SINCE the setback in growth in sales and profit suffered by the Alembic Chemical Works Company Ltd. (Managing Agents: Messrs. Rayuma Services, Baroda) during 1961 was due to some operational defects, it is not surprising to find that the Company has quickly recovered the lost ground during the year 1962, its working results "showing an all-round improvement over those of the previous year." Sales realisation, which had improved by only Rs. 22.47 lakhs in 1961, has spurted by Rs. 69.39 lakhs, or over 24 per cent, to Rs. 353.29 lakhs, and the gross profit is correspondingly higher at Rs. 59.55 lakhs, as against Rs. 41.68 lakhs. This betterment in profits has, of course, been due to larger turnover but only partly so, because no mean contribution to increased profitability has come by way of saving in expenditure incidental to a bigger output. Thus, the ratio to sales of total expenses has decreased to 84.6 per cent from 93.5 per cent in the previous year, despite higher excise duty and other expenses; it is, in fact, lower than the corresponding figure of 86.2 per cent for 1960. Essential provisions, however, have increased somewhat disproportionately, particularly in regard to taxation, claiming an aggregate of Rs. 39.93 lakhs, as against Rs. 27.99 lakhs. Of this, Rs. 2.80 lakhs (Rs. 1.69 lakh) are for the Managing Agents' remuneration, Rs. 20.88 lakhs (Rs. 18.05 lakhs) for depreciation and the balance of Rs. 16.25 lakhs (Rs. 8.25 lakhs) for taxation. In view of the concessions announced in the S.P.T. Bill, no liability for S.P.T. is expected this year. The resulting net profit is, therefore, higher by only Rs. 5.93 lakhs at Rs. 19.62 lakhs. After supplementing it with the Rs. 48,000 brought in and the Rs. 8.13 lakhs written back from past provision, the sum available for appropriation is Rs. 28.23 lakhs. Although this sum is substantially higher than the amount of Rs. 19.00 lakhs similarly available last year, the Directors have thought it fit to pursue their cautious dividend pay out policy. They have, therefore, proposed a lower dividend of 12 per cent, as against 14 per cent, both subject to deduction of tax. Since this is payable on the enlarged capital, it claims Rs. 13.87 lakhs, as against Rs. 13.07 lakhs.

The working results of the Company for the past four years are presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

High	285CR	283	300	215CR
Low	185XR	220	202	153XR

Note :—All dividends are subject to deduction of tax.

Consequent to the rights and bonus issues made earlier in the year under review, the share capital of the Company has increased to Rs. 159.50 lakhs, comprising Rs. 15.00 lakhs in three classes of preference shares and Rs. 144.50 lakhs in equity shares of Rs. 100 each. This is supported by Rs. 80.25 lakhs in reserves and the surplus account. Loans stand at Rs. 123.37 lakhs, in addition to current liabilities and provisions of Rs. 67.85 lakhs. On the assets side, the block account has increased to Rs. 308.90 lakhs, owing to the addition of new assets worth Rs. 42.30 lakhs during the year, but this is written down to a net block of Rs. 192.06 lakhs. Investments, mostly in unquoted shares, are carried in the books at a cost of Rs. 40.36 lakhs, while current assets, loans and advances together amount to Rs. 198.56 lakhs.

Continuing its expansion activities, the Company has procured during the year a licence for the expansion of the penicillin plant to 20 m.m.u. per annum and has already placed orders for related plant and equipment.

The old ordinary shares of the Company with a face value of Rs. 100 are currently quoted at Rs. 166.75 *cum-div.* On *ex-div.* basis, the net return works out to 5.3 per cent.

SYNOPSES OF COMPANY REPORTS

Antifriction Bearings Corporation Ltd.

(*Chairman*: Mr. C. C. Desai, Bombay.)

Second Annual General Meeting—28th June 1963.

Extracts from the Directors' report for the year ended 31st December 1962:

Financial Results: The loss for the year after providing for depreciation of Rs. 56,751 amounted to Rs. 1,89,326 and the same be carried forward with the previous year's loss of Rs. 62,765.

Accounts: Royalty in accordance with the Collaboration Agreement for the Roller Bearing Project is payable at the rate of £6,500-0-0 per annum free of tax commencing from the date of Agreement—i.e. 22nd March 1962. Since the production of *Roller Bearings* has not commenced during the year, no provision has been made for royalty of Rs. 1,35,343 pertaining to the period from 22nd March 1962 to 31st December 1962. It is proposed to charge out royalty only during the period beginning from the date on which production of *Roller Bearings* commences and ending with 22nd March 1972, the date of the termination of the Collaboration Agreement.

Finance: Till the date of the report, 6,00,000 equity shares have been subscribed, including 50,000 equity shares allotted to Messrs. Steyr-Daimler-Puch AG., Austria, pursuant to the Collaboration Agreement. During the year a first call of Rs. 2.50 per equity share was made on 16th May 1962 and the second and final call of Rs. 2.50 per share was made on 22nd November 1962, the same being payable on or before 7th January 1963.

The Industrial Credit and Investment Corporation of India Ltd., Bombay, have agreed to grant, in addition to the loan of U.S. $672,000.00 (about Rs. 32,00,000) already sanctioned to the Company, a further foreign exchange loan of U.S. $63,000.00 (about 3,00,000) in order to cover the freight and insurance charges.

Operations: The extension to the existing factory building and the construction of additional bays has been almost completed. Most of the major plant and machinery required for the Roller Bearing Project has been received at site and installation is in progress.

Production of *Thrust Bearings* during the year showed a substantial improvement over the previous period, the total production being 52,667 bearings during the year as compared to 15,100 bearings during the five months ended 31st December 1961. The production of *Steel Shots*, however, showed a decline due to certain technical difficulties, the production for the year being only 43,516 tonnes as compared to the production of 39,278 tonnes during the five months ended 31st December 1961.

The Roller Bearing Project was inaugurated at an informal ceremony held on 21st March 1963, when Dr. F. Wieland, a Director of the Company and the Technical Manager of the Collaborators, Messrs. Steyr-Daimler-Puch AG., Austria, started up the first batch of machines. It is expected that all stages of production will be in operation by about the end of this year. In the initial stages certain imported components will be incorporated in the bearings and it is hoped that the first batch of *Roller Bearings* will be placed in market by July 1963.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	48,51,250	Gross block	34,26,498
Other liabilities	16,16,805	—Depreciation	75,402
		Net block	33,51,096
		Current assets	15,21,018
		Cash	11,03,093
		Preliminary expenses	2,40,757
		P.L. a/c deficit	2,52,091
	Rs. 64,68,055		Rs. 64,68,055

Godfrey Phillips, India, Ltd.

(*Chairman*: Mr. D. S. Barron, Bombay.)

Twenty-sixth Annual General Meeting—24th June 1963.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1962	1961
Sales	5,50,74	4,56,70
Closing stock—manufactured cigarettes and tobaccos	1,23	2,72
—raw materials	1,02,92	94,31

To short provision for taxation (for previous year)	17	Nil
Transfer to development rebate reserve	16	14
general reserve	26,50	Nil
Proposed dividends (taxable) C. preference	1,65	1,65
	(6.875%)	(6.875%)
equity	12,00	16,00
	(30%)	(40%)
Dividend per equity share	[Rs. 3.00]	[Rs. 4.00]
Carry forward	38	17,01

* This represents Rs. 9,65,203 being gratuity provision written back.

† Represents items relating to previous years of tax refunds and sale tax refunds.

Extracts from the Chairman's statement: Turning to future prospects I find myself in even greater difficulties than usual. This year's Budget has not only substantially increased the basic duty but has also imposed a special surcharge of 20 per cent thereon. Furthermore, a similar substantial increase in import duty and a special surcharge of 10 per cent thereon has further affected brands in the higher price classes in which imported leaf is an ingredient. In the result prices of all brands of cigarettes have risen, most of them substantially. At the same time other measures of increased taxation have lowered the purchasing power of most consumers. These measures, against a background of virtually static consumption during 1962, must adversely affect total consumption of cigarettes and tobacco and may well lead also to substantial changes in brand preference in the quest for economy. Changes of this nature require a considerable time to attain their full effect and it is impossible on the evidence so far available to make any intelligent forecast other than that an overall reduction in consumption seems inevitable.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	70,00,000	Gross block	86,62,918
Reserves and surplus	32,26,810	—Depreciation	52,34,329

High	25.81	22.62
Low	20.25	17.56

Extracts from the Directors' report: The working results of the Company have been satisfactory. However, in spite of the greatly improved profits, the surplus is practically the same as last year, because of the increased incidence of taxation with the introduction of Super Profits Tax in the 1963-64 Central Budget.

In the 1962-63 budget, excise duty on jute goods was levied for the first time in the history of the industry amounting to Rs. 125 per ton on sacking and Rs. 250 per ton on hessian. These duties were further increased by 10 per cent in the 1963-64 Central Budget.

The raw jute crop in the 1962-63 season again turned out to be a bumper one. Coupled with this, there was a pent-up demand from overseas buyers for finished jute goods and the industry, therefore, worked to the maximum extent throughout the year. All accumulated loom hours were utilised and exhausted. 1962 was, therefore, a very good year for the industry.

Prospects for the jute crop for the 1963-64 season are reported to be bright on account of excellent weather conditions prevailing in the jute growing districts both in India and in Pakistan, and if there is another bumper crop, raw jute supplies should be plentiful. But another bumper crop will also aggravate the problem of finance and disposal of raw jute supplies. In the two previous seasons, the bumper crops were disposed of through judicious purchases by the Jute Mills and also, to some extent, by the Jute Buffer Stock Association. It is anticipated that by June 1963, Mills will be carrying raw jute stocks of approximately 3.5 million bales, representing approximately six months' mills consumption. For this reason, the disposal of the 1963-64 crop will present a serious problem to both the Government and the industry, especially as Government have announced Rs. 30.00 per maund as the operational price against about Rs. 22.00 per maund prevailing in Pakistan. Because of this wide price differential, smuggling of raw jute from East Pakistan will be further encouraged and this will add to the pressure of supplies.

In the current year 1963, overseas demand for jute goods has tended to taper off, but it is anticipated that demand from developing countries as well as from Communist countries will increase, thus enabling the industry to continue working at the maximum production rate throughout 1963 with all looms unsealed.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	24,00,000	Gross block	77,43,303

Low	25.00	22.50

* Includes Rs. 3,83,374 being provision for taxation for previous years.

Extracts from the Directors' report: *General*: Sales by the Company have again increased in India and Burma but in East Pakistan a slight setback in sales volume has been experienced. The Company's earlier forecast of lower margins has in fact materialised and these are expected to continue in the light of Governmental measures and competitive conditions in the oil industry.

In December 1962, the Revolutionary Government of Burma entered into an arrangement, by an exchange of letters, with the Oil Companies in Burma for the taking over, with effect from 1st January 1963, of their remaining investments in the Burma Oil Company (1954) Limited and their marketing assets. The Company is due to receive, after the necessary formalities have been complied with, a total consideration for the foregoing of Rs. 68.74 lakhs. It is accordingly necessary to write down this Company's holding in the Burma Oil Company (1954) Limited, at 31st December 1962 to its realisable value and Rs. 81,64,785 has been written off. Half of the total sum to be paid by the Government of Burma was received in January 1963.

In the U.K. this Company is participating with British and American associates in the drilling of a further exploration well which should spud in before the end of June 1963.

Consequent upon the dismissal of this Company's test suit against the Union Government of Burma in respect of war damage, suits were brought by subsidiaries of Burmah Oil Company Limited in the Court of Session, Edinburgh, against Her Majesty's Government. Pending the outcome of these, a similar suit brought by this Company has been stayed. After an initial success the suits on appeal have been dismissed and further action is being considered.

Since the end of 1962, this Company, after complying with the formalities required under

Section 372 of the Companies Act, 1956, has undertaken an investment of Rs. 7 lakhs in Indo-American Electricals, Limited, Calcutta and negotiations are currently being undertaken for acquiring shares in other companies selected for their growth prospects.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,50,00,000	Gross block	1,24,09,906
Reserves and surplus	1,76,44,533	—Depreciation	64,80,542
Other liabilities	2,14,40,358		
		Net block	59,29,364
		Current assets	1,96,87,221
		Investments	1,84,96,011
		Cash	99,72,295
	Rs. 5,40,84,891		Rs. 5,40,84,891

* Paid-up capital consists of 50,000—7 per cent. taxable cumulative preference shares of Rs. 100 each and 10,00,000 ordinary shares of Rs. 10 each. Of the above 93,570 ordinary shares have been allotted as fully paid-up bonus shares.

Choonabhutti Tea Co., Ltd.

(*Secretaries and Treasurers*: Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—19th June 1963.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1962	1961
Tea sales	27,43	26,44
Closing stock of tea	2,26	5,20

Transfer to development rebate reserve	6	2
Proposed dividends (taxable) preference	15	15
,, ,, ordinary	1,80 (20%)	1,80 (20%)
Dividend per ordinary share	[Rs. 20.00]	[Rs. 20.00]
Carry forward	43	88

Extracts from the Directors' report: Weather conditions were again unfavourable, the total rainfall for the year of 358 cms. being 45 cms. below the average for the previous 10 years, and only 12 cms. higher than in 1961. The tea market was more favourable and the crop of 5,214 quintals sold at an average price of Rs. 4.69 per kg. as compared with the 1961 crop of 5,142 quintals, which sold at Rs. 4.45 per kg.

Capital expenditure during the year, which totalled Rs. 4,50,750, mainly represents the cost of an extension to the factory, new machinery, and the construction of quarters for staff and labour.

Estimates for the current season have been framed for a crop of 5,300 quintals.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*‡	11,00,000	Gross block	38,68,724
Reserves and surplus	14,99,631	—Depreciation	13,32,983
Other liabilities	7,31,695		
		Net block	24,85,741
		Current assets	7,86,262
		Investments	3,076
		Cash	1,06,267
	Rs. 33,31,346		Rs. 33,31,346

* Paid-up capital consists of 2,000—6½ per cent. free of income-tax cumulative preference shares of Rs. 100 each and 9,000 ordinary shares of Rs. 100 each. Of the above 7,000 ordinary shares are allotted as fully paid-up bonus shares by capitalisation of general reserve.

Dr. Paul Lohmann (India) Ltd.

(*Secretary*: Mr. D. P. Sen, Calcutta.)

Second Annual General Meeting—28th June 1963.

Extracts from the Directors' report for the year ended 31st December 1962: The profit and loss account after providing Rs. 8,200 for taxation (Rs. 2,500 in 1961) shows a credit balance of Rs. 7,450 (Rs. 3,067 in the previous year). Thus a total credit balance of Rs. 10,517 is carried forward to next year's accounts.

Fine Chemicals Factory: Construction of the Factory is almost complete. Imported plant and machinery have arrived. Nearly all the indigenous equipments and accessories are already at site and under installation or assembly. Erection of the utilities is nearing completion. The plant will soon come into stream.

Expansion of capacity: The licensed capacity of the Undertaking is 1,500 tons per annum. As reported last year, plant and machinery have, however, been designed to have additional capacity for the purpose of economic production and export. The most modern plant, machinery and technique of production in this Factory will ensure economic bulk production.

Manufacture of basic chemicals: An industrial Licence for manufacture of *Oxalic Acid, Formic Acid* and *Sodium Formate* has been received from the Government of India. These basic chemicals have wide industrial applications and are still imported in India. Considerable quantities of these chemicals will also be required as raw materials for production of salts at the Fine Chemicals Factory.

Requirement of additional capital: The capital cost of the Fine Chemicals Factory has been properly assessed. It has been estimated that further capital of Rs. 30 lakhs will be required to finance the additional cost of the plant according to reassessment and part of the working capital. Initial requirement of capital for the purpose of investment in the Basic Chemicals Project for manufacture of *Oxalic Acid, Formic Acid* and *Sodium Formate*, would be of the order of Rs. 30 lakhs.

Capital issue consent and rights issue: To raise the additional capital the Company applied to the Controller of Capital Issues and has obtained his sanction for issue of share capital of Rs. 60 lakhs. Out of the sanctioned issue of Rs. 60 lakhs, Equity Shares for Rs. 53,04,000 have already been issued and offered to the shareholders as *Rights Shares* in the proportion of two new shares for every one share held. Shares for the remaining Rs. 6,96,000 have been kept reserved for the Foreign Collaborators or their nominees and will be issued to them in the due course in compliance with the provisions of the Companies Act, 1956 and subject to the approval of the Reserve Bank of India.

Market: The chemicals scheduled to be manufactured by the Company have extensive uses in many large industries and are in great demand. Some of the items on the Company's production list are still imported to meet the country's requirements. The demand for the Company's products will, no doubt, increase with the planned growth of industries. No difficulty, therefore, is anticipated in marketing the products. Moreover, it will be possible to offer these for export too.

Financial arrangements: Arrangement has been made with the State Bank of India for a medium term loan of Rs. 10 lakhs to meet the current requirement of finance till the proceeds of the *Rights Issue* are available as well as the future need of working capital.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	25,84,950	Gross block	2,89,101
Reserves and surplus	10,517	—Depreciation	15,481
Other liabilities	82,359		
		Net block	2,73,620
		Block in progress	19,65,510
		Loans and advances	20,133
		Cash	1,78,100
		Preliminary expenses	2,40,463
	Rs. 26,77,826		Rs. 26,77,826

* Paid-up capital consists of 2,65,200 equity shares of Rs. 10 each. Calls in arrear amount to Rs. 67,050.

Andhra Cement Co., Ltd.

(*Chairman*: Mr. V. Ramakrishna, Madras.)

Twenty-fifth Annual General Meeting—22nd June 1963.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1962	1961
Cement sales	1,43,44	1,25,80
Closing stock of cement	1,28	16
Gross profit	24,07	21,07
Transfer to depreciation	9,39	9,85
,, ,, provision for gratuity	25	40
,, ,, ,, taxation	7,88	3,50
Net profit	6,55	7,32
Balance brought forward	2	14
Transfer from rehabilitation fund	1,01	73
,, general reserve	1,05	Nil
Refund of income-tax	Nil	4,11
Appropriations:		
Total available balance	9,53	12,30
To expenses relating to previous years	24	2,44
,, donations paid	51	2
Transfer to rehabilitation fund	1,62	1,02
,, ,, provision for development rebate reserve	55	75
,, ,, deferred taxation reserve	Nil	75
Proposed dividends (taxable) preference	20	20
,, ,, ,, equity	6,39 (9%)	7,10 (10%)
Dividend per equity share	[Re. 0.90]	[Re. 1.00]
Carry forward	2	2
Market value of equity shares (in rupees):	1962	1961
High	10,50	11,15
Low	8,85	8,85

Extracts from the Directors' report: Although the production during the year showed slight improvement over the previous years, it could not be maintained to full capacity due to short supplies of raw materials for want of adequate transport. Coal was continuously in short supply and supplies had to be arranged at exhorbitant cost by sea-cum-rail route and also from other alternative sources. After the price was fixed by the Government under the recommendations of the Tariff Commission in 1961, there was further increase in the cost of production due to Governmental action as well as other normal reasons. Representation has been made to the Government of India for the increase of retention price due to increase in the cost of production arising from actions taken by the Government. The working results during the year have not therefore been entirely satisfactory.

The Directors are also taking steps to convert the coal firing Kilns to oil firing as permitted by the Government of India subject to subsidy being allowed for the increased cost.

The Government of India was pleased to issue licence for the establishment of a Sponge Iron Plant, in two stages, by making suitable modifications to the existing Rotary Kilns. The first stage will be for a production capacity of 40,000 tonnes per annum and the second stage will be for an additional production capacity of 60,000 tonnes per annum making a total of one lakh tonnes. Further details of the scheme will be reported separately as soon as negotiations for the required capital equipment are finalised.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	73,89,580	Gross block	1,81,21,932
Reserves and surplus	9,99,880	—Depreciation	99,24,065
Other liabilities	70,58,592		
		Net block	81,97,867
		Current assets	64,12,560
		Investments	7,62,820
		Cash	74,605
	Rs. 1,54,47,852		Rs. 1,54,47,852

* Paid-up capital consists of 2,488—6 per cent. tax-free cumulative first preference shares of Rs. 100 each and 7,10,317 equity shares of Rs. 10 each. Amount paid up on shares forfeited is Rs. 37,610.

Asian Cables Corporation Ltd.

(*Chairman*: Mr. G. B. Kotak, Bombay.)

Third Annual General Meeting—27th June 1963.

Extracts from the Directors' report for the year ended 30th September 1962: After transferring an amount of Rs. 89,405 to the "expenditure during the period of construction" in respect of Project No. II and depreciation Rs. 6,60,926 the profit and loss account shows a net loss of Rs. 11,52,448 to which is added the net loss of Rs. 36,566 brought forward from the previous period, making a total loss of Rs. 11,89,014 to be carried forward to next year's account. No provision for taxation has been made in view of loss for the period ending 30th September 1962.

Factory Working: The Company's first plant for manufacturing of *VIR and CTS Cables* went into trial production in November 1961. But regular production started from January 1962. Starting with an initial monthly production of Rs. 1,25,000 the production reached Rs. 6,00,000 (8,00,000 core metres) in the month of September 1962. The total sales as on 30th September 1962 amounted to Rs. 9,40,269. The present monthly production is about Rs. 8,00,000 (12,50,000 core metres) on single shift basis.

The I.S.I. Certification for which the Company had applied as far back as in March 1962 was obtained in July 1962. The Company's cables were further approved for fire insurance by the Insurance Association of India, Bombay, Regional Council Committee, (Fire Section), in November 1962. In the absence of the ISI Certificate and the fire insurance approval, the Company's distributors had in the initial period some difficulties in selling the goods as most of the customers insisted on these requisites. However, considering the circumstances and the fact that the Company's products were absolutely new in the markets and the keen competition from non-standard manufacturers, the sales effected during the year and the subsequent period could be considered satisfactory.

Fresh Issue of Capital: In the year under report the Company raised fresh equity capital of Rs. 1,55,00,000 out of which shares of the value of Rs. 1,00,00,000 were offered as *Right Shares* to the shareholders and shares of the value of Rs. 55,00,000 (or equivalent of $11,30,000) were reserved to be offered to the Company's foreign collaborators Messrs. Phelps Dodge Enfield International Corporation of New York. The fresh issue has been fully subscribed. The fresh capital is being utilised exclusively for implementation of Project II for the manufacture of *Paper Insulated Power Cables* and *Enamelled Copper Wires*.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	98,57,375	Gross block	79,48,375
Capital reserve	786	—Depreciation	6,60,926
Other liabilities	88,58,015		
		Net block	72,87,449
		Block in progress	10,674
		Expenditure during the period of construction	89,404
		Current assets	64,56,244
		Investments	8,000
		Cash	34,39,658
		Miscellaneous expenditure	2,35,733
		P.L. a/c deficit	11,89,014
	Rs. 1,87,16,176		Rs. 1,87,16,176

* Paid-up capital consists of 49,980 equity shares of Rs. 100 each fully called up and 1,00,000 equity shares of Rs. 100 each—Rs. 50 per share called up. Allotment money in arrears—Rs. 1,41,875. Amount paid up on shares forfeited—Rs. 1,250.

FRESH CAPITAL ISSUES SANCTIONED

Three companies, out of which one is new, have been authorised to raise capital aggregating Rs. 1.05 crore. All are issuing equity shares. The consent for the first two companies is valid for 12 months and for the third company up to the end of August next. The following are the details:

A. Stock and Company Ltd., Calcutta, a new company, will issue capital of Rs. 50 lakhs in equity shares of Rs. 10 each for cash at par. The capital will be used for the manufacture of steel structurals and steel storage tanks.

Tiwac Industries Ltd. Dharwar (Mysore State) is raising capital of Rs. 28,00,000 divided into 28,000 equity shares of Rs. 100 each, at par, of which 2,200 shares will be allotted to the foreign collaborators for consideration other than cash and balance will be offered in India for cash. The money will be used for setting up an industrial undertaking for the manufacture of "one-day alarm time-pieces."

Century Flour Mills Ltd. has been given consent in supersession of the previous consent order of the 11th May 1962, to the issue of Rs. 27 lakhs capital to be issued for cash at par. The money will be used for the establishment of a biscuit factory. The consent will be valid up to 31st August 1963.

LARGEST POLYSTYRENE PLANT AT ROURKELA

A new company, called Nandlal Koppers Ltd., will shortly be registered to undertake the manufacture of styrene and polystyrene and other copolymers, at Rourkela. The internationally famous Koppers of Pittsburgh of the U.S. will be participating financially and technically in this project. The Indian partners will be Messrs. Bharatex Private Limited, Bombay.

Rourkela, it is said, offers an ideal site for the production of this plastic material. Both the important raw materials, ethylene and benzene, will be available at the site from Messrs. Hindustan Steel Ltd. Koppers will be entrusted with the design and supply of the complete plant and will also provide the know-how and research for the operation of the plant and its further expansion. The Company will secure its requirements of foreign exchange through Financing Institutions in the U.S. and is expected to enter the Capital market towards the third quarter of this year. Associated with American capital this will be the largest polystyrene plant in the country.

THE ANGLO-FRENCH "CONCORD"

LEAD GAINED OVER U. S. SUPERSONIC RIVAL

By Our Aviation Correspondent

"NOTHING," runs the old proverb, "succeeds like success," and the recent announcement of Pan American Airways' order for six 'Concords' may lend it considerable point—the 'Concord,' of course, is the Anglo-French supersonic airliner now under joint development by Sud Aviation and the British Aircraft Corporation. The general supposition is that this order may touch off some sort of chain-reaction; that, in fact, all those airlines with long-haul routes—specifically those with routes across the Atlantic and the Pacific—will have to follow suit. And, if we recall the positive scramble to order subsonic jets during the mid-nineteen-fifties, that supposition may well be borne out.

It is by no means unusual for European countries—Britain, perhaps, in particular—to be first with scientific discoveries and new inventions. It is less usual, however, to see them reap the commercial rewards of their inventive genius. When it comes to development and production, the greater wealth and production capability of American industry is a predominant factor. In this instance, however, the British and French—after, of course, many years of intensive research into various aspects and problems of supersonic travel—do seem to have stolen a decisive march.

Their success rests, in this instance, on the unanimity of expert opinion in the two countries regarding the shape and speed of the transport to be developed, coupled with the political acumen to exploit it. This, of course, in contrast to the lack of agreement on this subject which has prevailed in the U.S.A. The upshot is that, whilst Britain and France adopted the less ambitious but more immediately practical speed of Mach 2.2—and were able, consequently, to launch their joint project last autumn—the Americans continued to argue the merits of the Mach 3 (2,000 m.p.h.) liner and the advantages of eliminating the comparatively interim stage of Mach 2.2 (1,450 m.p.h.). Pan American's action, however, seems to have jolted them into action. President Kennedy has announced priority measures for a Mach 3 project.

This, however, does not materially alter the situation. The Anglo-French 'Concord,' which is scheduled to fly in 1966, and to go into airline service at the end of the decade, has gained an extremely valuable lead over its American rival. The latter, which will have to be constructed of special heat-resistant steels not yet fully developed, cannot possibly fly, it is thought, before 1970. Unless there are untoward developments, the 'Concord' appears to be on an excellent wicket. It should score freely in orders before its faster American rival is ready to take the ground.

Still a 'Paper Aircraft'

First blood, then, very definitely to the Concord. We have to recognise, nevertheless, that, before victory is assured, much remains to be achieved. The 'Concord' is still very much a 'paper aircraft.' It exists, no doubt, on the drawing boards of the firms concerned, but it has yet to be translated into metal. Moreover, Pan American's order has been placed subject to certain conditions—and this, no doubt, will be the case with all subsequent orders. Primarily, of course, the 'Concord' must fulfil its design specifications. These call for a speed of Mach 2.2, a payload of 20,000 lbs.—the equivalent of 100 passengers with baggage—and a range great enough to ensure regular non-stop operation over the Atlantic between London or Paris and New York. It is also a condition precedent that the Concord shall meet United States, British, and French licensing and air-worthiness requirements.

Apart from these fundamental conditions, there are other provisions which, in the long run, may prove more difficult. The International Air Transport Association has stipulated certain terms which govern the introduction of supersonic airliners by its members—and, since Pan American and all the other major airlines are I.A.T.A. members, the Concord will have to meet those requirements. I.A.T.A.'s terms demand, *inter alia*, that the safety of any supersonic airliner shall be at least equal to that of subsonic jets at the time of its introduction—which means *circa* 1969-70; that it shall be adaptable to then existing air traffic control conditions and facilities, and shall be capable of integration with services operated by subsonic jets; that it shall be economically competitive with and shall have a noise-level no higher than subsonic jets of that time.

These are exacting conditions and it is here, one suggests, that complications could develop. Design specifications of weight, capacity, and performance are, more or less, exact requirements—matters of fact, that is to say, rather than matters of opinion. In any event, there can be little doubt that the Concord, before it is offered for certification, will fully meet its design requirements. But I.A.T.A.'s conditions are more complex. Who, for instance, is going to adjudicate, in case of disagreement, on such comparative matters as safety, economics, adaptability to control conditions, and noise-levels? Even today, four years after the general introduction of subsonic jets, aids and facilities in many regions have been described as "totally inadequate." The difficulty of assessing what is, or what is not, acceptable for supersonic jets needs no emphasis.

Economic Aspects

So much, then, for what may be termed the technical and operational angles of the Anglo-French project. What, however, of the economic aspects? The total cost of development is, of course, not yet known. We do know, however, that £160 million of that cost will be found by the two Governments concerned on a fifty/fifty basis. We can only guess at what point the break-even figure has been set—the point, that is to say, at which the number of aircraft produced and sold covers the development costs, and beyond which profits begin to accrue. With the very high development costs involved, however, it is safe to assume that, to make the unit selling price at all attractive, the break-even figure has been set at, or about, one hundred units.

The selling price of the Concord is, in fact, about £5 million. At that figure, only the larger airlines can afford to invest and these, too, will try to restrict their requirements to the very minimum. Nevertheless, if we can assume that Pan American's order for six is fairly representative, it is entirely within the bounds of probability that one hundred or more units will be sold. The vital factor will be time. It will be essential, in other words, for the project to adhere very closely to its target dates. By the end of the decade, the American project will be coming into the picture. If it is seen that the Concord programme is slipping, confidence—and orders—will inevitably be lost.

Much, then, is at stake—and not least, perhaps, national prestige. Whilst the British Aircraft Corporation and Sud Aviation are well-drawn in the race and are demonstrably off to an excellent start, they have a tremendous task before them before they win through to victory.

I.M.F. CREDIT TO BRAZIL

The International Monetary Fund has agreed to a drawing by the Government of Brazil of $60 million to assist it in meeting payments difficulties produced by a temporary decline in export earnings. This is the first drawing under the Fund's decision on compensatory financing of export fluctuations announced in March last. The Fund's compensatory financing facility is designed to broaden its balance of payments support of member countries which experience temporary declines in export earnings due to circumstances largely beyond their control. Brazil's exports declined substantially in 1962 owing particularly to reduced sales of coffee and cocoa.

MONSOON PRECAUTION—
check your tyres !

Even 20 miles per hour can be a dangerous speed on a wet and slippery road—if your tyres are worn, there is every chance of skidding.

Protect yourself today against skidding by fitting Dunlop Gold Seal tyres to your car. Behind the designing of these tyres lies Dunlop's unique experience on the world's greatest racing circuits where cars with Dunlop racing tyres touch speeds of 180 miles per hour in the rain!

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE SEVENTY-SEVENTH ANNUAL GENERAL MEETING of THE SVADESHI MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Bombay House, 24, Bruce Street, Fort, Bombay 1, on Wednesday, the 17th July, 1963, at 4-30 p.m., to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December 1962, and the audited Balance Sheet as at 31st December 1962.

2. To declare dividends on Preference and Ordinary shares.

3. To appoint a director in place of Mr. J. R. D. Tata, who retires by rotation and is eligible for reappointment, and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice, as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. J. R. D. Tata, a director of the Company, who retires by rotation and who is also a director, member, officer and associate of Tata Industries Private Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint two directors to the Board), be and is hereby reappointed a director of the Company."

The reasons which make this special resolution necessary are that as the Managing Agents of the Company are authorised by the Articles of Association of the Company and the Managing Agency Agreement to appoint two directors to the Board, and as Mr. J. R. D. Tata is a director, member, officer and associate of the Managing Agents, his appointment can only be made by a special resolution of which a special notice (as noted above) has been received by the Company.

4. To appoint a director in place of Mr. K. M. D. Thackersey who retires by rotation and is eligible for reappointment.

5. To appoint Auditors and to fix their remuneration.

6. To consider and, if thought fit, to approve and adopt the Regulations contained in the document to be submitted to the Meeting and for the purpose of identification subscribed by the Chairman thereof, as the Articles of Association of the Company with such modifications, if any, as may be agreed to at the Meeting, and to pass the following resolution as a Special Resolution pursuant to Section 31 of the Companies Act, 1956:—

"RESOLVED that the Regulations contained in the document submitted to this Meeting, and for the purpose of identification subscribed by the Chairman thereof, be and are hereby approved and adopted as the Articles of Association of the Company, in substitution for, and to the exclusion of the existing Articles thereof."

7. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that pursuant to Section 360 and other applicable provisions, if any, of the Companies Act, 1956, the Company hereby authorises, approves of, confirms and consents to the following contracts being entered into between the Company and the Ahmedabad Advance Mills Limited (who are deemed to be Associates of the Managing Agents, Tata Industries Private Limited), namely:—

(a) For purchase by the Company from the Ahmedabad Advance Mills Limited of cotton and all items of general and consumable stores such as spinning and weaving accessories, dyes, colours, chemicals, finishing agents and all other mill stores, and machinery, plant, equipment and spare parts (used or unused) in respect of which the Company may experience a shortage and which may be surplus to the requirements of the Ahmedabad Advance Mills Limited, at prices which are not less favourable to the Company than the prevailing market prices for such commodities and which are otherwise reasonable;

(b) For sale by the Company to the Ahmedabad Advance Mills Limited of cotton and all items of general and consumable stores such as spinning and weaving accessories, dyes, colours, chemicals, finishing agents and all other mill stores and machinery, plant, equipment and spare parts (used or unused) which may be surplus to the requirements of the Company at prices which are not less favourable to the Company than the prevailing market prices for such commodities and which are otherwise reasonable Provided that for any property so supplied or sold, the Ahmedabad Advance Mills Limited shall make payment to the Company within one month from the date of supply or sale of the property.

RESOLVED FURTHER that all contracts of sale and purchase of any property as aforesaid hereinbefore entered into between the Company and the Ahmedabad Advance Mills Limited are hereby confirmed and shall be deemed to be valid against the Company."

8. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that pursuant to the provisions of Section 370 (if at all applicable) and other applicable provisions, if any, of the Companies Act, 1956, the Company hereby authorises, approves of, confirms and consents to loans made or being made from time to time by the Company of cotton and all items of general and consumable stores such as spinning and weaving accessories, dyes, colours, chemicals, finishing agents and all other mill stores of any kind and description, and machinery, plant, equipment and spare parts (used or unused) to (1) the Ahmedabad Advance Mills Limited (2) the Tata Mills Limited, and (3) the Central India Spinning, Weaving and Manufacturing Company Limited (being Companies under the same managements as the Company) or any one or more of them, subject to such variations or modifications of the terms of such loans as may from time to time be thought necessary."

Notes:—(a) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 3, 6, 7 and 8 set out above, is annexed hereto.

(b) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(c) The Transfer Books of the Company were closed from Monday, the 15th April, 1963, to Monday, the 13th May, 1963, both days inclusive.

(d) If dividends on shares, as recommended by the directors, are passed at the Meeting, payment will be made on and after Thursday, the 18th July, 1963, to those members whose names were on the Register of the Company on the 13th May, 1963.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
Director.

Bombay, 16th May, 1963.

Registered Office:
BOMBAY HOUSE,
24, BRUCE STREET, FORT,
BOMBAY, 1.

FERRO ALLOYS CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventh Annual General Meeting of the Company will be held at the Registered Office of the Company, Shreeram Bhavan, Tumsar, on Saturday the 29th June, 1963 at 4 p.m., to transact the following business:—

1. To adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1962.

2. To sanction the declaration of dividends.

3. To appoint a director in the place of Shri Gulabdas Agrawal who retires by rotation under Article 121 and being eligible, offers himself for re-election and to consider and if thought fit to pass the following as a special resolution of which special notice as required, has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956 Shri Gulabdas Agrawal who is also a director of Saraf Mor & Company Private Limited, the Managing Agents of the Company be and is hereby re-elected a director of the Company."

4. To appoint a director in the place of Shri Ramnarayan Mor who retires by rotation under Article 121 and being eligible, offers himself for re-election and to consider and if thought fit to pass the following as a special resolution of which special notice, as required, has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956 Shri Ramnarayan Mor who is also a director of Saraf Mor & Company Private Limited, the Managing Agents of the Company, be and is hereby re-elected a director of the Company."

5. To appoint a director in the place of Shri Amritlal P. Trivedi who retires by rotation and being eligible offers himself for re-election and to consider and if thought fit to pass the following resolution of which special notice as required under Section 281 of the Companies Act, 1956 has been received by the Company:—

"RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956 Shri Amritlal P. Trivedi who has attained the age of 68 years and who retires by rotation, be and is hereby re-elected a director of the Company and it is hereby specifically declared that the age limit for directors prescribed under Section 280 of the said Act shall not apply to him."

6. To appoint auditors and to fix their remuneration.

7. To consider and if thought fit to pass, with or without modifications, the following as a special resolution:—

"RESOLVED that subject to the approval of the Central Government clause Number 3(d) of the existing Managing Agency Agreement dated the 25th March 1961 between the Company and Messrs. Saraf Mor & Company Private Limited be substituted by the following clause:—

'3 (d) The said remuneration for any year or other period for which the accounts are made up shall be payable immediately after such accounts are audited and have been placed before the General Meeting of the Ferro Alloys Corporation Limited provided however that the amount of minimum remuneration of Rs. 50,000 as specified in clause 3(b) of the Agreement may be paid in four equal quarterly instalments due on 31st March, 30th June, 30th September and 31st December in any year.'

and that the directors be and are hereby authorised to agree to such modification, if any, as may be required by the Central Government."

8. To consider and if thought fit to pass with or without modifications, the following as a special resolution:—

"RESOLVED that pursuant to the provisions of Section 360 and other applicable provisions of the Companies Act, 1956 the Company hereby approves of an agreement in terms of the draft placed before the meeting and for the sake of identification initialled by the Chairman, for the purchase of 15.06 acres of land together with (a) 'A' type bungalow with all fittings, fixtures, structures, road, well, compound wall, garden, and (b) five blocks of tin-roofed quarters with all fittings, fixtures and structures more fully described in the said agreement, from Messrs. R. B. Shreeram & Company Private Limited who are or may be deemed to be Associates of the Company's Managing Agents, at a price of Rs. 2,01,340 subject to the condition that the stamp duty, registration charges and other expenses in respect of the purchase shall be borne and paid by the buyers;

and that the Board of Directors be and are hereby authorised to complete the aforesaid agreement and to complete the conveyance of the said property in the name and favour of the Company."

9. To consider and if thought fit to pass, with or without modifications the following as a special resolution:—

"RESOLVED that pursuant to the provisions of Section 360 and other applicable provisions of the Companies Act, 1956 the Company hereby approves of an agreement in terms of draft placed before the meeting and for the sake of identification initialled by the Chairman, for exchange of 2.82 acres of land between the Company and Messrs. R. B. Shreeram and Company Private Ltd., who are or may be deemed to be Associates of the Company's Managing Agents, subject to the condition that the stamp duty, registration charges and other expenses in respect of the said exchange of land shall be borne by the two companies equally; and that the Board of Directors of the Company be and are hereby authorised to complete the aforesaid agreement and to complete the conveyance of the said property as per the terms of the agreement."

N.B.—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

2. The Share Transfer Books of the Company will be closed from 19th June to 29th June, 1963 both days inclusive.

3. Intimation of change of Address, if any, should be given to the Company immediately.

4. All persons holding shares on blank transfers should immediately arrange to have the shares registered in their own names as the Company will pay the dividend which may be declared only to the person(s) in whose name(s) shares stand in the Register of Members of the Company on the date of declaration of dividends. After sanction of the proposed dividend by the General Meeting Dividend Warrants will be posted to such shareholders and will be payable on or after 7th August, 1963.

5. The relative explanatory statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business is being posted to all members.

By Order of the Board,

FOR FERRO ALLOYS CORPORATION LIMITED,

FOR SARAF, MOR & COMPANY (P) LIMITED,

UMASHANKAR AGRAWAL,
Director,
Managing Agents.

THE DURGAPUR PROJECTS LIMITED

(A Government of West Bengal Undertaking)

SALE OF NAPHTHALENE OIL

THE DURGAPUR PROJECTS LTD. INVITES offer from *bonafide* consumer/dealer for purchase of Naphthalene Oil of the following specification:—95% distilling from 210°C-228°C-Phenole content 4-6%. Specific gravity 0.980-1.04 at 38°C.C.P.-69°C. This can successfully be used in the production of Crude Naphthalene (H.P.), Beta-Naphthol, Phthalic Anhydride, Pure Naphthalene and for use in other chemicals. Interested persons may contact Sales Officer (Chemicals), The Durgapur Projects Ltd., 10, Middleton Row, 1st floor, Calcutta-16 on or before June 24, 1963 with their offer of price indicating expected monthly offtake. Disposable quantity at present is 150 M. tons.

NEWS IN BRIEF

THE Tariff Commission has undertaken an inquiry into the cost structure of the preserved fruits and vegetables industry and the need for subsidy on tinplate for open top sanitary cans. It has prepared questionnaires for producers, consumers and distributors.

The National Instruments Ltd. has finalised arrangements for the setting up of an ophthalmic glass factory at Durgapur with Soviet assistance. The plant, which will have a capacity to produce 300 tons of ophthalmic glass per annum, is expected to commence operation early in 1966.

Coal mining organisations in India have been invited to participate in the International Coal Conference to be held at Tokyo in October next. The Conference will discuss, *inter alia*, problems arising from the use of furnace oil, atomic energy, etc., and new possible uses of coal in the changing circumstances of the world's industrial set up.

The foundation stone of the Rubber Research Centre, sponsored by the Madras Rubber Factory Ltd., was laid by the Prime Minister, Mr. Jawaharlal Nehru, on Wednesday, this week at Tiruvottiyur, Madras. At the Centre, technologists will do research and technical students will be given specialised training.

An educational mission led by Mr. G. K. Chandiramani, Joint Secretary, Ministry of Scientific Research and Cultural Affairs, has left New Delhi for Liberia to help the Government of that country to formulate long-term plans for economic and social development. The mission is expected to complete its assignment by the middle of September next.

The foundation stone of the Rs. 67-crore steel smelting shop of the alloy steel project at Durgapur was laid on the 8th inst. by Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries. The shop will go into production by October 1964. It will manufacture carbon, alloy, tool and engineering equipments, special quality steel, including stainless and heat-resisting varieties, and other critical grade alloys.

The Union Ministry of Community Development and Co-operation has set up a study group, with Mr. V. P. Varde of the Saraswat Co-operative Bank Ltd., Bombay, as Chairman, to suggest measures for a sound and speedy growth of credit co-operatives in the non-agricultural sector. The group will study the present patterns of organisation and working of non-agricultural credit societies, including urban co-operative banks and employees' credit societies.

The study group on co-operatives under the Railways and the P. and T. Department, appointed by the Union Ministry of Community Development and Co-operation, has made a number of recommendations regarding the steps that should be taken for encouraging the growth of labour construction co-operatives. It has recommended the setting up of 150 labour construction co-operatives under the Railways during the remaining period of the third Plan.

A project agreement for technical collaboration for exploiting the Karanpura coalfields in Bihar was signed on the 10th inst. by the representatives of the Governments of India and France. Under the agreement, the Charbonnages de France, the State-owned undertaking operating all mines in France, will send an integrated team of miners to act as operators and demonstrators, along with an Indian team of fully trained miners and engineers. The French Government will also spend Rs. 10 lakhs to cover the foreign exchange cost of the personnel, depreciation of equipments used, etc.

An annual grant of Rs. 25,000 for post-graduate studies in technical subjects by students of Assam in Indian Universities has been announced by Oil India Ltd. This is in addition to the grant of Rs. 9,000 per annum sanctioned by the Company to the Calcutta University for advanced research in geology and physiochemical subjects and of Rs. 50,000 to the Council of Scientific and Industrial Research for scholarships to outstanding Indian students for advanced studies in technical subjects abroad.

The Crookes Laboratories of London, one of the pioneer pharmaceutical companies in Britain, is collaborating with Indian and Dutch producers to set up a new company to develop, make and sell pharmaceutical products in India. The principal products of the new Company, which will be named Crookes Interfran, will be Vitamin D. The Company will extend Crookes' already considerable interests in India. Its products have been sold in the country for over 50 years and it has had a branch in Bombay since 1929.

The governing council of the U.N. Special Fund has approved an Indian project costing the Fund Rs. 44.25 lakhs and the Government of India Rs. 50 lakhs for a survey of coniferous and hardwood forests. A second programme will be for a centre for training teachers in engineering colleges at Warangal in Andhra Pradesh. Fellowships will be given for Indians to study abroad. The Fund will contribute about Rs. 88.24 lakhs and the Government Rs. 2.66 crores. The Indian scheme is one of the 41 projects in developing countries approved by the Council. Asia and the Far East will receive the largest share of the new allocations. The Fund will spend Rs. 6 crores on 14 projects in this area.

The Union Ministry of Education, in consultation with the Planning Commission, has decided to set up a committee to examine the problems of education in relation to employment opportunities. Prof. M. S. Thacker, Member (Education), Planning Commission, will be the Chairman of the Committee. The terms of reference of the Committee will be to examine the trends concerning the output of educated personnel at different levels of education and the relationship of such output with employment opportunities; to recommend suitable measures for bringing about a better planning between the output of educated personnel and the pattern of employment; and to suggest the setting up of any organisational machinery for facilitating the employment of educated personnel.

Co-operative sugar factories in the country have recorded steady progress. The production of sugar in the co-operative sector during the 1962-63 crushing season is expected to be of the order of 475,000 metric tons, as against the 470,000 produced in the previous year, while the total production is reported to be lower at 2.20 million tons, as against 2.68 million tons. The share of co-operative sector in the total production of sugar has also registered a significant increase from 17.5 per cent during 1961-62 to 21.6 per cent during 1962-63. The increase in production in the co-operative sector is attributed largely to the effective member participation. The co-operative sector has produced for export 80,000 metric tons of raw sugar, in addition to the usual export quotas of crystal sugar. Out of the 57 co-operative sugar factories in the country, some 41 factories are in production, as against 34 factories. The remaining 16 factories are in various stages of installation.

The Union Ministry of Irrigation and Power has sanctioned a loan of Rs. 31 lakhs to the Punjab Government for financing the expenditure on the Beas Project during the current year. The total loan sanctioned so far to the State Government for this Project amounts to Rs. 10.46 crores. The Project will consist of two units—Beas-Sutlej link and Beas Dam at Pang. These together will not only harness the Beas power potential but will also create an irrigation 'grid' enabling great flexibility in operation of water releases for canal systems for the Sutlej and the Beas. The capacity of the proposed Beas-Sutlej link has been fixed at 7,500 cusecs to enable full utilisation in a lean year of the storage capacity of the Bhakra reservoir, so that the power plant at Bhakra can operate with higher head and increase releases. This will improve the 'firm' power at Bhakra by about 60 M.W. at 100 per cent load factor. The scheme will also help stabilise the economy of the region in the field of irrigation development. It will provide irrigation facilities to 600,000 acres of land lying to the South and South-West of Punjab. This is expected to yield about Rs. 10 crores worth of crops annually.

* * * *

From Abroad

The average national income of Pakistan has risen from Rs. 2,495.6 crores in 1961-62 to Rs. 2,523.1 crores in 1962-63, while the *per capita* income has declined from Rs. 261 to Rs. 258.

The Japanese Government is launching a campaign to curb rising prices and wages, as it fears that cost inflation will imperil the country's fast economic growth.

The Committee on Commodity Problems of the U.N. Food and Agriculture Organisation, which held a meeting at Geneva a few days ago, has decided to set up a Study Group to study the aspects relating to the production, consumption and trade of jute, kenaf and allied fibres.

New techniques for settling serious disputes will be studied by a 12-man team of professional negotiators which has just been appointed by President Kennedy. It will examine how far the Administration can exert its influence early in the course of negotiations, instead of waiting till the crisis is near.

The U.S. Export-Import Bank has granted a credit of over $6 million to the Mexican steelworks, Altos Hornos de Mexico, to help finance its expansion and modernisation programme. The credit is tied to the purchase of equipment in the U.S. Amortisation is over a period of 13 years commencing from 1965 and the rate of interest charged will be 5.75 per cent.

A group of industrialists, economists and bankers from seven European countries have formed a "European Committee" in Paris to coordinate the aid contributions of European private business to Latin America. The countries represented in the Committee are West Germany, France, Italy, Belgium, Spain, the Netherlands and Switzerland.

A new scheme of investment grants for the diversification of the ailing French shipbuilding industry has been approved by the Government. Under the scheme, 20 per cent of the new investment will be given to shipyards embarking on new activities involving more than 50 men, as well as to other firms setting up factories near shipyards, and another 15 per cent for extending existing factories near shipyards.

The second largest tanker ever to be constructed for a Japanese shipowner will be built at the Nagasaki Works of Mitsubishi Zosen (Mitsubishi Shipbuilding and Engineering Company Ltd.). The 92,460 tons D/W tanker has been ordered by Tokyo Tanker Company, a subsidiary of Nippon Oil Company Ltd. The projected tanker is second only in size to the 132,000-ton D/W mammoth tanker, *Nissho Maru*, owned by Idemitsu Kosen Company Ltd.

The West German Government proposes to continue the process of denationalising the Volkswagen concern by an issue of convertible bonds to be made by VEBA, a Government-owned holding company with a stake in coal and electric power. Parliament is to be asked to approve a scheme under which VEBA would issue DM 100 million in bonds redeemable within 15 years at the usual interest of 6 per cent or perhaps less. Bond holders will be given the option of asking for repayments not in cash but in Volkswagen shares. The Government's holding in this Company at present is DM 120 million.

The Japanese Iron and Steel Export Committee has fixed iron and steel export target for the fiscal year 1963 at 3,828,000 metric tons. In order to help achieve this goal, the industry has asked the Government to interpret flexibly and, where necessary, revise anti-monopoly laws and trade regulations with a view to securing an orderly and stable pattern of exports; to ease deferred payment terms, facilitate long-term loans, and simplify and streamline export procedures; to seek an easing by the U.S. and Canada of their trade restrictions against Japan, and an elimination of discriminatory policies towards Japan by the nations of the European Economic Community; to relax requirements for long-term loans and deferred payment arrangements in order to promote exports to India, South Korea, Taiwan and the less-developed countries and to throw more support into the construction of ships built to carry exclusively iron ore and coal.

An "Investment Code" providing for important guarantees and benefits for foreign capital investments in Algeria has been presented by the Algerian Government to the National Assembly. The Assembly's Finance Committee will discuss the Code and present it to the Assembly for final approval. The main guarantee introduced by the Code provides that no expropriation of a concern created by a foreign capital investment can take place before the amortisation of the invested capital has been assured. The Code provides that any expropriation measure will give the right to a just compensation also. It stipulates three important benefits for concerns created through foreign capital investments. First, State protection against foreign competition within the framework of the Government's policy on import dues. Secondly, assistance of State financial bodies for the purpose of obtaining loans for the equipment of such concern and thirdly, Government orders for supplies for public works and supplies for the State. It also guarantees to foreign investors the possibility of transferring abroad annually 50 per cent of their net benefits. Algerian economists hope the guarantees and benefits provided by the new Code will facilitate the country's industrial development and, in particular, the exploitation of Algeria's large mineral wealth.

PERSONAL

MR. C. H. Bhabha, a leading banker and a former Union Commerce Minister, has been nominated Chairman of the reconstituted National Shipping Board in place of Mr. G. L. Mehta.

Mr. Larbi Benani has been appointed Ambassador of Morocco in India.

Mr. Mirza Ispahani has been elected Chairman of the Pakistan Jute Mills' Association for the current year.

Sir Kenneth R. Pelly, Chairman, Wm. France, Fenwick and Co., Ltd., has resigned the chairmanship of Lloyds Register of Shipping. Mr. A. C. Grover has been elected the new Chairman.

Mr. W. Jenkins, a former Director of Commerce (1935) Ltd. and of Messrs. W. H. Brady and Company Ltd., has been installed as Lord Mayor of Belfast, Northern Ireland.

Mr. Fulchand Shamji and Mr. Padamsi Khatau have been elected President and Vice-President, respectively, of the Bombay Woollen Dealers' Corporation for the year 1963-64.

Sir Errington Keville of Britain has been elected Chairman of the International Chamber of Shipping for the current year. Mr. L. P. Ruys of Holland and Mr. F. Fabre of France have been elected Vice-Chairmen.

Mr. Prabhu V. Mehta has been re-elected Chairman of the Textile Machinery Manufacturers' Association for 1963-64. Mr. L. T. Gholap and Mr. K. H. Shah have been elected Vice-Chairmen.

Dr. Raffaele Mattioli, Chairman of the Banca Commerciale Italiana, has accepted an invitation to serve on the panel of international investment bankers established in February 1962 to act as advisers to the I.F.C.

Mr. V. L. Kodikal, Managing Director, Coltour Gate-Palmolive (India) Private Ltd., has left on a tour of France, the U.K., the U.S., Japan and Hong Kong, to explore the possibilities of promoting the exports of the products manufactured by his Company.

TREND OF MARKETS

MONEY BETTER AT CLOSE

(From Our Own Correspondent)

BOMBAY, *12th June*

The short-term money market continued to rule tight during the major part of the week under review. The funds actually available were inadequate fully to meet demand, with the result that inter-bank call rate moved up from 5 per cent to 5½ per cent. Conditions, however, improved slightly later in the week. Yesterday, the supply-demand position was somewhat well-balanced and, today, the market was better still. Renewals were done at 5 per cent and some business was put through even at 4½ per cent after clearing hours. A year ago, it may be recalled, the rate prevailing was no more than 3½ per cent. Calcutta reported persistently tight situation, with both renewals and fresh money quoted at 5½ per cent.

Despite the slight improvement in the tone of the money market, the response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 11th inst., was poor, though the amount offered was higher by Rs. 10 lakhs at Rs. 2.10 crores. The amount offered and accepted was unchanged at Rs. 2 crores, while the rate of accepted tenders rose from Rs. 2.350 to Rs. 2.354 per cent per annum. The Intermediate Treasury Bills, however, evoked good response, the Bills actually sold from the 5th to 8th inst. aggregating Rs. 135.25 lakhs, as against Rs. 50 lakhs a week before Rs. 80 lakhs two weeks before.

There was a further fall of Rs. 2.92 crores to Rs. 114.50 crores in foreign assets during the week ended 7th June 1963. The fall was accounted for entirely by balances held abroad which amounted to Rs. 5.42 crores. Foreign securities held in the Issue Department of the Reserve Bank stood at Rs. 109.08 crores, same as last week. Loans and advances to scheduled banks went up by Rs. 6.93 crores to Rs. 24.53 crores, of which the share of those against usance bills was Rs. 9.35 crores, a rise of Rs. 65 lakhs. The deposits of scheduled banks with the Reserve Bank declined by Rs. 3.72 crores to Rs. 74.70 crores. Notes in circulation jumped up by Rs. 32.54 crores to Rs. 2,313.99 crores.

The total credit made available by scheduled banks to their client during the week ended 31st May 1963 declined by just Rs. 34 lakhs to Rs. 1,553.01 crores. Inter-bank borrowings also declined by Rs. 1.47 crore to Rs. 54.20 crores. Since, however, the deposits fell by over Rs. 10 crores, the banks had to take recourse to larger borrowings from the Reserve Bank. The total of the borrowings went up by Rs. 6.65 crores to Rs. 16.37 crores, of which those against usance bills amounted for Rs. 8.91 crores, a rise of Rs. 2.42 crores. At the same time, the banks reduced their investments by Rs. 2.06 crores to Rs. 628.18 crores and balances with the Reserve Bank by Rs. 2.58 crores to Rs. 76.85 crores.

The Gilt-edged market continued to rule steady. Short-dated and selected medium-dated loans met with good support, though prices did not show any marked tendency to rise. 3½ per cent 1967 hardened by 15 nP to Rs. 98.35. 3½ per cent 1968 rose by 15 nP to Rs. 98.75. 4½ per cent 1972 gathered 20 nP to Rs. 100.20. 6½ per cent 1977 Gold Bonds were done at Rs. 116.75, at which rate the redemption yield comes to 5.03 per cent.

The banks' selling rate per 100 dollars continued unaltered at Rs. 478, as also the buying rate at Rs. 474.75. In New York, the pound sterling was irregular *vis-a-vis* the dollar. Thus, the spot rate rose from 279.990-280.020 cents to 280-280.040 cents, while the three months' forward receded from 279.640-279.670 cents to 279.570-279.610 cents.

SILVER REGAINS EARLY LOSSES

(From Our Own Correspondent)

BOMBAY, *12th June*

Silver regained early losses this week and closed steadier, but gold eased as a reaction to the last week's smart rally. Business was limited and movements were narrow.

Silver opened a shade lower at Rs. 223, as against the last week's close of Rs. 223.50, and dropped further to Rs. 222.50 on Friday the 7th inst. On Saturday, however, it steadied up to Rs. 223.50. Yesterday, it looked up to Rs. 224.50 at which level it closed today. This recovery, after the early decline, was due mainly to arrivals shrinking further, especially from the mid-week, to 12 bars a day, on an average, as against 15 bars last week. The daily average offtake also improved by two units to 10 bars.

Gold, which had jumped up from Rs. 110 to Rs. 114.50 last week, opened one point lower at Rs. 113.50 and shed a point further to Rs. 112.50 on Friday the 7th inst. Thereafter, it moved narrowly between Rs. 113 and Rs. 113.50, and closed today at the higher level. The spurt last week kept buyers aloof at higher levels. Besides, there were fears of further official action against gold. In contrast with the quiet tendency in gold, sovereign rose further this week from Rs. 83.50 on Friday to Rs. 85 today, at which level it was two points higher over the week.

In New York, spot silver was lower initially at 127.2 cents, but rallied later to close at 127.4 cents, as against 127.6 cents a week ago. In London, however, ready silver eased from 110½*d.* to 109⅜*d.* and the forward dropped from 110½*d.* to 110*d.* before closing at 110⅛*d.* Ready gold was a shade higher at 250*s.* 6½*d.*, as compared with 250*s.* 5¾*d.* a week ago. The dollar price for gold also moved up from $35.06⅛ to $35.07⅜.

Mr. Morarji Desai, Union Finance Minister, has threatened to close down the Kolar gold mines, if efforts to bring down the cost of production of gold in the mines do not succeed. Inaugurating the general meeting of the Hindustan Chamber of Commerce at Madras on Saturday the 8th inst., Mr. Desai said that production costs in the Kolar mines worked out to nearly Rs. 128 per tola, as against the international rate of Rs. 62.50. He added that production was costlier than even the inflated price within the country. Justifying the Gold Control Rules on the ground that, because of them, smuggling of gold into the country had considerably gone down, he observed that, in two or three years' time, more stringent measures would be adopted to prevent smuggling. Mr. R. Venkataraman, Industries Minister of Madras, who presided over the meeting, stated that, on account of the non-availability of 14 carat gold, there was a sense of frustration among the traders. He suggested the establishment of a gold refinery in the State either by the Centre, or on a co-operative basis, or by the State Government itself, if necessary.

President Kennedy signed on Thursday the 6th inst. the bill (which became law thereafter) to remove silver backing for one-dollar notes into circulation. The new legislation is aimed at countering the prevailing world under-supply of silver and to "unfreeze" 1,300 million ounces of the hitherto tied metal for use by the U.S. Treasury in the production of coins. Under the new legislation, dollar bills will be replaced by federal reserve notes, backed to the extent of a quarter of their value by gold. The Treasury already has authority and has started to replace $300 million in silver-backed five-dollar and 10-dollar bills by reserve notes.

The price of silver in the U.S. could reach 129 cents an ounce any time, at which level the U.S. Treasury would redeem silver certificates for bullion. Mr. John Edgar, Vice-president of Sunshine Mining—the largest silver producer in America—said at Portland on Friday the 7th inst. Mr. Edgar was not sure that the price of 129 cents was as high as the price which was likely to go in the foreseeable future. In other words, he expected the price to exceed 129 cents. What looks like, he added, a very big reserve held by the Treasury probably would not last more than another seven or eight years.

The following table shows the trend of prices during the week under review:

	15-6-63 (closing)	High	Low	5-6-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (.995 fine) ..	224.50	224.50	222.50	223.50
Gold				
Ready (.995 fineness) ..	113.50	113.50	112.50	114.50
Sovereign ..	85.00	85.00	83.50	83.00
London—				
Gold	250*s.* 6⅛*d.*	250*s.* 6*d.*	250*s.* 6*d.*	250*s.* 5¾*d.*
Silver Ready ..	109⅜*d.*	110*d.*	109*d.*	110*d.*
Silver Forward ..	110*d.*	110*d.*	110*d.*	110*d.*
New York—				
Silver	127.4 cents	127.4 cents	127.2 cents	127.6 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *12th June*

Easy conditions prevailed in the cotton futures market during the week under review. The easiness was induced by report of rains beneficial to the cotton crop in Khandesh, Berar/C.P. and Saurashtra areas. It was thought that since the rain started early this year, the crop would have an early start and new crop cotton would be available to mills earlier than usual. The issue last week of the allocation for the balance quantity of the P.L.480 cotton assured plentiful supplies of U.S. cotton. This, along with the record crop expected this season, indicated a comfortable supply position. These considerations discouraged support to the market. The Jarilla August, which had opened the week on a steady note at Rs. 707.25 per three quintals declined sharply and touched a low of Rs. 698.75 yesterday. A feable recovery was witnessed today, thanks to short-covering and the contract rose to close at Rs. 701.25. The undertone of the market is, however, weak.

The spot market at Sewri reported fairly good demand from mills for ready cotton. Spinner bought sizable quantities of choice quality Co2, L.147, Digvijay, 197/3, Kalyan, Laxmi and Wagad. Prices ruled easy. The trend of mill demand in the next few months will depend upon the progress of the monsoon.

There was a revival of export demand for Bengal *Deshi* for November shipment. Some business was put through on a subject-to-licence basis in anticipation of an export quota.

In the foreign section, spinner demand for Sudan cotton widened. East African and Egyptian cotton also attracted attention. The issue of the P.L. 480 allocation for 160,900 bales (of 500 lbs. each) of U.S. cotton on the 5th inst. was welcomed by both trade and mills. This allocation covers the balance quantity of U.S. cotton due to India under an agreement signed in January last. The contracting period for this cotton is from 11th June to 30th November 1963 and the shipping period from 11th June to 31st December 1963.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Kalyan 915; Co2 1,630; Jaydhar 1,070; Laxmi 1,075; B.P. 52 1,221; Sudan XP3L 1,440; Karnak 1,850.

The staple fibre sub-committee appointed by the Indian Cotton Mills Federation has reported that the use of viscose staple of the type manufactured at present in India, either as a substitute for or as a supplement to cotton, is "not at all a worthwhile proposition." The sub-committee has pointed out the various advantages and disadvantages of blending man-made fibre with various types of cotton. It has expressed the opinion that the disadvantages far outweigh the advantages. Cotton viscose blends, in its view, will mean a lower value to the consumer at a higher cost. The sub-committee has found that viscose staple fibre has a low wet strength, poor resistance to caustic soda treatment and has high elongation and poor abrasion resistance. From the consumer's point of view, blend fabrics will prove more costly. Because of shorter life of these fabrics, the consumer will have to buy more yardage. The recommendations of the sub-committee have been accepted by the Indian Cotton Mills' Federation and are forwarded to the Union Government.

Cotton futures in Karachi suffered a setback during the week. Bearish weather news and lack of spinner demand induced selling. Futures prices consequently declined. N.T.R.G. July eased from Rs. 73.90 to Rs. 72.75. The January contract declined by 90 nP over the week.

Trading in the Liverpool cotton futures market was featureless. Values remained practically unchanged in dull trading. Ready demand was mainly confined to American-type cottons, new crop Turkish cotton, as also South American, styles was also in demand. The following are the latest available quotations—in pence per lb.—from Liverpool:

July 23.05; October 23.00; December 23.15.

Cotton futures in New York ruled barely steady during the week. Continued uncertainty about the new cotton legislation acted as a restraining influence.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago:

(In cents per lb.)

	11-6-63	4-6-63	28-5-63
July	33.45	33.50	33.25
October	32.60	32.55	32.38
December	32.68	32.60	32.43
New York Spot ...	35.80	35.95	35.95

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, *10th June*

A firm trend continued in foodgrain prices during the past week due to brisk consumer demand in the face of poor arrivals.

Wheat hardened by 75 nP to Re. 1.75 per quintal according to quality on better consumer demand and poor arrivals. The average quality was quoted between Rs. 41.25 and Rs. 43, the farm produce between Rs. 43.75 and Rs. 48.50 and the red quality around Rs. 40 to Rs. 40.75 per quintal. Arrivals dropped to 600 to 700 maunds a day. Firm conditions continued in rice, as values moved up by 67 nP per quintal on brisk demand from the consuming areas and small arrivals from the producing areas. Week-end prices were:—Rice *basmati* superior Rs. 88.41 to Rs. 96.45, *sela basmati* Rs. 83.06 to Rs. 88.41, *mainpuri* Rs. 58.27, *ramajwayan* Rs. 64.30, *raimunia* Rs. 66.98 and *gadda* Rs. 53.58 per quintal.

Gram moved up by 67 nP per quintal on firm advices from Punjab. The Punjab quality was quoted at Rs. 42.87 and the local produce at Rs. 42.20. Arrivals, mostly from Punjab and Rajasthan, totalled 4,000 maunds during the week. Local stocks were estimated around 16,000 maunds. Barley and *bejhar* advanced by Re. 1.25 and Re. 1 per quintal, respectively, to be quoted at Rs. 32.25 to Rs. 32.75 and at Rs. 33 to Rs. 35 per quintal, respectively. Demand for these cereals was reported fairly heavy, while arrivals were small. *Juwar* and *guwar* sought higher levels on poor stocks position. Latest prices were Rs. 32.15 to Rs. 37.51 for *juwar* and Rs. 33.49 to Rs. 36.17 per quintal for *guwar*. Small arrivals of *methi* were lifted at slightly better prices between Rs. 48.75 and Rs. 49.75 per quintal. Week-end prices were: *Methi* Rs. 48 to Rs. 49, maize Rs. 31.48, *bajra* Rs. 30.81 to Rs. 32.15 and oats Rs. 32 to Rs. 33 per quintal.

A firm tendency continued to prevail in pulses. While the farm quality of peas was almost stationary, the *dara* quality gained 50 to 87 nP per quintal on better demand for conversion into *dal*. The *dara* quality was quoted at Rs. 35 to Rs. 35.50 and the farm quality at Rs. 35.75 to Rs. 37 per quintal. Peas *dal* improved slightly to Rs. 39.37 per quintal. Arrivals of peas were poor at an average of 500 maunds daily, and local stocks were estimated around 58,000 maunds. *Arhar* also hardened by Rs. 5 per quintal, with the *dara* quality at Rs. 58 to Rs. 58.75 and the superior quality at Rs. 61.62 to Rs. 64.30 per quintal. *Urd* was almost stationary at Rs. 66.98 to Rs. 72.34 per quintal for want of support. *Moong* was steadier on poor stock position. *Arhar dal*, *moong dal* and other *dals* also ruled firm. Today's prices were: *Arhar dal* Rs. 75.02 to Rs. 80.38, *urd dal* Rs. 80.38, *moong* Rs. 48.23 to Rs. 54.92, *moong dal* Rs. 64.30, *masoor* Rs. 52.25 to Rs. 54.92, *masoor dal* Rs. 65.64, gram *dal* Rs. 50.91 and *moth dal* Rs. 50.91 per quintal.

ART SILK YARNS STEADY

(From Our Own Correspondent)

BOMBAY, *12th June*

In the limited turnover, the yarn market presented a steady appearance this week. The feature of trading, however, was a slightly improved tone in art silk yarns on revival of buying enquiry at lower levels. Staple fibre yarn was dull, after the last week's rally, for want of support at higher levels. Cotton yarns were generally quiet.

Improvement in art silk yarns was shared by National Rayon 120D which looked up from Rs. 11.55 to Rs. 11.90 per kg. S.I. Viscose 150D gained 20 nP to Rs. 13.75. Century 100D moved up from Rs. 13.07 to Rs. 13.20. As an exception, National Rayon 150D declined from Rs. 12.23 to

Rs. 11.81. In 2 x 40 staple fibre yarns, Century reacted from Rs. 8.25 to Rs. 8.18, but City gained 7 nP to Rs. 8.87. Among cotton yarns, 10s Podar eased slightly from Rs. 18 to Rs. 17.87.

The Yarn Export Promotion Committee was scheduled to meet at Madras on Monday the 10th inst. to streamline the existing machinery for the export of cotton yarn. At its meeting, the Committee was expected to consider suggestions from individual exporters as well as export agencies on the fixation of a reasonably attractive price for yarn in order to compete effectively in the international market. One recommendation to reduce the price was to abolish the inter-State sales tax which has been raised from 1 to 2 per cent, particularly in the case of those who guarantee sales abroad. Refunding the sales tax amount to exporters as an incentive was another suggestion. Rigid pre-shipment inspection in order to ensure quality was also suggested. The Committee was appointed early in April, with the Textile Commissioner as the chairman, to suggest measures to secure an increase in India's cotton yarn exports.

India's position as a supplier of cotton yarn to Burma *vis-a-vis* the position of other main exporting countries Burma is presented below, with the value of cotton yarn (in lakhs of Kyats) imported by that country between January and December 1962: India 4.77; Communist China 354.55; Japan 108.84; Pakistan 66.11; U.A.R. 46.33; Italy 14.24; Hong Kong 7.06; and Hungary 3.27.

Meanwhile, the Union Government has decided to exempt cotton yarn of the specified description from so much of excise duty as is in excess of the rates indicated against each of the items. The first quotation in each case refers to single yarn, whether grey or bleached, and grey multiple fold yarn, if cleared out of the factory in hanks, while the other quotation refers to "all others" (in naya Paisa per kg.): counts 48 or more 17,-27; above 40 counts but less than 48 counts 8, 18; counts between 35 to 40 *nil*, 18; counts 17 to 35 *nil*, 13.5; less than 17 counts *nil*, 10. These concessions are not applicable to any yarn used in composite mills. Further, a hand should not contain more than 768 metres of yarn in plain (straight) reel.

The rate of duty drawback against exports of staple fibre yarn and fabrics therefrom, including fabrics containing a mixture of yarn other than art silk yarn, has been fixed at Re. 1.49 per kg. In regard to fabrics containing staple fibre yarn and art silk yarn, the rate of duty drawback has been fixed at Re. 1.49 per kg. of staple fibre yarn and the rate as specified in S. No. 1 of Schedule I of the art silk yarn content. Manufacturers of art silk fabrics made from rayon yarn consisting entirely of cellulose derivatives, or regenerated cellulose, or both, will be entitled on export of such fabrics to duty drawback at the rate of Rs. 20.87 per kg. of art silk yarn content, when the yarn is below 18 denier and does not belong to the category of crimped, stretched, or terelyne yarn, according to an amendment made by the Union Government in the schedule of rates of duty drawback on exports of fabrics and other manufactures.

A goodwill-*cum*-purchase delegation from Iraq arrived in Bombay on the 6th inst. on an 11-day visit to this country. The visit, sponsored by the Silk and Rayon Textiles Export Promotion Council, is expected to open up new opportunities for developing the growing export trade between the two countries. Iraq is one of the important Middle East markets for Indian rayon and synthetic fabrics. The exports, which were 1.37 million metres values at Rs. 17.1 lakhs in 1960, shot up threefold to 4.66 million metres valued at Rs. 45.4 lakhs at the close of last year. The performance during the first four months of the current year is much better still, the quantity exported amounting to 4.59 million metres valued at Rs. 45.2 lakhs.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	12-6-1963	5-6-1963
	Rs.	Rs.
Art silk yarn **(per kg.)—**		
National Rayon 120D	11 90	11.55
Century 75D	18.50	18.50
S. I. Viscose 150D	13.75	13.55
Staple fibre yarn **(40 x 2)—**		
Kohinoor (per kg.)	—	9.22
Century	8.18	8.25
Cotton yarn **(per bundle of 10 lbs.)**		
10s Podar	17.87	18.00
20s Modern	25.00	25.50
30s Kohinoor	29.75	29.75
40s Hind	34.00	34.00
60s Kasturi	47.00	47.50
80s Laxmi	83.50	83.50

OILSEEDS RALLY

(From Our Own Correspondent)

BOMBAY, 12*th June*

Oilseeds staged a smart recovery during the week under review, thus resuming the upward trend which was halted last week. Groundnuts ruled distinctly firm, thanks to pronounced strength of the spot section induced by sustained support from vanaspati manufacturers and crushers. Bullish crop reports from the South also imparted some steadiness. Castorseeds put on a cheerful appearance, as new arrivals were readily taken up. Linseeds moved up in sympathy. Cottonseeds ruled steady, despite weakness in cotton.

Groundnut July 1963 contract, which had receded from Rs. 229.25 to Rs. 228.62 by Monday, rallied to Rs. 231.25. It declined, however, to Rs. 230.87 today on stale bull liquidation. September 1963 contract rose from Rs. 227.12 to Rs. 229.37, before closing at Rs. 228.87. Nizam bold hardened by 37 nP to Rs. 47.12. Khandesh quality strengthened by 25 nP to Rs. 48.12. Oil ex-mill and railway receipts gained 50 nP each to Rs. 19 and Rs. 18.60, respectively.

Castorseed June 1963 contract advanced by Rs. 3.75 to Rs. 160.75. September 1963 contract was maintained at Rs. 163.75. Ready Madras spurted by 38 nP to Rs. 31.50. Kanpur improved by 12 nP to Rs. 30.12. Oil commercial picked up 5 nP to Rs. 12.80.

Linseed June 1963 contract improved by 75 nP to Rs. 37.12. September 1963 contract gathered 50 nP to Rs. 38.12. Bold ready rallied by 75 nP to Rs. 37.25. Linseed oil rose by 50 nP to Rs. 14.60.

Cottonseed July 1963 contract scored a gain of 25 nP to Rs. 105.25. White was higher by 13 nP to Rs. 20.75. Both non-white and berar were fully steady at Rs. 22.75.

The following table shows the closing prices of oilseeds and oils on Wednesday 12th June, as compared with those of two previous weeks:

	12-6-1963	5-6-1963	29-5-1963
	Rs.	Rs.	Rs.
Groundnuts			
July 1963 contract	230.87	229.25	231.00
September 1963 contract	228.87	227.12	228.75
Nizam bold	47.12	46.75	48.00
Khandesh quality	48.12	47.87	49.00
Oil ex-mill	19.00	18.50	18.75
Oil commercial	18.60	18.10	18.50
Castorseed			
June 1963 contract	160.75	157.00	158.00
September 1963 contract	163.75	163.75	164.75
Ready Madras	31.50	31.12	31.62
Ready Kanpur	30.12	30.00	30.25
Oil B.S.S.	13.00	13.40	13.35
Oil commercial	12.80	12.75	12.65
Linseed			
June 1963 contract	37.12	36.37	36.75
September 1963 contract	38.12	37.62	38.06
Bold ready	37.25	36.50	37.00
Linseed oil	14.60	14.10	14.50
Cottonseed			
July1963 contract	105.25	105.00	105.75

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER STEADY

(Messrs. Parekh and Co.)

BOMBAY, 12*th June*

Malabar black pepper ruled fully steady, with sellers reserved, as Singapore refused to reduce its price much to the chagrin of New York bears who expected still lower offerings in view of the devaluation of the Indonesian currency. Ungarbled hovered around Rs. 264 and garbled at Rs. 274. July delivery was quoted at Rs. 280 and August delivery at Rs. 284, with business very much thin. The price in Singapore, after the recent setbacks improved to $97½ for black and $142½ for white pepper. Sellers there are unwilling to offer lower, unless they can replace their sales from Indonesia. Spot, in New York, after going down to $0.29¼, improved to $0.30, as the origins were unwilling to offer lower. Offers to New York from Singapore are reported few, as sellers do not want to sell short at the present low price and in view of the uncertain outlook regarding the coming crops.

The future of pepper depends upon the selling policy of Indonesia rather than on the size of Sarawak and Lampong coming crop for the year. Pepper, in Bombay, is quoted at Rs. 145 to Rs. 147. On the forward ring, Bombay moved within a narrow groove. Shrawan hovered around at Rs. 300 and Bhadrapad at Rs. 304. Malabar parity works out to about $0.31 per lb. C & F, New York.

GOOD DEMAND FOR TEA

(Messrs. Forbes, Ewart & Figgis Private Ltd.)

COCHIN, 6*th June*

A total of 822,000 kgs. was on offer in Sale No. 23 held on the 4th inst. Quality in general showed a further seasonal decline. The market opened to a good demand which continued throughout the sale. Low medium and medium brokens were well supported, but these were slightly easier. The cleaner types under this category were sold at around last rates. Similar fannings were also sold readily, though they eased by 5 to 10 nP. There was useful enquiry for good mediums, but, here again, prices were lower. Highgrowns elicited better support, though the majority of these were sold at rates below last. Clean black leaf descriptions continued in demand at firm rates. Unorthodox descriptions were bid at last rates. Whole leaf grades met with useful support but were little irregular, particularly the flowery pekoes, whilst orange pekoes and pekoes fared well. Tippy teas were in strong demand at dearer rates.

The quotations (per kg.) were as follows:

	1963	1962
	Rs.	Rs.
Low mediums	4.00-4.20	3.50-4.00
Mediums	4.25-4.45	3.80-4.30
Good mediums	4.50-5.05	4.30-5.50
Nilgiri B.O.P.	4.50-5.80	4.00-5.75

The average price realised in Sale No. 23 was Rs. 4.19 per kilo, as against Rs. 4.23 a week ago and Rs. 3.96 in the corresponding sale last year.

In dust Sale No. 23 held today, 470,000 kgs. were offered. The market met with good general demand. Low medium descriptions were sold well, but these were irregularly easier by 10 nP and in some cases more. Coloury mediums encountered better support and tended dearer. There was strong enquiry for C.T.C. and C.T.C. types which registered advances. There was useful enquiry for highgrowns, particularly the best liquoring kinds which were done at rates above last. Clean black grainy descriptions changed hands at around last rates.

The average price realised in dust sale No. 23 was Rs. 3.92 per kilo, as compared with Rs. 3.95 a week ago and Rs. 3.24 in the corresponding sale last year.

Colombo: The market met with good general demand. Best dimbulas were dearer, while others met with irregular support. Plainest and mediums eased in price, whereas lowgrowns are quoted steady.

London: There was no sale held during this week due to Whitson holiday.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire us as follows:

"*Sale No.* 24: 864,000 kgs. offered. Good general demand. Plain and low medium brokens irregularly firm. Similar fannings 5 to 10 nP easier. Mediums upto 20 nP lower. Highgrowns irregularly easier. Unorthodox steady."

ENQUIRIES FOR COWHIDES

(From Our Own Correspondent)

MADRAS, 10*th June*

Arrivals of kips in the local market this week were moderate, while clearance was slow. Prices hardened slightly towards the close of the week, following several overseas enquiries for cowhides fourth and fifth selections and cowcalf fourths. A small volume of shipment business was booked at slightly lower prices. Demand for buffcalf was good both from the U.K. and from the U.S., but tanners were not keen to book orders, as the season for raw stocks was over and they had sufficient orders to cover their stocks.

In the tanned skins section, prices rose sharply in view of the strength in the raw section where shippers of pickled goat skins were paying prices far in excess of what tanners could pay. There were several enquiries at increased prices for all grades and weights of tanned goat skins. Light weights were scarce and offers were not available at reasonable prices. American buyers were interested in heavier average goat skins, lower ends. Tanned sheep skins—middle class lower selections —were in good demand and prices hardened sharply.

Shipments during May 1963 were 2,509 bales tanned cowhides, 316 cowcalf, 27 buffhides, 519 buffcalf, 634 goat skins and 390 sheep skins to the U.K.: 17 cowhides, 66 cowcalf, 58 buffcalf, 703 goat and 135 buffcalf and 155 goat skins to the Continental ports; 20 buffs, goat and 112 sheep skins to the U.S.A.; 13 of tanned goat and 9 cases of wet chrome goat to Hamburg and 101 cases of chrome tanned goat and 861 cases of pickled goat to Odessa.

"KHANDSARI" AT NEW PEAK

(From Our Own Correspondent)

HAPUR, 10*th June*

Sugar was not easily available here in the open market and, in private, was quoted as high as Rs. 165 per quintal, as against the controlled price of Rs. 114 per quintal. The U.P. Government, however, expects the situation to improve in the next two months. At present, sugar is being distributed in the State through a network of over 6,000 fair price shops, but the quantity allotted is meagre. It is alleged that the bulk of the supplies is being resold at a premium in private. Meanwhile, ration cards for consumers are being prepared.

The scarcity of crystal sugar led to a further advance in *khandsari* prices which surpassed all previous records. Demand from Punjab was very brisk. Enquiries from Rajasthan, Maharashtra, M.P. and local areas were also quite encouraging. Week-end prices were: Inferior Rs. 133.96 to Rs. 142, superior Rs. 150.76 to Rs. 171.17 and crystal Rs. 155.39 to Rs. 176.83. The current prices were higher by Rs. 52 to Rs. 80 per quintal than those in the corresponding period last year. Production of *galawat khandsari* was carried on these days and enquiries were received from Punjab at Rs. 107.17 to Rs. 128.60 per quintal.

Gur was steadier, thanks to good buying enquiry from Gujarat. The week's offtake aggregated 11 wagonloads to the South and local stock shrank to 14,000 maunds. The new production season will commence at the end of September or early October, and the stock now left is considered quite low for the intervening period. Conditions of the cane crop were reported fair, and some pre-monsoon showers have benefited the standing crops. Week-end prices were: *Gur* superior Rs. 72.50, *dara* Rs. 69.50 and *shakker* Rs. 76 per quintal.

ANOTHER BUMPER JUTE CROP EXPECTED

(From Our Own Correspondent)

CALCUTTA, 11*th June*

The fair number of inquiries received from overseas buyers helped to maintain prices of jute goods steady during the week under review, while there was no change in the conditions prevailing in the raw jute market. Earlier anxiety about an apprehended delay in the arrival of monsoon in West Bengal and Assam were set at rest when typically monsoonish weather prevailed on the 7th inst. which led to favourable crop reports and increase in the tempo of selling pressure in lower grades fibre. Frequent thundershowers in April and May aided earlier sowing in most areas and the bright sunshine in the last two weeks of May and the first week of June left plants in a very healthy state. Since the last three weeks, drought conditions tended to set in in certain areas, and

plants had reached a stage when heavy rains were essential. Against this background, the rains in the last few days have led to strengthen expectations that the crop would exceed the bumper harvest of the season just closing. In the meantime, reports of severe damages to plants in the coastal areas of Pakistan have continued to come in. There is no doubt that the crop in Pakistan would be affected and, since, therefore, prices would be better there than last year, there would be less incentive for smuggling of fibre across the border to India.

On behalf of the mills, it is pointed out time and again that, with a view to enabling the mills to face the serious threat from Pakistan mills in overseas markets, steps should be taken to reduce cost of production. With a wage structure that tends to move only in one direction, without regard to a compensatory increase in the productivity of workers, and with increased prices of mills' stores, the industry has urged that the possibility of reducing the minimum prices is the only way open by which operating costs can be cut down. With increasing use of fertilisers and spreading of overhead costs over an increased output, it is a safe guess that the cultivators' cost of production has fallen and, if a portion of this benefit is extended to mills, such an act would enable them to increase exports to a level higher than in 1962-63. Considerable sums of money have been locked up as a result of the mills purchasing fibre in pursuance of the price support scheme. So far in the current season (ending on 30th June), mills' purchases of fibre aggregate 6.7 million bales. The quantity bought by the State Trading Corporation is 70,000 bales, and the members of the Jute Buffer Stock Association have taken 625,000 bales. A further point which favours a reduction in the price of fibre is that the farmer no longer needs to use the jute sticks after removing the fibre by retting, as firewood or fishing rods. These sticks can now be sold as raw material for pulp manufacturing. West Bengal's seven districts produce annually three million tons of these sticks, and already plans are in an advanced stage to set up a Rs. 10 crore plant capable of producing about 60,000 tons of newsprint and 15,000 tons of rayon pulp a year from 150,000 tons of jute sticks.

On Tuesday last, with ready B. twills at Rs. 112.85 and ready hessian 40" 10 oz. at Rs. 50.75, prices were steady. Buyers evinced interest in hessian for deliveries extending up to the end of this year. However, sellers were reserved, despite selling pressure in the futures market. With more business taking place on Wednesday, prices advanced, and increased interest was shown in both ready and forward goods as well as in the futures trading in hessian. Ready hessian 40" 10 oz. advanced to Rs. 51.20 and, in sympathy, B. twills gained to Rs. 113. At this stage, selling pressure set in in the futures market to push down prices, with the result that, on Thursday, ready hessian 40" 10 oz. eased to Rs. 51 and B. twills to Rs. 112.35. On Friday, prices began to ease, but this tendency was arrested by the news of receipt of a number of inquiries by shippers. Had it not been for this late feature, ready hessian 40" 10 oz. would have closed lower than Rs. 50.95 and B. twills than Rs. 112. Over the week-end, although dull conditions prevailed with regard to turnover, prices picked up following the availability of details of goods in stock with mills as at the end of May. Although there had been an overall rise of 4,900 tonnes with stocks at 94,300 tonnes, the fact that the increase in sacking was only 500 tonnes, against the expectation of a higher rise was noted with satisfaction and this led ready B. twills to harden to Rs. 112.40. The stock of hessian increased by 3,300 tonnes, but, in view of the expectation of increased business with the U.S.S.R. and the U.S.A., no disappointment was caused in the market. Despite the fact that mills' stock of fibre fit hessian manufacture had declined considerably, hessian output showed such an impressive rise pleased the market. The satisfaction was registered by pushing up ready hessian 40" 10 oz. to Rs 51.20. Prices were easier yesterday, in view of poor business. B. twills sagged to Rs. 111.75 and hessian 40" 10 oz. to Rs. 50.70. Earlier interest by Cuba for heavy cee bags was transformed into orders, and deliveries varied from July to September.

Conditions in the fibre market were unchanged. There were more sellers of inferior fibre than buyers. Reports of good rains in jute districts prevented prices from rising. However, new crop varieties were quoted at the minimum rates. In view of the encouraging reports of crop prospects, mills continued to be reserved.

TEA BETTER

(From Our Own Correspondent)

CALCUTTA, 11*th June*

Demand at the second tea export sale last week was better in line with the trade's expectations. The small carry-over from the last season makes the statistical position good, and, although overseas countries are better stocked than at this time last year, it appears that they will continue to increase their stocks in view of the uncertainty in the Himalayan border. It has not, therefore, been surprising that enquiries for shipping space in respect of tea have increased. During the week, tea bookings towards the end of June and the beginning of July were sizable, covering several destinations. In respect of the Continental and U.K. ports, forward bookings extending up to the end of August were reported. This shows that foreign buyers desire to buy as much as they can in the beginning of the season. With floods and swelling of rivers in Assam, the crop may be affected, and there is, therefore, every possibility that prices may rise. However, if weather conditions improve, the North Indian crop should total as near a figure as the 1961 bumper crop. Reports from South India and Ceylon have indicated a higher trend in output.

That the industry's anxiety about the F.A.O. forecast of a glut in supplies within the next few years is beginning to be shared by the Government of India is indicated in the latter's request to the F.A.O. to make a further study and assessment. It will be remembered that so far fears of a surplus had been dismissed by the Tea Board. The trades plea that growing competition by Africa is a threat to India's common teas and that sufficient measures should, therefore, be taken to reduce the cost of production in respect of the gardens producing these teas is not paid sufficient attention by the authorities. While Russia has increased intake of tea from Ceylon as well as India (from Ceylon more markedly), it has also increased its output. Argentina is also expanding output. All these support the assumptions behind the F.A.O. forecast of a glut in supplies in the near future.

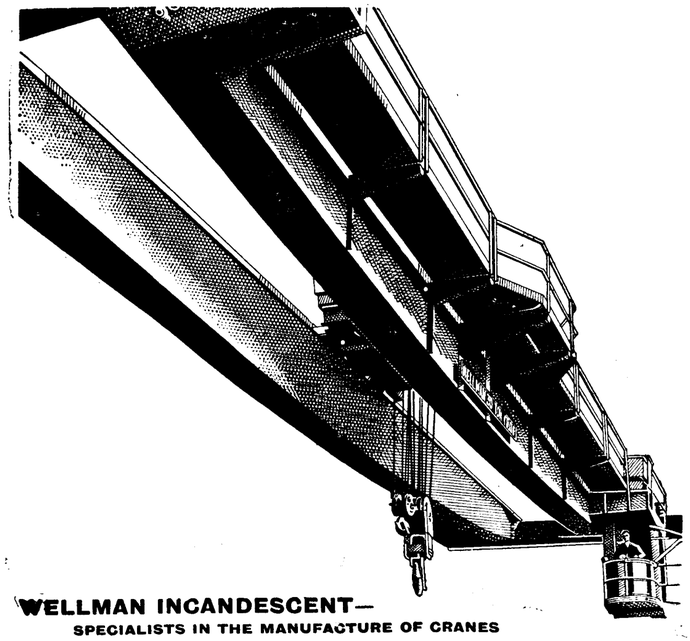
While tea consumption in India has increased, the preference among consumers for quality teas has forced gardens to change rapidly to the manufacture of C.T.C. teas. Since C.T.C. teas are said to give more cups of tea as compared with orthodox tea, it is evident that the industry will attempt not only to increase the quantity but also improve the quality. This may lead to higher costs of production.

It is good news that in view of the proposed abolition of the tariff on tea by the E.C.M. countries, the Government of India is considering a scheme to promote exports to these countries. Promotional campaign machineries may be set up in these countries. At present, these countries take only about 2 per cent of India's total exports of tea. Since India's promotional campaigns in the U.K., the U.S.A. and Australia have yielded good results, the trade expects that campaigns in Europe will also be fruitful. While the marketing outlook for the better varieties of Indian teas is good, there is anxiety about medium and plain teas. An earnest plea has already been made for giving concessions in the excise duty on these teas.

In the dusts sale held last week, offerings consisted of 15,313 chests of the old season's tea and of 5,255 packages of new season's crop. Among the former, exportable orthodox dusts met with good competition at lower prices. The better liquoring Assam eased by 15 to 20 nP. Medium C.T.Cs met with good demand at prices which were lower by 20 nP. The feature of the new season's offerings was the strong demand for Darjeelings which realised higher prices. Orthodox and legg-cut dusts closed with a gain. Assam C.T.Cs eased by 20 nP, but the other C.T.C. grades were firm. In view of the insufficient quantity of representative teas, no quotations were issued.

In the export sale, held on the 4th inst., offerings totalled 18,811 packages which consisted mostly of Darjeelings. Because of the plentiful nature of the offerings of this variety, little interest was shown, while other categories met with useful competition. The better Darjeelings eased in an irregular trend. Although there was good demand for brokens and fannings, they realised lower prices. Competition was offered to C.T.Cs which were fully firm. Brokens were well supported and fannings met with better demand than previously. An irregular trend was recorded in legg-cut teas. Good support was accorded to the remainder of the orthodox teas. Better liquorings realised higher prices, and plainer and medium sorts were firm. The more stylish and higher-priced teas displayed an irregular trend.

SPURT IN TIN



(From Our Own Correspondent)

CALCUTTA, 11*th June*

While tin recorded a substantial gain this week, lead remained unchanged but fully firm, while electrolytic zinc and copper scrap displayed an easier tendency. The feature on the London Metal Exchange was the impressive rise in the price of tin from £910 to £922 a ton, with the three-months' delivery also moving up from £910½ to £923½. Thus, the backwardation widened from 10s. to £1½, indicating that forward buyers did not think the price would move down in the near future. Earlier in the week, sales from the buffer stocks in London held down the price at £910 for some time, but the rise of £20 a ton in the Singapore price, which is equivalent to 10 straits dollars a picul, occasioned the uptrend.

It is evident that buffer stock sales at the upper ceiling of £910 have failed to check the upward trend. Speculative business has been heavy, and it is believed that the Buffer Stock Manager will not be able to check the uptrend. In Calcutta, the price opened at Rs. 3,800 per 100 kgs. and rose steadily to Rs. 3,900. The steady rise in tin shares on the London Stock Exchange supports the belief that the upward trend in the metal will not be a short-lived affair. However, the U.S.A. may take the opportunity to increase the quantity of the weekly releases. Considering that the Malayan producers have represented time and again that the economic price would be £1,000 a ton, the steady rise in the world price will provide the necessary incentive for marginal producers. The abandoned mines may also be re-worked.

Despite shortage, utensil copper scrap, in Calcutta, closed lower on balance at Rs. 557.25 per 100 kgs., after opening at Rs. 568. The setback was due presumably to expectations that the Government may shortly consider restricting releases for non-essential purposes, such as utensil-making, in order to tide over the shortage. Since aluminium is available in plenty, the people may be suggested to change over from copper and brass vessels to aluminium vessels. Virgin lead remained unchanged at Rs. 200 per 100 kgs. Demand was fair, but buyers were cautious in view of the setback, on the London Metal Exchange from £64¼ a ton to £63¾. Zinc, in London, rose from £75 a ton to £76½ due to scarcity of the higher grade metal. Zinc closed here at Rs. 257, after opening at Rs. 268.

WELLMAN INCANDESCENT—

SPECIALISTS IN THE MANUFACTURE OF CRANES

At the giant Durgapur Steelworks Wellman Smith Owens designed and supplied 33 cranes including seven 150 ton, three 280 ton ladle cranes, two 200 ton ingot stripping cranes and three 9 ton soaking pit chargers. To-day, Wellman Incandescent India Ltd., in collaboration with The Wellman Smith Owen Engineering Corporation and Incandescent Heat Company of the U.K., are in a position to manufacture and supply all types of cranes—light, medium and heavy— to suit all classes of industry in India.

In addition, Wellman Incandescent are also experts in industrial heat engineering and are making in India a wide range of furnaces and ovens for various industrial applications.

ROAD DEVELOPMENT IN INDIA

(*Concluded from page 1063*)

and partly, and progressively more so, from increasing investment of general funds, there appears to be some justification in certain instances for the levy of tolls to finance highway construction.

The twin defects in the prevailing system of financing road development are, first, the funds are uncertain and, secondly, they are inadequate. A certain continuity in the supply of funds is essential, if wasteful expenditure is to be avoided and programmes are to be pursued without interruption. There already exists the Central Road Fund which is supplying funds in a limited way. The Taxation Enquiry Commission has recommended that similar road funds should be created in each State for ensuring continuous and speedy road development. Instead of multiplying the organisations in various States, it would be administratively desirable that the organisation is centralised and the funds channelised to the respective States, according to the respective needs and urgency. Hence a Road Finance Corporation or a unified Central Road Fund jointly financed by the Centre and States may be established, replacing the existing Central Road Fund and State Road Funds. It should have authority to issue the Government guaranteed loans to a certain specified limit. The Corporation should also receive annual allotment from the Central and State Governments. Such a Corporation can guarantee the continuity of funds for the development of roads without any break. Such a Fund or Corporation can be administered by the Central Road Board such as in New Zealand where a Central Road Board is created with a Central Road Fund. The Road Board in New Zealand is constituted under the chairmanship of the Minister of Works and consists of the representatives of private and commercial vehicle owners, counties, municipalities, Ministry of Works and Transport Department. The representative nature of the Board has been adopted to bring to bear on road matters the widest possible background of knowledge and experience. Although some members are nominated by user organisations and spending authorities, they do not act as delegates for the nominating authorities. Their responsibility is national, not regional, that is to the people as a whole who pay the taxes on which the National Roads Fund is based. The money in this fund is derived from road taxation paid by the users, the private motorist and the commercial vehicle operator and is supplemented by an annual grant of £1 million from the consolidated fund. Through this roads fund the money is returned to the road user in the form of safer, smoother and more economical travel. It is an inviolate fund. Under the legislation by which it was brought into operation on 1st April 1954, all taxation paid into it must be immediately available and be used for roading purposes.

