STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per share.

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

All preference shares are taxable unless otherwise stated.

***These shares carry the right of a preferential dividend at the rate of 8 per cent (of which only 5 per cent cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent of the 10 per cent dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent these shares carry the right to receive a non-cumulative dividend of 3 per cent per annum and also to participate in further dividend of 2 per cent per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

C—Cumulative. R—Redeemable. T.F.—Tax-free. R.O.—Redeemable at option.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating upto 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank pari passu with ordinary shares after ordinary shares receive 6 per cent dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating up to 9 per cent. (t) Free of Income-tax upto 6 sh. in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of Issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent on 6 months' notice. pp—Partly paid.

MARKET GOSSIP

(*Concluded from page 483*)

beyond the means of producing countries, in addition to high operating costs arising from the "bulk of the commodity and its non-durability."

The new steps suggested for implementation by the meeting were very limited in scope. One of the important recommendations was that an international machinery for exchange of marketing intelligence should be set up apparently under the auspices of the F.A.O. This step, it is said, would help control price fluctuations. The meeting also called for a long-term study of the demand for hard fibres in their specific uses, taking into account competition from synthetic fibres, technological changes and possibilities of new uses, so as to provide a basis for correct formulation of national production policies.

On the question of high prices for sisal currently ruling in world markets, the meeting felt that this situation would encourage the production of synthetic substitutes in consuming countries. In this connection, it called upon the U.S. to release about 10,000 tons of sisal from its strategic stockpiles in order to relieve the present shortage of hard fibres. Although the U.S. reaction to the appeal is not known so far, it is quite unlikely that it will refuse to oblige.

The current statistical position of hard fibres is so tight that prices are not likely to come down in the immediate future unless the U.S. Government agrees to release a part of its stocks. The U.S. Government's gesture will be appreciated not only by American industries using sisal and other hard fibres, but also by countries like India, which meet a major part of their requirements through imports. India's imports of sisal, it may be noted, aggregated Rs. 66 lakhs as of 1961-62. But for stringent import restrictions, these would have been still higher, as the demand from domestic producers of rope, etc., has been going up steadily. There has been some talk of promoting the cultivation of sisal in India during the last few years. But no perceptible progress has been made in this direction, except for the establishment of a 1,000-acre farm at Rajnagar by the West Bengal Government. In this connection, one does not know the fate of the Sisal Sub-committee constituted by the Government of India as early as in April 1959 with the purpose of suggesting measures to ensure self-sufficiency in hard fibres. The work of the Sub-committee needs to be revived, particularly in view of the prospects for expanding exports of ropes made of sisal.

De Gaulle's Dilemma

A serious labour crisis is presently brewing in France. French coal-miners, who are on strike for a 11 per cent increase in pay, seem determined to fight it out with President de Gaulle who has refused to concede the demand because the strike has been called at a time when the country is desperately fighting inflation and when the President has personally taken command of the anti-inflationary battle. The strikers have disregarded the Government's requisition order for the miners to return to work. If the order is sought to be enforced through legal proceedings and police action, it might spark off a general strike; if it is withdrawn or allowed to be disregarded, it is a serious loss of face for the Government. The French Government is thus faced with a real dilemma.

If the coal-miners' plea for wage increase were conceded, it would be difficult for the Government to resist the demand for wage increases of workers in other nationalised industries. This will start a wage spiral that will thwart the current efforts at checking inflation.

While the Government is thus caught on the horns of a dilemma, the strikers are getting support and encouragement from far and wide. They have requested dockers and railwaymen not to handle imported coal. This has dashed the hope, entertained by the Government, of limiting the effect of the strike. Apart from coal-miners, workers in several other industries and public utilities are either on strike or making preparations to stop work to press their case for wage increases. If these strikes were to materialise, irrespective of who wins in the end, the French economy would suffer a serious setback.

The coal-miners on strike are also getting sympathy and support from unexpected quarters. For instance, Soviet dock workers are reported to have refused to load coal for France as long as French coal-miners are on strike. Whether this gesture on the part of Soviet dock workers is a genuine, spontaneous expression of working class solidarity or it is a subtle move inspired by Premier Khrushchev to show the world that Soviet workers can freely exercise the right to strike, there is no doubt that it will help the cause of the French coal-miners.

Revolution in Amateur Photography!

There is big news from Kodak for the amateur photographer. No more winding of spools and loading in the dark. A new, easy-load system of amateur photography, developed by Kodak, will eliminate all these irksome procedures. It is based on an entirely new-design "instamatic" camera and is described as "the greatest advance in the field of photography since the introduction of the roll film at the beginning of the century."

In the new camera, a film cartridge takes the place of the conventional film roll. The cartridge is simply dropped into the back of the camera, which is of the size of a small transistor radio, and the lid is shut. The cartridge contains two spools and no winding is, therefore, necessary. It can be loaded into the camera or removed from it in bright sunlight and is to be handed over complete for developing. A new cartridge is used each time.

Four types of cameras in which cartridges could be used will be made available initially. They are Kodak Instamatic 50, 100, 300 and 400. All cameras have automatic film counting which renders double exposure impossible. The two cheapest of the four models mentioned above will give correct exposure in bright daylight or with flash, while the other two more extensive models have built-in light meters to adjust the exposure.

The new cameras and films will be put on the market in May next. They are expected to make a tremendous impact on international market for cameras and films used by amateurs.

CHARTERED BANK EARNS MORE

The consolidated profit of the Chartered Bank for the year ended 31st December 1962 is higher at £1,076,748, as compared with £990,238 earned in the previous year. The Directors have recommended a final dividend of 7.5 per cent actual, less income-tax at 7s. 9d. in the £, which, together with the interim distribution of 7.5 per cent, makes a total of 15 per cent per annum, less tax, on the £1 fully paid shares, same as in the previous year. The whole of the dividend, as against only the final distribution last year, is on the increased capital of £6.6 million following a rights issue, in October 1961, of £1.1 million at 100 per cent premium. The dividend absorption will, therefore, amount to £606,375, as against £555,844 last year. Allocation to the reserve fund is £450,000, as against £400,000 in 1961. At £561,021, the amount to be carried forward is £20,373 more than the sum brought in.

DR. PAUL LOHMANN LTD.

An industrial licence for the manufacture of 600 tons each of formic acid and oxalic acid and 300 tons of sodium formate per annum has been obtained by Dr. Paul Lohmann (India) Ltd. The Company is to set up a new unit for making these basic chemicals. In order to proceed with this expansion, it has been authorised to issue fresh capital of Rs. 60 lakhs to the existing shareholders for cash at par. This consent of the Controller of Capital Issues is in supersession of the previous authorisation for Rs. 30 lakhs given in December last.

TWO BONES OF CONTENTION

ANDHRA Pradesh, Mysore, Maharashtra, Madhya Pradesh and Orissa are not sovereign nation-states; they are only constituent parts of the sovereign Indian Union. The linguistic homogeneity, in which each State has, not unoften, taken chauvinistic pride, does not amount to an attribute of sovereignty. And yet, in their unseemly quarrel all these years over the sharing of the waters of the Krishna and the Godavari, they, especially the first three, have been talking and doing things as if they were independent riparian States. Surely, the passions and emotions of the moment, it would appear, have led them to forget or disregard some simple but relevant facts. One of these is that, although "water, that is to say, water supplies, irrigation and canals, drainage and embankments, water storage and water power" are in the State List of Legislative Powers under the Constitution of India, the States' powers are subject to the provisions of Entry 56 of the Union List. This latter entry pertains to "regulation and development of inter-State rivers and river valleys to the extent to which such regulation and development under the control of the Union is declared by Parliament by law to be expedient in the public interest." So, the riparian "sovereignty," if it can be so called, of the Indian States concerned is very limited indeed. But that is not all, for there is another relevant fact, namely, that, under international law, upper riparian States have greater sovereignty and rights over the rivers flowing through them than the lower riparian States. Considered from this angle, even if the Indian States in question are wholly sovereign States, the upper riparian Mysore and Maharashtra can lay greater claims to the waters of the Krishna and the Godavari than the lower riparian State of Andhra Pradesh. And yet it is Andhra Pradesh which has been most vociferously swearing by the 1951 agreement reached at a conference of representatives of the then States of Bombay, Madras, Hyderabad, Mysore and Madhya Pradesh, whereby Bombay and Hyderabad were allotted shares of 3 per cent and 26 per cent, respectively, of the unutilised waters of the Godavari and Bombay and Mysore got shares of 24 per cent and one per cent, respectively, of the unutilised waters of the Krishna. This is an incidental reference to an agreement, the legal enforceability of which has been doubted by the Union Law Ministry and the Attorney-General.

But there is nothing incidental about the actions of Andhra Pradesh which has deliberately gone ahead, since 1951, with the construction of irrigation and power projects involving an average annual diversion of about 500 t.m.c. (thousand million cubic feet) of the Krishna waters and of 28 t.m.c of the Godavari waters. The comparable figures for Maharashtra and Mysore are about 130 t.m.c. and 125 t.m.c., respectively, of the Krishna waters. As for the Godavari waters, the comparable figure in the case of Maharashtra is 88 t.m.c. What is more, Andhra Pradesh has proposed a large number of new projects besides the ones already completed or under construction. These additional projects will involve an average annual diversion of about 1,260 t.m.c. of the Krishna waters and 1,140 t.m.c. of the Godavari waters. The comparable figures pertaining to proposed new projects in Maharashtra and Mysore are 550 t.m.c. and 765 t.m.c., respectively, of the Krishna waters and 470 t.m.c. and 30 t.m.c., respectively, of the Godavari waters. These figures, taken from the report, just published, of the Krishna-Godavari Commission (Chairman: Mr. N. D. Gulhati), show that Andhra Pradesh and, in competition with it, both Maharashtra and Mysore have been anxious to commit as many projects as possible to the utilisation of the waters of the two rivers.

That many of the proposed projects have been hastily evolved and ill-conceived could be seen from the relevant findings of the Gulhati Commission. The engineering and economic feasibility of most of the projects, according to the Commission, has yet to be established through detailed field investigations. Some of the projects would involve the construction of dams, two or three miles long, and large spillways to store one or two t.m.c of water; these, *prima facie*, are not practical propositions. In the case of some other projects, it might not be possible for the land to absorb all the water proposed to be put on it. There are some projects which, though sponsored by only one State Government, would submerge large areas in the territory of another State. There is still another class of projects put forward by different States, which impinge on each other. Some of these are dependent on the same supply of water. Others are on the same storage site, while still others, if executed, would drown the tail-race waters of an upper power project. Accordingly, the totals of *proposed power installed* (7.43 million kw.), *proposed annual irrigation* (32.29 million acres) and *proposed annual diversion* (5.010 t.m.c.), in the estimation of the Commission, are likely to be substantially more than the practical potentialities of the two river systems. By and large, the Commission continues, the State Governments have put forward these projects on the tacit assumption of unlimited funds being available. What is worse, they seem to have assumed for each project the highest priority on the available flow at the site of the project without consideration of the requirements of other projects on the river system.

It is, indeed, amazing that not only these new projects but also the ones under construction have not been based on discharge observations at the sites concerned. For project planning, the Commission notes, river flow has been estimated by various empirical formulæ which are unsound and undependable. The Commission has found that there has so far been no planned and systematic observation of discharges on either the Krishna or the Godavari river system and that the position with regard to sediment data is still worse. The only systematic records that are available pertain to existing anicuts or reservoirs. But these are not adequate for the purpose of taking decisions on new projects. How serious must be the drawbacks of projects drawn up on the basis of insufficient or unscientific data could be inferred from the following recommendations made by the Commission and accepted by the Government:

"The Commission strongly recommends, as a matter of first urgency, the establishment, on a permanent basis and on scientific lines, of daily discharge observations at 38 sites of the Krishna river system and 38 sites on the Godavari river system. The river flow data to be obtained at these sites are essential for the preparation of individual projects, for the preparation of an integrated basin-wide plan, for the subsequent operation of such a plan and the regulation, to best advantage, of the available river waters in any year.

"As a number of dams are being constructed in these river basins, it is necessary that, besides taking discharge observations, systematic data should also be collected with regard to the sediment carried by river waters. These data would be of considerable use in the design of the dams and in estimating the probable life of reservoirs.

"The Commission regards the collection of river discharge and sediment data as a fundamental work of national stock-taking and recommends that, like metrological data and general surveys, the Central Government should assume the responsibility for this important work and set up a special organisation for this purpose."

If most of the new projects, conceived in haste without the aid of basic data, do no credit to the State Governments concerned, what about the ones taken up for execution since 1951? Here, too, it is a depressing story of faulty planning, slow execution and even slower utilisation of potential benefits. The findings of the Gulhati Commission constitute, in this connection, a damning indictment of the States concerned. It is, indeed, atrocious that, against a total annual irrigation potential of 5.76 million acres to be created by all the projects undertaken since 1951 (including several incomplete pre-1951 projects) on the two river systems, the projects completed by 1961 have accounted for only 13 per cent of that aggregate potential. Construction work in the case of some of these projects has not proceeded at the optimum rate, while relatively little effort has been made for speeding up utilisation under other projects. The Commission has given three typical instances of projects which are yet to develop fully the irrigation potential they have created. The Rajolibanda Diversion Scheme, shared by both Mysore and Andhra Pradesh, came into operation in 1958, but the irrigation developed by it upto 1961 was only 21 per cent. Secondly, the Bhadra reservoir project in Mysore came into operation in 1957, but the irrigation developed by it upto 1961 was only 7 per cent. Thirdly, the Gangapur project on the Godavari river system in Maharashtra was brought into operation in 1957, but its irrigation development upto 1961 was only 12 per cent. At this rate of construction and development, it will take many years more for Andhra Pradesh, Maharashtra and Mysore to complete all their current projects on the two river systems.

It is against this background of actual performance in the matter of current projects that the decisions of the Central Government, following the Gulhati Commission's report, would have to be viewed. The most important decision pertains to a temporary State-wise allocation of waters, pending their final allocation in the light of more reliable and complete river flow data and of a project report, as suggested by the Commission, on the supplies to be diverted from the Godavari into the Krishna basin. The provisional allocations, representing annual withdrawals of supplies during the period ending 1975-76 for projects already started and those contemplated in the near future, are as under:

State	Krishna (t.m.c.)	Godavari (t.m.c.)	Total (t.m.c.)
Maharashtra	400	400	800
Mysore	600	30	630
Andhra Pradesh	800	372*	1,172
Madhya Pradesh	..	†	..
Orissa	..	‡	..

* 66 t.m.c. for the Pochampad project and about 306 t.m.c. of supplies to be diverted to the Krishna through two link canals.

† No specific figure (400 t.m.c. demanded by State). ‡ No specific figure (200 t.m.c. demanded by State). It has been assumed that there should be no difficulty in meeting their demands.

The above provisional allocations of the waters of the Krishna and the Godavari, taken together, fall short of the aggregates of annual

diversion, under both current and new projects, of 1,240 t.m.c., 915 t.m.c. and 2.925 t.m.c. demanded by Maharashtra, Mysore and Andhra Pradesh, respectively. But they seem to be well above their foreseeable capacity—financial and physical—to implement irrigation and power projects in the next ten to thirteen years. It may be noted here that the cost of utilising all the waters under the provisional allocations would be no less than Rs. 2,000 crores for all the five States together. There is, therefore, no reason why the States concerned should grumble over the Centre's decision and continue their quarrels.

As much mutual adjustment, give-and-take and co-operation are required to develop the Krishna-Godavari basins for power generation and irrigation, it would be folly on the Central Government's part to yield to the possible clamour and unreasonable agitation in Andhra Pradesh or elsewhere. The Centre, it need hardly be added, should firmly stick to its decision to establish a River Board for preparing master plans for the two river basins taken together. Unless co-ordinated and integrated plans of the kind are evolved and the innumerable current and new projects in the States concerned are fitted into them, things will only be at sixes and sevens in the vast drainage area of the Krishna and Godavari basins—an area which is more than one-sixth of the whole of India. If the Centre's authority cannot be effectively asserted and maintained through the proposed River Board, more direct and forthright measures for balanced and integrated development of the basins would be justified in the interests of the people inhabiting them.

EXPORTS AND TAXES

TWO subjects of burning importance, namely, export promotion and additional taxation, which, in several ways, are inter-related, figured prominently in the proceedings of the 127th annual general meeting of the Madras Chamber of Commerce held at Madras on the 25th instant. Almost the entire speech of Mr. B. B. Dodd, Chairman of the Chamber, was devoted to the question of export promotion in all its bearings. The other subject pertaining to the crushing incidence of the Central Government's latest proposals for additional taxation was dealt with exhaustively by Mr. A. R. Foster, President of the Associated Chambers of Commerce and chief guest at the meeting of the Madras Chamber. Although Mr. Foster, too, had something to say about exports and export-incentives, it was Mr. Dodd who discussed the relevant problems in greater detail.

The pervading temper of Mr. Dodd's speech was one of acute awareness of the foreign exchange crisis which, in his considered opinion, raised "issues just as vital in their own way as the military and political crisis arising out of the Chinese invasion of India." In a reference to the continuing trade deficit of more than a crore of rupees a day, Mr. Dodd sought forcefully to drive home the point that it was no less important to create the forces necessary to close the trade gap than to create those necessary to close the Himalayan passes. But he was, at the same time, painfully aware of the discouraging factors in the situation. While the Government had no doubt installed machinery—extensive in its coverage and effective up to a point—for close and continuous consultation with commerce and industry, he added, it was difficult at times to suppress the frustrated feeling that, though non-official views might be heard, they were not often heeded. The connecting link between comprehensive consultation and sustained follow-up action has thus been too weak to survive the strain, with the result that the expert knowledge and practical experience of business representatives have not been adequately harnessed by the authorities. The "sluggish reactions" of a bureaucratic administration would have to give place to energetic follow-up action. This can happen only if the whole machinery of Government is "overhauled, renovated and modernised." It was on this aspect of administrative reform that Mr. Dodd laid particular emphasis at the very outset of his speech.

A critical examination of the problems pertaining to the exports of some individual commodities was another noteworthy feature of Mr. Dodd's speech. In the case of Indian sugar, for instance, its export price would become competitive in world markets only if Government policies were aimed at raising the sugar content of the cane to a minimum of ten per cent and doubling the average yield of cane per acre. But how can one expect any progress in this direction when these aims have been subordinated to altogether different objectives in the cane price policy of the Government of India and in the land policies of the State Governments? As with sugarcane, so with cotton, oilseeds, tobacco and other foreign exchange earning crops, yields can be vastly improved by the increased use of fertilisers and the wider application of scientific methods. Mr. Dodd was, therefore, on firm ground while expressing the opinion that the volume of our traditional exports of primary products could be substantially expanded. It may be recalled, in this context, that Sir Norman Kipping, Director General, Federation of British Industries, has given an identical finding in his recent report on India. There can, therefore, be no two opinions on Mr. Dodd's suggestion that the supplementary programme now contemplated for agriculture under the third Plan should be guided and controlled by the paramount needs of export promotion and import substitution.

Two other export commodities, about which Mr. Dodd had much to say, are cotton textiles and leather. As for cotton textiles, the strenuous efforts made to arrest the decline in their exports have been of no avail, for the increase in the basic rate of incentive premium and the provision of additional premia for exports to non-traditional markets have been largely neutralised by increases in the cotton prices which now stand at 25 per cent above world parities. Still, something could be done to promote cotton textile exports, if the following suggestions of Mr. Dodd were adopted:

(1) Whether the voluntary pact with the U.K. cannot be administered to greater advantage by established U.K. importers rather than by the Indian exporters calls for immediate consideration.

(2) The present grouping of overseas markets into traditional and non-traditional categories should be revised.

(3) Under the present incentive scheme, only 25 per cent of the value of the import entitlement for dyes can be used by the mills and the balance of 75 per cent has to be transferred to Indian manufacturers of dyes. This increases costs and reduces the value of the incentive. The practice, therefore, calls for revision.

(4) Compulsory diversion of 50 per cent of the mills' import entitlement for machinery to Indian manufacturers of machinery impedes the modernisation of exporting mills. This, too, should be changed suitably.

(5) The Indian Cotton Mills Federation should effect transfers of export values between mills in such a way as to enable exporting mills to realise the full premium for their surplus export values.

In regard to leather exports, 95 per cent of which move out through Madras port, Mr. Dodd's suggestion is that effective Government assistance should be provided for exporting more finished leather than semi-tanned leather. Thereby foreign exchange earnings can be increased. But, at present, exporters of tanned hides and skins have import entitlement only for raw hides and skins and some tanning substances but not for machinery and materials required for finishing leather. There is, therefore, little or no encouragement now for the crust tanners to experiment with processing beyond the semi-tanned state. Even under the special export incentive scheme for finished leather and leather products, applications for import licences remain unprocessed for months on end.

Besides these concrete suggestions for promoting exports of particular commodities, Mr. Dodd has also outlined a plan for the proposed formation of an "Export Sector." Such a sector, in his opinion, should be broad-based to include *all* exporters who, in the previous year, had exported goods to the value of not less than Rs. 12 lakhs. Secondly, Export Houses should be formed in association with the Export Promotion Councils to serve as outlets for the smaller exporters. Thirdly, all units of the Export Sector should be given the highest priority in the supply of power, transport, raw materials and components so that they could work continuously at full capacity and thus reduce the unit-costs of their products. Fourthly, the whole tax system should be reorientated so that neither the manufacturer nor the merchant can afford to stay out of the export trade. And, fifthly, the meagre benefits so reluctantly conceded to exporters by the Finance Act should not be snatched away by the Super Profits Tax.

The taxation aspect would be most relevant to any drive for export promotion on the above lines. Mr. A. R. Foster, whose address was notable for its vigorous criticism of the Super Profits Tax, also made some points pertaining to taxes in relation to exports. The move to raise considerable additional revenue by customs duties, he felt, would very heavily increase the capital cost of new projects, thus adding to the existing high levels of cost throughout Indian industry. Any increase in cost of production would only hinder export promotion. Likewise, the cumulative cost incidence of excise duties on intermediate goods would be reflected in higher unit-costs of export products even after allowance is made for some tax rebates. The comparatively few additions to the scope of export-incentive schemes in the latest Finance Bill would not also meet the needs of the situation. Incentives by way of fiscal concessions, import entitlements, and so on might have to be not only generous but also widely applicable to all those responsible for the manufacture of export materials and for their shipment. Unless taxation questions are approached from the point of view of their relationship to the vital task of export promotion, efforts to close the trade gap will be partly frustrated. Both Mr. Dodd and Mr. Foster have, therefore, done well to ring the tocsin.

A MYTH EXPLODED

IF India is finding the task of export promotion extremely difficult, it is due as much to the defective economic policies pursued by it in the past decade, especially in the years 1950 to 1957, as to the deterrents imposed by the importing countries, developed and underdeveloped alike. The past mistakes were realised towards the close of the fifties but have not been rectified fully even today. A cumulative result of these wrong policies, based on outmoded economic and social ideologies, is the emergence of this country as a high cost economy in the world. The malady has become so chronic that the remedy has to be drastic, if it is to be effective, yielding sustained results. Meanwhile, the country must press on with a reorientation of its policies pertaining to agriculture and industry, in which a beginning has already been made, so that at least some progress in exports may be made. The previous article on this page is devoted to this aspect. Here we propose to draw attention to an example which serves a twofold purpose: (*a*) exploding an economic myth and (*b*) highlighting the impressive achievements of an *entrepreneur* who acted with foresight and conviction.

For long, there has been a belief in this country that the introduction of automatic looms and other modern textile machinery capable of giving higher output per worker and better quality of products would lead to displacement of labour and aggravate unemployment in this country. This belief has been responsible for the series of exasperating restrictions on modernisation of mill industry, more especially on the installation of automatic looms. In recent years, the Government has doubtless relaxed some of the restrictions but not sufficiently. Besides, wisdom dawned on the authorities belatedly, with the result that India has been lagging far behind its competitors. The foreign exchange situation has since deteriorated and, even if the authorities are prepared to follow a liberal policy, India does not have the wherewithal to buy the most up-to-date types of automatic looms, high speed spindles and other balancing equipment. That the premise on which the authorities restricted the introduction of automatic looms in cotton mill industry itself was not wholly correct has now been established beyond doubt. The experience of the Bombay Dyeing and Manufacturing Company, Ltd., one of the leading cotton mills of India under the management of Mr. Neville N. Wadia, provides convincing evidence. According to facts given by Mr. Wadia in his statement to shareholders circulated along with the Company's annual report and statement of accounts for 1962, the forward-looking policy pursued by the Company is yielding sumptuous dividends to the country generally and to its workers, in particular.

In the last ten years, the Company has installed new machinery worth Rs. 8.50 crores. By the middle of next year, the Company's mill —the Spring Mills—will have been completely re-equipped from start to finish, the only exception being the carding engines. "It will be," to quote Mr. Wadia, "one of the largest units anywhere with only automatic looms—2,160 under one roof." Besides renovating and modernising the spinning and weaving sections, the Company has also built one of the largest and finest finishing plants. The Company now has a mercerising-cum-Hecowa plant, continuous vat dyeing, screen and roller printing, resin finishing, sanforizing and a large raising capacity, besides a modern high pressure yarn dyeing and mercerising plant. What are the results? Production has gone up, in terms of yarn, from a total of 26 million lbs. in 1952 to 41 million lbs. in 1962. The mills are now able to proce an average of over 80,000 lbs. per day, as co

pared with 30,000 lbs. per day in 1952, and hope to increase the turnover to 100,000 lbs. The number of workers has gone up from 3,000 ten years ago to as many as 12,500 in 1962, an increase of no less than 56 per cent. But what is more important, this growth in the number of workers employed has been accompanied by an impressive increase in individual earnings. The weavers, for instance, were earning a basic pay of Rs. 80 per month before the automatic looms were introduced. They are now earning a basic pay of Rs. 265 per month on automatic looms, that is, a well over threefold increase. The fortunes of workers have improved to such an extent that some of them are income-tax payers and all workers are liable to come under the Compulsory Savings Scheme announced in the Central Budget for 1963-64. It will thus be seen that the misgivings expressed by trade union leaders and Government spokesmen on the effects of rationalisation and modernisation on the level of employment and the welfare of workers have proved groundless.

The country, too, has benefited immensely, in that the bold programme of capital outlay on modernisation of the Spring Mills has enabled the Company to meet the growing competition in the export markets and hold its ground. Nearly 50 per cent of the Company's looms are engaged on export orders and its contribution to the foreign exchange budget of the country has gone up, from an average of Rs. 3 crores per annum ten years ago to Rs. 5 crores per annum in 1962. During the past six years, the Company has actually earned Rs. 32 crores worth of foreign exchange and maintained an unbroken record as the largest exporting mill company for more than two decades. This creditable achievement would not have been possible if it had not installed automatic looms. It must be made clear here that the Company was given no special concession or favoured treatment by the Government for the introduction of automatic looms. Only, it had the resources and ability to accept and fulfil all the rigorous conditions imposed by the Government.

It is the shareholders of the Company that have benefited the least by the huge capital outlay. Over the decade ended 1962, there has been no increase in the Company's paid-up capital nor in the rate of dividend. The 14 per cent dividend for 1962 being taxable, the net dividend is only 9.8 per cent which is not a great improvement over the 8 per cent paid for 1952 and 9 per cent for 1953. Indeed, having regard to the fall in the purchasing power of the rupee during the past decade, the shareholders have been worse off. It is true that the Company's reserves have gone up from Rs. 209.30 lakhs to Rs. 383.44 lakhs, but, from the shareholders' point of view, they are only a book entry for all practical purposes. They can, however, have the negative satisfaction that, but for this capital expenditure, their investment would have depreciated in value. Besides, they can also have the positive satisfaction of having richly contributed to the foreign exchange resources of the country. This aspect will, perhaps, be better appreciated, if one bears in mind the following quotation from Mr. Wadia's statement:

> "The cotton textile industry is one of the oldest in the country, the ownership of which is so well spread throughout the country that the largest of the units under the management of one industrial group does not amount to even five per cent of the industry. This is the general pattern almost throughout the world and, therefore, competition, both internally and in world markets, is extremely severe. Margins are low and, unless plant, machinery and methods are kept abreast of the times, profits soon dwindle to nothing and, before long, out-of-date mills incur losses and face extinction. One has only to hear the sad stories of so many mills in Lancashire, Europe and even America to read the writing on the wall. Our first duty, therefore, was and still is to keep our mills up-to-date in equipment with the object of producing at economic costs an ever-expanding range of marketable fabrics. While the pace at which we have been going was almost too rapid, this has been a blessing in disguise. We have been able to install a large quantity of new machinery, much of it of the best quality and design from abroad, at prices which are well below those prevailing now..... Some shareholders have criticised our policy of selling in export markets at prices somewhat lower than the internal market, but it was our exports which earned us the machinery import licences."

The foregoing extract also shows that, if the daring manner in which the management of the Bombay Dyeing has gone ahead with its modernisation programme, notwithstanding the unhelpful industrial, fiscal and labour policies, is emulated by the other units in the private sector, as, indeed, some of them have done, India's performance on the export front will be better than it is and the future for the private sector as a whole will be brighter. It is never too late to learn from the experience of pioneers.

PERSPECTIVES & PROJECTIONS

By Mercator

Mystery Mission

"Out of thine own mouth will I judge thee."
St. Luke: 19:22.

TACT, it seems, is not a quality which comes as naturally to the Indian politician as, say, to the British, whom we like to emulate in many other matters. There is no need to name the men in our country who, with excellent accomplishments to their credit and very sharp wit, have found their tongue a great handicap to advancement. I am not overlooking the notable exceptions like the Madras Chief Minister who practises an economy of words rare in our public life and is not less popular for it; but he symbolises stability and shrewdness, not the dashing go-aheadness which is needed in the larger spheres of the Centre. Time and again, the public is led to expect great deeds from those who seem brilliant, confident and brave to the point of being reckless; and recklessness is all that it seems to get in the end. These reflections have been prompted by the excitement caused in the Lok Sabha over the Patnaik mission to the United States and the peculiar circumstances surrounding it. Some of the anomalous features surrounding it might have gone unnoticed but for the provocative manner in which Mr. Patnaik went about his business of communicating with the American press.

If it was a necessary high-level mission, there was no reason why it should have been linked with the Chief Minister's personal interest in Orissa's projects; if at all, the latter should have been a secondary, not primary purpose as Mr. Nehru insists on saying. But then, of course, it will be hard to explain why those who have formal responsibility at the Centre for defence or its economic aspects were not considered competent enough, along with their technical advisers, to undertake the mission. That power should be exercised without responsibility in such matters is quite extraordinary, even if it is assumed that Mr. Patnaik was in fact acting as a kind of personal envoy of the Prime Minister, though his position was not by any means parallel to Mr. Harriman's under President Kennedy. Nor is the converse of this position, of Mr. Patnaik being entrusted with responsibility without having the political power to carry out his wishes, any happier. But everyone concerned seems to have acquiesced in this anomalous role, since he went with the benedictions of the emergency committee of the Cabinet.

As usual on such occasions, it is the press reporter who is accused of getting the wrong ideas. Even if this passes locally, it is unlikely that people abroad swallow such denials readily, or that all the correspondents involved in this affair can be simultaneously discredited. The Speaker's disapproval and members' dissatisfaction of Mr. Patnaik's statements on defence, not normally given to the public in this country, cannot be easily ignored; Mr. Nehru was, as usual, loyal to aides of his own choice, and had to be; but soon after Mr. Morarji Desai had lumped all defence grants under one head to conceal even the broad heads of expenditure, even the credulous will find it hard to accept the Prime Minister's ingenious argument that there was no harm in following a different practice abroad on defence secrets, particularly by those who are not committed to the obligations of secrecy governing Central Ministers.

An Italian Miracle Too

It is no longer the fashion to talk of the German economic miracle. Italy has now qualified for such attention and its rate of growth is now being viewed with as much interest as its mixed economy. Italy offers a classic example of development through State intervention, for reasons not dissimilar to those in India such as the historical role of the State, the need to preserve regional balance and the political compromise with the ideology of the Left. Elsewhere in the Common Market countries, Italian nationalisation trends have given room for disquiet, though most observers realise that the average Italian is an individualist who cannot be regimented for long in a totalitarian set-up; further, Italy's membership of the European Community is an insurance against trends towards greater economic statism. But it is a fact that the two great national holding companies have a hand in all important sectors of the nation's industry—steel, chemicals, oil, power, motor car manufacture, shipbuilding and shipping and even consumer goods—as they hold shares of varying proportions in companies which are privately managed. Such a system would be regarded as revolutionary in this country; if, for example, Mr. Morarji Desai should tomorrow bring forward a scheme for an investment trust which can hold shares in all private sector companies, perhaps taking over the existing holdings of the L.I.C. also, I am quite sure that the private sector here will feel outraged by the proposal. I am also certain that such ownership will not be used in the way in which Italian control is judiciously exercised, which probably explains why the private industrialist there is not unduly alarmed.

Recently, the leading private industrialist, Giovanni Agnelli, is reported to have told the *German International* that, though he was a liberal economist and a believer in the free market economy, he would be realistic enough to admit that Italy's problems would not be overcome without State intervention. He added: "It is up to our responsible politicians—it will make great demands upon their wisdom and self-control—to keep the State from interfering in the economy from self-regarding motives, and to do no more than is necessary to assure economic and social progress."

A second cause for concern in Europe is the wage structure in Italy, which is regarded as low; but the truth, it seems, is that, as in Japan, labour is more industrious in Italy and confers cost and price advantages for Italian goods competing with other European manufactures. Until recently, European members of G.A.T.T. spoke of low-wage Asian textiles to justify their restrictionist approach; the journal mentioned above candidly admits that it has become the standard excuse for explaining the decline in the competitive position of European industry wherever it has occurred.

Farm Lobbyist

Mr. S. K. Patil is usually counted among the realists in the Central Government and, though his practical approach to his Ministry's problems has shown results, which his predecessors, except the late Mr. Kidwai, had failed to achieve, he is not apparently undogmatic. His recent reply to the debate in the Lok Sabha was an excellent example of his considerable debating skill. He tried to prove that agriculture was not like industry to show a proportionate increase in output according to outlay and that climatic factors cause fluctuations even in the most advanced agricultural countries. It is doubtful if anyone in India needed to be told so, at least inside the Lok Sabha where the majority represents the agricultural population. Having persuaded the converted, Mr. Patil proceeded to suggest that there should be farm lobbies in India, as powerful as any that he had seen in Europe and America, overlooking perhaps that he and his policy on sugarcane prices are already meeting with obstacles from the most active of the farm lobbies in the country. Multiply them and the Union and State Governments will get stiff opposition not only to adverse price policies (which may be excusable) but to every improvement in productivity or output which indirectly may affect entrenched positions.

If, indeed, we have agriculturists of the same calibre as in the West, who can make a real business of farming, there may be little harm in their organising themselves into pressure groups to advance their interests. On this aspect, however, Mr. Patil came forward with the apologia that adoption of new techniques and tools takes time in India and quick results should not be expected. Surprisingly, the oddity of hitching a twentieth century conception of farm lobby to a still backward farmer who may use it only to protect his disinclination to change—as, indeed, U.P. and Bihar cane farmers are already doing—did not strike Mr. Patil or perhaps even his approving listeners. And more than that, his plea overlooks the unhealthy influence of the predominantly agricultural votes on the political parties competing for them; they constitute now one giant political lobby which has helped to minimise taxation on this sector and brought steadily increasing prices for foodgrains, oilseeds and other commercial crops, while burdening the urban sector for all the development through heavy taxation and price increases caused by deficit financing. To say, as Mr. Patil said, that there is much squealing about prices when the farmer gets the slightest benefit, was no minor distortion of the truth in Mr. Patil's attempt to play to the farmers' gallery.

MARKET GOSSIP

World Commodity Prices Rally

THE recovery in world prices of primary commodities witnessed during the last quarter of 1962 has continued unabated during the first quarter (January-March) of the current year. This trend is fully reflected in the movements of the commodity index of the London *Financial Times*. The index (basis 1st July 1952=100), which had dipped to an all-time low of 74.62 in September last, has since continued to move up to stand at 82, as compared with 78.30 a year ago. The present level, it may be noted, is higher than at any time during the last three years. An important feature of the uptrend in prices is that it has been broadbased, having been shared by a wide range of commodities, unlike, for instance, during the Korean boom. Although the increase has been widespread, a few commodities, such as sisal, cocoa, coffee and certain non-ferrous metals, were in the limelight throughout. Prices of certain commodities which are not taken into account in the compilation of the F.T. index have also made a strident increase, prominent among them being sugar and silver. The latest available quotation for sugar in London is £62 per ton which is almost the post-Suez crisis peak and only a few pounds below the all-time high touched during the Korean war boom.

The table on this page shows at a glance the current prices of major commodities in the London market, as compared with their prices at the close of last year, in the beginning of September (when the F.T. commodity index touched an all-time low) and those a year ago.

Although the recovery in commodity prices is a source of relief to primary exporting countries, there is no adequate ground to believe that it would go on uninterrupted during the coming months. This caution is not unwarranted, considering the fact that futures markets have not received any perceptible stimulus. It is significant that the Dow Jones index (average 1924, 1925 and 1926=100) for futures has gone up only slightly, that is, from 144 at the close of 1962 to 146 by the end of March. At this level, it is still lower by a point, as compared with that a year ago. The Dow Jones index for spot, however, has made perceptible gains, being currently placed at 154, as compared with 150 three months ago and 148 a year ago.

Even if the trends in industrial activity in Europe and the U.S. do not give room for any marked increase in demand for raw materials, etc., in the ensuing months, there is no denying the fact that some of the commodities will continue to elicit better support. One of the important commodities in this group is tin. The price of tin has been going up during the last few months. The increase would have been much more but for the uncertainty over the disposal of surplus stockpiles in the U.S. This uncertainty, however, has just been removed, following the clarification of the U.S. policy last week. Under the new policy, the U.S. will dispose of its surplus at the rate of only 2,500 tons a quarter (or about 200 tons a week). The General Services Administration would continue its policy of not accepting bids for the sale of stocks, if such prices were below the prevailing market level. A new feature of the policy is the provision to the effect that "the programme will be continuously reviewed and sales will be reduced or temporarily suspended during periods of relative price weakness." This provision, incorporated in the policy at the instance of the International Tin Council, is said to be a sort of a guarantee that world markets would not be unduly disturbed by the U.S. stock releases.

The possibility of a further increase in the price of sugar also cannot be ruled out. The price is already more than double that a year ago, bringing it equal to, if not a little higher than, the price in India. The possibility of a further rise in prices is based on the fact that the output of sugarcane, which makes up about 60 per cent of world supplies at present, could not be significantly increased for 18 months even if planting of more cane were done today. Besides, planting of the 1963 beet crop in Europe has been delayed by the severe weather, and much of it will not be in the ground till the end of this month. Present world stocks are still at reasonable levels, but, if output is not likely to rise appreciably, a further decline in world sugar stocks by as much as 3 to 4 million tons could well be justified in the current year.

The upward trend in the price of cocoa has also received further momentum last week, with the announcement by the F.A.O. that production of cocoa would fall short of demand by about 54,000 tonnes during the current year. Among the other commodities which have ruled firm during the last quarter, mention may be made of coffee, sisal, cotton, oilseeds and oils, silver, lead, zinc and copper and black pepper. On the other hand, prices of some of the commodities, particularly jute, copra and coconut oil, castor oil, tea and rubber, suffered losses, albeit moderately.

Mr. V. A. Grantham on Dear Money

For quite some time now, *Commerce* has been emphasising the need for a policy of high interest rates. At no time was this discipline so urgent as it is today, what with the forces of, inflation gathering momentum, following defence orders, industrial expansion, a soft home market and generous labour awards. If, in spite of all this, the monetary authorities still lack faith in such a policy, we would only urge them to ponder the observations of that well-known banker and sincere friend of India, Mr. Vincent Alpe Grantham, Chairman of the Chartered Bank. Without mincing words, Mr. Grantham says, in his latest annual statement to the stockholders of the Bank, the full text of which is published on pages 550-57 of this issue, that "our sympathies must be with the monetary authorities who require dearer money and restricted credit to combat the danger and yet are under departmental pressure to keep interest rates low to finance development plans as cheaply as possible." At the same time, he makes it clear that the policies followed by indigenous banks should not be at variance with the real needs of the country as a whole. He has noted the recent upward revision in the Bank rate, but seems to feel that the revision alone will not suffice. What is needed, according to him, is a realistic rate structure for commercial banks round the Bank rate, with no distortion through holding of free counterpart funds by one privileged bank. Appropriately enough, Mr. Grantham observes:

"A reasonable spread in rates would help the banks to build up their reserves in keeping with the Reserve Bank's policy of creating a strong banking system. In furtherance of that policy, too, they are restricting credit to the banks, some of which had become badly over-lent and over-dependent on official assistance. Nevertheless, the Reserve Bank has always helped where restrictions jeopardised essential industry or seasonal crops and this system of selective credit control worked smoothly and is in the country's best interests. The new statutory requirements, to be operative from September 1964, are, however, obligatory by legislation, but, in a rapidly expanding economy, they may be too drastic and amendments may have to be introduced. There is still some doubt whether the central institution's policy on Government securities is fair to the commercial banks who are obliged to make purchases at artificially controlled low yields."

A dear money policy, coupled with suitable fiscal incentives to promote investment and production, will go a long way towards consolidating the industrial progress which, as Mr. Grantham rightly avers, is necessary in preference to further industrial expansion. For what is the use of putting up new mills and factories when the existing ones are unable to utilise their capacities, installed at considerable outlays, fully, owing to acute scarcity of raw materials, machinery, accessories and stores? The major difficulty so far experienced in gearing the existing and potential capacity to the country's defence and development requirements has been the shortage of foreign exchange. Since most of external aid received by India is tied not merely to specific development projects but to purchases from the donor countries concerned, it has not eased to any great extent the shortage of ready foreign exchange required to pay for the country's normal day-to-day import requirements. Drawing attention to this aspect, Mr. Grantham points out that the basic economic problem of India is still to earn enough foreign exchange to meet the inescapable needs of its people and to keep its new industries going, but setbacks have occurred through transport difficulties, lack of electric power, and inability to purchase abroad vital spare parts and materials. "With exchange reserves at a level that gives no scope for further reduction, there can be," to quote him again, "little optimism for an early improvement and, in any case, manufacturing costs are generally too high for open competition in world markets." He does admit that some reduction in costs will come as experience is gained in running the new industrial units, particularly if the protected domestic market is not made easy to sell in. But he hastens to add that even the older industries are unable to compete abroad, thanks to heavy taxation, high cost of protected local raw materials and low productivity of an increasingly costly labour force.

If this is the position, what is the solution? Here is what Mr. Grantham has to say: "It would seem then that any betterment of the exchange position is more likely to come from the gradual rise in agricultural production." But even granting that such a rise, in fact, occurs and that exports will rise appreciably, whatever foreign exchange that is earned will simply not be sufficient to pay an import bill already cut to the minimum. It is clear, therefore, that the aid-giving countries should step up the quantum of assistance to India, a large part of the assistance being given in the form of a non-project loan or a general development loan, repayable over a reasonably long period and bearing low rate of interest. Equally important is the need for enlarged export markets for Indian goods. Mr. Grantham has certainly done a signal service to India and other developing countries by calling upon the industrial countries to ensure that their trading policy does not discriminate against manufactures from developing countries, for "these countries *must* export to survive and the best aid they can be given is to buy the goods and commodities they produce."

U.K., Too, Manipulates Bank Rate

The conflict between the twin objectives of maintaining the external stability of the national currency and stimulating expansion of the economy has led many countries to devise ingenious monetary devices to reconcile the two. Britain has so far resisted the temptation to have recourse to any unorthodox use of the Bank rate as a lever to serve these two purposes at the same time. But faced with the urgent need to ease the growing pressure on the pound sterling, on the one hand, and to stimulate domestic economic expansion, on the other, that country, too, has been forced to effect a new refinement in monetary management. This consists of a new technique of lending to the London discount market, not at the official Bank rate as was the practice hitherto, but at a slightly higher rate. The aim is to raise the short-term rates, especially the Treasury Bill rate, in London, thereby making the City more attractive to foreign investors of short-term money, without, at the same time, raising the cost of bank credit to British industry and trade. The rise in Treasury Bill rate will attract short-term funds to London and this in turn will have the effect of strengthening the pound sterling. It will also discourage the outward movement of short-term funds invested in London in search of higher return elsewhere. The outcome will be reduced pressure on the pound sterling. But, as the Bank of England will continue to lend money to the banks at the Bank rate, the cost of bank advances, mortgages and hire-purchase credit, which needs to be kept down to stimulate economic expansion, will be unaffected by the rise in short-term rates. In otherwords, the character of the British Bank rate has changed and has become similar to that of the Indian Bank rate.

On Tuesday the 19th inst., the Bank of England applied, for the first time, the new technique of lending to the discount market at a rate above the Bank rate. A fairly large amount was lent but only at ¼ per cent above the Bank rate, which is at present 4 per cent. This increase in the lending rate to the discount market has been regarded by City commentators as a disguised increase in the Bank rate. Their explanation for taking this view is that, although the Bank rate is officially unchanged, the rate at which the Bank lends to the discount market (which may be technically regarded as the Bank rate) has been increased. Thus, a two-tier Bank rate has been brought into operation.

Although no official indication of the objective of this move is available, London money market circles think that it is aimed at stopping the Treasury Bill rate, which has been drifting downward since the beginning of the year from falling further, thereby reducing still further the already narrow margin between the Treasury Bill rates in London and New York. In fact, it is considered a precise and clear indication that the British monetary authorities now desire a reversal of this trend.

The Bank of England's action has started yielding results. The Treasury Bill rate in London rose immediately to 3.8 per cent during the week ended 23rd March, as compared with 3.4 per cent in the previous week. As a result, the difference between the Treasury Bill rates in London and in New York (2.9 per cent) widened to nearly a full one per cent, thereby adding to the attractiveness of sterling.

The introduction of the two-tier Bank rate has injected an element of uncertainty into the London discount market. There is no knowing when and by how much the premium paid by the discount market will be raised. But there is no doubt that, if it is raised unduly, it will create distortion in the money market. For instance, the increase in Treasury Bill rate will increase the flow of domestic funds (say, corporate funds which at present earn 2 per cent in bank deposits) into Treasury Bills which offer almost double that rate. This would adversely affect the volume of deposits with banks and the liquidity of the banking system and reduce the scope for expanding bank advances. This may defeat the other objective of the two-tier Bank rate, namely, expansion of the domestic economy. But this can be minimised by the Bank of England directly providing credit to the banks as the Reserve Bank does in this country.

Guidelines for U.S. Aid

A little over three months ago, the U.S. President asked a distinguished group of ten private citizens to examine the scope of American assistance (economic as well as military) and to recommend measures for ensuring its optimum contribution to strengthening the security of the U.S. and the free world. The group, named the Committee to Strengthen the Security of the Free World, was headed by General Lucius D. Clay and consisted of Messrs. Eugene R. Black (ex-President of the World Bank), Robert B. Anderson, Clifford Hardin, Robert A. Lovett, Edward S. Mason, L. F. Mccollum, Herman Phleger, Howard A. Rusk and George Meany (President of A.F.L.-C.I.O., the combined American labour movement). The Committee has since submitted to the President an interesting ten-thousand-word report the contents of which are bound to influence greatly the U.S. Administration in shaping the aid programmes in future. With the exception of Mr. George Meany, who has dissented from the findings, the report embodies the general views on how the foreign assistance programmes should be conducted. Briefly summed

CHARTERED BANK

DIVIDEND MAINTAINED

THE results of The Chartered Bank for the year ended 31st December 1962 are highly encouraging. The consolidated profit of the Bank and its subsidiaries has improved from £990,238 to £1,076,748. This is after providing for taxation and making allocations to inner reserves. The aggregate balance-sheet total of the group as a whole has expanded sizably again from £408.10 million to £468.66 million and that of the Bank alone has risen from £353.14 million to £402.11 million. The dividend on the £1 fully paid shares, half of which was paid earlier as interim, has been maintained at 15 per cent per annum, less income-tax at the rate of 7s. 9d. in the pound. The whole of it, as against only the final distribution in the previous year, is on the increased capital of £6.6 million following a rights issue of £1.1 million at 100 per cent premium made in October 1961. It absorbs a larger sum of £606,375, as compared with £555,844 a year before. The transfer to the reserve fund has been raised again from £400,000 to £450,000. The carry forward, including £50,945 (as against £45,738 in 1961) retained in subsidiary companies' accounts, is £561,021, as against £540,648 brought in.

Mr. Vincent Alpe Grantham, Chairman of the Bank, says in his statement to shareholders that, while efficiency at the Bank is being increased, its much larger business has entailed increases in overseas staff, and in all parts of the globe costs, particularly salaries, have risen and still show a tendency to rise. "We are fortunate so far," he adds, "that our income has enabled us to keep pace with these increases, and I think it will be agreed that the result achieved in this not altogether easy year is satisfactory."

The following comparative table gives a picture of the liabilities and assets of the Bank alone as at the end of the past four years:

(In thousand £s sterling)

	As on 31st December			
	1962	1961	1960	1959
Liabilities (Main)				
Capital	6,600	6,600	5,500	5,000
Reserve fund	7,525	7,150	5,700	5,500
Undistributed surplus	510	495	470	463
Current and other accounts	207,668	181,501	181,455	188,655
Fixed deposits	156,814	133,123	108,802	59,578
Notes in circulation	5,295	5,107	4,732	3,869
Bills payable	2,380	2,054	2,237	1,668
Acceptances (contra item)	14,977	16,757	7,624	10,396
Assets (Main)				
Cash	77,942	72,794	57,085	44,289
Investments—				
Government and other securities	82,385	68,697	69,481	68,821
Securities lodged against note issue	6,023	5,399	4,706	3,945
Advances	181,897	155,565	144,436	116,687
Bills of exchange	29,301	30,513	23,734	22,699
Bank premises	3,537	3,391	3,210	3,180
Holdings in subsidiaries	3,226	2,898	2,897	2,889
Trade investments	416	414	416	885
Balance-sheet total	402,111	353,142	316,203	270,390

The improvement in profit has come through a businesslike use of the available resources. Over the year, advances have shot up from £155.56 million to £181.90 million, though there is a slight setback in bills of exchange from £30.51 million to £29.30 million. Investments, too, have increased from £5.4 million to £6 million. This growth has been made possible by a further expansion in fixed deposits from £133.12 million to £156.81 million and a spurt in deposits in current and other accounts to £207.67 million from the previous two years' static level of £181.50 million. Cash balances at close have improved from £72.79 million to £77.94 million, thus underlining a satisfactory liquidity position of the Bank.

To sum up this review, one is tempted to refer again to the Chairman's statement wherein he aptly remarks: "The administration of a banking business extending over the greater part of Asia (which is the case with The Chartered Bank) into a multiplicity of sovereign States each pursuing highly individual and often conflicting economic policies grows increasingly complex with the passing of the years . . . it is often alleged that banks are hide-bound by precedent; this cannot be true of The Chartered Bank . . . if it were there could have been no rapid adaptation of traditional credit operations to new financial conditions . . . in 1962 the challenge of change was perhaps more insistent than at any time during the past decade and the results of the Bank demonstrate the success with which this challenge has been met." The figures brought together in our review fully substantiate the Chairman's claim.

ALLAHABAD BANK

ALL-ROUND PROGRESS

THERE has been a further all-round and fairly encouraging improvement in the working of the Allahabad Bank Ltd. (General Manager: Mr. M. J. Maclaren Calcutta) during the year ended 31st December 1962. Gross income from all sources has expanded by Rs. 46.32 lakhs to stand at the peak level of Rs. 380.42 lakhs, deposits have risen by a further Rs. 5.24 crores to aggregate Rs. 62.64 crores and advances which had remained stagnant during the preceding two years have advanced to Rs. 38.37 crores from Rs. 31.63 crores just a year before. With the increase in the paid-up share capital and the substantial accretion to reserves, the Bank's capital base has been widened and this has resulted in raising, however modestly, the ratio of "own funds" to deposits from 2.9 to 3.1 per cent. And, finally, the balance-sheet total has spurted smartly from Rs. 64.61 crores to Rs. 71.94 crores which is an all-time high.

Contributions to the improvement in earnings have come from all sides but, principally, from interest and discount earned which has gone up by as much as Rs. 43.43 lakhs to Rs. 331.66 lakhs. Receipts from the other two sources, namely, commission and exchange, and other income too have improved but only marginally, the former by Rs. 2.59 lakhs to Rs. 46.37 lakhs and latter from Rs. 2.11 lakhs to Rs. 2.39 lakhs. Unfortunately this betterment in gross income has not, as in the case of many a banking company, been reflected in the net profit figure after allowing for all expenses, depreciation and taxation. This was due, as readers are well aware, to the rise in operating expenses. The outward interest alone has expanded by no less than 16 per cent from Rs. 154.30 lakhs to Rs. 178.78 lakhs, while staff expenses excluding bonus have shot up from Rs. 108.21 lakhs to Rs. 125.96 lakhs. Other expenses which have been constantly on the rise have also risen by Rs. 3.74 lakhs to Rs. 49.98 lakhs. Provision for depreciation claims a slightly bigger amount of Rs. 3.26 lakhs as compared with Rs. 2.88 lakhs a year ago. As a result of these increases, the net profit has receded, albeit fractionally, from the all-time high figure of Rs. 22.49 lakhs for 1961 to a slightly lower level of Rs. 22.45 lakhs. However, with the inclusion of a larger amount brought forward from the preceding year, the amount available for distribution is actually higher at Rs. 28.69 lakhs as against Rs. 27.51 lakhs a year ago. Out of this, Rs. 9.30 lakhs, or nearly one-third, has been absorbed by the provision for bonus to employees, while Rs. 4.50 lakhs have been credited to reserves, which is same as last year. So far as the shareholders are concerned, the Directors had maintained the interim distribution on ordinary shares at 18 per cent per annum, including the bonus element of 6 per cent per annum. The final distribution, which is on a higher capital, has, however, been cut to 12 per cent per annum, by leaving out the bonus. In effect, therefore, the shareholders are getting for the whole of 1962 a return of 15 per cent only (12 per cent dividend+3 per cent bonus), though the amount required for this purpose is larger, as the new shares are eligible for the final dividend for the three months ended 31st December 1962.

The sustained progress made by the Bank during the past four years is shown in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Gross income	380.42	334.12	293.84	275.95
Of which:				
Interest and discount earned	331.66	288.23	252.93	238.66
Commission and exchange	46.37	43.78	38.75	35.33
Other income	2.39	2.11	2.16	1.96
Interest paid	178.78	154.30	135.29	135.38
Staff expenses	125.96	108.21	96.46	87.62
Other expenses	49.98	46.24	42.08	34.13
Provision for—				
Depreciation	3.26	2.88	2.66	2.55
Taxation	N.D.	N.D.	N.D.	N.D.
Net profit	22.44	22.49	17.35	16.27
To reserves and contingencies	4.50	4.50	..	..
,, staff pension fund	..	1.00	1.00	2.00
,, bonus to staff	9.80	9.25	8.80	7.60
Dividend—				
Preference	1.17	1.17	1.44	0.90
Ordinary	7.42 (D. 12% +B. 3%)	5.40 (D. 12% +B. 6%)	5.40 (D. 12% +B. 6%)	5.40 (D. 12% +B. 6%)
Carry forward	6.80	6.10	5.04	3.86

	As on 31st December			
	1962	1961	1960	1959
Capital	82.50	47.06	45.50	45.50
Reserves	123.75	108.00	108.00	108.00
Deposits	62,64.71	57,40.83	51,95.00	50,12.66
Borrowings from other banks	6.70	8.50	10.82	127.64
Advances	38,37.16	31,63.03	31,03.25	28,36.40
Investments	17,73.06	17,51.55	12,58.61	14,62.86
Cash	868.07	986.45	900.25	10,04.12
Balance-sheet total	71,94.13	64,60.82	59,84.50	59,10.74
Ratio to deposits of—	%	%	%	%
Advances	61.8	55.1	61.4	56.6
Investments	28.3	30.5	24.2	28.2
Cash	13.8	17.2	17.5	20.0

All dividends are subject to deduction of tax.
N.D.=Not disclosed.

The improvement in deposits has been shared by all types. Thus, fixed deposits have gone up from Rs. 37.05 crores to Rs. 39.96 crores, savings deposits from Rs. 8.13 crores to Rs. 9.57 crores and current accounts by Rs. 0.88 crore to Rs. 13.11 crores. Side by side with this rise in deposits, there was an equally impressive increase in advances which, as at 31st December 1962, aggregated Rs. 38.37 crores as against Rs. 31.63 crores a year ago.

During the course of the year, the Bank issued 22,500 equity shares of Rs. 100 each at a premium of Rs. 50 per share to the existing shareholders in the proportion of one new share for every two shares held. Besides, the unpaid amount of calls of Rs. 12.94 lakhs on the old shares, was also received fully during the year. Consequently the Bank's issued and fully subscribed capital has gone up from Rs. 47.06 lakhs to Rs. 82.50 lakhs. This is supported by Rs. 123.75 lakhs in reserves. Thus, the total of 'own funds' comes to Rs. 216.25 lakhs.

NEWS IN BRIEF

THE Governments of India and Pakistan have extended the current trade agreement between the two countries by three months with effect from the 21st inst.

The Lower House of Swiss Parliament, the National Council, has approved of a ten-year extension of the existing Federal financial system and a reduction of 10 per cent in "Defence Tax" with effect from 1st January 1965.

The Development Aid Committee of the German Bundestag has urged the West German Government to conclude agreements on the protection of investments and on taxation with all developing countries.

The London Transport Board is proposing to introduce an automatically controlled train if current trials prove satisfactory. This train picks up "instructions" from the rails in the form of coded electric impulses. There will be a train operator in the cabin to take over driving if any part of the automatic system fails.

The Neyveli Lignite Corporation has invited global tenders for the supply of additional machinery required to increase lignite production from the original target of 3.56 million metric tons to 4.88 million tons. All the units of the projects are expected to go into production by 1965.

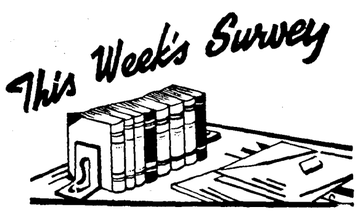
Steel production in the U.S. is expected to touch a record of 101 million tons in the current calendar year, according to the Commerce Department. The actual output last year was 98.3 million tons, accounting for 25.7 per cent of the world steel production of 382.9 million.

The Government of New Zealand has decided to appoint a committee of inquiry to recommend ways of regulating company take-over bids in the country, following last year's unsuccessful attempt by Eagle Star Insurance to acquire the New Zealand Insurance Company.

A $2.20-million plant for making polystyrene foam sheet is to be built at Hazleton in Pennsylvania (U.S.A.) by the Japanese firm of Sekisui Plastics, the newly formed U.S. Subsidiary of Sekisui Chemical Company of Osaka. This is the first Japanese direct manufacturing investment in the U.S.

The "Jollyboard for Modern Living" Exhibition, sponsored by the Anil Hardboards Ltd., was inaugurated by Mr. Y. B. Chavan, Union Minister for Defence, at Bombay on Tuesday this week. The pavilion housing this exhibition has been constructed with the hardboard, insulating board and ceiling tiles manufactured by the Company.

It has been decided to recognise provisionally the degrees in engineering and agriculture awarded by the People's Friendship University, Moscow, for purposes of recruitment to superior posts and services under the Central Government in the appropriate fields. This has been done on the recommendations of the Board of Assessment for Technical and Professional Qualifications, Government of India.



In its programme to intensify search for copper in the country, the Geological Survey of India drilled a total of 3,685.43 metres in various regions in the country. The drilling was in addition to large-scale mapping and sampling for copper in the States of Bihar, Rajasthan, Madhya Pradesh, Mysore, Punjab, Andhra Pradesh, Jammu and Kashmir and Uttar Pradesh.

The "EWP-Information Centre for Development Aid" will be established at Bonn by three organisations, namely, German Friedrich Ebert Foundation, Weltweite Partnerschaft (Worldwide Partnership), and Peace with Freedom Inc. The project was decided at a conference in Berlin in which 65 delegates from 16 countries and three Continents took part, representing 34 private organisations. The office is to co-ordinate the development aid of all participating parties.

The "Frankfurt Inter-continental," a DM 40-million hotel to be shortly opened in Frankfurt, is being described as a "small town all under one roof." Consisting of 21 floors, the building will be 75 metres high. Famous architects and artists have participated in the designing and construction of the hotel. To ensure that urgent communications reach the guests without delay, a pneumatic system has been installed by the postal authorities for carrying mails.

The trade pact between India and Greece has been extended up to the end of this year, under a treaty signed at New Delhi last week. India will continue to import from Greece abrassives, gum resin and dried figs and will export jute manufactures, textile fibre, cotton piecegoods, coir manufactures, spices, lacs and cinematograph films. During 1962, India exported goods worth Rs. 67.8 lakhs and imported from Greece items valued at Rs. 5.1 lakhs.

India's exports (excluding those from the ports of Goa, Daman and Diu) during the month of February 1963 amounted to Rs. 56.10 crores, as compared with Rs. 46.85 crores in the same month last year, registering an increase of Rs. 9.25 crores. In the first eleven months of the financial year 1962-63, the total exports rose by Rs. 26 crores at Rs. 629 crores, as against Rs. 603 crores in the corresponding period of 1961-62. The imports in the same period were Rs. 966.5 crores, as against Rs. 969.5 crores a year before.

NEOGY COMMITTEE'S LABOURS

THE work of the Neogy Committee on Transport Policy and Co-ordination was the subject of a question in the Lok Sabha the other day. The question was whether any further progress had been made in regard to the finalisation and submission of its report by the Committee. In reply to it, a statement was laid on the table of the House by the Deputy Minister for Planning. This statement was, in more ways than one, a distressing commentary on the state of affairs pertaining to the labours of a committee which came into being in July 1959, submitted its preliminary report in February 1961 and, immediately thereafter, invited the opinions of State Governments and other interests on the various issues raised in that report. If, even after the lapse of three years and eight months from the date of its constitution, the Committee was not in a position to draw up a final report, were there any extenuating circumstances which could absolve it of all blame for the inordinate delay? Yes, there were, if one were to go by the Deputy Minister's statement which referred to the "time-consuming process" of getting the comments "even from the interests more directly concerned with the formulation of transport policy." The relevant portion of the statement, which is quoted below, suggests, by implication, that the Committee cannot be blamed for the delay:

"The Committee considered it particularly necessary to have the views of the State Governments. As the executive authority in regard to road transport under the existing law vests in the State Governments, the recommendations affecting any basic policy relating to transport could be formulated only after due consultations with them and after ascertaining their views. The State Governments were requested to send their comments in June 1961 and, even after a year, replies had been received only from three State Governments. At the request of the Chairman of the Committee, the Prime Minister invited the personal attention of the Chief Ministers in June 1962, to the questionnaire sent by the Committee to the State Governments. Subsequently, a team of officers of the Committee went round the States to collect the State Governments' views and other relevant factual information. The officers have recently completed their round of discussions, except with the State Government of Assam. Detailed notes are now under preparation presenting the material and the views so far collected from the State Governments. In the case of several States, the material available still has some gaps and further communications are awaited on the points which arose during the discussions with them."

The above explanation, however, does not reveal why the State Governments have been lukewarm and non-co-operative in their attitude towards the Neogy Committee. It is, indeed, amazing that, while chambers of commerce and road transport interests had taken the preliminary report seriously and promptly forwarded their views thereon, the State Governments had chosen to procrastinate and put off replies to the Committee's questionnaire of February 1961. After all, it is the State Governments, which themselves run some transport undertakings and which regulate roads and road transport and inland navigation, that should have been most helpful and prompt with their views and facts and figures. Their lapse is all the more deplorable at a time when the transport situation has gone from bad to worse and the need for a dynamic transport policy to serve the needs of both defence and development has been keenly and widely felt. If the Committee is not enabled to complete its labours at least in the course of the current year, it will have virtually lost its *raison d'etre* as far as the third Plan is concerned.

PAINTS AND VARNISHES

The paints manufacturing industry continues to make good progress, induced by growing demand for the surface coating of buildings and furniture, transport vehicles, railway coaches, etc. The total output of paints touched a record of 60,150 tonnes in 1962, which compares favourably with 59,082 tonnes in 1961 and only 40,000 tonnes in the beginning of the second Plan. The progress of the industry has not been confined to quantitative increase in output alone, for, side by side, there has been a steady improvement in the quality of paints produced. What is more, the industry has made significant headway in diversifying its range of products and thereby reducing dependence on imports. Among the new varieties of paints, the production of which has been undertaken in India during the last five or six years, mention may be made of super-synthetic enamels for coating of copper wire, finishes for bakelites, luminous paints, lacquer finishes for leather, liquid envelopes for protection of precision instruments, anti-pest finishes, hot drip protective coatings, paints capable of withstanding temperatures upto 1,500 degrees F., synthetic iron oxide pigments and pigment dyestuffs.

While the industry's growth has been generally satisfactory, it should not be forgotten that producers have to make still greater efforts to fulfil the growing demand, which, according to the Planning Commission, would rise to about 160,000 tons by 1966. Even assuming that small-scale units would be able to produce about 30,000 tons within the next three or four years, there will still be a wide gap left for the organised sector to fill. It is, of course, true that there is sizable idle capacity in the industry at present, which could be fully utilised, provided the industry is assured of adequate raw materials, part of which has to be imported. There are at present 53 organised units, with a total installed capacity of about 85,000 tons. These units are concentrated mostly in Maharashtra and West Bengal.

Although the industry is faced with the problems of shortage of raw materials and relatively high cost of production, it has made a good beginning in securing export business. Export incentives offered by the Government have been taken advantage of by several large-scale manufacturers. The total exports of paints, pigments and varnishes amounted to Rs. 17 lakhs during the first ten months of 1961-62, or an annual average of over Rs. 20 lakhs, which compare well with only Rs. 12 lakhs five years ago. Mr. T. M. Bishop, President of the Indian Paint Association, in his address at the annual meeting of the Association held last week-end at Calcutta, expressed the view that there was large scope for promoting exports further. He revealed that some of the producers had conducted market surveys last year in certain overseas markets for studying the prospects for stepping up shipments of paints. These surveys had opened out new avenues for exports, despite the preference in those countries for established brands from other competing countries. Mr. Bishop, however, did not minimise the difficulties involved in securing export business. He observed that specialised packings, market research, sales promotion and overseas commission agents' remuneration, etc., would make heavy demands on the resources of the industry. In view of the severe competition in paints in world markets, the Government of India will do well to increase the benefits under the existing incentive schemes to those exporters whose performance is outstanding.

INCENTIVES FOR WORKERS

The role of monetary and non-monetary incentives for workers in industry was the subject matter of a stimulating paper discussed by a study group of the conference of personnel and welfare officers, which concluded its deliberations in the City on the 23rd instant. The main conclusion of the study group was that incentive scheme was a "must" in Indian industries, especially in view of the urgent need to improve productivity and to achieve the Plan targets for industrial production. The study group recognised that the existence of good industrial relations and prior consultation with workers materially assisted in the successful implementation of incentive schemes and that satisfactory working of such schemes would, in turn, lead to better and more cordial industrial relations.

The study group was in favour of the introduction of a system of payment by results, wherever practicable, with as wide a coverage as possible. It would be easier, in its opinion, to frame such schemes on unit-wise basis rather than on industry-wise basis. In any case, introduction of incentive schemes, the study group emphasised, should be preceded by scientific work study.

The study group also discussed at length some of the practical problems associated with the implementation of incentive schemes. It conceded that the introduction of incentive schemes might result in a shrinkage in the total volume of employment. But such shrinkage in employment, in its opinion, would only be a temporary phase. It, however, felt that great care should be taken to ensure that the schemes did not ordinarily result in retrenchment of workers. Wherever retrenchment was inevitable, it should be effected strictly in accordance with the principles laid down by the Indian Labour Conference.

Apart from the effect of incentive schemes on employment, there are certain other practical considerations which should be borne in mind in formulating incentive schemes. These relate to the nature of the scheme (that is, whether it is simple or complicated), the adequacy of the incentives offered and implementation. In fact, Dr. R. L. Mitchell, Chief of the I.L.O. Productivity Mission, who also participated in the discussion, laid particular emphasis on these aspects of the question. According to him, three conditions should be satisfied by any incentive scheme if it were to prove a success. These are: (1) the scheme should be simple and easily understandable by workers; (2) the reward should be sufficient to enthuse the workers to give their best; and (3) payment of the reward should be made as expeditiously and frequently as possible; in any case, the worker should at least be informed of his incentive earnings as early as possible.

While generally agreeing with the conclusions of the study group, one cannot help feeling that a degree of oversimplification of the problem of incentives is reflected in its suggestions and recommendations. The greatest difficulty in the way of introducing incentive schemes is the tendency of workers and their unions to look with suspicion at any kind of incentive schemes. This is because of the fear that such schemes are the thin end of the wedge designed to get more production from workers at the same or proportionately less pay. This fear can be removed only by properly educating workers on the merits of incentive schemes. Personnel and welfare officers can play an effective role in this educative effort which should precede the introduction of all incentive schemes.

FOOD: HOPES AND FEARS

The debate on the demands for grants for the Union Ministry of Food and Agriculture in the Lok Sabha last week was notable for the grave concern with which members viewed the disconcerting trends in output of foodgrains. Most of them appeared to have endorsed the Planning Commission's reading of the food situation, when they maintained that the implementation of agricultural plans had failed. One would have thought that the criticisms levelled against the Food Ministry would create a positive response from the Minister for Food and Agriculture, resulting in the evolution of more energetic steps to augment production. But these criticisms did not make any impression on Mr. S. K. Patil, Union Minister for Food and Agriculture, who expressed his oft-repeated view that there was nothing wrong with the basic food situation. Mr. Patil's stand would not have been a source of concern but for the fact that it smacked of unwarranted complacency, which would, if not checked in time, adversely affect the process of planned development. The need of the hour is to expedite vigorously plans for increasing food production and thereby eliminate the yawning gulf between actual output and third Plan targets. It is rather disappointing to note that Mr. Patil's observations did not reflect a thorough awareness of this need.

Mr. Patil almost sounded fatalistic when he told critics that progress in agriculture was different from that in industries and that one would be living in a fool's paradise if one expected graduated increase in food output year after year. He also referred to year-to-year cyclical movements in food output in India. These arguments, however, do not carry much conviction to students of agriculture. During the first and second Plan periods, Indian agriculture had shown that there was a tremendous production potential in the economy. Barring setbacks in one or two years, foodgrains output, over a decade or so, tended to move up steadily. The total output of foodgrains at the end of the second Plan was almost 50 per cent higher, as compared with ten years before. Does Mr. Patil mean that even this rate of progress cannot be maintained during the third Plan? Mr. Patil, of course, did not say directly that the third Plan targets were beyond reach. On the contrary, he made a curious statement, when he said that he was expecting a spurt in output, and when it came, food production would jump from the present level of about 80 million tons to 90-95 million tons. One is at a loss to know the basis of his belief, when he himself had discounted earlier the possibility of spectacular progress on the food front. Mr. Patil's expectation of a spurt in output can, at any rate, be realised, if farmers are provided with adequate fertilisers, irrigation facilities, credit and other means of increasing productivity. It is here that the Centre, in co-operation with the State Governments, have to do a good deal of earnest and co-ordinated work.

Mr. Patil's refusal to share the pessimism of some critics is somewhat understandable, viewed against the background of his desire not to create a psychology of shortage which would lead to undue rise in prices. He was, in fact, proud that the national emergency had not led to a steep rise in prices unlike in other war periods. This is certainly commendable. But it should be admitted that this was not the result of any increase in domestic output, but was the cumulative effect of larger imports, several measures undertaken by the Government to improve the distributive machinery and the voluntary control exercised by the trading community. The basic statistical position thus remains none-too-satisfactory, with the foodgrains output almost stagnant at about 80 million tons during the first two years of the third Plan, when population has gone up by about 16 million. Imports, of course, have played a key role in removing the scare of scarcity. The annual report of the Ministry of Food and Agriculture for 1962-63 points out that imports of foodgrains were higher in 1962 at 3.64 million tonnes, valued at Rs. 141.1 crores, as compared with 3.5 million tonnes, valued at Rs. 129.6 crores, in 1961. Imports of wheat in 1962 aggregated as much as 3.25 million tonnes, consisting of 2.85 million tonnes from the U.S. (of which about 2.7 million tonnes were under P.L. 480, 0.05 million tonnes under the manganese-wheat barter agreement and 0.1 million tonnes against commercial purchases), besides small quantities from Australia and Canada. Of the rice imported, about 0.19 million tonnes were from the U.S. under P.L. 480 and 0.2 million tonnes from Burma.

Despite these imports, prices tended to go up, albeit slightly. The average index number of wholesale prices (base 1952-53=100) for cereals was 106 in 1962, which compares unfavourably with only 102 in 1961. The average index for rice rose from 105 in 1961 to 109 in 1962 and that of wheat from 89 to 92. There was a more marked increase in prices of pulses, their combined price index having gone up from 91 in 1961 to 104. Mr. Patil's announcement that price incentives would be made available to farmers is welcome to the extent that this may stimulate production and arrest the rise in prices. Price incentives alone, however, will not lead to increase in output where there is a physical shortage of manures and fertilisers, improved seeds and implements, irrigation water, pumpsets, pesticides, and so on. They must, therefore, be accompanied by more adequate provision of all aids and facilities needed for intensive farming and higher productivity. Otherwise, price incentives will merely provide windfalls to farmers at the existing level of production itself.

BISCUIT INDUSTRY

With the steady improvement in the standard of living in India, consumption of biscuits has gone up considerably. It may be recalled that the Planning Commission, at the time of the formulation of the second Plan, had anticipated the demand for biscuits to be of the order of only 15,000 tons by 1960-61. The actual domestic consumption rose, however, at a much faster rate and touched about 24,000 tons by the end of that Plan. The biscuit industry was not slow in responding to consumer demand. The production of biscuits in the organised sector was, accordingly, stepped up from about 12,000 tons in 1955 to 26,000 tons by 1961 and further to a record level of 28,000 tons in 1962. An important feature of the working of the industry last year was the almost full utilisation of installed capacity, estimated at about 30,000 tons per annum. In fact, some of the major units worked more than one shift and some others to their maximum capacity. While these trends are encouraging, one cannot overlook the fact that the industry has still to go a long way before it can achieve the targets laid down in the third Plan. The increase in output was only 2,000 tons last year, which does not compare well with an annual average increase of about 3,200 tons envisaged in the third Plan.

Nor is the performance of the industry on the export front satisfactory. For the first ten months (April 1962 to January 1963) of the current financial year, exports aggregated only 86 tonnes, valued at Rs. 3.2 lakhs, representing an annual average of just about 103 tonnes worth Rs. 3.8 lakhs. This represents a marked decline from the previous year (1961-62) when exports were of the order of 128 tonnes, valued at Rs. 4.5 lakhs. The proportion of export to total output is also negligible at present. This is particularly disconcerting, viewed against the background of Mr. Manubhai Shah's call to the industry to export about 5 per cent of its output; this would mean shipments of about 1,500 tonnes annually. The fulfilment of this objective is going to be an uphill task for the industry. This is so particularly because of import restrictions in some of the neighbouring countries like Burma and Ceylon, besides the growth of the domestic industry in some of the Afro-Asian countries, which have been large buyers of India-made biscuits.

Exports can be stepped up only if the cost of production is reduced. It is, therefore, only appropriate that Mr. A. C. Khanna, Chairman of the Federation of Biscuit Manufacturers of India, who is also Chairman of the Britannia Biscuit Company Ltd., should have drawn particular attention to problems of increasing productivity in the industry in his speech at the annual meeting of the Federation held at Delhi last week-end. Among the factors that tended to raise costs, he included higher wages and increasing cost of raw materials, power and transport. Mr. Khanna struck a note of realism when he stressed that biscuit prices could be stabilised only through increasing output thereby bringing down the unit cost.

Mr. Khanna urged the Government of India to provide every assistance to the biscuit industry so as to enable it to increase production In particular, he suggested that producers should be allowed liberal quotas for the import of biscuit machinery, without which they would have to work on obsolete plant which was most uneconomic to operate. The entire requirements of the industry could be met, according to him, if only it was given import licences worth Rs. 20 lakhs annually for the next two or three years. Mr. Khanna's plea cannot be too easily brushed aside, as there is urgent need today for increasing production of biscuits and reducing their prices not only to meet the growing civilian requirements, but also to cater to mounting defence needs, as well as exports.

ECONOMY IN FUEL UTILISATION

The findings of the two-member British team, which made a study of fuel utilisation in India (a brief account of which has just appeared in a section of the press), give a broad indication of the extent of wastage of industrial energy which is in short supply and which the country needs so badly for rapid industrialisation. The team's report was submitted sometime last year, but no specific measures seem to have been taken by the authorities so far. Whatever the Government may or may not do, there can be no doubt that much can be done by industries themselves in the matter of economic fuel utilisation. In the context of a fuel shortage which is expected to continue, the team's findings and recommendations may well claim increasing attention in industrial circles.

The team, which consisted of Mr. C. A. T. Plummer and Mr. B. R. Addicott, both members of the National Fuel Efficiency Service of the U.K., visited as many as sixty establishments representing a cross-section of Indian industry. It found that among the establishments visited, there was not a single unit which did not offer scope for a saving of at least 15 per cent in fuel utilisation. In some units, nearly 50 per cent of the fuel consumed could be saved. The scope for fuel saving was the greatest in areas where the delivered cost of fuel was the lowest.

The team found many anomalies in the price structure and consumption pattern of coal which, in its opinion, militated against efficiency in fuel utilisation. The price structure of coal, according to the team, neither reflects its value in the national economy nor does it give incentive to industry to use poorer qualities more plentifully. In fact, the team gained the impression that industrial management tended to value coal by what it paid for it and not by its intrinsic worth. This resulted in prodigal use of coal. The team has, therefore, suggested that, in order to discourage such wastage, the price of coal and of industrial fuels in general should be related to its real value.

The spectrum of prices for coal, that is, the grade differentials, the team maintains, is not broad enough. This encourages a clamour for better grades of coal for purposes which could as well be served with inferior coal. It has noted a marked tendency to utilise good quality coal in order to camouflage inefficient use of coal.

A significant finding of the team is that a saving of as much as 10 per cent can be achieved by what it calls elementary "first-aid" measures, such as lagging and thermal insulation, prevention of steam leakage and use of steam at the lowest possible pressure which involve little capital outlay.

Bad maintenance is, in the opinion of the British experts, the most frequent cause of fuel wastage. Lack of proper measuring instruments makes improvement in fuel efficiency difficult. The team found that managements either did not install these instruments or, after having installed them, failed to keep them in good repair. This situation needs to be remedied immediately. If spares and components cannot be imported due to import restrictions, their indigenous manufacture should be actively promoted, suggests the team.

It is the considered opinion of the team that most of the Lancashire boilers used in India could save at least 15 per cent of coal out of every 100 tons they now burn by fitting mechanical stoker and economiser. This will result, in the aggregate, in a substantial saving of coal. The team has also recommended mechanised handling of fuel to improve efficiency. It admits that this will result in some displacement of labour but, in its opinion, the advantages of reduced costs, improved wagon turnround and higher output will outweigh the disadvantage.

The study has made certain suggestions for improving fuel utilisation in the country on a permanent basis. According to it, no country seeking to industrialise itself can afford to be prodigal in the use of its fuel resources, much less India which is faced with shortage of fuel resources. Fuel efficiency not only economises the use of fuel but also contributes, in a very great measure, to industrial efficiency. The team has recommended a fuel efficiency service for India on the model of the Fuel Efficiency Service in the U.K. This service, the team emphasises, should function independently of the agency responsible for the administration of coal distribution controls.

TEXTILE MACHINERY

Although the textile machinery industry has made remarkable progress in the past few years, there is still considerable shortage of machinery, components, spares and accessories. Including the anticipated production of machinery worth Rs. 27.5 crores in the current calendar year, the aggregate value of output during the entire third Plan period is expected to be of the order of Rs. 142 crores, against which the requirements are estimated at Rs. 310 crores or a gap of Rs. 168 crores. This gap, according to the 1962-63 annual report of the Union Ministry of Steel and Heavy Industries, is proposed to be covered to the extent possible by expansion of existing units and, if need be, by establishment of new units for meeting the specific requirements. The capacity licensed so far (in terms of value) is Rs. 44 crores per annum. Figures pertaining to capacity, in terms of value, actually brought into existence are not available in the report under reference. In terms of quantity, however, figures are available only for the principal items of textile machinery from the *Monthly Statistics of Industrial Production*. Thus, as of 1961, the capacity for making calico, semi-automatic and automatic looms was 880 looms per month, for spinning frames 170 per month and for carding engines 220, the average production being 631, 116 and 110, respectively. It will thus be seen that unutilised capacity is quite sizable in all these three principal items of textile machinery. The annual report of the Ministry of Steel and Heavy Industries mentioned above shows that, in terms of value, the actual rate of output of all types of textile machinery in 1962 was Rs. 11.50 crores. The annual production of components, spares and accessories was about Rs. 15 crores and the target of Rs. 20 crores is likely to be achieved during the third Plan period. These figures impressively highlight the urgency of maintaining production at as high a level as possible.

Viewed thus, the Government of India's decision to set up shortly a high power panel to advise it on the development of textile machinery industry has, therefore, come not a day too soon. Disclosing the decision, Mr. R. Doraiswamy, Textile Commissioner, who inaugurated the twentieth annual general meeting of the Association of Merchants and Manufacturers of Textile Stores and Machinery held at Bombay last week-end, certainly struck a note of

MODIFICATIONS SOUGHT IN S.P.T.

MR. MORARJI DESAI UNDER PRESSURE

By Our Special Representative

NEW DELHI, 20*th March*
(*Delayed in transit*)

SUPER Profits Tax stole the Federation of Indian Chambers of Commerce and Industry's annual show at New Delhi last week-end. Speaker after speaker dwelt on its manifold iniquitous features. Although the Federation's resolution on the subject of fiscal policy did not call for its abolition, the spirit of the speeches clearly indicated that everyone was in favour of its withdrawal. There is a section of business community which did not participate in this year's session of the Federation's annual meeting but which met the Prime Minister and the Finance Minister separately. This section holds the view that S.P.T. is most objectionable in principle and that the best thing to do would be to drop the measure and impose a special surcharge on corporate taxation for the duration of emergency. The Federation, however, is not officially in favour of abolition of S.P.T., for it realises that such a demand will not be politically feasible. The Finance Minister has categorically rejected all suggestions for abolition of S.P.T. He is reported to have told the friendly businessmen who had met him that those who wanted the removal of S.P.T. were asking him to commit political suicide. It is a safe bet, therefore, that the S.P.T. has come to stay, perhaps for a much longer time than the emergency.

The Federation's spokesmen have suggested a number of modifications in the S.P.T. to make it agreeable to investors, both foreign and Indian. Details are not available, but from the pressure that is being exercised on Mr. Morarji Desai even from the Congress Parliamentary Party it is evident that the business community's misgivings about this new fiscal weapon are now being appreciated by a large number of Congressmen. It is gratifying to find that even Mr. Mahavir Tyagi, who has always been critical of the private sector, has come to realise that the six per cent norm for arriving at the super profit is too low and that it should be raised to at least nine per cent.

Even businessmen, whose abiding affection for the Congress Party is well known and who do not like to air their differences with the Government in public, are of the view that a mere increase in the standard rate for S.P.T. from 6 to 9 per cent or even to 10 per cent will not solve their difficulties. They feel that this concession will not be sufficient to induce foreign private investors to put their money in this country. In their view, the rates of S.P.T. also should be substantially reduced; but what is much more important is that there should be an overall limit to all corporate taxation. For example, the total incidence of normal corporate tax and the S.P.T. should not exceed a specified level, say, 56 to 58 or 60 per cent of the taxable profit. The most important consideration that should be borne in mind, according to them, is that foreign private investors should not be discouraged from coming to India and helping its economic growth. Even foreigners may not mind accepting a lower rate of return during the period of national emergency, provided the Government makes it clear that this is only an emergency tax. However, since none knows it for certain as to how long the emergency will last, the Government will have to indicate the duration for which the S.P.T. will be in force, if this suggestion is to yield the results expected of it.

Official Reactions

Reactions in official circles to the vehement protests against S.P.T. that have been heard from all parts of India are lukewarm. The consensus of opinion is that, in a bid to get maximum concession from the Government, businessmen are exaggerating the incidence of S.P.T. on corporate profits and capital markets. The argument that the S.P.T. will penalise efficiency, hard work and economy and encourage dishonesty and inefficiency is described by them as highly theoretical and bookish. It does not, in their opinion, square with the businessmen's readiness to accept an emergency surcharge of even up to ten per cent. In other words, if a 60 per cent corporate tax is regarded as more tolerable than S.P.T. *plus* the present rate of corporate tax (namely 50 per cent), how is the objection to S.P.T. on grounds of principle tenable, official circles ask. An unduly high level of taxation, they point out, will have the same effects as those attributed to S.P.T. They are, however, prepared to concede that the case for reducing the incidence of S.P.T. by raising the exemption limit and effecting other refinements is arguable. To what extent the Government should yield ground on these points is, they say, a matter for the Finance Minister to decide. That would, one is told, depend primarily on the basic objectives with which he has forged this new fiscal weapon. Whether they are confined only to the question of raising finance or meant to cover other considerations also is a question for which the answer is known, one is led to believe, only to the Finance Minister and the Prime Minister.

The Federation's stand to seek modifications in S.P.T. rather than insist on its abolition is regarded as the most realistic by official circles. The latter further feel that it would be in their own interest not to accentuate the bearish atmosphere in the capital market by indulging in broad generalisations and by overestimating the effects of S.P.T. on distributable profits and dividends. In view of the threats from China and Pakistan, it does no good to anyone, they say, to engender a diffident mood among investors, in particular, and the public, in general, Instead, businessmen should quietly present their difficulties to the Government and try to obtain relief purely on the basis of the facts of the case. It is apparently this realisation, namely, the necessity to ensure a high level of morale and to prevent the spread of pessimism among investors, that prompted Mr. G. D. Birla, one of the topmost leaders of the business community, to appeal to businessmen on the 17th instant to go about their business as usual without getting unduly upset by or excited over the new tax proposals. He added, in effect, though not in as many words: "We have represented our case to the Government. We have drawn its attention to the bad effects of some of the new taxes on the growth of industry. Let us patiently wait for the outcome of these representations. Whatever the outcome, we shall do nothing to make matters difficult for the Government. On the contrary, we shall continue to stand by it through thick and thin, for political stability is a great thing." Meanwhile, Mr. Birla was sanguine that the Government would be responsive to the businessmen's appeals and quoted, in support of his confidence, the Prime Minister's assurance (given in the course of his inaugural speech at the Federation's annual session) that the Government would do nothing that would harm industrial progress.

Discussions with knowledgeable circles in Delhi go to confirm the belief that Mr. G. D. Birla's optimism is not an exaggeration. The theory that the budget proposals have been framed for the political purpose of giving a further boost to the socialist pattern of society is discounted in Delhi. The fact that neither the Prime Minister nor any of the Ministers derided the private sector, though they had occasions to do so last week-end, is quoted in support of this conclusion. It is very likely that the Finance Minister will modify the S.P.T. to an extent that would assure him an additional tax revenue of Rs. 25-30 crores which seems to be the target in his mind. The belief is that, being a shrewd man, he must have deliberately presented a harsh S.P.T. to begin with, so that he could have room for giving concessions to meet the clamour of the interests affected by it—a clamour which would have been there even if he had imposed a mild S.P.T. This, at any rate, is the reading of some in Delhi who know the Finance Minister intimately.

A revised scheme of distribution of pig iron for 1963-64 will come into effect from 1st April next. The scheme seeks an equitable distribution of the available supplies among all types of consumers. The demand for pig iron is now much in excess of availability. Even a conservative estimate puts the minimum essential demand at about two million tons, whereas availability is around a million tons. All the steel plants have been asked to increase their pig iron output and also to make some more pig iron available for distribution to foundries. It has been estimated that the availability may be increased to about 1.1 million tons. This will be broadly distributed as follows: Steel works maintenance 100,000 tons, railway sleepers 300,000 tons; spun pipe industry 187,000 tons; direct defence demands 60,000 tons; castings needed by D.G.S. and D. 30,000 tons; railway maintenance and other Government departments 50,000 tons; foundries getting defences contracts 20,000 tons; Central list foundries 176,000 tons; State list foundries 120,000 tons and reserve 7,000 tons.

DELHI LETTER

RIVER WATERS—HALF SOLUTION

MORE U.S. AID FOR POWER

(*From Our Special Correspondent*)

NEW DELHI, 26*th March*

THE intractable problem of the distribution of the Krishna and Godavari waters has again defied a firm solution. If the Gulhati Commission's report has made any progress, which it has undoubtedly, from the previous position of near chaos, it is mainly because the Centre has determindedly jumped into the fray this time, and has intervened almost in the manner of an arbitration.

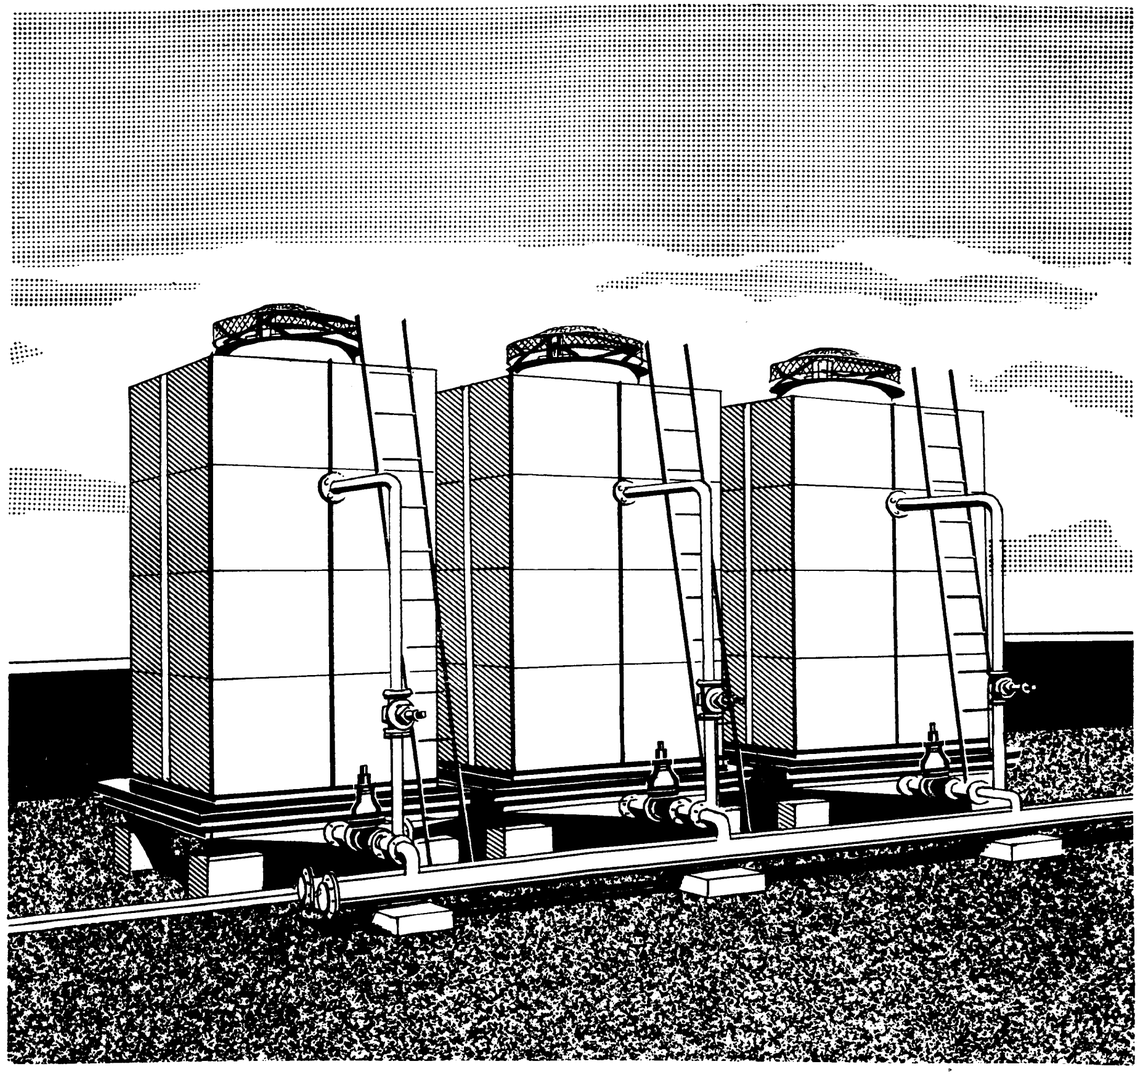
From the available comments it is clear that the solution has not fully satisfied any of the main contending States—Maharashtra, Mysore and Andhra Pradesh. It has, all the same, met their demands partially on an *ad hoc* basis. In the decision to reopen the subject in 1976 for a final solution (Andhra had earlier taken the stand that the 1951 agreement was almost sacrosanct and could not be altered or replaced till the completion of the full twenty-five years of its stipulated tenure), the Union Government has only underscored the temporary nature of the solution. It could not do otherwise, because there is no reliable data on the availability of water from these two rivers.

In any case, the new decisions call for appreciation, in that they have laid down certain principles which will also help in the solution of other inter-State problems like the question of border adjustments. The proposal for working out an integrated Master Plan for these two river basins, transcending all regional barriers and parochial pettyfogging, is in keeping with the needs of the times. In line with this will be the earlier proposal to set up seven zonal super-grids for power instead of slicing them within the State confines.

These two basins, comprising approximately 72 per cent of the area of Maharashtra, 61 per cent of Mysore, 53 per cent of Andhra, 15 per cent of Madhya Pradesh and 11 per cent of Orissa, together make for more than one-sixth of the entire area of India, and their total size is slightly larger than that of France. With the rise in the availability of power because of the number of projects already in hand and the centralised assessment which will add more, with the abundance or irrigation facilities that can be provided and with the rich mineral resources deposited in its heart, a really fruitful co-operative endeavour of all the concerned States can certainly change the face of this long-neglected area.

It is surprising that all these years claims and counter-claims had been preferred on the basis of non-existent, fictitious data. The approach to the problem so far, on the part of the States concerned, could not have been anything but political. The issues involved had been made use of successfully during the last and previous general elections. Claims had been laid for larger allocation on the basis of paper plans for which no work had been done. Issues had been joined as if the contenders belonged to separate countries.

The new principle, even if it be of convenience, of settling this dispute aims at ending the parochial attitude and going forward to build up the area on a national basis. To that extent it deserves praise and support. But will the Centre succeed in its aim without repeatedly intervening in a sphere not within its full control? Herein lies the danger. If, within the next thirteen years, the study made by a joint inter-State river board should upset the present allocations, the regional rivalries might again rear their heads to undo the very reasonable foundation of co-operative action laid now.



Another and immediate cause for much heartburning is that, while some of the projects already taken in hand by the different States have been given the green signal, a few others, considered strategically important for the particular States' economic development, will have to be kept in abeyance for the time being till the Master Plan finds it possible to incorporate them. Thus, Maharashtra will have cause to grieve over the refusal to permit the westward diversion of the Koyna for increasing its power potential. Mysore feels cheated of 50 per cent of its claim with which it had planned to cover some of the scarcity areas. Despite Andhra's apparent satisfaction over the approval of the Srisailam hydro-electric and Pochampad irrigation projects, there is disappointment that Nagarjunasagar Stage II will have to await the preparation of the Master Plan. Nevertheless, the feeling has crystallised here that the problem is being tackled in the correct way and nothing should be done to jeopardise this move in the right direction.

Chandrapura Power Station

There are many benefits to be derived from competition between the leaders of the two power blocs in giving economic aid. Some time ago, the Russian-aided lignite-based thermal power station at Neyveli was rated as the biggest in the country with a total generating capacity of 400,000 kw. Now it has been left behind by the U.S.-aided Chandrapura thermal power station in Bihar which will have a generating capacity of 420,000 kw. An announcement of a loan of Rs. 7.6 crores ($16 million) was made here yesterday, to finance the foreign exchange cost of adding a third 140,000 kw. generator to the plant.

The two generators now being installed are expected to go into production in 1964 and the third is scheduled to be commissioned two years hence. The power station has been so designed as to

WHEN IT'S A
QUESTION OF
COOLING TOWERS

VOLTAS PROVIDE THE BEST ANSWER

At thermal power stations, factories, industries, air conditioning and refrigeration plants...it's VOLTAS for *dependable* cooling.

VOLTAS Cooling Towers are light, as they should be. They're available as standard types or can be tailor-made to your specifications.

And they're backed by the sound technical advice and expert engineering service of VOLTAS—the people who know air conditioning and refrigeration best.

Made, sold and serviced by

VOLTAS LIMITED AIR CONDITIONING & REFRIGERATION DIVISION

AMERICAN LETTER

NO RECESSION IN SIGHT

"MOONLIGHTING"—NEW WORD IN VOCABULARY

From Our Special Correspondent

NEW YORK, *24th March*

BUSINESS trends in the United States are still encouraging. Volume has moved on a high plateau for the past four to five months without much divergence either up or down. Depending on the terminological inclinations, the economic state of affairs is referred to as either moving side-ways, or in a mixed pattern.

From Administration quarters at Washington the verdict is that 1963 will not see a recession, but that this might occur in 1964 unless the proposed tax cuts and tax reforms are enacted. Hearings from interested parties and from experts have been endless. There have been many arguments and debates, but since the Congress convened in January only two bills have been actually passed.

There have been debates about Canada, about President Charles de Gaulle of France, about Cuba, about the Far East, about the Sino-Russian tensions and about the Alliance for Progress Programme of the U.S. in Latin America and the economic implications which are implied.

President Kennedy's meetings with the Central American Chiefs of State have been described as highly successful. A compromise is being sought between those who demand an end to the Castro regime by force and those who would like to see the Castro regime disintegrate. The latter course is advocated by those who suggest that Premier Castro is a very sick man with brain tumors, according to reports from eminent Danish specialists who are reported to have been consulted.

In the meantime, sugar price advances are causing manufacturers of candy, soft drinks, bakery goods and other consumer items using sugar to consider price increases. The backlogs of Cuban tobacco leaves is also running out.

Employment

Employment in numerical terms is still a matter of concern in the U.S. It has been increasing lately, but so has unemployment which touched a discouragingly low of 6.1 per cent of the labour force in February. The two prime reasons for this development is the increase in population and in employables and the ever growing automation of industry.

The latter has caused most of the present and prospective labour troubles recently. It has brought on the strikes on the daily newspapers at New York and Cleveland and it is threatening the shutdown of some railway companies. It also had a great effect in the steel industry where fewer people are required for the output of all sorts of goods.

In order to assure employment for their members, the trade unions are pressing for shorter working hours and weeks. But this does not help much either, since most people do not like to be idle for a good part of their working hours. The result is that a new word has made its appearance in the American idiomatic language, or "slang," which is "moonlighting."

It refers to people holding not one, but two jobs. Some persons do not like to go home after their shorter work period is completed and they take second and third jobs to keep themselves occupied. That is moonlighting and it does not help a bit to spread the work load, so that the rate of unemployment in terms of the total labour force may be reduced. And there is really nothing that anybody can do about it in a free society where everyone can choose what he wants to do.

Because the economic indicators are going neither up nor down, there is a good deal of uneasiness in the U.S. where extremes are the natural pattern, like the weather. For example, this last winter—1962-63—was the most severe during the past 100 years. This was also true of Europe, Japan and England. There has been an excess of moisture and now there are floods. The effects on business are obvious.

A joint annual survey by the U.S. Department of Commerce and the Securities and Exchange Commission disclosed that industry and business expect to spend a record $39,100 million on new plants and equipment this year, presumably because of better depreciation allowances. The survey points to a new high in sales. Manufacturers, wholesalers and retailers expect a 4 per cent increase over 1962 and the utilities anticipate a 5 per cent boost.

Last year's outlays for capital investment were 9 per cent higher than in the preceding year, but that was a recession year and figures are not quite comparable.

U.S. Steel Output Still Leads

The U.S. was still the leader and well ahead of other steel producing countries last year, but its share of world output continued to decline. Around the world, steel production, according to the U.S. Commerce Department, reached a new high of 382.9 million tons. This was 2.2 per cent higher than in the year before.

The U.S. with 98.3 million tons, while still ahead of the Soviet Union and other producing countries, accounted for only 25.7 per cent of world output, as compared with 46 per cent a decade ago. The Soviet Union with 84.1 million tons held the second place and West Germany ranked third in the world with 35.9 million tons. Japan was fourth.

Steel is always linked closely with automobile production. Auto output and sales are at near record levels. Nobody can explain the exact reasons. It is a fact nevertheless. Automotive production has varied widely and so has the demand for steel in that sector of industry.

The Retail Outlook

Sales on the retail level have been very satisfactory, indeed, except in New York and Cleveland where no daily papers were published and no store advertisements appeared except in make-shift papers. The gain in retail sales over last year has been running between 7 and 8 per cent this year.

Along the same lines, hire-purchase transactions, or what is called consumer credit, in the U.S. has reached more than $63,000 million which is equal to about one-sixth of the disposable income of $383,000 million and over the past third of a century, consumer credit has grown about twice as fast as disposable income (after taxes). The composition of consumer loans is rather interesting. About 30 per cent was for automobile loans, 20 per cent for other consumer goods, 20 per cent for personal loans, 15 per cent for single payment loans, 9 per cent for charge accounts and 5 per cent for repair and maintenance loans.

It is a very revealing picture of what makes the American economy tick. Most of the business is on credit in one form or another. Those who have "credit" can afford almost anything. It is not unusual for a regularly employed person to carry credit cards which could enable him or her to fly around the world without any cash outlay. Thus, retail spending behaviour must be judged against this background. But, if people do use their credit facilities, it is usually a sign of confidence in the future and that seems to be apparent at this writing.

(Concluded from next column)

which may be necessary to get an order. The expansionists argue, of course, that there is no salvation in attempting to squeeze costs further and that the only practical course is to raise output and, as stated in Your Correspondent's description of the Industrial Survey made last week by the Institute of Directors, an increase in output would generally lead to a reduction in costs. So everything is on the shoulders of the Chancellor who has to devise ways of pepping up British industry.

The Council of the O.E.C.D. has decided to grant Turkey Credit facilities in gold amounting to $50 million out of the European Fund to facilitate the financing of its Five-year Economic Development Programme. Of the total credit, $35 million will be made available for drawing by Turkey as from the 15th inst. and the remaining after 30th June next. Repayments will be in four instalments: $10 million on 31st October 1964; $15 million on 15th March 1966, $15 million on 31st October 1966 and $10 million on 15th March 1967. This is the first time that a country receiving credit from the European Fund is allowed to repay in four years, instead of the normal three years. The credit bears an interest at 3½ per cent per annum and a service charge of ¼ per cent on undrawn accounts.

LONDON LETTER

TWO-TIER BANK RATE

ECONOMY STATIC

From Our Own Correspondent

LONDON, *22nd March*

THE Bank of England's final weapon to discourage anti-sterling speculation has been to re-employ its device of the two-tier Bank Rate. The Discount Market was being forced to borrow from the Bank of England at the general rate of 4 per cent; the Bank decided to make conditions for foreign capital in this country a little more attractive by applying a rate of 4½ per cent for lending to the discount Market. This half per cent increase in the cost of money supplied to the discount market is expected to push up the short-term interest rates—particularly the Treasury Bill rate. It is these rates that are of great interest to foreign investors who shift their funds from centre to centre in the U.S., the U.K. and the Continent to take advantage of the highest return available.

It is not quite clear whether the Bank wants to push up short-term interest rates for a period or whether it is only concerned with the immediate present by way of support for sterling. The other side of this matter is the view that, in fact, even 4½ per cent is not good enough for the foreign investor who can get 5 per cent on the Continent. Still, if it is good enough for the holder of home sterling who might otherwise switch it elsewhere, it will be playing its part in strengthening the currency.

Industrial Production

Industrial production has obviously been picking up since construction work was able to re-start with the end of the bitter cold spell. The figures just published are for January and they show for the manufacturing industries a drop of 2 per cent as compared with January the previous year and a drop of 4 per cent compared with December 1962. However, this last comparison is a little invidious because of the special weather factor. Any comparison with a year ago suffers equally and one must await not even the February but probably the March figures in two months' time for a statistical assessment of where British production is going.

If one makes the January comparison for all industries, which include construction and mining especially affected by the weather, then the drop this January on last is as much as 6 per cent. But a more up-to-date index is that of the workless and this month the total has dropped by about 180,000 since the previous month. But the fact remains that the number of wholly unemployed is about 225,000 more than a year ago and the total unemployment rate is 3.1 per cent as compared with 2 per cent. If one takes the figures for men alone, then the comparison with a year ago is rather worse.

Foreign Trade

Turning to Britain's external trade, the February figures show a rise on the previous month, both exports and imports, which leaves the crude trade gap slightly higher than it was a month ago, itself rather worse than in December. The following table shows the seasonally adjusted values of imports and exports grouping the last two sets of three months together:

	Imports c.i.f.	*Exports and re-exports f.o.b.*	*Crude gap*
December 1962/February 1963.	369	328	41
September/November 1962 ..	377	334	43
1962 quarterly average ..	374	329	45

In short, in the last three months, exports were about 2 per cent less than in the previous three months and were about the same as through 1962. On the same basis, imports were 2 per cent less than the previous three months and also 2 per cent less than the average for 1962. But, for the month of February alone, the crude trade gap was about the same as through 1962; so one can safely say that there is no discernible trend.

There is, therefore, no indication in all the foregoing data about either British production or British exports making any move towards the target which NEDDY has been setting the country and which the Chancellor has endorsed. Expectant eyes will obviously be turned upon the Chancellor for his Budget as to what he is going to do in the face of this almost stagnant position. It is understood that the Government are very conscious of the need for price competition; their main argument for the advantages of entering the Common Market was indeed that it would force British industry to be more price conscious. On the other hand, there is probably very little margin in British costs for cutting in order to gain an extra one or two per cent price advantage

(Continued in previous column)

RESERVE BANK'S RECENT CREDIT RELAXATIONS

AN ASSESSMENT OF LIKELY BENEFITS

A FORTNIGHT ago, the Reserve Bank of India announced two measures to provide additional credit to scheduled banks. These schemes came into effect last week-end, that is, from 23rd March. Under these schemes, banks providing credit facilities to small industries and co-operatives will be entitled to extra credit, that is, a net addition, to the extent of such facilities, at the Bank rate to the total quota for automatic borrowing from the Reserve Bank. Simultaneously, certain changes were introduced in the provision of credit against export bills. The modified scheme takes into account the difficulties which prevented the banks from taking advantage of the Export Bill Market Scheme. Under the new measure, banks will be able to borrow from the Reserve Bank against their own promissory notes on the security of export bills maintained by them in their portfolios. The borrowings against such bills will be allowed at the Bank rate, such borrowings being additional to the amount available under the first slab of the Reserve Bank's system as well as to that available under the overall quota. At present, banks' borrowings from the Reserve Bank under Section 17(4) (*a*) and 17(4) (*c*) are ordinarily subject to a ceiling of 100 per cent of their statutory cash reserves (namely, 3 per cent of their deposits), borrowings upto 50 per cent of the statutory reserves being charged at 4½ per cent and the remaining 50 per cent at 6 per cent. Advances above this limit are approved in exceptional circumstances subject to a special charge of ½ per cent. The system of borrowing quotas and lending rates as obtaining at present will be applicable in respect of advances under Section 17(3) (A) also (that is, advances against export bills of a usance not exceeding 180 days) to banks in the same way as their borrowings under Section 17(4) (*a*) and 17(4) (*c*) of the Act. Thus, the Reserve Bank has succeeded in introducing some liberalisation in the credit facilities made available to scheduled banks without sacrificing the framework of 'ceiling' for bank borrowings announced on the eve of the present busy season.

Well-timed

Originally, the Reserve Bank intended to introduce the schemes from 1st January, that is, from the beginning of 1963. Certain consultations regarding procedures, etc., seem to have held up the measures and they were, therefore, introduced from 23rd March. The introduction of the schemes has been well-timed in that they have been announced at a time when the banks are particularly squeezed for want of resources. For instance, just before the announcement of the schemes on 13th March, the scheduled banks' borrowings from the Reserve Bank as of 8th March showed the sharpest increase during a week and stood at Rs. 83 crores. This huge borrowing has been absorbed by the banking system without any impact on the high level of call money rates on inter-bank borrowings.

The quantum of relief to banks from the new credit liberalisation measures is expected to be of the order of Rs. 12 to 15 crores. The benefit, however, is expected to be distributed somewhat unequally among banks. This is because the benefit of additional facilities given for financing co-operatives and small industries will accrue to the State Bank and a large part of the export refinancing facilities may help the Exchange Banks, since they continue to finance a large portion of India's export trade, especially in jute and tea, even now. But it is evident that some of the big banks under extreme pressure may also get some relief from the modifications made by the Reserve Bank. The precise impact of the measures will be evident only when the March-end statistics of scheduled banks are released.

Two Other Angles

There are two other angles from which the utility of these schemes necessitate analysis, namely, the magnitude of diversion of credit which these measures can induce to small industries, co-operatives and the export sector from other channels in which bank credit is now employed and whether such credit is likely to stimulate these nationally useful channels. In these words, the implications of the measures from the point of view of small industries, export sector, etc., need examination. Any such diversion of credit from existing lines to small industries and export sector seems unlikely. The banks' resources are now fully employed in financing industry and trade. All that may happen is that banks will utilise the refinancing facilities to the extent they have already lent to the favourite sectors in question.

Again, the banks usually lend to traditional lines, namely, industry and trade, and have been showing an aversion, with the exception of the State Bank, to lend to small industries. The small industries suffer from several handicaps such as lack of market for specific types of products they manufacture, inability to offer any security which is considered worthwhile by conservative commercial bankers and absence of godown facilities. In several cases, the small industrialists do not have even the resources to provide the margin money asked by banks to extend credit for purchasing raw materials. In view of the greater risks associated with this type of business, the rates of interest paid by a small industrialist is very high, as high as 15 to 17 per cent in some cases. It is not the provision of cheap credit which worries the small industrialist but the availability of credit, without stringent conditions like security, even at a high price. The small industrialist resorts, therefore, to the *multani* banker and the moneylender. It is, therefore, unlikely that the liberalisation of credit facilities provided to commercial banks will assist the small industries sector to any significant extent. It is only the State Bank which, by and large, has be enspearheading the financing of small industries that is likely to benefit most from this measure.

Finance for Export Sector

As regards finance for the export sector, it is necessary to note that, under the inter-bank agreement on minimum interest rates on advances, the banks are charging 6½ per cent and above. If the banks want to take advantage of the scheme announced by the Reserve Bank, they have to make credit available to exporters at 6 per cent, for one of the conditions for banks enjoying this rediscounting facility is that they should not charge the borrower a rate of interest which exceeds the Bank rate by 1½ per cent. Assuming that the incentive provided under the scheme to banks is sufficiently strong enough, the operation of such a scheme is likely to work to the advantage of the export sector by making credit available at a cheaper cost and correspondingly increasing the ability of Indian exporters to compete in international markets. The new scheme is a complement, on the short-term credit side, to the scheme introduced for refinancing medium-term export credits which came into effect from the beginning of 1963. It will be recalled that, under the scheme of refinancing of medium-term export credits, the Refinance Corporation for Industry provides refinance facilities in cases in which the credit is for a period of more than six months but less than five years. The refinance will be provided to banks which make credit available to exporters for such periods in order to enable the latter to sell goods abroad on the basis of payment spread over a maximum period of five years. The Corporation charges a rate of interest of 5 per cent but does not make any stipulation about the ultimate rate of interest charged by the bank to its client.

With facilities available for refinancing short and medium-term credit given to exporters, a comprehensive scheme of export credit has now been finalised. Individual exporters can strengthen their position to take advantage of the credit facilities by taking out suitable policies with the Export Risks' Insurance Corporation. Small exporters, who are particularly vulnerable because banks cannot depend upon their overall resources in case goods are refused by the foreign importer, have now been provided with special cover against even this risk. The State Bank has announced a scheme for providing foreign exchange assistance to exporters to cover imports of raw materials on condition that repayment is made from the export proceeds. Taken in conjunction with these various facilities, availability of export finance has certainly been made less difficult than before.

But the most important question is whether our export performance has been disappointing for lack of adequate credit facilities. In our country, having regard to the shortage of foreign exchange, industrial licences are issued to a limited number of concerns, the object being to see to it that the output does not exceed the demand over a period of time and is in accordance with the Plan priorities. Government policy has been to assist the private entrepreneur in every conceivable way in the procurement of financial and material resources. He is protected from foreign competition and, once he is in possession of a licence, even though there may be some delay, there is no difficulty in obtaining the controlled raw materials and finance from specialised agencies set up for the purpose. Even the selling prices are so fixed as to allow an adequate margin of profit. The industrialist has no incentive, therefore, to be cost or quality minded. The result is that, when he endeavours to enter the export market, he finds himself outpriced and unable to compete, nor is he under any compulsion to make a special effort to develop the export market for his product because the domestic market is there to give him all the profit he desires. This is the basic problem of our export effort and not mere lack of export finance. It is because we still have certain traditional commodities like tea and jute manufactures for which there is a demand abroad and which we had already learnt to export and because we have been able to carve out new markets for our traditional exports in East European countries also that we have been able to stand our ground. What we have to pay attention, therefore, is not only provision of cheaper export finance, important though it is in its own way, but pay attention to the economic conditions inside the country and make them healthy enough to provide a sound basis for promoting exports.

I.D.A. CREDIT FOR INDIAN RAILWAYS

The International Development Association (I.D.A.) has announced a development credit of $67.5 million for the Indian Railways to finance imports of materials and equipment needed for the Railways' development programme during 1963. The credit will be used to buy components and materials needed to build locomotives and rolling stock in India, to finance imports needed for the electrification programme for track, and to purchase other materials and equipment. Orders for imported equipment are placed on the basis of international competitive bidding. The 1961-66 programme of the Railways places emphasis on equipping the existing system to carry heavier trains at higher speeds. An increasing proportion of the traffic will be hauled by diesel or electric locomotives; some 1,600 route-miles of track are being electrified; about 80,000 new freight cars, many of increased capacity, are being acquired and heavier track is being laid over much of the system. In addition, workshops, bridges, yards and signalling works are being improved. The programme is already well advanced. The credit is for a term of 50 years, with repayment of the principal beginning on 1st May 1973. Thereafter, 1 per cent of the principal will be repayable annually for 10 years, and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of ¾ of 1 per cent per annum on the amount withdrawn and outstanding will be made to meet I.D.A.'s administrative costs.

The revised rates of premia under the Emergency Risks (Goods) Insurance Scheme and the Emergency Risks (Factories) Insurance Scheme for the next quarter (April-June 1963) are 10 nP and 15 nP, respectively, per Rs. 100 or any part thereof of insurable value. In order to facilitate payment of premia, the Government of India has decided that payment may also be made by cheques. Such cheques are, however, required to be drawn only on the local office of a scheduled bank at the places where the business of the treasury is conducted by the Reserve Bank or by the State Bank of India or by any of the subsidiaries of the State Bank. The cheques should be crossed and written clearly in English or any Indian language which is normally understood and the use of which is normally accepted by banks in the area concerned. The payment of any premia due under the Scheme will be deemed to have been paid only when the money has been credited in full in the Treasury.

The International Monetary Fund has agreed to a drawing by the Government of Afghanistan of $5.63 million in U.S. dollars. In addition, an initial par value of 45 afghanis per U.S. dollar, has been agreed to by the Fund. The Government of Afghanistan is undertaking a comprehensive reform of the exchange system designed to establish a realistic exchange rate and to strengthen the country's export effort. It eliminates most of the previous multiple exchange rate practices, while maintaining the present freedom from restrictions on imports and on invisible and capital transactions. The Afghan authorities are making efforts to reduce the budget deficit for the current fiscal year to a level consistent with domestic monetary stability.

Commonwealth countries in Africa received £78.9 million in capital and other financial aid during 1961-62 under the Special Commonwealth African Assistance Plan (S.C.A.A.P.), now in its second year of operation. This was nearly £30 million more than the previous year's total, and the programmes for 1962-63 are likely to bring a further increase. Besides expansion of capital and other financial aid, considerably more experts, teachers and advisers were supplied, and the number of scholarships, fellowships and other educational awards was more than doubled.

The Bank of Spain has notified that, with effect from 1st April 1963, all banks in Spain must maintain a minimum liquidity coefficient of 12 per cent. It will be recalled that, earlier this year, the Government empowered the Bank of Spain to fix the coefficient between a floor of 10 per cent and a ceiling of 20 per cent as part of the banking reform of last year when this Bank was nationalised.

The International Monetary Fund has entered into a standby arrangement with Peru authorising drawings upto $80 million over the next 12 months. The agreement replaces the expired one for the same amount, under which no drawings were made.

SUPER PROFITS TAX

AMENDMENTS SUGGESTED TO MAKE IT TOLERABLE

By Professor Russi Jal Taraporevala

THE Finance Minister introduced in Parliament the Super Profits Tax Bill, 1963, as a part of the budget proposals for 1963-64. The Bill contains detailed proposals for the levy of the new Super Profits Tax. Since the Bill was published, its salient features have been analysed and its economic implications have been outlined by various institutions, economists and financial commentators in memoranda and articles and by the author in various articles published recently. The Bill has also generated a tremendous amount of public interest and discussion, as it is likely to have very far-reaching effects on various sectors of the Indian economy. It has been clearly stated that the Super Profits Tax, as proposed in the Bill, will deal a severe blow to the growth of the corporate sector as the principles on which the tax is based are unsound.

At present, companies pay income-tax and corporation tax at the total rate of 50 per cent of their annual profits. The Super Profits Tax aims at taxing the residual profits of companies (after payment of income-tax and corporation tax) at the rate of 50 per cent on profits between 6 and 10 per cent of the capital employed (as defined in the Bill) and at the rate of 60 per cent on profits in excess of 10 per cent of the capital employed. It is estimated by the Finance Minister to yield Rs. 25 crores but various statistical studies show that it is likely to yield more than Rs. 40 crores.

The tax will impose a greatly enhanced burden on companies, reduce their distributable profits and dividends, and drastically curtail the amounts which they can plough back into the business, that is, corporate savings. The burden of the tax will fall inequitably and in an unjustified manner as between companies. It will penalise the more profitable and efficient companies more than their less profitable and inefficient rivals. The tax will result in untold economic sacrifices and sufferings for shareholders of companies, as dividends will be drastically reduced and the capital values of whose shares will fall. The tax will scare away foreign investors from starting new enterprises within the country or from expanding their existing enterprises. The tax is thus likely to have severe adverse effects on the rate of industrial growth and corporate expansion within the country.

Some of these effects have already manifested. The stock exchanges have, in recent days, seen a collapse which has wiped out crores of rupees in the capital values of shares held by millions of poor and middle-class investors. The response to new issues has dried up. A number of companies have been compelled to slash their dividends. Even labour is faced with the prospect of receiving lower bonuses on account of the sharp drop in profits after tax which will result from the introduction of the Super Profits Tax!

Withdrawal and Alternative Tax

It is on account of these factors and the basic unsoundness of the principles underlying the Super Profits Tax as proposed in the present Bill that the withdrawal of the measure has been canvassed by many sections of the community. The Super Profits Tax is based on unsound principles which run counter to well-known economic theories of public finance. It has been suggested that the same revenues as are expected from the new tax measure could be collected by increasing the corporation tax at a flat rate of 6½ per cent, making the total income-tax and corporation tax on companies at the rate of 56½ per cent of their annual profits. The latter alternative would undoubtedly result in far less adverse economic effects than the proposed Super Profits Tax. The case for its repeal is undoubtedly very strong and should be seriously considered.

However, the Finance Minister in various statements made in recent days has declared that he will not consider the withdrawal of the new tax measure. The tax may not, therefore, be withdrawn, in spite of its extreme inequity, lack of soundness and the tremendous havoc it is likely to play in the Indian economy. The present article suggests various amendments and modifications which should be introduced in the provisions of the Super Profits Tax Bill, in order to make it less inequitable and in order to reduce the burden of the tax to a relatively more reasonable level.

The tax has been justified in the context of the present emergency caused by the Chinese invasion. Its inequitable effects and harsh burden on companies and its serious adverse effects upon the growth of the corporate sector in India should be limited to a short period of time during which the emergency may last. It should be specifically declared, either in a preamble to the Bill or in a statement in Parliament, that the tax will be a temporary measure for financing the emergency defence outlays and that it will be repealed as soon as the emergency ends. It may be pointed out that such a provision existed in the Excess Profits Tax which was levied during the last world war in India.

A clear official declaration that the tax is a temporary emergency measure will do much to restore the confidence of investors, especially foreigners, in the future profitability and growth potential of industrial investments in the Indian economy. Indeed, it has been announced in the newspapers that several foreign collaborators, who were considering the idea of starting new industrial enterprises in India, have decided to postpone or cancel their plans for doing so on account of the introduction of the Super Profits Tax. If foreign investors are assured that the new tax will be repealed soon, they will probably reconsider the idea of starting new industrial units in India, take the long-run view in the matter and decide to come into the country, in spite of the tax. Similarly, the corporate sector in India and investors in shares of industrial companies may be reassured of the long-term profitability of new industrial investments in the country.

Retrospective Application

The Super Profits Tax will have to be paid for the accounting years ending on or after 1st April, 1962. Hence, companies whose accounting years ended after 1st April, 1962 and which have closed their accounts and paid their dividends will have to make a double provision for the tax in the current year. It is quite inequitable to introduce this levy in this retrospective fashion. The ends of justice would be better served if the tax is made applicable to companies in respect of accounting years completed on or after 1st April, 1963. Alternatively, some rebate, adjustment or relief should be given to those companies which closed their accounts and paid their dividends before 28th February, 1963, when the tax was announced, in respect of the burden of the tax for the past year.

Expand Capital Base

The Super Profits Tax is to be payable on net profits of companies after paying income-tax and corporation tax in excess of 6 per cent of the capital employed. However, an extremely narrow and arbitrary definition has been adopted in respect of the capital employed for the purposes of taxation. The capital employed is to be arrived at by adding the paid-up capital and the reserves of companies. But statutory reserves like development rebate reserves are to be excluded from the computation of the total capital employed. Various other reserves, like reserves created out of revaluation of assets in the past, are also to be excluded in computing the capital employed. Thus, the present definition of capital employed only includes the amounts which have been actually paid into the company by way of capital or share premium by the shareholders and the amounts ploughed back in past years out of taxed profits to free reserves. This narrow definition runs counter to well accepted economic norms of capital employed in a business. The profitability of a business is determined not only by the actual paid-up capital *plus* reserves, but also by its short-term and long-term borrowings which finance the various assets employed in the business. The Tariff Commission of the Government of India recognised that capital employed could not be measured only by taking the paid-up capital and reserves of companies. Thus, in the past, the Tariff Commission has used the proper economic standard for measuring the capital employed in a business by defining it as "net assets comprising fixed and current assets used in the business less current liabilities and provisions." Such a definition takes into account the borrowings of a company which contribute to its economic assets and profits. The Super Profits Tax Bill should be amended to include in the computation of the total capital employed the paid-up capital, all reserves including statutory and other types of reserves and all long-term and short-term borrowings of companies.

Redefine Chargeable Profits

The definition of chargeable profits under the Super Profits Tax Bill is also very narrow and arbitrary. The chargeable profits for the purposes of the Super Profits Tax are to be computed by taking the total income of the company as defined in the Income-tax Act and making certain deductions therefrom. The deductions are restricted to capital gains, compensation and other payments referred to in Clause (ii) of Section 28 of the Income-tax Act which governs the compensation paid to managing agents or managing directors, etc., for loss of office, and, thirdly, the profits of life insurance business. After these three deductions are made, the income-tax and corporation tax attributable to the remaining amount are to be deducted. The Super Profits Tax Bill, moreover, contains a clause under which expenditure on account of commission, entertainment or advertising, which in the opinion of the income-tax officers is considered excessive, may be added back to the income of the company for computing the chargeable profits. This clause, therefore, gives the power to the tax authorities to increase the chargeable profits, to a level substantially in excess of profits as computable under the Income-tax Act, by adding back various items which may have been allowed as deductions for computing profits for income-tax purposes. There is no justification for this narrow definition of the chargeable profits. Considering the extremely heavy burden of the Super Profits Tax, it would be far more sound if the chargeable profits for its purposes are computed by first taking the assessable profits for income-tax purposes, deducting the items at present provided for under the Bill and then deducting various items, which may have been disallowed for income-tax purposes but which would be allowed as deductions for calculating the commercial profits of the business as granted under Section 109 of the Income-tax Act in the computation of "distributable income." Moreover, deductions should also be given in respect of various items and allowances on which rebates of income-tax are given under the Income-tax Act such as donations for charitable purposes and the National Defence Fund.

Preference Dividend

The Super Profits Tax Bill overlooks the contractual obligations in respect of dividend payments to preference shareholders which are binding on various companies. No deduction is given in respect of computing the chargeable profits for these amounts, which have to be paid under the past contractual arrangements to preference shareholders. It should be provided that arrears of preference dividends, as well as the preference dividends payable in a particular year, should be allowed as deductions in the computation of chargeable profits for the purposes of the Super Profits Tax.

Accumulated Losses

The Super Profits Tax Bill has no specific provision for allowing the set-off of past accumulated losses against the profits of a particular year for computing the chargeable profits. It should be clarified that the companies will be given a set-off on account of past losses in computing the chargeable profits for a particular year, as allowed under the Income-tax Act. Indeed, it should also be provided that where losses are incurred in years subsequent to profitable years during which Super Profits Tax has been paid, the tax should be refunded in later years by taking into account the losses incurred in them. Finally, as is pointed out later in this article, the profits of small companies, banking companies, and new companies may be deducted from the computation of chargeable profits as has been allowed in the case of profits from life insurance business.

Standard Deduction

The Super Profits Tax Bill provides for a standard deduction to be allowed against chargeable profits before the levy of the new tax. The standard deduction is proposed at the rate of 6 per cent on the capital employed as defined in the Bill. This is a grossly inadequate rate of return to offer shareholders of companies before subjecting them to the new tax. The lending rate of banks and financial institutions varies from 7 to 9 per cent. Preference shareholders have to be paid a return of 9 to 10 per cent in today's conditions of the capital market. Hence, the standard deduction which sets the rate of normal return payable to equity shareholders should be fixed at a minimum of 12 per cent of the capital employed.

Moreover, the standard deduction should be allowed to be carried forward in the event of inadequacy of profits in particular years. The Super Profits Tax Bill lacks such a provision, so that companies earning steadily every year the amount of the standard deduction will get the benefit thereof, whereas companies whose profits fluctuate over the years (that is, in some years, they earn much more than the rate of standard deduction and in some years they may not earn it at all) will not get the full benefit thereof. It must, therefore, be recognised that shareholders of companies should be entitled to get the benefit of the standard deduction per annum over a period of time. Accordingly, it should be provided that, in the event of deficiency of profits in particular years, the amount of the standard deduction allowable in such years should be carried forward and set off against chargeable profits of subsequent years before levying the Super Profits Tax. In the case of companies which have paid Super Profits Tax in some years which are followed by years in which they make losses or inadequate profits, it should be provided that a refund of the Super Profits Tax paid in previous years should be allowed by giving a carry-backward of the standard deduction in so far as it can be adjusted against the taxes paid in previous years.

Progressive Rates Inequitable

The Super Profits Tax introduces progression in the rates of tax payable by companies; the rate of the tax is *nil* upto the quantum of the standard deduction, it is 50 per cent in the first slab (on profits of between 6 and 10 per cent of the capital employed) and 60 per cent in the top slab (i.e. on profits in excess of 10 per cent of the capital employed). Economic theory and the principles of public finance clearly indicate that, whereas progressive rates of taxation are justified in the direct taxation of individuals, their imposition is inequitable and totally unjustified in the taxation of companies. This is so, because the corporate sector consists of companies which have millions of shareholders. Some of the shareholders may be rich but the majority of them are middle-class and poor investors. The burden of corporate taxation falls on these investors irrespective of their personal incomes and irrespective of their ability to pay.

Tax Refund

The Income-tax Investigation Commission, 1949, had thus commented that "public companies generally attract a large number of middle-class shareholders and many of them would be seriously prejudiced, if companies are subjected to super-tax at progressively increasing rates. If such super-tax is levied, it will not be fair to exclude the application of Section 49B in such cases." The old Section 49B provided that the tax paid by a company was deemed to have been paid by the shareholders and that the latter were entitled to a credit or refund thereof on the dividends received by them. If the Super Profits Tax is to be introduced, it is essential that its burden should not fall on the poor and middle-class shareholders many of whom are either not liable to income-tax or pay income-tax at very nominal rates. To impose this staggering burden of corporate income-tax, corporation tax and super-tax on such shareholders would constitute one of the harshest and most inequitable tax measures ever enacted. If the Super Profits Tax is to be imposed, it should be provided that shareholders will be deemed to have paid the tax and will be entitled to get a refund on account of the same in respect of the dividends paid to them.

Reduce Rates of Tax

The present rates of Super Profits Tax, namely, 50 and 60 per cent of the residual profits, are much too high. They would result in imposing a marginal rate of taxation on companies of between 75 and 80 per cent of the gross profits before taxation if one takes into account the income-tax and corporation tax. These rates are so high as to confiscate most of the profits made by companies and even to discriminate strongly against the corporate form of organisation, inasmuch as the Super Profits Tax is not payable by other forms of business enterprise like partnerships and proprietorships. The rate of Super Profits Tax should be substantially reduced from the present 50 to 60 per cent to around 25 per cent.

Tax Ceiling

In order to make the total burden of direct taxation on companies reasonable and not fantastic, it should be provided that the maximum amount payable on account of the income-tax, corporation tax and Super Profits Tax in a particular year should not exceed 60 per cent of the gross profits made in the year by various companies.

Banking, Financial and Insurance Companies Need Exemption

There is a very strong case for totally exempting from the Super Profits Tax or, at worst, for levying the tax at concessional rates on profits of companies in the banking, long-term industrial financing, and general insurance businesses. These are businesses which occupy a focal point in the economy and are ill-equipped to bear the burden of the Super Profits Tax. The banking industry collects the savings of the community and channelises them into short-term industrial loans, Government securities, etc. The banking industry is regulated strictly by the Reserve Bank and it has recently been under pressure to increase its reserves, so that the capital and reserves of banking companies rise as early as possible to 6 per cent of their deposit liabilities. For this purpose banks have been asked to set aside 20 per cent of their declared profits for plough back to their reserve funds. If such a plough back to reserves has to be made and the Super Profits Tax has also to be paid, the banking companies will be unable to maintain their dividends: indeed in almost all cases they will have to sharply reduce their dividends or stop their dividend payments totally. This in turn will make it difficult to raise fresh capital which they must if their understanding with the Reserve Bank is to be fulfilled. The levy of Super Profits Tax on banking companies will, in short, impose a severe financial strain on the banking structure of the country, jeopardise the soundness of the banking system and even introduce a measure of instability in our banking institutions.

Similar considerations apply to the case for exempting long-term industrial financing institutions like the industrial Finance Corporation of India, the various State Finance Corporations and the Industrial Credit and Investment Corporation of India, from the Super Profits Tax. These institutions channelise a vast volume of funds for industrial development and perform vital financing services. They are still in the very early stages of their development and are sorely in need of building up their resources. They should be exempted from the Super Profits Tax or alternatively made to pay tax at concessional rates. Similarly, companies doing general insurance business in India should also be given favoured treatment in respect of the Super Profits Tax.

The Government has already exempted the profits of the Life Insurance Corporation from the Super Profits Tax by making them deductable in full for the purposes of computing chargeable profits. Similarly, deduction from the computation of chargeable profits should be given in respect of profits from the banking, general insurance and long-term industrial financial businesses. If for any purpose this is found to be not feasible, then companies engaged in these businesses should be taxed at one-half or one-third of the normal rates of Super Profits Tax.

Exemption for New Companies

The Super Profits Tax has made investment in new industrial companies totally unattractive. Investors in new companies often have to wait from five to seven years before they can get any returns or dividend. Such a waiting period was justified formerly by prospects of adequate profits once the companies got stabilised and became prosperous. But now the Super Profits Tax will take away, together with the income-tax and corporation tax, 75 to 80 per cent of gross profits in the upper slabs, if the tax is imposed at the present rates. In any event, the Super Profits Tax will prevent new companies from ploughing back their profits into the business at a rapid rate once they are stabilised after a long waiting period. It is imperative that the establishment of new companies should be encouraged if new industries are to be set up in the country and industrial growth stimulated within the economy. It is, therefore, suggested that special concessions from the Super Profits Tax be given to them.

It should be provided that new companies will be totally exempted from the Super Profits Tax for the first five years after commencement of production just as Section 84 of the Income-tax Act gives them a concession in respect of income-tax during this period. However, it has been found that a period of five years after the commencement of production is inadequate for many companies to either build up reserves or even to get the benefit of the income-tax concessions which have been hitherto given to them. Most companies have teething troubles and incur losses in the first two or three years after commencement of production. It takes them more than five years to turn the corner. On an average, good profitability and possibilities of paying dividend and ploughing back profits to reserves are established after the seventh or eighth year from the start of production. In recognition of this fact, a further concession in respect of Super Profits Tax either in the form of total exemption or in the form of substantial rebates of the tax should be given to new companies even after the lapse of five years from the commencement of production until they have been able to build up adequate reserves, say, equal to one-half or one-third at least of their paid-up capital. Of course, to get the benefit of such a concession it may be provided that companies should not pay dividends of more than 8 to 10 per cent on their capital, until they have achieved this level of reserves.

Inter-corporate Investments

The Super Profits Tax Bill makes a serious omission in respect of inter-corporate investments. The tax will be levied at a series of points in respect of the income accruing from inter-corporate investments. Thus, if the shares of an industrial company are held by another company whose shares are held by a holding company, the Super Profits Tax will have to be paid by all the three companies in respect of the profits earned initially by the industrial company. Thus, the total income-tax, corporation tax and Super Profits Tax paid by the three companies may amount to as much as 95 to 99 per cent of the gross profits originally earned by the industrial company. It must be recognised that inter-corporate investments are important in India, as in various other parts of the world, for financing industrial activity. The Super Profits Tax will literally prohibit inter-corporate investments and thus choke off the flow of corporate savings into investments in various companies. It should, therefore, be provided that dividends received by companies in respect of inter-corporate investments will be exempt from the Super Profits Tax.

Exempt Small Companies

The Super Profits Tax will retard the establishment and growth of small companies. It will frustrate the aims of the Government of encouraging new entrants to come up in the commercial and industrial fields in India. The burden of the tax on small companies will be especially heavy in so far as a large part of their profits are often related to the personal efforts of their directors or management and are not related to the capital employed. It is obvious that new *entrepreneurs* initially lack capital and their only hope of possessing even modest financial resources is through ploughing back most of their profits into the business. The normal pattern of entrepreneurship in the country is that a man initially starts a small company, say, with a capital of Rs. 25,000 or Rs. 50,000 and engages in trading operations. If he is successful in trading, he makes profits which he ploughs back into the business until he has accumulated a minimum capital of, say, Rs. 2 to 3 lakhs which is necessary even to start a small-scale industry.

The imposition of the Super Profits Tax on small companies will result in draining away over 75 per cent of their gross profits by way of direct taxation. Their ability to plough back into the business their profits, to build up reserves and to strengthen their financial position will be severely retarded and in many cases totally destroyed. If Government wants new entrants to come up in the industrial field, it should encourage their growth by exempting them from the levy of the Super Profits Tax. Indeed, there is the strongest case for exempting small companies from the tax.

The Government may adopt any yardstick for measuring size in order to define small companies. Thus, it could be provided that profits of companies having a paid-up capital of less than Rs. 10 lakhs, or even less than Rs. 5 lakhs, would be exempt from the Super Profits Tax. Alternatively, it may be provided that profits of companies having fixed assets of less than Rs. 10 lakhs, or even Rs. 5 lakhs, would be exempt from the tax. As a third alternative, it may be provided that the first Rs. 2 lakhs of profits would be exempted from the tax by making it deductable from the computation of chargeable profits. Under the Excess Profits Tax levied during the last world war, the first Rs. 36,000 of profits was exempted from the tax. The real value of the rupee since then has fallen steepily, so that today an exemption of profits of Rs. 2 lakhs in a year would approximate to the old exemption granted under the Excess Profits Tax Act. No matter what the yardstick adopted, Government should decisively encourage small com-

PLEA FOR COTTON BOARD'S CLOSURE

SPINNERS WANT A NEW CENTRAL ORGANISATION

From Our Special Correspondent

MANCHESTER, *19th March*

MANCHESTER LETTER

WINDING up of the present Cotton Board, the central body of the Lancashire cotton industry, is officially proposed by representatives of the powerful spinning section of the Lancashire cotton industry. In its annual report, the British Spinners' and Doublers' Association said that plans should be laid for the winding up of the Board towards the end of 1965 or during 1966 when its responsibilities under the Cotton Industry Act will have terminated. Arrangements should then be made for the setting up of a new central organisation with the full co-operation of the trade unions.

The attack by the millowners on the Board follows forthright comment on the industry's structure made by the retiring Chairman of the Cotton Board, Lord Rochdale, at Harrogate in October. Lord Rochdale then said that there should be one employer organisation and, as far as possible, one trade union organisation, with co-ordination between the two, through a combined committee, to provide a recognised mouthpiece of the industry on matters affecting the Government.

The British Spinners' and Doublers' Association supports this view, as well as Lord Rochdale's opinion that an industrial chairman, chosen by the industry, could do more to knit the trade together than an independent chairman. On company amalgamations, the Association says that the attempts at "marriage broking" have not proved very successful. "The production of the industry must be centred on the most efficient firms and close understanding must be established in a vertical direction upwards and downwards between sellers and buyers if actual amalgamations do not take place."

Describing the past year as a very difficult period, the Association reports that output in spinning and doubling declined by 10 per cent. Although yarn imports fell by 27 per cent, very low import prices continued to have a depressing effect on home prices out of all proportion to the volume of arrivals. An increase in mill activity in the final quarter of 1962, and an improvement in the operation of shift work was recorded.

Re-equipment projects in spinning mills under the Government subsidy scheme have been submitted to a value of £51,468,488 and in doubling to the extent of £2,836,680. Plant and machinery must be ordered by 8th July this year, and installed and paid for by July 1964 to qualify for the 25 per cent grant.

Marginal Rise in Output

Seasonal variations in the rate of production of cotton textile goods must be expected from year to year and complete comparisons can only be gained over a longer period. Some slight encouragement, however, can be taken in the fact that, during January, the output of both yarn and cloth per working day from British mills was marginally higher than at the end of last year, although the totals involved showed some reduction in relation to the figures achieved in January 1962.

Average weekly production of single yarn was 11,950,000 lbs., as against 10,880,000 lbs. in December and 12,370,000 lbs. in January last year. Equivalent figures for cloth production show the current weekly average at 30,280,000 yards, as against 27,000,000 yards in December and 33,910,000 yards in January, 1962.

Statistics about the labour force tend to give a picture which does not always square with the facts owing to fundamental changes which are taking place in the industry. It cannot be denied that, since the end of 1961, the number of workers on the books of spinning and weaving employers has declined from nearly 170,000 to little more than 150,000. Mills have certainly gone out during this period and curtailment of production has followed, but the situation is not quite as it seems.

Entering any modernised spinning or weaving unit these days can be an eye-opener for those whose memories of the trade go back even a generation. Gone are the days when operatives tended just a few machines, most of which required constant supervision. Now it is possible to gaze at long lines of shining new equipment in the knowledge that only a handful of workers are engaged in the particular section and that mechanisation is doing the rest.

A good deal has been heard of the movement towards a fully-automatic mill in the past few years, but there comes a point at which the labour force has been reduced to a minimum. Quite a number of Lancashire firms are getting close to this objective. Already the numbers involved in some departments are so small that illness among the operatives can create difficulties in unbalanding the flow of output through the different processes.

While it is no use pretending that every mill in this part of the world fits this particular description, it is also true to observe that the percentage of highly intensified production units is increasing, literally from week to week. In some cases, the process has been under way for a year or two and is still not completed. Output has to be maintained at the best possible levels during the time of transition, but many managements are coping with a continuous process of dismantling, re-flooring and installation, covering a large part of their mills.

That such developments are more obvious in the spinning section is due to the fact that the changes in techniques resulting from machinery adjustments have occurred only within the past few years. Perhaps even more vital in considering the future prospects of the trade is the realisation that re-equipment is no longer a temporary phase but must be a continuing process, has finally been accepted by the millowners.

Improvement Forecast

After a series of reports indicating the difficult trading conditions lately encountered in the Lancashire cotton textile industry, a more optimistic note is struck by Mr. H. W. Hadfield, Chairman of J. J. Hadfield Ltd., the Stockport proofing and finishing firm. Although anticipating that 1963 will be another difficult year, he says that there are indications of some improvement and expresses confidence that the position at the end of the year will be more satisfactory.

The Company has benefited, Mr. Hadfield says, from the fact that the business covers a wide field in the textile finishing trade. Some sections have had a poor year's trading, but others have done reasonably well, with the result that some bright spots appear in an otherwise rather depressing picture. The net profit was reduced from £33,331 to £20,456, but the dividend is being maintained at 17 per cent for the year, the Board justifying this decision in view of the healthy state of the balance-sheet and their expectation of seeing some improvement in trade in the current year.

An encouraging increase in turnover and some improvement in profit margins is recorded in the dyeing section where the sales staff have obtained orders of a more remunerative nature. Despite a satisfactory year's work, competition in the sheeting section has become more intense, but the Directors are planning development in this side of the business. New plant is being installed which should be in production late this year. Mr. Hadfield says that these developments will involve considerable capital expenditure but the Directors are confident that some return will be obtained early in 1964.

The textile industry in India will adopt the French count system to express the fineness of cotton yarn with effect from 1st April next. Six months after the introduction of the system, that is from October next, the industry will manufacture yarn exclusively in hanks of 1,000 metres and in bundles of 2.5 kg. or 5 kg. The yarn and cloth meant for export will, however, continue to be manufactured according to the specifications of overseas customers.

The Tariff Commission has taken up for investigation the claim of the cotton textile machinery industry for continuance of protection beyond December next. The scope of the inquiry, *inter alia*, covers, complete spinning ring frames, spindles, spinning rings, fluted rollers and automatic looms.

The International Cotton Advisory Committee is scheduled to meet for the first time in India at Bangalore from 23rd April to 8th May next. Normally, the meetings are held at Washington. The Indian delegation is likely to be led by a Union Minister.

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

INTERNATIONAL LIQUIDITY

PROSPECTS FOR MULTILATERAL SOLUTION BRIGHT

By D. Krishnaswami Rao

THE publication of a report by the staff of the International Monetary Fund on *International Reserves and Liquidity*, prepared for the annual meeting of the Fund held at New Delhi in October 1958, was the starting point of thought and effort at the academic level as well as among the highest echelons of world finance to hammer out acceptable and workable ways of enlarging the external reserves of the free world. The background of the problem, now fortunately less pressing than it was till two years ago but likely to grow serious again, may be briefly stated. The monetary gold reserves of the free world have been increasing in recent years at a pace which is between just a fourth and a third of the rate at which world production and trade have been growing. As a consequence, increasing reliance has had to be placed on the "key" currencies, the United States dollar and the British pound, as reserves—a system that is fraught with considerable risk, since, if a "key" currency were to come under suspicion either because the "key" currency country has persistent deficits in its external payments or because of any other reason that leads to fears of a possible devaluation by that country, the holders of reserve balances in that currency start withdrawing them.

Such a threat faced the United States dollar in the autumn of 1960 and has more than once weakened the pound sterling in the past six years. The consequences of the system could be disturbing in the extreme to the "key" currency countries and at the same time be injurious to the rest of the world, because the former could only redress the imbalance of their external payments by measures that have from time to time held back their own economic growth and have also swung countries trading with them into recession. Herein lies what Sir Dennis Robertson has so well described as "the problem of a world in which the most serviceable currencies are no longer very strong and the strongest currencies are not yet very serviceable."

An obvious way out of the difficulty caused by the shortage of the world's monetary gold reserves would be to raise the official world price of gold above the U.S. parity of 35 dollars per ounce and, indeed, such a course has the powerful support of a disinterested expert, Professor Sir Roy Harrod of Oxford University. The United States, however, would not countenance this step, for, among other reasons, a revaluation of the international price of gold would give to Soviet Russia a boost in the form of a higher value for her own very large holdings of gold.

Triffin Plan

Professor Robert Triffin of Yale University, who also questions the wisdom of a higher price for gold, put forward in his famous book, *Gold and the Dollar Crisis*, published in 1960, a plan for the radical transformation of the international monetary system under which countries which are members of the International Monetary Fund would cease to hold the currencies of other countries as monetary reserves but hold their reserves instead in the form of deposits at the Fund, these deposits to begin with to be about 20 per cent of member-countries' existing reserves. Such deposits at the Fund would be as fully usable as gold itself in transactions between members, so that the Fund would act as a central bank for the central banks of the world, effecting settlements between them by transfers between their accounts with it and extending overdraft facilities to members in balance of payments difficulties.

Triffin's scheme was in essence a revival of Keynes's plan for an International Clearing Union which the British Government had sponsored in 1943. But Keynes's proposals had failed to win acceptance at Bretton Woods due to two basic objections—firstly to his view that holdings of Bancor (the proposed new international unit of account) should not carry the right to conversion into gold and secondly to the fact that the credit-creating powers of the proposed Clearing Union would be unlimited under his scheme, with possible inflationary implications for the world economy.

To obviate such objections, Professor Triffin suggested that deposits accrued at the Fund to the credit of a member above the prescribed minimum should be convertible into gold at the member's request and that the Fund's lending under the enlarged role that he envisaged for it should continue, however, to be according to the same staid criteria as had been followed by that institution since its foundation. Triffin would further lay down an overall annual limit of increase to the Fund's lending, so that it just kept pace with the growth of the world's needs for liquidity.

Triffin had, of course, not seen much merit in the general 50 per cent increase in I.M.F. quotas which had been made in 1959 as a result of the unanimous resolution to that effect at the New Delhi meeting of the Fund held a year earlier. For the increase would largely "flood the Fund's coffers" with a number of minor currencies which no member might ever need to borrow, while it could only stave off for a short breathing spell the problem of the leading currencies, during which more fundamental remedies would have to be worked out. Triffin was aware, however, that his scheme would not gain quick acceptance, because central bankers and governments' financial experts would not easily take to a root-and-branch change of the system they had traditionally been accustomed to work.

Basle Agreement

As though to prove how correct Triffin had been, the U.S. dollar had made very rough weather in the last quarter of 1960 and, in the spring of next year, the British pound had to face a serious outflow of "hot money" sparked off by fears of a devaluation of sterling. It was then that the European central bankers, meeting at Basle in March, arranged for a system of mutual credits that has since been known as the "Basle Agreement." Under this informal agreement, the central bank Governors participating agreed, in the words of Lord Cromer, Governor of the Bank of England, "that, for the mutual good of all the countries represented, they would counteract speculative movements, as and when they arose, by providing each other with what was tantamount to short-term banking accommodation, in one form or another."

Jacobsson Scheme

In September 1961, Dr. Per Jacobsson, Managing Director of the International Monetary Fund, made a further move in the same direction when he obtained the approval of the Vienna meeting of the Fund for a scheme of standby credits under which the Fund would be provided with credit lines aggregating $6,000 million by the ten leading industrial nations for use to redress temporary balance of payments deficits, especially those caused by sudden tidal movements of short-term funds. Essentially the scheme, finalised at a meeting of the Finance Ministers of the ten countries concerned at Paris in December 1961, is similar to the Basle Agreement. Under the Basle Agreement, a withdrawal of privately held short-term funds from a country was met by an increase in its debt to a European central bank; under the scheme of standby credits for the I.M.F., a flight of short-term funds from a country would be met out of an increase in the country's borrowing from the Fund, which would obtain the currency in demand by drawing on its credit line with the country or countries to which the "hot money" was in flight. This way unsettling movements of speculative capital could be offset, since the loss of funds from one major financial centre must be equalled by inflows into others: in effect, the former would be borrowing reserves from the latter. It was clear, however, that Dr. Jacobsson and the Fund would only "under-pin" the reserve currencies of the world, not replace their reserve function as Triffin had suggested was necessary and inevitable.

The leavening effect of Triffin's ideas on official thinking at the Fund was visible though. Pointing out that the member-countries' drawing rights on the Fund were at the end of 1960 equivalent to $18 billion—"almost as large as the total of all foreign exchange reserves held by national monetary authorities," the I.M.F.'s *Annual Report* for 1960-61 strongly urged the member-countries to count in their I.M.F. quotas as part of their international reserves. Informally the Fund also suggested to members to regard as part of their reserves at any rate their gold subscription to the Fund and any outstanding sales of their respective currencies by the Fund. This view of reserves could be the harbinger of the wider (Triffin) concept of member-countries holding part of their international reserves at the I.M.F. and regarding a credit at the Fund as the equivalent of gold.

"Swap" Arrangements

In the meantime, the Basle idea was catching on. Central bankers, while refusing to accept the notion of a supra-national central bank, were more prepared than before to co-operate with each other in a practical, if rather piecemeal, way to buttress the international monetary system against speculative assault and to innovate new official interventions in the foreign exchange markets towards the same end. In these improvisations, Western Europe was also making her warm response to the new initiatives coming from the United States Treasury, now obliged to call in the old world to help redress the disequilibrium in the balance of payments of the new. The United States had since 1958 been running a large payments deficit which had been causing a serious drain on her gold reserves. As one way of stanching further losses of gold, the U.S. authorities have made "swap" arrangements with various countries—the United Kingdom, France, the Netherlands, Belgium, Switzerland, Germany, Italy and Canada—so as to be able to acquire foreign currencies when needed as a second line of defence for the dollar. This patchwork of international credit has in fact played an important part in the past year, bearing the strain of large international movements of funds, cushioning the exchange rates from their impact and obviating the need for disruptive gold flows.

