(3) If any dispute arises in regard to the amount of compensation payable under sub-section (2), either party may make an application to the Land Tribunal within whose jurisdiction the land or the major part thereof is situated for deciding such dispute.

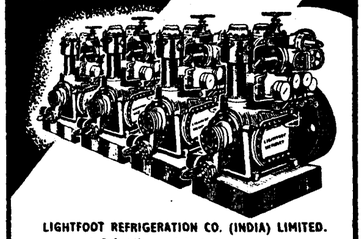
67. *Certain claims for arrears of rent not to be enforced against Government.*—No claim of any person to any arrear of rent or any other amount accrued or due in respect of any land for the period prior to the date of taking possession of such land under section 62 shall be enforced by any court whether in execution of a decree or otherwise against the Government or against any person holding the land under the Government.

68. *Landowner's right to resume under Madras Act XXV of 1955 not affected.*—Nothing contained in this Chapter shall be deemed to affect the right of any landowner under the Madras Cultivating Tenants Protection Act, 1955 (Madras Act XXV of 1955) to resume possession for purposes of personal cultivation of the land the possession of which has been taken by the authorized officer under this Chapter and for the purposes of such resumption the Government shall be deemed to be the cultivating tenant in respect of the land aforesaid.

69. *Furnishing of return on acquisition by lease of any land in excess of cultivating tenant's ceiling area.*—(1) If, on or after the notified date, any person acquires by lease any land which together with the land, if any, already held by him, exceeds in the aggregate the cultivating tenant's ceiling area, he shall, within ninety days of such acquisition, furnish to the authorized officer within whose jurisdiction the land or the major part thereof is situated, a return containing such particulars as may be prescribed.

(2) If he furnishes the return or fails to furnish the return or furnishes an incorrect or incomplete return, within the period specified in sub-section (1), the provisions of sub-sections (2) and (3) of section 61 and other provisions of this Chapter shall, as far as may be, apply as if it were a return required to be furnished under sub-section (1) of section 61.

70. *Removal of doubts.*—For the removal of doubts, it is hereby declared that nothing in this Chapter shall apply to any land held by any sugar factory as tenant.



71. *Effect of certain Acts.*—The provisions of the Madras Cultivating Tenants Protection Act, 1955 (Madras Act XXV of 1955), the Madras Cultivating Tenants (Payment of Fair Rent) Act, 1956 (Madras Act XXIV of 1956), the Tiruchirappalli *Kaiaeruvaram* and *Mattuvaram* Act, 1958 (Madras Act XXXVI of 1958) and any other law relating to tenancy shall, except in so far as they are inconsistent with any of the provisions of this Chapter, continue in force.

CONDENSED MILK TO COSMETICS
Milk products or cosmetics, lubricants or vanaspati, paints or pharmaceuticals, processed food or printing inks, wide is the range of industries served by tin containers manufactured by Poysha. Though young in years, they are already one of the leading tin container manufacturers in the country. Over the last four years their turnover has increased by about 70%, annually ■ A great deal has been achieved in such a short time because at Poysha the emphasis is always on quality and service. At every stage of manufacture quality control is exercised by technicians, working with modern equipment. Service begins even before the order is placed and ends only when canning is completed.

BASIC BANK RATE RAISED

FEATURE of India's monetary policy has been the allotment of a back seat to the Bank This has been so particularly since the ing of planned economic development. y to prevent a drastic fall in the market of Government securities and a desire to down the cost of credit to the public sec- the name of socialism have been the al aims. The authorities have been suc- in achieving their objectives to a consi- extent, for the cost of their domestic ings has been much lower than in most ed countries. But the effect of this policy ngs has been injurious, besides helping ic disparities to broaden. For, apart he fact that interest rates could be kept only with the help of a large dose of de- ancing in both the public and private the low interest rates policy of the Gov- has been more beneficial to the rich the poor. In addition, this policy has n responsible, in an imperceptible way, avating the pressure on the balance of s position. It is true that, in the past rs, there has been a change in the offi- icy in favour of higher interest rates, change has been gradual, halting and rted. An upward adjustment in interest ed to be made only when forced by t conditions and under the persuasion of ternational Monetary Fund. The reluct- f the authorities to follow a realistic t rates policy is evidenced by the dele- of the Bank Rate weapon to a subordi- ole. Instead of leading the market rates, ank Rate in India has been led by them. uthorities have been content to adjust the Rate only at long intervals and in the resort when it becomes patently out ignment with the rest of the interest rates ture. This unorthodox practice is in con- with that pursued by most of the managed omies in the West where the Bank Rate een the keystone of the structure of est rates.

The latest change in Bank Rate in this try, namely, an increase of ½ per cent to 4½ cent announced after the close of business nd January, is in keeping with the policy uthorities have been following all along. It ome after an interval of a little over 5½ . It is indeed only the third change in the ndependence period of 15 years and 4½ ns. The first change was made on 15th mber 1951, when it was raised from 3 to 3½ cent to shock the economy out of the ean war boom and inflation. Really, this the only occasion when the Bank Rate was ed up for the purpose for which it is usual- e, namely, to give a shock treatment, to xcessive speculation and to warn the of the need for less spending and more The second change came after 5½ years, fth May 1957 to be precise, when it was d by a further one half of one per cent to nt. But long before this was done, the iv Bank Rate had gone up to 4 per cent gh an adjustment of the stamp duty on e bills. It was Mr. T. T. Krishnamachari, hen Finance Minister, who invested the duty with a monetary function. But his uity did not work for long and the de Bank Rate had soon to be brought in ment, at least to some extent, with the ailing interest rates in the market.

The 4 per cent Bank Rate had ceased to be stic at least some three years ago. This t came to be recognised by the Reserve when it felt the need to place restrictions on the quantum of its credit to scheduled banks. After considerable deliberation, the Reserve Bank introduced in October 1960, that is, at the commencement of the 1960-61 busy season, a system of slab rates under which scheduled banks' access to central bank credit was regulated. There was in effect a three-tier Bank Rate system, the rates being 4, 5 and 6 per cent. The more a bank borrowed from the Reserve Bank the higher was the cost. The average Bank Rate in that season, according to the Reserve Bank's calculation, was 5.46 per cent. But the *de jure* Bank Rate continued to be 4 per cent and efforts were made to relate the Government's borrowing programme to that rate, though not quite successfully. As those who are intimately connected with the Gilt-edged market are aware, the Reserve Bank is still holding large blocks of Government loans floated in the last two years. The three-tier system was pursued in the 1961-62 busy season also. During the peak of that season, 20 banks had borrowed at the maximum rate of 6 per cent, 15 banks at 5 per cent and only 7 banks at 4 per cent, the average being roughly 5.29 per cent, including the incidence of stamp duty. In July last, the terms of central bank credit were stiffened further by introducing a four-tier system of Bank Rate, with the maximum going up to 6½ per cent. "The new lending rate structure," to borrow the Reserve Bank's description in its annual report for 1961-62, "meant, in effect, a raising of the average lending rate of the Bank by about ½ per cent or more." Shortly after China started crashing into our territory in N.E.F.A. and Ladakh, the Reserve Bank switched back to the three-tier system, but, in substance, this did not amount to a relaxation of credit curbs, as the quantum of credit that a bank could obtain was severely limited and as the ceilings could be enhanced only if the Reserve Bank was convinced of the necessity for it and that too at a penal rate of 6.5 per cent. It will thus be noted that, during the past 2½-3 years, the Bank Rate at 4 per cent was only nominal and the real Bank Rate was much higher.

The *de jure* and *de facto* characteristic of the Bank Rate in India became a glaring feature of the structure of interest rates in July last when the Central Government entered the long-term capital market for the first time in the past three decades or so with a 4½ per cent loan. Of course, the loan was for a period of 23 years, but the fact that it was prepared to pay 4½ per cent, as against 4 per cent till then for long-dated loans, constituted a significant move towards higher rates of interest. Thus, even from the point of view of Government borrowings, India had entered the 4½ per cent era six months ago. Accordingly, a 4 per cent Bank Rate was an anomaly that should have been rectified at least in July last, if not earlier. Why did the authorities hesitate to effect a simultaneous increase in the Bank Rate at least to the level at which the Centre decided to borrow? An answer of some sort can be had from the following extract from the 1961-62 annual report of the Bank:

> "These measures (the ½ per cent increase in the average lending rate of the Bank and the enhanced rate of interest offered by the Central Government) represent substantial steps towards adjusting the pattern of rates in the organised money and capital markets to levels commensurate with the basic scarcity of savings in the economy in relation to investment needs. The Bank has also been aware of the need to reduce, in the longer run, the gap between the interest rates in the organised and unorganised sectors, so as to induce a larger flow of funds into the organised sector, which is more amenable to control, and thereby facilitate the channelling of an increased proportion of the available financial resources towards essential uses. While the implementation of this objective has entailed a shift to higher interest rates in the organised sector, the Bank has also been guided by the need to avoid any large disturbance in the capital market in the context of the substantial borrowing operations of the public and private sectors in the years to come."

The explanation contained in the last sentence of the above quotation for the gradualness in interest rate policy is far from convincing, especially in the light of experience of the developed countries and for reasons mentioned at the outset of this article. If the Central Government's borrowing programme in July last was a substantial measure of success, it was mainly because of the compulsion on the investment of the funds of the Life Insurance Corporation, the banks, the Provident Funds and various other trusts; the principal beneficiaries of these institutional investors are the middle class and low-income groups. The savings channelised through these institutions into Government loans will have been more and the need for deficit financing will have been less had the rates of interest on Government's borrowings been higher.

The *de jure* Bank Rate has been out of alignment also with the rates of interest charged by banks to trade and industry and those offered by first class industrial concerns on their debentures. Short-term commercial bank credit now costs 7 to 7½ per cent, though there may be

some privileged borrowers such as the giant industrial corporations who may be paying 6 to 6½ per cent. Recently, a Central Government-backed oil concern offered on its debentures 6½ per cent, even at which rate the response was so poor that the underwriters had to take a big portion of their commitments. Only last month, a first class industrial company floated debentures carrying interest at 7 per cent. The Industrial Finance Corporation of India, established to provide liberal long-term credit facilities for industries, is charging 7½ per cent and the L.I.C. 8 per cent on mortgages against immovable properties. Only the rates of interest on term deposits are relatively low, but that is because of the restrictive practices carried on by banks under the Inter-bank Agreement with the blessings of the Reserve Bank and the Government of India.

Having regard to all the facts mentioned above, the ½ per cent increase in the Bank Rate which the Reserve Bank has just effected represents a belated and half-hearted attempt to bring the Rate in line with the rest of the interest rates in the money market. Along with the increase in the Rate, the Bank has replaced the three-tier system with a two-tier one, by abolishing the middle-tier on which the rate of interest was 5 per cent. But since any bank which wants to borrow in excess of its maximum quota will continue to have to pay the penal rate of 6½ per cent, it would be more correct to say that a four-tier system has been replaced by a three-tier system. Be that as it may, the Reserve Bank pithily explains the step it has taken by remarking that the change made by it "formalises the existing pattern of interest rates and simplifies the system of the Reserve Bank's lending rates." This is surely an exaggerated claim. For, even at 4½ per cent, the Bank Rate is far two low as compared with the interest rates prevailing in the market and, while there may be one tier less than before, a bank wanting to borrow from the Reserve Bank more than its quota will have to go through the complicated and time-consuming procedure of convincing the central banking authorities of the need for such additional accommodation. A simpler and more effective method would be to raise the Bank Rate to 5½ per cent, if not 6 per cent, and let it remain at that level until the rate of savings in the country registers a perceptible improvement, a dire necessity for both defence and development. Since, however, neither the Government of this country nor the financiers in the private sector appreciate the value of higher interest rates, this suggestion, one realises, is a cry in the wilderness, though it is intrinsically sound. One has, therefore, to be thankful for small mercies. By formally raising the Bank Rate to at least 4½ per cent, the authorities have indicated that they do not propose to revert to the cheap money policy pursued in the Second World War and for many years thereafter. To follow such a cheap money policy in the name of defence effort at a time when a large increase in money supply will be inevitable would be tantamount to burning the candle at both ends.

WHITHER AGRICULTURE?

THERE are two general but somewhat contrary impressions about the Indian agricultural sector as it has functioned under planning over the last ten or twelve years. One is that this sector, in spite of the prosperity it has enjoyed during the larger part of the period in question, has not only not contributed a fair share to the pool of resources raised for financing general economic development but has in fact absorbed much more of these resources than what it has given. This is broadly true, for it is well known that the agricultural sector's contribution by way of land revenue, income-tax, small savings and subscriptions to public loans has not kept pace with the increase in prices and farm incomes. The other impression is that economic progress in rural areas has not been achieved in an adequate measure, that the gap between levels of income and employment opportunity in rural and non-rural areas has widened and that the agricultural economy has not been strengthened sufficiently to meet the demands of rapid industrial and economic development. This, too, is broadly true, and much of the available evidence marshalled in the presidential address of Mr. Tarlok Singh (Member, Planning Commission) at the All-India Agricultural Economics Conference held at Ahmedabad on 26th December 1962 goes to confirm it. In confining his attention to a comprehensive examination of this impression, Mr. Tarlok Singh has done well to project, at the same time, the broad perspectives for the future, albeit within the framework of policies and institutions on which the agricultural plans are based and in the evolution of which he has himself played no mean role.

The background to Mr. Tarlok Singh's appraisal of the state of the rural economy is provided by some statistical magnitudes and trends. There is, firstly, the growth of population which has thrown, and will continue to throw, an increasingly heavy burden on the rural areas. According to the 1961 Census, the number of agricultural workers has increased from about 98 million in 1951 to 131 million in 1961, that is, by 34 per cent, the proportion of agricultural workers to the total working force remaining at about 70 per cent. This large increase in the pressure of population has largely neutralised the growth in agricultural production. It may be noted, in this connection, that the net output of agriculture, animal husbandry and ancillary activities rose by 33 per cent between 1950-51 and 1960-61, as compared with the 42 per cent increase in national income over the period. The presumption here is that, in an economy which, as a whole, has been advancing only at a moderate pace, agriculture has tended to lag behind and that, with the growth of population, the gap between incomes in rural and urban areas may have actually widened. Since the population trend, as projected for the period 1961-76, shows that there will be a further addition of about 50 million to the agricultural labour force, the gap between rural and urban incomes may widen further, unless, of course, the development of agriculture and the rural economy proceeds in what Mr. Tarlok Singh has called "a truly dynamic manner."

If there has been stagnation in the rural economy in the past, does it amount to saying that the agricultural policies and programmes of the first two Plans have not been sufficiently dynamic and progressive in their impact? That seems to be so, and Mr. Tarlok Singh himself has made some very significant admissions in this connection. There is, for instance, the admission that the process of community development has not yet gone far enough to be able to tap sufficiently the local manpower and other resources of each area. Secondly, while there is statistical evidence of increasing readiness on the part of cultivators to adopt improved agricultural practices, in many areas the limits to the actual adoption of such practices are now set by the ability of the extension services to make the necessary supplies and technical guidance promptly and readily available. Thirdly, the piecemeal character of land reform legislation and its excessive reliance on the machinery of revenue administration, without adequate education of rural opinion and support by way of supplies, credit and other services and programmes for resettlement on land, have tended to diminish its impact on rural welfare and development. Fourthly, consolidation of fragmented holdings has been undertaken on a notable scale only in three or four States, and this accounts only for a small percentage of the 50-60 million acres that stand to benefit from this reform throughout the country. Fifthly, despite some advances in the field of agricultural and industrial co-operation in rural areas, the role of co-operative institutions is still quite small and the present rate of progress, especially in the fields of co-operative marketing and co-operative processing, is most disappointing. The objectives connected with the building-up of a "strong, diversified and dynamic" co-operative sector have not yet been fully incorporated into the concepts and practices of Community Development at the Block and village levels.

If, in view of these and other glaring deficiencies, the impact of economic, technical, social and administrative policies and measures associated with agricultural planning has not been felt in terms of any big increase in productivity, either these policies and measures have not been uniformly sound or, if sound, they have not been efficiently implemented. Increases of about 18 per cent in the average productivity (yield per acre) of foodgrains and about 7 per cent in that of commercial crops over the last decade have been too low in relation to the scale of investment (about Rs. 2,000 crores) in agriculture and irrigation under the first two Plans. If much larger increases in productivity are to be brought about in the third and fourth Plan periods, such of those agricultural policies as have not been well conceived would need to be modified, while the basically sound ones would have to be more energetically implemented. In this context, the many and varied suggestions made by Mr. Tarlok Singh for changes in the emphasis or the direction of accepted policies, as well as for some fresh policies and measures, point to a more dynamic pattern of agricultural reorganisation and development in the years to come. As he happens to be a Member of the Planning Commission now, one may be tempted to conclude that his ideas are likely to influence the future shape of things in agriculture. But much will depend on the readiness of politicians to accept an administrator's views.

One of the most realistic suggestions advanced by him is to the effect that, in every area where land tenure and tenancy reforms are carried out, there should be an intensive production drive through provision of supplies, credit and other services, greater emphasis on the organisation of co-operative activity, and support for rural employment programmes. If this approach had been adopted from the beginning, much of the confusion and unsettlement caused by tenure and tenancy reforms since independence could have been avoided. As the process of land reform is expected to be completed by the end of the third Plan, the State Governments should think forthwith in terms of the kind of constructive approach suggested by Mr. Tarlok Singh. Greater zeal on their part for service co-operatives than for joint farming may go a long way towards undoing the disruptive consequences of land reform. Although Mr. Tarlok Singh is a firm votary of co-operative farming, there is no need to worry about his preference therefor, as, even according to him, "the broad aim is that, over a period of ten years or so, a substantial proportion of agricultural land should be cultivated on a co-operative basis." The word "substantial" must be deemed vague and inconsequential so long as it is not precisely defined in numerical terms.

The directions in which existing policy, planning and administration would need to be strengthened have also been indicated by Mr. Tarlok Singh. Cropping patterns, in his view, should not be subject, to any marked extent, to short-term shifts in prices and demand. In keeping with the crop plan to be evolved, the relative prices and other economic incentives should be as nearly equal as possible as between different crops. In the planning of agriculture, a much more central role should be assigned to price policy and the organisation of marketing than has been done so far. The Community Development organisation in blocks would have to be greatly strengthened in terms of technical, agricultural and extension personnel. There is also need for a much more intimate connection between agricultural research and its application in the field. Lags in the utilisation of irrigation facilities constitute a critical weakness in the present agricultural situation, and so the many-sided approach suggested by Mr. Tarlok Singh seems to be absolutely necessary for remedying the weakness. With a larger and better organised labour input, it would be possible to extend irrigation, undertake soil conservation, dry farming, land reclamation and afforestation, and adopt labour-intensive agricultural practices on a scale far exceeding that yet attempted in any part of the country. A marked intensification of agricultural operations, supported by extension activities, community action and the full use of manpower and by co-operative organisations, will call for a bolder and more forward-looking approach to investment in agriculture. Otherwise the rural economy will continue to be as ill placed as it is today for mobilising its manpower and other resources and gaining adequately from, as well as supporting, the processes of industrial and economic development which have been initiated. To the question "Whither agriculture?", Mr. Tarlok Singh has thus given the clinching answer that it must be in the direction of dynamic progress through better organisation of aids, services and manpower. That, in our view, provides the right perspective for the future of Indian agriculture.

MARKET GOSSIP

An Innocuous Step?

THE rise in the Bank rate this week has been of a mild order. It has only followed, and that too belatedly, the increases that have already taken place in interest rates in the short-term and long-term sections of the capital market, as will be noted from the first editorial in this issue of *Commerce*. It need not, therefore, cause any adverse repercussions in either commodity or share markets or even in the Gilt-edged market. Sentiment has no doubt been bearishly affected, but only slightly, and even that may prove to be a passing phase. There is no suggestion in the Reserve Bank's *communique* that the banks should raise their rates of interest in advances. Nor is there any reason why they should do so, because the spread between the enhanced Bank rate and the banks' lending rate is already 2½-3 per cent—a difference sufficiently large. Further, it is only from the first of this month that the banks' Inter-bank Agreement on the minimum lending rate has come into force. Under this Agreement, the big borrowers who enjoyed the privilege of being big by paying 5-5½ per cent on their borrowings from banks will have to pay a minimum 6 per cent per annum. There is, of course, a provision in this agreement to the effect that the minimum lending rate shall be two per cent above the Bank rate subject to a minimum of 6 per cent, but it does not operate automatically, for there is also another provision in the agreement which says that any increase over 6 per cent must first be considered and sanctioned by the Executive Committee of the Indian Banks' Association in charge of the agreement. The Executive Committee has not met up to the time of writing this (Thursday night) to consider the issue and it is a moot point whether the Committee will decide to increase the lending rate to 6½ per cent so soon after the commencement of operation of the agreement. The lending rates of individual banks, however, may automatically go up in the case of those advances the terms of which are specifically linked to the Bank rate.

There might be a case for a general increase in the lending rates of banks, if the rates of interest on term deposits, now pegged under the Inter-bank Agreement, were to be enhanced. But the banks are very reluctant to pay more for their deposits. There is no provision in this Agreement which requires an automatic increase in the rates of interest on deposits when the Bank rate is raised. The Executive Committee of the Indian Banks' Association in charge of this Agreement has, however, the right to revise the rates without a referendum, in case it feels that a revision is necessary consequent upon the change in the Bank rate.

The Executive Committee of the Association may be in no hurry to make any change in the rates of interest on deposits. If there is to be any change, it has to be in the upward direction. There is a very influential section of bankers which feels that no increase in deposit rates is called for and its view is bound to prevail, for the profit-margin of banks for 1962 is likely to show a decline. Further, the rate of corporate taxation which went up by 5 per cent last year is expected to go up further in the forthcoming budget. The banks have been complaining that the cost of their operations is increasing for a variety of reasons, such as more pay to employees, deposits insurance premium and the necessity to open more branches. The Reserve Bank, they say, has been refusing them permission to open branches in centres where a bank has already a branch, in order to compel them to spread banking facilities to towns which do not enjoy them now. These are invariably small towns and the cost of opening a branch in such towns will be high and the period required to make them pay will be longer than in the case of branches in bigger, or commercially more important, centres. In view of this, the banks argue, one should avoid paying more for deposits.

Another powerful argument put forward in favour of the *status quo* in regard to deposit rates is the optimistic view taken of the prospects of deposits growth in the coming months and years. In 1962, deposits expanded faster than in 1961 without the incentive of higher interest rates, the chief reason being a bigger dose of deficit financing. Bankers feel that, with the certainty of heavier defence expenditure, currency in circulation will expand faster still in future and with that their deposits too. In view of this strong possibility, this school of thought avers that it will be superfluous to pay higher rates of interest on deposits; on the contrary, the banks may even find it possible to lower the deposit rates, perhaps in the slack season of 1963. In fact, it wonders why the Reserve Bank at all increased the Bank rate now. Its reading is that the Bank must have taken this step in order to show to the I.M.F. and the World Bank that India does not propose to resort to cheap money policy for financing the defence effort.

The aforesaid line of reasoning seems to ignore one important consideration. Unlike in the last war, India has to have both economic development and stronger defence. Again, there will be no continuous accumulation of external resources. On the contrary, the reverse will be true and India's external debts will grow. It must be borne in mind that India is not in the position of Britain which passed on a big part of the burden of the last war to its huge colonies. Any attempt on India's part to shift a part of the "defence inflation" to the friendly countries which are prepared to help it will be strongly resisted. Besides, there is no scope for trying to restrain civilian consumption by allowing prices to rise, as price levels are already high and there is a shortage of real resources. Deficit financing has, therefore, to be restricted to the barest minimum. Heavy taxation beyond a point will be equally inflationary, besides acting as a check on the inflow of foreign private capital which is necessary. So what is the alternative? There is no substitute to real, spontaneous savings. Such savings will have to be encouraged by offering all possible incentives. Higher interest rate is one of them. And, since a substantial part of the savings of the community is kept with banks, it would be unrealistic to assume that they would be allowed to keep down the rates of interest on deposits through mutual agreement among themselves. Sooner or later, the issue will come to the fore again, unless, of course, the Government and the monetary authorities happen to be paying only lip service to sound money policy.

Credit Guarantee Scheme

Two new notable steps designed to make the scheme for the guarantee of advances granted to small-scale industries—popularly called the Credit Guarantee Scheme—have just been announced by the Reserve Bank of India. One, the Scheme, which was initiated on an experimental basis in July 1960, has been placed on a permanent basis. Two, the area of its operation has been extended to cover the entire country, as against the 52 districts covered hitherto. The Scheme provides guarantee for advances made to small-scale industrial units by 93 selected credit institutions comprising 49 scheduled banks, 21 State co-operative banks, 14 State Financial Corporations, and the Madras Industrial Investment Corporation, besides the State Bank of India and its seven subsidiaries. The other banks and credit institutions, too, may avail themselves of the guarantee facility in respect of advances granted by them, provided the credit institution concerned either participates in such advances to the extent of not less than 25 per cent of the amount or undertakes to share not less than 25 per cent of losses arising from such advances. Even two or more credit institutions may grant an advance jointly.

For the purpose of the Scheme, a small-scale industrial unit will continue to mean an undertaking engaged only in manufacturing and processing (not trading), the total capital investment of which is not in excess of Rs. 5 lakhs. The maximum period for the issue of guarantee is seven years. A charge at the rate of ½ per cent per annum on the maximum amount of advance (or limit) as sanctioned is levied for providing the guarantee cover.

In operating the Scheme, the Guarantee Organisation, which is no other than the Reserve Bank, will, we are told, as far as possible ensure that delays and formalities are reduced to the minimum and the claims made under the guarantee are paid within 30 days of receipt of the required supporting evidence. The responsibility for collection of debt after the invocation of guarantee will naturally be that of the credit institution which should take such steps for recovery as are necessary or required by the Guarantee Organisation; the recoveries are shared between the Organisation and the lending institution in the manner prescribed under the Scheme.

A notable feature of the Scheme is that it does not prescribe any procedure for grant of advances by credit institutions; questions regarding terms and conditions, such as type of security, margin and rate of interest, are left to the discretion of the lending institution concerned.

The chief merit of the Credit Guarantee Scheme lies in the sharing of losses arising out of advances to small-scale industries between the lending institutions and the Government of India. The maximum amount of loss recoverable against the guarantee issued under the Scheme in respect of any one advance is, of course, only Rs. 1 lakh. Nevertheless, by providing a degree of protection to lending institutions against possible losses in respect of their advances, the Scheme will doubtless enable these institutions to liberalise their lending criteria and thus assist a larger number of small units than they would have done otherwise. It may be noted, in this connection, that, during the first two years of its working (that is, upto the end of June 1962), 2,949 applications for guarantee for sums aggregating Rs. 10.70 crores were received, of which guarantees were actually issued in respect of 2,667 applications covering a sum of Rs. 9.10 crores. The guarantee was invoked just in one account and, even here, the sum paid by the Guarantee Organisation as its share in the default was a bare Rs. 540.

Medium-term Export Credits

The Refinance Corporation for Industry has added another feather in its cap by taking up refinancing of medium-term export credits with effect from the 1st of this month. The Corporation was established in June 1958 with the primary object of providing relending facilities against medium-term loans given by selected scheduled banks to medium-sized concerns for facilitating increased production, chiefly those engaged in industries included in the second Five-year Plan. With a view to enlarging its activities and making its operations more flexible, the Corporation introduced, in 1960-61, some important operational changes in its scheme of refinance, broadly in line with the proposals formulated by it in 1959-60. The changes included (a) extension of refinancing facilities to 43 additional banks (they had been confined only to 15 banks earlier), 15 State Financial Corporations and 3 State co-operative banks; (b) freedom to financing institutions to charge their borrowers whatever interest rates they thought reasonable; (c) widening of the list of industries eligible for refinance loans; (d) decision to consider, in exceptional cases, loans for longer periods (upto 10 years, as against 3-7 years), as well as loans to industrial units with capital and reserves above Rs. 2.5 crores); and (e) grant of refinance loans to small-scale industries under certain conditions. Further steps to enlarge the scope of its activities were taken in 1961-62. They pertained to extension of refinancing facilities to loans made jointly by two or more banks or a bank and a term lending institution and to the medium-term part (that is, instalments repayable within 7-10 years) of long-term loans. To all this has now been added export finance, in pursuance of the recommendation made by the Study Group on Credit Facilities for Exporters constituted by the Government of India in April 1960.

Under the scheme which came into force on the 1st inst., the Corporation will give refinancing facility in respect of medium-term export credits, that is, credits for periods exceeding six months but not exceeding five years. This facility is, of course, limited to exporters in the private sector who are manufacturers, recognised export houses or other exporters of standing, and it will ordinarily be extended in the case of exports of capital goods or engineering goods. But the Corporation has assured the public that it will also consider the question of extending the facility in respect of other goods subject to Exchange Control agreeing to the receipt of sale proceeds within a period exceeding 180 days initially. The refinance facilities will be available to 34 banks which are authorised dealers in foreign exchange and otherwise eligible for refinance from the Corporation. The scheme also provides for refinancing of pre-shipment credit where it is combined with post-shipment credit.

The minimum amount of a loan for refinance purposes will for the time being be Rs. 1 lakh, while the maximum amount of export credits refinanced in respect of any one exporter is fixed at Rs. 50 lakhs. The loans eligible for refinance will relate to exports against firm contracts and be ordinarily covered by appropriate policies of the Export Risks Insurance Corporation. A down cash payment to the extent of 20 per cent or a letter of credit or guarantee providing for payment to that extent against delivery of shipping documents should ordinarily have been obtained from or on account of the importer before the loan is refinanced. This condition may be waived where the period of credit is short, say, not exceeding one year, or in other deserving cases. An order from the Reserve Bank granting the necessary exemption under Rule 6 of the Foreign Exchange Regulation Rules 1952 has to be obtained and a copy furnished to the Corporation.

Now that the Refinance Corporation has taken up refinancing of medium-term export credits, the need to establish a separate Export-Import Bank such as the one in the U.S. has been obviated. As we had stated on an earlier occasion, there is no need for multiplying institutional agencies, nor are the conditions and circumstances in India favourable to copy the American model of Ex.-Im. Bank. The Refinance Corporation has been doing pretty well and it can surely be relied upon to play a significant role in providing export finance on a reasonable basis through commercial banks. For the Corporation has sizable unutilised long-term funds at its disposal and it may get a large flow of similar funds in future. What is more, since the Corporation is a non-statutory body, its procedure and methods of operation are relatively more flexible than those of other institutions incorporated and governed by special laws. Viewed thus, the refinancing of medium-term export credits by the Corporation will greatly help not only in building up new export possibilities but also in diversifying and expanding the country's exports.

Austere Import Policy

Import curbs have been tightened further under the policy announced for the period October 1962-March 1963. The announcement of the policy on 24th December 1962 had been delayed by about three months and came almost at the middle of the half-year licensing period. The delay was due to the uncertainties created by the Chinese aggression and had kept industry and trade in suspense. It is true that a system of annual licensing on a selective basis was adopted in April 1962. But, in retrospect, this has not been of much use, as several changes have been made in the import policy announced last week, restricting the benefits arising from annual licensing. Some of these changes and also the further reduction in imports envisaged are admittedly beyond reproach, when viewed against the background of the present emergency. Considering the precarious foreign exchange position, even a rank optimist would have anticipated nothing better. In April 1962, when the previous import policy announcement came, sterling balances were around Rs. 134 crores, whereas today they are well below the minimum safety level of Rs. 100 crores (at Rs. 96.78 crores to be precise). Exports during the eight-month period, April to November 1962, were only Rs. 13 crores higher at Rs. 451 crores (as compared with the corresponding period in 1961) and are running much short of the annual target of Rs. 720 crores fixed by the Board of Trade. Of course, the adverse balance of trade has declined by about Rs. 44 crores to Rs. 232 crores during this period, but the gap is still too wide to warrant any relaxation in import curbs.

On the face of it, the reduction in imports is not heavy, the cut being only Rs. 8-10 crores. At an annual rate of Rs. 20 crores, the cut forms no more than two per cent of the imports in the current year. In the eight months ended November 1962, imports aggregated Rs. 683 crores (provisional figure) or an annual rate of Rs. 1,024 crores for the 1962-63 fiscal year. But even this minor reduction has upset the trade and industry, apparently because it has come on top of substantial cuts previously, and the industry base requiring imported raw materials and components has widened. The cut affects all established importers, actual users and co-operative societies, albeit in varying degrees. The established trade in particular is considerably exercised over the further inroads made into its business. It has been decided to confine the issue of licences to the established trade during the

TREND OF SHARES

BAD START FOR THE NEW YEAR

(From Our Own Correspondent)

BOMBAY, *3rd January*

WHILE the stock exchanges turned slightly steady towards the close of 1962, they commenced the new year on a distinctly subdued note. From the middle of December last, the drooping trend in equities cried a halt and yielded place to a little upward tendency due to the sizable L.I.C. buying in a couple of leading counters, which encouraged the public to make small investment purchases in strictly selected counters, especially automobile and engineering shares. Some speculative buying in the nature of bargain hunting in the hope that the Chinese might not take to arms again against India was also in evidence. Some short-covering, induced by the institutional support and long Christmas holidays (from 22nd December to 1st January in Bombay and Madras and from 24th to 26th December in Calcutta), contributed further to the recovery. The third week of December saw moderate improvement in values. Even some of the weak spots were traded above their minimum levels during that week. The rally was led by automobile shares and selected engineering issues, which were supported on ideas of unrestricted production in these industries to meet the defence needs.

The recovery, however, proved to be a short-lived affair, as, during the holidays, values in the kerb dealings drifted lower on stray selling and absence of fresh support. As the markets opened for the new year, prices moved down further on tired selling by the erstwhile buyers. The early optimism of a peaceful settlement with the Chinese seemed to be misplaced, as subsequent reports suggested that the enemy was massing strength in both men and machines in Tibet and on the borders of Sikkim and Nepal. The tenor of the recent Chinese communications to the Government of India was far from contributing to creating a climate of peace. The Chinese allegation of "suspicious" movements by the Indian Forces in the border areas only made the people of this country more suspicious about the enemy's intentions in calling the cease-fire.

All these factors and the recent statement by the Chinese Premier that the demand by India of restoration of the *status quo* on the North and the North-Eastern borders as on 8th September 1962 was unacceptable to Peking affected the market sentiment. The increase in the Bank rate from 4 to 4.5 per cent had also a bearish effect. Consequently, at the close of business today, several counters remained stuck were they were three weeks ago, that is, at their minimum levels, with sellers over. Some leading shares, which had improved quite briskly, showed, however, small gains over the three-week period. Nonetheless, sentiment was clearly weak and the tendency was to wait and watch.

* * * *

Values on the Bombay Stock Exchange, which had staged a fairly good recovery in the third week of December, lost practically all their gains during the Christmas holidays. Yesterday, when the market reopened, several counters were quoted around their minimum levels. Today, following the announcement of higher Bank rate, even the relatively more fancied shares like Telco, Hindustan Motors and Bombay Burmah had their gains clipped; Telco opened 3 points lower at Rs. 280 and Bombay Burmah 20 points lower at Rs. 620, with Hindustan Motors declining to Rs. 16.24 as against yesterday's close of Rs. 16.92. However, over the three-week period, Telco showed a gain of 8 points at Rs. 281, Bombay Burmah of 13 points at Rs. 628 and Hindustan Motors of 60 nP at Rs. 16.80. Among other shares to show important changes over the period under review were Standard which closed 25 points higher at Rs. 807, Kohinoor which were 14 points better at Rs. 291, Digvijay Cement which appreciated by Rs. 5.50 to Rs. 163.50, Premier Automobiles which gained Rs. 4.50 at Rs. 105.50 and West Coast Paper which were up by 10 points at Rs. 147. Among cash scrips, Colour Chem showed a gain of Rs. 17.50 at Rs. 342.50, Synthetics of Rs. 7 at Rs. 153, Permanent Magnets of Rs. 10 at Rs. 201.25, S.L.M. of Rs. 15 at Rs. 113, T. Maneklal of Rs. 10 at Rs. 610 and Baroda Rayon of Rs. 8.50 at Rs. 124.50.

* * * *

After putting up an early brave show on higher advices from Bombay, the Calcutta Stock Exchange turned easy during the period under review and closed with small losses in speculative issues. It was reported that yesterday 20,000 Indian Irons changed hands in the market below the minimum rate of Rs. 22, even though I.I.S.Co. showed a marked rise in its production during December. The Company's output of steel ingots improved from 85,016 tonnes to 91,175 tonnes and of pig iron from 107,690 tonnes to 116,804 tonnes. The production of saleable steel, however, showed a setback from 70,218 tonnes to 66,444 tonnes. But despatches increased from 79,856 tonnes to 80,395 tonnes.

Birla Jute, in the forward list, disclosed a loss of 81 nP at Rs. 29.75 over the three-week period and Dunlop Rubber were down by 50 nP at Rs. 37.50. But Indian Aluminium disclosed a gain of 39 nP at Rs. 33.81. The cash section had a few bright features. Dunbar, among textiles, were up Re. 1.37 at Rs. 28.37, Champdany Jute improved by Rs. 6.50 to Rs. 144.50 and Delta by Rs. 9.80 to Rs. 182, Binani Metals gained 69 nP at Rs. 10.50, Escorts showed a rise of Re. 1.25 at Rs. 19.62, Angelo Bros. were up by Re. 1.75 to Rs. 25, Goodyear gained Re. 1.62 at Rs. 40.82 and Martin Burn recorded an improvement of 62 nP at Rs. 30.37.

* * * *

Business during the period under review was restricted in Madras. The tendency at close was quiet, though some selected issues looked well supported at the current levels and closed with small gains. Thus, S.I. Viscose appreciated from Rs. 141.50 to Rs. 144, Orissa Cement closed 62 nP higher at Rs. 15.87, Madras Rubber gained Rs. 2.08 at Rs. 21.20 and, among tea shares, Parkside improved by Re. 1.10 to Rs. 24, Peermades by 50 nP to Rs. 22.25 and United Nilgiri also by 50 nP to Rs. 20.87. Tube Investments, as an exception, declined from Rs. 269 to Rs. 262.

TWO RIGHTS ISSUES

Two companies, namely, the Hindustan Aluminium Corporation Ltd., and the Kesar Sugar Works Ltd., have proposed to raise their capital by issuing right shares to their existing shareholders, subject to the consent of the Controller of Capital Issues. Hindustan Aluminium wants to increase its paid-up capital by Rs. 4 crores to Rs. 12.50 crores by issuing 40 lakh right equity shares of Rs. 10 each in the proportion of two new shares for every three shares held. Although the existing shares of the Company are quoted around Rs. 15, the new shares will be issued at par, as the Company is new with little or no reserves.

Kesar Sugar has, at present, a paid-up capital of Rs. 37.47 lakhs, of which Rs. 22.47 lakhs are in Rs. 50 fully paid ordinary shares and the balance in 5.5 per cent Rs. 100 fully paid cumulative first preference shares. The Company proposes to raise additional capital of Rs. 9 lakhs by issuing 18,000 right shares of Rs. 50 each at par in the proportion of two new shares for every five shares held. The new shares will come from the so far unissued 35,000 ordinary shares of Rs. 100 each, which are to be split into units of Rs. 50 each. Currently, the Rs. 50 fully paid ordinary shares of the Company rule around Rs. 180. Since the Company is a well established one, with a good dividend record and a strong financial position, it remains to be seen whether the Controller of Capital Issues will agree to its proposal to issue the right shares at par. In view of the depressed state of the capital market, the Company may, however, succeed in getting its proposal sanctioned as it is.

The proceeds of the rights issues will be utilised by both the companies to finance their development plans. Hindustan Aluminium has been licensed to augment its production of aluminium ingots by 30,000 tons to 50,000 tons a year. The expansion programme will cost Rs. 30 crores. The Company's existing plant, which was commissioned in May 1962, has attained 90 per cent capacity. The new plant, to be set up now, will be commissioned towards the close of 1965 or early 1966. The Company also plans to install a thermal plant.

Kesar Sugar, which had been granted a licence to raise its sugar factory's capacity by 900 tons a day, proposes to go in initially for an additional capacity of 400 tons and complete the scheme within two years at a cost of about Rs. 24 lakhs. The Company has also a scheme for the manufacture of sodium hydrosulphite, formosul and other chemicals in technical and financial collaboration with A.C.C. (Brotherton) Ltd. of the U.K. The terms of collaboration have, however, been revised and have yet to take final shape. Meanwhile, the Company has received a licence for stepping up further its distillery's capacity to 2.95 million gallons per year and is considering its implementation. In view of its proposed diverse activities, the Company will take, with the approval of its shareholders, a new name, which is Kesar Industries Ltd.

LOWER PROFIT FOR DENA BANK

The net profit of the Devkaran Nanjee Banking Company Ltd. for the year ended 31st December 1962, after providing for taxation but before making provision for bonus to staff, has declined from Rs. 29.65 lakhs to Rs. 24.08 lakhs. The setback could easily be attributed to the new developments during the year, namely, the introduction of the deposit insurance scheme and the implementation of the Bank Award, which must have led to an increase in expenses. The profit seems to have declined also because of the insufficient rise of Rs. 2.18 crores to Rs. 32.24 crores in advances in relation to the growth in deposits from Rs. 43.36 crores to Rs. 50.50 crores, as a result of which the credit ratio has receded from 69.3 per cent to 63.8 per cent. There has been an increase in branches from 107 to 112. The number of employees has jumped up from 2,188 to 2,510.

Inclusive of Rs. 13.51 lakhs brought in (Rs. 7.86 lakhs a year before), the distributable profit is, however, fractionally higher at Rs. 37.59 lakhs as compared with Rs. 37.51 lakhs in 1961. The dividend, including 7 per cent final, has been maintained at 11 per cent per annum. A proportionate dividend of 2.8 per cent on the new shares issued during the year has also been recommended. The total distribution to the shareholders, therefore, absorbs Rs. 6.90 lakhs, as against Rs. 5.50 lakhs in the previous year. The cost of bonus to staff has gone up from Rs. 3.50 lakhs to Rs. 4.50 lakhs. Transfer to reserve fund has also been enhanced by Rs. 8 lakhs to Rs. 23 lakhs. The remaining surplus of Rs. 3.19 lakhs is to be carried forward. The paid-up capital was doubled during the year to Rs. 1 crore by the issue of one lakh ordinary shares of Rs. 50 each at a premium of Rs. 2 per share. The share premium account of Rs. 2 lakhs, together with the plough-back of Rs. 23 lakhs from the year's profit, equates the reserves to the paid-up capital. The balance-sheet total as at the year-end, expanded to Rs. 55.70 crores from Rs. 48.37 crores a year before.

GWALIOR RAYON TO RAISE OUTPUT ?

The Gwalior Rayon Silk Manufacturing (Weaving) Company Ltd. is understood to have sought Government's permission to raise its productive capacity of staple fibre from 80 tons to 150 tons a day. The foreign exchange needs for expanding the capacity thus are placed at only Rs. 1 crore. The Company's Rs. 8-crore 150-ton-a-day rayon grade pulp plant in Kerala is due to be commissioned this month.

WEEK'S STOCK EXCHANGE TREND

PERSPECTIVES & PROJECTIONS

By Mercator

Government by Amendment

THE Indian Press, which has recently earned encomiums from the I.P.I. for its vigilance and freedom, has reason to congratulate itself for the prompt publication of the move to merge the office of Attorney-General with the Law Minister, followed by unanimous disapproval of its implications. Within one week, the Government's position on this question underwent a radical change; after Mr. Nehru had written to two M.Ps that the Government's legal advice was to the effect that no amendment of the Constitution was necessary to combine the two offices, a decision was taken to amend the Constitution. This episode gives a foretaste of how sound legal advice is likely to be in future when it comes exclusively within the province of the Law Ministry. Not that there are not competent legal brains in the advice section of the Law Ministry; the reluctance to give unpalatable advice, when it is known that the Cabinet is bent on any specific course of action, will become greater, so that the Government will not be in a position to be even prepared for a challenge of legality of its actions until the Press exposes weaknesses (as it did in this case) or the matter comes up before the Courts.

Anyhow the proposed amendment of the Constitution will give an opportunity for all views to be aired and for the rank and file of the Congress Party and the Opposition parties to express their opinions. While it is wrong to think that the Constitution envisaged a position of complete independence for the Attorney-General, in the sense in which the judiciary and the Auditor-General are considered independent, a merger would be improper for two major reasons. Professional advice, whether it is legal, medical or scientific and technical, must be given by one who keeps his roots and links in the profession concerned; that at this time the Law Minister is one who is also a leading member of the legal profession should not set a precedent. There is absolutely no obligation for an Attorney-General to avoid giving a strictly professional opinion on the merits of any issue; he need not take into account all the calculations of politicians. A Law Minister, on the other hand, will not only have lost touch with the law to the extent of his preoccupation with politics but will also be prevented from speaking out his mind for reasons of expediency. Secondly, the Attorney-General is expected, both under the Constitution and the rules made by the Government, to appear before the Supreme Court and the High Courts when necessary. Now, presumably, the Government will keep a panel of lawyers who will act as proxies for the Law Minister, since it is improbable that he will go to the extreme of appearing in person.

The loser will not be the public but the Government. That in a very large number of administrative and routine legislative matters, the Law Ministry's advice is now adequate is no argument for saying that it will always be so, especially on major crucial issues. The legal profession is naturally much upset by the present move, not only because it deprives it of one of the positions of eminence open to it but also because it may place at its head some time in future a person without professional merits who may acquire it by purely political means. Lawyers would be entitled to demand that the privileges hitherto accorded, as a matter of course, to the Attorney-General as a leading member of the legal profession should not continue after it has become a purely political office. Perhaps some of these implications will gradually dawn on the authorities who seem to have taken a decision in a huff; the Prime Minister has indicated that permissive Constitutional Amendment will be enacted first and the next step would follow when convenient.

* * * *

Monument to Unity?

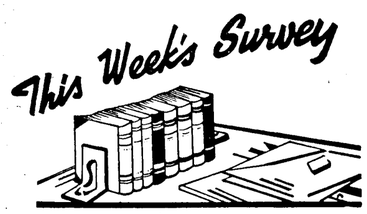
Yet another Constitutional amendment is in the offing, as a result of the Southern Zonal Council's unanimous decision to make secessionist propaganda unconstitutional. The pressure for this move has been steady and unrelenting. At first, the Committee on National Integration and Regionalism was prevailed upon to make some reference to amending Article 19 to control secession talk; this it did in the most laconic manner, without arguing its necessity or implications and after paying a glowing tribute to the spirit of national unity displayed by all the parties in the country during the emergency, including the D.M.K., the Akalis, the Nagas and other hill leaders. If, indeed, in an hour of national danger all are united in facing it, where is the risk, one may ask, of permitting some crazy persons the liberty even for espousing perverse separatist causes? Has it not been proved that the real danger now comes from those who have extra-territorial loyalties, who will probably be still permitted free functioning as part of the nation's normal political activity, in order perhaps to give proof of our non-alignment in foreign policy?

From more than one quarter the suspicion has been voiced that the Congress Party is using the present emergency to strengthen its own political position against opposition groups, since it apparently fears that the latter have gained in prestige in recent weeks. Article 19 of the Constitution already permits a wide range of restrictions to maintain public order, security, to check incitement to offences and also enables preventive detention. Is this not sufficient to control dangers to the Indian Union, when any vicious separatist talk is sought to be translated into mischievous action? It is not lack of powers but local political expediency which often dictates restraint or passive attitudes on some occasions, like the Assam linguistic agitation, the communal troubles in Madhya Pradesh or the exhibitionist antics of E. V. Ramaswami Naicker in Madras. The D.M.K may stop formally pleading for separation if the Constitutional amendment is enacted but the reasons for which it is steadily growing in strength in the Madras State will not be removed. In fact, there is a danger that the Congress Party may be lulled into complacency by an amendment which outlaws the D.M.K. with its present creed; the revival of Hindi fanaticism or neglect of the economic development of the South may let the D.M.K. thrive on discontent and cause trouble to the Centre when it captures a legislative majority in a general election, as the Communist Party did in Kerala. If there is real statesmanship at the Centre, this would be seen as an occasion to capitalise on the friendly gestures offered by the D.M.K. and to hasten measures like the legislation for continuance of English as an associate language, so that it is either persuaded to modify voluntarily its pernicious creed or the public is convinced that it is obnoxious. The Congress Party, however, is thinking of mending the Constitution (for which it has a brute majority) as a substitute for mending its own ways and policies, thus alienating not only those who directly misuse liberties but even the law-abiding public which would certainly like more homage being paid to fundamental principles.

The great British democracy did not suffer by tolerating in the 'thirties the shocking heresy proclaimed in Oxford that its *alumni* would not fight for the King and the country. Ultimately, the crystallised wisdom of the community prevails in any democratic community and, if it has not in this country so far checked the D.M.K. it is only due to the tolerance its enjoys from non-partisans who think it offers a corrective to the tendency for imposing uniformity in the name of unity. It has been shown now that much of the talk about national integration of the last few months was quite off the mark because the diagnosis was incorrect. The heart of the nation is sound as the response to the emergency has proved beyond any shadow of doubt; if there are any who think that it is the Congress Party or its leadership alone which has helped to forge this unity, they must be living in a world of their own creation. The Party's deficiency is nowhere more conspicuous than in its tendency to think that every national problem can be solved by a Constitutional amendment—which is all that its numbers enable it to do!

* * * *

Economists in Conclave



That economists should have gone so far as to create a common forum and venue for their annual conferences held so far under different labels is a landmark in a country where personal attitudes are rarely subordinated to a common purpose, even though there is constant talk of integration of one kind or another. The Ahmedabad conference has also served to emphasise that the experts are hardly happy with things as they are; it was highly significant that even Mr. Tarlok Singh, who has been intimately associated with the planning process from its inception, should have expressed dissatisfaction with the serious weaknesses in implementation. Labour economists are unhappy over the inadequate importance given to manpower absorption and poor attention paid to the cost structure of the economy in the working of the tripartite machinery for labour matters. On top of these inadequacies is the feebleness of the Government's gold policy even in this emergency when some effective measures could be expected to have the support of public opinion; it is evident that this disappointment extends also to general resource mobilisation.

Mr. Morarji Desai's definition of the present problem as one of achieving the maximum rate of development along with defence preparations was acceptable to the bulk of the economists assembled at Ahmedabad. But in asking them to make recommendations in precise form, taking into account all practical aspects, including the consequences of suggested policies for total mobilisation, Mr. Desai seemed to be casting on economists all the obligations of the politician and the administrator. While it is true that some of the great economists like Keynes could be practical in their advice (though Americans did not relish much of his advice in the international talks at the end of the war), it is doubtful if economists in this country can be asked to take into their calculations the kind of political attitudes entering into the policies of the Congress Party. If that should be the case, no sane advice can be given, for example, on what should be the right sugarcane price that will make the sugar industry viable inside the country and help it to achieve exports. No recommendation can be made for imposition of the salt tax or the repeal of prohibition to raise more revenue. On the basis of a finding that the agricultural sector has taken an increasing share of the increment of national output in recent years, no recommendation can be made for a higher land tax—which is impracticable in U.P. And presumably no advice will be permissible that the trading community, which is the biggest beneficiary of planning and development, should be made to pay more taxes through efficient assessment and collection as this will be considered impracticable by the revenue collecting agencies. The Labour Minister will not listen to talk of freezing wages with or without productivity and Mr. Patil will not contemplate controls which affect farmers or grain traders. Since stability of State Congress Cabinets will be involved, no suggestions for cutting down of Ministers or staff will be practicable. Within this "practical" framework of inhibitions of a thousand kinds, economists are expected to find convenient ways for the executive to raise resources for carrying on the Plan as usual while doubling defence outlay. While economists can be blamed to a certain extent for running away from realities, they cannot in fairness be asked to unravel the knots into which the Congress Party has tied itself over economic policy. It is not surprising that after all these exhortations from the Finance Minister, they followed their usual method of talking in abstractions, leaving only their dissatisfaction to stand out of the proceedings.

* * * *

Patron Saint

Mercator means a merchant, but this was the Latinised surname of Gerard de Cremer who was born in Belgium in 1512. He later became famous for his map-making projections which he started at the age of 25. Mercator kept supplying the scientific world with globes which were the outstanding products of sixteenth century cartography. He published the first modern map of Europe in 1554, of the British Isles in 1564 and of the world in 1569, the last of immediate value to navigators. Then he started on his ambitious project of a history of the cosmos, with references to astronomical phenomena but, at that time, modern astronomy was still in its infancy. It was his use of the term Atlas for the collection of his maps that has passed into common use in all languages. But a curious aspect of his reputation is that he was quite unknown for nearly a century after his death; he later came to be regarded as the greatest of cartographers since Ptolemy, though he had never travelled except between the two or three cities in which he lived his entire life. His 450th anniversary was celebrated in Belgium and Germany last year.

SCIENTIFIC RESEARCH

INDIA has built up by now a vast apparatus of scientific and industrial research in its 27 national laboratories, universities and private institutions. As many as 6,000 to 8,000 professional scientific workers are employed by this country-wide research organisation. Much of their work is, or is supposed to be, related to technology, that is, the development of appropriate scientific techniques for actual application in the field of industry. As advanced technology, incidentally, could overcome the handicap of poor physical resources and also cut down the requirements of capital, the accent on applied research in India is well conceived. Although it might be argued that India, which is a late-comer to industrialisation, could draw upon the research experience of the advanced countries, it should nevertheless be recognised that there is need and scope for considerable independent research in this country. For instance, while India is drawing upon the experience of the United States, Germany, Austria, the U.S.S.R. and Britain in the matter of steel technology, there is still the need here for research pertaining to some special problems facing the iron and steel industry. One such special problem is the peculiar composition of the Indian iron ore which introduces great complexities in the production of pig iron. Finding a suitable technological remedy to this problem is the function of applied research—a function which is being discharged, to some effect, by the National Metallurgical Laboratory at Jamshedpur and the laboratories of the Tata Iron and Steel Company, Ltd. The peculiar characteristics, if any, of ores and other raw materials in India would, therefore, call for independent research. There is no question here of duplication of the same kind of research, for no two countries are faced with the same set of special problems.

While thus justifying independent scientific and industrial research, expensive though it may be, by newly developing countries, Mr. Jehangir Ghandy of the T.I.S.Co. has also cited other powerful reasons for such research in his convocation address at the Jadavpur University on 29th December 1962. His arguments are quoted below:

"The advanced nations have a resource endowment very different from ours. They have, relatively speaking, an abundance of capital combined with a shortage of labour. Their preoccupation is, therefore, with technological improvements which have the eventual aim of replacing labour with capital. In our circumstances, we should be seeking improvements in efficiency and productivity at the minimum capital cost and with the least displacement of labour. Again, many of the advanced nations have already very large domestic markets and their technology is geared, therefore, to large-scale production. In countries like ours where the relatively small market of today is spread over a vast area, these large production units may be uneconomic in some industries, not only now but for many years to come. Our technology should, therefore, be deliberately seeking ways of improving the economics and efficiency of smaller-scale production. There must undoubtedly be a *via media* between antiquated cottage industry and mass production units, and it is up to us to discover it. It is these considerations that have prompted many leading thinkers to urge the stepping up of research in developing countries as an essential part of their campaign for an economic break-through. Independent research is, therefore, neither a luxury nor a meaningless attempt to bolster national prestige, but an indispensable activity in the quest for modernisation."

Mr. Jehangir Ghandy's plea for acceleration of "quick-yielding, applied research," without detriment to basic research, is particularly timely in the present context of special requirements for national defence. He has, in this connection, referred to the fact that military research accounts for 90 per cent of all expenditure on scientific research in countries like Britain and the United States. While he does not think that India's circumstances require diversion of research effort to defence on that scale, he feels nevertheless that the discipline of working to a set task within a given time-span may do some good by stimulating effort and quickening the tempo of activity in our laboratories. One may readily agree with this point of view, considering the amount of stimulus that a national emergency like war usually provides to research and industrial development.

Unless the research results themselves become more tangible and substantial and lend themselves to practical application, there could be no marriage of research and utilisation in many or most industries. No comprehensive picture of practical research achievements and their utilisation in individual industries is yet available. Mr. Jehangir Ghandy has, of course, referred to the good results achieved by the National Metallurgical Laboratory and the practical utilisation of some of these results by the industries concerned. And he has also cited such successful instances of specialist laboratories run by individual industries as the Textile Industry Research Association of Ahmedabad, the Jute Mills' Association Laboratory in Calcutta and the Tocklai Research Centre of the Indian Tea Association. Are there no other instances of national laboratories and research institutions which have done equally good work in the fields of applied research and practical implementation of research results? Some idea can, of course, be had from the annual reports of the National Research Development Corporation, but this does not go far enough. It is time, therefore, a comprehensive appraisal of research performance and utilisation was made with a view to formulating a co-ordinated longer-term plan like the ten-year plan adopted by Japan in 1960 for scientific development. Quick-yielding emergency research must also be fitted into this pattern of long-term research, both basic and applied.

DEFENCE PRODUCTION

In times of national emergency such as the one India is facing today, there is dire need for making the fullest use of industrial potential in the country, irrespective of whether it exists in the private or the public sector. Most of the major industries are, no doubt, strategically important, supplying the sinews of war directly or indirectly. But, of course, the priority for development in an emergency has necessarily to be accorded to armaments industries. The public sector in any free country is not meant to be self-sufficient in the production of armaments and this sector, therefore, works in close collaboration with the private sector. It was only appropriate, therefore, that Mr. Prabhu V. Mehta, Chairman of the All-India Manufacturers Organisation, should have urged, at a meeting of the A.I.M.O. last week-end in Bombay, that the Industrial Policy Resolution of 1956 reserving armaments production exclusively to the public sector should be revised in the present context in such a way as to enable the private sector to participate in defence production.

The Union Minister for Defence Production, Mr. Raghuramiah, who inaugurated the meeting, made a pointed reference to the question of enlisting the private sector's co-operation in the matter of armaments output. He did not, of course, give any assurance that the Industrial Policy would be revised, but made it quite clear that the Government would unhesitatingly tap the productive capacity in the private sector to the maximum extent in order to make the nation self-sufficient in basic defence requirements in the shortest time. This is a pragmatic approach, but it remains to be seen to what extent the Government will follow it in actual practice. At the moment, there is no sign of any real change of heart.

The private sector is not only willing but also sufficiently equipped to meet the needs of a wide range of defence requirements. It is admittedly not possible to entrust the private sector with the production of all types of arms and ammunitions, because of strategic reasons. So it is all the more necessary that the Government should spell out in unambiguous terms the specific types of defence equipments which private industries could take up. It is in this respect that the Government has failed to give the lead so far. Even the symposium on "organising for defence production," which was arranged by the A.I.M.O. last week and in which both officials and leaders of industry participated, has not taken one very far on this question. One would have thought that Prof. M. S. Thacker, Member of the Planning Commission and Chairman of the Emergency Production Committee, would enlighten the industrialists on the question of specific defence requirements expected from private industry. But the expectation has not been fulfilled. Prof. Thacker, of course, warned that the time for platitudes were over, but his *ex tempore* speech did not contain much that was very new or helpful to the industrialists in organising themselves for defence production. It is to be hoped that the Government itself will first make sure, without any delay, what it wants the industry to do, before seeking the latter's co-operation.

Prof. Thacker's broad hint was to the effect that the Government would do everything within its power to provide raw materials, both imported and indigenous, to defence-based industries in order to ensure better utilisation of capacity and thereby increase production. This assurance is certainly welcome. But he did not say whether any new scheme was being worked out for procurement and distribution of such raw materials as steel, non-ferrous metals and coal, to mention only a few items which are in short supply. The question of raw materials was dealt with at length by Mr. N. D. Sahukar, a leading industrialist of Bombay, who suggested the establishment of a special directorate for the speedy procurement and proper distribution of raw materials, on the lines of a similar organisation set up during World War II.

In his speech at the symposium, Mr. Murarji J. Vaidya called upon the Planning Commission to revise the third Plan targets for industrial production to make them defence-oriented. According to him, most of the industries were defence-oriented, for, while defence industries directly helped war effort, development of civilian goods industries was equally necessary to boost the morale of the people. Therefore, Mr. Vaidya wanted relaxation of restrictions on credit and adequate provision of raw materials and transport facilities for "non-defence" industries too. But he went too far when he urged the Government to remove that provision under the Industries (Development and Regulation) Act which makes it obligatory on all industrialists to get the permission of the Government before expanding production capacity or diversifying the pattern of production. This measure may be beneficial to certain industries, particularly those which are catering to defence needs. But the complete removal of Government sanction for expansion will endanger the Plan, besides the interest of some of the established industries themselves through indiscriminate development of certain industries and a possible glut in some products. What is needed, however, is that the Licensing Committee should reduce delays and expedite the processing of applications for essential industrial licences.

RAISING JUTE YIELDS

Since the jute industry is predominantly an export-based industry, the need to supply high quality goods at competitive prices is imperative. The need is imperative especially in the context of the keen competition not merely from Pakistan jute mills but also from substitute packaging materials. Although there are no two opinions on this view, there is no unanimity on the answer to the vital question: How are the Indian jute goods to be made competitive from the point of view of both price and quality? This is so because of the politician's preference for the easy solution of high prices for raw jute. It is true that a high degree of efficiency in the manufacture of jute goods is also necessary but there is no denying the fact that this efficiency has increased quite notably in recent years following modernisation and rationalisation in a number of mills. The progress made in this direction will, however, be of little avail, unless more energetic steps are also taken to improve conditions in the primary stage of jute industry, that is, cultivation of raw jute which accounts for the bulk of the total cost of goods production. This aspect has to be specially stressed, because, in spite of the development activities carried out by the Indian Central Jute Committee during the last fifteen years, there has not been, as Mr. A. D Pandit, Special Secretary to the Union Ministry of Food and Agriculture, has frankly admitted any appreciable increase either in the yield per acre or in the quality of raw jute. Addressing the annual general meeting of the Committee at Calcutta last week-end, Mr. Pandit stated that much of the jute produced in some States yielded fibre of low quality; besides, the average yield had not risen above 2.5 bales per acre. This is well below what is obtained (6.0 bales) on certain plots in Bihar by prize winners in competitions. The Indian Jute Mills Association itself has been able to demonstrate in the cultivators' fields that a crop giving a yield of 4.0 bales can be produced.

It is thus evident that there is immense scope for augmenting the productivity of jute lands. To the extent to which this scope is exploited, the economic position of jute growers will improve and, incidentally, the heavy incidence of raw jute cost in the manufacture of goods can be reduced. Mr. Pandit certainly struck a note of realism when he declared that one of the obvious ways in which the cultivators' income from the jute crop could be maintained at the same level, in spite of any cut in the minimum price necessitated by foreign supply and demand conditions, was to assist him to produce more jute from the same acreage of land. And Mr. Pandit rightly pointed out that, in view of the very large dependence of the jute industry on exports, the level of raw jute prices would be dictated by the prevailing level of international prices for manufactured goods. "The jute industry," to quote him, "is as anxious as the Government to ensure that it continues to obtain raw material at prices which would enable it to sell the maximum quantities of manufactured jute goods in international markets at competitive prices. In this matter, we cannot afford to be dogmatic or to adhere to a certain level of prices calculated theoretically."

A given area devoted to raw jute cultivation can certainly give a much higher yield of superior quality fibre, provided the development work is intensified on right lines. There is, for instance, the need for covering a larger area under improved jute seed. The quantity of such seed distributed to growers should itself be stepped up. There is also the need for ensuring adequate supplies of fertilisers. A study of fertiliser application has shown that the use of chemical nutrients gives an additional yield of 3.12 maunds of jute per acre. The quantity of fertilisers distributed during 1961-62 was nearly double that of the previous year. Yet it is, according to Mr. Pandit, insignificant, considering the total area under jute which is about two million acres. Further, effective measures must be taken to spread improved methods of cultivation among as wide a section of growers as possible. Arrangements for marketing, too, needs to be improved considerably. The Indian Central Jute Committee has done well to urge the Government to accord it an effective role in the organisation of co-operative marketing and regulated markets for jute, as well as in the formulation and operation of price support policies and programmes.

On the issue of raw jute marketing, Mr. Pandit emphasised two pertinent points. The first one pertains to arrangements for grading of jute in various markets, wider dissemination of market intelligence for growers, and strengthening of co-operative societies and the storage facilities under their control. Secondly, abuses such as unregulated weights and measures and unjustified deductions from the prices payable to growers must be done away with.

COST ACCOUNTING

There is continuous need in a developing country like India for so organising and exploiting its limited resources in machinery, money, materials, trained manpower and management personnel as to obtain the maximum return. In this matter of efficient or economic utilisation of scarce resources, scientific cost accounting has a vital role to play. It is the function of a cost accountant, who has the requisite specialised knowledge and training, to carry out a continuous analysis of costs and evaluate the economics of different industrial and commercial techniques. Such cost control which is necessary in any private-sector undertaking is no less so in a public enterprise, though the latter may not have to face any competition. The fact that a seller's market has been prevailing for a number of years now has, however, been hardly conducive to the development of "cost consciousness." But, of late, in their frantic efforts to increase exports, both Government and industry have begun to realise that, unless the costs of production of Indian goods are brought down to competitive levels, they would be priced out of the external market in several lines. Cost reduction through cost control is thus a national necessity. The Union Government's recent decision to set up a division of cost studies in the Department of International Trade for undertaking inquiries into the cost structure of certain major export industries and commodities is a step in the right direction.

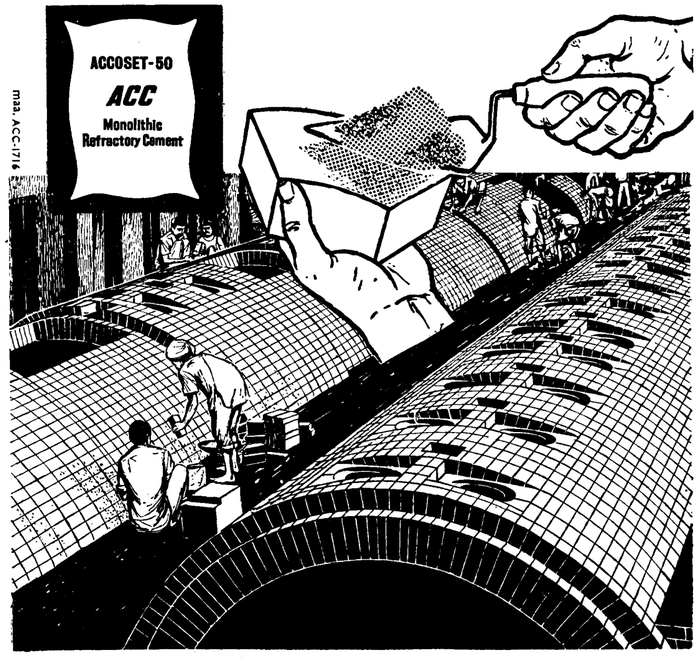
But are there sufficient numbers of competent cost accountants in the country to cater to the requirements of industry and commerce? The answer is an emphatic 'no', for, according to Mr. V. Srinivasan, President of the Institute of Cost and Works Accountants of India (Calcutta), who spoke at the Annual Convocation of the Institute on 20th December 1962, the total outturn of qualified cost accountants per year is very low—too low to meet the large demand expected within a short span of time from the various projects in the public and private sectors. Although the annual registration of students by the Institute is in the region of 4,000, the outturn is very low, because the facilities for coaching and practical training provided by the Institute's Regional Councils at Calcutta, Bombay, Madras and Delhi and by some private institutions are too inadequate. The standard of examinations conducted by the Institute is necessarily so high that most students fail because of inadequate preparation. It is, therefore, a hopeful development that the Central Government is now considering a scheme whereby every student registered with the Institute could undergo coaching of an approved standard for a prescribed period before he could sit for the examinations. This scheme will help increase the annual outturn of cost accountants and also improve their quality. As the scheme has been welcomed by the Minister for Commerce and Industry, Mr. K. C. Reddy, while speaking at the Convocation, it is reasonable to hope that it will be launched this year. In the meantime, the question arises whether the short-term training course in cost accountancy launched by the Department of Company Law Administration five years ago in consultation with the Institute should be continued. Both the Minister and the Institute's President alike have recognised that such *ad-hoc* or partial training is no reliable substitute for the kind of professional knowledge expected of cost accountants. Costing is so vast a subject that a full grasp of it cannot be acquired within a few months. Since it is no good to have inadequately trained cost accountants, the present short-term courses may be abandoned as early as possible.

BICYCLE INDUSTRY

Bicycles are a very popular means of transport in India and will continue to be so, despite the growing competition from more advanced modes of transport. There are now about ten million cycles on the road, which makes India one of the largest cycle-using countries in the world. A source of cheap and handy transport for the common man, bicycles will have a ready market in the country, particularly in view of the improvement in the general standard of living. Stimulated by the growing demand, the cycle industry has made rapid strides during the last few years and, today, it not only meets the entire domestic demand but also exports a part of its products to world markets in the face of competition from well-known brands from the U.K. and Japan, in particular. It may be recalled here that, until 1952, there were only two cycle manufacturing units in the country (Hind Cycles of Bombay and another unit at Patna), their aggregate capacity being 120,000 cycles. During the subsequent one decade, the industry has grown at a very fast pace. As a result, there are now as many as 20 large- and medium-scale units, with an aggregate capacity to produce annually 1.12 million cycles on a single-shift basis. The total number of cycles produced in the organised sector has gone up from just less than 200,000 in 1952 to 1.04 million by 1961. During the first six months of 1962, output aggregated 594,000 and it is estimated that for the whole year the output would be well above 1.2 million cycles.

The organised sector appears to be capable of catering to any increase in demand in the foreseeable future by working the units on multiple shift. The third Plan has, therefore, not envisaged any new major expansion programme for the cycle industry. The large-scale units alone are expected to produce about two million bicycles by 1965-66. A large number of small units (placed at 150 units as of 1960) have also sprung up in almost every part of the country in recent years: they now produce annually

A highly refractory mortar for all furnace constructions



ACCOSET-50

is composed of finely ground plastic clays, high alumina burnt refractory materials and special chemicals. Once it is dried and burnt, **ACCOSET-50** becomes one with the bricks.

Recommended for jointing, bonding, monolithic and rammed linings, gunning etc.

Buy National Defence Bonds

about 250,000 cycles. The small units are expected to double their production by the end of the third Plan. Thus, both the organised and small-scale sectors together are expected to produce 2.5 million bicycles by 1965-66. Of these, 2.3 million are expected to be consumed within the country and the balance will be available for export.

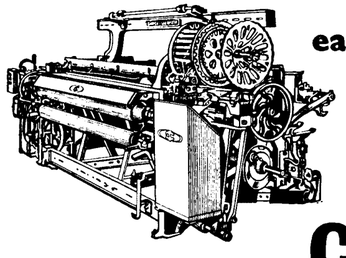
The cycle industry is quite confident of fulfilling production targets. But producers seem to be concerned about the latest trends in the demand for cycles, which have not come upto earlier expectations. In his presidential address at the annual meeting of the Cycle Manufacturers' Association of India held at Bombay last week-end, Mr. M. G. Vohra pointed out that the Tariff Commission's estimate of demand for 1960 at 1.25 million cycles and its expectations of an annual increase of 200,000 have erred on the higher side. The actual demand, according to him, was only about 1.13 million cycles in 1960, or a shortfall of 120,000, as compared with the Commission's estimate. The demand in 1961 also fell "considerably short of" 1.45 million anticipated by the Commission. There does not, however, seem to be any room for undue despondency on the score of demand. Mr. Nityanand Kanungo, Union Minister for Industry, who inaugurated the meeting, allayed fears of any lag in expansion of demand. The temporary fall in demand, according to him, might be attributed to the "quality consciousness" of the consumer, who would like to buy a quality product, "even if it costs a little bit more." This contention is based on the fact that sales of some brands of cycles of better quality, which are costlier, have gone up, while the stagnation in demand was in evidence only in inferior brands. Mr. Kanungo believed that the demand for cycles would be increasing, if only the industry took pains to keep quality and price to suit the pockets of users. The cycle industry, having been in the protected list for about sixteen years, has a particular obligation to consumers to bring down prices further and improve the quality of its products.

One does, however, realise the industry's difficulties in reducing the price, in the face of mounting costs on account of increase in wages and excise duty on components as well as shortage and high cost of raw materials, and plant and machinery. Even so, it cannot be denied that there is still room for increasing the efficiency of the industry. In this context, one feels that the mushroom growth of small units (despite their employment potential) do not contribute to the improvement of quality. The Government will, therefore, do well to prevent further growth of cycle units of uneconomic size. Development of small units may, however, be encouraged as ancillary units for the manufacture of cycle components and accessories, provided it is not detrimental to the maintenance of quality in the manufacture of cycles at an economic cost.

The cycle industry's difficulties in the way of procuring raw materials also deserve the urgent attention of the Government. Mr. Vohra, who dealt at length with this problem, was particularly sore on the cut in imports of the industry's raw materials by 30 per cent under the import policy for the current half-year announced last week. According to him, raw materials, such as tubes, spoke wires, rolled strips and bright bar cuttings, although produced in the country, are insufficient for the requirements of the industry as a whole and some of them are of inferior quality. The claim of the industry for a fair deal in this matter is justifiable on grounds of both strategic importance and the need for promoting exports. Exports during January-October 1962 were only 2,400 bicycles, which compare unfavourably with about 13,000 in 1961 (whole year) and 4,000 in 1960. The export performance can be bettered only if all the manufacturers participate in the Association's export pool scheme and take advantage of incentives offered to the industry by way of import entitlement of 40 per cent of f.o.b. price of exports of cycles. Otherwise, the third Plan export target for exports (200,000 cycles) will remain a far cry.

WAR RISKS INSURANCE COMES INTO FORCE

The Government of India has framed two schemes under the Emergency Risks (Factories) Insurance Act and the Emergency Risks (Goods) Insurance Act, providing for compulsory insurance of goods and factories against risks of damage likely to arise from enemy action and/or action against enemy. Both the schemes came into force on 1st January 1963. The rates of premium for the quarter ending 31st March 1963 have also been announced. They are 15 nP for every 100 rupees or part thereof of the insurable value for goods and 25 nP per hundred rupees or part thereof of the insurable value of factories. In other words, the premium is 0.60 per cent for goods and one per cent for factories. These rates do not appear to be unduly high even after taking into account the fact that no fighting is taking place now. The premium in respect of both goods and factories are payable before 31st January 1963.



The goods scheme provides for the insurance of goods held for sale or supply and covers all goods except those exempted under Section 3(2) of the Act. The insurable value of the goods is to be arrived at on the basis of the prices prevailing at the time the policy of insurance takes effect. Insurance is compulsory in the case of goods of the aggregate value of Rs. 30,000 and over. Goods, which are not compulsorily insurable under the scheme, can be insured voluntarily, if they do not come under the exempted category.

The factories scheme is applicable to all undertakings or installations which are factories within the meaning of Section 2(m) of the Factories Act, 1948. There are no exemptions. Factory buildings, plant, machinery and materials used in the factories, except to the extent that they are covered under the goods scheme, are compulsorily insurable under the scheme. While insurance is compulsory for all completed factories, it is optional for factories which are under construction. The insurable value of factories will be calculated in the case of completed factories at the prevailing prices when the policies take effect, and in the case of those under construction, at the estimated value of such works at the end of the quarter ending 31st March 1963. The factories scheme will also be applicable to mines, oil installations, gas and electricity supply undertakings, standing tea crops in tea gardens and inland vessels having an aggregate value exceeding Rs. 2,500 on the same terms and conditions as in the case of factories. It is noteworthy, in this connection, that Indian shipping interests have urged that sea-going vessels flying the national flag should also be brought under the purview of war risks insurance. In view of the fact that ships on the high seas are as much exposed to the danger of enemy attack and the vital role they play in carrying exports and imports it is imperative that insurance cover should be provided for ships too. A scheme for insurance of risks is reported to be under consideration. It is to be hoped that it would be finalised soon and brought into force as soon as possible.

Policies issued under the goods scheme are not assignable or transferable. Policies issued under the factories scheme can, however, be transferred. Both the schemes will continue to be in effect throughout the period of the emergency and for such further period thereafter as may be determined by the Government. Policies issued will be valid for three months at a time but will be replaced or renewed at the end of each quarter. Premiums to be charged in respect of the quarters subsequent to that ending on 31st March 1963 will be determined and notified in due course.

It may be recalled that, under the Emergency Risks (Factories) Insurance Act and the Emergency Risks (Goods) Insurance Act, the maximum rate of premium that can be charged is 3 per cent. The Finance Minister had indicated, while moving the relevant Bills for adoption, that this rate was the upper limit and that the actual rate would vary from time to time depending upon the Government's assessment of the risks. The premium rates of 15 nP for 100 rupees of insurable value in

BUILDING A FACTORY?

GCCP PLANS YOUR ENTIRE ELECTRIFICATION AT THE BLUEPRINT STAGE!

That's when it should be done—right from the word 'go'. Electrification planning for a new factory must begin at the blueprint stage when such aspects as civil works, water and machinery are under consideration.

MORE THAN MEETS THE EYE

There's more to electrification than meets the eye. Climatic conditions at site must be taken into account. Load has to be assessed and sanction obtained. The layout is governed by a number of factors—Indian Electricity and Fire Insurance regulations, availability of equipment and future expansion or alteration. Electrification calls for a concentration of specialized skills and experience. GCCP has them.

MORE TRADE WITH SOVIET UNION

PLANS FOR ANOTHER LONG-TERM DEAL

From Our Special Correspondent

NEW DELHI, 1st *January*

THE Soviet Union is planning to send a team of negotiators to make arrangements for another long-term trade agreement with India to cover the period 1964 to 1968. The three-year arrangements effective from 1960 have operated more successfully than envisaged and during 1962 the total Indo-Soviet trade target of Rs. 60 crores is said to have been exceeded. Against an original target of doubling by 1963 the trade levels from the 1960 figure of Rs. 43 crores, the trading this year is planned to total Rs. 100 crores. In 1955-56, it may be recalled here, Indo-Soviet trade had totalled less than Rs. 10 crores.

DELHI LETTER

During 1963 Soviet supplies of petroleum products at one million tons will be double the quantities delivered in 1962. Apart from kerosene, Soviet deliveres will include 300,000 tons of furnace oil. According to the Soviet Trade Representative in Delhi, Russia is also willing to supply crude oil to India. But India is not ready to use Soviet crude supplies. In 1963 Russia will increase her deliveries of machinery and capital goods, including power generating and electrical equipment, textile machinery, tractors, newsprint, asbestos and lead and zinc. Russia will increase purchases from India of tobacco, jute bags, footwear and other goods. For the first time Soviet imports from India will include steel castings and structurals.

On the Indo-Soviet shipping line there will be in use ten ships from each side instead of seven ships hitherto. In 1962 Russia began supplies of power equipment for electric power stations in India. Increased Russian purchases in 1962 included jute cloth and bags, cotton and woollen cloth, footwear, handicraft goods, and coir products.

In November the Russians signed a contract for the supply of earthmoving and roadbuilding equipment worth Rs. 3 crores to the Orissa State Government. In December the Russians signed a deal with the Maharashtra Co-operative Society for the supply of 1,000 tons of bananas. The contract is on an experimental basis and, if the experiment proves successful, bananas will become a new item of regular exports to the Soviet Union.

Cultural Exchange

Mr. Humayun Kabir, Union Minister for Scientific Research and Cultural Affairs, is expected to visit Moscow in March for further promotion of Indo-Soviet cultural and scientific exchanges. The Russians have agreed to give aid worth Rs. 110 lakhs for the next four years for establishing ten centres for scientific research in Indian universities. This project has been sponsored by U.N.E.S.C.O. Besides this, the Russians will make a bilateral pact with India for exchange of scientific and cultural personnel and provide facilities to Indian students for advanced instruction in science subjects in the Soviet Union. Under the U.N.E.S.C.O. project, which may take six years to implement, Russia will provide equipment for research laboratories and will send leading Russian scientists to work in these centres. The programme will specially cover teaching of mathematics, physics, chemistry and biology.

The Russians and the Czechoslovaks have agreed to speed work on the heavy machine-building plants being set up with their assistance. The Russian-aided heavy machine-building plant at Ranchi with a capacity of 80,000 tons will begin partial production by the middle of this year. It will be in full production by 1967-68 when it will be capable of producing equipment for a million-ton steel plant. In 1964-65 the plant, according to present expectations, will produce 55 cranes ranging in capacity from ten tons to 150 tons. It will then also produce one oil drilling rig. By 1965-66 the plant will be capable of producing 22,500 tons of machinery, including 85 cranes of which five will have a capacity of 150 tons each. The plant will also then produce one 350-ton crane and more oil drilling rigs. The foundry forge plant, being set up with Czech assistance, is behind schedule and its annual capacity is being increased from 45,000 tons to 80,000 tons. The iron foundry part of the project is likely to be completed in 1964 and the steel foundry by the middle of 1955. According to the Czechs, this plant will be the biggest of its kind in Asia. Since there will be a time lag between the completion of the heavy machine-building plant and the forge shop, smaller types of forgings and castings may be made in other factories. The bigger castings will need to be imported from the Soviet Union.

Apart from a coal mining machinery project in Durgapur with Soviet aid there are plans to establish another mining machinery plant with Polish assistance.

Steel Production

The Minister for Steel and Heavy Industries, Mr. C. Subramaniam, is gratified with the improvement in the performance of the steel plants in the public and private sectors in the past few months. The Soviet-aided Bhilai plant achieved its annual target of one million tons of ingot steel on 26th December five days ahead of schedule. Production of ingot steel is already 103 per cent of capacity at Bhilai and has been at 90 per cent capacity at the British-aided Durgapur and German-aided Rourkela plants. In terms of saleable steel, production is 103 per cent of capacity at Bhilai, 61 per cent at Durgapur and 72 per cent at Rourkela. In the private sector, Tatas are turning out ingot at 96 per cent of capacity and Indian Iron at 102 per cent of capacity.

Mr. Subramaniam hopes that the target of four million tons of saleable steel will be exceeded in 1962-63 and the target of 4.4 million tons of saleable steel in the next financial year can be achieved easily. The Minister's main attention now is devoted to the details of negotiations for the special alloy steel plant in Durgapur. Tenders have been received for this 50,000-ton project from Britain, Japan and France and Mr. Subramaniam hopes to place the contracts by March. He also wants the plant to be completed in three years on the basis of a crash programme.

Japanese Drive

Japanese diplomats specialising in economic affairs—from posts in 23 Asian countries—in three days' conference in Delhi in December discussed Japan's emerging role in the backdrop of European economic consolidation. Also studied by the Japanese experts was the problem of increasing demands for assistance from developing Asian countries. Britain's proposed entry into the European Common Market would affect the exports of several Asian countries and the Japanese diplomats welcomed the efforts of E.C.A.F.E. in the direction of greater economic co-operation among Asian countries. The diplomats were agreed that Japan should do something to stabilise prices of primary products exported by Asian countries. The diplomats felt that Japan should use her influence in this direction at the world trade conference to take place under the auspices of the United Nations.

According to a spokesman of the Japanese Embassy, the developing nations wanted Japan to do more than she is doing now in the matter of assistance but Japan had her own problems. Other Asian countries do not agree with the Japanese interpretation of her limitations in capacity and some of the diplomats in conference felt that Japan could do more even within her limitations. For example, the financial regulations could be simplified to permit speedier use of credits. In Japan's favour is the fact that Japan has trebled her overseas investments and assistance since 1956 although even today it runs at about half per cent of her gross national product. The Americans also have been pressing on Japan to increase her rate of overseas assistance and investments.

The International Monetary Fund has entered into a standby arrangement with the Government of Costa Rica which authorises drawings up to the equivalent of $11.6 million over the next twelve months in currencies held by the Fund. An adjustment in the exchange rate and related measures taken in September 1961, strict limitation in 1962 of Central Bank credit to the public and private sectors, and increased confidence in the Costa Rican currency all contributed to a considerable improvement during 1962 in the country's reserve position. The Costa Rican authorities will seek to deal with the fiscal problem and to restore equilibrium by continuing in 1963 credit and taxation policies successfully introduced late in 1961. A unified exchange rate will be maintained for the colón and the exchange system will be kept free from restrictions. Under a previous standby arrangement for $15 million, which expired on 3rd October 1962, Costa Rica drew a total equivalent of $10 million, of which $6.6 million have since been repaid.

SOVIET AID FOR INDIA

MANY PROJECTS BENEFIT

By V. A. Sergeyev

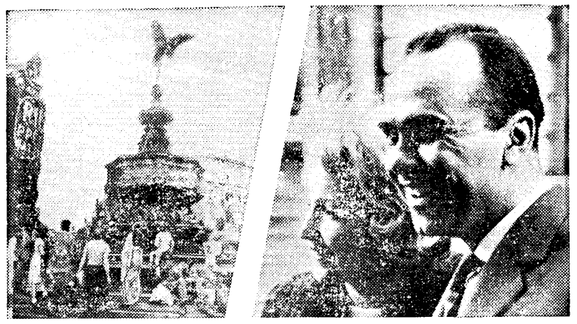
Vice-Chairman, Soviet Foreign Economic Relations Committee

THE Soviet Union is helping India to build such leading industries as metallurgical, heavy machine-building, power engineering, oil and coal. By the end of 1961, the Bhilai Iron and Steel plant had reached the projected capacity of one million tons of steel a year. In his message of greetings on this occasion, Mr. Swaran Singh, the then Minister of Steel, Mines and Fuel of India, said:

"We are really proud that Bhilai has achieved the projected capacity. This would have been impossible without the stubborn efforts and close co-operation between the two countries. I am sure the friendly relations between the Soviet specialists and Indian engineers considerably facilitated this success."

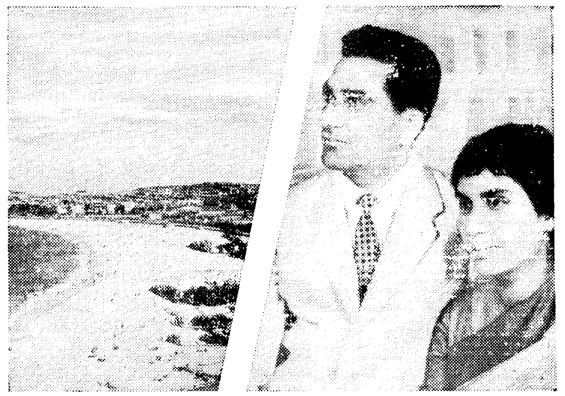
A contract was signed at Delhi, in February 1962, on supplies of equipment and materials for increasing the capacity of the Bhilai Iron and Steel plant to 2,500 tons of steel a year. The contract envisages the expansion of the mines in Rajhara Pahar and the limestone quarry in Nandini that supply the plant with raw material. Work has already begun for increasing the plant's capacity and, in 1963, it will be developed still further. India will send to the Soviet Union engineers and workers to undergo practical training at Soviet iron and steel plants.

Oil deposits have been discovered with the technical assistance of Soviet specialists in Ankleshwar, Kalol and Rudrasagar, and the one in Ankleshwar began commercial production of oil in February 1962. At present, it is producing 1,200 tons of oil a day and, by the end of 1963, it is planned to bring up production to 3,000 tons a day. Soviet specialists, together with Indian colleagues, are conducting explorations on new formations in the areas of Olpad, Sanand, Gogha and Bereja. It is planned to extract 3,500,000 tons of oil a year by the end of the third Five-year Plan in the areas where the Commission on Oil and Natural Gas is working.



The Soviet Union is helping India to build two oil refineries in Barauni (Bihar) and Baroda (Gujarat) each with a capacity of two million tons a year. The factory in Barauni, the construction of which is under way, is to be completed by the end of 1963.

As regards the coal industry, two large mechanised mines with a capacity of 1,200,000 tons and 600,000 tons of coal a year are beginning to be sunk in the area of Korba with the technical assistance of the Soviet Union, and construction will begin of an electrical mechanical workshop for repairing mining equipment. Construction of India's two largest heavy industry enterprises, with the technical assistance of the U.S.S.R., is gaining momentum, the heavy machinery works in Ranchi with a capacity of 80,000 tons of hardware a year and a mine equipment factory in Durgapur with a capacity of 45,000 tons of hardware a year. It is supposed that the first shops of these enterprises will be commissioned in 1963.



Soviet designing organisations are completing the technical project of another large enterprise to be built with U.S.S.R. assistance, an electrical equipment factory in Hardwar. This factory will produce steam and hydraulic turbines and electric generators with a total capacity of 2,700,000 kw. and heavy electrical machines with a total capacity exceeding 500,000 kw. a year. Technical designs will soon be completed of a precision instrument factory in Kotah.

With the technical assistance of the Soviet Union, a hydro-electric station will be built in Bhakra on the right bank of the Sutlej and four thermal power stations—in Neyveli, Korba, Obra and Patratu, with a total capacity of 1,700,000 kw. which will constitute about 25 per cent of the capacities of the power stations to be commissioned during India's third Five-year Plan period. The official opening of the thermal power station in Neyveli took place in August 1962 when the first unit with a capacity of 50,000 kw. was put into operation. The commissioning of the station was attended by Dr. S. Radhakrishnan, President of India, who warmly congratulated the Soviet and Indian specialists on the important achievement, and noted that the spirit of co-operation which permeated the friendly relations between the

WORLD GOLD POSITION

RECORD FLOW INTO PRIVATE USES AND HOLDINGS

[The January (1963) issue of the Monthly Letter of the First National City Bank, New York, contains a review of the world gold position in the past year. This is a timely analysis for us in India, coming as it does on the eve of Mr. Morarji Desai's announcement of measures for restricting, if not preventing, private hoarding of gold. One does not know what steps he will be taking in this direction. But it is to be hoped that, before he acts, he will read the review in the Monthly Letter and revise his exaggerated, nay, ill-informed, notions of private hoarding in other countries. The most important point emerging from the said review is that, in 1962, as much as $1,100 million worth of gold, representing some three-fourths of total new supplies of gold in the free world, went into private uses and holdings. In terms of Indian currency, the gold that disappeared into private hoards during 1962 alone is worth Rs. 524 crores; in terms of quantity, it works out to 31.43 million ounces or 8.38.13.000 tolas. As compared with an annual accretion of this magnitude into private and the so-called industrial uses in the world, the amount of gold passing into private use and holdings in India is negligible, estimated at Rs. 20 crores in terms of the world price of gold. Our object in reproducing on this page the Monthly Letter's topical survey of gold in 1962 is to enable readers to have a proper perspective against which they may view the forthcoming steps of the Government of India for checking purchases of gold by the people of this country.—ED.]

OVER the past year, again, gold has figured prominently in financial developments and policies. Output in the Free World is running at the highest level recorded in history. Of these enlarged supplies, however, more has been absorbed into industrial uses and private holdings, and correspondingly less added to official stocks, than in any other year since World War II. The U.S. gold stock, although still representing some two-fifths of world monetary gold outside Russia, has declined to its lowest level since 1939.

While gold has been very much in the news, it is sometimes difficult to fit isolated facts into a coherent and intelligible pattern. In particular, the U.S. gold position can be appraised sensibly and realistically only within the framework of the world picture. This review seeks to set world gold developments and policies into perspective.

Output at Record Levels

In 1962, world gold output (excluding Russia, Mainland China, etc.) approached 37 million ounces, equivalent to $1.3 billion—2 per cent more than in 1940 when it had reached its peak following the universal currency devaluations during the Great Depression. Last year's output was 6 per cent higher than in 1961 and 62 per cent above 1953, when the post-World War II rise in production began.

As in earlier years, the rise in world gold output was attributable to a further increase in South Africa, which accounts for a little more than two-thirds of world production outside Russia. Rich new discoveries, improved techniques, and production in association with uranium explain the growth. In Canada, the second largest producer, output dropped somewhat despite a rise in the Canadian dollar price associated with devaluation. Production in the United States, which still holds third place, remained practically unchanged.

Russia's production continues to be blanketed in secrecy. Western observers put it variously at $350-600 million. We are less in the dark regarding the gold Russia sells in Europe to balance its international accounts. Import statistics of the United Kingdom show gold imports from Russia at $68 million during the first ten months of last year, as against $183 million during the comparable period of 1961; Russia also ships gold to the Continent. Exports, of course, do not necessarily coincide with sales. Russian sales were stepped up in late October and in November; even so, it appears that they were smaller in 1962 than in the five preceding years when they averaged $240 million annually. Despite the rise to new heights in South

African output, therefore, total new gold supplies in the Free World last year were of the same order as in 1961—some $1.5 billion.

Private Demand in the Limelight

A comparison of new gold supplies with year-to-year increases in the total of official gold stocks makes it possible to get an approximate idea of the varying amounts of gold absorbed by the arts, industry and private holders.

In the United States, uses in the arts and industry have been expanding in recent years. Net consumption in 1961 amounted to $97 million—somewhat less than in 1960 but almost twice as much as only five years ago. With production covering only three-fifths of consumption, the U.S. gold stock is being drawn upon in a degree by domestic needs. In addition to traditional uses, some entirely new industrial applications have been developed in recent years; the gold- and silver-plated spacecraft Mariner II, which reached its rendezvous with Venus two weeks ago, is a striking illustration. Contrary to the practice in most other countries, where gold coin and medals are available as stores of value, there is no gold coinage here and residents are not allowed to hold gold in monetary form except for coins of recognised numismatic value minted before 5th April 1933.

In the world around us, with few exceptions, gold is held and traded privately, serving its age-old function as the citizen's favourite hedge against paper-money inflation. More gold moved in 1962 into private uses and holdings than in any other post-war year. The tentative figure

works out at $1.1 billion or some $250 million more than in 1961. Thus, somewhat over three quarters of total new supplies went into private uses and holdings.

These developments in 1962 appear as the third post-war wave of greatly enlarged private gold absorption. The first of these waves dates back to 1951, the accompaniment of the Korean inflation; the second was in 1960, the year of the great fright over the dollar and the London gold rush. In last year's circumstances, there was a persistent demand for gold in Latin America as well as in the Far and Middle East; but the bulk of hoarding can be traced to what may best be called investment demand in Europe. Declines in American and European stock markets, along with wage-price spiralling on the Continent, reinforced the demand for gold last spring; the Cuban crisis led to a sharp but short-lived flurry in late October.

Although under pressure during most of last year, the London gold price at no time exceeded $35.20 an ounce; this is minimal in comparison with the $40 momentarily reached in October 1960. To keep the price on an even keel, gold sales had begun to be made in late 1960 from British reserves under a broad understanding that the Bank of England could replenish in the United States gold it sold on the London market. In early 1962, when renewed pressures developed on U.S. gold stocks, this "gold bridge" was supplemented by a wider informal co-operation among central banks to refrain from buying gold in London when the supply is short and to participate with the United States in channelling gold to the market.

The strength of demand from people of moderate means has increased premiums of coins over bar gold. To meet demand, quite a few nations have resumed the minting of gold coins, though for sale as a commodity rather than for circulation as money. Last year, South Africa joined the parade with a new two-rand piece.

The Anatomy of Official Gold Flows

As a result of the enlarged private gold absorption, much less from current gold supplies was left for additions to official gold stocks than in most other post-war years. In fact, during the first nine months of 1962 for which estimates could be made at this writing, official stocks in the aggregate increased by only around $200 million. During the last quarter, with the London price most of the time below the U.S. Treasury selling price of $35.0875 (in part as a

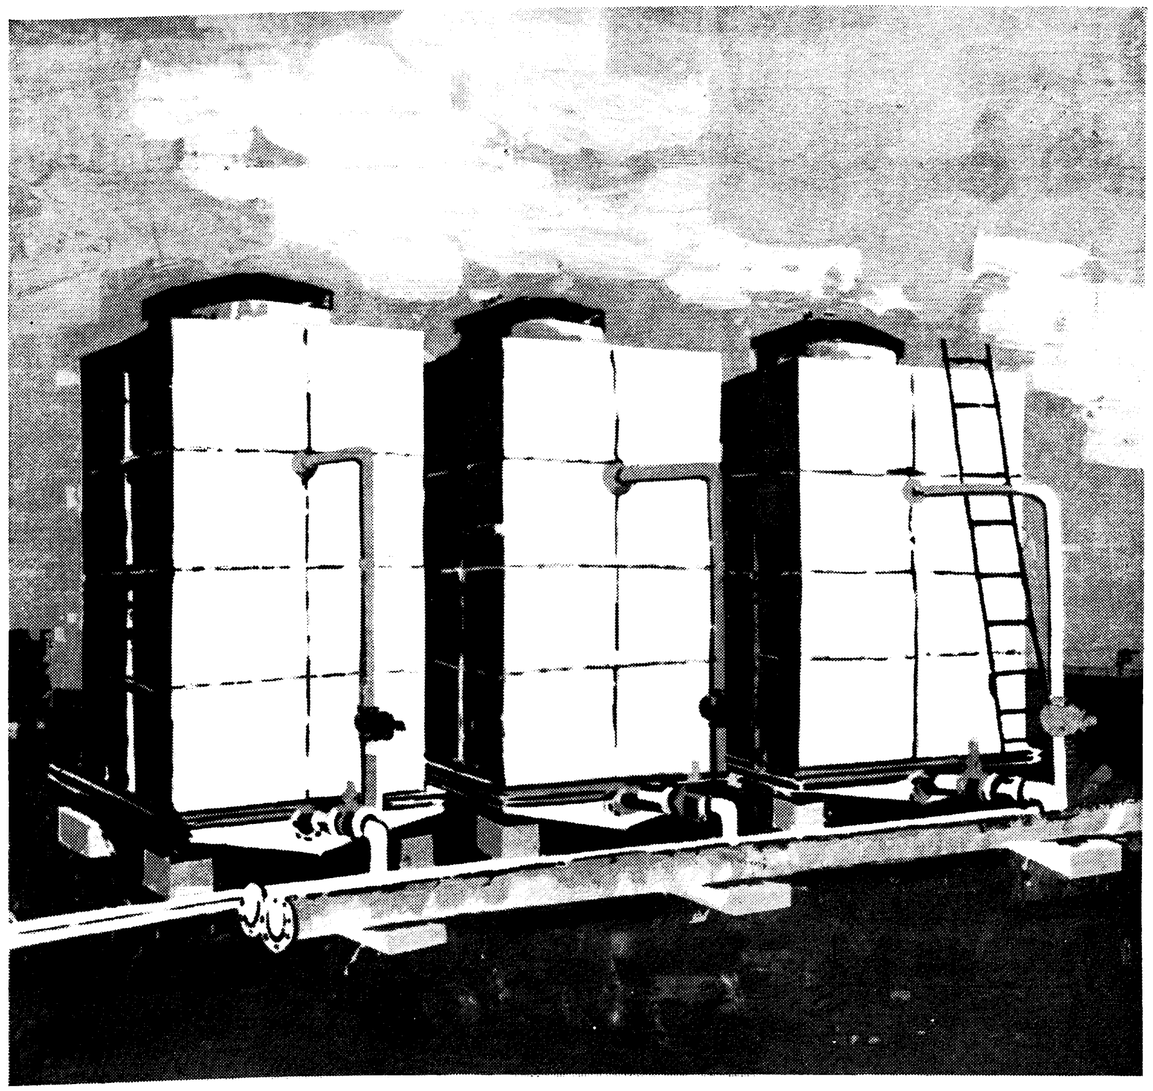
† Through 26th December.

result of reported Russian sales, as already noted), central bank buying probably increased; but, even so, 1962 was not a good year. As the world has learned the hard way, confidence in currencies must be maintained, if gold is to flow into international reserves to buttress international liquidity.

Several significant facts stand out clearly. Of the $1.3 billion of U.S. gold sales, over half went to the United Kingdom but only part of it seems to have been added to British stocks. Four continental countries—France, Spain, Belgium and Austria—bought $779 million of gold from the U.S. Treasury during the twelve months ended September 1962. France, which now has the largest balance-of-payments surplus in Europe, will—as the Finance Minister, M. Giscard d'Estaing, stated—use future dollar accumulations to pay off debts it owes to the United States; last year, it thus prepaid $470 million. On the other hand, Continental nations acquired comparatively small amounts of gold in the London gold market and from other non-U.S. sources; this contrasts sharply with large acquisitions outside the United States during previous years.

Two other factors greatly influenced international gold flows last year. During its exchange crisis in the spring, Canada sold a sizable amount to the United States, incidentally easing our position. On the other hand, South Africa, using part of its new production to rebuild its reserves depleted during the payments difficulties of 1960-61, supplied less gold.



Most of the European nations keep the bulk of reserves in gold. The ratio of gold in British reserves, shown in the table as of June 1962, was sharply increased after the United Kingdom had repaid, in July, the remainder of its indebtedness to the International Monetary Fund. In the British view, a country which is an international financial centre should hold most of its reserves in gold. For Germany, the ratio is lower than in most neighbouring countries, but, in absolute amount, its gold stock is the largest after our own.

The U.S. Gold Position

Until 1961, the United States kept its international reserves entirely in gold. Today, it also holds modest amounts of convertible foreign currencies ($338 million as of last October). The thought is that present arrangements among leading nations for reciprocal currency holdings contain within themselves the possibility of wider and more general application that will tend to improve the working of the international currency system.

How far the United States is prepared to go in holding foreign currencies, and how far

ACHIEVING PLAN TARGET FOR COTTON

CALL FOR SUSTAINED EFFORT

A VIGOROUS plea for a sustained effort to achieve the third Plan target for cotton was made by Mr. Madanmohan R. Ruia, in his Presidential speech at the twenty-fifth annual general meeting of the Cotton Buyers' Association held at Bombay on 28th December 1962. Mr. Ruia asked as to how an increase of 1.6 million bales in cotton production in the next three years, required to achieve the third Plan target of 7.0 million bales, could be secured unless "we set about this business with means altogether different from those adopted so far." Although he did not state what these "means" were, he did say that the present national emergency provided a splendid opportunity to bring all the farmers throughout the country under one centralised and uniform agency which could apply its mind solely to the question of achieving the third Plan target for cotton. Mr. Ruia suggested that, if necessary, the services of experts from outside, particularly from countries which have succeeded in obtaining higher per-acre yields, should be utilised to improve yields of cotton in India. The focal point in the task of increasing production, the President of the Association emphasised, was the primary producer who, in his opinion, must be supplied with the basic requirements at subsidised rates, if need be. Mr. Ruia had no doubt whatsoever that, given the tools and the incentives to spur him to give of his best, the Indian farmer would deliver the goods. He conceded that monetary incentives such as price increases had serious limitations in raising output and added that unless incentives were accompanied by other equally effective measures, they would not yield the desired results.

Supply Position

Dealing with cotton production generally, Mr. Ruia said that it looked as though there was a favourable and an unfavourable crop every alternate year in view of the vagaries of nature. Thus, he said, the crop, which was 5.4 million bales during 1960-61, was only 4.6 million bales in 1961-62 and was expected to be 5.4 million bales again during the current (1962-63) season. His assessment of the prospects for cotton supply in the new (1962-63) season, which began on 1st September 1962, is as follows:

By reason of the reduced crop last season, the new season started with a small carryover of 1.45 million bales. As a result, the total supply of indigenous cotton during the current season will be to the tune of only 6.85 million bales. As against this, mill consumption is likely to account for as much as 4.8 million bales, requirements for *Khadi and Ambar Charkha* for 50,000 bales and export quotas (already released) for 200,000 bales. There will thus be a disappearance of 5.05 million bales in all out of the total supply indicated earlier, leaving, at the end of the present season, a carryover of 1.8 million bales of domestic cotton. The small improvement in carryover of less than 400,000 bales thus is by no means satisfactory, having regard to the uncertainties about the next season's crop prospects. It is evidently because of this none too satisfactory statistical position that the authorities have taken, right from the beginning of the current season itself, precautionary measures, such as continuation of compulsory surveys, requisitioning at places where cotton quotes above ceilings, and retention of the scheme of distribution of crop through quota system to mills, coupled with appointment of supervisors to ensure that cotton is made available to mills at rates no higher than the ceiling prices. These restrictive measures have greatly upset the normal marketing mechanism and thereby caused considerable hardship to practically every section of the trade, including the primary producers. It is to be hoped, therefore, that the increasing pace of new crop arrivals and the consequent availability of new crop cotton at prices below the ceiling will persuade the authorities to relax some of these restrictive measures so that the trade can operate in a relatively freer atmosphere than today.

Commenting on the export policy, Mr. Ruia observed that the policy followed during the 1961-62 season and so far in the current season had worked to the satisfaction of all the interests concerned. He appealed to the Government to continue the policy of issuing export quotas soon after the commencement of the season and to retain the prevailing licensing procedure which helped to ensure continuity of supplies to foreign buyers and keep export channels active.

As for the import allocation of over 600,000 bales of cotton, including 375,000 bales of U.S. cotton under P.L. 480, issued so far in the current season, Mr. Ruia pointed out that the allocation was an indication of the Government's willingness, notwithstanding the national emergency and the difficult foreign exchange situation, to explore all possible channels for obtaining cotton from every available source. In this connection, he urged the Government to utilise the extensive experience and knowledge of the trade to gain the maximum advantage to the country.

COTTON YARN EXPORTS TO U.K.

In pursuance of the agreement arrived at between India and the United Kingdom, a ceiling of 11.5 million lbs. has been fixed for the export of cotton yarn from India to the U.K. during the year 1963. For the purpose of licensing, the shipment period will be from 1st December 1962 to 30th November 1963. The shipment covered by these licences issued in India as from 1st December 1962 should reach the U.K. not earlier than 1st January 1963.

Licences under the scheme shall be issued by the Joint Chief Controller of Imports and Exports, Bombay, on the basis of quota certificates issued by the U.K. Licensing Committee of the Cotton Textiles Export Promotion Council, Bombay. The Committee consists of two representatives each of the Indian Cotton Mills' Federation and the Cotton Textiles Export Promotion Council and one representative each of the Textile Commissioner and the Joint Chief Controller of Imports and Exports, Bombay. Licences shall be valid for shipment from any port in India. Quotas will not be transferable except with the express consent in writing of the U.K. Textile Licensing Committee.

There shall be four categories of quotas and licences, namely, reserved quotas and licences, unreserved quotas and licences, re-export licences and subsequent re-export licences.

The U.K. Licensing Committee shall supervise the entire scheme, keep a watch over the performance from time to time, interpret and give decisions on various matters arising out of the operation of the scheme and make such changes in the scheme as the Licensing Committee may deem fit from time to time. The Licensing Committee's decision on all matters shall be final and binding.

I.C.M.F. ON CLOTH STOCKS

The Committee of the Indian Cotton Mills' Federation, at its meeting held on 24th December 1962, noted indications of an improvement in the offtake of cloth from mills and felt that, with the restoration of confidence in the economy, there would be a revival of demand for cloth from trade channels. In order, however, to tide over the current difficulties of financial strain on mills, the Federation decided to take the following steps:

All mills in the country should be requested to inform the Federation of any individual difficulties they were experiencing in securing financial accommodation, so that the Federation should be able to assist them in solving their individual problems.

The State Governments should be requested to use their good offices for securing the necessary financial assistance and guarantees to mills situated in their regions.

The Government should be requested to remove any bottlenecks in the transport of cloth.

The Committee considered that action along these lines would help restore confidence and decided to advise the mills not to reduce the shift working or to resort to closures, as this would create problems of unemployment at a time when the country was facing national emergency. It also gave consideration to the Government's proposal for the holding of certain minimum stocks by every mill and felt that the proposal should not be proceeded with, as it would create problems of scarcity and high prices for certain qualities, without in any way contributing to the solution of the general problem of liquidation of stocks. The Committee urged that a watch be kept over the situation with a view to ascertaining how far the present healthy trends were maintained and decided to meet again some time in January to take a further review.

a helping hand...

As far back as 1921, Tata Steel established a Technical Institute in Jamshedpur to develop a cadre of fully qualified technical personnel to take up positions of responsibility in India's first steel works. Subsequently, the Company instituted training courses for skilled artisans and other categories of employees.

During the last four years, the Jamshedpur Technical Institute has planned and provided special training programmes to meet the urgent needs of Hindustan Steel. Over 1,800 technicians from the Government steel plants at Rourkela, Bhilai and Durgapur have availed themselves of the accumulated training experience and facilities placed at their disposal by Jamshedpur, where industry is not merely a source of livelihood but a way of life.

PROSPECTS FOR COTTON INDUSTRY

OPINIONS AMONG MILLOWNERS CONFLICTING

From Our Special Correspondent

MANCHESTER, *18th December*

MANCHESTER LETTER

MOVING among a reasonable cross section of traders in Lancashire textiles, not necessarily dealing in the production or distribution of a single specific article, it is sometimes surprising to find such a diversity of opinion not only about the future but even about current conditions. As the year draws to its close, its record must be regarded as a sombre one, despite the improvement which the final quarter has displayed. Not everyone connected with the industry, however, is certain in his own mind that this better trend has come to stay.

Wide variations can be found among the different branches as to the rate of present activity. Even within individual sections, some salesmen have lately done a great deal better than others, and reports of a definite upsurge in business have caused shaking of heads when those less fortunate have read them. Nevertheless, the fact that some ground has been gained from the very dismal trading situation of a few months ago cannot be denied. At all stages of business, there will be some firms which achieve better progress than others, although there seems to be at present a wider gap than usual. As in the past, a moment comes towards the year-end when the tendency is to predict that the first quarter of the new year will turn the scales perceptibly. Yet some of the latest national economic news has dampened the prospects. Rising unemployment over the country at large, with a very marked deterioration in certain areas, can scarcely encourage a freer demand for consumer goods so that distributors can feel justified in building up supplies. Buying in general for the past three months has certainly broadened, but a continuation and expansion of this mood is essential if the mills are to make fresh progress in 1963.

Cautious Forecast

One of Manchester's leading stockbroking firms has recently issued a market forecast which is distinctly cautious in tone. "The Chancellor has set in train a number of measures which should lead to higher economic activity," it says, "but they seem unlikely to start working much before the spring of next year. Even if they produce favourable effects on profits, these could hardly begin showing up in company statements in less than 12 months, and their full impact will not begin to appear until somewhat later." Such realism must be the basis on which those who estimate affairs have to work. It is certainly true of textiles, no less than other sectors of the economy. At the same time, provided the movement is in an upward direction, it should not be despised.

Dealing with the question of measures which might be taken by the Government to stimulate the economy into even more rapid recovery, the report suggests that this is a course with many dangers. "Any general action, such as reducing indirect taxation to increase consumer purchasing power, would bring back conditions of overful employment and incipient inflation in the South and Midlands, even whilst it was reducing industrial 'misery' in the more northern parts of the Kingdom," the report adds. "From the political aspect, further measures now will reduce the scope available at the time of the next Budget, which ought, for psychological reasons, to be allowed to have some political impact."

Meanwhile, some of the economic indicators, which are still keenly watched by traders with an eye to the future, do not make wholly disheartening reading. Wholesale textile figures, including, it should be noted, such ancillary goods as floor coverings, furniture and millinery, show that total sales in October were 1.7 per cent higher than in the same month last year. Total sales for the first ten months of 1962 were nearly 3 per cent down. Stocks, however, at the end of October were 2½ per cent lower than at the same stage a year previously.

A Valuable Asset

Liverpool's pre-eminence as a raw cotton trading centre suffered its harshest blows not merely as a result of the understandable decision of the Government to assume responsibility for war-time control over the distribution of the raw material, but subsequently when political interference robbed the market of its chance to reinstate itself. The belated recognition of the importance of the city as an independent barometer of cotton prices came just in time to salvage some of the wreck in the shape of the retained "know-how" of the pre-war operators in the market, but the long gap never really provided the basis for a sustained revival in futures trading. Accordingly, it is scarcely surprising that the directors have reacted favourably to a new offer from a London property company to buy the Exchange Building which, for all the expertise of the Liverpool traders, must now be regarded as the principal asset of the Association. The reorganisation plan put forward a year or two ago failed to gain the approval of the members; this scheme included the forming of a separate property company to take advantage of the Exchange Building and develop it for the benefit of the Association as a whole.

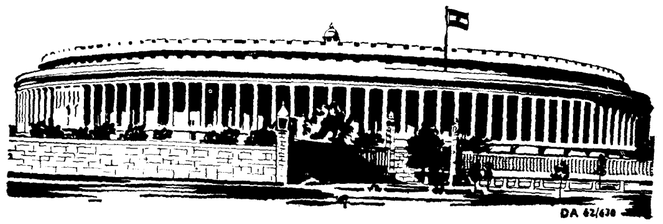
The bid of £400,000 for this important landmark in Liverpool exceeds the present valuation of the Building by some £50,000 and if accepted will mean the end of an era. For a number of years, trading in the market has been confined to a much smaller space than the huge floor where pre-war operations dealt in hundreds of thousands of bales weekly. The curtailment of business in cotton goods generally has obviously had its impact on the sale of actual, while futures transactions have lately been rare indeed. It is reasonable enough to conclude that trading in the years ahead will continue on this restricted scale, but accommodation will be available for those operators remaining in the market.

Fast and furious come the opinions—independent and otherwise—of what will happen to cotton textiles in the event of Britain joining the European Community. The latest assessment, quoted by the Egyptian Cotton *Gazette*, describes the reaction of numerous developing countries to the project as yet another example of the tendency towards a closed shop by a group of the wealthier economies. "The African or Asian exporter of cotton piece goods and clothing faces a barrage of quota and tariff restrictions from European countries which in many instances are the creation of recent years," says the author. "While in the long run the economic growth of the less developed countries can only be ensured by some formula which reconciles the growth of their exports with the conservative interests of the more advanced economies, the progress of the Common Market does not promise much in the way of growth in the European market for imported piece goods and clothing."

Keen Competition

Output and trade figures within the textile industries of the Six have, it is stated, been moving lately towards a progressively higher degree of self-sufficiency, so reducing the group's dependence on imports from the rest of the world. Within the area competition remains very keen, being the motive power behind the strong drive to raise productivity. This has been reflected in the rise in exports to outside countries in the past few years.

Quota restrictions from competition from Asian and African producers has insulated the Common Market countries to a large extent from any inroads which might have adversely affected their textile industries. The prospect of any removal of this protection still seems very remote, despite the fundamental idea of the Geneva agreement, which has pushed the door very slightly ajar for the developing areas to obtain a toehold in Europe. In spite of this meagre concession, the matter is admirably summed up by the closing sentence in the article, which reads: "By sticking to the letter of the agreement, the more protectionist countries—such as those of the Common Market—can effectively prevent any real inroads into their markets by imported cotton textiles for the foreseeable future, particularly as current quota levels are very low."



OUR RESOLVE

"With hope and faith, this House affirms the firm resolve of the Indian people to drive out the aggressor from the sacred soil of India, however long and hard the struggle may be."

From the Resolution passed by Parliament (November 1962)

JAI HIND

DA 62/630

INDIA JOINS WORLD COFFEE PACT

REPERCUSSIONS ARISING FROM MEMBERSHIP UNDER STUDY

THE year which has just closed was an eventful one for the coffee interests the world over in that it witnessed the successful conclusion of a new five-year International Coffee Agreement. The Agreement has already come into force, the declaration of intent to ratify it having been made by more than the requisite number of countries before 30th November 1962, the closing date for signatures. Fifty-four countries, including India, we are told, have signed the Agreement, of which 32 are exporters accounting for 95.1 per cent of world shipments during the year 1961-62 and 22 are importers accounting for 94.7 per cent of world imports, whereas the minimum required was 20 exporting countries and 10 importing countries, both accounting for 85 per cent of world trade in coffee during 1961-62. In view of the significance of the Government of India's decision to join the Coffee Agreement, it was but natural that the Chairman of the Coffee Board, Mr. H. Sitarama Reddy, made special mention of it when he addressed the fifty-fifth meeting of the Board held at Bangalore recently. But the reference as such was rather cursory. For Mr. Reddy did not care to explain the considerations which weighed with the Government in deciding to join the coffee pact. All that he said was simply this:

"An event of great importance which needs special mention here in connection with exports of coffee is the decision of the Government of India to join the International Coffee Agreement. ... According to this Agreement, the basic export quota fixed for India is 21,600 tonnes (360,000 bags) exclusive of our exports to the non-quota countries like the U.S.S.R. We must make every effort to build up markets and keep them in the non-quota countries also. The repercussions arising out of the I.C.A. and India joining it are under study and adequate measures would be taken to safeguard the best interest of the industry."

While the statement of Mr. Reddy that adequate measures would be taken to safeguard the *best* (italics ours) interest of the industry is reassuring, we wish Mr. Reddy—he was the leader of the Indian delegation to the United Nations World Coffee Conference—had thrown some light at least on three important aspects of the Agreement. In the first place, why should certain countries be given special consideration in the matter of quotas? Secondly, how is it that the actual shipment of coffee from India during the calendar year 1961 was not accepted as the basis for determining its export quota? It may be noted here that coffee exports during 1961 were pretty high, amounting to over 31,000 tons. And, finally, how will the export quota be varied (in future) to reflect programmes of production increases undertaken prior to a member joining the Coffee Agreement?

Exports to W. Europe

In his speech, Mr. Reddy touched on promotion of exports to the West European countries. He alluded to the two suggestions put forward by the Marketing Committee's Sub-Council for export trade with Western Europe, constituted in September 1962 at the instance of the Central Government. They are: (*a*) discontinuance of the system of open auctions and the reversion of the system of closed tenders for export sales; (*b*) incentives in the form of grant of import licences to the tune of 10 per cent of the value of foreign exchange earned on exports to certain West European countries for import of machinery auxiliary to the coffee industry. The second suggestion is a pertinent one and deserves consideration. It is, however, difficult to agree with the first. The system of open auctions for export sales was introduced only last year (1962), because the system of closed tenders had been found to be highly defective. In making up lots for sale under the closed system, coffees of the same type and grade of equivalent quality were bulked together and offered as separate district growths, but there was no guarantee that, each year, any lot of a particular district offered comprised coffee from the same two or three estates of the district. In any case, the importers in foreign countries knew only that they were being offered the bulk of a particular district growth and were, therefore, not in a position to enter the market or interest themselves on grounds of selective buying. No other country in the world is selling coffee by this system and one fails to appreciate the logic behind the plea for closed tenders for coffee exports.

To revert to Mr. Reddy's speech. His review of the recent trends in coffee marketing reveals that the current (July 1962-June 1963) season will be one of the poorest in the recent history of the Indian coffee industry from the point of view of production. The revised estimate of the crop puts the total yield at no more than 53,035 tonnes (32,800 tonnes of Arabica and 20,215 tonnes of Robusta), as against the previous estimate of 54,800 tonnes. Although this output is higher than the previous season's production of 45,653 tonnes (22,482 tonnes of Plantation, 6,620 tonnes of Arabica Cherry and 16,551 tonnes of Robusta), it is much less than what was actually plucked (67,794 tonnes) in 1960-61. The impact of weather conditions on the size of the coffee crop apart, the poor return obtained by coffee growers must have also had its effect. It is true that the final return to the growers in respect of the 1961-62 season's crop may be higher than that for the previous season's crop: Rs. 2.20 per point (according to Mr. Reddy), as against Rs. 2.06. But it is markedly lower than the Rs. 2.81 obtained by the grower in 1956-57. With such meagre return and with the growers having no control over the marketing arrangements for their coffee, how can one expect the maximum level of output? Incidentally, the estimated output of 53,035 tonnes in 1962-63 fall short of the third Plan production target of 80,000 tonnes fixed to be achieved by 1965-66. It is thus obvious that, if the wide gap between the present level of output and the third Plan target is to be filled, a more reasonable return must be ensured to coffee growers.

Raising Output

The need for stepping up the production of coffee is urgent to a degree, what with the persistently expanding domestic demand for this beverage and the importance of earning as much foreign exchange as possible through exports. No less urgent is the need for improving quality and reducing cost of production. There is a feeling in some quarters that the quality of coffee is deteriorating. Apropos this fear, Mr. Sitarama Reddy observed:

"Whether it is really so, it is too early to say. There are surmises that it may be due to various causes such as the age of trees, larger production, thinning out of shade and lack of proper care during the harvesting, processing and curing of coffee. This problem does not seem to be peculiar only to India, since other country coffee producing countries like Kenya are also facing it. Various remedies have been suggested from time to time by the scientific workers in the field, such as replanting old coffee with suitable varieties best suited to the soil and climate, proper maintenance and care in the harvesting, processing and curing of coffee."

Research

The aforesaid remedies certainly involve, as Mr. Reddy himself very pertinently stated, careful planning. It is here that a heavy responsibility rests on the Coffee Board. It is, indeed, gratifying to hear from Mr. Reddy that the various sections of the Board's Research Department are implementing the lines of approach in respect of scientific work as suggested by the Evaluation Committee. Studies on the new malady are being continued by the Department. Of late, indications for the existence of eel worms in large areas are being frequently obtained and studies are in progress to understand the implications of this fact. It is hoped that the officer of the Board who is undergoing training in the U.S.A. on nematology could take up extensive investigation on this problem on his return. Preliminary studies have, however, been started by the Research Department to determine whether pest incidence could cause ill health among plants due to resultant nutrient or hormonal deficiency. Desirability of ground protection, improvement of soil tilth, provision of adequate shade under Indian conditions, together with adequate plant protection measures and balanced nutrition, is considered to be a very essential condition in bringing round affected coffee. For the first time, resistance to the established four races of the leaf disease fungus has been obtained in Arabica coffee and the material is under progeny tests. The Research Department has taken up investigations to improve upon the reported higher percentage of CT in S.795 and selection work has progressed and lines established which indicate comparatively lower trends of CT.

Firestone

World's Leading Producer of Rubber

Nobody builds tyres like Firestone, world's leading producer of rubber. Nobody tests tyres like Firestone — and millions of punishing tyre miles each year prove it. In fact, no part of a car is more thoroughly proved than its Firestone tyres. Motorists everywhere in the world, trust the tyre that's built, tested and backed by the Firestone name. It's their surest sign of value. They know what they are getting when they buy Firestone.

Firestone

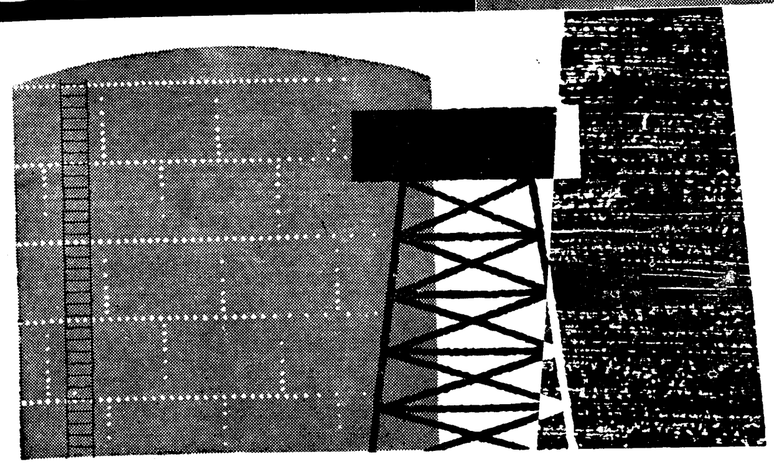
Your Symbol of Quality and Service

The steel chimneys, towers, storage tanks...rising in towns and cities all over India are symbols of a resurgent industrial nation. Structural steelworks like these are fabricated by NSE.

NSE also manufactures: pneumatic hammers and drop forges in collaboration with B & S Massey Ltd., Manchester, U.K. • drilling machines, sheet metal and plate working machinery • textile blowroom machinery in collaboration with Trutzschlers, Germany • Augusta suction and overhead cleaners for ring frames in collaboration with Ernst Jacobi, Germany • electric furnaces in collaboration with F. E. Tagliaferri, Milan, Italy • other foundry and metallurgical equipment • E. O. T. cranes

Vital for India's economic growth, NSE products serve many industries—public and private. And every NSE product is backed by over a quarter century of engineering know-how, skill and service.

By helping reduce the country's dependence on imports, NSE contributes towards national strength and self-reliance.



NSE — *service to industries*

INCENTIVES TO ELECTRICITY INDUSTRY

STANDARD RATE OF RETURN MAY GO UP BY ONE PER CENT

ACUTE power shortage in several parts of the country was responsible for the slower tempo of industrial production in 1962. The authorities did not, however, pay heed to the advice of the Federation of Electricity Undertakings of India in this connection. That advice was to the effect that it would be far better to over-expand power generating facilities, even if they had to operate at less than their full capacity, than to have industries operate very much below their installed capacities for want of electricity. It was a sound piece of advice, for power-consuming industries, in which investments were generally far heavier than in power supply utilities, could have hardly afforded to keep a part of their capacity idle.

There were, of course, five major reasons for the Government's failure to provide for the free growth of electric power in the country—namely, (i) limited foreign exchange, (ii) inadequacy of trained technical personnel, (iii) insufficient margin of error in load forecasts, (iv) too much rigidity in planning power development to meet just the demand forecast and no more, and (v) the "invidious" distinction between private sector and public sector. The first two causes are understandable, while the other three are inexcusable. The third and fourth causes may cease to operate only when the recently-appointed committee of foreign and Indian experts lays down a more reliable and accurate forecast of long-term power requirements than has been attempted so far and the Government, too, draws up a more realistic programme of power development in the light of the Committee's survey. As for the fifth factor which smacks of a doctrinaire approach on the part of the authorities, it is noteworthy that it has come in for renewed criticism at the hands of Mr. S. M. Zubair, Chairman of the Federation of Electricity Undertakings, in his speech at the annual general meeting of the Federation on 22nd December 1962. Here is the relevant portion of his speech:

"The largest single inhibitor (of the free growth of electric power) has been the invidious distinction between 'Private Sector' and 'Public Sector,' when a public utility in any sector by its very nature serves a public purpose and supports the concept of Welfare State. If a group of utilities in the so-called 'Private Sector' which is well managed by earnest men of proved ability and integrity is allowed to be strangled by law or exposed to unwarranted attacks and nibbling encroachments by the State Electricity Board and is forced to be neglected by the investing public through the manipulations of the Reserve Bank rate and thus meet a slow and sure death, it is folly to think that we will have punished the profiteers; it would be the nation as a whole that will suffer the grievous loss."

Industry's Minimum Demands

It is in this context that the Federation has continued to plead for some essential amendments to the Electricity (Supply) Act so that private licensees, especially those who have embarked upon financing programmes at rates of interest higher than the 'Standard Rate,' can raise finance for development. The main proposals, which the electricity industry regards as the absolute minimum for raising new finance for essential development, are: (1) An increase in the 'Standard Rate' by at least one per cent; (2) an amplification of the law so as to make it clear beyond doubt that all forms of taxation, including tax deductible at the prescribed rate from dividends, shall form part of the operating expenditure just as all tax relief has redounded to the benefit of the consumer; and (3) whenever the electricity undertakings are obliged to raise loan finance at interest rate in excess of the 'Standard Rate' the actual interest *plus* half per cent shall be allowed as operating expenditure.

Although the Federation has been canvassing the above proposals with laudable persistency all along, the powers-that-be have provided only some temporary relief which, too, is very modest in scope. The relief is by way of permission to the licensees to make special appropriations, at the rate of 6½ per cent of the assessable income, for being ploughed back into business. But there is no uniformity of practice even in this regard, for some of the State Governments have taken no action so far in pursuance of the Central Government's recommendation for "special appropriations" in respect of the fiscal years 1959-60, 1960-61 and 1961-62.

Clearly some permanent and more tangible relief or incentive to the industry is called for. It is a happy augury, in this connection, that the Union Minister for Irrigation and Power, Mr. Hafiz Mohammad Ibrahim, has announced something definite and concrete in his reply to Mr. Zubair's speech:

"The Government have been, by and large, satisfied about the desirability of increasing the standard rate of the reasonable return by one per cent. It is considered that some of the other demands of the industry which have been found to be reasonable should also be met. My Ministry is preparing an amending Bill incorporating the necessary amendments and it is proposed to introduce this Bill during the budget session of Parliament. Financial provisions of this Bill will, if approved by Parliament, come into force with effect from the next financial year. I hope that the amended provisions would enable the licensees to raise the necessary capital for development and to take all possible steps to meet the power demands in the areas served by them."

Ministerial Commitment

It will be seen from the above extract that the Minister has definitely committed himself to increasing the 'Standard Rate' by one per cent. The electricity industry may feel thankful for this promise of early relief, although it cannot confidently look forward to the acceptance of its other related demands on which the Minister has chosen to be vague and non-committal. But it is certainly a hopeful development that the Minister has taken the line that the "inevitable" enlargement of the public sector in the electricity industry "should not deter the licensees from continuing to play their part in making ample, reliable and continuous supply of electricity available to the people in the areas they serve." While the words within inverted commas do not necessarily suggest that private electricity undertakings can expand without any hindrance, in the context of the promised increase in the 'Standard Rate' of return and the expected assumption by the Union Ministry of Irrigation and Power of direct responsibility for making foreign exchange available for the maintenance and replacement imports of licensees they seem to signify a more sympathetic official attitude towards the industry.

The exigencies of the Sino-Indian war emergency have probably dictated this responsive stand on the part of the authorities who are noticeably keen on increasing power production by two principal means, namely, (i) advancing the dates of commissioning of units and (ii) ensuring that all essential raw materials and spare parts are in stock for the full operation and maintenance of plants. But it is too early to say whether they connote a pronounced shift in the direction of liberalisation of official policies and procedures governing the private electricity industry's expansion and growth.

GENERATOR STATOR FROM U.S. FOR GUJARAT POWER PLANT

A giant generator stator, weighing some 110 tons, meant for installation at the Dhuvaran thermal power project in Gujarat, was unloaded at the Bombay docks on 19th December 1962. This was the second time that a Bombay Port Trust crane had handled a one-piece package of similar weight. The first one was also a stator received some months ago from the United States.

Both the stators are parts of the generator sets to be installed at the Dhuvaran plant. The plant will have four such sets, and stators for the remaining generator units are expected to arrive shortly. The first generator unit is expected to be commissioned some time this year and the last one in 1964.

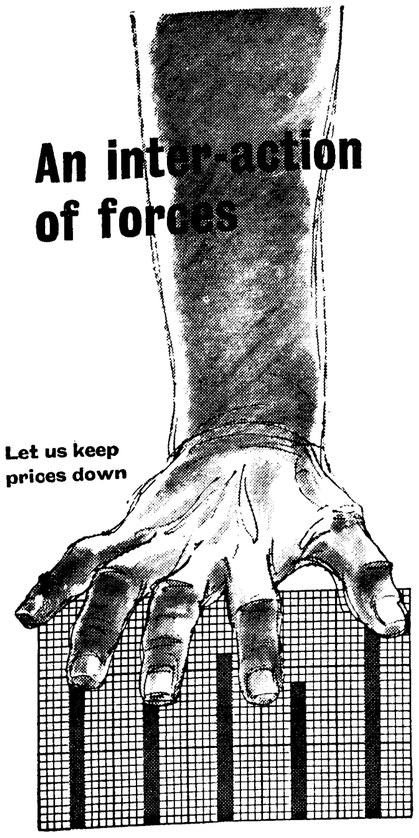
The 254 M.W. Dhuvaran thermal power project is being entirely financed by a loan from the United States Agency for International Development. The loan, announced in February 1962, comprises $33.6 million to cover the foreign exchange needs and a rupee component of Rs. 9 crores from P.L. 480 funds. Civil designs for this Gujarat Electricity Board project were drawn up by the Kuljian Corporation of Philadelphia. Designs for the electrical and mechanical work have been done by the International General Electric of New York. The former is supervising the construction of the project. All the major equipment for the plant are being imported from the United States. About 10,000 tons of equipment have already been received at the project site and some 8,500 tons are yet to be received.

WEST GERMAN CREDIT FOR ROURKELA EXPANSION

The Federal Republic of Germany finalised a Rs. 56-crore credit agreement with India in the third week of last month for financing, among others, the expansion scheme of the Rourkela steel plant in the public sector. The first portion, amounting to Rs. 6.66 crores, of this credit package is earmarked for advance supplies for the Rourkela expansion scheme, and also for necessary imports to stabilise full production in the existing plant in pursuance of the Solveen Commission's recommendations. Another portion, amounting to Rs. 11.9 crores, will be used to finance the maintenance import requirements of Indo-German collaboration projects. A sum of Rs. 5.95 crores will be in the form of direct loans to the Industrial Finance Corporation of India, the Industrial Credit and Investment Corporation of India and the National Small Industries Corporation Ltd. Of the balance, a sum of Rs. 22.5 crores will be used to finance mutually agreed projects in the sectors of power, irrigation and transport. The entire credit of DM 470 million (Rs. 56 crores) *plus* DM 85 million covering Rourkela payments falling due, represents West German aid promised for the second year of India's third Plan.

FURNACE OIL FROM RUSSIA

A trade agreement between the State-owned Indian Oil Company and "Sojuznefteexport," the Russian Export Organisation, for the supply of 300,000 tons of furnace oil from Russia was signed in Bombay on 21st December 1962. This forms part of an agreement under which the Indian Oil Company is to receive one million tons of oil products, mainly kerosene, from Russia during 1963.



It will be recalled, in this connection, that the Indian Oil Company had entered into an agreement with the U.S.S.R. for the import of 1.5 million tons of refined petroleum products on rupee payment basis in 1960.

NEW BRITISH TRANSPORT PLANE

It is reported that the new British general-purpose transport aircraft, the *Short Skyvan*, is to make its maiden flight in the near future. Simplicity of design and construction allow the *Skyvan* to be maintained and overhauled easily even in remote parts of the world. Fully loaded, it will be able to operate from a runway, clearing or field just half-a-mile long. The *Skyvan* can also be used as a 15-passenger transport, executive plane or agricultural aircraft. In military service, paratroop transport, supply dropping and air ambulance duties all come within its scope.

Hearty Congratulations
and
Good Wishes to
BARODA RAYON CORPORATION LTD.

An inter-action of forces

Let us keep prices down

Our morale high

Hurling the Chinese back across the Himalayas calls for national stamina, not just a flexing of the biceps. The mobilization on the economic front is as important as it is on the military front. In the emergency that imperils our freedom today, the dividing line between profits and profiteering can be pretty thin. Even as the army, a nation in combat has to march on its stomach. The farmer in the fields is just as much a 'jawan' as the captain of industry. In keeping prices down, we help keep our morale high, our national stamina in fine fettle, and our armed forces in the fighting spirit that it takes to win.

Jai Jawan

Issued in the interests of the nation
BY SAHU JAIN GROUP OF INDUSTRIES

WORK FOR VICTORY

Your job is vital to victory. India demands all hands to work — and work more for increased production to strengthen our fighting forces, to build up the nation's resources and striking power on all fronts.

At foundry and lathe, machine shop and giant industrial plant, shall all hands strive the harder to raise productivity, boost output. Let vital supplies flow in an unending stream to the front line as well as for the nation's domestic needs.

EVERYONE A SOLDIER ***for GREATER PRODUCTION STRONGER DEFENCE***

NEW PRODUCTS AND PROCESSES

Paper Based on Synthetic Fibres

A DUTCH paper mill is marketing a new product capable of satisfying special requirements by its properties. The paper has a high synthetic fibre content and is characterised by the properties of these fibres, such as strength, weather resistance and resistance to wear. Wet and dry folding resistance is exceptionally good, while resistance to cracking and tearing when dry, but particularly when wet, is unprecedentedly high. Alongside these improved properties the new product still retains the authentic character of paper. The paper can be supplied in several glazes and in substances between 50 and 150 grams per square metre. To facilitate impregnation, the porosity of the paper can be altered. Despite its special composition, the paper can be printed on using normal inks, by both offset and book printing methods. The paper is particularly suitable for the manufacture of charts, securities, leaflets and other products that regular use subjects to heavy wear.

Concrete Beam Machine

A new type of machine capable of producing five 200 ft. lengths of prestressed concrete flooring beams simultaneously, has been made by an Australian company for the Philippines Pre-Stressed Concrete Company Inc., of Manila. The manufacturer is Monier Steel Pty. Ltd., of Sydney, which has already made two identical machines for another Sydney firm, Prestressed Concrete Pty. Ltd. The machine, known as the Monier Prestressed Floor Beam Machine, has greatly speeded up prefabrication techniques in concrete building construction. It is a five-head machine, 27 ft. long and 13 ft. wide, and is operated by a built-in electric motor. Five hoppers feed the heads. These are filled by a cement buggy which can be driven on to the machine's steel deck. In operation, the machine moves along a track on the chain and pinion system. It can move to the full extent of its 200 ft. range, or to any pre-determined variant of this range, depending on the length of beam required. As the machine passes along the track the newly-cast beams are deposited in moulds on the ground. It has a capacity of five 200 ft. 6 in. U-beams in two and a half hours. Stressing wires which are cast in the concrete are cut after the beams have been allowed to cure. Other concrete forming machines made by the firm are a roofing tile-making machine, and a machine made under licence from a French company which forms railway sleepers. The railway sleeper-making machine moves along the railroad track, forming and depositing on the ground concrete sleepers ready for track laying. Concrete sleepers have many advantages over wooden sleepers. They can be made on the job as required, are durable and comparatively cheap.

Mechanical Seeder

An Australian farmer's invention has enabled many thousands of his fellow agriculturists to sow their crops easily and cheaply. The farmer-inventor is Mr. Alan Clough, who now farms a 1,500-acre sheep and wheat property at Inverell, in north western New South Wales. His invention, called the "C" Paster Seeder—the "C" standing for his surname—is a new concept of mechanical seeding. The "C" seeder is made in Sydney by one of the oldest farm implement companies in Australasia—Donald Patents Ltd., which was founded in New Zealand 92 years ago and has been operating in Sydney for 54 years. The machine is extremely simple but ingenious in design. Its lack of moving parts ensures a long life, while its simplicity enables it to sell at about one-third the price of conventional seeders. It has a seedbox of 30 to 35 pounds capacity, seven feet long and divided into 14 six-inch compartments. Each compartment has a seed distributing hole in the bottom. A spring wire, which drags on the ground, passes through each hole. These spring wires are attached to a similar wire stretched the full width inside the box. Vibration of the vertical springs as they move along the ground shakes the seed and causes it to flow between the circumference of the holes and the springs. The continuous vibration ensures an even flow of seed. Each compartment of the seeder is fitted with a sowing cup, which can be rotated to allow eight different seed sizes to flow through the seeding holes. A code setting out the sowing rates with various seeds, travelling speeds, and hole sizes, is supplied with the seeder. The "C" seeder is the only seeder in which any cup can sow a different weight of seed at a different drop rate from the other cups. This means that the operator can drop a heavy seed with a lighter seed from alternate cups without pre-mixing.

A hinged chassis enables the seeder to be raised for travelling from place to place and a sealed lip keeps the seed dry in wet weather. The standard model is seven feet wide, but two-feet extension boxes are available if a wider coverage is required. It can be attached by two bolts to any vehicle, tractor or implement, and is particularly useful in seeding contour banks, creek beds and other places which have been hitherto inaccessible with conventional machines. Donald Patents Ltd. also makes a range of wool-presses, tobacco presses and wire strainers. The Ajax hydraulic tobacco press is a one-man press, easily operated and reasonably priced. A major Australian tobacco company is using five of these presses on its plantations in Fiji.

Electronic Telephone Exchange

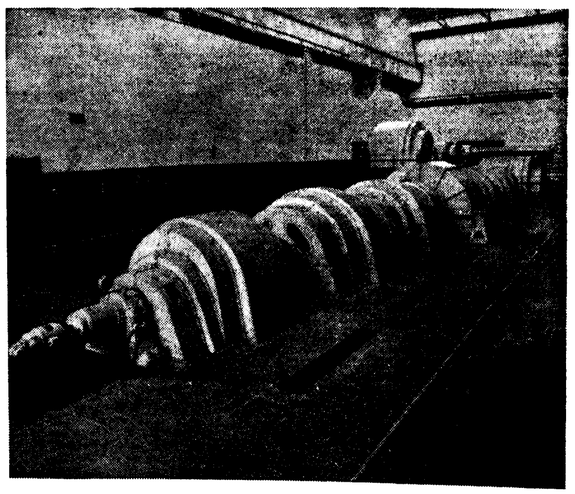
The first electronic telephone exchange of its type in the world has just been put into operation in London. It has been described by the Postmaster-General, Mr. Reginald Bevins, as the "most important milestone in the history of telephony in the U.K.," and one that could give Britain a lead in world communication markets. The new exchange operates on what is known as the "time division multiplex," which means that the switching equipment is shared simultaneously by a large number of subscribers. They all talk over the same physical paths, but because every conversation is "chopped up" into 10,000 pieces every second and fitted into its own individual time slot in the system, there is no interference between channels. Resultant speech quality is considerably higher than that needed for ordinary telephone working. The "brain" of the system is a magnetic memory which contains all the information relating to each line that enters the exchange and can determine whether a call comes from a subscriber's telephone or a call box. It even knows if a particular telephone bill has not been paid. The exchange will be used experimentally. Three more exchanges are already being built in London. Each of them is designed to try out, under actual service conditions, a different approach to the problem of telephony by electronics. Mr. Bevins said: "There is not the slightest doubt that the future lies in electronic exchanges, and it is the Post Office's policy to move from our existing automatic exchange systems to fully electronic ones as soon as possible."

Dry-cooling System for Big Generating Units

Successful tests, it is announced in London today (17th December), have been carried out on a major British electrical power development—the use of the Heller dry-cooling system in large electricity-generating units. The tests lasted a year and covered a wide range of weather conditions, including severe icing. A big advantage of the system is that power stations—and in particular atomic power stations—designed around dry-cooling towers do not have to be sited near sources of ample water supplies. Instead, they can be built wherever they are needed—for example, a conventional power station could be based on a cheap coalfield having no water supplies. In the dry-cooling system, the boiler water itself is used again in a cycle of operations to provide further water. Power authorities in a number of countries, including Australia, Canada, and the United States, are displaying great interest in the British tests.

Indestructible Industrial Flooring

A flooring material described as "almost indestructible" has been developed by a Scottish firm Messrs. Rowan and Boden Ltd. With an epoxy resin base, it is much stronger than concrete, needs no maintenance, and is completely resistant to almost every known chemical used in industry. Test areas have been laid in industrial premises throughout Britain and not one shows any sign of wear and tear, in spite of being put through tests which would destroy or damage any other type of flooring. With a jointless non-skid surface, it is ideal for all premises where hygienic conditions or a dust-free atmosphere are essential. Able to withstand high temperatures it can also be laid in abnormally cool conditions and remains unaffected when exposed to the weather. It will set in 24 hours. The surface also stands up to constant traffic, such as heavily laden steel wheeled trucks, fork lift trucks, cars and lorries. The firm believe that the formula will solve almost every flooring problem in industry, ranging from heavy steel making and oil refining to brewing and baking.



Device to Detect Over-voltage

A new device to combat industrial electrical breakdowns has been produced by a British firm of electric motor control gear manufacturers, Allen West and Co. Ltd. It is a portable unit for detecting and recording transient over-voltages known also as "spikes." The device, known as the "Spiketector," has been specially designed to meet a growing need in industry brought about by the increasing use of semi-conductors, particularly silicon diodes and silicon-controlled rectifiers, which are extremely sensitive to reverse over-voltages. The switching speed of semi-conductor devices has considerably increased the problem. The new device will accurately record short-duration transients which elude moving coils and moving iron meters and in the past would have only been detected by a good quality oscilloscope in the laboratory. The unit, which itself is completely isolated, is connected to installations on site by merely clipping in its two probing leads. It will give immediate visual warning of the presence of any transient spikes above a pre-set value, and will count spikes up to a maximum of ten per second.

Automatic Tin Plate Classifier

A new machine, claimed to be the world's first automatic sheet-tin plate thickness classifier has just been demonstrated in Britain. The machine can automatically sort tin plate sheets to a fine degree of accuracy at a rate of 3,600 sheets per hour, with one operator. Previously, the sheets were graded into thicknesses by hand—one man handling 3,000 sheets per day. The sorting of tin plate into various thicknesses within very close limits is necessary in many treatments, including the manufacturing and printings of cans, but the makers claim that the machine can be adapted to handle any flat material "of rigidity and flexibility similar to tin plate" such as plastics. A new machine which can shape or form the hardest and toughest metals is now being marketed by a Glasgow firm. Known as the "Marmax" Four Head Electrochemical Metal Forming machine, it is a complete departure from the conventional machine tool which uses large heavy structures and requires skilled personnel. The new process is similar to the technique of electro-polishing and operates at a greatly accelerated rate. It shapes tough or brittle "space age" metals through dissolving the excess material by means of an electric current, passing between the component and the tool through an electrolyte. The machine consists basically of four horizontally operated heads and is completely automatic in operation. Each head consists of a die or cathode (to suit component being manufactured), a servo controlled gearbox with ball nut and lead screw fitted to the die, a control console, a stabilising power unit and an electrolyte pumping system. The unique feature of the new machine is its ability to employ the electrochemical process in the production of components in sequence to very fine tolerances.

AGRICULTURE AND PLANNED DEVELOPMENT

VILLAGERS NEED SOME PROSPECT OF VISIBLE SATISFACTION FOR HIGHER PRODUCTIVITY

By W. Wilson Mayne

I HAVE two interesting recollections of my thirty years in India which seem to me to have a bearing on the problem of India's agriculture. I had the good fortune to work under the direction of Dr. Leslie C. Coleman, who was Director of Agriculture in Mysore for nearly a quarter of a century and left a proud record of service to rural India. One of the projects near to his heart was the improvement of the Amrit Mahal cattle by selection and breeding. To this end, he organised a search of the State for the best types to build up a breeding herd and, having done so, he invited a party of local farmers to comment on the beasts that had been selected as foundation stock. They examined the animals with care and deliberation and after a while shook their heads in *some dubiety*; they lacked the lucky marks—those twists of hair which mark a change in the lie of the coat. I remember Dr. Coleman's comment: "Well, we'll just have to select for lucky marks."

During the years I worked under Dr. Coleman, I had the opportunity to make friends with many of the fine staff of research and extension workers he had built up. I remember a conversation with one of them who had not long returned from a period of study in Britain, which turned to problems of agricultural progress. He had been impressed by an experience in England of a university friend who, having graduated, was going back to the family estate in the country to manage it. He commented that this appeared to be a normal event in Britain, whereas in India it would have been an extraordinary one.

Leadership from Within

Is it fanciful, after quarter of a century, to see in these two recollections the essence of India's agricultural problem?—the need to know what the farmer really wants and the need for leadership from within the rural community. This is not to ignore the two great problems of land tenure and rural finance, but both of these could prove less intractable with sympathetic understanding and responsible leadership in the village and the field.

The dominant political thought of the economically dependent countries of the world has been moulded by two revolutions, one, slow, spread over three hundred years, and the other, violent, victorious after thirty. I think it is true to say that neither the Western technological revolution nor the Russian political revolution owed anything to the thought and way of life of agriculture. It is not, therefore, surprising that the measures taken to harness the farmer's effort to development programmes based on the principles of these revolutions have met with little success. This failure has become increasingly apparent in recent years, as Mr. Khrushchev's frankness on his agricultural difficulties has reached the world's Press and Mr. Chou-en-Lai's buyers have appeared on the world's grain markets. For the less-committed, the case for re-examination of the foundations of development programmes takes on a new urgency. The successful growth of an industrial base on the Marxist pattern is likely to create more problems than it solves if the workers fail to get enough to eat.

A Confusion

The technological revolution of the past three centuries derives primarily from the scientific approach to the problems of natural phenomena and the Marxist revolution claims to be the application of this method to the problems of human society. The success of the method has, perhaps, tended to obscure its limitations and to conceal its dangers. The process of the scientific method is one of abstraction—a concentration on similarities to the neglect of differences—and, within limits, this leads to an insight into the world of nature unattainable in any other way. The inherent danger, and it is a very real one, is that the picture so obtained is assumed to be the whole picture and action is based on that assumption. There is a confusion between the statistical abstract and the real situation and the attempt to use the former to solve the problems of the latter can well lead to confusion and despair.

Anyone familiar with the farmer of any country will recognise his absorption with the real situation. It is the uniqueness of his problems which dominates his thinking, problems which can be solved only on his own terms. The scientific method has been slow to penetrate farming practice and even where it has been accepted, it has usually been in relation to what might be described as 'new' problems—new crops, new diseases or new pests. Traditional cultural practices have been remarkably resistant to change and, where changes have been made, they usually owe more to example than to argument.

Nothing could be more difficult than to fit this awkward individualist into a centralised planning system where targets are determined by statistical abstractions and techniques for their attainment devised on theoretical grounds. It is not that his problems have not been investigated and theorised about. Libraries are weighted with tomes on the Agrarian Problem and there are any number of *panaceas* from collective farms to proud peasant-owners to solve it. No one could deny that much painstaking research has gone into these proposals and many of the generalisations can be justified by massive statistical evidence. Equally no one would deny that the problem is a very real one, involving, in human terms, a burden of waste and misery crying out for relief. Yet the effect of all this research has been singularly barren of practical results.

Fresh Look Wanted

Experience would suggest that a wholly fresh look should be taken at the problem, a reversion to pure observation, free of theory and of theorising, with a view to discovering *ad hoc* solutions to real situations and recognising that there are panaceas. There are, of course, tremendous political difficulties to any such pragmatic approach. There may well be cases where a good landlord-tenant farmer relationship affords a promising basis for new growth; others where conditions favour some form of capitalist farming; still others where the soil is ripe for a co-operative solution. The first two of these would be anathema to the theorists and the dominant politicians wedded to a socialist pattern of society, but both might well offer promising solutions in individual cases.

In fact there is plenty of evidence that these older systems can still work and it seems folly to condemn them on theoretical or statistical grounds. The fact that, on the whole, the landlord-tenant system in India has proved bad does not alter the fact that there are some good and progressive landlords, upon whose experience and influence, community development could be built. It is not unimportant that capitalist farming has given India its major export crop and provided the workers in it with a standard of living substantially in advance of that of the rural agricultural worker.

Dudley Stamp in *Our Undeveloped World* records, "By and large, the better British farmer is the tenant farmer. ... The traditional social organisation of British farming into landlord, tenant farmer and farm worker is firmly established and normally successful. It may be said that the trend of the world as a whole is rather toward the British model than away from it." It may be that there are more good landlords in Britain than there are in India, but that there are—or were—some, and it is a great pity that their potential services to a developing agriculture have been largely extinguished by legislation based on the average performance of their class.

Experience of Mexico

Writing on economic development in Mexico, Asoka Mehta, who could well be expected to take up a doctrinaire position, notes, "In agriculture, though land reforms initiated economic changes, the productive advances have been made in areas that had escaped the reforms and where capitalist farming developed. The commercial crops register advances because they attract capital. The small farms tend to stagnate, unless land reforms are followed by appropriate measures of reorganisation and co-operation." It is not clear whether Asoka Mehta would include capitalist farming among possible measures of reorganisation alongside the magic incantation "co-operation" upon which so many hopes are placed. The evidence would suggest that a closer look at its possibilities should not be excluded by ideological blinkers.

Cuban Experiment

A very recent account of the agrarian situation in Cuba by Henry Brandon (London *Sunday Times* 28th October 1962) is not without relevance. To quote him:

> "... the serious long-term problem, as Carlos Rodriques, who has the unenviable job of Minister for Agriculture, readily admits, is agrarian reform. The first method used, collectivisation, he confesses a failure. Most collective farms are now being remodelled as quickly as possible as State farms where workers are again workers, where they get wages not in equal shares, but depending on their production and where they have their own trade union. ... But whether production has yet improved is doubtful. So far, only 45 per cent of all farm land has been *nationalised*; the rest is *in private* hands and it is the farmers owning between 45 to 500 acres who present the most serious problem. They are hostile to agrarian reforms and have neither enough workers nor any strong incentive to produce much."

The only solution which Che Guevara, described as the ablest of the Cuban leaders, could suggest was socialisation, though it can hardly be said to have proved a resounding success elsewhere.

Turning, significantly, from the general to the particular, Brandon continued, "I also stopped to visit a small farmer who belonged to a class owning less than 45 acres. He had been given this piece of land which he had previously rented from an absentee landlord. He, too, did not seem anxious to sell his produce, because he said there was little he could buy in the markets. But he also admitted that his family had enough to eat of their own eggs, chicken, meat and vegetables." The whole problem could hardly be better summarised than in that picture of a Cuban peasant farmer caught in the web of Marxist planning. It also fixes the point of departure for any rational agrarian programme—what does the farmer want?

It is not what the farmer in the abstract wants—that approach has already been made and the answer that the cultivator wants to own his land has often been thought to be sufficient in itself. The little picture of the Cuban farmer shows only too clearly that mere ownership will not produce the goods upon which any balanced development plan must depend. The real point of departure is what Kale Gowda wants in Kodlipet—a concrete situation to be solved in its own context. The generalisations from research into agrarian problems may well provide useful tools in solving such specific problems but they cannot produce blueprints.

There is nothing original in this approach and, indeed, this was implicit in the original thinking behind the Community Development Programme, except perhaps the insistence on freedom from any preconceptions as to what any individual solution ought to be. It does not make the task any simpler and the obvious criticism that what Kale Gowda wants is probably unattainable remains still valid. The concrete approach would seek to establish attainable ends by discussion in which no possibility would be excluded from consideration and no absurdity dismissed without examination. The difficulty comes when a recognised need is incompatible with official plans or an acceptable solution is contrary to official policy. Perhaps, a sufficient number of concrete inquiries into the needs of individual farmers and rural communities made without preconceptions might induce changes in plans and policies, but such a hope has only to be expressed to reveal its hollowness.

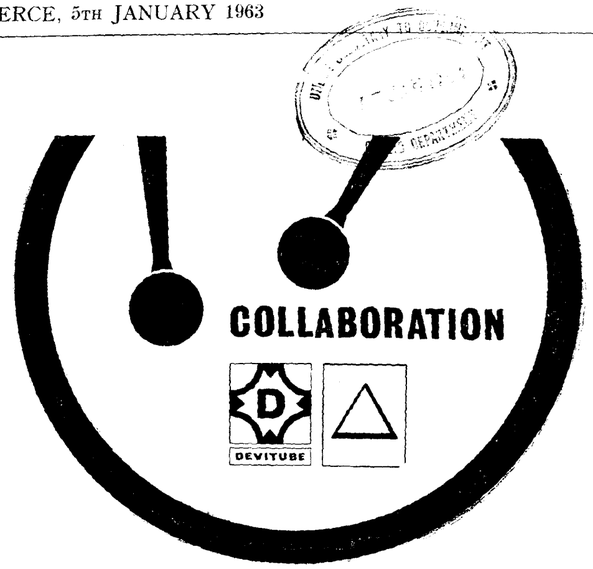
An Incompatibility

The fact is that conventional planning directed to building up a heavy industrial base and to providing the infra-structure of power, water, education and communications at the cost of current consumption is wholly incompatible with the needs and aspirations of the cultivator. His has long been a life of austerity and deprivation and his concept of freedom and independence is bound up with some relief from these burdens. What point is there for him in effort, if the results of that effort cannot be turned into goods he can buy and use and consume? If land reform reduces the burden of rent, the incentive to produce may be still further diminished as long as he and his family have enough to eat.

It would be very encouraging, if the folk in the villages had the imaginative vision to see the hope of an expanding economy and the part they could play in bringing the reality closer. This is, indeed, an ideal to be worked for but not a reality to count on. The people of the villages have had less to sustain them in the waiting before "take off" than the urban industrial and constructional workers, to whom the first fruits of development have already reached. Their effort is not to be secured by exhortation but by some prospect of visible satisfaction.

Value of Consumer Goods

The obvious practical conclusion is that some concession to swell the flow of consumer goods is required and that the nature of the flow should be based on market research designed to find out what rural people really want rather than what the planners think might be good for them. On a scale large enough to be effective, there may well need to be some contraction in longer-term industrial projects but an increasing flow of agricultural products may prove of more permanent social value than, say, a synthetic rubber plant or another shipbuilding yard in a world with an abundance of rubber and a superfluity of shipyards.



Of course, the encouragement of a flow of consumer goods is not likely to be of much value without the improvement of facilities for the farmer to exchange his produce for the things he wants. The importance of better marketing of agricultural produce has been more appreciated than the need to satisfy the farmer's wants. Nevertheless, the results of the attention devoted to it have been little more successful than that directed to stimulating production and the distortions in foodgrain marketing which have characterised some of the experiments have attracted widespread attention and acid criticism.

Once again, the dangers of an approach to complex problems based on feeding back an abstract analysis to the solution of a real situation is abundantly demonstrated. The analysis facilitated is indeed only possible—if the facts that buyers, sellers and middlemen are human beings actuated by a variety or motives and that goods can rarely move smoothly from one point to another, are left out. That human beings behave as human beings and machines behave as they should not, but usually do, is not surprising to the unprejudiced observer, but is a matter of the deepest offence to the analyst whose theoretical model has become his favoured plan of action. The blame for failure is placed everywhere but the right place.

Human Weaknesses must be Recognised

Every one knows that existing systems are defective, that human beings who alone can operate them are greedy, cruel and selfish—and sometimes generous, kindly and helpful. These are factors in every situation and cannot be left out of account. It is wiser to seek ways of improving machinery which has developed over the years, so that abuses can be checked and allowances for human frailty made rather than to scrap it and attempt to build anew in the middle of an emergency—and we have been living in an emergency since 1947. One can repeat with propriety a thought of Francis Bacon. "It were good if men in their innovations would follow the example of time itself, which indeed innovateth greatly but quietly and by degrees scarce to be perceived. For otherwise whatsoever is new is unlooked for; and ever it mends some and impairs others; he that is holpen takes it for a fortune and thanks the time; and he that is hurt for a wrong and imputeth it to the author." We may recognise that we cannot wait the slow change of time but we can accept the principle that change should grow from what has already grown.

One is driven to the conclusion that our concern with the scientific approach to human problems has led us away from human understanding and only with a return to it, shall we be able to deal with those problems which lie so close to men and the land from which they sprang and draw their sustenance.

To meet the increasing demands of a growing industrial economy...