The Chief Engineers, in their road development plan, have recommended the creation of a Road Board on the lines of the existing Railway Board for co-ordinating the various activities pertaining to roads and road transport. The Indian Road Development and Transport Association, in its reply to the Neogi Committee, has opined that the Road Board be confined to the road transport on the national highways only. In regard to feeder and local traffic, it has observed that it should continue to be handled by the States concerned as at present in regard to both roads and vehicles, and it should be left to them to decide whether to consult the Road Board or not on any matter of policy. In this matter, the Road Board will be advisory. This expedient, according to the Association, would entail no encroachment on the States' jurisdiction on their roads and traffic on it.

In order to ensure unified administration and control of roads and road transport, it may, perhaps, be better to constitute one Central Road Board with a Central Road Fund or Road Finance Corporation with State-wise branches. Such a system may be able to ensure balanced regional road development and also encourage on embarking, on an ambitious road development programme in the country.

Whether it is from the point of view of industrialisation or of utilising the country's vast natural resources or of providing employment on a substantial scale, or from the point of the defence of the country, the development of roads is in the best interest of the country. Road development must keep pace with development in other fields in the country and in fact in many respects precede it. Many developmental activities cannot proceed smoothly in the absence of roads and rural development, in particular, is likely to be handicapped.

AMAR DYE-CHEM LIMITED

(*Concluded from page 1059*)

Trade is looking into the matter of incentives and I hope that a satisfactory formula will be arrived at so that the exports business is established on a fairly satisfactory and permanent basis, without heavy loss to the producer. I hope it will also remove the fallacy of imports taking place at higher rates of the same items which we are exporting at lower rates.

National Emergency

When the Government of India declared national emergency owing to Chinese invasion on Indian frontiers, the Company placed at the disposal of the Government its versatile chemical plant for the manufacture of materials required for defence purposes. The Government appreciated this offer and we had some discussions with the officials to explore the possibilities of utilising the plants for manufacture of such materials. However, nothing has come out of it yet.

In response to the call of the nation, your Directors have decided that a sum of Rs. 1,20,000 be given as contribution to the National Defence Fund for the year 1963. As the industry is passing through a very difficult period, the contribution of the said sum of Rs. 1,20,000 is made in monthly instalments of Rs. 10,000.

Fixed Deposits

The Company has started accepting fixed deposits from April this year and the response is fairly satisfactory. The Company pays different rates of interest on such deposits depending on the period as under:—

For 30 to 90 days deposit	...	5½ per cent
For 4 months to 6 months deposit		6 " "
For 7 months to 11 months deposit		6½ " "
For 12 months and over	... ...	7 " "

The minimum amount accepted is Rs. 5,000.

Labour

I am glad to report that relations with labour continued to be satisfactory. There was no major labour trouble.

Before I conclude, I take this opportunity to thank all my colleagues on the Board for their invaluable support during the year under review. I am sure all of you will join me in expressing our warm appreciation of the cordial relations maintained between the management and the labour and the loyalty and devotion of the officers and staff of the Company who have contributed in no small measure to the smooth running of the plants throughout the year under review.

Thank you, gentlemen.

Note: *The above does not purport to be the proceedings of the Annual General Meeting.*

COMPANY AFFAIRS

(*Concluded from page 1075*)

laboratory has been set up in the unit at Loni, which, apart from analysing and testing samples of materials obtained from local sources, is also manufacturing those chemical compounds that are not available in suitable specifications from suppliers. An cutfit for a tool room has recently been acquired for the Calcutta factory which will make it independent of the unit at Loni for supplies of mechanical piece parts. Schemes for expanding the factory's activities are being examined. The Company is pursuing its plans to produce, in association with other manufacturers, vital parts and components as well as finished goods of special types.

With a view to conserving foreign exchange, the Government has sanctioned the Company's scheme for manufacture of tungsten and molybdenum wire and tungsten coils at the Bombay factory in collaboration with Messrs. N. V. Philips' Gloeilampenfabrieken, Eindhoven, Holland. This programme will make the indigenous lamp industry more self-sufficient and save annually Rs. 12 lakhs in foreign exchange for the country. For its financing, a rights issue of Rs. 16.66 lakhs in 10-rupee shares at a premium of Rs. 5 per share has been sanctioned by the Government, and the matter will be placed before shareholders in due course. Meanwhile, the Directors have decided to discontinue the pharmaceutical business, constituting a minor part of the Company's total activity, as its uninterrupted growth depends on possessing a full-fledged manufacturing set-up which it is considered inadvisable to have at the present juncture.

The Company has a paid-up capital of Rs. 220 lakhs, backed by reserves and surplus amounting to Rs. 90.70 lakhs. Total liability to others, including borrowings of Rs. 176.57 lakhs, amounts to Rs. 430.73 lakhs, and is covered by current assets aggregating Rs. 537.10 lakhs and investments shown at Rs. 5.09 lakhs. The gross block of Rs. 295.61 lakhs (Rs. 244.48 lakhs a year before) has been written down to Rs. 190.89 lakhs. The net block, including capital expenditure in progress, is shown at Rs. 199.25 lakhs.

Quoted currently at Rs. 26.37 *cum-div.*, the 10-rupee fully paid ordinary shares of the Company give, on an *ex-div.* basis, a net yield of 3.5 per cent per annum.

Notices

THE HIGHLAND PRODUCE COMPANY LIMITED

ALLEPPEY

NOTICE IS HEREBY GIVEN THAT THE Thirty-seventh Annual General Meeting of the Company will be held at the Registered Office at W-19/440, Beach Road, Alleppey, at 10 a.m. on Thursday, the 27th June, 1963, to transact the business as set out in the NOTICE sent to the members of the Company individually.

The Directors have recommended 15 per cent dividend on the Equity Shares and 6.76 per cent dividend on the Preference Shares, both subject to deduction of tax, for the year 1962, and the same, if approved by the General Body, will be paid to those Equity Shareholders and Preference Shareholders respectively whose names stand registered in the books of the Company as on 27th June, 1963.

The Share Transfer Books and Registers of Members of the Company will remain closed from 20th to 27th June, 1963 (both days inclusive), during which period no transfer of shares will be registered.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead; a proxy need not be a member.

By Order of the Board,
A. V. THOMAS & CO., LTD.,
Managing Agents.

ALLEPPEY,
3rd June, 1963.

A. V. THOMAS AND COMPANY LIMITED

ALLEPPEY

NOTICE IS HEREBY GIVEN THAT THE Twenty-eighth Annual General Meeting of the Company will be held at the Registered Office, W-19/440, Beach Road, Alleppey, at 11 a.m. on Thursday the 27th June, 1963, to transact the business as set out in the NOTICE sent to the members of the Company individually.

The Directors have recommended 13 per cent dividend on the Equity shares and 7.8 per cent dividend on Preference shares, both subject to deduction of tax for the year 1962, and the same, if approved by the General Body, will be paid to those Equity Shareholders and Preference shareholders respectively whose names stand registered in the books of the Company as on 27th June, 1963.

The Share Transfer Books and Registers of Members of the Company will remain closed from 20th to 27th June, 1963 (both days inclusive), during which period no transfer of shares will be registered.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead; a proxy need not be a member.

By Order of the Board,
K. SRINIVASAN,
Chief Administrative Officer.

TOWARDS AN INCOMES POLICY?

AN exquisitely dry and objective narration of economic facts and figures, interspersed with occasional comments—some pregnant, some delightfully vague—is to be found in the Reserve Bank's Report on *Currency and Finance* for the year 1962-63. The Report, published this week, brings up-to-date the economic data for the said financial year—data which were rather incomplete in the Government's *Economic Survey* which was distributed along with the Budget papers at the end of February last. Although the Reserve Bank's Report traverses much the same ground covered in the Finance Ministry's *Economic Survey*, its usual importance is in no way diminished thereby. If anything, it continues to maintain its exhaustive character and to provide a more complete picture of the economy and the trends therein than does the *Economic Survey*. But a noteworthy difference between the Finance Ministry's *Survey* and the Reserve Bank's Report is that the former contains a broad appraisal of the prospects for 1963-64, while the latter makes no such attempt except by way of stray observations.

The Reserve Bank's Report has taken note of the latest available estimates of national income, that is, those for 1961-62. According to these estimates, national income, at 1948-49 prices, is Rs. 13,020 crores, which represents a modest rise of 2.1 per cent over the level of 1960-61. It is pointed out that this order of increase was noticeably smaller than the average annual rate of growth of 3.4 per cent and 4.1 per cent in the first and second Plan periods, respectively. The authors of the Reserve Bank's Report have also drawn pointed attention to the fact that such rise in national income as had taken place during 1961-62 had come mainly from sectors other than agriculture. It may be further noted that the all-round improvement in agricultural as well as non-agricultural sectors which took place in 1960-61, that is, the last year of the second Plan, was not to be found in 1961-62, that is, the first year of the third Plan. Such increase as had taken place would have been somewhat greater had industrial production at least registered a faster rate of growth. But that was not to be, for, during the year 1961-62, the increase in industrial production was only of the order of 7.3 per cent over that of 1960-61, as compared with about 11 per cent in the latter year. In the year 1962-63, for which no national income estimates are yet available, economic growth does not seem to have accelerated to any substantial extent, for agricultural production in the year was not significantly higher than in the previous year and the rate of growth of industrial production, too, was only marginally higher (7.4 per cent) than in 1961-62. All in all, therefore, economic growth, in general, that is, in terms of agricultural, industrial and other production, had not received any shot in the arm, so to say, by the heavy developmental outlays of the first two years of the current Plan. Incidentally, the Plan outlay in the public sector was Rs. 1,140 crores in 1961-62 and Rs. 1,465 crores in 1962-63, covering the Centre and the States together.

But these heavy developmental outlays, whatever their other beneficial consequences might have been, seem to have had an inflationary impact on the economy. The authors of the Reserve Bank's Report have stated that, in the first part of the year under review, "there was an increase in inflationary pressures, resulting mainly from enhanced developmental outlays." This statement is not surprising, for the increased developmental expenditure has been financed, to a considerable extent, by deficit financing. The authors of the Report have this to say, namely, that "deficit financing in the wider meaning of net bank credit to the Government sector was enlarging the money supply at a considerably faster rate than in the corresponding period of 1961." In the whole of the year under review, net bank credit to the Government sector (adjusted for P.L. 480 and P.L. 665 Funds) aggregated Rs. 277 crores, as compared with Rs. 279 crores in 1961-62. Even in the restricted sense denoting the overall deficit in the Central Government's budgetary transactions, the magnitude of deficit financing in 1962-63 was of the order of Rs. 240 crores. Whichever figure of deficit financing is taken as applicable to the reasoning here, there can be no gainsaying that it has been of such magnitude as to exert a decisive inflationary pull.

No wonder, therefore, there have been undesirable repercussions on the price front in more recent months too. In April and May 1963, for instance, the index of wholesale prices (1952-53=100) had increased by as much as five points since March 1963. This figure pertains to all commodities. In respect of food articles, the index had registered a still larger increase of about eight points. To some extent, this steep increase in prices since March last may be attributed to the recent Budget with its heavy excise imposts on a wide range of commodities. But, at the same time, it must also have been due, to some extent, to an increase in deficit financing, on account of both defence and development, in the closing months of 1962-63. Although the Reserve Bank's Report has not taken into account, in its appraisal of economic trends, these disquieting price trends in more recent months, it has admitted that "the increase in indirect taxation in the 1962-63 and 1963-64 budgets and the higher prices allowed by Government in respect of certain price administered commodities also contributed to the general price increase."

To the extent that the rising trend of prices in the last two months or so has been due to the Central Budget for 1963-64, to that extent the objectives of some of the fiscal measures adopted would seem to be difficult of attainment. The authors of the Reserve Bank's Report have stated, in this connection, that "the budget for 1963-64 represents a bold attempt to maintain the tempo of development and to meet the needs of defence without generating inflationary pressures." This statement, while set against the price trends in recent months, seems to be rather premature or unwarranted. Another statement in the Report is also strange, to say the least. This is to the effect that "the enhanced direct taxes on individuals would keep down their purchasing power and mark a step in the direction of an incomes policy." This is an intriguing statement, for the authors of the Reserve Bank's Report have not clarified it further. What do they mean by an "incomes policy"? Is it implied that there is going to be a general limitation of incomes? This term, of course, may mean anything, it may mean much or little. But, if it is meant that, in some way or other, individuals are going to be prevented from exercising their full bargaining power to maximise their incomes, it is something serious. It has also other serious implications, for it is generally assumed that an "incomes policy" will involve simultaneously a prices and profits policy, a rents policy, a policy for limiting land values, and so on. If salary earners or wage earners are to accept this restraint on their salaries and wages, they will quite logically demand that other sections, deriving incomes from other sources, should not be free to add to their incomes indiscriminately. The implications of an "incomes policy" are many and varied. Instead of discussing these threadbare, why have the authors of the Reserve Bank's Report permitted themselves a vague but provocative statement that the enhanced direct taxes on indi-

viduals constitute a step in the direction of an "incomes policy"? Are living standards likely to rise in a situation of austerity, income limitation through unprecedented taxation, and rising prices? The answer to this is only a vague hope held out by the authors of the Reserve Bank's Report that the "era of austerity should in time strengthen the foundation of both national security and rising living standards."

Obviously, an "incomes policy" will be extremely difficult to evolve. Even if evolved, it will be highly controversial and its feasibility cannot be taken for granted. But there is no doubt that something has to be done to mobilise larger savings for the twin purpose of defence and development. In this connection, it will be interesting to refer to some British suggestions which represent an alternative to an "incomes policy," as it has been canvassed in the United Kingdom. In the Spring 1963 issue of *Moorgate and Wall Street*, Mr. Maxwell Stamp has made a series of constructive suggestions. These are as follows:

(i) The principle that extra work, extra risk-taking and extra saving must receive a reward sufficient to call forth adequate supplies of these things should be adopted. If people make high wages or high profits, they must be allowed to keep more of them. The revenue thus lost should be made up by taxes on consumption, that is, indirect taxes. (ii) The net tax on companies can be less so that they can retain a higher proportion of earnings for "ploughing back" into new investment. (iii) Companies should be allowed to choose their own depreciation rates for new equipment. (iv) It may be possible to do something about capital gains without hurting growth prospects.

The supreme question is how to ensure growth and fuller employment without inflation. How an "incomes or a wages policy" can be made to contribute to growth with stability is a matter for consideration. The difficulty here is that such a policy may also have to involve simultaneously a policy of restraint on prices, profits, rents, capital gains, and so on. It would be interesting if the authors of the Reserve Bank's Report could spell out the ingredients of a possible "incomes policy." To set out the various problems involved may help clearer thinking on the subject, whether or not such a policy is feasible, desirable and generally acceptable.

PAKISTAN'S ECONOMY

THE mass of information and statistical data furnished by Pakistan's Finance Ministry in the several documents released along with the budget for 1963-64 no doubt presents a healthy picture of the economic conditions obtaining in Pakistan. But there is also sufficient evidence to prove that the economy of the country continues to be subjected to quite a few severe stresses and strains. To take first, however, the brighter side of the picture. There has been a notable expansion of industrial production, the actual growth in the financial year ended June 1962 being 10.6 per cent, as against 7.8 per cent in 1960-61. A further growth of about nine per cent has taken place in the first six months of the current year which is due to end on the 30th of this month. Agricultural production, however, exhibits a mixed trend. Thus, the yield of cash crops other than jute has improved, while that of foodgrains has tended to decline, though the food situation as a whole is claimed to be comfortable. There has been "a considerable stability" in the general price level and the country, we are told, has gained much from the policy of decontrols. The foreign assets of Pakistan have registered a notable rise. The total of these assets, as of 7th June 1963, stands at Rs. 119 crores—they were higher still at Rs. 122 crores a week before—representing a rise of Rs. 23 crores since the end of 1962. It may be interesting to note here that India's foreign assets are less than Pakistan's, being Rs. 116 crores.

The achievements have been impressive especially in the industrial sector of Pakistan. The credit for these, of course, goes largely to private enterprise. But no less significant is the role played by the Government. The production-oriented import policy, liberal provision of industrial credit facilities, setting up of a number of technical and allied institutions, provision of adequate infra-structure facilities, protection from foreign competition, and the various fiscal and monetary concessions are some of the many aids which the Government has provided to industry. The Government has also played a prominent part in itself promoting industrial development. The Pakistan Industrial Development Corporation has been the main agency for sponsoring industries in the public sector. Up to June 1962, the Corporation had undertaken the establishment of 55 projects at a total outlay of Rs. 172 crores. Special attention has been paid by the Government to the development of the less developed areas, establishment of heavy industries and promotion of small industries. The policy of the Government has all along been to give maximum freedom to market forces to operate. Price and distribution controls have been resorted to only when they were inescapable. All this action by the Government of Pakistan might not have been of much avail but for the generous economic aid extended by the friendly countries abroad. The total foreign grants and loans committed from 1st July 1960 to 31st March 1963 amounts to $939 million, excluding the aid received under the U.S. P.L. 480 Title I and the contributions for Indus Basin replacement works.

The impact of the various measures taken by the Government to assist the industrial sector will be evident from the fact that the amount of industrial investments sanctioned during the first two and a half years of the second Plan (July 1960-December 1962) was as much as Rs. 407.48 crores (with a foreign exchange component of Rs. 246.41 crores), as against the provision of Rs. 284.40 crores (Rs. 169.52 crores in foreign exchange) under the Industrial Investment Schedule of November 1960. The rate at which the implementation of this Schedule, which covers the period from July 1960 to June 1965, is progressing reinforces the confidence reposed in private enterprise to accelerate the pace of development in the country. Since the beginning of the second Plan, Pakistan has started moving into more complex types of industries such as steel, petro-chemicals, heavy machine industries, machine tools, cars and trucks, air-conditioning and refrigeration.

Commendable though the economic progress of Pakistan has been, there is no denying the fact that the rate of progress has slowed down of late. How else is one to explain the meagre increase of 1.1 per cent in national income (at constant prices) during the year 1962-63, as against the rise of 6.0 per cent recorded in 1961-62 and of 3.6 per cent in 1960-61? Even this increase has been more than neutralised by the persistently high rate of population growth: 2.2 per cent, as against 1.7 per cent for the world as a whole. Such a high growth rate necessitates, as the *Economic Survey* of Pakistan has rightly stressed, a high level of savings and investment. According to experts, if a country's population increases by one per cent annually, the maintenance of the existing standard of living requires the investment of 2 to 3 per cent of its national income. Judged by this standard, Pakistan, with its 2.2 per cent growth rate of population, will have to invest annually at least 6.0 to 6.5 per cent of its national income in order to maintain the existing standard of living and more than 6.5 per cent if the standard is to be improved. Another way of improving the standard of living would, of course, be by lowering the rate of rise in population. This pre-supposes vigorous family planning which may or may not be feasible in Pakistan.

In view of the persistently rising trend of population, the need for speeding up Pakistan's economic growth is imperative. But the biggest handicap facing Pakistan, as in the case of India and other developing countries, is shortage of foreign exchange and technical know-how. It is true that liberal foreign aid in the form of grants and loans has been of great use to Pakistan, but, unless this aid is supplemented by large-scale inflow of private foreign capital, the pace of economic development cannot but be slow. The *Economic Survey* claims that the Government has allowed liberal concessions to foreign investors, including guarantee against expropriation, repatriation of capital and facilities for remittance of profits. "The investment climate in the country," to quote it, "has been very favourably commented upon by the different international financial agencies and eminent foreign industrialists and bankers." Reference is made here to the 318 foreign investment proposals covering a total of Rs. 74.55 crores (exclusive of foreign loans amounting to Rs. 43.15 crores) for which the Investment Promotion Wing has accorded sanction during the period from April 1959 to December 1962. However, the actual inflow of direct private foreign investment during the year 1962 was no more than a crore of rupees.

The urgency of more liberal foreign aid and large-scale overseas private investments in Pakistan is clearly borne out by the persistently wide adverse balance of trade. The actual adverse balance in the calendar year 1962 was over Rs. 162 crores, a new record since the establishment of Pakistan, as against Rs. 115 crores in 1961. The figure for the first quarter of 1963 was Rs. 32 crores. The wide gap is due to the fact that imports have continued to be heavy because of development programmes—they aggregated Rs. 352 crores in 1962, as against Rs. 306 crores in 1961—while the performance on the export front has not been quite encouraging. The total value of exports in 1962, according to the *Economic Survey*, was actually lower at Rs. 189 crores, as against Rs. 191 crores in the previous year, whereas the Budget *White Paper* places the exports higher at Rs. 199 crores, as against Rs. 188 crores. The difference in the two sets of official figures apart, it looks as though the various export boosting measures taken by the Government of Pakistan have had only limited significance. If, however, the position has not been more disquieting, it is due in a large measure to the Export Bonus Scheme instituted in January 1959. The Scheme covers all exports other than Pakistan's traditional agricultural exports like raw jute, cotton, hides and skins, raw wool and tea. Earnings from exports covered by the Scheme have risen from Rs. 25 crores in 1958 to Rs. 78 crores in 1962.

The continued low level of overall exports must be attributed to two important factors, besides the tariff, quota and other restrictions imposed by the importing countries. They relate to (a) the high cost of production in relation to Pakistan's competitors abroad and (b) the strong domestic demand which permits these high-cost articles to be absorbed locally. Viewed thus, the problem of export promotion cannot, as in the case of India, be achieved merely by providing concessions and facilities for export. What is wanted is a rapid increase in output which, as the *Economic Survey* has very pertinently averred, depends on the efficient organisation of human and natural resources and efficient use of capital, so that goods can be produced cheaply and sold competitively. Moreover, the traditional products are "not enough to support Pakistan's breakthrough into self-sustaining growth." Greater diversification of export trade with special emphasis on industrial goods is an absolute necessity.

An important aspect bearing on the finances of Pakistan is the mounting defence expenditure. Out of the total revenue receipts of the Central Government estimated at Rs. 224 crores for the year 1963-64, the share of the outlay on defence comes to exactly half, Rs. 111 crores, to be precise; this is in addition to the massive military aid received from other countries, especially the U.S. A large portion of this outlay can certainly be used for the development of the economy, if only the powers-that-be in that country make suitable gestures that could lead to a *rapprochement* with India.

PLANS FOR A BETTER CALCUTTA

NO other city in India faces today such acute economic and ecological problems as Calcutta. With the growth in the tempo of industrialisation during the last decade, there has been a steady increase in the migrational flow of population to the city not only from the other districts of West Bengal, but also from neighbouring States. This is on top of the influx of refugees from East Pakistan, numbering about one-and-a-half million. Thanks to such fantastic increases in population, the civic problems of this congested city have defied solution so far. For the growth in population has created insurmountable problems of housing, water-supply, sanitation and drainage, as well as transport and communications. According to the latest census, 2.9 million people are huddled in an area of 39 sq. miles of Calcutta proper. In just 0.3 per cent of the total area of West Bengal, the Calcutta metropolitan district, that is, Greater Calcutta, houses as much as 8 per cent of the State's population. The overall density of population of Greater Calcutta is 17,000 per square mile and that of Calcutta proper still higher at 75,000, which compare with an average of only 1,031 per sq. mile for the whole of West Bengal and 384 for the whole of India. The increase in population out of all proportion to the available civic amenities poses the greatest challenge to those in charge of the administration of this city.

It is to grapple with these problems within the framework of an integrated pattern of urban planning that the State Government set up, towards the end of 1961, a new development agency called the Calcutta Metropolitan Planning Organisation (C.M.P.O.). The first annual report of the Organisation has just been released. The C.M.P.O., which owes its origin to the farsightedness of the late Dr. B. C. Roy, the then Chief Minister of West Bengal, is entrusted with the task of evolving, through its own studies and by revising the partial plans of other public agencies, a comprehensive development plan for Calcutta. It is necessary to remember that this body is only a planning agency, and not an executive authority. Its studies and action programmes are being made in collaboration with such international agencies as the Ford Foundation of the U.S. and the W.H.O. The C.M.P.O.'s report for 1962, however, may not fully satisfy those who are anxious to find immediate solutions to the problems confronting the teeming millions of this metropolitan city. It, however, certainly deserves kudos for its clear exposition of the magnitude of the problems and the limitations in finding solutions for them.

The C.M.P.O.'s report does not promise any utopia for the people of Calcutta. Nor does it suggest any spectacular schemes to overcome the ills that afflict this city. The C.M.P.O. makes no bones about the fact that it would be unwise, if not impractical, to carry out an urban renewal programme on a large-scale in the built-up areas. In other words, the existing houses, streets and utilities cannot be scrapped to make way for replacement. The C.M.P.O. is certainly on strong ground when it affirms that such an expensive approach to physical development cannot be afforded at present "either in absolute terms or in the relative priority of claims of other sectors of development."

To say this is not to suggest that Calcutta's problems are beyond solution and that the city is doomed to suffer further deterioration. Far from it. Though the C.M.P.O. does not favour either replacement or renewal, it advocates a development policy seeking to bring about "the improvement and augmentation of existing facilities." The realisation of even this limited objective will call for enormous resources which alone can provide the wherewithals of what the report calls "an improved economy." The demand for public finances for rehabilitation would be considerable, requiring mobilisation of both State's and national resources. These resources may still be inadequate and, as the report says, technical and financial assistance from abroad on a larger scale would be necessary to supplement domestic resources.

Foreign aid or Government assistance, however, cannot entirely be a substitute for voluntary efforts by the local community itself. It is only appropriate, therefore, that the C.M.P.O. has emphasised the need for "aided self-help for further improvements in existing facilities." This approach would be of particular benefit in solving the deficiencies in housing programmes. The C.M.P.O. suggests that the Government itself should undertake the acquisition of land and arrange for installation of services for building houses by the private sector. This proposal is meant mainly to remove the legal and other difficulties involved in the acquisition of land for dwelling construction. But equal attention deserves to be given to the procurement of adequate quantities of building materials like cement and steel, as also provision of credit on liberal terms, the shortage of all of which has already adversely affected not only ordinary housing programmes, but also projects for slum clearance and re-housing of *bustee* dwellers in Calcutta. Besides constructing new residential buildings, projects which are bound to be slow in coming up under the present conditions, existing houses in the city deserve to be provided with more amenities.

The C.M.P.O. is equally optimistic about the possibility of improving the traffic and transport situation by better utilisation of available facilities. Staggering of working hours in offices and factories is, of course, a tried and tested method for spreading the peak load on roads and transport facilities. The Organisation has also recommended the establishment of some new facilities, such as a river crossing south of the Howrah bridge and some new arterial roads. Although the C.M.P.O.'s findings are of immediate interest only to Calcutta, they are also applicable, *mutatis mutandis*, to other Indian cities like Kanpur and Ahmedabad where the growth of population has brought in its train steady deterioration in living conditions. The civic authorities of these cities may have some useful lessons to learn when the C.M.P.O. finalises its Master Plan for the long-term development of the city. But as far as cities like Bombay, Madras and Delhi are concerned, they may well provide some lessons in urban planning to the Calcutta Metropolitan Planning Organisation.

MARKET GOSSIP

Steel Price Rise—A Damp Squib

THE latest increase of Rs. 28 to Rs. 550.50 per tonne in the steel retention price has proved to be a damp squib both from the stock market angle and from the industry's angle. On Dalal Street it did create a flash, but did not fire. Monday evening, when the price increase was officially announced, Tata Steel Ordinary spurted to Rs. 142 from the day's official close of Rs. 139, and Indian Iron to Rs. 23.32 from Rs. 23, but, in the next day's official session, they closed much lower at Rs. 139.50 and Rs. 22.92, respectively, and subsequently lost further ground to Rs. 138.25 and Rs. 22.68. Welcoming the announcement, an official spokesman of the Tata Iron and Steel Company Ltd. was reported to have said, however, "it does not put anything extra in our pockets." The reaction in shares was due as much to the usual quick realising, once the anticipated good news is published, as to this qualifying statement of one of the two private-sector producers, since it was construed to mean that, if the T.I.S.Co.'s profit would not rise, the dividend might not be higher. The dividend for the year ended 31st March 1963 will be announced within a few weeks, after the Chairman, Mr. J. R. D. Tata, returns from abroad.

The Press note on the now published price increase recalls the official resolution of 7th September 1962, in which the Government had stated that the retention prices of pig iron and steel, fixed for the period 1960-62, should also be applicable provisionally beyond 1st April 1962, subject to necessary changes owing to increase in coal price as well as rail freight. It notes the interim increase of one rupee per tonne in the pig iron price allowed from 13th June 1962 and of Rs. 5 per tonne in the steel price allowed from 1st July 1962. The producers had, however, represented that, apart from the statutory increase in the price of coal and rail freight, costs had risen due to the enhanced royalty on iron ore, limestone and other minerals, higher wages on account of the interim Wage Board award, greater incidence of excise on certain consumable stores, etc. The matter was considered by the Cost Accounts Branch of the Ministry of Finance, and on its report and after careful consideration, the Government decided: (1) For the period 1962-63, escalation elements of Rs. 10 per tonne and of Rs. 6 per tonne be allowed on the 1960-62 retention prices of saleable steel and pig iron escalations, respectively. (2) From 1st April 1963 onwards, a further increase in escalation of Rs. 8 per tonne in the case of steel and of Rs. 4 per tonne in the case of pig iron should be allowed. (3) From 1st July 1963, the steel retention prices should be increased further by Rs. 10 per tonne for the payment of emergency war risks insurance; the sum to be adjusted finally with the equalisation fund on the basis of actuals of each steel works.

The increase in the steel price thus works out to Rs. 28 per tonne. The Tariff Commission, in its report last year, had recommended an increase of Rs. 38, but the Government had conceded only Rs. 10.50. The increase which is now allowed places the producers, under the Tariff Commission formula, at the 1962 level, though the Government apparently thinks it places them much ahead. Considering this, the increase, which is to take care of the rise in costs subsequent to the Tariff Commission's recommendations, should thus have been double, that is Rs. 56 per tonne. Unfortunately again, what the Government has conceded on the three heads of higher costs does not meet the producers' expectations, though it does not fall far too short either. The industry finds the now revised price of Rs. 550.50 insufficient to help increase profit mainly because of the Government's rejection of the Tariff Commission's recommendation for an increase of Rs. 38 last year.

The World Bank mission which visited this country early this year urged for a steel retention price of Rs. 700 per tonne. The mission felt that that price would be in line with production costs and still Indian steel would be much cheaper than the imported material. The Government need not draw inspiration from foreigners, if it doesn't wish to. But it cannot possibly forget that even the Raj Committee's findings favoured aligning the prices to costs. The Committee frankly pointed out that the present retention prices did not allow adequately for the replacement of plant at current (or prospective) costs.

Since the Tariff Commission made its recommendations last year, three important issues concerning the industry in the private sector have been in prominence due largely to the questionable logic of the Steel and Heavy Industry Minister, Mr. C. Subramaniam. These are: the operational efficiency, the exclusion from the capital block of the special advances made to the companies as well as the reduction in the provision for interest on working capital, and the reversal of the earlier decision (taken in 1959) to include in retention prices an element for the repayment, with interest, of the special advances. The announcement of the latest increase in the price, which is related to the escalation elements and not to the basic price, could not be expected to deal with these issues. It may be noted, however, that the two private-sector plants do operate at 90 per cent efficiency, and the extra 10 per cent, which Mr. Subramaniam wants, is well-nigh impossible. As regards the repayment, with interest, of the special advances, Mr. Subramaniam has conceded indirectly, in connection with the question of raising capital for the Bokaro plant, that it is difficult for steel companies to raise fresh capital. It follows, therefore, that a special element in the retention price for the repayment of the special advances is inevitable. Mr. Subramaniam had suggested that the Government would take up new shares in the private-sector companies. But the agreement on the advances lays down that that could happen only if the companies agree. Besides these three issues, the question of replacement cost for plant is also there. This is much too serious and the Government is said to be considering it. All these questions will have to be dealt with when the basic price policy is considered next time. It would be unrealistic for Mr. Subramaniam, who lately seems to be seeing realism particularly in the light of his efforts to launch the Bokaro project, to delay unduly the revision of the basic price policy.

Steel For Engineering

How basic is the proposed Bokaro steel plant to the development of the country is a question on which there can be no two opinions. Both the Government and the private sector firmly believe that Bokaro is a vitally important project which will go a long way towards meeting the fast-growing demand for steel in the country. Mr. Bharat Ram, President of the Federation of Indian Chambers of Commerce and Industry, declared, in unequivocal terms, the private sector's support for the Bokaro project. Addressing the members of the Engineering Association of India the other day at Calcutta, Mr. Bharat Ram pointed out how important the project was to the development of steel-based industries such as engineering. He cited the low *per capita* consumption of steel, and the high imports of and growing demand for it, to show that Bokaro will not inhibit the growth of the private sector in steel. In fact, he pointed out, far from hindering private industries, it will stimulate them by enabling fuller utilisation of installed capacity in industries like engineering.

It may be noted, in this connection, that the shortage of steel has been largely responsible for the under-utilisation of capacity in these industries. The urgency for increasing the supply of steel is evident from the difficulties experienced by industries in getting iron and steel. For instance, as against the requirement of two million tons of pig iron, the engineering industries get only 1.1 million tons. Even out of this, 350,000 tons are supplied against railway orders for cast iron sleepers. Far more serious is the position in regard to supply of steel and flat products, the shortage of which has become chronic. The extent of idle capacity in the engineering industries is estimated at as much as 50 per cent. Mr. Bharat Ram's remarks are worth quoting: "I would like to make it categorically clear that Indian private enterprise, too, has come to attach considerable importance to this project and there cannot be any question of looking upon it with indifference merely on the ground that it will be in the public sector. We badly need steel and we want more of it. Therefore, the installation of the Bokaro steel plant is a hope which is strongly held by Indian enterprise. On it will depend the utilisation of the installed capacity of the Indian engineering industry, its expansion and even the competitive position of private enterprise—in short, the future strength of the Indian economy."

While opinion in both Government and industrial circles has thus crystallised strongly in favour of the Bokaro project, it is disappointing to find a degree of equivocation on the part of the U.S. on this question. President Kennedy has already pledged his support to the project. But the latest statement of Mr. David Bell, Director of the U.S. Agency for International Development, that, before a final decision is made, a second survey will have to be made has given rise to the apprehension that U.S. aid for the project will be delayed further. Equally disconcerting is the report that aid for Bokaro, if and when given, will be within the overall limit for aid to India for the third Plan and not in addition to it. If any such thing were to happen, it is certain that some other priority projects included in the aid programme would have to be postponed, if not abandoned altogether.

Raw Cotton Policy

At long last, the Government of India has announced the cotton policy for 1963-64 well in advance of the commencement of the season. This marks a welcome departure from the past practice of announcing the policy by about the beginning of a new season which starts on 1st September. Actually sowing of crop starts in most parts of the country much earlier; in fact, in many areas, sowings are completed long before the beginning of a new season. Because of this time lag between the announcement of the cotton policy and the commencement of sowing operations in the past, the former had little effect on the farmer who was left in doubt, at the time of sowing, what minimum price he would get for his produce. This considerably detracted from the usefulness of the fixation of floor price as a guarantee to the farmer of a reasonable minimum price. It is heartening that the authorities have become aware of the need to make an early announcement of the marketing and price policy at least in respect of cotton. It is noteworthy that the floor price for jute for 1963-64 was announced only in the second week of April, whereas it ought to have been announced before the end of February, that is, before sowings began, if it were to serve the purpose of assuring the grower, at the time of sowing, a reasonable minimum price. It is to be hoped that this lapse will not be repeated next year.

To revert to cotton policy. Barring the grant of greater powers to the Textile Commissioner in regard to the supervisory scheme and certain minor

alterations in respect of the basic staple length of certain varieties, the cotton policy for the new season is the same as that currently in force. The controllers, as well as the panel of supervisors, will be appointed by the Textile Commissioner who will also have the right to cancel appointments without assigning any reason.

The supervisor will be entitled to a commission at the rate of ¼ per cent of the final invoice value of the cotton. He will have the option to demand from the buyer a deposit against the commission due and payable to him. It is also laid down that, when a manufacturer has been given permission for ginning *kapas*, a supervisor authorised by the Textile Commissioner will check the samples of lint cotton drawn in the prescribed manner for submission to the zonal or *ad hoc* committee. He will also verify whether the price paid by the mill for the *kapas* bears a reasonable corresponding relation to the price fixed for lint cotton. If the price actually paid by the manufacturer is found to be higher than the price warranted by the legal maximum price for the lint cotton, the lint cotton so produced will be liable to be requisitioned and permission to buy and gin *kapas* will also be liable to be withdrawn.

The rules regarding requisitioning of cotton will continue to be the same as in the current season. Prices higher than the legal minimum will, however, be admissible in certain specified cases, such as (1) if the cotton is certified as grown in areas reserved for the purpose of procuring seed, and (2) it is Agmarked, bearing the red and green labels. The scheduled maximum price will be reduced by appropriate amounts for cottons which appear to have been deliberately mixed and/or watered.

Another development which has a direct bearing on trading in cotton during the new season is the decision, taken this week, by the East India Cotton Association, Bombay, regarding the formula for fixation of tendering differences. This question has been hanging fire for some time now and the E.I.C.A. has done well to end the uncertainty by agreeing upon a compromise formula. The original proposal was to fix the tendering difference in respect of the hedge contract for the new season before the commencement of the season. This was found unacceptable. Instead, it was unanimously decided that the tendering differences for the March 1964 contract should be fixed in the middle of February 1964 and, for the May 1964 and August 1964 contracts, on 1st April 1964. The differences are to be fixed on the basis of the spread between the spot rate and the hedge contract rate. A graded percentage is to be added to the premium to compensate for the gap between the spot and futures rates. The by-laws of the E.I.C.A. will be suitably amended to incorporate the changes which are, of course, subject to the approval of the Forward Markets Commission.

With the announcement of the cotton policy and the question of devising a hedge contract for the new season taken in hand early, it looks as though futures trading in new crop would start earlier than usual.

Paper Traders' Plea

The Federation of Paper Traders' Association of India, at its annual conference held at Ahmedabad this week, sought to highlight the several problems confronting the paper trade. Speaking on behalf of the trade, Mr. R. P. Kapur, President of the Federation, urged the Government to rationalise the existing system of fiscal levies on paper which, he said, had created difficulties for both traders and consumers. He actually indicated the way in which such a rationalisation could be ensured. His suggestion was for merging the sales tax on paper with excise duty, as has been done in the case of commodities, such as textiles and tobacco. Although the trade has been making this plea for some years now, the issue has still not been settled to its satisfaction owing to the divergence of opinion among the various State Governments. Mr. Kapur, therefore, requested the Union Finance Minister, Mr. Morarji Desai, who inaugurated the conference, to persuade the State Governments to agree to the merger of sales tax with excise duty. But Mr. Desai expressed his helplessness in this matter in view of the disagreement among the States over the question of excise duty allocation. The difficulty, he said, centred round the issue of determining whether consumption or population should be the basis of allocation. Even the committee which had studied this question, he added, failed to devise a suitable formula agreeable to all the States. And he made it clear that, so long as the States did not agree, the Centre could not issue any directive seeking to abolish the States' sales tax and replace it by excise duty. This explanation of Mr. Desai is not quite convincing. Since he is convinced of the need for merging sales tax with excise duty, it may not be difficult for him to make the State Finance Ministers to reach an understanding on a question which has been agitating the minds of paper traders for long.

The Finance Minister's reply to the plea of Mr. Kapur for giving import licences to the established trade must have also been quite unsavoury. The Minister rejected the plea on the score that the bulk of India's requirements for paper was now being met from indigenous sources and that the foreign exchange situation continued to be too tight to permit liberal imports. This stand of Mr. Desai seems to be justified. Surely, paper traders cannot expect the imports to be maintained at the previous level and that, too, when the domestic paper industry is striving to ensure self-sufficiency in paper. It is, however, true that the development of this industry has not been quite satisfactory lately. Indeed, some consumers fear that there will be a shortage of paper and paperboard in the not-too-distant future. The fear stems from the fact that the rate of actual domestic production has been going up only at a slow pace, while the civilian and defence demand is rising pretty fast. The quantity of paper and paperboard actually produced in 1962 was higher by just 20,000 tonnes at 383,000 tonnes. As compared with the second Plan period, when the average annual increase in output was about 30,000 tonnes, the present rate of increase is very slow. It is only by creating conditions more favourable to the growth of the paper industry that the consumers can be given a fair deal. This, it is needless to say, cannot be accomplished unless the claim of the paper manufacturers for a further increase in the price of paper, now fixed on the basis of the Tariff Commission's recommendations, is conceded. The profitability of paper ventures has, of late, turned out to be too small to attract sufficient capital for its expansion and development. This is clearly reflected in the inability of several licensed units to go ahead with their projects. Some of these licences have already been revoked. There is, therefore, urgent need for redressing the legitimate grievances of the industry.

Bombay's Vanishing Trams

The decision of the Bombay Electric Supply and Transport Undertaking, popularly known as BEST, to abolish entirely their tram service with effect from All Fools Day of the ensuing year, is in pursuance of the recommendations made by the I.L.O. Management, Development and Productivity Mission which visited India some time back. This decision has been taken, by a strange coincidence, at a time when the Russians have sent their "space couple" into orbit. To do away with an outmoded means of transport is certainly to opt for progress and modernity. But the BEST has decided to do away with trams not because they want to join the "Space Age" but because the tram service has proved to be most uneconomic and slow, and a "trouble creator" for the fast-moving traffic. Hence, from 1st April 1964, Bombay City will bid "good-bye" to its tram service.

This move of the BEST has created mixed feelings among the citizens. Those who will be most inconvenienced are the factory workers and the lower middle class. Though the BEST has a plan to press into service some 200 buses to fill the gap, these groups will still be greatly inconvenienced, for they cannot afford to pay more than 10 nP daily—which the prevailing tram fare for a distance of 5½ miles. But it can't be helped, for an obsolete and uneconomic service can scarcely be expected to be maintained for their sake. But, at the same time, there is a compelling case for giving some relief to these classes. Such relief can conceivably be given by plying "workers' specials" in the place of tram cars at the same or, perhaps, at a slightly enhanced uniform rate of 15 nP.

RS. 3.11-CRORE ALLOY STEEL PROJECT AT KANPUR

Messrs. Gangadhar Baijnath of Kanpur, a prominent business house of Northern India, have announced the progress made in setting up an alloy steel plant at Kanpur, with a capacity of 19,800 tons per annum of silico-manganese alloy steels and other special steels required for manufacturing springs. The plant is claimed to be the biggest of its type in the private sector. A public limited company—Bagla Alloy Steels Ltd.—is being floated with an authorised capital of Rs. 2.50 crores, out of which Rs. 1.50 crore will be issued shortly. The Board of Directors will consist of Mr. Rameshwar Prasad Bagla, Mr. Sri Prakasa, ex-Governor of Maharashtra, Mr. Motilal Khaitan, Chairman of Bata Shoe Co. (P) Ltd., Mr. Chimanlal B. Parikh, a leading industrialist of Bombay, Mr. M. David, Deputy General Manager of Compagnie Des Ateliers Et Forges De La Loire of France, collaborators in the project, and Mr. Satya Narain Bagla. It is intended to expand the Board later. Messrs. Compagnie Des Ateliers Et Forges De La Loire are a leading firm of engineers and manufacturers of steel and alloy steels in France. The collaborators will participate in the equity capital of the Company, supply plant and equipment, arrange pre-shipment inspection, supervise erection and initial operation of the plant, and provide technical know-how for a period of five years. They have also agreed to train a number of Indian technicians in their works.

The plant will be an integrated one for manufacturing high grade of silico-manganese and other low carbon alloy steels, using indigenous scrap iron and ferro alloys. It will consist of a melting shop, in which will be installed two 10-ton direct electric arc furnaces, a casting shop with a continuous casting machine, and a rolling shop with fully automatic rolling mills for producing flats, rounds and squares in a wide range of section. A noteworthy feature of the manufacturing process will be a two-strand continuous casting machine on the "Rossi-Concast" system which will directly cast molten steel into billets suitable for rolling. An agreement has also been reached with Messrs. Concast A.G. of Switzerland, who are the patentees of this process, for the supply of technical know-how and initial operation of the machine. This machine will be the biggest of its type to be installed in Asia, excluding Japan.

The Government has granted the necessary industrial licence, accepted the terms of collaboration with Messrs. Compagnie Des Ateliers Et Forges De La Loire, and approved the inclusion of the project in the current French credit by allocating Rs. 123.27 lakhs for the import of plant and equipment. The project has also been approved for inclusion in the French credit by the Government of France and the Compagnie Francaise d'Assurance au Commerco Exterieur (COFACE). This credit has been granted on very attractive terms. The necessary permission for the issue of capital has also been obtained from the Controller of Capital Issues. The total outlay on the project, including the working capital, is estimated at Rs. 3.11 crores, which will be financed by the issue of capital, supply of plant under the French credit and a rupee loan from the Industrial Finance Corporation of India. The U.P. State Industrial Corporation Ltd., Kanpur, has already agreed to underwrite shares worth Rs. 30 lakhs in the proposed issue. The promoters, French collaborators, Directors and their friends will take up shares worth Rs. 50 lakhs. It is expected that the balance of the share capital to be issued will be fully underwritten by other investment institutions and leading share and stock brokers in the country.

PARTICLE BOARDS'S CAPITAL ISSUE

Particle Boards India Ltd. is issuing 5,000 redeemable cumulative 9.3 per cent preference shares of Rs. 100 each and 25,000 equity shares also of Rs. 100 each. Of these, 5,000 equity shares have been subscribed by the promoters, 6,656 equity shares, to be credited as fully paid, are reserved for allotment to the Company's technical assistants, Messrs. G. Siempelkamp and Company of Krefeld, of West Germany, against 30 per cent of the f.o.b. value of the machinery payable to them, 4,344 equity shares are to be subscribed by the Directors, their friends and associates. The remaining 9,000 equity shares and 5,000 preference shares are to be offered for public subscription. The entire preference issue has been underwritten by the Investment Corporation of India Ltd. The preference shares will be redeemed at par on 30th June 1973, with the option for the Company to redeem them at par on or after 30th June 1970, after giving three months' prior notice to the preference shareholders. The subscription lists will open on the 24th inst. and close on the 29th, or earlier, but not before the 26th.

The Company proposes to manufacture at Bhandup (Bombay) particle board and its bye-products out of firewood, logging and forest management waste and industrial wood residues. These waste materials, which have not been exploited so far and have a low economic value, can be profitably converted into particle board. At present, there is no up-to-date factory in the country for the manufacture of particle board. The immediate minimum demand is estimated at 30,000 tons per year. With the availability of indigenous supplies, it will rise rapidly. The licensed annual capacity of the Company's factory will be 6,000 tons, but the layout has been arranged for subsequent expansion. The Company has obtained a licence worth Rs. 24.65 lakhs for the import of plant and machinery which its technical consultants are to supply.

The major portion of the machinery is being shipped. The erection of the machinery will begin in August 1963, when the main factory building will be constructed, and will be completed by October. The factory is expected to go into production by October next in order to get the benefit of one full year's working, since the Company's financial year ends on 30th September. Messrs. Jolly Industrial Agencies (Private) Ltd. are the Managing Agents of the Company. Mr. N. K. Petigara is its Chairman, with Mr. A. N. Kilachand, Mr. G. R. Jolly, Mr. K. L. Jolly, Mr. M. P. Shah, Mr. Dieter Siempelkamp and Mr. R. B. F. Kuka on its Board.

KRISHNARAM BALDEO BANK (PRIVATE) LTD.

The profit, before taxation, of the Krishnaram Baldeo Bank (Private) Ltd. for the year ended 31st December 1962 has gone up to Rs. 3.48 lakhs from Rs. 1.73 lakh to which level it had fallen in the previous year from Rs. 3.96 lakhs for 1960. The profit has recovered due to both higher income and lower expenses. The income from the banking business proper has risen from Rs. 10.71 lakhs to Rs. 11.78 lakhs; this improvement has more than offset the decline in income from other sources from Rs. 43,000 to Rs. 34,000. The total of interest paid is lower at Rs. 4.45 lakhs, as against Rs. 5.34 lakhs a year before. Staff expenses, too, are lower at Rs. 2.61 lakhs, as against Rs. 2.78 lakhs, while other expenses have increased from Rs. 97,000 to Rs. 1.25 lakh. Depreciation has claimed Rs. 33,540 (Rs. 32,622 in the previous year) and taxation Rs. 1.72 lakh (Rs. 30,000). The amount transferred to staff gratuity fund has been raised by Rs. 15,500 to Rs. 26,000 and that to the statutory reserve fund from Rs. 50,000 to Rs. 75,000. As against the Rs. 22,301 set apart in the previous year, nothing has been taken out of the year's profit to contingency reserve. The taxable dividend on the Rs. 50 paid 100-rupee shares has been stepped up to Rs. 1.50 per share, after it was cut in the previous year from Rs. 3.90 to Re. 1.

Deposits of the Bank, which had increased by Rs. 16.25 lakhs to Rs. 205.08 lakhs in the previous year, have dropped to Rs. 176.36 lakhs at the end of the year under review. Because of this decline in deposits, the Bank has closed the year with lower advances aggregating Rs. 61.72 lakhs, as against Rs. 80.93 lakhs in the previous year, as well as lower investments amounting to Rs. 87.40 lakhs, as against Rs. 89.44 lakhs. The total cash at the end of the year is also lower by Rs. 6 lakhs at Rs. 84.71 lakhs. The credit ratio has declined further from 39.4 per cent to 35 per cent, but the ratio of investments to deposits has recovered from 43.6 per cent to 49.5 per cent. The cash-deposits ratio has increased further from 44.2 per cent to 48 per cent. The liquidity ratio has thus jumped up from 87.8 per cent to 97.5 per cent. It may, however, be noted that, out of the total investments of Rs. 87.40 lakhs, only Rs. 55.61 lakhs are in Government securities. The paid-up capital is unchanged at Rs. 25 lakhs and reserves amount to Rs. 42.50 lakhs which, as a percentage of deposits, account for 38.2, as against 32.5 a year before.

PERSPECTIVES & PROJECTIONS

By Mercator

Never Had it So Bad

COMPARISONS, though recognised to be odious, have always been irresistible when political institutions or conventions of India are concerned, for which Britain has mostly provided the model. In a week in which both the Indian and the British Cabinets have been involved in crises of varying magnitudes, some comparisons are bound to be made. A six-hour debate in the House of Commons on Monday brought out all that needed to be said for either Macmillan's Government or its critics on the deplorable Profumo affair. Its highlight was Mr. Wilson's brilliant presentation of the issues in their right perspective; it was effective without being too harsh or trying to make political capital of Mr. Macmillan's grave error in treating with indifference the unsavoury aspects of a Minister's conduct even after they were brought directly to his notice. It was an extreme case of loyalty to a colleague and, what has been proved to be, misplaced trust in an untruthful person. Mr. Macmillan could only plead that he had acted honourably though it will be questioned whether he had acted with "proper diligence and prudence" as he claimed, when he had an abundance of sources of information. Mr. Wilson described it as "indolent, nonchalant attitude" and considering that more than two years ago the Secretary to the Cabinet had warned him of the possible danger, this charge was certainly not overstated.

The abstention of 27 Conservative backbenchers and Sir Nigel Birch's outspoken opinion that Mr. Macmillan should give way to a younger man indicate that Tory leadership will soon change. The interests of the party rather than loyalty to the leader might explain the apparently united front presented by the Treasury benches behind Mr. Macmillan; and a promise of early retirement might be the price he has paid for securing support to preserve his and the party's honour at the moment. The matter is unlikely to rest here. While an outraged public will continue to debate the moral issue, of the relations between persons in high places and the underworld of vice, the political issue is shown to be the distinct one of the Prime Minister's inclination to gamble with the country's security.

Mr. Macmillan, unlike Mr. Nehru, has not been soft during his career as P.M. He sacked Mr. Selwyn Lloyd without hesitation when it suited him and made other changes in the past which showed that he could be a ruthless political butcher when party interests demanded it. How he slipped up on Mr. Profumo may remain a mystery. Though the Tories have been profoundly grateful to Mr. Macmillan for leading them out of the Suez impasse, it has not prevented them from calling for a change. Lord Dilhorne's clearance on the security aspect of the Profumo affair has not encouraged them to lay the flattering unction to their souls that all is yet well. Besides their own shrewd political sense, the uniformly adverse reactions in the press, both in the editorial and correspondence columns, might have convinced them that the damage to the party's prestige was deep and could not be easily covered up by the usual tricks. In the eyes of both the Labour Party and his own supporters, Mr. Macmillan's tragic blunder was that he was "credulous and negligent" and that is sufficiently serious in a democratic parliamentary system for everyone to call for a change.

* * * *

The Malaviya Mystery

Mr. Nehru's announcement at a Press conference of his acceptance of the resignations of Mr. Malaviya and Mr. Hafiz Mahommed Ibrahim, was relatively uneventful and by the time Parliament assembles it will perhaps become an old story provoking little interest. There is still considerable sympathy for Mr. Ibrahim who, notwithstanding several Congress party denials, is regarded as the helpless victim of a party manœuvre, though many will agree that he has shown little ability in an office which controls the key sector of power. Mediocrity is now so much taken as the norm that it fails to excite public indignation even when the Plan is in the doldrums; for how else can one explain the continuing indifference to the anomaly of Mr. K. C. Reddy's position after all that has been said in public regarding his suitability for it?

These are, however, minor questions when compared to the Malaviya affair. If his position had depended solely on the inquiry by the Supreme Court Judge, why did he anticipate the report and resign 24 hours or so earlier? Mr. Nehru said that on the earlier occasion Mr. Malaviya had only offered to resign but that now he had actually resigned. Will its acceptance mark the end of the matter, besides what may be done to the officials involved in the Serajuddin case? Until Mr. Malaviya makes his promised statement to the press or Parliament it is difficult to say what new circumstance prompted him to take the step which he earlier had shirked. It is indeed a great pity that on a matter of great public importance involving questions of rectitude in public life, the Prime Minister has bound himself to secrecy regarding the contents of the Judge's report. Whether he had a right so to commit himself, or the Judge to demand secrecy in a matter in which the public is expected to take the Government's version of the Judge's report as conclusive, will continne to be debated. And there will continue to be curiosity regarding the others reported to be mentioned in the firm's books.

Will there be a further inquiry into all these other aspects? Since Parliament is not in session no effective demand can be made; the public has a right to know whether or not there are several squalid transactions for the benefit of the party or individuals. If some officials are to be prosecuted, more facts may come to light later on but that is no reason for their being suppressed now. Such embarrassing situations were not unforeseen when Mr. Nehru announced his decision to keep the Judge's findings confidential. The question is whether he should at all have gone to a Judge in office for obtaining a private opinion when he could as easily have secured an ex-Judge or senior jurist for purely personal advice. Mr. Malaviya had often claimed before that except in the one case of money received for election assistance to a Congress candidate (which was not considered sufficient to justify resignation at an earlier stage) he has been blameless. Does not his resignation indicate that there were more and hence a lack of candour?

Mystery on these matters is hardly desirable since both a section of the Indian public and some foreign circles genuinely seem to believe that Mr. Malaviya's resignation marks the ascendancy of the Right in India. It is not in anybody's interest to foster that impression. Immature foreign journalists may succumb to the temptation to varnish their copy with such plausible comment but neither in the Indian public's distrust of past China policy (which led to Mr. Krishna Menon's exit), nor in the Malaviya affair is there any indication of a swing to the Right though the by-elections seemed to favour such a theory. The swing, if any, is explained by the belief that a corrective to Congress mistakes, and failure to provide a clean administration which people want everywhere, is sorely needed; the Right seems more uninhibited in its criticism these days than the so-called leftist elements. It is the business of everyone to make it clear to socialists here or abroad that political integrity cannot be subordinated to an ideological label of doubtful content or relevance at the present time.

Mr. Nehru's sarcastic reference at his Press conference to the "non-corrupt" press, which has taken a keen interest in recent political trends, contrasts unfavourably with Mr. Macmillan's plea (on the day he was to pay the price of its vigilance in the Profumo affair) for an honourable understanding between the politicians and the press. He reminded his audience that the press existed to probe and criticise, not merely entertain, and that neither the press nor the politician should be too sensitive, though there may be occasions for complaint by both sides.

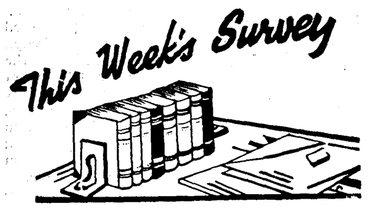
Woman in Space

"The Book of Life begins with a man and a woman in a garden. It ends with Revelations."—OSCAR WILDE.



That a woman transported into space became banner-line news even in a week of cabinet crises and a battle for negro rights shows the fascination which the world of both sexes has always had for the achievement of any distinction by a woman. True, Valentina Tereshkova followed, and did not precede, men in space and adventuresome women in the past have climbed peaks and performed other daring exploits. The calm tranquil face which adorned the newspapers on Monday was not, however, that of a person restless and seeking an adventure. She might with equal claim have been a nurse or a housewife. Cosmonauts, it seems, are chosen for their equipoise, mental and temperamental. To seek out a textile worker for the role does credit to the powers of discernment among the Space programme organisers of the Soviet Union and to the thoroughness of their training methods. But the timing of the woman's flight into space indicates an urgency about adding to the scientific data on the effects of space travel on man. The effects of radiation and weightlessness on the reproductive functions of the woman will throw more light on the space hazards. It is significant that Major Yuri Gagarin wished her to have many children. Soviet comment has emphasised that Valentina was closer to earth dwellers than her predecessors in space and hence has hastened the day when anyone could go into space. But, at the same time, others have stressed the capacity of the female mechanism to withstand various physical strains and isolation in space. Whether the United States will as quickly find a woman to match this feat will be as important as making a landing on the moon for which President Kennedy has devoted much of American resources. If, indeed, there should be colonisers in space where life can exist, they should be couples; but then, perhaps, their terrestrial nationality will have little importance!

WORLD BANK LOAN TO THAILAND

The World Bank has announced a loan of $35 million to Thailand for the development of national highways. The loan will assist in financing the improvement of new construction of sections of three national highways, in northern, central and southern Thailand. It will also finance the purchase of road maintenance and other equipment, engineering services and the technical training of Thai personnel. Six commercial banks are participating in the loan, without the World Bank's guarantee, for a total amount of $895,000 representing the first maturity and part of the second maturity which fall due between July 1968 and January 1969. The participating banks are The Chase Manhattan Bank, New York; Bank of America, National Trust and Savings Association, San Francisco; First National City Bank, New York; Irving Trust Company, New York; The Bank of Tokyo Trust Company, New York; and the New York Agency of The Mitsui Bank Limited.

The total cost of the project is estimated at $62 million. The Bank loan will cover the foreign exchange costs and the local currency costs will be met by the Government of Thailand. It is expected that construction will be completed in about 4½ years. Contracts for the construction work and purchases of equipment will be let on the basis of international competitive bidding. The loan is for a term of 20 years and bears interest of 5½ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin in July 1968.

OIL MINISTER'S RESIGNATION AND AFTER

AT a Press conference in New Delhi on the 15th instant, Prime Minister Nehru announced the resignation of Mr. K. D. Malaviya, Union Minister for Mines and Fuel. The resignation letter, he continued, was being forwarded to the President with a recommendation that it be accepted. Thus, another controversial member of the Union Cabinet will soon be out of office. The circumstances which have led to Mr. Malaviya's exit from the Cabinet are already public knowledge, and it is hardly necessary for us to comment on them here. Suffice it to say that what has happened does not detract from some of the qualities of the outgoing Minister—qualities of vigour and efficiency which have been acclaimed even by critical sections of the press and the public. This journal, too, has had occasion to pay tributes to the zeal and efficiency with which the Minister has been implementing the Government's oil policy, although it has differed from him quite often and strongly criticised him for his stubborn denial of the right of the private sector in oil industry to expand further even in terms of the Industrial Policy Resolution itself. It is needless to add that Mr. Malaviya has given a twist or slant to this Resolution by emphasising that the public sector should have a dominant role in the oil field.

The Industrial Policy Resolution of 1956, it will be recalled, has listed "mineral oils" in Schedule A, that is, the list of industries in which all new units, save where their establishment in the private sector has already been approved, are to be set up only by the State. In terms of this provision, it has no doubt been appropriate on the part of the Oil Minister to seek to establish new oil enterprises in the public sector. But, at the same time, it should be noted that the same Resolution has also laid down that "this does not preclude the expansion of the existing privately owned units, or the possibility of the State seeking the co-operation of private enterprise in the establishment of new units when the national interests so require." It is, indeed, a good thing that Mr. Malaviya has recently concluded a deal in respect of the Cochin refinery project—good for the reason that private enterprise will have a substantial share in it, if not for anything else. Unfortunately, however, the Minister has been clinging stubbornly so far to his stand that the existing private refineries, namely, Esso, Shell and Caltex, could not be given permission to expand further.

The question now is whether Mr. Malaviya's exit from the Cabinet will lead to some desirable consequences in the form of more liberal interpretations of the Industrial Policy Resolution, particularly in so far as the role of the private sector in oil industry is concerned. The Prime Minister has, no doubt, emphatically stated that the oil policy is of the Government as a whole and not of any individual. This may be true, notwithstanding the fact, admitted by Mr. Malaviya himself, that some of his own colleagues have raised doubts about the wisdom of the policy. But the more important point is that in the matter of actual implementation of the policy Mr. Malaviya, with his wonted dynamism and ideological bias, has given a certain twist to it, with the result that the role of the private sector in oil industry has been circumscribed to the point of enabling the public sector to catch up with it and attain a position of parity. It would not be too much to hope that his resignation from the Cabinet might be availed of for the purpose of removing the rigidity in the practical implementation of the oil policy in the interests of faster growth of the economy, in general, and the oil industry, in particular.

FAMILY PLANNING

In the context of the distinct slowdown in the rate of growths of national income during the first two years of the third Plan, the need for a more vigorous campaign to control population growth through family planning acquires an added urgency. The adverse effect of a slower rate of growths of the economy would be aggravated if population continues to rise at the present high rate of over 2 per cent. Conversely, a lower rate of population growth can cushion, to some extent, the impact on *per capita* income and employment of the decline in the pace of economic expansion.

The reported decision of the Union Ministry of Health to strengthen greatly the organisational framework of the family planning programme has, therefore, come not a day too soon. The Ministry proposes to recruit more than a million voluntary family planning workers in the next three years to carry the message of family planning to each and every village. One male and one female worker, it is said, will be deputed to every village. Recruitment and training of more staff is part of an expanded family planning programme, which aims at bringing down the rate of population growth from the present two per cent to one per cent by 1976. The programme includes the appointment of several thousand full-time workers, increased import and mass production of contraceptives and their distribution through *panchayats*, co-operative stores and shops. It is expected to grow into a mass movement during the fourth Plan period when the Ministry hopes to spend Rs. 50 crores on family planning.

The emphasis now being laid on the recruitment of more family planning workers and the broad-basing of the programme on a wider national scale augurs well for its success. For it is not funds that stand in the way of popularising family planning, but the lack of adequate personnel and organisational arrangements to utilise the funds made available. This is evident from the fact that hardly 25 per cent of the third Plan allocation of Rs. 27 crores has been used so far. It must, however, be borne in mind that mobilisation of the voluntary services of a million family planning workers, as now planned, will by no means be an easy task, availability of funds notwithstanding.

INDIA'S TRADE WITH EUROPE

It is rather premature to adjudge the usefulness or otherwise of the recent tour of Mr. Manubhai Shah, Union Minister for International Trade, to Western European and East European countries. For the benefits, in terms of both trade and aid, that might flow from his efforts would not be clearly known for a considerable time to come. Mr. Shah's distinctly optimistic assessment of the prospects for trade and aid, therefore, has to be taken with a pinch of salt. To say this is not to minimise the significance of the commendable efforts which Mr. Shah made in the countries of the Common Market and the Soviet bloc to enable them to get a clearer insight into India's problems.

It is reasonable to believe that he was able to impress upon the Common Market countries the special difficulties faced by developing countries like India in the field of world trade—difficulties which have been aggravated by the creation of regional trade blocs. This belief is based on the premise that the Common Market countries would expedite negotiations for bilateral trade with India alongside talks for a comprehensive trade agreement with this bloc. Mr. Shah did well to tell the Common Market countries that these agreements should not await the outcome of the "Kennedy round" of tariff negotiations which would be a protracted affair. He expressed the view that bilateral pacts, particularly those with West Germany and France, would increase the flow of credit and technical assistance to India, besides increasing trade. If Mr. Shah's claim that both West Germany and France, the leading members of the Common Market, had been convinced of the need for giving special concessions to Indian exports like textiles and engineerings, this should be considered a major achievement of Mr. Shah's tour. How far this claim will be borne out by actual practice, however, remains to be seen.

In the meantime, India has some good news from Europe. For instance, the latest decision of the E.C.M. countries to suspend the common external tariff of 18 per cent on tea from January 1964 onwards has come as a welcome relief. The consequent price advantage which tea will have in European countries is bound to expand the market for this commodity. This is a comforting thought to India which is the world's leading producer and exporter of tea, particularly because, as the F.A.O. has had occasion to point out, the long-term prospects for tea in world markets are rather uncertain. The E.C.M. has also decided to drop tariffs on certain relatively minor items. Mr. Shah disclosed that, besides twelve items for which there would be no tariffs, the E.C.M. was considering the question of reducing import restrictions on goods like coir mats, leather, footwear, and jute goods. While these decisions are welcome, such piecemeal measures are not likely to help India much. It is, therefore, essential to push through plans for bilateral pacts with the E.C.M. countries, besides negotiating for a comprehensive trade agreement with this trade bloc.

SUGAR TARGET

The reported move of the Union Government to step up the third Plan production target of sugar from 3.5 million tons to 4.0 million tons is quite realistic and must be welcomed. In the Draft Outline of the third Plan, the Planning Commission, it will be recalled, had fixed the target at no more than three million tons. It was this journal that first pointed out that the three-million-ton target was a conservative one, inasmuch as it did not take into account (a) the *per capita* nutritional requirements of sugar (estimated by experts at nearly 23.00 lbs. per annum, as against the 13.87 lbs. assumed by the Planning Commission), (b) the possible increase in consumption of sugar if its price was brought down to a reasonable level, and (c) the need for earmarking a portion of output for purposes of buffer stock, not to speak of the exigency of earning foreign exchange through exports. We had clearly warned then, and also on many occasions subsequently, against the danger of sugar output failing to keep pace with enhanced demand at the end of the third Plan, unless the target was revised in time. The more responsible section of the sugar industry itself administered a similar warning. That there was no exaggeration whatever in this warning was clearly borne out by the upward revision of the target from 3.0 million tons to 3.5 million tons in the final report of the third Plan.

Within five months after the third Plan began (early in August 1961, to be precise), however, the Government of India announced suspension of the issue of licences for new sugar factories. The suspension was sought to be justified on the ground that the aggregate production capacity of 3.15 million tons already licensed (the capacity covered the establishment of new sugar mills as well as expansion of existing ones) was more than adequate. The President of the Indian Sugar Mills Association had also pleaded for a production target lower than that envisaged, namely, 3.5 million tons. It was this journal again that questioned the basis on which this assessment had been made (*vide* page 358 of *Commerce* dated 19th August 1961). We did concede that there was a sizable sugar surplus and that difficulties were being encountered in finding export markets for the commodity. But we made it clear that the situation was purely temporary and that, considering the possible expansion of domestic requirements, the buffer stock needs and the export demand, even the 3.5 million target was itself a conservative one. It is a matter of some gratification to us that this assessment has since proved correct, as witness the reported move of the Centre to raise the target to four million tons.

The proposed new target represents a rise of 650,000 tons as compared with the estimated total licensed capacity of 3.35 million tons as at the end of March 1963. The major portion of this additional capacity, according to present indications, will be licensed in the co-operative sector, in addition to the 57 factories already licensed in that sector, of which 41 are working at present and the remaining 16 units are expected to commence production in the next season (1963-64). May be, the Government has been influenced by the notable progress made by the co-operative sugar mills, whose share in the total sugar production has gone up from 17.5 per cent in 1961-62 to 21.3 per cent (estimated) in 1962-63. But one wonders whether this progress would have been possible but for the active support and encouragement extended by the Government, Central and State. It may be noted here that, excepting a few lakhs of rupees raised by the cane growers, the bulk of the capital outlay on co-operative sugar mills has been contributed in the form of share capital by State Governments and loans by the Industrial Finance Corporation of India. By all means, let the State foster the growth of co-operative sugar mills. But should it, at the same time, brush aside the case for expansion of joint-stock sugar mills? These sugar mills have all the advantages and can easily undertake expansion of their capacity. It is needless to mention that the expenditure involved in the establishment of a new sugar factory is considerably higher than that needed to expand an existing unit.

While the move to fix a higher target for sugar is commendable, the question is whether the consumer of sugar will enjoy the fruit of an expansion of production? This question is raised because, although the current rate of sugar output is well above that a decade ago, the consumer continues to pay a price which is high in all conscience, due to increased cost of production and heavy incidence of taxation. It is somewhat doubtful whether the tax burden will be lowered in the context of the urgent need of money for defence and development, but there is plenty of scope for reducing production cost. What is wanted is an all-round improvement in efficiency in the farms and the factories alike.

SUPERSONIC AIRLINERS

A race is on between Britain and France, on the one hand, and the United States, on the other, in the field of development pertaining to supersonic jet airliners. The "Concord," which is the name of the supersonic airliner that is being developed by the British and French together, is scheduled to take to the skies in 1966, although it may go into commercial service only by the end of the current decade. The U.S. supersonic rival, which will have a higher speed than the 1,450 m.p.h. of the "Concord," is still only in an ideational stage. But the American project will receive a shot in the arm if President Kennedy's latest plan for an investment, over the next six years, of $750 million of Government funds is approved by the U.S. Congress. The plan visualises an aggregate outlay of a billion dollars, of which 25 per cent is to be made by the aircraft industry and 75 per cent, that is, the said $750 million, by the U.S. Government. It is also proposed that the Government will subsequently recoup a part of its own outlay from the airlines purchasing the supersonic aircraft.

The aircraft industry in the United States, it may be noted here, is not in a position to incur this heavy expenditure on the development of a supersonic airliner with a fantastic speed of just under 2,000 m.p.h. But the development proper will still take place primarily through the efforts of private enterprise. The U.S. Government's role will be limited to providing the larger part of the finances required for the development project. The Government, however, will have to maintain some control over the project in view of its financial contribution. But such control, it is visualised in President Kennedy's plan, will only be minimal and will decrease, if the financial contribution of the industry to the development of the airliner increases in proportion. If everything goes well, the American version of a supersonic airliner may be expected to take to the skies by 1970. Thereafter, a veritable race between the world's airlines may be on for replacing their present subsonic jets by supersonic airliners.

TAX BURDEN ON INDUSTRY

The latest Central Budget continues to haunt the thoughts of businessmen all over the country. They are particularly exercised over the Finance Minister's experiment with new fiscal levies, particularly the Super Profits Tax. If the S.P.T. is only an emergency measure, the business community is likely to have no grudge against this innovation, however burdensome it may turn out to be. It is, however, unfortunate to find that the Government has not chosen to clarify its precise stand in respect of this controversial fiscal levy. It is against this background of general uncertainty regarding the future role of the S.P.T. that Mr. G. D. Somani, President of the Indian Merchants' Chamber, at a meeting at Bombay the other day, appealed to the Finance Minister to scrap this levy, if it led to deleterious effects on the growth of the corporate sector. Similar pleas have been put forward by several other leading spokesmen of the business community as well and can legitimately be considered the consensus of opinion among industrialists.

Mr. Morarji Desai, Union Finance Minister, who also addressed the Chamber, ruled out the possibility of the withdrawal of the S.P.T. in the immediate future. But he gave an assurance that the scheme of S.P.T. would be "positively reviewed" by the authorities, if it retarded the growth of the corporate sector. The assurance of a future review of the situation is, no doubt, welcome. But the condition attached to this assurance is quite vague inasmuch as there is no clear-cut criterion for judging the impact of this levy on industry, the growth of which may be influenced by several factors other than fiscal levies. Mr. Desai did not also share the view of Mr. Somani that there was considerable underestimate of revenue and overestimate of expenditure. Giving an account of the Government's methods of estimate of revenue and expenditure, he stressed that there was no deliberate attempt on the part of the Government either to underestimate revenue or overestimate expenditure. It may be that these lapses in estimates are not deliberate. This does not, however, diminish the grievances of the taxpayer who is forced to augment the revenue to an extent which is not warranted by actual spending. It would be good, if Mr. Desai tries to ensure that the present system of calculations is at least improved to avoid wide divergences between budgeted figures and those actually realised, which have become a recurring phenomenon.

While these grievances of the industry deserve to be looked into carefully by the authorities, there is, as Mr. Desai pointed out, no escape from some stresses and strains in industries in the present context of national emergency. This is a feeling that has been readily shared by the business community which has not been slow in responding to the demand made on it during the emergency. Apart from this, Mr. Desai appealed to industrialists to strive to reduce the cost of production through increased productivity and greater efficiency. This, however, is easier said than done. So long as capital equipment for modernisation and several raw materials and fuels are in short supply, industry's attempts to improve operational efficiency will be largely ineffective. One of the possible means of solving these problems of shortage is to augment their domestic production by attracting foreign capital. Mr. Somani pleaded for larger incentives for attracting foreign capital. Mr. Desai, however, felt that the present facilities were adequate for attracting foreign capital and refused to review the matter. Admittedly, India has given some serious attention to this problem, but much more remains to be done, if the country is to secure a larger flow of capital and technical know-how, for which there are several competing claimants in the world.

D.V.C. IRRIGATION SYSTEM

A decision to the effect that the canal system of the Damodar Valley Corporation below the Durgapur barrage could be taken over by the West Bengal Government is reported to have been taken at a conference of representatives of the Union Ministry for Irrigation and Power and the State Government. This takeover, it is further stated, will not involve any payment of compensation by the State Government. The report does not add much to what has been already written in a note entitled "Controversy over D.V.C. Dams," which appeared on page 1002 of our issue of 8th June 1963. Incidentally, it was pointed out in the note that the contention of the West Bengal Government that no compensation would be payable by it for the take-over of the canal network had been upheld by the Attorney-General. But the State Government has nevertheless been reluctant to take over the irrigation system *without the headworks in the Panchet and Maithon dams.*

If the State Government is now going to take over the canal system alone, will that in any way compromise its other claim for the control of the two dams? The West Bengal Government seems to think that its stand has in no way been compromised. In fact, it continues to swear by it and plead for the transfer of control over the two dams also. As was pointed out by us in the former note, the State Government's stand has a logic of its own, for it would be technically difficult to manage the system of flood control and irrigation effectively without simultaneous control over the headworks too. Here, however, there is a snag inasmuch as the question of control over power generation would also have to be settled. As of today, the State Government's contention has not been accepted by either the D.V.C. or the Centre. So the position seems to be that, while the West Bengal Government will now take over the canal system without paying any compensation to the D.V.C., it will continue its fight with the Centre for the acceptance of its other contention, namely, that the control over the two dams should also vest in the State Government. Thus, the controversy over this question may be expected to continue for some more time. A happy end to it can possibly be a compromise whereby, in return for the acquisition of control over the two dams, the State Government will accept the super-grid proposal for the Eastern Himalayan region comprising West Bengal, Bihar, D.V.C. and Upper Orissa.

THE PROFUMO AFFAIR

(From Our Own Correspondent)

LONDON, *15th June*

WHEN Britain's leading economic weekly carries on its cover the photograph of a girl described in the leading article as "a 21-year-old trollop"; when the *Financial Times* has to devote an editorial to the Government-capsizing activities of the same young woman; when *The Times* in two powerful articles tells the Government that on her account its time is up; when, in short, the City, Westminster and Fleet Street are rocked by the biggest scandal of modern times and the stock markets dip in response, then the subject matter has obviously spilt over from the social and political into the economic scene.

And nothing less than that has happened this week. Bizarre as it may sound, the all-absorbing topic of interest has been whether a call-girl who unwittingly caused the ruin of the Secretary of State for War would also send the Prime Minister, the Government and even the Conservative Party crashing. And it was the realisation that the Government might fall that caused stock prices to be heavily marked down in mid-week, though uneasiness can have no long-term effect in this direction. After all, the possibility of a change of Government within a year or so has been taken into account and what is at stake now is the timing!

Of course, by the time this article appears, the immediate effect on the Government will have been decided and be known. Nevertheless, it is worthwhile reporting from on the spot just what are the various reactions at this moment when the outcome is still in the balance. And the first thing to note is that the political part of the storm is within the ranks of the Government and their supporters. The opposition have had little to do except go out of their way to disclaim interest in the morals of the former Minister and to state concern over security. So the politicians argue that, if the Minister for War shares a mistress with a Soviet Intelligence Officer, this is taking an unconscionable security risk, the Prime Minister should have known and, if he didn't, he must go; the Parliamentarians are outraged by the Minister having lied to them from the front bench in a personal statement which is always assumed to be truthful and think that a Government in which this can happen must be corrupt; the moralists are outraged by the fact that a Minister should consort with call-girls and draw the same conclusion as the others—that both Prime Minister and Government must share the blame and pay the penalty.

But the Prime Minister, of course doesn't agree with this at all. He takes the view that there has been no breach of security and that the moral and parliamentary issues lie on the Minister for War alone and that he has paid the penalty. And the outcome of a national public opinion poll taken this mid-week shows he is probably right. Sixty per cent of the electorate think the Minister alone responsible and only one-quarter regard the Government as a whole to blame. More than half think the Premier should continue in office (though only 30 per cent of Labour supporters take this view) and only one-third think the Government should resign now and go to the country (though 50 per cent of Labour supporters do think this). But the electors are evenly divided as to whether the Premier was right or wrong in believing the ex-Minister when he made his famous denial in the House! Yet none of this adds up as helpful to the Government when an election does come along and to the basic question "How would you vote?" over 50 per cent said Labour and only one-third said Conservative. Never before in these periodic polls has the Government's stock stood so low.

The Premier's concern is to avoid going for an election now, because, if he does, the Tory Party will be massacred. And his answer to those who want to push him out is that he would then go to the country. He has also declared that he intends to stay in office till the next election and his shrewder opponents in his Party will not try to force resignation now, but try to get him personally to retire decently later on, so that a new Tory leader can have a chance to revive the Party before going to the polls. The Labour Party would like to keep Mr. Macmillan in till the election and in this they are on Mr. Macmillan's side! Whether this astute parliamentarian will have his way remains to be seen—but leaving aside all the excitements on the surface, the real battle behind the scenes is who is to succeed to the leadership and when? The affair of the call-girl and the Minister has served to touch off all the inflammable material in this issue.

DELHI LETTER

MR. MALAVIYA GOING OUT OF CABINET

PLANNING FOR THE FOURTH QUINQUENNIUM

From Our Special Correspondent

NEW DELHI, 18*th June*

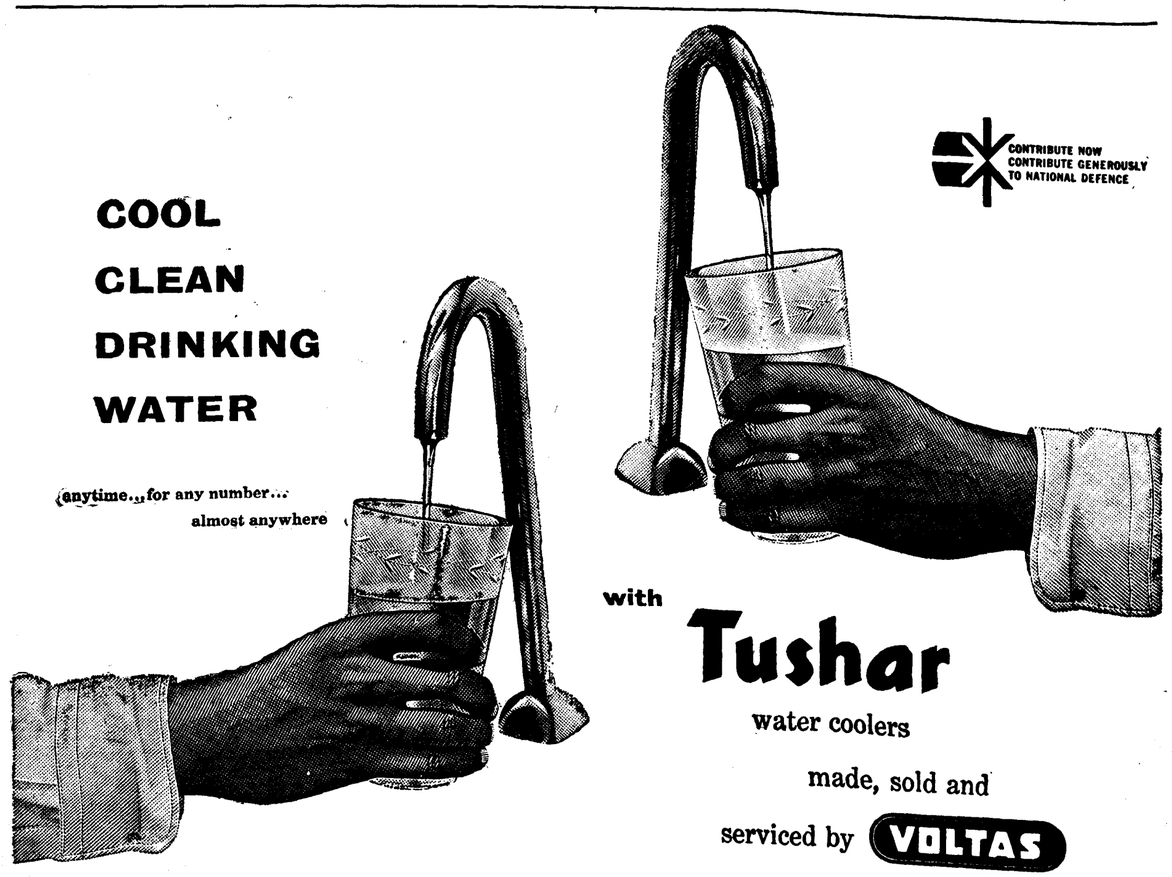
THE Prime Minister's assertion that the present oil policy was that of the Government and not of an individual, Mr. Keshav Dev Malaviya, must make interesting reading. Naturally, when a Minister propounds a theory and follows it up with practising its "virtues" through his more amenable ward, it is difficult for the other colleagues in the Cabinet openly to denounce its *mala fide* manifestations. But any claim that all the Cabinet members are unanimously behind the oil policy followed so far, will be, to say the least, extremely odd, because that is not true. An examination of the "Malaviyan policy" will show that it had to face ever mounting opposition from some of his colleagues who, for various reasons, have been urging its modification in one way or another, if not its total abandonment. It is also a known fact that a section of the country's policy-makers, while loyally abiding by the postulate of preponderance of the public sector in the oil business, has been nevertheless in favour of a pragmatic approach, keeping in view the exigencies of the emergency. If the Planning Commission is today examining afresh the question of private sector refinery expansion, it is but an instance of the other point of view successfully asserting its right to be heard.

It is hundred per cent correct to claim that the oil policy so far has been the policy of the entire Government (because there has not been an open clamour against it from inside), as the Prime Minister has done. But it will be equally incorrect to assert that all the nuances of that policy had the implicit and unanimous support of the entire Cabinet. In fact, the strictly correct position will be to state that the past policy has been as much of the Government's as will be the new policy when the new incumbent takes over the portfolio. Let us not overlook the fact that individuals, given the charge of operations, do influence the tactical implementation of a general strategy, and sometimes bring about a situation which tend to depart substantially from the agreed goal—in this case self-sufficiency (except in some categories) in petroleum products.

It is, however, too much to expect that the long-awaited exit of Mr. Malaviya from the Cabinet will bring about an immediate change in the outlook in oil. If anything, his successor will take some time to adjust himself to the new responsibility and assess the situation. Meanwhile, those who have been opposed to Mr. Malaviya's doctrinaire approach to the country's petroleum industry are determined that there should be no sliding back from whatever little has been gained in the recent past.

As usual, speculation is rife in the Capital to identify Mr. Malaviya's successor. Three alternatives are open to Mr. Nehru: (*a*) to select a new man from among the Congress M.Ps, (*b*) to bring in someone from the States as in the case of the Defence Ministry, or (*c*) to redistribute the present portfolios among the existing Cabinet members. If Mr. Nehru's replies at his recent Press conference is meant to disabuse the public mind of any drastic reshuffling of the Cabinet, the first two alternatives are ruled out. But the third alternative also does not seem to be amenable to a smooth implementation. All the Cabinet Ministers have their hands full, what with the nerve-racking problems created by the emergency. Any additional portfolio, and one of the size of Mines and Fuel, will be nothing short of overburdening with the resultant lack of efficiency. If, as suggested here in some quarters, one of the Deputy Ministers or the Ministers of State is asked to take over, this portfolio is certain to be shuffled out of the Cabinet rank as it was prior to the second general elections. In view of the new responsibilities that have added to this portfolio during the past years, such a move will not be helpful to the smooth and efficient functioning of this strategic industry. It is hoped that no such idea is under the Prime Minister's consideration. In any case, the situation will clear by the first week of August when direct soundings will get under way.

Fourth Plan Projections



The perspective planners have finally arrived at the long-awaited conclusion—our exports cannot earn sufficiently to pay for the imports. At least, that is the main plank of their projections for the fourth Plan. The Perspective Planning Division has recast its earlier assumption for the next five-year Plan, which, in a substantial degree, also upsets its previous projections for the fifth Plan. In a discussion note, the Division has redrawn its "basic strategy" to limiting the gap in the balance of payments position as also the quantum of foreign aid.

Earlier, the P.P.D. had assumed a rate of growth of the order of 6 per cent per annum from 1965-66 to 1970-71 and a little over 7 per cent per annum for the fifth Plan period. Rethinking has now made it opt for an annual rate of growth at 7 per cent for the fourth Plan itself. A high rate of expansion, both in terms of the total income and of the productive capacity in basic and heavy industries, has been considered essential if the country is to become self-reliant for economic development and defence. In fact, the major item of defence requirements was totally absent from its earlier assessments. It has now acquired a prominent position in the list of allocations.

The P.P.D. is of the view that the most critical factor in the realisation of an annual rate of growth of the order of 7 per cent will be our balance of payments position, and that our export earnings for the next two Plan periods are not likely to be adequate. It believes that the gap may even widen. This new orientation is primarily based on the realisation that the present trend of our foreign trade and the international impact on it will continue for some time to come. It is also recognised that, while an improvement in exports is bound to be there consequent to a variety of promotional activities undertaken during the past one year, the imports bill will go up tremendously with the beginning of the fourth Plan when a number of heavy industrial, machinery and power projects plus several new but capital-intensive plants will be in the final stages of their completion. In order to check a runaway rise in imports, the P.P.D. would prescribe bold steps to develop import-substitution on a massive scale. Correspondingly, the Division also suggests speedy expansion of the metallurgical, machine-building and mineral oil industries, the three main groups which account for the bulk of our imports and under which imports are likely to enlarge in the coming years. The Division also feels that if the commissioning of the industrial projects are advanced with decisions taken speedily on them, it might be possible to limit our foreign exchange requirements to the level envisaged for the third Plan, that is, Rs. 3,200 crores. This would also mean the pegging of the foreign aid allocations for the fourth Plan at a minimum of 10 per cent of the total outlay as against 20 per cent in the current Plan.

But, to ensure a steady flow of foreign aid, the P.P.D. considers it important that the aid-giving countries should be informed sufficiently in advance of our needs for the fourth and the subsequent Plans. This would be particularly necessary in case of the Communist countries like the U.S.S.R., Czechoslovakia and other East European countries which have now established a pattern of announcing their total aid contribution

VTY-12 **VOLTAS LIMITED** HEAD OFFICE: **Ballard Estate, Bombay-1** CALCUTTA . MADRAS . NEW DELHI . BANGALORE . COCHIN . AHMEDABAD . LUCKNOW . KANPUR . SECUNDERABAD

Opening a research centre recently, our Prime Minister, Jawaharlal Nehru said, "If I were much younger and inclined to do research, I would rather like to do research in the conditions here."

The Prime Minister, a scientist himself, has always advocated the limitless power of research to improve the lot of the common man.

Under his brilliant and dedicated leadership, pure and applied research in India has forged ahead.

In the public sector there are 23 national and regional laboratories, and many other research centres. These work in close collaboration with research units attached to the private sector and the universities. The ultimate aim: "To confer the benefits of science on the man in the street."

"One of the first things we thought of from the early days of independence was...RESEARCH!"

In the field of research, as in many others, we can never repay our debt to Jawaharlal Nehru.

On 12th June 1963, the Prime Minister laid the foundation stone of a new, trail-blazing research project-- THE RUBBER RESEARCH CENTRE sponsored by the MADRAS RUBBER FACTORY. The first of its kind in India, the Centre will work on research towards providing the public with new and quality rubber products.

The Rubber Research Centre is to commemorate the full scale production of Mansfield tyres in record time at the Madras Rubber Factory.

MADRAS RUBBER FACTORY LIMITED
In collaboration with the Mansfield Tire & Rubber Company, U.S.A.

AMERICAN LETTER

FIRST U.S. WORLD TRADE FAIR SHIP

PLANS UNDER WAY FOR SAILING IN 1964

From Our Special Correspondent

NEW YORK, 15*th June*

BUSINESS conditions in the United States continue much better than expected. The mild boom is supported mainly by durable goods rather than soft goods. Consumer buying of automobiles, for example, continues at rates comparable to the best on record.

The U.S. international balance of payments situation remains a matter of concern. Hence, concerted drives are now under way for an extensive liberalisation of the coverage offered by the U.S. export credit insurance programme. This is in order to boost exports and improve the balance of payments.

Tied in with these considerations are the complexities which have arisen in connection with the European Common Market and with other trade areas, such as the "Outer Seven" and the new developing Latin American Common Market. Increasing official contact is being established among these various trade areas.

This has worsened the competitive position of the United Kingdom and of the U.S. This has led to the introduction of legislation at Washington to tighten the anti-dumping laws, primarily directed toward curbing steel imports. The legal interpretation of dumping is the sale of the products here at price levels below that of the country of origin.

Indirect protection by means of country-of-origin marketing rules currently advocated in the U.S. is also winning increasing support in the U.K. where the prime supporter is the Trade Union Congress which fears losses of jobs. The motivation in the U.S. is the same.

"S.S. Tradefair"

Along the same lines, plans are being completed at the present time to bring about the "First United States World Trade Fair Ship." It will be run by a New York corporation, headed by John H. Morrill, a retired Rear Admiral of the U.S. Navy, and it will be commanded by Commodore Phillip H. Fitz-Gerald, another retired U.S. Rear Admiral.

The Japanese Government has subsidised a similar ship which has been extremely successful, commercially. The U.S. State and Commerce Departments have expressed great interest in the venture and so has the U.S. Information Agency and they are considering to have exhibits aboard.

A 19,000-ton vessel will be renovated in the Massachusetts shipyards of Bethlehem Steel Corporation at the request of Senator Edward Kennedy. This is his home state and the Senator and his brother, the President of the United States, would like to see this project succeed.

Government agencies intend to take exhibit space along with major U.S. industrial corporations. Among them are Bethlehem, Allied Chemical and Westinghouse. The tentative sailing date of the s.s. *Tradefair* is November 1964. She will have four port schedules.

In the Orient, she will be at Jidda for three days, at Karachi for eight days, at Bombay for eight days, Madras six days, Singapore seven days, Hong Kong eight days, and other calls are at Kobe, Tokyo, Yokohama, Davao and Manila. Each of the four geographical port schedules will provide a total of 68 exhibition days, excluding the voyage-time in between ports.

Schedule No. 1 provides for calls at Liverpool, Glasgow, Helsinki, Stockholm, Copenhagen, Oslo, Hamburg, Rotterdam, Antwerp and London. Schedule No. 2 includes Bilboa, Lisbon, Casablanca, Barcelona, Marseilles, Genoa, Tripoli, Piræus, Istanbul and Beirut.

Finally, there will be calls in the Southern hemisphere in such places as Sidney, Melbourne, Tamatave, Durban, Cape Town, Buenos Aires, Santos via Rio de Janeiro, La Guaira, Barranquilla and Colon.

There will be on-land exhibit centres at London, Beirut and Davao. Displays and exhibition supplies for firms contracting in blocs of 10 port schedules may be carried aboard the s.s. *Tradefair* and/or may be shipped ahead, whichever is desired. At any rate, it is a significant development in the sense that the U.S. has finally become world-trade-conscious.

Heretofore, the domestic market absorbed the overwhelming portion of U.S. manufacturing capacity. At present, there is still much idle capacity and, while employment has been increasing, the number of jobless is also increasing owing to the increase in population and the number of younsters seeking jobs while their schools are recessed for the summer.

Big U.S. Borrowings Abroad

The U.S. Government is currently borrowing, or has contracted to borrow, in the neighbourhood of $2,000 million from Europe. These funds are earmarked for two major purposes. Number one is a sort of insurance premium against future raids against the dollar. Number two is to have readily available funds to cover possible purchases of European dollar holdings in case they are available. It is understood that the U.S. Treasury, so far, has placed non-marketable securities up to 21 months' maturity with European central banks and Government agencies.

United Nations News

The International Bank for Reconstruction and Development, an affiliate of the United Nations, has extended a $30-million loan to the Industrial Credit and Investment Corporation of India Limited which is very highly regarded here as a privately-owned-and-managed development company established to promote the growth of private industry.

Similar to four earlier World Bank loans to the I.C.I.C.I., proceeds of the loan will be used to meet foreign exchange requirements of projects financed by the Corporation. Spokesmen for the World Bank says that I.C.I.C.I., since its establishment in 1955, in the relatively few intervening years, has "become one of the largest and most successful development finance companies" with which the World Bank has been associated. It is estimated here that I.C.I.C.I. operations have resulted in mobilising capital investment equivalent to some $650 million, or five times its own investments, and a direct gain of some 60,000 additional jobs.

Negotiators of the present loan say that the new proceeds, together with the balances still available from the earlier loans, should meet I.C.I.C.I.'s foreign exchange requirements until the early part of 1965. Under the terms of the loan, interest charged on each part of the loan will be at the World Bank's current rate when that particular part is committed for one I.C.I.C.I.'s projects.

At such time, the World Bank and I.C.I.C.I. will make an agreement on an amortisation schedule for repayment of that part of the loan. The amortisation schedules are to provide for semi-annual repayments and for final repayment of the entire $30 million loan not later than 1st December 1978. The loan is guaranteed by the Government of India.

(*Concluded from next column*)

tries and, against these, the U.K. had claims of £861 million, of which 40 per cent against sterling countries. Thus the *net* liabilities in private funds amount to £649 million only, of which £539 million is to sterling countries and only £110 million to non-sterling countries. Even if to this last figure is added the £395 million held by non-sterling central banks, the total *net* liability to non-sterling countries is only £505 million.

LONDON LETTER

STERLING BALANCES

BANK OF ENGLAND'S ANALYSIS

(*From Our Own Correspondent*)

LONDON, 15*th June*

WHETHER sterling is shown up as being more or less vulnerable than had hitherto been supposed as a result of the searchlight, which the Bank of England has just been casting on the balances, depends obviously on the view previously taken. Some City commentators think that the claims on sterling now appear as rather more frightening in relation to the U.K.'s resources, but your correspondent is not among them. The position on the contrary appears rather more reassuring.

What has happend is this: the Bank of England has been busy, obtaining much more detail about the U.K.'s external liabilities, and has just issued the result of its analyses. Most important, it is casting its net wider, embracing 170 banks and finance houses, as against the 150 previously covered; next, it is assessing gross liabilities and gross counter-claims separately—instead of just the net balance; next, it is eliminating long-term liabilities. The figures to be published henceforth will, therefore, give a comprehensive picture of the U.K.'s *short-term* liabilities and claims in sterling; while the half-yearly figures for the balance of payments will take into account any movements in long-term liabilities. The reason for making this distinction, between, for instance, British Government long-dated securities held by foreign central banks (included in the sterling balances) and the same securities held by the Crown Agents and other official bodies —except for note backing—(excluded), is that the first is regarded as being held for monetary purposes and the second for long-term investment purposes. And, if one were to include the latter, where would one stop? Foreigners make all sorts of investments in the U.K.—apart from securities, they lend to local authorities and invest directly in commerce and industry: in the event of panic liquidation of sterling these assets could be sold and the proceeds be offered for conversion, so in the end all overseas investment in the U.K. is a sterling liability against which, however, could be placed all the U.K.'s overseas investment!

New Technique of Computing

Thus, in future, the sterling balances figure (or, as it will be called the figure of U.K. sterling liabilities and claims) will be the total of sterling holdings for monetary purposes, either at the disposal of monetary authorities overseas or international organisations or held by private individuals by way of short-term investment—"hot money". One disputed gap remains: money deposited directly by overseas residents with finance houses and local authorities. This would seem to be as hot as any type of holding, but while the Bank reveals that at the end of last year the total was £175 million (£100 million from the sterling area and £75 million from non-sterling sources) it is being kept separate for the time being—all the more odd since the same money deposited with a U.K. bank and used by it in turn with the local authorities or with finance houses would be included!