Roosa Proposals

Mr. Robert V. Roosa, the former Vice-President of the Federal Reserve Bank of New York, who since last year has, as the Department's Under-Secretary, been in charge of the U.S. Treasury's international operations, and hence has played a leading part in building up this network of "swap" holdings of currencies, sees in them not a "patchwork improvisation of minor devices" but "the groundwork for the most comprehensive restructuring of international liquidity arrangements since the founding of the I.M.F." Not for Mr. Roosa proposals either for revaluing gold or for erecting the Fund into a super-national central bank; not only will the world's liquidity position, according to him, be quite tractable in the next few years, but it could be dealt with by further extensions of the principle of reciprocal holdings of currencies.

Three years earlier, writing on the Radcliffe Report, Mr. Roosa had said: "As to its [Radcliffe Committee's] long-term endorsement of the 'bancor' idea of an internationally acceptable reserve currency—with the I.M.F. converted into an international central bank—that has had high endorsement before, and will surely deserve the further study which the Committee commends." (*Lloyds Bank Review*, October 1959, page 13.) He is now convinced, however, of the need to continue the role of the dollar as an international reserve currency and of the ease of enabling it to do so through further bilateral "swing" credits of the type that his Treasury has been negotiating in the past two years.

Maudling Plan

Mr. Roosa's present position was affirmed both in a paper that he brought out on "Assuring the Free World's Liquidity" a little prior to the Fund meeting last September, and also during the deliberations of the Fund when he strongly opposed the scheme tentatively suggested by Mr. Reginald Maudling, the British Chancellor of the Exchequer, for a multilateral approach to the problem of international liquidity under the ægis of the I.M.F. It could be, as has been suggested, that Mr. Roosa and the U.S. Treasury are sticking out for national prestige in this matter, the more so as the once powerful dollar has been so often in the doldrums in the past four years. Mr. Roosa had also hopes, now sadly receded, of an England economically unified with Western Europe and of the evolving of suitable operational techniques between the monetary authorities of the United States and their counterparts in an expanded and financially unified Common Market.

It was, therefore, very much against the trans-Atlantic drift that Mr. Maudling launched his "new initiative" at the annual meeting of the Fund in Washington last September. The Chancellor chose to put his proposals in general terms, leaving them, if they could gain sufficient initial support, to be shaped by the officials of the Fund into a detailed scheme for consideration by the next (1963) meeting of the Fund. But his basic ideas are clear.

Mr. Maudling would build up a system of multilateral swing credits to be run under the auspices of the Fund so that pressures against particular currencies could be met without a draft on the gold reserves of the countries affected. A country which receives large accretions of the currency of another member would, on the latter's initiative, deposit them in a mutual currency account to be managed by the Fund and receive instead a credit or deposit certificate denominated in an international currency unit bearing a fixed value in terms of gold, like all holdings in the Fund. If, later, the tide of payments were to turn against the depositor, the deficit could be financed out of its credit balance in the mutual currency account.

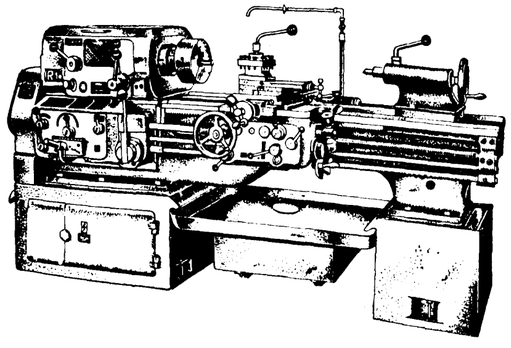
To illustrate: When funds are flowing from London to New York, the United States would deposit the inflow of sterling in the proposed mutual currency account in the Fund and obtain a deposit certificate. If, thereafter, the payments position were to turn against the dollar, the United States could use its deposit certificate to redeem the surplus dollars that would now be lodged by her creditors in the mutual currency account. The idea is to reduce unnecessary gold movements and set off cross flows in international payments as far as possible through debits and credits at the suggested mutual currency account to be operated by the Fund.

Credit Certificates

Credit certificates at the mutual currency account would not be generally transferable between countries, at any rate not at the start of the scheme. But they would function as part of the reserves of the countries holding them. Future accruals of the key currencies would thus be held not as volatile short-term claims of one country against another but be turned into stable claims against an international institution carrying a gold value guarantee. World liquidity would be expanded and, at the same time, the threat of recurrent gold losses that key currency countries now face would be removed.

Unlike the U.S. Treasury's bilateral agreements for reciprocal holdings of currencies, the British plan is multilateral and centres on the Fund: it could be the nucleus of a scheme of holding reserves pooled in an international institution and hence capable of augmentation to meet the growth of world trade. Thus the Maudling initiative, modest though its present objectives are, could be a first step on the road recommended by Triffin, who, of course, is "the professor we mustn't name." (*The Economist*, 8th September 1962.)

Mr. Maudling's proposals evoked little enthusiasm either from the Fund or from its members, the U.S. opposition to them being plainly voiced by Mr. Roosa. There is no saying whether agreement can yet be found on a multilateral solution for the problem of world liquidity.



The lessons of international monetary history, however, point clearly to the fashioning of international reserve and credit arrangements as a surer safeguard for world trade and payments than national reserves bilaterally buttressed as between individual countries. Bilateral credits are nothing new in international monetary relations. Mr. Benjamin Strong of the Federal Reserve Bank of New York and Mr. Montagu Norman of the Bank of England had already blazed this trail in the inter-war period. But their efforts could not prop up the restored international gold standard for even the short spell of a decade. Not that these men were unaware of the need for broader based international monetary co-operation but they knew that the world was not ready for it. Surely, international co-operation should now be forthcoming in larger measure to work out a multilateral solution for the difficulties that hamper the running of the present international payments mechanism.

Kirloskar

MH

Machine Tools for Precision plus Production

IMPROVED MODEL 'RL' LATHES

SWINGS OVER BED DIA 375 mm to 570 mm

These versatile Lathes possess the qualities of ruggedness and outstanding performance which distinguish all Mysore Kirloskar products.

The all-geared headstock of these heavy duty, sliding, surfacing and screw cutting Lathes transmits maximum power throughout the spindle speeds. All the gears are made of specially selected alloy steel, hardened and ground to give long service.

These high speed, precision Lathes have several other special features described in an illustrated literature. Please send for it today.

AUGMENTING PRODUCTION OF SUGAR

TARGET FOR NEXT SEASON FIXED AT 3.3 MILLION TONS

THE Government of India seems to be determined to maintain sugar production at as high a level as possible in the ensuing season (November 1963-October 1964). This at any rate is the impression one gets from the pronouncements made by Mr. S. K. Patil, Union Minister for Food and Agriculture, and his deputies in the past few days in Parliament and outside. Addressing Parliament's Informal Consultative Committee for his Ministry on Wednesday the 20th inst., Mr. Patil announced that an enhanced target of 3.2 to 3.3 million tons of sugar had been fixed for the 1963-64 season, in order to meet increasing domestic consumption, to enable larger exports and to ensure adequate carryover stocks. Reiterating the urgent need for producing more sugar, Mr. Patil stated in the Lok Sabha on the following day, in the course of his reply to the debate on the demands for grants for his Ministry, that the sugar economy of India would be a surplus one and that the third Plan output target would be raised from 3.5 million tons to 4.0 million tons, with half a million tons kept for export. He also indicated the adoption of certain measures designed to augment sugar production. The Press version of his statement is as follows:

"Necessary incentives will be provided to cultivators as well as sugar millowners. The Food and Agriculture Ministry is working out reasonable increases in sugarcane prices for the next season based on the linking formula in order to raise cane production and discourage its diversion from sugar to *gur* manufacture. Increases will have to be worked out carefully, so that what is given to the farmer will not have to be taken back at any stage. If, by giving farmers increases in prices, consumers' prices are to be increased, we have to put up with it, because the farmers cannot work without incentives. Under the scheme for augmenting the per-acre yield of cane, it is proposed to take up blocks of 4,000 acres around each sugar factory in Uttar Pradesh. The scheme is estimated to cost about Rs. 1 crore to be shared by the Centre, the State Government, the mills and the cultivators. The Centre will meet one-third of the cost. Similar schemes are expected to be implemented in Bihar and the Punjab."

Decline in Output

The awareness of the Government to the need for ensuring maximum sugar production in the next and also subsequent seasons is to be widely appreciated. Only one would have wished that the same awareness had been in evidence in the current season. It was because of the absence of such awareness that the country is now faced with the prospects of tight supply position. Well before the sugar mills commenced their crushing operations in the current season, it was pretty clear that the cane crop in several parts of the country had suffered a severe damage. At that time, the *gur* and *khandsari* prices were also ruling very high. In view of these factors, attention of the Government had been drawn to the possibility of large-scale diversion of cane away from sugar mills to *gur-khandsari* making. But the Centre or the States did not do anything to check this tendency, with the result that the sugar output has suffered a distinct setback, the estimated production being no more than 2.1 million tons, as against the 2.7 million tons actually produced in 1961-62.

As compared with the estimated output of 2.1 million tons in 1962-63, the production target of 3.2 to 3.3 million tons fixed for the next season represents an increase of 1.1 to 1.2 million tons. The target may, therefore, appear to be a very ambitious one, but it is not difficult of achievement, provided proper steps are taken in time. After all, India did produce nearly three million tons of sugar in 1960-61. One of the means of boosting sugar output indicated by Mr. Patil relates to the upward revision in cane prices. Evidently, Mr. Patil has been weighed down by political pressure exercised by cane growers and openly supported by the Governments of Uttar Pradesh and Bihar. The new sugarcane price policy has been in force just since November 1962 and one wonders why this policy should be changed so soon. The policy, as this journal has repeatedly pointed out, is quite liberal and assures to cane growers much higher prices than they were getting before.

How heavy has been the incidence of cane cost in the total cost of sugar production and how unreasonable is the plea for a further rise in cane prices were explained in detail in these columns only five weeks ago (*vide* page 314 of *Commerce* dated 23rd February 1963), so that it is unnecessary to refer to the issue again. Suffice it to say that the prices now being obtained by cane growers are quite attractive. If the growers make earnest efforts to produce in a given area of land a larger quantity of cane with higher sucrose-content, they can definitely secure a more handsome return under the present formula. In this task, the Central and State Governments can help the growers actively through schemes for the intensive cultivation of cane, including provision of irrigation facilities, establishment of more seed nurseries, distribution of disease-free and improved varieties of seeds, supply of manures and fertilisers, control of pests and diseases, etc. These schemes must be implemented properly. The State Governments, which collect by way of cane cess crores of rupees every year and which also get liberal grants from the Centre, cannot certainly complain of inadequate funds for implementing the schemes.

Other Alternatives

The Government of India may be inclined to feel that, unless the price of cane is raised suitably, it is not possible to ensure adequate, regular supply of cane to sugar mills. But one would ask as to whether there are no other alternatives. By banning manufacture of *gur* and *khandsari* in and around sugar mills, the State Governments can make the agriculturists growing cane in factory areas to supply the same to the sugar mills. Stern measures must also be taken to check any speculative rise in the prices of the aforesaid sugar substitutes.

It may be recalled in this context that the high minimum price of Re. 1.62 per maund of cane (irrespective of quality considerations) enforced in the seasons 1959-60 and 1960-61, as against the old price of Re. 1.44, was so very attractive that the cultivators were knocking at the gates of sugar mills with cart-loads of cane for sale. If the price had not been attractive, the sugar mills would certainly not have been able to produce as much as 2.42 million tons of sugar in 1959-60 and 2.98 million tons in 1960-61. And if the production in 1961-62 was lower, it was due not to reduced cane supply on account of uneconomic price but to the 10 per cent cut in production enforced by the Government in view of heavy accumulations. Although the growers are assured of still higher prices under the new cane price formula, Mr. Patil stated in the Lok Sabha that he would not allow the cane producer to suffer in any way. Indeed, he assured that the future policy would be regulated in such a manner that the producer got adequate incentives and that there would not be any more need for diversion of cane from the factory to the *gur* manufacturer. It is indeed regrettable that Mr. Patil also has joined the rank of politicians who have all along been pampering the cane growers. It will be of interest to note here that five per cent of the total agricultural income is derived from sugarcane, though the area under this crop accounts for just 1.5 per cent of the entire cultivated area. The anxiety to improve the economic lot of the cane growers is, of course, understandable, but it should not be stretched too far to ignore the two important objectives, namely, increased production of high quality sugar at an economic cost and prevention of large-scale diversion of lands from foodgrains to cane growing.

The Cane Commissioner of U.P. unfolded the new scheme for improved cane cultivation at a meeting of the representatives of sugar factories, Cane Councils and Cane Development Unions of Gorakhpur and Deoria districts held at Gorakhpur recently. Under the scheme, 4,000 acres of land would be taken up in 25 sugar factory zones in the State, to begin with, for intensive cane cultivation, in order to push up the per acre yield. At the end of every third year, another area of 4,000 acres would be taken up and thus, in a period of nine years, each factory zone would have an area of 12,000 acres under intensive cultivation with improved sugarcane yield. The scheme in respect of each unit of 4,000 acres would cost Rs. 1,40,000 at the rate of Rs. 35 per acre. The Union Government and the State Government would each bear one-third of the total cost of the scheme, while the remaining one-third would be borne equally by the sugar factories and the cane growers of the area.

VANASPATI

Symbol of Food Purity in India

MILLIONS of people in India depend every day on the purity of Vanaspati. To protect the health of the people, the Government and the Vanaspati industry have laid down strict regulations, insisting on the absolute purity of Vanaspati. Thus Vanaspati is manufactured only to these exact specifications... is tested at every stage of processing to ensure that is it pure vegetable fat in its best form!

Vanaspati is made from the finest vegetable oils which are refined, hydrogenated, deodorised and vitaminised. Every gram is fortified with 25 I.U. of vitamin A and 2 I.U. of vitamin D. Therefore Vanaspati is as nutritious as the best semi-solid fat, and certainly more nutritious than ordinary vegetable oils. What's more, it's hygienically packed in sealed containers to guarantee that its purity and food value are intact. Thus Vanaspati offers purity, quality, nourishment, good cooking, economy and convenience—all the essentials of a good cooking medium.

For all these advantages, Vanaspati has become the popular cooking medium in thousands of Indian homes. In fact, the consumption has increased from 30,000 tons to over 338,000 tons in the last 30 years!

A product of the combined resources of agriculture, science and technology, Vanaspati is the ideal everyday cooking fat for India... for your family... for *you!*

VANASPATI AND VANASPATI-LIKE FATS ARE USED THROUGHOUT THE WORLD!

ECONOMIC GROWTH OF WEST EUROPE—I

WHY DEPRESSION HAS NOT OCCURRED

By Dr. Per Jacobsson
MANAGING DIRECTOR, INTERNATIONAL MONETARY FUND

AFTER a large war, there are many assets, such as factories and machines, which have not been adequately maintained, and there are also many unsatisfied needs for everything from highways to new houses and clothing which could not be met while the war lasted. From this premise, it has often been assumed that these unfulfilled needs would guarantee a high rate of business activity for a number of years after the war was over. If we look back in history, we find, however, that, after the large wars of the past, there was as a rule a period of depression. This was the case for many long years after the Napoleonic wars, and again after the war between the States in the U.S.; again, in the U.S., there was a sharp but relatively short depression after the First World War. As you know, many economists believed that a similar experience would be repeated after the Second World War, but, against these expectations, there was at no time any appreciable decline in business activity. I believe it will help our understanding of the whole question of growth if I try to indicate briefly why it was that a post-war depression did not occur after the Second World War.

In the analysis which follows, I shall refer to certain concepts of Keynes, particularly that of liquidity as measured in wage units. For I believe it is important to stress that an increase in the volume of demand, by whatever financial measures adopted, must be related to **the prevailing level of costs.** But while I use Keynes' concept of liquidity, I want to emphasise that I regard this concept—in conformity with what I think is now commonly accepted—as a factor affecting not only the demand for investment goods (as Keynes regarded it) but also as a factor affecting the demand for consumer goods.

In 1945, there were, as you know, large amounts of unspent balances in the hands of business firms and consumers, which had accumulated during the war. Wages, on the other hand, had been prevented from rising sharply during the war by the imposition of effective controls. Thus there was at the end of the war a very high degree of liquidity relative to wages. This means that, on the one hand, there was a high potential demand, nourished by the high degree of liquidity, while, on the other hand, the cost of production had not risen proportionately with the increase in demand. So commodities and services were able to find ready customers at current prices and profit margins were high, with the result that business was active, with a strong propensity to invest, and thus no depression set in. In earlier large wars, the situation had been very different. Prices and wages had been allowed to rise to unprecedented heights in response to the inflated war demand and to the war-time scarcity of goods and services. When the war was over, costs and prices proved too high in relation to peace-time demand; consequently, a period of adjustment had to be lived through before a new equilibrium could be reached. The key to the more fortunate development after the Second World War thus lies in the fact that the rise in costs and prices was held back by direct controls while the war was still raging.

Inflationary Expansion

This analysis fits well with the developments in the United States and Great Britain, with the additional observation, however, that, in both these countries, largely through easy money policies, the high degree of liquidity already existing at the end of the war was further increased in the early post-war years. This was important not only for these two countries but also more generally, since the trend of demand in the United States and Great Britain exerted, under the circumstances prevailing at the time, a predominant influence on the general state of demand on the world markets. Part of the persistently high volume of demand on world markets became directed to other countries, in particular to the countries on the Continent of Europe. As a result of the 1949 currency devaluations, most Western European countries had become increasingly competitive and, without impairing the competitive position, this left room for some further price increases in most Western European countries, especially as there was some continued inflationary expansion in the United States.

We have now especially to analyse what happened to the volume of liquidity, which in some of the countries on the Continent of Europe developed differently from the two Anglo-Saxon countries. In Western Germany and in the Netherlands, by official action, the excessive liquidity prevailing at the end of the war was sharply reduced; in Germany, by something like 92 per cent through cancellation of notes and bank deposits at fixed percentages, and in the Netherlands also through a series of measures affecting bank deposits and the note circulation. In Italy, most of the value of money assets was wiped out by the high inflation, since prices rose to fifty-five times the 1938 level before the inflation was arrested in the summer of 1947. So, in these three countries, the end war volume of liquidity was very much reduced, while, at the same time, wages in real terms remained at a low level as compared with pre-war. It seemed certain that liquidity would have to be expanded, and also that prices and wages would show a tendency to increase. The degree of liquidity and the level of wages were both low as compared with most other European countries. Thus, liquidity in Western Germany, the Netherlands and Italy expanded largely as a result of increased foreign demands for the goods and services of these three countries, all of them in a strong competitive position. In the period 1950-60, fully one half of the increase in demand for the industrial goods of Germany, Italy and the Netherlands was in the form of export demand; less than one half of the increase came from additional domestic demand.

Payments Surpluses

The high foreign demand led to payments surpluses, which helped to create the necessary domestic liquidity needed for the increased business activity. Furthermore, this was done under conditions in which costs, and particularly wage costs, rose only slightly, while productivity increased sharply. The moderation in wage increases was a factor of great importance for the sustained growth of these three countries. In the Netherlands, the moderation was the result of income policies pursued by employers and employees with the blessing of the Government, this being an innovation in wage relations that over the years has had a considerable impact on Dutch economic development. In Italy and Western Germany, the ready availability of labour militated against substantial increases in wages. Official statistics showed around two million unemployed in Italy, but there was additional concealed unemployment. In Western Germany, there has been since the end of the war and until the Berlin Wall was erected a very considerable influx of manpower from the East, later on supplemented by an influx of workers from other Western European countries, mainly Italy.

The net result of all this was, in Keynesian terms, that liquidity was constantly increasing corresponding to fresh demand, and was still at a high level as measured in wage units. Thus, a basic condition was present for an expansion of business activity at a high rate of growth. There was, however, one snag—especially in the early years—relating to the needs for imports which had to be paid for.

When Keynes defined liquidity in terms of wage units, he did so in order to direct attention to one crucial factor: the relation between, on the one hand, the major element in the cost of production, which is labour, and, on the other hand, the volume of effective demand as sustained by the volume of money or liquid assets. There are, of course, other elements in the cost of production: land and its produce in the form of raw materials; capital in the form of tools and machines; just to give some obvious examples. In the early post-war period, while there was still in several countries a fair amount of unemployment—and a great deal in Italy—it became evident that these other elements could in no way be disregarded. The availability of unemployed labour was not in itself a sufficient ground for the introduction of what was at that time called "an aggressive investment policy," which would have to be financed in part by credit expansion. Such investment would obviously need not only labour but also raw materials, machines, and other goods, a large part of which would have to be imported.

In these early years before exports had had time to increase, the imports of the additional goods could not be paid for by current receipts but tended to produce a deficit in the balance of payments at a time when monetary reserves were low, or even near exhaustion. This was a serious bottleneck which, if not overcome, might have greatly retarded the rebuilding of European economic strength. It was the great merit of the Marshall Plan that the capital necessary for the financing of investment was made available in foreign exchange and thus enabled European countries to pay for the necessary imports, and made possible investments on a scale that could not otherwise have been undertaken. This applied to all recipients of the Marshall Aid, but it was particularly true of the three countries, Germany, Italy and the Netherlands, whose particular problems I have just been discussing. Consumption continued to rise in these countries in the post-war years, but, while the Marshall Plan supplied capital initially, increased domestic savings enabled the financing of investment to be maintained and ensured continued growth.

Brake Against Over-expansion

In these three countries, the forces which I have mentioned were sufficient to ensure economic expansion. Thus growth had not to be promoted by particular fiscal or monetary measures. The purpose of fiscal and monetary policy was rather to provide a brake against over-expansion. Such surpluses or deficits in Government budgets as occurred were related primarily to institutional factors and could not be considered as important elements in the process of growth. An example of such institutional factors was the investment in the nationalised industries in Italy, which appeared as part of the budget expenditure and could be said to influence the size of the budget deficit. For several years in the Netherlands, and almost regularly in Germany, budget surpluses were attained; in Germany by both the Federal Government and the provincial Governments—the Länder. Under the circumstances, these budgetary surpluses were expansionary factors in growth, as they permitted an even greater rise in private investment.

I do not want to imply that developments in Germany, Italy and the Netherlands were following exactly the same pattern, but the similarities were so great that these countries may be presented as a group. When one leaves them and considers other countries of Western Europe, however, one must treat them individually; and this is particularly so with France and Great Britain.

In France

To understand what happened in France after the end of the Second World War, one has to keep very much in mind a widespread French determination to ensure that the French economy would not be afflicted by another period of stagnation of the kind that prevailed in so many of the inter-war years. One might even go a step further and say that the French were determined not to allow the expansion, on which they had set their heart, to be hampered by considerations of monetary policy. For it was felt and often repeated that it was the so-called "policy of monetary stability" in the days of the gold bloc that was responsible for the lethargic state of the French economy at that time. In other words, the level of investment considered essential had to be attained at all cost, even if it meant extensive use of bank credit for its financing, including resort to the Bank of France. This was the emotional background of the Monnet Plan for Modernisation and Investment—a plan supported by the Gov-

ALLAHABAD BANK, LIMITED

(AFFILIATED TO THE CHARTERED BANK)

DIRECTORS' REPORT

The Directors of the Allahabad Bank, Limited, have pleasure in submitting the Accounts, duly audited, showing the position of the Bank's affairs as at the 31st day of December, 1962, together with their report.

	Rs.	nP
The result of the working for twelve months, including the balance from former Account, and after making allowance for taxation and depreciation, is a profit of	28,69,494	90
Out of this there has been paid Dividend and Bonus on the Ordinary Shares at the rate of 12 per cent. and 6 per cent. per annum respectively and Dividend on the Preference Shares at the rate of 7.80 per cent. per annum (both subject to deduction of tax in accordance with the provisions of the Indian Income Tax Act) for the six months ended 30th June, 1962, absorbing	4,63,500	00
Leaving an available balance of	24,05,994	90
which your Directors recommend should be disposed of as follows:	Rs.	nP
In payment of a Dividend (subject to deduction of tax in accordance with the provisions of the Indian Income Tax Act) on the Preference Shares for the six months ended 31st December, 1962, at the rate of 7.80 per cent. per annum	53,500	00
In payment of a Dividend (subject to deduction of tax in accordance with the provisions of the Indian Income Tax Act) on the Ordinary Shares for the six months ended 31st December, 1962, at the rate of 12 per cent. per annum	3,37,500	00
Transfer to Reserve Fund	4,50,000	00
Provision for Bonus to Staff	0,30,000	00
	17,76,000	00
Carry forward to next Account	6,29,994	90

The Bank's business showed satisfactory expansion during 1962, but, unfortunately, this has not been reflected in the profit figure owing to enhanced operating costs. As hitherto, investments are shown in the Balance Sheet at less than the actual market value.

The Bank made a donation to the National Defence Fund amounting to Rs. 1,15,000.

The issued and fully subscribed Capital of the Bank was increased during the year to Rs. 82,50,000 by a 'rights' issue of 22,500 Ordinary Shares of Rs. 100 each to the existing equity shareholders in the proportion of one new share for every two shares held, at a premium of Rs. 50 per share. The premium received on the 'rights' issue, amounting to Rs. 11,25,000 has been added to Reserves. The new Capital will participate in the proposed final dividend of 12 per cent. per annum for the three months ended 31st December, 1962.

During the year a new branch of the Bank was opened on the 11th October, 1962, at Brabourne Road, Calcutta, and the remaining five pay offices were upgraded to full branch status.

Exemption from the requirement of compulsory audit was obtained from the Central Government for 39 branches in respect of their accounts for 1962 and the remaining offices were either audited by Bank's Statutory Auditors, Messrs. A. F. Ferguson & Co., or by firms of Chartered Accountants appointed in consultation with them.

Under Article 115, two of the Directors, Mr. I. G. Thomson and Mr. M. J. Maclaren, retire from office by rotation but are eligible for re-election.

Auditors will have to be appointed for the year ending 31st December, 1963.

Mr. M. R. Das being absent from Calcutta has not signed the accounts.

By order of the Board,

I. G. THOMSON,
Chairman.

M. J. MACLAREN,
General Manager.

CALCUTTA, *The 20th February*, 1963.

BALANCE SHEET AS AT 31st DECEMBER, 1962

AUDITORS' REPORT TO THE MEMBERS.

1. We have audited the foregoing Balance Sheet of the Allahabad Bank, Ltd., as at 31st December, 1962, and also the foregoing Profit and Loss Account of the Bank, for the year ended upon that date, in which are incorporated the returns of all the Branches, of which 26 Branches have been audited by us, 24 Branches by other auditors and 39 Branches unaudited.

2. We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from all the Branches of the Bank;

(d) the reports on the accounts of Branches audited by other Auditors have been forwarded to us and the same have been considered in preparing this report;

(e) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

ALLAHABAD BANK NOMINEES LIMITED

DIRECTORS' REPORT

The Directors of the Allahabad Bank Nominees Limited submit the audited Balance Sheet for the year ended 31st December, 1962, together with their report.

A Profit and Loss Account is not submitted as no profit was made nor loss sustained. The Company is a wholly owned subsidiary of the Allahabad Bank Limited which has paid the entire expenses of the Company.

Under Article 55, Pt. Lok Nath Shukla retires from office by rotation but is eligible for re-election.

Auditors will have to be appointed for the year ending 31st December, 1963.

M. J. MACLAREN,
J. RITCHIE
W. SMITH,
LOKNATH,
} *Directors.*

CALCUTTA,
The 20th February, 1963.

We have audited the foregoing Balance Sheet as at 31st December, 1962, of the Allahabad Bank Nominees Limited. We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account as required by the law in force have been kept by the Company so far as appears from our examination of those books. The Company's Balance Sheet is in agreement with the books of account and in our opinion and to the best of our information and explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1956, in the manner so required and gives a true and fair view of the state of the Company's affairs as at 31st December, 1962.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

THE CHARTERED BANK

CHAIRMAN, MR. V. A. GRANTHAM'S ANNUAL STATEMENT

FOREIGN EXCHANGE IS STILL INDIA'S BASIC ECONOMIC PROBLEM

FOREIGN exchange is still India's basic economic problem which is unlikely to improve early, in view of the generally too high manufacturing costs for open competition in world markets. This view has been expressed by Mr. Vincent Alpe Grantham, Chairman of The Chartered Bank, in his statement to shareholders circulated along with the Directors' report and statement of accounts of the Bank for the year ended 31st December 1962. The Annual General Meeting of the Bank will be held at London on 3rd April 1963. Even the older industries, he says, find that they are unable to compete abroad with the heavy taxation, high cost of protected local raw materials and low productivity of an increasingly costly labour force. He adds that any betterment of the exchange position is more likely to come from the gradual rise in agricultural production, though even an appreciable rise in exports will not meet an import bill already cut to the minimum. On the official action against hoarded gold, Mr. Grantham attributes the poor response to Gold Bonds to their unrealistic terms which ignore the fact that the prerequisites for the voluntary surrender of gold are an attractive price as well as a guarantee against inflation and a depreciating currency. Speaking of industrial progress as such, he is for consolidation in preference to further expansion.

The following is the full text of Mr. Grantham's statement:

The administration of a banking business extending over the greater part of Asia into a multiplicity of sovereign states each pursuing highly individual and often conflicting economic policies grows increasingly complex with the passing of the years. It will be seen, however, from the statement which follows that the management of the Chartered Bank has continued during 1962 to respond to rapidly changing situations and to every challenge of new political forces emerging in the East. It is often alleged that banks are hide-bound by precedent; this cannot be true of the Chartered Bank. If it were there could have been no rapid adaptation of traditional credit operations to new financial conditions. In 1962 the challenge of change was perhaps more insistent than at any time during the past decade and the results of the Bank's operations during that year, to which I shall shortly refer, demonstrate the success with which this challenge has been met.

The continuing favourable condition of the Bank's affairs is a reflection of the professional skill displayed by the general management in London and the branch managers everywhere. The stockholders will, I am sure, wish to be associated with the Court of Directors in acknowledging the skill, devotion and enterprise exerted on the Bank's behalf by the general management, the branch managers and staff at all levels and throughout the establishment. I would again draw your attention to the number of new branches opened at various points.

Tours

During the months of April and May, the Chief General Manager undertook an extensive tour which enabled him to appraise at first-hand new developments of concern to the bank in the Far East and the Middle East. Mr. Pullen spent a week in Iran, where he was able to see in person the progress of the business of our associate the Irano British Bank.

Eastern Bank Ltd.

During the past few years the association of the Chartered Bank with its wholly-owned subsidiary, the Eastern Bank Ltd., has grown progressively closer with marked advantage to both institutions. The Eastern Bank Ltd. which enjoys a wide measure of autonomy within its own specialised sphere of operations continues to prosper and the observations I have made regarding the management and staff of the Chartered Bank apply with equal force to those of the Eastern Bank Ltd. To a large extent the services of the two banks have been brought under a single direction and the associated establishments are working together with harmony and goodwill.

Mr. E. J. Pakes, C.B.E., on retiring from business in the city a year ago, relinquished his seat on the Court and I take this opportunity of acknowledging with gratitude the valuable help and good counsel he brought to the deliberations of the Directors. The Court elected in place of Mr. Pakes, Mr. Kenneth M. Campbell, M.B.E., Chairman of the British India Steam Navigation Company Ltd., and the stockholders will be invited to confirm his election at the approaching annual general meeting.

Irano British Bank

The business of our associate in Iran continued to expand though perhaps, due to a general slowing down of the internal economy, less rapidly than we had hoped. The results of operations during the bank's third full year, which ended in March last, justified the declaration of a small dividend similar to that of the previous year and it is confidently hoped that this will be maintained.

A report on Iran is included in the overseas survey.

Allahabad Bank Ltd.

As mentioned in my statement last year our holding in the equity of the Allahabad Bank was increased in January 1962 when the balance of the partly paid shares was called up. The paid-up capital was further enlarged in September 1962 when the holders of ordinary shares were offered one new share of Rs. 100, at a premium of Rs. 50, for every two shares held. The offer was fully taken up, and the paid-up capital and reserve fund now amount to Rs. 82,50,000 (£618,750) and Rs. 1,28,25,000 (£961,875), respectively, the extent of our interest therein being indicated in the accounts. The Allahabad Bank's business continues to increase steadily, and it is hoped that in the near future permission will be obtained from the Reserve Bank of India for the opening of new branches which will pave the way to further expansion.

The Bank's Balance Sheet

In 1961, because our balance sheet total had shewn a very substantial increase over that of 1960 after rapid progress in previous years, I felt bound to warn that there were factors that might affect our further progress, although I hoped that increased business resulting among other things from the opening of new branches and the increase in our capital and reserves would outweigh these factors. In the event, we have had another good year and our balance sheet shews an increase of no less than £49 millions, standing at the record figure of £402 millions.

It will be noted that the main contributions to this increase are rises in current and other accounts and fixed deposits of £26 millions and £24 millions, respectively.

On the other side of the balance sheet the figure for advances and other accounts shews an increase of £26 millions, while our figures for cash and securities are up £5 millions and £19 millions, respectively.

The consolidated balance sheet total of £468 millions, which includes of course the figures of the Eastern Bank, shews an increase of £60 millions over that of last year and is an all-time high.

In view of these figures we have deemed it wise to increase our allocation to reserve funds.

Consolidated Profit and Loss Account

The profit we shew for 1962 of £1,076,748 is up £86,510.

While we are doing all we can to increase our efficiency by the introduction of mechanisation, this much larger business of ours has entailed increases in overseas staff and in all parts of the globe costs, and in particular salaries, have risen and still show a tendency to rise. We are fortunate so far that our income has enabled us to keep pace with these increases and I think it will be agreed that the result achieved in this not altogether easy year is satisfactory. Our stockholders have benefited by the increased dividend distribution arising from the rights issue made at the end of 1961. The total distribution is £50,531 higher.

With the balance brought forward from the previous year of £540,648, the amount available for allocation totals £1,617,396 out of which we have transferred £450,000 to reserve funds which now stand at £7,700,000. The interim dividend of 7½ per cent, less income tax, paid in September last, absorbed £303,187 and it is now proposed to pay a final dividend of 7½ per cent, less income tax, costing £303,188. This leaves a balance of £561,021 to be carried forward, an increase of £20,373 on last year's figure.

II

OVERSEAS SURVEY

Our sphere of operations is largely in what are known as the developing countries, and it was gratifying that the Managing Director of the International Monetary Fund, at the 1962 meeting, should give such a direct assurance of the Fund's intention to help overcome their difficulties in earning sufficient foreign exchange for their needs. These difficulties arise largely from the fact that the developing countries are in nearly every case primary producers and as such are at the mercy of world commodity prices. For some time the terms of trade have been getting steadily more unfavourable for primary producers, because the trend of commodity prices has been downward, while manufactured goods have been becoming more expensive.

As I pointed out last year, export earnings are the main source of foreign exchange for economic development in Asia, because external aid however generously given can only be marginal to total requirements. The first task, therefore, is to see that violent fluctuations in commodity prices are avoided, if necessary by such means as international commodity agreements and stockpiles, and that a reasonable return on the cost of production and shipment is obtained. The second is to ensure that the markets of the industrial countries are kept open to the products of the developing countries, which means multilateral rather than regional trading. World trade has been expanding, but the greater part of this increase has been shared among the industrial countries and little benefit has accrued to the developing countries. A high level of business activity in the industrial countries is of obvious importance to the developing countries because it stimulates demand for the raw materials the latter produce. Many Asian countries, however, are now developing manufacturing industries of their own and as output grows and quality improves, their manufactured products are entering world markets. A heavy responsibility lies on the industrial countries to ensure that their trading policy does not discriminate against manufactures from Asian and other developing countries, for those countries must export to survive and the best aid they can be given is to buy the goods and commodities they produce.

Benefit of Free Economy

Fortunately there is now a distinct trend in the world towards freer foreign trade and the lowering of tariff barriers, but if the developing countries want to take full advantage of this, their own commercial and financial policies will need revision in some important respects. It would seem that those countries which are wedded to state trading and inter-governmental barter agreements must permit more freedom and allow more scope to the private sectors of their economies, because recent experience has shown that in such conditions a more rapid improvement in living standards is possible. In those parts of the world which our Bank serves, Malaya and Thailand have long enjoyed the benefit of a free economy and now the Philippines has successfully lifted exchange and import restrictions, while Hong Kong remains a shining example of how the process of economic development can be accelerated by conditions favourable to business enterprise.

The abrupt conclusion of the Common Market negotiations must compel some urgent reconsideration of their position by the developing countries. We can only hope that in the absence of Britain's influence, the Community in Europe will not lose sight of its moral obligations to these countries.

Cyprus

The political future of Cyprus and its economic prosperity depend largely on the two major communities fusing into a Cypriot nation and co-operating in the national interest. So far, little real progress has been made in this direction and although there are some signs of a slight improvement in the general relationship, the retention of dual municipalities and the ratio of Turkish-Cypriots to Greek-Cypriots in the civil service are outstanding points of contention. Only a general return of confidence can bring about a worthwhile repatriation of the substantial Cypriot funds held abroad, which if invested locally would be of great benefit in the island's development.

As it is, the Republic's first five-year economic development programme, announced in 1961, is slowly getting under way and there have been encouraging offers of aid from friendly governments and industrial groups, particularly from British, West German, American and United Nations sources. The World Bank has agreed to lend £7½ millions for expansion of electrification. The water and mineral resources are to be developed and new and up-to-date hotels are to be built to boost the island's earnings from tourism. The establishment of the Development Bank has been delayed but is expected to take place shortly.

For the mining industry and fruit growers it was an average year but, notwithstanding an unexpected windfall from the high price of potatoes in foreign markets, there was again an adverse trade balance of approximately £22 millions. This will be partly offset by the expenditure of about £15 millions by and on behalf of the armed services in the bases. With the government adopting a liberal attitude towards imports there seems little chance of an improvement in the position and Cyprus, with this balance of payment problem, must still look mainly to increased agricultural output to pay for the extra machinery and manufactured goods to be imported. With this objective, Cyprus is negotiating trade agreements with the Soviet bloc and other countries for the disposal of local agricultural produce in return for manufactured goods and building materials.

In the coming year government expenditure is to be reduced in order to balance the budget and the contribution to the development programme is also to be slightly lower. Banking deposits are rising and there is more evidence of wealth in the hands of the people but the projected Central Bank has not yet been established; the Governor and Deputy Governor have been appointed and it may start operating shortly as an issuing bank, but its further responsibilities will only be clear when the banking legislation, which is now under consideration, is made public.

Lebanon

The year was politically uneventful and trading conditions, though far from buoyant, showed some improvement. Beirut is no less vulnerable than other centres of entrepot trade and in recent years various disagreements between the Arab states have reinforced the usual tendency for foreign traders to by-pass the entrepot. The transit trade of the Lebanon is relatively unimportant to the national economy and fortunately what there is consists mainly of oil flowing through the pipe-lines, for the merchandise transit trade is now only one-fifth of what it was five years ago.

Against a background of a small domestic market and falling invisible exports and foreign markets, the five-year development plan launched by the Government in 1961 is specially significant and work has begun on time on the improvement of Beirut port and Beirut airport, and on various irrigation, electrical and road schemes. Tourist hotels are also being constructed and it is hoped that the tourist trade, which is now said to yield L£150 millions per annum, can be substantially improved.

During the year a Money and Credit Bill was published and is likely to be enacted, not necessarily in its original form, during 1964. The bill as it stands prescribes the organisation and powers of a proposed Central Bank, and the regulations for the establishment and conduct of commercial banks. Measures of this kind are always controversial and the Government will certainly receive a great deal of opposition and expert advice on the legislation as it now stands.

Iraq

It is too early yet to say whether the new Government of Field Marshal Arif, which has now received general recognition, will be able to settle the Kurdish trouble and also restore friendly relations with some of its neighbours, but at least there is an indication that it will take a realistic view towards the oil industry. This is of paramount importance for Iraq's economic stability still depends largely on the maintenance, and even increase, of its oil shipments. Oil production and oil revenue showed a modest increase in 1962 but an unknown factor so far is the operation of the Iraqi National Oil Company, which was set up during the year with wide powers, including the exploitation of areas allocated to it by the Government.

Foreign exchange earnings from oil were in 1962 supplemented to the extent of I.D.13 millions by the sale of agricultural produce and cement. The increases in the date, wheat and barley crops are no doubt attributable in part to favourable weather but must to some extent be due to sustained development over a long period of years. The export of cement, probably the most important of the light industries, is believed to have exceeded 200,000 tons in the year, against 130,000 tons in 1961. Other work under the development plan is proceeding on both Western and Soviet sponsored projects. Several large contracts were awarded during the year and construction work has started on the new airport at Baghdad. The development of Basra port is still of primary importance, and there unfortunately the threat of heavy taxation under the old regime seems to have kept some trade away.

Generally speaking, business conditions were not entirely satisfactory during the year and turnover was affected by the increased customs duties on a wide range of imports. One can, however, be optimistic about Iraq's future as its economy is fundamentally sound and has great scope for development.

A new office of the Eastern Bank was opened at Alwiyah, in Baghdad, in November.

The Gulf

Bahrain: Bahrain remained quiet during the first year of the Ruler's reign and had on the whole a fairly prosperous year. There was no unusual business activity and the demand for foodstuffs (which are a considerable element in Bahrain's entrepot trade) has been poor. Importers of motor vehicles are having a dull time owing to greatly increased competition. On the other hand, the rapid development of Abu Dhabi has improved the demand for certain Bahrain re-exports and there is great interest in the development of property on the island itself, with a corresponding improvement in the demand for building materials.

The local production of oil was once more steady and the refinery throughput, which includes crude from the mainland, again showed a considerable increase. The new port was opened by H.H. the Ruler in May and is now working and at the end of the year H.H. performed the opening ceremony of the new municipal offices—one of the first public buildings in Bahrain.

Doha: The Qatar State continues to make progress. In February two important laws were published providing for the reorganisation of the higher administration of the Government and for the definition of the principles which should govern public financial policy.

The public works mentioned in my last statement were continued and the chief new activity in 1962 was road construction. Plans are also in hand for the increased utilisation of natural gas. The Doha Port scheme, which was to have cost about £6 millions, is not to be undertaken in its present form which is thought to be uneconomic; but it is understood that its first stage—for the dredging of an approach channel —may be carried out. Exports of crude oil again showed an increase and off-shore production is expected to begin within two years.

Sharjah: The signing in June of an agreement between the Ruler and an independent American oil company has given local encouragement to hopes for Sharjah's future, though the search for oil has yet to begin. Market conditions improved a little, with a growing demand for building materials. Various development projects, including one for a piped water supply, are under consideration.

Abu Dhabi: Orderly development of the town area is now beginning. A modern hotel has been built and opened; contracts have been awarded for the first stage of the town plan, which includes the construction of a jetty and certain roads; and projects for a power station and a water distillation plant are under consideration. Not surprisingly there is a shortage of labour and wages and costs have risen sharply.

Shipments of oil from Das Island began during the year and increasing interest is being shown in Abu Dhabi as an important oil State.

An office of the Eastern Bank was opened at Al Ain (Buraimi) on 15th December 1962.

Hadhramaut

Mukalla: The search for oil continues and drilling may start early in 1964. In the meantime various development plans are being considered by the Quaiti Government, and it is understood that a five-year programme costing nearly £2½ millions may be undertaken with assistance from the Colonial Development and Welfare Fund.

Unfortunately the steps to improve the port, which have been under consideration for some time, must now await further expert advice. In recent years Mukalla's direct trade with other countries has increased to some extent and quite apart from possible improvements to the jetty itself, covered storage space is urgently needed for grain, sugar and cement.

The plans for the new premises of the Eastern Bank have been settled and it is hoped to start construction shortly.

Seiyun: The Eastern Bank's new branch at Seiyun in the Kathiri State opened for business during the year in temporary premises. Like the Quaiti Government the Kathiri Government is deeply interested in the current search for oil. The State has old trading connections both with Aden and with the Far East, but its own natural resources are relatively small, and a new source of revenue would be most welcome.

Aden

Last year I mentioned that a closer association was probable between Aden Colony and the Federation of South Arabia, the latter comprising most of the states in the Western Aden Protectorate and one from the Hadhramaut. A treaty providing for the accession of Aden to the Federation was signed in January 1963 and took immediate effect. The British Government's proposals for the merger, although accepted by the legislative council, aroused strong opposition in the Colony particularly from the People's Socialist Party and the trade union movement which, as expected, represented the merger as a means of perpetuating British rule. The trade unions, which are comprised largely of migratory Yemeni workers in the port, dislike even more the labour legislation in force since 1960 under which strikes are illegal, but it is believed that one of the first acts of the new national Government may be to repeal the ordinance and remove this basic cause of discontent. Although the Colony has the right to secede from the Federation after a period of six years, it will in the meantime have a minority representation on the enlarged federal council and it is quite clearly a bold constitutional experiment to merge the prosperous port of Aden, which is well on the road to self government, with the economically undeveloped sheikhdoms in the interior. On the other hand, the recent upheaval in the Yemen has shown how important it is to give this added strength to the States in the Federation.

Whilst economically there are obvious advantages in welding Aden and the hinterland into one unit, these advantages are by no means all on the side of the States. Aden Colony, in marked contrast to the interior, is at the moment immensely prosperous but that prosperity is largely dependent upon expenditure in connection with the British armed forces stationed in the Colony. It is still the leading bunkering port in the world but its entrepot trade is tending to diminish with the strengthening competition from Hodeidah, Djibouti and other Red Sea ports and this trend will probably continue. The States, on the other hand, grow cotton at Abyan and Lahej and the increased export figures in this connection are very encouraging. There is also considerable scope for expanding the production and supply of fruit and vegetables and although oil prospects at the moment are not considered good, if it is discovered it will most likely be in the Hadhramaut.

If the investment in the British military base is not maintained at its present level the Colony might lose its comfortable economic position and, in the absence of any worthwhile local industrial development, would have to rely more and more on the development of the States in the interior into prosperous trading partners. Aid from the British Government to provide adequate roads in the Federation, and thus facilitate further trade and development, should help a smooth change in the emphasis of wealth

within the area and a broadening of the economic basis of the Federation.

Iran

The fate of Dr. Amini's Government, which resigned in July, and the experience today of his successor Mr. Alam suggests that it is easier to restore Iran's external trade position than to prove effective in domestic matters. This is largely because economic issues have been overshadowed by political news in the last few months and two events of particular importance have occurred. H.I.M. the Shah has taken the issue of reform directly to the people and significant changes have been announced in the land reform and the election laws. Now in the offing should be a further distribution of land, a Literacy Corps for village education, the nationalisation of forests, profit-sharing schemes for factory workers and a general election. The danger in all this seems to be that, once started, there can be no drawing back for the people are getting more restless now that their appetite for the new social order has been whetted. The cost of these far-reaching reforms will, in the absence of any substantial diminution in the Forces expenditure, fall on the oil revenue. Fortunately this is being maintained and crude production and refinery throughput figures were considerably up on the previous twelve months. It is mainly to the oil revenue too, that recourse will have to be made for the third five-year plan, although local and foreign borrowing is also required. Notwithstanding estimated annual increases of 6.5 per cent in the earnings from oil and 6 per cent in the ordinary revenue it seems likely that the plan will have to be reduce in scope, and up to now the activities of the plan organisation have been largely concentrated on completing second-plan projects. Negotiations for World Bank assistance are still proceeding.

Thanks to measures taken by the Central Bank to curb foreign exchange expenditure the external position is probably healthier now than it has been for some years, but efforts to stimulate the internal economy by increasing the credit available to the private sector have not, so far, proved successful and conditions in the bazaar remain dull. Further efforts to encourage local private investment in productive industry and to attract foreign investors stand little chance of complete success in the face of the political policy statements in the Press and elsewhere from time to time and tolerance towards foreign investments and trading as well as to internal democratic aspirations seem a prerequisite to an optimistic view of the future.

India

Already painfully beset with economic difficulties, India was given by the events of October and November, a stark and unwelcome reminder of the harsh political realities of the modern world. The shock administered by the exposure of mistaken assumptions in foreign policy and military planning was profound, and the reasons which have long prompted friends of both India and Pakistan to urge on them the need to settle their differences over Kashmir and other problems became increasingly recognised by thoughtful people in both countries. Whatever other effects the hostilities on the northern frontiers may have had, a feeling of fervent national unity has been stimulated among the Indian people and there is a universal willingness to work together in the national interest. If leadership emerges to harness this spirit there can be little doubt of the country's ability to respond to the challenge it now faces. This is a testing time for Government, which is now called on to lead the nation in a situation which contains hazards and difficulties unforeseen at the time its policies were overwhelmingly endorsed in last year's general elections.

Even before increased spending on the armed forces became necessary it seemed that lack of foreign exchange was likely to cause some revision of the third Five-year Plan (1961-66). After some delay the consortium of countries helping to finance the Plan agreed to raise their contributions for the second year of the Plan, but as most of this aid is allocated to specific development projects, and is available only for purchases from the donor country concerned, it did little to ease the shortage of ready foreign exchange required to pay for the country's normal day-to-day import requirements. The reduction in the reserves has been gradual, but has continued steadily and in July a standby credit from the International Monetary Fund was arranged, part of which has since been drawn.

If then, as is hoped, the equipment now required from abroad for the armed forces will be either on lease-lend terms or under aid, the country's basic economic problem is still to earn enough foreign exchange to meet the inescapable needs of its people and to keep its new industries going. It was anticipated that the export of manufactured goods would increase and make a valuable contribution to overseas earnings but setbacks have occurred through transport difficulties, lack of electric power and inability to purchase abroad vital spare parts and materials. With exchange reserves at a level that gives no scope for further reduction, there can be little optimism for an early improvement and in any case manufacturing costs are generally too high for open competition in world markets. Some reduction in costs will no doubt come as experience is gained in running the new industrial units, particularly if the protected domestic market is not made so easy to sell in, but even the older industries find that they are unable to compete abroad with the heavy taxation, high cost of protected local raw materials and low productivity of an increasingly costly labour force. It would seem then that any betterment of the exchange position is more likely to come from the gradual rise in agricultural production, but even an appreciable rise in exports will not meet an import bill already cut to the minimum.

In these circumstances it was not unexpected that official thought again turned to the country's hoarded gold. It has always been assumed that India would have no balance of payment problem if the vast quantity of gold privately hoarded within the country could be brought out and at last official action has been taken to mobilise it for the national benefit. An offer of gold bonds met with a poor response, which was not surprising for its terms were unrealistic and ignored the fact that prerequisites for the voluntary surrender of gold are an attractive price and a guarantee against inflation and a depreciating currency. Moreover, as a proportion of the privately held gold in the country represents the proceeds of tax evasion there was some reluctance, despite assurances from the Government, to disclose such holdings. Persuasion having failed the authorities have now had to resort to compulsion and the ownership of all gold, other than ornaments, is to be declared. If this causes a fall in the Indian gold price to something near the world level the considerable traffic in gold smuggling from abroad, by which the Indian demand is at present met at a serious cost in foreign exchange, will be decisively checked. Whether it will bring out gold is another matter, and for some years, when the exchange reserves were high, I advocated the contrary policy of a free market, which would at least have saved the many millions of pounds lost through smuggling over the years.

Defence orders, industrial expansion, a soft home market and generous labour tribunals all points to one thing—inflation—and our sympathies must be with the monetary authorities who require dearer money and restricted credit to combat the danger and yet are under departmental pressure to keep interest rates low to finance development plans as cheaply as possible. In these circumstances it is important that the policies followed by the indigenous banks should not be at variance with the real needs of the country as a whole. The bank rate was recently raised and what is needed is a realistic rate structure for commercial banks round that rate, with no distortion through holding of free counterpart funds by one privileged bank. A reasonable spread in rates would help the banks to build up their reserves in keeping with the Reserve Bank's policy of creating a strong banking system.

In furtherance of that policy too, they are restricting credit to the banks, some of which had become badly over-lent and over-dependent on official assistance. Nevertheless the Reserve Bank has always helped where restrictions jeopardised essential industry or seasonal crops and this system of selective credit control worked smoothly and is in the country's best interests. The new statutory requirements to be operative from September 1964 are, however, obligatory by legislation, but in a rapidly expanding economy they may be too drastic and amendments may have to be introduced. There is still some doubt whether the central institution's policy on Government securities is fair to the commercial banks, who are obliged to make purchases at artificially controlled low yields.

All the foregoing, I am sure, points to the necessity of the economy of India and its industry being consolidated in preference to further industrial expansion. Perhaps I am being a little pessimistic in stressing the difficulties and the failures rather than the general achievement, but optimism about India's future must, for the time being, be based largely on the political importance of its stabilising influence in Asia and the willingness and the determination of the Western powers to support it in that role.

We have recently received permission from the Reserve Bank to extend our branch organisation to Vasco da Gama in Goa and arrangements are now in hand for the opening of the new office.

Pakistan

Political events in Pakistan receive much wider publicity than economic pointers but it may be that economic factors are finally more important in the country's stature and influence in the world. This suggestion is in no way meant to detract from an historical year, which saw the promulgation of a new constitution and the termination of martial law. The constitution represents a bold effort to re-establish democratic institutions on a presidential and federal basis, but its success must largely be in the hands of politicians and early indications are that the parties have not yet the sense of responsibility to preserve the very considerable benefits which have accrued to the population from the President's strong but benevolent leadership during the past four years. Fortunately the President, whose prestige stands as high as ever, seems determined not to submit to factional or regional pressure which would disturb internal stability.

Externally the most momentous event for Pakistan has been the Sino-Indian conflict and its effect on the country's relations with its neighbours and friends. Understandably Pakistan, with its outstanding difference with India over Kashmir, was apprehensive about the rapid build-up of India's armed forces by aid from the West. Its Government quickly concluded a border treaty with China and it was only the unwillingness of the Afghan ruling party that prevented a resumption of diplomatic relations with that country. Fortunately Pakistan and India have agreed to talks and preliminary ministerial level discussions have already taken place. It is to be hoped too that any easing of the tension between these two countries, whose future is largely dependent upon mutual co-operation, will restore the former basis of confidence and understanding between Pakistan and the West.

The economic picture is one of slow but steady progress in the agricultural and the industrial sectors. The latter is, however, partially at the expense of the vital export trade and, with a continuing deficit balance of payments, concern must be felt at the low level of the foreign exchange reserves. The Government is at present committed to a policy of liberal imports and it is difficult to see how exports can be expanded to cover the cost, even with the addition of external aid. Finally perhaps increased exports of manufactured products will restore the balance but finding and increasing overseas markets is in itself difficult, and the emphasis on industrialisation, in East Pakistan in particular, is switching exportable raw materials to local manufacture. In the meantime, it may well be to the agricultural sector that the Government will have to look for its increased export earnings and here one major difficulty to be overcome is the effect of water logging and salinity, caused by defects in the canal system, which are reducing the fertility of large tracts of agricultural land. Expensive remedial action in the former Punjab could increase annual output but restoration of productivity in the former Sind area may be more difficult. Notwithstanding this disability food production in particular increased during the year and one of the basic aims of the development programme is to grow sufficient food to feed the rapidly increasing population. The jute and cotton crops were both higher but greater local use reduced their overseas earnings.

With intensive industrial development and a rising standard of living bringing inflationary tendencies on the one hand and balance of payment difficulties on the other, the monetary authorities have had to tread very warily and they are to be congratulated on sustaining the momentum of the Five-year Plan whilst retaining stability in the domestic level. The increase in bank deposits is hardly keeping pace with an already high expansion of credit and the authorities will no doubt take measures to make good the difference in order not to dampen down development and yet keep a sound banking system. It was partly for this reason that a new banking ordinance was brought into force on 7th June last, but unfortunately there was no prior discussion with banking interests and measures to ensure liquidity in banks and to build up adequate reserves have been weighted heavily against the foreign banks. It was encouraging to hear the Governor for Pakistan, at the annual meeting of the International Monetary Fund in September, advocate liberal policies and state that financial and commercial activities in the global context have a common destiny and must be governed by common principles.

One can be optimistic about Pakistan's future for financial stability and a determination to succeed should ensure continued, but perhaps slow progress.

Ceylon

Ceylon has natural riches in agriculture which, efficiently used and developed, should ensure a rising standard of living for its people, and yet again in 1962 there was further deterioration in the economic position and it is doubtful if the national income is expanding fast enough to maintain existing standards let alone improve them. It is doubtful too whether this deterioration can be arrested without a strong and united Government, for many of the factors accounting for Ceylon's lack of progress were political. There were clearly disagreements within the Cabinet and the interference of politicians in the day-to-day administration did little to help the permanent officials in tasks which had already been made difficult by the general appetite for social services.

For some years now the heavy cost of food subsidies has resulted in Government revenue being insufficient to meet expenditure, the deficit being covered by a steady expansion of public debt, and although a bold effort was made to meet this serious situation by cutting the rice ration, it proved politically unacceptable. To have cut the rice ration would have reduced the subsidy and would have achieved a substantial saving of foreign exchange on total food imports. As food imports are absorbing a substantial proportion of Ceylon's foreign exchange earnings not to make a saving in this item forced the administration to take other steps, some of which were open to criticism and did little to right the situation. Understandably, further import restrictions became necessary although export earnings remained steady notwithstanding a decline in the prices of tea, rubber and coconut. It is hoped that the more comprehensive system of import control now introduced will be more effective than the restrictions imposed in the past, but it is a pity advantage was taken of the position to make a further move against remittances of profits. Taxation is already so high and discriminatory against foreign investment that there is, in any case, very little reward for those investments which have built up Ceylon's present foreign exchange earning potential.

The present shortage of imported goods and increased restrictions are incentives to set up local manufacturing units and industrialisation is in progress, particularly in the Colombo area. Private enterprise is confined to the production of consumer goods and a number of industrial projects are planned in the public sector. Foreign capital and technical assistance could speed industrial development but the very high rates of taxation and the difficulties put in the way of existing foreign-owned enterprises are likely to deter even the most venturesome. Here too, the nationalistic legislation directed against the foreign banks prevents their giving direct assistance to new Ceylon enterprises and closes this usual channel for the introduction of overseas capital and potential manufacturers.

Many of Ceylon's other problems are of the Government's own making. Its policy in regard to hospitals and education and its discrimination against the Tamils for example, can only reflect adversely on the country's progress. As, however, deterioration has largely taken place because of policies rather than economic ills there is the possibility that recovery, once started, could be rapid and effective, but it will take strong leadership to convince the public that the position is so critical that only improved agriculture and an adjustment in the rice subsidies can avoid increased external exchange problems and internal inflation.

Burma

The coup d'etat which returned General Ne Win to power last March was well received by the population who had good reason to remember the marked improvement in conditions the General's "caretaker Government" had brought about during his previous tenure of power. The new military Government subsequently indicated its view that parliamentary democracy as hitherto practised in Burma had failed and invited the co-operation of all political parties in establishing a new socialist democratic state. The Government's policy is, in effect, a re-affirmation of the socialist concepts on which the independence of Burma was founded in 1948, but whereas in the past considerable latitude has been given to private enterprise, even in the State-controlled rice and teak trades, the public sector will now have an increasingly dominant part. This is already evidenced by the rapid extension of the activities of the Government-owned Burma Economic Development Corporation and the impending nationalisation of the import trade. It has been a good year for the country's overseas trade. Rice shipments, the main source of export earnings, were substantially higher than in 1961 and were doubtless assisted by the state agricultural marketing board's new system of bonus awards to port workers. Beans and pulses were in strong demand in foreign markets and the issue of import licences as an incentive to exporters of agricultural produce to step up their overseas sales has helped to stimulate a higher volume of oil cake exports. Consistent with the new regime's emphasis on austerity, imports of consumer goods have been reduced and although purchases of foreign capital goods were higher the total import bill for the year is likely to show a substantial reduction. The more favourable turn thus imparted to the country's foreign payments is shown by the steady rise in the external reserves, which now include an increased proportion of gold. Trading activity within the country has been brisk and the increased money supply ensuing from higher exchange reserves has been comfortably absorbed without the domestic price level being disturbed.

The new Government has carried out a thorough review of the second four-year plan (1961-65) and a number of prestige projects have been eliminated in order to devote all investment resources possible to increasing agricultural output and expanding exports. Particular attention is being paid to rice production and it is intended to apply Japanese methods of cultivation in the Delta and Lower Burma, and Israeli methods in the dry zone of Upper Burma. Extensive rehabilitation of paddy land is being put in hand in the Pegu area and in the Delta and two major irrigation schemes, the Mu river project and the Washang dam in the Myitkyina district, are being undertaken.

Industrialisation is being promoted through the Burma Economic Development Corporation and other State organisations with assistance either from Japanese reparations or from foreign sources. The clause in the Investment Act, guaranteeing new enterprises immunity from nationalisation for a period of ten years, has now been repealed and there is to be no further participation with foreign firms in joint ventures. Nevertheless, many schemes for industrialisation are in progress where foreign firms, mainly Japanese, are prepared to provide technical expertise without financial participation. At the end of the year the oil interests of the Burmah Oil Company were acquired by the Government and an invitation was issued to Rumanian oil interests to advise on the exploitation of oil resources.

Although private foreign investment is not encouraged, Burma is still prepared to accept aid on a Government to Government basis, and in the shape of World Bank loans and Japanese reparations. The Government hopes that their various State enterprises, if run on commercial lines, will make profits sufficient to develop the economy and ease the burden of taxation. They may, however, have reckoned without the weakness of their bureaucracy in the lower echelons. It is clear that private business enterprise will have progressively less scope, but Burma is so rich in natural resources that its economic future should not be in danger even under State control and regimentation, although agriculturists, traders and others may feel a loss of a sense of freedom.

• • • •

Since this report was written there has been a further change in the political position and we have been told that all private commercial banks in Burma have been nationalised. We were the first of the exchange banks to commence business in Burma when we opened our office in Rangoon just over one hundred years ago. Our business there was not large, but we must regret that so old an association has been brought so abruptly to an end.

Federation of Malaya

The merging of the Commonwealth territories in South-East Asia in the proposed Federation of Malaysia has been the main topic of political interest during the year and it is evident that the bold and imaginative initiative taken by the Prime Minister of the Federation of Malaya, Tengku Abdul Rahman, should bring the merger into being barring unexpected political complications of major importance. Following discussions between the Malayan and the British Governments it was agreed that sovereignty in those States for which the British Government is at present responsible should be transferred not later than 31st August 1963. Although the Sultan of Brunei has agreed in principle to bring his State into Malaysia, it remains to be seen to what extent the recent uprising will affect the issue. Apart from this the negotiation of detailed arrangements for the merger appears to be proceeding smoothly.

The merger will be a major success for the Federation Government whose popular support has been reflected in the recent local council elections, but the creation of Malaysia will bring with it added responsibilities as well as the more obvious advantages. As the Federal Finance Minister pointed out when introducing his budget in November, there will, for example, be additional defence commitments, notably in respect of the Borneo territories. Even if aid from the British Government is forthcoming it may no longer be possible to keep the cost of defence at its present level, which is less than 10 per cent of the Federation's ordinary budget expenditure. Then, too, the peoples of the various States which are to form Malaysia will look to the merger for improved living standards and this will entail some self-denial on the part of the Federation, whose own development programme has now reached the stage where rising expenditure will have to be financed to an increasing extent by running down accumulated reserves and by raising loans at home and abroad, for it seems undesirable economically to change the present level of taxation.

In these circumstances loan funds are very reasonably being devoted to projects likely to produce a reasonable return on the investment and, in order to conserve Government funds as far as possible, every encouragement is being given to capital investment in the private sector of the community and the number of firms with pioneer status has continued to grow. Private investment however is not increasing as rapidly as the Government had hoped and this is perhaps the main reason for increasing the capital of the Government-sponsored Malayan Industrial Development Finance Limited, in which this bank is one of the larger original shareholders. Additional loans funds are also to be made available to the Company by the Government, the International Finance Corporation and, it is hoped, the public. There is little doubt that, because of the favourable conditions now to be found in the Federation, industrial development will continue.

Manufacturing, however, at present makes only a modest contribution to the national income and the economy is still overwhelmingly dependent upon rubber and tin. The price of rubber, after drifting down early in the year because of doubts about American stock-pile policy, became fairly steady later. This is partly due to Russian and Eastern European buying, which remains an important factor. Competition from synthetic rubber is also a stabilising influence and the lack of violent fluctuations must benefit both consumers and producers. The future of the industry is fairly dependent upon continued industrial expansion and rising living standards throughout the world, and in such conditions the efficient Malayan industry should be in a good position to compete. Tin exports last year were the highest since 1950 but the uncertainty caused by the statement that the United States was to dispose of fifty thousand tons of its stated surplus of one-hundred-and-sixty-four thousand tons depressed prices by roughly eighteen per cent. As, after representations by the International Tin Council, it seems that American official policy will be to make disposals with the minimum disruption of the market, prices will probably settle down on a satisfactory basis for efficient producers with good ore reserves. Marginal mines, however, are tending to close down. Despite these uncertainties the Federation's exports, marginally assisted by greater production of oil palms and manila hemp, have increased during the year, but the trade surplus was reduced because of the expansion of imports in connection with the development programme.

It is assumed that after the merger and when the fiscal and monetary framework of Malaysia has been defined, the Central Bank of Malaya will extend its operations to Singapore and the Borneo territories. It is also likely to become the note-issuing authority and this will involve agreement by the constituent states on the backing for the currency and the treatment of the existing currency fund. These

and other vital economic matters have still to be clarified and much importance is attached to the World Bank Malaysia economic mission, headed by Monsieur Jacques Rueff, which in February 1963 initiated an enquiry into the prospects of closer economic co-ordination among the territories of the new Federation. This mission has arisen from the proposal by the Singapore Government some years ago that a common market should be set up between the Federation and Singapore and its scope is now to be extended to include the Borneo territories.

Building operations have now been commenced for our new main office in Kuala Lumpur, which it is hoped will be completed in 1964, and a reproduction of the architect's perspective of the building appears elsewhere in this report. We have also expanded our branch organisation in the Kuala Lumpur area by opening two new offices early this year.

Singapore

The referendum promised by the Prime Minister of Singapore to ascertain the conditions under which the electorate would be prepared to join Malaysia was held in September after a long trial of strength between the Government and its opponents over this important issue. The considerable majority for acceptance of the Government's proposals, which had been agreed with the Federation Government and confer on Singapore autonomy in matters of education and labour, has assured Singapore's entry into Malaysia provided there is no sudden political upheaval and the Prime Minister and his colleagues are to be congratulated on the vision and courage they have shown in bringing about this satisfactory result.

The merging of the territories which are to form the new Federation of Malaysia will involve many economic problems and much will depend upon the tariff arrangements within the merger and whether or not the free trade area of Singapore is to be maintained. It would obviously be to Singapore's advantage, and would aid its industrial development, if the tariffs imposed by the other territories in Malaysia could be abolished, or even reduced, but it might be difficult to achieve this and still obtain the advantages at present derived from its entrepot trade. That is why the recommendations of the Commission headed by Monsieur Rueff will be awaited with special interest, but it is logical to assume that Singapore will be encouraged to prosper in order to enable it to make concessions to aid economic development in the other States in Malaysia.

Meanwhile the Singapore Government has persevered with its plans for industrial development and work on the Jurong industrial estate on the west coast of Singapore is proceeding rapidly; the construction of roads and the preparation of sites already being well advanced. Unfortunately, political uncertainty and the activities of trade unions have deterred local and foreign industrialists from setting up factories, but since the referendum in September there appears to have been a notable improvement in confidence and the greater strength of the property market is one indication of this. Only internal stability and unrestricted access to the Malaysian market, however, can seemingly create conditions attractive enough to ensure the volume of investment and industrial development that Singapore needs.

For some time to come the island's prosperity will remain dependent upon trading activities and it is satisfactory that pan-Malayan trade has continued to expand, although with imports tending to increase more rapidly than exports, there is a possibility of future payments problems as development in Singapore and the Federation gathers impetus. During 1962 the volume of trade in Singapore was satisfactory but merchants generally indicated that it had been less profitable. Trade with Indonesia has been maintained but this particular sector, on which a significant proportion of Singapore's economy depends, has become fraught with even more risks than usual. In these circumstances it is satisfactory that agreement has been reached for the continued use by the British Government of the bases in Singapore for, apart from its military importance, it provides employment for a large local labour force.

During the year we have opened two new branches in Singapore and further expansion of our organisation on the island is envisaged.

North Borneo

The report of the Cobbold Commission published in August was of the greatest political importance to North Borneo for it revealed the broad measure of agreement on the major recommendations for the inclusion of the Colony, and that of Sarawak, in the projected Federation of Malaysia. It was evident from the report that certain misgivings were felt in both territories on some aspects of the merger and this was clearly seen when the merger date was brought forward to August next. In the circumstances it was reassuring that, following the conclusion of discussions between representatives of the Government's party to the merger, an announcement was made that complete agreement had been reached on the constitutional and fiscal arrangements as well as on the necessary safeguards for the accession of North Borneo and Sarawak to Malaysia. Only a year ago it seemed that local opinion on the merger was tending to divide on racial lines and it reflects great credit on the leaders of the various political parties of North Borneo that they were able to merge their interests and thus enable the Colony's representatives to present a united front and obtain from the negotiations the necessary safeguards for the territories' future. The growth of political consciousness and the emergence of a sense of national solidarity between races is strikingly demonstrated by the heavy poll at the first local elections recently held. The revolt in Brunei, the Filipino claim to the Colony and reports of aggressive intention by Indonesia have had a unifying effect and created a greater pride in citizenship.

That trade has expanded progressively in recent years owes much to the Government's soundly conceived development programme and its success in creating conditions favourable to commercial enterprise. Overseas trade figures have again reached record levels, with imports and exports approximately in balance. The export figures were surprisingly good considering that for the first two months of the year exceptionally heavy rains on the east coast hampered timber shipments and rubber production. Furthermore, the world price of rubber was low and there was a reduction in the quantity of barter copra available owing to the higher prices in the Philippines.

To facilitate the opening up of the Colony the Government is pressing ahead energetically with a programme of road construction, and port facilities are also being improved. Particular attention is being paid to rural development and the strong budgetary position is enabling the Government to maintain the momentum of present progress. Shortage of skilled labour is still to some extent hampering economic advance, and most rubber estates on the west coast for instance are unable to reach full production for lack of tappers. There is every indication, however, that the economy is steadily expanding and the Colony can look forward with confidence to its continuing to do so within the Federation of Malaysia.

Brunei

The armed revolt in Brunei in December was an unexpected threat to the Malaysian merger. The object of the rebels was evidently to capture His Highness the Sultan and force him to retract the agreement in principle which he had announced to take his State into the merger. In many respects it is surprising that the Party Rak'yat should have resorted to force as their overwhelming victory in the district council elections in August had enabled them to fill all sixteen seats for elected members on the legislative council and had thus given them an opportunity of influencing affairs by orthodox and constitutional means. That they did revolt at this juncture, and in such an inept manner, may have been due to disagreement within the party on the proposed Federation of Malaysia and to an internal struggle for the party leadership. As soon as order was restored in the country the Rak'yat party was declared an illegal organisation and as an emergency measure the constitution was suspended and the legislative and district councils dissolved.

Although the general situation in the State is now almost back to normal, business conditions in Brunei Town and Kuala Belait remain very quiet, but continuing opposition to the Government and support for any political organisation that will promise better conditions seems likely, unless the development projects now under consideration and other schemes to raise the standard of living are quickly brought into effect. The twenty-five million dollars allocated to development in 1961 still remains unspent and so far little has been done to implement the National Development Plan for the years 1962-66, the main objects of which were to provide new employment opportunities and make the State less excessively dependent upon the oil industry. One major impediment to progress is a chronic shortage of technicians and skilled labour and perhaps some easing of the present strict immigration requirements will be necessary if ambitious projects, such as the construction of a deep-water harbour at Muara and the development of that town as an entrepot port and centre for light industry, are to be achieved at an early date. Finance still presents no difficulty for the interest the Government receives on its substantial investments abroad compensates for the steady reduction in the oil royalties.

Sarawak

Only by reducing imports did Sarawak come near to balancing its overseas trade, for notwithstanding increased shipments of timber and pepper lower world prices for these commodities, and for rubber, reduced export earnings. The difference would have been greater had not sago flour exports continued to grow and had there not been a good illipenut crop after two blank years. The lower world prices for staple exports, particularly rubber, also means lower revenue and for the first time since 1949 the Colony finished the year with a budgetary deficit. With little indication of possible rises in world prices, Sarawak faces the prospect of further reductions in Government revenue during the coming year and increased taxation has been necessary to meet steadily mounting expenditure. Nevertheless, in an effort to accelerate the rate of economic growth, spending is to be raised to a record level and will be partly financed by drawing on surplus balances.

The present five-year plan, which is due to be completed at the end of 1963 and which lays emphasis on the processing of local raw materials, will do little to lessen Sarawak's dependence on primary products for some years to come, and because of this vigorous efforts are being made to increase agricultural production and yields also. A subsidised rubber planting scheme aims to keep this most important local industry fully competitive in overseas markets, and inducements are also being given to the smallholder to improve the quality of his rubber output. Much importance in the development programme is attached to road construction and opening up the country, for Sarawak is known to have considerable mineral wealth additional to the bauxite deposits being worked and earning exchange. Japanese interests are at present developing coal deposits in the hinterland and it is hoped that export trade will result in this commodity.

The revolt in Brunei only affected Sarawak to a slight extent, but it brought home to the population the advantages of becoming part of a larger political entity and has thus strengthened popular support for the Malaysian merger. It is unfortunate that at this stage, when the budget has run into deficit and development commitments are increasing, it should be necessary to spend more on internal security.

Indonesia

Of the three great tasks which President Sukarno set himself two have now been completed; the West Irian dispute has been settled and internal security throughout Indonesia has been restored to the extent that it has been announced that the state of emergency will be terminated on 1st May next. These two major achievements have enhanced the already high prestige of the President, who remains as ever the uncontested and popular leader of his people. The third task, that of providing more food and clothing, must now be faced and it is to be hoped that the country's political leaders will turn their full attention to this urgent problem now that it should be possible to make a substantial reduction in the heavy burden of defence expenditure which the country has been bearing in the last few years and which has contributed to the acutely serious economic situation.

Defence spending last year accounted for approximately eight per cent of total budget and, not surprisingly, perhaps, there was a considerable revenue deficit. As this could not be met by the issuing of Government bonds and levying compulsory contributions it resulted in a doubling of the already excessive money supply. The consequent inflation reached such runaway proportions that the cost of food in Djakarta for instance trebled during the year and production costs increased to the point where staple exports are being priced out of world markets. Factors other than production costs also adversely affected overseas earnings for production itself, particularly in State-owned estates, declined and there was unfortunately during the same period a downward trend in the world prices of important exchange-earning commodities such as rubber. World commodity prices should still be fairly satisfactory providing trading is efficient and

quality maintained but the difficulties in raising production, and thereby stopping the decline in exchange earnings, seem almost insurmountable and the United States Economic Survey team places the blame for this on the deterioration in maintenance of the estates and the lack of capital investment over the last few years.

Although the level of the external reserves is undisclosed, it is evident that they are at a very low ebb and will come under greater stress through the servicing of the existing foreign debt and the payments in kind for the large armament purchases from the Soviet bloc. Two schemes were introduced to help the situation: the first was the SIVA system which permitted exporters to retain fifteen per cent of their foreign exchange earnings, thus enabling them to import much needed supplies and equipment from abroad. The other was production sharing, whereby the overseas investor in a project supplied the foreign exchange and everything else except the domestic costs but could not participate in the ownership. Both these schemes are only palliatives and can have but a marginal effect on the problem, and clearly the only immediate remedy is aid. Fortunately, following the West Irian settlement, there are signs that the United States and others are prepared to be generous in an effort to help rehabilitate the export industries and to help stabilise the economy.

The substantial reduction which it has been reported is to be made in defence spending this year is encouraging evidence of the Government's intention to achieve a more satisfactory balance between revenue and expenditure. If by this means the basic cause of inflationary pressure, the budget deficit, could be significantly reduced or even eliminated, the way would be clear for a revaluation of the rupiah at a more realistic level and the expansion of exports which is so desirable in the present state of the exchange reserves. In writing of a revaluation of the rupiah I do not rule out the introduction of a new currency altogether, but any step in this direction can only seemingly be practicable at the moment if backing for the new currency and support for the economy were obtained from the international institutions: such backing would most likely be conditional upon the Government taking genuine economic steps to put its own house in order and might include an even greater reduction in the expenditure on the armed forces and the dropping of costly prestige projects. State trading organisations continue to grow in importance and control an increasing proportion of the country's trade so that the part we in the private sector can play is severely restricted. Within these limitations The Chartered Bank continues to give all the assistance it can, but we view with much concern our soaring overheads and the cost of keeping our business going.

Thailand

Thailand has continued to prosper under the present regime, which has given the country the political stability so essential to economic progress, and exports from this country, rich in agriculture, again reached a satisfactory level. The pattern of the export trade did however change somewhat over the year as restrictions were applied to rice shipments in order to avoid a possible shortage at home. Foreign exchange earnings are, in any case, now less preponderantly dependent upon rice and it is gratifying that in addition to the other traditional exports, tin and rubber, useful earnings are now arising from shipments of jute, maize and timber. There is a trade deficit but, as the already satisfactory exchange reserves rose over the year, foreign aid clearly more than offset any adverse balance.

A further source of foreign exchange is the rapidly growing tourist trade and Bangkok is fortunate in having a number of unique tourist attractions; at the same time being easily accessible through its situation on many of the major air routes. The importance of this source of income is fully realised and extensive road reconstruction is being carried out in the city and hotel accommodation is being improved on imaginative lines to cater for an increasing number of visitors. In anticipating increased revenue and foreign exchange from this source, however, it is as well to recognise that the tourist trade is highly volatile and its development will depend on the absence of political disturbances in South East Asia generally.

The gold and foreign exchange reserves are now U.S. $484 millions compared with U.S. $298 millions at the end of 1959 and now seem large enough to safeguard an economy which is largely dependent upon the world prices of its agricultural produce. In fact the very satisfactory position makes it a little more difficult for Thailand to justify a continuance of foreign aid at the present level. At the moment, in addition to receiving outright assistance, several loans have been granted for irrigation projects, road and railway improvements and other worthwhile developments. Side by side with this programme a large number of small manufacturing units have commenced operation and form a sound basis for future industrial expansion, and the Government's liberal attitude to trade and industry makes Thailand an attractive field for foreign investment. It is significant that the only industrial enterprises of any size are those sponsored by a foreign interest and there is still little indication of local savings being channelled into industry in preference to land and buildings in the traditional manner. Local enterprise continues to prefer agricultural to industrial investments and this in many respects may be to the national advantage as primary production will remain a mainstay of the country's income for many years.

A feature of the present administration is its orthodox approach to finance and not only is a balanced budget achieved, with more than half the current capital expenditure financed from current revenue, but the Government has eliminated its indebtedness to the Bank of Thailand and has placed its treasury bill and long-term obligations on a sound and reasonable basis. In these circumstances it was only to be expected that steps should be taken to ensure that the soundness of the banking system was beyond question and the long-awaited legislation to give the financial authorities more effective control over the commercial banks was introduced in May. The immediate effect of the observance of more orthodox banking standards has been a rise in the time deposits of the banks and a more healthy ratio between advances and deposits. Provided Thailand is not faced with military aggression and is not tempted to abandon her present liberal attitude towards trade and commerce, her future should be brighter than most of the South East Asian countries.

Vietnam

The struggle to maintain the independence of Vietnam continued throughout the year and could last for some years to come. Increased pressure by the Viet Cong has been countered by stronger American support for the Government but, in a country eminently suited to guerilla activity, the final outcome will depend to a great extent on the co-operation of a people free from rebel threats and terrorism. It is in this direction that perhaps the most positive successes to date have been gained and the resettlement of over nine million people in strategic hamlets has given the protection necessary if the morale of the population is to be sustained, particularly in the more remote districts. In combat encouraging results have been obtained against an enemy kept well supplied with weapons from outside the country, and as further defeats are inflicted the Viet Cong may intensify their efforts to infiltrate into Saigon and disrupt security. It is not only the co-operation of the inhabitants of the devastated rural areas that is required, for the wholehearted support of the citizens of greater Saigon is also necessary in the struggle, and it would be a pity if heavy taxation and rigid controls in business and every-day life caused a sense of frustration and apathy. There is, of course, no escape from the heavy burden the war effort imposes on the country's finances, for the United States cannot be expected to foot the whole of the bill. Consequently taxation has had to be increased but even so the revenue for the coming year will be sufficient only to cover the cost of maintaining security, which is approximately half the total budget expenditure.

There is justification, too, for the measures taken to collect Government revenue more efficiently and to check tax evasion, but some latitude is required if businessmen are not to be discouraged at a time when enterprise and expansion are of great importance. Already political uncertainty and controls have affected industrial development and although a number of new factories have commenced operations the pace is much too slow. There is scope for the development of light industry, for it should be possible to manufacture locally various goods which at present have to be imported, and further Government encouragement is required in this direction to conserve the country's exchange reserves. These reserves are under stress because of the decline in exports attributable to cultivation and transport difficulties created by rebel action. This affected both rubber and rice and there were no rice exports at all, notwithstanding special military measures to protect the harvest. Prospects for the coming harvest are, however, much better and there should be a considerable surplus available for shipment.

With this decline in export earnings it was only to be expected that further restrictions would be placed on the import of consumer goods and the Vietnamese proportion has now shrunk and is only about twenty-five per cent of the total, the balance being financed largely by American aid.

Cambodia

Incidents on the frontiers with Thailand and Vietnam have continued to cause anxiety and have led the head of state, Prince Norodom Sihanouk, to propose that the country's independence should be guaranteed by the fourteen states which participated in the agreement to neutralise Laos. A guarantee of this nature is apparently considered as the only feasible alternative to putting Cambodia under the protection of mainland China. The present uncertainty regarding the prospects of obtaining the proposed guarantee is characteristic of the general situation in this segment of South-East Asia, where the possibility of a general war developing over Laos—fortunately avoided—and the Viet Cong efforts to gain control of Vietnam have brought tension and anxiety to the whole area.

Cambodia's economy is recovering from the setback caused by the devastating floods in late 1961 and the latest rice crop is back to average. This means much-needed foreign exchange, for until the flood damage stopped rice shipments foreign aid had always been sufficient to cover the normal trade deficit. Last year, however, some reduction of the exchange reserves was unavoidable, but they are still at a more than comfortable level and with the improvement in the rice exports which is now anticipated, and with normal shipments of rubber, maize and timber, receipts should approximately balance payments.

The Government has been at pains to foster conditions favourable to further development of the country's economy. Educational facilities are being improved and the remoter areas of the country are being opened up by the construction of new roads. Considerable importance is attached to the installation of improved facilities at the port of Sihanoukville and a railway line is under construction connecting the port with Phnom Penh. Sihanoukville is the only alternative to the Mekong river as a channel for Cambodia's overseas trade, and various projects are in progress to increase the port's capacity.

Prince Shianouk is as popular as ever and the elections held last year strikingly demonstrated this. There have been changes in the Government and the substantial deficit of the budget is a challenge to the youthful new ministers. It is to be hoped that they will continue to show tolerance towards existing foreign undertakings, for only by so doing can they hope to attract the further investment needed for the development of local industry: always a difficult task in an area of political uncertainty.

The Philippines

Last year I mentioned that shortly after he had assumed office President Macapagal made the courageous decision to introduce in January a further phase of exchange decontrol. This virtually abolished exchange restrictions in the Philippines and, despite some doubts at the time, this bold move has proved successful. With the withdrawal of the Central Bank as a buyer and seller of exchange the peso was left to find its own level, but the announcement by the President that a stabilisation loan had been secured from the United States, and the tightening of credit restrictions, particularly in relation to import transactions, helped to steady the exchange rate. Although official support has been necessary from time to time it is a matter of justifiable pride to the authorities that they have been able to stabilise the peso without utilising the various credit facilities placed at their disposal in the United States. In fact the international reserve shows substantial improvement despite repayments of loans from abroad. Increased export earnings, which benefited from high copra prices and from the transfer to the Philippines of part of the former sugar quota in the American market, mainly accounted for this favourable trend. Imports too, which might have been expected to increase after the lifting of controls, were less. This reduction was in part due to the imposition of regulations requiring cash deposits prior to the opening of letters of credit which in turn caused the business community to run down the excessive

stocks of goods maintained during the years of exchange control. It is evident that the country's international trade and payments position is much better than a year ago and, with the further stability that will be achieved when the U.S. $73 millions war damage funds are received, it is possible that an attempt will shortly be made to set the par value of the peso.

At home prices have risen appreciably as a result of decontrol, but not so much as had been feared and hence it has been possible to ease credit controls. Despite improved revenue collection, Government spending has been commendably restrained although various public works are being put in hand in connection with irrigation and communications to create employment opportunities for the rapidly growing population. Great importance is attached by the Government to the part which foreign investment can play in the more rapid development of the country's basic industries and a number of projects are in progress jointly sponsored by foreign and local interests. This bank is participating in the equity of the Private Development Corporation of the Philippines, a venture which is expected to commence business soon and which, with the assistance of loans from the Agency for International Development of the United States Government and from the World Bank, will provide medium and long-term finance for private productive enterprises.

Much of the popular support the President received when he was elected was due to his uncompromising determination to eliminate graft and corruption and his obviously sincere desire to raise living standards throughout the country as quickly as possible. He has had considerable difficulty however in gaining acceptance of his policy on these important matters by Congress, which has also shown itself far from sharing the Government's anxiety to foster conditions favourable to foreign investment in the Philippines. Consequently, legislation vital to the President's socio-economic programme has still to be passed and it is hoped that in the coming year, where matters so important to the population as a whole are involved, less partisan considerations will prevail, particularly now that the success of exchange decontrol has opened up new and promising opportunities for trade and industry in the Philippines.

Hong Kong

As Britain's negotiations to enter the European Economic Community had a depressing effect on all branches of Hong Kong industry, then conversely the failure of talks will probably be hailed as an encouragement and a pointer to future prosperity. Local opinion was generally that shipments to Britain, which now amount to about one-fifth of the total exports, would be subjected to, and would suffer from, a gradual reduction in commonwealth preference and although it is too early to say whether this advantage will be maintained at its present rate it is logical to assume that Hong Kong exporters will continue to be given favoured treatment. This is most important to Hong Kong's industry for with a general rise in wages over the last two or three years and in the cost of raw materials and freight, over which the Colony has no control, local production costs have largely ceased to be competitive with those of Japan and other manufacturing rivals. In this respect the Common Market talks may have been advantageous for Hong Kong as they have not only caused an even more intensive search for overseas markets but has stimulated planning for improvements in efficiency both in production and marketing techniques. With profit margins now very small, there is little leeway left for more competitive overseas selling.

Textile manufacture is still the barometer of local industry and its difficulties during the year were unfortunately so great that most of the mills were reduced to working well below capacity and some sections were brought to a standstill. The principal problem which had to be met was the temporary embargo imposed by the United States Government on shipments of all Hong Kong major textile lines. This embargo came on top of the voluntary undertaking already given to British cotton manufacturers to limit shipments to the United Kingdom. Unfortunately too, similar restrictions were imposed or requested by Canada, Norway and West Germany. On the other hand, when the American market was reopened in October the grey cloth which had been stored there in bond since March was released without deduction from the ensuing year's quota. This, plus orders received from Indonesia for yarn processed from cotton made available under terms of U.S. Public Law 480, strengthened yarn prices and once again, a little fortuitously, enabled the industry to extricate itself from a heavy overstocked position. Even so, it is difficult to see the industry working at much more than about seventy per cent of its potential for some time to come, and that notwithstanding brighter prospects for the garments section. Fortunately there is still a strong overseas demand for garments made in Hong Kong and exports showed a considerable increase on those for 1961. A considerable proportion of the garments exported are manufactured from cloth produced in Japan and elsewhere and, considering the depressed state of the textile industry, the movement by spinners and weavers to confine manufacture to local cloth is understandable.

In view of the experience of the textile industry it is perhaps surprising that Hong Kong again had a prosperous year with increases in both exports and imports. This to some extent was due to the widening of the range of products manufactured and to improvement in quality. Moreover, earnings from tourism have now bounded into second place behind textiles. The rapid improvement in air communications and the excellent hotel facilities now available in the Colony, as well as the abundant supply of competitively priced goods available, have combined to make Hong Kong a convenient as well as an attractive centre for visitors to the Far East.

Better than estimated revenue receipts may enable the Colony to complete the year with a final surplus and this favourable position would aid the Government in its housing schemes and its numerous development projects. With no aid being received from abroad the cost of housing the large squatter population is a heavy burden and yearly the position is made more difficult by the general increase in population and the influx of immigrants from mainland China. The private building of office and residential accommodation goes on apace; so much so that it is surprising that tenants are still coming forward, and with money enough to rent or purchase the completed property as it becomes available. If, however, construction continues to increase as projected it is possible that demand might taper off and builders and developers find themselves precariously involved. Although there is little sign of this yet, the potential danger does stress the importance of sound banking.

This is one of the reasons why it is particularly desirable that the new banking legislation, which is timed to come into force early in 1963, should give the authorities full powers to supervise the Colony's rapidly expanding banking system. If, as expected, it limits banking licences to banks working on orthodox lines, with adequate capital and reserves, and by provision for periodic inspection eliminates the speculative practices arising from the over-banking that has already taken place, much benefit will accrue to the community as a whole.

Given freedom from external political pressures there seems no reason why the prosperity of Hong Kong should not continue and it is encouraging that during the year trade with the mainland increased.

Our organisation in Hong Kong has recently been extended by the opening of a new branch in Kwun Tong.

China

The prospect of better crops this year after a series of setbacks should stimulate China's economy and, given a period reasonably free from natural calamities, the country, with its continuing official policy of agricultural expansion, should achieve greater economic stability and increased external purchasing power. A series of good harvests would not only reduce the country's dependence upon grain imports and perhaps make it self sufficient in cotton but it would also raise the standard of living for the people, and there are already indications of more liberal supplies of foodstuffs in Shanghai and other areas. China's tremendous effort towards paying off the two large initial development loans received from the Soviet Union must also help towards this end as the saving in produce and other repayment shipments now accrues to the national benefit and is an aid to a more diverse trading system. Official reports state too, that the country is moving steadily towards self sufficiency in oil.

Last year the United Kingdom's share in China's trade was slightly reduced but, given freedom from political barriers, there is no reason why it should not grow as China's purchasing power increases. The emphasis within the country is stability and consolidation, and even in the industrial sector priority is now being given to the production of fertilisers and farm equipment. Communications are also being improved and one has a feeling that the economy is developing quietly but confidently along more orthodox lines.

Our Shanghai office has continued to do useful business, mainly in connection with the financing of China's export trade.

Japan

Japan in 1962 staged another of its remarkable balance of payments recoveries, but this time it was by means of a spectacular growth in exports rather than by the more usual policy of restricting imports. Final figures show an increase of $355 millions in the exchange reserves over the year but included in the published reserve figures are gains in Euro-dollars, free yen and other short-term foreign credits as well as the balance of the 1961 crisis borrowings from American banks. Helpful too, is the spending of United States forces stationed in Japan, which is still over thirty-million dollars monthly, but after allowing for these items there was much genuine improvement in trade.

Many factors contributed to these good results, one of the most important being the skill with which the monetary authorities reversed the effective tight-money policy of the previous year. As the foreign exchange reserves began to build up again internal rates were lowered and more freedom of movement in foreign capital was allowed in conformity with, and to supplement, a more liberal trade policy. It had for some time been officially recognised that if Japan's aggressive selling policy overseas, and the work of its business missions, were to bear fruit, further trade-ties eliminating discrimination against Japanese goods were necessary, and Japan could only achieve this by lowering its own trade barriers. One success in this respect was the signing of the Anglo-Japanese Treaty of Commerce and Navigation, which should result in a steady expansion of trade between the two countries and may be a pattern for similar agreements with continental countries. Of great importance too, were the concessions won at the fifth conference of G.A.T.T. as they paved the way for the cancellation of Articles 35, still imposed by certain Western European communities. Another requisite to expansion was competitive pricing, and in this the country reaped the benefit of the massive investment—up to over thirty-five per cent of the gross national product—in new plant and equipment which has been made in recent years and which has fundamentally altered the pattern of industry. This change of emphasis is enabling the country gradually to ship more and more heavy industrial and other capital goods to replace, to some extent, textiles and other similar products which are encountering more difficult and more competitive markets as the developing countries set up their own industries.

The success in the overseas trade of the more liberal monetary policy was not reflected domestically. Rising costs in the face of sluggish home demand and cut export prices has meant reduced profits and a holding-up of modernisation programmes. Stocks throughout industry are still high and there are obviously some soft spots in the economy not at all in keeping with the external picture; one of these is the coal industry and the Government has run into much criticism over its policy for dismissing miners and closing inefficient and uneconomic mines.

Politically the year was uneventful and even parliamentary struggles seemed to lack the bitterness of the last few years. International relations generally were good and a slight movement towards mainland China was noticeable. With a continuance of this political tranquility, and the usual exhibition of hard work and determination by the people of Japan, the country's future looks assured for some time to come.

•

New York

It is difficult to analyse let alone predict the trend of an economy in which concurrently industrial production increased but unemployment remained high, the visible balance of trade was favourable and yet there was a payments deficit of about $2,200 millions on the year but there are enough pointers within these generalisations to suggest that one can be

quietly optimistic about future developments in the United States.

The international balance of payments deficit could be eliminated overnight if the generous aid which is being given to developing countries and the heavy military expenditure overseas were to be reduced. That there is no intention of doing so is a pointer to the toughness and the innate strength of the economy. In any case adequate arrangements have been made to repel any speculative movement against the dollar as a reserve currency for notwithstanding some improvement in the position the authorities have made it clear that the present outflow of gold cannot be allowed to continue indefinitely.

With industry running below capacity and with unemployment, although reduced, still at what is regarded as an excessive level, the President is anxious to maintain the momentum of the economic recovery initiated two years ago and has set much store on the programme of tax reduction and reform which is now being considered by Congress. This programme which may entail an increase in the already high budget deficit may have some difficulty in obtaining the approval of Congress but as submitted it should ensure a continued economic recovery. This is of tremendous importance to the Asian countries as increased business activity in the United States creates a demand for the raw materials which are their staple exports. The anxiety which I mentioned last year had been caused in the Orient by the decision to reduce huge stockpiles of strategic material held by the United States Government still remains and doubts over the precise terms on which these surpluses are to be sold have had their effect on rubber and tin prices. Our New York branch has continued to develop our numerous and long standing connections with exporters and importers in the United States.

Hamburg

Last year the increase in West Germany's import bill was greater than the rise in export earnings, the trade surplus being almost halved and with German tourist expenditure abroad reaching new high levels external payments have run into deficit. The gold and foreign exchange reserves, however, remain more than adequate and as the payments deficit is of modest proportions it presents no danger to the German economy and is internationally an advantage, inasmuch as it has contributed to a more equitable distribution of international reserves. This fundamental change in the Republic's balance of payments is partly due to the continuing effects of the revaluation of the D. Mark in 1961, but the main cause is the progressive increase in wages which I mentioned last year. In conditions of full employment and now that workers from East Germany can no longer cross the border, it is becoming steadily more difficult to obtain the additional skilled labour which industry needs. Foreign labour from elsewhere in Europe is normally unskilled and the supply is limited; the consequent upward pressure on wage rates is gradually eroding the favourable competitive position German industry has previously enjoyed in overseas markets and is slowing down industrial investment.

The Berlin situation still remains unresolved and it is possible that both the major power blocs are content, following the Cuba crisis, to let the matter rest for the time being, rather than risk the increased international tension which might ensure from another round of unsuccessful negotiations. Now that the United States Government is pressing its allies to assume a more equitable share of the burden of economic assistance to developing countries, West Germany's foreign aid programme may well be stepped up. At present approximately half the Federal Republic's capital assistance to developing countries is directed to Asia, an encouraging indication of German interest in trade with the East.

Meanwhile, our own business in Hamburg continues to progress satisfactorily.

Conclusion

From this review, it is clear that continuing inflation is still a major problem with many of the developing countries and, in addition to this, their ever increasing short-term and medium-term foreign debt must cause deep concern. Its servicing accentuates the already difficult balance of payment problems and at times the return from eagerly sought after foreign loans is not commensurate with the cost, as they are diverted into nationalistic enterprises which do little to balance and strengthen the economy.

The supply of aid is necessarily limited, save in exceptional circumstances and many Asian countries are now seeing the advantages of encouraging private investment from abroad. Whereas foreign loans involve interest charges and repayments which become a burden on budgets and exchange reserves, the risk of private investment is borne entirely by the investor who can only receive a return on his investment if his enterprise is successful. Ability to attract new private capital is closely linked with the treatment of existing investments and those countries which have failed in their appeal to the overseas investor are invariably those which have been less than fair to direct investments made in the past. It is those who already know the East and have confidence in its future who are most likely to be the new investors and it is not accidental that most of the private investment which has been made in Asia in recent years has come from enterprises which were already locally established. The potential investor from overseas who is considering setting up business for the first time naturally takes into account the treatment meted out to existing foreign firms in the country in which he is interested. He is unlikely to be impressed by promises of freedom to remit profits and repatriate capital by Governments which deny such freedom to existing enterprises. It is significant that those Governments which have been most successful in attracting foreign investment have been at pains to create conditions favourable to business enterprise and to induce confidence in the political and economic stability of their countries. The flow of private capital to developing countries would be greatly facilitated if agreement could be reached on an internationally acceptable code of behaviour regarding the treatment of foreign property on the lines of the draft convention recently sponsored by the Organisation for Economic Co-operation and Development.

We continue to assist to the best of our ability the many countries in which the Chartered Bank group is working. This assistance can be financial or in the form of advice based on many years' experience in many different countries and, needless to say, wherever we have a branch it is our policy to work fully in the interest and aspirations of the country concerned and within its regulations.

COMMERCIAL POSSIBILITIES OF HOVERCRAFT

SALES BREAK-THROUGH YET TO COME

By Our Aviation Correspondent

IT is now six months (*Commerce*, 4th August 1962) since your Correspondent last wrote on the subject of air-cushion vehicles or, as they are often, if erroneously, called, Hovercraft. Whilst this has been a period of outward quiescence, the development of A.C.V. has by no means been static. It would be impractical, in the course of a short article, to follow this development on a world basis. Consequently, one has chosen the British industry which, in this particular field, is probably still in advance of others—notwithstanding the very considerable progress which common report attributes to Russia.

At the time one last wrote, both the Vickers Armstrong 24 passenger VA-3 and the Westland Aircraft 70 passenger SR N2 were operating, or were about to operate, commercial-cum-experimental services—the former across the estuary of the River Dee near Liverpool, and the latter across the Solent from the Isle of Wight to the mainland. Both these services, which were of a seasonal nature only, were immensely popular with the public and, whatever the commercial results may have been, they undoubtedly provided a great deal of valuable data.

Demonstration in Canada

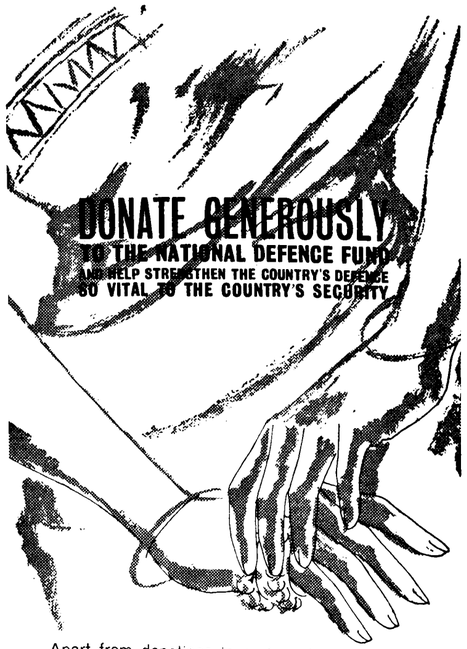
The SR N2 is now to be shipped to Canada where, in accordance with the terms of an agreement reached between Westlands and the Autair Helicopter Company of Montreal, it will carry out a series of tests and demonstrations. These, which will commence in mid-April, are initially to be conducted on the St. Lawrence. Westlands have this to say on the subject: "Canadian interest has been increasing... and with the acknowledged potential that the large, fast SR N2 has for operation over the snow, ice, rivers, lakes, and muskeg of the northern sub-continent, Canada will become the focus of world Hovercraft interest during the demonstration period." Incidentally, and somewhat unexpectedly, one imagines, the SR N2 had a foretaste of Canadian conditions when, during Britain's recent exceptionally severe winter, an opportunity occurred to test the craft over pack ice in Wooton Creek on the Isle of Wight.

The greatest fillip for Westlands, however, is, probably, a British Ministry of Aviation order for a prototype SR N3. This will be a vehicle of 37½ tons—as against the 27-ton SR N2—and will be used primarily to investigate various military uses for this form of transport. Following the Ministry order, Westlands have negotiated an agreement with the Mitsibushi Shipbuilding and Engineering Company of Tokyo whereby the Japanese firm will build the SR N2 under licence, and will be kept advised by Westlands of future Hovercraft developments.

The Japanese appear to be strongly impressed by A.C.V. possibilities because Vickers Armstrong have also negotiated an agreement with another Japanese firm—the Mitsui Shipbuilding and Engineering Company. The latter, it is understood, will build Hovercraft in Japan with the technical assistance of Vickers. What type of Hovercraft the Japanese firm will build has not been disclosed but, initially, it is to be presumed, it will be the VA-3.

Development of New Types

Vickers Armstrong have now given some indication of the size and type of their future projects—the VA-4 and the VA-5. Both are to be primarily over-water craft but, of course, with amphibious capabilities. The former will have a gross weight of 100 tons and accommodation for 240 passengers and 24 automobiles. The craft will have a cruising speed of 75 knots in waves of up to 3 feet but with ability to operate—presumably at lower speed—in wave conditions of up to 7 feet.



The leading particulars clearly indicate that Vickers Armstrong have in view a specific market—the car-ferry business between Britain and the Continent. Car ferries, whether operated by airlines with such aircraft as Carvairs, or by the rail and steamer companies, are doing exceptionally well at present and there seems to be an almost unlimited expansion potential. A Hovercraft which would cut the present price and, at the same time, operate at a speed little slower than an aircraft, must appear to have excellent commercial possibilities. There are, at present, no positive indications as to whether the VA-5 is also to be aimed at this market. All that has been disclosed is that it will be a Hovercraft of 300 tons—the optimum size, according to present British thinking, for an over-water Hovercraft.

That, then, seems to sketch in the immediate foreground of the Hovercraft picture and, considering that the principle of this form of transport was only conceived some four years ago, progress has been remarkably rapid. As the British National Research Development Corporation points out in its report for the year 1961-62, "the progress of this project has been relatively rapid and a considerable amount of further development will be necessary before Hovercraft transportation is fully established. Nevertheless, our collaborators (the firms actually engaged on the design and manufacture of Hovercraft) are now in a position to meet specific requirements." In other words, the hurdle which now looms up is not so much the technical problems involved as the commercial marketing of the end-product.

Concrete Orders Lacking

What are the indications of commercial interest in Hovercraft? There is, of course, the single order from the Ministry for an SR N3—but one swallow, we are reminded, does not make a summer. There are, too, the various agreements which have been reached with firms in Canada, Japan, and elsewhere—but these, in themselves, are probably not particularly remunerative. Considerable interest, we are told, has been shown in North and South America, in Australia, in India, in Africa and in Pakistan. Indeed, two Hovercraft, we are told, have actually been ordered by Pakistan for operation in East Pakistan but information as to the actual type ordered is lacking.

In short, whilst interest—even a great deal of interest—is undoubtedly being shown, what the British industry now requires are some concrete orders. It is self-evident that individual firms, such as Vickers and Westlands, cannot indefinitely pour money into the development of any project, however promising, unless, within the foreseeable future, that project is going to provide an adequate return. So far, some £2 million have gone into Hovercraft development. In comparison with the development of even a single commercial airliner, that is not, of course, a large sum of money. Nevertheless, the time must be approaching when there will be hesitation to incur further development costs unless and until something more concrete than interest is forthcoming. One has not the slightest doubt of the eventual importance of the A.C.V. industry—but it is not always the pioneers who reap the rewards. The British aircraft industry has had more than one bitter experience of that fact. This, then, must be a crucial period for their Hovercraft projects. Will the sales "break-through" come in time?

Apart from donations in cash or by cheques, the STATE BANK OF INDIA will gratefully accept, at all its offices and those of its subsidiaries donations to the Fund in GOLD/GOLD ORNAMENTS, in the form of SILVER/SILVER ARTICLES as well as JEWELS and Precious STONES, which may provide valuable foreign exchange for acquiring the armaments, ammunition and other equipment required.

THE BANK OF BARODA, LIMITED

(ESTABLISHED: 20TH JULY 1908)

(Registered Office: **Mandvi, Baroda**)

FIFTY-FOURTH ANNUAL REPORT OF THE DIRECTORS.

To be presented to the Shareholders at the Annual General Meeting to be held at the Registered Office of the Bank at Mandvi, Baroda, on Monday, the 8th April 1963, at 11-30 a.m.

The Directors have pleasure in submitting this Fifty-fourth Annual Report together with the Audited Statement of Accounts for the year ended 31st December, 1962.

	This Year Rs. nP	Previous Year Rs. nP
The net profit for the year 1962, after providing for taxes, including Rs. 3,02,553.37 brought forward after taking Rs. 12,44,043.06 towards depreciation on buildings and furniture amounts to	66,21,722.36	68,72,553.37
An ad-interim dividend at the rate of 16 per cent. per annum, subject to deduction of income-tax at the appropriate rates was paid for the half-year ended 30th June 1962 which absorbed	12,00,000.00	10,50,000.00
Amount transferred to Reserve Fund	12,75,000.00	20,00,000.00
Provision for Bonus to Staff	22,00,000.00	20,20,000.00
	46,75,000.00	50,70,000.00
The Directors now recommend :—		
(*a*) Payment of a final dividend at the rate of 16 per cent. per annum per equity share on the paid-up value on all those shares (issued prior to 30th June 1962) subject to deduction of tax at the appropriate rates for the half-year ended 31st December 1962 amounting to	12,00,000.00	15,00,000.00
(*b*) Payment of a final dividend at the rate of 16 per cent. per annum on the paid-up value on the new issue of one lac equity shares in proportion to the period commencing from the first day of the month following the date of receipt of application moneys, subject to deduction of tax at the appropriate rates for the portion of the year ended 31st December 1962 amounting to	3,30,000.00	....
(*c*) and carry forward to the next year's account of the balance amounting to	4,16,722.36	3,02,553.37
	Rs. 66,21,722.36	68,72,553.37

2. The business of the Bank during the year under review continued to be satisfactory.

3. The Reserve Bank of India rate of interest continued to rule at 4 per cent. per annum for the past 5 years, but was raised by ½ per cent. per annum to 4½ per cent. per annum effective from 3rd January 1963.

4. The Deposit Insurance Corporation Act, 1961, came into force from 1st January 1962 and premium amounts on our total deposits in India (excluding deposits permitted by the said Act) at the rate of 5 nP. per cent. per annum were paid to the Corporation.

5. The Bank opened during the year [illegible] branch offices in India, namely :

Navrangpura, Ahmedabad	Jamnagar
Bareilly	Shrimanta Bazar, Indore
Willard Estate, Bombay	Godhra
Khanji Bazar, Bombay	Ludhiana
Khar, Bombay	Mangalore
Bracch	Asaf Ali Road, New Delhi
Lake Market, Calcutta	Cuttack
Belgaum	Cuttack
Shaktinagar, Delhi	Virangam
Dhulka	Mulund, Bombay

and closed 3 branch offices at Bruce Street (Bombay), Pimpalgaon (Baswant), and Industrial Fair (New Delhi). Consequently, the number of its branch offices in India increased to 157 as at the end of 1962. Since 1st January 1963 the Bank has opened further branches at Asarwa, Ahmedabad (Girdharnagar), Bombay (Khetwadi Main Road) and at Borsad and will shortly be opening another branch at Bori Bunder (Bombay).

Three more branches were opened in foreign countries, first at Mbale (Uganda), second at Moshi (Tanganyika), both in East Africa and the third at Port Louis in Mauritius Island.

6. The Board of Directors decided to take over the banking business of the Surat Banking Corporation (Private) Limited, Surat. Accordingly, after due examination and valuation, the banking business of the Corporation has been taken over by the Bank with effect from 1st January 1963 and the only office of that Bank at Vania Sheri, Surat, has commenced functioning as a branch of this Bank from that date.

7. The Bank had in all 174 branch offices after taking into account three branches closed down during the year ended 31st December 1962. It has applied for and been granted exemption from audit under Section 228 of the Companies Act, 1956, in respect of 73 branches in India for the year 1962. Out of the remaining 101 branches, 87 branches in India have been either audited by the Bank's Statutory Auditors or by firms of Chartered Accountants entrusted with the audit in consultation with the Statutory Auditors. All the Bank's branches outside India numbering 14 have been audited by Chartered Accountants who have been competent to act as Company Auditors under the Acts of the respective countries and who have been approved by the Bank's Auditors.

8. The Directors report with great regret the death on the 7th July 1962 of one of their senior colleagues, Shri Durgaprasad Shambhuprasad Laskari. They desire to place on record their appreciation of the valuable services rendered by him to the Bank for a period of 10 years.

9. In accordance with Article 145 of the Articles of Association of the Bank, four directors Shri Kantilal Nahalchand, Shri Naval H. Tata, Shri Anandlal Hiralal Sheth and Shri B. K. Daphtary retire by rotation and being eligible, offer themselves for re-election.

10. Under the provisions of Article 149 of the Bank's Articles of Association, Shri A. M. M. Arunachalam and Shri Navnitlal S. Shodhan, who have been appointed as additional directors during the year will hold office upto the date of the Annual General Meeting, i.e., upto 8th April 1963. They being eligible, offer themselves for appointment.

11. The shareholders are requested to appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting and to fix their remuneration.

For and on behalf of the Board,
TULSIDAS KILACHAND,
Chairman.

BOMBAY, *7th February*, 1963.

Note :—(1) The Managing Director is allowed the use of the Bank's motor car free of cost.

(2) Some of the figures of the previous year have been regrouped to make them comparable with those of the current year.

CERTIFICATE PURSUANT TO RULE 8 (c) OF THE COMPANIES (BRANCH AUDIT EXEMPTION) RULES, 1961.

We hereby certify that no material change has taken place in the arrangements made for the audit of accounts of the Branch Offices exempted from audit under Rule 4 (1) (*b*) of the Companies (Branch Audit Exemption) Rules, 1961, enabling the Chartered Accountants employed by the Bank for the purpose of audit of the accounts of Branch Offices, to visit the Branch Offices and to have access at all times to the books, accounts and vouchers of the Bank maintained at such Branch Offices audited by them and for furnishing all such further information and explanations required by them and that such auditors have carried out the audit of the Branches assigned to them in accordance with the Internal Audit Programme drawn up by them and approved by the Bank's Statutory Auditors.

For THE BANK OF BARODA, LIMITED,
A. H. SHETH, *Director.*
N. M. CHOKSHI,
Managing Director.

CALCUTTA, *22nd February*, 1963.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Bank of Baroda Ltd., as at 31st December 1962, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 41 Branches audited by us, 60 Branches audited by Branch Auditors and unaudited returns from 70 Branches for which exemption from the provisions of Section 228 of Companies Act, 1956, has been obtained from the Central Government under Rule 4 clauses (*a*) and (*b*) of the Companies (Branch Audit Exemption) Rules, 1961.

We report that :

(*a*) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(*b*) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(*c*) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us ;

(*d*) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(*e*) the reports on the accounts of the Branches audited by Branch Auditors have been forwarded to us and the same have been considered by us in preparing our report ;

(*f*) in our opinion and to the best of our information and according to the explanations given to us, the said accounts, together with the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

DESIGNING DAM ACROSS UNUSUAL RIVER

INDIANS AT WORK IN CAMBODIA

By K. Krishna Moorthy

THE Royal Palace in Pnompenh, the Cambodian capital, is built facing one of the holy river confluences in the world. At Allahabad is the Sangam, the meeting place of the Ganga and the Yamuna and the invisible mythological river, the Saraswathi. In front of the Cambodian royal palace in another Sangam, called Quatre Bras in French or Chatur Mukh in Sanskrit (to mean "four arms" or "four faces"). The main 'holy' river in the Sangam in India is the Ganga and in Pnompenh it is the Mahaganga which has now come to be called the Mekong.

In Pnompenh the confluence is of the Mekong which rises in Tibet and comes through Thailand and Laos, a mighty, turbulent, untamed river, the Mekong which flows out into Vietnam and the sea, the Bassac, a distributary of the Mekong going into Vietnam and the Tonle Sap which connects the confluence with the Great Lake of Cambodia, one of the biggest fresh water lakes in the world. The Tonle Sap (which means the fresh waters) is 150 kilometres long and lies entirely within Cambodia. She is one of the most unusual rivers in the world, flowing in one direction between May and November and in the opposite direction during the rest of the year. The Mekong starts rising in May and continues to rise until the end of October; then it starts falling. When the Mekong begins to rise, the level of the water at the confluence at Pnompenh rises to higher than the level of the Great Lake and the Tonle Sap flows north-west to bring water into the lake.

The Great Lake

The level of the bed of the Great Lake is about the same as the sea level and the level of the river bed at Quatre Bras is about ten metres below sea level. Because of tidal pressures from the sea, the water brought down by the Mekong in the early floods is diverted through the Tonle Sap into the Great Lake. The Great Lake gets filled up in the early floods and when the big floods raise the level of the Great Lake and the level at the confluence to higher than the sea level, the Mekong flows in its untamed fury into Vietnam inundating vast areas. Then, as the Mekong flood subsides, the level of the Great Lake becomes higher than at the confluence and of the sea level and the Tonle Sap reverses her direction of flow and brings water from the Great Lake into the Mekong at the confluence. For about a week in November the Tonle Sap remains stationary as the river changes direction. This is a ceremonious occasion in Pnompenh which celebrates the water festival at this time. This peak period corresponds also to an important phase in agricultural operations in the Great Lake region which is the richest fish and rice area in Cambodia. There is no parallel anywhere else in the world to the Tonle Sap phenomena and building a dam across the Tonle Sap poses special engineering problems. The upstream face of a barrage across the Tonle Sap will have to become the downstream face for part of the year.

A group of Indian engineers are working on an appropriate design for this unusual dam and experiments are being conducted on models of barrage sections at the water and power research station near Poona in India. The crest of the barrage as it is being conceived now will be about two metres above the mean sea level. Above the barrage may be steel gates nine to ten metres high for a length of about one kilometre. The gates will be designed so as to be opened or closed completely or kept open at various water clearances. The basic design will also include a road and railway bridge over the barrage to improve communications across the Tonle Sap.

The Great Lake has an estimated area of around 10,000 square kilometres in the dry season and the lake grows into about 30,000 square kilometres in the peak of the rainy season. No detailed depth soundings of the lake have yet been undertaken although it is known that the depth of the water in the lake goes down to about half a metre in the dry season. A U.S. $500,000 survey of the depth of reservoir capacity of the Great Lake is to be conducted by a Filippino firm according to a recent decision of the Mekong Committee during its meeting earlier this year at Vientiane. For international comparisons of the reservoir capacity of the Great Lake: The Bhakra reservoir in Punjab State in India is one of the biggest man-made reservoirs in Asia and one metre rise in the Great Lake will be equal to the peak capacity of the Bhakra reservoir. (Incidentally, the Indian engineer posted to Pnompenh to be in charge of the data collection and basic work for the dam design has the same name as this writer; he was also earlier in charge of building dams in Iraq.) The final dam design will be made by engineers at the Central Water and Power Commission in New Delhi.

Benefits of Project

The Tonle Sap dam, which is one of three mainstream projects envisaged in the Mekong development scheme, will bring benefit to both Cambodia and South Vietnam. The benefits to Cambodia are primarily in the field of food production. It is about the only barrage in the world where the major benefit will be in increasing fishery resources. Irrigation, navigation and power production will be the subsidiary benefits to Cambodia. The benefits to Vietnam will be flood control, navigation and irrigation. Another benefit will be salinity control in Vietnam, which is affected by the intrusion of sea water. The barrage will help to diminish the high water during the flood season and augment the water flow during the dry season helping to push out the tidal sea water so that the low lands in Vietnam will become fertile.

The fresh water resources of Cambodia are said to be among the most productive in fish in the world. When the fish start migrating down the Tonle Sap in November huge fish barrages are constructed (huge nets) across the narrow portions of the river. At the worst of the dry season the Great Lake level falls to about half a metre and the big fish become suffocated. As they come down with the current they are enmeshed in the sprawling nets but millions of fish also pass through to the Quatre Bras confluence. The waters flow down the Mekong and Bassac into Vietnam. The people of Cambodia have had historical animosities towards the Vietnamese and fish also do not find the Vietnamese waters hospitable! And that for a scientifically valid reason. These fresh water fish will die in the saline tidal waters of the Mekong and Bassac in Vietnam.

At Quatre Bras the fish take a quick turn and go up north-east along the Mekong river. At Krathie these fish have to contend with rapids. Unlike fish in other rivers in other parts of the world, the Cambodian fish cannot negotiate the rapids. They settle down below the rapids to spawn. In May when the Mekong begins to rise, the current pushes the fish down back to Quatre Bras. From here they shun the downstream Mekong and Bassac and flow with the Tonle Sap into the Great Lake where they will fatten themselves. During this migration fishing is prohibited. The food for the fish comes from a forest of shrubberies around the lake which gets inundated during the flood season. The lake is getting silted up and there is growing concern among the Cambodians over the increasing level of the lake bed. Dredging is an impossible task in view of the size of the lake. The hydrological solution of the experts is to raise the level of the water during the dry season. The fish output will grow enormously if a barrage across the Tonle Sap can keep a minimum level of two metres of water in the lake in the dry season instead of the half metre now at the peak of the dry season.

Since the barrage will have to control the flow of the Tonle Sap in two directions, the overall conception of the Tonle Sap barrage is extremely complex; it will be the most unconventional dam in the world. Power production from the Tonle Sap project will be seasonal and power will be produced when sufficient water flows in either direction. Bold as the Tonle Sap project will be in conception, it will increase the moderating effect of the Great Lake as a natural controller of flooding in the Mekong delta. This the dam will seek to achieve by allowing the early small floods to reach the sea.

When the first small floods begin in May the barrage will close the Tonle Sap flow into the Great Lake and thus let the waters go down the Mekong and the Bassac. These and their distributaries are capable of letting the small early floods flow without damaging the Vietnamese delta area. When the big flood breaks, the barrage will open to let the waters flow into the Great Lake, which has meanwhile been kept at a low level, and reduce the fury of the late floods. This is novel, because the Tonle Sap dam helps control floods by actually not checking but just speeding the flow of water into the sea.

Tonle Sap will be the last of the mainstream projects. A total of four projects are planned in Cambodia, two on the mainstream and two on the tributaries. Sambor, four kilometres above Krathi, will essentially be a power project on the Mekong mainstream and will be at the bottom of the rapids which the Cambodian fish cannot contend with. In a way the project will give the fish more room for migration upriver. The geological test drilling on the Sambor project has already been done by the Australians and the designing will be by the Japanese. The other mainstream project in Cambodia is on the Tonle Sap. One of the tributary dams will be at Battambang (which incidentally is the birthplace of the Thai Prime Minister Marshall Sarit). This is in the rice bowl of Cambodia and the Japanese had established a rice research centre here during the occupation. Investigations and preparation of designs on this project are being conducted by the French firm of Sogreah and the funds are coming from the U.N. Special Fund. The other tributary project is 35 kilometres from Pnompenh at Prekthnot. This power and irrigation project is being designed by the Japanese and the irrigation design will be by the Israelis. The irrigation mapping is being done by the Cambodians themselves.

International Co-operation

The Indians are designing the Tonle Sap dam but the hydrological studies are being conducted by the Cambodians. The fisheries and sedimentation studies are being undertaken by the French under an aid allocation from France. The hard currency needs for the Indian design work are being borne by New Zealand, which has paid the amount into the E.C.A.F.E. account. The Tonle Sap, as well as other investigations of the Mekong Basin, provide a fascinating example of the coalition of expertise and money from various sources across the world. The Indian contribution to the Tonle Sap investigations amounts to around Rs. 1.2 million and the New Zealand contribution to U.S. $45,000. The Indian investigation and design will form the basis of an international loan application. The Indian experts have set up a materials testing laboratory with Indian-made equipment and other apparatus bought with New Zealand aid. Apart from the model testing experiments in Poona, India is to train one Cambodian engineer in Delhi in dam designing. One Cambodian and one Vietnamese are being trained in model experiments in Poona. Another Cambodian is being trained by the Indians in Pnompenh in soil and concrete testing. The design of the dam may be ready by the end of 1963, but the comprehensive project report, to be prepared by India on the basis of collateral investigations by other engineers, may be ready in 1965.

A milestone in the Mekong programme was the signing in December last of the loan agreement under which West Germany is lending U.S. $11 million to Thailand for the Nam Pong hydro-electric project and dam on the border of Thailand and Laos. Thailand herself is appropriating U.S. $6 million of local currency resources for the dam in the north-east of the country. Australians, who conducted the geological survey at Sambor, are drilling for dam sites at Nam Pong. Many of these Australian experts have had experience in the Snowy Mountains project in Australia.

While the U.N. mission headed by Lt. Gen. Raymond Wheeler in 1957 called for an allotment of U.S. $9 million for investigations, the resources with the Mekong Co-ordination Committee are now more than U.S. $21 million.

The first installation on the Mekong scheme to take physical shape will be the German-aided dam in Thailand. At the session of the co-ordination committee in January in Viantiane, Italy joined fifteen other nations in the Mekong programme. The countries now participating in the programme are: Australia, Canada, India, Japan, New Zealand, Pakistan, the Philippines, Britain and the United States (all these through the Colombo Plan) and China (Taiwan), West Germany, France, Iran, Israel, Italy and the Netherlands. U.N. agencies in the programme are : E.C.A.F.E., the U.N. Special Fund, the U.N. Expanded Programme of Technical Assistance, the U.N. Department of Economic and Social Affairs, I.L.O., F.A.O., U.N.E.S.C.O., the World Meteorological Organisation, the International Atomic Energy Agency and the International Bank. Among private agencies helping the programme are the Asia Foundation, the Ford Foundation, Resources for the Furture Inc., Price Waterhouse Company and the Shell Oil Company.

NEW PRODUCTS AND PROCESSES

Tape-Controlled Milling Machine For Shoes

A NEW method of manufacture, which halves the time taken to produce the moulds used in making long runs of shoes, has now been fully proven at a British mould-making factory, E.M.I. Electronics Ltd., Middlesex, England. The system employs a tape-controlled (Cincinnati No. 3) milling machine, which produces mould parts to high accuracies, without the need for expensive hand-cut templates. There are normally two side moulds and a sole mould, which together determine the shape of the shoe. The machining of these mould parts to the necessary high degree of accuracy has always been a long and difficult operation, but the control system ensures a perfect fit by using the same tape to control the cutting of two adjacent profiles—for example, the inside curve of one of the side moulds, and the corresponding curve of the sole mould. Besides saving time by eliminating the need for hand-made templates while maintaining high standards of accuracy, the system has other important advantages. By using the "mirror images" technique, both left and right foot profiles can be cut from the same tape, merely by turning a switch. The workpiece need only be positioned approximately on the table, and the fine setting carried out by dials in the control cabinet. Cutter compensation can also be allowed for, if the cutting tool is a few thousandths of an inch under size after being reshaped, by adjusting the dials.

Automatic Cardboard Making Machine

A machine which automatically forms cardboard boxes from pre-cut blanks—and tapes, or "stays," all four corners simultaneously—has been developed by a British firm, Caledex Machine Co. Ltd. Designed for boxes measuring between 3½ in. x 2½ in. x ½ in. (8.89 x 6.35 x 1.27 cm.) and 17½ in. x 13½ in. x 4½ in. (44.45 x 34.27 x 11.43 cm.) in size, the machine has a standard variable speed unit which gives a speed range of 20 to 55 boxes per minute, depending on size. The unit can be operated by one unskilled attendant, who loads the hopper-type feed table with blanks. Blanks are fed from the bottom to the box-former which presses them into shape, and thermoplastic tape from over-hanging spools is applied to each corner and cut to the required length. The feed table is mounted on sintered bronze strips, which are self-lubricating, and there is a conveniently placed graduated scale to facilitate the manual adjustments which have to be made when varying blank sizes. The specially designed tape feeds incorporate six gear boxes which are tied mechanically to the adjusting unit, thus ensuring matching tape lengths. All four tape feeds can be set simultaneously by a single hand wheel, and any type of thermoplastic tape in widths of either ¾ in. or ⅞ in. (1.90 cm. or 2.22 cm.) may be used.

Foam-backed Garments

The hard to handle and "stiff" characteristics usually associated with waterproofed foam-backed garments are a thing of the past as a result of a new process developed by a British firm, Medlock Manufacturing Company, Oldham. Garments treated by the process will be fully waterproofed, while retaining the same surface appearance and handle of ordinary fabrics. The knitted face, or outer cloth, which can be of almost any fibre, is bonded by an adhesive to a thin layer of foam. This outer cloth has a water-repellant finish, but this is only ancillary to the main waterproofing—applied by a new method between the fabric and the foam. The company has also developed a special laminating machine for applying the process. The process makes the material not only waterproof and windproof, but also air-permeable—allowing the garments to "breathe." The company claims that while breathable foambacks have been produced before, they have not been wind resistant. Even if the face cloth gets soaked, the water cannot get through to the inside of the garment. The process means the fabric can be light in weight, non-iron, shrink-resistant and can be washed or dry-cleaned without having to be reproofed.

Portable Welder

A portable, medium-frequency a.c. welding alternator, which works independently of mains power supply, has been developed by a British firm, Small Electric Motors Ltd., Kent. The alternator can be fitted to most British and Continental tractors and run from the power take-off; alternatively the machine can be run from a 12 h.p. petrol or diesel engine or driven by an electric motor. A d.c. power unit is also available; it gives an output of 110V—enough to drive electric tools and to provide lighting. The 427-cycle alternator is claimed to be comparable in performance to the more expensive d.c. welding generator; it has an advantage over the d.c. generator in that there are no commutator, slip rings or brushes which require maintenance. Fitted with the d.c. power unit the welding alternator is an extremely useful piece of equipment. It is smaller and lighter than oxy-acetylene bottles. Vehicles equipped with it can take electrical power for welding, cutting and tool operation anywhere—a great advantage considering the present capriciousness of mains power supplies.

Glass Curtains

Curtains made from glass, which could be mistaken for Irish linen, were on show at the London office of J. P. Stevens recently an American firm. The firm has patented a new process for drawing the threads which takes away the disadvantages of existing glass fibre textiles—cracking and abrasion. The firm also claims, with justice, that colour patterns show up much better on material made by the new process. The process is called Gentle-air and it differs from the old in that the glass is exposed to hot air and not to a gas flame. About 95 miles of thread can be drawn in the process of heating and drawing (coronising) from a glass marble of three-quarters of an inch diameter. The firm is entering the ready-made curtain market with a big advantage. It can offer ready-made curtains which are cheaper than material for making into curtains.

New Insulator

The International General Electric Company of New York claims that it has a new insulating material for motors and generators, especially designed for high-demand motor-car generators. It is High Bond Permafil (H.B.P.), a resinous material. H.B.P. cures in one hour, penetrates deep into windings and has a very high bond strength at high temperatures. It contains no harsh solvents to damage wiring. Applied by the roll-through process to armatures it fills almost all openings and holds the wires firmly in place, thus reducing the likelihood of damage due to severe centrifugal loads. Less of the material is needed than for standard phenolic varnishes. This combined with the shorter curing time means lower costs. H.B.P. is currently used for power-tool motors and has reduced burn-outs caused by excessive overloads.

New Detergent

A new detergent which is degraded 100 per cent by soil bacteria has been developed by Hans J. Zimmer Verfahrenstechnik, Frankfurt-am-Main, West Germany. It is sugar ester based on cane sugar and ricinolic or oleic acid. Detergent qualities are as high as those of commercial detergents now available and the foam production is low, so that the detergent is suitable for modern washing machines. Being non-ionic it does not form insoluble salts in hard water. The degradable property is one long searched for by chemists because of troubles at sewage works. A few have been developed in Britain and are in use, but they are not 100 per cent degradable. The Zimmer detergent will cost about 15 per cent more than the partially degradable detergents now available, but the whole of this will not go into the consumer price.

Book-vending Machine

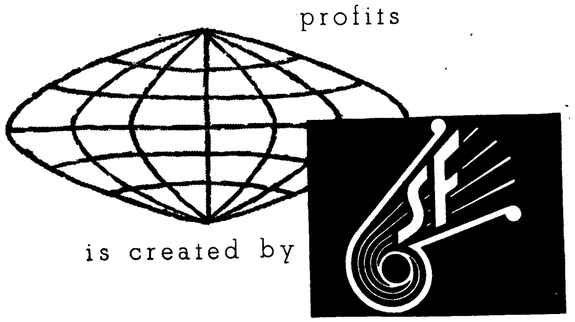
A new coin-operated British book-vending machine will handle the standard range of paperback books and magazines of a similar size. The unit is pilferpoof and will display more titles—48 in all—for a lower capital cost per title than other comparable machines. It is fitted with a coin mechanism which can be arranged to suit the coinage of most countries. Operation is simple. The books are mounted in robust slides on a turntable which the customer rotates for viewing the books selection. By positioning the chosen book under a small gate, insertion of the appropriate coin or coins causes the gate to slide to one side. The book is then easily removed. The machine can be loaded with either 48 different titles or, to exploit the sales potential of a current best-seller, with a smaller number of titles and more copies of one particular book.

Diamond Drilling Simplified

The process of diamond drilling has so far been carried out in an oxidising atmosphere, with a platinum-iridium needle. However, owing to the oxidation of the diamond surface, it was impossible to give the final finish to the requested profile of the drawing die, and as a result, after preliminary drilling, the final shape has to be machined in a mechanical way. Two Hungarian inventors Sandor Rózsa and Istvan Mráz have found that using a reducing atmosphere and a tungsten needle for drilling, the entire and final profile can be shaped in a single operation. In this way a better diamond surface is obtained, and the drilling operation is carried out in a shorter time. The development of this new process resulted from the observation that it is not oxidation, but sublimation that occurs in the diamond during the drilling process.

Conditioning Equipment

The Conditioning Equipment, type, KON-12, a Hungarian invention, is said to be indispensable for the treatment of raw material used in textile weaving. Lots of 300 to 600 gramme picked from large heaps of material are completely dried by the apparatus, and the weight of the material can be established at an accuracy of 0.05 g, by the balance mounted on top. There is no need to put weights on the balance; the required load is adjusted on the balance arm by turning a set of discs. The moisture content is established by the test which serves as a basis for accounting the raw-material in question. The apparatus is electrically heated, and is provided with forced draught. A constant thermometer ensures the temperature controlled at an accuracy of + 2°C.



Diesel Cars

The British Motor Corporation's new 1¼-litre diesel cars—the Austin A60 Cambridge and Morris Oxford Series VI Diesel Saloons—are meeting with considerable commercial success, particularly in oversea markets, where their outstanding fuel economy and extremely low overall running costs are endearing them to taxi and hire car operators. Before the end of January a total of over 3,000 Austin and Morris diesel cars, worth £1,500,000, had been shipped for oversea destinations, the A60 Diesel accounting for more than 2,000 units and the Oxford VI for around 1,000.

In Textile Industry...

THE RIGHT "CLIMATE"

for greater profits

is created by

In your mill, the quality of the products is dependent on climatic conditions. SF Humidifiers create the right "textile climate" not only for improving the quality of products but also for increasing the efficiency of workers.

A series of humidification towers, each connected directly to its own distribution channel, when placed along the walls in suitable numbers according to requirement of each department, ensure uniform distribution of moisture and a high degree of ventilation. Because of their low power consumption, excellent flexibility, low installation cost and long life, hundreds of textile mills in India with a total spindlage of about 3 millions have already installed SF Humidifiers.

SETTLEMENT OF INDUSTRIAL DISPUTES

MR. NANDA CALLS FOR ADOPTION OF VOLUNTARY ARBITRATION

THE question of arbitration *versus* adjudication figured prominently in the inaugural speech of Mr. G. L. Nanda, Union Minister for Labour, at the three-day conference of personnel and welfare officers (organised by the National Institute of Labour Management, Bombay), which concluded in the City this week. Mr. Nanda advocated voluntary arbitration in the place of adjudication as a method of fostering cordial industrial relations and stepping up production. Voluntary arbitration, according to him, offered a simple, informal and prompt method of settling industrial disputes, whereas adjudication involved time-consuming litigation and delay. This delay bred among workers resentment and a feeling of being harassed. Consequently, it undermined the faith in each other on the part of both workers and employers. Moreover, the large number of adjudication cases also whittled down the quality of adjustment necessary for the settlement of industrial disputes.

Mr. Naval Tata, President of the Employers' Federation, in his address, joined issue with Mr. Nanda on the question of voluntary arbitration. Mr. Tata conceded that voluntary arbitration was good in principle. But it called for will and strength on the part of workers' and employers' organisations to practise it. Voluntary arbitration was a success in countries like the U.S.A. and the U.K. because there was a high degree of understanding between workers and employers. Mr. Tata, however, disagreed with Mr. Nanda on the suitability of voluntary arbitration in the present context in India. He said that it would be a serious mistake to think that the adoption of voluntary arbitration was a simple and automatic process. Adjudication could be dispensed with, according to him, only if the idea of voluntary arbitration was properly nursed in the minds of workers and employers.

Attitude of Employers

Mr. Tata's remarks are typical of the attitude of employers in the country to voluntary arbitration. In fact, similar views were also expressed by Mr. N. G. Bowen, Chairman of the Employers' Federation of Southern India, in his speech at the annual general meeting of the Association held recently at Madras. Mr. Bowen had pointed out that, as a method of dispute settlement, arbitration could succeed only in a situation where collective bargaining was fully developed and where wages and other conditions of work were already laid down by collective agreements. Arbitration was most effective and successful in the interpretation of existing rights rather than in the creation of new ones. It was in this limited role that voluntary arbitration operated successfully in those countries where it had become an integral part of the machinery for the settlement of industrial disputes.

Successful working of voluntary arbitration, Mr. Bowen had pointed out, presupposed the existence of unity in the ranks of workers. Multiplicity of unions and inter-union rivalry, which characterised the labour scene in India, made recourse to voluntary arbitration extremely difficult, if not impossible.

Official thinking on the question of voluntary arbitration reflects a lack of understanding of the practical problems involved in its wider adoption. Employers, as both Mr. Tata and Mr. Bowen made it clear, are not opposed to voluntary arbitration; their objection is that the time is not yet opportune for a complete switchover to voluntary arbitration. At present if employers and employees agree by mutual consent to submit disputes to voluntary arbitration, there is nothing in the laws relating to industrial disputes to prevent them from doing so. Voluntary arbitration, by its very name, indicates free choice and it is against the spirit of the concept to force either party to adopt it.

The Union Labour Minister's approach has, however, been endorsed, with some qualifications, by a study group of the Conference, which examined the role of voluntary arbitration in the national emergency. The conclusions of the group's meeting may be summarised as follows:

The group was of the opinion that, in the context of the present national emergency, voluntary arbitration had an important role to play and it endorsed the recommendations contained in paragraph 5 of the industrial truce resolution dated 3rd November 1962, regarding settlement through voluntary arbitration of disputes pertaining to dismissal, discharge, victimisation and retrenchment of individual workmen. It was also of the opinion that all collective agreements should contain a clause providing for reference to arbitration of all points of disputes arising out of the interpretation of the terms of such agreements.

The group also reached the following further conclusions:

(1) The organisations of employers and workmen in each industry should draw a panel of independent persons to work as arbitrators.

(2) If both the parties to the dispute and the arbitrator or arbitrators agree, assistance of assessors may be requisitioned.

(3) Reference to arbitration should be at the joint instance of the employer concerned and the recognised union.

(4) Proceedings before an arbitrator should be informal and legal practitioners may be allowed to appear for any party only with the written consent of the other party.

(5) The decision of the arbitrators shall be binding on both the parties.

(6) A dispute, once decided in arbitration and implemented by the parties concerned, should not be referred by Government to adjudication under the Industrial Disputes Act, 1947.

Personnel Officers

Mr. Nanda, in his speech, dwelt at length on the role of personnel officers in ensuring harmonious industrial relations. Their role in the prevention of industrial disputes was more important, according to him, than their other duties. What was required for resolving labour disputes was sympathy and understanding. If a common ground between employers and workers was found out and co-ordinated, it would go a long way in achieving greater results in the sphere of industrial output.

The Union Labour Minister also referred to certain "signs of tension," which had become visible during the last one month or so, as compared with the smooth relationship prevailing in industry immediately after the declaration of the national emergency and the adoption of the industrial truce resolution in November last. He said that in the context of the present emergency, even minor and unreasonable complaints of workers were serious matters which required to be examined in order to remove seeds of discord. Personnel officers could very well investigate such complaints so that all genuine grievances might be redressed more expeditiously than in normal times.

ECONOMIC GROWTH OF WEST EUROPE—I

(*Concluded from page 547*)

ernment and by almost all sectors of the French economy.

With regard to the state of liquidity in France, the French authorities decided in 1946 not to proceed with an enforced curtailment of the money and credit volume; the result was that, for the time being, the high degree of wartime liquidity was maintained. In such a situation; continued financing of investment partly by credit expansion tended to lead domestically to rising costs and prices and, in the balance of payments, to a deficit and a loss of monetary reserves, with the exception only of certain periods when special receipts, such as Marshall Aid, offset the inflationary impact. As the situation developed, with rising costs and prices and intermittently dwindling reserves, the franc had several times to be devalued in the post-war period. These devaluations had the tendency to reduce costs and prices in relation to other countries and also to make the liquidity as expressed internally in French francs of less value in international terms. But after each of the two earlier devaluations, as the credit expansion continued and costs and prices continued to rise in France, the relation to other economies was upset again, and the uncertainty which such a chain of events created continued up to the end of 1958. In that year, a more fundamental improvement was assured by a number of measures taken in two main steps. Early in that year, steps were taken to reduce the budget deficit and also to limit the financing of credit expansion by the Bank of France, and towards the end of the year further steps were taken in the budget and credit field, together with a devaluation of the franc. In the following two years, the budget deficit was much reduced (well below the deficit foreseen in the budget estimates); credit creation against domestic assets was kept within narrow limits; money wages rose only a little and not at all in real terms. In this way, France attained a position not unlike that of Italy, Germany and the Netherlands as described earlier: relatively low wages and a relatively low degree of liquidity in international terms. This set the stage for an increase in exports, an overall surplus in the balance of payments, and an increase in monetary reserves which helped to create the liquidity of an expanding economy. The economic expansion was set off not by growing domestic demand, but essentially by the increase in export demand, and it was only in 1961 and 1962 that any appreciable increase in domestic demand made itself felt.

In United Kingdom

Great Britain is also a special case, and it is often asked why the British growth rate in most of the post-war years has not been as high as that of the countries on the Continent of Europe. There is no doubt that countries which are already highly industrialised, such as Great Britain, have in some ways greater difficulties in attaining a very high growth rate. But I think that is not the complete explanation; there have been some special circumstances which affected the British economy and, in explaining these circumstances, I must again make my analysis in the terms of liquidity and wage costs. After the Second World War, wages in Great Britain were on the low side, and this was accentuated by the devaluation in 1949. This left wages low, perhaps not in comparison with those in the major European countries, but at a lower level in comparison with many other parts of the world, and particularly the United States, than could be regarded as at all normal in the light of past experience.

The high degree of liquidity at the end of the war and comparatively low wage costs could be expected to ensure a state of high employment in Great Britain in the post-war years—and that was the case, even to the extent that immigrants were attracted and found ready work. But the liquidity gave rise most of all to internal demand; and the British economy is by nature so extrovert that without booming exports it is difficult to imagine a high all round growth rate.

Some British economists have insisted that the low wage level in Great Britain was the main cause of the country's poor export performance, Great Britain being paid—as they said—too little for its exports. But if this had been the true explanation, why did not the still lower wages in Germany and the Netherlands produce the same effect? There must have been some other factors. I believe one of these was the state of liquidity in the country. There was, after the war, in Great Britain no enforced curtailment of the accumulated liquidity; the 1949 devaluation could be expected to bring about some adjustment to a more normal equilibrium through a rise in costs and prices, but this took some years. An examination of the statistics shows that, up to very recently, the degree of liquidity in Great Britain was on the high side in comparison with pre-war standards and the conditions in most countries on the Continent of Europe. Such a high degree of liquidity tended to exert an insistent upward pull on the level of wages and prices, and was translated into an increasing domestic demand for goods and services.

A Danger

If, in such a situation, by Government action or through a privately induced boom, there would be, in any given year, an appreciable expansion in the volume of credit, there would be a danger that, in an economy already provided with ample liquid assets, the fresh credit expansion would result in an overdose of liquidity spilling over into other economies in the form of an increased demand for imports, and overseas investments, largely in the sterling area, and, indeed, lead to an exchange crisis. This explains why an expansion of bank credit, which in comparison with the expansion in other countries might be regarded as only relatively slight, has had adverse balance of payments consequences in Great Britain. It also helps to explain why after acceleration in the economy, concommitant with an expansion of credit, there has had to be before long an application of the brakes. So, while it can be advantageous in some respects to have a high degree of liquidity, an excessive degree will have undesirable consequences until it has been worked off—mainly by a rise in the money volume of the gross national product.

(To be concluded)

INDIA'S BALANCE OF PAYMENTS

RESERVE BANK'S ANALYSIS OF TRENDS

THE view that the net deficit in balance of payments during the third Five-year Plan period would be substantially larger than the level of Rs. 3,200 crores originally laid down in the Plan has been expressed by the Reserve Bank in a study on *India's Balance of Payments 1948-49 to 1961-62*, just released. The conclusion is based on a study of the trends in exports and imports and also in transactions in invisibles during the last fourteen years, of which the latest year (1961-62) corresponds to the first year of the third Plan. It may be recalled here that the third Plan has provided for an annual average of Rs. 740 crores of exports, as against only Rs. 613 crores during the second Plan period. Imports (including Plan and maintenance imports) are expected to be Rs. 1,270 crores annually, as against Rs. 1,080 crores during the second Plan. The third Plan document has also assumed *nil* figure for invisible net receipts excluding official deviations, as against an annual average of net receipts of Rs. 76 crores during the second Plan. Allowing for an annual net outgo of Rs. 110 crores on account of capital transactions, which excludes non-cash private investment and fresh receipts of official loans, but includes private capital other than non-cash, amortisation payments and banking capital, the net deficit is estimated at Rs. 3,200 crores, or an annual average of Rs. 640 crores, which compares with Rs. 418 crores in the second Plan. The gap is expected to be filled by external assistance, including P.L.480 aid. It has also been assumed in the Plan that there would be no further draft on foreign exchange reserves during 1961-62—1965-66.

The actual trends in balance of payments during the first year of the third Plan itself have shown that the Planning Commission's aforesaid estimates have gone awry. The Reserve Bank Study makes it clear that developments in 1961-62 were not encouraging enough to suggest that actual changes in India's balance of payments over the five-year period of the third Plan would conform to initial estimates. This observation is based on several factors. In the first place, there was a draft (though small) on reserves in 1961-62, in spite of a large I.M.F. drawing and a sizable increase in exports. Secondly, on invisible account other than official donations, there was, in fact, a substantial net payment. In all probability, the size of net payments on this account would increase substantially in the remaining period of the third Plan in view of the growing burden of interest payments on large foreign loans and declining investment income. Quite apart from this, according to the Study, it seems that maintenance imports and even the import content of the Plan projects are likely to be revised upwards.

Export Promotion

It is, of course, true that the basic weakness of India's balance of payments situation stems more from the preoccupation of the Indian economy with the objective of maintaining a reasonably adequate rate of growth than from any cyclical swings in its trade fortunes. It, therefore, follows that India will have to apply itself to the strenuous task of promoting its exports on a more enduring basis, besides seeking to secure more foreign aid. But for the slow growth of exports during the past few years, the payments situation would not have been as crucial as it is now.

It would not be out of place in this context to examine the major trends in balance of payments during the last decade of planning. Over the first Plan period as a whole, the net current deficit (excluding official donations) was only around Rs. 151 crores, as against Rs. 667-727 crores projected in the Plan; there was a net surplus of Rs. 109 crores on official donations and the net inflow of capital, that is, net private, banking and official excluding reserves, was only Rs. 13 crores. However, the actual draft on reserves was higher than indicated by the net current account position, official donations, and net changes in private and official capital accounts in view of the negative figures of Rs. 98 crores in non-identifiable transactions. Even then the draft on reserves was at Rs. 127 crores, which fell short of the Rs. 290 crores estimated for the first Plan.

The relatively comfortable position of the balance of payments during the first Plan period had certain important implications. First, the actual developmental effort fell considerably short of what was planned. This was evident from a fall in the proportion of investment to national income in 1952-53 and a virtual stationary level of investment in the following year. Since the expected impact on the balance of payments was linked up with the volume and pattern of investment, the reduction of the investment led to a lower order of imports, mainly of capital goods. In a sense, the slowing down of the pace of investment and the consequent easing of the payments position led to a much greater pressure on the balance of payments in subsequent years. Secondly, there was an unexpected rise in the domestic output of foodgrains and as a result, the quantum of food imports declined considerably.

Second Plan Period

But there was a drastic change in the situation during the second Plan period, with the emergence of heavy pressure on foreign exchange reserves. Over the second Plan period, the actual net current account deficit, excluding official donations, was Rs. 1,956 crores or Rs. 836 crores higher than what was estimated. The actual annual average of exports at Rs. 613 crores and invisibles, excluding official donations, at Rs. 75 crores were higher than the Plan estimates by Rs. 20 crores and Rs. 24 crores, respectively. Since the actual average of imports at Rs. 1,080 crores was considerably higher than the Plan estimates of Rs. 868 crores, it more than offset the gains from exports and invisibles. As a result, the actual draft on foreign exchange reserves amounted to Rs. 599 crores which exceeded the Plan estimate by about Rs. 400 crores. This heavy draft on reserves was due partly to under-estimation of the import requirements of the Plan projects, partly to larger investment in the private sector in directions not anticipated in the Plan and partly the cumulative backlog of import licences issued earlier. However, the more than anticipated inflow of foreign assistance helped to attenuate the size of the draft on reserves.

The table at the bottom of this page shows a summary of the trends in India's balance of payments from 1948-49 to 1961-62.

Seasonality in Exports

Analysing some of the outstanding features of India's balance of payments situation, the Reserve Bank study makes a particular reference to the seasonality in India's exports. India's exports, being largely agriculture-based, are subject to strong seasonal influences. It, therefore, becomes necessary to formulate policy in a way which would minimise the impact of short-term factors on reserves, if not remove them altogether. The seasonality in export receipts is borne out by the fact that the last two quarters, October-December and January-March, of every financial year are distinctly more favourable for exports than the other two quarters. This element of seasonality stems mainly from two commodities, namely, tea and jute goods. The Study reveals that the seasonal element has not worn off to any marked extent over the decade of planning. This only shows that attempts at diversification of exports have not progressed as fast as it should have. Though some shipments of new commodities like engineering goods have commenced, their contribution is still too meagre to make any perceptible difference in the seasonal character of the export trade.

E.C.M.

On the basis of a study of the regional pattern of trade during the decade of planning, the Reserve Bank publication urges the need for ensuring proper safeguards for India's exports to the European Common Market and thereby assuage the impact on balance of payments. Drawing attention to the decline in India's exports to the E.C.M., the Study says that shipments to the Six fell from Rs. 55 crores in 1956-57 (9 per cent of total exports) to Rs. 48 crores (about 8 per cent of total exports) in 1960-61; the lowest point was reached in 1958-59 when exports amounted to Rs. 43 crores. There was, however, a recovery in 1961-62 and total exports to the Six touched Rs. 55 crores.

The total current account transactions with the countries constituting the Common Market showed deficits during 1956-57 to 1961-62. Thus, the net current account deficit, which amounted to Rs. 158 crores in 1956-57, increased to Rs. 218 crores in the following year, but tended to decline thereafter rather sharply; it was around Rs. 114 crores in the last two years. The rise in the deficit in 1957-58 was the result both of a very sharp increase in imports and a decline in exports; the subsequent narrowing down of the current account deficit was wholly due to a steep decline in imports from the Common Market countries. However, the deficit was reduced by the foreign assistance from these countries, mainly West Germany, which aggregated to about Rs. 128 crores over the six-year period. Adjusting for this foreign assistance, the total current account deficit over this period would come to as much as Rs. 706 crores.

India's Overall Balance of Payments (Summary): 1948-49—1961-62

(Value in crores of rupees)

	1948-49	1951-52	1952-53	1953-54	1954-55	1955-56	1956-57	1957-58	1958-59	1959-60	1960-61	1961-62

ALKALI AND CHEMICAL CORPORATION

The new rubber chemicals plant of the Alkali and Chemical Corporation of India Ltd., Calcutta, which has been under construction for the last two years, is now ready for going into production. This was disclosed by the Chairman of the A.C.C.I., Mr. A. R. Foster, at the annual general meeting of the Company held at Calcutta on 21st March 1963. The new plant, according to him, would produce rubber chemicals, for the first time in India, satisfying urgent defence needs and saving valuable foreign exchange. Outlining the other plans for expansion, the Chairman stated that a licence had been secured for expanding the capacity of the paints plant by 50 per cent and for the establishment of a modern resin plant. He added that the intermediate density polythene plant, which was nearing completion, was expected to go into production by the end of this year.