To supply an ever-increasing number of extrusion process, seamless Solid drawn copper and brass tubes for :—

Electrical · Refrigeration · Chemical · Textiles · Automobiles · Stoves & Pressure Lamps · Sugar Refineries and several other industries

BARODA RAYON'S PLANT INAUGURATED

THE rayon yarn manufacturing plant of the Baroda Rayon Corporation at Udhna near Surat in Gujarat was inaugurated on Sunday, 23rd December 1962, by the President, Dr. S. Radhakrishnan. The plant, put up in collaboration with the two well-known Japanese firms of Mitsubishi Shoji Kaisha Ltd. and Asahi Chemical Industry Company Ltd. has a capacity to produce 8.25 million lbs. of rayon yarn per year, 50 per cent of which will be sold on sized beams. The Corporation is one of seven viscose rayon yarn manufacturing companies in India. The factory will also produce every day 48 tons of sulphuric acid, five tons of carbon-di-sulphide and two tons of anhydrous sodium sulphate. The total cost of the entire project is Rs. 8 crores. The number of workers employed in the initial stage will be 1,100.

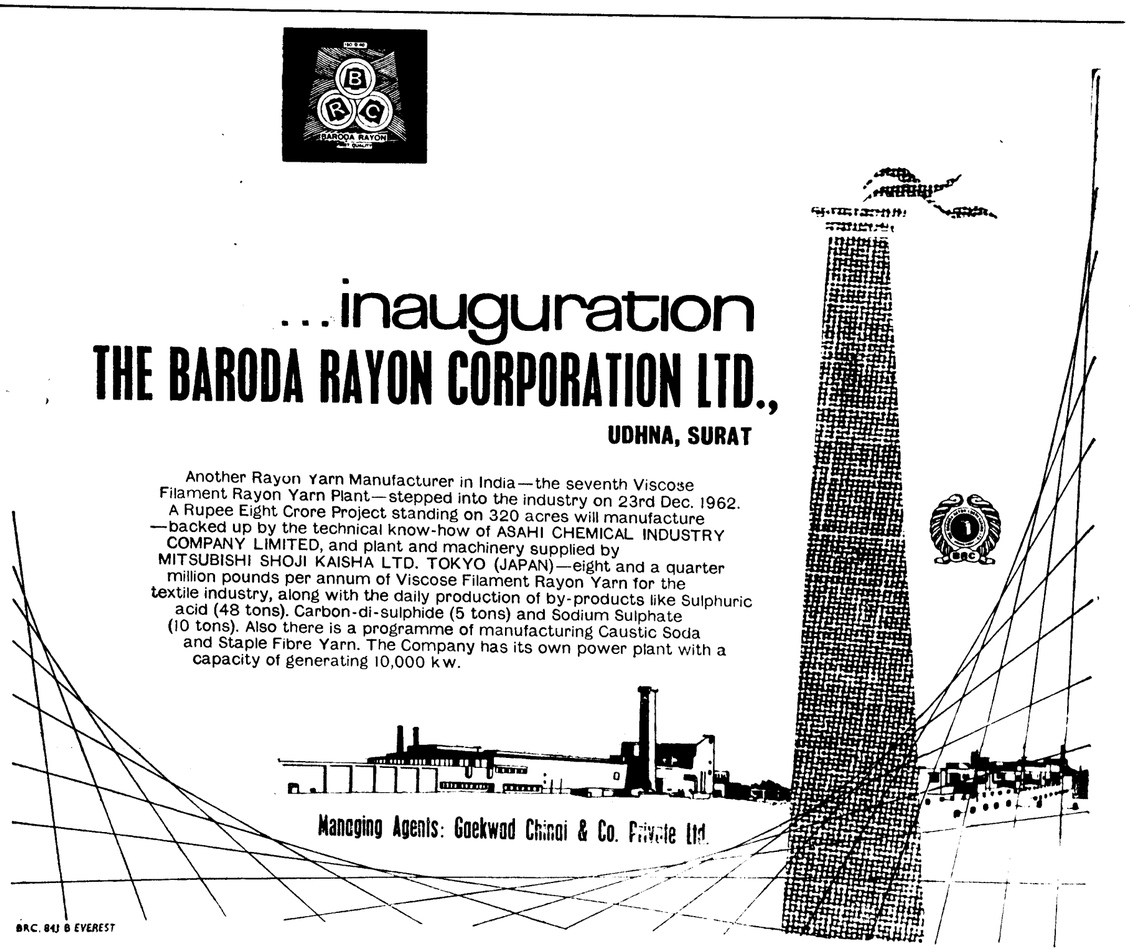
The idea of putting up this rayon project was first conceived by Mr. Babubhai M. Chinai, a scion of the illustratious House of Chinais which is well known in the field of rayon manufacture who had established the National Rayon Corporation Ltd. earlier. His Highness Maharaja Fatesinhrao P. Gaekward of Baroda and Mr. K. K. Shah backed this project actively and are today on the Board of the Company, with His Highness as the Chairman. Gaekwad Chinai and Company (Private) Ltd. was thus incorporated in May 1958 with the idea of promoting a public limited company to erect a rayon project at Udhna (Surat). The Baroda Rayon Corporation Ltd. was registered in May 1959. Mr. Madanmohan Ramnarain Ruia, Mr. Rasiklal J. Chinai, Lala Bharat Ram and Mr. Raykrishna Harivallabhdas, leading industrialists of the country, lent their valued support and experience to the venture by joining the Board of Directors of the Company. Subsequently, Mr. C. H. Bhabha and Mr. Shriyans Prasad Jain joined the Board. As representatives of the Industrial Finance Corporation of India—from which the Company has obtained a long-term loan of Rs. 293 lakhs—Mr. N. Dandekar, I.C.S. (Retd.) and Mr. V. V. Joshi, also joined the Board. Mr. K. Miyazaki, a nominee of the Asahi Chemical Industry, too, is on the Board and contributing his knowledge in the field of rayon.

The Company obtained an industrial licence in September 1959 and acquired about 320 acres of land for the setting up of this factory. The plant is now licensed for the following capacities:

7½ tons of continuous filament rayon yarn on 100 denier basis per day;

48 tons of sulphuric acid per day;

5 tons of sodium sulphate per day.



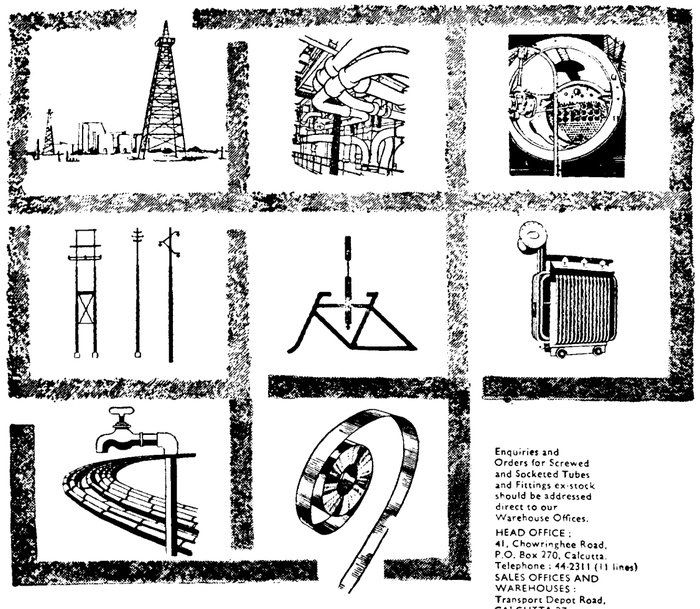
In the problem of finding out suitable technical collaborators for this project, Mr. Babubhai M. Chinai was greatly assisted by Mr. Rasiklal J. Chinai, Director of the National Rayon Corporation Ltd. Negotiations were successfully carried out with the Mitsubishi Shoji Kaisha for the supply of machinery and equipment, and with the Asahi Chemical Industry for the supply of technical know-how and engineering services. These two Japanese companies are known throughout the world and they occupy a very high position in the field of rayon. The Government of India was good enough to issue to the Company an import licence, under the yen credit procedure, for Rs. 300 lakhs (f.o.b.) and necessary machinery and equipment were imported from Japan.

Power and water are the two prime requirements in the manufacture of rayon yarn. The manufacturing process is such that it will not tolerate even the slightest fluctuation in the power supply position. As the Gujarat State Electricity Board expressed its inability to ensure a regular and continuous supply of power, the Company had to put up its own power plant, consisting of two units of 5,000 kw. each. The Company's requirement of water is six million gallons per day and, in order to ensure regular supply of such a huge quantity of water, the Company has laid pipelines from the Tapti river bed and Varachha to the factory site, a distance of nearly seven miles. Since water is to be treated chemically before use in the manufacture, a water treatment plant has been installed. Percolation wells have been constructed in the river Tapti and a pump house has also been put up at Varachha.

The Company's main plant building is 1,150 feet in length. The capacity of this plant, as installed, is 6½ tons a day, on the basis of 100 deniers. As the Company has also been licensed to expand the capacity of this plant by 1½ tons more, this building has been designed to accommodate eight more spinning frames which will be installed to achieve the expanded capacity. The other buildings housing the sulphuric acid plant, the carbon-di-sulphide building and the sodium sulphate are so scientifically planned and constructed, under the direction of the technical collaborators, that they achieve maximum benefit in the manufacturing operations. The Company has also constructed godowns for storing raw materials and finished products.

In July 1961, the Company was granted an industrial licence to expand the production capacity of its sulphuric acid plant from 20 tons to 46 tons a day and of the rayon plant from 6½ tons to 7½ tons a day on 100 denier basis. The expansion of the sulphuric acid plant has been completed. In order to implement the expansion of the rayon plant, effective steps have already been taken. Provision has been made in the main plant building to accommodate eight more spinning frames which will be installed to attain the licensed expanded capacity. The Company is awaiting a licence from the Government to import the required machinery and equipment for this expansion. The delay is due only to foreign exchange difficulties. Meanwhile, the Company has approached a leading financial institution for credit facilities in the form of both foreign exchange and Indian rupees. It is hoped that these negotiations will materialise. Important raw materials such as wood-pulp and sulphur are imported from abroad and stocked in sufficient quantity.

About 33 per cent of the country's power-looms is located in the vicinity of Surat. There is, therefore, a ready market for B.R.C. yarn and the Company is saved the expense on transport of products to market centres. The Corporation proposes to have 50 per cent of its production of yarn on sized beams. This has not been done by any other manufacturer of rayon. The balance will be on cones. The plants have undergone thorough trials and come out with flying colours. Full production capacity is expected to be achieved within a period of two months.



Mitsubishi's New
'Electronic Banker'
Ends
A Thousand-Year Tradition

For over ten centuries Japanese have used personal seals to sign documents and establish identity. With Mitsubishi's Autho-Visor, the depositor is completely protected against loss or fraud, without the use of his traditional seal.

Innovations like these reflect Mitsubishi's tradition of service. Experienced, internationally-minded Mitsubishi Bank is well qualified to aid foreign business in all fiscal matters. Contact Mitsubishi for profitable, efficient dealings in Japan.

ROLE OF LABOUR ECONOMIST

CLOSER ASSOCIATION WITH POLICY-MAKING URGED

IN his presidential address at the Sixth All-India Labour Economics Conference, held at Ahmedabad on 26th December, 1962, under the auspices of the Indian Society of Labour Economics, Prof. C. N. Vakil made a searching analysis of the role of the labour economist in industrial relations and emphasised the need for associating him more directly with the formulation of labour policies. The distinguished professor pointed out that relations between labour and management had a wider significance under the rapidly changing economic structure of the country inasmuch as they affected the society in general at several points. Hence problems of labour-management co-operation, healthy development of trade unions and labour policy called for objective study by independent experts who had no vested interest. In Prof. Vakil's view, labour economist would meet this requirement, and so it would be necessary to recognise labour economics as a special branch of study deserving more time and attention than had hitherto been devoted to problems of labour in the study of economics.

Prof. Vakil, in this connection, called for an inter-disciplinary approach to the subject. Unlike other branches of economics, study of labour problems, he pointed out, was a study of human relations involving examination of not only economic but also social and psychological factors affecting the relationship between workers and employers. It was for this reason that, in some Western countries, the subject was designated as Industrial or Human Relations. For a fuller understanding of the various problems which affect labour, it was necessary, Prof. Vakil averred, to make a joint approach in which the sociologist and the psychologist could play an important part in co-operation with the economist. He suggested further that universities and research institutes should introduce suitable changes in their courses so that persons who wished to specialise in labour economics might receive instruction and guidance not only from economists but also from sociologists and psychologists.

Emphasising the need for research in labour problems, Prof. Vakil referred to the enormous amount of labour legislation enacted in recent years. This created a very real need for specialists to deal with the problem. Although labour disputes were increasingly becoming a specialised field of practice for lawyers and business houses were engaging legal advisers to help them in matters connected with labour, there was a singular lack of knowledge of basic economic issues affecting labour among the legal experts. Consequently, judicial decisions often ran contrary to the principles of collective bargaining on which legislation was based and tended to become increasingly legalistic. There were also instances of contrary decisions having been given even by High Courts on identical cases. In view of this unsatisfactory position, Prof. Vakil suggested that labour economists should be actively associated with the enactment and judicial interpretation of labour legislation. It was also essential, according to him, that a detailed examination of the various labour laws should be undertaken in the light of the decisions already made by the courts. Such a study would, in his opinion, reveal the need for important changes in the existing laws. It was also necessary to make a comparative study of labour legislation and decisions arising therefrom in India with those in other countries. The large amount of labour literature, which the I.L.O. publishes could be utilised with advantage for this purpose. Here was a task of great importance in which both the labour economist and the labour lawyer could fruitfully co-operate.

While on the subject of labour research, Prof. Vakil referred to the proposed Central Institute of Labour Research, to be established in Bombay, and made certain suggestions for making it a more useful and effective body. According to him, the Institute, along with the Productivity Councils and the Institute of Manpower Research, would fill a great need in the country. While the formation of the Institute was a step in the right direction, he pointed out that intensive research of the type proposed to be done at the Institute presupposed the existence of an adequate number of research workers in labour economics. If appropriate changes were made in the courses of study offered in Universities, they could provide suitable recruits for training in research on labour problems in the Institute. Prof. Vakil had certain suggestions to offer for improving the organisational pattern of the Institute. According to him, the Governing Body of the Institute should consist of persons who had either done some work in the field of labour research or associated themselves actively with the same. The proposed method of representation to several organisations might, in his view, bring to the Governing Body busy persons who were more concerned with other things and not conversant with labour economics. A method suited to an organisation where vested interests had to be satisfied, he warned, was not necessarily suited to an institution where scientific work had to be done free of any bias from any quarter, including the Government.

Tripartite Machinery

Prof. Vakil was critical of the tripartite machinery for formulating and administering labour policies obtaining at present in the country. It was modelled on the I.L.O. which adopted the tripartite principle in the constitution of its Governing Body, General Conference and Industrial Advisory Committees. In all these bodies, Governments, workers and employers were represented. Following this example, the Indian Labour Conference and the Standing Labour Committees were constituted in 1945 as tripartite bodies. The tripartite principle had been extended to a number of bodies pertaining to workers' education, workers' participation in management and the code of discipline. Even in the field of administration of labour laws, this principle had been followed. Prof. Vakil doubted whether the tripartite principle, which was suited to conditions in the West, was the ideal one for developing countries like India. In his view, in countries like India, where workers were not yet fully attached to industrial work, where labour organisations were dominated by political parties and where capital was trying to grow gradually by the method of trial and error and where the Government itself was the biggest employer, it was possible that, in the efforts to reconcile the conflicting claims of capital and labour, the interests of consumers were not always safeguarded by the Government. This was because the Government itself was liable to be motivated by political considerations. He suggested, in this connection, that it would be a useful piece of research to ascertain whether, in the various steps taken by or on behalf of the Government to settle industrial disputes in the country, political considerations had not influenced decisions and whether in the process the interests of consumers had not been sacrificed. As it is, there was, according to Prof. Vakil, no one in the tripartite machinery to take an objective view of the national interest or the consumers' point of view. The tripartite character of the machinery should, therefore, be modified and, instead of three parties, there should be four parties, the fourth being the labour economist.

There is much to be said for Prof. Vakil's argument that, in the formulation and implementation of labour policies the views of the labour economist should be given more weightage than has been done hitherto. But his plea that the labour economist should be represented in tripartite bodies on a footing of equality with employers, workers and the Government might not find ready support for the simple reason that an equally valid case could be made out for including sociologists, psychologists, etc. in the tripartite bodies because, as Prof. Vakil himself admits, labour policies have sociological and psychological aspects too.

In spite of its limitations, the tripartite principle has worked fairly well and has succeeded in a large measure in reconciling the conflicting interests. The purpose which Prof. Vakil has in view could be served if the views and advice of labour economists on labour problems are sought and given due weightage. Labour economists can best serve the country in an advisory capacity and not by involving themselves too deeply in the actual formulation and implementation of policies. But the issue posed by Prof. Vakil, in so far as it relates to the neglect of consumer interest, would nevertheless have to be squarely faced and solved in some appropriate way.

PREMIER AUTOMOBILES LIMITED

MOTOR TRANSPORT INDUSTRY STAGNATES DUE TO HEAVY TAXATION

CHAIRMAN LALCHAND HIRACHAND CAUTIONS AGAINST FURTHER BURDENS

THE view that it would be against the national interest to impose further burdens on motor transport industry, which was already groaning under the weight of heavy taxation, was expressed by Mr. Lalchand Hirachand, Chairman of Premier Automobiles Ltd., in his speech delivered at the Eighteenth Annual General Meeting of the Company held at Bombay on 27th December 1962. Mr. Lalchand pointed out that figures of truck sales showed that the industry had become stagnant, particularly during the last two years. The effect of imposing levy upon levy of different kinds on transport vehicles and transport services, he averred, was the undoubted increase in the cost of practically every commodity in the country, leading to an inflation of prices all round.

The following are extracts from Mr. Lalchand Hirachand's speech:

We meet today under unusual circumstances created by the unprovoked aggression of Indian territory by China. The people have cheerfully responded to the Government's call for supreme effort and sacrifice. The automobile industry was one of the first to offer its resources for the defence of our country and your Directors have offered to the Government the full resources of your Company for assisting the defence effort of the country.

We have pledged the full efforts of our Company for producing such vehicles for defence purposes as Government may require in addition to producing vehicles for civil purposes so that the life of the country may go on with as little dislocation as possible.

Your Company has contributed their mite to the defence effort by donating two lakhs of rupees to the National Defence Fund. The staff and the workers of the Company have donated their one day's salary and wages amounting to Rs. 58,000 by working an additional day on 25th November 1962 and the Company has donated Rs. 20,000 as part of their profit arising out of the additional day's work. This is in addition to the donation of two lakhs mentioned above.

Turnover

During the year under review, the Company's turnover reached a figure of Rs. 21,47,61,789 only, as compared to last year's turnover of Rs. 22,73,86,793, 7,193 cars and 5,324 trucks were sold during the year.

The Company has made a profit of Rs. 39,53,999 after providing Rs. 60,37,508 for depreciation, Rs. 8,00,000 for development rebate and Rs. 49,00,000 for taxation. Adding to this, the balance of Rs. 4,73,969 left over after adjustment of the amount of dividend paid on forfeited shares (forfeiture now annulled) from last year's "carry forward" and after transferring from deferred taxation reserve Rs. 14,60,000, the amount available for distribution comes to Rs. 58,87,968. Out of this, your Directors have made the following appropriations:

	Rs.
To adjustments to excess of expenses over the income, claims and excess provisions in respect of previous years	3,11,850
To provision towards taxation in respect of previous years	14,60,000
To dividend on equity shares at Rs. 7 per share (subject to tax)	39,31,625
Balance to be carried forward	1,84,493

The fall in profit during the year was due to various causes, principal among which are less turnover due to decline in demand for trucks, rise in overheads, particularly in wage bill which included an amount of Rs. 15,08,034 paid to the employees as bonus for the year 1959-60 and larger provision for taxation due to higher rate of taxes. In terms of the new agreement with Fiat, which came into force with effect from 1st July 1961, the Company had to pay higher fees for technical assistance. The lower margin of profit on Fiat car, the price of which was reduced in 1960, was further responsible for this rather unhappy position.

New Subsidiary

The decline in the sale of trucks is mainly due to the proposed legislation on hire purchase. As stated in the Directors' report, the Company has formed a new subsidiary for the hire-purchase business under the name and style of "Pal Hire Purchase Limited" to provide hire-purchase facilities for disposing of the Company's products.

I am happy to state that the manufacture of components and parts is progressing according to schedule and more and more components are made every year and this year certain further components, to which a reference is made in the Directors' report, were produced in the factory.

As you know, we have undertaken the putting up of a complete press plant for pressing the sheet metal parts required for trucks and cars. For this purpose the Company obtained a loan of 7.2 million dollars from the Development Loan Fund of Washington. The orders for machinery pursuant to this have been placed. For the purchase of dies, jigs, fixtures and other equipment a further loan of U.S. $3 million was arranged with the Agency for International Development of Washington—an Agency of the Government of U.S.—when I visited the U.S.A. in May 1962.

The Agreement with the Agency for International Development was signed on the 28th June 1962, the repayment being guaranteed by the Bank of Baroda Ltd., to whom our thanks are due. We are proceeding fast to place the necessary orders for dies and other equipment.

Progress of Press Plant

For the press plant and for the future expansion of your Company, we had in mind a site of about 300 acres on the Kalyan-Shill Road, which, as was reported in the last year's report, was being acquired by Government for the Company. Because of a decision of the Supreme Court of India regarding the powers of the State Governments to acquire lands for companies the acquisition proceedings could not progress. We have, therefore, negotiated for purchasing another suitable site on the Kalyan-Shill Road and have already obtained possession of about 400 acres. This factory will be ready by the time the machinery for the press shop is received.

The prices of cars and trucks can be reduced to have more economic production only if we have a larger volume. To achieve this, we had submitted to the Government an expansion programme based on the production of 15,000 Fiat cars and 15,000 trucks per year on two-shift working and had asked for foreign exchange allocation.

The Government has under consideration our proposals for assisting the war effort and for increasing your Company's production. I hope that Government now realises to the full the strategic importance of the automobile industry and will give its full support to the expansion of the industry as fast as possible.

The Government should also consider the burden of tax that is being cast upon this one industry. The industry is taxed as a luxury industry when, in fact, it is one of the most basic industries in the country.

Heavy Taxation

For your information I may state that the Fiat car is sold at a retail price of Rs. 10,651.00 and the 165" wheelbase truck is sold at a retail price of Rs. 28,610.00 in Bombay. The incidence of customs and excise duty on this price comes to 21.43 per cent for a Fiat car and 17.96 per cent on a 165" wheelbase truck. Thus a big slice of the price is taken away by taxes, namely, customs and excise. In addition, sales tax at the rate of 10 per cent has to be added to the price.

The incidence of taxes on the prices of motor vehicles sold by the Company comes to 31.43 per cent on a Fiat car and 27.96 per cent on a 165" wheelbase truck which is fairly high. This is only a part of the stiff taxation the road transport industry pays to the Central and State Governments—the amount in total exceeds Rs. 200 crores a year. The State Government has put additional levies on diesel oils, gasoline and a variety of other items and justify the additional taxes on the plea that the industry can bear this. The figures of truck sales tell a contrary tale. They show that the transport industry has become stagnant, particularly during the last two years. The effect of imposing levy upon levy of different kinds on transport vehicles and transport services is the undoubted increase in the cost of practically every commodity in the country, leading to an inflation of prices all round.

The role that the railways and road transport industry have to play in the country's economic development is a complementary one. At present, this industry is taxed on luxury footing. It would be against the national interest to impose further burdens on this industry which is groaning under the weight of heavy taxation; on the contrary, it should receive adequate encouragement at the hands of the Government to enable it to expand and speed-up the tempo of economic growth of the country.

The Agreement between the Company and Messrs. Henry Meadows Ltd., England, has now been concluded and under this Agreement the Company is granted the exclusive right and licence to manufacture and sell, within the Republic of India, certain Meadows Engines and the component parts thereof. The Agreement is for five years, in the first instance, renewable for a further period of five years and terminable by six months' notice on either side.

The production of Meadows Engines has been taken in hand. As the Company has not been able to obtain from the Automobile Products of India the necessary machine tools required for the production of these engines, it became necessary to purchase additional machine tools from abroad for which the import licences have now been received. After these machines are received and installed production of Meadows Engines will reach the target of 250 engines per month.

Small Car Project

As all of you know, the Government of India have decided to shelve the "small car" project as it would involve not only money resources—of which the Government is short enough, especially in terms of foreign exchange—but also physical resources like building materials, steel, power and transport (for production) all of which are also in short supply at present. I had pointed out to the Government in my speeches at our meetings as well as through the Press that it was not in the interest of the country that the public sector should take up the manufacture of economy car and I am glad that the Government have decided that this project be shelved.

During the five months ended 30th November 1962 the Company sold 2,271 cars and 1,909 trucks and spare parts of the value of Rs. 66,22,344, as against 2,937 cars and 1,917 trucks and spare parts of the value of Rs. 67,06,938 sold during the corresponding period of the last year. It is difficult to forecast the results for the current year in view of the present uncertain conditions.

(a) The issue of 1,87,237 shares of Rs. 100 each at a premium of Rs. 10 per share recently made by the Company was fully subscribed. As you know, the sum of Rs. 30 with application and Rs. 20 per share on allotment has been called and the balance of Rs. 60 per share will be payable by three calls of Rs. 20 each at such times as the Directors may think fit.

(b) Out of the 1,60,000 debentures of Rs. 100 each issued by the Company, 197 debentures are outstanding as on date.

Subsidiaries

The business of the Premier Auto Electric Limited, a subsidiary, was satisfactory. The Company took up the distributorship of "Beacon" dynamos, starters and regulators manufactured by Best and Co. Private Ltd., Madras, in collaboration with Simms Motor Units Ltd., England. This subsidiary company has also extended further its range of "Prakash" products by introducing two ancillary items, namely, horns as well as wiper arms and blades into the market.

The other subsidiary company, the India Steering Gears Ltd., could not start business this year also due to non-availability of a licence.

(a) During the year under review your Director, Sir Manilal B. Nanavati, Kt., resigned from the Board of Directors for reasons of health. Your Directors accepted the resignation with deep regret and placed on record their appreciation of the very valuable services

THE WEST COAST PAPER MILLS LIMITED

HIGHER ELECTRICITY DUTY DEPLORED

CHAIRMAN, MR. G. L. BANGUR'S SPEECH

THE increase in electricity duty from 1 nP to 2 nP per unit on the power generated by the Company's own plant for self-consumption and from 0.07 nP to 1.5 nP per unit on the power supplied by the Mysore State Electricity Board was deplored by Mr. G. L. Bangur, Chairman of the West Coast Paper Mills Ltd., in the course of his speech read at the Seventh Annual General Meeting of the Company, held at Bombay on Thursday, 27th December 1962. In the absence of the Chairman, Mr. P. D. Bangur, a Director of the Company, presided over the meeting and read the speech. Mr. Bangur observed that the higher levy on self-generation and self-consumption of power in Mysore State contrasted sharply with complete exemption conceded by several progressive States from the duty on self-generation and consumption due to a general power shortage all over the country. He hoped that the Government of Mysore would immediately consider reduction in the duty on self-generated power.

The following is the full text of Mr. Bangur's speech:

GENTLEMEN,

I welcome you all to the seventh annual general meeting of the Company.

I have to inform with regret that our active Director, Shri G. D. Somani, is laid in bed due to a severe heart attack since 12th December. By the grace of God, he is progressing satisfactorily, but has been advised complete rest by the doctors; as such, Shri Somani could not be in our midst this afternoon. I am sure you will join me in wishing him a speedy recovery.

We have gathered here at a time of emergency in the country which has arisen out of the Chinese aggression on our frontiers. You are all aware that the unprovoked invasion has shocked the entire democratic world which has rallied its moral and material support to us in this hour of national emergency. In our country, the whole populace has responded magnificently to mobilise its entire resources to fight the Chinese aggression to preserve our national honour and dignity.

Defence—Top Priority

The paper industry as a whole has readily responded to the call of the Government in giving top priority to the defence requirements of paper. Your Company has also accordingly decided to give first priority to the orders from the Government departments. All the customers of the Company in the civil market have been requested to co-operate in maintaining the price line. Your Directors have also decided to give all the necessary facilities to the employees of the Company who are willing to serve for the defence of the country. In this and many other ways, your Directors have been extending all possible assistance for the defence of the country, and I am sure that we will succeed in gaining the ultimate victory.

The Directors' report accompanied by the audited statement of accounts for the year ended 30th June 1962 has been in your hands for some time and with your permission I take the same as read.

It would be observed from the Directors' report that the production during the year under review was 25,604 metric tons as compared to 25,770 metric tons during the previous year. Thus production was practically maintained in spite of the fact that there was a strike in November-December 1961 in the factory for a period of nearly three weeks.

Electricity Duty

However, the gross profit declined due to increasing cost of raw materials, stores, spares, chemicals and transport charges. Further, due to change in the pattern of production to meet the market demands, the profitability was affected. This has been further aggravated by the increase in electricity duty from 1 nP to 2 nP per unit on the power generated by the Company's own power plant for its own consumption as also the increase in the duty on the power supplied by the Mysore State Electricity Board from 0.07 nP to 1.5 nP per unit. Such levy on self-generation and self-consumption of power is quite peculiar and adds substantial burden in the cost of production. In this critical period, when there is an overall power shortage prevailing in the State of Mysore, such steps are certainly putting impediments on the new industrial development in the State. As a matter of fact, at this stage, there is a general power shortage all over the country and several progressive States have offered special concession by way of complete exemption from the duty on self-generation and consumption. In strange contrast to this, we find ourselves facing with additional burden of duty on self-generation and consumption. This point of view has been fully represented to the State Government by us and other commercial bodies and I hope the State Government would give its due and immediate consideration to reduce the duty at least on self-generation.

You will be glad to note that the Government of India have granted an *ad hoc* increase in prices of paper with effect from 21st June 1962 of Rs. 60 per ton on all varieties and have withdrawn the rebate of Rs. 40 per ton of paper supplied in reels. But your Directors feel that the increase in selling prices of paper allowed by the Government is inadequate in view of the reasons mentioned in the foregoing paragraph.

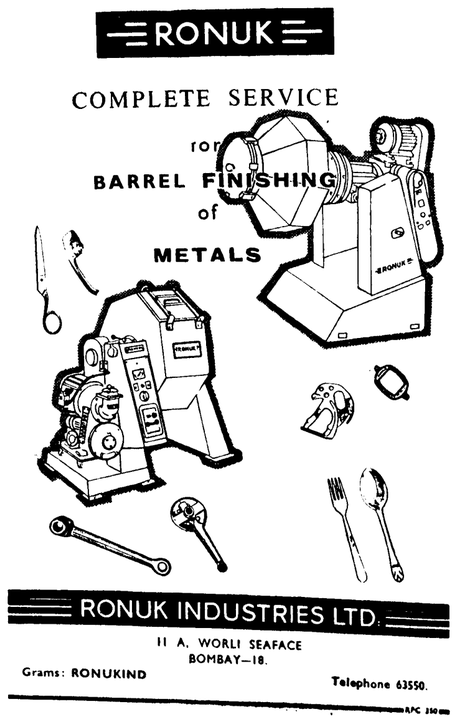
Rayon Grade Pulp Project

The negotiations with an American company are taking place for manufacture of rayon grade pulp and other specialities. Much details still remain to be settled, whether in fact the agreement will be entered into or not, will depend on a variety of circumstances. The Company had received green signal from the Government of India for negotiating the foreign exchange requirements of Rs. 6.5 crores which is now under negotiation between various institutions and the collaborator as well as your parent Company which are to be satisfied with the implications of this scheme and its capital structure. The Government of Mysore has laid down certain terms and conditions for allocating additional forest ranges, which require further consideration of your Directors. The emergency and present state of capital market are also factors to be taken in account. All these points will be collectively studied before the scheme can be said to be capable of implementation in future.

Your Directors have finalised the orders of caustic soda/chlorine plant with Messrs. Krebs and Company, Paris, under French credit on long-term basis which is a part of the expansion programme. The capital cost of this unit is estimated to be Rs. 1,50,00,000. The Government of India has also approved the scheme and has agreed to issue the import licence of Rs. 80 lakhs for import of plant and equipments, which is part of the total requirement of foreign exchange of Rs. 6.54 crores.

Plantation

I am glad to inform you that the Company is doing research work to augment resources of other alternative raw materials such as lops and tops of various species of hardwoods and the use of cotton linters and rags so that no difficulty may be experienced in getting adequate supply of raw materials, particularly to face the situation created by the flowering of bamboos in this forest. The Company has undertaken extensive plantation programme of eucalyptus, paper mulberry and other suitable fast growing species of woods in addition to the introduction of other species of bamboos not usually found in Dandeli forest. Furthermore, the Mysore Government is also fully conscious of this problem and our scheme of extensive plantation programme is duly approved by the State Government to supplement the efforts that are being made by the Forest Department so that the increasing requirements of the industry can be met.



The different varieties of paper manufactured by your Company continued to be in good demand.

It is gratifying to note that Alnawar-Dandeli railway line has been transferred from the Forest Department of the Government of Mysore to the Railway Board.

Our relations with the labour, excepting for the strike period as mentioned above, have remained cordial. The bonus issue for the two years ended 30th June 1961 and 30th June 1962 has been amicably settled between the workers' representatives and the management.

I hope you will join with me in placing on record our high appreciation of the services rendered by the staff and labour alike, which have resulted in achieving this good performance.

Note: *This does not purport to be the proceedings of the annual general meeting of the Company.*

KOLHAPUR SUGAR MILLS LIMITED

CHAIRMAN, MR. RAMNIWAS R. RUIA'S SPEECH AT ANNUAL MEETING

NEW CANE PRICE FORMULA MAY PROVE TO BE A DISINCENTIVE TO FACTORIES

HOW could it be just to fix the price of sugarcane on the basis of recovery for a limited period and that too the highest recovery? Thus ask Mr. Ramniwas R. Ruia, Chairman of the Kolhapur Sugar Mills Limited, in the course of his speech at the Twenty-ninth Annual General Meeting of the Company held at Bombay on Wednesday, 26th December 1962. Such a method of fixing cane price, Mr. Ruia declared, was especially unjust for Maharashtra where the season started much earlier than December and closed much later than the end of March. This measure, he added, might prove to be a disincentive to the mills buying cane in the earlier and later parts of the season when the recovery was bound to be lower than the basis taken for fixing the cane price. Indeed, he feared that the measure would lead to a shortfall in production to some extent and also affect the cultivator adversely, as his cane might not be accepted, being either too early or too late.

The full text of Mr. Ramniwas Ruia's speech is reproduced below:

GENTLEMEN,

It gives me great pleasure to welcome you at the twenty-ninth annual general meeting of the Kolhapur Sugar Mills.

Gentlemen, we are meeting this afternoon in the midst of a crisis. I refer to the unscrupulous and the wanton Chinese aggression in the North-East Frontier and in Ladhak. We trusted the Chinese for being implicit supporters of peace and *Panchshila*, as much as ourselves. It has been a great disillusionment to our leaders and to the people and has awakened both to a new sense of realism about the profession and practice of the imperialistic expansionism of Communist China.

Whatever the Chinese did, and are doing or will do, and whatever prestige India may have lost in its weakness in armed strength, I am sure, the whole episode will mean a great boon in disguise, to our country, in spite of its trials and tribulations and, in the long run, India will become really a great nation and completely united in both body and spirit. At the same time, our leaders have and will realise even more how to deal with whom and whom to consider what, and also what should be our country's strength, and realise what type of leadership is necessary to make our country strong enough to defend ourselves. This sort of realisation has to come to us by finding our weak spots in our total set-up and not just by speech and talk, because no country in the world's history has gained and maintained its freedom for long, unless it was prepared and strong enough to defend it. Today, more or less, for the first time, we are really a united nation. Thanks to China!

Defence

We all realise that the defence of the country and the preparations for a protracted and long-drawn war have become the major issue before the country today. The choice of Shri Yeshwantrao Chavan as Defence Minister has been so widely acclaimed and is so assuring that, in his able hands, the country feels completely safe. Yeshwantrao, since his early days, has been an able and successful leader and administrator. I have a feeling that he will prove himself much more successful as Defence Minister by his tact, statesmanship, resourcefulness and intuitive judgment of men and events.

At this time of our national emergency, it is gratifying to notice the heartening response of the sister countries of the Commonwealth and of the Western democracies who have rushed to our assistance expeditiously.

Gentlemen, you will be pleased to note that the employees of our Company have contributed very handsomely to the Defence Fund by collecting Rs. 25,000 from their earnings. Your Directors, too, have decided to contribute Rs. 1,00,000 on behalf of the mills.

While thinking of the contribution to war effort, it is clear that the significance of the role of industries lies in unhampered maximisation of production. Modern military history shows that wars in these days are all-out wars and the country which possesses industrial superiority ultimately wins. We in the sugar industry have, naturally, to play our role in this respect. Sugar is not only an everyday necessity but has become an earner of exchange. Your Company, it is estimated, will crush an all-time record of more than three lakh tons of cane in the present season. This should be considered most gratifying.

Coming to the business of this meeting, the accounts for the period ended 30th June 1962, along with the report of the Directors, for the statutory period, have been already in your hands and, with your permission, I shall take them as read.

Company's Working

Though the financial working of the mills for the accounting year has been satisfactory, I may be allowed to refer to some of the salient features.

The production of sugar in 1961-62 was 2,69,890 bags, as against 3,16,777 bags in the preceding year. The average recovery was 12.45 per cent, as against 12.57 per cent. The fall in production during the year was due mainly to the imposition of the 10 per cent cut in production by the Central Government and also due to lower yield of cane per acre, due to unfavourable climatic conditions and also due to damage to crops by floods. However, the working of the distillery, with the increased capacity, has been very satisfactory, the production during the year being 7,31,580.3 gallons, as against 2,80,202.9 gallons in the previous year. We have been able fully to utilise not only our molasses but also 4,642.918 tons of molasses from the three neighbouring factories. During the ensuing year, we hope to utilise still larger quantities of molasses from the neighbouring factories. The actual capacity realised in our distillery with the new plant is between 5,500-6,000 gallons per day. In addition, with the old plant we can produce 1,000 gallons of absolute alcohol per day. Thus we may be able to realise a daily capacity of about 7,000 gallons per day. With this capacity, your distillery will be able to handle the molasses of the two neighbouring co-operative factories under construction along with the three old co-operative factories, thus becoming a central distillery for the Kolhapur region.

Land Ceiling

I may also refer to the Land Ceiling Act of the Government of Maharashtra by which Government will assume the estates of mills. For taking over these lands, Government have appointed an Advisory Committee, on which both Government and the industry have been represented. In this taking over of lands from factories, various complicated problems such as valuation of standing crops, movable and immovable properties, etc., are involved. With mutual goodwill and understanding, all such problems, it is hoped, will be amicably solved. There will be specific problems of our factory in this regard and your management will try their utmost to safeguard the interest of the factory. I may add that the Government of Maharashtra have assured a guaranteed cane supply to the mills from the area taken over by them.

Another feature of the year is the introduction of the Price Linking Formula. This Formula is intended to improve the quality of cane. In the Maharashtra region, a commonsense method for paying for cane in relation to quality, was already in vogue and this had worked to the satisfaction of both the cultivators and the factories. We are proud to say that, because of the recovery, we are among the highest priced group for cane price that is paid by any factory to the farmers and growers. A feature of the newly evolved formula of the Central Government is the fixing up of the cane price on the recovery of the previous season, during the period from December to end of March. The old Maharashtra Formula was based upon average recovery of the previous season. I do not see how it could be just to fix the price of cane on the basis of recovery for a limited period and that too of the highest. This especially is unjust for Maharashtra where the season starts much earlier than December and closes much later than the end of March.

This measure may prove to be a disincentive to the mills buying cane during the earlier and the later parts of the season, when the recovery is bound to be lower than the basis taken for fixing the cane price. I should not wonder if this measure leads to a shortfall, to some extent, in production. It may also affect the cultivator adversely, as his cane may not be accepted being either too early or too late. It may be recalled that, on occasions, the Governments in the North had to persuade the factories to crush cane in later months by reducing the price and also by giving other concessions.

I am happy to inform you, that it is reported only yesterday, that "the recovery taken for Maharashtra is for the period November to March," thus accepting my contention to a large extent, though not fully.

The recommendations of the Central Wage Board for employees of the sugar factory were also applied to farm labour from November 1961.

Cane Supply

Gentlemen, I have already mentioned that the estimated crushing for the present season will be more than three lakh tons. Our factory is situated in the heart of the cane-belt in the Kolhapur district and, with the cane development work the factory is doing to help cultivators to grow cane by giving technical advice, implements, improved seed, manures and cash advances, the supply of cane to the factory is increasing. Even for the present season, there are offers for more cane supplies. But we had to decline the same for want of adequate crushing capacity. The possibilities of supply of 3,50,000 to 4,00,000 tons of cane to our factory are quite evident now and there is an urgent necessity of expansion to 2,500 tons per day, at least. Your Directors have already moved Government for the same and it is hoped that Government may accede to our request.

The acetic acid plant is expected to be installed by June next year. The completion of the project has been delayed for various reasons, chief amongst which is the delay in the supply of power by the Maharashtra Government. We are now assured that the supply will be available by June 1963.

Alcohol-based Industries

I have pleasure also in intimating to you that your Board has already approached Government for a licence for the production of ethyl acetate, carbon dioxide and dry ice. We have been on the alert for the new projects of alcohol-based industries and I believe I am expressing your wishes when I say that we have before us the prospect of making this area a beehive of such allied chemical industries.

Gentlemen, you are aware that the management has been particular in looking after also the cultural and physical well-being of the employees. I have great pleasure in saying that the *Jeevan Kalyan* has presented cultural programmes of drama, music, and such other cultural entertainments in keeping with its high traditions, at the *Ganapati* festival. Its Annual Number is in print and its publication is awaited. The institution has given educational aid to the children of the employees, in cash and books, amounting to Rs. 3,000 during the year.

In sports, the record of the Gymkhana of the mills is very flattering. In table tennis, we won the Maharashtra Gymkhana Championship. Our tennis team annexed the Ruia Shield for tennis. We conducted the Lohia Open Table Tennis Tournament. We also conducted the Maharashtra Bridge Association Tournament, in which our team won the rolling trophy. In the Ruia Sports, in Bombay, we lost to our head office team in which myself and Sushilkumarji were participants.

I have very great pleasure in recording our special appreciation for the admirable manner

(Continued on next page)

SPENCER AND COMPANY LIMITED

CHAIRMAN, MR. IRANI, EMPHASISES NEED FOR HOLDING PRICE LINE

IMPACT OF EMERGENCY ANALYSED

THE need for holding the price line during the national emergency was stressed by Mr. Z. R. Irani, Chairman of Spencer and Company Ltd., in the course of his speech at the Sixty-fifth Annual General Meeting of the Company held at Madras on 21st December 1962. In so far as his company was concerned, Mr. Irani made it clear that its policy had been, and ever would be, not to take advantage of market shortages in particular commodities that occurred from time to time. By maintaining prices, the profit-margin of the Company, according to him, might become smaller, as there were no prospects of reducing working expenses.

The following is the full text of Mr. Irani's speech:

GENTLEMEN,

I welcome you to the Sixty-fifth Annual General Meeting of the Company. These are critical times, so the less I say, the better. So much has been said by so many people in different walks of life that action by all of us in our various spheres should be the order of the day.

You have had ample time, I am sure, to study the accounts for the year ended 30th June 1962. Before proceeding to comment on certain aspects thereof, let me give you once again a break-up of the contribution towards the total profit made by the different sections of the business. Wholesale and retail trade, which is still our bulwark, represented 29 per cent, drugs and pharmaceuticals 26 per cent, hotels and catering 14 per cent, refrigeration and airconditioning 11 per cent, house furnishing 7 per cent, aerated waters 4 per cent, tea 4 per cent, cigars 2 per cent and sundries 3 per cent.

Profit Declines

The drop in the manufacture of carbon dioxide which forms part of the item "Sundries" and the fall in the income of the Rob Roy Tea Estate has already been mentioned in the Directors' report, and these, coupled with the higher incidence of corporate taxation, have brought about the decrease in the net distributable profit —not by any means alarming, but certainly of some concern to your Board because the movement has been in the wrong direction, however cogent the reasons may be for this. You may well question the further increase in turnover to over five crores and why this has not resulted in higher profit. In previous speeches of mine, I have explained that we cannot avoid the trend of mounting expenses and that our sole means of countering this is a drive for larger turnover. In this, we have succeeded but only at the cost of reduced profit margins. Neither we, nor any other concern indulging in our form of trade, can hope to do business on the margins that existed, say five years ago. Further, our policy has been, and ever will be, not to take advantage of market shortages in particular commodities that occur from time to time. If anybody has the reputation in our country of maintaining the price line, it is we. Difficult years in the past have proved it and we shall not depart from the tradition so carefully fostered.

National Emergency

And now to a consideration of the future. The emergency brought about by the perfidious aggression perpetrated on our country by the Chinese is likely to create complex conditions and it is a little too early to prognosticate what effect they will have on the working of the Company. Whilst so far there has been some drop in our trade, a few adverse circumstances can further be anticipated and, in fact, are gradually manifesting themselves. In the first place, there is bound to arise some shortage of consumer goods which will affect turnover. Secondly, there will be the problem of movement of goods which has been tight enough in recent months and will become even tighter. Thirdly, the same problem affects the transport of coal and coke; the former is already creating power shortages so much so that some States have imposed a ban on the new installation of airconditioners which will hit that side of our business; the latter will further adversely affect the production of carbon dioxide. Fourthly, any flare up, however small, in this part of the world always cuts down foreign tourist traffic. Fifthly, to maintain the price line, profit margins will become smaller, and, sixthly, as against all this, I can see no reduction in working expenses. There is the brighter side, but I have little optimism. For instance, not all or mayhap even none of the above circumstances might come about; the tea estate, aided by good climate conditions, may well produce a better crop and defence orders for such goods and material that we can supply may come our way, for we are only too ready to assist in every way possible.

In giving you this some what dismal picture, do not for a moment think that your Board is despondent, downhearted or frustrated. I am merely stating facts and we shall face them and accept the challenge confronting our Company.

Taxation

Speaking of things external to the Company's affairs, we must expect a rise in taxation. There are many well qualified to submit observations and suggestions on fiscal and economic policy—but to what purpose? It will be our duty as responsible citizens to conform with the Governmental line and adhere to the decrees promulgated. Whether they deserve criticism or not will in no way alter the issue. At the same time, if I may be permitted to express a purely personal opinion, I think it will be readily admitted that, in every country, the best brains are not necessarily those of men holding the reins of Government. What I believe essential is not committees of an advisory nature whose advice may or may not be accepted, but bodies of able and informed men, not figureheads, for guidance in their particular spheres of knowledge—guidance which should not, except for very cogent reasons, be refused.

And now a word on the subject of collections for Defence Funds. Today we have States, Ministers, Societies, Associations and individuals all vying for maximum collections. A contributor may donate his maximum to one source, find himself unable to give to the many others and thereby run the risk of being considered unpatriotic. In passing, I will mention that the Company has made an initial contribution, but I will not disclose the figure as we are not desirous of publicity. In the ultimate event, I ask what total quantum of donations can be expected and what proportion that will bear to the very considerable finance that will be required for defence purposes. Any intelligent person can give the answer. I would rather see the levy of appropriate taxation for that will remove invidious comparison.

Industrial Truce

Employers and workers of the country have entered into an industrial truce and have pledged themselves to make every effort to increase production to strengthen the defence of the country. It is hoped that this will mean that workers throughout India will co-operate with management to ensure that prices of goods and other essential commodities do not increase, and that our own workers too will help us to hold the price line.

Prior to the declaration of the national emergency, some of our workers made extravagant demands for revision of basic wage scale and dearness allowance. These demands were made, in spite of the fact that both the wage scales and dearness allowance were recently fixed by Industrial Tribunals—in the case of dearness allowance as recently as March 1961. Classification of workers and fixation of grades of pay is a long-term plan and should not be altered unless change of circumstances is definitely proved. The scales themselves are usually fixed on the assumption that there will be an expansion of business and unless there has been a material change in circumstances, no such claims should be tenable. I am hopeful that our workers, apart from bearing the industrial truce in mind, will appreciate this principle and drop their claim.

Finally, I am glad to report that we have continued to receive the loyalty and support of all grades of our employees and, on behalf of the Board, I should like to thank them most cordially for all their efforts during the past year. We must necessarily continue to rely on their skill and efficiency for the continued progress of the Company.

The balance-sheet as at 30th June 1962 was approved and adopted. A further and final dividend of 12 per cent less tax on the ordinary shares as recommended by the Directors was declared, making in all a total dividend of 18 per cent less tax for the year.

Note: *This does not purport to be a record of the proceedings of the annual general meeting which will be sent separately to shareholders.*

(*Concluded from previous page*)

of conducting the annual dinner, at the end of the season, in honour of the *Satyanarain Puja*. About 11,000 persons partook of the *Mahaprasad* last year. It was, as usual, a very orderly well-disciplined function, in which officers, staff and employees heartily co-operated and achieved an efficiency which I most admire. I almost feel, it is a part of the social education of the masses and a lesson in social integration.

I take this opportunity to thank my colleagues on the Board of Directors who have all along given me their guidance, advice and support. I am equally thankful to you all for your keen interest in the affairs of the Company.

As Chairman of the Company, I desire to express my feelings of thankfulness to the managements of the co-operative factories, the cultivator-suppliers and contractors with whom our relations have always been very cordial, and of whose invaluable co-operation I am very sensible.

Finally, I desire to record our warm appreciation of the very efficient and devoted work of our General Manager, Shri M. B. Lohia, the loyal and earnest co-operation of his colleague officers and for the never failing and hearty co-operation of the staff and workers in the discharge of their duties. Mentioning names will be invidious.

Gentlemen, it has been my very great pleasure to be in your midst this evening and for having had this opportunity of placing some of my thoughts about the industry and the progress of our mills before you.

Thank you.

JAI HIND.

DALMIA IRON AND STEEL LIMITED

NOTICE IS HEREBY GIVEN THAT THE SEVENTH ANNUAL GENERAL MEETING OF THE COMPANY WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY AT RAJGANGPUR (DIST. SUNDERGARH, ORISSA STATE) on Thursday, the 21st February, 1963, at 3 p.m., to transact the following business:—

(1) To receive and consider the Directors' Report, the Auditors' Report and the Audited Statement of Accounts for the year ended 30th September, 1962.
(2) To declare dividend.
(3) To elect a Director in place of Shri J. Dalmia who retires by rotation and is eligible for re-election.
(4) To elect a Director in place of Shri B. P. Khaitian who retires by rotation and is eligible for re-election.
(5) To elect a Director in place of Shri B. D. Goenka who was appointed as an Additional Director on 23rd October, 1962 and who holds office as such upto the date of the Seventh Annual General Meeting. Notice has been received from a shareholder under Section 257 of the Companies Act, 1956 proposing his candidature for the office of Director.
(6) To appoint Auditors and to fix their remuneration.

By Order of the Board of Directors,
For DALMIA IRON & STEEL LIMITED,
G. KEJRIWAL,
Managing Director.

18*th December*, 1962.

Notes.—(*a*) Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the meeting.

(*b*) The Register of Members and Share Transfers of the Company will remain closed for accepting Share Transfer Applications from 16th January to 31st January, 1963, both days inclusive.

(*c*) The dividend when sanctioned will be paid to those shareholders whose names would appear in the Register of Members on 31st January, 1963. Dividend Warrants are expected to be posted by 15th March, 1963.

(*d*) Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 for item No. 5 of the Agenda is being forwarded to the Members of the Company.

THE MYSORE SUGAR CO., LTD.
BANGALORE

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-ninth Annual General Meeting of the Mysore Sugar Company, Limited, will be held at the Registered Office of the Company at Sri Jayachamaraja Wadiyar Road, Bangalore City, at 4 p.m. on Thursday the 31st January 1963, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th June 1962.
(2) To declare a dividend.
(3) To elect a Director in place of Sri L. Siddappa, who retires by rotation and, being eligible, offers himself for re-election.
(4) To elect a Director in place of Sri T. Shamanna, who retires by rotation and, being eligible, offers himself for re-election.

The Share Transfer Register of the Company will be closed from the 18th to the 31st January 1963 (both days inclusive).

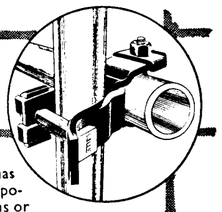
By Order of the Board,
T. HANUMIAH,
Secretary.

BANGALORE, 11*th December* 1962.

Note:—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies must be lodged with the Company not less than 48 hours before the meeting.

(2) The Dividend, when declared, will be made payable at the State Bank of Mysore, Bangalore, on and after the 15th February 1963. The Dividend Warrants will be posted to those shareholders whose names stand on the Company's Register on the 17th January 1963.

Massive tyres. Working under the killing sun or deep into the night by the powerful beams of scores of flood lights. Propelling the gigantic earthmoving machines amidst the loud clangour of incessant work...at Koyna, Nagarjunasagar, the N.C.D.C. mines and numerous important projects.



The tread pattern and the especially tough casing of the Dunlop Earthmover tyre were developed after prolonged field trials on many kinds of terrain in many parts of the world.

It is a tyre proved in service.

WHICH HOLDS THE GREATER LOAD ?

Modern construction projects, require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites, Mills tubular scaffolding has a versatile use—storage racks, temporary buildings, open-air auditoriums or bridges—apart from its normal use as a construction aid.

The special spring-steel fittings quickly secure the tubes—with a ½" spanner as the only tool needed. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle grip' principle.

All fittings are made from special quality spring steel, by Guest, Keen, Williams, Ltd. and the tubes are manufactured by The Indian Tube Company (1953) Limited.

PANYAM CEMENTS AND MINERAL INDUSTRIES LIMITED

MR. T. S. SUNDARAM ON THIRD PLAN TARGET FOR CEMENT

ADDRESSING the Seventh Annual General Meeting of the Panyam Cements and Mineral Industries Ltd., held at Cement Nagar, Kurnool, on Monday, 24th December 1962, Mr. T. S. Sundaram, Chairman of the Company, expressed doubts about the cement industry's capacity to fulfil the revised capacity target of 18 million tons fixed to be achieved by the end of the third Plan, that is, 1965-66. Mr. Sundaram was not sure whether all the licences already issued for additional capacity would be actually installed in view of the lack of incentives in the fair prices fixed by the Central Government on the basis of the Tariff Commission's recommendations and the difficulties in the way of obtaining machinery and equipment.

Extracts from the speech of Mr. Sundaram's speech are given below:

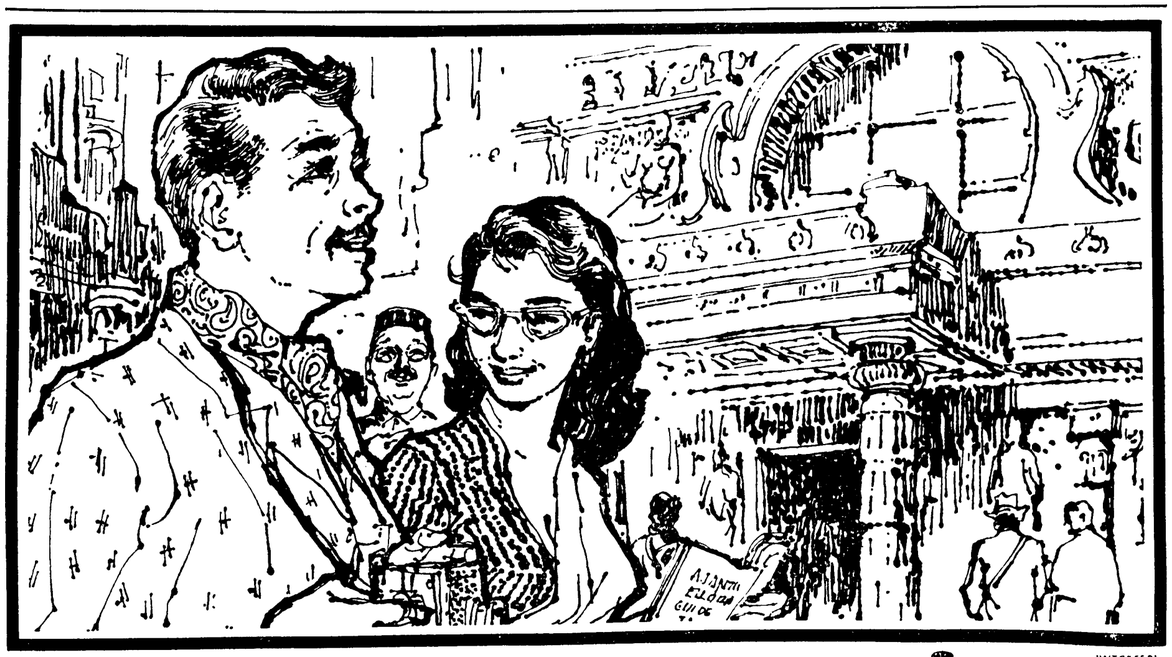
I have great pleasure in welcoming you all to this seventh annual general meeting of the Company.

The Directors' report and statement of accounts for the year ended 31st August 1962 are already in your hands, and they would have given you all particulars for a proper understanding of the working of the Company during the year.

Before offering my remarks further to the Directors' report submitted to you all, I must recall to you the fact that we are meeting at a time of national emergency created by the Chinese invasion of our Himalayan borders, when our own problems and the difficulties of our industry must be viewed against this background of war and peril to our country. Let us all firmly resolve to protect our country to the last of our blood and money, and help our Government to preserve our freedoms. Let us pledge ourselves to support and enable our Army to drive out the invaders from our borders. Inevitably, therefore, our industry should place itself on a war footing, with due priority and importance given to the needs of the war.

The capacity target for cement industry fixed for the third Plan at 15 million tons was, during the year, reviewed; and was revised upwards at 18 million tons; that is, double the present capacity. Licences have been granted for this additional capacity. What with the absence of incentives in the price policy adopted by the Central Government on the basis at least of the last report of the Tariff Commission, the difficulties for obtaining machinery, except with a delay of three to four years, and other operational difficulties which the entrepreneurs undertaking new and expansion programmes encounter, it is left to be seen whether all the additional capacity licensed for will get actually installed. If not by the end of the third Plan period, at least two or three years later, we are sure to reach the target of 15 million tons production, to meet the increasing needs of our country as a result of the allied programmes of the Plans in irrigational and industrial fields.

Apart from the discouraging attitude of the Ministry for Heavy Industries to the recommendations of the Tariff Commission in general, the quarterly fixation of packing charges continues to be disappointing as ever, without any agreement whatsoever, with the prevailing trends of the jute market.



In the Directors' report, reference has been made to our scheme of expansion by another 100 000 tonnes. I am glad to inform you that all orders for the main and ancillary items of machinery have been placed and the Central Government has granted import licences for all importable items. Barring anything unforeseen, it should be possible to complete the expansion programme by about the end of next year, although it is too early to make any definite assessment, due to various uncertain factors caused by the Indo-Chinese war.

To finance the expansion programme, the Company issued additional capital of 11,360 redeemable preference shares and 35,000 equity shares. Of this, 975 preference and 10,000 equity shares were taken by the existing holders as their right shares. The balance of 10,385 preference and 25,000 equity shares were issued to the public by a prospectus on 14th June 1962. The entire balance was taken by the public, besides the Life Insurance Corporation of India and the Andhra Pradesh Industrial Development Corporation Ltd., Hyderabad. I am glad to announce to you that all the additional capital has thus been subscribed and collected. Calls have not yet been made on the shares covered by the prospectus.

Despite the retention price granted being lower than that recommended by the Tariff Commission, and higher working expenses, coupled with the fact that, producing at rated capacity, we could not increase our production further, we have been able to declare a maiden dividend this year on ordinary shares, after paying off arrears of dividend on preference shares and current dividend on redeemable and non-redeemable preference shares. The results could have been better but for the illegal strike resorted to by the workers, lasting for ten days. We feel confident that we will be able to keep up this dividend in the coming years, as the demand position is quite encouraging and our machinery is responding in due measure, for production at rated capacity.

I would like to thank, on your behalf, our workers, staff and officers of the Company for their sincere services and would appeal to them to improve the factory's production to the maximum. Thanks are also due to the Managing Agents for the careful way in which they have been looking after the affairs and growth of the Company, all these years, despite difficulties encountered from time to time.

Note: *The above is not a document purporting to be a report of the proceedings of the annual general meeting.*

THE MYSORE KIRLOSKAR LTD.

SPEECH OF MR. M. D. SHIVANANJAPPA

THE view that tax concessions now being granted under Sections 84 and 85 of the Income-tax Act were too much restrictive was expressed by Mr. M. D. Shivananjappa, I.A.S., Chairman of the Mysore Kirloskar Ltd., in his speech at the Twenty-first Annual General Meeting of the Company held at Harihar on 8th December 1962. He appealed to the Government to extend the period of concession under these sections from five years as at present to eight years, particularly because the initial proving period in the machine tool industry is longer than in other industries. Salient extracts from Mr. Shivananjappa's speech are given below:

LADIES AND GENTLEMEN,

It is my proud privilege to welcome you to this twenty-first annual general meeting of your Company. Unfortunately, we are meeting today after the sad and premature demise of Sri Rajaram Laxman Kirloskar on the 8th October 1962 in Bombay.

Being one of the architects of this Company, Sri R. L. Kirloskar needs no introduction. Since he was amidst you at Harihar from the first day of incorporation of this Company, some of you may be knowing him, perhaps, even more intimately than I do. I have been associated with him for the last 3/4 years and I know him as a very dynamic person full of energy and zeal which were mainly responsible for the development of this Company.

At the time of the last annual general meeting, I had pointed out the difficulties faced by the Company in procuring quality hard coke and pig iron. This year the situation became even more difficult. The position of coke had gone from bad to worse and the supply position of pig iron was perhaps at its worst. The timely help received from the Mysore Iron and Steel Works, Bhadravati, however, helped us to maintain the continuity of production. The difficulties experienced in getting wagons have also increased because of the speed restrictions on the movement of trains.

I can take this opportunity to appeal again to the authorities concerned to give their very earnest and serious consideration to these problems which the industries are facing year after year.

I would like to draw your attention to the departure that we have made this year in not publishing separate statements of accounts for the Herbert Kirloskar Division. We had planned for a substantial progress of manufacture of the Capstans and Turrets in this Division and held reasonable hopes that the Company might be able to secure the tax concessions under Section 15C of the old Income-tax Act or Sections 84 and 85 of the new Act, 1961. Our hopes have, however, been belied by the refusal by the Central Government to grant us any further import licence to import certain components in the early stages of our phased programme. As a result of the refusal to grant import licence, we will not be able to attain the targetted speed in production as envisaged earlier. We will not, therefore, be in a position to claim the tax concessions under Sections 84 and 85 of the Income-tax Act, 1961, which are available during the first five years only of the new project. Three years have been already over since we started the project and we can hardly expect any profits in the Herbert Kirloskar Division during the next two years to be able to get the concessions under Sections 84 and 85. We have, therefore, found that separate statements of accounts for this Division would no longer be necessary.

From our experience, we find that the conditions governing the tax concessions under Sections 84 and 85 of the Income-tax Act are too much restrictive and, in effect, they are denied to the industry for no fault of the industry proper. For a machine tool industry like ours, I feel, the period for these concessions should be extended for 8 years at least, particularly because the initial proving period in a machine tool industry is longer than in other industries. In addition to the extension of the concession period to eight years, I would also suggest that the provision for Development Rebate should be ignored for calculating profits for this concession.

I also want to make another suggestion in regard to the capital gains tax in respect of the sale proceeds of old, discarded or obsolete machinery. The Government has not allowed any tax-free replacement reserves to meet at least to some extent the considerable rise in prices of machinery. To enable the industry to modernise its plant and to replace old machinery, it is necessary to provide for some tax relief. The least that the Government could do is to allow the capital gains on the old, discarded or obsolete machinery tax free. Government may, if necessary, impose conditions similar to those applicable to Development Rebate, that a separate account for the capital gains should be maintained in the books of a Company and that the said amount should not be utilised for a period of five years in any manner other than for purchasing new machinery for replacement.

I request the authorities concerned to consider these suggestions and grant the machine tool industry the much needed relief at an early date.

The Government has levied an additional burden of corporate tax on the profits of the Company, on the plea that the companies are all prospering. But if a long-term view is taken of the position of the industries, it will be easily found that, unless sufficient profits are made by the companies, they will not be in a position to keep their plant and machinery in up-to-date condition. Everybody knows that prices all over the world are going up so much so that during the last 15 years for which period your Company is working, the prices of machine tools have gone up by 300 per cent. If a Company working at double shift is to keep its plant modern, then it should replace its machinery at least once in seven years and taking the above into consideration all the machinery in use prior to the year 1955 will have to be replaced in your factory.

The depreciation allowance which is allowed tax free cannot exceed the original cost of the machine, whereas the cost of replacement is three times such original cost in respect of machinery prior to the year 1955.

Note.—*This does not purport to be a record of the proceedings of the annual general meeting.*

SCINDIA STEAM NAVIGATION COMPANY LTD.

RATIONALISATION AND ECONOMY IN OPERATIONS BEING CONTINUED

CHAIRMAN, MR. DHARAMSEY KHATAU'S SPEECH

A PESSIMISTIC note about the future prospects of the Scindia Steam Navigation Company Ltd. was struck by its Chairman, Mr. Dharamsey M. Khatau, while addressing the shareholders at their Forty-third Annual General Meeting which was held at Bombay on Wednesday, 26th December 1962. Mr. Khatau observed that it was difficult to visualise any improvement in freights sufficient to cover costs and provide a reasonable return on capital. Nonetheless, he assured the shareholders that the Company was continuing its efforts at rationalisation and economy in operations and was taking steps to improve the level of freight rates.

Following is a summary of Mr. Khatau's speech:

"This statement comes to you at a time of national emergency created by the Chinese invasion of India. The shipping industry as a whole has pledged its wholehearted support to the Government of India in its present stupendous task of successfully facing this emergent situation. Our Company has donated a sum of Rs. 5 lakhs to the National Defence Fund. I deem it my duty to assure the Government, on behalf of you all and of myself, of all the assistance and co-operation that we can give in this hour of crisis."

Higher Profit

The Chairman referred to the drop in the quantum of cargo carried and corresponding drop in freight income, despite which the Company made a profit of nearly Rs. 48¾ lakhs as against approximately Rs. 4½ lakhs in the previous year. The Company declared a dividend of 60 nP per share, after transferring Rs. 48 lakhs from general reserve and providing for a further proportion of the statutory development rebate of 1960-61.

Regarding overseas trades, the Chairman attributed good results to rationalisation of services and partial effect of 10 per cent increase in the rates of freight in the eastbound services from U.K./Continent. He expressed the hope that the Company would secure the co-operation of the shippers in maintaining rates of freight at a reasonable level. The Chairman referred to the increase in the share of the Indian Lines from 30.25 per cent to 39.475 per cent in the India/U.K. trade as from 1st September 1962 and a provision for an annual increase of 1 per cent ensuring ultimate parity between the three Indian Lines and the U.K. Lines. He also referred to the equal sharing by the three Indian Lines of the trades, on a pool basis, between India and Poland, India and East Germany, India and Soviet and Rumanian ports, India and Egypt and Adriatic ports.

Tariff Inquiry

Regarding coastal shipping, the Chairman endorsed the request of the industry for examination of its case by the Tariff Commission to enable coastal steamer tonnage to remain at the level of current and future national need. He pressed for restoration of the cut of 5 per cent in freight rate on coal from Calcutta to ports upto Cochin.

The Chairman specially urged the extreme urgency of introduction of a war risks insurance scheme by the Government of India so as to ensure adequate insurance protection to Indian vessels against war risks.

Regarding tonnage position, the Chairman observed that the Company was facing difficulty in its replacement and new construction programme because of acute foreign exchange position and other factors.

The Chairman referred to the increase in operating expenses as a result of changes in conditions of service of crew members of the floating staff, and of a fresh agreement concluded between the Company and the Maritime Union of India, representing the officers of the floating staff.

Regarding future prospects, the Chairman said that it was difficult to visualise any improvement in the freights sufficient to cover the costs and to provide a reasonable return on capital. The Company is, howefer, continuing its efforts at rationalisation and economy in operations and is taking steps to improve the level of freight rates.

Konkan Services

The Chairman referred to the Konkan services of B.S.N. (1953) Ltd. in the following terms:

"Subsequent to our negotiations with the Government of India, it agreed to pay for the years 1961-62 and 1962-63 a subsidy in lieu of 8 per cent increase in fares as also a subsidy of about Rs. 6 lakhs being the excess of repair cost over the Rao Committee's estimates; it further agreed to reimburse the excess repair cost for the year 1961-62, subject to a maximum of Rs. 14.50 lakhs, all these payments being subject to scrutiny of the Government Department. The Government had also agreed in October 1961 to grant an interest-free loan to cover the entire cost of the three new ships and an annual subsidy in this behalf. While the Company has been writing to the Government from time to time regarding new tonnage, it was not until October 1962, when the Government advised the Company, that in view of certain offers received by it for the operation of the Konkan services with new ships without increase in fares and without payment of loan or subsidy, the Government saw that no useful purpose will be served by permitting the Bombay Steam (1953) to build new ships. It may be noted here that the Rao Committee had recommended an additional subsidy as also an interest-free loan to acquire new ships to maintain the services on the same pattern as before on the basis of Rs. 40 lakhs as the cost of each ship. It is, therefore, not understood how these very same services could be operated without any increase in fares or other assistance when the cost of these new ships has gone up to Rs. 60 lakhs each and when there have been further increases in cost of operations. The Company has replied to the Government that it would continue to run the Konkan services with the existing ships till 31st May 1966 if the present terms of the Government assistance are continued till then, whereafter the position will be reviewed in the light of the Government giving permission for new tonnage."

Mr. Khatau thanked Mr. Jagjivan Ram, Minister of Transport and Communications, Mr. Raj Bahadur, the Minister of State for Shipping, and other officials of the Transport Ministry for the interest shown by them in promoting the cause of Indian shipping. He also appreciated the services rendered by the officers and staff and the Company's agents abroad and in India and thanked the shippers and consignees for their continued support.

THE TEST OF TIME...

Burn & Co. Ltd., Refractory & Ceramic Works at Jabalpur have been making salt-glazed stoneware pipes since 1892 — for nearly three quarters of a century. Their works today is one of the most modern in India producing top quality salt-glazed stoneware pipes 3" to 18" diameter.

In service for over sixty years, these pipes have proved themselves resistant to corrosion and decay. For long, unimpaired, trouble-free service, BURN's salt-glazed stoneware pipes are the first choice of engineers and corporations.

THE ASSOCIATED CEMENT COMPANIES LIMITED

SUMMARY OF CHAIRMAN'S STATEMENT

THE following is a summary of the statement which has been issued to shareholders by Shri Dharamsey M. Khatau, Chairman, The Associated Cement Companies Limited, dealing with the Company's working for the year ended 31st July 1962. The Annual General Meeting of the Company will be held on Friday the 18th January 1963 at 4 p.m. at the Sunderbai Hall, off Queen's Road, Bombay 1.

We are today under a grave national crisis caused by unprovoked aggression. Our policy and all actions affecting each of us as individuals and our business must therefore be governed by the overall consideration of the great and urgent task of repelling the invader. The Company's factories, collieries and engineering workshops will naturally be utilised to the fullest extent in the service of the country. Your Company has already donated Rs. 10 lakhs to the National Defence Fund and I am proud to say that the employees of the Company, numbering many thousands, are solidly behind the Government.

If, against this background, I appear somewhat critical of certain Government policies, I want to make it clear that such criticism is made both in view of the urgent need to stimulate the growth of the cement industry—a vital industry both in times of peace and war—and of the part which your Company can play in this great emergency.

During the year the most important event was the recommendation of the Tariff Commission for an upward revision in the retention price of cement and Government's action thereon. The Directors' report has mentioned the difficulties—operational and other—which prevented the Company from achieving better results than were actually obtained and why, despite higher profits it has not been possible to recommend a higher dividend.

Prospects for the Future: Pricing and Industrial Policy of Government

As regards the profit-earning capacity of the Company and its future prospects, these are so largely dependent on the retention prices and Government's industrial policy and action, that there is very little I can say. I can only assure you that our efforts in increasing productivity and reducing costs are being ceaselessly pursued. As you are aware, Government arbitrarily scaled down the increase in price which the Tariff Commission had recommended. The retention price allowed to your Company was inadequate even by the Tariff Commission's standards; and in the absence of automatic escalator clauses, the relief afforded by such price increase is being rapidly reduced, since prompt adjustments to cover subsequent increases in the price of fuel and power, railway freight rates, etc., are unfortunately not forthcoming.

It is a matter of deep regret that the Government should ignore the recommendations of a statutory body like the Tariff Commission—an independent body consisting of people, known for their capacity and judgment, who make their recommendations after scrutiny of all relevant facts and giving weight to all affected interests. It is therefore most disturbing that there is a tendency to dub this body as 'outmoded'. In the absence of an independent organisation of this kind, one fears that fixation of prices by Government could be completely arbitrary.

The incidence of the enhanced tax on corporations from 45 to 50 per cent is substantial. The heavy financial burden imposed by these and other charges has further reduced the profit element. One of the recommendations of the Tariff Commission was that the retention price should be revised if and when adjustments become necessary owing to increases in costs due to governmental action. A representation has been made to the Government through the Cement Manufacturers' Association.

Cement Industry in the National Economy

Cement is a key industry whose continued progress and prosperity are vital to the economic development of the country. The measure of work to be done can be seen from the fact that the target of installed capacity at the end of the third Five-year Plan, fixed at 15 million tonnes, has been considered inadequate, and it has been mentioned in authoritative circles that the figure should be 18 million tonnes. Even against a target of 15 million tonnes, the current capacity is only 10 million tonnes. The rate of growth is thus certainly not as vigorous as might be expected. Even conceding that numerous difficulties exist, it is difficult to escape the conclusion that this slow growth is largely due to lack of incentives, through the imposition of rigid Government controls on price, distribution and in the manner of licensing of new factories.

The Role of A.C.C.

I would like to remind you of the role which A.C.C. has played in building a sound cement industry and in developing a demand for cement in the country. A.C.C. has a proud record of pioneering during the past quarter of a century. To serve consumer as also national interests, it has dispersed its factories carefully and has put to good use even substandard raw materials by employing beneficiation processes. The wisdom of such planned dispersal must be evident to the S.T.C. which, I have reason to believe, is deriving considerable monetary advantage by low freight leads on despatches from A.C.C. factories, which helps it to subsidise the higher freights on cement despatched from factories belonging to other interests. A.C.C. has been a pioneer in employing new processes and producing new products. The dry process of cement manufacture, the manufacture of white cement, blast furnace slag cement, oil-well cement, water-repellent cements, low-heat cement etc. have all been introduced by A.C.C. after much study, research and development. The credit for manufacturing cement-making machinery at its own workshops and thus helping to lay the foundations of a sound heavy engineering industry in our country must also go to A.C.C. Our Engineering Works at Shahabad and the A.V.B. Heavy Engineering Works at Durgapur, established in collaboration with Vickers and Babcock & Wilcox, will not only meet A.C.C's own requirements, but also serve the needs of the cement industry as a whole, thus helping India to conserve a great deal of foreign exchange.

Much foresight, money and effort have gone into these projects and products. A.C.C. has therefore paved the way for other manufacturers to share in the benefits of its pioneering and developmental efforts. Far from discouraging new entrants in the field, A.C.C. has, on several occasions, lent a helping hand to them.

I have dwelt on this somewhat pointedly as there appears to be a tendency, especially in licensing new factories, to consider a Company like yours as a monopoly, for which reason it must take a lower place in the queue!

During the year your Company's contribution towards the National and State finances was Rs. 27 crores in the form of income-tax, corporation tax, excise and other duties, sales tax, railway freight, import duty etc.

These direct and indirect contributions to the national revenues, and the Company's record of progress and service are impressive. All this can continue to be harnessed to good use and I sincerely hope that Government will not stifle this by a doctrinaire approach. I believe that the 'know-how' we possess and our organisational vigour can help to expedite the expansion of the cement industry and make it easier to hold the price line.

Coal supplies continued to cause some anxiety in the early part of the year though, with special arrangements for the allocation and movement of coal introduced by Government, the position has considerably improved. The Company has also been able to draw about 30 per cent of its coal requirements from its own collieries. With increasing emphasis laid on regionalisation of the supply and movement of coal, the importance and utility of our two collieries have grown.

In the matter of packing materials the industry was looking forward to a continuance of the satisfactory position permitting the rational use of second-hand bags in reasonable proportions. However, its hopes were rudely shaken by Government's decision from the last quarter of 1962, insisting that producers pack 50 per cent of their production in second-hand bags—a condition physically impossible to fulfil in view of the limited availability of second-hand bags of serviceable quality. The jute bag is a wasting commodity and cannot be re-used beyond a certain point. From the point of view of the consumers it is likely adversely to affect the standard of packing and will result in loss of cement by seepage by repeated use. The industry has made representations to Government to restore the *status quo ante* in this respect.

Cement Demand and Transport

Demand for cement in the country is in excess of availability. Transport difficulties have aggravated the situation, creating artificial scarcity in some localities. Your Company has endeavoured to gear road transport to meet the situation. Substantial quantities of our cement were moved by road during the year.

Expansion and Rehabilitation

The Company's planned programme of expansion and rehabilitation has made satisfactory progress. Your Board has taken the decision to resume work on the construction of a new factory at Porbandar.

A.C.C.-Vickers-Babcock Ltd.

The Heavy Engineering Plant of A.C.C.-Vickers-Babcock Limited at Durgapur, inaugurated in February last, has commenced production and has received orders for boiler plant, cement-making machinery, etc. Full production will be reached by the end of 1963.

Labour-Management Relations

The labour situation at our Cement Works continued to be peaceful. At the Katni Firebricks plant and Okhla Bulk Depot where the Wage Board's recommendations did not apply, we entered into comprehensive wage settlements. The only factory, Madukkarai, where it was not possible to implement the Wage Board's recommendations, has also been brought into line and the settlement of implementation was signed on 31st July 1962.

The question of bonus, unfortunately, continues to trouble us as it is troubling all industries, in spite of the fact that it has been the policy of the Directors to pay bonus to employees even though strictly according to the Labour Appellate Tribunal Formula no bonus may have been payable. We have four bonus disputes before Tribunals—National and Industrial. These proceedings cost a great deal of money, and drain away the time, energy and attention of personnel, including workers, from the productive side of the enterprise.

Here again, there are hopeful signs in the shape of the appointment of the Bonus Commission by the Government of India. It is earnestly hoped that the Commission will be able to arrive at an acceptable formula which will once for all bring peace in this sphere of industrial relations.

At our collieries there was one major stoppage and quite a number of lesser dislocations—lightning strikes, go-slow, conciliation and adjudication. Kotma Colliery was closed for 133 days on account of a strike followed by closure. This strike was called on a completely extraneous non-industrial issue, and continued despite the advice of concerned Government authorities, and was accompanied by violence.

The appointment of the Wage Board for the coal industry during the year to determine 'fair' wages, I hope, will bring peace and improvement in production in this sorely troubled industry.

Appreciation

I would like to express on your behalf our warm appreciation of the sustained hard work and wholehearted co-operation of your employees.

BOMBAY, 30*th November* 1962.

DEVELOPMENT OF CHEMICAL INDUSTRY

PLEA FOR RATIONALISATION OF EXCISE DUTY

THE chemical industry has made considerable progress during the last few years by expanding output, diversifying production lines and improving quality. The industry's development has received much momentum in the first and second Plans, and it is expected to expand sizably during the third Plan period. It may be noted that the production index (base 1951=100) for chemicals has been steadily going up, being as much as 283 as of 1961. The pace of growth has been, in fact, still higher in some of the vital segments of the industry. The production index for sulphuric acid, for instance, has gone up (from 100 in 1951) to 381, that of caustic soda to 801, soda ash 366, chlorine liquid 363, ammonium sulphate 738 and rayon 1,034. These compare very favourably with the growth of all industries taken together; the general index for all industries has gone up to only 181. Of course, the comparison does not stand on all fours, for many of the chemical industries are relatively younger ones and have thus had a greater potential for growth. To say this is not to detract from the present high rate of growth which the chemicals group has achieved, despite progressive reduction in import quotas for raw materials during the last few years. Among the new items, the manufacture of which has been taken up during the last two years, are sodium hydrosulphite, ammonium chloride, some vitamins, certain items of coal-tar dyes, etc.

The rapid development of the industry has made it possible to cater to several strategic needs, especially in the present context of Chinese aggression. As Mr. Shriyans Prasad Jain observed in his inaugural address at the annual meeting of the Indian Chemical Manufacturers Association in Bombay last week, chemicals are connected, directly or indirectly, with almost every industry associated with defence needs as well as the needs of the economy. A wide range of chemicals is consumed by such other strategic industries as steel, textiles, cement, rubber, leather, footwear, metals, arms and ammunition, explosives, electrical appliances, automobiles, aviation and engineering.

Holding Price Line

In view of the strategic importance of the chemical industry, Mr. Jain appealed to the manufacturers of chemicals to spare no efforts to hold the price line for their products during the emergency. He opined that in times of stress caused by shift in production priorities, prices might tend to go up. This might lead to consumer resistance and public resentment calling for statutory controls. Mr. Jain appealed to the chemical producers to avoid such a predicament by exercising voluntary vigilance and discipline. He also urged them to take collective action to maintain supplies and evolve appropriate policies for the distribution of chemicals at reasonable prices. Mr. Jain's plea for voluntary control was ably supported by the President of the Association, Mr. J. H. Doshi. The latter felt that the industry had a conscious and deliberate duty to ensure that it held the price line both in the national interest and in its own. Many of the chemicals, he added, were used as intermediate raw materials for other chemicals and also for other industries, and if the pricing should lead to a situation where it generated "customer hostility," the industry would not make any progress.

Mr. Doshi dealt at some length with the need for stepping up output to cater to defence requirements. In this connection, he suggested that a high-level committee of commercial and technical persons should be constituted to determine the ways of increasing the supply of chemicals for defence needs, without, at the same time, upsetting civilian needs or exports. Such a committee, he observed, might also be able to study the various problems of the industry, particularly those arising from the curtailment of imports of raw materials, difficulties in the way of securing adequate transport, coal and power.

Balanced Development

In this context, Mr. Doshi urged the authorities to ensure that no imbalance would arise in the development of various interdependent chemical industries. Explaining this point, he observed as follows:

"In executing our Plan, it is inevitable that certain amount of imbalance would arise from time to time, such as manufacture of dyestuffs and pharmaceuticals considerably progressed, but the scheme for basic intermediates required for these industries is lagging behind; manufacture of formaldehyde has come in, but the question of clearing industrial licences for methanol remains to be settled. A number of licences have been granted for industries based on petro-chemical products and some of these schemes have even progressed, but the decision about establishing naphtha cracking units to feed these industries is awaiting clearance. As you are aware, some of these decisions have been held up on ideological grounds. In some cases, though the licences have been granted, they are not allowed to progress on similar grounds. Whilst in normal times such temporary delays governed by various considerations would not create serious problems, under the present conditions, every scheme that promises to bring in production quickly and save or earn foreign exchange, needs to be expeditiously implemented and supported from all quarters. In matters like these, the sole consideration should be to help achieve maximum production by filling such missing gaps and strengthen the national economy by broadening industrial base. In fact, I would go even to the extent of suggesting that where raw materials are in the main or exclusively indigenous and foreign exchange required for plant and machinery can be arranged by the entrepreneur, licences should not be denied."

Excise Duty

Another major difficulty faced by the industry relates to the levy of excise duty. Mr. Doshi appealed to the Government to see that the principles adopted for bringing new items under the levy were so rationalised that the effects would not be cumulative and their impact on general price structure would be minimum. He suggested that basic raw materials should, as far as possible, be free from excise duty, "as the multiple effect of such a levy becomes difficult to measure in relation to the point of consumer resistance for the end-products, whereas in regard to levies on the finished products themselves, this can be determined with reasonable accuracy." Endorsing Mr. Doshi's suggestion on excise duty, Mr. Jain observed as follows:

"I agree with this suggestion, because these materials are generated in the process of manufacture itself and are consumed within the factory of production. For instance, take the case of CO_2 gas used in the manufacture of soda ash. This gas is a mixture of various other gases compressed to a pressure of only 45 lbs. per sq. inch and is not commonly known as CO_2 gas of a minimum of 99 per cent purity and compressed to the usual pressure of 1,000 lbs. per sq. inch. The gas is not being stored separately and cannot be sold as such. Yet it is subject to duty. Another example is the duty on rubberised fabrics where the procedure for its collection is not only vexatious but hampers production and the tyre manufacturers have suggested that the duty should be levied at one point, that is, when the tyres are cleared from the factory. Thus it is evident that the excise duty is not being levied on a rational basis. Therefore, it is high time to go into the philosophy and rationale of the excise duty."

It is to be hoped that these aspects of excise duty will be carefully considered by the Central Excise Reorganisation Committee (Chairman: Mr. A. K. Chanda). Both Mr. Doshi and Mr. Jain also refuted allegations about the manufacture of sub-standard and spurious drugs. They contended that, except for a few black sheep, the pharmaceutical industry was run on scientific lines and its products were of the standards equal to the best in the world. In fact, a principal drugs-producing centre like Maharashtra State has the most efficient and vigilant drugs control administration. Mr. Doshi's suggestion is that, in order to remove offenders, the administration of the Drugs Control Act should be strengthened and made more efficient. The suggestion should be heeded, for it is the reputation of the pharmaceutical industry in domestic and foreign markets that is at stake.

"SOUTH INDIA INDUSTRIAL REPORTER"

The inaugural number of the *South India Industrial Reporter* (Edited and Published by Mr. N. L. Govindaraj, P.B. 666, Madras-14) contains informative articles on some important aspects of India's industrial development. The article on "India Arms for Victory" by Mr. V. Suryanarayana gives an interesting account of the development of major industries which have a strategic potential. It also examines other related matters including technical manpower, agriculture and transport, against the perspective of defence requirements during the Second World War. The new publication, it is said, has been launched with the object of serving the cause of industrial and technological development with special reference to the problem of industries in South India. We wish the journal every success.

ELECTRIC LAMPS INDUSTRY

FAIR SELLING PRICES TO BE FIXED

THE Tariff Commission has taken up an investigation of the cost structure of the electric lamps and fluorescent tubes industry with a view to fixing fair selling prices for these products. The present enquiry is a sequel to the complaints of consumers about the shortage and high prices of these products. Opening the tariff enquiry the other day in Bombay, Mr. K. R. P. Aiyangar, Chairman of the Commission, urged the industry to take advantage of the growing market for its products in the country by increasing production, improving quality and reducing cost in such a way as to ensure that products reached consumers at reasonable prices. He also gave an account of the present supply and demand position of electric lamps, which may be dealt with in some detail in this note.

The establishment of the electric lamp manufacturing industry dates back to 1933 when Bengal Electric Lamp Works Ltd. commenced production of general light service (G.L.S.) lamps on a modest scale at Calcutta. Before the end of the decade, E.L.M.I. (Electric Lamp Manufacturers (India) Private Ltd.), the largest manufacturer of electric lamps, had gone into production. During the next fifteen years, the industry did not make much headway. However, with the implementation of development plans and the accent placed by Government on industrialisation and power development in the subsequent period, the electric lamp industry has made rapid progress. Its aggregate annual capacity rose from 13 million pieces in 1946 to 23.05 million in 1951, 43.08 million in 1956 and 47.52 million in 1961. Production maintained a similar upward trend from 8 million in 1946 to 15.52 million in 1951, 29.84 million in 1956 and 45 million in 1961.

Diversification

There was also diversification when the industry commenced the manufacture of fluorescent tubes in 1952. The capacity for the manufacture of fluorescent tubes rose from 0.40 million pieces in 1952 to 1.20 million in 1961. The actual output of fluorescent tubes increased from 0.08 million in 1952 to 1.89 million in 1961. At present, there are 19 units in the organised sector manufacturing electric lamps, fluorescent tubes and miniature bulbs. Out of these, seven are in West Bengal, five each in U.P. and Delhi, four in Maharashtra and one each in Bihar, Mysore and Madras. As regards number of units manufacturing different types of lamps, it may be stated that three units manufacture all the three varieties, four units manufacture G.L.S. and miniature lamps, six manufacture G.L.S. lamps only, five miniature lamps only and one mercury vapour lamps alone. Various other kinds of lamps, including photo-flash and prefocus torch lamps, are also being manufactured.

In the small-scale sector of the industry, there are 16 units which manufacture various types of miniature lamps, such as for automobiles, torches, radio panels, cycle dynamos, etc. Of these, sixteen units, six are in the U.P., five in Maharashtra, four in West Bengal and one in Bihar.

Imports

Owing to diversified indigenous production, imports of only special types of lamps are now allowed, and the imports have sharply declined from Rs. 63.92 lakhs in 1957 to Rs. 34.13 lakhs in 1961. Side by side, exports have increased from Rs. 0.27 lakh in 1957 to Rs. 2.16 lakhs in 1961. It is noted that the units producing G.L.S. and allied lamps and miniature bulbs are now operating on single shift only, except in the case of fluorescent tubes where the units are working double shift.

At the beginning of the first Plan, the electric lamp industry was almost entirely dependent on imports for the supply of its raw materials and components. Gradually, production of components like glass shells and brass caps (bayonet type) was undertaken indigenously and now the entire requirements of these items are met from local production. At present, there is a certain concentration of production of these components with a few lamp producers and at least one lamp manufacturer has expressed some misgiving about the consequences of such vertical integration. The production of brass caps and glass shells in 1961 was 46.91 million and 62.27 million, respectively, as compared with the output of 45.27 million

(*Continued on page 48*)

A.C.C.'S GRAND RECOVERY

YET RESERVES DEPLETED FOR DIVIDEND

A STRIKING improvement in both gross profit and profit-margin (ratio of gross profit to sales) from the moderate setback suffered in the previous year is the outstanding feature of the results of the Associated Cement Companies Ltd. (Managing Agents: Messrs. Cement Agencies Ltd., Bombay) for the year ended 31st July 1962. Gross profit, which had receded from Rs. 602.59 lakhs to Rs. 587.35 lakhs in the previous year, has spurted to Rs. 788.02 lakhs, which is a record for the Company. The profit-margin, which had retreated from 22.2 per cent to 19.5 per cent in 1960-61, has recovered more than fully to 23 per cent during the year under report. These increases in profit and profit-margin have followed mainly the rise in the production of cement and the increase allowed in the retention price of cement from 1st November 1961. Besides, the higher profit reflects also the results accruing from certain diversification of the Company's activities, such as white and special cements, refractory products etc., all of which showed better performance during the year. Sale proceeds continued their upward trend and expanded from Rs. 30.04 crores to Rs. 34.37 crores—a new record for the Company. There was an increase of 1.02 lakh tonnes in the installed capacity during the year, and production, as compared with the previous year, increased by 1.07 lakh tonnes. We are told that production would have been higher but for the poor quality of coal, short supply of wagons for carriage of coal and cement despatches and limited supply of power to certain factories. Nonetheless, despatches were higher by 5 per cent at 10.70 lakhs tonnes, representing roughly 30 per cent of the total despatches in India.

The marked improvement of Rs. 200 lakhs in gross profit is reduced to a mere Rs. 65 lakhs at the level of net profit which has expanded from Rs. 157.08 lakhs to Rs. 222.05 lakhs following a substantial increase in the provision for taxation from Rs. 137.55 lakhs to Rs. 272.83 lakhs and in Managing Agents' commission from Rs. 17.16 lakhs to Rs. 35.73 lakhs. The provision for depreciation, however, has been reduced from Rs. 275.56 lakhs to Rs. 257.41 lakhs. After setting apart Rs. 35.02 lakhs (Rs. 30.38 lakhs a year before) for reserves, the profit available is insufficient to cover fully the taxable dividend on the Rs. 100 fully paid shares, which is proposed to be maintained at the previous year's level of 12 per cent per annum and which absorbs in all Rs. 228.90 lakhs. To make good the deficit, reserves have been depleted to the extent of Rs. 37 lakhs (Rs. 98 lakhs a year before). This means that even after allowing for of reserves to the extent of Rs. 1.98 lakh. The percentage of dividend coming from reserves is, however, small at 1.9, as compared with 5.1 in 1960-61, 4.4 in 1959-60 and 4.1 (out of a total of 11 per cent) in 1958-59.

A bird's-eye view of the progress made by the Company in the past four years can be had from the comparative table below:

(In lakhs of rupees)

	For the year ended 31st July			
	1962	1961	1960	1959
Sale of products	34,36.69	30,04.39	27,08.68	25,55.37
Other income	65.34	78.62	82.22	78.48
Closing stocks	163.17	138.82	117.68	129.69
Cost of materials, cement purchased, stores, etc.	14,73.77	13,95.23	11,50.97	11,17.64
Staff expenses	574.43	539.45	496.87	451.55
Other expenses	895.74	882.11	558.35	542.32
Gross profit	788.02	587.35	602.59	550.23
Managing Agents' commission	35.73	17.16	38.96	37.14
Depreciation	257.41	275.56	239.60	212.74
Taxation	272.83	137.55	110.93	100.35
Net profit	222.05	157.08	213.10	200.00
Excess provisions written back	4.01	4.39	2.60	3.92
Withdrawal from reserves	37.00	98.00	84.50	79.00
Transfer to reserves	35.02	30.38	71.81	74.16
Dividend	228.90 (12%)*	228.90 (12%)*	228.89 (12%)*	209.82 (11%)*
Carry forward	0.66	0.61	0.42	0.92
	1962	1961	1960	1959
Equity shares' market value (In rupees): High	165.00	172.00	152.50	159.50
Low	145.50cd	143.25	137.50	141.00

* Subject to deduction of tax.

The progress on the developmental activities of the Company is summed up in the following paragraphs:

With the installation of the third raw mill in November 1961, the 'raw-grinding' capacity of the duplicated plant at Mancherial factory has improved. It is expected that the limitation on the supply of power from the Andhra Electricity Board, as a result of which this additional capacity could not be fully utilised during the year under review, will be overcome shortly. Production of 'slag' cement at Chaibasa could not reach full capacity, though many of the initial operating difficulties were overcome. Transporting granulated slag from Jamshedpur to Chaibasa is said to be now the major bottleneck. Nonetheless, sales of slag cement improved during the year from a mere 1,200 tonnes to 46,900 tonnes. A sizable improvement is foreseen during the current year.

The work on the Jamul factory structures and buildings has made good progress. Machinery and equipment have been ordered. It is proposed to manufacture all the cement machinery at the workshops of the Company and of the A.C.C.-Vickers-Babcock Ltd. The manufacturing programme has, however, suffered a very serious setback due to non-receipt of steel plates ordered out from the Rourkela plant. However, the Government has granted a special import licence to import boiler quality and other plates required for the manufacture of cement machinery, and these plates are expected to be received soon. Work on the factory is now expected to be completed by the middle of 1964. Progress on the extension of the Dwarka works has been well maintained. It has also been decided to resume work on the construction of a new factory at Porbandar.

Civil engineering construction work in connection with the white cement plant at Kymore has almost been completed. The plant will, however, be commissioned only in early 1964 because of the delay in receipt of boiler quality plates. The engineering works project at Shahabad (Mysore State) is said to be making satisfactory progress. Construction work is going on according to schedule. Orders for plant and machinery have been placed and some have been executed. The railway siding has also been completed. Barring the grey iron foundry, other shops are expected to be completed by the middle of 1963.

Negotiations for the sale of the Company's undertaking in Pakistan had to be abandoned on account of various difficulties faced by the entrepreneurs in that country.

Financially, the Company is in a sound position. The paid-up capital of Rs. 19.07 crores is supplemented by reserves and surplus aggregating Rs. 10.53 crores. Secured loans, the bulk of them being amounts drawn against cash credit accounts with banks and secured by 6 per cent mortgage debentures and hypothecation of stocks, amount to Rs. 7.05 crores, as against Rs. 7.54 crores in the previous year. Current liabilities and provisions total Rs. 13.55 crores. The total indebtedness to outsiders amounts to Rs. 20.60 crores, which is, however, fully met by current assets, loans and advances aggregating Rs. 19.87 crores and investments amounting to Rs. 3.56 crores. The gross block, which expanded during the year from Rs. 43.88 crores to Rs. 46.47 crores, has been conservatively written down to Rs. 25.60 crores and, together with machinery in transit valued at Rs. 17.54 lakhs and unallocated capital expenditure amounting to Rs. 100.96 lakhs, is shown at Rs. 26.78 crores.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 154 *cum-div.* On the *ex-div.* basis, they offer a net yield of 5.7 per cent per annum.

(*Concluded from next column*)

under review. The paid-up capital now stands at Rs. 111.85 lakhs, of which Rs. 68.56 lakhs are in ordinary shares and the balance in two classes of preference shares. As against this, reserves and surplus aggregate Rs. 148.76 lakhs, that is, more than twice the size of equity capital. Secured loans, including the outstanding I.F.C. loan and a loan of Rs. 36.83 lakhs raised during the year from the Madras Industrial Investment Corporation Ltd., are shown at Rs. 303.10 lakhs, as against Rs. 275.51 lakhs a year before. Out of the Rs. 303.10 lakhs, Rs. 214.08 lakhs have come from banks. Unsecured loans have, however, come down from Rs. 40.24 lakhs to Rs. 11.43 lakhs. Together with current liabilities and provisions standing at Rs. 217.82 lakhs, the total short-term indebtedness to outsiders amounts to Rs. 443.33 lakhs and exceeds current assets, loans and advances as also investments aggregating Rs. 343.63 lakhs. The net block is shown at Rs. 449.35 lakhs, as against a gross block of Rs. 574.32 lakhs, the depreciation provided so far amounting to Rs. 124.93 lakhs.

The Rs. 10 fully paid ordinary shares are currently quoted at Rs. 22 *cum-div.* and offer, on the *ex-div.* basis, a net yield of roughly 5 per cent per annum.

K.C.P.'S MAGNIFICENT PERFORMANCE

70 PER CENT OF PROFIT PLOUGHED BACK

THE performance of K.C.P. Ltd. [Managing Agents: Messrs. V. Ramakrishna Sons (Private) Ltd., Madras] during the year ended 30th June 1962 is highly encouraging. Net proceeds from sales (that is, excluding the excise duty paid) and internal transfers have shot up by Rs. 158.38 lakhs to Rs. 529.09 lakhs, and the bulk of the improvement, Rs. 143.85 lakhs to be precise, has come only from sales. Gross profit has spurted by about Rs. 29 lakhs to Rs. 99.38 lakhs—a level which is only a bit short of the crore-mark. What has gone into the making of this exceedingly good performance at a time when companies engaged in lines similar to K.C.P., namely, sugar, sugar machinery and cement, have struggled to keep their heads above water, is larger production and productivity. Thus, although the quantity of cane crushed was less at 290,240 tonnes against 332,829 tonnes in the previous year, production of sugar increased from 29,848 tonnes to 29,967.4 tonnes, following an increase in the percentage recovery from 8.97 to 10.03. The output of cement at the Company's Macherla factory also increased during the year from 71,519 tonnes to 91,815 tonnes. The second stage of the cement factory, increasing the annual capacity by 50,000 tons to 150,000 tons, commenced in June 1962. It will be seen from these facts that production of sugar was more than maintained at substantially lower costs.

After providing Rs. 4.90 lakhs (Rs. 3.50 lakhs a year before) for Managing Agents' remuneration, Rs. 26.40 lakhs (Rs. 21.42 lakhs) for depreciation and Rs. 18 lakhs (Rs. 10.50 lakhs) for taxation, the net profit amounts to Rs. 50.08 lakhs, as against Rs. 35.17 lakhs in 1960-61, that is, an increase of 43 per cent. A sum of Rs. 8.14 lakhs, as against Rs. 10.17 lakhs in the previous year, has been withdrawn from reserves and provisions, and against this, in all Rs. 44.10 lakhs (Rs. 31.28 lakhs in the past year) have been set apart for reserves and provisions. The amount ploughed back thus works out to Rs. 35.96 lakhs, or roughly 70 per cent of the year's net profit. The dividend on the Rs. 10 fully paid ordinary shares has only been maintained at 15 per cent per annum, subject to tax, for the fourth year in succession. The last tax-free dividend paid for 1957-58 was also 15 per cent. And since the dividend became taxable from the year 1958-59, it has not been upgraded even to the extent necessary to compensate shareholders for the loss of benefit of grossing up. At least during the year under report, the Directors could have chosen to do so. But as the Company has obtained a long-term loan from the Industrial Finance Corporation of India, the dividend is payable subject to the sanction of the Corporation. A higher dividend would obviously not have found favour with the Corporation. Incidentally, the Corporation's loan, which stood at Rs. 60.90 lakhs in 1960-61, was reduced to Rs. 52.20 lakhs during the year under report.

A synopsis of the Company's progress in the past four years is provided in the comparative table below:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959
Sale proceeds and internal transfers, less excise	529.09	370.71	302.03	283.40
Other income	9.01	4.96	5.64	4.38
Closing stocks and work-in-progress	147.20	162.08	108.88	77.47
Excise duty	79.39	74.63	76.76	89.22
Cess on sugarcane	13.65	16.38	11.57	11.60
Materials, stores and spares consumed	298.36	244.93	184.66	129.53
Staff expenses	35.18	29.65	23.44	21.46
Other expenses	76.18	67.32	62.11	54.40
Gross profit	99.38	70.59	57.30	36.64
Managing Agents' remuneration	4.90	3.50	3.00	2.34
Depreciation	26.40	21.42	15.56	13.36
Taxation	18.00	10.50	24.75	..
Net profit	50.08	35.17	13.09	20.94

Out of the issue of 100,000 rights ordinary shares of Rs. 10 each to shareholders in January 1961, 98,608 shares were allotted up to the date of the last annual general meeting and a further 567 shares were allotted during the year

(*Continued in previous column*)

BELAPUR'S PROFIT-MARGIN DWINDLES

LOWER PRODUCTION—SHARP RISE IN COSTS

A SHARP fall of 20 points to 20.6 per cent in profit-margin (ratio of gross profit to sale proceeds) is the disappointing feature of the results of the Belapur Company Ltd. (Managing Agents: Messrs. W. H. Brady & Co. Ltd., Bombay) for the year ended 30th September 1962. The fall is due to the fact that, while the sale proceeds have jumped up from Rs. 195.84 lakhs in 1960-61 to Rs. 261.31 lakhs in 1961-62, the gross profit has dwindled from Rs. 79.77 lakhs to Rs. 53.96 lakhs. In the previous year, it will be recalled, although gross profit had beat a retreat to Rs. 79.77 lakhs from the record level of Rs. 85.60 lakhs earned in 1959-60, the profit-margin had declined only slightly from 44.2 per cent to 40.7 per cent, since the sale proceeds at Rs. 195.84 lakhs were only a shade higher than Rs. 193.50 lakhs in 1959-60. As 20.6 per cent, the profit-margin for the year under review is even lower than 23.8 per cent for 1958-59. Readers may be aware that the taxable dividend on the Rs. 50 fully paid ordinary shares in respect of the year 1961-62 has been pruned again, by 10 points to 40 per cent per annum. There is virtually no transfer to reserves, as against Rs. 10.04 lakhs set apart in the previous year. The carry-forward is higher at Rs. 13.80 lakhs, as compared with Rs. 10.30 lakhs brought in.

The following table compares the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1962	1961	1960	1959
Proceeds from sale of sugar	261.31	195.84	193.50	202.37
Other income	12.02	1.85	2.91	5.60
Closing stock of sugar	59.51	91.18	49.87	16.86
Excise duty, cane cess, etc.	68.16	48.79	57.08	62.01
Other expenses (after adjustment of stocks)	151.21	69.13	53.73	97.80
Gross profit	53.96	79.77	85.60	48.16
Managing Agents' commission	5.08	7.80	8.25	4.50
Depreciation	2.79	3.01	3.01	3.30
Taxation	15.50	16.65	19.75	12.50
Net profit	30.59	52.31	54.59	27.80

Low	205.00cd	240.00	310.50	259.50

* Subject to deduction of tax.

A number of factors, we are told, were responsible for the unsatisfactory results during 1961-62. The quantity of cane crushed in the season, for instance, declined to 184,589 tonnes from the record figure of 217,607 tonnes crushed in the preceding season. Consequently, the production of sugar was lower at 218,976 bags, as against 256,733 bags which was a record output in the history of the Company. The decline in sugar production would have been more marked but for the rise, albeit slight, in sugar recovery from 11.76 per cent to 11.87 per cent. There was also a considerable drop in the yield of cane per acre due to adverse climatic conditions. While the production of cane and output of sugar suffered a setback thus, costs (after adjusting stocks) shot up from a mere Rs. 69.13 lakhs to Rs. 151.21 lakhs. The burden of excise duty, cane cess and purchase tax on cane also increased sharply from Rs. 48.79 lakhs to Rs. 68.16 lakhs. Further, the loss of income due to the Company's export quota of 32,534 bags of sugar amounted to about Rs. 5.5 lakhs, as against Rs. 6 lakhs in the previous year. The increased monthly releases of sugar for sale by the Government during the year, together with deliveries for export, account for the smaller closing stock of Rs. 59.51 lakhs, as compared with Rs. 91.18 lakhs a year before.

As is well known, the Government has now decided to export raw sugar. But the Company has not offered to manufacture raw sugar in its factory because of technical difficulties arising from the present system of clarification which cannot be changed until the new Dorr and Oliver machinery now on order has been put into operation.

After the implementation of the Central Wage Board recommendations for factory workers, a request was made by the labour union to make compensatory adjustments for those employees working on the farm side of the business. This was amicably settled by agreement and increments were given with retrospect effect from November 1961.

Crushing operations in respect of the current season started on 6th November 1962. The early results from the point of sugar recovery are said to be very satisfactory. The Directors, however, feel that the enactment of the recently passed Maharashtra State Agricultural Income Tax Bill will severely affect the profit for the year. They also fear that, if the State Government were to carry out its intention of taking over the cane farms from 1st April 1963, the agricultural profit for the year commencing from 1st October 1963 would be entirely eliminated. Owing to these various Government measures, the prospects for the Company from the profitability angle are considered by the Directors to be far from bright and they regret that a more optimistic view cannot be foreseen at present.

Additional loans of Rs. 11.10 lakhs (making a total of Rs. 48 lakhs) were granted during the year to the subsidiary unit, Gangapur Sugar Mills Ltd. Since the close of the year, a further sum of Rs. 1.5 lakh has been advanced to it. During the year ended 30th June 1962, the subsidiary unit showed a profit of Rs. 9.36 lakhs without providing for depreciation, as against a loss of Rs. 4.36 lakhs in the previous year. It crushed 123,474 tonnes of cane (as against 116,369 tonnes a year before) and produced 141,228 bags of sugar (115,684 bags) at an average recovery of 11.43 per cent (9.91 per cent).

Despite adverse working results for the year 1961-62, the financial position of Belapur is pretty sound. The paid-up equity share capital of Rs. 70.50 lakhs is more than twice covered by reserves and surplus aggregating Rs. 175.88 lakhs. Current liabilities and provisions are shown at Rs. 79.11 lakhs and are exceeded thrice by current assets, loans and advances aggregating Rs. 243.59 lakhs. Investments are shown at Rs. 30.24 lakhs, of which Rs. 30.12 lakhs are unquoted. The gross block, which increased during the year from Rs. 165.54 lakhs to Rs. 168.13 lakhs, has been properly written down to Rs. 51.65 lakhs.

The Rs. 50 fully paid ordinary shares of the Company are currently quoted at Rs. 213.50 *cum-div.* On the *ex-div.* basis, they offer a net yield of 7 per cent per annum.

FRESH CAPITAL ISSUES SANCTIONED

The Controller of Capital Issues has authorised the following seven companies to issue capital aggregating Rs. 3.52 crores. The details are given below:

Bagla Alloy Steels LTD., a company to be incorporated in the U.P. for the manufacture of silico-manganese alloy steel for springs, in collaboration with a French firm, is to issue a capital of Rs. 1.5 crore. This will be divided into Rs. 1.25 crore in equity and Rs. 0.25 crore in cumulative preference shares carrying a dividend of 9.3 per cent. Equity shares of the value of Rs. 6.5 lakhs will be offered to the foreign collaborators, against the import of equipment and for providing technical know-how. The balance will be issued for cash at par.

The English Electric Co. of India (Private) Ltd., will issue a capital of Rs. 60 lakhs in 6,00,000 equity shares of Rs. 10 each. Shares of the value of Rs. 25 lakhs will be offered for public subscription after converting the company into a public limited company. Shares worth Rs. 35 lakhs will be given to the English Electric Company Ltd., of England, against the supply of plant and machinery.

Ferro Alloys Corporation Ltd., Maharashtra, will raise a capital of Rs. 50 lakhs, divided into 40,000 equity shares of Rs. 100 each and 10,000 preference shares of Rs. 100 each bearing a dividend of 9.285 per cent. The consent is valid up to 30th June next year.

The Industrial Development Corporation of Orissa Ltd., Bhubaneshwar, is to issue a further capital of Rs. 50 lakhs divided into equity shares of Rs. 100 each, for cash at par. The entire issue will be subscribed by the Orissa Government.

All Steel Industries Corporation Ltd., Madras, has been granted consent to issue a capital of Rs. 30 lakhs consisting of equity shares of Rs. 25 lakhs and preference shares of Rs. 5 lakhs for cash at par.

Southern Structurals Ltd., Madras, will raise Rs. 30 lakhs through right shares for cash at par.

Swastik Rubber Products Ltd., Bombay, will raise a further capital of Rs. 12,50,000 in the form of 12,500 equity shares of Rs. 100 each for cash at par.

GLOBE AUTO ELECTRICALS LTD.

The Globe Auto Electricals Ltd. commenced trial production on 18th December 1962 and successfully produced the first item in the production programme, namely, ignition coil. Disclosing this to the shareholders at their first annual general meeting held at Bombay on Saturday, 29th December, Mr. N. M. Sheth, Chairman of the Company, stated that samples of the coil, which were sent to leading vehicle manufacturers in Bombay, stood the rigid prescribed tests well. The Company, we are told, will soon despatch supplies against bulk orders already secured for the coil. Production of windshield wiper and other Marelli products (the Company has been working in collaboration with Messrs. Magneti Marelli of Italy) will be taken up in the near future. According to Mr. Sheth, the production programme of the Company will run smoothly, in view of the excellent training received by its engineers in Italy, as also the availability in Bombay of the Marelli expert technicians during the initial period of factory construction and setting up of the plant and machinery.

The Company has adequately covered its financial requirements. The foreign exchange loan equivalent to Rs. 8.5 lakhs from the I.C.I.C.I., the Rs. 15 lakhs loan from the I.F.C. and the cash credit arrangement of Rs. 5 lakhs with a leading bank in Bombay have adequately supplemented the Company's equity share capital of Rs. 45.75 lakhs.

The Company has entered the automobile ancillary industry at the crucial time of building up national defence for which the industry has been accorded high priority. Mr. Sheth envisaged bright prospects for the Company. He stated that, in due course, the Company would diversify its activities and produce special items for the first time in the country.

STEEL TUBE PROJECT IN PUNJAB

A steel tube mill, claimed to be the only one of its type in the country, with an annual capacity of 36,000 tons, on single-shift basis, for producing tubes up to 6" size, will go into operation by next winter at Ganaur near Sonepat in Punjab State. The installed target capacity will be 100,000 tons. About 130 acres of land have been allotted for the project to the Bharat Steel Tubes Ltd. of Delhi by the Government of Punjab which has also sanctioned the supply of the requisite electric power and allotted necessary coal for construction purposes. Initial civil work has commenced.

Mr. Raunaq Singh, Managing Director of the Company, has just returned from the U.S., after signing a financial and technical collaboration agreement with a leading American firm, Messrs. Abbey Etna Machine Company of Ohio. In addition to supplying machinery and technical know-how, the American firm will participate in the equity capital of the Company to the extent of one million dollars. The Government of India has sanctioned the Company foreign exchange to the extent of Rs. 88 lakhs from the D.L.F. credit. The estimated cost of the project is about Rs. 3 crores.

The Company has decided to issue 175,000 equity shares of Rs. 100 each and 25,000 preference shares of Rs. 100 each, for which the sanction of the Controller of Capital Issues has been obtained. The promoters, Directors and their friends and relatives will subscribe for shares worth Rs. 30 lakhs. The balance of the capital will be open for public subscription. Negotiations for a loan are in progress with the Industrial Finance Corporation of India.

WELLMAN INCANDESCENT INDIA LTD.

The Wellman Incandescent India Ltd. has completed the allotment of the 110,000 ordinary shares of Rs. 10 each, which it issued to the public in the third week of November last. Applicants for 500 shares have been granted full allotment. Five hundred shares have been allotted for applicants for 510 shares, 525 shares for 550 shares, 550 shares for 600 shares, 625 shares for 700 shares, 650 shares for 800 shares, 800 shares for 1,000 shares as also 1,050 shares and 850 shares for 1,200 shares. The allotment against applications for 2,000 shares has been restricted to 1,000 shares, for 2,500 shares to 1,200 shares, for 4,000 shares to 1,400 shares and for 5,000 shares to 1,700 shares. Letters of allotment and refund orders have already been posted.

Notice

THE ALEXANDRA JUTE MILLS LIMITED

THE BOARD OF DIRECTORS HAS DECLARED the following interim dividends in respect of the year ending 31st December, 1962:—

(i) On 7% (tax-free) Cumulative Preference Shares @ 9.1% (being the stipulated dividend increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960), and

(ii) On the Ordinary Shares @ 20%.

These dividends will be paid to the registered holders of the above shares whose names appear in the Company's Register of Members on 21st January, 1963 after deduction of tax under Section 194 of the Income Tax Act, 1961.

The Share Transfer Books of the Company will be closed from 15th January, 1963 to 21st January, 1963, both days inclusive.

By Order of the Board,
McLEOD & Co. LTD.,
C. HOCKLEY,
Director,
Managing Agents.

Registered Office:
"McLEOD HOUSE,"
3, NETAJI SUBHAS ROAD,
CALCUTTA, *29th December*, 1962.

SYNOPSES OF COMPANY REPORTS

Orissa Minerals Development Co., Ltd.

[*Managing Agents*: Messrs. Bird and Co. (Private) Ltd., Calcutta.]

Annual General Meeting—Held on 28th December 1962.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1962	1961
Sales	1,18,61	1,19.97
Closing stock	8,90	10,98
Gross profit	20,58	28,48
Transfer to Managing Agents' remuneration	1,38	2,18
" " depreciation	6,02	5,61
" " provision for taxation	6,35	9,40
Net profit	6,83	11,29
Balance brought forward	1,42*	1,16
Appropriations:		
Total available balance	8,25	12,39
Transfer to general reserve	2,00	5,00
" " statutory development rebate reserve	1,41	18
" " staff and workmen's accident compensation and pensions reserve	45	45
To interim dividend (taxable) ordinary	2,00 (10%)	2,00 (10%)
Proposed final dividend (taxable) ordinary	2,00 (10%)	3,00 (15%)
Total dividend per cent.	[20%]	[25%]
Carry forward	39	1,16

* This includes Rs. 25,500 being statutory development rebate reserve written back.

Extracts from the Directors' report: Iron Ore.—Raisings increased from 6,54,489 tonnes to 6,64,881 tonnes as compared with last year. Despatches decreased from 6,58,203 tonnes to 6,50,797 tonnes.

Manganese Ore.—The total output was 77,091 tonnes as against 60,610 tonnes last year. The total sales were 64,166 tonnes as compared with 65,316 tonnes in the previous year. Normal prospecting was carried out during the year under review.

Manganese Dioxide.—As reported last year, there was no further production of *dioxide ore.* The total sales during the year decreased to 770 tonnes from 2,140 tonnes. Sales were effected from our previous stocks.

Market.—The demand for iron ore was satisfactory but as last year this year again the full advantage of the demand could not be taken due to inadequate supply of railway wagons.

The total world production of *manganese ore* is in excess of the total demand, as a result the manganese export market became more depressed and competitive than last year.

Bolani Ores Ltd.—The current despatches of *iron ore* to Durgapur from Bolani are at the rate of 1.4 million tonnes per year and from 1st April 1963, the despatches will be increased to 2 million tonnes per annum. Expansion plans are being finalised to supply 3 million tonnes of *iron ore*, both lumps and fines, from 1965-66 to Durgapur Steel Plant.

Eastern Shipping Syndicate.—The activities of the Syndicate ceased on 31st August 1957. The realisation of assets and the payment of liabilities are still in progress.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,00,000	Gross block	80,62,201
Reserves and surplus	68,06,232	—Depreciation	34,56,786

Carry forward	25	49

* This also includes Rs. 8,400 being excess provision for dividend on cumulative redeemable preference shares for the year ended 30th June 1960 adjusted.

Extracts from the Directors' report: During the year under review the factory crushed 4,35,333 tonnes (1,16,63,585 mds.) of sugarcane as against 4,68,427 tonnes (1,25,50,299 mds.) in the previous year. The working days were less at 167 days as compared to 193 days in previous year. The average recovery was 9.64 per cent against 9.65 per cent in the previous year.

The Government of India allotted an export quota of 2,971 tonnes of sugar out of the production of the season 1960-61. The export quota out of the production of the year 1961-62 is expected to be considerably more than last year.

The Company's farms yielded a crop of about 22,528 tonnes (6,03,600 mds.) of sugarcane as against 23,917 tonnes (6,40,800 mds.) of sugarcane in the previous year.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	35,00,050	Gross block	2,16,55,502

Proposed dividends (taxable) 10.71% C. preference	6	6
" " " 5.5% C. R. preference	55	55
" " " ordinary	2,88 (36.5%)	2,88 (36.5%)
Ordinary dividend per share	[Rs. 3.65]	[Rs. 3.65]
Carry forward	8	10

Extracts from the Directors' report: During the year under review the factory surpassed the record crushing of the previous year and crushed 1,97,540 tonnes (52,92,567 mds.) of sugarcane against 1,96,980 tonnes (52,77,557 mds.) in the previous year. The factory worked for 192 days against 180 days in the previous year. The recovery was slightly lower at 9.03 per cent as against 9.11 per cent in the previous year.

The Government of India has announced that during the current year no restriction will be placed on production of sugar but the acreage under sugarcane in the area went down considerably due to cut in sugar production announced by the Government last year. Further the standing cane crop was damaged by heavy rainfall and floods. A crushing of about 1.34 lac tonnes (36 lac mds.) of sugarcane only is expected during the current season.

During the current year the Government of India has linked the price of sugarcane with recovery. Up till last year the price of sugarcane was fixed irrespective of the recovery.

The Government of India allotted an export quota of 1,247 tonnes of sugar out of the production of the season 1960-61. The export quota out of the production of the year 1961-62 is expected to be considerably more than last year.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	18,54,619	Gross block	60,10,536
Reserves and surplus	39,93,883	—Depreciation	38,18,611

" " " Ordinary	21	32
Carry forward		

* This includes Rs. 2,800 being excess provision for dividend on preference shares for the year ended 30th June 1960 adjusted.

Extracts from the Directors' report: During the year under review the factory surpassed the record crushing of the previous year and crushed 1,16,566 tonnes (31,23,078 mds.) of sugarcane against 1,11,509 tonnes (29,87,596 mds.) in the previous year. The factory worked for 216 days against 194 days in the previous year. The recovery was slightly lower at 9.58 per cent as against 9.80 per cent in the previous year. The lower recovery which was in common with the other sugar mills in North Bihar was mainly on account of longer duration of the season.

During the current year the Government of India has linked the price of sugarcane with recovery. Up till last year the price of sugarcane was fixed irrespective of the recovery.

The Government of India allotted an export quota of 757 tonnes of sugar out of the production of the season 1960-61. The export quota out of the production of the year 1961-62 is expected to be considerably more than last year.

The Company's farms yielded 2,116 tonnes (56,707 mds.) of sugarcane as against 1,925 tonnes (51,594 mds.) of sugarcane during the previous year.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	24,00,000	Gross block	25,79,542
Reserves and surplus	16,31,813	—Depreciation	17,63,223
Other liabilities	67,05,697	Net block	8,16,319
		Current assets	79,69,827
		Investments	14,10,615
		Cash	1,43,694
	Rs. 1,03,40,455		Rs. 1,03,40,455

* Paid-up capital consists of 5,000 five per cent. cumulative redeemable preference shares of Rs. 100 each fully paid up in cash and 1,50,000 ordinary shares of Rs. 10 each fully paid up in cash.

Mysore Cements Ltd.

(*Secretaries and Treasurers*: Sterling Enterprises Private Ltd., Bangalore.)

Chairman: Mr. A. M. M. Murugappa Chettiar.

Fourth Annual General Meeting—Held on 31st December 1962.

Extracts from the Directors' report: The inauguration of the Company's factory was held on the 11th November. It is a happy augury that this Company should have gone into production at a very opportune time when cement as an essential commodity is very much in shortage for national requirements.

The daily production is progressively going up to its installed capacity of 335 tons per day and is likely to be reached within the next month or two. Mr. Edgar F. Kaiser, President, Kaiser Engineers Overseas Corporation, despite the heavy demands on his time was gracious enough to be present at the Inauguration function, with Messrs. Leonard K. Schwartz, Frank F. Davis and Mervin Lee, Vice-Presidents of Kaiser Engineers Overseas Corp. Mr. Edgar F. Kaiser expressed his satisfaction at the progress made in bringing this Industry to production despite heavy odds within such a short time.

Expeditious steps are being taken on all fronts to accomplish the expansion scheme and this company with the experience gained in having completed the first stage should find no difficulty in completing the project before the end of 1963 as scheduled.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	22,90,889	Fixed assets	1,46,83,882
Other liabilities	1,15,41,993	Expenditure during the period of construction	38,10,246
		Current assets	41,63,316
		Cash	1,13,108
		Miscellaneous expenditure	2,66,391
	Rs. 2,30,36,943		Rs. 2,30,36,943

* Paid-up capital consists of 11,50,000 equity shares of Rs. 10 each. Calls unpaid amount to Rs. 5,050.

Central Provinces Railways Co., Ltd.

(*Managing Agents*: Messrs. Killick Industries Ltd., Bombay.)

Fifty-third Annual General Meeting—Held on 4th January 1963.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1962	1961
Gross income	6,89	7,47
Expenses	35	33
Gross profit	6,54	7,14
Transfer to Managing Agents' commission	33	36
" " provision for taxation	3,46	3,05
Net profit	2,75	3,73
Balance brought forward	2	5
Appropriations:	2,77	3,78
Total available balance	2,11	3,76
Proposed dividend (taxable) equity	(2½%)	(4%)
Dividend amount per share	[Rs. 2.25]	[Rs. 4.00]
Carry forward	66	2

Extracts from the Directors' report: The following table shows the statistics of traffic for the past three years:—

	1959-60	1960-61	1961-62*
Number of passengers	22,90,889	25,17,327	27,27,573
Gross earnings (in rupees)	10,13,968	11,52,657	11,41,994
Merchandise (in metric tonnes)	1,35,634	1,46,395	1,11,954
Gross earnings (in rupees)	5,16,457	5,83,911	4,48,245

* The figures for 1961-62 in respect of the number of passengers and tonnes carried during September, 1962, will require adjustment as the audited figures have not been received.

Coaching Traffic:—There has been an increase of about 2,10,000 in the number of passengers carried but coaching receipts have decreased by over Rs. 10,000.

Goods Traffic:—This class of traffic shows a decrease of over 34,000 tonnes resulting in a decrease of more than Rs. 1,35,000 in earnings.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	94,00,000	Fixed assets	95,64,616
Reserves and surplus	1,20,828	Current assets	3,33,089
Other liabilities	5,40,882	Investments	500
		Cash	1,63,505
	Rs. 1,00,61,710		Rs. 1,00,61,710

* Paid-up capital consists of 94,000 equity shares of Rs. 100 each fully paid.

THE SIRPUR PAPER MILLS LIMITED

Registered Office:
"ALI VILLA," 6-3-655, Somajiguda, HYDERABAD-4 A.P.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE TWENTY-THIRD ANNUAL GENERAL MEETING OF THE SIRPUR PAPER MILLS LIMITED, will be held on Wednesday, the 16th January, 1963, at 4-00 p.m., at the Registered Office of the Company, at "ALI VILLA," 6-3-655, Somajiguda, Hyderabad-A.P., to transact the following business:

1. To consider the Directors' Report and Audited Accounts of the Company for the year ended 30th June, 1962.
2. To declare Dividends on Preference and Ordinary Shares.
3. To appoint Directors in place of (i) Shri N. Sundaresan and (ii) Khan Bahadur C. B. Taraporvala, who retire under Article 122 of the Articles of Association of the Company and are eligible for re-appointment.
   (i) Shri N. Sundaresan has attained the age of 65 years (his date of birth being 13th January, 1895) and holds an office of profit in bodies corporate under the management of Messrs. Birla Brothers Private Limited, the Managing Agents of the Company. The Company has received a Special Notice from a shareholder and which is hereby given to the shareholders for passing the following Special Resolution for re-appointment of Shri N. Sundaresan, as a Director of the Company.

   "RESOLVED that Shri N. Sundaresan, who has attained the age of 65 years and who is holding an office of profit in bodies corporate under Messrs. Birla Brothers Private Limited, the Managing Agents of the Company, be and is hereby re-appointed as a Director of the Company and it is hereby specifically declared that the age limit prescribed for a Director under Section 280 of the Companies Act, 1956 shall not apply in his case."

   Shri N. Sundaresan has wide commercial and administrative experience. During the period of his association with the Company he has rendered useful and valuable advice to the Company and it is in the interest of the Company to continue to have the benefit of his advice.

   (ii) Khan Bahadur C. B. Taraporvala has attained the age of 65 years (his date of birth being 3rd September, 1896). The Company has received the requisite Special Notice from a shareholder and accordingly the Special Notice is hereby given to the shareholders for passing the following resolution for re-appointment of Khan Bahadur C. B. Taraporvala, as a Director of the Company.

   "RESOLVED that Khan Bahadur C. B. Taraporvala who has attained the age of 65 years, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

   Khan Bahadur C. B. Taraporvala has rendered valuable advice from time to time since his appointment as a Director of the Company. It is considered advisable, in the interest of the Company, to retain him on the Board to avail of his valuable advice.
4. To appoint Auditors for the current year and fix their remuneration.

   The present Auditors of the Company, Messrs. S. B. Billimoria & Co., retire and are eligible for re-appointment.

By Order of the Board,
FOR THE SIRPUR PAPER MILLS LIMITED,
P. L. BHANDARI,
Secretary.

Note: 1. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a Member of the Company.

2. The Share Register of the Company will remain closed from 10th December, 1962 to 22nd December, 1962, both days inclusive.

3. The Dividends, when sanctioned, will be paid on or after 20th February, 1963 to those shareholders whose names appear in the Register of Members of the Company on 22nd December, 1962.

SHAMA ENGINE VALVES LTD.

Fairly good progress is said to have been made by Shama Engine Valves Ltd. of New Delhi in implementation of its project for the manufacture of valves for heat and internal combustion engines in collaboration with Messrs. Bayerisches Leichtmetallwerk Kg: Munich, Germany. Construction work of the factory at Bhopal is in progress. Orders for machinery and plant have been placed with forsign and Indian manufacturers. Imported machinery and plant are expected to arrive in February-March 1963. The Company has sent technicians to Germany for training in the works of the collaborating firm. The plant is scheduled to go into production in July or August next.

J. K. STEEL LIMITED

BILLET SCARCITY, A PERENNIAL PROBLEM

CHAIRMAN, MR. LAKSHMIPAT SINGHANIA, GIVES A GRAPHIC ACCOUNT

THE shortage of billets—a sort of perennial problem of the rolling industry in India—found a clear exposition at the hands of Mr. Lakshmipat Singhania, Chairman of J.K. Steel Ltd., while he addressed the shareholders at their Ninth Annual General Meeting which was held at Calcutta on Thursday, 27th December 1962, Dealing with the problem, Mr. Singhania pointed out that, despite the fact that it was decided to reserve certain capacity of the new (public sector) steel plants and the main producers for supply of billets to the rolling industry, the position had hardly improved. In fact, he regretted that the supply position in 1962 instead of improving had deteriorated further. From the statement placed before the Lok Sabha on 13th June 1962 by the Ministry of Steel, Mr. Singhania said, it was clear that, while some of the re-rollers were allocated and actually supplied about 2,000 per cent of their 1946 capacity, others had not got supplies equal to their capacity and their plants had, therefore, remained unused to a large extent. He stressed the need for drawing up a definite plan for the supply of the raw material to the rolling industry.

The following is the full text of Mr. Singhania's speech:

GENTLEMEN:

I have pleasure in welcoming you to the ninth annual general meeting of the Company. The Company's annual report and accounts for the year ended 30th June 1962 have already been circulated and the Directors, in their report to the shareholders, have dealt with the salient features of the Company's working during the year.

Longest Strike

The progress of the Company during the year was hampered due to slowdown and an unfortunate strike lasting 106 days—longest in the history of the Company—which resulted in loss of production to the country amounting to Rs. 60 lakhs. It is very unfortunate that in spite of best attempts, we were unable to persuade the union, whose objectives seem to be guided more from other considerations than the legitimate trade union work, to adopt methods and procedures prescribed for settlement of such disputes and in utter disregard to the Code of Discipline and other obligations undertaken by the parent trade union organisations for settlement of such disputes, the illegal strike was continued for such a long period. However, the Company has passed through this critical period.

The Company was established in Calcutta in the year 1953 primarily to produce jute baling hoops which were originally being produced by Messrs. J.K. Iron and Steel Company Limited at Kanpur since 1940. I have pleasure in mentioning that since then we have met the entire demand of the jute industry in India—the principal export industry of the country—replacing imports totally. The jute baling hoops plant was shifted to Calcutta from Kanpur as per the desire of the Tariff Commission, which had considered the matter in 1946, and the Government. Principal reasons for recommending the transfer of this plant to Calcutta were that it would be situated near the majority of jute mills and would be assured of full raw material requirements, being close to the main producers, and thus, among other things, save freight on finished goods as well as on raw materials.

Billet Supplies

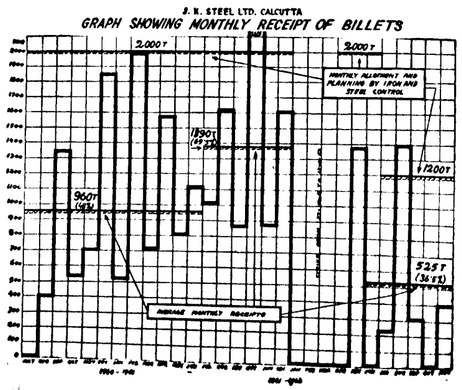
The supply of raw materials, that is, billets, for the manufacture of jute baling hoops is a problem in itself. Rolling industry which in India is called "re-rolling industry" has played a very significant part in the developing economy of the country in two ways. One way is to utilise profitably such materials which are actually used for melting and not used for further processing and the second is to produce specialised items in such quantities which would be difficult for any main producer to undertake due to requirement of the country being insufficient for the main producer. Thus the rolling industry (re-rolling), in my opinion, has its own place in the country. Unfortunately, the supply position of the main raw material, that is, billets, for this industry has always been very unsatisfactory and a matter of great concern to the industry. Even before the setting up of the Government plants and the expansion of the steel industry, the matter of supply of billets had been gone into by the Government at several occasions and it was repeatedly promised and decided that certain capacity of the new steel plants and expansion of the main producers would be kept reserved for supply of billets to this vital industry. Unfortunately, all those promises and expectations have not borne fruit and the position has hardly improved. In the beginning of the second Five-year Plan, it was estimated by the Planning Commission that the billets availability from the main producers would be of the order of 7 lakh tons by the end of the second Five-year Plan, which is the rolling industry's requirements based on one-shift working as per the Saxena Committee's report. Against this the supply of billets during 1961 was of the order of 4.57 lakh tons. The supply position in 1962 instead of improving has further deteriorated. This is, in fact, a repetition of the old story, that is, billets being a comparatively less paying proposition, the main producers start utilising the available steel for converting the same into finished products rather than selling them as billets. This was the position before and in spite of so much talk about the Government plants, same is the position even now.

The second unfortunate position is that in spite of the very rigid control of production and distribution of steel in the country, the supply and distribution of billets is very erratic. From the statement placed before the Lok Sabha on 13th June 1962 by the Ministry of Steel, it is clear that while some of the re-rollers are allocated and actually supplied billets about 2,000 per cent of their 1946 capacity, others have not got even equal to that capacity and their plants have remained unused to a large extent. While it is difficult to analyse the reason for such a disparity of supply of this raw material, since different factors may be responsible for such decisions, one thing is definite, that there has been inequitable distribution and the distribution system has not worked healthily for this industry. The industry has to be divided into two broad divisions—one, the manufacturers engaged in production of essentials, like your factory, and second, those who are engaged in production of common materials. The industry engaged in essentials should receive priority in allocation of raw materials.

Actuals Fall Short

Another disappointing feature of the distribution system is that the actual supply of billets is far short of even the allotments and the plannings made by the Iron and Steel Controller. As will be seen from the following table and chart, the supply of billets even to a priority industry like manufacture of jute baling hoops has been far short of the allotments and plannings made by the Iron and Steel Controller, resulting in frequent interruptions in the manufacturing process and great loss of production. Actually our hot rolling mills, manufacturing jute baling hoops, had to be closed down again for a period of 1½ months during the months of October and November 1962 for want of billets.

It will also be observed from these that against our monthly allotment of 2,000 tons of billets per month in year 1960-61, our actual receipts were only 960 tons, obviously resulting in lower production. Our quota for future allotment of billets for 1962-63 has been fixed on the basis of actual consumption of billets during 1960-61 which, as mentioned above, was lower due to short supply of billets. The new quota fixed is at 1,200 tons per month, against which supplies received so far were only 525 tons per month which is approximately 25 per cent of our 1960-61 allotment. Thus, this is a process of ever-reducing allotment and supply and in this context it is surprising to note as to how others could be allotted an ever-increasing supply of billets.



In my view, it is, therefore, necessary that a definite plan for supply of raw material to this industry is made which can be adhered to for proper utilisation of the existing capacity and for further increasing the production of this industry which is the backbone of developing engineering industry in the country.

Efficiency Penalised

I am happy to say that, in spite of the fact that we have never been in a happy position with regard to the supply of raw material which is necessary for achieving required efficiencies, we have been able to produce jute baling hoops at a conversion cost which can be well compared with any country in the world for a similar plant. However, more and more efficiency we have attained the more and more retention prices have been cut. In other words, this is a way of working back and killing the incentive to the industry. I wish something better is done and some method evolved whereby efficiency is rewarded instead of being penalised.

Your Company started manufacture of cold rolled strips, box strappings and steel wire ropes from the year 1958. Unfortunately, the supply position of raw materials has been very disappointing since the beginning. For instance, for the cold rolled strips and box strappings plant, the raw material supply had been about

Period		Allotment fixed and plannings made by the Iron and Steel Controller (per month)	Actual receipts (average per month)	Percentage of receipts to plannings
July 1960 to June 1961	12 months	2,000 tons	960 tons	48%
July 1961 to December 1961	6 months	2,000 tons	1,389 tons	69%
January 1962 to April 1962	4 months	Strike	..	..
May 1962 to November 1962	7 months	1,430 tons (average)	525 tons	36.5%

20 per cent of the plant capacity, resulting in having continuous idle capacity on the one hand and importing finished material at much higher cost on the other hand. At this stage, it may be pointed out that in spite of this, further industrial licences for the manufacture of cold rolled strips and box strappings have been granted by the Government to the tune of an annual capacity of 40,000 tons. I am at a loss to understand what will be the fate of the new comers for raw material supply. However, I have great satisfaction in informing you that the performance of our both these projects, that is, manufacture of cold rolled strips and box strappings and steel wire ropes, has been exceedingly good without any foreign assistance, technical or otherwise. We have been able to produce quality products to the full satisfaction of the consumers and technically, if not better, then equal to imported stuff.

The Government of India has granted industrial licences for the manufacture of wire ropes for a total annual capacity of 34,800 tons, against the present consumption of approximately 10,000 tons, in the hope that the country will be able to consume all that in the increased economy and without properly assessing the problem of availability of raw material to this industry which requires steel of special specifications. It is not clear as to from where such steel would be made available to this industry. The problem assumes even increasing importance in view of the acute foreign exchange problem necessitating restriction in imports of raw material.

It is our experience that the main producers are reluctant in supplying steel of required composition which is essential to produce special products which are so very necessary to be developed in India and which only can replace imports and contribute to the growing engineering industry. The growth of engineering industry in India is most essential, for which special engineering products, which serve as components to engineering industry, have to be produced in this country. Therefore, the raw material requirements of such engineering industry have to be met and such production, for which necessary arrangements must be made, is, in my opinion, more important than producing ordinary steel.

Other Projects

Your Company has further obtained certain industrial licences like manufacture of electric hoists and chain pulley blocks. This project is going on for sometime, but unfortunately due to non-allotment of a small amount of foreign exchange the project is unexpectedly being delayed. Majority of the plant and equipment has been purchased either from rupee payment countries or indigenously. The buildings are complete and we are awaiting, for want of foreign exchange, certain essential imports from our foreign technical collaborators for this project. I hope that we shall get clearance for the pending matters from the Government shortly and the project will be completed without further delay. As regards other industrial licences such as doubling the capacity of wire ropes, manufacture of pipes and tubes and installation of electric furnace, the matters are being pursued. However, in view of the acute foreign exchange shortage, it is very difficult to say which project will come into existence when. I can only assure the shareholders that the management is doing its best to pursue these and put them through.

Before I close, I may again repeat that the control system of a main commodity like steel in India should have been expected to show much better results, especially for manufacture of the required specification of steel as well as distribution, and I must say that the present working of the system is very cumbersome and does not yield any positive results even in spite of planning and it is a long demand that either this system be improved so that it will become effective or it be scrapped altogether. I hope something better may come in in the near future.

Gentlemen, on your behalf, I express my thanks to the Managing Agents for the very careful way in which they have been guiding the affairs and growth of the Company during these years. I would also like to express my appreciation for the contribution made by all sections of our employees, starting from the worker to the technicians, and the management staff and also to our various customers for patronising our products.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

NEWS IN BRIEF

THE Committee on export sector, set up by the Board of Trade, has constituted five study groups to undertake intensive studies on the various export commodities. The study groups cover textiles and fibres, plantations, other agricultural products, minerals and engineering industries and chemicals.

A new company, John Oakey and Mohan Ltd., has been formed in collaboration with John Oakey and Sons Ltd. of the U.K. for the manufacture of water-proof and other specialities of abrasive products. The factory, to be set up at Mohan Nagar near New Delhi will go into production by the middle of this year.

An engineering plant, set up by Kirloskar Brothers at Dewas, Madhya Pradesh, has commenced production of centrifugal pumps and agricultural implements. The plant, which has been put up at a cost of Rs. 5 lakhs, has a capacity of 5 tons a day and is expected to increase to 12 tons at a later stage.

The Supreme Court has held that the Central Government has every power to acquire any land or property owned by the States, while dismissing the West Bengal Government's suit challenging the validity of powers acquired by the Centre under the Coal-bearing Areas (Acquisition and Development) Act of 1957. The State Government had contended that Parliament had no right to make legislation authorising the Centre to take over properties owned by the State.

The rate of provident fund contribution has been raised from 6¼ per cent to 8 per cent in four industries with effect from the 1st inst. The four industries are cigarettes, electrical, mechanical or general engineering products, iron and steel and paper (other than hand-made paper). Establishments employing 50 or more workers in the industries are covered by the increase in provident fund contributions under the Employees' Provident Fund Act, which was amended recently.

Following the recommendations of the Board of Trade, the Government of India has appointed an expert committee on cost reduction studies for formulating cost reduction programmes in respect of export commodities. The Committee is headed by Dr. S. K. Muranjan. The Committee will have a cost accountant and a research office to assist it in its work. The Committee will start with the cost studies for vegetable oils, textile fabrics (cotton, man-made fabrics, woollen and mixed fabrics) and sewing machines and bicycles.

The Central Board of Fisheries has recommended the establishment of a Fisheries Corporation in the public sector to sponsor large-scale integrated projects primarily with a view to stepping up exports of fish and fishery products. The proposed Corporation is expected to engage in all aspects of trade, including fishing, processing, marketing and exporting fish, particularly frozen and canned fish and shrimps. Meanwhile, the Marine Products Export Promotion Council has decided to appoint a trade representative each in Ceylon and Burma to act as liaison officers between exporters in this country and importers, with a view to increasing shipments of dried fish.

The Refinance Corporation for Industry has introduced a scheme for refinancing of medium-term export credits, in pursuance of a recommendation made by the Study Group on credit facilities for exporters in April 1960. The total period of credit granted under this scheme will not be less than six months and more than five years. The minimum amount of a loan in respect of which refinance may be sought will be Rs. 1 lakh. The total amount of export credits refinanced in respect of any one export sector will not exceed Rs. 50 lakhs. The Corporation has listed 21 Indian and 13 exchange banks as eligible for refinancing facilities under the new scheme.

The Union Ministry of Finance has decided to set up Regional Direct Taxes Advisory Committees at the headquarters of the Commissioners of Income-tax on the model of the Central Direct Taxes Advisory Committee. The Commissioner of Income-tax concerned will be the Chairman of the Committee, which will include five non-official members, namely, a Member of Parliament elected from the region concerned, and two representatives each of professional tax experts, and commerce, industry and professions. The Committee will meet twice a year and will consider matters relating to income-tax and other direct taxes with a view to removing any administrative and procedural difficulties in the region concerned, and improving public relations.

A three-year trade agreement has been signed between India and Burma. Under the agreement, the level of annual trade each way between India and Burma is likely to be between Rs. 11 and Rs. 14 crores during the three years from 1962-63. Payments will be made by each country in free convertible currency and efforts will be made by both the countries to achieve as near a trade balance as is practicable. The agreement provides for the export by India of a number of commodities like cotton textiles, jute goods, sacking material, fish and prawns, coal, engineering goods, chemicals and pharmaceuticals, and the import by India of rice, timber, lead and other mineral ores, seed potatoes, etc., from Burma. India has agreed to purchase a minimum of 150,000 tons of Burma rice each year during the period of the Agreement, and has also concluded a specific agreement for the year 1963 for purchasing the said minimum quantity, as also such additional quantity as may be required and as may be available.

* * * *

From Abroad

Australia has signed a new contract with Communist China under which the latter will buy, within the next six months, 50 million bushels of wheat, valued at about £A35 million. This contract brings the total Australian wheat sales to China during the last two years to 190 million bushels, valued at about £A130 million.

West Germany's foreign trade surplus fell by half during the January-November 1962 period to DM 3,100 million, as compared with the corresponding period in 1961. At this rate, the surplus for the whole year 1962 is expected to be the lowest since 1956. Imports rose by 12.3 per cent to DM 45,100 million and exports by 4.2 per cent to DM 48,200 million during the eleven months.

World consumption of fertilisers has gone up from only 2 million tons in the beginning of this century to 28.5 million tons by 1960-61, according to the F.A.O. Since 1945-46, when consumption was 7.5 million tons, use of fertilisers has increased 260 per cent in the period under review. The increase in consumption was particularly marked in developing countries like India, Pakistan, Brazil and the U.A.R.

The Pan-American World Airways and Trans-World Airlines have proposed a merger of their interests, which would make the joint Company the largest commercial airlines in the U.S. The new Company will be known as Panam World Airlines Inc. and would operate the fleets and routes of both the airlines. If the U.S. Aeronautics Board approves the merger, the new company will have assets of $1,200 million, serve air routes 120,000-kilometre long linking 169 U.S. and foreign cities and employ about 44,000 persons.

World production of oil touched a peak of 1,251 million tons in 1962, an increase of 95 million tons, or 7.5 per cent, over 1961, according to the British Petroleum Information Bureau. All the regions participated in the increase. North America, the major producing region, accounted for an output of 433.5 million tons, of which the U.S. share was as much as 400 million tons. Middle East produced 306 million tons, Latin America 223 million tons, Far East 33 million tons, Africa 32 million tons and Western Europe 18 million tons. The Soviet bloc output rose fast, being 206 million tons, as against 187 million tons in 1961. All but 20 million tons of this was accounted for by Soviet Union, with most of the rest by Rumania.

The next Leipzig (East Germany) Spring Trade Fair will be held from 3rd to 12th March 1963. The fair is expected to be attended by exhibitors from about 60 countries. On a floor space of some 300,000 sq. metres, more than 9,000 foreign trade organisations and firms will exhibit their products. Almost one-third of all fair buildings and halls available for the forthcoming fair will be accounted for by foreign exhibitors. Besides Communist countries, Western European countries are also represented in Leipzig on a large scale by leading metallurgical works, manufacturers of the chemical industry, electrical engineering, the machine building industry, the textile and food industries, etc. Exhibitors from the U.S. and Canada are also likely to participate in the fair. Several countries of Asia, Africa and Latin America are also expected to take part in the fair.

PERSONAL

MR. George D. Woods has assumed charge as the President of the World Bank, with effect from 1st inst. *vice* Mr. Eugene R. Black, who has retired.

Mr. J. H. Doshi has been re-elected President of the Indian Chemical Manufacturers' Association for the year 1963. Dr. C. J. Dadachanji and Dr. H. R. Nanji have been elected Vice-Presidents.

Mr. Abijit Sen and Mr. A. M. M. Arunachalam have been elected President and Vice-President, respectively, of the Cycle Manufacturers' Association of India.

Mr. Akbar Hydari, Managing Director of the Western India Match Company Limited, has been elected President of the Bombay Chamber of Commerce and Industry for the year 1963-64.

Prof. M. P. Gandhi has been elected a member of the Co-ordinating Committee of the All-India Council for Technical Education for a period of three years.

Mr. P. A. Gopalakrishnan, Managing Director of the Indian Oil Company, has been appointed Chairman of the Company (in the place of Mr. Nijalingappa), in addition to his present duties as Managing Director.

Sir Willis Jackson, Professor of Electrical Engineering at the Imperial College of Science and Technology, London, has arrived at New Delhi on a visit arranged by Britain's Department of Technical Co-operation. He will advise generally on the syllabus, building and equipment of the College of Engineering and Technology in Delhi and will report to the Secretary for Technical Co-operation in London. The Delhi college has been set up with the aid of the British Government and British industrial firms.

BANK RATE RAISED TO 4½ PER CENT

(From Our Own Correspondent)

BOMBAY, 2nd *January*

At long last, the Bank rate has been raised, albeit slightly, to 4½ per cent from 4 per cent to which level it had been increased from 3½ per cent on 16th May 1957. The announcement of the increase was made by the Reserve Bank after the close of business today (Wednesday the 2nd inst.). Simultaneously, the Reserve Bank announced the replacement of the existing three-tier system of rates charged by it on borrowings by scheduled banks from it by a two-tier system. "A scheduled bank will now be permitted," to quote the relevant Press *communique* issued by the Reserve Bank, "to borrow at Bank rate during each quarter a quota equal to 50 per cent of the average of the reserves required to be kept by it under sub-Section 1 of Section 42 of the Reserve Bank of India Act during each week of the previous quarter. Further borrowing for an amount equal to the quota at Bank rate will be permitted at 6 per cent. Banks requiring assistance beyond this limit will be required, as at present, to discuss their requirements with the Reserve Bank. Any assistance granted as a result will continue to be at a penal rate of interest. On 11th December 1961, the Reserve Bank granted certain additional quotas to scheduled banks based on their lending to small-scale industries and co-operatives. The scheduled banks were informed on 31st October 1962 that, while they would be able to borrow these additional amounts at Bank rate, their quotas in the next higher slab or slabs (viz. at 5 per cent and 6 per cent if necessary) will stand reduced by the respective additions. This system will continue; and a bank's quota at 6 per cent will be reduced to the extent of addition to its quota at 4½ per cent on account of lending to small-scale industries and co-operatives."

The aforesaid changes, claims the Reserve Bank, "formalises the existing pattern of interest rates and simplifies the system of the Reserve Bank's lending rates."

The New Year has begun with a distinct improvement in the tone of the money market. Demand for money no doubt continues to be heavy, but, since supplies are available, borrowers are not finding it much difficult in obtaining their requirements. Market circles feel that conditions may ease further in the next few days. Inter-bank call rate currently stands at 4½ per cent, as against 5½ per cent prevailing till the end of 1962. Conditions in the short-term money market at Calcutta also have improved, fresh money being now available at 5 per cent, as against 6 per cent until recently.

The amount offered and accepted against tenders for Government of India's 91-day Treasury Bills sold today were both equal to the amount invited which was unchanged at Rs. 2 crores. The average rate of accepted tenders was also unaltered at Rs. 2.355 per cent per annum. Intermediate Treasury Bills, which were on tap from 24th to 29th December, fetched a sizable amount of Rs. 3 crores, notwithstanding the fact that banks would normally have been busy conserving their resources for window-dressing purposes.

India's foreign assets declined by Rs. 1.72 crore to Rs. 96.78 crores during the week ended 28th December 1962. The decline was accounted for entirely by balances held abroad which receded from Rs. 10.42 crores to Rs. 8.70 crores, while foreign securities were unaltered at Rs. 88.08 crores. Loans and advances to scheduled banks increased by Rs. 4.19 crores to Rs. 20.70 crores, of which those granted against usance bills alone accounted for Rs. 13.66 crores.

The aggregate credit made available by scheduled banks to their clients during the week ended 21st December increased by Rs. 12.49 crores; the actual outstandings as on 21st December stood at Rs. 1,405.30 crores. Deposits also rose by Rs. 7.30 crores to Rs. 2,161.64 crores. Inter-bank borrowings, too, rose by Rs. 5.28 crores to Rs. 46.65 crores.

The Gilt-edged market continue to remain listless. Business put through is restricted, with values moving narrowly.

In the foreign exchange market, the banks' selling rate for ready T.T. U.S. dollars continues to remain unchanged at Rs. 477.50 per 100 dollars. There is also no change in their buying rate except in the case of T.T. and 30-day rates which have declined by 25 nP each to Rs. 474 and Rs. 471.75, respectively. On the New York Exchange, the £ sterling was somewhat irregular *vis-a-vis* the dollar. Thus, the spot rate has eased by 0.090 cent to 280.240-280.280 cents per £, while the rate for three months' forward has improved by 0.050-0.060 cent to 279.970-280.010 cents per £.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 31*st December* 1962

Quiet to easy conditions prevailed in foodgrains here during the last fortnight due to poor demand. Selling through fair price shops was being increased, but offtake was small, as the prevailing market prices were at par with controlled ones. Stocks of grains with the Centre were reported heavy and arrivals of imports continued satisfactory.

Wheat prices eased by 99 nP a quintal on slack demand and selling pressure from stockists. Wheat average quality was quoted at Rs. 38.85 and farm quality between Rs. 42.87 to Rs. 44.88 a quintal. Arrivals were negligible and stocks here were estimated around at 75,000 maunds. Crop prospects were reported to be much better, thanks to the recent rains. Rice, on the other hand, ruled steady on better consumer demand. New produce arrivals were continuing. Stocks here improved to 12,000 maunds. Week-end prices were:—Rice *basmati* superior Rs. 80.38 to Rs. 91.09, *sela basmati* Rs. 72.34 to Rs. 77.70, mainpuri Rs. 50.91, ramajwayan Rs. 58.94, raimunia Rs. 61.62 and gadda Rs. 48.23, a quintal.

Gram prices declined by 67 nP per quintal on poor demand at Rs. 40.87 for the local produce and at Rs. 41.19 for the Punjab quality. Stocks declined to 6,000 maunds. Maize prices improved slightly to Rs. 30.14 to Rs. 31.48 per quintal on good seasonal demand. Arrivals were 500 maunds a day. Stocks here were estimated around 20,000 maunds. Barley and *bejhar* sought lower levels for want of support. *Bajra*, however, ruled steady on better seasonal demand. New crop arrivals were poor. *Juwar*, *guwar* and other coarse grains were almost stationary. Week-end prices were:—Barley Rs. 24.78, *bejhar* Rs. 24.78, *juwar* Rs. 34.83 to Rs. 35.50, *guwar* Rs. 33.49 to Rs. 34.83, *methi* Rs. 58.94 to Rs. 61.62, *bajra* Rs. 35.50 and oats Rs. 30.81, a quintal.

WIDE MOVEMENTS IN GOLD

(From Our Own Correspondent)

BOMBAY, 2*nd January*

Wide movements in spot gold and a steady trend in forward and ready silver characterised trading in bullion during the three-week period ending today. The rather erratic price trend in gold was due to strong support at setbacks and pressure of arrivals mostly of the smuggled material at higher levels. Besides, at higher levels, the fear of some Government action was all the greater. Silver moved in a narrow range, but displayed a distinctly steady tone thanks to revival of speculative support from upcountry operators. Although gold reacted after early spurt, closing prices today showed all-round gains over the three-week period. The delay in the announcement of new official measures to bring down gold price continued to impart some strength to the market.

Ready gold, which had closed on 12th December 1962 at Rs. 104.25, shot up to Rs. 119 six days later. The improvement was mainly due to price rigging by traders in the light of strong demand in the face of limited arrivals. Subsequently, however, the price tended to drift lower and moved down to Rs. 100.75 on 29th December. Thereafter, it rallied to Rs. 108 today, before easing to close at Rs. 106. At Rs. 89 on 18th December, sovereign showed a rise of 11 points in six days. But, subsequently, it turned easy and dropped to Rs. 81 on 29th December to close at Rs. 82 today. Daily arrivals of gold roughly amounted to 5,000 tolas and were almost matched by offtake.

The *Fagun* settlement in silver opened on 13th December at Rs. 205.50, as against the previous day's close of Rs. 202.40. Within four days, it advanced sharply to Rs. 214. Likewise, ready silver, which had opened higher at Rs. 203, as against the previous close of Rs. 200.15, jumped up to Rs. 212.70. Thereafter, the futures contract and the ready price drifted lower and moved in a narrow range of about three points. At close today, ready silver finished at the best level of Rs. 212.70 and the forward settlement also closed at the same rate. The lowest levels for the period under review were seen on 13th December itself, when the ready metal was done at Rs. 202.90 and the futures contract at Rs. 205.40. Thus, after the early advance, silver tended to stabilise around the higher levels and retained most of the gains scored during the period under review. Daily arrivals in silver averaged 20 bars, as against which the offtake amounted to 10 bars a day.

On 22nd December, the F.M.C. announced a change in the margins on silver futures by endorsing with little modifications, the suggestion forwarded to it by the market authorities. The revised scheme of margin is as follows:

If the price exceeds Rs. 215, a margin of Rs. 300 will be levied per bar of 10 kgs. At Rs. 220, the margin will be Rs. 600 and above Rs. 225, it will be Rs. 1,125. There will be an exemption limit of 325 bars as long as the price is under Rs. 225.

In the previous scheme, the margin was a uniform Rs. 300 per bar at Rs. 215 and above, with an exemption limit of 650 bars.

It is learned today that the F.M.C. has decided to place a limit of Rs. 4 on weekly price movement in silver, if the trend were to be upward. It may be noted here that the market authorities had proposed that the limit should be Rs. 7 per week.

The above measures are designed to arrest unhealthy speculation in the white metal.

Recently (on 26th December, to be precise), the Finance Minister warned the bullion dealers of fresh measures to bring down gold price. He was reported to have stated that the Government measures would have their impact within a month's time. Apparently, he had in mind the expected new measures which would go to add to the influence of the steps already taken by the Government to reduce the price of gold.

On 30th December, two eminent economists, Dr. V. K. R. V. Rao and Prof. B. R. Shenoy, expressed the view that there was something wrong with the Government's gold policy and that it was not likely to succeed in bringing out hoarded gold.

The following table shows the trend of prices during the three-week period under review:

GOLD	2-1-63 (closing)	High	Low	12-12-62 (closing)
	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	106.00	119.00	100.75	104.25
Sovereign	82.00	89.00	80.50	78.50
SILVER				
Ready (.996 fine) ..	212.70	212.70	202.00	200.15
Fagun	212.70	214.00	205.40	202.40
London—				
Gold	250s.2½d.	250s.3½d.	250s.2½d.	250s.2½d.
Silver Ready ..	103½d.	103¾d.	102½d.	102½d.
Silver Forward ..	104¼d.	104¼d.	102¾d.	103¼d.
New York—				
Silver	120.50 cents	120.50 cents	119.00 cents	119.50 cents

* 11th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 2nd *January*

The cotton futures market ruled fully steady during the three-week period covered by this review, namely, 13th December last to 2nd January 1963. Although there were signs of weakness during the first two days, the trend of futures prices subsequently showed that the market's assessment of the outlook for cotton was not bearish. In spite of the increased pace of arrival of new crop, which exerted a downward pressure on spot prices, futures ruled fully steady. Two factors explain this steadiness. First, it was expected that the stock position in respect of cloth would improve, thanks to the Government's offer of help to the mill industry and that a revival of demand for cotton would ensue. Secondly, the late movement of the crop indicated the prospect of the supply position continuing to be tight, at least during the early part of the year. Out of an estimated crop of 5.4 million bales, no more than 360,000 bales had arrived by the end of November. As compared with this, more than double that quantity had arrived in the corresponding period of the 1960-61 season which also produced a crop of 5.4 million bales.

The trend of prices of the Jarilla March 1963 contract during the period is indicated below:

2-1-63	*High*	*Low*	12-12-62
685.50	705.50	673.75	682.00

In the spot market at Sewri, mill demand tended to slacken. Mills preferred to postpone purchases pending a further fall in prices. Moreover, most mills especially those of Ahmedabad, Madras and certain other upcountry centres had covered their immediate requirements and therefore became more and more choosey. Moderate interest, however, continued to be reported in popular varieties such as Vijay, Digvijay, Kalyan and Surti. Total arrivals of new crop till the end of November amounted to 502,000 bales, as compared with 555,000 in the same period last season and 1,020,000 in the 1960-61 season. The region-wise break-down of new crop arrival is given below:

(In thousand bales of 400 lbs.)