At the end of last December the sterling balances were given as £4,106 million; under the new technique this is amended as follows: long-term investments held by the Crown Agents and others—deduct £307 million; liabilities in terms of sterling area currencies and not U.K. sterling—deduct £80 million; liabilities to the U.K. for acceptances (previously ignored)—deduct £166 million; total deductions £553 million; *net* liabilities on the new basis £3,553 million.

At the end of March 1963 the new *net* figure is £3,453 million (a drop of £100 million) and this is made up of liabilities of £4,345 million and claims by the U.K. of £892 million—it is these last figures which have caused some dismay, the first by being so large and the second by being so small, though these contradictory reasons were not held by the same people! On the contrary it is satisfactory to find that of the U.K.'s liabilities £2,227 million are held by Central banking institutions which have a sense of international responsibility and £608 million by international organisations. Of course, these funds can be drawn on, but they are not speculative. The privately-held sterling funds amount to £1,510 million of which 60 per cent were due to sterling coun-

(*Continued in previous column*)

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government to this issue has been obtained by an order No. R. 430-CCI/61 dated 13-3-1962 amended by letter No. R. 430-CCI/61-2043 dated 1-8-1962 of which complete copies are open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed with regard to them.

Application forms alongwith copies of the Prospectus can be had from the registered office of the Company or from the Underwriters, Bankers, Brokers whose names and addresses are given below.

PARTICLE BOARDS INDIA LIMITED

(INCORPORATED ON 11TH MAY 1961 UNDER THE COMPANIES ACT, 1956.)

Registered Office: **First Floor, Lakshmi Insurance Building, Sir Pherozshah Mehta Road, Fort, Bombay-1**

SHARE CAPITAL

AUTHORISED:

	Rs.
(i) 40,000 Redeemable Cumulative Preference Shares of Rs. 100 each	40,00,000
(ii) 60,000 Equity Shares of Rs. 100 each	60,00,000
	1,00,00,000

PRESENT ISSUE:

(i)	5,000 Redeemable (at par after 10 years) Cumulative Preference Shares of Rs. 100 each carrying a dividend of 9.3% per annum free of Company's tax, but subject to deduction of tax at source at prescribed rates	5,00,000
(ii)	25,000 Equity Shares of Rs. 100 each	25,00,000
		30,00,000

OUT OF THE PRESENT ISSUE:

(a)	The promoters have subscribed for 5,000 Equity Shares of Rs. 100 each for cash at par, upon which Rs. 50 per share is credited as paid up, payment having been received in cash	5,00,000
(b)	6,656 Equity Shares of Rs. 100 each to be credited as fully paid up are reserved for allotment to Messrs. G. Siempelkamp & Co., Krefeld, West Germany, against 30% of the F.O.B. value of the machinery payable to them	6,65,600
(c)	The Directors, their friends and associates have agreed to subscribe for and will be allotted 4,344 Equity Shares of Rs. 100 each for cash at par	4,34,400
		16,00,000

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION:

(i)	5,000 Redeemable (at par after 10 years) Cumulative Preference Shares of Rs. 100 each carrying a dividend of 9.3% per annum free of Company's tax, but subject to deduction of tax at source at prescribed rates	5,00,000
(ii)	9,000 Equity Shares of Rs. 100 each	9,00,000
		30,00,000

The Preference Shares will be redeemed at par on 30th June 1973 with option for the Company to redeem at par on or after 30th June 1970 after giving 3 months' prior notice to the Preference Shareholders.

TERMS OF PAYMENT:

Rs. 25 per share on Application.
Rs. 25 per share on Allotment.
Rs. 50 per share (balance) payable by one or more calls as may be determined by the Board of Directors.

The Company has not issued any debenture or other loan capital.

UNDERWRITERS FOR PREFERENCE SHARES

THE INVESTMENT CORPORATION OF INDIA LTD., Ewart House, Bruce Street, Bombay-1.

The entire issue of 5,000 Redeemable Cumulative Preference Shares of Rs. 100 each carrying a dividend of 9.3% per annum free of Company's tax, but subject to deduction of tax at source at prescribed rates has been underwritten by the Investment Corporation of India Ltd. Equity shares have not been underwritten.

PROPOSED ACTIVITIES AND LOCATION

The Company proposes to manufacture Particle Board and its bye-products out of firewood, logging and forest management wastes, industrial wood residues. Most of these waste materials which have not been exploited so far and have low economic value, can be profitably converted into particle board. Particle board is a very versatile board material and among others can be used in place of solid timber in the manufacture of furniture, besides its potential uses in the building industry as well as in other industries. In recent years the manufacture of particle board has developed at a very fast pace in advanced countries. At present there is no uptodate factory in India for the manufacture of Particle Board. It is estimated that there is an immediate minimum demand of 30,000 tons per year and that this will increase rapidly as indigenous supplies become available. The factory is located at Bhandup, Bombay.

An industrial licence No. L/36(2)/N-60/L Ind. dated 25th March 1960 has been obtained from the Central Government for the establishment of this new industrial undertaking. The Central Government has also granted to the Company Import Licence No. 991287/61/HQ.CG dated 31-1-62 for Rs. 24,65,000 for the plant and machinery required.

The licensed capacity of the factory will be 6,000 tons per annum but the layout has been arranged for subsequent expansion also.

The Company has entered into an agreement for technical assistance and supply of Plant and Machinery with Messrs. G. Siempelkamp & Co. of Krefeld, West Germany, leading manufacturers of particle board machinery.

PROGRESS SO FAR

The construction work of the factory buildings has already been taken up on hand and the main portion is expected to be completed before August so that erection of the machinery could start in August. Major portion of the machinery are already ready for shipment and shipment will be effected starting early June. Erection of the machinery will begin in August and will be completed by October. The factory is expected to go into production by October this year to get the benefit of one full year's working as the Company's financial year ends on 30th September.

An Application will be made to the Stock Exchange of Bombay for permission to deal in the whole of the issued Equity and Preference Shares and in due course for an official quotation.

APPLICATIONS FOR SHARES MUST BE IN THE PRESCRIBED FORM AND MUST BE FOR A MINIMUM OF 5 SHARES OR MULTIPLE THEREOF.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 24th JUNE 1963 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 29th JUNE 1963 OR EARLIER AS SOON AS SUBSCRIPTIONS APPROXIMATING THE AMOUNT ISSUED TO THE PUBLIC HAVE BEEN RECEIVED BUT NOT EARLIER THAN 26th JUNE 1963.

DEVELOPMENTAL ACTIVITIES OF STATE BANK OF INDIA

A FRESH AND BOLDER APPROACH NEEDED

THE primary consideration which weighed with the Government of India in deciding to nationalise the former Imperial Bank of India about nine years ago was that the institution should play a promotional role in the context of planned economic development of the country. Since then, the developmental activities of the State Bank of India—the new name that was given to the Imperial Bank—have included, besides opening banking offices in non-banking areas, the financing of small-scale industries and the co-operative movement. The actual financing of small units in industry by the Bank was started in 1956. To begin with, several 'pilot' centres were opened to experiment with the financing schemes. Since then, the Bank has made notable progress. Likewise, in regard to the financing of co-operative movement, the Bank has marched forward. The following table indicates the total outstanding loans made available by the State Bank and its subsidiaries in the past four years:

(In crores of Rs.)

	State Bank	*Subsidiaries*	*Total*
Small-scale Industries :			
December 1960 ..	3.7	1.1	4.8
December 1961 ..	5.1	1.5	6.6
December 1962 ..	6.0	2.3	8.3
March 1963	6.7	2.6	9.3
Co-operative Movement :			
September 1960 ..	5.5	2.2	7.7
September 1961 ..	6.6	1.0	7.6
September 1962 ..	8.5	1.9	10.4
March 1963	11.7	2.1	13.8

It will be observed from the above figures that the assistance obtained by small industries from the State Bank has nearly doubled in the past two years. The progress made by the Bank proper has been more encouraging than that shown by its subsidiaries. In the sphere of small-scale industries, the progress is attributable to several factors. The Bank, besides providing short-term credit, has been giving medium-term finance. A separate development department, set up at each local head office, attends to the financing of small industries, including term-loans and co-operative financing. The Bank has also introduced an Instalment Credit Scheme which is designed to assist the financing of equipment or machinery by small and medium-sized business engaged in approved manufacturing industries, that is, those primarily connected with defence. The period of repayment of loans is spread over nearly five years and the maximum amount is limited to Rs. 5 lakhs. The medium-term accommodation was extended to new units which had no previous connection with the Bank. Three units were sanctioned limits aggregating Rs. 2.02 lakhs during 1962-63.

In the context of the present emergency and the need for greater effort towards defence production, the Bank has come forward to meet the credit requirements of such small units as receive Government orders from the D.G.S. and D. Arrangements have been made through which the Liaison Officer of the National Small Industries Corporation in the D.G.S. and D. Office shall periodically furnish to the Bank the names of the units receiving orders. Similar arrangement has also been made by the Bank with the Ministry of Defence to receive names of such small-scale units from the Director General of Ordnance Factories, whose tenders have been accepted.

Credit Guarantee Scheme

The State Bank has been able to extend these facilities mainly because of the Credit Guarantee Scheme of the Government of India in respect of small industries. This Scheme, which came into force in July 1960, has been extended to cover the entire country and placed on a permanent footing since 1st January 1963. Thus, as on 31st March 1963, out of the total credit limits amounting to Rs. 13.02 crores sanctioned by the Bank and in force at centres covered by the Scheme, the issue of Guarantee Certificates covered Rs. 6.40 crores. The number of small units assisted by the Bank appears to be larger when the credit limits sanctioned are seen. The amount of credit actually sanctioned increased from Rs. 10.1 crores in 1961 to Rs. 11.8 crores in 1962 and the outstandings against these limits increased from Rs. 5.0 crores to Rs. 6.0 crores. The increase of Rs. 1 crore in outstandings when distributed over 3,000 new accounts, not to speak of old accounts, shows that the progress, really speaking, has been very negligible. The pace of utilisation of credit is also negligible, being just 50 per cent of the limits sanctioned.

The principal reason for the poor progress in the financing of small-scale industries is that the risk element continues to be great as before. The agent of the State Bank, in particular, and other commercial banks, in general, are reluctant to take risks, in view of the likely admonishment in the event of failure of the advance. It is well known that a large number of products manufactured by the small industries do not command a ready market. Again, the majority of small borrowers are individuals of small means. As such they find themselves exhausted financially by the time they set up the factory and lack sufficient funds to provide the requisite margins. This probably explains the low level of utilisation of the sanctioned limits. The other difficulties pertain to absence of adequate godown facilities in several places and inability of borrowers to offer any tangible security, in spite of the wide range of acceptable securities against which the banks are prepared to lend. The problem for a bank agent in the case of small industries is posed by the absence of any balance-sheet. Naturally, the agent can only notionally estimate the "means" position of the borrower, that is, only by market rumours. This makes the financing of small industries particularly difficult. It is no wonder that the financing of small industries, if a close look is taken, shows very poor progress. The Guarantee Scheme sponsored by the Reserve Bank has not, therefore, helped much in boosting credit facilities to small industries.

Removal of Handicaps

It is doubtful whether the financing of small industries would make progress without the removal of various bottlenecks and the relaxation of the principles of commercial bank lending. The problem of lending to small industries is akin to that of granting agricultural credit. The credit for small-scale industry should be related to the productive use of such credit, instead of to the ability of borrowers to furnish security. Unless a basic change is made in the concept of providing credit, small industries are unlikely to receive encouragement. What the Reserve Bank and the State Bank has been doing so far is to nibble at the problem only on the surface. The result, therefore, has been poor and unencouraging. It is to be hoped that the authorities concerned would pay attention and give serious thought to the suggestions made here.

In the sphere of co-operative credit, the Bank has been giving remittance facilities and also credit limits to co-operative banks other than land mortgage banks. Such credits are sanctioned mostly on a pledge basis. The credit limits actually sanctioned by the Bank increased from Rs. 15.8 crores to Rs. 22 crores during the year ended September 1962. The corresponding outstandings were Rs. 2.6 crores and Rs. 3.8 crores, respectively. These figures show that the utilisation of credits sanctioned has been very poor, reflecting again the reluctance of co-operative credit institutions to patronise the pledge of limits which any commercial bank gives to every individual. In 1962, the State Bank decided to grant advances to constituents against rural debentures. The credit limits sanctioned by the Bank to co-operative central land mortgage banks amounted to Rs. 3.4 crores in 1962, as against Rs. 90 lakhs in 1961, while the actual outstandings aggregated Rs. 1.5 crore, as compared with Rs. 19 lakhs. The outstanding advances given by the Bank to co-operative sugar factories and processing and marketing societies showed a decline, due to increased release of stocks of sugar in the case of the former and cancellation of unutilised limits in the case of the latter.

From the foregoing account, it is evident that the progress of the State Bank in the co-operative sphere has been equally tardy and halting. The main reason appears to be the fact that the Bank is prepared to give the same facilities to co-operatives as those accorded to any of its customers in its traditional business and it has not done anything to relax the conditions of advances, etc. for co-operatives.

In contrast to the much publicised progress, a close look thus reveals that the State Bank's progress in the financing of small industries and co-operatives has been very disappointing. It is disappointing not only in the context of the requirements of these vital sectors but even in achieving the limited objectives which the Bank has set for itself. The outstanding limits given by the State Bank to these two types of activity even after several years of experimentation account for less than one per cent of its total advances. The traditional conservatism and inhibitions which characterise the outlook of a commercial bank are probably the main impediment in the way of the State Bank making more marked progress.

When this is the state of affairs with the State Bank which has been nationalised specifically to provide finance for developmental purposes, the less said about the other banks the better. With the exception of a few regional banks, the majority of commercial banks do not wish to touch the financing of small industries even with a pair of tongs. The Credit Guarantee Scheme or no scheme, it is rather difficult to change the mentality of commercial bankers.

It would be worthwhile to start a separate financing corporation as part of the State Bank apparatus to devote attention to the financing of small industries and co-operatives. Just as in agricultural credit the provision of which is related to stimulating production, so in respect of commercial credit, such an approach should form the basic feature. The State Bank as it is situated is too inhibited by conservatism to experiment with the new principle. Unless the financing of small industries is reoriented on the lines suggested above, it would be difficult for any entrepreneur to start a new industry, as in Western countries, without adequate capital resources. In other words, credit to small industries and co-operatives must be production-oriented and not security-oriented.

AGRICULTURAL REFINANCE CORPORATION

The Agricultural Refinance Corporation Act, which provides for the establishment of an Agricultural Refinance Corporation, has been brought into force with effect from 1st May 1963. The Corporation is proposed to be established by 1st July next. The Corporation will be mainly a refinancing agency concerning itself with major projects of agricultural development which cannot be satisfactorily financed either by central land mortgage banks or by apex co-operative banks within their existing framework either on account of the quantum of finance involved or the terms of repayment. The schemes that may be considered by the Corporation will have to be compact ones, economically paying and susceptible of close and intensive supervision. Assistance from the Corporation may be available for schemes such as the following:

(a) Financing of the reclamation and preparation of land, so that, in particular, facilities for irrigation are fully utilised;

(b) financing the development of special crops such as arecanut, coconut, cashewnut, cardamom, orchards, vineyards, tea and coffee;

(c) development of mechanised farming, use of electricity through tube-wells, pumping sets, etc., and

(d) development of animal husbandry, dairy farming, pisciculture, poultry farming, etc.

Among other business that the Corporation may transact is the guaranteeing of deferred payments in connection with the purchase of capital goods from outside India by eligible institutions. The refinance facilities from the Corporation will be available to an eligible institution only against Government guarantees. However, the Corporation may waive the requirement of Government guarantee in cases where adequate collateral security is available. Central land mortgage banks, State co-operative banks and scheduled banks which are members of the Corporation are eligible for refinancing facilities from the Corporation which will work in close collaboration with the Reserve Bank of India.

The authorised capital of the Corporation is Rs. 25 crores divided into 25,000 shares of Rs. 10,000 each, of which 5,000 shares of the value of Rs. 5 crores will be issued in the first instance. Of these, 2,500 shares will be subscribed by the Reserve Bank, 1,500 by central land mortgage banks and State co-operative banks and 1,000 by scheduled banks, Life Insurance Corporation and insurance and investment companies. The shares of the Corporation will be guaranteed by the Central Government in regard to both repayment of principal and payment of a minimum annual dividend. The shares of the Corporation will be deemed to be trustee securities and will also be approved securities for the purpose of the Insurance Act, 1938 and the Banking Companies' Act, 1949. The Government of India will provide an interest-free loan of Rs. 5 crores, the repayment of which will commence after 15 years from the date of the loan. The Corporation is also authorised to raise resources by accepting deposits for periods exceeding twelve months and by issuing bonds and debentures.

The share subscription list of the Corporation will open on 1st July next and close on 31st July.

MINIATURE OILFIELD

Another new well is begun — "spudded-in", as the drillers say. Down goes the drill, and up come continuous samples of the rock formation being penetrated. The geologist gets a lot of information from these small rock cuttings, but solid cores can give him more. Cores are cylindrical sections cut out of the subterranean rock by a special tool. They enable the geologist to examine, among other things, the physical characteristics of the rock, such as its porosity and permeability.

Porosity depends on the arrangement of holes, or pores, in the rock ; the larger they are the greater room there will be for the oil. *Permeability* is the measure of a formation's ability to allow the oil to flow through it and into the well. Under ideal conditions, a core taken from an oil-bearing formation is almost a little oilfield in itself.

JUTE INDUSTRY IN THE FOURTH PLAN

OUTPUT TARGET FIXED AT 1.6 MILLION TONS

CONSIDERING that jute manufactures constitute India's largest earner of foreign exchange—they account for as much as one-fifth of the total value of all goods exported from the country every year—it is but appropriate that the perspective Planning Division of the Planning Commission has given a prominent place to the jute industry in the fourth Five-year Plan. The development programme drawn up for this industry envisages a production target of 1.6 million tons to be achieved by the end of the Fourth Plan, that is, 1970-71. The target represents a rise of 300,000 tons, as compared with the third Plan target of 1.3 million tons which was higher than the actual output of 1.02 million tons in 1960-61 (last year of the second Plan) by 278,000 tons. The second Plan, it may be noted here, had provided for only a marginal increase of 50,000 tons to 1.2 million tons, and even this increase was not achieved, as the actual output in 1960-61 was just 1.02 million tons. The basis on which the fourth Plan target of 1.6 million tons has been fixed is not known. It may, however, be safely guessed that, in suggesting this target, the Perspective Planning Division must have taken into account (*a*) the rise in the domestic requirements of jute goods, following the expansion in the production of agricultural commodities and other packagable goods, notably cement and fertilisers, and (*b*) the demand for jute goods in world markets under three heads, namely, packaging, floor-coverings and other industrial uses. It must have also borne in mind the competition that is likely to emerge in world jute goods trade, not merely from Pakistan, which is making an all-out bid to expand the capacity of its jute industry, but also from substitute materials, such as plastic and paper bags, as well as bulk handling.

Judging by the progress actually achieved in the first two years of the third Plan period, one can confidently expect the jute industry successfully to hit the production target of 1.6 million tons assigned to it under the fourth Plan. This is, however, subject to one important assumption and that is, that the industry will be assured of plentiful supplies of raw jute and mesta at reasonable prices. The Perspective Planning Division has fixed the production target for raw jute alone at 7.5 million bales (of 400 lbs. each), as against the third Plan target of 6.2 million bales and the actual output of 5.37 million bales in 1962-63. These figures exclude mesta, the production of which, it may be noted here, has gone up quite significantly in recent years. The crop actually harvested in 1962-63 is estimated at 1.52 million bales, as against 682,000 bales in 1952-53, the area under mesta being 348,000 hectares (1 hectare=2.48 acres), as against 195,000 hectares.

Productivity Poor

The additional raw jute output of 1.3 million bales can easily be obtained without any marked expansion in the area under this fibre. The total area under jute in 1962-63 is estimated at 848,000 hectares. The productivity of the lands now devoted to raw jute is rather poor and there is plenty of scope for augmenting it. The average all-India yield of raw jute per hectare is no more than 6.33 bales (1962-63) which is well below the average of as much as 9.16 bales obtained in East Pakistan during the season 1960-61. The yield, as well as the quality, of jute in India can be improved greatly, if more energetic action is directed towards provision of retting tanks and high quality seeds.

The jute mills are endeavouring their best to maintain output at as high a level as possible. At its meeting held at Calcutta on the 12th inst., the Committee of the Indian Jute Mills Association decided that the industry should continue to operate at the present maximum level of production for a further period of one month, that is, up to the end of July next, although the total stocks of mills at the end of May 1963 were substantially higher at 95,800 tons, as against 90,900 tons a month before and 84,100 tons a year before. The actual production of jute goods is currently running at an annual rate of over 1.2 million tons and it seems certain that the output will be stepped up to 1.3 million tons (the third Plan target) in the next two years. Every effort is being made to solve the shortage of spinning capacity for supplying yarns. Orders have been placed for large quantities of spinning and ancillary machinery. Simultaneously, modernisation of equipment for the post-spinning stages is progressing well. More and more broad looms are also being installed. During the seventeen months ended May last, 2,023 broad looms weaving wide hessian cloth for tufted carpet backing were installed and another 227 looms are expected to be put up in the remaining months of the year. Thus, by the end of December next, 2,250 broad looms will actually be working with an aggregate annual production capacity of about 135,000 tons on three-shift basis.

Offtake Larger

Production of jute goods, as already stated, is currently maintained at a high level. The quantity actually produced in the first five months of 1963 was 512,300 metric tons, as against the 483,400 tons produced in the corresponding period of last year. The mills have been prompted to maintain output at a high level not merely by the availability of adequate raw jute supplies but also by the encouraging trend of demand for both domestic consumption and export. Reflecting this trend, the aggregate despatches of jute goods in the aforesaid five-month period were higher at 499,300 tons, as against 451,200 tons a year before. The following table shows the month-by-month production and despatches of jute goods during the first five months of 1963 and 1962, as well as in the whole of 1962, 1961 and 1960:

(In metric tons)

	Production		Despatches	
	1963	1962	1963	1962
January	103,100	98,700	94,900	90,800
February	94,400	92,200	102,100	89,900
March	104,500	97,800	95,200	98,200
April	105,400	97,000	104,800	82,300
May	104,900	99,700	102,300	90,000
Total	512,300	483,400	499,300	451,200
Whole of 1962	1,186,800	..	1,151,300	..
„ „ 1961	970,300	..	991,200	..
„ „ 1960	1,088,442	..	1,058,800	..

The notable rise in jute goods production has been accounted for by hessian and other manufactures, while that of sacking has tended to decline. The rise was particularly marked in the case of hessian, the output of which in the first five months of 1963 was 217,700 tons, as against 189,400 tons. The production of other jute manufactures was 81,800 tons, as against 67,200 tons. The sacking output, however, was lower at 212,800 tons, as against 226,800 tons.

The continued improvement in the offtake of jute goods has been mainly on account of exports. The actual despatches for sales abroad during the January-April period aggregated 270,800 tons, a rise of 24,400 tons as compared with the despatches in the corresponding period of 1962. Despatches for domestic consumption have gone up by 11,400 tons to 126,200 tons. The table below indicates the position in respect of production, despatches and closing stocks of jute goods:

(In metric tons)

	January-May		Whole of	
	1963	1962	1962	1961
Production :				
Hessian	217,700	189,400	482,800	355,700
Sacking	212,800	226,800	551,800	483,700
Others	81,800	67,200	152,200	130,900
Total	512,300	483,400	1,186,800	970,300
Equivalent of jute consumption (000 bales)	2,918	2,754	6,735	5,458
Despatches :				
For exports	270,800	246,400	848,400	713,100
Of which :				
Hessian	149,600	127,800	433,500	332,900
Sacking	76,100	88,700	307,700	289,600
Others	45,100	29,900	107,200	90,600
For internal consumption	126,200	114,800	303,000	278,100
Of which :				
Hessian	19,600	16,600	44,200	36,300
Sacking	94,000	86,800	223,500	209,900
Others	12,600	11,400	35,300	31,900
Total despatches	397,000	361,200	1,151,400	991,200
Of which :				
Hessian	169,200	144,400	477,700	369,200
Sacking	170,100	175,500	531,200	499,500
Others	57,700	41,300	142,500	122,500
Closing stocks :*				
Hessian	32,300	27,100	22,700	16,100
Sacking	45,500	37,300	46,500	28,900
Others	18,000	19,700	13,600	10,700
Total stocks	95,800	84,100	82,800	55,600

Note :—Figures relating to despatches in the first and second columns are for the first four months of the years only.
* End of period.

It will be seen from the above figures that, during the first four months of 1963, as compared with the same period last year, exports of hessian were higher by as much as 21,800 tons at 149,600 tons, while those of sacking were lower by 12,600 tons at 76,100 tons. On this basis, sacking exports work out to an annual rate of just 228,300 tons, as against the actual shipments of 307,700 tons in 1962 and 289,600 tons in 1961. In 1956, it will be recalled, shipments of sacking cloth aggregated as much as 439,000 tons. The setback has been due to the keen competition offered by the Pakistan jute industry which enjoys the benefit of export subsidy bonus and low prices of raw jute. Unless the competitive capacity of Indian sacking cloth is strengthened, it may be priced out of world markets in the not too distant future.

THE MYSORE PAPER MILLS, LIMITED

Asiatic Buildings,
Kempegowda Road,
P.B. No. 570, Gandhi Nagar P.O.,
Bangalore 9.

12*th June* 1963

CIRCULAR—Notice for payment of III and Final Call on 10,00,000 Equity Shares (Right Issue).

TO THE SHAREHOLDERS,

It is notified for the information of the Shareholders of the above Company that the Directors of the Company have resolved to make the Third and Final Call of Rs. 3 (inclusive of the premium of 50 nP.) per Share and fixed 1st August 1963 as due date for payment of the III and Final Call.

Shareholders are requested to make the payment promptly. Shareholders are further requested to note that if the sum in respect of the Call money is not paid on or before the aforesaid due date, interest at 6% (six per cent) per annum shall be charged from the date appointed for the payment to the time of actual receipt of Call money without prejudice to the Articles of Association of the Company, whereby the Shares are liable to forfeiture in case of non-payment.

A separate notice in respect of the above call is also being sent to shareholders individually.

By Order of the Board,
C. V. RAMACHANDRA RAO,
Secretary.

TEXTILE ACTION GROUP'S STATEMENT

REASONABLE PRICE SCHEME WITH QUALITY CONTROL SUGGESTED

From Our Special Correspondent

MANCHESTER, 11*th June*

MANCHESTER LETTER

TO borrow a phrase from the cricketer's repertoire—a very topical habit in this part of the world during the past few days when the first Test Match against the West Indies has been taking place—Lancashire intends to set in attacking field when the country's industrial representatives put the President of the Board of Trade in to bat on Friday. Mr. Erroll is visiting Manchester for talks with cotton trade leaders. Similar occasions in the past have sometimes been allowed to pass in too tranquil a fashion, even when the trade has had a good case to argue. Perhaps a little afraid to speak too forcibly; perhaps a fear of antagonising possible "friends at court" have resulted in an unexpected mildness of manner.

Not without significance, therefore, is the reawakening, after months of silence, of the Textile Action Group which, in its earlier days, tended to present a rather exaggerated version of the trade's decline. Now, at the psychological moment, a far more mature and reasoned document is presented by the Group, which is known to be supported financially by many leading firms and individuals in the industry. Summarising the suggestions made "to put the cotton industry on an economic basis," the main points are:

All forms of dumping must be ruthlessly suppressed; a reasonable minimum price scheme with quality control should be operated by an independent body, without encouraging price levels sufficient to give guaranteed profits to inefficient firms; control of imports could be regulated by an import buying commission, if desired, but all tariffs and quotas should be entirely reciprocal with other countries, whether foreign or Commonwealth.

The Group, in its lengthy statement, elaborates on these themes, ending with a spirited defence of Lancashire's frequently criticised mill managements. "We categorically refute the charge that, by comparison with our overseas competitors, the majority of U.K. firms are inefficient producers, whether recently re-equipped or not," it declares and adds: "Given fair trading on the part of the aforesaid competitors, we will very quickly prove it."

Need for Imposed Discipline

Britain's system of merchant converters, the statement goes on to point out, although much maligned, is the envy of the world. The reason the foreigner has been so quickly able to exploit the British market is because of our ready-made system of merchant converters, who being denied access to foreign markets have turned importers to take advantage of cheap dumping prices. Finally, the Group accepts the need for imposed discipline. "We do not see why it should not be an offence to dissipate the country's wealth by selling at a loss," it says. This follows an earlier suggestion that it should be made illegal to sell below the cost of production, apart from sub-standard goods.

One aspect of the quota system which the Group mentions only in passing is the question of categorisation. This, however, is likely to be a major plank in the argument submitted to the President by the Cotton Board. There is growing support for the idea that the ceilings should be broken up into a number of categories, to avoid a sudden thrust from abroad totally incapacitating a defenceless section.

Summer Summary

With the arrival of Whitsuntide, most people, whether interested in textiles or not, begin to think seriously about holidays, so that an assessment of conditions in the industry hardly comes amiss. At such a time, also thoughts automatically switch to the weather, which has certainly a very important part to play in stimulating demand for goods made in the local mills. Rising overheads, exemplified by increased insurance charges and the higher wages which have to be paid at the end of this month, must automatically bring renewed attempts by producers to secure better terms, a matter of serious concern to most spinners and weavers whose experience in this department for many months has been singularly unfortunate. Even during the freer demand which has been encountered from March onwards, the rate of margins has been far from satisfactory.

All the same, the employment of more machinery on current contracts and the persistent re-development of labour to encourage economic working have been aspects of the trade which should not be overlooked, particularly by those who are always ready to carp and criticise. Some of the initial claims under the re-equipment programme appeared to be exaggerated at the time, but the intervening state of trade has not been calculated to offer much incentive for millowners to make their commitments any heavier.

Varying Reports

Within the different sections of the trade, varying reports have been received over the past few weeks as to the amount of business actually recorded. The offtake has been larger and the call for supplies has broadened without arrangements being made for bulk buying to be completed in many instances. Clearances from many of the major distributing sources have proceeded on a more satisfactory basis than at the same time in earlier years and, coupled with the recognised reduction of supplies in the pipeline, it is not surprising that merchants have taken a less jaundiced view of the outlook. It cannot be said that the turnover in fine goods, particularly in yarns, has broadened to the same extent as purchasing in standard medium fabrics, but this is a trend of trade which appears to be here to stay.

Latest reports giving financial details of trading up to the end of the first quarter of the year are almost uniform in providing a depressing picture. Losses have tended to outweigh gains and the complaints still being voiced by salesmen do not indicate any rapid change in this particular aspect of the situation. In the circumstances, the feelings of those who have to render chairmen's statements can be imagined. Their reluctance to prophesy can be understood; their aggravation at the undermining of prices by further pressure from overseas competitors in the home market can be appreciated and supported.

April was another month of smaller overseas trade, both on the import and export side. A reduced level of business was recorded in the official Board of Trade accounts and, apart from September last year, the earnings from exports were at the lowest level recorded since the war. In the first four months of this year, shipments of cotton yarns and manufactured goods were valued at little more than £15 million, less than half the corresponding total in 1957. In comparison, the cost of imports of woven cotton cloth alone in the same period was over £18 million, but this figure should be judged against the peak of foreign cloth purchases in 1961, when expenditure exceeded £24 million in the first four months of the year.

So far as cloth exports are concerned, 17,361,000 sq. yards were shipped abroad, bringing the four-month total to 75,760,000 sq. yards, as against 83,725,000 sq. yards in 1962. Even the recently rising trend of yarn and thread shipments took a downward turn at 1,672,000 lbs., the end-of-April total being 7,463,000 lbs., as against 7,063,000 lbs.

Imports Still Up

Although the volume of arrivals of grey and finished cotton cloth was the smallest for any month so far this year at 48,903,000 sq. yards, it was still nearly 8 million yards higher than in the same month of 1962. Total imports for the four months were 224,033,000 sq. yards, as against 188,185,000 sq. yards last year.

Grey unbleached material during this period came in to the extent of nearly 170 million sq. yards, a rise of nearly 30 million sq. yards on the 1962 level. Supplies imported from India were nearly 10 million yards up at 66,257,000 yards, while a similar increase occurred in shipments from Hong Kong at 28,873,000 yards. Arrivals from Pakistan showed an even bigger rise at 22,344,000 yards, as against 8,849,000 yards. The entry of Chinese grey cloth also doubled compared with last year at 12,145,000 yards.

In comparison, the rise in purchases of finished fabric was less noticeable, being only 4 million yards higher than in 1962 at 54,253,000 yards. The chief supplier was Hong Kong, with 12,241,000 yards, as against 7,015,000 yards.

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

FIFTH ANNUAL REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1962, together with the Auditors' Report.

	Rs. nP
During the year the working of the Bank has been satisfactory and after making the necessary and usual provisions the Bank has made a profit of Rs. 3,48,308.12. To this has been added the balance of Rs. 10,089.83 brought forward from previous year, making a total sum of	3,58,397.95
The following appropriations have been made :—	
Amount provided for Taxes	1,72,000.00
Amount provided for Gratuity	26,000.00
Amount transferred to Reserve Fund	75,000.00
Amount transferred to Contingency Reserve	....
The Directors now propose :—	
To pay dividend for the year ended 31st December, 1962, at the rate of Rs. 1.50 per share subject to deduction of tax at the prescribed rates which will absorb	75,000.00
To carry forward to the next year's account	10,397.95
Total .. Rs.	3,58,397.95

Her Highness Maharani Vijaya Raje Scindia being out of India has not signed the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1962, and the Directors' Report to Shareholders.

Under Article 149 of the Articles of Association of the Company, Directors Her Highness Rajmata Vijaya Raje Scindia and Shri Ram Babu Vaishya retire by rotation but are eligible and offer themselves for re-election.

The Directors convey their thanks to all the constituents of the Bank for their support to the Institution and place on record their appreciation of the services rendered by the Manager and Staff of the Bank.

The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

By Order of the Board,

BRIJRAJ NARAIN,
RAM BABU VAISHYA,
LALCHAND B. SETHI,
D. P. MANDELIA,
} *Directors.*

GWALIOR, *30th March*, 1963.

AUDITORS' REPORT TO THE MEMBERS

We have audited attached Balance Sheet of the Krishnaram Baldeo Bank Private Limited, as at 31st December, 1962, and also the annexed Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the audited returns from all the branches.

We report that :—

(a) we have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books ;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account ;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet together with the notes thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

GROWTH OF GENERAL INSURANCE GATHERS MOMENTUM

INDUSTRIAL PRODUCTION LAGS BEHIND

THE rate of growth of general insurance during the two years 1960 and 1961 has been faster than the rate of growth in industrial production. This is borne out by the figures published in the latest issue (1962) of *The Indian Insurance Yearbook*, a brief reference to which was made in our last issue (*vide Commerce* dated 15th June 1963, page 1047). Thus the index number of general insurance (Base 1951=100), which stood at 157.9 in 1959 increased by 21.3 points to 179.2 in 1960 and by 21.4 points to 200.6 in 1961. As compared with this, the index number of industrial production, which stood at 152.1 in 1959, rose by only 17.6 points to 169.7 in 1960 and by only 11.5 points to 181.2 in 1961. This conclusion is, however, contrary to that indicated by the provisional figures for 1960 given in the *Indian Insurance Yearbook* 1961, published last year. According to the latter, the index number of general insurance increased from 157.9 in 1959 to 169.7 in 1960 (as against the revised figure of 179.2), that is, by 11.8 points, whereas the index number of industrial production increased by 18.4 points from 151.9 to 170.3 during the same period. There is thus a wide divergence between the provisional and final figures, inspite of the fact that even the provisional figures are made available one and a half year and the final figures two and a half years after the close of the accounting year to which they relate. This gap renders the provisional figures unreliable even as a rough indication of the trend of business. Could not something be done to bring the provisional figures nearer the final figures and to make them available earlier than at present?

Rise in Premium

The rise in index number of general insurance reflects the increase in premium. Thus the gross premium written direct in India during 1961 in all the three classes of insurance by Indian insurers, aggregating Rs. 31.25 crores, was double that in 1956 when gross premium amounted to Rs. 16.49 crores. Gross premium written direct in India by non-Indian insurers in 1961 amounted to Rs. 12.05 crores, comprising Rs. 5.63 crores in the fire department, Rs. 2.93 crores in the marine department and Rs. 3.49 crores in the miscellaneous department, as compared with a total of Rs. 9.58 crores in 1956. Thus the rate of growth of gross premium written by Indian insurers was faster than that of non-Indian insurers. This is reflected in the percentage share of Indian and non-Indian insurers in the total gross premium. The share of Indian insurers in the total increased from 63.2 per cent in 1956 to 72.2 per cent in 1961, while that of non-Indian insurers declined from 36.8 per cent in 1956 to 27.8 per cent in 1961.

Growth of net premium also reveals same pattern. Total net premium in India of Indian insurers in 1961, aggregating Rs. 23.50 crores, as against Rs. 9.06 crores in 1956, accounted for 73.6 per cent of the total net premium in India of Rs. 31.94 crores. The share of non-Indian insurers amounted to Rs. 8.44 crores (as against Rs. 6.98 crores or 43.5 per cent in 1956), which works out to 26.4 per cent. Thus during the six years 1956-61, the share of non-Indian insurers in the total net premium written in India declined from 43.5 per cent to 26.3 per cent while that of Indian insurers rose from 56.5 per cent to 73.6 per cent. The two-column table at the end indicates the trend of gross and net premium in India of Indian and non-Indian insurers.

Gross premium written direct outside India by Indian insurers amounted to Rs. 9.55 crores, comprising Rs. 2.50 crores in the fire department, Rs. 2.09 crores in the marine department and Rs. 4.96 crores in the miscellaneous department. The net premium income outside India of Indian insurers increased from Rs. 14.44 crores in 1960 to Rs. 15.97 crores in 1961. This was made up of Rs. 7.72 crores in the fire department, Rs. 2.64 crores in the marine department and Rs. 5.61 crores in the miscellaneous department.

The breakdown of premium according to the class of business reveals some interesting trends.

The proportion of fire insurance business in the total gross premium written direct in India by Indian insurers has fallen from 45 per cent in the year 1956 to 34 per cent in the year 1961 and the proportion of miscellaneous insurance business has gone up from 31 per cent in the year 1956 to 46 per cent in the year 1961, while the proportion of marine insurance business has fallen from 24 per cent in the year 1956 to 20 per cent in the year 1961. This trend is the result of a faster increase in the gross premium written direct in India in miscellaneous insurance business, as compared with the increase in fire and marine insurance business.

In the gross premium written direct outside India by Indian insurers, the proportion of fire insurance business has decreased from 35 per cent in the year 1956 to 26 per cent in the year 1961 and the proportion of marine insurance business has decreased from 32 per cent in the year 1956 to 22 per cent in the year 1961 while the proportion of miscellaneous insurance business has gone up from 33 per cent in 1956 to 52 per cent in 1961. This is because the gross premium written direct in miscellaneous insurance business during the year 1961 is more than twice that written in the year 1956, while the gross premium written direct in the other two classes during the year 1961 is only slightly more than that written during the year 1956.

For the non-Indian insurers, 47 per cent of the total gross premium written direct in India during the year 1961 came from fire insurance business, 24 per cent from marine insurance business and 29 per cent from the miscellaneous insurance business. The composition during the year 1956 was 49 per cent for fire, 28 per cent for marine and 23 per cent for miscellaneous insurance business. The change in the proportion of marine and miscellaneous insurance business is accounted for by the fact that the increase in premium income in fire and miscellaneous insurance business in the year 1961 over that in 1956 is much greater than that in marine insurance business.

An analysis of the underwriting experience shows that the claims ratio (the ratio of claims to net premium) was higher in all classes of business for Indian insurers, as compared with non-Indian insurers. Expenses of management, including commission, of Indian insurers were, however, lower in all the three classes of insurance. Indian insurers allocated a higher percentage of net premium to reserves than non-Indian insurers in all classes of business. The following table illustrates the position:

Underwriting Experience

(Percentages)

Ratio to net premium income of	Fire		Marine		Miscellaneous	
	Indian insurers	Non-Indian insurers	Indian insurers	Non-Indian insurers	Indian insurers	Non-Indian insurers
Net claims ..	37.0	19.8	73.0	55.5	50.5	42.6
Expenses of management including commission ..	42.2	48.7	25.6	36.8	36.9	45.8
Increase in reserves ..	5.0	3.8	7.7	..	8.0	2.8
Miscellaneous outgo ..	3.6	0.7	1.0	1.4	1.0	0.6
Balance	12.2	27.0	—7.3	6.3	3.6	8.7
Total ..	100.0	100.0	100.0	100.0	100.0	100.0

Income and Outgo

The total income of all Indian insurers amounted to Rs. 40.18 crores. This was made up of net premium income in India of Rs. 23.50 crores, net premium income outside India of Rs. 15.97 crores, interest, dividends and rents of Rs. 0.67 crore and the balance of Rs. 0.04 crore from miscellaneous sources. Their total outgo was Rs. 34.76 crores, of which Rs. 19.34 crores related to claims, Rs. 5.53 crores to net commission, Rs. 9.10 crores to expenses and Rs. 0.79 crore to miscellaneous outgo. Of the balance of Rs. 5.42 crores, Rs. 3.57 crores were absorbed by the increase in reserves for unexpired risks and additional reserves while Rs. 1.85 crore were transferred to the profit and loss account. This profit of Rs. 1.85 crore, together with a deficit of Rs. 0.04 crore brought forward from last year (after payment of Rs. 0.98 crore as dividends for the previous year), and amounts of Rs. 1.21 crore and Rs. 0.44 crore earned by way of interest, dividends and rents (not relating to any particular class of insurance business) and miscellaneous income respectively, amounting in all to Rs. 3.46 crores, was appropriated in the profit and loss accounts and in the profit and loss appropriation accounts as follows: Expenses of management Rs. 0.12 crore, taxes paid and provided for Rs. 1.42 crore, transfers to particular funds or accounts Rs. 0.59 crore, dividends for the year 1961 paid or provided for Rs. 0.30 crore, miscellaneous outgo Rs. 0.20 crore and balance carried over Rs. 0.83 crore.

Section 40C

The position in respect of contravention by insurers of the legal limitation on expenses in 1961 was better than in 1960. The number of groups (parent and subsidiary companies taken together) of Indian as well as non-Indian insurers, who contravened the provisions of Section 40C of the Insurance Act during 1961, was less than in the year 1960. About one-third of the groups of insurers, who contravened the provisions during 1960, were administered a warning in terms of Section 64M(2) of the Insurance Act in respect of the contravention. Of a total of 116 groups of both Indian and non-Indian insurers, who transacted business during 1961, 32 groups contravened the provisions four or more times during the years from 1956 to 1961; 28 of these were warned once or more in respect of the years 1956 to 1960. The groups of insurers who spent less than the basic limits in terms of Rule 17E of the Insurance Rules, 1939, wrote a greater proportion of the total gross direct premium income in India in 1961, as compared with 1960. The aggregate experience of all groups shows that there is a sharp rise in the saving during 1961 as compared with 1960.

Assets

The total assets of Indian insurers, as on 31st December 1961, amounted to Rs. 72.69 crores, as compared with Rs. 64.38 crores and Rs. 57.04 crores at the end of 1960 and 1959, respectively. As on 31st December 1961, 10.7 per cent of the total assets were invested in securities of Government and public authorities, 2.7 per cent in foreign Government securities, 31.6 per cent in shares and debentures of Indian companies, 2.0 per cent in land and house property, 22.4 per cent in deposits, cash and stamps, 1.1 per cent in loans, 0.4 per cent as accrued and outstanding interest and 7.0 per cent in miscellaneous assets. The balance of 22.1 per cent was agents' balances, outstanding premiums and amounts due from other insurers.

The total assets in India of the non-Indian insurers, as on 31st December 1961, amounted to Rs. 12.41 crores, of which 20.0 per cent were invested in securities of Government and public authorities, 20.1 per cent in shares and debentures of Indian companies, 2.8 per cent in land and house property, 37.2 per cent in deposits, cash and stamps, 1.5 per cent in loans, 0.2 per cent as accrued and outstanding interest and 9.6 per cent in miscellaneous assets. The balance of 8.6 per cent was agents' balances, outstanding premiums and amounts due from other insurers.

WORKING RESULTS OF FIVE GENERAL INSURANCE COMPANIES

NEW INDIA WRITES RECORD PREMIUM

FOR general insurance business, 1962 was, on the whole, a favourable year. Although the Chinese aggression on India and its repercussions on industry, in particular, and the economy, in general, have had their effect on the business of general insurers towards the close of the year, the overall experience during the period was generally satisfactory. The working results of the companies presented in tabular form on this page reflect this. The New India Assurance Company, Ltd. (Managing Director: Mr. B. K. Shah, Bombay), the largest general insurance company in the private sector and a market leader, recorded a sizable increase in net premium from Rs. 12.65 crores in 1961 to Rs. 13.67 crores in 1962, a rise of Rs. 1.02 crore. It must be noted that this increase has taken place despite the reduction in fire premium with effect from 1st July 1962. The marine and miscellaneous departments accounted for the bulk of the increase in premium, Rs. 49 lakhs and Rs. 48 lakhs respectively, while the increase in the fire department was only of the order of Rs. 5 lakhs.

The combined claims ratio (for all the three classes of insurance) was, however, higher at 53.07 per cent, as against 50.3 per cent in 1961, thanks to the adverse experience in respect of reinsurance acceptances from the U.K. and the Continental markets. Commission and expenses, too, were fractionally higher at 36 per cent, as compared with 35.7 per cent in the previous year. Consequently, the underwriting profit showed a less than proportionate rise from Rs. 1.03 crore in 1961 to Rs. 1.04 crore in 1962. This works out to 7.6 per cent of net premium income in the year, as compared with 8.1 per cent in 1961. The gross profit amounted to Rs. 1.40 crore, as against Rs. 1.28 crore in 1961. The net profit, after making provision for taxation of the order of Rs. 67.34 lakhs, as against Rs. 58.95 lakhs, in the previous year, aggregated a little over Rs. 73 lakhs, as against Rs. 74.6 lakhs in the previous year.

The Directors have recommended payment of a dividend of Rs. 4.50 per share, which will absorb Rs. 42.7 lakhs, and a bonus of Rs. 1.20 per share, both subject to deduction of tax. The bonus is paid out of the capital reserve built up from the compensation received from the Life Insurance Corporation of India. The net distribution thus amounts to Rs. 3.99 per share, same as in the previous year.

Net premium in the fire department, as can be seen from the table, increased by Rs. 5 lakhs to Rs. 4.47 crores. Claims ratio was higher at 44.5 per cent, as against 37.3 per cent in 1961. Expenses of management, taxes and other charges increased by 0.6 per cent during the year, as compared with 1961, while commission declined by 1 per cent. As a result, the overall cost of the department declined by 0.4 per cent as compared with 1961. After earmarking Rs. 1.79 crore as reserve for unexpired risks, being 40 per cent of premium, and Rs. 44.72 lakhs as additional reserve, making in all Rs. 2.24 crores, the account shows a surplus of Rs. 59.90 lakhs.

Net premium in the marine department during the year under review was Rs. 49 lakhs higher at Rs. 2.93 crores. The claims experience was far more favourable than in 1961, the ratio being only 60 per cent as compared with 74.1 per cent in 1961. Commission was a shade higher, while expenses of management remained the same as last year. After providing Rs. 2.93 crores as reserve for unexpired risks, being 100 per cent of premium, a sum of Rs. 6.9 lakhs has been transferred to the profit and loss account, as against the loss of Rs. 20.7 lakhs in the previous year.

Net premium in the miscellaneous department aggregated Rs. 6.27 crores, an increase of about Rs. 48 lakhs over the previous year. Claims ratio was higher at 57.4 per cent as compared with 50.2 per cent in 1961. Commission and expenses of management were also higher, by 0.7 per cent and 0.9 per cent respectively. As a result of these higher costs the underwriting profit showed a decline from Rs. 51.1 lakhs in 1961 to Rs. 37.4 lakhs in 1962.

The departmental contribution to the profit and loss account aggregates Rs. 1.04 crore. After taking into account other income and outgo, the gross profit amounts to Rs. 1.40 crore which, after taxation, leaves a net profit of Rs. 73 lakhs, as against Rs. 74.6 lakhs in the previous year. This, together with Rs. 3.8 lakhs brought in, makes available for distribution a sum of Rs. 76.9 lakhs. Of this, a sum of Rs. 3.5 lakhs has been transferred to the general reserve, Rs. 4.7 lakhs to the gratuity reserve, Rs. 10 lakhs to the dividend equalisation reserve and Rs. 15 lakhs to the exchange reserve and Rs. 43.7 lakhs to the dividend reserve.

As a result of the year's operations the funds of the Company increased by Rs. 93 lakhs. The Company had, as on 31st December 1962, capital and reserves aggregating Rs. 13.49 crores, as against Rs. 12.56 crores at the end of the previous year.

Concord of India

The combined net premium in the fire, marine and accident (miscellaneous) department of the Concord of India Insurance Company, Ltd. (Managing Director: Mr. N. M. Cole, Calcutta) during the year ended 31st December 1962 aggregated Rs. 85.20 lakhs, a rise of about Rs. 13 lakhs over 1961. Only the fire and accident departments participated in the increase in net premium which, however, more than offset the slight decline in premium in the marine department. The fire department showed an underwriting profit of Rs. 83,187, and the accident department of Rs. 3.37 lakhs, while the marine department suffered a loss of Rs. 1.74 lakhs. The net underwriting profit amounted to Rs. 2.46 lakhs. The net profit, after making provision for taxation, was Rs. 2.74 lakhs, as against Rs. 3.91 lakhs in 1961. The dividend has, however, been maintained at Re. 1 per share, subject to tax, the same as in the previous year.

Indian Mercantile

The net premium of the Indian Mercantile Insurance Company, Ltd. (Manager and Secretary: Mr. C. M. Telivala, Bombay) in the three departments, namely, fire, marine and miscellaneous taken together, recorded a small rise of Rs. 2.75 lakhs for the year ended 31st December 1962, as compared with the previous year. The overall claims experience was, however, less favourable than in the previous year, the combined ratio being 43.2 per cent in 1962, as against 41.9 per cent in 1961. Commission and expenses too were higher at 43 per cent, as against 41.7 per cent in the previous year. The underwriting profit, after maintaining the reserve for unexpired risks at 50 per cent of premium in the fire and miscellaneous departments and 100 per cent of premium in the marine department, aggregated Rs. 5.73 lakhs, as against Rs. 4.94 lakhs in the previous year. Net profit, after earmarking a sum of Rs. 4.25 lakhs as provision for taxation, amounted to Rs. 4.01 lakhs. The Directors have recommended a dividend of Rs. 7.50 per share of Rs. 50 paid up, subject to deduction of tax (as against Rs. 6 per share of Rs. 40 paid up in the previous year) which will absorb Rs. 3.17 lakhs.

Sterling General

For the Sterling General Insurance Company (Chairman and Managing Director: Mr. M. N. Seth, New Delhi) the past year was a very favourable one; "the best year we have had for some time," to quote the Chairman. Although both gross and net premium showed only a marginal increase, the claims experience was extremely favourable, thanks to the steps taken in the past to weed out uneconomic accounts. The combined claims ratio (for all the three classes of business taken together) declined from as much as 79 per cent of net premium in 1961 to about 56 per cent in 1962. Commission and expenses of management too were lower. Consequently, the year's operations resulted in an underwriting profit of Rs. 1.81 lakh, as against the loss of Rs. 0.85 lakh in the previous year. The reserve for unexpired risks is 40 per cent of net premium in the fire, marine and miscellaneous departments. Additional reserves are maintained for all the three departments. The gross profit, after providing for all expenses, is Rs. 4.04 lakhs, tax paid and provided for aggregate Rs. 1.54 lakh, leaving a net profit of Rs. 2.51 lakhs, to which had been added Rs. 1,508 brought in, making available a sum of Rs. 2.52 lakhs for distribution. Of this, Rs. 75,000 has been transferred to the general reserve, Rs. 66,200 towards provision for depreciation on investments and Rs. 17,500 to gratuity fund. The proposed dividend of 6 per cent on ordinary shares and 10 per cent on preference shares, both subject to deduction of tax, will absorb Rs. 0.92 lakh, leaving a balance of Rs. 1,687 to be carried forward.

New Great

A sizable increase in net premium income was recorded by the New Great Insurance Company, Ltd. (General Manager: Mr. M. G. Mody, Baroda) for the year ended 31st December 1962. The bulk of the increase, as much as Rs. 10 lakhs out of a total of Rs. 13 lakhs, was accounted for by the fire department which showed an underwriting profit of Rs. 9.28 lakhs. Both the miscellaneous and marine departments were in deficit, the underwriting loss having been of the order of Rs. 1.04 lakh and Rs. 3.64 lakhs, respectively. The net underwriting profit, after maintaining reserves for unexpired risks at 50 per cent of premium in the fire and miscellaneous departments and 100 per cent in the marine department, aggregated Rs. 4.60 lakhs. The net profit, after earmarking Rs. 3.35 lakhs as provision for taxation, aggregated Rs. 3.42 lakhs, to which is added Rs. 21,078 brought in, making available Rs. 3.63 lakhs for distribution. Out of this, a sum of Rs. 40,000 has been transferred to staff gratuity account. The proposed dividend of Rs. 3 per share, subject to deduction of tax, will absorb Rs. 3 lakhs. The balance of Rs. 22,823 is carried forward.

THE INDIA UNITED MILLS LIMITED

CHAIRMAN, MR. M. D. BHAT'S SPEECH AT ANNUAL MEETING

REVISION IN STRUCTURE OF CLOTH PRICES OVERDUE

THE view that, as the cost structure of the cotton mill industry has substantially changed since 1960-61, revision in the structure of cloth prices was overdue, was expressed by Mr. M. D. Bhat, Chairman of the India United Mills Limited, in his speech at the Forty-third Annual General Meeting of the Company held at Bombay on Monday, 17th June 1963. Mr. Bhat stated that, although the cost of cotton, stores, chemicals, etc., was rising, cloth prices continued to be regulated in accordance with the formula voluntarily fixed by the industry in September 1960. Consequently, the profits of several mills had fallen, the fall being particularly steep in the case of some of the coarse and medium count mills. His Company, he said, had to make distress sales in the basic period and, though more than two years had passed, it was still suffering from the initial handicap. Old and obsolete machinery, according to Mr. Bhat, presented difficulties in producing better and finer varieties of cloth for which there was good demand. He, however, hoped that, as the old machinery was being gradually replaced by new machinery, the Company would be better equipped to introduce new and popular sorts and to compete successfully with other mills producing similar types of cloth.

The following is the full text of Mr. Bhat's speech:

GENTLEMEN,

I have great pleasure in extending to you a cordial welcome to the forty-third annual general meeting of the Company. The Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st December 1962 have been in your hands for some time and, with your permission, I propose to take them as read.

The working results for the year show a profit of Rs. 86.62 lakhs. This is subject to provisions for depreciation, taxation and bonus. I invite your attention to the appropriations under different heads in the Directors' report. These include Rs. 13.54 lakhs for depreciation, Rs. 3.26 lakhs for development rebate, Rs. 15 lakhs for taxation and Rs. 4.30 lakhs for balance of bonus liability for 1961.

Rising Production Costs

It is recognised that many mills have done relatively better. At the last annual general meeting, I had stated that the working profits for 1962 would be about two-thirds of those for 1961. I regret that the profits did not come up to my forecast, which was based on the working of the first six months. During the latter half of the year, however, there was a marked deterioration in the market conditions. On account of acute shortage of cotton, the position of supplies became critical from August to November and, although the closure of textile mills was avoided, the indifferent qualities of the left-over cottons and the rising prices seriously affected the working results for the period from July to December. The situation was further aggravated in the last quarter owing to the Chinese aggression which caused a severe dislocation in the cloth trade, particularly in the North-Eastern States. The annual consumption of Indian cottons in your mills now exceeds one lakh bales of various types. Any restrictions on supplies or any rise in prices of cottons would entail a serious handicap to your mills. The 1962 prices of cottons were about 11 per cent to 12 per cent higher than those in the previous year. The increased dear food allowance and further increase, from 1st January 1962 in the basic wages according to the recommendations of the Central Wage Board, meant an overall increase of Rs. 75 per worker for the year in the wage bill. The cost of stores, colours and chemicals has been steadily rising. Even after taking into account the incentives, the export prices were unremunerative. All these factors contributed to the lowering of the profits during 1962.

The textile industry has been asked to strive hard and to export cloth and yarn equivalent to 12½ per cent and 3 per cent, respectively, of the value of their annual turnover. The Indu Mills tried their utmost to increase their exports. During certain months of the year, more than 30 per cent of the total number of looms worked only on export sorts. On account of old and obsolete machinery, however, the sub-standard production and rejections were higher and the prices realised for export varieties were much below cost and I regret to say that it was not possible to fulfil our export obligations fully.

Bonus

May I invite your attention to paragraph 1(c) in the Directors' report relating to bonus. The question of the total quantum of bonus payable by the textile mills in Bombay for 1959-61 was decided under the Mediation Award of the Chief Minister of Maharashtra and the distribution of bonus amounts among the various mills was decided upon by the Millowners' Association. As against the provisions of Rs. 6.50 lakhs for 1959 and Rs. 7.25 lakhs for 1960 made on the previous basis, the total amount payable under the Mediation Award came to Rs. 41.92 lakhs, that is, Rs. 28.17 lakhs in excess of these provisions. The 1961 bonus also has been on a liberal scale. Payment of the bonus for 1959 and 1960 in 1962 and for 1961 in 1963 has imposed a heavy burden on our finances. The system of bonus has been in vogue in India for some decades but its operation has been controversial. The Bonus Commission has now completed its investigations and would submit its report to the Government of India shortly. It is to be hoped that, as a result of the recommendations of the Commission, a procedure will be devised for fixing the quantum of bonus and for its payment which will eliminate friction and give satisfaction to both labour and management.

The rise in wage bill is an inevitable feature of a developing economy. It is, however, of vital importance to see that such rise is commensurate with and justified on the basis of increased productivity. In the textile industry, it is observed that cost and taxation have risen, while production and earnings have remained almost steady. The effect is that reserves are shrinking and the capacity to replace old and obsolete machinery from the industry's own resources is declining.

It will be seen from the balance-sheet that a sum of Rs. 25.41 lakhs has been spent for the addition of new machinery in 1962. The amounts for the preceding three years were, respectively, Rs. 6.09 lakhs for 1959, Rs. 17.73 lakhs for 1960 and Rs. 22.45 lakhs for 1961. Thus, during the period from 1959 to 1962, new machinery worth Rs. 71.68 lakhs has been added.

Capital Expenditure

The gross profit during these four years, subject to depreciation, taxation and bonus, was approximately Rs. 410 lakhs. Keeping this profit in view, the capital expenditure incurred for replacement of old and obsolete machinery cannot be considered as excessive. A more ambitious programme has been planned and further machinery has been ordered, some of which has already arrived and is under erection. The price of the machinery, which has been ordered and is to be received, as on 1st May 1963, is Rs. 134 lakhs, including advance payments made in respect of such machinery. The machinery will be received by about the end of 1964 and some of the machinery has been purchased on deferred payment terms. The machinery includes: (1) 10 sets of draw frames, and speed frames, (2) 170 ring frames, (3) 15 doubling frames, (4) two roto-coners with high speed winding and warping, (5) one cloth mercerising range and (6) other miscellaneous machinery, motors, etc. in different sections. All this new machinery will enable the Company to cut down its manufacturing costs, to improve quality, to increase production and to achieve higher profitability.

To supplement its free reserves, the Company has applied to the National Industrial Development Corporation Ltd. and to the Punjab National Bank for financial assistance for capital expenditure and it is hoped that necessary assistance will be available from them to meet the cost of the phased programme of rehabilitation and modernisation. The orders for machinery are closely studied and carefully scrutinised by the Planning and Purchase Sections and recently a Committee of Experts has been appointed to examine the entire project and to submit its views on the expenditure already incurred and to be incurred and the benefits likely to accrue from the investments.

Raw Cotton

The supplies of Indian cottons this year have been satisfactory. The initial crop estimate of fifty-five lakh bales has now been confirmed. On account of good crop and general uncertainty cotton prices were easy in January and February. The ceiling prices were raised last year by Rs. 125 per candy which satisfied the farmers. The floor prices have been raised by Rs. 100 per candy recently. When the supply position is easy, prices cannot remain at the highest point. None will dispute that the Indian farmer is entitled to get a fair and adequate return for his cotton cultivation, but the fact is that he is unable to stand in competition with the farmers in other countries on account of the low yield of cotton, 100 to 110 lbs. per acre. In India, nearly 87 per cent of the cotton crop is cultivated in the non-irrigated area. About fifteen years ago, the percentage of non-irrigated area in the United States of America in which cotton was grown was as high as 90. Even then the average yield per acre was 274 lbs. The percentage of non-irrigated area is now 75 and the average yield is 325 lbs. per acre. There may be certain factors which are favourable for a higher yield in the United States of America, but they cannot account for the wide gap that exists between the average yield per acre in the United States of America and India. If energetic measures are taken by the State Governments to educate the farmer, to encourage the use of fertilisers, to increase the area under irrigation, to grow better varieties of cotton, etc., the yield of cotton per acre will increase considerably and the farmer will get a much higher return than at present. Increased production of cotton will also ensure adequate supplies for the textile industry and lead to reduction in the price of cotton which forms nearly 50 per cent of the total cost of manufacture. In this way, the price of cloth could be brought down giving relief to domestic consumers and augmenting exports to foreign countries.

Cloth Prices

Although the cost of cotton, stores, chemicals, etc., is rising, cloth prices have been still regulated in accordance with the price fixation formula voluntarily accepted by the textile industry in September 1960. The formula was adopted as an *ad hoc* solution and as a temporary measure. The question of fair selling prices has been referred to the Tariff Commission. The *ad hoc* formula maintained the initial disparities in prices of cloths obtained by different mills in competitive markets and it was hoped that the whole structure would be scientifically revised and such disparities would be removed or at least minimised. The Indu Mills had to make distressed sales in the basic period and, although more than two years have passed, they are still suffering from the initial handicap. Apart from this, as the cost structure has substantially changed since 1960-61, revision in the structure of cloth prices is overdue.

The profits of several mills have fallen. In the case of some of the coarse and medium count mills, the fall is steep. The following table will give you an idea about the working of your mills.

	1959	1960	1961	1962
Spindles worked (in lakhs)	1,566.75	1,829.35	2,116.23	2,165.21
Looms worked (in lakhs)	35.96	36.88	38.27	37.99
Average number of workers employed	15,308	16,315	17,592	17,712
Cotton consumed (in lakh kgs.)	176.54	175.90	195.55	205.16
Total yarn produced (in lakh kgs.)	148.21	151.47	170.43	173.30
Market yarn (in lakh kgs.)	8.17	9.74	15.34	16.01
Total cloth produced (in lakh metres)	1,222.33	1,315.37	1,380.10	1,393.32
Cloth for exports (in lakh metres)	182.36	178.23	157.27	157.09
Excise duty paid (in Rs. lakhs)	198.00	140.67	196.76	186.75
Wages, salaries and other incidental charges (in Rs. lakhs)	337.03	385.66	419.30	446.09
Profit subject to depreciation, taxes, bonus and other provisions (in Rs. lakhs)	29.68	112.07	181.60	86.62

A fall of nearly one crore of rupees in the profit in a year is a serious matter and it is receiving careful consideration of the Board. Suitable redistribution of work, effective checks at different levels and complete orientation of the sales organisation are being planned. On account of bulk production and relatively a small number of varieties of cloth, it becomes difficult to obtain adequate prices. Old and obsolete machinery presents difficulties in producing better and finer varieties of cloth for which there is good demand. But as the old machinery is being gradually replaced by new machinery, it is hoped that the Company will be better equipped to introduce new and popular sorts and to compete successfully with other mills producing similar types of cloth.

The Punjab National Bank has always been helpful to us. For the new machinery that has been ordered, we have requested the Punjab National Bank for certain facilities. It is hoped that the Bank will be able to extend necessary help to us.

Labour

Our relations with the trade union continue to be normal and I am glad to say that, as in the past, we have been able to settle our differences in a spirit of mutual accommodation and understanding. With the installation of new machinery, the question of rationalisation becomes important and we are making satisfactory progress in that direction with the assistance and co-operation of the trade union.

I take this opportunity to express our sincere thanks to the Textile Commissioner and his department. In the management of your mills, their assistance is needed from time to time and I greatly appreciate the valuable assistance which they have readily extended to us. The Ministry of Commerce and Industry of the Central Government and the Ministries of Industries and Labour of the Government of Maharashtra have always extended their help to your mills and we are deeply grateful to them for the interest they are showing in the progress of your mills.

Mr. S. A. Kher

Shri S. A. Kher will complete the term of his appointment as Chief Executive Authority next month. During these five years, the output of your mills has increased, the efficiency has risen and the quality has improved. A programme of rehabilitation and modernisation of your mills has been prepared and the financial position of the Company has been strengthened. He has been a great asset and I should like to pay my tribute to him for the invaluable work that he has done for the benefit of the Company.

I deeply regret to refer to the death of Shri A. B. Wadia, which took place on 23rd May 1963. He was working as cotton selector for the Indu Mills for the last twenty years. He was the best cotton selector and in his death the Company has lost an esteemed officer of great integrity. It would be extremely difficult to fill the void created by his death.

You will, I am sure, wish to join the Directors in recognising the loyal co-operation that has been extended to the Directors by the officers, staff and workers and the hard work that they have put in and in conveying our grateful thanks to all of them.

Before I conclude, I wish to thank all my colleagues on the Board for the invaluable support which they have always given to me.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

3, Mangoe Lane, Calcutta - 1.

Cut down your lubricants
Cut out your paper-work

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex Office.

Help your Purchase Officer to eliminate the stacks of paper that collect in his office...the unnecessary flood of Purchase Orders. When each department in a plant specifies a lubricant without reference to the purchases of other departments, there is bound to be duplication and waste.

The Caltex "Stop-Loss" programme can do away with this lubrication waste...can cut a great deal of Purchase Order paper-work.

Caltex "Stop-Loss" is a complete plan for organising lubrication on an efficient basis. There is no other programme like it.

It will be worth your while to find out specifically how Caltex "Stop-Loss" can help to ease the problems in your plant.

Help your operation to greater profit with the Caltex "Stop-Loss" programme.

INDO-FRENCH CO-OPERATION IN OIL

I.F.P. OF FRANCE PLAYS A NOTABLE PART

[The French Petroleum Institute—I.F.P., for short—has been playing a notable part in the development of oil industry in India. The I.F.P. is a scientific and technical organisation whose activities cover all fields of oil industry, that is, exploration, production, transportation and application of oil products. It has trained a number of Indian engineers, helped in the establishment of the Indian Institute of Petroleum, and carried out an overall survey of the possibilities of setting up a petro-chemical industry. It is also taking part in the exploration programme. All these activities have been recorded in an interesting article appearing in the May issue of News from France, *published by the Embassy of France in India at New Delhi. The article is by Mr. R. Navarre (Chairman and General Manager) and Mr. J. Favre (Director, Foreign Affairs) of the I.F.P.]*

SINCE 1956, there have been many exchanges of views between I.F.P. and Indian authorities in charge of scientific research and industrial development, resulting from a number of visits between the two countries. Indian industrial circles themselves were involved in this movement, in particular with the circular tour of mining experts sponsored by the United Nations Economic Commission for Asia. It is not possible to mention the names of all the members of University, representatives of Government agencies or industrial executive who visited the I.F.P. to confront their points of view with that of I.F.P. technicians on scientific or technical problems, or to exchange information of a more general interest. But what must be underlined is the particular significance of those visits whose purpose was to specify the steps most likely to intensify the exchange of knowledge between the two countries and to delimit the fields offering the best chances for a fruitful collaboration. We have in mind the visits of Mr. K. D. Malaviya, Mr. Reddi, Mr. Khera, and Professor Thacker.

The Indian oil situation is characterised by the presence of vast sedimentary basins and a huge potential market, although, for raffinates and petro-chemicals, the industry has still to be developed. In respect of these problems, I.F.P. was in a position to make a valuable contribution based on a 17-year old experience. Teams were exchanged and collaboration terms were gradually defined which ended in a series of agreements.

Training of Men

As early as 1950, I.F.P. received Indian students for probationary periods. For their specialisation, trainees either worked in the laboratories or enrolled in one of the sections of the Ecole Nationale Supérieure du Pétrole et des Moteurs. Furthermore, each of the agreements reached with Indian authorities provides for the training of Indian engineers. A number are to be sent to France where they can avail themselves of our facilities on a free basis, while receiving a training adapted in each case to the specific problem they will be asked to tackle later. Since we work ourselves in India, we know their problems and it helps us make this adjustment. Besides, we have always incorporated Indian officials in our missions so as to hand over our technical knowledge and to profit by that of our Indian colleagues, in the framework of a common work. Forty-four Indian engineers have already come to Rueil for training periods of an average of six months, and nine of them attended the courses of the Ecole Nationale Supérieure du Pétrole et des Moteurs.

Training in foreign countries, however, cannot be anything but a transitional phase. The authorities, being aware of their future extension decided by the Government, have long since realised that the means of scientific research and training had to be created in India. This resulted in the creation of the Indian Institute of Petroleum (I.I.P.).

During the first Petroleum Symposium of the Economic Commission for Asia and the Far-East (E.C.A.F.E.) in New Delhi in 1958, there were talks about the creation of one or several Regional Petroleum Institutes. This roused tremendous interest and the Symposium proceedings described the I.F.P. as an example of achievement in this respect.

Aware of the problem, Indian authorities decided first to make an inventory of their existing agencies, whose authority might be enlarged to cover oil matters. An *ad hoc* commission was created and we were asked to place one of our engineers at its disposal as an expert. Following a thorough investigation, the Commission declared itself in favour of the creation a new specialised body.

The decision of the Indian Government provided for the creation of two I.I.P. sections, namely, an Exploration Production section under the sponsorship of O.N.G.C. and a Refining and Application section under the sponsorship of C.S.I.R. The latter called upon the I.F.P. to set up a plan for the establishment and development of the section under its sponsorship. The plan was worked out by an I.F.P. mission which came to India in March 1960. This plan covered the modalities of development of the I.I.P. for the period 1960-65 and also defines the contribution of I.F.P. On 23rd June 1960, the C.S.I.R. informed I.F.P. that it gave full approval to the plan proposed by I.F.P. In October 1960, the first two I.F.P. engineers detached for temporary service with C.S.I.R. arrived in India. I.F.P. contribution covers the following:

Free availability to I.I.P. of all the knowledge gained by I.F.P. in the research or training fields (documents, printed lectures).

Detachment with I.I.P. of 13 I.F.P. experts (for a total of 549 expert-months). Ten are already in their places, some for over two years, while the last three are due to take their functions in the course of 1963. It goes without saying that they can, at any time, call upon assistance from any of the I.F.P. specialised departments.

Free admission of 16 Indian engineers of I.I.P. (for a total of about 240 trainee-months), in the laboratories or schools of I.F.P. Ten of them are in France at present.

Communication, in case of need, to I.I.P. of the construction plans of its specialised departments (engine test benches, pilot units, etc.).

The office of Technical Co-operation of the French Government takes a large share in this project by sharing one-third of the expenses borne by I.F.P. for the dispatch of its specialists to India and by granting scholarships for the trainees provided for in the agreement. Its working also includes the supply of Rs. 200,000 worth of scientific equipment to the French experts in India.

Thanks to the dynamism of the C.S.I.R. and of its General Manager, Professor Thacker, and with the assistance of I.F.P., the project was given an efficient start. In less than two years, I.I.P. totals 130 members, has already organised the first courses for engineers, and the first studies and laboratory researches have been brought to a successful issue. Laboratories temporarily installed in New Delhi, are about to be transferred to Dehra Dun.

Petroleum Exploration

Following the first contacts between India and France, it had been jointly agreed that a first I.F.P. mission would look into the problems of petroleum exploration in order to lay down the possibilities and conditions of co-operation. In November-December 1957, the Manager of our Bureau of Geological Studies and one of his assistants went to India on a geological round tour of most Indian sedimentary basins. Pointing out the attractiveness of the Cambay region, they proposed in their report an original working scheme for an O.N.G.C.-I.F.P. joint project on the Kutch and Cauvery basin. The Cauvery was considered as a second target on which to transfer the main part of the efforts, depending on the results of the Kutch survey. The discussions ended in the signature, on 12th September 1961, of an agreement between O.N.G.C. and I.F.P. which roughly followed the modalities proposed in our 1958 report. Operations are to be carried out in Rajasthan.

I.F.P. will make all its experience available to O.N.G.C. by taking part in the operations and through the help of its laboratories and engineering services, so that the oil and gas which might possibly existing may be discovered in time-saving and economical conditions, and with the possibility of broad exchanges of knowledge and practical experience. The preamble to the agreement is, in fact, quite clear in this respect:

"Through this Agreement between O.N.G.C. and I.F.P., O.N.G.C. welcomes the participation of I.F.P. to supplement the efforts of O.N.G.C. for the fulfilment of its soil exploration programme. I.F.P. expresses its desire to offer an effective service to work for the exploration and development of petroleum resources, without any commercial interest in the project, and to transmit scientific and technical knowledge to O.N.G.C."

O.N.G.C. and I.F.P. will collaborate to create and operate during a three-year period an Indian-French exploration team which will concentrate its efforts on the Jaisalmer region. This team will function within the framework of, and under the administrative and financial control of, O.N.G.C. The team will be composed of O.N.G.C. officers and I.F.P. engineers and led by an I.F.P. chief of mission, having long experience of oil exploration, to be designated as Exploration chief. The main technical responsibilities assigned to the team are:

To set up a detailed programme of exploration for each year,

to give advice to O.N.G.C. on tenders received,

to carry out all geological and photo-geological work, field-mapping, laboratory analyses and geological control of drilling,

to supervise the work of contractors,

to interpret results, and

to undertake at regular intervals a synthesis of new results.

Benefit of Expert Advice

The responsibilities of the team will extend to all matters connected with the training of personnel. On the other hand, I.F.P. will guarantee the Indian-French team full assistance and supervision by its technical divisions and laboratories and will extend the benefit of its expert advice on any other problem which O.N.G.C. might wish to submit to I.F.P. The I.F.P., as consultant, will assist O.N.G.C. in securing contractors' services on the most economic and competitive basis. I.F.P. will train, each year, in its technical divisions and laboratories as many O.N.G.C. officers as will prove necessary. It is evaluated at six per year. The remuneration of I.F.P. will be strictly limited to the expenses directly incurred by the work assigned to I.F.P. under this agreement.

In case the first results of the exploration work in Jaisalmer does not warrant all the effort and expenditure initially envisaged, O.N.G.C., in consultation with I.F.P., may divert the efforts of the exploration team to any other area deemed more in keeping with the project or may terminate the agreement according to the provisions of the agreement in this respect. The entire project will amount to an estimated cost of Rs. 6.5 crores for a three-year period of operation. It will require the services of seismic and drilling companies which will be selected according to their possibility of entirely abiding by the work conditions stated above. According to the terms of the agreement that has been reached between the representatives of the Governments of India and France, a credit for a sum of four million francs will be provided by the Government of France to cover the foreign exchange expenditure involved in the programme outlined in the contract between O.N.G.C. and I.F.P. This agreement has been in operation since the beginning of 1962. The formation of the Indian-French team is in progress and work started early in 1963.

On 14th June 1962, an agreement was reached between O.N.G.C. and I.F.P. for the execution of a general survey on the introduction of petrol-chemistry in India. This agreement gave effect to the proposals submitted to the Indian Government in 1957-58, in addition to the proposals referred above on exploration. Following a previous experiment in 1956, an I.F.P. engineer had been appointed at the same time as a Rumanian engineer, as an expert with a commission of the Indian Government charged with the task of finding the best location for the first public-sector refinery. Also, in 1959, one of our engineers of the Application Department had been working jointly with the Standard-Vacuum Company, for studying the use of light fractions in diesel engines, as a means of partly covering the shortage in diesel oil which weighs heavily on the Indian oil industry. In this connection, studies on the wear of injectors by means of radio-active tracers have in fact been undertaken at the I.F.P. for the Stanvac Cy. which later transmitted all its results to the Indian Government.

These studies were, as a matter of fact, in keeping with our researches on multifuel diesel engines, which were materialised in the design and development of one such engine. We refer to the Vigom process which we have had the opportunity to present to the members of Development Council for Automobiles in 1960.

Through the agreement of June 1962, O.N.G.C. entrusted I.F.P. with the task of carrying out within seven months an overall survey of the implantation of a petro-chemical industry in India. The role of incentive of the economic development played by this industry in many countries, the need to reduce imports which heavily drain the foreign currency assets of the country, the desire to make maximum use of local work-power in handling materials of domestic origin or foreign sources, the fact of possessing a large potential market are as many imperatives justifying the Indian Government's determination to create without delay a powerful petro-chemical industry in their country.

The target being defined, problems arise at the stage of achievement. There is a risk that costly projects may be developed, following an improper study of their implications, bringing about a result just opposite to the one expected. Proposals from isolated initiatives are submitted to the approval of government authorities. So Governments, which deliver licences, are bound to take decisions one after another, under the pressure of various influences and very often with no other basis of reference than a very general scheme of which the headings were drafted on the sole basis of the assessment of predictable requirements. They have no definite criteria to help them in their choice and can by no means make sure whether any process will profitably contribute in the overall development. This "spot by spot" decision cannot but give rise to scattered production, harmful gaps in the development scheme, not to mention the waste in particular raw materials or by-products, etc.

The Scheme Proposed

It is on these grounds that we offered to prepare a general plan conceived to remove such difficulties for the Indian Government. The proposed scheme covers:

Assessment of present and future market;

location of consumption areas, current prices, transportation costs, etc.;

survey of all available raw materials (natural gas, refinery gas, petroleum cuts and possibly other substances such as agricultural products, etc., etc.;

definition, on these bases, of: practicable productions, choice of most adequate processes, and most satisfactory grouping of manufacturing units for the complete utilisation of basic products and by-products; and

study of chosen productions from the point of view of: possible and desirable plant size, necessary investment, domestic and foreign currency, operating costs, profitability assessed on the basis of strict price criteria by comparing with predictable world prices, and best places to locate a unit and effect on the cost of another location which might be decided on other than technical grounds.

Such a document conveys, to those responsible for the country's development, a synthetic view of operations economically feasible and sound. The services in charge of planning can then establish an order of priority in the operations and fix the targets of each phase of the Plan on good grounds. The survey also enables authorities to take enlightened decisions when choosing manufacturing processes and locations. Political decisions about public, private or mixed concerns to which these operations will be entrusted, will be facilitated since investments and their profit will have been assessed beforehand. Funds will then be all the easier to get as the profits from any project offered to private, domestic, or foreign concerns will have been better assessed in the preliminary survey. Similarly, if a clear idea is given of the nature of projects, of their future promises, and of their place in the local economy, it cannot but help governmental authorities in deciding upon investments, as well as for influencing foreign Governments or International organisations which might be ready to provide financial assistance.

The survey was begun in June 1962. The first stage (collection of necessary data) resulted in a first draft prepared with the participation of the assistant manager of the Indian Institute of Petroleum who spent some time in Paris for this purpose. After a thorough discussion with responsible Indian authorities, the definitive version was issued.

The I.F.P. which already executed similar surveys for other countries, will, of course, be glad to undertake, under the same conditions of independence, the more specific studies which might be asked for in connection with the operations which will next be decided upon. Due to its contribution in similar achievements in France, the I.F.P. possesses a considerable experience which it can make available to responsible Indian authorities.

NEW PRODUCTS AND PROCESSES

Novel Japanese Medical Cameras

JAPAN'S optical industry has developed two unique optical devices for medical purposes—a stomach camera with a glass fibre view-finder tube and a radiographical camera with the sharpest known set of mirror lenses. The gastro-camera, one of the latest products of a major Japanese camera maker is just like any other conventional camera of its kind in appearance. It is an extremely small camera attached to the end of a long and slender tube and can be inserted into the patient's stomach to take pictures of its inner walls. What distinguishes this camera from others, it is said, is its adoption of a glass fibre scope as a built-in view-finder. Through it, the operator can directly observe any part of the inner walls of the patient's stomach where the camera is aimed. With a conventional camera of this type, the photographer cannot direct it because of the lack of a finder and must rely upon his usually quite unreliable tactile sensations through the tips of his fingers to determine the position of the camera inside the gastric organ.

With the new camera, the position of the camera can be determined at all stages through this novel finder. Even a novice could take a picture of any part of the gastric all with assurances of satisfactory results. This fibre scope is a bundle of glass fibre optics, approximately four millimetres in diameter. Each fibre is only about 10 microns in width. The bundle is exceedingly pliable and can thus find its way easily into any part of the patient's stomach. The intestinal picture is visible from the outside as a light carries it from inside the stomach to the finder in the form of a catoptric wave through the fibre optics.

Meanwhile, another Japanese camera maker has developed an automatic radiographic camera featuring a set of mirror lenses claimed to be the sharpest ever known in the world, with an F number of 0.59. A marked improvement over the *f*.0.63 mirror lens previously known as the sharpest in the world, the one installed in this new radiographic camera has a focal distance of up to fractions of 200 millimetres against an ultrawide aperture to account for this extremely low F rating. Since most conventional radiographic devices are equipped with a reflex lens whose F number is, at best, in the *f*.1.4 range, the mirror lens used for the new radiographic camera is at least six times as sharp. This has given rise to the possibility that an X-ray picture can now be obtained of even the innermost part of the internal organs. In addition, since this new apparatus emits less radioactivity than any other of its kind, the occupational hazards to the radiographer will be minimised.

Advance Design for Machine-tool

A major design advance of particular interest to manufacturers who use rotary transfer machines for repetitive operations such as drilling, boring, facing, tapping, and milling, is claimed by a British firm, Transfer Tool Ltd. The firm has produced a rotary transfer machine which not only incorporates new features to increase machine life and accuracy, but achieves this with a substantial reduction in cost. The new model makes use of a recently introduced recirculating linear ball bearing in a totally enclosed cylindrical slideway. It also incorporates a completely detachable packaged type of hydraulic system that provides full hydraulic control under air power. The whole unit is compact and can be easily removed for servicing. Since there is no hydraulic pump, there are no hydraulic pulsations, and the feed movement is smooth. Another important feature is the automatic cycling or sequence of operations and automatic feed selection for the multi-spindle head. The functions are initiated and controlled by a combination of air and hydraulics, in which compressed air is a source of power, but complete hydraulic control is retained over the rapid approach, feed and withdrawal of the head. This system provides three different and adjustable feed rates operated in automatic sequence, with a fourth feed rate that may be brought into operation on the return stroke for functions such as tapping.

Vidicon Camera

A completely new, solid state, miniature vidicon television camera channel has been announced by Britain's Marconi Company. This camera has been specifically designed for the highly specialised requirements of aircraft, marine, military and heavy industrial applications, where there is a growing need for a fully automatic equipment able to give extremely reliable operation under arduous environmental conditions and to withstand considerable vibration and mechanical shock in normal operation. Completely automatic in operation, the only control in the entire channel which is provided for regular use is a single on/off switch. The automatic sensitivity circuits in the camera enable it to accept rapid changes in scene illumination over an extreme range, with no perceptible change in picture, while "black level" is also controlled automatically over its wide environmental range. It will operate from a mains supply or from a lightweight battery.

New Method of Embossing Textiles

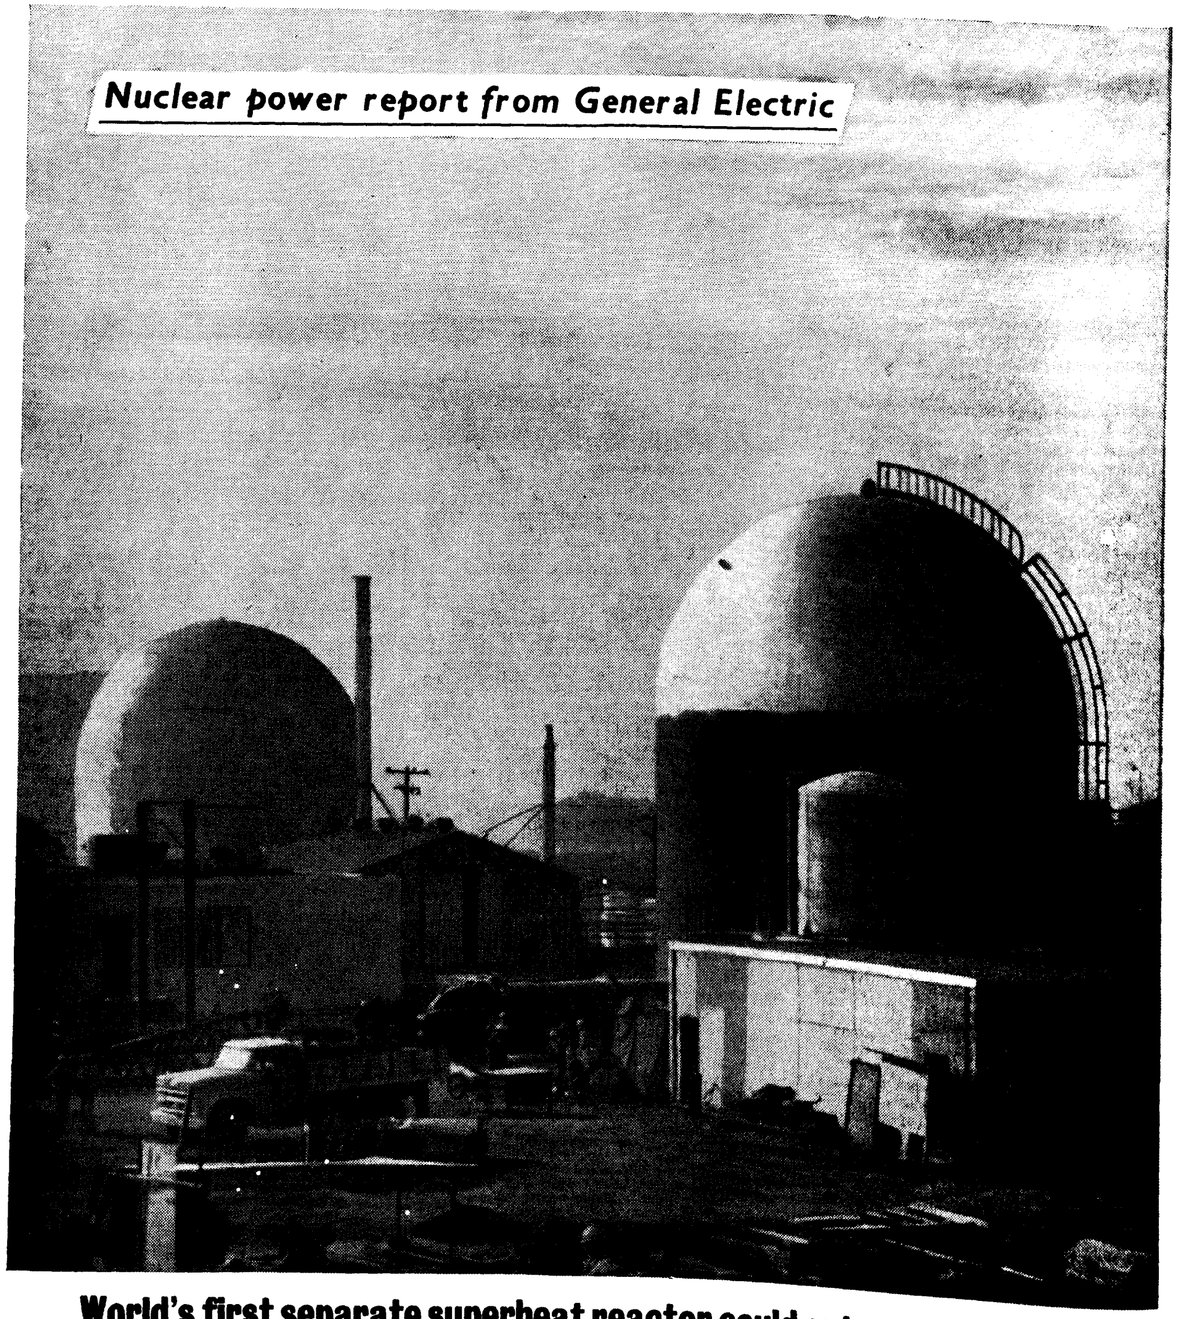
A new method of embossing textiles, by the use of paper stencils, has been introduced by the Cotton, Silk and Man-made Fibres Research Association of Britain. The use of the new process, which can be adapted to any existing suitable calender, provides a cheap method of obtaining great versatility in pattern and effect. The cost is a fraction of that of an engraved steel cylinder. Not only can a wide variety of designs be used, but attractive background effects can be obtained by the use of superimposed meshes and other materials with characteristic surfaces. Almost any material—and even wallpaper—can be embossed by the method.

Heavy-duty Precision Cranes

Four new heavy-duty lifting cranes designed for the exact positioning of heavy steel sections have recently been introduced by a Yorkshire firm, Priestman Brothers Ltd. The larger models will lift 30 tons at a radius of 10 ft. The maximum length of the boom is 110 ft. or, when a fly-jib is fitted, the maximum combined length is 140 ft. The cranes, which will erect themselves from the horizontal position, have been designed to have a life of at least twenty years in any climate. They have only three controls. One hand lever controls lifting and lowering of the load; a second lever controls slewing to right or to left, travelling (in the case of crawler-mounted cranes) and auxiliary lifting over the fly-jib; a third controls high-speed raising or lowering of the whole boom, to alter the radius. At least two movements can be fully performed simultaneously. The controls are operated by compressed air and are therefore exceptionally light to handle.

High-speed Automatic Cotton Loom

A sturdily constructed cotton loom, which has been designed to offer mills in the cotton and rayon field a competitive and economical machine, providing efficiency at high speed, has been introduced by a British firm, Wilson and Langbottom Ltd., Yorkshire. Combined with its basic simplicity, the loom incorporates the proven (Hunt) let-off motion for maintaining constant warp tension. Depending on a mill's requirements and the type of fabrics to be woven, the loom is available with three different weft replenishing systems, a standard rotary battery, the Fischer box loader and the Unifil mechanism. The latter incorporates its own winding head and the weft is merely supplied to the loom on a cone. The loom is more rigidly and precisely built than is normal with this class of machine. The loom can be fitted with a standard type pirn change battery with a capacity for 24 pirns, 8 in. number 3 butt. A positive outside cam shedding motion with precision-machined cam tracks and bowls is fitted as an integral part of the machine to ensure even and steady shedding. The machine, which incorporates a lubricating system as a standard part, is driven by an electric motor. The sley unit is fitted with hydraulic buffers.



Room Air Cooler

The use of khus-khus for improving the thermal environments of living and working places during the dry and hot summer months is a common practice in northern parts of the country. Systematic investigations have revealed that, if an exhaust fan is suitably placed in a closed room near the frequently wetted khus-khus screen, comfortable environments are maintained throughout the day. But this is troublesome, laborious and expensive. Desert coolers and certain other types of cooling boxes, making use of cooling by evaporation of water, have also been introduced. These are quite efficient but are very expensive. Moreover, in these types of coolers, liquid water particles are also carried along with the air stream, in addition to water vapour. This involves the risks of damage and short circuiting.

Experiments conducted at Defence Science Laboratory, Delhi, have led to the fabrication of a cheap air cooler which is easy to operate and maintain and recurring expenditure is low.

The cooler comprises a fan or blower chamber communicating with three or four superimposed cooling chambers placed behind it. Each cooling chamber contains a tray, in which is placed a frame work carrying the cooling fabric, arranged in vertical equiplaced layers. The air is drawn through the rear opening, cooled along its passage through cooling chamber, and finally forced into the room by the fan or a blower. The cooler can be placed outside the room shaded from direct sunshine. Its front end being fixed against an open window, in such a way that air can enter the room only through the cooler. It can be placed inside the room also near the window with the above conditions observed. The trays containing the frame should be carefully filled up with water and should be refilled when water falls to a level about ½" from the bottom. Capillary action has been employed to keep the cooling surface constantly wet, thereby dispensing with pump or other device for circulating water. Cooler is, therefore cheap and simple to operate, recurring cost being only on account of the power consumed by the fan. There is no water dripping through the air drawn by the fan, thereby minimising all risks of damage or short circuiting with water particles carried into the air. The optimum width and spacing of the cooling fabric layers have been worked out in relation to air delivery of the fan or blower, thus improving the overall efficiency of the cooler. The performance of the cooler depends upon the prevailing humidity in the atmosphere; lower the humidity, higher the cooling efficiency. In huts in Delhi were experiments were conducted, it was observed that in May inside temperature in a room fitted with the cooler was 15 to 22°F below the outside temperature (shade) of 105 to 112°F. In June when humidity was relatively higher, the room temperature can be maintained 10 to 17°F below the outside temperature.

The cost of a popular model of a room cooler (overall outside dimensions 36" x 24" x 26") is estimated at Rs. 70 without the fan or blower. A delux model where ¼ H.P. motor is used for blower and other materials are of better quality, is expected to cost below Rs. 250, including the cost of blower. All the raw materials required for the manufacture of air cooler like plywood, paint, brass nails, screws, galvanized iron sheets, gunny fabric, etc. are available indigenously. Blower or a standard 16" fan is also available easily.

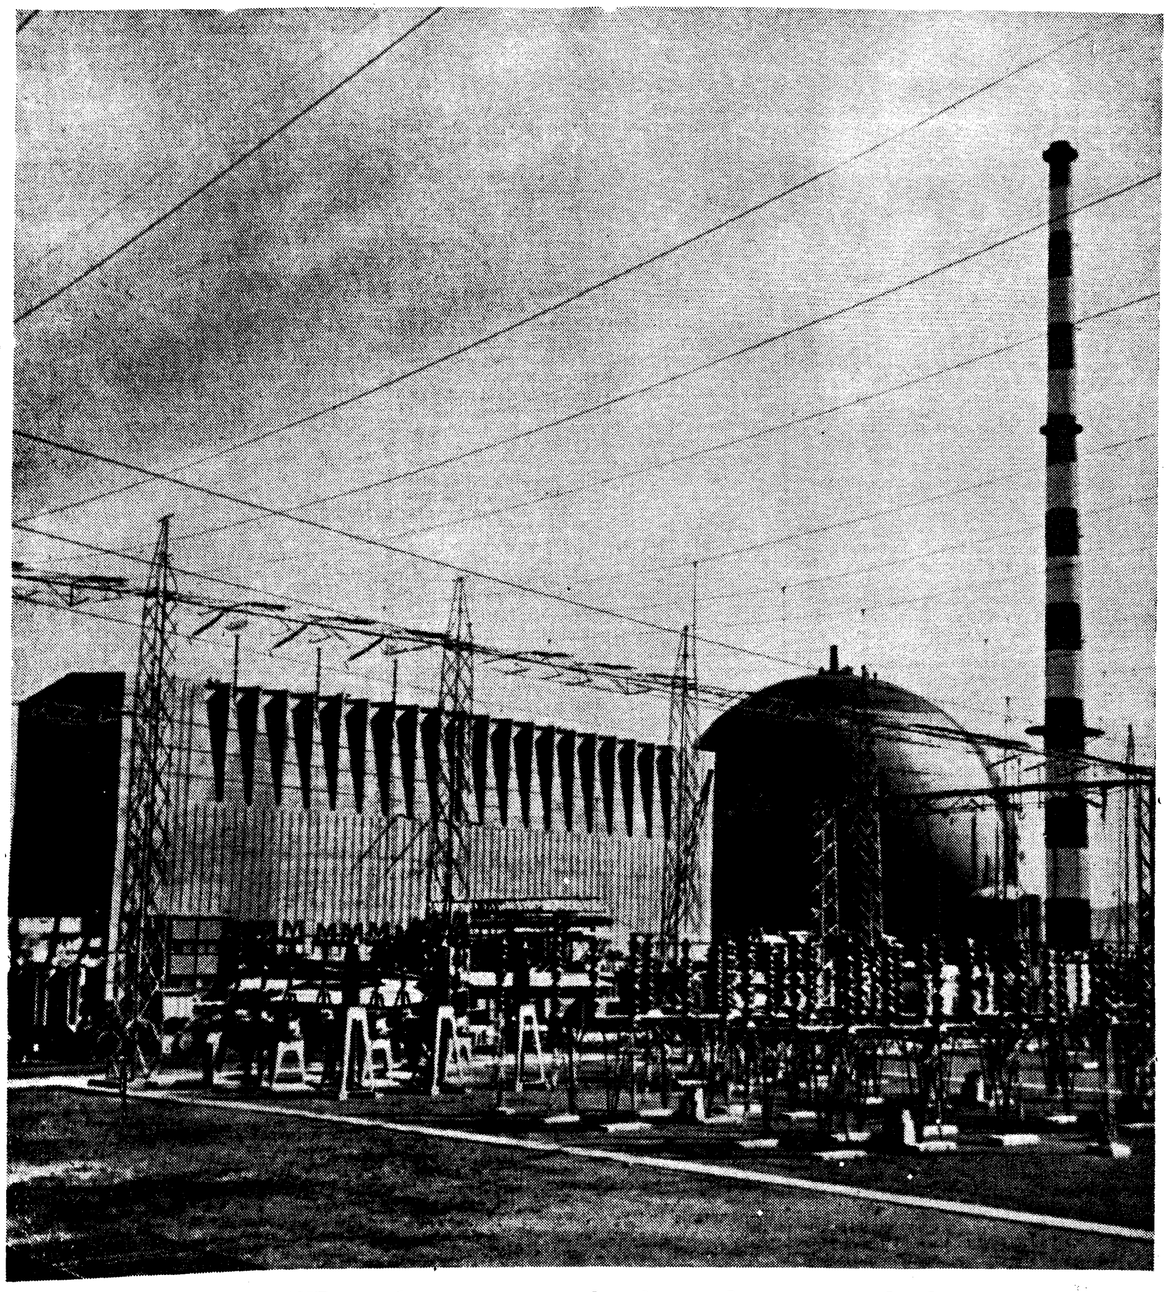
World's first separate superheat reactor could cut nuclear power cost

(Above) ESADA Vallecitos Experimental Superheat Reactor (foreground), Pleasanton, California, U.S.A., a joint project of General Electric and the Empire State Atomic Development Associates, Inc. Forerunner of large-scale separate nuclear superheat plants to be available in the late 1960's.