Reviewing the working of the Company, the Chairman pointed out that the profit in 1961-62 was lower, as compared with the record results of the previous two years. He attributed the decline in profits mainly to rising costs of raw materials and wage rates, besides increase in excise duties. Because of the ceilings on prices imposed by Government in respect of caustic soda, liquid chlorine and hydro-chloric acid, the Company could not recover the larger incidence of costs through a corresponding increase in their prices. Lower realisation from exports and from bulk sales to Government also adversely affected the earnings of the Company. The Chairman, however, expressed the view that fluctuations in profits were not unexpected in the type of activities undertaken by the Company under the present conditions in India and that results, viewed over a period of time, showed a satisfactory picture.

U.S. MANUFACTURING ABROAD

The production of goods abroad by American-controlled manufacturing firms reached $25½ billion in 1961, a $2 billion increase over the 1960 amount, according to the latest annual survey of foreign subsidiaries and branches of American companies. Foreign production by U.S. manufacturing firms has increased by 40 per cent since 1957, when these figures were first collected. Based on the rapid expansion of plant and equipment and a rising demand, the output of manufactured goods by U.S. companies in Europe reached $10.7 billion in 1961, 70 per cent above the total for 1957. Big gains were reported in the production of chemicals, food and machinery, but sales of the automobile companies slowed down as compared with earlier years. In Latin America, good sales showed up in chemicals, primary and fabricated metals, and electrical machinery, raising production in the area by these companies by 20 per cent more than the previous year's figure. Argentina showed the biggest relative increase, 30 per cent. Sales in Canada remained stable at $8.9 billion, as reductions in the transport industry and in machinery and rubber products were offset by gains in other commodity groups, particularly chemical products. In the rest of the world, sales were moderately better, despite cuts in the automotive industry. Next to Canada, the countries in which output by American-owned manufacturing plants and factories rank high are the United Kingdom with $5.1 billion in 1961, followed by Germany ($2.3 billion), France ($1.2 billion), Australia ($1.0 billion), Brazil ($0.9 billion), and Argentina ($0.9 billion). The sharpest increases in 1961 were noted for Italy, where production rose by 36 per cent to $475 million, and Japan, where there was a rise of 31 per cent to $380 million.

NATIONAL RUBBER'S EXPANSION PAYS

SHAREHOLDERS REWARDED

THE National Rubber Manufacturers Ltd. (Managing Director: Mr. K. N. Mookerjee. Calcutta) fared exceedingly well during the year ended 31st December 1962. All the three indicators of progress, namely, sales, gross profit and profit-margin (ratio of profit to sales) improved further. Net sales (that is, excluding excise duty paid) shot up by 30 per cent, from Rs. 256.40 lakhs to Rs. 338.18 lakhs. Gross profit spurted by 37 per cent, from Rs. 13.80 lakhs to Rs. 18.99 lakhs. Profit-margin rose from 5.3 per cent to 5.6 per cent.

The working results for the year reflect the major effects of the Company's expansion scheme which was first taken up in 1957 and was completed in the latter half of 1960. Last year, the scheme was not fully effective because of power shortage in the first half of the year. It may be mentioned here that, in 1957, when the firm, formed in 1946, was converted from a private to a public limited company, launched a Rs. 93-lakh expansion programme and, to finance the programme, it entered the capital market with an issue of Rs. 52 lakhs.

During the year under report, the installed capacity of certain items like cycle tyres, industrial V-belts and fan-belts was more than fully utilised and the need for further expansion was keenly felt. Incidentally, the Company has already been licensed additional capacity of fan-belts and V-belts. Thanks to the all-round increase in demand, the turnover of the Company has risen, as was anticipated at the time of launching the expansion scheme, to over Rs. 3 crores in 1962 and the closing stocks have been reduced by almost 50 per cent from Rs. 100.17 lakhs to Rs. 52.57 lakhs.

Out of the gross profit of Rs. 18.99 lakhs, Rs. 7.58 lakhs (as against Rs. 6.93 lakhs a year before) have gone towards depreciation. Taxation has claimed Rs. 5 lakhs, as against nothing in 1961. Net profit, after these allocations, is slightly lower at Rs. 6.41 lakhs as compared with Rs. 6.87 lakhs in the previous year. Nonetheless, the return on the 10-rupee ordinary shares has been stepped up from 6.5 to 8 per cent per annum, subject to tax, apparently as a reward to shareholders for having forgone their claim two years ago. The aggregate plough-back to reserves is, however, less at Rs. 1.46 lakh (as compared with Rs. 2.72 lakhs in 1961), comprising Rs. 46,307 to development rebate reserve (Rs. 1.72 lakh in 1961) and Rs. 1 lakh to dividend equalisation reserve (Rs. 1 lakh). The amount carried forward is Rs. 75,633, as against Rs. 58,466 brought in.

The following table compares the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Sales, less excise paid	338.18	256.40	230.99	193.61
Other income	2.35	1.88	1.19	2.20
Closing stocks of finished goods and work-in-progress	52.57	100.17	58.44	43.97
Materials and stores consumed	177.21	189.84	159.23	122.88
Staff expenses	42.32	40.66	36.41	32.06
Excise duty paid	13.60	13.79	12.02	6.42
Other expenses	54.41	55.71	42.48	30.39

* Subject to deduction of tax.

The General Tyres Ltd., of which the Company is the Managing Agents, has made satisfactory progress and is almost ready to go into production. Set up in 1960 for the manufacture of 180,000 units of tyres and tubes, it has obtained the Government's approval in principle to expand output to 300,000 units of tyres and tubes.

The Company will doubtless shape well in the years to come due to expansion which has already started paying, as well as the further expansion which has been licensed. Besides, the Company will soon start earning its remuneration as Managing Agents of the General Tyres Ltd. It appears, therefore, that future profits will be higher, though more income will mean more taxes, including the new Super Profits Tax. Incidentally, after deducting from the year's net profit the amount set apart for development rebate reserve, the profit assessable under S.P.T. amounts to Rs. 5.95 lakhs on "own funds" aggregating Rs. 67.76 lakhs. It works out to a return of 8.7 per cent. Allowing for the standard deduction of 6 per cent, the excess is Rs. 1.87 lakh, half of which will be claimed by S.P.T.

The financial position of the Company is now satisfactory, since borrowings have been brought down to a modest level of Rs. 95.56 lakhs from the previous year's exorbitant figure of Rs. 145.60 lakhs, though current liabilities and provisions make a bigger total of Rs. 63.09 lakhs, as compared with Rs. 43.39 lakhs a year before. The aggregate indebtedness to outsiders thus shows a drop of Rs. 30.34 lakhs to Rs. 158.65 lakhs. This is fully covered by current assets, loans and advances shown at Rs. 165.27 lakhs. The paid-up capital, including Rs. 10 lakhs in 6 per cent, tax-free, cumulative preference shares of Rs. 100 each, is unchanged at Rs. 60 lakhs. It is supplemented by reserves and surplus aggregating Rs. 17.28 lakhs, including Rs. 9.47 lakhs under development rebate reserve and Rs. 4.774 as capital reserve. The gross block, which has gone up from Rs. 116.09 lakhs to Rs. 123.15 lakhs, has been written down adequately to Rs. 69.06 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 11.62 *cum-div.* On the *ex-div.* basis, they offer a net yield of 5 per cent per annum.

MADRAS RUBBER FACTORY LTD.

The Madras Rubber Factory Ltd. has reported sales of Rs. 107.29 lakhs for the nine-month period ended 30th September 1962, as against Rs. 164.48 lakhs for the 12 months of 1961, and gross profit of Rs. 16.11 lakhs, as against Rs. 23.51 lakhs. The results are for nine months because of the change in the accounting year from January-December to October-September. Depreciation has claimed Rs. 2.26 lakhs (as against Rs. 4.58 lakhs) and Managing Agents' commission has amounted to Rs. 63,648 (as against Rs. 63,120). Since the income for the nine months is not liable to income-tax, no provision has been made for taxation; last year, the allocation was Rs. 9 lakhs. Transfer to development rebate reserve has been increased from a mere Rs. 14,294 to Rs. 10.45 lakhs. The taxable dividend on the 10-rupee ordinary shares is 45 nP per share, which works out to 6 per cent per annum, same as last year. Besides, it is on a larger paid-up capital of Rs. 124.92 lakhs, as against Rs. 101.84 lakhs in 1961, following the allotment of shares already issued last year. The paid-up capital includes Rs. 24.96 lakhs being subscription for consideration other than cash and Rs. 21.43 lakhs for shares allotted as fully paid to the collaborators, Messrs. Mansfield Tire and Rubber Company of Ohio, U.S., against supply of machinery. The issued capital is unchanged at Rs. 125 lakhs.

In their report for the period under review, the Directors state that the profit has come exclusively from the tread rubber division. The main plant for production of tyres and tubes was commissioned on 4th December 1962. The Government has sanctioned expansion of annual licensed capacity to the tune of 60,000 tyres and an equal number of tubes, the enhanced capacity being 360,000 units of both.

BRAITHWAITE DEFERS DIVIDEND

At their meeting at Calcutta on 18th March 1963, the Directors of Braithwaite and Company (India) Ltd., decided to postpone consideration of the Company's accounts and dividend for the year ended 31st December 1962. They feel, we are told, bound to point out, however, that, on the basis of the Super Profits Tax Bill, 1963 in the form in which it has been introduced in the Lok Sabha, the Company will be faced with the very heavy liability to tax, which, coupled with the tax payable on the capitalisation of reserves in 1962 and the obligation to set aside substantial sums each year to finance the expansion referred to in the Chairman's statement which accompanied the 1961 accounts and in the prospectus dated 13th August 1962, will seriously affect the dividend-paying capacity of the Company.

The 1962 accounts and dividend will be considered by the Board at its meeting to be held on 9th May 1963 unless the Super Profits Tax Bill is enacted before 22nd April, in which case a meeting will be held during the last week of April.

BANK OF BARODA

LESS RETURN ON MORE CAPITAL

FOLLOWING the Reserve Bank's suggestion to banks towards the close of 1961 to build up, as a goal, a 6 per cent ratio of "own funds" to deposits by expanding the equity base and setting apart a minimum of 20 per cent of declared profit for the reserve fund, the Bank of Baroda Ltd. (Managing Director: Mr. N. M. Chokshi, Baroda) issued, on 22nd May last year, 100,000 right shares of Rs. 100 each in the proportion of one-for-three at a premium of Rs. 15 per share. As only half the total issued has been called, the paid-up capital, as at 31st December 1962, shows an increase of Rs. 50 lakhs to Rs. 200 lakhs. The reserves, including share premium, have also risen by Rs. 28.08 lakhs. Consequently, the total "own funds" are higher by Rs. 78.08 lakhs at Rs. 409.33 lakhs, as against Rs. 331.25 lakhs a year before. Whereas the ratio of "own funds" to deposits has edged forward slightly from 3.4 to 3.6 per cent, because of a spurt in deposits during the year from Rs. 95.46 crores to Rs. 113.96 crores, the return on the increased capital (that on new shares being *pro rata* and absorbing Rs. 3.30 lakhs) has been pruned from 17 to 16 per cent per annum, subject to tax.

Ordinarily, the Bank might not have cut the return on higher capital. But the cut has been occasioned in view of the setback in declared profit from Rs. 67.73 lakhs to Rs. 63.53 lakhs. The setback has been due to higher expenses on all counts, a feature of last year's working of banks in general. The extent of the increase in expenses is indicated in the table which follows. The lower profit has also resulted in the reduction of the amount transferred to reserve fund from Rs. 20.20 lakhs to Rs. 12.75 lakhs. Bonus to staff has absorbed Rs. 1.80 lakh more at Rs. 22 lakhs. The dividend takes up Rs. 27.30 lakhs, as against Rs. 25.50 lakhs a year before, leaving Rs. 4.17 lakhs to be carried forward, as against Rs. 3.03 lakhs brought in.

The following table gives a clear idea of the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

Cash	9.4	8.6	9.6	9.7

* After providing for taxation, bad and doubtful debts and other essential provisions. Taxation for 1960 was Rs. 30 lakhs, for subsequent year the amount is not disclosed.

† Includes Rs. 2.24 lakhs for paying final dividend at the rate of 20 per cent on the new issue of Rs. 50 lakhs.

‡ Subject to deduction of tax. § Unencumbered portion only.

It will be seen from the above table that the Bank has reached new heights of progress. Its gross income has soared from Rs. 513.82 lakhs to Rs. 621.93 lakhs and the balance-sheet total has expanded considerably from Rs. 122.83 crores to Rs. 143.86 crores. The growth in deposits from Rs. 95.46 crores to Rs. 113.96 crores has been indicated at the outset, fixed deposits rising from Rs. 53.12 crores to Rs. 62.19 crores, savings deposits from Rs. 19.71 crores to Rs. 25.00 crores, and current and contingency deposits from Rs. 22.63 crores to Rs. 26.78 crores. Over the year, advances have gone up from Rs. 70.37 crores to Rs. 84.79 crores and the credit ratio from 73.7 to 74.4 per cent. Investments have risen from Rs. 24.90 crores to Rs. 26.09 crores, though, as a percentage of deposits, they stand slightly lower at 22.3, as against 23.8 a year before. With the substantially large cash balances of Rs. 10.78 crores, as against Rs. 8.20 crores a year before, the aggre-

(Continued in previous column)

(*Concluded from next column*)

gate liquidity ratio has been well maintained at 31.7 per cent, as against 32.4 per cent in 1961.

Twenty more branches have been opened by the Bank during the year in different parts of the country, while three have been closed, thus bringing the total to 174. The number of overseas branches has increased from 11 to 14, with one office coming up at Mbale (Uganda), the second at Moshi (Tanganyika) and the third at Port Louis in Mauritius Island. Exemption from audit has been obtained in respect of 73 branches in India for the year under report. The Bank has taken over the Surat Banking Corporation (Private) Ltd. from 1st January 1963 and turned that Bank's only office at Vania Sheri, Surat, as its branch.

MADURA MILLS COMPANY LIMITED

SPEECH OF CHAIRMAN, DR. RAJAH M. A. MUTHIAH CHETTIAR

CONCERN OVER CONTINUING SCARCITY OF RAW COTTON

POINTED attention to the inadequacy of raw cotton was drawn by Dr. Rajah M. A. Muthiah Chettiar, Chairman of the Madura Mills Company, Ltd., in his speech at the Annual General Meeting of the Company held at Pandyan Building, Madurai, on 21st March 1963. He added that inadequate supplies in the face of rising demand led to heavy increases in cotton prices, despite official measures to control them. Together with the rise in the cost of cotton, he observed, there was a steady increase in other manufacturing costs too, which adversely affected the cotton textile industry.

The following is the full text of Dr. Rajah Muthiah Chettiar's speech:

GENTLEMEN,

Before we commence the regular business of today's meeting, I have to refer, with very great regret, to the passing away of Shri Rajendra Prasad, our ex-President, who was one of the noble sons of India. His death is a great loss to the country and, as a mark of respect to his memory, I request you all to stand up and observe two minutes' silence.

The report of the Directors and the audited accounts of the Company for the year ended 31st December 1962 having been circulated in the prescribed manner, I propose with your permission to take them as read.

As you are all well aware, the country is now passing through a very critical period in its history and we are in a state of emergency, owing to aggression by a powerful and ruthless enemy. Although there is a lull in the fighting now and the Chinese have withdrawn to positions of their choice, we have to be prepared to meet the challenge. It is most gratifying to find that all parties are united in this effort and that there is an awareness on the part of labour on the need for achieving greater productivity. Your Company and its associates are playing their full share in meeting the requirements of defence in this national emergency.

Shortage of Cotton

On the last occasion, I mentioned the difficult position with regard to cotton we would face during the year. The crop for the year to 31st August 1962 was only 46.50 lakh bales, as against the earlier expectations of 54 lakhs, as a result of bad weather conditions all round. Most of the areas produced sub-normal crops. The overall consumption, estimated at 57.10 lakh bales, was, therefore, much higher than the cotton available and mills generally had great difficulty in purchasing the required raw material. To cover the deficit, imports were allowed of short-staple cottons from America and Pakistan to the extent of 10.66 lakh bales, but actual arrivals were only about 8.65 lakh bales. Inadequate supplies and rising demand naturally led to heavy increases in the price of cotton. Although the Textile Commissioner took measures to tighten up control by the re-imposition of compulsory quality surveys, prohibition on mills' holding stocks in excess of five months' average consumption and restriction on supplies to mills by means of quotas, the industry was forced to pay very high prices for its raw material. With effect from 1st September 1962, Government raised the ceiling prices for all varieties of cotton by Rs. 125 per candy. It, therefore, became an extremely arduous task for your Company to procure the required supplies of cotton both qualitatively and quantitatively. Despite these odds, you will note with gratification that production was well maintained by your Company during the year.

Rise in Costs

As in the previous year the demand for our products continued to be strong throughout the year. Together with the steady rise in the cost of cotton, we also witnessed a steady rise in manufacturing cost, but Government was hesitant to yield to the industry's demand for increases in yarn prices of counts 40s and below. This resulted in an increasing trend in the divergence between the ex-mill prices and market prices showing that Government's reluctance to allow increase in ex-mill prices in no way benefited the consumer. From your Company's point of view, the Government's policy affected the trading results of the year and, if profits are not favourable in comparison with the previous year, you have the explanation. You will note from the accounts that, while there was a reduction in the net turnover by about Rs. 25 lakhs, as compared with the previous year, the raw material cost was almost equal to that in the previous year. I am pleased to be able to report, however, that there has been a revision in the yarn prices, which, with Government's approval, has come into force from 7th February 1963. I sincerely hope that the Company will have a satisfactory trading year in 1963, despite the threatened power cut. I would like to mention in passing that the Company is giving its full support to the Textile Commissioner's and the Madras Government's schemes for distribution of yarns to the handloom weavers' co-operative societies in India to assist the handloom weavers in the co-operative fold.

We continue to do well on the export side, though our performance during the year has not been as good as in the previous year. I made reference, on the last occasion, to the meeting between the representatives of the Lancashire textile industry and the Indian Cotton Mills Federation and to the subsequent meeting of G.A.T.T. in Geneva. In pursuance of the agreement arrived at between the Governments of India and the United Kingdom, a ceiling of 11.5 million lbs. has been fixed for the export of yarn. Export markets are highly sensitive to prices; however, we continue to have a very large share of the export quota.

Debenture Issue

The proposed debenture issue mentioned in my last speech was successfully effected in November 1962, and on the strength of this, we have gone ahead with the full implementation of the 450-loom project. The first consignment of looms has already arrived and the looms are in the process of erection, with a few in operation already. Although these looms are the first of their kind in India, we are wholly satisfied with their performance and versatility. We have an export obligation of 50 per cent of the production on these looms, 350 of which will eventually be erected at our Ambasamudram unit where an up-to-date weaving shed is in course of erection. Market surveys done so far indicate that we shall be in a position to fulfil the obligation, provided we are granted a share of the markets at present restricted by quotas.

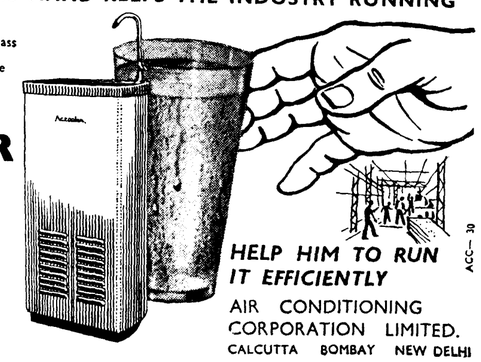
Profit

Turning now to the accounts for the year, I must say that the net profit shown, Rs. 31,81,355, is considerably lower than that of the previous year, but taking into consideration that this figure is arrived at after providing Rs. 10,00,000 for debenture stock redemption reserve and after meeting the increase in depreciation charge, together with the increase in raw material and manufacturing costs I referred to earlier, I am sure you will agree that the results are not unsatisfactory. With the increase in yarn prices announced in February and with the introduction since the 11th of this month of rationalised workloads in our units at Madurai and Tuticorin in settlement with the unions at these places (who, I am pleased to say, have appreciated the need of the day for increased productivity), I hope and trust that results for the current year will be more satisfactory. In this connection, I wish to mention that, due to the conservative and prudent policy observed by the Company in the past in the matter of dividends and to the policy of ploughing back profits, the reserve position is very sound, but still I cannot say that the Company is not adversely affected by the proposed Super Profits Tax. It may not be possible in future to add to our reserves to the extent possible in previous years, but it is hoped that the dividend rate could be reasonably maintained.

Labour Relations

The financial results are undoubtedly due to the harmonious co-operation and efforts of all our employees to whom again I would like to express my appreciation. We have still much to complete in our modernisation and expansion projects. With their continuing support we can look forward to the future with confidence and with mutual financial benefit.

Before concluding, I have to refer to the announcement in the notice calling this meeting which stated that Mr. A. E. Cooper was not offering himself for re-election. Mr. Cooper joined the Company in the latter part of 1954, and joined the Board of your Company and of the Managing Agents, the latter as Deputy Managing Director, in April 1960. He plans to leave India and to work in his homeland. His departure will be a great loss to the Company and I would like to express, on your behalf and on my own, our appreciation of the valuable services he has rendered to the Company. I wish him all success in his future career.



As you know, it has been my intention to propose to you, as the second and third items on today's agenda, that Mr. Victor Duxbury be elected to the Board in the vacancy caused by Mr. Cooper's retirement. I am very sorry to have to tell you that, during the last few days, Mr. Duxbury has advised the Company that personal considerations have made him decide to resign his position with the Company, and that he does not now wish to be considered a candidate for election to the Board.

Under these circumstances, Mr. Cooper has agreed to offer himself for re-election and to continue on the Board, if elected, until a suitable replacement for him can be arranged.

Note: *This document does not purport to be a report of the proceedings of the meeting.*

THIS HAND KEEPS THE INDUSTRY RUNNING

Millions of hands like this are reaching eagerly every day for a glass of cool water. ACCOOLER water cooler has the proud privilege of supplying them plenty of cool water—as a matter of fact, as much as they need.

Carry forward	32	94

* This represents accounts for 15 months ended 30th September 1961.

Extracts from the Directors' report: The total quantity of sugarcane crushed was 23,53.000 quintals with a recovery of 9.82 per cent, the sugarcane price remaining the same as last year. The Government of India have recently passed a legislation for linking the price of sugarcane with the sugar recovery from the season 1962-63 and the present rate of sugarcane for this Company's factory has been fixed at Rs. 4.42 per quintal. The Government have also announced the revised price linking formula effective from 1958. The Company has made provision of Rs. 8,16,000 for the payment of deferred cane price during the last two years. Although the details and the actual incidence are not yet known, this amount is expected to suffice the liability of the Company for the past four years.

The Lakshmi Industries and Cold Storage has suffered a loss of Rs. 9,131 owing to unprecedented depression in the price of groundnut kernel.

It is regretted that the Lakshmi Electricity Undertaking also sustained a loss of Rs. 7,820. As the licence is expiring shortly, the Government had given a notice for taking over the Electric Undertaking. Preparatory work is already completed and it is hoped that the undertaking will be taken over by the Government shortly.

With the enactment of Uttar Pradesh Imposition of Ceiling on Land Holdings Act, 1960 most of the land of Japra Farm will shortly be acquired by the Government. The remaining land will eventually be disposed of by the Company. The loss in Japra Farm came to Rs. 306.

The Directors are glad to report that the Company has applied for industrial licences to establish a 10-ton straw board factory and to increase the present crushing capacity of the sugar mills from 2,100 to 2,500 tons per day. It is hoped that the industrial licence for the straw board factory would be granted shortly.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	30,00,000	Gross block	82,85,646
Reserves and surplus	26,56,080	—Depreciation	46,78,632

†Represents Rs. 635 transferred to capital reserve.

Extracts from the Directors' report: The Directors regret to have to report that the results for the year cannot be regarded as satisfactory. The profit for the year shows a decrease of Rs. 1,83,018 as compared with the results of the previous year. The reason for this is that the dividends from the Company's holdings in Jute Mills, Electricity, Mining including Collieries, Paper Mills, Tea and Miscellaneous Companies have shown a decrease.

Investments: The Company's portfolio is representative of investments which are quoted on the Calcutta and Colombo Stock Exchanges with the exception of certain shares costing Rs. 7,38,456. The total of the market value of the investments for which quotations are available together with the unquoted investments as valued by Directors exceeds the book value at 30th September 1962 by Rs. 16,97,262.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	14,00,000	Investments	67,05,058
Reserves and surplus	9,30,457	Current assets	1,10,367
Other liabilities	16,38,891	Cash	63,923
	Rs. 69,69,348		Rs. 69,69,348

*Paid up capital consists of 21,000—5½ per cent cumulative preference shares of Rs. 100 each and 2,00,000 ordinary shares of Rs. 10 each. Of the ordinary Capital Rs. 7·50 per share is called up in cash and Rs. 2·50 per share is paid-up as Capital Bonus by capitalisation of reserves.

Dhanalakshmi Mills Ltd., Tirupur

(*Managing Agents*: Messrs. M. Nanjappa Chettiar and Sons. Tirupur.)

31st Annual General Meeting—30th March 1963.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sale of finished goods	1,73,04	1,60,73

Low	9.50	10.37

Extracts from the Directors' report: The factory commenced crushing on the 27th November 1961 and concluded on the 21st June 1962 with a crush of 1,773,447 quintals of cane as compared to 1,908,558 quintals in the previous year. The untimed rain and long spell of cold wave affected the quality of cane, and with the prolongation of crushing season during the summer, the recovery of sugar has been lower at 9.11 per cent as against 9.14 per cent in the previous year.

The previous year's accumulated stock of sugar and the increased production during the year created problems of finance and storage for the industry and the disposal of sugar has been much slower than the production.

The Company's share in the export loss amounting to Rs. 3,86,050 has also been adjusted in the accounts of the year.

Season 1962-63: The area under cane cultivation has considerably fallen. Moreover, due to diversion of cane to *gur* and *khandsari* where prices were ruling very high, the supply of cane to the Company's factory has been affected and the crushing for the current season is expected to be lower.

Subsidiary Company: There has been a substantial improvement in the working of the subsidiary Company, viz., Hindustan Wire Products Ltd., and better results are expected during the year.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	29,23,562	Gross block	60,30,070
Reserves and surplus	11,51,609	—Depreciation	35,52,045
Other liabilities	1,15,70,212		
		Net block	24,78,925
		Block in progress	70,762
		Current assets	1,10,99,804
		Investments	6,03,487
		Cash	3,03,385
	Rs. 1,56,45,383		Rs. 1,56,45,383

* Paid-up capital consists of 3,89,805 ordinary shares of Rs. 7·50 each fully called up.

Automobile Products of India Ltd.

[*Managing Agents*: Technical Services (Private) Ltd., Bombay.]

Extracts from the Directors' report for the year ended 31st July 1962: The loss after providing for depreciation on fixed assets and other charges amount to Rs. 34,48,014. To this is added the balance brought forward from last year of Rs. 14,61,710; additional taxation in respect of the previous year Rs. 1,768 and bonus adjustment in respect of the previous years Rs. 1,23,663 making a total debit of Rs. 50,35,155. After deducting from this the excess provision for Royalty made in the previous year now written back of Rs. 1,03,294 there is a final debit balance of Rs. 49,31,861 to be carried forward to next year.

The reduction in the Company's turnover caused by the cancellation of Meadows Diesel Engines project could not be made up completely within the year under review.

Machinery for the manufacture of *Lambretta* engine components were originally scheduled for delivery towards the end of 1960. Bulk of the machinery was delivered only by the middle of 1961. This in turn caused delay in completing the tooling and training of skilled personnel and most of the machines went into production only towards the end of 1961. Hence, there was a substantial loss of turnover in the Lambretta Division as well.

The overall sales turnover of the Company came down from Rs. 4,38,93,269 in the year which ended on 31st July 1961 to Rs. 3,25,96,381 for the year under review. From this sale, has to be deducted Rs. 65,59,486 being value of components transferred at cost to the Premier Automobiles Ltd. Thus, the net sales turnover of the Company for the year under review amounted to only Rs. 2,60,36,895. This represents a decline of Rs. 1,57,26,254 from the net turnover of the previous year.

In the initial stages of the manufacture of *Lambretta* engine components, rate of scrapping on the critical parts was high with the consequent excess consumption of material and man-hours.

Prices of the three models of *Lambretta* have been rigidly controlled by the Government. Notwithstanding the steady increase in the cost of production and sale, the Government were not inclined to grant any price increase till recently, with the result that the prices fixed by the Government in 1956 were progressively less and less remunerative.

It is gratifying to report, however, that the Government were pleased to grant in October 1962 an increase of Rs. 83 in the price of 150 cc. scooter and Rs. 50 in the case of the 48 cc. scooterette. Revision of the price of 175 cc. FLI three-wheeler is at that moment under consideration of the Government.

The Directors are glad to report that in the current financial year production and sales have shown a steady improvement and effective steps taken to reduce overhead expenditure and consumption of materials and other consumables have shown encouraging results.

The Company has been successful in obtaining outlet for its products in the export market. Messrs. Innocenti S. G., Milano, have been kind enough to grant it certain limited export rights to countries in the Middle East and Far East.

Towards the end of the year under review, the Company issued 2,50,000 right equity shares, against which applications for 89,720 equity shares have so far been received and these have been allotted in full.

The Company has made an application dated 30th November 1962 to the Industrial Finance Corporation of India for a third loan of Rs. 25,00,000 for purchase of machinery, particularly, *Pressure Die Casting Machines* and *Automatics* for completion of the projects on hand with the Company.

The Company had taken two mortgage loans aggregating Rs. 50,00,000 from the Industrial Finance Corporation of India. Out of this, after deducting the repayments made, a balance of Rs. 40,00,000 is due as on date.

Accounts in brief as at 31st July 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	75,00,000	Gross block	1,96,23,524
Capital suspense†	1,65,900	—Depreciation	58,65,436
Reserves	33,03,075		
Other liabilities	2,78,20,494	Net block	1,37,58,088
		Block in progress	44,869
		Current assets	2,00,06,227
		Investments	2,000
		Cash	46,924
		P.L. a/c deficit	49,31,861
	Rs. 3,87,89,469		Rs. 3,87,89,469

* Paid-up capital consists of 4,20,000 equity shares of Rs. 10 each fully called up: 25,000—5 per cent. redeemable cumulative preference shares of Rs. 100 each fully paid up and 5,000—6 per cent. tax-free redeemable cumulative second preference shares of Rs. 100 each fully paid up.

† Being share application money at Rs. 2.50 per share on right equity shares of Rs. 10 each, not yet allotted.

UNITED BANK OF INDIA LIMITED

STRUCTURE OF INTEREST RATES SHOULD BE REORGANISED

CHAIRMAN, DR. N. N. LAW'S PLEA

A PLEA for reorganising the structure of interest rates was put forward by Dr. N. N. Law, Chairman of the United Bank of India Limited, in the course of his speech at the Thirteenth Annual General Meeting of the Bank held at Calcutta on Monday, 25th March 1963. The reorganisation, in his opinion, should be such as to suit the economy and, at the same time, to improve the profitability of banks. Dr. Law pointed out that the convention evolved by British banks in regard to the maximum rate of interest on deposits which is 2 per cent below Bank rate and the prime rate of advances which is 1 per cent above the Bank rate with a minimum of 5 per cent was more pragmatic in its approach than the agreement adopted in this country. He wanted the Indian Banks' Association to modify the inter-bank agreement on similar lines but providing for a larger differential.

Extracts from the speech of Dr. Law are reproduced below:

GENTLEMEN,

I welcome you to this thirteenth annual general meeting of the United Bank. Since we met last year, we have lost our revered Director, Sri N. C. Datta, who died on 16th April 1962, at the age of 83 years. The death of Sri Datta has been a great loss to the Bank and the community. Way back in 1914, urged by the spirit of national service, when Sri Datta founded the Comilla Banking Corporation, banking was yet at a formative stage. His strength of conviction and urge for service is better appreciated when one remembers that he set forth on a pioneering enterprise and, in order to work whole time for it, gave up a lucrative legal practice. With his progressive approach, foresight and expert knowledge, he has made a marked contribution to the banking industry.

The closer I came to him the more I was charmed by his forthright behaviour, wealth of experience, and the warmth of his affection. Let us take consolation in the fact that he lived a glorious life, saw the fruition of his dream, assisted us in solving the difficult problems of amalgamation, and was able to see the United Bank well on the way to progress. May the departed soul rest in peace.

D. N. Mukerji

With a deep sense of sorrow I have also to refer to the rather untimely demise of Sri Dhirendra Narayan Mukerji, the founder of the Hooghly Bank, another amalgamating unit of the United Bank. On the 19th of February 1963, Sri Mukerji passed away at the age of 62. Sri Mukerji, as you are aware, coming from a well-known family, sacrificed a lot in the interest of the nation and built up the Hooghly Bank, the hard way. The story of the growth of the Hooghly Bank, and its march from a small place on Dharamtala Street to 42, Chowringhee Road, is like the story "from log cabin to White House." His efforts, with winning manners, contributed not a little to solving the problems of the merger. Even when he was not on the Board of this Bank, he did his best to support the cause of the institution. We condole his very untimely death.

On this occasion, we cannot but remember with reverence the founders of the other two amalgamating units—the Comilla Union Bank and the Bengal Central Bank. The late Sri I. B. Dutt started the Comilla Union Bank in 1922. He had no need for personal earnings and was motivated entirely by selfless service to the community. Those who know the history vividly recall even today how he, for all his aristocratic heritage and foreign education, went from door to door, with a spirit of humility, for collecting a few rupees either by way of capital or deposit.

The late Sri J. C. Das, who founded the Bengal Central Bank, was well known in the country as a professional accountant, having acquired his accountancy qualifications both in the U.S.A. and U.K. His firm of accountants enjoyed a high reputation in the country. His advent in the field of banking was again a case of service to the cause of the community. The Bengal Central Loan Company was established by him at Calcutta in 1918, with a view to helping and co-ordinating the activities of various loan offices in Eastern India. A few years later, it was converted into a regular commercial bank. Development of the Bengal Central Bank was entirely the result of his untiring efforts. The late Sri Das had often thought of a merger of the larger banks of Bengal to make it one of the foremost in the country. It is not generally known that, in 1948, the merger of the Bengal Central Bank and the Comilla Banking Corporation was almost complete, but certain circumstances prevented it. It is an irony of fate that, when the amalgamation really took place, with a larger purview, he was no longer with us to see the fruits of his efforts.

I take this opportunity to pay my homage to the deceased founders of the amalgamating units.

National Emergency

I must make a reference to the state of emergency that the country now faces. Our defence forces who gallantly resisted the massive aggression against heavy odds deserve the highest tribute. The memory of the brave who laid down their lives in defending the motherland will ever remain enshrined in every heart.

Confronted with the challenge, the immediate reaction of the nation has been to face up to it with unity and determinaion. It is now the duty of all of us to see that the initial enthusiasm and the sense of oneness is maintained so that the period of emergency is seen through successfully.

Emergency Risk Insurance

Of the measures taken with the advent of the emergency, mention must be made of the Emergency Risk Insurance, which also covers the plantation industry. This has been a timely and appropriate step. However, by the nature of things, the schemes of emergency insurance cannot cover all the facets of the risks which are inherent in the situation. As in the case of the risks covered under the Emergency Risk Insurance, there are other risks also which had better be covered similarly, rather than left with the respective units to carry. I feel that a close study of the risks of every nature that the financial institutions, *vis-a-vis* industry and trade, have to bear, should be undertaken, in collaboration with all the sections concerned. Remedies suggested by such a study could be formulated well in advance and implemented whenever the situation so warrants.

I take this opportunity to mention that the services rendered by your Bank in the frontal areas during the relevant period, were highly appreciated by the Chief Minister of Assam, the business community, in general, and the tea industry, in particular. I must also make particular mention of the staff of all categories at our branches in the forward areas who conducted themselves admirably well during the crisis period.

Gold Control Measures

Another emergency measure that deserves mention is the steps taken to discourage hoarding of gold. The issue of gold bonds has been a very well devised measure. It is most unfortunate that it did not meet with much success.

The follow-up measure imposing a complete control on dealings in and uses of gold, has raised an amount of controversy which, however, could be expected. That the measure has had its initial impact on gold racketeering is noticeable from the reactions in the gold markets abroad as reported in the London *Economist*. However, the manner and the degree of success of the measure will depend on many factors. Varied and difficult problems of breaking down the age-old traditions and building up an adequate administrative set up will have to be faced. All this will take time.

Super Profits Tax

As expected, the budget for 1963-64 has imposed substantial burden in the form of increased and new taxation. On the whole, in view of the emergency, such a step was inevitable. The increased outlay will largely be financed by tax resources and less by deficit financing. This approach is preferable to relying more on deficit financing, which would have further eroded the purchasing power. However, this positive quality of the budget would considerably be set off by the adverse impact of the Super Profit Tax now proposed. A few remarks on this aspect of the budget will not be out of place here.

By further taxing the taxed profits of corporate bodies, their ability to build adequate reserves, through ploughing back, will be seriously curtailed. Particularly in the case of banks, the need for plough back, both in the form of published as well as internal reserves, is pressing and this has fully been recognised by the monetary authority; the Super Profit Tax will hit hard the already limited ability of the banks. If the recent attempts to strengthen the banking system are to succeed, some method of relief from the incidence of this tax will have to be devised.

I may suggest that, in case of banks, their transfers to reserves—published and internal—to the extent of at least 30 per cent of after-tax profit be specially exempted from the chargeable profit to be calculated under any modifications to the Super Profit Tax that may be introduced as a result of reappraisal. Such a concession, while helping the banking system, will not result in any great loss to the exchequer in terms of revenue.

The imposition of Super Profit Tax, besides its impact on corporate finance, also has a bearing on the industrial development in the country. The importance of private sector investment for economic development is well recognised and has also been emphasised in the *Economic Survey* released along with the budget. In recent years the capital market was showing signs of healthy growth and a new section of investors was gradually developing. The imposition of Super Profit Tax as proposed has produced an impact on the market, which, if continued, may distort this healthy development to an undesirable degree.

Investment Trust

It is heartening to learn that the Government is considering the question of formation of Investment Trusts with a view to spreading the benefit of the industrial investment in the community at large. I have, in the past, emphasised the importance of and need for Investment and Unit Trust, as recommended by the Shroff Committee. It is well known that the growth of such trusts has so far been inhibited on account of the incidence of multiple taxation which, under the present tax laws, such trusts would be subject to. I am, therefore, particularly happy that the idea is now being considered in earnest at the appropriate level.

I would, however, submit that, in order to achieve the desired results, it would be necessary for the Government to provide conditions and encouragement for such trusts to grow extensively throughout the country. Such a broad-based development, with direct participation from the small investors, alone can provide for a healthy, balanced and natural growth of the capital market.

Compulsory Deposit Scheme

The other measure I would like to refer to is the Compulsory Deposit Scheme, which is being introduced for the first time. As a step to curtail consumption, to mobilise resources and to ensure a general participation in the defence efforts the scheme has been well devised. However, the scheme in its present form can seriously affect the growth of deposits with the commercial banks by diversion of funds, and to that extent inhibit commercial banks' ability to serve the needs of industry and trade.

The scheme will affect the very section of the people who provide the prime deposit to the banks. The banking system, therefore, can legitimately expect that the Government will take other measures so as to mitigate their problem created by this imposition. We have, in the past, had occasion to refer to the need for utilising the commercial banks as depositories of Government funds, and I feel that the present measure is a further justification for giving serious consideration to this idea.

Bank's Working

The Directors' report and the accounts for the year 1962 have been in your hands for some time and, I am sure, you have studied them with interest. You will, no doubt, have seen that, despite the situation that developed towards the end of the year, the results have been satisfactory. Deposits have risen by

Rs. 5.83 crores or by nearly 10 per cent over the previous year.

This growth in deposits enabled us to increase our advances partially to meet the rising demand for bank credit, and to expand our investment portfolio in Government securities. Our Foreign department continued to render services to the country's import and export trade and, over the years, the volume of business transacted has registered a satisfactory growth, with a pronounced increasing trend. Our Pakistan branches continued to play their useful role in the development of the local economy and their business during the year was satisfactory.

Desai Award

In September last, the Award of the National Industrial Tribunal (Bank Dispute) was announced, with its provisions taking effect from January 1962. You will have noticed that the establishment charges have risen by Rs. 24 lakhs, inclusive of normal increment, etc., as against an increase of about Rs. 8 lakhs during the previous year. This is an increase of 16.7 per cent over the previous year and of 4.1 per cent on the quantum of increase in deposits in 1962. Most of this rise is due to the extra load imposed on the Bank by the Award, and its other implications are yet to be felt in the current year.

However, now that the Award has been implemented in the interest of the well-being of the staff, one may reasonably expect a higher degree of co-operation from the staff members. Only then can the incidence of the operating cost be somewhat lightened. I do hope that, while the management will continue to make their efforts, the staff will not be lacking in extending greater co-operation.

Interest Rates

You would have noticed that interest on deposits during the year under review has increased by Rs. 24 lakhs for a rise of only Rs. 5.83 crores in deposits. This works out to 4.1 per cent on the amount of increase in deposits and reflects the tendency towards increase in the rates of interest on deposits noticed during the last few years. If we are obliged to abandon our restraint with regard to interest on deposits, I am afraid, our operating cost ratio would further rise. I would once again like to repeat that higher interest rates on bank deposits, in a regulated and closed economy, does not, as it could not, by itself act as stimulant to deposit growth.

The recent growth in bank deposits is largely attributable to opening up of new branches, increase in the national income, expansion of currency and similar other factors. If all these are taken into account, one would see how little, if any, has been the influence of increased rate of interest on the growth of deposits. At the same time, banks' operating costs have been unnecessarily raised. As a result, the rates of interest on advances have also increased.

If the lending rates were raised to broaden the differential with the deposit rates and thus substantially to strengthen bank reserves, a useful purpose would have been served. But, instead, the trend has continued to be that the increase in interest rate on deposits has pushed up the lending rates without expanding the differential. The structure of interest rates, I feel, should be reorganised to suit the economy, at the same time to improve the profitability of the banks.

The convention evolved by the British banks in this regard, viz. that the maximum rate of interest on deposits be 2 per cent below the Bank Rate and that the prime rate of advances be 1 per cent above the Bank Rate with a minimum of 5 per cent, is more pragmatic in its approach than the agreement adopted in this country. I think the Indian Bank's Association should reorganise the inter-bank agreement on similar lines, but providing for a larger differential.

Service Charges

Here I would like to reiterate the need for standardising the charges for various services provided by banks. While deposit rates are regulated by agreement, absence of standardisation of service charges based on the costs of such services, militates against true implementation of the deposit rate agreement. I am at a loss to understand how, in the face of the existing agreement on deposit rates, and even on lending rates, can there be any objection to an agreement on service charges, particularly when such an agreement becomes necessary in the interest of the existing ones.

Note:—*This does not purport to be a record of the proceedings of the Annual General Meeting.*

SUPER PROFITS TAX

(*Concluded from page* 541)

panies and especially small companies engaged in trading and manufacturing operations to grow by exempting them from the Super Profits Tax.

Concessions for Export Profits

The Government has recognised the need for stimulating exports through the grant of concessions in respect of profits earned on exports. Thus, the Finance Bill, 1963, contains specific concessions in respect of income-tax and super-tax related to the exports achieved by assessees. The Super Profits Tax Bill not only lacks similar concessions but is likely to negate the concessions given in the Finance Bill, 1963, by taxing the residual profits without making an allowance for the profits earned in respect of exports. The attainment of our export targets during the coming year will require the maximum effort on the part of the business community and should be stimulated by the grant of fiscal incentives by the Government. In order to give a strong boost to exports, the Super Profits Tax Bill should totally exempt from the tax, or, alternatively, levy the tax at nominal rates on, the profits earned through exports.

Rebates for Profits Ploughed Back

Strong incentives should be given to companies to plough back as much of their profits into reserves as possible. It has been shown by the statistical studies of the Reserve Bank and various other data that the retained profits constituted the main source of funds for rehabilitation, modernisation and expansion in the corporation sector. Between 1951 and 1960, internal resources accounted for more than 60 per cent of the total gross capital formation of leading companies studied by the Reserve Bank. It has also been shown that retained earnings constituted almost 40 per cent of the net profits after tax of companies. The levy of the Super Profits Tax will severely curtail the net profits after taxation of various companies. Their tendency may, therefore, be to try and maintain their dividends at the previous level by not ploughing back profits into the business. Without special incentives to do so, shareholders may demand maintenance of dividends and a foregoing of corporate savings as a result of the Super Profits Tax. A drop in corporate savings will have severe adverse effects on the industrial growth of the country. In order to encourage companies to plough back their profits into reserves even after the levy of the Super Profits Tax it should be provided that a rebate equal to one-third or one half of the Super Profits Tax would be given to companies in respect of profits ploughed back into the business or put into reserves. In past years, rebates from income-tax were given in respect of profits ploughed back by companies. If the rate of corporate saving is not to fall sharply as a result of the introduction of the Super Profits Tax, substantial incentives on these lines should be given.

Amend Section 109 of Income-tax Act

In the case of private companies and public companies in which the public are not substantially interested, the level of corporate savings will be compulsorily reduced unless Section 109 of the Income-tax Act is amended. Under Clause (iii) of this section, these companies are forced to pay out as dividends certain statutory percentage of their profits after tax. Since the imposition of the Super Profits Tax will result in a substantial fall in the profits after tax of these companies, they will be unable to maintain the normal plough back into the business. Section 109 of the Income-tax Act should be amended so as to lower the statutory percentages of profits after tax, which such companies will be required to distribute, so that they will be able to plough back into reserves the same amounts of profits as would have been possible without the imposition of the Super Profits Tax. The amendment of Section 109 of the Income-tax Act by lowering the statutory percentage of profits which such companies have to distribute is all the more imperative in so far as the section applies to many small companies which are badly in need of building up their financial resources by ploughing back their profits. The Government should recognise the importance of maintaining the level of corporate savings as far as possible and, therefore, amend Section 109 of the Income-tax Act.

Loan Repayments

As a result of the introduction of the Super Profits Tax, the net profits after tax of many companies will fall heavily. They may, therefore, be unable to meet their obligations in respect of repayments of long-term loans which they had taken in the past and for which the basis of financing was the old tax structure. The Super Profits Tax may place companies with heavy long-term borrowings in an extremely embarrassing position by making it very difficult, if not impossible, for them to repay their loans which they had originally planned to do from plough-back of their profits after paying tax at the old rates. The Government surely should recognise the plight of such companies and give them some rebate or concession from the Super Profits Tax which will at least enable them to meet their repayment obligations under long-term loans contracted in the past. It should be provided that the amount to be repaid under long-term loan arrangements during a particular year could be deducted for computing the chargeable profits of the business.

The amendment of the Super Profits Tax Bill on the lines suggested above will bring about a substantial improvement in the new tax measure. Although the principle of progressive taxation on which it is based is unsound, amendments on the abovementioned lines will minimise the adverse economic effects of the new tax. They will partially revive the capital market. These amendments will partially rescue the proposed measure from creating economic dislocation, regression and chaos in the Indian economy.

DELHI LETTER

(*Concluded from page* 536)

eventually accommodate six generators of 140,000 kw. each.

The Estimates Committee's report on the Ministry of Irrigation and Power lays bare the acute shortage of power that the country will suffer from at the end of the third Plan. We will have to have several Neyvelis and Chandrapuras to meet the increasing demand for power. The Committee felt that the firm generating capacity in the country would continue to lag behind the anticipated demand throughout the third Plan. The overall shortage is expected to increase from 353.1 MW. in 1961 to 455.3 MW. in 1966. This shortage will be the acutest in 1964 and heaviest in the Bihar-DVC-Bengal region. Almost all the States and Union Territories will come under its blow, the only exceptions being Jammu and Kashmir, Kerala, Rajasthan and Delhi. The shortfall will be further aggravated by the additional requirements of the defence-oriented industries.

The Planning Commission, the Ministry of Irrigation and Power and the Central Water and Power Commission would do well to pay heed to the Committee's suggestion that capacity for power generation must be created ahead of the installation of industrial capacity, for "the demand for power nearly always outruns the available supply." Another important suggestion which should commend itself to the authorities concerned is the preparation of blue-prints of all the hydel schemes on which some work has been done, so that they could be readily executed whenever the need arose in any particular region.

The Estimates Committee has done a signal service to the people with its hard-hitting criticism of the procedural delays and administrative bottlenecks faced by project authorities in procuring foreign exchange, machinery, equipment, steel, etc. It has suggested the appointment of a high-power inter-ministerial committee to check these bottlenecks.

WORLD TRADE CENTRE

A World Trade Centre costing some $270 million is to be built by the Port of New York Authority on the west side of lower Manhattan to help promote export-import trade. Located in an area of the world's heaviest concentration of international trade activity and agencies, the Centre will bring together members of the international trade community under a "single roof," enabling them to synchronise and co-ordinate their activities for peak efficiency. A host of essential export-import trade services, including customs brokers, freight forwarders, steamship, air, truck and rail carriers, marine insurance firms, American and foreign banks, and important commodity exchanges, are to be concentrated in the new Centre. Also planned for inclusion are new facilities for the U.S. Customs Service. In addition, it will comprise a reservoir of world trade information sources, stemming from the participation of consulates, commercial attaches, trade associations, U.S. and international chambers of commerce, and a variety of other agencies whose export knowledge of specific phases of world trade activity will assist in keeping businessmen up-to-date. In effect, the Port of New York's trade service agencies through the Centre will be at the immediate call of both American and foreign businessmen. The Centre will assist them in many ways, such as displaying their products before buyers from every part of the world; informing them of new products, prices, regulations, and most importantly, trade opportunities, and presenting new techniques for their participation in world trade.

• • •

The Common Market Commission has worked out a Bill providing for full freedom of movement for workers and employees from the member-countries and for abolition of priorities for national labour markets. Workers from countries outside the Common Market are allowed to be hired only according to the provisions of the Bill, if the reserves within the market are depleted. The Federation of German Employers' Organisations has criticised the proposed measure.

Notices

INDIAN ALUMINIUM COMPANY LIMITED

31 Chowringhee Road, CALCUTTA-16

NOTICE IS HEREBY GIVEN THAT THE twenty-fifth Annual General Meeting of Indian Aluminium Company, Limited will be held at its registered office, 31 Chowringhee Road, Calcutta-16, on Friday, April 26th, 1963, at 11.30 a.m., for the following purposes:

2. To declare dividends.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and to fix their remuneration.
5. As special business, to consider and if thought fit to pass with or without modification the following resolution of which special notice has been received:

   "That Mr. J. A. Dullea, who retires at this meeting and who has attained the age of sixty-five years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

The register of members and the share transfer registers of the Company will be closed from April 5th to April 26th, 1963, both days inclusive.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on April 26th, 1963, or to their mandataries. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

Any member of the Company entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

By Order of the Board,

T. D. SINHA,
Secretary.

February 15th, 1963.

The Explanatory Statement and Statement of Interest relating to Item No. 5 above in terms of Section 173(2) of the Companies Act 1956 has been forwarded to the members of the Company along with the Notice.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 37th Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House," 57-B, Free School Street, Calcutta, on Wednesday, the 24th day of April, 1963, at 11 a.m., for the following purposes:

1. To consider the Profit and Loss Account for the year ended the 31st December, 1962, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare dividends.
3. To appoint Directors in the place of those who retire by rotation.
4. To appoint Auditors and to fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolutions of which number 5 will be proposed as an ordinary resolution and numbers 6 and 7 as special resolutions:

5. (*As an ordinary resolution*): "That Sardar Hardit Singh Malik, a Director of the Company, who retires by rotation and who attained the age of sixty-eight years on 23rd November, 1962, be and is hereby re-appointed a Director of the Company and it be and is hereby specifically declared that the age limit for directors prescribed in Section 280 of the Companies Act, 1956, shall not apply to him."

   Special Notice of intention to propose this resolution in conformity with Section 281 of the Companies Act, 1956, has been received by the Company.

6. (*As a special resolution*): "That subject to the approval of the Central Government, the terms and conditions of service of Mr. Prakash Narain Haksar, a Director and Deputy Managing Director (Purchasing) of the Company, as approved by a special resolution at the Annual General Meeting held on 27th April, 1961, be and are hereby varied in the manner following, that is to say:—
   (a) a pension be provided to him in accordance with the Rules and Regulations of The Dunlop Rubber Company (India) Limited Executive Staff Pension Fund established by the Company under the Trust Deed dated 22nd September, 1962, and
   (b) the payment of bonus to him be discontinued,

   and the said terms and conditions varied as aforesaid be and are hereby approved."

7. (*As a special resolution*): "That subject to the approval of the Central Government, the terms and conditions of service of Mr. Phani Bhusan Sen Gupta, a Director and Deputy Managing Director (Administration) of the Company, as approved by a special resolution at the Annual General Meeting held on 19th April, 1960, be and are hereby varied in the manner following, that is to say:—
   (a) a pension be provided to him in accordance with the Rules and Regulations of The Dunlop Rubber Company (India) Limited Executive Staff Pension Fund established by the Company under the Trust Deed dated 22nd September, 1962, and
   (b) the payment of bonus to him be discontinued,

   and the said terms and conditions varied as aforesaid be and are hereby approved."

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

The Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 17th April to 1st May, 1963, both days inclusive. Any dividends that may be declared will be paid only to those members whose names appear on the above Registers on 16th April, 1963.

By Order of the Board,

P. B. SEN GUPTA,
Director and Secretary.

DUNLOP HOUSE,
57-B, FREE SCHOOL STREET,
CALCUTTA,
29th March, 1963.

Note: An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been annexed to the notice issued to the members of the Company.

1. To adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1962.
2. To sanction the declaration of a Dividend.
3. To appoint a Director in the place of Mr. Pratapsinh Mathuradas who retires by rotation, and being eligible offers himself for re-appointment.
4. To appoint a Director in the place of Mr. N. M. Wagle who retires by rotation, and being eligible offers himself for re-appointment.
5. To appoint a Director in the place of Mr. J. D. Choksi who retires by rotation, and being eligible offers himself for re-appointment.
6. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting, and to fix their remuneration.

SPECIAL BUSINESS

7. AND for the purpose of considering, and if thought fit, to pass (with or without amendment as may be permissible), the Resolutions set out below as Special Resolutions:—

(*a*) Special Resolution No. I

"RESOLVED that, subject to permission being accorded by the Central Government under Section 363 of the Companies Act, 1956, in respect of all or such of the amounts referred to hereafter for which permission is necessary, the Company hereby waives the recovery from Messrs. W. H. Brady & Co. Ltd. (who are or may be deemed to be 'associates' of the Company) of the sums of Rs 43,158/52, Rs. 87,429/40, Rs. 67,363/69 and Rs. 34,464/48 paid by the Company to Messrs. W. H. Brady & Co. Ltd. during the years 1960, 1961, 1962 and 1963 (up to the 11th March 1963), respectively, in respect of goods purchased from them by the Company."

(*b*) Special Resolution No. II

"RESOLVED that, subject to permission being accorded by the Central Government under Section 363 of the Companies Act, 1956, in respect of all or such of the amounts referred to hereafter for which permission is necessary, the Company hereby waives the recovery from Messrs. The Empire Dyeing and Manufacturing Co. Ltd. (who are or may be deemed to be 'associates' of the Managing Agents of the Company) of the sums of Rs. 1,14,504/27, Rs. 2,75,904/87, Rs. 63,579/44 and Rs. 1,30,923/38 paid by the Company to Messrs. The Empire Dyeing and Manufacturing Co. Ltd. during the years 1960, 1961, 1962 and 1963 (up to the 11th March 1963) respectively, in respect of the services by way of processing work rendered by them to the Company."

(*c*) Special Resolution No. III

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. W. H. Brady & Co. Ltd., Bombay (who are or may be deemed to be 'associates' of the Managing Agents of the Company) to be operative as from the date of this Meeting until determined by three months' notice given by either side to the other, in respect of purchases from Messrs. W. H. Brady & Co. Ltd., of machinery and spare parts of machinery, laboratory and testing equipment and mill stores such as emery fillets, spindle tapes, valves, pirns, bobbins, beam flanges, steel strappings, greases and lubricating oils, beltings and such other goods in which they trade or do business or may trade or do business, as well as in respect of the sale or supply to them of any property or any article produced, dealt in or owned by the Company; subject to the conditions that the prices of such mill stores, machinery and spare parts and such other goods and equipment as aforesaid shall be such as are reasonable and/or are approved of by the Directors of the Company, and that all payments to be made to the Company by Messrs. W. H. Brady & Co. Ltd. shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. W. H. Brady & Co. Ltd."

(*d*) Special Resolution No. IV

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Central Government being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. The Empire Dyeing and Manufacturing Co. Ltd., Bombay (who are or may be deemed to be 'associates" of the Managing Agents of the Company)—(subject to any amendments as may be suggested by the Central Government and accepted by the Board of Directors of the Company and by Messrs. The Empire Dyeing and Manufacturing Co. Ltd.,)—to be operative as from the date of this Meeting, until determined by three months' notice given by either side to the other in respect of Messrs. The Empire Dyeing

and Manufacturing Co. Ltd. rendering services by way of any work of or in relation to processing of cloth and yarn such as bleaching, dyeing, printing, raising, mercerising and finishing, and in respect of purchases from them of such goods in which they trade or do business or may trade or do business as well as in respect of sales to them by the Company of any property or any article produced, dealt in or owned by the Company, subject to the conditions that the prices or rates to be paid by the Company shall be reasonable and/or approved of by the Directors of the Company, and that all payments to be made to the Company by Messrs. The Empire Dyeing and Manufacturing Co. Ltd., shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. The Empire Dyeing and Manufacturing Co. Ltd."

(e) Special Resolution No. V

"RESOLVED

(a) that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of an agreement for sale in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, for the sale to Messrs. Bombay Ring Travellers Co. Ltd. (who are or may be deemed to be 'associates' of the Company's Managing Agents), of two plots of land of the Company's Dye Works at Cadell Road, Mahim, namely (i) an area admeasuring about 4,300 square yards (over which Blocks 'Q', 'O' and 'O1' are at present located), and (ii) an area admeasuring about 2,300 square yards (situate on the other side of a 20' wide road between these two plots (subject, however, to increase or decrease in area as provided in the aforesaid draft Agreement), at the price of Rs. 130 per square yard, and on payment, by way of reimbursement, of betterment charges under the Town Planning Scheme in respect of these plots at Rs. 5 per square yard; subject to the condition that the stamp duty and registration charges in respect of the documents relating to the sale of the said two plots shall be borne and paid by the purchasers.

(b) that the Board of Directors of the Company be and they are hereby authorised to complete the aforesaid agreement for sale and thereafter to complete the conveyance of the said two plots of land in favour of Messrs. Bombay Ring Travellers Co. Ltd. and/or their nominee or nominees in accordance with the terms of the said agreement for sale."

The Explanatory Statement under Section 173 is annexed in respect of the above Resolutions.

The drafts of the contracts referred to in Special Resolutions Nos. III, IV and V are open for inspection by any Member at the Registered Office of the Company on all working days from 10-30 a.m. to 1-00 p.m.

By Order of the Board,

NOWROSJEE WADIA & SONS (PRIVATE) LTD.,
NEVILLE N. WADIA,
Director,
Managing Agents.

BOMBAY, 14*th March*, 1963.

Notes:—

(a) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(b) The Share Transfer Books of the Company will remain closed from Saturday, the 9th March, 1963 to Friday, the 29th March, 1963, both days inclusive.

(c) The Dividend when declared will be made payable at the National and Grindlays Bank Ltd., Bombay, on or after the 26th April, 1963, to those Members whose names stand on the Register of the Company on the 29th March, 1963, and the Dividend Warrants will be duly posted to them.

(d) The members are requested to notify immediately any change of address to the Company.

(e) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above is annexed to the Notice of the Annual General Meeting posted to the Members.

Registered Office:
'NEVILLE HOUSE',
BALLARD ESTATE,
BOMBAY, 1.

THE CENTRAL BANK OF INDIA LIMITED

Registered Office:
Central Bank Building, Mahatma Gandhi Road, Fort, BOMBAY-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FIFTY-SECOND ANNUAL GENERAL MEETING of the Shareholders of THE CENTRAL BANK OF INDIA, LIMITED, will be held at the Walchand Hirachand Hall, 4th Floor, Lalji Naranji Memorial Indian Merchants' Chamber Building, 76, Vir Nariman Road, Churchgate, Bombay-1, on Monday, the 29th day of April, 1963, at 4-00 p.m. (S.T.), to transact the following business:—

1. To receive, consider and adopt the Report of the Directors and the Audited Accounts for the period ended 31st December, 1962.
2. To declare a dividend.
3. To appoint a Director in place of Mr. Cooverji H. Bhabha, who retires by rotation under Article 92 of the Company's Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
4. To appoint a Director in place of Mr. Dharamsey M. Khatau, who retires by rotation under Article 92 of the Company's Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
5. To appoint a Director in place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation under Article 92 of the Company's Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
6. To appoint a Director in place of Mr. Nani A. Palkhivala, who retires by rotation under Article 92 of the Company's Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
7. To consider and, if thought fit, to pass, according to the provisions of Section 309 of the Companies Act, 1956, the undermentioned Resolution, with or without modification, as ordinary Resolution:—

   "RESOLVED that Mr. Nariman K. Karanjia, Managing Director of the Company, be paid during the period of his appointment as such Managing Director, the undermentioned remuneration, viz:—

   Monthly salary of Rs. 5,500 and Rs. 350 per month as car allowance with the right to participate in the Provident Fund, Gratuity and other benefits and to receive the Bonuses that may be sanctioned by the Company for its staff from time to time provided that he shall not be entitled to any further remuneration or sitting or other fees as a Director."

8. (a) To appoint Auditors to audit the accounts of the Company and such of the Branch Offices of the Company as the Meeting may determine and to fix their remuneration.

   (b) To consider and, if thought fit, to pass the following Resolution, with or without modification, as a Special Resolution:—

   Special Resolution

   "RESOLVED that pursuant to Section 314 of the Companies Act, 1956, consent of the Company be and is hereby accorded to the appointment of Messrs. A. F. Ferguson & Co., a Partnership Firm, one of whose Partners, viz., Mr. Naval Rustomji Mody, is a relative of Sir Homi Mody, a Director and Chairman of the Company, as Auditors of the Company and as such holding an office or place of profit under the Company, for the period commencing from the conclusion of this Annual General Meeting held in 1963 to the conclusion of the next Annual General Meeting, and for attending to such other work as may be entrusted to the said firm of Messrs. A. F. Ferguson & Co. during the period of their appointment by the Board of Directors of the Company."

9. (a) To consider and decide which Branch Offices of the Company in and outside India, including any Branch Offices which may be opened hereafter, other than those resolved to be audited by the Company's Auditors, shall be audited by persons qualified to act as Auditors, and in that connection to authorise the Board of Directors to appoint from time to time, in consultation with the Company's Auditors, such persons as are qualified for appointment as Auditors of the Company under Section 226 of the Companies Act, 1956, on such terms and conditions and remuneration as the Board may deem fit, to audit the accounts of such Branch Offices of the Company.

   (b) To consider and, if thought fit, to pass, with or without modification, the following Resolution for applying for exemption from audit of the accounts of the Company's Branch Offices other than those resolved to be audited respectively by the Company's Auditors and by persons qualified to act as Auditors.

   "RESOLVED that the Board of Directors be and is hereby authorised to apply to the Central Government under the Companies (Branch Audit Exemption) Rules, 1961, for exemption from audit of the accounts for the year ending 31st December, 1963, of all Branch Offices, now existing and which may be opened hereafter during the said year ending 31st December, 1963, other than those resolved to be audited respectively by the Company's Auditors and by other persons qualified to act as Auditors from the provisions of Section 228 of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960, and to agree to such terms and conditions as the Central Government may prescribe in this behalf, and in the event of such exemption being not granted in respect of any of such Branch Offices, then and in such event the Board of Directors be and is hereby authorised to appoint such persons as are qualified to act as Auditors of the Company, in consultation with the Company's Auditors and on such terms and conditions, as the Board of Directors may decide upon from time to time for audit of the accounts of such last mentioned Branch Offices."

10. To consider and, if thought fit, to pass, with or without modification, the following Resolution, as Special Resolution:—

    Special Resolution

    "RESOLVED that pursuant to Sub-Section (1) of Section 163 of the Companies Act, 1956, the registers, indexes, returns, books, certificates and documents of the Company required to be maintained and kept open for inspection under Section 163 of the Companies Act, 1956, or any or more of them may be kept at the Registered Office of the Company or at any one or more of the following places within the City of Bombay, namely:—

    (1) Laxmi Insurance Building at Sir Pherozeshah Mehta Road, Fort, Bombay.

    (2) Byramjee Jeejeebhoy School at Queen's Road, opposite Charni Road Railway Station.

    (3) Dadar Branch premises of the Bank at Bhowanishanker Road, Dadar.

By Order of the Board,
N. K. KARANJIA,
Managing Director.

BOMBAY, 20*th March*, 1963.

Note:—A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(a) The Transfer Books of the Company will be closed from Wednesday, the 10th day of April, 1963, to Monday, the 29th day of April, 1963 (both days inclusive).

(b) Dividend Warrants for the half-year ended 31st December, 1962, will be posted to the Shareholders at their Registered Address on and after the 13th day of May, 1963. Shareholders are requested to intimate to the Company their change of address, if any, immediately.

(c) The Explanatory Statement required under Section 173 of the Companies Act, 1956, has been forwarded to the Members of the Company.

TREND OF MARKETS

MONEY TIGHT AGAIN

(From Our Own Correspondent)

BOMBAY, 27*th March*

Stringent conditions continued to prevail in the short-term money market during the week under review also. The supply of funds no doubt improved, but it was insufficient fully to meet the persistently heavy pressure of demand. Three banks were reported to be big borrowers. Consequently, the inter-bank call rate was maintained throughout the week at the high level of 6¼ per cent. Conditions in Calcutta were also extremely tight, the call rate standing at 6¼ per cent, same as last week.

The prevailing tight money situation is reflected in the poor response to the 91-day Government of India Treasury Bills, tenders for which opened on Monday the 25th inst. The total amount offered was no more than Rs. 2 crores which was also the amount invited and accepted. The average rate of accepted tenders continued unaltered at Rs. 2.370 per cent per annum. The Intermediate Treasury Bills, too, evoked poor response, the amount of Bills actually sold from the 20th to 23rd inst. being just Rs. 6 lakhs which was, of course, higher than the Rs. 50,000 fetched a week before.

India's foreign assets rose by a further Rs. 1.61 crore to Rs. 117.57 crores during the week ended 22nd March 1963. The whole of this rise was accounted for by balances held abroad which aggregated Rs. 12.49 crores, as against Rs. 10.88 crores in the previous week, while foreign securities held in the Issue Department of the Reserve Bank were unchanged at Rs. 105.08 crores. Loans and advances to scheduled banks receded by Rs. 7.29 crores to Rs. 69.38 crores, of which those against usance bills amounted to Rs. 54.31 crores, a fall of Rs. 2.24 crores. Notes in circulation declined by Rs. 11.36 crores to Rs. 2,230.44 crores.

The persistently rising trend of credit made available by scheduled banks to their clients noted since 14th December 1962 was somewhat halted during the week ended 15th March 1963 when the total credit declined by about Rs. 2 crores to Rs. 1,578.55 crores. In contrast, the deposits of banks spurted by Rs. 8.33 crores to Rs. 2,162.69 crores and inter-bank borrowings by Rs. 3.68 crores to Rs. 40.32 crores. The banks, as a result, reduced their borrowings from the Reserve Bank to some extent, by Rs. 5.38 crores to Rs. 78.28 crores, of which those against usance bills alone accounted for Rs. 56.20 crores, a fall of Rs. 2.51 crores. Investments show a nominal drop of Rs. 32 lakhs to Rs. 587.55 crores.

Activity in the Gilt-edged market was considerably restricted, with fresh buying support lacking. Central loan 3½ per cent 1974 was subjected to heavy selling and marked down by Rs. 2 to Rs. 96.4 per cent. 1972 and 1973 both declined by 20 nP to Rs. 98.90. State loans were all unchanged. 6½ per cent 1977 Gold Bonds were nominally quoted at Rs. 116, giving a redemption yield of 5.06 per cent.

In the foreign exchange market, the banks' selling rate for ready dollars was unaltered at Rs. 478 per $100. But their buying rate was lower by 25 nP at Rs. 474.50. On the New York Exchange, the £ sterling strengthened *vis-a-vis* the dollar, the spot rate improving by 0.070 cent to 280.060—280.090 cents and the three months' forward by 0.120 cents to 279.240—279.270 cents.

GOLD EASES FURTHER

(From Our Own Correspondent)

BOMBAY, 27*th March*

While gold eased further, silver and sovereign closed steady this week. Trading was restricted and movements were narrow.

With no significant backing forthcoming from silver, ready gold slipped from Rs. 101 to Rs. 100 at which level it closed, as against Rs. 102 a week ago. Sovereign commenced, however, one point higher at Rs. 74 than the last week's closing level of Rs. 73. On Monday the 25th inst., it moved up a little further to Rs. 74.50, but eased today to Rs. 74.

Silver moved both ways in a narrow range of two points. It opened unchanged at Rs. 239, eased gradually to Rs. 237 on Monday the 25th inst., but recovered today to the opening level. This steadiness reflected mainly the strong stock position in favour of buyers. Besides, the daily average arrivals dropped from 30 to 17 bars, though offtake, too, receded by two units to eight bars.

London silver moved between 109½d.—last week's closing level—and 109⅜d. and finished at the higher level. The forward quotation eased, however, further from 110d. to 109½d. Spot silver in New York was also easier at 127.30 cents as compared with 127.70 cents a week ago. After having been quoted at 250*s.* 7½*d.*, ready gold in London recovered to close unchanged at 250*s.* 8½*d.* The dollar price of gold was up again from $35.10½ to $35.11½.

Addressing the Institute of Economic Growth at the Delhi University campus on Sunday the 24th inst., Mr. Morarji Desai, Union Finance Minister, expressed his determination to pursue his gold policy to its logical conclusion even if it meant ruination of his political career. He described gold as "yellow myth" and promised more steps to break it and bring in thereby sanity and prosperity in the economic field as well as elimination of the symbol of social distinction.

The All-India Handicrafts Board is reported to be planning to set up a national institute for jewellery in order to train gold-smiths in the use of special tools for making ornaments with gold of 14 or less carats. Special arrangements will be made to train apprentices so that skills may be preserved. The Board is said to have already framed a scheme to train apprentices in making South Indian jewellery in collaboration with the Madras Jewellers' Association. A survey of important jewellery centres in order to study the extent of unemployment caused by the Gold Control Rules is also proposed by the Board.

The following table shows the trend of prices during the week under review:

	27-3-63 (closing)	High	Low	20-3-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine) ..	239.00	239.00	237.00	239.00
GOLD				
Ready (.996 fineness) ..	100.00	101.00	100.00	102.00

Silver	cents	cents	cents	cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

RALLY IN ART SILK YARNS

(From Our Own Correspondent)

BOMBAY, 27*th March*

The recent depression in art silk yarns cried a halt this week. Prices rallied on revival of demand. Some of the cotton yarns were also a shade better. But staple fibre continued to be easy.

Improvement in art silk yarns was noticeable over a broad front. 150D National Rayon rose smartly from Rs. 10.31 to Rs. 11.26 a kilo. 120D S.I. Viscose gained 13 nP at Rs. 12.91. 100D bright Century advanced from Rs. 14.43 to Rs. 14.72. Among 2×40 spot staple fibre yarns, Century sagged from Rs. 7.37 to Rs. 7.28 and so did Kohinoor from Rs. 8.10 to Rs. 8.05. In a steady market for cotton yarns, 10s Podar improved from Rs. 17.50 to Rs. 18.25 and 30s Madura showed a gain of 50 nP to Rs. 29.75.

The Union Government has decided to extend the present export promotion scheme for art silk fabrics beyond 31st March 1963. A notification issued by the Textile Commissioner on Saturday the 23rd inst. says that, in respect of exports of art silk fabrics effected on and after 1st April 1963, the manufacturer-exporters will be eligible to utilise up to 70 per cent of the value of their import entitlements of art silk yarn. The balance of 30 per cent will have to be surrendered compulsorily for import of rayon grade wood pulp by spinners of indigenous art silk yarn, against which the manufacturer-exporters of art silk fabrics will receive 0.75 lb. of indigenous art silk yarn for every rupee of the entitlements surrendered.

The Indigenous Art Silk Yarn Distribution Committee is understood to have decided, at its recent meeting, to make allotment of indigenous art silk yarn to actual users during the next half-yearly period from April to September on a denier-wise basis. Allotment cards for actual users will indicate accordingly the break-up of allotment under different deniers. Reviewing the supply position in the next few months, the Committee is said to have felt that production of 75 denier and 100 denier yarns would fall short of the targets recommended by a high-power panel of the Committee. The supply of 120D dull yarn was also expected to be below weavers' requirements. It was, however, felt that the production of 150D and 300D yarns might rise over the level suggested by the high-power panel and even exceed the estimated requirements. The Committee was, therefore, believed to have decided to correlate individual allotments to total available supply.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	27-3-1963	20-3-1963
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	11.68	11.44
Century 75D	16.92	16.63
S. I. Viscose 150D	11.55	11.53
Staple fibre yarn (40×2)—		
Kohinoor (per kg.)	8.05	8.10
Century	7.28	7.37
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.25	17.50
20s Edward	22.50	22.25
30s Kohinoor	29.75	29.25
40s Cambodia	36.00	36.00
60s Kasturi	48.00	48.00
80s Madura	—	76.00

JARILLA MARCH EXPIRES

(From Our Own Correspondent)

BOMBAY, 27*th March*

The first hedge contract of the 1962-63 season, namely, Jarilla March 1963, went off the Board on Monday, the 25th inst., at Rs. 750 per three quintals. Although the contract did not attract any tenders on any of the previous notice days, two hundred bales of Kalyan cotton were tendered on the last day. But for this last-minute tender, the contract would have expired, as its predecessor, Jarilla March 1962, did, without any tenders.

The Board of the East India Cotton Association, at its meeting on Monday, the 25th inst. fixed the hedge contract rate at Rs. 725 and the corresponding spot rate at Rs. 781 per three quintals. According to the bye-laws of the E.I.C.A., half of the difference between these two rates will be the invoicing back rate. The cut rate for the contract therefore works out to Rs. 753 per three quintals.

The contract had a fairly eventful career. After having opened at Rs. 730.25 on 9th May 1962, the contract soon came under bear pressure. It recovered subsequently in the beginning of the season, touching the highest rate of Rs. 752.75 on 19th September 1962. The Chinese aggression and its aftermath together with bearish crop news depressed the contract which declined to a low level of Rs. 659 by the third week of January 1963. The recovery witnessed subsequently led to the contract rising gradually to close at Rs. 750 on the last day.

The fact that the Jarilla March 1963 contract did not touch the ceiling either at close or before it, as also the issue of some tenders, as compared with *nil* tenders against the previous contract (Jarilla March 1962) indicate that the supply situation at present is less tight than a year back.

With the expiry of the March contract, the May contract was the centre of attraction. Some placement buying and fresh support imparted strength to the contract which improved to close at Rs. 705.50, as against last week's closing price of Rs. 697.25.

In the spot market at Sewri, mill demand for ready cotton was limited. Needy mills, however, booked sizable lots of good quality cotton. Prices were well maintained. Export demand was affected by rumours of a possible abolition of duty on ¾" cotton. Ready lots of foreign cotton attracted limited spinner interest. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Kalyan 1,000; CO2 1,600; L.147 Laxmi 1,185; B.P.52 2,050; Busoga 1,190; Guiza 45 2,600.

Barring the March contract which ruled fully steady till it went off the Board on the 25th inst. (the last known quotation for the contract was Rs. 71.60) cotton futures in the Karachi market ruled subdued during the week. The May contract met with selling pressure induced by the lack of export interest and reduced domestic mill demand and eased from Rs. 72.95 to Rs. 72.40. The July contract, however, attracted some support and improved to close at Rs. 73.70, as against the closing rate of Rs. 73.60 on the 25th inst.

Exports of raw cotton from Pakistan during the current season are expected to set a record for the past six years. Shipments of staple cotton aggregated 600,000 bales so far, according to the Karachi Cotton Association. Another 200,000 bales of staple cotton and 100,000 bales of *Deshi* varieties will be available for export after meeting domestic requirements, it is estimated.

Cotton futures in Liverpool continued to rule quiet during the week under review also. Values moved in a narrow range. Turnover was limited. In the absence of any new development, trading sentiment was subdued. Sudan cotton contracts at Liverpool were neglected. Values remained unchanged.

The following are the latest available quotations—in pence per lb.—from Liverpool:

March 24.25; May 23.95; March (Sudan) 29.00.

Despite the uncertainty created by the lack of any definite indication of the marketing policy for the next season's cotton crop, cotton futures in New York ruled fully steady during the week. The sustained firmness of ready prices imparted strength to futures which recorded modest gains over the week. The possibility of legislation being enacted in time to influence sowing of the 1963-64 crop is now generally regarded as remote.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago.

(In cents per pound)

	26-3-63	19-3-63	12-3-63
March	—	—	34.86
May	—	34.89	34.82

New York Spot ...	34.34	35.90	35.85

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 27*th March*

Oilseeds ruled generally firm during the week under review on sustained speculative support. Groundnuts continued to make headway, thanks to sizable buying by *vanaspati* manufacturers and crushers. Values would have gone up still further but for slack overseas enquiries for both groundnut oil and extractions. Castorseeds were pushed up until Monday as a result of persistent covering by a prominent export house. This trend, however, was reversed today, following the withdrawal of support by this export house. The maturing contract (March 1963) in castorseeds suffered a distinct setback today on account of the heavy tenders (about 3,500 tons) offered against it. Over the week, linseeds and cottonseeds registered handsome gains.

Groundnut April 1963 contract rose from Rs. 201.50 to Rs. 203.75, before finishing at Rs. 202.50. July 1963 contract advanced by a like amount to Rs. 213. Khandesh quality improved by 25 nP to Rs. 41.75 and Nizam bold by 12 nP to Rs. 41.12. Oil ex-mill picked up 10 nP to Rs. 16.50.

Castorseed March 1963 spurted from Rs. 170 to Rs. 174 initially, but gave way later and closed at Rs. 163.25. June 1963 contract, which had risen from Rs. 159 to Rs. 163, finished on a subdued note at Rs. 158.25 today. Kanpur bold, rose from Rs. 31 to Rs. 32.50, before closing at Rs. 31.12. Oil B.S.S. hardened by 30 nP to Rs. 13.40 and railway receipts by 10 nP to Rs. 12.80.

Linseed March 1963 contract improved by 75 nP to Rs. 33.62. June 1963 contract put on 25 nP to Rs. 34.25. Bold ready was higher by 12 nP at Rs. 32.87. Linseed oil moved up by 35 nP to Rs. 12.60.

Cottonseed July 1963 contract advanced by

Rs. 3.25 to Rs. 100. Both non-white and Berar strengthened by 15 nP to Rs. 19.75.

The following table shows the closing prices of oilseeds and oils on Wednesday 27th March, as compared with those of two previous weeks:

	27-3-1963	20-3-1963	13-3-1963
	Rs.	Rs.	Rs.
Groundnuts			
April 1963 contract	202.50	201.50	202.00
July 1963 contract	213.00	212.00	211.75
Niam bold	41.12	41.00	40.50
Khandesh quality	41.75	41.50	41.00
Oil ex-mill	16.50	16.40	16.30
Oil commercial	16.25	16.25	16.15
Castorseed			
March 1963 contract	163.25	170.00	161.00
June 1963 contract	158.25	159.00	156.00
Ready Madras	32.25	32.62	31.50
Ready Kanpur	31.12	31.00	30.25
Oil E.S.S.	13.40	13.10	13.10
Oil commercial	12.80	12.70	12.85
Linseed			
March 1963 contract	33.62	32.87	30.87
June 1963 contract	34.25	34.00	32.75
Bold ready	32.87	31.75	30.37
Linseed oil	12.60	12.25	12.15
Cottonseed			
April 1963 contract	—	97.00	95.25
July 1963 contract	100.00	96.75	95.25

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

FAIR SUPPORT FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 21*st March*

A total of 339,000 kgs. was offered in Sale No. 12 held on the 19th inst. Quality from the Nilgiris showed a slight decline, whilst medium categories were a little irregular. The market met with good demand. Plain and low mediums met with fair support but these inclined easier. There was better support for mediums which were firm and the brighter kinds were dearer. There was keen competition for good mediums which sold at fully firm to dearer rates. Highgrown brokens elicited less enquiry and sold at lower rates but similar fannings were better supported and were about steady. Clean, black leaf descriptions sold at around last rates. Unorthodox descriptions received useful support and were fully firm and in some cases dearer. Whole leaf grades, although sold readily, declined in price, whilst tippy teas were slightly easier.

The quotations (per kg.) were:

	1963	1962
	Rs.	Rs.
Low mediums	4.40-5.00	4.00-4.40
Mediums	5.10-5.50	4.40-5.20
Good mediums	5.50-6.50	5.20-5.75
Nilgiri B.O.P.	6.00-10.30	5.00-9.55

The average price realised in sale No. 12 was Rs. 5.44 per kilo as compared with Rs. 5.39 a week ago and Rs. 5.19 in the corresponding sale last year.

In Dust Sale No. 12 held today, 117,000 kgs. were offered. The market met with strong demand. There was good support for all medium categories and these were irregularly dearer by 10 to 15 nP. Highgrowns were also well supported at fully firm rates. Milled and fibrous kinds also shared in the upward trend of the market. Teas of unorthodox manufacture sold readily at around last rates.

The average price realised in dust sale No. 12 was Rs. 4.76 per kilo as against Rs. 4.73 a week ago and Rs. 4.13 in the corresponding sale last year.

Colombo: Just over 5 million lbs. were offered this week. The market opened extremely irregular, with best highgrowns generally selling at considerably easier rates. The lesser sorts were about firm, particularly where quality showed an improvement. B.O.P. fannings were strong. All mediums were irregular and lower, whilst lowgrowns closed at about steady prices.

London: North Indian and other growths: In Monday's sale there was good general demand. Best liquoring teas sold at dearer rates, but low mediums were irregular and easier. Clean plain descriptions were steady, whilst thin stalky kinds registered a decline.

Ceylon and South Indians: In Tuesday's sale, there was good demand with the better quality south Indians selling at firm rates but thin stalky types were easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire us as follows:

"Sale No. 13: 341,000 kgs. offered. Good general demand. Low mediums barely steady. Mediums and good mediums firm, and sometimes dearer. Highgrowns irregular and much easier. Unorthodox about steady."

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *26th March*

Good demand was in evidence at the last week's internal tea sales. With export auctions having already ended, tea shipments in the week were practically *nil*. In the last week's sales at London, offerings totalled 75,000 packages, including 40,893 packages of the North Indian manufacture. London bidders followed quality, and coloury medium teas and good liquorings were dearer, while the poorer varieties eased. This trend indicates that the overseas demand for quality tea remains unsatisfied, and this is significant, as current stocks in the United Kingdom, despite having risen to 155 million lbs. in the week ended 15th March from 153 million lbs. in the previous week, are low for this time of the year. It is also noted that the average price realised in London last week of 48.63*d.* per lb., as against 47.61*d.* in the previous week, was lower as compared with 55.20*d.* obtained in the corresponding period of last year.

Although India's tea output declined by about 10 million kgs. in 1962, exports rose by 9 million kgs. This achievement should be attributed to the concession in export duty announced about a year ago, and the trade is hopeful that, with this year's doing away with the remnants of the duty, exports will show a further remarkable increase in 1963. The fact that despite the increase in exports, foreign exchange earnings totalled only Rs. 125 crores in 1962, as against Rs. 124.6 crores in 1961, reveals the difficult price trend for the year.

However, any complacency over the increase in quantity exported should stop when it is remembered that India's share in the world's increased consumption in the past one decade pales into insignificance as compared to the shares of other producing countries. East Africa exported 70.1 million lbs. in 1961, as against only 30.1 million lbs. in 1951—an increase of 133 per cent. Ceylon exported 425.7 million lbs. in 1961, as against 305 million lbs. in 1951, the increase working out to 39 per cent. In the same period, India's exports were almost static, as exports in 1951 totalled 454 million lbs. and in 1961 455.5 million lbs. A study of the output figures of these three countries is also worthwhile. Whereas output in East Africa increased from 37.6 million lbs. in 1951 to 82.8 million lbs. in 1961 and in Ceylon from 326.2 million lbs. to 455.2 million lbs. that in India increased from 629.1 million lbs. to 776.6 million lbs. In other words, whereas India's output rose by 23 per cent, it should be noted that India's exports did not increase. Against a rise of 121 per cent in output, East Africa increased exports by 133 per cent. Ceylon increased output by 36 per cent and exports by 39 per cent.

The trade is at a loss to understand how Indian tea will be able to meet the competition from other producing countries where cost of production is much lower. The steep increase in taxation in this year's budget will only make the position all the more favourable to India's competitors. As Mr. T. J. Hardingham, Chairman of the Darjeeling branch of the I.T.A., said in his address at the annual meeting, the emergency risks insurance scheme amounted to another tax. He calculated that the premium on factories alone would amount to a sum equal to a 3 nP increase in the daily wage rate of a worker.

Dusts on offer at the last week's internal sales totalled 28,539 packages. The strongest features were the plain and medium orthodox teas, prices of which rose impressively on keen competition. Legg-cut teas were also fully strong. Good C.T.Cs rose keen competition. Good demand was in evidence for the better liquoring C.T.Cs, but medium C.T.Cs. eased. Quotations per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust Rs. 6.70 to Rs. 7.10, medium Assam C.T.C. dust Rs. 5.50 to Rs. 6.10, legg-cut dust Rs. 5.20 to Rs. 5.70, medium Assam dust Rs. 4.80 to Rs. 5.40 and plain orthodox dust 4.30 to Rs. 4.70.

At yesterday's export sales, offerings totalled 37,543 packages. Although demand was good, the better teas tended to give way towards the close. Since representative teas were insufficient, no rates were issued. Medium C.T.Cs were in good demand, and the fibrous varieties hardened. Legg-cut teas eased by 30 nP. Plain orthodox teas were dearer and the "teas for price" were in favour. Better liquoring Dooars, B.O.Ps and fannings were firm, though irregular and lower, while the B.Ps were in good demand. Medium Assams were taken at firm rates, while the better liquoring Assams eased. Whole leaf grades gained.

JUTE GOODS EASIER

(From Our Own Correspondent)

CALCUTTA, *26th March*

Adequate buying support lacking, the jute goods market evidenced easier conditions during the week under review. With the anxiety of sellers to dispose of the balance stocks of fibre with them even at a discount, fibre prices were quiet. For a time, the earlier news of increased consumption of burlap in the United States during the month of March imparted steadiness, but, since business with the U.S. was at a low ebb, dullness soon returned. At 89 million yards, February consumption was higher by 21 million yards and 11 million yards as compared with the previous month and February 1962, respectively. The increase is partly the result of interruption caused in January by the dock strike in that country. It may be noted here that, despite increased consumption, the combined figure for January and February was lower by 8 million yards, as compared with the corresponding figure in 1962. Market circles noted that burlap stocks at 304 million yards fell only by 2 million yards. These are expected to last nearly four months. That existing stocks in the U.S. are heavy is also indicated in that the stocks at the end of February last year were equal to about three months' consumption only then. It is clear that U.S. buying would continue to be only sparingly, and such an assumption explains the rapid fall in prices during the week under review.

The report that a large hessian importer of the U.S. has decided to terminate his interests at Calcutta caused considerable anxiety. This led to selling pressure often, but, with only a few buyers operating, prices were affected. The view of the I.J.M.A. that, if timely action is not taken to meet Pakistan competition, India's exports of sacking goods would decline was hailed in the market as being timely. It has now become imperative that the mills should execute their modernisation plans as rapidly as possible, but, with increased taxation, mills would be hard pressed for finances. The Union Finance Minister's firm rejection of any modification in the Super Profits Tax has caused much disappointment, and the future prosperity of the mills' industry has never been so uncertain as at present. Against the background of increased direct taxation, the increase in excise duty on jute goods for internal consumption has gone almost unnoticed, but the market believes that, since excise duty has been increased on a number of products, this in itself is unlikely to affect consumption of jute goods. However, there would be a tendency to use bags again and again and, to this extent, the overall increase in consumption would not rise by as much as before. This is considered unfortunate, since mills have in stock fibre equal to six months' consumption and a good portion of this is only fit for production of sacking goods which account for a good part of internal consumption. It has been noted that despatches of goods for local purposes in February were sharply higher by 9,800 tonnes at 41,000 tonnes as compared with the previous month. No doubt, his increase should be attributed to the expectation that the duty was bound to be increased. On the other hand, despatches for export abroad aggregated only 61,100 tonnes, as against 63,700 tonnes.

Since the past few weeks, overseas buyers of goods have continued to pay sparse attention to offers. With reports of early rains in both India and Pakistan and with the possibility of yet another bumper crop, buyers of goods believe that they stand to benefit if they delay entering into commitments. With the anxiety of the industry and the Government to ensure fair prices to the cultivator, any chance of a further fall in prices should be ruled out, but overseas consumers need not necessarily foresee such a likelihood. Already, the fact that fibre prices in Pakistan are much lower than in India is causing much headache to Indian mills, but it is expected that the Pakistan Government would adopt firmer measures to prevent prices from falling to uneconomic levels as in 1962. During the week, conditions were extremely dull in Pakistan and quiet in Calcutta. Fibre arrivals have now fallen to about 35,000 maunds a day from 40,000 maunds a day a week ago, but, with reports of more rains, stockists, eager to dispose of their outstanding holdings, discounted prices. Interest shown by mills was limited. White and mesta fibre were offered at below the minimum prices, whereas daissee and tossa had buyers at above the minimum prices. March-April bottoms were quoted as follows: Daissee Rs. 33, northern Rs. 29.50, and Assam Rs. 30.00 a maund.

From shipping instructions received so far this month, it is apprehended that shipping would be lower. At the same time, in view of the increased despatches for local purposes in February, such despatches this month would also be lower. If these inferences were to prove correct, there would be an increase in goods stocks with mills at the end of this month. It is clear that overseas buyers do desire an increase in stocks, so that prices would continue to fall. For their contention is that, with plenty of fibre, prices should move down. On Tuesday last, the report of higher consumption of burlap in the U.S. pushed up sentiment for some time, but the selling pressure from holders was so heavy that prices eased. Hessian 40" 10 oz. was quoted at Rs. 46.35, as against Rs. 46.50 on the previous day, and B. twills at Rs. 110.60, as against Rs. 111.00. Although many overseas inquiries continued to be received, only a few led to business. On Wednesday, there were reports of some business in hessian with the U.S., and, as a result, 40" 10 oz. recovered to Rs. 46.70. In sympathy, B. twills firmed to Rs. 110.15. More business in hessian with the U.S. followed on Thursday, but the quantity involved being insignificant, there was not much encouragement for the price to move up. The quotation on that day was Rs. 46.50 and that for B. twills was Rs. 109.80. With buyers lacking B. twills fell to Rs. 109.60 on Friday and, despite some short-covering, 40" 10 oz. hessian receded to Rs. 46.00. Over the week-end, business that took place was little, as overseas buyers expected that prices would continue to fall. As a result, hessian 40" 10 oz. fell to Rs. 45.85 and B. twills to Rs. 109.30. Yesterday, following fair activity in the futures market, ready hessian 40" 10 oz. firmed up to Rs. 46.30, but B. twills fell to Rs. 108.35.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *26th March*

Following increased demand, firmer conditions were in evidence in the metal market during the week under review. The feature on the London Metal Exchange was the spurt in the price of spot tin from £856 a ton to £859½ on apprehensions of an impending strike by the Malayan mine workers. However, since these apprehensions were soon belied, the quotation eased to £852. A similar price movement was in evidence in the Far Eastern markets, too. In Calcutta, after an initial decline from Rs. 3,050 to Rs. 3,040 per 100 kgs. tin improved to Rs. 3,065, but closed at Rs. 3,060. Demand was good, and covering was done against a Government tender for a modest quantity.

Zinc, in Calcutta, eased from Rs. 282 to Rs. 273 per 100 kgs. but recovered to Rs. 277. The easiness followed news of fresh arrivals. This naturally led to greater demand for copper scrap for alloy making and, as a result, utensil scrap rose from Rs. 554 to Rs. 562.50 per 100 kgs. In London, cash copper was firm at £234 a ton and the 3-months' position at £234½. Since the backwardation has narrowed down, and wide fluctuations are not anticipated in view of the comfortable stock position, forward deals will be naturally limited. Zinc, in London, opened at £71½ a ton and soon improved to £72½ on good demand. Since industrial consumption there is expected to rise, it is not surprising that the backwardation is widening.

The steadiness in zinc imparted strength to lead in London, and the price for the latter hardened from £55¼ to £55½ a ton. Sellers there were not in a hurry to unload and book their profits. This resulted in the maintenance of the upward trend in London. Lead, in Calcutta, was unchanged at Rs. 175 per 100 kgs. Demand was good.

MIXED TRENDS IN FOODGRAINS

(From Our Own Correspondent)

HAPUR, *25th March*

Divergent trends prevailed in the foodgrains market here this week. While wheat eased with the advent of new *rabi* crop in the market, rice was steady and so was *urd* among pulses.

Wheat prices declined during the week by Re. 1 to Re. 1.34 per quintal according to quality, on anxious selling by stockists on expectations that harvesting would commence by the end of this month. The average quality was now quoted between Rs. 38.18 and Rs. 38.52 and the farm produce between Rs. 41.53 to Rs. 42.20 per quintal. The standing crop prospects were reported as fair. Stocks at the week-end were estimated around 28,000 maunds. Rice was steady on better consumer demand against poor arrivals from producing areas. Local rice stocks declined to 10,000 maunds. Today's prices were: Rice *basmati* superior Rs. 85.74 to Rs. 91.09, *sela basmati* Rs. 80.38 to Rs. 85.74, *mainpuri* Rs. 53.58, *ramajwayan* Rs. 61.62, *raimunia* Rs. 64.30 and *gadda* Rs. 50.91 per quintal.

Gram prices hardened by 67 nP to 99 nP per quintal according to quality on poor stock position. New crop arrivals from producing areas were still poor. The Punjab quality was now quoted at Rs. 40.19 and the average quality at Rs. 38.85 per quintal. Local stocks were meagre at 4,000 maunds. Maize prices also hardened during the week by 67 nP to Re. 1.34 per quintal on brisk consumer demand in the face of poor arrivals. Prices were now quoted at Rs. 25.45 to Rs. 30.81 per quintal. Local arrivals averaged daily at only 200 maunds and stocks declined to 8,000 maunds. Barley eased slightly on want of support, while *bejhar* ruled unchanged. The new produce will reach the market soon. *Juwar* and *guwar* were almost unchanged at previous levels of Rs. 27.46 to Rs. 28.13 and Rs. 30.81 to Rs. 34.83, respectively, per quintal. *Bajra* and other grains were listless.

SUGAR BULLISH

(From Our Own Correspondent)

HAPUR, *25th March*

The bullish trend in sugar prices continued unabated during the week under review due to brisk buying support from upcountry markets and hesitancy on the part of mills to sell. The main influencing factor was the estimated setback of 3 lakh tons in sugar production in the current season at 25 lakh tons. Spot and mill delivery prices registered sharp gains up to Rs. 2.25 per quintal during the week. Week-end prices here were: Spot delivery Rs. 113 per quintal, mill delivery D29 Amroha Rs. 112, Dhampur Rs. 112, Seohara Rs. 112, D30 Meerut Rs. 112.50, E29 Bijnore Rs. 111.25 and E30 Simbhauli Rs. 112.50 per quintal.

Khandsari prices registered sharp gains of Rs. 3 to Rs. 4.50 per quintal during the week in sympathy with the bullish trend in sugar. Rajasthan and Punjab supported the market. Production season is slowly coming to a close. Week-end prices were: *Desi* wet Rs. 88.41 to Rs. 86.45, dry crystal Rs. 97.79 to Rs. 106.50 and non-crystal Rs. 99.13 to Rs. 107.17 per quintal.

Brisk buying from the South led to a continued rise in ready *gur* prices during the week. Daily arrivals here, partly out of stocks retained by cultivators, were about 1,200 maunds. Stocks were put around 31,000 maunds. The week's offtake aggregated ten wagon loads mostly to Gujarat side. Shakker attracted good demand from Rajasthan and, as arrivals and stocks left were small, prices were steadier during the week. Sowing of cane for the next season is being done these days and thanks to incentives being given both by the State and Central Government and a likely increase in cane prices to Rs. 2 per maund, cane acreage is likely to increase. Week-end prices here were: *Gur* superior Rs. 56.26, average Rs. 54.92 to Rs. 55.49, *dara* Rs. 52.01 to Rs. 53.58, *balti* Rs. 54.92 to Rs. 56.26 and *shakker* Rs. 61.62 per quintal.

Trading in *gur* futures is likely to be revived very soon. Representatives of different chambers conducting trading in *gur* futures met the Union Food Minister and later President of the F.M.C. and it was reported that the Government was reconsidering the whole issue.

SMALL BUSINESS IN KIPS

(From Our Own Correspondent)

MADRAS, *25th March*

Arrivals of kips this week from the tanning centres were of the usual volume. Prices were held high by the sellers, in view of the steady demand from importers in the U.K. for light and medium weight cowhides and cowcalf lights. There were inquiries for heavy weight cowhides from the East European countries. But business was difficult because tanners were not keen to shade their prices. Buffhides and calf were quiet, as the American buyers were out of the market.

The tanned skins section ruled firm. Tanners of goat skins were not able to buy raw skins at economic prices. There was good demand for light weights, but sellers were scarce. Tanners put up their prices for other lines which rendered regular trading very difficult. There was brisk call for all classes of sheep skins and higher prices were paid for middle class light weights by buyers from the U.K. Sellers quoted fancy levels for prime and semi-prime sheep, which importers declined to pay.

It has been reported that sales of pickled goat skins to the U.S.S.R. have been made from North India; and this no doubt will cause prices to harden.

TREND OF SHARES

A SPECTRE OF GLOOM

(From Our Own Correspondent)

BOMBAY, 28*th March*

UNCERTAINTY about relief in Super Profits Tax, the Prime Minister's confirmation of heavy concentration by the Chinese army across the Northern borders and some depressing corporate news caused a spectre of gloom envelop stock exchanges this week. Because of the precipitous fall in values since the budget and heavy deliveries, the President of the Calcutta Stock Exchange decided to close the market officially, at the request of members, on Saturday the 23rd inst. After that date, members refrained from transacting business, though the market was open. Operators in Delhi followed the example of Calcutta. This voluntary strike is to be continued till the outcome of today's meeting of Stock Exchange representatives with the Finance Minister is known. In Bombay, too, where values rallied near the close on revival of scattered selective support, operators did not commence business for 15 minutes on Monday the 25th inst., until they were told by the Vice-President of the Exchange, Mr. Kantilal Ishvarlal, that it would not be advisable to close the market, as that would be construed as a protest against the Government's fiscal policy. At its meeting on Friday the 22nd inst., the Council of Management of the Madras Stock Exchange resolved that, in the view of the Council, the present position of the market warranted the continuance of the minimum prices fixed on 7th March 1963. This reaffirmation in the utility of minimum prices at this juncture is in contrast to the lifting of such restrictions, with some exceptions, in Bombay, Calcutta and Ahmedabad last week.

While the plea from representatives of business and industry for either abolition of S.P.T. with a suitable increase in corporation tax or relaxation of the Tax by a suitable modification in its rate, increase in the 6 per cent standard deduction and limit on the overall burden of both corporation tax and S.P.T. is still under Government's consideration, some prominent companies have reported lower profits and reduced dividends for 1962. The following table gives an idea of the cut in dividend:

	1962	1961
	Rs.	Rs.
Arvind Mills	30	45
Nutan Mills	22	35
Arun Mills	24	35
Raipur Manufacturing ...	24	40
Empire Dyeing	2.50	5
G. Claridge	15	30

The dividend of Empire Dyeing is on shares of Rs. 15 each and that of other companies is per share of Rs. 100. It will be recalled that the Brady group of companies, namely, Empire Dyeing and G. Claridge, have announced the above revised dividends which are lower than what had been proposed before the budget was announced. In other words, the budget has clearly meant a cut in the dividends of these two companies.

• • • •

After displaying further weakness, values rallied on Dalal Street to close with generally small losses and some gains in selected counters. Yesterday and today, selling pressure abated on hopes that the incidence of S.P.T. would be lightened. Thus, Bombay Burmah rallied from Rs. 613 to Rs. 625, but closed three points lower over the week at Rs. 622. T.E.L.Co. made an impressive recovery from Rs. 271 to Rs. 281, though at close they showed a loss over the week of one point at Rs. 279. Hindustan Motors, which looked up from Rs. 15.48 to Rs. 16, closed 36 nP lower over the week at Rs. 15.92. Tata Steel Ordinary were one point up at Rs. 117.50, but Indian Iron were 38 nP down at Rs. 19.32, after having been quoted still lower earlier at Rs. 19.20 from the week's opening level of Rs. 19.70. Among other market leaders, Kohinoor closed three points higher at Rs. 280 and Bombay Dyeing one point higher at Rs. 62.10 because of the maintenance of the dividend despite the lower profit, but Voltas lost Re. 1.50 at Rs. 249.50.

Off-side scrips in the cash section lost heavily, as they were traded after a long time. For example, New Svadeshi Sugar slumped by Rs. 90 to Rs. 250, W. H. Brady by Rs. 70 to Rs. 380, National Ekco by Rs. 35 to Rs. 146.25. Oudh Sugar by Rs. 34.50 to Rs. 140 and Ambika Silk by Rs. 25 to Rs. 220. Among the more active scrips, Permanent Magnets declined by Rs. 12.50 to Rs. 175, Ultramarine Pigments by Rs. 15 to Rs. 137.50 and Ceat Tyres by Rs. 8.75 to Rs. 135.

• • • •

On the Calcutta Stock Exchange, small losses predominated. In the forward section, Texmaco were down by 40 nP at Rs. 20.30 and Birla Jute by 25 nP at Rs. 25. In the cash section, among Textiles, Bharat Commerce declined by Re. 1.88 to Rs. 19.87 and Jayshree by 94 nP to Rs. 12.81. A two-point setback at Rs. 265 was recorded in Bengal Coal. A slump from Rs. 172 to Rs. 140 in Delta featured trading in jute shares, where Kelvin also showed a big loss of Rs. 11 at Rs. 165, Dalmia Iron declined further from Rs. 11.06 to Rs. 10 and so did Jessop from Rs. 22.06 to Rs. 21.06, Associated Battery from Rs. 26.19 to Rs. 24.25, Dr. Paul from Rs. 19 to Rs. 14.50 and Hindustan Aluminium from Rs. 13 to Rs. 11.87. Following the cut in dividend, as reported last week, Union Carbide fell by Rs. 13.50 to Rs. 29. Martin Burn were down by Rs. 5.50 to Rs. 25 and Philips Carbon by Rs. 5.37 to Rs. 16.75.

• • • •

Thanks to the maintenance of the minimum prices, there was only one share to show any change over the week in Madras, which was Midland Rubber at Rs. 10.50, as against Rs. 10.37 a week ago.

SURVEY

(*Concluded from page 535*)

realism when he urged the industry to step up production and develop the ancillary industry "in a big way." Mr. Doraiswamy stated that there was already an acute scarcity of spares and accessories and that demand would increase still further, with the commissioning of new spindleage, establishment of export units and implementation of the replacement programme. He did not hesitate to point to two disquieting features, namely, the easy manner in which schemes were drawn up based on imported components and raw materials and unsatisfactory standards of production. But the Government itself is to be blamed partly for this state of affairs. Mr. P. J. Engineer, the retiring President of the Association, declared, for instance, that the Government had merely fixed value targets without formulating concrete schemes for achieving them and that the plans recommended by the Textile Machinery *Ad Hoc* Committee covered only machinery and not stores and accessories. It is to be hoped that the high power panel now proposed to be set up by the Government will ensure the development of the industry on a solid and sound footing.

Meanwhile, the Government will do well to consider the plea of Mr. Engineer for raising the ceiling on wire and strips imports from the general currency area. Unless the manufacturers of textile ancillaries and spare parts are assured of adequate supplies of the aforesaid raw materials, they will not be able to utilise their production capacities fully. The need to ensure a high level of output of textile machinery, spares and accessories is urgent in the context of the rising domestic demand and the importance of earning foreign exchange through exports. India did earn quite a bit of foreign exchange from the export of these items in 1962. Textile machinery, spares and accessories worth Rs. 15.11 lakhs, Rs. 35.61 lakhs and Rs. 13.72 lakhs, respectively, or a total of Rs. 64.44 lakhs, were exported last year. This amount can certainly be stepped up if the industry is given the necessary facilities to improve production both quantitatively and qualitatively.

GOODYEAR PUTS OFF RISE IN CAPITAL

Shareholders of Goodyear India Ltd. rejected by an overwhelming majority at their general meeting at Calcutta on Friday the 22nd inst. three resolutions seeking their approval to increasing the Company's share capital from Rs. 200.15 lakhs to Rs. 300 lakhs by the creation of 998,500 new equity shares of Rs. 10 each to be issued at a premium of Rs. 16 per share. The rejection was in the light of the budget proposals. For, before the resolutions were put to vote, Mr. R. E. O. Carey, Managing Director of the Company, who presided, said that, although the Company's expansion plans were ready before the budget proposals were announced, the Directors had found, after very careful consideration, in conjunction with the Company's associates, the Goodyear Tire and Rubber Company of the U.S., that the position had substantially changed because of the budget and warranted a re-examination. He, therefore, asked the shareholders to delay the decision to increase capital. The proceeds of the new issue were intended to finance a capital expenditure of Rs. 1.5 crore on new machinery and training and employment of 250 additional persons under the expansion programme. The consent for the capital issue is, however, valid till February next and Mr. Carey hoped that the Company would be able to make use of it in the near future.

KOTHARI SUGAR'S FACTORY INAUGURATED

The Rs. 1.55-crore factory of the Kothari Sugars and Chemicals Ltd. was inaugurated by Mr. K. Kamaraj, Chief Minister of Madras, at Sirumayangudi village (Tiruchirapalli District) on Friday the 22nd inst. The factory has an installed crushing capacity of 1,250 tons per day. Speaking on the occasion, the Chief Minister stated that it was in the long-term interests of cane growers that the productivity of sugar factories was not jeopardised by irregular and inadequate supply of cane. Mr. D. C. Kothari, a Director of the Company, who welcomed the guests, referred to the large-scale diversion of cane from sugar factories to jaggery manufacturers. Since the extraction ratio in the case of cane used for making *gur* would be less at 60 per cent as against 90 per cent for making sugar, he called such diversion a national waste which must be prevented. The State's Finance Minister, Mr. M. Bhaktavatsalam, endorsed Mr. Kothari's views and reminded cane growers that sugar factories had been put up in order to give them a stable market for their produce. It will be recalled that the business of the Company, which was incorporated on 7*th November 1960*, includes manufacture of sugar, superphosphate and other chemicals.

The Oriental Metal Industries (Private) Ltd. of Calcutta has obtained an industrial licence for substantial expansion in its vitreous enamel division. After expansion, the full capacity will be 3.6 million pieces of enamelware per annum. The Company is already exporting hurricane lanterns to several countries in West Asia and Africa and proposes to sell there also enamelware after completing the expansion programme. Its products, such as, *Khas Janata* kerosene cooker, *Khas Janata* medium, *Khas Janata* junior and *Dipti* kerosene stove, are claimed to be popular in the country.

MARKET GOSSIP

(*Concluded from page* 532)

up, the main conclusions of the Committee are as follows:

1. Cuts in military aid to countries with defence burdens far beyond their economic capacity.

2. Cuts in military and economic aid to countries with larger military forces than they need or with substantial resources of their own.

3. Reductions in economic and military assistance to countries in the communist border area—particularly in South East and Western Asia—which are not U.S. allies or members of alliances with which the U.S. is associated.

4. Economic and military aid to India and Pakistan "must continue under present circumstances," but it will be difficult to justify continued economic aid at present levels, unless other free world countries expand their own assistance programmes.

5. It is difficult to see how free world countries can assist Indonesia "unless it puts its internal house in order, provides fair treatment to foreign creditors and enterprises, and refrains from international adventures."

6. "Every effort" should be made to reduce aid to countries in return for bases, especially Spain and Portugal which are already more than adequately compensated.

7. Most U.S. aid to North and North East Africa is granted in return for military bases and this aid should be curtailed or substantially reduced, except for technical assistance and farm commodity shipments. The U.S. Congo contribution should not be more than half the total economic aid provided by other nations for the next few years. Western Europe must bear most of the economic aid burden in Africa.

8. The U.S. should not aid a foreign country to establish government-owned enterprises which compete with existing private concerns.

These guidelines for U.S. aid would appear to have evoked a generally receptive mood among both Congressional leaders and official spokesmen. Mr. David Bell, A.I.D. Administrator, for instance, has said: "Judgments on the policy and attitudes expressed are sound, appropriate and proper, and we do not have any substantial difference of judgment on the main lines of recommendations which the Clay Committee has made." President Kennedy himself is believed to have decided to slash, in his foreign aid message to be sent to Congress on Tuesday next, his original $4,900-million request deeper than the $200-million cut at first envisaged.

For its part, India need not be apprehensive about the aforesaid reports. For the Clay Committee has most forcefully urged special attention to India in any review of front-line countries, even though this country is not, according to it, an ally. The words actually used by the Committee to describe the position of India bear reproduction:

"We have provided economic assistance to India for some time, most of it as part of a multilateral undertaking which obtains aid from other sources. Recently, we have agreed to extend military assistance on a parity with similar aid from the United Kingdom and other Commonwealth countries. The importance of this programme frequently has been misunderstood, in view of past expressions of Indian foreign policy and certain aspects of its internal philosophy. India has recently proved, however, that it is determined to maintain its independence from communist domination. Together with our ally, Pakistan, it is the only area of South Asia able to offset the Red Chinese colossus. Unless their freedom and economic growth continue, there can never be a balance of power in Asia and our own involvement in this area could be indefinitely and infinitely more costly. Thus, we believe that, in the interest of our own and free world's security, economic and military assistance to India, as well as of Pakistan, must continue under present circumstances."

The last sentence in the above quotation is important. It is common knowledge that the bulk of the external assistance for the economic development of India and other developing countries in the last few years has been made available by the U.S. There are several other industrial countries which have attained a very high degree of economic growth and which are enjoying high standards of living. But they have not extended assistance to India commensurate with their economic prosperity. Even here, the assistance rendered has, as the Clay Committee points out, largely been in the form of hard loans to finance exports from the lending countries. How strongly the Committee feels on this issue will be evident from the following extract from its report:

"We are convinced that the burden of sustaining foreign assistance to the less-developed countries is falling unfairly upon the U.S. and that the industrialised countries can and should do more than they are now doing. The present iniquity is even more apparent when one adds defence expenditures to economic assistance to determine the national shares in the total expense of protecting and advancing the free world's well-being. This matter is of even greater concern when one considers the negative U.S. balance of payments."

Countries other than the U.S. ought to take a more liberal attitude in regard to external assistance. The Clay Committee has done well, indeed, to highlight this point. In particular, it has urged Italy to allocate budgetary funds for aid, expand volume and liberalise terms, Canada to step up the quantum of aid, Britain to lower interest rates and increase aid to independent, developing nations, W. Germany to raise the volume of its aid and soften the terms, France to liberalise the conditions attached to aid, and Japan to soften its terms of assistance.

POSITION OF SCHEDULED BANKS

(In lakhs of rupees)

	For the week ended (Friday) 15-3-63	8-3-63	16-3-62
1. Demand liabilities—			
(a) Demand deposits—			
(i) From banks	51,81	48,41	48,98
(ii) From others	825,17	815,92	751,91
(b) Borrowings from banks	21,57	10,54	12,65
(c) Others	61,01	62,99	53,20
2. Time liabilities—			
(a) Time deposits—			
(i) From banks	20,41	19,47	14,96
(ii) From others	1,191,86	1,195,57	1,127,42
(b) Borrowings from banks	18,75	17,10	15,84
(c) Others	12,44	12,01	13,39
3. Aggregate deposits [(1) (a) (ii) + 2 (a) (ii)]	2,017,03	2,011,49	1,879,33
4. Borrowings from Reserve Bank	78,28	83,65	66,40
(a) Against usance bills and/or promissory notes	56,20	58,71	47,84
(b) Others	22,08	24,95	18,56
5. Borrowings from State Bank and/or a notified Bank	19,69	22,06	16,51
6. Cash	52,94	51,33	50,26
7. Balances with Reserve Bank	72,15	71,38	75,00
8. Cash and balances with Reserve Bank	125,09	122,71	125,26
9. 8 as per cent of 3	6.20	6.10	6.67
10. Balance with other banks in current account	18,91	19,51	16,86
11. Money at call and short notice	36,69	32,47	32,72
12. Investments in Government securities	587,55	587,88	595,61
13. 12 as per cent of 3	29.13	29.23	31.69
14. Advances—			
(a) Loans, cash credits and overdrafts	1,303,42	1,301,09	1,169,43
(b) Due from banks	15,13	16,98	9,06
15. Inland bills purchased and discounted	221,47	226,87	177,79
16. Foreign bills purchased and discounted	53,66	52,57	45,73
17. Total Bank Credit [14 (a)+15+16]	1,578,55	1,580,54	1,392,95

William Blake.

VOL. CVI. No. 2711 BOMBAY, 6th APRIL 1963 PRICE Rs. 2

GOLD PROBLEM IN PERSPECTIVE

BOTH the supporters and opponents of gold control have been exaggerating their respective cases. Both have been unwavering in their approach and attitude to the problem. The authors of gold control and their supporters have become as fanatical as their opponents to be found mostly in the Swatantra Party. The stronger the opposition the greater is the determination of the Finance Minister to prove that he is right and that he will succeed. The Gold Control Board, entrusted with the task of discouraging the use of gold for ornamental and hoarding purposes, has been pushed to the background, thanks to the fierce posture of the Finance Minister. One thought that the Gold Control Board was a sort of autonomous body and that it would be given adequate freedom to consider the issues calmly, present the case persuasively, carry the public with it and make a positive approach to an age-old problem. But, for all practical purposes, the Board has been reduced to the status of a department of the Finance Ministry, so much so it looks as though no useful purpose is being served by having this separate organisation. Indeed, given the attitude of the Finance Minister, there is no need for the Gold Board, and no need for its personnel strutting about the length and breadth of the country; it is all a sheer waste of taxpayers' money. Now that the Government of India is determined to force the control on an unwilling public by punitive action, instead of securing its voluntary cooperation, the task may well be left to the Excise Department and the Police.

The extreme stand taken by the Finance Minister, on the one hand, and an opponent like Rajaji, on the other, has not helped the country. It has distorted the problem. It is steadily pushing the Finance Minister to a position of no return. In his anxiety to bring down the domestic price of gold to the artificially pegged world price, he seems to be thinking of further measures which, if taken, will convert gold control into gold prohibition, as was feared by this journal when it was first introduced. It will then share the same fate as the prohibition of liquor has done. Some say place a ceiling on the gold ornaments that one can hold. Some others say ban private transactions in gold ornaments, by which they mean that selling and buying of ornaments by individuals should be prohibited. They do not seem to care very much about the feasibility of enforcing these controls. They seem obvious of the fact that the present gold control has been necessitated because of the Government's failure to prevent smuggling and evasion of foreign exchange controls. How can a Government, which has not been successful in apprehending a few hundred smugglers and a few thousand exporters-importers, be expected effectively to enforce controls involving millions of people? The Finance Minister would be most foolish if he were to heed such advice. Controls of this nature cannot work, unless the Government is prepared to behave in a dictatorial fashion, search every house and punish millions of people. Nothing but a police State can perform this task. The Finance Minister himself has repeatedly stated that he had no intention of harassing the public or of nationalising all private holding of gold bullion, coins and ornaments. He certainly meant it when he said so.

Accordingly, any further measures that he may contemplate should be in consonance with these assurances in letter and spirit alike. There is a school of thought which argues that the mere placing of a control on the statute book would act as a deterrent and that its active enforcement is not of primary importance. This is a highly unrealistic view, which disregards the people's attachment to gold jewellery. There can be nothing like a passive law and an active law. All laws are meant to be observed in practice. A democratic nation that has on its statute book laws that are observed in the breach will disintegrate sooner or later through demoralisation and widespread corruption. None who has the good of the country at heart and wants to preserve the democratic way of life should put forward proposals that would expose it to such a danger.

A proper appreciation of the gold problem is necessary, if it is to be tackled successfully. The problem is simple. It is estimated that India has been losing Rs. 40 to 50 crores of foreign exchange a year on account of gold smuggling. That the country cannot afford to do so is pretty clear. In order to stop this drain, it is necessary to deflate the demand for gold. This is sought to be done through the present scheme of gold control. The replacement of 22-24 carat gold jewellery by 14-carat jewellery is an excellent idea. People will gradually adapt themselves to the new specification and, with passage of time, more and more of the existing jewellery of 24 carat will get converted into 14 carat. It takes time for the fashion to spread. It is unnecessary, nay undesirable, to expedite the process, lest it should unduly whet the appetite for 14-carat jewellery and push up the demand for gold. In the understandable anxiety to find employment for goldsmiths, the Gold Board and officials are actively participating in efforts designed to boost the popularity of gold jewellery of 14 carat. This is an imprudent thing to do and runs counter to the basic objective of gold control. On the contrary, the officials should continue to appeal to the people to buy jewellery only if they must for unavoidable social and religious functions and that too only in limited quantities. They must also tell jewellery manufacturers and dealers to make only utility ornaments, such as bangles, chains and rings, in limited varieties. They may also consider the feasibility of placing restrictions on the quantum of fresh purchases of 14-carat jewellery, though the conversion of higher purity old ornaments into 14-carat may be exempted.

The impact of gold control on employment among goldsmiths has been exaggerated. There has undoubtedly been a severe disturbance, but the unemployment will soon turn out to be a short-lived affair when the demand for 14-carat gold gathers momentum. In fact, the present development may prove a blessing in disguise for the workers, because not only the demand for jewellery in terms of units may be greater, thereby giving them more work, but the wages also may be higher. This is quite obvious. As the price of 14-carat gold is, and ought to be, cheaper than the 24-carat gold by 30 to 35 per cent, one can make more jewellery than before for a given capital outlay. Already, jewellers in Bombay are charging their customers 50 to 100 per cent more on account of making charges, besides collecting a liberal premium on the price of 14-carat gold. Surely, they ought to pay their workers well. Again, the Government is prepared to permit manufacture of jewellery in higher carats for purposes of export by supplying gold to the parties concerned at world prices subject to suitable safeguards in order to prevent leakage of such jewellery into the domestic market. Here is a first class opportunity for goldsmiths and jewellery dealers to help export promotion and thereby to help themselves, instead of engaging themselves in the anti-national activity of fabricating and processing smuggled bullion.

The opponents of gold control are doing no service to the country by decrying it outright and by extolling the habit of investment in gold. Their approach is purely negative, their objective being to use the gold control as one more weapon to beat the ruling party with. It is absurd to encourage people to go in for gold as a means of investment. Its liquidity was no doubt high hitherto, but one had to pay a stiff price for this quality in the form of loss of interest. Further, it has been denying the country both foreign exchange and rupee resources. Its function as a store of value is better performed nowadays by other forms of investment such as shares and stocks, land, buildings, and small savings certificates. And, what is more, these other forms of investment bring wealth and happiness to the people. Indeed, it pains one to find that even highly intellectual people who have made immense sacrifices for winning political freedom for the country should find themselves in disagreement with the Government on the basic objectives of gold control and mislead the public, by taking undue advantage of its inherent weakness for gold.

If the antagonists are overdoing their attack on gold control, the protagonists are overplaying their zeal for the reform, so that they do not carry conviction to the public. On the contrary, they have made the public cynical about it. The threat of further measures has, so it seems to us, only aggravated the demand for jewellery, because every one wants to buy when it is still possible. Even the prospect of a further fall in the price of gold does not deter them from fulfilling their desire, as witness the rush for 14-carat gold the moment it became ready. No useful purpose is served by jeering at the gold habit. Each country has its customs and traditions. To taunt the women of India as being backward for desiring to have gold jewellery and to hold the fashion of their sisters in the West as worthy of emulation is not in good taste. Why not then recommend the feminine saratorial habits of the West also to our women? That would lead to a lot of saving in the cloth consumed in the country. Either the surplus production can be exported to earn the much needed foreign exchange, or the production of cloth can be cut, the resources thus saved being used for other purposes. But it would be readily conceded that the suggestion that the *sari* should give way to the frock would be ridiculous. Equally ridiculous it would be to suggest that *mangal sutras* could be replaced by rings or a chain of mere beads. There must be a sense of proportion in any social reform even when dictated by considerations of national emergency or material prosperity. This sense of proportion is undoubtedly there in the present gold control, but it is sadly lacking in the protagonists' exposition of their case and in the threats of further action. Both are replete with arrogance and half-truths. This surely is not the way to win the co-operation of the public. It can be more easily had by passionately appealing to one's sense of patriotism, by explaining the circumstances in which gold control has been necessitated, by giving up

threats of action, by inviting the religious and social leaders to extend their help in educating the public and engendering a sense of contentment with 14-carat gold, and by meeting the public at least half-way. The successful implementation of gold control requires the imagination, shrewdness and patience of a level-headed statesman-cum-social reformer and not the bluster and force of an impatient bully, out to secure quick results.

There is no cause for the Government to feel dissatisfied with the results of the measures already taken to check consumption of gold in the country. Smuggling seems to have slowed down considerably. The price of gold has stabilised well below Rs. 100 (per 10 grams) and is at a level 30 per cent below the peak touched in 1962. This is not an attractive level for encouraging large-scale smuggling. There is already visible evidence of this in the value of the rupee in the free foreign exchange markets of the world. The value has risen. Before the Gold Control Order, one had to pay as much as Rs. 7.50 for one U.S. dollar, as against the official exchange rate of Rs. 4.76. Today, the rate has come down to Rs. 5.60 per dollar. It may be interesting to note, in this connection, that the corresponding value of the Pakistani and Ceylonese rupees and Burmese kyats, all of which have the same official parity as the Indian rupee, is still much lower, the rates being Rs. 6.80, Rs. 8.50 and the kyat Rs. 9.75, respectively. What is even more important, the upward trend in the price of gold which had persisted during the last eight years has definitely been reversed and the confidence of people in gold as a unique store of value and an effective hedge against inflation has been shaken. This is particularly true of persons who were investing in gold precisely for these qualities. There may still be some sceptics, but their number cannot be large. Instead of introducing fresh curbs as advocated by some supporters, the Government will do well to consolidate the steps already taken and enforce them properly. After all, the present scheme has been in operation for only three months and has not yet had full trial. This is too short a period to allow any firm conclusions to be drawn. It would certainly be rash to say that the scheme has failed. The best thing to do would be to pursue it vigorously, besides redoubling the watch against smugglers. If the price of gold were depressed to appreciably low levels, the demand for gold might become strong. The Government's purpose would be served so long as the price is held at a level which is not conducive to attract contraband gold. At the same time, the Government should launch a country-wide campaign against purchases of gold ornaments and restore the confidence of investors in equities.

COAL INDUSTRY: PERFORMANCE AND PROSPECTS

THANKS to the Emergency, the coal industry has accelerated the tempo of production since November last and, according to the official claim made in the latest annual report of the Union Ministry of Mines and Fuel, output has exceeded the target of 62.1 million tonnes for 1962-63 by a comfortable margin of anything upto one million tonnes. Two non-official estimates—those of the Indian Mining Association and the Indian Colliery Owners' Association—have it that actual coal production during 1962-63 was about 64.0 million tonnes. Whichever estimate is taken to be correct, there is no doubt that the relevant figure represents a big jump from the 55.2 million tonnes actually produced in 1961-62. But what detracts from this achievement is the fact that the 1962-63 output is not substantially more than the second Plan target of about 61.2 million tonnes which was to have been achieved in 1960-61. That, however, is not all, for, in the light of the Planning Commission's revised target of 69.6 million tonnes for 1962-63—a target which, presumably, the Ministry of Mines and Fuel has not recognised and worked for—there has been a shortfall of about six to seven million tonnes in achievement. Whichever target holds the field during the third Plan period—the 97 million tonnes to which the Ministry seems to be sticking or the 105 million tonnes representing the revised target laid down by the Planning Commission, the more relevant question is whether it will be achieved. Judging by the tempo of production in 1962-63 and assuming that it can be slightly accelerated in the remaining three years, there is every likelihood of the original target of 97 million tonnes being achieved in 1965-66. The same cannot be said of the other higher target of 105 million tonnes, let alone a still higher target of 107 million tonnes which, according to one report, might be finally approved by the Planning Commission.

Be that as it may, a doubt seems to have arisen in a section of the industry whether the trend in coal consumption in the last one year would justify even the original target of 97 million tonnes. This doubt has arisen, because pithead stocks of coal with private and State collieries, as at the end of 1962, were as much as 3.5 million tonnes and 0.5 million tonnes, respectively. While pithead stocks with the N.C.D.C. collieries have since gone up to 0.6 million tonnes, as of February 1963, private producers, too, seem to have experienced further difficulties in disposing of their stocks in the last few months. This is probably a temporary phase which cannot be taken to reflect a fall in the effective demand for coal. Transport bottlenecks and shortages in power and raw materials, it is well known, have been responsible for the slow-down in the pace of industrial production in the last two years. If coal consumption by industries in October 1962 (3.6 million tonnes), for instance, was at the same level as in October 1961 (3.5 million tonnes), it must have been due to three causes—transport bottlenecks, slow progress in the construction of thermal power projects in the first two years of the third Plan and the general slow-down in the pace of industrial production itself. There is no reason to believe that furnace oil, for instance, has found extensive application in industries as a substitute for coal in the last one year. When more power projects come to fruition in the next two years under the third Plan's phased programme and industrial production, too, goes up as a consequence, the demand for coal is bound to increase at a rapid pace. It would, therefore, be unwise to proceed on the basis of a misleading temporary trend in coal consumption and slow down production by not pursuing the expansion projects vigorously. The combined needs of development and defence point to a spurt in the demand for energy in all its forms in the coming years.

The industry thus has no need to take a pessimistic view of the situation pertaining to coal consumption. But it has certainly every reason to take a dim view of the prospects for production and expansion. As far as the private sector of the industry is concerned, it has no doubt performed much better than the public sector so far. Its estimated production of a little over 54.0 million tonnes in 1962-63 was much higher than its target of 49.3 million tonnes for the year, whereas the public sector covering the N.C.D.C. and Singareni collieries produced only about 11.0 million tonnes during the same period, against its target of 12.8 million tonnes. But this heartening performance of the private sector in 1962-63 does not necessarily point to its repetition from year to year in the rest of the third Plan period. Unless the older and the newer difficulties besetting the private collieries are removed betimes, it may not be surprising if, in the next few years, they fail to acquit themselves as creditably as they have done so far. It is, in this context, that the remedies, for which Mr. Rasiklal Worah pleaded in his presidential speech at the Thirtieth Annual General Meeting of the Indian Colliery Owners' Association held at Dhanbad on 29th March 1963, acquire an immediate relevance. The more important points made by him, from the point of view of planned and scientific mining and expansion in production, are highlighted below:

1. Mining machinery should be imported under a central agency and an immediate beginning be made to manufacture indigenously suitable items of machinery and equipment, particularly the spare parts.

2. Intensive training of technical personnel should be undertaken on a large scale right from now to meet the estimated needs of the future for technical manpower.

3. Indigenous production of explosions should be increased and manufacture of detonators, too, be established forthwith.

4. The idea of setting up thermal stations near coalfields to meet the increasing power requirements of the collieries should be vigorously pursued.

5. The difficulties experienced by the coal industry in the matter of acquisition of surface lands for mining and allied purposes should be removed without delay.

6. Innumerable small consumers are still not getting the quantities of coal required by them, because there is a shortfall of 20 per cent (representing 1,000 wagons a day) in wagon availability on the railways for coal transport.

7. The present coal prices are uneconomic. A general price increase, besides the latest (1st March 1963) increase of 80 nP per tonne for all grades of coal so as to compensate the industry for the additional wage cost arising from the interim recommendations of the Wage Board, would be necessary for neutralisation of cost increases on other counts. The present price ceilings on Grades II and HH coals and Grades IIIA and IIIB coals should also be removed.

8. Decisions on the Coal Grading Committee's recommendations pertaining to more scientific grades based on calorific value should not be delayed.

9. The present suicidal policy of easy and quick exploitation of superior grades of coal, which account for only 20 per cent of all deposits, should be abandoned in favour of a regulated pattern of production in conformity with qualitative resources.

10. The undistributed profits of the industry, which have been earmarked for re-investment on account of expansion projects approved under the World Bank Loan Scheme, would be depleted by the Super Profits Tax. The additional import duty on machinery and equipment would also add to the cost of those items. Relief is called for on both these counts, if the industry's present financial stringency is not to be aggravated.

These ten points, between them, constitute a cogent and balanced plea for relief and assistance to the industry in practical ways. It is doubtful whether the shortage of rupee resources required by the industry for fully availing of the World Bank Loan Scheme can be relieved except through a general price increase. After all, it is a fact that the seven price increases sanctioned since 16th November 1959 have aggregated just Rs. 3.64 nP per tonne and have been mostly by way of compensation for additional wage and labour welfare costs. The industry's case for a minimum price increase of Rs. 5.43 per tonne, which was conceded in June last year to the extent of only 38 nP to Re. 1.50 per tonne according to different grades, continues to be even more valid today, in view of its obvious inability to raise the counterpart rupee resources for implementing the expansion projects under the World Bank Loan Scheme. Sooner or later—sooner than later—the Government would have to give the needed relief to the industry by way of fuller neutralisation of cost increases. It may be noted here that today's controlled prices are based on production costs of about six years ago.

So much about the private sector which will continue to face real difficulties in the matter of expanding production in the next three years, unless, of course, these are eliminated in good time. What about the public sector collieries? Will they at least fare better? The National Coal Development Corporation has recently argued that, though it has already created, in its second Plan projects, the potential to produce 13.5 million tonnes, its production target for 1962-63 had to be fixed at just under 10.0 million tonnes because of transport shortage. This may be true, for the daily average loading of coal from both the public and private sectors in West Bengal and Bihar during 1962 was only slightly higher at 5,090 wagons per day, as compared with 4,769 in 1961, and in fields outside these States at 1,254 wagons a day in the former year, as compared with 1,164 in the latter. But the question is why this less-than-expected increase in wagon availability has stood in the way of output expansion in the public sector alone, but not in the private sector. Apparently, the N.C.D.C. has developed a part of its capacity in areas without ascertaining the railway ability to serve them fully. If there had been proper co-ordination between the N.C.D.C. and the Railways, the problem would not have been as acute as it is now.

The N.C.D.C. has created production facilities on a large scale and most of its third Plan projects for establishing a production potential of about 30 million tonnes have already been taken on hand. Mention may be made, in the latter connection, of last week's Indo-Polish agreement covering financial and technical assistance for the N.C.D.C.'s project for a deep-shaft mine at Sudamdih in Jharia and of another deep-shaft mine to be developed by the Corporation at Jarangdih with the assistance of Britain's National Coal Board. As the pattern of mechanised coal mining which the N.C.D.C. is fast developing with Polish, Russian, American and British collaboration can be expected to ensure higher productivity and bigger production, the Corporation will certainly be in a position to produce much more in the years to come than it has done so far. But it would be a waste of resources to keep the existing as well as the rapidly increasing, capacity of the N.C.D.C. unutilised on the ground of transport shortage. Efforts should be made from now onwards to remove this bottleneck. The public sector has no such acute financial problem as the private sector has and it is, therefore, in a position to go ahead with its third Plan projects, for which it has already ordered and largely received machinery worth Rs. 31 crores upto the end of 1962. It has no problem of power shortage either. While the public sector is thus operating under the most favourable circumstances, there can be no excuse for its possible failure to produce to the limit of its capacity.

MARKET GOSSIP

Profiteering In 14-carat Jewellery?

NOW that 14-carat gold ornaments are being made and sold by some leading dealers in the prominent cities, it will be worthwhile to take a second look at the supposedly malefic effects of the Gold Control Order on jewellers and goldsmiths. We say supposedly malefic effects, because, first, that is what the trade had said and, secondly (which is more important), we find that the Order has been a blessing in disguise to the trade. This finding has nothing to do with the tall claims being made by the jewellers and dealers that they have found little difficulty in drawing the material of the required strength from the 14-carat gold bars in order to make ornaments of beautiful designs, shapes, sizes and sets and of all types like plain, enamelled, embossed and inlaid. Indeed, such claims only lend credit to the skills of our goldsmiths and make those poor souls among their ranks, who took their lives because of the Gold Control Order, look all the more poor. The finding referred to above is based on a comparison of the prices of 14-carat ornaments with those of 22-carat ornaments, which suggests that there is a lot of profiteering by dealers in jewellery of 14-carat and less.

There is profiteering in both the price of gold content in the ornaments as well as the charges for making them. The price of gold content is mentioned as Rs. 70 per 10 grammes. On the basis of the ruling price for gold of .996 fineness at Rs. 98 per 10 grammes, it must not, however, exceed Rs. 57. Since the price given for gold bullion is the official quotation from the licensed dealers and is some six points above the unofficial rate, the value of 14-carat gold is likely to be lower still. The little copper and silver used as alloys in making 14-carat jewellery may cost some three rupees. This will bring the price to Rs. 60. How does it become Rs. 70? The charges for making 14-carat ornaments are Rs. 15 per bangle of 10 grammes. In the case of 22-carat ornaments, they used to be Rs. 8 to Rs. 10. The higher charges for 14-carat jewellery are said to be the result of the complicated nature of making such ornaments. One wonders whether this work is so complicated as to warrant a 50 per cent increase in the charges. In some cases, the increase is even 100 per cent. The dealers appear to be duping the public. According to our calculation, 14-carat bangles should cost not more than Rs. 72 apiece, taking the making charges as Rs. 12. Against this, the dealers' price is Rs. 85, which is an increase of Rs. 13 or 18 per cent. This is nothing short of profiteering, considering that the term "making charges" include the jeweller's profit too.

Unfortunately, 14-carat jewellery is definitely cheaper than the superior one. A set of four bangles in 14-carat gold, weighing 42.55 grammes, is offered by a prominent dealer in Bombay at Rs. 348. The same set in 22-carat gold would cost Rs. 418, according to him. Although one may not like it, the cheaper jewellery will cause more demand which will swell the dealers' fortunes. With profiteering and more demand, jewellers and goldsmiths have now no ground to complain against 14-carat ornaments. No wonder, they find it now not difficult at all to make such ornaments. It is only the people who may grudge that they have not only been denied the gold that really glitters but are also made to pay the price of 22-carat for 14-carat gold.

Tea Exports

The Indian tea industry seems to have turned the corner after passing through difficult times. Last year, it will be recalled, production of tea was less at 756 million lbs., as against the 778 million lbs. produced in 1961. Exports were, of course, higher at 471 million lbs. worth Rs. 125 crores, as against 452 million lbs. worth Rs. 124.6 crores. But the increase in exports was possible because of reduced prices, the average export price actually realised being no more than Rs. 2.62 per lb., as against Rs. 2.76 per lb. Since the beginning of 1963, however, the position has distinctly improved, as will be evident from the following figures relating to exports:

	January-February	
	1963	1962
Quantity of exports (million lbs.)	83.60	68.20
Value of exports (Rs. crores) ...	22.60	17.60
Average export price realised (Rs. per lb.)	2.70	2.58

Will the upward trend of tea exports continue in the remaining months of the year and thereafter? It will, according to Mr. A. S. Bam, I.C.S., Chairman of the Tea Board. Speaking at the annual general meeting of the Assam Tea Planters' Association held at Sibsagar on Sunday this week, Mr. Bam observed:

"....The Tea Board and the Government of India are extremely keen to see that exports of tea go up as envisaged in the third Five-year Plan. Various steps and measures have already been taken towards this and all other actions that may be necessary to remove genuine hindrances to exports will certainly be taken. I would also like to tell you categorically that we firmly believe that the targets of production and exports laid down in the third Five-year Plan are not at all impracticable or over-ambitious. Consumption of tea in the whole world is increasing rapidly and the pace of growth is going to be accelerated in the years to come as a result of the intensive promotional campaigns which we are going to launch in different countries of the world. We are convinced, therefore, that there will be no excess of world supply of tea over world demand in the foreseeable future. The feasibility of attaining the export target set for the tea industry in the third Five-year Plan is, therefore, beyond any shade of doubt."

The statement of the Tea Board Chairman that whatever actions necessary to remove genuine hindrances to exports "will certainly be taken" is, indeed, reassuring. Can this assurance be taken to mean that Mr. Bam will persuade the Government to grant refund of excise duty on tea exported? The withdrawal of this refund, it is pointed out on behalf of the tea industry, has greatly neutralised the benefit of the abolition of export duty. Whatever be the tax relief, the tea industry must also endeavour its best to improve the quality of tea and reduce production costs. Equally important is, as Mr. Bam rightly stressed, zealous and aggressive salesmanship on the part of the industry, so that foreign buyers can be induced to buy more and more of Indian teas.

One of the difficulties experienced by tea producers relates to payment of excise duty at increased rates long before sales have taken place. It is gratifying to find that Mr. Bam is sympathetic to the industry's plea for clearance of tea in bond without payment of excise duty or for the introduction of some other satisfactory method for deferred payment of excise duty. It is to be hoped that the Central Excise Reorganisation Committee, which submitted its report to the Government last week-end, has given due consideration to this plea. It is also gratifying to hear from Mr. Bam that the banks have agreed to continue their normal financing.

Since Assam accounts for half the total production of tea in India—some of the fine quality teas are grown in that State—the need to safeguard the interests of the industry in that part of India which is exposed to the dangers of Chinese aggression cannot be stressed too strongly. The authorities, both Central and State, are fully alive to this need. The Assam Government, we are told, is considering the question of convening a conference to consider the ways and means of improving the facilities for irrigation in the gardens, as well as for facilitating the flow of finance to the industry. Further, the Tea Board is taking steps to ensure adequate supplies of coal, cement and fertilisers to the industry. The question of setting up an efficient road transport organisation for Eastern India is also engaging the attention of the Central Government in consultation with the State Governments.

Stainless Steel Industries

A fervent plea to the Government of India to make available adequate raw materials to manufacturers of stainless steel goods was put forward by Mr. R. M. Shah, President of the All-India Stainless Steel Industries Association, at the annual meeting of the Association held in Bombay on Friday this week. He urged the Government to give stainless steel industries priority of consideration in the matter of allocating foreign exchange on the score not only of their purely economic importance, but also of their defence potential. He was highly critical of the Government's policies seeking to restrict imports of stainless steel sheets. Some strange forces, he feared, had been working against the stainless steel industry, particularly against the utensil sector, but for which imports of their raw materials would not have been curtailed, after permitting the industry to grow enormously in recent years. The number of units in the field of stainless steel goods production, which was only 40 in 1957, has since gone up to 400. The industry, he maintained, had been developed intentionally with a proper perspective in mind. He, therefore, expressed the view that it would be a retrograde, if not suicidal, step to curb the growth of the industry by denying it basic raw materials.

T. I. S. CO.'S PRODUCTION UP

(In thousand metric tonnes)

	Pig iron	Steel ingots	Saleable steel
1962-63	1,766	1,799	1,413
1961-62	1,648	1,643	1,318
1960-61	1,586	1,622	1,263
1959-60	1,591	1,555	1,237

It is, of course, true that the Government is hard put to it to allocate the limited foreign exchange among several competing claimants. But it is a pity that it has so far failed to evolve a long-term policy for import of stainless steel. What has been happening is that there are frequent changes in the policy, ranging from complete ban to liberalisation of imports, from time to time. Making a particular reference to this vacillation, Mr. Shah gave an account of the "contradictory decisions" taken by the Government during the last few years. A complete ban on imports of stainless steel was imposed in 1957, but soon the policy was reversed and the then existing 50 units were permitted to import stainless steel sheets worth Rs. 20 lakhs (as compared to imports of Rs. 4 crores in 1956, that is, before the imposition of the ban). Gradually, by 1958-59, imports were stepped up to the level of 1956, with the avowed purpose of encouraging the development of the industry in the country on diversified lines. Again, in June last year, it was decided to permit import of 4,000 tonnes of stainless steel sheets under barter deals by utensil manufacturers, but later it was revoked. In December 1962, however, the ban was reimposed on the import of stainless sheets by utensil manufacturers. But early last month, it was announced, once again, that imports of stainless steel sheets would be allowed against exports of stainless steel scrap. Under the revised scheme, it is not possible to import, it is said, more than just 400 tonnes of sheets, which are grossly insufficient for the domestic industry.

The need for ensuring adequate supply of sheets to the industry is particularly urgent, considering the possibilities of expanding exports of finished goods. In this connection, it may be noted that an incentive scheme is in operation, under which 75 per cent of export earnings is allowed to be used for importing sheets. But, according to Mr. Shah, these entitlements alone cannot ensure uninterrupted working of the existing units, unless adequate supply of raw materials is ensured for taking care of local needs as well. Explaining this point, he observed as follows:

"Every foreign buyer wants a variety of items —there are more than 400—in varied specifications and shapes. One cannot switch over production from one item to another based on the requirements of any single export order—if the raw material is given only for this purpose, one cannot know what type of order may come and what type of article the buyer will require so that the same can be produced and kept ready for him—but, if he starts producing only when the order is received, he cannot effect quick shipments. During the transition period when export orders are not forthcoming, how is it economically possible to keep the factory working and pay overheads? The only solution, therefore, is to continue exports and increase them, but raw material for local consumption is absolutely essential so as to ensure a continued flow of production from the factory to the local market, which can then act as a cushion to rest upon during times when there are no export orders, or act as a buffer stock which can fulfil the needs of an urgent export order."

The country would not have been in the serious plight in which it finds itself today in regard to this modern steel had the Government the foresight to encourage the manufacture of stainless steel. Even now, it is dillydallying on this issue, so that there is no prospect of minimising the dependence on imports in the foreseeable future.

Controversy On Air Fares

A crisis has developed in world air transport industry over the question of international air fares. The British Ministry of Aviation and the U.S. Civil Aeronautics Board (C.A.B.) are ranged on opposite sides of a controversy which threatens to upset the fare structures and schedules of airlines throughout the world. The trouble started a month ago when the C.A.B. refused to ratify the proposal of the International Air Transport Association (I.A.T.A.) to reduce the discount offered on round-trip fares by member-airlines from 10 to 5 per cent. The reason for the refusal was that the reduction would bring about an increase in fares. Two major developments in the past few days have brought the crisis to a head. These are: (1) The attempt by the I.A.T.A. to prevent chaos by introducing a 30-day "freeze" on passenger fares from 1st April 1963 (the date on which the revised fares, which are subject to the approval of the Governments of the countries to which the member-airlines of the I.A.T.A. belong was to come into force) was rejected by the airlines recently. (2) The British Ministry of Aviation authorised the British Overseas Airways Corporation (B.O.A.C.) on 29th March to raise the fares by five per cent with effect from 29th April; in other words, this means approval of the I.A.T.A.'s proposal. The British Ministry wants all foreign airlines also to do the same and has categorically stated that the only fares it is prepared to approve from 29th April in respect of Atlantic and Pacific routes to and from British territory are those proposed by the I.A.T.A.

The C.A.B. is, therefore, now obliged to reconsider its stand or to go it alone and fight it out with the I.A.T.A. by bringing round other Governments too to its way of thinking. Otherwise, theoretically at least, a situation could develop in which American airlines would be refused landing rights in Britain, unless they too increased their fares. It remains to be seen whether the C.A.B. will launch a full-scale attack on the powers of the I.A.T.A. It would, however, appear that the C.A.B., too, is anxious to prevent a deadlock in international air transport. Mr. Alan S. Boyd, Chairman of C.A.B., is reported to have asked U.S. airlines to agree to an increase in fares, if they were forced to do so, but only under protest, so that it would not compromise the stand of C.A.B. It is too early to predict what the outcome of the conflict will be. Whatever that might be, there is no doubt that the whole problem of international air fares has now been taken out of the hands of individual airlines and put into those of national Governments.

Mr. Kennedy's Foreign Aid Message

This year's foreign aid message of President Kennedy, sent to Congress on Tuesday the 2nd inst., contains two heartening features of utmost significance to India and other developing countries. In the first place, Mr. Kennedy's request for economic and military aid abroad amounting to a total of $4.525 million in the next fiscal year commencing 1st July next is much larger than that ($3,929 million) available in the current year, though it is smaller than the sum of $4.958 million asked for last year. Secondly, the "primary new initiative" in the programme relates to the U.S. Administration's increased efforts to encourage investment of private capital in underdeveloped countries. The President has recommended the following steps to the U.S. Congress:

1. An amendment to the internal revenue code for a trial period to grant U.S. taxpayers a credit for new investments in developing countries which should also apply, to some extent, to reinvestments of their earnings in these countries.

2. Amendments in the investment guarantee provisions of the Foreign Assistance Act designed to enlarge and clarify the guarantee programme.

This move of President Kennedy clearly signi-

(*Continued on page 624*)

threats of action, by inviting the religious and social leaders to extend their help in educating the public and engendering a sense of contentment with 14-carat gold, and by meeting the public at least half-way. The successful implementation of gold control requires the imagination, shrewdness and patience of a level-headed statesman-cum-social reformer and not the bluster and force of an impatient bully, out to secure quick results.

There is no cause for the Government to feel dissatisfied with the results of the measures already taken to check consumption of gold in the country. Smuggling seems to have slowed down considerably. The price of gold has stabilised well below Rs. 100 (per 10 grams) and is at a level 30 per cent below the peak touched in 1962. This is not an attractive level for encouraging large-scale smuggling. There is already visible evidence of this in the value of the rupee in the free foreign exchange markets of the world. The value has risen. Before the Gold Control Order, one had to pay as much as Rs. 7.50 for one U.S. dollar, as against the official exchange rate of Rs. 4.76. Today, the rate has come down to Rs. 5.60 per dollar. It may be interesting to note, in this connection, that the corresponding value of the Pakistani and Ceylonese rupees and Burmese kyats, all of which have the same official parity as the Indian rupee, is still much lower, the rates being Rs. 6.80, Rs. 8.50 and the kyat Rs. 9.75, respectively. What is even more important, the upward trend in the price of gold which had persisted during the last eight years has definitely been reversed and the confidence of people in gold as a unique store of value and an effective hedge against inflation has been shaken. This is particularly true of persons who were investing in gold precisely for these qualities. There may still be some sceptics, but their number cannot be large. Instead of introducing fresh curbs as advocated by some supporters, the Government will do well to consolidate the steps already taken and enforce them properly. After all, the present scheme has been in operation for only three months and has not yet had full trial. This is too short a period to allow any firm conclusions to be drawn. It would certainly be rash to say that the scheme has failed. The best thing to do would be to pursue it vigorously, besides redoubling the watch against smugglers. If the price of gold were depressed to appreciably low levels, the demand for gold might become strong. The Government's purpose would be served so long as the price is held at a level which is not conducive to attract contraband gold. At the same time, the Government should launch a country-wide campaign against purchases of gold ornaments and restore the confidence of investors in equities.

COAL INDUSTRY: PERFORMANCE AND PROSPECTS

THANKS to the Emergency, the coal industry has accelerated the tempo of production since November last and, according to the official claim made in the latest annual report of the Union Ministry of Mines and Fuel, output has exceeded the target of 62.1 million tonnes for 1962-63 by a comfortable margin of anything upto one million tonnes. Two non-official estimates—those of the Indian Mining Association and the Indian Colliery Owners' Association—have it that actual coal production during 1962-63 was about 64.0 million tonnes. Whichever estimate is taken to be correct, there is no doubt that the relevant figure represents a big jump from the 55.2 million tonnes actually produced in 1961-62. But what detracts from this achievement is the fact that the 1962-63 output is not substantially more than the second Plan target of about 61.2 million tonnes which was to have been achieved in 1960-61. That, however, is not all, for, in the light of the Planning Commission's revised target of 69.6 million tonnes for 1962-63—a target which, presumably, the Ministry of Mines and Fuel has not recognised and worked for—there has been a shortfall of about six to seven million tonnes in achievement. Whichever target holds the field during the third Plan period—the 97 million tonnes to which the Ministry seems to be sticking or the 105 million tonnes representing the revised target laid down by the Planning Commission, the more relevant question is whether it will be achieved. Judging by the tempo of production in 1962-63 and assuming that it can be slightly accelerated in the remaining three years, there is every likelihood of the original target of 97 million tonnes being achieved in 1965-66. The same cannot be said of the other higher target of 105 million tonnes, let alone a still higher target of 107 million tonnes which, according to one report, might be finally approved by the Planning Commission.

Be that as it may, a doubt seems to have arisen in a section of the industry whether the trend in coal consumption in the last one year would justify even the original target of 97 million tonnes. This doubt has arisen, because pithead stocks of coal with private and State collieries, as at the end of 1962, were as much as 3.5 million tonnes and 0.5 million tonnes, respectively. While pithead stocks with the N.C.D.C. collieries have since gone up to 0.6 million tonnes, as of February 1963, private producers, too, seem to have experienced further difficulties in disposing of their stocks in the last few months. This is probably a temporary phase which cannot be taken to reflect a fall in the effective demand for coal. Transport bottlenecks and shortages in power and raw materials, it is well known, have been responsible for the slow-down in the pace of industrial production in the last two years. If coal consumption by industries in October 1962 (3.6 million tonnes), for instance, was at the same level as in October 1961 (3.5 million tonnes), it must have been due to three causes—transport bottlenecks, slow progress in the construction of thermal power projects in the first two years of the third Plan and the general slow-down in the pace of industrial production itself. There is no reason to believe that furnace oil, for instance, has found extensive application in industries as a substitute for coal in the last one year. When more power projects come to fruition in the next two years under the third Plan's phased programme and industrial production, too, goes up as a consequence, the demand for coal is bound to increase at a rapid pace. It would, therefore, be unwise to proceed on the basis of a misleading temporary trend in coal consumption and slow down production by not pursuing the expansion projects vigorously. The combined needs of development and defence point to a spurt in the demand for energy in all its forms in the coming years.