	1962	1961	1960
Punjab/U.P. Rajasthan ...	252	370	330
Oomvas	219	160	660
Elsewhere	31	25	30
Total ...	502	555	1,020

Export demand for Bengal *Deshi*, especially choice and superfine qualities, was well maintained. Sales of Bengal *Deshi* out of the current export quota of 200,000 bales till 28th December aggregated 105,000 bales. Mill interest in foreign cotton centred round U.S. cotton. Demand for other growths was moderate. Importers are anxiously awaiting the outcome of the representation made for the restoration of the recent cut in the global quota.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Ganganagar 730; Nagar Coz 1,500; Digvijay 1,190; Vijay 1,095.

Cotton futures in Karachi ruled firm during the three-week period under review. Good export demand and keen domestic mill interest led to a hardening of values. N.T.R.G. January contract rallied from Rs. 69.95 on 11th December 1962 to Rs. 73.50 at the end of the month. The March contract firmed up by Rs. 2.05 during the period to Rs. 73.25.

Harvesting of cotton throughout Pakistan is reported to be progressing satisfactorily. In the Punjab, the crop movement is in full swing while in Sind it has ended.

Listless conditions prevailed in the Liverpool cotton futures market during the period under review. Spinner inquiries were moderate and covered mostly American cottons. Turnover was limited due to the Christmas and New Year holidays and price movement was narrow. The following are the latest available quotations—in pence per lb.—from Liverpool:

December 23.90; March 23.75; January (Sudan) 29.75.

Cotton futures in New York recorded handsome gains. The growing belief that no new cotton legislation would not be enacted in time to affect the 1963 crop imparted strength to the market. The March contract rose from 34.30 cents per lb. on 11th December to 34.65 cents at the end of the month. The May contract rose from 34.38 cents to 34.75 cents. New York spot was quoted higher at 34.80 cents, as against 34.90 cents three weeks ago.

ART SILK YARNS STEADIER

(From Our Own Correspondent)

BOMBAY, 2nd *January*

The improved tendency noticed in spot art silk yarns and staple fibre yarns in the second week of December last continued during the subsequent three-week period ended today. This was due to sustained good buying support. Higher levels, however, met with some consumer resistance. Nonetheless, the tone was steadier, with today's closing prices showing widespread gains.

In the art silk yarn section, the 120D N.R.C moved up from Rs. 11.97 to Rs. 12.54 per kg. 120D S.I. Viscose showed a gain of 36 nP to Rs. 12.72 and 100D Century advanced by 55 nP to Rs. 15.60. 150D N.R.C., however, slipped back from Rs. 11 to Rs. 10.93. Among staple fibre yarns, 40 x 2 Century edged forward from Rs. 7.08 to Rs. 7.22 and Kohinoor from Rs. 7.63 to Rs. 8.18. But cotton yarns showed small losses over the three-week period. Thus, 10s Podar eased by 44 nP to Rs. 18 and 60s Finlay by 75 nP to Rs. 69. 80s Madura dropped rather heavily by three points to Rs. 74.

A significant development concerning the yarn market occurred on 17th December 1962, when the Union Government imposed a ban on forward trading in art silk and staple fibre yarns with immediate effect and enforced squaring up of outstanding business at the rates prevailing at the close of business on that day. The ban was quite unexpected, as the trade here had clearly disfavoured it some time back. Its announcement led to heavy short-covering in the 40 x 2 staple fibre yarn futures in the local market, as a result of which the December contract rallied sharply from the day's (17th December) low of Rs. 652 to Rs. 672 at which level it closed, as against Rs. 650 on 12th December 1962. The February contract finished at Rs. 702, as against Rs. 675 on 12th December.

Decrying the ban, Mr. Kantilal Nahalchand, President of the Bombay Yarn Merchants' Association and Exchange Ltd., said that he was unable to understand the reason behind the Government's action, especially when yarn prices had tended to be easy. He feared that the measure would lead to unemployment of about 10,000 people in the market. The Association sent protest telegrams to Mr. Morarji Desai, Finance Minister, Mr. Manubhai Shah, Minister for International Trade, Mr. K. C. Reddy, Minister for Commerce and Industry, Mr. T. T. Krishnamachari, Minister for Defence and Economic Co-ordination, and to the Textile Commissioner. The Association also registered its protest by keeping the market closed for three days immediately after the ban was imposed. It was learnt today that the Association would shortly represent its case for continuance of forward trading in staple fibre yarn to Mr. Manubhai Shah.

A ceiling of 11.5 million lbs. has been fixed for the export of pure cotton yarn from India to the U.K. during 1963. The period of shipments covered by licences issued under the aggrement between India and the U.K. is from 1st December 1962 to 30th November 1963, but shipment should reach the U.K. only from 1st January 1963. Out of the total quota, 5.5 million lbs. are to be allotted to established exporters during the first six months commencing from 1st December 1962. The basis of the allocation is the performance of the exporters during the calendar year 1961, the proof and the date of shipment being as per the bills of lading. Should an established exporter exhaust his quota earlier than the six-month period, the U.K. Textile Licensing Committee of the Cotton Textile Export Promotion Council may allot additional quantities out of the undistributed quota. Ten per cent. that is 1.5 million lbs., of the total quota has been set apart as unreserved quota to be allotted in the first place to new applicants who undertake to ship the goods within one month of the issue of the licence. But, if any part of the quota remains unutilised, it shall be allotted to the reserved quota holders at the discretion of the U.K. Textile Licensing Committee.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	2-1-1963	12-12-1962
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12.54	11.97
Century 75D	18.83	18.15
S. I. Viscose 150D	11.13	11.00
Staple fibre yarn (40 x 2)—		
December („ „)	672.00†	650.00
February	702.00†	675.00
Kohinoor (per kg.)	8.18	7.63
Century	7.22	7.08
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.00	18.44
22s Century	24.25	24.25
30s Bradbury	—	27.00
40s Hind	33.00	34.00
60s Finlay	69.00	69.75
80s Kasturi	74.00	77.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

† Closing prices on 17th December 1962, when the ban on futures trading was announced.

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 2nd *January*

Oilseeds ruled easy during the last fortnight. Groundnuts encountered heavy selling, following large arrivals of new crop from the South and Gujarat. Heavy tenders against the maturing contracts also acted as a damper. *Vanaspati* manufacturers and crushers were hesitant to enter into fresh commitments in anticipation of a further decline in prices. The export section for extractions and expellers, too, turned quiet in the absence of any encouraging overseas enquiries. Castorseeds were subdued on reports that the current season's would be better than last year's. Besides, operators were pessimistic about any revival of U.S. buying of castor oil, on account of stockpile disposals there and the increasing pressure of supplies from Brazil. But for stray enquiries for castor oil from the Communist countries and the U.K., prices would have declined still further. Linseeds ruled depressed on account of bleak prospects for linseed oil exports. Cottonseeds drifted downward on selling pressure induced by bumper cotton crop anticipations during the year.

Groundnut January 1963 contract closed at Rs. 203.50 today, as against Rs. 206.62 a week ago and Rs. 208.12 two weeks ago. In fact, Monday last, it had touched the season's low of Rs. 200.50. April 1963 contract fell from Rs. 216.75 to Rs. 211.75 by Monday, before recovering to Rs. 214.12. Nizam bold lost Re. 1.25 over the fortnight to Rs. 39.75. Khandesh quality eased by a rupee to Rs. 40.75. Oil ex-mill declined by 50 nP to Rs. 16.60 and railway receipts by 45 nP to Rs. 16.45.

Among linseeds, March 1963 contract fell by 69 nP to Rs. 37. Bold ready suffered a loss of one rupee to Rs. 38. Linseed oil receded by 15 nP to Rs. 15.35.

Castorseed March 1963 contract fell from Rs. 164 to Rs. 162.75 on Monday, but it improved today and finished at Rs. 164. June 1963 contract, which had fallen from Rs. 165 to Rs. 164.12, closed today at Rs. 166 on a steady note. Madras small, however, was easy at Rs. 32.50 two weeks ago. Oil B.S.S. softened by 15 nP to Rs. 13.85 and commercial by 10 nP to Rs. 13.25.

Cottonseeds January 1963 contract suffered a setback of Rs. 4.50 to Rs. 91.50. April 1963 delivery gave way from Rs. 96.50 to Rs. 92.50.

The following table shows the closing prices of oilseeds and oils on Wednesday 2nd January, as compared with those of two previous weeks:

	2-1-1963	26-12-1962	19-12-1962
Groundnuts	Rs.	Rs.	Rs.
January 1963 contract	203.50	206.62	208.12
April 1963 contract	214.12	214.37	216.75
Nizam bold	39.75	39.88	41.00
Khandesh quality	40.75	41.50	41.75
Oil ex-mill*	16.60	16.90	17.10
Oil commercial*	16.45	16.80	16.90
Castorseed			
March 1963 contract	164.00	164.75	164.00
June 1963 contract	166.00	165.50	165.00
Ready Madras	32.37	32.75	32.50
Ready Kanpur	31.12	31.75	31.12
Oil B.S.S.†	13.85	13.80	14.00
Oil commercial†	13.25	13.30	13.35
Linseed			
March 1963 contract	37.00	36.94	37.69
June 1963 contract	—	—	—
Bold ready	38.00	38.50	39.00
Linseed oil†	15.35	15.50	15.50
Cottonseed			
January 1963 contract	91.50	95.00	96.00
April 1963 contract	92.50	96.50	96.50

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

STEADY CONDITIONS IN TEA

(From Our Own Correspondent)

CALCUTTA, 1*st January*

Since our last report for the week ended 11th December 1962, one export sale and three internal sales were held in Calcutta. In the first two internal sales and in the only export sale, prices eased, but in the last internal sale, held on 28th December, prices gained. It is becoming clear that, with the shortfall in output and higher exports, tea is going to be in short supply. Up to the end of November last, North Indian production totalled 567.82 million lbs., as against 595.27 million lbs. in the corresponding previous period, and represented a shortfall of 27.45 million lbs. In November alone, the output dropped by 2.3 million lbs. and due to the early winter this year, production in December tended to be poor. As a result, the shortfall in production in North India in 1962 as a whole has been estimated at 30 million lbs., which would be confirmed with the availability of details of December production.

On the other hand, exports in the nine months to September were higher at 67.88 million lbs., as against 55 million lbs. in the corresponding period of 1961. The shortfall in production coupled with higher exports will lead to steady conditions in the sales to follow. The fall in prices in the recent sales had been due to the increase in arrivals through steamer services. In the last three weeks, tea bookings continued to be heavy to the U.K. and the Continent in particular. Demand for forward space had been keen.

In the recent sales in London, conditions were easy, as demand slackened following the end of the suspension of the Calcutta-Assam river services. However, having regard to the decline in output, trade circles here feel that the trend in London should firm up after the New Year holidays. Stocks of tea in the U.K. totalled 140 million lbs. in the week ended 21st December last, representing a rise of 5 million lbs. over the previous week. On 7th December, the stocks were 133 million lbs.—a decline of 5 million lbs. over the previous week.

At the last export sale held here on 17th December, offerings totalled 61,413 packages. Prices eased, although demand tended to be more general than in the previous sale. C.T.Cs declined by 20 nP, while brokens received better support than their equivalent fannings. The more fibrous teas were ignored. Legg-cut teas also eased. Darjeelings generally eased, but the quality lines were better. Plain whole leaf grades added 10 nP, while the more stylish teas eased. Plain orthodox brokens gave way, while fannings, even after declining by 20 nP, met with only limited inquiries. There was ready absorption of the better liquoring B.O.Ps. The quotations (in rupees) per one kg. inclusive of excise duty, were: Best Assam C.T.C. fannings 6.10 to 6.40, medium Assam C.T.C. fannings 5.30 to 5.80, best Assam C.T.C. B.P. 6.10 to 6.40, medium Assam C.T.C. B.P. 5.30 to 5.80, clean plain pekoe 4.40 to 4.70, plain fannings 3.90 to 4.30 and plain B.P. 3.80 to 4.10.

In the last internal sale held here on 28th December, there was good general demand for the dusts on offer totalling 28,760 packages. (In the previous internal sale there was only fair demand at irregular rates. Offerings then totalled 29,321 packages. In the sale held on 12th December prices eased, dust offerings totalling 29,856 packages.) Bright medium C.T.Cs recorded a rise in prices. The plainer varieties were irregular, and the more fibrous teas could meet with support only after a liberal decline in prices. Good C.T.Cs were firm, the brighter teas recording higher prices. Plain orthodox and poorer Assam teas eased, while medium Assam orthodox teas were irregular. The strong liquoring teas were fully firm, while legg-cut teas eased up to 20 nP. The quotations, (in rupees) per one kg. inclusive of excise duty, were: Good Assam C.T.C. dust 6.20 to 6.60, medium Assam C.T.C. dust 5.50 to 5.85, legg-cut dust 4.90 to 5.20, medium Assam dust 3.90 to 4.90 and plain orthodox dust 3.80 to 4.10.

By way of its contribution to India's defence efforts, a sum of £107,374 was presented by Mr. N. Thomas, Chairman of the Indian Tea Association in London, to India's High Commissioner in London to be credited to the National Defence Fund. This represented contributions by the sterling tea interests in North-East India. The value of the presentation is all the greater, as it is in foreign exchange. Another good news has been the Tea Board's decision to double the fund for the tea machinery hire-purchase scheme to Rs. 4 crores, half of which would be towards supply of irrigation equipment.

With the passage of the Emergency Risks Insurance Acts, which also cover standing tea crops in addition to factories and goods and which came into force as from today, a difficulty faced by banks in financing tea crops in Assam and the N.E.F.A. has been removed. The Acts have rightly been made effective from now, since this is the time when gardens look for finance for purchasing fertilisers for next year's crop. At the peak period of the season, that is, August, bank advances to the tea industry in North-East India will amount to Rs. 25 crores. The Assam Government has asked the Assam Co-operative Apex Bank Ltd. to undertake tea financing more liberally.

The crisis in the Pakistani tea industry has again been highlighted by the high prices which rule at the internal auctions. So far in this season, only 4 million lbs. have been auctioned for export, and the quantities offered in internal auctions have totalled 26.9 million lbs. Earlier in the year, Pakistan estimated the crop to total 50 million lbs., but actual production would fall much shorter. The total of world tea output so far has come to only 1,293.5 million lbs., representing a decline of 14.2 million lbs. as compared to the corresponding previous figure.

As a further incentive for increasing exports, the Union Ministry of Commerce and Industry is sympathetic to the industry's earnest plea for a further reduction or total abolition of the export duty. Despite lower output, the industry has increased exports substantially due to the reduction in the duty granted in April. It follows from this that a further reduction in the duty will add to the export drive.

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, 1*st January*

This review covers the period commencing from 12th December to date and, mainly as a result of lower inquiries from abroad, prices of goods recorded a declining trend. Despite several price support measures, it is a truism that fibre prices are still below minimum levels. The mills, however, continued to accord support to the extent possible. The fact is that supply is far in excess of demand, and sellers are anxious to dispose of their holdings without loss of further time. This season's crop is estimated at 7 million bales, of which 4½ million bales have already been lifted. The balance awaiting disposal is 2½ million bales, and arrivals now average 75,000 maunds a day. It can, therefore, be seen that, unless the tempo of support is increased, the possibility of prices rising up to the minimum levels is very remote. The psychological effect such an event would produce on cultivators would be disastrous now that sowing time for the next crop is fast approaching. In the interior, co-operative marketing societies have commenced purchases, and the State Trading Corporation has also been active. Mills at present hold fibre sufficient to meet their consumption of five months, in addition to one month's requirements held by them on behalf of the Buffer Stock Association. In other words, the mills can afford to continue to operate their plants at the existing level without purchasing any more fibre up to the time the next crop starts arriving! This being the actual position, mills have been hard put to find storage space and also the additional finance for purchasing additional fibre.

The Jute Commissioner announced a few days ago some steps to increase fibre purchases. He directed the I.J.M.A. mills to lift 650,000 bales and the non-I.J.M.A. mills 50,000 bales this month. The Buffer Stock Association would also take 50,000 bales. The Commissioner was not aware as to how much more fibre cultivators had still in their possession.

The prices of fibre in and around Calcutta have not risen above Rs. 27.50 a maund in the last three weeks, and prices are still lower in the districts. There are reports from the Murshidabad district that there have been distress sales at even half the minimum prices. The mills agree that the growers must be paid a fair price for their crop, but point out that there is the need to revise the minimum prices, as they think that cost of output has moved down. The mills also stress the need to impress on the cultivators that the importance on quantity has now shifted to quality, and that the next crop should be planned to increase the proportion of good quality fibre. The S.T.C. has so far purchased about 160,000 maunds through co-operative societies and is planning to purchase 80,000 maunds more. So far the S.T.C. has received orders for 200,000 maunds from some East European countries and has already exported 40,000 maunds to the U.S.S.R.

It is now months since buffer stock purchases began, and the mills feel that, as a result of their continued storage, quality has deteriorated and there is naturally the apprehension that, within a further period of time, these stocks would become obsolete. The mills have, of course, been permitted consumption from buffer stocks, but they have represented that the rules in respect of releases would have to be revised. Before any releases, they are required to cover the quantity involved and present documents in respect of other contracts, or mill receipts in respect of fibre purchased. At the same time, the mills must pay for the fibre to be released from the buffer. The Marketing, Statistics and Publicity Sub-committee of the Indian Central Jute Committee is expected to make soon recommendations designed to strengthen the marketing mechanism for raw jute as well as those bearing on the formation of regulated

markets for the crop. The mills would urge the Committee to examine cultivators' costs and determine if a realistic revision of the minimum prices can be effected.

Earlier in the period, there was considerable anxiety as a result of the steep fall in fibre prices in Assam, and several steps were taken to stabilise prices in this State. The National Agricultural Co-operative Marketing Federation announced its decision to purchase 100,000 maunds in Nowgong district in January. It was also decided that the apex marketing society would buy from cultivators at various mofussil markets in Assam. At the same time, the I.J.M.A. instructed mills to purchase jute on a priority basis from Assam areas. The Government of India asked the State Trading Corporation to purchase jute to the tune of Rs. 2 crores on behalf of the Assam Government. As stated earlier, these measures, though they led to the lifting up of prices from their lowest levels, have not yet resulted in success, inasmuch as prices quoted are yet below the minimum levels.

Jute goods recorded a gradual decline during the period under review. On 12th December, the decline was set in motion following the announcement of details of stocks with mills as at the end of November, which, at 101,400 tonnes, represented a substantial rise of 10,500 tonnes. The increase was the result of larger total working hours, as, in comparison with October, November had less holidays. Of the rise in stocks, hessian accounted for 5,500 tonnes, sacking for 3,200 tonnes, and miscellaneous goods for 1,800 tonnes. Following this announcement, ready hessian 40" 10 oz. declined from Rs. 54.30 to Rs. 53.65 and B. twills from Rs. 119.50 to Rs. 119.25. On 13th December, hessian 40" 10 oz. eased to Rs. 52.60, but the decline in B. twills was arrested at Rs. 119.10 following a Government tender, though the quantity bought fell much below expectations. On the next day, hessian 40" 10 oz. was unchanged at Rs. 52.60, but, on news of continued purchases by Government, B. twills recovered to Rs. 119.50. These levels were maintained on 15th December.

On the following Monday, that is, on 17th December, the market reopened on a steady note, and covering business and more purchases by Government pushed up B. twills to Rs. 121. In sympathy, hessian 40" 10 oz. recovered to Rs. 52.85. On the next day, prices declined to Rs. 120.60 and Rs. 52.10, respectively, in the absence of support, despite publication of export details for November according to which the total of all goods exported at 100,700 tonnes was higher by 7,400 tonnes as compared with the previous month. On the 19th, there was selling pressure in the futures market, as a result of which ready B. twills eased to Rs. 119 and hessian 40" 10 oz. to Rs. 51.75. As interest thinned further, B. twills gave way to Rs. 118.75 and hessian 40" 10 oz. to Rs. 51.75 on 20th. Despite the news of Government tender for 6,000 bales of A. twills for January delivery, B. twills eased to Rs. 117.85 on the 21st and dull market reports from New York were an additional factor for pushing down hessian 40" 10 oz. to Rs. 51.65. Over the week-end of 22nd December, B. twills eased to Rs. 116.75 and hessian 40" 10 oz. to Rs. 51.25.

It is unfortunate that complaints have again risen over customs' verification of prices on export contracts. For it is reported that U.S. consumers have complained that the customs' refusal to permit exports under forward contracts unless the prices quoted therein were in line with current spot prices is being used by the Indian selling agents to repudiate their contracts. It is not understood how these complaints have arisen, since the Government of India has already introduced a scheme for the voluntary registration of sale contracts for export of jute goods as and when made. A four-man committee has been set up to examine all forward contracts and issue registration certificates the production of which would be sufficient for customs clearance. Complaints from U.S. buyers caused a further fall in prices and hessian 40" 10 oz. was quoted at Rs. 50.85 on 26th December when the market reopened after the Christmas holiday. B. twills were quoted at Rs. 116. On the 27th, hessian 40" 10 oz. was fractionally higher at Rs. 51, while B. twills eased to Rs. 115.35. Speculative buying caused prices to recover to Rs. 51.40 and Rs. 116.10, respectively, on the 28th. A further small recovery on the 29th took prices up to Rs. 51.50 and Rs. 116.35, respectively. These were the closing levels of 1962 and, as compared with the 1961's closing of Rs. 59.50 and Rs. 135.25, they represent a loss of Rs. 8 and Rs. 18.90, respectively. The market remained closed yesterday and today.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *1st January*

After remaining quiet in the week ended 15th December, the metal market here turned firm in the subsequent two weeks. On the London Metal Exchange, prices of the principal metals, except copper, moved down. The trade has been greatly disappointed with the import policy for the period October 1962 to March 1963, which has very largely eliminated the established importers from the non-ferrous metals trade. With this present policy, established importers stand removed from all imports of non-ferrous metals, excepting imports under the D.L.F. licences. Tin and tin scrap have now been included in the list of items, the import and distribution of which can be done only by the State Trading Corporation. It has been explained by the Government that this step has been taken in order to reduce profits of the middleman. Not long ago, import of zinc and brass scrap was brought under the S.T.C's purview.

The S.T.C. will distribute tin to non-scheduled actual users, including the small-scale industries, against allocations made by the State Directors of Industries. Annual licences to established importers will not be revalidated in respect of such items as zinc or spelter unwrought, copper scrap whether ingoted or otherwise, copper wrought, silicon, and brass, bronze and similar alloys, wrought and unwrought.

The trade has represented that this measure, in addition to causing hardship to small-scale industries, will make it impossible for established importers to survive. There ore, it has urged that the Government should ask the S.T.C. to use the normal trade channels for distribution. The trade has even urged that the Government should revise its policy and permit established importers to import tin and zinc with the same restrictions as applied to copper.

In the present phase of foreign exchange difficulties, the news that Sir Roy Welensky, the Federal Rhodesian Prime Minister, has offered a £1 million copper loan to India as his country's token of sympathy and support to India in the latter's cause against China has been hailed by both the trade and industry. One million pounds can buy approximately 4,273 tons of copper based on the current L.M.E. price of £234 a ton for cash copper. This is approximately a month's requirements of India.

Copper scrap supplies here continued extremely tight, and consumer buying was active. As a result, the price of utensil scrap rose from Rs. 480 per 100 kgs. to Rs. 535.75. There was a tender on behalf of the Government for 1,500 tons and this was covered. On the London Metal Exchange, cash copper at one time improved by £1 on the news of strike in the industry. With the spurt in the price, however, more offers were forthcoming, and, therefore, the price returned to £234.

Tin opened here at Rs. 2,750 per 100 kgs. and, after falling to Rs. 2,650, gradually rose to Rs. 2,950. On the London Metal Exchange, price movement reflected the improving warehouse stocks. On 12th December last, spot tin was quoted at £856 a ton. The price improved to £863 on 14th December, but fell to £861 on the following day. From then on, it gradually declined, until it reached £851 on 28th December. Lack of good demand from Europe was a factor for the downward movement.

At the recent meeting of the International Tin Council, it was decided to send a delegation to meet the U.S. Government on the question of the latter's policy of releases from the stockpile. According to statistics released in Malaya, the price of tin has fallen by £80 to £100 a ton since the U.S.A. started releases. This recession in price is affecting production and discouraging marginal producers.

Virgin lead here was throughout quiet. On the L.M.E., it eased from £55½ a ton to £54¾ as did zinc from £66¾ a ton to £66.

SUGAR PRICES REACT

(From Our Own Correspondent)

HAPUR, *31st December* 1962

After recording some gains in the earlier part of the past fortnight, sugar prices here reacted, as demand from the consuming areas turned slack. Upcountry markets also showed little interest. Cane supplies to the factories in West U.P. improved following the closure of the unlicensed crushers. Production of sugar in the country during November last was higher at 1.73 lakh metric tons, as against 1.12 lakh metric tons in November 1961. Stocks with the industry in November were put at 9.45 lakh metric tons, against 11.09 lakh metric tons in the same month of the previous year. Week-end prices here were:—Spot delivery Rs. 104.75, mill delivery (D 29) Amroha Rs. 101.46, Meerut Rs. 103.25, Dhamour Rs. 101.81, Seohara Rs. 101.30, (E 29) Simbhauli Rs. 103, Bijnore Rs. 101.14 and Dhampur Rs. 101.65 per quintal.

Khandsari suffered a further setback of Re. 1.34 to Rs. 2.67 per quintal during the last fortnight on account of want of support from Punjab and Rajasthan. Crushers were facing shortage of cane supplies even at Re. 1.50 per maund. While wet *khandsari* was quoted at Rs. 75.02 to Rs. 85.74 per quintal, dry stuff was being lifted at Rs. 85.74 to Rs. 92.48 and non-crystal quality was quoted at Rs. 87.08 to Rs. 93.77 per quintal. *Khandsari* manufacturers were perturbed over the State Government's recent levy of 16 nP per quintal by way of purchase tax on cane, which would be in addition to the charge of 5 nP per quintal paid to the Cane Development Society.

Gur prices here were depressed, as demand turned slack at higher price levels. Loading facilities here were reportd satisfactory and the daily arrivals at an average of 3,000 to 4,000 maunds here and about 2,000 maunds in the mofussil centres of Gulaothi and Saina were being readily lifted by Gujarat, M.P. and Bengal. The week's offtake aggregated 32 wagonloads. Week-end prices here were:—*Gur* superior Rs. 47.91, dara Rs. 46.22, *shakker* Rs. 58.94 and *gur balti* quality Rs. 49.57 to Rs. 52.25, per quintal.

KIPS QUIET

(From Our Own Correspondent)

MADRAS, *29th December* 1962

During the week ended 29th December 1962, the tanned skins and hides market here was quiet because of holidays overseas as also here. The prices for cowhides, cowcalf, buffhides and buffcalf remained almost unchanged, though the U.K. enquiries were at about a penny lower than the levels of the previous week. While the supplies of cowhides were moderate that of cowcalf continued restricted. Buffcalf had fair enquiries from the U.K. and the Continent, but the U.S.A. remained nearly uninterested.

Tanned goat and sheep skins also were again quiet because of holidays and prices maintained the previous week's levels. Revival of normal business is expected only from about the 2nd week of January.

SURVEY

(Concluded from page 8)

respect of goods and 25 nP in respect of factories indicate that the Government does not assess the risks involved to be high at present. If, however, hostilities were to be resumed, the premium rates for the next quarter would naturally be higher.

The Government has advised all persons liable to take out policies of insurance under the schemes to apply, in prescribed forms, to the nearest possible offices of the Oriental Fire and General Insurance Company, which has been appointed as the sole agent for the implementation of the scheme, for coverage against war risks. Obviously, thousands of applications would have to be handled by the offices of the 'Oriental.' The scrutiny of applications, collection of premia and issue of policies, all of which must be done in less than a month's time, calls for a high degree of efficiency and speed. It remains to be seen whether 'Oriental' can rise to the occasion. In view of the magnitude of the task involved, it was surely unwise on the part of the Government to have spurned the offer of private insurance companies to act as the agents of the Government free of charge.

WORLD BANK LOANS TO THAILAND

The World Bank has made two loans aggregating the equivalent of $9 million to Thailand for projects to increase agricultural production through irrigation. A loan of $5.6 million has been given to assist in the execution of a further stage in the development of irrigation over nearly two million acres of the Chao Phya area in the Central Plain, Thailand's chief rice producing region. The second loan, amounting to $3.4 million, is for a project to irrigate about 130,000 acres of the Petchburi Plain southwest of Bangkok on the Thai peninsula. Private commercial banks in the United States are participating in both loans without the guarantee of the World Bank. Five banks are participating in the $5.6 million Chao Phya loan for a total amount of $390,000, representing the first two maturities and part of the third which fall due between November 1965 and November 1966. The participants in this loan are Bank of America National Trust and Savings Association, San Francisco; Grace National Bank of New York; First National City Bank, New York; Girard Trust Corn Exchange Bank, Philadelphia; and Crocker-Anglo National Bank, San Francisco. The Girard Trust Corn Exchange Bank and the First National City Bank, New York, are participating in the $3.4 million Petchburi loan for a total amount of $65,000 representing the first maturity which falls due in November 1966.

The total cost of the Chao Phya project being assisted by the World Bank loan is estimated at $12 million. The Bank loan of $5.6 million will cover most of the foreign exchange requirements and the remaining costs will be met by the Government of Thailand. The loan is for a term of 15 years and bears interest at the rate of 5¼ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin in November 1965.

The Bank loan of $3.4 million for the Petchburi Project will cover most of the foreign exchange costs of imported equipment, materials and services, and the remaining costs will be met by the Government of Thailand. This loan is for a term of 20 years and bears interest at the rate of 5¼ per cent per annum including the 1 per cent commission which is allocated to the Bank's Special Reserve. Amortisation will begin in November 1966.

WORLD BANK-I.F.C. FINANCING IN MOROCCO

The World Bank and its affiliate, the International Finance Corporation, have announced that they will finance an expansion of the Banque Nationale pour le Developpment Economique (B.N.D.E.), a development bank in Morocco. This is the first time that the World Bank and the Corporation have engaged in a joint financing, and is also the first of a number of combined operations now in prospect whereby the Bank will provide loan funds and the I.F.C. will provide share capital for industrial development banks in the less developed countries.

The World Bank has agreed to lend the Moroccan bank the equivalent of $15 million in foreign exchange, and the I.F.C. intends to invest 7.5 million Moroccan dirhams (equivalent to U.S. $1.5 million) in common stock of the B.N.D.E., representing three quarters of a new stock issue. The Bank and the Corporation financing will substantially increase the funds available to B.N.D.E. for credits and other investments. The B.N.D.E. will devote the major portion of its resources to financing private industrial enterprises, thereby making an important contribution to the growth of industry in Morocco.

The World Bank loan has been made to the Banque Nationale pour le Developpment Economique and is guaranteed by the Kingdom of Morocco. It will be operated as a line of credit and will be committed, in parts, for individual projects to be agreed upon from time to time by the Bank and the B.N.D.E. The repayment of each part of the loan will be in semi-annual instalments over not more than 15 years according to a schedule tailored to the needs of the project, and determined at the time of the commitment. Interest will be applied to each part of the loan at the World Bank's rate current when such part is committed for one B.N.D.E.'s projects.

LONDON LETTER

RING IN THE NEW

(From Our Own Correspondent)

LONDON, *29th December* 1962

1962 is going out unsung; it will be remembered mainly as the year of an economic policy based on the expectation of an inflation in consumer spending and, when that fell to the ground, of the argument that there could be no incomes expansion without an incomes policy. Since there was, and is, no incomes policy, we have had no expansion. Thus 1962 dies—a year of stagnation: but to what does it give birth?

The chief fairy attendant at the birth of the New Year is that familiar figure Uncertainty. Her attendants are "loss of confidence in the Government," "loss of confidence in economic policy," "doubt about entering the Common Market." If the Chancellor of the Exchequer is to be an effective godfather, he has got to dispose of at least the second of these attendants—the others are beyond him and their continued presence must mean some continued uncertainty.

It is clearly anticipated all round that the first half of 1963 will be relatively depressed, but that in the second half there should be some revival in production and general growth as the Government's measures to encourage investment and its own programme of an added £200 million to public investment get under way. Clearly, what the country is looking for is bold action to boost the economy in the next few months—and successful bold action then would have an enormous effect in pushing forward economic growth during the rest of the year. Budget measures taken in three months time will be too late; they may even stimulate at the time that a sedative should be given. What then about Mr. Selwyn Lloyd's famous "regulator"—the power the Chancellor has to boost *or lower* all indirect taxes by up to 10 per cent? If he were to use this *now*, he could pump purchasing power into the economy over the next six months approaching £150 million. And the knowledge that the concession might be short-lived would encourage spending on consumer goods (even though these are largely semi-luxuries and luxuries) above the average.

The London *Economist* this week also reminds us that, in the 1946 National Insurance Act, the Government took power to alter the rates of contribution by employers and employees as an economic

WE ACCEPT THE CHALLENGE TO OUR WAY OF LIFE

measure. The power has never been used—why not now? And, lastly, it is admitted that much of the present high unemployment cannot be coped with by the men concerned in the short run; the industries is not their fault and, in due time, they may have to move away. Meanwhile, the unemployment earnings average one-fifth of what the workers get while in work. If the figure were to be doubled, it would still be less than that allowed by some Continental countries.

So much for short-term measures. But the Chancellor has also got to do something about Britain's long-term rate of expansion. At present, the expectation is that this country will expand total output by a little over 2½ per cent. No Continental country expects to do less than this and France and Italy expect to do twice as much. This country, however, has the labour resources to expand output by more than any of its European colleagues. A good deal will depend upon economic progress in the U.S.A., for expansion there will ensure satisfactory exports. British costs are no longer uncompetitive and recent experience suggests that, whatever happens, this country will hold onto her world share of exports—but American revival will mean that the U.K. will do even better. On the other hand, imports are already expected to rise substantially over the 1962 level and so we notice at the birth of 1963 the bad fairy "Balance of Payments" in attendance. Will she deter the Chancellor? Or will he say that, having scraped through 1962 successfully (though with little balance in hand), he must rely upon boosted output to help push exports even further (and to reduce costs at the same time) and so adopt a policy of boldness? The Common Market countries are moving into balance on their external payments—their surpluses are disappearing—and the U.K. might take encouragement from that.

Even a journal like the *Economist*, which tends to caution, points out that "the new industries which go forward fast only in a time of domestic growth are the most vital export industries for Britain to encourage, and . . . foreign investors are nowadays more likely to plough equity funds into a go-ahead economy than into a stagnating one." That sounds like the right guide for 1963, but it all comes back to boldness. As the New Year is rung in, will there be a good fairy present to whisper firmly into the Chancellor's ear "Be Bold"?

COMMERCE AND INDUSTRY

(*Concluded from page 36*)

G.L.S. lamps. Caps for fluorescent tubes and miniature bulbs and screw-in type caps for G.L.S. lamps are not yet manufactured in the country. It is understood that schemes are being drawn to produce those items also locally.

According to Mr. Aiyangar, the actual availability of electric lamps and fluorescent tubes (production *plus* imports *minus* exports) rose from 36.8 million to 46.8 million pieces in 1961. The Development Council for Light Electrical Industries has estimated the demand for all types in 1961-62 at 49 million pieces. According to it, by 1965-66, demand will go up to 80 million pieces for G.L.S. and similar lamps, 8 million for fluorescent tubes and 50 million for miniature bulbs. The third Plan production target is 88 million for G.L.S. and other similar lamps, 8.8 million for fluorescent tubes and 55 million for miniature bulbs. The Plan target has made provision for exports to the extent of 10 per cent of output. Mr. Aiyangar pointed out at the enquiry that, taking into consideration the present capacity together with additional capacity licensed, the production target was well within the reach of the industry, provided the G.L.S. lamp sector operated in multiple shifts.

It is gratifying to hear, in this connection, that consumers are generally satisfied with the products of certain sections of the industry. But there are complaints about certain other segments of the industry. Complaints relate mainly to the shorter life of lamps and tubes, loose fitting of caps, broken filaments and extra thinness of outer shells resulting in breakage even with light pressure.

As regards supplies, there have been complaints from a number of consumers. Complaints pertain to high prices, the shortage of fluorescent tubes, low wattage G.L.S. lamps, high pressure mercury vapour lamps and also to the long delivery periods extending upto 10 to 12 months. Many Government departments and industrial concerns complained that they were not getting their full requirements at rate contract prices and bulk purchase prices, respectively. Other complaints made by consumers, dealers and their associations are that (1) the distributors and dealers are forced to accept certain other items along with lamps and fluorescent tubes and as such 'coupled' items have to be sold at lower prices, higher prices are being charged for lamps and fluorescent tubes, (2) supplies are limited to a few preferential dealers and are on a quota basis, (3) the trade's share of supplies comes to about 40 per cent only as Government departments and industrial concerns obtain supplies directly from the selling organisations of manufacturers and, therefore, supplies to traders need to be increased, (4) even Government departments at times have to purchase from the market at prices occasionally higher by 50 per cent than rate contract prices, and (5) it is hardly possible to make purchases at the advertised prices. Mr. Aiyangar observed that the margin between ex-factory and retail prices was considerable. Manufacturers, according to him, did not have any control over distribution.

BANKING

(*Concluded from page 12*)

other nations may be ready to move toward holding smaller proportions of reserves in gold, is not at all clear. The President of the German Federal Bank, Dr. Karl Blessing, mentioned at the I.M.F's annual meetings last September, that nations might consider agreeing on some "common attitude toward the composition of currency reserves." Professor S. Posthuma, a member of the managing board of the Netherlands Bank, suggested two months ago a ratio of 60 per cent in gold to 40 per cent in "key" currencies, including—in addition to the dollar and the pound sterling—the currencies of the European Common Market nations. Such mutual currency holdings would be endowed with guarantees of reimbursement in the event of devaluation. These are provocative ideas but an arrangement of this sort would not necessarily ease the U.S. gold position.

During 1962 (upto 26th December), the U.S. Treasury's gold stock declined by $911 million. This approximates the losses in 1961 and 1959 but was much less than those in 1958 and 1960.

The U.S. gold stock on 26th December amounted to $15,978 million, lowest since 1939 but still 39 per cent of the Free World's monetary gold stock; in 1949, when the U.S. gold stock was at its peak, the ratio was 70 per cent.

People who speak in terms of a threatening gold deficiency often cite the fact that the U.S. gold stock is now less than U.S. liabilities to foreign countries and international financial bodies. This is not, however, the whole story. As Dr. Max Iklé, a member of the managing board of the Swiss National Bank, remarked last fall, a world banker—just like any other banker—cannot keep 100 per cent liquid:

In order to assess whether ... a run (on the U.S. dollar) is likely, it is necessary to take a closer look at the creditors. The world's central banks hold short-term claims to a total of $12 billion and the international institutions to a total of $5 billion, so that only $8 billion consists of private claims.

Since the purpose of international institutions is to overcome monetary crises, they would not take part in a run on the dollar. It would be just as pointless for the central banks to do so, as they have a stake in the maintenance of the present monetary system and would in the event of a monetary crisis be called upon to provide assistance through the machinery of the I.M.F. Not the least important function of private holdings of short-term dollars is, for various reasons, their use as working balances, so that these claims, too, are more stable than their short-term character might suggest.

Dr. Iklé also noted that a comparison of U.S. gold stock with short-term liabilities to foreigners overlooks the $7 billion of short-term claims on foreigners held by American banks, business and individuals. It also forgets that the U.S. *long-term private investments* abroad exceed the long-term investments of foreigners in our own country by $28 billion. The U.S. Government holds foreign government obligations; some of these are being repaid in advance of maturity to reduce the U.S. payments deficit.

While the international balance-sheet of the United States shows, despite the loss of gold, a respectable surplus of assets over liabilities, this must not make Americans complacent. For no nation can run up its floating obligations indefinitely.

Confidence in the U.S. dollar is also an indispensable condition for the proper functioning of our international currency system. Over the past year, fears and suspicions have brought about enlarged gold hoarding and, as a result, official gold stocks have increased by less than 1 per cent out of new production. With firm confidence in the dollar and other leading currencies, official gold stocks could increase each year by as much as $1 billion—or 2½ per cent—assuming quite generously that, out of the $1.5 billion of new gold supplies, some $500 million were used in industry and the arts.

The Managing Director of the International Monetary Fund, Dr. Per Jacobsson, speaking in New York on 12th December expressed the belief that "the gold markets next year will see less demand for hoarding purposes and, therefore, should become in 1963 a useful supplier of monetary gold and a real alternative to the U.S. Treasury in this respect."

SOVIET AID FOR INDIA

(*Concluded from page 10*)

Soviet and Indian specialists made it possible to commission the power station, supplied with up-to-date equipment, in a short space of time. The thermal power station in Neyveli will supply electricity to the large industrial complex that is being built in this area, and will also supply electricity to the power system of Madras. The second unit of similar capacity is now being tested; the Soviet Union has supplied India with equipment for another three units; the first section of the power station with a capacity of 250,000 kw. will be commissioned in 1963 and its capacity will later be increased to 400,000 kw.

Work is under way on expanding the thermal power station in Korba. It is envisaged that the first unit of this station with a capacity of 60,000 kw. will be mounted by the end of 1963. The importance of this power station consists in the fact that it will supply electricity not only to the Bhilai Iron and Steel plant but also to the coal mines of Korba and other mines of Central India, including the mines in Manipur. Two coal mines in Korba and an open pit in Manipur, it will be remembered, are being built with the assistance of the U.S.S.R. An aluminium factory, which will be built with Hungary's assistance and the ore mines in Bailadila, will be supplied with electricity.

In 1963, construction will proceed of the medical enterprises begun in September 1962.

As before, the Soviet Union will continue to render India technical assistance in training engineers, technicians and skilled workers. In particular, about 300 people will be trained in the Soviet Union for the heavy machinery factory that is being built with U.S.S.R. assistance, and more than 200 people for the mining equipment works. Up to 150 Indian specialists will be trained in the Soviet Union for the medical enterprises. The 1961-66 plan envisages the training in the U.S.S.R. of 450-500 Indian oil workers.

All these facts show that Soviet-Indian economic co-operation, effected under agreements concluded between the Governments, is developing successfully. Undoubtedly this co-operation, is based on the principles of strict observance of sovereignty and equality, and principles of friendship and co-existence.

PREMIER AUTOMOBILES LTD.

(*Concluded from page 27*)

rendered and advice given by him during his long association with the Board since the inception of the Company.

In the casual vacancy caused by the resignation of Sir Manilal B. Nanavati, Kt., Mr. Shriyans Prasad Jain was appointed a Director pursuant to Article 162 of the Articles of Association.

(*b*) Mr. Pratap Bhogilal was co-pted as an Additional Director on the Board during the year under report.

Under an agreement with the Engineering *Mazdoor Sabha*, the Company paid to the employees drawing basic wages/salary upto Rs. 500 per month an advance equivalent to 1½ months' basic wages/salary to be set off against bonus that would be finally decided for the year. The employees drawing basic salary over Rs. 500 per month were sanctioned an advance equivalent to one month's basic salary which was paid on the eve of *Diwali*. The total amount paid by way of advance for both the category of employees referred to above comes to Rs. 11,90,565.

N.B.—*This does not purport to be a report of the proceedings of the annual general meeting.*

MARKET GOSSIP

(*Concluded from page 3*)

half-year for only a limited range of important goods such as drugs and medicines, books, X-ray films, rubber contraceptives, hides and skins, wattle bark, wattle extract, motor vehicle parts and lithographic materials. Even these materials are subject to prescribed cuts. Besides, revalidation of annual licences granted to established traders for the current half-year has also been limited to component parts of tea, jute, coal, textile and knitting machinery, etc. The overall effect is that the established trade has been deprived of quotas for as many as 317 items, apart from invalidation of annual licences granted in April for 31 items. Only the annual licences granted against the U.S. non-project assistance for the whole year 1962-63 has not been affected by the cuts.

The licences granted to actual users for the import of raw materials and components have been slashed, particularly in the case of components of passenger cars, bicycles and radios. The licences to consumers' co-operative societies have also been subjected to a reduction of as much as 50 per cent in their entitlement calculated in terms of the provisions contained in Appendix 41 of the current Red Book. Imports of several important items have been completely banned, for instance, printing, wrapping and packing paper, clocks and watches, betel-nut, cassia, cloves, ivory, dates, etc. These cuts have led to an increase in their prices all over the country. The reduction in imports of chemicals and dyes and non-ferrous metals has also tended to push up their prices.

An important measure improvised under the present policy relates to the decision to entrust the State Trading Corporation with the task of channelling import of tin block and tin scrap and of ball, roller and taper bearings and components. Those who are envious of the S.T.C.'s growing importance in trade matters have made no secret of their chagrin at this new measure.

Although reduction in imports of certain items are justifiable in the present context, the trade generally believes that the present slash may adversely affect industrial production. If these fears turn out to be true, it will not be in keeping with the urgent need for increasing industrial production and ensuring better utilisation of idle capacity in several industries. Some of the difficulties, however, can be mitigated if domestic producti of raw materials is stepped up and indigeno available substitutes are used wherever poss... This is by no means an easy job and requires display of much ingenuity by the Government and industry alike. The trade bodies, such as the F.I.C.C.I. and the Engineering Association of India can do a lot of good to the country, if they persuade all industrial licence-holders to execute their projects expeditiously and also disseminate information regarding the development of indigenous sources of raw materials. This may help speed up import substitution and ensure a sustained increase in industrial production. The Committee on Import Substitution should also hurry up with its findings and recommendations.

COMMERCE

GOLD PROHIBITION

WHILE the demand for removal of liquor prohibition is gathering momentum in the country, the Government has imposed another prohibition, namely, prohibition on gold. One has no relation to the other, of course, except that both the developments are an offshoot of Chinese aggression. But the gold prohibition enforced with effect from Thursday, 10th January 1963, seems to suffer from the same major drawback as the liquor prohibition that has been in force in several States for nearly a decade and a half. Although gold prohibition is as desirable a social reform as liquor prohibition, its enforcement by law will be as difficult as, if not more difficult than, that of liquor prohibition. It, too, may be more honoured in the breach than in the observance. There is, therefore, the grave danger of the Gold Control Rules falling within the category of those laws that have (*a*) reduced the people's respect for law and order and (*b*) aggravated the evil of massive corruption among the ruled and the rulers alike. There are many loopholes in this legislation which, incidentally, is unlikely to be withdrawn even when the emergency caused by the Chinese invasion ceases. But their plugging through more restrictions than those just announced will be most unpopular and make life intolerable. The exemption given to ornaments already held by the people, as well as to small holdings of gold bullion not exceeding 50 grams per adult person and 20 grams per minor, provides a big hole in the scheme through which a lot of gold can escape official control. The Government, however, must surely have been aware of this defect. If, nevertheless, it has decided to go ahead with this reform, it must be because of the necessity to carry the people with it as far as possible. To include jewellery and petty holdings of gold bullion or coins in the scheme would be to put the whole people up against the Government. And the authorities have wisely refrained from doing so, for this is not the time for introducing a revolutionary step of that nature. Now, more than at any other time, the Government needs the wholehearted support of the people for strengthening the defences of the country.

One's first natural reaction to this latest onslaught on one's freedom may be to resent it. However, plans for development and defence, in an economy like that of ours bereft of foreign exchange resources, cannot be successfully implemented without sacrificing some of the freedoms, especially those the continuance of which imposes a severe strain on scarce resources. None can deny that the Government has resorted to this measure only in the last resort and to meet the grave threat to the fundamental freedoms of the people. It is needless to add that, if these freedoms were lost, the freedom to buy and sell gold would be useless. It may be recalled, in this connection, that, in July 1958, when the idea of immobilising the gold held by the people was mooted as a means of finding resources for economic development, Mr. Morarji Desai himself had discounted it as a case of remedy being worse than the disease. Since then, our external resources have been depleted to the barest minimum, whereas the need for them has increased. The Government has tried to check smuggling by all possible methods, including the withdrawal of rupee currency which was in circulation in the Persian Gulf area and strengthening of customs forces. But the outcome has not been wholly satisfactory, as smuggling of gold into the country on a large scale has continued. The high price of gold, which one thought would discourage the demand for the metal in this country, seems to have had no appreciable effect on its offtake. Similarly, the appeal for subscriptions to gold bonds and for cessation of gold purchases has not yielded the response that was expected. Since neither indirect steps to prevent smuggling nor persuasion has worked, a certain measure of direct assault on purchases and possession of gold has become inevitable. It is hard to see how any patriotic-minded person can refuse to concede the compelling logic behind the Government's step. At the same time, it would also be true to say that the only ground on which one could justify this Draconian measure is patriotism.

Harsh though the regulations on gold purchases and holdings are, they are less severe than one had feared. Thus, the Government has decided to leave existing jewellery alone; it has allowed individuals to keep small quantities of gold without disclosing such holdings; it does not prohibit manufacture of new jewellery, provided the purity of gold content is not in excess of 14 carats, in contrast to the customary 21 to 22 carats' fineness. Small fresh purchases for such genuine social needs as marriages and essential industrial purposes will presumably be allowed, though it is not clear how exactly the control will be administered over the whole country. It will thus be seen that the vast majority of people in the country are unaffected by gold prohibition and that the area for harassment is restricted. Those who are possessing gold in forms other than jewellery and in excess of specified limits must declare their entire holdings to the Government. There is, however, no suggestion in the Government's notification that it will compulsorily take over such holdings, nor has the Government proposed any ceiling for them. Only those who fail to report what they have run the grave risk of confiscation and heavy penalty, including imprisonment. It must be noted that the Government has assumed extensive powers for searching hidden gold and even safe deposit lockers in banks will offer no protection.

Admittedly, the Government's objective is defensive rather than offensive. The Government wants to avert at least from now onwards that drain on the country's foreign exchange resources which is caused by continued smuggling of gold. In order to achieve this objective, it has decided to depress the demand for gold, control the operations of gold melters and refiners, and curtail the marketing facilities. The strategy is sound on paper, but its success in actual application remains to be seen. The country is blessed with thousands of goldsmiths all over the country and not all of them are wealthy. The administration is by no means pure and the weakness of officials to the temptations of bribe is common knowledge. Those who wish to defy the law in order to satisfy their craving for gold ornaments of higher purity than 14 carats or to hide their ill-gotten wealth may not, therefore, find it impossible to do so, for India is not a police State. Some may be inclined to think that the ban on the manufacture of gold ornaments of a purity higher than 14 carats is a blessing in disguise to those parents who have daughters to be married but not sufficient funds to meet the exacting demand for dowries in the form of gold jewellery. They may, however, be disillusioned, because the demand may take other shapes and forms. Could anyone claim that the demand for dowries has slackened because of the anti-dowry legislation that already exists? The success of measures designed to change age-old habits and customs, which have taken deep roots, will depend on the extent of co-operation that is forthcoming from the people. And since the steps now taken to wean people away from the gold habit affect not only social customs but also the monetary function, in that gold has long been regarded as a store of value, their success is extremely doubtful. They must, therefore, be regarded as nothing more than an experiment. If the ex-

periment fails, the Government must have the courage of Gandhiji to abandon it in favour of other methods.

Meanwhile, many holders of gold not in ornament form may wonder what to do. It would be extremely risky for them to proceed on the assumption that the Gold Control Rules would be ineffective, that sooner or later the Government would withdraw the control and that they could, therefore, hang on to their stocks hoping for the best. The Government seems to be determined to beat down the domestic price of gold to the neighbourhood of international level. It has also made the disposal of gold bullion in the market a difficult affair. The best and safest thing to do is to exchange such bullion for gold bonds before their sales are stopped. This advice holds good particularly to those who are not in a position to declare their stocks to the Government for obvious reasons. The alternative is to depend upon the hazardous black market route. Again, those who want to make jewellery will find it safer to obey the law by subordinating their desire to have ornaments of greater purity than 14 carats and to get them made by licensed dealers. Otherwise, they may run the risk of being cheated by goldsmiths, besides having to pay higher labour charges. If a goldsmith is prepared to evade the law by making gold ornaments of a purity in excess of permissible degree, what certainty is there that he will not stoop to dupe his customer? He may be greatly tempted to do so, because the customer can have no legal recourse against him.

There may also arise some anomalies in the pattern of gold prices, apart from the black market. The price of gold ornaments may soon command a premium over that of bullion, as there is no prohibition on holding them. It will not be surprising, if stocks of gold ornaments with jewellery merchants swiftly go underground, if they have not already done so. Another undesirable development that may emerge will be gold smuggling in the reverse direction, from India to Pakistan and other neighbouring countries where the price is well above the international level. As Indian currency is still available at a discount in foreign markets, the smugglers may find no great difficulty to pay the sellers of gold here in such currency. The risk of outflow, we gather, will be particularly great when the price of gold falls substantially below Rs. 90 per 10 grams. If this is true, the Government's battle against gold smugglers will be a never-ending affair.

ALTERNATIVES TO U.K.'S ENTRY INTO E.C.M.

THE decisive stage in the Brussels negotiations for Britain's entry into the European Common Market is yet to be reached. There seems to be developing in the meantime a serious crisis in the already tortuous course of negotiations. The blame for the crisis is attributed to France which is reportedly seeking to build up a "special relationship" with Germany and is, therefore, not enthusiastic about Britain's possible membership of the European Economic Community. A report from Rome has it that the Italian Budget Minister has just told his Chief, Signor Fanfani, that France "intends" to make the negotiations fail and that, at the decisive stage, Italy might even have to threaten to withdraw from the Common Market and enter into a "special" political-*cum*-trade-*cum*-cultural agreement with Britain. If the suggested Italian threat fails to avert the possible failure of the Brussels negotiations, what would happen to the American (and British) vision of an enlarged Economic Community as the first step towards European political integration? As forecasts about the final outcome of the negotiations are increasingly gloomy, the possibility of a setback to the immediate goal of Britain's entry cannot be entirely ruled out. It would, therefore, be of more than academic interest to discuss the alternatives to the Common Market, if in the end the E.E.C. is not prepared to offer satisfactory terms to Britain.

Precisely such a discussion is to be found in a *Hobart Paper** just received in Bombay. Its author, the well-known Mr. James E. Meade who is Professor of Political Economy at the University of Cambridge, has been, and continues to be, an ardent advocate of Britain's entry into a "liberal Common Market as a means to the wider end of a free trading North Atlantic Community." But he has recently formed the view that acceptable conditions for entry may not be obtained and that the Common Market seems to be less "liberal" than he would like it to be. Hence his examination of the case for other means of achieving that end. The alternative of not entering the Common Market but continuing as at present is not discussed by him, although, in his view, "it is not a ridiculous alternative." As Professor Meade is "an inveterate explorer of improvements in economic arrangements," his discussion of the two alternative paths, namely, unilateral action by the U.K. and multilateral negotiations, provides a stimulating perspective for the future.

The first alternative, which Professor Meade would prefer to be considered very seriously by Britain, relates to the unilateral reversal of its policy of protection. Holding, as he does, the view that the National Government made a great mistake in the abandonment of Britain's traditional free trade policy in 1930, Professor Meade urges that a domestic policy for economic expansion and growth be now combined with an external policy for the unilateral removal of protective restrictions on imports. But such a course, according to him, would call for adjustments in the rate of exchange to avoid or mitigate any strain which high domestic demand and free imports might impose on the country's balance of payments. Since, however, any such adjustment by way of depreciation of sterling may have some undesirable consequences, Professor Meade has objectively analysed the *pros* and *cons* of a policy of unilateral return to free trade in the following passages:

"Provided that we were prepared to make such adjustments, I have no doubt that this policy would have very great advantages. We could gain thereby the free trade advantages of specialisation, of larger markets, and of the competitive jolt to efficiency; a European customs union is not essential for this purpose. Moreover (apart from direct aid and capital loans), the two policies by developed countries which are of basic importance for the trade of the underdeveloped countries are that the developed countries should maintain a high and steadily expanding demand for goods and services in general (and so for the goods and services of the underdeveloped countries) and that the developed countries should not impose commercial-policy barriers against imports (and so against the exports of the underdeveloped countries). By combining a domestic policy for economic growth with an external free trade policy, we should be making our maximum contribution to a viable world trading system.

"There are, of course, disadvantages to this unilateral free trade policy. As has already been argued, it would be quite likely to impose some immediate strain on our balance of payments which would have to be offset by some depreciation of sterling. This in itself presents serious problems. Even if these were overcome, there might be some more or less permanent movement in the terms of trade against us. The increased demand on our part for imports, caused by the removal of our barriers to imports, might well mean that we should have to pay the outside suppliers rather higher prices for their products relatively to the prices received from the sale of our exports. A given volume of exports might purchase rather less imports than before. In my view, these disadvantages would be likely to be much more than offset by the free trade advantages of greater efficiency and of specialisation on what we were best fitted to produce."

Although the advantages of a unilateral free trade policy may be greater than its disadvantages, it would still be nice, Professor Meade continues, to avoid the latter if it were possible. If the other countries of the North Atlantic follow the British example and likewise reduce their barriers on imports, the demand for British goods in their markets would rise and there would then be no substantial strain on the U.K.'s balance of payments and terms of trade. But that is a big *if*, for Professor Meade himself refers to the possibility that the E.E.C. and the U.S. Administration, finding that European and American producers could in any case obtain free access to British markets, might become less anxious to bargain away their import duties as a means of obtaining easier access to the U.K. market. There is thus an element of risk in unilateral return to free trade just as there is risk in unilateral disarmament by any country. The free trade advantages of greater efficiency and of specialisation may be only theoretical; in any case they will not be felt in the immediate future or the short term. The practical disadvantages by way of sterling depreciation and possible failure of other developed countries to reciprocate by liberalising their commercial policies will, however, be more immediate and real. Professor Meade himself seems to be aware of the strength of these practical considerations, as he is frankly unable to answer whether the setting of a unilateral example by Britain would definitely be successful.

Where there is so much risk and uncertainty in the first course, the other method of "hard multilateral commercial bargaining" would seem to be the only safe alternative. Professor Meade's suggestion is that the U.K. should possibly convene a joint Commonwealth —E.F.T.A conference to take the lead in proposing trade negotiations with other countries and, in particular, with the U.S.A. and the E.E.C. "The object of these negotiations, which would presumably be organised under the General Agreement on Tariffs and Trade (G.A.T.T.), would be to make the most of President Kennedy's new trade powers to get a general reduction of trade barriers by all the developed countries of the world on a (non-discriminatory) basis which would make it easier for all underdeveloped countries to find expanded markets in the developed countries." Although Professor Meade is again unable to say whether such multilateral commercial bargaining will definitely deliver the goods, this seems to be the only feasible alternative worth pursuing.

If, ultimately, it happens that Britain is admitted to the membership of the E.E.C., will British influence be felt to the point of liberalising the commercial policies of the Common Market *vis-a-vis* outside countries? Here, again, Professor Meade is unable to make a confident prediction, for such liberalisation, according to him, is something problematical. Already, considering the hard bargaining in which the Six are engaged with Britain, the possibility of the enlarged Community becoming a liberal outward-looking entity cannot be rated too highly. Professor Meade, who feels "the greatest distaste in keeping Australasian foodstuff and Indian textiles out of the U.K. market, in order to protect high-cost European producers," is understandably unhappy over the trend of negotiations at Brussels. He has no doubt in his mind that, in spite of some important concessions promised by the Six to meet the interests of Commonwealth producers, Britain's entry into the Common Market "would involve the imposition of many substantial discriminatory barriers against the import of Commonwealth products which would have the effect of protecting E.E.C. producers against Commonwealth producers in the U.K. market." His fear is confirmed eloquently by two instances. One is that of Canada which, according to some leading Canadian bankers, will find that a greater part of its exports to Britain, aggregating some $900 million annually, will be affected if the latter joins the Market. Moreover, the Canadian bankers feel that the "protectionist bias" shaping up within the Market will adversely affect Canada's important agricultural exports to Europe too. The other instance is that of India which finds that the Common Market countries have increased their textile exports to Britain in 1961 to two-and-a half times their 1958 level and shudders to think what will happen after 1967 when their goods will enter duty-free and Indian textiles will be subject to duty at an average of 18 per cent.

Professor Meade has, therefore, emphatically driven home the twin point that it would not be attractive to "keep out the produce of the poor in order to protect the rich" and that the move towards a North Atlantic free trade community should involve a reduction of existing import barriers and not an imposition of new ones. Unless the Common Market itself is "liberal" and becomes still more so after Britain's entry, Professor Meade's objective of "a great liberal North Atlantic Community" will not be achieved. Whatever be the chances of ultimate liberalisation, the initial step of erecting substantial new barriers against outside products would be inescapable for Britain. It is too late to hope that this kind of criticism by Professor Meade or any other eminent individual or group in Britain would make the Six, especially the French, relent. On the contrary, it may have the effect of hardening opposition within Britain itself to entry into the Common Market. Between France, on the one hand, and the British electorate, on the other, the question of U.K.'s entry into the Market may continue to hang in the balance for some more time till it is finally disposed of one way or another by the latter (the electorate) in a General Election which, on present indications, does not seem to be far distant.

MARKET GOSSIP

Probe Into Powerlooms

THE powerloom sector of the cotton textile industry has grown, and is still growing, with what may be called amazing rapidity. But, in the absence of reliable statistical data, it has not so far been possible to state precisely the quantitative progress made by this sector—rough unofficial estimates place the total number of powerlooms at over 80,000, as against about 24,000 in 1953-54—or to find out whether the present pattern of growth is inimical to the country's interest. Consequently, there is an unresolved controversy about the place and importance to be given to powerlooms in the future set-up of Indian textile industry. Viewed thus, the constitution of a special committee by the Central Government, announced this week, to enquire into the problems of the powerloom industry, though belated, deserves to be welcomed. The Committee, it is gratifying, is quite a competent one, consisting as it does of six experts, and is presided over by that energetic public worker, Mr. Asoka Mehta. Although a socialist, Mr. Mehta is a good economist. The members are Mr. A. R. Bhat (Chairman, All-India Village and Small Industries Organisation), Mr. G. K. Devarajulu Naidu (a prominent millowner of South India), Nawab Aizaz Rasool (Vice-President, Uttar Pradesh Industrial Co-operative Association), Dr. D. K. Malhotra (Joint Secretary, Planning Commission), Mr. M. Somappa (President, All-India Handloom Marketing Co-operative Society), and Mr. K. B. Aravamuthan (Director, Economics and Statistics, Office of the Textile Commissioner). Unfortunately, the Committee does not include any representative spokesmen of powerloom interests. Although we are aware that at times Mr. Bhat has not hesitated to plead their case, his inclusion does not sufficiently offset the excessive weightage given to handloom interests by including a person like Mr. Somappa who has a closed mind on the issue of powerloom *versus* handlooms.

An idea of the complex nature of the inquiry can be had from the terms of reference of the Committee which are as follows:

To examine the structure and growth of the powerloom industry with special reference to the types, holdings, ownerships, appliances, supply of raw material, sorts of fabrics produced, processing of fabrics, marketing, financing and other related factors;

to examine the remunerativeness of the powerloom industry, taking into account the costs of production and efficiency of working and the conditions of workers;

to consider the relative role to be played by the powerloom industry *vis-a-vis* that of the handloom and mill industries and to recommend targets of production;

to account for the phenomenal growth of unauthorised powerlooms in the past and devise means to prevent future unauthorised expansion;

to examine the disirability and scope for the conversion of handloom co-operatives into powerloom co-operatives; and

to make suggestions for the establishment of the powerloom industry on a stable footing within the field of operation which should be allotted to it.

If the Asoka Mehta Committee were to succeed in putting the position and problems of the powerloom industry in their correct perspective, it would surely have justified its appointment. This aspect has to be specially stressed because of the misgivings expressed by a section of textile interests about the role of powerlooms. The powerlooms, it has been contended, have proved to be a serious threat to handlooms and mills and, unless the matter is gone into very earnestly, it will not be long before the powerloom factories gain a complete stranglehold over both the handloom and mill sectors.

It may be true that everything is not perfect and fair with the way in which the powerloom industry has grown in recent years. A large number of unauthorised powerlooms are thriving under the climate of protection created for handlooms and are not sharing the benefits accruing to them with either the consumer or the Government. It may also be true that, in order to evade excise duty and the obligations of the Factories Act, the owners of powerlooms are adopting ingenious devices and making unduly large profits. And there is some substance, too, in the allegation that a new class of middlemen is emerging who are hiring the services of traditional weavers for operating powerloom factories, with the result that the handloom weavers are simply sweating as wage earners. Instead of becoming owners of powerlooms. But it would be wrong to contend that, in view of these defects and deficiencies, which are largely the result of administrative failure of the Central and State Governments alike, the development of the powerloom industry must be curbed. The solution lies in finding suitable remedies so that this industry will expand and develop on right lines. No one will dispute the fact that the large-sized composite mills, equipped with modern spindles, automatic looms and other up-to-date machinery, are capable of meeting a significantly large part of the expanding demand for cloth (for both domestic consumption and export) at an economic price. Even so, one has to admit that the decentralised sector also will continue to play a significant role as the supplier of piecegoods. Only it is necessary to place this sector on a sound and solid footing.

The productivity of handloom industry, it is common knowledge, is very poor and so the earnings of those who are dependent on it for their living are extremely low. If the lot of weavers is to be improved, it is imperative that as many handlooms as possible are converted into powerlooms. Since these powerlooms, with their inherent capacity, are capable of producing much larger yardage per shift per loom than the handlooms, they will be more viable than the handlooms. It is rather unfortunate that this important consideration has been ignored by a section of millowners which wants to perpetuate the backwardness of handloom industry by placing curbs on the development of powerlooms.

With its distinct advantages, the powerloom sector can certainly be made to stand on its own feet, without proving itself to be a heavy burden on the mill sector or the public exchanger as the handloom sector continues to be. Indeed, the powerloom sector can, if its growth is well planned and competently regulated, contribute quite a lot by way of taxation to the Central and State Governments, besides yielding more decent returns to weavers and supplying piecegoods at reasonable prices. It remains to be seen to what extent the Asoka Mehta Committee, which is expected to submit its report in a period of six months, takes a realistic view of the issues posed to it, without importing outmoded ideological considerations.

Bleak Outlook for Belapur

The shareholders of the Belapur Company Ltd. were told by their Chairman, Mr. Neville N. Wadia, at their annual general meeting held in Bombay on Thursday the 10th inst., that the Company might find it difficult to maintain the dividend for the current year (1962-63) even at the reduced rate of 40 per cent per annum for reasons beyond the management's control. In the first place, the implementation of the State Government's Land Ceilings Act from 1st April 1963 will deprive the Company of its agricultural income which averaged at Rs. 21 lakhs per annum over the last 12 years and amounted to Rs. 18 lakhs last year. Secondly, the agricultural income-tax of 50 nP per rupee, which has come into effect from 1st April 1962 and applies to agricultural profits for both 1961-62 and 1960-61, will incur an additional burden of Rs. 24 lakhs (of which Rs. 9 lakhs are for 1961-62) for which no provision was made in the accounts for the two years. This liability, which will have to be provided for this year, will, however, be reduced to the extent of the surplus of Rs. 13.80 lakhs carried forward from the 1961-62 accounts.

Mr. Neville Wadia defended the pruning of the dividend last year notwithstanding the large surplus to be carried forward on the ground that it was necessary to carry the big surplus to meet

YOUR DISCIPLINE IS
INDIA'S STRENGTH

the anticipated liability on account of the then proposed agricultural income-tax. He also referred to the recently introduced education cess of Rs. 25 per acre of cane grown, which would add to the burden of heavy subsidies granted by most sugar factories for the education of their employees' children. In the light of these various measures adopted by the State Government and the rising cost curve of the industry, the Chairman assessed the future outlook for the Company, from the point of view of net profit, as not too bright. He, however, assured the shareholders that the Company's business would be conducted as efficiently and economically as hitherto. He disclosed that the Company would be able to crush this season the same quantity of cane as in the last season, when it was 184,589 tonnes.

Speaking on the Land Ceiling Act, Mr. Wadia observed that it would be wise for the State Government to take heed of the Centre's appeal for greater production and postpone the move for acquiring the land at least until the end of the present emergency. But the State Government has so far failed to respond to such pleas and it is a moot question whether it will change its mind. It would, therefore, be wishful thinking to nurse any hopes on this issue. The acquisition of the Company's 11,000 acres of land will bring the Company a paltry sum of about Rs. 5 lakhs by way of compensation and that too in 3 per cent 20-year bonds. Compensation for acquisition of the farm's machinery and equipment is under negotiation. The Company's subsidiary, Gangapur Sugar Mills, will earn a relatively larger amount of compensation for its 4,000-acre land, because the land is freehold.

Dealing with the shareholders' criticism of the poor working of this subsidiary, which had entailed a huge financial burden on the parent company by way of loans and advances, the Chairman said that, although the subsidiary unit was currently doing fine, it was faced with the shortage of cane supplies because of the Land Ceilings Act. And, again because of that Act, Mr. Wadia said, the proposed development scheme of the subsidiary had also to be given up. Had the proposed development materialised, he felt, the situation would have been quite different.

Alluding to the position of sugar industry in general, Mr. Wadia estimated the sugar production in the current season at 25 lakh tonnes, a shortfall of 2 lakh tonnes from the previous season's total. On this basis and after allowing for 4.5 lakh tonnes for export, the surplus at the end of the season would be no more than 6 lakh tonnes, a quantity that barely covered three months' domestic requirements. The shortfall in production was attributed by Mr. Wadia to diversion of cane from factory areas to the manufacturers of *gur* and *khandsari*. In view of the lower production, Mr. Wadia cautioned the Government that, if further exports were negotiated, there might be a shortage of white sugar in the country in the not too distant future.

Prospects for Shipping

During the past one year, there has been a decline of as much as 60 per cent in the price of secondhand ships. Liberty ships and even tankers are now quoted at about one-third the price prevailing a year ago. The slump in the world market for secondhand ships is a reflection of the gloomy prospects for shipping in the new year. The past year was not a good one either. In fact, it was one of the worst years of the depression, which is now six years old, inasmuch as, during the year, the dry cargo shipping freight rates fell to their lowest levels since 1948. It is true that, since the middle of 1962, there has been a recovery in freight rates, but this does not hide the fact that the volume of idle tramps laid up throughout the world rose to 3.1 million tons at the end of 1962, which is well over five times higher than the idle tonnage a year ago and represents 4 per cent of the world dry cargo fleet.

Not only was the experience of tramp shipping last year disappointing but the cargo liners too fared no better. With too much liner tonnage chasing too few goods, cargo liners had yet another depressing year. The situation was aggravated by the intrusion of tramps into trades that had traditionally belonged to liners. Only oil tankers had a comparatively better period, thanks to a perceptible rise in charter rates. Even so, the rates were only slightly higher than the low levels prevailing for the last six years.

London shipping circles feel that the prolonged depression in shipping may compel shipowners, in the interest of survival, to co-operate on an international scale to withdraw surplus tonnage from operation. Moves are already afoot by both dry-cargo tramp owners and tanker owners to investigate urgently schemes for international co-operation. Meanwhile, British shipowners have made a beginning by accelerating the rate of disposal of older vessels, in spite of the low level of prices, in their fleet, so that they could improve their competitive ability as quickly as possible.

Synthetic Leather

The versatile family of synthetic plastic materials has, of late, been displacing a wide range of primary commodities such as jute, shellac and mica from their conventional uses in the industrial field. This trend has adversely affected the export trade of several developing countries, including India. Leather is one of the important primary commodities, which has encountered severe competition from synthetic materials. In the U.S., for instance, over 300 types of plastics have been developed over the last few years to substitute leather for a variety of applications ranging from shoes to furniture. But none of these poses a greater threat to demand for natural leather in the U.S. than the development of a new material called "pomeric" by Du Pont. Pomeric, it is claimed, is the first synthetic material to have been introduced which "breathes" like real leather. The U.S. tanning industry is obviously perturbed over this fresh encroachment into its domain by synthetics. Its anxiety is all the more so because of the fact that pomeric bids fair to enter into competition in one of the few fields in which natural leather has hitherto retained its unquestioned dominance. This is in the field of manufacturing shoe "uppers," about 80 per cent of which are still made from real leather. India, being the largest exporter of leather in the world, is bound to feel the pinch some day or other of the inroads now being made by synthetics into the production of shoes, an industry which is the largest consumer of natural leather.

The new synthetic product has, according to Du Pont's claim, several advantages over natural leather, which will not be lost sight of by the finished leather industry and the consumer. Pomeric is expected to be supplied in uniform sizes and uniform textures, thus eliminating the need for skilled cutters to work the best sections of leather. Nor is there any need for polishing the shoes which are made of pomeric, for they require only to be wiped with a cloth to shine. As regards price, Du Pont has so far not made known its intentions. But the new product is said to be capable of offering keen competition only to dearer varieties of shoes of high quality. One cannot, however, forget that, by constant research, for which this American Company is well-equipped, cost of production may be brought down to levels at which the product can offer stiff competition to cheaper varieties of leather also. Du Pont has already gone ahead with the construction of a new plant for the large-scale manufacture of pomeric at Old Hickory, Tennessee; this plant is expected to be commissioned next year. It has already set up a pilot plant and expects to market the product much earlier on a small scale. The Tennessee plant is expected to produce enough pomeric for the production of about 25 million pairs of shoes annually. This, of course, is still a small proportion of the total output of shoes in the U.S., estimated at as much as 630 million pairs as of 1962.

The declining market for natural leather is a source of concern to exporters of raw and tanned hides and skins from India. Leather is one of India's major traditional exports, next only to jute goods, tea and cotton textiles. Tanned hides and skins fetched foreign exchange to the tune of Rs. 35 crores in 1961-62 and raw sheep skins (exports of which are strictly controlled) about Rs. 8

PERSPECTIVES & PROJECTIONS

By Mercator

Drift Again

THE continuing lull on the Indo-China frontier does not seem to be producing much good. On the contrary, there has been a weakening of the determination to mobilise all our resources to strengthen the nation; production in some of the defence factories has gone up but that is about all. A sense of drift pervades the atmosphere in Delhi as elsewhere and the leaders themselves seem to be in different minds and are occupying their time with sundry matters which are of no great importance to the task on hand. There was hardly any need at this juncture to create a controversy over the Attorney-General, nor any urgency over amendment to Article 19 to prohibit secession talk since the Article remains suspended during the emergency anyway; but such preoccupations sow doubts in the minds of the public. Similarly, Mr. Lal Bahadur Shastri has been dropping cryptic hints about the behaviour of the Press, which Mr. Chavan, the Defence Minister, thought was magnificent during the recent crisis. Mr. Nehru does not want brigades to be formed for supporting him, though they seem to thrive all the same, and long after civil defence activities got into full stride, it has been discovered that trenches and shelters can be overdone.

That people have put aside their differences has been further amply demonstrated. Besides the moves for the Socialist-P.S.P. merger, Mr. C. N. Annadurai's broadcast talk and his very sensible reaction to the Southern Zonal Council's decision on prohibition of secession talk have shown deep and gratifying awareness of the national interest in quarters where it was not ordinarily expected. Though Mr. Morarji Desai has not yet been able to capitalise on these and show success in his savings or gold bonds schemes, his budgetary task may be considerably lightened by the co-operation that seems to be assured from all sides. Even so, it will not be easy to find Rs. 350 crores more for defence (assuming that all other expenditure remains constant). Reduction of Central assistance to the States may release Rs. 50 crores or a little more and even if there is an equal amount of saving on unnecessary items of expenditure and an increase in borrowing over normal levels by about Rs. 100 crores, a substantial sum will remain to be realised through taxation within the restricted scope now available for it. How much of expenditure on development schemes can be diverted for defence without necessarily sacrificing development is thus one of the urgent questions crying out for an answer but it appears that this will not be faced with any sense of realism.

* * * *

Disappointing

The Planning Commission's recent meeting which was presumably convened to discuss this matter dispersed in the usual manner, after uttering many platitudes about the need for achieving both defence and development. This kind of slogan-mongering has been the besetting sin of our planning all along; in normal times it is understandable if not quite desirable but that it should extend to the present emergency is highly deplorable. Very few in this country will demand that development should be wholly sacrificed for better defence; and anyone who knows something of the Plan will be able to appreciate that agriculture, transport, power, heavy industry and mining and technical manpower are all necessary to fight China successfully. But the problem of priorities, effective investment and quick results remains; if these can be achieved with an economy of outlay there is no reason why attempts should not be made. There seems to be a danger that the authorities will try to show by a high level of outlay, rather than by effective implementation, their homage to development. If the ensuing meeting of the Standing Committee of the National Development Council merely endorses the vague generalisations about readjustments (not pruning) and the need for some changes here and there (no cut in the Plan), it will not exactly stimulate public enthusiasm. Mr. Desai cannot conjure up resources for defence out of nothing though his Ministry can do many more imaginative things to raise money. There is no need to deprecate or hide the inevitability of diversion of outlay from some heads which were conveniently put under development to others more relevant to the present occasion. Quite a good part of defence outlay will itself stimulate growth in sectors where there is slackness now and much new capacity and trained personnel will be created for defence needs which will have permanent effects on our future expansion.

Repetition *ad nauseam* of the unquestioned importance of paying attention to development, as if it is a *mantra* specially revealed to the few, is not very inspiring. Some of the hard choices inevitable in carrying through a Plan of large dimensions may thus be postponed even now, though the emergency was widely expected to give practical turn to these problems. A disappointing situation, on the whole.

* * * *

Tender Corns in Shipping

The plea for raising the permissible limits of foreign participation in Indian shipping from 25 per cent to 40 per cent put forth by the executive of the Congress Parliamentary Party has, as was to be expected, hurt many who had vigorously opposed such widening during the passage of the Merchant Shipping Act in Parliament. There is hardly any basis for the fear that this step would affect the national interest by introducing outside control to an undesirable extent since only majority control will give an effective voice in management. In any case Indian companies, however owned, will come under the domestic jurisdiction of the Government which in modern times exercises wide authority, as illustrated by developments in the field of oil. The bogey of prejudicial foreign control dates back to the pre-independence days when foreign companies had a free hand in running the affairs of their business and sometimes also of the politics of the countries in which they operated. Things have changed greatly but sometimes it is convenient not to recognise such changes and thus one hears chauvinistic sentiments from unexpected quarters. But the real issue is whether the proposed variation in the upper limit will bring in foreign aid and collaboration on a much larger scale than at present. The isolated swallow may not make a summer but I just cannot see why any foreign participant should invest more money which does not increase his effectiveness; actually he will be increasing his risks without corresponding gain. Minority participation should be sufficient for offering technical help and keeping a watch on the operations of a shipping company while benefiting partially by its prosperity. The idea of an investors' queue, waiting around just for permission to invest a larger proportion of capital has no truth in reality. While any progress in liberalisation of the terms of foreign participation should be welcomed always as a sign of maturity in policy, there is no point in starting (or reviving) a controversy which may end as before in the maintenance of the *status quo* in the face of overwhelming pressure.

* * * *

Unwieldy State Cabinets

Whatever the factors inspiring Mr. Pratap Singh Kairon's drastic cut in the size of his cabinet, it has set an example which the public greatly appreciates but finds that it has not been followed elsewhere. Suggestions to the Congress leadership that a wider adoption of a reduced size for State Cabinets will be welcome, has been invariably answered by the laconic statement that efficiency should not be affected—as if anyone suggesting it desires such a result. Few believe that the unwieldy cabinets in some States have any relation to efficiency; in fact, pruning may increase efficiency all round, as the States with small cabinets have demonstrated. So the answer convinces no one, perhaps not even those who give it; that it continues to be offered is an affront to public intelligence. The saving in Punjab is expected to be about Rs. 1½ lakhs per month—no small amount at a time when poor persons are giving their all to the defence fund. But political stability will be affected when some Ministers are thrown out and the problem of finding berths for the dispossessed may become acute in some States including Punjab. The question seems to be one of balancing the short-term difficulties within the party against the increase in popularity of the Congress which such austerity can confer.

The States have been readily slashing their plan outlays for the next year and do not seem to have shown any fear of unpopularity. To

(Continued on page 92)

GOLD CONTROL RULES

BID TO BRING DOWN PRICE AND STAMP OUT SMUGGLING

THE Government of India promulgated, under the Defence of India Act, the Gold Control Rules on the night of 9th January 1963. The Rules embody a series of measures to bring down the price of gold to around the international parity and to stamp out smuggling of gold. The main features of the Rules are: (1) Registeration and licensing of all power-operated refineries and major bullion dealers and drawing up prescribed procedures for conduct of their business, (2) embargo on any deals in new ornaments of gold above 14 carats, (3) declaration within 30 days in a prescribed form by all individuals and institutions of their gold holdings other than ornaments, with minor exceptions, (4) making it illegal for any individual or institution, other than a licensed dealer, to acquire additional non-ornament gold, except by inheritance or with a special permit, and (5) prohibiting all dealers from making any article of gold, except ornaments as specified, without special authorisation.

The Rules, which have taken effect from the 10th inst., are being administered by a specially constituted four-man Gold Control Board. The Board is also to take suitable measures to discourage the use of gold and to curb the demand for it. Execution powers, ranging from search and seizure to confiscation, have been entrusted to the Central Excise authorities. Non-compliance with the Rules will invite penalties like fines and imprisonment. Adjudication and confiscation under the Rules cannot be questioned in any court of law.

The Government's decision to promulgate the Rules was broadcast by Mr. Morarji Desai, Union Finance Minister, at 8-30 p.m. on the 9th inst. Mr. Desai declared that the Rules aimed at reducing the demand for gold without which the drain on the country's foreign exchange resources by way of persistent smuggling of gold could not be stopped. But, he clarified, the Government did not intend to harass the public, for only gold other than in the form of ornaments had to be declared. According to him, further measures are likely on the recommendation of the Gold Control Board.

The following is the full text of the official summary of the Gold Control Rules:

"The habit of buying gold is widespread in the country. The bulk of the demand for gold in the country is for traditional purposes such as marriages as well as for hoarding and speculation. The hoarding demand arises mainly from illegally acquired funds. As import of gold is banned and as the output of Kolar does not go into the market, purchase of gold, which is completely unproductive, pushes up the internal price and encourages smuggling which causes an annual foreign exchange loss equivalent to many crores of rupees. Smuggling cannot be completely stopped by the Customs staff so long as smuggled gold is easily transferable and the internal gold price is much higher than the internationally fixed price. Legislative and administrative measures directly to deal with smugglers and abettors, including deterrent punishment, are necessary and have been progressively intensified over the last few years. However, such measures can have a lasting effect only if the domestic demand aspect is effectively dealt with. In the ultimate analysis, it is only by curbing domestic demand for gold and thereby bringing down internal prices that smuggling can best be prevented. In the present emergency, when the threat of external aggression makes it imperative that the available savings of the public should go into defence and development and not be locked up in any unproductive form, the need to prevent smuggling is more urgent than ever.

"The Gold Control Rules are, therefore, issued as an amendment to the Defence of India Rules, 1962. These Rules come into effect from the midnight of January 9/10, 1963. The Rules are concerned with gold in any shape or form with a fineness of not less than nine carats. They are intended to regulate, in a detailed manner, the business of power-operated refineries and the larger dealers and seek to ensure a continual watch over them. They also provide for control over holdings of gold in shapes other than finished ornament in the hands of all others and envisage a few other measures which impinge on certain sections of the public. The Finance Minister has addressed the people on the radio on Wednesday night on these measures.

Gold Board

"The Rules are to be administered by a Gold Board composed of a non-official Chairman, and for the present, three members, two of whom are officials of the Ministry of Finance (Departments of Revenue and Economic Affairs) and one drawn from the Reserve Bank of India. The Gold Board now comprises Shri G. B. Kotak (Chairman), Shri B. N. Banerji (Member), Shri A. Baksi (Member), and Dr. N. A. Sarma (Member-Secretary). The office of the Board is in Bombay, for the present in the Reserve Bank of India Building. In addition to implementing the Gold Control Rules, the Board will take measures to discourage the use of gold and bring about conditions tending to reduce the demand for gold and will advise the Government on all matters relating to gold. Persuasion, through publicity and dissemination of information, will be an important aspect of the Board's work. The Board is also charged with a continuous study of the gold problem.

"Under the Rules, all gold refineries which operate with the aid of power, and all dealers in gold (e.g. bars, ingots, etc., ornaments and other articles made principally of gold) who are registered or come to be registered in terms of the sales tax laws, are required to apply to the Gold Board for licence within a month. Dealers who are not liable to apply may ask for licences if they wish to. The initial annual fee for the licence is Rs. 100, and the Superintendent of Central Excise in charge of the area where the applicant is situated is the issuing and renewing authority for licence. Pending receipt of licences or rejection of the applications, they may continue in business. On the receipt of an application for a licence, the Board may, after due inquiry, grant the licence or reject the application. Licences will not be refused to dealers except for good reasons.

Control on Refineries, Dealers

"Power-operated refineries and dealers required to be licensed will have to furnish immediately, in prescribed forms, full details of their initial stocks of gold in all shapes and forms and periodical returns thereafter of all acquisitions and disposals. They will be liable to produce documents as and when wanted and be subject to inspection, and also if necessary, to search and seizure. The control over licensed refineries and licensed dealers will be somewhat on the lines of those exercised over factories producing goods liable to central excise duties and will be operated mostly through the Central Excise staff. The licensees are required to maintain registers and to submit returns each month.

"Licensed refineries will not be permitted to make any article of gold other than primary gold (i.e., bars, ingots, etc.) or to do business with anybody other than licensed dealers. Dealers, whether licensed or not, shall not, without special authorisation, make any article of gold except ornaments. If a licensed dealer needs non-ornament gold, he can buy from another licensed dealer or refiner or from a person who has disclosed his holding of such gold to the Board, but from none else. A dealer who does not have a licence will not be permitted to acquire non-ornament gold. If any refiner or dealer who is liable to ask for a licence fails to do so, or if his application is rejected or if his licence once given is cancelled later, he will have to close his business and make over to the Central Government his stock of gold for which payment will be made at the internationally fixed price.

"Every other person (i.e. individual, association, company, temple, religious institution, etc.) who holds gold in any shape *other than ornament* will have to declare that holding to the Board within thirty days if the holding is above certain small exempted limits, in a prescribed form. Subsequent acquisition of non-ornament gold except by inheritance or special permit will not be allowed. Gold existing in the shape of ornament will not have to be declared. All further acquisitions and disposals of non-ornament gold will have to be declared as and when they occur. No declaration or further declaration is required in respect of gold owned by a minor unless it exceeds twenty grammes; for others the exemption limit is fifty grammes. Every declaration is to be made to the nearest Central Excise Officer of or above the rank of Inspector, in triplicate in the prescribed form, one copy of which would be authenticated by him and be returned to the person making the declaration. After declaration, non-ornament gold can be sold only to licensed dealers. Grant of loans on the hypothecation, pledge, etc. of non-ornament gold will be illegal unless such gold has been declared. Any person in possession or control of any gold, other than ornament, is presumed to be its owner.

Deals Above 14 Carats Banned

"Hereafter, under these Rules, no manufacture, acquisition or sale of new ornaments with a fineness above 14 carats will be permitted. Ornaments already in stock, irrespective of fineness, may be sold by dealers, whether licensed or not, for a limited period. Holders of old ornaments can retain them, or sell them to licensed dealers for melting down. Such ornaments, of gold purity above 14 carats, can also be taken to any dealer for polishing, or repair, or conversion into new ornament of gold purity upto 14 carats; they can be exchanged or sold directly between private parties. No manufacture by anybody of articles of gold other than ornaments is permitted except where the Board gives a special authorisation.

"Under these Rules as they stand, the gold holdings of persons (other than refiners and dealers to be licensed) in the form of finished ornaments are not required to be declared. New gold ornaments having a purity exceeding 14 carats cannot be made, bought or sold. Even when old ornaments are melted and converted into new ones, this rule has to be observed.

"Subject to suitable safeguards, the Rules give authorised Central Excise officers the necessary powers of search, seizure, ordering the production of documents, obtaining and testing samples of gold, confiscation, adjudication, etc., with provision for a final appeal to the Central Government. The Rules also provide for penalties and prosecutions for contraventions. The officers have been instructed to enforce the Rules firmly, with vigilance, but without causing unnecessary harassment to licensees and other individuals who have gold. In fact, the officers would extend every facility and assistance to the parties concerned to understand the Rules and follow the prescribed procedures. Whoever is in doubt regarding the procedures and obligations under these Rules may with advantage contact the Central Excise Office in the jurisdiction of which he is located."

NEW IMPONDERABLES IN OIL

PLETHORA OF PROPOSALS BEFORE GOVERNMENT

From Our Special Correspondent

NEW DELHI, *8th January*

DELHI LETTER

WHILE there is today little difference of opinion on the estimates of between 17 and 18 million tons as the projected demand for petroleum products by the end of the third Plan, the Planning Commission, the Oil Ministry and the foreign oil companies operating in the country continue to be at loggerheads over the process of quickly attaining this scale of refining capacity and over the most economic method. A high-level committee, consisting of five Ministers, will ponder the question of increasing oil refining capacity. As at present in operation the private sector refineries are able to refine 7.25 million tons per annum.

Mr. Malaviya has announced that he proposes to expand public sector oil refining to around ten million tons a year. According to Mr. Malaviya, the Barauni and Gujarat refineries, with Soviet collaboration, will have a capacity of three million tons each and the Nunmati plant's capacity will be raised from 750,000 tons to 1.25 million tons. The fourth public sector refinery, planned in Cochin, will have a capacity of 2.5 million tons. At the same time, Mr. Malaviya says that Burmah-Shell and Esso are being allowed to expand their plants marginally to 6.25 million tons. These plus the Caltex and Assam Oil refineries would give a total of nearly 18 million tons.

The Oil Ministry is known to favour the proposals of the American independent operator, Philips Petroleum, for the Cochin refinery with the Government having the majority holding. Esso's proposals are said to be for an increase of one million tons before the end of the third Plan and another million tons during the latter half of the fourth Plan. Burmah-Shell, on the other hand, is reported to be willing to expand refining capacity by two million tons, in one stroke, to 5.5 million tons.

Even after all the expansion plans outlined by Mr. Malaviya are implemented, there may be a gap of about one and a half million tons of highspeed diesel, kerosene and furnace oil. Expert opinion is that refining capacity will need to be about 20 per cent higher than the demand to meet consumption needs in full in all varieties by the end of the third Plan. This would mean a capacity of more than 20 million tons for total self-sufficiency in refining. The present total refining capacity is eight million tons. Eighty per cent of the refining is of imported crude oil. Mr. Malaviya says that the public sector refineries should be based on indigenous crude to save foreign exchange and this can be ruled out for the Cochin refinery which will have to depend on supplies from West Asia. The oil reserves so far discovered in Assam and Gujarat, according to expert opinion, will be unable to sustain the increased rate of production which Mr. Malaviya hopes to have for the public sector refineries.

Aid to Nepal

Nepal is the only foreign country where Indian foreign assistance is being used to any substantial extent and the prize project, the Trisuli hydel scheme, is suffering from long delays. The main reason for the delay has been the difficulties in operating the three-party regional transport organisation in which India, Nepal and the United States are participating. This organisation is being wound up and the Trisuli project is being delayed for want of a good road from Kathmandu to Trisuli to carry heavy machinery. The Trisuli hydro-electric project is entirely financed by India and the cost of the scheme may now be between Rs. 8 crores and Rs. 9 crores, as against the original estimate of Rs. 3.5 crores. In the beginning, the plan was to have a weir, but, since digging showed rocks instead of sand, it has now been decided to have a barrage. The original target date for the project to start producing power was the end of 1962. Work on the road to Trisuli was begun in 1957 and the road was supposed to be ready in 1960 for the engineers to begin transport of heavy equipment. The road was opened to traffic only early in 1962 and it was usable only for five months last year. Floods have swept away some bridges and it has been found that the road is still not strong enough to permit flow of heavy lorries. If everything goes smoothly, the project is now expected to be complete by 1965.

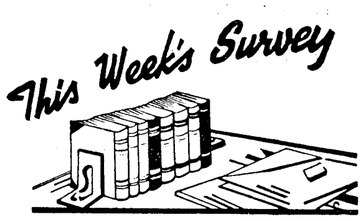
Meanwhile, the Chinese have completed their survey of the road to link Kathmandu with the Tibetan border and Lhasa. King Mahendra has brushed aside Indian arguments that the Nepal-Tibet road link would increase the military potential of the Chinese threat from across the border and is expected to sign soon the protocol on the eighty-mile road. Soon afterwards, scores of Chinese engineers will swarm the Nepalese countryside. The Chinese have offered a total assistance of Rs. 16 crores to Nepal.

When Pakistan accepts Chinese economic assistance, all countries neighbouring India would have accepted Peking aid. In talks between the Chinese Vice-Minister for Trade and Pakistani Ministers, the question of Chinese assistance was discussed and Pakistan's Foreign Minister has announced acceptance of the offer whose details remain to be worked out. The talks took place when the Chinese Minister visited Pakistan for negotiating a trade agreement. China is short of foodstuffs but has renewed its rice for rubber arrangement with Ceylon which will send 33,000 tons of rubber in exchange for 200,000 tons of rice this year. Numerous Chinese experts have been visiting Burma to implement projects included in the Rs. 40-crore Peking assistance to Rangoon. Peking assistance to non-communist Asian and African countries is now about Rs. 170 crores out of its total aid of more than Rs. 620 crores.

Foreign Assistance

In discussions with Mr. David E. Bell, Director of the U.S. Agency for International Development, who was in Delhi this week, Indian Ministers and officials raised the question of Washington announcing the assistance it is likely to give for the next three years of the third Plan. The initial reaction is the continued U.S. reluctance to make any bulk commitment. It appears certain that the United States will not unilaterally announce its commitment for the rest of the Plan period but may be willing to do so if the other aid-India consortium member nations will also announce their commitments.

At the end of 1962, according to the Indian accounting, authorisations of assistance to India (loans repayable in foreign currency, repayable in rupees and grants) aggregated Rs. 3,764.7 crores. Of these, loans repayable in foreign currency were Rs. 2,257.09 crores, loans repayable in rupees were 833.78 crores (Rs. 315.71 crores excluding P.L. 480) and grants authorised amounted to Rs. 673.83 crores. The utilisation was Rs. 1,315.81 crores from loans repayable in foreign currency, Rs. 364.82 crores from loans repayable in rupees, and Rs. 283.1 crores in the case of grants.



In foreign currency loans, the break-up at the end of 1962 was as follows (with utilisation in brackets): World Bank: to public sector Rs. 248.83 crores (Rs. 208.38 crores), to private sector Rs. 140.42 crores (Rs. 94.40 crores); I.D.A: Rs. 101.18 crores (Rs. 3.69 crores); Britain Rs. 249.32 crores (Rs. 161.48 crores); West Germany Rs. 220.82 crores (Rs. 210.47 crores); United States Rs. 404.5 crores (Rs. 17.75 crores); Soviet Union Rs. 383.79 crores (Rs. 115.2 crores); Canada Rs. 25.23 crores (Rs. 15.71 crores); Japan Rs. 65.71 crores (Rs. 24.49 crores). The other loans are from Czechoslovakia, Yugoslavia, Poland, Switzerland, France and Italy.

The total I.M.F. authorisations at the end of 1962 were Rs. 309.47 crores and the actual drawings were Rs. 273.75 crores. The total of foreign loans also includes Rs. 34.19 crores from Kuwait which was the amount involved in the withdrawal of Indian rupee currency from West Asian areas.

The rupee loans authorised by the United States total Rs. 833.78 crores, of which P.L. 480 accounts for Rs. 518.07 crores. Total utilisation from these is Rs. 364.82 crores.

Among the grants, Rs. 544.93 crores are from the United States (including the Ford and other Foundations) and Rs. 170.5 crores of these have been utilised. The other major grant is from Canada amounting to Rs. 103.5 crores, of which Rs. 89.23 crores have been utilised.

The U.S.I.S. accounting of the American assistance at the end of 1962, shows a total of Rs. 2,173.2 crores, comprising Rs. 1,100 crores loans repayable in rupees, Rs. 443 crores repayable in dollars and Rs. 630 crores grants.

THE RIHAND PROJECT

RIHAND, the biggest hydro-electric project of Uttar Pradesh, completed eleven months ago, was formally commissioned by Prime Minister Nehru early this week. The project, located on the Rihand river at Pipri in Mirzapur district, has been supplying power for some time now to the Hindustan Aluminium Corporation, a Birla enterprise which recently commenced production. Some of this power has also been made available to the Damodar Valley Corporation which caters to the industrial belt in Bihar and West Bengal. The U.P. Government cement factory at Churk in Mirzapur district is another major beneficiary of the project. The proposed caustic soda factory at Mirzapur and the integral coach factory of Varanasi will be likewise based on Rihand power. The availability of this power will render possible the projected electrification of railways from Moghalsarai to Patna. When the other big industrial projects, such as the tyre and tube factory at Naini (Allahabad) and the fertiliser factory at Gorakhpur, come up, Rihand power will be readily available for them too. All these new industries, which will consume 60 per cent of the entire Rihand power, are bound to transform the eastern districts of Uttar Pradesh which have been a by-word for poverty and economic backwardness.

The United States can justly claim the larger share of credit for Rihand, for its assistance by way of loans and grants has met 62 per cent (Rs. 28.4 crores) of the estimated total cost (Rs. 46.0 crores) of the project. This assistance, incidentally, represents 6.7 per cent of the aggregate American aid, to-date, of Rs. 424 crores for power development in India. The fact that two American engineers—Dr. J. L. Savage who carried out preliminary investigation in 1947 and Mr. H. A. Taylor who was construction adviser between 1957 and 1959—were associated with the project invests it with some additional significance. This significance is that the Rihand Dam, being a massive 300 feet high, straight-gravity concrete dam, is entirely American in its conception and in some of its distinctive features like the four inspection and drainage galleries at varying elevations from the foundation.

Some interesting details of the Rihand Project may also be noted here. First, its reservoir, with a water spread of 180 sq. miles and a storage capacity of 8.6 million acre feet, has the distinction of being the largest man-made lake in India. Secondly, its power house has an installed capacity of 250,000 kw. which will be ultimately raised to 300,000 kw. The Obra Dam Powerhouse, under construction at a site 20 miles downstream of Rihand Dam, will add a further capacity of 100,000 kw. to the Rihand power system. Thirdly, nearly two million acres in Uttar Pradesh and Bihar will be brought under irrigation through tube-wells energised by Rihand power and through additional firm supplies of water made available by the project to the Sone Canal System. It is, indeed, remarkable that a relatively small river like the Rihand, which is just 120 miles long, has been harnessed on such a vast scale for power generation and irrigation.

ENGINEERING INDUSTRIES

The general and electrical engineering industries other than heavy engineering cover a vast field and account for a total annual output of about Rs. 350 crores at the present time. Their development during the last fifteen years has been quite impressive. Installation of modern machine tools and adoption of improved methods of manufacture have led to the establishment of a large volume of capacity in these industries. But all this capacity, it has been known for some time, has not been fully utilised on account of shortages in the supplies of coal and coke, power and transport, iron and steel, and other raw materials like non-ferrous metals. The Engineering Association of India (Calcutta), it will be recalled, has repeatedly drawn the attention of the Government in recent years to the large proportion, about 50 per cent, of unutilised capacity in engineering industries.

In view of the national emergency created by Chinese aggression, the Association has just reiterated its plea for fuller utilisation of engineering capacity on two grounds. First, as many of the engineering industries can meet a variety of defence requirements, the idle capacity available with the different firms will come in handy for ready and speedy utilisation. Secondly, when the available capacity is thus fully utilised, there will be no shortage of engineering stores in the market and this will keep their prices in check. The Association has, therefore, done well to urge that, by and large, defence requirements should be met through fuller utilisation of capacity rather than through diversion of any engineering industry's entire production to the defence field.

Noteworthy in this context is the Association's latest survey of the exact idle capacity available with its member firms. The results of the survey, covering 79 firms which alone have provided clear and specific data, are quite revealing. The idle capacity in these 79 units together amounts to 341,852 machine hours *per month*, without taking into account casting, galvanising, etc. Out of this, 97,454 machine hours are idle for lathes and automatics, 11,816 for boring, 19,908 for milling, 11,179 for shaping, 39,341 for drilling, 35,735 for grinding, 31,435 for pressing, and 39,143 for welding, etc. These results do not indicate the types and ranges of different machines installed, nor do they provide a full measure of available capacity by taking into account possible multiple-shift working. In spite of these limitations, the survey does confirm the existence of a lot of idle capacity in the engineering industries.

All the 79 firms, besides 40 others, are stated to have evinced interest in undertaking defence production. Only some of them may have to install balancing equipment for utilising their existing capacity fully. But all of them will require regular and adequate supplies of power and raw materials. Their immediate requirements of iron and steel, non-ferrous metals and stores may have to be obtained from abroad with the help of more untied credits or, as recently suggested by Mr. K. L. Chowdhary, the erstwhile President of the Engineering Association, on some kind of lease-lend basis. If the engineering industries are thus enabled to utilise their large unutilised capacity fully, they can cater not only to defence requirements but also to domestic and foreign markets to a greater extent than now.

AN OBJECT LESSON

Whatever be the cause—Government bungling or emergence of acute foreign competition—the fact remains that Kerala has lost one of its most valuable export trade, namely, that in mineral sand. All processing units in the State, except one, are reported to have closed down. Ten thousand workers have been thrown out of employment. The employment situation in the State being what it is, there is little chance of their finding alternative employment. The State Government will lose, as a result of the loss of export markets, a sum of one crore of rupees in royalty and the country a valuable source of foreign exchange.

Opinions are sharply divided as to the exact cause of the loss of export markets. According to the leaders of the non-Communist Revolutionary Socialist Party, which leads the mineral workers at Chavara, Quilon, the centre of the mineral industry, the loss of export markets for Kerala's mineral sands is due to the "bungling, apathy and indifference" of the present State Government which continued the wrong policy followed by the former Communist Government of the State. The decline of the once-prosperous export trade in mineral sands started ever since the Communist Government rejected a U.S. demand for a five-year contract for the continued supply of mineral sand. It is said that the main reason for the rejection was the belief of the Industries Minister in the Communist Cabinet that, since Kerala held a world monopoly in mineral sands, it could dictate terms to any foreign buyer. This attitude of the Government, coupled with the pronounced leanings of the Communists towards Russia and other communist countries, forced American buyers to look for other sources of supply and when they did find alternative sources of supply, they promptly switched over their purchases to them. Norway, it is said, is now supplying most of the requirements of the U.S.

The P.S.P.-Congress Coalition Government, which succeeded the Communist, could have improved matters. But, instead of reversing the wrong policy, the Coalition Government, it is averred, continued it. What is more, it foolishly rejected the demand for a reduction in royalty made by private companies to offset the rising cost of processing of mineral sand. As a result, practically all the processing units, including one run by the Government, have closed down.

The Kerala Government, however, has a different story to tell. According to Mr. K. A. Damodara Menon, the State's Industries Minister, the loss of export trade in mineral sand is not due to the wrong policy followed by the Government but because Kerala lost its monopoly in mineral sands when other countries like Norway, Canada, Ceylon and South Africa started producing minerals from sand. The State Government, according to him, is trying its best to revive the mineral processing industry which had languished as a result of the loss of export trade.

The Minister's explanation is not wholly convincing. The emergence of new competitors cannot explain the total loss of longstanding customers. Traditional buyers would not easily switchover to new sources of supply, unless the price advantage is great and they are dissatisfied with the quality of the product or the business practices followed at this end. Further, Mr. Damodara Menon's explanation clearly shows that his Government was not wideawake to the emergence of powerful competitors. This is evident from its failure to provide the necessary incentives for retaining the established markets. This failure makes nonsense of its exhortation to industrialists in other parts of India to invest in and establish new industries in Kerala. Be that as it may, there is in it an obvious lesson for the whole country also. It is not easy to win back lost customers and if this realisation were to result in a more helpful and realistic policy in regard to exports in general, Kerala's loss would not have been in vain.

PRE-SHIPMENT INSPECTION

The news that a Bill for banning export of sub-standard goods has been drafted is indeed welcome. This move, though belated, reflects the Government's intention not to leave the question of quality control of export goods to chance any more. The Export Inspection Advisory Council, at its first meeting in New Delhi on Monday, readily endorsed the draft legislation, entitled Export (Quality Control and Inspection) Bill. The Council, which has been set up by the Union Ministry of International Trade, is entrusted with the task of advising the Government on the question of programmes, procedures and specifications for the various measures of quality control of export goods. How far the commencement of the Council's working and the approval of the Bill are significant can be gauged from the statement of Mr. Manubhai Shah who inaugurated the Council's meeting: "As we have begun this work of quality control and pre-shipment inspection in 1963 in a big way, I hope that, in the history of India's development, the year 1963 will register itself as 'a quality control year'."

One cannot, however, help feeling a sense of dissatisfaction at the inordinate delay which has occurred in the drafting of the legislation. The Bill, it should be remembered, is based on the Report of the *ad hoc* Committee on Quality Control and Pre-shipment Inspection (Chairman: Dr. Lal C. Verman, Director, Indian Standards Institution). Although this report was submitted to the Government about two years ago, it has been keept in abeyance for too long, despite the pressing demand for all-out efforts to promote exports. It is surprising that the Government should fail to expedite implementation of such measures as are of vital significance in export promotion. Besides quality control, the question of cost studies of export commodities, which was raised early last year, has also not received as much urgent attention as it should have. It was only last month that a committee for studying cost structure was constituted. Nobody knows how long the Committee will take to prepare a report. Since quality and cost are the basic determinants of any increase in exports, questions concerning these factors ought to receive prior consideration at the hands of the Government and others concerned.

The object of the Export (Quality Control and Inspection) Bill, a few details of which are just available, is mainly to ensure more stringent control on the quality of export goods and thereby enhance the prestige of India-made goods among overseas buyers. The Bill seeks mainly to enforce pre-shipment inspection on a wide range of exports, on the basis of standard specifications designed by appropriate agencies. The scope of certification marks of the Indian Standards Institution, as also Agmarks for some of the agricultural products, Itex mark for cotton textiles and several Q marks of States will be widened to serve this purpose. Goods which are not amenable to compulsory pre-shipment inspection will be subject to some kind of factual inspection. There is nothing new in these techniques, as several successful exporting countries like Japan have adopted them and reaped rich dividends. In Japan, incidentally, about 145 major export commodities, covering 40 per cent of its total shipments, are covered by compulsory pre-shipment inspection schemes. Six Government institutions and about 40 private organisations are entrusted with the task of inspecting goods in Japan.

Of course, compulsory pre-shipment inspection schemes cannot be said to be entirely new to India. For a few commodities, such as tea, coffee and coir, are already subject to statutory regulations of this type. Voluntary pre-inspection schemes have also been brought into force by export promotion councils such as those for mica, cashew, spices and leather. But these voluntary schemes have not been able to attract all the exporters in the field; hence the introduction of statutory regulations. Industry and trade, however, have no reason to feel unhappy about the element of compulsion now sought to be introduced. For most exporters presumably seek to ship goods of reasonably good quality and the control will adversely affect only the black sheep who are in a small minority. Mr. Manubhai Shah himself sought to dispel any misunderstanding on this score when he stressed that the quality control work would be carried out only in full consultation with exporters. Besides Government agencies, the schemes will be carried through export promotion councils and other specialised export agencies. One of the genuine fears of exporters is that official controls would lead to undue delays in export transactions. It is necessary, in this connection, to avoid any duplication of inspection work. While quality control is admittedly of vital importance, necessary precautions should be taken to prevent corollary procedures from becoming a drag on the swift movement of merchandise.

(Concluded from next column)

sands of marks for a single night: prices will look more familiar and be easier to convert into their own currencies.

How are the Finns themselves taking the reform? By and large, very peacefully. There are some, of course, who, despite all official reassurances, refuse to believe that there is no catch to it. There are even a few individuals who steadfastly believe that they will be loosing 99 per cent of their savings. One suspicious farmer recently sold some timber on the specific condition that the rest of the purchase price be paid next spring in old bank notes! His customer may be in for trouble: by next spring, almost all the old bank notes will have been destroyed by the Bank of Finland and replaced by new ones.

THIS IS ONLY AN ANNOUNCEMENT OF INTENTION TO MAKE PUBLIC ISSUE OF SHARES AND IS NOT A PROSPECTUS

PYROTENAX INDIA LIMITED

(Incorporated on the 7th July 1962 under the Companies Act, 1956)

Registered Office : 9 Wallace Street, Fort, Bombay-1

AUTHORISED CAPITAL.....60,000 Equity Shares of Rs. 100/- each .. Rs. 60,00,000
ISSUED CAPITAL.....55,000 Equity Shares of Rs. 100-/ each .. Rs. 55,00,000

SUBSCRIBED CAPITAL:

(a) Pyrotenax Limited, Hebburn, England, have agreed to subscribe for and have been allotted 5,500 Equity Shares of Rs. 100/- each credited as fully paid up for consideration other than cash, namely supply of technical know-how and technical assistance pursuant to the Technical Collaboration Agreement dated 26th November 1962 entered into with them .. Rs. 5,50,000
(b) The Bombay Company (Private) Limited, Bombay, the other promoters, have subscribed for and have been allotted 6,250 Equity Shares of Rs. 100/- each for cash, on which Rs. 50/- per each Equity Share has been paid up .. .. Rs. 6,25,000
(c) The Directors, their friends and associates have subscribed for in cash and have been allotted 7,000 Equity Shares of Rs. 100/- each, on which Rs. 50/- per each Equity Share has been paid up .. .. Rs. 7,00,000

Rs. 18,75,000

RESERVED FOR SUBSCRIPTION :

Pyrotenax Limited, Hebburn, England, one of the promoters, have agreed to subscribe for and will be allotted 22,000 Equity Shares of Rs. 100/- each credited partly for cash and partly for plant and machinery agreed to be supplied by them pursuant to an Agreement dated 26th November 1962 .. .. Rs. 22,00,000

Rs. 40,75,000

NOW OFFERED AT PAR TO THE PUBLIC FOR SUBSCRIPTION IN TERMS OF THE PROSPECTUS : 14,250 EQUITY SHARES OF Rs. 100/- EACH.

(a) Rs. 25/- per share on application ;
(b) Rs. 25/- per share on allotment ;
(c) balance of Rs. 50/- per share on call to be made subsequently but not earlier than three months after the date of allotment.

BOARD OF DIRECTORS

Name	*Address*	*Description and Occupation*
1. Mr. F. W. Tomlinson ..	Pyrotenax Limited, Hedgeley Road, Hebburn, County Durham, England.	Chairman and Mg. Director, Pyrotenax Limited, Hebburn, England.
2. Mr. E. S. Vernon-Jones ..	Wallace Bros. & Co. Ltd., 4, Crosby Square, London E.C. 3.	Director of— The Bombay Company (Pte.) Ltd.
3. Mr. G. V. Nath	The Bombay Co. (Pte.) Limited, 9, Wallace Street, Bombay-1.	Director of— 1. The Bombay Company (Pte.) Ltd. 2. The Lakshmi-Vishnu Cotton Mills Ltd.
4. Mr. Jaisinh Vithaldas ..	Vishnu Villa, Worli Seaface, Bombay-18.	Partner of—Vissanji Sons & Co. Director of— 1. Wallace Flour Mills Co. Ltd. 2. The Bank of India Ltd.
5. Mr. C. H. Pardiwala ..	Crawford Bayley & Co., State Bank Buildings, Bank Street, Bombay-1.	Solicitor and Partner of Crawford Bayley & Co., Solicitors.

LOCATION OF THE FACTORY

It is proposed to purchase an industrial site in Kirkee near Poona, for the erection of the Company's factory.

EXISTING AND PROPOSED ACTIVITIES

The Company has been incorporated with the immediate object of manufacturing and marketing of every kind of mineral insulated metal sheathed cables. Pyrotenax Limited, England, who are the leading manufacturers of special types of cables, have agreed to subscribe Rs. 27.5 lakhs which will be 50 per cent of the Company's issued capital. Pyrotenax Limited are the Technical Collaborators to the Company and have agreed to supply plant and machinery.

DATE OF OPENING AND CLOSING FOR SUBSCRIPTION

The Subscription List will open at the commencement of banking hours on the 21st January 1963 and will close at the closing of banking hours on the 29th day of January 1963 or earlier at the discretion of the Director but not before the close of banking hours on the 23rd January 1963.

FROM WHOM APPLICATION FORMS ALONG WITH COPIES OF PROSPECTUS CAN BE OBTAINED

Copies of application forms and of prospectus can be obtained from the Registered Office of the Company and from the Company's undermentioned Bankers and Brokers.

BANKERS :

THE CHARTERED BANK, Chartered Bank Buildings, BOMBAY. Branch Offices : Calcutta, New Delhi, Madras, Kanpur, Delhi, Cochin, Calicut and Amritsar.

THE BANK OF INDIA LIMITED, 70/80, Mahatma Gandhi Road, BOMBAY-1. Branch Offices : 23-B, Netaji Subash Road, Calcutta ; 54, Janpath, New Delhi ; 10, Armenian Street, Madras ; Thapar House, Kasturba Gandhi Marg, Kanpur ; Mahabir Trust Building, Chandni Chowk, Delhi-6 ; 3/51, Bazar Road, Cochin ; Silk Street, Calicut ; Hall Bazar, Amritsar ; Bhadra, Ahmedabad ; B-4-329, Sultan Bazar, Hyderabad and Pungaliya Bhuvan, Santa Bazar, Indore.

BROKERS

BOMBAY : Dorabji Framji, 59, Apollo Street, Fort, Bombay-1.

● Harkisondas Lukhmidas, Stock Exchange Building, 5th Floor, Apollo Street, Fort, Bombay-1.

MADRAS : Paterson & Co., 22, Errabalu Chetty Street, Madras-1.

CALCUTTA : Place, Siddons & Gough Private Ltd., 6, Lyons Range, Calcutta-1.

THE HEAVY FINNMARK

LAST TRACE OF PAST INFLATION REMOVED

(By A Correspondent)

ON 1st January 1963, there was a currency reform in Finland; on that day, a new monetary unit equivalent to 100 present-day marks, was adopted. This is merely a technical reform, similar to those effected by many other countries since the war—by France, for instance, in 1960. Nobody loses, nobody gains: to put it simply, it means dropping two zeros or dividing all values expressed in terms of money by 100. All prices, wages, assets, liabilities, exchange rates, pensions, insurance policies, etc., have changed in the same proportion.

Why was this necessary? The reason in Finland is the same as in the other countries that have effected similar reforms: past inflation, particularly during and after the two world wars has diminished the value of the currency unit. The purchasing power of the 1962 mark in Finland is only 1/250th part of that of the original silver mark of 1860. (The Finnish mark, incidentally, was established as a national currency 13 years before the German mark.) An excessively small currency unit has many practical and psychological disadvantages, and the latter are by no means the least: diminishing respect towards the currency unit produces many far-reaching effects on national spending habits. For a foreign tourist, a small currency unit gives an impression of inflation and weak currency, however strong the currency may in fact be.

The Finns have thus to learn to live with a new, larger currency unit, and to practise the mental arithmetics which dropping the two zeros involves. It is simple in principle, but not always easy in practice for the ordinary citizen. He will have to re-learn all the numerical orders of magnitude in his daily life. Milk will cost 46 pennies, instead of 46 marks, a man's overcoat 155 new marks instead of 15,500 of the old ones, and the family home 35,000 marks instead of 3.5 million.

The French went through all this fairly recently. In France, however, the process of getting used to the new values was handicapped by the fact that the old denomination bank notes remained in circulation for some time before sufficient new ones could be printed. In Finland, fortunately, there has been time enough to prepare for the reform; a sufficient stock of new currency has been printed and minted well in advance. Banks and post offices have started issuing only new currency from 1st January, and so the total circulation will be replaced in a fairly short time, probably a few months. All the same, there will be no compulsory exchange of old money for new: old bills and coins will remain valid indefinitely. This will protect unsophisticated savers, who believe that a cookie jar is the safest place to put money by for a rainy day.

Unique Printing Features

By 1st January, as many as 76 million new bank notes are said to have been manufactured by the Bank of Finland. The Bank has profited from the occasion to make further improvements to Finland's bank notes, which, even before the reform, were technically of a high level, fully up to the standard of those in other West European countries. Thus, the new 100-mark note incorporates certain unique security printing features which have been developed by the Bank-Note Printing House of the Bank of Finland and which have never been used by any other printers of bank notes in the world. These include an application of higher mathematics (the Fourier series) to bank note printing, the result being a cleaner appearance for certain relief designs on the notes.

With its new machinery and improved techniques, the Bank-Note Printing House in Helsinki can even compete with internationally established security printing firms on normal commercial terms.

Following the currency reform, the Finish mark has become a fairly high-value currency unit on the international scale. The International Monetary Fund has approved of the new par value of the mark—3.20 NFmk to one U.S. dollar—in place of the old rate of 320 Fmk to the dollar. This puts the Finnmark in the same order of magnitude as many other West European currencies. Foreign tourists arriving in Finland will no longer be baffled by the fact that the price of a hotel room runs into thou-

(Continued in previous column)

SILVER MAY REACH NEW HIGH THIS YEAR

STEADY MARKET FORECAST FOR GOLD

A NEW peak for the price of silver in 1963 has been forecast by Mocatta and Goldsmid, a leading firm of bullion dealers in London and a subsidiary of Hambros Bank, in its Annual Circular for 1962. Assessing the price trend against the background of world consumption, which is running ahead of new production, the firm thinks that silver in New York may approach 129 cents per ounce (which is the monetary value of U.S. silver certificates) and that in London, it may exceed the sterling equivalent of this figure. The forecast for gold, on the other hand, is a steady market between $35.05 and $35.20, provided the principal central banks remain technically co-operative and the gold policy of the U.S. Administration appears to private buyers to be in line with its other economic and fiscal policies.

Founded in 1684 and acting as official dealers in silver bullion to the Bank of England ever since the Bank's formation in 1694, the firm of Mocatta and Goldsmid is an authority on precious metals. It points out, in the circular under review, that the prospect of an appreciable rise in the price of silver has been present in the minds of all informed observers for a long time past. By the end of 1961, a considerable speculative holding had been built up and consumers were holding larger stocks than usual. Yet 1962 began with speculative sales which, added to the normal selling by producers, brought down the London quotation for spot silver from 88⅛*d.* to 86½*d.*, despite considerable sales to the U.S. where the price was reduced concurrently by only one cent to 103⅜ cents.

Two Conflicting Influences

The downward trend continued in the following months which saw two new and conflicting influences, one from China and the other from Mexico. In March 1962, China reappeared as a seller for the first time since the previous November, albeit on a more modest scale. As a result, the premium commanded by forward over spot slipped from ⅜*d.* to ⅛*d.* and even altogether disappeared for a week in April. During this period, the spot price remained steady at 84⅜*d.* and so did the price in New York at 101¼ cents. The surplus Mexican silver that should have been marketed in New York was absorbed by the Bank of Mexico. The surplus in London was, therefore, shipped to New York. By the end of May, the Bank of Mexico is estimated to have absorbed 10 million ounces of silver.

The resumption of commercial and speculative buying in June pushed up the price to 89*d.* in London and 104¼ cents in New York, and the reaction to 86⅛*d.* and 102⅜ cents in July was short-lived, as the summer months of rest and relaxation saw active dealings by the manufacturers and the mints. Substantial sales were effected before the autumn to the mints in Canada, France, Switzerland and Holland, and the regular consumer demand continued unabated. The result was a steady rise in the price to 103⅜*d.* for spot and 104⅜*d.* towards the end of September, with New York quoting at 121¼ cents. The price would have risen faster and higher than it did had the Bank of Mexico not replaced in the market some of the earlier absorbed silver.

The past year's highest level was seen on 22nd October, when London stood at 104⅛*d.* and New York at 122 cents; the highest price recorded in any previous year was 96⅜*d.*, as quoted in February 1920.

In November, the New York price reacted to 118 cents and affected sentiment in London for the first time in the year. But December witnessed a narrow and steady market between 120¼ and 119 cents on a reduced turnover. Due to the year-end, speculators realised their profits and consumers seemed concerned with their stock position.

As manufacturers drew upon their accumulated stocks, demand for domestic consumption in the U.K. shrank in 1962. Only 2.5 million ounces were recovered from coinage, and in America the white metal used for subsidiary coinage by the mint was obtained, without recourse to the market, by retiring $5 and $10 silver certificates instead of drawing on the free stocks. Chinese sales in London amounted to 50 million ounces, only about half the previous year's level.

Notion Condradicted

Mocatta and Goldsmid says that 1962 was notable in the gold market for the reason that the notion that the price of gold could be as variable as any other commodity had been, for the time being, contradicted, although the freedom of the market had remained unimpaired. The credit for this 'real achievement,' the firm believes, goes to the U.S. Administration and the central banks represented at the Bank for International Settlements in Basle. The achievement is described in the circular as follows:

"None too soon, these quite distinct 'authorities' faced up to a situation that had become uncomfortable, if not intolerable, for them both. They had been challenged in recent years by a series of spontaneous attacks on the traditional price of gold as fixed by the authorities, which threatened a revaluation of all financial values. The two latest of these insurrections, though probably not the last, occurred in 1962 and provoked a defensive mobilisation. The central banks (having formed, late in 1961, what has come to be known as the 'gold pool') mobilised their technique, and the U.S. Administration mobilised the moral force necessarily involved in its custodianship of the international value of gold."

The London firm adds that this custodianship makes it, unfortunately, inevitable that the value of gold should be linked directly with the prestige of the U.S. dollar, which fluctuates for all sorts of reasons, good and bad.

Investment Demand for Gold

The general decline in the American business confidence, culminating in the President's method of dealing with steel prices, was largely responsible for a fall in the Dow-Jones industrial index by some 150 points (from 725 to 575) between New Year's Day and the middle of May. From the beginning of that month, the gold market turnover reflected the effects of this and other related disturbances, until the trend was reversed by the Telstar-relayed President's broadcast that he would do nothing to alter the price of gold. The reflection was that he could do, in case of need, plenty of other things to protect the international value and prestige of the U.S. dollar, and the immediate pressures were at once relaxed.

The total private investment in gold during April and May of 1962 is said to have been of a much greater size than at any similar period since the London gold market reopened in 1954. Much of that investment is believed to be still held.

After the Cuban crisis, the Circular records, and by the third week of October, demand for gold in London rose probably to unprecedented heights and the dollar equivalent at the fixing was advanced to $35.18¾. But, within a week, the price slipped down to $35.12 "as a result of massive intervention effectively managed by the Bank of England on behalf of 'the gold pool' and so it had become evident that private buyers would have to reckon with that 'authority' as never before." On 31st December, the price was at the year's lowest level of $35.06¾. In London, the highest level per ounce of fine gold was 251*s.* 3½*d.* in October 1962 and the lowest level was 249*s.* 1½*d.* in March 1962.

During the past year, Russian sales fell away by more than a third. The Middle East demand shrank following the embargo on forward trading in gold imposed by the Indian Government in November. Another important development was the increased flow of gold direct from Canada to South America.

Answering the question as to why people in Europe "speculate" in gold, the London firm says:

"In fairness, it should be added that, although the term 'speculation' is often used in connection with gold hoarding, it does not necessarily suggest irresponsibility. The remaining link between gold and the foreign exchange markets makes it inevitable that gold should be treated by Continental specialists and others as an alternative investment which, in return for a sacrifice of interest, offers security against loss such as other forms in investment cannot provide."

As in the preceding two years, the Royal Mint struck no Queen Elizabeth sovereigns in 1962. But it has been announced that minting will be done during 1963. Demand for sovereigns naturally increased with the demand for bar gold. With the working of the gold pool, however, and the relatively small fluctuations in the gold price, the premium on all gold coin over its intrinsic gold value showed more changes than usual.

The Queen Elizabeth sovereign fell in the early months from $9.70 to $9.30 in the absence of demand only to rally to $9.55 by 23rd July following subsequent increase in demand for gold. Thereafter it reacted slightly, but advanced to $9.80 during the Cuban crisis. Since then, the price drifted downwards and closed the year at $9.50.

The Union Ministry of Commerce and Industry proposes to set up a corporation, with a capital of Rs. 10 crores, to establish new textile mills, particularly in replacement of scrapped units, and to take over closed and "sick" mills. The shareholding of the Corporation, to be known as the Textile Industry Rehabilitation Corporation, is expected to be restricted to the Central Government, State Governments, the Industrial Finance Corporation, the National Industrial Development Corporation, State Financial Corporations and other similar institutions, as also Indian Cotton Mills Federation and other regional associations of textile mills.

LONDON LETTER

REFLATIONARY PUFFS

A TWO-TIER BANK RATE

(From Our Own Correspondent)

LONDON, *4th January*

THE Chancellor of the Exchequer seems to be picking up a lot of the pieces of advice tendered to him and issuing them as reflationary puffs, but he is certainly doing this in such a cautious way that one begins to wonder if their psychological impact, at least, is not being entirely thrown away. Instead of introducing a reflationary budget when he came into power, he has issued a series of measures intended to reflate the economy and, with all the pressure that is being put on him—and in this last week the Trade Unions have been hard at it because of their concern over mounting unemployment—the Chancellor's measures also give the impression of being drips that result from a squeeze.

Instead, for instance, of using the former Chancellor's weapon of the "economy regulator" and knocking up to ten per cent off all indirect taxes, he has struck only at the highest taxes: first came the motor cars and now this week radios, television sets, gramophone, gramophone records, and cosmetics have had their tax cut from 45 per cent to 25 per cent. This will leave extra spending power in the hands of the public to the tune of £30 million in 1963.

Indirect taxes now present a neater picture, as given subjects of taxation now fall into categories of 10 per cent, 15 per cent or 25 per cent but neatness is not what is wanted at the pre-

BANK RATES IN EUROPE

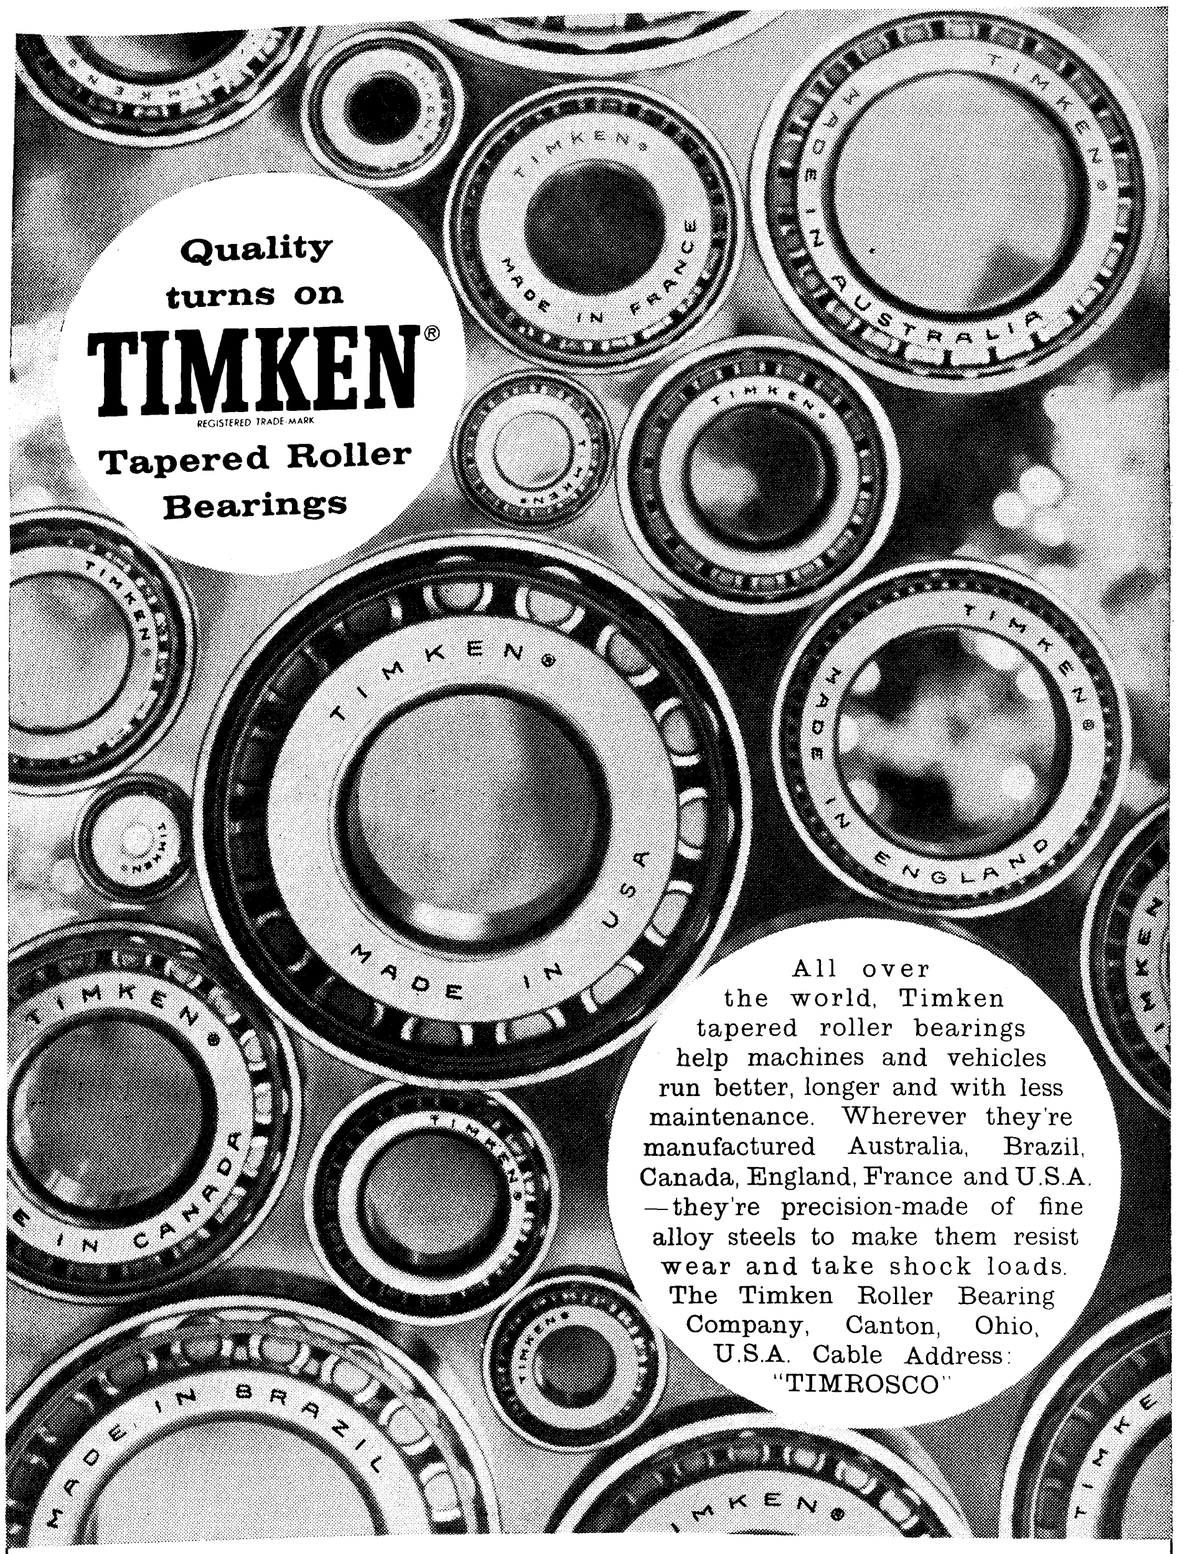
sent moment; it is a much bigger push to boost spending and production.

And the Chancellor should have been encouraged by the December gold and currency figures. These have shown an *inflow* of gold, etc., of £38 million in a month when traditionally there is an outflow on general account. But at the end of December, the Treasury has to service its post-war Canadian and American loans and this costs £66 million. The net effect, of course, is a reduction in the gold reserves of £28 million but it is important to make the distinction above between an inflow of gold due to factors arising in December and an outflow due to annual payments.



The U.K.'s gold and convertible currency reserves ended the year at £1,002 million and their movement over the past year can be summarised as follows:

	(In million £)
Reserves at the end of December 1961 ...	1,185
Gold *Inflow* 1962	309
Sub Total	1,494
Special Repayments	492
Reserves at the end of December 1962 ...	1,002

The greater part of these special repayments were repayments on capital account to the I.M.F. (including repayment of a drawing by Australia). The true increase after allowing for special repayments may in part be due to a favourable balance of payments over the year but certainly most of it will be due to a continued inflow of hot money. This, indeed, may have been the principal reason behind the good December figures.

But, with sterling so strong, the Chancellor has at last felt able to reduce the Bank rate by another ½ per cent to 4 per cent. This puts it in line with most European rates, although it is still above America. There is increasing speculation now that the Rate will be cut again. But this Bank rate of 4 per cent is a Bank rate with a difference, for the Chancellor and the Bank between them are still frightened of foreign funds being withdrawn and as a result we now have a two-tier Bank rate. Traditionally, Bank rate is the rate at which the Bank of England,

NATIONAL CL2-119-525A-62

CREDIT SITUATION IN PAKISTAN

FINDINGS OF THE OFFICIAL COMMITTEE

HOW is the credit situation in Pakistan? What measures are required to meet the credit needs of the expanding economy? How should bank credit be regulated in the best interests of the country's economy? These are the questions which have been critically examined by the Credit Committee appointed by the Government of Pakistan in May last year in its report released to the Press recently. The appointment of this Committee, it will be recalled, followed complaints about the stringency of bank credit and the appearance of slackness in economy. The Committee consisted entirely of officials and was presided over by Mr. Zahiruddin Ahmed, Joint Secretary, Ministry of Finance.

It is unnecessary to dilate at length on the findings of the Committee covering the credit situation proper, inasmuch as they are more or less similar to the appraisal contained in the special report of Dr. S. A. Meenai, Economic Adviser to the State Bank of Pakistan, dealt with in some detail in these columns four weeks ago (*vide* page 1030); Dr. Meenai was also a member of the Credit Committee. Suffice it to give a broad picture of developments pertaining to bank credit as indicated in the report. The pace of increase in bank credit has been remarkably accelerated since the middle of 1959. The total of outstanding towards the close of June 1962 was Rs. 286.15 crores, as against Rs. 130.20 crores three years before. How this increase was shared between private and Government sectors and how the net expansion of bank credit was financed are shown in the following table:

Bank Credit and Its Financing

(In crores of rupees)

	Year ended 30th June		
	1962	1961	1960
Credit expansion:			
Private sector	253.49	187.22	145.83
Government sector	32.66	33.06	15.91
Total	286.15	220.28	161.74
Rise over the previous year	65.87	58.54	31.54
Financed by:			
Total deposits	+47.95	+27.51	+32.01
Borrowings from State Bank	+ 6.56	+32.64	+ 0.13
Excess reserves with State Bank	— 1.67	+ 0.27	+ 8.41
Investments	— 0.77	— 8.09	—10.63
Cash balances	— 1.22	— 1.91	+ 0.54
Call loans	+10.31	+ 4.18	+ 3.08
Other sectors*	+ 4.61	+ 2.03	+ 1.08

* Include balances with other banks and inter-bank deposits.

The Credit Committee has not found any evidence of a general stringency of credit in Pakistan, though it admits that the small borrowers and the less developed regions continue to experience difficulties. Indeed, its assessment is that the available supply of credit has fully met the requirements of the larger borrowers except in a few special cases. Nevertheless, the Committee has urged special attention in regard to the credit requirements of P.L. 480 and other aid commodities, as they are imported under bulk purchase procedure and as there seems to be a time lag between the arrival of these goods and their offtake by consumers. It wants the Government to examine this matter in consultation with the State Bank, so that procedures are adopted to facilitate the import of these commodities. It expects the annual average rate of credit expansion in Pakistan during the second Plan period (1960-65) to vary from Rs. 50 to Rs. 60 crores. An important point high-lighted by the Committee is that the increase in bank deposits has not kept pace with the rise in credit, with the result that the credit ratio went up to as high a level as 77.4 per cent in June 1962. In order to finance future credit expansion without undermining the soundness of banking structure, it is considered necessary to relieve the pressure of demand for credit and to intensify the efforts at mobilising bank deposits. The specific measures which the Zahiruddin Ahmed Committee has recommended in fulfilment of these objectives are as follows:

For relieving pressure of demand for bank credit:

1. A limited scheme involving quota system with graduated interest rates for State Bank lending to commercial banks; a general rise in bank rate has not been favoured, since the economy is in an underdeveloped State and a deliberate increase in the cost of development is of doubtful benefit, particularly when it is considered in relation to the Pakistan Government's policy of encouraging the middle class entrepreneur.

The Committee further observes in support of the conclusion thus:

"The consensus of opinion expressed was that a higher rate of interest, unless it was made fairly steep, was not likely to have an appreciable effect on the demand for credit. Theoretically, a higher price of credit should result in curbing its demand. We consider, however, that, in view of the sheltered nature of our market, where either the margins of profit are so high that a moderate escalation in the interest rate is ineffective or the higher rate of interest can be relatively easily passed on to the consumer, such a result may not in practice be achieved in our country at this stage. We have been informed that, in some sections outside the banking system, borrowing on a limited scale was being resorted to at unconscionably high rates—a figure of upto 20 per cent was mentioned. Experience has shown that increasing the Bank rate from 3 to 4 per cent in 1959, which correspondingly increased the price of bank credit, did not affect appreciably the demand for credit."

2. Selective credit controls to curb excessive stock building.

3. Imposition of a ceiling on the amount which a bank can advance to any one borrower.

4. Organisation of a Credit Information Bureau by the State Bank.

For Mobilising deposits:

1. A general increase in deposit rates at this stage may not be effective unless it is made very steep, which is not considered practicable.

2. Every effort should be made to foster banking habits through publicity and promotion of special schemes.

3. The banks should be urged, even under compulsion, to spread into less developed areas. A percentage may be fixed upto which the banks would have to open branches at places indicated by the State Bank.

4. A deposit insurance scheme should be introduced in order to inspire confidence in the banking system.

5. Government may give consideration to fiscal incentives for the mobilisation of deposits and promotion of banking habits.

It came to the notice of the Credit Committee that the rather sharp increase in time deposits in recent years was largely attributable to the transfer of large amounts of U.S. owned counterpart funds from the State Bank to certain foreign commercial banks in Pakistan; the deposits of these funds in June 1962 aggregated Rs. 28 crores. Such transfers, it is felt, interferes with the regulation of credit system by the State Bank and may have a highly destabilising influence on the credit situation. The Committee has accordingly urged that the U.S. A.I.D. authorities should be persuaded to keep these funds with the State Bank.

Since a disproportionately large share of bank credit in Pakistan is concentrated in the hands of a small number of big borrowers, those who borrow on a small scale are not able to get their full requirements. The Committee's finding showed that, as of 31st March 1962, whereas about 57 per cent of total bank credit were locked up in as few as 333 accounts, ranging between Rs. 10 lakhs and Rs. 50 lakhs and above, 8.4 per cent of total advances were distributed among 71,802 borrowers for loans upto Rs. 25,000.

The Credit Committee has drawn attention to the existence of stringency in the sector of small borrowers, as well as in the less developed areas in Pakistan. "To a certain extent, such a situation," to quote it, "is inherent in a developing economy based on the free enterprise system. A deliberate effort is, therefore, necessary, if credit is to be directed in increasing measure into channels which are experiencing shortage but which, from the point of view of the overall social and economic objectives of the country, are highly important." In the considered opinion of the Committee, the following measures are required to encourage the flow of credit to small borrowers:

(i) Government policies designed to sustain the small and middle class entrepreneur should be consistently pursued.

(ii) The banking system should aim at making not less than 15-20 per cent of their total advances to parties requiring upto Rs. 25,000. This should be set as a target, but, instead of enforcing it as a compulsory requirement, the State Bank should use its influence to ensure the achievement of this target and exert pressure on individual banks which are lagging behind.

(iii) Developing the commercial banking system to assist the small borrowers is likely to be more effective than the establishment of a special credit institution. Commercial banks should set up separate small loans departments.

(iv) Banks should adopt a less orthodox outlook in regard to security and be willing to take a somewhat greater risk in dealing with small loans, as over 50 per cent of deposits are provided by small parties on which the banks make profit. The banks should formulate specific schemes for encouraging small borrowers and Government and/or State Bank should be prepared to underwrite a part of the losses under these schemes.

(v) Procedures relating to hypothecation and pledge of property, particularly land and real estate, and laws governing the realisation of bank dues against such property should be made simpler and less expensive.

(vi) Lower margins should be laid down in the case of small loans.

(vii) An intermediary agency in the form of discount houses and guarantee brokers should be created to help the small borrowers as recommended by the Credit Enquiry Commission.

The total number of Pakistani scheduled banks is 12. The Credit Committee emphasises the need for concentrating mainly on the consolidation and expansion of these bank rather than go in for the establishment of new banks. Even so, it observes: "It cannot be stated that we have reached the saturation point, particularly when we consider that about 30 per cent of our banking business is still done by foreign banks."

The Zahiruddin Ahmed Committee has also examined the question of monetary expansion. This is only as it should be, considering that credit is a part of money supply and the problem of credit expansion is directly related to the overall rate of monetary expansion. The data presented in the report reveal that the rate of monetary expansion in Pakistan slowed down perceptibly in 1960-61 (+Rs. 2.57 crores, as against +Rs. 29.60 crores in 1959-60) but picked up substantially again during 1961-62 (+Rs. 22.33 crores) and the trend in 1962-63 is towards acceleration in the rate of expansion. While the Credit Committee observes that there is no evidence of any slack in Pakistan's economy or appearance of deflationary tendencies, it does stress that a close balance between monetary expansion and real availabilities (of goods and services) would be essential in future to prevent such a prospect from materialising. The permissible rate of monetary expansion for the current fiscal year, according to it, is Rs. 30-35 crores.

The Committee has called for a careful analysis of the relationship of counterpart funds with the overall monetary situation. In particular, it has emphasised that, at the time of formulating the budget, the level of releases to match current accruals should be determined, the actual releases keeping pace with budget expectations; in case the releases lag behind, the Government should take suitable compensatory action. It is of the view that the private sector in Pakistan is trying to make unduly high profits by maintaining prices at high level, despite increasing domestic availabilities and aided imports. This is attributed as one of the reasons for the accumulation of stocks complained of by some businessmen. While the Committee has not favoured depression of general price level, it feels that there is room for an appropriate adjustment in prices of specific goods in specific sectors. Finally, the Committee wants the rate of monetary expansion to be kept continuously under review. It has suggested that the permissible limits of expansion must be carefully worked out in advance each year at the time of preparation of the budget.

AMERICAN LETTER

PROSPECTS FOR U.S. ECONOMY

AN OPTIMISTIC UNDERTONE PREVAILS

From Our Special Correspondent

NEW YORK, 31st December 1962.

AS the New Year begins, nearly all experts predict better business in 1963 than prevailed in 1962. The same prognosis was made 12 months ago and some of the expectations were fulfilled. Yet, there is a lot to be desired, at this writing at least.

The biggest metropolis in the United States —New York—is still in the midst of a strike organised by the typographers' unions which has made impossible the publication of seven daily papers. This has had a severe effect on retail trade because of lack of advertising during this holiday session. As a result, retail trade has been much slower than in previous years.

This strike has affected many thousands of people in all walks of life. Mediation efforts by the Government have accomplished nothing. The publishers made an offer for better wages and fringe benefits, but the trade unions want three times as much. The Editorial staffs of the papers, so far, have respected the typographers' picket lines, but, at this point, they have been without salary for about three weeks and the trade union treasuries which pay a strike subsistence are getting low.

It is one of these somewhat inexcusable "tides in the affairs of man" which do not benefit anybody. The typographers, one of the oldest trade unions, want to assert their authority, the publishers want to assert theirs because a newspaper outside of the prestige it involves is no longer a profitable matter—the return on the invested capital of the *New York Times* is about 1 per cent per annum—and so, radio and television have taken over more and more of the news coverage.

In addition, there is a longshoremen's strike affecting all Eastern U.S. seaports and the Gulf of Mexico. It impedes shipping in general, foreign trade and the very profitable winter cruise business to the West Indies, Central and Latin America. The chances are that both strikes will be prolonged. Both sides are very far apart at this time.

Nevertheless, economists predict a good 1963 as I said before. Experts assembled at the annual economic forum of the National Industrial Conference Board expect an increase of about 3 per cent this coming year. This was the collective opinion of 15 nationally known experts. The forum did draw attention to the problems adversely affecting national growth, especially the high rate of unemployment.

Forecasts were that, by the end of 1963, the U.S. Gross National Product would be somewhere between $575,000 and $585,000 million, as compared with a little better than $560,000 million at the present time.

Nearly everyone expects that there will be a small dip in industrial production in the early months of 1963 and that the unemployment rate will hold between 5.5 and 6 per cent of the labour force. In retrospect, 1962 is held to be an even more trying year for business economists than for American businessmen. There was a disturbing series of unanticipated and somewhat unprecedented events throughout the world. The uncertainties they created contributed toward the hesitant and erratic course of economic activity throughout last year. Outside of unemployment, other problems remain, such as the balance of payments' deficit, deficit financing by all units of Government and agricultural surpluses.

The 1963 expansion is expected to stem primarily from increased outlays by consumers and Government, provided that major international crises which must be expected do not disturb public confidence.

The major expectation at this time is that the consumption of durable goods will expand. The disposable income figure for 1963 is tentatively predicted at $394,000 million. Most experts, at this point, place the greatest emphasis on the purchase of automobiles which has had important connations for years, if not decades. Volume in the durable goods area is expected to gain 3 per cent in 1963 over 1962.

In the soft goods sector, the increase is expected to be less—perhaps 2.5, or 2.7 per cent. Economists also forecast a slight rise in prices and a 1.5 per cent boost in population which would make for an increase in food consumption and living space. There is ample accommodation for living space but the development, *per se*, means that there has to be an increase in construction.

Then, there is the ever present question of capital investment. With the new depreciation allowances which have been enacted, authoritative estimates are that spending for plant and equipment may be increased 5 per cent in 1963 over 1962. It should be borne in mind, however, that this potentially enlarged productive capability has not been matched by a corresponding increase in demand. Thus, the problem of overcapacity remains and other measures have to be taken to overcome it—primarily public confidence in the future—in my opinion. Cynicism and skepticism abound at the time of writing. But America is still a rich country, which can afford to be "imperious."

On the basis of present surveys, it would seem reasonable to assume that business expenditures on plant and equipment in the first half of 1963 would be at the same rate as they are now. After that, a boost may be in the offing, if tax relief is enacted. Such decisions, however, will be subordinated to prospective sales and profits.

A big boost to the U.S. economy will come from Government spending, regardless of what happens to the private economy. Federal expenditures for goods and services for 1963 are estimated at $67,400 million, as compared with $62,900 million in 1962. This represents an increase of 7.2 per cent, against an expected increase of 3.5 per cent in the G.N.P.

Farm income was fairly stable in 1962. Gross income increased by about $600 million, about half from the market and half from the Government. But production expenses increased, so that the net income has remained about the same. The year 1963 looks about the same. The gross income will be up a little because of increased payments to farmers for subsidies. Again, the net income is apt to be steady.

On the problem of U.S. international payments, may I offer a quote from Howard S. Piquet, senior specialist in international economics of the U.S. Library of Congress. He says:

"If the U.S. does not negotiate with the Common Market for the effective reduction of foreign trade barriers, a number of U.S. export industries will have to adjust to smaller markets. On the other hand, if the U.S. is to negotiate with Europe so as to hold those export markets, it will have to offer substantial concessions to foreign producers in lines which are competitive with U.S. production."

It could, or it could not, be applicable to India. It may, or may not, apply to India. But it is a thought.

THE TYRE MOST IN DEMAND
Dunlop Truck and Bus tyres are most in demand with operators all over the country. They have proved themselves to be the most sturdy, most dependable and most profitable under all conditions of service. Extra strong casing—more re-treads per tyre—lowest cost per mile!

LONGEST MANUFACTURING EXPERIENCE IN INDIA

WORLD SUPPLY AND DISTRIBUTION OF COTTON

SIGNIFICANT TRENDS IN STOCK POSITION

FINAL figures of supply and distribution of cotton in the free world countries during the 1961-62 season, which ended on 31st July 1962, indicate that the two were in balance. Consequently, stocks at the beginning of the current season (namely, 1962-63) remained unchanged as compared with those a year ago. There were, however, significant changes in the distribution of stocks. There was, for instance, an increase of roughly a million bales in stocks held in the producing countries, while there was a corresponding reduction in the stocks in the net importing countries. According to the International Cotton Advisory Committee's latest (December 1962) review of the world cotton situation, the main increase in stocks occurred in the U.S. but stocks were also noticeably higher in Brazil, Sudan and Pakistan. In importing countries, the reduction occurred primarily in India and Japan but stocks were also lower in most West European countries.

Production of cotton in the U.S. during the current season is expected to be only slightly higher than in 1961-62. Thus, as against 14.4 million bales of 478 lbs. each in 1960-61, production this season is estimated to be 14.5 million bales. Elsewhere, however, production is estimated at a record high of around 21 million bales, as compared with 19.5 million bales in 1961-62. Such increase in production is due, on the one hand, to a continuing expansion of cotton acreage in some countries, notably in Central America, Syria, Spain and possibly Brazil and, on the other, to improved yields in certain countries, particularly U.A.R. and India. Supply in the U.S. is expected to be higher, thanks to an increased carryover and a slightly larger crop. Disappearance in that country is, however, expected to decline and, on this basis, a further significant addition to carryover is anticipated by the end of the current season. The return to a situation of imbalance between supply and demand is one of the factors behind the moves currently being made in the U.S. to introduce new cotton legislation at the forthcoming session of the U.S. Congress. The legislation is expected to aim at stimulating demand and removing certain inequities in the existing cotton policies of the U.S. Government.

In the other cotton exporting countries, supplies are expected to be significantly larger by reason of increases in both carryover and production. Against this, however, must be set the sharp reduction in carryover stocks in the net importing countries and, on present reckoning, total supply outside the U.S. will be only moderately larger than in 1961-62.

No particular change is expected in the supply situation in communist countries, as the decline in stocks is expected to be offset by a corresponding increase in production.

The following table indicates the estimated supply of cotton during 1962-63 season, as compared with the supply and disappearance during the past three seasons:

World Supply and Disappearance

(In million bales of 478 lbs. each)

Item	1962-63*	1961-62	1960-61	1959-60
Stocks (1st August):				
United States	7.9	7.2	7.6	8.9
Other net exporters	3.9	3.5	3.2	3.6
Net importers	5.4	6.5	6.0	5.3
Total	17.2	17.2	16.8	17.8
U.S.S.R., China and E. Europe	2.2	2.5	3.4	3.2
World Total	19.4	19.7	20.2	21.0
Production:				
United States	14.5	14.4	14.4	14.5

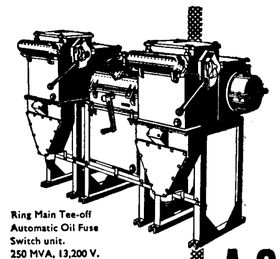
Destroyed	..	0.1	0.1	0.1
Total	..	48.3	48.1	48.4

* Estimates.

As will be evident from the above table, the relationship between production and offtake in the free world countries last season moved nearer to balance, with the result that carryover stocks at the beginning of the current season remained practically unchanged. There were, however, as noted above, significant changes in the distribution of stocks. Stocks in net exporting countries, including the U.S., increased by over a million bales from 10.7 million bales to 11.8 million bales, while there was a corresponding decline in stocks in the net importing countries from 6.5 million bales to 5.4 million bales.

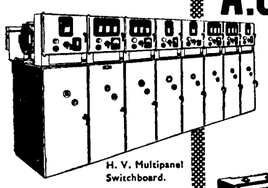


For the first time since 1956, stocks in the U.S. increased, from 7.2 million bales at the beginning of the 1961-62 season, to 7.9 million bales on 1st August 1962, that is, the beginning of the current season. This was because the increase in domestic consumption in 1961-62, which was of the order of 700,000 bales (from 8.3 to 9 million bales), was not sufficient to offset the marked decline in exports from 6.6 million bales in 1960-61 to 4.9 million bales in 1961-62. What is more, a further increase in carryover stocks is expected at the end of the current season, partly as a result of a larger crop but mainly because of a continued decline in disappearance. Thus, as against 7.9 million bales on 1st August 1962, stocks on 1st August 1963 are expected to rise to 9 million bales.

Opening stocks in other net exporting countries are estimated to have increased by 400,000 bales to 3.9 million bales; stocks in net importing countries, on the other hand, are expected to have declined by nearly one million bales and are about the level obtaining in 1959. The main reduction in stocks during the last season occurred in India and Japan but stocks in Western European countries also declined significantly.

Production, the other significant element in total free world supply, is expected to increase by 1.6 million bales to 35.5 million bales, as compared with 33.9 million bales in 1961-62. The increase is only marginal in the U.S., whereas elsewhere in the free world, production is expected to reach a new peak. The rise in production is mainly in Mexico, Central America, U.A.R., Pakistan, Uganda, Syria and India.

The most important element in the distribution picture is consumption. The outlook for cotton consumption during the current season is "enigmatic" at present. The general impression, according to the I.C.A.C., is that consumption might not be maintained at last season's record level of 32.5 million bales in the free world countries. This is because the present textile cycle has reached its peak in the U.S. and, under normal circumstances, a decline of perhaps half a million bales is anticipated during the current season. Consumption in Western Europe at present is running at a lower rate than a year ago and, although the continuing advance in the general economy and cyclical factors hold out the possibility of some recovery later in the season, the crucial point, the I.C.A.C. avers, is whether this will occur soon enough to offset earlier losses. In Japan, the outlook for cotton consumption is not encouraging and if, as anticipated, the present high rate of curtailment of yarn production continues, the net result is likely to be a further reduction in total consumption during the current season. In India, the basic factor in the consumption situation, according to the I.C.A.C.'s impression, continues to be availability of raw cotton and a prime consideration will be the assurance of sufficient supplies. The situation is further complicated by political development. Hence the Committee has opined that an assessment of the probable trend in consumption is difficult.



On the basis of consumption alone, it is hard to see, the I.C.A.C. remarks, how there could be any real optimism concerning the level of trade. A favourable factor in the trade outlook, however, is the existing low level of stocks in importing countries. Last season, consumption in Western Europe and Japan exceeded imports, the deficit being made up by drawing on stocks. The scope for any further reduction in stocks is now distinctly limited and imports will more or less have to match consumption. Eventually, given appropriate market conditions, stocks may be built up to more workable levels and this could have a decided effect on the volume of trade.

COTTON COMPANIES FARE BADLY

SHARP SETBACK IN EARNINGS

From Our Special Correspondent

MANCHESTER, 31st December 1962

MANCHESTER LETTER

A SHARP setback in earnings announced by British cotton companies in 1962 underlined the difficult trading encountered in Lancashire from early 1961. The figures were published before the recent improvement in demand had had time to be reflected in financial returns. Total net profits, after tax, of 69 companies owning more than 250 mills fell by more than £4,000,000 as compared with the figures issued in 1961. As a measure of comparison, however, last year's totals were £4,000,000 better than the aggregate profits published in 1959, when earnings were at their lowest level for 20 years back.

Dwindling order lists early in 1962 only began to lengthen again in the autumn. Substantial contracts booked in 1960 had been completed and subsequent lean times were reflected in the published net profits announced last year by the 69 companies of £7,704,955, as against £11,962,513 for the same firms in the previous 12 months.

According to an independent analysis of trading results (prepared by Frederick W. Tattersall Ltd., of Manchester), aggregate net earnings announced by 14 leading spinning and weaving combines and their subsidiaries last year amounted to £3,504,431, as compared with £6,597,657 in 1961. The average profit was £250,317 per group, as against £471,261. The average dividend paid was 12.83 per cent, as against 14.82 per cent and total credit balances were £13,385,052, as against £14,268,770.

Average profits announced by 22 independent spinning mills during 1962 were £26,587 per company, as compared with £50,061 for the same firms in 1961. The average dividend paid last year was 15.28 per cent, as against 19.04 per cent in 1961. Average profits earned by 16 concerns combining spinning and weaving were £145,148 per company last year, as compared with £185,607 in 1961. The average dividend was 13.60 per cent, as against 16.25 per cent.

For the whole of these 38 firms, the average profit announced was £76,507, as against £107,133 for the same concerns in 1961, while the dividend last year averaged 14.59 per cent, as against 17.86 per cent. Credit balances held by these companies total £9,477,073, an average of £249,397. A year ago, 39 firms had credit balances amounting to £7,377,842, an average of £189,175.

Average profits of 17 firms engaged mainly in weaving were £76,073 per firm in 1962, as against £76,106 in the previous year. Dividends averaged 11.54 per cent, as compared with 13.90 per cent and credit balances amounted on average to £200,417 per company, as against £174,092.

In 1962, five cotton textile firms reduced their capital from a total of £929,160 to £706,120.

1962 in Perspective

During the lull in trading between Christmas and New Year, traders had an opportunity to reflect on market conditions during 1962. The general feeling was that business in the last 12 months has been disappointing. It was only in the final quarter of the year that there were any indications of an improvement in demand and, but for this better trend, traders would have been exceedingly down-hearted.

Negotiations during the majority of the period remained at a very low level. Order lists were short at the beginning of the year and, until the later months, it was a constant struggle to keep machinery running. At the same time, individual traders had varying success and there was a good deal of irregularity in the turnover. Imports were lower, but this only reflected the poor state of trade, and in relation to home output arrivals were still quite substantial.

An important feature of the year was the progress made in curtailing imports. The arrangement to continue the current ceiling level of imports from Hong Kong, India and Pakistan until the end of 1965 was negotiated. A long-term plan to regulate world trade in cotton textiles was fixed up at international talks at Geneva. This arrangement aimed to allow developing countries to export cotton goods on a fair scale, but, at the same time, attempts to safeguard the interests of traditional textile manufacturing countries.

The year also saw the beginning of the negotiations for Britain's entry into the Common Market. Various views have been put forward as to the effect on the Lancashire cotton trade if Britain joins the Community. There was, however, a good deal of support for the Cotton Board's booklet which described the Common Market as probably "Lancashire's last chance."