(Right) Garigliano Nuclear Power Station (150,000 kwe), 35 miles north of Naples, Italy, after installation of transmission lines. G-E nuclear fuel assemblies are on site; G-E dual-cycle boiling-water reactor is to begin operating in May. Owner: Società Elettronucleare Nazionale (SENN).

These General Electric reactors—one an ***experimental*** fuel-test facility where U.S. scientists will investigate nuclear superheat as a way to cut power costs; the other, the largest ***power-producing*** plant of its type in Europe – are just two of the five G-E reactors that will go into operation this year.

The other three: the 12.5 MWe Japan Power Demonstration Reactor at Tokai-Mura (fuel loading scheduled for June); the 50-60 MWe Humboldt Bay Power Plant, Nuclear Unit, in California (went critical in February); and the 50/75 MWe Big Rock Point Nuclear Plant (reached full power in March).



At first, the ESADA experimental superheat reactor will operate at 12,500 kwt. Investigators will be using it to test the design of superheat cores and fuel, and to determine radioactivity levels and other characteristics of superheat operation. General Electric expects superheat to cut atomic-electric power costs 5 to 10 per cent by boosting steam temperatures from 550° F to 1000° F.

The ESADA reactor adjoins the pioneer Vallecitos Boiling Water Reactor, and the two will be integrated in series for some of the tests. The new $8 million reactor was built by G.E. and the Empire State Atomic Development Associates, Inc., a utility group that may build a full-scale superheat power reactor in New York State.

The Garigliano plant for SENN was designed and certain components were installed during construction to permit an anticipated uprating from 150,000 kwe to 225,000 kwe. Advances in fuel design, additional turbine-generator capacity, and the addition or modification of other components are expected to make possible the 50 per cent increase.

With construction almost complete, General Electric began shipping G-E nuclear fuel to the Garigliano site in February. The initial fuel loading has been set for May, with criticality tests following immediately.

G.E. can provide BWR plants in the ratings you require, incorporating high-power density cores, pressure-suppression containment, and internal steam separation. For the facts—and information on other G-E atomic products and services, write to: **International General Electric Company (India) Pvt. Ltd., Thackersey House, Graham Road, Ballard Estate, Bombay-1. *International General Electric Company, Dept. 30-30 PK, 159 Madison Avenue, New York 16, N.Y., U.S.A.***

Europe's biggest BWR nuclear power plant can be uprated 50 per cent

Progress Is Our Most Important Product

CONTROL OF PUBLIC EXPENDITURE

ROLE OF THE AUDITOR-GENERAL

By Prof. V. G. Ramakrishna Aiyer

THE authority of the Comptroller and Auditor-General to call the attention of Parliament to facts which appear to him to indicate an improper expenditure or waste of public money has been upheld by the Public Accounts Committee. It has pronounced this verdict on a reference to the manner in which audit of the accounts of the defence service was being conducted. Recently in clarifying the scope of audit, the Public Accounts Committee focussed attention on the following three aspects of the scope and functions of the Auditor-General:

1. What is the extent and scope of audit conducted by the system of administrative audit that falls within his purview?

2. What should be the form and content of audit report on the accounts of Government submitted by the Comptroller and Auditor-General?

3. In auditing the accounts, should audit make independent inquiries from private individuals or members of the general public?

Audit reports are submitted in pursuance of Article 151 of the Constitution which enjoins that the Comptroller and Auditor-General shall submit his report on the accounts of the Union and the States to the President and the Governor for being laid before Parliament and the State Legislatures. The scope and extent of audit conducted by the Comptroller and Auditor-General has not been defined by the Constitution. This has been left, as in other democratic countries, to the sole discretion of the Comptroller and Auditor-General.

Administrative Audit

The main controversy regarding the scope and extent of audit centres round the statement that the audit of the Comptroller and Auditor-General is financial, and not an administrative audit. Administrative audit is an examination of the technical and organisational processes of the administrative apparatus with a view to see how far the apparatus is working with maximum efficiency and what technical and organisational changes should be made so that optimum results could be obtained. This examination must necessarily be the primary responsibility of the administrative departments and they should for this purpose have a built-in organisation in the departments themselves. The Public Accounts Committee has been giving attention to this question for some years and has observed that, while it is not the intention that audit should encroach upon purely administrative matters or range over the entire field of administration, where administrative action has serious financial implications, it is the duty of audit to see that administrative action is not only in conformity with the prescribed law, financial rules and procedure, but it is also proper and does not result in an extravagance of infructuous expenditure. For instance, in a project for construction of a canal, audit would not concern itself with the administrative set-up for the actual construction of the canal, the qualifications of the staff, the manner of recruitment, the alignments of the canal, whether it should pass through a particular part of the country or not, etc. These are all matters of administrative audit, and not the concern of the Auditor-General. But if it involves additional or infructuous expenditure, or if the financial results were less than had been anticipated, then it is clearly the duty of audit to examine the circumstances which resulted in loss or avoidable expenditure to the taxpayer. Such an examination, though an aspect of administrative audit, unquestionably falls within the ambit of Comptroller and Auditor-General.

U.K. Practice

The U.K. practice is exactly similar to the practice that is obtaining in our country. In the U.K., "with the approval of the Treasury and of the Public Accounts Committee, and often at their instigation the Auditor-General is wont to push his inquiries further than the letter of the statute warrants, and to inquire also into any payments which appear to be imprudent and wasteful, and calling to them the attention of the Treasury, and the Public Accounts Committee." This extension of audit arose out of the normal scrutiny of accounts for losses, frauds, unusual charges and outstanding claims.

As regards the form and content of the audit report, it is necessary that audit reports should be independent and objective. It is because of this vital function the Constitution has taken special care to see that the Comptroller and Auditor-General can perform his duties" without fear or favour, affection or ill-will." The Constitution has not, therefore, prescribed the form and content of the audit reports. Audit reports are based on verified facts for which the Auditor-General takes exceptional care, and if the reports are to be of any value to Parliament, it is essential that the matters to be included and the comments to be made therein are left to the sole discretion of the Comptroller and Auditor-General. It is the function of the Auditor-General to satisfy himself that the expenditure has been incurred with faithfulness, wisdom and economy. The position of the Comptroller and Auditor-General in this regard in the U.K. is substantially the same as in India, that is, a complete and free hand in the matter of the form and content of the audit report. As a matter of fact, the Select Committee on Public Accounts in the U.K. has encouraged the Comptroller and Auditor-General to scrutinise and criticise improper and wasteful expenditure and to indicate where censure was, in his opinion, required. In fact in all democratic countries it has been accepted that it is the function of the Comptroller and Auditor-General to satisfy himself that every expenditure has been incurred with "faithfulness, wisdom and economy."

As regards the matters to be included in the audit reports, the longstanding practice followed in India is similar to that of the U.K. It is the primary function of the Auditor-General to report in such a way as to assist Parliament in making its way through the bulky reports replete with technical details and, at the same time, to focus attention on the losses or waste which Parliament must know regarding public moneys, for example, cases of waste and inefficiency in the conduct of a Department's business—a much wider responsibility than that of merely attesting the technical correctness of payments. Accounting officers have, therefore, to be prepared to defend the conduct of their Department's business and to make good not only the correctness and propriety of the payments in the technical sense but the efficiency and economy of the administration.

U.S.A. Practice

The position in regard to the scope and extent of audit and the form and content of the audit report is also similar in the U.S.A. Section 312 of the Budget and Accounting Act (1921) provides that the Comptroller-General, in his reports to the Congress, "shall make recommendations looking to greater economy or efficiency in public expenditures.... he shall submit to Congress reports upon the adequacy and effectiveness of the administrative examination of accounts and claims in the respective Departments and Establishments and upon the adequacy and effectiveness of departmental inspectors of the offices and accounts of fiscal officers."

In India

It is gratifying to note that so far as principles and practice are concerned, India is on all fours with the procedures of the U.K. and the U.S.A. At the present time, when there is heavy expenditure and taxation, the Comptroller and Auditor-General will pay even greater attention than in the past to this aspect of his duties and Government will give him all facilities to perform them.

As regards the third item listed above, namely, whether the audit authorities should make independent inquiries from private individuals or members of the general public, the facts included in the audit reports are not only based on official documents but are also vetted by the departments concerned. Matters reported in the audit reports are based on facts obtained through official channels. Effective and useful audit may not always be possible by a mere examination of the accounts and subsidiary documents, such as vouchers submitted to audit. It is only as a result of the examination of all relevant documents leading to a particular transaction that it is possible to arrive at a final audit view in the matter. It is also an accepted convention in the U.K. for the Auditor-General to call for any document relating to transactions to which his duties in respect of audit extend. In the U.S.A., the Budget and Accounting Act has specially provided for the production of all records which the Comptroller-General requires for the purpose of audit.

In fact, financial transactions of the Government mostly consist of (i) receipts of revenue, (ii) expenditure and (iii) purchases and issues of stores and stock. So far as the audit of expenditure is concerned, the functions of the Auditor-General in India are sufficiently comprehensive and are practically the same as those in Great Britain under the Exchequer and Audit Departments' Act. There is, however, one important difference. In the U.K., the Comptroller and Auditor-General combines in his own person two offices which were formerly separate. In his capacity as Comptroller of Exchequer Issues, he controls the issue of public money; in his capacity as Auditor-General, he is auditor of public accounts. This is not so in India where the separation of accounts from audit gives scope for financial irregularities. For instance, during the last war large sums were issued from the treasuries in Bengal on the authority of the Bengal Government, which were found to be irregular, and about Rs. 19 crores had to be written off. The English practice is commendable. Another point in relation to the powers of the Auditor-General is, though he is free to decide the scope of audit in relation to expenditure, his budget is controlled by the Finance Department. So far as audit of receipts is concerned, the position is very satisfactory. In England, the Comptroller and Auditor-General is required by law to audit all accounts of revenue and to report on them to Parliament. In India, the Auditor-General cannot of his own motion undertake the audit of the receipts of any department. He can do so only with the approval of and to the extent desired by the Executive Government. In England, the Comptroller and Auditor-General performs all the functions connected with assessment, collection and remittance of collections into the Treasury on behalf of the House of Commons, but in India audit is restricted to only remittance of collections into the Treasury. The fact is, when audit regulations were first framed about 1870, land revenue was the main source of revenue and audit offices would not have the necessary knowledge to check assessment and collections of land revenue, and in any case, it was duplication of work which was normally done by the District Collectors. But now land revenue is no longer a source of income for the Centre. Taxes on income, customs and excise can easily be checked by audit officers as in England, and if income-tax receipts are subject to audit by audit offices, there is a good possibility of checking the enormous evasion of income-tax.

Audit of Stores

Lastly, the position in regard to audit of stores and stock accounts is much the same as in relation to receipts. The Auditor-General in India can audit such accounts only if required, and to the extent approved by the Executive Government. When stores are purchased, payment has to be made and such payment comes within the cash account and is subjected to audit in the same way as other expenditure. But what happens to the stores after they have passed through the cash account is generally not the concern of the Audit Department. In the U.K., the Audit Department conducts the audit of all stores and stock accounts on behalf of the House of Commons. The same should be the case in India. The results of all such audits of revenue and stores and stock accounts should be reported to the Legislature and all such audit reports should be dealt with by the Public Accounts Committee in the same manner as it deals with Appropriation Accounts.

Since the Government of India is now examining a proposal to introduce legislation defining the duties and powers of the Comptroller and Auditor-General as required under Article 149, it is fervently to be hoped that some of the suggestions set forth above would be given due consideration. In general, it may be reiterated that nothing should be done in the proposed legislation to abridge the powers and duties of the Comptroller and Auditor-General, for he alone is bound to afford to Parliament the fullest and best information in his power with regard to expenditure. But, at the same time, it should not be laid down that Parliament be furnished with information which it would not be in the public interest to make public.

U.P. LETTER

AGRICULTURAL OUTPUT BELOW TARGET

BORDER AREAS IN NEED OF GREATER ATTENTION

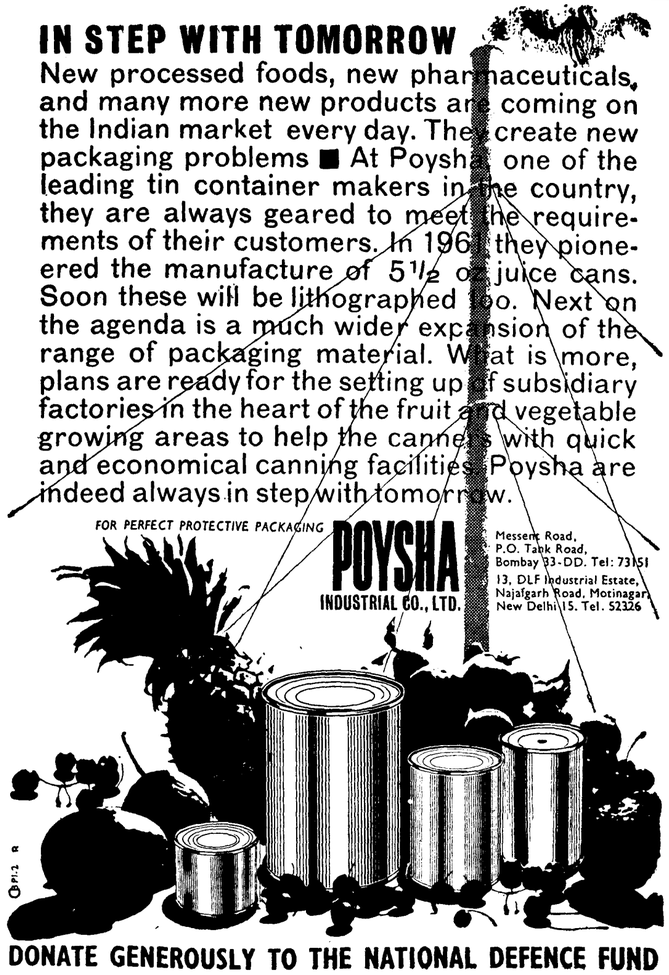
From Our Special Correspondent

LUCKNOW, 17th June

THE Planning Commission's team on agriculture, which made a study tour of U.P., did not discover any new facts nor did it make any new suggestions for increasing agricultural production in U.P. The team has suggested that a proper use should be made of the irrigation potential of the State, that better seeds and better manures be used, and that the organisation dealing with agricultural production be strengthened. The food production in U.P. during the years 1961-62 and 1962-63 amounted to 13.9 million tons and nearly 14.0 million tons, respectively, as against the targets of 14.4 million tons and 15.5 million tons for these years. Under the third Plan, U.P. has set a target of producing an additional 4.75 million tons of foodgrains, but the achievement in the first two years of the Plan has not been greater than 925,000 tons. It is, therefore, quite evident that, unless vigorous efforts are made by all concerned, it may not be possible to achieve the foodgrains target set in the third Plan. It cannot be denied that improper use of irrigation facilities, poor quality of seeds and manures, and natural calamities like drought, floods and soil erosion are responsible for low agricultural production as much in U.P. as in any other State. But, in U.P., the poverty of the cultivator, especially in the Eastern districts, is partly responsible for low output of foodgrains. The moneylenders and *mahajans* from whom the cultivator could obtain timely financial help have almost been liquidated and co-operative institutions have not yet filled the gap. Consequently, the cultivator is greatly handicapped by lack of finance at the right moment. Moreover, since he is still engulfed by old habits and customs, he frequently squanders a part of his finance in ceremonies and festivities which are made incumbent on him by custom.

In order to help the cultivator effectively to increase foodgrains production, an adequate provision will have to be made for providing him financial resources for the purpose considerably in advance of the sowing season. At its recent meeting, the U.P. State Board of Agriculture recommended that loans be extended to the cultivator on the basis of his production plans in good time before the sowing season, more in the shape of seeds, fertilisers and manures than in cash. This suggestion was also made in the past, but, for some inexplicable reason, it has not yet been implemented. The Board also recommended extension of the guarantee scheme under which the cultivator is assured against loss on account of using improved techniques of production. It is not only because the U.P. cultivator is conservative that he does not take to the use of better seeds, chemical manures and improved methods of production, but he is afraid, on the basis of past experience, that he may lose if he tries new experiments. If the guarantee scheme were extended, it would undoubtedly assure him.

The U.P. Cabinet's Agricultural Production Committee is reported to have decided to give a subsidy of Rs. 2 per foot of tube-wells bored in rural areas and to give priority to tube-wells in the supply of electricity. The *panchayats* have been directed to bring into use some 2,500 masonary wells which are lying unused in different parts of the State. Big irrigation schemes have their use in increasing agricultural production, but, in the peculiar conditions prevailing in U.P., a greater reliance will have to be placed on minor irrigation schemes. If, along with the other measures which have been taken, the minor irrigation schemes are pushed forward, it may be possible to increase foodgrains production above 14.0 million tons at which level it has been more or less stable for the past three years, even if it is not possible to achieve the target of 15.65 million tons fixed for 1963-64.



In the first two years of the third Plan, satisfactory progress was made in the consolidation of holdings scheme in U.P. As against the third Plan target of 9.0 million acres of land to be consolidated over a period of five years, some 2.12 million acres were consolidated in the first year and 2.8 million acres in the second year, as the officials in charge of consolidation work have worked with zeal and determination in spite of much opposition from the parties concerned. If the same devotion is shown by the village level worker, the co-operative supervisor, the patrol, the stockman, the agricultural inspector and the *panchayat* secretary and if they work smoothly and harmoniously together, it should be possible to increase the productivity per acre of land not only in the case of foodgrains but also in respect of all the crops. It is to be hoped that the proposed reorganisation of the Agriculture Department of the U.P. Government will take into consideration the problem of avoiding conflicts among the many officials who deal with the cultivator at the village level.

Agricultural Produce Market Bill

An important piece of legislation to be introduced in the U.P. Vidhan Sabha in its next session, so far as the cultivator is concerned, is the U.P. Agricultural Produce Market Bill. The Bill contemplates the setting up of a market area committee in each declared market area for its maintenance and management in order to serve the interests of the cultivators, consumers and dealers in foodgrains and other agricultural products. In U.P., there are nearly 470 *mandis* (markets) and the Government propose to cover at least 250 of these in the third Plan period. According to Mr. Charan Singh, U.P.'s Minister for Agriculture, the *mandis* handle annually agricultural products, excluding fruits, vegetables and *gur*, valued at more than Rs. 30 crores. The farmer does not get more than 68 to 80 per cent of the market price for his produce and 20 to 32 per cent is taken away by various middlemen as commission and in the shape of unfair exactions and deductions.

It is expected that, as a result of the proposed legislation, the U.P. farmers would benefit to the extent of Rs. 10 to 12 crores annually. In the case of liquidation of the village moneylender, the abolition of *zamindari* and other agricultural reforms in U.P., a gap was left in the supply of finance to the farmer. It is to be hoped that the farmers of the proposed legislation would take care to prevent this from happening. It is necessary to take care that, in its actual implementation, the proposed legislation actually benefits the cultivator and does not create fresh difficulties for him. Another important fact which is frequently ignored is that the co-operative marketing societies are handicapped because of inadequate finance. It is, therefore, necessary to provide for adequate financial assistance to the co-operative marketing societies. Mr. Charan Singh stated that the U.P. Government propose to give loans to the extent of Rs. 30 lakhs and subsidies to the extent of Rs. 18 crores (out of which half the amount would be shared by the Central Government) to the co-operative marketing societies after the proposed legislation comes into operation, in order to help them discharge their functions satisfactorily.

The three border districts of Chamoli, Uttarkashi and Pithoragarh in U.P. have a special importance for the country's defence against Chinese aggression. A recent meeting of the U.P. Citizens State Council at Naintal discussed the ways and means of improving the economic condition of people in the border districts. A survey team is now studying the problem. The main difficulty is that the people in these districts are too poor and ignorant to undertake any development scheme unaided. The U.P. Government has already started a scheme under which a model orchard of five acres would be set up in each block and, during the current year, 100,000 fruit plants would be distributed in the Pithoragarh district and an equal number in the Chamoli district and half that number in the Uttarkashi district in order to encourage the horticultural industry. Loans would be provided to persons who run orchards on the basis of the market value of agricultural land. Efforts are also being made to develop poultry farming, sheep rearing and some other cottage industries. It is considered possible to encourage the production of toys and decorative pieces on the cottage-industry scale and an official of the Industries Department of the U.P. Government has been deputed to study the working of the cottage industry centres at Faridabad and Ludhiana in the Punjab.

IMPORT TRADE IN 1962-63

INDIA BUYS MORE FOOD FROM ABROAD

SOME of the major features of India's export trade in 1962-63 were examined in these columns last week. An account of the import trade is given here this week. According to the provisional figures released by the Department of Commercial Intelligence and Statistics, Calcutta, (Government of India), imports aggregated Rs. 1,077 crores in 1962-63, which compare with Rs. 1,090 crores (revised) in 1961-62. Although the 1962-63 provisional figure for imports was lower by Rs. 13 crores, as compared with the revised figure for 1961-62, actual imports cannot be considered to have fallen. For the provisional figures do not include data on certain Government imports which may be anything between Rs. 40 to 60 crores. Thus the trend in imports continues to be upwards, despite more and more curbs imposed on imports by the established trade and, to some extent, by actual users.

On the basis of figures available now, the adverse balance of trade somewhat declined during 1962-63, thanks to smaller imports coupled with marked increase in exports. The deficit was only Rs. 383 crores last year, as against Rs. 430 crores in 1961-62. But still the deficit amounts to be over half of India's total exports (for breakdown figures, please see the miscellaneous statistical page). There is, therefore, no room for complacency on the balance of payments front. But for the stringent import policy, on the one hand, and sizable economic aid from friendly countries, on the other, the payments situation would have deteriorated at a faster pace than at present.

Import Control

Import control cannot, at any rate, be considered to be a very effective means for reducing the adverse balance of payments. For, under the present Indian conditions, imports cannot be cut further without hampering the smooth working of existing industries and the development of new ones. Already, several industries have been put to much hardship on account of the shortage of raw materials and components. What is worse, there has been a stringent control on imports of machinery and equipment, which has adversely affected not only the implementation of licensed projects, but also the modernisation of existing plants.

The import bill would not have been as large as it is now, but for the pronounced lag in agricultural production. The demand, at the same time, has gone up considerably, in view of the increase in population by about 8 million annually. It is on account of the unsatisfactory trends in the domestic production of food crops that India's dependence on other countries for food is steadily increasing, with the goal of self-sufficiency gradually receding from year to year. Imports of food materials continue at a high level, accounting for about 15 per cent of the total imports. In 1962-63, India imported food materials worth Rs. 152 crores from abroad; this was higher by Rs. 5 crores, as compared with 1961-62. The increase might have been of a still higher order, if certain imports on Government account, which have yet to be included, had been taken into account. Among food imports, cereals (including wheat and rice) figure as the major component, accounting for Rs. 117.11 crores in 1962-63, as against Rs. 116.9 crores during the previous year. Imports of cereals were mainly from the U.S. under P.L. 480, which, of course, did not constitute any foreign exchange drain inasmuch as only rupee payments were involved. Apart from cereals, imports of fish, fruits and vegetables, cocoa and spices have also gone up. Imports of fish have almost doubled over a year to Rs. 6 crores, despite some increase in domestic fish production over the last few years. Considering the fact that India exports fish worth only about Rs. 4 crores per year, the country has now become a net importer of this food item.

Machinery and Transport

Besides food, there has been some increase in the import of machinery and transport equipment which is quite understandable in the present context of industrial development. The total imports of machinery and transport equipment accounted for Rs. 372 crores (as against Rs. 368 crores in 1961-62), or about 35 per cent of the aggregate import bill. The increase was marked in the case of mining and other industrial machinery, power generating machinery and railway vehicles. On the contrary, the intake of electric machinery, metal working machinery and road motor vehicles has been smaller.

Raw Materials

Group-wise, imports of raw materials and manufactured goods suffered a setback during the week under review. The total imports of raw materials fell by Rs. 3 crores to Rs. 127 crores and those of manufactured goods by as much as Rs. 23 crores to Rs. 198 crores. Among raw materials, the decline was accounted for largely by raw cotton, reflecting the recovery in the domestic production of this commodity during the 1962-63 season. India's purchases of raw jute also fell on account of its larger availability within the country. Imports of several other crude materials, on the contrary, registered an increase, particularly those of chemical wood pulp, hides and skins and crude fertilisers, reflecting largely the growing demand for them by the consuming industries.

Among manufactured goods, there was a marked decline in India's purchases of iron and steel, that is, by about Rs. 21 crores to Rs. 87 crores. Imports of some of the non-ferrous metals like tin and nickel also were smaller on account of the restrictive import policy. A contrary trend was in evidence in respect of copper, aluminium, zinc and lead. Imports of manufactured fertilisers more than doubled during the year, thanks to the slow growth of the fertiliser industry within the country. The growth of the fertiliser industry has fallen much short of the *targets* envisaged in the third Plan, while the demand for fertilisers has been going up at a rapid pace.

These trends in India's import trade have been shown in the table appearing on this page. These figures, it may be noted here, are exclusive of imports into Goa, Daman and Diu which amounted to Rs. 4.1 crores in 1962-63.

LABOUR INCOME IN THE E.E.C.

Measures for the harmonisation of economic and social life in the European Economic Community (E.E.C.) cannot be drafted and implemented without an exact knowledge of the differences in the social and wage systems of the member states. This was already shown to be the case at the time of the establishment of the European Coal and Steel Community (E.C.S.C.). It emerged even more clearly when the Treaty on the foundation of the European Economic Community entered into force. One of the first steps taken by the E.E.C. Commission, therefore, was to commission the European Statistical Office to compile a compehensive study on labour incomes in the Community.

The initial results of this work were recently published. Ten thousand companies and fourteen different industries from all regions of the Community were interviewed. These results, which refer to the year of 1959, did not only give ample insight into the differences of labour income, but they also showed the great differentiation of all factors, which govern how much the worker will take home in his pay packet, and how much he can buy for his money. There are differences everywhere, in taxation, in the systems of social security and in the effective purchasing power of cash.

All these factors contribute to a situation whereby, according to the figures, now one country and now another is considered to be the most favourably or the most unfavourably placed; depending on whether one studies the income of single workers or those of married workers with two children, etc. In the evaluation of the results, differences in purchasing power were compensated by respective calculations, and the average remuneration paid per hour of work was thus computed, without taking any deductions into account. This calculation reveals the following figures: West Germany 0.60 U.S. dollar; Belgium 0.57 U.S. dollar; France 0.48 U.S. dollar; the Netherlands 0.42 U.S. dollar; and Italy 0.35 U.S. dollar.

Since 1959, the year studied, the gross earnings of workers in West Germany and in the Netherlands have risen most steeply, i.e., higher than in France and in Italy, where the growth rates were a little smaller, and as compared with Belgium and Luxembourg, where they were much weaker. The entire situation, however, is different, if one does not compare nominal remunerations, but actual income in real terms. While in a number of countries very high contributions towards social insurance are deducted, these compulsory contributions are very low in other countries.

Also the amount of average tax burden varies. At a gross annual wage of approximately 2,000 U.S. dollars in the case of an unmarried worker and a married worker with two and five children (in percentages of the gross wages), the respective amounts in the Federal Republic of Germany are 12.2 per cent, 2.1 per cent, and *nil*; in Italy 5.7 per cent, 5.3 per cent, and 4.9 per cent, respectively; in the Netherlands 15.7 per cent, 8.0 per cent, and 3.3 per cent, respectively. An even further change of the situation results, if the calculation is not based on gross and net wages (taxes and social burdens deducted), but if also family allowances are considered. Thus in 1959 fathers of two and five children, respectively, in Italy were paid a family allowance of 14.50 and 37.00 U.S. dollar, respectively, in the Netherlands approximately 9.00 and 27.00 U.S. dollar, and in Belgium 19.50 and approximately 60.00 U.S. dollar, respectively.

From all this, it can be seen that there are differences not only in view of the relative amount of these contributions, but also in the progressive differentials. How strong the effects of the various differentials will be upon the contents of the wage packets is illustrated by the following comparison: In most industrial branches in France, workers with five children get a good eighty per cent more than their single colleagues. This is almost the same in Belgium. In Italy, on the other hand, in the Netherlands, and in the Federal Republic of Germany, the net income of workers with five children is on an average only fifty per cent above that of the unmarried workers.

Imports of Major Commodities †

(Value in lakhs of rupees)

	1962-63	1961-62
Food and tobacco—		
Wheat	91,85	93,87
Rice	21,26	18,73
Maize	1,92	3,09
Cereals, milled (except wheat flour)	1,52	44
Condensed milk and other dairy products	8,67	9,55
Fish	6,16	3,87
Fruits and vegetables	18,21	14,60
Cocoa	21	18
Spices	1,77	1,67
Tobacco, unmanufactured	1,37	1,14
Crude (raw) materials—		
Raw cotton	56,91	62,66
Raw jute	3,34	6,27
Other vegetable fibres	1,02	1,24
Silk	77	64
Wool and other animal hair	12,15	12,18
Fertilisers, crude	2,98	2,74
Other crude minerals	9,01	7,86
Wood, lumber, cork	2,49	2,52
Pulp and waste paper	9,51	6,69
Iron and steel scrap	9	39
Hides and skins	2,76	2,24
Ores of non-ferrous metals	78	67
Non-ferrous metal scrap	68	1,31
Mineral fuels—		
Petroleum	30,15	42,36
Petroleum products	57,51	53,29
Chemicals—		
Inorganic chemicals	16,68	13,20
Organic chemicals	21,11	22,40
Coal tar dyestuffs	8,92	11,18
Dyeing and tanning extracts	1,75	1,44
Pigments and paints	1,49	1,84
Medicine and pharmaceuticals	9,24	11,30
Essential oils and perfumes	98	1,33
Fertilisers, manufactured	27,26	12,22
Explosives and miscellaneous chemicals	12,96	14,75
Manufactured goods—		
Textile yarn and thread	13,06	13,26
Cotton fabrics of standard type	18	40
Other fabrics of standard type	30	55
Special textile fabrics	1,60	1,49
Manufactured goods—contd.		
Iron and steel	86,65	107,81
Copper	25,24	23,45
Nickel	1,44	1,56
Aluminium	10,50	7,92
Lead	2,69	2,59
Zinc	9,02	7,35
Tin	5,10	5,78

† Provisional.

NATIONAL TOBACCO'S SALES FALL AGAIN

GROSS PROFIT, HOWEVER, SLIGHTLY HIGHER

THE forecast, made last year by the Directors of the National Tobacco Company of India Ltd. (Managing Agents: Messrs. B. N. Elias & Co. Pvt. Ltd., Calcutta) in their report to shareholders for 1961, that the increase in the consumer prices of cigarettes would probably result in a change in smoking preferences has proved correct. For, during the year ended 31st December 1962, the Company has succeeded at least in arresting a further deterioration in the gross profit, if not in completely retrieving the situation. In common with other cigarette manufacturers and following the drop in demand in general, the gross realisation from sales has receded from Rs. 874.32 lakhs to Rs. 844.47 lakhs, but the gross profit has actually increased, albeit only fractionally, from Rs. 26.79 lakhs to Rs. 27.28 lakhs. It is interesting to note that this improvement has been realised, despite the fact that income from miscellaneous sales and other sources has declined sizably, by Rs. 24.26 lakhs to Rs. 62.76 lakhs, and there is no change in the closing stocks of finished goods as compared with the preceding year. Raw material costs, too, have risen and so have interest charges because of the excessive leaf stock holding in the early part of the year.

Although the gross profit shows a rise, the provision for Managing Agents' commission has declined from Rs. 1.93 lakh to Rs. 1.89 lakh, probably because of the rise of Rs. 0.91 lakh to Rs. 7.87 lakhs in the provision for depreciation, as a result of the new equipment pressed into service during the year. Provision for taxation is, likewise, higher at Rs. 8.99 lakhs, as against Rs. 7.45 lakhs. Consequent on these increases, the net profit has declined to Rs. 8.53 lakhs from the previous year's level of Rs. 10.45 lakhs. Most of this profit, or Rs. 7.92 lakhs to be exact, has been transferred to reserves, while the preference dividend for the year claiming Rs. 2.79 lakhs and the maintained ordinary dividend of 7 per cent (subject to deduction of tax) absorbing Rs. 5.60 lakhs have been proposed for payment out of the surplus brought in from the previous year.

The vicissitudes in the fortunes of the Company during the past four years are clearly brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Sales	844.47	874.32	904.44	935.17

Market price of ordinary shares (In rupees):	1962	1961	1960	1959
High	13.00	23.10	24.00	18.87
Low	10.31	14.50	17.50	11.87

Note.—All dividends are subject to deduction of tax.

Despite the setback suffered in the past two years, the Company's financial position continues to be strong. The share capital remains unchanged at Rs. 124.95 lakhs, with Rs. 44.98 lakhs in preference shares of Rs. 100 each and the balance in ordinary shares and it derives the support of as much as Rs. 133.09 lakhs in reserves and surplus. Secured and unsecured loans have declined substantially from Rs. 169.21 lakhs to Rs. 121.34 lakhs, including Rs. 12.00 lakhs in debentures. Current liabilities and provisions are also lower at Rs. 25.96 lakhs, as against Rs. 32.02 lakhs a year ago. Both these are very adequately covered by current assets and loans and advances and investments altogether amounting to Rs. 375.44 lakhs. In addition to these, the net block stands at Rs. 77.88 lakhs and has been arrived at by reducing the gross block of Rs. 171.78 lakhs by Rs. 93.90 lakhs which represents the accumulated amount of depreciation.

The all-India consumption of cigarettes showed a slight decline in contrast to the successive regular increases in consumption noted in the previous years. Prices of main selling line, that is, the old 15 nP brands, were raised to 20 nP, and this increase was unfavourably received by the smoking public. Additionally, continuing market pressure by the main cigarette manufacture group in India has resulted in a considerable contraction in sales of this, the Company's main selling price category. The setback in unit sales has been greater than the reduction in sales value. Tax impositions in the 1963 budget have brought about a further price change and it is still too early to say confidently that the sales have touched their lowest level.

Sales of Regent filter-tipped cigarettes continued to show an upward tendency, and the brand maintained its position as the leading filter-tipped cigarette in India, but with a limited market potential. Number Ten Virginia cigarettes have made fairly good headway, and the brand has a healthy future. Cool menthol-ated filter-tipped cigarettes remained static because of the shortage of imported filters. This bottleneck will be overcome by the end of the year, with supplies of indigenous filters from a factory in Bombay, which has collaboration arrangements with one of the leading European filter manufacturers.

Exports of unmanufactured tobacco from India touched a post-war record in 1962. In keeping with this trend, the Company's exports also showed a large increase over the previous year. The Company was fortunate in achieving an improvement in unmanufactured tobacco sales, as this has assisted in mitigating the effect of an unsatisfactory cigarette business. The rise in exports was brought about by larger shipments to the East European countries. A beneficial feature of this trading has been the clearance of old crop tobacco, the accumulation of which had caused distress to the trade in previous years.

As for the prospects for current year, the Directors observe as follows:

"The recent budget announcements have imposed a further steep increase in the burden of taxation and, though we have been obliged to increase prices of most of our products, these increases have not reflected the full impact of the additional levies. Whilst price increases can possibly be borne by smokers in the higher income groups, those with medium and lower incomes will naturally feel the effects more severely and we expect there will be still more change in the smoking pattern of cigarette consumption. Your Company feels that its policy of continuous efforts to place before the smoking public products which will give them maximum value for their money must bear long-term beneficial results."

The Rs. 10 paid ordinary shares of the Company are currently quoted at Rs. 11.62 *cum-div.* They fetch a net yield of 3.8 per cent per annum on *ex-div.* basis.

(*Concluded from next column*)

pansion, the return on the new shares has started accruing from the very beginning. Then, the ceiling prices of cloth are expected to be revised upward soon in the light of the Tariff Commission's recommendations. The prospects for the current year are, therefore, considered to be encouraging.

The Company's cellulose acetate flakes and yarn project, to be set up at Harihar in Mysore State, is expected to be finalised in a couple of months. A loan from the U.S.-A.I.D. is now under active consideration at Washington, and a decision is expected shortly. Finance for this project is to be obtained from a one-for-one rights issue bringing Rs. 1.08 crore, and a public issue of Rs. 1.50 crore in equity shares and of Rs. 75 lakhs in preference shares. Messrs. Hercules Powder Company of Wilmington, Delaware, U.S., collaborators in the flakes project, are expected to take up preference shares worth Rs. 30 lakhs.

The paid-up capital of the Company has increased from Rs. 46.47 lakhs to Rs. 50.77 lakhs. Together with reserves and surplus, the "own funds" as at the end of the year amount to Rs. 118.96 lakhs. As against this, the gross block has gone up from Rs. 160.48 lakhs to Rs. 166.21 lakhs, and is written down to Rs. 72.97 lakhs. Borrowings aggregate Rs. 81.45 lakhs and current liabilities and provisions amount to Rs. 38.33 lakhs. The total indebtedness to outsiders works out to Rs. 127.26 lakhs, as against which current assets, including investments, total Rs. 170.93 lakhs.

Currently quoted at a discount at Rs. 47.75 *cum-div.*, the Rs. 50 fully paid ordinary shares offer, on the *ex-div.* basis, a net yield of 9.6 per cent per annum.

LOWER PROFIT-MARGIN FOR MODERN MILLS

BUT DIVIDEND SAME

THE profit-margin (ratio of gross profit to sales) of the Modern Mills Ltd. (Managing Agents: Messrs. N. Sirur and Company (Private) Ltd., Bombay) for the year ended 31st October 1962 has declined further to 12.4 per cent from 14.6 per cent, to which level it had shrunk in the previous year from 15.1 per cent for the year 1959-60. The setback has been accentuated by the drop in profit from Rs. 33.98 lakhs to Rs. 31.03 lakhs, in contrast with the upward trend in the previous three years, despite higher sales of Rs. 248.69 lakhs, as compared with Rs. 232.40 lakhs. Dealing with the year's results, the Directors have covered the familiar ground of very high prices of cotton without there being a corresponding higher realisation from the sale of yarn and cloth, in view of the industry's voluntary scheme of price control and export sales at some sacrifice due to competition from other exporting countries like China and Japan. Even so, it is creditable that the Modern Mills Ltd., unlike several other units, has not suffered any serious damage to the profit-earning capacity, since it enjoys the advantageous position as a manufacturer of both yarn and cloth.

The net profit, after the essential provisions, is a little lower at Rs. 10.69 lakhs, as compared with Rs. 11.86 lakhs a year before. Nevertheless, the dividend on 50-rupee ordinary shares has been maintained at 12 per cent per annum, subject to tax. The amount transferred to reserves and provisions, including Rs. 83,000 set apart for reserve for Super Profits Tax, is only Rs. 4.28 lakhs, as against Rs. 6.37 lakhs a year before. Further, a sum of Rs. 4.52 lakhs has been withdrawn from reserves in order to meet past provisions, especially the bonus for the year 1959, amounting to Rs. 2.82 lakhs.

A summary of the Company's progress since 1959 is contained in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st October			
	1962	1961	1960	1959

† Subject to deduction of tax.

The machinery ordered during the first half of the year under review has been received and installed, while Truetzchler blow room machinery worth Rs. 7.65 lakhs for Mill No. 1 was received after the close of the year and is under erection, and equipment for sewing thread manufacture is still to come. A thread and loop-cutter (Butta cutting) machine worth Rs. 1.11 lakh for Mill No. 2 is now under erection. Additional machinery worth Rs. 25.15 lakhs has been ordered. The modernisation and expansion programme of the Company covers mainly the spinning sector. The ratio of spindleage to loomage is now 80. The programme will surely result in higher profits. When fully implemented, it will raise the net block to over Rs. 1 crore from the present level of Rs. 72.97 lakhs and step up output.

In order to finance the modernisation, the Company has already issued during the year 92,947 right shares in the proportion of one-for-one to shareholders as on 4th June 1962. It has also capitalised reserves to the extent of Rs. 7.74 lakhs through a one-for-six bonus issue on the old shares as on 29th November 1962 and is to capitalise a like amount through a similar issue on new shares as soon as they are fully paid. Both the rights and bonus issues will augment the capital substantially. Since, however, the proceeds of the rights issue have gone straight towards modernisation and ex-

(*Continued in previous column*)

BENGAL PAPER PAYS LESS ON HIGHER CAPITAL

SALES AND PROFIT IMPROVE

A SIZABLE cut in the dividend on the 10-rupee ordinary shares from 27.50 per cent to 20 per cent per annum, subject to tax, has been made by the Bengal Paper Mill Company Ltd., for the year 1962. The reduced dividend is, however, on higher capital. On 26th February 1962, it will be recalled, the Company issued 180,000 five-rupee fully paid bonus shares. After the bonus issue, the shares were consolidated into Rs. 10 each. One factor necessitating the cut in the dividend for 1962 is that it is payable not only on these bonus shares but also on the 180,000 right shares of Rs. 10 each issued at a premium of Rs. 12 per share in the proportion of one-for-three on 12th March 1962. Another reason for the cut in dividend is that the Company has issued during the year 6.25 per cent 1963-70 loan stock of the value of Rs. 30 lakhs, which is convertible into equity shares within the period ending on 31st December 1968. The basic factor responsible for the lower dividend is, of course, the setback in net profit from Rs. 22.13 lakhs to Rs. 16.44 lakhs, due to the sharp rise in the tax provision from Rs. 19.30 lakhs to Rs. 30.73 lakhs, including Rs. 5.08 lakhs on account of Super Profits Tax. With the net profit itself being lower, there could have been no question of maintaining the dividend at the 1961 level on the increased capital. That would have meant a withdrawal from reserves which the Directors have wisely avoided, especially in view of the need for enlarging the "own funds" in order to minimise the mischief of S.P.T. A withdrawal from reserves during the year would have been all the more inappropriate, because the setback in net profit has also led to a reduction in the amount retained in business from Rs. 5.69 lakhs to Rs. 3.86 lakhs.

Tabulated below is the comparative position of the Company from 1959:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Sales, less excise duty	340.42	295.09	276.40	269.79

* Subject to deduction of tax.
† Inclusive of 1,80,000 bonus shares of Rs. 5 each fully paid, issued in the proportion of one bonus share for five shares held on 26th February 1962.

Note.—In February 1962, prior to the bonus share issue, the Company sub-divided the Rs. 25 fully paid ordinary shares into shares of Rs. 5 each. After the bonus issue, the shares were consolidated into shares of Rs. 10 each.

While the net profit has declined by 25.6 per cent because of the increased tax burden, the gross profit shows actually an increase of 9 per cent from Rs. 55.05 lakhs to Rs. 60.03 lakhs, since the net sales (that is, excluding commission, discount and brokerage as well as excise duty paid) have jumped up from Rs. 295.09 lakhs to Rs. 340.42 lakhs following greater production of 21,588 tonnes, as compared with 19,627 tonnes a year before. It will, however, be seen that the increase in gross profit has not kept pace with that in sales, due to rise in costs, so that the profit-margin (ratio of profit to net sales) has dropped by one point to 17.6 per cent. The percentage distribution of revenue during the year, with the previous year's comparative figures mentioned in brackets, is shown as: Materials, chemicals and stores 40 (39); power and fuel 8 (same); staff expenses 15 (17); other expenses 4 (same); depreciation 3 (4); maintenance 3 (same); tax and duty 23 (19); and dividends and reserves 4 (6). With effect from 21st June 1962, the Government has sanctioned an *ad hoc* increase of Rs. 60 per tonne in the price of paper of all varieties and discontinued the rebate of Rs. 40 per tonne for paper supplied in reels. This increase was a sequel to the representation made by the industry to the effect that the price fixed by the Government in pursuance of the Tariff Commission's recommendation (effective from 1960) had imposed a serious repercussion on all the units. The Directors of the Company, however, consider that the supplementary increase in price is inadequate, as it sets off only a part of the increase in the cost of production subsequent to the findings of the Tariff Commission. Moreover, costs have been continuously increasing. Higher costs and increased taxation, it is pointed out, will certainly affect the prospects for the current year. Incidentally, satisfactory progress is reported on the Company's expansion programme, and the new paper machine is expected to go into production by the last quarter of the current year.

On the 180,000 right shares, Rs. 5.50 per share (including Rs. 3 towards the premium) were paid on application and a further Rs. 5.50 per share (including Rs. 3 towards the premium) were called by 30th April 1963, that is, after the close of the year. The year-end paid-up ordinary capital is thus shown at Rs. 58.50 lakhs, as against Rs. 45 lakhs a year before, which, together with the preference capital, brings the total issued and subscribed capital to Rs. 84.50 lakhs. Reserves and surplus stand at Rs. 64.06 lakhs. Secured loans are higher at Rs. 60.49 lakhs, as compared with Rs. 56.41 lakhs a year before, due mainly to a loan of Rs. 6.85 lakhs from the Industrial Finance Corporation of India. The convertible stock of Rs. 30 lakhs forms part of unsecured loans amounting to Rs. 32.15 lakhs. The stock was offered in units of Rs. 250 each at par to shareholders in the proportion of one stock for every 45 ordinary shares of Rs. 10 each. Each stock shall be convertible: (*a*) into 10 equity shares of Rs. 10 each between 1st July 1963 and 31st December 1964, (*b*) into nine equity shares between 1st January 1965 and 30th June 1966, and (*c*) into eight equity shares between 1st July 1966 and 31st December 1968. Current liabilities and provisions amount to Rs. 67.40 lakhs. Excluding the I.F.C. loan and the convertible loan stock, the total short-term liability to others works out to Rs. 123.19 lakhs, which is covered fully by current assets, including investments, aggregating Rs. 198.88 lakhs. The gross block, which has increased from Rs. 290.26 lakhs to Rs. 300.20 lakhs, is written down to less than one-third of its value amounting to Rs. 96.10 lakhs. Inclusive of capital expenditure in progress, the net block is shown at Rs. 109.72 lakhs.

At their current market value of Rs. 29.12 *cum-div.*, the Rs. 10 fully paid ordinary shares of the Company offer, on the *ex-div.* basis, a net yield of 5 per cent per annum.

ELECTRIC HOISTS PROJECT

Hoist-O-Mech Ltd., a new company formed for the manufacture of electric hoists, proposes to enter the market shortly for raising Rs. 20 lakhs. The issued capital of the Company will be Rs. 35 lakhs. The promoters, Directors and their friends will subscribe Rs. 15 lakhs. Besides the capital, the Company will obtain an amount of Rs. 15 lakhs in the shape of a loan from the I.C.I.C.I. The Company is promoted by the Western Mechanical Industries (Private) Ltd. which claims to be the second largest manufacturer in India of electric overhead travelling cranes and has made considerable progress in the manufacture of cranes and other material handling equipment. Electric hoists find application in the equipment for material handling.

(*Concluded from next column*)

factory. But what about the current year? Speaking on this point in their report to shareholders, the Directors state that the conditions now obtaining do not make it possible to forecast with any accuracy what the profit are likely to be. In the first two months of the current year, production was hampered by lack of matching stell and negligible supply of electrodes. Considering this bad start, it will not be possible to equal the results for the year under review, but the Directors expect that, with improvement in the present conditions, the results for the current year will not be unsatisfactory.

The Rs. 10 paid ordinary shares of the Company are currently available at Rs. 31.75 *cum-div.* Reducing the price to an *ex-div.* one, the net result on fresh investment works out to 4.6 per cent.

INDIAN STANDARD WAGON DOES VERY WELL

HANDSOME RISE IN EARNINGS

THANKS to the "happy combination" of two factors, the Indian Standard Wagon Company Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) has been able to report to its shareholders extremely encouraging results in respect of the year ended 31st March 1963. One, with the greater number of larger orders reaching completion and consequently billed, the sales realisation has expanded by as much as Rs. 315.81 lakhs to Rs. 805.00 lakhs, representing an increase of about 65 per cent over the previous year's figure. Two, consequent to this rise in output, the unit cost of production has, quite logically, decreased and this has resulted in lifting the gross profit very substantially from Rs. 87.32 lakhs to Rs. 199.30 lakhs, a level that the Company has never realised in the recent past. As, however, could have been anticipated, this betterment has brought in its wake an increase in essential provisions, particularly those for Managing Agents' commission and taxation, the former going up from Rs. 5.50 lakhs to Rs. 7.50 lakhs and the latter nearly trebling itself from Rs. 42.00 lakhs to Rs. 125.00 lakhs, inclusive of Rs. 34.00 lakhs for S.P.T. With the provision for depreciation also higher, though fractionally, at Rs. 6.39 lakhs, as against Rs. 6.30 lakhs, the net profit is up by only Rs. 26.89 lakhs at Rs. 60.41 lakhs. Together with the Rs. 79,000 brought in, the total amount available for distribution is Rs. 61.20 lakhs. Although this sum is, by comparison, far larger than any similarly available in the past few years, the Directors have thought it prudent to plough back a substantial portion thereof, Rs. 30.86 lakhs in all, as against Rs. 12.81 lakhs, into the business after providing Rs. 12.71 lakhs, as against Rs. 7.55 lakhs, for staff gratuity and bonus for the year under review, as well as the one immediately preceding. From the balance left and after reserving Rs. 1.79 lakh for payment of preferred dividends, an ordinary dividend of 15 per cent and a cash bonus of 5 per cent, both subject to deduction of tax, have been proposed for payment on the capital as increased by the bonus issue effected earlier in the year. These claim Rs. 15.60 lakhs, leaving Rs. 24,064 to be carried forward, as against the Rs. 78,603 brought in.

Working results of the Company for the year under review together with those for the three previous ones are set forth in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1963	1962	1961	1960
Sale proceeds	805.00	489.19	475.72	550.50
Departmental orders and items used in works	29.13	27.85	25.05	24.33

* For the Rs. 25.00 fully paid share.

Consequent upon the bonus issue referred to above, the share capital of the Company as at 31st March 1963, has increased to Rs. 98.33 lakhs. Of this, only Rs. 19.67 lakhs are in preference shares of Rs. 100 each and the balance in equities. Reserves and surplus have declined, for obvious reasons, to Rs. 87.81 lakhs, despite the heavy accretion during the year. Nonetheless, total own funds show a welcome increase from Rs. 155.82 lakhs to Rs. 186.11 lakhs. Loans, both secured or unsecured, are conspicuous by their absence, but current liabilities and provisions rank as high as Rs. 563.22 lakhs. But these are adequately covered by current assets, investments and loans and advances aggregating Rs. 698.47 lakhs. With the new assets acquired during the year, the gross block has risen in value to Rs. 135.76 lakhs, but this is written down to a net block of Rs. 50.88 lakhs.

The Company's working during the year under review has no doubt been highly sat-

(*Continued in previous column*)

PODAR MILLS' PROFIT DROPS

RESERVES GET LESS

AS could have been well anticipated, the annual report of the Podar Mills Ltd. (Managing Agents: Messrs. Podar Sons Private Ltd., Bombay) for the year ended 31st December 1962 reveals a substantial drop in profits—despite better turnover—thanks to increasing costs of manufacture. "The results for the year," as the Directors themselves say in their report, "are not satisfactory, due to unfavourable trading conditions. Under the scheme of voluntary reduction in prices enforced by the Indian Cotton Mills' Federation, which continued throughout the year, prices of cloth and yarn remained the same, while cost of production increased. There was an all-round increase in prices of raw materials and stores and increases in power cost, wages, employers' contribution under the Employee State Insurance Schemes, etc."

Notwithstanding the general sluggishness in demand, gross realisation from sales of cloth, yarn and waste has increased by Rs. 28.69 lakhs, or about 12.6 per cent, to Rs. 257.05 lakhs, but the gross profit has declined sharply from Rs. 30.80 lakhs to Rs. 16.71 lakhs, even though other income has been higher and closing stocks lower. With such a drastic drop in profits, it is but natural that the provisions for taxation and Managing Agents' commission have been reduced, the former by as much as Rs. 12.50 lakhs to just Rs. 1.00 lakh and the latter by Rs. 1.12 lakh to just Rs. 1.02 lakh. Since the third essential provision, namely, that for depreciation, is also lower at Rs. 6.40 lakhs, as against Rs. 6.73 lakhs, the resulting net profit shows only a moderate rise of Rs. 16,000 to Rs. 8.29 lakhs. Out of this, Rs. 58,000 have been set apart for payment of preferred dividend and Rs. 1.25 lakh credited to the development rebate reserve. From the balance, a bigger ordinary dividend of 12 per cent (including a bonus of 2 per cent), subject to deduction of tax, is being proposed to be paid on an enlarged capital. This absorbs Rs. 6.60 lakhs, leaving Rs. 1.23 lakh to be carried forward, as against the Rs. 1.36 lakh brought in.

The above details have been set forth in the following table with the corresponding figures for the three years immediately preceding 1962.

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

Market price of ordinary shares (In rupees):				
High	162	160	183	186
Low	113	128	130	125

Note.—All dividends are subject to deduction of tax.

The financial position of the Company is sound. The share capital remains unchanged at Rs. 65.00 lakhs, comprising Rs. 10.00 lakhs in preference shares and the balance in equities. And there are the reserves and surplus amounting to Rs. 50.93 lakhs. Loans (secured and unsecured) aggregate Rs. 45.13 lakhs, besides current liabilities and provisions of Rs. 59.38 lakhs. Both these put together, however, are well covered by current assets and loans and advances amounting to Rs. 100.37 lakhs. Investments, mostly in shares of subsidiary companies, are carried in the books at a cost of Rs. 42.09 lakhs. Including the new assets worth Rs. 37.20 lakhs acquired during the year, the block account stands as at 31st December 1962 at Rs. 129.26 lakhs and this has been well written down to Rs. 77.98 lakhs through the depreciation account.

During the year under review, the Company received two industrial licences. The first of these covers the settling up of a separate spinning unit, with a complement of 12,000 spindles, in the city of Jaipur. The planning for construction of the new unit is in progress, while necessary orders for some machines have already been placed. The second licence relates to the establishment of a new industrial undertaking in the form of a separate company to manufacture automobile tyres and tubes in Kotah (Rajasthan) with an installed annual capacity of 300,000 units of each. Negotiations are in progress for foreign collaboration, both financial as well as technical.

The Rs. 10 ordinary shares of the Company are currently quoted at Rs. 11.48 *cum-div.* and fetch a real yield of 7.9 per cent per annum on the *ex-div.* price of Rs. 10.64.

The New India Industries Ltd., Baroda, has been allowed to issue further capital of Rs. 399,800, divided into 3,998 equity shares of Rs. 100 each as bonus shares on capitalisation of reserves. Out of this, bonus shares of the approximate value of Rs. 103,070 will be allotted to the Company's three non-resident shareholders.

SYNOPSES OF COMPANY REPORTS

Bowreah Cotton Mills Co., Ltd.

(*Managing Agents*: Messrs. Kettlewell Bullen and Co., Ltd., Calcutta.)

Annual General Meeting—28th June 1963.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1962	1961

* This includes super profits tax.
† The dividend for 1962 is on the increased ordinary capital of Rs. 33,60,000.
‡ For 1961, the dividend was on an ordinary paid-up capital of Rs. 24,00,000.

Extracts from the Directors' report: Trading condition during the year under review have been moderate.

The Central Wage Board's recommendation regarding the increase of Rs. 2 per month to the workers with effect from 1st January 1962 was duly implemented. In this connection, it will be pertinent to point out that the tripartite committee for the assessment of workload and rationalisation in the textile mills have not so far submitted their report.

With the introduction of Emergency Risks Insurance, increase in the import duty on cotton and increase in the price of indigenous cotton, dyes and chemicals, the cost of production is constantly in the process of increase without any proportionate increase in the price of cloth and yarn.

Machinery to the tune of Rs. 18 lakhs have been installed for replacement, modernisation as well as diversification of production, and orders worth approximately Rs. 32.20 lakhs are outstanding for further modernisation of the Mills.

During the year under review, as foreshadowed in the previous year's report, the Company issued 96,000 ordinary shares of Rs. 10 each at par.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	45,60,000	Gross block	2,01,26,214

Low	106.00	100.00

Extracts from the Directors' report: In view of the proposed amendments in the Super Profits Tax Bill it appears that the Company may not have to pay any Super Profits Tax for the year under report.

On account of higher prices of cotton, stores chemicals, etc. and increase in wages, the results of the working have been adversely affected. The Directors, however, are of the opinion that the Company's affairs should be regarded as satisfactory.

All efforts are being made to rationalise the working of the Company and good progress has been made in spinning and weaving departments. Since the closing of the year under report upto the date of this report, machinery worth Rs. 1,50,000 has arrived. There are 26,180 spindles and 550 looms in the Company's Mills.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	28,21,000	Gross block	1,35,17,045

Dividend per ordinary share	[Re. 1.80]	[Re. 1.90]
Carry forward	25	35

* Includes Rs. 1,90,000 for super profits tax.

Extracts from the Directors' report: The output for the year was slightly lower than in 1961. The construction of Tunnel Kiln No. 4 and other works in connection with the modernisation programme in the Company's old firebrick section caused a certain amount of disorganisation there and firebrick production dropped by 5,600 tonnes; this in fact is satisfactory as the Directors had anticipated a much higher drop in production. Sillimanite production was substantially higher and so was that of insulation and other specialised items. It is for these reasons although there was a substantial reduction in the quantity sold when compared to 1961, the sale value increased from Rs. 2.11 crores in 1961 to Rs. 2.26 crores in 1962.

Due to technological changes in the steel industry the demand for *Silica* is diminishing and will further go down in course of next few years. The Company is exploring various avenues in order to diversify production.

The expansion and modernisation referred to in the Directors' last report progressed satisfactorily during the year under review, and with the exception of the reconstruction of Tunnel Kiln No. 1 this is expected to be completed by the end of 1963.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	34,00,000	Gross block	1,70,20,512
Debentures	20,00,000	—Depreciation	82,30,436
Reserves and surplus	58,81,393		
Other liabilities	1,28,24,661	Net block	87,90,076
		Block in progress	1,65,121
		Current assets	1,43,02,079
		Investments	5,97,731
		Cash	51,052
	Rs. 2,39,06,059		Rs. 2,39,06,059

* Paid-up capital consists of 3,00,000 Ordinary shares of Rs. 10 each and 4,000—5½ per cent. redeemable cumulative preference shares of Rs. 100 each. Of the above, 60,000 Ordinary shares have been allotted as fully paid-up by way of Bonus shares by capitalisation of reserve.

South India Viscose Ltd.

(*Chairman*: Mr. G. K. Devarajulu, Coimbatore.)

Fifth Annual General Meeting—28th June 1963.

Extracts from the Directors' report for the year ended 31st December 1962: Review of Operations: *Staple Fibre Plant* which reached the full production target of 10 tons per day in the middle of 1961, continued to work to its full capacity throughout the year except in July 1962 when production had necessarily to be reduced due to power cut.

Rayon Plant: Out of 41 frames in *Rayon Plant*, 22 frames were erected in 1961; and 16 more frames in 1962. Notwithstanding the fact that 3 frames remained incomplete due to the delay in the receipt of replacement of component parts, the *Rayon Plant* has worked from August 1962 to the end of the year to its full capacity of 10 tons per day on 120 denier basis.

Production and Sales: The quality of the Company's products is comparable with the best standards of imported varieties. Production and sales of *Staple Fibre* and *Rayon Yarn* continued to be fairly satisfactory. Statement showing the statistics of production and sales in the year as compared with the previous year is given below:

	Staple Fibre		*Rayon Yarn*	
	1961	1962	1961	1962
Production in tonnes	1,894	3,739	148	2,769
Sales in tonnes	1,880	3,665	—	2,516
Sale Value (in lakhs of Rs.)	69.76	136.47	—	181.81

Price fixation and distribution of *Staple Fibre* and *Rayon Yarn* are controlled by the Textile Commissioner, Bombay. Sales of *Staple Fibre* are directly made by the Company to its sponsor mills against allotments made by the Textile Commissioner.

Rayon yarn is sold through the Company's selling and distributing agents, M/s. Rayonyarns

Import Company, Private Ltd., Bombay, for the time being, against allotments.

The working of the Company during the year has resulted in a gross profit of Rs. 1,27,12,139. The profit brought forward from last year is Rs. 1,11,024. The total gross profit is, therefore, Rs. 1,28,23,163. Against this sum, the directors had to statutorily provide a depreciation of Rs. 1,59,23,304 for the year 1962 and the unabsorbed depreciation of Rs. 53,09,160 relating to 1961; i.e. Rs. 2,12,32,464 in all. This has, therefore, resulted in a net loss of Rs. 84,09,301. If normal conditions prevail during 1963, the directors hope that a major portion of the carried forward loss would be absorbed.

Cost of the Company's fixed assets as on 31st December 1962 is Rs. 8.8 crores approximately, against the paid up capital of only Rs. 4.9 crores. The company has a liability of Rs. 1.68 crores to pay before the end of 1964 towards the imported machinery. The Company has borrowed from the Bank of Baroda Ltd., and The Indian Bank Ltd., a sum of Rs. 2.08 crores by way of cash credit loans and demand loans for meeting its working expenses and a part of its deferred payments.

Share Capital: As on 31st December 1962, the number of shareholders of the Company was 7,564 as against 6,454 in 1961. During the year, the shares that were reserved for the Company's Collaborators were completely allotted. The issued capital of Rs. 4,90,00,000 made up of 4,90,000 equity shares of Rs. 100 each is fully paid up.

Special Problems at the Present Time: Considerable difficulty is experienced by the Company in obtaining *Wood Pulp* and *Caustic Soda*, the chief raw materials. The Company is obliged to obtain pulp through *Export Promotion Scheme* at an additional cost of about Rs. 28 lakhs per annum. As a result of the National emergency created by the Chinese aggression and the Export policies followed by the Government of India in the matter of art silk fabrics, there was a crisis in the *Art Silk* yarn market. Similarly due to heavy imports of *Staple Fibre* by Government of India the *Staple Fibre* market was paralysed. The recent imposition of additional taxes, excise duty, war risk insurance etc., has thrown additional burden on the Industry.

The existing sale prices of *Rayon Yarn* are wholly inadequate for a new concern like this. The profit that this Company has earned under such handicaps, is hardly enough even to cover depreciation. The Company has therefore, represented to the Government of India for an increase in the prices.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ..	4,90,00,000	Gross block ..	8,79,94,291

Low	5.50	5.40

* Dividend on the increased equity capital of Rs. 24,85,810.
† Dividend on a paid-up capital of Rs. 19,60,955.

Extracts from the Directors' report: *I.F.C. Loan*: The Company repaid during the year a sum of Rs. 2,60,290 to the Industrial Finance Corporation of India and as on 31st December 1962, the amount outstanding from the old loan was Rs. 1,82,765. A fresh Rupee loan of Rs. 2,79,000 and a Dollar loan of Rs. 4,71,000 has been obtained for the development of the Company's Pimpri Unit. The Corporation opened Letters of Credit in respect of the foreign machinery and plant, details of which were not received during the year while the amount of rupee loan was received in cash.

Pimpri Unit: Trial production in the Pimpri Unit started in June-July of 1962 with available Semi-automatic machinery and reached the capacity of 4½ tons a day, before the end of the year. The automatic machinery and plant ordered from abroad will arrive by middle of the current year and the present production of this Unit will be doubled or even more when the new plant goes into production. The working result of this Unit during the short period of 6 months shows a revenue deficit of Rs. 43,530 after providing for depreciation and development rebate amounting to Rs. 67,236. The profit of the Company for the year has been arrived at after absorbing this deficit.

The new finance bill has imposed various fresh burdens on the finances of the Company. There is a rise in excise duty on glassware and electric motors, in custom duties on imported tin plate, chemicals, machinery and plant, in transport, charges on raw materials and finished products both by Road and Rail, and general rise in prices of essential raw materials like soda ash, coal, kerosene and petrol and various other costs besides emergency war-risk insurance.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	24,85,810	Gross block	67,80,765

High	35.50	28.50
Low	24.24	25.25

Extracts from the Directors' report: During the financial year, the Company issued 20,000 equity shares to the members, and the issue was fully subscribed. The Company proposes to utilise this amount primarily for raising one more floor to its factory building at Sewri so as to enable it to proceed with its expansion programme. Necessary formalities in this regard have been completed. If cement and steel which are in exceedingly short supply are made available in time, this additional working space is expected to be available by March 1964.

Specialised products, manufactured in collaboration with Lakeside Laboratories of U.S.A. and The Endo Drugs Corporation of U.S.A., are showing an upper trend and have found a good response in the market.

The Company is making continued efforts to obtain larger allocation of foreign exchange for import of raw materials to achieve increase in production. However, the national emergency created by the Chinese aggression and the need for diversion of available foreign exchange for defence purposes may not allow the Company to show the same rate of progress next year.

Accounts in brief as at 31st December 1962 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	14,56,344	Gross block	17,40,490
Reserves and surplus..	4,47,736	—Depreciation ..	9,02,099

Low	9.62	10.00

* Includes provision for super profits tax.
† Only a small sum of Rs. 496.11.

Extracts from the Directors' report: The value of production in 1962 amounted to Rs. 1,55,83,347 which compares very favourably with the corresponding figure of the previous year amounting to Rs. 1,11,89,889 and represents an increase in the value of production to the extent of 39 per cent. Another heartening feature has been the success of the Company's efforts to reduce the value of goods in stock and process from about Rs. 32 lakhs to Rs. 19 lakhs. The release of liquid assets achieved in this manner enabled the Company to keep away from significant borrowings from its bankers and will stand in very good stead in the programmes for expansion.

The Company's payments to foreign collaborators on the production of *centre buffer couplers* have increased from Rs. 78,965 in the year 1961 to Rs. 3,84,101 during the year 1962. This has been due to the considerable increase in the production of *couplers* during 1962 as compared to 1961.

The demand for the Company's products improved considerably in 1962 and, at the time of writing this report, the steel foundry is fairly well booked. The demand for steel castings continues to be very encouraging and the Directors feel confident that, in the foreseeable future, there will be no shortage of work. A large contract for the supply of *centre buffer couplers* is being negotiated at present and the Company hopes to get a fair share of this business.

Encouraged by the trend in demand for castings, the Company has applied for licence for expansion of capacity to 12,000 tonnes per annum and the Directors are confident that the licence shall be made available by the Government. The plan for expansion envisages the setting up of a new works within 15 to 20 miles radius of the Company's existing Ballygunge works where the finishing operations of production shall be transferred. Tentative estimates made in respect of the expansion programme indicate need for investment of approximately Rs. 50 lakhs in fixed assets. Besides this, an equal amount shall be needed for working capital purposes. The Directors are now considering ways and means for providing the required finances for the expansion programme.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	50,00,000	Gross block ..	1,12,71,910
Reserves and surplus	44,18,468	—Depreciation ..	76,90,692
Other liabilities ..	60,65,366	Net block	35,81,218
		Block in progress ..	1,06,370
		Current assets ..	1,17,23,384
		Investments	36,055
		Cash	36,807
Rs.	1,54,83,834	Rs.	1,54,83,834

* Paid-up capital consists of 5,00,000 Equity shares of Rs. 10 each. Of the above 2,99,893 Equity shares are allotted as fully paid up Bonus shares by capitalisation of revenue reserve.

Banarhat Tea Co., Ltd.

(*Managing Agents*: Messrs. Andrew Yule and Co., Ltd., Calcutta.)

Annual General Meeting—28th June 1963.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1962	1961
Tea sales	81,50	80,60
Closing stock of tea	11,23	20,83

Dividend per ordinary share	(21%)	(21%)
Carry forward	[Rs. 21.00]	[Rs. 21.00]
	42	70
Market value of ordinary shares (in rupees):	1962	1961
High	298.00	343.00
Low	244.00	275.00

* Includes depreciation underprovided on block assets sold/scrapped.
† This includes Rs. 12,000 for super profits tax.
‡ Includes Rs. 280 being supplementary dividend on account of the three years 1959, 1960 and 1961 (gross) on 4,000 preference shares at 0.07 per cent.

Extracts from the Directors' report: Weather conditions were less satisfactory than in the previous year, rainfall amounting to 336 cms. as against 403 cms. in 1961 and the 10 year average of 355 cms. In consequence a smaller crop of 14,844 quintals was secured compared with 15,515 quintals in 1961. The tea market was, however, generally stronger and the average price increased to Rs. 4.86 per kg. from Rs. 4.50 per kg. in 1961. Estimates for the current year have been framed for a crop of 15,250 quintals.

Capital expenditure incurred during the year totalled Rs. 10,84,668, of which some 80 per cent represents the cost of constructing labour quarters and the balance mainly expenditure on factory alterations and machinery. The Company's Karballa division has been converted to C.T.C. manufacture from the start of the current season.

Towards the end of April 1963, the Company's Banarhat division was struck by hail and the damage incurred was assessed at the equivalent of 31,800 kgs. of made tea.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	31,00,000	Gross block ..	97,71,475
Reserves and surplus..	38,04,341	—Depreciation ..	35,67,480
Other liabilities ..	28,83,438	Net block	62,03,995
		Current assets ..	26,88,714
		Investments	57,649
		Cash	3,42,421
Rs.	92,87,779	Rs.	92,87,779

* Paid-up capital consists of 4,000—6½ per cent. free of income-tax cumulative preference shares of Rs. 100 each and 27,000 ordinary each are allotted as fully paid-up bonus shares by capitalisation of general reserve.

NEWS IN BRIEF

THE *Government of Madras has ordered a 100 per cent power cut to all non-continuous process industries in the State with effect from the 20th inst.*

A six-man committee with Dr. A. Nagaraja Rao (Chairman, Heavy Engineering Corporation) as Chairman, has been constituted to ensure a proper utilisation of the available scope for growth of ancilliary and feeder industries.

The States of Maharashtra, Gujarat, Mysore and Punjab have adopted the economic criteria in the place of caste to determine backwardness for the grant of scholarships and tuition fees. The annual income limit prescribed is Rs. 1,200 in Gujarat, Maharashtra and Mysore and Rs. 1,000 in the Punjab.

The Federation of Indian Chambers of Commerce and Industry *is planning to conduct a three-day seminar on public and private industrial undertakings early in August next. The seminar will discuss, among other subjects, problems relating to the size of industrial undertakings, organisation, technique of production, sources of finance, labour, pricing, and sales and purchases.*

The Union Ministry of Education has appointed an eight-member committee of members of Parliament, with Mr. P. N. Sapru as Chairman, to examine the provisions of the Constitution regarding higher education. The terms of reference of the Committee will be to examine the provisions of the Constitution regarding the responsibility of the Central Government in the field of higher education with a view to finding out the extent to which the Centre could assume greater responsibility in this field and to suggest appropriate steps to be taken for the purpose.

The first three of 24 C-119 transport planes which the U.S. is making available to India have arrived. The aircraft have brought spare parts, equipment and supplies for the C-119s which have already been delivered to the Indian Air Force. These transport planes are being supplied under the U.S. military assistance programme. They have a cruising speed of 250 miles per hour over an operational range of 2,500 miles with a payload of 10,000 pounds. On shorter runs, they can lift a maximum of 30,000 lbs. Their huge rear-door cargo bay opens wide, permitting troops and trucks, tanks, bulldozers and other heavy equipment to be loaded easily and quickly.

A conference of industrial and trading interests of the Southern States of Andhra Pradesh, Kerala, Madras, and Mysore has been convened by the Federation of Indian Chambers of Commerce and Industry. It will be held at Hyderabad today. More than 250 delegates are expected to participate. The Chief Ministers of the four Southern States have been requested to depute their senior officers to take part in the Conference, as it would help towards a better understanding of each other's viewpoint relating to the working of industry and business. Some Ministers of Andhra Pradesh Government are also expected to attend and participate in the deliberations.

The Esso Refining Company of India Ltd. exported 190.8 million litres of motor gasoline and asphalt to New Zealand, Malaya and Indonesia during 1962. Foreign exchange earned thereby amounted to Rs. 1.99 crore. Since the Esso Refinery went on stream in 1954, it is claimed to have saved and earned Rs. 31.71 crores in foreign exchange. Last year, the refinery enjoyed yet another record year of progress. The crude throughput increased by 7 per cent over 1961, resulting in a total production of 2,433.5 million litres of various petroleum products. The first shipment of indigenous crude oil from Ankleshwar oilfield in Gujarat was received at the Esso Refinery on 16th February 1962. By the end of the year, the refinery is expected to receive about 600 tons of Ankleshwar crude per day. During the year, a new solvent plant went on stream and the Refinery supplied haxane and solvent oil to the local market.

The National Telex Service will come into being in India with the commissioning of the new exchanges installed at Calcutta, New Delhi, Bombay and Madras. These exchanges will start operating from the 24th inst. The new service will enable teleprinter subscribers at these stations to communicate with one another, the calls being established by automatic dialling. The annual rental for the telex connection will be Rs. 800. Charges for the transmission of messages will be levied at rates depending upon the distance and duration of call. For instance, a call from Delhi to Bombay will cost 40 nP for 12 seconds. Local call charges are 40 nP for every three minutes. The same is the charge for booking telegrams to the local telegraph office. Any telegram intended for a Telex subscriber will be transmitted on the teleprinter line free of cost. The existing Bombay-Ahmedabad service will continue and Ahmedabad subscribers will also shortly have the facility of inter-connection to the other stations.

Another loan of Rs. 63 lakhs has been sanctioned by the Union Ministry of Irrigation and Power to the Bihar Government for financing the Kosi Project in the current financial year. Out of this loan, a sum of Rs. 44 lakhs is earmarked for the irrigation sector and Rs. 19 lakhs for the flood control sector. The total loan sanctioned so far to the State Government for this project is Rs. 45.05 crores and the expenditure actually incurred upto April 1963 was Rs. 43.87 crores. The excavation of foundation and concreting work on the barrage, the prestressed concrete bridge over the barrage, the Eastern earth dam, the Eastern afflux bund and head regulator for the Eastern and Western canal have already been completed and the barrage gates are under process of erection. Work on the right guide bund, the Western afflux bund and the Western earth dam is in progress at present. The diversion of the flow of the Kosi river through the barrage has been completed ahead of schedule. Nearly 81 per cent of the earthwork in the main canal, four branch canals and numerous distributaries has been completed out of the total quantity of 237.60 crore c. ft. The second stage of the project, which consists of the construction of the Kosi Power House, the Western Kosi canal, extension of the Eastern Kosi canal and extension of flood embankments is also in progress. The whole project is expected to be completed during 1964-65.

Sales of goods manufactured by the Indian Telephone Industries at Bangalore during 1962-63 exceeded Rs. 7.5 crores, as against the original sales budget of Rs. 6.2 crores. The spectacular achievement is attributed partly to the spurt in production since the declaration of emergency in October 1962. Orders worth about Rs. 45 lakhs are now being executed to meet the supervisory remote control equipment requirements of the Indian railways. This type of equipment has been manufactured for the first time in the country and is being used on a large scale in the electrification projects of the Southern and South Eastern Railways. Substantial equipment has also been supplied to the P. and T. Department. As many as 1,100 measuring instruments of various types worth over Rs. 15 lakhs were manufactured and supplied during 1962-63, as against the production of about Rs. 8 lakhs in the previous year. The year under review also saw the beginning of pilot assemblies of Spark Quench resistors and magneto generators. When this work enters the stage of full-scale production, it would save approximately Rs. 10 lakhs of foreign exchange every year. The manufacture of co-axial equipment has also been taken up for the first time.

From Abroad

The aggregate world import of tea in 1962 was higher at 1,214 million lbs., as against 1,193 million lbs. in 1961, according to the International Tea Committee.

The Philippines is contemplating to join the General Agreement on Tariffs and Trade. The National Economic Council will hold public hearings next week to ascertain the views of the Filipino businessmen on this question.

The General Electric Company of the U.S. has developed a diesel electric locomotive which is claimed to be twice as powerful as any presently in service on U.S. railroads. The new locomotive, designated as the U50, is rated at 5,000 horsepower.

Harvey Aluminium of the U.S. and Norsk Hydro of Norway are collaborating to set up an aluminium plant in the Karmoey district of West Norway. The plant will have a capacity to produce 60,000 tons of aluminium per annum, most of which will be earmarked for export.

Negotiations for a trade pact between Israel and the Common Market have been adjourned for the second time. The Six put forward a proposal for a limited trade pact with tariffs and quota concessions in grape fruits, bathing suits and two kinds of fertilisers. This proposal was, however, flatly turned down by Israel.

Plans for a possible revision of the International Coffee Agreement are currently being discussed at the conference of the Federation of American Coffee Producers at Caracas. The Conference is also discussing the possibility of fixing an integrated Federation coffee export quota and examining the "special sales" systems.

The West German aluminium industry is reported to have sought the help of the Government against competition from U.S. and Russian imports. It is said that investigation has already begun in the Economics Ministry on the question whether there is a clear case for invoking anti-dumping procedure against imports of crude aluminium from the U.S.

Colombia has joined with those who have concluded an agreement with West Germany for restitution of war-seized German assets. Under an accord ratified by the Parliament of the South American Republic, 16 million pesos are being turned over to the German Embassy in Bogota for distribution among Germans whose property was confiscated.

The Austrian Airlines Company has concluded a tripartite pool agreement with the Scandinavian Airlines System (S.A.S.) and the Middle East Airlines for combined services on the Vienna-Beirut route. A similar pool agreement concluded with the S.A.S. and the United Arab Airlines will provide equivalent facilities for the Vienna-Cairo route.

An amendment to the Development Planning Act has been passed by the Odelsting Division of the Norwegian Storting (Parliament). Under the new amendment, local councils are now authorised to expropriate private ground for development purposes even before concrete development plans have been prepared. Previously this could only be done when fully completed plans had been submitted.

The wage costs per unit of production have risen faster in West Germany than in other important industrial countries in the last four years and have risen during a period in which per unit wage costs in some countries have decreased. From 1958 to 1962, per-unit wage costs in West Germany rose by 16 per cent, as compared with the rise of 12 per cent in Great Britain and 7 per cent in France.

Coffee is well on the way to become a favourite German national drink, judging by recent trends in the enjoyment of some of the so-called good things in life. Use of coffee in West Germany has risen fivefold in 11 years; beer-drinking, meanwhile, has increased by only three and a half times. Twice as much wine and champagne was being consumed in 1961 as in 1950, and four times as many cigarettes.

The first five-year trade pact between Britain and Poland was signed at Warsaw recently; hitherto trade agreements covered only three-year periods. The new pact, which will come into effect from the beginning of next month, provides for annual re-negotiation of the yearly trade quotas. The bulk of the Polish exports will continue to be foodstuffs, but there will be more industrial products such as ball bearing, glass, furniture, and others, while the British exports to Poland will be capital investment goods.

The National Iranian Oil Company has just completed an agreement with a consortium of European and U.S. companies for the construction of refinery and natural gas complex in Teheran at a total cost of about $140 million. The project includes two oil pipelines (at a cost of $30 million) for carrying oil from the Alborz field and another pipeline ($25 million) for carrying gas from the Sarajeh field. The refinery will be built at a cost of $85 million in two stages, with an initial capacity of 50,000 barrels per day and a target capacity of 100,000 barrels. The entire construction work is undertaken jointly by Phœnix Rheinrohr, Stahlunion and Mannesman of West Germany, the French Entrepose, and Williams Brothers of the U.S. The construction work is expected to be completed late in 1965.

Work in developing the smaller dependent territories of the Commonwealth continued in the Caribbean, Africa and the Far East last year, according to the Colonial Development Corporation's annual report. The Corporation, which is to be renamed Commonwealth Development Corporation under legislation now before British Parliament, started eight new projects in dependent territories, bringing the total number of such development schemes to 110. The total capital approved for these schemes is £117 million, of which nearly £92 million had been spent by the end of last year. Its operating surplus rose from £1.87 million in 1959 to £4.36 million in 1962. About half the Corporation's money was invested in projects to develop directly the natural resources of the countries in which it operates. The Corporation, which borrows money from the British Government on loan terms, also lends money itself for public utilities. Its operations cover, among others, development of plantations, smallholder farming, factories and building societies, undertaken either on its own or in association with experienced private companies. It also helps to provide skilled management and training for local management.

PERSONAL

MR. F. K. Khambatta has been appointed Air-India's new Manager in Bombay.

Mr. A. E. L. Collins has been re-elected President of the Association of Indian Automobile Manufacturers for the current year.

Mr. Robert Buron and Mr. Raymond Goldsmith have been appointed Chairman and Vice-Chairman, respectively, of the O.E.C.D. Development Centre.

Mr. Uma Shankar, a former Deputy Director-General (Telegraphs) in the P. and T. Board, has assumed charge as Managing Director of the Indian Telephone Industries at Bangalore.

Mr. John Wilcox, formerly Public Relations Officer for the Rootes Group of motor companies, has joined the International Wool Secretariat as Public Relations Manager.

Mr. A. K. Sarkar (*Ananda Bazar Patrika*) and Mr. K. M. Cheriyan (*Malayala Manorama*) have been elected President and Deputy President, respectively, of the Indian and Eastern Newspaper Society for the year 1963-64.

Mr. Robert M. Norris, an international business executive, has been elected President of the U.S. National Foreign Trade Council. The Council is a non-profit organisation of U.S. corporations concerned with foreign trade and investment.

DEVIDAYAL CABLE INDUSTRIES PRIVATE LTD.

SPEECH OF CHAIRMAN, MR. H. T. AGGARWAL

RS. 35-LAKH PUBLIC ISSUE SOON

THE Devidayal Cable Industries Private Ltd. will be converted into a public limited company as soon as conditions are favourable for a public issue. Disclosing this, Mr. Harikishandas T. Aggarwal, Chairman of the Company, stated, in his speech at the Annual General Meeting of the Company held at Bombay on Wednesday, 12th June 1963, that arrangements were being made to underwrite the public issue amounting to Rs. 35 lakhs. Mr. Aggarwal was confident that, after the existing expansion schemes were completed and new units established, the Company's turnover would increase several-fold. He saw no reason why the 7 per cent rate of dividend now paid on the existing small capital could not be maintained even on the increased equity capital of Rs. 50 lakhs.

The following is the full text of Mr. Aggarwal's speech:

We are meeting at a momentous occasion in the history of the Company. Your Board has decided to convert the Company into a public limited company as soon as conditions are favourable for a public issue. Arrangements are being made to underwrite the issue. The Controller of Capital Issues has already sanctioned the issue of capital to the public to the extent of Rs. 25 lakhs equity and Rs. 10 lakhs preference, to which you have also given sanction. This capital, when issued, will broad-base the ownership of the capital structure. We are hoping to enlist leading businessmen and industrialists on the new Board of Directors.

Sales Target

Now coming to the working of the Company during last year, as you will have noticed, our sales amounted to approximately Rs. 1,15,00,000. Our target for the current year is of the order of Rs. 1½ crores and, in the absence of unforeseen circumstances, we hope to maintain this sales figure.

The Company has been making considerable progress during the last three years as will be seen from the following figures:

	1960	1961	1962
	Rs.	Rs.	Rs.
Sales	72,67,580	78,03,335	1,14,34,943
Net profit, subject to depreciation, development rebate and taxation ..	5,41,000	4,95,000	10,27,000

Regarding the quality of our products, I need not dilate on it. Our winding wires are well known in the market and are being specified and used by leading manufacturers. In the case of P.V.C. and rubber cables and wires, we have established good reputation and compete satisfactorily with other well known manufacturers. You will be pleased to learn that, in spite of keen competition, the D.G.S. & D., have been pleased to award the rate contract to the Company for a period of two years from November 1962.

Aluminium Conductors

In accordance with Government policy, we have switched over from copper to aluminium conductors. In common with other manufacturers, there is a certain amount of resistance to the aluminium conductor cables, but, in the larger interest of the country, there is no alternative but that the aluminium conductor cables have come to stay and there is no doubt that these cables will be readily accepted by consumers in due course of time.

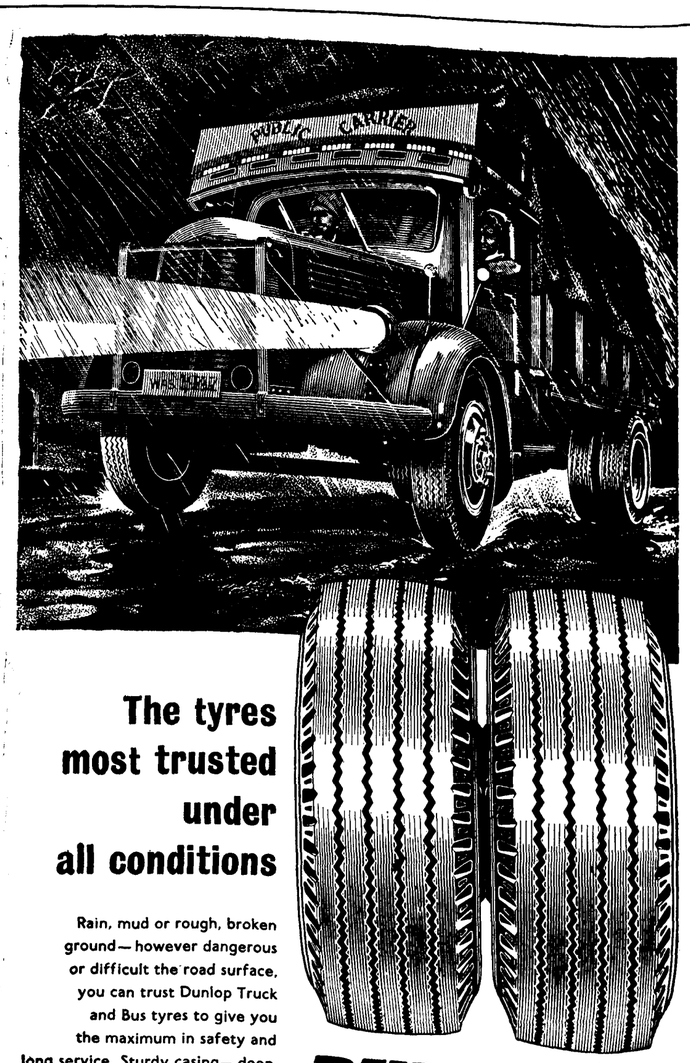
As you are aware, we have received a number of industrial licences for new units, as well as expansion of the existing ones. We have already effected expansion of the enamelled wire section. As soon as we are able to obtain the necessary finance and import licences, we will be proceeding with the implementation of the new schemes, such as glass insulated, nickel chrome and steel and alloy steel wires, and expansion of D.P.C. wires and strips.

One cannot predict with certainty the future of the Company, and I can only say that when the existing expansion schemes and new units are established, your Company's turnover will increase several-fold, and the public company will have a bright future. We have been able to declare 7 per cent on the existing small capital, but, in the absence of unforeseen circumstances, I see no reason why we should not maintain the same rate of dividend, even on the increased capital of Rs. 50 lakhs of equity.

Labour

The relations between the labour and management have been satisfactory. We have a contented labour. We pay good scale of wages and provide other benefits and amenities, such as incentive bonus, provident fund, annual bonus, recreation facilities and also satisfactory working conditions.

The Company is playing its part in the national economy. With a large-scale expansion of industries under the third Five-year Plan, particularly in the power generation sector, your Company's products will be in great demand as they are vital to the electrical industry, as also for distribution of electricity in the home and at factory, as, under the third Five-year Plan, a large number of villages and rural areas are scheduled to be electrified.



Before closing, I wish to place on record the valuable services rendered by the officers and other employees, both in the head office and at the factory, and also the large number of distributors and agents who act as a link between the Company and the consumers for the sale of our products.

I.M.F. CREDIT TO JAMAICA

The International Monetary Fund has entered into a standby arrangement with the Government of Jamaica, authorising drawings up to the equivalent of $10 million over the next twelve months. The standby arrangement is designed to provide an assured secondary line of reserves for Jamaica against unforeseen short-term balance of payments contingencies and to assist Jamaica to pursue its development effort with a minimum of interruption should such balance of payments difficulties arise.

Economic growth in Jamaica has been substantial and, during the past decade, the gross domestic product of the country has nearly doubled under conditions of relative price stability. The Jamaican authorities have pursued orderly fiscal and monetary policies intended to maintain a stable currency and a liberal exchange system. Balance of payments performance has been satisfactory with large inflows of foreign capital offsetting the trade deficit, and foreign exchange reserves have shown a steady increase.

Jamaica became a member of the Fund on 21st February 1963 and, on 28th February, it notified the Fund that it was prepared to accept the obligations of currency convertibility as set forth in Article VIII of the Fund's Articles of Agreement.

(*From Our Own Correspondent*)

BOMBAY, 19*th June*

There was a distinct improvement in conditions in the short-term money market during the week under review. Funds available were plentiful and borrowers found no difficulty whatsoever in obtaining their requirements. Consequently, inter-bank call rate was marked down from 5 per cent to 3 per cent. The rate was lower still at 2½ per cent after clearing hours today. Conditions at Calcutta were also much better, the call rate declining from 5¾ per cent to 4¾ per cent.

The improvement in the tone of the money market is reflected in the rise of Rs. 4.34 crores to Rs. 79.04 crores in the deposits of scheduled banks with the Reserve Bank during the week ended 14th June 1963 and the decline of Rs. 10.69 crores to Rs. 6.91 crores in borrowings, of which the share of those against usance bills was Rs. 2.86 crores, a fall of Rs. 6.49 crores. But the response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 18th inst., continued to be poor, the total amount offered being no more than Rs. 2 crores (as against Rs. 2.10 crores a week ago), which was also the amount invited and accepted. The average rate of accepted tenders was slightly lower at Rs. 2.350 per cent per annum, as against Rs. 2.354 per cent. But there was persistently good response to the Intermediate Treasury Bills. The Bills actually sold from the 12th to 15th inst. aggregated Rs. 135 lakhs, as compared with Rs. 135.25 lakhs a week ago.

India's foreign assets improved by Rs. 1.54 crore to Rs. 116.04 crores during the week ended 14th June 1963. The improvement was accounted for entirely by balances held abroad which aggregated Rs. 6.96 crores, as against Rs. 5.42 crores a week before. Foreign securities held in the Issue Department of the Reserve Bank, however, were unchanged at Rs. 109.08 crores. Notes in circulation showed an increase of Rs. 6.91 crores to Rs. 2,307.08 crores.

A spurt of Rs. 8.01 crores to Rs 1,561.02 crores in the total credit made available by scheduled banks was recorded in the week ended 7th June 1963. Deposits and inter-bank borrowings, too, rose at the same time but by smaller amounts the former by Rs. 3.80 crores to Rs. 2,245.38 crores and the latter by Rs. 1.89 crore to Rs. 56.09 crores. The banks had, therefore, to resort to increased borrowings from the Reserve Bank. The outstanding borrowings rose by Rs. 7.81 crores to Rs. 24.18 crores. The whole of this rise was accounted for by borrowings other than those against usance bills which remained unchanged at Rs. 8.91 crores. Investments went up by Rs. 9.14 crores to Rs. 637.32 crores.

The Gilt-edged market put on a cheerful appearance during the week under review. Several Central Government loans evoked good demand and tended to move up. 3 per cent 1970-75 hardened by 40 nP to Rs. 86.80. 3 per cent 1966-68 (Funding Loan) strengthened by 25 nP to Rs. 96.65. 3 per cent 1986 gathered 20 nP to Rs. 63.55. 3½ per cent 1987 gained 10 nP to Rs. 98.45. 6½ per cent 1977 Gold Bonds rose by 50 nP to Rs. 117.25. At this rate, the redemption yield works out to 5 per cent.

In the foreign exchange market, the banks' selling rate per 100 dollars continued unaltered at Rs. 478, while their buying rate declined by 25 nP to Rs. 474.50. In New York, the pound sterling firmed up a little *vis-a-vis* the dollar, the spot rate rising by 0.010 cent to 280.010-280.050 cents and the three months' forward by 0.030 cent to 279.600-279.640 cents.

FURTHER RISE IN SILVER

(*From Our Own Correspondent*)

BOMBAY, 19*th June*

Silver rose further this week on upcountry demand, while gold shed a large part of the early gains. Sovereign moved narrowly between Rs. 84 and Rs. 85 and closed unchanged over the week at the higher level.

The average daily arrivals in silver rose to 20 bars from 12 bars last week. But offtake, too, improved from 10 bars to 12 bars. Upcountry interests were reported to be the main buyers. Today, arrivals amounted to 10 bars which fell short of offtake by two bars. This sustained upcountry support lifted up silver from Rs. 225 on Thursday the 13th inst. to Rs. 227.50 today, at which level it was three points higher over the week.

Gold opened unchanged at Rs. 113.50 and, after gradually improving to Rs. 116 yesterday, reacted to Rs. 114.50 today. The early improvement was due to excise officials disallowing dealer-to-dealer sale of gold and insisting on dealers to obtain their requirements from refiners only. This move of the officials is said to be designed to keep track of all gold entering the market. It runs, however, contrary to the Gold Control Rules stipulating free deals between licensed dealers. The intervention by the excise officials came first on Thursday the 13th inst. and was continued subsequently. As a protest, dealers refrained from transacting any business for a couple of days. Consequently, the price rose. It, of course, reacted following rumours that higher prices had attracted a big parcel of smuggled material.

New York silver recovered this week from 127.4 cents to 127.8 cents on better demand. In London, too, the spot price was higher at 109¾d., as against 109¾d. a week ago, with the forward quotation at 110¼d., as against 110¼d. Ready gold in London was fractionally up from 250s. 6¼d. to 250s. 6¾d. The dollar price for gold also moved up from $35.07⅞ to $35.08¼.

The following table shows the trend of prices during the week under review:

	19-6-63 (closing)	High	Low	12-6-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine) ..	227.50	227.50	225.00	224.50
GOLD				
Ready (.996 fineness) ..	114.50	116.00	113.50	113.50
Sovereign	85.00	85.00	84.00	85.00
London—				
Gold	250s.6¾d.	250s.7¾d.	250s.6d.	250s.6¼d.
Silver Ready ..	109¾d.	109¾d.	109¼d.	109¾d.
Silver Forward ..	110¼d.	110¼d.	110¼d.	110¼d.
New York—				
Silver	127.8 cents	127.8 cents	127.4 cents	127.4 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

* * * *

Gold production in the world in 1962 (excluding the U.S.S.R.) increased by 6.3 per cent from 35 million fine ounces to 37.2 million fine ounces, but silver production (excluding the Communist bloc) declined from 205.9 million ounces to 199 million ounces, according to an article in the May issue of the Reserve Bank *Bulletin*. There was a sizable demand for gold on private account, amounting to 28.5 million ounces, out of the 43 million ounces marketed. World consumption of silver rose by 5.2 per cent to 365.9 million ounces. Industries used 239.3 million ounces and coinage accounted for 127 million ounces. South Africa's output of gold rose by 2.6 million ounces (or 11 per cent) to 25.5 million ounces and India's by 2.6 per cent from 154,000 fine ounces to 160,000 fine ounces. The U.S.S.R. made substantial sales of gold in 1962, and the U.K. imported three million ounces from that country. America's imports of silver rose from 48.9 million ounces to 80 million ounces, while its exports fell from 39.8 million ounces to 11.0 million ounces.

The Union Finance Ministry is reported to be considering the question of hall-marking 14-carat gold. A new machinery will have to be obtained for this. The question of reducing the licence fee for village goldsmiths is still under examination and expected to be decided soon. Meanwhile, the Union Finance Minister has urged again all the State Governments to implement immediately the scheme for rehabilitating goldsmiths affected by the Gold Control Rules.