The industry thus has no need to take a pessimistic view of the situation pertaining to coal consumption. But it has certainly every reason to take a dim view of the prospects for production and expansion. As far as the private sector of the industry is concerned, it has no doubt performed much better than the public sector so far. Its estimated production of a little over 54.0 million tonnes in 1962-63 was much higher than its target of 49.3 million tonnes for the year, whereas the public sector covering the N.C.D.C. and Singareni collieries produced only about 11.0 million tonnes during the same period, against its target of 12.8 million tonnes. But this heartening performance of the private sector in 1962-63 does not necessarily point to its repetition from year to year in the rest of the third Plan period. Unless the older and the newer difficulties besetting the private collieries are removed betimes, it may not be surprising if, in the next few years, they fail to acquit themselves as creditably as they have done so far. It is, in this context, that the remedies, for which Mr. Rasiklal Worah pleaded in his presidential speech at the Thirtieth Annual General Meeting of the Indian Colliery Owners' Association held at Dhanbad on 29th March 1963, acquire an immediate relevance. The more important points made by him, from the point of view of planned and scientific mining and expansion in production, are highlighted below:

1. Mining machinery should be imported under a central agency and an immediate beginning be made to manufacture indigenously suitable items of machinery and equipment, particularly the spare parts.

2. Intensive training of technical personnel should be undertaken on a large scale right from now to meet the estimated needs of the future for technical manpower.

3. Indigenous production of explosions should be increased and manufacture of detonators, too, be established forthwith.

4. The idea of setting up thermal stations near coalfields to meet the increasing power requirements of the collieries should be vigorously pursued.

5. The difficulties experienced by the coal industry in the matter of acquisition of surface lands for mining and allied purposes should be removed without delay.

6. Innumerable small consumers are still not getting the quantities of coal required by them, because there is a shortfall of 20 per cent (representing 1,000 wagons a day) in wagon availability on the railways for coal transport.

7. The present coal prices are uneconomic. A general price increase, besides the latest (1st March 1963) increase of 80 nP per tonne for all grades of coal so as to compensate the industry for the additional wage cost arising from the interim recommendations of the Wage Board, would be necessary for neutralisation of cost increases on other counts. The present price ceilings on Grades II and HH coals and Grades IIIA and IIIB coals should also be removed.

8. Decisions on the Coal Grading Committee's recommendations pertaining to more scientific grades based on calorific value should not be delayed.

9. The present suicidal policy of easy and quick exploitation of superior grades of coal, which account for only 20 per cent of all deposits, should be abandoned in favour of a regulated pattern of production in conformity with qualitative resources.

10. The undistributed profits of the industry, which have been earmarked for re-investment on account of expansion projects approved under the World Bank Loan Scheme, would be depleted by the Super Profits Tax. The additional import duty on machinery and equipment would also add to the cost of those items. Relief is called for on both these counts, if the industry's present financial stringency is not to be aggravated.

These ten points, between them, constitute a cogent and balanced plea for relief and assistance to the industry in practical ways. It is doubtful whether the shortage of rupee resources required by the industry for fully availing of the World Bank Loan Scheme can be relieved except through a general price increase. After all, it is a fact that the seven price increases sanctioned since 16th November 1959 have aggregated just Rs. 3.64 nP per tonne and have been mostly by way of compensation for additional wage and labour welfare costs. The industry's case for a minimum price increase of Rs. 5.43 per tonne, which was conceded in June last year to the extent of only 38 nP to Re. 1.50 per tonne according to different grades, continues to be even more valid today, in view of its obvious inability to raise the counterpart rupee resources for implementing the expansion projects under the World Bank Loan Scheme. Sooner or later—sooner than later—the Government would have to give the needed relief to the industry by way of fuller neutralisation of cost increases. It may be noted here that today's controlled prices are based on production costs of about six years ago.

So much about the private sector which will continue to face real difficulties in the matter of expanding production in the next three years, unless, of course, these are eliminated in good time. What about the public sector collieries? Will they at least fare better? The National Coal Development Corporation has recently argued that, though it has already created, in its second Plan projects, the potential to produce 13.5 million tonnes, its production target for 1962-63 had to be fixed at just under 10.0 million tonnes because of transport shortage. This may be true, for the daily average loading of coal from both the public and private sectors in West Bengal and Bihar during 1962 was only slightly higher at 5,090 wagons per day, as compared with 4,769 in 1961, and in fields outside these States at 1,254 wagons a day in the former year, as compared with 1,164 in the latter. But the question is why this less-than-expected increase in wagon availability has stood in the way of output expansion in the public sector alone, but not in the private sector. Apparently, the N.C.D.C. has developed a part of its capacity in areas without ascertaining the railway ability to serve them fully. If there had been proper co-ordination between the N.C.D.C. and the Railways, the problem would not have been as acute as it is now.

The N.C.D.C. has created production facilities on a large scale and most of its third Plan projects for establishing a production potential of about 30 million tonnes have already been taken on hand. Mention may be made, in the latter connection, of last week's Indo-Polish agreement covering financial and technical assistance for the N.C.D.C.'s project for a deep-shaft mine at Sudamdih in Jharia and of another deep-shaft mine to be developed by the Corporation at Jarangdih with the assistance of Britain's National Coal Board. As the pattern of mechanised coal mining which the N.C.D.C. is fast developing with Polish, Russian, American and British collaboration can be expected to ensure higher productivity and bigger production, the Corporation will certainly be in a position to produce much more in the years to come than it has done so far. But it would be a waste of resources to keep the existing as well as the rapidly increasing, capacity of the N.C.D.C. unutilised on the ground of transport shortage. Efforts should be made from now onwards to remove this bottleneck. The public sector has no such acute financial problem as the private sector has and it is, therefore, in a position to go ahead with its third Plan projects, for which it has already ordered and largely received machinery worth Rs. 31 crores upto the end of 1962. It has no problem of power shortage either. While the public sector is thus operating under the most favourable circumstances, there can be no excuse for its possible failure to produce to the limit of its capacity.

MARKET GOSSIP

Profiteering In 14-carat Jewellery?

NOW that 14-carat gold ornaments are being made and sold by some leading dealers in the prominent cities, it will be worthwhile to take a second look at the supposedly malefic effects of the Gold Control Order on jewellers and goldsmiths. We say supposedly malefic effects, because, first, that is what the trade had said, and, secondly (which is more important), we find that the Order has been a blessing in disguise to the trade. This finding has nothing to do with the tall claims being made by the jewellers and dealers that they have found little difficulty in drawing the material of the required strength from the 14-carat gold bars in order to make ornaments of beautiful designs, shapes, sizes and sets and of all types like plain, enamelled, embossed and inlaid. Indeed, such claims only lend credit to the skills of our goldsmiths and make those poor souls among their ranks, who took their lives because of the Gold Control Order, look all the more poor. The finding referred to above is based on a comparison of the prices of 14-carat ornaments with those of 22-carat ornaments, which suggests that there is a lot of profiteering by dealers in jewellery of 14-carat and less.

There is profiteering in both the price of gold content in the ornaments as well as the charges for making them. The price of gold content is mentioned as Rs. 70 per 10 grammes. On the basis of the ruling price for gold of .996 fineness at Rs. 98 per 10 grammes, it must not, however, exceed Rs. 57. Since the price given for gold bullion is the official quotation from the licensed dealers and is some six points above the unofficial rate, the value of 14-carat gold is likely to be lower still. The little copper and silver used as alloys in making 14-carat jewellery may cost some three rupees. This will bring the price to Rs. 60. How does it become Rs. 70? The charges for making 14-carat ornaments are Rs. 15 per bangle of 10 grammes. In the case of 22-carat ornaments, they used to be Rs. 8 to Rs. 10. The higher charges for 14-carat jewellery are said to be the result of the complicated nature of making such ornaments. One wonders whether this work is so complicated as to warrant a 50 per cent increase in the charges. In some cases, the increase is even 100 per cent. The dealers appear to be duping the public. According to our calculation, 14-carat bangles should cost not more than Rs. 72 apiece, taking the making charges as Rs. 12. Against this, the dealers' price is Rs. 85, which is an increase of Rs. 13 or 18 per cent. This is nothing short of profiteering, considering that the term "making charges" include the jeweller's profit too.

Unfortunately, 14-carat jewellery is definitely cheaper than the superior one. A set of four bangles in 14-carat gold, weighing 42.35 grammes, is offered by a prominent dealer in Bombay at Rs. 348. The same set in 22-carat gold would cost Rs. 418, according to him. Although one may not like it, the cheaper jewellery will cause more demand which will swell the dealers' fortunes. With profiteering and more demand, jewellers and goldsmiths have now no ground to complain against 14-carat ornaments. No wonder, they find it now not difficult at all to make such ornaments. It is only the people who may grudge that they have not only been denied the gold that really glitters but are also made to pay the price of 22-carat for 14-carat gold.

Tea Exports

The Indian tea industry seems to have turned the corner after passing through difficult times. Last year, it will be recalled, production of tea was less at 756 million lbs., as against the 778 million lbs. produced in 1961. Exports were, of course, higher at 471 million lbs. worth Rs. 125 crores, as against 452 million lbs. worth Rs. 124.6 crores. But the increase in exports was possible because of reduced prices, the average export price actually realised being no more than Rs. 2.63 per lb., as against Rs. 2.76 per lb. Since the beginning of 1963, however, the position has distinctly improved, as will be evident from the following figures relating to exports:

	January-February	
	1963	1962
Quantity of exports (million lbs.)	83.60	68.20
Value of exports (Rs. crores) ...	22.60	17.60
Average export price realised (Rs. per lb.)	2.70	2.58

Will the upward trend of tea exports continue in the remaining months of the year and thereafter? It will, according to Mr. A. S. Bam, I.C.S., Chairman of the Tea Board. Speaking at the annual general meeting of the Assam Tea Planters' Association held at Sibsagar on Sunday this week, Mr. Bam observed:

"... The Tea Board and the Government of India are extremely keen to see that exports of tea go up as envisaged in the third Five-year Plan. Various steps and measures have already been taken towards this and all other actions that may be necessary to remove genuine hindrances to exports will certainly be taken. I would also like to tell you categorically that we firmly believe that the targets of production and exports laid down in the third Five-year Plan are not at all impracticable or over-ambitious. Consumption of tea in the whole world is increasing rapidly and the pace of growth is going to be accelerated in the years to come as a result of the intensive promotional campaigns which we are going to launch in different countries of the world. We are convinced, therefore, that there will be no excess of world supply of tea over world demand in the foreseeable future. The feasibility of attaining the export target set for the tea industry in the third Five-year Plan is, therefore, beyond any shade of doubt."

The statement of the Tea Board Chairman that whatever actions necessary to remove genuine hindrances to exports "will certainly be taken" is, indeed, reassuring. Can this assurance be taken to mean that Mr. Bam will persuade the Government to grant refund of excise duty on tea exported? The withdrawal of this refund, it is pointed out on behalf of the tea industry, has greatly neutralised the benefit of the abolition of export duty. Whatever be the tax relief, the tea industry must also endeavour its best to improve the quality of tea and reduce production costs. Equally important is, as Mr. Bam rightly stressed, zealous and aggressive salesmanship on the part of the industry, so that foreign buyers can be induced to buy more and more of Indian teas.

One of the difficulties experienced by tea producers relates to payment of excise duty at increased rates long before sales have taken place. It is gratifying to find that Mr. Bam is sympathetic to the industry's plea for clearance of tea in bond without payment of excise duty or for the introduction of some other satisfactory method for deferred payment of excise duty. It is to be hoped that the Central Excise Reorganisation Committee, which submitted its report to the Government last week-end, has given due consideration to this plea. It is also gratifying to hear from Mr. Bam that the banks have agreed to continue their normal financing.

Since Assam accounts for half the total production of tea in India—some of the fine quality teas are grown in that State—the need to safeguard the interests of the industry in that part of India which is exposed to the dangers of Chinese aggression cannot be stressed too strongly. The authorities, both Central and State, are fully alive to this need. The Assam Government, we are told, is considering the question of convening a conference to consider the ways and means of improving the facilities for irrigation in the gardens, as well as for facilitating the flow of finance to the industry. Further, the Tea Board is taking steps to ensure adequate supplies of coal, cement and fertilisers to the industry. The question of setting up an efficient road transport organisation for Eastern India is also engaging the attention of the Central Government in consultation with the State Governments.

Stainless Steel Industries

A fervent plea to the Government of India to make available adequate raw materials to manufacturers of stainless steel goods was put forward by Mr. R. M. Shah, President of the All-India Stainless Steel Industries Association, at the annual meeting of the Association held in Bombay on Friday this week. He urged the Government to give stainless steel industries priority of consideration in the matter of allocating foreign exchange on the score not only of their purely economic importance, but also of their defence potential. He was highly critical of the Government's policies seeking to restrict imports of stainless steel sheets. Some strange forces, he feared, had been working against the stainless steel industry, particularly against the utensil sector, but for which imports of their raw materials would not have been curtailed, after permitting the industry to grow enormously in recent years. The number of units in the field of stainless steel goods production, which was only 40 in 1957, has since gone up to 400. The industry, he maintained, had been developed intentionally with a proper perspective in mind. He, therefore, expressed the view that it would be a retrograde, if not suicidal, step to curb the growth of the industry by denying it basic raw materials.

T. I. S. CO.'S PRODUCTION UP

(In thousand metric tonnes)

	Pig iron	Steel ingots	Saleable steel
1962-63	1,766	1,799	1,413
1961-62	1,648	1,643	1,318
1960-61	1,586	1,622	1,263
1959-60	1,591	1,555	1,237

It is, of course, true that the Government is hard put to it to allocate the limited foreign exchange among several competing claimants. But it is a pity that it has so far failed to evolve a long-term policy for import of stainless steel. What has been happening is that there are frequent changes in the policy, ranging from complete ban to liberalisation of imports, from time to time. Making a particular reference to this vacillation, Mr. Shah gave an account of the "contradictory decisions" taken by the Government during the last few years. A complete ban on imports of stainless steel was imposed in 1957, but soon the policy was reversed and the then existing 50 units were permitted to import stainless steel sheets worth Rs. 20 lakhs (as compared to imports of Rs. 4 crores in 1956, that is, before the imposition of the ban). Gradually, by 1958-59, imports were stepped up to the level of 1956, with the avowed purpose of encouraging the development of the industry in the country on diversified lines. Again, in June last year, it was decided to permit import of 4,000 tonnes of stainless steel sheets under barter deals by utensil manufacturers, but later it was revoked. In December 1962, however, the ban was reimposed on the import of stainless sheets by utensil manufacturers. But early last month, it was announced, once again, that imports of stainless steel sheets would be allowed against exports of stainless steel scrap. Under the revised scheme, it is not possible to import, it is said, more than just 400 tonnes of sheets, which are grossly insufficient for the domestic industry.

The need for ensuring adequate supply of sheets to the industry is particularly urgent, considering the possibilities of expanding exports of finished goods. In this connection, it may be noted that an incentive scheme is in operation, under which 75 per cent of export earnings is allowed to be used for importing sheets. But, according to Mr. Shah, these entitlements alone cannot ensure uninterrupted working of the existing units, unless adequate supply of raw materials is ensured for taking care of local needs as well. Explaining this point, he observed as follows:

"Every foreign buyer wants a variety of items —there are more than 400—in varied specifications and shapes. One cannot switch over production from one item to another based on the requirements of any single export order—if the raw material is given only for this purpose, one cannot know what type of order may come and what type of article the buyer will require so that the same can be produced and kept ready for him—but, if he starts producing only when the order is received, he cannot effect quick shipments. During the transition period when export orders are not forthcoming, how is it economically possible to keep the factory working and pay overheads? The only solution, therefore, is to continue exports and increase them, but raw material for local consumption is absolutely essential so as to ensure a continued flow of production from the factory to the local market, which can then act as a cushion to rest upon during times when there are no export orders, or act as a buffer stock which can fulfil the needs of an urgent export order."

The country would not have been in the serious plight in which it finds itself today in regard to this modern steel had the Government the foresight to encourage the manufacture of stainless steel. Even now, it is dillydallying on this issue, so that there is no prospect of minimising the dependence on imports in the foreseeable future.

Controversy On Air Fares

A crisis has developed in world air transport industry over the question of international air fares. The British Ministry of Aviation and the U.S. Civil Aeronautics Board (C.A.B.) are ranged on opposite sides of a controversy which threatens to upset the fare structures and schedules of airlines throughout the world. The trouble started a month ago when the C.A.B. refused to ratify the proposal of the International Air Transport Association (I.A.T.A.) to reduce the discount offered on round-trip fares by member-airlines from 10 to 5 per cent. The reason for the refusal was that the reduction would bring about an increase in fares. Two major developments in the past few days have brought the crisis to a head. These are: (1) The attempt by the I.A.T.A. to prevent chaos by introducing a 30-day "freeze" on passenger fares from 1st April 1963 (the date on which the revised fares, which are subject to the approval of the Governments of the countries to which the member-airlines of the I.A.T.A. belong was to come into force) was rejected by the airlines recently. (2) The British Ministry of Aviation authorised the British Overseas Airways Corporation (B.O.A.C.) on 29th March to raise the fares by five per cent with effect from 29th April; in other words, this means approval of the I.A.T.A.'s proposal. The British Ministry wants all foreign airlines also to do the same and has categorically stated that the only fares it is prepared to approve from 29th April in respect of Atlantic and Pacific routes to and from British territory are those proposed by the I.A.T.A.

The C.A.B. is, therefore, now obliged to reconsider its stand or to go it alone and fight it out with the I.A.T.A. by bringing round other Governments too to its way of thinking. Otherwise, theoretically at least, a situation could develop in which American airlines would be refused landing rights in Britain, unless they too increased their fares. It remains to be seen whether the C.A.B. will launch a full-scale attack on the powers of the I.A.T.A. It would, however, appear that the C.A.B., too, is anxious to prevent a deadlock in international air transport. Mr. Alan S. Boyd, Chairman of C.A.B., is reported to have asked U.S. airlines to agree to an increase in fares, if they were forced to do so, but only under protest, so that it would not compromise the stand of C.A.B. It is too early to predict what the outcome of the conflict will be. Whatever that might be, there is no doubt that the whole problem of international air fares has now been taken out of the hands of individual airlines and put into those of national Governments.

Mr. Kennedy's Foreign Aid Message

This year's foreign aid message of President Kennedy, sent to Congress on Tuesday the 2nd inst., contains two heartening features of utmost significance to India and other developing countries. In the first place, Mr. Kennedy's request for economic and military aid abroad amounting to a total of $4,525 million in the next fiscal year commencing 1st July next is much larger than that ($3,929 million) available in the current year, though it is smaller than the sum of $4,958 million asked for last year. Secondly, the "primary new initiative" in the programme relates to the U.S. Administration's increased efforts to encourage investment of private capital in underdeveloped countries. The President has recommended the following steps to the U.S. Congress:

1. An amendment to the internal revenue code for a trial period to grant U.S. taxpayers a credit for new investments in developing countries which should also apply, to some extent, to reinvestments of their earnings in these countries.

2. Amendments in the investment guarantee provisions of the Foreign Assistance Act designed to enlarge and clarify the guarantee programme.

This move of President Kennedy clearly signi-

PERSPECTIVES & PROJECTIONS

By Mercator

Caesar's Wife

CORRUPTION in the public services, like crime in general, may not decline in absolute terms. Extension of the spheres of public and private activity keep enlarging the areas in which the human element will show its weaknesses; punishment may set an example and instil fear in the timid but it will not deter the foolish, or the knevish, tempted into corrupt ways by opportunities available for personal enrichment in the public service. Not all forms of bribe-taking may be equally serious in their social consequences; there are many who would wink at or even favour the continuance of the various forms of *baksheesh* to subordinate officials and functionaries which lubricates an otherwise gritty machinery and make dealings with certain administrative agencies practicable to busy people. It is here that the trouble starts and makes it difficult for the public to draw the line at any point. In recent times, the public is more disturbed by corruption of a quite different kind, practised on a larger scale than hitherto; favours to important and influential people have been granted by top officials, often at the instance of politicians but sometimes also on their own because of the immunity conferred on them by the help they render to people who count.

Whenever the subject of corruption was broached, discussion was invariably diverted to the services and Ministers have sidetracked critics' attention to service rules, work of special police establishments and more recently, to amendment of the Constitution to facilitate speedy disciplinary inquiries. In Parliament, of late, many members have rightly refused to be diverted by these tactics and pointed out that the example set by Ministers by their ways of living or their general reputation for integrity is not such as to tone up standards of honesty. This outspoken criticism is a very hopeful trend, since it discourages the feeling that persons in high positions can get away with conduct which becomes questionable in respect of lesser beings; when even Ministers are not spared, those below them will have a healthy fear of repercussions on their future careers.

* * * *

S.P.E.'s Encouraging Record

Judged in this perspective, the report of the Special Police Establishment for 1962 must be considered extremely satisfactory, even though I am aware that as many cases as have been detected and punished have escaped the S.P.E.'s notice. It is obviously at a serious disadvantage in dealing with anonymous or pseudonymous complaints which formed nearly half the total of its incoming mail last year, but that may be no reason why it should adopt the general rule that it is not worthwhile investigating such complaints. In many situations, people who know of corrupt practices will not be in a position to reveal their own names, but could give useful clues and specific information which supports their complaints or suspicions. Subordinate officers, for example, will have no option but to remain anonymous, if they have to expose the conduct of those above them; the S.P.E. will have to revise its present policy, if it wants to prevent a position in which only disgruntled parties will prefer signed complaints, not others with a genuine public interest.

Of the cases inquired into by the S.P.E., nearly half related to Railways; posts and telegraphs, defence and Central excise departments follow in that order, excluding import control which stands on a slightly different footing. The period taken by the S.P.E. for inquiries seems reasonably short; only 22 enquiries were older than six months at the end of 1962 and only one case was carried over from 1961. One wonders, however, whether there is not the usual police tendency to show a high percentage of successfully completed inquiries by dropping complaints which may deserve to be pursued and referring to departments cases which the S.P.E. should have taken upon itself. There is a charming modesty about the S.P.E.'s report when it says that the increasing number of new cases taken up "cannot possibly be a true index of the volume of or extent of corruption. This increase could well arise from greater vigilance and, to some extent, may be the result of special efforts made by the Special Police Establishment to collect information about malpractices by public servants. It may also be due to the increasing interest being taken by the people in exposing this evil."

The private sector also figures in this report; 180 firms wrongfully utilised 237 licences valued at Rs. 44 lakhs obtained as actual users; 73 firms obtained 106 licences valued at Rs. 27 lakhs by misrepresentation or on the basis of forged documents, in which some high officials were also involved; and 74 firms were later blacklisted. Thus, the record of inquiry and action is good enough to instil a sense of fear of consequences among delinquent officials and private parties which is all that any system of punishment can hope to achieve by itself.

Clay Report and After

Some pessimistic notes have been struck in recent Press comments on the Clay report on U.S. foreign aid, which probably follow the line taken by Walter Lippmann in his widely read columns. The latter, I think, is an internal matter, best left to American controversialists to argue out in the light of their understanding of U.S. global responsibilities for defence and economic aid. President Kennedy had anticipated much of the Clay report in his actual policies since 1961; what he seems to have needed at this juncture, when next year's elections may queer his pitch, was some broad bipartisan support for the basic policies he intends to pursue. This he has secured from the ten-member group, and Mr. Black's being one of it is, I think, the best proof that it was not unduly shortsighted. U.S. balance of payments is still causing anxiety and some economy, consistent with effectiveness, was not out of place in the grant of U.S. foreign aid. Receiving countries also should now be in a position to get rid of the notion that only the amounts matter, not quality.

The quality aspect is becoming important, since many others besides the U.S.A. are now keen that a revision of aid techniques may be necessary. Mr. Walter Scheel, West German Minister of Economic Co-operation, has spoken of the need for new guidelines and minimum standards of profitability and usefulness. The new style, according to him, is: "Not single projects but project groups," leading to centres of development and measures of social reorganisation and reform. For example, land reform may be considered necessary as part of help to an irrigation project and a country seeking aid cannot be encouraged to regard reform as its own internal matter. This point has special relevance to the Syrian Euphrates project, which Bonn regards as the greatest after Rourkela. But Germany is now more interested in Latin America where the U.S., it seems, is willing to co-ordinate its efforts with its own Alliance for Progress for planning and advising on suitable economic institutions required for development.

Very significant and interesting are the lessons which Bonn had learnt, according to Mr. Scheel, from Rourkela. The first is that a project of this kind can be financed only if conditions are agreed upon which will guarantee its completion; key problems like supply of labour and skilled personnel and managers cannot be left wholly to the initiative of the developing country. While ruling out any intention to apply European profit standards for developing countries and recognising the value of symbolic projects which give them confidence, Mr. Scheel hinted that the problem of fitting modern enterprises like steelworks into the economic and social structure of the developing country would not be overlooked. But how the aiding country can solve it has been left unsaid; this is a matter which may be increasingly discussed in future, if Bonn tries to put its new principles into practice. Immediately this is relevant to drive home the point that there is an increasing Western awareness of the need to maximise results from aid.

Defining Industry

The Supreme Court has given a ruling that a university is not an industry. That such a question arose at all is significant; even more so is the circumstance that an industrial tribunal had earlier decided that the Delhi University was an industry for purposes of paying retrenchment compensation to motor drivers whose services were terminated. The logical processes by which the tribunal came to the conclusion have not naturally convinced the highest court in the land which has pointed out that the work of imparting education to students cannot be regarded as an industry. It is not known whether the respondents who were favoured by the tribunal cited the "output" of graduates as proof but the judgment refers to the parallel drawn between the co-operation among teachers and universities and among workers and employers—which the Court rejected. On the purely verbal plane, perhaps, Sir Joshua Reynolds's remark might have been quotable: "If you have great talents, industry will improve them. If you have but moderate abilities industry will supply their deficiency."

This case points to an anomaly in the law which requires an aggrieved employee to stretch and strain the meaning of words, in order to get protection or compensation. Conceivably, there may be other cases in which some kind of regulation of the terms of employment is necessary to safeguard service conditions. In the case of journalists, for example, the Government had to apply the Industrial Disputes Act—but without applying certain other restrictive conditions applying to a worker in industry seeking the benefits of the Act. Separate provisions may be needed to govern employer-employee relations in non-industrial establishments: a different set of principles may have be devised for non-profit making establishments, since it is obviously undesirable that any employee in a public or quasi-public institution should be left wholly without redress of forced to put forward untenable contentions to get a remedy.

BOMBAY BURMAH'S BONUS ISSUE

The centenary gift of the Bombay Burmah Trading Corporation Ltd., in the form of a one-for-one bonus share issue is to follow and not precede (as originally proposed by the Company) the sub-division of the existing shares which are expressed in different denominations—Rs. 2,500 each fully paid, Rs. 125 each fully paid and Rs. 125 each with only Rs. 50 paid—into shares of Rs. 25 each. This modification has been made by the Controller of Capital Issues while sanctioning the bonus issue. Accordingly, the 100 fully paid shares of Rs. 2,500 each will be split into 10,000 fully paid shares of Rs. 25 each, the 71,400 fully paid shares of Rs. 125 each into 357,000 fully paid shares of Rs. 25 each and the 84,000 shares of Rs. 125, with Rs. 50 paid-up, into 420,000 shares of Rs. 25 each, with Rs. 10 paid-up. It will be recalled that in the case of the partly paid shares, the bonus element is to be utilised to raise the paid-up amount by 100 per cent, as the bonus issue is in the proportion of one for one. The bonus issue will double the paid-up capital from Rs. 1.34 crore to Rs. 2.68 crores, composed of 734,000 fully paid shares of Rs. 25 each and 420,000 shares of Rs. 25 each, with Rs. 20 paid. This capitalisation of reserves will attract tax of Rs. 16 lakhs.

BANK OF MAHARASHTRA

SAME DIVIDEND ON HIGHER CAPITAL

THE outstanding feature of the past four years' working of the Bank of Maharashtra Ltd. (General Manager: Mr. C. V. Joag, Poona) is the maintenance of the dividend on the 50-rupee fully paid shares at 9 per cent per annum, subject to tax, on a capital which has progressively increased in that period from Rs. 31.68 lakhs to Rs. 49.75 lakhs. The net return works out to 6.3 per cent which is only a shade lower than 6.5 per cent for 1958, when the paid-up capital increased for the first time in recent years from Rs. 28.19 lakhs to Rs. 31.68 lakhs. The increase in the past calendar year from Rs. 39.65 lakhs to Rs. 49.75 lakhs following the issue of Rs. 10 lakhs additional shares was the fifth in the series. Considering that that year was characterised with an all-round increase in the expenses of banks as a whole, the maintenance of the dividend on the higher capital for that year is quiet creditable for the Bank.

This has been possible, because (a) the rate of dividend itself has been modest and (b) there has been an impressive growth in the Bank's business in recent years. The year under review has witnessed a spurt in gross income from Rs. 89.65 lakhs to Rs. 121.91 lakhs as well as in the balance-sheet total from Rs. 23.59 crores to Rs. 30.55 crores. The rise in income has been practically wiped off by considerable increases in expenses as detailed in the table which follows. But, unlike in the case of the majority of banks, the Bank has closed the year with a slightly higher declared profit of Rs. 8.43 lakhs as compared with Rs. 8.24 lakhs a year before. The Bank has not only maintained the dividend which absorbs some Rs. 54,000 more at Rs. 3.89 lakhs but also set apart Rs. 4.50 lakhs —more than 50 per cent of profit—to the reserve fund, thereby sustaining its conservatives appropriation policy. The continuous increase in capital and the conservative appropriation of profit clearly demonstrate the Bank's anxiety to reach as fast as possible the 6 per cent ratio of "own funds" to deposits suggested by the Reserve Bank for banks as a whole. Since, however, this ratio at the end of 1962 stood at no more than 3.1 per cent, it is but natural that the Bank should have decided to make a further issue of capital in due course of time.

The following table compares the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Interest and discount earned	104.52	76.57	64.76	52.10
Commission, exchange and brokerage	16.27	12.08	8.44	6.85
Other income	1.12	1.00	0.79	0.78
Interest paid	63.08	41.86	33.99	28.74
Staff expenses	38.24	27.06	21.73	15.73
Other expenses	13.62	11.24	7.71	6.56
Depreciation	1.54	1.25	1.06	0.96
Profit after tax	8.43	8.24	6.00	4.26
To reserve fund	4.50	4.40	2.00	1.60
To industrial development fund	..	0.40	0.40	..
To staff benefit fund	..	0.10	0.10	..
Dividend	3.89 (9%)*	3.35 (9%)*	2.88 (9%)*	2.69 (9%)*
Carry forward	0.46	0.42	0.41	0.45

	As at 31st December			
	1962	1961	1960	1959
Capital	49.75	39.65	31.86	31.68
Reserves	26.80	22.00	17.10	14.60
Deposits	24,76.67	19,48.38	15,13.56	13,25.56
Borrowings from other banks	0.25	..	..	..
Advances	11,88.42	976.40	968.10	506.67
Investments	950.10	747.13	662.50	652.64
Cash	426.80	302.48	256.16	224.49
Balance sheet total	30,55.48	23,58.72	18,06.60	15,87.33
Ratio to deposits of—	%	%	%	%
Advances	47.7	50.1	45.1	36.2
Investments	38.3	38.3	43.7	49.2
Cash	17.2	15.5	15.5	16.9

* Subject to deduction of tax.

Deposits of the Bank have increased during the year from Rs. 19.48 crores to Rs. 24.77 crores and have been channelled largely into liquid assets. The liquidity ratio is up by more than two points at the pretty formidable figure of 55.5 per cent. The credit ratio, on the other hand, has moved down from 50.1 to 47.7 per cent and is much lower than both the scheduled banks' average for the year as a whole and for the last month of the year at 65 per cent and 69 per cent, respectively.

Mr. V. P. Varde, Chairman of the Bank, referred to the Bank's credit policy in the course of his speech at the 28th annual general meeting of shareholders at Poona on 30th March 1963. In the matter of advances, he said, the Bank had continued its policy of encouraging small-scale industries in the State and of promoting a balanced industrial growth, especially in the backward areas of Marathwada, Konkan and Vidarbha. He stated that the small traders and industrialists affected by the Panshet floods had been helped by the loans granted to them by the Bank to stand on their feet again; most of them have commenced repayment of the credits.

No new branch was opened by the Bank during the year, though, after the close of the year, a new branch was started in the industrial estate of Hadapsar at Poona. Permission to open branches at Panjim and Madgaon (Goa), Goregaon (Bombay), Uran and Ichalkaranji has been received. A proposal to open new branches in Maharashtra and other States during the next three to five years has been submitted to the Reserve Bank. Alongside, a programme for training the staff has also been taken up.

TREND OF SHARES

WEAKNESS PREVAILS

(From Our Own Correspondent)

BOMBAY, 4th April

WEAKNESS continued to prevail on the stock exchanges this week, due to virtual absence of support. There were intermittent minor rallies in selected counters on short-covering like the one yesterday which followed reports that China had decided to free all Indian prisoners. This, however, could not be sustained for want of follow-up support. Tired liquidation on these rallies continued. Consequently, the week closed with the majority counters showing small to moderate losses.

Support was lacking, in spite of widespread expectations of relief in Super Profits Tax. Sentiment was chiefly influenced by some more prominent companies either cutting or delaying their 1962 dividends and some others thinking of abandoning their expansion programmes because of S.P.T. For example, the Travancore Rayons Ltd. has reduced its dividend from 20 to 15 per cent, taxable, for the year 1962. Some of the Tata group of companies, the financial years of which closed in December last, were said to have thought of delaying their dividend announcements owing to the uncertainties about the exact incidence of S.P.T. in view of the expected relief in the Tax. Mr. Raymond C. Firestone, President of the Firestone Tire and Rubber Company, U.S., said at New Delhi on Wednesday the 3rd inst. that his company did not know whether to go ahead or not with its expansion programme in India, as the 6 per cent return on "own funds," as proposed in S.P.T., would make it difficult for it to attract investors to its shares.

Another development concerning the corporate sector was the reported shelving of the amalgamation of the Hind Cycles Ltd. with the Gwalior Rayon Silk Manufacturing (Weaving) Company Ltd., as the Directors of the two companies were not enthusiastic now about proceeding with the merger scheme. This decision of the Directors is, perhaps, the result of the publication of the report of the Vivian Bose Commission on the Dalmia-Jain group of companies where in such mergers as the one proposed are strongly criticised. Market circles have welcomed Birla's decision as a step in the right direction. Shares of Gwalior have picked up Re. 1.75 to Rs. 42.25.

While the Hind Cycle's merger with Gwalior Rayon was reported to have been dropped, shareholders of the Hind Mills Ltd. yesterday approved of the Company's amalgamation with the Ahmedabad Jupiter Spinning, Weaving and Manufacturing Company Ltd. The shareholders will get against their 35 ordinary shares and one preference share one ordinary and one preference share, respectively, of the Ahmedabad Jupiter.

At their meeting with the Finance Minister at New Delhi on Thursday, 28th March 1963, the representatives of the stock exchanges sought a raise in the rate of the standard deduction of profit for S.P.T. from 6 to 10 per cent and a reduction in the rate of the Tax from 50 and 60 per cent (as proposed) to 20 and 25 per cent at suitable slabs of profit, after the standard deduction. While the Finance Minister told them that he had an open mind on the issue, he did not indicate (naturally) what relief he might give.

The Calcutta Stock Exchange, where trading was suspended by operators for more than a week pending the outcome of these talks, resumed activity from Monday the 1st inst. Minimum prices for nine cleared shares in that market were revised yesterday to the current low levels. Out of the 18 forward shares there, compulsory badli will be applied only to 10 shares. From Wednesday the 3rd inst., minimum prices for all equity shares were lifted on the Madras Stock Exchange.

* * * *

Among the market leaders on Dalal Street, Century were down by 13 points at Rs. 477 and National Rayon by 10 points at Rs. 343, with Indian Dyestuff showing a loss of five points at Rs. 382.50 and T.E.L.Co. of three points at Rs. 276. As against this, Bombay Dyeing showed a further improvement of 40 nP at Rs. 62.50, Standard of five points at Rs. 740, Bombay Burmah of two points at Rs. 624 and Voltas of Re. 1.50 at Rs. 251. Among Steels, Tata Ordinary and Indian Iron were a shade higher at Rs. 117.75 and Rs. 19.40, respectively. Greaves Cotton suffered a big loss of Rs. 8.75 at Rs. 155. In the cash section, while T. Maneklal declined by Rs. 15 to Rs. 585 and Shah Construction by Rs. 14 to Rs. 123.50, Permanent Magnets showed a gain of Rs. 10 at Rs. 185 as did Synthetics and Chemicals at Rs. 146.

* * * *

In Calcutta, among cleared shares, Shree Gopal edged forward from Rs. 21 to Rs. 21.62, while Rohtas closed 25 nP lower at Rs. 10.50 and Texmaco 20 nP lower at Rs. 20.10. In the cash list, among Textiles, Bharat Commerce and Birla Cotton declined by Re. 1.87 each to Rs. 18 and Rs. 27, respectively, but Jayshree recovered by 69 nP to Rs. 13.50. In Jutes, Budge Budge gained Rs. 16 at Rs. 169 and Fort Gloster Rs. 17 at Rs. 399. Among Engineering issues, J.K. Steel showed a loss of Re. 1.13 at Rs. 16.12 and Jessop of 75 nP at Rs. 20.31. In the Miscellaneous section, while Balmer Lawrie improved from Rs. 245 to Rs. 257, Goodyear lost Rs. 2.50 at Rs. 35.50 due to the postponement of the rights issue and the expansion programme.

* * * *

On the Madras Stock Exchange, Ashok Leyland declined by 60 nP to Rs. 7.25 and Dalmia Cements by 75 nP to Rs. 12.25 following the lifting of the minimum prices. Losses were bigger still in some of the mill shares. For example, Dhanalakshmi fell from Rs. 237 to Rs. 224.75 and Cannanore by Rs. 7 to Rs. 122. Sugars were steady but, in Plantings, Consolidated Coffee were down by 63 nP at Rs. 15.62 and Balanar by 91 nP at Rs. 12.

DELHI LETTER

COMPLACENCY IN TRADE BOARD

INDIAN OIL "ORGANISERS"

From Our Special Correspondent

NEW DELHI, 2nd April

THE latest meeting of the Board of Trade, seventh in its life of about a year, has taken a few welcome decisions towards facilitating higher exports from this country. Its decision to set up a committee to go into the question of exorbitantly high sales tax chargeable on export goods will be welcomed by the trade and industry. The Committee has been entrusted with the task of evolving and suggesting procedures and quantum of rebates or refunds or set-offs on different groups of commodities entering into the export trade. The inclusion in the Committee of the Sales Tax Commissioners of Maharashtra, Uttar Pradesh, West Bengal, Gujarat and Madras and the representatives from the Finance and the Commerce and Industry Ministries, with a non-official Chairman of the eminence of Mr. R. G. Saraiya, shows that quite a measure of practical wisdom has been brought into play in constituting it. The hope is that this Committee will not only thoroughly sift all the relevant problems but also be able to come up with useful recommendations easy of speedy implementation.

However, trade circles are not convinced about the Board's finding that the export trade will remain generally unaffected by the new Budget imposts. In fact, the Board itself is not very much convinced of it either. It has thus suggested studies on individual products to devise remedial measures to obviate any adverse effect. It has also recommended, among others, freight assistance to such items whose exports were uneconomic even after concessions by the shipping companies.

A Danger

A feeling is all the same growing that, despite the advantages flowing from the periodic deliberations of the Board, the time is fast approaching to prevent them from degenerating into mere rituals, and the Board itself from tending to stagnate and become another stamping agency for governmental policies. This danger becomes extraordinarily evident from the complacent manner in which the Board has viewed non-implementation of some of its own suggestions for export promotion.

At this meeting, the Board emphasised again the need for larger programmes of market research and area surveys and the importance of strengthening short-term programmes of locating and identifying exportable quantities and commodities in the country to maintain a minimum annual rise of Rs. 40 crores in export earnings. Everyone will agree with this. But the question is: What has the Board done about it except repeating it every time it meets?

Almost since its inception, the Board of Trade has been emphasising the importance of market research and area surveys in any scheme of export promotion. But the steps taken to implement this suggestion are woefully inadequate and absolutely insufficient to help sustain an annual rise in export earnings of this order. Even at this meeting, the Board had nothing practical to offer beyond suggesting that a substantial part of the Rs. 3.8 crores set aside for export promotion in the Budget be diverted to projects for market research. The Board's euphemism over the surveys conducted by the Reserve Bank can be interpreted as a blatant admission of its failure to accomplish a task which is mainly its own responsibility.

Not Easy

The problem is not an easy one undoubtedly. But it is also a fact that the Board could have started from the point where the Mudaliar Committee on the import and export policy had left. That Committee had recommended strengthening of our commercial representation abroad. Has the Board reviewed the position so far and taken steps to get some of those very useful recommendations implemented?

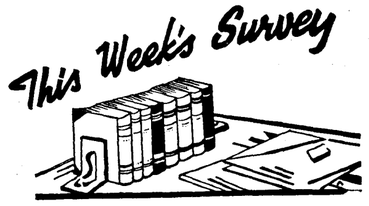
The facile way in which it has expressed satisfaction over the textiles exports also goes to show the extent of complacency that has crept into it. According to the *Indian Textiles Bulletin*, the monthly average exports of mill-made cloth has dropped from 64 million metres in 1957 to 37.96 million metres in 1962 (average of January to August). In the case of handloom cloth, the drop is from 2.85 million metres to 1.94 million metres during the same comparable period.

A.-I.M.O. Conference

Mr. Nehru's exhortations at the twenty-third annual session of the All-India Manufacturers' Organisation varied little from his address to the session of the Federation of Indian Chambers of Commerce and Industry a fortnight ago. It was but natural, since the lapse of time between the two was very short and the issues raised before and in the earlier session had not yet achieved any degree of resolution. He, however, held out hope of a possible modification in the tax proposals now under Parliament's scrutiny.

The A.-I.M.O. has also opted for a modification of the Super Profits Tax and the surcharge rather than their complete abolition. Its resolution said that the S.P.T. should not be levied unless the income of a company—after deducting the carryover of losses and allowances under Section 15C of the Income-tax Act and the income and the super tax payable by it—exceeded ten per cent on the capital reserves, including development rebate and short-term and long-term loans incurred for business purposes.

Another important proposal in this connection was the total exemption of the small-scale industries from the purview of the S.P.T. This is absolutely in keeping with the Government's declared policy to encourage small-scale industries. Because of its very nature, the small-scale sector suffers from enormous handicaps in regard to return on its investment. If it is to be burdened with levies like the S.P.T., it will only be crippled beyond recovery. It is all the more applicable to the small-scale industries, because the Government itself has fixed their investment limit to Rs. 10 lakhs and not more.



Meanwhile, speculation is rife here that the Finance Minister would be willing to concede some alterations in the direct taxes without removing any of them, in view of the mass of evidence produced to prove their crippling effects on trade and industry. It is generally held here that any reduction in the incidence of S.P.T. will automatically call for lowering of the proposed levy on kerosene. The total reduction thus effected will be made up, according to Parliamentary circles by increase in some of the existing levies. The object, it is stated, is that there should be no reduction in the total funds to be raised by this Budget.

A Rap on the I.O.C.

The Estimates Committee has again performed a valuable service to the taxpayers by uncovering an underhand deal in a valued public sector enterprise. But for the Committee's exposure, the public at large would not have come to know of it, at least for a long time to come. I.O.C.'s extra-special concessions to the Hindustan Organisers in the sale of 40,000 tons of superior kerosene and 5,000 tons of high-speed diesel oil per year from 1959-60 to 1961-62 have caused the taxpayer a loss of Rs. 17 lakhs.

According to the Committee's findings, the Hindustan Organisers were given a net advantage of Rs. 10 lakhs per year for the sale of 40,000 tons of superior kerosene alone, besides several other concessions, none of which were made available to other private dealers or co-operatives. The I.O.C. allowed interest-free credit of 135 days to the firm for payment for the kerosene lifted by it. This concession was not allowed to other dealers, individuals or co-operatives who were asked to take delivery against ready payment. Taking advantage of this concession, the firm had Rs. 7 lakhs to Rs. 8 lakhs outstanding against it in October last.

The terms of agreement, by a strange logic, were all in favour of this private firm. These provided for the supply of additional quantities of petroleum products at the option of buyers, and what was more, at additional price concessions. This particular clause was objected to even by the Ministry of Mines and Fuel. However, the Ministry, for some inexplicable reason, did not think of having it deleted from the agreement. While the Managing Director of the I.O.C. has informed that the agreement with the Hindustan Organisers will now be terminated, we shall have to bear this loss for still another year under a specific stipulation in the same agreement.

TRAINING IN ECONOMETRICS

TIME was when economics was an awfully simple discipline, but today a good part of modern economics is simply awful. The impact of mathematics on economics resulting in the use of mathematical and statistical methods in economic analysis is mainly responsible for transforming economics from the pleasant amalgam of economics, politics, and sociology, which it was when it used to be called political economy, into a difficult science requiring a high degree of knowledge of mathematics for its understanding. In fact, the development of mathematical economics has been so fast in the West that, at present, not only in academic circles but also in public forums, where national and international economic policies are discussed and shaped, the participants often find themselves obliged to discuss arguments invoking Walrasian equations or forecasts based on Leontief's matrices. Economics might have lost some of its simplicity and popular appeal from this association with mathematics but it certainly has gained much as a precise and serviceable science.

In India, however, development of this branch of economics has been slow. Although, thanks to the pioneering work of the Indian Statistical Institute, Calcutta, econometrics, as this new discipline which combine economics, statistics and mathematics has come to be called, has had a beginning, it has hardly taken root in this country. But considering that model building and projections, the major tools in the repertoire of the econometrician, have become an accepted and integrated part of the studies relating to the formulation of economic plans, the need to promote the study of econometrics is becoming increasingly evident, more especially in the context of perspective planning in the country. The efforts of the sponsors of the Indian Econometric Conference, which concluded its three-day session in the City this week, therefore, deserve all encouragement. The Conference, which is the third in the series held in this country, was inaugurated on 29th March by Mr. P. C. Bhattacharyya, Governor of the Reserve Bank of India. The earlier two conferences had discussed a number of important and useful subjects such as demand forecast for food and clothing, effect of changes in income distribution, concentration of employment, capital-output ratios, determination of interest rates in the organised money market, velocity of circulation of money, deficit financing and its impact on price level and several other subjects.

As Mr. Bhattacharyya pointed out in his inaugural address, such conferences focus attention on the quality and quantity of work done in the field, provide a useful forum for exchange of ideas and impart a freshness of approach to many of the unsolved problems confronting econometricians in the country. They also help to co-ordinate the work done in the field of econometrics at the various centres of research in the country.

Dr. N. S. R. Sastri, Statistical Adviser to the Reserve Bank of India, in his welcome address, reviewed the recent developments in the theory and practice of econometrics, pinpointed the practical value of econometrics and indicated the defects and deficiencies in the field of teaching and research in the subject in this country. It is a mistake, Dr. Sastri pointed out, to think that econometrics is a sophisticated subject accessible only to the mathematical economist and far removed from practical realities. In fact, the reverse is the case, because the importance of the subject stems from its tackling a practical situation and devising methods for doing it.

Recent developments in economic planning even in capitalist countries have turned the attention of econometricians to the construction of economic models of various types. These models, as Dr. Shastri made it clear, are not magic formulas which divulge the secrets of the complex economic system with the aid of a few equations. They are only an additional tool in the hands of the economists who have to draw upon others such as qualitative analysis and their own intuition to tackle a given problem. The advantage of the statistical approach is that it gives quantitative information to check up the validity of assumption and logic in drawing inferences. Dr. Sastri has summed up the usefulness of economic models in policy-making in the following words:

"Some knowledge of the nature of the mutual inter-dependence between the economic factors in the various parts of the economy is obviously a prerequisite for intelligent formulation of overall Government policy such as those relating to taxation and subsidies, public spending, price regulations and rationing, etc. When a new policy is going to be introduced, one must have an idea of the direct and indirect effects on different sectors of economy as also the probable changes in the structure of economy as a result of this policy. The practical administrator makes use of simplifications, broad abstractions and rough approximations or even hunches, making it hopeless to keep track of all the repercussions. The economist who engages in quantitative economic research should state more openly and explicity what these simplifications and abstractions are, so that their implications may be studied in a rational fashion. This will at least lead to the avoidance of logical inconsistencies and errors. Though in a *laissez faire* economy the usefulness of this kind of work may not be obvious, it is absolutely essential when economy is directed by Government in a planned manner."

The main problem to be faced in encouraging the study of econometrics is to find ways and means of teaching and research in the subject. Unfortunately, as Dr. Sastri rightly pointed out, there is a big gap in this sphere. Apart from the belated realisation of the value of statistical methods in applied economic research, there is a dearth of qualified teachers to give instructions and guide research in econometrics. A good number of professors, who head the Departments of Economics in Indian Universities, have little or no grounding in mathematics which is essential for understanding econometrics. In the past, the selection of subjects for study in universities was also such that very few students of mathematics had a chance to study economics. Even where such facilities have been available, the standard of knowledge of the economist of mathematics (and *vice versa*) has been poor. In the official, as distinguished from the academic, field also, research in econometrics have not been undertaken on a sufficiently large scale. Dr. Sastri has a suggestion to make in this regard. According to him, in some countries there is a bifurcation of work in research organisation into short-term and long-term projects. This can be achieved in this country, if not by having larger sections to do work on both aspects, at least by associating university teachers with long-term projects and allowing official research organisations to specialise only in short-term projects. This suggestion implies that the universities are well equipped with expert personnel proficient in econometrics and capable of handling long-term issues pertaining to planning. But, as we have just seen, there are not enough of such professors even to teach econometrics to students. Surely, something must be done to break this bottleneck quickly. Why not the leading universities in India select bright young economists and send them abroad for training in econometrics who in turn can spread the knowledge in India? If this practice is followed for a few years, the shortage can be quickly overcome. Meanwhile, a major change in the courses offered in Universities, aimed at providing students with a fairly high level of basic training in both mathematics and economics, is required to enhance the standard of instruction in econometrics in Universities. This is a prerequisite for improving the quality of personnel available for research and training in this new branch of economics.

A.-I.M.O.'S TWO PLEAS

Among the subjects which figured in the proceedings of the twenty-third Annual Conference of the All-India Manufacturers' Organisation, held at New Delhi last week-end, particular mention may be made of two, namely, power development and the proposed Super Profits Tax. On the first subject the Conference took a realistic stand in view of the damage caused to industrial growth by the slow and halting pace of power generation. The treatment of this subject in a resolution was most timely, for the public sector had not done all that it could have in the matter of advance planning for power. (*Vide* recent report of the Lok Sabha's Estimates Committee.) The Union Government's failure to effect better co-ordination between the Centre and the States in the field of power development was also there. It was clear that this situation could be remedied by planning on a national basis without regard to State boundaries. The recent proposal for seven zonal power grids, when implemented, would only constitute a half-way house. Something more drastic would certainly be called for. It was, therefore, a pertinent plea that the A-I.M.O. Conference made in its resolution. The relevant part of the resolution reads as follows:

"The Conference recommends, in this connection, the constitution of a Central Power Agency charged with the task of establishing hydel or thermal stations at appropriate places and making power available to individual State Electricity Boards through a national grid. The Conference emphasises that this should be done even by amending the Constitution, if necessary, so as to make power generation above a certain limit a Central subject, instead of a concurrent one as it is at present."

The A-I.M.O.'s resolution is also noteworthy for its plea for reconsideration of the Government's present policy in regard to power generation by investor-owned companies. These undertakings in the private sector would have to be encouraged to meet a part of the growing demand for power. This could be done by permitting them freely to install additional generating sets, by allowing them returns adequate enough for attracting capital for expansion, and by putting a stop to threats of nationalisation. As the public sector, by itself, has not done full justice to the job of generating power, it is high time the private sector was allotted a bigger role in this field.

The A-I.M.O.'s approach to the other subject, namely, the Super Profits Tax, was equally realistic and balanced. The Conference did not demand the total withdrawal of the proposal. On the other hand, it pleaded for some modifications in it—modifications that would make it possible for industries to give an attractive return on capital to the investor and to have sufficient resources for their own programmes of development in step with the overall programmes of industrial development envisaged in the third Plan. This was only in the nature of a general plea, for there were no specific suggestions either in Mr. Prabhu V. Mehta's presidential speech or in the appropriate resolution for raising the exemption limit and lowering the rates in respect of the proposed levy. Of course, the general plea itself was strong and good enough, all the more so because it was supported, in Mr. Mehta's speech, by the following quotation from a report submitted to the Government of India, some years ago, by Prof. J. K. Galbraith:

"In both the capitalist and the communist countries, investment is in very large measure from the earnings of industrial enterprises. These accumulate surplus which becomes available either for their own expansion or elsewhere. The enterprise thus assumes responsibility for both the technical side of its own growth and improvement and also for getting the requisite resources. Something like this must happen in India as all Indian economists recognise."

This is a very apt quotation. The proposed Super Profits Tax, at any rate in its present form, will not be conducive to the realisation of such a desirable objective.

TOO MANY COMMITTEES FOR EXPORTS

The Central and State Governments have shown in recent years an unabashed persistence in setting up new committees and study groups even on the slightest provocation. This practice would not have been a matter for public concern, but for the fact that, more often than not, it has been resorted to with the aim of avoiding prompt and quick decisions and/or shirking responsibility. This trait, however, is no longer a monopoly of the Government. For it is steadily permeating to other spheres like Government's advisory bodies. An outstanding instance is provided by the Board of Trade, which specialises in improvising an endless array of committees as part of its export promotion drive. The seventh monthly meeting of the Board, held at New Delhi under the chairmanship of Mr. Manubhai Shah last week, was no exception to this trend. At this meeting, it was decided to set up no less than three new committees, in addition to several others which were constituted earlier and the findings of most of which have yet to see the light of day. From the growing list of committees and the frequency with which new ones are added to it, one fears that the Board may become preoccupied with the work relating to all and sundry committees, thereby overlooking basic issues of export promotion.

To say this is not to cast any reflection on the distinguished personnel usually associated with such committees or to belittle the importance of subjects referred to them. The only contention is that this practice often leads to unnecessary delays and avoidable duplication of work. After all, most of the important aspects of export promotion have already been studied thoroughly by several expert committees. Since the Board itself has a secretariat of its own, with a few competent officials in it, it would be better if they themselves undertook studies and submitted proposals on the specific questions raised at the monthly meetings. These proposals, in turn, may be amended or improved otherwise by the wise men comprising the Board. This procedure can be adopted at least in respect of some of the relatively simple questions of export promotion that are now being referred to expert committees.

One of the committees formed at the meeting will study and report on the burden of sales tax on export commodities. The Committee, which will be presided over by Mr. R. G. Saraiya, a busy businessman, consists of sales tax commissioners of U.P., Maharashtra, West Bengal, Gujarat and Madras States. It is expected to review the question of Central and State sales tax on export commodities, suggest procedures and the quantum of rebates or refunds on different groups of commodities which enter export trade. It may be recalled here that the question was examined by the Mudaliar Committee on Exports and Imports Policy in 1961. On the basis of the broad suggestions made by this committee, officials of the Board and the Ministry of International Trade could as well have prepared suitable procedures and quantum of rebates to be granted to exporters and submitted them for the approval of the Board. More or less the same argument applies to the Board's desire to have another "small and compact" committee in order to evolve the forms, procedures and criteria for assistance to exporters, for which an amount of Rs. 3.8 crores has been provided in the current Central Budget. At the meeting itself, it was decided that a substantial portion of the assistance should go towards financial help for projects of market research, commodity research and market surveys conducted by universities, industrial houses, commodity boards, export promotion councils, etc. The need for giving some assistance in the case of uneconomic freights was also stressed. It is surprising to note that neither the top officials assisting the Board nor those in the Ministry of International Trade consider themselves competent to make some proposals on "forms, procedures and criteria for assistance" in the matter of apportioning the relatively small amount of Rs. 3.8 crores. What miracle is expected from the proposed committee is anybody's guess. The third committee planned by the Board of Trade is meant to review the whole field of commercial arbitration and to suggest administrative and legal measures to be taken in the matter in the long-term interests of exports. It will certainly be interesting to watch the progress (if any) of the work of these committees, which cannot but be a protracted affair.

Although the Board conceded that the burden of sales tax acted as a deterrent to certain exports, it did not, surprisingly enough, share the concern of the business community about the adverse effects on exports of additional taxes envisaged in the Central Budget. The Board, however, suggested that studies on individual export products might be made so that any compensatory measure could be devised to reduce adverse effects, if any. It is not known now whether this matter, too, will be the subject of investigation by a series of new committees.

On a review of the recent trends in exports, the Board was much exercised over the setback suffered by some of India's leading traditional exports, prominent among them being cotton textiles, manganese ore, steel scrap, etc. It was of the opinion that these exports required further stimulation. But no indication was given as to whether any specific measure of additional incentive or aid was proposed for them. Turning to agricultural products, rightly did the Board stress the need for expanding exports of such commodities as sugar, fish and sea foods, oil and oilcakes and cotton. But the major lacuna here is that the production of most of the agricultural products has been lagging behind (which, incidentally, is a field beyond the control of the Board of Trade). Consequently, instead of augmenting exportable surplus, India's dependence on imports of several agricultural commodities has been going up. This is particularly true of vegetable oils (including copra and palm oil), fish and raw cotton. In respect of sugar, prospects for exports have increased considerably in recent months on account of a sudden spurt in world sugar prices. While a year ago the domestic price of sugar was twice the international price, today the latter has actually exceeded the price in India by a concatenation of strange circumstances.

India, however, does not seem to be in a position to take full advantage of even this windfall, as sugar output this year is smaller and exportable surplus low. Though it is admittedly essential to plan foreign trade on a long-term basis, as the Board insists, prompt steps must also be taken to reap benefits arising from short-term fluctuations in world commodity prices by augmenting the exportable surplus, even if it means some cut in domestic consumption.

The overall exports in 1962-63, according to the estimates of the Board, will be of the order of Rs. 710 to Rs. 715 crores, including shipments from Goa amounting to Rs. 15 crores. If Goa's contribution is excluded, exports from India in 1962-63 must have been Rs. 695 to 700 crores. Although this figure is higher than the exports in 1961-62 (Rs. 665 crores) by some Rs. 30 crores, it falls much short of the target of Rs. 720 crores envisaged for 1962-63. Since the target for 1962-63 was fixed without taking into account Goa's exports, the shortfall would be Rs. 20-25 crores. One feels that the actual gap may be much wider. For exports during the first eleven months (the latest period for which official figures are available) aggregated only Rs. 629 crores, or an annual average of Rs. 686 crores. Even on the basis of the monthly average of Rs. 61.5 crores in the months of November-February which constitute the bulk of the export season, the total for the whole of 1962-63 works out to no more than Rs. 690 crores. On this basis, the gap between the target and performance will be wider still at Rs. 30 crores. It may be noted here that these figures are based on customs returns collected by the Department of Commercial Intelligence and Statistics, Calcutta. It would appear that the Reserve Bank's estimate of exports, based on Exchange Control data, places exports at a much lower level. For the first six months of 1962-63, the Reserve Bank's figures of exports are lower than those compiled by the D.C.I. and S. by as much as Rs. 17 crores. It is, however, gratifying to note that the Union Ministry of Commerce and Industry has instituted an enquiry into the causes for the discrepancy between the two sets of figures.

SUGAR IN MAHARASHTRA

How to check the rising trend of (white) sugar prices in Maharashtra? And what should be done to ensure adequate supplies at reasonable prices? These were the questions which came up for discussion at a largely attended meeting of the representatives of all sugar mills, wholesale and retail traders and other leading businessmen, as well as official spokesmen, held at Sachivalaya in Bombay on Friday last week. The meeting was presided over by Mr. Homi J. H. Taleyarkhan, the State's Minister for Civil Supplies. In his opening remarks, the Minister declared that the Government was determined to stabilise sugar prices at reasonable levels. Disclosing that the Government had sought from the Centre powers of distribution at the State level, he said:

"If this can be done—that is, if the Centre gives such powers to the State Government—it may be possible for the State Government to supervise over both the prices and the movement of sugar which is released from the factories of Maharashtra.... Till such time, however, it is necessary to find a solution. There are two ways open: first to put a percentage of the sugar from the co-operative as well as joint-stock mills into the fair price shops and, secondly, to arrive at some voluntary, gentlemen's agreement regarding the price to be charged both ex-factory and wholesale."

There was general agreement on the necessity of arriving at a gentlemen's voluntary agreement for curbing prices after taking all factors into consideration. On the sugar mills' plea for some more time to consider the Minister's suggestion, it was decided that the matter should be discussed further on the 10th inst. to finalise the proposals.

The anxiety of the Maharashtra Government to check any undue rise in sugar prices is clearly understandable. The exigency of national emergency apart, the need for making every effort to hold the price line is urgent especially in respect of sugar which is an essential item of consumption. The need is all the greater in the context of tight supply position following the distinct setback in output in the current season. It is certainly the duty of the Government to see that consumer prices do not soar too high as a result of manipulation of stocks or prices by any section of industry and trade. It is to be hoped that the Government's interest will not be confined only to white sugar but also cover *gur*, which is the principal sweetening agent used by poor people and the price of which has risen faster and to a much greater extent than that of white crystal sugar.

The sugar industry fully shares the Government's anxiety and it is willing to impose upon itself a voluntary scheme of price regulation such as the one in vogue in the cotton mill industry. But it is unable to agree with the Government on the question of prices. The Minister for Civil Supplies has suggested the fixation of ex-factory price of sugar at Rs. 109 per quintal bag (100 kg.), minimum wholesale price at Rs. 113 per bag and retail price at Re. 1.17 per kg. In support of his view, the Minister recalled that the wholesale price of sugar had declined to Rs. 108-Rs. 111 per bag after the removal of control in September 1961. But this decline, it must be said, was due to abnormal causes. Thanks to the peak level of output (2.98 million tons) in 1960-61, the sugar mills, godowns were bulging with heavy stocks and, since the holding of such stocks entailed a severe financial burden, the mills were very eager to dispose of the sugar as speedily as possible even at substantially lower prices. The wholesalers, too, could not hold on to the stocks due to fear of a further fall in prices and they also pressed sales at reduced prices. And so the price range of Rs. 108-Rs. 111 per bag quoted by the Minister was a purely artificial one and cannot, therefore, be taken as reasonable.

The ex-factory price of Rs. 109 per quintal bag suggested by Mr. Taleyarkhan is no doubt higher than the Rs. 107.29 fixed for D29 grade sugar in 1959. But the actual rise of Re. 1.71 does not adequately cover the increase in the cost of production that has taken place since then. The incidence of cane price in the output cost of sugar is said to have gone up on an average by Rs. 5 per quintal bag, War Risks Insurance by Re. 1 and wage bill by 25 nP following the implementation of the Wage Board's award. Considering all these increases, the industry's plea for fixing the ex-factory price under the gentlemen's agreement at Rs. 113 per quintal bag seems to be quite reasonable. On this basis and taking into account the rise in railway freight (25 nP per quintal bag), War Risks Insurance (10 nP), loading and unloading charges (2 nP), and the higher cost of road transport, the wholesale price works out to not less than Rs. 118. It may also be noted here that the wholesale sugar dealers bear an expense of Rs. 4 per bag as transport charge and pay a town duty of Re. 1.50 per bag, besides storing expenses and brokerage. Assuming that the gap between wholesale and retail price is usually Rs. 3-Rs. 4, the latter price comes to about Rs. 122 to Rs. 122.50 per quintal bag or Re. 1.22 per kg.

If the Government of Maharashtra really wants the voluntary sugar price agreement to work successfully, it will have to agree to the fixation of ex-mill, wholesale and retail prices at the aforesaid levels which are well below those currently prevailing. For, otherwise, there will be, according to sugar interests, complete chaos. There may be a little exaggeration in this view, but there is no denying the fact that, if sugar prices in Maharashtra are not fixed at reasonable prices, sugar will move away into adjoining centres where prices are ruling pretty high, thereby creating an acute scarcity of supplies. The very objective of maintaining stable prices will thus be defeated. Even if the Maharashtra Government is vested with powers of distribution at State level, it cannot fix sugar prices arbitrarily. While it has to make every effort to ensure adequate supplies of sugar to consumers at reasonable levels, it is also the duty of the Government not to ignore the interests of sugar industry and normal channels of trade.

TRANSPORT MINISTRY'S REPORT

By and large, the second year of the current Plan was a year of satisfactory progress in several sub-sectors of the broad sector of transport. This is the impression one gets from a perusal of the report of the Union Ministry of Transport and Communications (Department of Transport) for 1962-63. Particularly heartening, in this connection, are the year's developments relating to major ports and shipping. The development schemes of the major ports like Calcutta, Bombay, Madras and Visakhapatnam, involving a foreign exchange expenditure of about Rs. 44.5 crores over the third Plan period, were being vigorously pursued, thanks to assured foreign aid, aggregating Rs. 41.8 crores, from the World Bank, the International Development Association and the U.S. President's Asian Economic Development Fund. The fact that capital expenditure, met directly by the Central Government, on four ports, namely, Visakhapatnam, Kandla, Mangalore and Tuticorin, is being stepped up from Rs. 3.7 crores in 1962-63 (revised) to Rs. 6.9 crores in 1963-64 (budget) is an additional proof of the

earnest effort that has been initiated in the sub-sector of port development.

As for progress in the field of shipping, it is noteworthy that Indian tonnage crossed, by the end of 1962, the one-million-ton mark. Further, firm commitments for acquisition of 24 overseas ships aggregating 281,000 G.R.T. and two overseas tankers aggregating 55,000 G.R.T. have already been entered into. These two items, making up a total of 336,000 G.R.T., together with the actual acquisitions of 166,000 G.R.T. since the beginning of the third Plan period, will bring the revised target of *gross addition* (550,000 G.R.T.) to near-fulfilment in the next one or two years. Only about 50,000 G.R.T. will have to be arranged for in the rest of the Plan period to ensure hundred per cent fulfilment of the target. This is certainly heartening. But it should not be forgotten that, in spite of the additions to tonnage, Indian shipping will have no more than 1,300,000 G.R.T. by the end of the third Plan, for as much as 200,000 G.R.T. of obsolescent vessels will have been scrapped in the meanwhile. Unless the Government actively pursues the proposal to raise the limit of foreign private participation in Indian shipping from 25 per cent to 40 per cent of equity capital, further additions to tonnage, especially in tramps and tankers, cannot be expected to take place during the rest of the third Plan period. There is, however, no reference in the Ministry's report to this proposal which has been under the Government's consideration in recent months.

The official report has referred, with some pride, to the fact that the country's road mileage (both surfaced and unsurfaced) has increased from about 241,000 in 1947 to nearly 441,000 in 1961, that is, by as much as 200,000. This progress, in the words of the Ministry, "is gratifying indeed." Of course, progress in road construction has been quite impressive. But it may be doubted whether the increase in 'surfaced roads' mileage from about 91,000 in 1947 to 147,000 in 1961 has been quite adequate for sustaining the tempo of development in the field of automobile transport. It may be noted, in this connection, that 'surfaced roads' include National Highways and that, out of the third Plan provision of Rs. 48.5 crores for National Highways, about Rs. 30 crores are required for schemes carried over from the second Plan and only the balance of Rs. 18.5 crores will be spent on new works. This shows that development of National Highways (N.H., for short) did not materialise to the extent planned in the second Plan. Even under the third Plan, there is no provision for any expansion of the existing N.H. system. What is proposed is only a limited effort for constructing missing road links, improving existing low grade sections and bridging unbridged river crossings.

It is by no means clear whether the more recently proposed improvement of a 191-mile stretch of the Grand Trunk Road from Calcutta to Topchanchi, at a cost of about Rs. 8.0 crores, for the purpose of facilitating coal transport by road will be *strictly additional* to the original N.H. programme under the third Plan or will involve the abandonment or postponement of some other scheme in that programme. But there is no such doubt about the I.D.A.-financed N.H. works in West Bengal, Bihar, Orissa and Maharashtra. It will be recalled that the I.D.A. has provided a credit of about Rs. 29 crores for the development of some N.H. routes in these States. This credit augments, to that extent, the provision already made under the third Plan for National Highways. So much so, the Government has been able to step up the outlay on National Highways from Rs. 9.8 crores in 1961-62 to Rs. 19.0 crores in 1962-63. This is a redeeming trend in an otherwise unsatisfactory situation pertaining to National Highways which are vitally necessary for the development of long-distance lorry transport.

P.L. 480 TOBACCO

Although India is one of the world's largest producers of tobacco, the domestic cigarette industry as been dependent on imports for a part of its requirements of certain superior varieties of tobacco. The industry has, of late, been facing difficulties in securing adequate imports on account of foreign exchange difficulties. It must, therefore, be a matter of relief to the industry to find that the U.S. has agreed to supply high quality tobacco under P.L. 480. Under an agreement signed at New Delhi last week, the U.S. will supply 2.6 million lbs. of tobacco valued at Rs. 1.2 crore. As in other agreements under P.L. 480, India will pay for these imports in rupees. The U.S. will make available to the Government of India 85 per cent of the sale proceeds to be used in economic development projects. Prof. J. K. Galbraith, the U.S. Ambassador to India, was not exaggerating in the least when he observed that the transaction represented an important saving in foreign credits to this country.

The value of the present agreement to India's economy was fully brought out by Mr. L. K. Jha of the Government of India thus: "This particular agreement will lend even stronger support to our effort to mobilise domestic resources. By the time this tobacco has gone up in smoke, it should have left behind something of abiding value to this economy." It may be noted here that the present agreement is a supplement to that signed on 26th November 1962, which provided for the supply of long-staple cotton. The total U.S. commitments, under the eight P.L. 480 agreements so far concluded with India, amount to Rs. 1,157 crores, mostly on account of foodgrains. Of these, the U.S. will have made available an amount of Rs. 375.5 crores as grants, Rs. 555.8 crores as loans to the Government of India for financing development projects and Rs. 78.7 crores as loans to private industrialists.

While the present agreement is based on convenient terms, this is an occasion which calls for some stocktaking by the planners and others in charge of expanding production of tobacco in this country. There is, of course, the fact that the overall tobacco output has increased substantially in recent years. In fact, the domestic output in 1961-62 itself exceeded the third Plan target. But the increase has generally been confined to inferior and common varieties. On the other hand, there has not been any appreciable increase in the output of high quality tobacco, though efforts have been made in this direction by the Central Tobacco Committee. It is, however, a matter for some consolation that exports of raw tobacco have been going up in recent months. During the first ten months of 1962-63, they amounted to Rs. 14 crores, representing a record annual rate of Rs. 17 crores. But the prospect of maintaining the pace of expansion of exports will be limited, unless urgent measures are devised to improve the quality of the products and encourage the cultivation of virginia and other superior varieties.

E.C.M. AND U.K.

When the negotiations between the U.K. and the European Common Market broke down last January, there were some indications, especially from France, that an alternative solution to ensure associate status to Britain would be put forward by Italy and Benelux countries. No doubt, the U.K.'s initial reaction to the suggestion of associate status was cool. But the U.K. Government has since left no one in doubt that it would consider any suggestion put forward by the Six, if it were unanimous. As weeks pass by, the possibility of U.K.'s association with the Six, however, seems to be fading out. In fact, it appears that proposals of this nature have been completely dropped. The President of the Common Market Commission, Prof. Walter Hallstein, himself ruled out chances of association, in his speech at a meeting of the European Parliament at Strasbourg last week. He also made it clear that no interim form of association between the U.K. and the Six was feasible.

In defence of this policy, which apparently has strong support within the Six, Prof. Hallstein observed that neither the Common Market countries nor the U.K. appeared to be in favour of association. Prof. Hallstein's statement is particularly important, considering the fact that, so far, he had not subscribed fully to the French stand on the question of U.K. entry. He was, in fact, known to be engendering hopes of bringing the U.K. eventually into the Common Market club. But in his last week's speech, he seemed to have virtually closed the door in the face of the U.K. Of course, he expressed his belief in the virtue of intensified diplomatic contacts between the U.K. and the Common Market. But then, in advocating more diplomatic contacts, he did not mean any reopening of negotiations on Britain's application, but only closer commercial co-operation. He thought that the European problems could only be tackled on a world-wide scale, in particular by adopting a more liberal commercial policy, in a framework which included not only the U.K., but also the major industrial countries like the U.S., Canada and Japan. It would appear from this that the Commission is not prepared to give any special consideration to the U.K. by virtue of its being a European power. There is thus reason to believe that the question of British application to join the Common Market is not likely to be reopened in the foreseeable future. This is not a comforting thought for those in the U.K. who make no secret of their intention to join the Common Market and to participate in the new Europe that is unfolding itself on the Continent.

LONDON LETTER

BRITAIN'S BALANCE SHEET

A CANDID SURVEY

(From Our Own Correspondent)

LONDON, 30*th March*

A SENSE of fallibility in surveying the economic year ahead is one of the reasons behind the Government's decision to stop its annual series of "Economic Surveys." For last year, this document, which is the preamble to the annual Budget, declared: "Provided the pressure of home demand is kept in check and the incomes policy widely applied, the country will be able to take advantage of the favourable opportunities for exports in 1962 . . . it is essential to make the most of them. If this is done, production could expand without a damaging increase in the pressure of demand upon resources and without a renewed risk to the Balance of Payments."

And with that background the Chancellor of the Exchequer went ahead with a deflationary Budget and, after a half-year, the country slumped away into stagnation and mass unemployment.

But another solid reason for halting these Surveys is that the Government has now got its N.E.D.C. whose function is precisely that of looking ahead and advising what should be done about it. So in lieu of forecasting, the Government this year produces, on the eve of its Budget, a straightforward, sober report, an account of the year behind.

This report points out that, demand for goods actually slowed down, first because of a reduction in orders for new plant and equipment and, secondly, because consumers themselves spent less as unemployment grew. The result was that, in the last quarter of 1962, the level of production actually fell.

It is noteworthy that, though the pay pause introduced in the crisis days of summer 1961 was finally washed away in the spring of last year, wage rates rose no more than 2.8 per cent, while it lasted, the greater part of this increase being due to pay rises negotiated before the pause or rises automatically accruing with a step up in the cost of living. But even though there was an upsurge in wage increases after the pause, it left its imprint on both the year 1961 when it was initiated and 1962 when it came to an end. The average rise in wages per annum in each of these two years was 5 per cent as compared with 6½ per cent in the preceding year.

Corporate Profits

What about company profits? They had been falling over the years 1960 and 1961, the cumulative being some 10 per cent, but, over the year 1962, there was a rise of 6 per cent. This can be linked with the various moves the Government made in the second half of last year to re-direct its policy. Already in April last year, the banks had had released one-third of the special deposits which they had been forced to place with the Bank of England in order to restrict their lending capacity. In October, another third was released and in November the balance. In October also, the banks were freed from all restrictions on their lending and, as a result, over the eight months from May to December covering the whole period in which the Government began to change course, bank advances to private industry and individuals rose by £137 million. Next one recalls that, in October, the Government began paying out £42 million of war-time taxation which had been held back (so-called post-war credits) and issued a plan for public investment stepping up the existing figures by £175 million. Finally, the rate of tax on motor cars was nearly halved. All this was helped by the public themselves who dropped their level of personal savings from the record in 1961 of £1,942 million to £1,810 million in 1962.

Balance of Payments

So much for the general economic scene as it now appears to the Government. Next one turns to the final results of the U.K. balance of payments for 1962. In your correspondent's review of 1962 written at the end of November last year he forecast that the year would end with a surplus of about £60 million. The Government's final figure, just published, is £67 million showing an improvement in comparison

THE BANK OF MAHARASHTRA LIMITED

RESERVE BANK MUST HELP SMALL BANKS

CHAIRMAN, MR. V. P. VARDE'S PLEA

THE role played by small banks in the economic development of the country was highlighted by Mr. V. P. Varde, Chairman of the Bank of Maharashtra Ltd., in his speech at the Twenty-eighth Annual General Meeting of the Bank held at Poona on Saturday, 30th March 1963. The Reserve Bank authorities, Mr. Varde pointed out, must ensure that the position of such banks is strengthened by proper guidance and help. He wanted the policy regarding branch banking to be well defined, the small banks being allowed to function in an effective manner in their respective areas of operations. He also appealed to the big banks to take a lead in this matter and see that their smaller brethren prospered with their co-operation and assistance.

The following is the full text of Mr. Varde's speech:

GENTLEMEN,

I have great pleasure in welcoming you most cordially to the annual general meeting today. The twenty-seventh report of the Board of Directors and the audited statement of accounts for the year ended 31st December 1962 have been printed and circulated among the shareholders. Following the usual practice and with your permission I will take them as being read.

The year 1962 was an eventful year for the banking industry, being increasingly called upon to play its role in the industrial development of the country. Larger and larger credit facilities are being made available to a variety of clients. The total deposits of all the scheduled banks increased by about Rs. 200 crores, recording a rise of about 12 per cent over the year 1961. During the same period, the money in circulation rose from Rs. 1,981 crores to Rs. 2,120 crores, while the total money supply with the public rose by over Rs. 200 crores. The advances portfolio increased to the level of Rs. 1,400 crores in the peak season in 1962. Investment in Government securities, which had not increased in 1961, crossed the figure of Rs. 700 crores. The average of advances-deposit ratio for all scheduled banks was 65 per cent, whereas it rose to 69 per cent at the end of December 1962. The ratio shows rising trend and in some cases it is as high as 75 per cent to 80 per cent. Liquidity of the banking system was maintained at a satisfactory level. The Government programme of borrowing was a great success. The inter-bank call-money rate dropped as low as 2 per cent in August-September, 1962. But things began to change suddenly after the Chinese aggression on our frontiers. All efforts were directed towards defence of the country. Therefore, things on the economic front began to move suddenly. Money market became tight and the inter-bank call money rate rose as high as 5½ per cent to 6 per cent. The response to the Defence Loans and Gold Bonds has not been as satisfactory as was expected.

Gold Control Order

The Gold Control Order also dislocated for sometime the economic life in rural areas. The order and the rules framed thereunder and the action of various Excise authorities caused considerable confusion in the minds of the people. Banks which had advanced money against gold ornaments were perplexed and the advances had to be called up. This one reliable source available to the rural population for raising money against ornaments in an emergency is blocked up and no other agency for supplying this credit requirement of the agriculturists has effectively come into being. Thus a vacuum is created. Money with the banking industry has been increasingly locked up in defence production. Post Office Savings Bank rate has also been raised to 3 per cent. We have thus been passing through critical and uncertain days.

The Inter-Bank Agreement on interest rates, which was at one time threatened to break, was saved by a compromise formula allowing medium size and small banks to quote a little higher rate than the big banks. Thereby the continued co-operation between banks was assured. In the wake of the changing economic conditions and strain on banking resources, an agreement on minimum rates on advances was also brought about. Although an agreement on service charges is shelved for the time being by the Banking Association, it was conceded that efforts to secure such an agreement be continued. It is on the basis of mutual confidence and trust between banks of various sizes and types that the progress of banking in India can be assured in a healthy manner.

Branch Banking

In this connection, I welcome the speech of Shri P. C. Bhattacharya, the Governor of the Reserve Bank of India, delivered at a seminar of small banks, at Madras, in which he clearly supported my view expressed on different occasions that the small banks have a place in the banking structure of the country and that they can effectively play their role in the economic and industrial development. I trust the Reserve Bank authorities will now see that the position of such banks is strengthened by proper guidance and help. The policy regarding branch banking should be well defined and the small banks be allowed to function in an effective manner in their respective areas of operations. I also appeal to the big banks in the country to take a lead in this matter and see that their smaller brethren prosper with their co-operation and assistance and thereby jointly contribute to the economic and industrial development of India.

The Reserve Bank continued the policy of selective credit controls. In the beginning of the slack season in July 1962, the Reserve Bank changed the three-tier system of interest rates to a four-tier system, raising thereby the cost of borrowing by the banks from the Reserve Bank. This was again changed to the three-tier system in October 1962 with a ceiling on borrowings by banks. It may be noted that the Reserve Bank Governor had at this time appealed to bankers not to advance on gold, shares, commodities, etc., but to help in defence, production and export. A strong representation was made by banks against the imposition of ceiling, especially at the beginning of the busy season and specially when banks were called upon to increasingly help the financing of industries in defence production. As a result, the Reserve Bank agreed to consider individual cases on merits and relax the ceiling, wherever necessary, but, at the same time, it informed banks that penal interest rates will be charged on the additional borrowings. These credit restrictions ultimately mean costlier credit to industry and trade. Restrictions on advances against commodities like paddy and rice, and advances against shares were also continued.

The Reserve Bank, during the year, advised banks to raise their capital base to at least 6 per cent of the deposits within a reasonable time. This, they advised, could be done by transferring larger sums to reserve fund and/or by issue of fresh capital. The Reserve Bank also simultaneously sought to increase the ratio of liquid assets to deposit liabilities to 30 per cent. But after discussion with the banks, this was agreed to be reduced to 28 per cent. The Banking Companies Act was accordingly amended and a period of two years has been given to banks to conform to the liquidity ratio.

Tax Burden

Early this year, the bank rate has been raised to 4½ per cent. Consequently, the inter-bank call money rate has tightened to a new high level of 6¼ per cent to 6½ per cent. Before I close this general review, it will be proper to refer to the taxation proposals of the Government, announced last month. These have seriously affected the various stock exchanges and share prices have fallen even below minimum prices fixed at the time of the Chinese aggression. The Super Profits Tax as proposed will take a very large slice from profits after taxation of various corporate organisations, including banks. The distributable profits of the banks will be affected considerably and, if the proposals as made are finally accepted by Parliament, this Bank cannot be an exception. Besides the incidence of Tax, the banks will be affected by the taxation measures as a whole in various other ways. The additional personal taxation and the scheme of compulsory deposits will restrict the capacity of the individuals to save. The inability of the industries to plough back adequate resources, it is feared, will lead them to default in the repayment of the loans taken from the banks. In the circumstances, while the deposit resources of the banks may not continue to grow at the same pace as before, the demand for advances may increase and the advances already given may be required to be extended. It is, therefore, fervently hoped that the representation made by commercial and banking industry will be sympathetically considered and the proposals modified in such a manner as will not affect the banking industry in particular and industrial development in general.

Accounts

I now turn to the statement of accounts under consideration. I trust you have gone through the same and are satisfied about the all-round progress of the Bank during the year. During the year under report, the share capital of the Bank was raised from Rs. 40 lakhs to Rs. 50 lakhs and the response from the shareholders was very encouraging. As it is necessary to maintain a safe capital-deposit ratio, we have already submitted our application to the Government of India for permission to issue further capital. After their permission is received, the Directors will decide the appropriate time and amount of capital to be issued, having regard to the monetary conditions and the state of the capital market.

Our total reserves now amount to Rs. 26,80,000 which is 53.87 per cent of the paid-up capital. You must have noted that this year we have taken Rs. 4.50 lakhs, that is, 53 per cent of net profits to the reserve, as against the statutory requirement of 20 per cent. This is because of the Board policy to strengthen our reserves to the maximum extent after providing a reasonable return on the paid-up capital.

Our deposits have increased from Rs. 19,48,00,000 to well over Rs. 24,76,00,000 which means a rise of 27.11 per cent, as against the general rise of scheduled banks of about 10 per cent only.

Assets

Coming to the assets side, you will find that our liquidity position has been further improved. Our ratio of investment to deposits is 38.38 per cent, while that of cash and bank balances is 17.23 per cent. You will thus see that we have been maintaining the liquidity ratio even more than that required under the direction of the Reserve Bank. The advances have increased from Rs. 9,76,00,000 to well over Rs. 11,83,00,000, showing a rise of over Rs. 2 crores. The advance-deposit ratio is 47.78 per cent, as against all scheduled banks ratio of 69.82 per cent. In the matter of advances the Bank continued its policy of encouraging small-scale industries in Maharashtra. With the introduction of the Reserve Bank Guarantee Scheme, this type of advances has been increasing. The Bank also tries to see that a balanced growth of industrial activities is achieved, especially in the backward areas of Marathwada, Konkan and Vidarbha. The Bank has always tried to help as many small industrialists as possible. Last year, I referred to the circumstances in which our Bank came forward to help the small traders and industrialists affected by the Panshet floods. This has helped many businessmen to stand on their own legs, and I am glad to say that the repayments of these loans have started coming in. This has amply proved the wisdom of the step taken by the Board of Directors at the critical juncture. I am glad to state that Government of Maharashtra approved the name of our Bank for granting of loans under the State Aid to Industries Act. Since then, the work in this department is increasing day by day. Many new industrial concerns are being started in Maharashtra and the Bank is trying to help these concerns as much as possible with due regard to the interests of the depositors. I am glad to state that the business of our Foreign Exchange Department is also progressing from year to year.

Income Rises Markedly

Coming to the profit and loss account, although the income shows a substantial increase from Rs. 89,00,000 to well over Rs. 1,21,00,000, most of it is taken away by substantial increase in interest paid on deposits and salary. The rate of interest on savings bank deposits was raised from 2 to 3 per cent during the year and the rates on other deposits and seasonal borrowing also moved upwards. The rise in interest paid is 50 per cent. The rise under salary is mainly due to the adjustments made in the salary of the clerical and subordinate staff in terms of the Desai award. We have implemented the Desai award fully and in some respects a little more liberally. The salaries of the officers had also to be revised consequent on a

(Continued on next page)

REFINANCE BODY'S PROGRESS

ACTIVITY GATHERS MOMENTUM

THE Refinance Corporation for Industry has completed five summers and the Directors presented their report for the fifth year, namely the year ended 31st December 1962, on 26th March 1963. The Corporation achieved high and steady level of business in 1962. Thus, it received in that year 88 applications for refinance from 20 financial institutions for a total sum of Rs. 13.77 crores, as against 69 applications for a total sum of Rs. 11.27 crores received during 1961. Of the applications received during the year, 73 applications for Rs. 10.63 crores were sanctioned, as compared with 59 applications for Rs. 10.72 crores in the previous year. Two applications for Rs. 14.62 lakhs were rejected, because they did not satisfy the conditions of eligibility while another two applications were withdrawn by the financial institutions. Sanctions in respect of seven applications were treated as lapsed, as such sanctions (Rs. 144 lakhs) were outstanding for a considerable period. Of the 24 applications for Rs. 465.40 lakhs under consideration as at the close of the year (1962), 15 applications for Rs. 316.90 lakhs have since been sanctioned. In cases where complete particulars are supplied, the time taken by the Corporation to sanction applications is about three weeks. Five institutions, which had not hitherto availed themselves of the facilities provided by the Corporation, took advantage of these for the first time in 1962.

Disbursements follow sanctions and a sharp rise in the former was anticipated after the large sanctions in 1961. The amount disbursed in 1962, namely Rs. 795.75 lakhs, was greater than the sum of Rs. 470.57 lakhs in 1961. In consequence, the total disbursements amounted to Rs. 14.92 crores at the end of 1962 as against Rs. 6.97 crores at the end of 1961. The progress in disbursements was remarkable in the last two years, more particularly in the last year. If the tempo of progress attained in 1962 were maintained in 1963, the business of the Corporation should show a further substantial improvement, leading to early utilisation of the P.L. 480 funds earmarked for the Corporation. As the total outstanding loans of the Corporation increase, the pressure on the Corporation's resources would make itself felt. This is already evident from the fact that the Corporation had to borrow a further sum of Rs. 6 crores from the Government of India, taking its total borrowings from the Government out of the sum of Rs. 26 crores set apart for the Corporation from the P.L. 480 funds to Rs. 11 crores. It is likely that the commitments of the Corporation may soon come close to the total resources currently available. But it should not be difficult for the authorities to negotiate for further assistance from the accumulated P.L. 480 funds, should necessity arise, especially since the functions of the Corporation were recently enlarged to assist exports.

The total refinance sanctioned by the Corporation since its inception and upto the end of 1962 comes to Rs. 27.12 crores, covering 165 applications from 22 financial institutions. The total amount of loans outstanding as at the end of 1962 is Rs. 13.56 crores.

Types of Borrowers

An analysis of loan applications received by the Corporation shows that textiles, food and machinery industries accounted for over 50 per cent of applications. Manufacture of machinery and textiles led the list of disbursements with a sum of Rs. 2.33 crores and Rs. 2.37 crores, respectively. Coal industry, which has been given a loan from the World Bank and has been searching for rupee resources, figured with only one application for a sum of Rs. 50 lakhs. The hotel industry which was approved for refinancing purposes but which had not figured in the development plans accounted for a sum of Rs. 11 lakhs. The total sum disbursed by the Corporation for the benefit of the hotel industry up to the end of 1962 was Rs. 17 lakhs. Chemicals and chemical products industries received assistance to the extent of Rs. 2.73 crores.

Several factors contributed to the remarkable progress of the Corporation in the year which has just ended. Two are worth mentioning. During 1962, the State Financial Corporations Act was amended permitting the corporations to borrow money, with the prior approval of the Reserve Bank, from any financial institution notified in this behalf by the Central Government. On 16th June 1962, the Government notified the Refinance Corporation for the purpose and the Reserve Bank also accorded its approval to the State Financial Corporations for borrowing from the Corporation. The Board of the Corporation on its part decided to extend refinancing facilities to three other scheduled banks and the Punjab State Co-operative Bank without requiring them to become shareholders of the Corporation.

With a view to stimulating exports, the Study Group on Credit Facilities for Exporters had suggested that the Refinance Corporation should extend refinancing facilities in respect of export credits also. The Corporation drew up a scheme for refinancing medium-term export credits, that is, credits for periods exceeding six months but not exceeding five years. As this scheme, however, came into force from 1st January 1963, its impact on the Corporation's turnover will be felt only in the current year. The facility will be ordinarily extended in the case of exports of capital or engineering goods. The Corporation has plans to extend the facility in respect of other goods also where the Exchange Control agrees to the receipt of sale proceeds within a period exceeding 180 days initially.

Financing Exports

The refinancing facilities in respect of exports are available to banks which are authorised dealers in foreign exchange and otherwise eligible for such facilities from the Corporation. The exporters should be in the private sector and may be manufacturers, recognised export houses or other exporters of standing. The scheme provides for refinancing of pre-shipment credit, where it is combined with post-shipment credit. The total period of credit, excluding the period of pre-shipment credit, should not be less than six months or more than five years and the exporters should obtain necessary exemption from the Foreign Exchange Regulation Rules, 1952. The minimum amount in respect of which refinance may be sought has, for the time being, been fixed at Rs. 1 lakh and the total amount of export credits refinanced in respect of any one exporter should not exceed Rs. 50 lakhs. The exports should be against firm contracts and ordinarily covered by appropriate policies of the Export Risks Insurance Corporation.

The refinancing facilities were extended earlier in the year to cover instalments falling due for repayment within ten years in respect of long-term loans (beyond ten years), which are of particular interest to the State Financial Corporations, and also to loans made jointly by two or more banks or by a bank and a term lending institution, such as the I.F.C. These proposals and the extension of refinancing facilities in respect of medium-term export credits involved an amendment to the agreement between the President of India and the Refinance Corporation. A fresh Agreement incorporating all these changes was signed on 7th August 1962.

Lending and Borrowing Rates

The enlargement of the functions of the Corporation will make it play a very useful role. The relatively inactive part the Corporation played during the first three years of its existence made certain sceptics feel doubtful about the utility of this Corporation. But this appreciation was not correct. In the initial years of the Corporation, the banks had either surplus funds or the growth in deposits covered the increase in advances between 1957 and 1960. Nor was the practice of giving medium-term loans very much in vogue with commercial banks in those years. The result was that they felt no need to approach the Corporation for refinancing facility. Further, the banks resented some of the systematic details, naturally required by the Corporation in the initial stages about the borrowers from banks. They wanted the Corporation to sanction loans purely on the strength of an individual bank's prestige without bothering about the creditworthiness of its borrowers. The "dear money" policy launched by the Reserve Bank, two years ago, which culminated in the fixation of ceilings for bank borrowings from the Reserve Bank during the 1962-63 busy season, however, forced the banks to comply with the requirements of the Corporation and resort to its assistance in an increasing measure.

The growth in the Corporation's business has brought an improvement in its finances. The Corporation made a larger profit in 1962 than in 1961, that is, Rs. 25.57 lakhs against Rs. 20.19 lakhs. This profit would have been still larger had not the Corporation to pay higher interest (3 per cent) on the substantially large borrowings (which had increased by Rs. 6 crores to Rs. 11 crores in 1962) from the Government. It is relevant to note that even the present rate of interest at which the Corporation obtains funds from the Government is low. From 1¾ per cent in 1960, it was raised to 2½ per cent in 1961 and was further stepped up, as just referred to, to 3 per cent. Ultimately, the rate on these loans will be fixed at 4 per cent. This will, probably, be done next year, that is, in 1964.

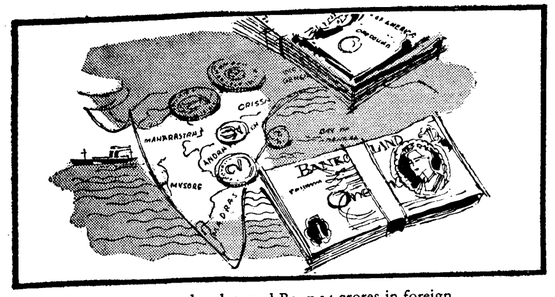
The Corporation has stepped up its lending rate (that is, the rate of interest on its loans) from 5 to 5½ per cent, with effect from 14th March this year. This represents a concession to the prevailing "dear money" policy. The Corporation has, however, wisely decided to keep the rate of interest on medium-term export credits at 5 per cent only, so that the benefit of cheap credit, in turn, will be passed on to the exporter, thus improving the competitive capacity of Indian exports in foreign markets.

Out of the Corporation's profit of Rs. 25.57 lakhs, no less than Rs. 15.46 lakhs have gone to the Government by way of taxation, Rs. 10 lakhs have been absorbed by dividend at the modest rate of 4 per cent per annum subject to tax and Rs. 1.50 lakhs have been credited to reserves.

In fine, the Corporation has more than justified the optimistic expectations of the founders. In judging the achievements of the Corporation one must always bear in mind that it belongs to the category of lenders of last report and that, accordingly, its activity will depend largely on the demand-supply position in the capital market for short- and medium-term funds, which in turn is influenced by a variety of factors, including Government's policies. A large and rising turnover in the Corporation's business will invariably reflect lower rate of savings in the country in relation to the demand for capital. Conversely, a shrinkage in its turnover may be the outcome of a fall in investment activity or a rise in the supply of funds or a combination of both.

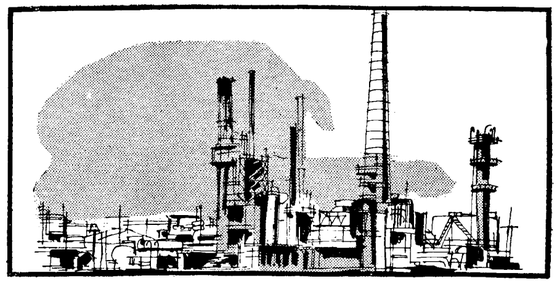
BANK OF MAHARASHTRA LTD.

(*Concluded from previous page*)



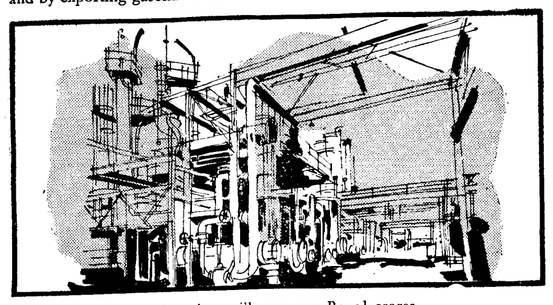
rise in the emoluments of the clerical staff. A portion of the rise was also due to additional staff required for expansion of business. The increases in other items under profit and loss account are more or less in keeping with the growth of the Bank. You will have noted that as many as 44 branches have been audited by qualified auditors. The business of these branches accounts for more than 80 per cent of the total business of the Bank.

Staff Training

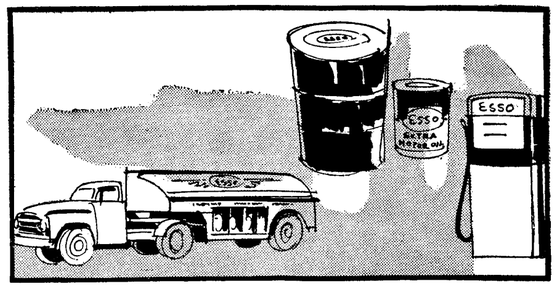


Although we did not open any new branch during the year under review, we have submitted to the Reserve Bank, for their consideration and, in accordance with their directive, proposals for opening branches during the next three to five years. With a view to enabling us to follow up this programme, we have already undertaken a programme of training for the staff. We are also deputing some members of the staff to the training programmes of the regional Productivity Council and Management Association. Thus it is ensured that properly trained staff is available for the proposed expansion programme.

During the year under report, our relations with the staff continued to be cordial. I thank them all for their continued co-operation, but for which the progress of the institution would not have been so satisfactory. I have no doubt whatsoever that they keep the interest of the institution uppermost in their minds. I also gratefully acknowledge the ever-increasing confidence of a large number of our depositors, clients and you, shareholders, which has enabled it to carry out the ideals with which the Bank was established, and to make the present progress. I am also grateful to members of the Local Advisory Committees at the branches and my colleagues on the Board, whose co-operation and guidance have made my task lighter and more pleasant. Lastly, I will be failing in my duties if I do not acknowledge with thanks the deep sense of gratitude to the officers of the Bank of all ranks and especially our quiet and lovable General Manager, Shri C. V. Joag, who has ungrudgingly shouldered the burden of the growing Bank through the period of stress and strains.



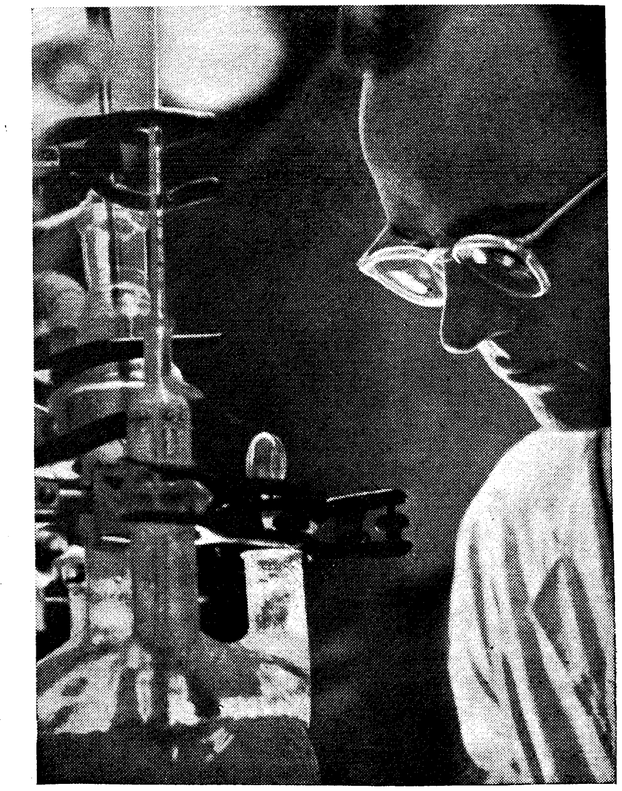
Thanking you.



During last year, we saved and earned Rs. 7.24 crores in foreign exchange by manufacturing petroleum products for local consumption and by exporting gasoline to the value of Rs. 2 crores

If proposals are approved for refinery expansion from 2.5 million tons to 3.5 million tons by 1966 and 4.5 million tons by 1969, an additional Rs. 5 crores will be saved in foreign exchange annually

The proposed lubricating plant will save over Rs. 2½ crores of foreign exchange annually



During 1962, Esso purchased locally, goods worth Rs. 8.2 crores

How long is a year?

A year is long enough for a Company to make its name known and trusted throughout the country; especially when its public services closely touch the daily lives of millions of people.

During its first year of operation in India, Esso has supplied its petroleum products to agriculture, industry, transport and domestic users, establishing in India the supreme quality of Esso products and services.

On its first anniversary, Esso looks back proudly on a year of service to the country . . . of vital supplies maintained and life lines preserved during a time of national emergency . . . and looks forward to making greater contributions towards India's progress.

WORLD SUPPLY OF COTTON AT ALL-TIME PEAK

NO CORRESPONDING FALL IN PRICES

A RECORD world supply of 69 million bales (of 478 lbs. each) during the current season is predicted by the International Cotton Advisory Committee, Washington, in its latest monthly review of the world cotton situation. This represents an increase of about 1.5 million bales over the 1961-62 figure and nearly one million bales more than the 1959-60 peak of 68.1 million bales. It is significant that the free-world countries account for the entire increase in supply; in fact, supply in the Communist countries is expected to show a slight decline from 16.4 million bales in 1961-62 to 16 million bales during the current year, thanks to a lower carryover stock at the beginning of the season aggregating 2.2 million bales, as against 2.5 million bales at the commencement of the last season.

The I.C.A.C. makes the following estimate of the supply and distribution of cotton during the current season, as compared with the previous two seasons:

(In million bales)

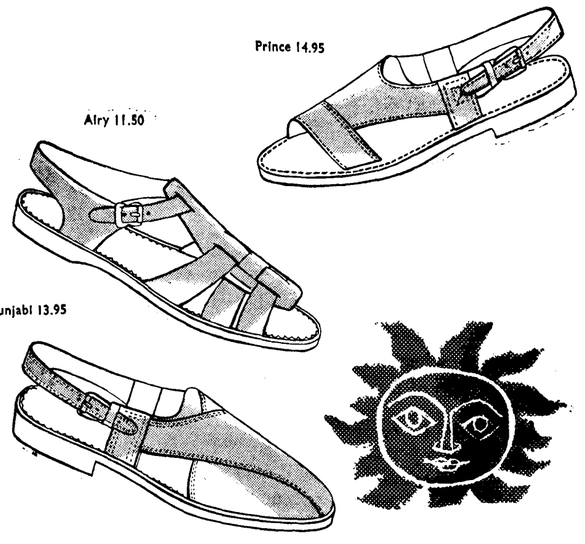
	1962-63*	1961-62	1960-61
Stocks, 1st August:			
United States	7.8	7.2	7.6
Other net exporters	3.9	3.5	3.2
Net importers	5.4	6.5	6.0
Total	17.1	17.2	16.8
U.S.S.R., China and E. Europe	2.2	2.5	3.4
World Total	19.3	19.7	20.2
Production:			
United States	14.7	14.4	14.4
Elsewhere	21.1	19.5	19.0
Total	35.8	33.9	33.4
U.S.S.R., China and E. Europe	13.8	13.9	14.0
World Total	49.6	47.8	47.4
Consumption:			
United States	8.3	9.0	8.3
Elsewhere	23.2	23.5	23.3
Total	31.5	32.5	31.6
U.S.S.R., China and E. Europe	..	15.7	16.4
World Total	..	48.2	48.0
Destroyed	..	0.1	0.1
Total	..	48.3	48.1

* Estimated.

With stocks at the beginning of the season remaining more or less at the same level as in the previous season, the increase in supply in the free world is attributed to the marked expansion in production during the present season, which is estimated at 35.8 million bales, as against 34 million bales in 1961-62. The actual increase in supply would, however, be more than what is indicated by the rise in production because of the marked increase in carryover stock at the beginning of the present season. Taking these into account, it can be concluded that supply in the net exporting countries is higher by roughly 3 million bales. However, considering the decline in carryover stocks at the beginning of the season in net importing countries by about one million bales, total supply during the season may not increase more than the estimated rise in production.

Of the estimated increase in supply in producing countries, about one-third is accounted for by the U.S. where a combination of increased carryover and larger crop has meant an addition to supply of about one million bales. Conversely, utilisation of cotton, officially estimated at 12.8 million bales, will probably decline by a like amount, so that there is likely to be a marked increase in the end-season carryover stock. The current estimate is that stocks at the end of the season would aggregate 10 million bales, as compared with 7.8 million bales a year earlier.

The increase in supply in other net exporting countries is much more pronounced, roughly 2 million bales, but, in contrast to the U.S., this is not expected to result in any marked build-up in end-season carryover. Moreover, any increase in carryover stocks is related to other factors rather than lack of demand. The U.A.R., for example, is committed to a policy of bringing stocks to a more normal level.

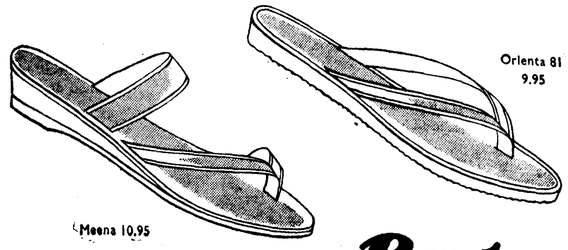


While supply is thus expected to set an all-time record, it is becoming increasingly evident that prospects are for a lower total consumption, with the most marked reduction in the U.S. where, at the present rate, consumption is estimated at 8.3 million bales, as against 9 million bales in 1961-62. Elsewhere, consumption is anticipated to remain close to the last season's level, despite a further decline in W. Europe and Japan. In the free world as a whole, consumption is expected to be lower by about one million bales at 31.50 million bales, as compared with 32.50 million bales in 1961-62.

Despite the decline in consumption, the expectation is that international trade in raw cotton will be maintained at about the 1961-62 level. There are many reasons for this apparent anomaly of a decline in consumption and continuing high level of exports. First, the major reduction in consumption in the U.S. will have little, if any, effect on imports into that country. The demand from Communist countries as a whole has so far in the current season been higher than in the corresponding period of the past season. Moreover, the current low level of reserve stocks in many net importing countries limits any opportunity for a further large-scale consumption which means that imports might nearly equal current off-take.

The maintenance of a relatively high volume of total export demand should, according to the Committee, provide many countries with an opportunity for expanding exports, but this in turn is likely to impinge on the market for U.S. cotton. Official estimates of American cotton exports during the current season have been scaled down in recent months. It is commonly held that, despite the expanded financing available under the various Government programmes, exports will reach the estimated figure of 4.5 million bales, as compared with 5 million bales last season. This would be the third successive decline in exports of U.S. cotton since the 1959-60 peak.

Reflecting the prospects for increased supplies and the increased volume of cotton coming into the market in the wake of a fall in demand, U.S. cotton prices declined steadily during the opening months of the current season. The downward trend was, however, arrested in December, thanks to the heavy movement of cotton into the Government loan programme and more active demand. In fact, the heavy entry into loan was interpreted as a bullish factor inasmuch as this cotton will be available only at a price which will have to cover the carrying charges also. Consequently, prices in the U.S. tended to rise since December and this trend still persists.



Influenced by the trend of prices in the U.S., prices of American type cottons in other markets generally eased and, in many cases, the decline was more pronounced, so much so that the subsequent recovery in many instances preceded the upturn in U.S. prices and has been, if anything, more noticeable, particularly in those markets where supplies are limited. This has had the effect of increasing the price of these staples *vis-a-vis* the U.S. growths and improving the latter's competitive position.

MILLOWNERS REJECT WAGE RISE CLAIM

RUMOURS OF MORE MERGERS IN COTTON INDUSTRY

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 26*th March*

A NEW claim for a wages increase for 150,000 employees in the Lancashire cotton industry appears to have failed. After a two-hour meeting at Manchester between employers and union representatives of workers in the spinning and weaving sections of the industry, the employers said that they could see "no justification for an upward adjustment of wages" on the arguments put forward. But the employers' spokesmen decided to refer the question to their constituent bodies for consideration, and there will be a further meeting with the unions on 5th April.

The leader of the union deputation, Mr. Lewis Wright, General Secretary of the Weavers' Amalgamation, stated that they had told the employers that an average wage increase of 1 per cent a year would not be tolerated and, unless they could get something better, the good industrial relationships that had existed for so long would be in jeopardy. Union members were refusing to accept "alibis," and were insisting on some sort of "militant action."

The employers also refused to consider the unions' request for an industry-wide compensation scheme which would make payments to operatives thrown out of work by mill closures. They said that this was now being considered by the Government, and they felt that it should be dealt with at national level. The last cotton pay rise was in October last year when employees were given a 7d.-in-the-£ increase.

British-backed Competition?

Sir Norman Kipping, Director-General of the Federation of British Industries, has issued a report on his recent visit to India which has caused some concern in Lancashire. The report deals with the problems of financing imports needed for India's development, the import licensing system adopted by the Indian Government, the uses of aid in relation to the country's funds of foreign currency, which affects both the British exporter and the British investor.

"The rockbottom truth is that the long-term prosperity of British investments in India and the security of the profits they may earn is dependent upon the ability of India to earn her keep," says Sir Norman. "If they wish to prosper in India they must accept the challenge of playing their due part in helping India to prosper." He suggests that active help be given to India as an exporter, and puts forward a plan that British traders might help in the marketing of cotton goods and possibly some categories of engineering and other goods in the same way that India's jute and tea industries were originally developed. The feeling in Lancashire is that it seems scarcely fair to investigate the possibilities of bringing in British-backed competition into the few markets still available for Lancashire textile products.

New Talks on Groupings

Rumours are circulating about the possibility of more mergers in the Lancashire cotton industry and, although earlier efforts to establish links between various firms either on a horizontal or vertical basis may have broken down, it is common knowledge that similar schemes are at the moment at least at the "talking" stage. This has been admitted by the chairman of one of the largest groupings, whose name was linked last year with two other firms which subsequently effected an amalgamation. Now, it seems, the feelers are being put out again in other directions. Few firms of any note in the industry have not been mentioned as possibilities for merging operations during the past few years and many of the regular names are now cropping up again, stimulated sometimes by sudden movements of their shares on the Stock Exchanges.

Experience in the post-war phase of concentration in British industry has proved that even the giants are not immune from changes in structure of this kind. It is scarcely surprising, therefore, that more "marriages" are being mooted among the major concerns, with some emphasis towards horizontal arrangements, particularly in spinning. In favour of such developments, which are not in line with what is regarded as modern practice, is the strength which amalgamations would give to those responsible for maintaining yarn margins at a time when the erosion of profits has been all too evident.

Liaison Offered

Assistance in guiding movements of this kind is, indeed, valuable and the Cotton Board has already expressed readiness to act as a bridge between the various parties. Mr. Frank Rostron, the Chairman, in a review of current conditions, has said: "Obviously there is a need to develop strong marketing organisations, capable of providing the finance for market research for maintaining representation overseas and for vigorous sales promotion."

Under modern trading conditions, he continues, what may be a very efficient production unit from the technical point of view may fall far short of the size necessary to market its products effectively. Some kind of "combined operations" are necessary, whether they take the form of takeovers and mergers, or looser forms of association such as marketing groups.

Awaiting Events

Activity in the market for Lancashire textiles in the first quarter of most years tends to be governed by contrasting factors; dependent on which gains the upper hand, so the turnover develops either slowly or with increased rapidity. The major influence is invariably the prospect of the forthcoming Budget, with its resultant effect on purchasing power, while, in a period which should reflect the absence of holidays, output and demand are less likely to be disturbed by seasonal variations.

National economic trends for well over a year have been decidedly restrictionist, with the protracted negotiations ending in the failure of the Common Market talks as much responsible for hesitation as any other single aspect. More unemployment, undoubtedly swollen by a winter of almost unprecedented severity, has added its quota of uncertainty about the future, and has enveloped distributors in its icy grip. Small wonder it is that the attitude of merchants has been to keep their purchases as small as possible, and even to slow down their delivery instructions to a minimum.

Quickening of Interest

In a market still extremely sensitive to sudden ebbs and flows of demand, the question of confidence still remains a dominant feature. On at least two brief occasions since the turn of the year, a swift quickening of interest has emerged, giving producers just that moment of encouragement which suggested that the hoped-for revival was near at hand.

Only a week or two ago, some firms were able to report such a phase of easier business, when buyers showed perceptible initiative, even being prepared to pay the prices quoted without much argument. In consequence, contracts were booked which had at least the merit of maintaining work for the machinery a little further ahead after order lists had dwindled rather sharply.

More Spending Power

At this stage, it is difficult to gauge whether the Government's surprising switch from emphasis on saving to spending will "do the trick"—either economically or politically. Textiles, with their immediate consumer appeal, start with an advantage, if such a policy is to be carried to extremes, and the shadow of the inevitable General Election will presumably be creeping more and more into the picture. The merchant community, however, is a lot more hard-headed than the nation's representatives at Westminster sometimes recognise. They wait for the most suitable moment when conditions favour effective purchasing before taking the plunge.

Millowners, with their constant problems of how to equate the cost of extensive new machinery and the general upkeep of their premises, must endeavour to secure margins which are reasonably remunerative, even at a time when the pressure of low-cost imports is causing a crumbling internal price structure. Attempts to co-relate selling rates to the necessity of the situation have not been abandoned. Various methods of avoiding price cutting are even now being explored by those who realise that they carry the future of the trade in their hands.

India will be exporting Rs. 50 lakhs worth of coarse *khadi* to the U.S.A. during the current year, according to Mr. V. L. Mehta, Chairman of the Khadi and Village Industries Commission. The exports will be increased to Rs. 2 crores in course of time. The annual production of *khadi* in India is now valued at about Rs. 18 crores. There is no difficulty in selling this because of the rebate.

ECONOMIC GROWTH IN WEST EUROPE—II

MAINTENANCE OF STABLE MONEY WAGES IMPERATIVE

By Dr. Per Jacobsson

MANAGING DIRECTOR, INTERNATIONAL MONETARY FUND

IT would be interesting to analyse what has happened in other countries in Western Europe in terms of the liquidity-cost approach, but I am afraid it would make this paper too long to do so. It is with some regret that I have had to leave out the analysis of certain other countries; for example, Belgium's development has been a very interesting one because of a very substantial rise in real wages as compared with pre-war levels and because of the measures taken at the end of the war and later on to contain liquidity. Switzerland's development, too, is a story of its own; so is that of Sweden and some of the other Northern countries, but an analysis of the pattern of development in all these countries would necessitate a book instead of a short paper.

The somewhat lower rate of growth in Great Britain in no way means that there has been stagnation in the economy of that country. Savings have continued to be fairly high and have been regularly invested in houses, public utilities, factories and other forms of assets. And this has happened without exposing those who had claims in money, for example, in the form of bonds, to the loss of almost all that they owned, as could have happened if there had been extreme war-time or post-war inflation. There is rarely any policy which is satisfactory from every point of view, and this has to be remembered.

The degree of liquidity as measured in wage costs is, I believe, a predominant factor influencing the rate of growth and, by examining it closely, one is able to get some clue to the reasons for the difference in growth rates in the different countries. When the liquidity factor has been such as to produce fairly rapid growth, the advantages thus gained are immediately observable—but they are not always the most important for a country. Looking back through history, those countries which have maintained relatively stable monetary conditions, so that people know that they are dealing with a sound currency, have derived distinct advantages from such an achievement. Confidence in currencies is a plant of slow growth, as becomes manifest in several ways. On the other hand, there are many countries in which, through inflation and otherwise, the public has lost in one or two generations well-nigh all of its assets expressed in money. Those countries have to live down calamities which may for years to come have an effect on public confidence and people's behaviour in relation to capital. It is reasonable to deduce that the higher level of long-term rates in some of the countries on the Continent of Europe is in part the result of the effect on savers of the heavy losses suffered by extreme inflation.

I do not say that other factors than liquidity and wage costs have not been of importance for growth. No doubt the position of political confidence, the system of taxation, the elimination of obstacles to trade, the formation of the Common Market, which has given a new vision to the inhabitants of the six countries, have been important. But my belief is that they have not played the same fundamental role as liquidity and wage costs factors. It is sometimes stressed that experience showed that even rather high interest rates—rates in Germany, for instance, were much higher than in the United States—did not impede growth. The reason was obvious: profits were in those years sufficiently high to meet the higher interest charges in Germany and the same applied to some other countries. This does not mean, however, that these other factors will always be of minor importance. The rather extraordinary relation between liquidity and costs, which was found in several Continental countries in the post-war period, will not last forever, and it would even be dangerous if it were to do so, because it has the inherent weakness of being, on the whole, inflationary in its effect and could, if continued, lead to an upset in confidence.

Note: This is the second and final instalment of the article, an adaptation of the paper presented by Dr. Per Jacobsson at a Symposium on Economic Growth sponsored by the American Bankers Association at Washington (D.C.) on 25th February 1963. The first instalment appeared in our last issue.

In fact, I think that this extraordinary period is now largely over; and that no country can count any longer on the high profit margins resulting from relatively low costs in relation to prices. In this *new situation*, as it appears early in 1963, business is still good; but it no longer has the same momentum, and may have to be sustained in a manner which would seem to bring the problems of the countries of Continental Europe closer to those that have already for some time been present in the economies of the United States and Great Britain. In this new situation, increased attention will have to be given to a number of problems, such as methods of taxation most suitable for growth, flexible utilisation of resources, including labour, establishment of effective capital markets, reduction of trade barriers, etc. But even when these problems are duly dealt with, a dominant influence will still be the state of liquidity in relation to costs.

To understand the requirements of the new situation, it is helpful to consider the effects which would be exerted by rising wages. As long as the inflationary trend was still prevalent, individual firms would often be willing to permit an increase in wages, since they would be able, as a rule, to raise prices without suffering a decline in sales. Once, however, the inflationary trend is over, intense competition militates against the possibility of raising prices, and an increase in costs then tends to reduce profit margins. A narrowing of profit margins has made itself felt for several years in the United States and also in Great Britain, and it is now becoming a characteristic of some branches of industry in the countries on the Continent of Europe.

Scarcity of Labour

On the Continent, there is still a scarcity of labour (though a declining one) and the new situation has not yet given rise to increased unemployment. There are some pockets of unemployment, but there is still enough demand for labour to give employment to all who are able and willing to move from one place to another. But in the United States and Great Britain, the degree of unemployment has become a problem.

The measures taken and proposed in the United States and Great Britain to promote economic expansion and ensure a reduction in unemployment envisage, in the first place, "an increase in demand," in line—as it is said—with Keynesian economics. Keynes, it is true, was in favour of an increase in demand, but, in this connection, it should again not be forgotten that he measured liquidity in money wages, and prescribed in times of marked unemployment that money wages would have to be kept *stable* for the unemployment to be reduced. This is an essential part of Keynes' teaching, though it is often insufficiently stressed. Therefore, the warning may have to be sounded that it will not do to pick out of the Keynesian recommendations those which seem palatable, such as deficit spending, and neglect those which are not so widely attractive, such as the maintenance of stable money wages.

The guidelines which were issued here in the United States early in 1962 in the Report of the Economic Advisers to the President, sought not stable money wages but a moderation in wage increases in order to keep them within the improvement in productivity, and thereby to ensure stable *prices*. This is not what Keynes thought would be needed to bring down high unemployment, but it is an approach to a situation which may well be compatible with more economic output, although it will not lead to the same reduction in unemployment as would be achieved by the maintenance of stable wages. It is likely that the countries in Europe will before long have to grapple with very much the same problem of undue wage increases.

An International Aspect

As far as the liquidity problem is concerned, there is not only the domestic aspect to be considered, but also an international aspect, in that individual countries will have, in a measure, to keep in step. This raises a number of problems connected with the strength of currencies and the defence of the international monetary system, including cost and price relations, taxation, capital markets, and short-term money movements. All these problems are the daily preoccupation of Governments and central banks, and of the International Monetary Fund as well as the Organisation for Economic Co-operation and Development.

There is at the moment no lack of liquidity in terms of credit facilities in the main industrial countries, which between them determine the trend of world affairs. But we are in a new situation; and it is likely that the question of economic expansion will be in the future more a question of common concern than it has been in the past. I shall now briefly try to reply to the specific questions which have been put to me.

Question I: *What have been the principal determinants in the extraordinary growth rates experienced by Western European Nations since World War II?*

Answer: I have already mentioned the liquidity-cost factor as being a dominant influence in the period of great needs for all kinds of goods after the war. Another factor which I think has been important was the sense of co-operation begun under the Marshall Plan and continued in the European Payments Union as part of the Organisation for European Economic Co-operation, and then for the six countries in the European Economic Community, which gave a feeling of common effort and one might even say, a new vision, to a number of European countries; and made it natural for them to adopt a "go-ahead" attitude. The pessimism which had perhaps been at its height in the difficult year of 1947 gave way gradually to an increase in optimism regarding the economic prospects. At first it was more a matter of reconstruction than of building up new industries which had not existed before, and not so much a question of inventing new techniques as of applying techniques already invented and in use in the United States. The technical spurt thus set in motion has borne fruit. European enterprises are now evolving techniques of their own, although there is still much that they can learn, especially from the United States.

Question II: *Are there one or more of the factors which seem to be more significant than others?*

Answer: In my answer to the previous question, I have mentioned those factors which I considered most important, the liquidity-cost factor, the feeling for co-operation, and the access to U.S. technical experience. But I think there are others which have been of significance, particularly in those countries which have experienced the highest rate of growth. There was a general desire after the war among the peoples and Governments of Western Europe to improve standards of living, and this was complemented by a willingness of labour to work hard to achieve these ends. This has been combined in some countries more than in others with relatively little disturbance from restrictive labour practices. Also the more industrialised Western European countries have certainly benefited from the addition to their labour force by the large-scale immigration that took place from Eastern Europe and some Mediterranean countries, as those who emigrate from a country are usually among the more energetic. It has been estimated that, between 1948 and 1960, the total labour force in the Common Market countries rose from some 66 million persons to almost 74 million.

There has also been an abandonment of restrictive and discriminatory trade practices, and a discarding in several sectors of the economy of nationalistic and autarkic policies; these changes had a direct economic impact in that they forced European firms to face up to competition from abroad and, consequently, to modernise and improve their efficiency. In many cases, firms became aware, sometimes rather to their surprise, that, with some imagination, better organisation, and more aggressive sales promotion, they could become highly competitive and very successful.

A further important fact is that, in most countries, cautious monetary and fiscal policies were followed and interest rates were allowed to rise sufficiently to give a fair remuneration to those who saved. In countries that had suffered greatly both from the war and from the post-war inflations, it was a matter of great urgency that monetary confidence should be restored; and it was soon found that these cautious policies in no way retarded the economic expansion, but, on the contrary, contributed to it in no uncertain way.

Question III: *Do you expect the influence of these factors to be relatively long- or short-lived?*

Answer: I certainly think that some of the factors that I have enumerated will have a lasting influence. Thus, I am certain that the monetary confidence which has been established, based—among other things—upon the return to convertibility, will continue to exert a useful influence and will help, for instance, to promote savings. The defences against currency speculation through increased monetary reserves, reciprocal credit arrangements, and the substantial increase in the resources available to the International Monetary Fund are now so strong that these currencies are unlikely to be shaken by speculative onslaughts: It also seems probable that the liberalisation of trade which has made great progress will not suffer any serious setback, but it cannot be excluded that the momentum for further advances may slacken under the impact of recent events. Finally, I would like to point out that there is still a great deal to do in Europe in the field of modernisation and in raising the standard of living. Technical improvement must continue; labour is not as plentiful as it was; wages are higher; and in these circumstances, more attention must be paid to the introduction of labour-saving processes.

There are thus many factors which will continue to exert a useful influence. But, as I have already mentioned, we are being faced with a new situation and, in this situation, new problems will come to the fore. The liquidity-cost factor will not operate so forcefully in favour of a high rate of growth. It is true that increased wages and other forms of income help to provide the outlet that consumer goods will need at a time of growing output, but prudence must be observed in these movements, since wages if rising too fast may unduly narrow profit margins, as I have already pointed out. Before long, more deliberate policy measures (including, for the first time in several countries, income policies) may well be required. Since in most countries on the Continent of Europe business is still active, there may not yet be a need for distinct expansionary policies; but there is perhaps no longer need for policies of restraint. And in this new situation, there will have to be a closer and more effective co-ordination of policies among the various countries. I am glad to say that there is increased understanding of the need for this close economic and monetary co-operation which, indeed, is one of the necessities of our time.

Question IV: *Has the Common Market been a factor? If so, how long will it be an expansionary influence?*

Answer: A great deal of the improvement in Europe occurred before the Common Market was inaugurated; and most of the growth would have happened even if there had been no Common Market. The formation of the Common Market has, however, made an important contribution, for it gave a new vision to the people of Europe; it enlarged the markets for, particularly, the industrial products of the six countries and this, in its turn, gave rise to technical improvements and much new investment, a fair amount of which came from elsewhere—largely from the United States.

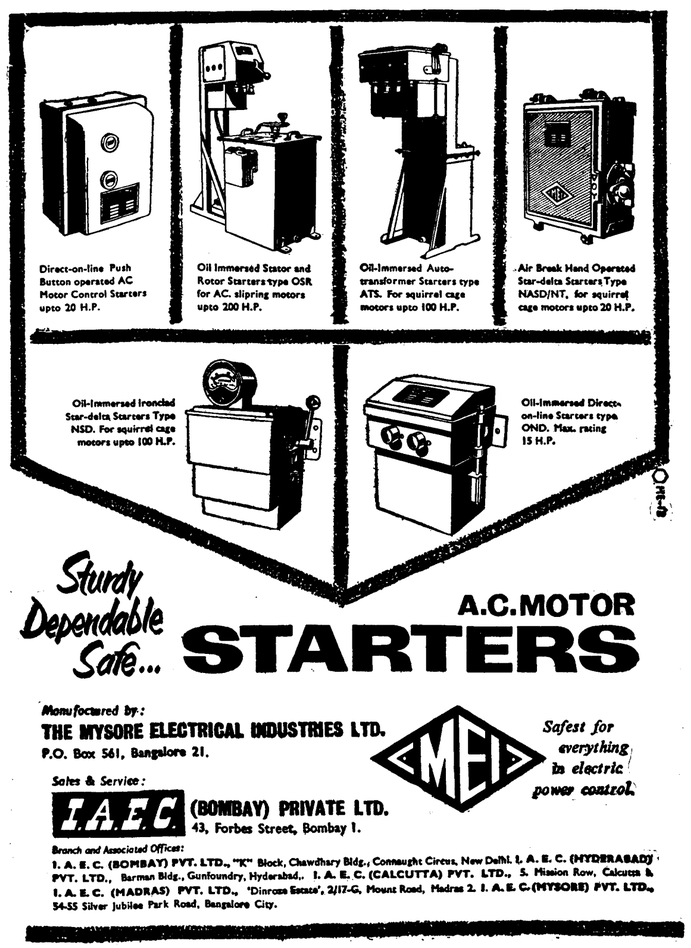
Between the six countries themselves, economic integration has been progressing quickly, perhaps even more quickly than some people had expected. Even so, the Common Market is still in its early stages; much remains to be done before it can reach its ultimate goal, i.e., something similar to the freedom of movement for the factors of production and to the uniformity of processes now existing, for instance, in the United States. If the work that remains in this direction is pushed along expeditiously, this should ensure a further impetus to economic expansion. As to the attitude of the Common Market toward other countries, there is at the moment a degree of uncertainty, which may even have repercussions on the internal problems of the six countries. This uncertainty could prove to be a retarding influence, although I do not expect that there will be a severance of relations already established, or a setback of long duration.

It had, of course, been thought essential that the Common Market would reveal itself as an outward-looking arrangement, liberally associated with other areas of the free world, so that it would promote and not impair the freedom of payments on a world-wide basis. There are many who still work towards such a goal and I do not see why this work should not in the end be crowned with success. But we have learned once again that liberal policies will not be adopted if they are not worked for with pertinacity and singlemindedness.

Question V: *What roles have fiscal, tax, and monetary policies played in achieving rapid growth?*

Answer: The first point to make is that fiscal and monetary policies have been far from uniform in the Western European countries. The divergencies were at times of considerable importance, but, under the influence of the European Payments Union, the Bank for International Settlements and the International Monetary Fund, there was gradually an acceptance of more flexible monetary policies, including the use of flexible interest rates. In the countries on the Continent of Europe which have had the highest rate of growth, the stimulus up to very recently has been provided by an appropriate liquidity-cost factor; the main task of monetary policy in this period has been to restrain inflationary pressures. There was no need to rely on deficit spending or on easy money. In fact, there was the need to establish and maintain confidence in the currency, and the efforts made in this direction became as a matter of fact more and more successful.

In France, as already mentioned, there was not the same resistance to inflation up to 1958, but, in the two following years—1959 and 1960—very cautious monetary and fiscal policies were pursued, and wage increases were avoided, and thus a basis was provided for the high rate of expansion in 1961 and 1962. In those years, a high rate of domestic growth has been combined with the attainment of truly impressive surpluses in the country's balance of payments.



To sum up, therefore, as long as there was sufficient impetus for expansion inherent in the economy, the main task was to guard against overheating. We have now reached a time, however, as I have already mentioned, when some of the European countries may be approaching a new situation in which they will not find economic expansion so free of problems. And when it comes to taking appropriate measures, let me repeat, they will be well advised to co-operate closely with each other and also with other countries.

There is, however, one step they could proceed with individually without delay, namely, the establishment of effective capital markets. Where no such market exists, there is a tendency for business firms to rely upon bank credits even for the long-term investment financing so necessary for economic growth. History has shown, however, how dangerous this kind of financing may be, since it may tempt the banks to over-extend themselves, make them vulnerable at difficult times and provoke a financial crisis. In their own interest, those countries which have not effective capital markets have every reason to establish such markets as promptly as possible.

* * * *

I have now answered briefly the specific questions put to me, but I should like to add one further observation. In the post-war period, business has continued to operate without being concerned about what happened politically. Many businessmen seem to have said to themselves that the effects of full-scale global war, if it were to come, would be so incalculable that the only practical course was to proceed on the assumption that there would be no war. And I think that, deep in their hearts, most businessmen, and perhaps most of us, have always felt that the leaders of the various countries would hesitate long before bringing onto themselves and their own peoples the terror of nuclear conflict. There has as a rule been willingness to co-operate, or at least not to break relations. It is usually easier for people to co-operate in adversity than at a time when their material conditions have vastly improved. It is, therefore, of critical importance now when many countries are more conscious of their own economic strength and prosperity that the momentum to continue co-operation should not be weakened.

(Concluded)

WORKING OF COFFEE BOARD

ACTION TAKEN BY GOVERNMENT ON ESTIMATES COMMITTEE'S REPORT

IN its report on the Coffee Board submitted to the second Lok Sabha towards the close of March 1961, the Estimates Committee had made, among others, two important recommendations. One, the coffee pricing policy should be examined to see in what way it required modification, in order to give a fair return to the grower and to encourage exports while avoiding too high an internal price. Two, a periodical assessment of the Coffee Board's working with reference to its prescribed objectives and functions should be undertaken by an agency independent of the Board and its report presented to Parliament. Although full two years have elapsed since these recommendations were made, it is regrettable that the Government has still not taken any decision. All that it has done is, according to the fifth report to the third Lok Sabha, to request the Coffee Board to examine which, if any, modifications in the pricing policy are required and are feasible. The report of the Board was sent to the Ministry of Commerce and Industry on 3rd November 1962 and, at the time of factual verification, the Ministry merely said: "The pricing policy for coffee is reviewed periodically and the considerations of giving a fair return to the grower and encouraging exports are duly taken into account while determining the policy." As for the suggestion pertaining to periodical assessment of the Board's working, the Government has just said: "The recommendation is being examined and a further communication will follow."

It may be true that the average prices realised by coffee growers have increased lately, but the actual increase does not, in the majority of cases, adequately cover the rise in the cost of production, selling expenses and other overhead charges. Unless the growers are assured of a price that not merely meets the production cost but also ensures a reasonable return, they will not put in extra efforts to produce more and more of quality coffee. The present prices of coffee are, of course, high in all conscience and no one will suggest that the prices should be raised further. Even without such a rise, the coffee growers can be made to derive a higher price, if only the Government cares to bridge the wide gap that exists between the "consumer price" and the "coffee grower's price."

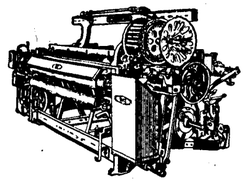
Sound Price Policy Wanted

The need for a sound coffee price policy is imperative, especially because of the peculiar nature of the economy of this industry. Coffee is one of the main cash crops in the hilly tracts of the Western Ghats. If, for any reason, coffee does not become paying, there is no alternative crop that can be raised on the small hilly slopes. Besides, the nature of coffee plantation is such that one cannot easily switch over from it to another. As readers are aware, a coffee bush takes several years to yield fruit and, once it starts producing beans, its life lasts for several years. Accordingly, once coffee is planted, it would be most uneconomical to destroy the plantation and devote the land to any other plantation crop or forest produce. The planter must, therefore, have the wherewithal to nurse the coffee bushes and get a consistently high yield from them. Besides, in recent years, coffee has also been a consistent earner of foreign exchange. Drawing attention to this aspect, the Estimates Committee had urged "every effort" to foster the industry, so that the objectives of the Coffee Board might be fully realised.

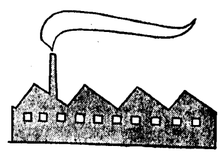
It is appropriate to refer, in this connection, to the trend of coffee production in India in recent years. The quantity of coffee actually gathered no doubt went up quite markedly in the second Five-year Plan period, from 35,028 tonnes in 1955-56 to 53,355 tonnes in 1960-61, but declined to 44,850 tonnes in 1961-62. Although the estimate for 1962-63 places the crop higher at 53,050 tonnes, it is much below the third Plan target of 80,000 tonnes fixed to be achieved by 1965-66, so that the gap to be covered in the last three years is pretty large. The rise in output in recent years has, of course, been due partly to the expansion of acreage and partly to the improvement in per-acre yield. Usually, coffee crop fluctuates from year to year, as it is susceptible to cyclical influences. One good year is invariably followed by a bad year. Again, a good proportion of the existing bushes consists of younger plants and, as they attain full maturity, crops will look up. Accordingly, the prospect of hitting the target of 80,000 tonnes by 1965-66 is not bleak. Even after making allowance for all these features, the fact remains that the current average yield per acre is relatively low, being only 50 per cent of the world's average. There is, therefore, room for augmenting the productivity of coffee lands. It will certainly be interesting to know the progress actually made in respect of yield from existing acreage, production from the reclamation of abandoned tracts of established coffee, and expansion by way of new clearings and plantations. The Government of India has done well to accept the Estimates Committee's plea for the Coffee Board giving figures of increased production under the aforesaid heads. Incidentally, it has also accepted two other notable recommendations. These are: (1) suitable action should be taken to see that the research stations do not suffer for want of necessary equipment; (2) it would be desirable to have a follow-up of the results of application of the fruits of research conducted by the Coffee Board.

Coffee Exports

The Government is in general agreement with the Estimates Committee's observation on coffee exports and says that the considerations set out in the recommendation will be constantly kept in mind. The Committee had said: ".... the export of coffee has to be specially encouraged to increase earnings of foreign exchange. Indian coffee is now faced with keen competition in the world market and special measures are called for not only to increase our exports but even probably to retain them at the present level. The Committee feel that it may be desirable for this purpose to export Indian coffee at comparatively lower prices, even though that may require pegging of domestic consumption." Exports of coffee last year (1962) earned Rs. 7.71 crores, as against Rs. 9.50 crores in 1961. The fall was due chiefly to keen competition in world markets resulting in lower prices. The need to ensure larger exports of coffee is no doubt urgent to a degree, but it would be wrong to achieve such exports by pegging domestic consumption. For, as this journal has ere now stressed, it is only through maximisation of production and expansion of the home market that the industry's capacity to export a larger volume at a loss can be sustained. Forming part of export promotion work is propaganda. The Government of India has noted the remark of the Estimates Committee that much has not been done for foreign propaganda. The Committee had rightly urged "prompt and adequate measures" to make Indian coffee popular among overseas consumers.



Marketing and Publicity



It will be recalled that the Expert Committee on Coffee Marketing had recommended a Marketing and Publicity Committee in lieu of the existing two committees for marketing and propaganda. The Estimates Committee endorsed this view and suggested that the feasibility of amalgamating the Marketing and Propaganda Departments of the Board might also be examined without delay. The Coffee Board was not in favour of a single committee to be in charge of both the functions and wanted the *status quo* to be continued. The Government has agreed with this view. It has, however, accepted in principle the Committee's suggestion regarding the merger of the Marketing and Propaganda Departments and necessary steps, it is said, are being taken.

The loan scheme of the Coffee Board had come in for criticism at the hands of the Estimates Committee. The Committee had felt that adequate thought was not given to the different aspects of the scheme before it was put into operation and had hoped that the modification of the terms and conditions of loans would prove effective and that the Board would be able to show a much better performance from 1960-61. This expectation seems to have been borne out by the upward trend already record-

SEN-RALEIGH LIMITED

EXPANSION PLANS UNDER WAY

CHAIRMAN, MR. ABHIJIT SEN, STRIKES A CAUTIOUS NOTE

"IF the months following the emergency are any index of the shape of things to come, the outlook for the coming year is not very bright," observed Mr. Abhijit Sen, Chairman of Sen-Raleigh Ltd., at the Company's Thirteenth Annual General Meeting held at Calcutta on Thursday, 28th March 1963. In support of that contention, he advanced three reasons: first, the exigencies of the emergency leading to diversion of the limited quantity of indigenous steel to defence production; second, further cuts in the import licences for the industry; and third, the dock strikes in the U.S. wherefrom the bulk of the raw materials continue to come. Because of these factors, he remarked, production of both bicycle and components had suffered a considerable setback. Notwithstanding the unencouraging immediate outlook, the Directors had proposed not to delay the expansion plans that had been worked out in the past two years. Stating this, the Chairman gave shareholders an idea of the preliminaries already completed.

The following is the text of Mr. Sen's statement to the shareholders:

Working and Efficiency

In the year under review the growing popularity of the Company's products was reflected in the satisfactory increase in its sales. The demand for its bicycles continued to rise steadily and even with a considerable rise in production, the year closed with a full order book in this line. Except for one of our products where offtake did not match output, the demand for bicycle components was also steady.

In the face of ever-rising costs of raw materials and their erratic supply making operating conditions difficult and leading to unduly high costs of production, the profits of the Company have failed to rise in proportion to its expanding sales. This is a situation which your Directors view with concern and to which they are endeavouring to find a remedy.

The changes brought into the organisational structure of the Company over the recent past have effectively helped in improving production, but it has to be noted with regret that they have not yet achieved the much desired targets of improved efficiency and tighter controls referred to in my last report to you. To bring future profits of the Company more in line with the scale of its operations, it is necessary to streamline its activities in all aspects, and, though this is bound to be a formidable uphill task, it is one that must be handled boldly—with all the resources of the Company mobilised in the attempt. If there is a realisation of the fact that with a sincere effort on the part of each and every person within the organisation the targets of efficiency and improved operation can be reached, it should be possible in the coming years to attain this goal—and maintain the Company's pre-eminent position amongst leading bicycle manufacturers in the country.

Emergency and Outlook

In the context of the present emergency the accent in industrial production is on co-operative effort better to utilise materials, avoid waste, and increase productivity. These important features kept in the forefront at all times—and not only during the emergency—will inevitably lead to improved operations for any industrial unit, and it is only to be hoped that the present heavy emphasis on these aspects of operation remain with us for ever.

If the months following the emergency are any index of the shape of things to come, the outlook for the coming year is not very bright. Further cuts in import licences demonstrate the bicycle industry has fallen considerably from grace where import policy is concerned. Moreover, the exigencies of the situation have called for diversion of supply of the limited quantity of indigenous steel to defence production, and a considerable drop in bicycle production as a whole in the country is visualised unless the situation changes rapidly for the better in the near future. The dock strikes in the U.S.A., a country from which much of our raw materials now come, have been a further retarding factor affecting supply lines, and as a result of all these features, both bicycle and component production has suffered a considerable setback. In the interests of India's economic development, it is only to be hoped that these conditions will pass off soon.

Early in the emergency, your Company along with many others offered its services for assisting in defence production. Your Company is eminently equipped to undertake production of defence stores and any orders for defence production would doubly benefit the country in its hour of need, as, in addition to resulting in outturn of much needed stores, these would also assist towards fuller employment, and utilisation of idle capacities.

Expansion

Though the immediate outlook is not very encouraging, your Directors do not consider that the Company should delay implementation of any of its future projects on which it has been working for the past two years. As you are aware, negotiations have been successfully concluded with Raleigh Industries Limited for financing the foreign exchange requirements of schemes for expansion of bicycle production and diversification into the manufacture of house service meters These negotiations culminated in the subscription by the latter to a substantial part of the new capital issued by the Company in November last, and, in their executing a series of fresh agreements with the Company to replace the agreement dated 3rd November 1948 and the sales agreement. In November too, the Company in General Meeting accepted the new continuing technical aid agreement with Raleigh Industries Ltd., under which royalty will be payable at half the previous rate uptil 1968, and no royalty shall be payable thereafter for technical aid and use of their marks.

At the same time, the trade mark agreements with Raleigh Industries Limited and its associates were recast to fall in line with the requirements of the Trade and Merchandise Marks Act, 1958. Amended agreements with Union Sils van de Loo and Co., and Wittkop and Company consequent to the revision of the Trade Marks Act have also been submitted to Government for approval.

Export of Bicycles

An Indian trade mark belonging solely to the Company has now been introduced, and it gives me pleasure to announce that the first consignment of bicycles bearing the brand *Balaka* will soon be on its way to Africa. It has been found that in markets where the popular English brands of our associates hold sway, an Indian brand of bicycle with our standards of quality finds easier acceptance than the English brand of an Indian manufacture. In such markets an Indian Raleigh would fight an unequal contest with its English counterpart and result only in creating an embarrassing situation for both. Although we have started the *Balaka* exports in a small way at present, one can hope for the time when this flight of Indian birds will spread its wings over the major cycle importing countries of that day.

The expansions we have undertaken would cost the Company over Rs. 2 crores in the next 2-3 years, and the capital we have now raised will be financing just one part of this expansion. For the rest, we shall be dependent mainly on finances generated within the Company, but we may need to consider an approach to the Industrial Finance Corporation for foreign fund loans for the reason that though the Raleigh subscription covers the exchange requirements of the entire bicycle expansion scheme and most of the house service meter scheme, a small part of the exchange requirements of the latter scheme still remains to be found.

For the scheme of manufacture of house service meters, a technical agreement has been entered into between your Company and Associated Electrical Industries Limited of the U.K. This agreement has a tenure of ten years, and is based on the payment of royalty for use of the A.E.I. "knowhow." It also allows the Indian Company to export. The planning work on this project is well advanced, and subject to import licences for plant and equipment being received on time, it is expected to commence trial production in 1964.

Supply of Steel

In planning our expansions, we have the expectation that the steel output in the country having reached its take-off stage, much of our expanded requirements could be met in the near future from indigenous supply; that if exports of our products develop on planned lines, export incentive licences should help us substantially in regard to meeting our essential import requirements; and that most of the plant required for our expansions would in general be suitable for the manufacture of defence stores, should this aspect of production assume greater priority. At the moment, the range of steel manufactured in the country is relatively wide, and with better co-ordination on the part of the various Ministries concerned leading to a fuller utilisation of re-rolling and cold-drawing capacities in the country, the major requirements of light engineering industries could be met from indigenous steel. Today, though skelp, black bar and wire-rod are all manufactured in fair quantity by the primary steel producers, much of the cold strip, bright bar and wire drawing capacities in the country still remain idle and imports have to continue in these latter items. With a bit of planning, and co-ordination the imports could be scaled down considerably with hot rolled material replacing the cold-rolled and allowing the cold-rolling capacity in the country to work to capacity. It is hoped that with the creation of the new Ministry for Economic and Defence Co-ordination, this problem could be looked into on a wider perspective than at present.

Rise in Costs Inevitable

The impact of the recent increases in excise have already been reflected in our past year's performance. With the threat of further taxation looming ahead of us, the extremely onerous burden of Emergency War Risks Insurance premia, and increasing costs of transport and power, a rise in costs will inevitably result of an order which cannot be countered by any economy effected by efficiency of operation or increased output alone. Something extra is called for now and we must be prepared to trim the many little luxuries we have allowed ourselves in the past, and to effect the many small economies which we have tended to ignore as inessential so far, in our bid to meet the challenge of the times.

Staff and worker relations continued to be quite happy though recent lay-offs due to lack of materials has been a disturbing factor for both management and workers. Towards the end of last year, the agreement with the employees' union at Kanyapur was to have come up for review, but in the face of the emergency, both the union and the Company agreed that the existing one be extended and negotiations for a new agreement be held in abeyance till more settled times.

I cannot close without a word of thanks to all staff and workers of the Company for their efforts during the year.

Note: *This does not purport to be a record of the proceedings of the Annual General Meeting.*

(*Concluded from previous page*)

ed in the size of the amount drawn by the Board for disbursement among small growers. As for the Committee's finding that the Development Department of the Coffee Board had hardly justified its existence and should be wound up, the Government says:

"After careful consideration, Government have come to the conclusion that it would not be desirable to wind up the Development Department whose activities in the matter of both scrutinising loan applications and actual disbursement of loans, as well as of keeping an effective control over the recovery of the loans already disbursed, will increase considerably in future years. It has, therefore, been decided to continue the Department provisionally, upto 28th February 1963, but with a considerably reduced strength, its further continuance depending on the results achieved in the meantime."

The latest position about the Department is not known. The annual report of the Ministry of Commerce and Industry makes no mention of it at all. If the Department has not been functioning properly, the solution lies not in closing it but in improving the set-up, so that it can be made more effective. Only care must be taken to see that the maintenance of this Department does not involve the Government in heavy expenditure year after year.

ASIATIC OXYGEN LIMITED

MULTIPLE SHIFTS FOR INDUSTRIES URGED

CHAIRMAN, MR. B. L. JALAN, ON EMERGENCY AND DEVELOPMENT

IN his address to shareholders at their Second Annual General Meeting at Calcutta on Saturday, 30th March 1963, Mr. B. L. Jalan, Chairman of Asiatic Oxygen Ltd., dwelt at length on the challenge facing the country during the emergency, especially in regard to industrial development. To meet that challenge, he advocated multiple-shift working for industries. Speaking about an overall strategy during the emergency, he called for voluntary extra effort by all concerned and fixing of production targets for each State, district and village. Discussing the various measures taken by the Government, including the budget, in that perspective, he concluded that they were calculated to defeat the very objectives before the nation. He regretted that the sense of national urgency had not penetrated the Government's licensing procedures and the working of autonomous public institutions. As for the price line, he felt, the powerful forces released in the economic system would make it impossible to hold it.

The following are extracts from Mr. Jalan's speech:

GENTLEMEN,

As you are aware, our proposed production facilities together with those of our subsidiary company will represent an extensive network of industrial gas factories around the country, at Calcutta, Bhilai, Barauni, Durgapur, Bombay, Madras, Rourkela, Hyderabad and Patna. We will also have additional three units for the manufacture of oxy-acetylene gas, welding and cutting equipment, electrodes, and arc welding transformers, which will enable us to provide complete service to our customers, large or small, in the industrial welding and cutting field. Our gas plants are expected to be shipped from the U.S.A. very shortly and we hope that all our gas plants will be on stream before the year is out.

Industry's Prospects

It is not necessary for me to dilate at length on the prospects of this industry. The demand for oxygen and dissolved acetylene was estimated at 1,000 million cubic feet and 150 million cubic feet, respectively, in 1960-61. The third Plan production targets of 1,650 million cubic feet for oxygen and 200 million cubic feet for dissolved acetylene were based on a projected capacity of 2,300 million cubic feet for oxygen and 250 million cubic feet for dissolved acetylene. This growth represents a 66 per cent rise in five years for oxygen and 33 per cent for dissolved acetylene. All indications and projections show that the demand would be higher. Utmost vigilance, however, is warranted in our licensing policy which may lead to mushroom growth of industrial units leading in its wake to uneconomic and wasteful capacity.

The industrial gas industry has assumed a special importance owing to the national emergency proclaimed in the aftermath of the massive and wanton Chinese invasion. The requirements of oxygen and allied gases for purposes of defence have considerably gone up in consequence of increased defence efforts. Your industry, I am proud to say, has joined the whole country in offering its services and unstinted support in the national cause. It is a matter of great satisfaction to us that practically the whole world has supported our righteous stand and that Communist China has been completely isolated. Friendly countries like the United States and the United Kingdom, besides several others, have come out with large-scale and immediate help.

As the Prime Minister has rightly said, the war has to be fought not only on our frontiers but equally in our fields and factories. No time would be more propitious than now that the 150 million of our working village people should be geared to provide more food and more raw materials. Voluntary extra effort would be the answer. Members of Parliament, State legislatures and other social workers supported by Government officials in rural areas can do yeoman service to the nation by organising the villagers to dig canals, wells and the like. Targets should be determined for each State, each district, each village. Simultaneously, industry should be asked to operate additional shifts and to work on all Sundays. Workers should contribute to the National Defence Fund their extra wages and the industrialists should contribute their extra profits. It is estimated that in one year alone workers would earn about Rs. 75 crores of additional wages, the industry would produce additional goods and services of the gross value of Rs. 480 crores and of the net value of about Rs. 180 crores.

Super Profits Tax

It is in this perspective and context that we should view the various measures taken by the Government, including the new taxes. The yield, you know, of the new Super Profits Tax has been estimated at Rs. 25 crores which pales into insignificance before the estimates of additional wealth which would be created by making the industry work on additional shifts and on Sundays. Moreover, the suggestions I have made a little while ago would increase the national wealth, and therefore, the intrinsic strength of the nation. The taxation will only bring about a mere transfer of the existing flow of incomes, even if it does not actually, as apprehended by many, retard production seriously. It may also be recalled in this connection that even the voluntary contributions to the National Defence Fund during the last six months have been twice as large as the total yield estimated to accrue from the new Super Profits Tax for the whole year. I have absolutely no doubt in my mind that, if instead of imposing this fresh tax, the Government asked the industry and the people of India to make additional voluntary contributions to the tune of Rs. 25 crores, they would welcome this as an additional responsibility to be carried out willingly and with a sense of gratification.