The belief that a wage advance for spinning and weaving workers was imminent was one of the major reasons for the belated improvement in business. An award of 3 per cent was granted by the Industrial Court. This was considered niggardly by the unions and there is still some doubt as to whether a further approach will be made to millowners in 1963.

Fears that prices would be raised if higher wages were granted to operatives led to an improvement in business. Distributors felt that the time was ripe to put down further contracts for delivery in the early part of 1963. Traders are hopeful that a freer turnover will be encountered in the next few months. Perhaps the extent to which activity takes place will depend on whether large-scale modernisation programmes are carried out. The Cotton Board has blue-prints for modernisation from the mills worth around £115,000,000. These plans will qualify for a Government grant but it is open to doubt whether the schemes will in fact materialise.

There is a cautiously optimistic feeling about the future prospects. Rising unemployment in the country and other outside influences may have an effect on purchasing power, but it seems likely that turnover will show a more encouraging trend next year after such a difficult trading period.

Cautious Forecast

One of Manchester's leading stockbroking firms has recently issued a market forecast which is distinctly cautious in tone. "The Chancellor has set in train a number of measures which should lead to higher economic activity," it says, "but they seem unlikely to start working much before the spring of next year. Even if they produce favourable effects on profits, these could hardly begin showing up in company statements in less than 12 months and their full impact will not begin to appear until somewhat later."

Such realism must be the basis on which those who estimate affairs have to work. It is certainly true of textiles, no less than other sectors of the economy. At the same time, provided the movement is in an upward direction, it should not be despised.

Dealing with the question of measures which might be taken by the Government to stimulate the economy into even more rapid recovery, the report suggests this is a course with many dangers. "Any general action, such as reducing indirect taxation to increase consumer purchasing power, would bring back conditions of overfull employment and incipient inflation in the South and Midlands, even whilst it was reducing industrial 'misery' in the more northern parts of the Kingdom," the report adds.

Meanwhile, some of the economic indicators, which are still keenly watched by traders with an eye to the future, do not make wholly disheartening reading. Wholesale textile figures, including, it should be noted, such ancillary goods as floor coverings, furniture and millinery, show that total sales in October were 1.7 per cent higher than in the same month last year.

Total sales for the first ten months of 1962 were nearly 3 per cent down. Stocks, however, at the end of October were 2½ per cent lower than at the same stage a year previously.

BAG/6

DEVELOPMENT WORK ON SUGARCANE

CENTRAL COMMITTEE DECIDES TO CONCENTRATE IN SELECT AREAS

DESPITE the repeated emphasis on intensive development of sugarcane especially since the era of planning began in India in 1951, the progress actually achieved has been negligible. It is true that the all-India average per-acre yield has gone up from 13.33 tons in 1950-51 to 17.63 tons in 1960-61, but the quality of cane has suffered a distinct setback, the average recovery of sugar in cane during 1960-61 being no more than 9.74 per cent, as against 10.03 per cent in 1950-51. From the point of view of sugar industry, what matters is not so much the quantity of cane raised from a given plot of land as the quantity of sugar that can be recovered from the cane crushed. In other words, the quantity of sugar that is derived from one acre of land devoted to cane is the correct yardstick. Judged by this consideration, the progress made is negligible. It is not surprising, therefore, that the incidence of cane cost continues to be unduly heavy, being as much as three-fourths of the total cost of making sugar. The Indian Central Sugarcane Committee did well to give some serious thought to the whole question at its thirty-second session held at Coimbatore recently. The Committee decided to concentrate its efforts on sugarcane development work in favourable areas. These efforts will be designed to raise the yield per acre and bring down the price of cane. Such a concentration is certainly better than extension of development work to cover the entire country. For what is the use in spending time and money on development work in regions the soil and climatic conditions of which are not suited to cane cultivation?

Schemes Approved

The deliberations of the Committee revealed that the main causes for the low per-acre yield of high sucrose-content sugarcane were inadequate irrigation facilities and fertiliser supplies. It was found that the co-operatives had not been able to cope with the demand for fertilisers. The Committee accordingly urged that arrangements be made to supply fertilisers to sugar mills for distribution to cane growers. It also recommended inter-zonal visits of progressive cane growers in order to popularise the adoption of improved varieties of sugarcane and holding of refresher courses for cane development workers at the Indian Institute of Sugarcane Research, Coimbatore. Further, the Committee approved of two important schemes. One is to control the stalk borer, a serious pest of cane in Uttar Pradesh, Bihar and Punjab. The other is for undertaking research to control the yellow spot disease found in Andhra Pradesh, parts of Orissa and Mysore. The Committee also passed its budget for the next year estimated at Rs. 12 lakhs, a substantial sum of which being earmarked for research schemes. The Committee gave its approval, too, to the following recommendations made by its Research and Development Committee:

There must be biological control of yellow spot diseases in Andhra Pradesh and stem borers in Madhya Pradesh through introduction of some suitable parasites as was done some years ago by the introduction of cochineal insects from Australia to destroy the prickly pear in the country.

Roads should be built in cane areas around sugar factories for which the Union Government has agreed to bear one-third the cost and the State Government the balance.

A separate quota of fertilisers must be sanctioned for cane cultivation in the States of Andhra Pradesh and Madras, as is done in the case of certain other crops.

Exchange programme at the expense of the Committee must be launched whereby the cane growers in Northern and Southern regions will exchange visits to cane fields in each other's regions.

An atlas showing cane-growing regions in the country and a book on improved varieties of cane showing their various characteristics must be published. There are said to be about 40 varieties of cane grown in the country.

The Committee must make arrangements for giving at its cost training in cane development for departmental men at Lucknow for six months.

The need for launching a more vigorous, intensive cane development drive cannot be stressed too strongly in the context of the urgency of maintaining maximum sugar production at an economic cost, what with the expanding domestic requirements of sugar and the exigency of earning foreign exchange through exports. That there is immense scope for such a drive was impressively highlighted by Dr. Ram Subhag Singh, Union Minister for Agriculture, in his speech while inaugurating the Golden Jubilee Celebrations of the Coimbatore Sugarcane Breeding Institute the other day. It will be seen from the figures he cited that sugarcane yields of 60 to 70 tons per acre are common in cane competitions, whereas the all-India average is only 14.6 tons; the final official estimate of the 1961-62 season's crop, however, places the average yield at 16.16 tons. The highest yield of 150.51 tons has been obtained in the Southern region and 82.12 tons in the Northern region. These prove that considerably higher average yields are possible in India and our scientific achievements do not, as Dr. Singh said, lag behind those of any advanced cane-growing country.

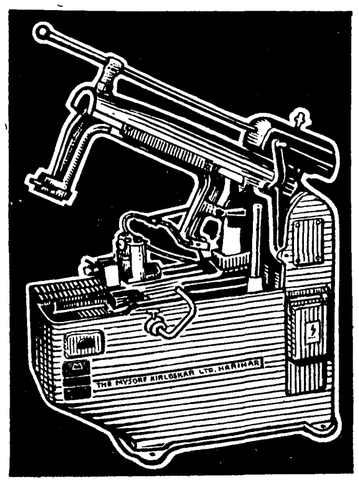
Raising Productivity

It will be interesting to note here that the immediate impact of the adoption of improved varieties bred at the Coimbatore Institute in place of the old indigenous varieties is a rise of 50 per cent in the average per-acre yield of cane. These varieties, we are told, provide satisfactory yields even under different conditions of agriculture. Emphasising the supreme urgency of augmenting the productivity of sugarcane lands, Dr. Singh observed:

"With the provision of more fertiliser plants and the development of irrigation projects, the irrigated area under the sugarcane crop will increase. I hope that the new formula announced by the Government of India, under which payment for cane will be made on the basis of quality, will benefit both the growers and the millers. With the attempts made for increasing the yield of cane and recovery of sugar, India will, ere long, be in a position to reduce the cost of sugar production, thereby making it available at a cheaper price to the consumer."

The statement that the areas devoted to the cultivation of cane must be made to yield the maximum quantity of cane with the highest possible recovery is as old as the sugar industry itself. It is, however, deplorable that the spirit of the statement has not been appreciated by the State Governments who it is that are directly concerned with the primary stage of sugar industry, that is cultivation of cane. Indeed, it may not be wrong to say that some State Governments are trying to undo whatever good has been done in cane development work. How else is one to explain the doggedness of the Maharashtra Government in imposing the land ceiling legislation on the cane farms of the joint-stock sugar mills? These mills, it must be remembered, have spent huge sums of money on scientific methods of cane cultivation. It is this investment that has, as has been repeatedly stressed by this journal, made the Maharashtra State the most efficient sugar producer in the whole of India. Both the average yield and the recovery of cane grown in the sugar mills farms are the highest obtained in the whole country. Why then should the State Government want to disturb this set-up? The more rational policy would have been to exempt from ceiling legislation the farms of mills which are prepared to devote more time and money in the direction of augmenting the productivity of cane lands.

Coimbatore Institute



Be that as it may, the adoption of improved varieties in the place of old indigenous varieties is an essential prerequisite for achieving higher yields of cane. In this context, the part played by the Coimbatore Sugarcane Breeding Institute (established in 1912) has been quite significant. On the occasion of its golden jubilee, the Institute can certainly look back upon its career with much pride and satisfaction. By sustained research, the Institute has produced improved sugarcane varieties to suit the diverse soil and climatic conditions, as well as the varying needs of the white sugar and *gur* industries. The results of the work of the Institute are patent in the fact that the improved varieties now cover over 90 per cent of the area in the country. Although the all-India average yield is only 16.16 tons (1961-62), the Co canes developed by the Institute are capable of giving yields of 30 to 35 tons in North India and about 40 to 45 tons in tropical India, the highest yields obtained in these regions being 89.12 tons and 150.51 tons, respectively, as already mentioned. The achievement of high yields, however, presupposes the creation of certain essential facilities such as provision of irrigation facilities, adequate supply of fertilisers, effective control of pests and diseases, and education of farmers in the introduction of proper cultural practices. It is to this vital task that the agricultural departments of State Governments which collect crores of rupees by way of cane cess in the name of cane development should address themselves in right earnest.

"KHANDSARI" IN U.P.

It is indeed gratifying to hear that the U.P. Government has reimposed the levy of purchase tax (at the rate of 16 nP per quintal or 6 nP per maund) on *khandsari* units in the State during the current assessment year 1962-63. The tax, it will be recalled, had been remitted in full throughout the reserved area during 1961-62 in order to ensure crushing of cane found surplus to the requirements of sugar mills. Justifying the imposition of levy, the U.P. Government says:

"Sugar mills' have not been allowed any new or special concession in purchase tax this year; but like last year a general remission of 16 nP per quintal in the purchase tax of 67 nP per quintal has been allowed to factories this year to maintain the existing rate of purchase tax at the previous rate of cess/purchase tax, namely, 51 nP per quintal (or 19 nP per maund). This year, conditions are different and sugar factories have not even been allowed by the State or Central Governments any concession in purchase tax or excise duty on sugar or sugarcane production. Taking into consideration all relevant factors and the national emergency, the State Government have come to the conclusion that there is no case for reduction or total remission of purchase tax on *khandsari* units during the assessment year, 1962-63."

The imposition of purchase tax on *khandsari* will go some way towards checking an undue diversion of cane supplies from sugar mills to *khandsari* making. Competition for the available supply of cane is, however, keen not so much from *khandsari* producers as from *gur* producers. The competition is so much that it is feared that sugar production in U.P. and Bihar may be adversely affected for lack of sufficient cane supplies. Viewed thus, the reported move of the Central Government to devise special measures to prevent large-scale diversion of cane to *gur* manufacture in a new bid to tackle the crisis in sugar industry must be widely welcomed. It is understood that the senior officials of the Food and Agriculture Ministry will shortly conduct a factual study of the extent of diversion.

THE
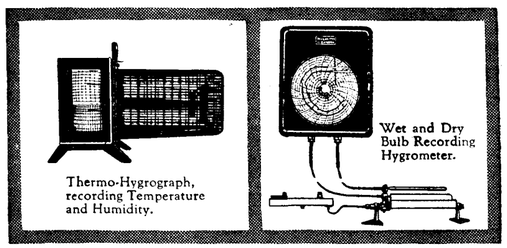
HYGROMETER
CIRCA 1820



THE INGENIOUS EXPERIMENT OF AN ENGLISH SCIENTIST PAVED THE WAY FOR MODERN HUMIDITY MEASURING INSTRUMENTS

Early in the 19th century, a dedicated English scientist, Professor Daniells, invented the Dew-Point Hygrometer – an instrument for measuring humidity. It consisted of two bulbs (A and B in the illustration) connected by a tube. Bulb A contained a thermometer and was partly filled with ether. Bulb B was empty, covered with a muslin cloth. The apparatus was mounted on a stand.

Professor Daniells' experiment was simple. A few drops of ether were dropped on the muslin covered bulb. The ether evaporated and the bulb cooled. Ether condensed into it from bulb A. The temperature of bulb A fell as its ether content evaporated and condensed in bulb B. The process was repeated till dew formed on bulb A. The temperature at which this occurred was the Dew-Point. Professor Daniells' brilliant invention was the forerunner of modern humidity measuring equipment.

Negretti & Zambra too, have pioneered in the field of humidity. Over a century's experience lies behind their range of indicating, recording and controlling instruments. To industry worldwide, the name Negretti & Zambra means instrumentation of faultless workmanship and trusted reliability.

Thermo-Hygrograph, recording Temperature and Humidity.

Wet and Dry Bulb Recording Hygrometer.

BELL/38

WORLD CRUDE OIL PRODUCTION

SHARPER RISE IN 1962 THAN IN 1961

IN the year just ended, crude oil production in the whole world reached an unexpectedly high peak of over 1,200 million metric tons, being some 91 million tons or 8.2 per cent larger than in 1961 in the course of which it rose by close on 70 million tons. In the free world, production in 1962 rose by 7.6 per cent passing for the first time the 1,000 million ton mark. The volume of last year's increase was by far the highest so far recorded for a single year, while on a percentage basis, the increase for the whole world of over 8 per cent was well above the recent average rates of increase of some 7 per cent annually in 1951-60, and 6.4 per cent in 1961. The magnitude of last year's rise in world output is illustrated by the fact that the additional volume of oil was almost equal to the year's output in Kuwait, the largest producing country in the Middle East.

Nor is there any reason to think that, in the absence of any widespread economic slump, world crude oil production will not continue to move ahead, though at a somewhat slower pace. Mr. James W. Foley, President of Texaco, has just forecast that, over the next five years oil demand will, on average, rise by between 2½ and 3 per cent annually within the U.S.A., and by between 8 and 9 per cent in the rest of the free world. Demand in the whole free world would thus rise, over this period, by around 6½ per cent annually, but the free world's production would probably rise at a slightly lower rate, allowing for the probable increase in imports of Soviet Bloc oil.

Given the planned rise of output in the U.S.S.R. and the other Communist countries, total world production is likely to reach between 1,650 and 1,700 million tons by 1967. The annual average increase over the five years would thus be around 90 million tons, or much the same as the record increase that occurred in 1962. In addition to the extra facilities needed to produce this massive extra volume of oil year by year, the corresponding scale of facilities for transportation, refinery and distribution must, of course, be provided. No other activity in the world involves expansion on this scale.

Last year's increases were widely spread. The U.S.A. achieved only a modest increase of about 1½ per cent, whereas, in the free world outside the U.S.A., the rise was as high as 11½ per cent, embracing steep increases in the major producing regions in both Hemispheres. In the U.S.S.R., the rise was also 11½ per cent. To last year's over-all increase, the Middle East contributed some 27 million tons, the U.S.S.R. 20 million tons, the emergent African areas 15 million tons, Venezuela 14½ million tons, the U.S.A. 5½ million tons, and Canada 4½ million tons.

Western Hemisphere

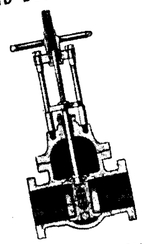
The 1½ per cent rise in the U.S.A. in 1962 followed a similar increase in the preceding year when, however, output barely surpassed the level previously reached in 1957, during the Suez crisis. The share of the U.S. in world production has now fallen to barely 30 per cent, compared with about 50 per cent ten years ago. Demand for petroleum products in the U.S.A. last year rose by about 4½ per cent, but much of the higher demand was covered by higher imports and by the larger output of natural gas liquids. A large part of the higher crude oil production occurred in Louisiana; the number of "allowable" days in Texas was at a new low record of 97 compared with 101 in 1961.

In Canada, the Federal Government's policy of setting voluntary production targets for the industry has stimulated production in the past two years during which output has risen by 14-15 per cent annually. The target of 39.5 million tons (including natural gas liquids) that was set some time ago for 1963 is now in sight. However, with internal demand lagging, the recent increases are mostly due to higher exports to the U.S.A. the expansion of which may in future be less buoyant as a result of the new U.S. import policy, which is more restrictive than before.

Venezuela has been adversely affected in recent years by U.S. import restrictions, by the advance towards self-sufficiency in Argentina, the loss of the Cuban market, and unfavourable local circumstances. But it is now benefiting from the growing European demand for heavy crudes and fuel oil needed to complement the new supply of light North African crudes—a good example of the value of having access to widespread markets. Venezuelan production rose last year by as much as 9.3 per cent, reaching over 166 million tons, which is somewhat more than half the total production in the whole of the Middle East. In 1959, the Government stated that it wished the future growth of production to be kept within a range of between four and six per cent annually but the actual rise in 1960 and 1961 was very small and, as Dr. Perez Alfonzo, the Minister of Mines and Hydrocarbons, has recently pointed out, the average annual rate for 1959-62 will in fact remain below four per cent even allowing for last year's rapid advance. In Columbia, output from the old-established fiedls has been steadily declining but the downward trend for the country as a whole has been reversed in the last quarter of 1962 when a number of new fields began regular production.

Though no major local discoveries have lately been made in Mexico, production has risen by around 7 per cent or one million tons in each of the past two years, and it is foreseen that annual increases of 6-8 per cent will continue for the time being. Argentinian production, which nearly doubled during 1959-61 thanks to the new co-operation with foreign capital, rose by nearly 1½ million tons to 13½ million tons last year. In Brazil, a succession of annual increases was interrupted early last year by labour disputes but a production of 4.3 million tons was only slightly below that of 1961.

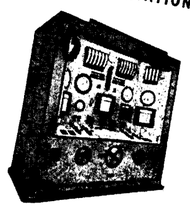
The Middle East



With oil demand in Europe still rising briskly, Middle Eastern production which rose by over 7 per cent in 1961 went forward by about 9½ per cent last year to reach about 311 million tons, nearly three times the region's production ten years earlier. The current rate of increase is the more noteworthy, in view of the rising volumes of oil from North Africa, Venezuela, and the Soviet Bloc now reaching European Markets.

In terms of volume, last year's increase in the Middle East of 27 million tons is one of the highest that has occurred in the region. It came mainly from the area's three largest producing countries: Kuwait, where an insignificant increase in 1961 was followed by a rise of over 10 million tons in 1962, Saudi Arabia, and Iran. Output in Iraq was stationary. The prolificness of the main fields allows big increases to occur without undue difficulty. Iran's most prolific field, Agha Jari, which has produced over the past eighteen years as much as 2,000 million barrels of crude, including 1,000 million barrels during the past four years, is now producing at the high rate of 800,000 b/d, or about 40 million tons a year. There are only four other fields in the free world which have a cumulative production of over 2,000 million barrels, of which three are in the Middle East (Kirkuk, Burgan, and Ghawar); the other is the East Texas field.

In Iraq, operating conditions deteriorated sharply at the end of 1961 when the Government arbitrarily took over more than 99 per cent of IPC's concession area. Despite the added difficulties of the nearby Kurdish unrest the Company's production in the north of the country has continued at more or less the same rate as previously, but, in the south, it has been checked by the imposition in mid-1960 of higher port charges at Fao. Last year's output in the south was about 9 million tons, as compared with 10 million tons in 1961, and 12½ million tons in 1959.



The Kuwait-Saudi Arabian Neutral Zone yielded 12 million tons in 1962 and is now developing into a major oil producing area. Of last year's output, close on 10 million tons was onshore, and over 2 million tons offshore. The offshore production is by the Japanese-owned Arabian Oil Company, which hopes to find outlets in 1963 for as much as 9 million tons. The Zone's total output would then reach around 20 million tons a year, which would be as much as the Algerian Sahara produced last year.

Another potentially important producing area in the Persian Gulf is the Shaikhdom of Abu Dhabi, where regular commercial production started last July, from the offshore field of Um Shaif held by BP and CFP. The initial capacity of the export facilities of Das Island, of about 1½ million tons, will be doubled by the middle of this year, and plans for further expansion are already being made. Early in 1964, regular production will start from the onshore field of Murban, held by a company of the IPC group which is now creating facilities for the export of about 6,000,000 tons a year.

Last year's increase in Egyptian production, estimated at over 500,000 tons, comes mainly from the onshore and offshore Belayim fields of COPE in which the Italian ENI has a big stake.

Production on the African Continent which was negligible only a few years ago reached last year about 35 million tons, thanks to the big upsurge in output in the Algerian Sahara and Libya, and to steadily rising production in Nigeria. Despite the difficulties of the transition to Algerian rule and the political uncertainties, Saharan output rose by 5 million tons to over 20 million tons in 1962. The Evian agreement provides for continued French cooperation, so as to assure further expansion and there are tentative plans for an output of between 50 and 60 million tons by 1965. This will necessitate the doubling of existing pipeline capacity.

Libya joined the ranks of oil producing countries in October 1961 when the pipeline from Oasis's Dahra field to Sidra was brought into use; a second pipeline, that from Esso's Zelten field to Brega, came into operation last May. Last year's actual output from fields thus connected to the two export terminals was of the order of 9 million tons. But this is only the beginning; the potential of producing wells so far drilled in the country as a whole is nearly 20 million tons a year.

Nigerian production reached last year over 3¼ million tons and Shell-BP, at present the only producer, has set a target of 5,000,000 tons for 1965, with every hope that this can be doubled five years later. Moreover, other companies are now searching for oil in promising territory.

A new development in Angola is the discovery of the Tobias field and the consequent increase in Angolan production from only 100,000 tons in 1961 to about 500,000 tons in 1962. Next year, it is hoped to produce 1.2 million tons, of which about 850,000 tons will be shipped to Portugal.

Europe and the Far East

Production in Western Europe showed last year a rise of 1.2 million tons, half of which occurred in Western Germany. The high duty protection of over £7 per ton, which has enabled Western Germany to increase her crude oil output more than fourfold over the past ten years, will however come to an end early next year, probably to be replaced by a considerably smaller subsidy from the yields of a new tax on petroleum products. Austrian production is stagnant but France and the Netherlands, both now with a number of small fields, continue their steady advance.

In the Far East, there was a further rise in Indonesia where output has been rising steadily for many years. In 1962, the increase came mainly from Shell's Tandjung field in Kalimantan which was brought into regular production at the end of 1961, after the completion of the necessary pipeline and other facilities. Production in British Borneo, almost all from the Seria field in Brunei, was hardly affected by the recent revolt, but the field is now in natural decline and the yield has gone down from 5½ million tons in 1959 to about 3.8 million tons in 1962. Extensive exploration onshore and offshore has so far failed to find new resources.

In India, the new refining and pipeline facilities to handle crude from new fields in north-east Assam were completed during the year and production also started from new fields north of Bombay, bringing the country's output to nearly one million tons which, however, will be considerably higher next year. Fortunately, the recent Chinese incursion into Assam did not cause any serious injury to the local oil industry.

The U.S.S.R. has once again exceeded her goal, reaching about 186 million tons or some 12 per cent more than in 1961. Over the past six years her annual production has risen by over 100 million tons, and it is now destined to rise by some 20 million tons a year to reach 240 million tons in 1965 and then to go on to 390 million tons in 1970, and 700 million tons in 1980, along with big increases in natural gas output. Most of the increase in production so far has come from the prolific Ural-Volga region, but important reserves have recently been discovered in Siberia, Central Asia and elsewhere which have to be developed if the long-term goals are to be reached.

In China, production of crude, including oil from shale and coal, went up from 3.7 million tons in 1959 to 5.5 million tons in 1960, probably reaching a rate of well over 6 million tons towards the end of that year. Subsequently, output was adversely affected by the country's general economic difficulties but has recently picked up again and it was officially stated a few months ago that a rate of about 6 million tons might again be reached by the end of 1962. As was foreseen, our estimate for 1961 of 6½ million tons has been revised to 5½ million tons.

Within the past five years, production has started for the first time in six new countries: in Gabon in 1957, the Sahara and Nigeria in 1958, Libya and Congo (ex-French) in 1960, and Abu Dhabi in 1962. Towards the end of this year, it is expected that a start will be made with regular production in Australia, from the Moonie field in Queensland. However, with annual increases in production of the massive size of that of 1962, sustained exploration effort in new areas remain a vital necessity.—*By arrangement with Petroleum Press Service.*

NGB/46A

ECONOMIC TRENDS IN CANADA
RETROSPECT AND PROSPECT

By George Hees
MINISTER OF TRADE AND COMMERCE

FOR the Canadian economy, 1962 has been a year of strong advance. The quickened pace of business activity which took hold in 1961 has continued in the year just over. As a result, the economic gains realised in 1962 are among the largest of the post-war years. On the basis of figures available to date, Canada's Gross National Product has increased by 8 per cent in 1962 as compared with 1961. National output in real terms has risen by 7 per cent. This rate of growth surpasses that realised in the Free World at large and within Canada's recent history has been exceeded in only three of the past seventeen years. This expansion is all the more notable in that it has been achieved in the face of increasingly competitive world conditions which is in sharp contrast to the buoyant demand situation of earlier post-war years.

Industrial Production Higher

The growth in output between 1961 and 1962 has been more pronounced in goods-producing industries than in services and a major part of the gains have been realised in sectors of industry highly exposed to foreign competition. Figures available to date show industrial production in total up by more than 8 per cent. A number of secondary industries have contributed materially to this advance. Approximately 500,000 motor vehicles have been produced in Canada in 1962, 30 per cent more than in 1961 and surpassing the previous record levels of the mid-50's. Production of electrical apparatus has increased by 15 per cent, appliances by 15 per cent and textiles by 9 per cent. Rising activity in durable goods industries and in construction have kept Canada's steel mills running close to capacity.

On the basis of figures so far available materials which have shown substantial production gains in the past year, as compared with the previous year, include the following:

	Percentage increase
Steel	10
Petroleum and equivalent	17
Natural gas	44
Iron ore	44
Lumber	12
Cement	11

Expanding industrial activity has brought a substantial increase in new job opportunities. In the first eleven months of the year, 177,000 more persons were employed, on average, than in the same period of 1961. The rise in employment has exceeded the growth in the labour force and there have been 85,000 fewer persons unemployed. In 1962, there were 5.9 per cent of the labour force unemployed, as compared with 7.2 per cent in 1961 and 7.0 per cent in 1960.

Upsurge in Real Income

Income trends have been strong and important gains have been realised by all major income groups. Total personal incomes were 8½ per cent higher in the first nine months of 1962 compared with the previous year, while between the same two periods consumer prices were up by only 1 per cent. This upsurge in real income has provided the basis for both a strong consumer market. and increased savings. At the same time, sharply higher corporate profits, accompanied by larger dividend disbursements, has given an important lift to business confidence.

Against the background of this improving business climate, more is being spent on new plant and equipment. Available information indicates that the expanded business investment programme anticipated at mid-year has been fully realised. This, together with the continued rise in institutional and public building and a moderate upturn in housebuilding, has stimulated activity in construction and other capital-goods industries.

Foreign Trade

Another key feature of the current expansion has been the generally strong performance in foreign markets. Figures for the first ten months of 1962 show merchandise exports 9 per cent higher for the year compared with 1961. This follows upon a similar increase between 1960 and 1961. In other words, within the space of two years, Canada's annual sales abroad have risen from $5.4 billion to something in excess of $6.3 billion, an increase of more than one-sixth. Items figuring prominently in this year's increase include iron ore, aluminium, petroleum and natural gas, lumber, wood-pulp and a number of manufactured products. The continuing growth in exports of highly-manufactured products such as machinery and equipment and finished consumer goods is a particularly significant aspect of recent trade developments. Exports of this kind have increased by more than one-quarter over the last two years.

Strong demand conditions in Canada have resulted in higher imports, which in the first ten months of the year are up 12 per cent. Much of this increase reflects the rise in prices of goods purchased abroad associated with the change in exchange rate. This means that a relatively small part of the recent growth of real demand in Canada has been supplied from abroad. This is in sharp contrast to previous periods of strong expansion when increased domestic demand gave rise to a major upsurge in the volume of imports. In the current situation, a much larger proportion of the rise in domestic purchases is being supplied from Canadian sources.

Balance of Payments

The moderately greater rise in the value of imports than in exports, together with a slightly lower adverse balance on "invisible" account has resulted in a deficit on all current transactions of $791 million in the first three-quarters of 1962 compared with a deficit of $710 million in the corresponding period of the previous year. There is, however, indication of an improvement in the current balance position in the latter part of 1962.

For a number of years, Canada's large deficit on current account has been covered by an approximately equivalent inflow of capital funds. In the first half of 1962, this inward movement of funds was interrupted, thus giving rise to a sharp drain on the foreign exchange reserves. Quick action was taken to contain this downward pressure on the reserve position and a substantial build-up in reserves has subsequently occurred.

The balance of payments difficulties encountered earlier in the year have in no way interrupted the upward movement of activity in the economy. On the contrary, developments arising from these difficulties have on balance given new impetus to the drive for expanded markets and increased production.

Government Measures

Underpinning Canada's currently accelerated growth has been the broad programme of federal measures designed to speed industrial development and in particular to strengthen the competitive ability of the Canadian producer. A central feature of this programme has been the action taken to bring the exchange value of the Canadian dollar into line with present needs for economic development. After running at a premium on the U.S. dollar for a number of years, the Canadian dollar was brought to a discount in 1961 and, in May 1962, was pegged at 92½ cents in terms of U.S. currency.

In the prevailing conditions of intensive international competition an exchange rate shift of this magnitude provides an important lift to the wide range of industries competing with foreign goods, both domestically and abroad. Moreover, the establishment of a fixed exchange rate removes much of the uncertainty as to future returns which, under conditions of a fluctuating rate, acts as a deterrent to the development of new lines of production in internationally competitive fields.

Other features of the Government's programme include the provision of more adequate credit facilities for export and other purposes, encouragement to industrial research, greatly increased assistance for technical training and various forms of financial incentives aimed at industrial expansion.

These and other measures have had the effect of materially extending the areas of production in which Canadian industry can compete and generally improving the climate for growth. To help producers take advantage of the new opportunities available, intensified promotional programmes are being carried forward.

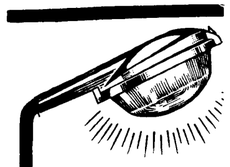
Outlook

The response on the part of Canadian producers has been vigorous. A growing awareness of the need for new initiatives in industry is widely evident throughout the business community. While there are already indications of new gains being made in both the domestic and foreign markets, the beneficial effects of these new initiatives should be increasingly apparent in the period ahead. In fact, the further penetration of markets arising from the new competitive strength of Canadian producers should provide a major source of stimulus in the coming year.

Meanwhile, there are signs of hesitancy in some of the major industrial economies of the world. Industrial production in the United States has followed an approximately level trend since midsummer, although business confidence appears now to be strengthening. In Western Europe, the expectation is widespread that economic expansion will proceed less vigorously in the coming year. There has been some tendency toward softening in international commodity markets.

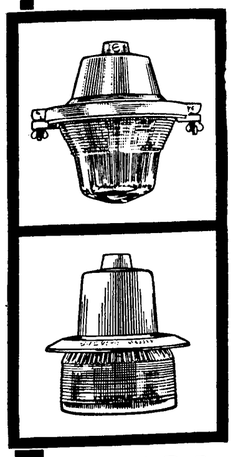
Any slowing down in the outside world would mean that even greater efforts would be required if the upward momentum of the Canadian economy is to be maintained.

There are, however, important elements of strength in the domestic market outlook. The financial position of consumers is unusually strong; inventory-sales ratios are in a healthy position and businessmen seem to be planning for another good year. A preliminary survey of investment intentions of large Canadian companies suggests a level of business capital outlays in 1963 about 5 per cent higher than in 1962. These considerations point to a significant increase in overall demand in Canada in 1963. If, in addition, Canadian producers take full advantage of the new opportunities available to further strengthen their position in both domestic and foreign markets, the Canadian economy should move steadily forward.



While the task ahead is not an easy one, there is every reason for Canadians to look to the future with new confidence.

OUTLOOK FOR AUSTRALIA



"In the present atmosphere of Australian business, the only ingredient which seems to be lacking is the sense of urgency in attaining a rapid rate of growth and expansion, still needed to take full advantage of all available resources," states A.N.Z. Bank in its *Quarterly Survey*. The Bank goes on to point out: "The part played by Government finance assumes particular significance in this context. The need for an excess of Government expenditure over revenue was accepted, indeed emphasised, in the Commonwealth budget for the current year, and it had been expected that stimulus in the first half of the financial year was an integral part of official strategy. Yet Government expenditure has not run appreciably ahead of revenue and loan receipts during the financial year to date. Government finance has thus not stimulated the economy and speeded recovery in the manner envisaged in the budget. This in itself is conducive to lack of confidence as a result of failure of official policy to ensure that its announced objectives are being achieved.

"The Australian economy in the past has shown a degree of uncertainty and lack of discipline in periods of rapid expansion" continues the *Survey*. "It is this uncertainty as to the ultimate objective which can so readily be carried on to an over-enthusiastic expansion, with unbalanced use of resources, failure to recognise the importance of relative costs and pursuit of growth for its own sake irrespective of the cost. The imposition of correctives designed to check a boom, through fear that the restoration of confidence may lead on to boom conditions, is surely the wrong approach in an endeavour to maintain a high level of business activity expanding at a reasonably satisfactory rate. In order to achieve the latter, it would seem to be far preferable, as has been suggested in a number of quarters, to provide information for business men in the form of benchmarks and targets which will enable them to know where they are heading. They can then aim at achieving a certain result in the knowledge that this result will provide a steady rate of expansion without unduly pressing upon resources and causing dangers of boom and inflation."

"Such a procedure," concludes the *Survey*, "should avoid the need for restrictive measures designed to check a boom and substitute in their place a steady progression from one target to another, set within the capacity of the available resources of men and materials. Each industry would then know that, within the group of targets, it could be reasonably sure of obtaining adequate supplies and receiving adequate demand but that, beyond those targets, resources would be inadequate, the authorities likely to be unhelpful or even hostile, and disciplinary measures imposed."

PEACEFUL USES OF ATOMIC ENERGY

POWER PLANS OF SOME NATIONS

THE world's first actomic reactor "went critical," that is, achieved a "sustained, controlled nuclear chain reaction," in the United States on 2nd December 1942. In the twenty years that have elapsed since that date as many as 518 nuclear reactors of many types, sizes and functions have been commissioned or taken up for construction in 46 countries round the world for producing atomic energy for peaceful purposes. According to the U.S. Atomic Energy Commission, which has made this estimate, there are 301 research and power reactors already in operation in different countries. The United States alone, it will be seen from the accompanying table, has 286 out of the total of 518 reactors in operation or under construction.

The United States, with its large number of reactors in operation, has led the rest of the world in the process of utilising atomic energy for peaceful purposes. The milestones in the American Atoms-for-Peace programme are: *First* useful electricity from Idaho installation lighted four 200-watt bulbs in December 1951; *first* large-scale plant exclusively producing nuclear power was commissioned at Shippingport in Pennsylvania in December 1957; *first* use of atom in space in June 1961 when two radios in Transit Navitation Satellite were powered by atomic batteries; and *first* nuclear-powered merchant ship, N. S. *Savannah*, was put in operation in 1962. The United States has so far spent more than $2,000 million on power reactors to produce electricity. Other countries have followed suit in this field. Canada, France, Great Britain and the Soviet Union have already commissioned about two dozen nuclear power plants, the total rated capacity of which exceeds 2,500 M.W. Roughly three-quarters of this capacity are accounted for by stations in Britain and the U.S. Italy, Japan, Czechoslovakia, Belgium, West Germany and East Germany are just building atomic power plants. Many more nations are planning their construction in the coming years. The construction programmes now under way or authorised in the various countries foreshadow a rise in the free world's overall nuclear capacity to 7,000-8,000 M.W. by 1967-68. Radioisotopes, which now finds uses in medicine, agriculture, industry and research in at least 40 countries, are also being produced on a large scale and in hundreds of varieties from the world's nuclear reactors. It is noteworthy that the Oak Ridge plant of the U.S. Atomic Energy Commission has alone made more than 100,000 shipments of isotopes to domestic and overseas users.

A more detailed review of the progress made by the leading countries, namely, the United States, Great Britain and the Soviet Union, in the establishment of nuclear power stations may now be given, along with their plans for the future. In the United States, the 24 stations now in operation, under construction or on order have an aggregate capacity of 1,900 M.W. Four of these stations, totalling 650 M.W., already feed power into large electrical systems, and another five totalling 350 M.W. have just been, or are about to be, commissioned. All but two stations are owned and run by private electricity concerns. Of the four stations now in operation, the one at Dresden (Illinois) has a capacity of 180 M.W. It is a boiling-water reactor plant built by Commonwealth Edison Inc. at the comparatively low capital cost of $258 per kw. installed. Another of 255 M.W. net capacity, commissioned last August by Consolidated Edison Inc. at Buchanan (New York), is notable for deriving only 60 per cent of its output from a pressurised water reactor, while the rest is produced by an oil-fuelled super-heater. It will be seen that although the United States has no great urgency for hastening the development of supplementary sources of energy as it is well endowed with abundant resources of primary sources of energy, namely, coal, oil, natural gas and hydel power, it is nevertheless going ahead with a substantial nuclear power programme. One of the objectives in doing so is to acquire comprehensive and up-to-date experience in the design and operation of atomic power plants. Such experience and progress in nuclear technology are considered essential for the purpose of exporting atomic power equipment to other countries. It is stated that nuclear superheat designs projected for the late 1960s in the United States are expected to obtain a thermal efficiency in excess of 40 per cent.

A noteworthy recent development in the United States is the report of the Atomic Energy Commission which has recommended a three-phase, 12-year programe to make nuclear power plants economically competitive throughout the United States by 1980. The Commission's goal is to develop an ideal reactor—a so-called "breeder" that produces more fuel than it consumes—for the three-phase programme. This programme, incidentally, envisages construction of 17 to 20 new nuclear power plants between 1963 and 1975. In the first years, the plants would be "water" reactors similar to the 165,000-kilowatt Yankee Nuclear Power Station in New England. Though technically advanced, this kind of station will produce little residue fuel that can be used to fuel another reactor. The middle years would stress construction of "advanced converters"—reactors that can convert some consumed fuel into plutonium to fire other reactors. In the last phase would be built pure "breeders" to produce more fuel than they burn. Looking further ahead, the A.E.C.'s report envisages atomic plants producing 50 per cent of all electric power in the United States by 2000 A.D. when the country's total power consumption itself is expected to be ten times the current level.

In the meanwhile, according to a report from New York this week, Consolidated Edison Company has applied to the U.S. Atomic Energy Commission for a permit to build a 1,000-M.W. atomic power station for catering to that metropolis. The firm, which has already built a 202-M.W. atomic station up the Hudson River for supplying power to New York, plans to complete the proposed bigger station, involving a capital outlay of $175 million, by 1970. This plant, too, will be based on the "pressurised water" reactor similar to that in the atomic power station at Shippingport (Pennsylvania). Steam superheated in pipes surrounding the reactor core will drive huge turbine generators to produce electricity. The federal review of plans for the plant, which will be the largest atomic power station in the U.S., is just under way to see that it will be technically sound.

Progress in the field of nuclear power in Great Britain has been on a relatively larger scale than in the United States. In fact, the U.K. was the first in the world to generate elecricity from atomic fuel on any significant scale. The main explanation for this lead by the U.K. lies in the fact that the country's economically mineable coal reserves are getting depleted, that its supply of hydel power is very limited and that it has to import almost all its requirements of petroleum. Britain realised quite early in the post-war years that it must be ahead with the plans for producing nuclear energy for commercial purposes, if its growing power needs were to be met without excessive dependence on other countries. Under its 5,000-M.W. programme which is scheduled for completion by 1968, Britain has already commissioned its first two commercial stations one at Bradwell (300 M.W.) and the other at Berkeley (275 M.W.). The largest nuclear station so far authorised will have an installed capacity of 800-1,000 M.W. The capital costs of the two completed stations, working out to £166 5 per kw. and £172.5 per kw., have exceeded the original estimates by 17 per cent and 19 per cent respectively. But the capital costs of subsequent stations are expected to decrease steadily, as a result of progressive improvements, especially in the thermal efficiency of fuel burn-up. In this respect, the Advanced Gas-Cooled Reactor under development holds promise of reducing capital costs by 20-25 per cent below those of the present generation of Calder-type or "Magnox" stations.

The Soviet Union, which brought a 5-M.W. nuclear power reactor into operation early in 1954, has since set up several stations with an aggregate capacity of 750 M.W. It is stated that no major expansion of nuclear power capacity is being planned in that country, as priority is being given to the development of its vast coal and petroleum resources.

In the six European Common Market countries, too, production of nuclear power has made substantial headway during the last five years. Although current output is only a fraction of conventional energy production, it is noteworthy that it has increased from one million kilowatt hours in 1957 to 270 million kw.h. in 1961. By 1970, nuclear power is expected to be available in large and commercially usable quantities in Western Europe, and most experts believe that it will then be competitive.

In the underdeveloped countries nuclear power is yet to make any significant progress. Since nuclear plants today not only involve a very high capital investment but also call for many specialised components not readily available from local sources, the amount of foreign exchange needed for their establishment in developing countries like India is considerably greater than in the case of conventional stations. If, however, gas-cooled reactors come to be adopted, the total amount of foreign currency to be spent over the life of a nuclear power station would be less than in the case of a water reactor, for the former reactor system burns natural uranium that can largely be manufactured locally in the developing countries, whereas the latter depends on high-cost enriched uranium which would have to be imported. But the initial foreign currency requirements for a gas-cooled reactor will exceed those for a water reactor. It is this foreign exchange aspect, as well as an insufficient supply of trained and skilled scientists, not to mention engineers, that will set severe limits to nuclear power development in the poorer countries.

ELECTRICAL POWER AND ENERGY SURVEYS

The Government of India has just appointed two expert committees—one for undertaking an electrical power survey and the other for conducting a comprehensive energy survey. The Electrical Survey Committee, under its terms of reference, will also consider appropriate measures to meet the prospective demands for power by States, regions and categories of consumers expected by March 1971. The Committee has been directed to make recommendations as to the phasing in which the development of power resources is to be brought about. The terms of reference also cover (i) fuel for thermal power stations, (ii) outline of plan for regional and all-India grids, (iii) survey of local production of generation, transmission and distribution equipment, (iv) investments necessary in generation, transmission and distribution, (v) importation necessary and (vi) requirements of skilled manpower. The Committee will further make recommendations in regard to electricity supply legislation and electricity tariff and financial policies.

The members of the Committee are: Mr. M. R. Sachdev, Secretary, Ministry of Irrigation and Power, Mr. Walker Cisler, U.S.A., Prof. Austin Robinson, U.K., Mr. Der Heen, Belgium, Mr. Jacques Descrousseaux, France, Mr. S. S. Kumar, Mr. H. R. Bhatia, Mr. K. P. S. Nair, Mr. V. P. Appadurai, Mr. S. Bose, Mr. B. S. Nag, Mr. Pitambar Pant, and Mr. M. S. Ram (Member-Secretary). The Committee will be advised by Mr. C. M. Trivedi, Prof. Thacker and Dr. Bhabha. It will have powers to co-opt other experts from time to time.

The other Committee, namely, the Energy Survey Committee, is expected to survey present and prospective demands for and supplies of energy, both total and in respect of all constituents of energy, on a national, regional and sectoral basis. It is to provide the Government of India basic material for development planning in the field of energy up to 1981.

The members of this Committee are: Mr. M. R. Sachdev, Mr. K. R. Damle, Mr. Walker Cisler, Prof. Austin Robinson, Mr. Der Heen, Mr. Jacques Descrousseaux, Mr. P. R. Nayak, Mr. M. N. Chakravarthy, Mr. B. S. Nag, Dr. P. S. Lokanathan, Dr. V. K. R. V. Rao, and Mr. Pitambar Pant. Other members will be co-opted as and when necessary. This Committee, too, will be advised by Mr. C. M. Trivedi, Prof. Thacker and Dr. Bhabha.

The largest parking garage in Europe is at present under construction at The Hague, the Netherlands. The garage comprises ten floors, has a total capacity of 4,500 cars and is financed by owners of large department stores in the town centre, aiming at a solution of the problem of finding parking space for the cars of their customers. This initiative has already led to the erection of another smaller garage of the same type in another district of the town, where shopkeepers have been quick to procure the same facilities for their clients. It is expected that this co-operation of shopkeepers will lead to the building of a chain of public parking garages, all of them right on the spot where they are needed, founded on a strictly economical basis. At present there are more than 50,000 cars in the City of the Hague, as against 14,000 in 1950. On 1st August, 1961, there were 602,500 passenger cars in the whole of the Netherlands, that is, at the ratio of one car to every five families.

NEW PRODUCTS AND PROCESSES

New Method of Packing Coffee

TWO well-known companies in the U.S.A. and in Canada are now marketing their ground coffee in 1 lb. packages consisting of a tightly sealed Pliofilm inner liner and a printed outer paper bag. These bags keep the pre-ground coffee fresh. The packages are produced on Swiss SIG machines model KFAS which form, fill and seal these bags—all fully automatically. Although exacting demands are made for completely airtight inner liners, both machines operate at above 70 bags per minute. The packaging material is taken from roll stock and made into double bags in separate consecutive operations: First the inner liner of Pliofilm is formed and heatsealed with full-length side seam and fin-type bottom seal. Subsequently the outer bag of printed paper is formed and glue-sealed over the inner liner. Positively held in a conveyor chain, the bags are brought to the coffee filling station equipped with four precision scales. Automatic in-line check weighing of every bag provides constant control and rejects both overweights and underweights. (Checkweigher may be replaced by filling level control.) For top closing the inner liner is heatsealed to provide and airtight pack, bag top is then folded over and over to filling level and glue-sealed. The flat top closure makes for pleasant appearance and also facilitates stacking.

Road Breaker

A new type of road breaker, employing a revolutionary form of power, which is claimed to have an efficiency of 50-60 per cent compared with 10-15 per cent of conventional compressed air drills, has been developed by George Adlam and Sons, Bristol. It is also extremely quiet. The road breaker consists of what is called a valveless sonic generator powered by a 13 h.p. petrol engine (which can be converted to run on gas), a diesel engine of greater horse-power, or an electric motor. A comparable pneumatic drill requires a 40 h.p. engine.

Dry Cooling Towers for Generating Units

Successful tests have been carried out on a major British electrical power development—the use of the Heller Dry Cooling Tower system with large electricity generating units. The tests lasted a year and covered a wide range of weather conditions, including severe icing. A big advantage of the system is that power stations, and in particular atomic power stations, designed around dry cooling towers do not have to be sited near ample water supplies. Instead, they can be built wherever they are needed—for example, a conventional station could be built on a cheap coal field having no water. In the dry cooling system the boiler water itself is used again in a cycle of operations to provide further water. Power authorities in Spain, Africa, Australia, the Middle East, Canada and the United States are said to be displaying great interest in the British tests. English Electric Company Ltd., had to develop large car-type radiator cooler elements to fit the biggest dry cooling tower in the world, as well as the largest spray condenser to condense the steam from the 120,000 kilowatt generating set associated with the dry tower.

Automatic Materials Handling

An automatic materials handling system, which can be used in many types of factories, has been produced by the joint effort of two British firms, General Precision Systems Ltd. and Manufacturers Equipment Company Ltd. Designed mainly for sorting and routing packaged products, notably packaged food, cosmetics and tobacco (where products of diverse natures have to be conveyed from several product lines) the equipment consists of conveyor lines with electronic sensing and controlling devices for routing the products. The conveyors automatically separate containers, but a touch of the hand can halt the container line temporarily without a pressure build-up. A flat type of conveyor can carry a distributed load of 500-lb. (226.796 k.) over a 10 in. (25.4 cm.) length. The system employs various types of unit including a three-way switch section for taking packages ahead, or left or right, into "spur" lines. Other units with belt drive, lifting mechanisms and various roller formats, are installed where necessary.

Putting Tides to Work

An unusual caravan will shortly put to sea from the port of Murmansk. Two tugs will tow a strange-looking structure that had never been seen before by the sailors. It will be neither a ship nor a barge. In its appearance it resembles a floating dock, but this is not a dock, either. The tugs will be towing prefabricated parts of a Tidal Power Station (TPS) building. The first experimental TPS will be delivered to the Kislaya inlet in the Barents Sea. At this place the floating structure will be lowered onto a prepared place and anchored to the sea bottom. Tidal waves will start rotating the turbine installed in the TPS building. Following the pilot installation, tugs will bring TPSs to the Lumbovsky and Lizensky Bays of the White Sea. Dams of the Lumbovskaya TPS will stretch for 5 kilometres and cut off from the sea an area of 70 square kilometres. The tides reaching here a height of 7 metres will be put to work. The design of the Byelomorskaya Tidal Power Station is really impressive. According to estimates of specialists, the 100-kilometre dam of this TPS will wall off the whole eastern part of Lizensky Bay and will supply 14 million kilowatts of electricity into the power grid of the European part of the U.S.S.R.

New Chemical Materials

Soviet scientists are developing new chemical materials which will be used in the industry of the U.S.S.R. in the near future. They have, for instance, made a new synthetic rubber, SK-I, which can be fully substituted for natural rubber. The new chemical has very high strength, elasticity, adhesiveness and low rates of heat generation. Very soon large-scale production of this material will be organised in the country. The Soviet scientists are also working on perlites—volcanic rocks. The use of this mineral raw material in technology under conditions of deep freeze reduces the cost of insulation by approximately 20 times. Perlites can be used in agriculture, too, with equal effect.

Emergency Oxygen Unit Introduced

A new portable emergency oxygen unit, currently being marketed by Union Carbide Corporation in the U.S., provides a 90-litre supply of oxygen, U.S.P., sufficient for 15 minutes of continuous use. The unit comes complete with a disposable oxygen supply cylinder, plastic oxygen mask and tubing, instruction booklet, carrying case, and a prescnt regulator which delivers oxygen at a constant flow of six liters per minute. Replacement oxygen cylinders and component parts for the unit are also supplied, if desired. Assembled in seconds, it has a long shelf life and can be stored for years without loss of effectiveness. The administration of oxygen has been found useful in many emergencies such as heart attacks, shock following injury, smoke inhalation, electric shock, carbon monoxide poisoning, drowning, asphyxia, and other medical conditions where oxygen is prescribed by a physician. It has been calculated in the U.S. that one out of every 10 normal healthy middle-aged men will experience coronary disease before he is 65. It can be expected to kill, according to Union Carbide one out of every 20 currently normal men before they reach 65. The availability of oxygen when these attacks take place could prove most helpful.

Tested at a leading medical centre, the Emergency Oxygen Unit has been proven effective and easy to use. Anyone suffering from a lung or heart condition, or any difficulty in breathing, may wish to ask his physician about this unit. It can be used in homes, offices, factories, public meeting places, boats, autos, etc., and is especially recommended doctors, fire and police departments, industrial plants, rescue squads and civil defence units.

Electronic Oven

The Dutch Philips Co. at Eindhoven, the Netherlands, has started the serial manufacture of an electronic oven which uses electromagnetic waves generating heat inside food. Every part of the food in the oven is heated to exactly the same degree in the same space of time, thus bringing down cooking time to some minutes or even seconds. According to the manufacturers, electronically prepared meals are much tastier than cooked or boiled food, while at the same time all minerals and vitamins are preserved and dishes retain their original colour. The new oven can be used for three different methods. Firstly, meals can be prepared beforehand and heated up when required; secondly, deep-freeze meals can be heated within seconds to the desired temperature and, finally, raw foods can be cooked, boiled or roasted in a very short time.

Instrument to Record Aircraft Behaviours

The Netherlands Airlines Company, K.L.M., has initiated a revolutionary new method of recording the behaviour of aircraft and engines during flight with a highly accurate recording apparatus, invented and developed by the National Aeronautics and Space Laboratory at Amsterdam. Of every flight the apparatus produces a complete and highly detailed recorded survey which after analysis indicates air speed, altitude, power setting, course, etc., together with data on the mechanical condition of aircraft and engines, such as turbine temperature and engine speeds. At the same time this robot observer automatically discovers any defect occurring in any part of the plane and immediately indicates the place of the trouble with a red flash light on a panel board. KLM has been testing the new recording system for some months in one of its DC-8 jets. The so-far collected data are at present being studied at the KLM scientific laboratories at the Netherlands' National Airport, Schiphol.

INSTALMENT CREDIT FOR EQUIPMENT OR MACHINERY

The State Bank of India

have pleasure in announcing the introduction of 'Instalment Credit Scheme', to cater to the needs of industrialists. In approved cases, the purchase of equipment or machinery will be financed by loans repayable in monthly or quarterly instalments spread over a period up to five years on easy terms.

For details, please contact the nearest Branch of the Bank.

INCREASE PRODUCTION AND ASSIST IN DEFENCE EFFORT

THE STATE BANK OF INDIA INDIA'S LEADING BANK

SISTA'S-58-70A

DEFINITION OF SMALL INDUSTRY

MUST IT BE REVISED UPWARD?

By Small Man

SCARCITY of capital, abundance of unskilled labour, regional disparities in income and industrial growth, and the inflation-oriented demand for consumer goods and simple producers' goods, are some of the major reasons for the encouragement given to the small-scale sector. It is hoped that the assistance and facilities offered under the various small-scale industries schemes would enthuse the entrepreneurs of meagre means to create new avenues of employment, specially in the backward regions, and thereby assist to raise the standard of living of the local populace. Thus, the small-scale sector is visualised as an effective medium for translating into practice the concept of Socialist Pattern of Society. Because of their short gestation periods and their low capital-output ratios, the small-scale industries assist, in theory at least, to dampen the inflationary pressures on consumer goods and simple producers' goods. There is, however, no doubt that, if nursed and nurtured properly, the small-scale units could be successfully harnessed for earning foreign exchange for the country.

The Standing Committee of the Small-scale Industries Board had constituted a sub-committee for (i) considering the modification of the present definition of small-scale industries, which is Rs. 5 lakhs for general and Rs. 10 lakhs for ancillary industries, (ii) examining the feasibility of applying one definition to all, ancillary and non-ancillary small-scale industries, and (iii) considering the reservation of certain facilities for small units with lower capital assets, in case the present definition was enlarged.

The Committee has recommended the extension of the present definition "to cover small-scale industries with capital assets ranging from Rs. 5 lakhs to Rs. 10 lakhs."

The Committee felt that the extension of the present definition would put an end to the present administrative difficulties arising out of the differentiation to be made between ancillary and non-ancillary small-scale units. Secondly, the Committee was of the opinion that the exemption of the units having capital assets upto Rs. 10 lakhs from obtaining licences under the Industrial Development and Regulation Act, would facilitate the enlargement of the present definition. And, lastly, the Committee believed that the extension of the definition was warranted by the present inflationary situation, which had increased the cost of adopting modern technical and managerial processes, which are so essential for maintaining the competitiveness of the small industries in export markets.

While recommending the enlargement of the present definition, the Committee has claimed to be aware of the "limited resources available" to the present small-scale units, and the additional strains to which these resources would be subjected as a result of the upward revision of the present definition. Since not only the demand for technical assistance would increase, but also the nature of the technical assistance demanded would change, due to the complicated techniques employed by the large-sized new 'small' units, the committee has suggested "substantial strengthening" of the Central Small Industries Organisation, the various Small Industries Service Institutes, and other related bodies.

Considering the present shortage of credit facilities available to the small-scale units, the Committee has recommended that, under the revised definition, small units with capital assets between Rs. 5 lakhs and Rs. 10 lakhs should qualify for credit facilities only from the State Financial Corporations and the Credit Guarantee Scheme of the Reserve Bank, but not under the State Aid to Industries Acts.

The Committee has further suggested that accommodation in industrial estates should be made available to all units covered by the revised definition, though the needs of the smaller units should be accorded a higher priority. Another recommendation of the Committee is that the subsidy on rent granted to the small units accommodated in industrial estates, should be made applicable to all units under the enlarged definition, though the State Governments should have the discretion to decide which particular estates should qualify for the benefit of this subsidy. The Committee felt that the subsidy on rent would help to attract industries to the unfavourable and rural areas.

Advocating the abolition of the discrimination made between the ancillary units attached to the public and the private sectors, as also between the ordinary small industries and the ancillary small industries, the Committee has recommended "that the terms and conditions of hire purchase should be made applicable equally to all units coming under the revised definition." A ceiling of Rs. 4 lakhs has, however, been suggested to be fixed for the value of machinery which could be supplied to a given party.

Under the revised definition, the present small units would have to face severe competition from the bigger 'small' units, in securing orders under the Government Stores Purchase Scheme. Recognising this point, the Committee has introduced a safeguard by suggesting that a price preferential of only 7½ per cent should be given to the small units with capital assets between Rs. 5 lakhs and Rs. 10 lakhs, as against the price preference of 15 per cent given to the small units covered by the new definition. The Committee has also recommended an increase in the number of items to be purchased exclusively from the small-scale sector.

As regards the supply of raw materials, the Committee has recommended that, under the revised definition, units with capital assets ranging between Rs. 5 lakhs and Rs. 10 lakhs should not be transferred to the care of the State Directorates of Industries, without a corresponding increase in the allocations of resources to the small-scale sector.

Neglected Considerations

One of the reasons put forward by the Committee for enlarging the definition is the present administrative difficulty arising out of the differentiation to be made between the ancillary and non-ancillary small-scale units. But under the enlarged definition too, the administration of the safeguards recommended by the Committee relating to credit facilities and price preference, would necessitate the differentiation of the small units with capital assets of Rs. 5 lakhs and below, from the small units with capital assets ranging from Rs. 5 lakhs to Rs. 10 lakhs. Thus, the administrative difficulty which is sought to be solved, might become more complicated under the enlarged definition, where differentiation will have to be made from among a very large number of small-scale units.

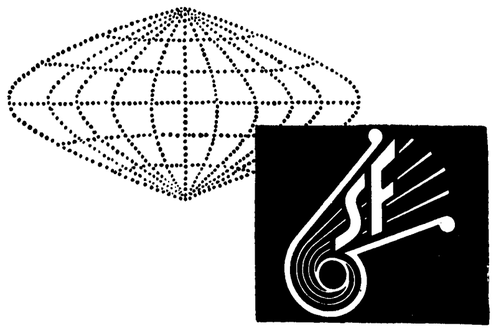
Secondly, in view of the impossibility of the "limited resources available" increasing in the near future, the safeguards recommended by the Committee will not be able to safeguard the interests of the present ill-fed small units, under the enlarged definition. The present experience suggests that these aggrieved small units might be crucified for the sake of the larger 'small' units.

Thirdly, it is not denied that inflation has raised the cost of modernisation of small units, but are there no small units engaged in life-and-death struggle, under the present definition? If these units in the oxygen tent cannot be nursed properly due to paucity of resources, then wherein lies the wisdom in enlarging the present definition? This writer is unable to comprehend the grand strategy of increasing the commitments, when there is not even a bleak possibility of the resources increasing in the near future. It is his sincere opinion that everythink possible should first be done to help these anæmic small units to reach the present definition limits, and then stage the flirtations with the concept of enlarging the definition. It is the existence of the anæmic small units which is at stake at present, whereas the Committee's deliberations are concerned with the difficulties of expansion faced by the larger-sized and affluent 'small' units. The function of the definition of small-scale industries is to help the small units to achieve the self-sustained status, and the present definition limits of Rs. 5 lakhs for general and Rs. 10 lakhs for ancillary small-scale industries, are quite reasonable from this point of view. The post-self-sustained expansion is the skill of the entrepreneurs, which should not strain the inadequate resources of the concerned institutions. On the contrary, the assistance rendered should be a declining function of the increment in the assets of the small units.

It should be pointed out, in this connection that, very often, the people benefiting from the multifarious assistance offered under the various small industries schemes, are the influential big financiers, operating under the garb of small-scale industry, thus nullifying the main object behind the programme—that of assisting the entrepreneurs of meagre means. In order to close this loophole, it has been suggested by some that a ceiling on income of the people qualifying for such assistance be imposed. The resources-starved small entrepreneurs must be assigned a priority in any scheme for rendering assistance, but, strangely enough, it is these very entrepreneurs who are left to the mercy of the (black) market forces, and to discover that the various attractive schemes of assistance promised in the colourful booklets, are only a mirage. If this is the plight of the small units under the present circumstances, then God save the small units under the enlarged definition.

The proposed enlargement of the present definition amounts to letting loose a pack of wolves amongst half-starved sheep. If the Committee was so keen on conferring favours upon the large-sized 'small' units, it could as well have suggested the creation of an altogether new sector for this purpose. Indeed, the current situation is so hopeless that, apart from enlarging the definition, one feels that the present definition should be further sub-divided to classify separately the anæmic small units, say, with capital assets of Rs. 2 lakhs and below, in order to enable the concerned institutions to do proper justice to these units in coma.

The Committee has claimed to be aware of the 'limited resources available.' Is then the recommendation for subsidy on rent to be applicable to "all units" accommodated in an industrial estate borne of this awareness of limited resources? The infra-structural requirements of the large-sized 'small' units are more detailed and elaborate than those of the present small units, necessitating more capital outlay on the construction of the industrial estates. It is also doubtful how far the subsidy on rent can attract the large 'small' units to usually ill-furnished industrial estates in the unfavourable and rural areas.



The Committee must be expecting manna from heaven, when recommending a ceiling of Rs. 4 lakhs for the value of machinery to be supplied by the National Small Industries Corporation, to any given party, under the enlarged definition. It is an underestimate to say that the present small units are encountering a "serious shortage," for they are being suffocated by starvation of credit. What then are the reasons which have led the Committee to aggravate the situation by recommending the qualification of the new entrants (under the enlarged definition) for the credit facilities obtainable from the State Financial Corporations and under the Credit Guarantee Scheme of the Reserve Bank?

It is the declared intention of the Government now to reduce the element of subsidy to small-scale industries. The motive of the Committee behind the extension of the subsidies on rent, price, etc., to the new entrants, is, therefore, difficult to explain. The present small units will find it difficult to compete with the new entrants under the Governments Stores Purchase Scheme in spite of the price preferential difference of 7½ per cent operating in their favour. Competition is a function not only of the price preference, but also of the quality of the techniques employed, and the 'influence' enjoyed in the concerned circles. On these two latter considerations, the present small units are definitely placed at a disadvantage as compared with the proposed new entrants, and the price preference difference will not be able to repair the damage done by the enlarged definition.

It is also not clear from whence does the Committee expect the resources to accrue for the "substantial strengthening" of the Central Small Industries Organisation, the various Small Industries Service Institutes, and the Extension Centres. The Committee has recommended that the new 'small' units should not be transferred to the care of the State Directors of Industries without a corresponding increase in their allocations of raw materials. What then has induced the Committee to confer the benefits obtainable from the National Small Industries Corporation.

SVENSKA FLAKTFABRIKEN!

In air handling business no other symbol is so well known as SF (Svenska Flaktfabriken). Today, in practically every country of the world, SF equipment are an integral part of their industry. More so in Europe, where Sweden's engineering skill and experience in all branches of air handling is widely recognised.

Over a period of nearly half a century SF and their technicians have spread to all corners of the world. The benefit of their research and study is now available in India as well.

SF Sales and Service organisation is always ready to meet your requirements in.

Ventilation
Humidification
Heating and Cooling
Drying

EMPLOYEES' PROVIDENT FUNDS SCHEME

RAPID EXPANSION OF COVERAGE

IN less than ten years, the coverage of the Employees' Provident Funds Act of 1952 and the scheme framed thereunder has expanded from the initial six industries to as many as 69 factory and non-factory establishments, covering about three and a half million workers as at the end of October 1962. The Act now applies to all the States and Union Territories in India, except of Jammu and Kashmir where the State Government has instituted, with effect from 1st June 1961, a separate provident fund scheme for the workers on the lines of the Employees' Provident Fund Scheme. According to the annual report on the working of the Scheme during the year ended 31st March 1962, issued by the Central Board of Trustees of the Employees' Provident Fund, the Act was made applicable to fourteen well-organised industries and classes of establishments during the year. Eight more industries were brought under the purview of the Act since the close of the year till the end of November 1962. Thirty-eight additional industries, with an estimated prospective membership of about 300,000, have already been surveyed, with a view to examining the feasibility of bringing them within the purview of the Act. Proposals to extend the Act to banks and insurance companies, almost all of which have their own provident fund schemes, are also under consideration.

The Act applies to all factories and other establishments falling under any "covered industry" employing 20 to 49 persons on completion of five years of existence and to those employing 50 or more persons on completion of three years' existence. It does not apply to establishments registered under the Co-operative Societies Act 1912 (or under any other law relating to co-operative societies), if the establishments employ less than 50 persons and work without the aid of power. Nor does the Act apply to handloom factories organised as industrial co-operatives as a class; this exemption is scheduled to last upto the end of 1964. Further, it does not apply to tea plantations and tea factories in the State of Assam where the State Government has a separate provident fund scheme for these establishments. It does not cover the collieries also, as they are covered by a separate scheme, under a special legislation enacted as early as in 1948. Different departments and branches of an establishment covered under the Act are treated as a part of the establishment and the staff strength of the branches is duly taken into account for coverage purposes.

The number of subscribers, which had stood, at the close of the year ended 31st March 1961 at 2.92 million, increased to 3.15 million at the end of the year under review, while the number of establishments covered increased from 12,133 to 17,416 during the same period. About 100,000 subscribers ceased to be members of the Fund during the year, while about 300,000 new subscribers were enrolled, the net addition to total membership of the Fund during the year being 224,000. The number of establishments voluntarily covered rose from 115 in 1961 to 152 in 1962.

Exemptions

The Act provides for management of provident funds by individual institutions in the covered industries, under certain conditions. Thus, when an establishment has its own provident fund, gratuity or pension scheme and the total quantum of benefits available thereunder is not less than that under the statutory scheme and is subject to the continuance of all the benefits under the scheme, such an establishment can apply for exemption from the Scheme (not from the Act) or its employees as a class can opt out of it and administer the scheme independently. In view of the rapid expansion of the coverage of the scheme, the Central Board of Trustees of the Scheme has granted exemptions as freely as possible. The number of establishments exempted for this purpose as at the end of March 1962 amounted to 943, covering 1.34 million workers of whom 1.16 million were subscribers. As compared with this, there were 941 exempted establishments at the end of the previous year, with 1.31 million employees of whom 1.13 million were subscribers. The industries to which the Act has been made applicable, number of establishments covered and subscribers are tabulated on this page.

Eligibility for membership of the Fund continued to be unchanged during the year under review. An employee in a covered establishment, other than an excluded employee, is eligible for membership, provided his basic wages, dearness allowance, including cash value of food concessions and retaining allowance, if any, do not together exceed Rs. 500 per month. An individual whose emoluments exceed Rs. 500 per month subsequent to his becoming a member of the Fund can continue to be a member contributing on Rs. 500 per month. He can also contribute on the excess amount if he so desires and his employer agrees. The qualifying period for membership of the Fund is one year's continuous service or 240 days' actual work during a period of 12 months or less. In the case of seasonal establishments, an employee should have worked for two-thirds of the period during which the establishment remains in operation.

Rate of Contribution

The rate of provident fund contributions for members continue to be 6.25 per cent of wages, with an equal contribution by the employers. The total savings per employee therefore aggregate 12.5 per cent of wages. A member can, with the consent of his employer, contribute voluntarily at a higher rate, but the employer's contribution in such cases does not exceed 6.25 per cent. During the year under review, only 38,000 members voluntarily contributed at higher rates. Total contributions in cash during the year, inclusive of past accumulations, amounted to Rs. 25.04 crores, as against Rs. 20.30 crores in the previous year. In addition, past accumulations amounting to Rs. 1.35 crore, contributed in the shape of securities, were also received from newly-covered establishments that had previously their own provident fund scheme.

The Technical Committee appointed under the chairmanship of Mr. M. R. Meher, which examined the proposal to increase the rate of contribution in four major industries, namely, cigarettes, electrical, mechanical or general engineering products, iron and steel and paper, had recommended enhancement of the rate of contribution from 6.25 per cent to 8 per cent in the above industries. The Government has accepted this recommendation and the necessary legislation to enforce it is in progress. Information is also being collected in respect of a few other well-organised industries to determine if a similar rise in the rate of contribution can be effected.

The revised pattern of investment for provident funds is 20 per cent in National Plan Savings Certificates and 80 per cent in long-term Central Government securities. This pattern is expected to yield a little over 4 per cent per annum in respect of future investments and, consequently, interest allowed on provident fund accumulations of members is expected to touch this figure as soon as the old investments mature and are reinvested as per the above pattern. During the year ended 31st March 1962, a sum of Rs. 23.56 crores was invested in Central Government securities in respect of unexempted establishments, as against Rs. 16.34 crores in the previous year, bringing total investments, as at the end of March 1962, to Rs. 113.34 crores. This is inclusive of securities worth Rs. 14.92 crores received as past accumulation from covered establishments. The corresponding figure of total investments as at the close of March 1961 was Rs. 90.71 crores. This compares with Rs. 136.55 crores being investments of coal mines provident funds (Rs. 22.22 crores) and of other provident funds including funds of those establishments covered by the Act but permitted to run their own schemes. As at 31st March 1961 the total investment in Government securities on account of all provident fund schemes (according to the *Reserve Bank of India Bulletin*) was of the order of Rs. 217.55 crores.

Yield from Investments

The year-wise yield from the investments of the Central Provident Fund Commissioner is as follows:

	(In lakhs of rupees)
1952-54	13.39
1954-55	30.75
1955-56	47.42
1956-57	70.77
1957-58	109.09
1958-59	158.03
1959-60	209.22
1960-61	272.53
1961-62	350.00

As in the previous year, on the recommendation of the Central Board of Trustees,

DEVELOPMENT OF INDIAN STANDARDS

CERTIFICATION MARKS SCHEME MAKES HEADWAY

THE seventh Indian Standards Convention is due to take place at the end of this month at Calcutta. The convention, organised by the Indian Standards Institution in a bid to promote the popularity of standardisation and other measures of quality control, is expected to discuss various problems faced by both the industry and trade in adhering to standardisation measures and suggest solutions to overcome them. Such annual conventions in the past were of immense educative value. These efforts to stimulate standard-consciousness deserve to be encouraged, particularly because standardisation is a comparatively new technique in this country, having been in vogue only during the past decade and a half. The first step towards the development of Indian standard specifications on a systematic scale was taken in 1947, when the Indian Standards Institution was established at New Delhi. With the growth in the tempo of industrial development and expansion of exports, the I.S.I. has become a powerful agency for ensuring quality control. But the standard-consciousness cannot be said to have permeated to all levels of industry and trade. Much, therefore, yet remains to be done in this direction.

Standardisation, it may be noted here, is a process for establishing a level of comparison (a standard) with reference to which the quality or suitability of an article may be judged. Standardisation, besides defining quality of materials and products also concerns itself with dimensional and functional interchangeability, simplification and safety requirements, the ultimate aim always being to ensure the largest possible measure of economy and efficiency. The number of Indian Standards published so far is near the 2,000-mark. According to the fifteenth annual report of the Indian Standards Institution, the total number of standards published by it since its inception and under print touched a record of 1,926 in 1961-62. During the year under review, 259 new standards were adopted, as against 246 in 1960-61. Besides, 67 standards were revised and six standards withdrawn during the year. The report says that demand for national standards for the guidance, development and expansion of industries and trade has continued to grow. As a result, the actual implementation of Indian Standards touched a new high of 1,604 as at the end of 1961-62. Many industrial undertakings and purchase organisations, both in the public and private sectors, have implemented Indian Standards, resulting in the production of goods conforming to these standards. There has thus been a further increase in the subscribing membership of the Institution. The total number of members was 2,310 during the year under review, as against 2,065 during the previous year and only 1,347 in 1956-57. The revenue realised through subscription was also higher at Rs. 6.51 lakhs in 1961-62, as against Rs. 6.03 lakhs and Rs. 3.36 lakhs in 1960-61 and 1956-57, respectively. Side by side with the increase in the number of subscribing members, the number of Committee members has gone up from 11,287 in 1960-61 to 12,397.

New Proposals

Proposals for formulating Indian Standards are normally entertained from the members of the I.S.I. Every proposal is scrutinised by the appropriate Division Councils. There are seven Division Councils covering agricultural and food products, buildings, chemicals, electro-technical goods, engineerings, structurals and metals and textiles. When these Division Councils approve of new proposals, the work of drafting standards is entrusted to the sectional committees, consisting of various interests, industry, trade and consumers' organisations. The sectional committees, we are told, are weighted in favour of consumer interests. The next step is the formation of sub-committees and panels, consisting of scientists and experts and others concerned. The sub-committees and panels work out draft standards, after exhaustive studies of data and literature on the subject, sometimes supplemented by laboratory tests. After the draft is approved by the Sectional Committee, it is widely circulated among interested parties in India and abroad for elicit ing comments. A standard is finalised only after taking into account these comments.

The I.S.I. received 446 new proposals for formulation of Indian Standards in 1961-62. During the year, 326 new and revised standards were published. Of these, the building division accounted for the largest number of standards (55). Some of the important materials for which standards were evolved during the year are plain hard drawn steel wire for pre-stressed concrete, fold worked steel bars deformed and twisted for concrete reinforcement, glazed earthenware tiles, pillar taps, ice cans, sealing compounds and performed fitters for expansion joints in concrete and timber for use in aircraft construction.

Chemicals

A substantial number of standards, fifty-three to be precise, was finalised for chemicals and chemical products, reflecting the rapid growth of the industry. The highlights of work in this section were the publication of standards on methods of temperature measurement of petroleum and its products (Part I), as also specification for petroleum hydro-carbon solvents, bleaching earths of Indian origin used for decolorising vegetable oils, and butter tins. The other important chemicals covered by new standards include common salt for butter and cheese industry, paper for permanent records, methods of test for ready mixed paints and enamels, rubber hot water bottles and crown corks.

The structurals and metals division and the engineering division together accounted for 100 new or revised standards. One of the important standards published in the structural and metals division during the year under review was the schedules for wrought steels for general engineering purposes. A wide range of other ferrous and non-ferrous metal products (particularly aluminium) was also brought within the scheme of national standard specifications. The important articles in the engineering section which were dealt with by the I.S.I. included bolts, screws, nuts, rivets, hand tools, weighing instruments, drills, reamers, etc. The I.S.I., with the assistance of an expert made available by the U.N. Technical Assistance Organisation, is also working on preparation of standards for machine tools and small tools, apart from seeking to remove technical difficulties in the way of change-over to metric system.

The published standards in the textile division cover, among others, important items, such as guide for marking textile materials made of wool which aims to establish a generally recognised usage of such terms as 'wool,' 'all wool,' 'worsted blended wool,' 'part wool,' etc., A-twill jute bags for packing sugar, shuttles for plain calico looms, suction-threading type cotton sewing thread, cotton lining cloth, cotton embroidery thread, cotton tape newan, cotton spindle tapes for cotton and jute industries, handloom cotton mootus, handloom cotton bleeding Madras and coir door mats.

Certification Marks

Apart from publishing standard specifications, the I.S.I. has been issuing certification marks in respect of goods manufactured or processed in conformity with the requirement of the I.S.I. standards. The basic idea of the I.S.I. certification marking is to convey an assurance to the buyer that the goods so certified have been inspected, tested and certified by experts of the I.S.I. Before granting a licence, the I.S.I. makes thorough inspection of the factory, machinery and equipment, manufacturing process, etc. Surprise checks and random testing of such products are also conducted by the I.S.I. to prevent any malpractices.

The I.S.I. certification mark scheme continues to gain in popularity. The number of licences granted rose from 184 in 1959-60 to 289 in 1960-61 and to 401 in 1961-62. One of the important industries in which certification marks scheme was introduced in 1961-62 was steel, and the first ten licences were given to Hindustan Steel Ltd. for their plants at Bhilai and Durgapur. While the progress achieved is commendable, there is no denying the fact that a substantial section of industry and trade still remains outside the purview of the scheme. Proposals for making the certification marks more effective have, of course, been made by the Lal Verman Committee on quality control (1961); apparently, these proposals are still being studied by the Government for implementation. Another committee, under the chairmanship of Mr. D. S. Joshi, has suggested the levy of a voluntary development cess on certain products to cover the cost of certification marks and other facilities for research in the industries concerned. The Government of India will do well to finalise its policy in these matters without further delay, considering the vital need for ensuring strict quality control for enhancing the quality of goods manufactured in the country.

NICKEL CONSUMPTION FALLS

There was a small decline in world demand for nickel in 1962, in distinct contrast to the trends in the previous year. The total free-world consumption of nickel fell by 5 per cent to 480 million lbs. in 1962, as compared with 1961. The setback in consumption occurred mostly in Western Europe and Japan, reflecting the slower growth rates of industrial production. But these declines were offset partly by the increase in consumption in the U.S., which accounts for about 50 per cent of the free world use of nickel.

The following table shows the trends in the consumption of major consumers in the non-communist world.

	(In million lbs.)	
	1962	1961
United States	240	227
Common Market countries ...	87	100
United Kingdom	62	78
Japan	39	43
Sweden	15	20
Canada	13	12
All others	24	24
Total ...	480	504

Despite the decline in the use of nickel in 1962, the outlook for the metal still remains encouraging. According to Mr. Henry S. Wingate, Chairman of the International Nickel Company of Canada, the long-range prospects for increased consumption of nickel continue to be excellent. He expressed the view that nickel consumption in 1963 will exceed the levels attained in recent years. Mr. Wingate's optimism is based on the belief that the development of nickel consuming industries, such as stainless steels, nickel-plating, high nickel alloys, constructional steel, iron and steel castings and copper and brass products, will gain considerable momentum in the coming years.

Although the general demand conditions were not favourable, nickel-producing countries continued to expand production capacity, achieving a record high in 1962. Canada is still the largest producer of nickel, accounting as it does for 75 per cent of the total production capacity of the free world. Of this, the International Nickel Company alone accounts for an annual capacity of 400 million lbs. During the year, the capacity of this company's new project at Thompson, Manitoba, was raised from 75 million lbs. to 90 million lbs. The annual capacities of the two other Canadian producers, namely, the Falconbridge Nickel Mines Ltd. and the Sheritt Gordon Mines were 70 million lbs. and 25 million lbs., respectively. Societe Le Nickal, the French nickel company, with deposits on the island of New Caledonia in the South Pacific, has an estimated capacity of 55 million lbs. of nickel per year. The capacity of the principal producer in the U.S., the Hanna Mining Company at Riddle, Oregon, is about 22 million lbs. annually. The bulk of the free world's remaining nickel-producing facilities is in Japan. Employing imported ores, the Japanese refiners can annually produce an estimated 50 million lbs. of nickel. Cuba is also continuing to produce nickel in the form of nickel oxide sinter in the U.S. Government facilities seized by the Castro regime. Some of the Cuban nickel was in Western Europe during 1962 through Czechoslovakia.

The following extract from Mr. Wingate's year-end review will give one an idea of the trend of nickel prices and the principal uses to which the metal is put:

"A reduction of 2½ cents (U.S.) per pound in the price of electrolytically refined nickel, effective 24th May 1962, was announced by Falconbridge Nickel Mines Ltd. This reduction brought the price of nickel in the United States to 79 cents per lb. including the 1½ cent United States import duty, from the level of 81½ cents per pound which had prevailed since 30th June 1961, when the price advanced from its previous level of 74 cents. Other nickel producers, including International Nickel, promptly followed the 23rd May price action by likewise decreasing their prices of refined nickel. Equivalent price reductions were effected in European markets and in Canada. "Stainless steel continued in 1962 to outrank all other applications of nickel by a wide margin, although its proportion took a significant drop."

The following table furnishes estimates of the consumption of nickel during 1961 in the various fields of applications, in comparison with revised figures for 1961:

	Per cent of total	
	1962	1961
Stainless steels	30	33
Nickel plating	16	15
High nickel alloys	16	15
Constructional steels	13	14
Iron and steel castings ...	12	11
Copper and brass products ...	4	4
All others	9	8

One of the major factors that threatens the stability of nickel prices is the surplus metal lying in U.S. strategic stockpiles, estimated at 140 million lbs. Mr. Wingate has urged the U.S. Government not to upset the market by indiscriminate release of this surplus. His suggestion is that the U.S. Government should either retain this surplus or supply to producing industries, for resale through regular channels, in accordance with a long-range plan worked out between the Government and the industries concerned.

MANAGING AGENTS' LOANS TO COMPANIES

COURT RULES SPECIAL RESOLUTION UNNECESSARY

IN a test case (suit No. 196 of 1962) filed by the Central India Spinning, Weaving and Manufacturing Company Ltd. against Tata Sons (Private) Ltd. and Tata Industries (Private) Ltd., the question submitted for the opinion of the Court was "whether, in case loans are made by the second defendant or its associate the first defendant or any other associate to the Company after 28th December 1960, when the Companies (Amendment) Act 1960 came into force, interest at rates agreed to by the Directors of the Company is charged in respect of such loans and such interest exceeds Rs. 5,000 in any year, the approval by a special resolution of the Company and also of the Central Government would be required under the provisions of Section 360 of the Companies Act, 1956."

Answering the question in the negative, Mr. Justice Kantawala held that "the only question that has to be considered is whether the granting of a loan by the Managing Agent or its associate to the Company is a contract for the supply or rendering of any service other than that of managing agent. ... It is clear that, whenever it is intended to make specific provisions for loans to companies, provisions have been made expressly to that effect. ... The words in Section 360, namely, contract 'for the supply or rendering of any service other than that of managing agent' are not intended to include and do not include the granting of a loan by the managing agent or his associate to the Company and the question is accordingly answered in the negative."

Mr. S. Nariman instructed by Messrs. Ardesir Hormusji Dinshaw and Co. appeared for the plaintiff and Mr. N. A. Palkhivala instructed by Messrs. Mulla and Mulla and Craigie Blunt and Caroe for the defendants.

As the case in point is of interest to all company managements as well as those concerned with the Company Law, we reproduce below the full text of the oral judgement delivered by Mr. Justice Kantavala:

This is a special case under Section 90 and Order XXXVI of the Code of Civil Procedure.

Background

The plaintiff is a company incorporated under the provisions of Act No. X of 1866. Prior to April 1945, the first defendant company was the Managing Agent of a number of companies, including the plaintiff. The second defendant is a private limited company incorporated on 7th April 1945 under the provisions of the Indian Companies Act, 1913. The second defendant was from its inception and is a wholly owned subsidiary of the first defendant company. By an agreement dated 22nd September 1945 made between the plaintiff, the first defendant and the second defendant, the second defendant was appointed Managing Agent of the plaintiff as from 1st October 1945 at the remuneration and upon the terms and conditions contained in the said agreement and by the said agreement, the first defendant agreed to guarantee irrevocably to the plaintiff-Company the due observance and performance of the said terms and conditions of the said managing agency agreement by the second defendant and to meet, satisfy and discharge all losses and damages and other liabilities which the Company might sustain or be put to by reason of any breach by the second defendant of the terms and conditions of the said agreement. By a special resolution passed at the extraordinary general meeting of the Company, held on 31st March 1960, the second defendant was, subject to the approval of the Central Government, appointed Secretaries and Treasurers of the Company as from the 16th day of August 1960 for a period of 10 years upon the terms, provisions and conditions set out in the draft agreement proposed to be entered into between the plaintiff, the second defendant and the first defendant, as guarantors of the second defendant. The Government of India gave its approval to the said draft agreement, subject however to certain modifications and subsequently an agreement was executed on the 29th day of December 1960 whereby the second defendant were appointed as Secretaries and Treasurers of the Company for a period of five years from the 16th of August 1960 upon the terms, provisions and conditions set out in the draft agreement. Under the agreement, the second defendant is paid by the plaintiff as remuneration for services as such Secretaries and Treasurers, a commission on a graduated scale on the net profits of the Company, with a maximum of 7½ per cent on the first Rs. 10 lakhs or fraction thereof on such profits for any year and a minimum of 3 per cent on any such profits over one crore of rupees for any year.

Paragraphs 6 and 7 of the Special Case are as below:—

In the course of its business as Secretaries and Treasurers, the second defendant, and the first defendant by virtue of its relationship with the second defendant and the Company, make loans with or without interest and provide finance to the Company and also give guarantees on behalf of the Company for loans taken by the Company from individual parties, banks and other financial institutions. Guarantee is provided by the defendants without receiving any commission. The Company would find it difficult to meet its financial obligations if some speedy mode were not available to it of either borrowing from the defendants or obtaining a loan from any outside party or a bank or any financial institution on the guarantee of the defendants.

Sometimes when the exigencies of a case so require, the Secretaries and Treasurers and its 100 per cent holding company, the first defendant, instead of giving loans to and giving guarantee on behalf of the Company as aforesaid, arrange with their associate companies to provide finance for the Company. All transactions of loans and guarantees by the Secretaries and Treasurers are effected with the sanction of the Board of Directors of the Company, which Board fixes or approves the rates of interest and other terms of the loans.

Plaintiff's Case

It was pointed out by Mr. Nariman, appearing for the plaintiff, that it has been contended by some of its shareholders that in case of loans advanced by the second defendant (the Secretaries and Treasurers) and by its 100 per cent holding company and guarantor, the first defendant, as associate (as defined by Section 2(4) (b) of the said Act) of the Company, where such defendants respectively charge no interest or where the interest charged does not exceed Rs. 5,000 in the aggregate in any year, the case would be covered by the provisions of Section 360(4) of the said Act and as such no special resolution of the Company or approval of the Central Government would be required under Section 360(1) of the Act, but that if the amount of the interest on the loans exceeds the aforesaid limit of Rs. 5,000 in any year, the approval of the Company by means of a special resolution and also of the Government would be required under Section 360 of the Act, notwithstanding the provisions of Section 370 of the Act in this behalf, as the giving of loans by the Secretaries and Treasurers to the Company is not a matter exclusively covered by Section 370 of the Act.

Question for Court's Opinion

The question for opinion of this Court is as under:

"Whether, in case loans are made by the second defendant or its associate, the first defendant, or any other associate to the Company after the 28th December 1960 being the date when the Companies (Amendment) Act 1960 came into force, interest at rates agreed to by the Directors of the Company is charged in respect of such loans, and such interest exceeds the limit of Rs. 5,000 in any year, the approval by special resolution of the Company and also of the Central Government would be required under the provisions of Section 360 of the Companies Act, 1956."

Relevant Sections

Section 360 deals with contracts between managing agent or associate and company for the sale or purchase of goods or the supply of services etc. It provides as under:

"(1) A contract between a company and its managing agent or an associate of the managing agent, (a) for the sale, purchase or supply of any property, movable or immovable, or for the supply or rendering of any service other than that of managing agent; or (b) for the undertaking of any shares or debentures to be issued or sold by the company shall not be valid against the company (i) unless the contract has been approved by the company by a special resolution passed by it; and (ii) where the contract is for the supply or rendering of any service other than that of managing agent, unless further the contract has been approved by the Central Government, either before the date of the contract or at any time within three months next after that date.

(2) The special resolution aforesaid shall (a) set out the material terms of the contract proposed to be entered into (or entered into) and (b) provide specifically that for any property supplied or sold, or any services supplied or rendered, by the company, the managing agent or associate shall make payment to the company within one month from the date of the supply or sale of the property, or the supply or rendering of the service, as the case may be.

(3) Every such contract and all particulars relating thereto shall be entered in a separate register maintained by the company for the purpose.

(4) Nothing in clause (a) of sub-section (1) shall affect any contract or contracts for the sale, purchase or supply of any property or the supply or rendering of any services, in which either the company or the managing agent or associate, as the case may be, regularly trades or does business, provided that the value of such property or the cost of such services does not exceed five thousand rupees in the aggregate in any year comprised in the period of the contract or contracts."

Section 370 deals with loans, etc. to companies under the same management. It provides as under:

"(1) No company (hereinafter in this section referred to as 'the lending company') shall (a) make any loan to, or (b) give any guarantee, or provide any security, in connection with a loan made by any other person to, or to any other person by a body corporate which is under the same management as the lending company, unless the making of such loan, the giving of such guarantee or the provisions of such security has been previously authorised by a special resolution of the lending company.

(1A) Where the lending company (a) makes any loan to, or (b) gives any guarantee, or provides any security, in connection with a loan made by any other person to, or to any other person by, a firm in which a partner is a body corporate under the same management as the lending company (i) the loan shall be deemed to have been made to, or (ii) the guarantee or the security shall be deemed to have been given or provided in connection with the loan made by such other person to, or to such other person by, a body corporate under the same management.

Units Under Same Management

(1B) For the purpose of sub-sections (1) and (1A) two bodies corporate shall be deemed to be under the same management (i) if the managing agent, secretaries and treasurers, managing director or manager of the one body, or where such managing agent or secretaries and treasurers are a firm, any partner in the firm, or where such managing agent or secretaries and treasurers are a private company, any director of such company, is, (a) the managing agent, secretaries and treasurers, managing director or manager of the other body; or (b) a partner in the firm acting as managing agent or secretaries and treasurers of the other body; or (c) a director of the private company acting as managing agent or secretaries and treasurers of the other body; or (ii) if a majority of the directors of the one body constitute, or at any time within the six months immediately preceding constituted, a majority of the directors of the other body, (or) (iii) if not less than one-third of the total voting power with respect to any matter relating to each of the two bodies corporate is exercised or controlled by the same individual or body corporate; or (iv) if the holding company of the one body corporate is under the same management as the other body corporate within the meaning of clause (i), clause (ii) or clause (iii), or (v) if one or more directors of the one body corporate while holding, whether by themselves or together with their relatives, the majority of shares in that body corporate also hold, whether by themselves or together with their relatives, the majority of shares in the other body corporate.

(2) Nothing contained in the foregoing provisions of this section shall apply to (a) by any loan made (i) by a holding company to its subsidiary, or (ii) by the managing agent or secretaries and treasurers to any company under his or their management, or (iii) by a banking company in the ordinary course of its business; (b) any guarantee given or any security provided (i) by a holding company in respect of any loan made to its subsidiary, or (ii) by the managing agent or secretaries and treasurers in respect of any loan made to any company under his or their management; or (iii) by a banking company in the ordinary course of its business."

Resolution When Necessary

Section 379 provides that all the provisions of the Act applicable to managing agents shall apply to secretaries and treasurers, with the exceptions and modifications specified in Section 380 to 383.

Under Section 360(1) a special resolution of the Company is necessary where there is a contract between the company and its managing agent or its associate for the sale, purchase or supply of any property, movable or immovable, or for the supply or rendering of any service other than that of managing agent and further the approval of the Central Government is necessary where the contract is for the supply or rendering of any service other than that of managing agent. The granting of a loan by the managing agent or the associate of the managing agent can in no sense be said to be a contract for the sale, purchase or supply of any property movable or immovable.

The only question that has to be considered is whether the granting of a loan by the managing agent or its associate to the company is a contract for the supply or rendering of any service other than that of managing agent. There are several provisions in the Indian Companies Act which specifically deal with loans. Section 296 of the Act deals with loans to directors, etc. Section 370 deals with loans, etc. to companies under the same management.

Thus it is clear that, whenever it is intended to make specific provisions for loans to companies, provisions have been made expressly to that effect. The words in Section 360, viz., contract "for the supply or rendering of any service other than that of managing agent" are not intended to include and do not include the granting of a loan by the managing agent or his associate to the company and the question is accordingly answered in the negative. There will be no order as to costs.

C.D.F.C. LOAN TO BRAITHWAITE

A sterling loan of £322,500 has been made by the Commonwealth Development Finance Company Ltd. (C.D.F.C.) to Braithwaite and Company (India) Ltd. of Calcutta towards the estimated cost, at £3.19 million, of modernising the Company's Angus works at Bhadreshwar and the Clive works at Kidderpore, both near Calcutta. The modernisation will introduce the manufacture of various types of cranes at the Angus works and increase the output of railway wagons at the Clive works from 17,000 tons to 30,000 tons a year. Production of the foundry will also be raised.

The General Tyres Ltd. of Calcutta has made the second and final call of Rs. 25 per preference share of Rs. 100 and of Rs. 2.50 per ten-rupee ordinary share. The call is to be paid by the 31st inst. Notices for the call have been despatched.

KESAR SUGAR FARES SLIGHTLY BETTER

EXPANSION PROGRAMME AMENDED

THERE is nothing particularly outstanding about the results of the Kesar Sugar Works Ltd. (Chairman: Mr. Tulsidas Kilachand, Bombay) for the year ended 31st July 1962, for the simple reason that, during the year, the industry as a whole had not been completely through the crisis created by the glut in the previous year. All the same, from the point of view of profit, the year's results show some improvement over the previous year's poor performance. This is noteworthy especially because of the fact that the cost curve continued to be upward. Net sale proceeds (that is, excluding the excise duty paid) of sugar, molasses, power alcohol, chemicals, etc., have improved further from Rs. 163.25 lakhs to Rs. 171.28 lakhs. Gross profit has looked up from Rs. 14.37 lakhs to Rs. 15.51 lakhs. The profit-margin (ratio of gross profit to net sale proceeds), which had fallen from 19.7 per cent to 8.8 per cent in 1960-61, has crept up to 9 per cent during the year under report.

These slightly better financial results reflect the improvement in sugar production from 210,750 quintals to 230,202 quintals. The quantity of cane crushed increased from 2,194,667 quintals to 2,373,933 quintals. The average recovery was also a little better at 9.70 per cent, as against 9.60 per cent in the previous year. The duration of the season at 206 days was almost unchanged. The higher production has been attributed by the Directors to modernisation and rehabilitation carried out during the last few years.

The rise in production has been accompanied by an increase in expenses (excluding excise duty) from Rs. 170.88 lakhs to Rs. 187.65 lakhs, including the cost of sugar production which went up by about Rs. 10 lakhs to Rs. 118.43 lakhs and staff expenses which declined, however, by Rs. 1 lakh to Rs. 22.58 lakhs. The excise bill amounted to Rs. 58.43 lakhs, as against Rs. 61.72 lakhs a year before. The provision for depreciation has been raised from Rs. 3.95 lakhs to Rs. 4.28 lakhs and that for taxation by Rs. 1.25 lakh to Rs. 5.25 lakhs. Because of these higher provisions, net profit, at Rs. 5.98 lakhs, is lower as compared with Rs. 6.42 lakhs in the previous year. Consequently, the profit retained in business is only Rs. 85,000, as against Rs. 1.46 lakh a year before. The taxable dividend on the Rs. 50 fully paid ordinary shares has been maintained at 20 per cent per annum, subject to tax.

The following comparative table gives a fair idea of the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st July			
	1962	1961	1960	1959
Sale proceeds of sugar, molasses, etc., excluding excise duty paid	171.28	163.25	120.73	145.25
Other income	4.48	4.42	2.83	1.84
Closing stocks	159.24	131.84	114.26	53.33
Excise duty paid	58.43	61.72	70.55	51.97
Other expenses	187.65	170.88	160.15	117.02
Gross profit	15.51	14.37	23.84	11.66
Depreciation	4.28	3.95	3.16	2.46
Taxation	5.25	4.00	7.90	3.90
Net profit	5.98	6.42	12.78	5.30
Provisions written back	..	0.40	..	1.03
Miscellaneous provisions made	0.11	0.06	0.68	1.40
Transfer to reserves	0.85	1.46	6.10	..

Low	170.00	160.00	66.00‡	45.50

* Subject to deduction of tax.
† On Rs. 50.00 paid up per share.
‡ On Rs. 40.00 paid up per share.

Further improvement was noted during the year in the working of the Company's distillery and the offtake of its product. However, full capacity could not be utilised for want of timely offtake. With the synthetic rubber factory near Bareilly commencing to lift alcohol and in view of the possibility of increasing exports, the production in the distillery might increase further during the current year. Incidentally, the Company has been licensed to raise the capacity to 2.95 million gallons a year. Despite a slightly higher output, the chemical factory of the Company did not fare well, for, while prices remained depressed, costs rose further.

The programme to expand the crushing capacity of the sugar factory by 900 tons a day has been amended, as it is felt that sufficient cane corresponding to the increased capacity might not be available. The Company is now to go in for an additional capacity of 400 tons a day. The industrial licence has been accordingly amended by the Government. The amended programme is expected to be completed within two years at a cost of roughly Rs. 34 lakhs. The scheme for the manufacture of sodium hydrosulphite, formosul and other chemicals at Baheri in technical and financial collaboration with Messrs. A.C.C. (Brotherton) Ltd., U.K., was also revised during the year. Although it has been generally approved in principle by the Government, the details are still under consideration.

After the close of the year, the Company subscribed to 16,666 ordinary shares of Rs. 100 each offered as right shares at a premium of Rs. 20 per share issued by the Synthetics and Chemicals Ltd. in which it holds 60,000 ordinary shares.

A reference was made in our last issue (*vide* page 4) to the Company's proposal to raise its capital by Rs. 9 lakhs by issuing 18,000 shares of Rs. 50 each to the existing shareholders in the proportion of two right shares for every five shares held. The present paid-up capital of the Company amounts to Rs. 37.50 lakhs, of which Rs. 22.50 lakhs are in ordinary shares, and is supplemented by reserves and surplus aggregating Rs. 22.95 lakhs. During the year, borrowings went up from Rs. 136.25 lakhs to Rs. 159.06 lakhs. Current liabilities and provisions stand at Rs. 93.98 lakhs. Thus, the total indebtedness to outsiders amounts to Rs. 253.04 lakhs, as against which current assets, loans and advances total Rs. 203.11 lakhs. Then there are investments, standing at Rs. 66.88 lakhs, of which Rs. 61.47 lakhs are quoted and command a market value of Rs. 134.79 lakhs. The gross block, which expanded during the year from Rs. 101.91 lakhs to Rs. 107.04 lakhs, has been written down to Rs. 41.91 lakhs and, including machinery under installation of Rs. 1.59 lakh, the net block is shown at Rs. 43.50 lakhs.

The Rs. 50 fully paid ordinary shares of the Company are currently quoted at Rs. 180 *cum-div.* On the *ex-div.* basis, they offer a net yield of 4 per cent per annum.

INDIA FORGE AND DROP STAMPINGS LTD.

Experimental production by the India Forge and Drop Stampings Ltd. of Madras will start by the third quarter of 1963, according to the Directors' report for the year ended 30th June 1962. Meanwhile, the Company has been licensed additional capacity of 3,600 tons of steel forgings and drop stampings and of 120 tons of non-ferrous stampings. Due to the increased cost of land, building materials, etc., and in view of the provision in the layout for further expansion, the total project cost has increased appreciably over that provided for in the original project report. The extent of the increase has, however, not been disclosed by the Directors.

Contract for the construction of the factory and foundations has been awarded to Gammon India Ltd. Steel structures for some of the factory sheds are ready and fabrication of the balance will soon be completed. The Supreme Court's decision on acquisition of land for companies by Government led to a change in the site from the Padi-Muggappar village to the State Government's industrial estate at Ambattur and delayed construction. Results of the soil tests at the new site have been approved by the Company's collaborators in the U.K., Messrs. B. and S. Massey Ltd. of Manchester. The latter have suggested driving of concrete piles under the hammer foundations and that is being done.

The major portion of the plant and machinery, both imported and indigenous, is expected to be received according to schedule. The bulk of the machinery to be supplied by the collaborating firm is ready for shipment and the rest will be ready shortly. The Company has, however, still to receive Government's clearance for the import of heat treatment plant and two other items. With the steel forging industry acquiring special significance in the present emergency, the Directors are hopeful of obtaining the necessary licence.

The I.C.I.C.I. foreign exchange loan of Rs. 27 lakhs to the Company towards import of capital equipment covered the cost of plant only. However, the Corporation has granted another loan of $76,300 (roughly Rs. 3.64 lakhs) to cover approximate freight and insurance charges on the import of plant and machinery. The Company issued during the year additional capital of Rs. 38.76 lakhs, out of which ordinary shares worth Rs. 3.76 lakhs were subscribed for by the Directors, their friends, etc., and the balance of Rs. 35 lakhs divided into 250,000 ordinary shares of Rs. 10 each and 10,000 9.286 per cent redeemable cumulative preference shares was offered to the public. The entire amount was taken up and the issued and subscribed capital stood at the year-end at Rs. 50 lakhs, as against Rs. 11.24 lakhs a year before. The paid-up capital is shown at Rs. 24.61 lakhs, as against Rs. 4.05 lakhs in the previous year. The first call of Rs. 25 per preference share and of Rs. 2.50 per ordinary share was made on 1st July 1962. During the year, a sum of Rs. 65,335 was expended on construction work.

OUR RESOLVE

"With hope and faith, this House affirms the firm resolve of the Indian people to drive out the aggressor from the sacred soil of India, however long and hard the struggle may be."

From the Resolution passed by Parliament (November 1962)

JAI HIND

DA 62/630

SYNOPSES OF COMPANY REPORTS

Kirlampudi Sugar Mills Ltd.

(*Managing Agents*: Messrs. Kubera Sugar Managers Ltd.)

Registered Office: Pithapuram (East Godavari District).

Eighteenth Annual General Meeting—21st January 1963.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1962	1961
Sale of sugar and molasses	1,11,13	98,71
Closing stock	75,36	77,03
Gross profit	4,19	5,08
Transfer to depreciation	3,73	4,00
,, ,, development rebate reserve ..	15	39
Net profit	31	69
Balance brought forward	1,10	41
Total available balance	1,41	1,10
Appropriations	Nil	Nil
Carry forward	1,41	1,10

Extracts from the Directors' report: During the year under report, the Factory crushed 1,05,147 tonnes of cane and produced 1,05,080 bags of sugar (100 kilos) at a recovery of 10.02 per cent which is the highest so far for any year. Though the recovery has been very satisfactory, the profits of the Company have not shown any improvement mainly due to fall in the price of sugar, implementation of the Wage Board Award with retrospective effect from 1st November 1960, provision for all arrears of depreciation and extra shift allowance in previous years, loss on compulsory exports, high interest charges, and increased expenditure under other item.

The financial position of the Company continues to be satisfactory, and the excess of the current assets over the liabilities and provisions amounted to Rs. 31.16 lakhs as on 30th June 1962. The Directors are unable to recommend any dividend from the available surplus due to the unascertained liability to accrue due to any deferred payment payable to the cane growers under the price linking formula from the year 1958-59 onwards.

The crushing season for 1962-63 is about to commence and the Directors hope that the sugar situation will improve during the year.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	22,97,510	Gross block ..	80,38,490
Debentures	13,42,537	—Depreciation ..	42,63,252
Reserves and surplus..	8,18,891		
Other liabilities ..	1,04,89,633	Net block	37,75,238
		Other assets ..	3,454
		Block in progress ..	47,550
		Current assets ..	93,29,317
		Investments	17,08,000
		Cash	85,012
	Rs. 1,49,48,571		Rs. 1,49,48,571

* Paid-up capital consists of 17,000 equity shares of Rs. 100 each and 6,000—5½ per cent. income-tax free cumulative preference shares of Rs. 100 each. Calls in arrears amount to Rs. 2,490.

Champarun Sugar Co., Ltd.

(*Secretaries and Treasurers*: The British India Corporation, Ltd., Kanpur, U.P.)

Fifty-seventh Annual General Meeting—31st January 1963.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1962	1961
Sale of sugar and molasses	2,43,65	1,62,56
Sale of country crops	10	12
Closing stock	1,37,82	1,37,85
Gross profit (+) or loss (—)	—9,79*	+10,64
Transfer to Secretaries' and Treasurers' remuneration	49	57
,, ,, ex-Managing Agents' remuneration. ..	Nil	11
,, ,, depreciation	2,27	1,78
,, ,, development rebate reserve ..	28	85
,, ,, provision for taxation	Nil	3,75
Net profit (+) or loss (—)	—9,79	+3,58
Balance brought forward (credit)	19	28
Adjustments (credit items)	71†	78‡
Appropriations:		
Total available balance	90	4,64
To expenses relating to previous year ..	18	15
Transfer to rehabilitation reserve	Nil	1,54
,, ,, general reserve	Nil	60
Proposed dividend (taxable) ordinary ..	Nil (Nil)	2,16 (12%)
Carry forward credit (+) or debit (—) ..	—9,07§	+19
Market value of equity share (in rupees):	1962	1961
High	18.25	19.50
Low	15.87	16.19

* Loss after providing for Secretaries' and Treasurers' remuneration, depreciation and development rebate reserve.
† Represents provisions no longer required and rebate on cane seeds, etc.
‡ Includes profit on sale of assets and rebate on cane cess, etc.
§ Net deficit balance carried forward after taking into account the expenses relating to previous years of Rs. 18,687.

Extracts from the Directors' report: The unsatisfactory trading results have been primarily due to losses suffered amounting to approximately Rs. 5,66,000 by the export of sugar at prices far lower than the production costs, substantial increase in bank and other interest charges due largely to accumulation of sugar stocks and drop in the average recovery of sugar from cane crushed at the Company's factories from 9.12 per cent to 8.66 per cent in the case of Barrah Factory and from 9.40 per cent to 9.08 per cent at Chanpatia Factory. The low recovery has been partly caused by having to crush cane at an uneconomic period.

Operations: Barrah Factory commenced crushing on 27th November 1961, and continued to crush upto 7th June 1962. The total cane crushed being 13,97,590 Qtls. as against 15,00,456 Qtls. in the last season. The crushing operations at Chanpatia Factory started on 24th November 1961 and closed on 12th June 1962. The total cane crushed being 14,58,429 Qtls. as against 14,43,745 Qtls. in the last season. Both the factories, in order to crush sur-

plus cane available in their areas, were required by the Government, contrary to the restriction placed on sugar production before the start of the crushing season 1961-62, to continue crushing operations till June 1962, which resulted in the recovery going down as low as 5.25 per cent in the month of June 1962. Frequent mechanical breakdowns and poorer quality of cane received for crushing adversely effected operations at the factories.

The working of the Barrah Factory had been particularly unsatisfactory and an expert examination of the factory was consequently carried out, with a view to take suitable measures for removing any defects in the working of the factory in the ensuing crushing season. Urgent recommendations made by the expert, after investigating the operations at the factory for improving first continuous carbonation process primarily, have been considered by the Directors and implemented as far as possible.

Raw Sugar: In response to the offers invited by the Indian Sugar Mills Association from the sugar factories for the sale of raw sugar required for export by the Government of India, this Company has agreed to supply 7,500 metric tons of raw sugar. It is considered by the technical staff that the Chanpatia Factory Branch of the Company is better suited to produce raw sugar and accordingly arrangements for the productions have been made at the factory.

Cane Prices: The Government of India, in pursuance of their policy of linking cane prices for season 1962-63 to the recovery obtained in the last season have, by a notification dated 1st November 1962, prescribed the sugarcane prices to be paid by the sugar factories. The cane prices per maund for the Company's factories are:

Barrah	Re. 1.530
Chanpatia	Re. 1.575

as against Re. 1.62 per maund for gate deliveries in the previous season.

General: The ten per cent cut on sugar production by the factories has been withdrawn by Government of India with effect from 1st November 1962. The removal of restrictions on production, at this late stage, has not, however, been helpful in increasing the production of sugar, as the acreage under can has been considerably reduced in anticipation of the continuance of the cut, and on account of floods and adverse weather conditions the estimated cane crop has further decreased. Efforts are, however, being made for obtaining additional cane supplies from outlying areas in order that production does not suffer. The Company's Estates continued to produce cane both for crushing and seed purposes.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	18,00,000	Gross block ..	88,28,695
Reserves and surplus†.	46,06,937	—Depreciation ..	61,52,650
Other liabilities ..	1,42,09,143		
		Net block	26,76,045
		Block in progress ..	1,09,788
		Current assets ..	1,66,90,685
		Investments	36,000
		Cash	11,02,962
	Rs. 2,06,16,080		Rs. 2,06,16,080

* Paid-up capital consists of 1,80,000 ordinary shares of Rs. 10 each fully paid up in cash.
† Reserves are shown after adjusting the debit balance of Rs. 9,07,232 in the profit and loss account.

Sitalpore Sugar Works, Ltd.

(*Managing Directors*: Mr. R. N. Datta and Mr. D. P. Gosh.)

Registered Office: 93/A, Dharamtall Street, Calcutta.

Thirtieth Annual General Meeting—14th January 1963.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1962	1961
Sales	87,12	57,17
Closing stock of sugar and molasses ..	51,69	57,66
Gross loss (after providing for depreciation) ..	—7,07*	—36
To depreciation	1,32	1,73
Balance brought forward credit (+) or debit (—)	+17	+ 5
Adjustments (credit)	Nil	+50†
Net profit (+) or loss (—) carried forward ..	—8,90	+16‡

* Including provision for development rebate reserve of Rs. 9,525.
† This represents a credit of Rs. 58,804 being compensation received from Government for the season 1953-54 on sugar.
‡ Credit balance carried forward after setting aside Rs. 10,906 for maintenance charges for railway siding since 1950 paid to N. E. Railway under protest.

Extracts from the Directors' report: Three causes can be attributed leading to the adverse result for the year. One, the impact of the implementation of the Central Sugar Wage Board award with retrospective effect from 1st November 1960. Two, low Recovery obtained due to cane of very poor quality supply. In fact quality of cane in the whole of North Bihar has deteriorated which is partly due to non-availability of good variety of seed cane and partly due to vagaries of nature. Third, general rise in the cost of stores and services, interest charges and mounting export loss compulsorily made to incur.

During the previous year rebate on cane cess and excise duty was available which came to Re. 1.33 per maund of sugar but during year under review the Company did not receive any rebate.

Average realisation on sugar has come to Rs. 27.36 (previous year Rs. 27.25) per maund excluding excise duty while cost of production outstripped this by Re. 1.42 per maund before providing for Bank interest, sales commission and export loss. Total loss comes to Rs. 2.86 per maund. This, however, could be covered up had the Company got normal recovery, i.e., 9.8 per cent and there was no retrospective burden on account of wage board implementation. The extra sugar thus obtained would have alone covered a loss of Rs. 2.38 per maund.

Sugar production during the year was 2,28,654 mds. from a crush of 94,195 metric tons of cane against last year's production of 2,62,667 mds. from a crush of 1,07,289 metric tons of cane.

Prospect for the current year is not considered bright as there will be fall in the availability of cane due to shrinkage in acreage. Further difficult trading condition which started last winter is still persisting except for a brief period during peak consuming months.

The Company has further repaid Rs. 50,000 against previous loan taken from the Bihar State Financial Corporation together with interest accrued thereon reducing the same to Rs. 3 lakhs and made further arrangement for a loan of Rs. 5 lakhs required for the completion of the extension of capacity of the Company's factory to 1,000 tons.

Under the existing set of things the company's plant has been classified as an uneconomic unit. For making an economic unit the Government of India have permitted to increase its capacity to 1,000 tons. The expansion of the factory has progressed much and all the necessary machineries have already been purchased. It is hoped that the expansion work will be completed before the start of the season 1963-64.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital* ..	10,02,115	Gross block ..	38,14,577
Reserves ..	67,398	—Depreciation ..	20,31,034
Other liabilities ..	82,04,993		
		Net block ..	17,83,543
		Current assets ..	65,18,009
		Investments ..	27,707
		Cash	2,54,849
		P.L. a/c deficit ..	6,89,998
	Rs. 92,74,506		Rs. 92,74,506

* Paid-up capital consists of 1,00,000 ordinary shares of Rs. 10 each. Calls unpaid amounts to Rs. 50. Amount paid up on shares, forfeited is Rs. 2,165.

Speciality Papers Ltd.

(*Managing Director*: Mr. Dwarkadas Jivanlal Patel.)

Registered Office: Homi Cottage, P.O. Udvada, R.S. District Surat (Gujarat.)

First Annual General Meeting—12th January 1963.

Extracts from the Directors' report: The Company was incorporated on 18th July 1961. The Board of Directors decided to have the financial year of the Company as from 1st July of one year to 30th June of the subsequent year. The first accounts are, therefore, for the period 18th July, 1961 to 30th June 1962. The accounts for the period show a loss of Rs. 13,716 after transferring Rs. 46,188 to expenditure during the period of construction which is being carried forward to the next year.

The progress of the Company: The land acquisition proceedings started in 1961 by the Government of Gujarat for the land for the Company's factory had to be suspended as a result of an adverse judgment by the Supreme Court of India, affecting the legalities of such proceedings. Subsequently as a result of negotiations between the parties and the Company and the assistance of the Government of Gujarat, the Directors obtained possession of approximately 15 acres of land at village Morai, Taluka Pardi, District Surat in September 1962. Building plans for the factory are ready and construction work has begun.

Electricity: The Gujarat Electricity Board has agreed to supply 1,200 kw. of electric energy as soon as the Dhuvaran project is complete. In the meantime the Company shall install its own generating set which will be of help during the construction period and later assist in going into production of speciality papers. It will also be useful as a supplement and as a stand-by after the Company's get power from Gujarat Electricity Board.

Plant and Machinery: The Government had given a cash import licence of Rs. 4.80 lakhs c.i.f. for import of plant and machinery in the name of Shri Dwarkadas J. Patel, the promoter of the Company. The licence has been transferred into the name of the Company. The Company has also obtained an industrial licence, as its scheme now falls under the Industries (Development and Regulation) Act, 1951.

The Company made a further application to the Government for permitting import from West Germany of certain machinery of Rs. 4.99 lakhs c.i.f. The Government has indicated its approval provided the Company obtains a foreign exchange loan from the Industrial Credit and Investment Corporation of India Limited or Industrial Finance Corporation. The directors are negotiating for this loan and hope to get the necessary foreign exchange. When the directors obtain this machinery the Company's plant and machinery will have such flexibility as will help it in manufacturing a wider range of speciality papers which will benefit not only the Company but also the country.

Raw Materials: The Government has kindly given the Company import licences for raw materials, component parts, etc. It is expected that the factory will be set up by the middle of 1963 and commercial production will start immediately thereafter.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	5,16,413	Block	5,957
Share application money refundable..	7,250	Block in progress ..	51,086
Other liabilities ..	17,771	Current assets ..	63,012
		Cash	2,61,717
		Miscellaneous expenditure ..	1,45,946
		P.L. a/c deficit ..	13,716
	Rs. 5,41,434		Rs. 5,41,434

* Paid-up capital consists of 1,00,000 equity shares of Rs. 10 each. Allotment money in arrears and calls unpaid amount to Rs. 4,83,587.

NEWS IN BRIEF

THE total throughput of the Assam Oil Company's oil refinery at Digboi touched a peak of 560.93 million litres (0.47 million metric tons) in 1962, or an increase of 24 million litres (0.02 million tonnes) over 1961.

A wide range of low-voltage distribution fusegear is now being manufactured in the Madras factory of the English Electric Company. The factory has reached the stage at which it can manufacture complex control panels. Among the processes now established in the factory, in addition to assembly work, are plastic moulding and electric plating.

The Board of Trade will hold its next meeting at Madras on the 19th inst. The meeting will consider the scope for expanding exports of hides and skins, leather and leather goods, tobacco, handloom textiles, chemicals and engineering goods. The working of the ports of Madras, Cochin, Vizagapatnam and Mangalore and other minor ports in the South will also be discussed at the meeting.

A new company, called Hindustan Dowidet Tools Ltd. has been formed at New Delhi in collaboration with a West German firm, Dowidet Werke, for the manufacture of hand tools. The Company has secured a licence to manufacture 360 tons of spanners, pliers and adjustable wrenches annually on a single-shift basis. The new plant is expected to go into production by September 1963.

Sugar production in the month of November 1962, the first month of the season 1962-63, was 173,000 metric tons, as against 120,000 tons in the same month last season. The total offtake from factories during the month was 226,000 metric tons (including 18,000 tons despatched for export), as against 210,000 tons (including 11,000 tons despatched for export) by the same period last season. The total closing stock of sugar with the factories as on 30th November 1962 was 945,000 metric tons, as against 1,109,000 tons on the same date last season.

The entire fertiliser factory at Nangal has now been established to a condition of nearly full designed production. This has been achieved following the commissioning of the third stream in the ammonia plant on 16th November 1962. Production of ammonia during the month of December 1962 was 8,650 tonnes and that of calcium ammonium nitrate fertiliser 32,629 tonnes. Total production of fertiliser during the current financial year up-to-date has amounted to approximately 200,000 tonnes.

The National Council of Applied Economic Research, New Delhi, has launched a survey of savings in rural areas in the country. It has selected about 9,000 households in 325 villages from all over the country. The survey is expected to yield valuable information on financial situation and saving habits of rural households. The Council, it may be recalled, has already completed two studies on saving, one on the estimation of aggregate saving in the country and the other on survey of saving in urban areas.

The United Nations Special Fund has agreed to contribute $6.83 million to finance the expansion of the National Engineering Institute at Powai, Bombay. The aid, which will be supplemented by a contribution of about $1.66 million from the Government of India, will be utilised for organising and developing facilities for training in the various fields of industrial engineering. The International Labour Organisation will be responsible for organising and providing the technical assistance offered by the Special Fund.

Production of ammonia and urea at Sindri Fertiliser Factory of the Fertiliser Corporation of India during December, 1962 touched a new high and production of ammonium sulphate was maintained at the full rated capacity. Production of ammonia in the old group of plants during the month was 9,721 tonnes and that of ammonium sulphate 29,762 tonnes. The expansion plants are running to nearly the maximum possible capacity. In the new plants, production of ammonia during the month was 3,501 tonnes, urea 1,914 tonnes (the highest so far achieved) and double salt 6,530 tonnes.

The Tata Iron and Steel Company has decided not to go ahead with the project for the manufacture of special steels, for which a licence had been granted. This was disclosed by Mr. P. C. Sethi, Union Deputy Minister for Steel and Heavy Industries. This leaves only two units in the field, one at Bhadravati and the other at Durgapur. The Bhadravati plant is expected to produce about 80,000 tons of special steel annually in technical collaboration with a West German firm. A scheme costing Rs. 8 crores for this purpose has been drawn up. The Durgapur plant, which will be set up at a cost of Rs. 40 crores, will have an annual capacity of 50,000 tons of special steels.

A draft plan for the establishment of the proposed refinery in the South has been submitted to the Government of India by Phillips Petroleum Company of Oklahoma and Duncan Bros. and Co. of Calcutta. The precise location of the plant has not been finalised, but it is likely to be put up either at Cochin or Madras. The total outlay on the refinery, which will have an annual capacity of 2.5 million tons, is expected to be $32 million. According to the present plant, the refinery could be completed in 1965. It is also learnt that the two companies have also put forward to the Government another proposal to build a lubrication plant, with an annual capacity of one million tons, adjacent to the refinery.

A final decision on the location of a steel plant in the Madras State will be taken by the end of this year, according to Mr. R. Venkataraman, State Minister for Industries. The technical consultants of the project, Messrs. Dastur and Co., have already submitted to the Government a preliminary report on the project. The location of the plant and the process of producing steel will be decided on the basis of the recommendation of the consultants who are now working out the economies of the low-shaft furnace process and the electric reduction process. Three sites, including Neyveli and Salem, have so far been suggested for locating the plant.

The Central Government has accepted the recommendation of the Central Wage Board for tea plantation industry in respect of interim wage increase for labour in tea estates in Mysore State. The recommendations will come into force with retrospective effect from 10th August 1962. An interim increase will be effected in such a way that the daily wages of an adult male worker will come to Re. 1.75, adult female worker to Re. 1.35, adolescent to Re. 1.15 and of children to 95 nP in accordance with the Board's award. Earlier, while making the recommendations for interim wage increase in respect of South India, the Board had not made any recommendations in regard to labour in tea estates in Mysore in view of an agreement made in 1960. This agreement has now expired.

The Government of Maharashtra has appointed a committee under the chairmanship of Mr. V. M. Joshi, I.C.S., Secretary, Education and Social Welfare Department, to study the question of properly defining the standard normal yields for major crops in the States to be used as a yardstick for comparison with yields in different years. The Committee will examine the fixation of standard yield and suggest suitable standard yield for each major crop in each district of the State in the light of the available results of crop-cutting experiments made in the past several years. It will also examine the suitability of the *annawari* formula, particularly the manner in which allowance is made in the formula for variations in the fertility of the soil, and suggest necessary modifications, if any, in it and introduce uniformity in the *annawari* formula used in the Vidarbha region and the rest of the State.

The Government of Maharashtra has decided to open immediately about 160 fair price shops, in the first instance, for the sale of cloth in Greater Bombay in order to make cloth available to consumers at reasonable prices and to serve as a measure of safety in any emergency. The Indian Cotton Mills Federation has agreed that 10 per cent of mills' production will be earmarked for priority distribution to consumers' co-operative societies, fair price shops and other approved trade channels according to the release orders that will be issued to the mills by the Textile Commissioner, Government of India. The mills will supply a cross-section of different categories of cloth to the fair price shops, etc., at ex-mill price plus 4 per cent. The Textile Commissioner is finalising a scheme for the distribution of cloth accordingly. The Bombay Millowners' Association has agreed to make available a reasonable quantity of the cross-section of the production for distribution to the fair price shops. The Government of India has no objection to the introduction of the scheme which will be generally on the pattern of the all-India scheme. For convenience, the shops will be selected from the lists recommended by the All-Bombay Consumers' Co-operative Societies' Federation, the Federation of the Bombay Retail Cloth Dealers' Association, the Bombay Retail (Goods Supply) Co-operative Society and individual applications for such shops, where necessary or desirable. The Government has also decided that similar fair price shops for cloth should be opened at important places in the districts. The Collectors will select the shops in consultation with the District Food and Civil Supplies Advisory Committees.

From Abroad

China bought wheat worth £A130 million from Australia last year. Disclosing this, the Secretary of the Australian Wheat Growers' Association has stated that wheat exports to China might be £A75-100 million during this year.

Heavy rains in many parts of the Federation of Rhodesia and Nyasaland in the last few days have adversely affected the current tobacco crop. The Federation produced 270 million lbs. of tobacco in 1962 or 7 million lbs. more than in 1961. The Federation is the world's second largest producer of tobacco and a major exporter.

The output of cement in Soviet Russia rose by about 250 per cent to 57 million tons in 1962, as compared with ten years ago. The output in 1963 is expected to be about 63 million tons, of which 60 per cent will be high quality portland cement. It is claimed that Russia's cement output exceeded that of the U.S. in 1962.

The *per capita* expenditures of social security in West Germany were among the highest in the European Economic Community as of 1960. They amounted to DM 695, as compared with the equivalent of DM 858 in Luxembourg, DM 679 in Belgium, DM 647 in France, DM 452 in the Netherlands and DM 315 in Italy.

At least eleven countries are using British engines in 24 different types of aircraft and air-cushioned vehicles, according to the new edition (1962-63) of *Jane's All the World's Aircraft*. Britain is now producing 52 different types of aero-engines, 65 aircraft, and 14 air-cushioned vehicles. India's first supersonic fighter, the HF-24, is fitted with the Bristol Siddeley Orpheus engine, which is also used to power Japan's Fuji T-IF.

In twelve European countries at present, some 60,000 food self-service stores are in operation as against only 11,000 in 1956 and, due to rapidly rising wage bills and an ever greater labour shortage, even more retail traders feel compelled to adapt their operations to the new sales methods. In the Federal Republic of Germany alone, the number of self-service retail sales outlets has risen from 1,379 in late 1956 to no less than 30,680 in early 1962.

World production and consumption of natural rubber was closely balanced during 1962, according to the Economist Intelligence Unit, London. World production of rubber in 1962 was 2.12 million tons, which was 30,000 tons more than in the previous year. Of this, Malaya accounted for 750,000 tons and Indonesia for 670,000 tons. Including minor producers and stockpile releases, 2,185,000 tons of natural rubber are estimated to have been released on the world markets, while consumption amounted to 2,180,000 tons.

The B.O.A.C. has initiated a study on the prospects for operating a fleet of giant freighter aircrafts for carrying specialised cargoes from all over the world. A study group set up for the purpose has already completed the study of such operations on the transatlantic route. It has now taken up studies of other routes. The B.O.A.C. has in mind the operation of a heavy aircraft which would have a freight capacity between 40 and 50 tons and would cost 4½d. to 5d. per ton per mile. The present studies are part of a long-term project which may take about five years to realise.

The British Council's programmes for overseas specialists for 1963 provide for nearly 200 places on courses covering medicine, engineering, education, agriculture, economics, finance, museum care, and personnel work. The popularity of these courses can be judged from the fact that in 1962 there were 593 applications for 300 vacancies. The course members, college teachers, senior doctors, company executives, and civil servants, hear lectures on their own subject by British experts, and see examples of British work in their own field.

West Germany's crude steel production in 1962 is expected to have been 3 to 4 per cent lower than in the previous year. In the first three quarters of 1962, production amounted to 27.6 million tons, 2.9 per cent less than in the corresponding period of 1961. The production of steel with the use of traditional production methods (basic bessemer and open hearth steel) declined by about 8 per cent and 2 per cent, respectively, while the output of oxygen-blown steel went up by almost 37 per cent.

The next International Men's Fashion Week in Cologne (Germany) will be staged from 24th to 26th August. This will mark the tenth anniversary since its inception in 1954 and will be a special event for the men's and boys' outerwear industry. This annual event enables members of the trade to come together to gather information on fashion trends and to conduct business discussions on an international level. Last year's Men's Fashion Week was the meeting point for over 12,000 trade visi-

(*Continued on page 81*)

PERSONAL

MR. Henry Davidson has been appointed B.O.A.C.'s Manager in Bombay *vice* Mr. O. C. Cochrane who has been transferred to Hong Kong as Sales Manager, North-East Asia.

Mr. F. De C. Matthews and Mr. R. E. Grant of the First National City Bank have been appointed Vice-President and Resident Vice-President, respectively, in charge of the Bank's interests in India, Pakistan, Afghanistan, Ceylon and Nepal.

Mr. B. S. Agarwal of the Electrical Industries Corporation, Calcutta, and Mr. D. C. Chinai of Enamelled Wire Private Ltd., Bombay, have been elected Chairman and Vice-Chairman, respectively, of the Magnet Wires and Cables Manufacturers' Association.

Mr. Bahubali Gulabchand of the Indian Hume Pipe Company Ltd., Bombay, has been elected Chairman of the Engineering Association of India, Western Region (Bombay) for the year 1963. Mr. A. M. Kapadia of the Structural Engineering Works Ltd., has been elected Vice-Chairman.

Lord Godber, Chairman of the Commonwealth Development Finance Co., Ltd. (C.D.F.C.), has arrived in India for a one-month tour of this country. During his tour, he will meet ministers, bankers and leading industrialists, besides visiting some of the projects in which the C.D.F.C. has an interest.

Mr. John Marsh, Director of the British Institute of Management, has arrived in India on a lecture tour. An expert on the technique of management, Mr. Marsh will speak on all aspects of scientific management during his stay here, before leaving for similar lecture tours in Pakistan and Ceylon.

Mr. George L. Martin, Director of Marketing of the World Bank, has been appointed Director of Marketing for the International Finance Corporation as well. Besides being the Director, Mr. Martin has also served as adviser on capital formation and the development of securities markets in a numper of the Bank's member-countries.

Sir Norman Kipping, Director-General of the Federation of British Industries (F.B.I.), has arrived at New Delhi on a four-week tour of India. Sir Norman, who paid similar visits in 1957 and 1959, will discuss with authorities current problems in connection with F.B.I. members' business in India. He will also exchange views with Government, industrial and trade circles in India on general matters of common interests, and make a study of the outlook with a view to a report to the British industry.

THE KESAR SUGAR WORKS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-ninth Annual General Meeting of the Shareholders of THE KESAR SUGAR WORKS LTD. will be held on Monday the 28th day of January 1963 at 4 p.m., (S.T.) at the Registered Office of the Company, 45-47, Apollo Street, Fort, Bombay, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st July, 1962.
2. To sanction payment of dividend to Preference Shareholders.
3. To declare a Dividend to Ordinary (Equity) Shareholders.
4. To elect a Director in place of Shri G. D. Somani who retires by rotation under Article 143 of the Articles of Association of the Company, but being eligible offers himself for re-election.
5. To elect a Director in place of Shri Lalchand Hirachand who retires by rotation under Article 143 of the Articles of Association of the Company, but being eligible offers himself for re-election.
6. To appoint Auditors for the current year and fix their remuneration and also to fix the amount of travelling and out-of-pocket expenses for going to audit the accounts at the factory.

SPECIAL BUSINESS

7. To consider and if thought fit to pass with or without modification the following Resolution as an Ordinary Resolution:

"RESOLVED that in exercise of the power conferred by Section 293 of the Companies Act, 1956 the Company does hereby give its consent to the Board of Directors contributing or subscribing to charitable and other funds not directly relating to the business of the Company or the welfare of its employees (not being contributions to which Section 293A of the Act applies) such amount or amounts as they may think fit, from time to time upto Rs. 2,50,000 in the aggregate in any financial year."

8. To consider and if thought fit to pass the following resolution as a Special Resolution:

"RESOLVED that subject to the approval of the Central Government the name of the Company be changed from the Kesar Sugar Works Limited to Kesar Industries Limited."

9. (*a*) To consider and if thought fit to pass the following resolution as a Special Resolution with or without modification.

"RESOLVED that the 35,000 unissued Ordinary (Equity) Shares of Rs. 100 each in the authorised capital of the Company be sub-divided into 70,000 Ordinary (Equity) Shares of Rs. 50 each."

(*b*) To consider and if thought fit to pass the following resolution as an Ordinary Resolution with or without modification.

"RESOLVED that approval be and is hereby given to the issue of 18,000 Ordinary (Equity) Shares of Rs. 50 each at par out of the 70,000 Ordinary (Equity) Shares of Rs. 50 each to be offered to the holders of existing Ordinary (Equity) Shares in the capital of the Company, the same to be offered to the members whose names appear in the Register of Members on such date as the Directors may hereafter resolve in the proportion of two such new (Equity) Shares of Rs. 50 each for every five existing Ordinary (Equity) Shares of Rs. 50 each held by such members on such date and if the offer of such new (Equity) Shares results in any members becoming entitled to a fractional interest in a share then and in that event fractional certificates or coupons be issued to members on such terms and conditions as the Directors may hereafter resolve and the Directors be and are authorised to make such arrangements regarding the issue and offer of such new (Equity) Shares and to their ranking for the payment of dividend subject to the provisions of this resolution as they may consider advisable."

10. To consider, approve and adopt new Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of the Company and to pass the following Resolution with or without modification as a Special Resolution.

"RESOLVED that the Regulations contained in the printed document submitted to this meeting and for the purpose of identification signed by the Chairman thereof be approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of Association of the Company."

The Register of Members and the Transfer Books of the Company will be closed from 14th day of January 1963 to 28th day of January 1963 (both days inclusive).

By Order of the Board of Directors,

K. D. SHETH,
Secretary.

BOMBAY, *24th December* 1962.

N.B.—1. A member entitled to attend and vote is entitled to appoint a Proxy, or when that is allowed, one or more Proxies, to attend and vote instead of himself. A Proxy need not be a member.

2. Ordinary and Preference Share Dividends when declared will be made payable at the Bank of Baroda Ltd., Bombay, on and after the 19th day of February 1963. Dividend warrants will be posted to those Ordinary and Preference Shareholders whose names stand on the Register on 28th day of January 1963.

3. The proposed Articles of Association of the Company may be inspected at the Registered Office of the Company on any working day during business hours until 12 Noon on the day of Meeting.

4. Explanatory Statement as required under Section 173 of the Companies Act 1956 has been posted along with the copy of Notice to all the Shareholders.

Shareholders are requested to kindly notify any change of address.

THE GWALIOR SUGAR COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will remain closed from the 16th day of January 1963 till the 31st day of January 1963, both days inclusive, in connection with the Annual General Meeting of the Company to be held on the 31st January, 1963 at the Registered Office of the Company at Dabra (Madhya Pradesh).

By Order of the Board,

FOR THE GWALIOR SUGAR COMPANY LTD.,

Y. BAHADUR,
Secretary.

LABOUR

(*Concluded from page 72*)

interest at the rate of 3.75 per cent on provident fund accumulations of the members was approved by the Government for the year 1962-63. The Board is hopeful of recommending an increase in interest rate in the next financial year.

Full accumulations with interest thereon are refunded in the event of death, permanent disability, superannuation, retrenchment or migration from India for permanent settlement abroad and leaving service for any reason after completion of fifteen years' membership. In other cases, a member receives, besides his own contribution and interest thereon, a portion of the employers' contributions with interest according to a graded scale ranging from 25 per cent for less than three years' to 85 per cent for ten years or more but less than 15 years. It may be noted here that during 1961-62, a sum of Rs. 5.29 crores was paid in respect of 113,000 claims, as against Rs. 4.27 crores, covering 102,000 claims paid in the previous year, bringing the total claims settlement since the inception of the Scheme in 1952 to Rs. 19.90 crores, involving 543,000 claims. Some of the important categories into which claims paid during the year can be classified are the following:

Categories of Claims

	No. of claims	Amount (Rs. in lakhs)
Superannuation	6,900	69.06
Retrenchment	21,500	115.01
Dismissal	2,200	7.44
Resignation and termination of service..	59,100	191.92
Migration	1,100	4.41
Permanent invalidation	7,500	52.22
Death	8,100	40.00

The report under analysis claims that, despite the ever-increasing number of claims being received, there is practically no avoidable delay in their final disposal. The procedure, it is said, has been so regulated that a personal watch is kept by the Regional Provident Fund Commissioners on this work and the account of an outgoing member is normally finalised within a maximum period of 15 days.

Advances for payment towards a policy of life insurance of a member are permitted under the scheme. A total of 38,241 members (as against 35,764 members in the previous year) availed themselves of this facility during the year and a sum of Rs. 25.02 lakhs was withdrawn by members during the year, as against Rs. 22.40 lakhs in the previous year. Non-recoverable advances are also granted for the purchase of a dwelling site or for construction of a dwelling house under the Subsidised Housing Scheme for industrial workers. A sum of Rs. 12.91 lakhs was advanced during the year under this head. The facility of advancing a loan out of the Fund to meet expenses in connection with serious or prolonged illness of subscribers or members of their families was withdrawn with effect from 20th January 1962. Till then a sum of Rs. 104 lakhs had been paid in respect of 59,675 cases.

Defaults

One of the problems which continue to be tackled with urgency is recovery of overdues from defaulting employers. The report points out that the provisions in law for punishing employers for default are not sufficiently deterrent. The fines imposed by courts on defaulting employers are small even in respect of cases where the amounts recovered from the wages of the workers have not been remitted by the employer. The effect of revenue recovery proceedings is also not always satisfactory. In some cases, it is said, the Provident Fund authorities have to stand in the queue along with other claimants entitled to priority and the first preference is given, as provided in law, to secured creditors and other claimants. In view of this situation, the Government is considering whether a deterrent punishment could be prescribed for defaults committed under the Act and the scheme.

DEFINITION OF SMALL INDUSTRY

(*Concluded from page 71*)

Scheme of the Reserve Bank, etc. upon the new entrants, without a corresponding increase in the resources of these institutions? Why this equivocation?

To conclude, the Committee has assumed away the additional resources required to meet the new commitments arising out of the enlarged definition. One has good reason for the misgiving that, in view of the "limited resources" available, these additional commitments would be met at the expense of the present small-scale industries, especially because of the 'influence' commanded by the larger-sized 'small-scale' industries. The function of the definition of small-scale industries is to assist the small units till they achieve the self-sustained status. The present definition limits of Rs. 5 lakhs for general and Rs. 10 lakhs for ancillary small-scale industries are quite reasonable from this point of view. Everything possible should first be done to help the anæmic small units to reach the size under the present definition. The current (and indeed the realistic estimation of the likely situation in the future) situation does not permit the enlargement of the present definition of small industry, to cater to the requirements of the post-self-sustained expansion, which must be left to the skill and resources of the entrepreneurs concerned. Moreover, an upward revision of the present definition, as suggested by the Committee, would dynamite the main object behind the Socialist Pattern of Society by making the rich richer.

MONEY TIGHT

(From Our Own Correspondent)

BOMBAY, *9th January*

The short-term money market was somewhat tight during the week under review. Demand for money continued to be heavy, while floating funds were not adequate enough to meet it fully. Consequently, inter-bank call rate was maintained at the high level of 5 per cent for both fresh money and renewals. Conditions in the Calcutta market were comparatively better, with call rate standing at 3½ per cent.

The rise in Bank Rate (from 4 to 4½ per cent) last week has not had any perceptible effect on the short-term money market. This is not surprising because the interest rates on deposits are controlled by the inter-bank agreement and those on advances had been considerably enhanced even before the rise in the Bank Rate. Only, the State Bank of India and other banks raised their *hundi* rates (that is, the rate of interest on advances to indigenous bankers) by ½ per cent to 7 per cent and 7½ per cent, respectively. There are, however, unconfirmed reports that, sooner or later, the banks may increase their general lending rate further.

The amount offered against tenders for Government of India's 91-day Treasury Bills sold on Tuesday the 8th inst. was no more than Rs. 2 crores, which was also the amount invited and accepted. There was no change in the average rate of accepted tenders, namely, Rs. 2.355 per cent per annum. In view of the tight money conditions, the response to the Intermediate Treasury Bills, which were on tap from the 3rd to 5th inst., was poor, the amount actually fetched being a bare Rs. 5 lakhs.

The total foreign assets of India rose slightly by Rs. 9 lakhs to Rs. 96.87 crores during the week ended 4th January 1963. The rise was accounted for entirely by balances held abroad which aggregated Rs. 8.79 crores. Foreign securities were unaltered at Rs. 88.08 crores. Loans and advances to scheduled banks declined by Rs. 1.25 crore to Rs. 19.45 crores, of which those granted against usuance bills alone amounted to Rs. 10.31 crores, a fall of Rs. 3.35 crores as compared with the previous week.

Reflecting increased pressure of demand for funds from industry and trade, the total credit made available by scheduled banks during the week ended 28th December 1962 spurted by Rs. 15.71 crores; the actual amount outstanding as on 28th December stood at Rs. 1,421.01 crores. Deposits, too, rose by Rs. 11.64 crores to Rs. 2,173.28 crores and so also inter-bank borrowings by Rs. 3.26 crores to Rs. 49.91 crores. Investments fell by Rs. 9.96 crores. The banks must have evidently felt the need to maintain higher cash balances in order to show a better cash ratio in their balance-sheets as at the end of 1962.

Dull conditions prevailed in the Gilt-edged market. Turnover in both Central and State loans continued to be small.

The rupee in the foreign exchange market firmed up a little *vis-a-vis* the U.S. dollar, the banks' selling rate for ready T.T. dollars being Rs. 477.25 for 100 dollars, as against Rs. 477.50 a week ago. Their buying rate (T.T.) was Rs. 473.75, as against Rs. 474.25. On the New York Exchange, the £ sterling strengthened *vis-a-vis* the dollar. Thus, the spot rate improved by 0.270 cent to 280.510-280.550 cents per £ and the rate for three months' forward by 0.110-0.120 cents to 280.190-280.230 cents.

* * * *

The total contributions brought into the Central account of the National Defence Fund at New Delhi upto the close of business on the 9th inst. amounted to Rs. 30.57 crores. In addition, contributions in gold and gold ornaments weighing 1,069.587 grammes approximately equivalent to 97,731 tolas have been advised so far.

FOODGRAINS DRIFT LOWER

(From Our Own Correspondent)

HAPUR, *7th January*

Except rice which ruled steadier prices, foodgrains here indicated an easier tendency this week. Heavy stocks with the Government and continued imports were the main influencing factors.

Wheat prices eased by 67 nP per quintal for want of support. At the week-end the *dara* quality was quoted at Rs. 38.85 and the farm produce at Rs. 42.87 to Rs. 44.21. Arrivals were small and stocks here were declined to 65,000 maunds. Standing crops prospects were reported fair. Rice ruled steady on better consumer demand. Arrivals were better and local stocks consequently increased to 16,000 maunds. Week-end prices were: Rice *basmati* superior Rs. 80.38 to Rs. 91.09, *sela* Rice *basmati* Rs. 72.34 to Rs. 80.38, *mainpuri* Rs. 50.91, *ramajwayan* Rs. 58.94, *raimunia* Rs. 61.62 and *gadda* Rs. 48.23, a quintal.

Gram lost 32 nP per quintal on lack of demand and was quoted today at Rs. 40.87 to Rs. 41.09 per quintal according to quality. Maize prices eased by 67 nP to 99 nP per quintal due to better arrivals which averaged daily 500 maunds. Maize stock was around 25,000 maunds. Barley and *bejhar* were listless. *Bajra* drifted lower owing to better arrivals of the new produce. Other grains were almost stationary. Week-end prices here were: Maize Rs. 29.47 to Rs. 30.14, *bajra* Rs. 34.16, barley Rs. 24.78, *bejhar* Rs. 24.78, *juwar* Rs. 34.83 and *guwar* Rs. 33.49 to Rs. 34.83 per quintal.

In pulses, peas declined by 66 nP to Re. 1.34 per quintal according to quality on selling pressure from stockists. Peas stock was around 30,000 maunds. *Arhar* was quiet in the absence of demand. Standing crop prospects were not very encouraging, as heavy frost during the week was said to have adversely affected the crop. *Urd* prices drifted lower, as new crop arrivals increased. *Moong* prices were, however, steady.

BAN ON SILVER FUTURES

(From Our Own Correspondent)

BOMBAY, *9th January*

The Government of India announced late in the evening today ban on forward trading in silver throughout the country. The embargo also applies to trading in non-transferable specific delivery contracts. The announcement came a couple of hours before the scheduled broadcast of the Finance Minister tonight at 8-30 p.m. It came not as a complete surprise, for, when the Government banned forward trading in gold on 3rd November 1962, many an observer had wondered as to why futures trading in silver had been continued.

Gold and silver here were at complete divergence this week. Gold opened and remained steady until today when it reacted sharply on fears that the Finance Minister might announce in his tonight's broadcast the much-feared new measures against hoarding. Silver commenced slightly lower and sagged till the mid-week only to bounce thereafter thanks to sustained speculative buying in futures and slightly reduced arrivals in the spot section. Firm overseas advices for the past two days also influenced the sentiment towards the close of the week.

Spot gold opened unchanged at last Wednesday's close of Rs. 106 and, after easing to Rs. 104.50 on the next day (4th inst.), improved to Rs. 107.50 on the 7 inst. Today it opened two points lower at Rs. 104 as compared with yesterday's closing level of Rs. 106 and declined further to Rs. 101 to rally at close to Rs. 102.75, at which level it was Rs. 4.75 down over the week. Arrivals till yesterday averaged 5,000 tolas a day and were matched by offtake of almost same level. Today, however, arrivals shot up to 15,000 tolas, though offtake also improved to 8,000 tolas. The sharp rise in arrivals was attributed by spot dealers to increase in the inflow of the smuggled material on fears of likely measures against hoarding. Sovereign was quite steady at Rs. 81, but closed two points lower at Rs. 80 over the week.

Commencing the week at Rs. 212, both ready and forward silver showed a loss of 70 nP over last Wednesday's closing levels which also were uniform for both at Rs. 212.70. By Saturday, the 5th inst., ready silver had sagged to Rs. 210.85 and forward to Rs. 210.60, after having been done on the previous day at Rs. 212.45 and Rs. 212.20, respectively. The small reaction was due to speculative realising in futures. Monday saw a reversal in this reactionary tendency thanks to renewed speculative buying in upcountry centres, especially Calcutta. Prices continued to forge ahead thereafter, with the spot metal reaching today a high of Rs. 214.40 and forward Rs. 213.90, which were the week's best levels. Closing prices were a shade below the highest levels and showed, over the week, a gain of Re. 1.60 at Rs. 214.30 in spot and of Re. 1.10 at Rs. 213.80 in forward. The average daily arrivals approximated this week 15 bars, as against 20 bars in the previous week, and the average daily offtake improved by three bars to 10 bars.

Silver prices in London and New York scaled new peaks yesterday, with ready silver and forward advancing to 105½d. and 106d., respectively, in London and spot silver improving to 122.60 cents in New York. The 1962 best level for ready silver was 104¼d. in London and 122 cents in New York. Earlier in the week, London silver was done at 103¾d., as against the previous week's closing level of 103⅜d. and New York silver was quoted at 121 cents against the previous week's close of 120.50 cents. Spot gold in London moved narrowly and closed lower at 249s. 11¼d., as against 250s. 2¾d. a week ago. The dollar price at 35.05⅞ yesterday showed little change over the week.

The following table shows the trend of prices during the week under review:

	0-1-63 (closing)	High	Low	2-1-63 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	102.75	107.50	101.00	106.00
Sovereign	80.00	81.50	80.00	82.00
SILVER				
Ready (.996 fine) ..	214.30	214.40	210.85	212.70
Fagun	213.80	213.90	210.60	212.70
London—				
Gold	249s.11¼d.	250s.2¾d.	249s.11¼d.	250s.2¾d.
Silver Ready	105½d.	105½d.	103¾d.	103⅜d.
Silver Forward ..	106d.	106d.	104¼d.	104¼d.
New York—				
Silver	122.60 cents	122.60 cents	121.00 cents	120.50 cents

* 11th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

SMALL BUSINESS IN KIPS

(From Our Own Correspondent)

MADRAS, *7th January*

Trading in kips here this week continued small. Arrivals were moderate. Semi-premiums lights and mediums were firm at 78/68/58d. and 60/56/46d. basis, while buyers' ideas were 1d. to 1¼d. less. F.A.Qs remained quiet, despite tanners' reduction in price by a penny. Inferior varieties, too, were quiet, with very limited inquiries and generally unchanged prices.

In cowcalf, inquiries mostly centred on 2/2½ lbs. primes and 1/1½ lbs. semi-primes. Prices remained generally unchanged. In tanned buff calf, following further increases in prices of the raw stuff, tanners quoted higher prices which buyers were not anxious to follow. The premium 1½/2 lbs. run and thirds were quoted at 95/75d. Towards the week-end, however, the tone was somewhat quiet. The market for tanned buff hides remained unchanged.

The U.K. and the Continental inquiries for tanned goat skins were small, with buyers quoting lower prices. But East European inquiries were good and fair amount of business resulted with those countries. Prices generally were unchanged.

STEADINESS IN COTTON PERSISTS

(From Our Own Correspondent)

BOMBAY, *9th January*

Fully steady conditions continued to prevail in the cotton futures market during the week under review also. The official announcement of the issue of purchase authorisation for P.L. 480 cotton and the steadily mounting arrival of new crop did not have any adverse effect on market sentiment because they were offset by other bullish factors. News of better offtake of cloth and the Government's move to take over of sick and closed unit for running them on sound lines encouraged the hope that mill demand for cotton would improve. Reports that cotton crop in the Kaira District of Gujerat was infected by a disease called *sukara* also bullishly affected the market. The Jarilla March contract, which had closed at Rs. 685.75 and Rs. 688.25 and closed steady at Rs. 689.

Better activity was reported in the spot market at Sewri, Spinner interest centred round popular, staple cotton such as 197/3, L.147, CO2, Digvijay, Khandesh and Kalyan. Prices, however, tended to ease, thanks to increasing arrivals of new crop. In the export section, fairly good business was done in choice and superfine Bengal *Deshi* cotton. Export sales registered from 1st September till 7th January were placed at 139,000 bales. If the present trend of demand were to persist, it is quite possible that the balance of the quota (200,000 bales) would be filled soon. The current strong demand is attributed to the fact that, since the conclusion of the China-Pakistan trade agreement, Japan has turned to India to meet its requirements to *Deshi* cotton.

Only stray mill interest was evident in foreign cotton. The shipment period with regard to import of 55,000 bales of U.S. cotton stapling 1-1/16" and above but below 1-3/16" under the sugar-cotton barter deal has been extended from 31st December 1962 to 31st January 1963.

The Government's decision to restore the cut, imposed in November last on all allocations made against the global import quota announced in August last, was welcomed by the trade. The only snag, according to trade circles, is that the shipment of cotton will be allowed from 1st July 1963 which again is subject to a fresh trade notice to be issued at a later date. As the position stands now the trade and the spinners are left to guess the terms of this announcement. In the meantime, the spinners are supposed to stick to the firm commitments which they have entered into with the foreign shippers and pay the carrying charges till the commencement of the shipping period. This would involve extra remittance of foreign exchange and, at the same time, make the cotton under import more costly to the spinners. The trade feels that all this could have been avoided if the global quota announced on 29th August last had been left undisturbed.

India will utilise $21.469 million for purchasing cotton stapling 1.1/16" and above from the United States under the Purchase Authorisation (No. 39-85) issued by the U.S. Government to India, it was officially announced. The Textile Commissioner has decided to calculate the distribution of this cotton to consumers of foreign cotton varieties during the basic calendar year 1960. Consumers of cotton stapling 1.1/16" and above but below 1.3/16" in the basic year are allotted cotton worth $10.4 million while consumers of cotton stapling 1.3/16" and above are allotted cotton valued at $7.0 million. The balance is reserved for distribution to other categories of consumers. The cotton will be subject to the usual rates of premium as applicable to each of the two staple groups. Consumers of cotton stapling 1.3/16" and above, if so desired, can utilise the value allotted for the import of cotton stapling 1.1/16" and above. But if they import cotton stapling below 1.3/16" the premium applicable to that staple category will only apply. The Textile Commissioner has asked actual user mills to advise him whether they are prepared to import the allocation proposed and, if so, the staple length group required (only in case of mills having a basic consumption of 1.3/16" and above) so that a regular quota letter may be issued indicating the correct rates of premium.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* (fine) 672; Vijay 1,100; Digvijay 1,130-1,140; CO2 1,500; Khamgaon 27/32" 995; B.P. 52 1,200.

The Karachi cotton futures market, after having ruled firm during the first part of the week under review, turned easy in the second. Support induced by good export demand and domestic mill-interest pushed the January and March contracts from last week's closing rates of Rs. 73.50 and Rs. 73.25 to Rs. 74.45 and Rs. 75.75, respectively. Profit-taking attracted by the high level led to a decline. The January contract finished at Rs. 72.80 and the March contract at Rs. 73.80. The former thus shows a net decline of 70 nP over the week while the latter indicates a net gain of 55 nP. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 74.00; Punjab *Deshi* 70.75; 4F Punjab Roller 80.20; S.G. 85.70; L.S.S. Punjab Roller 82.20; S.G. 87.20; N.T. Roller 86.20; S.G. 89.70.

Trading conditions continued to be quiet in the Liverpool cotton futures market during the week under review also. A limited volume of long liquidation was absorbed in trade covering. Prices remained practically unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closing prices:

March 23.75; May 23.70; January (Sudan) 23.75.

Listless conditions prevailed in the New York cotton futures market during the week. Continued

uncertainty about new legislation for cotton restricted business. The nearby March contract was quoted unchanged at 34.65 cents per lb., the May contract 4 points lower at 34.71 cents and the July contract 10 points lower at 33.90 cents. New York spot was quoted at 34.95 cents per lb., as against 34.90 cents last week.

YARN PRICES REACT

(From Our Own Correspondent)

BOMBAY, *9th January*

Absence of demand at higher levels led to a small reaction in yarn prices this week. The upward tendency noticed in the past month or so was well maintained in earlier sessions. But, as the week progressed, business tended to shrink for want of buying support and prices gradually drifted lower to round off the week generally slightly lower on balance. In view of the present tight money conditions and political uncertainties, buyers were disinclined to make any purchases in excess of their immediate and urgent requirements.

Among art silk yarns, 120D N.R.C. showed a loss of 9 nP at Rs. 12.54. 100D Century sagged from Rs. 15.60 to Rs. 15.40 and 75D Century finished 42 nP lower at Rs. 18.41. 120D S.I. Viscose, however, improved from Rs. 12.72 to Rs. 12.91. In the 40 x 2 staple fibre section, Centurys fell by 20 nP to Rs. 7.02 and Kohinoors by 13 nP to Rs. 8.05. Cotton yarns were featureless. 60s Finlay finished 50 nP lower at Rs. 68.50, while 40s Gokak gained a point to Rs. 34.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	9-1-1963	2-1-1963
Art silk yarn **(per kg.)—**	**Rs.**	**Rs.**
National Rayon 120D	12.45	12 54
Century 75D	18.41	18 83
S. I. Viscose 150D	11.13	11.13
Staple fibre yarn **(40 x 2)—**		
Kohinoor (per kg.)	8.05	8 18
Century	7.02	7.22

KEEN OVERSEAS DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *8th January*

Overseas demand for tea was keen in the leaf sale held here on the 3rd inst. Shipments last week were normal. It is expected that in the coming few weeks shipments to the United Kingdom will be substantial. In keeping with the gathering momentum of despatches, tea stocks in the U.K. increased to 141.6 million lbs. in the week ended 28th December from 139.6 million lbs. in the previous week.

The trend in the last auctions held in London, i.e. the first ones held after the Christmas break, showed that buyers there were paying more attention to quality. Prices of good quality teas, therefore, were steady there, while the prices of the remainder were irregular. Bidders in Mincing Lane were apparently in no hurry possibly because of the belief that the incoming shipments in the next few weeks would be heavy. The average prices realised were lower at 54.83*d.* per lb. as compared with 54.91*d.* per lb. in the previous week.

Details of the North Indian tea output have been brought up to 15th December. The total is 575 million lbs. showing a decline of a little over 26 million lbs. Despite the lower output, shipments overseas from this part of the country have been satisfactory, thanks to the export duty reduction in the last budget. Trade circles have noticed that Ceylonese tea is gaining fresh ground in world markets. Ceylon has already set up a factory for the manufacture of instant tea, and now proposes to set up two more such factories. In these days of "acceleration" and the search for the quickest means to get things done, instant tea is capturing markets in West Germany, the United Kingdom and the United States. Reports indicate that in the last two years the percentage of instant tea sold to that of total tea consumed has increased significantly. Unless India joins the line, it is feared that it stands to lose market.

The tea industry's plea for abolition of the export duty becomes stronger when figures of output and export in respect of recent years are examined. In 1951, India's production was 629 million lbs. and by 1961 this had increased to 777 million lbs.—a rise of 148 million lbs. or 23.5 per cent. On the other hand, exports in 1961 were 455 million lbs. as against 451 million lbs. in 1951—a rise of a mere 4 million lbs. or not even 1 per cent. Significantly enough, in the same period, imports by India's largest buyer, the U.K., fell by 16 million lbs. to 272 million lbs. At the same time, higher output in other producing countries found an increased share of the increased overseas consumption.

In the leaf sale that took place on the 3rd inst., offerings totalled 48,967 packages. There was a good general demand. Keen competition was offered for whole leaf grades, prices of which rose as a result. Tippy teas were also dearer. Darjeelings also met with a dearer market. Plain orthodox teas were in good demand, but this petered out soon and closing prices showed a small loss. Brighter Dooars and medium Assams were steady, while the clearer and more useful lots advanced. The better liquoring Assams realised higher prices. An irregular trend was in evidence in C.T.Cs. The plainer and more fibrous teas eased, but the teas showing a seasonal improvement in liquor hardened. Good support was accorded to the best liquoring teas, B.Ps receiving more attention than similar fannings. Legg-cut teas eased by 10 to 20 nP. The quotations in rupees per one kg., inclusive of excise duty, were: Best Assam C.T.C. fannings 6.10 to 6.40, medium Assam C.T.C. fannings 5.50 to 5.80, best Assam C.T.C. B.P. 6.10 to 6.40, medium Assam C.T.C. B.P. 5.50 to 5.80, clean plain pekoe 4.60 to 4.90 plain fannings 3.90 to 4.40 and plain B.P. 3.80 to 4.10.

There was good general demand at yesterday's sale when leaf on offer totalled 70,981 packages. There was keen competition for whole leaf grades and tippy teas and prices gained. Darjeelings were a strong feature, and those lots representing improved autumnal quality recorded a liberal advance in prices. Plain orthodox teas were fully firm, but fannings eased. The better liquoring Dooars and medium Assam teas were irregular. The brighter Assams advanced. Medium C.T.Cs were in good demand. B.Ps received more attention than fannings. Prices for the better liquoring teas rose. A firm trend was recorded in the better liquoring legg-cut teas. The quotations in rupees per one kg., inclusive of excise duty, were: Best Assam C.T.C. fannings 6.20 to 6.60, medium Assam C.T.C. B.P. 5.50 to 6.00, best Assam C.T.C. B.P. 6.20 to 6.60, medium Assam C.T.C. fannings 5.50 to 5.90, clean plain pekoe 4.70 to 5.00, plain B.P. 3.90 to 4.20 and plain fannings 3.80 to 4.40.

SHARP SETBACK IN G'NUTS

(From Our Own Correspondent)

BOMBAY, *9th January*

Oilseeds suffered a sharp setback during the week under review on heavy bull liquidation, following larger arrivals of new crops and tight money conditions. Groundnuts were particularly depressed, with values of seeds touching the lowest levels of the season. The easiness in groundnuts was due to larger offerings from Kanpur and heavy tenders against the maturing contract. But for some slow down in arrivals from Gujarat and South India on account of unattractive prices ruling in the local market, values would have been lower still. Castorseeds ruled easy, thanks to reports of new crop movement to terminal centres in Andhra Pradesh and lack of overseas inquiries for castor oil. Linseed and cottonseeds, too, moved down in sympathy with other seeds.

Groundnut January 1963 contract lost Rs. 9.50 to Rs. 194, April 1963 contract fell by Rs. 6.25 to Rs. 207.87. Nizam bold reacted by 38 nP to Rs. 39.37. Khandesh quality moved down by 25 nP to Rs. 40.50. Oil ex-mill, however, hardened by 10 nP to Rs. 16.70.