Mr. G. B. Kotak, Chairman of the Gold Control Board, told representatives of the Akhil Bharatiya Swarnakar Sangh at Bombay on Saturday the 15th inst. that there could be no alteration in the limit of 14-carat for making new gold ornaments. The Sangh had pleaded for an alteration favouring a higher carat limit. Its representatives also discussed with Mr. Kotak the unemployment among goldsmiths, created by the Gold Control Rules. Mr. Kotak assured them of an expeditious settlement of the issue.

It has been decided by the Gold Board that permits for the acquisition of gold by industrial consumers in the industries mentioned below will be renewed for the quarter June-August 1963 on the same basis as for the quarter March-May 1963 and for the same quantities as were granted hitherto to individual permit holders, says a Press note issued on Monday the 17th inst.

The industrial consumers included are:—Dentists; ayurvedic and *unani* doctors and manufacturers of siddha ayurvedic and *unani* medicines; manufacturers of surgical instruments; manufacturers of gold *zari*; manufacturers of liquid gold; manufacturers of glass beads containing gold; manufacturers of fountain pen nibs; and gold electroplaters.

Applicants for the acquisition of gold in respect of the abovementioned industries, who have already submitted applications for the issue of permits for the quarter June-August 1963, will be issued permits on the basis of applications already forwarded to the Board. Applicants who have not so far forwarded their applications to the Board are informed that they should do so immediately so that permits may be issued in time for the quarter June-August 1963.

In another Press note issued on the 17th inst., the Gold Board said that applications for a dealer's licence under Rule 126E (6) of the Defence of India Rules, 1962, as amended by the Defence of India (Amendment) Rules, 1963, Part XII A—Gold Control, would be dealt with on merits in the following manner:

(*a*) All such applications already filed with Central Excise Officers will be examined and licences issued if the applicants satisfy the terms and conditions for issue of a licence.

(b) Applications for licences received hereafter will be entertained and dealt with on merits in the manner set out above up to 15th July 1963. Applications received thereafter will not be entertained by Central Excise Officers.

COTTON FUTURES DECLINE AFTER A RISE

(*From Our Own Correspondent*)

BOMBAY, 19*th June*

Cotton futures which, continuing last week's trend, ruled easy during the first half of the week under review, turned firm on Monday. The firmness gathered further momentum yesterday, although towards the close of the session profit-taking and fresh selling ensued which resulted in a decline in prices. The downward trend accelerated in today's session. The closing prices were, however, higher than last week's closings. Monday's firmness was due to buying attributed to reports of unfavourable weather (scarcity of showers) in certain important cotton-growing areas and damage to the early-sown crop in the Punjab. Under pressure of large-scale buying the Jarilla August contract firmed up from last week's closing rate of Rs. 700.25 to Rs. 711.25 yesterday. Profit-taking brought down the quotation to Rs. 705 at close today.

The cotton policy for the new season commencing on 1st September 1963 announced towards the close of the week had no effect on the market as it is more or less the same as that for the current season.

In the spot market at Sewri, spinner demand for ready cotton was moderate. Choice qualities of most popular varieties were, however, in good demand. Prices tended to rule easy. Nothing definite is known about the report that India is likely to import 60,000 bales of Pakistan cotton under a new trade agreement.

Bengal *Deshi* and 'yellow-pickings attracted the attention of foreign buyers. Progress of the new crop Bengal *Deshi* is said to be satisfactory so far. If weather conditions continue to be satisfactory, a crop exceeding 500,000 bales will be a distinct possibility.

In the spot section, spinner demand for foreign growths was slack. Ready lots of Egyptian and Sudan cotton were bought by some mills against their incentive quotas. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Kalyan 930; Co2 (Nagar) 1,650; Hubli Laxmi 1,150; B.P. 52 1,200; Sudan G6S 1,210.

Cotton futures in the Karachi market ruled firm during the week under review. Renewed domestic mill support and export demand imparted strength to the market. The N.T.R.G. July contract advanced from Rs. 72.75 last week-end to Rs. 73.55. January contract was quoted higher at Rs. 70.30, as against last week's closing rate of Rs. 70.

Listless conditions continued to prevail in the Liverpool cotton futures market. Values moved in a narrow range in thin trading, showing negligible net changes over the week. Demand for ready cotton covered a wide variety of growths, including South American cotton and Egyptian and Peruvian growths offered for nearby and distant shipping. The following are the latest available quotations—in pence per lb.—from Liverpool:

July 23.25; October 22.95; December 23.25.

Small gains were recorded by cotton futures in the New York market, thanks to commission house support and short-covering. The continued uncertainty about cotton legislation restricted business.

The carryover of all kinds of cotton in the United States on 1st August, 1963, is expected to aggregate 11.1 million bales. This is 3.3 million bales more than that on 1st August 1962 and the largest since 1957. The record high carryover was 14.5 million bales on 1st August 1956.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago:

(In cents per lb.)

	18-6-63	11-6-63	4-6-63
July	33.79	33.45	33.50
October	32.75	32.60	32.55
December	32.82	32.68	32.60
New York Spot	35.70	35.80	35.95

ART SILK YARNS IMPROVE

(*From Our Own Correspondent*)

BOMBAY, 19*th June*

Following increased buying enquiry, art silk yarns generally staged a moderate improvement this week. Staple fibre yarns and cotton yarns, however, were maintained around the last week's levels.

In art silk yarns, National Rayon 150D closed 9 nP higher over the week at Rs. 11.90. S.I. Viscose 120D moved up from Rs. 13.42 to Rs. 13.55. Century 75D staged a brisk rise from Rs. 18.50 to Rs. 18.70. Among 2 x 40 spot staple fibre yarns, Century were unchanged at Rs. 8.18 and so were City at Rs. 8.87. Cotton yarns were again dull, though 40s Hind gained 50 nP to Rs. 34.50.

Mr. Kantilal Nahalchand, President of the Bombay Yarn Merchants' Association and Exchange Ltd., stressed in his speech at the Association's ninth annual general meeting at Bombay on Saturday the 15th inst., the urgent need for reviving forward trading in staple fibre yarn. Any *delay, he warned, would mean* an imminent danger of unemployment for 10,000 persons in the yarn market. There was no justification for banning forward trading, he argued, when production of yarn this year had increased from 20,000 bales to 30,000 bales per month and that of raw staple fibre from 90 to 130 tons a day. Spinners themselves, he added, had represented to the Forward Markets Commission that there was a surplus of about 3,000 bales of staple fibre yarn per month. Mr. Nahalchand pointed out that forward trading was not responsible for the decline in the 2 x 40 staple fibre yarn prices in November last. The decline, in his opinion, was in sympathy with the setback in all commodity markets. As for art silk yarn, he pleaded for immediate removal of control on its distribution and prices in order to help spinners dispose of stocks as well as to hold the price line. Mr. Nahalchand was re-elected the President of the Association. Mr. B. B. Shah was elected the Vice-President and Mr. M. G. Shroff the Treasurer.

Imports of art silk yarn into the Bombay port in the month of May amounted to 333,609 kgs., bringing the total for the first five months of 1963 to 1,138,672 kgs. Imports of synthetic yarn stood at 270,471 kgs., bringing the aggregate to 1,200,155. Cotton yarn imports in May were 787 kgs., with the total rising to 6,342 kgs.

Exports of cotton yarn from the Bombay port in May amounted to 229,438 kgs. and those of cotton sewing thread 27,443 kgs. The greatest quantity of yarn, amounting to 63,865 kgs., was lifted by Hong Kong, with Ceylon, lifting 35,828 kgs.,

being the second largest buyer. Nigeria bought 19,219 kgs. of sewing thread and topped the list among the buyers, while Rhodesia, standing second, took only 1,966 kgs.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	19-9-1963	12-6-1963
	Rs.	Rs.
Art silk yarn **(per kg.)—**		
National Rayon 120D	11.92	11.90
Century 75D	18.70	18.50
S. I. Viscose 150D	13.75	13.75
Staple fibre yarn **(40 × 2)—**		
Hind (per kg.)	8.25	8.32
Century	8.18	8.18
Cotton yarn **(per bundle of 10 lbs.)**		
10s Podar	17.87	17.87
20s Modern	25.00	25.00
30s Kohinoor	29.75	29.75
40s Hind	34.50	34.00
60s Kasturi	47.00	47.00
80s Laxmi	83.50	83.50

SUGAR ON RATION IN U.P.

(From Our Own Correspondent)

HAPUR, *17th June*

The sugar supply position continued tight during the week and only a nominal quantity of one kilo per family per week was supplied through fair-price shops. However, the U.P. Government is to enforce rationing of sugar in the State from the next month. In urban areas, every adult will get one kilo of sugar every month, that in rural areas the quantity would be a half kilo. The U.P. Government has pressed the Centre to enhance the State's monthly quota of sugar by 50 per cent to 30,000 tons. While controlled prices of sugar are Rs. 114 to Rs. 118 per quintal, in private dealings sugar was quoted this week as high as Rs. 160 per quintal. In the Muzaffarnagar market, too, the sugar position continued tight, and rationing is being enforced in the district. In private sugar was quoted up to Rs. 170 per quintal.

Khandsari continued firm till the mid-week on brisk demand from Punjab, Rajasthan, M.P. and other centres following acute shortage of crystal sugar. Prices touched an all-time high level but reacted slightly in the week-end, as demand turned slack. Demand for *galawat khandsari* remained slack, but price moved up in line with those of *desi khandsari*. Week-end prices were: Inferior *khandsari* Rs. 131.28 to Rs. 139.32 and superior Rs. 158.38 to Rs. 176.83. These prices were higher by Rs. 40.56 to Rs. 80.38 per quintal as compared with the corresponding prices last year.

Ready *gur* ruled firm during the week on good buying support mainly from Gujarat side in the face of the last dwindling local stocks. The week's offtake aggregated 10 wagonloads, and the local stocks left were very small around 8,000 maunds. *Shakker* prices touched new high levels due to poor stocks as well as brisk buying support. Standing cane crop prospects have very much improved, thanks to the fairly heavy rains during the week. Week-end prices were:—*Gur* superior Rs. 76.36 to Rs. 77.70, *kotha* selected Rs. 77.70, *shakker* Rs. 77.36 to Rs. 80.38 and superior Rs. 83.06 to Rs. 85.74 per quintal.

Gur ruled firm in the Muzaffarnagar market also on good demand and in sympathy with bullish trend in *khandsari* prices. The *chaku* quality improved to Rs. 30.50 to Rs. 32.50 per 40 kgs.; the corresponding prices last year being Rs. 19.83 to Rs. 21.56. The *rusket* quality improved to Rs. 29 to Rs. 33 and *shakker* prices to Rs. 29.50 to Rs. 35.50 per 40 kgs. *Dana minja* hardened by Rs. 2.62 to Rs. 108.32.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *17th June*

A steady to quiet trend was witnessed in the foodgrain prices during the past week. While the monsoon has not yet set in here, the heavy premonsoon showers received will help the *kharif* sowings. As the crop prospects have brightened, the rising prices of foodgrains have tended to turn quiet. After an early fall on increased arrivals from Punjab, wheat improved in the week-end on brisk stockist support. The average quality was now quoted at Rs. 41.75 to Rs. 43.75, the farm produce at Rs. 43.75 to Rs. 48.25 and the red variety at Rs. 41 to Rs. 41.50 per quintal. Daily arrivals averaged about 1,000 maunds, and the local stock was now around 30,000 maunds.

The coarse quality rice advanced by 67 nP to 99 nP per quintal on good seasonal consumer support. The rise in prices was common to varieties, with only the superior *basmati* quality ruling quiet. Gram stayed steady on stockist support. Arrivals were around 8,000 maunds from Punjab and Rajasthan, and the local stock improved to 19,000 maunds. Barley and *bejhar* were steady, as arrivals were small, while consumer demand was brisk. *Juwar* and *guwar* were much in request for seed purposes thanks to the good rains. *Methi* was subdued for want of support. Week-end prices (in rupees per quintal) were:—Rice *basmati* superior 88.41 to 96.45, *sela* 85.74 to 88.41, *mainpuri* 56.94, *ramajwayan* 64.30, *raimunia* 66.98, *gadda* 54.92; gram 42.20 to 42.87, barley 32 to 33, *bejhar* 33.75 to 35, *juwar* 32.15 to 37.51, *guwar* 32.15 to 34.33 and *methi* 46.75 to 47.75.

A steadier trend prevailed in pulses. Peas hardened by Re. 1.50 to Rs. 2 per quintal on better demand for conversion into *dal*. Arrivals averaged 500 maunds, and the stock was around 58,000 maunds. Four wagons of peas were despatched to Biharside. *Arhar* advanced by Rs. 3 to Rs. 4 per quintal and moong hardened on Rajasthan advices. Week-end prices (in Rs. per quintal) were:—Peas *dara* 36 to 36.75, farm 36.75 to 38, peas *dal* 39.65, *arhar* 56 to 57, *arhar dal* 73 to 85.74, *moong* 48.23 to 56.26, *moong dal* 64.30, *urd* 66.98 to 72.29, *urd dal* 80.38, *massor* 52.25 to 54.92 and *massor dal* 65.64.

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *19th June*

Oilseeds forged ahead during the week under review, though a sagging tendency developed towards the close. Groundnuts were in the limelight on heavy short-covering and bull support. The reported delay in the onset of monsoon in the South and other major oilseeds producing areas gave a fresh momentum to the upward trend in prices. On Monday the 17th inst., the July 1963 contract pierced the ceiling of Rs. 236 per 250 kgs. fixed by the Forward Markets Commission. The spot section, too, ruled firm on sustained purchases by *vanaspati* manufacturers. But a reaction set in later in the week, as buying support tapered off at higher levels. *Vanaspati* manufacturers generally withdrew from the market, following reports that the Government was not inclined to concede the plea for an increase in price effected last month on a voluntary basis in consultation with the Government of India. The plea for enhancing the price was based on the recent spurt in the price of the industry's major raw material, groundnut oil, which led to an increase in the cost of production of *vanaspati*. Castorseeds also firmed upon short-covering. Linseed and cottonseeds moved up in sympathy.

Groundnut July 1963 contract advanced from Rs. 230.87 to Rs. 236, before declining to close at Rs. 234.75. September 1963 contract put on Re. 1.88 to Rs. 230.75; it had touched Rs. 232.12 earlier in the week. Nizam bold spurted by Re. 1.75 to Rs. 47.87. Oil ex-mill moved up from Rs. 19 to Rs. 19.25, but declined later to Rs. 19.10. Oil railway receipts, which increased from Rs. 18.60 to Rs. 18.95, wound up the week on a subdued note at Rs. 18.70.

Castor September 1963 contract rose from Rs. 163.75 to Rs. 166.37 by yesterday, but fell to Rs. 165.62 today. Ready Madras hardened by 62 nP to Rs. 32.13 and Kanpur by 63 nP to Rs. 30.75. Oil B.S.S. improved by 15 nP to Rs. 13.45 and commercial by 10 nP to Rs. 12.90.

Linseed September 1963 contract went up from Rs. 38.12 to Rs. 38.62 by Monday; it, however, fell subsequently to Rs. 38.50. Bold ready was maintained at Rs. 37.25; it had touched Rs. 38 earlier. Linseed oil, however, shed 5 nP over the week to Rs. 14.55, thought it had risen to Rs. 14.70 earlier.

Among cottonseeds, white was higher by 25 nP at Rs. 22.80. Both non-white and berar picked up 5 nP to Rs. 22.80. There was no official trading in cottonseed hedge contracts during the week under review.

The following table shows the closing prices of oilseeds and oils on Wednesday 19th June, as compared with those of two previous weeks:

	19-6-1963	12-6-1963	5-6-1963
	Rs.	Rs.	Rs.
Groundnuts			
July 1963 contract	234.75	230.87	229.25
September 1963 contract	230.75	228.87	227.12
Nizam bold	47.87	47.12	46.75
Khandesh quality	48.75	48.12	47.87
Oil ex-mill	19.10	19.00	18.50
Oil commercial	18.70	18.60	18.10
Castorseed			
June 1963 contract	—	160.75	157.00
September 1963 contract	165.62	163.75	163.75
Ready Madras	32.12	31.50	31.12
Ready Kanpur	30.75	30.12	30.00
Oil B.S.S.	13.45	13.30	13.40
Oil commercial	12.90	12.80	12.75
Linseed			
June 1963 contract	—	37.12	36.87
September 1963 contract	38.50	38.12	37.62
Bold ready	37.25	37.25	36.50
Linseed oil	14.55	14.60	14.10
Cottonseed			
July 1963 contract	—	105.25	105.00

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, *18th June*

Interest shown by overseas buyers being poor, jute goods recorded modest declines during the week under review. With the expectation of an early crop, mills showed less attention to offers of old crop and, as a result, the lower varieties continued to be quoted below the minimum prices. Advices from the New York burlap market were discouraging, and it was clear that, with the expectation of a bumper crop and the need of mills to continue to operate at the enhanced rate of production, buyers there were not inclined to enter into long-term commitments. This factor led to the fall in the prices of hessian 40" 7½ oz. and 40" 10 oz. from 9.50 cents and 12.50 cents a yard to 9.30 and 12.30 cents, respectively. This was also a factor for prices to ease here. Moreover, there was continued selling pressure throughout the week in the futures market, and weak holders were caught in a wave of nervous selling. The fact that mills entered into commitments in new crop middles and tops and sellers of these higher grade varieties were freely available was taken as an indication in the market giving rise to expectations among mills that an increase in the proportion of superior fibre *vis-a-vis* the lower varieties was likely. The fact that the heavy rains this week benefited jute plants strengthened the expectation.

Output details of mills in respect of last month also pleased buyers. For, despite various difficulties being experienced by mills, total output at 104,900 tonnes was only lower by 500 tonnes as compared with April 1963. While the production of miscellaneous goods amounting to 18,800 tonnes rose by 400 tonnes, sacking and hessian constructions at 42,400 and 43,700 tonnes declined by 800 tonnes and 100 tonnes, respectively. Against the almost-unchanged character of output as compared with the previous month, it should be noted that goods in stock with mills as at the end of May amounted to 94,300 tonnes, showing a rise of 4,800 tonnes. The highest increase of 3,200 tonnes was recorded in hessian, and this, despite lower output, aided buyers to discount incoming offers. As a result, business done in hessian during the week was small. Buyers on behalf of the U.S. accounted for scattered business only. The fall in the price of hessian had a dampening effect in heavy goods and this, coupled with the news that Pakistan mills succeeded in getting some orders from Australia and Burma by underquoting Indian mills, chilled sentiment in heavy goods

With the continued threat from substitutes, mills are constantly exploring the ways and means by which the cost of production can be reduced and at the same time quality of output can be improved. That jute goods lack a standard universal specification is a great disadvantage for mills. An accepted standard helps the buyer as well as the seller, as it makes the task of stipulation of quality easy. Against this background, the news that the special committee appointed by the Indian Standard Institute, with Mr. G. C. L. Jonejea, the Jute Commissioner, as the convenor, and representatives of the industry and trade, has completed the drawing up of standard specifications for the various kinds of jute goods has been noted with enthusiasm. A standard specification enables the mass manufacture of a single item, thus enabling producers to make economies in prime costs.

On Tuesday last, although business in heavy goods was poor, the earlier news that Cuba had bought a substantial quantity of heavy Cee bags for July-September shipment pushed up ready B. twills from Rs. 111.75 to Rs. 112. Hessian 40" 10 oz. fluctuated within narrow limits, and closed a few nP lower on balance at Rs. 50.60. At this stage, output details of mills for May were announced, and the fact that, despite lower output, goods in stock as at the end of May had risen by 4,800 tonnes depressed sentiment in both heavy goods and hessian. This led to selling pressure in the futures market. Ready B. twills, as a consequence, eased to Rs. 111.65 and ready hessian 40" 10 oz. to Rs. 50.15 on Wednesday. Since these lower rates did not lead to any increase in interest shown by overseas buyers, prices on Thursday showed a further recession. B. twills fell to Rs. 110.60 and hessian 40" 10 oz. to Rs. 49.30. Selling pressure in the futures market continued to have its impact on ready goods. At the reduced rates, overseas buyers showed some interest, but this only led to a fractional recovery in ready goods, because of nervous selling in the futures market. Ready B. twills were quoted at Rs. 110.75 and ready hessian 40" 10 oz. at Rs. 49.50. During the week-end, scattered business with overseas buyers took place and as a result, hessian 40" 10 oz. recovered to Rs. 49.70 and B. twills to Rs. 111. Business was veries were up to November 1963. The Pakistan mills also secured some business with Cuba. Yesterday, with B. twills at Rs. 111.10 and hessian 40" 10 oz. at Rs. 49.80 prices showed a small improvement. Demand, however, was poor and buyers seemed bidding for time in the expectation of a decline in prices.

With mills showing little interest in the lower grades of fibre and with good weather reports from growing areas, fibre was quiet. Stockists of old fibre were anxious to locate buyers, but the main interest of mills was in new crop offers of middles and tops. The quotations for June-July delivery were: Assam bottoms Rs. 30; Northern bottoms Rs. 29.50; and daissee bottoms Rs. 33. In the futures market, September Assam bottoms opened at Rs. 30.58 and closed lower on balance at Rs. 30.40. The week's low was Rs. 30.24 and high was Rs. 30.60.

Severe opposition in East Pakistan to the Central Pakistan Government's move to take over the Jute Marketing Corporation from the Provincial Government has been reported. At the same time, this opposition has been taken as an opportunity to demand the handing over of the Pakistan Jute Board from the Central to the Provincial administration.

METALS STEADIER

(From Our Own Correspondent)

CALCUTTA, *18th June*

Steadier conditions were in evidence in the metal market during the week under review on increased buying interest on expectations that, with foreign aid for the current year of the Plan forthcoming, the industrial progress would be accelerated and greater provision would be made for the import of non-ferrous metals.

The Government of India is, however, reported to be considering the possibility of evolving an emergency scheme for the production of non-ferrous semis. In this scheme, it is most likely that restrictions will be placed on the civilian use of semi-manufactures, and the non-essential consumption will be totally banned. Base metals are in acute short supply in India, and their import programme is necessarily restricted by foreign exchange difficulties. Non-ferrous semi-manufacturers will be asked to give top priority to the requirements of defence industries, including the transport industry. It is stated that the quota of small-scale industries, which account for the consumption of about 5,700 tonnes of copper and about 3,800 tonnes of zinc a year for manufacturing brass and copper sheets and circles, will be completely withdrawn; these industries may be asked to depend on supplies of scrap of copper and brass. The scheme also envisages the rolling of such copper sheets as to meet the requirements of the essential industries only. This means that rolling of sheets for manufacturing copper and brass utensils will be prohibited. It is also likely that the Government will allow the use of copper for conducting electricity only. The Government's scheme is expected to make available about 20,950 tonnes of copper and 9,700 tonnes of zinc for the essential requirements.

The spurt in tin from Rs. 3,825 per 100 kgs. to Rs. 4,000 in Calcutta this week emphasises the acute shortage of the metal in India. On the London Metal Exchange, the metal opened this week at £916 and, after improving to £917½, closed lower at £915½. Cash copper was unchanged in London at £234 a ton. The price in New York was also unchanged. It was reported that the new copper contracts, which were approved by the authorities of the London Metal Exchange, would come into force from 1st July 1963, when dealings would commence in contracts maturing on and after 1st October, and the L.M.E. would issue official prices for the following: copper standard cash buyers and sellers and settlement price for wirebars, cathodes and fire-refined 3-months buyers and sellers. Locally, utensil scrap copper closed higher at Rs. 568 per 100 kgs., as against the opening of Rs. 562.

Lead continued to be quoted firm at Rs. 200 per 100 kgs. Improvement in the stock induced consumers to go slow in entering into commitments. However, the fact that the price remained unchanged at Rs. 200 shows that the improvement in stock position was only marginal. In London, cash lead closed higher on balance at £65½ a ton, as against the opening of £64¾. The gradual recovery in lead on the L.M.E. in recent weeks has been taken to mean a general improvement in the statistical position of the metal. In 1962, lead output in the world exceeded demand by 20,000 tons. Keen competition by the U.S.S.R. was a factor in depressing prices last year. Zinc, in London, was higher this week at one time at £77¼ a ton, after opening at £76⅝, but closed at £76½. The quotation in Calcutta closed firm at Rs. 260 per 100 kgs. after opening at Rs. 257.

ACTIVE DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *18th June*

Active demand was featured the export sale held here yesterday, when prices generally appreciated. This is not surprising in view of the U.K. buyers' need to replenish the depleted stocks as early as possible. For, tea stocks in the U.K. for the week ended 7th June totalled 149.81 million lbs., at which they were lower by 4.75 million lbs. over the week. However, despite this factor, if poor demand met offerings of North Indian teas in the auctions held last week at Mincing Lane, it was because offerings consisted mainly of the end-of-the-season teas. Better liquoring teas from Assam and South India were fully steady in London, and the better highgrown Ceylonese teas were dearer. Good competition was noted from African teas. Indicative of the gathering momentum of the season have been the keen inquiries for shipping space for tea from Calcutta. During the week, some prompt U.K. loaders were declared full.

Time and again, tea interests have stressed the importance of international regulation of crops. On behalf of the Government of India, it has however, been pointed out often that it does not apprehend that tea is going to become a surplus commodity in the next few years. For, although the world output of tea is generally rising year by year, it is thought the annual rise nearly equals the yearly increase in consumption.

Offerings at yesterday's export sale totalled 22,146 chests of leaf, which met with good general demand. As a result, prices were fully steady. No quotations were given in view of the limited quantity of suitable grades. Arrivals from gardens have not yet started in full swing, but a gradually increasing trend has been recorded, and this indicates that the peak of the season is in sight, if only floods and rains do not cause disturbance to transport. A strong feature was the keen attention which bright liquoring C.T.Cs received. However, the other C.T.Cs met with only poor demand leading to a decline in prices. Plain and medium orthodox teas were firm, and all teas possessing bright liquors were fully steady. Whole leaf grades also met with good attention. Darjeelings eased in line with quality. Legg-cut teas gave way by 15 nP.

SELECTIVE BUYING IN KIPS

(From Our Own Correspondent)

MADRAS, *17th June*

In the absence of any important buying by importers, prices in the tanned hides market did not harden this week as expected by the tanners. Export trading was selective. Lower selections in cowhides met with good inland demand. Overseas inquiries for cowcalf run and fourths selections were good and prices ruled firm. Sellers of buffcalf were reserved as stocks available were poor.

The prices of raw goat and sheep skins in the producing centres continued to be firm on competitive buying by the exporters of raw stock and tanners. Tanners put up their prices sharply; and importers buying was selective, with emphasis on run selections in top class goat skins, suede types in prime and semi-prime sheep skins, and lower selections in middle class sheep skins. Higher prices have been established, and the market will remain firm for some time in view of the uneconomical prices ruling in the raw section. The ruling prices per lb. for all-round parcels in the local market were: Tanned cowhides 8/8½ lbs. average Rs. 2.25 to Rs. 2.30; cowcalf 1½/2 lbs. average Rs. 3.80 to Rs. 4; buffhides 12/14 lbs. average Rs. 1.70 to Re. 1.72 and buffcalf 1½/2 lbs. average Rs. 3.50 to Rs. 3.65.

ALEMBIC CHEMICAL WORKS CO., LTD.

PROSPECTS FOR CURRENT YEAR BRIGHT

CHAIRMAN, MR. R. B. AMIN'S ANNUAL SPEECH

DESPITE a strange lull overtaking industrial activity by the time the Government could finalise its decision on the purchase of numerous defence items, the current year's prospects for the Alembic Chemical Works Company Ltd. are bright. This was the assessment made by the Chairman of the Company, Mr. R. B. Amin, when he addressed the shareholders at their Fifty-sixth Annual General Meeting held at Baroda on Thursday, 20th June 1963. Sales of the Company's products were increasing and, with the full results of some of the earlier expansion schemes being reflected during the current year's working, the results were expected to be even better than those for the year 1962.

The following is the full text of Mr. Amin's speech:

LADIES AND GENTLEMEN,

I have great pleasure in welcoming you to the fifty-sixth annual general meeting of the Company. The accounts for the year ended 31st December 1962 and the Directors' Report have been circulated to you, and with your permission, I shall take them as read.

As might have been noticed from the accounts and Directors' report, the working results for the year have shown an all-round improvement over those of the previous year. The sales picked up, and increased by about Rs. 70.00 lakhs to Rs. 3.53 crores this year; the profits earned were almost double those of the previous year (Rs. 17.35 lakhs and Rs. 33.96 lakhs). The reserves and surplus position has been strengthened further.

Meeting the Challenge

The necessity of a tremendous increase in production, both for meeting the Chinese aggression and for fulfilling our development programmes, is obvious. It should, however, be realised that the emergency can only underline the need for a greater effort by all; it does not by itself constitute a means of achieving higher productivity. Therefore, the means and incentives by which a higher productivity is obtained must not be lost sight of. Government policies, including the taxation policy, must, therefore, be directed towards further growth of production and providing incentives for a higher productivity. Particular importance must be attached to increasing investment in industries and to creating a favourable climate for exports. They must also provide incentives for private savings. It must always be remembered that a tax policy which becomes fully confiscatory above a certain range of income, would sap incentives and remove a fruitful source of private savings. Large Government borrowings also absorb funds which would otherwise be available for industrial investment and tend to hold back economic expansion.

Any discouragement to further industrial investment will ultimately affect employment, because higher employment can arise only out of a higher industrial activity. The requirements of the Plan and the war effort demand a high and productive employment. It is only by a complete and efficient utilisation of our productive resources that we can achieve prosperity.

The Government's decision on the purchase of a number of defence requirement items rests on the nature and extent of foreign aid. After the purchase portion is ascertained, its allocation between imports and local procurements will be made. This again will take some more time. A strange lull has overtaken industrial activity in the meantime. I do hope, therefore, that the Government's action would be quick, and that Government spending and taxation would, hereafter at least, be planned to avoid any obstacle in the utilisation of productive resources.

I would like now to refer to some of the activities we propose to pursue in the current and the coming year.

Virus Research Centre

With the advent of antibiotics, most diseases of bacterial origin have been controlled, but viral diseases are not yet amenable to control. However, the last few years have given us considerable hope in this field too. Viral vaccines have been developed against poliomyelitis and measles, and many similar vaccines seem to be in the offing. We considered it important to enter this field at this stage and have, therefore, started a new virus research laboratory. We believe that this is the first such effort in the private sector in India.

With almost a virtual ban on the import of many types of consumer goods, the demand for such goods of good quality remains unsatisfied. With the increasing standards of living, the demand for quality consumer goods is bound to increase. We thought that it would be possible for your Company to undertake the manufacture of some of these and thereby to diversify the Company's activities also. A beginning would be made with such products as dentifrices, inhalers and nasal drops, clear and pearly shampoos, non-caloric sweetening agents, first aid sprays and such other things as everyone in the family desires. Most of these products have already been scientifically developed by us in our laboratories and have been tested. A few more are at the laboratory stage.

All these products would be marketed under a special brand name, and it is expected that some of them would be in the market early next year.

Ethyl Alcohol Plant and Other Expansion

The expansion of ethyl alcohol plant is nearing completion. When completed, it will increase the production of ethyl alcohol as well as that of Co_2 Gas, which is a by-product.

Orders for the machinery for the yeast project have been placed and the machinery is expected to arrive early next year.

Despite the present industrial climate to which I made a reference at the beginning, we think that the current year will prove another good year for your Company. The sales of the Company's products are increasing and, with the full results of some of the earlier expansion schemes being reflected this year, the working results for the current year are expected to be even better than those of the year 1962.

I take this opportunity of thanking my colleagues on the Board as well as the Managing Agents, the staff and the workers of the Company for their co-operation. I now commend the annual accounts and the Directors' report for your consideration.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

RAMTIRTH BRAHMI OIL

Special No. 1. Registered.

NOW ADDED WITH VITAMIN 'C' IS MORE EFFECTIVE!

An invaluable hair tonic for the prevention of dandruff and falling hair. It is manufactured scientifically with many precious ingredients, which cools brain, improves system and brings sound sleep. Most ideal for body massage. Useful to every one in all seasons.

Available Everywhere.

ABBREVIATIONS. N—Nominal. (f) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport.
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable.
†† Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1935.
f—Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex Ten instalments but inclusive of accrued interest.
M—At the option of the Government after three months' notice. K—On September 1986 or later at the option of the Government after three months' notice.
T—Liability taken over by Madhya Pradesh. @ Total amount invested in Gold Bonds up to 18th February 1963.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per share.

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

All preference shares are taxable unless otherwise stated.

***These shares carry the right of a preferential dividend at the rate of 8 per cent (of which only 5 per cent cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent of the 10 per cent dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent these shares carry the right to receive a non cumulative dividend of 3 per cent per annum and also to participate in further dividend of 2 per cent per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

C—Cumulative. R—Redeemable. T.F.—Tax-free. R.O.—Redeemable at option.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating upto 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank pari passu with ordinary shares after ordinary shares receive 6 per cent dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of Income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. TREND OF SHARES

SETBACK IN EQUITIES

(From Our Own Correspondent)

BOMBAY, 20*th June*

POLITICAL uncertainties, coupled with an unsatisfactory increase in the steel retention price and the discouraging corporate news background, produced a sizable setback in equities this week. Operators were deeply concerned over reports that the Chinese had made a fresh intrusion and a provocative action as well at Rezangla in Ladakh on the 3rd inst., that they had been strengthening their position on the N.E.F.A. border and that the Government of India was obliged to attack unsparingly, in the External Affairs Ministry's note of the 10th inst., the Chinese policies "to overthrow, by war and violence, the lawfully-constituted Governments of the independent peoples of Asia and Africa." The shadow of the Chinese loomed large all the more over the stock markets after these reports were published in the last three days. Apart from this troubled situation across the border, the internal political atmosphere was also tense, with prospects of some of the Opposition parties, notably the Communists launching demonstrations against the Government's policies after the emergency. The impending exit of Mr. K. D. Malaviya and Mr. Hafiz Mohammad Ibrahim from the Central Cabinet led to speculation over an imminent Cabinet reshuffle.

Besides the political uncertainties, the corporate situation was far from stimulating. Market*men anticipated a setback in the profit* of the Indian Dyestuff Industries Ltd. and also of the Tata Engineering and Locomotive Ltd. for the year ended 31st March 1963. The results of the Tata Chemicals Ltd. for the year to 30th June 1963 were expected to show a substantial improvement, but the gossip, since it was much ahead of the date for the announcement of the Company's preliminary results, did not produce the desired effect in the generally weak market. Even steel shares fell in line with the general trend, after making a brave show till the announcement of an increase in steel retention price, as a spokesman of the T.I.S.Co. reportedly described the increase as insufficient to raise the Company's profit. Apart from these specific cases, the general corporate results were expected to be poor, in view of the rising costs and heavy taxation. There were, besides, prospects of a power cut due to insufficient rains. A total cut on power supply to non-continuous industries was scheduled to become operative in Madras from tonight. The Kerala Government was also reported to be thinking on similar lines. In Maharashtra, too, the effect of insufficient rains was noticed in the drop in the level of Tansa Lake.

The setback during the week is to be read against the background of "free" trading, with permission to sell short and also hedge against investments which may be unloaded. In the light of the uncertain political and economic conditions, the urge to sell is more than the inclination to buy. Selling so far is presumed to be short, and one will have to await the end-account delivery figures to know what disinvestment, if any, has taken place after the resumption of normal trading in all the markets, except the Calcutta Stock Exchange which has still to complete the necessary formalities. Meanwhile, the Governing Board of the Bombay Stock Exchange has sought the permission of the Government to restrict the application of interim margin regulations to only 14 leading speculative scrips. This move is designed to free members from filling up numerous forms for the margins in respect of the other shares, which they have to do at present even when their positions are small. While this is the official explanation in support of the move, it seems that the decision has been taken more to stimulate business in the market which goes to confirm that the new margin scheme is too stiff.

* * * *

Steel shares, which dominated the sentiment on Dalal Street till Monday the 17th inst., lost the grip the next day after the announcement of the increase in steel retention price. From Tuesday onwards, the general weakness was aggravated and Steels, too, followed suit, though Indian Iron still showed a gain of 16 nP over the week at Rs. 22.68, while Tata Steel Ordinary closed unchanged at Rs. 138.25. Among prominent losers were Standard (from Rs. 772 to Rs. 735), National Rayon (from Rs. 333.50 to Rs. 318), Indian Dyestuff (from Rs. 380 to Rs. 350), T.E.L.Co. (from Rs. 272 to Rs. 259.50), and Voltas (from Rs. 246 to Rs. 232). Bombay Dyeing were also weak at Rs. 59.50, as against Rs. 60.50 a week ago, and so were Hindustan Motors at Rs. 16.44, as against Rs. 16.68. Scindia, however, attracted support at lower levels and gained 16 nP to Rs. 10.12. Tata Chemical were 44 nP higher at Rs. 16.08. In the cash section, Mafatlal declined by Rs. 15.25 to Rs. 695, Baroda Rayon by Rs. 7 to Rs. 92 and Indian Rayon by Rs. 5 to Rs. 75. Among others, Sandvik Asia showed a loss of seven points to Rs. 187, Ultramarine of nine points to Rs. 124 and Bharat Bijlee of Rs. 13 to Rs. 149.50, but Bajaj Auto gained six points to Rs. 96.

* * * *

In the absence of "free" trading, the Calcutta Stock Exchange managed to put up a steadier show. In the forward list, Orient Paper gained as much as Re. 1.40 to Rs. 35.40, Birla Jute 87 nP to Rs. 29.12 and Kesoram 69 nP to Rs. 22.56. Birla Cotton, among cash textiles, were up from Rs. 26.75 to Rs. 33. Coals were subdued, with East Indian showing a loss of 37 nP to Rs. 31.50. But Jutes were better, with Kelvin rising from Rs. 184 to Rs. 185, Barnagore from Rs. 199 to Rs. 201 and Champdany from Rs. 20.25 to Rs. 20.94. Engineering issues were also higher, especially Braithwaite at Rs. 31.19, as against Rs. 29.75 a week ago, and Jessop at Rs. 24, as against Rs. 23.06. Burn and Co. spurted from Rs. 463 to Rs. 506. Alkali Chemical improved from Rs. 31.37 to Rs. 32.25. In the Miscellaneous section, H.P. Glass staged a smart come-back from Rs. 14.50 to Rs. 15.87, with Angelo Bros. scoring a gain of 75 nP to Rs. 21.87. Union Carbide put on 75 nP to Rs. 39.25 and Martin Burn 69 nP to Rs. 25.50. Paper shares were quiet. Among Teas, Dhelkat lost 25 nP to Rs. 19.75 and Grob 50 nP to Rs. 7, while Duffaghur gained 50 nP to Rs. 27.50 and so did Hantapara to Rs. 105.50.

* * * *

Values declined on the Madras Stock Exchange, with Textiles being conspicuously weak. Thus, Bangalore Woollen fell from Rs. 250 to Rs. 238, Buckingham from Rs. 265 to Rs. 260, Cannanore from Rs. 120 to Rs. 114 and S.I. Viscose from Rs. 129.50 to Rs. 128. But Ccimbatore Cotton improved by six points to Rs. 162. Leading Miscellaneous issues were lower, Textools by Rs. 5 to Rs. 149, Aluminium Industries by 63 nP to Rs. 17.12 and Travancore Chemical by 38 nP to Rs. 18.87. Among Sugars, Deccan declined by 35 nP to Rs. 9.80, but Cauvery rallied from Rs. 106 to Rs. 109. In Plantings, Peermades slumped from Rs. 21.65 to Rs. 20.34, though Chembras recovered from Rs. 3.73 to Rs. 3.90.

SUGAR PLANT FROM K.C.P. LTD.

The K.C.P. Limited, Madras, signed on the 12th inst. an agreement with the National Cooperative Sugar Mills Ltd., Madurai, for the manufacture and supply of a sugar plant with a daily cane-crushing capacity of 1,000-1,200 tonnes. This is the sixth complete sugar plant to be supplied by the K.C.P. Ltd. The Company, manufactures sugar and cement plants in collaboration with Messrs. Fives Lille Cail, Paris, which have built some of the largest sugar and cement plants in the world. Recently the K.C.P. Ltd. also signed the second agreement with the Industrial Development Corporation of Orissa Ltd. (a Government of Orissa undertaking) for the manufacture and supply of a third cement plant, with a capacity of 600 tonnes per day, in addition to the two plants already contracted for with them.

DELHI LETTER

(Concluded from page 1096)

at the commencement of our Plans. The Prespective Planning Division expects shortly to place a model draft of the fourth Plan before the Planning Commission members.

Board of Trade Meeting

Mr. Manubhai Shah will have several interesting points to make before the Board of Trade when it examines the country's export problems at its forthcoming meeting here on 6th July. The experience gained by Mr. Shah will no doubt be of tremendous help to the members of the Board and, if followed properly, will go a long way towards boosting our trade with West Europe. The number of concessions secured by Mr. Shah shows that, if earnest efforts are made, the problem of exports will not remain as intractable as it is today.

*

A welcome sign is the manner in which the Board is getting ready to tackle the problem. At its next meeting, it will have before it a complete annual review of the commodity-wise and country-wise export performance, to check up on the trend and identify the commodities and areas that are refusing to look up. And this will help to point out the measures, immediate and long-term, necessary to overcome the shortcomings. An issue of much worry for the Board that has presently cropped up is the demand for all-round freight increases by the India-U.K. shipping conference. The fifteen per cent increase asked for will seriously upset all our plans to augment exports. Some members of the Board do not appreciate the Union Government's readiness to accept a seven and a half per cent increase in place of the fifteen per cent demanded. If the freight rise is introduced immediately, even after scaling it down by half, the cost of exports will go up commensurately, making nonsense of all the efforts put in during the recent past to make them competitive. Unless the Government is prepared to subsidise the exports in proportion to the rise in the freight charges, there is no way of saving the situation. It will be a hard task for the Board members to devise any immediate solution satisfactory to both exporters and shippers.

SMALL BANKS' PROBLEMS

Small banks are handicapped in giving efficient service to their constituents at competitive rates because they do not have branches in important cities of the country. This was disclosed by Raja Hari Singh, Chairman of the Bank of Rajasthan Ltd., in his speech at the annual meeting of the Bank held at Udaipur recently. The difficulty could be partially removed, he believed, if the State Bank of India and its subsidiaries, and other bigger banks offered concessional rates to small banks for collection of bills and drawing of drafts on their branches. According to him, the Reserve Bank of India had lately been too strict in granting fresh licences to banks for dealing in foreign exchange, which had led to the risk of people shifting their other business as well from the non-licensed banks to those which had the licence. In order to eliminate such risk, he suggested that all scheduled and licensed banks should be granted licences to deal in foreign exchange, or, at least, the authorised dealers in foreign exchange might consider the possibility of allowing the non-authorised banks to share commission and/or exchange in the foreign exchange business passed on to them by such banks.

Recently it has been observed that banks have been opening new branches in the same small area without any consideration of the business potential. This results in unhealthy competition to the disadvantage of all. Raja Hari Singh suggested that a convention be established amongst banks to avoid the opening of new branches at places where a branch of another bank was already working, and especially when there appeared little scope for increasing the number of banking offices in a locality.

UNIQUE INDO-BRITISH TIES

IF Queen Elizabeth's visit to India early in 1961 is memorable for the reason, among others, that it was the visit of the Head of the Commonwealth to a republican country, President Radhakrishnan's recent return visit to Britain is memorable because it has been the first of its kind to be made to that country by the Head of another member State of the Commonwealth. By an unfortunate and wholly unforeseen coincidence, however, the Indian President's 12-day visit, which concluded on the 23rd instant, took place at a time when the Profumo affair was muddying the political waters in the host country. Of course, the visit was well arranged and the several engagements connected with it were fulfilled with meticulous care. But it should have nevertheless been an embarrassing experience for the British people and their Government to receive the Indian President in such a period of political tension. It redounds greatly to the credit of President Radhakrishnan that, sensing the embarrassment in the situation, he sought, intuitively or otherwise, to put his host at ease. This he did by saying in a speech at London on the 13th June that "every country had a skeleton in its cupboard." In a period when the spotlight in Britain was on Profumo and that in India on Malaviya, the President's disarming reference to the skeleton in every country's cupboard was, indeed, a master stroke in a kind of delicate diplomacy, transcending the passions, prejudices and aberrations of the moment and aimed at cementing further the bonds forged by History between India and Great Britain. None but a tolerant mind, which magnanimously recognised the weaknesses and limitations of *Homo sapiens*, could have said such a thing. It would thus appear that President Radhakrishnan's visit to Britain, though it accidentally synchronised with a period of moral and political tension in that country, is still memorable in its own way for its contribution it has made to the strengthening of Indo-British ties.

These ties, which have been historically derived a reinforced by the Commonwealth are, indeed, unique in more ways than As the London County Council's address me to President Radhakrishnan said, the of history have long bound our two countries together and a community of ideals and institutions still unites us in membership of the Commonwealth." The Queen, too, had this to say, namely, that the relationship between the two countries has been a "very special" one. This special relationship has, no doubt, inconsistencies, contradictions and surprises, but, as the Queen put it, there has been running through it from the beginning "a bright thread of genuine personal friendship and affection." There are, of course, other ingredients in this special relationship between the two countries, these being the commitment of India to the kind of parliamentary democracy that Britain has bequeathed, the adoption of the English language into its (India's) own immemorial culture, the continuation of its membership of the Commonwealth, the generous manner in which it has forgotten the bitterness of the past connected with the Independence movement, and, above all, the spontaneous sympathy evinced by the British people and their Government at the time when the Chinese hordes crossed into N.E.F.A. The last-mentioned factor, namely, the spontaneous expression of sympathy for India in its hour of dire need is, incidentally, comparable in some ways to Winston Churchill's offer of aid and sympathy to the Russian people on the day following Hitler's invasion of the Soviet Union in June 1941. It could, therefore, be said with justification that "it is not a far road to a friend's house," as Prime Minister Macmillan so aptly put it while welcoming the Indian President at a dinner at Lancaster House on the 20th instant. In fact, this country has never doubted Britain's sympathy and friendship, and it was thus to a close friend's house that Dr. Radhakrishnan went during his State visit.

Another component of the special relationship between Britain and India has always pertained to the economic field covering financial and technical assistance for India's development, private British investment in this country and mutually beneficial trade. To take the subject of financial and technical assistance first. It is most gratifying to find that the British Government's assistance by way of loans aggregated about Rs. 123 crores during the second Plan period and that the U.K. Government has provided or pledged to provide a total of Rs. 167 crores for the first three years of the third Plan. In all, therefore, Britain has provided so far just under Rs. 300 crores for India's development. This amount of assistance is, of course, much less than what the U.S. has given up till now. But it would be unrealistic to make any such comparison between the two aid-giving countries, namely, the U.S. and the U.K., for a couple of reasons. For one thing, Britain has been among the earliest countries to appreciate the importance of providing a substantial part of its assistance in the form of balance-of-payments support for the import of spares, components and other industrial raw materials. For another, the aggregate quantum of British aid, though much less than that of the U.S., has been accompanied by large-scale private investment in this country.

The latest available figures, in the latter connection, show that, as of 1962, private British investment in India must have touched, or slightly exceeded, Rs. 500 crores, as compared with only about Rs. 200 crores in 1948. In other words, if Government-to-Government assistance has not been on a very large scale in the case of British aid to India, the insufficiency has been more than made good by a correspondingly larger inflow of British private capital into this country. It is even more significant that British investment in India constitutes roughly two-thirds to three-fourths of all foreign private investment. Another fact, which has a bearing on this situation, is that, since 1959, British companies have concluded nearly 400 out of a total of 1,300 collaboration agreements with Indian companies, in many of which there is an investment in the form of equity shareholding. This, again, may be compared with the figures relating to collaboration agreements between the U.S. and the Indian companies, the relevant number of such agreements during the same period being only about 200. The fact that British private capital continues to find the Indian climate congenial speaks volumes for the British investor's understanding of the needs, problems and circumstances of this country. Such an understanding would not have been possible had not a "special" historically-derived relationship obtained all along between the two countries.

In the sphere of trade, too, Indo-British relations have been to the mutual advantage of the two countries to a far greater extent than, for instance, in the case of India's trade with the U.S. or with Western Europe. As of 1962-63, India's exports to the U.K. are Rs. 163 crores, as compared with its exports of Rs. 117 crores to the U.S. On the other hand, this country has imported from Britain during the same year Rs. 178 crores' worth of goods, as compared with its imports to the tune of Rs. 315 crores from the U.S. Indo-British trade, though it has thus a slightly unfavourable balance for this country, has still been nearly balanced, whereas there has been all along a big imbalance in India's trade with the U.S. and Western Europe. It would thus appear that, if all the three components—aid, private investment and trade—of the Indo-British economic relationship are taken together, the advantage to this country compares quite favourably with that derived by it from the Indo-American economic relationship. It is this beneficial relationship between India and Britain that has now been reinforced further by President Radhakrishnan's visit. The unique ties between the two countries may thus be expected to endure and grow from strength to strength.

F.I.C.C.I.'S SOUTHERN CONFERENCE

THE Southern Zone comprising the four States of Andhra Pradesh, Kerala, Madras and Mysore accounts for just 20 per cent of the total area of India (636,697 square kilometres out of 3,053,596 square kilometres), but its share in the aggregate population is over 25 per cent (110.2 million out of 439.2 million). In spite of the prominent place thus occupied by this region on the demographic map of India, it is rather unfortunate that it continues to remain economically more backward, as compared with the other regions. It is estimated that the percentage growth of per capita incomes in the Southern Zone since the beginning of the first Plan in April 1951 has been well below the all-India average rate and is lower than that for the Northern, Eastern, Western and Central Zones. Why has the rate of increase in per capita incomes in the Southern Zone been relatively small? And what should be done to accelerate the rate of growth? It was on these questions that the regional conference of the Southern constituents of the Federation of Indian Chambers of Commerce and Industry, held at Hyderabad last week-end, sought to focus attention. Surprisingly enough, Mr. Bharat Ram, President of the Federation, who presided over the conference, made only a cursory reference to these issues. He devoted the major part of his speech to highlight the current sluggishness of the Indian economy and to indicate the lines on which the rate of economic growth could be

stepped up in the country as a whole. Mr. Bharat Ram, incidentally, gave a clear warning that, unless the country was able to raise this rate to the level attained by China—that is, 7 per cent per annum, as against India's meagre 2 per cent at present—it would be difficult to counter the sinister motives of that country.

But the biggest stumbling block lying in the way of speedy industrial progress of the country, in general, and of the Southern Zone, in particular, has all along been the persistent acute shortage of power which, as is well known, forms the very basis for rapid all-round development. It is true that the total firm generating capacity (including bulk supply) in the Southern Zone has expanded in the last two years by 243.0 MW to 1,050.9 MW (estimate for 1963), but the actual demand has gone up much faster, by 427.4 MW to 1,382.7 MW, so that the gap has widened from 147.4 MW to 331.8 MW. Thanks to the critical power supply position, the implementation of several new industrial projects has been delayed and, what is worse, a lot of capacity in many of the existing industries is lying unutilised. The position will no doubt improve in the next three years, the estimate of firm generating capacity for 1966 being 2,405.1 MW, representing an additional 1,354.2 MW. But, by then, the demand will have risen to 2,476.3 MW, so that the gap in power supply three years hence will still be as wide as 71.2 MW.

Viewed thus, the regional conference did well to urge the vital urgency for augmenting power capacity in the Southern Zone. Such an expansion of capacity can be achieved speedily provided the authorities at the Central and State levels give effect to some of the valuable suggestions put forward at the conference. It has been rightly emphasised that each State should endeavour to develop the grid system as expeditiously as possible and that private parties who are prepared to install power generating capacity should not only be allowed to do so but actively encouraged. It is, however, difficult to agree with the statement that the manufacture of power generating equipment within the country would facilitate this objective. For it will take a pretty long time before such equipment can actually be produced. In any case, the supply of equipment may not be difficult. For the Government of India has already decided to make available additional funds, including foreign exchange, for completing several major power projects of the third Plan ahead of schedule and for initiating action on projects that would yield results in the first two years of the fourth Plan period. Another notable suggestion made at the conference is that, in States like Andhra Pradesh, a balance should be kept between hydel and thermal power, since excessive dependence on hydel power may cause difficulties such as those experienced in Madras when the monsoon fails. Thermal power can certainly be developed in the coal-bearing areas. And it is necessary that each State should develop the grid to enable the surplus power in any area being quickly supplied to another which needs it. This has necessarily to be followed up with a grid for the Southern Zone as a whole, eventually forming part of the all-India grid.

No less urgent is the need for better transport facilities in the Southern Zone. The development of railway and road systems, as Mr. K. S. Dutt, President of the Federation of Andhra Pradesh Chambers of Commerce and Industry, stated in his speech at the conference, have not followed any rational principle. The arrangement of railway zones, we are told, is causing inconvenience to goods traffic because of too many transhipment points in some States. The railway network is also said to be inadequate. One could discern the same lopsided development, according to Mr. Dutt, in respect of the road system also. All this is depressing. Unless suitable steps are taken right now to improve transport facilities, the tempo of industrial development in the Southern States is bound to slow down. This aspect has to be specially stressed in the context of the recent move to set up steel plants, another oil refinery at Cochin and a new shipyard, also at Cochin. The scope for development of road transport in particular is, indeed, very large and it can be exploited to the maximum extent possible if the present heavy incidence of taxation on transport vehicles is reduced and some sort of uniformity introduced into the varying rates of tax in the States.

Sales tax is another drag on the progress of industry and trade. The Southern States have different schemes of sales tax with varying rates. Mr. Dutt was quite right when he pointed out that the sales tax systems in all the States should be co-ordinated by an expert body, in order to achieve as much uniformity as possible in the rates and methods of assessments and refunds. The Southern Zone can give a lead in this matter to other regions, so that, ultimately, the entire country will have a uniform law governing sales tax. Judging by the earnest efforts so far taken to solve the problems connected with power and river waters, the hope expressed by the conference that the important subject of sales tax also would receive the serious attention of the State Governments seems to be a justifiable one.

Considering the economic backwardness of the Southern States, a reference to which has already been made, the need for a substantial expansion of industries cannot be stressed too strongly. Indeed, such expansion is an essential prerequisite for providing larger employment to the people and improving the living standards of the masses. The Southern region is known for the existence of abundant natural resources such as iron ore, coal and lignite, water power, and various industrial raw materials. Why not the four States of this region join together and undertake an intensive survey of these resources? The findings of the survey will, there is no doubt, considerably strengthen the case of these States for the establishment of several basic industries in the region.

MORE ON COMPULSORY LIFE INSURANCE

THE Union Deputy Minister for Finance, Mrs. Tarakeshwari Sinha, clarified at Madras on the 22nd inst., Mr. Morarji Desai's recent statement that the compulsory deposits scheme would be followed up by a scheme of compulsory life insurance. Mrs. Sinha said that what Mr. Desai had in mind was that, ultimately, compulsory life insurance would replace the compulsory deposit scheme. In other words, the compulsory deposit scheme is a temporary measure designed to pave the way for compulsory insurance. There is, therefore, according to her, no question of both the schemes running concurrently. Compulsory insurance is thus meant to be a substitute, so to say, for the compulsory deposit scheme, **not to supplement it.**

Savings .Ensure

Security

To the extent that this clarification removes the doubt whether both the schemes would be in force simultaneously, it is welcome. But it still leaves many questions unanswered and has even raised some fresh ones. The Union Deputy Minister's statement that, under compulsory insurance, the burden on employers would increase is significant, for it may be a straw in the wind. The Government is presumably thinking along the lines of a contributory scheme under which, as in the case of provident fund, employers and employees would share the burden of insurance. But she has not thrown any further light on the exact nature of the scheme, the type of cover proposed, the basis of underwriting, the range and duration of coverage, the level of benefits offered, etc.

Once it is accepted that life insurance should ultimately replace compulsory deposits, practical ways of bringing it about are a matter for serious consideration. Whatever the advantages of compulsory life insurance over compulsory deposits, introduction of compulsory insurance is bound to present many practical difficulties. It is not proposed in this article to examine all these difficulties or to suggest solutions for them. What is attempted here is to indicate some of the problems involved so that the temptation to devise ill-thought-out schemes and to enforce them in the hope that the problems will sort themselves out or be automatically solved in course of time would be resisted.

It may be pointed out, at the outset, that the choice is not between the compulsory deposit scheme, which is at present envisaged as an emergency measure, and compulsory life insurance for a temporary period. The latter, that is, compulsory insurance on a temporary basis, would serve no purpose, for life insurance is a long-term plan and a temporary insurance scheme will not encourage savings or provide sufficient risk cover. Nor will large funds be available from it for the Government, because no life funds are usually built up for temporary insurance. A major portion of the premium collected under temporary insurance, which will necessarily be small unless the premium is fixed at a level that has little relation to the risks assumed, will have to be spent in meeting the administrative expenses which are certain to be high if the scheme is sufficiently broad-based.

If compulsory life insurance for a temporary period is ruled out on these grounds, the choice left is to introduce compulsory insurance on a long-term basis and to make it an integral part of the structure of national savings. Here the question arises as to whether it is justified, on grounds of equity, to force the citizens to insure their lives when they do not enjoy even the bare minimum of social security protection. The common man is more concerned with the chances of his falling sick or losing his job in the immediate future than with the distant, and, perhaps less likely, prospect of premature death. Unless provision is made for meeting these needs, in fairness, it cannot be demanded of him that he should take compulsory cover against the risk of death. In other words, certain minimum standards of social security would have to be established before life insurance is made legally obligatory. This would appear to have been the stand taken by the Government whenever the question of making life insurance compulsory was put before it for consideration. (The Life Insurance Corporation, incidentally, seems to have suggested repeatedly over the years that life insurance should be made compulsory.) But it is by no means clear whether the Government has now entirely changed its stand. Probably, the kind of compulsory insurance it envisages is limited in scope, covering only a section of the employed population.

If compulsory insurance is accepted in principle, the question is how to devise a workable scheme. Several issues of practical import are involved in this. For instance, is it feasible to have a comprehensive scheme covering the entire cross-section of the people? Obviously not, because it will present many problems—administrative, actuarial and others—which do not lend themselves to easy solution. Moreover, the cost of insurance will go up because the mortality experience of this enlarged group is bound to be adverse. In fact, the actual mortality rate will be nearer the Census mortality rate than the present mortality of assured lives. There are also other issues, such as (i) whether the cover provided should be related to the earnings, (ii) whether there should be a minimum level of benefits applicable to everybody, and (iii) whether only gainfully employed and earning persons should be covered and, if so, what is to be done if an insured person loses his job and is unable to pay the premium. It is thus extremely difficult, if not impossible, to have a scheme of compulsory insurance covering all sections of the population. If coverage is limited to that section, which is brought under the purview of the compulsory deposit scheme, the practical difficulties will be less, though it would still be difficult to enforce compulsory insurance, especially in the case of self-employed people in both the urban and rural areas.

In the case of employed people, that is, those in factories and commercial establishments, compulsory insurance (if it is on a non-contributory basis, with employers shouldering the entire burden of premium, or on a contributory basis, with the burden of premium being shared by employers and workers) will raise the issue of the capacity of the industry to bear the burden. If employers are forced to contribute, they may try to pass on the burden to the consumers. In the case of industries, the products of which are subjected to price control, employers will be justified in asking for an upward revision of prices. This will add momentum to cost inflation leading to higher prices and fresh demands for wage increases.

If, however, what the Government is contemplating is only a compulsory group insurance scheme of the kind which the L.I.C. is trying to popularise at present on a voluntary basis without much success, it should not present any insuperable difficulties. But, then, it would be nothing more than an attempt to achieve by legislation what has already been accomplished on a voluntary basis in the advanced countries of the West where group insurance, covering the risk of death of an employee while in service, is part of the service conditions offered by most industrial and commercial undertakings.

MARKET GOSSIP

14-Carat Gold Era Starts

WITH the amended Gold Control Rules (*vide* details on page 1172), the era of 14-cart gold really starts only now. It could not have started earlier without the amendments. For, so far, the Rules allowed licensed refiners to hold substantial quantities of pure gold, to produce pure gold in the course of refining operations and to dispose it of to licensed dealers who, in turn, could stock and deal in primary gold, with sales confined to permit-holders. Because of this lacuna, the Rules were known to have been cautiously defied at least by clever dealers indulging in fictitious deals with chosen customers in order to market the smuggled material. Since one of the amendments restricts the purity of gold in the case of both licensed refiners and dealers to 14-carats and less, it plugs this major loophole. The amendment lays down exceptions for refiners in "certain very special cases" where pure gold has necessarily to be used and the permission of the Gold Board has also been obtained. The very special cases seem to be of industrial users and other permit-holders, though supply of gold to them, according to inquiries with the Gold Board, has still to be worked out. In this connection may be noted another amendment providing for the hall-marking of all primary gold produced by refineries and standardisation of supplies of pure gold in forms which may be suitable for the production of ornaments or for essential industrial purposes. Through this amendment is sought the elimination of the smuggled material from supply. A third amendment provides that the manufacture or sale of ornaments and the lending of money against ornaments or gold pledged should be carried on in separate premises. It will prevent the sale of illegally manufactured gold ornaments from being passed on as the return of pledged goods to borrowers.

The clarifications on the amendments point out that, while gold ornaments should be of 14-carats and less, non-ornamental gold articles should be of nine carats and less, that the Excise Officials can now take "cognisance" of violations of the Rules without reference to the police, that non-power-driven refineries can function only after obtaining a licence, and that the Finance Ministry (not the Gold Board as envisaged earlier) will be the ultimate authority administering the Rules.

The amendments and the clarifications thereon, especially those pertaining to powers of the Excise officials, have put the gold trade out of gear. This could not be helped. It will be some time before dealers switch over to 14-carat gold. But the nominal price for 10 grammes of such gold has declined between yesterday and today by about three points to Rs. 64, and this augurs well for the start of the new gold era.

The amendments clearly underline the Finance Minister's unswerving determination to pursue the Government's gold policy to its legitimate end. The exceptionally sweeping powers conferred on the Excise officials only highlight the gravity of the problem. Gold control, in some ways, is different from liquor prohibition, as it is motivated by practical exigency rather than moral principles. On the gold issue, the public, it is hoped, will co-operate with the Finance Ministry. Its success will, therefore, depend, as Mr. Morarji Desai candidly told Congressmen at Calcutta last Sunday, not so much on legislation and policing as on a popular campaign. What is called for is the missionary zeal of a Gandhiji to mobilise public opinion not in favour of 14-carat gold, as against 22-carat gold, but against all gold, for it is the exaggerated demand in the country that has kept the price of gold excessively high and thereby encouraged smuggling.

Foreign Investment In India

There was a fear among industrialists and the authorities last year that the Chinese invasion would scare away foreign capital from India. But this fear has luckily been belied by the impressive rise in the flow of foreign private capital to this country last year. This trend is discernible in the recent increase in financial collaboration secured by Indian industrialists. The value of total foreign participation in new capital issues touched an all-time high at Rs. 55.3 crores in 1962 (including bonus and miscellaneous issues), according to the Reserve Bank *Report on Currency and Finance* for 1962-63. This formed about 25 per cent of the total consents (covering both domestic and foreign capital) in 1962, as against only about 18 per cent (Rs. 33.8 crores) in 1961. The increase was particularly marked in the case of the U.S., which raised its share of only 28 per cent (of the total consents for foreign participation) in 1961 to 45 per cent in 1962, thereby stealing a march over the U.K. which had till then held the leading position in this field.

That the aforesaid estimate of the Reserve Bank is not wide of the mark has been proved by a detailed survey of new capital issues made by the Department of Company Law Administration. The Department's survey, which related to the financial year 1962-63, analysed the capital structure of 55 companies which issued shares worth Rs. 21.73 crores. Of these shares, foreign collaborators took up as much as 23.2 per cent, which compared favourably with only 7.9 per cent in the previous year. The Department thus seems to be justified in concluding that capital participation by foreign industrialists, which had shown a marked decline in 1961-62, had recovered and almost trebled in 1962-63. It will be recalled, in this connection, that a similar survey carried out by the Department last year had shown that the foreign investor was more interested in technical collaboration than in financial participation. According to the latest survey, this trend seems to have been reversed. There is thus a growing realisation abroad of India's capacity to absorb additional resources and the soundness of India's basic policy towards foreign capital.

Viewed against the background of this promising picture pertaining to the flow of foreign private capital to India, the assessment made by the Federation of Indian Chambers of Commerce and Industry last week seems to be rather pessimistic. In the course of a note prepared by the Industrial Development Sub-Committee of the Federation, it is pointed out that the total number of collaboration agreements had declined from 416 in 1961 to 307 last year. This is construed by the Federation as evidence of the growing reluctance of foreign industrialists to invest in India. It is doubtful whether one can draw such a pessimistic inference from a mere fall in the number of collaboration agreements, while the quantum of foreign capital involved in these agreements has gone up substantially. It is, therefore, not possible to endorse unreservedly the Federation's thesis. The Federation, however, is probably right when it says that special conditions imposed by the Government and dilatory official procedures have discouraged several collaboration agreements with foreign countries. Elaborating this, the Federation says as follows:

"The terms are far from clear and most cases of collaborations are decided on 'merit.' The imposition of special conditions is understood to be cumbersome in certain cases. The fact that no clear indications are given about the terms agreeable to the Government, makes frequent revision of the draft agreement necessary, which means delay. Again, entrepreneurs find it sometimes difficult to reconcile the terms insisted upon by the Government and those agreeable to collaborators. Finally, in many cases, suitable collaborators are not found."

A FERVENT CALL TO BUSINESSMEN

The Federation believes that, in the interest of the future of democracy and private enterprise, which in a large measure are inseparable, businessmen and industrialists in India must so conduct their affairs as to evoke and command a high degree of respect in all sections of the public. The record of Indian businessmen stands comparison with that of businessmen in any part of the world, as also with that of any other group in our own country. However, like every other section, businessmen also have to assume larger responsibilities. The Federation, therefore, urges the business community to run their industrial enterprises and businesses in the context of wider public policy. It is equally important that the prestige of commercial and industrial organisations is maintained and enhanced. In the fulfilment of the above objectives, it becomes necessary for businessmen to exercise a great measure of self-restraint and for commercial and industrial organisations to devise ways and means of securing the observance of high standards in the public life of businessmen and in their business practices.—*This call was issued by the Committee of the Federation of Indian Chambers of Commerce and Industry at its meeting held at Hyderabad on 21st June* 1963.

There seems to be some substance in the Federation's complaint, for no less a person than Mr. G. L. Mehta, Chairman of the I.C.I.C.I. and the Indian Investment Centre, who has just returned from a tour of the U.S., the U.K. and the Continent, has pointed out that U.S. industrialists did complain against some of the inordinate delays involved in sanctioning new projects with collaboration in India. It is this official delay and red-tapism that damages the otherwise satisfactory image of India's policies. If such procedural delays had been minimised or eliminated, it is just possible that there would have been a still greater inflow of foreign private capital.

Cancellation Of Industrial Licences

There has, of late, been large-scale revocation of industrial licences by the Government of India on the score that licensees have failed to take effective steps to implement the projects concerned in the stipulated time. Last year, 342 licences were revoked, as against the issue of 1,056 new licences; the proportion of cancelled licences thus comes to about 35 per cent of the total issued in one year. It is, no doubt, in the public interest to penalise those who deliberately sit tight on industrial licences and prevent others from coming into the field concerned. But those belonging to this group are naturally few, if any. For no industrialist would seek licences simply for the fun of having them. It is, therefore, a matter of considerable concern that a very large number of licences should have been made invalid by the authorities. The Federation of Indian Chambers of Commerce and Industry, therefore, has done well to devote some attention to this question which has been agitating the minds of several businessmen.

The Federation is right in putting the blame for the delay in the implementation of industrial projects at the doors of the Government itself. According to it, the failure of entrepreneurs to go ahead with their projects stems from red-tape and procedural delays of the Government machinery in screening applications for the approval of collaboration agreements and the import of capital goods. According to the Federation, there are a number of difficulties encountered by industrialists in proceeding with their schemes once they obtained licences. For instance, placing a firm order for plant and machinery, excepting where the plant is to be procured from indigenous sources, is dependent on the grant of foreign exchange by the Government and obtaining an import licence, which are protracted affairs. The period generally allowed for taking "effective steps" is six months, although, in certain cases, it may extend up to one year or more. But, after obtaining the industrial licence, even if the plant is ordered from indigenous sources, it would not be possible very often to take "effective steps" within the stipulated period. After all, a great deal of planning, ascertaining the details of operation of machinery, obtaining offers and making the selection has to be done. The position in respect of imported plant and machinery is far more difficult with all the rigid screening of applications and the need to accommodate such applications under various sources from which credits are available. In certain cases, negotiations have also to be carried on with international financing institutions, which need time.

The Federation's views are not in the nature of baseless allegations against the Government. They are, in fact, based on a study of about 50 selected projects where the progress has been reportedly slow. This lends particular force to its contention that the onus for the delay in the implementation of projects lies not with the licence-holders but with the administration itself. If so, why penalise the former? The *indiscriminate* revoking of industrial licences, at any rate, is not a solution; it will only hold up economic development and impede the growth of vital industries. What is needed, therefore, is the toning up of the administrative machinery in such a way as to facilitate expeditious decisions on collaboration agreements and import of machinery and equipment.

Towards Greater Integration In E.E.C.

The European Economic Community has already taken some preparatory steps towards the eventual co-ordination of economic and financial policies of the member-countries. Experts from the Six, according to the latest report by the Common Market's Economic Policy Committee, have succeeded in producing statistically comparable budget forecasts for the member-States. It is hoped that from this year it will be possible to improve co-ordination in the matter of financial policy by completing the procedure of joint economic forecasting before member-governments take the relevant financial decisions.

Another major step in the direction of greater economic integration of the Community may soon be taken if the proposals just put forward by the Common Market Commission in respect of monetary and budgetary policy are accepted by the Council of Ministers. Four proposals have been made by the Commission in this connection. First, it is proposed that there should be periodical meetings between the Governors of the central banks of the Six, in addition to the meetings which already take place at Basle with the Governors of the other European banks, to keep under constant review the Community's monetary problems. The second proposal is that the Six should co-ordinate their monetary policies in their relations with non-member-countries and with such international institutions as the International Monetary Fund. Thirdly, the Commission has proposed that there should be obligatory consultation between the Six before any major changes of policy are effected by any of them on such questions as exchange rates. And, fourthly, there should be collaboration between the competent administrative services of the six Governments on budgetary policy. It will be seen that this fourth proposal is in continuation of the earlier step relating to statistically comparable budget forecasts for member-countries.

Certain economic trends in the E.E.C. in the current year may also be noted in this connection. It is reported that some of these are disquieting. There is, firstly, a rise in prices and production costs—a rise which is expected to continue. Incidentally, according to another report, the present situation in France, for instance, is markedly inflationary, for there has been an excessive growth of bank loans and savings have been increasing less rapidly than the total money supply. It is also stated that productive investment in the Community is expected to rise only slightly, or not at all, in the current year. However, the Economic Policy Committee of the E.E.C. does not expect any major balance of payments problem during the year. Economic growth, too, measured in terms of increase in gross national product, is expected to be maintained at reasonable levels, that is, 5.5 per cent in Italy and France, 4.5 per cent in Holland, 3.5 per cent in West Germany and 3 per cent in Belgium. These trends, only some of which are encouraging, would seem to suggest that the series of steps required for greater economic integration of the Community will present difficulties of one kind or another. For instance, an inflationary situation in one member-country and a fairly stable monetary situation in another will undoubtedly create problems in the field of monetary co-ordination. It will be interesting to watch how these difficulties will be faced and overcome by the Common Market Commission and the Council of Ministers.

TREND OF SHARES

EQUITIES SLUMP

(From Our Own Correspondent)

BOMBAY, 27th *June*

EQUITIES slumped this week, a great majority of them to new low levels in the current downward trend, on persistent bull liquidation and bear pressure, as well as absence of any important fresh support. Rallies on short-covering at lower levels only attracted further bull unloading. Consequently, the week closed with sizable widespread losses and a distinctly weak tone.

Sentiment this week was badly shaken when two professional operators unloaded big holdings in speculative counters and turned to sell short on Dalal Street. The break in values came on Saturday evening, a day after the end-account on Friday the 21st inst., as the two operators turned sellers. The immediate provocation for their selling was said to have been a report in a Bombay political weekly that China and Pakistan proposed a joint attack on India. Basically, however, their liquidation was due to their having failed to carry the public in their strides in the last settlement. Despite adverse political factors and the none-too-encouraging economic situation, they had attempted in that two-week settlement a big pull on values which, however, seemed to have cried a halt soon after the announcement of the increase in steel retention price. Concealing any plans of big sales till the end of the account, they came out, however, in their true colours before official trading in the new account could start. On Monday the 24th inst., the new account opened with considerable overnight losses. Values dropped further, as selling by the aforesaid two operators did not subside and, consequently, bears picked up courage to add to the volume of business. Yesterday, when the week's lowest levels were struck, the market rallied rather impressively. But today, it reacted again in the absence of support, due to conflicting rumours about the quantum of T.E.L.Co. dividend for the year ended 31st March 1963. The weakness on Dalal Street spread fast to the other stock exchanges. There was, therefore, a general downward trend in all the markets.

At their meeting this evening, the Directors of T.E.L.Co. decided to maintain the ordinary dividend at Rs. 14.50 gross. It absorbs Rs. 115.99 lakhs. Since, in this total figure, the amount of tax-free profit is lower at Rs. 24.57 lakhs, as compared with Rs. 47.61 lakhs a year before, the net dividend (including the tax-free profit element) is lower at Rs. 11.07 than Rs. 11.94 a year before. The dividend has been maintained, despite a setback in profit (before taxation and development rebate reserve) from Rs. 378.40 lakhs to Rs. 327.50 lakhs. The turnover has, however, expanded from Rs. 41.65 crores to Rs. 43.64 crores. The provision for taxation (including S.P.T.) amounts to Rs. 184.50 lakhs, as against Rs. 187.75 lakhs a year before, and development rebate reserve has got Rs. 27.47 lakhs, as against Rs. 40.18 lakhs. These allocations leave a surplus of Rs. 125.15 lakhs, after taking into account Rs. 3.62 lakhs brought in and Rs. 6 lakhs withdrawn from reserves, as against Rs. 152.94 lakhs in the previous year. Out of this, Rs. 125 lakhs (Rs. 124.32 lakhs a year before) have been taken to dividend reserve. General reserve, which had received Rs. 25 lakhs in the previous year, has got nothing.

This week's slump amply justified the belief of the Committee of the Federation of Indian Chambers of Commerce and Industry that "it is imperative that the Government should take immediate steps to revitalise different markets—share, capital and security—as, otherwise, all developmental efforts will be jeopardised and the future of the economy seriously impaired." Talking to reporters, the F.I.C.C.I. President, Mr. Bharat Ram, said: "The markets have lost confidence." Observers, however, wondered, whether, because of the huge defence effort and particularly in view of the tussle between the "rightists," "centrists" and the "leftists" in the Congress party, the Finance Minister would at all be in a position to think of any stimulants for the markets. The F.I.C.C.I. Committee's meeting, which was a forerunner to the conference of industrial and trading interests of the Southern region, painted a gloomy picture of the economic development of the country, which, Mr. Bharat Ram, inaugurating the conference the next day, elaborated in precise terms. This had also a depressing effect on the market sentiment.

* * * *

Heavy widespread losses predominated on Dalal Street at the close of the week today. Among market leaders, Century fell from Rs. 531.50 to Rs. 493 before closing today at Rs. 496.50, as against Rs. 529.50 a week ago. Standard dropped from Rs. 740 to Rs. 658 to round off the week 57 points lower at Rs. 664 *ex-div.* Bombay Dyeing were the other principal loser, closing at Rs. 56.70, as against Rs. 59.50 a week ago. National Rayon showed a loss of Rs. 10.30 at Rs. 296.50 *ex-div.* Indian Dyestuff declined by Rs. 35 to Rs. 215, T.E.L.Co. by Rs. 13 to Rs. 246.50, Voltas by Rs. 9 to Rs. 223 and Hindustan Motors by 72 nP to Rs. 15.72. Both the steel shares closed substantially lower, Tata Ordinary at Rs. 132.25, as against Rs. 138.25 a week ago, and Indian Iron at Rs. 22.04, as against Rs. 22.66, after having been quoted yesterday at Rs. 131 and Rs. 21.84, respectively. Among others, Kohinoor attracted good support at setbacks, but were still Rs. 4.50 lower at Rs. 299, with Svadeshi showing a loss of five points to Rs. 227. Scindia found buyers on the decline and closed 8 nP higher at Rs. 10.20. Tata Chemicals were also in demand, but failed to retain the improvement due to the general weakness and finished only 4 nP higher at Rs. 16.12.

A.C.C. declined by Rs. 2.25 to Rs. 138, Alcock by Rs. 14.41 to Rs. 270 *ex-div.*, Larsen by 52 nP to Rs. 21 and Bombay Burmah by Rs. 2.50 to Rs. 59, but Belapur gained two points to Rs. 172. The cash section was weak, though losses were small. Laxmi Starch, however, suffered a big setback of Rs. 38.75 to Rs. 116.25, with Sandvik Asia declining by Rs. 11 to Rs. 176 and Permanent Magnets by Rs. 7.50 to Rs. 150.

* * * *

Normal trading on the Calcutta Stock Exchange commenced today. Although the trading was restricted till yesterday, the market closed with fairly big losses. Thus, in the forward section, Howrah Jute lost Rs. 1.81 to Rs. 18.19, Birla Jute Rs. 1.12 to Rs. 28, Orient Paper Rs. 1.70 to Rs. 33.70 and Indian Aluminium Rs. 1.31 to Rs. 32.75. In the cash section, Jutes were noticeably weak, Alliance declining by Rs. 5 to Rs. 115, Nuddeah by Rs. 4.25 to Rs. 52.50 and Barnagore by Rs. 3 to Rs. 198. Bengal Coal shed three points to Rs. 277. In the Engineering section, Escorts found buyers and rallied from Rs. 16.50 to Rs. 18.12, but Braithwaite closed 94 nP lower at Rs. 30.25. Alkali Chemical declined from Rs. 32.25 to Rs. 31.12, while Bengal Chemical rallied from Rs. 97 to Rs. 99. Among Miscellaneous issues, Jayshree showed a loss of Rs. 1.06 to Rs. 14.44. Philips Carbon eased by 81 nP to Rs. 15.94 and B.I.C. by 69 nP to Rs. 7.62, but Philips India looked up from Rs. 26.76 to Rs. 28. Among others, Cawnpore Sugar declined by 56 nP to Rs. 9.50, but Hantapara, among Teas, closed 50 nP higher at Rs. 106, with Grob gaining 19 nP to Rs. 7.19.

* * * *

A sharp fall in Mettur Industries from Rs. 324 to Rs. 278 due to the setback in the Company's profit, before tax, from Rs. 31.02 lakhs to Rs. 23.62 lakhs leading to a cut in the dividend from Rs. 22.50 to Rs. 20 featured the week's trading on the Madras Stock Exchange. S.I. Viscose also suffered heavily from Rs. 128 to Rs. 117. While Textiles were thus weak, leading Miscellaneous issues closed substantially lower, with Textools at Rs. 146, as against Rs. 149 a week ago, and Andhra Cement at Rs. 9.46, as against Rs. 10.30. India Sugar declined by 69 nP to Rs. 9. Highlands, among Teas, moved down from Rs. 13.80 to Rs. 13.37.

MENTHOL FACTORY AT BARODA

The Bhavana Chemicals (Private) Ltd. is understood to have commenced commercial production of natural and synthetic menthol at its factory at Baroda. Its product has been well received and approved by the pharmaceutical manufacturers as favourably comparable with the imported material. Erected at a cost of over Rs. 25 lakhs, this project is said to be the first of its kind in India. Machinery and equipment were supplied by a foremost manufacturer of West Germany with whom the Company has entered into technical collaboration.

The installed capacity of this factory, which is 82.5 tons per year, is believed to be enough to meet the present requirements of the country. The capacity can be expanded to about 120 tons per year with a little effort, and the Company will be able to cope with the increased demand in the country. This project will save the country foreign exchange worth several lakhs of rupees, since menthol was an item on the import list until now. However, the Company's prices are comparatively higher, since the import duty on the main raw material is around 85 per cent, while that on the finished product is only 26 per cent. The Company proposes to plead for a reduction in the duty on raw material, so that its prices may be reduced. It has plans for developing agricultural programme for growing the necessary raw materials locally, and is negotiating with the various State Governments for acquisition of land on lease. It has worked successfully on an experimental farm at Bangalore. Research programmes are also being developed, so that the Company will be able to switch over to production of menthol from Indian raw materials, in which event the production cost will be further reduced.

ELPRO INTERNATIONAL LTD.

The Directors of the Elpro International Ltd. announce that the Company's public issue of 21,250 equity shares of Rs. 100 each at par has been oversubscribed. The subscription lists, which opened on 19th June 1963, were kept open up to 25th June in order to enable the largest possible participation by investors. Steps are being taken to settle the basis of allotment in consultation with the Bombay Stock Exchange authorities.

ECONOMIC UPLIFT

F.B.I. RECORDS "TEMPERATURE" OF INDUSTRY

(From Our Own Correspondent)

LONDON, 21st *June*

THE Chancellor of the Exchequer has, of course, a vested interest, particularly at the present time, in the prosperity of the economy, and in his speech this week to the Association of British Chambers of Commerce he made no secret of it. "Business is expanding," was his theme and he pointed to the strength of sterling, in spite of what might be called "difficulties," to the prospects for European expansion and to the undoubted reality of the go-ahead American economy. At home his optimism was, he pointed out, reinforced by the fall in the figures of unemployed and the steady improvement in the trade figures.

LONDON LETTER

The trend of the British Balance of Payments is undoubtedly favourable. Over the first five months of this year exports showed a 5 per cent increase over their average level for 1962 (just the figure which the National Economic Development Council have been asking for). Imports have also increased but at a much lower rate; their rise over 1962 is only 2 per cent. Indeed, the trend in the reduction of the visible trade gap which has been consistent over the past four quarters now indicates that the U.K. is probably in balance *on visible account only*. It seems pretty clear that in the first quarter of this year such balance was indeed achieved although the official figures are not yet available. If, when they appear, they do sustain this informal calculation, then this is all the more reason to suppose that in the current quarter of 1963 the *visible* balance is actually positive. This is a situation which has not existed for four years.

Production Statistics

It is harder to find comparable economic comfort from the figures of industrial production: those now appearing for the month of April barely show a rise over March so that the level remains roughly what it was six months earlier before the bad winter dip. Another disturbing feature on the industrial front is that the level of capital investment for the first quarter of this year is now revealed as being 4 per cent lower than it was in the last quarter of 1962. In manufacturing industry the fall is no less than 9 per cent and it is a fair question to ask how far industrial output can improve in the light of an actual fall in capital expenditure. On the other hand, the economy still has a good deal of leeway in the form of unused production capacity.

These official figures naturally all suffer from being somewhat in arrears and the general impression shared by both the City and the industry in this country is that there has been a definite improvement in very recent months. This makes the four-monthly survey of what may be called the "temperature of industry" by the Federation of British Industries all the more valuable. Their previous Survey appeared in February and showed a uniformly depressing picture, but now we have the results of their June Survey which shows a complete change in feeling. First of all, we find that 56 per cent of the business firms canvassed are more optimistic about the general business situation in Britain than they were four months ago and only 3 per cent are less optimistic. This is a complete reversal of the picture. Asked about output, 37 per cent say that for the past four months their current output has been higher than in the previous period and only 20 per cent say it has been lower. As for the future, 41 per cent of those questioned say that new orders received in the past four months have been higher than in the previous period; more than double the number who find that their new orders are less. Again, a third of all the firms are more optimistic about their export prospects than they were when last questioned and under 10 per cent are less optimistic. It is worth pointing out that, at the same time, a quarter of the firms admit that their average selling costs per unit of output are now higher than they were and only half as many say that they are lower.

Although two-thirds of these industrial firms are still working below capacity, although half of them have suffered lower profits (all this relates, of course, to the past) and similar-

(Continued in previous column)

(Concluded from next column)

ly they have been investing less in new capital; although also one can say that all this optimism is largely a matter of sentiment rather than of fact and that there are more hopes than contracts—nevertheless, an upsurge in business confidence on the scale just revealed cannot be lightly dismissed. It is business confidence which leads to new contracts. It has been argued that the recent Parliamentary scandal might have a depressing effect on industry; that myth has hardly had time to be floated before the facts have exploded it. Whatever concern there was has already disappeared in terms of practical business activity and expectations. The Chancellor is so convinced of all this that he has made it quite clear he is not going to give any further stimulus to British industry—he is quite convinced that all the stimuli (and many of his Budget stimuli have not yet begun to operate) are more than enough and that, if he is not careful, there could be overoptimism leading to inflation. That miserable word has not, indeed, been mentioned and provided that the practical evidence from the Production Index next published supports the current feelings of industry, there is no reason why it should be.

PERSPECTIVES & PROJECTIONS

By Mercator

What Next?

THIS is a question which crops up every moment in discussions of almost all aspects of our national policy. What shape will the Cabinet reshuffle take? Will portfolios be regrouped? Now that there is evidence of new Chinese aggression in Ladakh, and the usual protest notes have been sent, what do we do? How good are the prospects for revitalising our drooping economy and of maintaining a higher tempo of development, at least until defence preparedness can be freed from the uncertainties of foreign assistance? There are no answers to be found to these or other equally important issues agitating the minds of the public. They depend on one man, the Prime Minister, who remains sphinx-like. Perhaps he is not himself aware of the answers and has been thinking them out during his Kashmir holiday, though many would think that he has had ample time already and should soon make up his mind to check speculation and undesirable political manœuvres. The longer decisions are delayed, the longer will idle gossip pervade and pollute the political atmosphere.

We have already begun to hear the indignant voices of the pseudo-Leftists crying out that Mr. Malaviya's exit was the outcome, not of the doubtful propriety of some of his actions but of a systematic campaign against him and the former Defence Minister, Mr. Krishna Menon. It may be that some who did campaign against both have made common cause with others who only wanted that some standards of integrity should be maintained in our public life; it may also be that some other Ministers of the opposite school are no less culpable of similar actions and deserve to go. If so, there is no reason why the victims of the conspiracy should spare their opponents; if the Right-wingers also have dealings with big business for party funds or governmental favours and they are exposed, our democracy should emerge purer for it. But it is wholly disingenuous to sidetrack the issues involved by raising a bogey of a "blood hunt," particularly when the Prime Minister was very slow to respond to demands for Mr. Malaviya's or Mr. Krishna Menon's resignation and was not personally or ideologically opposed to either of these two former Cabinet colleagues. Could he have resisted, or Mr. Malaviya withhold his resignation, if there was overwhelming evidence which could not be refuted or explained away?

Moreover, the idea that all is fair if some persons feel that they are socialistic (and that others are not) in their policies, and that socialism consists in expanding the public sector as a vast area of personal patronage, is too naive to carry conviction with the public. More irregularities and waste in the use of public funds raised by imposing heavy burdens on the citizens only bring the Government into contempt; the services also get involved in these transactions (as it has happened in this case). Why should anyone wink at or tolerate them merely because they are all done in the good name of socialism? It is preposterous that some very intelligent people should argue that profession of socialism by itself should confer immunity from the consequences of allegedly improper action. Socialism cannot be reduced to one of robbing Peter to pay Paul; on the other hand, an average citizen would expect a sense of dedication and austerity from those whose mission it is to work for social justice and also some visible proof in the ordering of the affairs of the body politic in which there is less ostentation in private or public consumption. That some can claim to be "progressives," so as to be able to dub their opponents as "reactionaries" reminds us of Gulliver's big-endians and small-endians, or the rival religious schools in our own country based on differences in ritual.

At his last press conference the Prime Minister spoke of the variety that is India (in reply to a question whether he would be in a position to constitute a homogeneous cabinet). He might well have added that such variety is reflected even in the Congress Party. If the predominant sentiment in the party is against the continuance of any Minister against whom allegations have been made, and possibly substantiated, and some sections of the Opposition in Parliament also share that feeling, should the Prime Minister ignore it to satisfy the feelings of outraged columnists or editorialists who think that it is a surrender to some kind of pressure which is distasteful to them?

Anyhow, the Prime Minister's view is important for drawing the conclusion that homogeneity will be a lesser objective than representation of the different wings of the Congress in the reshuffled Cabinet. Whether this principle will also extend to the allocation of portfolios remains to be seen; for example, will the subject of Mines and Fuel continue to be held by a person who may hold doctrinaire views on the public sector's role? There has been much speculation over the possible regrouping of portfolios to achieve better co-ordination; but ultimately personalities, and their inclinations to hold or part with their present responsibilities, may decide who should hold what, or whose empire should be expanded at the expense of another. Or the entire speculation over possible changes may be made ridiculous by the Prime Minister deciding to avoid uncomfortable changes and appointing a newcomer to take the place of Hafiz Mohammed Ibrahim, to satisfy the needs of a secular State and possibly also of Leftist opinion. Then everything else may continue to be as of old.

* * * *

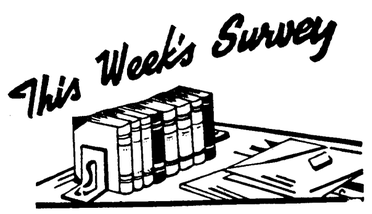
Bokaro: Brick by Brick

Bokaro no longer remains a mere steel project, the fourth in the public sector. It is fast becoming a centre of political controversy within and outside the Indian Government, causing misunderstandings among the U.S. authorities and between them and the Indian. The Prime Minister described the delay on aid as a frustrating experience; and Mr. C. Subramaniam's rather tactless remarks at a press meeting have been widely commented upon. Very soon the Indian Consultant's project report will be ready; but it is hardly fair to expect that the U.S.A.I.D. authorities can be persuaded to ignore their own technical report, wherever it conflicts with the Indian Consultant's. It is one thing to say that everything will be done to make Bokaro qualify for U.S. aid (while exploring possibilities of other aid if it does not materialise) but quite a different matter to make insinuations. It is amusing to hear that the project will be undertaken with or without aid. Soviet help on the scale of the American technical consultant's report on Bokaro may be ruled out as very unlikely in the present conditions, though Mr. Manubhai Shah has come back with glowing accounts of the success of his mission abroad. West Germany has signified its lack of interest by cutting down aid to India at the last Consortium meeting, even though her trade depends to no small extent on further aid to India; in any case German commitment to a very large project like Bokaro is to be ruled out. Japan is another likely source but, while technical collaboration and supply of equipment on credit may be expected, substantial foreign investment on a long-term basis should not be expected from that country. Bokaro may yet perhaps be built, brick by brick, over a period of years by Indian engineers with such foreign exchange as may be spared from the total Plan aid but that will not make our steel targets meaningful either in the fourth Plan or even the fifth.

Keen as public interest in Bokaro is, it seems unlikely that the Government will be blamed if it shows more patience, tact, and understanding of the American pressures on foreign aid and adopts more diplomatic postures than Mr. Subramaniam has shown so far in order to get a firm American commitment. Perhaps a change in attitude, if not of policy, in the Minister of Mines and Fuel will by itself accelerate other steps. Very few intelligent Indians are shocked (as Ministers seem) by American insistence on complete surveys of the ore and other raw materials, seeing how these aspects were wholly neglected so far in the general desire to erect showpiece steel plants. Similarly, the surprise over Mr. David Bell's statement, that aid for Bokaro must come out of the same total aid bill for the Plan, is also curious since Bokaro has always remained part of the third Plan which the Consortium is committed to assist as a whole. If the Tarapur atomic power station and Bokaro absorb the bulk of future U.S. aid, little will be left for other purposes, like transport and thermal power or for non-project aid for maintenance

(Continued on page 1174)

I am a born optimist —what about you?



If a man can look at the bills his wife runs up and say: "Thank heavens she has not spent more!"—then he is an optimist. AND THAT'S ME.

Even when it comes to paying more through taxes and compulsory deposits, I grin and bear it. It's not that I'm some kind of heroic nut. I know that some day it's all going to pay dividends, if not for me, for my kids—and they are all that I'm concerned about. Of course, it means tightening the old belt a bit.

Not that I never groan, of course. I groan when the postman brings those premium notices on my Life Insurance. But I pay up and say: "One payment less; one more chunk saved; one step nearer maturity." It *does* make for peace of mind. The thought of my wife and the children having this little security feeds my optimism.

I AM AN OPTIMIST—I think.

ASP/LIC-E-12

MR. PATIL ON SUGAR SITUATION

THE three statements on sugar which Mr. S. K. Patil, Union Minister for Food and Agriculture, made at a Press Conference in New Delhi on Monday this week—that is, the day after his return from a five-week tour of the U.S. and Japan—are, indeed, heartening. Firstly, the U.S. Government has offered to buy 500,000 tons of Indian sugar every year and also agreed to allot a permanent sugar quota to this country. The significant fact, Mr. Patil pointed out, is that India has now developed ready markets for at least 750,000 tons of sugar—500,000 tons in the U.S. and 250,000 tons in Japan. Secondly, the Government of India is prepared to provide "all kinds of incentives" for bringing about a rise in sugar production. And, thirdly, the prices of sugarcane will not be raised further.

The U.S. offer to buy annually such a large quantity of sugar as 500,000 tons from India—the offer will, of course, be valid only from the ensuing sugar season due to commence on 1st November next—is to be widely welcomed in the context of the continued pressing need of this country to earn foreign exchange. Mr. Patil has not given any indication whatsoever regarding either the price that the U.S. will pay or the delivery schedules. Presumably, nothing has yet been decided on these issues which will have to be discussed at a later date. It is, however, well known that, under the amended Sugar Act, the U.S. is paying only the price ruling in world markets and not the special price which used to be 50 per cent higher than the world price. Taking the current ruling price (at New York) of about $222 (Rs. 1,056) per ton, the annual sale of 500,000 tons of Indian sugar to the U.S. will earn for the country a foreign exchange of $111 million (about Rs. 53 crores). Lest these figures should engender a sense of complacency among Indian sugar interests, a note of caution needs to be struck, namely, that the present high world prices of sugar may not continue in future, though it is possible that prices will not recede to the low level touched a few months ago. Mr. Patil did well, therefore, to urge that serious attempts should be made to bring down the cost of production. In his characteristic way, he said: "The honeymoon (the present spiralling trend of world sugar prices) will not last for more than two or three years after which it will come down to a point when India will have to scrape everything to sell her sugar."

How can the cost of sugar production be lowered? This is the problem posed before the industry. While the rejection by Mr. Patil of the plea for a further rise in cane prices is reassuring, it has to be emphasised that the existing level of prices itself is pretty high. Cane cost alone accounts for as much as three-fourths of the total cost of making white sugar. Such a heavy incidence of cane cost has all along rendered difficult the task of building up a permanent export market for Indian sugar. The incidence can be reduced only through energetic action directed towards improving the productivity of cane lands. In spite of all the fanfare of publicity given to cane development work, the all-India average yield of cane continues to be very low, being no more than 17 tons per acre. There is vast scope for augmenting the yield to twice or even three times this level. It is, however, not the quantity of cane obtained from a given area of land alone that is important. Equally important is the quality of the cane harvested. It may be noted here that the all-India average recovery of sugar is a bare 10 per cent. In other words, the criterion should be how much sugar can be produced from a given bit of land. Sugar, after all, is made in the fields and not in the factories and the Agriculture Departments of State Governments should be geared to improve conditions in the sugarcane economies in their respective regions.

To revert to the U.S. offer to buy every year 500,000 tons of sugar from India. If this offer and the Japanese offer to buy 250,000 tons are to be fulfilled, it is imperative that sugar production in India be maintained at the optimum level. It is certainly a matter of gratification that Mr. Patil has held out the assurance that the Government is prepared to give "all kinds of incentives," including rebate, for a rise in sugar production. Whatever be the nature of these incentives, there is no denying the fact that prompt measures must be taken to ensure to sugar mills adequate supplies of cane. This aspect is especially stressed because of the danger of the persistently large-scale diversion of cane supplies to the manufacture of *gur* and *khandsari* which are commanding very high prices. Some of the suggestions made by the Secretary of the Madhya Pradesh Sugar Mills Association, Mr. B. J. Jain, in a letter to the State Cane Commissioner, though they relate to the sugar industry in Madhya Pradesh, apply with equal force to other States. The suggestions are:

1. There should be absolutely no operation of *gur* and *khandsari* units in the factory areas (radius of 15 miles) and, in cases where sugarcane has to be drawn from long distances, orders should be issued by the State Government that manufacture of *gur* and *khandsari* shoud not be started before the sugar factory starts.

2. Power crushers should not be allowed to purchase cane without first obtaining the permission of the District authorities of their areas.

3. Prohibitive excise duty must be imposed on *khandsari*.

4. Good road facilities should be afforded to the cultivators for movement of their cane to the factories.

5. Sufficient rebate in the transport charges of cane must be allowed to the factories which have to draw cane from road centres and the factories must have powers to deduct such rebate from the cane price on the basis of properly certified distances of the road centres without obtaining prior permission from the Government.