In the midst of the flare up of border warfare and some initial reverses, our Prime Minister so boldly and so rightly laid the task before the nation: while we should double our efforts and be prepared for a prolonged war with our treacherous neighbour, we should not relent our efforts to achieve a faster rate of industrial and economic growth. Any other approach would only achieve one of the basic objectives of our communist adversary. Confronted with a complete debacle of "leap forward" at home, the successful "leap forward" in India by democratic methods, techniques and institutions, became an eyesore to China. By giving up our plants of economic development we would only be playing into the hands of the aggressor.

Objectives Before the Nation

Our distinguished Finance Minister in his budget speech so candidly and so lucidly described the objectives of our fiscal and economic policies. At the cost of repetition I will reproduce here what he said: "First and foremost, there is the need to increase production and accelerate the pace of development. The growing claims of defence and development cannot be met except on the basis of an expanding volume of production. By far the greater part of the responsibility for increasing production rests with the private sector and, when I refer to the private sector, I am referring not only to organised industry and labour, but also to the millions of our peasants and artisans." One wonders, however, if the tax proposals are calculated to help achievement of the basic objectives of our policy.

Take the Super Profits Tax. It is a tax on taxed income. It is a tax on economy and efficiency and higher productivity. It is a deterrent tax on investments. It is a deterrent tax on inflow of foreign capital. Does it not, therefore, go against those basic principles of taxation which have been evolved through many centuries?

The Super Profits Tax also negatives the attractive features of our tax system, namely, development rebate and five-year tax holiday.

Defeating Measures

I do not have many doubts about the situation which emerges. Our objectives have been wisely devised; but the ways and means adopted to achieve them are calculated to defeat the very objectives. It is not a question, as is sometimes posed, of public and private sectors. It is a basic question of mobilising, in the most efficient manner, our limited national resources. It is in this context that I sincerely believe that our industrial policy enunciated in 1956 has become outdated and obsolete. There cannot be a dichotomy of productive effort, reserved here for the private sector and there for the public sector. There is only one sector and one goal. The only sector is the national sector. The only goal is the national growth and prosperity.

It is only in recent years that people in the middle and lower income brackets have shown considerable interest in industrial investments. This is doubtlessly a very healthy and profound development. It has a far-reaching impact on our economic and social framework. I wish the Government realised the deterrent impact the new budget would produce on these large numbers of investors and disturb healthy trend of more widespread interest in capital issues.

There is yet another area into which I am afraid the dynamic sense of national urgency has yet not penetrated. The functioning of the licensing procedures and of the autonomous public institutions continues to be as dilatory as, if not more, than before. The impression has gained currency that the national emergency has not brought any perceptible change in the red-tape-ridden methods and procedures of Government.

I am aware of quite a few cases of leading foreign companies which otherwise willing to make large investments, were repelled by bureaucratic behaviour and dilatory methods of licensing and regulatory procedures. It is, perhaps, seldom a more precious asset, that is, highly advanced technical know-how. The United States of America spends every year on research alone some 15 billion dollars, that is, about Rs. 7,500 crores equivalent to our total public spending under the entire third Five-year Plan in all the sectors of the economy. It is, indeed, this national urge for more efficient techniques, tools and processes which have made possible the high productivity of American industry and the phenomenal prosperity of the American people.

Price Line

I had referred earlier to another objective of our current economic policy, namely, to hold the price line. It is a 'must' for our rapid and accelerated rate of industrial and economic growth and for mobilising our resources for defence at minimum cost. I am afraid, however, that powerful forces have been released in the economic system which would make it impossible to hold the price line. Government spending, both on civil and defence accounts, has been raised phenomenally. Similar spending on capital account has been likewise rising. Monetary incomes have been touching new high levels. Liquidity within the country is expanding owing to foreign aid and investments. Industrial costs have been allowed to increase unabated. Taxes have been imposed which tend to further increase the costs. The cost of capital equipment and construction has considerably gone up. The cost of capital goods has witnessed an unprecedented rise in recent years while bank credit to industry is becoming more and more difficult to obtain. Disposable profits have been reduced by all forms of taxation.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

PORTABLE AIR-CONDITIONER

An entirely new portable air-conditioning unit, claimed to be the first of its kind in the world to offer real air-conditioning, is being marketed by the Rootes Tempair Company. Only half the size of an average T.V. set and completely self-contained, the new unit, the makers claim, marks a new concept of personal air-conditioning. Plugged into an electric supply, the unit can filter, cool (or warm), dehumidify and wash the air—and direct it unobtrusively to create a zone of fresher, cleaner air around the user up to nine feet away. Compact and elegantly styled, the P.A. weighs only 42 lbs., it can be carried from room to room in one hand and it costs nothing to install. At half the price of the cheapest room air-conditioner on the market, it offers comfort all the year round for the housewife in her kitchen or the executive at his desk—and it is designed to have many other applications in the home, commerce or industry. In the U.K., the P.A. is priced at £59.12.7. (inc. £8.17.7. P.T.) or, incorporating a two-kilowatt heater, at £66.7.9 (inc. £9.17.9 P.T.). It is also economically to operate—the cooling unit running costs are only 3d. for an eight-hour day.

DISCREPANCY IN IRRIGATION STATISTICS

POWER SHORTAGE WILL PERSIST FOR MANY YEARS

UNDER the first two Plans together the actual outlay on irrigation was of the order of Rs. 730 crores in the country as a whole. Did this enormous outlay *really* increase the net irrigated acreage from the level of 51.5 million acres in 1950-51 to 70.0 million acres in 1960-61? This latter figure of 70.0 million contained in the *Third Five-year Plan* seems to be only a broad estimate based on guesswork. The Report of the Union Ministry of Irrigation and Power for 1962-63, just released, has presumably relied on this "guestimate," as will be seen from the following quotation:

"According to the *latest available figures*, the irrigated area in the country is *now* 70.0 million acres, recording a rise of 18.5 million acres over the pre-Plan 1951 figure."

The *latest available figures* from which source? Which year does "now" refer to? One can answer these questions only inferentially by a reference to the third Plan document. The Ministry's Report, it is indeed amazing, has avoided all reference to the irrigated areas statistics of the Union Ministry of Food and Agriculture. The latest available figures of net irrigated area, published by the latter Ministry, are for 1958-59. According to these figures, the aggregate area (net) irrigated from all sources was 57.8 million acres in 1958-59, as compared with 57.2 million acres in 1957-58. Assuming liberally that the increase in irrigated area in each of the two subsequent years, 1959-60 and 1960-61, was not less than 1.1 million acres, the aggregate irrigated area in the last year of the second Plan could only have been about 60.0 million acres, as compared with the 70.0 million acres estimated by the Planning Commission and the Union Ministry of Irrigation and Power.

Intention and Achievement

As there could have been no big jump from 57.8 million acres in 1958-59 to 70.0 million acres in 1960-61, one wonders if the Union Ministry of Irrigation has mistaken "intention" for "achievement." That Ministry owes it to the public to explain why there is a big discrepancy between its irrigation statistics and those of the Ministry of Agriculture. Otherwise, it would be extremely difficult to accept the veracity of the following figures given in the Irrigation Ministry's Report:

"From major and medium irrigation projects, an additional area of about 9.15 million acres was brought under irrigation during the first and the second Plan periods.... India has so far put to use 27 per cent of the total dependable annual supplies of water available to her. . . . About 13 million acres are expected to receive irrigation during the third Plan period. The pace of development of irrigation, as compared to the creation of irrigation potentials, may be seen from the table below:

To end of	Potential (Million acres)	Utilisation (Million acres)	Percentage utilisation	Remarks
1955-56 (1st Plan period) ..	6.4	3.00	46.9	Actual
1960-61 (2nd Plan period) ..	12.56	8.79	70.0	Do.
1961-62 (1st year of the third Plan) ..	13.63	9.68	71.0	Do.
1962-63 (2nd year of the third Plan)	15.28	11.07	72.4	Target

The irrigated area statistics compiled by the Union Ministry of Agriculture are based on returns from the State Governments—returns which, in turn, are based on their annual revenue records. These records, maintained for the purpose of collecting land revenue from wet and dry lands, water rates, etc. may be presumed to reflect the real situation pertaining to irrigated acreage. If even these records are not deemed reliable for the purpose of working out the extent of irrigation development that has taken place, how can one take the unsubstantiated assertions of the Irrigation Ministry to be more reliable? Even granting that the figures of *additional* irrigation potential are hundred per cent correct, one is still led to ask whether *actual* utilisation has not lagged far behind the targets and the Ministry's 'estimates' alike. As the third Plan will involve a further outlay of about Rs. 600 crores on irrigation and the aggregate outlay on it in the 15-year period 1951-66 will have come to as much as Rs. 1,330 crores, the public has a right to ask for a more dependable and impartial estimate, here and now, of the actual increase in irrigated area from 1951-52 to 1961-62, if not 1962-63.

Electricity Projects

There is no doubt that irrigation development to-date has fallen short of the country's expectations. Has power development at least a better story to tell? Not at all, for here, too, it has been a disappointing record, though not as disappointing as in the case of irrigation. The first Plan, which started with 2.30 million kW. of aggregate installed capacity, for electricity, increased it to only 3.42 million kW., as compared with the target of 3.70 million kW. The second Plan, which started with 3.42 million kW. of aggregate capacity, raised it to 5.60 million kW., as compared with the target of 6.90 million kW. While 1961-62—that is, the first year of the third Plan—has fully achieved that year's target (0.58 million kW.) for *additional* capacity, the second year, that is, 1962-63, has *added* only 0.60 million kW., as compared with its *additional* capacity target of 0.65 million kW. On the whole, by the end of the second year of the third Plan, even the second Plan target for installed capacity of 6.90 million kW. has not been fully reached, the capacity attained, according to the present calculations, being no more than 6.78 million kW.

Even if the third Plan schemes are expedited in the coming years, the indications are that, at the most, only the *additional* capacity targets of 1.17 million kW., 2.00 million kW. and 3.45 million kW. for 1963-64, 1964-65 and 1965-66 might be fully achieved. This would mean that the aggregate installed capacity would be of the order of 12.40 million kW., as against the present target of 13.45 million kW. which itself needs to be increased by at least a million kW. if the projected demand is to be fully met. In order to plan for a larger target, the Ministry has asked for an additional allocation of Rs. 160 crores—additional to the Rs. 1,090 crores which has been allotted for power development under the plan. In any case, even the proposed upward revision of the third Plan outlay and target in respect of power is not expected to ease the power supply situation in the next two years, that is, 1963-64 and 1964-65. In fact, according to the Minister of State for Irrigation and Power, Mr. O. V. Alagesan, there is likely to be some relief only towards the end of the third Plan. The present shortage in power generation, in his further estimation, would be *largely* rectified only by the *second* year of the *fourth* Plan.

Magnitude of Shortage

So that's that. Currently and in the near future power shortage will, therefore, continue from year to year. The latest report of the Estimates Committee (1962-63) on the Ministry of Irrigation and Power (Power) has, in this connection, estimated the annual magnitude of power shortage from 1961 to 1966 on the basis of firm generating capacity, as distinct from installed capacity. The following table, taken from the Committee's report, indicates the position regarding the estimated demand, firm generating capacity and surplus/shortage for the entire country, except Union Territories (excluding Delhi):

Year	Estimated demand (mW.)	Firm generating capacity (mW.)	Surplus (+); shortage (—) (mW.)
1961	3,629.6	3,276.5	— 353.1
1962	4,530.3	3,792.9	— 737.4
1963	5,423.5	4,403.4	— 1,020.1
1964	6,577.3	5,206.9	— 1,370.9
1965	7,612.9	6,700.5	— 912.4
1966	9,417.6	8,962.3	— 455.3

According to regionwise figures, the estimated shortage for the Bihar-D.V.C.-West Bengal area is 414 mW., 464 mM., 266 mW. and 203 mW. in 1963, 1964, 1965 and 1966, respectively. The position in the other regions of the country will be as follows:

(Surplus (+) or shortage (—) in mW.)

State	1963	1964	1965	1966
Maharashtra	+ 16	—136	—215	— 68
Madras	— 86	—114	— 56	— 26

Rajasthan	— 8	— 22	+ 21	+ 18
Jammu and Kashmir..	+ 6	+ 1	+ 2	+ 17

The Estimates Committee has commented on the above figures and also urged planning for surplus power elsewhere in the report. The relevant passages are quoted below:

"It is a matter of concern that firm generating capacity in the country would continue to lag behind the anticipated demand throughout the third Five-year Plan. The position is likely to improve somewhat during the last year of the third Plan but the Committee note that the overall shortage would in fact increase from 353.1 mW. in 1961 to 455.3 mW. in 1966. Power supply at the end of the Plan is expected to be short in all the States, except Jammu and Kashmir, Kerala, Rajasthan and Delhi. The shortage (in 1966) is expected to be the heaviest (202.5 mW.) in Bihar-D.V.C.-West Bengal region. The additional requirements of power for the defence-based industries may further aggravate the shortage.

"Since the cost of installing 1 kW. of electric power is but a fraction of the capital investment required to utilise it, it is obvious that, if in any eventuality power generating capacity was underutilised, it would entail less overall loss to the national economy than would be the case if productive machinery was to be rendered idle on account of power deficit. Past experience in India and other countries clearly shows that in a developing economy the demand for power nearly always outruns the available supply. Planning for surplus power is, therefore, essential for achieving an optimum rate of growth in the country. The Committee strongly recommend that power being a primary source of energy should be one step ahead of industrial and other requirements."

The Committee has also criticised the existing procedure of power planning which is aimed at providing additional generating capacity just sufficient to meet the demands anticipated at the end of a particular Plan period. As it takes three to five years to install and commission a power project after sanction, the report continues, serious power shortage is bound to be experienced in the earlier years of a Plan period. This precisely has been the experience of the first two years of the third Plan. If the same experience is not to be repeated in the earlier years of the fourth Plan, projects intended to meet the additional requirements in 1966-67 and 1967-68 would have to be sanctioned well before the current Plan ends, so that work on them could be started in time. It is, therefore, good to know, in this connection, that the Union Ministry of Irrigation and Power is just initiating advance action on some of the fourth Plan projects, so that the first two years of that Plan period could each produce two million kilowatts of additional power.

STEEL: PRODUCTION AND IMPORTS

The Indian steel industry produced approximately 4.0 million tonnes of finished steel in 1962-63, as compared with 3.2 million tonnes in 1961-62. Imports during the two years were 0.8 million tonnes (valued at about Rs. 74 crores) and 1.0 million tonnes, respectively. These estimates are contained in the Report of the Ministry of Steel and Heavy Industries (Department of Iron and Steel) for 1962-63. Detailed unitwise figures of production have been given in the report only for the calendar year 1962, as compared with 1961. These are:

(Thousand metric tons)

	1962	1961
T.I.S. Co.	948.4	875.6
I.I.S. Co.	613.7	563.1
Mysore Iron and Steel Works	33.1	37.7
Rourkela Plant	428.9	145.0
Bhilai Plant	514.2	256.6
Durgapur Plant	188.2	49.6
Registered re-rollers and secondary producers	827.1	758.1
Unregistered re-rollers	126.4	120.3
Wire-drawing units	21.7	15.5
Total ..	3,707.7	2,816.5

The total availability of steel (domestic production *plus* imports) during the year under review was thus 4.8 million tonnes, as compared with 4.2 million tonnes in 1961-62. The aggregate demand for steel in 1962-63 exceeded availability by 0.3 million tonnes. This demand estimate, however, did not include the increased defence requirements on account of the emergency. The supply position of foundry grade pig iron, too, remained unsatisfactory, for production was only about 1.0 million tonnes, as against an estimated demand of about 1.8 million tonnes during the year.

Only such items of steel as could not be utilised in the country were allowed to be exported. The estimated exports in the calendar year 1962 were 23,000 tonnes of pig iron, 10,000 tonnes of finished steel, and 165,000 tonnes of iron and steel scrap (against the overall ceiling of 400,000 tonnes for export of ferrous scrap). The aggregate foreign exchange earnings from all these exports were just Rs. 3.5 crores.

FRESH WATER FROM THE SEA

The cost of converting salt water into fresh water, particularly in the Pacific south-west of the United States, may soon be no higher than the cost of transporting fresh water over long distances. This claim has recently been made on behalf of the U.S. Department of Interior which has sponsored pilot saline water conversion projects. The Department believes that the answer to economical salt water conversion for municipal and industrial uses could be a combined power and water plant. If large thermal power plants are combined with saline water conversion plants, fuel costs should be lowered far enough to make the salt water conversion economically feasible. The water costs could also be subsidised by the sale of the power produced. A power-conversion combination, producing 50,000 kilowatts of electricity and 10 million gallons of converted salt water, it is claimed, could supply water at a cost of 30 cents per thousand gallons. This figure, if attained, would be economically competitive with the cost of fresh water supplies in some areas of the United States.

NEW PRODUCTS AND PROCESSES

New Lens for Eye Diseases

NEW hope for sufferers from eye diseases such as trachoma, which affect people in tropical countries, is offered by an Australian company. The Corneal Lens Corporation, Sydney, Australia which specialises in making corneal and micro lenses. These tiny transparent lenses worn instead of conventional spectacles, adhere to the eye through surface tension and float on a minute layer of tears. They are the only type of visual aid for correcting sight in cases of trachoma, keratitis and keratoconus, all prevalent in Asian countries. Trachoma is a contagious disease affecting the eyelids and cornea; keratitis affects the cornea only; and keratoconus is a malformation of the cornea. The company already supplies lenses on prescription to clients they have never seen, in all parts of Australia and New Zealand. Testing procedures and optometrical equipment are used to measure the exact prescription without ever touching the surface of the eye.

Opticians and ophthalmologists now use these techniques to prescribe corneal and micro lenses for defects such as short sight; long sight; ostigmatism; and focussing difficulties. The Australian firm now envisages a service in which trained personnel in Asian and other tropical countries, familiar with the latest optometric techniques, can send prescriptions for their clients and receive the lenses from Australia by airmail in less than a week. The contour of the eye varies with individuals, rather like a fingerprint, but with special instruments used by the Corneal Lens Corporation, it is possible to get perfect vision from a lens no bigger than the end of a cigarette. The lenses are made from acrylic plastic, supplied in 4 ft. rods the thickness of a fountain pen. The rod is cut into tiny segments and the lenses individually contoured by an air-cooled diamond tool, first on the inside to fit the shape of the cornea, and then on the outside to fit the prescription.

A plus lens—thicker in the middle than at the edges—is cut for long sight, and a minus lens—thicker at the edges than in the middle—is cut for short sight. The lens is then polished and, if desired, can be tinted blue, grey, green or brown. Minute holes can also be drilled to allow greater circulation of tears under the lens.

Isotopes Sort Potatoes

A potato harvester has come to the fields, releasing many people from arduous duties. But this machine has one main drawback. A lot of earth-clots and stones get into the receiving hopper together with the potatoes. The combine cannot as yet separate them from the tubers. And this hampers the wide adoption of mechanical potato harvesting on hard and stony soils. Members of the staff of the Russian All-Union Institute for Mechanisation and Electrification of Agriculture have noticed that potatoes, earth lumps and stones pass gamma-rays in different fashions. This led them to use the rays for separating automatically potato tubers from foreign admixtures. The working model of a radiometric separator has the following operation principle. When a beam of gamma-rays is intercepted by some foreign body, a definite signal is produced. From the radiometric device it is fed into a quick acting electronic relay and then to the actuating mechanism. The latter diverts all impurities into one of the hoppers, whereas potatoes enter the other one. In passing the control zone potatoes absorb little radiation, if at all, and the gamma-relay is not triggered. Experiments have revealed that the new sorter can successfully be applied not only in potato harvesters but also in other machines, for example, beet harvesting combines.

Wax-Coating Paper

Wax coatings can be applied to reels of paper or card at high speed by one of the latest machines designed by Strachan and Henshaw of Whitehall, Bristol, England. Intended for applying single side coatings to materials used in the manufacture of carton containers for liquids at over 600 feet per minute, it will accommodate reels up to 52 inches in diameter. Coating is accomplished by passing the web of material between a pair of press rolls. The lower, or applicator roll is made of metal and is arranged so that the lower portion runs in the wax tank. It is designed to allow for steam heating. The upper roll is rubber covered and it is mounted immediately above the applicator roll and serves to keep the web in contact with the applicator roll. By means of an ingenious device unwaxed stripes can be provided at intervals across the web. These intervals are readily and quickly adjustable. After waxing the web passes over a heated spreader bar and then to cooling rolls. The cooled, coated side of the web is visible for inspection before it passes through a slitting unit and to rewind. The maximum diameter of the rewind coils is 25½ inches.

Aluminium Strip Coated with Paint

Aluminium strip, coated with a vinyl paint, which has good adhesion and is sufficiently tough to withstand severe forming operations, produced by a British firm, Alcan Industries Ltd., Oxfordshire, England, is claimed to eliminate certain finishing processes. It is made in six basic colours —red, blue, yellow, green, black, and white with other colours available to special order. The reverse side of the standard product has a thin gold-wash finish, although alternative finishes can be specified. The material is available in either sheet or coil form in widths up to 24 in. (60.96 cm.) and in a range of nominal thicknesses from 0.010 in. to 0.028 in. (.254 mm. to .711 mm.). A feature of the roller-coating process is an anodising pre-treatment in which the thin anodic film, being temporarily porous, provides a "key" for the paint, resulting in extremely good adhesion. The premium on cost for the new finish over the basic price of the aluminium sheet is comparatively low, since the finish is applied in a continuous process under ideal conditions and with virtually no wastage.

Friction-welding of Metals

Engineering design and production in many fields is likely to be altered radically as a result of the development of a new method of welding. The method is known as friction welding. An experimental machine has been developed by the British Welding Research Association, 19 Fitzory Square, London W.1, and will be shown for the first time at the International Engineering Exhibition to be held at London from 23rd April to 2nd May. One of two components which are to be welded together is rotated while being pressed against the other. As a result heat is generated by the friction of the abutting faces. Then the component which is being rotated is braked and additional pressure applied through the axle of the other component to consolidate the joint. Its advantages are many. It is compact and adaptable for new manufacturing processes, including automation; it reduces power costs considerably and, has little, if any, restriction on the kind of metals that can be welded together.

Mine Without Miners

Not a single man works underground at the Degtyarsk copper mines, not far from Sverdlovsk, the Urals, U.S.S.R. There is a regular underground town there, with squares, streets and lanes. Whole trains of trolleys are in constant motion, explosions rent the air and the noise of pneumatic drills is heard all the time. All the operations in the mines and automatic machines are controlled by the people from the surface, from a distance of 250 metres from the workings. Scores of automatic devices load ore into the trolleys, weigh them, push them into huge elevators, unload them and send back underground. All the operations performed underground can be watched on a television screen at the control desk. This enables the dispatcher "to have a look" at any point in the mine.

Nickel-zinc Battery

Dongiprouglemash Institute of the U.S.S.R. has developed a lightweight, heavy duty nickel-zinc battery for use in miners' lights and other underground applications. The battery is claimed to be better than the standard cadmium-nickel types now in use and to be cheaper, lighter and to require less electrolyte than the standards cell. It is also said to operate at very low temperatures. The weight of the battery is given as 1.5 kilos against 3.5 for existing Soviet models and about 2.5 kilos for representative British and German types. Capacity is reported to be 10-19 ampere-hours at 2.18 volts—a working voltage about 40 per cent higher than that of the conventional cell.

Rubber Rollers

Rubber rollers developed by a British firm, B.T.R. Industries Ltd., Lancashire, U.K. are helping to make printing, paper laminating and wax coating machinery work longer with less maintenance. The rollers consist of a metal spindle covered with a "long-life" rubber compound. Because the rollers must withstand constant pressure, paper-abrasion, friction-heat and the effects of chemicals in printing inks and waxes, a small quantity of rubber reinforcing resin is added to the mix. This improves resistance to heat and chemicals, minimises age hardening and enhances the rubber-to-metal bond.

TEMPORARY COMMISSIONS IN THE MILITARY NURSING SERVICE

If you are a State Registered Nurse, aged between 21 and 35 years, of medical category 'A' and without encumbrances, apply today for a Commission.

CONSUMERS' CO-OPERATION IN INDIA AND ABROAD

ROLE IN RESTRAINING PRICES APPRAISED

By Prof. R. V. Shastri

THE problem of holding the price-line has been engaging the attention of planners in the country since the end of the second Plan. Various measures for arresting the rise in prices have been suggested in the third Plan. Still, prices have shown a tendency to rise during the second year of the third Plan. More recently, with the declaration of the national emergency in the wake of the Chinese aggression, the problem has acquired special significance.

It is generally agreed that, in a developing economy, some price rise is bound to occur. For instance, substantial economic progress occurred in England, France and, to a lesser extent, in Spain, in the sixteenth and seventeenth centuries when prices were rising continuously. Japan's high rate of economic growth after 1860 was accompanied by continuous inflation. Spectacular economic growth in Soviet Russia in the 1930's was accompanied by heavy inflation. The last two decades have been periods of inflation almost all over the world accompanied by rapid rise in production.

This is not to suggest that prices should be permitted to rise. Far from it, for our aim should be to keep the evils of inflation under check. The consensus of opinion is opposed to reduction in Plan expenditure, though, of course, marginal adjustments in it have been regarded as inevitable. If the third Plan outlay continues to be as it is, there is the probability of total Government expenditure rising to a very high pitch due to defence efforts. War expenditure being essentially unproductive may give fresh impetus to inflationary forces. It is, therefore, vital that the prices of essential goods are kept in check.

The problem of evolving a sound price policy is regarded as one of highest importance by the Planning Commission. The Minister for Planning has suggested, among other steps, the establishment of a network of consumers' co-operatives throughout the country. To what extent consumers' co-operative movement is likely to give relief to the common man is a relevant question. With a view to throw some light on this problem, a brief review of the consumers' co-operation abroad has been attempted here. Conditions in the world are not uniform; consequently, policies adopted naturally differ. We, in India, can learn a good deal from the experience of these nations.

British Consumer Movement

If we analyse the origin, history and working of the consumers' movement, we find that co-operation has remarkable achievements to its credit in many countries. British consumer movement is the oldest and has influenced many countries. Modern British consumer movement is dated from the foundation of the Rochdale Equitable Pioneers at the end of 1844. It continued to grow during the latter part of the nineteenth century. By the third quarter of the twentieth century, there were in the U.K. more than 900 retail industrial co-operatives with a membership of 12 million persons. The movement employed 400,000 workers. Goods of all kinds worth £1,000 million were sold through their 30,000 shops spread all over the country. This is a remarkable achievement. In spite of this, the influence of the movement is not highly even everywhere in the country. The movement is particularly stronger in the industrial areas than in the rural areas. The movement has acquired such great strength that even the Great Depression and the Second World War could not cause any significant injury to it. The area covered by retail co-operative societies in England, Wales and Southern Scotland is today almost continuous barring a few exceptions here and there in Wales. If we analyse the working of the co-operative societies, more particularly in recent times, we find that, of the total trade of the retail societies, about 75 per cent was in foodstuffs, about 17 per cent in clothing and footwear and the remainder in furnishings, coal and various services. The co-operative movement in Britain has made least progress in books and stationery, obviously because the working class does not feel strong necessity for it. All co-operative stores deal in groceries and bread and most have drapery department. The average trade per member in 1881 was £28 which rose to £80 by the late fifties. Much of the rise is accounted for by the rise in prices.

The most noteworthy feature of the British consumer movement is that it has essentially local roots. It has grown spontaneously and is not imposed from above. Various societies are independent of one another, though, of course, they have a common membership in the Union and Wholesale Co-operative Society. The Union and the Wholesale Society are the creation of the retail societies and exist to serve them. Thus the movement has grown from bottom to the top and not *vice versa*.

An interesting development in the field of consumers' co-operation in England after the Second World War is the introduction of self-service stores. It has now gone on to popularise the change from self-service to supermarket. This leads to considerable reduction in the administrative cost of the working of consumers' co-operatives. Another notable development in the British Consumer Movement is the flourishing travel service. Many local societies run coach tours.

The co-operative stores are open to both members and non-members. The non-member is asked to take up a membership share of £1. But he is called upon to pay up only one shilling in the beginning. The remainder is accumulated automatically out of the dividend on the purchase due to the member.

The co-operative movement was started in England with a view to overcome the evils of credit. It follows usually a policy of cash sales. However, a rigid adherence to this principle has been found not very congenial for the progress of the movement. In fact, circumstances have forced it to resort to credit sales in certain cases. One method is the weekly account, specially for milk, bread and other commodities delivered at the door. Another facility provided is of hire purchase of certain expensive articles like furniture, radio, etc. The third facility that has been developed is called mutuality club. In the mutuality club there is a formal undertaking to make contributions over a fixed period and permission to purchase after the first few payments have been made. These clubs are costly to run, but they have greatly helped in increasing the sales.

One more point that needs to be noted is the absence of profit motive in the co-operative movement. Though profits are not paid according to shares, arrangement is made to distribute dividend on purchase. According to this scheme, trading surplus is distributed to each member in proportion to actual spending. This will give the members encouragement to purchase largely through the co-operative store. However, this practice has also led to the evil of higher prices to enable the co-operatives to distribute high dividends.

In Europe

Consumers' co-operation outside Great Britain was a later development and was much influenced by the British pattern. For instance, the basic structure of the French consumers' co-operation closely resembles that of the British. The ravages of the Second World War gave it a severe blow. However, once again it has regained its strength and stands at the top of the continental co-operative movements. It has today a membership of 3,000,000.

In Germany, there are in all over 300 societies with over 2,250,000 members and turnover approaching £200 million. All the Scandinavian countries—Sweden, Norway, Denmark and Finland—have a brilliant record of consumers' movement. Of these, the best known is Sweden, for the movement has taken deep roots there and has a very wide coverage. Swedish movement has considerable influence abroad, especially in the U.S.A. Cooperativa Forbundet (K.F.) represents the combination of administrative and trading centres in a single organisation. It has entered into certain fields which are regarded as difficult, for it has even successfully combated monopolies. It sells a variety of goods of high quality. The style and charm of its shops are particularly noteworthy. In a total population of seven million it has over a million members. It sells goods worth £200 million annually. In Southern Europe, Switzerland has also an encouraging record of consumers' movement. American consumers' co-operation is essentially a peasant movement. It has not much in common with the urban consumers' movement in Britain and Europe.

In Asia

Consumers' co-operation developed in Ceylon during the Second World War to meet the requirements of food rationing. Stores were established in all parts of the country. To meet the needs of the emergency, a hastily conceived machinery for wholesale and import trade was established. During the war the movement showed remarkable progress. However, after the end of the war, the mushroom growth of the retail and wholesale stores could not be sustained. In cities, they succumbed to the competition of private traders. The wholesaling machinery could be sustained only with Government support. Surprisingly enough, the co-operative stores have been able to survive and progress in the villages and small towns.

Israel stands in a class by itself. Not much is known about the consumers' movement in Israel outside that country. However, it should be borne in mind that the achievements of the movement in Israel stand favourable comparison with those of the Scandinavian countries or the U.K. The development of the movement has been entirely on unconventional lines. It needs, therefore, special mention. The most remarkable feature of the movement is that it has evolved from top to bottom and not the other way round as in Britain. In spite of this, the movement has many achievements to its credit.

Consumers' co-operation started with the establishment of a national wholesale consumer society (which came to be known later as) Hamashbir Hamarkazi. This national society was not federal society, for, at that time, no local consumer societies existed. Settlements as well as individuals could become its members from anywhere in the country. It is, therefore, correct to say that the consumers' movement started from the top and grew to the bottom. To use the simile of Gita, its roots are up in the sky, its branches below.

Within the last 30 years a strong consumers' movement has grown up from the root Hamashbir Hamarkazi. It supplies to its members 75 per cent of the country's requirements of agricultural equipment, machinery, chemicals, seeds and fertilisers. It deals in groceries, foodstuffs, grain and cereals, household and kitchen appliances, textiles, footwear, building materials, sanitary installations, etc.

The novel feature about Hamashbir Hamarkazi is that it enters into partnership with affiliated societies for establishing departmental or retail stores. In Tel Aviv 15 departmental stores have been established on these lines. Still more significant is the special arrangement made for the establishment of retail consumers' co-operatives in the new settlements. New Jewish immigrants have neither the necessary mental equipment nor the financial resources to establish new co-operatives. A special subsidiary named Hamashbir Laoleh (Hamashbir for the new-comer) was established. This subsidiary took 50 per cent of the shares in the consumers' co-operatives registered in the new settlements. The remaining 50 per cent was contributed by the Jewish Agency by way of shares on behalf of each family residing in the settlement. Half the members of the managing board of the local society also represented the Hamashbir Laoleh. It is, as it were, the co-operative movement was imposed from above. In spite of this basic departure in the principles of co-operation, it is remarkable that genuine consumer societies standing on their own legs have come into existence. This is brought about by the gradual withdrawal of patronage by Hamashbir Laoleh. In this respect Indian consumers' movement can learn a good deal from Israel.

Another feature of the Hamashbir Hamarkazi needs careful attention. It sells goods at prices lower than the market price. This it can do even by competing with private traders, functioning under a free market. Direct participation by it in the establishment of consumer stores is also undertaken with a view to bringing about a reasonable reduction in market prices.

India's Experience

In India, consumers' co-operative stores appeared with great rapidity during the period of the Second World War and they continued to hold on so long as rigid controls on foodgrains and other essential articles continued. However, on the withdrawal of rationing and controls on these articles, there has been a continuous decline in their number. The decline in the number of consumers' stores was due to liquidation every year of several stores which had either become dormant or were incurring losses owing to competition from private traders. If consumers' co-operation has not succeeded in the past, would it be reasonable to assume that it will succeed in the present context?

However, it should be borne in mind that even credit co-operation has not succeeded. But we do not take a pessimistic view of the movement for that reason. The All-India Rural Credit Survey Committee suggested a thorough change in the policy. Among other things it advocated State participation in the movement. The keynote of the recommendations was the positive and deliberate creation of conditions for the growth and progress of the movement. A similar change in the attitude towards the consumers' movement is needed if it is to succeed. If we were merely to repeat the experiment of the movement during the Second World War, chances of success would be bleak.

It is, therefore, desirable to analyse as to what extent the present scheme of consumers' co-operation is an improvement over the past experiment. The new scheme aims at building up a large network of consumers' stores for the supply of essential articles. It is proposed to set up about 200 wholesale and central stores with about 4,000 branches and primary stores. These will cover all metropolitan cities, State capitals, industrial centres, cities with a population of one lakh or more and a number of other towns. So far the scheme does not appear to be materially different from the earlier scheme. However, it has the following novel features. The aim of consumers' movement that is sought to be initiated now is basically different. The scheme is not aimed at meeting the short-term needs of the emergency. It is conceived as an inseparable part of the planning process in the country for the future. Its aim is not to distribute a few rationed and controlled articles but to meet the daily needs of the consumers for a long time to come. It is clear that the aim is not limited. Apart from this, another point that needs examination is this: Will the consumers' co-operatives be able to act as a check on rising prices? In other words, to what extent the consumers' co-operatives can follow an active price policy with success? It implies that price fixation by co-operatives will not be influenced by the market price, but the co-operatives will influence the market price. In what manner can the co-operatives succeed in this ambitious task? Experience suggests that consumers' co-operatives in Germany, Sweden and Israel have successfully followed an active price policy. We have seen earlier how in Israel, Hamashbir Hamarkazi has followed an active price policy. We can fruitfully follow the example of Israel, for, in our country, there are not very bright chances for consumers' movement to grow on its own initiative. The German consumers' movement which had to be organised afresh after the breakdown of the Nazi regime has helped the consumers in fighting the high cost of living. It has also followed an active price policy which was responsible for this result. This policy is quite distinct from the policy of the British co-operatives which sometimes fix high prices and give high dividends. Moderate dividends are, of course, essential to encourage the members to buy through the co-operatives only. However, the prime objective of the co-operatives in India is to ensure a regular flow of goods of quality at reasonable or cheap prices. The Government has assured that it will see to it that the co-operatives succeed in this task. The Government hopes to realise this objective by supplying them goods at reasonably low prices from the industries. It follows that the co-operatives will not merely sell a few controlled or rationed articles but will cater to the variety of needs of the consumers. If the consumer has to depend more on the private traders than on the co-operatives for his daily needs, he is likely to be led away from the movement.

State Participation

The new scheme also aims at active encouragement of the movement by accepting the principle of State participation in share capital and by giving liberal loans and grants. The scheme provides for a wholesale store contribution to the share capital on a matching basis to the extent of Rs. 1 lakh. It further provides for clean credit accommodation through central co-operative banks to the tune of Rs. 2 lakhs and loans and grants for godowns, etc. to the extent of Rs. 1 lakh. In order to meet the expenses of management which are very often a stumbling block to the progress of the movement, arrangement has been made to give a subsidy for managerial expenses upto Rs. 10,000 spread over a period of three to five years. A similar policy has also been laid down in connection with the primary stores. It provides for share capital contribution by the Government to the share capital of the primary stores to the extent of Rs. 2,500 on a matching basis. Subsidy will be granted for managerial expenses to the tune of Rs. 2,000 spread over a period of three to five years. This liberal scheme of financial assistance is aimed at giving a fillip to the movement at least in the initial stages. If the results are encouraging, the scheme may be suitably modified in future. Without liberal financial grants from the Government it is difficult to imagine how the co-operatives can compete successfully with the established private traders. Expenses of management have been usually high almost everywhere in the world where consumers' movement has made progress. The recent development of self-service stores has helped in reducing the cost of management. Till such time, when self-service stores develop in India, managerial grants will have to be given.

Another feature of the movement is that the proposed 200 wholesale stores will have 4,000 primary stores or branches under them. That is, each wholesale store will have under it either 20 primary stores or branches as the case may be. Each primary society should have 500 members, though, for making a beginning 100 members may suffice. The consumers' movement in Israel also began from the top and gradually spread towards the bottom. In India conditions for the spontaneous growth of primary consumers' stores are lacking at present. It is, therefore, necessary to start the movement from the top. However, the aim should be to turn these branches into genuine co-operative stores as early as possible. It is also well to remember that unless the consumers' stores come into existence simultaneously all over the country, and unless they are evenly spread over the country, it is difficult to expect satisfactory results from the movement. This is not to suggest that all principles of viability must be thrown to the winds. But it is also certain that a rigid adherence to the principles of business management may not be very helpful in the present circumstances. There are bound to be some bitter experiences. But one cannot think of a better time for a beginning in this direction than the present. It is good that efforts are to be concentrated in the beginning in big cities, towns and industrial centres. If results are promising, the coverage may fruitfully be extended.

Ask your Banker

Should you require banking service anywhere in Canada, The West Indies, Central or South America, ask your banker about the facilities we provide in these important trading areas. The Royal Bank of Canada is always glad to co-operate fully with your local bank to serve you.

NEW PUBLICATIONS

Digest of B.I.R. Cases. By N. N. Akruwala and B. R. Shah. Published by Industrial Law Publishers, Ahmedabad-1. Pages : 284. Price : Rs. 15.

THIS book fulfils the long-felt need for a good digest of the case law under the Bombay Industrial Relations Act, 1946. Of course, the authors have taken care to include the case law on the general industrial subjects too.

The Bombay Industrial Relations Act is a peculiar enactment in force in the States of Maharashtra, Gujarat, Madhya Pradesh and Rajasthan. The then State of Bombay introduced this legislation. The various provisions are different from those of the Industrial Disputes Act. Mention may be made of the provisions relating to the registration of unions. The "representative union," as it is called, is the only union which can represent the industry and it can by-pass the union of the unit. Individual complaints by workmen can be brought before the courts for decision. Industrial disputes under the Industrial Disputes Act, on the other hand, can only be raised by unions and individual workmen, who have grievances of dismissal or wrongful termination, have to be under the whims and fancies of the union and its members. Practically the individual workman has no place under the Industrial Disputes Act whereas, under the B.I.R. Act, he can file an application before the Labour Court and seek remedy. Of course, the "representative union" can interfere and withdraw the application but this is rarely done by such unions.

No employer can change any existing system without consulting the union or the workmen concerned. This is a check on employers who do not care to see the changes in the present century. At the same time, it can be misused by the union by preventing genuine changes necessary in the units.

In view of the application of this enactment to many industries in the State it becomes necessary to have a good digest. The book is bound to be useful to all the companies which are under this Act, to lawyers, labour officers and courts themselves, besides the unions and the representatives of employees. The *Digest* has a table of cases, and a subject index which one does not find in many digests. The book has been arranged in alphabetical order to facilitate quick reference. References to sections applicable have been provided with the subject dealt with. References and cross-references have been provided. This helps a busy lawyer who finds it difficult to get the particular law report to get cross-references. The *Digest* is a must for all those concerned with this branch of labour law.

The Trachtenberg Speed System of Basic Mathematics. Translated and Adapted by Ann Cutler and Rudolph McShane. Publishers : Asia Publishing House, Ballard Estate, Bombay-1. Pages : 270. Price not mentioned.

Mathematics, it has been said, is the father of all sciences. Of late, several universities have begun to prescribe mathematics as a part of the course taught for degree courses even in Arts subjects like economics and social sciences. This is a move in the right direction, if only mathematics can be rendered a little easier. It is, in this context, that the book under review should be welcome to students. It gives a new slant to teaching mathematics to the beginner.

The Trachtenberg system is based on procedures radically different from the conventional methods with which we are familiar. There are no multiplication tables, no division. To learn the system you need only be able to count. The method is based on a series of keys which must be memorised. Once you have learned them, arithmetic becomes delightfully easy because you will be able to "read" your numbers. It is claimed that the important benefits of the system are greater ease, greater speed, and greater accuracy. Educators have found that the Trachtenberg system shortens time for mathematical computations by 20 per cent.

All operations involving calculations are susceptible to error whether by human or mechanical operation. Yet it has been found that the Trachtenberg system, which has a unique theory of checking by nines and elevens, gives an assurance of 99 per cent accuracy—a phenomenal record. The great practical value of this new system is that, unlike special situations, it is a complete system. Much easier than conventional arithmetic, the Trachtenberg system makes it possible for people with no aptitude for mathematics to achieve the spectacular results that we expect of a mathematical genius. Known as the "shorthand of mathematics," it is applicable to the most intricate problems.

Perhaps the greatest boon of this new and revolutionary system is that it awakens new interest in mathematics, gives confidence to the student, and offers a challenge that "spurs" him on to mastering the subject that is today most hated in our schools and colleges.

Labour Demands and How to Meet Them. By D. N. Vora. Published by Labour Law Publishers, Model Basti, New Delhi-5. Pages : 253. Price : Rs. 20.

This is a valuable addition to the number of books on the industrial laws of the country. This book deals with bonus, dearness allowance, industrial wages, gratuity, leave and holidays and other non-wage benefits. The appendices contain recommendations of the three Plans, a note on the need-based wage and a summary of the provident fund enactments.

The author has written the book on the basis of relevant judgments on the various topics. He has neatly and intelligently arranged them under various sub-headings. On the subjects dealt with by the author, this book is handy and good and to the point. It will be a good reference book for those practising and dealing in labour matters.

Notices

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held at the Tata Auditorium, Bombay House, 24, Bruce Street, Fort, Bombay 1, on Friday the twenty-sixth day of April 1963, at 4 p.m. (S.T.), for the purpose of considering and, if thought fit passing, with or without modifications, the following resolution as a Special Resolution, namely:—

RESOLVED that the shares of the Company be sub-divided as follows:—

(a) that each of the existing Rs. 2,500 fully paid shares be divided into 100 shares of Rs. 25 each, fully paid up;

(b) that each of the existing Rs. 125 fully paid shares be divided into five shares of Rs. 25 each, fully paid up;

(c) that each of the existing Rs. 125 partly paid shares on each of which the sum of Rs. 50 has been paid up be divided into five shares of Rs. 25 upon each of which the sum of Rs. 10 has been paid up.

The transfer books of the Company will be closed from the sixth day of May 1963 to the eleventh day of May 1963, both days inclusive.

By Order of the Board,
WALLACE AND COMPANY,
Secretaries and Treasurers.

Registered Office:
9, WALLACE STREET,
FORT, BOMBAY.
Dated 25th March, 1963.

Notes: (1) Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

(2) The Explanatory Statement as required by Section 173 of the Companies Act, 1956, has been forwarded to members of the Company.

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held at the Tata Auditorium, Bombay House, 24, Bruce Street, Fort, Bombay 1, on Friday the twenty-sixth day of April 1963, at 4.15 p.m. (S.T.), or as soon thereafter as the preceding Extraordinary General Meeting to be held on the same day at 4 p.m. shall have been concluded, for the purpose of considering and if thought fit, passing, with or without modifications, the following resolution as a Special Resolution, namely:—

RESOLVED upon the recommendation of the Directors.

(1) that it is desirable to capitalise a sum of Rs. 1,33,75,000 being as to (a) Rs. 92,28,873, the whole amount at credit of the Capital Rehabilitation Reserve, (b) Rs. 41,46,127, part of the amount at credit of the Fixed Property Reserve;

(2) that the sum of Rs. 1,33,75,000 accordingly be capitalised and distributed among the members in pursuance of Article 106A of the Articles of Association of the Company and that the said capital sum be applied on behalf of the persons whose names stand on the Register of Members of the Company on such date as may be fixed by the Directors, as follows:—

(a) as to an aggregate amount of Rs. 91,75,000 in paying up 3,67,000 unissued shares of Rs. 25 each to be issued as fully paid bonus shares to those members holding fully paid up shares of Rs. 25 each in the Company on such date as may be fixed by the Directors in the proportion of one bonus share of Rs. 25 each fully paid share of Rs. 25 held by them respectively and that the said 3,67,000 bonus shares credited as fully paid up be allotted accordingly, subject to the Memorandum and Articles of Association;

(b) in applying the balance, namely Rs. 42,00,000 out of the said sum of Rs. 1,33,75,000 in crediting the 4,20,000 partly paid shares of a nominal value of Rs. 25 each upon which Rs. 10 has been paid up with the sum of Rs. 10 per share being part of the sum of Rupees 15 per share at present unpaid thereon and upon the sum of Rs. 42,00,000 being so credited the said 4,20,000 shares in the Company will become partly paid up to the extent of Rs. 20 per share;

(3) that the amount and the shares so distributed shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such shareholder and not as income;

(4) that the 3,67,000 shares issued consequent upon such capitalisation do rank *pari passu* with the existing fully paid shares of the Company and for all dividends declared after the 26th day of April 1963;

(5) that the 4,20,000 partly paid shares of the nominal value of Rs. 25 each (and on which Rs. 20 will have been paid up or credited as paid up) do rank for all dividends declared after the 26th day of April 1963 in proportion to the amount of capital paid up or credited as paid up thereon;

(6) that the crediting of Rs. 10 per partly paid share of the nominal value of Rs. 25, and the allotment and issue of fully paid Bonus shares, to the extent that they relate to non-resident Members of the Company, be subject to the approval of the Reserve Bank of India under the Foreign Exchange Regulation Act, 1947;

(7) that the Company shall complete and have ready for delivery the Share Certificates in respect of the existing and bonus shares within nine months from the last allotment thereof, and

(8) that for the purpose of giving effect to this Resolution the Directors are authorised to take all necessary steps and give such directions as may be necessary and to settle any question or difficulty that may arise in regard to the issue of the bonus shares as they think fit.

The transfer books of the Company will be closed from the sixth day of May 1963 to the eleventh day of May 1963, both days inclusive.

By Order of the Board,
WALLACE AND COMPANY,
Secretaries and Treasurers.

Registered Office:
9, WALLACE STREET,
FORT, BOMBAY.
Dated 25th March 1963.

Notes: (1) Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

(2) The Explanatory Statement as required by Section 173 of the Companies Act, 1956, has been forwarded to members of the Company.

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held at the Tata Auditorium, Bombay House, 24, Bruce Street, Fort, Bombay 1, on Friday the twenty-sixth day of April 1963, at 4.30 p.m. (S.T.), or as soon thereafter as the preceding Extraordinary General Meetings to be held on the same day at 4 p.m. and 4.15 p.m., respectively, shall have been concluded, for the purpose of considering and, if thought fit passing, with or without modification, the subjoined resolutions as Special Resolutions.

1. That the following alteration shall be made in the Memorandum of Association, namely:—

The following Clause shall be substituted for Clause 5 of the Memorandum of Association:

The Capital of the Company is Rupees Three crores (Rs. 3,00,00,000) divided into Twelve lacs (12,00,000) shares of Rupees twenty-five each.

2. RESOLVED that the regulations contained in the document submitted to the Meeting and, for the purpose of identification, subscribed by the Chairman thereof, be approved and adopted as the Articles of Association of the Company in substitution for, and to the exclusion of all the existing Articles thereof.

By Order of the Board,
WALLACE AND COMPANY,
Secretaries and Treasurers.

THE EMPIRE DYEING AND MANUFACTURING COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixty-third Annual General Meeting of the Shareholders of the Empire Dyeing and Manufacturing Company, Limited, will be held at the Company's Registered Office, "Brady House," 12/14 Veer Nariman Road, Fort, Bombay, on Tuesday the 30th day of April 1963, at 11-30 a.m., to transact the following business:

1. To adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1962.
2. To sanction the payment of Dividend.
3. To appoint a Director in place of Mr. Kantilal Nahalchand, who retires by rotation in accordance with the Articles of Association of the Company and, being eligible, offers himself for re-election and to consider and if thought fit to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act 1956, has been received by the Company:

"RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Mr. Kantilal Nahalchand, an Associate of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company (who by the Articles of Association of the Company and the Managing Agency Agreement are entitled to appoint two Directors), be and he is hereby re-appointed a Director of the Company liable to retire by rotation."

4. To appoint a Director in place of Mr. Nanabhoy B. Jeejeebhoy, who retires by rotation and, being eligible, offers himself for re-election and to consider and if thought fit to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act 1956, has been received by the Company:

"RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Mr. Nanabhoy B. Jeejeebhoy, an Associate of Messrs. W. H. Brady & Co. Ltd., the Managing Agents of the Company (who by the Articles of Association of the Company and the Managing Agency Agreement are entitled to appoint two Directors), be and he is hereby re-appointed a Director of the Company liable to retire by rotation."

5. To appoint a Director in place of Mr. Homi A. Shroff, who was appointed an Additional Director of the Company by the Board of Directors and who ceases to hold office under Section 260 of the Companies Act, 1956, but who is eligible for re-appointment and in respect of whom the Company has received a Notice in writing from some members proposing his candidature for the office of Director.
6. To consider and if thought fit to pass the following Resolution as a Special Resolution:

"RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960, the Company hereby accords its approval to a contract being entered into between the Company and Special Steels Limited, who are Associates of W. H. Brady & Company Limited, the Managing Agents of the Company, for the sale and supply by the Company to Special Steels Limited and for the purchase by the Company from Special Steels Limited of all movable properties, goods and materials, owned, stocked, dealt-in or manufactured by the Company and Special Steels Limited respectively and required by the Company from Special Steels Limited or required by Special Steels Limited from the Company for the purpose of their respective business in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman to be operative from the date of its execution and to remain in force until it is determined by either of the parties thereto by one month's previous notice in writing to the other of them, subject to the condition that all payments to be made to the Company by Special Steels Limited for any such properties, goods and materials, sold and supplied by the Company to Special Steels Limited shall be made within one month from the date of the sale and supply and that the prices or amounts to be charged to the Company by Special Steels Limited in respect of the movable properties, goods and materials, sold and supplied by Special Steels Limited to the Company shall be such as are not less favourable to the Company than the market rates or which are otherwise reasonable."

7. To consider and if thought fit to pass the following Resolution as an Ordinary Resolution:

"RESOLVED that pursuant to the provisions of Section 359 of the Companies Act, 1956, the Company hereby authorises W. H. Brady & Company Limited, the Managing Agents of the Company, to retain all commission or other remuneration earned or to be earned by them as Agents of The New India Assurance Company Limited at any time during the period they continue to act as Managing Agents of the Company in respect of services rendered by them in regard to all contracts of Insurance (Policies) which have been or which may at any time hereafter during the period aforesaid be entered into by the Company with the said Insurance Company provided always that the amounts charged to this Company in respect of such insurance are at rates which are not less favourable than the market rates or which are otherwise reasonable."

8. To appoint Auditors for the current year and fix their remuneration.

By Order of the Board of Directors,
W. H. BRADY & COMPANY LIMITED,
V. MATHALONE,
Secretary,
Managing Agents.

(2) Draft Contract referred to in item 6 has been kept open for inspection by the Shareholders at the Registered Office of the Company between the hours of 2-30 p.m. and 4-30 p.m. on any working day and on Saturdays between the hours of 11 a.m. and 1 p.m.

(3) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY OR PROXIES TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

(4) The Register of Members and the Transfer Books of the Company will be closed from Friday, the 12th April, 1963, to Friday, the 3rd May, 1963, both days inclusive.

(5) If Dividend on shares as recommended by the Directors is passed at the Meeting, payment of such Dividend will be made through the Bank of India Limited, Bombay, on and after 20th May, 1963, to those Members whose names are on the Company's Register on the 3rd day of May, 1963.

HENLEY CABLES INDIA LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE THIRD ANNUAL GENERAL MEETING of the Company will be held at the Auditorium, Bombay House, 24 Bruce Street, Fort, Bombay, on Monday the 29th April, 1963, at 4 p.m., to transact the following business:—

1. To receive and consider the Balance Sheet and Profit and Loss Account of the Company and the Report of the Board of Directors and Auditors for the year ended 31st October, 1962.
2. To appoint a Director in place of Mr. K. C. Bakhle, who retires by rotation and, being eligible, offers himself for re-appointment.
3. To appoint a Director in place of Mr. B. M. Ghia, who retires by rotation and, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

AS SPECIAL BUSINESS

5. To appoint a Director in place of Mr. B. A. Hensler, who was appointed a Director pursuant to Article 113 of the Articles of Association of the Company to fill the casual vacancy on the Board caused by the resignation of Mr. F. V. Vaissiere, and who ceases to hold office under Section 262 of the Companies Act, 1956, but is eligible for appointment and in respect of whom the Company has received notices from members proposing his candidature for the office of Director.
6. To appoint a Director in place of Mr. A. E. C. Gibson, who was appointed an additional Director pursuant to Article 113 of the Articles of Association of the Company, and who ceases to hold office under Section 260 of the Companies Act, 1956, but is eligible for appointment and in respect of whom the Company has received notices from members proposing his candidature for the office of Director.
7. To consider, and if thought fit, to pass with or without modification as may be permissible, the following resolution:—

"RESOLVED that the Company approves of the appointment of Voltas Limited as Sole Selling Agents for the Company's products marked "Henley" and/or "Argosy" and/or any products other than those marked with "AEI" mark within the territories of the Republic of India and the Kingdom of Nepal on the terms and conditions contained in an agreement dated the 15th March, 1963 made between the Company of the one part and Voltas Limited of the other part, a true copy whereof is placed before this meeting and initialled by the Chairman by way of identification with authority to the Directors to amend or alter any terms and conditions from time to time as may be deemed fit by them."

The Register of Members and the Share Transfer Books of the Company will remain closed from Monday, the 15th April to Monday, the 29th April 1963, both days inclusive.

Notes:—(a) The relative Explanatory statement pursuant to Section 173(2) of the Companies Act, 1956, in respect of special business under items 5, 6 and 7 set out above is annexed to the Notice forwarded to the members of the Company.

(b) The Agreement entered into between the Company and Voltas Limited referred to in item 7 is kept open for inspection at the Registered Office of the Company on all working days between 10 a.m. and 1 p.m.

(c) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

THE PROXY FORM SHOULD BE DEPOSITED AT THE REGISTERED OFFICE OF THE COMPANY NOT LATER THAN FORTY-EIGHT HOURS BEFORE THE TIME FIXED FOR THE MEETING.

(d) MEMBERS ARE REQUESTED TO KINDLY NOTIFY ANY CHANGE OF ADDRESS.

By Order of the Board,
F. R. GINWALLA,
Secretary.

Registered Office:
HENLEY HOUSE,
BALLARD ESTATE,
BOMBAY-1.
Dated, 15th March, 1963.

Road and rail services are not competitive; both perform equally essential functions. Together they form an integrated and complementary transport system which is essential for the development of the country's economy. ■ The Indian Road and Transport Development Association is doing valuable work in focussing attention on the urgent need for modern roads and road transport facilities, for making accessible the remote areas of the country. ■ It has been estimated, on good authority, that the cost of building a road is one-third that of laying a railway track, with moreover, a saving of valuable foreign exchange and conserving of scarce raw materials such as steel. ■ With better roads and modern vehicles, Road Transport operators can deliver the goods.

SETBACK IN INDUSTRIAL RELATIONS?

IMPARTIAL EVALUATION OF LABOUR POLICY URGENTLY NEEDED

A COMPREHENSIVE review of the developments in the field of labour in both the Central and State spheres is presented in the latest Annual Report of the Union Ministry of Labour for 1962-63. Appropriately enough, the report, while recording the progress made in the implementation of labour legislation and policies, also evaluates the effect on industrial relations and production of the Industrial Truce Resolution unanimously adopted by representatives of workers and employers in November last in the wake of the Chinese aggression. The Resolution, it may be recalled, called for special efforts on the part of workers and employers to meet the needs of the national emergency. These related, among other things, to the avoidance of work stoppages and collaboration in increasing production. The report notes that, since the adoption of this Resolution, there has been a sharp decline in the monthly average of man-days lost owing to industrial disputes. Thus, while the average figure for the months January 1962 to October 1962 was 470,000, the provisional figures for November and December 1962 are markedly lower at 70,000 and 19,000 respectively. Besides, there have been numerous instances where workers have forgone their rest days or worked extra hours often without extra wages. In many cases, disputes have been withdrawn. Workers have also contributed liberally to the National Defence Fund.

The sharp decline in the number of man-days lost in November and December considerably improved the total picture of industrial relations during the year under review. Thus, the number of man-days lost during 1962 declined to 4.8 million, from 4.9 million in 1961, 6.5 million in 1960, 5.6 million in 1959 and 7.8 million in 1958.

Although the labour situation during the two months immediately following the adoption of the Industrial Truce Resolution has thus been highly encouraging, signs of tension have developed of late. There have been complaints, largely from workers, of violation of the Resolution. In fact, in the course of his reply to the debate on the labour Ministry's demand for grants, Mr. Nanda, Union Minister for Labour, expressed concern over what he called the backslide in the implementation of the Industrial Truce Resolution and indicated that he would soon convene a tripartite conference to discuss the matter.

This is a move in the right direction, because the workers' allegations should be quickly examined in the interests of sustaining a high level of morale among them. If the allegations are ill-founded, those trade union leaders who are responsible for them should be suitably punished. If they are well-founded, the employers concerned should be taken to task. Meanwhile, spokesmen of employers have denied that there has been any slackening of effort on their part and have emphasised that they have been carrying out their obligations under the Resolution loyally and faithfully. The boot, they point out, is on the other leg. In spite of the assertion to the contrary, the urgency to increase production is not fully reflected in Government's policies and actions. It is true that politicians still wax eloquent on the need to make the utmost sacrifice for the country but the brave words are not matched by commensurate effort. As Mr. N. G. Bowen, President of the Southern India Employers' Federation aptly pointed out, no amount of propaganda or impassioned speeches can bring a sense of urgency to the people if the latter finds no such sense in the business of the Government itself.

Depressing Picture

While the labour situation in the country has been generally satisfactory, the employment position continues to present a depressing picture. The number of persons on the live register of employment exchanges, which is a rough indication of the trend of unemployment, continued to show an upward trend, the figure as at the end of December 1962 being 23.79 million, an increase of 20-24 per cent over the previous year. What is surprising, however, is the statement of Mr. G. L. Nanda that his Ministry could not be held responsible for this situation. The Labour Ministry, he argued, could not create employment activities; its function was only to distribute the employment opportunities which was the result of the total economic activity. Such a statement could hardly be expected to emanate from a Minister who also holds the combined portfolio of planning and employment. It is true that the Labour Minister alone cannot be held responsible for the unemployment in the country. But is it not the duty of the Labour Minister to examine impartially the adverse effects of labour policy on the creation of employment opportunities? Has not the present labour policy been responsible for the high cost structure of Indian economy? Has it not led to securing advantages for workers employed at the expense of those unemployed? The answer to both the questions is certainly "yes." By not linking wages to productivity, the wage policy has resulted in high cost of production and inefficiency, with the result that India's exports have suffered and profit-margins of industries have shrunk. The outcome has been shortage of foreign exchange and lower rate of capital formation, both of which have retarded the economic growth and with that the growth of employment. This has also been the result of policies pursued in regard to modernisation of industries, protection afforded to uneconomic units and retrenchment. It is surely high time a proper evaluation was made of India's labour policy in the post-independence period by an impartial body of competent experts.

Labour Legislation

To revert to the latest annual report of the Union Ministry of Labour. The report enumerates the major amendments to legislation enacted during the year and indicates the important legislative proposals under consideration. Among the former, mention may be made of the following: (1) Amendment to the Workmen's Compensation Act providing, among other things, for raising the wage limit for coverage under the Act from Rs. 400 to Rs. 500 per month and revising the rates of compensation. The amendment was brought into force on 1st February 1963. (2) Amendment to the Working Journalist Act with a view to liberalising the provisions pertaining to the payment of gratuity. (3) Amendment to the Industrial Disputes (Central) Rules in order to make certain provisions aimed at securing an improvement in the functioning of works committees.

Some of the important legislative proposals under consideration are the following:

(i) Legislation to supplement the Personal Injuries (Emergency Provisions) Act, 1962. Under the Personal Injuries (Emergency Provisions) Act, 1962, employers have been exempted from the payment of compensation in respect of personal injuries and personal service injuries under the Workmen's Compensation Act, 1923, and the Employees' State Insurance Act, 1948. As the compensation payable under the Personal Injuries (Emergency Provisions) Scheme, 1962, will, in many cases, be less than the amount payable under the Workmen's Compensation Act, the above provision would adversely affect the interests of the persons concerned. To protect their interests, it is proposed to enact separate legislation on the lines of the War Injuries (Compensation Insurance) Act, 1943. The proposed legislation would provide, *inter alia*, for the payment of compensation approximately equal to the difference between the amount payable under the Workmen's Compensation Act and the scheme framed under the Personal Injuries (Emergency Provisions) Act, 1962.

(ii) The Industrial Disputes Act, 1947. The more important proposals for the amendment of the Act now under consideration relate to:

(a) the declaration of air transport service as a permanent public utility service;

(b) empowering conciliation officers to refuse adjournment of conciliation proceedings even when the parties ask for an adjournment jointly in writing;

(c) the provision that only a majority of workmen could terminate an award or settlement by proper notice;

(d) the provision that conditions of service, etc., should remain unchanged during the pendency of arbitration proceedings;

(e) the provision of a revised procedure for recovery of moneys due from an employer;

(f) widening the scope of adjudication proceedings under the Act whereby Tribunals could go into the merits of industrial disputes involving dismissals and discharges.

(iii) The Payment of Wages Act, 1936—Proposals regarding the amendment of the Act mainly relate to:

(a) the widening of the scope of the Act to make it applicable to industrial establishments like air services, tramway services and motor transport services;

(b) the authorisation of deductions from wages towards the payment of premia in respect of Fidelity Guarantee Bonds and recovery in respect of items of traffic debits on railways;

(c) the enhancement of penalties for the infringement of the provisions of the Act;

(d) the extension of the time limit for presentation of claims; and

(e) the proper maintenance of registers and records, etc.

(iv) The Factories Act, 1948. It is proposed to amend the Act to have a clearer definition of the term 'worker,' 'factory,' etc., and to provide for (a) enquiry by an Inspector into the more serious accidents with a view to ascertaining the causes, and taking suitable remedial and penal measures; (b) the appointment of safety officers; (c) safety and occupational health services in factories; (d) the exemption of workshops attached to research stations; and (e) the payment of fees, if any, to certifying surgeons by the occupier of the factory.

Wage Boards

The annual report indicates the progress made in the implementation of the recommendations of the Wage Boards for industries. The total number of Wage Boards now functioning is six, covering tea, coffee and rubber plantations, jute, iron and steel and coal mining. The progress of implementation of the recommendations of the Wage Boards for cotton textiles, sugar and cement, which have submitted reports, is indicated below:

Implementation of Wage Boards Recommendations

	Cotton textiles	Sugar	Cement
No. of units covered	410	173	34
No. of units which have fully implemented	360 (27)	159 (7)	28 (6)
No. of units which have not implemented	14*	7	—
Percentage of workers benefited	99.27	96.20	100

Figures in brackets indicate number of units which have partly implemented the recommendations.
* Includes 4 units which are closed at present.

It is noteworthy that all the 34 units (28 units fully and 6 partly) in the cement industry, covered by the award of the Board, have implemented the recommendations. In the sugar industry, the units which have not implemented the recommendations are working out details of implementation. In the case of the cotton textile industry, an inquiry is being conducted into the reasons for non-implementation of the Wage Board's recommendations by some units. Interim relief for workers in jute, coal and iron and steel industries and tea, coffee and rubber plantations has been recommended by the respective wage boards. These recommendations have been accepted by the Government.

In the course of his reply to the debate, Mr. Nanda stated that a study group would be appointed to examine the wage structure in the engineering industry. The wide character of engineering industry and the existence of big and small units, according to him, made it difficult to decide where a beginning could be made. He disclosed, however, that it had been decided to select some important sector of the engineering industry and refer it to a wage board for the purpose of wage fixation. The Minister expressed satisfaction at the working of the wage boards in general and their method of settlement of the wage question. The latter, in his opinion, produced good results, whereas awards by industrial tribunals and adjudicators often left a trial of bitterness. But he hastened to add that it was not possible for the Government to set up wage boards for all industries, as it was difficult to find suitable personnel to man these boards. So far, however, wage boards had been set up in all industries for which a demand had been made.

Joint Management

The annual report of the Ministry also reviews the progress of the scheme of workers' participation in management. Joint Management Councils were functioning in 53 industrial units during 1962-63, of which 16 were in the public sector and 37 in the private sector. In 1961-62, such councils were in existence in 29 units, of which 11 were in the public sector and 18 in the private sector. Evaluation studies on the working of the Joint Management Councils in respect of seven units were completed during the year under review, besides the 23 units studied in 1961-62. The report claims that these studies revealed better industrial relations, a more staple labour force, increased productivity, reduction in waste, better profit and, above all, a closer understanding between the management and the workers in varying degrees in most units in which Joint Management Councils have worked successfully. The report does not make it clear whether the improvement in industrial relations in establishments having Joint Management Councils were due primarily to the influence of these Councils. It may be pertinent to add here the Joint Management Councils are set up only in establishments which have a reasonably good record of industrial relations.

PROGRESS OF PLASTICS IMPRESSIVE

SOME LESSONS FROM GROWTH OF THE INDUSTRY IN WEST EUROPE

THE plastics industry in India continues to make headway not only by expanding output, but also by diversifying the range of production lines. The growth of the industry is fully reflected in the trends in the production of various plastics raw materials and processed goods. The output of poly vinyl chloride (P.V.C.), for instance, rose by 180 per cent in 1962 over the previous year and U.F. synthetic resins by 76 per cent. There was also a marked increase in the output of U.F. moulding powder, polyethylene, polyestyrene and P.F. moulding powder. Besides, low density polyethylene and polyestyrene moulding powders, which were in short supply in 1961, were available in adequate quantities last year, so much so that it was possible to impose a ban on their imports. Another major step in the development of this industry was the commencement of production of polyester on a commercial scale last year. The production of plasticisers, which started in 1961, has been going on in full swing. In addition, licences have been issued for the establishment of units for the production of cellulose acetate and acrylic sheets from resins.

The processed plastics sector too maintained steady progress last year, according to the latest annual report of the Union Ministry of Commerce and Industry. There was thus a substantial increase in the output of phenolic laminates and unsupported P.V.C. sheets last year. The production of plastics moulded goods and polyethylene films was steady. The only exception to this trend was provided by leather cloth and linoleum, the output of which suffered a decline, following difficulties in the availability of P.V.C. resins, fall in demand and shortage of power.

Production in 1962

The following table shows the production of the major plastics raw materials and processed goods in 1962, as compared with the two previous years:

(Quantity in tonnes unless otherwise stated)

	1962*	1961	1960
Moulding powders:			
Phenol formaldehyde	2,283	2,111	2,134
Polyethylene	7,777	5,800	4,213
Polystyrene	3,734	3,484	3,676
P.V.C. resins/compositions	2,563	917	366
Synthetic resins for plywood	2,393	1,354	..
Urea formaldehyde	631	433	366
Phenolic laminates	1,057	694	624
Polythene films and lay flat tubings	2,013	1,975	1,438
P.V.C. sheets (unsupported)	1,725	1,490	1,105
Leather cloth†	6,147	7,010	5,846
Linoleum†	460	721	567
Plastic moulded goods‡	943	899	1,000

* Production figures for 1962 are based on estimates made by the Union Ministry of Commerce and Industry.
† In thousand metres.
‡ Million Nos.

Although the growth of the domestic plastics industry is thus impressive, the place attained by it in the world map is small, especially as compared with such highly industrialised countries like the U.S., U.K., West Germany, Japan and others. The development of the industry in the West is particularly notable for the technological improvements that are constantly being accomplished in the field of new applications and utilisation of raw materials. It is, therefore, essential that the plastics industry in India should keep track of the various technical and other developments taking place in the industrialised countries. Realising this necessity, the All-India Plastics Manufacturers' Association sponsored a delegation for a study tour of some of the Western European countries. The delegation, which was headed by Mr. G. N. Parikh of Great India Plastics, Bombay, toured the U.K., West Germany, Switzerland and Italy in 1961 and made an on-the-spot study of the latest technological advances in the sphere of plastics machinery, raw materials and applications. The findings of the delegation have now been brought together in the form of a report. It may be noted here that this was the second delegation sent by the Association for this purpose, the first having gone as early as in 1948. It is, however, surprising that the delegation should have taken very nearly two years to prepare its report. Even delegations sent by the Government submit their reports in less than a quarter of the time taken by these businessmen who form part of India's private sector.

One of the important recommendations made by the delegation relates to the need for devoting more attention to research. A large amount of money is being spent in the industrially advanced countries on research, both pure and applied, in the fields of plastics raw materials and machinery. The delegation observes that, if India were to catch up with the progress abroad, producers will have to spend more on research work not only in the raw material plants, but also in machinery manufacturing units. Besides, these units, according to the delegation, should maintain application laboratories, on the lines found in other countries, in order to demonstrate to converters the latest methods of production and their uses.

The emphasis laid by the delegation on research is particularly relevant from the point of view of reducing the cost of production of plastics, which alone would enable the industry to compete successfully with conventional materials like steel and other metals, rubber and timber. It is mainly as a result of extensive research that prices of plastics have been brought down consistently in advanced countries. The latest advances in plastics processing techniques, it may be noted, have considerably reduced fabrication costs. This trend, according to the delegation, is basic for the expansion of plastics consumption. But for the decline in prices, plastics materials would not have found as large a demand for them as is the case now in the U.S., the U.K. and the Continent for being used as construction and building materials, replacing metals and other traditional materials. In this connection, the delegation urges manufacturers in India to increase production of such plastics products as would cater to the requirements of agriculture, industry and construction.

Petro-chemicals

It is, of course, common knowledge that the progress of the industry in India is inhibited by shortage of basic raw materials. Alluding to this problem, the delegation suggests speedy execution of petro-chemical projects in the country. It points out that all the industrially advanced countries, including the U.K., West Germany, Italy, the U.S. and Japan, have well-developed petro-chemical industries, which provide basic raw materials for the production of synthetic resins, synthetic fibres, synthetic rubber, paints, fertilisers, pesticides and medicines. It is said that the petro-chemical process is the cheapest source of ethylene.

Several technological advances have been made in the production of petro-chemicals and other raw materials in Western Europe. Raw materials, says the delegation, are being manufactured with improved properties to withstand high temperatures, ensure heat and light stability and improve mechanical characteristics. The use of copolymers and alloys, which have very versatile properties, has been on the increase. There has also been evidence of growing orientation for purposes of modifying the physical properties of polymers. Advances are also taking place in the West in the production of big capacity mouldings by recourse to preplasticising equipments. A section of the Report, it may be noted, deals exhaustively with the recent technological developments which have taken place in Europe in respect of specific raw materials, both thermosetting and thermoplastics.

Machinery and Moulds

The delegation has also made some pertinent observations on the lines on which India should expand the production of plastics machinery, moulds and dies. Fast cycling and fully automatic machines are being developed in other countries, in order to produce quality products at competitive prices. The delegation has urged the Government of India to allow imports of such machinery in order to keep pace with the developments taking place abroad till such time as similar machines are produced in the country.

On the question of producing machinery and intricate moulds and dies within the country, the delegation urges the Government of India to give all facilities to those who intend to take up such products. It observes that, if need be, attractive terms should be offered to foreign collaborators in any scheme of this nature. Another important recommendation made by the delegation is that a programme of high priority should be formulated whereby technicians in the industry are sent abroad for specialised training in plastics technology. In view of the inadequacy of technical manpower at present and the need for acquainting the technical personnel already employed by the industry with the latest technological developments abroad, the delegation's suggestion for overseas training deserves to be given urgent consideration.

FUEL INJECTION EQUIPMENT INDUSTRY

A public inquiry into the question of continuance of protection to the fuel injection equipment industry was held last week in Bombay, with the Chairman of the Tariff Commission, Mr. K. R. P. Aiyangar, presiding. Mr. Aiyangar, in his opening speech, observed that the industry had made substantial progress both in expansion and diversification of production and improvement in quality. The industry has thus taken good advantage of protection, which it has been enjoying for the last eight years. This is the fourth inquiry into this industry, the previous inquiries having been held in 1954, 1957 and 1959. On the recommendation of the Commission, Government first granted protection initially upto 31st December 1956 to (a) single-cylinder fuel injection pumps for stationary diesel engines and component parts, excluding elements and delivery valves, and (b) nozzle-holders with a clamping capacity upto 1-inch clamping diameter for nozzles (atomisers) for use on stationary and automobile diesel engines and components (excluding nozzles). The protective duty levied was 60 per cent *ad valorem*, but nozzle-holders and their components of U.K. origin were subject to a preferential duty of 52½ per cent. Later, protection was extended upto 31st December 1957 at the then prevailing duty and further to the end of 1959, with the scope of protection widened to cover elements, delivery valves and nozzles. Following the last inquiry in 1959, protection was extended for a period of four years, ending 31st December 1963 at a reduced rate of duty of 25 per cent *ad valorem* standard.

There are two major units, one each at Bangalore and Bombay, engaged in the manufacture of diesel fuel injection equipments in the country, as at the time of the last inquiry in 1959. A new unit has come into being at Kolhapur in Maharashtra, but its production is small (1,000 pumps in 1962) and is meant for use in engines produced by the same company, and not for marketing. Besides, its manufacture is based on elements and nozzles procured from either of the other two major units.

The installed capacity of the industry has gone up substantially. Thus, the capacity for single-cylinder pumps rose from only 12,000 in 1959 to as much as 80,400 in 1962, for multi-cylinder pumps from 6,600 to 30,000 and for nozzle-holders from 48,000 to 310,800. Similarly, the capacity for nozzles increased from 72,000 in 1959 to 834,000, for elements from 66,000 to 794,400 and for delivery valves from 66,000 to 794,400. Two more units have recently been licensed to manufacture diesel fuel injection equipment. The total annual licensed capacity (including both existing units and licensed ones) for single-cylinder pumps is 118,080, multi-cylinder pumps 60,000, nozzle-holders 486,000, nozzles 1.61 million and element and delivery valves 1.44 million each.

There has been a strident increase in production since 1959, as will be seen from the following table:

(In thousands)

	1959	1962
Single-cylinder pumps	48.6	63.3
Multi-cylinder pumps	11.7	27.8
Nozzle-holders	118.3	207.7
Nozzles	†110.3	331.8
Elements	†128.2	409.4
Delivery valves	†108.7	474.6

The domestic demand for fuel injection pumps has increased considerably during the last few years and is expected to go up still further during the remaining years of the third Plan. The following table shows the estimate of demand made by the Motor Industries Company for diesel fuel injection equipment for the current year and forecasts for 1965 and 1966:

	1963	1964	1965	1966
Single-cylinder pumps	63,000	72,000	78,000	82,000
Multi-cylinder pumps	32,500	38,000	43,600	50,800
Nozzle-holders	236,400	282,450	318,000	363,150
Nozzles	824,400	928,950	1,044,250	1,181,100
Elements	631,500	707,750	794,850	899,100
Delivery values	591,500	663,500	745,000	842,700

One of the major difficulties facing the industry relates to dependence on imports for essential raw materials. The bulk of the raw materials required by the industry is in the form of bright drawn alloyed and unalloyed steel bars, which continue to be imported. However, there are now units in India which can bright draw out of imported hot-rolled material. Their capacity to meet the demand of the industry is at present limited, as their production (dependent, in turn, on imports) and quality of the product are yet to be stabilised. A welcome feature in regard to raw materials is that the share of the indigenous raw materials in the total cost of raw materials has gone up substantially and sustained efforts in further improving the share of indigenous content continue. Since the last inquiry, progress has also been achieved in procuring finished components from local sources, although a few items like grooved dowel pins, packing rings and spring rings, are still being imported. It is reported that some difficulties like irregular supplies of raw material and inconsistent quality are being experienced by producers in the matter of indigenous procurement of finished components. Stabilisation of production in this protected industry, as was stressed by Mr. Aiyangar, would depend on progressive increase in indigenous material used and lowering of costs.

BOMBAY DYEING'S PROFIT DOWN AGAIN

HIGHER SALES OF NO AVAIL

IN the past calendar year, the Bombay Dyeing and Manufacturing Company Ltd. (Managing Agents: Messrs. Nowrosjee Wadia and Sons (Private) Ltd., Bombay) produced and sold more cloth and yarn. But this has been of no avail from the shareholders' point of view, for the profit-margin, which had improved in 1961, has suffered a renewed setback. The gross and net profits alike are lower. The amount ploughed back has been drastically pruned, the net profit being only a little above the amount required to maintain the dividend at the none-too-high level of 14 per cent, subject to deduction of tax.

Fluctuations in profits of cotton mills from year to year are not uncommon. Even so, cost inflation and heavy taxation have been aggravating the erratic trend in recent years. It will be useful to recall here this premier cotton textile Company's experience in recent years. Its gross profit for 1956 was Rs. 125.80 lakhs. It fell progressively in 1957 and 1958 to Rs. 110.31 lakhs and Rs. 90.70 lakhs. In the subsequent three years, the profit curve took an upward turn and reached a level of Rs. 158.37 lakhs in 1961. From this peak level, it has dropped to Rs. 147.19 lakhs for the year under review, namely, 1962. This is in spite of net sales (that is, excluding excise duty and clearing, wharfage and other expenses paid) rising from Rs. 12.89 crores to a new peak level of Rs. 13.91 crores. The profit-margin (ratio of profit to sales) has therefore shrunk from 12.2 to 10.6 per cent.

The net profit has dropped rather sharply from Rs. 58 lakhs to Rs. 38.77 lakhs because of a substantial increase of Rs. 9.60 lakhs to Rs. 23.80 lakhs in the provision for taxation, which has been necessitated apparently by a lower credit of Rs. 9.75 lakhs taken for development rebate, as compared with as much as Rs. 24.83 lakhs a year before. The dividend, including the interim of one rupee, has been maintained at Rs. 3.50 per share of Rs. 25, subject to tax. The final dividend, absorbing Rs. 25.10 lakhs, is to be paid out of the dividend equalisation reserve. As, out of the year's net profit, a sum of Rs. 19 lakhs has been transferred to this reserve, the net depletion will be Rs. 6.10 lakhs. Adjusting the credit to development rebate reserve of Rs. 9.75 lakhs against this depletion, the actual net addition to reserves is only Rs. 3.65 lakhs, as against as much as Rs. 22.83 lakhs a year ago. The carry forward is Rs. 67,586, as against Rs. 69,669 brought in.

A comparative picture of the Company's progress in the past four years is presented in the table below.

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Sale proceeds, less excise and clearing, wharfage, etc.	13,91.19	12,89.17	11,07.26	10,38.97
Other income	23.79	23.91	26.26	18.29
Stock of finished goods and work-in-progress	279.44	229.10	222.23	148.49
Excise duty paid	88.96	68.04	35.40	44.17
Clearing, wharfage and other expenses	1.80	1.97	1.82	2.20
Materials and stores consumed	795.88	696.89	664.47	581.19
Staff expenses	375.06	325.50	310.32	241.86
Other expenses	146.64	139.18	107.98	109.79
Gross profit	147.79	158.37	124.49	103.84

Equity shares' market value (In rupees):	1962	1961	1960	1959
High	72.20	71.90	72.70	71.60
Low	58.80	58.50	60.40	55.00

* Subject to deduction of tax.

The Directors have attributed the setback in profit to the rigid fixation of cloth prices in spite of rising costs of production. Besides, the home and export markets were very dull during the year and, towards the end of the year, the national emergency created a sense of uncertainty causing heavy accumulation of stocks in the local market. The increase in the manufacturing costs and other expenses of the Company during the year can be seen from the above table. It may be pointed out, however, that, over the year, the Company had to pay Rs. 79.27 lakhs more for the cotton consumed, the average price paid being higher by Rs. 61 per candy.

The spurt in sales reflects the growing popularity of the Company's products as well as the introduction of several new varieties in attractive colours and designs during the year, particularly Jacquard and dobby towels, printed bedsheets and pillow cases, furnishings, suitings and printed dress materials. Cotton-terylene mixed suitings, introduced recently, have been liked very much by the public. Sales at the Company's retail shops at Bombay and Calcutta and through other authorised stockists have gone up by nearly 30 per cent.

Exports of cloth in 1962 declined further in quantity from 51.9 million yards (in 1961) to 42.7 million yards and in value from Rs. 5.54 crores to Rs. 4.92 crores in line with the setback in the country's total exports from 575 million to 512 million yards due to the severe competition from Japan, China and Hong Kong. Nonetheless, the Company's share in the total value was maintained at the best level of 12 per cent reached in 1961. The Company has been concentrating on larger exports of bleached, dyed, printed and finished goods which fetch a better realisation per yard of cloth.

During the current year (1963), sales from the Company's retail shops and through the authorised stockists are expected to be better still. The shops keep the Company in close touch with public opinion and trends and help it to act accordingly. The year will also see introduction of 100-rupee coupons for shareholders at a discount of 10 per cent, to be issued along with dividend warrants. As for new varieties, the Company will be putting on the market this year *Hecowa* finished goods under licence from Heberleins of Switzerland. The Schreiner calender has added another finish to the range of products, and the making of *Lantor* blankets and *Tygan* blinds is under consideration. All these innovations will put the Company in a better position to meet demands from abroad, and help it bring benefits of the latest developments to its customers at home. While all this is no doubt encouraging, it may also be noted that the Company and its customers will be faced this year with the import duty of 10 nP per kg. plus a surcharge of 10 per cent on imported cotton and a surcharge of 20 per cent of the basic excise duty on counts of yarn below 35s and of 33½ per cent on counts of 35s and above. Although selling prices of yarn have been recently revised upward, the increase was before the announcement of the budget proposals. It remains to be seen to what extent and when the mills will be allowed to pass on to consumers these new burdens.

During the year, a sum of Rs. 1.57 lakh was spent on constructions and extensions to the buildings of the Spring and Textile Mills. New machinery of the value of Rs. 61.46 lakhs was installed in both the Mills. The entire blow room machinery has now been renovated at the Spring Mills and the blow room at the Textile Mills is being replaced. The screen printing plant is now in full production and the printed material from it is commanding good sales. A yarn mercerising machine has recently been installed in the new dye-works and it will help towards making new qualities with mercerised and dyed yarn. Besides the new Schreiner calender, new engraving and pantograph machines have also been installed, which will now enable the Company to turn out printed designs which require a high degree of accuracy in engraving. The plant ordered for imparting the *Hecowa* finish to the Company's goods is under installation at present and is expected to go into production in a couple of months. Orders have been placed for new drawing and high speed frames and ring spinning frames for the Spring Mills to replace the old machinery. The deliveries of these machines will be spread over a year. A further set of combers has also been ordered for the Spring Mills to increase production of fine count fabrics. The number of installed spindles at the Company's Spring and Textile Mills is at present 208.184 and of looms 3,551, out of which 1,974 are automatic. Further 240 automatic looms are still to be received for the Spring Mills.

The financial position of the Company is strong. The paid-up capital, unchanged at Rs. 250.98 lakhs, is supplemented by reserves and surplus aggregating Rs. 383.44 lakhs. The total of borrowings stands at Rs. 507.13 lakhs, as against Rs. 540.37 lakhs a year before. Together with current liabilities and provisions amounting to Rs. 247.29 lakhs, the total indebtedness to outsiders works out to Rs. 754.42 lakhs, against which are available, on the assets side, current assets, loans and advances aggregating Rs. 754.12 lakhs and investments shown at Rs. 45.35 lakhs. The gross block, which expanded during the year from Rs. 12.22 crores to Rs. 12.81 crores, has been written down to Rs. 5.87 crores.

Thanks to able management, the Bombay Dyeing has made impressive progress over the years. A review of the past ten years' progress by Mr. Neville N. Wadia, Chairman of the Company, was editorially discussed in *Commerce* last week. The facts and figures given by Mr. Wadia are extremely gratifying. It may, however, be mentioned here that besides the management's clever handling of the job behind the facts and figures lies also the greatly conservative policy of the management in appropriating profit over the years, in which shareholders have acquiesced, sometimes with more than loud protests. In the editorial, we had brought out that beyond a steady return shareholders have had very little to share in the Company's striking progress so far. They may, however, have the consolation that, but for the conservative appropriation policy of the management, their shares would not have remained steady around Rs. 62 even during the present crisis in the market, which has brought other comparable shares reeling down. In other words, if there has not been much of capital appreciation for shareholders, there has also not been any big depreciation. At their current quotation of Rs. 62.10 *cum-div.* (final), the Rs. 25 fully paid ordinary shares offer, on the *ex-div.* basis, a net yield of about 4 per cent per annum.

WORKING AND ADMINISTRATION OF COMPANY LAW

A total of 1,614 new companies were formed during the year ended 31st March 1962, as against 1,683 in 1960-61, according to the sixth annual report on the working and administration of the Companies Act, 1956. The report, which was presented to Parliament by Mr. Nityanand Kanungo, Minister for Industry, adds that, while the total of new registrations was slightly lower, the number of new public limited companies formed in the year at 199 was a record for the six years period of the Act, a fact which has rendered baseless the businessmen's apprehension that the Companies Act of 1956 might restrict the growth of the corporate sector.

The total number of companies at work at the end of the year was 24,757, with a total paid-up capital of Rs. 1,879 crores. Of these 24,757 companies, 5,999 were public companies having an aggregate paid-up capital of Rs. 933 crores and 18,758 were private companies having a paid-up capital of Rs. 946 crores. During the six years of the 1956 Act, there was a fall of 5,117 in the aggregate number of companies at work. This was mainly due to the weeding out by the Department of Company Law Administration of moribund units from the registers of live ones. The Department would not, one is assured, relax its efforts to remove all "paper companies" from the records, in order to attain its long-term objective of promoting "managerial alertness and discouraging growth of rickety companies and use of derelict company shells for improper company methods and practices and evasions and avoidance of the law."

Notwithstanding the fall in the number of companies at work, the aggregate paid-up capital increased by about Rs. 855 crores in the six-year period. This development, the report says, proves that purposeful and vigilant supervision of the working of the corporate sector is not only fully compatible with its heavy growth and expansion but is, indeed, an essential aid to such expansion and development.

Dealing with appointment of directors and their relatives to offices of profit, the report notes that the proportion of directors appointed to posts carrying salaries of Rs. 1,000 or more to the total number of such appointments increased in the year from 32 to 35 per cent and that of their relatives soared from 17.5 to 31.6 per cent. As for appointment of ex-managing agents as the sole selling agents, which, under Section 294, has to be approved of by the Central Government, besides shareholders, the Government passed two out of seven applications made during the year and that too subject to certain conditions. The Department made it clear that the answer to the question whether or not appointment of distributors for sale of goods on a principal-to-principal basis would fall within the ambit of Section 294 would depend on the contractual relationship between the parties and on the terms and conditions of appointments.

The Department received 75 applications under Section 326, seeking the Government's approval to appointment and re-appointment of managing agents. This figure, together with 44 outstanding cases of the year 1960-61, brought the total number to 119, out of which approval was accorded to 63 applications, 19 were rejected, eight were withdrawn and 29 were left outstanding. The shift away from the managing agency system to other forms of management since 1956 continued during the year. Only 1.2 per cent of the total number of new companies formed in the six-year period (1956-62) adopted the managing agency system.

During the year under review, apart from requests for special audit received from shareholders, the Department also considered the desirability of taking action *suo moto* under the provisions of Section 233 in a few cases. It was found that there was a *prima facie* basis for ordering such audit in respect of two companies, though actually it was ordered only in one case.

Twenty-seven applications for loans and guaranteeing loans amounting to Rs. 3.38 crores to directors, their relatives and firms in which they were interested were considered by the Government during the year. It approved 17 applications for loans worth Rs. 3.13 crores, rejected nine applications for some Rs. 25 lakhs and left one pending for consideration. In 1960-61, loans worth Rs. 1.47 crore were approved.

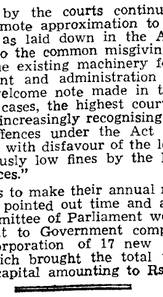
In respect of inter-company investments, the Government considered 60 applications totalling Rs. 9.04 crores, approved 30 for Rs. 5.49 crores, left six for some Rs. 47 lakhs pending, while 24 involving Rs. 3.08 crores were either rejected or withdrawn. The amount of Rs. 5.49 crores approved during the year far exceeded the 1960-61 figure of some Rs. 46 lakhs, because the coming into force of the amended provisions of Section 372 enlarged the scope for application for such investments under that section. During the year under review, the number of applications for inter-corporate investments from companies belonging to the same group was 28 for Rs. 5.62 crores, of which 10 for Rs. 3.66 crores were approved, 14 for Rs. 1.55 crore were either rejected or withdrawn and four covering some Rs. 41 lakhs stood pending for consideration.

In 1961-62, 3,990 prosecutions against 902 companies were instituted, as against 6,272 against 1,220 companies in the previous year. The fall in number is attributed in the report partly to the new provisions for the levy of additional fee under the amended Section 611, which was being preferred to the launching of prosecutions in most cases of defaults over a short period, and partly to the awareness on the part of the managements of companies that wilful contravention of the provisions of the Act might not be an easy game to play, as the Department was increasingly reluctant to treat such contraventions as mere technical offences.

The average fine imposed per case by the courts in different States increased to Rs. 68 in 1961-62 from Rs. 57 in 1960-61, and in West Bengal particularly, having the largest number of companies, it rose to Rs. 47 from Rs. 23. In this connection, the report underlines the fact that the fines imposed by the courts continued to have only a very remote approximation to the ceilings for such fines as laid down in the Act and this can only add to the common misgivings as to the adequacy of the existing machinery for the effective enforcement and administration of the Act. Alongside, a welcome note made in the report is that "in some cases, the highest courts of law in the States are increasingly recognising the seriousness of the offences under the Act and looking more and more with disfavour of the levy of nominal or ridiculously low fines by the lower courts for these offences."

Suggestions to make their annual reports more informative as pointed out time and again by the Estimates Committee of Parliament were made by the Department to Government companies. The year saw incorporation of 17 new Government companies, which brought the total to 154, with their paid-up capital amounting to Rs. 627 crores.

T.E.L.CO. PROCEEDS WITH RIGHTS ISSUE



Letters of acceptance and renunciation of the one-for-four rights issue of 200,000 ordinary shares of Rs. 100 each at a premium of Rs. 50 per share have been posted by the Tata Engineering and Locomotive Company Ltd. to its shareholders in its books as on 8th March 1963. The letters must reach the Company on or before the 30th inst. A sum of Rs. 75 per each of the right shares (made up of Rs. 25 on premium account and Rs. 50 on capital account) is payable along with the application for such shares. The balance of Rs. 75, including Rs. 25 on premium account, shall be payable by 30th September 1963.

The new shares will rank *pari passu* with the old shares, except that they will not qualify for the dividend for the year ended 31st March 1963.

It may be noted that all fractions for holdings of less than four old shares or for those holdings which are not a multiple of four will be consolidated and in respect of each set of four such fractions the Board will allot one share to a person or persons selected by it for holding and selling such share at such time or times and at such price or prices as may be approved by the Board and the net sale proceeds, after deducting the expenses thereon, will be divided *pro rata* among the members who would otherwise have been entitled to such fractions. In other words, fractions are not to be issued but sold in the market by the Board through its nominee to whom they will be issued in consolidated full shares and the proceeds will be distributed to shareholders to whom the fractions belonged.

Construction work on Indian Aluminium's Rs. 5-crore smelter-foil project has commenced. The first earth for the new smelter at Alupuram was broken on 1st February 1963. The smelter, scheduled to go on power in the second half of 1964, will raise the Company's smelting capacity from 5,700 tonnes to 10,850 tonnes per annum. The first earth for the related foil mill construction will be broken later this year. The mill, with an annual capacity of 2,500 tonnes, is to commence production in the middle of 1965. Finance for these projects was raised, it will be recalled, in December last, when the Company issued right shares of Rs. 2 crores, rupee debentures of Rs. 1 crore and sterling debentures of £500,000.

Two U.S. loans aggregating $11.15 million, comprising $4.5 million (in rupees) from the Agency for International Development and $7.65 million (in American currency) from the Export-Import Bank, have been announced for Union Carbide India Ltd. to help it double its output of butyl alcohol, butyl acetate and ethyl acetate, take up manufacture of plasticisers, increase its high pressure polyethylene output 3.5 times and produce benzene, propylene and ethylene. The dollar loan will be used to purchase American materials and equipment for use in the expansion programme. The Union Carbide Corporation of New York, of which the Company is an affiliate, owns 60 per cent of the capital.

ROUND THE BEND

A crooked hole is a driller's headache. The weight of a string of steel drill pipe tends to keep it vertical, but when the cutting bit strikes an inclined wall of hard rock buried deep in the earth it may sheer off at an angle. Then the hole has to be straightened by reducing or increasing the weight on the drill bit, or by using extra heavy drill pipe, called collars. As a last resort, a bad bend may have to be sidetracked from the point where the deviation began, or the well may be abandoned altogether and a new hole drilled.

Many ingenious tools have been devised for dealing with difficulties at the well, but to use them effectively calls for men with practical experience at their command and high skill at their fingertips.

" " depreciation	1,07	1,02
" " provision for taxation	4,85	2,65
Net profit	5,60	3,24
Balance brought forward	11	16
Adjustments	Nil	1,46
Transfer from general reserve	Nil	2,75
Appropriations:		
Total available balance	5,71	7,61
Transfer to provision for gratuity	Nil	3,00
" " development rebate reserve	*	3
" " general reserve	50	Nil
To dividends (taxable) preference	18	18
" interim dividend (taxable) ordinary	1,37 (8%)	..
Proposed final dividend (taxable) ordinary	2,93 (17%)	4,29 (25%)
Total ordinary dividend per share	[Re. 0.50]	[Re. 0.50]
Carry forward	74	11

Market value of equity shares (in rupees):	1963	1962	1961
High	5.15	5.25	5.75
Low	4.75	4.62	4.65

* Only a small sum of Rs. 138.

Extracts from the Directors' report: *Tea*: A crop of 5,15,350 kgs. (1960-61: 4,46,673 kgs.) was harvested at a cost of Rs. 3.49 **per kg. The average net price realised for the** year was Rs. 5.35 per kg. as compared with Rs. 5.17 per kg. for 1960-61.

Coffee: The crop harvested amounted to 121.819 tonnes (1960-61: 37.379 tonnes).

Extracts from the Chairman's statement: *Future Prospects*—The estates are in good order, and the Company has estimated for the current year a tea crop of 4,80,000 kgs. and a Coffee Crop of 80 tonnes. At the end of February 1963, 4,000 kgs. of Tea had been harvested which is in excess of the estimate for the first four months of the current year, and it now seems probable that the 1962-63 coffee crop will be 90/95 tonnes made up of 20 tonnes *Arabica* and between 70 to 75 tonnes *Robusta*. Prospects for the 1963-64 coffee crop are good, and given reasonable weather conditions in March it is hoped to harvest a crop in the region of 150 tonnes.

There are at present many imponderables connected with the future which makes it difficult to venture an opinion on prospects for the current year. For example, the Company is still awaiting the final recommendations of the Wage Boards constituted in 1961 to investigate wage rates on estates. The Company is also faced with additional taxation, and increased expenditure due to the National Emergency.

Accounts in brief as at 31st October 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	19,67,076	Gross block	36,03,338
Reserves and surplus	10,64,533	—Depreciation	7,67,740
Other liabilities	12,72,549		
		Net block	28,35,598
		Block in progress	18,205
		Current assets	7,15,330
		Investments	1,02,283
		Cash	6,32,742
	Rs. 43,04,158		Rs. 43,04,158

* Paid-up capital consists of 25,000 preference shares of Rs. 10 each fully paid and 8,58,538 ordinary shares of Rs. 2 each fully paid.

Note.—6,79,269 ordinary shares have been allotted as fully paid up by way of bonus shares through the capitalisation of reserves and share premium account.

Associated Bearing Co., Ltd.

(*Chairman*: Mr. A. D. Shroff, Bombay.)

Registered Office: Mahatma Gandhi Memorial Building, Netaji Subhas Road, Bombay-2.

Second Annual General Meeting—23rd April 1963.

Extracts from the Directors' report: The loss after providing for depreciation is Rs. 1,51,784. After taking into account Rs. 28,000 transferred to development rebate reserve and Rs. 2,25,000 to provision for taxation there is total debit of Rs. 4,04,784. To this is added the loss brought forward from 1961 of Rs. 2,29,835, making a total loss of Rs. 6,34,619 to be carried forward.

During the year, assembly of SKF *Pendulum Weighting Arms* was commenced at a small rented factory in Bombay. This factory is working satisfactorily and is now making a small profit. The sales of *Pendulum Arms* amounted to Rs. 6,54,907.

The Company's factory at Poona is under construction and it is not expected to be completed until about the middle of 1964. The decision in Aurora's case by the Supreme Court and subsequent legislation in respect of the acquisition of lands by limited companies, under the Land Acquisition Act 1894, delayed the start of the construction on lands being acquired by the Company at Poona by nearly twelve months. In the meantime, the overhead expenses of the Company continued.

Finance: During the year, the issued share capital of the Company was raised from Rs. 10 lakhs to Rs. 4 crores. Sixty per cent of this sum, that is Rs. 2.4 crores has been put up by the foreign collaborators and has been deposited in the Company's bank accounts in Europe and is being used for the purchase of machinery for the manufacture of bearings and textile machine parts. The balance of Rs. 1.6 crores has been subscribed in India and of this sum, Rs. 80 lakhs was raised by public subscription. Applications for shares were far in excess of those offered and allotments were made in consultation with the authorities of the Bombay Stock Exchange.

Moneys not utilised out of the share capital have been placed on deposit. The interest received thereon during the year amounted to Rs. 10,10,556.

Since the close of the Financial Year, the Budget Proposals which have recently been made will result in increased costs in respect of import duty on capital goods and raw materials imported into India.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	4,00,00,000	Gross block	14,12,599
Reserves	28,000	—Depreciation	61,312
Other liabilities	6,32,033		
		Net block	13,51,287
		Block in progress	4,17,135
		Current assets	1,28,88,105
		Unquoted investments†	76,21,404
		Cash	1,77,47,485
		P.L. a/c deficit	6,34,619
	Rs. 4,06,60,033		Rs. 4,06,60,033

* Paid-up capital consists of 4 lakhs equity shares of Rs. 100 each fully paid. Of this 2,40,000 equity shares are held by the Holding Company—Aktiebolaget Svenska Kullagerfabriken, Gothenburg, Sweden, and its subsidiaries.

† The Company holds British Government Treasury Bills with a face value of £5,80,000.

Indian Tack and Nail Co., Ltd.

Registered Office: A-1, Gillander House, Netaji Subhas Road, Calcutta-1.)

Second Annual General Meeting—19th April 1963.

Working Results: The accounts for the year 1962 show a loss of Rs. 2,19,335 after providing for depreciation. This together with the loss brought forward from 1961 of Rs. 1,00,728 leaves a total debit balance of Rs. 4,20,063 to be carried forward.

Extracts from the Directors' report: The Company's factory at Konnagar was completed during the year and all machinery installed. Production of shoe tacks and nails began in October, 1962. The Directors are confident that full production could be attained during 1963 provided adequate supplies of raw materials and electric power could be ensured. Unfortunately there are serious delays in the procurement of steel sheet and wire while the availability of adequate electric power is uncertain. These are problems, however, which all industrialists in India are facing at the present time and are a result of the high industrial development in recent years.

Because of the short period for which the factory was in production during the year a loss was incurred.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	40,00,000	Gross block	31,15,771
Other liabilities	1,56,259	—Depreciation	1,77,729
		Net block	29,38,042
		Current assets	4,76,704
		Cash	1,97,088
		Miscellaneous expenditure	1,24,362
		P.L. a/c deficit	4,20,063
	Rs. 41,56,259		Rs. 41,56,259

* Paid-up capital consists of 4,00,000 equity shares of Rs. 10 each fully paid up. Of the above shares 2,53,620 shares have been allotted as fully paid up pursuant to contract without payment being received in cash. 2,30,000 equity shares are held by the Holding Company, The British United Shoe Machinery Co., Ltd.

Brushware Ltd.

(*Secretaries and Treasurers*: The British India Corporation Ltd., Kanpur, U.P.)

COMPANY MEETINGS AND DIVIDENDS

NATIONAL RUBBER MANUFACTURERS LTD. Seventeenth Annual General Meeting, Calcutta, 11th April 1963. Dividend: 8 per cent or Re. 0.80 per ordinary share, subject to deduction of tax. Transfer books remain closed from 27th March to 17th April 1963, both days inclusive.

KIL KOTAGIRI TEA AND COFFEE ESTATES CO., LTD. Fifteenth Annual General Meeting, Coimbatore, 16th April 1963. Dividend: 25 per cent or Re. 0.50 per share, subject to deduction of tax, payable on or before 25th April 1963. Transfer books remain closed from 3rd to 16th April 1963, both days inclusive.

BOMBAY DYEING AND MANUFACTURING CO., LTD. Eighty-fourth Annual General Meeting, Bombay, 18th April 1963. Dividend: Rs. 2.50 per share, final (making a total of Rs. 3.50 per share or 14 per cent for the year ended 31st December 1962), subject to deduction of tax, payable on or after 26th April 1963.

INDIAN TACK AND NAIL CO., LTD. Second Annual General Meeting, Calcutta, 19th April 1963. Dividend: *Nil*. Transfer books remain closed from 5th to 19th April 1963, both days inclusive.

ASSOCIATED BEARING CO., LTD. Second Annual General Meeting, 23rd April 1963. Dividend: *Nil*. Transfer books remain closed from 1st to 26th April 1963, both days inclusive.

DUNLOP RUBBER CO. (INDIA) LTD. Thirty-seventh Annual General Meeting, Calcutta, 24th April 1963. Dividend: Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 17th April to 1st May 1963, both days inclusive.

INDIAN ALUMINIUM CO., LTD. Twenty-fifth Annual General Meeting, Calcutta, 26th April 1963. Dividend: Re. 1.00 per ordinary share, final (making a total of Re. 1.75 per ordinary share, for the year ended 31st December 1962), subject to deduction of tax. Transfer books remain closed from 5th to 26th April 1963, both days inclusive.

CALCUTTA LANDING AND SHIPPING CO., LTD. Annual General Meeting, Calcutta, 26th April 1963. Transfer books will remain closed from 12th to 26th April 1963, both days inclusive.

BRUSHWARE LTD. Annual General Meeting, Kanpur, U.P., 29th April 1963. Dividend: Re. 0.80 per share or 8 per cent for the year ended 30th November 1962.

CENTRAL BANK OF INDIA LTD. Fifty-second Annual General Meeting, Bombay, 29th April 1963. Dividend: 20 per cent or Rs. 5.00 per ordinary and 'A' ordinary share (includes interim dividend of Rs. 2.40 per share), for the year ended 31st December 1962, subject to deduction of tax. Transfer books will remain closed from 10th to 29th April 1963, both days inclusive.

VASANTA MILLS LTD. Taxable ordinary dividend of 20 per cent or Rs. 20 per share, for the year ended 31st December 1962. Transfer books will remain closed from 10th to 24th April 1963, both days inclusive.

Notices

THE MILLOWNERS' ASSOCIATION BOMBAY

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING of the MEMBERS of the MILLOWNERS' ASSOCIATION, BOMBAY, will be held at the Auditorium in the basement of Bombay House, Bruce Street, Bombay, at 11-30 a.m. on Wednesday, the 17th April 1963, to transact the following business:—

(1) To receive and adopt the Committee's Report and Statement of Accounts for the year 1962;

(2) To appoint Auditors of the Association's Accounts for the current year and to fix their remuneration;

AND any other business that may be brought forward.

By Order of the Committee,
R. L. N. VIJAYANAGAR,
Secretary.

BOMBAY, *8th April* 1963.

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 10th April to 11th April, 1963, both days inclusive, for the purpose of payment of Preference Dividend for the half-year ending 31st March, 1963, on or after the 19th April, 1963, to those Preference Shareholders whose names appear on the Company's Register of Members on the 11th April, 1963, or to their mandatees.

By Order of the Board,
A. G. GIDLEY,
Secretary.

Registered Office:
12, MISSION ROW,
CALCUTTA-1.
27th March, 1963.

NEWS IN BRIEF

THE first phase of the antibiotics factory now being set up in the public sector with Soviet assistance near Rishikesh has been completed. The factory is expected to go into production by October 1965.

The Union Government has appointed a special committee to draw up a scheme for giving awards to groups of workers and individuals in factories and industrial establishments where absenteeism declines and efficiency improves.

West Germany has agreed to provide India a credit of DM 400 million for the expansion of the Rourkela steel works. An agreement covering the credits is expected to be signed shortly between the Governments of the two countries.

The last date for submission to the licensing authorities of the annual licences of April 1962-March 1963 period for endorsement for utilisation of the second half of the licences has been extended upto 15th May next.

The Governments of India and Nepal have agreed to establish a technical board, to be known as "Indo-Nepal Board for Irrigation and Power Projects," to facilitate exchange of data and relevant information pertaining to the projects and rivers of interest to both the countries.

A six-member domestic foundry productivity team has been constituted under the auspices of the Institute of Indian Foundrymen and the National Productivity Council in order to promote exchange of ideas on methods of manufacture, cost control and productivity among foundrymen in the different parts of the country.

In a bid to check the rising trend of sugar prices, the Indian Sugar Mills' Association has decided to open fair price shops throughout the country. It has already opened at Delhi 20 such retail shops with the display of the sponsoring mill's name and the ceiling retail price of Re. 1.20 per kilo of D29 grade sugar.

An eight-day Asian seminar on workers' participation in management is scheduled to commence at New Delhi on the 14th inst. under the auspices of the Asian Trade Union College of the International Confederation of Free Trade Unions. Mr. G. L. Nanda, Union Minister for Labour and Employment, will inaugurate the seminar. It will be attended by delegates from India, Ceylon, Japan, Malaya, Philippines, Pakistan, Korea, Okinawa, Singapore, Sarawak and Indonesia.

The Nangal Fertiliser Factory of Fertiliser Corporation of India has exceeded the production target for the current financial year. The actual production of fertiliser till the morning of 29th March was 281,945 tonnes, as against the target of 280,000 tonnes, three days ahead of the scheduled period. The factory has now been established to a condition of nearly full designed production of 388,000 tonnes of fertiliser per year. The target set for the next financial year is 370,000 tonnes.

The National Coal Development Corporation has concluded an agreement with the Cekop, Polish foreign trade organisation, for technical collaboration and supply of detailed design and equipment for the deep-shaft mine at Sudamdih in Bihar. It is planned to produce 2.16 million tonnes of coal per annum from the mine. The investment outlay is estimated at Rs. 18 crores, which will be met out of the credit provided under the Indo-Polish economic co-operation agreement of May 1960.

A new company with an authorised capital of Rs. 20 lakhs, known as the Indian Oil Blending (Private) Ltd., a joint venture of the Indian Oil Company Ltd. and the Mobil Petroleum Company, Inc. of New York, on a fifty-fifty basis, has been formed at Bombay to set up plants at Bombay and Calcutta for blending and packaging high-grade oils, lubricants and oil products, including process and chemical products. The total capacity is estimated at 100,000 tonnes per annum. The American Company will subscribe to the capital in U.S. dollars in order to buy capital equipment for the plants, besides providing technical know-how. Mr. P. A. Gopalakrishnan, Chairman of the I.O.C., is also the Chairman of this Company.

The Central Sales Tax Amendment Act, which was recently passed by Parliament, has come into force with effect from the 1st inst. Under the new Act, every dealer who, in the course of inter-State trade, sells goods either to Government or to registered dealers, will pay sales tax at the rate of 2 per cent of the turnover. The rate was 3 per cent so far. If, however, a dealer sells to an unregistered dealer in the course of inter-State trade, the tax liability would be 10 per cent, as against the existing rate of 7 per cent. If a commodity is generally exempt from payment of sales tax within a State or is taxed at a rate lower than 2 per cent, the inter-State sales tax will also be governed by the exemption or the lower rate, as the case may be.

The Central Excise Reorganisation Committee (Chairman: Mr. Ashok Kumar Chanda, a former Comptroller and Auditor General of India) has submitted its unanimous report to the Government. The Committee has made important recommendations on the reorganisation of the Central Excise Department and also of some of the major levies. The terms of reference of the Committee were to examine generally the organisational and administrative set up of the Central Excise Department and advise Government on such reorganisation as may be necessary for achieving maximum efficiency at minimum costs; to review the Central Excise Act and rules and procedures and recommend the steps required for their rationalisation, simplification and improvements; and to make any other recommendations germane to the objectives of the investigation.

The President has promulgated a Regulation, under Article 240 of the Constitution, which provides for the extension of certain laws relating to direct taxes to the Union Territories of Dadra and Nagar Haveli, Goa, Daman and Diu and Pondicherry and for connected matters. Under this Regulation, the Income-tax Act 1961, the Wealth Tax Act 1957, the Gift Tax Act 1958, the Estate Duty Act 1953, the Government Trading Taxation Act 1926, the Payment of Taxes (Transfer of Property) Act 1949 and the Voluntary Surrender of Salaries (Exemption from Taxation) Act 1961 have come into force in these Union Territories with effect from the 1st inst. The Regulation specifically empowers the Central Government to grant any exemption or reduction in the rate of tax or otherwise modify any provisions of the Income-tax Act, the Wealth Tax Act and the Gift Tax Act in order to remove any hardship or for removing any difficulty that may arise from the application of these enactments to the Union Territories. Similar power is already available under the Estate Duty Act in respect of estate duty. The Government propose to issue orders, in due course, limiting the taxes on income for the year 1963-64 to the amount which would have been payable under the laws in force in the Union Territories before 1st April 1963. Further, suitable reductions are proposed to be made in the rates of taxes to be levied under Central enactments for the three assessment years subsequent to the year 1963-64, that is, for the assessment years 1964-65, 1965-66 and 1966-67. The full rates of Central taxes will become applicable in the year 1967-68. Orders will also be issued in regard to certain other matters relating to the application of the Central tax enactments to these Union Territories.

From Abroad

Pakistan will receive two 40-year interest-free loans amounting to $32 million from the U.S. under agreements signed between the Governments of the two countries at Karachi last week-end.

Under an agreement signed at Dacca last week between the East Pakistan Industrial Development Corporation and a Japanese steel firm, a steel mill is to be set up at Chittagong in East Pakistan at a cost of Rs. 27 crores.

Holland has decided to join the Pakistan Aid Consortium. The present members of the Consortium are Britain, Canada, the U.S., West Germany, France and Japan. Holland will make available $11 million for the last three years of Pakistan's second Plan.

The Japanese shipbuilding firm of Isikavazima-Karima has got orders from the Greek Shipping Company in Lasithi for the supply of two tankers of 56,800 d.w.t. each, costing $5.7 million each, 80 per cent of which will be paid in seven annual instalments.

A five-year agreement regulating exports of certain types of cotton textile goods from Hong Kong to Norway has been signed by the Governments of the two countries. The agreement covers sports, leisure and work shirts and men's, women's and children's nightware.

A contract for building Italy's new $1-million experimental atomic reactor at Casaccia near Rome has been secured by the Geneva branch of the American Machine and Foundry Company (A.M.F.). It is expected to be completed in 1965 and will be equipped with four PTR type reactors developed by the A.M.F.

Under operating agreements with the Philippines Oil Development Company and the San Jose Oil Company, the Union Oil Company of California will soon start exploring the Philippine Islands for oil. The area to be covered is situated on the island of Lugon. It will drill a minimum of 40,000 feet of hole on at least three structures.

Four Australian banks (Bank of New South Wales, National Bank of Australia, Commonwealth Trading, and Australia and New Zealand Bank) are jointly providing £A8.33 million towards financing the new £A21 million refinery of Ampol Petroleum at Brisbane. Ampol will provide £A7.7 million and the balance of £A5 million will be provided as loan by other financial and insurance institutions.

French shipyards are incurring an average loss of 25 per cent of the cost of their orders even after obtaining a State subsidy of 11 per cent and the Government must give long-term loans to enable some of them to change over wholly or partly to other lines of business, according to the Conseil Economique et Social. This situation is regarded in shipbuilding circles, as critical, particularly since the Government reduced its subsidy last summer in accordance with Common Market rules.

The Thai Oil Refinery Company, which is putting up a £10-million refinery at Sriracha in Thailand, is negotiating for the purchase of four 2,000-ton tankers from a British shipyard. The refinery is expected to go into production in September next. The Company will run the refinery for 10 years, over 25 per cent of the profits being given to the Thai Government. At the end of the 10-year period, the refinery will be taken over by the State.

PERSONAL

MR. John Symon, Chairman of Commerce (1935) Ltd. and Senior Technical Adviser to Messrs. W. H. Brady and Co., Ltd., has retired after serving the latter Company for thirty-two years.

Mr. V. Mathalone, Secretary, Messrs. W. H. Brady and Co., Ltd., has retired after a service of forty-three years with the Company.

Mr. M. L. Gopala Setty and Mr. L. S. Venkaji Rao have been elected President and Vice-President, respectively, of the Bangalore Stock Exchange.

Mr. G. B. Kurkarni, Economic Adviser, State Bank of India, has left for New York to attend the Conference of the Society for International Development.

Mr. U. N. Dhebar and Mr. K. Arunachalam have been nominated Chairman and Vice-Chairman, respectively, of the reconstituted Khadi and Village Industries Commission.

Mr. Vasant J. Sheth and Mr. G. T. Kamdar, representatives of the Indian National Steamship Owners' Association, have been re-elected members of the Board of Trustees of the Bombay Port Trust for a period of two years from 1st April 1963.

Mr. S. N. Mukherjee has been elected Chairman of the Indian Mining Federation for the year 1963-64. Mr. B. M. Varma and Mr. P. A. Chanchani have been elected Vice-Chairman and Junior Vice-Chairman, respectively.

Mr. Walt Whitman Rostow, one of President Kennedy's principal advisers on foreign affairs, arrived in New Delhi on the 1st inst. for talks with the Government of India on the political and economic aspects of defence requirements.

Mr. Prabhu V. Mehta has been re-elected Chairman of the All-India Manufacturers Organisation for the current year. Messrs. D. M. Desai, Chinibhai Manibhai, Sukumar Roy, Govind Saran Gupta and K. S. G. Haja Shareef have been elected Vice-Chairmen of the Organisation.

Mr. M. J. Rathbone has been elected Chairman of the Board of Directors of Standard Oil Company (New Jersey) *vice* Mr. Leo M. Welch who has retired. Mr. Michael L. Haider succeeds Mr. Rathbone as President and will also be Vice-Chairman of the Executive Committee.

Private West German investment abroad in 1962 amounted to DM 1,279 million, as against DM 1,353 million in 1961, bringing the total investment between 1952 and the end of 1962 to DM 4,956 million. Of this total, genuine capital exports account for DM 4,285 million (86.5 per cent), plant and equipment for DM 492 million (9.9 per cent) and loans for DM 178 million. The amount of private West German investment in India during 1962 was of the order of DM 68.7 million.

The world crude steel production increased by only 2.1 per cent to 369 million tons during the year 1962, as compared with the growth rate of 4.2 per cent in 1961 and 12.3 per cent in 1960. Production in the major steel-making countries of western world was just maintained, or fell or rose slightly as compared with last year. The U.S. output, for instance, was 90.8 million tons, as against 90.5 million tons in 1961. Production in W. Germany declined by 2.7 per cent to 32.6 million tons. The Soviet Union and its satellites produced generally more steel than in 1961.

The World Bank and the Inter-American Bank will jointly finance a $300,000-project to prepare about 200 Spanish and Portuguese language libraries on economic development. The libraries, similar to those in English and French prepared by the Economic Development Institute (the staff college operated by the World Bank for the training of senior officials from less developed member countries) will be made available to select government agencies, banking and educational institutions in Latin America, Spain and Portugal. The project will be carried out by the Centre de Estudios Monetarios Latinoamericanos of Mexico City under the Institute's supervision.

The Mitsubishi Zosen (Mitsubishi Shipbuilding and Engineering Co.) has drawn up a comprehensive plan for the construction of two mammoth-size docks at its Nagasaki Works, one for shipbuilding and another for ship repairing purposes. When completed in 1965, each of the two new docks will be capable of accommodating vessels of 150,000 tons D/W. They will be among the largest in Japan and the most efficient among their kind throughout the world. According to blueprints, the new docks will measure 350 metres in length, 56 metres in breadth and 14 metres in depth. There will also be investments in two heavy cranes each capable of lifting and transporting a maximum 300-ton load. Their use will not only save time but also increase the overall efficiency in various constructional processes of shipbuilding, effecting a bigger turnover through reductions in costs by lifting super large assembly blocks (up to a maximum load of 600 tons between the pair) and transporting them between the dock and the dock-side block assembly shop. The Company is setting aside $18.36 million for implementing this project.

THE NIZAM SUGAR FACTORY LTD.

CHAIRMAN, MR. SYED ALI'S SPEECH

LINKING CANE PRICE TO AVERAGE RECOVERY OF ENTIRE SEASON URGED

THE Government of India's policy of fixing cane price on the basis of both quality and weight was welcomed by Mr. Syed Ali, Chairman of the Nizam Sugar Factory Limited, in the course of his speech at the Twenty-fifth Annual General Meeting of the Company held at Hyderabad (Andhra Pradesh) on Saturday, 30th March 1963. Mr. Syed Ali declared that the policy would go a long way towards improving both the quality of cane and the efficiency of sugar factories. He, however, felt that, since the recovery of only the optimum period of the season was taken as the basis, it had resulted in the fixation of a higher price for cane. In his opinion, it would, perhaps, be more equitable if the price of cane were linked to the average recovery of the entire current season, instead of the average recovery of the optimum period of the previous season.

The full text of Mr. Syed Ali's speech is reproduced below:

I have great pleasure in welcoming you to the twenty-fifth annual general meeting of the shareholders of the Nizam Sugar Factory Limited. The Directors' report and the audited accounts for the fifteen months ended 30th September 1962 have been in your hands for some time. The comments of the Comptroller and Auditor-General of India thereon under Section 619(4) of the Companies Act, 1956 could not be posted to you along with the audited accounts, as the same was not received by then from the Comptroller and Auditor-General of India. The comments have been posted to you subsequently and the same have been in your hands by now and, with your permission, I shall consider the Directors' report, audited accounts and the comments as read.

Trends in Sugar

I shall now briefly review the events that have taken place in the sugar industry since the last annual general meeting. The sugar industry at the commencement of the year under review was faced with certain new problems, probably for the first time during the last decade or so. The most important problem which this industry was called upon to face was the phenomenal fall in sugar price, rise in the cost of production with the narrowing of profit margin and the prospect of introduction of fresh measures for controlled trends in the sugar market. The formation of a Sugar Marketing Board is in the offing and, as the full scheme is not available, it is not possible at this stage to know the details regarding its functioning.

In the last annual general meeting, the Chairman in his speech mentioned regarding the promulgation of the Sugar (Regulation of Production) Ordinance 1961, by which the sugar production in the year 1961-62 was curtailed by 10 per cent of the previous year's production. This measure was adopted by the Government as a result of record production of about 30 lakh tonnes in the year 1960-61 and a huge carryover of about 12 lakh tonnes before the commencement of 1961-62 season. This sudden decision of the Government put many factories in difficulties, as they had already contracted cane for the 1961-62 season well before the promulgation of the Ordinance. Your factory made representation to the concerned authorities and obtained additional production quota so as to avoid payment of penal excise duty. In September 1961, the Government removed all controls on movement and distribution of sugar with a view to augmenting internal consumption and reducing the huge gap between production and consumption of sugar. No doubt, the above two measures to some extent corrected the imbalance between production and offtake, but also resulted in a steep fall in sugar prices. The production was at the level of about 27 lakh tonnes and the domestic consumption touched the figure of about 25.3 lakh tonnes. About 3.3 lakh tonnes were exported, earning a foreign exchange of about Rs. 14 crores. Thus, the season 1962-63 started with a carryover of about 10.4 lakh tonnes.

Cane Price

For the current season, the Government of India have decided to fix the price of sugarcane on the basis of quality instead of weight as was being done hitherto. This important decision will go a long way in improving both the quality of the cane and the efficiency of the factories. It may be noted that, for the current season, the price of sugarcane has been fixed on the basis of the recovery obtained by the individual factories during the optimum period of the season. Since the recovery of only the optimum period was taken as the basis, it has resulted in the fixation of a higher price. It would perhaps be more equitable if the price of cane is linked to the average recovery of the entire current season, instead of the average recovery of the optimum period of the previous season.

Another important development in the sugar industry this year for the first time is the production of raw sugar for purposes of export. Your factory has produced 2,203.9 tonnes of raw sugar, according to the specifications laid down by the Indian Sugar Mills Association and the entire quantity has been exported.

Working of Factory

I shall now proceed to review the working of your factory. During the year under review, 6,00,267 tonnes of cane was crushed producing 57,566 tonnes of sugar with a recovery of 9.59 per cent, as against 6,48,916 tonnes of cane crushed, producing 65,219 tonnes of sugar with a recovery of 10.05 per cent of the previous year. The factory commenced crushing operations on 22nd October 1961 and the season came to a close on 31st May 1962. The duration of the season was 222 days which is shorter by 29 days than in the previous year. This is due to crushing of 48,649 tonnes of cane less than the previous year. The output of sugar also decreased from 65,219 tonnes to 57,566 tonnes. The recovery has slightly fallen from 10.05 per cent to 9.59 per cent which is mainly due to lower sucrose content in the cane. The factory farms produced and supplied 2,39,282 tonnes of cane, as against 2,07,354 tonnes of cane in the previous year. There has been a slight increase in the production of cane on the farms.

Your Company has made a gross profit of Rs. 52,26,136 for the 15 months period ended 30th September 1962, as against Rs. 81,33,275 of the previous year. Deducting Rs. 22,09,788 towards depreciation (including development rebate of Rs. 8,22,091) and Rs. 10,44,000 for taxation, the net profit is Rs. 19,72,348 which is less by Rs. 24,04,524 when compared to the net profit of Rs. 43,76,872 in the previous year. The decrease in the profit this year is mainly due to (i) slight fall in recovery percentage of sugar on account of less sucrose content in the cane, (ii) fall in sugar price on account of additional releases and lifting of control on movement and distribution of sugar, (iii) payment of increased interest on heavy borrowings due to large accumulation of stocks and (iv) additional expenditure of three months (July 1962 to September 1962) in the accounts to the tune of nearly Rs. 22 lakhs, as a result of change in the financial year of the Company from 'July to June' to 'October to September.' The general trend in the industry this year has been the dwindling of profits. Considering the unfavourable conditions the sugar factories in general have experienced this year, I feel that the results achieved by your Company are satisfactory.

The sugar sales during the period totalled to 6,45,342 bags as against the previous year's sale of 4,66,783 bags. Your Company has incurred a loss to the tune of Rs. 7,81,747 on the export quota of 48,552 bags allotted to it.

The price of cane was fixed at Re. 1.74 per maund of cane delivered at Factory gate from 1st November 1962. This year no provision for extra price of cane is made, as the same is not payable according to the formula followed by the Company.

Invest in active securities

Not in dead metal

Dividend

Your Directors have recommended payment of dividend on preference shares in terms of the Preference Shares (Regulation of Dividends) Act, 1960.

In the case of ordinary shares, your Directors are reluctantly obliged to recommend a lower dividend of Rs. 4.50 per share of Rs. 25 fully paid, subject to deduction of tax, as against Rs. 5.75 recommended in the previous year. A sum of Rs. 2,60,000 had to be transferred from the dividend equalisation reserve to the profit and loss appropriation account to enable your Directors to declare the above dividend, as the profits of the year were not sufficient.

The working results of the confectionery plant show a loss of Rs. 2,47,477, as against Rs. 1,64,546 of the previous year. The Company had to spend sizable amounts towards advertisement and sales organisation, as this was essential because, without proper publicity and organisation, it was very difficult to push the sales by competing with the rival brands, who widely advertise their goods and have firmly established in the market. The benefit achieved from advertisement and publicity on a wide scale will only be felt in the coming years. I am glad to say that the sales this year are improving. The sales organisation is now taken over by the Company itself and steps are taken to augment sales by establishing reliable distributors backed by efficient system of distribution and advertisement. It is hoped that, in the course of the next two or three years, the losses will be reduced and the confectionery line will start making profits.

The Chairman, in the previous report, had touched upon the position regarding availability of new tractors. I am glad to say that the Company has now acquired 14 new tractors and there is a proposal to buy additional 10 tractors every year, so that, by the end of three years, the Company will be having a fleet of 44 new tractors. By this, the operational cost will be reduced by Rs. 28 per acre, envisaging a total saving of about Rs. 2 lakhs annually.

The agreement between the Nizam Sugar Factory Ltd. and the Government Power Alcohol Factory for the management of the affairs of the Government Power Alcohol Factory by the Nizam Sugar Factory Ltd., on agency basis and for supply of steam and molasses, have been finalised and sent to the Government for execution.

Contributions to N.D.F.

The management-labour relations during the period were on the whole satisfactory. In this connection, I have great pleasure to inform the shareholders that, in response to the appeal of the management, the employees of the Nizam Sugar Factory Ltd. have contributed one month's salary out of the bonus payable to them to the tune of Rs. 3,77,000 to the National Defence Fund. The cane growers have also generously contributed a sum of Rs. 4 lakhs from the arears of extra cane price payable to them. The Company has also contributed a sum of Rs. 3,15,000 to the National Defence Fund. Thus, in the hour of the country's need, the Company, employees and the ryots have readily come forward to contribute their mite to the national cause.

The work of construction of 260 two-room tenements is in progress and an expenditure of Rs. 9,92,328 was incurred on the project. Eighty-eight units were completed in all respects and allotted to workers. The remaining units are expected to be completed within three months. A loan of Rs. 3,00,300 was received during the period from the Government of India.

I regret to inform the shareholders about the sad demise of two senior officers of the Company, namely, Shri N. Venkatayya, General Manager, and Shri M. A. Khan, Chief Mechanical Engineer. They served the Company loyally and conscientiously. Their services were highly appreciated by the management.

Before I conclude, I would like to express my thanks to my colleagues on the Board of Directors for their abiding interest in the affairs of the Company and to the officers, staff and workers of all ranks for their continued co-operation, loyalty and efficiency.

N.B.—*This does not purport to be a report of the proceedings of the General Body meeting held on 30th March 1963.*

TREND OF MARKETS

MONEY SLIGHTLY BETTER

(From Our Own Correspondent)

BOMBAY, *3rd April*

Conditions in the short-term money market improved slightly during the week under review. Demand for funds no doubt continued to be pretty heavy, but there was also a rise in supply, though the rise was only modest. Nevertheless, the inter-bank call rate was maintained at the high level of 6¼ per cent. After clearing hours today, some transactions were reported to have been put through at 6 per cent. One big bank, it was said, borrowed sizably at this rate. The trend at Calcutta, too, was a little easy, the call rate declining by a quarter per cent to 6¼ per cent. Good business was reported done both at this rate and at 6 per cent, with borrowers over.

Despite the slight improvement in the supply of funds, the 91-day Government of India Treasury Bills, tenders for which opened on Monday the 1st inst., evoked, as usual, poor response. The total amount offered was just Rs. 2 crores; this was also the amount invited and accepted. The average rate of accepted tenders continued unchanged at Rs. 2.370 per cent per annum. The response to Intermediate Treasury Bills was slightly better, the amount of Bills actually sold from 26th to 30th March being Rs. 10 lakhs, as against Rs. 6 lakhs fetched a week before.

There was a fall of Rs. 1.19 crore to Rs. 116.38 crores in India's foreign assets during the week ended 29th March 1963. The whole of this fall was accounted for by balances held abroad which stood at Rs. 11.30 crores. Foreign securities held in the Issue Department of the Reserve Bank were unaltered at Rs. 105.08 crores. Loans and advances to scheduled banks improved by Rs. 1.91 crore to Rs. 71.28 crores, of which those against usance bills aggregated Rs. 53.30 crores, a rise of Rs. 1.02 crore. Notes in circulation went up by Rs. 11.52 crores to Rs. 2,241.96 crores.

The total credit made available by scheduled banks to their clients increased by a bare Rs. 42 lakhs to Rs. 1,578.97 crores during the week ended 22nd March 1963. Since their deposits, too, rose quite markedly by Rs. 8.80 crores to Rs. 2,171.49 crores, the banks resorted to less borrowings from the Reserve Bank. The actual borrowings fell by Rs. 8.76 crores to Rs. 69.52 crores, of which those against usance bills alone accounted for Rs. 54.34 crores. At the same time, the banks expanded their investment portfolio by Rs. 9.56 crores to Rs. 597.11 crores.

The Gilt-edged market continued to rule dull and quiet. Business put through was restricted, with values moving narrowly.

In the foreign exchange market, the banks' selling rate for ready dollars was unaltered again at Rs. 478 per $100. But their buying rate was higher by 25 nP at Rs. 474.75. On the New York Exchange, the £ sterling eased *vis-a-vis* the dollar, the spot rate declining from 280.060-280.090 cents to 279.980-280.020 cents and the three months' forward from 279.240-279.270 cents to 279.050-279.090 cents.

• • • •

The total contributions brought into the Central account of the National Defence Fund at New Delhi upto the close of business on 30th March 1963 amounted to Rs. 50.50 crores, including Rs. 28 lakhs received from Britain and Rs. 42 lakhs from other countries. In addition, contributions in gold and gold ornaments amounted to 1,866,242 grammes approximately equal to 160,055 tolas.

BULLION PRICES LOWER

(From Our Own Correspondent)

BOMBAY, *3rd April*

Bullion prices were lower this week, with silver shedding its last week's steadiness more due to weakness in gold than anything else. Turnover remained on the low side.

With some leading dealers having successfully made and displayed 14-carat gold ornaments, ready gold of .996 fineness seemed to lose its glitter. Ready gold opened one point lower at Rs. 99 on Thursday, 28th March, and eased further to Rs. 97 the next day at which it hovered thereafter to close a shade higher today at Rs. 98. At today's closing, gold was down by four points over the past two weeks. Sovereign was unchanged this week at Rs. 74.

Ready silver opened at Rs. 238 and recovered to the last week's close of Rs. 239 the next day only to turn lower again to round off the week at the lowest level of Rs. 237. Due to the drop in price, the daily average arrivals contracted further from 17 bars to 14 bars, while the offtake improved by one unit to nine bars.

After further initial easiness, silver prices firmed up in New York and London, as demand tended to expand. The week's best levels in London were, however, not maintained till the close, though the New York price was fully firm. Ready silver, in London, recovered at first from 108¾d. to 109¼d. (the last week's closing level), but eased again to close at 109¼d. The forward quotation similarly looked up from 109½d. to 109¾d., before closing at 109¾d. In New York, the price recovered from 126.7 cents to 127.3 cents at which level it closed unchanged over the week.

During the week under review, ready gold, in London, showed an improvement from 250s. 8¾d. to 250s. 9¼d., after having fluctuated between 250s. 8d. and 250s. 9¼d. The dollar price of gold eased, however, from $35.11¾ to $35.10¾.

According to official information, production of gold in India has declined since 1960-61 on account of an "overall fall" in the grade of ore mined and rock burst. However, the total production in 1961-62 showed a marginal improvement at 4.98 million grammes as compared with 4.95 million grammes a year before.

Permits for the purchase of gold not exceeding 500 grammes in each case for industrial uses during the quarter from 1st March to 31st May 1963 are not to be granted to those users who did not actually consume the commodity in the corresponding period of 1962. A similar restriction will apply to manufacturers of ayurvedic and unani medicines, according to a Press note issued by the Gold Control Board at Bombay on 28th March 1963. Explaining the position in regard to return of gold ornaments mortgaged with licensed and non-licensed dealers, the note says that the same can be done provided that (i) the mortgage had been done before 10th January 1963, (ii) in the case of a licensed dealer, the ornaments are included in his return and declared by him as well as the person who has mortgaged them, and (iii) the excise authorities are satisfied about the genuineness of the mortgage deal. No restriction applies to return of ornaments pledged or pawned with persons not construed as dealers under the Gold Control Rules. Declared gold in the process of making ornaments can be returned by a dealer to the customer in the presence of the excise authorities, provided it was lying in unfinished form on 10th January 1963. When, however, ornament gold such as old ornaments had been given for the manufacture of new ornaments, gold even in unfinished form cannot be returned to the owner, except in the shape of ornaments of a purity not exceeding 14 carats, the note adds.

The Union Government has decided to allow facilities for the manufacture of gold ornaments of over 14 carats in bond for export purposes in order to earn more foreign exchange. The Government has amended the Customs Bonds (General) Rules, 1960, by inserting the item "articles made of gold of a purity exceeding 14 carats" in the schedule appended to the Rules. The amendment will, however, come into effect from the 30th inst. It is estimated that 12 to 15 firms are engaged at present in making gold ornaments for export, valued at Rs. 80 lakhs to Rs. 1 crore.

Mr. G. B. Kotak, Chairman of the Gold Control Board, stated at Madras on 30th March 1963 that the question of supplying 14 carat gold to dealers and goldsmiths would be considered by the Board with the Government, though the Rules at present did not allow the Board to arrange for such supply.

The following table shows the trend of prices during the week under review:

	3-4-63 (closing)	High	Low	27-3-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine) ..	237.00	239.00	237.00	239.00
GOLD				
Ready (.996 fineness) ..	98.00	99.00	97.00	100.00
Sovereign.	74.00			74.00
London—	250s.9¼d.	250s.9¼d.	250s.8d.	250s.8¾d.
Gold	109¾d.	109¾d.	108¾d.	109¾d.
Silver Ready ..	109¾d.	109¾d.	109¼d.	109¾d.
Silver Forward ..				
New York—	127.3	127 3	126.7	127.3
Silver	cents	cents	cents	cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

TRADING IN JARILLA AUGUST

(From Our Own Correspondent)

BOMBAY, *3rd April*

The most important development of the week in the cotton futures market was the commencement of trading in Jarilla August 1963 contract on Wednesday, the 3rd inst. The contract opened at Rs. 715 per three quintals, that is, about Rs. 10 higher than the May 1963 contract. Initially, the contract attracted selling, with the quotation declining to Rs. 712, although it recovered to close at Rs. 715.50. Traders are optimistic that the contract would have a smooth sailing on account of the fairly comfortable supply position of cotton during the current season.

Trading in the other hedge contract, namely, Jarilla May 1963, was featureless. Prices tended to decline, thanks to easy advices from the ready market. Lower levels, however, met with resistance which prevented a further fall in prices. The contract fluctuated between Rs. 701 and Rs. 710 and finished at Rs. 709, as against last week's closing rate of Rs. 707.50.

Trading in the spot market at Sewri was dull. Spinner demand was slow. Generally speaking, only needy mills were in the market for such popular varieties as C02, L.147, Buri and Digvijay. Export interest in Bengal *Deshi* was moderate. Ready lots of selected foreign cotton varieties such as Busoga, Menoufi, Elpaso and Karnak attracted the attention of mills.

Indications are that Indian mills consuming Egyptian cotton will have to pay higher prices for their raw material if the reported decision of the U.A.R. Government to raise the price paid to growers of Egyptian cotton, with effect from the next season beginning on 1st August 1963, is implemented. The proposed increase is one tallaris per cantar for Ashmouni variety, three tallaries per cantar for the Dandera variety, and two tallaris per cantar for the Karnak variety.

The main objective of the price revision is said to be to compensate the farmers for the decline in the yield per acre of certain varieties and the higher cost of cultivation of some others. The present market situation for Egyptian cotton would also appear to be favourable for an upward revision of prices. Prices of Egyptian cotton, especially of the longer staple variety, have of late been ruling firm both at Alexandra and in foreign markets.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Ganganagar 800; CO2 (Dhulia) 1,470; L 147 1,175; Busoga 2,025; Menoufi 1,768; American 1,385; Sudan G4S 1,345.

Cotton futures in the Karachi market suffered a setback during the week. Slow domestic mill demand and reduced export interest led to a decline in prices. The N.T. May 1963 contract receded from Rs. 72.40 to Rs. 71.40. The July contract eased by 40 nP to Rs. 73.30. The ready market too ruled subdued. The following are the latest available quotations—in rupees per maund—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 74.50; Punjab *Deshi* 69.50; 4F Punjab Roller 78.05; S.G. 83.55; L.S.S. Punjab Roller 80.05; S.G. 85.05; N.T. Roller 84.05; S.G. 85.55.

Cotton futures in Liverpool tended to recede during the week, thanks to commission house selling in new crop months, which found support only at low levels. In the spot section, spinner demand was largely confined to American, Mexican and Turkish growths. Prices tended to recede. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closing quotations:

May 23.75 (23.95); 23.60; May (Sudan) 29.00 (29.00.)

Cotton futures in the New York market ruled firm early in the week, thanks to commission house buying and domestic mill support. The sentiment, however, changed towards the close of the week. The announcement by the Department of Agriculture of an export sales programme beginning from 1st July 1963, under which cotton from Government stocks would be available for export on a competitive basis, prompted selling. A part of the earlier losses were wiped out. Net change in price over the week, however, was negligible.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago.

(In cents per pound)

	2-4-63	26-3-63	19-3-63
May	34.52	34.92	34.89
July	33.68	34.34	34.25
New York Spot ...	35.90	35.90	35.90

MIXED TRENDS IN YARNS

(From Our Own Correspondent)

BOMBAY, *3rd April*

Mixed trends were discernible in yarn prices this week. In art silk yarns, some selected varieties gained further, while others eased. Spot 2 x 40 staple fibre sagged again. With some minor exceptions, cotton yarns closed unchanged over the week.

Among art silk yarns, while 120D S.I. Viscose improved further from Rs. 12.91 to Rs. 13.62 a kilo, 150D declined by 10 nP to Rs. 12.45. National Rayon yarns were steady at the last week's levels, but 100D Bright Century fell from Rs. 14.72 to Rs. 12.17 in the absence of buying support. Kohinoor 2 x 40 spot staple fibre reacted sharply from Rs. 8.05 to Rs. 7.35, though Century looked up from Rs. 7.28 to Rs. 7.35. Among cotton yarns, 10s Podar showed a gain of 25 nP to Rs. 18.50.

Exports of rayon and synthetic fabrics in January this year at 3.45 million metres valued at Rs. 33.89 lakhs were lower as compared with 4.27 million metres valued at Rs. 39.5 lakhs in the previous month. The setback was due to lower offtake by Asian and African countries at Rs. 22.75 lakhs and Rs. 6.95 lakhs, respectively, as against Rs. 37.67 lakhs and Rs. 10.11 lakhs in December last. On the other hand, exports to the U.S. and Europe showed some improvement at Rs. 1.04 lakh and Rs. 2.56 lakhs, respectively. The average price realised per metre during January was 98 nP., as against 92 nP in the previous month. In May 1962, the price realised was as high as Rs. 1.28.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	3-4-1963	27-3-1963
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	11.68	11.68
Century 75D	16.68	16.92
S. I. Viscose 150D	12.45	11.55
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.)	7.35	8.05
Century	7.35	7.28
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.50	18.25
20s Edward	23.00	22.50
30s Kohinoor	—	29.75
40s Cambodia	35.75	36.00
60s Kasturi	47.50	48.00
80s Laxmi	83.00	83.00

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *3rd April*

Barring castorseeds which suffered a distinct setback on heavy liquidation, the oilseeds market ruled firm during the week under review. The firmness of groundnuts futures was engendered by strong speculative support as well as pronounced strength in spots. The decline in arrivals from Gujarat also imparted strength. Linseeds moved up, following encouraging advices from sarson markets in the North. Cottonseeds ruled steady. The easiness in castorseeds was prompted by large-scale issue of tenders against the maturing (March) contract and larger arrivals of new crops from upcountry centres. At the close of last

month, March contract in castorseeds and linseeds went off the board.

Groundnut April 1963 contract advanced by Rs. 6.25 to Rs. 208.75. July 1963 contract rose by Rs. 3.12 to Rs. 216.12. Nizam Bold strengthened by 63 nP to Rs. 41.75. Khandesh quality improved by 50 nP to Rs. 42.25. Oil ex-mill hardened by 20 nP to Rs. 16.70 and railway receipts by 10 nP to Rs. 16.35.

Linseeds June 1963 contract gathered 69 nP to Rs. 34.94. Bold ready closed higher at Rs. 33.25, as against Rs. 32.87. Linseed oil picked up 25 nP to Rs. 12.85.

Among cottonseeds, both non-white and bearer rose by 35 nP to Rs. 20.10. White increased by 20 nP to Rs. 19.10. July 1963 contract, however, lost Rs. 2 to Rs. 98.

Castorseed March 1963 contract, which had closed last week at Rs. 163.25, went off the board at Rs. 154. June 1963 contract moved down from Rs. 158.25 to Rs. 156.25, before recovering to Rs. 157.25. Kanpur fell by Re. 1.87 to Rs. 29.25. Ready Madras eased by Re. 1.75 to Rs. 30.50. Oil B.S.S. declined by 55 nP to Rs. 12.85 and commercial by 35 nP to Rs. 12.45.

The following table shows the closing prices of oilseeds and oils on Wednesday 3rd April, as compared with those of two previous weeks:

	3-4-1963	27-3-1963	20-3-1963
Groundnuts	Rs.	Rs.	Rs.
April 1963 contract	208.75	202.50	201.50
July 1963 contract	216.12	213.00	212.00
Nizam bold	41.75	41.12	41.00
Khandesh quality	42.25	41.75	41.50
Oil ex-mill	16.70	16.50	16.40
Oil commercial	16.35	16.25	16.25
Castorseed			
June 1963 contract	157.25	158.25	159.00
Ready Madras	30.50	32.25	32.62
Ready Kanpur	29.25	31.12	31.00
Oil B.S.S.	12.85	13.40	13.10
Oil commercial	12.45	12.80	12.70
Linseed			
June 1963 contract	34.94	34.25	34.00
Bold ready	33.25	32.87	31.75
Linseed oil	12.85	12.60	12.25
Cottonseed			
April 1963 contract	100.00	—	97.00
July 1963 contract	98.00	100.00	96.75

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, *1st April*

The Madras kips market ruled steady this week. There were good inquiries from overseas importers for fifths selection in cowhides in light and medium weights all marks, but with shippers here quoting a penny more than buyers' prices, business was restricted. Cowcalf were steady, with the call being more for lower selection than run. Demand for buffcalf was poor and stocks of light weights began accumulating in the local market.

In the tanned goat skins section, sellers quoted stiff prices which importers did not follow, except in the case of light weights. There was some call for secondary marks from the U.K., Continent and U.S. As regards sheep skins, primes and semi-primes ruled firm, but sales were patchy. Demand for middle class sheep 6/7 lbs. fifths and inferiors was brisk and prices hardened slightly.

The next tanned skins auctions in Germany will commence on the 8th inst., when about 80,000 goat skins and 29,000 sheep skins will be offered for sale.

TIPPY TEAS EASIER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *28th March*

Sale No. 13 held on the 26th inst. comprised 341,000 kilogrammes. Quality of Nilgiris showed a slight decline, while there were few brighter teas available among mediums and good mediums. The market met with good general demand. Low mediums were well supported, but prices for these were barely steady. Mediums and good mediums were fully firm and the brighter types were dearer, particularly brokens. Highgrowns met with less support and prices for these declined considerably. Teas of unorthodox manufacture sold well and prices were about steady. Whole leaf grades also attracted useful support but were a little irregular. Tippy teas sold at easier rates.

The quotations (per kg.) were as under:

	1963	1962
	Rs.	Rs.
Low mediums	4.40-4.90	4.00-4.40
Mediums	5.00-5.70	4.40-5.25
Good mediums	5.70-6.60	5.25-6.80
Nilgiri B.O.P.	6.00-9.40	5.00-8.85

The average price realised in sale No. 13 was Rs. 5.46 per kilo as against Rs. 5.44 a week ago and Rs. 5.37 in the corresponding sale last year.

In dust sale No. 13 held today, 149,000 kilogrammes were offered. The market met with good demand. Low mediums and mediums, although sold readily, were irregularly 10 to 15 nP easier. There was good inquiry for good mediums which sold at around last rates. Highgrowns were also well supported and are quoted barely steady. Grainy black Middle East types were strong and registered advances in price. Teas of unorthodox manufacture inclined a little easier.

The average price realised in dust sale No. 13 was Rs. 4.58 per kilo as compared with Rs. 4.76 a week ago and Rs. 4.09 in the corresponding sale last year.

Colombo: There was fair general demand. Plainer sorts were about steady. There was strong demand for uvas and mediums which were dearer by 5 to 10 cents. Lowgrowns were also well supported at firm to dearer rates.

London: North Indian and other growth: In Monday's sale, there was useful demand. Prices ruled firm on last week with the best liquoring teas tending dearer.

Ceylon and South Indians: In Tuesday's sale, offerings amounted to 23,595 packages, of which 6,626 packages were from South India. Quality teas from Ceylon were firm to dearer, while mediums and lowgrowns sometimes declined by 1*d*. There was good inquiry for South Indians which were firm, particularly fannings grades.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 14: 340,000 kgs. offered. Good general demand. Low mediums and mediums 10 to 15 nP easier, particularly fannings good. Highgrowns and unorthodox lower."

OUTLOOK FOR TEA IMPROVES

(From Our Own Correspondent)

CALCUTTA, *2nd April*

The interval between the end of one season and the beginning of another of a commodity is usually used as an opportunity to assess prospects for the new season. With the export sale that took place a week ago, the 1962-63 tea season came to a close, and the trade has since been busy discussing the marketing outlook that is in the offing. The fact that, despite a decline in output, exports in 1962 totalled 214 million kgs. representing a substantial increase of 10 million kgs. over the previous year, has enthused the trade. Further, in the first two months of the current year exports totalled 38.1 million kgs., recording an increase of 4.6 million kgs. over the corresponding period of the previous year and of 6.8 million kgs. over that of 1961. This shows that, if this satisfactory trend continues, exports in 1963 will be higher than in 1962. Moreover, with little or no carryover stocks from the last season, the marketing outlook will be all the more encouraging. Tea stocks in the United Kingdom are lower for this time of the year and, it is, therefore, expected that as and when the new season's export sales open the demand accumulated by that time will sustain the satisfactory price trend.

This rosy picture does not, however, mean that all is well with the tea industry. For instance, the news that the U.S.S.R. has agreed to buy this year 6 million lbs. of tea from Ceylon has caused apprehensions that Ceylon has succeeded in diverting partly Russian demand from India. Ceylon has already shipped 2 million lbs. to the U.S.S.R. this year. Russian purchases from Ceylon in 1962 totalled 5 million lbs., as against 319,000 lbs. in 1961. The U.S.S.R. usually buys tea from India, Ceylon and Indonesia, but the significant increase in Russian interest in Ceylonese tea is taken here to mean that Ceylon is getting an increased share of Russian requirements. Ceylon is also offering stiff competition in other overseas markets with improved quality and relatively lower cost of production.

Both the industry and the Government in this country have also been seized with the importance of improving quality, and Tata-Finlay's decision to set up a plant for the manufacture of instant tea is an evidence of the sagacity of the private sector. The Government has proposed to spend a sum of Rs. 3 crores for exploring new markets. That the Tea Board is alive to the need to devote more attention to expand markets is evident by the series of measures it has taken in recent months to step up propaganda. The United Kingdom is India's biggest market and it is, therefore, only natural that that country should receive much attention at the hands of the authorities. The decision to set up more cafeterias in the U.K. has been timely, and it is proposed to ship tea vans, now under manufacture in India, to many markets abroad. Australia, where the *per capita* consumption of tea is much lower than in the U.K., will also receive more attention. However, Ceylon has already established an expanding market in Australia with its lower cost of production.

Judged against this background, the prospects of increased cost of production in India as a result of the numerous levies in this year's budget are causing concern. This is only too evident in the stock market where tea shares have been virtually neglected, despite the indications of a good marketing outlook. Although the average prices per kg. of leaf and dusts realised in 1962 were higher at Rs. 5.29 and Rs. 4.89 against Rs. 4.70 and Rs. 4.87, respectively, in 1961, it was found that profitability of the industry did not improve in 1962 because of the increased cost of production. The increased charges for transportation and higher prices for tea garden stores will also contribute to a further rise in costs this year. The only redeeming feature in the present situation is that tea gardens are at liberty to reduce costs by spreading out overheads over an increased output. And, in this regard, the studied view of the Tea Board Chairman, Mr. A. S. Bam, that, although all producing countries have been trying to raise their output, there is no ground for apprehending that supply will outstrip consumption in the foreseeable future is encouraging. However, with 80 per cent of the profits being claimed by the national Exchequer, there is little money left for the gardens to plough back on expansion. The problem of finance is worrying the tea industry, and urgent representations have been made for exempting this industry from the scope of Super Profits Tax.