Castorseed March 1963 contract came down by Rs. 4.50 to Rs. 159.50; it had touched Rs. 158.75 earlier during the week. June 1963 contract gave way from Rs. 166 to Rs. 162, before closing at Rs. 162.50. Castorseed ready Madras closed lower by 12 nP at Rs. 32.25, after fluctuating between Rs. 32.50 and Rs. 32. Kanpur bold shed 12 nP to Rs. 31. Oil Commercial eased by 40 nP to Rs. 12.85. Oil B.S.S. declined by 30 nP to Rs. 13.55.

Linseed March 1963 contract receded by Re. 1.38 to Rs. 35.62. Bold ready declined by 50 nP to Rs. 37.50. Linseed oil retreated by 35 nP to Rs. 15.

Cottonseed April 1963 contract lost 50 nP to Rs. 92. Both non-white and berar declined by 50 nP to Rs. 19. White shed 10 nP to Rs. 20.

The following table shows the closing prices of oilseeds and oils on Wednesday 9th January, as compared with those of two previous weeks:

	9-1-1963	2-1-1963	26-12-1962
Groundnuts	**Rs.**	**Rs.**	**Rs.**
January 1963 contract	194.00	203.50	206.62
April 1963 contract	207.87	214.12	214.37
Nizam bold	39.37	39.75	39.88
Khandesh quality	40.50	40.75	41.50
Oil ex-mill*	16.70	16.60	16.90
Oil commercial*	16.50	16.45	16.80
Castorseed			
March 1963 contract	159.50	164.00	164.75
June 1963 contract	162.50	166.00	165.50
Ready Madras	32.25	32.37	32.75
Ready Kanpur	31.00	31.12	31.75
Oil B.S.S.†	13.55	13.85	13.80
Oil commercial†	12.85	13.25	13.30
Linseed			
March 1963 contract	35.62	37.00	36.04
June 1963 contract	—	—	—
Bold ready	37.50	38.00	38.50
Linseed oil†	15.00	15.35	15.50
Cottonseed			
January 1963 contract	93.50	91.50	95.00
April 1963 contract	92.00	92.50	96.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

STRONG DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *3rd January*

A total of 629,000 kgs. was offered in sale No. 1 held on the 2nd inst. Quality generally showed a further improvement. The market met with strong demand. Low medium and medium brokens were keenly competed for and were dearer by 10 to 20 nP. Fannings under this category sold readily, but did not register the same advances and, although irregular, were about steady. Good mediums received strong support and sold at around last rates. Highgrowns elicited good enquiry but sold at irregular rates. A few selected invoices realised useful prices, whilst others were irregular and occasionally easier. Clean black leaf description and tippy teas were strong and dearer. Unorthodox descriptions were well supported at dearer rates. Flowery pekoes and pekoes were irregular, whilst orange pekoes sold at rates above last.

The quotation (per kg.) were:

	1963	1962
	Rs.	**Rs.**
Low medium	4.20-4.60	3.40-3.70
Mediums	4.60-5.00	3.70-4.20
Good mediums	5.00-5.85	4.30-5.40
Nilgiri B.O.P.	5.40-8.50	5.40-8.10

The average price realised in sale No. 1 was Rs. 4.91 per kilo, as against Rs. 4.77 two weeks ago and Rs. 4.31 in the corresponding sale last year.

In dust sale No. 1 held today, 333,000 kgs. were offered. There was good demand. At the opening of the sale prices were generally lower, but, as the sale progressed, demand strengthened and prices were fully firm to dearer. Plainest and low mediums were well competed for and were often dearer. Mediums opened slightly easier, but prices for the types appreciated as the sale progressed. Best highgrowns were steady, whilst others inclined a little easier. Clean black grainy descriptions were also well supported and sold at around last rates. There was strong support for unorthodox dusts which sold at rates above last.

The average price realised in dust sale No. 1 was Rs. 4.28 per kilo, as compared with Rs. 4.20 two weeks ago and Rs. 4.20 in the corresponding sale last year.

Colombo: The market met with good demand. Best Dimbulas were slightly easier, whereas others were firm. Best Uvas were firm, but others were a little easier following quality. Coloury mediums were well supported at firm to dearer rates, whilst lowgrowns declined in price. Best liquoring fannings were fully firm to dearer. Plainer sorts were a little easier.

London: North Indian and other growths: In Monday's sale, there was good general demand. Best liquoring teas were fully firm, whilst others were a little irregular and sometimes easier.

Ceylon and South Indians: In Tuesday's sale, 28,697 packages were offered, of which 9,173 packages came from South India. There was strong demand. Ceylons were often 1*d.* to 2*d.* lower, particularly those valued up to 4/6*d.* whilst others were fully firm. South Indians were irregularly easier by 1*d.* to 2*d.* except the best liquoring kinds which were firm.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 2: 702,000 kgs. offered. Good demand. Low medium and medium brokens upto 10 nP dearer. Similar fannings easier. Good mediums fully firm. Highgrowns irregular and little easier. Unorthodox firm to dearer."

JUTE MARKETS DULL

(From Our Own Correspondent)

CALCUTTA, *8th January*

In the absence of adequate demand, dull conditions prevailed in both the jute goods and raw jute markets during the week under review. That the goods market is facing a glut is only too evident in the rapid recession in the prices of heavy goods. In sympathy, hessian also moved down. The news that burlap consumption in the U.S. during the month of November increased to 77 million yards from 75 million in the previous month and from 70 million yards in November 1961 failed to stop the decline, as it was realised that output in mills was outpacing demand. The fact that U.S. stocks at the end of November aggregated 261 million yards, representing a significant increase of 12 million from the previous month, was revealing, inasmuch as it becomes clear that U.S. buyers need not be in a hurry to make fresh buying.

The trend of goods prices in the past four weeks makes it clear that the heavy stocks of goods with mills are pulling down prices and restraining buyers from entering into any large commitments. The mills' stocks of fibre are also heavy, and buyers of goods know it for certain that there would be no question of mills deciding to curtail production. At a time when mills are working up to their maximum capacity, it is unfortunate that they are subjected to criticism. The critics, who include members of Parliament, as well as of the Indian Central Jute Committee, want the mills to increase output in an attempt to arrest the slump in fibre prices. Despite several price support measures, including the imposition of minimum purchase quotas on mills by the Jute Commissioner, fibre prices continue to remain below minimum prices at Calcutta. In the mofussil areas, the gap is naturally still wider. In this state of affairs, it becomes prudent to inquire as to why fibre prices should remain low. The answer is lack of adequate demand for goods.

Referring to the criticism on the working of mills, Mr. C. L. Bajoria, Chairman of the Indian Jute Mills Association, points out that, since the end of 1961, mills have been working up to their maximum capacity, with the result that production in 1962 was the highest since 1942. The working of the weaving departments depends on the supply of adequate quantities of yarn. In order to maximise yarn supplies to the weaving departments, the mills are working their spinning departments three shifts on all days of the week except the weekly holiday when they are only allowed to work one shift, thanks to power shortage. Mr. Bajoria says that this is the limiting factor on mills' production. Mills are working all their looms to the full extent subject to availability of yarn supplies. It is necessary that they should increase their spinning capacity. If, however, demand for goods does not increase, a further increase in stocks will only accentuate the problem of prices.

The I.J.M.A. Chairman would welcome the Government of India to accept the recommendation of the I.C.J.C. members for the grant of a subsidy on jute exports. India's sacking goods are at present meeting with stiff competition in overseas markets, and their market is gradually shrinking. If a subsidy were granted in sacking exports, the mills would be enabled to widen India's markets abroad.

When the country's interests demand increased exports, it is unfortunate that shipments of gunny to the U.S. have been withheld and/or delayed, following Customs regulations to check prices on invoices. The protest of the U.S. industry has been brought to the forefront by Mr. Paul M. Jones, President of the American Carpet Institute in New York, who has urged early relief from delays. While Mr. Jones appreciates that the Government of India should take all measures to conserve foreign exchange, he wants the authorities to take into account trade practices in the U.S. Forward contracts are entered into when prices are suitable for both buyers and sellers. If, by the time the contracted supplies start moving, there has been a rise in prices, it is not legitimate to ask the foreign buyer to shoulder the difference in prices.

On Wednesday the 2nd inst., the first session in the new year, ready B. twills were quoted at Rs. 114.50, that is, a decline of Re. 1.85 over the previous working day. Ready hessian 40" 10 oz. fell from Rs. 51.50 to Rs. 51.35. At lower levels, there was some demand due mainly to short covering by bears. On Thursday, there was selling pressure in the futures market, and conditions in ready goods were featureless. Hessian 40" 10 oz. was around Rs. 51.40 and B. twills Rs. 114.40. Since selling pressure continued on Friday, prices were affected further. B. twills eased to Rs. 113.75 and hessian 40" 10 oz. to Rs. 51.25. Over the week-end, there was hardly any activity, since buyers anticipated that the present declining phase would continue. Hessian 40" 10 oz. eased to Rs. 50.85 and B. twills to Rs. 113.30. Although conditions were quiet yesterday, B. twills recovered to Rs. 114.00 due mainly to activities in the futures market, while hessian 40" 10 oz. was quiet at Rs. 50.70.

In the fibre market, conditions were dull. Sellers were anxious for business and the mills were interested to buy small lots only. A redeeming feature, however, was that sellers were not prepared to discount prices any further. Daily arrivals were estimated at around 75,000 maunds a day, as against 80,000 maunds a week ago.

METALS UP ON SCARCITY FEARS

(From Our Own Correspondent)

CALCUTTA, *8th January*

The non-ferrous metals market here has not yet been able to absorb the import policy shocks. The established importers are not permitted to import tin and also not entitled to revalidation of licences in respect of copper and zinc for the current six-month period. This restrictive import policy has caused uncertainty, and prices of available metals in scrap form have been pushed up.

The hardening tendency gathered momentum last week. The belief in trade circles that the S.T.C. would take quite some time to mature as an importer led to fears of likely shortages in the meantime. Hence the rise in prices. While virgin lead remained unchanged at Rs. 150 per 100 kgs., electrolytic zinc went up four points to Rs. 262. Tin rose as high as Rs. 3,030 per 100 kgs., as against Rs. 2,950 in the previous week. Utensil copper scrap closed firm at Rs. 546.50, adding about ten points on balance.

It is pointed out by traders that the import and distribution of copper and zinc are already under the effective control of the Government. The trade is distributing the same in accordance with the permits issued to consumers by the Government from time to time. The percentage of profits is also stipulated. In this context, the trade contends that the Government could have decided to bring tin also under similar control and avoided the drastic action of completely eliminating established importers from the scene.

On the London Metal Exchange, spot copper remained unchanged at £234 a ton, with the backwardation being as low as 5*s.* against sellers' attempts to push it to 10*s.* Spot tin improved from £850½ a ton to £852½, but the backwardation fell from £4½ to £2. Spot lead was quiet at £54 a ton, but spot zinc advanced from £66 to £67½ a ton.

Following the recent meeting of the International Tin Council, it has been reported that the U.S. Government has been approached to fix a floor price of £965 a ton for stockpile sales in order to stabilise the market and encourage producers to increase production. While it is realised that the U.S. Government may not accept this recommendation, it is possible that Washington may review its present policy in the light of the recent depression in world markets. Malaya has indicated that it does not propose to withdraw from the Agreement as a protest against the U.S. stockpile policy; on the contrary, it will stand by the I.T.C. and cooperate with other producing countries in their attempt to persuade the U.S.A. to change its policy.

SUGAR IMPROVES

(From Our Own Correspondent)

HAPUR, *7th January*

Sugar prices here sought higher levels this week thanks to better demand. Traders were, however, still hesitant to enter into long commitments due to the emergency in the country. The industry was reported to be faced with near crisis conditions owing to inadequate cane supplies. Sugar production in the country might shrink to 24 lakh tons in the current season. Offtake from the factories during the week was reported small and week-end prices of sugar here were: Spot delivery Rs. 105, mill delivery (D29) Amroha Rs. 101.45, Dhampur Rs. 101.75, Seohara Rs. 101.36, Meerut Rs. 104, (E29) Simbhauli Rs. 103.25, Bijnore Rs. 101.56 and Dhampur Rs. 101.46.

The revival of demand from Delhi, Rajasthan, Punjab and M.P. accounted for a steady trend in sugar prices during the week in the Muzaffarnagar market. Prices improved by 35 nP to one rupee per quintal, and the rise was more pronounced in bold grain sugar, as its stock with mills were meagre. Following closure of unauthorised crushers, cane supplies to factories improved slightly but there were still apprehensions that the factories would close by mid-February due to non-availability of cane.

Khandsari prices continued to drift lower due to slack demand from the consuming areas of Punjab and Rajastinan. *Khandsari* producers were also facing shortage of cane. While the inferior quality damp *khandsari* was quoted at Rs. 72.34 to Rs. 83.06 per quintal, the dry crystal and noncrystal were quoted between Rs. 85.74 to Rs. 92.43 per quintal. Crystal *boora* was held between Rs. 104.49 and Rs. 105.83 per quintal.

Gur prices registered a rising trend on brisk buying support from Gujarat and M.P. Daily arrivals here averaged 3,000 maunds and were mostly lifted easily due to easy loading facilities. Local stock of *gur* was around 3,000 maunds. Total arrivals of *gur* here during the current season up-to-date were put at 2.70 lakh maunds.

NO PEPPER SHORTAGE THIS YEAR

(Messrs. Parekh and Co.)

BOMBAY, *9th January*

New Year for Malabar black pepper opened under a discouraging note, foreign inquiries being sparse and arrivals expanding. Lampong-holders both in Indonesia and at Singapore, after having sat tight on their large holdings for more than a year, got tired and started underselling Indian even after the end of the harvesting season in Sumatra. This made foreign buyers all the more suspicious. They bought only to cover their immediate requirements. Singapore was reported offering Lampong black at $0.27 and $0.28. Indonesia was showing her willingness to sell direct even at a cheaper rate.

Though the arrivals on the coast are augmenting, the prices of ungarbled are held steady, as the growers are resisting lower prices. Ungarbled during the week moved between Rs. 248 and Rs. 246. January on the ring moved up and down within a range between Rs. 252 and Rs. 260. Turnover was very mush restricted, as speculative interest was sidelining. Inland demand was comparatively good, as almost all the imported spices were banned and prices thereof consequently hardened. Singapore remained quietly steady at $92½ throughout the week.

New York spot moved narrowly between $0.32 and $0.34 according to the demand from grinders and in line with the offers which New York dealers received from the sources.

The year 1962 proved a bad year for black pepper as well for white pepper. It was one-way traffic. There were intervening upheavels all of which proved short-lived. These upswings were encouraged at one time either by manipulations of New York dealers—who bought sparingly with a view to creating an artificial scarcity in the spot—or by strike on the water front in New York and at other time by the political situation in Cuba, Laos, Brunei and Dutch Guinea. Such political events brought forth buying from grinders and dealers of the U.S.A., but, there being ample supply available in India, Singapore, and Indonesia, the exporters continued to offer at every advance. New York, after covering sizable quantity, withdrew. Their withdrawal, having been synchronised with the improvement in political situation, was responsible for bringing down the prices. Former stalemate condition continued. The prices, as a result, renewed downward trend. Spot price in New York moved down to $0.32. Major rise of the year was at $0.39 a new York.

In Singapore, Lampong pepper made history, inasmuch as the heavy stock of about 6,000 tons was maintained during the entire period of the year. The stock was held by the State Trading Company of Indonesia. Inexperienced as they were, they preferred to sit tight on the stock in the hope of getting higher prices after the harvesting in India was over. However, Malabar production, having proved higher during 1961-62, India continued to offer at every price. As such India did not allow any chance to Indonesia to sell competitively. The Chinese exporters in Singapore also exploited the heavy stock position in the Island. They tried hard to force the State Trading Company of Indonesia to liquidate their holdings at lower prices. At long last, the Chinese exporters won the day.

The State Trading Company tried its best to boost prices by resorting to various means. It first tried to induce the Indonesian Government to raise its check prices, so that it may get a chance for liquidating its stocks in Singapore. Secondly, it tried to spread rumours that its whole stock was already sold to Russia and other East European countries. By such tactics, it once or twice succeeded in squeezing shorts at Singapore, but was not able to export more than 1,000 tons to U.S.S.R. during the year.

It is reported that the State Trading Company at Singapore is still maintaining a stock of 4,000 to 5,000 tons. The Indonesian Government, having realised the helplessness of the State Trading Company in marketing pepper, is now reported to have brought down its check prices to a more realistic level, so that the Singapore Chinese can get a chance to buy Lampong and export in competition with other sources. There being no likelihood of shortage of supply in the year 1963, the future of black pepper is nothing but rosy unless, of course, there are some imponderables like war, cyclone, earthquake and such other natural calamities affecting the coming crop.

LONDON LETTER

(Concluded from page 56)

as a lender of last resort, will discount first-class bills. The new Bank rate still means that but without the emphasis on the words "as a lender of last resort," for, when the market is really pushed, it can always raise money from the Bank by depositing security. Now, if that happens, the "lender-of-last-resort" rate will not be the new rate of 4 per cent but the old rate of 4½ per cent.

What, then, does the drop in Bank rate mean? It means that the Bank has signalled to the joint-stock banks and the money market that rates for *internal purposes* should go down. Joint-stock banks have forthwith cut the rate they pay on their deposits by ½ per cent and they have cut the rate they charge on their loans. This is intended to stimulate borrowing and business. The markets, too, will get their money cheaper but, by maintaining a penal rate to the Discount Houses, the Bank intends that short-term rates shall not drop to the same extent as long-term rates and since hot money movements are designed to take advantage of market rate differentials and the funds are invested in Treasury bills, etc., it is expected that London will still remain a relatively attractive centre for foreign funds. But London is still *too* attractive. Hence the thinking that this week's move is a preliminary to a further cut in Bank rate or, more likely Bank rates. Maintaining the differential between the two and encouraging both the domestic economy with cheap money and the flow of short-term foreign funds encouraging short funds with dear.

NEWS IN BRIEF

(Concluded from page 77)

tors, amongst them almost 3,000 from abroad, and there were nearly 400 exhibitors from 13 different countries.

The Government of Pakistan has decided to establish a truck manufacturing plant at Karachi, the first of its type in the country, in collaboration with the U.S. firm, the Mack Trucks Inc. The plant, which will be owned jointly by the Government of Pakistan, the U.S. firm and private investors in Pakistan, will have a capacity to produce initially about 2,000 trucks and buses annually. Eventually, over 50 per cent of the parts of the vehicles will be manufactured in Pakistan, with the remaining components supplied by Mack.

The Pakistan Government has announced a liberal import policy designed to boost industrial production with export potential. Higher import quotas have been provided for certain items, including tools, chemicals, dyes, auto spares, typewriters and office machines. But licensing has been closely tied to export performance, and industrial units which have not fulfilled export targets will be penalised with a token cut of 10 per cent on their import licences. The import of paint, paper, cardboard, glassware, china and a few other items has been banned on cash licensing.

Pakistan and China have signed their first-ever trade agreement providing for most-favoured-nation treatment to each other in matters of commerce and trade, including shipment. The agreement also provides for the conclusion of arrangements between the two countries to facilitate expansion of trade between them. Items to be exported from China include metals and steel products, coal, cement, machinery, chemicals, raw materials and cereals. Goods to be exported from Pakistan include jute, cotton, jute manufactures, leather, cotton textiles, sports goods, surgical instruments, chrome ore and newsprint.

Diamond sales in the world touched a new peak in 1962. The value of diamond sales conducted through the central selling organisation of De Beers (which accounts for the marketing of 80 per cent of the world's output of diamonds, including Russian gem stones, besides those from South Africa) aggregated £96.3 million in 1962, as against the previous peak of £95.7 million in 1961, and only £65.5 million in 1958. The increase in sales reflects a situation in which the demand for high-quality gem diamonds has probably remained in excess of supply, whereas business in industrial stones has continued good despite competition from synthetic materials. The diamond market's chief problem concerns over-supply of small gem stones.

The Soviet Academy of Building and Architecture has built an experimental residential house in Moscow exclusively out of plastic materials. This house is only a section of a five-storeyed building which is soon to be adopted for large-scale construction. There are a two-room flat and a three-room flat in the experimental house. The flats are like others in their lay-out, but differ in their interior decoration. Doors and windows are built of fibre glass, and floors of polyvinylchloride plates. Even water, sewage and gas pipes are made of plastics—polyethylene, polypropylene and vinyplast. There are neither radiators nor central heating in the rooms and dwelling houses in general. Heating is aerial, combined with ventilation. Warm air is pressed through invisible synthetic air-pipes. The house as a whole is said to be about three times lighter than that built of conventional materials.

ABBREVIATIONS. N—Nominal. (*f*) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport. A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable. ††Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1925. f Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex Ten instalments but inclusive of accrued interest. M—At the option of the Government after three months' notice. K—On September 1986 or later at the option of the Government after three months' notice. T—Liability taken over by Madhya Pradesh.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

TREND OF SHARES

TOWARDS NORMALCY

(From Our Own Correspondent)

BOMBAY, 10th *January*

THE week under review on the stock exchanges was notable not for change in the trend of values, as it remained very much the same as before, but for certain relaxations made by the market authorities in Bombay and Calcutta in the trading regulations in an attempt to restore normalcy in the two principal markets. Nonetheless, closing prices disclosed a mixed pattern and underlined the diffident outlook.

From Friday the 4th inst., fresh speculative purchases in the forward scrips have been permitted by the Governing Board of the Bombay Stock Exchange without the payment of the previously imposed margin of 5 per cent. The limit on purchases in any single share has, however, been left unchanged at Rs. 50,000. Likewise, the limit on the aggregate purchases in all scrips still stands at Rs. 2 lakhs. Among the other measures adopted by the Board with effect from that date are the removal of minimum prices for cash scrips and the lifting of the stipulation of compulsory carry-over in respect of 33 less active out of the 74 shares on the forward list. The Board has also reduced from last Friday the minimum price for Century from Rs. 562.50 to Rs. 545, for National Rayon from Rs. 422 to Rs. 410 and for Tata Steel Ordinary from Rs. 121 to Rs. 120.

From Friday last, again, fresh purchases in Indian Iron in Calcutta have been permitted up to a maximum limit of 6,000 shares, subject to a margin of one rupee per share on the initial 3,000 shares and of Rs. 2 per share on further 3,000 shares. Only such members who have a net purchase position of less than 10,000 shares in the scrip are allowed to make fresh purchases. No new buying has, however, been permitted in other cleared shares.

The above relaxations had their full play during the week under review. As the relief granted in Calcutta was confined only to a solitary share, it produced no significant results. But, in Bombay, the liberalisation of trading had its immediate impact on the price level. All the three shares the minimum prices of which were reduced attracted short-covering and staged, therefore, small rallies. However, the improvement could not be retained for long in the absence of fresh support. Nonetheless, the shares closed a little above their minimum levels, though two of them, namely, Century and National Rayon, showed a loss of Rs. 11.50 at Rs. 551 and of Rs. 10 at Rs. 412, respectively. Tata Ordinary finished 75 nP higher at Rs. 121.75. The removal of minimum prices in the cash list produced widespread small losses in that section.

By lowering the minimum prices of three leading shares, the market authorities in Bombay have aligned themselves to the real situation as has been obtaining particularly in such scrips and generally in the market as a whole. The small losses in the cash section only confirm the diffidence of operators over the near-term outlook. The diffidence has found further expression in the continued absence of buying support, despite the sanction of margin-free buying in forward shares within specified limits. It is significant that the market authorities are engaged in restoring normalcy in the markets only so far as buying is concerned. Restrictions on short-sales are being continued, for the political uncertainties persist.

* * * *

The price variations in the three leading counters on the Bombay Stock Exchange have already been noted above. Among the other market leaders, Telco gained, over the week, 12 points at Rs. 293, Voltas five points at Rs. 255, Hindustan Motors 56 nP at Rs. 17.36, Indian Dyestuff 20 points at Rs. 395 and Bombay Burmah 10 points at Rs. 638. A.C.C. were also up by two points to Rs. 152 and Belapur by Re. 1.50 to Rs. 215. Standard, among Textiles, showed a gain of Rs. 7 at Rs. 814, but Kohinoor slipped from Rs. 291 to Rs. 280 and Bombay Dyeing from Rs. 62 to Rs. 60.50. In the cash section, Mafatlal slumped by Rs. 27.50 to Rs. 690. Raymond and Alembic disclosed a loss of five points each at Rs. 133 and Rs. 180, respectively. Indian Rayon were down by Rs. 4.50 at Rs. 80. Most of the other counters closed slightly lower.

* * * *

Indian Iron, in Calcutta, closed unchanged at Rs. 22. Other forward shares were easy. Indian Aluminium showed a big setback from Rs. 33.81 to Rs. 31.50. G.K.W. were down by 55 nP at Rs. 34.45, Dunlop by 25 nP at Rs. 37.25, Jaipur Udyog by 31 nP at Rs. 11, Orissa Cement by 25 nP at Rs. 15.37 and Shree Gopal by one rupee at Rs. 23.25. Cash scrips were dull. However, jute shares were generally weak, with Champdany slipping from Rs. 144.50 to Rs. 140 and Delta from Rs. 182 to Rs. 179, while Gourepore advanced as an exception from Rs. 454 to Rs. 463. Selected Engineering issues gained some ground. For instance, Binani were up by 37 nP at Rs. 10.87, Britannia Engineering by 38 nP at Rs. 10.69 and Jessop by 75 nP at Rs. 23.12. Miscellaneous section, on the other hand, closed easier, with Associated Battery declining by 62 nP to Rs. 28.25, British Paints by 44 nP to Rs. 19.81, Goodyear by 75 nP to Rs. 39.87 and Hindustan Aluminium by 94 nP to Rs. 13.62. Other sections showed hardly any variations.

PYROTENAX INDIA LTD.

Pyrotenax India Ltd., a new company incorporated on 7th July 1962, for the manufacture of mineral insulated metal sheathed electric cables at Kirkee near Poona in collaboration with Pyrotenax Ltd. of England, will enter the capital market for a week from 21st January 1963 with a public issue of Rs. 14.25 lakhs in ordinary shares of Rs. 100 each. The Company's authorised capital is of Rs. 60 lakhs all in equity shares, of which Rs. 18.75 lakhs has already been subscribed and fully paid by the promoters—Pyrotenax Ltd. of England and the Bombay Company (Private) Ltd. —and by the Directors of the Company and their friends and associates. Shares worth Rs. 22 lakhs have been reserved for additional subscription by the British firm. Together with the proposed public issue, the total issued capital of the Company will be Rs. 55 lakhs.

The types of cables the Company is to manufacture will be made for the first time in the country. Hence the prospects are quite favourable. Besides, the market potential is expected to rise and it will also be possible to export the product. Among the raw materials, magnesium oxide is indigenously available and, although copper and aluminium may have to be imported initially, the Directors expect indigenous supplies of copper and aluminium bearing raw materials like tubes and rods to be available in the near future. The collaborating British firm is to provide the technical know-how, advise the Company on erection and construction of plant and machinery and on the manufacture and marketing of cables and train the Company's staff at its works in the U.K. It has agreed to grant the Company licence to use its trademark, namely, *Pyrotenax* and *Pyropak*.

UNITED BANK OF INDIA LTD.

A slight improvement in net profit from Rs. 20.50 lakhs to Rs. 21.20 lakhs has been reported by the United Bank of India Ltd. for the year ended 31st December 1962. The dividend on the ten-rupee ordinary shares has been maintained at 6 per cent per annum, subject to tax. It absorbs Rs. 16.08 lakhs. Allocation to the statutory reserve fund has been raised a bit from Rs. 4.11 lakhs to Rs. 4.26 lakhs. The surplus of Rs. 3.26 lakhs, including Rs. 2.40 lakhs brought in, is to be carried forward. Deposits increased during the year by more than Rs. 5 crores to over Rs. 64 crores.

MARKET GOSSIP

(Concluded from page 51)

lakhs. The U.S. is one of the major buyers of raw goat and kid skins and tanned leather, next only to the U.K. The growing competition from synthetics need not dishearten India's exporters, if only they make all efforts to improve quality and increase the competitive capacity of natural leather. They may also learn a lesson from the promotional campaign for natural leather launched by the Tanners Council of America. The Council has decided to double its annual outlay on promotional campaigns and advertising in 1963, in a fresh bid to popularise natural leather. Besides, research is being carried out for finding out cost-reducing methods of processing hides and skins. Primary commodities will not be able to maintain their hold on consumers in the face of competition from synthetic substitutes unless their competitive capacity in terms of price and quality is stepped up by all possible means.

Wage Cost in U.K. and Germany

Wage-cost inflation presents the greatest threat to economic stability and competitive success of most West European countries. The year 1962 proved to be a "costly" one in terms of wage bill for industries in many countries. To take Britain, for instance. Wage increases granted in that country last year were the largest since 1956. Figures for the eleven months of 1962 (January to November) show that 12.2 million workers received a net increase in weekly wage rates of £4.9 million a week or £255 million a year. This is much greater than the figure for the whole of 1960 when there was a major wage rise in the engineering industry.

This trend shows that the efforts made by the British Government to impose wage restraint through a "guiding light" after the "pay pause," which had ended in April 1962 after lasting for eight months, did not succeed. Even the "pay pause" had only limited success in that it merely postponed a number of wage increases from 1961 to 1962. Measured by the weekly wage index of the British Ministry of Labour, there was an increase of 4.2 per cent in weekly wage rates in the first eleven months of 1962. The previous peaks for wage increases were in 1955 and 1956 when the percentage of increase was 7 and 7¼, respectively. Over the past ten years 1952-62, the average annual increase in wage rates works out to 5½ per cent.

For W. Germany, too, 1962 proved to be a year of high wages. Workers' earnings increased during the year by an average of 8 per cent. The working time was reduced by contractual agreement by one to one and a half hour per week. This means a two to three per cent rise in production cost.

The prospects for the new year are not encouraging in both Britain and W. Germany. In the former, many wage demands have already been put forward, one of the most notable among them being the claim for a ten per cent pay rise made by 14,000 jute workers in Dundee. In W. Germany, industrialists fear that new burdens will be placed on industry with the certain consequence of a further rise in cost of production. Apart from the annual demand for wage increases which will have to be faced in any case, two more additional financial burdens will have to be shouldered by the W. German economy as a whole. These are, (1) a 6.6 per cent increase in pension for about 8 million people, requiring 1,100 million D-marks to be provided by pension funds and by Government contribution, and (2) a minimum paid holiday of 15 days a year as per the Federal Holiday Law which came into force on 1st January 1963. As per this law, many firms will have to extend the minimum period of paid holidays which, it is estimated, will cost 500 million D-marks in 1963.

In addition to these two, another burden is likely to be imposed in the new year. The West German Parliament is expected to amend the law on accident insurance which will call for higher accident insurance contribution by employers. It is estimated that additional costs on this account will be of the order of 200 million D-marks. The higher pension, longer paid holiday and higher rates of insurance contribution are together expected to cost 2,000 million D-marks. One has to add to this higher postal and rail rates and other social expenditures which form part of last year's social reform measures but which have not become effective.

The main "wage round" for the year 1963 lies still ahead. The West German Metalworkers Union, covering workers in iron and steel, engineering, motors and the shipyard, which has become something of a pace-setter for other unions, has yet to put forward its wage demand for 1963. Chemical industry workers have already lodged a claim for a 12 per cent increase in wages. Coal-miners have revived the plea that the man in the mines should be the best paid of all skilled workers. Pressure for a further reduction in working hours is mounting up. Last year, according to the West German Trade Union Federation, 15 million employees, out of a total of over 20 million, enjoyed a five-day week with an average working day of nine hours. But only 700,000 were on a 40-hour week which is said to be the Federation's goal.

"BANK OF BARODA WEEKLY REVIEW"

To the Bank of Baroda goes the unique distinction of being the first among banks in India to publish a weekly review presenting in a nutshell news and notes on economic and political trends in India and abroad. The inaugural number of the *Weekly Review* has just been published; it is edited by Mr. N. Salivati, a well-known journalist. The Number contains brief surveys of general business conditions, food situation and banking trends. There are also short notes on synthetic rubber production, oil deposits and export promotion. In the note on banking trends in India, the *Weekly Review* draws attention to a recent suggestion of Mr. N. M. Chokshi, Managing Director of the Bank, for establishing a foreign exchange bank with the co-operation of all Indian Banks, instead of each individual bank trying to open branches in foreign countries. The rationale for this suggestion is as follows:

"The establishment charges of foreign branches are very heavy and, during the initial period, the branch incurs losses. It would not, therefore, be possible for any single bank to open the required number of overseas branches. Besides, in most of the foreign countries, it is not possible for branches of Indian banks to secure a sufficient volume of deposits to take care of the needs of the business of the branch and such business has to be financed by remittances of funds from India. As the resources of all Indian banks are at present fully employed or would remain so employed for a long time to come, it would not be within the means of a single bank to maintain the required number of branches."

Mr. Chokshi feels that an exclusive foreign exchange bank operating abroad with the resources and talent of all the Indian banks pooled together is urgently needed, as it will facilitate export promotion.

PERSPECTIVES & PROJECTIONS

(Concluded from page 52)

that extent at least there will be less work. Further, the Centre will in future be setting tasks to be carried out by the State administrative services. There will be less of local legislative or policy-making chores and it is difficult to think of ways in which more than a dozen Ministers can be usefully engaged in the work of the State Government. Larger numbers not only claim more staff and space (the latter will increasingly become scarce) but also the attention of lower level officials who have to dance on them to the neglect of their normal work when the supernumerary Ministers move around for lack of anything better to do. It is Parkinson's caricature come to life and far from there being an end to this trend, there will be an accentuation when legislatures and cabinets are constituted for the Union Territories of Himachal Pradesh, Manipur, Tripura, Pondicherry, Goa, Daman and Diu. More than half the States have now ratified the Constitutional (Fourteenth) Amendment and the way is clear for the extension of popular rule to these areas under a diarchical system.

Uniformity in these matters may be technically difficult because the States and the Chief Ministers in charge of them are at least in theory autonomous in their sphere, though in practice not a sparrow falls or flies without the High Command becoming aware of it in one way or another, through its prior consent or subsequent appeals for its intervention. In the matter of retirement age, for example, the Southern States have now declined to accept the lead given by the Centre; the position is uncertain elsewhere and in U.P. the moves for reversal of the increase in retiring age to 58 have been frozen by the Centre's action. Is there something which makes uniformity particularly difficult in essential matters?

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CVI. No. 2700 BOMBAY, 19th JANUARY 1963 PRICE Rs. 2

IS OIL POLICY REALISTIC?—I

THE Union Minister for Mines and Fuel, Mr. K. D. Malaviya, has made a number of statements in the past three or four weeks on the Government's oil policy. His object seems to be to educate public opinion by elucidating the actual manner in which his Ministry has been implementing the policy. It is gratifying to find that the Hon'ble Minister now realises the need for answering his critics in the Press, unlike in the past when he invariably ignored them. His latest statements, however, do not show any improvement in his attitude to the problem of taking care of the country's growing requirements of petroleum products in the most expeditious and economic manner. He is still more concerned with the expansion of the public sector projects in oil than with the basic issues of the problem. He is determined to see that no more expansion of the refineries belonging to the three foreign oil companies in the private sector takes place before the refining capacity in the public sector exceeds the aggregate capacity of the companies. Yet he takes exception to one describing his policy as being doctrinaire. But mere reiteration does not prove anything. He has categorically stated on several occasions that he is not following a doctrinaire policy. In support of his contention he refers to the steady expansion that has taken place in the capacity of the refineries of foreign oil companies in recent years. The throughput of Burmah-Shell refinery has gone up from 2 million long tons in 1955 to 3.75 million long tons in 1962; in the same period, the ESSO Refinery's throughput has expanded from 1.20 million tons to 2.50 million tons. Even as compared with the position in 1959, the expansion in throughput is 1.35 million tons in Burmah-Shell and about 900,000 tons in ESSO. Similarly, the Caltex refinery in Visakhapatnam has been allowed to expand its capacity from 800,000 tons to 1.20 million tons. These are facts no doubt. At the same time, it is also a fact that, if the Government had not allowed the maximisation of throughput of these existing refineries, it is the country which would have been a great loser, for the alternative would have been to import refined products, involving a large waste of foreign exchange and loss of additional employment opportunities, neither of which the country can afford in the present circumstances. Equally true it would be to say that Mr. Malaviya agreed even to the aforesaid expansion in throughput only reluctantly and when confronted with the prospect of a shortage of petroleum products in the country.

The doctrinarism of Mr. Malaviya is also evident from another fact. Two years ago, he invited foreign oil companies to submit their terms for petroleum exploration in the country. Then, too, as now, he stated that he was not a doctrinaire person and that the oil companies in the West were welcome to participate in the search for oil reserves in this country. But what has been the result? Several foreign companies submitted their proposals only to find that the Government of India's ideas were far different from theirs. Consequently, the public sector is the only prospector for oil in the whole country, barring Assam, where Oil India Ltd., a joint (50:50) partnership between the Government of India and the Burmah Oil Company, is engaged in searching for more oil. Even here, the area allotted to this company in which the Government has a substantial stake is only a part of the oil-bearing regions of Assam, the balance being earmarked for the Oil and Natural Gas Commission, which is a wing of the Government of India. It has been estimated by competent persons that the oil reserves so far discovered in Assam and Gujarat will be sufficient to feed only two refineries of 3 million-ton capacity each for a period of 15 years, so that India's dependence on foreign crude will be pretty heavy during this period. The O.N.G.C. has no doubt a creditable record to its credit, especially in Gujarat. But the task, as Mr. Malaviya himself has admitted, is too big to be handled successfully and speedily by the Commission with its limited resources in men, money and material. The Minister has, of course, arranged for some technical collaboration with Italy and Russia for purposes of exploration, but the assistance is not adequate nor are its terms as favourable as has been made out. Would it not, therefore, be prudent and realistic to let the foreign oil companies also to search for oil and gas in such areas as the Punjab, the Himalayan foothills of Uttar Pradesh, the Gangetic plain, Rajasthan and the Cauvery basin? Obviously, Mr. Malaviya thinks not. In his opinion, foreign capital participation in the development of indigenous petroleum is undesirable, except on a small scale. The example of other countries which have rapidly expanded their oil resources with the help of foreign capital has failed to carry conviction to him.

In the matter of power, fuel, transport and basic industrial raw materials such as steel and cement, it is always desirable, in the interest of smooth progress, to keep capacity in excess of demand. This is particularly true of a growing economy like India. But it does not suit Mr. Malaviya to accept this view, for his philosophy is that it is the public sector oil companies that should have the dominant place, no matter what happens. In the past four years, his estimates of future demand were always lower than those of either the oil companies, which have far greater experience in this sphere than the Minister, or the Steering Committee of the Oil Advisory Committee. Much ink and breath have been spent in the efforts to convince the Minister that he was erring on the side of underestimation of demand. Most of it was futile, in that much precious time was lost. If he had listened to the advice of more knowledgeable persons and allowed at least one of the private sector refineries to expand, the country today would not be importing about two million tons of refined products which cost more than the crude. His strategy has been to delay the expansion of private sector refineries as much as possible and stall, in various ways, the entry of new entrepreneurs into the picture with a view to gaining time for the public sector projects. When, however, it became quite obvious that his earlier estimates of future demand would not hold ground—the demand is expected to be 18 million tons by the end of the third Plan period (March 1966), as against 14 million tons mentioned by the Oil Ministry before—and that the case for allowing the private sector refineries to expand their capacity not through maximisation of throughput but by adding new plant and machinery had gained in strength, Mr. Malaviya succeeded in persuading the Planning Commission and the Central Cabinet to agree to an expansion of the public sector refineries. His revised plan, already accepted by the Planning Commission and the Cabinet, is to expand the capacity of Koyali and Barauni refineries from two to three million tons each and of the Nunmati refinery from 750,000 tons to 1.25 million tons and to establish a fourth public sector refinery in the South, with a capacity of 2.5 million tons. Accordingly, the third Plan will have to be amended and the necessary additional resources, both rupee and foreign exchange, will have to be found. There is no idea as yet as to how this will be done. Nor has the public been given a picture of the extra capital that will be required to fulfil Mr. Malaviya's expansion plan. We are, however, told that the refinery to be put up in the South alone will cost no less than Rs. 30 crores. Even assuming, on a rough basis, that the expansion envisaged in Nunmati, Barauni, and Koyali will cost another Rs. 25 crores, the extra capital to be found by the public sector will be Rs. 55 crores, of which at least one-half, if not more, will be foreign exchange. Must the country take on this additional burden when it has to find money for building up its military strength and when there are foreign investors belonging to friendly countries like the U.S. and the U.K. who are willing to finance the expansion of petroleum industry from search to sale on terms that are mutually beneficial?

One of the objections of Mr. Malaviya to allow more foreign private investment in the development of this vital industry is that, in the ultimate analysis, more money will be remitted out of the country by way of dividends than the capital brought in. Apart from the fact that this is true of foreign investment in any industry, it is not less true of development with the help of foreign loans. Royalty has to be paid for technical know-how, interest has to be paid periodically even if no profit is made on the investment and the principal has to be returned by the specified date. In the case of equity investment by foreigners, dividends will fall due only if and when profits are made; the entire amount of dividends may not be remitted, if scope is given for expansion and reinvestment in the country. The original capital itself will stay, unless and until it is forced out. It would, of course, be quite advantageous if a country can develop its economy without resort to foreign capital in any form. India, however, is not in that happy position.

It is common knowledge that Burmah-Shell has offered to raise its capacity in Trombay by two million tons in a little less than two years. ESSO is ready to expand its capacity by a million tons by 1965 and by another million tons by 1969. Caltex, too, is prepared to invest in expanding its capacity, though details are not known. Both Burmah-Shell and ESSO will, if their plans are accepted without any further delay, create additional refining capacity well in advance, say, by at least a year, of the end of the third Plan period. The cost of this expansion scheme of the two companies will, perhaps, be no more than Rs. 10 crores or, say, less than one-fourth of the outlay which the public sector will have to make for reaching the additional goals set before it.

There has also been a welcome change in the attitude of foreign oil companies operating here to such issues as special duty protection, profit-margin and associating domestic capital in their operations. In principle, they have agreed to drop the refinery agreements and operate on the basis of an industrial licence like any other industrial concern. If the details can be satisfactorily worked out, the strain on the balance of payments position caused by remittance of dividends will be considerably less

than before and less onerous than the foreign capital which Mr. Malaviya has arranged in the form of loans. How can a Minister who rejects such proposals claim to be practical with both his feet firmly on the ground?

Apart from capital, the question of delivering the goods in time and at an economic price is equally important. Whereas the foreign oil companies can be depended upon to complete their projects well ahead of March 1966 and thereby meet the growing requirements of the country to the extent they are allowed, it is doubtful whether the public sector will be able to do so. Mr. Malaviya, of course, asserts that it can, but his assertions are not convincing in the light of the public sector's performances hitherto not only in the sphere of oil but also in many other spheres as, for instance, power, coal, fertilisers, steel and transport. Undoubtedly, the public sector has more experience now than it had before. Even so, it is hard to believe that it can complete the following tasks between now and March 1966:

1. Expand the capacity of the Nunmati refinery (which is in a disturbed area due to Chinese designs on N.E.F.A.) from 750,000 tons to 1,250,000 tons. This refinery is still struggling hard to produce to the maximum capacity already created.

2. Raise the refining capacity at Barauni by 50 per cent, from 2 million tons to 3 million tons. Work on Barauni refinery is already behind schedule and the additional task set for it may only delay its progress further.

3. The Koyali refinery in Gujarat, for which the project report has just been received by the Government, is to be a three-million-ton plant, instead of a two-million-ton plant. This would involve amendments to the project report, in the same way as the Rourkela steel project was enhanced from a half-million to a million-ton capacity and, perhaps, with similar delays in the completion of the project.

4. A refinery of 2.5-million-ton capacity is to be had either in Madras or Cochin. No decision has been taken yet either about the site or about the foreign collaborator. The whole thing is still only on a decision stage.

Notwithstanding all this, Mr. Malaviya is firmly of the opinion that (a) the first stage of Barauni refinery (2 million tons) will be completed in September 1964 and the second stage from 14-16 months from then, (b) the Koyali refinery will be accomplished before July-August 1965, and (c) the South Indian refinery will be completed by October-November 1965. He can surely be expected to know what he is talking about. If the programmes are fulfilled by the dates mentioned by him, he will certainly have performed a miracle and deserve the thanks of the nation. Even assuming that, in his enthusiasm to outshine the late Signor Mattei, Mr. Malaviya has not overestimated the ability of the public sector to deliver the goods in time and at an economic cost, there are good reasons why the expansion schemes submitted by the foreign oil companies should also be approved. For considerations of space, a discussion of this aspect has to be deferred to our next issue.

THE KENNEDY APPROACH

PRESIDENT Kennedy, whose felicitous prose and epigrammatic style are among the outstanding characteristics of his latest State of the Union Message to the U.S. Congress, has made quite a few pregnant observations which provide the framework for his policies and proposals. One such observation is that "the mere absence of war is not peace." Another is that "the mere absence of recession is not growth." "This country cannot afford to be rich and desperately poor"—that is yet another. "We shall be judged more by what we do at home than what we preach abroad"; "free world development will (still) be an uphill struggle, requiring not only the fuel of finance but the torch of idealism"; "a dispute (between Russia and China) over how to bury the free world is no ground for Western rejoicing"; "our commitment to national safety is not a commitment to expand our military establishment indefinitely"; "we seek not the world-wide victory of one nation or system but a world-wide victory of man"—these are other telling observations which, together with the earlier ones, constitute a happy but none-too-easy mixture of idealism, pragmatism and cautious optimism and signify a dynamic and forward-looking approach to the economic and social problems of the United States as well as of the developing nations round the world.

The question of 'war or peace' is uppermost in the mind of President Kennedy as it is in that of every citizen in the world. It is a question which involves either ever-increasing defence expenditure or disarmament, either continuing 'cold war' or the peaceful co-existence of communist and non-communist nations. As a durable peace, however, postulates the fulfilment of two extremely difficult conditions, namely, a spectacular reversal in Communist *methods or goals* and the development of a reliable system of international security, the real choice may seem to be only between 'war' and 'armed peace.' It is the fear of nuclear devastation—a fear equally shared by the United States and the Soviet Union—that seems to ensure peace of a sort, uneasy, of course, but peace all the same. That even this uneasy peace can be maintained only by that mutual deterrence which involves an ascending spiral of expenditure on armaments on either side is its most disturbing feature. In one sense, this state of 'armed peace' may be a lesser evil than war in the nuclear age. But, in another sense, it is a worse evil, for the acute additional feeling of insecurity and uncertainty in the mind of every individual, who is already subjected to economic insecurity of one kind or another, may permanently distort, derange or debase the human mind, unless, of course, disarmament becomes a reality at an early date and the resources freed by it become available for universal human advancement. President Kennedy's vision of a world-wide victory of *man* demands a supreme effort by the two nuclear giants to pave the way for general and complete disarmament. It is a happy augury, in this connection, that the U.S. President has made the following forthright and transparently sincere statement on the question:

"....our commitment to national safety is not a commitment to expand our military establishment indefinitely. We do not dismiss disarmament as an idle dream. For we believe, in the end, it is the *only* (italics added) way to assure the security of all without impairing the interests of any. Nor do we mistake honourable negotiation for appeasement. While we shall never weary in the defence of freedom, neither shall we abandon the pursuit of peace."

This is the kind of statement which should enable the world to perceive the sincere American dedication to peace. It is so very unlike those long-winded Russian statements which, with their plethora of words, conceal more than they reveal. But, if it is true that Premier Khrushchev is a 'man of peace', as several statesmen, including Prime Minister Nehru, believe, he cannot fail to respond sincerely to President Kennedy's call. That any such response may also mean the abandonment of Communist hopes of turning war into world revolution is a salutary prospect. President Kennedy's reference to the winds of change which appear to be blowing more strongly than ever in the world of communism may be stretched to apply to a situation of ferment and longing for peace and freedom in that world. Disarmament hopes, therefore, are not idle dreams.

So much about President Kennedy's approach to those supreme problems of war, communism and peace—an approach informed by a rare combination of idealism, pragmatism and cautious optimism. The same unique mixture is to be found in his dynamic approach to economic and social problems both within and without the United States. Starting with the premise that "the mere absence of recession is not growth," the President has built up a convincing case for a higher rate of economic growth and full employment in his country. Both these objectives, in his view, will be immeasurably advanced if, to begin with, a substantial reduction, as also revision, in federal income taxes is brought about in stages over the next three years. It may be noted, incidentally, that the United States has the highest marginal rate (91 per cent) of personal income taxation and the second highest maximum rate (52 per cent) on undistributed corporate profits among the leading countries of the world. As it has become increasingly clear to those in government, business and labour that such high rates of taxation "exert too heavy a drag on private purchasing power, profits and employment," check growth by inviting recurrent recessions and discourage extra effort and risk, the Kennedy Administration has proposed a *permanent* reduction in tax rates which will lower liabilities by $13.5 billion. Of this, $11 billion will be accounted for by reductions in individual tax rates, which now range between 20 and 91 per cent, to a more realistic range of 14 to 65 per cent, and $2.5 billion by reduction in the corporation tax rate from 52 per cent to the pre-Korean level of 47 per cent. (The latter reduction will be in addition to the more than $2.0 billion cut in corporate tax liabilities resulting from last year's investment credit and depreciation reform). To achieve this twofold reduction within the limits of a manageable budgetary deficit, it is proposed to phase the cuts over three calendar years in the following manner:

(i) 1963—A cut of some $6.0 billion at annual rates.

(ii) 1964—A cut of $7.5 billion, of which $3.5 billion will be offset by some structural changes which will broaden the tax base and end unfair or unnecessary preferences.

(iii) 1965—Budgetary receipts at the outset to be increased by $1.5 billion a year, without any change in tax liabilities, by gradually shifting the tax payments of large corporations to a more current time schedule.

It is noteworthy that this programme combines tax reduction with tax reform. The reform part of it is designed to remove a host of tax inequities and special preferences which have distorted the flow of investment. And the tax reduction part of it is designed to provide a full opportunity first to private consumers, employers and investors for creating more jobs and growth. It is true that these twin objectives could be achieved in another way too, namely, a massive increase in federal spending, but it has not been preferred, as it is not a sound method from the long-term angle. This is how President Kennedy's Chief Economic Adviser, Mr. Walter M. Heller, has argued the case for tax reduction and reform:

"The present steeply rising tax rates syphon off a progressively greater portion of income as economic activity accelerates and earnings rise into the higher tax brackets. Thus, present tax rates curb purchasing power and investment capital, the main stimuli to economic growth. It is this curb on spendable income that leads to the kind of under-utilisation of economic capacity which has marked the past few years, and to slowed-down economic growth. This situation can best be cured by a massive tax cut which would leave more money in the hands of consumers and business investment planners.... Heightened economic activity and greater national income would in time yield more federal revenues on the basis of lower tax rates than would a sluggish economy on the basis of higher tax rates."

That last argument clinches the whole issue, and the fiscal traditionalists who consider a tax cut an invitation to even greater budgetary deficits cannot easily refute it. It is the kind of argument which, incidentally, is applicable to a country like India which continues to maintain high maximum rates of income and corporate taxes—nearly as high as in the United States. Although tax reduction alone will not be enough to strengthen the American economy, there can be no gainsaying that, by augmenting the growth potential, it will go a long way towards eliminating the paradox of poverty in the midst of plenty in that economy. Two distressing facts cited by President Kennedy about American society, in this connection, are that as many as 32 million Americans still live on the outskirts of poverty and an estimated four out of every ten students in the fifth grade will never finish high school.

What is remarkable about the United States is that, in spite of such exacting domestic problems of its own, it has continued to serve as an economic arsenal of democracy by providing massive assistance, in various forms, to developing nations throughout the world. The Kennedy Administration, it is noteworthy, is wedded to the foreign assistance programme even more strongly than the previous two Administrations. This is clear from the President's hard-hitting statement that "it makes little sense for us to assail, in speeches and resolutions, the horrors of communism, to spend $50 billion a year to prevent its military advance —and then to begrudge spending, largely on American products, less than one-tenth of that amount to help other nations strengthen their independence and cure the social chaos in which communism has always thrived." President Kennedy is justly proud of the fact that, thanks to the U.S. mutual defence and assistance programme, "not a single one of the nearly 50 U.N. members to gain independence since the Second World War has succumbed to communist control." That fact reinforces the case for continued American assistance to developing nations without which some or many of them may yet succumb to communism.

But the Kennedy Administration luckily does not believe that Government aid alone can do the trick. Hence its increasing efforts to supplement aid by private investment, trade expansion and commodity stabilisation. This approach to the problems of developing nations will be as full of promise as the forthright approach to aid only if the other advanced Western countries, too, move away from protectionism and restrictionism even as the United States seeks or hopes to do. Also the developing nations themselves must co-operate with the developed countries by making available opportunities for foreign private capital to operate in those spheres where they are talented. This they can do by pursuing pragmatic industrial and fiscal policies.

MARKET GOSSIP

Sugar Exports

IT is indeed deplorable that the Government of India has still not announced the quantity of sugar that can be exported in the current 1962-63) season, although more than two and a half months have elapsed since the season began. Meanwhile, the Indian Sugar Mills Association is reported to have suspended the overseas sales of sugar for the present under the pretext of production uncertainties. The wisdom of this decision is doubtful, especially as India may miss the present excellent opportunity provided by the distinct firmness of the world free market for sugar. Raw sugar in London is now quoted at as high as £45 (Rs. 600) per ton c.i.f. London, the highest level since 1957. Although this rate is lower than the all-time peak of over £62 (Rs. 827) touched on 16th April 1957, it is more than twice the price of £21 (Rs. 280) prevailing this time last year. Thanks to this phenomenal rise in world prices, the loss that India will have to suffer on sugar exports has been considerably reduced from Rs. 450 per ton early last year to just Rs. 130 at present, the Indian export price being about Rs. 730 per ton (after the full remission of excise duty of Rs. 291.25 and cane cess of Rs. 51.72). One fails to understand as to why the authorities and the sugar interests in India are sitting quiet when the prospects of earning much foreign exchange through exports are highly encouraging in view of the bullish trend of world markets. If earnest attempts are not made immediately to enter into export deals with overseas sugar buyers, the country may miss the bus, for there is no guarantee that world prices will continue to be maintained at the present high levels for any appreciable length of time.

The "wait and see" attitude on the part of the Government and the industry in regard to sugar exports may, perhaps, be due to the feeling that world prices may go up further. Or it may be due to uncertainties about the level of production in the current season. It is feared that, on account of the setback to cane production and large-scale diversion of cane supplies to *gur* and *khandsari* manufacture, no more than 2.5 million tons of sugar (including raw sugar) will be produced. It is too early to be dogmatic on this point, for it is reported that the Central and State Governments are determined to ensure adequate cane supplies to sugar mills. Even if the estimate of sugar output (2.5 million tons) were to prove correct, the apprehension of a shortage of supplies in the country in the closing months of the season is rather exaggerated, if not unwarranted. Including the carryover stock of 865,820 tons (exclusive of the unutilised export quota of 170,000 tons out of the total commitments amounting to 500,000 tons in respect of 1961-62) as on 1st November 1962, the total available supply in the current season comes to over 3.37 million tons, as against the anticipated domestic consumption of 2.6 million tons. The surplus thus works out to about 800,000 tons. Even if 400,000 tons are exported, there will still be left a running stock of 400,000 tons, which may be considered as adequate, assuming that the 1963-64 season will be a normal one, yielding some 3 million tons of sugar. A quick announcement of export quota will surely enable the Sugar Mills Association to negotiate deals with the foreign sugar buyers on relatively better terms than last year, taking advantage of the bullish fervour in the world sugar markets. There is a possibility of substantial offers of beet sugar by East European sources which have been out of the markets for two months now. Since such offers would doubtless cause a sharp break in prices, India should hasten to conclude export deals at the current high prices.

The underlying reason for the persistent firmness of world sugar in the past few weeks, it may be noted here, is the fact that the supply-demand position will be very closely in balance in 1963. In fact, there is a feeling in some quarters that a shortage may develop. Here is what Messrs. Czarnikow and Co., the well-known international firm of sugar dealers in London, stated in the course of a recent review:

"The heavy surpluses, which accumulated after the outstanding results achieved in 1960-61, have now disappeared, following a crop of more normal proportions and with consumption increasing at the rate of nearly two million tons each year. The possibility of adjustments, sufficient to remove the current prospect of a tight available supply position in 1963, seem quite remote. The major world market sellers in the past two years have been the East European beet producers and Cuba and Brazil. It is improbable that East European countries will have much to offer during 1963, at least until the autumn of that year except to specified outlets, where such business may be considered expedient for one reason or another. Indeed, the Soviet Union will probably be a net importer of nearly two million tons, whilst production in certain East European countries is unlikely to be adequate to meet domestic requirements. The Cuban crop last year suffered grievous damage as a result of the very bad weather conditions and also, according to the official report, due to lack of experienced cane cutters. While, whether the labour difficulty has yet been overcome remains to be seen, it is generally believed that a further reduction is probable in 1963. This will lead to a cut in the tonnage available for resale by her East European trade agreement partners. Consumption is increasing rapidly in Brazil."

Advices from London received after the aforesaid assessment was made suggest, as already mentioned, that some of the European beet sugar producers may be attracted to sell a part of their production by the prevailing high prices.

In view of the apparent ending of the world-wide sugar glut of previous years, it is not surprising that several consuming countries have been replenishing their stocks lately. Moreover, the rapid rise in prices, according to a London report, has caused the forward discounts to widen and created a considerable amount of 'straddle' business between the near and distant positions, raising the turnover. Another effect of the recent rise in prices, it is said, has been to reduce the U.K. Sugar Board's losses on Commonwealth sugar. As a result, the Board has recently lowered its surcharge on sugar for domestic consumption by 9*s.* 4*d.* per cwt.

The aggregate world sugar production during 1961-62, it will be recalled, was substantially lower at 52.67 million tons (raw value), as against over 57.75 million tons in 1960-61. Despite the marked setback in production, exports were maintained at about the same level as in the previous two years by drawing on carryover stocks. With current season's estimated output of 52.08 million tons being less than the 1961-62 output by 600,000 tons, it appears that "it will be impossible to maintain the customary export tonnage in 1963." The change thus in the trend of world sugar economy is welcome from the point of view of India. Here, indeed, is a chance for the country, if it is serious, to build up new export markets by maximising the production of quality sugar at an economic cost.

Raw Jute Prices

The spokesmen for raw jute growers have raised their voice again. And this time they want immediate intervention by the Prime Minister to arrest the slump in prices. In a joint memorandum submitted to Mr. Nehru, two Members of Parliament and forty Members of the West Bengal Legislative Assembly have pleaded for a three-pronged drive to stabilise raw jute prices: (*a*) immediate purchase by the State Trading Corporation of a million bales of jute at Rs. 40 per maund; (*b*) export of a million bales with a substantial subsidy; and (*c*) directive to mills to run three shifts, instead of 48 hours per week as at present. In support of this plea, the memorandum observes:

"The prices now offered to the poor growers by the jute mills, Buffer Stock Agency and the State Trading Corporation are so ridiculously low that they do not cover even the cost of production, whereas the manufacturers of jute goods are making a profit of Rs. 20 per maund. The vested interests are paying the growers Rs. 4 or Rs. 5 less than the minimum price fixed by the Government and are obtaining minimum price vouchers from them. A high judicial commission must be appointed to go into the irregularities of the country's jute industry, so that the growers may not be exploited in future."

Few will dispute the need for preventing a precipitous fall in raw jute prices, inasmuch as such a fall will adversely affect not merely the growers but the jute mills themselves. For a persistently low level of prices will compel the cultivators to grow less jute by diverting the lands to the production of rice and other crops. Since the industry will be in a position to maintain the output and exports of jute goods at the optimum level only if it is assured of adequate fibre supply, it is always anxious to see that no such large-scale diversion of land takes place. It is this anxiety which prompted the industry voluntarily to purchase as much raw jute as possible. The existing stocks with mills are considered to be sufficient to meet their requirements up to July or even August next. In fact, the mills, we are told, are finding it difficult to arrange for storage accommodation to keep raw jute in proper condition. This is an important point and, if the fibre is not stored properly, its quality will deteriorate, thereby affecting the quality of the goods manufactured from it.

The criticism that the industry is working only a 48-hour week is totally unwarranted. As Mr. C. L. Bajoria, Chairman of the Indian Jute Mills Association, points out in the course of a rejoinder to the aforesaid memorandum, the industry has been operating its full capacity since the end of 1961 and its output of jute manufactures in 1962 was the highest in any year since 1942. The suggestion that jute mills should be asked to work three shifts is, to say the least, impracticable and misleading. The mills would certainly be too glad to work longer hours, provided the conditions are congenial. But the fact is that, apart from the demand factor, there are two serious limitations, namely, inadequate spinning capacity and power shortage. "The mills," to quote Mr. Bajoria, "are already working three shifts in their spinning departments daily except on the closed day when they are allowed to work one shift because of power shortage. This is the limiting factor on their production and they are all working their looms to the full extent of the available supply of yarn."

The plea of the signatories to the memorandum to Mr. Nehru for raw jute exports with substantial subsidy is ridiculous. Do the signatories, Mr. Bajoria asks, wish to strengthen foreign jute manufacturing industries by subsidising their raw material and thereby weaken our own jute industry? If any subsidy were to be given, it would, according to him, be in the national interest to subsidise India's exports of sacking in order to prevent the continued erosion of export markets and the consequent loss of foreign exchange. This would also be in the interest of cultivators, because, if these sacking markets are lost, the industry's consumption of jute will inevitably decline and the producers of low-grade fibre will be the first to suffer. While the subsidy for raw jute exports is not justified, subsidy for exports of sacking, it must be stressed, can at best be only a palliative. This at any rate is not the way to build up export markets for jute goods. The competitive capacity of these goods will undoubtedly be higher if the cultivators take care to grow and supply good quality jute, instead of growing and dumping on the mills all sorts of jute. Good quality jute, it is needless to add, fetches a substantial premium. Are not the cultivators in West Bengal, where 50 per cent of the Indian jute crop is grown, making a handsome profit at this year's prices?

As for the allegation that mills are buying at well below the minimum prices, one does not know the facts from this distance. But it must be added that the Government has been unrealistic in not fixing proper minimum prices for all varieties of jute, taking into account the difference in their quality as compared with Assam bottoms for which the minimum mentioned is Rs. 36 per maund. Further, assuming that the malpractice complained of is correct, it is the Government that has to be blamed. This journal has been repeatedly saying that the operation of buffer stocks is the function of the public sector and not of the jute mills. The Government, however, has been shirking this responsibility. True the S.T.C. is in the picture, but it entered the scene only recently and is playing a minor part. Moreover, the S.T.C., with its multifarious activities, is hardly the proper agency to perform this task. What is needed is a *pucca* buffer stock agency, which will be solely concerned with the task of handling the problem of agricultural surpluses and deficits as a whole, with its own storage facilities and marketing organisation.

Manufacturers' Cash Scheme

A novel scheme, called Manufacturers' Cash Scheme, which seeks to provide a simple answer to the problem of manufacturers who are forced to lock up their funds by having to provide long term credit to their customers, is planned to be introduced on a national scale in Britain. The initial reception to the scheme, which was inaugurated some time ago in selected industries on an experimental basis, is said to have been "enthusiastic." This has encouraged the promoters, namely, London Bridge Finance Company, to cast the net wider.

The scheme is basically simple. Instead of selling directly to his customer on credit, a manufacturer sells his goods to London Bridge Finance Company on cash terms. The Company thus becomes the principal in the transaction but remains undisclosed by appointing the manufacturer himself as agent for the delivery of the goods to his original customer and for collection of proceeds when due. No extra paper work is involved but a small charge, depending upon turnover, is paid by the manufacturer to the Company for the facility.

The Company believes that there is great scope for this scheme in the British market and claims that it will help manufacturers to increase their turnover, make more effective use of their capital, take advantage of trade discounts and, by enabling them to give longer credit for customers, assist sales. There is also a special place, it is said, for the scheme in export finance. Facilities under the scheme have been offered to manufacturers in selected industries such as engineering, concrete and food preservation. Its success, so the Company claims, goes to prove its adaptability to a wide range of products.

Bumper World Wheat Crop

A bumper wheat crop is expected in most of the major producing countries during the current season (1962-63), thanks to very favourable climatic conditions. Almost all the major wheat exporting countries (except the U.S.) and most of the traditional importers (except Communist China) have shared in the increase in output. Larger output in importing countries has reduced the chances of any increase in world exports, which touched a record of 35 million tons in 1961-62 (excluding Soviet Union). In fact, it is feared that world wheat exports would decline by three to four million tons in 1962-63, despite the larger offtake by Communist China from Canada, Australia and France. Already, the demand for wheat from Western Europe is slack, due to substantially larger production, particularly in France, following higher yields and larger area under wheat cultivation. It is significant to note here that Western European countries like France are not only reducing imports but are offering competition to traditional exporters in their bid to secure alternative outlets. French exports of wheat to Communist China is an instance in point. According to the Commonwealth Economic Committee, London, wheat output in France in 1962-63 is a record 13.64 million tons, representing an increase of as much as 45 per cent over the 1961-62 crop. France, it appears, has an exportable surplus of three million tons this year. The output in West Germany is also estimated higher by 500,000 tons at 4.52 million tons and that in the U.K. by a million tons at 3.56 million tons. In Spain and Italy, too, there has been a marked increase in wheat production. Both these countries have an exportable surplus of 750,000 tons and 500,000 tons, respectively.

Besides Western Europe, most of the major producers in the other regions have also reported larger wheat output during this crop year. Canadian output, which suffered a distinct setback in 1961-62, has staged a smart rally, with the latest crop having gone up by about 100 per cent to 14.93 million tons. Consequently, its stocks have jumped up by about two million tons to as much as 9-10 million tons. Australian output is placed higher by 0.75 million tons at 7.37 million tons, which is slightly higher than the previous record of 7.33 million tons attained in 1960-61. The Far East (including India and Pakistan), West Asia and North Africa have also registered increases in wheat output.

The increase in output in this wide range of countries would have sharply upset the wheat market but for the fall in production, albeit modest, in a few other countries. Notable among the latter group of countries is the U.S., the wheat production of which has declined by 3.8 million tons to 29.24 million tons. This has been the result mainly

TREND OF SHARES

EQUITIES FRIENDLESS

(From Our Own Correspondent)

BOMBAY, 17*th January*

THE peace feelers on the Sino-Indian border issue, which emanated on the 13th inst. at the end of the two-day full-length talks between the emissaries of the Colombo conference and the Indian leaders in New Delhi on the still secret proposals put forward by the six non-aligned nations to resolve the issue, failed to revive support for equities. On the contrary, equities were more friendless this week, as could be seen from the fact that those shares which had been slightly above their minimum prices before quickly retreated to their 'base' levels and the weak spots which had already been around their minimum levels were difficult to sell even at a small discount.

This no buyers and all sellers situation for shares can be explained by the operators' obsession with budget uncertainties. Be it peace or war with China, the country has to be prepared militarily. Hence the conclusion that, whatever the political climate in future, the next year's budget will be overshadowed by the ghost of the Chinese. Apart from this basic influence, sentiment was also affected by such factors as the undisclosed nature of the Colombo conference proposals and the uncertainty about the extent of the 'positive response' of China to the proposals. Besides, one was told that the 'promising response' of the Government of India to the proposals would be known not before Parliament had taken up the matter for consideration from the 21st inst. In the circumstances, the proposals will carry their meaning for stock markets only sometime next week.

While the political situation was still full of imponderables, the internal situation in stock markets in respect of trading rules and regulations was hardly different. The anxiety of market authorities to normalise trading by lifting the excessive curbs which were imposed to arrest the fall in values following the Chinese perfidy in October last had been apparent for quite sometime and had found some expression in the past fortnight or so. Expectations of more liberalisation, which materialised to some extent this week, also went to restrict activity.

The Council of Management of the Madras Stock Exchange resolved on the 15th inst. to lift with immediate effect the minimum prices fixed on 2nd November 1962 for both cleared and non-cleared shares. The Council decided, however, to retain the present system of business on only hand-delivery basis.

The Governing Board of the Bombay Stock Exchange announced on Wednesday the 16th inst. substantial relaxation of the curbs on forward trading. Readers will be aware that the Board had initiated some liberal trading only last week. The new reliefs are threefold. First, compulsory *badli* has been confined only to 12, as against 41 at the last settlement, out of the 74 shares on the forward list, at substantially lower making-up prices. Two, minimum prices for all cleared shares have been lifted, with the exception of five vulnerable counters, namely, Century, National Rayon, Tata Steel Ordinary, Indian Iron and Scindia, in which cases the prices have been reduced further to the revised making-up prices. Third, the limit for margin-free purchases in any one cleared share has been raised from Rs. 50,000 to Rs. 75,000, above which a 5 per cent margin on value is payable. At the same time, the overall limit for aggregate purchases in cleared shares has also been increased by Rs. 1 lakh to Rs. 3 lakhs.

Floor prices for all non-cleared shares in Ahmedabad will be removed from the 21st inst. The Governing Board has also decided to reduce by 2.5 per cent the minimum prices for all forward scrips, except Tata Ordinary and National Rayon. The practice of compulsory *badli* has, however, been retained.

The Standing Committee of the Presidents of the seven stock exchanges in the country decided at its meeting at Indore on the 12th inst. to request scheduled banks to reduce the margin for advances on shares from 40 to 30 per cent of the ruling rates. The Committee urged the Reserve Bank to take necessary steps in that direction. It ruled out the possibility of having uniform emergency measures on all the stock exchanges, on the ground that curbs had to be imposed in the light of volume of business in, and certain peculiarities of, each market.

* * * *

Dalal Street suffered widespread losses. The leaders were the worst hit. Thus, Standard slumped by 32 points to Rs. 782, Century by six points to Rs. 545, Kohinoor by four points to Rs. 276, T.E.L.Co. by 13 points to Rs. 280, Hindustan Motors by 36 nP to Rs. 17, Voltas by nine points to Rs. 246, Indian Dyestuff by 20 points to Rs. 375 and Bombay Burmah by 10 points to Rs. 628. Among the less volatile shares, Premier Automobile showed a loss of Rs. 3 at Rs. 104, Premier Construction of Rs. 3.50 at Rs. 123, B.B. Petrol of 28 nP at Rs. 3.96, A.C.C. of Rs. 2.50 at Rs. 149.50 and Belapur of Rs. 1.50 at Rs. 213.50. In the cash section, Oudh Sugar dipped by 10 points to Rs. 174.50, Raymond were seven points down at Rs. 128, T. Maneklal fell by 30 points to Rs. 620 and Dharamsi were Rs. 7.50 lower at Rs. 147.50. A.B.C. and Sandvik disclosed a loss of six points at Rs. 139 and Rs. 183, respectively. Hindustan Wired Glass closed seven points lower at Rs. 143.

* * * *

Active cleared scrips lost further ground in Calcutta. Burrakur declined by Rs. 1.31 to Rs. 15.25, Dunlop by Rs. 1.06 to Rs. 36.19 and Orient Paper by 20 nP to Rs. 36.50. In the cash list, while Amalgamated Coal improved from Rs. 23.12 to Rs. 25.06, Anglo-India Jute reacted by six points to Rs. 223 and Megna Jute by 69 nP to Rs. 13. Braithwaite were up by Rs. 1.80 to Rs. 36.60, but Alkali Chemical showed a loss of Rs. 1.62 at Rs. 37.50. Ballarpore Paper receded by 44 nP to Rs. 17.12. A gain of 13 nP in Bengal Paper at Rs. 32.44 was offset by a loss of 13 nP in I.P. Pulp at Rs. 18.87. Carew Sugar improved from Rs. 12.44 to Rs. 13.37.

* * * *

The lifting of the minimum prices resulted, at close of business yesterday, in widespread losses and small gains in a few isolated investors' counters in Madras. Thus, among Textiles, Madura were marked down by Re. 1.75 to Rs. 31.37 and S.I. Viscose slumped by 10 points to Rs. 134. In the Miscellaneous section, losses of 10 nP were noted in Aluminium Industries at Rs. 23.20. Ashok Leyland at Rs. 8.15, Dalmia Cement at Rs. 13.25 and Mettur Chemical at Rs. 13.15. Madras Rubber fell rather sharply by Re. 1.30 to Rs. 19.90. Deccan Sugar at Rs. 9.50 and Travancore Sugar at Rs. 6.85 closed 10 nP lower, but E.I.D. showed a gain of 12 nP at Rs. 40.37. Among Plantings, Consolidated Coffee gained 20 nP at Rs. 16.75, but Coffee Lands fell by 63 nP to Rs. 14.07. Some of the active shares appreciated slightly and Vaikundam Rubber recovered 10 nP at Rs. 30.85.

CENTRAL BANK PAYS SAME

The Directors of the Central Bank of India Ltd. have proposed to maintain the final dividend for the year ended 31st December 1962 at Rs. 2.60 per share, subject to tax. Thus, together with the interim dividend of Rs. 2.40 per share, subject to tax, the Bank will be paying the same dividend as for 1961, that is, Rs. 5 (or 20 per cent per annum) subject to tax, per Rs. 25 paid 50-rupees ordinary share. The declared net profit for the year is slightly lower at Rs. 179.96 lakhs as compared with Rs. 182.76 lakhs a year before. The setback is, however, to be attributed to an additional burden of Rs. 68 lakhs by way of operational expenses, Rs. 11 lakhs on account of deposit insurance, Rs. 9 lakhs towards the National Defence Fund and an increase of one per cent allowed during the year in the interest rates on savings deposits. The dividend distribution for the whole year will absorb the same amount of Rs. 63 lakhs. As against this, transfer to the reserve fund has been reduced from Rs. 45 lakhs to Rs. 38.71 lakhs. The allocation to the staff gratuity fund has been raised slightly from Rs. 10 lakhs to Rs. 10.44 lakhs and bonus to staff has taken away Rs. 5 lakhs more at Rs. 65 lakhs. The carry forward is Rs. 26.17 lakhs, as against Rs. 23.37 lakhs brought in.

DHARAMSI MORARJI'S NEW VENTURE

The Dharamsi Morarji Chemical Company Ltd. of Bombay is to form jointly with the Borax (Holdings) Ltd. of London a new company for the manufacture of borax and boric acid, subject to the necessary sanctions from the British and Indian Governments. Dharamsi Morarji has already been granted an industrial licence by the Government. The new company, to be called Borax Morarji Ltd., will have its plant close to the works of Dharamsi Morarji at Ambernath, near Bombay. The site is ideal in respect of water and power supply, transport facilities and other amenities. Erection of the plant and machinery which will cost Rs. 65 lakhs is expected to commence soon and to be completed before 1963 is out. Principal consumers of borax and boric acids in India, namely, glass, enamel, ceramic, metal and leather industries, have been meeting their requirements through imports, the bulk of them being from the Borax (Holdings) Group of London.

THE CENTRAL BANK OF INDIA LIMITED

Profit for the year 1962

The net profit of the Bank for the year ended 31st December 1962, including the sum of Rs. 23,36,733.88 brought forward from the previous year's account and after providing for taxation, amounts, subject to audit, to Rs. 2,03,32,560.71 which the Directors have disposed of as follows:—

	Rs. nP
An *ad-interim* dividend paid at the rate of Rs. 2.40 per share, subject to tax (i.e., Rs. 1.68 net) for the half-year ended 30th June 1962	30,24,000.00
Amount transferred to Reserve Fund	38,71,500.00
Amount transferred to Staff Gratuity Fund	10,43,810.83
Amount provided for Bonus to Staff	65,00,000.00
	Rs. 1,44,39,310.83
The balance of Rs. 58,93,249.88 the Directors propose to recommend to the Shareholders to dispose of as follows :—	
To pay a Final Dividend for the half-year ended 31st December 1962 at the rate of Rs. 2.60 per share, subject to tax (i.e., Rs. 1.82 net), making in all 14% net for the whole year ..	32,76,000.00
To carry forward to next year's account	26,17,249.88
	Rs. 2,03,32,560.71

STATE BANK OF HYDERABAD

TURNOVER BETTER, BUT PROFIT LOWER

DESPITE satisfactory growth in both deposits and advances and an increase in gross earnings, the State Bank of Hyderabad (General Manager: Mr. Satya Dev, Hyderabad) has made a lower net profit of Rs. 10.66 lakhs for the year ended 31st December 1962 as compared with Rs. 12.19 lakhs for the previous year. The reduction in the profit is attributed by the Directors to the higher cost of deposits, premia paid to the Deposit Insurance Corporation, higher taxation and increased staff expenses following the revision of salaries of all categories of the staff under the Desai Award. Thus, while aggregate gross earnings from banking business rose over the year by Rs. 26.50 lakhs to Rs. 146.12 lakhs, the total of interest paid and other expenses at Rs. 135.76 lakhs showed a relatively greater rise of Rs. 28.62 lakhs. Although the profit is lower, the dividend on the Rs. 100 fully paid shares has been maintained at 6 per cent per annum. The transfer to reserve fund has, however, been only Rs. 2.50 lakhs, as against Rs. 4.15 lakhs a year before. Other funds for pension and staff welfare have got the same amount of Rs. 1.28 lakh. Bonus to staff has been raised by Rs. 50,000 to Rs. 4 lakhs. The balance to be carried forward is roughly Rs. 25,000, as against about Rs. 36,000 brought in.

Excepting the drop in profit, for reasons common to banks in general, the Bank was able to make further progress during the year in all other respects. Its deposits expanded from Rs. 24.29 crores to Rs. 26.53 crores. Advances rose to a greater extent than deposits, from Rs. 13.99 crores to Rs. 16.17 crores and the credit ratio, therefore, advanced from 57.6 to 61 per cent.

The increase in advances took place together with an increase in investments from Rs. 870.02 lakhs to Rs. 962.57 lakhs. There were, once again, no borrowings from other banks as at the end of the year. The aggregate cash balances, however, were lower at Rs. 300.26 lakhs as compared with Rs. 361.74 lakhs a year before. Consequently, the ratio of liquid assets (cash balances and investments) to deposits shrank to 47.4 per cent from 50.5 per cent a year before.

The following comparative table shows the Bank's progress from 1959.

(In lakhs of rupees)

	1962	1961	1960	1959
Interest and discount	116.80	92.35	76.30	68.90
Commission, exchange and brokerage	29.23	27.27	22.97	18.86
Other income	3.19	2.50	2.10	2.38
Interest paid	63.15	50.03	38.61	35.60
Expenses	72.61	57.11	51.24	47.09
Depreciation	2.80	2.79	2.37	2.46
Net profit*	10.66	12.19	9.15	5.00
To reserve fund	2.50	4.15	1.85	1.00
,, other funds	1.28	1.28	1.25	1.25
,, bonus to staff	4.00	3.50	3.00	2.70
Dividend	3.00 (6%)	3.00 (6%)	3.00 (6%)	Nil
Carry forward	0.25	0.36	0.09	0.05
Capital	50.00	50.00	50.00	50.00
Reserves	35.50	33.00	28.85	27.00
Deposits	26,53.21	24,29.30	19,39.73	18,78.69

Investments	36.2	35.8	48.3†	48.0
Cash	11.3	14.9	8.3	18.4

* Provision for taxation undisclosed.
† Only unencumbered portion.

Besides transacting the Government cash business and agency functions at all its offices as in the previous year, the Bank, an associate of the State Bank of India, undertook Government cash business at its existing offices at Shahabad, Bhalki and Shorapur and at its new branches at Armoor, Madhira and Sircilla. The Bank thus handles Government cash business at 56 centres (50 centres in the previous year) and holds currency chests of the Issue Department of the Reserve Bank at 62 centres (57 centres). It has now as many as 82 branches, besides three sub-offices. As a public sector institution, the Bank has the additional obligation of facilitating movement of funds from one centre to another in the area of its operation and also dispense credit to agriculture and small industries on easy terms. The total amount of remittances issued and encashed during the year under the Reserve Bank scheme amounted to Rs. 86.40 crores and Rs. 13.33 crores, respectively, as against Rs. 78.61 crores and Rs. 11.70 crores, respectively, in the previous year. The total amount of remittances issued and encashed on behalf of the co-operative institutions during the year amounted to Rs. 34.23 crores (Rs. 18.02 crores in 1961) and Rs. 23.95 crores (Rs. 11.60 crores), respectively. The Bank continued to act as the Registrar of the Andhra Pradesh State Electricity Board. As for credit facilities, the total limit sanctioned against the security of warehouse receipts went up during 1962 from Rs. 44.71 lakhs covering 1,380 accounts to Rs. 49.51 lakhs covering 1,339 accounts. Concessional and simplified terms and conditions continued for such advances, so that warehouses might find a wider use. Advances to small-scale industries increased from 50 to 82 in terms of units covered and from Rs. 49.83 lakhs to Rs. 81.14 lakhs in terms of aggregate value. The amount of credit utilised by such units amounted to Rs. 37.55 lakhs, as against Rs. 25.89 lakhs a year before.

FOUR BASIC PRINCIPLES OF U.S. ECONOMIC SYSTEM

PART I: WHY A BIGGER PIE; ECONOMIC FREEDOM

By Thomas C. Mann
U.S. AMBASSADOR TO MEXICO

IN speaking of the experience of the United States in economic development, I shall refer to certain broad economic principles which I consider basic to our *American economic system*. These same principles are also basic to other successful economies in the free world. However, it is not my intention to imply that every nation could or should apply these general principles or guidelines in the same general way we have done. Cultures, situations, and problems differ from country to country and exact conformity is neither practical nor desirable.

The important thing is not whether an economic theory is logical, or whether its proponents have good intentions, but rather whether it produces results in a particular country—whether, without destroying freedom, it creates prosperity or poverty for the masses of a particular country. This is, I suggest, the yardstick by which all economic systems and policies, including those of my own country, will ultimately be judged. Whether a particular policy will promote or impede progress is often open to debate. For, unlike mathematics, economics is not an exact science. But whether a system or policy is, or is not, successful can ultimately be determined with almost mathematical exactitude.

Social Justice

When one speaks of economic development, he is in a very real sense also speaking of social justice. The two things are indivisible. One cannot imagine that any people will benefit from an equitable distribution of poverty. It is necessary to think, first, of economic development—of the ways to produce wealth—before theories about the distribution of that wealth become meaningful. Or, as we say in the United States, it is necessary to make a mighty big pie before one can distribute large pieces to every member of a large family.

With these introductory remarks, I should like now to discuss specifically certain broad economic principles, tested in practice for more than 200 years, which form the general guidance for the United States economic system and for its economic policies. The first which I would like to mention is *economic freedom*.

You will recall that, during the period of the seventeenth and eighteenth centuries, the theory of mercantilism dominated European economic and political thought. Essentially, mercantilism taught that a State prospers by amassing gold. This could be brought about by a country's exporting more than it imported. Foreign trade, as well as domestic production, was, therefore, tightly controlled in order to make it possible for the country to maintain, on a bilateral basis, "favourable" balances of trade with each trading partner. The regulation of trade and production was very extensive.

These mercantilist practices had much to do with the decisions of colonies in the Western Hemisphere to break away from the mother countries. When it became apparent that these controls were stifling production and were failing to raise the living standards of the masses—and we should not forget that mercantilism *has* failed—quite naturally the pendulum swung in the opposite direction.

What Adam Smith Said

Adam Smith, in his *Wealth of Nations*, spoke of "natural" liberty as including the right of people to be free in the economic as well as the political sense. Economic progress would come faster, Smith stated, if Governments were relieved of "the duty of superintending the industry of private people." This idea that political and economic freedom were all of one piece was developed, in England at least, by other economists and philosophers and by distinguished lawyers. In essence, they feared the exploitation of man by the State even more than they feared the exploitation of man by man. A free man, they reasoned, can better protect himself from the tyranny of an individual than from the tyranny of an all-powerful State.

The concept of economic freedom runs through the Declaration of Independence and the Constitution of the United States. To cite only two illustrations: Although we are a group of sovereign States, no State may put obstacles in the way of inter-State commerce; our Constitution created a common market in which the free movement of capital goods and labour was guaranteed. On the other hand, the power of the Federal Government to regulate intra-State affairs was severely curtailed. Second, because it seemed logical that the right of the individual to the "pursuit of happiness" of which our Declaration of Independence spoke would be incomplete without economic as well as political freedom, the Fifth Amendment to our Constitution provided:

"No person shall be ... deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation."

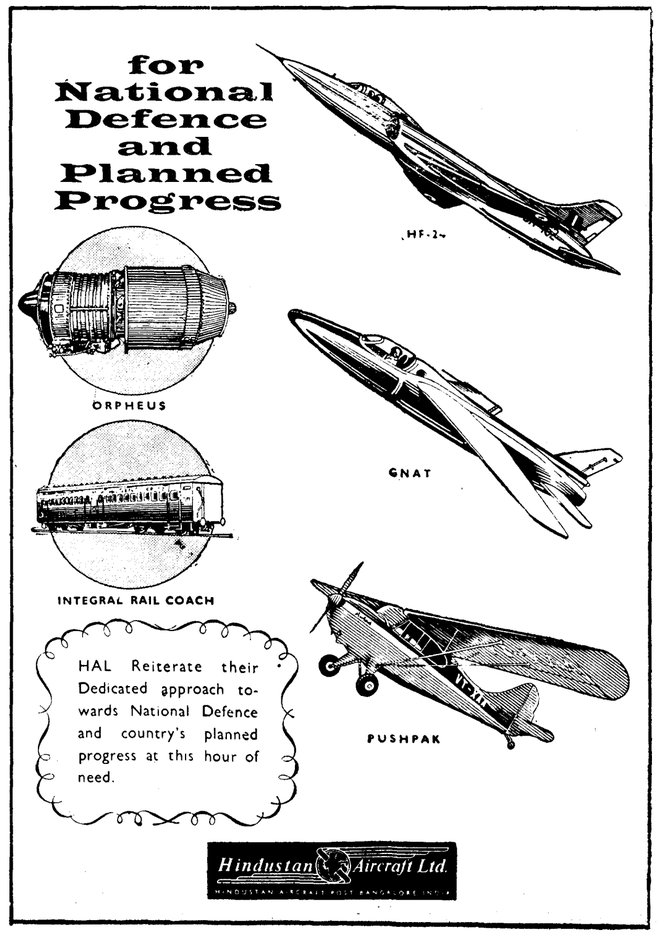
Tyranny of the Majority

I do not mean, of course, to imply that we believe economic freedom should be unlimited. As our own James Madison (fourth U.S. President) pointed out, men are not angels. He wrote, for example, in *The Federalist* papers, about the danger of the tyranny of the majority.

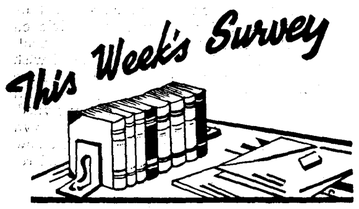
And because tyranny by the few over the many is also possible, we have adopted anti-trust laws to prevent unfair trade practices which restrict competition. Similarly, a limited number of our industries which have monopolistic or other peculiar characteristics, such as railroads and public utilities, are regulated.

There are other limitations to the principle of absolute economic freedom in my country, notably in respect to research and production of military and space machines and nuclear energy. There are certain controls on shipping, telecommunications, and aviation and controls on the production of a limited number of agricultural commodities. But the point which I wish to emphasise is that these and other things are the exceptions and not the rule. Virtually all of our industry and farms are privately owned. Individuals and corporations conduct their own research, improve their own designs, seek new and better ways to improve the quality and reduce the cost of their product.

Virtue of a Free System



We believe that freedom of choice by the individual unleashes individual ingenuity and inventiveness which in turn gives a vitality and dynamism to our economy that it could not otherwise have. As John Chamberlain—a U.S. political and economic writer—has observed:



"The virtue of a free system ... i.e., competitive capitalism ... is that it allows energy to flow uncoerced into a thousand and one different forms, expanding goods, services and jobs in myriad unpredictable ways."

We are reluctant in the U.S. to stray too far from economic freedom in search of easy solutions to short-term problems. We would, for example, consider it against our own interest to deal with a temporary balance-of-payments problem in such a way as to diminish the prospects for a steady, long-term economic growth; or to force industrialisation in a discriminatory manner and at a pace which would tie our economy perhaps permanently, to a group of inefficient industries with the dubious prospects of ever being able to compete and earn foreign exchange in the outside world.

As Henry Hazlitt, economist and contributing editor on *Newsweek* magazine, reminds us:

"Economics ... is a science of recognising secondary consequences. It is also a science of seeing general consequences. It is the science of tracing the effects of some proposed or existing policy not only on some special interest in the short run, but on the general interest in the long run."

NEW INDEX OF INDUSTRIAL PRODUCTION

THE need has been acutely felt in recent years for a new index of industrial production which, unlike the old one with its 1951 base, would more fully reflect the performance of a diversified industrial structure with its newer and younger industries. It is a heartening development that this need has just been met by the Central Statistical Organisation which has constructed a new series of index numbers of industrial production with the year 1956 as base. The choice of 1956 as base seems to be most appropriate, for data are available for a large number of new items of production from that year only. Moreover, 1956 witnessed fairly stable industrial and economic activity and marked the beginning of the second Plan. The revised index has a coverage of 201 items of production, as compared with only 88 items included in the old index. This comprehensive coverage is due mostly to the inclusion of new items of production established after 1951. The revised index has also the merit that its coverage by *value added* of the 201 items represents 90 per cent of the total value added by manufacture of all factory establishments and the mining sector in India during 1956-57, as compared with about 70 per cent in respect of the corresponding coverage of the 88 items included in the old index. Thus, with its broader coverage in terms of production items and of their "value added by manufacture," the new index

TABLE I—*Weights Assigned to Groups of Industries*

	Old index (1951=100)	Revised index (1956=100)
1. *Mining and Quarrying*	7.16	7.47
(i) Coal	6.69	7.09
2. *Manufacturing*	90.68	88.85
Food manufacturing	11.85	13.99
(i) Sugar	4.27	4.62
(ii) Tea	5.94	7.42
Beverages and tobacco (cigarettes)	1.50	1.49
Textiles	48.01	41.76*
(i) Cotton textiles	36.10	32.10
(ii) Jute textiles	11.91	5.62
Footwear, etc.	0.85	0.28
Paper and paper products	1.57	1.39
Rubber products	3.35	3.04
Chemicals and chemicals products	4.16	3.58
Petroleum products	..	3.79
Non-metallic mineral products	3.21	2.47
(i) Cement	1.85	1.24
Basic metal industries	8.04	9.25
(i) Iron and steel	5.92	7.48
Metal products except machinery and transport equipment	2.57	0.99
Manufacture of electrical machinery, etc.	1.46	2.41
Transport equipment	2.92	2.86
(i) Automobiles	2.69	1.28
3. *Electricity*	2.16	3.68
4. TOTAL	100.00	100.00

*Includes rayon fabrics (2.58), woollen fabrics (1.10) and others (0.36).

may be taken to reflect more fully and accurately the trends in industrial production. It is, therefore, bound to be welcomed as a more realistic and reliable indicator of industrial growth than the old index (base 1951=100).

To what extent the revised index represents an improvement over the old one may be inferred from the respective weights allocated to important groups of industries in either index. It will be seen from the following table that the main group of 'manufacturing' has been assigned in the new index a weight (88.85) which is only slightly less than the weight (90.68) assigned to that group in the old index. But it will also be seen that, within this main group, the sub-group of 'textiles' has been appropriately given a lower weightage while increased weights have been allocated to several other sub-groups. The differences between the old index and the new in this respect are explained by the fact that the weights allotted to the individual items in the former index were in proportion to the 'value added' of those items during the year 1951, whereas the weights in the latter are proportional to the 'value added' of the individual items in 1956. To the extent that the re-allocation of weights reflects the changed or diversified pattern of industrial production in the era of planning, to that extent the new index is an improvement on the old.

The new index is an improvement on the old in the further sense that it reflects the trend of industrial production more fully and faithfully. Of course, a direct comparison of the trends revealed by the two series is not possible except after shifting the base in the old index to 1956. Table II below, giving the new index numbers for the last eleven years alongside the numbers in the old index with its base adjusted to 1956, renders such direct comparison possible.

TABLE II—*Old and New Index Numbers of Industrial Production*

Year	Old index (base shifted to 1956=100)	Revised index (1956=100)
1951	75.4	73.0
1952	78.1	75.3
1953	79.6	77.4
1954	85.1	82.6
1955	92.3	92.8
1956	100.0	100.0
1957	103.6	104.1
1958	105.4	108.1
1959	114.7	117.0
1960	128.0	129.7
1961	136.7	139.0

A perusal of the above figures may suggest that the trends of industrial production as revealed by the revised index and the old index during the period 1951-61 do not show any big variations. This may be due to the fact that the weights assigned to the largest main group of 'manufacturing' are about the same in the two indices. But it is also noteworthy that the variations in trends are not insignificant either. The fact of the matter is that industrial production, as of 1961, had really increased by 39.0 per cent since 1956. If the old index, even after adjusting its base to 1956, shows that industrial production, as of 1961, had increased only by 36.7 per cent since 1956, it only means that, with its relatively limited coverage, it could not serve as a reliable indicator of trends in industrial production.

REORIENTATION OF PLAN

In the wake of the emergency created by Chinese aggression, the third Plan seems to be undergoing a reorientation in *Yojana Bhavan* at New Delhi. Gearing the economy to meet the needs of defence is the proclaimed purpose of such reorientation. Anything like a clear or coherent picture of this process of readjusting the Plan's priorities and targets has, however, not emerged up till now, for the Central and State Plans for 1963-64 are yet to be finalised. But some broad contours of the contemplated re-shaping are discernible in the basic considerations laid down, the more recent steps or decisions taken and the special instructions issued by the Planning Commission. The basic considerations governing the Plan's reorientation, incidentally, are that (i) the defence requirements must be quickly and fully met, (ii) the tempo of development in the fields of industry, minerals, transport and communications mainly in the Central Plan and of agriculture, irrigation and power mainly in the State Plans be sustained and accelerated, and (iii) a systematic effort be made to eliminate or postpone all expenditure which is not related directly or indirectly to the defence effort and to the basic development of the national economy. Whether the application of these basic criteria should involve a bigger aggregate outlay on the Central and State Plans for the next financial year or bigger outlays on some essential projects and smaller outlays on others is reported to be under discussion now between the Planning Commission and the Union Finance Ministry. The financial size of the 1963-64 Plan covering the Centre and the States, as finally decided upon, will determine the extent of additional resources to be raised by further taxation and borrowing.

Considering the Planning Commission's current anxiety to apply the third criterion, namely, elimination or postponement of all non-essential expenditure, it may be that heavier taxation, that is, heavier than that contemplated in the Plan, will be found to be unnecessary. It is in this context that some of the decisions taken or instructions issued recently by the Planning Commission seem to be significant. These, according to Mr. Shriman Narayan, Member, Planning Commission, are as under:

(i) The expenditure on housing colonies, townships and factory buildings should be reduced to the barest minimum.

(ii) The formation of labour co-operatives should be encouraged as much for utilising surplus local labour in construction projects as for avoiding the use of big and costly machines.

(iii) The Public Works Departments of the State Governments should lower their specifications and ensure *minimum* use of scarce building materials like steel and cement.

(iv) Private construction of a non-essential nature like new cinema houses and shopping centres should be controlled.

(v) Work on the various fertiliser projects should be started without any further delay.

(vi) The public sector oil refineries are to be expanded.

(vii) The existing industrial estates in States should be utilised for meeting defence needs.

Presumably the above decisions or special instructions do not cover the whole range of steps required for the kind of reorientation under contemplation. Perhaps more decisions will be announced in due course and these, like items (i) to (iv), may be intended to reduce non-essential expenditure or to achieve economies in construction costs. All these are steps to which objection can scarcely be taken. The purpose of reducing Plan expenditure in some lines should only be to provide more funds for the crucial sectors of agriculture and irrigation, power and transport—sectors in which public expenditure has been, and will continue to be, of dominant importance.

COLOMBO PLAN'S ELEVENTH YEAR

Eleven years have passed since the Colombo Plan for Co-operative Economic Development in South and South-East Asia came into being. The Plan, which envisaged a unique pattern of international co-operation, has acted during all these years as a catalytic agent in the planned development of this region which accounts for one-fourth of the world's inhabitants living in one-sixteenth of the world's land. It is, of course, a very modest one in conception, if we compare it with, say, the Marshall Plan for Europe or any of the regional economic and trade blocs like the European Common Market or even the COMECON. All the same, the Colombo Plan remains a shining example of international co-operation which has helped the countries of the region in their fight against poverty. Although it embraces all the countries of this region, it has no supra-national authority and is not a master plan for the area; indeed it is not, in the true sense, a plan at all, but rather "the sum of the national plans of its Asian members." It does not interefere in the formulation of national plans. There is neither compulsion nor inspection, nor accounting. The Colombo Plan provides just a loose organisation by which both Asian development under national Plans and also voluntary arrangements for mutual assistance between themselves, or with one of the more developed countries outside, can be made more easy and smooth, principally through friendly and informal discussion and contact. Its work is being looked after by a small Bureau situated at Colombo, with a complement of about 25 persons.

Despite its modest structure and framework, the Colombo Plan has been able to stimulate planning-consciousness in this region (where, over a decade ago, the term 'planning' would have been looked upon with suspicion, except perhaps in relatively more developed countries like India). It has sought to encourage economic growth by tackling the twin problems of shortage of capital and technical personnel. These efforts of the Colombo Plan have not been in vain. The countries of the region, most of which have put into effect long-term plans, have been devoting more and more of their resources for development purposes. According to the latest annual report of the Colombo Plan Consultative Committee, the Governments of the fifteen countries of the region spent on equivalent of as much as U.S. $5,400 million in development during the year ended June 1962, representing an increase of $1,000 million over 1960-61. For 1962-63, the total estimated development expenditure is still higher at $6,700 million. The total value of external assistance directed to the countries of the region during the last eleven years has amounted to $12,000 million. By far the greater part of the assistance under the Colombo Plan has come from the six member-countries outside the area—the U.S., U.K., Canada, Australia, New Zealand and Japan. But the member-countries within the area have also been assisting each other to the best of their ability.

The U.S. continues to be the largest donor member of the Colombo Plan, with its total assistance to this region so far amounting to $10 billion. In 1962 alone, the U.S. Government's economic and technical assistance to the region aggregated about $1.67 billion. Besides, an amount of $954 million was provided through the Agency for International Development in the form of loans, grants and technical assistance during the year. These figures exclude the U.S. assistance under P.L. 480 through the sale of agricultural commodities, the contribution to specialised international agencies, long-term credits granted by the Export-Import Bank and private investments. Canada has also made a significant contribution to the Colombo Plan.

It has made available $381.7 million for capital and technical assistance to member-countries of the Colombo Plan, all in the form of grants. In each of the past three years, $50 million has been appropriated annually by the Canadian Parliament for contributions to the Plan. In the ten years since the Colombo Plan came into operation, approximately 47 per cent of Canada's contribution has been expended on participation in construction projects (chiefly power stations, transmission lines, ground and aerial surveys) and the provisions of industrial or agricultural equipment. The provision of commodities, including foodstuffs, metals, wood-pulp and fertilisers, represents roughly 47 per cent of Canadian expenditure in this period. Technical assistance has taken about 3.4 per cent of the Canadian contribution and the remainder has been devoted to capital equipment.

Britain has maintained its position as one of the leading donors of the Colombo Plan. In 1961-62, the British Government spent £30.97 million on capital aid and technical assistance for development in South and South-East Asia, bringing the total of such expenditure since the beginning of the Colombo Plan to £213.8 million. Additional commitments of the Government at the end of June 1962 amounted to £108.4 million: this includes Britain's £20.8-million contribution to the Indus Basin Development Fund, which will be paid over the period up to 1971-72. Similarly, Australia, New Zealand and Japan have shown great interest in the development of Colombo Plan countries.

Particular mention may be made of the fact that the schemes for technical co-operation have made considerable headway during the year. The total value of technical assistance that has flowed into the region since 1950 amounts to over £102 million. The total number of persons in this region who have received training is 24,062. Besides, 4,163 experts in the fields of agriculture, industry, and administration have visited this region to perform a wide variety of highly technical tasks. These facilities have been supplemented by the provision of scientific and technical equipments, the aggregate value of which amounts to £32 million. It may be noted here that India has played a prominent part in the provision of technical training to persons from other Colombo Plan countries, besides being a recipient of such facilities. Training places for 369 persons were given in India in 1961-62, making a total of 1,914 so far. In view of the pronounced dearth of technical personnel for implementing development plans, the technical assistance rendered under the Colombo Plan has been of invaluable help to this region.

DISUNITY IN EUROPE?

It is a paradox that the Common Market, which has been designed with the avowed purpose of cementing the bonds of unity in Western Europe, should have led to quarrels among European countries of a nature unprecedented in the post-war era. The blame for creating this feeling of disunity in Western Europe may be attributed principally to President Charles de Gaulle of France who has done his damnedest to make the question of Britain's entry into the Common Market an extremely difficult one. At a Press Conference held on Monday, for instance, he left one in no doubt where he stood on that question. He has, of course, never been an ardent supporter of Britain's entry. But it was, perhaps, for the first time that he gave free vent to his opposition to the U.K. joining the Common Market as a Commonwealth power. The French President refused to appreciate any of the difficulties facing Britain—difficulties arising from its special obligations to domestic farmers, to the Commonwealth and its partners in the European Free Trade Association (E.F.T.A.). On the other hand, he all but suggested to the U.K. that it should snap its ties with the Commonwealth, cease to protect its agriculture by the prevailing methods and break the existing bonds with the Free Trade Association nations.

The U.K. was welcome to join the Common Market, declared President de Gaulle, if it reoriented its economy in accordance with his prescriptions and adapt itself fully and immediately to the conditions laid down under the Treaty of Rome. He made much of the differences in economic structure and commercial relations between the U.K. and the Continent. These differences were highlighted by President de Gaulle in support of his view that the best that the Common Market could do under these conditions was to offer only an associated status to Britain.

The British spokesmen have quickly reacted to General de Gaulle's statement and made it clear that the U.K. wants to be a full political partner in Europe and does not favour associate membership. One would have thought that some of the members, particularly West Germany, would support de Gaulle on this question. But this has not luckily happened so far, and West Germany is even reported to have disagreed with the French President. According to West German official opinion, the U.K. is entitled to full membership of the E.C.M. Some of the other members of the Common Market have reacted more sharply. The Belgian Foreign Minister, Mr. Paul-Henri Spaak, has stressed that Belgium's approach is entirely different from that of France, adding further: "I do not see why we should ask Great Britain to renounce its relations with the Commonwealth any more than we asked other countries to give up the links that they had with African countries." Mr. Spaak has received ample support at the hands of the Dutch Foreign Minister, Mr. Joseph Luns, according to whom the economic similarity between Holland and the U.K. is stronger than that between Holland and France.

If anything, the Italian stand on the question of British entry, as is well known by now, is diametrically opposite to that of France. Incidentally, the British Prime Minister, Mr. Harold Macmillan, will be visiting Italy in a few days, with a view to improving trade relations between the two countries. Mr. Macmillan's discussions in Italy may throw more light on reports that Italy might even withdraw from the Common Market, if France were to hinder Britain from joining the E.C.M. Thus most member-countries of the Common Market seem to have ranged themselves against France in its uncompromising attitude to Britain's entry. Even the U.S. has taken exception to the French President's broadside against the growth and reinforcement of the Atlantic Community, in which the U.S. would have a leading role. The French President's statements are all the more inopportune, in that they have coincided with the commencement of a new series of negotiations at ministerial level between the U.K. and the E.C.M. aimed at thrashing out an agreement to admit the former into the Community.

TRADE UNION LEADERSHIP

A damning indictment of exploitation of workers by outsiders, who had wriggled their way into positions of responsibility in trade unions, was made by Mr. Justice Shah of the Bombay High Court while dismissing an appeal filed by Dr. Shanti Patel and four others. It is needless to go into the details of the case here. It may, however, be added that Mr. Justice Shah's strictures against the mismanagement of trade unions by outsiders are pertinent not only in respect of the union in question, namely, the Bombay Port Trust Railwaymen's Union, but also of quite a few others in the country. Deploring the wrangle for power on the part of vested interests and exploitation of workers by office-bearers of trade unions for their personal glorification, His Lordship observed:

"I fail to understand why they, under the pretext of improving the life and standard of living of workers, which they do not appear to have done in any appreciable degree despite their officious leadership over the years, often paralyse the economic and civic life of the City by inciting them to go on strike time and again and putting forward, in the name of workers, demand for higher and higher wages time and again, the burden whereof falls upon and is ultimately borne by the common man without, at the same time, exhorting them to work more efficiently and with greater sincerity."

The devastating attack on a pernicious characteristic feature of trade union leadership in this country is well deserved. Politicians, who have no connection with trade unions, are reluctant to pull up erring union leaders for fear that they might lose their support in the elections, while those who combine politics and trade unionism (and their tribe is increasing) have a vested interest in covering up the mismanagement of trade unions by politicians. Independent critics, who oppose mixing up politics with trade unionism, which is often injurious to the latter, are charged with partisan approach. As a result, there has developed a situation in which politicians have nearly succeeded in driving home to workers that what is good for politics is good for trade unionism too. Evidence of this success is the plethora of political strikes which the country witnessed in the early years of the Indian Republic. Fortunately, however, such strikes are few and far between now, thanks to the Code of Discipline and the tireless efforts of Mr. G. L. Nanda, the Union Labour Minister. But the character of trade union leadership has not changed much for the better and politics and politicians continue to dominate trade unions and their activities.

Basically, the problem of trade union leadership is one of finding the right type of men to manage the unions. The position in this regard is far from satisfactory at present. It is correctly summed up by Mr. Justice Shah as follows:

"At present, it seems that trade union business is anybody's business and anyone who has no honest occupation in life can dabble in it and make some money out of it at the workers' cost. If this is the kind of leadership of workers' unions, the sooner it is put an end to or eradicated, the better for all concerned."

Here is a situation which offers a challenge and an opportunity to policy-makers to rectify the defects in trade unionism in the country.

LALA SHRI RAM

Lala Shri Ram, who passed away on Friday, 11th inst., was certainly a doyen of Indian industry. Starting his career in the Delhi Cloth and General Mills way back in 1909, Lala Shri Ram took over its management in 1934. Under his able stewardship, the group expanded to cover sugar, distillery, heavy chemicals, fertilisers, potteries, sewing machines, electric fans and motors, and other engineering industries; plants for the manufacture of calcium carbide, polyvinyl chloride, rayon tyre-cord, ball bearings and sealed compressors are under erection.

Lala Shri Ram was a man of high principles. He fully subscribed to the view that an entrepreneur is a trustee of the community, accountable to the worker, the consumer, the shareholder and the Government. He was a staunch advocate of workers' participation in management, profit-sharing in industry, export promotion and encouragement to small industries. He took an active interest in modern management training and methods. And he devoted quite a bit of his time to scientific research and education, as witness the establishment of the Industrial Research Institute, as well as several colleges and schools. He was a member of the Governing Body of the Council of Scientific and Industrial Research since it was constituted. He also guided the affairs of national agencies; he was the founder Chairman of the Industrial Finance Corporation of India, Chairman of the Sindri Fertilisers and Chemicals and Director of the Reserve Bank from 1935 to 1961. Above all, he was one of the architects and builders of the Federation of Indian Chambers of Commerce and Industry.

Imbued with high ideals, Lala Shri Ram made a distinct contribution to the industrial development of India. He will be remembered as a veteran industrialist, lover of scientific research and education, and great philanthropist. Surely, his distinguished career as a leader among men provides plenty of inspiration to the younger generation.

HOECHST HITS UP CENTURY

The West German giant chemical company, Fabwerke Hoechst, is 100 years old this month. The Company has to its credit a wide range of pioneering achievements, being the first in the world to develop such synthetic pharmaceuticals as hormones and the local anesthetic, novocain. It was also the first in the world to produce synthetic dyes that, incidentally, gave a mortal blow to India's trade in indigo. The Company came into being on 4th January 1863 at Hoechst in the outskirts of Frankfurt, with a complement of hardly half a dozen workers. Today it employs as many as 53,000 persons. Its total turnover, as of 1962, aggregated no less than DM 3,500 million (about £310 million); this figure includes the output of foreign affiliates estimated at DM 500 million (about £45 million).

Hoechst has extended its operations beyond the frontiers of Germany from as early as 1878, when it put up a dyestuffs factory at Moscow. There is now a large number of Hoechst associates not only in Europe and North America, but also in developing countries of Asia, Africa and Latin America. This Company has been closely associated with the development of dyes and pharmaceuticals in India as well. An outstanding instance of the Company's operations in India is Hoechst Pharmaceuticals Ltd. which has put up a factory at Mulund, a suburb of Bombay. This unit has an annual installed capacity (among others) of 6.4 million tons of procaine hydrochloride, a product for which India has been dependent exclusively on imports until recently. Procaine hydrochloride finds extensive use in the production of procaine penicillin. The Company has also extended

CRIES OF DISTRESS IN RAW JUTE

MORE ON MR. MALAVIYA'S OIL POLICY

From Our Special Correspondent

NEW DELHI, 15*th January*

DELHI LETTER

THE Indian jute crop has in the past decade followed a fairly predictable pattern of high rates of production following a season of shortage and high prices for the fibre, and a drop in output after the prices fall in a season of good production. The current season's trends also reflects this general pattern, the minimum price fixing by the Government having failed to arrest the slump in fibre rates. The Jute Commissioner's talks in Delhi with senior Union Government officials early this week was to give Delhi a clearer picture of the situation rather than to attempt to evolve any new firm policies, it is understood. The loud complaints of the jute growers crystallised in a memorandum by two members of Parliament and dozens of West Bengal legislators to the Prime Minister, urging him to take numerous steps including the appointment of a judicial commission to investigate the reasons for the failure of the raw jute price policy. Some jute growers even want a minimum price of Rs. 40 per maund against the current Rs. 30; the current statutory floor price has become illusory, since sales have been reported even at less than Rs. 20 for some varieties of jute a rate said to be lower than the cost of production. An easy solution propounded by the growers' representatives is export of raw jute with a subsidy, but nobody other than the cultivators is willing to accept this procedure, because it would mean sacrifice of foreign markets to some European manufacturers. Pakistan's and Thailand's raw jute exports already are enough to feed the European mills, and one contributory reason for the Indian slump in jute prices is the smuggling of fibre from Pakistan where prices are lower. Even the Soviet Union, which is making purchases of raw jute, is interested only in high grade fibre of which there is a shortage despite a glut in total Indian fibre production. The European buyers, too, are interested mostly in superior grade jute and any large-scale change in policy to permit raw jute exports will cut into the prospects for special varieties of goods which the Indian industry is slowly building up. The impression in Delhi is that the Government is not eager to take any steps which may hurt the export prospects for jute manufactures.

Shipping Controversy

Indian shipowners had over the years built up a strong and vocal lobby to speak for their interests in Parliament and outside; it is intriguing how these spokesmen failed to block a decision by the executive of the Congress Parliamentary Party to advocate an increase in the foreign share in Indian shipping companies to 40 per cent from the current 25 per cent. Both the Minister of Shipping, Mr. Raj Bahadur, and the former Transport Minister, Mr. S. K. Patil, had publicly opposed moves to invite more foreign capital for investment in Indian shipping.

Spokesmen for Indian shipowners hark back on the historic reasons for the protection of Indian firms, but few if any of the early fears are any longer valid. Even at 40 per cent, the foreign interests will be a substantial minority. Anyway, this winter has also been a season during which many historically valid concepts have been thrown overboard.

It is now generally assumed that the revised third Plan target of 1.25 million tons of Indian bottoms may be even exceeded by the use of the Rs. 55 crores allocation, and there are some planners who hold the view that shipping expansion is not an issue meriting high priority. The chances are that the proposals on the foreign share in shipping may degenerate into an issue of prestige between some of the Congress top brass and the Indian shipping lobby.

Oil Refineries

The Minister for Oil, Mr. K. D. Malaviya, appears to be determined that expansion of private-sector oil refineries shall be permitted only after the public-sector refining capacity reaches parity with or exceeds private-sector capacity. The Oil Ministry's latest explanation is that the expansion plans had been taking shape even before the Chinese invasion and the declaration of the state of emergency (see also *Commerce* dated 12th January, page 53). The question of reorienting the expansion policy to meet the need for greater speed is still in search of convincing answers from the Oil Ministry.

As explained by the Oil Ministry, at the end of the third Plan, the public sector will have in operation the two-million-ton Barauni refinery, the two-million-ton Koyali plant, a two-million-plant in the South and a possible capacity of 1.25 million tons at Nunmati, where the Rumanian-aided plant will be expanded. This would give a total of about 7.25 million tons of refining capacity. The Southern and Barauni refineries are to be expanded later to 2.5 million tons and the Gujarat refinery to three million tons. But the yield from these expansion projects will be available after the end of the third Plan. If the private sector refineries are not expanded during the third Plan, the total refining capacity will be less than 15 million tons, far lower than the agreed estimates of demand for petroleum products by 1966. Even with a capacity of 18 million tons, some varieties of products would need to be imported. To balance the 15-million-ton production with the demand, it is likely that imports in 1966 may have to be in the range of four million tons of petroleum products. In other words, the breakthrough into self-sufficiency in refining will be further delayed. Some of the conditions in the agreements which led to the setting up of the Bombay refineries no doubt need changing; but the inflexible policies of the Oil Minister have also become archaic.

ENGINEERING EDUCATION IN W. GERMANY

Year after year, the number of students in German engineering colleges (Ingenieurschulen) has been rising; and, indeed, apart from the technical universities (Technische Hochschulen), the engineering colleges have had a most important function in the education system of Germany for many decades: generations of young people were technically trained by the engineering colleges to become qualified engineers. Teaching at German engineering colleges resembles that which is customary at the technical universities. It is not only the number of students but also the number of engineering colleges that goes up increasingly. At present, there are 83 State or Government engineering colleges and two private colleges, recognised by the Government, in West Germany. A total number of 46,487 students are enrolled in the engineering colleges. Candidates wishing to attend one of these colleges must either have finished a secondary modern school education (Mittelschule) or have achieved the so-called Obersekundareife (a kind of G.C.E. ordinary level examination in several subjects of a secondary school or grammar school). Moreover, vocational qualification will be required—in most cases a journeyman examination passed after a handicraft apprenticeship. Already, at the beginning of the college education, students must select one of the three major fields of study: general engineering, building engineering or electrical engineering.

The annual report of the German Commission for Engineering Education contains a number of interesting facts. The growing popularity of the engineering colleges can be seen from the rapid increase in the number of students; it rose from approximately 26,000 in 1952 to 46,000 today. Moreover, it contains information about the age groups of students. In the academic year of 1962, 76.3 per cent of the students belonged to the age group of between 20 and 25 years, 12.8 per cent to the group of between 25 and 30 years, and 10.9 per cent were over 30 years old.

In view of their ever-growing importance, German engineering colleges have been expanding the scope of teaching syllabi for quite some time, in order to keep abreast with the ever faster progress of technological development. Likewise, the engineering colleges have been modernising their technical facilities, their lecture halls, study rooms, design departments, collection of models and their technical equipment.

(*Concluded from next column*)

House of Lords, Lord Hailsham, to be Special Minister for the North-East. This is an area in which heavy industry, chemicals and shipbuilding are paramount and where unemployment is particularly heavy. Though this may look like doing something, it is questionable what, in practice, a Special Minister can do, except encourage and in some degree co-ordinate, for positive action lies with established Ministries. Such work of domestic interest such as the co-ordination of local authorities is a long-term job and what is needed now is something quick, as, for instance, an expansion of the road-building programme or of other capital expenditure which it lies in the Government's power to command. Lord Hailsham may find he has an impossible task, in that he does not hold the money-bags and, however much encouragement a man of his vitality can give, it may still not suffice to move the boards of businesses which have contemplated the sort of programmes outlined in the Survey mentioned above.

STATE OF BUSINESS

"THERE IS NO DEPRESSION IN THIS HOUSE"!

(*From Our Own Correspondent*)

LONDON, 11*th January*

LONDON LETTER

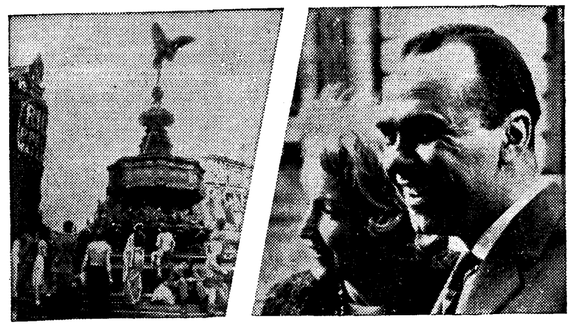
"THERE is no depression in this house" is a famous saying attributed to Queen Victoria. For months past the Government has been saying the same to the country. Now they are no longer sure. We are still being told to look at the November figures of pre-Christmas shopping and shown how good they were, but that is a seasonal accident and the Survey which the National Institute has made on businesses in December is telling a different story. In brief, some increase in production is expected in 1963 accompanied by a comparable increase in exports but *no rise in employment*.

It is most important to keep the matter of the state of business activity in the United Kingdom in proper perspective. The great concern shown by the Trade Unions and now at last by the Government has been at the fact that unemployment has substantially passed the 2 per cent level and is moving up to 3 per cent. The crisis before the country is primarily one of employment and well-being; it is not primarily one of the level of production. There is no depression in the sense that production is going to fall off alarmingly, that exports are going to drop or that there will be a balance of payments crisis: nothing of the kind is envisaged by Business.

But, on the other hand, Business sees that the modest increase in output which it contemplates is going to do nothing at all to improve employment and very little to improve utilisation of plant capacity. In short, the country does not look as if it is going to do anything like as well in 1963 *as it could do*.

The Survey made by the National Institute is a very serious one. It covers about 140 companies, employing nearly one-third of the labour force in engineering, chemicals and motor vehicles throughout the country. As a sample it must be taken as representative. What does it find? First, a rather greater degree of pessimism about the future than at any time in recent years; secondly, a substantial margin of unused capacity. Engineering, for instance, is running between 75 per cent and 80 per cent of capacity; motor vehicles at 72 per cent capacity. The chemical industry, with a higher capital utilisation, nevertheless goes so far as to say that, in the year ahead, it can meet any foreseeable increase in demand without any increase in capacity and they actually expect to reduce their labour force by 2 per cent!

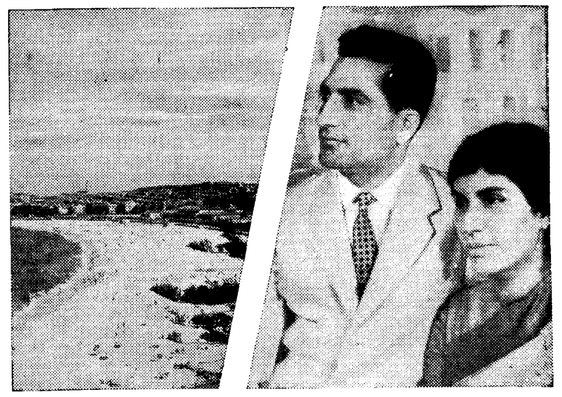
Such is the state of mechanisation and automation in the motor industry that the latter reckons that it could increase output by 15 per cent without employing any extra labour at all. It does actually hope to increase its output by this amount and its deliveries to the home market by substantially more; if it were to increase its deliveries to the home market by 40 per cent, it would still only need to employ another 7 per cent of labour—but it does not, of course, expect any such expansion in demand.



Engineering could increase its output by 10 per cent without employing any more labour; in fact, they do not expect their output to rise by more than about 4 per cent and, if there is no further reduction in employment, it will only be because firms are still prepared to carry excessive labour. The chemical industry, as already indicated, reckons to expand output by about 6 per cent and will do it with probably a 2 per cent *reduction* in their labour force.

Behind these figures there is a possibility of a further fall in employment if businesses begin to think that a substantial upturn in output is too far ahead for them to be able to afford any longer the cost of carrying partly-employed labour. The dribbling into the open of concealed unemployment may, therefore, become a feature of 1963.

Nor is there any hope to be looked for in these circumstances from increased capital expenditure. The engineering industries reckon to spend about 10 per cent less this year than last and the chemical industries perhaps 15 per cent less.



The Government's belated awareness of the need for stimulating the economy has been underlined by the appointment this week of one of its principal figures and their Leader in the

MONTHLY ECONOMIC REVIEW OF U.K.

GREAT REVOLUTION IN SAVING HABITS

STEP-BY-STEP APPROACH TO REFLATION

By W. T. C. King
EDITOR OF *THE BANKER*

IN the tale of Britain's economy in the last month of 1962 the main strands were quite evidently a continuation—and some of them an accentuation—of those of the preceding few months. In each month since early autumn, the principal indices have pointed to a somewhat wider margin of "slack," of under-utilised productive capacity, than had previously been assumed by many observers. And in each month, accordingly, the Chancellor of the Exchequer, pursuing the step-by-step approach to reflation that he outlined early last October, has taken some new steps with the object of stimulating the volume of demand whilst avoiding any exaggerated upsurge.

In December, one indicator of activity was particularly disappointing, and indeed came as a sharp shock. The seasonally corrected index of industrial production for October, which became available shortly before the Christmas holiday, not only showed a fall but an exceptionally big one—dropping from 118 to 115 (1958=100), which carried it back to the level of the spring. The evidence of a single month should not, indeed, be regarded as sufficient to demonstrate a change of trend, especially in view of the difficulty of making really reliable corrections for seasonal influences; but, at least, this October figure when averaged with the September index suggested that the aggregate of industrial output had been broadly stable for six months. The upturn in the volume of total demand that had been hoped for in the second half of the year had evidently not materialised, except marginally, by the end of the third quarter, in spite of the considerable expansion of exports and the resumption by industry of moderate stock-building, in place of the decline in stocks that had marked the first quarter.

Trend of Personal Savings

The summer's rise in retail sales, seasonally adjusted, had seemingly been confined to August and September, for, in October, the value index had relapsed to just under the average for February-July whilst the volume index showed no advance on the corresponding month of 1961. There were, admittedly, signs of expansion in other forms of consumption, but it seemed probable that the rising trend of personal saving was still cushioning business activity against the full impact of the rise in personal incomes. An analysis recently published by the Treasury showed that, over the decade 1952-61, the share of personal saving in total saving of the community rose from 18 per cent to 41 per cent, and that the advance was especially fast in 1960 and 1961. Between 1959 and 1961, indeed, the estimated aggregate of personal saving was more than doubled, rising from £1,010 millions to £2,073 millions, in contrast with only £383 millions in 1952. The estimate for the first half of 1962 is £1,136 millions, which is slightly less than that for the first half of 1961 but well above the average for that year. As a proportion of disposable personal income (i.e. after deduction of income taxes and social insurance contributions) personal saving rose from 3.4 per cent in 1952 to 10.7 per cent in 1961. These (official) estimates of personal saving are subject to a wide margin of error, since they have to be computed as residuals—the difference between estimated total personal income and estimated total personal expenditure; but, when full allowance has been made for this, they clearly prove that a great revolution has taken place in saving habits in this past decade.

Public Sector Expenditure

This strength of the saving habit has attracted widespread attention in recent weeks and has been adduced by many commentators—especially by the more impatient of the "expansionists"—as a reason for expecting the Government to find difficulty in quickly stimulating a renewed growth in aggregate output. The big dynamic influence on the economy at the moment appears to be the rise in expenditures by the public sector especially capital expenditures; but this rise in public sector investment seems to have been more considerably offset than had been expected by the falling away of private investment. Aggregate fixed investment by industry, including the distributive and service industries, dropped by 4 per cent in real terms, allowing for seasonal influences, in the third quarter of 1962; but fixed investment by manufacturing industry fell much more steeply, and, for the fourth successive quarter, it was down by 9 per cent.

This co-juncture of rather disappointing business news caused a distinct change of mood in city circles just before Christmas, and for a few days at least stock market observers and some Press commentators swung sharply over to a distinctly gloomy interpretation of other indices that did not in fact show any major change of trend. In particular, a somewhat distorting colour was imparted to the figures of the unemployment count of 10th December; these showed that, over a four-week period, the total unemployed in Great Britain had risen by 22,288 to the relatively high point on 566,196, equivalent to 2.5 per cent of the labour force, as compared with 2.4 per cent in November and 1.7 per cent in December 1961. Human concern above the hardship of rising unemployment, especially at the peak of the winter (and it has since been proving itself the worst winter for many years) did not justify, however, the representation of the December figures as a severe deterioration. Several comments tended to overrate the decline in unemployment that is common between November and December (the normal seasonal decline is in fact only about 1,000) and hardly any of them brought out the point that the true rise, after eliminating seasonal movements, was almost precisely the same as in the two preceding periods.

Balance-of-Payments

A somewhat similar coloration was imparted to some comments on the balance-of-payments estimates for the third quarter. These, admittedly, were rather disappointing, since the new seasonally corrected series showed that Britain's balance on all current-account transactions overseas relapsed from the surpluses estimated for each of the two preceding quarters, into moderate deficit. The third-quarter deficit was put at £13 million, compared with surpluses of £37 million in the second quarter and £9 million in the first, and £12 million in the corresponding quarter of 1961. Most of the deterioration was due to a rise in (f.o.b.) imports, seasonally smoothed, from £1,003 million to £1,039 million, their highest since the first quarter of 1961. Exports were virtually maintained at the peak of just over £1,000 million reached in the second quarter.

It is important to observe, however, that, though the current account worsened, the so-called overall "monetary position" improved once again. In the third quarter, the decline in the central gold and exchange reserves was more than accounted for by net repayments of short-term external indebtedness—in part by a reduction of the London balances of the overseas sterling area, but mostly by repayments of the exchange borrowed from the International Monetary Fund during the crisis of 1961. The net gain during the quarter amounted to £30 million, in spite of the swing of the current account into deficit to the extent of £45 million (before seasonal adjustment) and in spite of £53 million of net outgoings (compared with £60 million in the previous quarter) in aid and long-term investment overseas. To reconcile these two sets of figures—the "identified" outgoings on current and long-term capital account and the net gain on the monetary "position"—the accounts include a "balance item" of unidentified earnings or borrowings (or net errors, of an over-pessimistic kind, in the other estimates). In the third quarter, this unidentified credit balance totalled £128 million, equal to nearly three times the identified current deficit.

Fresh Dose of Stimulants

For the time being, the presence of this large unexplained credit justifies one in reserving judgment on the question whether the third-quarter current-account figures indicate a significant change of trend. On the other hand, coupled with a rather sharp setback in exports in November (from their all-time peak in October), they clearly afford grounds for a continuance of the Government's cautious attitude towards reflation. This month's dose of stimulants for the economy has been a modest one, comprising a further concession in purchase tax, and then a reduction in the Bank Rate from 4½ to 4 per cent.

The first move had indeed been generally hoped-for, though not necessarily quite so soon; following the precedent set by the reduction in motor-car purchase tax from 45 to 25 per cent early last month, it had been expected that the limited range of goods left in the 45 per cent (top) tax bracket would be treated similarly in due course. This has now been done, with benefit notably to radio and television sets, gramophones and recorders, which account for some two-thirds of the £30 million by which tax collections are expected to be reduced in a full year as a result of this relief. In the prevailing atmosphere, the concession is unlikely to start any massive boom in the industries concerned, but it will at least have one quick effect—by avoiding the exceptional falling off in retail demand that would otherwise have been virtually certain to occur in these few months before the budget.

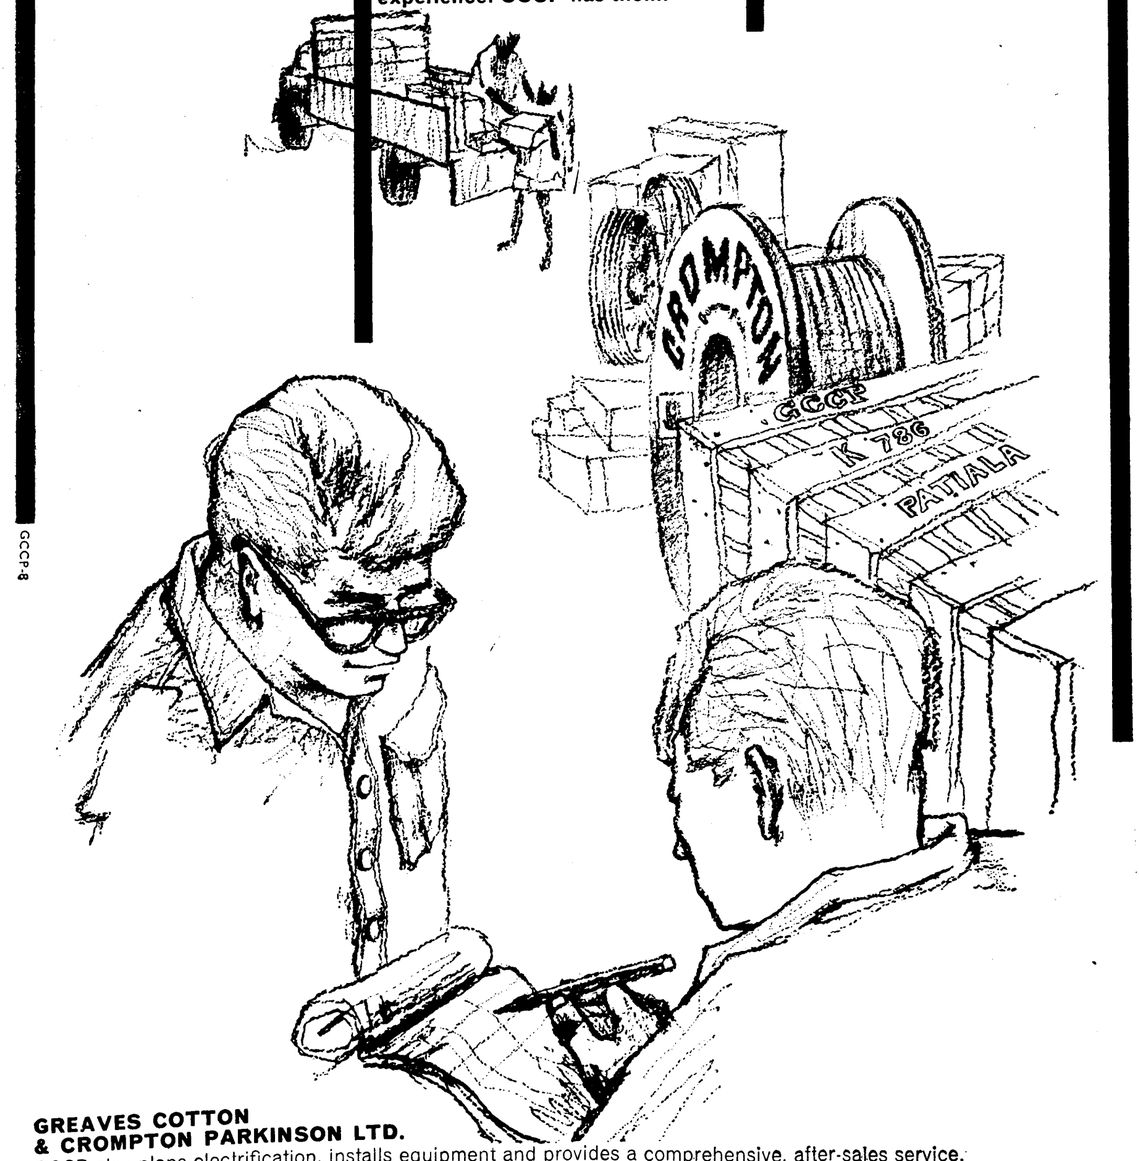
The other move in estimulation, the cut in the Bank Rate, is likewise not a major operation, but it has been accompanied by an interesting technical change that could prove to be of considerable importance. The Bank of England has intimated to the discount houses that, when they come to it for loans "at last resort," loans traditionally made for a minimum period of seven days, they will be charged Bank Rate or over (apparently up to 1 per cent over) at the discretion of the Bank. In recent years, the practice has been to grant these seven-day loans at Bank Rate, whereas, between the wars, they were normally made at half per cent over Bank Rate, and in still earlier times at a varying relationship to Bank Rate. The aim of the change is to help the authorities, when they think fit, to keep the rate for Treasury Bills closer up to Bank Rate; this Bill Rate is governed by the weekly tenders for bills, and these in turn are strongly influenced by the tactics of the money market houses whose borrowing costs will be affected by the new "discretion" of the Bank. It is the Bill Rate rather than the Bank Rate as such that determines the attractiveness of London to foreign funds. Hence, if Bill Rate is closer to Bank Rate, it may be possible to work, on the average, at a somewhat lower Bank Rate than would otherwise be needed to protect the exchange value of sterling with probable benefit to the domestic economy in conditions when reflation is the objective.

LONDON, *7th January*

BANK OF INDIA EARNS MORE

The declared profit of the Bank of India Ltd. for the year ended 31st December 1962 at Rs. 111.54 lakhs, after providing for taxation and making the usual provisions for contingencies, shows an increase of Rs. 1.23 lakh over the previous year's figure. Together with Rs. 29.16 lakhs brought in, the total sum available for distribution amounts to Rs. 140.70 lakhs. Out of this, Rs. 22.50 lakhs (Rs. 15 lakhs a year before) have been ploughed back to the reserve fund which, inclusive of Rs. 3 lakhs shown under development rebate reserve, stood at Rs. 328 lakhs in the previous year. The dividend on the Rs. 50 paid ordinary shares has been maintained at 20 per cent per annum, subject to tax. It is made up of the 8 per cent interim paid earlier on the then existing capital of Rs. 300 lakhs and 12 per cent final to be paid on the subsequently increased paid-up capital of Rs. 405 lakhs. The total distribution to the shareholders, therefore, works out to Rs. 72.60 lakhs, as against Rs. 60 lakhs for 1961. The carry forward, subject to the payment of bonus to staff, amounts to Rs. 45.60 lakhs. In the previous year, bonus had absorbed Rs. 19 lakhs only.

UNITED COMMERCIAL BANK LTD.



Good progress has obviously been made by the United Commercial Bank Ltd. during the year ended 31st December 1962, for the declared net profit for the year has increased to Rs. 73.33 lakhs from Rs. 72.61 lakhs for the previous year. The dividend on the Rs. 50 paid 100-rupee ordinary shares is proposed to be maintained at 12 per cent per annum, subject to tax, on the increased capital of Rs. 3 crores following the issue of one right share for every two shares held at a premium of Rs. 25 per share on 13th August 1962. On the new shares, however, the dividend is only *pro rata*. The aggregate distribution to shareholders by way of dividend amounts to Rs. 24.50 lakhs, as against Rs. 24 lakhs a year before. The transfer to reserve fund has been reduced by Rs. 5 lakhs to Rs. 25 lakhs. Bonus to staff aborbs Rs. 2.50 lakhs more at Rs. 16.50 lakhs. The gratuity trust fund gets the same amount as in the previous year, namely, Rs. 4 lakhs. The Company donated Rs. 2.15 lakhs to the National Defence Fund and the Dr. B. C. Roy Memorial Fund. The amount to be carried forward is Rs. 3.25 lakhs, as against Rs. 2.07 lakhs brought it.

BUILDING A FACTORY?
GCCP SUPPLIES ALL YOUR ELECTRICAL EQUIPMENT

Electricity makes most things tick. It turns a mass of inanimate metal into an intricately moving, highly functional producer. Electricity—converted to mechanical power—brings a factory to rumbling life.

WHAT'S NEEDED?
A bewildering range of electrical equipment. GCCP supplies all of it—transformers, high and low tension switchgear, distribution boards, motors, starters, V-belt drives, plugs and sockets, lighting fittings and many other items. Producing this equipment to the highest possible standards calls for a concentration of specialized skills and experience. GCCP has them.

GROWTH OF DEPOSITS OF CO-OPERATIVE BANKS INADEQUATE

RESERVE BANK STUDY CALLS FOR RE-EXAMINATION OF POLICY

A STATE-WISE analysis of the trend of deposits of State and central co-operative banks during the period 1957-58 to 1960-61 is contained in a study published in the latest (December 1962) issue of the *Reserve Bank of India Bulletin*. As the period covered by the study coincides with three of the five years of the second Plan, the analysis provides a fractual background against which the magnitude of the efforts which co-operative credit institutions should make in deposit mobilisation during the third Plan period could be assessed. It may be recalled here that the third Plan envisages a lending of Rs. 530 crores by way of short- and medium-term credit by co-operatives by 1965-66. Of this, not more than Rs. 250 crores may be made available for them by the Reserve Bank. The co-operatives will, therefore, have to rely increasingly on their own resources for reaching the credit target of Rs. 530 crores. In other words, they have to attract more deposits to support their enlarged lending operations. It will be pertinent to record here that, in 1960-61, out of a total credit of Rs. 203 crores provided by primary credit societies about Rs. 163 crores were based on lending by the Reserve Bank to apex banks. In other words, the progress made by co-operatives in deposit mobilisation in the second Plan period was inadequate.

Although the total deposits with co-operative banks increased during the period 1957-58 to 1960-61, the annual rate of growth was not uniform. Deposits with State co-operative banks increased from Rs. 45 crores at the end of June 1958 to Rs. 72 crores at the end of June 1961 and those with central co-operative banks from Rs. 66 to Rs. 111 crores. The total of deposits of these two sets of co-operative banks was up from Rs. 112 crores to Rs. 183 crores. A year-to-year variation shows that the increase was Rs. 23 crores (or 21 per cent) in 1958-59, Rs. 19 crores (14 per cent) in 1959-60 and Rs. 29 crores (19 per cent) in 1960-61.

Inter-State Variations

There was considerable inter-State variations in the deposits of State and central co-operative banks. Deposits were mostly concentrated in two States, namely, Maharashtra and Gujarat which, though having only 14 per cent of the families coming under the co-operative fold all over the country, accounted for as much as 40 per cent of the total deposits in the country. Next to Maharashtra and Gujarat, the States which showed a sizable concentration of deposits were U.P., the Punjab, Mysore, Madras, Madhya Pradesh and Andhra. These six States together accounted for 50 per cent of the families and 44 per cent of the total deposits. In the remaining States, particularly W. Bengal, Rajasthan and Bihar, the position was relatively unsatisfactory.

Within the individual States, the deposits position showed considerable regional variations. In some regions, such as the Deccan region of Maharashtra, deposits with central banks were far larger, as compared with the Konkan and Vidarbha regions. Equally marked were the variations between one bank and another within the same State. Thus, in Maharashtra, out of the 35 central banks, 32 banks had deposits exceeding Rs. 10 lakhs each but 76 per cent of the total deposits in the State was accounted for by 10 banks in one region.

The increase in deposits with State and central co-operative banks in the country as a whole during the period 1957-58 to 1960-61 was 63 per cent. Owing to non-availability of comparable data, the Reserve Bank study has made no analysis of inter-State variations in deposits of the State co-operative banks, otherwise known as the apex banks. Its study is, therefore, restricted only to trend of deposits with central banks. It shows that deposits with central banks registered an increase of 67 per cent over the period. Average deposits per central bank increased from Rs. 16 lakhs in 1957-58 to Rs. 29 lakhs in 1960-61. The average deposits per bank at the end of June 1961 exceeded Rs. 50 lakhs in Gujarat, Maharashtra, Madras, and Mysore and were between Rs. 25 lakhs and Rs. 50 lakhs in Andhra Pradesh, Kerala and Punjab. The increase in average deposits per bank was significant in Maharashtra, Gujarat, Mysore and Madras.

It is obvious that the percentage increase in deposits does not really indicate the rate of growth of deposits, because of variations in the volume of deposits in the different States. So also the average deposits per bank cannot be considered a reliable indicator of the growth of deposits because of the concentration of deposits in a few banks. Hence, according to the authors of the Reserve Bank study, a more reliable indicator of growth of deposits would be the increase in the average deposits per 100 families. According to this indicator, the rate of growth of deposits was relatively high in Gujarat and Maharashtra, followed by that in Mysore, Punjab and Madras, in that order. The rate of growth in Maharashtra and Gujarat was almost three to four times that in the latter three States. It is particularly noteworthy that Andhra Pradesh, where co-operatives are relatively well developed, deposits did not record a substantial rate of growth.

Types of Deposits

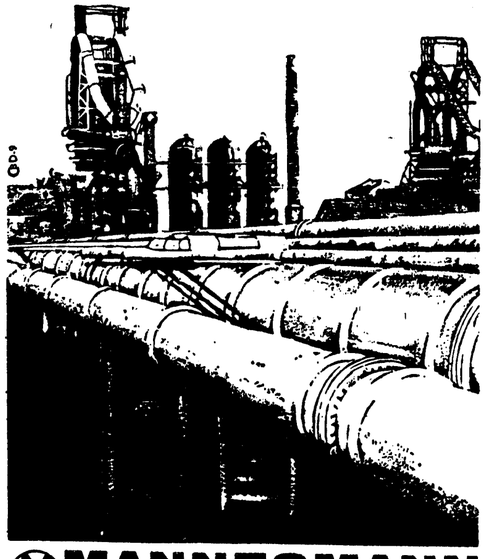
Among the different types of deposits, both current and fixed deposits were more important than the savings deposits with State co-operative banks, while all the three types of deposits appeared more or less equally important in the case of central banks. The following table illustrates this position:

Deposits	Proportion of deposits of each type to total deposits (per cent)		Percentage change in deposits in 1960-61 over 1957-58	
	State co-operative banks	Central co-operative banks	State co-operative banks	Central co-operative banks
Current	35 (25.6)	28 (31.5)	+ 52	+ 84
Savings	9 (6.6)	29 (31.9)	+ 8	+ 66
Fixed	34 (24.7)	33 (36.7)	+ 53	+ 67
Others (reserve fund, provident fund deposits, etc.)	21 (15.4)	10 (10.5)	+144	+ 65
All-India	100 (72.3)	100 (110.6)	+ 59	+ 67

Note:—Figures in brackets indicate absolute amounts in crores of rupees.

An analysis of the pattern of ownership of deposits revealed certain interesting trends. Deposits with State co-operative banks were predominantly from societies, central and primary, accounting as they did for more than 60 per cent of the total. But the percentage varied considerably from State to State. Deposits from societies exceeded 80 per cent in Gujarat, the Punjab, Mysore and Kerala. They were between 60 and 80 per cent in Andhra, Bihar, Madhya Pradesh, Maharashtra, U.P., Rajasthan and Tripura. Deposits from individuals accounted for a sizable proportion in Madras, Assam, Delhi, Jammu and Kashmir, West Bengal and Orissa. In respect of central banks, the proportion of deposits from fellow central banks accounted for only 40 per cent while those from individuals and others (non-members) formed 54 per cent. Whereas the deposits with central banks from individuals and others rose by only 50 per cent during the period 1957-58 to 1960-61, their total deposits increased during the period by as much as 67 per cent owing to a much larger increase in deposits from primary societies.

Apart from such factors as the development of the co-operative movement in general, the financial stability of individual banks, the confidence of the investing public in them and the banks' efforts at tapping rural savings, the growth of deposits with co-operative banks is also influenced by the banking facilities made available to customers and also the rate of interest offered on deposits. The rate of interest which co-operatives pay on deposits are largely determined by the conditions in the market, on the one hand, and the margin decided upon between the lending rates and the borrowing rates, on the other.



Interest Rates

A study of the rates of interest offered by co-operative banks to depositors discloses that, generally, the central co-operative banks pay ¼ per cent to ½ per cent on current deposits. The rates of interest on savings deposits were generally between 1½ per cent and 3 per cent and on fixed deposits anywhere between 2 and 5 per cent, depending upon the local conditions and the duration of deposits. The usual rates of interest on the different types of deposits offered by the central banks in the northern and eastern States were, however, generally lower than those in other States. Commenting

COAL— VITAL RAW MATERIAL, WORTHLESS WITHOUT TRANSPORT

Unless delivered to industry, coal might just as well be rubble. The growth of our industries means increased coal consumption. The railways, working to full capacity, find it difficult to keep up with the demand. Vital industries are constantly faced with coal shortage. The Indian Roads and Transport Development Association has made a valuable contribution towards public awareness of this urgent and vital problem. They estimate that by 1965 the demand for long-haul traffic will be 330 million tons against a transport capacity of only 290 million tons—a gap of 40 million tons. With better roads and modern vehicles, Road Transport can deliver the goods.

CARPET INDUSTRY IN INDIA

SHOULD POWERLOOMS BE INTRODUCED?

WHENEVER it is suggested that powerlooms be introduced into India to weave carpets, a cry of protest goes up from conservative quarters. It will ruin the handwoven carpet industry and throw thousands of poor peasant-weavers out of work, it is said. But a deeper examination casts doubt on the validity of this opposition.

It is right to treat the proposal warily, because the wool carpet industry is providing a good measure of two things vital for India's current development plans, namely, foreign exchange and employment or part-employment for very many people. Neither must be endangered. The whole question whether powerlooms would be an evil or a blessing resolves itself into three component parts. Will it adversely affect sales within India? Will the Indian machine-made carpet be competitive with foreign ones in the world market generally? Will it adversely affect the sale of Indian's handwoven carpets abroad?

About 90 per cent of Indian carpets are exported, and the U.K. usually takes about two-thirds of them, or roughly 1.5 million sq. yards. Yet machine-made carpet production in the U.K. itself is running around 45 million sq. yards, in spite of which the Indian carpet still sells. The U.S.A. is India's second biggest customer, taking about half a million sq. yards, although the production of carpets and rugs there is over 100 million sq. yards.

To a certain extent, all floor coverings—linoleum, coir mats, carpets, and so forth—compete with one another, but the fact that the Indian handwoven carpet sells despite such overwhelmingly large alternative supplies available does show that as a speciality article it can hold its own, and that it has its own particular clientele.

If now India puts her own quota of machine-made carpets into the same foreign markets—say 1 or even 2 million sq. yards—it would increase total available supplies by an average of less than 1 per cent which can hardly make any significant difference to the sale of the handmade article. The long-term prospects for the handwoven carpet industry emphasise that its vulnerability is due not to the direct competition of the powerloom but because its costs are rising inexorably.

Carpet weavers, whose earnings on piece-rate for a 9-hour day amount to Re. 1.50, will not remain unaffected by Government plans to raise the standard of living and establish a greater social equality. Recently, Uttar Pradesh's Minimum Wages Act of 1948 was revised and carpet manufacturers were required to pay between 25 to 40 per cent more wages. All this must inevitably lead to a contraction in the number of those who can afford to buy a handmade article. More and more will be bought for the æsthetic value rather than as a utility article.

Within India's home market, the position is different. Protected as it is from imports of machine-made carpets, perhaps handmade ones have got a higher sale here than they would have otherwise. A proportion of the internal business of, say, a quarter of a million sq. yards, might be lost to the powerlooms unless some protection were given. This might be done by ruling that the whole production of carpet powerlooms be exported. Or a vigorous sale promotion within the country might increase the internal market sufficiently to satisfy both.

Finally, the question whether Indian machine-made carpets can compete with others of the same type in foreign markets is one that cannot be answered with certainty until it has been factually tried. As in all new enterprises, there is an element of risk and much depends upon the ability of the manufacturer and the initiative of the salesman. Some have sufficient self-confidence to want to try.

There is an impressive list of favourable factors. India has the tradition and the experience of making carpets. The designers, spinners, dyers and finishers are all here. All that is required is the man in charge of the powerloom. Particularly are there ample supplies of raw wool available.

On balance, there seems to be a strong case for permitting the experimental introduction of carpet powerlooms into India, even if initially their product has to be banned from the home market. It could well mean a greater utilisation of home-grown wool and more foreign exchange, without detriment to the existing cottage industry.

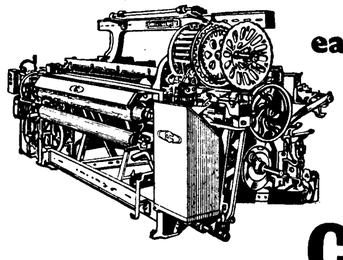
A REVOLUTION IN WEAVING

What may be described as a "revolution in weaving" was exhibited at Japan Machinery Centre in Bombay this week. The exhibit was the Air Jet Loom (Type MJ) manufactured by the Murata Machinery Ltd. of Japan. This loom has a novel method of weft insertion. It uses, unlike in the case of the conventional looms, no shuttle and draws yarn directly from cones. The picking speed is about double that of conventional looms, being 320 to 360 per minute depending on the count of yarn, as well as the width and type of cloth. Pirn winders are not necessary at all and such articles conventionally considered to be of consumption as shuttle, shuttle-box, swell, picker, picking-stick, stick-buffer and pirn bobbins are eliminated. All movements to the thread feeding devices, heald, reed, sand beam and warp regulator are incorporated in the box frame. Shafts are carried in ball or roller bearings—to be lubricated only once a year. Transmissions, connecting linkages and most of the other motive parts, are completely enclosed in the box frame—a feature which reduces many accidents.

The design of the loom is simple and it is easy to handle. The cost of production is claimed to be very low, since one worker can operate as many as 30 looms, as against only eight of other automatic looms. Moreover, the loom can weave almost twice the quantity of cloth produced on other looms. The price of the loom is about Rs. 16,500 to Rs. 17,000 (delivery in Bombay.)

RAW WOOL IMPORTS

The import policy for wool for the period October 1962-March 1963 was announced by the Government recently. There is no important change in the policy. Licences for import of wool tops, raw wool and shoddy wool will be granted, as in the past, in consultation with the Textile Commissioner for a period of 12 months. An overall ceiling is fixed for the grant of foreign exchange to the industry. Imports of handknitting wool, wool fabrics and wool weaving yarn remain banned.



The following table shows the raw wool and wool tops imports into India during the first nine months of 1961 and 1962:

(In thousand lbs.)

	Jan.-Sept. 1961	1962
Raw Wool		
Australia	3,993	7,820
New Zealand	833	1,480
United Kingdom	431	176
Argentina	207	108
Uruguay	294	269
Other countries	224	161
Total	5,982	10,014
Wool Tops	(Including carded sliver)	
Australia	3,376	3,966
France	250	120
Japan	2,603	1,761
United Kingdom	4,645	3,230
Other countries	369	152
Total	11,243	9,229

IMPORT OF TEXTILES EQUIPMENTS

Those units of cotton textiles, art silk and woollen industry which desire to import small value ancillary equipments and permissible items of hosiery machinery are required to submit their applications for the period October-March 1963 to the concerned Regional Offices of the Textile Commissioner in accordance with the procedure laid down in the circular dated 17th April 1962 addressed to the industry and the various associations in cases where such applications have not already been made earlier. The Regional Offices will also consider applications for import of sewing machines required by the registered manufacturers of ready-made garments. The last date for receipt of such applications is 15th February 1963. The units may also submit their applications for spares, ancillary equipments, capital equipments, etc., against machinery entitlements against the Export Promotion Scheme on or before 15th February 1963 to the Textile Commissioner, as well as to the licensing authorities.

MORE ON FINANCES OF COTTON MILLS

PROSPECTS FACING LANCASHIRE TRADERS SOMBRE

From Our Special Correspondent

MANCHESTER, *8th January*

FURTHER analysis of the results of cotton companies published in the year just ended show that the figures, although in most cases well below the 1961 level, were by no means unsatisfactory in relation to those announced in comparable trading periods during the past decade. Having provided a table of financial details in respect of the spinning industry in this Letter last week, there now follows an assessment of the earning power of the other branches of the trade, most of which include much bigger firms than the single-unit spinning mills:

MANCHESTER LETTER

	Companies	Average profit per company	Yearly average dividend
		£	Per cent
Combines			
1951	11	761,526	19.00
1952	13	534,004	17.42
1953	12	264,180	11.94
1954	12	431,928	13.58
1955	14	333,213	14.99
1956	14	224,904	13.23
1957	14	354,919	12.72
1958	14	235,716	10.79
1959	14	120,254	9.73
1960	14	375,425	12.48
1961	14	470,799	14.82
1962	14	250,317	12.83
Spinner-weavers			
1951	17	194,423	23.03
1952	17	177,045	19.98
1953	21	74,047	17.06
1954	17	82,200	16.32
1955	20	60,701	13.96
1956	18	50,233	12.53
1957	18	69,197	10.89
1958	19	71,504	10.74
1959	20	57,736	10.18
1960	17	112,844	14.17
1961	16	171,868	17.51
1962	16	145,148	13.60
Weavers			
1951	21	120,494	31.79
1952	21	79,837	24.99
1953	28	49,821	21.21
1954	28	38,120	15.98
1955	27	42,285	13.80
1956	24	28,090	9.61
1957	24	24,320	6.27
1958	23	25,015	5.07
1959	22	19,073	6.64
1960	20	47,492	9.66
1961	17	57,512	13.11
1962	17	76,073	11.54

The key role now played by the main groupings in the industry has been commented upon on previous occasions; this preponderance has been even more noticeable since the reorganisation scheme. Even so, the 1962 returns for the 14 major combines exceeded on average those for several years in the 1950's.

In the case of the groups, comparable statistics have been available for some years, but changes in the structure of the trade affecting spinner-weavers and firms mainly engaged in weaving make the above comparisons not exact. The years do not necessarily include the same firms, although the results of many important companies run throughout the figures. Nevertheless, average earnings of spinner-weavers were not only well maintained during the past decade but have improved since the reorganisation scheme. A similar comment can be made on the position of weavers, though, in both branches, the current tendency is to reduce dividends in order to be on the safe side.

No Punches Pulled

Sombre, indeed, are the prospects facing Lancashire traders outlined in yet another assessment of the outlook in the event of Britain's now more problematical entry into the European Community. The dismal forecast provided just before Christmas by Mr. J. A. Blackburn, one of the trade's best-known economists, received due attention at the hands of those outside commentators who are usually only too ready to leap upon any suggestions that our local industry is as out-of-date and uncompetitive as they themselves believe. His opinions, published in the *Three Banks Review*, certainly pull no punches, but are in marked constrast to a statement issued earlier last month on behalf of clothing exporters. Teams which had visited Europe indicated that Continental buyers were very enthusiastic about the quality of British cloth.

Although this probably favours the woollen industry rather than cotton, there must be many instances where British textile manufacturers will be able to make progress in trade across the Channel if they set their minds to it. Such a view fits in with Mr. Blackburn's final comment: "The challenge is there and it is up to Lancashire to accept it, if it wishes to survive." Previously, however, he made no bones about the problems ahead for local producers. Production per worker is mostly lower than in the E.E.C. countries, he declared; our mills are considerably less well equipped, machine utilisation is much poorer and commercial organisation is weaker. "As matters now stand it would seem that we cannot avoid losing some ground in the enlarged Community," was his summing up.

Role of Merchants?

Once again the structure of the industry in Lancashire gets its usual condemnation. It should become more vertical and operate in larger units, Mr. Blackburn urges. Only a small market for intermediate products, such as yarn and grey cloth, exists and the separation of manufacturing and merchanting in Britain, already exploited to the full by overseas suppliers in the past, would continue, to Lancashire's detriment, if this country is to be allied to the Community. The British merchanting section could well be turned into a body of agents for Europe—his answer was for producing firms to carry out the whole process of manufacturing and marketing for themselves.

Such, briefly, is Mr. Blackburn's summary of the situation, but for those who look further than merely the last few paragraphs of any document of this kind there is much of interest in the body of the article. For example, Mr. Blackburn points out that, even when all barriers have been removed under the Rome Treaty, there will still remain a number of "Nutural" obstacles to trade which will give each local producer a certain amount of protection. He instances the cost of shipping a relatively low-priced cotton fabric to Italy from the U.K. as being as much as 5 per cent of the cloth price, although the average for all fabrics to all Common Market countries is perhaps around 2 per cent. The question of transit time, he adds, can also be a consideration for buyers in a hurry.

Cost of Supplies

In view of the world market for raw cotton, the countries of the Common Market and Britain can obtain supplies on equal terms but, he adds, about one-third of the raw material used in Europe consists of man-made fibres where the situation is quite different. These are produced by a very small number of firms and are protected by formidable import duties and in some cases by patent rights. The cost of viscose staple fibre in Britain is 22¾*d.* against a range of from 21½*d.* to 23*d.* in Europe. The present British import duty of staple fibre of 7½*d.* per lb. will eventually be abolished within the Common Market and under the common external tariff will be levied at 10 per cent or about 2½*d.* per lb. at current prices.

Wage comparisons between Lancashire and the Continent show that average earnings and supplementary charges in the British spinning industry are the lowest in the Community, except for Italy. Mr. Blackburn warns, however, that this is not entirely true in the case of those mills which have modernised their operations, due to the substantial premium which has to be paid for labour over some of the less progressive units. In a re-equipped and re-deployed spinning mill on two shifts, the cost of a spinner, including fringe benefits of 10 per cent, is 74*d.* per hour, against 56*d.* in a single-shift, traditionally deployed, mill. The cost of an operative weaver on automatic looms working multi-shifts is 88*d.* per hour, against only 54*d.* on single shift Lancashire looms.

DEVELOPMENT OF AGRICULTURE

AN ASSESSMENT OF THE PACKAGE PROGRAMME

By Our Special Correspondent in New Delhi

THE Intensive Agricultural District Programme, commonly known as the Package Programme, has been put into operation in fifteen selected districts in the country. The Programme emerged from the recommendations of an expert mission sent by the Ford Foundation between January and April 1959. In its report, the Ford Foundation team made recommendations on a ten-point programme to increase agricultural production. The objectives of the programme were defined as:

(1) to demonstrate in pilot districts the most effective ways of expanding national food production by co-operative effort between the Centre, the State, the district, the block, the village and the individual cultivators;

(2) to increase the income of the cultivator and his family;

(3) to increase the economic resources and potential of the villages;

(4) to provide an adequate agricultural base for more rapid economic development and social betterment.

Before an attempt is made to evaluate the achievements hitherto under the Programme, it is necessary to recapitulate the ten points in the Ford Foundation team's recommendations. These were:

1. Adequate farm credit, based on production potential made readily available through strengthened service co-operatives.

2. Adequate supplies of fertilisers, pesticides, improved seeds, improved farm implements and other essential production needs, made readily accessible through strengthened service co-operatives.

3. Price incentives to participating cultivators through assured price agreements for rice and wheat (and for millets in appropriate districts) announced two years in advance.

4. Marketing arrangements and services which enable the cultivators to obtain the full market price for his marketed surplus.

5. Intensive educational, technical and farm management assistance made available in every village in every development block in the pilot districts.