6. Railways should be requested to afford full facilities to the sugar factories in regard to supply of empties and clearance of loaded wagons in terms of the factories requirements without delay and supply of wagons for movement of coal, firewood, lime, etc., without delay.

7. Steps must be taken to ensure all necessary supply of adequate quantities of cane to factories in order to enable them to start crushing earlier than usual and also to continue longer; in order to compensate the factories for the loss due to lower recovery for earlier start and longer continuation, suitable rebates in fiscal levies must be allowed.

The aforesaid suggestions are quite pertinent. The Central and State Governments should give effect to them. Otherwise, sugar production will suffer a setback in the coming season too.

HINDUSTAN MACHINE TOOLS

In refreshing contrast to several public-sector projects which generally grow by fits and starts, the Hindustan Machine Tools has kept up a high degree of operational efficiency ever since the commissioning of its first plant at Jalahalli, near Bangalore, in 1956. H.M.T.'s proud record is reflected in the decision of the Company to pay a dividend of 10 per cent—the highest in any public-sector project—in 1962-63 for the third year in succession. According to the latest annual report of this State-owned unit, the net profit of the Company rose to Rs. 2.15 crores in 1962-63 (or a return of 33 per cent on the share capital of Rs. 6.56 crores), as compared with a return of Rs. 1.27 crore (24 per cent of capital) in 1961-62 and only Rs. 74 lakhs (or about 14 per cent of capital) in 1960-61. The trend in profits has been quite satisfactory inasmuch as this has not been achieved by charging higher prices for machine tools which, in fact, have a sellers' market in this country. The domestic sale price of all H.M.T. machines, which were fixed in September 1960 at 10 to 20 per cent below the then landed cost of European machines of equivalent quality, were maintained during the year 1962-63. The revised selling prices which have been put into effect from April 1963 are uniformly 15 per cent below the current landed cost of European machines of the same type.

A striking feature of the Company's working is that it has endeavoured to plough back a fairly good proportion of its profits for expansion and development. According to Mr. M. K. Mathulla, Chairman of the H.M.T., the Company has drawn up plans to have a chain of five machine tool factories, each employing 3,000 persons, every alternate factory being financed from internal resources of the parent company. Already the H.M.T. has two units at Bangalore, the latest one having gone into production much ahead of schedule in April 1961. It is gratifying to note that, following the emergence of large-scale defence demand, these units have improved the rate of utilisation of their capacity. In fact, production at the two plants almost reached their full annual capacity of 2,000 machine tools in 1962-63.

Plans for the establishment of three more plants in different parts of the country are under different stages of implementation. Mr. Mathulla disclosed that the third plant, being set up at Pinjore in the Punjab, would go into production by the end of this year. This plant, which will have an annual capacity of 1,000 machines, is expected to involve an investment of Rs. 7.5 crores. The fourth machine tool plant of the H.M.T., which will be more or less of the same size as the one at Pinjore, will be set up at Kalamassery in the Kerala State. The construction of the factory is expected to commence soon after the monsoon season is over. The fifth factory is expected to be located at Sanatnagar in Andhra Pradesh. Unlike the Pinjore and Kerala plants, which are being designed and built entirely by Indian personnel, the fifth plant will be put up in collaboration with Poland. Mr. Mathulla is expected to visit Poland shortly to negotiate for the purchase of equipment, etc. When all these five units go into production, the value of their total output would go up to about Rs. 25 crores per annum. Mr. Mathulla observed that by the time all the units are commissioned, the production lines at Bangalore would be decentralised, enabling each factory to specialise in one or two families of machines. This specialisation is certainly to be welcomed as it is bound to ensure greater efficiency and reduce cost of production.

Besides machine tools, H.M.T. has also entered the field of watch manufacturing in collaboration with a Japanese firm. Its plant at Bangalore assembled about 52,000 watches last year. The indigenous component of these watches is still about 54 per cent only. There is obviously need for stepping up this share by increasing the output of components at the Bangalore plant itself.

Side by side with the plans for establishing new plants, the management of H.M.T. has realised the need for organising centres for specialised technical training in the various aspects of machine tool manufacturing. Training centres have already been set up in the Punjab and Kerala, besides the facilities already available at Bangalore. A new major step in this field will be the opening of an institute of machine tool technology which is being put up at Bangalore at a cost of about Rs. 90 lakhs with assistance from Czechoslovakia. These efforts are commendable in view of the dearth of trained personnel in the country, and the need for reducing dependence on foreign know-how which, at least in the initial stages, helped the growth of H.M.T. to a large extent.

Such training of Indian personnel in this specialised field will be of assistance not only to H.M.T. directly, but also to other units, particularly those in the private sector. The production of all units in the public and private sectors has been increasing of late. H.M.T.'s present share is still about 40-50 per cent of the country's total output of machine tools, which in 1962 was about Rs. 10 crores, as against Rs. 8 crores in 1961 and Rs. 6 crores in 1960. But India has still to make up a great leeway, as, despite import restrictions, it imports annually machine tools worth about Rs. 25 crores According to an estimate of the Development Council made in 1960, the total value of domestic requirement of machine tools in 1965 would be as much as Rs. 49 crores. If the strategic requirements are taken into account, the demand may grow at a still faster rate.

OIL INDIA'S PROGRESS

Oil India Ltd., jointly owned by the Government of India and the Burmah Oil Company, has made good progress in the twin fields in which the Company is operating, namely, exploration for, and production of, crude oil and the construction of pipelines for the transport of oil to public sector refineries. In a statement circulated at the fourth annual general meeting of the Company held on the 21st instant, Mr. Khandubhai K. Desai, Chairman, has stated that the exploration programme has made good headway and that further exploration and test drilling in these areas would be carried out on the most intensive scale possible. Oil India drilled about 25 wells in 1962 in its initial mining leases of about 511 sq. miles. Of these, as many as 19 were proved to be oil producers and only two were dry; the remaining await further testing.

It is significant that, in one of the wells, a new technique has been adopted for the first time in this country. The new technique, known as "dual completion," enables simultaneous production from two horizons in the same well. Another new technique which O.I.L. has adopted is directional (deviated) drilling in order to tap oil resources under the bed of the Burhi Dihing river. Three wells have so far been successfully completed through this method. In fact, according to Mr. Desai, the exploration programme could have been carried out at a faster pace but for the delay in land acquisition earlier during the year and the slowing down of certain operations in the face of Chinese aggression. O.I.L. also took a major step in its development schemes when its first crude conditioning plant at Naharkotiya was put into operation in February last. It has already started supplying conditioned crude to the Gauhati refinery. Meanwhile, another crude conditioning plant is being set up at Moran. While these new centres in the field of oil are praiseworthy, O.I.L., as Mr. Desai himself has stressed, would have to make still greater efforts to increase the production potential, both in the existing fields and in the new areas for which prospecting and exploration licences have been secured, in view of the growing demand for petroleum and its products.

Among the new prospecting licences secured by O.I.L., the major one is an exploration area of 1,290 miles in Dum Dum in upper Assam. This licence was secured only in January last and a detailed seismic survey was started in March. During this short period, O.I.L. has been able to make good progress on this project, and it is learnt that the first test well in this area will be spudded-in near Bogapani in November next. The construction of the ten-mile approach road to this dense jungle area has already begun.

O.I.L.'s operations in the field of pipeline construction have also been equally commendable. Its 720-mile pipeline, the longest in the country, has been brought to a state of operational readiness, with the completion of the hydraulic testing on the second sector, that is, the 470-mile Gauhati-Barauni line in February last. The first sector, Naharkotiya-Gauhati, had been completed in March 1962. It is, however, a matter of some concern that the capacity of these pipelines has not been utilised completely as a result of "certain recurrent troubles" at the Gauhauti refinery, which restrict its offtake, and because of the delay in the commissioning of the Barauni refinery. The commissioning of the latter refinery, which has been postponed from time to time, is now expected to take place by October-December this year. It is to be hoped that the successor to Mr. K. D. Malaviya in the Mines and Fuel Ministry will spare no pains to set things right at the Barauni refinery as early as possible. For the time being, however, O.I.L. has no alternative to patiently wait for the refinery to go on stream, although it may affect, to some extent, the financial results of the Company in 1963. Incidentally, it may be noted that the Company has paid a dividend of Rs. 90 per share for 1962 and that this works out to a net return of 6¾ per cent. on equity after deducting dividend tax.

FREEDOM FROM HUNGER

The deliberations of the World Food Congress, which was held at Washington as part of the Freedom from Hunger Campaign, ended last week. The Congress issued a clarion call to the peoples of the world that freedom from hunger should be won "within our lifetime," as Mr. B. R. Sen, Director-General of the Food and Agriculture Organisation, put it in his concluding speech. The call has gone forth in the form of a momentous declaration which has laid down at the very outset that "freedom from hunger is man's fundamental right" and that "all human beings, without distinction of any kind, are entitled to its realisation through national effort and international co-operation."

How is this national effort to be organised? The declaration has spelt out a series of measures for implementation by (1) the developing countries and (2) the developed countries. As far as the developing countries are concerned, the declaration has urged them to take all measures within their power for a planned and integrated use of resources which at present are largely under-utilised, for the adaptation of their institutions to the requirements of economic and social progress, for the provision of incentives to increased production through ensuring just and stable prices, for the reform of unjust and obsolete structures and systems of land tenure and land use, for the maximum utilisation of the stock of scientific and technical knowledge and for the purposive education of the rural population in modern techniques and systems of production. The developed countries, too, are expected to make their contribution to the campaign for increased production in the developing countries. In this connection, the developed countries have been urged to strengthen the total flow of external assistance, both bilateral and multilateral, to the developing countries, for "freedom from hunger cannot long be secure in any part of this interdependent world unless it is secure in all the world."

But increased assistance—financial, material and technical—by the developed countries cannot by itself ensure speedier implementation of the development programmes of the poorer countries. Something more is required to sustain progress not only in the campaign for freedom from hunger but also in the broader movement for social and economic development. The declaration of the World Food Congress has, therefore, done well to highlight the need for curbing and reversing the present adverse and disturbing tendencies in the trade of the developing countries and to urge that, for this purpose, adequate and comprehensive commodity agreements be devised. It has equally done well to recommend that a more equitable and rational sharing of world abundance, including the expanded and improved utilisation of food surpluses, be effected for the purpose of economic and social development. If and when the efforts for bringing about universal disarmament succeed, vast sums could also be released for possible use in the world-wide campaign for the elimination of hunger and malnutrition. It is noteworthy that the declaration of the World Food Congress has drawn pointed attention, in this connection, to the distortions caused by the arms race.

So explosive is the growth of world population that there are already disturbing tensions in several of the newly independent countries where millions of people are aspiring for freedom from hunger and higher levels of living. The growth of world population, which is currently running at a rate unmatched by adequate increases in productivity, imparts a new urgency to the campaign for freedom from hunger. The World Food Congress has, therefore, adopted a resolution to the effect that the national Freedom from Hunger campaign committees be placed on a continuing basis, that is, continued beyond 1965. The resolution has also recommended the holding of a World Food Congress periodically to review a world food survey in relation to population and overall development. But it looks as though, in spite of these proposed steps, it will take several years more for the needs of all countries and the available resources to be assessed and a world-wide plan of action formulated.

FERTILISER SUPPLY

It has been estimated that a pound of fertilisers in terms of nitrogen could raise foodgrain yield by 10 to 15 pounds. The price per ton of fertiliser is almost equal to that of a ton of foodgrain. In other words, by importing one ton of fertiliser for producing more food indigenously, we can avoid the import of 10 to 15 tons of foodgrain. This point was vividly brought out by Mr. Bharat Ram, President of the Federation of Indian Chambers of Commerce and Industry, while inaugurating the Southern Regional Conference of the Federation at Hyderabad the other day. Elaborating this, he said that imports of foodgrains to the tune of Rs. 130 crores could be eliminated by spending about Rs. 20 crores on the import of fertilisers and fertiliser manufacturing plants for the purpose of producing an equivalent quantity of foodgrains within the country.

But, unfortunately, the position regarding fertiliser supply continues to be very unsatisfactory. Domestic production of fertilisers is, no doubt, making steady progress, but the demand therefor is growing quicker than the supply. With the present imports of fertilisers *plus* domestic production, it will be just possible to meet only 60 per cent. of the aggregate demand during 1963-64. While this demand is estimated at 3.3 million tons, domestic production is not likely to exceed one million tons. What quantity will be imported in 1963-64 is not precisely known. But a rough measure of possible imports in the current year can be had from the import figures for 1962-63. The total import of manufactured fertilisers during 1962-63 was Rs. 27.3 crores, as compared with Rs. 12.2 crores in 1961-62; import of crude fertilisers amounted to about Rs. 3.0 crores in the former year, as against Rs. 2.7 crores in the latter.

The big gap between demand for and supply of fertilisers is being narrowed by increased domestic production only at a very slow pace. For instance, public-sector production is behind schedule in some of the units. The factory at Nangal is still working below its rated capacity. Only by the end of 1965 the new factory at Namrup in Assam, which is being financed by a British credit of £5.1 million, will go into production. Yet another factory for the manufacture of urea and ammonia, which is coming up at Gorakhpur in U.P. with Japanese assistance, is expected to go into production only in 1967. The big fertiliser unit at Rourkela, which was commissioned in 1962, is yet to reach its rated annual capacity of 600,000 tons of calcium ammonium nitrate. As regards the private sector, progress has been restricted in a number of units due to the delay in taking up manufacturing licences for want of foreign exchange and foreign collaboration. In the current year, only E.I.D.-Parry Ltd. inaugurated its compound fertiliser factory at Ennore near Madras. It would thus appear that progress in the implementation of fertiliser projects is slow and uneven in the current Plan period. The Government should inquire into the reasons for this slow progress, especially in the private sector, and take suitable remedial measures.

PROTEINS FROM PETROLEUM

Petroleum, one of the world's most important sources of energy, may as well become a major source of protein, if the experiments currently being conducted on a pilot scale by the Standard Oil Company of New Jersey, U.S.A., should prove successful. And if it does, only 200,000 to 300,000 barrels of oil a day, or roughly one per cent of the current annual world output of crude oil, will be needed to provide sufficient protein to the millions of underfed people in Asia, Africa and Latin America. The *per capita* daily intake of protein in these regions is much below the minimum of 15 grams necessary to maintain health and efficiency. Mr. M. J. Rathbone, President of Standard Oil, who reported the sensational results of experiments conducted in the Company's laboratories to the sixth World Petroleum Congress, currently being held at Frankfurt, expressed the hope that hunger and malnutrition in the world would be liquidated by using the new process which is already in an advanced test stage. The process consists in biosynthesis by which petroleum is transformed into a protein-rich food.

With the discovery of such new uses for oil, the question of a probable shortage of oil supplies in future assumes a new dimension. Mr. Rathbone has forecast that, between now and 1980, world consumption of oil would be somewhere near 270,000 million barrels, or about the present world total of proved resources. There is, however, no danger, according to Mr. Rathbone, of a world oil shortage, because supplies would be augmented through new discoveries, better methods of recovery and the exploitation of oil shale and tar sands. Whether his optimism about future oil supplies is shared by other participants in the Frankfurt Congress is not known at the time of writing. The trend of future demand for and supply of oil will depend on a variety of factors, not all of which can be precisely assessed in advance. Here the experts themselves are not unanimous in their projections of the energy pattern in which the relative roles of coal and oil, in particular, continue to be matter of controversy.

Notice

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Thirtieth Annual General Meeting of the Company will be held at the Registered Office, 59C Chowringhee, Calcutta, on Wednesday, the 17th day of July 1963, at 12.30 p.m. for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st March 1963 and the Reports of the Directors and Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.

Special Notice of the intention to propose the election of Mr. M. K. Vellodi, who is 67 years of age, has been received.

4. To re-appoint and fix the remuneration of the Auditors.
5. To transact any other ordinary business of the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

NOTICE is hereby given that the Ordinary Share Register of the Company will be closed from 1st to 17th July 1963, both days inclusive.

By Order of the Board,

B. BARKER,
Secretary.

59C CHOWRINGHEE,
CALCUTTA, 22*nd June* 1963.

THE VALUE-ADDED TAX

A NEW WEAPON IN THE FISCAL ARMOURY?

By Leif Mutén

[What is a value-added tax? In some ways it is a non-cumulative turnover tax. But it has also much in common with a tax on net profits. The author of this article, who is Professor of Fiscal Law and Public Finance at the University of Uppsala, discusses the features and implications of this tax and the possibilities for its adoption. The article is reproduced here from the Quarterly Review No. 2, 1963, Skandinaviska Banken, Stockholm (Sweden).]

A SHORT TIME ago notices appeared in the Swedish newspapers stating that a special committee had been set up within the Ministry of Finance, the task of which was to follow tax developments in Europe. In particular, studies were to be made of the plans for the standardisation of indirect taxes through using a value-added tax as a common instrument. Since the Swedish tax armoury does not yet include this weapon, a description of the value-added tax can be of interest—particularly as there is much evidence suggesting that, within the not too distant future, we shall be making its acquaintance not only as newspaper readers but also as taxpayers.

The value-added tax can be briefly described as a non-cumulative turnover tax levied at each point of sale in the production and distribution chain. The general sales tax presently in force in Sweden is, in principle, levied at only one point of sale, i.e., when the goods and services are passed on to the consumer. However, there are many countries on the Continent where turnover taxes are imposed not only at the retail stage but also at earlier stages in the production process.

In the majority of cases, this type of tax is of a cumulative nature, i.e., it is levied on the total turnover at each stage in the production—sales chain. In this way, the same good can be taxed several times—first when the raw materials are sold to the producer of semi-manufactures; next when the semi-manufactures come into the hands of the producer of finished products; then when the finished products are purchased by the wholesaler; then when these products are passed on to the retailer; and finally when they are sold to the consumer. This kind of cumulative turnover tax is usually referred to as a "cascade" tax.

However, it is possible to design this tax in such a way as to exclude the "cascade" effect. If, at each stage of the good's journey from primary producer to consumer, the tax is imposed only on that part of the sales value that is not related to previously taxed purchases of raw materials, components, etc., then the tax will be of a non-cumulative nature. What would be taxed at each stage is the value of the processing that has been carried out there. The value of the finished product would be taxed, but deductions would be made for the value of previously taxed semi-manufactures, raw materials, etc.

French Experience

Such a tax has been adopted by the French tax authorities, being known as the *taxe sur la valeur ajoutée*, or *T.V.A.* It is true that this tax is not levied on the retail trade—there it is felt that the conditions demand a tax of simpler construction, in principle of the same type as the Swedish general sales tax. But up to this stage the *T.V.A.* is a pure example of a non-cumulative turnover tax. Its present level is 20 per cent of the value subject to taxation, including tax.

Before we go any further, it should perhaps be mentioned that objections can be raised against our referring to the value-added tax as a turnover tax. There are those who uphold that a value-added tax, particularly if it is levied via the "direct" method, has much in common with the tax on net profits. The additional value that is taxed is, of course, in reality net profit plus certain costs, primarily wages and salaries plus interest payments. Under the "direct" method, the tax would in fact be calculated in this way. However, the prevailing view is probably that these additions to net profits are in practice of such significance, particularly for the shifting of the tax, that it is more correct to regard it as a "refinement" of the turnover tax than as an extension of the tax on net profits.

As has been pointed out above, the value-added tax can either be applied "directly," in which case the net profits plus certain costs are taxed, or "indirectly," with the tax being levied on gross sales after certain deductions have been made. This latter method, practised in France, gives us the clearest picture of the real nature of the tax.

The non-cumulative character of the tax can, in this latter case, be arranged in two different ways. One way is to tax total turnover after deducting the value of those purchases of bought-in materials and components etc., that have been subject to taxation at earlier stages in the production and distribution processes. The other way is to compute the tax on the total turnover, but to allow a credit for the tax already paid on previous stages. The first method permits a "concealed" debiting of the tax, i.e., it is included in prices. This makes it difficult to differentiate tax rates for various goods. In France, where there is a marked differentiation of tax rates, the method of deducting "tax from tax" is applied and all *T.V.A.* is debited openly.

The value-added tax is to be found in its purest form when deductions may be made from the value of sales (or a credit is given against the tax on these sales) for *all* purchases subject to tax (or for the tax on these purchases). However, judging from the discussions on the introduction of the *T.V.A.* as well as from the European turnover tax debate in general, there is some disagreement as to whether purchases of capital goods and goods consumed in production should be allowed to reduce the value added liable to tax in the same way as purchases of raw materials and semi-manufactures. It has been argued that a value-added tax could be constructed so as to exclude the right to deductions for purchases of machinery and other equipment. Here, we can draw a parallel with the Swedish application of the general sales tax, where firms are looked on as consumers of their machines, equipment and the goods used in production. However, the French *T.V.A.* has been constructed in what is really the most consistent way, i.e., allowing a credit for tax paid on capital goods purchased for production.

Two Forms

Deductions or credits of this type can be permitted in two forms. Either the deductions are made at the same rate as the depreciation on the capital goods, or the total cost of the capital goods subject to tax can be deducted from total sales right from the outset. However, since investment outlays can sometimes weigh very heavily, it is necessary—at least in the latter case—to extend the right of deduction over a number of years so that incomes from sales will be sufficient to cover the deductions for the purchase of capital goods. This is under the assumption that the Government authorities do not allow tax refunds—but this is not usually very popular among ministers of finance.

When choosing between these two methods, the immediate right of deduction—despite the necessity of extending this right over a number of years—is more attractive on account of its simplicity. Furthermore, such a method can be regarded as an investment incentive. But it can perhaps be said that such an incentive is needed in order to compensate businessmen for the additional cost involved in their having to pay tax on the capital goods, the total amount of which cannot always be deducted from the tax on sales until after a number of years.

Reasons for Adoption

The principal reason why the E.E.C.-countries are on the way towards the adoption of a value-added tax system is that they hereby want to avoid the shortcomings of cumulative taxation. These are particularly marked in two respects. In the first place, a cumulative turnover tax promotes integration. In the second place, the cumulative nature of the tax makes it more difficult to calculate the export compensation and import duties required in the application of the "country of destination" principle for the international distribution of the tax burden.

The first of these arguments will, of course, be of varying importance depending on the value one attaches to the integration of firms. If one can assume more rational operation when primary producers, producers of semi-manufactures and producers of finished goods merge, then a tax system designed to further such a development should naturally be welcomed. But if one believes that rational operation is the product of specialisation, of using the sub-contractor system instead of "do-it-yourself" methods, then one must reject any tax that will prompt companies to depart from a profitable (in the absence of such a tax) system of operation.

It is, of course, most reasonable to assume that conditions will vary from branch to branch, from company to company. When the tax is cumulative, there is a risk that it will stimulate integration even in those cases where this does not in itself entail a rationalisation of operations. And when the tax is non-cumulative, it cannot in the same way be said to make a non-integrated system of operation relatively more profitable than it would have been in the absence of the tax. In view of these factors, it is a decided advantage if the value-added tax, as well as those taxes levied at only one point of sale, be constructed in such a way that the tax system will not influence businessmen one way or the other in their decisions in respect to integration.

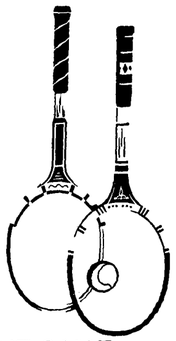
The other shortcoming of the cumulative taxes brings us to the important question of the international distribution of indirect taxes.

Indirect Taxation and Foreign Trade

There are two feasible principles for the distribution of taxes: the "country of origin" principle and the "country of destination" principle. According to the former, which is the internationally accepted principle as far as *direct* taxation is concerned, the tax borne by a good in international trade should be the tax imposed by the country from which the good originates. The remission of direct taxes to exporters is not considered *comme il faut*, but involves risks that the same retaliation measures will be taken as those used to suppress dumping, for example. Direct tax relief for producers of export goods has to be given—and unfortunately is given —a more refined form.

On the other hand, the country of destination principle—used in indirect taxation—implies that the tax on a good shall be the same when the good is consumed, irrespective of whether the good comes from outside or is produced domestically. An exporting country can thus refund those indirect taxes that are levied on the export goods, without there being any danger of retaliation. The importing country can impose duties corresponding to the tax burden that an identical domestic good is estimated to have carried up to the stage of manufacture reached by the imported good.

The more uneven the tax burden on different goods and different methods of production, the more difficult it is to apply the country of destination principle. A cumulative tax constantly gives rise to conflicts: refunds for certain export goods are considered too high by resentful competitor countries, while domestic producers, whose goods are hit hard by the "cascade" effect, complain that the refunds are insufficient.



It is only to be expected that these questions have caused awkward conflicts within E.E.C. and have given rise to measures designed at least to stabilise the prevailing situation.

We can now consider two possibilities of getting out of the situation that arises when a cumulative tax is to be imposed under the country of destination principle. We can either adopt the country of origin principle, or we can change the tax to the non-cumulative type, which would make it easier to calculate import duties and tax remissions to exporters.

The majority of observers are of the opinion that the adoption of the country of origin principle would necessitate the far-reaching harmonisation of indirect taxes. As long as the differences are as great as they are today between the distribution of indirect taxes in different countries, we cannot rely solely on exchange rates as an "equalisation" instrument when applying the country of origin principle. For reasons of competition the country of destination principle must be retained. It is possible that agreement can gradually be reached as to its being relinquished by the E.E.C. countries, but only after extensive harmonisation has been achieved and only in respect of trade within the Common Market—not *vis-a-vis* a third country.

In some quarters it has been asserted that the adoption of the country of origin principle would be possible not on condition indirect taxes

AGRICULTURAL RE-FINANCE CORPORATION

PROSPECTS FOR LONG-TERM CREDITS ASSESSED

A NEW chapter in the history of India's agricultural credit will begin on the 1st of next month when the Union Finance Minister, Mr. Morarji Desai, will inaugurate the newly constituted Agricultural Re-finance Corporation. Generally speaking, the Corporation is the counterpart of the one set up for assisting industries. Its constitution and functions were published in the *Gazette of India Extraordinary* dated 25th March 1963 and a brief reference to the salient features of the Corporation was made in these columns last week.

In a predominantly agricultural country—over 70 per cent of the population is engaged in agriculture and its allied pursuits which together account for as much as 50 per cent of the aggregate national income—the importance of the Corporation cannot be underscored. In fact, it is surprising that such a corporation had not been set up much earlier. After all, the P.L. 480 funds have been accruing since 1956 and it is logical that a part of these funds should be utilised for promoting agricultural production. Probably a well integrated and sound institutional structure was lacking to route the assistance, and this proved to be the principal impediment to the setting up of the Corporation earlier.

The Agricultural Re-finance Corporation is starting when there are noticeable shortfalls in agricultural performance. National income in real terms has shown an increase of not more than 2 per cent in each of the last two years, due mainly to stagnation in agricultural output. If the Corporation succeeds in stepping up agricultural production even marginally, there is the possibility of self-sufficiency in food production. The Food and Agricultural Minister, Mr. S. K. Patil, remarked recently that India was now producing 96 per cent of the requirements of food production and that only 4 per cent of the needs was being imported from abroad and added that this was expected to be more than taken care of by the new P.L. 480 assistance under negotiation with the U.S. Administration at Washington. It is obvious in such a context that the new Corporation's activity will be specially designed to stimulate agricultural production, in general, and food output, in particular. This is evident from the wide range of activities for which the Corporation's finances will be made available. Thus, assistance will be given to the financing of such schemes as reclamation and preparation of land, development of special crops (like tea, coffee, cashewnuts and coconuts), mechanised farming, use of electricity through tube-wells and pumping sets, animal husbandry, dairy farming and poultry farming. The schemes presented will have to be compact, economical and open to close supervision by the Corporation. The Corporation will also be guaranteeing deferred payment for capital goods imported by eligible institutions against Government guarantee. The requirement of guarantee will, however, be waived in cases where adequate collateral security is forthcoming.

Liquidity for Long-term Credits

The activities of the Corporation have to be viewed against the present nature of shortcomings on our agricultural front. For example, vast tracts of virgin land under new projects like Musi and Nagarjunasagar are now lying unirrigated due to the absence of link or feeder canals, reclamation, etc. The provision of finance for irrigational works, if properly utilised, will assist in augmenting food production through better utilisation of irrigation potential. Likewise, finance for plantations like coffee and rubber will boost the production of commercial crops and step up our foreign exchange earnings. Now, plantations are being provided only with short-term credits by commercial banks. The total of such credits as on 29th March 1963 amounted to a little over Rs. 50 crores, representing about 3 per cent of the aggregate scheduled banks' credit as on that date. The scheduled banks, by the nature of their liabilities, cannot provide long-term finance unless there is some agency to provide necessary liquidity for long-term advances. This much needed liquidity is expected to be ensured by the activities of the Corporation.

The Corporation has an authorised capital of Rs. 25 crores, divided into 25,000 shares of Rs. 10,000 each. To start with, 5,000 shares will be issued, of which 2,500 shares or 50 per cent will be subscribed by the Reserve Bank, 1,500 shares by the central land mortgage banks and State co-operative banks, and 1,000 shares by scheduled banks, the L.I.C., insurance companies and investment companies. The shares of the Corporation have been guaranteed by the Union Government in regard to both the repayment of principal and the payment of minimum dividend. They are deemed as trustee securities for purposes of the Insurance Act and the Banking Companies' Act. The list will open for subscriptions on 1st July and close on 31st July. No great difficulty is anticipated in attracting the requisite share capital, in view of the attractive terms of the shares. In addition, the Government will provide the Corporation with an interest-free loan of Rs. 5 crores. The repayment of loan will commence after 15 years from the date of the loan. The Corporation is authorised to raise resources by accepting deposits for periods exceeding 12 months by issuing bonds and debentures. Perhaps, the initial interest-free loan will be paid out of the P.L. 480 funds now lying with the Reserve Bank.

There is close collaboration between the Reserve Bank and the new Corporation. The Chairman of the Corporation is the Deputy Governor of the Reserve Bank connected with agricultural credit and its Managing Director has been working with the Agricultural Credit Department of the Reserve Bank during the best years of his life. The directors from the various participating institutions, the Government of India, etc., are expected to ensure the necessary co-ordination in its working.

The new Corporation will work to supplement the activities of central land mortgage banks, State co-operative banks and scheduled banks in supplying productive agricultural credit. The assistance will be routed through these institutions. An important reason why the Corporation was started at this juncture is that certain types of long-term needs are not covered by the present activities of central land mortgage banks and State co-operative banks. These institutions no doubt provide long-term credit, but the actual extent of such credit is small—ranging between Rs. 10,000 and Rs. 15,000—and it is repayable in equated instalments spread over 10 to 15 years. Such loans are taken mostly for discharging old debts and not often for productive purposes. The loans provided by the Corporation will be in fairly big amounts, spread over sufficiently long periods—even 30 to 40 years in specific instances; they will be particularly dovetailed to specific needs. In other words, in the event of re-plantation of coffee and tea bushes, the Corporation will not insist on any repayment in the initial stages, say, three or four years, until the plantation comes of age and starts yielding income.

The Corporation intends to utilise the services of technical experts in the different States to assess the risk in projects and supervise the various activities to be financed. The dependence of the Corporation on outside assistance, especially at the State level, may land the Corporation in difficulties not necessarily of its own making. This is because the various State Governments are reluctant partners in any experimentation with the Reserve Bank. It may be noted here that the Reserve Bank started, as an experimental measure, the financing of rubber plantations at Kuttinad in Kerala. But the State Government, instead of assisting the Reserve Bank in the experiment, is reported to have simultaneously started another scheme, so much so that both the schemes, it is said, are in difficulties.

Another Danger

There is yet another danger which may inhibit the well-meant intentions of the Corporation. The co-operative credit structure in our country is weak, as it lacks a strong base. It is spoon-fed from above through official support. There were plans to route as much as Rs. 150 crores of long-term finance through central land mortgage banks and State co-operative banks even before the Corporation was set up. This magnitude of assistance is nearly five times the volume of financial assistance given during the second Plan period. If the co-operative credit structure is entrusted with additional responsibilities much beyond its abilities—this is what seems to be happening—there is the possibility of the structure coming down through its own inherent weaknesses. No amount of Reserve Bank supervision can remove this sort of weakness. This is a danger against which the Corporation would do well to protect itself.

An obvious alternative is to utilise the institutional mechanism of the scheduled banks. The banks have a strong institutional set up and, if they take a greater interest in financing agricultural production, they will be opening a new chapter in India's history of commercial banking. To what extent they will be able to do so will depend, to a very large extent, on their resources position which at present is far from comfortable. But, if the deposits gather momentum and if the scheduled banks are compelled by the Reserve Bank to devote some attention to the financing of agricultural production, there is scope for far more fruitful increase in agricultural production. The Finance Minister and the Chairman of the Corporation would do well to emphasise this important point on the occasion of the inauguration ceremony.

Need facts about importing from Australia?

Alert, progressive importers have much to gain from Australia's rapidly expanding export potential. The Bank of New South Wales, Australia's first and largest commercial bank, is uniquely equipped to provide vital up-to-date information on importing from or investment in this fast-developing Continent.

HIGHWAYS IN YUGOSLAVIA GET WORLD BANK LOAN

The World Bank has made a loan equivalent to $35 million to assist in financing completion of Yugoslavia's two most important highways, the Central Highway and the Adriatic Highway. The Central Highway, which extends 720 miles from the Austrian to the Greek border, serves the main centres of population, agriculture and industry. The Adriatic Highway will run 465 miles along Yugoslavia's Dalmatian coast, renowned for its scenic beauty, ancient towns and temperate climate. The highways will open the country to Western European road traffic, reduce transport and road maintenance costs, and stimulate tourism, an important source of foreign exchange earnings.

The Central Highway forms the backbone of Yugoslavia's highway network. A large part of the highway has been completed, and the Bank loan will help to finance the two most important of the uncompleted sections. Some sections of the Adriatic Highway have already been built to modern standards; the Bank loan will assist in financing the construction of sections totalling 262 miles to complete the highway. Altogether, the Bank loan will help to finance the construction of 370 miles of roads; the work involved includes construction of earthworks, paving, bridges, viaducts, tunnels, interchanges and overpasses. The roads are scheduled for completion in 1965 at a total cost equivalent to $98 million, of which $68.2 million will be for the Adriatic Highway and $29.8 million for the Central Highway.

The Bank loan is for a term of 20 years and bears interest at the rate of 5¼ per cent per annum including the one per cent commission which is allocated to the Bank's Special Reserve. Amortization will begin in December 1966. The loan is guaranteed by the Government of Yugoslavia. Today's loan is the sixth loan the Bank has made in Yugoslavia; it brings total lending to $180.7 million, of which approximately $17 million has been repaid. Earlier loans were for equipment for timber production, electric power development, agriculture, mining and transport.

WORLD BANK MISSION ON CLOTH EXPORTS

THIRD PLAN TARGET UNREALISTIC

SOME interesting observations on the conditions in the Indian cotton textile industry with particular reference to exports have been made by the World Bank mission, a summary of whose report is given in a section of the daily press. The mission, it will be recalled, visited India early this year. There is, of course, nothing new in the findings of the mission, since many of them are well known. Nevertheless, the findings are of great value in that they impressively highlight certain disquieting trends in the cotton textile economy of the country and forcefully stress the urgency of improving the competitive capacity of the textile industry in world markets.

The World Bank mission is reported to have expressed serious doubts about the fulfilment of the export target fixed for cotton piecegoods under the third Five-year Plan. The press version of the mission's remarks is as follows:

"The third Plan export target of one billion yards (that is, 1,000 million yards) for cotton textiles, equivalent at current prices to about Rs. 78 crores, is unrealistic. Even with better export drive and a serious effort to rationalise production and increase productivity, India will probably not be able to sell abroad more than 850 million yards of cloth valued at Rs. 65 crores by the end of the third Plan (1965-66). But, if no steps are taken to increase the industry's efficiency and, in particular, to solve the labour problem, or, unless, alternatively, some fiscal measure is devised to strengthen its competitive position *vis-a-vis* foreign producers, an even lower limit of Rs. 40 crores, equivalent at present prices to exports of about 500 million yards, may prove optimistic."

Actual Exports Low

Before referring to the factors on which the World Bank mission has based its conclusion, it is necessary to remove the misunderstanding in regard to the actual export target for cloth fixed in the third Plan. The correct target is only 850 million yards and not 1,000 million yards as is reported to have been mentioned by the mission. The figure of 1,000 million yards was, in fact, the export target fixed in the first and second Plans. When the Planning Commission fixed the export target for 1955-56 (last year of the first Plan), it was prompted by the highly encouraging export performance during the year 1950-51, with actual shipments of cloth (mill-made and handloom) standing at the all-time peak of 1,270 million yards. But the performance was not repeated at all. In fact, in no year during the first Plan period had the actual exports exceeded 82 per cent of the target. The total quantity of piecegoods exported in 1955-56 was no more than 741 million yards. But still the Planning Commission retained the figure of 1,000 million yards in the second Plan also, as it presumably thought that, with the various measures taken by the Government of India during the first Plan period for stimulating exports, the export target would be successfully hit. But that was not to be. For the actual total exports of fabrics were well below the target, as the following figures show:

(In million yards)

Calendar year	Total exports	Of which: Mill-made cloth	Of which: Handloom cloth
1955	875	815	60
1956	804	744	60
1957	881	844	37
1958	622	587	35
1959	851	815	36
1960	724	695	29

The low level of exports in 1958 was apparently due to the world-wide recession in that year as well as intensified foreign competition; while the low level in 1960 was mainly due to the shortfall in the cotton crop during the 1959-60 season (as the varieties of cloth exported require indigenous cotton to a large extent) and the consequent increase in internal prices of indigenous cotton and of cotton textiles. Throughout the second Plan period, there was a wide margin of failure between targets and achievements on the export front, which is also partly due to the growth of the cotton textile industry in countries hitherto dependent on imports. The Planning Commission, therefore, fixed the export target for the third Plan (to be achieved by 1965-66) at the lower level of 850 million yards, the bulk of which being accounted for by mill cloth. As against this target, the actual exports of cloth amounted to only 600 million yards in 1961 and 582 million yards in 1962, corresponding more or less to the first two years of the third Plan, respectively.

Judging by the actual export performance in the past few years and against the background of conditions obtaining in the industry, the assessment of the World Bank mission that exports of even 500 million yards may prove optimistic seems to be well-founded. As the mission has rightly averred, Indian textiles have turned out to be a "costly commodity." For the raw cotton grown in the country, which used to be much cheaper than imported cotton, is no longer so. The prices of a variety of imports, such as chemicals, dyes and parts, have also gone up very substantially in the last few years. "These increased costs," to quote the mission, "have not been offset by a corresponding increase in the productivity of labour and equipment." According to a recent study by the U.S. Department of Commerce which the mission has cited, the total cost of printed cloth in India is 14 per cent higher than in Japan and is just 10 per cent lower than in the U.S. As for sheeting, the Indian product is only slightly cheaper than the Japanese make. It is said that the output per man-hour in India is one-third of that in Egypt, while gross wages, including fringe benefits, are only 40 per cent lower in India. Mention is also made of the fact that the Indian cotton textile industry has been under pressure from the Government and the trade unions not to discharge its surplus labour.

Poor Productivity

The poor productivity of cotton mills in India must be attributed partly to the old and outmoded equipment and partly to excess labour. Most of the mills, including some which are performing quite well in the export market, are working equipment installed 50 to 60 years ago and carrying a labour force which is 30 to 50 per cent larger than is needed even with the technology at present employed. Pinpointing these aspects, the World Bank mission refers to the period from 1958 to 1960 when trade in cotton goods among the industrialised countries of Western Europe and North America expanded in a spectacular way. The total imports into the nine selected countries (the U.S., Britain, Canada, Belgium, Luxembourg, France, West Germany, Italy and the Netherlands) expanded from 1,080 million yards (120,000 metric tons) to 2,070 million yards (230,000 metric tons), representing an increase of about 990 million yards. Imports of cotton piecegoods produced in the so-called low-cost countries almost doubled over the same period, mainly because of larger purchases by the U.S. and Britain and, to a lesser extent, by Canada and West Germany. The mission bluntly says that the Indian cotton textile industry, due to its inefficiency, did not benefit from this very rapid expansion to any appreciable extent. The following figures pertain to the total exports of cloth from India to eight of the aforesaid nine countries during the years 1958 and 1960, as well as in 1961 and 1962:

(In million yards)

Destination	1962	1961	1960	1958
United States	26.60	6.99	33.04	0.67
United Kingdom	134.40	132.96	198.48	101.62

It will be seen from the above table that cotton piecegoods exports from India no doubt registered quite a marked rise during the year 1960 as compared with 1958, the actual shipments aggregating over 262 million yards, as against less than 121 million yards, a rise of 141 million yards or almost 117 per cent. But the actual increase (141 million yards) in India's exports to the eight countries represented only 14 per cent of the increase (990 million yards) in imports into these countries.

The foregoing account clearly underlines the supreme need for a more dynamic approach to the problems of the cotton textile industry in India. The World Bank mission has certainly struck a note of realism when it says that, unless a modernisation programme is implemented, the industry "has little chance of coping with competition from Hong Kong and Japan where modern machinery has been used." It is only through speedy modernisation and rationalisation that India can hope to recover the cotton textile markets lost and also to establish new markets. The Indian cotton goods must be produced cheaply and sold abroad competitively.

MEETING OF TEXTILE ADVISORY COMMITTEE

The need for utilising available foreign cotton to the best advantage in view of the requirements for the production of fabrics for defence purposes was stressed by Mr. R. Doraiswamy, Textile Commissioner to the Government of India, while presiding over the meeting of the Cotton Textile Advisory Committee held at Bombay on Monday this week. Mr. Doraiswamy also advised the textile industry to take effective steps to increase utilisation of staple fibre. There was no reason, he said, why the industry should not use a specific percentage of staple fibre in the manufacture of yarn. Observing that the problem of rehabilitation and modernisation of industry required serious consideration at the hands of the industry, he assured that the Government would render whatever assistance it could in the matter of providing funds and foreign exchange for the purpose.

The Committee considered the question of supply of popular varieties of cloth and yarn in adequate quantities and measures for maximisation of production of such varieties. It also noted that some of the composite mills which processed powerloom cloth stamped their names more prominently than that of the powerloom which manufactured such cloth, thereby giving the impression to the consumers that the cloth was produced by the processing mill. With a view to safeguarding the interests of the consumers, it was decided that such cloth should be marked as produced by the powerloom and the name of the processing mill should not be printed.

Some of the members present at the meeting felt that there was undue restriction on the import of textile machinery and, having regard to limitations of the indigenous machinery manufacturers in regard to both quality and quantity, a more liberal import policy would appear to be called for. It was explained that, in framing the import policy on the basis of foreign exchange allocations, full account had naturally to be taken of indigenous production both in regard to quality and quantity. While it was agreed that it would be in the interest of the machinery manufacturers themselves to keep on improving the quality of their products, importation of textile machinery would continue to depend on the availability of foreign exchange resources.

TEXTILE PRODUCTION AND STOCKS

The cotton textile mills' production in the month of May 1963 is provisionally estimated at 75 million kg. of cotton yarn and 377 million metres of cotton cloth, as against 72 million kg. and 387 million metres, respectively, in the corresponding month last year. The total production in the first five months of 1963 was 360 million kg. of yarn and 1,822 million metres of cloth, as against 358 million kg. and 1,907 million metres, respectively, in the same period of 1962. The following table indicates the trend of yarn and cloth production—month-by-month—during the first five months of 1963 and 1962, as well as in the whole of 1962, 1961 and 1960:

(Yarn in million kg.; cloth in million yards)

Month	Cloth 1963	Cloth 1962	Yarn 1963	Yarn 1962
January	374.75	399.00	73.84	75.35
February	385.79	362.00	66.82	68.37
March	376.82	381.00	72.27	72.42
April	368.49	378.00	71.07	70.11
May	377.00	387.00	75.00	71.95
Total—Jan.-May ..	1,821.85	1,907.00	359.60	358.20
Whole of 1962	4,560.00	..	859.56	..
Whole of 1961	4,704.00	..	862.60	..
Whole of 1960	4,620.00	..	787.97	..

1 kg.=2.2046 lbs.; 1 metre=1.0936 yard.

At the end of May 1963, the composite mills of the cotton textile industry held an estimated cloth stock of 141,000 metric bales as unsold and 137,000 bales as sold (unlifted).

EXPANSION OF HOSIERY UNITS

A few days ago, the Government of India announced its decision to sanction ten hosiery units by way of expansion to the existing hosiery units registered under the Industries (Development and Regulation) Act 1951 and which were having sizable exports of hosiery goods in the past three calendar years. The hosiery units include cotton, wool and art silk. The foreign exchange for the purpose of expansion allowed will be to the maximum extent of Rs. 4 lakhs. Two conditions, however, have been laid down. One, the unit shall export the hosiery goods to the extent of three times the value of the imported machine within a period of four years from the date of importation of the machinery and shall execute a bond in favour of the President of India supported by a banker's guarantee of the equal amount in the form approved by the Textile Commissioner. Two, the admissible items of the hosiery machinery will only be allowed to be imported.

The Textile Commissioner has since issued a notification informing that the hosiery units not falling under the Industries (Development and Regulation) Act 1951 may also apply for the facilities envisaged previously, provided the average annual export of hosiery goods during the past three years, that is, 1960, 1961 and 1962, was not less than Rs. 5 lakhs. The other terms and conditions, however, remain unchanged. The hosiery units which are not registered under the Act desiring to avail of the facility are required to apply to the Textile Commissioner for necessary application forms which should be submitted duly filled in, in triplicate, on or before 15th July 1963.

WORLD PROMOTIONAL PROGRAMME FOR WOOL

GREATER CO-OPERATION BETWEEN GROWERS AND MANUFACTURERS URGED

THE problems that wool must face in the future and the strategy and detailed plan to meet them were outlined by Mr. W. J. Vines, Managing Director of the International Wool Secretariat, in his speech at the conference of the International Wool Textile Organisation held recently at Palma, Majorca, Spain. The main problem, according to Mr. Vines, is to establish consumer demand for pure wool products at a level which will ensure that the textile and carpet industries are able to pay economic prices to the growers of wool, notwithstanding the relatively low levels to which prices of synthetic fibres may fall. A very important feature of the plan to achieve this result is the development of a series of internationally related national trade marks for use by pure wool products of excellent performance and quality. Considerable preparatory work required to implement this programme has been done and the effort is continuing. The I.W.T.O. intends to promote these trade marks very heavily and continuously in the wool-consuming countries of the world. The marks will be licenced to manufacturers of pure wool products, subject only to two broad conditions, namely, (1) an agreed standard of purity of fibre content and (2) the conformity of each product to certain minimum standards of quality and performance appropriate to their use and price category. These standards are now being developed in collaboration with scientists and with various sections of the woollen industry in every country.

The Problem Facing Wool

This promotional programme, Mr. Vines made it clear, will be additional to the existing campaigns many of which are conducted in partnership with the wool textiles and carpet industries and will not replace them. Wool products, according to him, must have a special status in the eyes of the consumer, but it is fully realised by the I.W.T.O. that promotional efforts for other products must continue. Mr. Vines amplified the exact nature of the problem facing wool in the following words:

"We believe that, given a peaceful future, there will be an ever-expanding market for quality wool products, and hence for wool itself, in a world in which living standards are constantly improving and populations increasing at a rapid rate. This is the exciting and wonderful prospect which lies ahead of the industry—and by 'industry' I mean the processors as well as the producers of wool. On the other hand, we have to face the certain prospect of a continuing decline in the selling prices of the synthetic fibres which are capable of being directly substituted for wool. This will come about as a natural consequence of the greatly increased volume of sales which these fibres must enjoy, the consequential reduction in their manufacturing costs, and the intensification of the battle between the chemical giants for a share in this expanding market. I believe we all understand the objectives of the chemical fibre producers. Not only are they interested in the value of the fibre sales, which in themselves are to obtain thereby secure outlets for the basic chemicals which they also produce and which are consumed in fibre production."

Price Factor

Processors of wool, namely, manufacturers of wool who transform raw wool into marketable garments and products, Mr. Vines emphasised, have an important role to play in wool promotion. In this connection Mr. Vines referred to the question of price of wool, which has a direct bearing on wool's competitive capacity and, on which the growers of wool and its manufacturers do not see eye to eye with each other and posed the following question: Is it, in fact, in the interest of the processors of wool that prices should be maintained at levels which are sufficient to encourage greater production of the fibre and which will most certainly be higher than the prices industry in future might be called upon to pay for substitute fibres?, and proceeded to answer it. He referred first to the interest of that section of the industry, which is called the merchants, combers and topmakers. This section of the industry has a large capital investment in equipment for the processing of wool, and for this reason alone, it must be vitally concerned with the preservation of the wool growing industry. The three countries of the I.W.S. produce about 60 per cent of the free world's supply of wool and account for nearly 80 per cent of the exports of raw wool. Each of these three countries has a relatively large wool-growing industry and a relatively small—by Northern Hemisphere standards—national economy. If the time should ever come when the prices which the world is prepared to pay for raw wool fall below the level which is economical to the producers, then there is no possibility at all, stressed Mr. Vines, that the taxpayers of these three countries could afford to subsidise the industry in the way that wool-growing is subsidised in certain other countries. This means that, if wool prices follow synthetic prices down to the levels to which these will undoubtedly fall, then wool growing will automatically have to be curtailed in these countries, and the land devoted to other purposes. In practical terms, this means that the world's supply of raw wool would be seriously diminished. Obviously, this is a situation which would cause the business of the raw wool section of the trade seriously to diminish also. In addition, this section of the industry does much of its trade upon a commission basis. For this further, though perhaps less important reason, this section has a real interest in the continuation of economic prices of raw wool.

Fibre Neutrality

Turning to the industrial section of the industry, that is, to spinners, weavers, knitters and garment makers, Mr. Vines said that the more distant a manufacturing process is from a sheep's back, the more that section of the industry tends towards an attitude of fibre neutrality. He maintained that this could be a very dangerous altitude for any section of the wool trade to adopt. Reiterating his last year's plea, Mr. Vines said that the woollen textile industry must have a very real interest in preserving its identity as a wool industry and not becoming an anonymous part of an anonymous textile industry in which it would inevitably have to compete not always on advantageous terms. Mr. Vines enumerated the advantages to the manufacturers of maintenance of economic prices for wool and emphasised that the most important of them was the guarantee of regular supply of wool.

SHODDY WOOL INDUSTRY

The shoddy wool manufacturing industry is critical about the stepmotherly treatment meted out to it by the Government of India in the allocation of raw material for its use. There are four units manufacturing shoddy wool having a total annual capacity of about 15 million lbs. Of these four units, only two with a capacity of 800,000 lbs. are being given a very meagre and token quota for import of woollen rags and wool wastes, the quota being not sufficient to feed the units even for a few weeks. The other two units in the country are not getting any quota whatsoever.

Shoddy wool is required mostly for the manufacture of shoddy woollen yarns by the shoddy spinning industry. At present, most of the allocation of raw materials is being given to the shoddy spinners who are not adequately equipped to produce shoddy wool on scientific lines. Shoddy can also be used by the *khadi* and village handspinning industries. It is stated that, in countries all over Europe where large quantities of shoddy fabrics are produced, the shoddy making industry is established as an independent sector and not as part and parcel of the spinning industry, in view of the innumerable qualities of shoddy wool required for the production of different types of yarns and fabrics. In these countries, it is the shoddy maker who produces a proper blend of shoddy for manufacturing a particular type of fabric; he is better placed to guide the spinner in the use of suitable raw material for the production of a fabric that the weaver wants. In India, it is considered all the more necessary to have independent shoddy making units, as most of the spinning units in the country are small ones having only a few hundred spindles. In all, there are 16 units with a total of 17,000 spindles, whereas, in several countries of Europe, there are individual concerns each having 20,000 spindles. When these big units do not consider it advisable to produce their own shoddy, how can a few small units, it is asked, produce shoddy wool scientifically?

Within the amount of foreign exchange allocation made to individual mills for import of woollen rags and wool wastes, the industry, it is said, cannot import original unsorted woollen rags and wastes, as there are hundreds of colours and qualities in these goods, which an individual mill cannot possibly make use of. As a result, the spinning mills are obliged to import sorted rags and wastes and, for doing so, they have to spend double the amount of foreign exchange on account of expensive European labour added to the material in the sorting process. The industry, therefore, points out that, if independent shoddy-making units are allowed to function in the country and given necessary foreign exchange for import of raw materials in bulk, nearly 50 per cent of the foreign exchange of about Rs. 1 crore now being allowed to the shoddy spinning industry for import of raw materials can be saved. After feeding the spinning industry, it may also be possible to meet a portion of the requirements of the various *khadi ashrams* and hand-spinning centres for the manufacture of hand-spun yarns and fabrics. The other points made by the industry are:

As it is, the country is faced with an acute scarcity of woollen raw materials, on account of foreign exchange shortage and increased consumption of woollen goods due to rising standards of living. There are qualities of shoddy wool which have value equivalent to that of virgin wool, but their price is less than 30 per cent of the price of virgin wool. The yarns and fabrics produced from such materials would be equal to the fabrics produced from virgin wool and these fabrics ideally suit the pockets of the lower income group of people. Besides making larger quantities of raw materials available in the country without any extra expenditure of foreign exchange, the independent shoddy-making industry would also give employment to about 15,000-20,000 persons as most of the processes of sorting the rags and wastes into various qualities and colours are carried out by manual labour. Even in the highly advanced countries of Europe having a population far smaller than that of India, large quantities of shoddy wool and wool wastes are being used. The quantity (in million lbs.) actually used in some of the countries during the year 1962 are: Austria 5.2; Belgium 11.5; France 44.0; West Germany 24.0; Italy 184.5; Japan 71.0; Netherlands 8.4; Portugal 7.0; Sweden 5.6; U.K. 96.6; U.S. 144.5.

While the U.S., one of the richest countries in the world with a population of only 178 million, is consuming 144.5 million lbs. of shoddy wool, wool waste, etc., India with a population of 440 million is consuming just 10 million lbs. annually. Quoting these figures, the shoddy industry points out that the scope for its development is vast. Such a development, according to it, can be achieved by having independent shoddy units in the country which can produce shoddy wool scientifically.

DEVELOPMENT COUNCIL FOR WOOLLEN INDUSTRY

The eighteenth meeting of the Development Council for Woollen Industry was held at Bombay on 21st June under the chairmanship of Mr. R. K. Birla. Inaugurating the proceedings, Mr. Birla recalled how the woollen industry had rallied round and geared up to meet defence requirements. The industry, he pointed out, was not attuned for production of heavy types of material required for defence purposes as they were primarily designed for producing finer fabrics. Mr. R. Doraiswamy, Textile Commissioner, speaking on the occasion, referred to the role of the Development Council for the woollen industry. He said that he would not like the Council to concern itself with the day-to-day routine problems of the industry but would like it to play a positive role in the development of the woollen industry in the country. All the routine problems, according to him, could be attended to by the appropriate agencies. He added that it was normally the duty of the manufacturers' associations to represent the routine problems and advise, the Textile Commissioner on other day-to-day matters affecting the industry. In this connection, he said that he was pleased to note that the two representative associations of the industry were merging into one. He enumerated some of the subjects which have a vital bearing on the development of the industry which the Development Council could tackle.

The industry, he suggested should make a study to improve the quality of Indian wool and of the extent to which Indian wool could be used for fabric manufacture. Particular attention should also be paid to the quality of yarn produced as production of quality yarn was an essential prerequisite to boost export of yarn and fabrics. He said that this problem had been highlighted recently when we had occasion to examine the yarn produced for the manufacture of hosiery items required for defence purposes.

The Textile Commissioner also referred to the export of woollen goods where we were comparatively "new." He said that we should endeavour to get a foothold in the foreign markets if we were to get substantial assistance for modernisation. Even though the industry is today geared for defence production "diversification of fabric and hosiery production must be undertaken." He appealed to members to address themselves to these problems and any conclusions which they might reach, might be passed on to the Export Promotion Panel. He also appealed to the industry to take full advantage of the advance licensing scheme. Referring to the question of modernisation he said that the Working Group of the N.I.D.C. had estimated the foreign exchange requirements of the woollen industry for modernisation at Rs. 10.5 crores. It was, however, bound to be more today due to increase in prices. Government will not be able to meet the entire requirements and, therefore, the industry should earn it by increasing exports. He appealed to the members to use the good offices of the Development Council to advise the industry to build up reserves so that rehabilitation and modernisation can take place at a rapid pace.

NO REVISION OF TEXTILE IMPORT QUOTA

A BETTER INTEGRATED INDUSTRY WILL BENEFIT CONSUMERS

From Our Special Correspondent

MANCHESTER, 18*th June*

MANCHESTER LETTER

MR. F. J. Erroll, President of Britain's Board of Trade, made it clear to Lancashire cotton trade leaders when he met them in Manchester last week that the Government had no intention of seeking any revision of the quota arrangements governing imports of cotton goods into the United Kingdom until the present agreements expire at the end of 1965. He met appeals from an all-section delegation from the industry with a blank refusal saying he was determined not to lecture the trade on what it should do about its affairs.

Not surprisingly, there was much resentment within the rank and file of the trade after this unyielding attitude was disclosed, and there were complaints that the industry's leaders were not showing enough energy in presenting their case. In fairness to the Cotton Board, which once more may be called upon to play the scapegoat for the unsatisfactory outcome of the deliberations, it should be said that not only was the outline of the case presented to Mr. Erroll in forceful terms, but it was made public—an unusual practice, and quite a change from the time-honoured report of "full and frank discussions."

Mr. Frank Rostron, Chairman of the Board, said the normal cyclical pattern had become distorted due to the perpetual threat on the imports side. Ceilings on imports from Commonwealth countries and quotas on arrivals from other areas had been pitched too high. "Thus, at the present crucial stage in the industry's attempts to modernise itself, to reorganise its structure and to re-equip, any increase in demand is reflected in increased imports from abroad."

What the Industry Wants

No stability would be possible, he went on, whatever the ceiling rate, unless categorisation was introduced, the Commonwealth content qualification for entry was revised, and the Government showed greater willingness to invoke the provisions of the G.A.T.T. long-term agreement. In addition, measures should be adopted to make British anti-dumping legislation more effective, and, as a real change of policy, the 1932 Ottawa agreements should be thoroughly revised in the light of 1963 conditions.

"The present state of drift cannot continue," declared the Cotton Board Chairman. "The industry will collaborate with the Board of Trade to the maximum degree if the Government will give an indication of a genuine willingness to discard the old policies and introduce newer and better ones."

Mr. Fred Dunkerley, President of the British Spinners' and Doublers' Association, went further. Calling for positive, definite action by the Government, he declared that if this issue was not faced, the industry would have to examine its attitude, which up to now had been one of co-operation with the Government, but would in the future be one of complete hostility.

Spinners Hard Hit

Before this, Mr. Dunkerley had put in a strong plea for a complete ban on yarn imports. "Yarn comes into this country in the form of made-up goods, finished goods and cloth," he said. "It is quite unfair that the spinning and doubling industries should bear the additional burden of yarn imports." Citing the impact of the absence of categorisation, he pointed out that 77 per cent of yarn imports from India are folded yarns.

Low margins caused by excessive imports are the basic problem still facing many producers, who are quite unable to put anything aside for depreciation and the purchase of new machinery at a time when re-equipment programmes are scheduled for completion. "Many firms placed orders for large-scale equipment two years ago," added Mr. Dunkerley. "This equipment is now being delivered and cannot be cancelled." The result is serious difficulties for the firms concerned, as they had to borrow substantial sums of money to complete their re-equipment programmes and are now quite unable to secure profits on the extremely low margins ruling today.

But the last word was with the militant Textile Action Group. Two officials waited outside in the street and gave the President a document. One, Mr. John McCann, said the industry was "seething" at the lack of action by the Government. The memorandum handed to the President described the unrest in the trade, he added, and warned Mr. Erroll that few people in Lancashire would vote for the Government at the next General Election unless something was done to curb imports.

Story of Growth

Any company which can increase its turnover from less than £95 million to nearly £185 million in ten years must be a force to be reckoned with. These figures show the record of Marks and Spencer Ltd., and when it is considered that a vast proportion of these sales represent textile garments of every kind, the full implications of this achievement can be gauged.

Lord Marks, the Chairman, in his annual statement, attributed the sustained growth of the Company to a four-point programme comprising the progressive up-grading of the branded goods sold throughout the stores and the widening of their range and variety; intensive scientific and technical work applied to the development of the quality and value of the garments and other products; massive investment in rebuilding, expanding and modernising the stores and the maintenance and strengthening of the goodwill and confidence of their customers.

It is now almost ten years since all wartime controls imposed by the Government ended, so that a decade of freedom from such restrictions has enabled progressive firms such as Marks and Spencer to make an important contribution to the distributing sector of the textile economy of this country. "During this period, science placed at the disposal of industry a range of interesting man-made fibres with special characteristics and performance values, continued Lord Marks. The group strengthened its teams of scientists and technologists and made increasing use of these fabrics while problems of new constructions, new dyestuffs and new finishes had to be solved.

Record Sales

As an example, nylon, the only synthetic fibre available in 1954, then accounted for £4 million of sales in the group's stores. Last year, £64 million of goods made from nylon and the new fibres which followed, such as Terylene, Orlon, Acrilan and Courtelle, were sold.

The links between this world-famous group and local manufacturers has been exceedingly strong for many years past, particularly since the war. Lord Marks again reports that 99 per cent of the Company's goods are British made. This is also true, he says, of the materials and fabrics used.

Penetrating Cotton's Markets

Everything has combined in recent years to encourage the contention that a gradual merging of the various fibres into a broader-based textile industry would be of advantage to most firms in Lancashire. It might mean more experimentation in finding the best use for each newly discovered synthetic, together with wise blending, but the ultimate consumer should certainly benefit and the wider use of fibres generally should be regarded with enthusiasm.

Spinners, however, are less likely to secure gains in this way so long as filament yarns account for such a large proportion of man-made fibre output. Moreover, competition from this source is growing, as has been pointed out in a number of recent reports.

Mr. J. H. G. Macalpine, Chairman of Crosses and Heatons, for example, has observed, in his annual statement, that although cotton yarns are very widely used, the fine spinning industry is meeting with ever-increasing competition from this direction.

Another important statement which underlines this trend has been made by Courtaulds, announcing that production of the two modified rayon fibres, "Sarille" and "Vincel," is being built up. Both, said the statement, were aimed at mass markets.

While Sarille simulates the characteristics of wool, Vincel, according to the promoters of this campaign, gives woven or knitted fabrics a high degree of stability and resistance to shrinkage and imparts an appearance of texture similar to fine combed cotton. In the words of the Courtaulds hand-out: "Its potential in the woven field could be enormous because polynosic rayons provide the first real opportunity for man-made fibres to penetrate the massive cotton-using markets on a major scale."

Design Centre Praised

An exhibition of textile fabrics was described by Lord Snowdon as "stimulating, exciting and refreshingly alive" when he visited the Cotton Board's Colour, Style and Design Centre in Manchester last week.

He told officials, including the Cotton Board Chairman, Mr. F. Rostron, and the Design Centre Director, Mr. Donald Tomlinson, that he could appreciate the stimulus which the Centre had for the industry, and said he hoped the ideas revealed would extend to other parts of the country.

Earlier Lord Snowdon had been given a private preview of the new Manchester Design Centre, which was later opened by the President of the Board of Trade, Mr. F. J. Erroll. The Centre, which is being run by the Manchester Building Design Centre and the Council of Industrial Design, will contain a permanent exhibition of the best examples of British-made consumer goods.

TRAVANCORE CEMENTS LIMITED

EXCLUSION FROM THE PRICE RISE

BUT REPRESENTATION MADE, ASSURES CHAIRMAN, MR. C. S. LOGANATHAN

ADDRESSING the shareholders of the Travancore Cements Ltd. at their Sixteenth Annual General Meeting held at Nattakom, Kottayam, on Monday the 17th inst., Mr. C. S. Loganathan, Chairman of the Company, referred to the exclusion of the Company, as a solitary case, from the increase of Rs. 2.75 per tonne in the f.o.r. destination price of cement, allowed to producers from 1st June 1963 in order to meet the increased cost of production. At the time of revision of cement price in November 1961, the Government agreed to revise the price subsequently, if the cost of production went up due to governmental action. According to Mr. Loganathan, the cost of production in the Company's factory has also gone up consequent on governmental action, and there cannot be any justification for the Government to exclude the Company alone from getting the benefit of the recent price increase. The Chairman assured shareholders that representation to the Government for granting the price rise had been made and hoped that it would be duly considered.

The *full text of* Mr. Loganathan's speech is reproduced below:

GENTLEMEN,

It gives me great pleasure in welcoming you all to this sixteenth annual general meeting of the Company.

The Directors' report and the audited accounts for the year 1962 have been with you for some time and I shall, with your permission, take them as read.

National Emergency

Since we met last, our nation had to face a very great crisis on account of the dastardly attack by the Chinese on our frontiers. Though we have suffered many a shock, the entire nation had rallied round our Prime Minister unitedly and with purpose to stem the Chinese onslaught and thanks to the united effort of the entire nation, the enemy has to stop further hostilities. In this common effort in the face of the grave emergency, the entire industrial sector in the country had geared up to meet the crisis and has reached peak production levels to give the nation the much needed materials. The cement industry as a whole has also participated in this national adventure and is still putting forward its maximum effort to meet the national emergency. Your factory, besides keeping the high tempo of production, has also contributed a sum of Rs. 25,000 to the National Defence Fund, and I am very glad to inform you that the employees of your factory have been regularly making voluntary contributions to the National Defence Fund.

The working of the Company for the year 1962 has been very successful. The sale of our white cement is increasing steadily, and, during 1962, we have sold 4,623 tonnes, as against 3,447 tonnes in 1961, which works out to an increase of 34 per cent. For the year 1962, we have made a net profit of Rs. 967,529, as against Rs. 499,058 in the previous year. Your Directors have recommended payment of 7 per cent dividend (taxable) for the year 1962 as against 6 per cent for 1961. Provision has also been made for income-tax liability, including Super Profit Tax, for the period up to 31st December 1962.

Development, Rehabilitation and Research

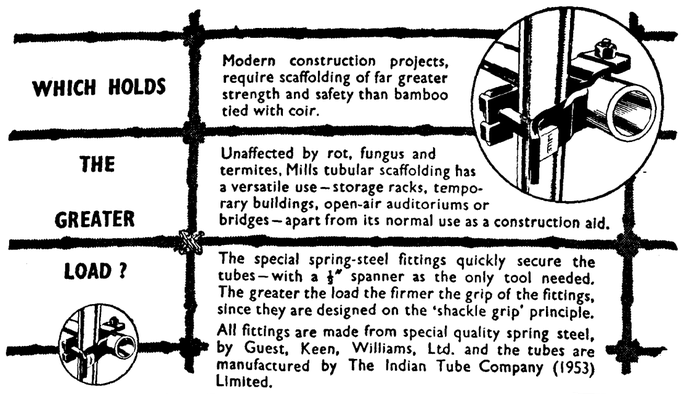
In the price of cement allowed to the producers, an allowance towards development and rehabilitation and research is also included. The allowance for development is deposited with the bank in a separate account to be used for development and rehabilitation purposes with the approval of the Government of India. I have also pleasure to inform you that a research institute under the name and style of "Cement Research Institute of India" has been formed by the Association of Cement Manufacturers, of which we are also a member, to promote research and other scientific works connected with cement and other allied industries. The allowance for research included in the selling price of cement is being contributed to this institute and our share for 1962 has been Rs. 6,296. It is hoped that much useful work will be done by this institute.

You would have noticed from the various reports that the f.o.r. destination price of cement has been raised by Rs. 3.75 per tonne with effect from 1st June 1963, considering the increase in the ex-works cost of cement on account of increase in price of coal, railway freight, electricity charges etc., and additional expenditure by way of Emergency Risk Insurance. Out of this price increase of Rs. 3.75 per tonne, Re. 1 is allowed to the State Trading Corporation of India Ltd., to meet the increased railway freight on cement and the balance Rs. 2.75 per tonne is allowed to the cement producers to meet the increased cost of production. Unfortunately, this increase in price has not been allowed to our Company alone. At the time of revision of cement price in November 1961, the Government of India had agreed in principle to revise the price of cement, if the cost of production goes up due to governmental action. The cost of production in our factory has also gone up since then, consequent on governmental action, and there cannot be any justification for the Government to exclude our Company alone from getting the benefit of the recent price increase of Rs. 2.75 per tonne. Our factory is working very efficiently, but as the capacity of the plant had to be kept very low on account of the limited resources of raw materials, the cost of production is very high due to the inherent disadvantages of a small unit. As you are all aware, most of the expenses such as wages, railway freight, excise duty, sales tax on goods and electricity charges, which go into the cost of production are all statutorily fixed and the retention price of cement payable to the producers is also fixed by the Government. Under these circumstances, if the retention price of our cement is also not raised whenever there are material increases in the cost of production due to statutory obligations, the resources will become insufficient to meet our commitments. Our factory has an installed capacity of .05 million tonnes per annum and the total installed capacity of the entire cement industry in India is about 9 million tonnes per annum. Even though ours is a very small unit, it is the only cement factory in Kerala State and is playing a very important role in the development of this State.

We have made representations to the Government of India for granting us the price increase of Rs. 2.75 per tonne as allowed to all other cement factories with effect from 1st June 1963, and we hope due consideration will be shown to our representation.

Agency Commission from S.T.C.

The State Trading Corporation of India Ltd. took over the distribution of cement with effect from 1956 and since then we are working as their agents for the distribution of grey portland cement produced in our factory. Similarly, other producers or their sales agencies were also appointed as selling agents for the distribution of cement by the State Trading Corporation. The State Trading Corporation was allowing a commission at the rate of Rs. 1.50 per tonne for the cement distributed by these agents.



We are now informed by the State Trading Corporation of India that the remuneration payable to the selling agents will be reduced to Rs. 1.25 per tonne of cement with effect from 1st June 1963. The remuneration of Rs. 1.50 payable to the producers was fixed previously taking into consideration the various sales expenses of the distributors and the present deduction of 25 nP per tonne in the remuneration will affect our profit. The Cement Manufacturers' Association is taking up the matter with the State Trading Corporation to reconsider the matter and continue the selling commission of Rs. 1.50 per tonne.

I take this opportunity to express my gratitude to all the Directors for their valuable guidance and to the Works Manager and all employees of the factory for their co-operation and service during the year.

Gentlemen, I thank you all for being present at this meeting.

I now request that the Directors' report and the audited accounts for the year 1962 may be taken up for consideration and adoption.

ELPHINSTONE SPINNING AND WEAVING MILLS CO. LTD.

COMPULSORY EXPORT OBLIGATION HAMPERING INSTALLATION OF AUTOMATIC LOOMS

CHAIRMAN, MR. N. K. JALAN, URGES RISE IN CLOTH PRICES

HOW the price of cloth has remained the same as a result of voluntary price control since September 1960 while the cost of production has been steadily increasing was highlighted by Mr. N. K. Jalan, Chairman of the Elphinstone Spinning and Weaving Mills Company, Ltd., in his speech at the Forty-fourth Annual General Meeting of the Company held at Bombay on Thursday, 27th June 1963. With all the additional burdens imposed, the mills would not, Mr. Jalan declared, be able to run economically if the Government did not allow an upward revision in the prices of cloth. He, however, assured that, in spite of several handicaps, the management of the Company had been continuously modernising the mills in order to be in a position to hold its own even in the most difficult times. Explaining the progress made in modernisation and renovation, he referred to the limitations placed by the Government on the replacement of ordinary looms with automatic looms. The condition of compulsory export, he said, was so drastic that the mills were finding it difficult to install automatic looms. One of the prerequisites for the production of quality cloth, he added, was to have automatic looms.

The following is the full text of Mr. Jalan's speech:

GENTLEMEN,

It gives me great pleasure to welcome you all to this forty-fourth annual general meeting of your Company. The Directors' report and the audited statement of accounts have been with you for some time now and, with your permission, I shall take them as read.

In the year under review, the gross trading profit was Rs. 35,24,501. I hope you will consider the working results of the year quite satisfactory, especially in the face of a number of adverse circumstances in the working caused by the very difficult availability of cotton and the consequent high prices that had to be paid for cotton, increased labour charges, increased cost of stores, electricity, etc., although the price of cloth remained the same on account of voluntary price control. Taxable dividend on ordinary shares has, therefore, been reduced to 18 per cent from last year's 22 per cent.

The year under review was marked by lower output mainly on account of paucity of cotton and generally slack demand. A very grave situation arose with cotton mills out of the malaise of accumulation of stocks which started from the month of May 1962 and steadily deteriorating month by month, reached a crisis at the close of the year. The long-drawn-out crisis during the last quarter of the year was mainly a crisis of confidence generated by war psychosis which was also responsible for panicky trading conditions during this period.

Production Cost Up

At the same time, the production cost went up considerably on various counts. There was an acute shortage of cotton supplies during the year resulting in runaway prices. The Government increased the ceiling prices of Indian cotton by Rs. 125 per candy of the cotton crop of 1962-63 season and most of the varieties of Indian cotton were ruling around their ceilings. Excise duties on several chemicals and dyes had been imposed in the year. Losses had to be incurred on account of the obligatory export scheme voluntarily accepted by the industry—as a result of heavy undercutting of prices by the mills selling for export. A surcharge of 10.5 per cent was levied on power bills with effect from July 1962. Basic wages were increased by a flat rate of Rs. 2 per month per worker from January 1962. Average dearness allowance payable to workers reached the highest figure of Rs. 95.76 for 26 working days. Employers' contribution under the Employees' State Insurance Scheme was doubled from 1¼ per cent to 2½ per cent with effect from 1st April 1962.

Bonus

It will be noticed from the report and accounts that a sum of Rs. 6,50,000 has had to be transferred from general reserve to enable your Directors to pay the dividends as recommended. This transfer was effected mainly on account of heavy inroads made into the profits of the year by the additional provision that had to be made for bonus to employees for a sum of Rs. 12,76,359 in respect of the years 1959, 1960 and 1961 under an Award issued consequent on the decision given by Shri Y. B. Chavan, the former Chief Minister of the State of Maharashtra, who had been appointed as the mediator in the disputes for bonus for these years.

It is a matter of serious consideration whether such extraordinary disbursements by way of bonus to the employees are really justified at a time when the needs of the industry to plough back profits are high for the purpose of modernisation of its plant and equipments. It is also urged, for the consideration of the Bonus Commission appointed by the Government, whether, in the case of composite companies owning factories belonging to different industries like yours, bonus payable to workers should not be assessed in respect of each factory, although the balance-sheet of the Company is one covering the working of the factories together. The profits and the prior charges can be allocated between the different factories of the same company and the assessment of bonus payable to workers of different factories should not be difficult.

Cloth Exports

In spite of the fact that the industry volunteered to bind itself to a minimum export performance, results achieved so far have not been satisfactory. India's export of cloth during the year 1962 stood at 508 million yards worth Rs. 40 crores, as compared to 572 million yards worth Rs. 46 crores in 1961, 690 million yards worth Rs. 54 crores in 1960 and 810 million yards valued at Rs. 55 crores in 1959, evidencing a steady decline in the country's exports in the last few years. Your mills could maintain its export at the preceding year's level of about 14 per cent of the production of the year.

Although quality control, diversification of products and market research, as part of a three-phased programme of expansion of exports, might help in the export drive, one has to go to the root of the problem by studying the practical difficulties being faced for correcting the present unfavourable trends. One of the primary needs of the industry has been rationalisation and modernisation of plant and equipment. The competitive ability of the industry in the international market has to be bolstered up by reduction in prices and by economising cost with the help of modern machines and judicious employment of labour.

Besides, the steady increase in the cost of raw materials has also proved highly unfavourable in successfully tackling the export problem. It will be increasingly difficult for the industry to sell in export markets if it cannot procure raw materials at economic prices. It is also unfortunate that, under the last budget, the benefit of rebate has not been extended to the cotton textile industry if its manufactures are not directly exported by the producers themselves.

Cotton

It is ironical for our country where the problem of cotton supplies is so acute that this is the fifth successive year in which world production has risen to a new record with the help of the exceptionally high world yield of 285 lbs. of lint per acre, as compared to the poor Indian record of 112 lbs. per acre. The yield per acre during 1962-63 in the U.S.A., Egypt and Pakistan is 455 lbs., 583 lbs. and 219 lbs., respectively. In our country, on account of low productivity, we are constrained to live a hand-to-mouth existence with regard to the requirements of cotton. It is only to be hoped that, with the establishment of a permanent organisation of cotton research as proposed by the Bangalore session of the International Cotton Advisory Committee, the level of productivity will increase and we will be able to attain self-sufficiency in this essential raw material in due course, especially when the area under cotton cultivation in India is the highest in the world.

Besides, the prices payable for cotton continue to remain at a high level. Either there is a failure of crop and the prices payable by the mills are very high as for the season 1961-62, or there is a good cotton crop, but the prices payable are all the same very high on account of the Government raising the ceiling prices as in the case of the crop of the current season. It is keenly felt that it should serve the purpose of the country better, if, instead of the farmer being encouraged to develop a sort of vested interest in the low level of his production, serious efforts are made to tackle the problem of increasing the productivity. The prices of Indian cotton varieties are at present above the world parity and the advantage of relative cheapness, which obtained to the Indian cotton textile industry in the past, is now almost entirely lost much to the detriment of export promotion.

Leather Cloth Division

As mentioned in my speech last year, the working of this division was not as satisfactory during the year under review as that in the preceding year, mainly on account of drastic cuts effected by the Government in the import licences for the essential raw materials required in the manufacture of leather cloth. Owing to very much restricted imports, the raw materials had to be purchased from indigenous manufacturers at prohibitive prices, with the result that the profitability of this division was very much affected.

On account of drastic cut in the import of P.V.C. raw material and the highly irregular policy adopted in regard to distribution of plasticizer by the only manufacturer, working of our plant was stopped for about three months. I consider it my duty to refer to another serious handicap that is militating against our economic growth. Ours being a composite company, we have to pay textile wages to the workers of leather division also, whereas other concerns manufacturing exclusively leather cloth are not bound by such imposition and hence we have to work under such handicap.

Expansion

After the purchase of the block of Moon Mills was completed, as referred to in the last year's report, negotiations were started with the National Industrial Development Corporation Ltd. for a loan from it for [illegible]

newly acquired unit with the latest types of spinning and other required machinery. The negotiations are still in progress.

High Cost Structure

You will naturally expect me to give some idea about the current working and the future prospects. In this connection, I am constrained to say that, while the prices of cloth have remained the same as a result of the voluntary price control in force from September 1960, the cost of production of this industry has only been steadily increasing. Apart from the heavy incidence of new financial burdens on the industry effected in and from the year under review as mentioned in the foregoing paragraphs, several other measures have contributed to a much steeper cost of production in the current year which are more or less of a permanent nature. Duties on several important items of stores have been increased. Machinery will cost more on account of customs duty on capital goods. Import duty on raw cotton has been reimposed. Freights and inter-State sales tax have been increased. The power supply company effected a further increase of about 26 per cent in its tariffs from last May, in addition to a surcharge of 10.5 per cent imposed in July 1962. The financial commitments involved in the Emergency Risks Insurance Scheme, which was brought into force from the beginning of the current year, will also make sizable cuts into the profits of the Company. Several tax measures have been introduced by the State Government inclusive of increase in sales tax on cotton and certain important items of mills stores, chemicals, etc. The cost of borrowings has increased as a result of the increase in the advance rates of banks.

In order to help the Government in holding the price line, the mill industry has so far pegged down its prices to the level of these prevailing at the end of 1960. With all these additional burdens since 1961, however, it is difficult to say how the mills will be able to run economically if the Government does not allow an upward revision in the prices of cloth.

Modernisation and Renovation

In spite of several handicaps, the management has been continuously modernising your mills with a view to be able to hold its own even in the most difficult times. During the year under review, machineries worth about Rs. 20.45 lakhs have been further installed and put into commission. These include one mercerised plant, 48 Textima automatic looms, three high speed drawing frames, one Cockers high speed slasher sizing machine, one polymerising machine, one warp tying machine and five N.M.M. ring frames. Further, after the close of the year, two high speed drawing frames, one chemic machine, one comber, one acid ager and 11 constant card strippers have already been received and installed. We further expect early delivery of four OM/RKI ring frames and one Dornamat continuous coating plant.

As for the spinning section, I am glad to inform you that your Company was granted permission last year to install 3,088 additional spindles for balancing purposes, in addition to 3,200 spindles granted in the previous year. Orders for indigenous ring frames have been placed, but deliveries have been rather disappointing and we could complete the installation of only 2,240 new spindles. We have also applied for a licence to put in 6,087 additional spindles for balancing purposes.

In view of the difficult position of supply of new ring frames, the Company continued during the past year its programme of converting its existing ring frames to longer lifts and to the latest systems of high drafting and equipping them with Pneumafil. Simultaneously the Company also carried out the conversion of some of the existing speed frames to high drafting and can-feed on experimental basis. The Company succeeded in obtaining import licence for two Simplex frames of the latest model from Japan and applied for import of further four machines of the same type. Subject to the availability of import licences, the Company has a programme to change its entire old blow room machineries, draw frames and speed frames in course of time.

The installation of five new high speed draw frames was in useful replacement of old machines and it was completed during the year under review. In the year 1960, the Company installed four high speed combers to enhance the combing capacity for the production of goods of superior quality. The combing capacity has now been further supplemented by one more high speed comber of the latest type installed this year.

An experimental super high draft frame of indigenous make was also installed during the year under review and further orders for four super high draft ring frames were placed for delivery this year. The Company already has a super high draft plant of 8,000 spindles working since 1956 and additions of super high draft spindles are now being made, with a view to effecting further economies in the working of the Company.

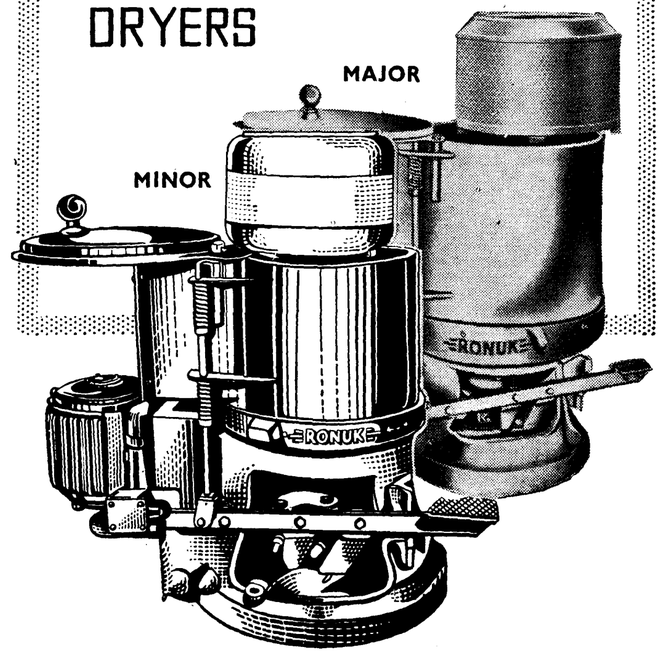
In the weaving preparatory department, one high speed sizing machine was installed, in addition to one machine installed in the previous year. The Barber Colman spooler and warper, which were installed and put into commission in the year 1961, have modernised about half the winding and warping sections. With a view to completing the modernisation of this department, the Company is now considering the installation of the latest automatic high speed winding and warping machinery incorporating revolutionary changes in winding technique. One automatic warp tying machine was received last year and orders for further such automatic machines are under consideration.

Automatic Looms

In the weaving shed, 48 automatic looms were installed in replacement of old plain looms and installation of further 96 automatic looms is under consideration. The Company could not finalise order of further imported automatic looms last year and is now considering the purchase of indigenous looms made with foreign collaborators which are now available.

In the processing section, the Company made the extension of this department for improving the layout and reducing the labour cost in handling. The mercerising machine was installed last year and the screen printing section was also put into commission. These two additions have increased the saleability of the Company's products which are now made in greater variety and finish to meet the demands of the market.

It is, however, paradoxical to note that we have to modernise our mills with so-called new machineries which are in fact outdated. You will be interested to learn that rapid scientific improvements, such as continuous automatic spinning equipments and jet looms, are being introduced in other progressive countries, whereas we have to remain content with outdated 8" lift spinning frame and old type of automatic looms.



Unfortunately, the Government is placing limitations in regard to replacement of ordinary looms with automatic looms. For instance, the condition of compulsory export against installation of automatic looms is so drastic that mills are finding it difficult to replace ordinary looms with automatic looms. It is imperative that the cost of production should be brought down, so that our products may compete in the world markets against many other advanced countries. Further, the cloth must be of superior standard and one of the prerequisites for the production of quality cloth is to have automatic looms.

For the leather cloth division, we have ordered out one of the most modern and up-to-date equipments with the object of producing leather cloth of international standard and we have also arranged for availing the services of foreign technical consultants to advise us on the latest techniques in the field of leather cloth manufacture. With the arrival of the new equipment, we also hope to compete successfully in the export markets of this product.

In conclusion, I have to thank sincerely my colleagues on the Board and to express my appreciation to the executives, staff and workers of the Company for the valued co-operation extended by them during the year.

Thank you.

PATTERN OF REGIONAL DEVELOPMENT

ECONOMIC, SOCIAL AND DEMOGRAPHIC ASPECTS EXAMINED

By B. L. Agarwal

UNIVERSITY OF RAJASTHAN, JAIPUR

ONE of the major objectives of planning in India is "the balanced development of different parts of the country, extension of the benefit of economic progress to the less developed regions and widespread diffusion of industry." While it may be argued that ten years is too short a period for the Plan to make its impact felt in each State and in different parts of the States so as to reduce disparities between them, it would not be unreasonable to expect that the two Five-year Plans should have laid the foundation for the balanced development of different States and reduced imbalance at least on a broad regional basis. But this study brings to light that the disparity between different regions has sharply widened during the past decade—the rich region getting richer and richer and the poor region lagging far and far behind. The pattern of regional development has been studied from three points of view, economic, social and demographic.

Economic Development

At the commencement of the first Five-year Plan, the different States and regions of India were at varying levels of development partly because of historical factors and partly on account of factors such as population, conditions of soil, climate and natural resources. The following table shows the *per capita* income of different regions:

Region	*Per capita* income at 1955-56 prices				Increase in *per capita* income 1951-61	Increase in population 1951-61
	1950-51		1960-61			
	Rs.	Index	Rs.	Index	Per cent	Per cent
Northern ..	245.6	119.9	324.2	141.6	32.6	27.4
Central ..	204.8	100.0	229.0	100.0	11.8	18.8
Eastern ..	213.8	104.4	246.0	107.8	15.5	25.5
Western ..	272.9	133.2	333.2	145.5	22.1	24.7
Southern ..	211.4	103.2	254.6	111.2	20.4	17.0

Source: *Indian Institute of Public Opinion.*

The above table indicates that the Western and Northern regions were the richest at the beginning of the Plan and they stand the richest in 1961 too. The Eastern region, which was third in rank in *per capita* income in 1951, has relegated to the fourth position, whereas the Southern region has gained from fourth to third, mainly on account of a much slower growth of population in the latter. The regions thus appear to have maintained their position *inter se*. The Central region, which was the poorest in 1951, remained so in 1961. Its *per capita* income increased by 11.8 per cent only, the lowest increase in all the regions.

The Government seems to have made little effort to increase its income at a relatively greater rate as is reflected by the amount of *per capita* outlay in this region during the first two Plan periods which works out to Rs. 65 only, as against Rs. 137, Rs. 84, Rs. 107 and Rs. 86 in the Northern, Eastern, Western and Southern regions, respectively. (Calculated from outlays given in Annexure III of the Third Plan in Outline on the basis of mid-census population.) Had it not been for a relatively slow growth of population, this region would have to face retrogression. The indices calculated in the table reveal further that the disparity in *per capita* income in the richest and poorest regions has increased from 33.2 per cent in 1951 to 45.5 per cent in 1961, and the Government's policy regarding widespread diffusion of industry, so that the less developed regions have a greater share of the prosperity of the country, has so far remained only wishful thinking even at the broad regional levels, not to talk of its implementation at the State and District levels.

The change in occupational structure from primary to secondary and tertiary sectors is also an index of economic progress and, if purposefully brought about, it can lay the foundation for reducing imbalance in the development of various regions. The ratio of income per worker in the agricultural (primary) sector as compared to the non-agricultural (secondary and tertiary) sector was 1 : 2.5 in 1951 and is approximately the same in 1961. In other countries also, the income in non-agricultural occupations is higher than that in agricultural occupations, although the ratio differs according to the stage of develoment of agriculture. A shift of manpower from agricultural to non-agricultural occupations, therefore, ordinarily increased per worker income on an average and can be used as a tool to bring about a balanced growth of different regions. The percentage of workers engaged in different occupation sectors in 1951 and 1961 is shown below:

Region	Occupational sector	Percentage of workers in	
		1951	1961
Northern ..	Agricultural ..	72.2	73.1
	Non-agricultural ..	27.8	26.9
Central ..	Agricultural ..	77.9	78.2
	Non-agricultural ..	22.1	21.8
Eastern ..	Agricultural ..	76.3	73.5
	Non-agricultural ..	24.7	26.5
Western ..	Agricultural ..	68.3	71.1
	Non-agricultural ..	31.6	28.9
Southern ..	Agricultural ..	67.1	66.7
	Non-agricultural ..	32.9	33.3

The above figures indicate that, during the decade, the rank of different regions according to their agricultural and non-agricultural populations has remained completely unchanged. No significant measures seem to be adopted to rapidly increase industrialisation and other non-agricultural activities in the areas which were highly agricultural ones. It is rather surprising that the proportion of workers engaged in agriculture has increased in the Northern, Western and Central regions. For Northern and Western regions, however, one can find satisfaction in the argument that it has happened on account of the exceptionally high rates of population growth in these regions, which, in the absence of suitable avenues of employment, could not but remain as disguisedly employed in agriculture. But the increase in the proportion of agricultural workers in the Central region in the face of relatively very low rate of population growth defies any explanation.

An examination of the disparity in the regions *inter se* in 1951 and 1961 reveals that, whereas in 1951 there was a difference of 10.8 points in the proportion of manpower engaged in agriculture in the highest agricultural region and the lowest agricultural region, it increased to 11.5 points in 1961. The disparity in the proportion of non-agricultural manpower in the regions *inter se* has likewise tended to increase.

Social Development

The pattern of social development may be judged from literacy rate which is given in the table below for the years 1951 and 1961:

Region	Literacy rate				Increase in literacy rate in 1961 over 1951
	1951	Index	1961	Index	
	Rs.		Rs.		Per cent
Northern ..	132.7	126.3	208.3	119.4	57.0
Central ..	105.1	100.0	174.5	100.0	66.0
Eastern ..	108.6	160.4	233.4	133.8	38.5
Western ..	216.4	205.9	300.4	172.2	38.8
Southern ..	208.0	197.9	291.4	167.0	40.1

It will be observed from the table that the rank of different regions in order of literacy rate remained unchanged between 1951 and 1961. However, the Central and Northern regions, in which the literacy rate was the lowest in 1951, witnessed the greatest percentage increase in literacy and the Eastern, Western and Southern regions, which had relatively higher literacy rates, witnessed a much lesser percentage increase in literacy during the last decade. The difference between the most highly literate (Western region) and the least literate region (Central region) narrowed down from 105.9 per cent in 1951 to 72.2 per cent in 1961 as is reflected in the indices calculated in the above table. Thus, in the matter of literacy, imbalance among different regions has tended to lessen during the decade. Whether this has been the result of effort ingrained in the Plans or that of the effort on the part of the people themselves is brought out in the following table which gives the percentage of increase in educational facilities to children in age-group 6-11 years:

Region	Percentage increase in educational facilities to children 6–11 years in 1961 over 1951
Northern	61.8
Central	45.9
Eastern	57.8
Western	72.9
Southern	74.7

The above table shows that greater educational facilities were provided by the Government in Western and Southern regions where the rate of literacy was already high. In the Central region, which was the least literate region in 1951, the Government paid the least attention to increase the facilities for primary education. Hence reduction in the imbalance in literacy rates in the different regions during the past decade is solely the result of public awareness to give primary education to their children irrespective of whether the Government provides facilities or not. The Planning Commission and the State Governments, therefore, hardly deserve any appreciation even at this front.

The regional percentage figures of increase in primary educational facilities put in juxtaposition with the growth rate of population again reveal the same sad story. The Northern region, in which the population during the last decade has increased by 25.8 per cent, witnessed an increase of 51.3 per cent in primary educational facilities, while, in the Southern region where the population increased by only 16.96 per cent, primary educational facilities have been stepped up by 74.7 per cent. Obviously, the expansion of facilities of primary education has been disproportionate in the various States and it does not bear any relation either to the illiteracy prevailing in the region or to the increase in population. Dr. P. S. Lokanathan has very rightly observed that "investment in social overheads must be on the basis of needs of various areas and, over a period of time, mobilisation of human resources through general education, improvement of skills, training facilities, alongside general improvement of mobility, will act as a powerful corrective to regional imbalances." One can simply be surprised and be sorry to note that such simple and sane advice has passed over deaf ears. Even in the third Five-year Plan, the Planning Commission has sought to increase the primary education facilities in the Central region—the least literate region—by 62.4 per cent only, whereas, in the Western and Southern regions which are the highest literate regions, provision has been made for 88.3 per cent and 93.5 per cent increase in educational facilities.

Thus from both economic and social points of view, the Central region, consisting of the two great States of India—Uttar Pradesh and Madhya Pradesh—provides a real challenge to the Government, for it is the most backward region by all standards and has shown little evidence of improvement in its relative rank during the past decade.

Demographic Development

The growth of population during the past decade has been very uneven in the different regions. The table below shows its effect on density per sq. mile:

Region	Density per sq. mile				Percentage increase in density per sq. mile 1951-61
	1951	Index	1961	Index	
Northern ..	183.7	100.0	234.0	100.0	27.4
Central ..	313.4	170.6	372.3	159.1	18.8
Eastern ..	345.6	188.1	434.0	185.5	25.6

It would thus appear that, although there is no change in the ranking of regions in order of density in 1951 and 1961, regions with higher density of population have tended to grow at a slower rate as compared to regions with relatively lower density of population which have grown at higher rate. The only exception to this is the Eastern region which, in spite of a high density of population, has grown faster probably on account of a large influx of refugees from East Pakistan. The difference in density of regions having the highest and lowest density has come down from 109 per cent in 1951 to 92.2 per cent in 1961, as is clear from the indices of density. If the imbalance in density in different regions has not been reduced by differential survival rates, it will be reasonable to presume that people have tended to migrate from the densely populated region(s) to the region(s) having low density of population. Whether the migration has been voluntary and *ad hoc* or has been planned and controlled to produce the aforesaid result is an open question.

From the three-pronged consideration of regional development—economic, social and demographic—it transpires that the demographic imbalance in the different regions is on a decrease, but there is little evidence to prove that the Government policies and planning have been directed in reducing the economic and social imbalance—rather the facts prove to the contrary. Would the Planning Commission, therefore, take a second look at the situation

ECONOMIC POLICY AFTER EMERGENCY

SOME UNDERLYING FALLACIES BROUGHT OUT

By Dr. Kersi Doodha

UNIVERSITY OF BOMBAY

AN unscrupulous and unrepentant enemy has thought fit to take advantage of our national disunity and military unpreparedness. In a world of our own creation, we believed that signed documents could take the place of sound armaments. Human nature being what it is, an act of kindness came to be identified as a sign of weakness. Treachery was the product of this synthesis. To meet the blatant Chinese challenge, we have awakened to a world of grim reality, in which the diversion of a part of our resources to the needs of defence has become an urgent necessity. From this incontrovertible fact, it has been inferred that the cost of defence in the post-Chinese action era is something *additional* to current total expenditures. This is fallacy number one. Why is this inference incorrect? If you will recall, we have since 1949 laid our faith in planning. Commencing from April 1951, we have adopted Five-year Plans to solve our problem of poverty. Prior to the final sanction of each Plan by the supreme body called the National Development Council, projections of our aspirations and needs are recorded, discussed and finalised in terms of availability of existing and potential resources. What the economy is capable of performing is ultimately laid down in terms of targets in different spheres of activity. In-so-far as the third Plan is concerned, after careful consideration and a fairly upward bias, it was decided that the Centre and the States should between them spend a sum of Rs. 7,500 crores on development, assuming non-development expenditures would remain at a constant level. It, therefore, follows that if, after most careful consideration and an element of overestimation, this outlay was fixed, very little room was left for manœuvre. Hence, an effort to add a further sizable expenditure in the name of defence will prove futile.