Dusts on offer in the internal sales held here last week totalled 29,937 packages. Although there was a good and general demand, conditions weakened as the sales progressed. Good C.T.Cs were firm, but while medium C.T.Cs met with good demand, the clean teas eased by 20 nP. Legg-cut teas gave way by 20 to 30 nP. Orthodox teas had buyers at prices which were below 15 to 20 nP. The quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.60 to 7.20, medium Assam C.T.C. dust 5.50 to 6, legg-cut dust 5.10 to 5.50, plain orthodox dust 4.20 to 4.55 and medium Assam dust 4.70 to 5.30.

JUTE GOODS RECOVER

(From Our Own Correspondent)

CALCUTTA, *2nd April*

If prices of jute goods had recorded a small recovery during the week under review, this was due not to increased buying but to the likelihood of production being affected as a result of the West Bengal Government's directive to jute mills to stop operations of their weaving departments between 6.30 and 8.30 p.m. every day. This directive, which came into force as from yesterday, has been the result of power shortage. Although the demand for jute goods has not lately been as satisfactory as in the past and prices have gradually declined, mills continue production at the enhanced rate if only to reduce their stocks of fibre and lend support to the fibre market. How long the power shortage would last is difficult to say now, but the extreme summer months hold out no prospect of the situation easing. The trade noted with enthusiasm the International Trade Minister, Mr. Manubhai Shah's statement that exports of jute goods in 1962-63 touched a record figure of Rs. 160 crores, but the present lull in U.S. interest in hessian was causing concern. Stocks of burlap in the U.S. have risen, and it is apparent that the heavy purchases made by that country in October and November last did not follow an increase in consumption.

Mr. Shah's optimism that the jute industry would fulfill its export target of 900,000 tonnes per annum during the third Plan has not come as a surprise. It should, however, be emphasised that larger orders from overseas countries were received in 1962, in view of the sharp decline in the prices of goods following the bumper fibre crop. Fibre prices in Pakistan are much lower than in India, and the Pakistan mills are able to get as much orders as they are able to execute by under-quoting Indian rates. Orders for heavy goods come to mills in India only when Pakistan is unable to meet the demand. In order to enable mills to face competition, it is necessary that fibre prices must bear an economic relationship with prices of goods. Even when mills are doing all they can to purchase as much fibre as possible, the cry that the cultivator is being oppressed continues. Demands for permitting exports of superior fibre and for cancelling the export duty are often made without any regard to the long-term interests of the cultivator as well as the mill industry. While mills do not oppose the export of the inferior fibre, any attempt to export the higher grades would only add to the competitive power of mills abroad against the Indian product. In recent months, a shift in demand to specialities has been in evidence, but mills are not able to increase production of these due to shortage of good quality fibre.

During the week, fibre arrivals averaged about 35,000 maunds a day. Mills showed interest in small parcels only, but sellers refrained from discounting quotations further. The mid-week rise in goods raised fibre prices by 50 nP, but, even after the rise, some of the lower varieties failed to reach the minimum levels. Assam middles had buyers at the minimum rate. The prospect of lower production as a result of power shortage has caused anxiety to stockists. At the same time, mills have been worried that demand for goods is not picking up. They realise that, unless production is continued at the enhanced rate, carryover of fibre would be a problem. Also, there is every risk of deterioration in quality, since a good portion of the fibre is stored in open air covered with tarpaulin. Mesta was about Rs. 2 below the minimum levels, while the higher qualities such as daissee and tossa were quoted 50 nP higher than the minimum. In Pakistan, conditions were dull and the heavy accumulations of outgoing consignments of raw jute and jute goods in Pakistan ports due to absence of adequate shipping space caused concern to those who still had old fibre for disposal and commitments to honour. Reports of commencement of sowing in some districts and of germination in certain low-lying areas, where sowing had already taken place on a small scale, led to expectations of an early crop and these also affected prices in Pakistan.

The goods market was much relieved to know that the earlier reports of a large U.S. importer of Indian hessian having decided to close his interests in Calcutta were baseless. This resulted in liveliness in the hessian section and, for a time, selling pressure was also absent in heavy goods. On Tuesday last, there was a good amount of local buying in ready heavy goods leading to energising speculators in the futures market. As a result, ready B. twills gained from Rs. 108.85 to Rs. 110.75. In sympathy, ready hessian 40" 10 oz. was fractionally higher at Rs. 46.85. At this stage, interest was shown on behalf of U.S. buyers leading to scattered business. This was on Wednesday, when hessian 40" 10 oz. scored to Rs. 47.30. More interest was shown in heavy goods to push up B. twills to Rs. 111.30. Overseas buying continued on Tuesday, but the quantity was small to sustain the gains. B. twills eased to Rs. 111.10 and hessian 40" 10 oz. to Rs. 47.25. Soon, quotations were affected by selling pressure, but, on Friday, forward deals were put through in hessian. Hessian 40" 10 oz. was quiet at Rs. 46.75 and B. twills at Rs. 110.60.

Over the week-end, U.S. buyers renewed interest, and some business was put through. As a result, hessian 40" 10 oz. hardened to Rs. 47. There was also short-covering on account of due date goods. However, little interest was shown in ready goods, and B. twills eased to Rs. 110.40. Taking note of the end of British control over prices of jute goods imported into the U.K. in order to grant protection to the Dundee industry, the trade here thought that the British Board of Trade would soon take measures so that sales of Dundee goods would not go down. Control of prices came to an end in Britain following an order by the Restrictive Practices Court, which declared that seven price agreements in the jute industry in Dundee were contrary to the public interest. The retiring Chairman of the Association of Jute Spinners and Manufacturers, Dundee, has already demanded official action if only the jute industry in that country should not follow the example of the British cotton textile industry which is finding it very difficult to face the situation created by "unrestricted and uncontrolled importation of cheap goods." Yesterday, more sales with the U.S. were reported, and covering demand was fair. Hessian 40" 10 oz. was firm at Rs. 47 and B. twills at Rs. 110.75.

METALS QUIET

(From Our Own Correspondent)

CALCUTTA, *2nd April*

With permit-holders getting releases of base metals from the State Trading Corporation, the metal market here turned quiet during the week under review. The announcement by the Government that the import policy for the 1963-64 financial year would be announced before the end of this month was noted. Since base metals are required in a greater measure by the defence industries and the Chinese threat continues, it is expected that this year's quotas will be liberal. Further, a greater provision of imports under D.L.F. programme is also expected. All these factors led to the quiet tendency.

On the London Metal Exchange, the feature was the rise in tin from £853½ a ton to £855½. Despite the announcement of the peaceful settlement of the labour troubles in Malaya, the price rose on good demand from the U.S.S.R. in London. The Far Eastern markets also reported an upward trend. However, the price in Calcutta, after opening at Rs. 3,070 per 100 kgs. rising to Rs. 3,080, eased to close at Rs. 3,060. A Government tender for a modest quantity was reported.

The U.S. Government announced during the week that the General Services Administration would offer from the 3rd inst. 200 tonnes of tin for sale every week for a period of one year. The steadiness on the London Metal Exchange followed the U.S. Government announcement that bids would be accepted, if they were reasonably consistent with prevailing market prices. It was also stated that sales would be reduced or temporarily suspended, if open market prices showed a weakening tendency. The U.S. policy is in line with the demand of the International Tin Council, and is designed to stimulate confidence and encourage producers to increase output. Although it was not stated in such clear words, the tone of the announcements implied that the price of £850 a ton would be maintained. The Chairman of the International Tin Council has already welcomed the U.S. announcements.

Cash copper in London was unchanged at £234 a ton. Demand from the Continent was picking up. In New York, forward copper showed a fractional rise. This followed the forecast that the prospects for copper for this year were good, as consumption was moving up in the U.S. and Europe which take about 90 per cent of the free world's output. Although the S.T.C. released the virgin metal to permit-holders, a sharp decline in the price of zinc led to increased demand for copper scrap, and utensil scrap improved from Rs. 554 to Rs. 568 per 100 kgs. Electrolytic zinc opened at Rs. 287 per 100 kgs. and gradually dropped to Rs. 278, as demand was poor, while the stock position was comfortable. In London, the spot metal eased from £73¾ to £73½ a ton. Lead, in London, hardened from £56⅜ to £57½ a ton on keen consumer demand, but the rise was not sustained and the closing price was £56½. Lead was unchanged here at Rs. 175.

FOODGRAINS DRIFT LOWER

(From Our Own Correspondent)

HAPUR, *1st April*

An easy trend was witnessed in the foodgrain prices this week, as arrivals of new *rabi* crop increased. Harvesting of coarse grains is almost complete and that of wheat has commenced here. New wheat arrivals will soon commence. It is gathered that wheat stocks with the Centre are heavy and the Government is seeking extension of time limit for the 16 million tons of wheat from the U.S.A. under P.L. 480.

Wheat *dara* eased by 67 nP per quintal to Rs. 37.51 to Rs. 38.18 on selling pressure by stockists, but the farm quality was unchanged at Rs. 41.53 to Rs. 42.20. Local wheat stocks are now estimated around 26,000 maunds. Rice prices were almost unchanged at the previous levels, as arrivals from producing areas were small. Seasonal demand from consumers was on the increase. Stocks here are around 10,000 maunds. Week-end prices were:—Rice *basmati* superior Rs. 85.74 to Rs. 91.09, *sela basmati* Rs. 80.38 to Rs. 85.74, *mainpuri* Rs. 53.58, *ramajwayan* Rs. 61.62, *raimunia* Rs. 64.30 and *gadda* Rs. 50.91 per quintal.

Gram prices drifted lower on better new produce arrivals from Rajasthan and Punjab. The Punjab quality was quoted at Rs. 39.85 and the local quality at Rs. 38.85 per quintal. Arrivals averaged 200 maunds daily. Stocks with the trade were still very small. Maize prices ruled quiet, as seasonal demand was subdued. Prices ranged between Rs. 25.45 to Rs. 30.14 per quintal. Local stocks are now put at 7,000 maunds. *Barley* and *bejhar* prices were almost stationary at Rs. 24.11 and Rs. 24.11 to Rs. 24.78 per quintal, respectively. But *juwar* and *guwar* prices sought lower levels and were quoted at Rs. 30.81 to Rs. 34.83 and Rs. 27.46 to Rs. 28.13, respectively, per quintal. *Bajra* was steady at Rs. 30.81 to Rs. 32.15 per quintal.

In pulses, new peas improved by 32 nP to 67 nP per quintal according to quality. The *dara* quality was quoted at Rs. 27.29 to Rs. 28.80 and the farm produce at Rs. 32.82 per quintal. *Peas dal* was quoted at Rs. 33.49 per quintal. During the week, four wagons of *peas dal* were despatched to the south. Arrivals of new *peas* were around 800 maunds daily and were expected to increase soon. Local stock was estimated around 15,000 maunds. *Arhar* was quiet at Rs. 46.89 to Rs. 48.23 per quintal, but *arhar dal* sought lower levels at Rs. 64.30 to Rs. 66.98 per quintal. *Urd dal* was traded at Rs. 72.34 per quintal. *Moong* prices eased fractionally on slack demand. Week-end prices were:—*Urd* Rs. 58.94 to Rs. 66.98, *moong* Rs. 45.55 to Rs. 46.89, *moong dal* Rs. 61.62, *masoor* Rs. 50.91 to Rs. 52.25, *masoor dal* Rs. 58.94, *gram dal* Rs. 48.23, and *moth dal* Rs. 48.23 per quintal.

FURTHER RISE IN SUGAR

(From Our Own Correspondent)

HAPUR, *1st April*

Continued brisk buying support from Gujarat, Saurashtra, Maharashtra and Delhi accounted for a sharp rise of Rs. 3 to Rs. 4.50 per quintal in sugar prices this week. Towards the week-end, however, rumours were current that the Government would soon impose price control on sugar to stop the rising tendency in prices. Week-end prices were:—Spot delivery Rs. 114 per quintal; Mill delivery D29 per quintal—Amroha Rs. 112.75, Dhampur Rs. 113.12, Seohara Rs. 112.75, Meerut Rs. 113.75, E29 Simbhauli Rs. 113.75 and Bijnore Rs. 112.75.

A firm tendency prevailed in the Muzaffarnagar sugar market throughout the week, as demand was brisk. As mills were hesitant sellers, buyers from upcountry markets had to pay fancy prices. Prices for the different grades moved up by Re. 1 to Rs. 2.75 per quintal. Towards the week-end, however, prices developed a sagging tendency on persistent rumours that price control would be shortly enforced.

Despite restricted demand at higher levels, *khandsari* continued to rule firm. Towards the week-end, demand from Punjab, Rajasthan and Gujarat revived and the prices moved up by 67 nP per quintal. Week-end prices were:—*Khandsari* inferior Rs. 88.41 to Rs. 96.45, superior Rs. 99.13 to Rs. 107.84, crystal Rs. 97.79 to Rs. 107.17 and boora Rs. 107.17 to Rs. 115.21 per quintal.

After recording sharp gains up to Rs. 3 per quintal on buying support from Gujarat and Saurashtra, ready *gur* prices eased slightly in the week-end due to lack of demand at higher levels. Daily arrivals out of stocks retained by cultivators were around 600 to 800 maunds. The week's offtake aggregated ten wagon loads and stocks here came down to 31,000 maunds. Cane sowings were being done with vigour and the land vacated from the *rabi* crops was being utilised for such sowings. Due to the overall poor cane crop in the 1962-63 season, *gur* arrivals here during the season totalled 3.82 lakh maunds, as against 4.15 lakh maunds in the previous season and 4.68 lakh maunds in the season before that. Shakker continued to attract demand from Rajasthan. Week-end prices were:—*Gur* pansera superior Rs. 59.61 to Rs. 60.28, average Rs. 57.60 to Rs. 58.34, *dara* Rs. 56.26 to Rs. 57.60, *balti* Rs. 58.94 to Rs 61.62 and shakker Rs. 61.62 per quintal.

Gur and *shakker* prices recorded a rise in the Muzaffarnagar market. *Gur* chaku moved up by Re. 1.25 to Rs. 23 to Rs. 24.75 on brisk demand from Gujarat, Maharashtra and Punjab. *Gur* pansera was up by Re. 1 to Re. 1.50 on Punjab and Rajasthan support and was quoted from Rs. 22 to Rs. 23.50. East U.P. and Rajasthan evinced good interest in *gur* ladoo, the prices of which jumped up by Re. 1.50 to Re. 1.75 per 40 kg. to range between Rs. 22.25 and Rs. 23.75. Bihar, Bengal, Gujarat, Rajasthan and Punjab were keen buyers of rusket and khurpa, the prices of which advanced by Re. 1 to Rs. 2 per 40 kg. to Rs. 13 to Rs. 16.25. Shakker prices also recorded gains on Punjab and Rajasthan buying.

Notices

RAZA BULAND SUGAR COMPANY LIMITED

(Registered Office: RAMPUR, U.P.)

THE TWENTY-EIGHTH ANNUAL GENERAL Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Raza Buland Office, Rampur, U.P., on Tuesday, the 30th April, 1963, at 10.30 a.m. Notices of the meeting setting out the Agenda and Explanatory Statement on the Special Business to be transacted thereat are being sent by post.

Notice is hereby given that the Share Transfer and Members' Registers will remain closed from 11th April, 1963, to 30th April, 1963, both days inclusive, for purposes of dividend.

Persons holding shares under blank transfer should send such shares for transfer before closure of transfer books to be entitled to the dividend. Unless Exemption Certificate is received by 10th April, 1963, statutory Income Tax will be deducted from dividends.

By Order of the Board,

FOR RAZA BULAND SUGAR CO. LTD.,
S. K. KAUL,
Secretary.

RAMPUR, U.P.
Dated 1st April, 1963.

BRITISH PAINTS (INDIA) LIMITED

32, Chowringhee Road
CALCUTTA 16

THIS IS TO NOTIFY THAT THE BOARD OF Directors of this Company has recommended the payment of a Final Dividend of 3¾ per cent, subject to deduction of Income-tax, on the Equity Share Capital of the Company held by Members as on the date of the next Annual General Meeting.

The proposed Final Dividend of 3¾ per cent, together with the Interim Dividend of 6¼ per cent paid on 20th December, 1962, makes a total of 10 per cent payable out of the profits for the year ended 31st December, 1962.

By Order of the Board,

S. R. ROY,
Secretary.

Dated at Calcutta,
29th March, 1963.

LONDON LETTER

(Concluded from page 584)

with the preceding year of nearly £140 million This improvement has been made half on visible trade and half on invisibles. The following table shows how the totals of imports and exports have moved over the past three years:

(In million £s)

	1960	1961	1962
Imports f.o.b.	4,106	4,013	4,059
Exports and re-exports f.o.b. ..	3,710	3,865	3,988
Adverse visible balance ..	396	148	71

It will be noted that imports have shown very little movement and the improvement in balance of trade is basically due to a steady, if unspectacular, rise in exports.

As for the invisibles, the biggest handicap to substantial earnings is the enormous and still-growing level of Government expenditure overseas: six years ago, this was £147 million; in the year just ended, it has reached £371 million. Fortunately, over the last three years, the commercial invisibles moved up from £375 million in 1960 and £415 million in 1961 to £509 million in 1962. The improvement is mainly due to higher incomes from interest, profits, and dividends on overseas investments (especially oil) and more money coming in from shipping. So that, in spite of the swelling Government expenditure, invisible income netted £138 million to more than offset the deficit on visible trade and leave a small but agreeable current balance.

As usual (except in 1961 when there was an exceptional capital *inflow* into the United Kingdom), Britain's overseas investment is made regardless of whether the funds are there, and there was a surplus of investment overseas of £92 million.

A Chinese Puzzle

At this point, the arithmetic of Britain's external affairs becomes more intricate than a Chinese puzzle. It will be seen that, taking into account the excess of investment overseas, Britain apparently showed a net deficit of £25 million which was about the same as it was last year when there had been this big capital inflow.

But, in fact, there was no such deficit; there was a *surplus* estimated at £103 million and all this because somewhere in the accounts the gain to this country of £128 million has gone unrecorded; may be it represents items on current account, particularly invisibles, may be it represents other money transfers to this country which have slipped through the net of analysis; nobody knows what they are but what we do know is that the country did have a net gain on all its overseas monetary transactions of £163 million.

Britain, the international banker, can summarise her 1962 transactions rather in this way: the sterling balances dropped by nearly £400 million but, against this, there was an increase in miscellaneous liabilities through various capital movements of over £100 million. This left £280 million and odd to be found, of which £180 million and odd was found out of the gold and convertible currency reserves and the remaining £100 million was, of course, the favourable outcome of all the other transactions referred to above, both on current account, long-term capital account and the uncounted but favourable items.

T—Figures in Tons.

INDIAN JUTE STATISTICS

Particulars	Period	Quantity
	JUTE MANUFACTURES	(In 000 tons)
Production	During February, 1963	93.0
	Corresponding month, 1962	90.8
	Eight months ended Feb., 1963	790.4
	Corresponding period, 1962	666.0
Stocks	At the end of Feb., 1963	83.4
	Corresponding month, 1962	60.4
	DESPATCHES OF GUNNIES	(In 000 tons)
For Export Purpose	July-June, 1959-1960	833.5
	July-June 1960-1961	730.6
	July-June 1961-1962	760.1
	Jan., 1963	62.7
	Jan., 1962	62.4
For Internal Consumption	July-June, 1959-1960	248.3
	July-June 1960-1961	274.1
	July-June 1961-1962	282.8
	Jan., 1963	30.7
	Jan., 1962	27.0
	RAW JUTE	(In 000 bales)
Consumption by Mills	February 1963	539
	Corresponding month, 1962	528
	1958-59	6,014
	1959-60	6,291
	1960-61	5,782R
	1961-62	6,060

R—Revised.

INDUSTRIAL PRODUCTION*

Industries.		1959	1960	1961	Jan., to Aug., 1961	Jan., to Aug., 1962	Aug., 1961	Aug., 1962
Major Industries—								
Coal	million metric tons	47.80	52.62	56.10	33.72	39.79	4.36	4.96
Steel (Ingots and Metal for castings)	thousand metric tons	2,468	3,251	4,102	2,261	2,836	347	422
Yarn	million kgs.	781	788	862	565	574	75	74
Cloth	million metres	4,502	4,616	4,700	3,145	3,079	403	394
Cement	thousand metric tons	6,936	7,835	8,244	5,431	5,548	677	697
Jute	thousand metric tons	1,068	1,085	971	626	790	78	105
Paper and paper boards	thousand quintals	2,988	3,475	3,640	2,407	2,523	306	311
Matches§	million gross boxes	32.4	33.6	38.4	25.9	19.1	3.3	2.4
Sugar	thousand metric tons	2,117	2,591	2,841	2,240	2,123	15	5
Engineering and Electrical Industries—								
Machine tools	Value in lakhs of Rs.	439	601	793	630	682	72	86
Electric lamps	millions	34.84	41.39	46.12	31.20	37.21	3.96	5.09
Dry cells	millions	187.3	207.4	213.6	145.1	157.4	19.4	21.7
Power transformers	thousand K.V.A.	1,248	1,116	1,754	1,128	1,620	170	201
Electric Motors	thousand H.P.	576	680	827	539	647	72	86
Electric fans	Nos.	726,000	991,200	1,074,000	746,100	787,900	88,300	101,400
Radio receivers	Nos.	213,864	266,700	326,400	209,600	226,000	31,600	30,300
Storage batteries	Nos.	442,800	510,000	528,000	372,300	383,500	45,700	50,100
Diesel engines—Vehicular	Nos.	8,712	9,708	9,816	7,017	5,197	721	558
Diesel engines—Stationary	Nos.	30,336	44,196	44,196	28,609	27,202	2,537	3,510
Chemical Industries—								
Salt	million metric tons	3.18	3.44	3.47	3.18	3.50	0.09	0.13
Caustic soda	metric tons	69,876	99,144	119,844	77,103	82,355	10,492	12,523
Soda ash	metric tons	95,328	145,284	176,639	112,734	143,783	12,841	18,786
Chlorine liquid	metric tons	24,780	31,656	33,912	22,432	24,871	2,628	3,118
Bleaching powder	metric tons	5,184	5,928	7,128	4,373	4,418	666	653

ABBREVIATIONS. N—Nominal. (f) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport. A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable. †† Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6¼ to 4 per cent with effect from 1st April 1955. f—Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex Ten instalments but inclusive of accrued interest. M—At the option of the Government after three months' notice. K—On September 1936 or later at the option of the Government after three months' notice. T—Liability taken over by Madhya Pradesh. @ Total amount invested in Gold Bonds up to 18th February 1963.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per share.

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

(*Concluded from page 579*)

flies his earnestness to see that the pace of economic growth in the underdeveloped countries is accelerated through a larger outflow of American private capital. It is, of course, admitted that considerable progress has already been made to foster U.S. private investment through the use of investment guarantees—with over $900 million now outstanding—and by means of cost-sharing on investment surveys, loans of local currencies and other measures provided under the existing laws. Nevertheless, the rate of U.S. private capital investment in the underdeveloped countries continues to be in trickles. Take, for instance, India. The net inflow of U.S. private capital into this country, which had gone up from Rs. 2.6 crores in 1958 to Rs. 7.6 crores in 1959, declined to Rs. 5.0 crores in 1960 (the latest year for which data are available), whereas the aggregate net inflow from all sources spurted from Rs. 2.4 crores to Rs. 11.0 crores and further to Rs. 53.3 crores. If the inflow of American capital into India and other developing countries is to be stepped up, it is imperative that "much more," to quote Mr. Kennedy, "should be done both administratively through more vigorous action by the Agency for International Development and legislatively by the Congress." How urgent and important is the need for encouraging investment of U.S. private capital in the underdeveloped countries has been impressively brought out by President Kennedy in the following words:

"Economic and social growth cannot be accomplished by Government alone. The effective participation of an enlightened U.S. businessman, especially in partnership with private interests in the developing country, brings not only his investment but his technological and management skills into the process of development. His successful participation, in turn, helps create that climate of confidence which is so critical in attracting and holding vital external and internal capital."

While Mr. Kennedy's renewed emphasis on larger U.S. private investment in the developing countries is commendable, the Governments of these countries, too, cannot escape their own responsibility. They have to do everything possible to stimulate both foreign and domestic private investment not merely by pursuing sound economic and fiscal policies but by offering suitable incentives as well. Speaking for our own country, it is a moot question whether the Government of India has fulfilled this responsibility as well as it could have. Its oil policy is obstructionist and so also its policy in regard to many key as well as strategic industries. The same is true of some of the features of the Budget for 1963-64.

The underdeveloped countries must also utilise the aid received by them for useful projects, instead of for highly ideological programmes and make every effort to mobilise local resources. The need for all this is especially great in the context of the recent reviews of the U.S. aid programmes, including the Clay Committee's findings. Emerging from these reviews are "six key recommendations for the future" which have been incorporated in this year's aid message of Mr. Kennedy. Objective number one will be "to apply stricter standards of selectivity and self-help in aiding developing countries." Mr. Kennedy has said that increasing emphasis is already being placed on self-help and self-reform by the recipient countries themselves, using American aid "as a catalyst for progress and not as a handout." He has also promised continued emphasis on economic aid and "a sharp new look at both the size and purpose of those local military forces which receive our assistance." The other five key objectives are: (*a*) to hasten the day when nations helped will no longer need aid: (*b*) to continue "strong assistance" to countries most vulnerable to communist attack; (*c*) to bring about among prosperous nations a greater sharing of the aid burden; (*d*) to reduce the effect of the aid programme on the U.S. balance of payments; and (*f*) to increase the role of private investment and other non-federal resources in assisting developing nations.

The total foreign aid of $4,525 million asked for by President Kennedy in respect of the fiscal year 1963-64 represents, as already noted, an increase of $596 million as compared with the amount of $3,929 million which the U.S. Congress actually appropriated for the current (1962-63) year. The major portion of this increase is, appropriately enough, accounted for by economic aid, the requested sum being higher by $516 million at $3,120 million. The share of military aid has been raised by just $80 million to $1,405 million. Will the U.S. Congress appropriate the sums asked for by Mr. Kennedy? Last year, it will be recalled, the Congress effected a cut of $854 million in economic aid and $175 million in military aid. So far as the coming year is concerned, however, reports from Washington are encouraging, in that they suggest that the Congress will give its "full support" to President Kennedy's foreign aid programme, though some influential members of both the major political parties are said to be calling for reductions. This at any rate is the hope expressed by the top Democratic Legislative leaders. Mr. John W. McCormack, Speaker of the House of Representatives, for instance, is of the view that adequate foreign aid appropriations contribute vitally to the security of the U.S. and the free world. Mr. Hubert Humphrey, Majority Whip of the Senate, thinks that "it is a good programme and needs the public's support; I hope Congress will back the President." Senator William Fulbright, Chairman of the Senate Foreign Relations Committee, expects that the programme would be received with considerable approval."

A Historic Strike

The 114-day New York newspaper strike, which ended on 31st March 1963, was unique in many respects. It was, perhaps, the longest-ever strike in any country and was also one of the costliest. The nine daily newspapers affected are estimated to have lost over $108 million in advertising and circulation revenue. Newsprint producers lost $11.7 million and newsdealers were deprived of an equal amount. Apart from this direct loss, there were heavy indirect losses also. These were sustained by trade and businesses connected with or leaning heavily on newspapers such as department stores ($6.5 million), restaurants ($16 million), railways ($2.4 million) and hotels ($2 million). The loss by way of taxes to the Federal Government is placed at $12.15 million. No estimates are available of the loss of wage to workers, but it is bound to be equally heavy. The total cost of the strike to the community is estimated at $200 million or about Rs. 96 crores.

It may be recalled that the strike, which started on 8th December 1962, followed the rejection, by the publishers of four newspapers (*New York Times, Daily News, Journal-American* and *World Telegram*), of the demand by compositors for higher wages, shorter working hours and a guarantee against unemployment from increased automation. Other press workers joined the strikers later, bringing about a complete suspension of newspaper publication in New York. Five more newspapers voluntarily closed down in sympathy with the affected papers under a "one struck, all struck" agreement.

The agreement reached between the unions and the publishers provides for an increase of 12 dollars 63 cents in weekly wages and fringe benefits for compositors and a reduction in working hours from 36 to 35 a week. The strike may, therefore, be said to have been a success from the point of view of the workers. But considering the heavy loss suffered by the community, in general, and workers, in particular, the strike has been wasteful. It will take several years for workers to recoup the loss in their earnings.

This historic newspaper strike has demonstrated that newspapers still continue to be the most important media of mass communication. In spite of their best efforts, radio, television and periodicals could only partially fill the void created by the absence of newspapers. Consequently, the pace of economic activity in the City slowed down perceptibly and New Yorkers and the nation as a whole became poorer for it.

WEEK'S STOCK EXCHANGE TRENDS

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 4th April 1963.

SUGAR: PROBLEMS AND SOLUTIONS

"CRISIS" may not be the right word to describe the plight in which the sugar industry finds itself today. But it is not far from the truth to say that the conditions actually obtaining in the industry are akin to a crisis. The statistical position of sugar is pretty tight, the Central Government has reimposed controls on prices and the State Governments have taken measures to regulate trading (wholesale as well as retail). And there are possibilities of rationing being introduced in some parts. What is more, a cloud of uncertainty hangs on the size of cane crop and the output of sugar (white sugar as distinct from brown sugars, that is, *gur* and *khandsari*) in the ensuing season due to begin a little over five months from now. The blame for the present disquieting trends in the sugar economy rests largely with the Centre and, to some extent, with the State Governments. Well before the current season began (on 1st November 1962), everyone knew that the cane crop had suffered severe damage in several parts and that naturally the prices of *gur* and *khandsari* had risen to abnormally high levels. We had ourselves drawn the attention of the authorities to this phenomenon on more than one occasion and urged them to take the necessary steps to prevent large-scale diversion of cane supplies to the manufacture of *gur* and *khandsari*. Neither the Central Government nor the State Governments, however, did anything in the matter. But for this lapse, the sugar supply position would have been definitely quite comfortable and there would have been no need to impose controls on prices or distribution.

That Mr. S. K. Patil, Union Minister for Food and Agriculture, himself is conscious of the official lapse is borne out by the tone of his speech while inaugurating the thirtieth annual meeting of the Indian Sugar Mills' Association held at New Delhi on Wednesday this week. Mr. Patil did not accuse the industry or trade of being responsible for the none-too-encouraging situation. Nor did he seek to preach sermons to sugar interests as to how they should behave. He appreciated some of the difficulties confronting the industry which the retiring President of the Association, Mr. M. N. Pittie, so ably highlighted and gave a firm assurance that he would take all possible measures to ensure maximum sugar production in the coming (1963-64) season. Although Mr. Patil did not spell out in detail the new sugar policy, he did indicate three important steps. One, the Government of India proposes to take, in consultation with the State Governments, effective measures, well ahead of the next season, to deal with the problem of equitable distribution of cane supplies among different users, so that "the industry is not starved of supplies of cane required for the productive effort which we have set before us." Incidentally, Mr. Patil considers the sugar production target of 3.3 million tons for 1963-64 mentioned by Mr. Pittie to be below what he would like to achieve and has emphasised that, on the basis of home consumption and international trade, the target must expand every year by 200,000 to 300,000 tons. Two, if, in particular cases where the ex-factory prices fixed for sugar are found to be too low, suitable revision would be made. Three, the Government will give active consideration to the proposal of maintaining a buffer stock of sugar amounting to about 500,000 tons in order to smooth out fluctuations in production and demand.

It is indeed gratifying to learn from Mr. Patil that the State Governments are no less keen than the Centre to seek a sound remedy for the problem of diversion of cane supplies from sugar to *gur-khandsari* making. This is a problem that looms large over the sugar horizon every now and then. In the absence of a solution for it, the sugar industry cannot think and plan on a permanent basis. It is common knowledge that every additional ton of cane a sugar mill gets will result in 50 per cent more sugar output than what is actually obtained if the same cane is utilised for producing *gur* and *khandsari*. Sheer economic consideration, therefore, demands, as Mr. Pettie rightly said, that the production of *gur* and *khandsari* be not encouraged. White sugar bears a tax burden of Rs. 13.20 per maund, whereas the tax element on *khandsari* is very nominal and, on *gur*, there is no tax at all. To the extent the tax disparity is reduced, the sugar industry will be freed from the recurring cycles of surplus and shortage. There is also the need for a blanket ban on the manufacture of *gur* and *khandsari* in and around sugar factory areas.

These are not big problems, provided those who are at the helm of affairs eschew ideological considerations and display enough political courage. Mr. Pittie did well to urge a strict enforcement of the "Bonding Scheme" which has been tried on a limited scale and has yielded excellent results. It is, however, amazing that the I.S.M.A. President should have openly supported the plea for an increase in cane prices within the framework of the recovery linking formula, as if the prices fixed now were too low. Since this aspect has been discussed in detail ere now, it is unnecessary to go into it again. Suffice it to say that the formula assures to the cane growers quite a decent return and there is no need for an upward revision. Considering that only a third of the cane crop harvested in a season is utilised for making white sugar, it will not be difficult to ensure this much supply to the mills. Moreover, the supply of cane to mills depends not so much on the price paid by sugar mills as on the prices commanded by *gur* and *khandsari*. There must be constant vigilance to see that the prices of sugar substitutes are held within reasonable limits. The ban on forward trading in *gur* must be continued. If these are done and if cane supplies are regulated properly as between the mills and the decentralised sector, the sugar mills will certainly be in a position to maintain their crushing operations for longer periods and produce more sugar.

Further, if the cane prices were raised, the prices of sugar also would have to be enhanced suitably, as was done in the seasons 1959-60 and 1960-61. But such an enhancement of sugar prices will hit hard the consumers who are already groaning under the severe impact of inflation. If, however, the I.S.M.A. President thought that some incentive was very necessary to boost sugar output, he could have urged for the grant of a rebate of a part of the excise duty on the sugar produced in excess of the average of peak outputs touched in any two previous seasons. The grant of such a rebate would obviate the need for an incentive to enable the mills to start early. Mr. Pittie's suggestion for the commencement of crushing operations earlier than usual has one drawback, namely, that early crushing means crushing of cane which is not fully ripe and is, therefore, low in sucrose content. In effect, this will mean a waste of precious resources.

There is, however, considerable force in the contention of Mr. Pittie that controls have a crippling effect on the sugar industry. The facts and figures cited by him clearly reveal how controls as a rule have stifled both production and consumption of sugar. Mr. Patil, too, said that controls were no less distasteful to him than they were to the I.S.M.A. President. In fact, Mr. Patil has gone on record several times in the past to the effect that he is a firm believer in maximum freedom for sugar industry and trade. Why, then, did he clamp down statutory price control on 17th April? The answer that comes immediately to one's mind is that the control was necessary to check an undue rise in sugar prices. But the introduction of statutory controls and all the repercussions thereof could have been avoided if only the Central Government had given an opportunity to the industry and State Governments to work out a voluntary price regulation scheme. As Mr. Pittie explained, the industry had itself agreed to a voluntary control on ex-factory prices and drawn up a detailed scheme of operating fair-price shops in various zones, such as West Bengal, Bihar, Uttar Pradesh, Punjab, South India and the Deccan. The I.S.M.A. had also undertaken to build up a buffer stock in Assam and it was holding discussions with the representatives of the trade on an all-India basis for finalising arrangements. Some State Governments, especially in Maharashtra, were also trying their best to have a voluntary control scheme. But suddenly came the control announcement. It is said that even the State Governments were not aware of its coming. Mr. Pittie was quite right when he declared that the Government should have given at least a month's trial to the voluntary control scheme of the industry. It is, however, to be hoped that Mr. Patil will not hesitate to lift controls immediately after the sugar supply position turns out to be comfortable.

Mr. Pittie was also highly critical of the sugar price policy which, he said, left much to be desired. Mr. Patil, however, defended it by saying that it was a rational one, though he assured that, if, in any particular case, there was room for adjustment, he would ask the Food Secretary to look into it again on receipt of further data from the industry. To quote him:

"... Disparities such as exist are the established features of your industry and that, in practically every period of control in the past,

such disparities have always existed in a much more pronounced form. In fact, in the current price structure, these disparities have been substantially reduced. It is, of course, impossible that our figures of costs should exactly correspond to yours, but, if you will look into them closely, you will generally find that, on the basis of the Tariff Commission formula and adjustments necessary because of controls, the margin of difference is not considerable. I have no doubt that the prices we have notified constitute an equitable balance between the two factors."

This justification by Mr. Patil has failed to convince the sugar millowners, as witness the following resolution adopted by the I.S.M.A.:

"This Association notes with serious concern the highly uneconomic controlled ex-factory prices notified by the Government. The prices do not fully provide for the actual costs in several regions. The Association is of the considered view that, in any measure seeking to control and regulate prices, the minimum criteria should be the actual cost of production *plus* a fair return to the producer. The Association regrets that the above aspect has not been given due consideration by the Government in fixing controlled rates. Already, the industry in the major sugar producing areas is in a precarious position and is not able to provide for the rehabilitation of machinery and adopt latest production methods. The Association, therefore, apprehends that the present fixation of uneconomic prices for the factories in such regions would further aggravate the position."

In view of this wide divergence of opinion over the basis on which the ex-factory prices have been fixed for the sugar produced in the different regions, one wonders whether a fresh examination of the issue cannot be undertaken by the Tariff Commission. Since there is already a ready-made formula evolved by it, the Commission should be able to make a quick study and submit its report. Few can deny that the sugar industry is also in the grip of a cost inflation, like several other industries, and that the price it obtains for its product ought to be fair enough not only to cover adequately the production costs but also to leave a sufficient margin of profit. Such a margin, it is needless to add, is urgently required for implementing the industry's schemes of expansion, modernisation and rehabilitation, so that it can cater to the expanding domestic requirements of sugar at reasonable prices and export it abroad at competitive rates.

COMMONWEALTH AND THE G.A.T.T.

THE less developed countries, especially those of the Commonwealth, seem to have evolved, on the eve of the ministerial meeting of the G.A.T.T. at Geneva, a concerted approach to the question of freer world trade, in general, and that of expanded trade between them and the advanced countries, in particular. By far the most significant development, in this context, is the consensus achieved this week in the deliberations of the Commonwealth Trade Ministers' Conference at London. The *communique* issued at the end of the conference, it is noteworthy, does not pay lip service to the demand of developing countries for enlarged trade opportunities. On the other hand, it contains a strong plea for an action programme towards this end. A no less significant development of the week is an agreed draft resolution drawn up by a group of 21 developing countries for discussion at the G.A.T.T. meeting. This resolution calls for a series of measures, under G.A.T.T. auspices, for promoting trade expansion. Related, albeit indirectly, to these developments is the decision of the European Free Trade Association to accelerate its tariff reduction programme so as to complete it by 31st December 1966 (*vide* Market Gossip in this issue). It is just possible that one of the economic consequences of a liberal trade grouping like the E.F.T.A.—liberal, as compared with the rather inward-looking European Common Market—will be an enlargement of trading opportunities for third countries in the wake of further industrial expansion within the E.F.T.A. countries. Since the United Kingdom, which is a member of the E.F.T.A., is interested in an expansion of trade not only among the E.F.T.A. countries themselves but also between them and the Commonwealth countries, it may be expected to exert its influence in favour of further liberalisation. Thus the three developments, between them, have set the stage for the present G.A.T.T. meeting which is to determine the working rules for a full G.A.T.T. Conference on world trade in early 1964 for bringing about a general reduction in tariff and non-tariff barriers.

The Commonwealth Trade Ministers' Conference may first be considered here against the above background. Its deliberations were highlighted by the vigorous plea put forward by Mr. Manubhai Shah, India's Minister for International Trade. The most telling point made by him was that, if the present Kennedy Round of negotiations in G.A.T.T. were to have any significance for the developing countries like India, it was of the utmost importance that they should result in the maximum possible tariff cuts on products of particular interest to them, namely, semi-manufactured articles, processed and semi-processed goods and primary products, in the markets of the important industrialised countries. Another equally telling point made by him was that, for fiscal and developmental reasons, the developing countries could not be expected to reduce their tariffs on imports from industrialised countries. He argued, in this connection, that, to the extent increased access to the markets of industrialised countries enabled the less developed countries to increase their sales and enlarge their export earnings, the latter would be in a better position to finance a larger volume of imports from the former. This, he emphasised, was the only reciprocity which the industrialised countries could properly and realistically expect.

Thanks to the determined lead given by India and other Afro-Asian members of the Commonwealth, the London Conference has urged the importance of finding in the G.A.T.T. negotiations solutions to the problems of temperate agricultural products and of the exports of developing countries (including processed and manufactured goods) no less than to the problems of reducing tariffs on industrial products generally. If the Kennedy Round of negotiations should involve the unilateral dismantling of the existing structure of Commonwealth preferences, it is a price which the Commonwealth would not be prepared to pay, considering that the aggregate Commonwealth exports of just under £10,000 million (as of 1961) constitute a major contribution not only to the economic development of the Commonwealth but also to world trade. The London Conference has, therefore, rightly and logically taken the line that any modifications (in the structure of Commonwealth preferences) would need to be considered in the light of the compensating benefits which might be offered. What these compensating benefits could possibly be have not been spelt out in the *communique*. Presumably they could take the form of a special system of preferences, under the G.A.T.T. itself, for developing countries, as suggested by the Pakistan Trade Minister. Such a special system should involve (i) abolition of duties on raw materials and tropical products, (ii) substantial reduction of duties on semi-processed goods and manufactured goods, and (iii) exclusion of the products important in the trade of the less developed countries from the list of exceptions of the advanced countries. Although the *communique* has made no explicit reference to a possible system of preferences of the kind under G.A.T.T., it has at least done well to say frankly that "the less developed countries would not be able to afford reciprocal trade concessions."

Further support to the stand taken by the London Conference, it is gratifying, has been lent by the draft resolution which is being submitted at the G.A.T.T. meeting this week by 21 developing countries. The resolution, calling, *inter alia*, for (i) a decision not to erect new tariff or non-tariff barriers, (ii) the removal of quantitative restrictions affecting exports from the less developed countries, (iii) the adoption by the industrial nations of measures for the free admission of tropical products and raw materials, and (iv) the reduction, by at least 50 per cent within the next three years, of tariff barriers to the export of finished and semi-finished products from the developing countries, is also broadly on the lines of what has been advocated by India and Pakistan. As the less developed countries now make up a majority of G.A.T.T.'s participating countries, any reductions in barriers to trade in agricultural, as well as manufactured, products should, at the same time, assist their economic growth. If the G.A.T.T. negotiations fail to evolve suitable measures towards this end, the developing countries may be compelled to form an alternative organisation to G.A.T.T. under U.N. auspices. In other words, as some Afro-Asian countries have suggested, the U.N. might have to come into the picture in the event of failure or unsatisfactory progress at Geneva.

FRESH HOPES FOR BOKARO

PRESIDENT Kennedy's forthright support for the proposed Bokaro steel plant should serve to dispel doubts in Indian minds about American *bona fides* in the matter of help for putting up a steel mill in the public sector. The President categorically declared at a press conference held on the 8th inst. at Washington that it would be a great mistake not to help build the Bokaro plant, provided it was an efficient project. There was such a need for steel in India, he pointed out, that it was going to be unfulfilled. Answering critics, both within and outside the U.S. Congress, who opposed aid to Bokaro on the ground of its being a public-sector enterprise, the President said that he did not quite get the logic of those who vehemently opposed the project, *which was not to take over possession of a steel mill already constructed but to build a new one.* He drew an important distinction between the two and maintained that India needed the steel Bokaro would produce. And, finally, the President disarmed critics by citing the precedent of the U.S. having lent millions of dollars to Canada for a nationalised electrical undertaking.

It is apparent from the President's observations that the merit of the case for aid to Bokaro depends on whether or not it fulfils two criteria, namely, the existence of sufficient demand for steel to justify another steel plant and the technical and economic feasibility of the project. The President has no doubt that both these conditions are fulfilled in the case of Bokaro, and hence his unequivocal support. Evidently, the issue of public sector *versus* private sector, which has been responsible for much of the opposition from some U.S. legislators to aid for Bokaro, is not, in the President's view, so germane as the more important question of the need for and the feasibility of the project. This is a commendably pragmatic stand which shows that the U.S. Administration's approach is not doctrinaire, but flexible enough to enable it to judge individual cases on their merits. That the Kennedy Administration is not obsessed with a dogmatic addiction to any set pattern of development for other countries is clearly evident from the following amplification, by Ambassador Galbraith, of the President's stand:

"The policy of the United States is to recognise the existence of a large range of choice in economic development. We want to see the tests of efficiency and results rigidly applied. Beyond this it is not our policy to insist dogmatically on any particular design for development. In the past we have respected India's preference for power development in the public sector."

"President Kennedy's comment on Bokaro reflects the same attitude as regards steel production. In recent weeks a few people have predicted with something almost approaching pleasure that Americans would never give support to publicly-owned enterprises. I am not at all sorry to disappoint them."

In order to enable the U.S. President to overcome the opposition of hostile Congressmen and to get Congressional approval for funds, for which an initial provision of 50 to 100 million dollars is likely to be made in the next fiscal year's Foreign Aid Bill, it would be necessary for India also to adopt a flexible and realistic stand, especially in regard to the question of management of the plant. One could possibly see no reason to reject the suggestion that the management of the plant, after its construction, should be in American hands for a specified period of ten years. It is true that this involves a divorce, albeit for a limited period, between management and ownership of a public-sector enterprise, the former vesting in foreign hands and the latter in the Government's. But this innovation will have its own advantages. For, at the time of transferring management, too, to Indian hands, after developing sufficient indigenous talent and experience, the plant will have left its teething troubles behind and become a going concern. And it will not be for the first time that responsibility for technical execution, if not for the entire range of management, is vested in foreigners. For instance, it is clearly laid down in the agreement covering the Rourkela expansion project that Germans alone will retain executive powers in regard to technical questions. Only, in the case of Bokaro, the proposed ten-year management contract goes a step further in the same direction. Is it not natural for foreigners to insist on such minimum conditions where the successful running of aided projects of the magnitude of Bokaro is usually regarded, apart from other considerations, as a matter of national prestige?

MARKET GOSSIP

More Controls on Rice?

THERE has been quite a lot of wrangling between the Union Food Ministry and the Planning Commission during the last few months over the question whether the progress in agriculture is satisfactory or not. The former continues to maintain that the performance in agriculture has been quite good and that the granaries are over-filled, much to the chagrin of the Commission. A stage has, however, been reached now, when the issue cannot be considered merely as an academic one. For there has been a steady increase in the prices actually paid by consumers for foodgrains during the last two months or so, particularly for India's staple foodgrain, rice. A perceptible imbalance in the supply and demand position of foodgrains seems to have developed, especially in scarcity areas like West Bengal. It would thus appear that a crisis on the foodgrains front is brewing, despite imports under P.L.480 from the U.S. and commercial purchases from other countries.

The extent of the policy-makers' anxiety about the food situation is fully reflected in the Union Food Ministry's ungrudging acceptance of a proposal made by the Planning Commission to take "drastic steps," including controlled distribution of rice, to bring prices under control. Under a policy decision taken by the Commission, the entire stocks of rice with mills may be procured compulsorily at specified maximum prices, *if necessary*. Some of the State Governments, which are already buying certain percentages of stocks from mills, will be able, under the latest policy decision, to take over the entire stocks. Mr. G. L. Nanda, the Union Minister for Planning, is reported to have said that some of the rice mills might also be taken over by the Government, in order to ensure a fair distribution of the available rice supplies. Equally significant is his statement that some regulations in the distribution of rice might be necessary. Thank God, there is no specific mention of statutory rationing here.

It may be that these policy decisions do not constitute another attempt to bring back the scheme of State trading in foodgrains, which had been unceremoniously thrown overboard by Mr. S. K. Patil when he took over the reins of the Food Ministry from Mr. A. P. Jain. It cannot, however, be denied that what the Commission and the Ministry propose to do is to seek to improve the system of distribution. This is only tinkering with the food problem. The imperfections in the scheme of distribution are only reflections of the basic malady which lies in the field of production. The production of rice, it may be recalled, fell from 33.66 million tons in 1960-61 to about 33.61 million tons in 1961-62. During the 1962-63 season, the output is estimated (by trade sources) to have gone down still further by one million tons or so. So it is at the production-end that the problem would have to be energetically tackled, if prices are to be kept in check. Imports and new experiments with distributive machinery, though they may be unavoidable in an emergency, are only palliatives and will not provide a lasting solution. But, in so far as some fillip to production can be given through price support policies, the current move to open Government purchasing centres in far-flung areas of the country for buying foodgrains directly from farmers is commendable for two reasons. One is that such purchasing operations will continue to be in the nature of voluntary procurement which would any day be preferable to compulsory procurement and levies. And the other reason is that farmers will derive full benefit from the structure of minimum prices announced by the Government from time to time, for there will be no middlemen here to claim a margin for themselves.

E.F.T.A. to Close Ranks

The collapse of Brussels negotiations, which barred the entry of the U.K. into the Common Market, has left the British Government with no alternative other than strengthening its trade ties with the E.F.T.A. members and the Commonwealth. The U.K.'s desire to close ranks with the other E.F.T.A. members, which is shared by most of the others in the group, found solid expression in the decision taken by the Seven at Lisbon last week to accelerate the internal tariff reduction programme. Thus the elimination of tariffs on all industrial goods, which was to have been completed by 1970 under the Stockholm Treaty, will be speeded up by five years, the revised target date being 31st December 1966. Already, the internal tariffs among the E.F.T.A. members (the U.K., Austria, Denmark, Norway, Portugal, Sweden and Switzerland) have been reduced by 50 per cent (of the January 1960 level). Another 10 per cent will take place at the close of this year, and the rest in the course of the next three years. Thus, by the end of 1966, the seven nations of Europe, with a combined population of 90 million people, will have established another trade bloc in Western Europe with full free trade in industrial goods among themselves.

Although non-industrial goods are excluded from the purview of free trade under the Stockholm Treaty, they seemed to have been nevertheless very much in the picture at the Lisbon meeting. For some of the less-developed countries of the group (Denmark, Norway and Portugal), the economies of which depend largely on exports of agricultural products, have made no secret of their hesitation to grant concessions on industrial goods to the other members without gaining some concessions on their own exports of primary products. In view of their grievances, several bilateral agreements, designed to increase Intra-E.F.T.A. trade in agricultural products, were concluded at Lisbon. The U.K., for instance, has given a firm undertaking to Denmark to suspend duty on Danish butter, despite the fact that it may not be palatable to two of its Commonwealth partners, namely, Australia and New Zealand. Apart from these proposed concessions in tariffs, there will be no common policy for agricultural products. No decision has so far been taken about the reduction of tariffs on fish and fish products. But the question was discussed at the meeting and it was decided to study it further at a fisheries conference of all West European countries, as proposed by the U.K. Another gesture to help the less-developed members, particularly Portugal and Norway, related to the decision taken to establish an economic development committee. The proposed committee is expected to facilitate economic co-operation among Governments as well as among private enterprises. In order to encourage the flow of capital to the less-developed countries of the bloc, the U.K., in particular, has agreed to give the other members freer access to the British capital market.

It is too early to predict whether the growth of the E.F.T.A. may eventually lead to its merger with the Common Market itself, resulting in the creation of a wider European trade bloc. But the prospects for such a turn in events are limited, so long as Gen. de Gaulle refuses to budge an inch from his adamant opposition to Britain's entry into the Common Market. As far as India is concerned, the revised tariff reduction programme of the E.F.T.A. is not likely to affect it much, because of the absence of any common external tariff among the Seven and the exclusion of agricultural products from the tariff reduction. There is, however, reason to believe that India's exports of cotton textiles and jute goods to the U.K. may come up against stiffer competition, when free trade in these goods is ensured among the E.F.T.A. members.

Incentive for Export of Know-how

A plea for exempting from tax foreign exchange earned by the supply of technical skill has been put forward by the All-India Manufacturers Organisation in a memorandum submitted to Mr. Morarji Desai, Union Finance Minister. The Organisation has drawn the attention of Mr. Desai to the policy of the Government of India to provide all necessary incentives to increase exports and thereby earn more foreign exchange. One such incentive, introduced for the first time last year which is being continued under Section 5 of the Finance Bill of 1963, pertains to the rebate of one-tenth of income-tax and super-tax allowed on income earned by Indian experts abroad. But this concession does not cover the income earned by companies for the supply of technical know-how. Many Indian companies, the A.-I.M.O. goes on to add, are in a position to supply technical know-how to foreign countries, especially those in Africa and Asia. If the rebate were extended to companies as well, many Indian manufacturers would, in its opinion, be encouraged to enter into technical collaboration with concerns in foreign countries. It is, therefore, urged that the Finance Bill 1963 be so amended as to provide for the grant of such a rebate to companies. The specific amendments suggested by the A.-I.M.O. are as follows:

In Section 5, clause (i), after the words "any profits and gains derived from export of any goods or merchandise," the words "or supply of technical know-how and/or advice to foreign concerns in foreign countries" should be added.

In the same section, a provision has been made by clause (ii) for allowing a further rebate of tax to a manufacturer which will be calculated on an amount equal to 2 per cent of the sale proceeds received by the manufacturer. This is a welcome measure and its benefit should be extended on earnings of foreign exchange by supply of technical know-how and/or skill.

Since the net income from royalty or technical fees will amount to the extent of 80 per cent of the gross receipt, the words "or 80 per cent of the royalty or remuneration for technical know-how" should be added in the clause after the last line.

There is a *prima facie* case for extending tax concession to include companies. If the object of the concession is to encourage export of technical skill to earn more foreign exchange, there is surely no justification for drawing a distinction between an individual and a company.

Enhanced Air Fares To Stay

With the decision of the U.S. Civil Aeronautics Board (C.A.B.) to abandon its stand against higher air fares on North Atlantic and Pacific routes, the controversy on air fares, which had recently threatened to disrupt international air transport, may be said to have ended. The C.A.B. has instructed the two U.S. flag airlines—Pan American and Trans World Airlines—to charge the 5 per cent higher rates, which the International Air Transport Association (I.A.T.A.) recommended at its Chandler (Arizona) traffic conference and which has been accepted by the Governments of other member-countries. The higher rates, it will be recalled, should have become effective from 1st April 1963, but, since they were opposed by the C.A.B., there was a virtual deadlock on the issue of Atlantic fares. The deadline for increased fares was extended up to 29th April and again to 12th May later. Efforts to persuade the C.A.B. to modify its stand did not bear fruit. Meanwhile, the British Ministry of Aviation issued to the two U.S. airlines, namely, T.W.A. and Pan American, a directive asking them to charge their passengers five per cent more, with effect from 12th May, as a condition of their permits to fly into the U.K. But the two airlines, in deference to the wishes of the C.A.B., continued to charge the old fares in breach of U.K. law and rendered their aircrafts liable to detention. The British Government did not, of course, take this extreme step, pending a reply from the U.S. Government to its note urging an inter-Governmental conference to settle the transatlantic fare dispute. The C.A.B.'s decision to fall in line with other Governments has obviated the need for holding such a conference, although it could hardly be said that the issue of international air fares has been finally settled. For the C.A.B. has sought to assume complete powers to regulate and enforce whatever international fares it chose to and from the U.S. The President is reported to have sent to the Congress a Bill seeking to bestow such powers on the C.A.B. The legislation, if enacted, will greatly strengthen the authority of the U.S. in influencing decisions taken by I.A.T.A. traffic conferences in future. For the fact that the most powerful airlines and the Government in the world will have the right to demand and, if necessary enforce, whatever fares they wish, for operation to and from the U.S., will naturally influence other airlines to modify their views accordingly.

DELHI LETTER

EXPORT MARKET SURVEYS

NEW PATTERN BEING EVOLVED

(From Our Special Correspondent)

NEW DELHI, 14*th May*

THE next meeting of the Board of Trade will have before it some concrete proposals in the direction of fulfilling the third Plan export targets. Recently, the chairmen of the various export promotion councils have agreed on evolving a new pattern of market surveys for Indian export products. In general, the basic consideration in the proposed pattern will be its strictly utilitarian character instead of the present omnibus exercise in prospects which often enough do not have any relation to the actual realities at a particular given moment in a country. An important feature of this type of surveys will be their continuous updating with additional information regarding the prices of the competitive commodities of other countries in the given export markets. In an effort to streamline this information, the surveys will also be required to furnish details regarding their packaging, quality standards, technical specifications and an assessment of their popularity with the consumers.

In fact, these are some of the basic requirements if we are to successfully compete in the overseas markets. On several occasions better Indian products have been found to suffer for lack of knowledge of marketing techniques.

The chiefs of the export promotion councils favour the utilisation of the facilities of a number of existing agencies for the immediate starting of these surveys. Among these agencies will be the Indian commercial representatives abroad, the export promotion councils' own experts with the assistance of specialists in India and abroad, the Indian Institute of Foreign Trade, management consultants and similar specialised agencies and also such agencies as the economic intelligence units abroad, which would be prepared to undertake surveys on our behalf for suitable remuneration.

It is perhaps for the first time that such a concerted effort is being made to plan expansion of the work of research, market surveys abroad, area surveys and commodity surveys. It is gratifying to note that the chairmen of the export promotion councils have also paid considerable attention to the allied problem of co-ordinated publicity through the existing facilities offered by the External Publicity Division of the External Affairs Ministry, the All-India Radio, Indian Trade Missions abroad and the Director of Commercial Publicity. It is hoped that a sizable portion of the Rs. 3.8 crores provided in the budget will be made available soon to proceed with these steps at an early date.

Soaring Rice Prices

While the Ministry of Food and Agriculture and the Planning Commission continue their internecine strife over the state of our agricultural production, the food prices continue to rise. The price of rice has shot up by about 25 per cent in eastern India. In the Capital, a veritable rice shortage has appeared because of the low supplies from the Punjab. Rice prices in Delhi have gone up by 26 to 36 per cent during the past two months. The Food and Agriculture Ministry sources have contradicted a report that cooked rice would be taken off the menu in restaurants and hotels in northern India. But since the staple food is not rice in Delhi, as it is in the eastern parts of the country, the effect of high prices will not be felt acutely here.

A report that has gone uncontradicted so far is that all the four million tons of imported foodgrains had to be pumped into the market in 1962-63 to avoid famine. As a result, the Centre's plan to build up a buffer stock of five million tons has suffered a setback, the stocks remaining at two million tons, where they were a year ago. It is stated that the Food and Agriculture Ministry is now making efforts to import 4.5 million tons of foodgrains next year. But this additional half a million tons will scarcely help since the rate of consumption is also going up. Unless internal food production rises significantly, we might have to go in for further additional imports. And in that case, there can be hardly any check on the rising prices of foodgrains.

TREND OF SHARES

NORMAL TRADING SOON

(From Our Own Correspondent)

BOMBAY, 16*th May*

PROSPECTS for revival of normal trading in shares are now certain. Authorities of the Bombay Stock Exchange expect, according to a responsible source, to restore normal trading in a week's time. Since all the stock exchanges have individually sought permission from the Government to normalise trading, they will be allowed, simultaneously with the Bombay Stock Exchange, to revert to the pattern of business prevalent before the Chinese aggression in October last. Nothing has, however, been heard so far from the authorities on the issue of normalisation of trading. Our enquiries reveal that there is no basis for the press reports suggesting that the authorities have placed two alternatives before the Board of the Bombay Stock Exchange, namely, free and unlimited trading, with powers to the Government to enforce squaring up of the outstanding business at the rate it deemed appropriate, or, partial free trading confined to a few scrips. No word, it is stated, has been received from the authorities on free trading and the Governing Board has not held its routine Tuesday meetings for the last two weeks. An Ahmedabad news despatch saying that the stock exchange there had received permission for free forward trading and that the Governing Board of the Exchange had met on the 14th inst. to discuss resumption of such trading has also been categorically denied.

Speculation over normal trading is naturally rife owing to delay in the official decision which is presumably due to the Finance Minister's trip recently to Goa and parts of Gujarat. From what has been gathered, it seems that permission will be granted in a week for absolute (not partial, as suggested in a newspaper) forward trading, subject to restrictive margins. The margins will take the same form for all stock exchanges, though they may vary in extent in different markets.

Pending the official decision on the restoration of normal trading, stock exchanges presented a dull appearance this week. Fluctuations were narrow and activity limited. But the tendency was distinctly easy on liquidation at higher levels on fears that normal trading would lead to a general setback in values. It remains to be seen how far the authorities succeed in dispelling such fears, while permitting normal trading, by imposing stiff margins on short selling.

* * * *

Dalal Street opened quiet and eased further on steady realising by the erstwhile buyers and absence of fresh support. Among market leaders, Kohinoor closed eight points higher at Rs. 324 on the Chairman Mr. A. N. Haksar's striking, in his speech at the annual meeting of the Company yesterday, an optimistic note regarding the prospects for the current year, while all others showed moderate losses over the week. Noticeably weak were National Rayon which was pulled down from Rs. 369.50 to Rs. 353, before closing 11 points lower at Rs. 358.50, following the declaration of lock-out by the Company at its works. The speculative Standard declined by 20 points to Rs. 777, Century by six points to Rs. 553 and Bombay Dyeing by 70 nP to Rs. 61.30. Steel shares moved irregularly. Tata Ordinary eased at first from Rs. 134.50 to Rs. 132.50, but rallied to close at Rs. 133.50, as against Rs. 134.25 a week ago. Indian Iron moved between Rs. 22.04 and Rs. 22.36 before finishing at Rs. 22.28 at which level they closed with a minor gain of 8 nP over the week.

The Miscellaneous section followed the general trend. T.E.L.Co. eased from Rs. 289.50 to Rs. 285, Voltas from Rs. 263 to Rs. 259, Alcock from Rs. 305 to Rs. 303 and Larsen and Toubro from Rs. 24.80 to Rs. 24.24, but W.I.M.Co. spurted by Rs. 243 to Rs. 263.75. Indian Dyestuff fell by Rs. 11.25 to Rs. 408.75. Cements were a shade higher, particularly A.C.C. at Rs. 142, as against Rs. 141.50 a week ago, but Sugars were easier, especially Maharashtra at Rs. 153, as against Rs. 159, and Belapur at Rs. 191.50, as against Rs. 196. Tata Power improved by Rs. 7.50 to Rs. 1,030. Shippings were neglected. Cash scrips showed generally small changes. But Alembic declined sharply by Rs. 13.75 to Rs. 160 and so did S.L.M. Maneklal by Rs. 9 to Rs. 131 and Synthetics by Rs. 7 to Rs. 143, while Ceat Tyres gained Rs. 6.25 to Rs. 147.50 and Paper Mill Plant Rs. 6 to Rs. 86.

* * * *

Values drifted lower generally on the Calcutta Stock Exchange. In the forward list, Dunlop suffered a setback of 82 nP to Rs. 33.37, J.K. Cotton of 32 nP to Rs. 13.62, Kesoram of 25 nP to Rs. 22.75 and Burrakur of 19 nP to Rs. 16.81. There were, however, a few exceptions to the general tendency, especially Indian Aluminium which improved from Rs. 33.19 to Rs. 33.87 and Shree Gopal Paper which rallied from Rs. 23.50 to Rs. 24.12. In the cash list, among Textiles, Cawnpore closed 25 nP lower at Rs. 6.50, but Bharat Commerce were 63 nP higher at Rs. 22.50. Coal shares were steady, with Bengal gaining two points to Rs. 288. Jute shares made a mixed show; Anglo-India eased from Rs. 228 to Rs. 226, but Barnagore looked up from Rs. 180 to Rs. 185. Alkali Chemical declined from Rs. 36.31 to Rs. 33.87 and Calcutta Chemical from Rs. 18 to Rs. 17.37. In the Miscellaneous section, moderate losses predominated. Goodyear broke heavily from Rs. 37.50 to Rs. 35.25. Hindustan Twyford recorded a loss of 74 nP at Rs. 13.25, Hindustan Aluminium of 57 nP at Rs. 13.12, Universal Cable of 57 nP at Rs. 9.62 and Usha Martin of 44 nP at Rs. 13.87. Paper shares were also easier; Ballarpore from Rs. 17.31 to Rs. 16.31, Seshasayee from Rs. 8.06 to Rs. 7.37 and Titaghur from Rs. 17.06 to Rs. 16.25. Raza Buland, among Sugars, closed 75 nP lower at Rs. 9.31. In Teas, Brooke Bond eased by 13 nP to Rs. 11.81 and Dufflaghur by 87 nP to Rs. 27.

* * * *

The Madras Stock Exchange made a mixed show this week. Deccan Sugar eased by 40 nP to Rs. 9.60 and E.I.D. by 50 nP to Rs. 37.75, but Cauvery gained one point further to Rs. 105. In Tea shares, Blue Mountains showed a loss of 14 nP to Rs. 2.30 and Peermades of as much as 63 nP to Rs. 21.87, while Highlands improved by 15 nP to Rs. 13.40. Consolidated Coffee were 15 nP lower at Rs. 17.10, but Midland Rubber were 30 nP higher at Rs. 10.80. Among Textiles, Coimbatore Cotton edged forward from Rs. 154 to Rs. 155. In the Miscellaneous section, while Aluminium Industries declined by 30 nP to Rs. 17.40 and Madras Rubber by 32 nP to Rs. 18.28. Mettur Chemical gained 85 nP to Rs. 12.25.

RS. 25-LAKH ISSUE OF MULTIMETALS LTD.

Subscription lists for the public issue of Rs. 25 lakhs in equity shares of Rs. 10 each at par by Multimetals Ltd. will open on the 22nd inst. and close on the 28th. The public issue is out of the 749,993 shares being issued by the Company, of which 249,930 shares are to be subscribed by its promoters, Directors and their associates, 250,000 shares by its foreign collaborators and the balance of 225,000 shares by Metal Distributors Ltd. of Calcutta. The Company has been licensed to manufacture annually 1,800 tons of copper and copper alloy hollow and solid sections and 5,000 pieces of copper printing rolls on double-shift basis. It is setting up a plant at Kota (Rajasthan) in technical and financial collaboration with Revere Copper and Brass Incorporated, New York. The outlay on the project is estimated at Rs. 150 lakhs which is to be met out of the equity issue and bank loans. The foreign exchange component is Rs. 79.64 lakhs, being the cost of the imported plant and machinery. It is to be covered by the foreign collaborators' share in capital and foreign exchange worth Rs. 54.64 lakhs to be released by the Government under D.L.F. Loan No. 157. Planning work in connection with the project is well advanced. Land had been acquired. Building plans are ready and construction is to start next month. Barring unforseen developments, the plant will be ready for initial commissioning by the middle of 1964.

Prospects for the Company should be considered quite encouraging, in view of insufficient indigenous production of copper alloy rods, tubes, etc. Despite severe restrictions, imports of these products during 1961 exceeded Rs. 1.36 crore. The Tariff Commission has estimated the country's requirements in 1965-66 at 15,000 tons, as against only 5,338 tons in 1961. As regards copper printing rolls, the Company will be the first to manufacture then in the country. The Company needs virgin zinc and copper as the principal raw materials, indigenous production of which is limited, though efforts to increase it are being made in Rajasthan itself. It, however, expects to obtain actual users' licences for the necessary imported raw materials.

BINNY'S DEBENTURE ISSUE

Binny and Company (Madras) Ltd. is offering to the public 7 per cent 1973-78 debentures worth Rs. 30 lakhs in units of Rs. 1,000. Lists for subscription will remain open from the 29th to 31st inst. The issue has been underwritten by the I.C.I.C.I. for Rs. 10 lakhs and by a stock broker's firm of Madras for Rs. 20 lakhs. The Company, which has an authorised and paid-up capital of Rs. 100 lakhs, owns a controlling interest in two well-known textile companies (Buckingham and Carnatic Company Ltd., and Bangalore Woollen, Cotton and Silk Mills Company Ltd.), an engineering company (Binny's Engineering Works Ltd.) and a newly formed subsidiary (Giovanola-Binny Ltd.) which is also an engineering company. Besides, it acts as agents for the sale in India of goods manufactured by its principals and has developed the famous *Bintex* range of handloom fabrics.

Notice

MADURA MILLS COMPANY LIMITED

Registered Office:

NEW JAIL ROAD, MADURAI

NOTICE IS HEREBY GIVEN THAT IN CONnection with payment of interest to Debenture Stockholders, the Debenture Stock Transfer Register of the Company will be closed from 25th to 31st May, 1963, both days inclusive. It is recommended that:

1. All persons holding debenture-stock on blank transfers should immediately arrange to have the stock registered in their own names, as the Company will pay interest only to the person(s) in whose name the stock stands on the date of payment of interest.
2. Stockholders desiring interests to be paid to Banks or other Mandatees should register the mandates with the Company before 25th May, 1963.
3. Intimation of any change of address should be given to the Company immediately.

A. & F. HARVEY LTD.,
Managing Agents.

MADURAI,
3rd May, 1963.

U.CO. BANK FORGES AHEAD

"OWN FUNDS"-DEPOSITS RATIO UP

THE United Commercial Bank Ltd. (General Manager: Mr. S. T. Sadasivan, Calcutta), which is one of the five torch-bearers in the industry, has forged ahead during the year ended 31st December 1962. Its results mark substantial all-round progress. The gross income has expanded from Rs. 561.46 lakhs to Rs. 633.18 lakhs and the profit, after meeting all expenses and making provision for depreciation and taxation, has increased from Rs. 72.61 lakhs to Rs. 73.33 lakhs. In the matter of actual business, the balance-sheet total has shot up from Rs. 145.27 crores to Rs. 159.39 crores, in contrast with the previous year's contraction of over Rs. 4 crores. The growth of the Bank during the year marks no deviation from the sound, conservative policy of maintaining a very comfortable liquidity position at 45 per cent of deposits and widening the capital base further to nearly 5 per cent of deposits, from about 4.4 per cent a year before. This improvement in the ratio of "own funds" to deposits has been attained mainly with the issue of 200,000 additional shares on 13th August 1962 in the ratio of one for two at a premium of Rs. 25 per share. The ratio would have been higher still but for the fact that applications were received not for all the new shares but for 160,000 shares which were allotted in full. The paid-up capital has increased from Rs. 200 lakhs to Rs. 223.34 lakhs (excluding Rs. 56.66 lakhs, being the amount of calls payable by 31st January 1963 in respect of new shares) and reserves have gone up from Rs. 235 lakhs to Rs. 303 lakhs following the transfer of Rs. 28 lakhs (Rs. 30 lakhs in the previous year) out of the year's profit and receipt of Rs. 40 lakhs as premium on the new shares.

As noted at the outset, the profit has improved during the year from Rs. 72.61 lakhs to Rs. 73.33 lakhs. The increase amounts to just Rs. 72,000, as against Rs. 5.18 lakhs in the previous year. It is, however, still significant, considering that the year under review was characterised by a marked increase in deposit costs, staff expenses and operational expenditure of banks as a whole, to which the U.Co. Bank was not an exception. The year's profit is arrived at before taking into account the contribution of Rs. 2 lakhs to the N.D.F. and of Rs. 15,000 to Dr. B. C. Roy Memorial Fund. Since these are special contributions made during the year, they are not shown in the profit and loss account. The dividend on the Rs. 50-paid 100-rupee shares has been maintained at 12 per cent per annum, less tax, and a *pro rata* return is allowed on the new shares.

The Bank's progress in the past four years is presented in the comparative table below:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Gross income	633.18	561.46	528.98	490.61
Of which:				
Interest and discount earned	483.62	410.24	379.00	362.39
Commission and exchange earned	139.27	142.38	141.73	120.94
Other income	10.30	8.84	8.25	7.27
Interest paid	300.89	260.70	262.34	246.93
Staff expenses	183.03	156.35	140.86	122.96
All other expenses	67.77	56.44	53.23	48.84
Depreciation and repairs	16.16	15.36	15.13	11.46
Net profit	73.33	72.61	67.48	60.42
To gratuity trust fund	4.00	4.00	..	..
,, National Defence and other funds	2.15	..	..	..
,, reserve fund	28.00	30.00	30.00	27.00
,, bonus to staff	16.50	14.00	13.00	11.00
Dividend	24.50* (12%)†	24.00 (12%)†	24.00 (12%)†	22.00 (11%)†
Carry forward	0.25	2.07	1.47	1.04

	As on 31st December			
	1962	1961	1960	1959
Capital	223.34	200.00	200.00	200.00
Reserves	303.00	235.00	205.00	175.00
Deposits	1105,73.89	98,90.40	88,93.87	96,67.88
Borrowings from other banks	4,12.36	2,69.28	9,32.28	4,60.07
Advances	71,07.70	64,20.71	61,38.50	56,25.28
Investments	39,39.87	35,07.22	33,88.29	40,78.53
Cash	11,24.13	8,66.10	9,66.71	10,09.72
Balance-sheet total	159,39.12	145,27.50	149,35.81	145,44.58
Ratio to deposits of—	%	%	%	%
Advances	67.2	64.9	69.0	58.2
Investments†	34.4	35.8	29.5	37.4
Cash	10.6	8.7	10.7	10.4

* Subject to deduction of tax.
† Only the unencumbered portion is taken into account.
Note:—Provision for taxation from 1959 onwards not disclosed.

It will be seen from the figures above that the year 1962 has closed with an increase in deposits of about Rs. 7 crores to Rs. 105.74 crores. This increase is less as compared with the growth of almost Rs. 10 crores noted at the close of 1961. The rise during the year under review has been in all types of deposits, time deposits having gone up from Rs. 54.95 crores to Rs. 57.77 crores, savings deposits from Rs. 10.89 crores to Rs. 12.99 crores, and current and contingency deposits from Rs. 33.06 crores to Rs. 34.97 crores. Advances have gone up from Rs. 64.21 crores to Rs. 71.08 crores and as a percentage of deposits stand higher at 67.2, as against 64.9 a year before. This improved position of advances, which contrasts with the drop in the credit ratio from 69 per cent to 64.9 per cent in the previous year, has, however, not affected (as noted at the outset) the liquidity position. But owing to the insufficient growth in deposits, the improved position of the Bank's credit has been possible with increased borrowings from other banks, amounting to Rs. 412.36 lakhs, as against Rs. 269.28 lakhs a year before.

The Bank increased its branches to 160 during the year from 152 in the previous year and 89 in 1952. Following the nationalisation of banks, the Government of Burma has authorised repayment of foreign head office capital of K500,000 originally brought by the Bank into Burma.

PERSPECTIVES & PROJECTIONS

By Mercator

Planning Public Relations

THE Planning Commission has begun a new chapter in public relations which holds promise of interesting things ahead. Hitherto it has been interested in releasing only news items through appropriate channels, and newshungry correspondents have lapped up almost anything thus served. To the more leisurely sections among journalists, whose reflexes are conditioned by apparent concern with what has gone before and what may come after, many of the daring ideas of the Commission had proved damp squibs; and lately economic writers have seemed to take no more than formal notice of the Commission's schemes since its effectiveness in implementation or even co-ordination has increasingly become open to doubt. Thirteen years after its establishment, the Commission is feeling the absence of planning boards in the States which can give continuous consideration to the local problems of planning and keep in touch with progress so as to offer at least some data on these matters. (The indifference of the States' administrative machinery to the requests of the Commission, and sometimes even the Union Government, is appalling and may be due only to incompetence but it can be quite exasperating as the Neogy Committee on Transport Co-ordination has found.) Similarly, some direct contacts with the more critical sections of the journalistic world have also been recognised as important; it repairs an omission in the programme of securing public co-operation for the Plan.

There is, however, a difference; the dialogue will have to be two-sided since no good will come out of it unless the sceptical, or the merely querulous, writers are convinced that there is a case for the Commission. Mr. Gulzarilal Nanda's transparent sincerity can be disarming sometimes; everything done by the Commission is to him an act of faith in men or institutions, though it may often be misplaced. But he has now developed a constructive attitude towards criticism and finds that it may be useful in offering warnings against pitfalls, even if it is sometimes harsh or carping. This is indeed a very healthy sign. Mr. Nanda no longer tries to run away from the fact that most critics were right when the third Plan was framed; nor is he distressed if some people repeat *ad nauseam* that good intentions are not enough. He is not self-righteous, as most of his colleagues in the Cabinet tend to be, and possesses abundant candour. The Planning Commission has now acquired a sufficiently vocal economic expert as member in Dr. V. K. R. V. Rao, when formerly it had only the rarely visible Prof. Mahalanobis; but it still lacks enough technicians who, unlike the politically-minded other members, will feel less satisfied with aspirations than with achievements and proved methods.

There is hope for injecting a new element of criticism into the Commission's deliberations, if indeed the liaison is maintained continuously. But it is difficult to say who will be the wiser. There are far too many inconsistencies in planning policies to convince hardened cynics like economic journalists that all is well; and yet the attempt cannot be given up since opinion is made, or coloured, at this level, to the extent of course that it is not conditioned by wholly extraneous factors.

* * * *

The Long Wait

The Public Accounts Committee, perhaps because of the first word in its name, has been treated like some members of the public by Government departments, and its twelfth report contains a long list of the matters on which promised or expected departmental notes in response to inquiries or objections have failed to arrive. If a parliamentary committee has to suffer this, others similarly treated can have some consolation; but some inferences will be drawn by the complete absence of replies to some of the P.A.C's recommendations or queries. One of them is an old one, concerning disciplinary action against persons responsible in the Khadi Board for irregularities and losses; after it was upgraded into a Commission in 1957, the P.A.C. doggedly pursued the question of laying down a financial procedure to make for better accountability; the Government's response by way of a note, needless to say, is still awaited. So is the case with the heavy losses, to the benefit of a foreign firm, which helped to establish a showroom-cum-trade centre for the Commerce and Industry Ministry. It is less surprising to hear that the External Affairs Ministry has been chary of satisfying the P.A.C's insatiable curiosity about various aspects of its transactions abroad, like acquiring land urgently in a foreign country and leaving it unused for ten years following; that the Government of India is all the time profiting by the appreciation in land values in that country is an aspect which might have had greater relevance if the E.A. Ministry had, by our Constitution or statute, something to do with real estate business.

There is greater justification for the Food and Agriculture Ministry incurring a loss on purchase of condensed milk without necessarily having to accept it in a note to the P.A.C. But keeping stocks of foodgrains purchased in 1954 for seven years thereafter till they deteriorated is not only a bad way of operating buffer stocks but the most unwise since it gives an impression of plenty and unusability, which contradicts reports of scarcity and may deter those distributing food generously for peace. It is a long jump from all this to the Marine Department Stores in the Andamans, where the stocks are probably excessive but a Robinson Crusoe outlook might be excusable. The P.A.C. indeed tries to fly high by seeking a rationalisation of V.I.P. flights and adherence to the use of commercial services for journeys other than those of the President, Vice-President and Prime Minister. With such extravagant expectations the P.A.C. may be destined to be disappointed about the notes yet to come; but there is a touching innocence about the Committee's reference to the high proportion of free copies distributed of radio publications. Some Government reports have been best-sellers but when did Government journalism achieve the character that can make it paying or at least self-supporting? It is not radio publications alone but all Government journal that achieve a circulation by sheer importunity in mailing free copies, as any journalist knows. Radio programmes at least may be bought by the public, if the newspapers did not compete in offering this service to their readers, though even in this matter some regular listeners may have developed allergy to the increasingly propagandist tones which are substituting the musical.

I think the P.A.C.'s reports are likely to become best-sellers if they are always as juicy as this one: Two State undertakings, Hindustan Steel and the National Coal Development Corporation, competed for the purchase of some shovels. The suppliers naturally took advantage of it. The need for such competition is not apparent since they were commissioned in a rather leisurely fashion and, in any case, Hindustan Steel required only one, urgently for Rourkela. Some persons may expect much coordination in such cases because both are State undertakings, but that would be reckoning without the human element which explains all, not merely railway, disasters. In this case, however, the Ministry was the same and there was a common financial adviser; the Secretary of the Ministry was a member of both the Boards of Management. So what, may well be the query of those who think that the Committee should re-read Jekyll and Hyde to find the moral.

* * * *

A Golden Jubilee

Fifty years ago the Rockefeller Foundation was born this week in New York; it was incorporated by an Act of the State legislature when hopes of Congress approval had faded because of deep prejudices against big corporations. The senior Rockefeller had by then retired after financing Chicago University, the Institute for Medical Research and the General Education Board and starting an organised attempt to control hookworm disease. "The best philanthropy," Mr. Rockefeller had said, "involves searching for a cause, an attempt to cure evils at their source." That almost became the motto of the Foundation started in 1913; but some of its other guiding principles were equally laudable such as not giving individual charity or relief or to purely local causes, expecting self-help and co-operation from these benefited and refraining from giving perpetual gifts to particular uses. The initial endowment of $35 million has gone a long way since and the Foundation has spent in all $763 million till last year in humanitarian work of research in medicine (malaria and yellow fever coming next after hookworm), and in improving medical education.

There was a turning point in 1928 when the Foundation assumed responsibility for advancement of knowledge in the natural and social sciences and in the humanities and arts; agricultural sciences and new knowledge in them became the main object. Other causes like the National Bureau of Economic Research, the Social Science Research Council, the Brookings Institution and the Council on Foreign Relations have all been helped in their growth, and centres for the study of foreign history were created in American Universities; even music and dance have come within the purview of the Foundation's activities in the last ten years.

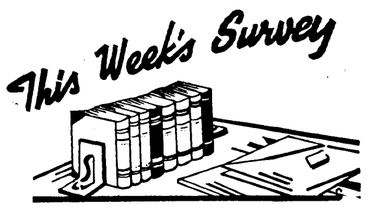
Thus the way has been shown to divert private wealth for public welfare but the most striking feature is the universality of the Foundation's approach. There have probably been many failures and disappointments, especially in recent projects in the underdeveloped countries but, even where it has not solved problems taken up on its own initiative, the Foundation has at least succeeded in spotlighting the areas in which governmental or other interest was needed. The most fascinating aspect of any philanthropy will continue to be the act of giving away for the benefit of mankind, not the results, however impressive.

INDIA TO PARTICIPATE IN ZAGREB FAIR

The Government of India has decided to organise India's participation in the Zagreb International Autumn Fair, 1963, to be held at Zagreb (Yugoslavia) from 7th to 22nd September 1963. This Fair, which attracts a large number of buyers and visitors from Yugoslavia and other parts of the world, is a very important annual event of its kind through which a considerable portion of Yugoslavia's foreign trade is negotiated. An "India Pavilion" is to be set up at the Fair to give extensive visual and commercial publicity to India-made goods and merchandise, and thus to maintain, extend and create a market for Indian goods abroad with special reference to Yugoslavia and its adjoining territories. At the exhibition will be displayed goods which India is now in a position to export. It will also be an opportunity to show the country's growing export potential in order to create demand for goods which are likely to be ready for export in the near future. Apart from display and visual publicity, information on quality, specifications, utility, probable price range and the availability of the goods on display and full addresses of the suppliers in India, their terms of trade, etc., will also be disseminated at the pavilion. The participants in the Fair will not be required to pay any charges such as space rent, decoration fees, etc., to the Government but only be required to tender their exhibits to Government's forwarding agents at Bombay. The Director of Exhibitions, Ministry of Commerce and Industry, Udyog Bhavan, Maulana Azad Road, New Delhi, will receive the list of goods proposed to be displayed by each participant upto 7th June 1963, for approval. The last date for acceptance of approved exhibits by the Government's shipping and forwarding agents at Bombay for onward transmission to Zagreb is 1st July 1963.

CONSUMERS' STORES

Steady progress has been made in the implementation of the scheme to set up a network of consumers' stores throughout the country. Though the scheme was launched only towards the end of 1962, some 72 wholesale stores with about 848 primaries and branches were organised during the year ended March 1963. The target is the organisation of 200 wholesale stores and 4,000 primaries by the end of 1963-64. The scheme is designed to ensure the equitable distribution of consumer goods at fair prices to consumers. The largest number of wholesale stores—fourteen—have been opened in Maharashtra, followed by Madras with 10 and Gujarat with 7 wholesale stores. The figures for primary stores include about 150 stores in private-sector undertakings. Some 78 stores have been organised among the coal mines. The National Co-operative Development Corporation released nearly Rs. 148 lakhs to the States for the purpose during 1962-63. During the same period, the Union Ministry of Community Development and Co-operation had sanctioned Rs. 1.37 lakh to the Tripura Administration for one wholesale store. The estimated expenditure by the Centre on the scheme during the remaining period of the third Plan is about Rs. 10 crores.



Notice

BALMER LAWRIE AND COMPANY LIMITED

THE BOARD OF DIRECTORS OF THE Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a final dividend of 18 per cent for the year ended 31st December, 1962.

BALMER LAWRIE & Co. LTD.,
D. MANSON,
Managing Director.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 11*th May,* 1963.

CLIMATE FOR FOREIGN INVESTMENT

AT no time in the past was the need for promoting the flow of foreign private capital into India so pressing as it is today in the context of the emerging defence requirements. But the fact remains that investment opportunities in India have not been brought to the notice of prospective investors abroad in a systematic way. This lacuna in India's overseas public relations service has been pin-pointed by no less a person than Mr. Bharat Ram, President of the Federation of Indian Chambers of Commerce and Industry, who has just returned after an extensive foreign tour. Viewed from this angle, the two-day seminar on "investing and operating in India" held at New York last week-end with the assistance of the Indian Investment Centre, is particularly noteworthy. The seminar, in which both Indian and U.S. experts participated, provided an occasion for a realistic assessment of the climate for foreign investment in India. Although it is difficult to measure the impact of such seminars, there is reason to believe that they are bound to allay the fears of investors arising from their imperfect knowledge of the state of affairs within this country and thus revive their confidence in India's ability and willingness to attract foreign capital.

In the course of the seminar, Mr. G. L. Mehta, Chairman of the Indian Investment Centre, highlighted the advantages open to entrepreneurs who invested in India. Indian economy, he said, offered assurances of financial stability, a well-developed infra-structure, a diversified pattern of industry and rapidly growing markets for manufactured products. The Government of India, he added, had become increasingly aware of the role that private investment could play in augmenting the nation's resources of capital and technical know-how. Mr. Mehta really touched the sensitive chords of U.S. businessmen when he pleaded with them that they should weigh not only the risks of investment in India, but also the risks of not investing in what was potentially the biggest market in the non-Communist world. Lending strong support to Mr. Mehta's views, a well-known Indian industrialist, Mr. Murarji J. Vaidya, pointed out that India offered vast opportunities for U.S. businessmen under "a well-planned and regulated economy." He drew a sanguine picture of the profitability of ventures in India and assured them that " anything you make in India today will sell at a profit." Among the promising lines of investment with the greatest potential, he included engineering industries, chemicals, durable consumer goods, farm machinery and communication and transport equipment.

It was just about a week prior to the aforesaid seminar that Mr. G. D. Birla talked to a distinguished gathering of businessmen on the same topic in San Francisco at the annual conference of the World Affairs Council of Northern California. Speaking on "Asia—Challenge to the U.S.," Mr. Birla underscored the need for larger U.S. investment in India "with the full understanding that India is the greatest citadel against communism in Asia." Discounting any fear about the role of the public sector, he observed that the private sector in India was flourishing and that the entrepreneur was full of enthusiasm, courage and confidence, in spite of the high taxation, which he considered "rather dampening."

Mr. Birla was of the opinion that, under the policy underlining a mixed economy in India, both private and public sectors were expected to "play their respective roles with a place of pride for both." Explaining this point, he observed as follows:

"The investments of the public sector have been mostly in such ventures as could not have been taken up by the private sector. Ventures like steel plants, etc., requiring huge investment would not have been possible for the private sector to undertake. With its limited resources it would not be possible for private enterprise to set up three steel plants costing nearly Rs. 800 crores. The decision of the Government to invest in steel plants in the absence of availability of private capital, whether Indian or foreign, cannot be objected to.

"There are steel plants in the private sector also and they have been asked to expand and they too have expanded. Thus, it will be seen that the steel policy is not so doctrinaire as it appears to some. There are a few other projects which could have been left to the private sector. But such objectionable areas are not very large."

It is true that there is a large field open to the private sector under the Industrial Policy Resoluion. But it is equally true that the burden of taxation is rather heavy. It is to be hoped that the policy-makers will leave no stone unturned to make the fiscal policy more attractive to foreign investors. As the flow of foreign capital is also impeded by the absence of double taxation agreements with the capital-exporting countries, barring a few, the Government of India would do well to conclude such agreements with other countries. In the absence of these agreements, foreigners who earn profits in India after paying taxes will have to pay taxes in their own countries as well. Another difficulty which faces foreign investors is the time-consuming official procedures adopted at every stage—approval of collaboration agreements, licensing, and the like. If difficulties of the kind are removed, there will be greater realisation abroad of India's capacity to absorb larger doses of foreign private capital, as also better appreciation of the spirit of fair play and justice which the basic policies display.

KOYALI REFINERY

The third public-sector oil refinery, just taken up for construction at Koyali (near Baroda) in Gujarat after the laying of its foundation-stone by Prime Minister Nehru on the 10th inst., will not be owned and operated by the Indian Refineries Ltd. On the contrary, this Soviet-aided project is to be managed and run by the Oil and Natural Gas Commission which, it has been supposed all along, would be concerned with the exploration for oil and its production but not its refining. Mention may be made, in this connection, of the Commission's contention that "where it had found oil as a result of its own efforts and expenditure, it should be enabled to reap the benefits from refining also" (*vide* Estimates Committee's recent report on the Indian Refineries Ltd.). In other words, the Commission has taken the line "that, apart from securing returns on the sale of crude oil, it ought to be entitled to certain profits or return on refining as its finances, which were also spent on infructuous exploration, would thereby be strengthened." Incidentally, one may raise the question whether private oil companies too, if they are invited to the field of oil exploration and production of crude, would not be equally justified in asking for refining rights. What is sauce for the goose should be sauce for the gander! That is by the way. What is immediately relevant is whether the Commission will be able to do justice to the task of construction and operation of a refinery on its own. Such a doubt arises because even the Indian Refineries Ltd., which has been specialising in this field, has so far acquitted itself none too creditably, as is evident from the poor operational performance of the Nunmati refinery and the delay in the construction of the Barauni refinery. The following findings of the Estimates Committee on these refineries are disquieting in this context:

"While the Committee agree that teething troubles are not uncommon in industrial undertakings, they feel that in the case of Nunmati refinery it had been unduly aggravated by the serious mistake in carrying out initially hydraulic testing. It appears that the Crude Distillation Unit of the refinery was commissioned in haste. The Committee hope that efforts would now at least be made to bring the refinery to its rated capacity. They also suggest that extra care may be exercised in the initial testing of the units in the other refineries.

"The Committee regret to note that changes had to be made in the pattern of production of the (Nunmati) refinery due to changes in the specification of the crude oil. They understand that the changes in the characteristics of crude oil are not uncommon and should have been taken into account at the time of preparation of project report for the refinery by the Consultants and before deciding the original pattern of production. The Committee hope that at least hereafter every care will be taken to see that there is no further revision in the pattern of production of the refinery as such revisions are bound to affect in the long run the economics of the refinery.

"On the present indication, the first stage of the refinery is likely to be completed by the fourth quarter of 1963, the second stage by the second quarter of 1964 and the third stage by the third quarter of 1964. It will be noted that there have been considerable changes and delays in the original schedule for the completion of the various units of the refinery. The Committee hope that every effort will now be made to complete all the stages of the refinery in accordance with the latest time schedule as the delays in such cases invariably increase the estimated costs of the projects and put off production."

While dealing with the Koyali refinery, it is necessary to draw particular attention to the above findings not only because the Oil and Natural Gas Commission lacks experience in the field of refining, but because this refinery is specially designed to produce more middle distillates—kerosene and diesel oil—which usually present peculiar technical difficulties. It is, however, to be hoped that the Commission will draw on the experience of the Indian Refineries Ltd. and construct the Koyali refinery according to the present schedule—completion of the first one-million stage by December 1964, the second by July 1965 and the third by February 1966. The locational advantage of this refinery, which will process the crude piped from the nearby Ankleshwar and Kalol oilfields, is a great thing. This may go a long way towards making it a profitable enterprise, although its estimated capital outlay of Rs. 31 crores is rather on the high side.

MAN-MADE FIBRE INDUSTRY

It may be conceded at the outset that there is truth in the Food and Agriculture Minister's general observation the other day at Bangalore, while inaugurating the twenty-second plenary meeting of the International Cotton Advisory Committee, that, in spite of the recognised advantages commanded by some of the man-made fibres, especially rayon, it would take a long time for any of them to replace cotton. But there is sufficient proof to support the view that the age-old king of fibres will have to contend now with a formidable rival in synthetic fibres. The best evidence of this is the constant effort of cotton textile mills to diversify, where possible, into rayons, or to go in otherwise for making mixed fabrics of cotton and synthetics. There is in this tendency of cotton mills, one suspects, an attempt to restrict the competitive strength of synthetics and deny them a straight walk-over as a substitute for cotton. But, according to Mr. A. R. Ramanathan, Chairman of the Association of Man-made Fibre Industry, synthetics are no longer substitutes for the traditional fibres; they are new materials in their own right. In other words, they are a growing rival to cotton.

Elegance, lightness, softness and shimmers are the attributes of man-made fibre products, thanks to which they have found increasing favour with men and women alike. From about 48 million lbs. in the initial year of 1921, the world output of man-made fibres in 1962 is estimated at the record level of 8,665 million lbs. Within the span of 40 years, its share in the total fibre output has grown from one per cent to 25 per cent. In India, too, where synthetics came as late as 1951 with the lean output of 5 million lbs., the production last year reached 57 million lbs. in viscose filament yarn and 70 million lbs. in staple fibre. Currently, the licensed capacity of man-made fibre (in million lbs.) in the country is 230.6 of cellulosics, comprising 79.4 of viscose filament, 8.8 of acetate yarn, 5.0 of cuprammonium, 104 of staple fibre and 33.4 of tyre cord, and 13.85 of non-cellulosics comprising 11.7 of nylon filament, 0.65 of nylon staple and 1.5 of nylon tyre cord. Imports of viscose rayon into the country have declined from 34 million lbs. in 1957 to 19 million lbs. in 1962, but those of synthetic yarn have increased from 1.3 million lbs. in 1957 to about 7.9 million lbs. in 1962.

In his speech at the annual general meeting of the Association of Man-made Fibre Industry, which was held at Bombay on the 14th inst., the Chairman, Mr. Ramanathan, candidly conceded that, while in the advanced countries like the U.K., the U.S. and Japan production was almost on par with demand and the industry there was, therefore, in a highly competitive state, the industry in India had enjoyed the benefit of a ready market owing to production falling short of demand. But he added, in the same breath, that in the matter of expansion, specialisation and diversification, the industry in India was not on the same footing as in the advanced countries owing to the restrictions imposed by the country's slender foreign exchange resources. He referred to the general lowering of manufacturing costs abroad through simple modification of production processes, such as the Snia Nylon-6 process or the new Japanese polumide technique of photosynthesis which is reputed to cut costs up to 50 per cent. While such specialisation would be advisable in India, the mere attainment of optimum production, sufficient to meet internal demand, would result in stabilisation of prices, he observed. It is a moot point how far, in the changed context of defence strategy, the industry can claim, as desired by Mr. Ramanathan, a priority in foreign exchange allocation, but the need for it cannot be overemphasised.

In this context, one significant point was made by Mr. Ramanathan. Although it smacks of a definite partiality for the man-made fibre industry and against the cotton textiles, it merits, all the same, serious consideration. He drew the point from the recent survey made by the Reserve Bank of India that the cotton textile industry had now become a net spender of foreign exchange owing to its substantial dependence on imported cotton. Improvement in the production of indigenous cotton would not, in any way, serve the purpose, he argued, because that would be a slow and gradual process, dependent on better technique and the vagaries of weather. Man-made fibres, particularly staple fibres, can fill the gap, according to him, in a significant measure and conserve sizable foreign exchange, if the industry is given the priority for development from the point of view of both raw material availability and substitution of cotton imports. The suggestion is far too much in favour of the man-made fibre industry inasmuch as it seeks its development only at the cost of cotton textiles and almost rules out the possibility of improvement in cotton production.

Uneconomic prices have inhibited the progress of several industries in the country and the man-made fibre industry is one of them. Prices of yarn have been frozen, according to Mr. Ramanathan, at the level which obtained in 1957, though costs have increased all-round since then. The industry has also been shouldering a heavy burden of excise duty. It may, however, be comforting to find that the Government has asked the Tariff Commission to examine the cost structure of the man-made fibre industry and recommend fair prices for manufacturers and consumers. The spinners have welcomed the Government's decision which was announced on the 9th inst.

The Tariff Commission's inquiry may well redress one of the basic grievances of the industry. Its claim for priority allocation of foreign exchange deserves consideration. But it may be noted that, for the past few months, prices in the yarn market have been showing a downward trend due mainly to the reluctance of consumers to lift goods against quotas allotted to them by the Artsilk Yarn Distribution Committee. If the industry's development programme were to materialise, the position would become all the more serious. One suggestion for getting over the problem is that a time-limit should be fixed for consumers to lift goods, failing which spinners be allowed to forfeit the quota and sell goods against it freely in the market. Meanwhile, the authorities are said to be quite aware of the problem and may soon find a way out.

ENGINEERING EXPORTS

India has made a good beginning in the export of several mechanical and electrical engineering goods in recent years. A major proportion of these goods has, however, been taken up by other developing countries in Asia and Africa. A general impression has, therefore, been created in the country that industrialised countries in the West do not offer much scope for our exports of engineering goods, a line in which they themselves are large manufacturers. But this appears to be an erroneous impression, if one is to believe the findings of the latest engineering trade delegation which toured West European countries at the instance of the Engineering Export Promotion Council. The delegation has found that there are immense possibilities for promoting exports of some of the engineering goods from India. Mr. S. L. Kirloskar, Chairman of the Council, who was also the leader of the delegation, himself told a gathering of engineering goods exporters in the northern region at New Delhi the other day that India could export large quantities of C.I. castings to Europe, besides crank-shafts and sugar machinery. He, in fact, went a step further and added that India could well become a "huge foundry for Europe."

Although Mr. Kirloskar was aware of the vast potentialities of exports to the West, he hastened to add that, since the European market was a highly "sophisticated" one, the products offered should be of the best quality. His suggestion that only reputed firms, which are in a position to offer quality products, should be encouraged to export to these countries, is certainly unexceptionable. This suggestion needs to be kept in view by the new export promotion centres proposed to be opened shortly by the Council, one in England and the other in the Continent. The new centres will seek mainly to develop contacts with the industry there and make known to prospective clients the various engineering goods which India is in a position to offer. Mr. Kirloskar hoped that this measure would mark "the beginning of an epoch-making event in the export of engineering goods and services to highly specialised and sophisticated markets of Europe." It, however, remains to be seen whether his optimism will be fully borne out by actual events. Although efforts to increase exports to the West are welcome, it should not be forgotten that India has to face competition in European markets on equal terms with several industrially advanced countries, barring, of course, the U.K. from which we get some Commonwealth preferences. There has been much talk about tariff and other concessions in favour of less developed countries. But no positive steps have been taken so far to translate these proposals into practice. Instead, further hurdles are being raised through the regional integration among developed countries and the imposition of irksome common external tariffs.

The apparent conclusion is that competitive conditions are becoming more and more stringent in West European markets. So the scope for promoting India's exports will depend exclusively on the maintenance of competitive price and quality of products and the type of services offered. On the question of price itself, India's position is none too encouraging. This is particularly so because even developed countries offer some sort of subsidy for exports and keep such prices below those in the domestic market. By means of incentive schemes, the Government of India has also sought to make good a part of the losses suffered by Indian exporters. Mr. Kirloskar conceded that even with the present concessions, there might still be some losses involved in exporting engineering goods not only to W. Europe but also to other countries. Some losses, according to him, were inevitable in the processes of exploring new markets abroad. But he felt that, in the long run, with increasing orders in their hands, this would ultimately enlarge their production programmes which, in turn, would reduce the cost of production.

Mr. Kirloskar made an impassioned appeal to manufacturers and exporters to take advantage of the export promotion incentives in force and thus help augment foreign exchange earnings. It was in the interest of the industry itself, he stressed, that it should enter export markets and avail themselves of the incentives offered. In the first place, this would help manufacturers to get a part of the foreign exchange to import raw materials, components, parts, stores and machinery which were very difficult to obtain otherwise in the present context of foreign exchange shortage. Secondly, exports would enable the industry to have a far-flung international market which would not be susceptible to domestic economic policies of a single national Government." The engineering industry, it is to be hoped, will give due consideration to Mr. Kirloskar's advice and diversify its range of markets. This, incidentally, will augment India's foreign exchange earnings, besides diversifying the very pattern of exports by reducing the share of primary products in them.

ROURKELA MANAGEMENT'S DEFENCE

With a promptness that is rather uncommon in a public-sector enterprise, the management of the Rourkela steel plant has come out with a contradiction of recent Press reports alleging violation of labour laws in the plant. Describing the report as "misleading," the management deplores that the news should have, as its basis, a report prepared by the Orissa State Labour Directorate for a meeting of the State Implementation and Evaluation Committee, which contained an "ill-assorted mass of exaggerations and repetitions." "It seems," the Rourkela management goes on to point out, "no attempt has been made by anyone to go through the compliance report sent to the Inspector of Factories by the steel plant authorities with the result that the framers of the charges against the plant have remained in blithe ignorance of the real position." "Many of the other irregularities, so much played up," the management adds, "are nothing but pure technicalities of a trivial nature relating to an obsolete period

THIRTY YEARS OF T.V.A.

A SYMBOLIC EXAMPLE OF "DEMOCRACY IN ACTION"

By Aubrey J. Wagner

CHAIRMAN, TENNESSEE VALLEY AUTHORITY

FROM its beginning in 1933, the Tennessee Valley Authority has relied heavily on its most important asset—the faith and determination of a free people. Known familiarly by all Americans as "T.V.A.," the Authority was created by Act of Congress to operate dams and plants on the Tennessee river to develop new types of fertilisers for American agriculture, improve navigation on the Tennessee, and maintain flood control. Other purposes are to generate hydro-electric power for a large area of the South-eastern United States that had been lagging behind the rest of the nation, to arrange its distribution and to further the proper conservation, development and use of the resources of its region. T.V.A. serves the people by helping them to serve themselves, adhering to the precept of unified resource development not only for the people, but by the people as well. T.V.A. provides the necessary tools of opportunity—flood control, river navigation, low-cost electric power, and agricultural assistance and education.

What has happened in the Tennessee Valley over the past 30 years dramatically demonstrates a very simple truth; a weak region is an economic burden in time of peace and a frail weapon for national defence. But a region made strong by wise development of its natural resources and the reborn leadership of its people is a national asset for better living and a source of strength for the protection of freedom. To best serve the people, T.V.A. has applied a multi-purpose approach to resource development. A well-planned series of dams holds back and controls the rivers, providing water for the creation of hydro-electric power, aiding navigation and storing potential floodwaters. The rush of destructive waters which once controlled the destinies of men has now become the servant of the people, contributing to the wealth and strength of the entire nation.

In 1933 the Tennessee Valley was a major economic problem in a land of general depression. Its rivers were underdeveloped; its forests were suffering from overcutting and lack of fire protection; its soils were eroded and drained of fertility; its people were subsisting on a *per capita* income averaging only 40 per cent of that of the nation. While water tumbled unused and uncontrolled over the region, farms and small towns had only coal oil lamps and candles for light. Today, the Tennesee Valley is an area where eroded hillsides have been transformed into rich pastures, heavy forests promise new wood-industry jobs in the years ahead, land once torn by the havoc of floods now serves as a multi-million dollar site for industrial and recreational developments. And not all of the benefits are economic. The opportunity to have and afford a modern living standard through low-cost electric service cannot be measured in statistics.

Power Generation

T.V.A. provides a dramatic demonstration that low-cost electricity can pay its own way by encouraging a greater use of electric power in homes, schools, farms and factories. The founders of T.V.A. wisely looked upon electricity as a tool rather than as a commodity—a tool which could be used freely to build a more productive economy. Application of one of the hallmarks of successful business economics—that mass sales at low prices result in lower costs per unit, in this case units of electricity—is the key to the T.V.A. power programme. Rather than limited use at high cost, the people enjoy abundant use at low cost. Today, more than 98 per cent of the region's farms are served by electricity, as compared with three per cent in 1933. One-fourth of the valley homes are heated electrically and the area leads the nation in electrical appliance purchases. Electricity is truly a tool for the people. In homes it sweeps and washes for the housewife. It pumps water and milks cows for the farmer. It turns the drills and lathes of industry, speeding production and easing the task of the worker.

To control the waters which once brought untold expense, misery and loss of life to the people of the Tennessee and Mississippi river basins, T.V.A.'s system of dams provides nearly 12 million acre-feet (15,000 million cubic metres) of storage space with the ability to reduce, or even temporarily hold back entirely, the flow of the Tennessee river. The flood control system has already prevented $180 million in estimated damage, within $4 million of the total system investment.

Swift currents and rocky shoals opposed efforts to make the Tennessee river a navigable servant of the people before the T.V.A. multi-purpose dam system formed the "Great Lakes of the South," a 650-mile chain of quiet water joining the region with the nation's inter-connected Inland Waterway System. With the development of T.V.A.'s nine-foot navigation channel, industrial growth logically followed. Since 1933 private industry has invested $854 million in water-front facilities along the river. Industry means new jobs and increased demand for regional products and resources, bringing more income to the valley people. In turn, the waterway enables shippers to transport products economically into the area. Barges from the mid-western wheat-belt bring grain to the mills of the Tennessee Valley. Shippers save on transportation costs and people throughout the nation have new markets and more economical products made available.

Agricultural Progress

T.V.A.'s Fertiliser-Munitions Development Centre at Muscle Shoals, Alabama, is the heart of efforts to help the people turn a land stripped bare by destructive water and poor farming into an area of increasing productivity. At the Centre, fertiliser chemistry is undergoing a scientific revolution as T.V.A. scientists and engineers provide improved fertilisers for better farming and improved production processes for more economical manufacturing. The nucleus of T.V.A.'s agricultural development programme began with two chemical plants built by the U.S. Army as weapons of war. T.V.A. converted these swords into ploughshares, working with private industry and agricultural colleges to make farming a more stable and prosperous, yet more flexible, operation. T.V.A.-sponsored test-demonstration programmes provide fertilisers and technical assistance to farmers in 31 states who demonstrate the effectiveness of improved farming methods to their neighbours.

In 1933 T.V.A. foresters found fire damage and erosion eliminating the natural advantage of climate in the Tennessee Valley, a region for which forestry once provided the people with a seemingly inexhaustible resource. T.V.A. joined State agencies in an intensive fire control and reforestation campaign. Today, with more than 96 per cent of the valley's 15 million forested acres protected from fire, wood and wood-using industries have created employment for 50,000 persons.

T.V.A. has become a symbolic example of "democracy in action" to peoples throughout the world. More than 1,500 representatives from other countries visit T.V.A. each year. The changes that are taking place in the Tennessee Valley are in accord with those sought by men in every nation. As a result, many valley development projects in other countries are based on the T.V.A. example.

(*Concluded from next column*)

ter they did not rise at all); accordingly the current balance of this year ought to be even better than last year. Against this, capital investment overseas, which was abnormally low last year, may go up substantially and absorb a great deal of this improvement. It is impossible to speculate intelligently about what the overall balance might be but following past trends it should still end favourably. Looking further ahead yet into 1964, it is clear that the increase in stock-building at home and the general revival in business will lead to a proportionate increase in imports and, since British export prices show signs of moving up in proportion to the general domestic price level, there may be no counter-balancing factor in further improved exports. Thus, the balance of payments in two years' time may once again become precarious. However, the authorities ought not to be inhibited by this in assessing the present expansion because there is no reason to suppose that any imbalance would be disproportionate to Britain's capital and borrowing resources to meet them.

Clearly the country's long-term balance of payments is dependent on the world situation and the signs from the United States are encouraging. The same cannot be said of the primary producing countries; so the external market picture is neutral.

LONDON LETTER

UPTREND IN ECONOMY

BALANCE OF PAYMENTS POSITION OPTIMISTIC

(*From Our Own Correspondent*)

LONDON, 10*th May*

THE British economy has been doing so badly in the past six months that it can hardly do any worse, and the indications are that it is bound to improve through the rest of 1963 more or less at the rate that the National Economic Development Council suggested for the long term, that is, about 4 per cent per annum. This is the conclusion reached by the latest survey of the economic situation made by the National Institute. Necessarily at this time of the year—that is, with a third of the year gone and incomplete data available for the first quarter—there is a good deal of surmise in any figures which one may write down, but the reasoning can be set down as follows:

The factors which have been dragging the economy down in the last two complete quarters have been a fall in manufacturing investment, followed by an even more drastic fall in building work as a result of the weather, and also a fall in stock-building—the latter in part the result of the long-maintained credit squeeze. The only improving factor was exports which were estimated to rise by about 2½ per cent in the first quarter of this year.

When stock-building has been low for a period there is always a rebound and, with money cheaper and credit easy, that rebound should already have begun. By the same argument investment by manufacturing industry has been plunging downwards towards the low point reached at the beginning of 1959 before the last major recovery. But the likelihood is that this downward trend will now flatten out. At the same time public authorities who have been *expanding* their investment, even when private industry was diminishing theirs, are increasing their rate of investment steadily and the estimate is that it is moving up about 4 per cent per annum. The combination of this increasing expenditure by public authorities *plus* investment by manufacturing industry and rebuilding of stocks will increase national expenditure at an estimated rate of 4 per cent over the year. Consumers' expenditure after allowing for savings (which, it is now thought, are a good deal less than has previously been estimated) is likely to increase by not less than 3 per cent. Since there is no indication that retail prices will rise other than nominally over the year, real incomes should be moving up at the same rate.

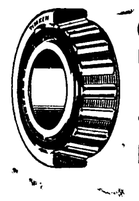
Expenditure Rising

Looking at the picture another way round, one can say that the indications are that expenditure, under the stimulus of the various Budget concessions, is rising, that industry has been given incentives to invest which could conceivably be withdrawn in the future, so they must be taken advantage of now, and on the analogy of what happened in 1958-60—the last cycle—the economic scene is set fair for an undramatic but solid improvement.

Unfortunately, the survey cannot see that employment will benefit correspondingly; this is in line with the estimates made earlier by industry that they had spare labour capacity largely in the form of unworked overtime. The improvement in output will accordingly lead to more hours being worked and, of course, money being earned but it is not expected to lead to any considerable reduction in unemployment which, it is pessimistically estimated, will be about the same at the end of 1963 as it was at the end of 1962. This is bad political capital for the Party in power.

Foreign Trade

The balance of payments presents an equally optimistic picture. It will be recalled that the U.K. finished 1962 with a favourable balance of £67 million on current account and, after allowing for capital movements and uninterpreted items, the overall favourable balance was as high as £103 million.



Already the first quarter of this year has shown an improvement in exports of 2½ per cent; the review states it would be optimistic to assume they could possibly go on expanding at that rate and suggests that, may be a rise in exports would be no more than the overall rise in national output, say 4 per cent over the year. On the other hand, imports are not likely to rise at the same time (during the first quar-

AN ASSESSMENT OF THE GOLD POLICY

MORE EFFECTIVE ENFORCEMENT OF RULES IMPERATIVE

GOLD prices have started moving up again. The rise in the last fortnight has been steady and continuous, with transactions reported around Rs. 118 per ten grams last week. At the time of writing (5 p.m. on Wednesday the 15th inst.), gold is quoted at Rs. 117. The rise is about Rs. 10 over the forward rate prevailing in November last when the Government of India banned forward trading in gold. As compared with the lowest level of Rs. 85 touched after the imposition of ban, the current rate is higher by about Rs. 32. Even at such a high level as Rs. 117 per ten grams, demand for gold continues to be keen. The unofficial quotation for undeclared gold has hardened to Rs. 113. The firmness of official prices seems to have stemmed from the strength in unofficial rate. The metal sold in unofficial dealings is mostly of contraband variety. The firmness of gold has induced the jewellers to put up the prices of 14-carat gold ornaments from Rs. 80 to Rs. 85 per ten grams. The demand for these ornaments have tended to decline at the high level. Sovereign has shot up to Rs. 82 in unofficial dealings. In view of the rise in prices, the Finance Minister declared at Surat on Monday this week that the aim of Gold Control Rules was not to bring down the prices but to control or stop smuggling. He is reported to have stated that the price of gold would never come down in the country; on the contrary, it would remain at a high level, since there was scarcity of gold. His ultimate aim, he added, was to stop even 14-carat gold ornaments. It is difficult to understand the logic of the Finance Minister, because, when prices are remunerative, smuggling would be stepped up once again but does not go down. Actually, there are indications that the substantial rise in price of late has brought about conditions when gold smuggling has become once again a profitable proposition.

Mr. Kotak on Gold Price

The Chairman of the Gold Board, Mr. G. B. Kotak, himself frankly admitted at a Press Conference in Bombay on Tuesday the 13th inst. that there had been some revival of illegal trade (smuggling) more recently, though he claimed that smuggling was very much less now than it was during 1960-62 and that Gold Control, by enhancing the risk element, had rendered the smuggling of gold more difficult. Referring to the steady rise in the internal price of gold again in recent weeks, Mr. Kotak observed:

"While it is now somewhat higher than on the eve of Gold Control, the price is still well below what it was in 1961-62. The main factor for this rise is, as is generally known, the busy season demand (for ornament-making for marriages) in the context of the limited supplies of gold with the dealers. Under the circumstances, the rise in prices that has taken place was to be expected, and the Gold Board is fully aware of the position. A permanent reduction in the internal price of gold takes considerable time and effort; meanwhile, through administrative enforcement, supervision and control over transactions of refineries and dealers, and other means, the pressure on smugglers and their abettors will be kept up by us. This modest price rise by itself will not induce any revival of large-scale gold smuggling. The undeclared gold holdings have become illegal. As and when they are detected, they will be confiscated. When any transactions in this gold are noted, penalties will be imposed according to provisions in the Rules. By now, the suitability of 14-carat gold for making various types of ornaments is admitted by all sections and this has ceased to be a problem. As for the particular 14-carat alloys that would be most suitable, this question has been very carefully considered by the Board and its Technical Advisory Panel, and a few compositions will be publicised soon."

Smuggling Continues

Whatever the explanation of the Gold Board Chairman, it looks as though Gold Control has still not met with success. A period of six months is long enough to prove that the Government's policy is being implemented, if at all, on right lines. But this is not the case, as is evident from the daily reports disclosing seizures of smuggled gold—this may decline to some extent with the onset of monsoon shortly—and the surreptitious presentation of 22-carat gold ornaments on important social occasions like marriages even now. Several goldsmiths are reportedly engaged in manufacturing ornaments of more than 14-carat pureness in the houses of consumers. That is why the Finance Minister characterised the gold trade as 'bunkum' and goldsmith's profession as a 'dishonest' one. But the fact remains that it is very difficult to control the manufacture of 22-carat gold ornaments, since the 500,000 goldsmith establishments are spread over the entire country. In view of the rise in the price of 14-carat gold, even the permission for their manufacture makes smuggling of gold an attractive proposition.

Export of Jewellery

It is against the aforesaid background that the Union Government announced, on the 6th inst., a special export promotion scheme for gold jewellery and gold articles. Under the scheme, 10 per cent of the f.o.b. value of exports can be used for the import of gold directly by exporters and 40 per cent permitted to be utilised by the Handicrafts and Handloom Export Corporation for importing gold subject to certain restrictions. The import permits are issued by the Reserve Bank. Against the export of gold jewellery and gold articles and gold enamelware, 50 per cent of the f.o.b. value will be available to exporters for importing diamonds, semi-precious stones and pearls. The manufacture of more than 14-carat purity is allowed for the purpose of export only and this has to be carried out in bonded factories under the supervision of the Customs Department. Individual jewellers are permitted by the Gold Board to manufacture or export gold jewellery on the recommendations of the All India Handicrafts Board. Gold jewellery and articles of more than 14-carat purity are allowed to be sold to foreign tourists visiting the country under certain precautions so as to prevent their resale within the country.

The export promotion scheme is expected to provide more loopholes for the evasion of Gold Control. The exporters of jewellery are allowed even now to import the entire quantity of gold required for manufacture. Export promotion schemes for precious stones are also in force. Again, gold jewellery is mostly exported to Persian Gulf and West Asian countries where gold is ruling at the international level of Rs. 62.50 per tola, and an import entitlement of 10 per cent of gold against the export of gold ornaments may not be of much help to exporters to meet the losses resulting from the wide disparity between internal and international prices. It is widely feared that the export promotion scheme for gold jewellery may provide fresh opportunities to smugglers to manipulate foreign exchange earnings. Further, the gold imported by exporters will mean a direct violation of the Gold Control Rules.

Not Something New

The idea of gold control is not something new in several countries. For instance, the private possession of gold was banned in the United States during the Great Depression and it was extended to cover U.S. citizens resident abroad in 1961 when a crisis enveloped the dollar. The idea in India was first mooted by Dr. B. K. Madan, Executive Director of the Reserve Bank, when he advocated the idea of individual gold ceilings in the course of a lecture delivered at the Punjab University in 1961, as a means to mobilise idle hoards of gold for productive purposes. The Government became receptive to the idea, in view of the low level of foreign exchange reserves, and started experimentation, seizing the opportunity offered by the Emergency. The Gold Bonds Scheme was announced in November last, but this proved to be a failure. Individuals holding gold, not ornaments, above a limit were asked to declare under Gold Control Rules, but this again met with poor response. Not more than 27.5 million grams of gold worth Rs. 13 crores at international price, we are told, have been declared by dealers and refiners and individual declarations aggregate just 12.7 million grams. An important reason for this poor show is that the bulk of gold is held in India in the form of ornament gold and 80 per cent of holdings is thinly spread in rural areas. It was only the educated few possessing non-ornament gold above the stipulated limit who cared to declare their holdings. Next, the Government directed the banks to exercise caution in extending credit against gold, but this helped only in disorganising trade and business, including agricultural operations, in rural areas and strengthened the hold of moneylenders there. This was admitted recently by Mr. Shriman Narayan, Member of the Planning Commission. The manufacture of 14-carat gold ornaments has been widely publicised, but people do not appear to have taken to the idea with as much enthusiasm as officialdom.

Limitations

Why has Gold Control not yet proved a success? Is it likely to face the same fate as prohibition? For finding answers to these questions, we must inquire into the nature of Gold Control. The idea of Gold Control in India is not to ban the private possession of gold. Nor is it the object to bring down the prices or to fix any limit to ornament gold in private hands. The Government is not in a position to offer any alternative scheme like Gold Certificates with a price clause, because it does not have enough gold with it to ensure repayment at a future date. Hedged with all limitations, the Government aimed at controlling smuggling by prescribing a lower purity for ornaments. While, theoretically, such a prescription should have reduced smuggling, because, with the same quantity of gold, twice the quantity of ornaments could be manufactured, the difficulty of enforcing the scheme placed serious limitations on its success, in view of the wide dispersal of goldsmiths all over the country. The goldsmiths who have been deprived of their livelihood in different States are preparing to launch an all-out *satyagraha* against the Government's Gold Control. It is evident that the Government started the experiment in a half-hearted way.

More Energetic Action Wanted

What then should be done? The Government should come out with a heavy hand, since it is convinced that people should be weaned away from attachment to gold. Possession of gold by private citizens should be made an offence, just as manufacture of currency notes or retention of foreign exchange by private individuals. Severe penalties must be prescribed for exhibiting or displaying gold. The purchase and sale of gold must be done by the Reserve Bank or the State Bank through its wide network of branches. Individuals owning gold should be asked to surrender all gold to these institutions before a prescribed date, on pain of penalties.

Simultaneously, the Government should lose no opportunity to explore the gold resources within the country. The gold mines in Hatti and other places in South India may, for instance, be explored. Every goldsmith should compulsorily get himself registered with the village officials and no time must be lost to rehabilitate them in alternative occupations. The entire issue of Gold Control should be treated on a war footing. As the Chairman of the Gold Board himself has emphasised, "gold control is an integral part of the nation's sinews for defence and development," and that "vigilant control has to be the basis of Gold Control policy. At the same time, whatever the measures taken directly to deal with smugglers and their abettors, including especially deterrent punishment, in the ultimate analysis, domestic demand has to be curbed for gold, and internal prices should be brought down to a reasonable level, if the policy is to show enduring results." What is wanted is more effective enforcement of the Gold Control Rules by strengthening the administrative machinery.

SWEDEN'S CONTRIBUTION TO I.D.A.

The Swedish Parliament has approved of a special supplementary contribution of $4,263,000 to the resources of the International Development Association (I.D.A.), an affiliate of the World Bank. The funds will be made available to the I.D.A. in freely convertible Swedish kronor, neither tied to procurement in Sweden nor restricted to use in any specified countries or in any specified projects. This contribution raises Sweden's participation in the financing of the I.D.A. to double the amount of its initial subscription. A year ago, Sweden made a supplemental contribution equivalent to $5,827,000 in kronor on terms similar to the new contribution. These supplemental contributions, together with its initial subscription of $10,090,000, bring its total contribution to the equivalent of $20,180,000.

The I.D.A's subscribed capital now amounts to about $970 million, of which $765 million have been subscribed in convertible currencies. Since its establishment in 1960, it has extended 36 development credits amounting to $450.15 million in 18 countries. The credits are assisting projects for the development of transportation, agriculture, communications, electric power, industry, municipal water supply and the construction of schools. In view of the fact that most or all of the freely convertible resources available from I.D.A's initial subscriptions will probably be committed this year, the Executive Directors are preparing a report for the Board of Governors recommending steps to be taken to replenish its resources.

Announcement regarding the Issue of Rs. 30,00,000 7 per cent Debenture Stock 1973/78

IN UNITS OF Rs. 1,000/- AT PAR

BY

BINNY & COMPANY (MADRAS) LIMITED

REGISTERED OFFICE: **7, ARMENIAN STREET, MADRAS-1**

EXISTING AND PROPOSED ACTIVITIES

The Company was incorporated in India in 1920 to take over a business originally founded in 1799. At the present time the Company owns a controlling interest in two textile mill companies (The Buckingham and Carnatic Co. Ltd. and The Bangalore Woollen, Cotton and Silk Mills Co. Ltd.), in an engineering company (Binny's Engineering Works Ltd.) and in a newly formed engineering subsidiary company (Giovanola-Binny Ltd.). In addition to the foregoing, the Company acts as agents for the sale in India of goods manufactured by principals, both indigenous and foreign, and has developed a "BINTEX" range of handloom fabrics which find good markets through the selling organisation which already exists for the products of the mill companies.

The mill companies manufacture the well-known "BINNY" range of cotton and union fabrics. Binny's Engineering Works Ltd., carry on general engineering business and are currently engaged with several large orders for complete Sugar Factories. Giovanola-Binny Ltd. has its factory in Cochin and is about to begin manufacture of penstocks which are much needed for hydro-electric projects. The latter company was formed in collaboration with Messrs. Giovanola Freres S. A. of Monthey, Switzerland, who have wide experience in the manufacture of penstocks, pressure vessels and other equipment.

LOCATION OF THE INDUSTRY

The Buckingham and Carnatic Co. Ltd. has its mill in Perambur, Madras-12; The Bangalore Woollen, Cotton and Silk Mills Co. Ltd. has its mill at Agraharam Road, Bangalore-23; Binny's Engineering Works are situated at Meenambakkam, Madras-27, and Giovanola-Binny Ltd. has its factory at Palluruthy, Cochin-5. There is a selling organisation for "BINNY" and "BINTEX" goods which covers the whole of India and export markets. The Binny Group of Companies is directed from the Company's Head Office at 7, Armenian Street, Madras-1.

BOARD OF DIRECTORS

MR. DONALD WILLIAM LAW, "Coromandel House," Mowbrays Garden, Madras-28 (*Chairman*).

MR. ALAN DOUGLAS GALLOWAY, "Vrindhavan," Boat Club Road, Mowbrays Garden, Madras-28.

MR. ROBERT EDWARD McLELLAN, "Rother House," Benson Cross Road, Bangalore-1.

MR. PATRICK RAYMUND DEVIN CARMICHAEL, "Kent House," 1st Avenue, Mowbrays Garden, Madras-28 (*Managing Director*).

MR. EDWARD WILLIAM DEREK JEFFARES, M.C., "Coleroon," Boat Club Road, Mowbrays Garden, Madras-28.

MR. HUGH MACKAY TALLACK, 22, Camac Street, Calcutta.

MR. BIJAYATI DAVARAJULU VENKATA RAMASAWMY, "Govardhan," 18, Taylors Road, Kilpauk, Madras-10.

DR. RAJAH SIR MUTHIAH CHETTIAR OF CHETTINAD, "Chettinad House," Adyar, Madras-28.

MR. ROBERT BEAVAN KERNICK, "Chiddingstone," Benson Cross Road, Bangalore-1.

MR MULLATH KADINGI VELLODI, "Staff Cottage," Bangalore Palace, Bangalore-1.

MR. PETER DERRICK WHITELEY, "Nandi," 3, Kelleys Road, Kilpauk, Madras-10.

MANAGING DIRECTORS/MANAGING AGENTS/SECRETARIES AND TREASURERS/MANAGERS

The Company has no Managing Agents, Secretaries and Treasurers or Managers and does not act in any of these capacities for any other company or business. The Company has one Managing Director, Mr. P. R. D. Carmichael. Members of the Company's Board of Directors (with the exception of Mr. H. M. Tallack, Dr. Rajah Sir Muthiah Chettiar of Chettinad, Mr. R. B. Kernick and Mr. M. K. Vellodi) are Directors or Managing Directors of one or more of the Company's subsidiary companies.

OUTLOOK FOR COTTON ENCOURAGING

I.C.A.C. CALLS FOR BIGGER PROMOTIONAL EFFORTS

THE outlook for cotton in the next season (1963-64) may be more reassuring than during the present season when it faced a big surplus, particularly in the U.S. This is the considered view of the International Cotton Advisory Committee (I.C.A.C.), Washington, which concluded its 22nd plenary meeting at Bangalore on the 8th inst. A policy statement issued by the I.C.A.C. at the conclusion of the meeting says that all available indications point to a better balance between production and disappearance next season. Two factors that reinforce this conclusion are: (1) the reduction in 1963-64 acreage in the U.S. by two million bales, which should help to reduce total production, and (2) the resumption of the upward trend of consumption in certain countries.

Surveying the cotton situation in the current season, the statement adds that cotton production during the season has risen to a new high level and that there has been a further increase in cotton exports from many countries outside the U.S. These developments have had a beneficial effect on the national income and foreign exchange earnings of these countries. Prices, in general, have so far continued to show a remarkable degree of stability, although at a slightly lower level than that a year ago.

With a record world crop and some anticipated reduction in the aggregate consumption for the first time since 1956, the statement continues, a sizable increase in the total world carryover at the end of the current season seems unavoidable. World stocks on 1st August 1963 are, therefore, likely to increase by over a million bales to reach the highest level since 1959. Figures of total stocks, however, do not reflect the true stock position. In fact, stocks in most of the producing countries are at or near the minimum. This is also the case in importing countries where buying has continued to be on a hand-to-mouth basis, resulting in a further depletion of stocks. A basic fact, therefore, is that the world surplus will be concentrated almost entirely in the U.S. where stocks are expected to increase to around 11 million bales, as compared with 7.8 million bales a year earlier.

The I.C.A.C. is aware of the difficult situation faced by the U.S. Administration in this regard. It recognises that, while acreage and production have continued to expand in many countries, the U.S. has continued its drastic acreage restrictions. The expansion in exports from other producing countries contrasts with a further sharp decline in U.S. exports during the current season. The Committee recognises this to be a valuable contribution to the health of the world cotton economy.

Higher Yields

The acreage restrictions have, however, been offset, in part, by the long-term trend towards higher yields. The failure of the U.S. domestic consumption to increase in recent years has, to some extent, been due to the disparity between the export and domestic prices of U.S. cotton. This has impaired the competitive position of cotton *vis-a-vis* other fibres in this important market.

The Committee devoted considerable attention to the question of competition between cotton and man-made fibres. Although, in the Committee's opinion, the decline in consumption of cotton during the current season may, to some extent, be cyclical, the fact remains that consumption of man-made fibres has risen to new record levels. Cotton's share of the total market has declined further during the current season, but, in absolute terms, the long-term trend in consumption continues to be upward. Many factors are involved in this situation, according to the Committee, and no single explanation would be adequate. But prices, in its view, seems to be a more significant factor as regards competition with the cellulosic fibres, particularly in certain end-uses, whereas, in the synthetic fibres, considerations of quality, performance and consumer preference appear more decisive.

On the question of the price of cotton and man-made fibres, many delegations which attended the I.C.A.C.'s meeting felt that the present price relationship between cotton and cellulosic fibres in most countries was more or less appropriate; but some considered that this was too optimistic a view, considering other relevant considerations. Others, however, expressed the view that a modest increase in prices of cotton would not have any detrimental effect on cotton's competitive position while it would materially contribute to the standards of living of cotton farmers throughout the world. The Committee did not express any opinion on this question but felt that it would be prudent to keep all aspects of the competitive situation, including price, under continuous review.

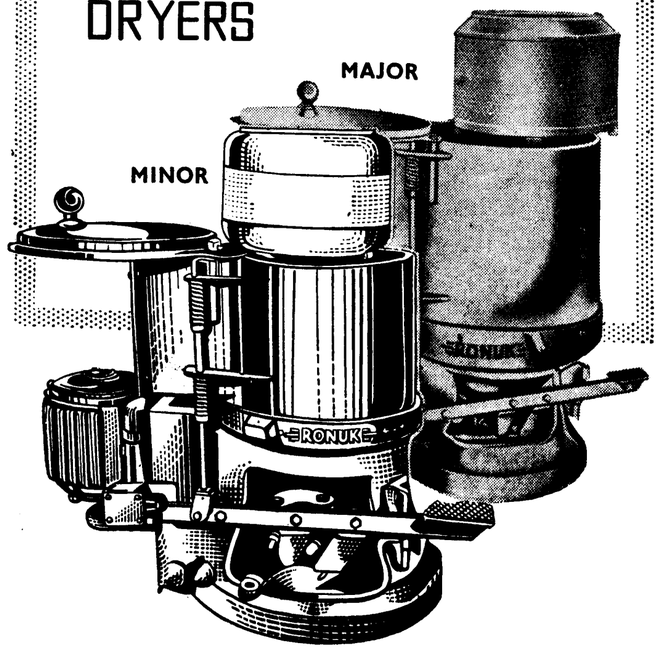
The Committee was critical of the promotional plans for cotton. Promotion, according to it, has a vital part to play in expanding the overall demand for raw cotton and in strengthening its competitive position *vis-a-vis* other fibres. Considerable efforts are already being made in this direction. But the plain fact is that, taken as a whole, they fall far short of those which are being made for the promotion of man-made fibres in the fields of both publicity and technical development. The Committee did well to suggest that producers should also be encouraged to take a more active part in the promotion of cotton in export markets.

Ample Opportunities

In the Committee's opinion, given increased efforts in all these directions, the position of cotton as a textile fibre in the long run would be encouraging. The continuous increase in world population and rising population and rising incomes, together with the hoped-for improvement in the standard of living, should provide cotton with ample opportunities, especially in countries where *per capita* consumption is low and where, for climatic and other reasons, cotton is particularly suitable. The Committee pin-pointed the importance of promotion by adopting a resolution on promotional activities for cotton. Promotional activities, the resolution contends, have in fact been inadequate for cotton to level off the trend towards increased use of man-made fibres. The resolutions also suggests that the standing committee of the I.C.A.C. should convene a meeting before the 23rd plenary meeting to consider ways of raising additional resources for promotion and market research.

EXTRA LONG-STAPLE COTTON

A comprehensive report on extra long-staple cotton was discussed at the 22nd plenary meeting of the International Cotton Advisory Committee, which concluded at Bangalore on the 8th inst. The report, which was prepared by a sub-committee appointed by the I.C.A.C., predicted that the supply of extra long-staple cotton during the current season (1962-63) would easily be the largest on record. While the total acreage under extra long-staple cotton declined, production increased, thanks to a record crop in Sudan and the general increase in yield per acre.



One of the significant points made by the sub-committee in its report was that, in spite of the increased supply, prices remained remarkably stable. This was primarily due to the pricing policies of the U.A.R. and Sudan. The stability had, however, been achieved only by continuously lowering the level of prices over a period of several years. This involved considerable loss in foreign exchange to the producing countries and a narrowing of the price differential between extra long-staple and medium-staple cotton. This, coupled with the rise in cost of production, tended to make production of extra long-staple cotton less attractive.

The Committee endorsed the recommendations of the previous meetings concerning diversification, by devoting land under extra long-staples to alternative crops or other staples. This would lessen the overwhelming dependence of the economies of certain countries on the extra long-staple cotton market. With the exception of the U.S., according to the Committee, no increase in area planted to long-staple cotton was contemplated for the next season in any country. The Committee expressed its continued support for promotional efforts on behalf of cotton, particularly extra long-staples. The development of new technology, involving blending of extra long-staples with other fibres, was noted.

As regards the future, the committee noted that the rising standard of living, especially in developing countries, had created a shift in consumers tastes which favoured expanded use of the extra long-staples. Other possible avenues for expanding the market were development of new end-uses, market research and intensified promotion work.

MERGER OF TWO BIG TEXTILE FIRMS

MILL WORKERS TO GET A FLAT RISE IN WAGES

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, *7th May*

WHAT might well be described as one of the most long-drawn-out rumours relating to textile share bids became an accomplished fact a week ago when the details of the deal between English Sewing Cotton Co. and Tootal Ltd., were published. Speculation over a merger between these two big firms had been going on for so many months that, even an hour or two before the news was released, it seemed as if the share movements were just another case of the Stock market "crying wolf."

To the professional share operator and those to whom textiles merely mean clothes on their back, the linking of one of the major thread manufacturing firms with a group whose name is synonymous with ties, socks and handkerchiefs was a matter of considerable importance. Within the trade, however, the background shadow of the "now-friends-again" Courtaulds and I.C.I. was the really significant factor.

How big a factor the participation of these two giants in providing finance for the deal really is only time will show, but their willingness to assist in developments calculated to encourage efficiency by integration certainly marks another page in the industry's history. It also remains to be seen how far their influence towards promoting man-made fibres at the expense of cotton will be felt in the years ahead. It is reasonable enough to predict that the present deal will not be the last in a series of moves aimed at consolidation of the industry.

Still Many Firms

Commentators on such developments, however, sometimes forget that there is no single guiding force which has a particular object in mind. Individual companies make their plans according to their own requirements, although a general policy may be followed out on a long-term basis.

If any one organisation was responsible for centralising moves to make the whole industry vertical in structure and universally efficient, near-monopoly powers would need to be invoked. It should not be forgotten that there are still something like a thousand firms engaged in the production of cotton and allied textiles, quite apart from the many hundreds of merchants, big and small.

Nevertheless, the May-Day merger has quite emphatically set the ball rolling and it will be surprising if other companies in similar circumstances do not emulate the example of the leading participants. No one who has read the details carefully can overlook the sentence in the statement which declared that the proposal did not preclude I.C.I. or Courtaulds, either jointly or separately, from entering into other arrangements designed to assist the textile industry of the United Kingdom if suitable opportunities occur in the future.

Imports Up Again

Imports of cotton grey cloth in the first quarter of 1963 showed a marked rise as compared with the level of arrivals in the same period last year. By the end of March, they had reached 133,177,000 yards, as against 107,497,000 yards in 1962. A slight increase in purchases of finished fabric from abroad brought the total to 41,990,000 yards, as against 39,697,000 yards last year. The joint total of imports at 175,167,000 yards compared with 147,194,000 yards last year and the recent quarterly level of less than 150 million yards.

Of undoubted importance is the fact that imports are rising in the case of only the three Eastern Commonwealth countries which are signatories to the inter-industry agreements, apart from a sharp rise in supplies acquired from China. Compared with the first quarter last year, imports from India have increased from 44,990,000 yards to 51,585,000 yards while arrivals from Pakistan have more than trebled at 18,880,000 yards, as against 5,141,000 yards. Hong Kong has sent 21,060,000 yards, as against 14,776,000 yards and China 10,400,000 yards, as against 4,028,000 yards.

The only really notable change in finished cloth imports is the continuation of larger purchases from Hong Kong. The Colony sent 9,497,000 yards in the quarter, as against 5,513,000 yards last year, but shipments from Belgium have declined from 8,147,000 yards to 6,477,000 yards. Moderate quantities have been secured from Western Germany, the Netherlands and India, each of these countries providing more than 3,000,000 yards.

Better Man-made Exports

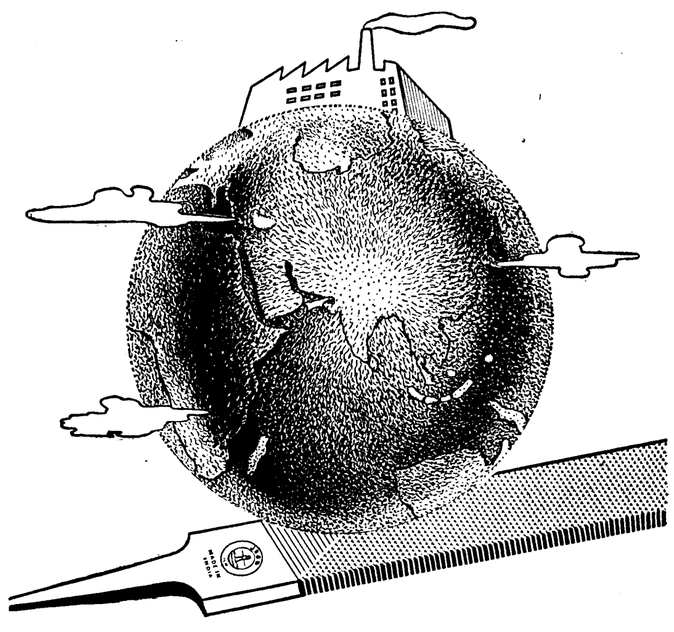
Any gains in the export sector must be attributed to shippers of man-made fibre goods, although cotton yarn and thread has managed to maintain its slight improvement on last year's level. During the quarter, shipments of man-made fibre yarns were 19,267,000 lbs. as against 17,190,000 lbs. last year, the major destinations being Australia, Sweden, Switzerland, South Africa and China. Further progress was also made by exporters of man-made fibre fabrics whose overseas trade to the end of March totalled 19,067,000 yards, as against 12,279,000 yards.

Cotton yarn and thread exports in the three months amounted to 5,790,000 lbs, as against 5,355,000 lbs. Only Australia absorbed more than 1,000,000 lbs., but fair support came from Canada. New Zealand and the Irish Republic. No real halt to the decline in exports of cotton fabrics can as yet be discerned. In the quarter, the total was 58,400,000 yards, as against 64,977,000 yards last year.

Machinery in Europe

Statistics covering the European cotton industry for the first six months of 1962 show an increase in the number of active automatic looms, reflecting the re-equipment plans being pursued in the textile industries of the area. The percentage of automatic looms within the total of active machinery rose from 49.91 per cent in 1961 to 51.89 per cent during the first half of last year.

The British returns, some of which are estimated, give the maximum number of active looms running in the first half of 1962 as 148,100, of which approximately 46,000 were either automatics or with automatic attachments. In comparison, looms running in Western Germany numbered 107,962, of which 68,731 were automatics; in Italy, 93,319 looms were running, including 76,755 automatics, and, in France, 91,935 looms were running, including 59,255 automatics.



Despite the scrapping programmes widely adopted in 1960-61, about 10 per cent of all Western European spindles were idle during the first half of last year, as against only 7½ per cent in 1961. Ring spindles operating in the United Kingdom during the period are shown at 5,787,000, as compared with 5,817,000 in Western Germany, 4,595,000 in France and 3,916,000 in Italy.

European textile industries as a whole have now almost completely abandoned mule spinning machinery. Outside Lancashire only 43,000 of these spindles were at work in the early part of last year. The British total is given as 2,107,000 mule spindles, a reduction of nearly 700,000 spindles as compared with 1961. By the end of last year, however, according to the latest Cotton Board figures, the number operating had fallen to 1,600,000.

Union-Employer Accord

The deadlock in the demand for higher wages for 150,000 Lancashire cotton spinning and weaving workers ended this week, with an announcement that the unions and employers have jointly agreed to a pay increase. The award is for a flat rate increase of 5s. 9d. per week for each operative. The new rates will be effective from the first pay day after 30th June.

A condition of the agreement is that both sides will proceed as quickly as possible through joint sub-committees—separately in the spinning and weaving sections—to examine the wage structure and its associated conditions with a view to its modernisation and the removal of existing anomalies.

PROGRESS OF THIRD PLAN—I

MID-TERM REVIEW BY PLANNING COMMISSION

THE third Five-year Plan completed its first two years by March 1963. During this period, which was marked by relatively unfavourable weather conditions and the emergency, there was no significant increase in agricultural production and industrial production in general recorded an increase of about 8 per cent per annum, although both capacity and production in the capital goods sector continued to show encouraging progress. A substantial part of the production potential created and bulk of the actual output achieved in the first two years of the third Plan are, to a large extent, the effects of the investments made during the previous Plan period. The results of the investments made during the first two years of the third Plan will be largely available in the concluding years of the third Plan. Nevertheless, the production potential created and the output achieved during the first two years of the third Plan have considerable significance not only for the appreciation of the current economic situation but also for making an assessment of the likely trend during the rest of the Plan period.

According to the *Advance Estimates of National Income* 1962-63, net national income in 1961-62 was Rs. 14,470 crores at 1960-61 prices. The increase in national income was thus of the order of 2.1 per cent only, as against the average of 4 per cent in the second Plan period and the extraordinary increase of 7.1 per cent in 1960-61. The low rate of growth in national income was a reflection primarily of the failure of agricultural output to exceed the record level of production achieved in the previous year. In the industrial sector also, the rate of growth in 1961-62 was somewhat subdued on account partly of the deficiency in raw materials and partly of shortages in power, transport, coal, steel and imported materials.

Prices

In the first year of the third Plan period, though the increase in national output was less than anticipated, there was no upward pressure on prices owing largely to the large supplies of foodgrains available from 1960-61 output. In fact, the wholesale price index declined by about 3.6 per cent between April 1961 and March 1962, in contrast to the increase of 7.5 per cent recorded in the last year of the second Plan due largely to the rise in the price of industrial raw materials and manufactured goods. In 1962-63, the trend in prices changed somewhat. Until about August 1962, prices moved upwards particularly in respect of food articles. Part of this increase was a result of the normal seasonal increases affecting the prices of such commodities as fruits, vegetables, milk and ghee; in part it was also a consequence of the reduced outturn in the agricultural sector during the 1961-62 season. However, in the months subsequent to August, the price situation eased and, at the end of March 1963, the general price index was 3.2 per cent lower than that at the end of August 1962. This fall did not, however, fully compensate for the increase that had occurred in the period April-July 1962 and prices at present are about 3.1 per cent higher than at the end of March 1962. This has once again been the result of the firming up of prices of food articles.

With a view to checking possible inflationary pressures, the Government's overall economic policy was carefully reviewed. Some of the measures which have been taken in pursuance of this objective are control of credit, regulation of forward trading, fixation of prices, control over the distribution of certain essential commodities (such as foodgrains, textiles, drugs and medicines, kerosene) and enlargement of the network of fair-price shops and consumer stores. At the same time, price supports to cultivators in the form of minimum or procurement prices were announced for wheat, rice and raw jute and the ceiling price was revised upwards in the case of raw cotton. Subsequent to March 1963, the floor prices for raw cotton have also been raised with a view to providing an incentive to the growers.

The effect of emergency and the assumption of wide powers by the Government of India under the Defence of India Act on general economic trends was not immediately very marked. Over the greater part of the country, there was no interruption in the economic activity. Except in certain cases, the increase in defence offtake has not been such as to reduce seriously the availabilities for civilian purposes. Simultaneously, a variety of factors contributed to the maintenance of civilian demands for goods and services more or less in balance with available supplies. While these factors moderated the increase in aggregate demand, there has been some improvement on the side of output. However, it would be dangerous to underestimate the strains that may develop in the economy, if larger increases in production are not achieved. The requirements of defence and development are bound to gather momentum in the coming year and these increases cannot be met through additional imports. Further, on account of the emergency, Plan implementation in certain vital sectors has to be speeded up; and this points to the need for larger effort for resources mobilisation.

Plan Outlay

As against the five-year target of outlay on the public sector plan of Rs. 7,500 crores, the expenditure in the first year amounted to roughly Rs. 1,112 crores. In addition, there was another expenditure of about Rs. 140 crores which was required for maintaining the developmental services created in the second Plan period. By definition, this expenditure is to be reckoned outside the third Plan. In essence, however, it is not different from the Plan expenditure as such. If account is taken of this also, the development outlay incurred in the first year would represent a significant step up over the level realised in the last year of the second Plan.

In 1962-63, the Central and State Governments had planned for an outlay of about Rs. 1,480 crores. It is not possible to indicate at this stage the actual outlay over the year. But even allowing for a possible shortfall, the step up in the second year of the Plan over the level of the first year would be of a sizable order.

For the year 1963-64, the size of the annual Plan has been set at a little over Rs. 1,650 crores. Taking the first three years of the Plan together, the total of the outlay would thus come to about Rs. 4,245 crores. The table below indicates the year-wise estimates.

(Rs. crores)

Heads	Third Plan outlay	1961-62 actuals	1962-63 estimates*	1963-64 Plan	Total for first three years
Agriculture and Community Development	1,068	147	188	216	551
Irrigation and flood control	650	103	132	112	337
Power	1,012	136	191	247	574
Industry and minerals	1,984	231	346	410	987
Transport and communications	1,486	290	364	400	1,054
Social service and miscellaneous	1,300	205	269	268	742
Total	7,500	1,112	1,480	1,653	4,245

* Estimates as furnished by the Central Ministries and State Governments in January 1963.

Financing of the Plan

The financing of the Plan outlays in the first three years together with the five-year scheme of finance as visualised at the time of the formulation of the third Plan, is set out below:

(Rs. crores)

	Third Plan scheme of finance	1961-62 likely actuals	1962-63 B.E.	1962-63 R.E.*	1963-64 Annual Plan†

* This is based on the revised estimates for the Centre and January 1963 estimates for the States.

† This is based on the budget estimate for the Centre and the annual Plan estimates for the States.

‡ Exclusive of an amount of Rs. 28.6 crores in respect of internal resources of public enterprises under the control of the Central Government. Since this amount was used up in financing working capital requirements and other miscellaneous asset formation, it has not been taken into account under either resources or plan outlays set out here.

For financing the outlay of Rs. 1,112 crores in 1961-62, the Central and State Governments raised about Rs. 721 crores out of their normal resources. Budgetary receipts corresponding to external assistance contributed another Rs. 303 crores, while the remaining amount of Rs. 88 crores was found through withdrawal from cash balances and borrowings from the Reserve Bank in the form of issue of *ad hoc* Treasury Bills in the case of the Centre and special ways and means advances and overdrafts in the case of the States. By and large, the financing of the Plan in this year did not lead to any serious strains in the economy. Tax receipts turned out to be fairly buoyant. There was, however, some setback in the small savings movement. In the matter of loans also, while the amount realised was quite substantial in the process the Reserve Bank holdings of the long-dated rupee securities also increased. The additional tax effort put forth by the Centre was substantial; in the States, however, only a modest beginning was made.

The year 1962-63 was in many respects markedly different from the preceding year. Firstly, there was a big step up in the outlay; secondly, because of the Chinese aggression, the outlay on defence and connected items had to be increased substantially. Another distinguishing feature of the year was the big tax effort put in by the States. In the table set out above, the estimate of budgetary deficit has been shown at Rs. 251 crores, Rs. 239 crores in respect of the Centre and Rs. 12 crores in the States. Data relating to the changes in cash balances and issue of Treasury Bills in favour of the Reserve Bank that have now become available show that perhaps the deficit was smaller. During the year, changes were made in certain small savings schemes. A modified Prize Bond scheme and another scheme relating to Gold Bonds was introduced. Certain far-reaching changes were made in the sphere of trading and possession of gold in private hands. A National Defence Fund was started. A scheme of Emergency Risks Insurance was also put into effect. The Centre's borrowings programme was strengthened by the introduction of a 4½ per cent National Defence Bonds. All these changes constituted the first step in the direction of mobilising large resources for defence and development.

Resource Mobilisation

The resource mobilisation effort that the country is undertaking in the current year is indeed a large one. The increased defence commitments and the rising tempo of Plan expenditures necessitate diversion of resources from non-investment and civilian consumption uses to investment and defence uses on an unprecedented scale. The fiscal programme put forth by the Centre and the States is designed to achieve this objective.

The tax measures of the Central Government, as finally approved by Parliament, are expected to yield an aggregate revenue of Rs. 258 crores in the current year. In addition, changes in railway passenger fares and postal rates would bring in another Rs. 22 crores. So far as the States are concerned, the scheme of finance as worked out at the time of the formulation of the annual plan for 1963-64 visualised that they should attempt to raise an aggregate amount of Rs. 89 crores from fresh taxation, including Rs. 21 crores representing the yield from changes in inter-State sales tax rates. Proposals put forth in the State budget, however, amount to additional taxation of Rs. 54 crores inclusive of the increase in inter-State sales tax. It is possible that, as in the past, some States may go in for further taxation during the course of the year.

In the Plan, the five-year target of additional taxation was indicated at Rs. 1,710 crores, Rs. 1,100 crores in respect of the Centre and the remaining Rs. 610 crores in the States. Measures taken by the Centre during the first three years are likely to yield an aggregate revenue of over Rs. 1,700 crores. Measures taken in the States so far, including the one relating to changes in inter-State sales tax rates, would bring in over the Plan period another Rs. 520 crores. Thus, taking the Centre and the States together, the tax effort put in in the first three years has been of a fairly high order. Nevertheless, in view of the substantially larger outlay on defence, the surplus from current revenues available for the Plan, which was of a significant magnitude in 1961-62, is likely to turn into a sizable deficit in the current year. The entire question of additional taxation has, therefore, now to be viewed in a perspective quite different from the one that existed at the time of the formulation of the third Plan.