6. Participation of all interested cultivators, both large and small, in direct individual farm planning for increased food production.

7. Village planning for increased production and village improvement to include livestock improvement, strengthening of village organisations such as co-operatives, *panchayats*, development councils, village leadership.

8. A public works programme, using local labour, to undertake drainage, bunding, soil conservation, minor irrigation, building of accessible godowns and roads and other development works contributing directly to increased food production.

9. Analysis and evaluation.

10. Co-ordination on a priority basis by village, block, district, State and Centre, of all resources essential to mount and carry out the programme with maximum speed and effectiveness.

Criteria for Selection

The criteria for the selection of the district were: The district should not require major irrigation, or drainage undertakings; those with pending land consolidation programmes should be avoided; the community development programme should be well organised, so that there would be functional credit, marketing and supply co-operatives and local leadership receptive to improvement.

The Ford Foundation team discussed in detail the administrative procedures that would be needed in supply of fertilisers, credit and assured prices. The Central Food Ministry no doubt was enthusiastic about the Package Programme from the very beginning but, for various reasons, the enthusiasm was not shared by all the State administrations. Probably, the States were not happy at the prospect of major changes needed to pep up the administrations for speedy advance on the lines suggested by the Ford Foundation team. To some extent the measure of success or comparative backlog in the implementation of the Programme in various districts is a reflection of the resilience of the State administrations.

Early in 1960, the Package Programme was initiated in seven districts in seven States: Aligarh (Uttar Pradesh); Ludhiana (Punjab); Pali (Rajasthan); Raipur (Madhya Pradesh); Sahabad (Bihar); Tanjore (Madras) and West Godavari (Andhra Pradesh). As in many other fields in Uttar Pradesh, the project in Aligarh district takes the cake for the poorest performance, while West Godavari in Andhra Pradesh gets the credit for best performance. The districts were selected after detailed discussions with the State Governments and some observers doubt whether the Uttar Pradesh and Rajasthan choices of districts were the best possible in the two States, because, coupled with the natural and created irrigation facilities, the districts should also have been chosen with an eye on the possible public response. Tanjore was the first to launch the Package Programme in April 1960, followed by Shahabad and West Godavari in the *rabi* season 1960-61. The other four districts, Ludhiana, Pali, Raipur and Aligarh implemented the Programme from *kharif* 1961-62. In these seven districts, there is a total of 139 blocks; out of these, the Package Programme was in operation in 115 blocks by June 1962. That is not to say that the cultivated area in these 115 blocks were entirely covered. (See Table I). In Pali and Shahabad districts, for example, the coverage was as low as 2 and 3.8 per cent of the total cultivated area in the district. In Ludhiana, the coverage was 36.6 per cent, in Raipur 8 per cent, in West Godavari 30.5 per cent and in Tanjore 18.7 per cent. The figures for Aligarh were not available officially, in the absence of information on the total cultivated area and the area under the Package Programme.

Food Programme Neglected

The original stipulation when the Programme was launched was that, in the first year itself, the Programme should cover 20 per cent of the cultivated area in a district and the coverage should rise to more than 65 per cent in the fifth year. The theory behind the Package Programme production targets was that the 32 per cent increase contemplated as a whole in the third Plan for agriculture should be achieved in the Package districts in three years; and the target for the Five-year Plan period for these districts was between 50 and 60 per cent increase. Pali, Shahabad and Aligarh reflect the neglect of the food programme even in what were selected as prize demonstration districts.

The total under the Package Programme increased, from 300,000 acres in 1960-61 to 1,200,000 acres by June 1962. While crop cutting experiments have shown that the rate of yield for foodgrain crops in the areas covered were naturally higher than the average yield in the district, the small proportion of the area covered meant that these higher yields were not reflected much in the total crop production of the districts.

Of the total of 13,285 villages in the districts under the Package Programme, 4,786 had been touched by the farm plans or more than a third, but, in terms of area covered, the figures were 12.11 lakh acres out of 65.51 lakh acres. The area covered until June 1962 was 18.5 per cent of the total cultivated area in the blocks and 15.6 per cent of the entire cultivated area in the seven districts.

The pattern of participation in the Programme varies widely from district to district and even from village to village. In some villages, all cultivating families have joined, while in some others only a small fraction is participating. And, in many instances, most of the participants have not adopted the improved practices on their entire holdings. Even the farm plans have not been adopted entirely by many cultivators. A primary difficulty is that the organisers have been unable to remove a variety of village rivalries. Often, for personal reasons, a cultivator is not a member of a particular co-operative and he becomes ineligible for loans. Or some of the bigger farmers would need sizable amounts for implementation of improved practices on their holdings and such amounts are not available from co-operatives.

Apart from these rivalries, a major affliction with the Package Programme is the non-availability of proper staff. The salaries and facilities offered are not attractive enough at many of the lower levels. In Tanjore and Raipur, there is a shortage of village level workers and this has delayed the extension of the Programme to new areas in Tanjore. The village level worker is also often called upon to tend to the behest of more than one superior officer in a variety of fields and is unable to concentrate his efforts on agriculture. Senior agricultural extension officers are also being transferred too quickly for them to settle down to work in an area.

At the State Agricultural Secretaries' Conference in May 1962, one of the problems dealt with was the lack of co-ordination in some districts between official agencies and non-official organisations, particularly co-operatives. There are co-ordination committees at the State and district levels already functioning, but it was suggested at this conference that another sub-committee at the district level should be formed (with the project officer, co-operative banker and co-operative society official, and a Reserve Bank representative and others) to review periodically the problems relating to agricultural credit, supplies and marketing. This suggestion, however, has been resisted by most of the State Governments who, perhaps, feel that multiplication of committees is no solution to co-ordination problems.

Reluctance to Delegate Powers

Another problem in the operation of the Package Programme is the reluctance of various State administrations to delegate financial and other powers to people at the district level. The Andhra Government, however, is

SUGAR INDUSTRY IN DIFFICULTY AGAIN

DIVERSION OF CANE SUPPLIES TO "GUR" AND "KHANDSARI" TO BE CHECKED

IT is reported that the Government of India will soon announce some important steps designed to maintain sugar production at as high a level as possible in the current season. The whole issue was discussed by Mr. S. K. Patil, Union Minister for Food and Agriculture, when he met the Chief Ministers of Uttar Pradesh, Punjab and Rajasthan at New Delhi on Friday the 11th inst. Mr. Patil is understood to have hinted at two notable measures, one to prevent diversion of sugarcane from sugar mills to *gur* manufacture and the other to raise the ex-factory price of sugar.

The urgency of the first measure has arisen from the sharp fall in the cane supplies to sugar mills, following a distinct setback to the cane crop in several parts of the country and the large-scale diversion for *gur* and *khandsari* manufacture, thanks to the high prices commanded by these sugar substitutes. The size of the current season's cane crop is expected to be smaller by 12 per cent in Uttar Pradesh, 25 per cent in Bihar and 15 per cent in Maharashtra. The quality of cane has also suffered a setback in many parts of the country, resulting in a lower yield of sugar. It is, therefore, not surprising that prices of *gur* and *khandsari* continue to rule pretty high. At the beginning of the current season, *gur* prices in Kolhapur and other producing centres in the Deccan were as high as Rs. 90 to Rs. 100 per quintal, whereas white sugar was quoted at only Rs. 105 to Rs. 110 per quintal and that too including the excise duty of Rs. 30. Similar was the case in Hapur and other centres in Uttar Pradesh. It may appear to be paradoxical, as the Indian Sugar Mills Association observes, that *gur* prices should be advancing at a time when sugar is available in plenty. The paradox, however, is not without an explanation. It is true that the country has plenty of sugar, but the fact is that the supply to the market is regulated by the Government through monthly releases which in the aggregate are no greater than the demand. If the large supply of sugar is to have a bearish effect on *gur* and *khandsari* prices, it must be freely allowed to flow into the market. Since neither the industry nor the Government wants this to happen, the abnormality in prices continues and encourages diversion of cane for *gur* production to such an extent as to pose a severe threat to the maintenance of white sugar output.

Situation Alarming

The west U.P. factories, which account for about a third of the total sugar production in India and two-thirds of the output of U.P. State, do not expect, for instance, to produce more than 600,000 tons, if the present volume of migration of cane supplies continues, as against the 800,000 tons actually produced in the 1961-62 season. And it is feared that many a factory there will have to close down by about the second week of next month, that is, two to three months before the normal closing period. Normally, this should not matter very much, for any sharp rise in *gur* production will ultimately result in a fall in its price and reverse the position sooner or later. But the authorities are understandably alarmed, for the operation of this economic law will take time and, in the meantime, the fall in white sugar production will cut into the surplus available for export and tend to create a scarcity in white sugar which is politically undesirable. Economically, too, it is desirable to increase the utilisation of sugarcane for white sugar production, as more sucrose can be extracted from cane in a modern factory than in a cottage unit. But this is not the consideration that is impelling the authorities to think in terms of restriction on *gur* and *khandsari* production.

That there was imperative need for checking any large-scale diversion of cane from factory areas to the production of *gur* and *khandsari* was obvious even before the current crushing season began on 1st November 1962. But the State Governments did nothing until very recently. Only a few days ago, the U.P. Government reimposed the levy of purchase tax (at the rate of 16 nP per quintal) on *khandsari* units in the State during the current assessment year 1962-63. The Punjab Government has banned, albeit belatedly, the manufacture of *gur* and *khandsari* in the areas of sugarcane assigned to sugar mills. At the same time, it has ordered the sugar mills to buy all the cane within these areas. As a result of this ban, the sugar mills in the State, it is said, will get an additional three million maunds of cane in the current season. One wonders why the other State Governments, too, have not taken a similar step. The Sugar Mills Association has urged the State Governments to bring within the purview of licensing all power crushers producing *gur* in factory areas. The licences, according to it, should be issued keeping in view the actual cane requirements of sugar factories. A deputation of U.P. sugar millowners recently met Mr. Patil at New Delhi and brought to his notice the substantial number of unlicensed power crushers which are operating in the west U.P. area. A vigorous plea was put forward for taking immediate steps to dismantle these unlicensed crushers and allied installations.

It is further urged that the rate of cess levied on the sugarcane utilised for *khandsari* manufacture must be stepped up. The present disparity—19 nP per maund of cane in the case of sugar and only 4 nP in that of *khandsari*—is certainly undesirable, in that it helps reduce the supply of cane for white sugar production. Incidentally, a higher rate of cane cess on *khandsari* will greatly discourage the wasteful process of utilising cane, inasmuch as the recovery of sugar obtained in the *khandsari* industry is only about two-thirds of that secured in sugar mills.

Sugar Price

The Indian Sugar Mills Association has also pleaded for an economic price for sugar. The need for such a price, it is pointed out, is inherent in the rigid conditions under which the sugar factories have to operate. To quote the industry:

"Cane price, accounting for nearly 70 per cent of the production of sugar, is statutorily fixed. Similarly fixed are the other items of cost such as taxes and wages. It is, therefore, only fair that sugar prices the factories are able to realise should correspond to the actual cost of production. Under the present conditions, the factories are finding it difficult to realise economic prices for their output. There is every likelihood that the consumer will lose before long if the present trend continues. It is obvious that production will suffer. Already there is the apprehension that this season's production would be lower than even the last year's reduced level. Under the present emergency, the Government has been urging the various industries to expand production and keep prices at a low level. This, in view of the none-too-conducive conditions obtaining in the sugar market today, implies that the authorities concerned should take prompt corrective measures."

One of the corrective measures which the Association has suggested pertains to regulated releases. Here is what it says:

"The basic objective of regulated releases was to maintain sugar prices at a fair level. But now that ex-factory prices have declined without benefiting the consumer and, in fact, threatens production, it is clearly necessary that the mechanism of regulated releases should be so employed as to ensure a fair price to factories. This was the basic objective of the Government while retaining the power of regulating releases when sugar was decontrolled in September 1961. The policy of regulated releases loses its meaning, if it does not take into account the changing market conditions and fails to appreciate the basic and common interest of consumers, producers and the Government in maintaining a high level of production. The sugar industry realises the need for maintaining the price line and, in fact, the Association has already come forward voluntarily to build up buffer stocks at some selected consuming centres in Assam and North Bengal where the possibility of prices going up due to transport difficulties is apprehended. It is, therefore, urged that the Union Government could aid the industry in maximising production by restoring confidence in the sugar market by regulating releases."

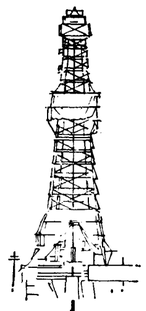
Disturbing Trend

The review of the recent trends in sugar economy as made by the Association reveals that the sugar industry has emerged from the 1961-62 season in a sorry state. The much-desired relief from excessive stocks has not materialised, despite the 10 per cent cut in production imposed by the Government. The finances of the industry have been strained to the maximum. Moreover, with the new crushing season in full swing, the factories need considerable finance for making regular payments for cane and financing new production programmes. The financial requirements have increased further due to pressure from various State Governments for payment of cane cess arrears, in view of the national emergency. Normally, perhaps, the Government would have taken a liberal view and deferred the realisation to enable mills to tide over the present difficult situation. Several other liabilities have also to be met and funds are urgently needed for stocking various store materials, too. The scarcity of finance has been aggravated by the downward trend in ex-mill prices. Consequently, while the trade has been subjected to severe hardships, the factories are finding it extremely hard to dispose of their released quotas even at the considerably reduced prices. Curtailment of fresh purchases by the trade is understandable; they cannot be expected to continue incurring losses. In a large number of cases, the factories, it is said, have not been able to effect any sales against the last two releases made by the Government, while prices continue their downward trend.

All this is disturbing indeed. The authorities—Central and States—must do something to set right the situation. While it is important that the sugar mills are enabled to maintain output at the optimum level, there is simultaneously the need to ensure easy availability of sugar in the different parts of the country, including the remote corners. This is possible only if the free forces of supply and demand are allowed to operate in the sugar market at least to some extent. Surely, the sugar industry cannot complain of mounting stocks and, at the same time, plead for restricted releases. In fact, as already mentioned at the outset, the chances are that this year the output of sugar will be no more than the domestic consumption. Accordingly, the burden of stocks will progressively diminish in the coming months and the 1953-54 season is expected to commence with normal stocks. Indeed, some millowners feel, *vide* the speech of Mr. Neville N. Wadia, published on page 112 of this issue, that, if exports in the current year were to exceed 450,000 tonnes, there might be a shortage of white sugar in the not too distant future. Further, the consumer price of sugar in some parts of the country, including Maharashtra, has gone up by Rs. 3 to Rs. 4 per quintal and come back to the level that was prevailing during the days of control. The industry may have a legitimate case for relief. But must it always be at the expense of consumers?

SERVE INDIA IN THOUGHT WORD AND DEED

There is no phase or corner of our lives where discipline and self-control cannot well be planted to give their strength and assurance to our resolution



- *Whether it be in refusing to heed the subtle poison of rumour*
- *Whether it be in foregoing luxuries to provide funds for defence*
- *Whether it be in controlling purchases of goods to avoid the inflation of prices*

GOING UP - TO GO DOWN

As the rigbuilders get to work on a new well location, so the local people say: "Ah, they're beginning to search for oil." Not so! Although the oilman's derrick is often the first *outward* sign that oil prospecting is in progress, months—perhaps years—of careful preparation by geologists, geophysicists, and other scientists will have preceded it without catching anyone's eye.

The building of the steel derrick, which is mainly a device for lowering and raising the driller's tools, drillpipe and casing into and out of the well, is one of the last stages of the operation.

It takes many skills and aptitudes—including the know-how of the sure-footed rigbuilders who erect the derricks—to find oil.

THE BELAPUR COMPANY LIMITED

SPEECH OF THE CHAIRMAN, MR. NEVILLE N. WADIA

EXEMPTION OF CANE FARMS FROM LAND CEILING URGED

A PLEA to exempt sugar farms from the purview of the Maharashtra State Land Ceilings Act in view of the fact that an agricultural income-tax of 50 nP per rupee had already been introduced in the State from 1st April 1962 was made by Mr. Neville N. Wadia, Chairman of the Belapur Company Ltd., in the course of his speech to the shareholders of the Company at their Forty-third Annual General Meeting which was held at Bombay on Thursday, 10th January 1963. One would think, Mr. Wadia said, that the Government would be satisfied with the imposition of the tax and leave the farms in the hands of companies to be run efficiently and developed further with the backing of experience and knowledge the companies had acquired through several years of hard work. Mr. Wadia dubbed it as iniquitous that the tax should apply to agricultural profits not only of 1961-62 but also of 1960-61.

The following is the full text of Mr. Wadia's speech:

"GENTLEMEN,

"The first item on the Agenda is to adopt the Directors' report and audited accounts for the year ended 30th September, 1962, but, before I make a formal proposal in this respect, I would like to mention a few matters concerned with the year under review and the current season's as well as the future, prospects. The Directors' report gives you the actual figures of cane crushed, sugar produced and average recovery percentage obtained during last season. The net profit, as a result of the year's working, is considerably down on the previous year and bears out the forecast I made when speaking to you twelve months ago. Even so, I think you will agree that the figure compares quite favourably with the results obtained by other companies, whose accounts have been published recently in the Press. The two main factors which have contributed to the lower profit are the enforced reduction in sugar production and the lower prices realised in the market following the decontrol of prices in September 1961. Other factors include higher wages due to the implementation of the Wage Board Recommendations and a general all-round rise in costs of materials and services.

Sugar Position

"The restriction on production has been removed for the current season as the Central Government want the industry to produce as much white and raw sugar as possible to meet increased export commitments and the anticipated higher consumption within the country, but the present estimate of production during the current sugar year from 1st November, 1962 to 31st October, 1963 is barely 25 lakh tonnes which indicates that the sugar manufactured in India during this period will fall short of the previous year's total by approximately 2 lakh tonnes. It could be, therefore, that, if further exports are negotiated, there might be a shortage of white sugar in the country in the not too distant future. According to present estimates, the carry forward stock of sugar at the end of the current season, after allowing for, say, 4½ lakh tonnes for exports, is anticipated to be under 6 lakh tonnes which is hardly three months' domestic requirements. The reduced production for this year is mainly due to the reported large-scale diversion of cane from factory areas to the manufacturers of *gur* and *khandsari*. The industry, through the Indian Sugar Mills Association, is, therefore, making representations to the Central Government to take suitable steps to deal with this situation and ensure adequate cane supplies to the factories. It is very unfortunate that such a situation should be allowed to arise just at a time when the Government are themselves appealing to the country for greater output in industry and agriculture.

Land Ceilings Act

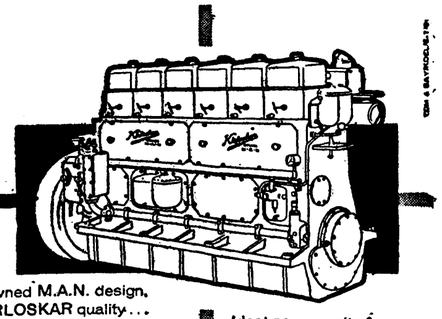
"This brings me to the question of the State Government's Land Ceilings Act which the Government intend to implement by taking over surplus lands including sugarcane farms from 1st April, 1963. Surely, it would be wise on the part of the State Government to take heed of the Centre's appeal for greater production and postpone this move until the present emergency is over, thus avoiding any dislocation in the sugar industry of the State and also the payment of huge amounts to the companies for the machinery and other assets they require but which do not become vested in the Government under the Act. These views have been put before the State Government but there has so far been no move on their part to adjust their ideas in the light of current events and circumstances.

"In the meantime, the sugar industry in Maharashtra continues to be the target of Government legislation. Recently, an education cess of Rs. 25 per acre of cane grown has been introduced, despite the fact that most factories heavily subsidise the education facilities they provide for their employees' children. Also we are now faced with an agricultural income-tax of 50 nP per rupee, which came into force as from 1st April, 1962 but which it is the State Government's intention to apply not only to the past year's agricultural profits but to those of 1960-61 as well. This, to say the least, is iniquitous, and strong protests are being made to the authorities concerned. One would think that, if the Government must have an agricultural income-tax after all these years, they would be satisfied with this imposition and leave the farms in the hands of the companies to be run efficiently and developed further with the backing of experience and knowledge acquired in past decades. Let us still hope the Government will see the wisdom of such a move before it is too late.

"Reverting to your own Company's affairs, I should mention that the expansion scheme to increase the capacity of the plant is having active attention and it is hoped to have all the additional manufacturing machinery ready for the 1963-64 season.

"Referring now to our subsidiary, the Gangapur Sugar Mills, I am glad to say that, so far, we have been able to make some progress, albeit slow, towards putting the Company on to a reasonable profit-making basis and, at the end of their financial year ending 30th June, 1962, they showed a profit of Rs. 9,35,522.65 without providing for any depreciation. This was a considerable improvement over the previous year and we were able to use this amount to reduce the losses brought forward from earlier years. Unfortunately, the cane supply situation for the Gangapur factory this current season is not at all satisfactory. This is a direct result of the Land Ceilings Act. When we took over the Gangapur Sugar Mills in 1960, it was our intention to finance a lift irrigation scheme to cover not only the Company's 4,000 acres of good caneable land but also some 2,000 acres of land belonging to cultivators in the same area and we were confident that we would eventually be able to make the Company into another 'Belapur.' If it had been possible to go ahead with our development scheme, we would by now be looking forward to harvesting our own cultivated cane and such difficulties as face us at the present time would never have arisen. However, notwithstanding the definite recommendations of the Planning Commission in the second Five-year Plan, to the effect that it would be advantageous to exempt from any Ceilings Acts sugarcane farms attached to sugar factories, and despite the fact that such farms were exempted from the operations of the Bombay Tenancy and Agricultural Lands Act, 1948, the Maharashtra Government brought in their Land Ceilings Act which gives no exemptions to the sugarcane farms in the State. In face of this Act, we had to shelve our development ideas. Hence, our predicament in the matter of cane supplies for the present season. The situation is so precarious for the future that we have approached the State Government in the matter and they are giving serious consideration to our problems. In the meantime, we are doing our utmost to get as much cane as possible by offering to assist those cultivators who are prepared to revert back to planting sugarcane instead of cotton. Lack of sufficient water in the wells has severely handicapped the local growers and, as already mentioned earlier, a number of those growers who have managed to cultivate their crops despite the water shortage, have sold their cane to *gur* manufacturers at more attractive prices than we could offer.

"From my remarks you will have gathered that, for the various reasons I have touched on, the future outlook for our factories, from the point of view of net profits is not too bright, but we shall continue to run the business as efficiently and economically as possible, always hoping that this time next year it will be found that my present views were too much on the pessimistic side."



Note: *This does not purport to be the proceedings of the annual general meeting of the Company.*

(Continued in next page)

DEVELOPMENT OF AGRICULTURE

(Concluded from page 108)

to be complimented for its leadership in the matter, and more for the spirit with which the delegation of powers has been done. Originally, the financial limit for district level decisions in West Godavari was the ridiculously low sum of Rs. 50; the amount was then raised to Rs. 500 and later to Rs. 5,000. There is a strong view that more financial powers need to be delegated in some of the other States, if speedy action is to be taken. There are still several drawbacks in the training given to field staff at the lower levels—the village level workers and the co-operative supervisors. Training programmes in the districts are not also planned well in advance to facilitate the effective participation of specialists from the Centre and the Ford Foundation.

In the initial stages, the farm planning programmes have been too complicated and another defect has been that the general farm plan techniques have not been adapted to suit local needs. There has also been not enough follow-up to see whether the farmers have adopted the farm plans and if so to what extent. In some instances, the co-operative financing institutions, not having been brought into the picture at the time the farm plans were made, were unable to meet the credit needs.

Economics of Production

Demonstration plots laid out in the 1961-62 *kharif* and *rabi* seasons totalled 9,400 and the officials have also evaluated the economics of production under the Package Programme conditions. In West Godavari, the additional income per acre from paddy was as high as Rs. 150 in one demonstration plot. In Raipur, Rs. 91 was the highest increase in income from one acre of paddy. In Ludhiana, the increase in income went up to Rs. 178 per acre of wheat.

The programme necessary for supply of improved seeds is still to be wholly implemented in the Package districts. Experiments are being made with the aim of converting selected villages into growing crops entirely for seed for neighbouring villages. The advances in increased use of chemical fertiliser vary over a wide range in the Package districts, the more spectacular increases being in West Godavari and Ludhiana (see Table II). In Ludhiana, the consumption of nitrogenous fertiliser (in terms of ammonium sulphate) rose from 5,400 tons before the Package period to 11,000 tons in 1961-62 and is expected to go up to 21,000 tons in 1962-63. The per acre consumption increase will be from 19 lbs. to 63 lbs. in 1962-63. In West Godavari, the consumption rose from 18,000 tons to 34.000 tons in 1961-62 (already 63 lbs. per acre) and will rise to 66,000 tons in 1962-63. In Tanjore, the increase has been from 28 lbs. to 57 lbs. per acre.

Chemical fertilisers are the most important factor in increasing food production under the Package Programme, but there has as yet been no efficient arrangement for fertiliser distribution in several Package districts. According to an official assessment, the drawbacks in the fertiliser field are: lack of adequate number of sale points, non-availability of the required quantity of fertilisers at the peak periods, unwillingness on the part of co-operatives to lift the stocks, especially of new types of fertilisers for fear of capital getting locked up and want of adequate godown accommodation.

In order to strengthen the programme, soil testing laboratories are being established to serve Shahabad, Aligarh, Raipur and West Godavari. In Tanjore and Ludhiana, the existing laboratories will be expanded. For Pali, the Jodhpur laboratory will be strengthened.

Co-operative Credit

The total co-operative credit made available in the districts in the Package Programme, excluding Shahabad, was Rs. 11.58 crores in 1961-62. Of this amount, Rs. 5.1 crores were given to farmers in the areas covered by the Programme. The procedure for loans still calls for more simplification.

The co-operative marketing societies have also progressed and in Tanjore paddy sales through co-operatives in 1961-62 were valued at Rs. 24 lakhs. These marketing units also recovered loans of credit societies totalling Rs. 12 lakhs. In Raipur, co-operative marketing accounted for sales of Rs. 60 lakhs in 1961-62.

To saturate the seven Package districts, more than 1,200 godowns (average 100 tons each) are estimated to be needed to bring supplies within the easy reach of the farmers. Four hundred and seventy godowns had been constructed until the middle of 1962 and another three hundred were under construction.

Further Extension

The Package Programme has been extended to districts in eight more States: Mandya (Mysore), Surat (Gujarat), Cachar (Assam), Bhandara (Madhya Pradesh), Palghat and Alleppey (Kerala), Burdwan (West Bengal) and six blocks in Jammu and Kashmir. Except for Burdwan, Bhandara and Cachar, the Programme has been launched in *kharif* 1962-63. Implementation of the Programme in Burdwan will be from *rabi* 1962-63 and in Bhandara from *kharif* 1963-64. In Cachar, much strengthening of the co-operative sector will be necessary before the Programme can be launched. Discussions were going on in Delhi in the beginning of December on the possible extension of the Package Programme to 70 more districts.

For the proper and most scientific use of water resources revolutionary changes will be needed in the agricultural sector. According to a foreign expert, at present there is much waste and in some instances in the Indo-Gangetic plains the available water can be used to farm double the crop area.

Under the present canal system, the farmer tends to use too much water, far more than is necessary. For one thing, he pays according to the area under cultivation, not according to the quantity he uses. The farmer has no control over the time the water is released into the canal. The plants have to be readied without an assurance on the date water will be available. The canal water may come too early or too late. In some areas, the water may be let to overflow into the drain and back into the canal by the farmer whose land is on the canal bank, without it reaching the next farmer who has to get the supply through the first farmer's land. In some other areas, there is a difference of a few weeks between the time a farmer on the canal bank and another farmer farther away from the canal receive their water supply. The distant farmer has to wait for all the farms on the way to fill up and overflow.

Some way has to be found by which the canal authorities can announce sufficiently in advance the date of release of water, so that the farmers can plan their sowing. Some of the irrigation systems are basically two or three centuries old and several radical changes are needed before the farmers can make the most optimum use of water. The Package Programme has yet to make a beginning with the demonstration of better water management methods. A scheme has recently been circulated to the States, proposing a few demonstration plots to illustrate efficient irrigation and drainage. Most of the States participating in the Programme are acting on the scheme.

MANCHESTER LETTER

(Concluded from page 107)

One of the most disturbing features about the local situation, according to Mr. Blackburn, is that output per head is improving only very slowly, whereas in the countries of the Common Market it is going ahead much more rapidly. In spinning, productivity in Lancashire is little more than 7 per cent above the level reached in 1948-49, whereas. between 1956 and 1961, the rate has advanced in Belgium by 15 per cent, in France by 28 per cent, in Western Germany by 23 per cent and in Holland (where a high level of output had already been achieved by 1956) by 11 per cent. Productivity is lowest in Italy, but even there an improvement of over 50 per cent has occurred since 1956, suggesting that Lancashire may yet be overtaken before long.

Although figures for weaving are less informative. output of cotton and man-made fibre fabrics in terms of weight per man-year in Britain in 1961 was 30 per cent higher than in Italy, but 14 per cent less than in France. Since 1956, output per man-year in weaving has increased by 50 per cent in Italy and by 38 per cent in France, but only by 8 per cent in the U.K.

REPORT OF THE AUDITORS

To THE STATE BANK OF INDIA :

We, the undersigned Auditors of the State Bank of Hyderabad, appointed under Section 41 (1) of the State Bank of India (Subsidiary Banks) Act, 1959, report on the Balance Sheet and Accounts of the Bank as at the 31st December, 1962.

We have examined the above Balance Sheet of the State Bank of Hyderabad as at the 31st December, 1962, and the Profit and Loss Account for the year ended upon that date with the Accounts and Vouchers relating thereto of Head Office and with the Returns submitted and certified by the Branch Managers, which Returns have been incorporated in the above Balance Sheet and Accounts, and report :

(i) that, in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(ii) that, where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory ;

(iii) that, the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(iv) that, the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit ;

(v) that the Profit and Loss Account shows a true balance of profit for the year covered by such Account;

(vi) that, in our opinion the Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law; and

(vii) that, in our opinion Books of Account have been kept by the Bank as required by law.

RUBBER CONSUMPTION RISES MARKEDLY

ACTUAL OUTPUT FAILS TO KEEP PACE

WITH the all-round development of industries under the two Five-year Plans, rubber consumption has naturally registered a marked expansion. The quantity of rubber (natural, synthetic and reclaimed) consumed during the calendar year 1962 was about 67,200 metric tons (on the basis of actual consumption in the first ten months of the year), as against a bare 20,000 tons in 1950. While the demand for rubber has gone up significantly thus, production of raw rubber has increased at only snail's pace, from 15,848 tons in 1950 to 28,500 tons in 1962, projected on the basis of the actuals for the ten months ended October 1962. In view of the persistently wide gap between production and consumption, the country continues to depend largely on imports which in 1961 aggregated as much as 36,658 tons (21,693 tons of raw rubber, 8,992 tons of synthetic rubber and 5,929 tons of reclaimed rubber), as against no more than 2,600 tons in 1950. No doubt the 30,000-ton capacity synthetic rubber factory at Bareilly in Uttar Pradesh, which is scheduled to go into production next month, will meet the major portion of the enlarged demand for this raw material. But there will still be a sizable deficit in supplies. It is estimated that the total requirements of rubber will be of the order of over 107,000 tons in 1970 and 171,000 tons in 1975. The need for augmenting raw rubber production cannot, therefore, be too strongly stressed.

Even the small increase in natural rubber output that has taken place in the past decade must be attributed to a large extent to the notable rise in the area under rubber, the re-

TABLE A—*Production and Consumption of Rubber*

gistered area increasing from 170,506 acres in 1950 to 348,121 acres in 1961 and tappable area from 118,811 acres to 183,600 acres, according to the *Indian Rubber Statistics* (Volume 5), 1962, published by the Rubber Board. The average yield of rubber per acre has also increased, but the increase is not appreciable. On an average, one acre of rubber land (tappable) gave in 1961 a yield of 324 lbs. which, though it is higher than 253 lbs. for 1950, is much below what is obtained in other rubber-producing countries. The overall yield of large and well organised estates in Malaya is said to be 1,000 lbs. per acre tapped. The latest material in commercial planting, we are told, has given yields from large acreages of more than 2,000 lbs. per acre per annum in many cases. These figures give an idea of the enormous scope that exists in India for boosting the productivity of rubber lands. To the extent yields are raised, the production cost will be reduced and, with such a reduction, the prices of the various rubber goods can also be lowered. It may be noted here that, during the year 1961, the number of manufacturing units consuming rubber was 700, of which 481 units consumed five tons and below and one unit alone consumed about 17,000-18,000 tons. The controlled price (f.o.b. Cochin) of Group 1 sheet rubber is at present Rs. 161.50 per 50 kg. minimum and Rs. 162.60 maximum, as against Rs. 89.50 and Rs. 90.50, respectively, prevailing prior to 6th March 1951.

How can the productivity of rubber lands be stepped up? There are five ways of achieving this objective. The first and foremost is the replanting of old, low-yielding trees by using new and improved high-yielding material. Secondly, there is the need for development of tree stimulation. Thirdly, high stem tapping and tapping system of greater intensity must be used without causing injury to the tree. Fourthly, the planting technique requires improvement and development. The nutritional status of the tree and its requirements, too, must be properly understood before the application of fertiliser is made.

The total area under rubber, as already stated, has risen by 177,615 acres to 348,121 acres between 1950 and 1961. The rise is ac-

TABLE B—*Rubber Holdings and Estates*

(No. of units)

	1961	1960	1956	1950
Holdings :				
Below 5 acres	54,581	49,636	30,492	10,714
5-10 acres	5,124	4,660	2,889	1,459
10-50 acres ..	3,162	2,878	1,784	1,299
Total ..	62,867	57,174	35,165	13,472
Estates :				
50-100 acres	294	271	204	199
100-500 acres	223	216	184	
500-1,000 acres	32	29	34	258
1,000-1,500 acres	18	18	17	
1,500-2,000 acres	6	5	4	
Above 2,000 acres	7	8	6	
Total ..	580	547	449	457
Grand total ..	63,447	57,721	35,614	13,929

counted for largely by new planted area which has increased by 157,908 acres—from 158,288 acres to 316,196 acres—whereas the replanted area has moved up by only 19,707 acres—from 12,218 acres to 31,925 acres. The breakdown of the total area of 348,124 acres according to planting materials used are 214,054 acres ordinary, 52,975 acres budded and 81,392 acres clonal. It will be noted that the area devoted to low-yielding rubber trees still constitutes the major portion of land under rubber. Accordingly, the mean weakness of this plantation industry persists.

Another weakness of this industry in India is that the majority of rubber growers are small holders. As many as 54,581 units out of the total 63,447 units have less than five acres each, while at the other end only seven units have more than 2,000 acres each. Three-fifths of the total area represent "holdings" with not more than 50 acres, the total area under this group being 209,759 acres (at the end of 1961). The combined share of "estates" having more than 50 acres is 138,362. Table B gives the classification of holdings and estates according to size as at the end of 1961, 1960, 1956 and 1950.

The rubber industry is heavily concentrated in Kerala. This State accounts for the major portion of raw rubber production, over 90 per cent of the total, to be precise. The actual output during 1961 was 24,490 tons, as against 22,680 tons in 1960, 21,660 tons in 1956 and 18,493 tons in 1952. Small quantities of rubber are also produced in Madras (2,076 tons in 1961), Mysore (400 tons) and Andamans (26 tons). Of the aggregate planted rubber area of 348,121 acres in 1961, Kerala alone accounts for 328,254 acres, the balance being shared by Madras (15,414 acres), Mysore (4,031 acres) and Andamans (422 acres).

The statistical data published by the Rubber Board bring out the wide gap between registered area and tappable area. The actual gap, which was just 32,618 acres in 1950, widened to as much as 164,521 acres in 1961. Out of the total registered area of 348,121 acres in 1961, only 52.7 per cent or 183,600 acres were tappable, whereas in 1950, the percentage of tappable area (137,888 acres) to the total area (170,506 acres) was over 80.8. This phenomenon is due to the fact that a substantial part of the registered area under rubber consists of the newly planted trees which are still not ready for tapping. If the entire registered area of 348,121 acres (end of 1961) is tapped, the total production of raw rubber will amount to about 51,100 tons on the basis of the average yield of 324 tons for 1961. This quantity can easily be doubled if energetic, sustained measures designed to augment productivity are taken without any further delay on the lines indicated earlier.

ELECTRONICS IN WESTERN EUROPE

A FAST GROWING INDUSTRY

[There are very few industries which are as dynamic as the electronics industry in the present-day world. As an industry catering, on a massive scale, to both military and civilian needs, it has been booming in recent years in several advanced countries like the United States, Britain, West Germany, France and Japan. The leading position is held by the United States with its electronics sales of $10,000 million as of 1960, while the second and third places are occupied by Britain and West Germany with their sales of $1,300 million and $1,000 million, respectively. Japan, too, is on a par with the two latter countries, for its electronics output exceeded $1,400 million in 1961 as compared with only $165 million in 1955. The size, as well as the dynamic growth, of this industry thus attracts increasing notice. The following article, reproduced from the October-November 1962 issue of Report on Western Europe *by the Chase Manhattan Bank of New York is, therefore, bound to be read with interest in industrial circles of this country.—*EDITOR.]

ELECTRONICS is today the most dynamic of Europe's manufacturing industries. Since 1958, factory output in the Common Market's electronics industries has grown at 15-20 per cent a year—about three times as fast as gross national product and even faster than the booming U.S. electronics industry.

Several factors explain this phenomenal expansion. Rising incomes have stimulated demand for consumer products. Rapid growth in other industries, accompanied by labour shortage, has spurred expansion of industrial and commercial electronics. Capital—scarce in the early 'fifties—is more plentiful today, and this has permitted more plant investment and bigger outlays for vital research and development. Gains in the number of wired homes have served as a base for growth.

Unlike its American counterpart, the European electronics industry is heavily oriented toward the consumer market. Although the United States still has a three-to-one lead in total electronics production; Europe's production of consumer electronics products is about the same as U.S. production. Since 1958 German television production has risen by more than 50 per cent; French production has about doubled; and total European television output now exceeds that of the United States. Production of radios, tape recorders, phonographs also are rising rapidly.

The Consumer Market

Not only have European family incomes and expenditures risen rapidly, but an exceptionally large portion of European consumer spending has gone for electronics (1.4 per cent in Germany *vs.* 0.5 per cent in the United States). Today European television saturation compares with that of the United States in the early 'fifties, and the trend is still up.

The attractive consumer market is fiercely competitive, however, and becoming more so. The large European electrical manufacturers recognised opportunity early and now are well entrenched, with efficient production and well integrated distribution networks.

This fierce competition explains the small role played by U.S. firms in European consumer electronics. U.S. exports, which also face tariffs of 15-30 per cent, are negligible. Investments in the consumer sector by U.S. firms have been few.

The Military Sector

Industrial and military electronics present an entirely different picture. In these sectors U.S. firms hold a large lead in volume of production and in technology. This lead stems mainly from the heavy American defence budget, supplemented by the U.S. space programme.

The precise distribution of military electronics production in Europe and America is hard to estimate. Until recently, however, nearly all electronics equipment for N.A.T.O. forces was supplied by American manufacturers. Less than 10 per cent of Common Market production went for military uses in 1960, against more than 50 per cent in the United States. Today European firms are taking over part of the N.A.T.O. electronics business, and developments like the French nuclear striking force are helping to build up the military sector. U.S. military electronics expenditures, estimated at nearly $8 billion for fiscal 1963, and the U.S. space programme, which is expected to add another $750 million, assure a continuing lead in this sector, however.

Industrial Electronics

This heavy military and space expenditure has accentuated the U.S. electronics industry's advantage in the industrial sector. While the consumer sector requires high loabour input and relatively small capital investment, industrial electronics requires heavy expenditures for research and development. U.S. military and space programmes pay for much of the research that has kept the American electronics industry in the forefront of technological progress. Total R. and D. expenditures by the U.S. electronics industry in 1960 were estimated at about $1 billion—or about 10 per cent of total sales.

European firms cannot allocate such huge sums for research. This has helped to divert the European industry away from the industrial sector and toward the consumer sector, a market which has proven more immediately profitable in recent years.

Much of Europe's demand for industrial electronics has been met by imports from the United States. Not counting military shipments for which data on countries of destination are not published, total U.S. electronics exports to Western Europe in 1961 exceeded $150 million, of which at least 80 per cent were industrial goods.

The U.S. Role

American firms also occupy an important place in European manufacturing of industrial electronics equipment. International Business Machines Corporation, for example, has long been established as Europe's leading producer of data processing equipment. I.B.M. has an estimated 70 per cent of the market in West Germany, 50 per cent in France, top position in Italy and Benelux, and a strong position in Britain. More recently other leading U.S. firms have entered the European market. Radio Corporation of America, for example, has expanded its role through agreements with the French firm Machines Bull. Since 1958, the Press has reported no less than 107 new electronics operations by U.S. firms in Western Europe—all but four in the industrial sector.

A look at this sample of 107 new U.S. operations shows that Italy is the favourite site (25 new operations), followed by France (19), Britain (17), and Germany (13). Acquisitions and joint ventures with existing European companies are the most popular method of establishment (34), but wholly-owned manufacturing subsidiaries (26) and licensing agreements (18) also are common. These operations are speeding the spread of American technology to Europe, and helping to maintain the strong position of U.S. industrial electronics firms in the European market.

Many of these new operations involve components—a trend which is based partly on the growing complexity of the electronics industry, partly the rise of international competition. Components account for an increasing share of total electronics production in Europe—rising from 22 per cent in 1956 to 24 per cent in 1961.

National Industries

As the table below indicates, Europe's electronics industries today show wide differences in structure, development, and emphasis from country to country.

Germany has the largest electronics industry in Europe (sales estimated at $1.3 billion in 1961) and is Europe's leading exporter. The consumer sector is much the largest, although German industry offers a good market for automation. Data processing lags behind France and Britain. Leading producers are highly concentrated. Two firms, Siemens and A.E.G., account for about one-third of production.

Britain (1961 sales estimated at $1.2 billion) has an electronics industry with more balanced production. The consumer market has the highest saturation in Europe. The military and industrial sectors are well developed, particularly in calculating and control equipment, navigational systems, and radio communications. Half of Britain's exports go to the Commonwealth.

France (1961 sales about $750 million) has relatively low saturation of consumer electronics products. The industrial sector is heavily concentrated around Paris, and is advanced in some lines. I.B.M. and Machines Bull give France a high rank in European data processing. The industry includes many strong firms and is laced with complex corporate interrelationships. Plans call for total output to grow at 13 per cent a year through 1965.

Italy has a small ($350 million) electronics industry which is growing rapidly with the aid of foreign investments. Consumer saturation is the Common Market's lowest. Engineers and technicians are relatively scarce. Exports are small (4.5 per cent of sales). Olivetti is well established in business machines, with a good start in data processing.

In Holland, the electronics industry is dominated by Philips, whose domestic plants produced more than $200 million in electronics equipment in 1961. Philips is involved in industrial electronics, but concentrates most heavily on the consuming sector. Its operations are world-wide. Belgium's electronics industry is small, tightly integrated, and export-oriented.

Some characteristics and trends are common to the European electronics industry as a whole, however. In the consumer, as well as the industrial sector, the European electronics industry is highly concentrated. A few companies dominate the field. The larger firms are well integrated—internally, and often through agreements with each other. The prospect of rising competition in the Common Market has encouraged a trend toward mergers, and some small independent firms have sold out to the larger companies.

Exports play a more important role in Europe. While the U.S. electronics industry exports only about 6 per cent of its output, the six Common Market countries export nearly one-fourth—much of it to each other.

European exports to the United States are very small and concentrated in a few consumer lines (e.g., record players and parts). They compete strongly in Africa and the Near East. U.S. exporters have a big lead in Latin America, but Europe's share is rising. Here, Japanese competition also is playing a growing role.

Competition from Japan will become an increasingly important part in the European market itself. Many European countries have imposed strict limits on imports from Japan, but some of these restrictions have been lifted and imports of some Japanese products have risen rapidly. Japanese exports of transistors to the Common Market quadrupled from 1958 to 1960, and sales of Japanese radio receivers to the Six topped 1 million units in 1961. As import controls relax further, more Japanese goods—particularly components—are sure to find a market in Europe.

Although the booming consumer business has drawn the most attention in the recent past, some parts of the industrial market are likely to lead in future growth. Industrial automation, a small market for European firms today, is becoming more important with the continuing labour shortage and the rise of wages. Production of data-processing equipment is expected to hit the $100 million mark in 1962. And these trends are swelling the demand for semi-conductors and specialised components.

The outlook for electronics in Europe adds up to a blend of ingredients becoming increasingly common in a world of rising incomes and rising trade: rapid market growth, fierce competition, increasing specialisation, and growing importance of research and innovation.

A Statistical Profile of Electronics in Europe

Country	Electronics sales* 1960 ($ million)	Increase in sales 1959-60 %	Exports† 1961 ($ million)	Imports* from U.S. 1960 ($ million)	Radios per 1,000 population 1960	TV sets per 1,000 population 1961	Electricity production 1961 (Billion kw.h)

MACHINE TOOL INDUSTRY

BIG INCREASE IN PRODUCTION LAST YEAR

THANKS to the substantial expansion programme executed in the last two or three years, the Indian machine tool industry is estimated to have stepped up its production to the level of about Rs. 12 crores in 1962, as compared with Rs. 7.3 crores in 1961. The estimate for the whole of 1962 may not be very wide of the mark, for actual production in the January-July period of that year, according to currently available figures, was around Rs. 6.0 crores. It is expected that, when the leading manufacturers soon complete their plans for expansion or for shifting the location of their factories, the output of machine tools will increase steeply in the coming years. Considering the industry's pace of progress to date, it may be taken that the third Plan's annual production of Rs. 30 to 35 crores' worth of machine tools will be achieved according to schedule. This confident expectation has found expression in the report, just published, of the Indian Machine Tool Manufacturers' Association for the year ended 30th June 1962.

But it will be seen from the accompanying table that, while indigenous production has been increasing, and will continue to increase, imports, too, have increased and will continue to do so. This is not surprising, for the tempo of industrial development has been, and will be, such as to accelerate the demand for graded machine tools. In the last year of the third Plan, this demand is expected to reach the staggering figure of Rs. 65 crores. There will, therefore, be larger imports than at present. Since, however, domestic production will also be much higher by that time, there will be more or less parity between it and the level of imports. This is the most heartening feature of the expected demand-and-supply situation pertaining to machine tools.

Imports and Production of Machine Tools

Year	Imports (Value in Rs. crores)	Domestic production of graded machine tools only (Value in Rs. crores)	Domestic production as per cent of imports
1955	5.3	0.7	12.8
1956	8.4	1.1	12.9
1957	14.6	2.3	16.0
1958	14.4	3.4	23.6
1959	16.3	4.2	25.5
1960	20.9	5.9	28.0
1961	24.2	7.3	30.3
1962	N.A.	12.0*	..
1965-66 ..	30-35*	30-35	100.0

N. A.=Not available. * Estimated.

The Association's review of the industry's progress in 1961-62 is notable for the information it has provided regarding the further development of new and more advanced types of machine tools. During the year under review, *Mysore Kirloskar Ltd.*, for instance, proceeded with the manufacture of its No. 4 Capstan and 7B Combination Turret Lathes. The new factory, at Chinchwad, of the *Investa Machine Tools and Engineering Company Ltd.* started production of a smaller lathe known as type L-160. Its regular production of medium duty radial drills, column drills and tool and cutter grinders will commence some time next year. *Cooper Engineering Ltd.* commenced, during 1961-62, the manufacture of heavy duty planing machines in various strokes, various slotting machines and the first prototype of the vertical turret lathe. *The Hindustan Machine Tools Ltd.*, in the public sector began to manufacture the "special purpose machines" in collaboration with a French firm. *The Batala Engineering Company Ltd.*, was engaged in the development of a "Beco" brand "Jeewan" lathe suitable for use in repair shops and technical institutes. *The New Standard Engineering Company, Ltd.* developed a nibbling machine, a plate bending machine, a plate straightening machine and a section bending machine. Regular production of oxygen cutting machines was started by the *Indian Oxygen Ltd. Heroes Engineering Works Private Ltd.*, commenced production of 'Heroes' brand horizontal milling machine No. 2, while the *Textile Machinery Corporation Ltd.*, began to manufacture Texmaco-Ward No. 3C Capstan lathes. *Kulkarni Foundries Private Ltd.*, manufactured, for the first time, hand-operated and pneumatic moulding machines, heavy duty double-ended snagging grinders and the sand mill with some unique features. *C. R. Sonalkar Factory* had under development several types and sizes of chucks and lathe accessories. *Amar Electrical and Mechanical Engineering Works* introduced a new bench lathe. *Multiple Industries* developed three-jaw and four-jaw self-centering lathe chucks.

The industry has thus been continuously engaged in the designing and development of new and more advanced types of machine tools, in several cases with foreign collaboration. This development effort, however, could have been on a still larger scale if sufficient foreign exchange had been allotted for obtaining the necessary technical know-how, capital goods, balancing equipment and components. As the Government has recently brought the machine tool industry under the category of high-priority industries, *on a selective basis*, for the purpose of foreign exchange allotment, it is hoped that a reasonable amount of such foreign exchange will be available for the assembly and manufacture of various types of new and complicated machine tools. The Central Machine Tools Institute, which is being set up by the Government of India with Czech assistance, may also be expected to meet a need which has been keenly felt by the industry. This need is for research in machine tools design and development, manufacture and testing of prototypes and training of machine tool designers. But this Institute may take some years to be established. So, in the meantime, designing knowledge will have to be imported on the scale required for development of new types of machine tools in the third Plan period. There is also a continuous need for stepping up the supplies of coke and foundry grade pig iron to the industry.

In the national emergency created by Chinese aggression, the Government, it is happy to note, has recognised the crucial role that the machine tool industry can play in the field of defence production. It has, therefore, quickly cleared most of the applications relating to the industry's requirements of foreign exchange, raw materials, etc. While this emergency step has been welcomed by Mr. S. L. Kirloskar in his presidential address at the 16th annual general meeting of the Indian Machine Tool Manufacturers' Association held at Bombay last week, he has also urged that the tax holiday be extended from five to ten years and the maximum rate of profit from 6 per cent to 12 per cent in the case of this industry in order to attract the necessary capital. This is considered necessary because the industry takes a long time to develop. The inordinate delay in official approval of foreign collaboration terms and the serious difficulty in getting components of C.K.D. machine tools cleared through the Customs would also have to be eliminated at an early date, if the industry is to be effectively geared to defence production in the required lines.

ROLE OF PRECIOUS METALS IN SPACE TECHNOLOGY

Such precious metals as gold, silver and the six platinum metals have the distinctive quality of high resistance to corrosion and oxidation. Thanks to this characteristic, they have found many applications in aero-space activities. According to Mr. Raymond F. Vines of the Development and Research Department of the International Nickel Company (New York), extension of the already diverse precious metal metallurgy is most likely to take place through the marriage of the precious metals and the refractory metals. One offspring of this family has already been announced—the powder metallurgy-produced tungsten-silver mixture which shows promise as a nozzle material for solid-fuelled rockets. This mixture combines, in separate phases, the high melting point of tungsten with the high thermal conductivity of silver. The use of platinum to bond protective sapphire covers to solar cells and ceramic bases in *Telstar*, the first communications satellite, has also been a sound engineering use of the metal's thermal expansion characteristics. These assemblies are expected to remain bonded for many years because expansion matching of component elements avoids undue stress during operational temperature fluctuations.

Another characteristic of the precious metals is their high degree of alloy compatibility. Thanks to this quality, it has become possible to develop, for instance, palladium-containing alloys for brazing base metals. In the jet engine field, brazing of jet engine hardware with a 24 per cent palladium alloy has permitted the construction of some engines with a thrust to weight ratio of 10 to 1. The use of the precious metals as catalysts has also been expanded with the development of the fuel cell power plant for space capsule use. Some other characteristics which have expanded the range of applications may also be noted. These are: (i) the stable thermo-electric behaviour of the precious metals and their unmatched capability for expeditiously measuring temperatures over the extended range encountered in space flight; (ii) the reliability of precious metals contacts in transmitting electrical impulses which control flight; and (iii) the high reflectivity of precious metal protective coatings for space vehicles and clothing. Another possible application is tha palladium septums could filter ultrapure hydrogen from impure gases—a service that would be extremely important if hydrogen-fuelled rockets are developed as expected.

BRITISH FIND USE FOR POWER-STATION WASTE

Development research by British scientists has turned power-station fly-ash—waste left after burning powdered coal in the generation of electricity—into a valuable by-product. This is revealed by Sir Harold Hartley, Chairman of the International Executive Council of the World Power Conference, who says that the knowledge should be of value to countries where pulverised fuel is used in power stations.

Of the 10 million tons of ash produced each year in Britain, a substantial proportion is being used with benefit in agricultural processes, road-making, civil engineering and building. Ash has been used to cover and convert a marsh into good crop-bearing land. It has been used even more widely to fill and reclaim worked-out gravel pits for purposes of building or for agriculture. Britain's Central Electricity Generating Board has used the ash in the structural concrete at the Hinkley Point atomic power station and in reinforced concrete at other power stations.

Ash is also finding wide use as a high-quality, low-cost, load-bearing filler for road and embankment foundations. It is being used to make lightweight building blocks offering savings in construction costs, and to improve acoustic and thermal insulation. It can also be used in brick-making, as a filler for paints, floor tiles, and roofing products, as an abrasive, and as an inert spreader for insecticides.

AUTOMOBILE PRODUCTION

The aggregate number of automobiles manufactured in India was 47,366 in the period January-October 1962. Thanks to some marginal improvement in the last two months of the year, aggregate production in the whole of 1962 is estimated to have ranged between 57,000 and 60,000 units. The average monthly production of cars, jeeps and commercial vehicles has attained the following levels:

Hindustan cars	1,125
Fiat cars	550
Standard cars	295
Jeeps and jeep commercials ..	750
Commercial vehicles	2,100
Total ...	4,820

The production levels, in so far as cars are concerned, have just been brought down, it is learnt, to 50 per cent, in order to increase the output of vehicles required for defence purposes. A heartening trend is that the progress towards greater indigenous content in the manufacture of automobiles is being maintained. It is expected that the automobile industry will attain 95 per cent indigenous content by March 1964 when the need to import parts will almost disappear.

TRAINING IN INDUSTRIAL VENTILATION

The Air Conditioning Corporation Ltd., Calcutta, has just organised training courses for engineers and technicians in industrial ventilation, hygiene and fan engineering. Inaugurating the first of the series of courses on the 8th instant, Mr. J. C. Kapur, General Manager and Chief Technical Adviser of the Company, emphasised that the dissipation of large quantities of heat generated during production or added through process requirements was a problem of considerable importance. In the industrialisation of a major tropical country like India, he continued, the engineers had to deal with the problem of heat of the process *plus* the heat of the atmosphere, if the thermal stresses in workers were to be kept within the limits of maximum productivity.

Through these courses it is proposed to make this highly specialised knowledge available to over 150 engineers and technicians from about a hundred public and private sector industries, defence and other Government organisations. The present courses follow the earlier training programme in "Industrial Instrumentation." They are being conducted by Mr. T. W. Rogers of Buffal Forge Company, U.S.A., who has come to India specially for this purpose.

ELECTRIC MEASURING INSTRUMENTS INDUSTRY IN JAPAN

A 400-page second English edition of the catalogue entitled "Measuring Instruments in Japan, 1962" has been published by the Japan Electric Measuring Instruments Manufacturers' Association (20, Shiba Kotohira-cho, Minato-ku, Tokyo). With its photographs of different instruments, the catalogue is as attractive as it is informative. The instruments covered belong to four broad categories, namely, (i) electrical indicating and electrical measuring instruments, (ii) watt-hour meters, (iii) instruments and automatic controls for industrial processes and (iv) radiation instruments. As many as 47 manufacturing units are covered in the catalogue. The industry's aggregate production in 1961 was $112.4 million, as compared with only $1.7 million in 1958. Such a big expansion in production can surely be described as phenomenal.

NEW PRODUCTS AND PROCESSES

Cheaper Aluminium

CHEAPER ways of producing aluminium from bauxite ore have been discovered by scientists at the British Aluminium Company's research laboratories near London. The discoveries concern benefits obtainable from using hard refractory material, titanium carbide or boride, as electrodes in aluminium production cells and methods for the cheap production of electrodes of the right shape and physical properties. These discoveries include design of electrolysis cells that cost less to build, because they take up less floor space and are easier to construct—cells having a longer life and giving an appreciable saving in power needed to produce the metal.

Sheen Finish for Cotton Fabrics

A finish for cotton dress fabrics which will give them a permanent sheen, even after washing and wringing, has been announced by a British firm, Calico Printers' Association, Manchester. A non-iron fabric is chemically treated to bring about a permanent modification of the fibres. The new finish, which does not include the use of resins, is the development of a process known as "cross-linking," first introduced to the textile trade more than three years ago. The absence of any resin deposits in the fibres gives the fabric a more natural feel, and greater comfort in wear.

Grease-resistant Flooring

A new flooring material composed of rubber and synthetic resins claimed to be permanently and completely resistant to oil and grease in every form has been produced by a British firm Runnymede Rubber Co. Ltd., London. It is believed to have many new industrial and commercial uses. The new flooring is tough and hard-wearing, is resistant to stiletto heels and heavy weights and suitable for premises where noise absorption, hygiene and easy cleaning properties are essential.

Economical Car

In three days of hard motoring over more than 1,000 miles of the most difficult territory in England and Scotland, a standard British diesel engined car has returned 58.34 miles per gallon (4.84 litres/100 km.) at an overall average speed of just over 30 miles an hour (48 km.p.h.). The test was conducted under strict observation of the British Royal Automobile Club. The new diesel, an Austin A60—a saloon which the manufacturers say can now claim to be among the world's most economical 1¼-litre motor cars—was recently introduced to world markets of the British Motor Corporation.

Preserving Food by Radiation

A radiation unit for preserving foodstuffs, with a cobalt irradiator, has been designed in the Soviet Union. Positive results were yielded by Soviet experiments to preserve food by means of ionizing irradiation. Even small doses of irradiation destroy micro-organisms and prolong the duration of storing 4-5 times over without a noticeable change in quality. Studies are now being carried out to find out whether various doses of irradiation may change the quality of foodstuffs, and the period of time for which fresh products may be preserved due to irradiation, is being determined. It has been established that foodstuffs, when treated in this way, do not have any residual radio-activity, that is, they are absolutely harmless. These investigations are part of the programme for using atomic energy in the national economy.

New Blending Technique for Paper Plant

A materials handling system which will blend powdered and liquid ingredients entirely automatically has been developed in Britain by Elliot Brothers (London) Ltd., Century Works, Lewisham London, S.E. 13 for a new paper making plant being built at Nivelle, near Brussels. The design of the equipment involves electrical, electronic, pneumatic and mechanical control techniques to mix the ingredients in the correct quantities, feed the blended material to the cookers and later distribute it to storage tanks ready for use in the coating process. The whole of the mixing, blending and storage stages will be monitored and controlled by an elaborate communication and alarm system.

Plastic Wall-covering

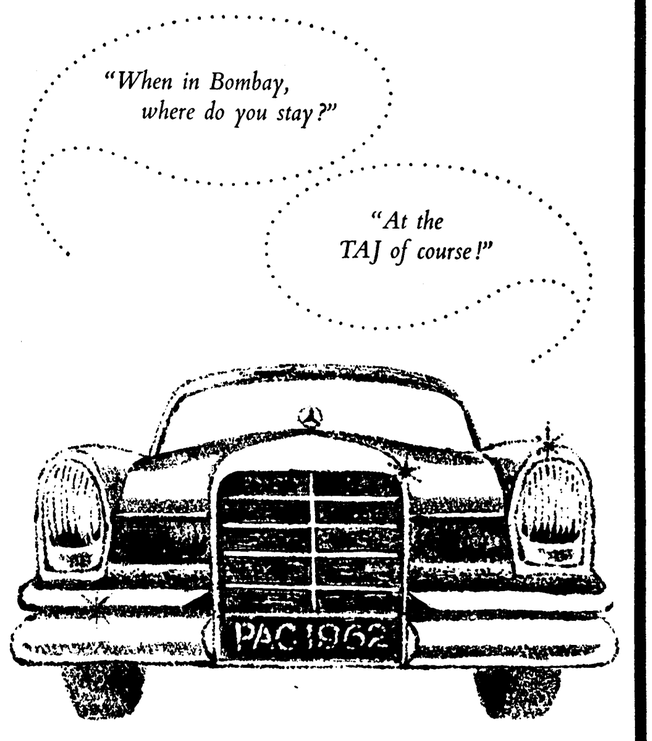
A Dutch firm has brought out, after many years of research, a new kind of material made of polyvinyl chloride, which can be used for covering not only walls but also cupboards, tables, stools, panels, tea-trays, etc. The P.V.C. lining can be supplied in two qualities, one paper-based and the other textile-based. Rolls of the paper-based type come in widths of 66 cm (26") and of the textile-based covering in widths of 132 cm (4'4"). The new covering does not discolour, can easily be cleaned—even with soap and water—and has a long life. It is applied with the aid of a special adhesive supplied in powder form. The company's production range comprises 54 varieties of different colours and arrangements, supplied in the two grades mentioned above.

New Device Aids Thorium and Uranium Prospecting

Prospectors for thorium and uranium—the atomic-energy metals—may soon get help from an instrument under development by Britain's Atomic Energy Establishment. The device, a new type of gamma spectrometer, is able to work from inside a Land-Rover survey truck. It is said to be considerably more sensitive than equipment previously in use. The device is able to distinguish between different radioactive elements, which means that it is now possible to look for sources of only one element, say, thorium. An approximate estimate of the metal content in an ore deposit can also be obtained. The instrument is to be used by scientists of the Atomic Energy Division of Britain's Geological Survey in routine surveys.

New Textile Yarn

The development of a new yarn based on extremely fine glass textile filament about one-half the diameter of natural or synthetic fibres is reported by the *Financial Times*, London. Each filament in the yarn is slightly over one-thousandth of an inch in diameter, resulting, the developers say, in a supple, soft material with greatly improved flex strength. This enables it to be knitted and processed in ways never before possible with glass-based yarns. The new yarn is expected to find immediate application in upholstery, bedspreads and materials which take advantage of its abrasion and wear-resistance. The developers expect eventually to be able to blend the yarn with natural and other synthetic fibres, the result being fabrics which are stronger and resistant to stretching and shrinking.



Boxes from Waste Materials

Articles like boxes, drawers and racks can now be produced from agglomerated materials such as wood shavings or plastic chips mixed with suitable binders by a quick process developed in France. The materials to be bonded are charged cold into a container made of thermosetting resin of approximately the shape of the finished component. This is then subjected to heat and pressure, the article being squeezed to its final shape. The resin case unites with the moulding during the process to give it a protective and decorative coat.

Electric Blanket

A Dutch firm has begun marketing an electric blanket provided with an automatic temperature control system. Once the temperature level of blanket has been set to suit an individual's requirements, the blanket's heating capacity adjusts itself automatically to the temperature in the bedroom. The new product consists of a switchbox and the blanket itself. The switchbox houses a thermostat, a heating element, an electronic safety switch and an on-off button. The blanket, which is made of 40 per cent wool and 60 per cent rayon, is formed by two layers interwoven in such a way that equally spaced channels are created through which the heating wire is threaded. In the broad edges of the blanket no wires have been placed and the blanket can therefore be tucked in generously without damaging the wires. To prepare for use, the blanket is connected to the switchbox by means of a two-core sheated cable, while the switchbox is connected to the light mains. With the aid of a selector switch on the switchbox the thermostat can be set at various positions. The thermostat reacts to the heat given off by the heating element. As soon as the set temperature has been reached, the thermostat switches off the heating element in the switchbox and the blanket's heating element. When the thermostat has cooled down, it switches the two heating elements on again. Switching on and off is so carefully controlled that the person using the blanket is not aware of any fluctuations in temperature. The thermostat in the switchbox is sensitive to any change in room temperature. As soon as it starts to get colder, it will take longer for the thermostat to attain the set temperature and break the circuit. In warmer weather the thermostat will cut out sooner. This means that when the room temperature is low the blanket will give more heat, and conversely less heat when the room temperature is high. The heating wire in the blanket is of a special design. A heating element has been wound spirally round a fibre-glass core. Around this an insulating coating of nylon has been sprayed. Around the layer of nylon a further spiral of signal wire has been wound. The wire is finished with an insulating sheath made of PVC. The nylon insulating layer between heating wire and signal wire only acts as an insulator at normal working temperatures. When the temperature rises the insulating capacity of the nylon drops sharply, and it is on this property that the blanket's safety system is based. Through the signal wire flows a direct current which actuates an electromagnetic relay housing the two switching contacts. If, owing to faulty use of the blanket, the temperature exceeds a certain limit, the insulating effect of the nylon layer will become too small and current will leak from the heating wire to the signal wire. The current passing through the relay coil will drop steeply, causing the relay to cut out, thereby switching the blanket off altogether. This will also happen if the wire breaks at any point or if the blanket is cut.

LABOUR IN COTTON MILL INDUSTRY

WELFARE SERVICES EXPAND—I.L.O.'S LATEST REVIEW

AS the largest organised industry in the country, employing as many as 800,000 workers, the cotton textile industry, which is more than a century old, occupies a premier position in India's economy. In fact, by virtue of the size of its output, the value and importance of the goods it produces and the number of workers it employs, the industry is second in importance only to agriculture. Labour conditions in the cotton textile industry have, therefore, a direct bearing on the life and welfare of a substantial and influential section of the working population of the country. A comprehensive and consolidated picture of employment, wages and working conditions in the textile industry is presented in the report and inquiries section of the latest (November 1962) issue of the *International Labour Review*.

The size of the labour force in the industry over the years gives an indication of the trend of employment. The estimated figures of employment in cotton mills in India were 787,000 in 1959, as compared with 685,000 in 1951, an increase of 15 per cent over the period. The average daily number of workers employed in three shifts was 801,389 in 1962 (average for three months), as compared with 714,479 in 1951. While the total labour force has thus been rising, albeit gradually, there has been a progressive decline in the percentage of women employed in cotton textile mills in the past thirty years. Of the total number of workers engaged in the cotton textile industry in 1959, only 6.7 per cent were women whereas the percentage was as high as 19.4 in 1927. It had, however, declined to 13.8 as early as in 1937, 10.1 in 1947 and 8.5 in 1950. This downward trend is attributed to the introduction of the multiple-shift system in cotton mills. Since the Factories Act of 1948 prohibits the employment of women workers between 7 p.m. and 6 a.m., women workers can be employed on day shifts only. They work mostly in the winding and reeling departments in cotton mills. Women are also employed in some mills as spinners and doffers, siders or piecers, reelers, croppers, packers, sweepers, *ayahs* and women door keepers. Women are not trained to handle skilled jobs in factories.

There has also been a considerable decline in the employment of child labour in mills. Since 1922, all persons below the age of 12 years are entirely excluded from employment in factories. The Factories Act of 1948, prohibits the employment of children below the age of 14 and declares persons between the ages of 15 and 18 as adolescents. No child or adolescent can be employed in a factory, unless certified as fit.

Absenteeism

Statistics relating to absenteeism in cotton textile mills point to certain significant conclusions. Monthly averages show that absenteeism is high in the months of April, May and June, the hot months before monsoon. Another point that emerges from the I.L.O. study is that absenteeism is higher in Bombay than in Ahmedabad as the following table indicates:

Percentages of Absenteeism in Bombay and Ahmedabad

Centre	1939	1944	1951	1954	1958	1959	1960
Bombay	10.5	11.4	12.7	10.8	7.0	7.3	10.4
Ahmedabad ..	3.3	5.7	8.3	8.7	7.1	6.6	2.9

Note.—The figures prior to 1947 are not based on a uniform definition.

The main causes of absenteeism are illness, accidents, social and religious ceremonies and amusements. As is only natural, the rate of absenteeism goes up immediately after pay day. It is worth recalling that the Bombay Textile Labour Inquiry Committee had suggested, as early as in 1940, that "proper conditions of work in the factory, adequate wages, protection from accidents and sickness and facilities for obtaining leave for rest and recuperation constitute the most effective means of reducing absenteeism."

Reviewing the trend of wages and earnings, the author of the article in the I.L.O. review points out that, while there were, generally speaking, no appreciable changes in wages and earnings between 1933 and 1938, after the outbreak of the Second World War inflation led to a rise in price levels and the industry made increasing profits. In 1942, an upward revision of wages took place. By 1947, thanks to various awards and recommendations, upward revision of wages was effected in many centres. The trend of movement of minimum earnings (basic wages plus dearness allowance) between 1947 and 1959 is indicated in the table below:

Monthly Earnings of Workers

(In rupees)

Centre	1947	1951	1954	1958	1959
Bombay	74.90	87.28	95.43	111.58	116.42
Ahmedabad	84.20	99.05	96.91	103.31	117.03
Madras	58.00	69.77	71.45	81.84	87.41

As will be seen from the above table, between 1947 and 1959 monthly earnings of workers increased by 55 per cent in Bombay, 39 per cent in Ahmedabad and 50 per cent in Madras.

An important development in the wage structure of workers since 1959 is the recommendation of the Central Wage Board for Cotton Textile Industry proposing an increase in wages of Rs. 8 per month to workers of mills belonging to category I and Rs. 6 per month for workers in mills belonging to category II with retrospective effect from 1st January 1960. This suggestion, as readers are aware, was accepted by the industry and has already been implemented. As regards the trend of real wages, the author of the article cites the studies made by two Indian economists, namely, Dr. R. R. Singh and Mr. P. D. Shrimali, of real wages in textile industry. But since the period covered by them is only upto 1957, one does not get a picture of the latest trends in real earnings.

Reviewing the conditions of work in the textile industry, the author of the article points out that general physical conditions of work in cotton mills differ from centre to centre and from unit to unit within the same centre. In older establishments, they are not as satisfactory as in newly constructed units with an up-to-date layout. Air-conditioning plants have recently been installed in an increasing number of mills, particularly in Bombay and Ahmedabad, where some mills also have vacuum-stripping plants for recovering cotton dust.

Accidents

In spite of the elaborate provisions of the Factories Act for safeguarding the health and safety of workers, the trend of industrial accidents shows a disturbing trend. It would appear that this is due more to the lack of training of workers in safety methods of work, than the absence of safety precautions in factories. The following table indicates the trend of industrial injuries in textile factories during the period 1951-58:

Industrial Injuries in Textile Mills

Year	Fatal	Non-fatal	Total
1951	49	25,652	25,701
1952	49	27,362	27,411
1953	42	29,545	29,587
1954	54	32,053	32,107
1955	60	44,769	44,829
1956	55	50,093	50,148
1957	65	47,732	47,797
1958	60	43,878	43,938

As the cotton textile industry is one of the oldest organised industries in the country, industrial relations in it have, indeed, set the pattern for other manufacturing industries. It has some of the best organised employers' associations in India. But the same cannot be said, according to the article under review, of the organisation of workers. One of the best organised trade unions in the country, says the author of the article, is the Textile Labour Association, Ahmedabad. But the pattern of labour-management relations which has developed in Ahmedabad is in a class by itself. In spite of the existence of representative organisations of employers and workers in textile industry, the author points out that, even in this industry, collective bargaining has only made a beginning and is yet a long way from being an accepted method of maintaining industrial peace.

Welfare Facilities

Welfare facilities available to workers in textile mills are also surveyed in the article. These facilities may be divided into two categories: those provided at the work-places and those provided for the workers' spare time. As far as the first category is concerned, the Indian Factories Act, 1948, contains provisions for facilities for washing, storing and drying of wet clothing, adequate seating accommodation, first aid appliances, canteens, rest and lunch room and creches. It is the author's finding that these facilities, are generally speaking, provided adequately. The second category of facilities is provided by State Governments, employers and a few trade unions.

In general, the standards of welfare amenities differ from centre to centre. While some mills have been content to provide the minimum facilities required by law, others have undertaken welfare activities on an intensive scale much beyond what the law requires. Thus, larger cotton mills have provided dispensaries in charge of qualified doctors. Some mills have well-equipped hospitals as well. Several have provided separate maternity homes or wards. Facilities for indoor and outdoor games, co-operative societies, schools for workers and their children and provident fund and gratuity schemes exist in several mills. In Bombay, member-mills of the Millowners' Association provide canteens, grain shops, literary classes, co-operative credit societies and recreational facilities for their employees. All mills in Bombay run canteens for their workers. Sixteen mills serve hot meals in their canteens at low prices varying from 25 nP to 37 nP per meal. Over 6,000 workers took advantage of the hot meal service, which is subsidised by the management to the extent of Rs. 8,000 per month. The other canteens provide eatables, snacks and drinks.

All cotton mills in Bombay have established grain shops on a no-profit-no-loss basis. Nearly 20 articles of food, including cereals and pulses, soap and matches are sold at these shops which are recognised by the Government as fair price shops and are authorised to sell subsidised foodgrains to workers. Twenty-seven mills in Bombay City were running 93 literary classes in 1960, which were attended by 2,500 employees. The average annual cost of these classes was estimated at Rs. 50,000. There were 66 co-operative credit societies in the Bombay cotton mills, with a membership of 116,291. About 13 mills had gymnasia or sports clubs for their workers.

As compared with the facilities provided by employers thus, welfare work on any considerable scale is undertaken only by a few workers' organisations, the most important of them being the Textile Labour Association of Ahmedabad. During 1957-58, it ran 27 cultural centres which were used as libraries and reading rooms providing books, periodicals and newpapers. In addition, it maintained a number of reading rooms and libraries either in hired buildings or in workers' *chawls*. In the nursery schools conducted by the Association, attendance was 6,291 boys and 21 girls. Scholarships amounting to Rs. 6,570 were awarded to 283 students. It would, indeed, be a good thing if trade unions all over the country could do at least this much, if not more, for its members.

FINANCIAL ABILITY AND RETIREMENT BENEFIT

An important ruling concerning the proper criteria for the introduction of double retirement benefit for workers was recently given by the Supreme Court of India. In the course of a ruling allowing an appeal by Balmer Lawrie and Co., Ltd., Calcutta, against the decision of the First Industrial Tribunal, West Bengal, the Court held "that it is now well-settled that, if the financial position of an employer permitted it, double retiring benefit in the shape of contributory provident fund and gratuity might be introduced by industrial tribunals." The facts of the case are as follows:

On a reference of the dispute between the Company and its workmen, the First Industrial Tribunal, West Bengal, observed that the financial position of the Company was sound and that there was no likelihood of a serious fall in its income in the foreseeable future. It, therefore, held that a further retiring benefit in the shape of a gratuity scheme should be introduced in addition to the existing provident fund scheme. Challenging the validity of the Tribunal's ruling, the Company contended before the Supreme Court that the scales of pay of its employees and other benefits like contributory provident fund and pension, which were in force in the Company, were more liberal than those in any other comparable form in the Calcutta region and that it was, therefore, not necessary to introduce a scheme of gratuity as an additional benefit.

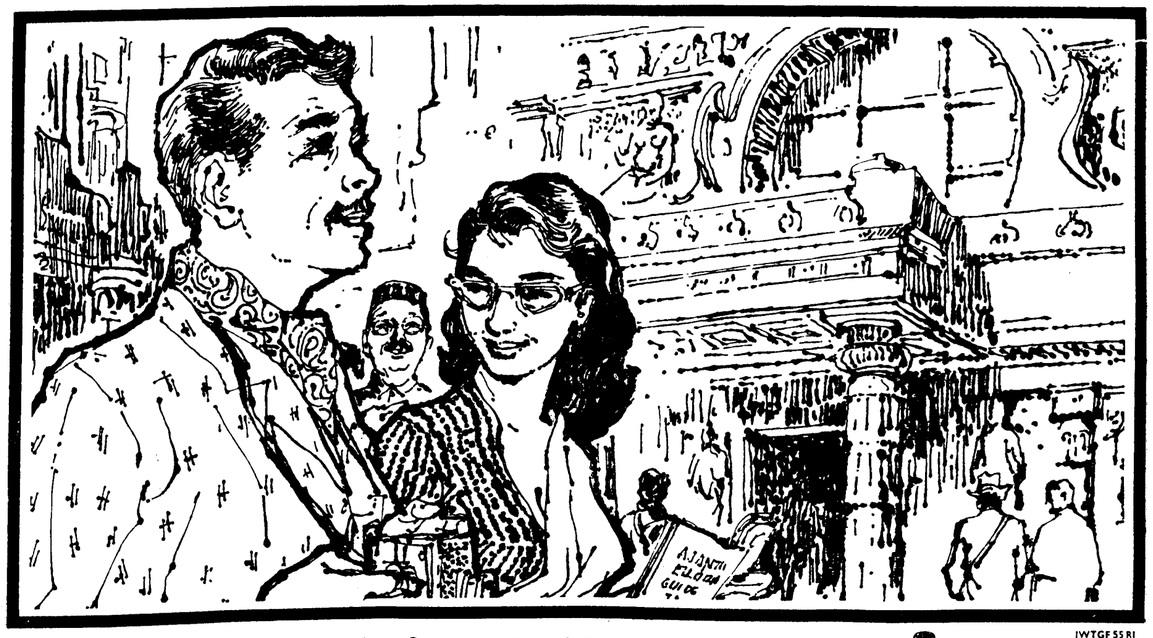
His Lordship Mr. Justice Wanchoo, in his judgment, held that the view taken by the Tribunal was correct and that there was no reason for withholding a second retirement benefit from the workmen of the appellant Company on the ground of financial incapacity. Though double retirement benefit was not the usual rule in the Calcutta region, His Lordship observed, it did exist in some concerns and in the circumstances of the case in which the appellant Company was in a position to bear the burden, there was no reason why it should not be introduced. Considering the merits of the case, His Lordship, however, felt that the Tribunal had not made any allowance for the extra benefits in force in the Company, which were to continue in addition to the gratuity scheme, and would thus result in more than double benefit to the workmen. His Lordship, therefore, modified the scheme so that, after its introduction, there would be only two retirement benefits in every case and not three.

POTASSIUM CHLORIDE FROM MIXED SALT

FIRST UNIT TO BE COMMISSIONED SHORTLY AT KANDLA

THE first large-scale plant in India to manufacture potassium chloride is expected to be commissioned at Kandla in Gujarat in four months. The project has been launched by the Central Salt and Marine Chemicals Institute, Bhavnagar, in collaboration with a private firm. The plant is designed to produce two to three tons of potassium chloride daily, besides 10 tons of magnesium sulphate, from mixed salt. This is one of the major projects in India to be set up for processing the chemical-rich mother liquor (mixed salt) left over after crystallisation and removal of common salt. India has been wasting a major part of the mixed salt so far, whereas in Western countries, the mother liquor is fully processed for the production of a wide range of chemicals such as chlorides, bromides and sulphates of potassium, calcium, sodium and magnesium. These chemicals produced from salt bitterns find extensive use in several other chemical industries.

Potassium chloride proposed to be produced at the Kandla plant will give an impetus to the development of potassic fertilisers in India, schemes for which have bogged down on account of non-availability of this raw material within the country. It is expected that the State Trading Corporation will put up another unit for the recovery of potassium chloride and other chemicals from sea salt bitterns at Tuticorin in Madras. These plants, when commissioned, are likely to save considerable foreign exchange now being spent on imports of muriate of potash. As of 1961-62, India imported 45,000 tons of muriate of potash, valued at Rs. 111 lakhs. It may be noted here that another scheme for the installation of a washery-cum-sodium sulphate plant is proposed to be put up by the Hindustan Salt Company, Ltd. in collaboration with a German firm. The proposed plant will have a capacity of washing 200,000 tons of salt produced at Sambhar lake and for recovering 8,800 tonnes of sodium sulphate annually, besides producing an additional quantity of 30,000 tons of salt from desulphated brine.



It must, however, be pointed out that execution of these schemes for recovery of chemicals from mixed salt has been delayed unduly for some reason or other. In fact, the urgent need for setting up plants for the recovery of salt by-products was stressed by the Salt Committee (appointed by the Government of India), in its report, as early as in 1958. It is, however, to be hoped that there will be no further delay in the completion of the Kandla and Tuticorin units. Incidentally, the Central Salt Institute, Bhavnagar, which is one of the important national laboratories run by the Council of Scientific and Industrial Research, has been making efforts to produce several chemicals from salt bitterns, which are important not only to other industries, but also for defence. Besides potassium chloride and magnesium sulphate, the Institute is engaged in the development of appropriate processes for the recovery of magnesium chloride and bromine (which is useful in the manufacture of dyes and photographic chemicals), as also sodium sulphate and sodium carbonate. Some of the important by-products already being recovered from salt works in India are gypsum (about 17,000 tons annually), magnesium sulphate (117,000 tons) and magnesium chloride (6,000 tons). A small quantity of potassium chloride (about 15 million tons annually) is also being produced as a by-product of common salt.

The projects for the recovery of by-products of the salt industry have assumed great importance, in view of the rapid increase and the consequent availability of large in the output of salt during the last few years, quantity of mixed salt. In the immediate post-independence period, it may be recalled, India was depending on imports for a part of its requirements of salt, as the valuable rock salt deposits in the Punjab and marine salt works in Sind went to Pakistan. But indigenous output of common salt rose steadily from 1.9 million tons in 1947 (as against a demand for 2.1 million tons) to 3.3 million tons by 1956 making the country entirely self-sufficient in common salt. In fact, India has started exporting some salt from 1956 onwards. The aggregate output of salt, as of 1961, was about 3.5 million tons, representing an increase of one per cent over the previous year. The production was running at a distinctly higher level in 1962. The actual output during January to August was about 3.4 million tons, or a record annual average of about 5.1 million tons.

Besides being used for edible purposes, common salt is being consumed in large quantities by several industries, particularly soda ash and caustic soda, as also in food processing, fish preservation, cattle feed, dairy and food industries, for treatment of hides and skins, etc. The total demand for salt, according to the Planning Commission, will go up from about 3.78 million tons in 1960 to 5.40 million tons by the end of the third Plan (1965-66). It is assumed that demand for edible purposes will rise from 2.74 million tons to 3.20 million tons (on the basis of an annual *per capita* consumption of 15 lbs. for a population estimated at 480 million in 1965-66). Besides, industrial demand for salt is expected to go up from 620,000 tons to 1.7 million tons, and exports from 420,000 tons to 500,000 tons.

In order to meet the increasing demand for salt, it is proposed to raise the capacity and output to 6.5 million tons and 5.4 million tons, respectively, by 1965-66 (from only 3.8 million tons and 3.4 million tons in 1960-61). The third Plan has envisaged an overall investment of Rs. 9 crores (including a foreign exchange component of Rs. 2 crores) in the salt industry. Of this, the public sector outlay is Rs. 3 crores, which will be used for three major types of projects. In the first place, a provision of Rs. 1 crore has been made for the development of Mandi salt mines the only source of rock salt

Things to be proud of... AJANTA and ELLORA

Imperishable monuments of exquisite craftsmanship. Incredible blending of architecture, sculpture, painting. Proud heritage of the past... each opus is epic, unique. (And Wills Gold Flake—as smooth as ever—superbly satisfying).

Wherever you go... they're good.

MYSORE SUGAR SUFFERS A SETBACK AGAIN

RESERVES DEPLETED TO MAINTAIN DIVIDEND

DESPITE a slight improvement of Rs. 4.76 lakhs to Rs. 342.81 lakhs in the gross realisation from sale of sugar, distillery products and farm supplies, there has been a further deterioration in the profit-margin of the Mysore Sugar Company Ltd. (Chairman and Managing Director: Mr. V. Venugopal Naidu, Bangalore) for the year ended 30th June 1962. The gross profit has declined from Rs. 28.28 lakhs to Rs. 20.37 lakhs which, incidentally, is the lowest level to be seen in the past five years. Though the setback has been due, in the main, to the lower prices realised on sale of sugar subsequent to the removal of controls in September 1961, there has been a few other factors as well which had an equally deleterious effect on the profit-margin. For example, the Company had to export a total of 7,180 tonnes of sugar under the export promotion scheme which entailed a loss of no less than Rs. 12.41 lakhs. The recommendations of the Central Wage Board for sugar industry regarding the wage-scale for employees also resulted in an increase in working expenses, a provision of Rs. 5.96 lakhs having had to be made to meet the additional cost. Furthermore, the heavy accumulation of stocks of sugar on account of restricted releases by the Government necessitated large-scale borrowings and this in turn occasioned an increase of Rs. 5.67 lakhs in interest charges. Operating expenses have, therefore, risen from Rs. 134.37 lakhs to Rs. 140.46 lakhs.

Besides these direct increases in expenditure, there were other factors which also affected the Company's operational efficiency. Thus, whereas the crushing during the year lasted for a period of 288 days as against 267 days previously, the quantity of cane crushed was actually lower at 385,016 tonnes as against 395,963 tonnes and, though this lowered the cost of sugarcane purchased and crushed from Rs. 184.04 lakhs to Rs. 166.42 lakhs, the overall result on the cost of production was just the reverse. Furthermore, the average recovery of sugar from cane also declined from 9.86 per cent to 9.77 per cent and this brought about a reduction in the production of sugar by 993 tonnes to 38,056 tonnes. Production of alcohol in the distillery too decreased from 857,817 gallons during 1961 to 713,268 gallons during the year under review and the amount of Rs. 10.75 lakhs realised on the sale of the product was likewise Rs. 1.25 lakh lower than in the preceding year.

All these factors have contributed, as aforesaid, in decreasing the gross profit by about Rs. 8.00 lakhs to Rs. 20.37 lakhs. On providing therefrom Rs. 8.27 lakhs (Rs. 8.21 lakhs last year) for depreciation and Rs. 10.00 lakhs (Rs. 11.00 lakhs) for taxation, there is a net profit of Rs. 2.10 lakhs, which is less than one-fourth of that (Rs. 9.07 lakhs) earned in the previous year. The Directors have, therefore, found it necessary to withdraw a sum of Rs. 8 lakhs from the reserves, besides utilising Rs. 2.03 lakhs obtained by way of rebate of excise duty for strengthening the amount available for appropriation. Out of this, Rs. 5.97 lakhs as against Rs. 3.05 lakhs last year have been transferred to various reserves and provisions, so that the net depletion of reserves is Rs. 4.06 lakhs. But for this dip into the profits made in the past years, it would not have been possible for the Directors to maintain the ordinary dividend at 30 per cent subject to deduction of tax, requiring Rs. 6.54 lakhs, as before.

Financially the Company is in fine shape. A share capital, exclusively in ordinary shares of Rs. 10 each, of Rs. 21.79 lakhs which has remained unchanged for a number of years is supported by reserves and surplus amounting to no less than Rs. 118.73 lakhs as at 30th June 1962. Secured loans have vastly expanded during the year under review to total Rs. 132.50 lakhs in addition to current liabilities at Rs. 128.02 lakhs. Both of these, however, are more than balanced on the assets side by current assets, loans and advances and investments which aggregate Rs. 344.19 lakhs. The gross block is valued in the Company's books at Rs. 178.77 lakhs but as accumulated depreciation amounts to as much as Rs. 123.58 lakhs, the net block, inclusive of capital work-in-progress, stands at Rs. 56.84 lakhs.

The following comparative table presents a synoptical view of the Company's working results for the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959
Sales—				
Sugar and distillery products	328.95	323.68	441.47	392.11
Farm supplies	13.86	14.37	13.82	12.02
Other income	2.82	3.86	13.20	12.47
Closing stocks	156.56	100.61	17.99	55.21
Cost of sugarcane purchased and milled	166.42	184.04	151.56	153.42
Expenses	140.46	134.37	132.64	130.00
Excise duty on sugar	74.34	77.86	114.74	104.26
Gross profit	20.37	28.28	34.50	28.00
Provision for—				
Depreciation	8.27	8.21	7.40	7.78
Taxation	10.00	11.00	13.50	8.00
Net profit	2.10	9.07	13.60	12.82
Withdrawals from provisions and other credits	10.03	..	..	..
Transfer to reserves and provisions	5.97	3.05	6.36	7.27
Dividend	6.54 (30%)	6.54 (30%)	6.54 (30%)	6.54 (30%)
Carry forward	0.26	0.64	1.15	0.45
Market price of ordinary shares (In rupees):	1962	1961	1960	1959
High	56.50	60.50	59.25	59.00
Low	53.40	56.50	49.50	43.26

Note.—All dividends are subject to deduction of tax.

At present the Rs. 10 fully paid ordinary shares of the Company are being quoted on the Madras Stock Exchange at Rs. 53.40 on a *cum-div.* basis. The net return on investment on an *ex-div.* basis works out to about 4.1 per cent per annum.

VOLTAS EARNS LESS BUT PAYS SAME

Despite an increase in total proceeds of sales and services from Rs. 25.73 crores to Rs. 27.16 crores, Voltas Ltd. has made a lower net profit of Rs. 66.48 lakhs for the year ended 31st August 1962 as compared with Rs. 73.06 lakhs for the previous year. However, the dividend on the Rs. 10 fully paid ordinary shares is proposed to be maintained at 14 per cent per annum, subject to tax. Besides disclosing the maintenance of the dividend, the statement issued by the Company also says that fully licensed orders in hand are substantially higher than in previous years.

The profit figure is arrived at after providing Rs. 71 lakhs (Rs. 66.50 lakhs in the previous year) for taxation. It is also after provision for depreciation, but the quantum of this provision is, not disclosed. The dividend absorbs Rs. 35.70 lakhs. While transfer to general reserve has been reduced by Rs. 5 lakhs to Rs. 20 lakhs, a sum of Rs. 7 lakhs has been set apart for taxation reserve, as against nothing in the previous year. However, nothing is credited to development reserve, as against Rs. 5 lakhs a year before, and the provision for development rebate reserve has been reduced from Rs. 1.82 lakh to Rs. 1.65 lakh. No allocation is made, as against Rs. 1 lakh a year before, for staff welfare reserve. The total transfers to the various reserves amount to Rs. 28.65 lakhs—Rs. 4.17 lakhs less than in the previous year. The provision for retiring gratuity has been reduced by Rs. 2 lakhs to Rs. 3 lakhs. The surplus to be carried forward is lower at Rs. 2.92 lakhs, as against Rs. 3.79 lakhs brought in.

T.E.L.CO.'S RIGHTS ISSUE

The Tata Engineering and Locomotive Company Ltd. has decided to avail itself of the consent granted to it by the Controller of Capital Issues last year for issuing 200,000 further ordinary shares of Rs. 100 each at a premium of Rs. 50 per share and to offer them as right shares to the existing shareholders in the proportion of one right share for every four shares held by them. A resolution authorising the Company to make the rights issue will come up at an extraordinary meeting of the shareholders to be held in Bombay on the 29th inst. The amount on the new shares, including the premium, is to be paid in two equal instalments. The first instalment is to be paid on application for the shares and the second before 30th September 1963. To permit the rights issue, it is proposed to raise the authorised capital of the Company from Rs. 10 crores as at present to Rs. 15 crores divided into 1,300,000 ordinary shares (against 800,000 shares as at present) of Rs. 100 each and 200,000 5 per cent cumulative preference shares of Rs. 100 each.

(Concluded from next column)

year, borrowings increased by Rs. 13.20 lakhs to Rs. 31.84 lakhs. Current liabilities and provisions stand at Rs. 50.05 lakhs. Thus, the total indebtedness amounts to Rs. 81.89 lakhs. Against this, current assets, loans and advances make a total of Rs. 95.76 lakhs and investments stand at Rs. 11.60 lakhs. The gross block, which expanded during the year from Rs. 48.71 lakhs to Rs. 49.49 lakhs, has been written down to Rs. 15.34 lakhs and, inclusive of machinery under installation of Rs. 45,207, is shown at Rs. 15.79 lakhs.

GWALIOR SUGAR'S SALES AND PROFIT RECEDE

DIVIDEND PASSED OVER

A SHARP recession in net sale proceeds (that is, excluding the excise duty paid) from Rs. 98.78 lakhs to Rs. 73.53 lakhs as also in gross profit from Rs. 9.87 lakhs to Rs. 2.22 lakhs are the discomforting features of the results of the Gwalior Sugar Company Ltd. (Managing Agents: Messrs. J. P. Srivastava and Sons (Private) Ltd., Dabra, Madhya Pradesh) for the year ended 30th June 1962. The net profit, after making the minimum essential provisions, is even less than a thousand rupees, as against Rs. 3.99 lakhs in the previous year, with the result that the Directors have been constrained to pass over dividend on the 100-rupee ordinary shares, which was maintained at 12.5 per cent per annum, subject to tax, in 1960-61.

The dividend has been skipped for the first time in the past seven years and this has definitely disappointed shareholders, although the tightly held and limited (18,250) ordinary shares of the Company, which had been nominally priced at Rs. 160 throughout last year, are still being quoted at this level. The shareholders may, however, find solace in the fact that the setback suffered by the Company was due entirely to circumstances beyond the control of the management.

The Directors have given four reasons for the year's setback, namely, lower production, lower recovery, lower price realisation and heavy loss on exports. Production statistics are not presented by the Directors. But we are told that the quantity of cane crushed during the year was 1,082,134.10 quintals, as against 3,436,740 maunds which work out to 1,271,593.80 quintals, and the average recovery was 8.88 per cent, as compared with 9.01 per cent in the previous year. On the basis of these figures, production during the year works out to 96,094 quintals, as against 114.571 quintals in the previous year. The prices realised were lower because of the general decline in rates. The loss on exports amounted to Rs. 4,01,720, as against Rs. 2.70 lakhs in the preceding year. Moreover, sugarcane crop in the cane areas of the factory was badly affected by disease and frost and consequently the factory could not fulfil the production quota fixed under the Sugar (Regulation of Production) Act, 1961. The approach made by the Company to the Madhya Pradesh Government for relief from cane cess to compensate it at least partially for the very poor quality cane crushed during the extended season has so far borne no fruits.

The following table shows the Company's progress since 1958-59:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959

Low	160.00	80.00	80.00	80.00

* Subject to deduction of tax.

The Government's restrictions on sugar production in the 1961-62 season and the prevalence of red-rot disease on account of which purely disease-free cane was not available for fresh plantation have resulted in a reduction of acreage under sugarcane in the factory area and it is likely that both the quantity and quality of cane available to the factory for crushing in the current season will not make for its economic working. However, the present construction of a road bridge over the Sindh river and the possibility of feeding the Harsi reservoir from that river hold out promise of better sugarcane development work in the Dabra area.

The Company's financial position is fairly good. The paid-up capital of Rs. 27.69 lakhs, of which Rs. 15.94 lakhs are in ordinary shares of Rs. 100 each and the balance in two types of preference shares, is backed by reserves and surplus aggregating Rs. 13.57 lakhs. During the

(Continued in previous column)

STRIKE HINDERS J. K. STEEL'S PROGRESS

DIVIDEND HALVED ON DOUBLE CAPITAL

A CAREFUL study of the results of J. K. Steel Ltd. [Managing Agents: Messrs. J. K. Industries (Private) Ltd., Calcutta] for the year ended 30th June 1962, which show a considerable drop in sale proceeds from Rs. 152 lakhs to Rs. 111.94 lakhs as also in gross profit from Rs. 36.37 lakhs to Rs. 25.08 lakhs, will lead one to agree with the management that notwithstanding this setback which was due to the 106-day (longest) strike in the Company's works during the year, the Company's overall position has not deteriorated on any account. This overall position finds expression in the profit-margin which actually determines the capacity of a unit to hold its own in the market and in the set-up of the industry it belongs to. The study reveals that, at 22.4 per cent, the Company's profit-margin during the year under review was quite satisfactory in relation to 23.9 per cent in the preceding two years. In other words, the Company had no difficulty in marketing its products. The strike, which according to the management was launched just before the general elections in the country by a union affiliated to the Communist Party with the aim of disturbing production in the Company's works and gaining political advantage, resulted in a production loss of Rs. 60 lakhs, which, in turn, reduced the turnover and profit. Had the strike not occurred, the Company would surely have been able to make further headway.

The provision for depreciation has been brought down drastically from Rs. 7.49 lakhs to Rs. 2.77 lakhs and the Managing Agents' commission has shrunk from Rs. 2.76 lakhs to Rs. 1.85 lakh. Taxation has claimed Rs. 9.10 lakhs, as against Rs. 9.85 lakhs a year before. The net profit, after these provisions, amounts to Rs. 11.36 lakhs, as against Rs. 16.27 lakhs in the previous year. The profit retained in business is less at Rs. 6.55 lakhs as compared with Rs. 11.31 lakhs in 1960-61. The dividend on the Rs. 10 fully paid ordinary shares has been halved to 10 per cent per annum, as the capital was doubled during the year to Rs. 40 lakhs by the issue of one-for-one bonus share. The total amount to be distributed to shareholders by way of dividend remains, therefore, unchanged at Rs. 4 lakhs. Although as in the previous year the dividend is subject to deduction of tax, we are told that 90 per cent of it will be exempted from tax, as against 80 per cent in 1960-61.

A synoptical view of the progress made by the Company in the past four years is presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1962	1961	1960	1959
Sale proceeds, less commission paid	111.94	152.00	124.30	94.95

Low	15.62	15.44xr	12.62	10.00

* Subject to deduction of tax.
Note.—From 1960, the preference dividend has been adjusted to 9 per cent, taxable.

During the year, the Company continued to be confronted with difficulty in obtaining raw materials, especially billets and hot rolled strips. In spite of the rigid control on production, supply and sale of steel products, adequate and regulated supply of steel from main producers to the end-product producers is, we are told, not ensured. The Directors regret that, in spite of quotas being fixed after detailed scrutiny, the Steel Controller's plans and distribution control are not at all effectual. The position continues to be the same at present and has affected the working of the Company's hot rolling mill. The necessity for ensuring regular supplies of raw materials to the Company is all the more important, as it is the sole producer of jute baling hoops which are used in packing jute goods which are an important foreign exchange earner.

The Company's expansion programme has been delayed on account of foreign exchange shortage. The project for the manufacture of electric hoists and chain pulley block has now crystallised, following the arrangement for foreign exchange with the I.C.I.C.I. The project was throughout blocked because of difficulty in obtaining a small amount of foreign exchange while the major part of the plant and machinery was arranged indigenously or through imports on rupee account.

Financially, the Company is sound. Its paid-up capital of Rs. 50 lakhs, of which Rs. 40 lakhs are in ordinary shares and the balance in preference shares, is supplemented by reserves and surplus aggregating Rs. 36.72 lakhs. The Company reduced during the year its loan liability to the West Bengal Government from Rs. 24.11 lakhs to Rs. 21.14 lakhs but raised a loan from its bank which is standing at Rs. 7.08 lakhs. The bank borrowings and current liabilities shown at Rs. 61.50 lakhs bring up total short-term indebtedness to outsiders to Rs. 68.58 lakhs which, however, is easily taken care of by current assets, loans and advances making a total of Rs. 106.82 lakhs and investments amounting to Rs. 9.90 lakhs, including Rs. 8.79 lakhs being quoted and commanding a market value of Rs. 10.05 lakhs. At Rs. 59.73 lakhs, the net block compares with a gross block of Rs. 87.91 lakhs (as against Rs. 81.63 lakhs a year before), with the accumulated depreciation amounting to Rs. 28.18 lakhs.

Currently, the 10-rupee ordinary shares of the Company are quoted at Rs. 16.50 *ex-div.* and offer a net yield of 4.2 per cent per annum.

KIRLOSKAR BROTHERS LTD.

Notwithstanding the unsatisfactory supply of pig iron affecting the output of almost all the engineering units in the country, Kirloskar Brothers Ltd. (Managing Agents: Messrs. Kirloskar Sons & Co., Kirloskarwadi) have given an excellent account of themselves during the year ended 31st July 1962. Gross realisations from the sale of manufactured and trading goods which had increased by Rs. 80.54 lakhs to Rs. 315.67 lakhs during the preceding year expanded further by Rs. 72.20 lakhs during 1961-62 to stand at the impressive level of Rs. 387.87 lakhs. The gross profit has likewise improved from Rs. 37.05 lakhs to Rs. 48.95 lakhs, though larger sums have had to be expended during the year for purchases of raw materials and goods, a higher incidence of expenditure on account of consumption of spare parts and a rise of Rs. 3.25 lakhs in the wage bill. Because of higher gross profit, provisions for Managing Agents' remuneration and taxation have naturally been stepped up, the former from Rs. 2.54 lakhs to Rs. 3.18 lakhs and the latter from Rs. 11.28 lakhs to Rs. 13.52 lakhs, while a higher depreciable block has necessitated a bigger provision for depreciation of Rs. 12.38 lakhs for the year under review as against Rs. 9.27 lakhs previously. Although these essential provisions have absorbed the major portion of the gross profit, the net profit still shows a smart rise of Rs. 5.91 lakhs or 42 per cent to Rs. 19.87 lakhs. With the inclusion of Rs. 0.04 lakh withdrawn from past provisions and Rs. 0.11 lakh brought forward, there is available for distribution a sum of Rs. 20.22 lakhs in place of Rs. 14.16 lakhs a year ago. Despite this increase in the distributable profit, the Directors have found no reason to modify their cautious policy of ploughing back a substantial portion of the profit into the business and have accordingly transferred an aggregate of Rs. 14.12 lakhs (Rs. 9.74 lakhs last year) to various reserves. Of this, Rs. 7.17 lakhs (Rs 2.15 lakhs) or nearly 50 per cent have been credited to the development rebate reserve, Rs. 1.85 lakh (Rs. 1.00 lakh) to the general reserve, Rs. 1.50 lakh each, as during the previous year, to the rehabilitation reserve and the debt redemption reserve. The rate of ordinary dividend has once again been maintained at the modest level of 10 per cent, subject to deduction of tax at source but, since this has become payable on an enlarged capital, it claims a larger sum of Rs. 5.78 lakhs as against Rs. 4.31 lakhs during 1960-61. The carry forward is Rs. 0.12 lakh, as against Rs. 0.11 lakh brought in.

The Company's dividend policy has so far been quite conservative and has been responsible for the accumulation of a substantial reserve position. Thus as at 31st July 1962, a share capital of Rs. 58.20 lakhs, all in ordinary shares, are supplemented by Rs. 108.67 lakhs in reserves, giving the equity per share as Rs. 72.55, against the face value of Rs. 25. The year has witnessed an increase in secured and unsecured loans from Rs. 54.96 lakhs to Rs. 93.95 lakhs and in current liabilities from Rs. 72.95 lakhs to Rs. 101.82 lakhs but both of these are duly taken care of by the total of current assets and loans advances which too has expanded by Rs 35.08 lakhs to Rs. 230.41 lakhs. Book value of investments is also higher at Rs. 23.13 lakhs in comparison with Rs. 20.33 lakhs previously, due to the increase in the investment in the associated company, Kirloskar Oil Engines Ltd., and in the subsidiary, Kirloskar Pneumatic Company Ltd. With the acquisition of new assets worth Rs. 57.46 lakhs during the year and together with the cost of Rs. 3.67 lakhs of buildings under construction, the gross block has grown to Rs. 197.30 lakhs and, deducting therefrom Rs. 88.20 lakhs being depreciation earned to date, the net block stands at Rs. 109.10 lakhs.

The steady progress made by the Company since the year ended 31st July 1959 is well depicted in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st July			
	1962	1961	1960	1959
Sales (gross)	387.87	315.67	235.13	228.44
Other income	5.29	3.41	3.00	2.79

Carry forward	0.12	0.11	0.12	0.12
Market price of equity shares (In rupees):	1962	1961	1960	1959
High	60.00	62.00cr	75.00cr	65.00cr
Low	44.00	37.00xr	61.00xr	53.00xr

During the year under review, construction of the factory building for the manufacture of machine tools such as vertical turret lathes and horizontal boring machines was completed. Most of the foreign machines are also at the site while the first set of components for the assembly of vertical turret lathes have also been received and the assembly of these machines has been taken up.

The construction of the factory building at Dewas was also completed during the year. The foundry at this branch factory has already commenced production and the Directors hope that regular production will commence during the current year. They further state that, if adequate supplies of raw materials are made available, the factory would be able to make satisfactory progress as visualised.

The Rs. 25 fully paid ordinary shares of the Company are currently quoted at Rs. 44.00 on a *cum-div.* basis. On an *ex-div.* basis the net return on investment in this scrip works out to 4.1 per cent per annum.

PAPER PRODUCTS LTD.

The results of the Paper Products Ltd. of New Delhi for the year ended 31st July 1962 show considerable improvement in both sales realisation and gross profit. Net sale proceeds, after allowing for expenses towards packing, railway freight, etc., have gone up by Rs. 37.13 lakhs to Rs. 150.54 lakhs. Gross profit, at Rs. 21.84 lakhs, is higher by Rs. 6.18 lakhs. However, as the paid-up capital was increased substantially during the year (as per details discussed later), the dividend on the 100-rupee ordinary shares has been reduced by six points to 18 per cent per annum, subject to tax. Even so the total distribution to the shareholders takes up a larger amount of Rs. 5.22 lakhs, as against Rs. 3.84 lakhs a year before. The cost of raw materials consumed during the year is shown at Rs. 100.55 lakhs, as against Rs. 74.86 lakhs in the previous year. Staff expenses increased from Rs. 7.48 lakhs to Rs. 11.35 lakhs and so did other expenses from Rs. 16.04 lakhs to Rs. 19.09 lakhs. The provision for depreciation has been raised slightly from Rs. 3.47 lakhs to Rs. 3.91 lakhs but that for taxation has been increased greatly from Rs. 4.98 lakhs to Rs. 9 lakhs apparently because of the upward revision in the tax on companies in the last budget. After making these provisions, the net profit shows but a small improvement of Rs. 1.73 lakh to Rs. 8.94 lakhs. Development rebate reserve gets some Rs. 90,000, as against roughly Rs. 85,000 a year before, and the transfer to reserve fund has been maintained at Rs. 2.80 lakhs.

New machines worth Rs. 5.67 lakhs were installed during the year. The Company's representation to the Government for increasing the value from Rs. 4,25,700 to Rs. 6,43,800 of the D.L.F. licence for the import of Rotogravure printing cylinders making machinery has been successful. The revision in the value had become necessary because the original estimate was based on quotations from West Germany, which had proved to be much lower than those from the U.S. from where the purchase under the licence had been stipulated. The incoming equipment, when received

	(10%)	(10%)
Carry forward	64	51

* This represents refund of income-tax Rs. 7,059 and excess provision of development rebate reserve written back.

§ Includes dividend on new ordinary shares at Rs. 2.81 per share subject to deduction of tax.

Extracts from the Directors' report: During the year under review, there was a breakdown in the transmission system of the Gujarat Electricity Board, who have been supplying electrical energy to the Sihor Licencee in June 1962, which continued for major part of the month, resulting in an evident loss of production which has partly had an adverse effect on this year's results.

Negotiations for technical collaboration with a reputed French Firm of M/s. Establishment Porcher with a view to increase the production and improve the quality of sanitarywares, and to start the manufacture of fireclay sanitarywares, have been successfully finalised and it is hoped that the collaborators will start their work, in terms of the collaboration agreement, as early as possible. The Government of India has approved the collaboration arrangement in principle and the formal sanction of the agreement is awaited.

The civil works of the proposed expansion project are expected to be completed in about two months' time.

Accounts in brief as at 31st July 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,45,000	Gross block	17,53,030
Reserves of surplus	4,42,270	—Depreciation	7,38,604

† Represents excess provisions of previous years Rs. 29,556 and refund of sales tax for previous year.

* This represents excess provisions of previous years amounting to Rs. 23,284.

Extracts from the Directors' report: Due to increased demand and steadier raw material prices, the Company's working has shown improved results for the year under review.

During the year the Company received a licence for manufacturing *Epoxy Plasticisers*. Initial plant and machinery to a value of Rs. 1,50,000 have been acquired for the purpose and are under installation. Indigenous raw materials will be used and the Company hope to commence trial production in January 1963.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	21,17,500	Gross block	22,78,927
Reserves of surplus	11,08,672	—Depreciation	23,58,749
Other liabilities	34,30,074

		Investments	82,840
		Cash	15,16,964
Rs.	66,56,846	Rs.	66,56,846

* Paid up capital consists of 21,175 Equity shares of Rs. 100 each fully paid up. Of the above shares, 10,175 (of which one share remains to be consolidated) are issued as fully paid up by way of Bonus shares by capitalisation of reserves.

Mandya National Paper Mills Ltd.

(Managing Agents: Bedi and Company Management Ltd., Bangalore.)

Registered Office: 14, Palace Road, Bangalore-1.

Fourth Annual General Meeting—Held on 28th December 1962.

Extracts from the Directors' report for the year ended 30th June 1962: As all the transactions are of non-revenue nature representing expenditure incurred during construction and trial period, the profit and loss account has not been drawn up. The expenditure during construction has been allocated towards fixed assets on an equitable basis in consultation with the auditors of the Company.

During the year under review, the erection of the entire plant and machinery, except the recovery section, was practically completed. At the time of signing this report the recovery section has also been put into operation.

The trial operations started in the last week of April 1962. The trial operations have had to face many teething troubles, which are being overcome. The production up to 30th June 1962, was 236 metric tons only and even direct expenditure incurred on raw materials etc., to manufacture this quantity was much in excess of the value of production during this period. The net expenditure has therefore been properly treated as trial operation expenditure and allocated towards the cost of plant and machinery.

The progress in the manufacture of high grade writing and printing paper is satisfactory and the rated production capacity has already been exceeded, though owing to various difficulties, sustained production up to the rated capacity could not be maintained. The products of the Company have been well received in the market and the Company orders in hand equivalent to the Mill's production for the next six months.

The Company is constructing a Housing Colony to accommodate staff and workers with the assistance of the Mysore Housing Board, who have also decided to undertake the construction of quarters for the workers and the Company has provided 40 acres of land free of cost for this purpose.

The power generating plant has been put into commission and the Company is now utilising its own generated power. The Directors are grateful to the Mysore State Electricity Board for providing temporary power till the commissioning of the power plant. The cost of independent generation is expected to be higher than the cost of Hydro-electric power supplied by the Government, but it is encouraging to know that the Government has taken a decision to subsidise the difference in costs.

During the year under review, 30,000 equity shares of Rs. 10 each were issued in part-payment towards the cost of power generating set in accordance with the sanction of the Controller of Capital Issues.

The Company has decided to expand the production capacity from 35 tons to 70 tons per day. The Directors, however, could not proceed to issue fresh capital to implement the expansion project in view of the depressed sentiments in the Stock Exchange when the interest in paper shares, in particular, remained subdued. The Directors will take necessary action to implement the expansion project as soon as conditions permit.

Accounts in brief as at 30th June 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	2,02,69,505	Block	4,25,81,763
Other liabilities	2,62,68,264	Current assets	31,52,943
		Investments	1,000
		Cash	4,26,044
		Miscellaneous expenditure	3,76,019
Rs.	4,65,37,769	Rs.	4,65,37,769

* Paid-up capital consists of :—(*a*) 60,000 seven per cent. tax free redeemable cumulative preference shares of Rs. 100 each fully called up (redeemable at par on the expiry of 15 years from the date of allotment—earliest date of redemption—1st December 1974) and (*b*) 14,30,000 equity shares of Rs. 10 each fully called up.

Note: calls unpaid on Preference share capital amount to Rs. 5,375. Calls unpaid on Equity shares amount to Rs. 25,120.

Parshuram Pottery Works Co., Ltd.

(Chairman: Mr. A. V. Gharpure.)

Registered Office: Morvi (Gujarat).

Thirty-first Annual General Meeting—24th January 1963.

* This represents income-tax refund for 1956-57 and rebate on power consumed during year 1952-53.

† This represents Rs. 1.28 lakhs transferred from general reserve for payment of excess bonus for past year.

Extracts from the Directors' report: Inspite of continuous power shortage in Morvi factory of the Company, the total sales during the year is Rs. 73,00,420 which is slightly more than the sales of the previous year.

The Company's loan for Rs. 12,00,000 (Rs. 7.25 lakhs in foreign currency and Rs. 4.75 lakhs in Indian currency) from the Industrial Credit and Investment Corporation of India Ltd., Bombay has been sanctioned. Application for the import licence is already made to the Central Government. The Company's collaboration arrangements with French firm are also completed and the work on the new project will be started soon.

Accounts in brief as at 31st July 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	13,00,000	Gross block	97,85,619
Reserves and surplus	20,76,444	—Depreciation	53,20,845
Other liabilities	51,21,322

* Pad-up capital consists of 10,000 six per cent. tax-free cumulative 1st preference shares of Rs. 25 each; 28,000 four per cent. tax-free 2nd cumulative preference shares of Rs. 25 each and 14,000 equity shares of Rs. 25 each.

(Concluded from previous page)

and erected, will add considerably to the capacity and efficiency of the plant which has recently been set up.

In order to meet to a greater extent its increasing requirements of paper which is the main raw material from indigenous sources, the Company is setting up a pulp and paper mill at Roha, about 90 miles from Bombay. Roha Pulp and Paper Mills Ltd., an independent company, has already been incorporated to operate the project. Progress on the scheme is satisfactory and production is expected to start, at the latest, by the beginning of the next financial year. The main factory building structure is almost complete. The plant has been imported from Japan on 10 years deferred payment terms and brought to the site. Most of the indigenous machinery has also been received. Supply of electric power has been arranged. Technicians from Japan to work on the erection and commissioning of the plant and machinery have arrived. The new company has been authorised to issue 5 lakh shares of Rs. 10 each and Paper Products has been permitted to take up one lakh shares out of them. The capital issue has been delayed because of the unfavourable market conditions. In case the conditions do not improve, Paper Products itself may take up the project. On the other hand, if the new company makes the capital issue and takes up the project, it will give first priority to Paper Products for selling all its production. In the meantime, the work on the project is being carried out by Paper Products. Negotiations for a medium-term loan are already afoot.

The paid-up capital of the Company was increased during the year at first from Rs. 16 lakhs to Rs. 24 lakhs by the issue of fully paid bonus shares worth Rs. 8 lakhs in December 1961, for the second time to Rs. 34 lakhs by the issue of 10,000 shares of Rs. 100 each for cash at par and lastly to Rs. 41.82 lakhs (excluding the unpaid calls of some Rs. 18,000) by the public issue of 16,000 shares of Rs. 100 each, on which only Rs. 50 have been called. Subsequent to the close of the year and till 25th December 1962, the balance money of Rs. 50 on the new issue of 16,000 shares was called, and the paid-up capital, therefore, increased to Rs. 49.22 lakhs, with calls in arrears amounting to some Rs. 78,000.

The paid-up capital of Rs. 41.82 lakhs as at the end of the year is supplemented by reserves and surplus amounting to Rs. 10.60 lakhs. Bank borrowings are shown at Rs. 40.91 lakhs, as against Rs. 27.89 lakhs a year before. These borrowings and current liabilities and provisions standing at Rs. 46.95 lakhs bring the total indebtedness to outsiders to Rs. 87.86 lakhs. As against this, current assets, loans and advances make a total of Rs. 81.72 lakhs and investments amount to Rs. 23.37 lakhs. The gross block of Rs. 49.16 lakhs, as against Rs. 40.94 lakhs a year before, has been written down to Rs. 34.60 lakhs.

The Company is engaged in the manufacture of packaging material, such as paper bags, industrial and miscellaneous wrappers, drinking straws, fancy paper, cartons, paper containers, cellophane and waxed paper, etc. Its factory is at Thana in Bombay. Its 100-rupee ordinary shares are currently quoted around Rs. 131 *cum-div.* and offer, on *ex-div.* basis, a net yield of 10.5 per cent per annum.

Notice

CHITAVALSAH JUTE MILLS COMPANY LIMITED

NOTICE

ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 22nd January, 1963 to 31st January, 1963, both days inclusive.

By Order of the Board,
McLEOD & Co. LTD.,
C. HOCKLEY,
Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA.
10th January, 1963.

UNDER SECRETARY TO GOVERNMENT 21 JAN 1963 PUBLIC DEPARTMENT

NEWS IN BRIEF

A UNIT to manufacture calculating and adding machines will be put up at Perungudi, near Madras, shortly by the Facit Asia Ltd., formed in collaboration with the well-known Swedish firm, A.B. Atvidabergs. The project is expected to cost Rs. 34 lakhs. The Swedish firm will provide technical know-how for the production of Facit machines, besides supplying necessary machinery and training Indian technical personnel.

A new technique in low temperature carbonisation of coal, developed by the Central Fuel Research Institute, Jealgora, has resulted in a higher calorific value. The technique is expected to save considerably on the capital cost of installation of the plants and thus lower the cost of producing coke. The technique, it is said, has been leased out for the commercial exploitation to a Calcutta firm for a period of 14 years exclusively for the State of West Bengal and Bihar.

India and the United Arab Republic have signed a protocol extending the present trade agreement up to February 1966. It provides for over 50 per cent increase in the present volume of trade between the two countries. The U.A.R. will buy Indian tea, jute and engineering goods, and several items of non-traditional goods like pharmaceuticals and insecticides. India will import from the U.A.R. cotton, rice and rock phosphates.

The first carbon black manufacturing plant in India, put up by the Phillips Carbon Black Ltd. at Durgapur, West Bengal, has gone into production. It is said that the unit, when in full production, will meet the entire demand for carbon black in the country, thereby saving Rs. 2 crores of foreign exchange annually. The unit has a capacity to produce 30 million lbs. annually. The plant is now proposed to be expanded to produce an additional quantity of ten million lbs.

The Governments of Punjab and Kashmir have concluded an agreement to set up a thermal power station with a generating capacity of 1,20,000 kws. at Kalakot about 74 miles from Jammu. The project will cost about Rs. 12 crores, which will be equally shared by the two Governments. This agreement has been signed on the advice of the Central Water and Power Commission. The project, to be run on the coal available from the Kalakot coal mines, is expected to be ready by the end of 1966. Power generated from this station will be connected with the Pathankot grid for providing electricity to the Punjab and Delhi.

The State Trading Corporation will export 500,000 pairs of shoes worth Rs. 1.25 crores to the Soviet Union in 1963, under a contract entered into recently. The National Small Industries Corporation will supply 250,000 pairs of shoes. The balance will be procured from regular suppliers of the S.T.C. With the conclusion of this contract, export of shoes to Russia will rise by more than 40 per cent, as compared with last year. For the past two years, shoes exports to Russia have been showing a decline. In 1960-61, exports fell to 435,450 paids from 477,200 in 1959-60. Last year, they were still lower at 310,000 pairs.

A Rolls-Royce jet engine overhaul plant, put up by the Air-India at Santa Cruz, Bombay, was formally inaugurated last week. The overhaul plant forms part of the Air India's engineering complex at its Santa Cruz base, where extensive facilities have been built to service, maintain and overhaul the Corporation's fleet of six Boeing 707 inter-continental jets. The new plant, built at a cost of about Rs. 60 lakhs, will enable the airline to undertake complete overhaul and repair of Rolls-Royce Conway jet engine which power its Boeing fleet. With the opening of the new plant, there will be a saving of foreign exchange to the tune of Rs. 35 lakhs annually.

The Indian Institute of Management, Calcutta, has been allotted $160,000 by the Ford Foundation for the expansion of facilities for training and research in business and industrial management. Besides, grants of $712,500 were made to enable five Indian laboratories to expand research in reproductive biology and increase the number of specialists for testing and developing new methods of family planning. These include Banaras Hindu University ($102,500) for research in endocrinology; the University of Delhi ($195,000) for research and post-graduate training in reproductive biology; the Institute of Agriculture in Anand ($120,000) for research on the reproduction of farm animals, with implications for human reproduction and to the National Institute of Sciences of India ($5,000) for materials for a symposium of leading Indian scientists on the endocrinology of reproduction and publication of the proceedings.

* * * *

From Abroad

Steel output in the U.K. aggregated 20.49 million tons in 1962, representing a decline of 7 per cent and 16 per cent, as compared with 1961 and 1960, respectively.

The Federal Government of Germany has decided to increase the amount of the loan fund which shipyards draw upon for financing long-term export orders by 50 per cent to DM 600 million. The loan fund offers loans for a period of about ten years at about 5½ per cent.

The U.S. has agreed to give $50,000 worth of enriched uranium to fuel research reactors in the Congo and Pakistan. The Congo will receive 1,000 grams of enriched uranium for a reactor at Leopoldville and Pakistan will get 5,775 grams for a reactor at Rawalpindi.

The Pakistan International Airlines has decided to set up a schedule helicopter service in East Pakistan, radiating from Dacca to 20 destinations. The service will begin in October next. The type of helicopter to be used has not yet been decided, but the airline will require twin turbine-engined helicopters, capable of seating up to 25 passengers and cruising at about 150 m.p.h. Initially, two such helicopters will be bought, with a third coming later.

World production of cocoa is estimated at 1.15 million tons in the 1962-63 season, or an increase of 4 per cent over the previous year. World consumption is expected to expand at a faster pace, that is, by 6.5 per cent, to 1.17 million tons in 1963. But the prices are not expected to go up much this year, as stocks at the end of 1962 were of the order of 4.8 months' supply; these, however, compare well with as much as 5.2 months' supply as at the end of 1961.

London's underground railway system, which carries about two million passengers a day, celebrated its centenary last week. The system was the world's first. Today, similar circuits are operated in 25 other cities, and are being built or planed in 12 others. The first London underground line was between Paddington and Farringdon Street, a distance of four miles. It was a steam railway. Subsequently, the underground network grew quickly, extending to the outer suburbs. Electric trains were introduced in 1890. Preliminary work has recently started on a new line which will connect Victoria Station, one of the big London terminals, with north-east London. It will be over eleven miles long and cost about £55 million.

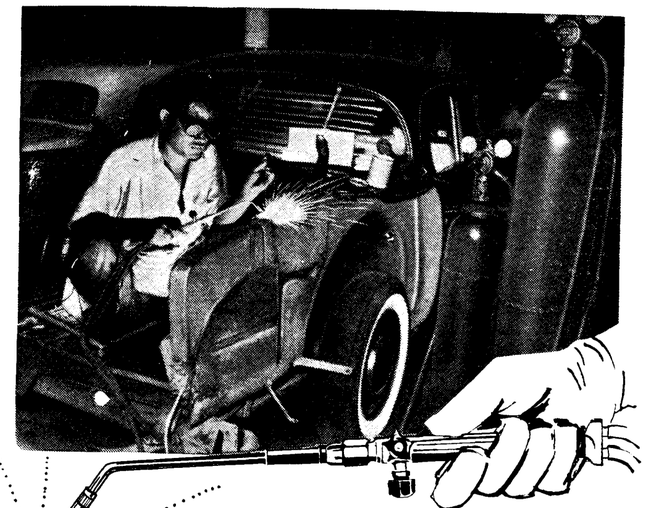
The U.N. Food and Agriculture Organisation proposes to set up a study group for keeping track of the trends in production, marketing and consumption of jute, *kenaf* and allied fibres. The proposed Study Group will study the costs of production and ways of reducing them. It will also study ways of improving marketing practices, including the promotion of standardisation in grading and the improvement of quality and of reducing marketing costs. Apart from helping the promotion of improvements in statistical services and providing information regarding demand and supply position, the Group will take into account problems affecting the long-term equilibrium between production and consumption of the fibres.

In order to tighten control over the inflow of short-term capital, the Japanese Government has raised the reserve requirements for certain foreign currency deposits, with effect from Friday last. Under the previous system which has been in effect since last June, banks were required to hold in reserve a uniform 20 per cent of all foreign currency liabilities such as Euro-dollars, call money, unsecured loans and deposits in non-resident free yen accounts. Under the new scheme, a dual rate system has been adopted under which reserve requirements will be raised to 35 per cent for newly introduced short-term capital. The rate for liabilities outstanding as at the end of December 1962 will remain at 20 per cent.

PERSONAL

MR. G. D. Somani and Mr. Dhirajlal Maganlal have been elected President and Vice-President, respectively, of the Indian Merchants Chamber for the current year.

Mr. M. S. Rao, Director of Personnel of Hindustan Steel Ltd., has been appointed Chairman in the place of Mr. J. M. Srinagesh.



Mr. V. M. S. Nair, Joint Chief Controller of Imports and Exports, Madras region, has been appointed Chairman of the Spices Export Promotion Council, Ernakulam (Kerala State).

Mr. C. N. Modwal, Deputy Director in the Indian Standards Institution, has been appointed Director-in-charge of Inspection and Quality Control in the Department of International Trade.

Mr. Shriyans Prasad Jain, President of the Federation of Indian Chambers of Commerce and Industry, and Chairman, Dhrangadhra Chemical Works Ltd., has been elected Chairman of the Millowners' Association, Bombay, for 1963-64.

Mr. Satish Chandra, a former Union Deputy Minister in the Union Ministry of Commerce and Industry, has been appointed Chairman of the Indian Airlines Corporation *vice* Mr. V. Shankar, Secretary to Food Department, Union Ministry of Food and Agriculture.

Dr. Douglas Leggett, a British expert on technological education and Principal of the Battersea College of Technology, London, has arrived in India on a three-week tour of Indian universities and technological institutes. During the course of the tour, which has been sponsored by Britain's Department of Technical Co-operation, he will acquaint himself with the developments in this particular field of education that are taking place in India.

The NEW
SAFFIRE LIGHT WEIGHT BLOWPIPE

Big automoblle garage or small workshop, the new Saffire blowpipe is ideal for welding light gauge sheet metal. Its low weight of 283. 50 grams (10 ozs) and the easy-to-grip fluted aluminium shank lessen operator fatigue in repetitive work.

Gas valves of advanced design and six sizes of copper welding nozzles ensure sensitive flame control and peak performance throughout the welding range of mild steel—from 914 mm. (20 s.w.g.) to 4.76 mm. (3/16") thickness.

The forward mounted gas controls and light weight mixer all contribute to give trouble-free performance over a long safe life.

INDIAN OXYGEN LIMITED

IOC-23

BANKING

(*Concluded from page 104*)

on rates of interest on deposits offered by the co-operative banks, on the one hand, and the small and medium-sized commercial banks, on the other, the authors of the Reserve Bank study observe: "Non-availability of comparable data render such a comparison difficult. However, from the available data, which have limited comparability, it can be broadly stated that the interest rates on deposits with co-operative banks were generally comparable in the case of current deposits, but slightly lower in respect of savings and fixed deposits than those offered by the commercial banks of comparable size."

Deposits with State co-operative banks as at the end of June 1961 formed about one-third of the total working capital. This indicates that most of the State co-operative banks continued to rely heavily on other borrowings to finance their affiliated units. State-wise, the proportion of deposits to total working capital exceeded 75 per cent in four States, namely, Assam, Bihar, Delhi and Himachal Pradesh. In the case of central co-operative banks, deposits accounted for 37 per cent of the total working capital in 1960-61, the proportion being less than 50 per cent in all the States, except Gujarat. In Assam, deposits formed about only 2 per cent of the working capital. The table below shows the position at a glance:

Size of deposits in relation to working capital

Year	Proportion of deposits to working capital (Per cent)	
	State co-operative banks	Central co-operative banks
1957-58	42	48
1958-59	40	41
1959-60	34	39
1960-61	33	37

A notable fact about these deposits is that, as a proportion of working capital, they showed a gradual decline during the four years in State as also central banks. This indicates that deposit mobilisation did not keep pace with the demand for credit on these banks, resulting in a faster increase in borrowings. It may, however, be noted that deposits, as a percentage of working capital, do not, by themselves, give a correct idea of the comparative position of the States with regard to progress of co-operatives in attracting deposits. A more appropriate criterion for a proper assessment of the comparative situation in the several States, according to the authors of the study, is the volume of deposits in relation to the number of families in each State. Deposits per 100 families exceeded Rs. 3,000 in Maharashtra and Gujarat while they were less than Rs. 200 in Bihar and Assam. The magnitude of the mobilisation of deposits was generally higher in those States where the level of co-operative development, as indicated by the volume of credit operations, was relatively better.

It will be seen from the foregoing account that deposits with the co-operative banks increased steadily over the period 1957-58 to 1960-61 but the rate of annual increase was not fast enough to reach the target set for co-operative credit. The slowing down of the rate of growth of deposits could be attributed to such factors as competition from commercial banks, and intensification of efforts by States at mobilisation of small savings and flotation of loans for development purposes.

Measures Called For

In conclusion, the authors of the study point out that the uneven performance of co-operatives in mobilising savings through deposits emphasises the need for intensifying efforts so as to achieve the third Plan target of Rs. 354 for deposits (Rs. 212 crores for central co-operative banks and Rs. 142 crores for State co-operative banks) and Rs. 530 crores for advances. The measures which the authors of the study consider necessary in this regard are the following:

(1) Strengthening the financial position of the co-operative banks through State participation and giving special managerial subsidies, (2) amalgamation of uneconomic units, (3) reviewing the pattern of interest rates offered on deposits in the co-operative banking sector against the background of recent trends in rates offered in the commercial banking sector, (4) removing restrictions, if any, on and encouraging investment of funds by local bodies in co-operative banks, (5) encouraging central banks to provide adequate banking facilities and services (where not already offered) and to open new branches, (6) exploring the need for introducing a scheme of deposit insurance in the co-operative sector and (7) ensuring proper co-ordination between the small savings campaign of State Governments and the efforts at mobilisation of deposits through co-operatives.

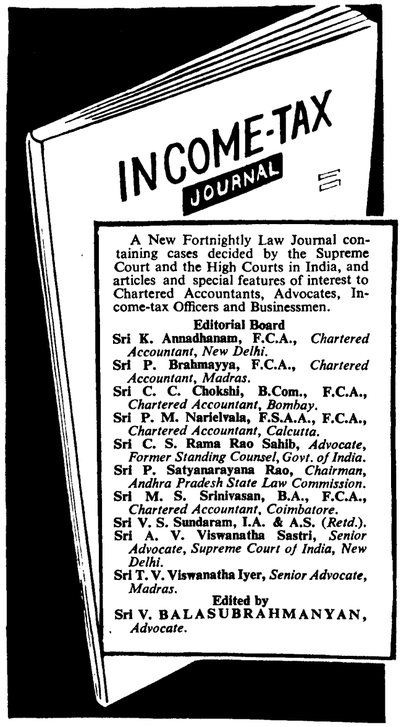
More important than these measures, according to the authors of the study, is a re-examination of the recent policy in regard to development of co-operatives with a view to making them sound and progressive units of banking business. In this connection, the authors of the study pertinently point out that the deposits position and financial resources of the central banks were generally more satisfactory in those States where significant and integrated efforts were made at reorganising the co-operative credit structure on a sound footing and at reorienting the loan policy and procedures of central banks.

COMMERCE AND INDUSTRY

(*Concluded from page 121*)

in India, with the object of switching over from dry mining to wet mining. Secondly, Rs. 1 crore will be spent on the proposed washery-cum-sodium sulphate recovery plant at Sambhar being put up by the Hindustan Salt Company. Besides, in order to assist development projects in the private sector, an amount of Rs. 1 crore will be provided from the cess fund for the desiltation of brine supply channels, provision of common services and improvement of communication, etc.

Side by side with increasing the output of common salt, attention is being given to improve its quality. In order to provide high quality product to industrial consumers, it is proposed to ensure that new salt works to be established would be mechanised, with provision made for establishing salt washeries. In order to demonstrate the scientific methods of production, two model farms were established during the second Plan period, one at Sumadi (Orissa) and the other at Tuticorin (Madras), in addition to one already existing at Wadala in Bombay.



The improvement of quality is as much important from the standpoint of domestic consumers as from that of overseas buyers. It is estimated that exports have risen from about 400,000 tons (valued at Rs. 62 lakhs) in 1957 to about 700,000 tons by 1961. Japan has been the major buyer of Indian salt and its purchases are being channelised through the State Trading Corporation. The other buyers are Ceylon, Pakistan and Nepal, East Africa and the Maldives.

INDIAN EXHIBITION IN MOSCOW

The Government of India has decided to organise an industrial exhibition in Moscow in July next, the first of its kind to be held by India in Soviet Russia. It has set up an advisory committee with Mr. G. D. Birla as Chairman, to advise the Government on organisational matters relating to the exhibition. The exhibition has a special significance to India's commercial and economic relations with Soviet Russia. So far, no composite Indian exhibition has been held in that country. The idea of the exhibition is to project before the Russian public the progress that has taken place in India during the last 15 years, the opportunities for future development and the part the Russian economy can play in such a development and, at the same time, display the raw materials, semi-processed and manufactured goods that India can offer to the Russian market. The object is to project an extensive and integrated visual picture of India's economy and its growth and the trade potential in an effective manner. In other words, this exhibition is being organised with a view to maintaining, extending and consolidating a market for Indian goods in Soviet Russia as well as to further stimulate Russia's interest in investment in the industrial growth of India. Apart from display and visual publicity, information on quality, specification, price range and the terms of trade of the goods on display along with full addresses of the exporters would be disseminated at a special information counter of the India pavilion at the exhibition.

Special care, it is said, may be taken by the participants with regard to packing and presentation of exhibits. Facilities for retouching the exhibits at Moscow are likely to be limited and expensive. Hence it is essential that the exhibits are attractively and securely packed so as to maintain their fresh appearance suitable for display. The intending participants are asked to send, for approval, a list of representative exhibits which they wish to display, indicating against each item (*a*) quantity and value, (*b*) area required for display of their exhibits, and (*c*) approximate gross and net weight and volume of the packages or boxes containing the goods so as to reach the Director of Exhibitions, Ministry of Commerce and Industry, Udyog Bhavan, Maulana Azad Road, New Delhi, by 28th February 1963 the latest.

MONEY IN GOOD DEMAND

(From Our Own Correspondent)

BOMBAY, *16th January*

Demand for money continued to be heavy during the week under review. But since the supply of funds was comparatively better, borrowers found no difficulty in getting their requirements. Inter-bank rate was, of course, maintained throughout at the last week's level of 5 per cent for both fresh money and renewals. The short-term money market in Calcutta too ruled firm, with call rate standing at 4½ per cent, as against 3½ per cent a week before; some transactions were put through even at 4¾ per cent.

There is as yet no indication of a possible increase in the lending rates of banks. Meanwhile, it is reported that the Reserve Bank has asked the banks not to effect any increase, because the recent rise in the Bank Rate does not, in its opinion, alter the average interest charged on its accommodation to banks. Since, under the Inter-Bank Agreement, the minimum lending rate of banks is linked to the Bank rate (in that it is to the effect that the banks may charge interest at 2 per cent above the Bank Rate, subject to the minimum of 6 per cent per annum), bankers wonder whether the Agreement as such needs to be revised in the light of the Reserve Bank's view. The Committee administering the Agreement is expected to meet shortly to consider the whole issue.

The Government of India Treasury Bill results are colourless, reflecting the absence of banks' interest in them. The amount offered and accepted against tenders for the 91-day Treasury Bills sold on Tuesday the 15th inst. was equal to the amount invited, namely, Rs. 2 crores, same as last week. The average rate of accepted tenders was also unchanged at Rs. 2.355 per cent per annum. The response to Intermediate Treasury Bills, which were on tap from the 9th to 12th inst., continued to be poor, thanks to tight money conditions. The Bills actually sold were no more than Rs. 5 lakhs.

There was a further small accretion of Rs. 53 lakhs to the foreign assets portfolio of the Reserve Bank of India during the week ended 11th January 1963. The total of these assets stood at Rs. 97.40 crores, of which foreign securities accounted for Rs. 88.08 crores (same as last week) and balances held abroad for Rs. 9.32 crores (as against Rs. 8.79 crores a week before). Loans and advances to scheduled banks rose by Rs. 5.60 crores to Rs. 25.04 crores, the sum advanced against usance bills alone amounting to Rs. 15.98 crores, a rise of Rs. 5.67 crores over the week. The notes in circulation spurted by Rs. 29.74 crores to Rs. 2,183.78 crores.

The total credit made available by scheduled banks during the week ended 4th January 1963 jumped up by a further Rs. 21.14 crores (to Rs. 1,442.15 crores), reflecting the mounting pressure of demand for funds from industry and trade. But deposits and inter-bank borrowings declined, the former by Rs. 8.84 crores to Rs. 2,164.44 crores and the latter by Rs. 9.31 crores to Rs. 40.60 crores. Investments fell again by Rs. 11.48 crores to Rs. 642.22 crores, so also balances with the Reserve Bank by Rs. 2.85 crores to Rs. 76.51 crores. The contraction in deposits and investments is apparently due to the transfer of Rs. 10 crores of P.L. 480 funds by the State Bank of India to the Reserve Bank of India. Under the revised agreement in this regard, there will be two more monthly transfers of Rs. 10 crores each, one in the first week of February and another in that of March.

The important development in so far as the Gilt-edged market is concerned pertains to the downward revision in the Reserve Bank's support prices for the Central loans with effect from the 10th inst. This move was a sequel to the need to bridge the wide gap between the previously fixed support rates and the actual market quotations that emerged following the increase in Bank Rate. The revised rates are lower by 45 nP (at Rs. 96.15) in respect of 3 per cent 1966-68 loan, 25 nP at Rs. 99.25 in the case of both 3½ per cent 1965 and 1966 loans, and 20 nP at Rs. 99.35 in that of 3½ per cent 1964 loan. Simultaneously with the reduction in support prices, the Reserve Bank has suspended the sale of 3½ per cent 1974 loan. These measures have not had any significant effect on the Gilt-edged market which continues to rule dull, with limited turnover.

The rupee in the foreign exchange market firmed up further *vis-a-vis* the dollar, the banks' selling rate for ready T.T. dollars being Rs. 477 per 100 dollars, as against Rs. 477.25 a week ago and Rs. 477.50 a fortnight ago. Their buying rate (T.T.), however, was unaltered at Rs. 473.75. On the New York Exchange, the £ sterling continued to rule strong *vis-a-vis* the dollar. Over the week, the spot rate rose by 0.040 cent to 280.590-280.620 cents and the rate for three months' forward by 0.090 cent to 280.280-280.310 cents.

UTILISATION OF FRENCH CREDIT

Letters outlining the detailed financial conditions applicable to the French credit of $50 million (about Rs. 23.81 crores) were exchanged at New Delhi on the 15th inst. between Mr. K. S. Sundara Rajan, Joint Secretary, Ministry of Finance, Department of Economics Affairs, and Mr. Jean R. Bernard, Councellor for Economic Affairs at the Embassy of France in India. The credit has been granted by France as a member of the Aid India International Consortium for the first two years of the third Five-year Plan. The credit amount is mainly allocated for the supply of equipment for power, oil exploration, light houses, alloy and steel manufacture and cement plant, as well as plants for chemicals.

SILVER OVERTAKES GOLD

(From Our Own Correspondent)

BOMBAY, *16th January*

The week under review was memorable for bullion trading in Bombay, inasmuch as it saw a race as it were between gold and silver in the matter of upward march in prices, which at the close was won by silver. While gold initiated the spurt, silver stole the show later and hit a new all-time peak of Rs. 232 per kilogram today (according to the quotations supplied by the Bombay Bullion Association), before closing at Rs. 230, as against Rs. 214.30 a week ago. No definite price for gold bullion as such was available either from the market authorities or from the traders, as dealers had yet to obtain the necessary licence to trade in gold. However, nominal quotation was mentioned in the trade circles, which fluctuated during the week from Rs. 106 to Rs. 100, as against last week's closing level of Rs. 102.75. It was, however, not gold but gold ornaments that attracted attention and recorded a sizable improvement in price owing to the mad rush of buyers which began within twelve hours of the promulgation of the Gold Control Rules on Wednesday the 9th inst. The price of the 22 carats jewellery per 10 grams appreciated from Rs. 100-105 on Thursday last to Rs. 110-115 on last Saturday and remained steady at that level until today when it reverted to Rs. 100-105, as the buying wave began to recede following virtual disappearance of all visible stocks. On the other hand, ready silver, after having moved idly between Rs. 212 and Rs. 215 between last Thursday and Saturday, looked up to Rs. 220 on Monday the 14th inst., rapidly advanced to Rs. 231 yesterday and to Rs. 232 today, at which level it was well above the previous all-time peak of Rs. 224.85 touched on 24th November 1962.

The rush for gold ornaments can be attributed to three factors, namely, (1) under the Gold Control Rules, the people have been permitted to keep jewellery with them, (2) manufacture of new ornaments above 14 carat gold has been prohibited and (3) dealers have been allowed to sell freely their existing stocks of ornaments of high fineness upto a period of one month from the date of the Ordinance. Driven by the strong urge to possess high quality gold ornaments before it became impossible to do so, a large number of people thronged the jewellers' shops in Bombay's Sheikh Memon Street. The jewellers charged prices as it suited them. The buyers' were also made to pay fancy prices by way of making charges. The mad rush, however, subsided today, because of the very high prices, absence of popular varieties of jewellery such as bangles and chains, and fears among buyers that, in their anxiety to buy gold jewellery, they might even be palmed off with brass or copper materials.

Demand for silver was on two counts. One, deals in silver are not regulated like those in gold. Second, because of the ban on futures trading and limited stocks in the spot market, speculative interests turned to cornering the supply in the ready market. According to market authorities, floating stocks of silver in Bombay amounted to 1,150 bars in the week ended 12th January 1963. The current floating stocks in the City are placed at no more than 700 bars and those in the country as a whole at 3,000 bars.

Concerned over the rush for gold ornaments, Mr. G. B. Kotak, Chairman of the Gold Control Board, appealed to the people, especially to women, not to indulge in that rush. He cautioned gold dealers against buying gold ornaments themselves. Apparently, a part of the buying spree was on account of the dealers themselves. Mr. Kotak is reported to have ruled out the possibility of extending the one-month time limit given for traders to dispose of their existing stocks of superior quality gold ornaments. However, the Board is expected to clarify the point expressly and consider suggestions for the manufacture of higher than 14 carat gold ornaments which have been submitted by the trade, at its first meeting in Bombay on Friday the 18th inst. Meanwhile, the dealers have been submitting their application for obtaining licences under the Gold Control Rules.

The Board of Directors of the Bombay Bullion Association decided at its meeting yesterday to call an informal meeting of the Association's members on Saturday the 19th inst. to consider suggestions for reviving forward trading in silver.

Silver prices in both New York and London reached new high levels this week. In New York, ready silver jumped up by a full cent to a new 43-year peak of 125.20 cents a fine ounce on the 14th inst. On the same day, ready silver in London advanced to a new peak level of 107*d.* from 105¾*d.* earlier in the week. Gold, in London, was quiet and moved within one pence between 249s. 10¾*d.* and 249s. 9¾*d.* to close a shade lower at 249s. 10¼*d.*, as against 249s. 11¼*d.* a week ago. The dollar price of gold finished at 35.05¾, as against 35.05⅝ last week.

The following table shows the trend of prices during the week under review:

	16-1-63 (closing)	High	Low	9-1-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (.996 fine) ..	230.00	232.00	212.00	214.30
London—				
Gold	249s.10¾d.	249s.10¾d.	249s.9¾d.	249s.11¼d.
Silver Ready	107*d.*	107*d.*	105¾*d.*	105¾*d.*
Silver Forward ..	107¾*d.*	107¼*d.*	106*d.*	106*d.*
New York—				
Silver	125.2 cents	125.2 cents	122.8 cents	122.60 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *16th January*

In contrast to the steadiness witnessed in the past two weeks, the cotton futures market ruled easy during the week under review. Although the market showed some strength initially, the mounting volume of new crop arrivals and the news that the Government had decided to import a further quantity of 200,000 bales of U.S. cotton under a barter arrangement involving exchange of manganese ore induced heavy selling which resulted in a sharp break in prices. The downward trend was accelerated by easy advices from the spot market and reports of slow movement of cloth stocks. The Jarilia March contract, which had closed at Rs. 689 last week-end, improved to Rs. 693.25 on Thursday the 10th inst. It succumbed to selling in subsequent sessions and receded to a low of Rs. 669 at close today. The net loss over the week is Rs. 20.

The Board of the East India Cotton Association, Bombay, has proposed to add to the existing hedge schedule a new standard description of L-147, with basic staple of 31/32" tenderable upto 3/32" 'On' and 1/32" 'Off' and to make certain other varieties like certified Buri 0394. A-51-9, C.T.1-4-21 tenderable against it so that the hedge contract would afford proper hedging facilities to these cottons also. These changes would be applicable for May 1963 and August 1963 deliveries of Indian Cotton Contract, trading in which has not been permitted so far. The Board has also prepared certain consequential changes in description of Buri/American and Cambodia (C) and in By-law 54(B) (2) relating to upcountry tenders in respect of these descriptions. These changes have been felt necessary because, in the Textile Commissioner's notification dated 5th September 1962, concerning the cotton control policy for the season 1962-63, L-147 certified or uncertified, had been given a separate description and certain other varieties like certified Buri 0394, A-51-9, C.T.1-4-21 were included in the same and the maximum price for it was fixed higher than that for Buri American. The existing schedule to the Indian Cotton Contract (hedge contract) was prepared by the East India Cotton Association prior to the announcement of the notification and hence only certified L-147 is tenderable against Cambodia (C), while uncertified is tenderable against Buri American standard, in accordance with the provisions of the last season.

In the spot market at Sewri, prices declined appreciably. Heavy arrival of new crop and the prospects for a good crop in Gujarat led to a recession in the price of Vijay, Digvijay, Kalyan and Surti varieties. Moderate mill demand was reported for these varieties. Most of the mills preferred to await a further fall in prices.

It was officially notified that the ceiling fixed for the Bengal *Deshi* quota was reached on Friday the 11th January. The trade is not optimistic about a further export quota for Bengal *Deshi* in the immediate future. It may, however, press for the immediate release of an export quota for at least 50,000 bales of Bengal *Deshi* to take advantage of the current spurt in demand from Japan for Indian cotton. With the exhaustion of the quota, business in Bengal *Deshi* dried up.

Barring moderate demand for U.S. growths, spinners' interest in foreign cotton was small. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Kalyan 950; L.147 1,225; Co2 1,205; Vijay 1,090; American (on sample) 1,290; Sudan G4S 1,420.

The Karachi cotton futures market, which ruled distinctly firm during the first half of the week under review, turned easy in the second. The easiness persisted till the close. Reports that Communist China was interested in Pakistan cotton and that it might buy up the entire exportable surplus gave a bullish twist to the market. Futures prices, consequently, rallied, necessitating a special clearance on Friday, the 10th inst. Prices, however, tended to decline thereafter, when it was known that the Chinese had actually contracted to buy only 30,000 bales of cotton as per the agreement signed on the 11th inst. The N.T.R.G. January contract, which rose from Rs. 72.80 to Rs. 73 on the 9th inst., declined to Rs. 71.95 yesterday. The March contract, after having risen to Rs. 74.30, receded to Rs. 72.95.

Cotton futures in Liverpool recorded modest gains during the week. Although uncertainties about possible Washington developments in regard to U.S. cotton policy, continued to restrict business, the quotation for both the American and American type contracts edged higher, thanks to scarcity of contracts. Sudan cotton contracts at Liverpool, however, remained unchanged at last week's levels. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week-end closings:

March 23.90 (23.75); May 23.85 (23.70); January Sudan 29.75 (29.75).

After a brief spell of weakness early in the week, cotton futures in New York firmed up towards the close. Although turnover was limited, as traders were inclined to await developments in regard to cotton legislation, the steadiness in spot cotton imparted strength to the market. The earlier losses were made good and the contracts closed steady. The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago.

(In cents per pound)

	15-1-63	8-1-63	2-1-63
March	34.68	34.65	34.60
May	34.70	34.71	34.70
July	33.77	33.90	34.84
New York Spot ...	34.95	34.95	34.95

ART SILK YARNS DEPRESSED

(From Our Own Correspondent)

BOMBAY, 16*th January*

A further decline in yarn prices was recorded during the week under review. Weakness extended itself in the virtual absence of buying support. Although the trend was downward all-round, art silk yarns were conspicuously weak. Thus, National Rayon 150D, which had closed the previous week unchanged at Rs. 10.93, moved down to Rs. 10.71 a kilo and 120D declined further from Rs. 12.45 to Rs. 12.17. S.I. Viscose 150D lost 20 nP to Rs. 10.93 and the bright Century 100D receded further from Rs. 15.40 to Rs. 15.18. Among the 40 x 2 staple fibre yarns, Kohinoor eased from Rs. 8.05 to Rs. 7.83 and so did City from Rs. 7.96 to Rs. 7.83. But, Century gained 13 nP to Rs. 7.15. Cotton yarns were also shaded, with the 20s Gokak receding from Rs. 25 to Rs. 24.50. 40s Gokak eased by 25 nP to Rs. 33.75.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	16-1-1963	9-1-1963
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12.17	12.45
Century 75D	18.41	18.41
S. I. Viscose 150D	10.93	11.13
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.	7.83	8.05
Century	7.15	7.02
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18 00	18 00
20s Modern	24 50	25 00
22s Century	24 25	24.25
30s Bradbury	—	—
40s Hind	33 75	34.00
60s Finlay	68.50	68.50

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

TEA SHIPMENTS TO U.K. RISE

(From Our Own Correspondent)

CALCUTTA, 15*th January*

Prices on yesterday's tea export sale here were well maintained on good demand. Demand at the internal sale last week was also good. Heavy shipments of tea to the United Kingdom were a feature of the freight market during the week. In order to cope with increased demand for space, shipping companies have now made available additional liner tonnage for tea, and it is expected that within a month's time the old season's shipments will be completed.

The U.K. stocks of tea in the week ended 4th January showed a small increase at 141.80 million lbs., as against 141.16 million lbs. in the previous week. This was because the week's landings and deliveries were almost unchanged at 8.92 million lbs. and 8.75 million lbs., respectively.

Last week's easier trend in the auctions that took place in Mincing Lane was attributed to the significant increase in the quantity of offerings, which totalled as much as 83,000 packages. The average price realised was, therefore, lower at 53.84*d.* per lb. as compared with 54.83*d.* in the previous week. In the corresponding period of last year, the average price was 51.60*d.* only. While prices of North and South Indian teas eased by 1*d.* to 3*d.* a lb., Ceylon teas were bid by Londoners at higher prices. Referring to this, trade circles here said that this was proof of the growing competition from Ceylon.

India's shipment of teas to the U.K. in the first half of the current financial year were slightly lower at 31.64 million lbs. as compared with 32.18 million lbs. in the corresponding previous year's period. However, since shipments to the U.K. in the last one month had been heavy following the resumption of the Assam-Calcutta river services and increased arrivals, the trade thinks that the year's offtake by the U.K. will show an increase.

Pakistan has decided to import one million lbs. of tea in order to relieve the existing shortage for internal consumption. With the prospect of no carry-forward, it is expected that that country will continue the ban on export in the next season also. In the current season, Pakistani exports have totalled only 4 million lbs. It is believed that tea output in that country is not expected to rise in the next season. On the other hand, internal consumption has been rising.

Dusts on offer at the internal sale held here last week totalled 29,149 packages which met with a strong general demand. Prices of good C.T.Cs rose impressively following keen competition, with medium C.T.Cs recording a firmer trend on good support. Plain orthodox teas were fully firm. The cleaner descriptions being a favourite of buyers, their prices advanced. Legg-cut teas were irregular but firmer. Prices per one kg. (in rupees), inclusive of excise duty, were: Good Assam C.T.C. dust 6.50 to 6.80, medium Assam C.T.C. dust 5.70 to 5.95, legg-cut dust 5.10 to 5.30, medium Assam dust 4.30 to 4.80 and plain orthodox dust 3.90 to 4.20.

Leaf offerings at yesterday's sales totalled 72,555 packages and met with good demand. On keen attention, whole leaf grades were sold at higher prices. Tippy teas opened on a dull note, but as the auctions progressed good demand raised prices. Darjeelings were steadier in accordance with quality. Prices of medium C.T.C. B.Ps hardened, but their fannings followed an irregular pattern to ease on balance. Best C.T.Cs were also irregular. Little support was accorded to the more fibrous teas, while the legg-cut teas met with keen support. Prices of the exportable fannings and plain orthodox brokens gained. "Teas for price" were dearer. Prices for the better liquoring Doars and medium Assam brokens also advanced. However, their equivalent fannings eased. Competition was in evidence to the brighter Assams. Prices per one kg. (in rupees) inclusive of excise duty, were: Best Assam C.T.C. fannings 6.20 to 6.60, medium Assam C.T.C. fannings. 5.40 to 5.80, best Assam C.T.C. B.P. 6.20 to 6.60, medium Assam C.T.C. B.P. 5.60 to 6.10, clean plain pekoe 4.80 to 5.10, plain B.P. 4.00 to 4.30 and plain fannings 3.90 to 4.40.

FURTHER FALL IN OILSEEDS

(From Our Own Correspondent)

BOMBAY, 16*th January*

Oilseeds continued to drift downward during the week under review. The renewed fall followed long liquidation induced by better crop reports from some of the major oilseeds producing regions. Tight money supply conditions also prompted operators to dispose of stocks. Groundnuts ruled distinctly easy. The easiness was due to large offerings from U.P. and the Nizam area, and prospects of sizable arrival from the South and Gujarat in the next few days. Linseeds, too, encountered persistent selling in view of the impending arrivals of new crops. The sentiment was also adversely affected by reports that the current crop of linseeds, as also rapeseed, in the North India, would be much larger than that in the previous year. There was pronounced weakness in cottonseeds as well, thanks to heavy arrivals of new crop from Berar and Khandesh. Castorseeds, however, ruled steady on hopes of some overseas enquiries for castor oil. But futures contracts lost considerable ground towards the close in the absence of follow-up support.

Groundnut April 1963 contract lost Rs. 3.87 to Rs. 204; it had touched Rs. 202.87 yesterday. Khandesh quality fell by 50 nP to Rs. 40 and Nizam bold by 37 nP to Rs. 39. Oil ex-mill declined by 30 nP to Rs. 16.40. Oil railway receipts shed 20 nP to Rs. 16.30.

Linseed March 1963 contract fell by Rs. 2.18 to Rs. 33.44. Bold ready gave way from Rs. 37.50 to Rs. 35. Linseed oil moved down by a rupee to Rs. 14.

Cottonseed April 1963 contract rose initially from Rs. 92 to Rs. 92.50, before declining to close at Rs. 88.50, the net loss being Rs. 3.50. White shed 25 nP to Rs. 19.75.

Castorseed June 1963 contract suffered a setback of Rs. 2 to Rs. 160.50, after an initial rally to Rs. 164. March 1963 contract fell by one rupee to Rs. 158.50. But the spot section ruled steady. Madras small picked up 37 nP to Rs. 32.62. Oil B.S.S. hardened by 15 nP to Rs. 13.70 and oil commercial by 10 nP to Rs. 12.95.

The following table shows the closing prices of oilseeds and oils on Wednesday 16th January, as compared with those of two previous weeks:

	16-1-1963	9-1-1963	2-1-1963
	Rs.	Rs.	Rs.
Groundnuts			
January 1963 contract	195.50	194.00	203.50
April 1963 contract	204.00	207 87	214.12
Nizam bold	39.00	39 37	39.75
Khandesh quality	40.00	40 50	40.75
Oil ex-mill*	16.40	16.70	16.60
Oil commercial*	16.30	16.50	16.45
Castorseed			
March 1963 contract	158.50	159.50	164.00
June 1963 contract	160.50	162.50	166.00
Ready Madras	32.62	32.25	32.37
Ready Kanpur	31 37	31.00	31.12
Oil B.S.S.†	13.70	13.55	13.85
Oil commercial†	12.95	12.85	13.25
Linseed			
March 1963 contract	33.44	35.62	37.00
June 1963 contract	34.62	—	—
Bold ready	35.00	37.50	38.00
Linseed oil†	14.00	15.00	15.35
Cottonseed			
January 1963 contract	93.50	93.50	91.50
April 1963 contract	88.50	92.00	92.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.E.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TIPPY TEAS STRONG

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 10*th January*

In sale No. 2 held on Tuesday the 8th inst., just over 700,000 kgs. were catalogued. A general improvement in quality was noticeable. The market opened to a good demand which prevailed throughout the sale for all descriptions, except Nilgiris and low medium and plain fannings which were somewhat easier. There was a useful selection of Nilgiri teas on offer, but, even though quality was improved, they generally sold at lower rates following less inquiry. Good medium brokens ruled firm to dearer and there was better support for their fannings at slightly higher rates. Medium and low medium brokens appreciated in price and, while clean medium fannings were also dearer, low medium sorts were barely steady. Plainest brokens advanced by 10-15 nP but equivalent fannings came to a lower market. Black leaf descriptions were well supported at dearer rates, as were whole leaf grades. Tippy teas came to a strong market. C.T.C. and legg-cut descriptions were firm to dearer.

The quotations (per kg.) were:

	1963	1962
	Rs.	Rs.
Low mediums	4.20-4.85	3.60-3.95
Mediums	4 85-5 20	3 95-4.50
Good mediums	5.20-5.85	4.50-5.60
Nilgiri B.O.P.	5.60-8.70	5.60-9.00

The average price realised in sale No. 2 was Rs. 4.95 as compared with Rs. 4.91 in the previous week and Rs. 4.71 in the corresponding sale last year.

A total of 284,000 kgs. was offered in dust sale No. 2 held today. The market opened to a good general demand but closed easier for all descriptions. Medium categories met with useful support and were fully firm but eased 10-15 nP towards the close. Milled and fibrous kinds were in strong demand and tended dearer. Highgrowns were steady, whilst unorthodox descriptions sold readily at around last rates. Clean black grainy descriptions also met with useful support.

The average price realised in dust sale No. 2 was Rs. 4.33 per kg. as compared with Rs. 4.28 a week ago and Rs. 4.08 in the corresponding sale last year.

Colombo: Just over 6¾ million lbs. were offered and met with useful demand. Whilst improved quality dimbulas were dearer and colourv sorts steady, the lighter liquoring and plainer descriptions eased 20 cents. Although similar fannings were easier, they were fairly strong. Uvas and the better medium teas were steady, but others eased 10-15 cents, whilst lowgrowns were a little dearer.

London: North Indian and other growths: In Monday's auction, there was good demand, but prices shaded slightly following quality.