It may be argued that the factors which governed the earlier decision have changed materially owing to the Chinese adventure; that the people today are willing to bear a greater burden cheerfully; that an economy subjected to pressures of war is not a normal economy; abnormal factors have appeared on the Indian scene generating abnormal expenditures, which this country as a self-respecting entity is obliged to carry. It may be pointed out that this series of propositions assume that, up to the time of the Chinese aggression, India was a normal economy and that it is the increase in defence expenditure that is making it abnormal. This gives rise to fallacy number two, for the above *assumption* is, to say the least, naive. India has been in the throes of economic development for over a decade now. Her economy has been subjected to pressures leading to bottlenecks in various directions. Over the last three years, there appears to be a shortage of power, transport, steel, cement and raw materials. Agriculture is proving a drag on progress. Consequently, the economy has reached a plateau and the rate of growth markedly slackened. The stagnancy in the economy is not to be identified with the Keynesian case of underemployment or excess capacity. In our case, the economy is unable to produce more because of supply inelasticities. In the circumstances, to add a further dose of expenditure to the existing level of expenditures will lead to serious economic repercussions.

(Concluded from previous page)

and initiate certain definite measures to reduce disparities and bring about balanced regional development? The Central region (Madhya Pradesh and Uttar Pradesh) merits the special consideration of the Planning Commission and the Central and State Governments. In an underdeveloped country like India fraught with illiteracy, disease, ignorance and overpopulation, social investment in education, health, family planning and the like is the foundation of progress and, if it is made in accordance with the needs of the regions, the economic balance will take care of itself and the demographic balance will follow in due course. The balances which sought to be achieved consistent with rapid growth of income are social, economic and demographic, in order of priority, while the study of regional development of the past decade tells the reverse story. The demographic balance in regions *inter se*, even if brought about, will not be sustained without economic balance and the latter will be very difficult to be achieved without social investment to reduce social imbalance. We should, therefore, *start first things first* and not put the cart before the horse.

A Dilemma

This at once poses a dilemma. On the one hand, national dignity requires that outlay on defence be raised to a level consonant with our ideal of personal liberty. On the other hand, any addition to the estimated levels of expenditure will seriously impair our economic apparatus. What shall we do? Our Government has recognised the presence of this dilemma. It has, therefore, attempted compensatorily to reduce private expenditures by the amount of the increase in public expenditures. The private demand for goods and services has been sought to be reduced by introducing such fiscal devices as increased income and consumption taxes, Emergency Risk Insurance, Super Profits Tax and Compulsory Deposit Scheme. In addition, the cost of investment has been sought to be raised by introducing hard money conditions, increasing import duties and demonetising gold. The sum effect of these measures, it is expected, will reduce the pressure on supplies, keep the price level reasonably steady, decrease the pressure on foreign exchange, and permit the public sector to acquire the resources necessary successfully to put through a programme of defence plus development.

In my opinion, the new fiscal and monetary policy will reduce the private demand for goods and services considerably greater than the increase in defence expenditure warrants. This may not only cause a reversal in the rate of development but may actually lead to a *recession*. Especially there are no hopeful signs portending a revival in the capital markets in this country in the immediate future. The current modest recovery in the stock markets may be dismissed as a temporary phase. Likewise, the reduction in output may unfavourably affect the balance of payments because of a future reduction in exports.

Another Fallacy

Further, there is no reason to believe that the taxpayers are willing to bear the increased burden cheerfully, as our Prime Minister wishes them to do. This is fallacy number three. The majority of people seem to be *unwilling* to carry a greater weight, because, basically, the degree of hardship a citizen is prepared to shoulder is a function of the degree of threat posed to his country's sovereignty. By the same token, the degree of hardship that a Government can successfully inflict on its people is a function of the magnitude and duration of the war effort. Usually, a war economy signifies a nation's resolve to fight the enemy with all the resources at its command, until final victory is achieved. This, it seems, is not the character of our war effort. We have not declared hostilities against anyone, nor are we at present actively engaged in combat with any country. Moreover, Mr. Nehru has stated in no uncertain terms that what can be achieved by peaceful negotiations cannot be realised by force. This leads me to infer that we as a nation do not contemplate aggression against anyone in the near future. It may be that, in the long period, when our economy has become sufficiently strong, we may exercise our *claim by force* to what is legally ours. But, for the time being, the aim of our war effort primarily consists of building up our basic logistical superiority. This, it is hoped, will prevent further or future encroachments on our territory. In view of the above analysis, it may not be incorrect to presume that the people of this country are unwilling to shoulder an additional burden of defence and development.

This conclusion should not come as a surprise, as over the past twelve years, we have been continuously exhorted to make sacrifices in the name of development. For instance, starting from the fiscal year 1956-57, taxes at the Centre have been raised from year to year without exception. If all the past increases are added upto the fiscal year 1963-64 and if allowance is made for a 3 per cent rise in revenues due to the annual increase in the national income, additional revenue from additional taxes should be Rs. 1,614 crores. To this if a probable underestimation of revenue of about Rs. 50 crores is added, then theoretically gross tax revenue accruable in 1963-64 should have been Rs. 1,213 crores only. This indicates that taxation has reached a point of diminishing returns. By interfering with the reward for extra effort, it has tended to reduce supply more than it has reduced demand. This has added to the mounting inflationary pressures rather than helped to abate them. It seems that there is a tendency among some economists (I confess I was one too some time ago) to view the taxed revenue as a ratio to national income. This ceiling is believed to hover in the neighbourhood of 25 per cent. Therefore, it is presumed that taxed revenue as a ratio to national income below this level indicates room for more taxation. Time has shown this to be a false indicator. One has to view the effect of taxes on spending and producing not by the tax revenue collected but by the rates of taxes. From this angle independent observers have shown that the tax rates as they prevail today hinder rather than help growth.

An offshoot of what I have been saying so far is that, over the past decade, the people of this country have been making heavy sacrifices in the name of development, that the war effort being a limited one, there is an unwillingness on the part of citizens to bear a greater tax burden, and that reliance on increased taxes is not desirable, since taxes are yielding diminishing returns by adversely affecting production. For all these reasons, if the present strategy is insisted upon, it is likely to meet with failure. At the current juncture in our history, failure is a *luxury* we can least afford.

The Goal

In an otherwise dismal picture, a silver lining is present: our goal must be to increase total output. The *Finance Minister* correctly stated, in his budget speech, that, "first and foremost, there is the need to increase production and accelerate the pace of development. The *growing claims of defence and development* cannot be met except on the basis of an expanding volume of production. By far the greater part of responsibility for increasing production rests with the *private sector*." But a vigorous private sector in a democratic framework functions only under a system of incentives. These have been repressed or eliminated in the past. They must, therefore, be restored. This may prove to be a politically difficult decision and the problem of prestige may arise. But Mr. Walter Lippmann has said: "Society, like each person in it, is a growing, living thing, and it must have fresh food and new clothes. ... So to pretend that men in the twentieth century can live under laws made in the eighteenth, or that children can be brought up like their grandparents, is to act as if society, instead of being alive as an oak, were dead as a rock." In order that our society may progress, it is necessary, therefore, that the system of incentives be reintroduced. When this is done, it will be apparent to all that this nation has vowed to face "the full magnitude of the task and to overcome a coward's part." For final victory will depend upon "our making it evident to the enemy that we can so organise our economic strength" that those who swear by the sword shall be made to perish by it!!

Notice

THE WEST COAST ELECTRIC SUPPLY CORPORATION, LIMITED

Registered Office:

20 Second Line Beach, MADRAS-1

NOTICE IS HEREBY GIVEN THAT THE 29th Annual General Meeting of the Company will be held at the Registered Office of the Company at No. 20, Second Line Beach, Madras-1, on Thursday the 25th July, 1963, at 11 a.m. to consider the subjects detailed in the Agenda posted to the Members of the Company individually.

FOR CHANDRIE & CO. PRIVATE, LTD.,
S. VENKATARAMAN,
Director,
Managing Agents.

21st *June*, 1963.

Note: A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

THE METAL BOX COMPANY OF INDIA LIMITED

REVIEW BY THE CHAIRMAN, MR. M. K. VELLODI

THE Thirtieth Annual General Meeting of The Metal Box Company of India Ltd. will be held on Wednesday, the 17th July 1963, at 59C Chowringhee, Calcutta.

The following is a copy of the Review by the Chairman, Mr. M. K. Vellodi, which has already been circulated to members.

Sales

This is rather a special occasion for me as this is the first time that I am meeting you. It is therefore with very real pleasure that I am able to report another successful year of business for your Company with an increase in Product Sales from Rs. 10.50 crores in 1961-62 to Rs. 11.85 crores or an increase of 13 per cent, an achievement which, in the conditions that prevailed during the year—uncertainty in the supply of raw material, increased excise duties and so forth—must be regarded as highly satisfactory. Constant vigilance and the never-ceasing search for substitutes for tinplate and the adoption of more and more progressive methods of production and sales are the factors that contributed to this result which, in normal circumstances, would have been passed on to the shareholders in the shape of increased dividends; but the times are not normal and taxation of an unprecedentedly heavy nature has denied to the shareholders these benefits that should have legitimately accrued to them. For as long as our marginal rate of tax is 74 per cent in all, such denial is likely to continue.

The year 1962-63, particularly in the early months, has repeated in many respects the features of the preceding years, features that have become increasingly familiar: a steadily dwindling foreign exchange reserve resulting in ever stricter restrictions on imports even of essential raw materials and the efforts of a much harassed Finance Minister to balance his budget, resulting in fresh imposts. However, as the year progressed, not only were the resultant problems solved, but the shock of the Emergency gave a new impetus to industrial effort in the country, production generally increased and, with it, the demand for the Company's products.

Prospects for the year ahead are not easy to forecast. It is the avowed object of the new taxes to cut expenditure on consumer goods but to what extent they will achieve this object is still a matter of conjecture. Direct defence supplies are bound to form a substantial part of the Company's activity during the year. The steady increase in the sales of non-tinplate products which contribute some 25 per cent of our total sales is an encouraging feature. Your Company's fortunes, however, depend in the last analysis, on those of the trades we serve; in most of these, conditions are at present buoyant, but this may prove to be the consequence of short-lived optimism when the impact of the Union Budget has its full effect on consumer spending.

Defence

Our industry adapts itself rapidly to a war situation. Within one year of the commencement of World War II, 80 per cent of your Company's output was devoted to war purposes of which 50 per cent represented direct supplies of war stores and 30 per cent indirect supplies, namely packages for war supplies. In the current Emergency we have already supplied the latter by the million: the need to supply the Armed Forces in the forward area with canned foods required a very rapid build-up in the supply of open top cans which was met on a basis of topmost priority until stocks of the specialised imported tinplate required were exhausted. I shall have more to say on this later. As to direct defence supplies, within one month of the outbreak of hostilities, the authorities, with commendable promptness, placed orders on us. Your Company's response to the Emergency was thus immediate and our resources were placed unreservedly at the country's disposal.

Your Company is better equipped for defence production than it was in the 1940's. Not only is its normal process capacity of press tools and can-making plant larger than it was, but in the Industrial Components and Machinery Building shops at Calcutta No. 2 there is both equipment and specialised engineering knowledge, which are particularly well suited to the manufacture of many urgently required defence supplies. Our newly established Paper Products Group will be able—though they have no orders as yet—to manufacture many of the special spirally-wound containers required by Kirkee and our Flexible Package Works in Calcutta can produce many of the specialised packing materials used in modern war. Our capabilities and past performance have been recognised by the Defence Purchasing and Ordnance Authorities in collaboration with whom we are tooling up on a priority basis for a wide range of defence stores. We hope in these diverse ways to make a notable contribution to the re-equipment of the country's Armed Forces.

Exports

Economic stresses and strains arising from political changes have affected our markets in South-East Asia and as a consequence, our direct export sales at Rs. 21.37 lakhs fell short of last year's level. Ceylon placed restrictions on imports, Burma's Defence Services bought less and there was intense international competition in crown corks. We, therefore, looked elsewhere in our drive for sales particularly to the markets of West Asia. As a result, machinery exports were nearly doubled; sales in East Africa and Hongkong were increased and our goods broke into four new markets: Afghanistan, Jamaica, Taiwan and Trinidad. Our success in the distant markets of Taiwan and in the Caribbean area mark a significant achievement for our and, therefore, India's engineering exports.

But it is by supplying exporters with containers and packaging materials made to international standards of quality that we make our main, though indirect, contribution to the country's exports—principally in America. Sales under this heading increased substantially, particularly in the shape of open top cans for the Kerala prawn packing industry. We now have two factories almost entirely devoted to servicing exports: the Mangalore Factory supplying the cashew trade and the Cochin Factory the prawn packers. We estimate that the value of goods exported in our containers is as much as Rs. 8 crores and we believe that much of these exports has been made possible by the provision of packaging to international standards by your Company: an impressive indication of the contribution which sound packaging can make in the effort to diversify India's exports into non-traditional fields.

Raw Materials

Throughout the year we were in difficulties with our major raw materials (tinplate, aluminium sheet, aluminium foil, sheet steel) and we ended it with depleted stocks. Until Rourkela's five-stand mill is delivered and commissioned presumably in 1965 or 1966, the country, and hence your Company, will depend to an uncomfortable extent on tinplate imports. Not surprisingly then, the provisioning of tinplate was a cause of continuing anxiety throughout the year, particularly as regards the special qualities for processed food containers (open top cans), the import of which has to be planned many months in advance of the packing seasons in various parts of India. Supplies ordered this year on the assumption of a brisk, though normal, rate of growth proved to be quite inadequate for the requirements of the Emergency. Immediately the accelerated demands became known, both we and the canning industry represented urgently to Government the need to license additional imports. The initial delay in responding, understandable as it was in the circumstances of the recently declared Emergency, was nevertheless the cause of an unhappy, though temporary, interruption in supplies to the Defence Services.

The significance of tinplate as an important industrial raw material has been represented vigorously at the highest appropriate levels of Government. Some 150,000 tons of tinplate, with an imported element amounting to only Rs. 6.50 crores, enable approximately Rs. 360 crores of consumer goods to be distributed. There is undoubtedly some limited scope for the introduction of substitute packaging materials, but substitutes are frequently more expensive and functionally less efficient. I am glad to say that notwithstanding the many competing demands of high priority for all available foreign exchange, the Government has shown an awareness that a shortage of tinplate would not only have an adverse effect on Defence provisioning but that it would have damaging and inflationary consequences for the economy as a whole. At the same time, in their anxiety to reduce imports, Government is contemplating restrictions on the use of tinplate. It is to be hoped that when deciding about these, the authorities will bear in mind that, while the foreign exchange saved would be marginal, seriously dampening the demand for tinplate products now could have an unhappy effect on the large market required to support Rourkela's new tinplate mill in 1965-66.

Any new mill for secondary steel products will take time to build up the quality and quantity of its production. Rourkela is no exception to this rule: it has had plenty of teething troubles, culminating in a serious breakdown early this February. The damage has been repaired and this mill, it is hoped, will now be brought up to full production with the commissioning of further hot-dip tinning capacity which should enable tinplate production in 1963-64 to be stepped up appreciably.

Supplies of deep-drawn steel for industrial components were adequately maintained throughout the year notwithstanding the commandeering, for defence production by the Ordnance Authorities on its arrival, of a consignment we had purchased against a barter deal from Japan.

We have been very careful in our use of aluminium with the result that availability has broadly met requirements, although there was a serious shortage of foil which your Company uses widely for pilferproofing purposes. In successive annual reviews in the past my predecessor had stressed the importance of pilferproofed consumer packaging. I would like to suggest to the authorities concerned that when all materials are scarce, it is more important than ever to ensure that goods reach their destination in first-class condition. Pilferproofed packaging is one of the most effective means of beating the racketeer who adulterates or substitutes the genuine article by the spurious. Your Company has on every possible occasion represented to the authorities the essential role of consumer packaging in any national drive against adulterated commodities. It is understood that the Health Ministry of the Government of India has under consideration several legislative measures which are designed to penalise the adulteration of food, but the contribution of sound marketing and distribution, of which packaging is an essential part, is still inadequately appreciated.

In common with most industries the cost of virtually all our raw and ancillary materials continues to rise, due to increased duties and excises in fiscal budgets. As the cost of materials represents such a large proportion of the total cost of manufacture, we have had no option but to increase selling prices.

Research, Design and Development

Our efforts under this heading have been devoted principally to taking the pressure off the demand for tinplate by designing and developing alternative packages; to evaluating new sources of raw materials; and latterly to problems connected with Defence supplies.

Paper Products. Your Company received its manufacturing licence for making "treated and laminated papers and boards, and containers made therefrom" on 27th March 1962 and was granted import licences for the equipment nine months later on 14th January 1963. No time was lost: the first shipment was made on 2nd February and by 31st March, 50 per cent of the plant had been shipped. By the end of March, short-term specialist staff were already in the country engaged in training staff and installing and commissioning the machinery. It has recently started production. Against the possible breakdown of tinplate supplies under Emergency conditions, our Paper Products Group has already developed a series of superior composite containers. Due to the disproportionately high cost of Indian board, however, it seems unlikely that these will displace tins except to the extent that tinplate is not available.

Bombay No. 2. Last year your Chairman referred to the acquisition of a fine factory site nine miles from Bombay No. 1, namely at Deonar. There the construction of the 90,000 square-foot Bombay No. 2 factory has made most satisfactory progress: production should commence this July. The private railway siding makes the premises well suited for the reception, storage and printing of tinplate and the manufacture of open top cans of which tinplate represents a particularly large fraction of cost. The removal of stocks and machinery from Worli will make room for the Paper Products Group, leave sufficient space to lay out anew the metal container plant there and thereby improve operational efficiency.

Cochin Factory. In order to improve our service to the prawn canning industry, the Service Installation at Cochin has been expanded into a fully-fledged manufacturing operation. Not only have we been able to pass on freight savings, but the new factory serves as a base for engineering and scientific staff needed to support this highly promising export industry.

Flexible Packages. During the past year, your Company continued to implement its policy of developing its range of packages manufactured from indigenous raw materials to international standards of appearance and functional performance both for the home market and intending exporters. New plant has now been commissioned to supply printed polyethylene bottles and a variety of printed and laminated flexible packages and flexible packaging materials made both by heat-lamination and extrusion-coating processes.

Work at our *Research Division* during the year has progressed satisfactorily in all aspects including those of protective and decorative finishes made from indigenous materials; the evaluation of cold-reduced tinplate from Rourkela and Russia; and the general compatibility testing of a wide range of pharmaceutical containers, including printed flexible packages. The Emergency has given impetus to the Canning Advisory Service and close co-operation is being maintained with Defence laboratories in all aspects of canning technology, with particular reference to the rigid requirements for foodstuff supplies to the Armed Services.

The *Technical Development Division* has again had a successful year making a valuable contribution by designing new products and new customers' closing machinery. The plant modernisation programme has progressed satisfactorily with the emphasis on material economy and higher manufacturing speeds.

Machinery Building. Lastly, the range of machinery built by your Company was extended by the addition of a double seamer for cannery operation which is faster and more sophisticated than any that has been previously manufactured in India. I wish to stress again that each extension of your Company's machinery building activities means a directly corresponding saving in foreign exchange.

Visit from Associates

Towards the end of the year we had the pleasure of welcoming Mr. K. D. Brough, Managing Director of The Metal Box Company Overseas Limited, accompanied by Mrs. Brough. During his tour Mr. Brough was able to see for himself the progress in the Company's establishments throughout the country and, representing our Technical Consultants, was able to give valuable advice and assistance in connection with the Company's development requirements and the financing of them.

Board Changes

It was with real regret that your Board accepted the resignation of Mr. K. C. Mahindra both as its Chairman and as a Director of the Company. For five eventful years which began with the foreign exchange crisis of 1958 and ended with the declaration of the Emergency, Mr. Mahindra had placed unreservedly at the service of the Company and of the Board his deep and wide experience of business and industry. The Board will miss his wise counsel and his human approach to all problems. I feel it is a great privilege to succeed him as your Chairman. Mr. Mahindra has been in the front rank of Indian industrialists for well over a quarter of a century. He has now decided to retire and I am sure that all of you will join me in conveying to Mr. Mahindra in his retirement our very good wishes for his health and happiness.

Employee Relations

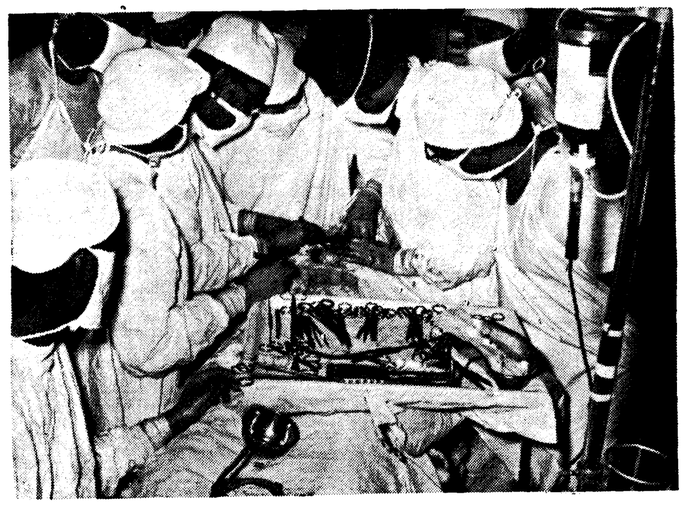
With one exception, relations between management and employees continued to be satisfactory throughout the Company. Agreements covering terms of service were successfully concluded with monthly-rated staff at Calcutta No. 1, Calcutta No. 2, Mangalore, Research Division, Technical Development Division and Head Office and with both monthly-rated and daily-rated employees at Faridabad.

An agreement on retirement age was reached with Research Division employees. The exception I referred to is the daily-rated men in Calcutta. The restlessness reported last year has continued into this year. An attempted bipartite settlement on conditions of service, wages and dearness allowance failed and the dispute has now been referred by the union to conciliation.

Soon after the declaration of the Emergency, the Company announced its policy dealing with the release of men called up for service in the Armed Forces; as a result nine men were able to join the forces without loss of pay. The employees' support of the National Defence Fund has been impressive: the Company's donation of Rs. 3 lakhs during the year was supplemented by donations and voluntary deductions from salaries and wages amounting to Rs. 1,35,000.

Your Company is a strong believer in keeping employees "in the picture"—a difficult exercise in communications which is more easily enunciated than executed. To this end, an employees' handbook, "Metal Box and You," dealing with the Company's policy as well as its rules and regulations was published in English, Marathi, Bengali, Hindi and Tamil and was well received.

Training at all levels in the organisation continues vigorously. Ten Indian officers were trained by Metal Box in the U.K. One senior manager was sent to the Administrative Staff College at Henley-on-Thames and another attended the Advanced Management Programme organised by the All-India Management Association at Srinagar. A further thirty-six managers have undergone the Company's residential management course in Calcutta: four of these came from our Associates in Malaya and Pakistan. Arrangements for the training of supervisors and apprentices and participation in workers' education programmes have been further strengthened.



I thank all the employees of the Company for their contribution to the past year's progress and their ready response to the increased demands made upon the Company as a result of the Emergency.

The Coming Year

Demand continues to be buoyant and we believe we shall be able to meet it, but the shadow of the Chinese incursion is still over us and high taxation, both personal as well as corporate, direct and indirect, is such as must daunt even the most ardent and progressive man not only amongst our employees at all levels but also amongst you, our shareholders, in India, the United Kingdom and the U.S.A. The difficulties and disincentives are considerable, but I have every confidence in our management and employees who, I am quite certain, will continue to surmount them.

Note: *This does not purport to be a record of the proceedings of the Annual General Meeting.*

EMERGENCY COMMISSION IN ARMY MEDICAL CORPS

Military service recognised as internship/housemanship for registration. ★ Antedate and higher rank for professional experience, post-graduate qualifications, previous commissioned service. ★ Ample scope for clinical and research work. ★ Prospects of permanent commission.

Graduates in Medicine (even without undergoing internship), up to 45 years of age and medically fit are eligible.

For application forms and particulars, write to

PROBLEMS OF DEVELOPING COUNTRIES

PRIVATE FOREIGN INVESTMENT MUST PLAY A SIGNIFICANT ROLE

By Manubhai Shah

THE Conference (Round Table Conference convened by the Association for Study of the Problems of Europe) is called primarily to discuss the problems of the agenda among the members of the Association from the developed countries. But we appreciate it very much that it is found fruitful to have some persons from developing countries also to take part in the discussions. Indeed, the subject-matter of the *Table Ronde* is very important in the present international economic context, in view of the pre-eminent place that problems of developing countries occupy in it at present and, in particular, the significant role of private foreign investment, potential as well as actual, in the development process. With us in India, this question has engaged continuous and detailed attention with a view to enlarging the valuable participation of private foreign investment in the building up of a progressive and dynamic economy. We have considered the matter throughout in the perspective of our national economic objectives of securing a higher rate of growth, widening general prosperity, democratic diffusion of enterprise, lessening of economic inequalities and promotion of greater economic opportunities. We thus welcome a discussion of this important problem in a general forum which seeks to examine the issues objectively and dispassionately from the point of view both of the developed or investing countries and developing or investee countries.

What I say now is necessarily tentative and preliminary, as the questions involved require thorough and comprehensive study and systematic examination. This, I trust, will continue to be made in a spirit of joint collaboration among capital-exporting and capital-importing countries toward finding solutions to problems satisfactory from the point of view of both. Again, these basic issues have to be viewed and considered objectively and dispassionately. Passions and hard phrases like 'expropriation,' 'guarantees,' 'total free enterprise,' 'safeguards' and 'special incentives' have not much place in this common endeavour based on fundamental business and commercial principles in the field of international commerce and co-operation rooted in community of interests and obligations accepted by the democratic countries for the welfare of the peoples of the world. I hope, in particular, this examination must, in due course, conduce to a considerable increase of the flow of private foreign capital. Again, in the task of helping forward the development of developing countries, this form of capital flow can only be complementary to public foreign capital, which is so much needed in the vital fields of infrastructures and basic heavy industries of the developing countries. This is an objective which, as previous speakers—particularly the Federal Minister for Economic Co-operation, Mr. Walter Scheel—have pointed out, is one that developed and developing countries have in view in common. Previous speakers have also rightly emphasised the co-operative endeavour involved in promoting the flow of private foreign investment, through actions at both ends, having regard to the nature of difficulties and obstacles that have so far impeded a fuller flow of private capital in the service of the developing countries.

Roles of State and Private Enterprise

With many of the observations and suggestions made by earlier speakers, of which I have been briefly apprised, I am able to express general agreement. However, to assist an exploration of acceptable solutions to particular problems and difficulties through frank and informal discussions in the spirit of *Table Ronde*, I would like to refer to some aspects of the problems which require more intensive consideration in the general perspective of the conditions prevailing in the developing countries.

An important aspect of the general problem which it is useful to consider as a background to an examination of the question of private international investment in developing countries is the role of the State *vis-a-vis* that of private enterprise in the task of their development. Happily, there is increasing recognition in developed countries of the crucial role that the State has to play in stimulating the process of development in underdeveloped countries, owing to the essential differences in their situation as compared with that of advanced industrial countries. The absence or near-absence of a broadbased infrastructure and inadequacy of trained number of personnel in the field of complex technologies and management is also to be kept constantly in mind. It, therefore, seems to me useful in the context of the principal reports submitted to the Conference for us here to appreciate more fully the reasons for a larger place for State initiative, leadership, direction and guidance of the development processes in the less developed countries, without in any way affecting the basic democratic urges of free and disciplined national life. It is also necessary to separate purely ideological considerations from the more basic and pragmatic needs of our time for providing adequate leadership in such vast and basic fields of industrial management and industrial technologies needed for the infrastructure which alone can provide the necessary stimulation of private enterprises in the large-scale, middle-scale and the small-scale sectors in underdeveloped countries. It is obvious that, without the provision of power, transport, water and basic metallurgical raw materials such as steel, which require vast investment and huge capital outlay and which have a long period of gestation, it will be beyond the capabilities of an individual entrepreneur or a group of even large-scale entrepreneures to block up their capital in such ventures which may yield no return or very little return for a very long period of time. Again, these areas of investment are bound to be low-return sectors in any national programme of development.

"University of Life"

In underdeveloped countries, in general, and particularly populous underdeveloped countries, the State has to assume initiative for more active development of the economy to break the long spell of stagnation—almost decades of stagnation in these countries since the advent of the industrial revolution in the European countries in the latter part of the eighteenth century. I may submit for the consideration of the Conference the fact that the conditions in which private enterprise could thrive and make a contribution to the economic development of these countries did not and do not exist in any ample measure. Again, the environment and the necessary climate for large-scale individual enterprises require the visible demonstration in the country itself of diverse technologies to serve as "university of life" where a young entrepreneur or a technician in a less developed country has the benefit of seeing such massive and complex enterprises being developed by his or her own nationals. The entrepreneur gets to learn and imbibe the spirit of enterprise and scientific outlook much earlier than as an apprentice in any foreign country, however welcome the atmosphere in the foreign enterprises would be.

All these and many other reasons are the principal factors which have tended to broad-base the investments in the public sector, especially in the fields of infrastructure of our national economy in the successive Five-year Plans of my country. I would, once more, appeal to the Conference to view this subject of public investment and private sector enterprises in the proper setting and background, free from any dogmatic or doctrinaire approach to this question. It is true that this is the subject which engages the attention of some economists and intellectuals even from the pure angle of theory and doctrines. However, as the time at our disposal is short, I would not like to involve the Conference on this doctrinaire aspect. But, even here, I may submit that, if social stability is to be preserved in order to protect and strengthen the sinews of democratic way of life, it will be worth considering for a moment the need for avoidance of large concentrations of wealth and economic power in a few hands in these newly-freed countries where large disparity of personal incomes between the millions and millions, on the one hand, and the very rich few, on the other, will work to the detriment of the very social and political stability which all the democratic world cherishes. The stability itself is an assurance and safeguard for free and accelerated flow of foreign private investment, in view of the trust and confidence it creates in the economic growth of these economies. Also, in view of the low level of personal savings and the undeveloped state of the capital market in underdeveloped countries, the comparative inability to mobilise resources to finance big projects by private capital has also to be kept in mind.

In India

In India, we have found that the public and private sectors are both expanding, in fruitful partnership, with the private sector responding magnificently to the stimulus of development in the public sector. Overall, 90 per cent of the output of goods and services in the economy is produced in the private sector, though the share of public sector investment is steadily growing and must grow in the process of giving an impetus and push to the economy on the road to self-sustaining growth. I also hope that the Conference will agree that, in the large and massive enterprises with remote control of management and organisation, the question of efficiency has no relationship at all to the *de facto* ownership. Thus the two sectors have no particular title to any special merit of efficiency as far as large-sized projects are concerned.

We in India continue to follow a policy which is somewhat pragmatic and flexible in the interests of industrial development, within the broad framework of our economic objectives. This policy affords a large enough scope for growth of the private sector to afford abundant opportunity for foreign private investment to participate with Indian capital in the development of the economy.

We may come now to some specific problems of private foreign investment in developing countries in which the Conference is interested. I am sure you would like to know the way we generally look at the problems in this sector. The important role which the inflow of private capital can play in the development of the Indian economy was recognised and emphasised in a statement made by the Prime Minister of India in the Indian Parliament in 1948, the very first year of our Independence. Recognition of the importance of private foreign investment has continued to grow, as planned development has progressed, and the scope for a complementary flow of private capital in a number of areas, side by side with very much larger public foreign capital for other areas, is increasingly appreciated. Appreciation of the increasing role of private foreign investment in our development is reflected in actual policies. The very fact that the foreign capital in India has almost trebled since independence—that is since 1947, from an amount of $560 million, the present private foreign investment has risen to about $1,500 million and more—is somewhat of a proof that the basic policies that India has followed in this matter have not been inadequate.

Tax Concessions

Although taxation in India has been on the increase—naturally enough when the country has to find more and more resources for development as well as now for defence—great attention is being given in framing tax laws to the importance of ensuring that new investment, particularly new foreign investment, is helped rather than discouraged. Some of the tax concessions are applicable to foreign nationals working in India and to foreign companies and agencies in a similar position. In the last two or three years, there has been a significant increase in the flow of private foreign capital into India with a large increase in the amount of foreign collaboration and participation jointly with Indian enterprises. Actually, India, which now manufactures from a "pin to a locomotive," has hundreds of private foreign collaborations from all industrialised countries of the world who have their joint financial-technical collaboration within my country. The flow, however, remains inadequate and should greatly increase further.

A significant feature of the pattern of foreign investment into India is that enterprises in which there is already a good deal of foreign investment are increasing their investment by ploughing back their profits and also by bringing in fresh money. India allows the repatriation both of profits and of capital free. Despite the difficulties and shortages of foreign exchange, no impediments have been placed in the way of these remittances. It is heartening that there is hardly any selling out of foreign investment in Indian industry and, instead, there is a pronounced tendency to augment the investment. One conclusion to be drawn from this trend of increasing investment by existing enterprises and the relative shyness of wholly new capital is that those who know India best are prepared to invest in it most. This thought is also supported by the leading role which British investment has played in India even after independence because for historical reasons British businessmen know India more intimately.

Investment Centre

The first task then, I feel, in promoting private foreign investment in India is to enable potential investors to know more about India and to know more about it from the inside. This is not a task ideally suited for governmental action. We have set up a non-official body, known as the Investment Centre, which deals with inquiries on all matters of interest to the foreign investor on a non-governmental commercial level. The Centre has been doing precisely the kind of things that Dr. Krebs suggested in his report by way of bringing the foreign investor and the Indian entrepreneur together. It has brought out, during the short period it has been in existence, a number of monographs on the procedures of investment, taxation, exchange control, company law, etc. The objective of the Centre is especially to obtain foreign collaboration and investment for medium and small enterprises.

What can the Governments which wish to encourage the flow of capital into developing countries do in order to help? To my mind, some of the efforts which are being made, although well intentioned, are not so well conceived. To seek *formal* inter-governmental assurances from developing countries in order to safeguard foreign private investment may well defeat its own purpose by making the developing countries more reserved in their attitude towards such investment and by making the potential investor think more and more in terms of the adequacy of *formal* assurances. The greatest safeguard of foreign capital in any country lies in the observed experience of treatment of foreign capital by the capital-importing country. And in this regard, you will find that India's record and policies are what investing countries would desire. Fair compensation in the event of acquisition of property by the State and remittance of the compensation proceeds are integral elements of the policy. On nationalisation itself, while present policy concentrates on building up new enterprises rather than acquiring existing ones, the foreign investor naturally has to take a long view of possible treatment of his investment. And the policy of permitting repatriation of capital, including any capital appreciation and equitable compensation—which, in all cases to date, has been reasonable by any standards—should give more confidence to the foreign investor than any formal assurance. In case of difference of opinion on quantum of compensation, arbitration alone could, perhaps, provide a non-controversial and fair way of satisfactory compromise in such international questions.

Government's Assurance

I think at this stage it is important to appreciate some of the problems that arise from the point of view of the recipient countries as from that of the capital-exporting countries. First and foremost, it is important that foreign capital should not create any feeling that it is displacing or ousting domestic capital but rather that it is complementary to it. Otherwise, protective instincts are naturally aroused. While the total availability of capital in developing countries is so small that there is never any danger of foreign capital competing with, much less ousting domestic capital, in overall sense, it can create such a feeling in particular fields of development. Experience has shown that, when the production of an item has been developed with indigenous capital and imports, therefore, are severely restricted, attempts on the part of firms who then want to start such production in the country itself create a certain amount of understandable opposition. The second factor which has a great deal of psychological significance is whether the enterprise retains and accentuates its foreign character or whether it becomes a citizen of the country into which it has migrated. In India, the Prime Minister's statement on foreign capital included an assurance that foreign firms should not be discriminated against and be, in fact, treated in the same way as national enterprises. This welcome assurance has, of course, a corresponding obligation on the part of the investor which can be best fulfilled by going into partnership with Indian capital and by pursuing a policy of employing Indian nationals at all levels excepting where local talent is not available. India encourages foreign experts in order to provide the joint ventures with the necessary expertise.

Quite apart from these matters which are essentially of form, there is a crucial economic issue to be faced. It is now generally agreed that international loans to developing countries should not be made on commercial terms and there should be soft loans with low or no interest and with a long period of repayment. Private capital, on the other hand, must, by its very nature, earn a commercial return on its investment and this return must clearly be higher than the commercial rates of interest on borrowed capital. The question is in what kind of conditions can developing countries service the private investment which they need welcome and receive. If a country cannot service a 20-year loan on 6 per cent interest, can it sustain and service an investment which may not involve any capital repatriation but which may mean a dividend liability of 12 per cent per annum?

Import-saving Projects

A measure of selectivity is, therefore, essential in determining the role which foreign capital could and should play in developing countries, particularly those whose external payments position is already overstressed. If the production of the industry can save on imports, obviously the outgoing of foreign exchange on account of dividends would be much less than the outgoings on imports. But the products which will be clearly import-saving have to be chosen with care. There must be products which the country is still importing and would continue to import even if its payments position were somewhat less favourable. It is necessary, therefore, that foreign investment should be capable of being fitted into the overall scheme of development when it is based on the import-saving concept. I need not remind the Conference that, in all industrialising economies, in spite of "import substitution," the national import bills are ever on the increase, thus providing the developed countries larger markets for their capital goods and technologies.

Another factor of import-saving projects which should not be forgotten is that a project may make substantial import demand, quite apart from the remittance of dividends, to keep it going at optimum levels of efficiency. This is particularly true of capital goods industries in developing countries. To make them completely self-sufficient in national terms may, in some cases, be wholly impossible and, in most cases, highly uneconomic. Quite often, capital goods industries set up with foreign capital in developing countries face certain difficulties on account of the fact that, while foreign credit and aid may be available for the import of complete equipment, it is not available to finance the import of components and raw materials which the plant may need. This lacuna needs to be rectified.

Exports

A surer foundation on which to build larger flow of foreign capital is industries orientated to exports. These can, with much greater confidence, not only service the foreign capital invested in the enterprise but also finance the import necessary to keep it going. Unfortunately, not a great deal of private foreign capital is moving out to developing countries with a view to producing for world markets. A high proportion seeks to take advantage of highly protected internal markets. One of the factors which may change the outlook for private investors is in the hands of the developed countries which can, by their readiness to welcome imports of manufactured goods from developing countries, help the movement of capital in areas where it would be most useful to itself and to the developing country concerned. "Export sector" of the developing economies is, perhaps, the most suitable field for large amounts of foreign investments in these countries.

A point not referred to earlier relates to taxation. Most developing countries have good reason to keep taxation at a high level. They do give special concessions to new investment; some of them are extraordinarily generous. Often these concessions got frustrated by the fact that double taxation relief arrangements work in such a way as to give the advantage of these concessions not to the investor but to the Exchequer of the country from which the investment came. Considering that there are limits beyond which tax concessions cannot be given to foreign capital which are not equally applicable to domestic capital and considering further the need for resources in a developing economy, would it not be right now to turn the thinking on the question of taxation away from the possibilities of relief being given by the developing countries to the possibility of incentives being provided by the developed countries from which this capital is to flow?

Five Main Points

To conclude, I would like to share the following thoughts which are not in the nature of conclusions, with the Conference:

The importance of the contribution which private foreign capital can make, not only in providing capital but also in providing foreign exchange plus know-how and managerial capacities, *should be fully recognised.*

The fields in which foreign capital can make the maximum contribution need to be identified with reference to a long-term picture of a country's development. Foreign capital can usefully play a role in import-saving or export-orientated industries. Of these, the latter are more important from every point of view.

Developing countries should provide "adequate climate" for foreign investment along with the necessary infrastructural facilities.

Levels of taxation are not such great impediments as is generally believed; and in so far as concessions and incentives are concerned, perhaps the industrialised countries could at this juncture make a much more significant contribution than the developing countries themselves.

Among the impediments to the flow of capital, one of the most important is the lack of adequate knowledge of the actual conditions in an economy and this knowledge is better disseminated through influential channels rather than by inter-governmental negotiations and agreements. It is in this field that we would urge large-scale publicity measures and creation of sufficient intelligence and information services in both the industrialised and less developed countries. Conferences such as this can be a great help.

The problem of tailoring the terms of foreign collaboration to the needs of different types of projects and different situations, and the working in practice of collaboration arrangements to achieve the desired ends offers fruitful scope for research organised on international lines. The International Chamber of Commerce has done some useful work in the study of these problems. An Industrial Bureau, set up under the auspices of the United Nations agencies, could make a valuable contribution to further study of these problems.

The above are some of the thoughts that I would like to place before the Conference, so that the necessary "climate and vigour" could be generated and sustained for the freer and larger flow of foreign capital and technical know-how from the industrialised countries to the less developed parts of the world.

Note: This article is an adaptation of the speech delivered by Mr. Manubhai Shah, Union Minister for International Trade, at Berlin on 30th May 1963 at the Round Table Conference, convened by the Association for Study of the Problems of Europe, on the subject of "Private Foreign Investment in Developing Countries."

NOTICE

IMPORTERS AND EXPORTERS ARE HEREby advised that the Foreign Exchange Dealers' Association of India, which is representative of all Banks in India authorised to deal in Foreign Exchange, has decided to adhere officially to the Uniform Customs and Practice for Documentary Credits (1962 Revision) International Chamber of Commerce Brochure No. 222, with effect from 1st July, 1963.

Therefore, all documentary credit transactions—relating to both imports and exports—which are based upon instructions dated on or after 1st July, 1963 will, unless otherwise expressly stated, be governed by the provisions, definitions and articles of the relative Uniform Customs Code.

On the other hand, all documentary credits issued, confirmed or advised, which are based upon instructions dated prior to 1st July, 1963, will—unless otherwise expressly agreed to between the parties concerned—be governed by the existing practice and not by the Code, notwithstanding the fact that such credits may be extended or otherwise amended on or after 1st July, 1963.

All Banks authorised to deal in Foreign Exchange in India will be pleased to explain to their import/export customers, on personal request, the provisions of the Uniform Customs Code.

(Issued by the Foreign Exchange Dealers' Association of India)

INAUGURATION OF TELEX SERVICE

INDIA'S FOUR MAJOR CITIES INTER-CONNECTED

THE inauguration, on the 24th instant, of the National Telex Service is an important landmark in the progress of telecommunications in India. This is a boon to the commercial world, for it makes available a newer and faster form of communication than the trunk telephone service. Telex, incidentally, is an abbreviated name for teleprinter exchanges. In this system, the teleprinter machines are fitted at the subscribers' premises, and a typed message can be sent without delay directly from one subscriber from his own premises to another in any part of the country or even abroad. The Telex service, according to Mr. C. P. Vasudevan, Director of the Telecommunication Research Centre, has greater advantages than trunk telephony. These advantages are:

"In many cases, the communication requirement is for a message to be sent across and not for a conversion or discussion. For this purpose, Telex is better suited than telephony, since a message can be sent instantaneously and without having to get a reliable person at the other end to take down the message and without disturbing him if he is there. Transmission is faster than can be done on the telephone and the cost is less. Where language difficulties or difficulties due to accent arise, Telex is particularly advantageous. For certain transactions, as between banks, business houses, hotels, etc., the written form of message also serves the purpose of confirmation and, because of its accuracy, can be acted upon immediately. The speed of transmission depends on the type of the telegraph circuits interconnecting the exchanges. (The present ones in widespread use throughout the country have a speed capacity of about 66 words per minute.)"

A Telex network, it is claimed, is cheaper to establish than one to provide comparable telephone facilities. This is so in respect of the costs of circuits—the connecting circuits between the teleprinter machines and the teleprinter exchanges, are telegraph circuits—as also of the costs of exchanges. The reason for the low costs of the telegraph circuits, as used in Telex, is because these are obtained by the use of "Voice Frequency Telegraph Carrier" systems, called in short, "V.F.T." systems. These systems enable a standard long-distance telephone circuit to be divided and used as 24 separate telegraph circuits, each capable of handling 66 words per minute, namely, for 24 simultaneous Telex interconnections. The cost of the Voice Frequency Telegraph Carrier systems is comparatively small, especially in the case of the long-distance circuits. Thus, the costs of the telegraph circuits are much lower than those of the telephone circuits and it is also possible to provide a large number of telegraph circuits quickly without high capital investments or extensive engineering.

Other Advantages

The Director of the Telecommunication Research Centre has also brought out another advantage in the use of telegraph circuits in Telex. As he has pointed out, for the setting up of the various selectors and other devices in the exchanges, impluses have to be transmitted from the subscriber's dial to the various exchanges along the route; the dial pulses are capable of being transmitted on the telegraph circuits interconnecting the Telex exchanges, since they are similar in characteristics. Thus, he continues, the *same* circuit is used for both the setting up of a connection and, after the connection is established, for the Telex inter-connection to be established. On the other hand, if similar facilities are to be provided in telephones, a separate circuit, similar to the telegraph circuit, has to be provided for the establishment of the connections and another circuit for providing telephone conversation.

In view of these advantages, the Telex service—now inter-connecting Calcutta, Bombay, Delhi and Madras—may well become very popular. As India is a place of long distances, the economies possible by the use of Telex communication are important. Moreover, as Mr. Vasudevan has emphasised, in the context of the relatively limited financial resources available for the development of modern communications in this country, the Telex service is the only feasible form in which large-scale communication for commercial, industrial and other users over long distances can be set up rapidly.

That is from the point of view of capital outlay by the Posts and Telegraphs Department. What about the cost to the subscriber? The rental for the Telex subscriber's line, inclusive of rent for the terminal teleprinter machine, will be Rs. 800 per annum within the local area of a telephone exchange system. In case the line extends beyond the local area of an exchange, the rental will be levied as for a connection within the local area *plus* an additional rental of Rs. 75 per annum for each additional kilometre or fraction thereof of the actual length of the connection beyond the local area. Provided that in cases where the actual length of the connection beyond the local area exceeds three kilometres, the above rates will apply only if the connection is provided by utilising existing wires or cable conductors with inexpensive charges. In all other cases special rates of rental based on the capital cost calculated in the same manner as in the case of departmental exchange connections will be leviable. Subscribers of the Telex Service will be provided with page teleprinters and control units by the Indian Posts and Telegraphs Department. Paper rolls and ink ribbon of good quality will be required to be provided by the subscriber. Power for operation of the teleprinter has also to be provided by the subscriber.

Call Charges

The installation charges for a Telex connection will be Rs. 60. The shifting charges for each shift of the subscriber's connection from one position to another will be Rs. 60. Call charges will be based on meter readings recorded in the Telex exchange and will be at these rates:—(*a*) Local call charges—40 nP for every period of three minutes duration or part thereof; (b) long-distance call charges—the charges vary according to the distance, 40 nP for a unit period of 60 seconds or part thereof for a distance upto 200 kilometres at the one end and for a unit period of 12 seconds or part thereof for a distance exceeding 1,000 kilometres at the other end. These charges will be reduced by 50 per cent for long-distance calls during the period between 7 p.m. and 8 a.m. (I.S.T.). Rent will be payable annually in advance. The minimum period of hire for connection chargeable at standard rates will be one year. No refund will be admissible if the service is given up during the minimum period of hire. If the facility is given up after the expiry of the minimum period of hire, refund will be admissible after charging rent upto the end of the month in which the connection is given up. Rent for a month will be one-twelfth of the annual rental.

For the present, the complete Telex interconnection on automatic dialling basis will be provided only to Bombay, Delhi, Madras and Calcutta. The Telex system at Ahmedabad, which is at present connected only to Bombay, will also shortly be replaced by new equipment of Indian manufacture for full inter-connection to the national network. During the third Plan period, new teleprinter exchanges will be opened at Ambala, Amritsar, Bangalore, Coimbatore, Cuttack, Gauhati, Jamshedpur, Kanpur, Lucknow, Nagpur, Patna, Poona, Rajkot, Secunderabad and Tiruchirapalli.

The commissioning of the National Telex Service has involved the manufacture of several types of equipment, of which the Telex exchange equipment, the Voice Frequency telegraph equipment and the Teleprinters are the most important. Of these, the Telex exchange equipment and the Voice Frequency telegraph equipment have been designed in the Telecommunication Research Centre of the Indian Posts and Telegraphs Department. These equipments have been manufactured by the Indian Telephone Industries at Bangalore. The teleprinters used in the service have been manufactured by Messrs. Hindustan Teleprinters Limited at Madras, which is a public-sector company functioning in collaboration with Messrs. Ing. C. Olivetti & Company of Italy. A large proportion of the cables which are being used for the service has been manufactured by Hindustan Cables Ltd., Rupnarayanpur, West Bengal. It is, indeed, remarkable that all the equipments for the Telex Service have come to be manufactured indigenously.

LEYLAND'S NEW LOW-WEIGHT TRACTOR

A new low-weight heavy-duty tractor designed for trunk road haulage in the United Kingdom and which can haul more than four times its own weight has just been announced by Leyland Motors Ltd. Named the *Badger*, the new two-axled tractor is the first of a range of low-weight models which will be added to Leyland's present range of heavy-duty *Power-Plus* models later this year. It has a 7 ft. 7 in. wheelbase and is designed for a gross train weight of 24 tons with a rear axle load limitation of 9 tons. It has a dry weight of 8½ cwt.—some 12½ cwt. less than the Leyland Beaver tractor—and its payload including semi-trailer is approximately 393 cwt.

For several months, prototype Badgers have been undergoing tests over routes ranging from hilly and twisting country roads to maximum-speed motorways and have shown up very well both as regards performance, fuel consumption and braking. During these tests the fuel consumption of the Badger, laden to 24 tons gross train weight and with the 2-speed axle equipped with ratios of 6.58 and 8.87 to 1, averaged as good as 13.3 m.p.g. on a flat route. On hilly routes consumption varied from 8.64 to 8.93 m.p.g. at average speeds of 20 m.p.h. Typical runs on the motorway at various speeds were: 11.65 m.p.g. at speeds up to 30 m.p.h., 10.67 m.p.g. up to 40 m.p.h., and 9.65 m.p.g. up to speeds of 50 m.p.h. In acceleration tests, the Badger took 39 seconds to accelerate from rest to 30 m.p.h. through the gears using the low rear axle ratio, and 43 seconds with the high ratio. Brakes were also good, tapely meter readings being as high as 65 per cent.

Power is provided by a Leyland *Power-Plus* 0.600 diesel with lower weight auxiliaries, which is de-rated to develop a net installed 140 b.h.p. at 2,200 r.p.m. and a maximum torque of 350 lb. ft. at 1,600 r.p.m. Air brakes work through a direct-acting brake chamber on each wheel, controlled by a Di valve giving straight-line braking characteristics over a total braking area of 541.8 sq. in. The design of the brakes and the type of materials used for the drums and brake shoes result in far more powerful braking than the linings' areas would suggest. A powerful servo-assisted handbrake which steps up a manual 20 lb. pull to the equivalent of 150 lb. operates on a braking area of 379.4 sq. in. The moulded brake linings, which are highly resistant to wear and fade, are ¼ *in.* thick.

Optional equipment includes:—spare wheel; tyre and tube; lockable filler on fuel tank; fog lamp; spot lamp; double-pole wiring; equipment to meet petroleum regulations; radio; sun visor; air pressure tyre valve and hose; air pressure system anti-freeze device; spring-loaded drawbar (jaw and hook type); front bumper and lower step; front pushbar; rear towing hooks; spare wheel carrier; tools and spares; fresh air cab heater and demister.

WORLD BANK LOAN TO EL SALVADOR

The World Bank has just made a loan equivalent to $6 million for the further expansion of electric power in El Salvador. The loan will help to finance an additional 43,000 kilowatts of generating capacity to supply the country's power network. Included in the project is a new steam plant which will both provide additional power to meet the rapidly growing demand and balance the power system which is now all hydro-electric.

Demand for electricity in El Salvador has been increasing at an average annual rate of 12 per cent and it is expected to continue at this rate for the next 10 years. There has been a 30 per cent increase in industrial production since 1959 and industry accounts for nearly two-fifths of the country's total power consumption. El Salvador's many energetic entrepreneurs and the organisation of the Central American Common Market give good prospects for further industrial growth.

The total cost of the power project now being undertaken is estimated at the equivalent of $10 million. The Bank loan of $6 million will cover the greater part of the foreign exchange requirements. The loan is for a term of 20 years and bears interest at the rate of 5¼ per cent per annum, including the one per cent commission which is allocated to the Bank's Special Reserve. Amortisation will being in October 1966.

I.B.R.D. LOAN FOR COLOMBIAN RAILWAYS

The World Bank has made a loan equivalent to $30 million to the Colombian National Railways (C.N.R.) for further improvement in the country's newly integrated railway system. The loan will be used for the purchase abroad of equipment and engineering services during the first two years of a ten-year C.N.R. programme to modernise the railroads of Colombia. This is the fourth loan from the Bank for the railroads and brings the total to over $76 million.

The problems now facing C.N.R. are twofold. Carrying capacity of the whole system must be greatly increased to cope with the demand created by the rapid overall economic growth of Colombia—including the large-scale production of cotton, rice, livestock, etc. from the newly opened lands in the Magdalena Valley. The greater number of locomotives and freight and passenger cars are obsolete and must be replaced with modern equipment as rapidly as possible. An indication of the state of the railroads is the fact that there were almost 700 train derailments in 1960. The second immediate need is to begin the rehabilitation of what were the regional railroads. Most of these were built many years ago, to standards inadequate for today's heavy traffic, and most of the lines need to be relaid and ballasted to modern standards.

The ten-year railway improvement programme was drawn up with the co-operation of C.N.R. and its consultants by a group of experts who, under the sponsorship of the Bank and the Colombian Government, undertook a survey of all modes of transport in Colombia. The total cost of the first five years of the railway programme is estimated at $74 million. The Bank's loan, which will be applied to the cost of the first two years, is for a term of 20 years and bears interest of 5¼ per cent a year including the one per cent commission which is allocated to the Bank's Special Reserve. Amortisation will begin 1st November 1966. The loan is guaranteed by the Government of Colombia.

NEW PRODUCTS AND PROCESSES

Chemical Pre-anodizing Treatment

A NEW chemical pre-anodizing treatment offers high quality surface finish on anodized aluminium architectural sections, without adding appreciably to their cost. The treatment, known as "Noralbryte", is the result of research by Aluminium Laboratories Limited, Banbury, England, and the Walterisation Company Ltd., in collaboration with Alcan Industries Limited. It is being marketed by the Walterisation company. Noralbryte treatment is designed for inclusion in the finishing sequence during the final stages of manufacture of such items as aluminium windows, curtain wall sections and balustrades. One of its chief characteristics, according to the manufacturers, is a smoothing power hitherto unattainable. The surface of aluminium is generally smoothed before anodizing if a high-quality finish is required, especially in the production of the extruded sections widely used in construction. Although untreated extrusions have comparatively smooth surfaces that are more than adequate for most applications, anodizing tends to emphasise any surface defects such as longitudinal die-lines. Noralbryte fills the need for an easily-handled, pre-anodizing smoothing treatment, a need that has arisen because of the increasing application of anodized, aluminium extrusions for architectural elements. Noralbryte is an immersion treatment, the solid ingredients being dissolved in water and used in a mild steel or rubber-lined tank. Articles to be treated are dipped for about five minutes at between 120°F. and 140°F. Optimum results are achieved at 131°F. Die-lines and shallow corrosion marks such as those caused by finger marking are usually eliminated within this time. Tests have shown that Noralbryte will not remove an excessive amount of metal. Although it was developed primarily for the pre-treatment of architectural sections and sheet, it also has a place in the jobbing anodizing shop as a general purpose etchant. Extremely smooth surfaces can be obtained, which means that attractive finishes can be achieved by lightly polishing with a chemical or electrolytic process. The cost of finishing a surface in this way can be as low as 50 to 75 per cent of the cost of bright-anodized finish obtained by mechanically polishing and chemically brightening.

New Industrial Reinforcing Materials

A new concept in non-woven structures of Du Pont nylon yarn now offers unusual strength-to-weight ratios in reinforced vinyl laminates and for coated, packaging, laminated and construction products. The nylon scrim provides the vinyl materials with four times more tear resistance and 10 to 20 per cent greater tensile strength than conventional 18 x 18 woven nylon fabric of equal weight, says manufacturer, Toscony, Inc., Passaic, New Jersey.

More Rapid Industrial Radiography

Examining circumferential weldments of pressure vessels, pipes and tubing, using short lengths of film, is eliminated with a new Du Pont "Screen Day Pack," a disposable dispenser loaded with 100-foot lengths of "Cronar" Type 506 and Type 510 Industrial X-ray Film. The dispenser-film assembly permits a quick and complete 360-degree exposure at one time. It also provides the advantage of film sandwiched between layers of lead intensifying screens. The dispenser is available from the Photo Products Department in 35 mm., 70 mm., 3½- and 5-inch film widths.

Improved Car Engine Performance

Newcomer to the Du Pont Automotive Specialties line of car-care products is Golden "7" engine conditioner, which prevents motor oil from thinning at high operating temperatures. Golden "7" eliminates oil burning and excessive smoking, helps reduce engine wear, quiets noisy valves and increases oil pressure.

Keeps Grounds Out of Coffee

Re-usable filters for percolator or dripolator coffee pots are being marketed by American Machine and Foundry Company. Made of glass fabric coated with "Teflon" TFE-fluorocarbon resin, the filters fit all strainer baskets up to four inches, resist stains and are odourless and tasteless.

New Resin

A British firm has developed a new foundry resin which, it claims, is cheaper to produce than phenol resins, has a higher hot strength, and distorts at least one-tenth less under heat. It can be made from substances derived from the by-products of cane sugar. The firm, Polygram Casting Company Ltd., which is considering licensing the manufacturing process in overseas countries, is at present using the resin for the coating of foundry sand to produce shell moulds and cores. A spokesman of the firm said: We think it highly probable that it will solve many of the problems associated with the making of carbon steel castings.

Three-in-one Bath

To meet modern demand for space-saving fittings, a British firm has produced in glass fibre a bath that incorporates a wash basin and shower —which together occupy no more space than an ordinary bath. Designed especially for "small space" conversions in flats, caravans, chalets and hotel rooms, the unit is made from tough, non-corrosive glass fibre. The firm has also produced a glass fibre shower cubicle designed to fit into the corner of any room. It is also useful for holidays camps, factories and schools, or other communal use where space is limited.

ASIAN CABLES CORPORATION LTD.

CHAIRMAN, MR. G. B. KOTAK'S SPEECH

MR. G. B. Kotak, Chairman of the Asian Cables Corporation Ltd., told the Third Annual General Meeting of shareholders at Bombay on Thursday the 27th inst. that the Corporation's second project would be on stream before the end of the next year. Since its foundation-stone was laid on 25th February 1963, the construction of buildings had begun and the shipment of machinery against orders would commence before the end of this year. Meanwhile, the erection of the P.V.C. cable section had been completed and the trial run had started. The Chairman said that the products from that section would be marketed shortly. The working of that section would increase the annual output by Rs. 25 lakhs and add to the profitability as well, he added.

The following are extracts from Mr. Kotak's speech:

GENTLEMEN,

The year ended 30th September 1962 being the first year of production, your Directors had to take very important and far-reaching decisions on certain matters involving policy such as bifurcation of accounts of project I and project II, allocation of pre-operational expenses to appropriate heads of capital assets, valuation of closing stocks, etc. This necessitated the extension of the time for holding the annual general meeting, which the Registrar of Companies was pleased to grant.

Progress Satisfactory

The Corporation has made during the year under report a loss of Rs. 11.52 lakhs after providing for depreciation of Rs. 6.60 lakhs which would leave an actual working loss of Rs. 5 lakhs, not unusual in the initial year of production. This is inevitable in all new ventures, at least in the first one or two years of production. Our Company came into regular production in January 1962. It will be seen from the month-to-month production that the output has been steadily rising from about Rs. 25,000 in January 1962 to about Rs. 7.50 lakhs at present, our full-rated capacity.

The production has now stabilised around the figure of about 1,250,000 core metres of cables per month, valued at Rs. 7.50 lakhs on a single-shift basis. In the month of March 1963, the production touched a record figure of Rs. 8 lakhs. This should certainly be considered as an achievement for a new company. I have no doubt that with the efficient and competent staff that we have and the happier relations we are maintaining with the labour, we should be able to maintain this progress, and show better results for the current year.

P.V.C. Plant

We have completed the erection of the P.V.C. cable section and trial run has started. We expect to put these products in the market in the coming few weeks. This will increase our production by about 25 lakhs per year and add to the profitability.

The general economic depression which set in in all the markets, including cables, due to the massive unprovoked Chinese aggression on our land affected to some extent the sales of our products too. But I am happy to inform you that on the removal of the prospects of an immediate threat of further Chinese attack, and improvement that is now felt in the general economic conditions in the market, sales have started picking up and have increased considerably in recent months. This is an evidence of appreciation of the quality of the Company's products and the useful range of cables the Company is capable of making for various types of clients. Our quality is being considered as good as the best produced in our country, and even in the United Kingdom.

I may make here a reference to an additional factor which has affected more or less all the industries, but more the newly established industries. For cables, the Government had imposed last year an excise duty for the first time. Simultaneously the percentage of excise duties on several other articles used in the manufacture of cables was also increased. During this year, the incidence of excise duty on many of the basic articles that go in the manufacture of cables has been increased further. To cite an instance, copper bars, when imported, attract import duties; a further levy has to be paid when the bars are rolled into rods; and finally, where the cables are actually turned out, a further excise duty has to be paid on the finished product. It will be thus seen that levies have to be paid at various stages on the same articles which are used as ingredients in the manufacture of cables. This naturally affects the cost structure; obviously all these extra burdens on the cost of finished products cannot wholly be recovered from the customers. The industry itself will have to bear some part of these multiple additional imposts.

Project II

The foundation-stone of our project II was laid on 25th February 1963. The construction of the buildings for the new project has already begun. Orders have already been placed for the necessary machinery and equipment and we expect the shipment of the machinery to commence before the end of this year, and production to start before the end of the next year. Some technicians have already been recruited and five of them are now under training in England in the power cable factory of Messrs. Enfield Standard Power Cables Limited. We could probably have made even an earlier start but for the heavy taxation in the national budget, which affected our understanding on the financial part of the collaboration of Messrs. Phelps Dodge Enfield International Corporation, New York. Their immediate reaction was that they might not get adequate return for their investment in view of the imposition of Super Profit Tax. Mr. E. H. Michaelsen, President of P.D.E.I. Corporation, came to India, when we placed before him the broader aspects of the national taxation policy which was, as we pointed out, indeed in the common interest to the peoples of the U.S.A., U.K. and India. These and other friendly countries were assisting India and other developing and underdeveloped countries of the world by heavily taxing their own people. Even if they continued to tax themselves, it was our own duty to see that they are not burdened by any lack of effort on our part. We must tighten our own belt to the utmost so that it may relieve some of the heavy burden of taxation on the peoples of these friendly countries. India's genuine and sincere efforts to help herself and thus relieve the foreign friends were much appreciated, and I am glad to report to you that our collaborators agreed to contribute their full part of investment in the equity capital of our Company, amounting to U.S. dollars 1,130,000. We as citizens of this country, really feel grateful to those who have been unstintingly assisting this country in order that better standards of living are obtained here and thus creating enduring prospects for peace and security and goodwill amongst the nations of the world.

I may also refer to the unpaid balance which remains to be called up on the right shares of the Company. Some shareholders feel a little anxious to know as to when the balance will be called, perhaps because of the condition that the shares will be qualified to participate in the dividend only after the shares are fully paid up. I fully appreciate their anxiety and can assure them that this question has been exercising the minds of your Directors for quite some time. The unpaid balance could have been called earlier. But actually the Company has not been in need of this much of money so soon. Collecting these balances earlier and when not needed would unnecessarily deprive the shareholders of the interest that may be accruing to them on their bank balance though the Company would have certainly been benefited by the interest advantage that would accrue on such called-up capital. It will, therefore, be appreciated that the Company has not called up the balance share capital for the sake of convenience and benefit to the shareholders.

L.I.C.'s Holdings

I take pleasure to inform you that we have in our midst as shareholders, besides the banks and insurance companies, the Life Insurance Corporation which has invested Rs. 2,56,000 in the equity share capital of our Company.

Before I conclude I should not fail in my duty to thank on behalf of the Board, the shareholders and on my own behalf, the engineers, the staff and the employees of the Company, for the efforts they have put in and the spirit of co-operation they have shown which have greatly contributed to the successful and satisfactory progress of the Company during the year under report. This encourages your Directors to look to the future with greater confidence. Our thanks are also in no small measure due to the spirit of sacrifice and service of the two Managing Directors who worked without any remuneration for nearly three years and even after that on a remuneration of Rs. 1,250 per month only because of the inadequacy of profits.

Note :—*This does not purport to be a record of the proceedings at the Annual General Meeting.*

U.K. MOTOR INSURANCE TARIFF RATES RAISED

REVISION OF FIRE PREMIUM IN THE OFFING?

MOTOR insurance in Britain will cost more from October next. Increases in basic premium rates ranging from 10 per cent to 30 per cent for private cars have been announced by the British Accident Offices' Association whose member-companies account for 50 per cent of the British motor insurance market. The enhanced rates will come into force from 1st October for new policies and for existing policies renewed on or after that date. Premiums for goods-carrying vehicles (commercial vehicles) will also be raised by about 15 per cent with effect from 1st October.

The enhanced premium rates will affect about 3.25 million motorists who are insured by the 114 Tariff Offices which constitute the Accident Offices' Association. The Association has given two reasons for the increase in premium. They are: (1) the continuing rise in the cost of repairs, and (2) the high level of third party claims. "These factors," according to the Association, "resulting in higher claims costs, which have not been offset by the extra premium from the increasing number of vehicles on the road, compel the companies to ask their policyholders for additional premium."

The higher premium rates, the Association maintains, have been related, as fairly as possible, to each category of vehicles according to its claims record. Thus for comprehensive insurance of private cars, the approximate increases are as follows:

Category	*Increase* (Per cent)
Not exceeding 1,100 c.c.	20
1,101 c.c.—1,300 c.c.	15
1,301 c.c.—1,600 c.c.	22½
1,601 c.c.—2,300 c.c.	25
Over 2,300 c.c.	30

Similar increases apply for third party policies. However, in the case of cars of up to 1,300 c.c. the increase will be only of the order of 15 per cent. Older cars will also pay a smaller addition as comprehensive and third party policies for cars registered before 1st January 1947, will go up by only 10 per cent.

Higher No-Claim Discount

The severity of the increase in premium will, however, be lessened, to some extent, by the changes made in the scale of no-claim discount. The revised scale provides for a maximum discount of 40 per cent to be reached after four years, as compared with the present maximum of 30 per cent to be reached in five years. The following table gives the scales of new and old no-claim discounts:

Period	*New discount* (Percentage)	*Old discount* (Percentage)
After 1 year	15	10
After 2 years	20	15
After 3 years	30	20
After 4 years	40	25
After 5 years	40	30

Although individual experience will vary, it is expected that for most claim-free policyholders, the net effect of the increase in premium rates, after taking into account the higher rates of no-claim discounts, will be less than 10 per cent. It is estimated that 75 per cent of all motorists insured with the Tariff Offices rank for no-claim discount. As a further measure to limit the advance in basic premiums, policies on private cars and nearly all commercial vehicles will not cover the first £15 of any claim for accident damage sustained while the vehicle is being driven by a "young driver or driver with limited experience."

The overall effect of the increase in premium is expected to be to enhance the premium income of the companies by about 10 per cent. It is noteworthy that the present increase is the first general increase in car premium since July 1957 when the premium rates were raised. It is true that some adjustments in tariff rates were made in September 1961 to conform to the classification of districts for differential rating which resulted in a 5 per cent increase in premium income. But it was not a general increase in the sense that about two-thirds of the policyholders were unaffected; a small proportion even paid less than before the adjustment.

The decision of the Accident Offices' Association to increase the tariff rate has not come as a surprise. The continuing adverse experience of motor business had clearly pointed to the need for a revision in premium. The average annual underwriting loss of motor business during the past decade (1952-62) has been estimated at about £4 million. Surely, insurance companies cannot be expected to do nothing about loss of such a magnitude. And perhaps the only thing that is directly within their power to do is to adjust the premium according to market conditions. In fact, clear hints of a possible upward revision of premium rates had already been given by the chairmen of some leading insurance companies in their respective annual statements to shareholders.

Effect on Underwriting Experience

It remains to be seen that effect the increase in premium will have on the underwriting experience of companies for the current year. The overall experience will no doubt depend not only on the premium but also on the trend of claims, commission and expenses. But it is possible that the increase in premium income, which the enhanced rates will bring about, will improve the underwriting picture. This is a bullish point which should impart some strength to the shares of insurance companies on the London Stock Exchange which have been sagging for some time now. Commenting on this aspect, "Lex," the well-known columnist of the *Financial Times*, London, observes:

"Perhaps the one certain investment pointer in the rise in motor insurance premiums of the tariff offices is that the income of insurance broking firms will rise—assuming, of course, that commission rates stay as they are. The shares of composite insurance companies have been a declining market for many months, and the rise in motor insurance premiums should become a sustaining factor on the basis that it is evidence that insurance companies are in the mood to raise premiums and that a rise in fire insurance premiums is likely to follow. For it is the fire losses that have been playing havoc with underwriting profits.

"A recent calculation by brokers who follow the investment side of insurance companies showed that 13 composite companies sustained a combined underwriting loss of £0.4 million in 1962, as against a profit of £11.2 million in 1961. This was even worse than the low level (£2.6 million) of underwriting profits ruling in 1957. The nigger in the woodpile in 1962 was the £12.8 million fall in fire profits. U.K. fire wastage has continued at a high level in the first four months of 1963, with losses of £23.6 million against £16.4 million for the comparable period of 1962.

According to *The Policy Holder*, insurance journal, the tariff offices made a 1 per cent profit on their U.K. motor insurance business in 1961, but there was a substantial world-wide loss. Average annual underwriting loss on motor business in the last ten years may be close on £4 million. Probably 40 per cent of the motor business originates in the U.K. and if this can be got on to an economic basis, shareholders must clearly benefit."

Now that the motor tariff rates have been raised, the question is whether it will be followed by a similar increase in respect of fire insurance which, thanks to the heavy incidence of fire in the past few years, has turned out to be the most unprofitable portfolio for British insurers. These trends and developments in British insurance are of interest to general insurers in India who have reinsurance and treaty arrangements with the former.

NEW TYPES OF LIFE POLICY

Two new type of life insurance policies, which are said to be becoming increasingly popular in Britain, are "Retirement Bonus Policy" and "Parent's Policy" issued by Sun Life Assurance Society. The "Retirement Bonus Policy" has a special appeal where the life assurance benefit under a pension scheme ceases at retirement, as is so frequently the case. This policy has been designed in the belief that, for most pensioners, the need for life cover will remain; it accordingly provides for the payment of the sum assured on death whether that occurs before or after the date of retirement and also for a tax-free capital sum on attainment of the selected retirement age, after which no further premiums become payable. The "Parent's Policy" has been designed specifically to meet the needs of parents of young children and contains a number of new features which, it is claimed, make it singularly attractive. In addition to providing an income for the child's maintenance, should the parent die, a lump sum is payable when the child comes of age. There are also valuable options to the child to effect assurances on his own life without evidence of health.

a challenge well met

On the 3rd January, this year, the 'E' blast furnace at the Jamshedpur steel works was blown out for relining and enlarging. It was a big job involving 2,100 tonnes of refractories, 1,700 metres of piping, 7,600 metres of electric cables and 1,100 tonnes of steelwork and castings.

When the original schedule was halved from 180 days to 90, many thought it to be impossible. But a team of Tata Steel engineers, technicians and workers took up the challenge and completed the operation in 84 days, 6 days ahead of the drastically revised schedule.

The 'E' blast furnace, with an original capacity of 315 tons a day, was bought second-hand from the U.S.A. 45 years ago. Its rated capacity has now been stepped up to 660 tonnes of pig iron a day without sinter burden, or to 725 tonnes with sinter and sized iron ore.

The record-breaking achievement is another demonstration of efficient team-work, technical know-how and sustained efforts to attain greater productivity with the minimum outlay that characterize a city like Jamshedpur, where industry is not merely a source of livelihood but a way of life.

MAHARASHTRA SUGAR MILLS LIMITED

CONTROLS INHIBIT PRODUCTION, SAYS MR. D. M. DAHANUKAR

SPEECH AT TWENTY-NINTH ANNUAL MEETING

PRESIDING over the Twenty-ninth Annual General Meeting of the Maharashtra Sugar Mills Ltd. held at Bombay on Monday, 24th June 1963, in the absence of the Chairman, Mr. M. L. Dahanukar, who is convalescing, Mr. D. M. Dahanukar, a Director of the Company, observed that controls tended to inhibit production, while their relaxation always boosted output. That could be taken as an axiom as far as the Indian sugar industry was concerned, he went on, but that fact had failed to secure appreciation from the Government. Paradoxically enough, Mr. Dahanukar added, India had been faced with a shortfall in production at a time when world sugar prices had registered a threefold rise and the country had been free from the obligations of the International Sugar Agreement. While conceding that the industry should pursue its efforts tirelessly to increase production, he blamed the Government for the present psychology of shortage in the country. Citing figures, he argued that demand could have been easily met had the Government followed a carefully planned policy of releasing stocks from factories. In spite of repeated warnings from the industry of a likely fall in production due to various factors, he said, the Government continued to take an optimistic view of the situation.

The full text of Mr. Dahanukar's speech is reproduced below:

GENTLEMEN,

I have great pleasure in welcoming you all to this twenty-ninth annual general meeting of this Company. We have come together at a time when individual participation in any field of endeavour has assumed great significance in the affairs of our country.

National Consciousness

You are all aware that the year 1962 brought with it the moment of reality for our dear motherland. A country whose cause we had pleaded in the highest councils of the world, perpetrated a great betrayal by launching an unprovoked and wanton aggression on our sacred land. The sudden Chinese onslaught was met with a display of supreme courage and self-sacrifice by our valiant jawans to whom our fullest praise and grateful homage are due. The unilateral cease-fire has brought about a period of lull, but the enemy continues his menacing build-up across our frontiers. This has only helped in evoking a spirit of national consciousness among our people who are determined and prepared to counter a repeated aggression in order to safeguard our national and territorial integrity. To this end, our Government and Mr. Y. B. Chavan, our Defence Minister, have taken measures for adequate defence mobilisation and I know that I am only voicing your thoughts when I say that no sacrifice on our part will prove too little in preserving our freedom. Our task is twofold: firstly, to do what we can to help the Government in its defence efforts; secondly, to build up our economy to heights which will sustain defence preparation. I will be failing in my duty, if I do not mention here the spontaneous response of our employees to the nation's call by their voluntary decision to donate one day's salary towards the National Defence Fund. Your Company has also contributed a sum of Rs. 1 lakh to the National Defence Fund.

We miss in our presence today the founder of your Company and its Chairman, Mr. M. L. Dahanukar. He was seriously ill for some time and is now steadily improving. I sincerely trust you will all join me in wishing him speedy recovery and even speedier restoration to normal health.

The Directors' report, audited balance-sheet and profit and loss account for the year ended 30th September 1962 have been circulated to you, and with your permission, I shall take them as read.

Decline in Profit

Several factors beyond our control have largely been responsible for the decline in profits for the year under review. The vagaries of monsoon brought about adverse effects on the sugar industry in the State. The growth of sugarcane was inhibited by scarce rainfall which in turn caused lower yields and a fall in output per acre. The Government imposed on the factories a 10 per cent cut in their production of sugar for 1961-62. In the previous year, the total sugarcane crushed was 252.794 tonnes, consisting of the Company's own cane, 186,666 tonnes and farmers' cane of 66,128 tonnes. In 1962, the total sugarcane crushed was 222,319 tonnes, which was made up of the Company's 174,086 tonnes and farmers' 48,233 tonnes. You will observe that the fall in the yield was general in respect of the Company's farms and that of the local farmers. Consequent to the fall in the sugarcane yield, production of sugar also suffered a heavy fall. Whereas the total sugar produced during 1960-61 was 312,082 bags (quintals), the total sugar produced during 1961-62 was 274,466 bags (quintals), resulting in a shortfall by 37,616 bags (quintals). This naturally affected the overall results of the working of the Company for the year. However, you will be glad to know that the production of sugar during the current year in your factory has increased by 18,290 bags (quintals) over the previous year.

Psychology of Shortage

A psychology of sugar shortage in the country appears to have been created. In consequence, statutory control on price and distribution of sugar has been reintroduced. A scrutiny of the figures, however, can belie this fear of shortage. The carryover stock of sugar from the previous season as on November 1962 was 10 lakh tonnes. If to this is added the production of 21 lakh tonnes in 1962-63, the total available sugar works out to 31 lakh tonnes. Out of this quantity, the Government had committed to export about 4.5 lakh tonnes, leaving a balance of about 26.50 lakh tonnes for domestic consumption. After the September 1961 decontrol, internal consumption increased reaching a level of about 25 lakh tonnes. If we take this to be the probable domestic requirement, you will see that the demand could have been easily met, had the Government followed a carefully planned policy of releasing stocks from factories. On the contrary, even though the industry had repeatedly warned the Government of a likely fall in the production of sugar due to lower acreage, reduction in yield, poor recovery and unfavourable climatic conditions, the Government continued to take an optimistic view of the situation. Controls have always tended to inhibit production; their relaxation has always boosted production. This can be taken to be an axiom as far as the Indian sugar industry is concerned, but this fact has failed to secure appreciation from the Government. Paradoxically enough, we are faced with a shortage in production at a time when world sugar prices have registered a threefold rise. When we had surplus stocks available for export, we were faced with the limitations of the International Sugar Agreement. Now, when we are free from the obligations of that Agreement, and can seize the opportunity of expanding India's foreign sugar markets, we are in the midst of a shortfall in production and are deprived of the benefits of the foreign exchange which would have naturally accrued to us through export. The industry should, therefore, pursue its efforts tirelessly to increase production, with an accent on efficiency and economy. You will be glad to know that despite the crippling effects of control, the industry rallied to the wishes of the Government and at a sacrifice to itself participated fully in the export programme thereby earning about Rs. 14.82 crores of foreign exchange during 1962. In this effort, I am happy to say your Company did not lag behind, and though it resulted in a loss of income to the Company, it contributed 37,569 bags of sugar for export.

We may all draw some satisfaction from the Government's action in fixing the production target for sugar for the next season at 33 lakh tons, eventually for 40 lakh tons during the fourth Five-year Plan. The target appears sound considering the recent increase in domestic consumption and the possibility of larger export, and if the past record of the industry is any criterion, the target is well within achievement.

In this context, I would like to refer to the recent Maharashtra Agricultural Lands (Ceiling on Holdings) Act, 1961, by which the Government of Maharashtra can take over the cane farms of sugar factories for being managed through State Farm Corporation. You are all aware that the genesis of this Act lies in the Government's ideological pursuits and not in any inherent shortcomings of the industry. You are also aware that the legislation was enacted in spite of vehement opposition from all sides. Even the recommendations of the Planning Commission have been ignored in applying the Act to company-owned farms run on modern and efficient and scientific lines. Several other States in the country have rightly exempted the sugar farms owned or managed by companies from land ceiling enactments. Many commercial bodies and associations throughout the country have attempted in vain to convince the Government that highly efficient and mechanically-run farms ought to be kept out of the purview of the Act.

The State Government has now imposed the agricultural income-tax and that too with retrospective effect and this casts a further burden on an already heavily taxed industry. The unconscionably heavy rate of 50 nP per rupee of the tax will have its own effect on the incentive to efficient cultivation of sugarcane on an economic scale. Further again, there can be no justification for Super Profits Tax levy which is unsound and unusual. From the balance-sheet, you will see that your Company has, however, taken due and adequate care to provide for the aforesaid new imposts on your Company by the latest Finance Act and I hope you will fully appreciate the prudent action on the part of the Directors.

Sugarcane Prices

Sugarcane prices are now linked to recovery percentage of sucrose content in cane, in accordance with the new formula. While the new scheme is regarded as rational and a welcome departure from the principle that has been followed so far, its application in practice suffers higher burden on the sugar factories. The minimum price of Re. 1.62 nP per maund of cane has been fixed for a recovery of 9.4 per cent and not on the usual basis of 10 per cent that was hitherto regarded as the norm all these years. Accordingly, the price of a maund of cane varies from a minimum of Re. 1.56 nP for cane with sucrose content of 9 per cent or less and an increase at 1.5 nP for every 0.1 per cent rise in recovery. You are aware that the sucrose content of the cane grown by your Company in its plantations has always been over 10 per cent. Thus, your Company will have to pay a higher price for sugarcane in accordance with the new price linking formula.

Technical Library

In conformity with the Company's policy of enabling their employees to acquire more and latest scientific knowledge, an air-conditioned technical library was set up in the laboratory building at the factory. It is equipped with books by eminent sugar technicians of the world. The formal opening ceremony of the library was performed at a pleasant function on 2nd September 1962 by Maharashtra State's Minister for Industries, Law and Judiciary, Hon'ble Mr. S. K. Wankhede. While paying glowing tributes to the management for its forward and progressive outlook, the Hon'ble Minister emphasised the nation's need for technical and scientific knowledge and exhorted the assembled technicians to keep themselves abreast of the latest development in sugar industry. I am glad to record here that the facility is being fully availed of by our technicians.

Let me place on record the management's high appreciation of the co-operation, team spirit and unstinted loyalty our employees have shown in the discharge of their various duties.

Note:—*This does not purport to be a report of the proceedings at the Annual General Meeting.*

SURVEY OF INDIAN INDUSTRIES

C.S.O.'S CENSUS REVEALS MAJOR TRENDS IN DEVELOPMENT

THE *Annual Survey of Industries—1960*, brought out by the Central Statistical Organisation, Calcutta, gives a wealth of data on the structure and pattern of large-scale industries in India. Although these data relate to 1960, they nevertheless provide authentic information on industries relating to their capital structure, trends in output and value added by manufacture, and the broad pattern of employment. The coverage of the *Survey* extends to the entire factories sector which comes within the purview of the Factories Act, 1948. Factories employing 50 or more workers with the aid of power (or 100 workers without the aid of power) are completely enumerated. The data given in the *Survey* relate to 63 industry groups; these are to be found in the table at the bottom of this page.

The total number of registered factories rose to 8,704 in 1960, representing an increase of just 97 factories or 1.12 per cent over the previous year. About 96 per cent of the factories (or 8,391 units) sent returns to the C.S.O.; the corresponding figure for 1959 was just about 95 per cent or 8,223 units. It may be noted here that the year-to-year comparisons in regard to capital, employment, etc., are vitiated to some extent by the difference in the proportion of reporting units. The total number of factories, which reported data in 1960, accounted for an aggregate productive capital of Rs. 1,999 crores, which was higher by about 15 per cent, as compared with the previous year.

Productive Capital

Productive capital, or capital employed, it may be noted, relates to that as at the close of 1960 (31st December, to be precise) in the case of factories which closed their accounts on that date and, in other cases, to the date on which accounts were last closed earlier during the year. It consists of both fixed and working capital. Fixed capital comprises land, buildings, including those under construction, improvements to land and other construction; plant, machinery, and tools (including uninstalled), transport equipment; other fixed assets, such as furniture, fixtures, etc. and intangible assets. Working capital consists of stock of materials, stores, fuels, semi-finished goods, including work-in-progress, and finished products and by-products; cash in hand and at the bank and the algebraic sum of sundry creditors as represented by (*a*) outstanding factor payments, for instance, rent, wages, interest and dividend, (*b*) purchases of goods and services, and (*c*) short-term loans and advances, and sundry debtors, comprising amounts due to the factory on account of sale of goods and services and advances towards purchase and tax payments. Of the total productive capital, fixed capital accounted for Rs. 1,286 crores (an increase of over 13 per cent over 1959) and working capital for Rs. 713 crores (or an increase of 18 per cent).

Although the rate of growth of capital thus gained momentum in 1960, there was no commensurate increase in employment. The number of employed persons in the reported factories rose by only 1.18 per cent or by 34,000 persons to 2.9 million. If the increase in the number of reporting factories is taken into account, there seems to have been no perceptible improvement in employment opportunities in the factories sector in 1960, that is, towards the end of the second Plan. This reflects, to some extent, the growth of capital-intensive industries like iron and steel and other heavy machinery and equipment manufacturing and the improved manufacturing processes adopted by several industries resulting in relatively less and less dependence on labour. The aggregate benefits accruing to the labour employed, however, rose during the year. Thus the bill of salaries, wages, and benefits aggregated Rs. 482 crores in 1960, as compared with Rs. 438 crores in 1959. Of the sum of Rs. 482 crores, wages for workers alone amounted to Rs. 342 crores, salaries to other employees Rs. 99 crores and the total money value of benefits Rs. 41 crores. The number of man-hours worked rose by 8 per cent to 5,912 million.

Industrial Production

The impressive increase in industrial production attained by the end of the second Plan is fully reflected in the trends in the expansion of ex-factory value of output. The ex-factory value of output rose by 17 per cent to Rs. 3,151 crores in 1960, as compared with the previous year. The rise in the index of industrial production during the year, it may be noted, was smaller than this at 11 per cent. This discrepancy stems from the fact that the indices of output do not take into account the impact of the price rise which is fully reflected in the value of output.

The value added by manufacture (V.A.M.) increased by about 14 per cent to Rs. 866 crores in 1960 (as against Rs. 759 crores during the previous year). The term V.A.M., which is an analytical tool of immense significance, represents that part of the value of the product which is created in the factory and is computed by deducting from the gross ex-factory value of output, the gross value of inputs comprising cost of materials, fuels, etc., amount paid for work done by other concerns, non-industrial services purchased and depreciation. The value added by manufacture is a measure of the contribution of the manufacturing industries as a whole to the national income. Taking this as an index, the order of importance of the more important industry groups in 1960 will be as follows: spinning, weaving and finishing of textiles; iron and steel basic industries; miscellaneous food preparations; sugar and *gur*, miscellaneous chemical products; and railroad equipment. The same six industry groups had their importance by way of larger contribution to value added in 1959 as well.

Among the industry groups, textile industry continued to occupy the pride of place, from the standpoint of labour and capital employed, and value added by manufacture. In 1960, spinning, weaving and finishing of textiles accounted for 11.7 per cent of the total reporting units and for 17.5 per cent of the productive capital. Again, this industry employed as much as 37.1 per cent of the total labour, and contributed 30.8 per cent of the total value added by manufacture. The iron and steel industry, which made great headway during the second Plan period, became the second largest contributor to the V.A.M. in 1960 (after textiles), thus stealing a march over miscellaneous food preparations, which had held this position in 1959. The other industry groups, which contributed more than Rs. 25 crores to national income by way of V.A.M., included sugar and *gur*, miscellaneous chemicals, basic chemicals, railroad equipment, electrical and other machinery, motor vehicles, as well as electric light and power and gas manufacture and distribution.

State-wise Data

The State-wise data furnished by the *Survey* give an indication of the relative importance of each region in the industrial map of the country. The following table shows the *percentage* contribution of each State to capital, output and employment, etc., in 1960:

	Returns received	Productive capital	Persons employed	Output gross	Value added by manufacture
Maharashtra ..	20.12	23.73	21.55	24.67	27.68
West Bengal ..	15.63	21.78	22.91	22.86	22.29
Gujarat ..	8.93	7.40	9.72	8.59	10.13
Madras ..	8.58	5.35	7.08	7.09	7.13
Bihar ..	2.87	12.78	5.71	7.77	7.10
U.P. ..	6.47	6.72	7.97	8.01	6.43
Andhra Pradesh ..	5.46	3.96	4.92	3.63	2.69
Assam ..	5.15	2.29	2.84	2.77	2.95
Orissa ..	1.10	2.07	0.89	1.12	0.97
Punjab ..	4.02	2.01	2.36	2.89	1.93
Madhya Pradesh ..	6.26	2.88	2.96	2.47	2.40
Kerala ..	6.65	2.05	4.56	2.33	2.44
Mysore ..	5.16	3.53	3.80	2.91	3.04
Rajasthan ..	1.22	1.04	1.50	0.98	1.01
Delhi ..	1.69	0.96	1.39	1.75	1.59

It will be seen from the table that six States, namely, Maharashtra, West Bengal, Gujarat, Madras, Bihar and U.P. are in the forefront in the industrial field. These six States together accounted for 63 per cent of the large-scale factories reporting data, 78 per cent of the productive capital employed, 75 per cent of employment, 79 per cent of the value of output and as much as 81 per cent of the value added by manufacture.

ASIAN DEVELOPMENT INSTITUTE

An agreement providing for U.N. Special Fund assistance to the Asian Institute of Economic Development and Planning, to be set up in Bangkok early next year, was signed the other day at the headquarters of the U.N. Economic Commission for Asia and the Far East (E.C.A.F.E.). The representatives of 13 countries and territories which have pledged contributions to the Institute, as well as the Director of the Special Fund Programmes in the Far East and the Executive Secretary of E.C.A.F.E., signed the document, which spells out in detail the Institute's organisation and plan of work. New ground was to be broken in obtaining, through collective action, the necessary funds for the Development Institute. Within barely two years, 25 members of E.C.A.F.E. and one non-member had announced or pledged contributions thereby backing up the contribution by the U.N. Special Fund of $2.4 million. The total cost for the first five years of operation is estimated at $3.5 million.

DEVELOPMENT OF S. ITALY

The High Authority of the European Coal-Steel Community is to co-operate with the Common Market Commission in studying industrial development possibilities in the Taranto-Bari region of southern Italy. For this purpose, the High Authority will provide credits of just over $40,000 during the financial years 1962-63 and 1963-64. The total cost of the study will be some $210,000. The encouragement of general industrial development in the Taranto-Bari area is the logical follow-up to the efforts already made to develop a local steel industry. In this context, the High Authority provided five loans totalling $17.5 million to help build the Italsider steelworks at Taranto, and the European Investment Bank provided further loans of $25 million.

Industry-wise Picture

(1 lakh=100,000)

Industries	No. of factories registered	No. of factories reporting	Total productive capital (Rs. lakhs)	No. of persons employed	Gross output ex-factory value (Rs. lakhs)	Value added by manufacture (Rs. lakhs)

* Industries included here are (1) canning and preservation of fish and other sea foods, (2) wine industries, (3) footwear repair, (4) wooden and cane containers and cane small-ware, (5) fur products, (6) leather products, except footwear and other wearing apparel, (7) cork and wood products, and (8) photographic and optical goods.

RESULTS OF TEXMACO IMPRESSIVE

DIVIDEND UP—DISTURBED LABOUR RELATIONS END

THE Textile Machinery Corporation Ltd. (Managing Agents: Messrs. Birla Brothers (Private) Ltd., Belgharia, West Bengal), which had staged a promising come-back in 1961, has fulfilled the promise during the year ended 31st December 1962 with very impressive results for that year. The realisations from sales and self-consumption have spurted by as much as Rs. 183.98 lakhs to Rs. 961.44 lakhs, a new peak level, and gross profit has jumped up by Rs. 76.57 lakhs to Rs. 157.24 lakhs, again a record level. In the previous year, the improvement was to the extent of Rs. 189.58 lakhs in turnover and of Rs. 19.37 lakhs gross profit, in contrast with the setback of Rs. 26.18 lakhs and Rs. 31.65 lakhs, respectively, suffered in 1960. It will be seen from these figures that the profit for 1962 has shown a marked rise, reflecting benefits of a larger production in both turnover and lower output cost. As a result, the profit-margin (ratio of profit to turnover), which had remained unchanged at 10.3 per cent in 1961, has gone up to 16.3 per cent in 1962.

The Managing Agents' remuneration has naturally increased from Rs. 3.63 lakhs to Rs. 7.41 lakhs. Depreciation has claimed nearly Rs. 1 lakh more at Rs. 25.37 lakhs. The tax provision has shot up from Rs. 19.81 lakhs to Rs. 70.90 lakhs (including Rs. 4.75 lakhs for the earlier years), due to increase in profit and the imposition of Super Profits Tax. Net profit, after these allocations, amounts to Rs. 53.56 lakhs, as against Rs. 32.86 lakhs a year before. Out of this, reserves and provisions have got Rs. 23.43 lakhs, as against Rs. 6.45 lakhs in the previous year. The dividend on the 10-rupee ordinary shares has been raised for the first time to 12.5 per cent per annum, subject to tax, after it was halved to 10 per cent, taxable, in 1960, in view of the setback suffered in that year.

The following comparative table mirrors the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Sales and internal consumption	961.44	777.46	587.88	614.06

* Subject to deduction of tax.

Besides the impressive results, the year has been important, the Directors state, from the point of view of labour relations as well. Go-slow tactics and sporadic strikes had been a major difficulty for a long time past. Negotiations with workmen were continued with great earnestness on both sides and, as a result, all the outstanding bonus disputes were settled in the current year. With the removal of this basic impediment in labour relations, they feel, there is now a new promise of a favourable climate for constructive endeavours.

The year under review itself saw encouraging progress in production. The output of ring frames increased by 15 per cent and that of carding engines by 25 per cent. The draw frame production was steady, with further headway made in the manufacture of the first prototype Simplex frame. Entering for the first time the European market, the Company sold three ring frames to the satisfaction of overseas buyers. The manufacture of No. 3 Ward capstan lathes proceeded according to schedule and efforts to turn out the more complicated No. 7 combination turret lathes were intensified. The steel foundry division showed further improvement and, apart from a sizable increase in output, the manufacture of some of the most intricate castings required for rolling stock and milling plant of sugar mills was successfully developed. A substantial expansion of the steel foundry is on hand. The average monthly production of wagons in the heavy engineering division rose, in terms of four-wheelers, from 207 to 240, and the production of water-tube boilers was nearly double, with that of other types of boilers, namely, Lancashire, vertical and Cornish, rising by about 25 per cent. A complete 1,000-ton-capacity sugar mill plant was also supplied and progress started in the making of another plant of the same capacity. On the structural side, the Company was engaged in the supply of equipment for high-pressure boiler for the D.V.C. thermal power project.

The above is a highly satisfying account of the Company's productive enterprise. It may, however, be noted that the Directors have drawn attention to the worsening power supply situation with the continuance of the cut imposed on the Company's factory as well as the shortage of matching steel and other essential raw materials and components which restrict production to below full capacity. For its cast iron spun pipe project, the Company has acquired a suitable site in Maharashtra, but the arrangement of foreign exchange for the import of plant and equipment is presenting some difficulty and causing delay in implementing the project. But, efforts, we are told, are being made to arrange the foreign exchange as early as possible.

The Company's paid-up capital is Rs. 289.99 lakhs, of which Rs. 150 lakhs are in equity shares and the rest in three types of preference shares. It is supplemented with reserves and surplus amounting to Rs. 79.31 lakhs, bringing the total "own funds" to Rs. 369.30 lakhs. Secured and unsecured loans stand at Rs. 318.45 lakhs, including the outstanding amount of Rs. 30,000 in respect of the 4,000 6 per cent debentures of Rs. 1,000 redeemed on 31st December 1960. As against this, the gross block amounts to Rs. 539.17 lakhs (Rs. 514.92 lakhs a year before) and is written down to Rs. 272.50 lakhs, including Rs. 44,903 being the value of machines under manufacture. Current assets and investments aggregate Rs. 959.16 lakhs and these exceed the total of current liabilities and borrowings by Rs. 97.11 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 24 *cum-div.* On the *ex-div.* basis, they offer at this rate a net yield of 3.7 per cent per annum.

(*Concluded from next column*)

The new refractories unit for the manufacture of chemically bonded bricks came into production in January 1962. This has added a new line to the wide range of refractories manufactured by the Company. During the year under review, chemically bonded steel-clad refractories were manufactured and supplied to the steel industry. The erection of the second tunnel kiln for the manufacture of basic refractories is in progress and this unit is expected to go into production in the latter part of the year 1963. Since February 1963, the manufacture of coke oven silica bricks has also commenced. These bricks, which were hitherto being imported in large quantities, are required for construction of the coke oven batteries. Orders to the tune of Rs. 27 lakhs have already been received.

The financial position of the Company as revealed by its balance-sheet as at 31st December 1962 is sound. The share capital of Rs. 265.00 lakhs, comprising Rs. 40.00 lakhs in preference shares and the balance in equities, is supported by reserves aggregating Rs. 136.04 lakhs. The outstanding amount of secured and unsecured loans is Rs. 100.61 lakhs (Rs. 43.65 lakhs from banks, Rs. 55.75 lakhs from the Industrial Finance Corporation of India, Rs. 1.11 lakh from the Government of India, and the balance as unsecured loans from others), while current liabilities and provisions are placed at Rs. 207.87 lakhs. On the assets side, the gross block, due to the additions of Rs. 40.56 lakhs made during the year, has risen in value to Rs. 629.57 lakhs, but this has been written down to a net block of Rs. 334.01 lakhs, which, together with Rs. 40.50 lakhs as capital work-in-progress and Rs. 3.07 lakhs as cost of machinery in transit, gives total fixed assets at the written down value as Rs. 377.58 lakhs.

Currently the Rs. 10 paid ordinary shares of the Company are quoted at Rs. 13.64 *cum-div.* On an *ex-div.* price, the net yield on fresh investment works out to 5.4 per cent per annum.