As against the five-year estimate of railways' contribution indicated in the Plan at Rs. 100 crores, the contribution in the first three years would aggregate to Rs 76 crores. Both these figures are, however, exclusive of the additional resources accruing from changes in fares and freights. It is estimated that changes in fares and freights carried out by the railways in the first three years would yield Rs. 66 crores in these years, the yield over the Plan period being about Rs. 180 crores. These amounts have been included under the item "additional taxation."

Public Enterprise Surpluses

In regard to surpluses of public enterprises, the contribution in the first year came to Rs. 20 crores. This figure is, however, exclusive of an amount of Rs. 28.6 crores in respect of internal resources of public enterprises under the control of the Central Government. Since this amount was used up in financing working capital requirements and other miscellaneous asset formation, it has not been taken into account under either resources or Plan outlays set out in this paper. For the year 1962-63, the estimates, without again counting the internal resources of Central Government enterprises comparable to the figure of Rs. 28.6 crores in 1961-62, comes to Rs. 28 crores. For the year 1963-64, a much larger sum of Rs. 69 crores is expected to be available from public enterprises by way of surplus for meeting the requirements of the Plan.

In regard to loans from the public, the net realisation in the first year was Rs. 148 crores, including Rs. 9 crores of borrowings by the State Electricity Boards. For the year 1962-63, the revised estimate, which includes receipts on account of defence bonds, is Rs. 202 crores. In 1963-64, the borrowing operations have to be conducted on a centralised basis. After allowing for repayments on account of maturing loans of the Centre as also of the States, the net receipts would come to Rs. 203 crores.

The performance in the first two years in the matter of small savings has been below the initial expectations. To supplement the small savings movement, a compulsory savings scheme has been introduced in the current year. This is expected to yield about Rs. 60 crores. In addition, there is the Prize Bonds Scheme. The 1963-64 target of net collections under all the four schemes taken together, namely, Small Savings, Compulsory Savings, Prize Bonds and Gold Bonds, is set at Rs. 172 crores.

The scheme of finance formulated for the current year postulates deficit financing of about Rs. 168 crores. The endeavour over the course of the year should be to limit deficit financing to an even smaller figure by suitable economies, speedier recoveries and the like so as to maintain reasonable stability in prices.

Agriculture

So far as agricultural production is concerned, the performance during the first two years has been stable. This is due to the fact that the year 1960-61, the last year of the second Plan, had an unusually good season, while, during the first two years of the third Plan, weather conditions were not so favourable. Therefore, the index of agricultural production (1949-50=100) shot up to 140 in 1960-61, as against 135 targeted on the assumption of a normal season and then continued more or less at the same level next year. Final estimates for 1962-63 are not yet available, but the index is not likely to record a significant improvement over 1961-62. Production of closed some of the important crops as compared to the five-year target has been as follows:

Item	Unit	1960-61	1961-62	1965-66 targets
Foodgrains	Mill. tons	79.7	78.6	100.00
Oilseeds	"	6.5	6.8	9.0
Sugarcane (*gur*)	"	10.4	9.7	10.0
Cotton	Mill. bales	5.4	4.5	7.0
Jute	"	4.0	6.3	6.2

The need for accelerating the programmes for agricultural development was felt right from the middle of 1962. In August 1962, State Governments were asked to increase the third Plan targets for minor irrigation and soil conservation by 20 per cent. Additional allocations over and above the Plan provisions for 1962-63 were made available for these programmes to the tune of about Rs. 10 crores. The need for giving a further impetus to agricultural development was again stressed with the declaration of National Emergency in October 1962. It was decided by the National Development Council that the third Plan targets in respect of minor irrigation, soil conservation and dry farming should be raised substantially. The need for securing immediate increases in the production of rice, millets, pulses, cotton, oilseeds, fruits, vegetables, milk, meat, etc., was emphasised both for meeting the increased defence requirements as also to hold the price line in the country. Detailed programmes were worked out for the intensification of effort for the production of the abovementioned commodities. Broadly speaking, it is the extension of the package programme approach which underlines the new programme. Further, on the basis of recommendations of expert committees areas have been selected for intensive development of cotton and oilseeds in various States.

In order to ensure larger investment for measures leading to increased production over a short period, the State Governments were advised to drop, curtail or defer some of the long-term developmental measures in the sphere of agriculture and also to cut down as far as possible expenditure on building programmes and to divert the savings to immediate needs. In addition to development of principal agricultural commodities, stress is also being laid on increasing the production of supplementary and protective foods like vegetables, fruits, milk, etc.

In collaboration with the State Governments and other Ministries concerned with agricultural development, the Ministry of Food and Agriculture and Planning Commission are trying to ensure that all the bottlenecks in the way of rapid agricultural development such as inadequate coordination, shortage of certain supplies, or credit and non-utilisation of irrigation potential are removed. It is only through continued attention in all these directions that the third Plan targets can be fully achieved. High level teams of Central officers are currently visiting the States to discuss with them and review the agricultural production programme for 1963-64.

Irrigation

The table below sets out the physical targets and achievements for major and medium irrigation schemes of the Plan:

(Million acres, gross)

Benefits	To end of					
	Second Plan (1960-61) (actual)	1961-62		1962-63		1963-64
		Target	Actual	Target	Actual	Target
Potential at outlets	12.56	13.96	13.63	16.43	15.28	18.80
Utilisation	8.79	10.62	9.68	12.72	11.07	13.84
Percentage utilisation of potential at outlets	70	76	71	78	72	74

Special efforts are being made to improve the utilisation of irrigation potential by getting the field channels constructed on a campaign basis through the beneficiaries as their contribution to the war effort and by other related measures. The Planning Commission has addressed the State Governments emphasising the urgency for speeding up utilisation as much as possible by ensuring close co-ordination among all Departments concerned, continuous supervision at all levels, frequent reviews, etc. Necessary legislation empowering construction of field channels at the cost of beneficiaries in the event of their default to construct them within a specified time already exists in the States of Jammu and Kashmir, Madhya Pradesh, Madras, Orissa, Punjab and Rajasthan. As a result of the present efforts, the Governments of Gujarat and Uttar Pradesh have also enacted the legislation for this purpose in January 1963 and February 1963, respectively. Andhra Pradesh is considering a draft Bill for the purpose and Maharashtra is preparing one. The remaining States have also been advised to enact such legislation.

A team of officers from the Ministry of Irrigation and Power has recently been visiting the States to review the progress made in the implementation of the various irrigation and flood-control schemes, particularly to find out what the bottlenecks are and to help in their removal.

The position regarding financial outlays for major and medium irrigation and flood control

(*Continued on page 903*)

NEW PUBLICATIONS

The History of Foreign Exchange. By Dr. Paul Einzig Published by Macmillan & Co. Ltd., Bombay. Pages : 319. Price : 36s. net.

DR. Paul Einzig claims that his forty-ninth book is the first attempt to cover the entire history of foreign exchange in all its main aspects, from its origin to our days. As a financial journalist, Dr. Einzig have had opportunities to study and comment on current exchange problems; he has soaked himself thoroughly in the archives as all serious students must do.

The book traces events during nearly 4,000 years. Part I begins with Babylonia and covers the ancient period, especially the evolution of markets in foreign bills, largely under the influence of the Church. Even in those days the foreign exchange market provided channels for non-commercial payments of every kind from one country to another, facilities for the transfer of capital abroad, etc. Part II covers the medieval period and the third part deals with the period upto the nineteenth century; the important developments during the later period related, among others, to the origin of the purchasing power parity theory, the terms of trade concept, Gresham's Law and Adam Smith's contribution.

The nineteenth century, that is, the period upto the beginning of the First World War marked an important landmark. During this period parities became better defined, specie points became narrower, active markets developed in foreign market notes, usance no longer determined the maturity of bills but was the basis of calculating the difference between market quotations and actual amounts paid for bills, markets became continuous, dealers were in contact every day throughout business hours and Paris and London became the leading markets. In the last section, the author brings the story up-to-date and the latest fact noticed is the declaration by the eleven countries of the I.M.F. to implement their obligations under Article VIII of the Fund's rules to restore convertibility for non-residents and for current payments and to abstain from multiple currency practices.

In the concluding chapters the author points out that a study of the History of Foreign Exchange theory discloses a remarkable degree of similarity of ideas during various periods notwithstanding the institutional changes. A significant modern development is the tendency towards international co-operation, symbolised by the I.M.F. Dr. Einzig points out: "It has come to be realised that panicky flights from exchanges are like conflagrations—if we abstain from doing our best to help our neighbour whose house is on fire, it is liable to spread to our house. In this respect mentality has changed beyond recognition during the last quarter of a century—even though upto the time of writing not quite sufficiently to secure co-operation to the extent required."

Foreign exchange is a technical subject. But in writing its history, interesting sidelights have been usefully indicated. Cleopatra financed her life of luxury partly by devaluing the drachma by 75 per cent; Nero financed the rebuilding of Rome after the Great Fire by debasing the deneirius. Plato invented the Gold Exchange Standard and Aristophanes invented Gresham's Law. The first known Forward Exchange was initiated by the Papal Court of Avignon in the thirteenth century. The Duke of Northumberland in 1551 forestalled Sir Stafford Cripps in officially denying an impending change in the parity of sterling which was carried out soon after his denial. Napoleon followed closely the quotation of sterling as an indication of the progress of his blockade of England.

The author makes a modest claim that, if the present book has contributed, however slightly, towards facilitating the task of those who have to assume responsibility for taking such difficult decisions and the task of those who criticise them, it has achieved the main purpose. In attempting to compress the available material to 300 pages, the discussion is pointed enough for students of foreign exchange and economic history. At the same time, the method of treatment has enabled him to pack it with material that is of interest to the general reader. The book contains a masterly analysis of the historical development of the theory and practice of exchange control.

Monetary Policy and Economic Growth. By H. V. R. Iengar. Published by Vora & Co., Publishers Pvt. Ltd., Bombay 2. Pages : 295. Price : Rs. 17.50.

Mr. H. V. R. Iengar was the Governor of the Reserve Bank of India during the period 1957-62 when the country passed through a critical period and particularly experienced the foreign exchange shortage which upset many calculations of the second Five-year Plan. Usually the least spoken people in the highest offices of nations are the Governors or Presidents of central banking institutions. In India also we had a similar tradition, but Mr. Iengar tried a different technique. He seems to have believed in more personal discussions, conventions being agreed to, and making known the background and objectives of policy. It should be said that, during his period of office, he was able to keep the banking community with him.

The publication contains a collection of twenty-three talks and these, together, give an account of the monetary policy and economic growth of India. The forums for these talks were varied. They were either University associations and international groups and institutions or chambers of commerce or gatherings of co-operators. The views expressed have sometimes sparked off controversies, at other times have been helpful in revealing the correct picture to foreign investors or, at times, have brought home some elementary truths which have been long forgotten.

Explaining the role of the Reserve Bank in the Planned Economy to a gathering in Cairo, he concluded: "To the extent that the Central Bank's promotional role helps to ensure the proper use of credit for productive purposes, the efficient working of banking institutions and the mobilisation of savings of the areas to which the development extends, it should strengthen the Bank in maintaining monetary stability in a period of economic growth." Speaking of Indian banking, he stated that "it should be possible, by a combination of firmness and understanding, to reorganise the banking structure within a relatively short period, say, a couple of years or thereabouts so that we will have one single type of banks in our country—both big and small, having a licence and coming within the purview of deposit insurance." Speaking of the rural conditions and, particularly, agricultural production, he stated in 1959 that "whether one looks at the problem from the specific point of view of agricultural production or of the general economic conditions of rural families, it is clear that such improvement as has taken place is inadequate for our needs." Almost the very last speech before giving up his office was on the topic of central banks and governments. Speaking of India, he states that "fortunately in the handling of this problem so far as the Government and the Reserve Bank are concerned, adjustments have taken place with a great deal of mutual understanding... the result is not automatic but has been the result of conscious effort of both sides."

It is difficult to summarise the contents of the various topics. Mr. Iengar gives to his talks the direct approach which is his peculiarity. These talks bear the stamp of originality and their subject matter is arranged properly. The collection is not only useful material for the student of economics and the general reader but a model, for many others, of how to put across effectively the policies that are being pursued.

Indian Industries, their Development, Management, Finance and Organisation. By T. R. Sharma and S. D. Singh Chauhan. Published by Shivalal Agarwala & Co. Private Ltd., Agra. Pages: 560. Price: Rs. 12.50.

Post-independence years have seen many industries coming up in our country, and this is a healthy sign for any growing economy. But the problems of these emerging industries are many and varied in nature. Their management, execution and perspective planning will determine, to a large extent, the future of industrial development. The present book, *Indian Industries*, is an attempt made to bring all these problems under one compass and analyse them from different angles. The subject matter of the book is divided into four sections.

Starting with a historical account of modern industries in our country, the first section prepares the background for describing the various industries and discussing their problems. It also includes a discussion of the industrial policy of the Government, the Industries (Development and Regulation) Act 1951, the working of the system of protective duties and the problems of rationalisation and modernisation.

This takes us to the core of the subject in the second section. It deals with the system of industrial management in some detail. From the discussion it appears that the British Managing Agency houses working in India were more honest and efficient, in comparison with the Indian managing agents, in their dealings with the companies under their management. It is also revealing to find through these discussions that the Government is perfectly justified in regulating management practices through provisions in the Company Law and other Acts like the Industries (Development and Regulation) Act. The establishment of honest and efficient management practices is one of the most important prerequisites for healthy industrial development.

Industrial finance forms the subject matter of the third section. It is perhaps very correctly said that one of the casualties of the Second World War was individual industrial finance. In most of the countries of the world, institutional finance has taken the place of industrial finance by big industrial and business magnates. India is no exception. Since 1947 a fine network of industrial finance institutions of all types has been built up and it is rendering yeoman service to Indian industries. The financial assistance provided by these institutions may not be quite adequate at the present time, but it is likely to grow with further industrialisation and development. Absence of industrial finance was one of the principal hurdles which prevented the development of independent director-managed companies and forced the new ventures to seek the shelter of managing agencies. This hurdle no longer stands in the way of promotion of industrial units as they are now independent of the need of financial protection afforded by the managing agents. The way is now almost clear for a healthy development.

The six leading industries of India, namely, iron and steel, cotton and jute textiles, sugar, cement and paper, are described in the fourth section. The engineering and chemical industries have also been included because they are basic to the development of other industries. The word "organisation" in its broadest sense, has been taken to denote the entire range of discussion of one particular industry, involving its manifold aspects. In its narrower sense, it has been used to denote (i) the sectors or sub-sectors of a particular industry as in the case of iron and steel, cotton, sugar and paper; (ii) the organisation of management to regulate the supply of raw materials, production of goods, working hours, etc., as in the case of the jute industry; and (iii) for the development of groups inside the industry, as in the case of the cement industry. One chapter has been devoted to each industry to discuss the various important aspects of its organisation.

The book will be a handy reference source for students, businessmen and research scholars. On the whole, it is a well documented piece of research work.

CONTROL OVER SUGAR PRICES

NORTH INDIAN MILLS WANT HIGHER RATES

THE Government of India's decision to re-impose control on sugar prices was discussed at some length in these columns three weeks ago (*vide* page 732 of *Commerce* dated 27th April). Referring to the fixation of ex-factory prices for sugar produced in the different regions, we pointed out that the price of Rs. 109.85 per quintal bag fixed for Maharashtra sugar was too low to cover adequately the increase in the cost of production that had taken place in the past three-four years. We then indicated how the actual extent of the rise in price (as compared with the price obtaining in 1959) was less than that effected in the case of North Indian sugar (over the controlled rate fixed prior to September 1961) and stated that the allegation made by sugar millowners of East U.P. and Bihar that they had been discriminated against *vis-a-vis* their counterparts in Maharashtra was baseless. Apropos of this reference, Mr. C. J. Mehta, Secretary, Bihar Branch of the Indian Sugar Mills Association, Patna, has sent us the following communication:

"While at the very outset, I would like to clarify that the factories in U.P. and Bihar are not in any way opposed to Maharashtra's demand for higher sugar price, but, at the same time, there is no getting away from the fact that, in the present controlled prices announced by the Government, they have discriminated against East U.P. and Bihar factories *vis-a-vis* their counterparts in Maharashtra. It is true that the present controlled prices allowed to U.P. and Bihar are higher by Rs. 7.82 per quintal over the controlled rates of Rs. 100.69 fixed prior to September 1961, but what is relevant is whether this price is commensurate with the fair price level. In comparison, you have stated that, in the case of Maharashtra, costs have gone up by Rs. 5.79 per quintal and that the controlled prices should have been fixed at Rs. 113 per quintal to cover this increase over the price of Rs. 107.21 per quintal obtaining in 1959.

"It appears that the very basis on which you have proceeded to compare the price structure for Maharashtra with that of U.P. and Bihar is erroneous in so far as the price obtaining in 1959 in Maharashtra was not controlled. In fact, no controls were imposed on Maharashtra factories in 1959 and the price of Rs. 107.21 per quintal was arrived at only on voluntary basis in agreement between the State Government and the industry in that region, not because their cost was high but because of the fact that, the area being deficit, sugar had to be imported from U.P. and Bihar and the price parity had to be maintained allowing the Maharashtra factories to retain the freight advantage. It needs hardly any clarification that the price thus fixed cannot be termed as controlled price. For a realistic comparison of the price structure for the two regions, it would be interesting to find out and determine as to what would have been the controlled rates in Maharashtra in 1959 if the same basis as applied to U.P. and Bihar was adopted. Here again was a case of discrimination against U.P. and Bihar, inasmuch as the controls were confined to the Northern region only, while other regions were left severely alone.

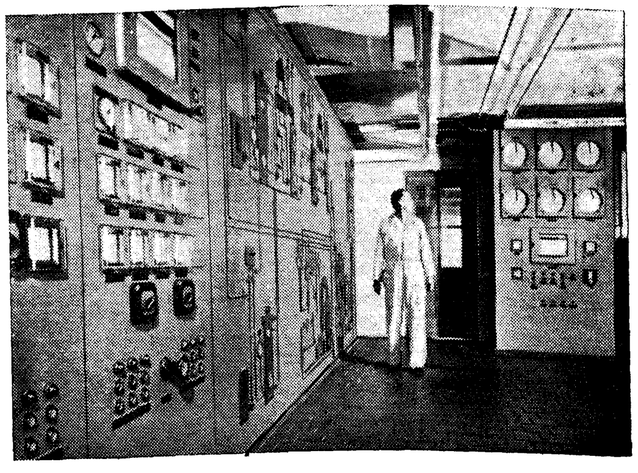
"It will be appreciated that, in any measure which seeks to control and regulate prices, primary consideration has to be given to the cost of production plus a fair return to the producer. Therefore, what is relevant here is to determine the actual cost of Maharashtra factories on the basis of the Tariff Commission cost schedule with adjustment for necessary increases since 1959 when the schedules were originally formulated. Likewise, should be computed the price for East U.P. and Bihar factories. These factories themselves have suggested the setting up of an impartial panel to study the cost in the various regions on the basis of the Tariff Commission schedules. Such a study is bound to reveal that, whereas the prices fixed for East U.P. and Bihar factories do not cover even the costs, in the case of Maharashtra, the prices actually give higher margins than those permissible under the Tariff Commission schedules. The irresistible conclusion, therefore, is that there has been discrimination against the East U.P. and Bihar factories.

"What the East U.P. and Bihar factories have demanded and which would be considered to be a reasonable and justified demand is that they should be allowed the same margin as has been allowed to Maharashtra factories in the controlled prices. On the basis of the Tariff Commission schedule, it can be conclusively established that the fair prices for East U.P., North Bihar and South Bihar should have been higher by Rs. 8.55, Rs. 10.88 and Rs. 21.94 per quintal respectively as compared to Maharashtra. It is somewhat ironical that the prices fixed for the East U.P. and Bihar are lower than those for Maharashtra. Is this not a clear case of discrimination against the regions which produce a big chunk of the country's sugar? This discriminatory policy, if continued, will ultimately affect production and thereby defeat the Government's declared objective of maximisation of sugar production.

"It is hoped that an eminent commercial journal of your standing will take an objective view of the situation and lend its support to the cause of the East U.P. and Bihar factories in their strife for securing an economic price structure at par with that of Maharashtra."

We do not think that there is need for any elaborate clarification of our point of view. Suffice it to say that, when we described as baseless the allegation of discrimination made by the East U.P. and Bihar sugar mills, we also made it clear that this did not mean that their plea for a higher ex-factory price was unjustified. What we sought to stress was only that the grounds on which their plea was based applied with equal force to sugar mills in Maharashtra too.

As for the comparison of the price structure for Maharashtra with that of U.P. and Bihar, Mr. Mehta says that the basis of such comparison is erroneous. We wonder how it is so. It is true that there were no controls on Maharashtra sugar factories in 1959 and that the price of Rs. 107.21 per quintal was arrived at only on a voluntary basis in agreement between the State Government and the industry. But would the Maharashtra Government have fixed the price of sugar at this level if it had not considered it to be fair? The present price has, therefore, to be compared with what was considered to be a fair price in 1959.



Refuting the charge of discrimination, Mr. A. M. Thomas, Union Deputy Minister for Food and Agriculture, stated in the Rajya Sabha last week that the Government of India had adopted a uniform yardstick throughout the country and went by the cost schedule recommended by the Tariff Commission; the cost was based on the average ex-factory realisation in February-March 1963. The Government, he added, had taken into consideration the landed cost price of sugar too. Mr. Thomas also denied the charge that the sugar price fixed for East U.P. and North Bihar was lower than the cost price envisaged by the Tariff Commission. The sugar price, he claimed, was fixed on sound principles and no sugar factory in the country would be receiving less than the cost of production on an average.

The aforesaid observations of Mr. Thomas, we feel, have answered the points raised by Mr. C. J. Mehta in his letter. It may be true that the cost of production in Maharashtra is more favourable than in U.P. and Bihar, but this is due to greater efficiency and better economic viability of the units. This, at any rate, should not, we repeat, be a reason for penalising the Maharashtra sugar industry.

MODERNISATION OF U.P. SUGAR MILLS

The need for modernising sugar mills in Uttar Pradesh was stressed by the High-Power Sugar Industry Advisory Committee at its meeting held at Lucknow recently. The Committee recommended to the State Government to place a rotating capital of Rs. 5 crores at the disposal of some lending agency to extend financial assistance for the purpose. Considering the huge amount involved in the task, the National Industries Development Council, it was felt, should also be approached to supplement the efforts of the State Government by providing long-term loans for the renovation and expansion of sugar mills. Mere modernisation and rehabilitation of sugar mills, however, will not make them viable units. Steps must simultaneously be taken to ensure adequate cane supplies. There is also the need for expanding the cane crushing capacity of mills, preferably upto 2,000 tons. The Committee did well, therefore, to urge encouragement to the merger of two small mills to ensure a bigger capacity and fuller crush. The two other recommendations made by the Committee were: (1) no new licences for power crushers should be issued within a radius of ten miles from the sugar mills; and (2) the sugar factory areas in east U.P. should be given preference in respect of minor irrigation projects and roads around sugar factories.

Addressing the meeting, the Chief Minister of Uttar Pradesh, Mr. C. B. Gupta, declared that the State Government was prepared to extend the intensive cane development scheme to all the 71 sugar factories in the State, provided the Centre, which was sharing one-third cost of the scheme, agreed to it. The State Government, he said, was deeply concerned over the collapsing economy of the industry and held out the assurance that all possible steps would be taken to restore it to its once leading position in the country. Mr. Gupta pleaded for a regional formula for the fixation of sugar prices instead of a rigid and overall formula for entire Northern India. Areas suffering from the regional drawbacks, in his opinion, did not get due relief under the existing formula. He made particular reference to sugar factories in east U.P. and said that they deserved special consideration in view of their precarious economy.

Look what you get with

HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.

You get training for your instrument technicians in the most up-to-date maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay.

You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise Instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

CANADA LEADS IN LIFE INSURANCE

THREE IN EVERY FOUR FAMILIES COVERED

CANADIANS are the most insurance-minded people in the world, judged by the ratio of life insurance in Canada to its national income. About three in every four Canadian families are covered by life insurance. The average amount of coverage is more than $11,000. The ratio of life insurance in force in Canada to the national income was 157 per cent in 1958, the highest for any country in the world, including the U.S.A. (135 per cent). The percentage must be much higher now, considering the phenomenal growth of life insurance in that country. Last year, according to *The Financial Post*, Toronto, Canadians spent nearly four per cent of their income after tax in insurance and annuities. New life insurance bought aggregated more than $6,600 million, bringing the total amount of life insurance in force at the end of the year to $54,500 million, as compared with $50,857 million in 1961. Ten years ago, that is, at the end of 1952, life insurance in force in the country aggregated only $19,739 million. Total business in force has thus recorded a threefold increase in a decade. The following table gives comparative figures of life insurance in force at the end of 1961 in selected countries:

(1961 figures in million dollars)

India	5,712	Italy	4,165
Argentina ..	560	Japan	24,496
Australia ..	11,126	Mexico	1,357
Belgium	4,216	Netherlands ..	2,157
Britain	33,021*	New Zealand ..	2,695*
Canada	50,857	Norway	1,341
Chile	77	Philippines ..	970
Colombia ..	424*	Puerto Rico ..	853
Denmark ..	1,853	Spain	532
Finland	1,736	Sweden	7,254
France	12,896	Switzerland ..	4,774
West Germany ..	19,898	United States ..	656,624

* 1960 total.
Source: *Canadian Life Insurance Officers' Association.*

A remarkable feature of life insurance in Canada is that, although all types of insurance have grown, the rate of growth was the greatest in the case of group life insurance. In 1945, group insurance represented about 11 per cent of total life insurance in force. It now represents more than 33 per cent. Most of the group insurance is by groups of employees but some covers members of trade unions and associations. More than 86 per cent of Canadian workers are employed in firms which have group insurance plans.

Highly Competitive Market

The market for life insurance in Canada is highly competitive, in which not only Canadian but also U.S., British and other European companies compete. In fact, the insurance market in Canada is freer than that in the U.S. or Britain. British life insurance companies do not operate in the U.S. nor do U.S. companies sell life insurance in Britain. But in Canada both British and U.S. companies compete with one another and with the Canadian companies. (The latter, in turn, operate in Britain, the U.S. and other countries.) In spite of this keen competition Canadian companies account for 70 per cent of the life insurance in force in Canada.

Life insurance is not only an important source of savings but also one of Canada's most important exports. About two million people in 50 countries own policies issued by Canadian companies, worth a total of $13,900 million. Of the two million policyholders of Canadian companies outside Canada, 70 per cent are in the U.S., 16 per cent in Britain, 2 per cent in Asia, 6 per cent in Africa and 6 per cent in the Caribbean and Latin American countries. Assets held by the Canadian companies on account of their overseas policyholders aggregate $3,000 million which amounts to about one-third of the total assets of all Canadian companies.

Pension Plans

The growing popularity of pension plans and personal retirement programmes is a feature of life insurance in Canada. Growth of annuities, especially group annuities for employees, has been rapid. Of the annuities, both individual and group, that are in force with Canadian companies, more than 20 per cent are payable to annuitants outside Canada. Nearly 50 per cent of the individual annuities are owned by persons outside Canada.

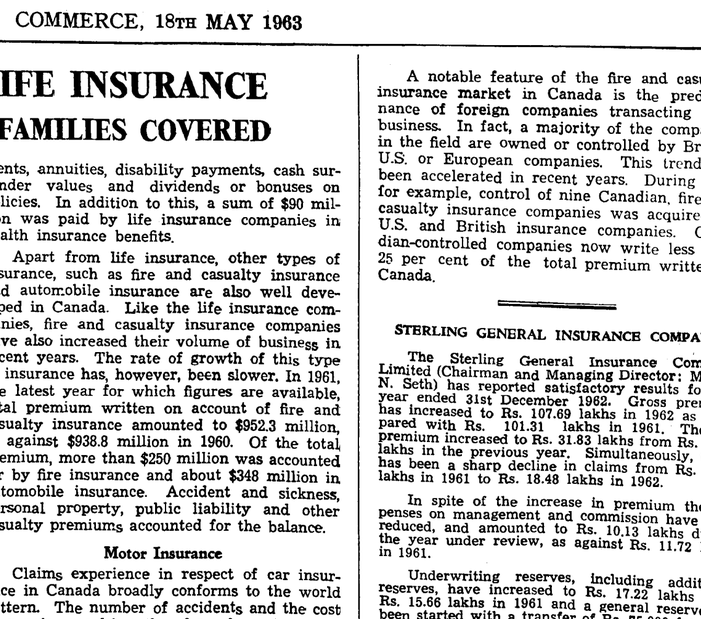
Life insurance and annuity benefit payments to Canadians amounted to about $650 million in 1962, as compared with $609 million in 1961. Of this, about 30 per cent represented death claims and 70 per cent matured endowments, annuities, disability payments, cash surrender values and dividends or bonuses on policies. In addition to this, a sum of $90 million was paid by life insurance companies in health insurance benefits.

Apart from life insurance, other types of insurance, such as fire and casualty insurance and automobile insurance are also well developed in Canada. Like the life insurance companies, fire and casualty insurance companies have also increased their volume of business in recent years. The rate of growth of this type of insurance has, however, been slower. In 1961, the latest year for which figures are available, total premium written on account of fire and casualty insurance amounted to $952.3 million, as against $938.8 million in 1960. Of the total premium, more than $250 million was accounted for by fire insurance and about $348 million in automobile insurance. Accident and sickness, personal property, public liability and other casualty premiums accounted for the balance.

Motor Insurance

Claims experience in respect of car insurance in Canada broadly conforms to the world pattern. The number of accidents and the cost of repairs resulting therefrom have increased in recent years. Premium rates have consequently gone up. In 1961, for example, the claims ratio, that is, the ratio of claims to net premium income, in respect of motor insurance rose from 58 per cent in 1960 to 61.4 per cent in 1961. This ratio increased again in 1962, with the result that premium rates during the current year will be about four per cent higher than what they were last year.

A notable feature of the fire and casualty insurance market in Canada is the predominance of foreign companies transacting such business. In fact, a majority of the companies in the field are owned or controlled by British, U.S. or European companies. This trend has been accelerated in recent years. During 1961, for example, control of nine Canadian fire and casualty insurance companies was acquired by U.S. and British insurance companies. Canadian-controlled companies now write less than 25 per cent of the total premium written in Canada.



STERLING GENERAL INSURANCE COMPANY

The Sterling General Insurance Company Limited (Chairman and Managing Director: Mr. M. N. Seth) has reported satisfactory results for the year ended 31st December 1962. Gross premium has increased to Rs. 107.69 lakhs in 1962 as compared with Rs. 101.31 lakhs in 1961. The net premium increased to Rs. 31.83 lakhs from Rs. 30.84 lakhs in the previous year. Simultaneously, there has been a sharp decline in claims from Rs. 24.23 lakhs in 1961 to Rs. 18.48 lakhs in 1962.

In spite of the increase in premium the expenses on management and commission have been reduced, and amounted to Rs. 10.13 lakhs during the year under review, as against Rs. 11.72 lakhs in 1961.

Underwriting reserves, including additional reserves, have increased to Rs. 17.22 lakhs from Rs. 15.66 lakhs in 1961 and a general reserve has been started with a transfer of Rs. 75,000 from the profit and loss account. The percentage of capital and reserves to net premium has increased progressively from 71.3 per cent in 1958 to 102.4 per cent in 1961 and to 104.9 per cent in 1962.

After providing for all expenses, claims and reserves, the profit, subject to tax, amounted to Rs. 4,04,662 (Rs. 1,34,486 in 1961) and after providing for tax and making appropriations for general reserve, gratuity fund, etc. the Directors have recommended a dividend of 10 per cent subject to tax on preference capital and 6 per cent, subject to tax, on equity capital (5 per cent in 1961).

DURABLE FIREBRICK JOINTS INCREASE PRODUCTION and lower maintenance costs

ACCOSET-50

HIGH TEMPERATURE REFRACTORY CEMENT

produces strong joints, as impermeable to the action of furnace gases as the best firebricks. Consequently, air infiltration is reduced and the thermal efficiency of the furnace improved.

Bricks jointed with **ACCOSET-50** are not easily dislodged and remain bonded together throughout the whole temperature range of the furnace.

ACCOSET-50

- has air-setting properties
- produces thin strong joints
- allows only the minimum shrinkage
- is highly refractory
- is economical in the long run

HIRE-PURCHASE IN MODERN ECONOMY—II

PRINCIPAL FEATURES OF SWISS LEGISLATION

SWITZERLAND is usually said to be "underdeveloped" with regard to hire-purchase. Owing to the lack of adequate statistics, it is unfortunately difficult to substantiate this view except by means of rough estimates. At the end of 1955, current hire-purchase business was estimated at 350 million francs. Some five years later, when preliminary discussions were started on a draft law, the estimate was raised to 500 million. Lacking any better, we have used this figure for our comparative table.

There is, however, reason to doubt whether the estimate corresponds to the reality. A few towns publish statistics on the number and importance of sales transactions in which the seller has reserved his rights of ownership until such time as the buyer shall have paid the purchase price in full (such reservation being only binding in Switzerland if registered at the time with the authorities at the purchaser's place of residence). Now it can be seen that such registrations have increased markedly since 1958. There was an increase of 68 per cent in the canton of Geneva from 1958 to 1961 and one of 43 per cent in the canton of Basle-City between 1958 and 1960. It is very probable that there have been similar increases in other towns. Perhaps this rapid growth does not apply to the total of hire-purchase transactions, and of course things may well have moved more slowly in the country districts. All the same, the statistics on reservation of ownership rights clearly reveal the prevalent trend.

The canton of Basle-City publishes detailed statistics on hire-purchase sales with reservation of ownership rights. Between 1950 and 1960, the total of claims rose from 10.2 million francs to 25.8 million francs, and the average amount per registration from 1,365 to 2,885 francs.

For the canton of Zurich, an interesting sidelight on the problem is given in the annual report for 1960 of the "Bank für Warenkredite AG.". In 1960, the lenders financing hire-purchase transactions and subject to the cantonal control office granted credits aggregating some 100 million francs. If we add the sums advanced by bodies not subject to cantonal control and by the retailers themselves, we obtain, for one year and one economic district only, a volume of credit of 160 to 180 million francs. Some few years ago, this sum would have been thought a reasonable estimate for the total of hire-purchase business in Switzerland.

Estimate of Transactions

It would seem, therefore, that the sum of about 500 million francs for current hire-purchase transactions must be a minimum. If we revert to the comparative table (*vide* page 822 of our last issue), it will be seen that indebtedness per head of population is similar in Switzerland to that in the other Continental countries. As for the current transactions measured in terms of the gross national product, Switzerland attains about the same level as France, whereas in Germany and Belgium the proportion is higher. Yet if the estimate is raised to 600 million francs, Switzerland overhauls France, Germany and Belgium where indebtedness per head is concerned. And at 700 million francs, Switzerland would also lead these countries on the basis of hire-purchase credit as a percentage of gross national product.

It would be foolish to pay too much attention to comparisons of this kind. The statistics given for Switzerland's neighbours are also only approximative and the real quantities may be larger. Yet the orders of magnitude revealed by our study should not be lightly set aside and there is little real justification for assuming *a priori* that hire-purchase is less developed in Switzerland than elsewhere in Europe. This fact should be taken to heart by all the newcomers, whether Swiss or foreign, to hire-purchase finance who are tempted to take a bold plunge on the theory that Switzerland is "underdeveloped" in this sphere. There are, indeed, signs here and there of a certain saturation in the hire-purchase market.

Necessity for Federal Legislation

Whereas most foreign countries, some for many years, have laws dealing with hire-purchase, Switzerland did not until recently think it necessary to have special and detailed provisions on the subject. Previously, the only Federal legislation applicable to sales on the instalment system were articles 226 to 228 of the code of obligations relative to the rights of the seller and to the exigibility clause, articles 715 and 716 of the civil code on the reservation of ownership rights and article 157 of the penal code aimed quite generally at usury. At the cantonal level, there were isolated regulations mostly promulgated in the interests of a better control of commercial practice. Mention must also be made here of the 1957 intercantonal agreement on excessive interest rates. This agreement extends to half-a-dozen cantons and, in particular, fixes a maximum rate of interest (including charges) of 1½ per cent per month.

Though the development of hire-purchase has been less spectacular in Switzerland than in the English-speaking countries and though Helvetian liberalism shrinks from any avoidable interference by the State, the necessity for a uniform and efficacious legislation in time became obvious. This was first clearly seen by public opinion in 1941 in connection with the financial difficulties experienced by the families of mobilised soldiers. Eight years later, the bankruptcy of a furniture factory that had been using as working capital the advance payments made by over 500 small savers once again drew attention to the urgency of the matter. In Parliament, questions were asked and demands made. Preliminary work on draft legislation was begun in May 1955. As for the draft law itself, chiefly the work of Mr. H. Stofer, president of the civil court of Basle, it was completed in 1958 and laid before Parliament by the Federal Council on 26th January, 1960.

Two Types of Sales

It is important to remember that the new law concerns two quite distinct things: sales on the instalment plan, and sales against prepayment. To employ the very words of the law, "in the case of a sale on the instalment plan, the seller undertakes to supply a chattel to the buyer before the latter has paid the full price, and the buyer to settle the price by means of part payments," whereas "in the case of a sale against prepayment, the buyer undertakes to pay the price of a chattel by means of instalments paid in advance, and the seller to supply the chattel to the buyer once the price has been paid in its entirety." The institution of sales against prepayment is of much less importance than that of sales on the instalment plan. However, it often proves attractive to financially weak buyers. Current business done in this way is estimated at between 150 million and 300 million Swiss francs. The objects of these deals are usually furniture, sewing machines and trousseaux. Experience shows that this type of sale is fraught with some risk for the buyer, especially if the prepayments are not guaranteed. It is in fact the abuses in this sector that gave the main impetus to the movement of opinion that led to legislation.

The fundamental economic difference existing between the sale on the instalment plan and the sale against prepayment (the former has an inflationary and the latter a deflationary effect) proves that the new law has a social and not an economic purpose. Above all, the purchaser, who is indubitably the weaker of the two parties concluding a hire-purchase contract, must be better protected. Provisions such as those limiting the duration of contracts and rendering obligatory a fixed initial payment naturally have general economic consequences. But the new law is by no means intended to provide an instrument of economic policy enabling the authorities, as is the case in other countries, to check or stimulate economic activity by facilitating or discouraging sales on hire-purchase.

Provisions of the New Law

In actual fact, the law does not take the form of an entirely new text. It merely modifies the existing provisions in the code of obligations. Articles 226 to 228 of this code, which have been completely re-worked and are now very long, concern sales on the instalment plan (Art. 226), sales against prepayment (Art. 227) and provisions common to both types (Art. 228). Article 219 of the law on suits for debt and bankruptcy, and Articles 1 and 13 of the law on unfair competition have also been extended. For the sake of completeness, it may be noted that the draft law included revised texts of Articles 715 and 716 of the civil code, dealing with the reservation of ownership rights, but Parliament finally decided not to modify the existing law on these matters. Quite surprising is the active part played by the Federal Parliament, and in particular its lower house the National Council, in the establishment of the final text of the law on hire-purchase. Although the subject was highly technical and, to save time, no commission of experts had been appointed, the debates were very lively and the draft law was modified on more than one count. These changes nearly all tended towards an even greater protection of the buyer—sometimes, it must be conceded, at the expense of strict legal consistency.

No word-by-word statement of and commentary on the new law will be given here. It will be enough to extract the guiding principles, certain of them being quite bold innovations.

The law begins by insisting on a *written agreement*. In the case of a sale on the instalment plan, the contract, if it is to be valid at law, must mention *inter alia* the object of the sale, the cash price, the surcharge for hire-purchase (in francs, not as a percentage!), the right of the purchaser to withdraw from the contract and, eventually, the reservation of ownership rights, the assignment of the seller's claim against the purchaser and the assignment of the purchaser's salary. In the case of sales against prepayment, mention must be made of the total claim of the seller, the name of the bank entitled to receive the prepayments and the rate of interest to which the purchaser is entitled.

Validity of Contract

The validity of a purchase by a married buyer is subject to the *written consent of the spouse*, if husband and wife are living together and if the amount involved exceeds one thousand francs. If the purchaser is a minor, the consent of his or her legal representative is required. On this point, the views of the National Council finally prevailed, although the draft law drew attention to the legal complexities consequent on such a clause and the Council of States remained in opposition to the bitter end. Social considerations overcame those of a legalistic or practical nature.

An interesting and from the legal point of view rather revolutionary innovation is the provision of a *period of grace for reflection*, during which the purchaser may withdraw from the contract. This only becomes valid, where the rights of the seller are concerned, five days after the purchaser has received a copy signed by all the parties. During this period, the purchaser may still write to the seller and declare that he does not wish the contract to enter into force. Any previous renouncement of this right is null and void, and no penalty may be claimed if the buyer withdraws. This is certainly the most novel and the most important provision of the new law. It will automatically reduce the turnover of all manufacturers employing doubtful methods of salesmanship. Here, too, the Federal Parliament went beyond the original draft, which only provided three days for reflection.

The law also regulates the *initial payment* and the *period of validity* of the contract. In the case of hire-purchase, the buyer must, at the latest when taking delivery of the goods, make an initial payment of one fifth of the cash price and work off his remaining debt within two and a half years reckoned from the signature of the contract. The seller who delivers the goods before having received the whole of the initial payment loses every legal right to the part of this instalment not yet transferred to him. In the case of sales against prepayment, the obligation to pay instalments cannot last longer than five years.

The right to *annul or denounce the contract* (not to be confused with the right to withdraw within five days) is defined in considerable detail, both in the case of hire-purchase when, under certain circumstances, it falls to the seller and in that of the sale against prepayment when it falls to the buyer. The law also limits claims for interest, for damage caused to the object of the sale, for non-performance of contract or for any penalty.

Sales against prepayment, because of the many possible abuses, are regulated with particular care. The essential point is the *security of the payments* already made. When the contract is to run for more than a year or for an indeterminate period, the buyer must make the payments to a bank named in the contract and subject to the Federal banking law. The payments are credited to a savings or deposit account in the name of the buyer, bearing interest at the customary rate. Withdrawals are subject to the approval of both parties. The buyer may, at any moment and subject to a normal lapse of time for delivery, *demand that the object of the sale be handed over* against payment of the whole price. The *fixing* and the *payment of the price* are also subject to certain conditions.

(*Continued on page 899*)

REPORT OF THE AUDITORS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account as required by law have been kept by the Bank so far as appears from our examination of the records in London and proper returns adequate for the purposes of our audit have been received from the branches in India, none of which has been visited by us. We have examined the foregoing Balance Sheet and Profit and Loss Account which are in agreement with the said records and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act 1956 (India) as amended by the Indian Companies (Amendment) Act 1960 and the Banking Companies Act 1949 (India) as amended up to 16th September 1962 and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of these branches as at 31st December 1962 and the Profit and Loss Account gives a true and fair view of the profit for the year ended on that date.

REPORT OF THE BOARD OF DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1962

GENERAL

As shown by the Balance Sheet as at 31st December, 1962, the Company's Authorised Capital of Rs. 10 lakhs has been fully issued, out of which Rs. 5,00,500 has been paid up and is held on Deposit Account with Mercantile Bank Ltd., Calcutta. As in previous years, the year under review shows no profit or loss, as the transactions of the Company, are incorporated with those of the Parent Company, Mercantile Bank Ltd.

Three shares previously held by nominees in India of the parent company were transferred into the sole name of Mercantile Bank (Nominees) Ltd., a wholly owned English subsidiary of our Parent Company. This transfer was effected during the year for the purpose of retaining the Company's status as a Private Company under Section 43A (6) (*a*) of the Companies Act, 1956. As a result of the transfer of the three nominee holdings into the name of the Mercantile Bank (Nominees) Ltd., certain consequential amendments were made to the Articles of Association of the Company during the year mainly to provide that a Director need not have any share qualification and that a quorum for a General Meeting of the Company need be only two.

DIRECTORATE

Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.) has been appointed a Director in the vacancy caused by the death of Sir Bijoy Prosad Singh Roy, K.C.I.E., Kt.

Mr. Basil Gill retires this year from the Board by rotation but being eligible offers himself for re-election.

AUDITORS

Messrs. Lovelock & Lewes retire but being eligible offer themselves for re-appointment as Auditors for the ensuing year.

CALCUTTA,
Dated the 4th January, 1963.

For the Board of Directors,

W. H. JACKSON,
B. GILL,
A. RAMASWAMI MUDALIAR. } *Directors.*

INDIAN LAC IN WORLD MARKETS

CONCERTED EFFORTS NEEDED TO RAISE EXPORTS

By R. K. Sharma

THE sluggish nature of the export trade of India has come in for a good deal of discussion in recent years. The third Five-year Plan admits that, over the last decade, India's exports have been stagnant. While the total world export trade doubled, India's share in it declined from 2.1 per cent in 1950 to 1.1 per cent in 1960. Among commodities which are directly or largely based on agricultural production, which still account for the bulk of India's exports, exports did not improve. The Plan further concedes the point that one of the main drawbacks in the past has been that the programme of exports has not been regarded as an integral part of India's development effort under the Five-year Plans.

Since the beginning of the third Five-year Plan, export promotion has come to the forefront and a number of schemes designed to improve export earnings have been initiated. However, before taking any realistic measures in the direction of export promotion, it is essential that systematic studies be carried out for various export commodities with a view to ascertaining (i) our competitive position of the different items in the world market and (ii) the export performance of each of them during the last decade of economic planning. In this article, we seek to examine these two points in relation to our export of lac.

Home of Lac

India is the home of lac and contributes nearly 80 per cent of the total world production. Outside India, lac is produced in Thailand, Burma, Straits Settlements and Pakistan. Lac is also produced in Indo-China, Ceylon, Java (Indonesia) and China, but the quantity produced in these countries is negligible. Although authentic data on the production of sticklac in Thailand, Burma, and Straits Settlements is not available, the following table brings out the annual average production of sticklac for these countries, along with that for India, for the twenty-year period 1934-35 to 1953-54:

TABLE I: *Trend of World Lac Output*

(In tons)

	1934-35 to 1938-39	1939-40 to 1943-44	1944-45 to 1948-49	1949-50 to 1953-54
India—				
Production	47,750	45,811	41,346	38,006
Percentage of total production	90.0	91.6	79.6	74.5
Thailand—				
Production	4,533	4,000	10,000	12,000
Percentage of total production	8.5	8.0	19.2	23.5
Burma—				
Production	300	100	300	500
Percentage of total production	0.6	0.2	0.6	1.0
Straits Settlements—				
Production	500	100	300	500
Percentage of total production	0.9	0.2	0.6	1.0
Total	53,083	50,011	51,946	51,006

Source:—Adapted from *Marketing of Lac in India* (Revised edition), Department of Marketing and Inspection, Ministry of Food and Agriculture, Nagpur, 1961.

It is clear from the above table that India's production constitutes the largest share in total production and that India and Thailand put together account for over 98 per cent of the total world output. It is also evident that the share of India in total production has shown a downward trend: from 90 per cent in the first period to less than 75 per cent in the last period of the series. The share of Thailand, on the other hand, has gone up during the same period, from 8.5 per cent to 23.5 per cent marking an increase of over 275 per cent. It is also evident that Thailand has made headway only after 1944-45.

Although production of Thailand has increased almost threefold, India still remains by far the most important lac-producing country and accounts for nearly 75 per cent of the total world output. The bulk of production is exported and this makes a good contribution to the country's foreign exchange earnings. Actually, upto 1946-47, India held a virtual monopoly in lac exports and supplied the entire world requirements of lac. It is only during the last decade or so—which (period) incidentally coincides with the era of economic planning in India—that Thailand has emerged from a small exporter to a keen competitor to our lac in the world market. The result has been that India has nearly lost her dominant position and her share in the world lac exports has declined from 98.5 per cent in 1945-46 to around 70.0 per cent in recent years.

Export Performance

Table II below brings together data relating to production and export—volume as well as value—of lac during the first and the second Plan periods:

TABLE II: *Lac in India*

Year	Production		Exports			
			Volume		Value	
	Thousand maunds	Index	Thousand maunds	Index	Rs. in lakhs	Index
1951-52	1,297	100.0	970	100.0	1,484	100.0
1952-53	1,153	88.9	912	94.0	742	50.0
1953-54	654	50.4	731	75.3	669	45.1
1954-55	1,023	71.2	725	74.7	1,055	71.1
1955-56	1,248	96.0	774	79.8	1,177	79.3
1956-57	1,315	101.4	769	79.3	947	63.7
1957-58	1,140	87.1	740	76.3	686	46.1
1958-59	1,013	70.4	714	73.6	574	37.4
1959-60	1,159	90.1	730	75.3	637	42.9
1960-61	1,427	110.0	740	76.3	633	42.7

Source:— Production: *Lac in India*, various issues; Exports: *Monthly Statistics of the Foreign Trade of India*.

It is apparent that lac production has fluctuated throughout the period under review. The index of production (1951-52=100) declined in the first two years to almost half (50.4), rose up in the next two years to touch a high of 101.4 in the last year of the first Plan. During the second Plan period, a trend similar to that in the first Plan is noticeable. Thus, production declined in the first two years, but moved upwards in the subsequent two years and reached the highest figure (110.0) of the period in the last year of the second Plan. Although a primary commodity, production of lac does not appear to be very susceptible to natural forces.

A study of India's lac exports furnishes a striking example of export vulnerability of the underdeveloped economies; all the three indicators of export vulnerability—instability in price, volume of exports and export earnings—are neatly exhibited in the export trade of lac. As is apparent from Table II, both volume of exports and export earnings have been fluctuating and show a downward trend. Thus, export earnings which stood at the high figure of Rs. 14.84 crores during 1951-52, declined in the next two years, moved up in the subsequent two years, then declined again in the next two years, only to gain in the last two years of the period under review. Taking the period as a whole, however, we get the disturbing point that foreign exchange earnings from lac have come down to about 43 per cent of what they were at the beginning of the first Plan.

A study of the indices of export earnings and volume of exports brings out the important point that the indices moved quite differently from each other. Although in both cases a downward trend is noticeable, the decline in the case of value index is much steeper than that of the volume index. Thus, the volume index did not decline below 73.6 in any year. The value index, however, fell to a low of 37.4 during 1958-59 and was not above 50.0 for six out of nine years. One point that clearly emerges from the foregoing analysis is that, from all considerations, lac exports have registered a downward trend and now constitute a weak link in our export earnings. What are the factors responsible for this unhappy position? Broadly speaking, this may be attributed to four main factors, namely, unstable prices, development of synthetic substitutes, competition from Thailand and shift in demand from shellac to seedlac.

Unstable Prices

On the basis of a detailed study of the problem in 1957 the National Council of Applied Economic Research, in its report *Export Market for Indian Lac*, 1958, came to the conclusion that "unstable prices constituted the biggest single problem in the (lac) industry." The frequent and wide price changes tend to upset the normal cost calculations and the price policies of products made of lac. The expressed complaint of lac users, the Council's study pointed out, was more against wide variations in prices at frequent intervals, rather than the level of prices. This tendency was apparently due to the manipulation of prices mainly by 'Calcutta interests' who indulged in unhealthy speculation, hoarding and underquoting, thereby pushing up the prices by creating artificial scarcity in the market. Another reason for price fluctuations recorded in the study is the shift in demand for lac. Demand for lac is affected by technological factors such as synthetics in addition to the usual factors like price of lac, prices at which synthetics are available and the long-term trend towards increase or decrease in consumption. Major changes in demand, such as those caused by the sudden collapse of the gramophone records industry, have a direct impact on prices. Such changes are likely not only to affect the prices but also contribute to the uncertainty in the market which, in turn, adds to the frequent short-period fluctuations common to lac.

Lack of market information is also responsible for unstable prices of lac. It needs hardly to be emphasised that, without market information, it is not possible to determine with any degree of accuracy future demand and future prices.

A study of the price data of pure T.N. shellac—which is the most common commercial grade in sympathy with which the prices of other grades more or less move—prominently brings out how lac prices have been subject to wide fluctuations. As will be seen from Table III, some element of stability, though at a lower range, is noticeable since 1958 when the Indian Lac Exporters Association was formed and fixed minimum export prices were introduced.

Source: *Lac in India*, Department of Economics and Statistics, Ministry of Food and Agriculture (various issues).

In a recent study on the impact of Indian economic development on exports, Professor Bhabatosh Dutta made a close study of the nature of price fluctuations of lac and their relationship to the instability in the volume of exports and export earnings. According to him, the data relating to end-of-month prices, ranges of intra-year variations as well as year-to-year variations reveal that, oscillations were "discontinuous, wide and erratic." Comparing the relative magnitude of fluctuations in price, volume and export proceeds, he noted that the magnitude of fluctuation in export earnings was greater than in either volume or prices. By splitting the period of his study in two distinct periods (1947-48 to 1951-52 and 1952-53 to 1956-57), Prof. Dutta analysed the inter-relationship in the fluctuations in prices, volume and export earnings and came to the conclusion that, in the first period, price and volume tended to move up or down together, a phenomenon apparently governed by changes in demand. Here fluctuations in price and volume tended to reinforce each other and the combined effect of the two was apparent in the relatively greater fluctuations in export earnings. In the second period, this trend was reversed so that there was a negative correlation between the fluctuations in price and volume. Throughout this period, price and volume moved in opposite direction, indicating that changes in supply factors influenced fluctuations in price and export earnings.

During the period 1957-58 to 1960-61, although the volume index has been nearly steady, export earnings have very much gone down due largely to decline in demand and consequently in prices. In 1957-58, following good crops, stocks were heavy and hence the range of prices was low. During 1958-59, the lowest level in post-war years was touched in April 1958 and is also reflected in the lowest index of export earning (37.4) during the decade 1951-60. In the last two years of the second Plan, with good demand from abroad and poor crops in Thailand, combined with the introduction of fixed minimum export prices, a slight improvement is noticeable in both the value and volume indices.

Synthetic Substitutes

An important factor responsible for the slackening lac exports is the competition from synthetic substitutes. Over the past few years, a number of synthetic products have been developed which are substitutes for lac in various industries. Thus, synthetics have now virtually replaced shellac in the entire gramophone record industry in the U.S.A. and have cut seriously in West Germany and the U.K. In the hat, floor and varnish, electrical goods and printing and paper industries, synthetics have either nearly replaced the use of lac or are now doing many jobs where formerly lac was used.

The changeover from lac to synthetics is attributed mainly to the "wide and erratic fluctuations" in the prices of lac which do not allow a manufacturer using lac as a major component for his product to control the price of the finished product. But, apart from price fluctuation, there are some technological and other factors responsible for substitution of lac by synthetics in various industries, as is indicated below:

substitution in the gramophone industry is caused by the advent of long-playing records for which lac is not suitable;

in paints and varnishes, synthetics are said to be cheaper, more easily applied and quicker to dry, thus affecting saving in labour and other costs;

in electrical insulation industries, synthetics give better and more easily manufactured insulation;

in leather-dressing industries, for some purposes, synthetics are easier to apply and are also cheaper.

Competition from Thailand

Within the above unfavourable setting, the factor that has cut deeply into our foreign exchange earnings from this age-old export commodity is the emergence of Thailand as a serious competitor to our exports in the world market. It may be recalled here that, prior to the Second World War, almost all exports from Thailand were shipped to India. It is estimated that, during 1946, practically no lac was exported from Thailand. Since then, there has been a phenomenal growth in lac exports from Thailand. From 3,183 tons in 1948, Thailand exports rose to the high figure of 17,116 tons in 1955, Indian exports during the same period was 24,531 tons and 28,428 tons, respectively.

As a result of this development, India's share in the world market declined from 98.08 per cent in 1948-49 to about 70 per cent in 1953-54. This share was reduced further in the next three years, so much so that, during 1955-56, taking the total exports from India and Thailand, our share declined to 62.4 per cent. In the subsequent two years, there was some improvement, although Thailand still accounted for about 30 per cent of the total world exports. Thailand's share declined to 16.57 per cent during 1958 due to crop failures in that country. In the next two years, Thailand has improved its share to about 25 per cent, as is evident from the following table:

TABLE IV: *Lac Exports from India and Thailand*

(In thousand quintals)

Year*	Seedlac		Shellac		Total

Shift in Demand

Another factor responsible for the decline in India's lac exports is the shift in the world demand from shellac to seedlac. It is well known that India has traditionally been a major exporter of shellac. But the demand for shellac has been near-stagnation, while that for seedlac has shown a consistently rising trend. Thailand, with its specialisation in the export of seedlac—which accounts for over 84 per cent of its total exports—has benefited at India's cost. This has enabled Thailand to make deep inroads in the American market, which is the largest importer for lac. In this context, we may reiterate the views expressed in the N.C.A.E.R. study:

"Although the general export policy of the Government should, as it has rightly been, to increase exports of manufactured products rather than raw materials or semi-manufactured products, some exception to the rule will become necessary in a case like lac. If India does not export seedlac, Thailand will take over foreign markets where demand for seedlac has expanded. Hence the need for India to increase exports of seedlac is great."

A slight improvement in our exports of seedlac was noticeable (Table IV) during 1957-58 to 1958-59, due probably to the decline in exports of seedlac from Thailand. According to latest indications, Thailand is striving hard not only to improve its exportable surplus of seedlac but also to improve the quality of its product.

Pattern of Exports

We may now turn to the direction or the destinational pattern of our exports. In Table V, we have analysed, in order of importance, the principal importers of Indian lac during 1951-52 (first year of the first Plan), 1956-57 (first year of the second Plan) and 1960-61 (last year of the second Plan):

TABLE V: *Destination-wise Shipments*

(In thousand quintals)

Destination	1951-52	1956-57	1960-61

Conclusion

Piecing all the threads together, we find that the position of lac exports from India, though unhappy, has clearly not yet gone out of hand; in fact, recent developments point to some improvement. As we have analysed above, the main factors responsible for the decline in our exports are unstable prices, development of synthetic substitutes, competition from Thailand and shift in demand from shellac to seedlac. In recent years, particularly since the introduction of minimum export prices in June 1958 and maximum prices in November 1959, there has been some element of stability in the price of lac, although there is still the need to remove the disbalance in the export price and the internal price.

An Indian Lac Exporters' Association has been established. An air-conditioned godown for lac at Calcutta is also being set up. These are obviously measures in the right direction. However, there is still much to be done to put the lac economy of our country in shape. Since unhealthy speculation in the Calcutta lac market is one factor damaging the export trade in the long run, suitable market organisation and regulation are of primary importance. In so far as speculation flourishes on fluctuations in demand and supply, the system of buffer stocks needs to be strengthened. The Association has to ensure that short-term considerations do not unduly vitiate the hard-pressed export economy of lac.

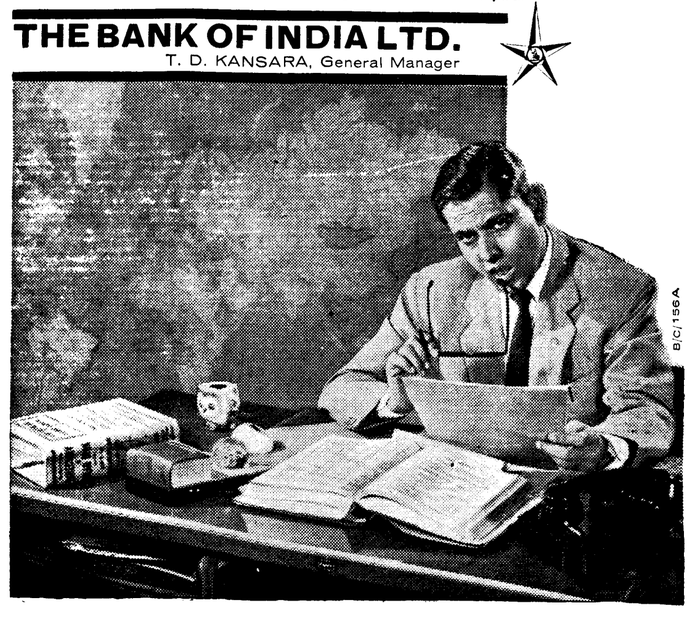
So far as the problem of severe fluctuations in foreign demand is concerned, its adverse effect can be greatly reduced if suitable market studies with regard to trends and developments bearing on demand for lac are undertaken and demand forecasts are prepared. In order to face the situation created by greater use of synthetics as substitutes to lac, research may be directed towards finding new uses of lac. It is equally necessary to bring together new ideas that have been developed by foreign users of lac: for this purpose, maintenance of close liaison with the users of lac in foreign markets is of utmost importance.

The threat to our lac exports from Thailand and the situation created by the shift in demand from shellac to seedlac can be met through greater production and export of seedlac. This apart, stability in prices, better quality of our product and marketing research in foreign markets would be very helpful in introducing stability and improvement in our export earnings. Given a co-ordinated programme of diversified effort suited to particular markets, the potential gains would be immense. The Indian Lac Cess Committee, the Shellac Export Promotion Council and the Indian Lac Exporters' Association need to join hands in making a concerted effort to lift our lac export earnings from the present level of Rs. 7 crores to that attained at the beginning of first Five-year Plan.

Note: The views expressed in the article are the author's personal views.

The lac industry is based on a raw material secreted by certain insects which live on some specific types of trees. The secretion forms a crust on the twigs of the host trees and lac is harvested by cutting off the twigs. The encrustation that is scraped off the twigs is known as sticklac which is crushed and washed to remove some of the impurities. The resulting product is known as seedlac. Seedlac is then processed into shellac either by the indigenous cloth-bag method, or the hydraulic press method or the solvent process method.

PROBLEMS IN FOREIGN EXCHANGE?



With our 14 branches overseas and over 500 correspondents almost all over the world, we are well equipped to assist you in every way.

Trade enquiries? Letters of Introduction? Credit information and status reports? Exchange Control Regulations? Travellers' Cheques? Remittances? Purchase and sale of foreign currencies? Import problems? Export problems?

Bring your problem to us and let us guide and assist you.

THE BANK OF INDIA LTD.

T. D. KANSARA, General Manager

B/C/156A

PUNJAB NATIONAL BANK LIMITED

MR. R. N. GOENKA URGES NEED FOR FRESH DEPOSITS

BANK CREDIT MUST BE LINKED LARGELY TO PRODUCTIVE ACTIVITY

GROWTH in bank deposits and a close link of bank credit with productive activity were stressed by Mr. R. N. Goenka, Chairman of the Punjab National Bank Ltd., while presiding over the 116th Annual General Meeting of the Bank held at New Delhi on Friday, 10th May 1963. Mr. Goenka was referring to the crucial role of banks in financing production—agricultural, industrial as well as defence—during the present emergency. He stated that, for the banks to maintain a comfortable position in the face of increased demands made on them, it would be extremely important that deposits grew at a faster rate. It could never be overemphasised, he said, that the extension of bank credit should have to be increasingly linked to productive activity, so that it did not contribute towards inflation, but supported an efficient control of speculative activity. Banks must also increasingly invest, according to him, in Government securities, when considerable finance would be required by the Government for defence purposes.

The following is a summary of Mr. Goenka's speech:

GENTLEMEN,

You will have observed from the statement of accounts that your Bank continued to make all-round progress during the year 1962. After providing for contingencies and taxes and after providing Rs. 15.64 lakhs to the employees' gratuity trust fund and Rs. 1.43 lakhs to the superannuation scheme, your Bank earned a profit of Rs. 124.21 lakhs, including Rs. 10.38 lakhs brought forward. A sum of Rs. 20 lakhs has already been utilised for payment of *ad-interim* dividend of Re. 1 per share subject to tax, leaving a balance of Rs. 104.21 lakhs for appropriation. Consistent with the policy of strengthening the capital base of the Bank, Rs. 25 lakhs have been transferred to reserve fund. A sum of Rs. 40 lakhs has been provided for bonus to staff, compared to Rs. 37.50 lakhs last year, and Rs. 4 lakhs have been contributed to charity and the National Defence Fund, leaving a balance of Rs. 35.21 lakhs. Your Directors have recommended a final dividend of Re. 1 per share, subject to tax, making a total of 20 per cent, the same as last year. The balance of Rs. 15.21 lakhs has been carried forward to the next year's account.

Year in Retrospect

During the year under review, your Bank shared in the general development of the banking industry. The deposits of your Bank during 1962 increased by Rs. 16.84 crores to Rs. 167.52 crores and advances by Rs. 6.32 crores taking the total to Rs. 99.54 crores. Throughout the year, most banks maintained a high level of advances compared to the previous year. The rate of interest on advances was also generally raised by one-half of one per cent. As a result of the increase in advances and the rate of interest charged, it was clear that the earnings of banks in general would be higher during 1962 than in 1961. However, the rise in expenses has been much more than the increase in income. Expenses of banks increased due to various factors like a sharp increase in the volume of time deposits bearing higher rates of interest and stepping up of interest rates. The most important factor, however, was the Desai Award which had retrospective effect from 1st January 1962. Premium on deposit insurance was also an additional expense. Taking such expenses into consideration, the banks in general have shown somewhat lower profits in 1962 than in 1961.

During the year which has elapsed since we met last, there have been developments of much more than ordinary importance in the economic and political life of the nation. Our very freedom and security have been threatened from across the northern borders and a challenge of great magnitude has been posed.

Pursuing a policy of peace, goodwill and friendship towards all nations irrespective of the economic and political ideologies followed by them, we have since independence planned for our economic development on the assumption that we are not likely to get involved in a shooting war with any nation. Having been primarily concerned with the supreme task of eradicating the mass poverty in our country we were caught unprepared in a shooting war with an aggressive northern neighbour. The emergency that has thus arisen poses a formidable challenge to our development plans. Against this situation, the stagnation in the economy during the first two years of the third Five-year Plan has been rather disheartening. This poor increase in national income has been due mainly to stagnant agriculture and a lower increase in industrial output.

Defence and Development

The dilemmas facing the development of the Indian economy infested with shortages and low level of consumption have become more acute with the inevitable diversion of India's scarce resources to defence efforts. Considerable help from friendly countries has come to India in her hour of need and is expected to follow. Yet, a great deal of effort has to be made within the country, as ultimately we must prepare ourselves to become strong enough to deter any future aggression.

While it is imperative to build up India's defences, the supreme task of economic regeneration to eradicate mass poverty cannot also be ignored. If the Chinese are able to divert India's attention from her programme of development, they will have achieved at least a partial victory. India must, therefore, prepare on both defence and economic fronts. Whether or not we can maintain the tempo of economic development in the face of a high level of defence expenditure has become a fateful question. I welcome the decision of the Government of India not to slacken developmental efforts during the emergency in spite of the sharp rise in defence expenditure.

The defence expenditure of Rs. 867 crores, when compared to the total planned expenditure of the Central Government of Rs. 1,226 crores, seems, indeed, formidable. But, there is no escape.

The major characteristic of defence spending is that it is by and large inflationary in character. As it is, inflationary tendencies of developmental in India increase from year to year and have been a constant worry for us all. The inflationary potential of increased non-developmental military expenditure will naturally be an additional cause of worry especially when a large volume of deficit financing has been found necessary, in spite of the rapid rise in taxes and anticipated compulsory savings. Adequate and effective steps to control inflation will thus become one of the major problems of our future economic policy.

Production Must Rise

The crux of the problem, however, is that production must increase at a faster rate. Immediate steps would seem necessary to increase agricultural production. It is true that the present emergency implies an expansion of output in defence-oriented industries, but this must be accompanied by an expansion on an increasing scale of export industries so as to meet the heavier demands on foreign exchange for development and defence industries. Production in consumer goods industries must also increase so as to keep prices from rising.

In this regard, the consideration shown by the Finance Minister in providing relief in the Super Profits Tax proposals is to be welcomed, and the business community must willingly bear the additional burden in the interest of the country. It is only to be hoped that the Super Profits Tax will be purely temporary for the duration of the emergency.

The banks in view of the necessity of building up their capital base and internal reserves certainly had a strong case for total exemption from this imposition like the Life Insurance Corporation. But the concessions given to banks have considerably reduced their burden.

Another important disturbing feature of India's development has been that considerable industrial capacity remains unutilised in a large number of industries. The major bottleneck in this sphere has been the lack of availability of free foreign exchange to be spent on raw materials and spares. We have been trying to get such materials to the extent our foreign exchange position has permitted us.

We face a serious paradox in the field of international finance, in that while on the one hand our foreign exchange reserves have come down to a bare minimum, on the other hand we have considerable amounts of unutilised foreign aid. This has been due to the fact that most of the foreign aid has been tied to definite projects and to countries. The recent untied loan from the United States of Rs. 114 crores should be a considerable help. We may, thus, have to urge all friendly countries to include substantial amounts of untied aid in their total aid commitments for a long time.

Growth in Deposits

Rupee finance, at times, has also become a bottleneck in our productive activity. Here banks have a crucial role in financing production—agricultural, industrial as well as defence during the present emergency. Our past experience shows that in our growing economy bank credit has expanded at a faster rate than deposits, resulting in an over-extended loans portfolio of most of the banks. Banks have also, therefore, to borrow from the Reserve Bank at penal rates of interest. For banks to maintain a comfortable position in the face of increased demands made on them it would be extremely important that deposits grow at a faster rate. It can never be overemphasised that the extension of bank credit shall have to be increasingly linked with the productive activity so that it does not contribute towards inflation but supports an efficient control of speculative activity. Banks must also increasingly invest in Government securities when considerable finance will be required by the Government for defence purposes. It is, therefore, imperative that bank deposits rise in proportion to the increase in demand for bank finance.

In order to mobilise financial resources, the banks may not only have to utilise their existing capacity more efficiently but also open many new branches for popularising and inculcating the banking habit. For this both the manage ments and the workers have to rise to the occasion. The productivity of workers in the banking industry must therefore increase rapidly. It is only the increase in efficiency which can lower the costs essential for meeting considerable expenses and losses in opening new branches in the already unbanked areas. On the other hand, bank managements shall have to set aside a significant portion of their earnings for meeting the losses of new branches and for strengthening the reserves (both statutory and secret) which would become very essential in order to provide for risks involved in financing new types of production both for defence and civilian uses. In the present emergency the banks shall also have to make certain that their scarce resources are not utilised for anti-social purposes of hoarding and speculative activity.

Credit Increased Faster

The growth of bank deposits depends not only on the capacity of the banks to tap them but also, and in the main, on the ability of the economy to generate deposits in the banking system. Under the first two Five-year Plans, the aggregate deposits of scheduled banks rose at an annual rate of 11.47 per cent, but the volume of bank credit grew at an annual rate of 14.43 per cent. True, the pace of expansion of bank credit was larger than that of industrial production which rose annually at an average of 9.43 per cent, but the disparity is to be attributed mainly to the process of monetisation of the economy in the rural sector where the economic activity is not fully financed by the co-operative banking structure.

For reasons which are of course outside the control of the banking system, the growth of deposits has slowed down and the demand on the resources of banks has grown. As a result, the resources of the banks have been already strained considerably.

In the current financial year, the Government has decided to make larger demands by way of higher taxation and compulsory deposits on that sector of the economy which has a propensity to save. On top of it, the growth of new industries is expected to make heavier demands on long-term capital. In such a situation, the banking system will have to qualify for a share in the available volume of savings which may be augmented in the event of the economic activity being stimulated. However, even assuming that the heavy expenditure on defence and development will accelerate the tempo of economic activity, the resultant growth of savings will have to be preceded by the financing of the economic activity at a higher level. Since the banking system has already lent to its maximum capacity it will have to be enabled to raise the additional resources by liquidating its investments or alternative institutional channels will have to be explored for financing the growth of the economy. Technically, at any rate, the obligation of providing adequate credit facilities for financing the legitimate economic activity rests on the Reserve Bank and the Government and not on the banks. I only hope that an appropriate solution will be carved out before it is discovered that the economic development is hampered by the paucity of adequate credit facilities.

Mobilising Funds

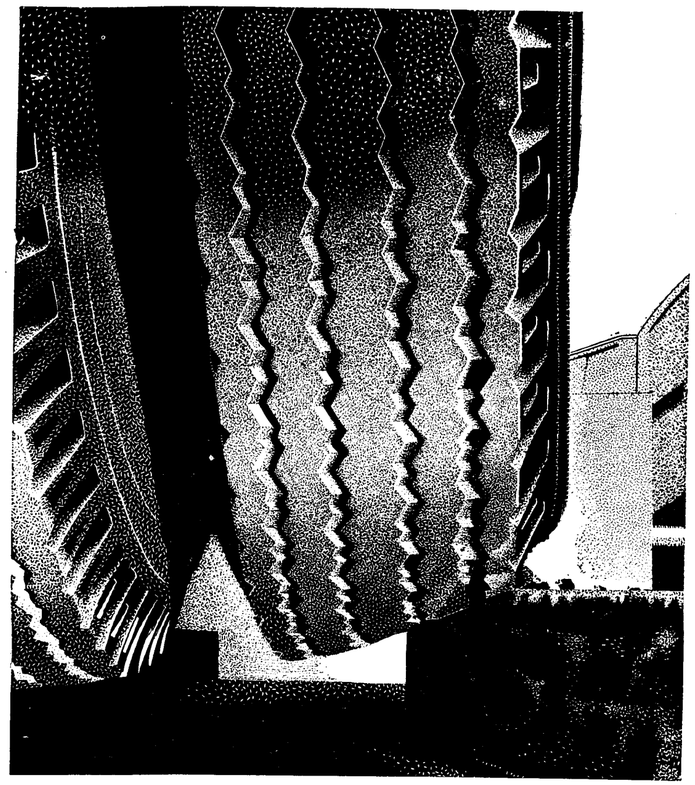
Under these circumstances, our task is to mobilise funds from the public on as increasing a scale as possible and channel them for productive purposes. I assure you, gentlemen, that we will leave nothing undone which will enhance the capacity of our institution to undertake the responsibilities inherent in the present national emergency. Apart from this job which we intend to perform to the best of our ability and capacity, I am happy to report to you that your Bank contributed Rs. 4 lakhs to the National Defence Fund. As a token of our affection for our armed forces defending our difficult frontiers, we have offered them and their wives general banking facilities free of any charge. Our staff has also risen to the occasion and many of our staff members have contributed one month's salary to the National Defence Fund.

In the end, the Chairman expressed his gratitude to the Directors of the Bank for their help and co-operation and acknowledged the hard work put in by Shri R. L. Tuli, General Manager, assisted by Sardar Mohan Singh, Deputy General Manager. He also thanked officers and the staff at all levels for their work and co-operation during the year.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

Notice

THE TITAGHUR PAPER MILLS COMPANY, LIMITED



RIGHTS SHARES—UNPAID INSTALMENT MONEY

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of the Company, at its meeting held on the 8th May, 1963, decided that interest on the instalment money, i.e., Rs. 7.50 per share due on the 5th April, 1963, in respect of Rights shares allotted on the 27th February, 1963, would be waived provided that such instalment money is paid in full to the Company on or before the 18th May, 1963, and that allottees who fail to pay such instalment money on or before the 18th May, 1963, shall be liable to interest thereon at the rate of 9 per cent per annum calculated from the 6th April, 1963, until payment. Furthermore the Rights shares allotted and in respect of which the instalment money remains unpaid after the 18th May, 1963, shall be liable to forfeiture in the terms of the Articles of Association of the Company.

Allottees concerned are therefore advised to make a prompt and punctual remittance of the outstanding instalment money to reach the Company on or before the 18th May, 1963. Payment thereafter must be accompanied by the appropriate interest calculated from the 6th April, 1963, to the date of payment.

By Order of the Board,

REPORT OF THE DIRECTORS

The Directors have pleasure in submitting their Twentieth Annual Report together with the Accounts of the Bank for the year ended 31st December, 1962.

The net profit for the year, after providing for taxes and for all known and anticipated charges, and including Rs. 2,07,428.02 brought forward from the previous account, amounts to .. .. Rs. nP. 75,40,053.91

The Directors have contributed Rs. 2,00,000 to the National Defence Fund and Rs. 15,000 to Dr. B. C. Roy Memorial Fund, transferred Rs. 28,00,000 to the Reserve Fund and Rs. 4,00,000 to the Gratuity Trust Fund, and provided Rs. 16,50,000 for bonus to staff. They now recommend the payment of dividend as follows:

	Rs. nP.
On 4,00,000 Old Shares at Rs. 6.00 per share, less tax	24,00,000.00
On 79,220 New Shares in respect of which application moneys were received on or before 1st October, 1962 at Re. 0.375 per share, less tax	29,707.50
On 89,780 New Shares in respect of which application moneys were received after 1st October, 1962 at Re. 0.25 per share, less tax	20,195.00

which will absorb Rs. 24,49,902.50, leaving an unappropriated balance of Rs. 25,151.41 to be carried forward.

Pursuant to the Resolutions passed at the General Meeting of the Shareholders held on 11th July, 1962, 2,00,000 shares of the Bank were offered for subscription in cash at a premium of Rs. 25 per share. Applications were received for 1,99,000 shares which were allotted in full. After crediting the premium of Rs. 40,00,000 to the share premium account, the Reserve Fund and other Reserves of the Bank stand at Rs. 3,03,00,000. The Paid-up Capital stands increased to Rs. 2,23,33,037.50 and will further rise to Rs. 2,80,00,000 when the allotment moneys payable on or before the 31st January 1963 are received.

The working of the Bank during the year was satisfactory with deposits crossing the Rs. 100-crore mark to stand at Rs. 105.74 crores.

Since the close of the financial year to which this report relates banking business in the Union of Burma has been nationalised with effect from 23rd February 1963 and the branches of your Bank at Rangoon, Mandalay and Moulmein have been taken over by the Banking Business Nationalisation Committee. The Government have authorised the repayment of foreign Head Office capital of K. 500,000 originally brought into Burma and have announced that compensation will be given for buildings and fixed assets taken over after deduction of liabilities, if any.

During the year branches of the Bank were opened at Bangalore Cantonment, Sandhurst Road (Bombay), Defence Colony (New Delhi), Jamshedpur, Chomu, Nadiad, Chetput (Madras), Adyar (Madras), Mirza Ismail Road (Jaipur), Sikar, Rohtak and Hissar and the office at Chittagong (East Pakistan) was closed.

The Directors are thankful to the Shareholders and the clients of the Bank for their continued support. They also express their gratitude to the Bank's Advisers and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the services of the General Manager and the Officers and Staff of the Bank during the year.

Mr. Shrenik Kasturbhai who was appointed an additional Director during the year vacates office under Article 34 of the Bank's Articles of Association and, being eligible, offers himself for election.

Mr. G. L. Bangur, Mr. G. D. Kothari, Mr. M. R. Ruia and Mr. M. L. Shah retire by rotation under Article 92 of the Bank's Articles of Association. Mr. G. D. Kothari and Mr. M. R. Ruia, being eligible, offer themselves for re-appointment, Mr. G. L. Bangur and Mr. M. L. Shah who have attained the age of 68 years are not seeking re-appointment. The Board have accepted their decision with regret and wish to place on record their high appreciation of the valuable services rendered by them during their long period of office.

Notices have been received from some members of their intention to propose at the forthcoming Annual General Meeting that Mr. Rang Nath Bangur and Mr. Govardhandas Binani be appointed Directors in the vacancies thus caused and the Directors recommend their appointment.

The Shareholders are requested to appoint Auditors for the current year and to fix their remuneration.

On behalf of the Board,
G. D. BIRLA,
Chairman.

REPORT OF THE AUDITORS TO THE MEMBERS OF THE UNITED COMMERCIAL BANK, LIMITED

We have audited the attached Balance-sheet of The United Commercial Bank, Limited, as at 31st December, 1962, and the Profit and Loss Account of the Bank for the year ended upon that date, annexed thereto, in which are incorporated the Branch returns audited by the Statutory or other Auditors. The reports on the accounts of the Branches audited by other Auditors have been forwarded to us and dealt with in preparing our report in the manner considered necessary by us.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance-sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and, on such basis, the said Balance-sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

BHOPAL HEAVY ELECTRICALS FACTORY

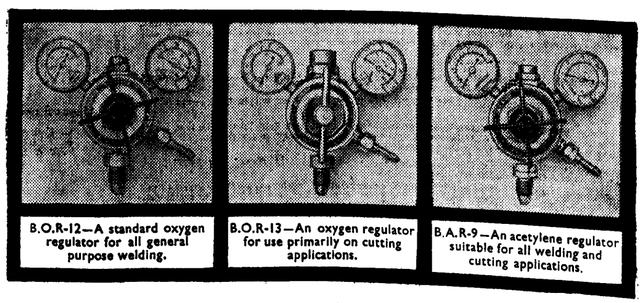
PACE OF PROGRESS TOWARDS OPTIMUM POTENTIAL SLOW

If the manufacture of heavy electrical equipment had been taken up in 1949 when certain other projects like the D.V.C. and the Sindri Fertilisers were launched, the country would have saved a large amount of foreign exchange on imports for the power projects in the first and second Plan periods. But the Government of India, unfortunately, did not fully appreciate the need for setting up a heavy electricals plant till late 1955. The Government's masterly inactivity in this field from 1949 to 1955 was attributed to financial stringency. It goes to the credit of the Estimates Committee of the Lok Sabha that, in its recent report on the Bhopal Heavy Electricals factory, it has refused to be taken in by this explanation. For, according to the Committee, the ground of financial stringency does not appear to be convincing in view of the fact that Messrs. Westinghouse were prepared in 1949 to offer a long-term loan to cover the foreign exchange expenditure of, and some permanent investment in a heavy electricals factory. Again, in 1952, the Planning Commission agreed to include the heavy electricals project in the first Plan itself, but the matter was not pursued vigorously. The Estimates Committee's comments on the Government's vacilation are highly critical, as will be seen from the following quotation:

"It would have been prudent if a decision to set up a factory had been taken in 1949 itself when the Government had the project reports from three well-known firms before them. That would not only have enabled its being set up economically but also provided the much-needed experience in this field. The factory would certainly have gone into production by 1953, thus providing not only the heavy electrical equipment at a time when it was badly needed for the power projects, but would also have saved valuable foreign exchange. The expenditure incurred on the preparation of the Project Reports in 1949 and 1954 was also rendered nugatory. It would thus be clear that as a result of this vacilation and delay regarding the setting up of the factory, a valuable period of six years (1949 to 1955) was lost."

Teething Troubles

Have things gone better with the project at least since November 1955 when a firm decision to set up a factory at Bhopal was taken? Most certainly not, for, as the Committee has pointed out, the foreign exchange necessary for a project of this magnitude was not made sure of before sanctioning it. It is not surprising, therefore, that there has been so much delay in arranging for the foreign exchange. The consequential delay in the execution of the project which had taken four years to go into production, and the costly credit arrangements made with a consortium of British Banks, have had the effect of increasing the cost of production. The ancillary plants of the Bhopal Project and the Testing Laboratory had not been completed or commissioned by the time the factory commenced production in July 1960. The Oxygen Plant has not been used to full capacity. The Estimates Committee, while dealing with the progress of production, has also drawn pointed attention to the unrealistic way in which targets have been fixed. For instance, as against a target of Rs. 2.9 crores suggested by the Consultants (Associated Electrical Industries of Britain) for the year 1961-62, the Bhopal factory aimed at a production of Rs. 3.5 crores. But the value of finished equipment manufactured in that year amounted to only Rs. 13 lakhs. Of course, there was, in addition, the value of works-in-progress and departmental works amounting to Rs. 1.6 crore. But, even if the entire works-in-progress are taken into consideration, the actual production has worked out to only 61 per cent of the revised target of Rs. 2.9 crores. When related to the capital investment of Rs. 30.1 crores upto 31st March 1962, the output in 1961-62 has worked out to 5.8 per cent only.



But all these teething troubles, it is hoped, are now over. In fact, the 1962-63 output of the plant has met a considerable part of the various State Electricity Boards, power projects, public sector undertakings, railways and industries in the private sector. Transformers manufactured in this factory have already been supplied to the States of Madhya Pradesh, Bihar, Punjab, Madras, Andhra Pradesh and Assam. These include 10,600 KVA transformers for the Umiam Project of Assam and the 25,000 KVA transformer which is under despatch for the Neyveli power distribution scheme of Madras. The factory has also undertaken to supply 15,000 KVA capacity transformers for the Delhi Electric Supply Undertaking, 37,500 KVA capacity transformers for the Obra Power Project of Uttar Pradesh, 40,000 KVA capacity transformers for the Dhuvaran Project of Gujarat, 50,000 KVA capacity transformers for the Damodar Valley Corporation and the Calcutta Electric Supply Company, 75,000 KVA capacity transformers for the Talcher Scheme of Orissa and power development schemes at Paras and Bhusaval in Maharashtra. Negotiations are in progress for securing an order for 175,000 KVA capacity transformers for the Damodar Valley Corporation. Capacitors manufactured in this factory have been supplied to a number of private industries, Hindustan Machine Tools at Bangalore and Pinjore, and the Armament Factory at Ambarnath in Maharashtra State. Negotiations are under way for supplying capacitors to the Diesel Locomotive Works at Banaras. Circuit Breakers produced in the factory have been supplied to the State Electricity Boards of Bihar, Gujarat, Jammu and Kashmir, Madhya Pradesh, Madras, Punjab, Uttar Pradesh and West Bengal; Railways, Directorate-General of Supplies and Disposals; public sector undertakings like the National Coal Development Corporation and the Heavy Engineering Corporation at Ranchi; private sector undertakings like the Associated Electrical Industries, and Electric Supply Companies. Work is in progress for the supply of switchgear equipment against the orders of Dhuvaran Project of Gujarat, Obra, Matatila and Rihand Projects of Uttar Pradesh, Uhl Project of Punjab, Umiam Project of Assam, Rana Pratap Sagar Dam of Rajasthan and Talcher Scheme of Orissa.

From July 1960 to March 1963 actual production in the Bhopal factory was only Rs. 2.0 crores' worth of finished goods and Rs. 2.6 crores of works-in-progress. During the current year, that is, 1963-64, the factory expects to produce Rs. 5.5 crores' worth of finished goods, as against the Consultants' estimate of a little over Rs. 4 crores. These figures may be compared with the ultimate annual output of Rs. 33 crores. The apparently slow pace of progress towards the optimum production potential is explained by the inherent time lag (five to eight years) in the development of a variety of heavy electrical goods, no two of which are identical. So, according to the Consultants themselves, the period required to achieve full production in the factory is expected to be eight to ten years, that is, upto 1968-70.

Continuing Losses

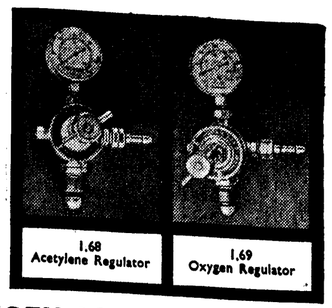
But, by that time, the outlay on the project will have aggregated Rs. 48 crores or so. A project involving such a heavy outlay of public money one may expect, should be operated on economic lines so as to produce a profit. Actually, however, the Company has incurred a net loss of Rs. 0.46 crore in 1960-61 and Rs. 1.07 crore in 1961-62. The Estimates Committee has been informed that this pattern of a sizable loss in the initial phases is inevitable in a project of this nature and that profits would be made only from 1970-71 when the volume of production and sales expand sufficiently to meet the high overheads, including interest and depreciation. The Committee trusts that the position would be constantly reviewed to minimise these losses "to the extent possible." There are at least two ways in which this could be done. One would be to relate the recruitment of staff strictly according to requirements. And the other would be to discard the present practice of fixing the prices of equipment produced by the Bhopal factory so as to correspond with the prices of imported equipment. The Estimates Committee has recommended, in this connection, that prices should be determined only on the basis of actual costs of production. But, at the same time, the H.E.L. would have to exercise the utmost economy and bring down the cost of production to a reasonable level, so that the selling price can leave an adequate margin of profit to the Company.

for precision welding and cutting
'B' type 2 stage regulators

B.O.R-12—A standard oxygen regulator for all general purpose welding.

B.O.R-13—An oxygen regulator for use primarily on cutting applications.

B.A.R-9—An acetylene regulator suitable for all welding and cutting applications.



Indian Oxygen offer a wide range of regulators to meet the growing needs of industry.

'B' series two stage regulators are unrivalled for use under conditions demanding close control of working pressures.

'I' series single stage regulators are admirably suited for cutting, gouging and heating operations where fine pressure adjustment is not important.

Please contact our nearest branch for further details.

for top performance under field service conditions 'I' series regulators

1.68 Acetylene Regulator

1.69 Oxygen Regulator

INDIAN OXYGEN LIMITED

ORISSA IRON ORE PROJECT

WORK NEARING COMPLETION

THE Orissa Iron Ore Project, which is nearing completion, will make a significant contribution to India's earnings of foreign exchange and also help in the development of an area of rich but hitherto unexploited natural resources. In the initial stage the project will enable India to mine, transport and export two million tons of iron ore annually to Japan. At prevailing prices this will earn foreign exchange worth approximately Rs. 10 crores, according to a writer who has reviewed the progress of the project for the United States Information Service.

The project is unique because it involves the association of three nations, India, Japan and the United States in promoting economic development of this part of the world. In June 1958 the United States extended a loan of $20 million (Rs. 9.5 crores) to the project from the Asian Economic Development Fund. This special fund, authorised by the United States Congress in 1955, finances projects to strengthen the economic ties between free nations of Asia. Unforeseen economies have resulted in the scaling down of this loan to $18.9 million (Rs. 9 crores). Japan has extended a Yen credit equivalent to $8 million (Rs. 3.8 crores). The project will help Japan by creating a reliable source of supply of iron ore for her steel industry. In addition to the loan from the Asian Economic Development Fund, a line of credit extended to the Government of India by the U.S. Export-Import Bank was utilised in part to purchase a considerable amount of mining equipment.

The project consists of the opening of a new iron ore mine at Kiriburu, the construction of two railway lines, Bimlagarh-Kiriburu Link (25 miles) and Sambalpur-Titilagarh Link (113 miles), the provision of diesel locomotives to pull iron ore trains, and the development of Visakhapatnam port to enable the expeditious shipment of iron ore.

The Kiriburu iron ore mine is located on the border of Bihar and Orissa, about 40 miles south-west of Rourkela. Three ore bodies located on the tops of hills in the area have been explored to a depth of 300 feet. Proven reserves amount to 385 million tons. But a great deal of additional ore is available in nearby hills which have not yet been thoroughly explored and it is believed that the total reserves are far in excess of this figure. The iron ore is exceptionally rich with an iron content of more than 60 per cent. The mine has been planned for an initial output of two million tons per year which will be shipped by rail 450 miles to the Port of Visakhapatnam for export to Japan. Ultimately the mine is expected to be developed to produce 9 to 10 million tons of ore per year.

Mining Equipment

The ore will be crushed in two large-sized jaw crushers. Fragments of less than half an inch in diameter (known as 'fines') will be rejected in the screening and washing operations. The rest of the ore will be delivered by a belt conveyor to a loading bunker which is capable of loading simultaneously 14 railway wagons. The bulk of the mining equipment is of American manufacture. Its cost of approximately Rs. 1.5 crores ($3 million) was met from the line of credit to the Government of India by the U.S. Export-Import Bank. The U.S. equipment includes electric shovels, dump trucks, crawler tractors, bulldozers, crawler mounted drills, blast hole drills, rotary drills and portable compressors. Crushing, screening, conveying and railway wagon loading equipment has been supplied by Japan.

The construction of the two railway links, which were opened in April 1963, posed many intricate engineering problems. The Bimlagarh-Kiriburu line passes through a mountainous terrain across which many streams and rivulets have cut deep gorges. This railway line goes up exceptionally steep grades in the last few miles adjacent to the mine. Some portions of the track have been laid on embankments which are as much as 70 feet high. A few pieces of heavy equipment of American origin were used in building the railway but the major portion of the work has been done by manual labour. On the Sambalpur-Titilagarh Link there are many multi-span steel girder bridges crossing wide streams. Steel girders for these bridges were imported from Italy, but the cost of the girders was financed with U.S. funds. Railroad rails for the above lines, imported from Japan, also were financed from the U.S. loan. While the Bimlagarh-Kiriburu Link will be used almost exclusively for the movement of iron ore, the Sambalpur-Titilagarh track will move a considerable amount of general traffic in addition to iron ore and will do much to facilitate the development of an area which has been remote from any railway service until the present time. Twenty-five high-powered diesel-electric locomotives financed by the U.S. loan from the Asian Economic Development Fund will be used to move the iron ore freight trains.

The success of the Orissa Iron Ore Project depends largely on increasing the capacity of the Visakhapatnam port. The port was opened to ocean going traffic in 1933. Tonnage handled by the port has grown from 280,000 tons in the first full year of operation to approximately three million tons at the present time. This figure will increase to five million tons when the Kiriburu mine goes into full-scale production. In 1966 when iron ore at the rate of four million tons per year is expected to be shipped from Bailadila, another major mine under development in eastern India, the port's tonnage will increase to about 10 million tons per year. The port presently handles vessels with a maximum draft (depth of ship under the waterline) of 31 feet. Deepening and widening of the entrance channel which is now in progress will enable it to handle ships with 33 feet draft and up to 623-foot length. The iron ore berths will be dredged to a depth of 36 feet and will accommodate vessels of 50,000 tons. The iron ore wharf, which is expected to be completed in 1964, is among the largest of its kind in Asia. It will have two berths. The United States has financed the procurement of material and equipment for the new wharves and the iron ore handling plant for unloading ore from railway wagons and loading it on to ships.

The Orissa Iron Ore Project is providing employment to thousands of workers. It has opened a large part of Eastern India for development, provided a means to increase India's export trade, and assured Japan's growing steel industry of a steady source of supply for its principal raw material. It is benefiting two major nations of Asia, thus fulfilling the objectives of the Asian Economic Development Fund.

NEW PRODUCTS AND PROCESSES

A New Automatic Levelling Instrument

A SWISS firm has just launched a new engineer's level, type GK 1-A, on which an automatic compensating device does away with the need to get the line of sight horizontal before each measurement. This device consists of a reflecting surface (roof prism) inserted in the optical path of the telescope and suspended like a pendulum. It keeps the line of sight horizontal to within + or— 1". This high degree of precision is achieved by a new magnetic system of suspension with extremely little friction, used for the first time. The pendular oscillation is absorbed pneumatically, so that if the instrument is shaken the telescope image returns very quickly to rest. Like all levels made by the same firm, the GK 1-A also possesses the special tilting head instead of the usual three setting screws. This system makes it possible to fix the instrument on the tripod very quickly and at the same time set it roughly level in a very short time and with no trouble at all. The combination of the tilting head and automatic levelling ensures simple rapid work. The very clear upright telescope image greatly simplifies reading on the levelling staff and speeds up work considerably. This is essential in order to benefit fully from the advantages of automatic levelling; the reflected optical path and the elimination of the setting screws have made it possible to give this instrument a modern compact shape. The precision of the GK 1-A, available with or without horizontal circle and reading glass, fully satisfies all the requirements of builders and engineers. The telescope has a magnification of 25x, with an effective aperture of lens of 41 mm.; the mean error over 1 km. of double levelling is + or— 2.5 mm. and the whole instrument, including its plastic case, weighs just over 5 lbs.

Wrapping Machine

A wrapping machine which works by enclosing an article in a sleeve of plastic film and drawing the film tight in a shrink-tunnel has been developed by a British firm of packaging machine manufacturers, Forgrove Machinery Co. Ltd., Leeds, England. The wrapping material feed is self-adjusting and cannot deliver film unless the article is in the correct position for wrapping. The machine, which is a special version of a well proved universal wrapping machine, can wrap a single item or a bundle of items. It will handle articles up to 16 ins. in length by 9¼ ins. wide by 5¼ ins. deep (40.64 cm.×24.13 cm.×13.335 cm.). Adjustments for different sizes of articles are easily made by means of hand wheels and other simple controls. An article which is an awkward shape can be given an even surface for wrapping by mounting it on a flat or U-shaped card. The speed of operation of the machine can be varied between 15 and 35 wrapped articles per minute. Attachments which can be fitted to the machine include a centralised semi-automatic lubricant system, a counting unit, and an adjustable feeding and folding unit.

Revolutionary Bicycle Design

A bicycle with 16-inch (40.64 cms.) wheels and a rubber suspension system which make it a complete breakaway from traditional design is to be manufactured by the British Motor Corporation. Target production is 500 a week by June 1963, eventually to be increased to 1,500. The designers have been inundated with oversea enquiries for the machine since it was first shown in London last November. With independent suspension at front and rear wheels and a frame without the conventional cross bar so that the bicycle can be ridden by men or women, the machine is a unique development of its kind. The small wheels give quicker acceleration and many other advantages. The machine is shorter, easier to manœuvre and easier to store than the conventional model and the centre of gravity is much lower. The saddle can be raised or lowered by a quick-acting toggle action. Rubber springs inside the tubular frame make it possible to ride over the roughest roads in comfort with better road adhesion when cornering or braking. The design range includes a motorist's model which splits into two parts and can be carried in the boot of a car.

Pneumatic Motors

A British firm manufacturing pneumatic and electric power tools, namely, Desoutter Brothers Ltd., the Hyde, Hendon, London, N.W. 9, has produced pneumatic motors in sizes from 0.08 to 0.5 b.h.p. which, it is claimed, can be used with complete safety where risk of fire and explosion precludes the use of electric motors—for example in the mixing of paint or other chemicals. The smallest motor weighs only 1¼ lb. and the largest about 5 lbs. An air supply of up to about 100 lbs. per square inch can be regulated to control the speed of the motor. Maximum power is achieved at a rotor speed of some 10,000 r.p.m., which is then geared down to drive the output shaft. With suitable gearing, a continuous output torque of up to 360 lbs./in. can be obtained from a 0.5 b.h.p. motor, only 10⅛ in. (26.98 cms.) long by 2¼ dia. with a consumption of 24 cu. ft. of free air per minute. In addition to these motors, the firm has also introduced a new range of constant-speed motors. These are available in eight different speeds from 450 r.p.m. up to 10,000 r.p.m., and develop 0.325 b.h.p. at 80 lbs. per square in. (5.62 kg. per sq. cm.).

New Shoe Material

A new synthetic material with the exceptional property of being porous is announced by Du Pont de Nemours of the U.S.A. It is intended for footwear and has been given the trade name Corfam. Quantities are limited at present because production is to be effected at first on a small pilot plant in the U.S. A full-scale production line is also being built and will be on stream late in 1964. Patents in most countries cover the processes and apparatus and other relevant factors. Naturally, one tends to use expressions such as "man-made leather," and "artificial leather." Du Pont is anxious to avoid these descriptions because Corfam is an entirely new product and not to be regarded as a substitute for anything. The essential quality of the material is that it has a built-in microporosity that allows it to "breathe." No information on its chemical structure has been divulged.

Vibratory-feed Weighing Machine

A vibratory-feed weighing machine, which will weigh 16 times per minute pre-set amounts in the range of 4 to 35 ozs. (113.39 grams to 1,000 grammes), according to the density of the material, has been produced by a Britain firm, Autopack Ltd., Worcestershire. Such machines are normally manufactured to individual requirements, incorporating alterations to meet specific applications. This new machine, which is provided as a "standard" model, costs comparatively much less than the ones made to order. It includes a standard weigh beam and balance assembly, and the weigh pan is fed from a two-speed vibratory feeder, drawing from a standard hopper. As the weighing operation nears completion the vibrator feeder is tripped into slow speed, and when the weighing is completed the feed is mechanically cut off and the weigh pan electrically tripped.

New Method of Shock Absorption

An entirely new method of shock absorption is embodied in a damper designed by scientists at the Rubber and Plastics Research Association of Britain. It is still at an early stage of development, but its adoption offers machine users—especially motorists—a simple, low-cost system of damping that requires very little maintenance. The idea originated in a scientific study of energy loss where rubber is deformed. The principle of the system is clear and not complicated and it is likely to show considerable technical and economic advantages over normal hydraulic systems. Economically, it lends itself to mass production techniques which—even at the present prototype stage—promises to be cheaper than the present liquid and sealing techniques used in hydraulic systems. Five firms have already taken up licences in the world patent rights of R.A.P.R.A.

Resilient Glue

A synthetic glue suitable for bonding aluminium alloys, stainless steel, titanium, and glass fibre reinforced plastics, and of keeping them securely bound together even when heated to 200° C. and continuously vibrated, has been reported from the Soviet Union. It has been synthesised by combining a modified nitrile rubber with an alcoholic solution of phenol-formaldehyde resin. Bonding is effective under a pressure of 140 lbs./sq. in. and at a temperature of 165° C.

It is claimed that the adhesive resists attack from solvents such as petrol and alcohol, and that it is suitable for use in wet humid atmospheres. Its adhesive strength, which, when it is used on aluminimum alloys, ranges from 2,300 lbs./sq. in. to 3,400 lbs./sq. in., does not deteriorate after repeated heating.

U.P. LETTER

"CRISIS" IN SUGAR INDUSTRY

RATIONING INCONVENIENCES EVERYBODY

From Our Special Correspondent

LUCKNOW, 15*th May*

THE sugar industry in U.P. is greatly agitated by the fact that under the Sugar Control Order the Government of India has fixed the ex-factory price of sugar for U.P. and North Bihar at Rs. 108.50 per quintal, as against a price of a little over Rs. 111 per quintal recommended by the Tariff Commission on the basis of an expert study of cost conditions. The ex-factory price does not leave a sufficient margin of profits to U.P. factories and most of them may have to incur heavy losses. The U.P. and North Bihar factories are handicapped, as compared with sugar factories in Maharashtra and the South because the per-acre yield of sugar-cane here is only 12 to 15 tons as against 25 to 30 tons in South India. This unduly increases the costs of raw material to the sugar factories in U.P. and North Bihar. Moreover, due to a number of causes the average duration of the current crushing season in U.P. and Bihar is expected to be 92 days which is much shorter than in Maharashtra and South India and the recovery of sugar at nearly 9.2 per cent in U.P. is also smaller than in the South. But, although the U.P. and North Bihar factories thus have higher costs of production, the ex-factory price of sugar fixed for this region at Rs. 108.5 per quintal is the lowest among the prices fixed for the six regions.

In reply to a short notice question in the Rajya Sabha last week, Mr. A. M. Thomas, Deputy Minister of Food and Agriculture, refuted the charge of discrimination against U.P. and North Bihar factories in fixing the ex-factory prices and stated that the Government had adopted a uniform yardstick throughout the country. It is true that the Government of India could not be accused of deliberate discrimination, but it cannot also be denied that the ex-factory price of sugar for U.P. and North Bihar has proved discriminatory in the sense that, whereas the costs of production of factories elsewhere would be covered by the ex-factory prices fixed by the Central Government, they would not be covered in the case of U.P. and North Bihar factories, many of which might have to close down altogether if the ex-factory price is not suitably adjusted. The U.P. Government and the Indian Sugar Mills' Association have both requested the Central Government to consider the difficulties of the sugar industry in U.P. and North Bihar and to allow a suitable increase in prices but these representations have so far produced no effect. The important point is that in the current crushing season the production of factory sugar in U.P. has declined by nearly 3 lakh tons, as compared with 1961-62 and, if the sugar factories make heavy losses, the output of sugar factories in U.P. in 1963-64 may decline still further, thereby making it difficult for the 1963-64 all-India target of sugar production of 32 lakh tons to be achieved.

Sugarcane Improvement

The U.P. Government is making intense efforts to increase the yield of sugar per acre of land, especially in the factory areas. The model scheme designed to increase the average per-acre yield of sugarcane from 400 maunds to 500 maunds was introduced last month in 25 factory areas in U.P. The Chief Minister, Mr. C. B. Gupta, told the Sugar Industry Advisory Committee at Lucknow that the U.P. Government would be willing to extend this scheme to all the 71 factories in U.P. provided the Government of India is agreeable. Under this scheme, each of the 25 factory units will have a restricted area of 4,000 acres of land under intensive cultivation for three years. Each unit would cost Rs. 1,44,900 per year out of which one-third cost would be shared by the Central Government, one-third by the U.P. Government and the remaining one-third equally by the millowners and the cultivators. Although this model scheme is very promising and is calculated to increase the total output, as well as the per-acre yield of sugarcane, it is felt by all concerned in the State that sugar production by U.P. factories would not increase unless the ex-factory price of sugar is suitably increased.

In the first week of May the U.P. Government introduced sugar rationing in the State under which the consumers would get on the basis of ration cards one kilogram of sugar per head per month from recognised dealers, fair price shops and co-operative stores formed for this purpose. There is a general consensus of opinion that the U.P. Government has been too hasty in introducing rationing of sugar. U.P.'s Civil Supplies Minister, Mr. Jagmohan Singh Negi, told pressmen that the Government was compelled to introduce rationing of sugar as it was reported that wholesalers were not issuing the quota of sugar to Government-recognised dealers and sugar was "slipping into the black market." But if the wholesalers were not behaving properly, as is alleged by the Minister, the U.P. Government should have taken suitable action against them. How would the introduction of sugar rationing improve matters? The fact of the matter appears to be that after the ex-factory prices of sugar were fixed by the Central Government, the U.P. Government was slow in announcing the wholesale and retail prices and, after these were actually announced, much time was lost in communicating these prices to the wholesalers and retailers, through the district supply officers. In the meantime it was only natural for the wholesalers and retailers to refuse to sell sugar as they did not know the prices at which they had to sell it. There might have been some unscrupulous people who took advantage of this confusion and charged high prices of Rs. 1.50, Rs. 1.75 or even Rs. 2 per kilogram. But this confusion was only temporary and there was no justification for the U.P. Government to rush in with the drastic method of full-fledged rationing of sugar, when none of the other State Governments have done so where conditions were no better. The harm in introducing full-fledged rationing of sugar has been to create a psychology of scarcity and to encourage the creation of black markets as the amount of one kilogram per head per month is obviously inadequate and most consumers will be compelled to buy in the black market to meet their essential requirements. As a result of rationing the consumers are forced to buy poor quality sugar with a lot of dust mixed with it and water sprinkled on it to increase the weight. There might have been some justification for full-fledged rationing if there was an overall shortage of sugar. But, according to the latest estimates, the total supply of sugar in the country is 33 to 34 lakh tons after taking into account the current season's production and the carry-over from the past while the total demand, including exports, does not exceed 32 lakh tons. Even so far as U.P. is concerned, there is no shortage of sugar. U.P.'s monthly quota of 28,000 tonnes per month should suffice, but if the U.P. Government had told the Central Government of their intention to introduce full-fledged rationing unless the monthly quota was increased to 30,000 tonnes per month, which is what the U.P. Government seems to consider adequate, there should have been no difficulty in the Central Government's way in doing so.

Hours of Work Under Shops Act

Under the U.P. Shops and Commercial Establishments Rules, 1963, the hours of work of shops and commercial establishments have been limited to ten from 10 a.m. to 8 p.m. since 1st May, 1963. In the past, shops and commercial establishments could keep open from 13 to 15 hours with the weekly holiday and with the provision that no shop assistant should put in more than eight hours of work. The new hours have been introduced to protect the shop assistants who were reported to be overworked and were not getting any overtime wages. But the new hours have inconvenienced everybody and there is a strong agitation against them. With the new hours of business the office-going people do not get enough time for shopping because they feel too tired to rush to the market after they return from office at 6 p.m. or after. By the time they reach the market the shopkeepers are getting ready to close their shops. Moreover, in these summer months very few persons shop in the midday heat. Most people prefer to go to the market after sundown and have to rush in making their purchases. The shopkeepers are wailing that their sales have gone down and some of them are even thinking of reducing their staff. In this way, the new shop hours might even harm the shop assistants for whose benefit they have been introduced. In view of the agitation the U.P. Government is considering to revise their order and it is now proposed to keep the shops open from 8.30 a.m. to 8 p.m. from March 15 to September 15 and from 10 a.m. to 8 p.m. during the rest of the year. At present the inspectors do not allow the building to open before 10 a.m., and the building must be closed at 8 p.m. This means that actual business is done only between 10.30 a.m. and 7.30 p.m. Under the rules, opening and closing should mean the commencement and close of business and not the opening and closing of buildings. In the case of restaurants, doctors' and chemists' shops and those selling shroud cloth and other paraphernalia for cremation and burial, some relaxation should be made in hours of work to avoid undue hardship to people.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Applications for shares will be entertained ONLY on the basis of Prospectus, copies of which are available at the Registered Office of the Company and in the Offices of its Bankers, Underwriters and Brokers.

Consent of the Central Government has been obtained to this issue.

The Subscription List will open at the Commencement of Banking hours on Wednesday the 22nd day of May 1963, and will remain open until the close of Banking hours on Tuesday the 28th day of May 1963.

MULTIMETALS LIMITED

(INCORPORATED UNDER THE COMPANIES ACT 1956 ON THE 2ND DAY OF AUGUST, 1962)

SHARE CAPITAL

	Rs.	Rs.
Authorised:—		
10,00,000 Equity Shares of Rs. 10 each		1,00,00,000
Issued, Subscribed and Paid-up:—		
7 Equity Shares of Rs. 10 each, fully paid-up, payment having been made in cash by the subscribers of the Memorandum of Association		70
PRESENT ISSUE		
7,49,993 Equity Shares of Rs. 10 each at par.		
Out of the Present Issue:—		
2,50,000 Equity Shares of Rs. 10 each at par are reserved for allotment to the Company's Foreign Collaborators, namely REVERE COPPER AND BRASS INCORPORATED of New York for cash in accordance with the provisions of the collaboration agreement hereafter referred to, on which application money at Rs. 2.50 nP. per share has been received.	25,00,000	
2,25,000 Equity Shares of Rs. 10 each at par have been reserved for allotment to Metal Distributors Ltd., Calcutta, for cash in accordance with the provisions of the collaboration agreement hereafter referred to on which application money at Rs. 2.50 nP. per share has been received.	22,50,000	
24,993 Equity Shares of Rs. 10 each at par reserved for allotment to Indian promoters, Directors and their associates for cash	2,49,930	
Available for Public Subscription:—		
2,50,000 Equity Shares of Rs. 10 each at par	25,00,000	
		74,99,930
		75,00,000

Payable:—
(i) On application ... ... Rs. 2.50 nP. per share.
(ii) On allotment ... ... Rs. 2.50 nP. do.

The balance of Rs. 5 per share will be payable by one or more Calls as may be determined by the Directors.

APPLICATIONS MUST BE FOR A MINIMUM OF 50 SHARES OR MULTIPLES THEREOF.

LOAN CAPITAL

The Company has no mortgages, debentures or other loan capital outstanding but agreement has been reached with The Bank of Baroda Limited and The Bank of India Limited to grant loans of the total amount of Rs. 75 lakhs to be secured by equitable mortgages on the present and future fixed assets of the Company. The terms as to interest, repayment, etc., are referred to in greater detail elsewhere in the Prospectus.

DIRECTORS

SHRI G. D. BINANI, Industrialist and Merchant. 38, Strand Road, Calcutta-1.
Director of:—The Binani Metal Works Ltd., Cominco Binani Zinc Ltd., Metal Distributors Ltd., Star Metal Refinery Pvt. Ltd., etc.

REGISTERED OFFICE

BINANI BUILDINGS, 38, Strand Road, CALCUTTA-1.

OBJECTS OF THE COMPANY

The Company was incorporated on 2nd August, 1962 with the objects stated in its Memorandum of Association and in particular to undertake the manufacture of Copper and Copper Alloy Rods, Tubes, Sections, Copper Printing Rolls for the Textile Industry.

The Company has obtained a Certificate of entitlement to commence business from the Registrar of Companies, West Bengal, dated 12th November, 1962.

MANUFACTURING LICENCE

An Industrial Licence No.: L/IB(2)/N-65/60 dated 9th August, 1960 has been issued by the Government of India to Shri G. D. Binani, a Promoter and Director of the Company. The Licence has been endorsed in the name of MULTIMETALS LIMITED by the Government on 5th September 1962.

The Licence provides for the yearly manufacture of 1,800 tons of Copper and Copper Alloy hollow and solid sections. The licence also provides for the manufacture of 3,000 pieces of Copper Printing Rolls on double-shift basis which has since been increased by the Government to 5,000 pieces in terms of their letter No. 3(6) Met/61 dated 2nd January 1962.

PROSPECTS

Copper and Copper Alloy Rods, Tubes, Sections, etc. proposed to be produced by the Company are extensively used by the Railways, Communications, Defence and Electrical Industries as well as by manufacturers of engineering plant and components, tyre tube valves, etc.

The present production of Copper and Alloy rods, tubes, etc. in the country is greatly insufficient to meet even current requirements. In spite of severe import restrictions imports of these products during the year 1961 exceeded Rs. 1.36 crores. The Tariff Commission has estimated that, as against the requirements of about 5,338 tons during 1961, the requirements of these products will be increasing to about 15,000 tons by 1965-66.

There is no production of Copper Printing Rolls in India at all and the entire indigenous requirements are met by imports. The production of Copper Printing Rolls is extremely specialised and there are very few plants in the world producing this item. The Company will be pioneers in the production of Copper Printing Rolls in India.

TECHNICAL AND FINANCIAL COLLABORATION

The Company has made arrangements for technical and financial collaboration with Revere Copper and Brass Incorporated, New York. Revere, with annual sales exceeding Rs. 110 crores, are one of the largest producers of non-ferrous products in the world. Besides providing 'know-how' and technical assistance, they will also participate in the share capital of the Company to the extent of Rs. 25 lakhs in terms of a collaboration agreement dated 15th June 1962. The Government of India has approved the collaboration arrangement by letter No. 12/(1) Met/61 dated 13.2.1962. The consents of the Controller of Capital Issues and the Reserve Bank of India have been obtained for the issue of shares to Revere for cash. The amount proposed to be invested by Revere, along with foreign exchange amounting to Rs. 54.64 Lacs agreed to be released by the Government of India under D.L.F. Loan No. 157, is expected to cover the entire capital cost of imported plant and equipment.

PLANT SITE, WATER AND POWER

The Company has taken on lease 37.71 acres of land at Kota from the Government of Rajasthan in the area reserved for heavy industries on 99 years' lease, renewable for a further similar period. The Company has agreed to pay rent at Rs. 30 per acre per year which amounts to Rs. 1,131-30 nP from 6th December 1962, the date of taking over the possession of the land.

The Rajasthan State Electricity Board has agreed to supply power and an abundant supply of water is available close to the plant site.

APPLICATION FOR SHARES

Applications must be made on the form attached to this Prospectus (or on a printed copy thereof). Application forms properly completed must be lodged together with the amount payable on application before the closing date of the subscription list to the Bankers of this issue or with any of their existing main branches at:—

Ahmedabad, Amritsar, Bangalore, Baroda, Bombay, Calcutta, Delhi, Hyderabad, Indore, Madras, New Delhi, Nagpur, Poona Camp, Poona City and Surat.

Remittances should be made by cash, draft or cheque and should be crossed "Account Payee" only. If payment is made by cheque or draft, the cheque or draft must be drawn on a Bank situated in the town at which the application is submitted. Cheques or Drafts should be drawn in favour of any one of the following Bankers A/c. "Multimetals Ltd."

1. The Bank of Baroda Ltd. 2. The Bank of India Ltd. 3. National and Grindlays Bank Ltd. 4. First National City Bank.

A separate cheque or draft must accompany each application form.

PETRO-CHEMICAL COMPLEXES

SEVERAL SCHEMES ON THE ANVIL

CONCERTED efforts are being made to launch large-scale projects for petro-chemical complexes during the fourth Plan period, designed to boost, if not revolutionise, India's organic chemical industry. Currently, the Union Ministry of Mines and Fuel has, under its consideration, a proposal to set up a petro-chemical advisory committee, more or less on the lines of the existing Oil Advisory Committee. The proposed Committee is expected to make a quick appraisal of the problems and the manner of growth of these industries. It is likely to make a distinctive contribution towards formulating a perspective plan for petro-chemicals, for which the Ministry has already taken some steps. The prospects for development of the industry in India are bright, if only the new refineries go into production according to schedule, making available surplus naptha for the production of "building stocks" (basic raw materials) by steam cracking. The offers for technical and financial participation in the proposed petro-chemical complexes by such reputed international companies as the E.N.I. of Italy and Dow Chemicals of the U.S. augur well for the development of this capital-intensive industry.

The petro-chemical industry, although comparatively of recent origin, has come to play a vital role in the economic structure of industrially advanced countries. With the steady expansion of the organic chemical industry, the development of petroleum feedstocks has become a vital necessity in India as well. In the early years of the growth of organic chemicals, the basic chemicals were derived from the processing of raw materials of vegetable origin, particularly by the fermentation of molasses, destructive distillation of wood and glycerol from soap lye. This raw material base was widened after the Industrial Revolution with the development of new sources of basic organic chemicals from by-products of the cokeries attached to iron and steel works, and as derivatives of acetylene from calcium carbide. Further diversification occurred on account of the emergence of several synthetic substitutes in the field of consumer goods and primary raw materials themselves, for instance, rayon and synthetic rubber. The latest to enter the field are petroleum feedstocks, which have not yet made any headway in this country.

Imports of Chemicals

India's organic chemical industry has been dependent on imports for many of the intermediate chemicals required for the manufacture of the various end-product derivatives, such as polystyrene, plasticisers, detergents, dyestuffs, agricultural chemicals and solvents. There have also been large imports of such end-products as synthetic rubber. It is common knowledge that imports, however, have been restricted to the minimum requirements of the industry on account of foreign exchange difficulties. But the scope of making available indigenously sufficient basic raw materials for the expanding organic chemicals industry is very limited, as explained in detail in an article on "The Importance of Petro-Chemical Industry to India" in the *Commerce*—1962 Annual Number. The major raw materials available indigenously are ethyl alcohol (from molasses), benzene and toluene from coal carbonisation, besides calcium carbide.

It is precisely because of the shortage and relatively higher prices of these products that the establishment of petro-chemical industries has been thought of. In a report submitted by the French expert, Dr. Henny, to the Government of India recently (which was referred to in this journal a few weeks ago), the failure to develop petro-chemicals in India will necessitate imports worth Rs. 51 crores by 1966 and as much as Rs. 140 crores in 1971. There seems to be no exaggeration in Dr. Henny's estimate, if due consideration is given to the projection of growth of the organic chemical industry in the country.

Supply of Naptha

In view of the expansion of refining capacity in the country, it seems possible to procure adequate naptha at least by 1966, that is, towards the end of the third Plan. There are already four refineries and another three are scheduled to be commissioned during the next few years. According to Dr. Henny's estimate, the aggregate refining capacity in India will be about 13.4 million tons by 1966, which will go up steadily to 22.4 million tons by 1970 and still further to 24.8 million tons in 1971. It is on this basis that he estimated the total net availability of naptha at over 800,000 tons by 1966 and about 1.45 million tons by 1971. The following table shows the region-wise net availability of naptha for petro-chemicals:

(Thousand tons per year)

	1966	1968	1969	1970	1971
Digboi	155	74	29		
Gauhati				371	321
Barauni					
East India ..					
Burmah Shell ..	417	287	264	240	540
Esso Eastern ..					
Gujarat	178	160	380	370	359
Vizakhapatnam ..	43	36	32	28	23
South India	50	255	241	225	200

In order to start a large-scale petro-chemical complex, according to Dr. Henny, there should be a continuing availability of over 150,000 tons of naptha per year. On this basis, it is possible to start the initial phases of two complexes by 1966, one in Bombay and the other in Gujarat. The Gujarat complex will be able to expand its capacity by 1969 and the other unit the following year. The establishment of another complex might be possible in South India by 1968 and in East India by 1970. It is said, however, that the quantities of by-product gases available at Vishakapatnam, Gauhati and Barauni are insufficient to permit the installation of viable petro-chemical production units based on them alone.

Dr. Henny's Suggestion

It appears that the Government of India has accepted in principle Dr. Henny's suggestion that petro-chemicals need to be produced in a complex of plants capable of absorbing all the by-products, adjacent to a refinery. The idea of establishing these plants in a complex, it is said, will enable the feedstocks from the oil-fields—natural gas and crude oil—and the waste gases from the refineries and by-products like naptha and fuel oil to be used economically and purposefully as raw materials for petro-chemical industries, including fertilisers, synthetic fibres, synthetic rubber and intermediate chemicals. Dr. Henny's report itself makes it clear that, in other parts of the world, the increasing tendency is towards a fully integrated complex entirely under the control of one organisation. This prevents a repetition of taxation at each of the intermediate stages, and allows rationalisation of off-sites, intermediate storage, working capital and, in fact, nearly all the important elements. The nature of organisation of these complexes is further explained in the report in the following words:

"In carrying on the programme, the normal procedure will be for any interested companies to work out the exact nature and definition of the complex and the share to be taken by each participant, and then to present the project to the Government with financing arrangements, for its approval. The setting up of petro-chemical complexes is tending everywhere to result in the whole project being handled by a single company; or else in the erection of a complex by a consortium of companies which create a jointly owned subsidiary that becomes responsible for the whole project, namely, the project is realised under the 'umbrella' of a single entity.

"Whatever happens, it is difficult to visualise a viable complex coming into existence on a piecemeal basis. The use of by-products, the allocation of costs and the value of intermediate streams is sufficiently arbitrary so that their equitable determination must be done on an overall basis. Failure to set prices of intermediate streams in an equitable manner can result in certain aspects of a complex being apparently very profitable, and being eagerly sought after by various interests; while other parts do not find 'takers,' or only find them under conditions which result in a very high selling price to the consumer. Now a complex must be realised in its entirety, if (a) plants are to be rationally designed, (b) raw materials are to be available as needed, (c) adequate partners are to be selected, and (d) coherent financing is to be obtained. Integrated development means that one organisation must be entrusted with the overall responsibility. This must be established at the beginning since decisions taken early in the planning can vitally affect later stages of the complex."

The Government of India proposes to ensure that the complexes grow within the framework of the Industrial Policy Resolution, ensuring Government control in several respects. The participation of, and regulation by, the public sector will not mean that the private sector will be discouraged from entering this field. While public sector units are favoured for basic units, other units utilising the basic materials will be open to private participation. Dr. Henny himself has advocated a dynamic policy in respect of securing the technical and financial collaboration of certain international companies specialising in this field. Thus the private sector, both Indian and foreign, is bound to play a significant part in the development of petro-chemicals, unless it is inhibited by doctrinaire considerations. The Government, of course, recognises the fact both the sectors have a great deal to do in this field. But a detailed plan, it is said, will be needed to ensure co-ordination between the two sectors. According to the policy-makers, it will take another one year to work out such a plan. Such delays, it is explained, are inevitable in establishing the petro-chemical industry, particularly because of difficulties involved in the supply of feedstocks and the price fixation of various products.

VANASPATI PRICES

The Vanaspati Manufacturers' Association has just clarified the position regarding supplies of vanaspati and prices charged by the manufacturers to remove misapprehension in the public mind. The Government of India, it may be recalled, increased the excise duty on vanaspati from Rs. 200 to Rs. 384 per tonne from 1st March. At the same time, the excise duty on edible oils used in vanaspati manufacture of Rs. 110 per tonne was removed. The Government issued an Essential Articles (Price Control) Order under the Defence of India Rules imposing a ceiling on vanaspati of Rs. 64 per tonne above the prices ruling on 1st February on the presumption that groundnut oil price would decline by Rs. 110 per tonne on removal of duty. This presumption, says a Press statement issued by the Association, was wrong as the incidence of excise duty on oil under compound levy was only about Rs. 30 per tonne on an average. Although the increase in excise duty was of Rs. 184 per tonne, the industry was allowed an increase of only Rs. 64 per tonne on the assumption that prices of edible oils will decline by Rs. 110 per tonne on removal of duty.

Groundnut oil price has been steadily rising as is indicated by the following figures:

	8th May 1963	1st February 1963	Assumed basic price for vanaspati control
	Rs.	Rs.	Rs.
Bombay ..	1,770	1,670	1,560
Delhi	1,820	1,729	1,619
Calcutta ..	1,880	1,760	1,650
Madras	1,680	1,620	1,510

The cost of groundnut oil to vanaspati manufacturer has thus increased by Rs. 170 to Rs. 200 per tonne, as compared to the 1st February level assumed under price control. The industry had large stocks of excise duty-paid oil on 1st March on which Government did not give rebate. Therefore, on vanaspati made from duty-paid oil, says the Association, the industry lost Rs. 120 per tonne of unabsorbed excise duty or a total of over Rs. 30 lakhs. There has been a marked increase in the cost of vanaspati manufacture owing to increase in sales taxes on raw materials, freight, prices of chemicals, tinplate, etc. Therefore, the vanaspati industry, it is said, has been suffering losses since March. With the recent rise in groundnut oil price, if vanaspati prices remain pegged at the existing levels, the industry, according to the Association will lose more than Rs. 2 lakhs per day and its entire paid-up capital wiped out in less than one year.

The vanaspati industry is an oil processing industry and the cost of oil accounts for nearly 80 per cent of the cost of vanaspati, excluding excise duty and packing. It is also a highly competitive industry with vanaspati prices following trends in the oil market. However, vanaspati manufacturers have maintained production during April and have continued supplies regularly as they had some stocks of oil.

They find it extremely difficult now to continue production at normal level, buying oil at high prices and incurring losses of over Rs. 3.50 per tin of 16.5 kg. If there is further delay in Government policy regarding vanaspati prices, it is to be feared that the manufacturers working with small capital may not be able to continue production suffering heavy losses. A manufacturer has generally an annual turnover of ten times his capital employed as it is only a processing industry. Therefore, continued losses may vitally affect the financial stability of an undertaking.

The industry feels that it is quite unjust to peg vanaspati prices when its principal raw material prices fluctuate widely. The industry's purchases account for only about 20 per cent of the total oil supply in the country. Its purchases of oil are regular irrespective of price trends in order to keep factories running. Its stocks at present are no higher than stocks at the same time last year. Therefore, the industry, says the Association, has very little influence on the price trends which are determined largely by seasonal factors, exports and speculation.

RESULTS OF BINNY COTTON GROUP

DIVIDENDS MAINTAINED—FINANCIAL POSITION EXTREMELY COMFORTABLE

THE year 1962, as readers must have come to know by now, proved to be a trying one for the cotton textile industry. As demand for cotton goods, both internal and overseas, remained subdued, production and sales could not be stretched to the extent possible. Costs, on the other hand, continued to mount, owing to the rise in indigenous cotton prices, higher costs of imports and enhanced levies on various essential materials. Profit margins, as a consequence, were squeezed rather badly. This was so even in cases where sales registered fair gains. The situation worsened further following the increase in corporate taxation, and many a company had the misfortune to report a reduced net profit to its shareholders, with the resultant cut in ordinary dividends in quite a few cases.

The published accounts of the two Binny Group concerns, namely, the Buckingham and Carnatic Company Ltd. and the Bangalore Woollen, Cotton and Silk Mills Company Ltd., for the year ended 31st December 1962, show that the performance of the Companies has been none too different from that of other textile mills in the country. Although the turnover of the former has increased further, its gross profit has declined, albeit modestly, and, if the latter has reported larger gross profit despite lower sales realisation, it was purely because of the inclusion in other income of the profit of Rs. 17.45 lakhs on the sale of assets. The only difference from the general pattern, however, is that management of neither Company has found it necessary to curtail the ordinary dividend.

Buckingham and Carnatic

Notwithstanding the drop from Rs. 2.02 crores to Rs. 1.64 crore in exports, the gross realisation from sales by the Buckingham and Carnatic Company has increased, for the fifth year in succession, by Rs. 87.62 lakhs to touch the record level of Rs. 13.23 crores. Unfortunately, however, this betterment in turnover has been more than fully neutralised by the rise in expenditure under various heads which has defied even the best efforts on the part of the management to control costs. Despite this, the decline in gross profit has been arrested at Rs. 1.94 lakh—from Rs. 154.28 lakhs to Rs. 152.34 lakhs—as the Directors state, by "maintaining production at a satisfactory level throughout the year."

The decreased gross profit has naturally attracted a lower provision for the commission payable to Directors and the holding Company, Binny and Company (Madras) Ltd., for which a sum of Rs. 2.33 lakhs, as against Rs. 2.54 lakhs, has been set aside. Provision for depreciation and taxation, however, are higher, the former by Rs. 2.34 lakhs at Rs. 47.48 lakhs and the latter by Rs. 8.69 lakhs at Rs. 55.29 lakhs. It is, however, to be noted that the provision for taxation includes the estimated liability for S.P.T. which, according to our calculations, works out to about Rs. 5.00 lakhs. These heavier prior appropriations, therefore, leave a much reduced net profit of Rs. 47.24 lakhs, as against Rs. 60.00 lakhs for the year before. Out of this, Rs. 5.00 lakhs (Rs. 6.50 lakhs) have been credited to debenture redemption fund, Rs. 5.00 lakhs (Rs. 6.52 lakhs) to development rebate reserve and Rs. 8.00 lakhs (Rs. 12.80 lakhs) to general reserve. Preferred dividends for the year claim a further Rs. 2.08 lakhs, leaving Rs. 29.31 lakhs, inclusive of the Rs. 2.15 lakhs brought in from the preceding accounting period, for distribution to equity shareholders. Since the amount falls short of the proposed dividend of 18 per cent subject to deduction of tax, claiming Rs. 32.12 lakhs, a sum of Rs. 4.86 lakhs has been withdrawn from the reserve for taxation. On making this payment, a sum of Rs. 2.05 lakhs remains which is being carried forward.

Bangalore Woollen

Owing to the temporary accumulations of process stocks of Union fabrics which occurred in the last quarter of the year under review, there has been a slight drop in the sales proceeds of the Bangalore Woollen, Cotton and Silk Mills Company Ltd. from Rs. 618.88 lakhs to Rs. 615.59 lakhs. Other income, however, has expanded by Rs. 17.36 lakhs to Rs. 23.75 lakhs, due to the profit of Rs. 17.45 lakhs realised on the sale of assets and this has been principally responsible for inflating the gross profit to Rs. 85.63 lakhs from Rs. 75.44 lakhs in the previous year. Despite this increase, the commission payable to the Managing Director remains more or less stationary at Rs. 65,000 as against Rs. 64,000. Provision for depreciation, on the other hand, has been stepped up from Rs. 15.80 lakhs to Rs. 16.96 lakhs and that for taxation from Rs. 27.00 lakhs to Rs. 32.00 lakhs. The latter figure includes Rs. 4.50 lakhs for taxation on sale of machinery and an estimated amount of Rs. 6.50 lakhs for the S.P.T. These essential provisions thus absorb Rs. 49.61 lakhs, representing the major portion of the improved gross profit, and leave a net profit of Rs. 36.02 lakhs which is higher by just Rs. 4.00 lakhs as compared with the previous year's figure. It is heartening to note that most of this accretion to net profit has been ploughed back by increasing the transfer to reserves from Rs. 9.90 lakhs to Rs. 13.40 lakhs and the sum carried forward is Rs. 2.53 lakhs, as against Rs. 2.25 lakhs. The balance has been utilised for paying the preferred dividend in respect of the year, which claims Rs. 46,800, and an ordinary dividend at 18 per cent, subject to deduction of tax, absorbing, as in the previous year, Rs. 21.87 lakhs.

Working of the two Companies during the past four years is presented synoptically in the comparative table at the foot of the page.

Both the Companies maintained a satisfactory level of production throughout the year. Bangalore Woollen made further progress in the manufacture of "Varsity" suiting, a "Terylene" polyster fibre/wool blend material which had an encouraging reception in the market. With ample supplies of filature and spun silk yarn, the silk department too worked to capacity. This Company has entered into contract with the Government of India for the supply of large quantities of "Angola" shirtings to the defence services. Although prospects in general are fairly encouraging, the Directors of both the Companies point out that the additional taxes, duties and other burdens imposed by the Emergency legislation which the industry has now to shoulder will inevitably result in increased costs during 1963.

As revealed by their respective balance-sheets as at 31st December 1962, the financial position of both the Companies is extremely comfortable. The share capital, a major portion of which is in ordinary shares, is exceeded by reserves and surplus by a fair margin, while current liabilities and borrowings are more than adequately covered by current assets, loans and advances and investment. Although the gross block of both the Companies far exceeds their "own" funds, it has been so heavily written down through the depreciation account that the resulting net block represents a reasonable portion of the Companies' invested funds. Summarised balance-sheets of the two Companies are set forth in the following table:

(In lakhs of rupees)

	Buckingham and Carnatic	Bangalore Woollen
LIABILITIES		
Share capital—	Rs. nP	Rs. nP
Preference	21.30	6.00
Ordinary	178.48	121.50
	199.78	127.50
Reserves and surplus	413.91	182.70
	613.69	310.20
Loans	121.45	
Current liabilities and provisions	164.61	138.05
Total	899.75	448.25
ASSETS		
Gross block	977.34	439.36
Less—Depreciation	597.28	339.93
Net block	380.06	99.43
Add—Capital work-in-progress	19.36	12.94
	399.42	112.37
Investments	16.49	10.60
Current assets, loans and advances	483.84	325.28
Total	899.75	448.25

The Rs. 100 paid ordinary shares of Buckingham and Carnatic are currently quoted at Rs. 266 *cum-div.* (final) to fetch a net return of 4.9 per cent on an *ex-div.* price. The ordinary shares of Bangalore Woollen, also of Rs. 100 each, are priced Rs. 250 *cum*-div (final). Reducing the price to an *ex-div.* one, the net yield works out to 5 per cent per annum.

PREMIER TYRES LTD.

Premier Tyres Ltd. (Managing Agents: Indo-Orient Agencies Private Limited) which rolled out the first tyre on 27th May 1962 and commenced commercial production in September, made sales worth Rs. 25.70 lakhs during the calendar year 1962 and carried stocks worth Rs. 36.06 lakhs, including raw materials of Rs. 18.13 lakhs. It incurred expenses of Rs. 81.32 lakhs, including Rs. 47.02 lakhs on purchase of raw materials and Rs. 8.92 lakhs by way of staff expenses. Out of the total expenses, Rs. 3.53 lakhs were transferred to expenditure during construction account which is shown in the balance-sheet. After allowing Rs. 40,000 for Managing Agents' remuneration, Rs. 19.18 lakhs for depreciation and Rs. 24.85 lakhs for development rebate, the year closed with a loss of Rs. 58.28 lakhs, which is carried to the balance-sheet. The paid-up capital at the end of the year is shown as Rs. 198.83 lakhs. Out of the calls in arrears aggregating Rs. 1.17 lakh, the Company has received Rs. 3,000 since the close of the year. The only reserve is the development rebate reserve created during the year by taking credit for Rs. 24.85 lakhs. The gross block, which has expanded during the year from Rs. 186.71 lakhs to Rs. 252.18 lakhs, is written down to Rs. 232.70 lakhs.

Bank loans amount to Rs. 118.70 lakhs, of which Rs. 91.70 lakhs are secured and the rest unsecured. Early in 1963, arrangements were made for securing for the Company a clean bank overdraft limit of Rs. 15 lakhs against the personal guarantee of the Managing Agents and for obtaining facilities for discounting the Company's documentary bills up to Rs. 10 lakhs. Since then, the Company has availed itself of the overdraft limit to the extent of Rs. 8.37 lakhs. Shown on the assets side of the balance-sheet are expenditure during construction amounting to Rs. 14.48 lakhs and miscellaneous expenditure of Rs. 5.52 lakhs. These will have to be written off in due course. Besides the debit balance of Rs. 58.28 lakhs, the Company carries arrears of preference dividend which up to 31st December 1962 amounted to Rs. 9.51 lakhs. The past calendar year was the third year of the Company. A return on equity shares may be expected in the fifth year.

NEW INDO-U.S. ELECTRICALS PROJECT

A new Indo-U.S. electricals project has been sponsored by the Investment Corporation of India Ltd. (a Tata group enterprise) and the General Electric Company of the U.S. The sponsors have formed a new company, called Elpro International Ltd., with an authorised capital of Rs. 2 crores to undertake the project. It will manufacture different types of X-ray equipment, alnico magnets, calrod heating elements, lightning arresters and other electrical products. The factory, which is being set up at Chinchwad in Poona, is expected to go into production in the last quarter of this year. Indian engineers for the Company have been trained by General Electric in its factories in the U.S.

At present, the Company has a paid-up capital of Rs. 35.000. It proposes to issue additional capital of Rs. 84.65 lakhs. Out of this, General Electric or one of its subsidiaries will subscribe Rs. 42.50 lakhs, Investment Corporation, its associates and directors Rs. 12.40 lakhs and the employees of the International General Electric Company (India) (Private) Ltd. of Bombay Rs. 8.50 lakhs, while the balance of Rs. 21.25 lakhs will be offered for public subscription in the last week of this month. On the Board of the Company are Mr. A. D. Shroff (*Chairman*), Mr. M. N. Dalal, Mr. J. A. Meher-Homji, Mr. H. P. Mukerjee, and Mr. J. W. Whiteside who brings to the Company more than 25 years of manufacturing experience in several factories of General Electric in the U.S.

G.K.W.'S RESULTS IMPRESSIVE

TAX BURDEN RISES SUBSTANTIALLY

IMPRESSIVE results have been reported by Guest, Keen, Williams Ltd., G.K.W. for short (Managing Director: Mr. W. Morrice, Calcutta) for the 52 weeks ended 29th December 1962. Turnover has continued its upward trend and touched a new peak of Rs. 13.06 crores, showing an improvement of Rs. 2.41 crores, as against the rise of just Rs. 1 crore noted in 1961. This spurt has followed a steady rise in production and demand. Since, however, the sales figure includes excise duty, the improvement is exaggerated to this extent, considering that increase in actual sales would mean a greater element of excise as well. Besides, the 1962 sales figure includes Rs. 16.37 lakhs, representing the additional excise duty on rolled and forged iron and steel products imposed since 24th April 1962. Even so, gross profit shows an increase of more than Rs. 29 lakhs to Rs. 184.83 lakhs in 1962, whereas it had risen by only Rs. 22.53 lakhs to Rs. 155.69 lakhs in 1961. As a ratio to sales, the profit is a shade lower at 14 per cent, as against 14.6 per cent a year before.

Profit, after depreciation of Rs. 51.19 lakhs (Rs. 45.21 lakhs a year before), is higher by Rs. 23.16 lakhs at Rs. 133.64 lakhs. But after allowing Rs. 55.60 lakhs (as against Rs. 30.50 lakhs in the previous year) as normal taxation, the profit stands reduced from Rs. 79.96 lakhs to Rs. 78.04 lakhs. But this is not all the tax liability of the Company. The Directors have transferred Rs. 10.56 lakhs to the tax equalisation reserve, as against Rs. 10.69 lakhs in the previous year, and set apart Rs. 1.20 lakh for additional taxation reserve to meet the liability arising from Super Profits Tax. In addition to this, a sum of Rs. 2.60 lakhs, being tax provision for previous periods, is set off against Rs. 2.82 lakhs, being income applicable to earlier periods, leaving a credit of some Rs. 22,000 by way of adjustments relating to previous periods. Adding the actual provision and the amount set apart for reserves, taxation has claimed Rs. 67.36 lakhs of the profit for the period under review, as against Rs. 41.19 lakhs a year before.

Other appropriations made out of the year's profit include Rs. 6.08 lakhs to additional depreciation reserve (Rs. 6.22 lakhs in 1961), Rs. 5.55 lakhs to development rebate reserve (Rs. 12.21 lakhs) and Rs. 5 lakhs to debenture sinking fund (same as in the previous year). The dividend on the 10-rupee ordinary shares is maintained at 14 per cent per annum, including the final distribution of 8 per cent, subject to deduction of tax.

The following comparative table mirrors the Company's progress in the past four years:

(In lakhs of rupees)

	For the 52 weeks ended			
	29-12-62	30-12-61	31-12-60	2-1-60

Low	34.87	36.00	36.75	36.00

* Subject to deduction of tax.

It will be seen from the table above, that expenses have gone up further during the year, due largely to the larger production. This is evident from the substantial improvement in sales and the larger stock of Rs. 130.09 lakhs at close, as compared with Rs. 93.31 lakhs a year before. Besides, the fact that the profit-margin at 14 per cent is nearly the same as in the previous year is sufficient proof of costs and expenses having been maintained well under control. We are told that supplies of billets for re-rolling (the insufficiency of which restricted operations in the engineering division in the previous year) improved steadily during the second half of the year, but production was affected adversely by intermittent deliveries from the main producers of good quality billets and matching materials.

In December 1962, the Company subscribed at par to 8,864 shares of Rs. 100 each offered as a rights issue by its subsidiary, Sankey Electrical Stampings Ltd. Consequently, the Company's holdings in this subsidiary increased from 112,864 shares to 121,728 shares, out of a total of 137,334 shares shown by that Company as issued and subscribed. After the close of the year, Tatas, having the balance of the shares, agreed to pass on their holdings to G.K.W. in order to make that Company a fully-owned subsidiary of Guest, Keen, Williams, Ltd. During the year, the subsidiary's sales improved from Rs. 482.35 lakhs to Rs. 588.12 lakhs and profit before tax from Rs. 52.60 lakhs to Rs. 69.32 lakhs. The holding Company received from the subsidiary Rs. 12.17 lakhs by way of dividend (at the rate of 10 per cent), as against Rs. 19.75 lakhs (17.5 per cent) in the previous year. An interim distribution made on 1st June 1962 by the Liquidator of Nettlefolds of India Ltd. (in voluntary liquidation), amounting to Rs. 4,78,692, has been deducted from the original investment of Rs. 5 lakhs in that subsidiary.

It may be noted here that recently a new company, called Sankey Wheels Ltd., has been incorporated for manufacturing commercial and passenger car wheels. G.K.W. is already producing passenger car wheels at its Calcutta works in technical collaboration with Joseph Sankey and Sons Ltd., a subsidiary of Guest, Keen and Nettlefolds Ltd. of the U.K. Joseph Sankey has also agreed to collaborate with B.K. Sahney and Sons which has been licensed to manufacture commercial and passenger car wheels. It has, therefore, been decided to merge the G.K.W.'s and Sahney's schemes under the new company mentioned above. G.K.W. will transfer its plant at an independent valuation of about Rs. 30 lakhs and obtain in return 300,000 shares of Rs. 10 each at par from the new Company. Besides, it will buy 82,000 shares for cash at par. The new Company will have an issued capital of Rs. 1.72 crore, comprising, besides G.K.W.'s holdings, 385,000 shares to be subscribed by Joseph Sankey, 216,000 shares by Sahney and Sons, 100,000 shares by the Commonwealth Development Finance Company, 17,000 shares by its promoters, directors and their friends, and 600,000 shares by the public.

G.K.W.'s "own funds" at the end of the period under review amount to Rs. 10.98 crores, of which Rs. 4 crores are in share capital and the balance constitutes reserves. As against this, the gross block stands at Rs. 9.78 crores (Rs. 8.41 crores a year before) and is written down by nearly a third of the cost to Rs. 6.35 crores. Including capital work-in-progress, the net block is shown at Rs. 6.63 crores. Secured loans of the Company have increased from Rs. 2.27 crores to Rs. 3.95 crores, comprising debentures of Rs. 1.50 crore and bank loans of Rs. 2.45 crores. Current liabilities and provisions aggregate Rs. 2.96 crores and, together with bank loans, bring the total indebtedness to outsiders to Rs. 5.41 crores. This liability is, however, more than covered by current assets, loans and advances aggregating Rs. 9.35 crores and investments shown at cost at Rs. 1.91 crore.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 33.25 *cum-div.* (final) and offer, on an *ex-div.* basis, a net yield of nearly 3 per cent per annum.

(*Concluded from next column*)

The Company's paid-up capital now stands at Rs. 109.97 lakhs, comprising Rs. 89.97 lakhs in equity shares and Rs. 20 lakhs in preference shares. It is backed by reserves and surplus amounting to Rs. 79.25 lakhs. Loan liability during the year has increased to Rs. 89.27 lakhs from Rs. 19.34 lakhs in the previous year, but current liabilities and provisions stand reduced to Rs. 79.63 lakhs from Rs. 91.77 lakhs a year before. The total indebtedness to others thus works out to Rs. 168.90 lakhs, as against Rs. 111.11 lakhs a year before, which is comfortably covered by current assets, loans and advances aggregating Rs. 215.92 lakhs. The gross block, excluding capital jobs in progress of Rs. 28.52 lakhs, has expanded further during the year from Rs. 134.47 lakhs to Rs. 164.62 lakhs and is written down to Rs. 113.65 lakhs.

Currently, the Rs. 100 fully paid ordinary shares of the Company are quoted at Rs. 196.25 *cum-div.* On the *ex-div.* basis, they offer a net yield of 3.3 per cent per annum.

LARGE IMPORTS AFFECT AMAR DYE-CHEM

EXPANSION PLANS IN HAND

THE performance of Amar Dye-Chem Ltd. [Managing Agents: Messrs. Amritlal and Co. (Private) Ltd., Bombay] during the year ended 31st December 1962 is much poorer than in the previous year, thanks to the change in the Government's policy in regard to the assessment of customs duty on naphthols and fast bases by which tariff values were done away with and import duty was assessed on c.i.f. basis from September 1961. Due to this change, more than 250 tons of naphthols and fast bases, consisting of items manufactured by the Company, were imported in 1962, in addition to the 100 tons imported during the year 1961. There was, therefore, more than normal supply, with the consequent downward pressure on prices. The Company had to revise its prices a couple of times and offer special discounts to maintain sales. Even these measures proved effective only to a certain extent, as sales realisation still showed a setback of almost Rs. 28 lakhs to Rs. 142.90 lakhs, as against the decline of about Rs. 6 lakhs to Rs. 170.40 lakhs suffered in the previous year. The realisation was lower not only because the sales were made at a discount and reduced prices generally but also because the total quantity sold declined from 751 tons to 732 tons, comprising 713 tons for domestic consumption and 19 tons for export.

Gross profit, which had receded in the previous year by Rs. 3.64 lakhs to Rs. 64.08 lakhs, fell further by Rs. 27.49 lakhs to Rs. 36.59 lakhs during the year under review. As a ratio to sales, the profit was 12 points down to 25.6 per cent. But the decline in net profit was relatively small, being Rs. 16.38 lakhs to Rs. 12.30 lakhs, because, while the provision for depreciation was raised from Rs. 8.66 lakhs to Rs. 12.65 lakhs, that for taxation was reduced substantially from Rs. 22.40 lakhs to Rs. 9.63 lakhs and Managing Agents' commission from Rs. 4.34 lakhs to Rs. 2.01 lakhs. The dividend on the 100-rupee ordinary shares is maintained at 9 per cent per annum, subject to tax. It absorbs, however, a larger amount of Rs. 8.10 lakhs, as compared with Rs. 7.35 lakhs a year before, because the 10,000 right shares issued in the proportion of one-for-eight at par on 21st August 1961 are eligible for a full year's distribution for 1962, as against for only four months in the year 1961. But the maintenance of the ordinary dividend has left only Rs. 3.08 lakhs as the plough-back to reserves, as against the fat sum of Rs. 20.42 lakhs a year before.

The Company's progress in the past four years is presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

The Company's expansion plans are being implemented and the Directors hope that, with the coming into production of the T.P.M. plant and reactive dyes, sales as well as profit during the current year will show improvement. The Company has already received Rs. 30 lakhs out of a rupee loan of Rs. 45 lakhs negotiated during the year with the I.C.I.C.I. Efforts are being made to expand the export business, especially in the Middle East and Far East. The Directors hope to recover the loss on exports from the various tax concessions and incentives granted by the Government. In order to derive further manufacturing advantages, the management has installed, as reported by the Directors in the previous year, separate plants for fast scarlet G base and fast red TR base at an approximate cost of Rs. 7 lakhs.

* This includes Rs. 3,20,000 for super profits tax.
† Represents credit items like refund of income-tax, etc.

Extracts from the Directors' report: *Sales*: The sales during the year have increased to Rs. 3.45 crores from Rs. 1.93 crore in the year 1961. The sales of Company's own products and those of its subsidiaries have also gone up to Rs. 1.29 crore as against Rs. 80 lakhs in the last year, though the progress is not to the expected level because of the difficulties faced in procurement of the raw material and transport as a consequence of Chinese aggression. However, it is estimated that the sales of the Company's own products will rise to about Rs. 3 crores in the current year, under normal conditions. The sales of imported goods will continue to be on the decline and booking of direct business from abroad will decrease from year to year due to foreign exchange shortage. This is the reason why the commission income has slightly gone down this year as compared to the last year.

Manufacturing.—The Company's new industrial units at Faridabad started production of *X-ray Equipment*, *Railway Shock Absorbers* and *Heating Elements* about the end of the year. The products have already been sold in reasonable quantities to Government Departments and private enterprises. Production and despatches are showing steady and satisfactory progress. Further, the Company has been granted licence to manufacture *Automotive Shock Absorbers* which can be produced on the existing machines of *Railway Shock Absorbers* without much additional capital investment.

The assembly and partial manufacture of *Rajdoot* motor cycles was commenced in December, 1962 in the Company's existing factory at Faridabad. The separate factory to house this project is under construction on an area of about 25 acres at Faridabad and is expected to be completed before the end of the current year. Lot of machinery has already reached the factory site and more is expected by October this year. Production of motor cycles during the current year is estimated at 4,000 machines. Manufacture of scooters has, however, been postponed under Government advice till the end of 1964.

The manufacture of pistons in the Company's Mahle factory at Patiala has increased from 126,014 to 213,806 units as compared to the last year. The Company is planning to expand the production of pistons which has been approved by the Government and necessary steps are being taken to implement the scheme and import capital equipment.

Finance.—The Company has received sanction for a loan of Rs. 35 lakhs from the Industrial Finance Corporation of India during the year to finance its Electro-Medical, Railway Shock Absorbers and Heating Elements units at Faridabad and also applied for a further loan of Rs. 65 lakhs for its Motor-cycle Scooter factory at Faridabad and for Rs. 7 lakhs (in German DMs.) for import of plant and machinery to manufacture piston pins in the piston factory at Bahadurgarh (near Patiala).

The facility of overdraft given by the National & Grindlays Bank Limited against the security of Company's assets has been increased from Rs. 30 lakhs to Rs. 60 lakhs.