Ceylon and South Indians: 27,984 packages were offered in Tuesday's sale of which 8,853 packages were from South India. Ceylons, particularly the best, were strong whilst mediums were a little easier. South Indians, with the exception of the best, generally declined by 1d. to 3d.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 3: 544,000 kgs. offered. Useful demand. Low mediums and mediums irregularly 5 to 10 nP lower. Good mediums steady. Highgrowns easier. Unorthodox and wholeleaf dearer."

JUTE GOODS STOCKS FALL

(From Our Own Correspondent)

CALCUTTA, 15*th January*

The announcement of a decline in goods in stock with mills as at the end of December led to steady conditions in jute goods during the week under review. Fibre also depicted a steadier trend following purchases against the January quota issued by the Jute Commissioner. At the end of December, stocks of goods with mills aggregated 83,000 tonnes, representing an impressive fall of 8,400 tonnes. While hessian and sacking goods fell by 4,900 tonnes and 3,900 tonnes, respectively, to 22,800 tonnes and 46,000 tonnes, miscellaneous goods rose by 400 tonnes to 13,600 tonnes. This welcome drop in total stocks, coming after a period of poor demand for goods from overseas markets, has been a pleasant surprise but, if, in the absence of adequate demand from overseas, stocks had fallen, the phenomenon must be attributed to an increase in demand for indigenous consumption. This inference is, of course, in line with the increased requirements of both the Government and industry as a result of greater defence efforts in recent months.

Thanks to the fall in the stocks of goods, mills are likely to continue to operate up to their maximum capacity. The large stocks of fibre with mills makes this also expendient; otherwise, continued storage of fibre may lead to loss of quality. Existing stocks of fibre with mills are likely to see them through, up to the beginning of the forthcoming season. However, at the same time, mills continue purchasing fibre and adding to their stocks. Working in mills has been smooth as is indicated by the fact that interim dividends announced in respect of some mills have been satisfactory. Mills are able to work without any restriction on looms. Despite the recent fall, the current prices of goods and fibre admit of reasonable profits. It is because Indian jute goods compete successfully in foreign markets that the mills are able to increase production. Exports of jute goods increased markedly in 1962, and the cheapness of Indian and Pakistani jute goods are the envy of the Dundee manufacturer. In fact, the British industry recently demanded protection against imports from India, and the British Jute Trade Federal Council in recent discussions pointed out that, in comparison with Dundee, the cost of production in mills in India and Pakistan was very low. The "mark-up" scheme, according to which prices of imported jute goods are priced up in line with Dundee prices, places the Dundee manufacturer in a very favourable position.

After all that is said and done, the Dundee industry is unable to meet the demand in full, and its order books are full for months to come. The U.K. has to depend on Indian jute goods. Mills in that country depend for fibre on Pakistan and Thailand. If the Dundee mills succeed in persuading the U.K. Government to adopt protective measures against Indian and Pakistani jute goods, nothing prevents Pakistan from increasing the export duty on fibre. It may be argued that the abolition of the export duty on jute goods from India a few years ago changed the position, but, in effect, this is not so, in view of the mark-up scheme as referred to above. While on this subject, the warning contained in the latest issue of the monthly *Jute Bulletin* of the Indian Central Jute Committee to the effect that the unrestricted export of raw jute might lead to a revival of European competition in the jute goods export markets is considered timely. India has considerable surplus of the inferior fibre that can be exported. If only prices are reduced, this would find a market abroad, in which case, exports of Indian sacking goods would be affected. Against this background, the *Bulletin* brings to the forefront the implications of the demand for free export of raw jute. Mills in Europe now depend on import of fibre from Pakistan and Thailand.

As a result of purchases by mills for fulfilling the January purchase quota issued by the Jute Commissioner—the quota is 750,000 bales, of which 50,000 bales should be bought by non-I.J.M.A. member mills, 50,000 bales by the Buffer Stock Association, and the balance of 650,000 bales by the I.J.M.A. mills—fibre prices moved up to reach nearer the minimum levels. The State Trading Corporation continued to be active and its recent purchases through co-operative societies have encouraged the mofussil holders. Prices of tossa were quoted at above the minimum levels. Daily arrivals averaged about 70,000 maunds. While sellers of mesta and tossa were reserved, jute was quoted at a discount. With the completion of this month's purchase quota, it is estimated that mills would have about 7½ months' consumption in stock. In the background of these heavy stocks with mills thus causing them both financial strain and storage difficulties, it is unfortunate that the West Bengal Government considers that the fall in prices of fibre has been due to the absence of adequate interest of buyers leading to imbalance in supply and demand. In the months of November and December, mills consumed 6 million maunds of fibre, but their purchases exceeded consumption by as much as 3.5 million maunds. Mills accorded such support to the fibre market in an earnest attempt not to cause difficulties to cultivators. This month, too, mills are purchasing fibre more than their needs, and it is heartening to note that prices have steadied up. This is welcome at this juncture, since sowing time is fact approaching.

On Tuesday last, quiet conditions were in evidence in goods, despite the announcement on that day of the sizable decline in stocks of goods with mills. This announcement had not been anticipated, since demand in December had been considered poor. As a result, time had to be allowed for reaction. Ready B. twills were unchanged at Rs. 114.00, while hessian 40" 10 oz. eased by 10 nP to Rs. 50.60. On the following day, however, prices hardened under the impetus of speculative interest, although genuine demand was poor. Ready B. twills recovered to Rs. 115.50 and hessian 40" 10 oz. to Rs. 51.40. At this stage, Russian interest for a substantial quantity of bags for February-March delivery was in evidence. This pushed up B. twills to Rs. 116.10 and hessian 40" 10 oz. to Rs. 51.90. On Friday, however, there was hardly any interest in evidence and B. twills declined to Rs. 115.40 and hessian 40" 10 oz. to Rs. 51.50. Over the week-end, profit-taking by bulls was a feature and, as a result, B. twills eased to Rs. 115 and hessian 40" 10 oz. to Rs. 51.25. Output in December at 104,200 tonnes showed a rise of 2,800 tonnes as compared with November, although the number of hours worked remained the same as 208. These details were available during the week-end, and it was encouragingly noted that, despite increased production, stocks as at the end of December had declined as above stated. Selling pressure in the futures market yesterday pulled down prices. Ready B. twills eased to Rs. 114.85 and ready 40" 10 oz. to Rs. 50.90.

HARDENING TREND IN METALS

(From Our Own Correspondent)

CALCUTTA, 15*th January*

A hardening trend was again in evidence in the metal market here during the week under review. However, there was resistance from buyers.

Advices from the London Metal Exchange were also firm. On good demand from producers, cash copper was maintained at £234 a ton. The three-months' position hardened from £233½ to £234½ following good demand on European consumer account. According to overseas reports, the price of copper is unlikely to move up because supplies are comfortable. In the United States, copper production in 1962 has been estimated at 1,415,000 tons, of which 1¼ million tons comprised primary copper from domestic ore and the balance was secondary copper refined from scrap. The upward trend in copper production is reflected in the estimated increase in the total free world capacity from 4,660,000 tons as at present to 4,915,000 tons by 1966.

Spot tin, in London, opened at £851½ a ton to soften to £850½ due to limited demand. While the U.S.A. has yet not announced the programme for releases of tin for 1963, it has been stated that the weekly offerings this month would continue at the rate of 200 tons. Meanwhile, there were indications that the request by the International Tin Council to the U.S.A. not to sell stockpile tin below a basic price of £965 was not acceptable to Washington. A price higher than £880 a ton, or 112 cents a lb., is believed to be difficult of U.S. acceptance. However, if the U.S. Government does not come to an agreement on the price at which releases would be made this year, the alternative will be for the producing countries to step in and ask the Buffer Stock Manager in London to purchase the weekly releases from the U.S.A. to stabilise the world price. Spot lead gained from £53¾ a ton to £55 and spot zinc from £67½ a ton to £67¾.

SHEEP SKINS BETTER

(From Our Own Correspondent)

MADRAS, 12*th January*

There was hardly any change in trading in kips and calf skins here this week. While buyers' ideas for semi-premium lights and mediums continued to be at around 77/67/57*d.* and 60/55/45*d.*, tanners were quoting 1*d.* to 1½*d.* more. Inquiries for F.A.Qs were again small, with shippers quoting nearly same prices. Inferiors had better demand but at prices half to 1*d.* less than those quoted by shippers.

In cowcalf, there was an improvement in inquiries and some fair business resulted. Prices remained same as last week. Tanned buffcalf skins remained comparatively quiet, as buyers were unable to follow Madras levels. There was a distinct weaker undertone at the close of the week. Tanned buffhides continued steady at last week's levels.

As for tanned goat skins, trading was dull, with very limited inquiries. In sheep skins, conditions were a shade better, yet only the lower ends were in demand. Here again, prices continued to be at levels current during the previous week.

Shipments (in bales) in December last, were 2,022 tanned cowhides, 264 cowcalf, 13 buffhides, 293 buffcalf, 523 goat, 432 sheep skins to the U.K.; 30 cowcalf, 33 buffcalf, 962 goat, 483 sheep skins to the Continental ports, one cowcalf, 28 buffhides, 87 buffcalf, 156 goat, 20 sheep to the U.S.A.; and 168 sheep skins to Japan.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 14*th January*

A quiet to easy trend was witnessed in foodgrain prices here this week. Selling pressure from stockists in view of heavy stocks with both the Central and State Governments was the main influencing factor. Heavy frost recently has, however, adversely affected standing crops.

Wheat eased by 32 nP to 67 nP a quintal according to quality, as stockists holding *khatti* were anxious sellers. The average quality was quoted between Rs. 38.50 to Rs. 38.85 and the farm variety between Rs. 42.87 to Rs. 43.54 a quintal. Arrivals were negligible and local stocks declined to 6,000 maunds. Rice held steady on better consumer demand. Arrivals were higher and were mostly from the East U.P. Stock remained stationary around 16,000 maunds. Week-end prices were: Rice *basmati* superior Rs. 80.38 to Rs. 91.09, *sela basmati* Rs. 72.34 to Rs. 77.70, *ramajwayan* Rs. 58.94, *raimunia* Rs. 61.62, *mainpuri* Rs. 50.91 and *gadda* Rs. 48.90, a quintal.

Gram was steadier on poor stock position. The Punjab quality was quoted at Rs. 41.53 and the local produce at Rs. 40.87 a quintal. Gram stock here declined to 5,000 maunds. Maize arrivals continued an average of 500 maunds a day and, despite good consumer demand, prices declined 32 nP to 67 nP a quintal to Rs. 28.13 to Rs. 30.81 a quintal. Local stock was quoted around 19,000 maunds. *Juwar* and *guwar* were subdued at Rs. 34.16 and Rs. 32.82 to Rs. 34.16 a quintal, respectively. Barley and *bejhar* prices also sought lower levels, while bajra ruled steady on better consumer demand. Other grains were listless. Week-end prices were: Barley Rs. 24.11, *bejhar* Rs. 24.11, *methi* Rs. 58.94 to Rs. 61.62, *bajra* Rs. 34.16 and oats Rs. 34.83 a quintal.

Pulses indicated a downward tendency. Peas prices declined by 67 nP per quintal on selling pressure by stockists and were quoted at Rs. 27.80 for the *dara* quality and Rs. 29.47 for the farm produce. Peas *dal* was quoted at Rs. 33.49 a quintal. During the week, three wagons were despatched to the South. Local stock was estimated around 30,000 maunds. *Arhar* lost Re. 1.34 per quintal on slack demand to be quoted at Rs. 48.23 to Rs. 49.57 a quintal. *Urd* ruled steady on better consumer demand at Rs. 58.94 to Rs. 60.28 a quintal. *Moong* eased on poor buying inquiry. Week-end prices were: *Arhar dal* Rs. 66.98, *urd dal* Rs. 66.98, *moong* Rs. 45.55 to Rs. 48.23, *moong dal* Rs. 58.94, *masoor* Rs. 50.91 to Rs. 53.58, *masoor dal* Rs. 58.94, gram *dal* Rs. 48.23 and moth *dal* Rs. 48.23, a quintal.

SUGAR RISES FURTHER

(From Our Own Correspondent)

HAPUR, 14*th January*

Sugar prices recorded a rising trend this week on brisk enquiries from the consuming areas of the South. Reports that sugar production in the country would be lower in the current season also had a bullish effect on the price trend. Cane supply position to factories in U.P. is very inadequate and the State Government is taking steps to increase supplies by sealing the unlicensed crushers. While spot delivery prices improved by 75 nP per quintal, mill delivery prices registered gains to the extent of 50 nP to 83 nP per quintal. Week-end prices here were: Spot delivery Rs. 105.75, mill delivery (D 29) Amroha Rs. 102.75, Dhampur Rs. 102.75, Seohara Rs. 102.75, Meerut Rs. 104.75, E 29 Simbhauli Rs. 104.50, Bijnore Rs. 102.75 and Dhampur Rs. 102.64 per quintal.

Brisk buying support from Punjab, Rajasthan, Delhi, Gujarat, Saurashtra and Madhya Pradesh accounted for a firm trend in sugar in the Muzaffarnagar market. Firm advices from Kanpur also affected the sentiment. Prices rose day by day and final gains were to the extent of 43 nP to Re. 1.25 per quintal for different varieties.

Khandsari prices registered sharp gains in the week-end, thanks to brisk buying enquiry from Punjab and Rajasthan. Stockists also started building up stocks. The improvement in prices, which was to the extent of Rs. 2.67 per quintal, was more marked in the medium quality. Moist stuff was being transacted at Rs. 72.34 to Rs. 83.06 and dry at Rs. 85.74 to Rs. 93.77 per quintal. Crystal *boora* was held higher upto Rs. 106.50.

Ready *gur* ruled steady to firm during the week, thanks to good buying support mostly from Gujarat and Saurashtra. Daily arrivals ran down further and averaged 2,500 maunds. As loading was restricted for last three days, the week's offtake aggregated about 20 wagonloads. Total arrivals of *gur* during the current season here were now around 2.90 lakh maunds, as against 3.10 lakh maunds on the corresponding date last year and 3.35 lakh in 1961. Week-end prices of *gur* here were: Superior Rs. 47.56, average 46.89, *dara* Rs. 45.55, *balti* Rs. 47.56 to Rs. 48.23 and *shakker* Rs. 61.62, per quintal.

Ready *gur* prices ruled quiet in the Muzaffarnagar market during the week due to weaker advices from the main consuming areas coupled with restricted loading facilities.

Gur futures recorded sharp gains during the week on continued bull support. Opening at Rs. 22.26 last Monday, *gur Fagun* delivery touched the highest at Rs. 22.59 and the lowest at Rs. 22.23 during the week was now quoted today at Rs. 22.50.

SURVEY

(Concluded from page 99)

technical collaboration to Colour Chemical Ltd. of Bombay for the manufacture of synthetic dyestuffs.

Hoechst, it may be recalled, had been amalgamated with the world-famous West German I.G. Farben combine at the beginning of this century. But this combine was broken up by the allies after World War II. Thus, Hoechst regained its distinctive identity in 1951, marking the beginning of spectacular expansion in various fields. It has also taken up new production lines, including the manufacture of terylene, under an I.C.I. licence, besides entering the petrochemical field. A feature of the Company's working has been the undivided attention devoted to scientific research. At present, Hoechst spends about DM 120 million per year on research in pharmaceuticals and chemicals.

LOMBARD BANK CONSOLIDATES IN NEW ZEALAND

Arrangements have now been completed between Lombard Banking, London, and Lombard New Zealand Limited, whereby the Bank's interests in New Zealand will be consolidated through Lombard New Zealand Limited. This was announced last week by Mr. Cuth Hogg, Chairman of Lombard New Zealand Limited, who also stated that the capital of the Bank would be increased to £750,000, all of which will be held by Lombard Banking, London.

The increased capital will be used mainly to purchase the shares of the other subsidiaries so that all the companies in the group will then become wholly-owned subsidiaries of Lombard New Zealand Limited. The major companies concerned in the consolidation are: Automobile Finance Group, Auckland; South Island Finance Corporation, Christchurch; Worcester Finance Company, Christchurch; Otago and Southland Finance Corporation, Dunedin; Premier Finance Group, Invercargill, and Devon Finance Corporation, New Plymouth.

Until recently, Lombard Bank held 63 per cent of the shares in Lombard New Zealand, but as a result of an offer by Lombard Bank in August 1962 to acquire all minority shares, Lombard New Zealand is now a wholly-owned subsidiary of Lombard Bank, London. The consolidated group will now enjoy substantial additional financial strength and a greater degree of flexibility.

The National Coal Development Corporation has so far trained 823 junior technicians in its five mining training schools. Last year alone, the number of trainees in all categories, such as fitters, chargemen, sirdars, surveyors, etc., was 315. Almost all the trainees who passed out till now have been absorbed in the Corporation. The Corporation has taken 34 mining engineers for apprenticeship, 54 of whom have been absorbed in the Corporation and the rest are continuing their apprenticeship. Twenty apprentice mining engineers have till now been given training abroad. Ten of them were sent to the U.K. under the Corporation's foreign training scheme, while an equal number was sent to France under the Indo-French technical co-operation programme.

A plastic train of self-propelled diesel coaches has been operating between Cologne and Leverkusen in the Federal Republic of Germany for the last few weeks. The only metal element in the train is a light-metal frame. Many otherwise necessary working processes have been eliminated: the 50 per cent lighter wagon box includes all heat and sound insulation materials as well as the inner wall structures.

MARKET GOSSIP

(*Concluded from page 95*)

of a reduction in area by about 8 million acres under the U.S. Wheat Stabilisation Plan. But the decline in production has not been large enough to have any appreciable effect on its total wheat stocks, which are still equal to over one year's output. It is expected that, by the end of 1962-63, U.S. wheat stocks would be about 32 million tons, a decline of only about three to four million tons, as compared with those a year ago. The anxiety of the U.S. Government to dispose of stocks is evident from the fact that it has entered into agreement for non-commercial exports of wheat under P.L. 480 with a larger number of countries than hitherto.

Besides the U.S., other countries to register some decline in their wheat output are Argentina (by 600,000 tons to 4.43 million tons), Japan (by 200,000 tons to 1.6 million tons) and South Africa (by 100,000 tons to 770,000 tons). This is true of East European countries, where current harvests are said to be disappointing. It is possible that a part of the deficit in Eastern Europe will be made good by Soviet Russia, where wheat is said to have shared in the general increase in grain output estimated at a record level of 145 million tons. There is hope that Russia's larger exports to Eastern Europe may slightly reduce the quantum of wheat which it exports normally to non-communist countries (about one million tons annually).

Thus, the current world supply position of wheat is, on the whole, distinctly more in favour of buyers than was anticipated last year, when exporting countries of the International Wheat Agreement managed to fix higher maximum and minimum prices for this commodity. Wheat (Manitoba No. 2) is currently quoted in the London market at £28 13s. per ton, as compared with £29 a year ago.

Airlines: From Red to Black?

1962 was a favourable year for the world aviation industry. Preliminary figures published by the International Civil Aviation Organisation show that international air traffic last year increased by 11 per cent as compared with 1961, which was probably the worst year since the advent of the jet age. With the loss suffered aggregating £50 million, the accounts of most airline companies were in the red in 1961. In the past year, both passenger and cargo traffic picked up. The airlines of the world carried 123 million passengers on their regular services in 1962, an increase of 11 per cent over 1961 and passenger miles flown rose by 12 per cent to 2,040 million. Reflecting this overall improvement, the average number of passengers per aircraft carried by individual airlines increased from 37 (in 1961) to 40. No indications are as yet available of the financial results of this improvement in air traffic. But it is expected that, since almost all the major airlines had more or less completed the switch-over from the conventional piston-engined aircraft to jets by the end of 1961, last year's improvement in air traffic would enable airlines to close their accounts for that year with a sizable surplus.

From the point of view of the travelling public, the most encouraging development of the year under review was the improvement in accident record. Accidents in 1962 were the lowest on record. For the first time since the Second World War, the fatality rate fell below one per 100 million passenger miles—0.91 per 100 million passenger miles, to be precise. In 1950, it may be noted, the fatality rate was as high as 3.15 per 100 million passenger miles. It was 1.10 in 1961, 1.25 in 1960, 1.02 in 1959 and just one in 1957. It is noteworthy that the improvement in the accident record has occurred despite the steep increase in the average cruising speed of aircraft. Thus, the average airliner speed was 285 miles per hour in 1962, as compared with only 155 miles in 1946.

Last year's recovery in air traffic has encouraged the hope that 1963 will turn out to be yet another favourable year for civil aviation. Sir William Hildred, Director-General of the International Air Transport Association (I.A.T.A.), has forecast an increase of 13 per cent in passenger traffic and 20 per cent in cargo loads in the current year and that the industry would be "back in the black" in 1963. It is too early to say whether this prediction will come true but it is obvious that, unless there is fuller utilisation of their capacity by airlines, no appreciable improvement in their financial position could be expected. For this purpose, both passenger and cargo traffic should expand. Passenger fares and freight rates on cargoes have a direct bearing on expansion of traffic. The scope, if any, for a reduction in fares and freights is, therefore, worth exploring. It may be noted here that, according to a survey conducted by the International Civil Aviation Organisation, there is considerable scope for reduction in cargo rates on a selective basis. The I.C.A.O. has suggested that the general average cargo rates may be reduced to less than the operating cost in relation to capacity available on passenger services. If the proportion of cargo to passengers on cargo-*cum*-passenger services could be varied according to demand, the I.C.A.O. points out, it would increase the use of aircraft and the amount of space occupied. It has also advocated both bilateral and multilateral arrangements between airlines to facilitate sales of space to each other and to provide greater frequency of services.

The I.C.A.O. survey reveals that the expansion of cargo traffic has not kept pace with the carrying capacity and facilities offered by airlines, although, when compared with passenger traffic, the rate of increase of cargo traffic has been good. Thus, the average rate of growth of cargo on international services was about 15.3 per cent per annum during the last 10 years, as against 15.2 per cent per annum in passenger traffic in the same period. This increase has been made possible by the introduction of larger aircraft and more frequent services. It is estimated that the volume of air cargo will equal the volume of passenger traffic by 1975. Nevertheless, earnings from the former will be only about half of those from the latter. It thus appears that, from the revenue point of view, expansion of passenger traffic is more attractive to airlines than the growth in cargo business.

SHAW WALLACE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 4 Bankshall Street, Calcutta, on the 13th day of February, 1963 at 3 p.m. to consider and, if thought fit, to pass with or without modification the following Resolution:

As an Ordinary Resolution:

"That approval be and is hereby accorded to the undernoted investments:

(*a*) 25 Equity Shares of Rs. 100 each in Matheson Bosanquet & Co. Ltd. at a cost of Rs. 14,403.75 nP.

(*b*) 247 Equity Shares of Rs. 10 each in Wallwood Plantations and Agency Ltd. at a cost of Rs. 3,539.51 nP, and

(*c*) 1,666 Equity Shares in Cruickshank & Co. Ltd. at a cost of Rs. 15,493.80 nP."

The Share Transfer Register of the Company will be closed from the 6th February to 13th February, 1963, both days inclusive.

By Order of the Board,
S. M. SMITH,
Managing Director.

CALCUTTA, the 14*th January*, 1963.

Note: (i) A member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote on a poll instead of himself and the Proxy need not be a Member of the Company.

(ii) In connection with the business to be transacted, an Explanatory Statement under Section 173 of the Companies Act, 1956 is being sent to all shareholders.

FOREIGN CAPITAL FOR SHIPPING

THE recent recommendation of the Congress Parliamentary Party's executive committee that the quantum of foreign capital participation in Indian shipping be increased from the present maximum limit of 25 per cent prescribed in the Merchant Shipping Act has touched off an animated controversy. It is a controversy in which a species of short-sighted chauvinism or dyed-in-the-wool conservatism is pitted against commonsense and enlightened national interest alike. The "no-changers" in this controversy have, of course, a formidable array of arguments. But, as these are arguments which are routed in some outmoded sentiments and irrational prejudices or fears, they can scarcely be expected to prevail ultimately against the relentless logic of national interest and circumstances.

Still arguments are arguments, whatever be their motivations. They cannot, therefore, be dismissed as *prima facie* unworthy of consideration. A recapitulation of the conservatives' case thus becomes necessary at the very outset. Noteworthy, in this connection, are the arguments and views expressed at a recent meeting of the Indian National Steamship Owners' Association. These are:

1. As the country's merchant navy is its second line of defence, increased foreign participation and control might create a difficult situation in a war or an emergency.

2. Through increased foreign participation and control, Indian shipping would lose not only its "swadeshi" character but also national ownership and management in the real sense. Once substantial foreign interests are allowed to come in, the dominating control and management is "bound to pass" into the hands of outsiders. As the assets of a shipping concern are floating ones, the power and control exercised by the Government of India would not be fully effective as in the case of other industrial establishments.

3. The disadvantages of "divided loyalty" would be particularly marked at International Liners' Conferences where India would have to speak with two voices—one of the nationals of the country and the other of the foreigners having a large share in the ownership of Indian ships. Foreigners cannot be expected always to stand by India at these conferences. The Government of India, too, cannot hope to influence adequately the decisions of the various powerful liners' conferences for several decades to come.

4. Nationalisation of shipping at one stroke would be a preferable alternative to creating uncertainties and anxieties, and the inevitable conflict between the purely "national" companies and the proposed "mixed" ones.

5. Increased foreign participation, with its concomitant in the possible creation of "surplus" tonnage in the overseas trade, would be "unfair" to the national shipping concerns which had struggled hard over the past few decades to establish Indian shipping on "sound" lines.

6. The present move is probably intended to accommodate some new shipping companies which could not raise enough equity capital within the country.

7. There is no guarantee that foreigners choosing to collaborate would not inflate the prices of their vessels in the course of their acquisition.

8. The third Plan target for shipping is about to be achieved without the necessity of inviting foreign capital.

Most of these arguments cannot stand closer scrutiny. Take, for instance, the first four arguments and the seventh which reflect a hysterical approach on the part of existing shipowners. All these are rooted in fear which, too, seems to be largely imaginary. It is becoming increasingly clear that India will have to rely entirely on the democracies in any future war with Communist China. And it is inconceivable that a democratic India will ever be at war with the democratic countries in the West. How a merchant navy, expanded in good time with the help of foreign private capital coming from the democratic countries, can create a difficult situation in a war passes one's comprehension. If, as we had occasion to write on an earlier occasion (14th July 1962), the country can think of establishing defence industries with the help of even communist countries, one fails to see why private capital from the democratic countries should not be permitted to join hands with Indian capital for expanding its mercantile marine. The fear that, since the assets of a shipping concern are "floating" ones, the power and control exercised by the Government of India would not be fully effective seems to be wholly unwarranted. There is no reason to suppose that a ship, with Indian command, Indian officers and Indian crew, might seek refuge in a neutral port or go over to an enemy in a war or in an emergency merely because 40 or even 49 per cent of the capital is not "Indian." If there is any such danger to a sea-going vessel, surely several strategic, land-based industries established in collaboration with not only foreign capital but also engineers, top level administrators and technicians would equally run the risk of having their valuable plant and equipment destroyed through sabotage. But such dire results can only be hallucinatory anticipations in which the powers-that-be have wisely refrained from indulging.

Again, the fear that increased foreign capital participation would lead to "dominating control and management" by outsiders seems to be entirely born of an inferiority complex on the part of existing shipowners. There is no reason to believe that even a 49 per cent foreign interest in equity, which will still be a minority interest, could lead to "dominating control and management" by outsiders. Such a big minority interest—assuming the maximum possible limit to foreign participation—will still not change the national character of an "Indian ship" as defined in the Merchant Shipping Act. Nor will it change the "Indian" character of control and management, for the majority of members on the Board of Directors can only be "Indians," representing the majority Indian share in equity ownership. Where such effective controlling interest remains only with the country's nationals, it is an equally imaginary fear to think that minority foreign interests in Indian shipping will collude with foreign shipping companies at the liners' conferences. After all, the minority foreign interests will have a stake, which will be nearly equal to that of majority Indian interests, in the profitability and efficient performance of Indian shipping. And they can, therefore, be expected, as a matter of course, not to do anything detrimental to the interests of an Indian shipping company in which they are participating. It may be pertinent to add here in passing that, in the past, when India was a part of the British Empire, British investors in Indian cotton mill industry did not hesitate to oppose the demands of Lancashire millowners who tried hard to retain a big share for themselves in the Indian market. Moreover, as each shipping company which is a member of a liners' conference has only *one* vote, irrespective of its size or tonnage, the Board of Directors of an Indian company, in which the majority interests are Indian, can very well nominate an Indian or a team predominantly of Indians to represent it at the liners' conference.

The other arguments advanced on behalf of shipowners bring out their conservative approach to the question of expansion. The reference to "inevitable conflict" between existing and new companies, as also to the possible emergence of a "surplus" in overseas tonnage consequent on the formation of "mixed" companies, reflects a static mind. Here, again, the conservative approach is rooted in the fear that the emergence of new companies with foreign capital participation might lead to further competition from more efficient and modern managements. The assertion that the existing companies have practically met the needs of overseas tonnage, except in the bulk and oil trades, ignores the shipowners' own longstanding commitment to the goal of expanding Indian tonnage on the scale required for carrying 50 per cent of the country's overseas trade, as compared with the present 10 per cent, besides being contrary to their own insistent shouting in the past for a more rapid development of Indian shipping. Where a fivefold expansion of Indian tonnage is clearly called for to enable it to handle at least half of the country's foreign trade, it is amazing that the older companies should refuse, ostrich-like, to see the expansionary role of foreign participation which can add greatly, as indeed it has already done in the case of the Jayanti Shipping Company even at the present limit of 25 per cent for foreign capital, to the existing tonnage in the shortest possible time. The idea of "surplus tonnage" and the fear of competition are, therefore, irrevelant to a situation which demands dynamic expansion of Indian shipping in all possible ways.

Whatever be the short-sighted opposition to foreign participation in Indian shipping, the Government would do well to take an early decision on the Congress Parliamentary Party Executive's recommendation. The country cannot afford to lose the undoubted advantages of such participation at the present juncture of national emergency. One of these advantages is that, since shipping is a heavy consumer of foreign exchange in the beginning, more foreign capital will automatically provide the foreign exchange for down payments on ships, the balance of which can be met from earnings. Besides enabling the rapid acquisition of new or second-hand ships at a time such as this when their prices are relatively low, foreign participation may also result in suitable ships being provided for operation in a given trade. The I.N.S.O.A. itself, incidentally, has recognised the need for greater foreign participation in tanker trade and tramp services, for instance. But it would not be wise to restrict foreign participation to these trades only. While coastal shipping can be wholly reserved for Indian capital, the entire field of overseas shipping should be open to

non-Indian participation. If the National Shipping Board, which, in our view, had unwisely rejected the idea of raising the limit of foreign participation at its meeting in July 1962 (*vide* page 58 of *Commerce* of 14th July 1962), changes its stand at its forthcoming meeting, it will be a very salutary development indeed. The Board, as its name suggests, is meant for protecting the growing national interests and not for perpetuating a closed market for the few existing companies. If there are Rip van Winkles in Indian shipping, it is the duty of the Board to call a spade a spade and to wake them up rather than allow itself to become a victim of their spell. If, however, the Board, as one report has it, merely *modifies* its familiar stand to suit a particular limited objective, the Government should not hesitate to go ahead with the proposal, now under its consideration, for increased foreign participation. After all, it has the power, under the Merchant Shipping Act itself, to alter, by notification, the minimum percentage of 75 in respect of Indian participation. To reduce this minimum to 60 per cent, if not 51 per cent, would not be a revolutionary step. If the Finance Minister follows this up by applying a concessional pattern of taxation to shipping, more foreign capital is bound to be attracted to this industry. Let us hope that day will not be far off.

IS OIL POLICY REALISTIC?—II

IN our last issue, we concluded our discussion of the Government's oil policy with the thesis that, notwithstanding the revised plan for expanding the capacity of refineries in the public sector, there was a good case for allowing the oil companies in the private sector also to expand their refining capacity. It is our intention to develop this thesis here. The oil companies in the private sector have now a capacity of a little less than 8 million tons (Burmah-Shell 3.80, ESSO 2.50, Caltex 1.20, Assam Oil at Digboi 0.45 million tons) in the aggregate. The public sector has programmed, as was shown in these columns last week, to have a capacity of 9.75 million tons scheduled to be attained by March 1966. On this basis and assuming that all the public sector refineries will be fully on stream according to the time-schedule outlined by Mr. K. D. Malaviya, Union Minister for Mines and Fuel, there will in all be a total refining capacity of 17.75 million tons. As against this, the demand for petroleum products is expected to be of the order of 18 million tons. This demand estimate was worked out before the emergency arose and does not provide for the expansion that will take place in the requirements of a bigger army, navy and air force. Again, from the experience of the past decade, it can be stated without fear of contradiction that the demand estimate is a conservative one and that it is always preferable, for a country like India with its great stress on economic progress, to keep capacity ahead of demand. A safety margin of 20 per cent need not be considered excessive, especially as the oil companies, with their world-wide connections, will have no difficulty in marketing temporary surpluses.

It would, indeed, be hazardous to underestimate Mr. Malaviya's efficiency as a Minister. He has so far displayed enough vigour, determination and firmness to command the respect of even knowledgeable critics. But even for him, the task of fulfilling on time the targets he has cheerfully set for his Ministry and the Oil and Natural Gas Commission will be difficult, if not impossible. We are now in the fag end of January 1963. The refining capacity the public sector now has (at Nunmati) is only 760,000 tons, with production running well below that level owing to continuing teething troubles. Is it realistic to proceed with plans for industrialisation and strengthening of our defence forces on the assumption that the public sector will be able to create a capacity of nine million tons and operate it successfully in a period of 38 months? Even Mr. Malaviya's performance in this sphere so far does not warrant an optimistic, affirmative reply. To take the Nunmati refinery, for instance. It went on stream on 1st January 1962. Over a year has thus passed. And yet its teething troubles are not over. According to the original schedule, the first stage of the two-million-ton Barauni refinery should have been over by June 1962 and a million-ton capacity should have commenced production by then. This target date was then shifted to March 1963 and very recently to October 1963. The second stage of two-million-ton capacity is now expected to be finished in September 1964. The demand for petroleum products is calculated to rise at an annual rate of between 3 and 4 million tons in the next three-four years, so that, even if there is a delay of two years in the completion of the public sector projects, there will be a shortfall of considerable quantity—not less than 6 million tons and perhaps even 8 million tons—in petroleum supplies which will have to be met either by imports or by curtailing consumption. If imports were stepped up to cover the shortfall, the foreign exchange lost will be of such large magnitude as to cover for several years the return on the foreign capital invested in creating the additional capacity suggested by the foreign companies. Apart from the loss of foreign exchange at a time when the country can least afford it, there will also be the loss of opportunity of creating additional employment, both direct and indirect, and of establishing valuable by-product industries, such as fertilisers, plastics, and a host of other petrochemicals. If domestic consumption were to be restrained to the available refining capacity, it would mean a very expensive setback to industrial growth, in general, in addition to the loss of opportunities just described.

It would be an unpardonable folly for anyone to expose the country to a risk of this nature, unpardonable because foreign investors in oil are quite willing to fill the gap on terms which do not appear to be unreasonable and which satisfy the conditions laid down by the Government for participation of foreign capital in India's economic development. The aggregate capacity of schemes for substantial expansion of refining capacity submitted by Burmah-Shell, ESSO and Caltex is just sufficient to provide a comfortable and reliable cushion that will take care of the possibility of consumption outstripping estimated demand, or of the failure of public sector projects to go on stream as has now been planned by Mr. Malaviya. Then there is also the possibility of the distribution arrangements of the public sector not being able to cope with the full production of the public sector refineries. Since the capital outlay on the expansion of the existing two refineries in Bombay will be very much smaller (about Rs. 10 crores for securing an additional capacity of 4 million tons) than the cost of putting up a new refinery of that size in a virgin area, the cost of oil to the consumer will definitely be cheaper. As foreign capital invested on this expansion will roughly be of the order of Rs. 5 crores only, the annual drain on foreign exchange resources on account of remittance of dividends will probably be no more than Rs. 75 lakhs, a relatively small sum as compared with approximately Rs. 5 crores of additional foreign exchange that will have to be spent on every million ton of product imports instead of the equivalent crude imports.

An argument advanced by the Oil Minister against expansion of the refineries in Trombay is that it would result in a strain on the already overburdened railways and road transport in moving the excess production to areas which are outside their economic marketing zone. On the face of it, the argument seems to carry a lot of force but does not stand critical scrutiny. In the first place, the demand for oil in the Bombay zone may exceed the existing refining capacity by the end of the third Plan and will be substantially greater in the fourth Plan. Secondly, since these refineries are situated in a port, coastal shipping can be depended upon to move the products to areas of consumption in the southern and eastern parts of the country. After all, if a refinery were to be put up in Cochin or Tuticorin, the refined products would have to be moved through rail and/or roadways to points of consumption. And either town is easily accessible to Bombay through the sea route. Besides, large sums of capital will have to be spent on expanding the port facilities in these towns and such expansion will take time. Thirdly, even as it is, the movement of goods from Bombay City to areas within the economic region is handicapped by the strangulating bottlenecks in the roads and railways between the city and Kalyan. Some way must be found to break them. If oil products could be despatched through pipelines upto, say, Poona and Nasik, or at least Kalyan, the position will be considerably easier for all. This solution cannot be put off for long and, when it is adopted, it can be so done as to handle the increase in supplies arising from the expansion of existing refineries. And, fourthly, it is sheer commonsense that the oil companies, which have to make profits and pay dividends to their shareholders, will not be interested in expanding their operations, unless they are sure of prospects of profitable operations. Surely, they cannot be interested in investing crores of rupees to enter into an ideological debate with the Government of India. It is pertinent to note, in this connection, that none of the oil companies has opposed the plans of the public sector to expand. Apparently, they are confident that the demand for petroleum products in future will be large enough to take up the refining capacities proposed to be expanded in both the sectors.

Assuming for argument's sake that Mr. Malaviya's contention about the scope of the markets for Bombay refineries is correct, it follows that he should have no objection to allowing the foreign oil companies to establish a refinery anywhere in South India chosen by the Government. It is public knowledge now that Burmah-Shell has submitted a plan to the Government for putting up a two-million-ton plant in the South, preferably at Cochin which is more favourably situated, from the economic point of view, than Tuticorin or Madras. A less known fact is that it is prepared to associate Indian capital in this venture in partnership with two prominent South Indian business houses, one of which is a pioneer in road transport. The capital outlay on this project is estimated at about Rs. 10 crores. An American oil company, Philips Petroleum, a new-comer to this country, has also put up a scheme for establishing a two-million-ton refinery at Cochin in partnership with a Calcutta business firm of considerable resources and with the Union Government as the major partner. If dispersal of refining capacity is regarded by the Government as the major consideration for granting permission and if the Government is not influenced by doctrinaire policies, as Mr. Malaviya claims, then it should give the licence for the refinery in the South in favour of that project which (1) is the cheapest in terms of capital outlay, (2) does not impose a strain on Government resources, and (3) promises expeditious completion. But Mr. Malaviya, if his public statements are to be believed, has already decided that the proposed refinery for the South should be in the public sector. Nevertheless, this does not mean that the Government has taken an irrevocable decision and that it cannot be changed in favour of the private sector if it really wants to. Since time is an important factor and delay will be dangerous, both politically and economically, it would be in the best interests of the country to arrive at an early decision.

Finally, the great bulk of the public sector's petroleum projects are being implemented with the help of Russia and Rumania. There is an inherent risk in this arrangement which needs to be neutralised. At the moment, these two countries are friends of India, but they are partners of China in the task of bringing the whole world under the Communist hegemony. If there are any differences between China and Russia today, they are only over the means to be adopted for reaching their avowed goal. Those who have any doubts on this point have only to read Mr. Khrushchev's latest speeches in East Germany to dispel them. In one of the speeches, the Supreme Soviet leader reiterated, in the bluntest language possible, that Russia had not abandoned its programme for spreading communism all over the world and that, short of going to war, he would resort to all other possible means for reaching this goal. Again, till not long ago, China, too, professed (and still professes!) friendship for India and the powers-that-be in this country took its solemn assurances at their face value. What is more, they persisted in doing so even after China's aggressive intentions had become clear. What certainty is there that, one day, Russia and its East European partners, too, will not let us down? It must be borne in mind that oil is a strategic commodity and one cannot afford to take chances so far as its development is concerned. It is not suggested that help from Russia or any East European countries should be rejected or that India should not establish closer economic relations with those countries. Nor does one underestimate the value of assistance this country has been receiving from them. All that is suggested here is that the Government of India should be prudent enough not to rely excessively on Communist countries, the economic aid from which has political overtones basically injurious to democratic way of life, especially in underdeveloped countries. Viewed from this angle, admittedly a political one, it is very essential to permit the existing foreign oil companies not only to expand their refining and marketing capacity but also to participate in prospecting for oil. Mr. Malaviya himself disclosed, in the Lok Sabha this week that, when the Chinese invaded N.E.F.A. and swiftly marched towards Assam, he had to ask the Russian technicians working in the Sibsagar area (Assam) for the Oil and Natural Gas Commission to suspend their activities there and shift to the Gujarat region. Surely, the need for such interruption would not have arisen had the task of discovering oil been entrusted to British or American companies.

MARKET GOSSIP

Ban on "Gur" Futures

SOON after our last issue came out of the Press, New Delhi clamped down a complete ban on forward trading in *gur* throughout the country. This move was not unexpected, for rumours to that effect had been thick before. Indeed, Mr. S. K. Patil himself had hinted at the possibility of the Government taking steps to check the undue diversion of cane from sugar mills to *gur* manufacture when he met the Chief Ministers of U.P., Punjab and Rajasthan on the 11th inst. (*vide* page 110 of our last issue). The ban on *gur* futures has followed the Forward Markets Commission's earlier measures of (*a*) limiting the weekly rise in the price of the new season contract to 60 nP per 50 kg., (b) imposing certain limits on gross open positions either way of each member, and (*c*) fixing price ceilings on futures at the different centres. Although these measures led to a sharp fall in *gur* prices—ready superior quality at Hapur receded from a high of Rs. 29 per maund on 13th October 1962 to Rs. 17.75 just prior to the imposition of ban on futures on the 18th inst.—the ruling price was still very much above that (Rs. 14.25) prevailing this time last year.

There might have been some unhealthy speculative manipulations on the part of the *gur* trade, but it would be wrong to attribute the rise in prices entirely to these manipulations. The normal market forces of supply and demand have also had their effect. Since the current season's sugarcane crop in several parts has suffered a distinct setback both quantitatively and qualitatively, the supply of *gur* is expected to be appreciably less than in the previous season. In view of this factor and considering the all-round increase in prices of consumer goods, it is but natural that the agriculturists have preferred to utilise a large part of the cane grown to produce *gur* themselves and sell the product at a high price, instead of supplying the same to the sugar mills. It will not be easy to check this tendency because *gur* making is a highly decentralised sector scattered over wide areas. The cane holdings of the majority of agriculturists are very small—a couple of acres on an average—and the average production of *gur* per grower is low.

All this does not, however, mean to suggest that no attempt should be made to reduce the diversion of cane to *gur* manufacture. There is every need for it, in order to ensure adequate cane supplies to sugar mills many of which, it is stated, are finding it extremely difficult to maintain a high level of sugar production, in view of paucity of cane supplies. The imposition of a ban on *gur* futures must, therefore, be welcomed. It has, however, to be emphasised that this step alone will not suceeed. It must be followed by a country-wide ban on the manufacture of *gur* and *khandsari* in and around sugar factory areas, as well as restrictions on the movement of these sugar substitutes from one place to another. Such restrictions, it will be recalled, had been enforced before.

Curbs on Cotton Relaxed

The relaxation, with immediate effect, of restrictions on cotton, announced by the Textile Commissioner on the 23rd inst., is a sequel to the recent fall in spot and futures prices and the accumulation of unsold stocks of cotton in the marketing centres. During the past few weeks, spot prices of most varieties of cotton have shown a consistently downward trend, thanks to lack of mill demand and mounting arrival of new crop. The following table indicates the extent of the fall in spot prices:

(In Rs. per three quintals)

	Revised ceilings	3rd week January 1963	3rd week December 1962	3rd week November 1962
Mogiat Jarilla 25/32"	798	742	770	798
Vidarbha Jarilla 26/32"	831	830	825	831
Khandesh 1st/3 26/32"	858	844	855	858
Buri American 29/32"	924	895	924	924
Bengal *Deshi*	690	565	677	585

It is evident from the table that the decline is not such as to cause any alarm. But some of the growers and traders have been unduly exercised over it. They have been urging the Government to scrap the supervisory scheme, to remove curbs on stockholding by mills and to force mills to cover their requirements of cotton soon with a view to arresting the modest fall in prices. It is obvious that the Government has allowed itself to be influenced by the pressure of interested parties. The prices have just started coming down and are only a few rupees below the ceiling levels. Is it the Governments's idea to convert the ceiling prices into floors?

According to the announcement made yesterday (23rd inst.), mills have been given freedom to hold as stock any quantity of Indian cotton, notwithstanding any previous instructions regarding limitation of stocks to three or four months' consumption. Mills are, however, allowed to buy only within their quota which have been raised. Mills in the north zone had so far been allowed a quota equivalent to 65 per cent of their consumption of Indian and foreign B cotton during the 1960-61 season, with the provision that a quantity representing 10 per cent should be purchased out of local growths in Rajasthan, Punjab and U.P. The quota has now been increased to 75 per cent. Further, the restriction that 10 per cent of it should be in local growths has been removed. In regard to mills in other Zones, the present quota of 65 per cent of their consumption of Indian and foreign B cotton during 1960-61 has been increased to 75 per cent. All mills have been given permission to make purchases on the basis of the enhanced quota without waiting for quota letters. Mills which require cotton in excess of the aforesaid quota are advised to apply to the Textile Commissioner for additional allotment.

In order to encourage consumption of long-staple Indian cotton and to cut down imports of equivalent foreign cotton, it is stipulated that mills, which consumed foreign cotton of staple length 1.1/16" and above but below 1.3/16" and/or Indian Cambodia A and/or Cambodia B in 1960-61, should utilise at least 5 per cent of their annual quota for the current season for the purchase of Cambodia A and B cottons.

The mode of payment for cotton has also been modified to avoid delay in the movement of the crop. Accordingly, 7½ per cent of the value of cotton, which had hitherto to be paid to the supervisors to be handed over to the sellers, has now been made payable by mills direct to the sellers, provided the invoices have been checked by the supervisors.

These measures will certainly quicken the movement of the crop and stimulate mill buying. In fact, the trend of futures on Thursday, the 24th inst., shows that the market has bullishly interpreted the relaxation. The Jarilla March Contract, which had closed at Rs. 667.75 (per three quintals) yesterday, firmed up overnight, following the announcement, and was quoted at Rs. 681 today, though the closing rate at Rs. 677 was a little below the peak. Ready rates too tended to look up. This only shows that the recent fall in prices was largely seasonal and not the result of any radical change in the supply position of cotton indicating a bearish outlook. It would, therefore, be unwise to lift all controls or to have recourse to other drastic steps such as compelling mills to buy cotton. Moreover, there is no certainty even now that the expectation regarding the crop would fully materialise. Although a crop of 5.2 to 5.4 million bales is now regarded as almost certain, one cannot be quite sure about it for another month. A cold wave in Gujarat or Madhya Bharat area is still a possibility and so also a drought down South.

Outlook for A.C.C.

The observations of Mr. Dharamsey M. Khatau, Chairman of the Associated Cement Companies Ltd., at the Company's annual general meeting in Bombay on Friday the 18th inst. suggest that nothing spectacular is in the offing for the Company in the current year. Indeed *status quo* seems to be a fair conclusion. For Mr. Khatau said that, while the previous year's progress was being maintained, neither production nor capacity was to be increased. In 1962-63, the Company would derive a full year's benefits of the higher retention prices granted with effect from 1st November 1961, as against only nine months' benefits obtained in 1961-62. But the benefits would be eaten up by higher costs. Besides, there was the problem of additional taxation in the ensuing Union Budget and the burden of war risks insurance premium, the extent of which depended on the still undetermined basis of working out the premium. If the basis were to be replaceable value and not depreciated value of fixed assets, the premium would be pretty high. It remains to be seen, Mr. Khatau added, whether or not the cement manufacturers' plea for a further increase in retention prices would be upheld by the Government.

Speaking of costs, the Chairman made an important point that deserves the notice of the policy-makers in the country. He quoted the Tariff Commission's report which had said that the A.C.C. was the second low cost unit (the first being the Dalmia Cement (Bharat) Ltd.) in the country. Nonetheless, increases in retention prices were given by the authorities in direct proportion to increases in costs and no premium was placed on efficiency. Surely, this policy runs contrary to the Government's desire to bring down the cost of production and raise competitive capacity of Indian industries. A former member of the Tariff Commission and an eminent economist, Dr. S. K. Muranjan, is in charge of the Committee for suggesting ways and means of bringing down cost of production. Will he be realistic enough to recommend a suitable modification in the Government's economic policy which, in the name of anti-monopolistic tendencies, encourages establishment of high cost units?

Dealing with some shareholders' demand for a bonus issue, the Chairman conceded that the share premium account could be used for this purpose, but added that this would be done only if and when the Board saw that the prospects of a reasonable return on increased capital were well assured. This qualification means that a bonus scheme in the immediate future is ruled out. Mr. Khatau assured the shareholders that the question of allowing them to participate in the share capital of the A.C.C.-Vickers-Babcock Ltd. would be considered when the need for raising additional capital for that Company arose. The A.V.B. was working to its capacity. Nevertheless, it was not expected to declare any dividend for at least two years.

Negotiations for the sale of the Company's assets in Pakistan had been abandoned following differences between the American negotiators and the Government of Pakistan. Other parties, however, have been approached and the matter is under consideration. Meanwhile, the assets are being well taken care of and are capable of very profitable use.

Among other important matters that cropped up at the meeting were distribution of cement produced by the Company, income-tax assessment and the L.I.C.'s holdings. Mr. Khatau stated that (1) the Company had no control on distribution of cement produced by it and that the entire distribution was controlled by the S.T.C. for a commission at the rate of 6 per cent of selling price from the Company, (2) the Company's income-tax assessment had been completed up to 1959 and (3) the L.I.C. held 12 per cent of the ordinary share capital of the Company.

Price Line Belies Cassandras

The indices of commodity prices pertaining to the closing days of 1962, which could not be had at the time we surveyed the economic trends in India in our 1962 Annual Number, are available now. The net change in the price situation over the past year, as disclosed by these data, is more encouraging than one had expected earlier in the year. It has belied the Cassandras who had predicted grave economic consequences in the monsoon months of last year and urged rigorous physical controls, including country-wide rationing of the necessities of life such as foodgrains, kerosene and cotton cloth. This was an extreme view, as this journal had tried to point out then. Mr. S. K. Patil, Union Food Minister, has good reasons to feel gratified that he was after all right in not allowing himself to be stampeded into expensive negative measures for bringing the price levels under control. It will be recalled that the Cassandras included not only theoretical economists but even some Central Ministers such as Mr. T. T. Krishnamachari and Mr. Gulzarilal Nanda.

Over the year, the general price level shows a rise of less than 2 per cent, though in some months of the second half of 1962 it was 6 per cent higher than a year before. It may be recalled that there was no significant rise in prices during the first quarter of 1962, with the index number of wholesale prices (base: 1952-53=100) of all commodities moving between 123 and 124. There was a sharp rise in the second and third quarters, with the index shooting upto about 132 by the middle of August. The price level continued to stay in the neighbourhood of the peak during the next three months, that is, upto the middle of November. Thereafter, the situation began to change for the better and prices sagged, notwithstanding the Chinese invasion, or, perhaps, because of it. The index climbed down to stand at 125 by the end of December, as compared with 122.7 a year before. The average index for the month of December was 125.6, which was higher by just less than 2 per cent, as compared with 122.9 for December 1961. It is true that this performance on the price front was not as good as in 1961 when there was actua ly a small fall of about 2 per cent in the overall price level, but it is in refreshing contrast to an average annual increase of 6 per cent witnessed in the second Plan period. In other words, it would be no exaggeration to say that, on the whole, there has been a fair measure of price stability in the first two years of the third Plan, the slight rise in 1962 having been neutralised by the slight fall in 1961. The following figures speak for themselves:

(Base: 1952-53=100)

	January	December	Percentage change over the year
1962	123.3	125.6	+1.9
1961	125 6	122.9	—2.1
1960	118.8	124.6	+4.9
1959	112.3	117.9	+5.0
1958	106.0	111.4	+5.0
1957	107.3	107.0	—0.2
1956	95.0	107.0	+12.0

The fact that the net increase in the price level over 1962 was less than 2 per cent is a remarkable feature for at least three reasons. In the first place, the population itself must have gone up by 2 per cent. Secondly, there was a larger dose of deficit financing than in 1961, notes in circulation alone having risen by Rs. 184 crores in 1962, as compared with a rise of only Rs. 68 crores in the previous year. And, thirdly, there was heavy additional taxation of the order of Rs. 115 crores by the Centre and the States, besides an increase in railway fares and freights, as also in the cost of road transport. It must be borne in mind that the major part of the increase in taxation was in the form of indirect taxes (excise duty, sales tax and so on) which are ultimately passed on to consumers.

There was a sharp fall in prices in the last six weeks of 1962. This was the cumulative result of several factors, not the least of which was the voluntary restraint exercised by the distributive trade, in the context of Chinese aggression. Probably a much more significant factor was the better crop position for the current season. Most of the foodgrains (except perhaps rice) and cash crops, such as raw cotton and oilseeds, have fared distinctly better during this crop year than in 1961-62. The tight money conditions have also discouraged the trade from accumulating stocks. The abolition of forward trading in shares, gold, and non-ferrous metals, etc., alongside several other curbs, also helped in reversing the upward trend of prices.

Oxygen—A Vital Industrial Gas

In the context of defence production and allround industrial development, oxygen is of vital importance. It is extensively used for welding, cutting and heating operations, in the catalytic processes for manufacture of several heavy chemicals and for steel production under the L.D. process. Liquid oxygen is used for industrial explosives, as laboratory refrigerant and for cold treatment of tools. Compressed oxygen is used as medical oxygen, for breathing oxygen in aircraft and for transport of fish. In view of the vast applications thus of oxygen, the rapid expansion of production that has taken place in the past few years is, indeed, encouraging. The actual output is currently maintained at an annual rate of about 700 million cubic ft., as against the actual output of a little over 328 million cubic ft. in 1956. The rise in output has followed a marked increase of 567 million cubic ft. to 1.034 million cubic ft. in installed capacity (triple-shift operation) that took place during the second Plan period, following the expansion of the 12 existing factories and the establishment of six new units. Including the additional capacity of 976 million cubic ft. licensed in the second Plan period

TREND OF SHARES

SMALL RALLY AT CLOSE

(From Our Own Correspondent)

BOMBAY, 24*th January*

AFTER displaying further weakness during the major part of the week under review, equities staged a small rally yesterday and closed the week at or around the improved levels. The rally came off not before several counters in the principal stock exchanges broke their respective 1962 low levels. Values were lower earlier in the week, because market authorities in Bombay and Calcutta had lifted the minimum prices, with some exceptions still maintained, albeit at lower levels. Markets were in no mood to rally from the lower levels and would have declined still further had short selling been permitted. Indeed, notwithstanding the bright long-term industrial prospects, investors were still shy and all the props in the shape of limited margin-free fresh speculative purchases fell flat as was expected because of the still confused state of political affairs and growing fears of heavy taxation in the ensuing budget.

The rally towards the close, which had been almost entirely on some bear covering, signified, however, a slight change in sentiment on expectations of a possible peaceful solution of the border issue with the Chinese, following the reports that China had accepted the Colombo conference proposals in principle. But the initial enthusiasm over peace with the Chinese seemed to have dissipated, as Prime Minister Nehru informed the Lok Sabha yesterday evening that China had not accepted the proposals and the clarifications given thereon *in toto* and that, unless and until it did so, India would not start talks with it over the border issue. Mr. Nehru further told the Lok Sabha that the Government of India had accepted the proposals with the clarifications thereof and sought the confidence of the Lok Sabha to proceed on the basis of the proposals and clarifications offered, provided China agreed to accept them in full.

Apart from this political factor, sentiment was also influenced by reports on the 23rd inst. that the Raj Committee on Planning and Distribution of Iron and Steel had called for a revision of the existing procedure of fixing retention prices of steel, as it did not adequately allow for replacement costs of plant to producers at either current or future levels. These reports led to speculation in market circles of a likely revision of the steel retention prices for 1961 and 1962, which the Government had arbitrarily reduced to Rs. 522.50 per tonne from Rs. 550 as recommended by the Tariff Commission. However, New Delhi was quick in curbing such speculation, as, according to informed reports appearing today, it was said to be contemplating no revision in the prices fixed for the last two years. It was, however, suggested that the Government was considering improvements in the price fixation policy to make it more scientific and that a new formula might apply to prices to be fixed for 1963 onwards. Following these reports, steel shares, which had been a little active and looked up a bit promisingly yesterday, turned quiet today.

Despite the rally, closing prices disclosed small gains only in some select counters and moderate losses in the majority of shares. The losses, as noted at the outset, were pronounced because of the lifting of minimum prices in the case of most of the shares in Bombay and Calcutta and all the shares in Madras. Turnover continued to be limited. The undertone at the close was far from unencouraging.

The substantially lower making-up prices fixed by the Governing Board of the Bombay Stock Exchange on the 17th inst. in the case of the 12 still 'controlled' shares for the settlement on Friday the 18th inst. upset members of the Exchange. It was contended by members that prices for some shares had been excessively reduced, although business in them had materialised before at higher levels. A.C.C. and Hindustan Motors were mentioned among such shares. In the case of Bombay Burmah, the price was reduced to a level—from Rs. 575 to Rs. 558—much lower than the 1962 low of Rs. 575 which was touched at the height of the Chinese aggression. Consequently, the Board restored the original price for Bombay Burmah and likewise re-revised the price for A.C.C. from Rs. 142 *cum-div.* to Rs. 146.50 and for Hindustan Motors from Rs. 15.60 to Rs. 16.04. *Badli* charges in quite a few of the 12 'controlled' shares, outstandings in which alone had to be compulsorily carried forward, shrank much below the levels fixed by the Board on the basis of 9 per cent per annum.

On Friday the 18th inst., the Committee of the Calcutta Stock Exchange decided to reduce, with effect from Monday the 21st inst., the minimum price for Indian Iron from Rs. 22 to Rs. 21.50, for G.K.W. from Rs. 34.45 to Rs. 34, for Rohtas Paper from Rs. 12 to Rs. 11.75 and for Kesoram from Rs. 22 to Rs. 21.50. The Committee also decided to lift from the same date minimum prices for all other cleared shares. As for cash scrips, it decided to retain minimum prices only for tea shares and leave all the rest free to find their levels.

• • • •

Selected Engineering issues and Automobiles recorded gains in Bombay. Telco improved quickly from the week's lowest level of Rs. 272.50 on Friday to Rs. 289 yesterday and closed today at Rs. 288 as against Rs. 280 a week ago. Voltas rallied from Rs. 241 to Rs. 248 to show a gain of two points over the week. Premier Construction were up by Rs. 1.75 at Rs. 124.75. Hindustan Motors attracted substantial short-covering and recovered from Rs. 16.52 to Rs. 17.36 and closed with a gain of 20 nP at Rs. 17.20. Premier Automobiles finished Rs. 3.90 higher at Rs. 103 *ex-div.* A.C.C. were done initially at Rs. 147, but closed better at Rs. 150, as against Rs. 149.50 a week ago. Textiles were the weakest counter. Century lost 17 points at Rs. 528, Standard 22 at Rs. 760 and National Rayon 15 at Rs. 395. Svadeshi were seven points lower at Rs. 258. Kohinoor two points at Rs. 274 and Bombay Dyeing Rs. 1.20 at Rs. 59.30. Mafatlal Fine, in the cash section, showed a loss of Rs. 18.75 at Rs. 670. On Tuesday, Tata Steel Ordinary and Indian Iron were quoted at the revised minimum prices of Rs. 117 and Rs. 21, respectively, but rallied the next day to Rs. 120 and Rs. 21.16 and opened higher today at Rs. 120.75 and Rs. 21.28, but eased to close at Rs. 118.50 and Rs. 21.08, as against Rs. 120 and Rs. 21.84 a week ago. Scindia finished 32 nP lower at Rs. 10.32.

• • • •

The relaxation of minimum prices produced widespread losses in Calcutta. In the forward list, Indian Aluminium declined by Rs. 1.50 to Rs. 30. Howrah by 75 nP to Rs. 18.25, Birla Jute by 56 nP to Rs. 29.06, J.K. Cotton by 75 nP to Rs. 13.62, Texmaco by 45 nP to Rs. 19.55 and Indian Cable by 31 nP to Rs. 34.19. Among cash shares, Textiles were weak, with Bharat Commerce losing Rs. 1.47 at Rs. 24.40. Jayshree Rs. 1.56 at Rs. 14.69 and Dunbar 87 nP at Rs. 27.50. Coal shares were generally steady, with the exception of Amalgamated, which, after having gained Rs. 1.94 to Rs. 25.06 in the previous week, reacted this week to Rs. 24.75. In Jutes, Khardah improved from Rs. 17.50 to Rs. 18 and Magna from Rs. 13 to Rs. 13.37, but New Central eased from Rs. 12.37 to Rs. 13.06. A 50-point slump in Burn at Rs. 550 was the feature of trading in Engineering issues. Among others, J.K. Steel suffered a loss of 88 nP at Rs. 15.62 and Britannia Engineering of 44 nP at Rs. 10.25. Miscellaneous section showed a sprinkling of losses which were quite sharp at Rs. 1.06 in Aluminium Corporation at Rs. 14.06, at Rs. 1.94 in East Anglia at Rs. 12.56 and at Rs. 3.31 in Philips Carbon at Rs. 18.50.

• • • •

Good gains in selected Plantings and further losses in some Textiles were the features of this week's trading in Madras. Parkside rose smartly from Rs. 23.12 to Rs. 23.75. Peermade gained 13 nP at Rs. 22.50. Ouchterlony Valley recovered 23 nP at Rs. 4.15 and Kil Kotagiri were 10 nP better at Rs. 4.90. At the same time, however, Vaikundam declined by 35 nP to Rs. 30.50 and Blue Mountain moved down from Rs. 2.37 to Rs. 2.30. Among Textiles, S.I. Viscose fell by nine points to Rs. 125, Travancore Rayon lost 60 nP at Rs. 27.75 and Madura closed 27 nP lower at Rs. 31.10. Indian Standard Rolling, in the Miscellaneous section, showed a loss of 37 nP at Rs. 11. Andhra Cement eased by 30 nP to Rs. 9.75 and Ashok Leyland closed 10 nP lower at Rs. 8.05. A loss of 50 nP in E.I.D. at Rs. 39.87 and of 10 nP in Deccan at Rs. 9.40 were the principal changes in sugars.

BOROSIL GLASS WORKS LTD.

A new company, called Borosil Glass Works Ltd., is to make a public issue shortly amounting to Rs. 38.25 lakhs towards its Rs. 2.06-crore project for the manufacture of 7,200 tons of borosilicate glass at its plant to be set up in one of Bombay's heavy industrial zones at Marole, Andheri. The Company has been promoted by Messrs. Industrial and Engineering Apparatus Company (Private) Ltd., which has been manufacturing scientific and laboratory glassware, neutral vials, petromax lamp chimneys, etc., under the *Borosil* trademark. For its project, Borosil Glass has obtained financial and technical collaboration of Corning Glass Works, Corning, New York, which enjoys a worldwide reputation as a leading manufacturer of technical glass. The American firm has agreed to allow the Company use of its trademark *Corning* and also help the Company in promoting exports. The Company has an authorised capital of Rs. 2 crores in ordinary shares of Rs. 10 each. It is to issue in all shares worth Rs. 1.50 crore. Forty-nine per cent of the issued capital, that is, Rs. 73.50 lakhs, will be subscribed by the American firm. One-half of the balance of capital is to come from the promoters, Directors and their friends and the other half from the public. The uncovered portion, amounting to Rs. 56 lakhs, of the capital outlay will be raised by way of bank borrowings as and when the need for it arises.

The Company has purchased 75,000 square yards of land which contains sufficient room for expansion in future when production expands. Construction of factory and administrative buildings is on hand. Plant and machinery are expected to reach the factory site in June next. The Company will also take over the existing plant of the I.E.A. at Andheri, which has a capacity of 1,500 tons of borosilicate glass in both white and amber. This takeover will benefit the Company, as the I.E.A. has an established annual turnover of Rs. 35 lakhs. The main plant will commence production in December 1963 and reach capacity by June 1964. Considering that its maximum production of 7,200 tons will be one-third of the estimated requirements of scientific and laboratory glassware at 21,500 tons per annum during the third Plan period, the Company seem to be assured of the market for its products. Besides, it is proposed to tap export markets also. Dr. S. R. Lele, Managing Director of the I.E.A., who is the Chairman of the Development Council for Glass and Ceramics and President of the All-India Glass Manufacturers' Federation, is the Chairman of the Company. Mr. R. D. Murphy of the Corning Glass Works, Mr. N. Dandekar, a retired I.C.S., Mr. P. H. Brown of Corn Products, Dr. P. N. Vaidya, Mr. R. C. Bennet of the First National City Bank, Mr. R. A. Shah and Mr. V. B. Desai are the Directors.

In order to step up the production of cement further, the Government of India has announced, according to a Press note dated the 22nd inst, a scheme under which a cement producer, who increases his production in 1963 will be eligible to an incentive payment. Under the scheme, an extra payment ranging from Rs. 2.50 to Rs. 5.50 tonne will be paid to a producer who is able to increase production above the highest level achieved by him during the previous three years. The payment will be made on the additional production so achieved. There will be no change in the selling price of cement to the consumers.

MARKET GOSSIP

(Concluded from previous page)

itself, the total capacity works out to about 2,010 million cubic ft. and the third Plan target is fixed at 2,300 million cubic ft. Even so, the scope for further expansion of capacity in the coming years is pretty vast, what with the potential increased demands from industries concerned with defence and the expected extensive use of oxygen in nitrogenous fertiliser industry in conjunction with the naphtha gasification process. It is, therefore, necessary to take a long-term view of the development of oxygen industry and plan accordingly. This important aspect has been impressively highlighted once again by Sir J. D. K. Brown, Chairman of the Indian Oxygen Limited, in his latest annual statement to the shareholders of the Company. The availability of industrial oxygen and dissolved acetylene particularly, Sir John Brown points out, has to be planned and capacity installed well in advance of current requirements.

The planners and the powers-that-be are not, of course, unaware of the need for such perspective planning, but the policy actually pursued leaves much to be desired. Thus, instead of giving encouragement to the existing units to expand their capacities, which is a more economic way of securing increased production, the Government has granted licences to many new parties to put up oxygen and dissolved acetylene plants. It is rather disquieting to hear from Sir John, that, in a number of cases, the implementation of schemes has been delayed through various factors such as shortage of foreign exchange or the difficulty in finalising terms for technical collaboration. "This," to quote him, "is particularly unfortunate in the context of the present emergency which has already thrown up pressing or potential additional demands which, with the best will in the world, can hardly be met from existing productive capacity. The present situation emphasises the necessity in an industry of this kind to have in reserve a margin of capacity to meet unexpected demands. The actual position is that the plants installed in the country are generally working beyond normal capacity, and the margin which preferably should exist between that capacity and peak demands is simply not there."

Sir John for one is not against new entrants into the field of oxygen manufacture. On the contrary, he admits that "there is room for newcomers whose emergence as competitors we, in fact, welcome." Only, he has uttered a warning against retarding the sound development of existing concerns pending the coming on stream of newer units. In his characteristic way, Sir John observes: "Whatever the justification from the point of view of the building up of a socialistic pattern of society, which, in the case of this particular industry, seems very doubtful, such a policy has grave dangers so far as the development of strategic industries generally is concerned."

The strategic consideration apart, it is an economic truism that, in any industry, the level of output, the quality of products and the cost of production are all influenced by the size of the unit concerned, as well as by the resources and technical know-how a manufacturer can readily command. If any factory is to maintain optimum production of superior quality goods at an economic cost, it is imperative that its scale of operations should be on as large a scale as possible. It is, therefore, in the country's interest that greater stress is laid on the expansion of existing units rather than giving licences to install several new small plants. Moreover, the establishment of new units involve a much larger capital outlay as compared with what is required in the case of raising the capacity of existing units. These points, though they are elementary, must always be borne in mind while considering the future development plans for oxygen and dissolved acetylene gas.

Notice

THE UNITED COMMERCIAL BANK LIMITED

Registered Office:

2, INDIA EXCHANGE PLACE, CALCUTTA

Issue of new 2,00,000 ordinary shares of Rs. 100 each, Rs. 50 per share paid up for cash at a premium of Rs. 25 per share

SHAREHOLDERS ARE HEREBY REMINDED that the sum of Rs. 37.50 per share towards the nominal value payable on allotment on the Right Shares is required to be paid on or before the 31st January 1963. No extension of time whatever will be given for payment of the sum payable on allotment.

Interest at the rate of 9 per cent per annum from 1st February 1963 to the date of actual payment will be charged on the amount payable on allotment if the same is not paid on or before the 31st January 1963.

By Order of the Board of Directors,
S. T. SADASIVAN,
General Manager.

CALCUTTA,
Dated 24th January, 1963.

PERSPECTIVES & PROJECTIONS

By Mercator

Unbelled Cat

THE discussions on the Third Plan show—some unkind critics even call them a farce—are nearly over and the standing committee of the N.D.C. has solemnly resolved to carry through an outlay on development of Rs. 1,744 crores in 1963-64, along with the added defence expenditure. This means that the Union and State Governments will have to find additional resources of Rs. 450 crores or more next year through taxation, loans, small savings and foreign aid. Though the word "readjustments" has been mentioned often in this connection, nothing has been heard of projects dropped or postponed due to diversion of domestic resources or foreign exchange to new defence needs. There is now an interlude for speculation of every kind until the Budget day, four weeks hence. The old notion in Planning and Government circles that the largeness of the outlay every year is the real determinant of the country's devotion to planning and economic development dies hard and prevents succession of realism. Anyone who calls for a practical approach in terms of possible resources and priority needs will be dubbed as being timid or worse and so no one cares enough to bring common sense and cold reason into these matters. The Union Finance Minister as the one directly responsible for raising the required sums for investment should have been able to specify the limits of the effort now possible along with the strengthening of the Army, but, if he alone should be faced with disapproval and unpopularity for taking a cautious and sensible view, it seems unlikely that the cat of unrealism will ever be belled.

The question is not so much whether the Indian economy can find ways of raising money for investment on the proposed scale but whether the present methods, which have shown no improvement at all in recent times, of mobilising small savings and taxation by the States and the continuance of men responsible for such slackness, will make this double aspiration for defence and development feasible. There are no signs of any reshuffle of responsibilities; men of unproven capacity and opinionated cranks are persisting in their old ways without showing any sense of urgency. A helpless shrug is all that can come from anyone who had hoped for improvement. A figure of 8 per cent was recently mentioned as the probable increase in industrial production in 1962; and agriculture may also be better, judging by the easing of the jute and cotton supply position without much apparent difficulty in food crops. But there are not many signs of vigorous economic growth, not to speak of dynamism, even though substantially large outlays have been maintained in the first two years of the Third Plan. One should have imagined that the mere prospect of substantial defence orders and larger Plan outlays would have stimulated the economy and extricated it from the stagnation; but the drooping stock markets and other signs of weariness indicate that some unreleased but unseen brakes besides foreign exchange shortage are still holding up progress. The men who understand such delicate aspects of the economic mechanism are not to be seen anywhere near the areas of decision on economic policy. It is unlikely that the grand scale of Plan outlay will remove frustration where it exists.

Fair Rule for Services?

Yet another Constitutional Amendment which has gone so far unnoticed relates to the proposed simplification of the rules for disciplinary action against Government servants. In the Constitution (Fifteenth Amendment) Bill referred to a Joint Select Committee of both Houses before they recessed last month, there is a provision to amend Article 311, which casts an obligation on the Government to give its employees a reasonable opportunity to show cause against any action proposed to be taken to dismiss, remove or reduce in rank any of them. If the amendment goes through in its present form, it would involve deletion of reduction in rank as a substantial penalty requiring the formalities of a proper inquiry, making it a minor affair which presumably can be resorted to after calling for an explanation. An employee, on the other hand, is likely to feel that it is a serious matter affecting his career; some sensitive men may prefer removal which will leave them with pension but without stigma barring further opportunities for employment. Though this change is reported to have the approval of the Santhanam Committee on prevention of corruption, it must be borne in mind that once the constitutional provisions are amended as proposed, the new requirements will apply to all classes of cases and introduce an element of arbitrariness in the dealings of the superior staff. If it can be assumed that only the corrupt will suffer, there may be no need to shed tears over the loss of certain privileges which public servants have long enjoyed but any such general assumption would be naive.

The Second Pay Commission felt that disciplinary inquiries were on the whole lenient, but observed that reference to an independent body at some stage of the proceedings was desirable and was contemplated by the Constitution in the functions assigned to the Public Service Commissions. In effect, however, these were not operative, in view of the exclusion of many disciplinary matters from the Commissions' purview. It is possible that some inquiries against public servants are long drawn out but, as in prosecutions for criminal charges, it is often difficult to secure evidence and witnesses and some departmental heads have such a poor knowledge of procedure that their perfunctory ways of charge-sheeting an employee and taking action invite ridicule from judicial authorities. As in litigation in the courts, delays occur and many of them cannot be prevented without abridging the rights of fair trial or changing our system of jurisprudence which prohibits a conviction not based on rules of evidence. So the issue is whether dismissal or removal will be done in a fair manner if, as is proposed, the rules only provide for "hearing at the inquiry"—whatever that may mean. Will written arguments, representation by a lawyer and cross-examination of witnesses be permitted? Is there any advantage to the administration if many of these matters which may vitiate an inquiry are raised at the appellate stage or in writs before courts, involving fresh inquiries? Besides the need to prevent vindictive action, there is the further point that public opinion now tends to feel that there is much corruption also at political levels in which the permanent services are, voluntarily or otherwise, participants. Mr. Nehru's response to Mr. C. D. Deshmukh's repeated complaints on this score has not been satisfying. It may be that democratic politics cannot wholly eschew some forms of spoils, favouritism and other evils and that, on balance, democratic virtues are greater. But should there be different standards for the services which would diminish longstanding privileges or safeguards? It is not the Centre alone that is affected by the change, since the State services also will in future get the same kind of treatment, though their organisations have not been given enough opportunity to express their reactions to the proposed change. The Select Committee has a great responsibility to weigh the pros and cons of this matter and improve the drafting, so that sufficient protection is still left after abridging the present procedure for inquiries and punishment. That almost every Constitutional amendment undertaken so far is restrictive, not liberalising, is also an important factor which the public cannot overlook.

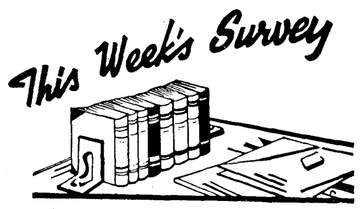
• • • •

Distrust Vindicated

Mr. Heath, Britain's Common Market negotiator, has begun the New Year badly. While formerly it would have been regarded as strange if the British ever broke off negotiations, it will now be considered a miracle, if they succeed in joining the E.E.C. President de Gaulle's offer of associate status is no minor taunt to British susceptibilities; and it is doubtful if Dr. Adenauer is still powerful enough to sway the major partner of the European alliance, assuming that he is more favourably disposed towards Britain's entry. The conflicting pulls on Britain, differing political attitudes inside the island and the very large number of matters on which Mr. Heath sought accommodation inside the E.C.M. made the negotiations difficult; but the French President's inscrutable ways were always considered the chief obstacle to success. British distrust was not ill-founded and, in retrospect, it is possible to say that it was not exaggerated.

Many pro-Market observers have occasionally conceded that, for Britain, the advantages of entry were not overwhelming and in these circumstances it required considerable determination to go ahead with the negotiations. That determination came perhaps mostly because of the feeling that, except as a member of a highly competitive and growing economy in Europe, the necessary spur to internal adjustments in costs and prices and dynamism for growth will not be possible. Now Britain will be faced with the problem of making such adjustments to overcome her isolated European position and, perhaps, the Commonwealth, which expected sacrifices from Britain to maintain the old trading system, will now be ready to get together and devise ways of expanding commerce inside a free trading bloc, comprising North America, E.F.T.A. and Latin America (if not the Western part of COMECON also). It is a great challenge and perhaps it will fall to a Labour Government in Britain to attempt it without the inhibitions suffered by Tory architects of European unity. The late Mr. Gaitskell might have risen to the occasion, but there is still much talent inside Labour which is far from being doctrinaire. It needs great vision and daring; with sympathy from E.F.T.A. and Commonwealth partners and perhaps also from President Kennedy, the external task may be less strenuous than the domestic measures of cost reduction, with or without adjustments in the currency's parity, along with a return to a Welfare State.

STATE BANK'S PROFIT LOWER



The net profit of the State Bank of India for the year ended 31st December 1962 amounts to Rs. 2.69 crores, as against Rs. 2.71 crores in the previous year. With Rs. 50.41 lakhs brought in, as against Rs. 56.21 lakhs a year before, the amount available for disposal is Rs. 3.19 crores, as against Rs. 3.27 crores. With the proposed final dividend at Rs. 13 per 100-rupee share, the total dividend is to be maintained at Rs. 23 per share, subject to tax. Transfer to reserve fund has been reduced by Rs. 20 lakhs to Rs. 55 lakhs. The allocation to pension funds has been increased from Rs. 7.42 lakhs to Rs. 7.61 lakhs, but that to the staff welfare fund as also that to the staff co-operative housing fund have been halved to Rs. 5 lakhs each. The provision for bonus to the staff is higher at Rs. 72 lakhs as compared with Rs. 45 lakhs a year before. The surplus to be carried forward is Rs. 45.67 lakhs.

UNION BANK'S PROFIT HIGHER

A slightly higher net profit of Rs. 22.22 lakhs, as against Rs. 21.62 lakhs for the previous year, has been reported by the Union Bank of India Ltd. for the year ended 31st December 1962. Inclusive of Rs. 1.45 lakh brought in, as against Rs. 92,703 in 1961, the profit amounts to Rs. 23.67 lakhs, as against Rs. 22.55 lakhs a year before. At Rs. 6 lakhs, the reserve fund gets Rs. 50,000 less as compared with the previous year's allocation. As in 1961, a sum of Rs. 50,000 has been used for writing off the building premises. The taxable dividend on the five-rupee ordinary shares is proposed to be maintained at 57 nP or 11-2/5 per cent per annum and a *pro rata* dividend of 14 nP per share for three months has been declared on the new shares. The paid-up capital now stands at Rs. 1 crore, as against Rs. 60 lakhs in 1961. The total distribution to shareholders by way of dividend amounts to Rs. 7.96 lakhs, as against Rs. 6.84 lakhs in the previous year. A sum of Rs. 9.21 lakhs, subject to payment of bonus to the staff which had absorbed last year Rs. 6.25 lakhs, is being carried forward.

PUNJAB NATIONAL BANK LTD.

A final dividend of one rupee per Rs. 10 fully paid share has been proposed by the Directors of the Punjab National Bank Ltd. for the year ended 31st December 1962. This brings the total dividend for the year on the 10-rupee ordinary shares to 20 per cent per annum, subject to tax, which is the same as that for the previous year. However, the aggregate distribution to the shareholders by way of dividend amounts to Rs. 40 lakhs, as against Rs. 28.75 lakhs in the previous year, as the 750,000 new shares which were issued at a premium of one rupee in September 1961 have become eligible for the full year's dividend for 1962 as against only three months for 1961. The profit, after providing for taxation and allocating Rs. 15.64 lakhs (Rs. 12.28 lakhs in 1961) to the gratuity fund, has declined from Rs. 118.40 lakhs to Rs. 113.79 lakhs. The setback in profit has been caused, we are told, by higher operating expenses, larger allocation to gratuity fund and a fresh burden of Rs. 8 lakhs on account of deposit insurance scheme. The plough back to reserve fund has been less at Rs. 25 lakhs as compared with Rs. 45 lakhs a year before. Charity and donations have taken away Rs. 3 lakhs more at Rs. 4 lakhs. Against Rs. 10.38 lakhs (Rs. 4.23 lakhs in the previous year) brought in, the amount to be carried forward, subject to bonus to staff which had absorbed Rs. 37.50 lakhs in the previous year, is Rs. 55.17 lakhs.

U.S. BUDGET FOR FISCAL YEAR 1964

THE American economy has registered a substantial improvement in the last two years. The Kennedy Administration, which claims the credit for this improvement, has cited six striking facts in this connection. Firstly, the total real output of goods and services has increased by 9 per cent. Secondly, total wage payments have increased by 10 per cent. Thirdly, corporate profits have gone up by 18 per cent. Fourthly, about two million additional non-farm civilian jobs have been created. Fifthly, the price level has been relatively stable. And, sixthly, the deficit in balance of payments has been significantly reduced from about $4,000 million in 1960 to about $2,000 million in 1962. But, in spite of these improvements, the American economy continues to be in a rather bad shape, for unutilised capacity is quite large, unemployment remains pretty high and economic growth lags behind capability. It is against this economic background, with its brighter and darker sides, that the Kennedy Administration has just framed its Budget proposals for the fiscal year 1964, that is, 1963-64.

The outstanding feature of the Budget is that it incorporates a major programme of tax reduction and reform (*vide* second leading article on page 94 of last week's *Commerce*). This programme, which will effect a total tax reduction of $10 billion over a three-year period, is designed to help speed the American economy towards full employment and a higher rate of growth with price stability by loosening the "check-rein" of taxes on private spending and productive incentives. It is expected that, with the passage of time, the economic expansion induced by tax reduction will yield a higher level of Government revenues than the present tax system, with its high rates, affords. But it is also recognised that the initial effect of the proposed tax reduction programme will be a fairly big revenue loss which, in the fiscal year 1964, will amount to $2.7 billion. This loss is, of course, a relatively small part of the estimated deficit of $11.9 billion in the administrative budget with its receipts at $86.9 billion and expenditures at $98.8 billion. But there is no gainsaying the fact that it has the effect of *increasing* the deficit which would otherwise be incurred in the coming fiscal year. However, on another basis which takes into account *total* receipts from the public at $112.2 billion and *total* payments to the public at $122.5 billion, the deficit ($10.3 billion) is seen to be smaller than in the administrative budget proper which does not cover such federal activities like social security, highway and other trust funds.

The estimated deficit—$11.9 billion on the first basis or $10.3 billion on the second basis—will be partly due to increases in fiscal 1964, as compared with fiscal 1963, that is, 1962-63, in three major items of administrative budget expenditure. The relevant figures are:

	(In billion dollars) 1963 (estimate)	1964 (estimate)
National defence	53.0	55.4
Space research	2.4	4.2
Interest	9.8	10.1
Total	65.2	69.7

All other expenditure items of the administrative budget, such as international affairs and finance, agriculture, national resources, transportation, housing, health and education, will, on the other hand, add up to a total of only $29.4 billion, as compared with $29.7 billion in fiscal 1963. It will thus be seen that expenditures for programmes other than national defence and space research will be held to the 1962-63 level, and even reduced somewhat. Although "international affairs and finance"—an item of expenditure which is of interest to developing nations—will account for only $2.7 billion, as compared with $2.9 billion in 1963, it is noteworthy that the economic aid part of that item will rise, by $200 million, to $2,300 million in the coming fiscal year. This programme of "economic aid" is examined in greater detail in a subsequent note in this section.

By keeping down federal expenditure under several heads, the Kennedy Administration has sought to keep the deficit within manageable limits. This deficit, in its view, should neither raise fears of inflation nor cause increased concern about the U.S. balance of payments. The fact that an overall deficit of $8.0 billion in fiscal 1963 has not led, or is not leading, to such dire results lends support to the view that a deficit of $10.3 billion in fiscal 1964 will be equally manageable. After all, the available tools of monetary policy and debt management, combined with the favourable effects of sustained economic expansion with increased productivity, may be expected to maintain relative price stability and, thus, the internal and external value of the dollar. The Administration's optimism is not unwarranted, for the tax reduction programme is bound to spur the American economy to a still higher level of production and productive efficiency.

GROUP TERM INSURANCE

Elsewhere in this issue are published (*vide* page 156) details of a new plan of Group Term Insurance, called One-year Renewable Group Insurance Scheme, introduced by the Life Insurance Corporation of India. It represents perhaps the first attempt to popularise group life insurance on a country-wide scale. It may be noted at the outset that there is nothing unique or original in the scheme. It is patterned on similar schemes in force in countries like Britain, with minor modifications to suit conditions in India. Group Life Insurance, though not unknown in India, has not achieved in this country the popularity it enjoys in the West, generally, and in the U.S. and Britain, in particular. Actually, group life insurance originated in the U.S., where a variety of ingenious plans have been evolved, but it soon spread to other countries. In Britain, for instance, group life insurance has found a habitat.

The distinguishing feature of group insurance is that each employee is covered for a uniform sum assured (or uniform for each of several salary classes) so long as he remains in employment. In the U.K., the cost of group life insurance for employees is borne entirely by the employer and the premium is assessed each year on the basis of a table of "renewable term" rates at each successive age. The rate at each age provides cover for one year only, but the employer may renew the policy for a further year at the higher age. No evidence of health is required, as the insurers rely on the principle that the group of employed persons will be subject to a mortality applicable to a sample of the employed population of similar age distribution. The group must be sufficiently large to form an average and it must include all, or substantially all, employees of the class concerned. For an average body of employed persons, the aggregate rate of premium is about one per cent of the aggregate sum assured. Generally, the group policy provides the employee the right, on his leaving the group, to effect a life insurance under the ordinary tables of whole life or endowment assurances at his attained age for the sum assured for which he has hitherto been covered without medical examination. It is noteworthy that, while group life insurance has been very popular when associated with a pension or annuity scheme, it has had little success when canvassed alone.

The L.I.C.'s scheme, as already noted, is basically the same as that in force in many foreign countries. A feature of this scheme is that, in addition to a plain group insurance scheme, it has also an arrangement linking group insurance with gratuity scheme. Many concerns in India now have gratuity scheme as a retirement benefit in addition to provident fund. The L.I.C. has drawn up a model gratuity-*cum*-group life insurance scheme, according to which even if an employee, who is insured under the group insurance scheme, had put in service with the employer for a period which is less than the qualifying period required for earning full gratuity, his dependents would get, on his death, the maximum benefit according to the salary he was receiving at the time of death. To take an example. An employee joins service on a monthly salary of Rs. 100 p.m. At the end of five years, he reaches a salary of Rs. 140 p.m. and dies. His dependents will normally receive Rs. 140×5=Rs. 700 (assuming that the gratuity rate is one month's pay for every completed year of service) according to the present gratuity rules. But, under the gratuity-*cum*-group life insurance scheme, his dependents would receive Rs. 140×15=Rs. 2,100, assuming that the maximum gratuity payable is limited to 15 months' salary. Hence the scheme is called an additional fringe benefit. It assures full gratuity in the event of premature death of the insured member of the group, the risk being borne by the Corporation.

From the practical point of view, the scheme can make headway only if there are employers who are prepared to bear the burden of the premium or a percentage thereof payable by them. It is true that the premium paid by the employers will be allowed as an expense for tax purposes, but that alone may not constitute sufficient compensation. From the employees' point of view, the fact that, as in the case of, say, fire insurance, no benefits are payable, except in the event of fructification of risk, will discourage them from joining the scheme, if it is on a contributory basis. Of course, they would not have any objection to be a member if the scheme is non-contributory which means that the employer bears the entire cost. The latter will do so only if he considers that the additional burden will be compensated by such gains as lower labour turnover and increased loyalty. The authors of the scheme claim that these in fact will be the gains to employers and, therefore, feel that every employer will profit by introducing the scheme in their establishments. Nevertheless, having regard to the attitude of employers and employees to such matters, it looks as though the idea, which is doubtless sound in principle, will take a long time to take root in this country. The L.I.C., however, should try hard to win the support of employers and employees through efficient salesmanship and skilful educational campaign.

U.S. FOREIGN AID

The U.S. Government will spend almost four per cent of its aggregate administrative expenditure of $98,800 million on foreign assistance during the fiscal year (1963-64) commencing on 1st July next, if the funds asked for by President Kennedy in his budget message sent to the Congress on Thursday the 17th inst. are sanctioned. The estimated amount of foreign assistance is $3,750 million, of which over three-fifths are accounted for by economic aid, the sum actually provided for being $2,300 million. The share of military assistance thus comes to $1,450 million. Although the expenditure of $3,750 million for military and economic assistance is $100 million less than the anticipated actual spending of $3,850 million in the current year (1962-63), it is significant that President Kennedy has held out the assurance that the U.S. Government will, in providing these sums, be "highly selective." Stress, we are told, will be laid on projects and programmes crucial to the rapid development of countries which are important to the maintenance of free world security and which demonstrate willingness and ability to marshall their own resources effectively.

The estimated actual spending of $2,300 million on economic aid programmes in 1963-64 represents a rise of $200 million as compared with 1962-63. But most of the increase goes to the Alliance for Progress Programme for economic and social progress in Latin America, the total amount provided for this Programme being over $1,000 million. In other words, the chances of India and other developing countries receiving larger amounts as economic assistance from the U.S. in the next fiscal year are not bright.

A notable feature of the U.S. foreign economic aid programme for fiscal year 1963-64 is the continuing shift in emphasis from grants to development loans. Of the total actual (estimated) spending of $2,300 million, development loans alone account for $1,105 million, including $401 million under the Alliance for Peace Programme. The provision made for grants is only $270 million and supporting assistance is expected to absorb $420 million. This shift in emphasis from grants to loans is to be welcomed, provided the terms of loans governing rate of interest and period of repayment continue to be as favourable as they are now. For the loans, being repayable, will engender a sense of financial responsibility and discipline among the aid-receiving countries to see that these loans are, as far as possible, utilised effectively, that is to implement well-conceived projects which yield sustained benefit to the community as a whole.

The total of $2,300 million to be spent by the U.S. Government on foreign economic assistance during the coming fiscal year will come out of the appropriations voted by the Congress in the current and previous years. The new appropriations asked for by President Kennedy amount to $4,945 million, of which $3,465 million are for financing the future economic aid efforts of the Agency for International Development (A.I.D.) and $1,480 million for military assistance. The actual amount that he proposes to spend is, however, $1,208 million lower. Apparently, the difference between the appropriations asked for and the amount intended to be spent in the fiscal year 1963-64 represents the amount required by the Administration to make forward planning and to cover emergencies. It is doubtful whether the foreign aid budget as recommended now will, in fact, be approved by the U.S. Congress, the final decision of which, it must be remembered, is influenced by many factors. Foreign aid, as Mr. Frank M. Coffin, A.I.D.s Deputy Administrator, has stated, has been one of the most difficult fields in which to "build a bridge of understanding" between the Administration and the Congress and between the Congress and the people. Further, the U.S. Congress has always been in the habit of not giving the full amount sought by the President. It may be recalled that, in respect of the current fiscal year (1962-63), the Congress voted down as much as $1,209 million out of the total appropriations amounting to $4,958 million asked for by the President. It is to be hoped that the U.S. Congress will display a more liberal attitude this time and sanction the whole of the sums earmarked in the new budget for economic (and military) assistance. As an observer in the underdeveloped part of the world, we can say, without any fear of being accused of indulging in exaggeration, that the amount sought by President Kennedy errs on the side of underestimation, considering the vast sums required to eradicate the evils of poverty, ignorance and disease, which form a fertile breeding ground for Communism.

EXPORTS TO AFRO-ASIAN COUNTRIES

The recent trends in India's exports are certainly disturbing. Despite several export promotion measures, shipments to most of the major customer countries have tended to decline. During the first eight months (April-November) of the current financial year, exports as a whole did, of course, rise by just Rs. 13 crores over the corresponding period of 1961-62 to Rs. 451 crores. But this increase was largely accounted for by East European Communist countries and, to some extent, by Canada and Australia. Exports to most of the other major markets, including the U.K., the U.S., European Common Market countries, as also Japan and other Afro-Asian countries, on the other hand, suffered a setback. It was only appropriate, therefore, that the Board of Trade, which met at Madras last week-end, should have made a region-wise review of export trade, with the object of finding out special export promotion measures for each region. The Board was particularly unhappy to note that export trade with some of the neighbouring countries of Asia has been on the decline. There is, however, nothing surprising in this trend, which has actually been in evidence for the last four or five years. Most of the neighbouring countries have imposed severe import restrictions, particularly on consumption goods like textiles and chemicals, with a view to tiding over their balance-of-payments difficulties and protecting their nascent industries. Besides, there are evidences of growing competition in these markets from Japan, China, Western Europe and America. All the same, India has to make a determined bid to secure larger markets in the neighbouring countries of this region. This is particularly urgent because of new tariff walls being raised in Western Europe under the pretext of regional integration. A still more compelling reason is the need for diversification of the direction of India's export trade, without in any way minimising the importance of, or neglecting the established markets. At present, nearly half the shipments goes to the U.K. and the U.S., and another 25 per cent is shared by five countries, namely, Japan, Russia, West Germany, Canada and Australia. The balance is spread over a large number of other countries, the offtake of each of which is generally negligible.

The Board considered several possibilities of expanding the scope of commercial co-operation with Afro-Asian countries. It felt that exports to these countries should be diversified so as not to concentrate on those consumer products which were finding greater competition and increasing resistance from internal production in those countries. Apart from this generalisation, the Board did not suggest any specific goods which are likely to be in demand in these countries. Probably, this is a field in which the territorial directors on foreign trade concerned can give some guidance to exporters in the country. It may be noted that the Government of India has established five territorial directors to concentrate on area-wise approach to export trade. The Directors are for (1) South-East Asia, (2) West Asia and Africa, (3) Western Europe and the U.K., (4) Latin America and the U.S. and (5) Russia and East Europe. The directorates are also expected to co-ordinate the activities of the commercial consulates and trade commissioners abroad, as well as various commodity boards and export promotion councils within the country.

Another suggestion of the Board for promoting trade with Afro-Asian countries is that existing export promotion councils should open new officials at important trading centres. These offices, if manned properly, may be able to serve the purpose of market research in those countries. But one wonders whether such offices will be able to serve the purpose of establishing more contacts useful to the export trade, as has been claimed by the Board. Would not this object be served better by inviting overseas importers to this country or sending Indian delegations abroad or by organising or taking part in trade fairs? These visits and trade fairs offer opportunities for businessmen to get together and establish direct personal contacts.

On the question of promoting exports to Eastern Europe, the meeting took up for consideration allegations that exports to those countries were being re-exported to Western countries which have been India's traditional customers. The Board appeared to be of the view that from Russia—a country accounting for the largest part of India's trade with communist countries—there had been no re-export or diversion at all. There was, however, some re-export of Indian goods from other Soviet bloc countries. The Board hoped that this would be reduced to the minimum in view of the consultations already initiated by the Government. The Board's examination of exports with the other regions has not yielded anything new.

Since the Board's meeting at Madras was the first to be held in the Southern region, some of the local problems also claimed its attention. The foremost problem related to expansion of port facilities in the South. The Board suggested, in this connection, expansion of stacking spaces in both major and minor ports. According to it, considerable expense could be saved by avoiding double handling of ores. If the turnround of ships could be expedited by greater mechanisation of handling and provision of specialised berths for mineral ores, these ports would be capable of handling substantially additional quantities with moderate expenditure. The Board also suggested a vigorous development of minor ports, as is being done in Gujarat, and extension of railway lines in the South in order to expedite the movement of manganese ore and iron ore to ports. Although the South exports a wide range of commodities such as plantation products, tobacco and hides and skins, its contribution in the field of exports of engineering goods, plastics and chemicals has not been much. The Board expressed the view that the quality of the latter group of products manufactured in the South was good. It, therefore, advised industrialists there to make more vigorous efforts to increase the exports of these manufactured goods. This advice is certainly wholesome, for the dependence of the economy of the South on exports of primary commodities has been so overwhelming that a gradual diversification of exports would be to its own benefit.

PREVENTION OF RAILWAY ACCIDENTS

The recent tragic accident at Umeshnagar (Bihar) on the North-Eastern Railway has just been followed by an equally tragic accident near Indore on the Western Railway. The loss of life in both the accidents has been pretty heavy—37 dead in the former and 10 or 12 in the latter. In the case of Umeshnagar collision between a mail train and a passenger train, the finding of the preliminary investigation is that the railway staff had been negligent in duty. The trolley tragedy on the Western Railway, on the other hand, seems to have been accidental inasmuch as the trolley, carrying railway employees and loose sleepers for track repair work, overturned while negotiating a curve. But, even in this case, there seems to have been an element of human negligence or miscalculation. Since thus neither accident can be wholly dismissed as an act of God, it is all the more necessary that whatever is humanly possible must be done to prevent accidents of the kind.

Many and varied are the preventive and precautionary steps that can be taken to make railway travel safer. It is precisely such measures that have been suggested in the report of the Railway Accidents Committee (Chairman: Mr. H. N. Munzru). The report and the Railway Ministry's statement thereon, which have been placed on the tables of the Lok Sabha and Rajya Sabha this week, are of some promise, for the Ministry has accepted almost all the recommendations of the Committee. One of the accepted recommendations is to the effect that all locomotives be fitted with speed recording instruments to enable drivers to observe speed restrictions. The Railway Ministry's present decision to fit locomotives with speedometers within a period of two years, while certainly commendable, cannot be taken as making ample amends for its failure to implement in time a specific recommendation made by the Bhita Committee in this regard in 1938 and subsequently reiterated by the Railway Inspectorate in 1955. It is, indeed, a deplorable commentary on the Ministry's negligence todate that not more than 300 locomotives are having speedometers. It is amazing that the authorities did not introduce this elementary simple gadget on all the locomotives. Such neglect by road transport operators would have landed them in great trouble. Anyway, better late than never. Only it is to be hoped that the Ministry will not simply wait for the manufacture of these instruments in railway workshops but will import some quantity immediately even while taking steps for their early indigenous manufacture.

Two recommendations made by the Committee are equally noteworthy. One of these is that there should be better co-ordination between the Union Ministries of Railways and Home Affairs and the State Governments in the matter of patrolling tracks on vulnerable sections. As "wilful tampering" with the railway track is known to have increased greatly in recent years, the need for more systematic patrolling is all too evident. It would also be necessary to track down miscreants more energetically and mete out deterrent punishment to them. Incidentally, the Committee's related recommendation that welding of rails should proceed at an accelerated pace should go some way towards making "wilful tampering" extremely difficult, if not impossible. The other noteworthy recommendation is that the State Governments should share equally with the railways the cost of manning unmanned level crossings. This is an endorsement of the Railway Ministry's own proposal which is being pursued with the State Governments whose co-operation is necessary for preventing accidents at an increasing number of points where roads cross the railways. All other practical recommendations of the Committee pertaining to maintenance of track and rolling stock, protection of trollies, signalling, special educational and admonitory drive among railwaymen and observance of speed limits call for early action at the hands of the Railway Ministry which, like some railwaymen, has been both complacent and negligent to some degree in the matter of safety and accident prevention.

CRUCIAL TALKS AT BRUSSELS

The U.K.-E.E.C. negotiations scheduled to resume at Brussels on Monday next will be of crucial significance. For the resumed meeting will take up for consideration the French proposal to suspend the negotiations outright. The French proposal, which was made during last week's Ministerial negotiations, was then opposed by the other five members of the E.E.C. If France now has its way, the prospect for U.K.'s entry into the Common Market will become distinctly bleak. Britain's last hope that the West German Chancellor, Dr. Adenauer, during his visit to Paris, would be able to mellow down Gen. de Gaulle's opposition to British entry does not seem to have been realised. According to reports from Paris, these two heads of State have not yet seen eye to eye on this problem. France cannot, however, use its veto to torpedo the negotiations without jeopardising the interest of the Common Market itself. For none of the other Common Market members subscribe to the French approach to the question of Britain joining them.

Quite apart from Britain's entry, French intransigence has created the most serious crisis in the Common Market in its five-year history. The "other five" have threatened that, if France insists on a break with the U.K., the Common Market itself would come to a standstill. In other words, plans for political union of the Community, for the acceleration of tariff cuts within the bloc, for common financial regulations, and so on, will all be put in cold storage. The Community is compared to a car driving on ice. It has, no doubt, got going, but, if ever it were to stop, it would be very doubtful whether it would start again at all.

If the ambitious project of the Common Market grinds itself to a halt, the blame will be laid squarely on France. For "the other five" and the U.K. have shown a spirit of accommodation in the course of the Brussels negotiations held last week, despite Gen. de Gaulle's obstinate

(*Continued on page 166*)

DEFENCE DEMANDS STILL UNCERTAIN

OUTLINE OF PLAN OUTLAY FOR NEXT YEAR

From Our Special Correspondent

NEW DELHI, 22nd *January*

DELHI LETTER

WHEN Parliament met again yesterday, the Defence Minister, Mr. Y. B. Chavan, frankly stated that the Government had not yet made up its mind on the money needed for strengthening the defence forces. The United States and Britain would be supplying the immediate requirements of heavy equipment for the ground forces and some MiG 21 fighter craft from the Soviet Union were on the way. But it is clear that the long-term consequences of a greater orientation of industries to defence production have not yet been worked out in detail by the Government. While emphasising the priorities for defence at the meeting of the Standing Committee of the National Development Council last week, the Prime Minister said that the shift would be 'slight.' According to him, 85 per cent of the programmes already envisaged for planned development are part of the defence effort. In the provisional outlays for Plan projects in the next financial year 1963-64, there is no indication of any major shift to defence production. The slight change is the provision of the additional Rs. 58 crores for power projects (Rs. 37.5 crores) and agriculture (Rs. 20.5 crores).

Plan in the Third Year

The total outlay of Rs. 1,744 crores for 1963-64 approved by the Standing Committee comprises Rs. 944 crores for Central schemes, Rs. 750 crores for State projects and Rs. 50 crores for use in Union territories. The cut in Central assistance for State schemes is also on a scale far smaller than was feared soon after the Chinese attacks in October. There is no pruning or major rephasing of the Plan as was threatened by some quarters at the height of the border war. The Central assistance to States is now placed at Rs. 400 crores, against an earlier estimate of Rs. 450 crores. The first definite reaction to the slightly heavier burden on the States has already come from Uttar Pradesh which has repeated its old argument of inability to impose new taxes on the people in the rural areas.

The States are understood to have made it known that they are capable of raising about Rs. 292 crores. This *plus* the Rs. 400 crores Central assistance still leaves a gap of Rs. 58 crores. Of Rs. 944 crores for the Central plan, only about Rs. 37 crores will come from public sector enterprises and other internal resources. The exchequer will have to provide Rs. 907 crores. The actual outlay in 1961-62, first year of the third Plan, is placed at around Rs. 1,150 crores, short of Rs. 1,214 crores envisaged. For the current year of the Plan the public sector outlay was planned at Rs. 1,446 crores, but this also is likely to show a shortfall partly because of delays in various foreign-aided projects.

One question on which there was unanimity at the Standing Committee discussions was on efforts to achieve a break-through in the agricultural sector. Maintenance of stable prices was also considered crucial. The planners are keen on strengthening the co-operative sector in the drive to hold the price line. Following upon the programme on co-operatives launched soon after the declaration of the emergency for foodgrain distribution, the Union Government is promoting a scheme to saturate the rural areas with village co-operatives and marketing societies. It is estimated that there are today about 15,000 units operating in the rural areas for supply of consumer goods, but these are confined to a few States. According to the Central scheme, the 45,000 co-operatives distributing fertilisers are to be asked to take over consumer goods also by the end of the next financial year. The target for rural consumer co-operatives by the end of the third Plan is 80,000. Goods to be covered will include sugar, salt, kerosene, matches and cotton cloth and utensils. The Government hopes to provide capital for these societies through loans up to Rs. 5,000 per society.

Impact on Exports

The impact of the emergency on export trade has been reassessed by the International Trade Ministry which seems to think that exports will not be affected substantially, except in the case of woollen goods whose despatches anyway have been small. The call of defence requirements on jute manufactures will be more than offset by the high rate of output following ample jute fibre supplies and, unless there are renewed Chinese onslaughts in the N.E.F.A. region, the tea exports will not be affected. In trade agreements for promotion of exports, only the Soviet bloc countries have opened the doors further. Whatever the result of the British negotiations at Brussels, the view in Delhi is that India should pursue efforts for a long-term agreement with the European Economic Community to provide new avenues for exports.

The humiliation suffered by Britain at the hands of France substantiates, in the view of observers here, Mr. Nehru's repeated warnings about the political dangers in Britain's entry into the European Community. In Delhi's interpretation, Britain may ultimately have to accept in the Community a status somewhat analogous to the States' ties with the Centre in the Indian Union. Reports from London that Britain may launch a counter-offensive by strengthening the Commonwealth or European Free Trade Association arrangements are taken with a pinch of salt in Delhi. Any attempt by Britain to breathe new life into Commonwealth trade will need British readiness to pump more credit and investment for Indian development. But there is a distinct disinclination on the part of officials and Ministers in Delhi to rub salt into Britain's wounds.

Disconcerting Trends

An official survey prepared for the meeting of the Board of Trade in Madras showed that in the first half of the current financial year, exports to Asian and African countries fell to Rs. 61 crores from Rs. 72 crores in the first half of the last financial year. The official survey seeks to dismiss the fall partly as due to import restrictions placed by these countries due to their balance of payment difficulties. The fact of the matter is that no exporter, including Britain, has found an answer to the increased Japanese trade through reparations payments. This is particularly true of Burma where Japan has replaced Britain as a top supplier. China has replaced India in the No. 3 position. China has been able to elbow India out, despite the fact that, as an old British province, Burma had extremely close economic and political connections with India.

In Thailand and Malaya, where some Indian products can have a greater market, the major drawback Indian products suffer from is lack of publicity arrangements. The Indian Finance Ministry has persistently discouraged even the few manufacturers who have wanted to try their hand by placing far too many restrictions on promotional expenditure. The same varieties of textile goods from different Indian mills are priced differently and, in Burma, for example, the authorities are suspicious that these price variations are loopholes for illegal money transfers. If the godowns of Singapore are stacked with Japanese goods, it is mainly because the traders there prefer to order from manufacturers whose deliveries are prompt. The Japanese also assure exclusive designs for wholesalers. In the case of Indian supplies, the slightest price increase in the domestic market leads to delays in shipments.

The export prospects for light engineering goods in South Asia may be dulled by the demands of metals for defence production, but, even in the long run, Indian products are handicapped by design deficiencies. The styling of Japanese and Chinese sewing machines is far superior to Indian makes. A trick which the Japanese have adopted for wider sales in far-flung areas in Malaya is that some spare parts of their machines can be replaced with spares for the Singer model which had been well established in the region. Thailand is one country in the region where Indian textiles do not have to compete with Chinese piecegoods (Thailand has an embargo on trade with China), but even there India has been unable to make any headway.

The International Monetary Fund has entered into stand-by arrangements with the Governments of Chile and Colombia. The agreement with Chile authorises drawings up to the equivalent of $40 million over the next twelve months. The arrangement is intended to establish conditions of monetary stability as a basis for continued economic growth. The last stand-by arrangement with Chile expired in February 1962; the country's outstanding drawings on the Fund now total $76.0 million. The stand-by arrangement with Colombia authorises drawings up to the equivalent of $52.5 million over the next twelve months. The arrangement replaces a one-year arrangement for drawings equivalent to $10 million which expired on 31st December 1962.

FORWARD FROM BRUSSELS

(From Our Own Correspondent)

LONDON, 18th *January*

LONDON LETTER

ALTHOUGH when this is read, the fate of Britain's Common Market negotiations will still be in suspence, it looks at present as if either Britain's capitulation is required or an ending of the talks—possibly for General de Gaulle's lifetime! At the moment what is known is that President de Gaulle has come out flatly for an ending of the talks. If Mr. Gaitskell had been asked from his hospital bed to write the French President's speech he could not have made it nearer the bone (and, by a strange irony, the announcement of the tragic death of the Opposition Leader at the moment of writing was accompanied on British television network by the closing lines of his famous speech at the Labour Party Conference in which he denounced entry into the Common Market on unfavourable terms). The French President—the Government is very much his creature—has come to the conclusion, or more accurately has chosen what he regards as the right moment to announce his conclusion, that Britain's talks are a waste of time, because Britain's approach is not that of France and Germany.

What Britain has been trying to do is to amend the Treaty of Rome, so that place can be found for her Commonwealth obligations and in the short-term for her commitments to her own domestic farmers. But, as the critics of the Common Market here have pointed out with increasing strength in the last few months, the Common Market was organised by the Six for their own specific Continental purposes. The United Kingdom has not wished to accept these purposes without any amendment whatsoever. Had she so wished, or did she indeed at this last ditch wish, to sign the Treaty of Rome exactly as it stands, that is to go into the Common Market on precisely the same terms as France and Germany are already in it, then President de Gaulle would have no objections.

What the French President objects to is having to mess up arrangements which are good for the Continental group in order to make them convenient to an extra-Continental country. The four relatively junior parties to the Six are not inclined to be anything like as hard on Britain or anything like as rigid on their own requirements. France is, of course, the prime mover in this rebuff to the United Kingdom and France's rebuff will stand, if she carries Germany with her. It might not stand if Germany were to oppose the French view.

Not Entirely Negative

The attitude of the French President is not entirely negative: he points out that what France wants is a political arrangement between the six countries and full acceptance of an economic plan. What Britain wants, he argues, is primarily an economic arrangement; in that case, he says, let Britain come in on an associate basis and share some of the economic advantages of association. Now, on the Left, there are opponents of the Common Market at any price who are happy to go along with the Associate idea which does not involve the United Kingdom giving up any of her present Commonwealth arrangements. But, on the Right, there are voices who say that such arrangements are meaningless; either Britain goes in on the President's terms or is out.

It is therefore worth taking a look at what are the reasons (and many people in this country have forgotten them now) why Britain should have been interested in going in. The first reason was to liven British industry up by submitting it to keen competition from the Continent and the second was to give the United Kingdom an expanded export market. Now it is obvious that the first purpose can be quite easily achieved by Britain reducing her own import duties. The second can only be achieved with more difficulty by Britain's exports becoming more competitive. It is all very well to say that Britain should look more to the Commonwealth or to the U.S.A.—both these areas are profitable fields for more trade. The Commonwealth could help by refusing to reduce its own protection against United Kingdom goods and Britain could help by supplying the Commonwealth on competitive terms in sterling against competition from Europe, Japan or the United States. In the same way,

INVITATION TO ENLIGHTENED EMPLOYERS

FROM LIC THERE COMES A WELCOME ADDITION TO FRINGE BENEFITS FOR EMPLOYEES

LIC has now introduced the One-year Renewable Group Term Insurance, so popular in advanced countries like the U.S.A. This low-cost scheme provides financial security for the employee's family and increases his loyalty to the firm. The main features of this morale-boosting insurance plan are:

1. The insurance cover is easy to obtain. There is no medical examination and no individual form filling.
2. The premium rates are low.
3. The amount of insurance can be adjusted automatically from year to year according to a predetermined plan to suit employee's changing needs.
4. The premiums paid by the employer are exempt from income tax to the employer, the employee and the beneficiary.
5. This cover is issued to eligible groups of fifty or more employees.

For particulars please apply to any of the following addresses:

(1) The Additional Zonal Manager, Divisional Office, Life Insurance Corporation of India, Jeevan Prakash, Sir Pherozshah Mehta Road, Bombay-1.

(2) The Additional Zonal Manager, Divisional Office, Life Insurance Corporation of India, 16, Hare Street, Calcutta-1.

(3) The Zonal Manager, Life Insurance Corporation of India, P.O. Box No. 2450, Mount Road, Madras-2.

(4) The Zonal Manager, Life Insurance Corporation of India, Laxmi Insurance Building, Asaf Ali Road, New Delhi-1.

DISCOUNT HOUSE FOR MULTANIS

THE LOGIC BEHIND THE SUGGESTION EXAMINED

By A Special Correspondent

A FEW days ago, Mr. T. D. Kansara, General Manager of the Bank of India Ltd., addressed a gathering of the *multani* bankers in Bombay in the course of which he made a suggestion that these well-known indigenous bankers should come together and establish a co-operative discount house for discounting their *hundis*. The discount house, in turn, could approach the Reserve Bank of India for re-discount facilities. Such a discount house would be able to supplement the facilities which the *multanis* now enjoy with the commercial banks. Only a brief version of the speech was reported in the daily press. The idea was readily endorsed by Mr. P. L. Bajaj, President of the *Multani* Bankers' Association, and he promised to give further thought to the problem. Mr. Kansara, who is one of the veteran bankers, belongs to those few who do not hesitate to come forward with unconventional ideas. The logic behind the discount house for *multanis* therefore, deserves critical examination.

The idea behind Mr. Kansara's suggestion seems to be twofold: (*a*) to lay the foundation of the nucleus of a bill market for indigenous bills and (*b*) to provide a supplementary source of discounting facility for *multani* bills. The need for a special discount house probably finds some justification, because a large number of commercial banks, when called upon by the Reserve Bank to restrict credit following the emergency, curtailed the facilities given to *multani* bankers. This had to be done, as the credit limits given to *multanis* were considered 'clean' or 'unsecured.' If a special discount house for *multani* bankers had existed, perhaps the unorganised sector would not have been starved of finance to such an extent as is the case now.

The most important question, which arises from Mr. Kansara's suggestion is whether a special discount house, enjoying re-discounting facilities with the Reserve Bank, a feasible proposition? To find an answer to this question, it is necessary to go into the *hundi* business conducted by the indigenous bankers.

Turnover

The *multanis* give short-term credit (90 days' duration) to small traders and industrialists without security. They work in an atmosphere of secrecy and as individual entities in an atmosphere of competition; the operations of these people are quick and informal. The maximum amount of an individual advance by a *multani* banker is *usually* restricted to Rs. 5,000 and the only basis of their business is trust in the integrity of their customers. There are nearly 200 *multani* bankers, carrying on business in over 400 places, mainly in Central and Southern India. The headquarters of these bankers is Bombay and the limits are fixed in Bombay, although the operations are allowed by commercial banks at more than one place of their choice. For instance, a *multani* banker may be allowed a credit limit of Rs. 10 lakhs, of which Rs. 2 lakhs may be utilised by him at Hyderabad, Rs. 3 lakhs at Madras and Rs. 5 lakhs at Bombay. Nearly 20 commercial banks, including a few foreign banks, are reported to be giving credit limits to *multani shroffs*. The aggregate of such limits may be placed around Rs. 25 to 30 crores. Their annual turnover is about Rs. 125 to 150 crores, constituting nearly 50 per cent of the total finance supplied to internal trade by all indigenous bankers.

How do the joint-stock banks fix the credit limits for *multani* bankers? This is a relevant question, since the proposed discount house will be called upon, if it comes into being, to fix discounting limits to various bankers. The limits by banks are fixed on the basis of resources reported to be "owned" by the *multani* bankers. The resources of the *multanis* are invested mainly in *Poorjas* (*benami hundis*) and, therefore, the bazaar opinion given by the brokers is the only basis of assessing their worth. The *multanis*' own resources, comprising deposits of relatives, *poorjas*, etc., are usually said to constitute 25 per cent of their liabilities at any point of time but the actual position is anybody's guess, since there is no way of verification. The banks fix the credit limits as so many times of the estimated worth of a *multani* banker. The *multanis* enjoy limits with several banks simultaneously and this is well-known to all banks. The total outstanding business of each *multani* at any point of time is usually a multiple of his reported own worth.

It is necessary to know about the broker who plays a vital role in the *multani* banking business and who shapes the opinion of banks about the reported worth of the *multani* banker based upon bazaar gossip. Naturally, the broker will play an important role even if a discount house is established by virtue of his special position in the system. The broker is not only a link between the bank and the *multani* but also between the *multani* and the latter's customers. He receives the money on behalf of the borrowers and delivers the *hundi* to the *multani* after the borrower affixes his signature on the document. The broker also tenders contracts on behalf of *multani* bankers to the bank—for re-discounting the bills—and assists the banks, as pointed out earlier, in assessing the worth of the *multani* banker and the *multani* banker in estimating the means of the maker or primary borrower. Thus, the broker is a commission agent doing business without capital and, therefore, without risk (except the loss of his business) but constitutes an essential link between the banks and the *multanis*. The banks and the *multanis* are at his mercy in taking the risk. There are nearly 300 brokers in Bombay City alone. The broker gets commission from the banks, *multanis* and often from the "maker" for his services. Some of the brokers are richer and more powerful than the *multani* bankers themselves.

It should be noted here that an additional precaution taken by the banks in discounting the *hundis* is to maintain a "makers" list. The borrower of the *multani* is known as the "maker" of the *hundi*. In making a list of makers of *hundis*, the banks make sure, of course once again from the brokers supplemented if possible by independent inquiries, that they are men of resources and good integrity and that finance is required for genuine trade purposes. Each maker of the *hundi* is given a limit by the bank and each bank usually discounts the bills of the *multanis* in respect of each client up to the allotted limit. If the maker of the *hundi* fails to pay the amount on the due date, the bank debits the amount to the account of the *multani*. The *hundi* is, therefore, regarded by bankers as a double signature document of a self-liquidating type and banks regard *hundi* business as not only safe but worthwhile.

Cost of Credit

The banks are now reported to be charging 7 to 8 per cent per annum for re-discounting the bills of *multanis*. The *multani* is reported to be charging his borrower at around 13 to 14 per cent; certain expenses like brokers' commission is added to the rate and deducted in advance, with the result that the effective rate of *multani* lending works out to 17 to 18 per cent. The high rate of interest is no consideration to a small trader or industrialist, because his problem is non-availability of credit and not a question of rate of interest. He is prepared to pay any rate of interest or price, provided he can secure credit and he tries to pass on the burden in turn to the customer of his product or to those who use his services.

In short, the banking business of a *multani* banker is based upon the watchword of 'integrity' and distribution of risk. The brokers' opinion is the main guide and the borrowers' assets which usually constitute the security in commercial banking parlance, are treated as of no consequence. It is, however, undeniable that the *multanis*' play a useful role, though at a stiff price, in the country's economic life by supplying the credit needs of small traders and industrialists who are not considered sufficiently creditworthy by commercial banks. The *multanis*, therefore, have held their own position in spite of the steady growth of banking facilities.

The Reserve Bank's policy has been to treat the *hundi* limits given by commercial banks as clean credit. The Bank has therefore made an attempt to develop the Bill Market Scheme, whereby commercial banks are permitted to convert a part of their overdrafts of borrowers into bills of three months' duration by special arrangement with the customers, so that the bills may be re-discounted with the Reserve Bank. The *hundi* is not included in the scheme.

Viewed against this background, the proposal for establishing a discount house by *multani* bankers has little chance of success. First, the suggestion runs counter to the present policy of the Reserve Bank. Secondly, there is already an indirect link with the *multanis* through commercial banks and if it is desired to step up credit to this sector, the best way would be to allow the commercial banks to treat the accommodation given to *multanis* as part of liquidity by treating it as eligible bills which can be re-discounted with the Reserve Bank. Thirdly, the proposal for a discount house involves duplication and may further contribute to overtrading by *multani* bankers. Fourthly, the onus of risk can be fixed nowhere, because the discount house of *multanis*, an institution of their own making and one which has to be constituted from the meagre owned funds of *multanis*, can in no way take the risk as commercial banks are doing at present. Finally, there is no reason why the Reserve Bank should shoulder this unnecessary risk. It should be noted that the *multanis* are a sort of financial *zamindars* who have been brought into being by the former Imperial Bank to avoid botheration with all and sundry and the only basis of their strength is that they have not failed so far. In a period of general inflationary conditions, when business is booming everywhere, there may be little risk in *multani* advances. But once there is some locking up of funds in trade or industry due to some cause or other, the entire basis of *multani* structure may become nebulous. It is worth remembering that, if there is a failure, there is little that *multani* banker can offer or pay because primarily he is trading, like commercial banks, with somebody's else funds, that is, borrowed funds, with a marginal stake.

A Safe Solution

It appears desirable, therefore, that whatever facilities are given to *multanis* must be routed through the commercial banks. Being in close touch with the market conditions, they will be able to take care of the shifting winds of creditworthiness of individual *multani* bankers. The onus of risk should be on commercial banks as at present. Incidentally, this will enable the Reserve Bank to plug the loopholes in its scheme of credit controls. Before agreeing to re-discount *multani hundis*, the Reserve Bank may suggest to *multanis*, as well as to commercial banks, to satisfy that each *multani* banker who is being accommodated under the Bill Market Scheme should have a minimum genuine capital of his own, at least 30-35 per cent. It should also be made certain that the *multani* presents only genuine trade bills and no accommodation bills. It is possible to make out whether a bill is trade bill or not from the register of makers maintained with the bankers. The commercial banks should insist that the *multanis* should not take shelter under the secrecy of their operations but should throw open their accounts whenever the accommodating bank so desires. It is desirable to have a wider circle of *multani* type of bankers and whoever is prepared to carry on business with integrity and resources, should be allowed to carry on with the *multani* variety of banking business. If these suggestions are carried out by the *multanis* before aspiring for further facilities, there is no reason why a larger volume of credit cannot be made to flow to the indigenous sector, so that the rates of interest there may be brought down.

AMERICAN LETTER

REPERCUSSIONS OF PRINTERS' STRIKE

TAX REFORM HIGHLY CONTROVERSIAL

From Our Special Correspondent

NEW YORK, 18*th January*

THE New Year has begun on a note of confidence. Most predictions are hopeful. A high level of economic activity has been sustained on an overall basis. But here in New York, the largest city of the United States, and in Cleveland hundreds of millions of dollars have been lost by the closing down of newspapers early in December by a walk-out of printers and pressmen.

In the first place, the publishers lost millions of lines of advertising and the department stores could not advertise their holiday wares. This was completely unforeseen and, as a result, people just did not patronise the large department and speciality stores. A chain reaction of this development was that the stores laid off help. Employment agencies here which always depend on advertisements to attract applicants for available jobs are also very hard off, indeed.

It is one of the situations which are difficult to fathom and nobody foresaw the consequences. The wire services and syndicates are still operating, papers from Boston and Philadelphia and Newark are being brought into New York and two enterprising but otherwise obscure publishers have started new papers. One of the two is printed in New Jersey. It has a circulation of more than 400,000 copies and is brought here in disguise, not in trucks but in ambulances and funeral hearses, so that the striking printers do not destroy the precious cargo for which the American public is so hungry.

Naturally, all the editorial staffs are laid off. The treasuries of trade unions up to this point have paid subsistence payments to their members, but now, after more than one month of idleness, the treasuries are almost empty and the hunt is on for loans. A fact-finding board of three very reputable judges has condemned the printers' union for their unwillingness to negotiate. But this particular trade union has a new president, named Powers, who wants to make a name for himself to the detriment of his members and other innocent bystanders. Economic losses in New York alone up to this writing are estimated at about $200 million, with no solution in sight.

Another devastating strike is that of longshoremen which affects all ports on the East Coast of the U.S. and on the Gulf of Mexico. Handling of passengers is no particular problem, but heavy cargo just sits in warehouses and foreign trade is affected primarily. So much for the irritations, if that is the word.

On a national basis, holiday sales in December are expected to have compared favourably with those of 1961 and the mainspring of the present confidence in the future is the pattern of an expanding economy. Employment has been rising along with an increasing population.

Tax Cuts

Also, this month (January) determined efforts will be made by the Washington Administration for a tax reduction, if not reform. Plans are to ask Congress for cut in corporate taxes from a top rate of 52 per cent to 47 per cent. Individual income-tax rates which are up to 90 per cent in the highest income brackets, it is suggested, should be decreased on a sliding scale ranging from 15 to 65 per cent, provided the tax base is broadened and Federal expenditures will be limited which is highly doubtful.

Business outlays on plant and equipment in the second half of 1962 have been $600 million higher than expected and rose to an annual rate of $38,400 million. The outlook in this respect for 1963 is promising but not yet clear, since much will hinge on tax reduction which is aimed at creating incentives for investments and at accelerating the economic growth rate. But tax reduction is as controversial a subject as the racial issue. The automobile picture which is such an important factor in the U.S. economy is encouraging. Sales of 1963 models which began about three months ago have been far better than expected and a good year seems to lie ahead.

Perhaps the most encouraging sign in the tax reduction issue—which will not deter diehards in Congress from opposing it—was a statement by President Kennedy before the Economic Club. If a Bill is enacted after hearings and compromises, he said, "no one will be fully satisfied... this nation CAN afford to reduce taxes—but we cannot afford to do nothing."

In view of the consistent price stability and the absence of inflation, very few people seem to be scared of additional Government spending. Everyone is more apprehensive that many industries are operating considerably below capacity because of fierce domestic and foreign competition.

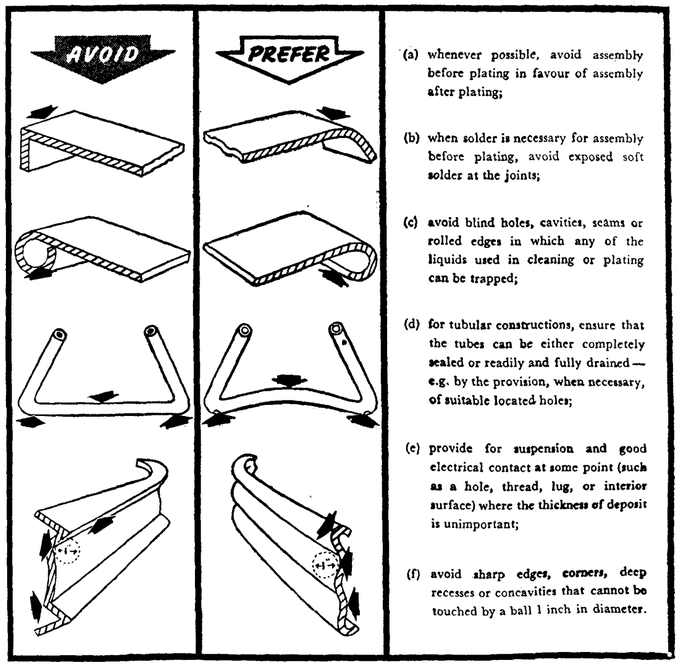
Interest Rates

The cut in the British Bank Rate and a similar reduction by the Netherlands has led to speculation what would be the reaction of the Federal Reserve authorities here. If I may draw a conclusion at this point, the answer probably is that the U.S. authorities are delighted, because it reduces the incentive of American money to flow into these two centres and thus alleviate the unfavourable international balance of payments position of the U.S. Secondly, it seems to me, there is a chance of slightly lower interest rates here, too.

Export Credit Insurance

The U.S. Foreign Credit Insurance Association has adopted several more flexible provisions in its export credit insurance coverage. First and of prime interest to companies shipping overseas to subsidiaries, or particularly good customers, the F.C.I.A., an association of 72 private insurance companies and the Export Import Bank, will offer policies covering political risks only on short and medium-term transactions.

Thus, the F.C.I.A. has gone one step further than the British Export Credit Guarantees Department which requires that exporters take both commercial and political coverage, or nothing.



Shadow Corporations

Another measure which affects countries outside of the U.S. and American corporations is the new Revenue Code of 1962 which constitutes amendments to the old code. These provisions have become law by signature of President Kennedy. It is designed to collect taxes from "shadow" corporations. There have been abuses in this area, to be sure. For example, an American corporation forms a holding company in Switzerland. The holding company, in turn, forms a company in West Germany which becomes quite profitable in due course. In order to avoid U.S. taxation of profits from Germany, the Swiss company syphons off the profits and keeps them for five years. Heretofore, profits from overseas operations of any kind were not taxable until they were repatriated to the U.S. For the first time in U.S. history, the 1962 code taxes those earnings under certain conditions. These conditions—to tax or not to tax—are unbelievably complex. They depend on the ownership of the company, on its markets, the primary purpose of existence and the whole thing is left for interpretation to the tax examiners of the Treasury Department. Thus, what may look like a legitimate deduction, non-taxable, by one examiner may look taxable to another. Such scope for conflicting opinions and interpretations may reduce the inducement for U.S. overseas investments.

Electroplating Facts

In the finishing of articles by electroplating, much time and money are wasted because of design being **unsuitable. Design that takes** into account not only the function of the article and **its method of fabrication** but also the requirements of polishing and electroplating, **always results in a** *more* serviceable and usually a *less costly* product.

A good design for electroplating should

(a) whenever possible, avoid assembly before plating in favour of assembly after plating;

(b) when solder is necessary for assembly before plating, avoid exposed soft solder at the joints;

(c) avoid blind holes, cavities, seams or rolled edges in which any of the liquids used in cleaning or plating can be trapped;

(d) for tubular constructions, ensure that the tubes can be either completely sealed or readily and fully drained—e.g. by the provision, when necessary, of suitable located holes;

(e) provide for suspension and good electrical contact at some point (such as a hole, thread, lug, or interior surface) where the thickness of deposit is unimportant;

(f) avoid sharp edges, corners, deep recesses or concavities that cannot be touched by a ball 1 inch in diameter.

For any further guidance or information needed on question of design for electroplating, please write to:

Nickel Information Bureau Private Limited,

United Bank of India Building, Sir Pherozshah Mehta Road, Bombay 1.

PERSPECTIVE PLANNING FOR COTTON TEXTILE INDUSTRY

FINDINGS OF A SPECIAL STUDY

COTTON cloth is one of the essential items of consumption which is bound to expand rapidly (and continuously) in the coming years, following the persistently rising trend of population, growth of income and improvement in living standards. The question as to how such expansion of demand for cloth can be met successfully will depend on a careful assessment of the whole position and the adoption of suitable steps from now alone. Otherwise, there is the possibility of either shortage of supplies or huge surpluses developing in later years. In other words, perspective planning for cotton textile industry is as necessary as for such industries as steel and cement. An interesting study on this subject by Mr. P. G. Saraph is published in a recent issue of the *Indian Textile Bulletin*, issued by the Textile Commissioner, Bombay.

The findings of the study, covering a period of 15 years (1960-61 to 1975-76), show that the overall cotton cloth requirements for both domestic consumption and export by the end of the fifth Plan, that is, 1975-76, will be of the order of 14,750 million yards. In order to produce this much quantity of cloth and to meet the requirements of other industries and exports, the total requirements of yarn is put at 3,550 million lbs. and that of cotton at 9.79 million bales (of 400 lbs. each). On this basis and providing for a spare capacity of 10 per cent, the author has estimated that the mill sector's capacity will have to be 23.65 million spindles and 368,000 looms. The employment potential is placed at 1,655,000 workers with 15 per cent spare.

TABLE A: *Overall Targets for Cotton Cloth*

	1971-76	1966-71	1961-66	1960-61
Population (millions)	625	555	492	438
Per capita requirement of cloth (yards)	22.2	19.6	17.6	16.0
Total cloth requirement for home consumption (million yards)	13,900	10,900	8,650	7,000
Exports (million yards)	850	850	850	1,000†
Overall cloth requirements (million yards)	14,750	11,750	9,500	8,000
Yarn required to produce cloth (million lbs.)	3,200	2,550	2,050	1,700
Yarn required for other industries and export (million lbs.)	350	300	250	200
Overall yarn requirement (million lbs.)	3,550	2,850	2,300	1,900
Spindle shift required to be worked every day (millions)	52.36	44.55	35.95	29.70
Spindles required to be put into commission in first shift (millions)	21.29	18.12	14.62	12.08
Spindles required with 10% spare (millions)	23.65	20.13	16.24	13.42
Additional spindles required to be installed over the previous plan period (millions)	3.52	3.89	2.82	..
Loom-shifts required to be worked every day (thousands)*	739	566	452	399
Looms required to be installed in first shift (thousands)*	331	258	206	182
Looms required with 10% spare (thousands)*	368	286	229	202
Additional looms required to be installed over the previous plan period (thousands)*	79	57	27	..
Employment potential in all departments (thousands)*	1,438.8	1,169.8	936.1	794.6
Total employment potential with 15% spare as *ballis* (thousands)*	1,655	1,345	1,077	914
Overall cotton requirements (million bales of 400 lbs. each).	9.79	8.33	6.72	5.40

* The figures relate to mill sector only.
† This was only the target fixed in the second plan. The actual export was no more than 700 million yards.

Demand for Cloth

The anticipated demand for cloth by 1975-76 is assessed on the assumption that there is a one-to-one correspondence between the quantity consumed and the expenditure on clothing. On this basis and taking the average *per capita* expenditure as Rs. 294 in 1956-61, Rs. 326 in 1961-66, Rs. 369 in 1966-67 and Rs. 424 in 1975-76, the demand for cotton cloth is expected to rise by 9.18 per cent, 11.88 per cent and 13.41 per cent in the last three periods, respectively. In terms of quantity, the *per capita* requirement works out to 17.6 yards, 19.6 yards and 22.2 yards, calculated with reference to the population of 438 million and the estimated consumption of 7,000 million yards in 1960-61. On the basis of the estimated *per capita* requirements, the cloth requirement for domestic consumption is calculated by taking into account the projected population figures for the future, while, in respect of exports, it is assumed that the third Plan export target of 850 million yards will remain unchanged in the fourth and fifth Five-year Plans also. Table A indicates the overall targets.

Before allocating the targets of cloth production among mills, powerlooms and handlooms, Mr. Saraph has presented some interesting data (*vide* Table B) relating to the present position as regards these sectors. He has drawn attention to the relative roles of the three sectors. The following is the relevant extract from the article:

"From a long-term point of view, it is felt that the handloom industry, although giving employment to lakhs of people, has got its limitations due to its crude and primary instruments. It is felt that the capacity of this industry will also remain more or less static. By increasing the productivity, reducing the idle capacity and by other measures, a certain amount of increase in production will no doubt be achieved, but, beyond a certain limit, this increase cannot be effected because of its elementary mode of operation. It is felt that about 3,500 million yards will be the optimum level of production in the case of handloom sector. Therefore, preference to handloom as regards the aid may be given only up to this level and, beyond that, perhaps, this preference will have to be shifted to powerloom industry which is second in order as regards employment prospects, especially in rural and semi-urban sectors of population. Therefore, from a long-term point of view, the powerloom industry must be given a preference after a certain period. That does not mean that, until the handloom industry achieves the optimum level, the powerloom industry is to be pegged at current level. The powerloom industry may also be allowed to increase its production of its own accord but at a lower rate compared to handlooms. As regards the mill sector, it will always be in a position to increase its production given the necessary permission to increase its loom capacity. But this also will have to be done with caution, as excessive installation may give a setback to both the sectors of handloom and powerlooms. It is felt that the best course will be to allow installation only up to a level, so that the share of mills' production in total production will remain more or less at the current level (that is, about 65-66 per cent)."

Allocation of Targets

In the light of the aforesaid position, the author has assumed three criteria for the allocation of targets. One, the handloom industry achieves its optimum level of 3,500 million yards, the gross productivity rate then becoming 1,250 yards (by the end of the fifth Five-year Plan). Two, the powerloom industry also increases its production but at a much slower rate (beyond the fifth Five-year Plan, it will be advisable to give financial aid to powerloom industry and aid to handloom industry kept constant without any further increase). Three, the share of mills' production in total production remains at a constant level of about 65 per cent.

TABLE B: *Mill and Decentralised Sectors* (1961)

	Mills	Power-looms	Hand-looms
Total capacity of looms (No. in thousand)	200	80	2,800
Working capacity of looms (No. in thousands)	182	60	1,400
Production per loom per shift (yards)	43	38	4
Shifts worked (daily average No.)	2.18	1.8	1.0
No. of days worked in a year	300	300	250
Actual production in 1961 (million yards)	5,100	1,200	1,400
Gross productivity per working loom in a year (yards)	25,500	15,000	500

On the basis of these criteria, the gross productivity rate (in yards) for powerlooms and handlooms, respectively, are: 1960-61: 15,000 and 500; 1965-66: 16,000 and 750; 1970-71: 17,000 and 1,000; 1975-76: 18,000 and 1,250. By multiplying the gross productivity rates by the respective total capacities, the author has fixed the output targets for the decentralised sector, while the mill's share has been derived by substracting this production from the overall output. The targets suggested are indicated in Table C.

The figures in Table C bring out the excessive weightage given to the handloom sector by relegating the powerlooms to the background and by slightly reducing the share of mills—the most efficient and economical among the three types of producers. In other words, the author has suggested the perpetuation of a sector which is highly uneconomic. The data presented by the author himself clearly show that the productivity of handloom industry is deplorably poor. And so the earnings of those who are dependent on it for their living cannot but be extremely low. It is precisely this consideration which invests the need for converting expeditiously as many handlooms as possible into powerlooms with supreme urgency. The Asoka Mehta Committee on Powerlooms should bear in mind this important point.

Evidently, the author of the article has thought it fit to follow the present official policy in these matters. He has neither envisaged nor advocated any modifications in that policy. This is evident from the importance given by him to the mill sector in his perspective planning.

Target for Mill Sector

The target for mill cloth output (7,290 million yards) suggested for the fourth Plan represents a rise of 1,470 million yards as compared with 1965-66 and the fifth Plan target of 9,510 million yards is higher than the fourth Plan target by 2,220 million yards. While these absolute figures may appear to be large, the share of production by the mill sector in the total production of cloth as a whole is actually a shade lower (*vide* Table C) than that in 1960-61. The overall yarn targets for the mill sector are 2,850 million lbs. in the fourth Plan and 3,550 million lbs. in the fifth Plan, as against 2,300 million lbs. in the third Plan. The required loomage and spindleage to produce these quantities of cloth and yarn are calculated as follows:

Looms: During 1961, the daily average number of looms worked was 182,000, 176,000 and 51,000 in the first, second and third shifts, respectively, or the total effective number of loom shifts worked was 399,000 and production thereby amounted to 5,136 million yards. In other words, it required 777 loom-shifts to be worked everyday to produce one million yards of cloth in a year. Taking this loom-shift requirement as a basis, the number of loom-shifts required to produce the target of cloth requirement for various plans is calculated. It was

TABLE C: *Targets for Different Sectors*
(In million yards)

	1975-76	1970-71	1965-66	1960-61
Mills	9,510 (65.8)	7,290 (63.7)	5,820 (63.2)	5,100 (66.2)
Powerlooms	1,110 (9.9)	1,360 (11.9)	1,280 (13.9)	1,200 (15.5)
Handlooms	3,500 (24.3)	2,800 (24.4)	2,100 (22.9)	1,400 (18.3)
Total	14,450	11,450	9,200	7,700

Note:—Figures in brackets relate to percentage shares in the total production.

observed that, out of 399,000 looms, 182,000 looms worked in first shift that is 45.61 per cent. Taking 45.61 per cent of required number of loom-shifts to fulfil the cloth target, the author has arrived at the required number of looms to be put into commission in the first shift. Assuming that normally 90 per cent of looms is put in commission, leaving 10 per cent for maintenance and repairs, the total installed capacity requirement has been calculated.

Spindles: During 1961, the daily average number of spindles worked was 12.08 million, 11.90 million and 7.06 million, respectively, in the first, second and third shifts or the total effective number of spindle-shifts worked was 29.70 million and production thereby amounted to *1,901 million* lbs. In other words, it required 15,631 spindle-shifts to be worked every day to produce one million lbs. of yarn in a year. Taking this spindle-shifts requirement as the basis, the number of spindle-shifts required to produce the target yarn requirements for various plans is calculated. It was observed that, out of 29.70 million spindles, 12.08 million spindles worked in the first shift, that is, 40.67 per cent. Taking 40.67 per cent of required number of spindle-shifts to fulfil the yarn targets, the author has arrived at the required number of spindles to be put into commission in the first shift. Assuming that normally 90 per cent of spindles is put in commission, leaving 10 per cent for maintenance and repairs, the total installed capacity requirement has been calculated.

Employment Potential

On the basis of the targets fixed for cloth and yarn, the author of the study has assessed the employment potential likely to be created in the third, fourth and fifth Plans on the assumption that the productivity of workers in the different departments remains the same as in 1961. This is a very unrealistic assumption, for it is already clear to those who know anything about the textile industry that, if Indian mill-made cloth is to be competitive and within the reach of the common man, the productivity per worker must improve considerably. If this condition is conceded, it is obvious that the mill industry cannot provide as much employment as has been calculated by the author. But this is no argument against expansion of the mill sector. If more cloth is produced at a relatively lower cost, more people may find employment in marketing and financing. Further, people will spend less on their clothing budget and this will make available a larger amount of purchasing power for other consumption goods and for providing better educational facilities for children, to mention an instance. Such expenditure in turn will provide additional opportunities for more gainful employment than that of an industrial worker.

Be that as it may. To revert to Mr. Saraph's analysis of employment potential in the mill industry. In 1961, the 319,000 workers engaged in the spinning (including preparatory) department together produced 1,901 million lbs. of yarn and the 281,000 workers engaged in the weaving

FURTHER CLOSURES OF COTTON MILLS

SUPPLEMENTARY REORGANISATION SCHEME CONSIDERED NECESSARY

From Our Special Correspondent

MANCHESTER, 15*th January*

FOR the first time in more than two years, manpower totals in the Lancashire cotton industry have shown an increase, the Cotton Board announced in Manchester. Latest figures give the labour total as 152,000, an increase of 290 in a month. Most of the increase was in the spinning section, which showed a net improvement of 220. The labour force has dwindled steadily from 185,560 in November 1960.

MANCHESTER LETTER

The Board also said that production of yarn and cloth showed an upward trend. The average daily yarn output went up for the third month in succession, and the average daily cloth output is 1.8 per cent better than in September.

Commonwealth Preferences Review?

Increasing competition and higher tariff walls affecting trade with some Commonwealth countries posed the question as to whether there should be a reappraisal of the Commonwealth Preferences, said Mr. A. G. Bardsley, Chairman of the Commonwealth (Dominions) Section of the Manchester Chamber of Commerce, in his annual report. "Trading with many of the Commonwealth countries is becoming more and more difficult not only from the angle of competition but from the aspect of the creation of tariff walls to protect secondary industries in the respective overseas markets," he declared, and added: "Over the past few years, these 'walls' have been given added strength and height and in some cases have reached impregnable proportions resulting in the practical closure to trade in certain commodities."

Mill Closures

Directors of the Calico Printers' Association, the Manchester-based textile group, announced that they are to close down the Company's last remaining mill in Ashton-under-Lyne. It is the 113-year-old Wellington Mill which employs 500 workers.

A spokesman for the Company said that a proportion of the plant would be transferred to other mills within the group. It was also planned to offer most of the workers alternative employment in the Company or in local mills. He blamed foreign imports for the closure decision. "A large proportion of the cloth produced at the Wellington Mill is of the type now being imported into this country from the Asiatic members of the Commonwealth, and it is impossible to compete against the comparatively low-wage costs of these countries." He added: "The continuance of the Government policy of granting large quotas for the import of cotton textiles and the fact that there are no indications that such a policy will be reviewed is the reason for the Directors' decision to close the mill."

More closures of textile finishing units were forecast by Mr. William Crossley, Chairman of the Finishing and Allied Trades Section of the Manchester Chamber of Commerce. The well-conceived, though unbalanced, reorganisation scheme had been nullified, he said, by a series of factors, notably the high stock position at the beginning of last year, the poor summer weather in 1962 and the continued decline in exports. "Further closures of finishing units have taken place," he added, "and already there are murmurings that a supplementary reorganisation scheme will be necessary." Uncertainty about the Common Market negotiations was an additional factor and the finishers' future plans could not be clearly defined until this momentous issue was decided.

Mr. Crossley argued that vertical integration of the industry was not the complete answer to its troubles. There was no single remedy to the problem, he contended, as each case had to be considered on its merits. "It has never been shown," he said, "that the commission finishing section of the industry would operate more efficiently if merged with another section."

General Downturn in Activity

The international situation in cotton textiles showed a general downturn in activity in the third quarter of last year, according to the Cotton Board's latest statistical review, when cotton yarn output fell by about 4 per cent after slight gains had been achieved in the first half of 1962. A similar fall was recorded in world exports of cotton cloth, but, in this department, a decrease of about 7 per cent had already been recorded in the first six months of last year.

Dealing with Lancashire's position last autumn, the Cotton Board gives a fair balance of good and not-so-good aspects of the situation, while offering some shrewd advice to distributors in the event of the seasonal revival in activity spreading into the current year. A slight lengthening in order books held by producers, first noted in September, was more marked in the following month, the statistical department confirms. Against this, margins were still unsatisfactory in general, permanent mill closures continued, with the drift of labour slackening but at that time not completely halted.

Sales and Output

On the upgrade was output of single yarn per working day, which increased by about 2 per cent in each of the months from September to November inclusive. The level of production regained the momentum ruling in spring last year, and doubled yarn output in October was equally buoyant. On the other hand, the rate of cloth production per working day last October was the lowest yet recorded in the recession then being encountered, and was 16 per cent below the October 1961 figure. Chiefly blamed for this poor showing was a very sharp contraction in output of surgical dressing cloths since early 1962.

Again, on a brighter note, retail sales of clothing showed a distinct improvement in the second half of last year and, as the survey states, undoubtedly pipeline stocks had been run down to a substantial extent. No forecast is made as to whether the process has yet run its full course and, since the figures under review have been collated, the threat to purchasing power has been substantially increased by the latest trend in unemployment, despite the measures taken by the Government to improve the economic climate.

Warning to Merchants

On the question of destocking, the Cotton Board makes some forthright comments, based on the past experience of the trade in similar circumstances. Assuming that the textile cycle follows its usual course, an upswing in activity should succeed the emptying of the pipelines. "Unless positive action is taken to guard against it, existing stocks of textiles, including in particular imported cloth, will again be accumulated, to be followed in due course by the inevitable painful correction of the position," says the review.

Putting the onus entirely on the merchant converting section of the industry as the largest holders of stocks, the Board adds: "It is not in the collective interest of converters to allow burdensome stocks to accumulate. Nor is it in the long-term interest of the converting section that the producing sections should be further weakened by a repetition of the boom-slump sequence, since, in the long run, a viable converting section can only continue in conjunction with healthy spinning and weaving sections."

The producing branches of the trade, it is suggested, are fully capable of meeting any normal increase in demand, but not one which merely leads to extensive stock-building. Converters should not base their buying policies on the assumption that all the increase in orders represents a genuine expansion in final offtake, as some at least of the purchasing they encounter must represent stock-building on the part of their customers or of their customers' customers.

NEW COTTON LEGISLATION IN U.S.

PRESIDENT KENNEDY WANTS LOWER PRICES AND STOCKS

FOR the past few months, trading in the New York and Liverpool cotton futures markets had been adversely affected by uncertainties about the proposed new legislation for U.S. cotton. In fact, speculative activity ebbed and flowed according to traders' assessment of the prospects for a change in the existing legislation. Speculation about probable changes in legislation affecting cotton became rife following the announcement by President Kennedy in September last that he was instructing the Department of Agriculture to give immediate attention to the formulation of a domestic programme that would eliminate the inequity of the two-price system (one price for domestic mills and another for overseas buyers) on the American cotton textile industry. This announcement followed the decision of the U.S. Tariff Commission against the imposition of an 8½ per cent equalisation fee on the cotton content of imported textiles. With this decision, it became clear that steps other than the imposition of a countervailing duty would have to be devised. The President had also indicated that, early in the following session of the U.S. Congress, he would recommend necessary legislation to achieve the aforesaid objective.

Opinion was sharply divided whether the proposed new legislation would be passed in time to affect the 1963-64 crop, sowings of which will begin next month. Till a few weeks ago, some knowledgeable quarters believed that it was too late for any new low to be made which could be applicable to the next crop. But the consensus of opinion is now veering round to the view that legislation will be enacted in time to affect the next crop.

Two developments have strengthened this view. One is the meeting of the U.S. Advisory Committee on Cotton held last week at Washington. The Committee is reported to have recommended to the Secretary of Agriculture a new plan for cotton legislation which would allow for payment-in-kind to domestic consumers of cotton from Government stocks at prices which would eliminate the inequities caused by the two-price system. It would also allow for plantings of cotton, above the basic acreage allotment, for export. The Committee's plan is said to be a refinement of the one put forward by it last October.

The other development is the President's State of the Union Message to the Congress last week. It contained two significant observations which may be regarded as having a bearing on cotton. They are:

(1) "This Government is in the storage and stockpile business to the melancholy tune of more than $16 billion. We must continue to support farm income, but we should not pile more farm surpluses on top of the $7.5 billion worth we already own. We must maintain a stockpile of strategic materials, but the $8.5 billion worth we have acquired—for reasons both good and bad—is much more than we need and we should reduce it by means which will not cause market disruption."

(2) "Neither we nor the members of the Common Market are so affluent that we can long afford to shelter high-cost farms or factories from the winds of foreign competition."

It is noteworthy that the President was careful to qualify his statement that farm income should be supported and that stockpiles should be reduced with two important conditions, namely, that the former should be done without having to add to the already massive stockpile and that the latter objective should be achieved without disrupting the world markets.

From the point of view of the cotton trade in general and importers of foreign cotton in particular, the latter of the two quotations above is highly significant. It is an indication that the President wants U.S. cotton prices to be brought down to parity with world market prices, so that the market for U.S. cotton might expand. It is noteworthy that there is a growing concern in the U.S. over the apparent difficulties in achieving a permanent expansion of the market for cotton. In the domestic market, the basic difficulty is said to be competition from man-made fibres and imported textiles. In the export market, the problem concerns the fact that U.S. cotton continues to be undersold by other growths and that increased exports from other countries have resulted in a reduced market for U.S. cotton. This is evident from the fact that exports from the U.S. declined from 7.1 million bales in 1959-60 (exports were even higher at 7.6 million bales in 1956-57) to 6.6 million bales in 1960-61 and 4.9 million bales last year. During the current season, exports are currently running at only about half of last year's rate. They may pick up later as the season advances. Even so, it is doubtful whether the total for the whole season will exceed that of last year, considering the cotton crop in the rest of the free world promises to be much higher than in the previous season.

The aforesaid developments have been followed by the introduction of a Bill, which seeks to make available U.S. cotton to domestic users at the same price as that paid by overseas buyers, in the House of Representatives (Lower House) by Mr. Harold Cooley, Chairman of the Agricultural Committee of the House of Representatives, on the 17th inst. The Bill proposes to amend the Agricultural Act of 1956 to allow the Commodity Credit Corporation "to make payment in cash or in kind to persons other than the producers of such cotton in such amount as will make such cotton available for domestic use at prices not in excess of the price at which cotton of comparable quality is made available for export." It will be noted that the Bill closely follows the recommendations of the Advisory Committee on Cotton. Introducing the Bill, Mr. Cooley stated that "it covered by far the most urgent aspect of the cotton situation and the one on which there appears to be virtually complete agreement by all sections of the cotton industry." The Bill, according to him, would benefit not only the U.S. textile industry but also cotton producers and consumers, because its effect would be to make U.S. cotton textiles cheaper and competitive in world markets.

It is too early to say what final shape the proposed legislation will take and when it will come into force. But it is certain that it will have to be rushed through the current session of the Congress, if it is to apply to the 1963-64 crop, sowings for which will begin in the U.S. South-West next month.

SEED TREATMENT FOR COTTON

Experiments conducted at the Amravati Centre of the Indian Council of Agricultural Research to control the different diseases of cotton, groundnut and jowar have shown that the blackarm of cotton could be checked by seed treatment followed by two sprays of Bordeaux mixture, Blitox or Perenox. Incidence of *Tikka* in groundnut could be reduced by two sprays of Fytolan, Blue Copper 50+Thiorit or Bordeaux mixture, 7 and 10 weeks after sowing. In jowar loose and grain smut could be controlled by treating the seed with 10 per cent mercurial seed dresser, sulphur or Tillex at 6 ozs. for 60 lbs. of seed.

Comparative studies on different pesticides at this centre have shown that most of the cotton pests can be effectively controlled by spraying a mixture of DDT-BHC (1:1) 5 to 8 times, or alternatively with 0.02 per cent Endrin. In case of groundnut, Telodrin as soil insecticide is quite effective. Though none of the pest control methods have been very effective against stem borer of jowar but 0.02 per cent Endrin at 15 days interval is quite useful in checking the damage. Studies on biological basis of pests control is also in progress at the centre.

Problem of conservation of moisture by using Polythylene film mulch has been taken up at this centre and it has been found mulched plot yield 69 per cent more as compared to controlled plots.

It has been observed that in cotton 40 to 60 lbs. of Nitrogen/acre, depending on climatic conditions, gives higher yield than control. Also the sulphate of ammonia proved to be the best form of Nitrogen.

WORK FOR VICTORY

Your job is vital to victory. India demands all hands to work—and work more for increased production to strengthen our fighting forces, to build up the nation's resources and striking power on all fronts.

At foundry and lathe, machine shop and giant industrial plant, shall all hands strive the harder to raise productivity, boost output. Let vital supplies flow in an unending stream to the front line as well as for the nation's domestic needs.

EVERYONE A SOLDIER for GREATER PRODUCTION STRONGER DEFENCE

GA 62/74

ASHOK LEYLAND LIMITED

CHAIRMAN, DR. A. RAMASWAMI MUDALIAR'S SPEECH

THE progress made by Ashok Leyland Ltd. in 1962 would be maintained during the current year, despite the limitations arising from restricted foreign exchange allotment to the Company. Promising this to the shareholders of the Company at their Fourteenth Annual General Meeting which was held at Ennore on Wednesday, 16th January 1963, Dr. A. Ramaswami Mudaliar, Chairman of the Company, disclosed that more vigorous steps were being taken to locate Indian sources of supply for all ancillary materials which were not normally produced by automobile manufacturers. Additional items, the deletion of which from the Import Schedule was not contemplated till 1964, would now be brought into the 1963 production in the Company's factory. The British collaborators of the Company had been in complete agreement with the view of its management on the subject and had been extending remarkable co-operation.

The following is the full text of Dr. Mudaliar's speech:

GENTLEMEN,

I have great pleasure in extending to you a cordial welcome to the fourteenth annual general meeting of your Company.

The Directors' report, audited balance-sheet and profit and loss account for the year ended 30th September 1962 have been circulated to you and, with your permission, I shall take them as read.

As the balance-sheet and profit and loss account have disclosed it has not been an unsatisfactory year from the financial point of view, in spite of difficulties regarding foreign exchange allotments for materials which have to be imported. Sales for the year exceeded Rs. 13 crores compared with Rs. 11.5 crores approximately in the previous twelve months from 1st October 1960 to 30th September 1961.

Expansion Programme

In my speech last year, I referred to the phased programme of expansion which we have undertaken to produce 6,000 Comets and in addition 1,200 heavy duty engines per annum. Accordingly during the year under review, buildings of a total cost of Rs. 31 lakhs have been completed and plant and machinery of a value of Rs. 104.5 lakhs have been installed. Additional plant and machinery of a value of Rs. 21.5 lakhs are either in transit from suppliers or awaiting installation. These figures represent roughly a total increase of Rs. 135 lakhs in the gross block capital during the year on account of buildings, plant and machinery. You will have noticed that, after making appropriate provision for depreciation, taxation and other charges and for the normal dividend of 8 per cent, subject to tax, there is very little surplus which can be transferred to general reserve. We have therefore been expanding our production and for the purpose investing money in plant, machinery and buildings almost exclusively from equity capital. There has been little scope for surplus earnings which normally are utilised to a considerable extent in financing expansion programmes.

When I state, as I did last year, that the selling price of our Comet chassis has remained constant since 1955 and that any additions made to the 1955 prices represent the additional duties levied by the Government from time to time, it will be realised that we have been obliged to absorb all the rising costs of materials, power and labour in the selling price. No other automobile unit has, I hope, been placed in such a difficult position. I trust that Government will take into consideration the handicaps we have thus been subjected to and give the necessary relief in agreeing to a fair increase in price, corresponding to rising costs—a relief for which we made a request last year.

Foreign Exchange Allotment

There is another problem which we are facing, and probably it is one which faces all automobile manufacturers in India. Until the latter part of 1961, on the assumption that the foreign exchange allotted would remain reasonably constant, it was the policy of the Company steadily to increase the indigenous content of its products and, utilising the same amount of foreign exchange, decrease the value of imported material per chassis thereby increasing their annual output.

During the first half of 1962, however, not only was the foreign exchange allotment reduced appreciably but, on more than one occasion, the issue of import licence even for the reduced foreign exchange allotment was seriously delayed. While I do appreciate the problems of Government in this regard, I would like to emphasise that the raw materials or components required by automobiles of particular types are not readily available in the open markets abroad. They have to be specially produced in the automobile factories or by ancillary manufacturers. The effect of these two factors—decrease in foreign exchange and delayed issue of licences—was experienced when, in October last, your factory had to close down its assembly section for a considerable period for want of the imported components. It was inevitable, though regrettable, that nearly 500 employees had to be laid off for two weeks.

This is not intended to be a catalogue of grievances that I have mentioned but my object is to present to the authorities the actual position which automobile companies generally are facing today. The demand for our products is continually on the increase, but we are unable to meet it. We are gradually entering the export market, so much needed for earning foreign exchange. Industries are constantly urged to increase production and productivity councils are giving valuable advice. And yet factors beyond our control are compelling us to reduce the working week to five days. The sense of frustration among enthusiastic workers is not the least of our anxieties. Fully aware of the emergency period through which we are passing, we and, indeed, all connected with the industry are desirous to be of the utmost help during this period. I would earnestly plead that this industry specially needs the removal of the handicaps to which I have referred.

Demand in Near Future

Your Company was formed with the object of producing a heavy duty vehicle, for which at the inception the demand was necessarily limited on account of the restrictions on gross vehicle weights placed by the highways authorities. Over the years, the demand has increased and a number of expansions have been undertaken involving large capital expenditure. There is every indication that the restrictions imposed by highways authorities in some States will progressively disappear so that there will be a greater demand for the Comet vehicles and it may become practicable to produce heavier vehicles and thereby increase the Company's turnover. The present emergency is likely to accelerate this demand either directly or indirectly. Apart from any needs of the Defence services, transport of heavy loads and of mineral ores by road will increase. There will also be an increasing demand for industrial engines and, as you are aware, the expansion programme which is nearing completion provides not only for the production of the Comet chassis but also, in addition, the industrial version of the Comet engine. The plan further envisages the production of 1,200 engines per annum of the 600/680 type which have a considerably greater power than the Comet. These heavier engines will be largely utilised for industrial applications.