RISE IN OUTPUT COSTS HITS ORISSA CEMENT

PROFIT LOWER—DIVIDEND CUT

A FURTHER increase of ten per cent from Rs. 534.30 lakhs to Rs. 589.53 lakhs in the sale proceeds of Orissa Cement Ltd. (Managing Agents: Dalmia Agencies (Private) Ltd., New Delhi) during the year ended 31st December 1962 well reflects, firstly, the full impact of the rise in the retention price of cement made effective from 1st November 1961 and, secondly, the better sales realisation in respect of all products, with the exception of silica bricks. If, despite larger turnover, the gross profit has declined by Rs. 18.40 lakhs to Rs. 142.19 lakhs, it was chiefly because of "several increases in costs" consequent on Governmental action. Increased royalty on limestone and levy of electricity duty alone are reported to have raised the production costs by about Rs. two per tonne. The incidence of various new imposts, such as Emergency Risks Insurance and upward revision of railway freight and pit-head price of coal, also would appear to have squeezed the profit margins of the Company. Another contributory factor has been the revision in the method of valuation of closing stock of unsaleable refractories and grog which has contributed to the decline in gross profit to the extent of about Rs. 10 lakhs.

In conformity with the decrease in gross profit, the provision for Managing Agents' commission has receded from Rs. 8.11 lakhs to Rs. 6.82 lakhs. The provision for depreciation, however, has remained very nearly unchanged at Rs. 36.62 lakhs, as against Rs. 36.82 lakhs, and that for taxation has advanced from Rs. 44.00 lakhs to Rs. 51.00 lakhs. Practically the whole of the increase in taxation is due to the imposition of Super Profits Tax which has claimed Rs. 6.50 lakhs. As a result of the combined action of all the aforesaid factors, the net profit shows a sharp drop of Rs. 23.91 lakhs to Rs. 47.75 lakhs. Considering the need to conserve funds in order to meet certain likely liabilities, the Directors have thought it fit to plough back an aggregate of Rs. 24.02 lakhs from the available profit. This naturally has meant a rather drastic curtailment in ordinary dividend from 15 per cent to 10 cent, subject to deduction of tax. The actual amount of dividend disbursement at this rate works out to Rs. 22.50 lakhs, in addition to Rs. 2.34 lakhs claimed by preferred dividend.

The working results of the Company for the past four years are presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

Low	15.00	13.00	12.64	11.72

Note.—Dividends are subject to deduction of tax.

The production of clinker and cement registered a further improvement during the year under review, the former aggregating 354,000 tonnes, as against 335,000 tonnes, and the latter 380,000 tonnes, as against 373,000 tonnes. Despatches of cement, too, were higher at 393,000 tonnes, as compared with 365,000 tonnes in the previous year. Production of refractories, however, did not come upto the level attained in 1961. For, in the basic section, operational difficulties were encountered and it became necessary to shut down the tunnel kiln for repairs and re-lining; about five weeks' production was lost on this account. But for this shut-down, production of basic refractories would have been higher as compared with the previous year. Production of silica refractories was curtailed and one of the kilns was switched over to fire-clay refractories due to decline in demand for silica bricks. The Company has been making efforts to import some balancing equipment to facilitate such adjustments in production.

(*Continued in previous column*)

SAME DIVIDEND FROM DALMIA CEMENT

TAXATION EATS INTO HIGHER PROFIT

SHAREHOLDERS of Dalmia Cement (Bharat) Ltd. [Managing Agents: Messrs. Hari Brothers (Private) Ltd., Dalmiapuram, Madras] have hardly any reason to be thrilled by the Company's strikingly improved performance during the past calendar year. For, despite sales realisation rising by 26 per cent from Rs. 410.77 lakhs to Rs. 517.83 lakhs and gross profit by 74.4 per cent from Rs. 84.03 lakhs to Rs. 146.62 lakhs, the dividend on the 10-rupee ordinary shares is unchanged at 12 per cent per annum, subject to tax, for the fourth year in succession. But the Directors cannot be held responsible, as the blame lies primarily with the Government, considering that the Company's tax burden has shot up from Rs. 24 lakhs to Rs. 70.50 lakhs (including Rs. 14.50 lakhs on account of Super Profits Tax) and that, consequently, the net profit, after making the essential provisions, has improved by only Rs. 15.03 lakhs, or 48 per cent, to Rs. 46.31 lakhs. Further, in view of the uncertain position of additional tax liability for some earlier years in regard to the take-over of the Indian assets of Dalmia Cement Ltd. and the desirability of strengthening the Company's reserves, the Directors have ploughed back in all as much as Rs. 21.18 lakhs, as against only Rs. 6.73 lakhs a year before. After this transfer, the residual surplus is just insufficient to permit an increase in the dividend. Shareholders may, however, draw some satisfaction from the fact that 62.5 per cent of the dividend will be exempt from tax.

The year's results reflect the benefits of record production and the full year's impact of the increase in retention price of cement allowed by the Government from 1st November 1961. Clinker production established a new record of 458,000 tonnes, as against 415,000 tonnes in 1961, and so did cement production of 495,000 tonnes, as against 406,000 tonnes, with despatches being the highest at 502,000 tonnes, as against 407,000 tonnes. Since the profit-margin (ratio of gross profit to sales) has expanded from 21.4 per cent to 28.1 per cent, the improvement in production seems to have been at lower unit costs. This is in spite of a higher incentive bonus to employees of 30 per cent of basic earnings, as against 25 per cent for 1961. In the ceramics division, where production increased all-round, especially of R.C.C. pipes by 45 per cent, profit from the sale of refractories, stoneware and R.C.C. pipes is said to have shown an improvement. Despatches of iron ore, mainly for export, increased from 117,000 tonnes to 150,000 tonnes. But the magnesite business carried on by Messrs. Dalmia Magnesite Corporation (a partnership of the Magnesite Corporation of India and the Company) showed a setback in despatches from 23,728 tonnes to 21,470 tonnes and in the Company's share of profit from Rs. 19.30 lakhs to Rs. 16.31 lakhs. The despatches declined because demand slackened.

Tabulated below are the synopses of the Company's progress since 1959:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

* Subject to deduction of tax.

Uncertainty continues to attach to the future exports of high grade iron ore to Japan, and the Company has been unable to plan any expansion of its mining activities. The Directors hope that the negotiations between the S.T.C. and the Japanese buyers will lead to a fresh high grade iron ore contract for the year 1963-64. The scheme for acquiring the shares of the Magnesite Corporation of India Ltd. and making it a wholly-owned subsidiary has been implemented since 1st January 1963, following the approval of the Madras High Court. Under it, the shareholders of the Corporation are issued one ordinary or preference share of the Company in lieu of each ordinary or preference share held by them in the Corporation. The Salem works project is under reconsideration, owing to uncertainty about the demand for dead burnt magnesite..

Dalmia Cement Ltd., a subsidiary of the Company, earned, after providing for depreciation, taxation and Managing Agents' commission, a net profit of Rs. 13.47 lakhs during the year ended 30th September 1962, as against Rs. 8.87 lakhs a year before. As stated in the previous year's report, the subsidiary exported during the year under review 20,000 tonnes of cement from its Dandot works at Karachi to India. The value of the cement will be adjusted against the Company's remittable profits in Pakistan. Some cash remittance was also permitted against the office expenses incurred in India for the Pakistan factories.

The Company's paid-up capital is unchanged at Rs. 232.58 lakhs, made up of Rs. 166 lakhs in equity shares, Rs. 61.58 lakhs in preference shares and Rs. 5 lakhs in deferred shares. It is backed with reserves and surplus amounting to Rs. 99.53 lakhs. Excluding Rs. 55,808 being the amount of a Government loan for industrial housing, borrowings stand at Rs. 173.39 lakhs, as against Rs. 232.80 lakhs a year before. These loans and the current liabilities bring the total indebtedness to outsiders to Rs. 401.23 lakhs, as against Rs. 403.91 lakhs a year before. It is covered by current assets and book debts aggregating Rs. 336.55 lakhs and investments shown at Rs. 210.53 lakhs (including Rs. 31.43 lakhs, same as in the previous year, in Dalmia Magnesite Corporation), out of which only Rs. 27.74 lakhs are quoted at Rs. 28.54 lakhs. The bulk of the investments—Rs. 169.77 lakhs, to be precise—are in Dalmia Cement Ltd., all the assets of which are in Pakistan. The return on this investment is *nil* at present, and the realisation of investment and the transfer of the amount obtained on sale will depend on the sweet will of the Pakistan Government. The block of the Company has increased from Rs. 301.69 lakhs to Rs. 314.38 lakhs and is written down to Rs. 182.58 lakhs. Expenses on construction in progress, amounting to Rs. 4.24 lakhs, are shown separately.

Currently quoted at Rs. 13.10 *cum-div.*, the Rs. 10 fully paid ordinary shares of the Company offer, on the *ex-div.* basis, a net yield of 6.8 per cent per annum.

(*Concluded from next column*)

worth Rs. 22.03 lakhs out of a total of Rs. 34.28 lakhs received during the year under review. In addition, the bulk of the electrical machinery valued at Rs. 11.97 lakhs was installed, enabling the Company to use power from the Chambal Hydel project. Consequently, the power engines of both the old and new mills have been stopped. The State Bank of India has sanctioned the Company a medium-term secured loan of Rs. 50 lakhs for financing its capital programme. Borrowings from banks and others, which decreased last year by Rs. 14.35 lakhs to Rs. 98.44 lakhs, have gone up since the close of the year by Rs. 77 lakhs on account of purchases of cotton and machinery.

The Company has a paid-up capital of Rs. 50 lakhs, of which Rs. 30 lakhs represent bonus issue on capitalisation of reserves. The capital is supplemented with reserves and surplus amounting to Rs. 26.09 lakhs. As against these "own funds" of Rs. 76.09 lakhs, borrowings, as noted before, stand at Rs. 98.44 lakhs, including Rs. 3.67 lakhs (Rs. 4.67 lakhs in the previous year) from the Madhya Pradesh Financial Corporation. On the other hand, the gross block has expanded during the year from Rs. 177.32 lakhs to Rs. 214.12 lakhs, and is written down to almost one-third at Rs. 74.72 lakhs. Thus, the financial position is satisfactory. Taking the short-term borrowings, current liabilities and provisions, the total indebtedness to outsiders works out to Rs. 142.59 lakhs, as against current assets and book debts amounting to Rs. 121.66 lakhs and investments are shown at Rs. 25.95 lakhs, out of which Rs. 25.19 lakhs are quoted at Rs. 54.22 lakhs.

Currently, the Rs. 100 fully paid ordinary shares of the Company are quoted at Rs. 190 *cum-div.* and offer, on the *ex-div.* basis, a net yield of 2.8 per cent per annum at the rate of the 1962 dividend.

INDORE MALWA'S PROFIT DECLINES

DIVIDEND REDUCED

DURING the year ended 31st December 1962, the Indore Malwa United Mills Ltd. (Chairman: Mr. Kudilal G. Seksaria, Bombay) suffered a sizable setback in gross profit from Rs. 32.67 lakhs to Rs. 14.14 lakhs, despite higher sale proceeds of Rs. 396.33 lakhs, as compared with Rs. 347.52 lakhs in the previous year. The decline in profit is attributed by Directors to the rising spiral of manufacturing costs and the Company's policy of keeping minimum stocks and of moving the production at an accelerated pace, as can be seen in the reduced closing stock of Rs. 54.61 lakhs, as against Rs. 70.27 lakhs a year before. Up to the end of September, the results of working were satisfactory, but, during the last quarter of the year, the Company had to incur heavy losses owing to sales at lower prices in order to meet the export obligations and to keep the stock at the minimum. As a result, the profit, which was expected to be somewhat near to the previous year's figure, receded substantially. The increase of about Rs. 48 lakhs in sale proceeds is made up of Rs. 41 lakhs on cloth sales and Rs. 7 lakhs on yarn sales. The Directors regret that the target of Rs. 80 lakhs for yarn sales could not be achieved, as the Textile Commissioner refused to renew the permission for running 3,800 extra spindles from June 1962, mainly in view of the acute shortage of cotton. It follows, therefore, that, had the Textile Commissioner granted the permission, the profit would have been higher.

The increases in costs and expenses have been tabulated in the table accompanying this review. It may be noted that, during the year, the Company has paid Rs. 1.90 lakh as bonus to its employees for the year 1960, which is equivalent of 4.8 per cent of the basic wages earned by them. As the payment of bonus is allowed as an expenditure in the year of payment, the Directors have not adjusted the liability of bonus for the year 1961, nor have they made any provision in respect of the year 1962. The net profit, after allowing Rs. 6.26 lakhs (Rs. 4.55 lakhs a year before) for depreciation, Rs. 1 lakh (Rs. 12.75 lakhs) for taxation and Rs. 28,916 (Rs. 2.15 lakhs) as remuneration to the Committee of wholetime Directors, amounts to Rs. 6.59 lakhs, as against Rs. 13.22 lakhs. Out of this, reserves have got Rs. 3 lakhs, as against Rs. 8.11 lakhs a year before. The dividend on the 100-rupee ordinary shares has been pruned from 10 per cent to 7.5 per cent per annum, taxable, at which level it is even one point lower than the dividend for 1960. The carry forward is Rs. 8,880, as against the Rs. 26,590 brought in.

The following comparative table indicates the progress of the Company in the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

* Subject to deduction of tax.

The Company's appeal for the accounting years 1954 to 1957 have been decided by the Appellate Assistant Commissioner of Income-tax substantially in its favour, and, as a result, the tax liability for the said years will be wiped out. However, there are certain points which the Company wants to take in appeal to the Income-tax Appellate Tribunal. The appeals for the accounting years 1942 to 1947 are still pending in the Supreme Court.

Considering that, in view of the fears of a fresh Chinese aggression and the new budget levies, the state of cloth trading is not likely to improve appreciably, the Directors feel that, in spite of the Company's renovation and modernisation programme being in full swing, it is difficult to foretell the current year's prospects. The Company added new machinery

THE SHREENIWAS COTTON MILLS LIMITED

CHAIRMAN'S SPEECH AT ANNUAL MEETING

A REALISTIC PRICE STRUCTURE URGED

A PLEA to the Government to formulate a price structure for cotton textiles whereby the industry, after paying a reasonable return to investors, is left with necessary funds for renovation and modernisation, was put forward by the Chairman of the Shreeniwas Cotton Mills Limited in his speech at the Twenty-eighth Annual General Meeting of the Company held at Bombay on Tuesday, 25th June 1963. The Chairman stated that the report of the Tariff Commission, which inquired into the cloth prices, had now become almost out of date, in view of the enormous increase in the cost of manufacturing since the inquiry was made and, therefore, any decision in the matter of prices would be obviously unjust and unfair to the industry.

The following is the full text of the Chairman's speech:

GENTLEMEN,

I have great pleasure in welcoming you all to the twenty-eighth annual meeting of the Company. The audited accounts, together with the Director's report, have been in your hands for some time and I propose to take the same as read with your consent.

The year 1962 has been most critical for the country since independence. The unprovoked massive Chinese aggression on our borders in October last year created an unprecedented atmosphere of solidarity and unity in the country to repel the brutal invader. It is really very remarkable that all sections of the community responded spontaneously to the call of the motherland to defend its territorial integrity and the business community also played its vital role not only in making contributions to the National Defence Fund but also in holding the price line and coming to the assistance of the Government in various other ways in the mighty task of defending the country.

The Company's working for the year under review was adversely affected due to many reasons. Under the award of Shri Y. B. Chavan, the Company had to pay about Rs. 7.62 lakhs as bonus to workers for the years 1957, 1959 and 1960 in excess of the provisions made for those years. Additional provision of Rs. 2.40 lakhs for taxes of 1961 has also to be made in this year's account due to 5 per cent increase in rate of tax and we had also to pay Rs. 11 lakhs more as compensation to labour which, of course, will be beneficial to the Company in the long run.

Cotton

The problem of cotton which constitutes the major cost of production of cloth is still baffling solution. The unexpectedly low production last year and consequential steep reduction in carryover increased the prices of cotton. The upward revision of ceiling and floor prices will not solve the problem, as the malady is deep-rooted and the remedy lies elsewhere. The area under cotton cultivation is one of the highest in the country and, in spite of every encouragement by the Government to the cultivator, the yield per acre in this country is the lowest. It is, therefore, necessary that efforts are made in this direction to get the maximum possible yield per acre by bringing more area under irrigation and supply of more fertilisers and better seeds. The Government is also curtailing imports and the mills are facing difficulty even in procuring cotton against export retention quotas. The projected move to ask mills to purchase P.L. 480 cotton against retention quotas will hit the industry, particularly the superfine mills. However, so far as your mills is concerned, I have pleasure to inform that it is fully covered in respect of requirements of foreign cotton for the current year as well as a little beyond also.

Manufacturing Costs

Apart from rising cost of the basic raw material, the manufacturing costs are also increasing alarmingly. Due to heavy indirect taxes, the cost of living is going high, as a result thereof, the dear food allowance is continuously rising. The contribution to Employees State Insurance Scheme has been doubled from 1½ per cent to 2½ per cent. The cost of dyes and chemicals and also stores has gone up. Power tariffs have been raised and electricity duties enhanced, resulting in increase of about 25 per cent in power bill. Emergency Risk Insurance premia, higher rates of inter-State sales tax, increase in custom and excise duties on a number of items consumed by the mills, increase in transport charge and interest rates have cumulatively pushed up the cost ratio. The total cost of production of the industry as a whole has thus gone up by about 15 per cent.

The selling prices of cloth and yarn were fixed as far back as January 1961 and, since then, the mills have been selling their products at these prices, in spite of substantial increase in their cost of production. It may be mentioned that the report of the Tariff Commission which inquired into the cloth prices has now become almost out of date, in view of the enormous increase in the cost of manufacturing since the inquiry was made and, therefore, any decision in the matter of prices on the basis of that report will be obviously unjust and unfair to the industry. I do hope the Government will take all these factors into consideration in formulating a price structure whereby the industry, after paying reasonable return to investors, is left with necessary funds for renovation and modernisation.

The industry, in consultation with the Government, took certain steps to promote export of Indian textiles and it is expected that these measures will prove useful. Apart from the quality and price factor, the high tariffs and quota restrictions specially in developed countries retard our exports. Since January 1963, your mills' exports have been to the tune of Rs. 20 lakhs with further orders of Rs. 9 lakhs in hand.

Renovation and Modernisation

The foreign exchange difficulty makes it well-nigh impossible to import latest types of machinery required for renovation and modernisation. The indigenous machinery manufacturers are booked for the next two to three years, with the result that they are not in a position to cope with the growing demand for modern and up-to-date machinery for a long time to come. I earnestly appeal to the authorities to take a more liberal view and allow the import of such machinery which is quite essential for reduction of cost and betterment of quality to enable the industry to compete in foreign markets. Your management is fully conscious of the importance of modernisation and has been spending year after year substantial amounts on renovation and modernisation.

We have got sanction for installation of additional 20,000 spindles, out of which 5,300 spindles have already started working and another 10,000 spindles will be put in operation by *this year end. The remaining spindles* will be installed in 1964. So far as your Company is concerned, the prospects for the current year seem to be satisfactory and, with the installation of additional spindles, the same may be expected to improve further.

Super Profit Tax

The recently introduced Super Profit Tax Act will retard the growth of the corporate sector, as it is not based on the principles of sound taxation. This taxation, together with the reduction in saving in the hands of individuals after meeting all taxes and rise in prices, is affecting the people's capacity to invest and, if the corporate sector is adversely affected and pays less dividend, it will have further adverse repercussion on the investment market. These apprehensions have proved correct by the recent issues which have not been fully subscribed and the underwriters have had to take the same. As the pace of economic development has to be stepped up, it is all the more necessary that the Government should take effective steps to improve the flow of individual savings so as to achieve our desired objective of quicker industrialisation.

Shree Madhusudan Mills Ltd.

The modernisation and renovation programme of your this subsidiary is being carried out according to the schedule. The first instalment of Rs. 16.48 lakhs against the loan of Rs. 53 lakhs sanctioned to them by the National

Market value of ordinary shares (in rupees):	1962	1961
High	288.00	285.00
Low	244.50	214.00

Extracts from the Directors' report: In the allocation of Rs. 14,11,836 to general reserve the Board has included the sum of Rs. 6,11,836 which would normally have been carried forward at the credit of the profit and loss account. This has been done in order to ensure that in computing the reserves of the Company for the purpose of Super Profits Tax credit will be given for all undistributed profits.

Operations.—All aspects of the Company's activities recorded satisfactory trading results which resulted in a substantial increase in the profit earned during the year as compared with 1961. However, after providing for the increased taxation thereon and for the estimated liability to Super Profits Tax the amount available for distribution is insufficient to enable the Board to recommend the payment of a final dividend at a higher level than last year.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	80,01,400	Gross block	91,05,947
Reserves and surplus	1,20,07,997	—Depreciation	44,08,273
Other liabilities	1,66,08,262	Net block	46,97,674
		Current assets	2,25,89,556
		Trade investments	88,64,328
		Cash	4,86,101
	Rs. 3,66,17,659		Rs. 3,66,17,659

* Paid-up capital consists of 80,014 ordinary shares of Rs. 100 each. Of the above 40,007 ordinary shares are allotted as fully paid-up bonus shares by way of capitalisation of revenue reserves.

Highland Produce Co., Ltd.

(*Managing Agents*: Messrs. A. V. Thomas & Co., Ltd., Alleppey.)

Extracts from the Directors' report:

Crop-Tea Estates	Estimate 1962	Crop secured 1962	Crop secured 1961
	Kgs.	Kgs.	Kgs.
Pasuparai	2,40,000	2,81,100	2,52,807
Carady Goody	3,60,000	3,89,100	3,83,400
Total	6,00,000	6,70,200	6,36,207

The total crop of 6,70,200 kgs. harvested during the year against an estimate of 6,00,000 kgs. is satisfactory and records an increase of 33,993 kgs. over the previous year's production.

The F.O.B. cost for the year was Rs. 3.01 per kg. as against an estimate of Rs. 2.73 and the all-in-cost was Rs. 3.67 per kg. against last year's figure of Rs. 3.63. The net average sale price realised was Rs. 4.39 per kg. as against Rs. 4.64 during the previous year.

Cardamom: The quantity of cardamom harvested during the year amounted to 26,690 kgs. as against 19,120 kgs. in the previous year. The cost of production for the year was Rs. 5.97 per kg. as against Rs. 6.02 during the previous year and the average sale price realised was Rs. 12.64 per kg. as against Rs. 15.76 for 1961.

Crop estimate for 1963	Tea Kgs.	Cardamom Kgs.
Pasuparai	2,60,000	—
Carady Goody	3,75,000	22,500
Total	6,35,000	22,500

The Directors are happy to report that both the Estates have been regularly visited by Visiting Agents and are reported to be in excellent condition. The policy of fine plucking has been continued and a portion of the produce has been shipped directly to U.K.

Production has been satisfactory both in tea and cardamom. It would have been much better if weather conditions had been more favourable. Heavy drought experienced in early part of the season as well as in December entailed loss of crop in both tea and cardamom.

Notwithstanding the fact that the quality of the teas produced by the Company was maintained and improved, the realisation was less than last year's entirely due to the general drop in prices of tea in all markets. The Company's estates' average was however better than that of other estates in the District.

Average cardamom prices have also been much lower than last year's. The Central Government has appointed a Cardamom Marketing Committee, which has just started functioning. How far this course will help the cardamom growers with a steady and economic price, has to be watched and seen.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	21,00,000	Gross block	37,97,279
Reserves and surplus	14,35,645	—Depreciation	6,80,483
Other liabilities	11,37,410	Net block	29,07,796
		Block in progress	37,989
		Current assets	10,47,824
		Investments	4,63,970
		Cash	2,15,470
	Rs. 46,73,055		Rs. 46,73,055

* Paid-up capital consists of 1,80,000 equity shares of Rs. 10 each and 30,000—6 per cent. income-tax free cumulative preference shares of Rs. 10 each. Of the above 1,20,000 equity shares are allotted as fully paid-up bonus shares by capitalisation of reserves and share premium account.

General Industrial Society Ltd.

(*Secretary*: Mr. K. C. Bagri, Calcutta.)

Annual General Meeting—Held on 28th June 1963.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1962	1961
Sales—finished goods	2,93,44	2,57,09
,, —raw materials	2,65	1,32
,, —cotton waste	17	15

Total available balance	11,43	4,15
Transfer to general reserve	2,30	Nil
,, ,, development rebate reserve	3,35	1,30
Proposed dividend (taxable) equity	5,62* (13%)	1,08§ (10%)
Dividend per equity share	[Re. 1.30]	[Re. 1.00]
Carry forward	16	1,87

† This includes Rs. 1,35,000 being tax on issue of Bonus Shares.
* On the increased Ordinary Capital of Rs. 43,20,000.
§ On a paid-up capital of Rs. 10,80,000.

Extracts from the Directors' report: As a result of improvement in the trading conditions of the jute industry during the year, the sealing of looms under the working time agreement of the Indian Jute Mills Association was progressively reduced and by the end of December 1962, it was completely removed.

Broad Looms: The Company has by the time of this report installed 38 Broad Looms. The Broad Looms have been working seven days a week on a treble shift basis and have made a positive contribution to the working of the Company. Installation of further Broad Looms is in progress and the remaining 48 looms against the present programme of 86 will be installed during the current year which would augment the profits of the Company. The Company has also applied to the Government for permission to install another 114 Broad Looms.

Cast Iron Foundry: The working of the unit improved during the year, although the supply of principal raw material remained unsatisfactory.

Cotton Mill: The Company has acquired during the year the property of the Champdany Jute Company Limited at Champdany in the district of Hooghly where this unit has been shifted. The site with the Railway siding, well equipped Jetty and other equipments is ideally suited for running a Cotton Mill. Almost all the old equipments have been replaced by new and up to date Machinery. So far 9,240 new spindles have been installed together with the ancillary machinery. The Mills at the new site went into production by the end of the third quarter of 1962. The present target of 18,128 spindles shall be completed during the current year. The production during the period under review was not satisfactory as the installation work was still in progress. This unit on completion should be in a position to make a substantial contribution to the prosperity of the Company.

Share Capital: 2,16,000 equity Right Shares of the Company issued at a premium of Rs. 3.50 per share have been fully subscribed and the premium of Rs. 7,56,000 realised has been credited to the "Share Premium Account". 12,500 cumulative redeemable preference shares could not be issued during the year, but are proposed to be issued in the current year. The Company has obtained the sanction of the Controller of Capital Issues extending the time for such issue upto 31st December 1963.

Loan for Financing Schemes: Consequent on the delay in finalisation of the second loan application made to the National Industrial Development Corporation for financing the Broad Loom Scheme of the Company, the Directors approached the State Bank of India and are glad to report that the Bank has agreed to grant a Medium Term Loan of Rs. 40 lakhs on *pari passu* Charge with the said Corporation.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	43,20,000	Gross block	1,75,30,042

High	12.50	15.50
Low	9.50	10.67

Extracts from the Directors' report: Operation: The working results for the year are quite encouraging as will be evident from the fact that the sales turnover increased by 16 per cent, while the net profit after depreciation rose by 60 per cent. The proportion of profit, before depreciation, to sales thus increased from 8.60 per cent to 10.19 per cent. But for the developments in the last quarter of the year and the declaration of a state of Emergency, the working results would have made better showing. The Company had been manufacturing two models of motorcycles on a *defined* basis. In order to meet the requirements of the Defence Services, only the heavier type of motorcycle is now being produced. This necessarily resulted in a dislocation of production facilities. Usually, in the automobile industry production planning has to be done considerably in advance, normally about a year ahead. The sudden implementation of the change in the pattern of production, which could not be preplanned, therefore, adversely affected the working of the last two months of the year. Besides, considerable expenditure was incurred in converting vehicles on hand and in varying stages of manufacture to meet Defence specifications.

Scooter Project: These developments naturally affected the programme for production of scooters which had just got into stride, after the successful completion of pilot plant operations. The equity capital raised for financing the scooter project could not, therefore, yield the anticipated return on investment. Even so, the dividend recommended is payable on an effective larger capital. During the previous year, the shares issued for the scooter project were eligible for dividend only for a part of the year. Additional shares were issued during 1962 to the Company's foreign collaborators, The Villiers Engineering Company Limited of United Kingdom in pursuance of the earlier reservation.

General: Thanks to the additional loan of Rs. 14 lakhs sanctioned by the Industrial Finance Corporation, most of the machinery required for the second phase of the scooter project have been received and are being erected.

The Company will be introducing as early as possible a new model lightweight motorcycle in the place of the existing model. This new model, which has been designed by the Company's engineers, will incorporate some new features and will have the same basic Villiers Engine as the Scooter.

Considerable amount of planning and preparatory work in connection with the Industrial Engines Project were done during the year.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	58,30,000	Gross block	1,08,91,608

High	1,011.00	1,637.00
Low	1,128.00	1,019.00

(a) For 1961 the Company paid no dividend. But there was a bonus issue in May 1962 in the proportion 1:3.

Extracts from the Directors' report: During the year under report in October due to Chinese aggression on this country's northern frontiers, the general conditions of the market suddenly deteriorated with no demand for cloth particularly from Bengal, Bihar, U.P. and the Punjab with the result that a large stock of cloth remained accumulated and unsold at the end of the year. The supply of cotton and particularly Indian cotton continued to be difficult.

There are 94,128 spindles and 1,819 looms in the Company's Mills. The Directors have decided to replace the 400 automatic looms installed at No. 2 Mills in or about the year 1938 by 362 new automatic looms of NMM-RUTI make and also managed to change the installation permit for 150 ordinary looms at No. 3 Mills to equal number of NMM-RUTI automatic looms and orders for these have been placed. These looms have started arriving. Orders for 9,600 spindles as per permit already obtained and for further 2,400 spindles are also placed. Further permit for 96 automatic looms in replacement of plain looms has also been received.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	97,61,200	Gross block	3,04,51,582

Carry forward		

Extracts from the Directors' report: The net block has gone up by about Rs. 10 lakhs during the year under review and this substantial addition of plant and machinery has greatly helped to increase production, resulting in increased sales.

Of the new schemes sanctioned by the Government, the Tool Room has no doubt made further progress and its production is considered satisfactory. This Unit has not attained its full stature yet, because delivery of some of the machines to be added to this unit from the Government and for a few more special purpose machines, sanction is still awaited from the Government. Production in Small Tool Project is gathering momentum and the directors are happy to state that this Company has been the pioneers in introducing another new item for the first time, viz., a special type of *Drilling Tool*, which is becoming increasingly popular with the consuming interests. The Solder Resin Cored Unit has also been commissioned and trial orders have been executed satisfactorily. In the current year, the production of this Unit also will make itself felt.

So far as the Milling Machine Project is concerned, though this Company has obtained the import licence, due to the growing competition and the very heavy capital cost involved, the Directors feel that this scheme should be kept in abeyance for the time being or until such time as the circumstances are more propitious.

The Company has maintained the progress and the profits in spite of difficulties.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	40,00,000	Gross block	39,60,644

Carry forward	Nil	94
Market value of ordinary shares (in rupees):	1962	1961
High	50.00C.R.	36.87
Low	30.00X.R.	21.25

Extracts from the Directors' report: In the allocation of Rs. 2,59,559 to general reserve, the Board has included the sum of Rs. 59,559 which would normally have been carried forward at the credit of the profit and loss account. This has been done in order to ensure that in computing the reserves of the Company for the purpose of Super Profits Tax credit will be given for all undistributed profit.

In August 1962, 1,00,000 shares of Rs. 10 each were issued for cash at par to the members of the Company. The new shares so issued will be entitled to participate in the dividend, if any, which may be declared in respect of the year ending on 31st December 1963.

Operations.—A further increase in the sales of *Switchgear* and *Electric Motors* was recorded which resulted in an improvement in the profit earned as compared with the previous year. However, after providing for the increased taxation thereon and for the estimated liability to Super Profits Tax, the amount available for distribution is insufficient to enable the Board to recommend the payment of a dividend at the same level as last year.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	25,00,000	Gross block	39,02,938

Extracts from the Directors' report: Season 1962: Green leaves produced by the Company's Estate during the year amounted to 1,22,745 kgs. which was approximately 50 per cent more than 83,921 kgs. of the previous year. This increase in production was derived due to higher yield of the young sections and extension in plucking areas. The green leaves produced were sold to Joonktollee Tea Estate.

The Tea Board Authorities have recently granted a further permit to extend the plantation in approximately 60 acres of virgin soil. This makes the total of permits received so far around 231 acres against which approximately 160 acres have already been put under tea cultivation including 26 acres planted since the publication of the last reports. Arrangement is being made to extend the plantation further during the coming cold weather to cover the permitted acreage as far as possible.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,50,000	Gross block	3,35,398
Reserves and surplus	14,11,248	—Depreciation	10,660
Other liabilities	3,57,113	Net block	3,24,738
		Current assets	11,64,560
		Investments	29,800
		Cash	3,99,263
	Rs. 19,18,361		Rs. 19,18,361

* Paid-up capital consists of 1,500 equity shares of Rs. 100 each.

AMBIKA SILK MILLS COMPANY, LIMITED

SPEECH OF CHAIRMAN, MR. RAVINDRA MAGANLAL

SEVERE SETBACK TO CAPITAL FORMATION FEARED

THE fear that compulsory deposits, surcharge on residual income, mounting taxation and rising price level would have a cumulative effect on eroding savings and inflicting a severe setback to the process of capital formation was expressed by Mr. Ravindra Maganlal, Chairman of the Ambika Silk Mills Company Limited, in his speech at the Twenty-fourth Annual General Meeting of the Company held at Bombay on Monday, 24th June 1963. It was necessary, Mr. Ravindra Maganlal said, that the tax structure should not be intricate in a country like India where legislation was carried out in a language known to a small minority. He felt that a high-power commission should be appointed to study the entire tax structure at both Central and State levels to find out, as well as to suggest, ways and means of having a flexible structure and also collecting taxes without the least possible irritation to taxpayers.

The following is the full text of Mr. Ravindra Maganlal's speech:

GENTLEMEN,

It gives me great pleasure in extending to you a cordial welcome to the twenty-fourth annual general meeting of your Company. The Directors' report and the audited accounts for the year 1962 have been in your hands for some time and I believe I have your permission to take them as read.

At the outset, I regret to say that, during the year, we had the misfortune of losing the very valuable advice and help of one of our Directors, Shri Trikamlal Girdharlal, who breathed his last on 25th December 1962.

Results Encouraging

Turning to the accounts, you will be happy to see that the working results for the year are encouraging indeed. Compared to the previous year, our sales have gone up by 43 per cent (from Rs. 1,24,81,002 to Rs. 1,77,91,287); corresponding rise in the gross profit has been 48 per cent (from Rs. 19,22,514 to Rs. 28,53,605). Nevertheless, your Directors could not recommend a higher dividend nor left over was of any sizable extent with the Company, in view of the exacting demands of our Exchequer. Of the net profit (Rs. 17,31,000), 68 per cent has been provided for meeting the current year's taxation liability, a formidable figure indeed!

Mounting figures of sales evince the rising popularity of your Company's quality products, in spite of the severe jolt to the market in the last quarter of the year consequent upon the Chinese aggression. Rising level of prices and heavy imposts of indirect taxes have accentuated the manufacturing costs; yet you will be happy to note that your Company's sales to gross profit ratio, after paying Rs. 1,00,000 to the National Defence Fund, has remained more or less stationary (from 6.492 to 6.234), showing the fruits of vigilance and check on every aspect of manufacturing activity.

During the last quarter of the year, the nation was faced with an unprovoked Chinese aggression in our Northern and North-Eastern frontiers. The Chinese attack was not the attack only on uninhabited territories, but was an attack on our very existence, our institutions and the way of thinking and living, an attack on our ideals and aspirations of peaceful co-existence. The menace was fought with a sense of oneness among the people of the nation, yet the aggression created an unprecedented dislocation in trade and industry. Most of the industries were faced with the menacing problem of dwindling trade and piling stocks. We, too, were no exception to it.

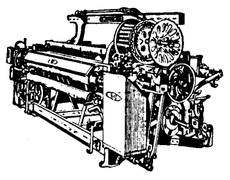
Formidable Task

We are now in the third year of the third Five-year Plan. The task that lies ahead is formidable indeed. Fulfilment of the Plan target is the solemn duty of each and every one of us. Nation's rhythm of life has to be changed to achieve the targets of the Plan. The national plan is the very hope and aspiration of the people. Each one has to contribute according to his or her capacity and ability for the fulfilment of the planned objectives to ensure an era of progress and prosperity. Planned economic development is not something vague, for this is "part and parcel of our daily thought and work."

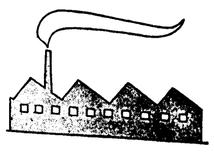
The Finance Minister, faced with the twin problems of defence and development, has, this time, cast a wide and stretching net of taxation. None will dispute the necessity of defending the frontiers and accelerating the pace of development. We all admit that a comprehensive development programme cannot be financed without calling for sacrifices from all sections of people. One should admit that heavy direct imposts have given a good deal of jitters to the taxpayers. And, obviously, jitters are not the catalysts for accelerating the pace of development. A point of diminishing returns has already been reached in the realm of direct taxation. The very theory of "taxing the taxed" is unsound in principle. So is the case with Super Profit Tax. Any scheme of taxation, with whatever philanthropic motives behind it, is unsound in principle and unprincipled in theory when it places an agio on inefficiency and draws away all the incentives in exercising economy or raising production. Most of the people would have swallowed this dose of heavy taxation with a smiling face had it been only for a temporary period of emergency.

Erosion of Savings

Finance itself is a limitation on development; yet financial and fiscal policies are meant for augmenting the finances and thereby development. Budgets have a complementary function of stimulating the savings and aid capital formation. More than four-fifths of the total savings comes from private savers, feeding the corporate sector as well as the Government with investible funds. Compulsory deposits and surcharge on residual income, mounting taxation and rising price level will have a cumulative effect of eroding the savings to a large extent inflicting a severe setback to the process of capital formation.



In a country like ours where legislation is carried out in a language known to a small minority, it is necessary that the tax structure should not be intricate. The proposal for taxes should be such as are able to carry with them a large majority of the country. I believe that a high power commission should be appointed to study the entire tax structure at both Central and State levels to find out and suggest ways and means of having a flexible structure and also collecting such taxes without the least possible irritation to the taxpayers.



Export Effort

It is impossible to sustain the economic development unless we sharply increase our exports. It makes, indeed, regrettable reading that India's share in the world trade has declined from 2.1 per cent to 1.1 per cent during the decade of planning. When compared with other industrialised countries of the world, value of India's exports in terms of percentage of national income works out to be extremely low. As against 19 per cent of the national income in the U.K., 21 per cent in Western Germany and 12 per cent in Japan, volume of India's exports works out to be hardly 7 per cent of the national income. 'Aid' has to be replaced by 'trade', if the dependence on benevolent donors is to be justified. Just to maintain the present standard of living, India must

NEWS IN BRIEF

EXPORTS of cashew kernels have gone up from 41,759 tonnes valued at Rs. 18.17 crores in 1961-62 to 48,557 tonnes valued at Rs. 1[illegible]36 crores during 1962-63.

The trade delegation from Jordan, which is currently in India, met the Secretary and other officials of the Ministry of Commerce and Industry and discussed the possibilities for the expansion of trade between the two countries.

The Central Government has set up a Mine Safety Equipment Advisory Board to keep under constant review the problem of availability of materials and equipment to the mining industry. The Board will make annual assessments of future requirements of mine safety equipment and materials and will also advise the Government on the availability of such equipment.

The fourth meeting of the Direct Taxes Advisory Committee will be held at Bombay on 1st July under the chairmanship of Mr. Morarji Desai, Union Finance Minister. The Committee, which is meeting at Bombay for the first time, consists of 17 members, including Mrs. Tarkeshwari Sinha (Vice-Chairman), Members of Parliament and representatives of trade and industry, and senior officials of the Union Finance Ministry.

A special committee, with the Director of the National Sugar Institute as Chairman, has been appointed by the Union Government to study the problems of uneconomic units in the sugar industry and to consider ways and means of dealing with them. The Committee is expected to complete its investigation within two or three months. The State Governments have been asked to co-operate in its work.

Reduced rates of premia under the Emergency Risks Insurance Scheme for the quarter commencing on 1st July next have been announced by the Government. The new rates are 1.50 nP per Rs. 100 in the case of goods and 11.25 nP per Rs. 100 in the case of factories. The premia rates in the first quarter were 15 nP and 25 nP, respectively. In the next quarter ending on the 30th of this month, the rates were reduced to 10 nP in the case of goods and 15 nP in the case of factories. Even the rates for the first quarter, it was explained, were well below the ceiling assured by the Finance Minister during the debate on the two Bills.

The State Trading Corporation of India is entering the lemongrass oil market with immediate effect with a view to giving price support to the lemongrass oil industry. Purchase depots are being set up at Tellicherry, Calicut, Alwaye, Cochin and Alleppey in Kerala State. Producers and collectors will be able to sell at these depots lemongrass oil of requisite citral content at the minimum prices fixed by the Government. The purchase price of lemongrass oil with 76 per cent citral content by the S.T.C. will be Rs. 13.75 per kg., as against the prevailing price of less than Rs. 12. Lemongrass is chiefly grown in Kerala. India is exporting about Rs. 2 crores worth of lemongrass oil annually to countries like the U.K., West Germany, the U.S., Switzerland, Japan and Italy. Lemongrass oil is used mainly in the manufacture of synthetic vitamin 'A' and as a base for some perfumes for the soap-making industry.

The National Rubber Manufacturers Ltd., the largest manufacturer of conveyor beltings in India, has just exported 750 metres of beltings. This is the Company's first and probably India's first major export of beltings. The exports were against orders secured by competing in a global tender. The other negotiations for conveyor belting exports now being conducted by the Company are expected to prove fruitful. The manufacture of conveyor belting is a highly technical process and India's total production capacity is about one-million feet, of which about 35 per cent is accounted for by this Company.

A formal agreement to continue the Fulbright Programme of educational and cultural exchange between India and the U.S. was signed at New Delhi last week. The revised agreement, which supersedes the one signed in 1950, provides a broader and more flexible scope of educational activities for the U.S. Educational Foundation in India. The activities of the Foundation are financed by P.L. 480 rupees made available by the U.S. Department of State. During the 12 years of its existence, the Foundation has been instrumental in facilitating academic work in the U.S. of about 1,500 Indians and in arranging grants for more than 500 Americans to come to India for research and lecturing.

From Abroad

Cigarette smokers in the middle age group have three times as much heart trouble and three times the death-rate of non-smokers, according to the Canadian Heart Foundation.

West German industrial reserves in the form of undistributed profits continue to shrink. Such reserves, traditionally a source of funds for plant renewals, expansion and research, were down at DM 13,300 million of undistributed profits for 1962.

The U.K. Government has given a loan of £2 million to the Government of Pakistan for financing the purchase of machinery and ancillary equipment required for industrial development. The bulk of the loan is to be used to buy machinery for sugar mills at Kushtia and Rajshahi. The repayment period will be 25 years, including a grace period of seven years.

The first Malayan company to enter oil prospecting field, the Borneo Oil Exploration, has been formed at Singapore with an issued capital of 8.4 million Malayan dollars. The Company, which will offer shares to the public, has already made applications to the Governments of North Borneo, Brunei and Sarawak for prospecting concessions.

The first of six sugar beet factories planned by the Moroccan Government has just commenced operation in the Rharb Valley. The plant has been built by the Polish Company, Cekop, at a cost of £4.2 million for the Office National des Irrigations, a Moroccan State agricultural development agency. It will have a capacity to produce 45,000 tons of granulated sugar per annum.

America's newest "weather eye" satellite (Tiros VII) is in orbit soaring 400 miles above the earth at a speed of 16,000 miles per hour. The satellite soared into orbit abroad a three-stage Delta rocket early this week. It is circling the earth once every 98 minutes. Tiros, whose main assignment is to study hurricanes and typhoons that roam across the oceans and threaten life and property, is designed to provide the most extensive photographic investigation yet of a full hurricane season.

The British Aircraft Corporation's giant four-engined VC-10 jetliner made its first international flight last week-end when it landed near Paris just 30 minutes after taking off from an airfield near London. The VC-10, which flew over to take part in the Paris International Air Show, carried 90 passengers, about 60 per cent of the normal passenger load. The first VC-10 for British Overseas Airways Corporation is expected to be delivered in a few months and will be flying early in 1964 on the Nigeria and Ghana route.

PERSONAL

DR. S. Radhakrishnan, President of India, returned on Monday this week after a three-week State visit to the U.S. and the U.K.

Mr. Pierre-Paul Schweitzer, Deputy Governor of the Bank of France, has been elected Managing Director of the International Monetary Fund *vice* Dr. Per Jacobsson who passed away early last month. Mr. Schweitzer will assume charge of his new office on 1st September next.

Mr. Nagindas H. Shah has been appointed Managing Director of the Gujarat State Financial Corporation for a period of two years.

Mr. C. P. Srivastava, Managing Director, Shipping Corporation of India, has returned to Bombay after a two-week tour abroad.

Mr. Chinubhai Manibhai and Mr. Kanchanlal C. Kapadia have been elected Chairman and Vice-Chairman, respectively, of the Gujarat Small Industries Corporation Ltd. for the current year.

Sardar Swaran Singh, Union Minister for Railways, has taken over temporarily charge of the Ministry of Mines and Fuel *vice* Mr. K. D. Malaviya whose resignation was accepted by the President on the 25th inst.

Mr. O. V. Alagesan, Minister of State in the Ministry of Irrigation and Power, has temporarily assumed charge of the Ministry of Irrigation and Power *vice* Mr. Hafiz Ibrahim whose resignation was accepted by the President on the 25th inst.

Mr. Gordhandas Jethalal has been elected President of the Bombay Metal Exchange Ltd. for the current year. Mr. Vadilal Soorchand and Mr. Mohanlal Hargovandas have been elected senior Vice-President and Vice-President, respectively.

Mr. R. K. Nehru, Secretary General of the External Affairs Ministry, will lead the Indian delegation to the 36th session of the United Nations Economic and Social Council which is due to commence at Geneva on 2nd July next.

TREND OF MARKETS

MONEY DISTINCTLY EASY

(From Our Own Correspondent)

BOMBAY, 26th *June*

With the return of funds to banks, conditions in the short-term money market were distinctly easy. Borrowers could eosily obtain their requirements and interest rates continued to move downward. Call rate among exchange and larger Indian banks receded from 3 per cent to 2½ per cent. The corresponding rate among the smaller Indian banks also declined. Calcutta, too, reported very comfortable supply of funds, the call rate easing from 4½ per cent to 2 per cent.

Reflecting the prevailing easy conditions in money, the total notes in circulation fell by as much as Rs. 31.89 crores to Rs. 2,275.19 crores during the week ended 21st June 1963. At the same time, there was a rise of Rs. 10.13 crores in the aggregate deposits of scheduled banks with the Reserve Bank and a fall of Rs. 5.61 crores to Rs. 1.30 crore in the loans and advances obtained from the Reserve Bank. The improvement in the tone of the money market is also reflected in the persistently encouraging response to the Intermediate Treasury Bills, the Bills actually sold from the 19th to 22nd inst. aggregating Rs. 4.62 crores, as against Rs. 1.35 crore in the previous week. But the response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 25th inst., continued to be poor. The total amount offered was just Rs. 2 crores (same as last week) which was also the amount invited and accepted. The average rate of accepted tenders was lower again at Rs. 2.345 per cent per annum, as against Rs. 2.350 per cent a week before.

There was a fall of Rs. 3.42 crores to Rs. 112.62 in India's foreign assets during the week ended 21st June. The fall was accounted for entirely by foreign securities held in the Issue Department of the Reserve Bank of India which amounted to Rs. 105.58 crores, as against Rs. 109.08 crores. Balances held abroad, however, were higher but by only Rs. 8 lakhs at Rs. 7.04 crores.

The total credit made available by scheduled banks climbed down by as much as Rs. 20.64 crores to Rs. 1,540.38 crores. Simultaneously, their deposits improved by Rs. 12.86 crores. Borrowings from the Reserve Bank, as a consequence, fell by Rs. 16.31 crores to Rs. 7.87 crores, of which the share of those against usance bills was Rs. 2.78 crores, a decline of Rs. 6.13 crores. Investments were lower by Rs. 4.88 crores at Rs. 632.44 crores.

A notable development of the week in so far as the Gilt-edged market is concerned was the suspension, by the Reserve Bank, of the sales of three Central loans with effect from Monday the 24th inst.; the loans are 3½ per cent 1969, 4 per cent 1969, and 4½ per cent 1986. The sales of these loans have been suspended apparently with a view to preparing the market for the implementation of the second instalment of Centre's borrowing programme; the first instalment, it may be recalled, consisted of the issue of conversion loans. The loans of the Central Government are expected to be announced within a week. The Government, according to some circles, may reissue 4 per cent 1969 and 4½ per cent 1986 loans, besides issuing 4½ per cent 1972 loan.

Simultaneously with the suspension of three Central loans, the Reserve Bank raised the purchase price of 3½ per cent 1964 loan by 10 nP to Rs. 99.70.

The outstanding balances of the 4 per cent 1963 loans of Maharashtra, West Bengal, Uttar Pradesh, Madhya Pradesh, Behar, Mysore, Saurashtra, Hyderabad, Madhya Bharat and Kerala will be repaid at par on 15th July next, with all interest due upto that date. It has been made clear that no interest will accrue on the loans after this date.

Conversion loan (3 per cent) 1986 was well fancied and spurted by 45 nP to Rs. 64. 3½ per cent 1968 picked up 30 nP to Rs. 98. 3 per cent 1970-75 gathered 20 nP to Rs. 87. 3½ per cent 1967 put on 10 nP to Rs. 98.55.

In the foreign exchange market, the banks' selling and buying rates per 100 dollars were unchanged at Rs. 478 and Rs. 474.50, respectively. In New York, the pound sterling firmed up again *vis-a-vis* the dollar, the spot rate rising from 280.010-280.050 cents to 280.030-280.060 cents and the three months' forward from 279.600-279.640 cents to 279.710-279.740 cents.

WEATHER DOMINATES COTTON FUTURES

(From Our Own Correspondent)

BOMBAY, 26th *June*

Weather dominated the cotton futures market during the week under review. Reports of lack of rain in certain leading cotton tracts induced firmness in the cotton futures early in the week. In fact, despite the bearish implications of a record crop of 5.0 million bales expected during the current season, the possibility of larger imports of U.S. cotton, thanks to the barter deal involving exchange of Indian manganese ore against import of American cotton, and the power cut imposed in many parts of the country, futures prices maintained a firm undertone. However, sentiment underwent a change towards the close of the week. News of showers in Akola, Amravati and Khamgaon tracts gave rise to the hope that no serious damage would be done to the crop. This prompted selling which led to a decline in prices. The Jarilla August contract declined from the week's opening rate of Rs. 707.50 to Rs. 699 today, although the finish was a shade higher at Rs. 701.

Dwindling mill demand was reported from the spot market at Sewri. Most of the mills would appear to have covered their requirements and withdrawn from the markets. Needy mills, however, showed interest in ready lots of such popular varieties as Co2, L.147 Digvijay, Surti and 197/3. Prices ruled easy.

Barring stray interest in zoda and yellow pickings, export demand for cotton was negligible. Spinners, however, showed moderate interest in foreign cotton, especially Sudan, Egyptian and African cotton. Interest in U.S. cotton was poor. The signing of the proposed barter deal, involving exchange of U.S. cotton for Indian manganese ore, is awaited with interest.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Kalyan 980; L.147 1,225; Hubli Laxmi 1,140; 197/3 950; Busoga (U.N.U.G.) 1,180; B.P. 52 1,190; Kernak-15 1,825.

A divergent trend was witnessed in the Karachi cotton futures market during the week under review. While the nearby July contract eased, thanks to hedge selling, from Rs. 73.55 last week to Rs. 73.10, the January contract attracted speculative support and firmed up from Rs. 70.30 to Rs. 70.70. Spot prices ruled steady.

Trading in the Liverpool cotton futures market was featureless during the week under review also. Prices ruled in a narrow range showing negligible net change over the week. Ready demand covered a wide selections, including Sudan, South American and Middle East growths.

The following are the latest available quotations—in pence per lb.—from Liverpool:

July 23.25; October 32.85; December 23.15.

Cotton futures in New York scored handsome gains during the week. Short-covering in nearby July, and speculative buying in the more distant position resulted in a rally in prices. Part of the buying was attributed to the prolonged delay in Congressional action on cotton legislation.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago:

(In cents per lb.)

	25-6-63	18-6-63	11-6-63
July	34.07	33.79	33.45
October	33.02	32.75	32.60
December	33.11	32.82	32.68
New York Spot	35.65	35.70	35.80

GOLD TRADING AT STANDSTILL

(From Our Own Correspondent)

BOMBAY, 26th *June*

With the announcement of amendments to the Gold Control Rules from Monday the 24th inst., as detailed later in this report, trading in gold bullion came to a standstill. The price of gold .996 fineness, which moved down from Rs. 113 on Thursday the 20th inst. to Rs. 111 on Monday the 24th inst., as against the last week's closing level of Rs. 114.50, was nominally quoted later in the week around Rs. 111. Business in sovereign, too, stopped at Rs. 85 on Monday. While dealers awaited official copies of the amendments, they were taken aback by the clarifications published in newspapers today, since they gave sweeping powers to the Excise officials. Further, it was too early for trading in 14-carat gold, as allowed by the amended Rules. Nonetheless, some scattered deals in such gold were reported at Rs. 66.50 to Rs. 67 per 10 grammes.

While business in gold was upset, silver moved in a narrow range between Rs. 227.50 on Thursday the 20th inst. and Rs. 226.50 today before finishing at Rs. 227, as against Rs. 227.50 last week. The undertone was steady, thanks to the drop in the daily average arrivals from 20 bars to 16 bars, though offtake also decreased from 12 bars to seven bars.

In the overseas markets—New York and London—prices were unchanged over the week. The dollar quotation for gold, however, eased from $35.08½ to $35.07½.

The following table shows the trend of prices during the week under review:

	26-6-63 (closing)	High	Low	19-6-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine)	227.00	228.00	226.50	227.50
GOLD				
Ready (.996 fineness)	111.00*	113.00	111.00	114.50
Sovereign	85.00*	86.00	85.00	85.00
London—				
Gold	250s.6d.	250s.6½d.	250s.6d.	250s.6½d.
Silver Ready	109½d.	—	—	109½d.
Silver Forward	110¼d.	—	—	110¼d.
New York—				
Silver	127.8 cents	—	—	127.8 cents

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

* As on 24-6-63.

* * * *

Certain amendments to the Gold Control Rules have come into force with effect from Monday the 24th inst., according to a Press note. The amendments, which have been drafted in the light of the actual experience of the implementation of the Rules, are primarily intended to remove some difficulties which have been reported.

The Rules as amended provide for the licensing of some non-power refineries in areas which are not served by any refineries at present. All refineries, including those operated by power, which are already in existence and are working or those which may be licensed in future, will be required to restrict the purity of any primary gold which may be produced by them to a maximum of 14-carats, and (except in certain very special cases where pure gold has necessarily to be used and the permission of the Gold Board has also been obtained) the production of gold of any higher purity in any primary form will hereafter be illegal. Existing stocks with refineries and dealers and any stocks which may be acquired by them hereafter will also have to be converted into gold of a purity not exceeding 14-carats within a period of seven days. Provision has been made in the amended Rules for the hall-marking of all primary gold which is produced by the refineries, and the necessary particulars, which are to be included or specified in the hall-marks, will be prescribed separately as soon as possible.

With these arrangements for the regulation and standardisation of the supplies of primary gold on forms which may be suitable for the production of ornaments or for essential industrial purposes, the manufacture of ornaments or other industrial products in conformity with the Gold Control Rules will, it is hoped, be facilitated.

The new Rules provide that the use of gold for the manufacture of anything other than ornaments or primary gold will also have to be authorised and regulated by the Gold Board.

The existing provisions relating to control over the transactions of persons who are dealers as well as moneylenders or pawnees, have been clarified and amplified. The new Rules provide that the manufacture or sale of ornaments and the lending of money against the pledge of gold ornaments or other gold should be carried on in separate premises and that the return of pledged or pawned ornaments will be regulated to the extent necessary for checking evasion or pawned ornaments will be regulated to the extent necessary for checking evasion or contravention of the various provisions of the law.

Simultaneously with the announcement of the above amendments to the Gold Control Rules, the Government has clarified that, during the last three-and-a-half months, the Central Excise authorities have seized primary gold and gold ornaments of more than 14-carat purity, collectively valued at Rs. 46.87 lakhs. The period covered is from the end of February last, when the deadline for making declaration of ownership under the Gold Control Rules expired, to 15th June 1963.

According to a report in a section of the Press, the Madras Government is taking steps to organise a gold refinery in Madras city on a co-operative basis. Spadework for the refinery, which will buy gold bullion and 22-carat jewellery and convert them into 14-carat gold for sale to industrial and other users, is being done by the Joint Director of Industries in-charge of industrial co-operatives.

On Sunday the 23rd inst., Mr. Morarji Desai, Finance Minister, called upon Congressmen to start a "popular" movement to change the people's "craze for gold." Mr. Desai, who was speaking to Party members at Calcutta, stated that it was not possible to change the people's habit by legislation or any other measure, unless demand for gold decreased.

The Central Government, after considering various representations received by it, has decided that coins or articles of gold other than ornaments, which have been in existence for not less than 100 years, may be sold either to licensed dealers or to any organisation maintained by the Central or State Government or to any person authorised to act for, and on behalf of, the Numismatic Society of India or to any University or any museum set up under law or maintained by the Central Government or by a State Government or any institution notified by the Gold Board. Normally, an ancient gold coin or other article will have a value in excess of the value of its metal content and a price, based on the historical or æsthetic value of the coin or article, might be offered by an authorised purchaser, if he is interested in acquiring or retaining the coin or article. Persons interested in the sale or disposal of ancient coins or other articles of archæological or historical interest will have to declare such coins or articles, irrespective of the quantity or value, as the grant of permission for sale or disposal is conditional on such declaration.

MIXED TRENDS IN SEEDS

(From Our Own Correspondent)

BOMBAY, 26th *June*

Mixed trends prevailed in the oilseeds market during the week under review. While groundnuts and linseeds ruled firm, castorseeds and cottonseeds turned weak in the absence of follow-up support. The firmness in groundnuts was induced partly by bullish crop reports from producing centres on account of the delay in the onset of mensoon and partly by the renewed support extended by *vanaspati* manufacturers, following the permission granted by the Government of India to raise the price of *vanaspati*. In a notification issued on the 20th inst., the Government of India states that the maximum prices for *vanaspati*, notified on 21st May last, have been reviewed in the light of the prevailing price of the raw oil, and in view of the persistent higher level of prices of the raw oil, some adjustments in those prices have had to be made. The increase has, however, been kept down by making certain adjustments in the distribution margins and other economies. As on the earlier occasion, prices have been fixed on a zonal basis, but the zonal structure has been somewhat simplified and there will, in future, be only four zones—broadly covering the four geographical regions. In each case two sets of prices have been notified one ex-factory and the other for retail sale. Zone A (Western) consists of Maharashtra, Gujarat, Madhya Pradesh and Goa, Daman and Diu; Zone B (Southern): Andhra Pradesh, Madras, Pondicherry, Mysore, Kerala and Laccadives, Minicoy and Amindivi islands, Zone C (Northern): Punjab, Uttar Pradesh, Delhi, Rajasthan, Himachal Pradesh and Jammu and Kashmir; and Zone D (Eastern): West Bengal, Assam, Orissa, Bihar, Manipur, Tripura, NEFA and Andaman and Nicobar Islands. Under the revised scheme, the retail prices of *vanaspati* per tin of 16.5 kgs., for instance, will be Rs. 47.19, Rs. 47.02, Rs. 48.51 and Rs. 48.67 in [illegible] C and D, respectively. The corresponding prices per kg. of loose *vanaspati* is Rs. 2.86, Rs. 2.85, Rs. 2.94 and Rs. 2.95, respectively. Similarly, maximum prices are laid down for tins of 4 kgs. and 2 kgs. as well.

Groundnut July 1963 contract rose by Re. 1.25 to Rs. 236. September 1963 contract went up initially from Rs. 230.75 to Rs. 231.75, but eased to Rs. 230.62 today. Nizam bold put on 88 nP to Rs. 48.75 and Khandesh quality 75 nP to Rs. 49.50. Oil ex-mill and railway receipt hardened by 15 nP each to Rs. 19.25 and Rs. 18.85, respectively.

Linseed, too, put on a cheerful appearance on reports of continuing dry season in certain producing areas. Bold ready gathered 75 nP to Rs. 38; it had touched Rs. 38.12 earlier. Linseed oil improved by 30 nP to Rs. 14.85. Linseed September 1963 contract rose initially from Rs. 38.50 to Rs. 38.87 by yesterday; but it turned subdued to close at Rs. 38.31.

Among castorseeds, which ruled easy in the absence of any export enquiries, September 1963 contract fell from Rs. 165.62 to Rs. 164.62. Madras small shed 12 nP to Rs. 32. Oil B.S.S. and commercial sagged by 5 nP, the former to Rs. 13.40 and the latter to Rs. 12.85.

Cottonseed white lost Re. 1.80 to Rs. 21. Both non-white and berar eased by 50 nP to Rs. 22.30.

The following table shows the closing prices of oilseeds and oils on Wednesday 26th June, as compared with those of two previous weeks:

	26-6-1963	19-6-1963	12-6-1963
	Rs.	Rs.	Rs.
Groundnuts			
July 1963 contract	236.00	234.75	230.87
September 1963 contract.. ..	230.62	230.75	228.87
Nizam bold	48.75	47.87	47.12
Khandesh quality	49.50	48.75	48.12
Oil-ex-mill	19.25	19.10	19.00
Oil commercial	18.85	18.70	18.60
Castorseed			
June 1963 contract	—	—	160.75
September 1963 contract.. ..	164.62	165.62	163.75
Ready Madras	32.00	32.12	31.50
Ready Kanpur	30.75	30.75	30.12
Oil B.S.S.	13.40	13.45	12.80
Oil commercial	12.85	12.90	12.80
Linseed			
June 1963 contract	37.75	—	37.12
September 1963 contract.. ..	38.31	38.50	38.12
Bold ready	38.00	37.25	37.25
Linseed oil	14.85	14.55	14.40
Cottonseed			
July 1963 contract	—	—	105.25

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

ART SILK YARNS RISE AGAIN

(From Our Own Correspondent)

BOMBAY, 26th *June*

A further improvement in art silk yarns following increased buying inquiries featured this week's trading in the yarn market. In sympathy, staple fibre yarns also rallied. Cotton yarns maintained a steady-to-quiet tone.

The improvement in art silk yarns was allround, with the exception of N.R.C. 150D which closed slightly lower at Rs. 11.75 a kilo, as compared with Rs. 11.90 a week ago. However, N.R.C. 120D were up from Rs. 11.92 to Rs. 12.54 and S.I. Viscose 120D from Rs. 13.55 to Rs. 14.30. Century 100D spurted from Rs. 13.13 to Rs. 14.98. This rise in prices was due, as noted at the outset, to greater demand following the steps taken by the distributive authorities to check defaults by weavers in lifting their allotments of indigenous yarn. The 2 x 40 staple fibre yarn section, which had been quiet last week, staged a noticeable rally partly in the wake of the improvement in art silk yarns and partly on better support. Thus, Century closed higher at Rs. 8.67, as compared with Rs. 8.18 a week ago, and City showed a gain of 37 nP to Rs. 9.24. Cotton yarns were steady, with the exception of 10s Podar which looked up from Rs. 17.87 to Rs. 18.25, and 30s Kohinoor which closed fractionally lower at Rs. 29.62, as against Rs. 29.75 a week ago.

It is reported that the Union Government proposes to increase the percentage of free yarn in the distribution scheme for cotton yarn from the present 16 per cent, or 20,000 bales out of the available 120,000 bales, to as much as 75 per cent. This move is said to be in the interest of the decentralised handloom sector. In order to facilitate a smooth working of the revised scheme, the Government will ask the State Governments to form associations of handloom cloth exporters and encourage weavers' associations outside the cooperative fold. The State Governments are at present connected with the distribution of yarn to the apex co-operative societies and export organisations.

Following several cases of manufacturer-exporters of art silk and synthetic fabrics having failed to apply for the allotment of indigenous art silk yarn under the export promotion scheme for such fabrics, the Union Government is understood to have fixed the time limit of 5th July 1963 for their application. According to reports, the failure of some manufacturer-exporters of fabrics to apply for their allotments of yarn has led to accumulation of stocks amounting to 3,000,000 kgs. with yarn spinners. The Government is also said to have fixed a time-limit for applying for the issue of allocation cards for yarn under the scheme in respect of exports from 1st January 1963. The time-limit fixed is one month from the date of issue of the relevant entitlement certificate against exports of fabrics, or receipt of a bank certificate for payments from abroad, depending on whichever is later. Applications not received within the time-limit will be time-barred and tantamount to loss of allotments.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	26-6-1963	19-6-1963
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12.54	11.92
Century 75D	—	13.70
S. I. Viscose 150D	13.88	13.75
Staple fibre yarn (40 x 2)—		
Hind (per kg.)..	8.80	8.25
Century	8.67	8.18
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.25	17.87
20s Modern	25.50	25.00
30s Kohinoor	29.62	29.75
40s Hind	48.00	34.50
60s Kasturi	—	47.00
80s Laxmi		83.50

JUTE GOODS FALL FURTHER

(From Our Own Correspondent)

CALCUTTA, 24th *June*

Absence of adequate interest by overseas buyers led to a further decline in the prices of jute goods during the week under review. Reports of jute plants having benefited by heavy rains in most of the jute districts in West Bengal, Assam, Orissa, and Andhra Pradesh strengthened expectations of a good crop and led to dull conditions in the fibre market, too. The bright sunshine in the last few days has been welcomed; this, coming after the recent heavy downpours, aids healthy growing. As a result, an improvement in the quality of the crop is likely. This is a welcome feature, as, with the need of mills to increase the proportion of production of hessian constructions and specialities as compared to heavy goods, mills are in dire need of more quality fibre. The poor interest displayed by U.S. buyers during the week highlighted the report of the fall in U.S. burlap consumption in May, small though it was. At 76.2 million yards, the decline was 800,000 yards as compared with April 1963. However, it should be noted that the May consumption was satisfactory when compared to only 72 million yards in May 1962. Hence the belief that the small decline last month was taken notice of in the market, because of little interest by U.S. buyers this week. Interest from other countries was also poor.

Including the figure for May 1963, U.S. consumption so far in this year amounts to 394.9 million yards recording a rise of 12.2 million yards as compared with January-May 1962. The monthly average is thus higher at 78.9 million yards, as against 76.5 million yards. Another satisfactory feature in this statistical analysis is that U.S. burlap stocks at the end of May aggregated 296.5 million yards, representing a decline of 3.7 million yards. This decline in stocks in the face of a fall in consumption has been due to lower offtake. It is, therefore, felt that it is only a matter of time before the U.S. buyers enter the market in a substantial way. Reports of good weather as well as the need of mills to continue the enhanced rate of production have naturally led foreign buyers to expect a decline in prices as and when movement of the new crop commences. It should be noted that U.S. burlap stocks at the end of May 1962 represented a stock duration of 14 weeks, as against 16 weeks at the end of last month. Against this background, it is not surprising that the New York burlap market has been depicting dull conditions in recent weeks. The latest quotations for 40" 7½ *oz.* and 40" 10 *oz.* hessian were 9.25 cents and 12.25 cents a yard, respectively. According to reports from New York, consumers there anticipated a further increase of goods in stock with mills in India at the end of this month. These reports naturally chilled sentiment here and this explains the absence of U.S. interest this week. Another factor which adversely affect sentiment was the publication of the details of jute goods despatches from mills in May 1963. According to these, total offtake for both export and local purposes was 99,900 tonnes, showing a marked fall of 4,900 tonnes as compared with the previous month. However, offtake in May 1962 was only 90,000 tonnes. Last month, the total of despatches for export abroad was 75,300 tonnes, as against 76,100 tonnes in the previous month. While hessian and miscellaneous goods at 37,700 tonnes and 14,400 tonnes, respectively, fell by 3,900 tonnes and 600 tonnes, sacking at 23,200 tonnes rose by 3,700 tonnes, thus reducing the overall decline to 800 tonnes only. As against the rise in sacking despatched for export, despatches against local demand fell to 18,800 tonnes from 22,600 tonnes in April 1963, and hessian at 3,200 tonnes represented a fall of 300 tonnes. Miscellaneous goods despatched against local purposes remained unchanged at 2,600 tonnes. The combined result was that despatches against local purposes at 24,600 tonnes fell by 4,100 tonnes.

On Tuesday last, the futures market experienced selling pressure. This, coupled with the absence of overseas inquiries, affected ready goods, and ready hessian 40" 10 *oz.* fell to Rs. 49.25 from Rs. 49.80 on the previous day and ready B. twills to Rs. 110.30 from Rs. 111.10. The expectations of an increase in goods in stock with mills as at the end of this month led to nervousness among weak holders. At lower levels, there was a modicum of covering demand, but, since turnover was small, prices continued to decline on Wednesday, when B. twills were priced at Rs. 109.60 and hessian 40" 10 *oz.* at Rs. 49.10. Reports of satisfactory shipping instructions for hessian failed to arrest the declining trend and, on Thursday, with hessian 40" 10 *oz.* at Rs. 48.90 and B. twills at Rs. 109.35 prices recorded further falls. Mills sold fair quantities of hessian against both near and forward shipments. The demand in this regard should have normally contributed to check the decline. But this was not to be for nervous holders attempted to liquidate their stocks. B. twills, as a consequence, eased to Rs. 109.10 and hessian 40" 10 oz. to Rs. 48.75 on Friday. Over the week-end, dull conditions continued to prevail, and it was only becoming too clear that foreign buyers were waiting for prices to touch rock-bottom levels before they would support the market. Ready B. twills eased to Rs. 108.40 and ready hessian 40" 10 oz. to Rs. 48.40.

Dull conditions marked activity in the fibre market. Sellers were keen to dispose of their outstanding stocks of old inferior fibre. However, they were disinclined to discount quotations for the new crop. The fibre market in Pakistan was also dull, and interest could be infused only at prices below the E.P.C. levels. Large shipments had taken place last month when a rise in E.P.C. prices had been anticipated. It was reported that many consignments were lying unsold in warehouses in overseas markets.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 24th *June*

A steady to firm trend was witnessed in foodgrain prices during the past week due to poor arrivals and good consumer demand. Thanks to fairly heavy pre-monsoon showers, sowings of *kharif* crops—maize *bajra* and *juwar*—have been done in time and good crops are expected.

After an early fall, wheat improved by Rs. 1.34 to Rs. 2 per quintal towards the week-end on brisk consumer support. The average quality was quoted at Rs. 41.75 to Rs. 43.75 and the farm produce at Rs. 44 to Rs. 50 per quintal. Arrivals averaged 1,000 maunds and were lifted by stockists. Local wheat stocks improved to 35,000 maunds. Rice advanced by Rs. 1.34 to Rs. 2.67 per quintal according to quality on brisk buying in the face of small arrivals from producing areas and small local stocks. Week-end prices were:—Rice *basmati* superior Rs. 88.41 to Rs. 96.45, *sela basmati* Rs. 85.74 to Rs. 88.41, *mainpuri* Rs. 60.62 to Rs. 61.62, *ramajwayan* Rs. 65.64, *ramunia* Rs. 68.32 to Rs. 69.66 and *gadda* Rs. 56.26 per quintal.

Gram moved up by 67 to 99 nP per quintal according to quality on firm advices from Punjab and good demand. The Punjab quality was quoted at Rs. 43.54 and the local produce at Rs. 42.87 per quintal. Arrivals totalled 10,000 maunds and local stocks improved to 32,000 maunds. Barley and *bejhar* prices continued firm on poor arrivals in the face of good demand. Barley was quoted at Rs. 33.12 to Rs. 33.75 and *bejhar* at Rs. 33.75 to Rs. 35.75 per quintal. Local stocks of these commodities were estimated around 8,000 and 4,000 maunds respectively. *Juwar* and *guwar* ruled quiet for lack of support. Latest prices were Rs. 32.15 to Rs. 36.17 per quintal for *juwar* and Rs. 32.15 to Rs. 34.83 for *guwar*. *Methi* was easy at Rs. 45 to Rs. 46 per quintal. *Bajra*, oats and other coarse grains were almost stationary. Week-end prices were:—*Bajra* Rs. 30.81 to Rs. 32.15, maize Rs. 31.48 to Rs. 32.15, oats Rs. 30.81 to Rs. 32.15 and *ramas* Rs. 32.15 per quintal.

A firm trend was witnessed in pulses. Peas and its *dal* attracted good outside support and, consequently, peas *dara* impressed to Rs. 37.27 to Rs. 38, the farm produce to Rs. 37.75 to Rs. 39.25 and peas *dal* to Rs. 40.62 per quintal. Arrivals averaged 400 maunds a day and local stocks were estimated around 58,000 maunds. During the week 10 wagons of peas and peas *dal* were despatched to Madras, Bombay and Bihar. *Arhar* also hardened on Madras support. Prices ranged between Rs. 55 and Rs. 57 for the *dara* quality and Rs. 61.62 at Rs. 63.80 per quintal for the superior quality. *Urd* improved to Rs. 66.98 to Rs. 72.34 per quintal on the poor stock position. Latest prices were:—*Arhar dal* Rs. 75.02 to Rs. 85.74, *urd dal* Rs. 80.38, *moong* Rs. 45.55 to Rs. 55.59, *moong dal* Rs. 64.30, *masoor* Rs. 52.25 to Rs. 54.92, *masoor dal* Rs. 65.64, *gram dal* Rs. 50.91 and *moth dal* Rs. 50.91 per quintal.

"KHANDSARI" IMPROVES

(From Our Own Correspondent)

HAPUR, 24th *June*

The sugar supply position here continued tight throughout this week, and, in private dealings, sugar was quoted as high as Rs. 1.70 per quintal, as against the controlled prices of Rs. 1.14 to Rs. 1.18 per quintal. Although the U.P. State Government has announced rationing of sugar in the State from the next month, as yet no arrangements have been made here to issue rationcards. Stocks of the last release have been exhausted, and the new release has not yet reached the market.

In the Muzaffarnagar market also, it was quoted up to Rs. 165 a quintal in the open market, as against the controlled price of Rs. 113.99. Retail prices, too, were unofficially quoted higher at Rs. 1.75 per kilogram, as against the controlled prices at Rs. 1.14 to Rs. 1.19 per kilo.

After a slight fall in the mid-session on slack demand, *khandsari* again turned firm in the week-end on revival of demand from all the consuming areas, including Punjab and Rajasthan. Week-end prices were:—*Khandsari* inferior Rs. 131.28 to Rs. 136.64 and superior dry Rs. 155 to Rs. 175. *Khandsari* stocks with the trade have been fast dwindling. *Galawat* production is being done these days and prices of that quality are Rs. 112.53 to Rs. 128.60 per quintal.

Ready *-gur* ruled firm during the week on brisk buying support from the South. The week's offtake aggregated 16 wagonloads to Gujarat, Madhya Pradesh and Bombay. Stocks here have declined appreciably to 5,000 maunds. Cane crop prospects have very much improved thanks to the fairly heavy pre-monsoon showers and a bumper crop is predicted on satisfactory monsoon. Ready stocks of *gur* have declined also in the mofussil markets, and, as the new *gur* production season will not commence before the end of September, a further rise in *gur* prices is predicted. *Shakker*

is also very much in request and, as the supply position is tight, prices have touched new heights. Week-end prices (in rupees per quintal) were:— *Gur* dry superior 80.38, *dara* 79 and *shakker* 80.38 to 85.84 per quintal. *Gur* firmed up in the Muzaffarnagar market on good demand in the face of poor stocks.

TEA EASY

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *20th June*

A total of 863,000 kgs. was offered in sale No. 25 held on the 18th inst. A further seasonal decline was noticeable among all teas, but there were a few brighter invoices from the Nilgiri districts. The market met with good demand. Poorest descriptions encountered less support and were easier by up to 20 nP. Low medium and medium brokens elicited useful support, but prices for these types could be quoted barely steady. A few fibrous kinds under this category were easier. Corresponding fannings met with less support and were generally lower with some withdrawals. There was good competition for good mediums which were firm. Highgrowns were irregular, the majority of them being sold at rates below last. Black leaf exportable types were sold well at around last rates and so did unorthodox descriptions. Whole leaf grades received useful inquiry at firm to dearer rates. There was good demand for tippy teas.

The quotations (per kg.) were as follows:

	1963 Rs.	1962 Rs.
Low mediums	4.00-4.15	3.10-4.00
Mediums	4.20-4.35	3.90-4.30
Good mediums	4.40-5.10	4.30-5.25
Nilgiri B.O.P.	4.40-5.55	4.00-5.95

The average price realised in sale No. 25 was Rs. 4.16 per kilo, as compared with Rs. 4.23 a week ago and Rs. 3.89 in the corresponding sale last year.

In dust sale No. 25 held today, 380,000 kgs. were offered. The market met with strong and active demand. Medium teas were well supported at firm rates with cleaner types selling well. Residual descriptions, though they received fair inquiry, were slightly easier. Unorthodox sorts were a strong feature at irregular and slightly easier rates with selected lines selling well. Highgrowns encountered keen competition and were fully firm to sometimes dearer. Black leaf grades were sold well.

The average price realised in dust sale No. 25 was Rs. 3.93 per kilo, as against Rs. 3.95 a week ago and Rs. 3.24 in the corresponding sale last year.

Colombo: Just under 7¾ million lbs. were on offer. The market opened to strong demand. Mediums came to an irregularly easier market, whilst uvas and lowgrowns were about firm.

London: North Indian and other growths: In Monday's auction, there was fair general demand. Old season's North Indians, however, were up to 3*d*. easier.

Ceylon and South Indians: In Tuesday's sale, there was fair demand and prices were slightly easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 26: 864,000 kgs. offered. Good general demand. Low medium and medium brokens about steady. Similar fannings 10 to 20 nP lower. Good mediums firm. Highgrowns irregular and lower. Unorthodox dearer."

TEA ARRIVALS IMPROVE

(*From Our Own Correspondent*)

CALCUTTA, *24th June*

The strong demand during the last week's tea dusts sale reflected the buyers' anxiety to replenish stocks as early as possible in view of the negligible carry-over from the previous season. Bidding during the last week's export auctions also disclosed a similar trend. Besides, it is customary on the part of foreign buyers to show greater interest at the beginning of the season, since tea produced in the summer months is invariably the best quality of the season. Tea arrivals in Calcutta from upcountry stations showed a further improvement this week, but the arrivals will be substantial only after two to three weeks. The keen enquiries for forward booking space for tea continued during the week. The further decline in the U.K. tea stocks during the week ended 14th June to 145.85 million lbs. from 149.81 million lbs. in the previous week is an index of the need of the British stockists to enter into commitments. It was, therefore, only natural that good demand prevailed during last week's auctions held in the Mincing Lane. The end-of-season North Indian teas met with keen attention there.

The fact that output last month amounted to 36.55 million lbs., as against the slightly higher figure of 36.69 million lbs. in May 1962, also encouraged sentiment. Thus production up to the end of May 1963 has been only 49.29 million lbs., representing a short-fall of 4.48 million lbs. as compared with the figure for the corresponding period of the previous season. Last year, production was smaller than in 1961, but it balanced with demand. With the improvement in the weather, the shortfall this season will be made good, though the output may not exceed the 1962 figure. The export demand has been encouraging. With the decision of the E.C.M. to allow entry of tea duty-free, it is expected that tea consumption in the Community will increase. At the same time, it is expected that tea consumption in India will also increase.

The rapid increase in production in East Africa, where in the decade 1952-62 the increase was by 160 per cent, stresses the need to raise output in India at decreasing marginal costs. If India is not able to capture a proper share of the expansion in world consumption, there cannot be any guarantee to inroads into India's markets by other producing countries.

With the fall in direct shipments of tea for participation in the U.K. auctions in recent years, the quantity of tea auctioned in Calcutta and Cochin has gradually increased. In 1962, tea auctioned in Calcutta totalled 3.4 million chests, as against 2.1 million chests in 1950, thus recording a substantial increase of 61.8 per cent over a period of 12 years. Naturally, the need for a bigger auction room in Calcutta was felt, and it was decided to construct one. Construction is now complete, and the new room is housed in a 10-storey building in Mission Row, the foundation-stone of which was laid by Mr. Nehru in December 1961. The Union Minister for International Trade, Mr. Manubhai Shah, is expected to open the new auction room tomorrow.

Dusts on offer totalling 5,973 chests in the internal sale held last week met with a strong general demand. Keen competition was offered to C.T.C. teas, of which the bright liquoring types were a particular favourite. Prices of all C.T.Cs rose. The keen demand for C.T.Cs has not come as a surprise, since it had been known for some time that consumers are showing preference for this type of tea. Darjeelings, having flavour, were in keen demand, and prices rose. Plain orthodox teas, however, eased. Legg-cut teas found buyers at rates lower by 10 to 20 nP, while the small and powdery teas were about firm.

FIRM TONE IN METALS

(*From Our Own Correspondent*)

CALCUTTA, *24th June*

Firm conditions were again seen in the metal market during the week under review. On the London Metal Exchange, however, both tin and lead eased. Spot tin there opened at £909 a ton and, with the continued offer of buffer stock, demand became slack. As a result, the price eased to £899. The fall in price has naturally caused disappointment to the Malayan producers. It was reported that possibly the U.S. General Services Administration would consider a price of £850 a ton being fair, but according to reports from Malaya, it is hardly possible for production to rise to the level of demand as long as the U.S. has plenty of stocks awaiting disposal. The price, in Calcutta, was firm at around the earlier level of Rs. 4,000 per 100 kgs.

Copper continued to be in short supply and utensil copper scrap was firm at Rs. 568 per 100 kgs. In London, cash copper had buyers at the unchanged level of £234 a ton. The three-months' metal was quoted between £234 and £234¼. Lead, in London, opened at £65⅛ a ton and eased to £64⅞, while zinc closed higher on balance at £76⅛ a ton, after opening at £75⅞.

KIPS EASY

(*From Our Own Correspondent*)

MADRAS, *24th June*

Arrivals of tanned goods from the tanneries were normal this week and the clearance was good at prices a shade lower than in the previous week. Enquiries for cowhides light weights and lower selections were fair, but importers were not keen to place business at the last levels. Demand for cowcalf was good, but stocks were small.

Export trading was difficult in the tanned skins section, as the E.I. tanners were quoting very stiff prices following the sharp rise in the raw markets. There was allround demand for tanned goat skins, and importers' buying was selective for the immediate requirements. Increased prices were established for top class tannages in goat and sheep skins and the quantities involved were small. Buyers in the Continent and the U.S.A. have so far declined to pay the prices quoted at the origin, and shipment trading has been poor in secondary marks.

The next tanned skins public auctions in Germany will take place on 1st July 1963, when about 68,000 goat skins and 36,000 sheep skins will be available for sale. The July tanned skins public sales in London will also take place on the 1st. The results are awaited with interest.

PERSPECTIVES & PROJECTIONS

(*Concluded from page* 1141)

imports. Defence aid is expected in addition to, and quite separately from, these, and even though no dollar figure has been given, it is expected to be very large in terms of quantity of military hardware. So the reasons for exasperation or indignation are not quite apparent, and how long will our leaders keep finding fault with foreign aid-givers to cover up their own deficient performance and delays?

The appointment of a committee under Dr. V. K. R. V. Rao underlines one of the conspicuous failures in planning—the delay in utilising foreign aid in certain cases. Unless the Government of India can find ways of making use of aid offered by East European countries, as well as of French, Austrian, Italian, Belgian and Dutch aid, there will be no sense in complaining against the decline in the European contribution to aid which the United States is insisting upon as a condition to providing equal amounts of its own aid. While it is true that the terms of lending of some of these countries should be liberalised before it can be drawn upon, it is also true that Indian project authorities do not make any effort to look outside the traditional sources of supply and equipment. These are some of the aspects on which the Committee may be expected to throw more light; the World Bank's recent survey of the Indian economy is reported to have highlighted this failure, which has an intimate bearing on Western future aid policy. The Committee should concentrate on the administrative and other failures on the Indian side which have caused the present shortcomings rather than seek to find imperfections in the system of offering aid to provide the excuse for lapses. It must be assumed that in all cases of aid, whether for Bokaro or for much smaller projects, the national interests of the aid-giving countries, and political feasibility of putting through aid Bills in national Parliaments, will be important considerations and that India must find ways of turning to her advantage the help that materialises out of such prolonged efforts.

THE VALUE-ADDED TAX

(*Concluded from page* 1144)

were first harmonised, but rather *as a* condition for such a harmonisation. The argument propounded here is that discussions on harmonisation can go on *ad infinitum*, while the introduction of the country of origin principle would force the countries involved to adjust their taxes to the degree necessary as a pure act of self-preservation.

It is regrettable that this healthy attitude has not met with any response. There is no reason why producers in those countries which have chosen to cover by means of indirect taxes a large proportion of the social costs that should primarily be borne by production, should be better placed than their competitors in those countries where these social costs are mainly covered by such taxes as follow the country of origin principle.

It can, it is true, be said that even with predominantly direct taxes the marginal producer operates tax-free, being able to compete on world markets with prices that do not include any direct taxes. But there is a much clearer dumping element in the country of destination system which, not only in marginal cases but quite generally, allows the social cost to which the tax corresponds to burden only home-market production while export production is exempt from tax. And it must clearly be an advantage for industry in a country with high indirect taxes, that imports are burdened with such compensating import duties as will make it possible to practice this sort of dumping to a considerable extent.

The fact that the country of destination principle is considered unsatisfactory need not, unfortunately, mean that it will be generally given up. However, the majority of the E.E.C. countries would like to see the abolition of the tax barriers, which are today serving the same purpose as the tariff barriers that these countries have set out to remove. The extensive studies carried out by The Six have resulted in a proposal by the Commission that a harmonisation should be effected in two steps: in the first place, they are to be abolish the cumulative turnover taxes which have caused so many conflicts over the right level of export tax refunds and import duties, and, in the second place, they are to harmonise the non-cumulative system in such a way as to make it possible to discard the tax barriers—should this be decided—and adopt the country of origin principle for the internal trade of the Common Market.

Such a harmonisation should take place through the medium of a value-added tax similar to the French *T.V.A.* However, if the expert committee (which has been responsible for these studies under the chairmanship of Professor Fritz Neumark) gets its way, credits will not be permissible as per the "tax from tax" principle but deductions as per the "purchases from turnover" principle. The purpose of this would be to avoid the differentiation of tax rates that is threatening to destroy the *T.V.A.* The method would also facilitate the later adoption of the country of origin principle, since the differences in tax levels—if these differences were at all tolerated in such a case—would make "tax from tax" credits very complicated when such credits were claimed for foreign tax. Finally, we should not forget the fact that in Germany it is by tradition forbidden to debit the turnover tax openly.

In view of, principally, the poor book-keeping standards and/or tax morals of retailers in some of the E.E.C. countries, it has been proposed that the harmonising value-added tax should go no farther than the wholesale trade. A simpler type of tax on the retail trade could be retained and varied having regard to the state of Government finances in each individual country.

DELHI LETTER

BOKARO: BLIND-MAN'S-BUFF

CHECK-UP ON AID UTILISATION

From Our Special Correspondent

NEW DELHI, 25*th June*

IF we insist on having a steel plant at Bokaro with U.S. aid, "a more or less equivalent amount will not be available for hydro-electric power plants, thermal power plants, fertiliser plants and raw materials, machinery and other assistance for development purposes." The retiring U.S. Ambassador has injected this dismal note into the already existing despondency over the future of the Bokaro project, while clarifying his earlier hopeful statement which was at variance with that of Mr. David Bell, Director of the U.S. Agency for International Development. Mr. Bell has made it clear to the American Senate, as well as the Government of India, that the U.S.A. is far from committed to aid Bokaro and that the final decision would depend on a second survey of the raw materials required for the proposed steel plant. The submission of the report on this survey may take anything upto two years.

It was probably an inauspicious moment when Bokaro was first considered as a site suitable for a large-size plant, way back in 1956, when the steel expansion programme had not yet been taken in hand. Later, Bokaro lost its position to Durgapur because it did not have suitable communications facilities as was available for the latter. Now, after such high hopes having been raised with the submission of the first report by the American steel experts a couple of months ago, it has again been shrouded in gloom. Bokaro was to be what is known as a U.S. "impact project" in India just as Bhilai by the Russians, Rourkela by the West Germans and Durgapur by the British.

Diversion of Aid

When Mr. Nehru told a recent press conference that it was a "frustrating experience," he was certainly not attempting a prediction. But that is what it has come to be finally. Even if there be a possibility of an agreement over a second survey after the U.S. makes a firm commitment to aid Bokaro, the latest proviso spelled by Prof. Galbraith will reduce it to nought. It is difficult to imagine that India will be agreeable at this stage to the diversion of funds from the current hydro-electric and thermal power plants, fertilisers, machinery and other development projects to Bokaro which, in any case, will require a much larger amount than these projects already in hand. Secondly, the U.S. aid already pledged includes a substantial amount which is untied and for use in financing essential non-project imports. India has already programmed commercial imports of the order of Rs. 1,322 crores for 1963-64 and another Rs. 1,415 crores for the next financial year on the basis of the expected untied aid. The reduced aid pledged at the Paris meeting of the Aid-India Club has even now affected this programme. On top of this, there has been continuous delay in the disbursement of the promised aid.

If India were to accept this diversion of the present aid to Bokaro, the first casualty will be our power projects, several of which are now being financed from the U.S. aid. At a time when the rate of industrial growth is positively on the downgrade, any shortage in power supply will spell disaster. Several of the new units and expansion schemes, which are due for completion shortly, will have to be held in abeyance for want of electricity. In fertilisers, our efforts to reach anywhere near self-sufficiency will have to be abandoned in addition to giving up the plan of importing fertilisers with the untied aid. And these problems can be recounted for several other projects as well. If this question of aid diversion were to become contagious among the Western Consorotium members, it might even mean that any further aid for the Rourkela plant expansion would have to be shared from the overall aid promised by West Germany at the Paris meeting. This could become a pattern in the case of several other heavy industry projects now under construction with Western aid. In such an eventuality little will be left of the third Plan. It is necessary to recall here that the Indian *aide memoire* to the Consortium had specifically kept Bokaro out of the general aid commitments expected for the current financial year.

Yesterday's meeting between the Steel Minister and the U.S. Ambassador has not clarified the position to any degree of comprehension. It seems both sides remain firm on their stand, except repeating their already known positions with regard to the second survey. On the question of diversion of funds, the Steel Ministry is obviously to consult the Finance Ministry and the Planning Commission before making its stand known. This must not be construed as a softening of the Government attitude on this issue, because the question of diversion concerns the Finance Ministry and the Planning Commission much more directly.

U.S. Senate's Approach

At the same time, it is necessary also to view the situation that has developed in the U.S.A. with regard to the aid commitment for Bokaro. It would seem that the Clay Committee report has really played havoc with the earlier work-out by the U.S. A.I.D. In view of the impending cut in the foreign aid programme, the U.S. authorities are now trying to overcome the difficulty by dovetailing Bokaro into the general aid plan. Moreover, recently a Bill has been introduced in the U.S. Senate forbidding U.S. aid to nations which go in for military purchases from the Soviet bloc. Although the major culprit under the Bill is supposed to be Egypt, we too may be roped in. We have already signed the MIG factory deal and now a military purchase mission headed by Mr. Boothalingam is to visit Moscow and Prague. (The U.S.S.R. is reported to have indicated in advance the types and quantities of military equipment which it is prepared to sell India on rupee payment. The most important item on the list is reported to be ground-to-air missles for air defence.) This might become a significant point of departure in the direction of the aid programme of the present U.S. Administration.

Meanwhile, reports have appeared in the Capital, with renewed vigour, that the Soviets and the Japanese have shown interest in Bokaro. It is as yet difficult to say whether these are seriously meant by the countries concerned, or have been floated by interested parties just to spite the U.S. for its interminable negotiations and dilatory moves on the Bokaro project. There has been no confirmation of any Soviet offer on Bokaro either by the Minister of Steel or by the Prime Minister, both of whom had been specifically asked about it. The difficulty about taking cognisance of any rumour about Japan's interest lies in the fact that there is so far no information on hand of that country's experience in setting up steel mills abroad. However, the basic problem remains that, whether it is the U.S.A., U.S.S.R. or Japan, we are losing one of the most valuable resources for our economic development—time. With the present situation, there is no hope of our salvaging the third Plan steel target even in mid-fourth Plan. And one does not know how long we will be forced to play this blind-man's-buff.

Foreign Aid Utilisation

The V. K. R. V. Rao Committee to probe foreign aid utilisation delays has been appointed none too soon. The World Bank and some of the aid-giving countries have lately complained about it. It is gratifying to note that the Government of India has acted promptly. A more thoughtful procedure would have been a probe even earlier than the complaints came through, since we ourselves also have had occasions to notice this shortcoming. The probe will not be of a general nature but will concern itself with the problems relating to certain specific projects in the public sector.

A measure of the slow utilisation of aid is shown by the fact that out of a total authorisation of Rs. 2,196 crores till the end of the last year, the balance available on the 1st of January this year was Rs. 1,544 crores, or in other words, about 70 per cent of the authorised aid remained unutilised. This is a rather shocking account. But, then, it will be an extremely cock-eyed estimate of the situation to put the entire blame on this country alone. It must be kept in mind that, to a large extent, the non-utilisation of foreign aid is inherent in the processing of aid through various stages of finalisation, entitlement and actual availability. This is also illustrated by the fact that, while a big chunk of the foreign aid promised and made available remained unutilised, this country was forced to deplete its foreign exchange reserves and even increase the borrowings from the I.M.F. by as much as Rs. 70 crores.

But all this does not take away the urgency of the probe, for, any further delay in setting matters right will inevitably lead to some hesitancy on the part of the donors. The shortfalls in the Plan targets and the slow rate of economic growth during the past two years have definitely contributed to the large unutilisation of the aid funds. To this could be added also the faulty implementation of the projects and wrong allocation of priorities in certain cases. An instance of our failure to make the proper preparations and in time to make the best use of the aid asked for is provided by the state of affairs regarding the World Bank loan of Rs. 14 crores for private-sector coal mining. Although the time limit for the loan expires in another five days, one-fifth of this amount still remains to be utilised. For various administrative and procedural reasons, shortage of rupee finances has become an insurmountable obstacle and the remainder of the aid might have to revert to the donor.

The appointment of the probe committee is, thus, a move in the right direction. If the urgent need is to go into the problems of certain specific projects and work out methods of solving them immediately, the committee should thereafter be asked to make an assessment of all the projects in this country which depend on foreign aid, whether in the public or the private sector, and set up norms for each of them so that any failure at any spot is detected forthwith and the defects rectified.

AMBIKA SILK MILLS CO., LTD.

(*Concluded from page* 1170)

double its exports within a decade. All these lead us to an irrebuttable conclusion that the efforts needed on the export front should be heroic. One, however, cannot help thinking that all the incentives, assistance, bounties and subsidies for export remain only tall talk, if the charges and surcharges, tolls and taxes, levies and duties together go on adding indefinitely to the cost of production.

The Government should also bear in mind and realise that the industry must have, for manufacturing quality goods and to attain and maintain high efficiency, proper and uninterrupted supplies of required raw materials, modern machinery and equipment. Then only the coveted target for exports can be fulfilled. I am sorry to observe that, since several years, no modern machinery is being allowed to be imported as far as art silk industry is concerned and the industry is being called upon to function with the old and in many cases outdated machinery. This position requires quick and sympathetic attention of the concerned authorities.

Before I conclude, I would like to thank all my colleagues on the Board who rendered unflinching co-operation throughout the year.

I am happy to say that your Company could receive unsparing co-operation from the members of technical and administrative staff throughout the year. On the labour front, we had a peaceful working. It is the endeavour of the management to create in every employee a sense of pride in being a part of our organisation. I take this opportunity of thanking them all on your behalf.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

SHREENIWAS COTTON MILLS LTD.

(*Concluded from page* 1167)

Industrial Development Corporation has been received. The permission of the Central Government for installing additional 20,000 spindles for balancing purposes has also been received. The arrears of dividend on preference shares have been paid off upto 30th June 1957.

Shree Gopal Industries Ltd.

The working of your this subsidiary is encouraging. This year, the Company may show small surplus after providing fully for current year's as well as past years' depreciation. The Company has got licence for installing additional 13,000 spindles and necessary steps are being taken. The investment in this Company, therefore, seems to give better results.

I would, in the end, like to put on record appreciation of the valuable contribution of the workers and the members of the