The Directors are also pleased to report that Goetze (India) Limited, a subsidiary of the Company, has been able to maintain the dividend of 10 per cent on equity shares. The other subsidiary, namely, Sharpedge Limited has declared a dividend of 7 per cent for the first time, the whole of which is estimated to be exempt from income-tax under Section 85 of the Income Tax Act.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,17,84,779	Gross block	1,78,84,005
Reserves and surplus	55,59,326	—Depreciation	22,52,420

,, ,, depreciation	20	17
,, ,, provision for taxation	83	45
,, ,, ,, super profits tax	9	Nil
Net profit	74	51
Balance brought forward	33	37
Adjustments*	5	1
Appropriations:		
Total available balance	1,12	89
Transfer to development rebate reserve	†	1
,, ,, general reserve	25	Nil
To taxation (for prior years)	Nil	5
Proposed dividends (taxable) ordinary	50	50
	(10%)	(10%)
Dividend per ordinary share	[Re. 1.00]	[Re. 1.00]
Carry forward	37	33
Market value of ordinary shares (in rupees):	1962	1961
High	11.85	14.00
Low	10.12	8.51

* This represents excess provisions for taxation, etc., no longer required.
† Only a small sum of Rs. 72.

Extracts from the Directors' report: The Company produced a crop of 343,350 lbs. (155,739 kgs.) of tea during the year which is 38,000 lbs. ahead of last year and only slightly less than the record crop of 3,51,427 lbs. obtained in 1960. Combined with the larger crop there has also been an increase in average sale price and the profit before taxation for the year has increased to Rs. 1,66,239 from Rs. 96,485 for 1961.

Acreage: A start has been made on the new clonal tea clearings and 3 acres were completed during the year. The present area under tea is 269.94 acres or 109.24 hectares.

The estate cost of production per lb. of made tea was Rs. 1.41 (Rs. 3.11 per kg.) compared with Rs. 1.55 (Rs. 3.42 per kg.) estimated on a crop of 2,79,000 lbs. (1,26,552 kgs.). The cost of production includes the payment of bonus to labour of Rs. 16,560 which was not included in the estimate. The lower cost of production is due to the higher crop.

The average sale price realised for the season improved to Rs. 2.42 per lb. (Rs. 5.34 per kg.) compared with Rs. 2.31 per lb. (Rs. 5.09 per kg.) realised last year.

Estimates for the season 1963: These are based on a crop of 3,00,000 lbs. (136,078 kgs.) to be harvested at the cost of 1.57 nP per lb. (3.46 nP per kg.)

The Board have provided for a total capital expenditure for 1963 of Rs. 74,200.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.

Dividend per ordinary share	[Re. 0.75]	[Re. 1.00]
Carry forward	7	11

* Includes Rs. 44,000 for proposed super profits tax.

Extracts from the Directors' report: *Trading conditions*.— During the first half of the year the Government of India by Notification reduced the maximum selling prices of *Flour* and *Atta* which accounts for 80 per cent of the production. The extraction percentage of wheat products continued to be controlled by the Government of West Bengal, and while the demand for *Atta* was good the demand for *Flour* was poor except for about two months of the year.

The mill continued to receive wheat from the Government of India and on the whole the quality of wheat received was satisfactory.

Production.—Production during the year was 2,52,082 quintals (6,75,376 maunds) as compared with 2,13,412 quintals (5,71,782 maunds) for the year ended 30th November, 1961.

Accounts in brief as at 30th November 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	5,00,000	Gross block	9,26,454

	(20%)	(35%)
Dividend per ordinary share	[Rs. 2.00]	[Rs. 3.50]
Carry forward	47	48
Market value of ordinary shares (in rupees):	1962	1961
High	27.25	41.37
Low	26.75	19.50

* This includes Rs. 18,500 for super profits tax.
† Only a small sum of Rs. 600.

Extracts from the Directors' report: Weather conditions were not favourable, rainfall amounting to only 199cms. as compared with an average of 279 cms. for the previous 10 years. Nevertheless, the crop of 2,868 quintals was higher than in previous years with the exception of 1961, during which a record crop of 3,136 quintals was obtained. The market was stronger and the crop sold at an average price of Rs. 6.60 per kg., as compared with an average of Rs. 6.01 per kg. for the 1961 crop, but this improvement is partly consequent on a greater quantity sold in London.

A tea extension of 4.05 hectares has been put out during cold weather 1962-63. Capital expenditure incurred during 1962 amounted to Rs. 4,56,849

Estimates for the current season have been framed for a crop of 2,900 quintals.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	7,65,000	Gross block	28,03,148
Reserves and surplus	11,03,585	—Depreciation	9,41,235

Low	89.00	126.25

Extracts from the Directors' report: There is a fall of about rupees eight lakhs in the profits obtained this year as compared to last year. This sharp fall is mainly due to the steep rise in the cost of cotton and the short realisation in the sale of *Staple Fibre Yarn*. The Industry had also to bear additional burden such as the levy of cess on Indian cotton consumption, increase of tariff on Electricity; the implementation of Wage Board Award and working of generators due to power cut and the Emergency.

The construction of the new unit near Karamadai is progressing according to schedule. The directors expect to complete the erection of machinery and commence production by the end of 1963.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	31,99,475	Gross block	1,15,52,126
Reserves and surplus	88,28,640	—Depreciation	59,70,767

		Current assets	24,05,164
		Investments	7,81,288
		Cash	20,321
	Rs. 95,88,132		Rs. 95,88,132

* Paid-up capital consists of 4,000 equity shares of Rs. 50 each with a preferential right to 8.45 per cent. (without deduction of tax payable the Company on its profits) cumulative dividend and 50,000 equity shares of Rs. 50 each. Calls in arrears amount to Rs. 525.

Note:—Of the above shares 20,000 equity shares are allotted as fully paid by way of bonus shares by capitalisation of reserves.

NEWS IN BRIEF

PROBLEMS facing India's mineral industry will be studied afresh at a two-day session of the eleventh meeting of the Mineral Advisory Board scheduled to be held at Bangalore on the 30th and 31st inst.

The Barauni Oil Refinery, scheduled to be commissioned in October next, will send refined oil to different places in North Bihar in railway tank-wagons and to Calcutta and Kanpur through pipelines.

A Rs. 15-lakh factory to produce annually 24,000 water meters of 15 mm, 25 mm. and 35 mm. sizes was commissioned on Sunday this week at Palluruthy near Ernakulam in Kerala by Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries.

A project proposal for the setting up of a plant to manufacture asphaltic roofing sheet has been prepared by the National Buildings Organisation of the Ministry of Works, Housing and Rehabilitation. These sheets will replace asbestos sheets which are at present being imported.

The fourth Plan Working Group for power is formulating proposals for additional generating capacity region-wise in relation to the load demands assessed by the Power Survey Committee. Tentative estimates put the total generating capacity by the end of the fourth Plan at about 25 million kw.

A special organisation to provide facilities of poultry insurance to farmers against natural calamities is being formed in the Punjab, according to Dr. Harbhajan Singh, Joint Director of Industries (Poultry) Punjab. The organisation will compensate its members for any loss arising from disease or fire.

A Bill seeking to amend the Drugs and Cosmetics Act has been introduced in the Rajya Sabha by the Union Health Minister. It provides for the confiscation of property and apparatus used in the manufacture of objectionable drugs and prohibits the import, manufacture and sale of drugs contaminated with foreign matter or which are manufactured or packed or held in insanitary conditions.

The Government of India has introduced a scheme of incentives to speed up the utilisation of irrigation potential created by major and medium projects. A team of control officers is currently touring the States to study the possibility of replacing certain schemes and concentrating activities on projects that are in advanced stage of construction.

The Union Food and Agriculture Ministry and the Planning Commission are jointly chalking out an elaborate scheme for the purchase of foodgrains directly from farmers in the interior. The scheme envisages appointment of licensees in villages and setting up of several depots by the State Governments to effect purchases. The procurement at present is mainly confined to purchases from millers.

The Central Government has made arrangements for ensuring supplies of important consumer articles like foodgrains, textiles, kerosene oil and medicines, to the network of consumers' stores being organised all over the country. Foodgrains will be made available to consumers' stores from the Central godowns. The textile mills have agreed to issue 10 per cent of their production to consumers' stores and fair-price shops at ex-mill rates.

The Sales Tax Act in Gujarat has been amended so as to reduce total incidence of tax from 6¼ per cent to 2¼ per cent on sales/purchases of articles of gold of fineness between 40 per cent and 75 per cent. Thus, with effect from 17th April 1963, articles of 14-carat and less purity would bear sales tax of 2¼ per cent. The Government of Madhya Pradesh has reduced the rate of sales tax on gold ornaments of 14-carat and less purity from 7 per cent to 1 per cent with effect from 1st April. In other States, generally there was no difference in tax rates between 14-carat and higher purity ornaments.

Some 318 pilot projects, each consisting of 10 co-operative farming societies, are to be organised during the remaining period of the third Plan. These projects are to demonstrate the benefits of co-operative farming and serve as catalytic agents for further expansion. These projects are to work under varied conditions and suitable techniques of organisation and operation are to be evolved. Up to the end of February, 688 societies were organised. The total membership of these societies was 12,251 and the area of land held was 77,427 acres. In addition to the pilot societies, 717 co-operative farming societies were organised outside the pilot project areas up to the end of February 1963. These societies have a total membership of 15,437 and hold an area of 95,591 areas. A comparative study of the progress made in the pilot projects during 1961-62 and 1962-63 indicates that while progress in Maharashtra, Punjab, Rajasthan, Madhya Pradesh and Uttar Pradesh is encouraging, it has not been adequate in the southern and eastern States.

A report on the future development of technical education in Goa will be discussed at the 26th meeting of the Western Regional Committee of the All India Council for Technical Education to be held at Bombay on the 17th inst. The report has been submitted by a committee appointed by the Western Regional Committee to visit the technical schools in Goa and offer recommendations. The other important topics that will come up for discussion at the meeting include a proposal to establish a polytechnic at Seoni, a suggestion for starting post-graduate courses in technology of silk and man-made textiles and the question of financial assistance for providing students' amenities in engineering colleges and polytechnics. The Committee will also discuss proposals for introduction of five-year integrated degree courses in civil, mechanical and electrical engineering in Baroda University and development of diploma courses in paint technology conducted by the D.E. Society's Technical Institute, Poona. Similarly, a proposal from the Gujarat Government to establish diploma courses in chemical engineering will come up for discussion before the Committee.

From Abroad

Five African States (Gabon, Cameroon, Congo, Upper Volta and Central African Republic) and Kuwait have joined the G.A.T.T.

Japan spent £243.5 million on advertising during the year 1962, as compared with £211 million in 1961, according to Dentsu Advertising, Japan's biggest agency.

The Board of French Railways has decided to ask the Government for a rise of 17.65 per cent in passenger fares and 5 per cent in freight rates. The Government is expected to approve the former but to limit the latter to 2.5 per cent.

The use of pulp made from old paper and board in the manufacture of new food packing materials has been approved by the U.S. Pure Food and Drug Administration. The new regulation is in line with accepted practice in the U.K.

The U.S. Senate Banking Committee has approved the Administration-backed Silver Bill which seeks to revise the present laws and now it will go to the floor of the Senate for consideration. The measure, which effectively ends the link between silver and paper currency, has already been passed by the House of Representatives.

Britain, the world's largest exporter of agricultural tractors, shipped more than 150,000 tractors overseas in 1962. They went to over 100 countries, the Commonwealth receiving 20 per cent of total exports. The industry's total production in 1962 was a record, with value exceeding £800 million. Exports were worth £144.5 million—an 8 per cent increase in 1961.

The Imperial Chemical Industries (U.K.) has decided to merge its Alkali and General Chemical Divisions in order to solve the problem of the present overlap of interest, between the Groups. The timing of the move and the ultimate form that the new unit will take will depend on the results of an investigation into the Divisions' activities which will start later this year.

So far West Germany has assisted in launching 10,000 development projects in Asia, Africa and Latin America. The West German Government wants to reach the highest possible effect of its development aid. Therefore a project-groups system is being worked out. Thus the development aid measures are to be adjusted to economic and infrastructure requirements.

The Government of Soviet Russia has decided to place with Japanese shipyards an order for 20 fishing factory ships costing a total of $137 million. The Soviet Union will make a downpayment of 30 per cent and the balance in twelve half-yearly instalments, the final payment being equivalent to two instalments. The twenty vessels are made up of five tuna factory ships worth $20 million, five cannery ships worth $40 million, five factory ships for the manufacture of fish meal worth $37 million and five refrigeration ships worth $40 million.

A new Italian Company-Raffineria Sarda Petroli (R.A.S.A.P.)—proposes to build in Sardinia a £22.8 million petroleum refinery with an annual capacity of five million tons. One-third of the output will go to the Government of Kuwait in part-payment for the supply of five million tons of crude. The refinery is to be built in the immediate vicinity of the new power station at Port Oscuso which will be linked by pipeline. It is envisaged to supply 30 per cent of the total refinery's output to the thermo-electric plant now being built at Porto Vesme (Sardinia).

Imports of tea in packages weighing more than three kilograms and of tropical timber into the European Economic Community and into Britain are to be duty-free. Dr. Ludger Westrick, Deputy West German Minister of Economics, has told the Bundestag (Parliament) that this was the aim of the negotiations between the E.E.C. members and Britain in Geneva. The West German Government expects the African states and Madagascar, associated with the E.E.C., to approve the settlement.

The Government of Morocco is to pay Dirhams 60 million (about £4.3 million) in Compensation to the French private power and railway companies for the nationalisation of their installations. Under a convention which has just been signed, the French Companies will be allowed to transfer Dirhams 25 million out of the country by stages over a five-year period, but will have to invest the remaining Dirhams 35 million in Morocco, in private firms whose development fits in with the State Plan.

The Norwegian Storting (Parliament) accepted unanimously the Government's bill which provides for an extra 150 million kroner (£7½ million) to be spent on subsidising consumer goods in order to keep the price index stable. The Government estimates that the proposed subsidies will cost £5¼ million during 1963, which leaves £2 million at the Government's disposal in case of unexpected developments. The immediate effect of the Storting's decision is that the price of milk goes down by slightly more than ½d. per pint, cheese by 9d. per pound, margarine by 2½d. per pound and flour by 1d. per pound. This last reduction will also affect the price of bread, cakes and biscuits. The overall effect of the subsidies will be to reduce the consumer price index by 1.2-1.3 points.

Further progress in the co-ordination of monetary policy in the Common Market has been urged in the latest report of the Community's Monetary Committee. In particular, the report calls for further liberation of capital movements in the Six in addition to the liberalising measures already agreed and in force in the spheres of direct and portfolio investment. In other fields, such as access to foreign capital markets, and the issue of loans on foreign markets, there still exist administrative restrictions in three of the member States (France, Belgium and Italy), which are sometimes rigorous. The liberation of trade and of capital movements, the realisation of a common agricultural policy and, more generally, the progress towards economic integration would make monetary co-operation even more desirable than ever. The report calls for the co-ordination of budgetary and Central Bank policies in each of the member States, and even at the level of the Community as a whole.

The United States spent a total of $5,084 million on foreign economic assistance programme in 1962, according to the U.S. Agency for International Development (A.I.D). Food for peace commodities accounted for $1,563 million (31 per cent), of the year's aid programme, an amount second only to that spent by A.I.D. itself. This was the third successive year that agricultural products accounted for 30 per cent or more of aid expenditures. Under the food for peace programme local currencies obtained by food sales are turned over to recipient countries as economic development grants, grants for common defence, loans to private industry, development loans and dollar credit sales. Out of the U.S. foreign economic aid in 1962 fifty-six per cent was in the form of loans, as compared with 50 per cent in 1961 and 42 per cent in 1960. The total U.S. economic aid to foreign assistance act countries since 1st July 1945 amount to $66,455 million, including another $30,678 million in military aid, the total U.S. foreign assistance for all purposes through fiscal year 1962 comes to $97,133 million.

A second American Telstar communications satellite has been put into a near perfect orbit on Tuesday last. Several transatlantic telecast are planned *via* the new satellite. It is the successor to America's Telstar I which made history last summer by transmitting the first telecast across the Atlantic. Before it went silent late in February, Telstar I handled more than 500 communications tests—T.V., teletype, telephone, data—between the U.S. and Europe and the U.S. and Latin America. The orbit will permit communications periods up to 30 minutes, twice as long as its predecessor. Telstar II, designed to extend the useful life of communications satellites, is a forerunner of permanent space stations linking the world's continents by radio and television. It has been modified slightly to make it more rugged and resistant to radiation. Transistors in one of its electronic systems have been pumped free of gas to prevent ionisation by particles in the Van Allen belts. Failure of Telstar I in February was traced to ionised transistors in a decoder system.

PERSONAL

VISCOUNT Bearsted, Chairman of Messrs. M. Samuel and Co., merchant bankers, has joined the Board of Lloyds Bank.

Mr. M. K. Vellodi, I.C.S. (Retd.), has been appointed Chairman of the Metal Box Company of India *vice* Mr. K. C. Mahindra who has retired.

Lt. General Sarda Nand Singh, General Manager of Gauhati Refinery, has been appointed General Manager of Koyali Refinery.

Mr. Walter Scheel, West German Minister for Economic Co-ordination, has accepted the Government of India's invitation to visit the Rourkela plant next autumn.

Mr. Himatlal V. Gandhi has been elected President of the Western India Automobile Association for the current year.

Mr. Rasiklal J. Chinai, a Director of the National Rayon Corporation, has been elected Chairman of the Association of Man-made Fibre Industry, for the year 1963-64.

Mr. T. Swaminathan, I.C.S., Secretary to the Ministry of Steel and Heavy Industries, has been appointed Special Adviser on trade and economic development to the Executive Secretary of the G.A.T.T. He is expected to take up his new assignment sometime during the ensuing summer.

Notices

THE SASSOON SPINNING AND WEAVING COMPANY, LIMITED

Registered Office:
Mafatlal House, Backbay Reclamation
BOMBAY-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE NINETIETH Annual General Meeting of the Shareholders of THE SASSOON SPINNING AND WEAVING COMPANY LTD. will be held at the Registered Office of the Company, Mafatlal House, Backbay Reclamation, Bombay 1, on Monday, 10th June 1963, at 5.00 p.m. (S.T.), to transact the ordinary business as specified in items 1 to 6 and to consider and if thought fit to pass the Special Resolutions contained in items Nos. 7 to 17 of the Notice dated 29th April 1963 already posted to individual members at the registered address with the Company along with the Explanatory Statement in respect of the Special Resolutions in items Nos. 7 to 17 of the Notice as required by Section 173 of the Companies Act, 1956.

By Order of the Board of Directors,

For M. G. INVESTMENT CORPORATION LTD.,

K. K. MAHADEVIA,
Director.
Managing Agents.

BOMBAY,
Dated 29th April 1963.

N.B.—(1) A MEMBER ENTITLED TO ATTEND AND TO VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND TO VOTE INSTEAD OF HIMSELF, AND A PROXY NEED NOT BE A MEMBER.

(2) The Register of Members and the Transfer Books of the Company remained closed from Thursday, 4th April 1963 to Friday, 26th April 1963, both days inclusive.

(3) Dividend as recommended by the Directors, when declared at the Annual General Meeting will be paid from Monday, the 17th June 1963 to Friday, the 30th August 1963, at the United Commercial Bank Ltd., Reclamation Branch, Bombay 1, and thereafter at the Registered Office of the Company during office hours, excepting Saturdays, to those shareholders whose names are on the Register of Members of the Company on 26th April 1963. Shareholders are requested to intimate the Company immediately any change in their registered address.

(4) The Article and the letters confirming the arrangements referred to in Special Resolutions mentioned in Items Nos. 7 to 17 of the Notice, are open for inspection of the Members at the Registered Office of the Company between 11.00 a.m. and 1.00 p.m. (S.T.) on any working day.

THE MAFATLAL FINE SPINNING AND MANUFACTURING COMPANY LIMITED

Registered Office:
Mafatlal House Backbay Reclamation
BOMBAY-1

NOTICE

To

THE SHAREHOLDERS,
THE MAFATLAL FINE SPG. & MFG. CO. LTD.

NOTICE IS HEREBY GIVEN THAT THE Thirty-second Annual General Meeting of the Shareholders of The Mafatlal Fine Spinning and Manufacturing Company Ltd. will be held at the Registered Office of the Company at Mafatlal House, Backbay Reclamation, Bombay 1, on Monday, the 10th day of June 1963, at 4.00 p.m. (S.T.), to transact the business mentioned in Items 1 to 6 as ordinary business and also to consider and if thought fit, to pass the Special Resolutions mentioned in Item 7 of the Notice accompanying the Annual Report and Accounts for the year ended 31st December 1962 being posted to the Members individually at their Registered addresses.

The Explanatory Statement as required by Section 173 of the Companies Act 1956 in respect of the Special Resolutions, is annexed to the Notice.

N.B.—(*a*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY OR PROXIES TO ATTEND AND VOTE INSTEAD OF HIMSELF, AND A PROXY NEED NOT BE A MEMBER.

(*b*) The Article and the letters confirming the arrangements referred to in Special Resolutions mentioned in Item 7 of the Notice, are open for inspection of the Members at the Registered Office of the Company between 11.00 a.m. and 1.00 p.m. (S.T.) on any working day.

(*c*) The Register of Members and the Transfer Books of the Company remained closed from Monday, the 18th March, 1963 to Friday, the 5th April 1963—both days inclusive.

(*d*) The Dividends as recommended by the Directors when declared by the shareholders, will be paid at the Bank of Baroda Ltd., Reclamation Branch, Bombay 1, from Monday, the 17th June 1963 to Friday, the 30th August 1963 during business hours and thereafter at the Registered Office of the Company during Office hours excepting Saturdays and Holidays, to those shareholders whose names stood on the Company's Register on the 5th April 1963. Shareholders are requested to intimate to the Company change in their Registered address.

By Order of the Board of Directors,

NAVINCHANDRA PURSHOTAMDAS & CO., LTD.,

H. B. MAFATLAL,
Director,
Managing Agents.

BOMBAY,
Dated 29th April 1963.

THE STANDARD MILLS COMPANY LIMITED

Registered Office:
Mafatlal House, Backbay Reclamation
BOMBAY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixty-eighth Annual General Meeting of the Standard Mills Company, Limited, will be held at the Tata Auditorium, Bombay House, Bruce Street, Fort, Bombay-1, on Wednesday, the 12th June 1963, at 4-00 p.m. (S.T.), to transact the business as specified in the Notice dated 29th April 1963 along with the Explanatory Statement required under Section 173 of the Companies Act, 1956 posted to the Members of the Company individually at their registered addresses with the Company.

A Member entitled to attend and vote is entitled to appoint a proxy or proxies to attend and vote instead of himself and a proxy need not be a member.

The Dividends, as recommended by the Directors, when sanctioned by the shareholders, will be made payable from Monday, the 17th June 1963 to Friday, the 30th August 1963 (both days inclusive), at the Bank of Baroda Ltd., Reclamation Branch, Bombay, during banking hours and thereafter at the Registered Office of the Company during office hours on all week days except Saturdays to those shareholders whose names stand on the Register of Members on Friday, the 5th April 1963.

By Order of the Board of Directors,

For THE STANDARD MILLS CO., LIMITED,

MAFATLAL GAGALBHAI & SONS,
Managing Agents.

BOMBAY, *29th April*, 1963.

BRITISH PAINTS (INDIA) LIMITED

Registered Office:
32, Chowringhee Road
CALCUTTA-16

NOTICE IS HEREBY GIVEN THAT THE Thirty-ninth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company at 32, Chowringhee Road, Calcutta-16, on Wednesday, the 26th June, 1963, at 11 a.m., to transact the following business:—

1. To receive the Report of the Directors and adopt the Audited Accounts for the year ended 31st December, 1962.
2. To declare a Dividend.
3. To elect a Director.
4. To consider, and if thought fit, to pass the following Resolution as an Ordinary Resolution with or without modification:—

   "That due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office pursuant to Section 257 of the Companies Act, 1956 Mr. Robert George Edwards be and is hereby appointed as a Director of the Company."

5. To appoint Auditors and to fix their remuneration.

TO TRANSACT AS SPECIAL BUSINESS

6. To consider, and if thought fit, to pass the following Resolution, with or without modification, as a special Resolution:—

   "That with effect from the First day of September, 1962, Mr. R. A. Godwin, the Managing Director of the Company, will be entitled to receive from the Company remuneration for his services in accordance with the terms set out in an Agreement dated the 26th day of April, 1963, made between the Company of the one part and Mr. R. A. Godwin of the other part."

7. To transact any other ordinary business that may be brought before the meeting.

By Order of the Board,

S. R. ROY,
Secretary.

Dated at 32, CHOWRINGHEE ROAD,
CALCUTTA-16,
the 14th day of May, 1963.

N.B.—1. The Share Transfer Books of the Company will be closed from the 12th June, 1963 to the 26th June, 1963, both days inclusive.

2. A member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself, and the Proxy need not be a Member.

3. Subject to the confirmation of the Members in the Annual General Meeting, the related Dividend Warrants in respect of the Shares registered in the Books of the Company on the date of this Meeting will be ready for despatch on the 2nd day of July, 1963, to the Holders thereof.

The explanatory statement as required by Section 173(2) of the Companies Act, 1956 in regard to the Special Business cited above has been forwarded to Members together with a copy of this notice.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

FRACTIONAL CERTIFICATES

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of the Company, at its meeting held on the 8th May, 1963, has extended the last date for submission of the Fractional Certificates for another three months, and the holders thereof are hereby requested to present, positively on or before the 7th August, 1963, the Fractional Certificate together with another like certificate for conversion into one fully paid-up 'A' Ordinary (Equity) Bonus share of Rs. 10 in the capital of the Company pursuant to the Special Resolution passed on the 20th December, 1962.

Such application must be made in writing and signed by the person making the same.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED.
Managing Agents.

MONTHLY ECONOMIC REVIEW OF U. K.

BUDGETARY BOOST TO DEMAND

EXPANSION OF BUSINESS ACTIVITY UNDER WAY

By W. T. C. King
EDITOR OF *BANKER*, LONDON

BUSINESS activity in Britain is now beginning to expand again after its setback in the second half of last year, and hopes are mounting that it will show a notably faster rate of growth in the months ahead. This better feeling is partly attributable to second thoughts about the reflationary Budget introduced in early April. The anti-climatic effect it produced at the outset in some circles was never very well founded; now it is more generally recognised that it should give a strong boost to demand when its influence is fully felt. Even more significant for the immediate future has been the accumulation of evidence to suggest that the economy was on the turn even before the Budget.

It is much too soon, of course, for any of the indices of business activity to reflect the effect of the budgetary injection; most of the general indices have not, indeed, yet emerged even from the period in which production was slowed down by the abnormal severity of the winter. The latest available index of production relates to February, but even in that month, in the midst of the wintry weather, the index of manufacturing output, corrected for "normal" seasonal factors, recovered by four points from the January low of 110 and thus was approximately restored to the average of just over 114 maintained in the fourth quarter of 1962. The all-industries index, likewise, recovered four points in February, but was still five points below the level of October-November last.

The divergence of these two indices is explained by the exclusion from the former of the important group of construction industries, which were naturally those most acutely disorganised by the freeze-up. At the unemployment count in mid-February, construction accounted for not far short of one-third of all workers then unemployed; the total then reached 878,000—the highest figure since the war, with one exception (during the highly abnormal dislocation caused by the fuel and power crisis of 1947). In the ensuing two months, total unemployment dropped by 176,000 and 97,000 respectively, and of these declines construction accounted for 141,000 and 53,000, suggesting that, when the next two indices of production appear, most of the winter's disparity will have disappeared. At the April count, after its much more than seasonal fall, total unemployment was thus down to 604,600, equivalent to 2.7 per cent of all insured workers, compared with 3.9 per cent at the peak and 2 per cent in April 1962.

The one major industry whose strong recovery can already be clearly measured is the motor-car industry. Registrations of passenger vehicles reached a new peak in March, and hire-purchase statistics suggest that there was a further advance in April. Output had climbed by March to a weekly average of 31,023 vehicles, as compared with 26,176 in March 1962 and only 19,557 in March 1961; at its new level it is virtually restored to the peak touched in the great motor-car boom of 1960. This spurt in activity, much of which must be a response to the reduction in purchase tax on motor cars conceded last November, is bound to have had important repercussions on the significant range of ancillary and associated industries; it was in the hope of producing that sort of diffused effect that the tax move was made.

Exports and Imports

A notable contribution to the revival of business confidence has come from the export trade. After their rather disappointing performance during most of the period since the middle of last year, the seasonally adjusted figures showed a marked improvement in March. Total exports shot up to the new peak of £349,000,000, as compared with £321,000,000 in February and £309,000,000 in January. The gain was partly attributable to the backlog from the two preceding months, and it also reflected the "lumpy" effect of deliveries of completed ships; but it carried the seasonally corrected average for the first quarter of the year to £327,000,000, showing a gain of two per cent on the average for the second half of last year.

Imports were likewise higher in March, but only slightly, and the average for the first quarter was little different from that for the last quarter of 1962—and thus was well below the peak reached in the three months before that. As a result, the "crude" trade gap (i.e., the excess of c.i.f. imports over f.o.b. exports and re-exports) narrowed in March to only £23,000,000; for the first quarter it averaged £36,000,000, as compared with £45,000,000 in 1962 as a whole and £52,000,000 in the worst (third) quarter of that year.

These figures have done much to allay the uneasiness felt in many quarters that the reflation of the economy may soon put significant pressure on the balance of payments. It is remarked that in 1962 the balance of payments as a whole showed a surplus of £67,000,000 on current transactions, and in addition there was a positive "balancing item" of £128,000,000, representing net receipts not identified as current earnings (that is, comprising either such earnings or unidentified net borrowings). In the fourth quarter of the year there was a current-account surplus estimated, after seasonal correction, at £36,000,000—the best for three years.

These, admittedly, are modest figures when set beside the gross amount of Britain's long-term lending and aid granted overseas; and this year the flow of long-term funds to Britain is unlikely to finance as considerable a part of the gross outflow as it has done (exceptionally) in the past two years. But if imports do, in fact, grow only moderately in the early stages of reflation, the pressure on reserves or on international credits should not be large.

Reserves Position

Meanwhile, in the period since the Budget, the earlier downtrend in the reserves has been reversed. The published total of holdings of gold and convertible currencies had shown a decline of $67,000,000 in February and an increase of $17,000,000 in March. But in his Budget speech, the Chancellor of the Exchequer disclosed that over these months Britain had taken up credit facilities from overseas central banks to the extent of $250,000,000 (under the arrangements for mutual help that have been continued and extended between central banks since the *ad hoc* "Basle" agreement was reached after the D-mark revaluation in 1961).

It can be presumed that the true strain on the reserves was larger in March than in February, though it was probably short-lived—mostly springing, it will be recalled, from the reaction of short-term holders of sterling and British importers to unofficial discussions, in the press and elsewhere, of whether "floating" rates would aid the drive for growth. This scare, if such it deserves to be called, quickly died down; but another consideration that caused a little uneasiness was the possibility of a too-reflationary Budget. It is the more heartening, therefore, that in April the reserves should have shown a true increase: there were no special transactions to distort the published increase of $34,000,000 to a total of $2,848 million (subject, however, to the outstanding $250,000,000 of credit facilities).

The spreading hopes that the reflation of the economy will now get steadily under way have been duly reflected in the behaviour of the Stock Exchange, though its response has been much more restrained than might have been expected if one looked solely to the scale of the budgetary injection. The week or so before the Budget had seen a strong anticipatory rise, carrying the ordinary share index of the *Financial Times* up from just under 300 to 309 (it had been under 280 early in the year, and as low as 265 after the Wall Street collapse last year). But the feeling of anti-climax after the Budget brought it back to under 300 again until second thoughts, and better industrial news started a new upturn just before Easter. By 3rd May the index had reached 315, its best this year—still, however, substantially below its all-time peak of 366 touched in May 1961.

A somewhat unusual feature of the stock market scene since the Budget has been the simultaneous firmness of the gilt-edged market. This market has been wholly unperturbed at the extent of the prospective Exchequer deficit shown by the Budget. It has taken due note of the Chancellor's hint that the "borrowing requirement" of £687,000,000 did not imply in itself large borrowings by way of marketable gilt-edged stock. The Exchequer will borrow automatically the next inflow of funds invested in National Savings securities (which brought in £190,000,000 last year) and also the counterpart of any rise in the note circulation that rising business activity will bring in its train. In addition, the current tightness of bank liquidity, at the beginning of a period in which bank advances must rise in order to finance the expanding output, means that the Government has unusual scope for innocuous (indeed, desirable) financing by floating debt placed through the banking system.

ANGLO-AUSTRALIAN TRADE

The Anglo-Australian trade agreement of 1957 is to continue at least until the autumn, even though, under its original terms, it is already well overdue for re-negotiation. The Governments of the two countries reached agreement on this extension after two days talks which concluded at London on Tuesday, the 7th instant. The main ground advanced for it is that both the U.K. and Australia will now be in a better position to participate effectively in the forthcoming G.A.T.T. trade discussions. Australia has made it clear, in the meantime, that it is anxious in principle that there should be a new agreement. It is also anxious that its character should be similar to the present one. What Australia is really concerned about is that a new agreement should incorporate either the present "best endeavour" clause or something equivalently favourable. Under the clause, the U.K. agrees to make every reasonable effort to purchase 750,000 tons of Australian wheat and wheatflour each year.

HIRE-PURCHASE IN MODERN ECONOMY—II

(*Concluded from page* 879)

The new law contains further provisions applying both to hire-purchase and to sales against prepayment. We shall merely enumerate them, although they are important for the effective legal protection of the buyer. These provisions deal with the limitation of the assignment of claims, the prohibition of clauses restricting legal competence to certain courts of law, and with the tardiness of buyers in meeting instalment payments.

* * * *

Swiss legislation on hire-purchase is the result of a compromise. The long period of incubation proves this. The interested parties have been consulted, the debates in Parliament were no mere formality. They lasted a whole year and nearly all the articles of the draft have been more or less profoundly modified. The Press intervened in the debate, and certain views first expressed in print did not remain unheeded. All this explains why the law is perhaps not a model of logical and legal consistency.

All the same, the work has not been in vain. A law had to come sooner or later. The resulting instrument is satisfactory, despite the lengths to which it goes to protect the purchaser. Its principles will, it seems, be approved by all sound businesses selling on the instalment system. Past experience showed that the abuses practised by a small minority could bring discredit to a whole sector of commerce. And in any case the suit has been heard: the new law is backed by pretty well the whole of public opinion.

As for the banks, if we except certain houses specialised in hire-purchase finance, they are scarcely touched by the new legislation. At the most, they will receive a few additional deposits deriving from the obligation to make prepayments to the credit of a savings or deposit account. Personal credit granted by the banks does not come under the new law, whatever be the purpose to which beneficiaries devote the sums obtained. In this connection, it may be mentioned that the banks were relieved to see dropped a provision in the draft nullifying advances if the lender knew or could presume from circumstance that the borrower was obtaining in this way the money required to make an initial payment under a hire-purchase contract.

A word still about the attitude of the Swiss banks to consumer credit. It has sometimes been averred that the big commercial banks are hostile to such credit. This is incorrect. The Swiss banks do their best to further small credit business, not because of any considerable financial gain to be obtained thereby—such advances scarcely pay their way in a big bank, owing to the relatively large amount of work involved—but because they wish to show that banks serve the whole community. This said, it remains obvious that it is not always desirable to foster consumer credit. This is especially the case under boom conditions when the economy needs sedatives rather than stimulants. —*By courtesy of* Business News Survey, *published by Swiss Bank Corporation, Basle.*

ASSOCIATION OF MAN-MADE FIBRE INDUSTRY

CALL FOR SWITCH-OVER FROM NATURAL TO SYNTHETIC FIBRES

CHAIRMAN, MR. A. R. RAMANATHAN'S SPEECH AT ANNUAL MEETING

ADDRESSING the Annual General Meeting of the Association of Man-made Fibre Industry, held at Bombay on Tuesday, 14th May, 1963, Mr. A. R. Ramanathan, Chairman, pointed out that, in view of the shortage of cotton and the need to import it at a tremendous cost in foreign exchange, a switch-over from cotton to cellulosic man-made fibres as raw material for cloth manufacture was advisable. The raw materials from which cellulosic fibres could be produced, such as bamboo and cotton linters, were indigenously available. It was, therefore, necessary, according to him, to give priority to the development of man-made fibre industry both from the point of view of raw material availability and saving foreign exchange. The following is the full text of Mr. Ramanathan's speech:

GENTLEMEN,

I have great pleasure in extending a hearty welcome to you all for the annual general meeting. To begin with, let me, on this occasion, express my sincere thanks for having given me an opportunity to serve this Association as its President for the previous year. To be in your midst, whenever the exigencies of circumstances so demanded and to work and deliberate with those who had great many achievements to their credit in the realm of man-made fibres, was indeed as much exhilarating as it was edifying to me. I am also particularly happy to find that we are, by degrees, coming closer in diverse ways and our faith in collective and concerted effort is slowly but surely being strengthened to meet the several challenges that the industry will have to face in the fast developing world of today.

Chinese Perfidy

The year 1962 was a year full of cares and anxieties for the nation as a whole. The country, which won its independence by peaceful and legitimate means and was deeply involved in stimulating its stagnant economy from the grassroots, had suddenly to face the perfidious and aggressive designs of the Chinese across its borders. Its programmes of development had to be adjusted, much against its will, to the urgent and pressing needs of defence. But the silver lining in the menacing clouds that were gathering around its borders was the spontaneous upsurge of patriotism to face the issues involved squarely and boldly. Besides, the financial and military aid that was immediately offered without any strings attached by U.K. and U.S.A., for which the country stands greatly indebted, was perhaps another contributing factor to deter the Chinese from their aggressive pursuits at least for the present. But the threat posed by them is not over as yet and the country has to be extra-vigilant if it wants to foster its democratic and spiritual values of life. To this end, the human and material resources of the country have to be completely and continuously mobilised so that our schemes of defence and development may run smoothly and on preferred lines.

Gentlemen, it is against this background of national emergency, the prospects for this industry, as it may be for others, have to be visualised and the problems resolved within the range limited and conditioned by force of economic and political circumstances.

Impressive Progress

It appears to be true, however, that, as we survey over the years the realm of textiles here and elsewhere, man-made fibres, whether in times of peace or war, have steadfastly maintained its upward trend despite the several handicaps it had to face, along with others, during its onward march. From about 48 million lbs. in the year 1921 to start with, the world output of man-made fibres in 1962 is estimated at the record level of 8,665 million lbs. Within the span of forty years its percentage share from 1 per cent in 1921 has registered an increase of about 25 per cent, in the year 1962. Even in a developing country like ours, facing an uphill task in improving its economy by all legitimate means conceivable, the progress achieved by this industry gives an impressive reading. As far as we are concerned, the story began in 1951 with the lean figure of 5 million lbs. and in 1962, the production figures have reached the level of about 57 million lbs. in viscose filament yarn and more than 70 million lbs. in staple fibre. Currently, the licensed capacity of man-made fibres in the country is as follows:

(In million lbs.)

Cellulosics	
Viscose filament	79.4
Acetate yarn	8.8
Cuprammonium	5.0
Staple fibre	104.0
Tyre cord	33.4
Total ...	230.6
Non-cellulosics	
Nylon filament	11.70
Nylon staple	0.65
Nylon tyre cord	1.50
Total ...	13.85

The production trends being on the increase, the imports of man-made fibres are naturally shrinking from year to year. From about 34 million lbs. in 1957, the imports of viscose rayon have declined to the level of about 19 million lbs. in 1962. But the reverse is the trend as regards the imports of synthetic yarn. From about 1.3 million lbs. in 1957, the imports have registered an increase to about 7.9 million lbs. in 1962.

While specialisation and diversification are taking place the world around, over certain basic fibres, another aspect of the progress that is becoming evident is the general cheapening of the processes. From a simple modification of production process, such as the Snia Nylon-6 process or the new Japanese polymide technique of photo-synthesis, which is reputed to cut costs upto 50 per cent, it has taken the direction of improving an already cheap fibre disproportionately to the cost of making the improved version, such as the polynosic versions of viscose rayon. It is said, and rightly so, that these factors are operating at a growing pace and within the next eight to ten years, one could very well see the sheep farmers thinking in terms of lamb chops rather than fleeces, while the cotton growers could perhaps be utilising their land for growing food crops to meet the demands of a world population multiplying in alarming proportions.

Problems of the Industry

While in the advanced countries like U.K., U.S.A., and Japan production is almost on par with the demand and in some instances even more than the demand and, therefore, spelling out danger for smaller units depending upon selling out large weights of a single type of yarn, India being a late-comer in the field, has a different story to relate.

Though it is true that man-made fibres are in short supply in the country and, therefore, could be assured of a ready market, further expansion on desired lines to reduce imports of rayon yarn may not, from the point of view of the Government, be a feasible proposition for the time being on account of slender foreign exchange resources. But, in this context, it is of relevance to note that the development of man-made fibres deserves to be given priority in the allocation of foreign exchange reserves for the reason that, with the optimum production of man-made fibres, there is every possibility of the internal demand for fibres being met in a substantial measure, resulting in stabilisation of prices. Self-sufficiency achieved, Indian textiles will gain new dimensions and will even earn a sizable surplus in foreign exchange by entering the overseas market at increasingly competitive prices.

These apart, as things stand at present, cotton textiles industry, which was, to all intents and purposes, deemed as a major export earner, has now become, according to the recent Reserve Bank of India survey, a net spender of foreign exchange for the reason that substantial quantities of foreign cotton have to be imported to meet the deficit requirements of the country. Further, to think in terms of indigenous cotton production will not, in any way, serve the purpose, because it is a slow and gradual process, dependent upon improved techniques and also on vagaries of wind and weather. It is at this juncture man-made fibres, specially staple fibres, can step in to fill up the gap in a significant measure and conserve a sizable foreign exchange. In the circumstances, the switching over to cellulosic man-made fibres for the time being appears to be advisable for the development of which the raw materials such as bamboo and cotton linters will be indigenously available, if they are properly exploited. It will, therefore, be in the fitness of things if priority is given to the development of man-made fibre industry both from the standpoint of raw material availability and substitution of cotton imports.

Yarn Distribution

Apart from certain difficulties experienced in the matter of expansion as stated above, the industry, for the present, is in the grip of a controlled economy. Production has to be patterned according to the consumers' requirements as given out by the Artsilk Yarn Distribution Committee. Prices of yarn have been frozen at the level obtained in 1957 and though there is an all-round cost increase since then, and this fact has already been represented to the Government, the matter is still under consideration. In the meanwhile, the market prices are showing a downward trend. Because of this and other contributing factors emanating from tight money conditions, yarn is not being lifted and stocks are mounting day by day. In the circumstances, a remedy has to be found by the Government without further loss of time and the quotas of those allottees, who do not lift yarn within a prescribed time limit, should be forfeited and the spinners should be given the right of free sale in respect of the lapsed quota. The redeeming feature, however, is that the authorities are quite aware of the problem and ways and means are being considered to find out a remedy as expeditiously as possible.

Assured Future

Gentlemen, the problems we are facing today, many of them are the problems that the nation as a whole is experiencing on account of the massive development programmes undertaken by the Government to increase the national product and to put the nation's economy on a sound footing. The Chinese threat has aggravated the situation, upsetting our calculations and planned endeavour, to a certain extent. But it is our hope that these problems will be a passing phase and the country will again be geared to its normal development programmes. As far as our industry is concerned, the prospects, inspite of the problems it has to face for the present, appear to be promising for, as you are aware, the rising population, improving living standards and national awareness and efforts are indicating towards a steady upward demand for our products. If, therefore, increasing demand is a reliable proof of public acceptance for any product, it can be said, without fear of contradiction, that consumers' preference all the world over is gradually veering in favour of man-made textiles. Besides, the almost unlimited variations of yarns, which these fibres make available, have increased the ability of the fabric designer to produce new, better and different fabrics on a scale which would otherwise be impossible. Further, man-made fibres have made possible the production of high quality fabrics at prices everyone can afford. Moreover, the spectacular growth of man-made fibre producing units here and elsewhere and the pattern of rising demand visible in the official statistics on the subject seems to indicate that the current consumption must have a significant mass content.

Because of this and other factors, man-made fibres have assumed new forms and combinations providing a wealth of material for the textile industry and developing a distinctness of their own. They are no longer considered as substitutes for traditional fibres, but they are new materials in their own right. While, in the laboratories of the world, the textile chemist is engineering new fibres, he is also improving today's fibres for the fabric of tomorrow. Furthermore, the industry is research-oriented and the molecular architect can now tailor fibre properties to any desired specifications. Progress for the industry is, therefore, assured.

Thank you.

Note: *This is not a report of the proceedings at the above Annual General Meeting.*

TREND OF MARKETS

CALL RATE 5½ PER CENT

(From Our Own Correspondent)

BOMBAY, 15th May

Stringent conditions continued to prevail in the short-term money market during the week under review. There was persistent pressure of demand for funds the supply of which was not adequate. Difficulty was experienced by several borrowers to meet their requirements. The inter-bank call rate, as a consequence, was maintained at the high level of 5½ per cent, as against 5¼ per cent a week ago and 4½ per cent a fortnight ago. The Calcutta market was tighter still, with call rate standing at 6 per cent, that is, ¾ per cent higher than in the previous week.

Despite the persistent stringency of money, the response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 14th inst., was more encouraging than in the past few weeks. The total amount offered was Rs. 2.62 crores, as against Rs. 2.04 crores last week and Rs. 2 crores in the week preceding it. But the total amount invited and accepted continued to be only Rs. 2 crores. The average rate of accepted tenders was higher again at Rs. 2.360 per cent per annum, as against Rs. 2.354 a week ago and Rs. 2.350 two weeks ago. The response to the Intermediate Treasury Bills, however, was poor, the Bills actually sold from the 8th to 11th inst. being no more than Rs. 13 lakhs.

India's foreign assets declined by a further Rs. 11 lakhs to Rs. 112.57 crores during the week ended 10th May 1963. The decline was accounted for entirely by balances held abroad which aggregated Rs. 7.49 crores. The foreign securities held in the Issue Department of the Reserve Bank were unchanged at Rs. 105.08 crores. Loans and advances to scheduled banks increased by Rs. 4.12 crores to Rs. 45.97 crores, including Rs. 30.73 crores made against usance bills. There was a sharp rise of Rs. 23.84 crores to Rs. 2.344.09 crores in notes in circulation.

The total credit made available by scheduled banks to their clients rose by Rs. 3.31 crores to Rs. 1,593.04 crores during the week ended 3rd May 1963. Since, at the same time, the deposits declined by Rs. 2.54 crores to Rs. 2,237.33 crores and inter-bank borrowings by Rs. 2.34 crores to Rs. 42.12 crores, the scheduled banks were forced to rely more heavily on borrowings from the Reserve Bank which went up by Rs. 8.84 crores to Rs. 40.20 crores. Of this amount, those against usuance bills accounted for Rs. 31.44 crores, a rise of Rs. 5.20 crores. Investments, however, showed a rise of Rs. 3.48 crores to Rs. 618.29 crores.

The Gilt-edged market ruled steady. Short-dated and selected medium and long-dated loans evoked good demand. But business actually put through was restricted, in view of limited offerings.

In the foreign exchange market, the banks' selling rate per 100 dollars declined by 25 nP to Rs. 478. Their buying rate eased by a like amount to Rs. 474.75. In New York, the pound sterling firmed up *vis-a-vis* the dollar, the spot rate per £ rising by 0.070 cents to 279.970-280.000 cents and the three months' forward by 0.100 cents to 279.500-279.530 cents.

BULLION EASY AT CLOSE

(From Our Own Correspondent)

BOMBAY, 15th May

Firmness in gold and a steady tone in silver were the features of trading in the bullion market practically till the close of this week, when prices eased a little on fears that the making of 14-carat gold jewellery might also be stopped. Such fears were based on the statement of Mr. Morarji Desai, Union Finance Minister, at Surat on Monday the 13th inst. that his ultimate aim was to stop even the 14-carat gold ornaments, as then only could smuggling be stopped. While the price trend registered the effect of that statement in the decline from Rs. 118 to Rs. 116.50, it did not record the likely counter effect arising from the Finance Minister's observation the same day that the price of gold in the country would never go down and that the object of the Gold Control Rules was to stop only the smuggling of the yellow metal into India.

Gold opened one point higher at Rs. 118 and was maintained at that level till the mid-week. On Monday, it eased to Rs. 117 and today it lost 50 nP further to Rs. 116.50, at which level it was, however, only fractionally lower as compared with Rs. 117 a week ago. Sovereign eased from Rs. 84 to Rs. 83.

Silver, which closed last week at Rs. 234.50, was steady till Saturday the 11th inst. at Rs. 235. On Monday, it eased from Rs. 235 to Rs. 233.50, but closed a shade higher at Rs. 234. It dropped to Rs. 232.50 yesterday, and further to Rs. 232 today, to show a loss of Rs. 2.50 over the week. The daily average arrivals and offtake were unchanged at 14 bars and nine bars, respectively.

New York silver rose this week from 127.7 cents to 128.4 cents and crossed in the process the 43-year peak level of 128 cents. The rise was influenced both by the reluctance of holders to part with silver and by Washington reports that the Senate Banking Committee had approved the new silver legislation. Over the week, the quotation was higher by 9/10 of a cent. In London, too, spot silver advanced to a new high level of 110½d., at which level it was one-eighth of a penny over the previous record price set in March last. While demand was normal, supplies were insufficient. Last week, the metal closed at 109½d. The forward quotation closed higher at 110½d., as compared with 109½d. a week ago. Ready gold moved between 250s. 6d. and 250s. 7½d. and closed a shade higher at 250s. 7½d., as compared with 250s. 7d. last week. The dollar quotation for gold edged forward from $35.07⅛ to $35.08⅛.

After the Gold Control Order became operative, about 12,000 persons declared 12.7 million grammes of gold valued at Rs. 6.5 crores at the international price (Rs. 13 crores at the internal market rate). The dealers and refineries declared 27.5 million grammes of gold valued at Rs. 14 crores at the international price (Rs. 28 crores at the internal market rate). These figures were given by Mr. G. B. Kotak, Chairman of the Gold Board, at a Press conference in Bombay on Tuesday the 14th inst. Mr. Kotak claimed that smuggling was considerably reduced, though recently there might have been "some revival" of that illegal trade. While a permanent reduction in the internal price of gold would take considerable time and effort, he added, the present modest rise in the price due to seasonal demand would not induce any revival of large-scale smuggling.

The following table shows the trend of prices during the week under review:

	15-5-63 (closing)	High	Low	8-5-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine) ..	232.00	235.00	232.00	234.50
GOLD				
Ready (.996 fineness) ..	116.00	118.00	116.00	117.00
Sovereign	83.00	84.00	83.00	84.00
London—				
Gold	250s. 7½d.	250s. 7½d.	250s. 6½d.	250s. 7d.
Silver Ready ..	110½d.	110½d.	109½d.	109½d.
Silver Forward ..	110½d.	110½d.	110½d.	109½d.
New York—				
Silver	128.4 cents	128.4 cents	127.7 cents	127.5 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

COTTON FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, 15th May

The recovery witnessed in the cotton futures market towards the close of last week proved to be a short-lived affair. In fact, the market, after having opened the week on a fairly cheerful note, turned easy in subsequent sessions. Sentiment was adversely affected by persistent rumours that the Government would soon release a substantial quota for import of U.S. cotton under P.L. 480 and a global quota for other growths. The issue of a comparatively large volume of tenders was also of a comparatively large volume of tenders was also bearishly interpreted. Tenders issued against the May contract on Tuesday, the 13th inst., aggregated 400 bales, bringing the total issued so far to 1,750 bales. On each of the previous notice days, 450 bales were tendered. These developments, coupled with the slow mill demand in the ready section, were sufficient to induce a decline in prices. But they were reinforced by two other bearish factors, namely, the news that mills carried a stock of 1.03 million bales of Indian cotton at the end of February, as compared with 0.76 million bales at the end of January and the proximity of the monsoon. Under pressure of selling induced by these factors, both the Jarilla May contract and the August contract declined, the former from the last week-end closing of Rs. 729 per three quintals to Rs. 720.50 at close and the latter from Rs. 725.75 to Rs. 719.50. The following table indicates the trend of prices of the contracts during the week:

(In rupees per three quintals)

	15-5-63	High	Low	8-5-63
Jarilla May ...	720.50	730.00	722.00	729.00
Jarilla August	719.50	728.50	718.50	725.75

In the spot market, mill demand for ready cotton continued to be restricted. Needy mills, however, evinced interest in such varieties as CO2, L. 147, Buri, Digvijay, 197/3 and Kalyan. But prices generally tended to recede. Among foreign growths, Egyptian and Sudan cotton attracted attention of mills. Selected East African and American cotton too were in demand but turnover was limited. Export demand for current crop Bengal *Deshi* was slack. Business to the extent of four to five thousand bales of new crop Bengal *Deshi* was, however, reported to have been done.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Kalyan 960; Gadag Laxmi 1,175; CO2 1,535; Sudan G6S 1,205; XG5S 1,410; Guiza 45-1,770.

Cotton futures in Karachi recorded further gains during the week. The maturing N.T.R.G. May contract firmed up, thanks to support based on considerations of tenders, from last week's closing rate of Rs. 73.70 to Rs. 75. The July contract rose in sympathy from Rs. 73.30 to Rs. 73.80. In the spot market, ready prices were well maintained.

Quietly steady conditions continued to prevail in the Liverpool cotton futures market during the week under review. Despite the announcement of a reduction in freight rates from the U.S. Gulf ports to the U.K., trading interest was lacking. Mill demand for ready cotton mainly centred round South Brazilian, Argentine, Sudan, and Mexican cotton. The following are the latest available quotations—in pence per lb.—from Liverpool:

May 23.25; July 23.05; October 23.00.

May (Sudan) 29.00.

Listless conditions prevailed in the New York cotton futures market. Barring the nearby May contract, which tended to rise, thanks to commission house support, both old and new crop deliveries ruled subdued. Spot prices, however, continued to rule firm.

The current season's U.S. cotton crop would be a record since 1953, according to the estimate of the Department of Agriculture. At 14.86 million bales, the crop would be 550,000 more than last season's production of 14.31 million bales. The yield per acre is estimated at 457 lbs., as compared with 438 lbs. last season and 446 lbs. in 1960-61.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago:

(In cents per lb.)

	14-5-63	7-5-63	30-4-63
May	34.95	34.80	34.70
July	33.28	33.42	33.20
October	32.53	32.65	32.35
New York Spot ...	35.95	35.95	35.95

RALLY IN YARNS

(From Our Own Correspondent)

BOMBAY, 15th May

Yarn prices rallied smartly this week on emergence of consumer support following the steps announced by the Art Silk Yarn Distribution Committee for readjustment of actual-user quotas for the period April-September 1963. The measures, which are detailed below, are expected to meet the situation of excess supplies in the market.

In art silk yarns, National Rayons were conspicuously firm on reports of a strike in the Company's works. N.R.C. 150D rose by 31 nP to Rs. 11.62 a kilo and 120D by 29 nP to Rs. 11.55. S.I. Viscose 120D looked up from Rs. 13.33 to Rs. 13.46 and 100D Century from Rs. 13.75 to Rs. 13.95. In 2 x 40 staple fibre yarns, Century scored a gain of 31 nP to Rs. 8.14 and Kohinoor rallied from Rs. 8.18 to Rs. 8.51. Cotton yarns were generally steady, with 10s Podar closing 25 nP higher at Rs. 18, while 30s Madura shed 38 nP to Rs. 29.62.

The Art Silk Yarn Distribution Committee, which met at Bombay on Saturday the 11th inst., decided to readjust the denierwise allocation of yarn already made to actual users for the period April-September 1963 to the extent of 50 per cent of the allotment, due consideration being given to deniers already delivered by the spinners. The adjustment will be made according to the pattern of requirements already indicated by the allottees in their applications for the period April-September 1963 and in respect of allocation cards issued by the Committee only. It is made clear that requests for readjustments not received by the Committee before 31st May will not be entertained; those requests which have already been received by the Distribution Committee will be dealt with only to the extent possible. It is also made clear that no further correspondence on the subject will be entertained. The actual user allottees of art silk yarn for October 1962-March 1963 period and previous periods who have not already lifted their quotas from the rayon yarn manufacturers to whom their cards have been endorsed, have been notified that, if they do not lift their allotments before the end of this month, the allotment will lapse.

At its 23rd meeting held at Bombay on Monday the 13th inst. the Development Council for Art Silk Industry reviewed the present system of distribution of yarn and recommended to the Government the continuance of the existing arrangement. The Council urged renewed efforts to streamline the procedure with a view to securing for both weavers and spinners a smooth and effective system of distribution. The Council considered the targets for viscose staple fibre for the third Plan. In order to minimise the country's growing pressure on cotton supplies consequent on the rise in *per capita* consumption of cloth, the Council felt that a target of 100,000 tons would not be high. The Council reviewed the excise tariff rates on the various deniers of yarn manufactured. It was felt by the members of the Council that, as it was not possible to spin rayon yarn of a particular denier continually and consistently, reasonable tolerances, as recognised by International Bureau for Standardisation of Man-made Fibre, should be allowed. The Council also asked the Government to review the export incentive scheme for export of art silk fabrics with a view to enabling the yarn manufacturers to import essential machinery required for the industry.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	15-5-1963	8-5-1963
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	11.55	11.26
Century 75D	17.47	17.31
S. I. Viscose 150D	12.91	12.65
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.)	8.51	8.18
Century	8.14	7.83
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.00	17.75
20s Modern	25.50	25.50
30s Kohinoor	30.62	30.00
40s Hind	36.50	36.00
60s Kasturi	46.50	46.50
80s Laxmi	83.00	83.00

OILSEEDS IMPROVE FURTHER

(From Our Own Correspondent)

BOMBAY, 15th May

Barring castorseeds which ruled easy on dull export prospects for oil and increased arrivals of new crop from Andhra Pradesh, oilseeds and oils moved up during the week. Groundnuts continued to make headway. Spot groundnuts were particularly firm on account of brisk offtake by *vanaspati* manufacturers and crushers. Encouraging advices from the groundnut extraction section also imparted strength. Prices would indeed have gone up still further, but for arrivals of some groundnuts from upcountry centres. Linseed futures ruled distinctly steady, but spot

seeds and oils turned easy, following larger arrivals of new crop and the none-too-encouraging prospects for linseed oil exports. Cottonseeds, too, put on a cheerful appearance.

Groundnut July 1963 contract rose by 37 nP to Rs. 224.62. September 1963 contract improved by 12 nP to Rs. 226.87. Nizam bold and Khandesh quality put on 50 nP each to Rs. 45.25 and Rs. 46, respectively. Oil ex-mill hardened by 25 nP to Rs. 17.75. Oil railway receipts increased initially from Rs. 17.35 to Rs. 17.55, but declined subsequently to Rs. 17.40, the net gain over the week being 5 nP.

Linseed September 1963 contract strengthened by 12 nP to Rs. 37.62. June 1963 contract was maintained at Rs. 36.31. Bold ready, however, declined by 1.1 nP to Rs. 35.50. Linseed oil shed 5 nP to Rs. 14.

Among cottonseeds, July 1963 contract firmed up by a rupee to Rs. 104. White was fully steady at Rs. 20.25. Both Berar and non-white were also maintained at Rs. 22.

Castorseed June 1963 contract fell by Rs. 2.13 to Rs. 157.12. September 1963 contract lost a rupee to Rs. 163.50. Kanpur fell by 50 nP to Rs. 29.50. Madras Small declined by 37 nP to Rs. 30.75. Oil commercial sagged by 40 nP to Rs. 12.55 and B.S.S. by 20 nP to Rs. 13.

The following table shows the closing prices of oilseeds and oils on Wednesday 15th May, as compared with those of two previous weeks:

	15-5-1963	8-5-1963	2-5-1963
Groundnuts	Rs.	Rs.	Rs.
July 1963 contract	224.62	226.25	222.75
September 1963 contract.. ..	226.87	226.75	—
Nizam bold	45.25	44.75	44.25
Khandesh quality	46.00	45.50	44.75
Oil ex-mill	17.75	17.50	17.50
Oil commercial	17.40	17.35	17.30
Castorseed			
June 1963 contract	157.12	159.25	160.62
September 1963 contract.. ..	163.50	164.50	165.62
Ready Madras	30.75	31.12	31.37
Ready Kanpur	29.50	30.00	30.12
Oil B.S.S.	13.00	13.20	13.10
Oil commercial	12.55	12.95	12.95
Linseed			
June 1963 contract	36.31	36.31	36.31
September 1963 contract.. ..	37.62	37.50	37.44
Bold ready	35.50	35.62	35.75
Linseed oil	14.00	14.05	13.90
Cottonseed			
July 1963 contract	104.00	103.00	—

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER RECOVERS

(Messrs. Parekh and Co.)

BOMBAY, 15th *May*

Malabar black pepper ruled weak in the earlier part of the week, in sympathy with Singapore, where black pepper was down by (M) $2½ and New York where spot was lower by $0.2 in anticipation of rather heavy unsold consignments from India and Singapore. In the later part, however, the market steadied on better advice from Indonesia.

New York having remained out of the market, Malabar holders reduced their price for garbled to Rs. 290 and ungarbled to Rs. 277. Locally, *vaisakh* delivery went off the board at Rs. 314. *Jeth* and *shrawan* ruled weak for want of support from speculators who were coming to support the price in rising market and withdrawing in a declining one. Speculators played "Cat and mouse." At the time of writing, *jeth* improved from Rs. 314 to Rs. 318 and *shrawan* from Rs. 324 to Rs. 329. Growers are not willing to part with their goods at the present low price. They remained reserved sellers. Weakness in forward appears to be due to liquidation by weakholders and, as a consequence, the ready materials are sympathetically soft, though temporary.

Internal demand proved poor. Local holders reduced their price to attract buyers, but were so far unable to create interest. At Cochin, May delivery reached the lowest at Rs. 290 and July at Rs. 304. At the time of writing, market improved by about a couple of rupees.

Spot in New York was down to $0.32, as the grinders were sidelining and parcels of afloat pepper were offered at relatively cheap rate, owing to heavy arrivals.

Singapore ruled quiet for want of foreign inquiries. The price of black was reduced to (M) $105, while white was nominally quoted at $155. Heavy speculation in nutmeg created some flutter during the month of April, but it proved short-lived, as no dynamic leadership was available either from Singapore or New York.

Statistically the position of Malabar pepper is healthy, but, without leadership either from the consuming countries or from the origins, no immediate improvement is vouchsafed. The future depends upon the size of new crop of Sarawak and Lampong.

MEDIUM TEAS IRREGULAR

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 9th *May*

Offerings in sale No. 19 held on the 7th inst. amounted to 502,000 kg. A further seasonal decline in quality was noticeable among teas offered in this sale. There was better general demand than in recent weeks. Low mediums and mediums met with useful enquiry, but these were irregularly easier by 10 to 20 nP, particularly fannings. Good mediums were sold readily, but, here again, prices were irregularly lower with quality. A few selected best invoices among highgrowns were sold at rates above last, while others evoked less demand at much lower rates with a number of withdrawals. Clean black leaf descriptions, although sold readily, were easier by up to 10 nP. Unorthodox descriptions were better supported and were quoted fairly firm. Whole leaf grades were sold well at around last rates, except the poorer types which were easier. There was useful support for a small selection of tippy teas.

Quotations (per kg.) were:

	1963	1962
	Rs.	Rs.
Low mediums	4.20-4.40	4.00-4.20
Mediums	4.45-4.80	4.25-4.95
Good mediums	4.85-5.50	5.95-5.80
Nilgiri B.O.P.	4.90-7.80	4.50-6.15

The average price realised in sale No. 19 was Rs. 4.70 per kilo, as against Rs. 4.84 a week ago and Rs. 4.60 in the corresponding sale last year.

A total of 347,000 kilogramms was offered in dust sale No. 19 held today. The market met with less general demand than of late and prices were easier for most descriptions. All mediums categories attracted only fair support and declined irregularly by 20 to 30 nP. Highgrowns elicited less demand and these were easier by up to 50 nP. Clean black grainy descriptions sold readily, but these also shared in the downward trend of the market. Unorthodox descriptions registered declines up to 20 nP, particularly true C.T.Cs and legg-cuts.

The average price realised in dust sale No. 19 was Rs. 4.35 per kilo, as compared with Rs. 4.53 a week ago and Rs. 3.68 in the corresponding sale last year.

Colombo: There was strong demand this week and prices were generally dearer. Highgrowns advanced irregularly, whilst usefil mediums were dearer by 10 to 20 cents. Plain mediums and lowgrowns were also firm. The plainest and thin liquoring kinds however were sometimes easier.

London: North Indian and other growths: In Monday's sale, there was selective demand. Best liquoring teas were firm, whereas others were irregular and sometimes easier.

Ceylon and South Indians: A total of 26,580 packages was offered in Tuesday's sale, of which 4,686 packages were from South India. Teas from Ceylon were firm to dearer with the exception of light liquoring kinds. South Indians met with good demand and prices were generally firm.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No. 20*; 927,000 kgs. offered. Good general demand. Plain and low mediums 10 to 20 nP lower. Mediums and good mediums irregularly easier by 40 nP, particularly brokens. Highgrowns irregular and generally lower with quality. Unorthodox little easier."

KIPS RULE QUIET

(From Our Own Correspondent)

MADRAS, 13th *May*

Arrivals of kips from the tanneries were moderate this week and clearance by shippers was halting. Export trading was patchy; confined to inferior fifths in cow hides and fourths in cowcalf skins. It is hoped that the present Madras prices will stimulate the U.K. dressers to enter the market. Prices of tanned buffcalf ruled firm due to steady buying by American importers, especially in 2½ lbs., 3 lbs. and 3½ lbs. averages.

In the tanned skins section, goat skins ruled firm on demand for all weights from the U.K. and the Continent. American buying was in heavier averages. As regards sheep skins, importers did not show interest in the prime and semi-prime classes at the prices quoted by the E.I. tanners. Even for the middle classes, buyers did not come forward to pay the last prices.

It is believed that a few more orders for pickled goat skins from East Europe have been booked. This fact, together with the good call for tanned goat skins, lent a bullish trend to the goat section.

DUST TEAS EASIER

(From Our Own Correspondent)

CALCUTTA, 14th *May*

A total of 29,445 packages of dust tea were offered at last week's internal sale No. 46 here. Demand was good, but only at easier rates. In fact, the recent sales have seen a steady decline in prices. This has naturally been a source of anxiety to the trade as well as the industry, and the question as to whether tea has become a surplus commodity is being freely asked. This anxiety is against the background of the recent firm belief, greatly encouraged by Government spokesmen, that tea output has been running below demand. Production in north-east India in 1962 was lower than in 1961, but in view of the export incentives given by the Government from time to time, exports in 1962 increased, thus leaving a smaller quantity than in 1961 for internal consumption. Despite this, prices at the recent internal sales have declined and given rise to the apprehension that internal consumption has been falling.

The industry has been urging the Government and the Tea Board to revive the internal promotional campaigns which had been abruptly terminated on the plea that, even at the cost of lower internal consumption, exports should be increased in order that the country might earn greater foreign exchange. The industry argues that while exports must be increased, efforts for increased production should be supplemented with improved prospects for internal consumption. For, despite the industry's best efforts to increase quality, a certain proportion of production would always be of inferior types, fit for domestic consumption only.

With the good rains experienced in this part of the country in recent weeks, the prospects for a larger crop this year have been confirmed. But there is the anxiety that a larger crop will depress auction prices. In the recent auctions at London also, prices recorded a decline, under the weight of the keener competition from Africa and other producing countries. Production in Pakistan, too, is expected to rise and Pakistan will attempt to ship abroad a greater quantity. It has also been reported that Ceylon's "instant" tea has made a good impression abroad, and that Ceylon has planned to increase its output.

During last week's internal sales, plain orthodox dusts registered an easier trend at the beginning, but hardened as the sale came to a close. "Tea for price" provided a strong trend. Assam teas eased, but a slightly upward trend was in evidence in good liquorings. In common with the general trend, legg-cut teas eased, despite the limited quantity on offer. C.T.Cs recorded an irregular trend. Medium C.T.Cs eased but at lower rates absorption was ready and immediate. Good C.T.Cs, which were firm in the recent sales, also eased, excepting for selected lines which were absorbed at firm to dearer rates. Plain orthodox teas tended to harden at close. The quotations (in rupees), per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.60 to 7.20, medium Assam C.T.C. dust 5.30 to 5.70, medium Assam dust 4.50 to 5.30 and plain orthodox dust 4.25 to 4.45.

JUTE GOODS ADVANCE

(From Our Own Correspondent)

CALCUTTA, 14th *May*

Substantial additions to prices of jute goods were recorded during the week under review, following speculative buying and short-covering, induced by the increase in frequency of load-shedding as well as in the duration of each of such occasions. It is accordingly apprehended that production would decline, but it is encouragingly expected that overseas demand would pick up. In fact, there was a tendency, among overseas buyers, to send in more inquiries during the week. Moreover, there was the bullish news that stock of all goods with mills as at the end of the last month aggregated 90,900 tons, representing a small fall of 100 tons. Hessian at 29,000 tons fell by 700 tons, while sacking goods increased by 200 tons to 45,000 tons and miscellaneous constructions by 400 tons to 16,900 tons. Prior to the publication of these details, a steeper fall had been anticipated, as was generally been believed that mills had received shipping instructions for larger quantities in the last month as compared with March. As an immediate reaction, prices of goods eased for a while, but, soon, it was announced that a heavy breakdown to one of the generators of the Calcutta Electric Supply Corporation Ltd. had occurred and that, since the extent of the damage could not be estimated, there was no knowing as to when the generator would be put into commission. Then followed by load-shedding for increased duration. This gave rise to apprehensions of lower production in the current and next months. Against this background, the decline in the stocks of goods, though it was not as marked as had been expected earlier, turned out to be bullish news on reflection. Another factor responsible for this week's gain was the steadying tendency in the New York burlap market, where the 40" 10 oz. light spot duty paid hessian hardened from 9.35 cents to 9.60 cents a yard, and the 10 oz. hessian from 12.10 to 12.50 cents a yard.

Dundee advices suggesting an increase in demand for sackings and tarpaulins were encouragingly noted. Earlier in the week, there were indications of increased buying of jute goods for internal consumption. Orders for heavy goods from the Middle East were also received, and it is now expected that this month stock of these goods would show a decline. The U.S.S.R. evinced greater interest in hessian, and it is expected that it would lift a larger quantity than last year. Russian purchases in recent years have gradually increased; these aggregated 29,315 tonnes from April to November 1962. In 1960-61, Russian offtake was only 2,623 tonnes, but, in 1961-62, this increased to 25,372 tonnes.

As a result of the agreement between jute mills and workers reached at a meeting of the Jute Wage Board, it has been decided to introduce a bonus system to jute mill workers. Daily rated workers will receive two weeks' wages, and monthly rated half a month's pay as yearly bonus. This benefit has been accorded irrespective of loss or profit in the industry. At a time when the mills are looking forward to measures aimed at reducing costs of production, the increase in the wage bill as a result of the introduction of the bonus system has come as a disappointment to the trade which is making earnest attempts to increase exports. It should be noted that this week's increase in prices follows speculation and short-covering in anticipation of a fall in output. The rise has not been due to any increase in demand. As a matter of fact, U.S. buyers have been according only poor support to the market. For, with satisfactory stocks of goods in the U.S., buyers desire to enter into fresh commitments only at lower prices. Also, expectations of a higher fibre crop have encouraged foreign buyers to wait before entering into commitments. The agreement between jute mills and workers also provides for the raising of a worker's monthly minimum wage from Rs. 70.59 to Rs. 81. It has also been decided to increase dearness allowance by 20 nP per point of rise in the cost of living index, with 425 as the base.

Although, as a result of the steadier goods market, sellers of fibre put up prices, there were hardly any transactions at these prices. With reports that jute has also been sown in portions of paddy lands and that the jute crop would show an increase over last year's bumper crop, stockists became nervous. The diversion of paddy land to jute is causing anxiety to the State Government which believes that this has been due to paucity of paddy seeds with farmers. During the week, there have been reports of further rainfall in several jute districts. The plants require an interval of sunshine, and clodding of the soil as a result of the recent showers and damage to seedlings in areas sown recently have been reported. Since has been predicted that there is every chance of floods later in the year. In fact, the State Government is so certain of the probability of floods this year that it has commenced issuing warnings in areas likely to be affected. There have been reports of rainfall from Pakistan districts also, and seedlings have been affected in low-lands. During the week, quotations in Calcutta were firm. Assam bottoms were quoted at Rs. 30 and Northern bottoms at Rs. 29.50, with Daisee bottoms rising from Rs. 33 to Rs. 33.50 a maund.

On Tuesday last, although no business of importance with foreign buyers took place, ready hesssian 40" 10 oz. hardened from Rs. 49.90 to Rs. 49.10 as a result of strengthening of activity in the futures market. On the other hand, there was profit-taking in heavy goods, and ready B. twills closed lower at Rs. 113.10, as against Rs. 113.25 earlier. At this stage, there were inquiries for woolpacks from Australia, and short-covering was done. There were also inquiries for hessian from abroad. As a result, hessian 40" 10 oz. rose to Rs. 49.25 and B. twills were firm but unchanged at Rs. 113. The news that the problem of electric power shortage has been accentuated by a major breakdown in one of the generating stations of the suppliers came in as a shock to mills. The prospect of a decline in output was reflected by increased speculative activity on Thursday, when hessian 40" 10 oz. spurted to Rs. 50.90 and B. twills to Rs. 115.50. On Friday, the price of ready hessian 40" 10 oz. rose to as high as Rs. 52. Ready B. twills were fully steady at Rs. 115.60. The upward movement in forward goods was less prominent, as it was expected that the serious phase of the power shortage would be over by the end of June. Over the week-end, there was a further spurt in prices influenced by speculative buying in the futures market. There was also the news that shipments to Australia and the Middle East are progressing satisfactorily and stock of heavy goods is, therefore, expected to show a decline as at the end of this month. Shipments of hessian to Argentina are also expected to be substantial this month. All these indications explained the rise in ready B. twills to Rs. 117.75 and hessian 40" 10 oz. to Rs. 53.75 over the week-end. The interpretation that the power cut is not as serious as earlier expected induced profit-taking yesterday, and hessian 40" 10 oz. declined to Rs. 51.65 and B. twills to Rs. 115.00. It is apprehended that these wide fluctuations may not accelerate foreign buying, although there are indications that U.S. consumption is increasing.

MIXED TRENDS IN FOODGRAINS

(From Our Own Correspondent)

HAPUR, 13th *May*

Mixed trends were witnessed in foodgrain prices this week. While wheat sought lower levels, thanks to increase in arrivals of new produce and the comfortable stocks both with the Central and State Governments, coarse grains were steadier, as arrivals did not improve and consumer demand was fairly heavy.

Wheat eased slightly, with the average quality quoted between Rs. 40 and Rs. 42 and the farm produce between Rs. 42 and Rs. 45 per quintal. Thrashing and winnowing operations will be over within a fortnight and arrivals will increase then. Arrivals during the week amounted to 500 maunds and local stocks were put around 12,000 maunds. Rice was steadier during the week. The recent rise in the prices has compelled the Government to take various steps to keep the situation under control. The steps envisaged include voluntary purchase from farmers, securing stocks from mills and distributing them through certain channels, price support and stress on changing food habit of the people. Week-end prices were:—Rice *basmati* superior Rs. 88.41 to Rs. 98.45, *sela basmati* Rs. 83.06 to Rs. 88.41, *mainpuri* Rs. 58.94, *ramajiwayan* Rs. 61.62, *raimunia* Rs. 64.30 and *padda* Rs. 52.92 per quintal.

Gram prices hardened a little on brisk buying support in the face of small arrivals from the producing areas of Punjab and Rajasthan. Prices advanced by 50 nP per quintal to Rs. 41.83 for the Punjab quality and Rs. 40.87 for the local produce. Barley ruled quiet at Rs. 28.75 to Rs. 30 per quintal on slack demand. *Bejhar* improved to Rs. 30 to Rs. 31.25 per quintal on brisk buying support. *Juwar* was fractionally higher at Rs. 33.49 to Rs. 36.17 per quintal on brisk demand for sowings. *Guwar* was unchanged at Rs. 29.47 to Rs. 30.14 per quintal. Methi and oats eased on new crop arrivals.

SUGAR SUPPLY INADEQUATE

(From Our Own Correspondent)

HAPUR, 13th *May*

Sugar supply here continued to be far from satisfactory this week, though the State Government regulated distribution. Earlier reports that sugar had been rationed in the State were denied by the State Minister for Food and Supplies. But the State Government may tighten distribution control, as was done from 1959 to 1961, if further complaints about supplies are received. At present, a household is allowed to buy 2 kilo a week. Demand is still very brisk due to the marriage season and summer.

The firm trend in *khandsari* continued unabated thanks to brisk buying enquiry from Gujarat, Maharashtra and East U.P. Local demand was also brisk. Since the imposition of the Sugar Control Order, *khandsari* has advanced by Rs. 15 per quintal. Week-end prices were—Inferior Rs. 112.53 to Rs. 115.21, dry superior Rs. 117.79 to Rs. 131.28, *Boora* Rs. 130 to Rs. 138, *dana minja* Rs. 80.38 to Rs. 88.41 per quintal. Current prices were higher by Rs. 32 to Rs. 35 per quintal than the prices prevalent in the corresponding period last year. *Khandsari* spurted to new heights in Muzaffarnagar and Kanpur, arrangements for distributing crystal sugar were inadequate and demand was brisk.

Gur ruled firm during the week on good buying support from the consuming areas, mainly Gujarat. The week's offtake was seven wagon loads and stocks here declined to 26,000 maunds. Stockists were hesitant sellers. The standing cane crop prospects were uncertain and would depend mostly on the monsoon. Week-end prices were:—*Pansera* superior Rs. 64.97, *dara* Rs. 63.28, *balti* Rs. 64.30 to Rs. 64.97 and *shakker* Rs. 65.64.

TIN SPURTS

(From Our Own Correspondent)

CALCUTTA, 14th *May*

The main feature in the metal market during the week under review was a substantial gain in tin on higher advices from abroad and the existing acute shortage at home. Opening at Rs. 3,280 per 100 kgs., the metal soared to Rs. 3,500. Mainly under the influence of strong advices from Penang, the London quotation rose to £905¼ a ton, after opening at £904. The rise also reflected the continued satisfaction of producing countries in regard to the U.S. stockpile release policy. The rise in London could not, however, be maintained and the quotation fell back to £904 due to lack of consumer demand at higher rates. This explains why the earlier belief that the quotation would rise to £910, at which level the Buffer Stock Manager in London would be a seller, did not materialise. The rise in tin on L.M.E. has revived the apprehension that the U.S. releases of 200 tons a week will not completely wipe off the deficit in supplies. Earlier reports had indicated that production in Indonesia was running lower and that Japan had gradually increased consumption.

On improved support, a modest gain was recorded in the price of lead. Consumer demand is again picking up and advices from abroad are higher. At Rs. 188 per 100 kgs., the gain in the local quotation was Rs. 4. In London, the quotation opened at £57½ a ton and hardened to £58¼. The rise followed the improvement in the West German labour situation. There were reports abroad forecasting an impressive increase in lead consumption in the U.S. and Europe, and this was also a factor influencing the rise in the L.M.E. quotation.

Shortage in copper led to greater inquiries for copper scrap, and utensil scrap recovered to Rs. 568 per 100 kgs. after falling to Rs. 562. In London, the price for cash copper remained at £234 a ton, with the backwardation of 5s.

The metal trade here has been taken by complete surprise by the new interpretation of the excise authorities that copper and brass squares and flats having a width or thickness of more than .375" will attract duty, as these are now said to come within the definition of "plates." It is pointed out by marketmen that these stores do not come within the meaning of "plate, strip, circle or sheet," which is the description given in the excise tariff, either according to specification of the Indian Standards Institution or commercial practice, or both.

Electrolytic zinc opened here at Rs. 262 per 100 kgs., but soon fell to Rs. 260. In London, despite a rise in stocks, the quotation at £75 a ton recorded a small gain. This was attributed to prospects of revival of normal interest from West Germany.

PROGRESS OF THIRD PLAN—I

(Concluded from page 875)

schemes in the third Plan is set out in the table below:

(Rs. crores)

	Third Plan outlay	1961-62		1962-63		1963-64
		Budget	Actual	Budget	Anticipated	Proposed outlay
Irrigation ..	599.84	96.60	91.66	108.17	103.10	96.27
Flood control ..	61.82	8.30	11.98	12.99	18.30	16.19
Total ..	660.66	104.90	103.64	116.16	121.40	112.46

The major and medium irrigation projects included in the Plan were reviewed with a view to determining which of them should be rephased in the context of the present emergency. It has been felt that all medium irrigation schemes (i.e. those costing less than Rs. 5 crores each) should be proceeded with as planned and even accelerated to the extent feasible to provide early benefits. Of the 56 major projects, rephasing or slowing down of 19, on which little or no expenditure has been incurred so far, has been suggested.

The tempo of flood control work has been stepped up, particularly in Assam and Punjab. In the past couple of years, there has been heavy damage in Assam due to floods and breaches in embankments. Emphasis has been laid on strengthening of embankments and construction of some new embankments where urgently required. In the Punjab, the work of anti-waterlogging has been accelerated as a means of early increase of agricultural production.

(To be concluded)

A low-cost, easy-to-operate, plastic fire extinguisher has been produced by a British firm, Messrs. W. G. Ward, Sussex. It consists of a light, high-density polythene container, loaded with dry, specially waterproofed powder which is non-toxic and harmless to skin, clothing or any material. Pressure within the container is supplied by a small cadmium-plated carbon dioxide bulb. It can be safely used on oil and petrol fires and also on electrical appliances, and is claimed to quell flames within three seconds.

WEEK'S STOCK EXCHANGE TREND

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CVI. No. 2718 BOMBAY, 25th MAY 1963 PRICE Rs. 2

LIMITED SUCCESS AT GENEVA

SOMEHOW things get usually, if not always, bogged at Geneva—that venue of several international negotiations of great moment. The present state of disarmament discussions is an instance in point. That these protracted parleys have been described by the Russians as so much waste of time is, indeed, disquieting. Surely, if there is failure here, it will mean the end of all hopes, held universally in the poorer countries, that some of the resources released from disarmament would be made available for their development. Of course, their hopes are not pinned to disarmament alone, for they have something to look forward to in a possible liberalisation of world trade. But here again, it is too early to say whether all their expectations will come true. The tortuous course of parleys, from the 16th to 22nd instant, at the ministerial meeting of the General Agreement on Tariffs and Trade (G.A.T.T.) provides no cause for excessive optimism, notwithstanding the virtual compromise reached between the United States and the European Common Market on tariff-cutting methods. And yet it is this compromise that holds, if at all, the key to ultimate success in what has come to be known as the "Kennedy round" of negotiations for an all-round lowering of trade barriers.

The fact that the difference between the U.S. and Common Market approaches to tariff-cutting procedures has been narrowed is significant, considering the original rigidity of the American proposal for across-the-board tariff reductions by as much as 50 per cent irrespective of wide disparities in national tariff rates. These disparities, it will be recalled incidentally, were pointed out by the Common Market at an earlier stage of the controversy over the U.S. plan for a linear cut in tariffs. It was then argued that the U.S. tariff schedule contained more very high duties than the external tariff of the Six and that its average level was higher than the West European average. Thus, the argument continued, 38 per cent of U.S. duties were higher than 20 per cent *ad valorem*, whereas only 5.3 per cent of the Common Market's were so. The Six resented the American suggestion that all tariffs, regardless of whether they were high or low, should be halved. And so they came forward with an alternative approach aimed at the general levelling of duties on industrial products through reducing the higher tariffs by a larger percentage than the lower ones. Under this approach, an American tariff of, say, 70 per cent on some manufactured commodity would have been brought down to 40 per cent, whereas a Common Market tariff of, say, 20 per cent on the same commodity would have been cut to only 15 per cent. On the contrary, the American approach would have brought down that 70 per cent U.S. tariff to 35 per cent and the 20 per cent Common Market tariff to 10 per cent. What has just happened at Geneva is that the Americans have accepted the Common Market's view that something has to be done about high American tariffs under "special rules." In return for this U.S. recognition of the validity of the Common Market's stand, the Six have dropped their counter-plan for differential tariff-cutting and agreed to a plan of substantial linear tariff reductions with a bare minimum of exceptions which, too, shall be subject to confrontation and justification.

That, in short, is the agreement reached, for the present, between the U.S. and the Six. But this is only the beginning of a long road, and the further detailed negotiations for laying down "special rules" and for cutting high tariff rates under such rules may not be smooth. As much has been acknowledged by President Kennedy himself in these words spoken at a press conference in Washington on the 22nd instant: "We have got a situation where there are different tariff structures in many different countries, where you have great, contrasting economic interests not only between the U.S. and the Common Market, but between other newly-emerging countries as well as those completely dependent upon agriculture. . . . But, during the next year when this matter will be coming down for final negotiations, we will have a long road, but one, I think, that we can travel and should travel and must travel." The British Executive Secretary of G.A.T.T. also has said that "we have a long way to travel before what we have agreed can be translated into action." In any case, the comprehensive trade negotiations on a most-favoured-nation basis, scheduled to begin at Geneva in May next year with the widest possible participation, are going to be difficult, for they would cover all classes of products—primary, agricultural and industrial—and deal with both tariff and non-tariff barriers. But the will to reach a final agreement seems to be shared by Europeans and Americans alike. The stake that developing countries have in such an agreement is that, when reductions in customs duties are effected between the U.S. and the Common Market, these will be extended, by virtue of the most-favoured-nation clause, to the other members of the G.A.T.T.

But there is no knowing, as of today, when these negotiations will be concluded and when these limited benefits from trade liberalisation between the U.S. and the Common Market will accrue, if at all, to the underdeveloped countries which are interested in the expansion of their exports to the industrialised countries. What these developing countries need is something that will go beyond mere reduction in tariffs. It is here that the failure of the present G.A.T.T. meeting to accept, *in toto*, the seven-point action programme canvassed by the developing countries with strong British support is positively disquieting. This action programme, incidentally, has called for the following measures for elimination or reduction, in the next two or three years, of tariff and non-tariff barriers against the exports of less-developed countries:

(i) No new tariff or non-tariff barriers be erected against the exports of less-developed countries; (ii) quantitative import restrictions on these exports should be eliminated within one year, or, in special cases, not later than the end of 1965; (iii) duties on tropical products should be eliminated by the end of 1963; (iv) duties on primary products important to the trade of less-developed countries should be eliminated; (v) industrialised countries should reduce duties on semi-processed and processed products from less-developed countries by at least 50 per cent over the next few years; (vi) internal taxes and revenue duties on products wholly or mainly produced in less-developed countries should be progressively eliminated by the end of 1965; and (vii) industrialised countries should report progress each year.

Although nearly all the industrialised countries have supported the principles behind the action programme, the Common Market has taken the stand that it has special relationships with the former overseas territories and that this factor would have to be taken into account. The Common Market has no doubt expressed its willingness to make special reductions in its common external tariffs on products of special interest to the less-developed countries. This would involve trade negotiations with the non-associated countries. Whether these negotiations would result in much lower trade barriers against the developing countries than are currently foreseen is the question. Again, whether these countries would be expected, in such negotiations, to give reciprocal concessions is also not clear. The G.A.T.T. meeting's acceptance, in principle, of the Indian point of view that developing countries cannot afford to grant such concessions to the industrialised countries and its decision to set up an action committee for helping the former countries to expand their export opportunities may not, by themselves, mean much unless these so-called decisions find practical application in the proposed detailed negotiations. The bridging of the gulf between principle and practice is not going to be that easy, for these negotiations are bound to be extremely sticky, throwing up many a difficulty in expected and unexpected ways. It seems that the less-developed countries, too, have a long way to go before they can hope to achieve all or some of their objectives.

AID PROSPECTS

IN less than a fortnight from now, the outcome of the Aid-India Consortium meeting, scheduled to be held at Paris on 4th June, will have been known. There is, meanwhile, a lot of speculation on the probable outcome, the speculation centering largely on three vital questions. In the first place, will the Consortium announce firm commitments of financial assistance for the third year (1963-64) of the third Plan or postpone the decision to a later date, as was done at the last Washington meeting (30th April and 1st May)? Secondly, what will be the quantum of assistance? It may be noted here that, in its *aide memoire* submitted at the previous meeting, India had asked for credits aggregating about Rs. 598 crores ($1,256 million) to meet the foreign exchange component of both development and non-development needs in the current financial year. And, finally, what will be the nature of assistance, that is, whether the Consortium members will concede India's plea for giving a sizable part of aid in the form of untied credits? It would, indeed, be a great disappointment, nay, tragedy, if the Consortium members were to delay again in making up their minds. For nearly two months have already elapsed since the third year of the third Plan began. Many important projects are halfway through and, unless they are assured of a continuing flow of foreign exchange, the pace of progress will be slowed down considerably. The implementation of several others which should have begun quite some time ago has been unnecessarily held up. What is worse, several running industries are experiencing great difficulty in utilising their capacities fully for lack of adequate maintenance imports. These are disturbing trends which, if not rectified in time, will have a deleterious effect on the economy of the country, especially in the context of massive defence needs. If, however, any indecision were again to creep into the deliberations of the Paris meeting, it would be widely regretted. Surely, it is not in the least beyond

the capacity of the Consortium members to give aid on the scale requested by India.

It is certainly India's good fortune that it has quite a few friends abroad who have consistently appreciated its aspirations and vigorously advocated unstinted support for its speedy economic development. They include not merely official spokesmen, industrialists, businessmen, economists and laymen but also the Press. It may be just possible that, in urging large-scale economic assistance to India, official spokesmen are prompted, to some extent, by political considerations, industrialists and businessmen by self-interest, and laymen by sheer humanitarian impulses. The approach of a good many Western economists is, however, different, for they generally view problems dispassionately and express opinions which they consider to be in the best interests of all concerned. To this section belong Prof. J. K. Galbraith, U.S. Ambassador in India, and Mr. I. M. D. Little, an Oxford economist. By a strange coincidence, both Prof. Galbraith and Mr. Little have simultaneously emphasised the urgency of stepping up economic aid to India for the current year and liberalising the terms of credit. Mr. Little's observations, as published in *The Observer*, London, are of added significance, in that they are based on his intimate personal study of the problems of India. This Oxford economist, it may be noted here, was recently in India as a consultant to the Planning Commission.

Mr. Little is highly critical of the attitude of certain Western countries in assessing the economics and politics involved in sanctioning large-scale aid to India. He has also deprecated in strong words the current moves on the part of some Consortium members, including Britain, to cut aid to India because of new commitments for the country's defence build-up. Since we do not have a copy of *The Observer*, we publish below the comments of Mr. Little as reported in the daily Press:

"The proposed cut in aid may signify that the West has abandoned a policy of wholehearted support for India's Plan. It also means that the Plan programmes already lagging and beset by foreign exchange difficulties and hardly helped by the Chinese invasion will certainly have to be judged a failure.... While India has the strongest claims for aid, it has received the shabbiest treatment.... If the present moves succeed, India will end up by getting at least $500 million less than the sum she asked for ($5,500 million for the entire Plan), while Pakistan, in contrast, will get considerably more than $1,700 million originally asked for.... The planners' calculations of foreign exchange requirements for the Plan are lower than the exchange content of the programmes."

India is, indeed, grateful to Mr. Little for his well-reasoned case for increased aid to this country. It is as clear as daylight that India is of late being treated by the West less generously than Pakistan in so far as foreign assistance is concerned. In the case of Pakistan, well before the fourth year of its second Plan is due to begin (on 1st July next), the Aid-Pakistan Consortium has announced firm commitments of aid, whereas, though the third year of India's third Plan began two months ago, similar commitments have still not been made. Again, whatever assistance that Pakistan had sought has been promised, but the same aid-giving countries are said to be in no mood to concede India's request for a minimum of $1,256 million. If reports are true, the Consortium countries are planning to cut aid to India to a level substantially below the commitment of $1,070 million for the second year.

The proposed cut, if it materialises, will be all the more deplorable, considering that India is today confronted with the gigantic task of defending itself against Chinese aggression and of raising the living standards of its teeming millions. There may be some truth in the British argument that defence aid must react on economic aid, for not all defence hardware will come out of store or can be made by resources now grossly underemployed in Britain. "But the tragedy," as the London *Economist* has very aptly stressed, "would be if the hardly-won and still barely perceptible improvement in economic conditions in India were to be thrown away by India in pursuit of an unrealistic programme of rearmament, or by any meanness on the part of countries whose business interest (to say nothing of any wider duty) is wrapped up with an India capable of growing without massive aid as soon as possible." It is precisely this aspect which has been most forcefully brought out by Mr. Maurice Zinkin and Mrs. Barbara Ward in a pamphlet, *Why Help India?*, written under the auspices of the Overseas Development Institute. In this pamphlet, the two authors, we are told, have explained in simple language what the Indian Plans are and why this country needs economic aid.

If, in spite of this favourable climate of opinion, some of the Western countries continue to think of effecting a cut in aid to India, it means that the Indian officials who have gone abroad to persuade them to step up assistance have not succeeded in carrying their point. Surely, there is no exaggeration whatever in the note of warning struck by *The Observer* that the present political trends and pressures may become gravely inimical to the success of India's efforts and to the processes of democratic planning in general. Viewed thus, the latest assurance reported to have been given by Prof. Galbraith to the Union Finance Minister that the U.S. is determined not only to do its best on its own but also to use its influence with the other members of the Aid-India Consortium will be widely welcomed. It is to be devoutly hoped that the Consortium members will realise the gravity of the situation obtaining in India and announce, at their forthcoming Paris meeting, the grant of the credits asked for by India, a sizable portion of it being in the form of non-project or untied aid. Urgency demands that much of the assistance required be committed early in the year and the necessary formalities finished at the earliest. It is equally imperative that the terms of assistance should not be such as to bear heavily on the balance of payments in the immediate years ahead. India will be immensely grateful to the Governments of the West European countries if the latter decide to make available longer-term credits carrying lower interest charges.

FOOD: FACTS AND FANCIES

NEITHER Mr. G. L. Nanda, Deputy Chairman of the Planning Commission, nor Mr. S. K. Patil, Union Minister for Food and Agriculture, has sought to exaggerate the area of differences between them in so far as their views on the past performance of, and prospects for, agriculture are concerned. Both of them have had occasions to refer to these differences during the last week, but they have taken pains to avoid the impression that they are at loggerheads with each other. It is, of course, good that such a public clarification has been deemed necessary to set at rest the public doubt that the Commission and the Ministry are working at cross purposes. Nevertheless, it is still difficult to believe that they see eye to eye on all basic issues relating to agriculture, whether in the field of production or in that of distribution. According to Mr. Patil, the so-called differences are merely two ways of looking at things. He prefers to take an optimistic view of the agricultural situation, whereas, according to him, the Commission is, perhaps, unduly pessimistic. The difference between pessimism and optimism is certainly not one of degree but of kind; it cannot, therefore, be considered merely as two ways of looking at the same thing.

Mr. Patil's arguments find their echo in a note circulated by the Union Food Ministry, which seeks to "answer Press and political criticisms" about the slow pace of agricultural development programmes and the shortfalls in production. In a tone characterised by a high degree of complacency, the note points out that "some of the recent Press comments about sluggishness in agricultural production and rising food prices are apparently based on inadequate, and even mistaken, appreciation of the actual position." But adverse comments on lagging output and higher prices have been made not only by the Press, but by the Planning Commission itself. This truth will be borne out, if we juxtapose the Food Ministry's note with another note prepared by the Commission only about seven weeks ago and circulated among the members of the Informal Consultative Committee of Parliament. It may be recalled here that the Commission's note had expressed unmistakably its disappointment at the "very slow" rate of progress in agricultural production. The Commission's reading of the situation was virtually endorsed by a large section of M.Ps in Parliament as well as in the course of the debate on the demand for grants for the Food Ministry.

The criticism against the Food Ministry in any case does not seem to have been motivated by political or other non-economic considerations. During the first two years of the third Plan, agricultural production has remained stagnant, as against an annual increase of 6 per cent envisaged in the Plan. The trends of actual production of various commodities are too well known to need elaboration. In short, the total output of foodgrains, which was 79.6 million tons in 1960-61, fell to 78.5 million tons in 1961-62, the first year of the third Plan. There has been a small recovery during the 1962-63 season, but the total production, according to trade estimates, is still below 80 million tons. The production of India's staple foodgrain, namely, rice, has suffered a marked setback during the last two seasons consecutively. The demand, at the same time, has been going up steadily; this is due as much to the annual population increase of eight million as to the income elasticity of demand in the context of additions to purchasing power.

The stock argument of the Food Ministry is that, unlike industrial production, agricultural production cannot by its very nature show a continuous upward trend. The note has alluded, in this connection, to the fluctuations in agricultural production in such countries as the U.S., Canada and Australia. These comparisons are, however, misleading. In highly developed countries, the agricultural situation is quite different from what obtains in India. No doubt, weather plays a major role in agriculture anywhere in the world. But fluctuations in production in the advanced countries cannot be considered to have been solely caused by the vagaries of weather. In fact, but for stringent restrictions on acreage under cereals, prompted by the accumulation of surplus stocks as in the U.S., output would have gone up still further in some of the developed countries. It is equally untenable to draw any hasty conclusion from a comparison of trends of production in India with those in such foodgrains exporting countries as the U.S., Canada and Australia, without taking into account the phenomenal increase in productivity already attained in those countries. The *per-acre* yield of foodgrains in India, on the contrary, continues to be very low by any standard. There is thus scope for vastly expanding output in this country through increases in productivity—other things remaining constant, the factor of irrigation, by itself, can bring about a 33⅓ to 50 per cent increase in crop yields. It is only such higher productivity brought about by secure irrigation that can act as a shield against crop failure in some regions on account of drought. But it is precisely in this field that the Central and State Governments have bungled or performed badly. Their sins of omission and commission can by no means be slurred over by blaming it on Nature. The question is whether India has taken adequate measures to improve productivity. The answer cannot but be in the negative. For instance, there is, according to the Commission's own figures which, however, are open to question, a wide gap of as much as four million acres between the irrigation potential already created and its actual utilisation. The progress in respect of provision of fertilisers, improved seeds and credit, as also programmes for soil conservation, has been deplorably slow. Unless the tempo of these programmes is stepped up, adverse weather conditions will continue to have a disproportionately large impact on production and supply.

Although the scheme of guaranteed minimum prices, now covering rice, wheat and *jowar*, is bound to be beneficial in the long run, its importance gets diminished, when viewed against the current background of an upward trend in the prices of foodgrains. The extent of the present increase in foodgrain prices would not have been a source of much concern but for the fact that it reflects, in a way, India's drifting away from the goal of self-sufficiency. When the P.L. 480 Agreement was signed in 1960, hopes were held out that there would be no need for another agreement of this kind. This hope has been belied. Mr. Patil's air dash to the U.S. is meant mainly to examine the possibility of importing further quantities of rice under P.L. 480. Despite the Commission's initial hesitancy about okaying further imports of wheat, there might be no alternative to it, if, at a later date, the situation gets out of control. Mr. Patil lays stress on his desire to use imported rice for building up buffer stocks. His plan is to have buffer stocks of at least two million tons of rice, which will include some quantity procured from indigenous sources. That, of course, is a desirable objective in the circumstances. But it would be necessary to ensure that, apart from building up such stocks with the Government, the buffer stocks are managed judiciously. In this context, the President of the Federation of All-India Foodgrains Dealers' Association, Mr. Hasham Premji, has stated that even the present level of indigenous procurement by certain States has created artificial scarcity of rice. His criticism is that it would be unwise for the Government to continue the policy of imposing the grain levy and acquiring further stocks for building up buffer reserves, in view of "comfortable" stocks with the Government. If the stock position is comfortable, as claimed by the Food Ministry itself, there is no reason why the Government should not release supplies on a much larger scale and ease the market situation. Too late and too little would only mean that the Government's bungling extends to buffer stock operations as well.

MARKET GOSSIP

Conversion Loans

THE first stage of the Central Government's borrowing programme for the current fiscal year has just been completed. The total amount subscribed by tender of two maturing loans—that is, 3½ per cent 1963 and 3 per cent 1963-65—is Rs. 138.79 crores; Rs. 85.69 crores for 4 per cent 1969 loan and Rs. 53.10 crores for 4½ per cent 1986 loan. The list for conversion opened on the 8th inst. and closed on the 18th inst. It is not surprising that the conversion subscription to the 1969 loan has been larger than to the 1986 loan, though the rate of interest is lower. For the institutional investors in the private sector, especially banks, have preferred to hold near-dated securities, instead of locking up their funds in long-dateds. The conversion subscription to the 1986 loan might have been much less but for the support extended by the Reserve Bank, which, as is well known, held the major portion of the maturing securities, as well as by the Life Insurance Corporation.

The total subscription of Rs. 138.79 crores by way of conversion is no doubt quite large, but the response to the conversion offer as such cannot be considered "substantially good." For this figure is less than the actual amount of Rs. 174.23 crores due for repayment in the current year, comprising Rs. 58.06 crores in respect of 1963 loan and Rs. 116.17 crores in that of 1963-65 loan. Consequently, the Government is obliged to repay in cash a sizable sum of Rs. 35.44 crores (about Rs. 7 crores of 1963 loan and a little over Rs. 28 crores of 1963-65 loan), which represents more than 20 per cent of the maturing loans' combined outstanding of Rs. 174.23 crores. The ratio of repayment in cash of maturing securities last year, it will be recalled, was only 16 per cent, the actual conversion amount being Rs. 153.67 crores, as against the outstanding of Rs. 183.14 crores. The response to the conversion offer cannot also be considered "substantially good" because the conversion loans were on tap for full ten working days, whereas, last year, the list was open only for two days.

All this has been stated just to highlight the stringency in the money market when the conversion loans were on tap (8th to 18th May), with call rate standing at the high level of 5½-5¾ per cent, as against 4 per cent in the corresponding period last year. The coming six months, of course, constitute the slack season, but there is bound to be severe pressure on resources, what with the continued draft on the community's savings through the small savings drive, National Defence Fund contributions, the Compulsory Savings Deposit scheme and higher levels of indirect taxation which have enhanced the prices of several items of consumption. It is against this background that one has to assess the prospects for the Central Government cash loans that are expected to be announced sometime in July next. Taking into account the conversion subscription of Rs. 139 crores, there remains a balance of Rs. 254-255 crores which will have to be raised to complete the current year's borrowing programme (Rs. 393 crores) of the Centre, including about Rs. 100 crores to be raised on behalf of the State Governments. If this programme is to be fully successful, the Government may have to offer higher rates of interest. For, after all, has there not been an all-round increase in the cost of money?

Expansion of Private Refineries

A glimmer of realism can be discerned in the Planning Commission's thinking on the question of expansion of oil refining capacity during the third Plan period. It cannot, of course, be said that the Commission's thinking has crystallised in favour of permitting the expansion of private sector refineries, in order that the third Plan target of 17 million tonnes of refining capacity may be surely reached. But it would appear that the Commission considers it prudent to provide a cushion, in case the calculations in respect of establishment of refining capacity in the public sector go awry. Realisation of the need for a hedge against a *probable* shortfall has dawned on the Commission in the course of its study of the question whether, with the capacity already licensed or proposed in the public sector, it would be possible to achieve the third Plan target of 17 million tonnes, or whether it would be necessary to permit the expansion of refineries in the private sector. No firm conclusion has been reached by the Commission in this regard, nor any definite recommendation made to the Government. But the Commission, which is expected to frame its views in a month's time, seems to think that it would be advisable to take into account the possibility of the public sector not being able to reach the target as scheduled and to allow the private sector to step in the breach so that the third Plan target could be hit.

This is a commendably pragmatic approach which is in refreshing contrast to the obstinate insistence of the Ministry concerned that expansion of capacity should be confined to the public sector whether or not the third Plan target is reached. Unless the Ministry relents from this stand, the Planning Commission's suggestion would meet with stiff opposition. Latest reports from New Delhi do not reflect any change of heart on the part of the Ministry. In fact, a news despatch from Delhi, which is presumably inspired by the Ministry itself, seeks to convey the impression that the public sector can fulfil its target as scheduled and that there is no need to permit private sector refineries to expand. The facts and arguments on which this claim is based are as follows: By the end of the current Plan period a total refining capacity of 9.75 million tonnes would have been built up in the public sector. The breakdown figures are: Barauni 3 million tonnes, Koyali 3 million tonnes, Nunmati 1.25 million tonnes, Cochin refinery 2.5 million tonnes. The capacity of the private sector oil companies at the end of the Plan would be 7.7 million tonnes, including a minor expansion of 300,000 tonnes by Caltex. The total refining capacity would thus aggregate 17.45 million tonnes, which is 0.45 million tonnes more than the Plan target. The conclusion is obvious. There is no need, according to the Ministry, for permitting the expansion of private sector refineries.

This kind of juggling with figures on paper would have carried conviction had the past record of the public sector in the matter of refinery construction been outstanding. But, unfortunately, it is not. One has only to turn over the pages of the report of the Estimates Committee, which cannot be accused of being prejudiced against the public sector, on the Indian Refineries Ltd., to see how rigidly(!) the various schedules for completion of work are adhered to. In fact, the schedules for completion of work in respect of Barauni have been shifted so often that the fixation of schedules has now acquired a measure of notoriety. The Estimates Committee was constrained to urge the completion of work in accordance with the latest schedule and to warn that delays would invariably increase the estimated cost of the project and put off production.

It is noteworthy that, of the four public sector refineries, only Nunmati has been fully commissioned. The first stage of the Barauni refinery is expected to be completed by the fourth quarter of 1963. The foundation-stone for the Koyali refinery was laid only a few days ago, while the Cochin refinery has not advanced beyond the signing of an agreement between the three contracting parties. Can anyone, with the slightest knowledge of the complexities and uncertainties involved in the construction and commissioning of an oil refinery, assert that an additional capacity of 8.5 million tonnes would be built and commissioned in just three years' time?

The question is whether it is safe to stake the achievement of the Plan target on the performance of the public sector, which is beset with many difficulties and uncertainties. If the private sector refineries are given permission, they can expand their capacity quicker and at much lower cost. Esso has made it known that it can expand its capacity from the present 2.5 million tonnes to 3.5 million tonnes by 1966. Similar expansion will not be difficult for other refineries too. And these will not involve any additional foreign exchange outlay, for the companies would themselves find the requisite foreign exchange. But it should be remembered that they should be given sufficient time to plan their expansion programmes. It is, therefore, necessary for the Government to make up its mind and to give permission for expansion before it is too late.

It is not confidence in the public sector's ability to finish its job according to schedule alone that is responsible for the Oil Ministry's refusal to permit expansion of private sector refineries. The apprehension that the private sector companies, if allowed to expand capacity, would capture the market earmarked for the public sector units, especially in South India and the Deccan, is also a contributory factor. The following despatch (dated 21st May 1963) of our Special Correspondent at New Delhi is revealing in this context:

"An Oil Ministry Officer, giving out the mind of the Ministry's policy-makers, confided that the private sector refineries could not be permitted to expand for the very same reason as has been advanced for allowing it—the delay in the setting up of the public sector refineries. The clear motive behind this stand is that, unless the public sector refineries come up and distribution of their products effectively arranged in their respective zones, the private sector refineries should not be permitted to invade those areas with their products from the expanded capacity.

"Permission to allow the two private sector refineries in Bombay to expand, according to this mode of thinking, will invariably open up the so far notional virgin market in South India and the Deccan. These markets, for the time being, proved somewhat costlier than the markets around Bombay area for the private sector refineries. Such a policy is to be pursued to safeguard the future interests of the public sector refinery at Cochin. The Visakhapatnam refinery will not be given permission to expand for a similar reason, so that it is prevented from eating into the areas reserved for the products of the Barauni refinery.

"The Oil Ministry does not, however, believe in point-blank refusal. Some of its spokesmen resort to unabashed prevarication. They would be quite prepared to concede the demand for expansion if the private sector refineries in Bombay or Visakhapatnam are able to prove that the increase in the demand for petroleum products in their respective areas corresponds to the enlarged capacity asked for. Otherwise, they say, the country will be burdened with unsaleable surplus motor spirit. They also aver that the pattern of production in the private sector refineries does not promise any enlargement of the capacity in respect of items which are in short supply these days."

Such fears are unwarranted, for the latest estimate of demand for petroleum products in 1966 is of the order of 20 million tonnes or so. There is, in any case, no need to be concerned over excess capacity in oil refining, for, with the rising defence demands for oil products, the 17 million tonnes capacity envisaged in the third Plan would definitely prove to be inadequate. Even in the unlikely event of a capacity surplus being created, such a surplus would not be half as dangerous as a deficit in refining capacity. It would be patently wiser to err on the side of a surplus than to tread dangerously on the verge of a shortage in respect of such a strategic material as oil—strategic to both defence and development.

Pepper Exports

Pepper constitutes one of India's important traditional export commodities. The total foreign exchange earnings secured by this commodity touched a record of Rs. 8.07 crores in 1961-62, but there was a sharp fall in exports to Rs. 6.57 crores during the year ended March 1963. The setback in exports gives a clue to the growing competition from other countries, particularly Sarawak and Indonesia. The decline was particularly marked in the offtake by the U.S., traditionally the largest market. In 1962-63, U.S. purchases of black pepper amounted to only Rs. 200 lakhs, which compare unfavourably with Rs. 327 lakhs in 1961-62. Exports to Soviet Russia also fell by Rs. 10 lakhs to Rs. 93 lakhs. More or less similar trends were in evidence in exports to the other major markets as well. What is worse, the unit value of exports of this commodity has fallen considerably. In fact, the decline, in quantitative terms, is practically negligible, the actual quantity exported being 2,086 tonnes in 1962-63, as against 2,162 in 1961-62. Thus, although the quantity of exports was almost maintained last year, the price received for Indian pepper has fallen sharply.

Viewed against this background, the call of Mr. Vallabhdas V. Mariwala, President of the Pepper and Ginger Merchants' Association, to all concerned to make renewed efforts to step up exports has come not a day too soon. Addressing the annual meeting of the Association in Bombay on Tuesday, Mr. Mariwala drew particular attention to the fact that overseas competition in pepper was gaining further momentum and that Indian shippers were, therefore, forced to quote highly competitive rates which did not leave a fair margin of profits. In order to arrest the decline in exports, he made a timely suggestion. He urged the Ministry of International Trade to introduce an export promotion incentive scheme for pepper designed to link its shipments to entitlements for imports of some of the other spices like cloves and cinnamon that are being imported. His idea is to ensure that the high premium received on imports of spices should make exports of pepper a more remunerative proposition. Such link schemes have already been tried with some degree of success and, therefore, Mr. Mariwala's plea deserves to be given serious thought by the Central Government.

The cause of export promotion is served to some extent by the hedge facilities offered for pepper in the forward markets at Cochin and Bombay. Mr. Mariwala is of the view that hedge facilities provide protection to exporters of pepper. There is, however, a snag here. For, if a section of trade indulges in unhealthy speculation leading to violent fluctuations in prices, this may adversely affect exports. It was only appropriate, therefore, that Mr. A. S. Naik, Chairman of the Forward Markets Commission, who presided over the meeting, should have reminded the trade of its responsibilities to ensure normal functioning of forward markets. He advised the trade itself to fix ceiling and floor prices as a regulatory measure. This would go some way towards removing violent swings in prices, besides giving the overseas buyers a rough idea about the price range. While control on unbridled speculation is quite essential, price stability cannot be brought about without a steady increase in production of pepper, a field which is beyond the control of trade. The recent trends in output in India have not been quite satisfactory. The current season's output of pepper is estimated lower by about 8 million lbs. at 59 million lbs., as compared with the last season. One of the possible ways of increasing output is to encourage the cultivation of pepper on an organised plantation scale, as is the case in Indonesia.

Synthetic Rubber Plant

The Rs. 20-crore synthetic rubber plant, put up at Bareilly (U.P.) by Synthetics and Chemicals Ltd., has just gone into production. This is the first plant of its kind in the country. It is now working at the rate of an annual capacity of 20,000 tons, which will be stepped up to 30,000 tons within two months. Disclosing this at a Press Conference in Bombay, Mr. Tulsidas Kilachand, Chairman of the Company, pointed out that, when in full production, the plant would lead to saving in foreign exchange to the tune of Rs. 10 crores annually. There is no exaggeration whatever in this claim, considering the steady expansion of demand for rubber in the country in the various rubber goods industries, the important among them being tyres and tubes. The domestic production of natural rubber is far short of this demand. As against a total rubber consumption of 63,848 tonnes in 1962, for instance, the domestic output of natural rubber was only 31,357 tonnes, or less than 50 per cent of requirements. Consequently, imports of natural rubber alone aggregated 23,394 tonnes last year, those of synthetic rubber 10,400 tonnes and reclaimed rubber about 6,500 tonnes. It is estimated by the Planning Commission's Working Group on Rubber Plantation Industry that the demand for rubber will increase further to 110,000 tons by the end of the third Plan, when the production of natural rubber in India will be only

45,000 tons, leaving a gap of 65,000 tons. A major part of this gap will be filled by synthetic rubber.

An important feature of the new plant is that it is based on raw materials, most of which are indigenously available. The basic raw material is alcohol, which is available in large quantities in U.P. The other major raw material, benzene, is being supplied by the Hindustan Steel Ltd. from its steel plants. Incorporated in the new chemical complex are units for conversion of alcohol into intermediates, namely, styrene monomer and butadiene which will be processed further for the manufacture of synthetic rubber and latices.

The successful erection and commissioning of the plant is not a little due to the efforts of the collaborating U.S. concern, the Firestone Tire and Rubber Company of Ohio. Firestone, which has extended technical and financial collaboration to the Bareilly plant, is an international company with over 70 factories in various countries and is the largest producer of synthetic rubber in the world. A part of the production of synthetic rubber from the Bareilly plant will be taken up by the Firestone tyre plants in India itself. About 50 per cent of the total output of the new plant will be consumed by the tyre industry in India, and the rest by a wide range of other rubber goods industries, such as conveyor belting, hose, cables, flooring, elastomeric foams, latex emulsion paints and shoe soling. In order to render technical service and guidance to consumers, the Company has already set up a Rs. 10-lakh technical laboratory at Worli in Bombay.

World Silver

Silver at London has spurted in the past fortnight by 1⅛d. to touch a peak of 110⅜d. In New York, the metal has risen by 0.4 cent to 128.40 cents, the highest level for forty years. At this time last year, it may be noted, the quotation was no more than 101.50 cents. The sharp rise of 26.90 cents in one year is not altogether unexpected. In fact, the total absence of silver sales by China this year has imparted considerable strength to the market and it was argued before that only a resumption of Chinese sales could prevent further rise in prices. As there has been no such resumption, silver prices have firmed up to record levels.

The current free market price of 128.40 cents per ounce of silver in the U.S. is dangerously close to the level (129.29 cents) at which silver certificates can be redeemed at the U.S. Treasury. It is unlikely that the price would rise beyond this level, if the Silver Bill, currently under the consideration of the U.S. Senate, comes into force. This at any rate is the opinion of the Senate Banking Committee. In a report published the other day, the Committee has urged the Senate to approve the Bill. The Bill has already been passed by the House of Representatives (Lower House). The Bill, if passed into law, would, according to the Committee, "take the Government out of the silver market" and "would permit a free silver market, not restricted by prohibitive transfer taxes, and neither supported by Government purchases (at least for many years) nor depressed by Government sales. The Committee's argument is as follows:

"The fact that the holders of $1,800 million of silver certificates now in circulation could present them at the Treasury and demand silver in exchange at the monetary value of $1.29 plus 0.29 cents an ounce (established by the Act of 18th January 1837, which established the weight and alloy of the dollar, so as to call for 371.25 grains of fine or pure silver in a standard silver dollar) would keep the market price from rising much above that figure. To that extent, the silver market would not be completely free. But there is no way to avoid this except by dishonouring the Government's pledge to exchange silver certificates for silver."

One result of the legislation, apart from augmenting overall supplies of silver, would be to facilitate the establishment of an effective silver futures market in New York. Another would be to increase the part of the U.S. gold stock required to back the internal note issue. It is estimated that about $450 million are required to replace silver certificates entirely by Federal Reserve notes. It is expected, however, that the change would not be immediate, but spread over several years.

Mahindras' Expansion Plans

The spirit to take up readily the challenge of exploiting fully the opportunities presented by planned economic development has not been lacking among industrialists in India. Any delay in translating the spirit into action is known to have been on account of the Government's officious attitude. Nonetheless, the truth is that both Government and industrialists do mean business. And that is why one finds, practically day in and day out, one or other new industrial project taking birth somewhere in this rapidly developing underdeveloped economy. The existing enterprises, too, have been fast expanding. Mahindra and Mahindra Ltd. is one of them. Famous for having made in India the well-known Willys jeeps and trucks, this Company has steadily expanded into the engineering field through its seven associate companies. It has now cut the ice deeper and drawn up big schemes, some of which have called for floating separate public limited companies. They include the ambitious tractor and alloy steel projects, expansion of trailer production, and manufacture of switchgear, tools and gauges. These projects had been in the air for quite some time and briefly outlined in the latest Directors' report for the year ended 31st October 1962. It is now exclusively gathered that the Company has finalised these schemes.

The tractor project envisages the manufacture annually of 3,500 McCormick International model B-275, 35 h.p. diesel wheel tractors in financial collaboration with the International Harvester Company of Chicago, Illinois (U.S.), and technical collaboration with its British subsidiary. Its cost is estimated at roughly Rs. 2.25 crores, including the foreign exchange component of Rs. 95 lakhs, being the cost of capital equipment. Besides the outlay on plant and machinery, a minimum of Rs. 25 lakhs will be expended on indigenous machine tools. Land and buildings and services are estimated to cost Rs. 40 lakhs. The foreign exchange cost of the project is to be met entirely from assistance of $2 million by the American firm in the form of equity participation up to Rs. 25.50 lakhs and a loan of Rs. 69.50 lakhs. A new company, International Tractor Company of India Ltd., with an authorised capital of Rs. 4 crores in equity shares of Rs. 10 each, has been registered to operate the project. It has been authorised to issue capital of Rs. 1 crore, but the Company has submitted to the Controller of Capital Issues a revised application for Rs. 1.50 crore. Mahindra and Mahindra Ltd. and Voltas Ltd., which have together promoted this new Company, will take up shares worth Rs. 25.50 lakhs each. The share of the promoters, directors and their associates in the capital will be Rs. 12.49 lakhs. Raising this amount is the responsibility of Mahindra and Mahindra Ltd., and the directors of the Company are examining ways and means of associating its shareholders with subscribing the amount so that they can participate in the new venture. The balance amount of Rs. 60.01 lakhs will be offered for public subscription towards the end of this year. The factory will be at Kandivli in Bombay. The collaborators have already drawn specifications for the plant and equipment and supplied the relevant technical data. Import licence for the capital equipment has been received and orders have been placed accordingly. Production will be phased over three years. Initial production will be 50 per cent, and efforts are being made to have it as high as 70 per cent. Mahindra and Mahindra will act as the Secretaries and Treasurers for the new Company and Voltas as the sole distributors.

Twenty-five thousand tonnes of steel ingot, or 18,000 tons of finished bars, will be manufactured annually by Mahindra Ugine Steel Company Ltd., which is a new company formed to take up the alloy steel project. The name of the Company is derived from Mahindra and Mahindra and Societe D'Electro-Chimie D'Electro-Metallurgie et des Acieries Electriques D'Ugine (Ugine), which is providing the technical collaboration. The outlay on the project will be Rs. 6.50 crores, of which Rs. 2.80 crores will be in foreign exchange to be procured by way of loans from the I.F.C. (Washington) and the I.C.I.C.I., besides equity participation by the former. The Industrial Finance Corporation of India is expected to advance a rupee loan. The Company will issue this year capital of Rs. 3 crores. The plant, which will be set up at Khapoli, is expected to be on stream by the end of 1965.

Mahindra Owen Ltd., an associate Company of Mahindra and Mahindra Ltd., is already manufacturing trailers at its factory at Pimpri in collaboration with Rubery Owen and Co. Ltd., of the U.K. which is holding 49 per cent of its capital. Initially, it made only slow speed trailers. It is increasingly engaged now in the production of high speed trailers, that is, semi-trailers for trucks and oil tankers. It has been licensed to double its production, and its turnover for the current year is expected to rise to Rs. 90 lakhs from Rs. 79.97 lakhs for the year ended 31st October 1962. It has issued additional capital of Rs. 28 lakhs. The British collaborating firm is to supply new equipment worth over £100,000 over the next two years.

Under the switchgear project, it is proposed to manufacture automatic current voltage regulators, current limitors, contactors and automatic star-delta starters in collaboration with Van Wyk and Visser of Geldermalsen, Holland. The plant will be at Pimpri and will be commissioned in March, 1964. A new company, Mahindra Van Wyk and Visser Ltd., is to be formed to take up the project. Its authorised and paid-up capital will be Rs. 30 lakhs and Rs. 12 lakhs, respectively. The Dutch firm will subscribe 20 per cent of the capital and will have the right to raise its share later to 49 per cent, while Mahindra and Mahindra will be the other participant. Although a very large part of the machinery and materials to be used in the project will be indigenous, the foreign firm has been allowed a share in the capital because of its technical know-how and research development.

Mahindra Waddington Tools Ltd., to be formed with 50 per cent financial participation by Waddington Tools Ltd., U.K., will manufacture and also design all types of tools and gauges at its factory at Kandivli, which is expected to be ready by the end of 1964. Since production of tools is highly skilled, the Company will start with a paid-up capital of Rs. 6 lakhs, out of Rs. 50 lakhs authorised, and raise it to Rs. 20 lakhs subsequently, after the collaborating firm has trained the Indian personnel. The British firm will associate two of its tool designers with the project.

In addition to the above projects, Mahindra and Mahindra Ltd. has some other schemes under consideration. Meanwhile, it has been allowed to raise the production capacity of jeeps from 5,500 to 10,000 units and to increase production of trucks to 2,500 units per annum. The new developmental projects and the increased capacity of its present lines of production have now placed the Company in a rather enviable position.

PUNJAB NATIONAL BANK

LIQUIDITY POSITION BETTER

DURING the calendar year 1962, the Punjab National Bank Ltd. (General Manager: Mr. R. L. Tuli, New Delhi) has made further all-round progress. Two outstanding features of the progress made by the Bank are sizable growth in deposits from Rs. 150.68 crores to Rs. 167.52 crores and further improvement in the liquidity ratio from 45.8 per cent to 47.4 per cent. Notwithstanding this conservative policy of keeping a very substantial portion of deposits in investments and cash, the Bank's gross income during the year has increased from Rs. 9.16 crores to Rs. 10.30 crores. The whole of the increase in income has come from banking business proper, as earnings from other sources have actually declined from Rs. 20.85 lakhs to Rs. 18.66 lakhs.

Profit for the year, however, is lower at Rs. 114.43 lakhs, as compared with Rs. 118.40 lakhs for the previous year, due to the higher cost of deposits and staff expenses as well as increased operational expenses. While the total cost of deposits and borrowings, in terms of interest paid, has increased from Rs. 371.45 lakhs to Rs. 426.89 lakhs, the burden of deposit insurance scheme alone is estimated at Rs. 8 lakhs. Staff expenses have gone up, following the implementation of the Desai Award, by Rs. 48.16 lakhs to Rs. 375.65 lakhs, including the gratuity provision which has been raised from Rs. 12.28 lakhs to Rs. 15.64 lakhs. Other expenses show an increase of about Rs. 12 lakhs to Rs. 95.33 lakhs. Depreciation repairs have claimed a little more at Rs. 17.84 lakhs, as compared with Rs. 14.71 lakhs a year before. The profit is arrived at after meeting all the expenses and providing for depreciation and taxation; the tax liability is again not disclosed.

As the profit is lower, the transfer to reserve fund has been reduced by Rs. 20 lakhs to Rs. 25 lakhs, at which level the fund accounts for roughly 22 per cent of the profit, that is, 2 per cent more than the amount the Bank is obliged to appropriate. A sum of Rs. 60,000 is taken to the development rebate reserve, as against nothing a year before. Provision for charity and donations is higher by Rs. 3 lakhs at Rs. 4 lakhs. The dividend on the 10-rupee shares (including the 10 per cent interim) has been maintained at 20 per cent per annum, subject to tax. However, the aggregate distribution to shareholders by way of dividend is more than in the previous year, being Rs. 40 lakhs, as compared with Rs. 28.75 lakhs. For the 750,000 new shares which were issued at a premium of one rupee in September 1961 have become eligible for the full year's dividend for 1962, as against only three months in 1961.

The table below gives a synoptical view of the growth of the Bank in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Interest and discount earned	836.63	732.49	697.12	629.86
Commission, exchange and brokerage	174.85	162.85	147.87	107.91
Other income	18.66	20.85	26.17	60.28
Interest paid	426.89	371.45	351.38	337.31
Staff expenses	375.65	327.49	305.75	281.97
Other expenses	95.33	83.91	81.21	77.85
Depreciation and repairs	17.84	14.71	14.78	12.72
Provision for taxation	N.D.	N.D.	53.00	17.50
Net profit	114.43	118.40	65.04	70.20
Appropriations—				
To reserve fund	25.00	45.00	11.00	17.00
To development rebate reserve	0.60	..	..	3.50
Provision for charity and donations	4.00	1.00	1.00	1.00
Bonus to staff	40.00	27.50	27.00	25.00
Dividend	40.00 (20%)*	28.75 (20%)*	25.00 (20%)*	25.00 (20%)*
Carry forward	15.21	10.38	4.23	3.19

	As at 31st December			
	1962	1961	1960	1959
Capital	199.64	199.37	125.00	125.00
Reserves	236.56	210.94	158.50	147.50
Deposits	167,52.13	150,68.20	139,48.47	141,15.86
Borrowings from other banks	62.94	32.71	473.67	315.60
Advances	99,54.36	93,21.82	93,53.28	78,51.04
Investments	55,88.10	45,53.50	45,80.33	66,26.94
Cash	23,67.73	23,68.97	12,75.29	13,32.95
Balance sheet total	223,95.98	205,11.99	191,52.13	179,55.72
Ratio to deposits of—	%	%	%	%
Advances	58.4	61.9	67.0	51.4
Investments	33.3	30.1	29.4	44.7
Cash	14.1	15.7	9.1	9.4

* Subject to deduction of tax.

Among the different types of deposits, savings deposits have shown the maximum growth, from Rs. 40.89 crores to Rs. 47.44 crores, followed by fixed deposits which have expanded from Rs. 71.59 crores to Rs. 78.48 crores and current and contingency deposits which have gone up from Rs. 37.73 crores to Rs. 41.16 crores. Notwithstanding this improved deposits position, the Bank has closed the year with higher borrowings from other banks, amounting to Rs. 62.94 lakhs, as against Rs. 32.71 lakhs at the end of the previous year. The improvement in the liquidity ratio from 45.8 per cent to 47.4 per cent, as noted at the outset, has been due entirely to the sharp increase in investments from Rs. 45.53 crores to Rs. 55.88 crores, as cash balances at Rs. 23.68 crores have been a shade lower over the year. The credit ratio has dropped once again sizably from 61.9 per cent to 53.4 per cent, though advances have increased over the year by Rs. 6.32 crores to Rs. 99.54 crores. The "own funds" of the Bank have increased from Rs. 410.31 lakhs to Rs. 436.20 lakhs, but, as a ratio to deposits, they have moved down slightly from 2.7 per cent to 2.6 per cent.

PERSPECTIVES & PROJECTIONS

By Mercator

After Amroha

THOUGH the Congress Party got a consolation prize in the Jaunpur by-election to the Lok Sabha, the resounding defeats at Amroha and Farrukhabad will have far-reaching significance to its political prestige over the entire country. The satisfaction which Congressmen derived from the West Bengal by-elections, where they retained four seats and wrested one from the Communists, is bound to give place to anxiety. In spite of six other Independent candidates who divided the anti-Congress vote in Amroha, Acharya Kripalani secured an absolute majority of the total votes polled in the constituency, where the entire Congress election machinery was concentrated to secure a prestige victory. The casualty is Hafiz Mohammed Ibrahim, Union Minister for Irrigation and Power, whose future hangs in the balance; obviously it would be most unwise for him to cling to his present office by virtue of his seat in the Rajya Sabha—after he had sought and been denied a popular vote.

This, however, is no more than a personal misfortune; though he was important for giving proof of Congress secularism, he is not indispensable to the Government and his candidature at Amroha was a negation of this secularism. In the event, Mr. Kripalani's victory is a more convincing proof of the electorate's secularism, which is more important to national unity than the professions of the Congress Party which contradicted its practice. He had to contend against three other Muslim candidates besides the Union Minister and it is remarkable that in a constituency in which Muslims constituted a third of the electorate, Mr. Kripalani got a decisive verdict. An outsider thus winning against a rival belonging to the area has upset some pet theories on election tactics; and if, as a result, the Congress Party becomes less addicted to exploiting communal forces for its ends, this reverse will serve a good purpose.

The Lok Sabha will be livelier for the addition of Mr. Kripalani and Dr. Lohia, though the latter is sometimes unpredictable and may often cause commotion. The Acharya will have to make do without his *bete noire*, Mr. Krishna Menon, though his effectiveness need not suffer. That the Jan Sangh helped both candidates in achieving success while losing in Jaunpur is a tribute both to its political maturity and the declining significance of the old party lines in the changing context. If the opposition parties (except the Communists) can learn the lessons of the recent by-elections, they could evolve a common front on a minimum programme in fighting the other by-elections. But these may be wild hopes, the temperaments of leaders being what they are.

Twice defeated Dr. Keskar's political future is in uncertainty, though politicians have surprising powers of recuperation and the Congress Party has ingenious ways of rewarding its less fortunate members. There will be speculation whether, if Hafiz Mohammed Ibrahim quits the Union Cabinet, there will not be larger Government reshuffle, long expected and desired by the public. Perhaps other by-elections will be watched and the results of the Serajuddin inquiry awaited; the monsoon session of Parliament is something to look forward to.

Reform by Definition

The Union Government has taken more than a year to react to the Supreme Court's judgment on the Kerala Agrarian Relations Act which declared that *ryotwari* land did not come within the definition of "estate" in Article 31A(2) of the Constitution. The Constitution (Seventeenth) Amendment Bill, introduced in Parliament before it adjourned, now seeks to widen that definition to include *ryotwari* land and validate more than a hundred State enactments which may be affected by the judgment. When this Article was first introduced following the Patna judgment invalidating *zamindari* legislation, there were understandable reasons because the Government's declared policy of abolishing intermediary rights in land was generally recognised to be necessary and that it should not be defeated by the guarantees of equality before the law, right to hold property and get fair compensation for acquisition. Even the amendment made in 1955 did not change the basic purpose of this Article; definition of "estates" had acquired a special legal meaning in most States before the Constitution came into being and that special meaning was recognised by the two amendments as applicable to the cases covered by the Article. Whatever was locally recognised by law or judicial definition at that time as "estate" was accordingly accepted as such since it fulfilled the main object of the Government's social policy.

The Supreme Court's judgment accordingly found that *ryotwari* land in the former Madras State, which later went to Kerala, was not governed by Article 31A. That verdict, however, affected land ceiling legislation in all States, including Madras, where *ryotwari* lands were involved; in such cases, the Court held that there should be provisions for acquisition which are not discriminatory and provide fair compensation. It is arguable whether ceilings are today as important as they were once regarded to be either for social reform or production. But even if this reform is imperative the best way of achieving it is to lay down that Article 31A will apply to *ryotwari* land in future as to "estates." But to assert today that the latter includes the former and shall always be deemed to have so included is to make nonsense of language and to repudiate the earlier stand. If that was the legal position contemplated earlier, then "estate" should have been defined as rights pertaining to all agricultural land, which was not the case when the local equivalent of "estate" in the then existing law relating to land tenures was specifically recognised as the thing intended; sub-clause (2) (b) of Article 31A was even more specific when it referred to, by way of illustration, "rights vesting in a proprietor, sub-proprietor, under-proprietor, tenure-holder or *other intermediary*" meaning that only intermediaries were intended. *Ryotwari* landholders are assuredly not of this kind.

The Government and Parliament will have to decide what public policy should be in this matter and discover whether public opinion will favour it. But the manner of achieving reform must not be open to ridicule. All land cannot be classified as "estate" merely because that definition would protect legislation against challenge in the courts. At the same time, those who criticise the proposed amendment should be clear in their minds about their attitude to further reform of land laws which it is expected to facilitate; once the need is accepted, then the amendment should also be accepted, after it is suitably rephrased.

Bringing up I.M.F.

While the London *Economist* is guessing who among its choices will be finally selected to head the International Monetary Fund in the place of the late Mr. Jacobsson, Mr. Harold Wilson, Britain's prospective Prime Minister, has been airing aloud his thoughts on the Fund's future role. The London *Times* found it important enough to take editorial notice of Mr. Wilson's proposals but came up with a cheap jibe about paper and gold to say that the Fund cannot create credit in the way in which a bank can do within a country. The Wilson plan is in some respects similar to the Stamp plan for issue of gold certificates and making them available to underdeveloped countries; but Mr. Stamp himself, undoubtedly wiser after three years of discussion of various plans, has written to *The Times* to say that the world is not yet ready for a radical reform, giving the Fund the right to create money and that there is no proved shortage of international liquidity to make it urgent. He would like Mr. Wilson to be more practical and not seek a world economic conference—which may recommend something to which the key nations, who have to accept the change, will demur; nor does he like conferring full central banking powers on the I.M.F. which the leading member-countries are bound to resist.

Giving what he thinks is a practical turn to the Wilson plan, Mr. Stamp suggests that the Fund should be able to issue gold certificates which the member-countries will, by an international undertaking, agree to honour so long as they are equivalent to gold. This can provide the method by which countries in surplus can lend their surpluses to others who are short of reserves, just in the same way as the World Bank issues bonds for lending in various currencies. Put this way, the proposal looks less revolutionary; considering that even Mr. Jacobsson, who was by no means a radical in matters of international finance, could not make much headway against Continental banking conservatism in pushing through his scheme of borrowing scarce currencies under the Fund's existing powers, Mr. Stamp's caution is understandable. The trouble about radical proposals is that the conservatives, whose support is vital for success, become at once suspicious and refuse to budge from existing positions, however anomalous these may be. Mr. James Callaghan, Labour's shadow Chancellor, has been probing the minds of the U.S. Administration on the same subject and, though Prof. Triffin, author of another plan for the Fund, has close links with the Administration, even U.S. bankers are an unduly suspicious lot. It would require someone with the stature and tact of Mr. Eugene Black to shape the Fund's future policy in such a way that the existing mechanism is made to work better without arousing fears that the Fund may extend its powers of control over national treasury and banking authorities.

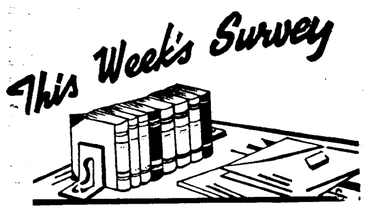
This World

Reports from Tokyo say that a Japanese radio manufacturing firm has accused an Italian company of "pirating" one of its designs and selling the product in Italy 40 per cent below the imported price of the Japanese product! Japan flattered others in the past by imitation; why not let others flatter it in return?

RURAL WATER SUPPLY

A comprehensive survey of the rural water supply programme is to be carried out all over the country with the object of speeding up its implementation. The work has already been taken up in ten States, namely, U.P., Andhra Pradesh, Assam, Kerala, Madhya Pradesh, Mysore, Orissa, the Punjab, Rajasthan and West Bengal. A special investigation division will also be set up under the scheme in every State to carry out the survey. The entire cost of the scheme will be borne by the Centre. In the first six months, the expert teams will make a rapid survey of the States' water projects with particular emphasis on the difficult areas where water scarcity is endemic. They will report on the possible alternative sources and make a prelliminary assessment of the costs. On their recommendations, priorities will be allotted and immediate programme formulated. The total provision for rural water supply under various heads in the third Plan is Rs. 67 crores. The aim is to provide a minimum of water to all the villages by the end of the period. With this end in view, the investigation divisions will collect statistical data on population in each area and report on whether it is adequately covered. They will make a detailed and exact survey of the present needs of the States, their future requirements and the existing facilities and will make recommendations for necessary improvements. The teams will prepare plans and estimates and will continue to work as advanced units ahead of the construction programme under the third Plan period and longer, if necessary. Bihar, Gujarat, Madras and Jammu and Kashmir have also submitted proposals for setting up similar teams.

The Reserve Bank of India has given a licence to the Bank of America, the world's biggest bank, to do banking business in India. The Bank has plans to open a branch at Bombay in the near future for servicing, in co-operation with other banks, the disbursement of foreign currency granted by such agencies as the U.S. Agency for International Department, Ex-Imp. Bank and the World Bank to the Indian Government and the private sector.



ALLAHABAD BANK LIMITED
Established 1865
(Affiliated to The Chartered Bank)
REGISTERED OFFICE:
14, INDIA EXCHANGE PLACE,
CALCUTTA-1

Safe Deposit Lockers are available on moderate terms at the following Offices:—

Ahmedabad, Aligarh, Allahabad, Allahabad City, Allahabad—Katra, Ambala Cantt., Auraiya, Bangalore, Bareilly, Bareilly—Shiamganj, Bhagalpur, Bhopal, Bombay, Calcutta, Calcutta—College St. Market, Calcutta—Shambazar, Calcutta—South, Chandigarh, Dehra Dun, Faizabad, Firozabad, Ghaziabad, Hyderabad Deccan, Jabalpur—Civil Lines, Jhansi, Jullundur City, Jullundur—Civil Lines, Kalpi, Kanpur, Lucknow, Lucknow City, Meerut, Meerut City, Modinagar, Moradabad, Mussoorie, Nagpur, Nagpur—Gandhi Bag, Naini Tal, New Delhi—Karol Bagh, Orai, Patna, Patna University.

CANE PRICES RAISED

SOON after we went to press last week, Mr. S. K. Patil, Union Minister for Food and Agriculture, announced, on the 17th inst. at New Delhi, the Government's decision to raise the minimum prices for cane payable by sugar mills under the new recovery linking formula in respect of the ensuing (1963-64) season. The increase has been effected not by revising the prices as such but by shifting the basis of payment. Thus, the minimum price of Re. 1.62 per maund will have to be paid for cane with a recovery of 9.4 per cent, instead of 9.8 per cent as at present. The discount or premium allowed on this price will, however, continue to be at the rate of 1.5 nP for every 0.1 per cent fall or rise in the average certified recovery of the factory for a prescribed duration during the current season. This would mean that the price of cane with 9 per cent recovery or less will be Re. 1.56 per maund (in place of Re. 1.50), which is the irreducible minimum.

The above announcement has certainly come as a surprise. No indication whatever of any increase in cane prices was given by Mr. Patil when he addressed the annual meeting of the Indian Sugar Mills Association just two days earlier (the 15th inst.), though the retiring President of the Association had openly advocated an upward revision in cane prices. The surprise apart, it is regrettable that Mr. Patil has yielded to the pressure tactics, among others, of politicians, especially in the States of Uttar Pradesh and Bihar, including the Chief Ministers of the two States. The consolation, however, is that Mr. Patil has not effected a steeper rise than the average of six nP per maund of cane. Even so, since the price of Re. 1.62 per maund (to which level it was raised from Re. 1.44 in 1959-60) is linked to a lower recovery of just 9.4 per cent and not the usual basis of 10 per cent that had been regarded as the norm for a long time, the minimum price of cane with 10 per cent recovery in respect of the coming season will work out to Re. 1.71 per maund, a rise of nine nP over the price fixed for the seasons 1959-60 to 1961-62 and of 27 nP as compared with the price of Re. 1.44 prior to 1959-60.

With the latest increase in cane prices, the additional cost incidence per maund of sugar produced in the next season will be 60 nP, on top of the first incidence of 24 nP imposed in the current season under the new formula. Still Mr. Patil does not expect that sugar prices would on this account rise, as compared with the present prices, though he has qualified his statement by adding the proviso "given a normal season." Indeed, Mr. Patil feels that there may be a fall in sugar prices, despite an increase in cane prices. It is somewhat difficult to follow the logic behind Mr. Patil's expectation. We only hope that the expectation will come true.

May be, the Government of India has been prompted to raise the cane prices by its anxiety to ensure sufficient cane supplies to the mills, so that sugar production could be maintained at a high level in the coming season. But the increase in cane prices will not affect either the size of cane crop or its utilisation. For the sowing of crop has already taken place, though one may broadly agree with Mr. Patil when he says that the farmer will take extra care to see that he gets a high yield. As we stated in the course of an editorial last week, since only a third of the cane crop harvested in a season is utilised for making sugar, it will not be difficult to ensure this much supply to the mills without any increase in cane prices, provided, of course, the State Governments take proper steps to check an undue diversion of cane supplies to the manufacture of *gur* and *khandsari*. The fixation of a higher price for cane with reduced recovery will have one disquieting effect, namely, that the agriculturists will concentrate attention more on the quantitative aspect of cane cultivation than on quality. Why, after all, should they bother themselves so much to grow cane with a rich sucrose-content—the scope for such cultivation is in any case restricted in the sub-tropical climate of North India—when they are assured of a high minimum price of Re. 1.56 per maund, though the recovery is just 9 per cent or even less?

O.N.G.C. TO VENTURE ABROAD?

Many important issues of policy and technical competence, not to speak of the crucial question of the availability of foreign exchange, which will no doubt be a decisive factor, are involved in the reported move of the Oil and Natural Gas Commission (O.N.G.C.) to enter the highly competitive and risky field of international oil exploration. Presumably in response to the interest shown by it, the O.N.G.C., it is reported, has been offered an oil concession in Iran. Details of the offer are not available at the time of writing. However, it would appear that Iran has indicated its willingness to grant O.N.G.C. prospecting rights over an offshore area adjoining an established oilfield in South Iran. The O.N.G.C. and the Ministry concerned are considering the offer. Since the question involves the O.N.G.C.'s leap from the national to the international field and carries with it certain financial and political implications, the Ministry will seek the Cabinet's approval for the proposal, even if the offer is found attractive otherwise.

The main argument advanced in favour of accepting the offer is that, if the Commission succeeds in striking oil in Iran, it would enable imports of crude oil, which involves large foreign exchange expenditure at present, to be substantially cut, if not altogether eliminated. The O.N.G.C., it is claimed, has the necessary technical competence and equipment to undertake the job. And the fact that there is a better chance of striking oil in Iran than in this country, so the argument goes, makes the venture considerably less risky and worth a try.

None can dispute the validity of the first argument. But the material point, apart from the question if, under its constitution, the O.N.G.C. can embark on a project outside India, is whether the Commission has the technical competence and equipment to prospect for oil abroad without prejudice to its responsibilities within the country. Granting that it has, there is still the other crucial consideration of foreign exchange. Is it advisable to embark on a risky and costly project abroad at a time when the country is hardly in a position to take chances? It is true that the O.N.G.C. has a fairly good record in prospecting within the country. But it is still a beginner and lacks the technical expertise and personnel required for venturing into the international field. The fact that the O.N.G.C. still leans heavily on help from foreign countries, not only in the matter of surveying, drilling and exploration but also in the training of Indian personnel, exposes its limitations in this regard. It is patently foolish to seek to run even before learning to walk.

POWER CRISIS IN W. BENGAL

West Bengal is again in the grip of an acute power shortage. The Calcutta Electric Supply Corporation has resorted to heavy load-shedding during the last fortnight. This has dislocated the production programmes of several industries, particularly jute mills, engineering units and oil mills, besides causing hardship to domestic consumers. The immediate reason for the recurrence of power crisis in this region is the failure of one turbo-alternator of the new Cassipore station belonging to the C.E.S.C. It is a sad commentary on the overall state of power generation in this region that the breakdown of a single set should upset the economic activities of the State on an extensive scale. Even when all the existing generators work, there is already a wide gap in the supply of, and demand for, power in the region. A conservative official estimate places the excess of demand over supply in the Bihar-D.V.C.-West Bengal region at as much as 414 MW in 1963, as against only 297 MW in 1962 and 120 MW in 1961. The widening gap between supply and demand has not come to the surface all on a sudden; in fact, it was anticipated even two or three years ago. But the authorities have been too slow to make amends for their earlier lapses and increase the power generating capacity. The Government's delay in expediting power expansion in this vital industrial region is all the more reprehensible because here are concentrated not only coal, steel and engineering industries but several others which are defence and export-oriented and which can ill afford to cut back production in the present context of national emergency.

It is, however, a matter of some gratification that the present power crisis has opened the eyes of the authorities to the stark realities of the situation. Efforts are now being made to solve the crisis through augmenting the available supplies. In fact, but for the willingness of the U.P. Electricity Board to transmit more power from Rihand to the D.V.C. grid, despite depleted conditions of the reservoir there, the shortage would have been much more serious. The D.V.C. grid will now be able to draw 25 MW from Rihand, as compared with the present intake of about 15 MW. Another important step by the West Bengal Government is the decision taken in consultation with the Centre, to permit those industrial units, which have their own generating sets, to put them into operation. The successful operation of these sets will, however, depend on the availability of adequate coal. But this is beset with uncertainties. The Union Ministry of Irrigation and Power has, of course, assured that sufficient coal will be made available to industrial units for generation of power. It is to be hoped that the assurance will be fulfilled through expeditious arrangements for the transport of coal to needy areas.

Meanwhile, work for replacing the defective motor at the Cassipore station has already been started. It may take about three to four weeks for this set to be brought back into operation. This will still not be of much avail in reducing the overall power shortage in West Bengal on account of the steadily increasing demand for power for industrial and domestic purposes alike. The scope for improving this situation to some extent is in sight, now that the Union Government has agreed to send a 12.5 MW generating set to the D.V.C., which is expected to arrive in India from the U.S. next month. A marked increase in supply is also expected next year, when the Bandel thermal plant goes into production. There is, however, no hope of wiping out the entire shortage of power in this region in the foreseeable future. But the shortage can be kept within reasonable limits, if the Central and State Governments, the D.V.C. and the C.E.S.C. make concerted efforts to augment power supply in the region and ensure that some standby generators are kept ready for use in case of failure of some units—the kind of failure which appears to be a recurrent phenomenon in West Bengal.

A STEEL-SAVING INDUSTRY

He who makes two ears of corn grow where one grew before deserves more of mankind than all the brood of politicians put together. So does a technologist or an entrepreneur who helps decisively to increase production in industry. But greater productivity, whether agricultural or industrial, is still one side of the coin, the other side of which is represented by saving and conservation. In the final analysis, economic growth will be determined as much by the latter as by the former. Thus, for instance, if a penny saved is a penny gained, a ton of foodgrains saved from pests, floods, animal depredations or wasteful consumption is as good as an additional ton of foodgrains produced. Likewise, a ton of steel conserved for longer use or saved for an essential purpose is the equivalent of a fresh ton of steel. This last generalisation, in particular, has an immediate relevance here, for a new industry, just established near Thana in Greater Bombay for reconditioning old drums, is a practical fulfilment of the need not only for saving some quantity of that scarce commodity—steel—for other essential purposes but also for conserving it for longer use.

Drum reconditioning, incidentally, is an idea that was born in Great Britain under the exigencies of World War II. The idea, which was sparked by the then pressing need to save time and money, as well as to conserve steel, has now grown into an important ancillary industry serving some of the major British industries which produce or use large quantities of industrial and consumer fluids. It is this industry that has just come to India to serve the many large and small users of drums in the oil, chemical and other industries. Thanks to a series of technical processes employed in the industry—processes like internal jet washing, internal and external washing, chimbing, shot blasting, de-denting, drying and painting—the old drums emerge, after reconditioning, as *virtually* new ones. The fact that an ordinarily handled drum could be so reconditioned at least six times will mean a great deal to the user and the economy alike. The drum users stand to gain substantial all-round savings in time and money, as the drums can be used over and over again till the maximum life is obtained from each drum. And the economy stands to gain by saving so much steel as would otherwise go into the production of a corresponding number of new drums for replacing the ones scrapped in the absence of reconditioning facilities. The amount of steel so saved in a year can go to meet more essential needs on account of either defence or development, where it is indigenously produced; it can save some valuable foreign exchange if, as happens in the case of drum manufacture, a substantial quantity of steel is being imported.

It, therefore, redounds greatly to the credit of Chamanlal & Bros. of Bombay that they have established this steel-saving industry for the first time in India in financial and technical collaboration with Victor Blagden & Co. of U.K., who are pioneers in this unique type of service industry. Their concern, Asnew Drums Private Limited, it is noteworthy, has the potential to benefit the economy by way of steel saving to the tune of 22,000 tons in a year, for it can recondition 1,500 to 2,000 drums per eight-hour shift. And it can benefit the user by way of money saving to the extent of Rs. 125-150, for the cost of a new drum is about Rs. 45 (with a scrap or resale value of Rs. 15 or so) and the reconditioning cost is approximately Rs. 12 per old drum; one can figure out the amount of saving possible here if, instead of buying every time a new drum at a cost of Rs. 45, the user gets it reconditioned six times. With such manifest advantages, this new industry may well be taken up in other centres such as Calcutta, Delhi, Nagpur and Madras. As the transporting of old drums, over long distances, from these centres to Bombay for the purpose of reconditioning may not be a worthwhile proposition, it is just possible that, in due course, the industry will spread to other suitable locations. If that happens, the aggregate steel-saving for the country as a whole may be of the order of 100,000 tons, valued at about Rs. 8 crores, in a year. It will, indeed, be a great thing if, with an estimated capital outlay of no more than Rs. 2 crores in five units (including the first one at Thana), so much gain to the economy, besides the larger and more direct gain to the drum users, can accrue. To achieve so much with so little would, indeed, be most laudable.

LATEST ON BOKARO

The fact has got to be faced, whether one like it or not, that there are some U.S. Senators and Congressmen who are so hostile to India that the very idea of American aid to this country is anathema to them. If these gentlemen do not disguise their hostility, it is no doubt a reflection of their intellectual honesty and of the democratic character of the U.S. political system. But, unfortunately, it does render the task of the U.S. Administration and the Indian Government tougher, by making it difficult for the latter to convince the Indian people, at least a section of them, of American *bona fides* in the matter of friendship and aid and for the former to justify large-scale assistance to India.