During the year 1963, we hope to produce at least 3,600 Comets instead of the 5,000 that was our target and, with a little help in the form of foreign exchange, to produce both the heavy duty vehicle and the corresponding engines to which I have referred. This will mean careful planning and great attention to increase the factory's efficiency while completing the expansion programme which is now in progress. I have every assurance from our resourceful staff that, in spite of all handicaps, progress will be maintained. It has been the policy of the Company to give the greatest priority to means for increasing the indigenous content of the chassis and planning to this end has been in progress for some time, so that its benefits may be secured in the immediate future. More vigorous steps are, therefore, being taken to locate Indian sources of supply for all ancillary materials which are not normally produced by automobile manufacturers; and, in some cases, if absolutely necessary, we propose to undertake the manufacture of such ancillaries in your factory. Additional items, the deletion of which from the Import Schedule was not contemplated till 1964, will now be brought into the 1963 production in your factory. Our British collaborators, sharing completely our views on the subject, have shown a remarkably co-operative spirit to achieve this end. They have arranged for a planning controller from Leyland Motors to complete these plans in consultation with your Company's executives. I would like, therefore, to assure you that, rather than becoming despondent or helpless in any unexpectedly difficult conditions, the organisation will accept these conditions as a challenge to overcome them so that the success, which has so far been achieved, will continue.

Ennore Foundries

Since I last addressed you, Ennore Foundries Limited, in which your Company has 25 per cent of the capital, has made further progress and the import by your Company of iron and aluminium castings has been completely discontinued, all such demands now being met by Ennore Foundries Limited. This has made a considerable contribution to the reduction of the foreign exchange required per chassis. After some initial "teething" troubles, the quality of the castings has become quite satisfactory, with a very low level of scrap in the machineshop. The Foundries' capacity has reached a stage at which it is possible not only to meet the full demand of your Company but also to supply castings to other manufacturers, thus both directly and indirectly saving foreign exchange.

I have reserved to the last a statement on the situation that has suddenly confronted the country by the unprovoked and unjustified aggression of our land by China. I am convinced that this aggression is not merely the result of a dispute over our borders. It poses a threat to democracy and the democratic way of life in our country; but it also consequentially poses a threat to neighbouring democracies which have recently become self-governing independent States. In the emergency that has arisen, your Company is determined to play its part worthily and well. The donation of a lakh of rupees, which your Company has made to the Prime Minister's Defence Relief Fund, is a bare expression of that determination in a tangible form. The very programme of production that I have outlined above will indicate our resolution to do whatever is necessary in the present emergency; and the collaboration of our British colleagues in the planning and expansion of this programme is an indication of their complete identity of views with ourselves on the subject.

Collaborators' Assistance

Leyland Motors continue to give us every assistance and we are greatly indebted to Sir Henry Spurrier and his colleagues for the valuable work they have done on our behalf in undertaking all the planning for our expansion project.

Since I last addressed you, we have had a visit from Mr. West, Chairman of West Yorkshire Foundries and a Director of Leyland Motors, Mr. Grimshaw, Leyland's engineering consultant, and Mr. Tattersal, their chief engineer. We are looking forward to another visit in the near future from Sir Henry Spurrier, Chairman of the Leyland group, who will be accompanied by Mr. West. These visits have been of incalculable assistance to us in organising and regulating our productive capacity. I am sure you will wish to convey to the Leyland Directors and particularly to Sir Henry Spurrier our thanks for all their assistance.

Our relations with our employees have remained cordial throughout the year and the results which were obtained, in spite of many difficulties, were in no small measure due to the co-operation which the officers, staff and work-people of your Company have extended to your Directors. The agreement with the employees' union, which was executed sometime back, expired at the end of 1961, but remained current while a new agreement was being negotiated. This new agreement was executed recently, effective from 1st July 1962 till 31st December 1964. I trust it will ensure a continuation of the happy relations between the management of your Company and its employees. I have already referred to the enthusiasm which our officers and workers have shown in the progress of our Company, but I would like specially to refer to one of my colleagues on the Board, as I did last year, whose contribution again has been outstanding. I refer to the Managing Director, Mr. Collins, who has been a tower of strength to his colleagues in the workshop and to his colleagues on the Board.

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

INDIA SELLS MORE TEA ABROAD

FURTHER TAX RELIEF NEEDED TO MAINTAIN THIS TREND

WILL the excise duty on tea be enhanced in the Central Government budget for 1963-64 due to be presented to Parliament on the 28th of next month? Speculation on this question has been rife for quite sometime now. From the reports covering the deliberations of the National Development Council's meeting, held at New Delhi on Friday last week, which clearly indicated heavy taxation for financing the defence and development expenditures, the planting interests are inclined to feel that tea may be included under the purview of the general increase in excise duty on all commodities. Planters do appreciate the urgency of additional resources in view of the present emergency, but fear that any upward revision in excise duty on tea will most adversely affect the industry, especially the producers of common teas. An increase in duty, according to Mr. B. C. Ghosh, Senior Vice-Chairman of the Indian Tea Planters Association and a member of the Tea Board, will only add to the cost of production which, as readers are aware, has gone up markedly of late as a result of the heavier wage bill and the rise in the various items consumed by the tea industry. Indeed, Mr. Ghosh fears that, if the additional duty fails to curb internal consumption—as it well may, looking at the ever-increasing domestic demand for tea—inflation may result, as the consumer's domestic budget will go up. And if costs rise, exports, too, will be affected, what with the keen competition from other tea-producing countries such as Ceylon and East Africa. Ceylon, for instance, today accounts for more than a third of the total imports into Britain, the largest market for Indian teas, as compared with the share of less than 23.5 per cent in the years 1953-55. During the first eleven months of last year, Ceylon exported as much as 164 million lbs. of tea to Britain, as against 150 million lbs. in the corresponding period of 1961. In several other markets, too, Indian tea has lost to the tea produced elsewhere. The trend of tea exports from India and other countries is indicated in the following table:

(In million kg.; 1 kg.=2.2 lbs.)

	January-October		Whole of	
	1962	1961	1961	1960
India	159.04	147.54	205.25	195.11

* January-September. † January-August. ‡ January-July. § January-November.

So far as the calendar year 1962 was concerned, tea exports from India no doubt registered an improvement as compared with 1961, the estimated actual shipments aggregating 471 million lbs. (214 million kg.), as against 451 million lbs. (205 million kg.) in 1961. Although the quantity exported was higher by 20 million lbs., the value of exports was higher by only Rs. 30 lakhs at Rs. 124.9 crores. This was because of the fall in the average export value of tea which in 1962 was Rs. 2.63 per lb., as against Rs. 2.76 in 1961. This trend indicates that the benefit of relief in export duty granted in the 1962-63 budget—the rate of duty was reduced from 44 nP to 25 nP per kg. besides a refund of excise duty at 15 nP per kg. on tea exports—must have been passed on to foreign buyers.

Factors Handicapping Exports

Indeed, tea shipments last year might have reached 500 million lbs. valued at Rs. 132 crores, but for certain temporary extraneous factors. These factors, as highlighted by Mr. A. S. Bam, Chairman of the Tea Board, in his speech, read out in his absence by Mr. I. F. Morris, Deputy Chairman, at the annual general meeting of the Dooars branch of the Indian Tea Association, held at Binnaguri, near Calcutta, last week-end, are as follows:

Probably the most important of the extraneous factors hampering fulfilment of export expectations was the strike by the Pakistani crew of the joint steamer companies which carry the bulk of tea from Assam to Calcutta. This strike, which started on 8th October 1962 and lasted for nearly two months, locked up or otherwise affected movement of very substantial quantities of tea. The strain on railway and other forms of transport caused by the emergency aggravated the situation. As a result, arrivals of tea in Calcutta during November 1962 were less than half of those in November 1961 (338,334 chests, as against 711,239 chests).

Prices during the current year have been consistently higher than last year at both Calcutta and London. The Chinese aggression and the consequent threat to Assam teas, the smaller arrivals and offerings at Calcutta as well as smaller despatches to London, all combined to give an upward thrust to tea prices all over the world.

Another problem that the tea industry had to face recently was the reluctance of certain commercial banks to advance loans to tea estates in the context of the present emergency. The Tea Board took the initiative in this matter and had a series of discussions with the banks to ensure the normal flow of finance to the industry. In order to meet the special requirements of the industry, standing tea crops were covered by the Emergency Risks (Factories) Act and the banks have agreed to continue normal financing activities in 1963.

Despite the aforesaid factors and the decline in production (from 760 million lbs. in 1961 to 738 million lbs. in 1962), the performance of the tea industry in the field of exports last year, as already noted, was quite encouraging. When exports are picking up, nothing should be done to reverse it. If anything, there is the need for a further relief in export duty, the benefit of it could be passed on to the foreign consumer. It is gratifying to learn from Press reports that the Ministry of International Trade has pleaded for a further cut in export duty.

Chief Competitors

Ceylon and East Africa together constitute the principal challengers of India in the world tea trade and pose the biggest threat in the next ten fears. The following figures illustrate the position:

(In million lbs.)

	1962	1961	1960	1956
Exports:				
India	471	451	426	528
Ceylon and East Africa ..	571*	466	452	375
Production:				
India	738	760	706	681
Ceylon and East Africa ..	536*	504	484	409

*Estimated on the basis of the latest available data.

It will be pertinent to quote here what the *Tea and Rubber Mail* said recently:

"Successful propaganda and sustained membership of tea promotion organisations, together with spending large sums, make Ceylon competitive enough to capture the market in many countries. In 1961, Ceylon maintained her position as the leading exponent of tea promotion. She spent

£693,434 on publicising the beverage and around the same amount in 1962. Much the same, a high rate of expenditure has been maintained over past years.... It is due to the success of this continuing promotion work that Ceylon is progressively gaining a larger share of the important U.K. market. Much the same trend can be seen in other markets where Ceylon tea is freely available and not hampered by trade agreements with other tea producing countries."

In the understandable anxiety to mobilise resources for defence and development, the important role that commodities like tea play as foreign exchange earners should not be ignored or underrated. Tea earned for the country a foreign exchange of as much as Rs. 125 crores out of the total export trade worth about Rs. 680 crores during the year 1962. With India's foreign assets being a bare Rs. 94 crores and with the pressing urgency to find finance for essential imports, the need for promoting exports of tea is obvious. This is possible only if the competitive capacity of Indian tea is improved *vis-a-vis* tea produced elsewhere. Such an improvement can be effected through the adoption of two notable measures suggested by Mr. Ghosh. One, the present method of collecting excise duty should be changed, so that the burden of cost on teas meant for export can be lessened. Two, the refund of excise duty in respect of tea exported should be based on a uniform average rate, instead of on the lowest rate now applied which varies from 15 nP to 45 nP per kg.

The present procedure of collecting excise duty at the producers' point, namely, the tea gardens, it may be noted, makes no distinction between the teas ultimately exported and those consumed within the country, as the entire produce is auctioned at Calcutta and Cochin. The result is that the teas meant for export are also paying excise duty, even though a refund at the lowest rate of the slab is being allowed at the time of export. The system, according to Mr. Ghosh, can be simplified by collecting excise duty at the point of distribution after sale, that is, the warehouses, as the tea go to ports or to internal markets. Many gardens are selling tea direct to consumers outside Calcutta, in order to avoid the West Bengal entry duty. This practice, it is felt, can be checked by levying a token duty at the gardens. The refund of excise duty at the lowest rate which varies from tea to tea, we are told, has made the price of common tea uncompetitive in world markets. This defect can be removed by allowing the refund at the average rate. It may be true that such a refund would indirectly serve as a subsidy to the export of common teas. But there is no gainsaying the fact that the grant of refund in this way, while it will not cost the Exchequer more, will, as Mr. Ghosh rightly observed, effectively push up sales of common varieties of tea in world markets.

The experience of Indian tea delegations visiting some foreign markets for export promotion has been that Indian tea is widely appreciated for its quality. Special steps should, however, be taken to expand the consumption of tea as a beverage. Emphasising this aspect, Mr. Bam mentioned some of the steps that are being taken by the Tea Board. These, according to him, include opening of tea centres, sending out tea vans to various countries in Europe and West Asia, special publicity and public relations measures, and expansion of the Tea Council's activities. In the U.K., India's first tea centre will be opened at Edinbourgh, which will be followed by a tea centre at Dublin and another in London. The Board is actively engaged in laying plans for setting up four tea centres in the important capitals of Europe. These centres will be linked with mobile tea kiosks which will take the message of Indian tea to the ever-increasing number of tourists.

Direct Assistance

Simultaneously with the export promotion work, the Tea Board, it is gratifying to learn, has also been rendering direct assistance to the industry to augment the production of quality teas. Mr. Bam's speech reveals that the machinery hire-purchase scheme, which has been in operation since April 1960, has been progressing satisfactorily and, upto date, 123 applications involving a sum of Rs. 76 lakhs have already been accepted. The Board had been urging the Government of India to provide special funds from which the industry could be financed to obtain equipment for irrigation. The Government had recently placed a separate fund of Rs. 2 crores at the disposal of the Tea Board for providing loans to tea industry specifically for the purchase of irrigation equipment either in India or abroad. This scheme has aroused keen interest among different sections of the industry.

Under the plantation scheme, 53 applications for a sum of Rs. 2.17 crores have already been accepted and 48 more for Rs. 3.00 crores were under examination. Payments against applications accepted would be made shortly.

As regards fertilisers, the Government has decided to meet the industry's entire requirement of nitrogenous fertilisers in the form of sulphate of ammonia, so that the production target for the third Plan might be achieved. A quantity of 117,285 tonnes of sulphate of ammonia was allotted to the industry for 1962-63 which would enable application of fertilisers at the recommended level of 80 lbs. per acre. Fertiliser price has been reduced from Rs. 401.30 to Rs. 384.60 per ton.

The Assam tea industry's demand for 176,885 tonnes of coal for 1962-63 has been met in full. Against a total demand of 142,309 tonnes of coal for North Bengal and Tripura tea gardens for 1962-63, the Coal Controller has sanctioned 127,661 tonnes. Movement of coal has not, however, been satisfactory. However, the Tea Board is taking all possible steps to move coal as expeditiously as possible. It is proposed to move 10,000 tons of coal by steamer to Dhubri and then by rail to stations east of Jhorai. Some movement by rail is also taking place via Santhahar-Gitaldaha route. In addition, movement by railway to estates west of Siliguri in Central Dooars is likely to materialise soon. Further, a coal dump at Haldibari is likely to be established shortly. In order to speed up movement of Bengal-Bihar coal to cover the shortfall of supplies during November and December 1962, arrangements have just been finalised with the Coal Controller for despatch of 21,000 tonnes of Ledo and Margherita coal of the Assam Railway and Trading Company's collieries to North Bengal (Dooars) gardens with immediate effect.

FOUR BASIC PRINCIPLES OF U.S. ECONOMIC SYSTEM

PART II: COMPETITION AND INDIVIDUAL INCENTIVE

By Thomas C. Mann
U.S. AMBASSADOR TO MEXICO

AND now I turn to a second principal tenet of the United States economic system: high standards of living for the people can best be achieved in a competitive economy. Let us first consider the protectionist, the one who does not wish to compete.

In my country, a minority of businessmen, who usually profess to believe in "private initiative" and competition for the other fellow, assert that their business is an exception and needs protection. Often they say that their only motive is the protection of the jobs of their employees or, perhaps, their only interest is that national "security" be maintained by denying foreign competitors access to our markets. I have heard the same general ideas expressed in different words in other countries.

To be sure there are cases where protection is justified and desirable, as, for example, in the case of an infant industry which has good prospects of becoming efficient and competitive, if, for a limited period of time, it is given a reasonable degree of protection. There are other exceptions. Like most economic decisions, the problem in the end becomes one of scope and degree.

Excessive Protection

But my point is that the national economy and the people pay a high price for excessive protection. Protection to a small group of individuals who own a particular factory is, in economic terms, a subsidy to the owners no matter what form it takes—whether it is a tariff, a quota, a licensing arrangement, or a cash subsidy.

The subsidy, if in the form of cash, is paid by the taxpayer. If it takes other forms, it is paid by the consuming public through higher prices usually for an inferior product, hence lowering the real income of the people. Precisely the same thing occurs when the industry is State-owned, with the difference that, in this case, the higher prices for consumer goods can be considered as an indirect tax. In any case, the result is the same—the lowering of the real income of the individual.

The economic disadvantages of unlimited protection from international competition are compounded if there is also little or no domestic competition either because the number of domestic producers is limited or because of policies which encourage monopoly. There are still other prices that are paid for excessive protectionism. National industries which cannot compete abroad cannot earn foreign exchange in the markets of the world. If too many industries are unable to compete, there will obviously be a problem of how the country can pay for its imports.

Moreover, national industries which are shut off from the spur of competition have little incentive for keeping up with modern technological advances, to modernise their machines, to find better ways to improve the productivity of the individual worker. The result can be that the national industrial plant and wages remain static, while the competitive world passes them by on the road to more efficient production and to prosperity.

Consumer Has A Stake

If what I have said about excessive protectionism is sound, it follows that the consumer has a stake in keeping industry efficient and competitive. And that includes all of us, for we all buy consumer goods. Whether we consumers are employers or employees, whether we work in a factory, on a farm, or in an office, the quantity and quality of the things our money will buy is at least as important to our standard of living and our real income as the amount of money we earn.

And the same thing is doubly true of our wage earner. His real wages are reduced if he has to pay more for what he consumes. In addition, he loses his chance of a non-inflationary wage increase because the only non-inflationary way to increase his wage is to increase his individual productivity.

Efficient industries use the latest and best machines, which is the principal way to increase the individual worker's output. Protected industries which are not required to compete do not have the same need to find new and better ways of produce. It is no accident that, in free competitive economies, the real wages of the worker are much higher than they are in economic systems which avoid competition.

This brings me to a third tenet of our American economic system—the value of individual incentive. Most of us want to have a better life for ourselves and our children. It is this aspiration, plus the activity which it generates, that has ever been the mainspring of progress. For progress and economic growth require human effort. And the rate of progress and growth is related to the degree of human effort which people are willing to put into the job.

Some economic theories are premised on the perfectability of human nature—on the notion that man is capable of being selfless, of subordinating his own self-interest and that of his family to the concept of what the general welfare is. "From each according to his abilities, to each according to his needs" is the best known statement of this doctrine. The economic system of the United States rejects the notion that "you work for John and you may be sure he will attend to your needs" as impractical and utopian.

The people of my country are deeply religious and, I believe, as idealistic and as concerned about their fellow man as any people in history. But we also recognise the reality that man has a driving urge to satisfy his own needs and those of his family. We, therefore, believe that society benefits from both the idealism and the self-interest of man—that man can best contribute to the general welfare through his efforts to provide for himself and his family. We, therefore, consider the profit motive as an indispensable element of economic progress and concern ourselves with preventing excesses and man's exploitation by man. We assert that the validity of this thesis is proved by comparing, for example, the agricultural production in economic systems which have taken away the farmer's personal incentives to produce—to put more into the land than he takes out of it—with our own system, which provides guarantees to the farmer that his land is his to own, improve, develop, and make productive and to pass on to his children.

* * * *

PART III: Capital Investment; U.S. Growth and Achievement

This brings me to the fourth and final tenet of the United States economic system: capital and the capitalist are essential and useful elements in a free economic society. Under all economic systems, national incomes can only be increased as national production is increased. Economic development, or economic growth, is nothing more than the increase of national production plus the distribution of increased production on a broad scale so as to increase the purchasing power of the masses. In other words, the way to increase the purchasing power of the masses is to raise the individual income of the masses of the people through the processes which I already have mentioned.

Under all economic systems, the rate of increase in *per capita* production depends upon the extent to which a country first accumulates capital, and second, uses the accumulated capital, in combination with its material and human resources, in the efficient production of goods and services for its people. The importance of land resources and labour in the productive process is well known. Labour is entitled to its fair share of the product; in the United States real wages (the purchasing power of wages) are the highest in the world. But what principally distinguishes highly industrialised from developing economies is the amount of capital available for productive enterprise.

If one looks about the free world today, he must come to the conclusion that the single most important missing compenent in most economic development programmes is risk capital. Those countries which have created internal conditions which attract the largest amounts of risk capital are those which have the highest sustained rates of economic growth. Conversely, those which discourage risk capital, and which must then necessarily depend in the long run on their limited tax revenues, will have lower rates of economic growth. Capital is scarce because, as Ludwig E. Von Mises points out:

"The only source of the generation of additional capital is saving. If all the goods produced are consumed, no new capital comes into being."

Who are the savers that provide the capital component of economic development? In the United States today, they are the millions of people who have slowly, and with sacrifice accumulated capital and invested it in productive enterprises which create jobs and produce goods for the people. They are the capitalists. If they have correctly assessed the needs of the consumer, they make a profit until such time as a competitor makes a better product or becomes more efficient and hence able to sell at a cheaper price. Those who make a profit pay taxes which become progressively higher in proportion to their earnings.

Benefits of Competition

But the important thing from the standpoint of economic growth is that the capitalist contributes a scarce and essential component of a productive process which, within a few generations, has accomplished more material progress for the masses than was accomplished in the preceding thousand years. And we should not forget the risk of loss—the risk that the capitalist and the entrepreneur will fail to assess the consumer's needs and preferences. For example, some 600 companies have been formed in the United States to manufacture automobiles. Out of the fierce competition in this industry not more than a dozen significant producers exist today. But the result is a better product at a lower price for the benefit of the consumer than otherwise would have been possible.

In a competitive system such as ours, one's success or failure depends entirely on whether he satisfies the needs of the people better than his competitors. It is, therefore, no accident that in the United States the highest positions in industry are filled by persons who have "worked their way up" from humble beginnings on the basis of ability.

The success in private industry of the saver, the capitalist, the manager, the entrepreneur, the technologist depends not on position or status or family but on his merits—on what he himself has contributed to society in producing more efficiently and more cheaply. The sole judge is the consumer. He makes his decision without pity and without favouritism on the basis of his own self-interest. Could there be a fairer or more impartial judge or standard?

Some will disagree with the economic tenets I have referred to. But no one can dispute that these principles have worked well for the United States and for other countries too.

Since 1870, the gross national production of the United States has increased between three and four per cent per annum. This is not a rate which is as spectacularly high as has been achieved for short periods of time in other countries, but no one can match this record of sustained growth and achievement over a long period of time. As Walter Hallstein (the European Common Market President) points out in his recent book, *United Europe*:

"One of the aspects of the United States that impressed Alexis de Tocqueville, as it has impressed visitors from Europe to this day, was the extraordinary degree of prosperity that he saw around him. 'No people in the world,' he declared, 'has made such rapid progress in trade manufactures.... The Americans arrived as but yesterday on the territory which they inhabit, and they have already changed the whole order of Nature.'

"In the century that followed, the speed of this progress became even more striking. Between 1900 and 1938, the United States industrial production rose by 163 per cent; by 1955, the gross national product per head of population in the United States stood at $2,353..."

We have had a continuously rising curve of manpower productivity, steadily increasing wages, and an unmatched domestic purchasing power created by the simple act of sharing growth with middle- and low-income families. All of this has been accomplished because we have a climate of freedom and of competition; because we recognise the value of both the capitalist and the worker and the absolute importance of teamwork between them and with the entrepreneur and the technologist; because we recognise the value of individual incentive and the individual initiative which it produces; and because equal rights of every person, whether he is a citizen or a foreigner, are guaranteed by law.

ACCIDENTS IN CIVIL AVIATION

I.C.A.O.'S STANDARD OF MEASUREMENT MAY LEAD TO COMPLACENCY

By Our Aviation Correspondent

THE promotion of safety in the operation of air transport is something in which every traveller, or potential traveller, has a vital interest. It is significant, in that respect, that, in every country in the world, there are still millions of people who, although habitual travellers, regard air travel as far too hazardous to be even considered. It is, perhaps, equally remarkable that even hardened air travellers, almost without exception, experience, on almost every journey, short periods of quite considerable tension. One has only to glance at the faces of one's fellow passengers during take-off and landing to establish the truth of *that*.

The air transport industry, consequently, is extremely sensitive on this particular subject. Its spokesmen are always at considerable pains to stress the supreme importance which the airlines attach to the question of safety. The impression conveyed is one of "no compromise" on this important issue. Just how much of all this is lip-service, and how much is sincere, remains, of course, a matter of opinion but, to put it at its lowest, it is commercially essential to maintain not only the correct attitude but, also, a reasonable standard of safety. Otherwise, sales would very soon reflect the waning of public confidence.

Heretical Views

It is hardly surprising, in the circumstances, that when a certain well-known aviation personality voiced, on a recent occasion, what appeared to be somewhat heretical views on this very touchy subject, he created a storm of protest. Like ripples on a pool, the subsequent controversy has raged in ever-widening circles. Mr. Masefield, formerly Chief Executive of British European Airways, and now the Managing Director of a company which manufactures light aircraft, is one whose views are certainly entitled to considerable respect. Before proceeding any further, however, let us see to what this particular heresy amounted. The occasion, incidentally, was an address to the Guild of Air Traffic Control Officers.

"The first duty of any form of transport," said Mr. Masefield, "is not solely to be safe but to offer transport safely, reliably, and economically. All three have to be kept in balance and up to the best possible standards." That, then, was the kernel of the discourse which, quoted—and, not infrequently, misquoted—in both the lay and the aeronautical press, brought down on Mr. Masefield's head the aforesaid storm of criticism. Now, Mr. Masefield is the head of a firm selling aircraft, specifically designed for business firms and private owners, and, if there is an objectionable feature in the airways systems of Britain and Europe, it lies in the very severe restrictions which encompass the flying of such aircraft. These restrictions are imposed to make the operation of commercial aircraft safer.

The Safety Factor

It is perfectly understandable, nevertheless, that those concerned with the light aircraft industry should campaign for some relaxation of restrictions which a great many people consider to be quite unnecessarily severe. This, of course, was Mr. Masefield's principal aim in his address to the Guild. In that context, one suggests, his thesis is perfectly reasonable. He enlarges on this in a further paragraph. "Safety," he expounds, "is, inevitably, a matter of degree and the aims of safety in the air must be kept in balance with those of the widest possible use of air space. An indiscriminate use of air space would result in an unacceptable degree of risk, just as the intolerant insistence on restrictions, in an endeavour to eliminate all hazards, would bring all traffic to a standstill." And that, no doubt, is a perfectly reasonable statement of fact.

But the use of air space is only a single aspect of safety in the air and, whatever your standard of safety, you cannot—or should not—be selective in its application. What of all the other aspects? What, for example, of the day-to-day operation of airliners and all the rules and regulations which govern those operations? Are we to understand that here, too, safety is to be weighed against other considerations, because, carried to its logical conclusion, that is what Mr. Masefield's dictum implies. And it is here, one suggests, that the danger lies.

It is, of course, perfectly true that there can be no such thing as absolute safety. Even if we were able to build an aircraft which was 100 per cent faultless and to evolve a communications and control system equally perfect, the human link in the chain of control is, and will always remain, fallible. From that cause alone accidents are bound to occur from time to time. That we have to accept. Do we, however, have to accept that they are bound to occur at some arbitrary rate based on the number of million passenger-miles flown? It is an unattractive theory and one from which every instinct revolts.

A Dangerous Formula

The air transport industry, in common with every other commercial undertaking, is striving for profits. The sacrifice of even a small measure of safety might lead to a substantially lower cost of operation. Not everyone in the industry—and this applies particularly to the upper hierarchy in the board rooms and to many top executives—has an intimate knowledge of the operational side of the business. Their business, in fact, is to make the airlines pay. Indeed, probably only the aircrews, and, to a lesser extent, the engineers, really know what does, or does not, make for safety. These seldom have any voice in policy. One does not for a moment suggest that directors, or top executives, would deliberately, or consciously, countenance policies or practices which militate against safety. Do they always possess the knowledge, however, which would enable them accurately to assess all the factors involved?

Last year, so the International Civil Aviation Organisation claims (*vide* page 132 of *Commerce* dated 19th January 1963), the accident rate—or fatality per every 100 million passenger-miles flown—was, so far as scheduled operations were concerned, the lowest since the end of the war. Nevertheless, in air transport operations as a whole, more than 1,200 passengers were killed. Any improvement over previous years is, of course, to be welcomed—but how many of those accidents should never have occurred? There is still considerable room for improvement. However realistic it may seem, therefore, to suggest that there is some "acceptable standard of safety" or, worse still, an "acceptable accident rate," is a dangerous doctrine. Standards and formulæ are all very well in their proper place, but only constant vigilance and the unremitting efforts of all concerned with the operation of air transport will reduce accidents. The utmost that can be humanly achieved—that is the sole criterion in this issue.

SNAILS TO CLEAR WEEDS FROM WATERWAYS

Weeds that often clog American waterways and require expensive ways to remove them are expected to be eliminated in the future by a species of snail. The weed-eating snail, which already has given encouraging results in tests, is a large mollusk that acquarium owners of southern Florida once raised for the market.

Basing their planning on the appetite of the snail—known as *Marisa cornuarietis* L.—scientists of the U.S. Department of Agriculture's research station at Fort Lauderdale, Florida, last year used the snail in a test to control several aquatic weeds that impede important waterways in south-eastern United States. The results were better than expected. In water areas where the snails were placed, they made a clean sweep of four weed pests—coontail, southern naiad, Illinois pondweed and salvinia. All four have been troublesome in canals, ponds and lakes in the south-east. Snails inhibited the growth of water-hyacinth and alligatorweed, both of which are very troublesome aquatic plants. Snails also partially controlled water lettuce and fed readily on fanwort and filamentous algæ.

Further research work is continuing in this field in the United States. Before the snails are introduced into any rice-growing area, it is said, thorough tests will be made to determine whether any potential damage to rice and other crops would result. American research scientists believe that, as a result of their tests, aquatic weeds may be controlled at little cost by the Marisa snail.

EXPANSION OF ROURKELA STEEL PLANT

It is reported that representatives of ten West German companies had gathered in New Delhi last week to finalise negotiations with the Union Ministry of Steel and Heavy Industries and the Hindustan Steel authorities for individual expansion contracts connected with the Rourkela steelworks. The awards have been formalised in *provisional letters of intent* which will become effective as soon as the West German Government frees the credits reserved for this purpose. About 15 more contracts are expected to be signed at a later date. Foreign exchange requirements for all these contracts for the expansion of the Rourkela plant are estimated to total Rs. 55 crores.

In the meantime, it is heartening to know that the existing plant at Rourkela produced in December last pig iron at the rate of 105 per cent and steel at the rate of 90 per cent of the respective rated capacities. This shows that the Rourkela plant has successfully passed its running-in period, formerly estimated to last two years ending June 1963. The one main problem that remains is how to stabilise capacity output. It is here that the need arises, according to German experts, for a rationalisation scheme which will estimate the losses of time, manpower, machine-power, etc.

U.S. GENERATOR FOR TROMBAY STATION

The Tata Power Company, Ltd. has just placed an order for a 150,000-kilowatt steam turbine-generator with the International General Electric Company (U.S.). This machine is intended for the Company's Trombay thermal power station which is being expanded. Incidentally, the three existing turbine-generators of the Trombay plant are of European manufacture.

The new turbine-generator, which will have the largest capacity and highest steam pressure and temperature of any unit in India, is scheduled for delivery in the spring of 1964. The machine will use steam at 2,400 pounds per square inch gauge pressure and 1,050 degrees F. at the turbine inlet. The reheat section of the turbine will receive steam at 1,000 degrees F. The 3,000-rpm. unit will generate electricity at 50 cycles, the system frequency used in India.

U.K. STEEL FIRM SETS TWO RECORDS

Two output records have been achieved by the Steel Company of Wales, according to a recent announcement made on behalf of the Company. The first record is the production by one furnace of 2,000,000 tons of iron in 1,305 days. This is a British record. It is stated that very few furnaces in the world have produced this tonnage in such a short time. The other record is a throughput of 1,036,274 tons of metal by a hot metal mixer. Here the claim is that it is for the first time in the history of the British steel industry that the million-ton mark has been exceeded by one mixer.

As part of the plan for improving the estuarian approaches of River Hooghly, the Port Commissioners of Calcutta have just placed an order with a Dutch firm for a giant dredger costing Rs. 2.5 crores. This dredger, which will have a hopper capacity of 5,000 tons of spoil, will be the biggest in use in the country. Its purchase is being financed from the World Bank loans (Rs. 15 crores provided in 1958 and Rs. 10 crores in 1961).

The Calcutta Port, incidentally, has a fleet of suction dredgers but it has been found that they are not quite suitable for dredging the estuary. With the decision to develop Haldia as a satellite port in the estuary capable of taking deep-drafted vessels, it has become necessary to improve the estuarian approaches.

The Chairman of the British Shipbuilding Research Association, writing in *Lloyds Annual Review* for 1962, has just forecast new technical developments in four main fields of shipbuilding, namely, naval architecture, marine engineering, production and atomic energy. As the increased wear of cylinder components associated with the burning of heavy residual oils constitutes a big problem in marine engineering today, the designing of a new type of marine engine has also been expedited in Britain.

NEW PRODUCTS AND PROCESSES

Waste-heat Boilers from Waste Gases

AN Austrian enterprise, Messrs. Waagner-Biro A.G., Vienna, has developed a new type of waste-heat and gas-cleaning plant in connection with the L.D. steel making process, well-known all over the world. When the carbon of pig iron is burned off, big quantities of gases polluted by very fine iron oxide dust are set free. Before they enter the atmosphere, they must be carefully cleaned, a process which becomes possible only after the gases have been cooled down. Technicians studied the possibility to utilise the big quantities of heat transmitted when cooling off the gases, for steam production in waste-heat boilers, which required, however, quite a new design of the boilers. By adequate measures, such as steam accumulation and additional firing during blast intervals, a uniform steam supply to the steel mill's steam network is secured. Since the construction of the first waste-heat boiler plant of this type the Austrian enterprise has built, either directly or under licensing contracts, about 65 such plants in several countries, among which are the United Kingdom, Norway, Italy, India, Japan and Brazil. These plants have a global steam output of roughly 5 million tons per year which—exclusively produced by means of converter gases—correspond to an electric energy of roughly 1 million MWh per year. The importance of the new process for national economies is clearly illustrated by the fact that this steam quantity is produced by means of formerly unused waste energy.

Ice in a Few Minutes

A Zurich firm has placed a new ice-making machine on the market capable of manufacturing ice at a moment's notice, without any trouble. One has only to press on a button to obtain almost immediately a continuous flow of chip ice. It is claimed that, in this apparatus, the method of manufacture is much more rational and more economical than the system used hitherto. By way of example, it is pointed out that the cost of 220 lbs. of chip ice amounts to only S.Fr. 1.- (U.S. $=0.23). Chip ice is a practical substitute for ordinary ice in numerous uses; it is as clean as drinking water, does not stick together and melts very slowly owing to its extremely low temperature. It is ideal for iced packages, therapeutic uses, the stocking and transport of fish, the preparation of iced drinks and a host of other uses. The "Autofrigor S-400" machine is quite small, being only 85 cm. long, 61 cm. wide and 137 cm. high; in spite of its compact design, it produces approx. 880 lbs. of chip ice per 24 hours. Its hermetically sealed refrigerating group is driven by a 1½ h.p. motor on three-phase current.

Protective Heater

A simply designed and inexpensive "collar" heater to protect electric motors against excessive condensation during non-running periods has been introduced by a British firm. Condensation of moisture in electric units causes the motor to deteriorate and the usual remedy is to fit a heater element to maintain the internal temperature. Available space in a modern motor is limited and the small cartridge heater in general use until now has to run at a high temperature to maintain the necessary conditions inside the motor frame. The high surface temperature of these heaters can damage the adjacent motor winding insulation and cause a major breakdown. The new heater element makes use of the narrow gap between end winding and frame, the low surface temperatures of the heater dissipating heat to the surrounding core and air. The device will be particularly applicable in humid climates, or where a motor has to be used in damp conditions.

Multi-purpose Adhesive

A new type of adhesive which also acts as a filler and sealer has been introduced by a British manufacturer. It is a concentrated polyvinyl acetate emulsion adhesive, which provides a strong bond for a wide range of materials including brick, stone, plastic, glass, metal and fabric; it is particularly suitable for joinery work. The emulsion develops its bond progressively, allowing plenty of time for the accurate positioning or adjustment of the materials being fixed. A reasonably strong bond is obtained in a few hours, and full strength is reached over 24 hours. On uneven surfaces, or to repair cracks, it is diluted with water and mixed with plaster or sand and cement. As a sealer it can be applied to porous or bituminous surfaces before painting, diluted with five times its own volume of water. The mixture can also be used as a dustproofer on existing concrete floors, and for new floors, it can be added to the sand and cement mix to produce a non-dusting grease-resistant screed.

New Substitute for Metal

Heat-resistant coverings, which make it possible to replace high alloy steel by lower sorts of metal, will acquire great importance in the future, according to Academician Nikolai Semyonov of the U.S.S.R. Sitall is a compound of glass and crystal. It is obtained from a cheap raw material —slag. Sitall can be used, for instance, to make pipes, heat-insulating materials, ball bearings and casing. Soviet scientists are now working on types of sitall with pretailored properties. The new synthetic materials, it is said, will soon replace metal in a whole series of technological processes. Sitall can be made stronger than steel. It stands up to very high as well as very low temperatures and is chemically resistant to a number of substances. Soviet specialists have made 60 new instruments last year and prepared 26 of them for mass production.

Building Material from Sulphite Lye

A foam-type building material made of waste products from the forest industry has been developed by a Swedish engineer, Mr. Walther Klug, Boras. The production method has been patented by the Alvsborg Forest-Owners' Association, West Sweden, which plans to start experimental production of 20,000 cu. m. a year. The principal raw material in sulphite lye from pulp making which is evaporated to about 50 per cent solid content and then hardened with a resinous product and reinforced with such materials as waste wood, mineral products, peat or bark. The final product will be moulded into blocks and is reported to be fire-proof and sound-insulating. The blocks can be worked with ordinary joiner's tools. The material has been tested at the Chalmers School of Technology in Gotherburg and is said to have aroused considerable interest both in Sweden and abroad.

Cheap Safety Fusion Valve

An inexpensive safety fusion valve for cutting off the flow of inflammable fluids in case of fire has been manufactured by the Swedish firm of Garle-Produkter, Kungsor, reports the Swedish *Shipping Gazette*. It is intended for installation in oil heating plants, chemical factories, on board motor boats, etc. The safety valve is of the ball type. The valve stem is springloaded and kept open by means of a wheel, the hub of which contains a fusion insert. At a temperature of +72°C the insert melts and the spring closes the valve. The supply of the inflammable liquid is thus immediately cut off, which makes it easier to limit and extinguish the fire. The valve is manufactured in a large number of sizes. It can be fitted with a new wheel and insert once the original one has been fused.

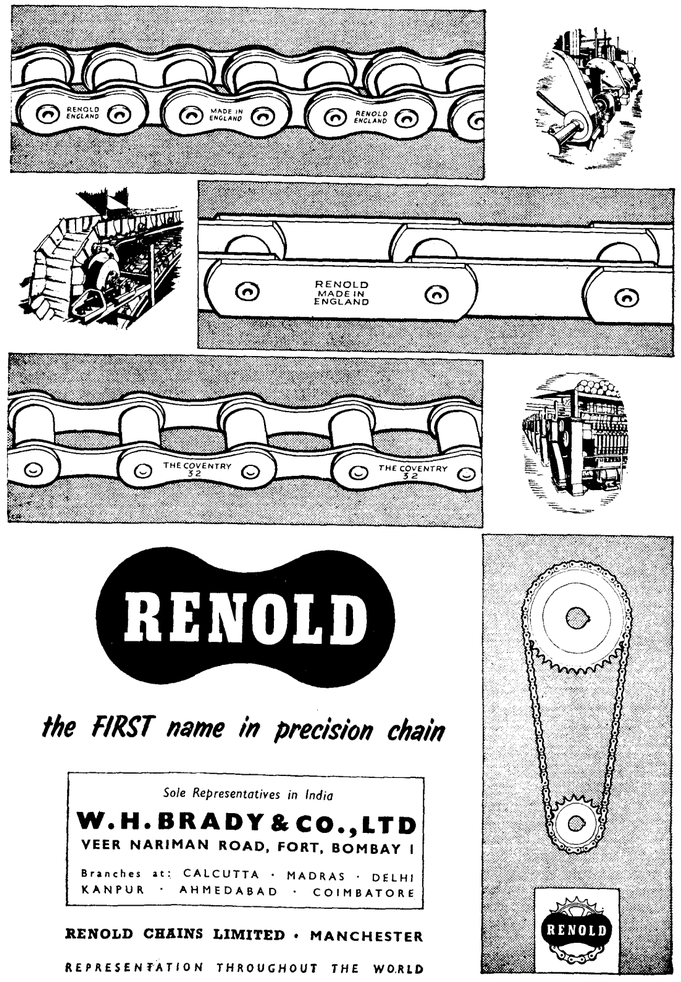
Transistorised Power Supply

A transistorised instrument which can conveniently be used as a constant voltage or constant current source has been developed by the Central Electronics Engineering Research Institute, Pilani. When used as constant voltage source, its output voltage can be continuously varied from 3 to 24 V, in two ranges. The maximum current which can safely be drawn through it is 1 amp. and the output impedence is 0.1 ohm. The output voltage variation is within 0.5 per cent for a line voltage of + 10 per cent. When used as a constant current source, it can deliver any predetermined value of current from 100 to 500 ma. into a load of 0 to 10 ohm. The variation of current in the load is negligible if line voltage changes by + 10 per cent.

Cable-sheathing Material

By blending synthetic rubber with two thermoplastics, a British firm has produced a cable-sheathing material of unusual strength for use in hazardous conditions. The new material is claimed to have particular value in heavy industries such as steel, shipping and building because it provides very high electrical insulation and protection to the cores against possible damage from internal friction. It has already been widely applied industrially in Britain, both for single and multi-core cables. In a large dockyard it has been specified for use in the general wiring of the lairages where it is subjected to obnoxious gases.

Alginic Acid from Brown Sea-weeds



Fifteen species of *Sargassum* collected from Saurashtra coast have been analysed for their alginic acid content by the Central Salt and Marine Chemicals Research Institute, Bhavnagar. A method for the extraction of alginic acid from these sea-weeds has also been developed. It consists in extracting the sea-weeds with sodium carbonate, bleaching the extract with sodium hypochlorite and precipitating the acid at pH 2-3 using 1N hydrochloric acid. The product is superior to the imported material in regard to its colour, purity and viscosity of its solutions.

New Drilling Instrument

Quantity production of a new type of hydro-monitor drilling bits has been started in the Soviet Union. They speed up the sinking of oil wells by 15-20 per cent, it is claimed. This hydraulic instrument, unlike the conventional ones, has three openings directed downwards along the movement of the drilling bit. Liquid clay, which is pumped under tremendous pressure into the well, usually carries the crushed rock to the surface. In the new instrument it fulfils yet another function: under high pressure this solution gushes from the drilling bit and hits the rock. Experts say that even the strongest rocks succumb to the force of this stream.

New Austrian Textile Fibre

A leading Austrian staple fibre concern recently developed a new textile fibre originally named Z-fibre. The new type of fibre soon won a special reputation particularly because of its high tensile strength, which in comparison with other types of fibre was increased by 15 per cent, and because of its excellent water-repellent properties. The Austrian Z-fibre is now being marketed under the name of "Viscolen."

INDIAN OXYGEN LIMITED

CURBS ON EXPANSION OF EXISTING UNITS UNWISE

CHAIRMAN, SIR J. D. K. BROWN'S STATEMENT TO SHAREHOLDERS

A WARNING against retarding the sound development of existing concerns, in the name of encouraging newer units to commence competitive production, has been uttered by Sir J. D. K. Brown, Chairman of the Indian Oxygen Limited, in his annual statement to shareholders circulated along with the audited accounts of the Company for the year ended 30th September 1962. Sir John points out that, whatever the justification for such a policy from the point of view of building up a socialistic pattern of society, it has grave dangers so far as the development of strategic industries generally is concerned. There is, according to Sir John, room for newcomers in the oxygen industry—in fact his Company welcomes the emergence of competitors—but it is unwise and positively harmful to stop expansion of existing concerns pending the going on stream of newer units.

The following is the text of the statement circulated by Sir John Douglas Keith Brown, Chairman, Indian Oxygen Limited, to shareholders with the annual report for 1962. The Twenty-eighth Annual General Meeting of the Company is to be held at Calcutta on 8th February 1963:

This review deals with a period which ended before the proclamation of the present emergency. Nevertheless, I feel that it is appropriate that I should begin it with a reference to the situation created by the attack launched by Chinese Government forces on Indian territory. While armed conflict between nations is rightly to be deplored by all thinking people at any time for the loss of life which it inevitably involves, and for the suffering which it entails for bereaved families and those who are rendered homeless, it is indeed tragic that, at a time when such vast efforts to raise the admittedly low standards of living of the mass of the Indian people were being made by means of planned industrial development, a part of that effort—possibly, a substantial part over a period of years—must now be diverted to increasing and modernising the country's defences.

For industry, the task today is to mobilise our total resources to ensure that, so far as it is humanly within our power, every demand of the Armed Forces is met without any avoidable delay; that where possible we should indeed anticipate these demands, and contrive by our ingenuity to overcome the shortages and the bottlenecks to production which are inevitable features of a situation such as that in which we now find ourselves. This involves the maximum degree of co-ordination, not merely between the various Ministries of Government, but within industry as a whole, and more particularly between Government and industry. Your Company is engaged in an industry which, in the context of defence production, is vital and I am sure I need hardly tell you that we have already assured the Government of India of our readiness to do whatever may be required of us to meet defence production demands.

Profits, Taxation and Dividend

The final outcome of the year's trading, after providing for depreciation and all taxation, is a profit of Rs. 60,82,869, as compared with the previous year's figure of Rs. 71,30,284. This may appear at first sight to be somewhat disappointing in a year in which gross income increased from Rs. 7.58 crores to Rs. 8.90 crores; but if the accounts are examined in detail it will be found that, in fact, the net profit, before charging taxation, increased from Rs. 1,07,55,284 to Rs. 1,35,49,869 despite the fact that the charge for depreciation alone increased by practically Rs. 5 lakhs, as compared with the previous year. The fall in net profits, after taxation, is accounted for by the fact that in addition to the necessity of providing for taxation at an increased rate this year, we have also had to provide for the shortfall in the previous year's taxation provision. This is an unavoidable adjustment in the case of a company such as ours, closing its accounts at 30th September, in any year in which the rate of tax on corporate profits is increased by the Finance Bill, which is not normally introduced until a date subsequent to the date of our annual general meeting. To aggravate the disparity in the taxation charge we have this year had to provide Rs. 13 lakhs, being the tax payable at 12½ per cent on the bonus issue of share capital made in September 1962—a heavy price to pay for a very necessary adjustment to our capital structure. While there can be differing views regarding the equity of taxing bonus issues which have been made out of accumulated taxed profits which might otherwise have been distributed to shareholders as dividends, I am myself quite unable to see the justice of levying an additional tax on the capitalisation of premiums which have been paid in cash by shareholders on subscribing for additional shares in a company. Personally, I feel that it is only right and proper that companies should be encouraged to issue additional capital at a proper premium; but I am sure that the practice would be much more acceptable to the investing public and to company managements if it were not for this inequitable tax on capitalisation of premiums which have been subscribed by the shareholders themselves in cash, possibly out of their own taxed savings.

Rising Costs

We continue to be faced during the year with rising costs in a number of directions. In terms of the recommendation of the Tariff Commission, the price of indigenously produced calcium carbide was increased from January 1962 and the consequent further rise in the cost of production of dissolved acetylene compelled us to raise our selling prices from 15th February 1962. Mild steel rods and core wire required for producing electrodes had to be largely imported at substantially higher prices, which forced us with reluctance to raise the selling prices of electrodes with effect from 1st November 1961 to cover some part of the increased cost of production. Generally speaking, however, increasing costs in other directions were absorbed by the expanded scale of our operations, which is the direct result of the heavy capital expenditure incurred in recent years and it was this which largely contributed to what I and my colleagues regard as a very satisfactory increase in turnover and trading profits.

At the time when the proposal to capitalise Rs. 1.04 crore out of the Company's reserves was announced in April 1962, it was made clear in a statement in the Press and to the Calcutta Stock Exchange that the proposed issue of bonus shares did not signify an intention to maintain the same rate of dividend on the increased capital, or indeed to increase at all the total amount distributed as dividends. In fact, in consideration of the increase in trading profits, your Directors have recommended a small increase in the distribution and you will see from the profit and loss appropriation account that the 12 per cent dividend proposed will absorb Rs. 43,68,000 as compared with the previous year's disbursement of Rs. 39,00,000 in respect of the 15 per cent distribution for that year on the smaller capital.

Sales

Sales, which last year were at a level of Rs. 7.56 crores, rose this year to Rs. 8.87 crores; an increase of Rs. 1.31 crore or 17 per cent, which I am sure you will agree is extremely satisfactory. These successful results have been achieved in spite of a number of difficulties. The Finance Bill which was introduced in the Lok Sabha on 23rd April 1962 provided for the imposition of an excise duty on oxygen. This development created quite a few administrative problems which, however, have since been satisfactorily resolved. On account of the foreign exchange shortage, procurement of adequate quantities of raw materials was never easy and shortages were particularly felt during the year in supplies of mild steel core wire used in electrode making and ammonium nitrate used in producing nitrous oxide. Continued power shortages at most of our operating centres again interfered with production and raised operating costs. It is a matter for satisfaction, however, that in spite of these difficulties the rising trend in our turnover over the past few years was successfully maintained. I may point out that, in the last five years, our turnover has shown a steady rate of increase of 16 per cent to 17 per cent *per annum* compound..

Substantial increases were achieved in sales of pipeline oxygen to the steelworks at Jamshedpur and Burnpur as well as in the sales of liquid oxygen explosives used largely in opencast mining, while sales of liquid and compressed oxygen also improved appreciably. Sales of dissolved acetylene again rose this year, as did our sales of electrodes and gas-user equipment, which were produced in greater quantities.

Share Capital and Finance

Just before the close of the year, the share capital was increased by Rs. 1.04 crore by the issue of 10,40,000 new ordinary shares as a capital bonus on capitalisation of Rs. 48 lakhs standing to the credit of share premium account and a sum of Rs. 56 lakhs forming part of our undivided profits standing to the credit of general reserve. As a result of this operation, the paid-up capital of the Company is now Rs. 3,64,00,000 and the opportunity of the general meeting which was held at the end of September was therefore taken to increase the authorised capital from Rs. 4 crores to Rs. 8 crores to provide for further issues of capital, which will inevitably be required to finance some part of the future development of our business, although I should make it clear that there is no immediate intention of issuing further capital.

Capital expenditure incurred during the year amounted to Rs. 1,32,35,506; this covered a number of projects all over the country, which are referred to in some detail hereunder. Most of our capital imports were arranged against foreign exchange entitlements already in our hands so that no new scheme for foreign exchange loan financing was involved, although you will have observed that our overdraft with our bankers in India increased further during the year. We have reached a stage, however, where, in order to finance further large-scale developments, which we believe to be urgently necessary, we shall have to seek further substantial loans in foreign currencies. Negotiation of such loans with the financial institutions and the procurement of the relevant import licences inevitably involves much delay, and in view of the relative urgency of implementing some of our development projects, we are particularly grateful to The British Oxygen Company Limited for having agreed in principle to make further advances by way of loan, up to a total of £500,000. I shall refer to this matter in more detail later in this statement.

Development and Expansion

At a meeting of shareholders held on the 27th September last, it was agreed to incorporate in our Memorandum of Association certain additional clauses dealing with the objects of the Company and we are now seeking the consent of the High Court in Calcutta thereto. As was explained in the statement which accompanied the notice convening the meeting referred to, it is proposed to undertake the manufacture and installation of, and to deal in, plant and machinery for producing and using gases and for manufacturing electrodes, gas-using equipment, welding transformers, etc. Ours being a capital-intensive industry, and most of our plant having previously been imported from abroad, you will appreciate that the implementation of this scheme will result in substantial savings of foreign exchange. Apart from manufacturing plants for our own use, we intend to undertake to install such plants and render technical assistance to others.

I had indicated last year that, in step with increasing oxygen requirements in the Jamshedpur area, the Company had taken in hand a programme to install three additional 400M³ oxygen plants in our factory there. I am happy to report that all three plants have now been installed and have commenced commercial production.

Acetylene Plant

The installation of a new dissolved acetylene producing plant at Gauhati was completed during the year and is now in commercial production. This supplements the oxygen-producing facilities installed at our own site there last year and provides a local source of supply of Assam's requirements of oxygen and acetylene, which, in the light of subsequent and recent events in that part of the country, can only be described as a most timely development.

Considerable progress was made during the year with our development plans at the Bombay factory. Civil work mainly centered round a new bay to accommodate the nitrous oxide plant and a new oxygen filling deck with an attached despatch office. The second 400M³ oxygen plant which was licensed for Bombay last year is now under erection and is expected to be on stream in February next year. The nitrous oxide plant was installed and has been in commercial production since October, constituting our second source of supply in the country of this important anæsthetic agent.

Land was purchased during the year at Hyderabad, and plans are now being laid for erecting a factory to manufacture oxygen and dissolved acetylene there.

An extension to the Electrode Factory building at Khardah, near Calcutta, was completed during the year and an additional electrode producing machine installed. The newly licensed wire mill has also just been erected and preliminary runs have already been made in drawing our own wire for electrode making. Additional machines were installed in the Equipment Factory at Beliaghata, which was reorganised along new lines some months ago.

Land has been purchased at Ranchi for building a modern factory to produce 'Loxite' cartridges, a component of liquid oxygen explosives. This activity has hitherto been carried on at Burnpur, where the available facilities have, however, now become outmoded.

Competition

In the same way that availability of electric power is indispensable to the development of the economy generally, so is an increasing supply of industrial gases essential if the output of the engineering industry is to expand. And just as in the case of electric power supply, the availability of industrial oxygen and dissolved acetylene particularly has to be planned and capacity installed well in advance of current requirements. In my statement last year, I discussed the need for perspective planning in the context of the Government of India's proclaimed industrial policy. Your Company has at all times endeavoured to keep its production facilities one step ahead of demand but in pursuing this policy it has been necessary from time to time to take account of industrial licences issued to potential competitors during the past few years. Unfortunately, in a number of cases where licences have been issued, implementation of schemes for the setting up of oxygen and dissolved acetylene plants has been delayed through various factors, such as the shortage of foreign exchange or the difficulty in finalising terms for technical collaboration. This is particularly unfortunate in the context of the present emergency, which has already thrown up pressing or potential additional demands which, with the best will in the world, can hardly be met from existing productive capacity. The present situation emphasises the necessity in an industry of this kind to have in reserve a margin of capacity to meet unexpected demands. The actual position is that the plants installed in the country are generally working beyond normal capacity and the margin, which preferably should exist between that capacity and peak demands, is simply not there.

Our own assessment of the position over the next ten years, made before the present emergency gave rise to potential increased demands from industries concerned with the defence of the country, shows that there is room for newcomers, whose emergence as competitors we in fact welcome; but I would utter a warning against retarding the sound development of existing concerns pending the coming on stream of the newer units. Whatever the justification from the point of view of the building up of a socialistic pattern of society, which, in the case of this particular industry seems very doubtful, such a policy has grave dangers so far as the development of strategic industries generally is concerned.

Management and Personnel

The six-year agreements with our various labour unions covering the bonus payable to the Company's employees other than officers terminated with the bonus payable in relation to the year ended 30th September 1960. The bonus payable for the year ended 30th September 1961 had to be determined during the year under review and I am happy to report that this was achieved amicably under an agreement reached with the unions covering the quantum of bonus payable for the two years, 1961 and 1962. The amount agreed was higher at five-twelfths of the basic earnings during each year, regulated within certain minimum and maximum limits.

I had referred in my statement last year to the selection of four members of the staff for intensive management training. These trainees have since been appointed officers and the results achieved fully justify the experiment. Officers of the Company continued to be trained, both inside the Company and outside at the Administrative Staff College of India at Hyderabad and through several other organisations as well as at Chartridge Lodge, a residential Staff College of The British Oxygen Group situated near London.

I have once again to record our particular gratitude to our Managing Director, Mr. A. K. Sen, who has not spared himself in directing the Company's activities. To him, to his colleagues in the management and to all staff and workpeople at our installations throughout the country, I once again offer on your behalf our grateful thanks. Having worked closely with Mr. Sen for over three years now I would assure you that this expression of thanks is no mere formality but signifies our sincere appreciation for a job well done.

Mr. C. Hawkins, who joined the service of the Company in 1952 and who was appointed a Technical Director in 1956, is severing his connection with us at the end of this month and I welcome this opportunity of extending to him our best wishes for the future along with our thanks for his services during the past ten years.

We have learnt only very recently of the death in the United Kingdom at the end of last month of Mr. D. B. A. Carty, who was appointed a Director and General Manager of the Company in 1937, and who was Managing Director from the end of 1942 until his retirement at the beginning of 1951. Mr. Carty played a most important part in building up this Company during its formative years and he continued to take a great interest in its welfare after his retirement. It is only appropriate that we should recall at this time his contribution to the growth of the Company and also that we should extend to Mrs. Carty our sympathy in her bereavement.

Technical Collaboration

We have been privileged recently to receive a further visit from Mr. J. S. Hutchison, the Chairman of The British Oxygen Company Limited. In company with your Managing Director and myself, Mr. Hutchison visited Delhi at the height of the fighting on the northern frontiers last month. Mr. Hutchison lost no time in pledging the full support and technical backing of The British Oxygen Company Limited, not only to your Board but also to the Government of India, through the Finance Minister, in meeting on a priority basis whatever demands might be placed on them. While this is most heartening, it is by no means all that Mr. Hutchison had to offer us when he was here. Appreciating the delays which might be involved in arranging for the necessary foreign exchange to meet the cost of the imported components of certain urgently required developments, he was in a position to offer on behalf of the parent company to make advances in sterling to your Company up to a limit of £500,000 on terms to be approved by the Government of India. I need not tell you that this is a most valuable gesture which should greatly assist us in implementing without delay demands for additional productive capacity which, it seems to us, must be placed on us before long. I might add that in addition to this offer and while Mr. Hutchison was still with us, the Board of The British Oxygen Company Limited undertook to contribute the sum of £15,000 in sterling to the National Defence Fund. The British Oxygen Company Limited is basically a Commonwealth enterprise and I welcome this opportunity of expressing publicly, on your behalf, our heartfelt thanks to Mr. Hutchison and his colleagues for the speed and the extent of their response to India's needs at this critical juncture in her history. Incidentally—a measure which you will surely approve—your Board has authorised a contribution of Rs. 3 lakhs to the National Defence Fund out of the funds of the Company; while contributions on a notable scale have been made directly by employees, who have authorised deductions from their wages and salaries for this purpose.

Apart from their generous response at the height of the present emergency, our Technical Consultants have continued throughout the year to meet all demands made upon them for technical advice, for the training and provision of staff and in various other directions. With our projected entry into the plant manufacturing field, we shall undoubtedly be making additional calls upon them while building up this side of our business. On your behalf, I extend to them our grateful thanks for their contribution in achieving the satisfactory results of the past year.

Prospects

Company Chairmen are notoriously vague in advising their shareholders in regard to future prospects. This, in my opinion, is a wise attitude born of caution and, in many cases, experience. The present emergency conditions prevailing in this country make it particularly difficult to venture an opinion on prospects for the current year. If I had been addressing you before the declaration of the emergency, I would have said that growth prospects continued to be favourable but that, being about to enter on another cycle of fairly massive capital expenditure, I should not expect to see the same spectacular increase in trading profits in the next year or two as we have seen in the accounts which are submitted with this statement; in other words, while long-term growth prospects remain favourable, because of increasing debt repayment obligations arising out of continuing capital expenditure, shareholders could not expect a further increase in dividend for another few years. While it is too early yet to make any pronouncement as to the effect of the changed conditions, which now obtain, our tentative conclusions are that it will probably be necessary to accelerate certain of our development projects in order to meet the demands of many of our customers who will be involved in the expansion of the country's defence industries. There are, however, so many imponderables connected with, for example, supplies of our own and our customers' raw materials, electric power and other items that I cannot usefully say more at this juncture. Your Company will, I assure you, do its utmost to meet whatever demands may be placed on it by the Defence Services directly or by industry generally and I am confident that, with the country-wide organisation which has been built up and with the invaluable technical backing of The British Oxygen Company Limited, we shall not fail.

Personal

As this is the last occasion on which I expect to address shareholders as Chairman of the Board, I take this opportunity of extending to my fellow Directors my thanks for their unfailing support, not only in the past year but throughout the period during which I have been privileged to be associated with the Company.

CALCUTTA,
20th December, 1962.

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

U.P. STATE COOPERATIVE LAND MORTGAGE BANK LIMITED

LUCKNOW

(Registered under Co-operative Societies Act II of 1912)

ISSUE OF 4½% DEBENTURES (1st Series)

(Guaranteed by the Uttar Pradesh Government)

Payable at Par on the 31st January 1973

Amount of Issue: Rs. 35,00,000

Issue Price: Rs. 100 for every Rs. 100

The Debentures are approved securities under the Indian Trusts Act, the Insurance Act and the Banking Companies Act. They are transferable by a transfer deed which is free of stamp duty. Interest is payable half-yearly on the 1st June and 1st December every year without production of the Debenture Scrip. The Debentures will be repaid at par on the 31st January 1973.

Applications will be received at the Head Office of the Bank at Lucknow from the 24th January, 1963 to the 31st January, 1963, both days inclusive, unless the subscription list is closed earlier. Copies of the prospectus and application forms can be had from the above office.

RAUF JAFRI, *President.* **S. N. TRIPATHI,** *General Manager.*

GROUP TERM INSURANCE SCHEME

L.I.C. INTRODUCES NEW PLAN OF FRINGE BENEFIT FOR EMPLOYEES

A NEW plan of group insurance, called One-year Renewable Group Term Insurance Scheme, has been introduced by the Life Insurance Corporation of India. It enables, to quote the L.I.C., employers to provide their employees, at a comparatively low cost, with adequate cover against premature death, in addition to normal retirement benefits. Although retirement schemes such as provident fund and gratuity instituted by many employers as required by law or voluntarily, have made a notable contribution to the economic well-being of employees, they have, points out the L.I.C., failed to mitigate the sufferings of the dependents of those employees who die a premature death. Protection to the family of employees can be given only through permanent plans of life insurance. Generally speaking, an employee, who is just trying to settle down in life, cannot afford to take out adequate life insurance under the normal plans during the early stages of his career. Nor can the employer be expected to provide life insurance cover under these plans, in addition to bearing the cost of retiring benefits. The new scheme devised by the L.I.C. seeks to meet this need.

As the name itself suggests, policies under the One-year Renewable Group Term Insurance Scheme are valid for a year but are renewable. Under the scheme, every member of the group, provided he is otherwise eligible, obtains life insurance cover upto a predetermined limit, without undergoing any test of insurability. As is the case with any other plan of life insurance the amount for which an individual employee is insured is payable in the event of his death. The sum for which an individual employee will be covered shall be determined according to the rules approved by the Corporation. Generally, the basis adopted for this purpose shall preclude individual selection and shall have regard to the conditions of service and the requirements of the employer.

Essential Conditions

One of the essential conditions of insurance under the scheme is that an employer contributes towards the cost of the scheme. The employer should either bear the entire cost (in which case the scheme is non-contributory) or he should require his employees to contribute on some uniform basis (in which event the scheme is contributory) with the balance of the cost being borne by the employer. In the latter case, the employers' contribution shall not be less than 25 per cent of the total cost. In a non-contributory scheme, where the employer bears the entire cost of the scheme, all existing employees and new employees shall join the scheme as soon as they become eligible and must continue to be covered thereafter. Where the employer does not bear the entire cost of the scheme but only a part thereof, at least 75 per cent of the existing eligible employees on the date of commencement of the scheme must join it, if the total number of employees exceeds 150. Where a smaller number of employees is to be covered under the scheme, the minimum percentage of eligible employees, who must join the scheme at the outset, varies according to the number of employees, as indicated below:

Total number of employees	*Minimum percentage*
Less than 75	90
75 to 100	83
100 to 150	78
151 and more	75

Here too all new employees must join the scheme as soon as they become eligible.

It is specifically laid down that no employee, having joined the scheme, can withdraw so long as he continues to be eligible. The number of employees covered under either the non-contributory or the contributory scheme shall not normally fall below 50.

As regards eligibility of employees to be covered under the scheme, a group of persons, working under a common employer, would be eligible for cover under the scheme if the employer agrees to meet a proportion of the cost of insurance. The employees must be confirmed, full-time, employees in active service. They must have completed continuous service of six months or such longer period as may be prescribed by the Corporation. An employee, who is continued in service beyond the normal retirement age will not be eligible for insurance under the scheme. Employees who are not eligible at the inception of the scheme on account of insufficient length of service would become eligible to join the scheme on the day following the completion of the qualifying period or such other date as may be specified in the rules framed for the purpose and approved by the Corporation.

The scheme is also applicable to employees in a proprietary or partnership firm, provided its main concern is the actual conduct of business. The scheme may be applied to any one or more categories of employees determined by the conditions of service.

Eligibility

The Corporation has laid down certain conditions of insurability. Each eligible employee may be covered under the scheme on his satisfying the following conditions:

1. He must be actively at work on the date on which his initial insurance or subsequent increase in his insurance takes effect or, if that date be a non-working day, on the previous working day.

2. He must not have remained absent from duty on grounds of ill-health during the prescribed period. Rules framed for the scheme shall *inter alia* provide for the minimum period of continuous service and the maximum duration of continuous or broken period of absence due to casual or inconsequential illness that may be condoned for the purpose of this condition.

3. If he is not actively at work on full-time basis, or if he is absent owing to illness or injury or leave of absence on the date he would have otherwise become eligible for initial insurance or subsequent increase in insurance, he shall be insured on the day on which he returns to active full-time work or on the date on which he satisfies the conditions described above, whichever is later.

A group will generally qualify for insurance on the basis of simple or automatic test of insurability not requiring medical examination or declaration of good health. After examining the circumstances pertaining to a particular group, the Corporation will determine the maximum amount of total insurance cover which can normally be given to any one individual employee on this basis. Such maximum amount of individual insurance, called "free cover" or "no evidence" limit, is the normal limit applicable to the group. The Corporation, however, reserves the right to require one or more employees in the group to furnish such other evidence of insurability or good health as may be deemed necessary. In any case, where the amount of insurance on the life of an individual employee, as determined by the rules, exceeds the "no evidence" or "free cover" limit, he will be required to furnish the Corporation with such evidence of health as the Corporation may require. The factors that would be taken into account by the Corporation in determining whether the group would qualify for insurance on "no evidence" basis and, if so, in fixing the "no evidence" limit for individual employees in the group will be the number of employees to be covered, the nature of their occupations, salary scales, service conditions, total volume of life insurance on the group etc.

Premium Rates

The rates of premium charged will generally depend upon the nature and location of business, class or classes of persons to be covered, aggregate amount of insurance and such other factors. The following table, however, indicates the specimen rates of annual premium per thousand rupees assured under the One-year Renewable Term Insurance:

Specimen annual premium per Rs. 1,000 sum assured payable on death within one year

Age nearer birthday*	Basic rates I	Basic rates II	Age nearer birthday*	Basic rates I	Basic rates II
	Rs. nP	Rs. nP		Rs. nP	Rs. nP
20	6.00	9.20	35	8.35	11.40
21	6.00	9.20	36	8.70	11.90
22	6.00	9.20	37	9.10	12.55
23	6.05	9.25	38	9.60	13.30
24	6.95	9.30	39	10.15	14.10
25	7.00	9.35	40	10.75	15.00
26	7.05	9.45	41	11.45	16.10
27	7.10	9.55	42	12.25	17.30
28	7.20	9.70	43	13.15	18.60
29	7.30	9.85	44	14.15	20.10
30	7.40	10.00	45	15.30	21.80
31	7.55	10.20	46	16.50	23.70
32	7.70	10.40	47	17.90	25.75
33	7.90	10.70	48	19.45	28.05
34	8.10	11.00	49	21.10	30.55
			50	22.90	33.30

* On the anniversary date of the scheme.

Normally, premium rates I are applicable to administrative and supervisory staff and rates II for industrial and other manual workers, when both these classes of employees have normal working conditions and are subject to normal occupational hazards or industrial risks. In the case of other categories of employees, as also in the case of the above categories of employees where the working conditions are different, the Corporation reserves the right to apply other rates of premium. If an employees' classification, salary or grade changes, the amount of assurance on his life shall be adjusted to that appropriate to his new classification, salary or grade according to the rules. The rates are subject to reduction, if the total volume of insurance on the lives of all employees exceeds Rs. 5 lakhs. So also, in the event of the mortality experience of the group being favourable, the policies will be entitled to a reduction in the rate of premium effective from the next renewal date, which is one year after the coming into force of a scheme in a particular undertaking.

The employer is responsible for the collection and payment of the premiums. Premiums are payable annually in advance. Half-yearly, quarterly or even monthly instalments are also, however, permissible. But there will be a surcharge of 1 per cent of the basic yearly premium for half-yearly, 1½ per cent for quarterly and 2 per cent for monthly modes of payment.

Once the conditions are fulfilled, the Corporation will issue a Master Policy to the employer or to the Trustees, where a Board of Trustees are administering the scheme. The policy will contain a schedule showing the names of the employees insured thereunder, their ages and particulars of insurance, including the effective dates of insurance. Certificates setting forth the details of insurance will be issued to the employer, or the Trustees as the case may be, for onward transmission to the employees. The certificates of insurance, which is not a negotiable instrument, and cannot be assigned or mortgaged, have to be surrendered for payment of claim when it arises.

Termination

Insurance on the life of an employee shall stop on (1) termination of the scheme, (2) termination of employment, (3) termination of membership of the employee in the defined categories, namely, eligible classes of employees, (4) termination by employer of insurance of any particular category of insured employees, (5) default in payment of premium within the days of grace allowed, and (6) the employee joining the armed forces.

One advantage claimed for the scheme, apart from cover against risks of death of employees in active service, is that premiums paid under the scheme are eligible for tax concession. Normally, under Section 17(2)(v) of the Indian Income Tax Act 1961 any premium paid by the employer to effect a policy of life insurance or annuity on the life of the employee is not considered a perquisite (a part of his taxable income) if such policies do not form part of the approved Provident Fund or Superannuation Scheme. The Central Board of Revenue has, however, given special tax concession to death benefits under the Group Term Insurance. Accordingly, (1) the premium paid by the employer under the scheme will be allowed as an expense for tax purposes, (2) the premium will not be treated as a perquisite in the hands of the employee, and (3) the benefits, if and when paid, will not be taxed in the hands of the beneficiaries. As the benefits are paid by the L.I.C., the employer cannot claim any tax relief thereon. If, however, the employer receives any amount by way of surrender value or return of premium, it will be taxable.

INDIAN INSURANCE DIRECTORY

One of the first casualties of nationalisation of life insurance was insurance publications. The mortality rate of insurance directories and yearbooks was so high that not a single publication of this category has seen the light of day in the past six years. The reappearance of the Directory under review (*Indian Insurance Directory 1962*, compiled and edited by V. N. C. Narichania, and published by him at 22, Sir P.M. Road, Fort, Bombay 1. Price: Rs. 7.50. Pages: 319) breaks a six-year tradition. The publisher can perhaps claim that this Directory is the only surviving insurance directory in the country. The publication is comprehensive in coverage but the insurance company statistics included in it are somewhat out of date.

HEALTH INSURANCE IN AUSTRALIA

Some of Australia's biggest hospital and medical benefit firms have been linked in a national organisation aimed at improving voluntary health insurance for the benefit of the contributors. Five non-profit making firms, covering five million people, have formed a new organisation to be known as the Voluntary Health Insurance Council. The Council will distribute information on the system of voluntary health insurance, and will promote research with the idea of improving the system.

CANADA LAUNCHES BIGGEST EXPORT DRIVE

EMPHASIS ON DEVELOPMENT OF TOURISM

THE Commonwealth countries, most of which had oriented their foreign trade to the requirements of the British market, received a rude shock when the U.K. Government took a firm decision to join the Common Market. After considerable heart-burning, these countries finally reconciled themselves to the prospect of losing most of the benefits of Commonwealth Preference. The British Government, it must, however, be said to its credit, has endeavoured to secure a phasing of the abolition of preferences over a period six to seven years. It now looks as though even this provision for smooth transition will be thrown overboard, if Mr. Macmillan's Government agrees to adhere to the Rome Treaty without adequate safeguards for Commonwealth trade, as demanded by the French President de Gaulle. It would mean in effect disruption of the traditional channels of Commonwealth trade. It is too early to say whether President de Gaulle will succeed in driving such a hard bargain with Britain. There are already indications that the other partners of the Common Market do not share Mr. de Gaulle's views on this question. While the final outcome is not certain, some of the Commonwealth countries do not want to take chances any more and to live on hopes of failure of the Brussels talks. They are sparing no efforts to diversify the structure and pattern of their export trade, without which their hopes of promoting exports will not be fulfilled. Canada, in particular, has taken a bold lead in this respect. Its anxiety to promote and diversify its exports is certainly understandable, because of the fact that, even if the U.K. does not join the E.C.M., Canadian exports, such as timber and forest products, will still be subject to severe competition in the U.K. market from other members of the E.F.T.A. One may feel that, in the U.S., a highly developed country and a close neighbour, Canada has a valuable substitute to the U.K. But Canadians are apparently not very enthusiastic about increasing their dependence on the U.S. for trade, for already, about 60 per cent of Canada's trade is with the U.S.

Diversifying Trade Pattern

It is only appropriate, therefore, that, in recent weeks, Canada should have launched several plans for export promotion, with emphasis on diversifying the pattern of its trade. The Canadian Government is planning to raise its exports during the current year to a record level. In fact, according to Mr. George Hees, Canadian Minister of Trade and Commerce, the programmes for export promotion chalked out for the current year (named collectively "Operation World Markets") constitute the biggest project ever undertaken for this purpose by Canada.

In 1962, exports from Canada are estimated to have touched a record of about $6,300 million, representing an increase of about one-sixth over 1960 (when they were $5,400 million). Shipments of wood, wood products and paper, agricultural products (notably wheat) and non-ferrous metals (aluminium, nickel and copper, as also iron ore) account for over two-thirds of total exports. Although primary products and simple manufactures dominate exports, several capital goods, including machinery, rolling mill products and farm implements, are finding an increasing share in Canadian shipments. Canada, it may be noted, ranks fifth among the trading nations of the world in terms of total volume and first among the nations in terms of *per capita* foreign trade. Its stake in exports can be gauged from the fact that as much as one-fourth of its national income is derived from exports.

Canadian Machinery

Among the major export promotion measures planned for the current year, particular mention may be made of arrangements being made for bringing to Canada a group of experts from all over the world to acquaint them with the machinery and equipments manufactured in Canada. The object of the visit is to give the overseas experts a firsthand awareness of the growing Canadian capacity to manufacture and export machinery of all types. The Department of Trade and Commerce has invited 200 representatives of foreign enterprises, including Government enterprises. These are persons known to be buyers of the kinds of machinery and equipment which Canada produces competitively. These engineers and technicians are from Britain and Continental Europe, from Asia and the Middle East, from Latin America and the West Indies, from countries in Africa and from Russia, Poland, Czechoslovakia and Yugoslavia. They will travel by air, singly and in groups, to arrive in Canada by 24th March 1963. Before they arrive, they will have been given individual itineraries, so that, in about 23 groups, they will visit two or three plants a day during the last week of March. Each group will thus see firsthand the capacity and the quality of workmanship of ten to fifteen Canadian factories. These plants are in many parts of Canada: in Quebec and Ontario, in British Columbia, the Prairie Provinces and the Maritime Provinces. The fields of industry include agricultural equipment, aircraft, automotive, construction, communications, electronics, hydro and thermal electric, process plant, speciality equipment as well as industrial equipment generally.

Almost coinciding with this visit of foreign buyers, there will be a national Samples Show at Toronto (on 2nd and 3rd April), which will exhibit a wide range of Canadian consumer products such as clothing, furniture, domestic appliances, building materials, food, furs, etc. This fair will be visited, among others, by 600 special invitees from the U.S., Europe and West Indies.

Trade Conference

Close on the heels of this fair, there will be a meeting at Ottawa of Canada's Trade Commissioners abroad, who will exchange ideas on increasing exports to overseas markets. Further, the assemblage of Trade Commissioners is proposed to be taken advantage of for exchange of information with private industrialists as well. Under a separate trade promotion conference to be held in April, Canadian businessmen will be able to meet Trade Commissioners in personal sessions and discuss the specific problems, and their possible solutions, with the latter. More than 2,000 industrialists are expected to take part in this conference. About 20,000 interviews are expected to take place during the conference.

The Canadian Trade Commissioners abroad have also been assisting the Canadian manufacturers touring abroad. About 20 Canadian trade missions went abroad in 1962, enabling 175 businessmen and representatives of organised labour to find out new market outlets in other countries. These missions, according to Mr. George Hees, Canadian Minister of Trade and Commerce, were successful not only in securing export orders directly, but also in laying foundations for future sales of Canadian products on a long-term basis.

Export Credits

Besides arranging trade conferences, the Canadian Government has been taking steps to increase the availability of finance for export credits. It was only last year that the Export Credits Insurance Act was amended to provide more funds for export credit. As a result of this amendment, the Canadian Export Credits Insurance Corporation, which was set up as early as in 1945 for providing both export credits insurance and long-term financing, will have as much as $900 million for direct assistance to exporters, of which $600 million is earmarked for insurance, and $300 million for direct financing of export sales on a long-term basis. Previously, the total funds for direct assistance were only $600 million. So far, $57 million have been made available to Canadian exporters covering a large number of capital goods involving six foreign countries. In addition, commitments have been made covering £100 million. It may be noted that, of this total of $157 million already authorised for long-term financing programme, over half was approved in 1962.

Tourism

In its drive for earning more foreign exchange, Canada has given a pre-eminent role to the tourist industry. According to Mr. Hees, the tourist industry is Canada's biggest single "export" industry. It is estimated that Canada's total income from overseas visitors aggregated no less than $550 million, a new record. It is proposed to double this income by 1967, the year in which a world fair will be held in Montreal. For this purpose, the administrative machinery is being reorganised. The services of the Travel Bureau are being integrated with those of the Department of Trade and Commerce. The work of the Travel Bureau is already being co-ordinated with that of the Trade Commissioners Service. The Trade Commissioners abroad are being provided with Travel Bureau literature and material in quantity for distribution in the areas for which they are responsible. Where field offices are, or will be, established for the Travel Bureau, the work will be co-ordinated with that of the trade officers to ensure that every opportunity for promotion of both travel and trade is achieved.

The other services of the Department of Trade have been made available to the Travel Bureau, such as the Trade Publicity Branch and its Editorial and Art Services Division, as well as the Canadian Government Exhibition Commission. Already, a number of projects have been started using the existing administrative services of the Department to coincide with the work of the Travel Bureau. As a corollary, the publicity operations of the Travel Bureau in future will take cognisance of the relationship between trade and travel. In setting up the Tours and Convention Section and working through the Trade Commissioners staff, every effort will be made to reach international and national trade associations to induce businessmen from other countries to visit Canada, either in groups or singly, with a view to increasing purchases of Canadian manufactures while stimulating travel to Canada.

Overseas Publicity

The Travel Bureau, it may be noted, handled a record number of enquiries, as many as 1.07 million in 1962, probably a record for any Government travel bureau in the world. It now corresponds each year with three million prospective visitors to Canada. The Bureau plans to set up in 1963 travel promotion centres in France and West Germany, similar to the one set up at London last year, besides appointing a General Manager for European Operations. Several other measures of publicity and propaganda are also proposed to be undertaken in other parts of the world, besides expanding tourist facilities within the country. During the current year, $150,000 will be spent in the U.K. alone on travel advertising programmes. A like amount will be spent for all the other parts of Europe.

In preparing for a banner tourist year in 1967, the Government is encouraging the Travel Bureau to follow a four-year development plan, starting immediately, under which it would maintain all its present activities while steadily expanding its advertising, publicity and promotion programmes to (1) intensify and extend Canada's travel promotion in the United States, and (2) reach out to other areas of the world. The proposed development programme for the Travel Bureau over the next five years would be (in millions of dollars):

	1963-64	1964-65	1965-66	1966-67	1967-68
Expenditure on advertising ...	2.1	2.35	2.62	3.75	3.94
Total expenditure ...	3.6	4.6	5.2	6.9	7.2
Target for travel income ...	625	700	800	900	1,000

In order to achieve these targets, plans have been drawn for advertising, public relations and publicity, besides expanding overseas representation facilities. The total advertising budget of the Bureau is expected to be around $7.2 million by 1967, or twice its present level.

TAXATION CLAIMS 55 PER CENT PROFIT OF INDIAN OXYGEN

RESERVES GET MUCH LESS

THE most striking feature of the pretty impressive results of the Indian Oxygen Ltd. (Chairman: Sir John D. K. Brown, Calcutta) for the year ended 30th September 1962 is frankly neither the 17 per cent, or Rs. 131 lakhs, increase in sales turnover at Rs. 887.67 lakhs nor the 17.7 per cent, or Rs. 32.83 lakhs, rise in gross profit at Rs. 185.34 lakhs but the more than 100 per cent, or Rs. 38.22 lakhs, rise in the provision for taxation at Rs. 74.67 lakhs at which level it claims 55.1 per cent, as against 33.7 per cent a year before, of the profit available after providing for depreciation (which has absorbed Rs. 5 lakhs more at Rs. 49.84 lakhs). The tax provision assumes importance over everything else, because it has nullified all the benefits of the larger turnover at the level of net profit which has turned out to be lower at Rs. 60.83 lakhs as compared with Rs. 71.30 lakhs a year before.

Because of the lower net profit, the amount ploughed back to reserves has been reduced sharply over the year by as much as 54.3 per cent or Rs. 20.92 lakhs to Rs. 17.60 lakhs. The dividend, too, has been pruned by three points to 12 per cent per annum per Rs. 10 fully paid ordinary share. But it is on a higher capital of Rs. 364 lakhs, as against Rs. 260 lakhs a year before, following the issue of fully paid 1,040,000 bonus shares on 27th September 1962. It will, however, be recalled that, while making the proposal to issue bonus shares, the Directors had clarified that the issue did not signify an intention to maintain the dividend or even to increase the total amount distributed as dividend. The dividend for the year absorbs, all the same, Rs. 4.68 lakhs more at Rs. 43.68 lakhs. The carry forward is Rs. 17.61 lakhs, as against Rs. 18.07 lakhs a year before.

The tax provision of Rs. 74.67 lakhs comprises Rs. 58.17 lakhs for the year, Rs. 13 lakhs for the bonus issue and Rs. 3.50 lakhs to meet the previous year's short provision. Referring to this subject of taxation in his annual statement to the shareholders, Chairman Sir John Brown has stated that adjustment in the tax provision for the past year is unavoidable, because the Company closes its year in September. The sharp increase in the year's provision has been due to the increase in the tax on corporate profits in the last budget as also because of the bonus issue. Sir John has dubbed the tax on bonus shares as inequitable.

The following comparative table gives a clear idea of the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1962	1961	1960	1959
Sale proceeds	887.67	756.58	645.52	554.18
Other income	2.03	1.43	2.13	0.61

High	50.12	42.00	45.00	29.25
Low	30.75	34.37	27.87	20.37

* Subject to deduction of tax.

While aggregate sales realisations and gross profit have continued to show a satisfactory improvement, the profit-margin (ratio of gross profit to sales) has only crawled up from 20.1 per cent to 20.8 per cent. The profit-margin, too, would have expanded more promisingly but for the increases in costs mainly of calcium carbide following the Tariff Commission's recommendation increasing the price from January 1962 and mild steel rods and core wire which had to be imported largely at substantially higher prices. Sir John Brown has, however, informed the shareholders that higher costs were met partly by increases in the selling prices of dissolved acetylene and electrodes. Another unfavourable factor was the continued power shortages at most of the Company's operating centres which interfered with production and raised operating costs. Under the new agreement with the employees' union for bonus for 1961 and 1962, the amount was raised to five-twelfths from one-third of the basic earnings.

Substantial increases, we are told, were achieved in sales of pipeline oxygen to the steel works at Jamshedpur and Burnpur as well as in the sales of liquid oxygen explosives used largely in opencast mining. Liquid and compressed oxygen sales also improved appreciably; dissolved acetylene sales rose again as did electrodes and gas-user equipment sales. This improvement in turnover, which reflected itself fully in higher gross profit, was the result of heavy capital expenditure incurred in recent years. Capital expenditure during the year under review alone amounted to Rs. 132.36 lakhs, as against Rs. 143.09 lakhs a year before.

The development and expansion plans progressed well. The three additional 400M3 oxygen plants which were under installation last year in the Company's unit near Jamshedpur area have commenced commercial production. A new dissolved acetylene producing plant installed during the year is now in commercial production. This supplements the oxygen producing facilities installed there last year and provides a local source of supply of oxygen and acetylene to Assam. The second 400M3 oxygen plant which was licensed for the Company's Bombay unit last year is now under erection and is expected to be on stream in February 1963. The nitrous oxide plant which had been installed during the year and is under commercial production from October last constitutes the second source of supply in the country of this important anæsthetic agent. Additional electrode producing machine was installed during the year after extension of the factory building at Khardah, near Calcutta, was completed. The newly licensed wire mill has been erected and has commenced trial runs. Additional machines were installed in the equipment factory at Deliaghata, which was reorganised before. It is proposed to erect a factory for the manufacture of oxygen and dissolved acetyelene at Hyderabad and set up a plant to produce *loxite* cartridges, a component of liquid oxygen explosives, at Ranchi. The Company's scheme for the manufacture and installation of plant and machinery for producing and using gases and for producing electrodes, gas using equipment, welding transformers, etc., awaits the necessary sanction from the Government.

To meet the financial requirements of the development plans, the Chairman has envisaged the need for further substantial loans in foreign currencies in addition to the £500,000 advance already offered by the parent company, namely, the British Oxygen Company Ltd. The parent company's loan is subject to the terms to be approved by the Government of India. According to Sir John, while the long-term growth prospects for the Company remain favourable, the shareholders cannot expect an increase in the dividend for another few years because of increasing debt repayment obligations arising out of the continuing capital expenditure.

The borrowed capital increased during the year from Rs. 166.83 lakhs to Rs. 227.46 lakhs mainly under bank borrowings which went up from Rs. 23.16 lakhs to Rs. 84.62 lakhs. The rest of the loan capital is partly in debentures and partly in the form of a loan of Rs. 75 lakhs from the parent company. Current liabilities also rose from Rs. 274.33 lakhs to Rs. 375.72 lakhs and, together with bank borrowings, resulted in a total indebtedness of Rs. 460.34 lakhs to outsiders. However, the liability is fully met by current assets and loan and advances aggregating Rs. 546.72 lakhs and investments amounting to Rs. 4.15 lakhs. The "own funds" of the Company comprise Rs. 364 lakhs in share capital and Rs. 139.97 lakhs in reserves and surplus. The gross block, which expanded during the year from Rs. 683.93 lakhs to Rs. 795.83 lakhs, has been adequately written down to Rs. 459.24 lakhs and, inclusive of work-in-progress of Rs. 97.04 lakhs, is shown at Rs. 556.28 lakhs.

Currently quoted at Rs. 30.75 *cum-div.*, the Rs. 10 fully paid ordinary shares of the Company offer, on an *ex-div.* basis, a net yield of 2.8 per cent per annum.

PESTICIDES GOES INTO PRODUCTION

Two major units of Pesticides Ltd., Bombay, have gone into production, one for the manufacture of benzene hexachloride and the other for copper oxychloride and cuprous oxide (technical grades). These units are part of Pesticides' plant located at Thana, which will take up the manufacture of a wide range of other pesticides (like malathion, zinc phosphide and parathion) as well during the coming few months. The unit for the production of malathion has already been put up and will be commissioned in a few days. The total cost of the project is estimated at Rs. 75 lakhs. It may be recalled that the shares of Pesticides were offered to the public in March 1961. The subscribed capital of the Company is Rs. 50 lakhs, of which an amount of about Rs. 35 lakhs has been fully paid up.

By far the largest unit at the Thana factory is the one for the manufacture of benzene hexachloride (B.H.C.), put up in technical collaboration with a well-known Japanese pesticides firm, Kureha Chemicals, Tokyo. This unit is designed for a normal capacity of 5 tonnes per day, or 1,800 tonnes per year, of B.H.C. (with about 13 per cent gamma isomer, as provided for under the specifications of the Indian Standards Institution). This unit, it is claimed, is one of the most up-to-date in the world, with most modern automatic control instruments and devices. The Company has also plans to manufacture lindane (which is the refined form of B.H.C., with 99 per cent gamma isomer). The requirements of lindane in India are now being met exclusively by imports.

The unit for the manufacture of copper oxychloride and cuprous oxide has an annual installed capacity of 460 tonnes. The melathion unit is designed to produce 30 metric tonnes per year, but its capacity is proposed to be expanded to 102 tonnes eventually.

Besides these three units Pesticides has plans to put up facilities for the manufacture of zinc phosphide expected to go into production in March 1963), organo mercurials like acetate, chloride and salicylate of phenyl mercury (July-August next), 2-4 dichloro-phenoxy acetic acid (end of 1963) and parathion (by the end of next year).

Transfer to Secretaries' and Treasurers' commission	64	82
,, ,, depreciation	4,87	4,86
,, ,, provision for taxation	6,35	6,18
Net profit	4,83	7,28
Balance brought forward	69*	74
Appropriations:		
Total available balance	5,52	8,02
Transfer to development rebate reserve	14	21
To preliminary expenses written off	1,00	2,00
Proposed dividends (taxable) 7.8% C. preference	1,56	1,20
,, ,, ordinary	2,40	3,20
	(6%)	(8%)
Dividend per ordinary share	[Rs. 6.00]	[Rs. 8.00]
Carry forward	42	1,41
Market value of equity share (in rupees):	1962	1961
High	117.50	147.00
Low	99.50	110.00

* After providing Rs. 72,000 being final dividend at 1.8 per cent on preference share capital for the two years ended 30th June 1961 (subject to deduction of tax).

Extracts from the Directors' report: Review of Operations: The 1961 special season started on 3rd September 1961 and ended on 21st December 1961. During this period 78,135 tonnes cane were crushed and 7,126 tonnes sugar produced at an average recovery of 9.12 per cent, which compares with 73,699 tonnes cane crushed and 6,697 tonnes sugar produced at an average recovery of 9.09 per cent during the previous special season.

The 1961-62 main season started on 23rd December 1961 and ended on 5th July 1962. During this period 1,30,907 tonnes Cane were crushed and 12,048 tonnes sugar produced at an average recovery of 9.204 per cent, which compares with 1,31,688 tonnes cane crushed and 11,693 tonnes sugar produced at an average recovery of 9.11 per cent during the previous main season. The slight improvement in recovery is due to better quality cane obtained during the year.

Loan on Mortgage: Under the provisions of the mortgage deed relating to the loan of Rs. 35 lakhs taken from the Industrial Finance Corporation of India against the security of the fixed assets and machinery spares at the Pettaivaytalai Factory, the fourth instalment of Rs. 2.50 lakhs towards repayment of the loan was made on 29th December 1961.

Kulittalai Cane Farms Private Ltd. As at 30th June 1962 the amount owed by Kulittalai Cane Farms Private Limited for rent was Rs. 2,90,911 (1961—Rs. 3,89,814) made up as follows:

	1961 Rs.	1962 Rs.
(a) Rent receivable in respect of land owned by the Company	2,19,375	1,70,000
(b) Rent receivable in respect of land leased by the Company from Mr. N. R. Sundaraja Iyer and others for the year ended 30th June 1962	1,70,439	1,20,911
	3,89,814	2,90,911

Since the date of the balance sheet an amount of Rs. 38,000 has been received against item (*a*). The amount of item (b) becomes payable to the Lessors as and when the rents on the same lands, which have been Sub-leased by this Company to Kulittalai Cane Farms Private Limited are received. Rs. 40,000 has been received against item (b) since the date of the balance sheet leaving a balance receivable of Rs. 80,911. The uncovered sum against item (*a*) is Rs. 1,32,000 which the Directors consider should continue to be regarded as doubtful. It is not considered necessary to make any special provision for this in this year's account. The Directors have the matter constantly under review.

Accounts in brief as at 30th June 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	60,00,000	Gross block	92,27,217
Reserves and surplus	18,17,106	—Depreciation	18,94,086
Taxation equalisation reserve	6,70,000	Net block	73,33,131
Other liabilities	1,04,73,820	Block in progress	3,09,614
		Current assets	1,03,82,055
		Cash	1,36,126
		Miscellaneous expenditure	3,00,000
	Rs. 1,84,60,926		Rs. 1,84,60,926

* Paid-up capital consists of 20,000—7.8 per cent. cumulative preference shares of Rs. 100 each and 40,000 ordinary shares of Rs. 100 each.

RALLIS INDIA LIMITED

NOTICE OF CLOSURE OF TRANSFER BOOKS

NOTICE IS HEREBY GIVEN THAT THE Transfer Books of the Company will be closed from 4th February, 1963 to 19th February, 1963, both days inclusive.

By Order of the Board,
KENNETH SHEPPARD,
Secretary.

16, HARE STREET,
CALCUTTA.
26th December 1962.

COMPANY MEETINGS AND DIVIDENDS

KIRLOSKAR BROTHERS LTD. Forty-second Annual General Meeting, Kirloskarwadi, District Sangli, 28th January 1963. Dividend: 10 per cent or Rs. 2.50 per share, subject to deduction of tax. Transfer books remain closed from 19th January to 4th February 1963, both days inclusive.

KESAR SUGAR WORKS LTD. Twenty-ninth Annual General Meeting, Bombay, 28th January 1963. Dividend: 20 per cent or Rs. 10.00 per equity share, subject to deduction of tax, payable on and after 19th February 1963. Transfer books remain closed from 14th to 28th January 1963, both days inclusive.

PAPER PRODUCTS LTD. Twelfth Annual General Meeting, New Delhi, 29th January 1963. Dividend: 18 per cent or Rs. 18.00 per equity share, subject to deduction of tax. Transfer books remain closed from 15th to 29th January 1963, both days inclusive.

GWALIOR SUGAR CO., LTD. Twenty-second Annual General Meeting, Dabra (Madhya Pradesh), 31st January 1963. Dividend: *Nil*. Transfer books remain closed from 16th to 31st January 1963, both days inclusive.

MYSORE SUGAR CO., LTD. Twenty-ninth Annual General Meeting, Bangalore City, 31st January 1963. Dividend: 30 per cent or Rs. 3.00 per equity share, subject to deduction of tax, payable on or after 15th February 1963. Transfer books remain closed from 18th to 31st January 1963, both days inclusive.

CHAMPARUN SUGAR CO., LTD. Annual General Meeting, Kanpur, U.P., 31st January 1963. Dividend: *Nil*. Transfer books remain closed from 23rd to 31st January 1963, both days inclusive.

INDIAN VEGETABLE PRODUCTS LTD. Thirty-fourth Annual General Meeting, Bombay, 5th February 1963. Dividend: 17 per cent or Rs. 17.00 per share, payable on or after 7th February 1963.

INDIAN OXYGEN LTD. Twenty-eighth Annual General Meeting, Calcutta, 8th February 1963. Dividend: 12 per cent or Re. 1.20 per ordinary share, subject to deduction of tax, payable on or before 5th March 1963. Transfer books remain closed from 22nd January to 8th February 1963, both days inclusive.

VOLTAS LTD. Taxable dividend of 14 per cent or Rs. 14.00 per share, for the year ended 31st August 1962, payable on 4th March 1963. Transfer books remain closed from 15th January to 4th February, 1963, both days inclusive.

RALLIS INDIA LTD. Taxable ordinary dividend of Rs. 8.50 per share, for the year ended 31st August 1962. Transfer books will remain closed from 4th to 19th February 1963, both days inclusive.

BOMBAY POTTERIES AND TILES LTD. Taxable ordinary dividend of 15 per cent or Rs. 15.00 per share, for the year ended 30th September 1962, payable on 28th March 1963. Transfer books will remain closed from 20th February to 20th March 1963, both days inclusive.

DALMIA IRON AND STEEL LTD. Taxable dividend of Re. 1.00 per share, for the year ended 30th September 1962, payable on 15th March 1963. Transfer books remain closed from 16th to 31st January 1963, both days inclusive.

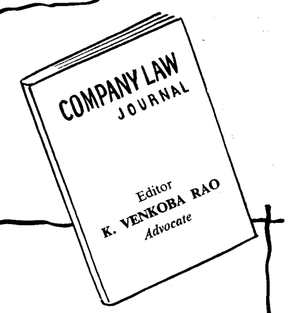
OUDH SUGAR MILLS LTD. Taxable dividend of 20 per cent or Rs. 20.00 per share, for the year ended 31st July 1962, payable on 11th February 1963. Transfer books remain closed from 16th to 31st January 1963, both days inclusive.

UNITED COMMERCIAL BANK LTD. Taxable ordinary dividend of 12 per cent or Rs. 6.00 per share, for the year ended 31st December 1962.

BANK OF INDIA LTD. Taxable final dividend of 12 per cent or Rs. 6.00 per share (making a total of 20 per cent along with the interim dividend of 8 per cent or Rs. 4.00 per share), for the year ended 31st December 1962.

BANK OF BARODA LTD. Taxable final dividend of 8 per cent or Rs. 4.00 per share (making a total of 16 per cent along with the interim dividend of 8 per cent or Rs. 4.00 per share), for the year ended 31st December 1962.

INDIAN BANK LTD. Taxable final dividend of 7½ per cent [includes bonus of 2½ per cent] or Rs. 7.50 per share (making a total of 15 per cent along with the interim dividend of 7½ per cent or Rs. 7.50 per share), for the year ended 31st December 1962.



STATE BANK OF TRAVANCORE. Taxable dividend of 5 per cent or Rs. 5.00 per share, for the year ended 31st December 1962.

CENTRAL BANK OF INDIA LTD. Taxable final dividend of Rs. 2.60 per share (making a total of 20 per cent or Rs. 5.00 per share, along with the interim dividend of Rs. 2.40 per share), for the year ended 31st December 1962.

DEVKARAN NANJEE BANKING CO., LTD. Taxable dividend of 11 per cent or Rs. 5.50 per share (includes interim dividend of 4 per cent), for the year ended 31st December 1962.

UNITED BANK OF INDIA LTD. Taxable dividend of 6 per cent or Re. 0.60 per ordinary share, for the year ended 31st December 1962.

NEWS IN BRIEF

THE report of the Mahalanobis Committee on the distribution of income in the country is in the final stages of preparation and is expected to be submitted to the Government of India in two months.

The State Trading Corporation is negotiating a barter deal with Japan for the export of chrome ore concentrates (of about 40,000 tons), against the import of ferro-alloys, special steel and steel plates. An agreement is expected to be finalised soon.

The Rs. 20-crore antibiotics project undertaken by the Central Government with Soviet collaboration at Rishikesh in U.P. is expected to be commissioned by the end of 1965. Plant and machinery for the project have already started arriving from Soviet Russia.

The output of cotton mills in December 1962 is provisionally placed at 73 million kilograms of cotton yarn and 378 million metres of cotton cloth. At the end of December, the composite mills of the industry held an estimated stock of 241,000 metric bales of cloth as unsold and 216,000 metric bales as sold (unlifted).

The Government of India has decided to set up an agricultural commodities board to regulate the wholesale and retail prices of foodgrains and a sugar marketing board to control production and sale of sugar. Disclosing this in the Lok Sabha, Mr. S. K. Patil, Union Minister for Food and Agriculture, stated that these bodies would not interfere in the work of private traders.

The Government of India has asked the Coffee Board to examine whether any modifications in its pricing policy are feasible. This request has been made, following the recommendation of the Estimates Committee of Parliament that the present pricing policy of the Coffee Board should be examined to see in what way it requires modification to give a fair return to the grower and to encourage exports, while avoiding too high an internal price.

The Government of India has informed the Andhra Pradesh Government that the work on the Rs. 20-crore Centrally-sponsored heavy electrical factory at Ramachandrapuram will have to be stopped or slowed down in view of the national emergency. It is learnt that an expenditure of over Rs. 3 crores has already been incurred on the project, the cost of preparing the project report itself amounting to over Rs. 50 lakhs.

A Bill to amend the Indian Tariff Act has been passed by the Lok Sabha. The Bill provides for automatic levy of countervailing duty on imported articles where an excise duty is leviable on similar articles produced indigeneously. It also provides for applying the normal rates of duty to certain items on which the duties were originally reduced due to commitments under the General Agreement on Tariffs and Trade (G.A.T.T.), but where such commitments no longer exist.

In a bid to stimulate the expansion of cement output, the Government of India has announced an incentive scheme. Under the scheme, a payment, ranging from Rs. 2.50 to Rs. 5.50, will be made to a producer for every additional tonne produced in excess of the highest level achieved by him during the previous three years. The Government has assured that this will not result in any change in the selling price of cement to the consumer. The scheme has been worked out in the context of prevailing shortage of cement and increased requirements during the present emergency.

The Government of India has granted seven industrial licences under the Industries (Development and Regulation) Act, 1951 for the production of coal in Madhya Pradesh. Of these, five licences have been issued to the National Coal Development Corporation, and two to private parties from Chindwara and Calcutta. These production units would involve a total annual investment of about Rs. 17.15 crores and would employ about 10,000 persons. Almost all these units will be located in eastern Madhya Pradesh at Korba and Katghora in Bilaspur District, Sukri in Chindwara District, Bangwan and Domarkachher and Kotma in Shahdol District and Korea and Kurasia in Surguja District.

The Planning Commission has approved the Rs. 49.22-crore Idikki hydro-electric project of Kerala for implementation as recommended by the Advisory Committee on Irrigation, Flood Control and Power Projects. Designed for an installed capacity of 800,000 kw., this project will also provide irrigation benefits for a total area of 115,000 acres in Thodupuzha, Meenachil and Vaikom taluks. The project will be situated within Kottayam and Ernakulam districts, across the River Periyar. Investigations of the Idikki project were undertaken by the Central Water and Power Commission in March 1957. The final project report was completed in September 1962. The scheme envisages the construction of two main dams, one across the Periyar at Idikki, and the other across the Cheruthoni river. The Periyar dam will be 540 feet high.

In a directive issued by the Department of Company Law Administration, it is complained that a large number of companies are not complying with the provisions of Rule 13A of the Companies Act 1956. Under the provisions of the Companies Act, 1956, every company is required to publish a notice in an English newspaper indicating the nature of the application proposed to be made by the company to the Central Government in respect of matters relating to the appointment, reappointment, remuneration, etc., of managing agents, managing directors, whole-time directors, managers, secretaries and treasurers. Rule 13A of the Companies (Central Government) General Rules and Forms, 1956, also provides that every company should send to the concerned Registrar of Companies a copy of the abovementioned notice, as published in the newspaper, along with all relevant particulars of the applications proposed to be made to the Central Government.

From Abroad

U.S. gold stocks fell by $50 million during the week ended 16th January 1963 to $15,928 million, which is the lowest level since May 1939.

The U.S. automobile industry, according to the Commerce Department, will produce 7 million cars in 1963, as against 6.9 million in 1963. Consequently, imports, which are now running well below the 1959 peak (of 668,000 cars), are expected to fall further to 350,500 cars this year. If the current year's estimate is proved correct, it would be the first time in over a decade that the U.S. car industry has enjoyed two outstanding production years in succession.

West Germany has decided to grant Syria a loan of DM350 million (£31.2 million) to finance the first stage of the Euphrates Dam project. The loan would be in hard currency repayable over 20 years in Syrian currency at 3.75 per cent interest. A Syrian delegation is due to leave for Bonn shortly to discuss the details of the dam project with the German Government. The conclusion of the agreement ends speculation as to whether the Syrians would accept Bonn's decision to reduce the original offer of DM500 million, made in July 1961, when Syria was still part of the U.A.R.

The world's first scheduled freighter service by pure jet airliner is being introduced by Trans-Canada Air Lines on its Montreal-to-Prestwick route. The service will begin on 1st March next. Operated by new Douglas DC-8F jets, five of which are being delivered to the airline during the spring, the once-weekly service in each direction will provide a considerably higher capacity and faster shipment of Scottish freight agents. The DC-8F airliner has been developed from the 131-seater jets already operating T.C.A's passenger services across the Atlantic. The DC-8F airliners are designed for palletted cargo—the pre-packing of consignments into specially constructed frames—which speeds up ground loading.

For the increasing number of American executives considering overseas investment, the American Express Company Inc. is offering a special foreign investment check-list. The check-list outlines a variety of problems that the firms should look into before setting up operations in a foreign country. It suggests a number of questions that might be asked on matters such as monetary system, export-import controls, marketing considerations, labour relations, real estate, law, taxes and Government. This special check-list can be obtained by writing to Mr. K. Connelly, Manager, The American Express Company, Inc., 21 Old Court House Street, Calcutta.

PERSONAL

MR. Taru J. Lalvani and Mr. K. C. Goel have been elected President and Vice-President, respectively, of the Paper Traders' Association for the year 1963.

Prof. M. P. Gandhi, Editor, *Major Industries of India Annual*, has been nominated a Director of the East India Cotton Association by the Government of India for the year 1963.

Mr. W. G. Brett, the newly-appointed Trade Commissioner for Canada in Bombay, has taken over the new assignment with effect from the 22nd in t. Mr. Bernard Horth, who was the acting Trade Commissioner until the arrival of Mr. Brett, is now Assistant Trade Commissioner in Bombay.

Mr. D. S. Joshi, Secretary to the Department of International Trade, Union Ministry of Commerce and Industry, has been elected first Vice-Chairman of the thirty-nation Committee formed under the auspices of the United Nations to organise a world trade conference early next year. Mr. Rosenstand Hansen of Denmark has been elected Chairman and Mr. Ladismav Smid of Czechoslovakia second Vice-Chairman.

The Governing Council of the United Nations Special Fund has approved an allocation of $43,673,500 for 42 projects for assisting 36 less developed countries and territories, including two regional projects—one for 14 countries and territories in Asia and the other to cover 12 countries and territories in the Carribbean area. In India, assistance to the tune of $873,500 has been announced for the Institute of Tropical Meteorology and International Meteorological Centre at Poona. An allocation of $2,200,000 has been earmarked for an Asian Institute of Economic Development at Bangkok. The new allocation will bring the total Special Fund commitments to about $254 million for aiding 288 projects affecting some 90 countries and territories. The total value of the projects assisted, including Government counterpart contributions, amounts to about $388 million.

MONEY SUPPLY SHORT

(From Our Own Correspondent)

BOMBAY, *23rd January*

The demand for and supply of money were fairly well balanced during the major part of the week under review, with inter-bank rate remaining unaltered at 5 per cent throughout. Since yesterday, however, the market was ruling firm, as the volume of floating funds was insufficient fully to meet the continued pressure of demand. Indeed, today, no money was left at all and the borrowers found it difficult to obtain their requirements except from the lender of last resort. But there was no change in interest rates. Conditions in Calcutta were reported to be rather stringent, the call rate being 5½ per cent, as against 4½ to 4¾ per cent a week ago.

The cloud of uncertainty continues to hang on the issue of revising the Inter-Bank Agreement in so far as it relates to the minimum lending rate in the light of the Reserve Bank's view that the rates need not be stepped up, since the recent rise in the Bank rate does not alter the average interest charged on its accommodation to banks. Meanwhile, an interesting proposal has been mooted to the effect that banks should charge the borrowers a small per cent on the unutilised portion of the credit limits sanctioned to them. There is nothing new in this proposition, as a section of bankers has been advocating it for a long time. The majority of bankers have not been in favour of the proposal, though some have been following it in select cases by charging ¼ to ½ per cent per annum. It remains to be seen whether, in the context of rising cost of operations, the majority of banks will agree to apply this penalty for non-utilisation of credit limits as a general practice. The banks have been asked by the Reserve Bank to value gold and gold contents of ornaments at the international price of Rs. 53.58 per 10 grams (or Rs. 62.50 per tola) of a fineness of 0.995) for purposes of advances already made. This in effect means a doubling of the margin for advances granted against gold and gold ornaments.

The market continues to be disinterested in the Government of India Treasury Bills. There was no change in the amount offered and accepted against tenders for the 91-day Government of India Treasury Bills sold on Tuesday the 22nd inst., namely, Rs. 2 crores, which was equal to the amount invited. There was also no change in the average rate of accepted tenders at Rs. 2.355 per cent per annum. The response to Intermediate Treasury Bills, which were on tap from the 16th to 19th inst., was a shade better, the bills actually sold amounting to Rs. 35 lakhs as against Rs. 5 lakhs in each of the previous two weeks.

India's foreign assets declined by Rs. 1.78 crore to Rs. 95.62 crores during the week ended 18th January 1963. The decline was accounted for entirely by balances held abroad which stood at Rs. 7.54 crores, as against Rs. 9.32 crores, while foreign securities held in the Issue Department remained unaltered at Rs. 88.08 crores. Loans and advances to scheduled banks rose by Rs. 2.16 crores to Rs. 27.20 crores, of which the share of usance bills alone was Rs. 16.43 crores. Notes in circulation show only a nominal increase of Rs. 39 lakhs, the total as on 18th January being Rs. 2,184 crores.

Scheduled bank credit expanded further by Rs. 11.52 crores to Rs. 1,453.67 crores during the week ended 11th January 1963. At this level, it represents a rise of Rs. 151.69 crores as compared with the total outstanding a year before. Inter-bank borrowings in the aforesaid week were also higher by Rs. 5.17 crores. Deposits, however, fell again, by Rs. 9.86 crores to Rs. 2,154.58 crores. Investments, too, receded by a further Rs. 6.71 crores to Rs. 635.51 crores.

In our last report, we had referred to the downward revision in the Reserve Bank's support prices for three Central Government loans, namely, 3 per cent 1966-68, 3½ per cent 1966 and 3¼ per cent 1964. It is now reported that the Reserve Bank has indicated offers to buy these loans at still lower prices: Rs. 96.05, Rs. 99.10 and Rs. 99.25, as against Rs. 96.15, Rs. 99.25 and Rs. 99.35 respectively. The purchase price of 3½ per cent 1965 loan has also been lowered from Rs. 99.25 to Rs. 99.10. Excepting for this development, the Gilt-edged market was listless. In view of the good demand for money in the short-term market, there was a preponderance of sellers.

In the foreign exchange market, the rupee eased somewhat *vis-a-vis* the dollar, the banks' selling rate for ready T.T. dollars being Rs. 477.25 per 100 dollars, as against Rs. 477 a week before. Their buying rate (T.T.) was, however, unchanged at Rs. 473.75. On the New York Exchange, the £ sterling softened a little in terms of the dollar. The spot rate declined from 280.590-280.620 cents to 280.450-280.490 cents and the rate for three months' forward from 280.280-280.310 cents to 280.080-280.120 cents.

* * * *

The total contributions in gold and gold ornaments brought into the Central account of the National Defence Fund at New Delhi upto the close of business on 19th January 1963 amounted to 1,234.275 grammes approximately equivalent to 105.855 tolas. In addition, contributions in cash amounted to Rs. 33.90 crores. This amount includes Rs. 25 lakhs received from the United Kingdom and Rs. 35 lakhs from other countries.

It is proposed to grant foreign exchange facilities to a limited number of students who wish to proceed to the U.K. in April 1963 to serve articleship with firms of chartered accountants with a view to appearing in the examinations conducted by the Institute of Chartered Accountants of the U.K. To qualify for release, the candidates should be graduates with good records and must have made arrangements with the firms of chartered accountants agreeing to accept them as articled clerks.

MAD RUSH FOR BULLION HALTS

(From Our Own Correspondent)

BOMBAY, *23rd January*

The previous week's mad rush for bullion, especially for the available high quality gold ornaments, cried a halt this week. Now that the rush was no more, even jewellers preferred to call it as simply mad. Not only was the previous week's furious buying lacking but the normal demand also tapered off as a result of dealers having pushed up prices to abnormally high levels. Consequently, the week under review saw some recession in silver, the price of which alone was quoted in some sensible way. According to the official rates of the Bombay Bullion Association Ltd., ready silver per one kilo opened five points lower at Rs. 225 on Friday the 18th inst. (Thursday was a holiday on account of Vivekananda birth centenary) and sagged to Rs. 219 by Monday. On Tuesday, however, it recovered to Rs. 221.50 and was quoted today at Rs. 221, as against Rs. 230 a week ago. This setback was caused by a sharp increase in average daily arrivals to 40 bars from 20 bars in the previous week as against which offtake shrank from roughly 15 bars to seven bars.

As for gold, two different rates were quoted, one for the so-called licensed dealers and the other for the so-called unlicensed dealers. This was rather a curious development, especially when the Gold Control Board was still not known to have issued licences to dealers who had sought the same. The rate for licensed dealers remained practically unchanged at Rs. 100/102 at which level it had settled down last week after having been up to Rs. 106. The rate for unauthorised dealers fluctuated during the week from Rs. 92 to Rs. 85. The rate quoted by jewellers for the 22-carat ornaments was also unchanged at Rs. 105 per 10 grammes. However, the making charges were reduced by jewellers and were charged at the rate of about Rs. 12 per bangle as against as much as Rs. 20 last week. The normal making charges used to be, we are told, roughly Rs. 5 a bangle. Unofficially, sovereign declined during the week by five points to Rs. 70. In the previous week, no definite quotation for sovereign was available.

At the informal meeting of the members of the Bombay Bullion Association last Saturday, a seven-man committee was constituted to submit a memorandum to the Government for resumption of forward trading in silver. Mr. Chandulal Kasturchand, President of the Association, is the chairman of the committee. No definite deadline has been set for the committee to complete the memorandum.

Silver in New York rose to 125.4 cents a fine ounce on Saturday the 19th inst., and to a new 43-year peak of 125.6 cents two days later, at which level it was roughly four cents below the monetary rate of 129.3 cents. In the previous week, the price was 125.2 cents. Insufficient supplies to meet users' requirements occasioned the spurt and the turnover on the 19th inst. was again estimated at 400,000 oz. Official circles were said to be unperturbed by trade estimate of the price rising to the monetary rate and were said to be confident of handling such a situation fairly easily by retiring silver certificates. The U.S. Treasury has on hand 1,600 million oz. of silver bullion backing the certificates. Meanwhile, the U.S. gold reserves were reported to have dropped to 15,928 million dollars, the lowest level since May 1939. This was the first decline in the past 11 weeks, the exact fall being $50 million.

In London, ready silver closed ½d. higher at a new peak of 107½d. and forward appreciated to close at 108d., as against 107¼d. in the previous week. Gold was a shade higher at 250s. as compared with 249s. 10½d. a week ago, with the dollar price mentioned at 35.06¼, as against 35.05¾.

The 6.5 per cent Gold Bonds (1977) of Rs. 100 each were quoted at Rs. 120 on the Bombay Stock Exchange on Monday the 21st inst. for the first time since they had been issued first on 12th November 1962. The rate was unchanged yesterday. At that rate, the redemption yield on the Bonds works out to 4.52 per cent.

The following table shows the trend of prices during the week under review:

	23-1-63 (closing)	High	Low	16-1-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (.996 fine) ..	221.00	250.00	219.00	230.00
London—				
Gold	250*s.*	250*s.*	249*s.*10½*d.*	249*s.*10½*d.*
Silver Ready ..	107½*d.*	107½*d.*	107*d.*	107*d.*
Silver Forward ..	108*d.*	108*d.*	107½*d.*	107½*d.*
New York—				
Silver	125.6 cents	125.6 cents	125.2 cents	125.2 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

* * * *

According to Mr. G. B. Kotak, Chairman of the Gold Control Board, persuasion and pleas to the public to control the urge to buy gold in any form were expected to help Government realise the twin objectives of forcing down the price of gold and eradicating smuggling. Disclosing this at a Press conference in Bombay on Friday the 19th inst. at the end of the two-day first meeting of the Board, Mr. Kotak emphasised that the authorities expected the public not to buy even 14-carat gold. Once demand tapered off, he added, price would decline and incentive for smuggling gold would disappear. He wanted the price to decline much below Rs. 85 a tola—possibly to Rs. 70 a tola as indicated by the Finance Minister earlier. He did not think that the lower price would encourage smuggling of gold from India to the neighbouring countries on any large-scale, as the smugglers would find it more profitable to obtain gold from the other sources of supply at the international price and smuggle into other countries. On the other hand, Mr. Kotak thought that lower gold prices would help hold the general price-line. He pointed out that, in present times, the public had outlets other than gold like Government and industrial securities, bonds and banks, to invest its savings.

Answering questions from journalists, the Chairman of the Gold Control Board stated that the 30-day time limit from 10th January for dealers to dispose of jewellery made from gold above 14-carat had been determined carefully and prescribed to avoid big losses to traders. As the Government had deemed it to be sufficient, the time limit was unlikely to be extended. The Board could, however, amend the limit in specific cases on their merits. No plans to control distribution and regulate the price of 14-carat gold was proposed by the Board. The price, it was stated, would be determined by market forces.

Dealing with the question of meeting industrial demand for gold of superior fineness, Mr. Kotak said that industrial users would be issued permits to obtain their requirements from dealers who would be permitted to stock high quality gold and sell it only to permit-holders. In all other cases, Mr. Kotak clarified, dealers would sell gold in any form of fineness not exceeding 14 carats. Jewellers were free to buy high quality gold ornaments but only for the purpose of melting down into 14-carat jewellery.

A member of the Gold Control Board estimated that there were in the country about five lakh goldsmiths, including silversmiths. Roughly 25,000 dealers in the country, of which more than 1,000 were in Bombay, were expected to register themselves and obtain licence under the Gold Control Rules. Licences were yet to be issued to dealers, but those who had registered themselves with the Board were deemed to have been granted permits. Goldsmiths, too, could seek registration for which there was practically no bar for anyone engaged in gold in one way or another. Licence fee for goldsmiths might be reduced from the level of Rs. 100 as specified for dealers.

The ceiling on non-ornament gold holdings fixed at 50 grammes per adult applied to "juridical entities" which included joint families, trusts and temples. In the case of a single family, both husband and wife could keep without declaration 50 grammes of gold each and their children could have 20 grammes each, provided all such gold was in different pieces. (In this connection attention may be drawn to the official clarification made in regard to declaring individual gold holdings. An individual declaring his stock can send the return in triplicate by post or messenger to the Central Excise Office in his area and need not necessarily file his returns personally in the presence of an excise inspector. The words "duly signed and sealed by the inspector of Central excise" in the rules regarding declaration of stocks by individuals had created an impression that the submission of the returns had to be made in the presence of the excise inspector.)

More protests against the Rules were heard from the trade. Some 500 Goan goldsmiths were reported to have met at Panjim on Thursday the 17th inst. and requested the Union Government to permit the manufacture of ornaments with at least 22-carat gold. A similar plea was made on behalf of the Madhya Pradesh Bullion Merchants Association. The Jammu Goldsmiths Association demanded revision of the Rules which, it said, had thrown some 700 goldsmiths in the city out of employment. According to that Association, the manufacture of 14-carat ornaments will involve heavy machinery and equipment which goldsmiths cannot afford. West Bengal's Finance Minister, Mr. Sankardas Bannerji, went on record as having told the Press in Calcutta yesterday that the Gold Control Order had failed. Adding that that opinion was not his but Mr. Morarji Desai's, he observed that it would be seen to that the Order did not fail in West Bengal. Speaking to reporters at Madras on Sunday the 20th inst., Mr. Morarji Desai ruled out the possibility of either reviewing the Gold Control Rules or permitting the making of ornaments of more than 14-carat gold. The Finance Minister said that it was possible to make ornaments of 14-carat gold, if silver instead of copper or in combination with copper was added to gold.

COTTON FUTURES RECOVER

(From Our Own Correspondent)

BOMBAY, *23rd January*

The cotton futures market, after having ruled distinctly easy till Monday, the 21st inst., staged a recovery yesterday. The recovery persisted till the close today. The earliness was due mainly to selling prompted by reports of heavy accumulation of unsold stocks of cotton in terminal markets and weakness of spot prices. In fact, official trading came to a standstill on two days, namely, Friday the 18th and Saturday the 19th, as the Jarilla March contract had declined below the weekly limit of fall fixed by the Forward Markets Commission. The lowest permissible limit for the contract for the week ended Saturday, the 19th inst. was Rs. 669. No deals could therefore be put through below this level officially. This level was reached on the 16th inst. itself. Hence trading was automatically suspended although, in private deals, the contract declined to as low at Rs. 660. The lower limit for the current week ending 26th January, is Rs. 659, that is, Rs. 10 below the previous week's floor rate. This level was touched on the very first day trading was resumed officially, that is, Monday, the 21st inst. There was, as noted above, a recovery since then, thanks to fresh buying and the strength of other commodity markets. The contract improved to close at Rs. 667.75.

The pattern of trading in the spot market at Sewri remained largely unchanged. Mill buying was limited in view of the tendency of prices to decline. Moderate business was reported in Vijay, Digvijay, L.147, Co2 and Kalyan. Traders are optimistic that the Government would persuade

itself to issue a fresh quota for Bengal *Deshi*. The East India Cotton Association is reported to have decided to recommend a further export quota for 75,000 bales of Bengal *Deshi*. It is suggested in some quarters that, in view of the urgent need to earn more foreign exchange, mills should switch over from Bengal *Deshi* to other equivalent varieties and make available more *Deshi* cotton for export. Mill demand for foreign cotton centred mainly round U.S and Sudan growths. Mills were, however, reluctant to buy U.S. cotton in bulk because of the high prices. Moderate demand was noted for East African and Egyptian growths.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 670; Buri 1,051; Gangaganagar 745; L147 1,200; Co2 1,450; Menoufi 1,500; Karnak 154 1,471; Sudan G5S 1,290.

The easy trend witnessed in the Karachi cotton futures market towards the close of last week gathered momentum during the week under review. Both the January and March contracts receded on selling by local and upcountry operators. The decline in export demand from China and lack of domestic spinner interest was the main influencing factors. The N.T.R.G. January contract eased from Rs. 71.95 to Rs. 70.25 and the March contract from Rs. 72.95 to Rs. 72.25.

Quiet conditions prevailed in the Liverpool cotton futures market during the week. Turnover was limited and price movements narrow. Washington advices gave no indications as to what final shape the proposed new legislation for U.S. cotton would take. However, in view of the tightening supply position of U.S. cotton, sellers in Liverpool were reserved while buyers were not prepared to advance previous bids. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closing rates.

March 23.95 (23.90); May (23.85); January (Sudan) 29.25 (29.75).

Futures trading in the New York cotton market was greatly affected by uncertainties about the proposed legislation for cotton. Spot prices, however, continued to firm up, thanks to increasing evidence of pressure on free supplies.

A Bill, which seeks to make U.S. cotton available to domestic users at prices at which it is available to overseas buyers, was introduced in the House of Representatives on the 17th inst. by Mr. Harold Cooley, Chairman of the Agriculture Committee of the House. It proposes to amend the Agricultural Act of 1956 to enable the Commodity Credit Corporation to make payments in kind or in cash to persons other than the producers of such cotton in such amounts as will make such cotton available for domestic use at prices not in excess of the prices at which cotton of comparable quality is made available for export.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago.

(In cents per pound)

	22-1-63	15-1-63	8-1-63
March	34.67	34.68	34.65
May	34.70	34.70	34.71
July	33.78	33.77	33.90
New York Spot ...	35.10	34.95	34.95

HEDGE FOR STAPLE FIBRE YARN SOON

(From Our Own Correspondent)

BOMBAY, 23rd *January*

Staple fibre yarn stockists in Bombay will soon have hedge facilities in the form of monthly non-transferable specific delivery contracts for the 2 x 40 yarn for the first time under the auspices of the Bombay Yarn Merchants' Association and Exchange Ltd., if everything goes well. The Association which had so far been conducting forward trading in staple fibre yarn, has sought the permission of the Forward Markets Commission to commence trading in such contracts. It has chosen to do so in order to have smooth trading under the express consent of the Commission. A set of specially prepared by-laws has been submitted to the F.M.C. and the sanction is expected in a fortnight.

The need for hedge facilities in staple fibre yarn has been felt all the more because of the continuous decline in prices even after forward trading in such yarn was banned by the Government on 17th December 1962. The ban on futures trading was apparently meant to arrest the fall. However, as against Rs. 672 and Rs. 702 per bale of 200 lbs. at which the December 1962 and February 1963 settlements for 2 x 40 yarn were closed on the aforesaid date, the currently ruling price is only Rs. 640. The persistently low level of prices, it is said, has made the approved stockists cautious in accepting further stocks offered to them by mills. Last month, a certain mill in Bombay could actually deliver no more than 250 bales out of the 1,000 bales offered to its stockists and a certain Southern mill could dispose of only 50 bales out of 250 bales offered by it to its authorised principal dealers. This reluctance on the part of stockists has been growing in the absence of hedge facilities. The Association has apparently thought that it cannot obtain the Government's permission to revive forward trading at this juncture. It must have, therefore, decided to start trading in non-transferable specific delivery contracts. The contracts will be for yarn of seven mills, namely, Century, Madhavnagar, Bharat of Nagda, Gopalkrishna, Coimbatore Spinning, New City and Kiran. The Board of the Association will make the goods of comparable quality tenderable in order to avoid the possibility of a squeeze or an undue rise in prices.

The Union Minister for International Trade, Mr. Manubhai Shah, is reported to have promised sympathetic consideration of the Southern India Millowners' Association's suggestion for an upward revision in the prices of lower count yarns. A delegation led by Mr. D. C. Kothari, President of the Association, met Mr. Shah at Madras on Saturday the 20th inst. It urged for revision of prices of yarns of 40 counts and below, in view of the increase in raw cotton prices and higher electricity duty imposed on spinning units.

Imports of art silk yarn into Bombay from January to October 1962 aggregated less than 7.3 million kg. The U.S. was the major supplier with 2.68 million kg., followed by West Germany with 1.53 million kg., the U.K. with 909,000 kg. and Italy with 734,000 kg. Imports of synthetic yarn during the same period amounted to 2.66 million kg.

During the week under review, the yarn market continued to be weak. Prices declined further in the absence of ready demand. Amongst art silk yarns, 120D National Rayon lost 14 nP to Rs. 12.03 per kg. and 120D S.I. Viscose were 13 nP lower at Rs. 12.78. Centurys 75D moved down from Rs. 18.41 to Rs. 18.15. Among 2 x 40 staple fibre yarns, Centurys were down by 7 nP at Rs. 7.08 and Citys by 13 nP at Rs. 7.70, but Kohinoors rallied from Rs. 7.83 to Rs. 8.01. Cotton yarns were easier, with 10s Podar shedding 50 nP to Rs. 17.50 and 60s Finlays declining by Rs. 1.25 to Rs. 67.25.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	23-1-1963	16-1-1963
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12.03	12.17
Century 75D	18.15	18.41
S. I. Viscose 150D	10.87	10.93
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.	8.01	7.83
Century	7.08	7.15
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.50	18.00
20s Modern	24.50	24.50
22s Century	25.50	24.25
32s Madura	30.00	—
40s Hind	—	33.75
60s Finlay	67.25	68.50

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

TIPPY TEAS STRONG

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 17th *January*

Offerings in sale No. 3 held on the 15th inst. amounted to 544,000 kgs. Quality was generally well maintained. The market met with useful demand but at lower rates. Low mediums and mediums attracted fair support but prices for these types declined irregularly by 5 to 10 nP with fannings grades receiving better support than last week. There was good enquiry for good mediums which were quoted steady. Highgrowns again continued irregular and generally sold at lower rates, except for a few selected lines. Fannings grades in general were in less demand than brokens. Clean black leaf descriptions were well supported but inclined a little easier. Unorthodox descriptions were well competed for at dearer rates, and so were whole leaf grades. Tippy teas continued strong.

The quotations (per kg.) were:

	1963	1962
	Rs.	Rs.
Low mediums	4.15-4.75	3.70-4.05
Mediums	4.75-5.10	4.05-4.80
Good mediums	5.20-5.80	4.90-5.70
Nilgiri B.O.P.	5.60-8.30	5.60-9.25

The average price realised in sale No. 3 was Rs. 4.89 as compared with Rs. 4.95 in the previous week and Rs. 4.91 in the corresponding sale last year.

In dust sale No. 3 held today, 234,000 kgs. were offered. There was fair demand at lower rates. Low mediums and mediums eased irregularly by 10 to 20 nP, whilst the better mediums were barely steady. Coloury Wynaad types met with less support than of late and often registered declined by up to 40 nP. Highgrowns elicited irregular support and were generally lower. C.T.C. dusts were about steady, but unorthodox types were irregular and sold at prices below last. Clean black grainy descriptions also inclined easier. Residuals and fibrous kinds sold well but only at lower rates.

The average price realised in dust sale No. 3 was Rs. 4.18 as compared with Rs. 4.33 a week ago and Rs. 4.06 in the corresponding sale last year.

Colombo: There was good demand. Best dimbulas were easier by 10 to 20 cents. Below best were very irregular and eased by up to 10 cents. Medium Uvas were firm, whilst lowgrowns were slightly dearer. There was strong support for all B.O.P. fannings.

London: *North Indian and other growths*: Monday's sale met with good demand and prices ruled firm on last week's rates.

Ceylon and South Indians: Offerings in Tuesday's sale aggregated 28,668 packages, of which 9,852 packages were from South India. There was good demand. Ceylons were firm with the exception of plainer kinds. South Indians were well supported at prices quoted steady with the poorest kinds sometimes selling at rates above last.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 4: 385,000 kgs. offered. Strong demand. Low medium and medium brokens barely steady. Fanning 10 to 15 nP dearer. Good mediums and unorthodox fully firm, occasionally dearer. Highgrowns higher with quality."

RECOVERY IN GROUNDNUTS

(From Our Own Correspondent)

BOMBAY, 23rd *January*

The feature of trading in the oilseeds market during the week under review was the smart recovery in prices of groundnuts, after a sharp fall in the initial sessions. The earlier setback followed long liquidation on bearish crop reports from the South. Recovery, however, set in towards the close on hopes of improvement in political situation in view of the Colombo Plan proposals for a possible settlement of the Indo-Chinese dispute. The sentiment was also influenced by better export inquiries for extractions and H.P.S. groundnuts and slackness in arrivals from upcountry centres at lower prices. Castorseed, linseed and cottonseed futures contracts, too, rallied in sympathy with groundnuts. Spot seeds ruled generally easy on reports of bumper crop from producing centres. There were also fears of large new crop arrivals in a few weeks' time.

The trade took note of the emphasis laid by the Central Oilseeds Committee, at its meeting at Hyderabad on Sunday, on the schemes for increasing per acre output of oilseeds. Mr. A. D. Pandit, President of the Committee, advised producers to adopt scientific methods of production and storage to improve productivity. He observed that the increase in oilseeds output in the last ten years had been due entirely to extension of cultivation to marginal lands. In the case of groundnuts, in particular, there had been a large increase in area under cultivation which was accompanied by a decline in yields.

Groundnuts April 1963 contract fell from Rs. 204 to Rs. 199.12, before recovering to close at Rs. 206.87. Nizam bold rose by 50 nP to Rs. 39.50; it had gone down to Rs. 38 earlier. Khandesh quality improved by 37 nP to Rs. 40.37. Oil railway receipts, which had eased from Rs. 16.30 to Rs. 15.80, closed higher at Rs. 16.35.

Castorseeds June 1963 contract put on a rupee to Rs. 161.50, after an initial fall from Rs. 160.50 to Rs. 158.62. March 1963 contract fell from Rs. 158.50 to Rs. 154, but improved subsequently to close at Rs. 159.25. Madras small gave way from Rs. 32.62 to Rs. 31.62 initially, but recovered to Rs. 32.12 at the close, but still lower by 50 nP over the week. Oil B.S.S. was steady at Rs. 13.70, but oil commercial lost 20 nP to Rs. 12.75.

Linseed March 1963 contract closed 25 nP higher at Rs. 33.69, after fluctuating both ways between Rs. 33.87 and Rs. 32.94. Bold ready shed Re. 1.50 to Rs. 33.50. Linseed oil receded by 40 nP to Rs. 13.60.

Among cottonseeds, April 1963 contract hardened by Re. 1.50 to Rs. 90. White, however, shed 25 nP to Rs. 19.50.

The following table shows the closing prices of oilseeds and oils on Wednesday 23rd January, as compared with those of two previous weeks:

	23-1-1963	16-1-1963	9-1-1963
	Rs.	Rs.	Rs.
Groundnuts			
January 1963 contract	—	195.50	194.00
April 1963 contract	206.87	204.00	207.87
Nizam bold	39.50	39.00	39.37
Khandesh quality	40.37	40.00	40.50
Oil ex-mill*	16.40	16.40	16.70
Oil commercial*	16.35	16.80	16.50
Castorseed			
March 1963 contract	159.25	158.50	159.50
June 1963 contract	161.50	160.50	162.50
Ready Madras	32.12	32.62	32.25
Ready Kanpur	30.37	31.37	31.00
Oil B.S.S.†	13.70	13.70	13.55
Oil commercial†	12.75	12.95	12.85
Linseed			
March 1963 contract	33.69	33.44	35.62
June 1963 contract	—	34.62	—
Bold ready	33.50	35.00	37.50
Linseed oil†	13.60	14.00	15.00
Cottonseed			
January 1963 contract	—	93.50	93.50
April 1963 contract	90.00	88.50	92.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

GOOD DEMAND FOR TEAS

(From Our Own Correspondent)

CALCUTTA, 22nd *January*

Although the quality of tea on offer at export sales here yesterday was slightly poor, demand continued to be good and prices, therefore, hardened further. Tea occupied a good portion of the available shipping space. Shipments to the United Kingdom were heavy. Forward bookings up to the end of February have been sizable. Shipments, after February, are, however, expected to fall considerably till the beginning of the next season's sales. The impressive increase in the U.K. stocks by 4 million lbs. to 145½ million lbs. in the week ended 11th January was in line with the heavy shipments after the strike by the Pakistani crew belonging to the Assam-West Bengal river services had ended.

World production of tea in 1962 has now been estimated at 1,307 million lbs., at which level there is a shortfall of 13.4 million lbs. over the year. This estimate had led to steadier conditions in last week's Mincing Lane sales. Prices for brighter liquoring African teas gained in London, and, among Ceylon's offerings, the broken orange pekoe fannings were buyers' favourites. North Indian offerings totalled 45,837 packages in two auctions and, although demand was good, prices were unchanged owing to poor quality. Similar conditions prevailed as regards Pakistani offerings which totalled 1,421 packages. The quantity from Pakistan had been shipped prior to the recent imposition of export ban in an attempt to relieve serious domestic shortage. The price for quality teas was 4*s.* 9*d.* to 5*s.* 9*d.* per lb., as against 4*s.* 9*d.* to 6*s.* in the previous week, and that for plain tea was unchanged at 2*s.* 10*d.* to 3*s.* 6*d.* per lb.

Contrary to earlier expectations, North Indian production in December 1962 was higher by 2.4 million lbs. as compared to that in December 1961. This has brought output for 1962 as a whole up to 573.1 million lbs., disclosing a shortfall of 25 million lbs. With the increase in cost of production in tea gardens and the fall in output, the percentage of profit has fallen. This is only too evident in the conspicuous absence of genuine investment interest in tea shares. Further, there is anxiety in regard to the gardens near the Sino-Indian border. Taking the combined average for the superior and inferior teas, prices realised in auctions have been slightly higher in 1962, although it has been estimated that total realisations by the industry must have fallen. Any advantage that any particular gardens may have had over the increased prices appears to have been completely negatived by increased costs and fall in output. The interim labour award, difficulties in border areas necessitating increased expenditure, increased transport charges for tea sent out, air freight on garden stores when transport by ship had been suspended have all pushed up costs.

In the circumstances, the tea industry has once again urged a rational revision of taxes in order that it be left with adequate finance for replanting. The industry has also drawn Government's attention to higher price for chemical fertilisers. If Government follows a price policy for agriculture as a whole, it is wondered why tea is not defined as agriculture. Speaking at the annual meeting of the Dooars Branch of the Indian Tea Association recently, the Chairman, Mr. J. G. Day, referred to the increasing trend in costs, and regretted that the interim increase in wages was recommended by the Wage Board without consultation with the industry. He expressed satisfaction at the prospect of tea finding free entry in the E.C.M. countries, and felt certain that exports would increase, but demanded that Government should help the industry in bringing down costs.

Tea exports from India in 1962 are estimated at 214 million kg., a rise of 9 million kg., over the 1961 level. However, foreign exchange realised is estimated to have been the same as in 1961, namely, Rs. 124.6 crores because while prices of quality teas had been higher those of plain teas had been lower. Referring to these figures, Mr. A. S. Bam, Chairman of the Tea Board, whose speech was read out at the above meeting, said that, had extraneous factors not affected exports in November and December the total exports would have risen to 227 million kgs. Mr. Bam noted with satisfaction that exports to some important markets, including Australia, the U.S., West Germany, the Irish Republic, the Netherlands, Egypt and Afghanistan, had increased.

At the dusts sale, held last week, offerings totalling 27,956 packages met with good general demand. Darjeelings with improved flavour met with good attention and realised higher prices. Plain and medium orthodox teas were in good demand at lower prices, but the brighter lines were fully firm. Legg-cut teas showing an improvement in quality were better, but others eased. Medium C.T.Cs were irregular. Keen competition was in evidence to the good C.T.Cs on offer, and their prices advanced. The quotations per one kg. (in rupees) inclusive of excise duty, were: Good Assam C.T.C. dust 6.70 to 7, medium Assam C.T.C. dust 5.60 to 6, legg-cut dust 5.00 to 5.30, medium Assam dust 4.15 to 4.80 and plain orthodox dust 3.85 to 4.10.

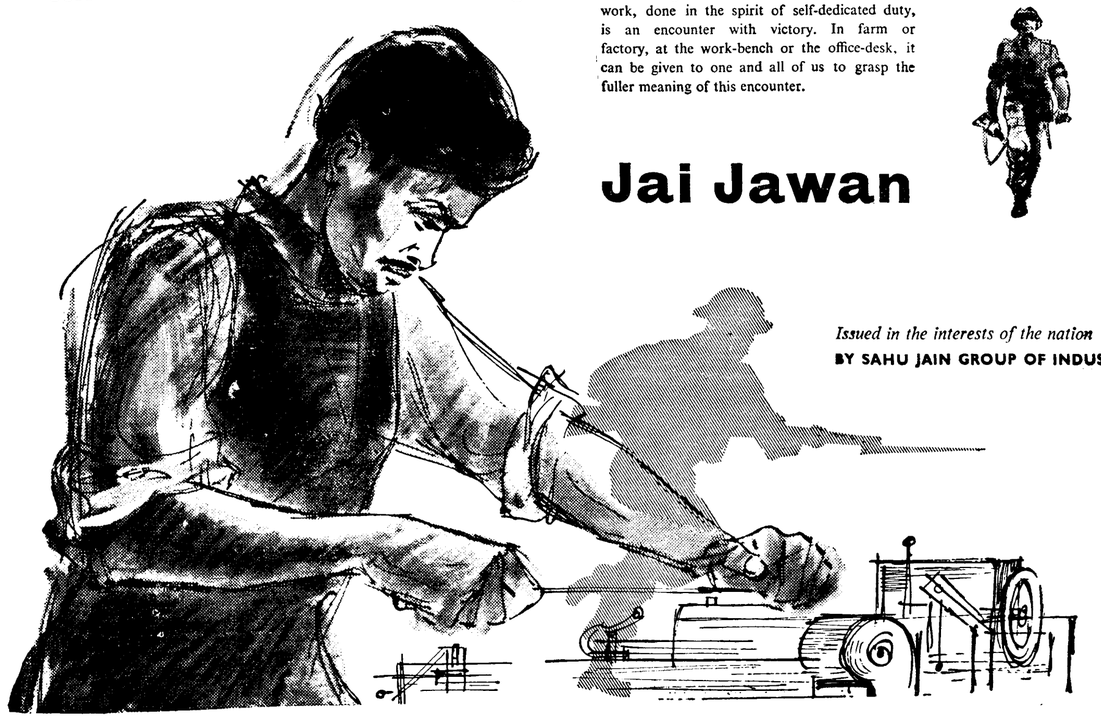
Offerings at yesterday's export sale totalled 67,173 packages and met with good general demand. Prices for the better varieties gained. Darjeelings were fully steady, with the selected lines following quality recording higher prices. Tippy teas hardened, while whole leaf grades were unchanged but fully firm. Plain orthodox teas met with good attention, and the clean exportable fannings hardened. "Teas for price" also gained. The better liquoring Dooars and medium Assams were fully steady, with B.O.Ps meeting with good attention. The brighter Assams were a strong feature. The best C.T.Cs hardened, while keen competition was in evidence to the fibrous C.T.Cs possessing bright liquors. Medium C.T.Cs were firm, with B.Ps realising higher prices. Legg-cut teas tended easier, but the brighter teas registered an upward trend. The quotations per one kg. (in rupees) inclusive of excise duty, were: Best Assam C.T.C. fannings 6.20 to 6.60, best Assam C.T.C. B.P. 6.30 to 6.60, medium Assam C.T.C. B.P. 5.70 to 6.20, medium Assam C.T.C. fannings 5.40 to 5.90, clean black pekoe 4.80 to 5.10, plain B.P. 4.00 to 4.30 and plain B.P. 3.90 to 4.40.

JUTE GOODS QUIET

(From Our Own Correspondent)

CALCUTTA, 22nd *January*

In the absence of adequate support, jute goods depicted a quiet trend during the week under review, but fibre prices were steady. Daisee and tossa varieties were bought at above the minimum prices, while white jute and mesta were available at below the minimum prices. Activity in the fibre market was on an increased scale, as mills purchased, both on their own behalf and on behalf of the Buffer Stock Association, substantial quantities in an attempt to complete the quota issued to them by the Jute Commissioner for this month. Since their godowns are full, the mills are now storing their fresh acquisitions in the open, and they are concerned with the increase in fires lately. An investigation of the causes of fires that occurred in recent months would be welcome, as that would enable the industry to take preventive measures. The mills have huge quantities of fibre and, apart from the danger of fire through open storage, there is also the apprehension of deterioration in quality. In recent months, the problems facing mills have only increased and, although mills are working profitably, the time has come for augmenting safe storage space in the jute districts. If this is done, the tendency among sellers to accumulate stocks in case railway wagons are not available in time will be checked. In the last one week, there have been complaints by sellers of inadequate wagon supply. Sellers often apply to mills for extension of delivery dates. This state of affairs leads to a fall in business and to accumulation, which adversely affect prices. On behalf of the mills, it is pointed out that the request of the railways to load/unload wagons placed at the sidings of mills within the minimum amount of time losses all meaning, for the loaded wagons in the possession of the railways are often held over all the way to destination because of inadequate shunting facilities. If only wagons move quickly, the Government's need for priority transport, it is felt, would not affect the railways' capacity to cater to the industry.



Those who complain that the support of mills to the fibre market has been niggardly apparently fail to appreciate the problems which mills are facing today as a result of continued steady purchases. A demand on behalf of growers that the Government should directly purchase from growers and thus build a direct buffer stock has been put forward. Stocks of fibre with mills are heavy, and the mills are in a position to carry on production at the existing enhanced rate without purchasing new fibre. This being so, it is pertinent to ask as to what the Government will do with the stocks that it is asked to build.

The Government of India is reported to be contemplating to reorient its jute policy. It favours the view that stocks should be built up by co-operative societies, and the mills should buy from these societies. It is pointed out that the co-operative societies will also face the same problem of finding adequate storage space. At present, they buy only an insignificant portion of the crop; their purchases, together with those made by the State Trading Corporation this season, are estimated to form just one per cent of the total crop. The Government's aim seems to be to reduce or remove totally the element of manipulation by inducing the co-operative societies to purchase the entire crop. Problems of finance and space would haunt these societies, but, if Government desires to experiment with this plan, these societies may get loan from it. It is stated that the finances necessary would be advanced by the State Bank of India to the co-operative societies. The Union Government is to hold a conference of all the interests concerned before taking a final decision in the matter.

On Tuesday last, prices eased in the goods market. The decline was, however, arrested by some covering demand at lower levels. Ready B. twills were done at Rs. 114.00, as against Rs. 114.85 on the earlier day. Hessian 40" 10 oz. declined from Rs. 50.90 to Rs. 50.50. On Wednesday, the report of a Government tender for A. twills imparted a steadier tendency. B. twills recovered to Rs. 114.25 and hessian 40" 10 oz.

An encounter with victory

Our will to win is worth only as much as our will to work. Increased output means self-sufficiency. It means relieving the Government of economic cares—leaving it free to concentrate all its efforts on throwing the Chinese out. An honest day's work, done in the spirit of self-dedicated duty, is an encounter with victory. In farm or factory, at the work-bench or the office-desk, it can be given to one and all of us to grasp the fuller meaning of this encounter.

Jai Jawan

Issued in the interests of the nation

BY SAHU JAIN GROUP OF INDUSTRIES

hardened to Rs. 50.75 in sympathy. Good business in hessian took place with the United States and, on Friday, this factor pushed up hessian 40" 10 oz. to Rs. 51.12. But ready B. twills eased to Rs. 113.85, thanks to meagre support. Figures relating to despatches of goods in December were noted with satisfaction, since they showed a substantial rise as compared with November 1962. The total despatches at 111,900 tons showed a rise of 11,200 tons, of which despatches for export were 81,400 tons, as against 75,100 tons in November and those for local purchases were 30,500 tons, as against 25,600 tons. Dundee reports of continued orders on spinners and manufacturers were also noted with interest. The Dundee mills are utilising all available labour, and their order books are now being filled up for the second quarter. During the week-end, there was the apprehension that, in view of poor shipping advices so far this month, stocks of heavy goods would rise. It is, however, to be hoped that, having regard to the tempo of increased internal consumption, stocks would record a healthy statistical position. However, the apprehensions in this regard pushed down B. twills to Rs. 113.60. In sympathy, hessian 40" 10 oz. also eased to Rs. 50.90. Conditions were featureless yesterday and, with no incentives, the drift in prices continued to take B. twills down to Rs. 112.30 and hessian 40" 10 oz. to Rs. 50.20.

Fair support was accorded by mills to the fibre market, as a result of which the premium for *tossa* and *daisee* was maintained. Mills were busy covering their quota against this month. The 1962 crop is estimated at 70 million bales, of which 53 million bales have already been marketed. Most of the balance amounting to 17 million bales is believed to be still in the hands of cultivators. According to agency reports, a rise in prices was indicated this week. The strike staged by jute workers in presses in Narayanganj, Chandpur and Chalna has been called off, a settlement of their demands having been arrived at between the representatives of the Narayanganj Jute Labour Association and the Pakistan Jute Association. Workers will get increased wages. With ready cuttings quoting at below the minimum price by £2 a ton, quiet conditions were in evidence in Pakistan markets during the week. Sellers were anxious for business, but overseas interests responded only sparingly. The Dundee mills were reported to have completed most of their fibre purchases from the last crop. With E.P.C. registrations in December aggregating 802,330 bales, of which the highest single buyer was Belgium with 79,085 bales followed by the U.K. with 78,635 bales, the total for July to December has come to 2,719,100 bales, representing an increase of 76,200 bales as compared with the corresponding previous figure.

SLOW CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, 21*st January*

Arrivals of E.I. tanned cow hides here were normal, but clearance by shippers was slow, while demand for local trade was good for lower ends. In light weights, importers were unable to place business because shippers' ideas were a penny higher, and stockists were unwilling to shade their prices. A small volume of trading was reported in other average weights for shipment. Prices of cow calf ruled firm and of buff calf steady. American buying was not in evidence.

In the tanned skins section, goat skins remained firm, especially the 11/12 lbs. average. There were inquiries for suede selections from the Continent. The U.S. was still out of the market on expectations of lower prices. Demand for middle class sheep skins was strong at unchanged prices. Other tannages ruled steady. In the tanned skins public sales to be held on the 28th inst., 40,000 goat skins and 100,000 sheep skins have been catalogued for sale. The following are the ruling prices per lb. for all-round lots in the local market:

Tanned cow hides 8/8½ lbs. Rs. 2.20 to 2.25, cow calf 1½/2 lbs. Rs. 3.75 to 4, buff hides 12/14 lbs. Re. 1.70 to 1.72, buff calf 1½/2 lbs. Rs. 3.50 to 3.62.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 22*nd January*

Against the background of the shortage which is expected to get aggravated as a result of the recent import policy, the local metal market continued to exhibit firm conditions during the week under review. Prices were quoted higher. Overseas advices were also firm.

On the London Metal Exchange, tin spot opened at £849½ a ton and rose to £853. It was announced in Washington that stockpile releases would be continued up to the end of March at the rate of 200 tons a week for both commercial and Government use. The London price, therefore, registered a softer trend, the week's closing being £851½. No indication of whether the U.S. Government would accept the recommendation of the International Tin Council for fixing a floor price for the releases was given. The decline in the London price followed apprehensions that continued U.S. releases would aggravate the price trend.

Cash copper, in London, was maintained at £234 a ton. The three-months' delivery was lower at £233½ a ton, despite reports of growing labour unrest in Chile and disruption in the working of the Union Miniere in Katanga. In New York, the price registered a small upward tendency, as consumers began building up inventories. Acute shortage for copper scrap continued in Calcutta and utensil scrap rose from Rs. 546.50 per 100 kgs. to Rs. 549.25. The fact that U.S. consumption of copper in 1962 was the highest in the post-war period was noted here. In the U.S.A., copper is being put to more and more uses, and, according to Mr. Clyde E. Weed, Chairman of the Board of Anaconda Company, copper usage in 1963 in both the U.S. and the free world will be above the average of the past five years. U.S. exports of copper and copper alloy sheets and scrips rose by 13 per cent in 1962 and the metals division of the Olin Mathieson Chemical Corporation, which is the world's largest producer of these sheets, anticipates shipments in 1963 to rise further.

Despite increased world consumption of copper, copper output is running higher than demand and, if in 1962 prices in London and New York had ruled firm at £234 a ton and 31 cents a lb. for most of the year, it had been due to the loss of production on account of strikes and economic cutbacks.

Virgin lead was firm at Rs. 158 per 100 kgs. in Calcutta. Consumer interest was good, and the stock position was believed to be not satisfactory. In London, spot lead firmed up from £54¼ a ton to £54⅞ on Continental demand and higher internal consumption. Electrolytic zinc eased here from Rs. 262 per 100 kgs. to Rs. 247, as following fresh arrivals permit-holders got supplies. In London, spot zinc gained from £67¼ a ton to £67⅝.

SURVEY

(Concluded from page 139)

opposition. While the five refused to heed French opposition, the U.K., on its part, seemed ready to offer further concessions on its earlier demands. It is said that Mr. Edward Heath, the chief of the British delegation, submitted a compromise "package deal" to the Common Market Commission seeking to modify the former U.K. request for *nil* tariffs on Commonwealth imports, provided the Six gave better terms on other items. The package deal is said to cover several goods exported from India and Pakistan, besides aluminium, lead, zinc and canned fruits. It may be noted here that Mr. Heath's package deal does not affect the goods, such as tea and cotton textiles, on which agreements have already been concluded with the Six countries. Mr. Heath has asked for a reduction of the common tariff to 10 per cent in respect of certain heavy jute goods and hand-knitted carpets, but has insisted that duty on E.I. kips should be *nil*. On aluminium, Mr. Heath asked that the Common Market tariff of 9 per cent should be halved, rather than abolished altogether. Britain still wants duty-free entry for newsprint, superrefined zinc and lead bullion, but would accept tariff quotas for other forms of lead and zinc. Mr. Heath still demanded a zero duty on tinned salmon, but on tinned pears and peaches he suggested that the tariff should be cut to 12 per cent together with tariff quotas for British imports.

The Common Market Commission has put forward some compromise proposals on these points. Among themselves, the Six Common Market Ministers at last week's meeting agreed to make a new counter-offer to Britain on newsprint, as desired by the Commission. Under this plan, Canada would be accorded the same treatment as Sweden if Sweden became associated with the Common Market. Britain would also receive a duty-free quota. On aluminium imports, the Commission, proposed a temporary suspension of the tariff from 9 per cent down to 7 per cent at which level it would be fixed only if the Community received corresponding tariff concessions from other countries in the Kennedy round of tariff negotiations. The French opposed this, because the tariff would be too low to protect their own aluminium industry, while the Dutch, on the other hand, felt that 7 per cent was still too high. The Dutch also opposed the Commission's proposals for lead and zinc, under which a Common Market duty would be imposed on imports, only if the price on the London market fell below a certain level, on the ground that this did not provide adequate guarantee for Dutch industry. These points will be raised further in next week's negotiations, if they are not deadlocked by French hostility.

TEXTILES

(Concluded from page 144)

(including preparatory) department produced 5,142 million yards of cloth. In other words, the number of workers required to produce one million lbs. of yarn and one million yards of cloth was 168 and 55, respectively. About 194,000 workers were engaged in other departments, including managerial staff, or 32 workers for corresponding 100 workers in spinning and weaving departments. On the basis of these three sets of figures, the total employment potential in the various Plan periods has been estimated. The relevant figures—actual number of workers—in respect of spinning, weaving and other departments, respectively, are: 1960-61: 319,200; 280,500 and 194,900; 1965-66: 386,400, 320,100 and 229,600; 1970-71: 478,800, 403,700 and 286,800; 1975-76: 562,800, 523,100 and 352,900.

No attempt has been made by the author to estimate the employment potential in the decentralised sector. This is only to be expected considering the difficulty involved in such estimation due to lack of any reliable statistics relating to the sector.

On the basis of the estimated overall yarn requirements of the mill sector and assuming that 2,923 bales of cotton are needed to produce one million lbs. of yarn, Mr. Saraph has estimated the cotton requirements in the various Plan periods thus: 6.72 million bales (of 400 lbs. each) in 1965-66, 8.33 million bales in 1970-71 and 9.79 million bales in 1975-76, as against the actual output of 5.40 million bales in 1960-61. These figures underline the urgent need for augmenting the production of cotton through intensive cultivation.

LONDON LETTER

(Concluded from page 140)

Britain and America could take a forward-looking view on tariffs aimed at reciprocal reduction of import duties and preach the gospel of freer and more expansive trade.

But behind phrases such as developing "an international trading and credit structure which will ... maintain the impetus of the advanced economies" is the hard reality of the need to be more competitive in the world's export markets.

It is generally recognised that the Government had assumed that entry into the Common Market would act as the very stimulus needed to give that fillip to British industry that would work for this country the "economic miracle" witnessed in recent years in Germany and France and, latterly, Italy. If that stimulus is not going to be there what other can replace it? The Government have obviously got to give the inspiration and to do certain practical acts to support that inspiration. The London *Economist* has, for instance, suggested it should "make it easier both for capitalists and workers to retain more of the money that they earn in profitable and expanding" industries. The British Government has always been both to draw distinction between domestic industries and export industries. Yet is an export tax subsidy not the sort of thing which could make industrialists export-minded without arousing the cry of 'unfair trading' from overseas? In short, if the tax structure in the next Budget were to be so amended that the profits on exports attracted less tax than the profits on domestic trade, would not that give the needed stimulus? This is certainly the kind of solution which European countries have successfully tried. Why should not Britain too go all out to make exports worth while?

I.F.C. INVESTMENT IN MOROCCO

The International Finance Corporation has joined the Government of Morocco, private Moroccan investors and leading financial institutions in Europe and the U.S. as a shareholder in the *Banque Nationale pour le Developpement Economique*. Its participation considerably increases the already heavy international financial support of the *Banque* and will enable it greatly to expand its activities in helping to finance the industrial growth of Morocco. The Corporation is participating in a new stock issue which will increase the *Banque's* capital by 10,000,000 Moroccan dirhams (equivalent to U.S. $2 million). It is subscribing DH 7,500,000, while the Moroccan Government subscribes DH 2,000,000 and the Morgan Guaranty International Banking Corporation, of New York, subscribes DH 500,000. The new stock issue is the most recent measure taken to attract outside investment to Morocco and to promote additional private investment within the country. Beyond that, the Corporation and the Government have agreed to make equal amounts of their shareholdings, to the extent of 12 per cent of all stock outstanding, available for sale to the Moroccan public. At the same time, the *Banque* has decided to intensify a recent trend in its policy: it will devote the major part of its resources to assisting enterprises that are industrial in character and essentially private in ownership.

The new investment establishes a precedent for the I.F.C. Its investment is part of a combined operation in which its parent organisation, the World Bank, already has made a loan of $15 million to the *Banque*. This is the first time the World Bank and the I.F.C. have engaged in a joint financing, and is the first of a number of combined operations now in prospect whereby the Bank will provide loan funds and the I.F.C. will provide share capital for industrial development banks in the less developed countries.

The consumption of coffee in the U.K. rose to a record of 67,000 tons (raw coffee) in 1962, as compared with only 55,000 tons in 1961 and only 31,000 tons in 1954. About 70 per cent of all coffee now drunk in the U.K. is in the form of instant brands, the remainder is made up of ground coffee and liquid essences. In addition to raw coffee imports, a further 1,800 tons of manufactured instant coffee, equivalent to about 6,000 tons of raw, was imported by the U.K. last year, from the U.S., Canada, Israel and West Germany, primarily for the "own label" brands sold by the retailers.

Total exports from the U.K. rose by just 3 per cent to £3,782 million in 1962, as compared with 1961. Imports were higher by 2 per cent at £4,495 million.

ABBREVIATIONS. N—Nominal. (f) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport.
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable.
††Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1935.
f Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex Ten instalments but inclusive of accrued interest.
M—At the option of the Government after three months' notice. K—On September 1986 or later at the option of the Government after three months' notice.
T—Liability taken over by Madhya Pradesh.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.
