The experts feel that, while the States have given publicity to a few projects whose completion dates have been advanced by some months, not much has been said about the large number of other projects which have run into difficulties. A major difficulty in many States is the lack of trained personnel at the top level. Besides, the emergency has caught the States suddenly on the wrong foot, so that they have been beset with several "top priority" demands for defence. It is now gradually dawning upon them that, unless power gets the topmost priority, certain essential materials like steel and cement may not be available in time. But, unfortunately, such a priority for power seems unlikely, according to these teams.

A peculiar situation has, however, arisen in regard to augmenting power supply in the capital. While provision has been made to have a built-in 20 per cent spare capacity, the Chairman of the Delhi Electric Supply Undertaking has expressed the fear of power glut in Delhi due to a continuous exodus of industries from the capital.

COTTON

(*Concluded from page 310*)

ers should have no reason to complain. Similarly, so long as the actual price is below the ceiling, mills have no right to complain. If this proposition is not accepted, there is no meaning in having floor and ceiling prices. Of course, what has happened is that farmers are not getting this year, the prices they got last year. These were far in excess of the ceilings that were applicable to the 1961-62 season crop. But, following the rise in the ceilings for the current season, they have been receiving in "white" almost the whole of what they got last year in "black." Moreover, is it not but fair that prices should decline at least to some extent when production goes up and supply increases? It will, indeed, be no exaggeration to say that, on account of favourable weather and larger yield, the farmer has been getting more money *per acre* than he did last year when nature was unkind to him. This is a question of simple arithmetic. If Ministers and Government officials themselves do not care for accuracy in what they say or to view the facts in their proper perspective but continue to support the clamour for higher prices without carefully examining the merits behind it, how can inflation be kept under control in this country and how are the goods made in India to compete in world markets? It is to be hoped that Dr. Ram Subhag Singh will pause for a while and reflect on this question.

It must, however, be said that Dr. Ram Subhag Singh was right when he said that the grower who took the trouble of producing better varieties of cotton should not suffer on account of temporary gluts in the primary markets during the marketing season and that it would be in the interest of mills themselves to support such farmers by promptly taking up the quotas allotted to them. But it would be more desirable to solve this problem by improving warehousing facilities which would enhance the holding power of farmers than to rely on mills.

Mr. A. D. Pandit, President of the Indian Central Cotton Committee, in his presidential speech at the meeting, discussed the supply position of cotton during the past and present seasons, reviewed the marketing of cotton in the context of the controls introduced by the Textile Commissioner and referred to the question of raising the floor price of cotton. He pointed out that suggestions had been received from various quarters that the gap between the ceiling and floor prices was now too wide and that the floor price should be raised in order to reduce the range of fluctuation in cotton prices and to impart greater stability to price level so as to give greater confidence to the grower. This question, he said, was being considered by the Government. But the Committee did discuss the question of raising the floor prices. There was general agreement among the members of the Committee representing growers, trade and the industry that the present gap was too wide and should be narrowed. A strong plea was made on behalf of growers that the difference between the floor and ceiling prices of the basic variety should be reduced from Rs. 345 to Rs. 150 per candy by raising the floor prices to Rs. 795 per candy. This suggested floor compares with about Rs. 880 per candy, the prevailing spot price for 25/32" Jarilla. In other words, what this demand means is that, if the price of cotton were to go down by about 10 per cent from the current levels, the Government should be ready to extend its support to the cotton market. Is the Government ready to shoulder this responsibility? That remains to be seen, but it has so far fought shy of it.

The President of the Committee referred to certain important points that emerged from the reports submitted by Development Officers of the Committee deputed to assess the progress achieved in the implementation of the measures under the cotton development schemes in the various States. They are: (1) The States of Gujarat and Mysore did not implement the cotton development scheme on the model pattern laid down by the Committee. (2) Although the package programme was intended to be implemented during the current season, little progress has been made in this direction. (3) The procedure for supplying fertilisers to farmers should be simplified and fertilisers should be given as loan in kind. (4) An early decision should be taken by State Governments in regard to the question of granting a rebate of 50 per cent on water rates for the new areas coming under irrigation as suggested by the Conference of Agricultural Experts held last year.

DEMOCRACY IN BURMA FADES OUT

IT is disquieting to find that freedom and democracy are being steadily stifled in our neighbouring countries by autocracy or dictatorship. The cause for concern is all the greater, because these authoritarian regimes are leaning more and more towards the extreme form of socialism which is indistinguishable from communism. In their external policies, too, their sympathies are for communist countries, in general, and China, in particular. Their economic relations with China are growing apace. Beginning with Indonesia, this trend has spread to Ceylon, Burma, Nepal and Pakistan. This may not be the result of a concerted political move to encircle democratic India, but the result is no different. This conclusion may sound a little alarmist to many, especially because the Government of India and the party-in-power do not look at the developments around India in that light. But the writing on the wall is clear. To be forewarned is to be forearmed. It is for our leaders to think of all the possible repercussions on India of the ascendancy of leftist, or opportunist forces in the neighbouring lands and to fashion their political and economic policies in such a way as to protect our democratic system.

We are afraid that, from this point of view, the policies pursued so far by the authorities in India have been defective in many respects. The most serious defect has been the playing down of the merits of private enterprise and the playing up of public sector and the derogatory regard for profit-motive. The nationalisation of life insurance and some sectors of banking, the reservation of strategic as well as key industries to the public sector, the accent on socialism, the continued reiteration of such shibboleths as classless society and equality in the distribution of wealth, the stress on joint-farming, the entry of the State in both foreign and domestic trades, the frequent condemnation of international oil companies operating in this country, the virtual expropriation of agricultural lands taken over under land ceiling legislation, the numerous amendments to the Constitution to deprive the property rights of citizens, the removal of the issue of fair compensation to owners of nationalised properties from the jurisdiction of courts, and, above all, the failure to recognise the evil of communism as a creed—all these have encouraged our neighbours to go a step ahead of us and to swerve from the path of genuine democratic socialism and stray into dictatorial socialism. There is no doubt that, in many respects, India has set a bad example for its neighbours. This is not to say that it has not displayed good qualities worthy of emulation. But, as usual, the bad ones have succeeded in gathering adherents rather than the good ones.

The immediate provocation for these thoughts is the series of nationalisation measures introduced by the Government of Burma in recent days, culminating in the public sector's takeover of all banks operating in Burma. Many in this country are wondering as to why commercial banks in Burma were nationalised, especially as the Government was already having sufficient control over them, besides owning the State Commercial Bank, the counterpart of the State Bank of India. But there is no need to wonder, for the Burma Government's declared policy of ownership of all lines of economic activity would not be complete so long as a large part of banking business was in the hands of private enterprise. Nationalisation of banking in Burma is, therefore, a purely doctrinaire action. It means the virtual end of private enterprise in the not distant future and a long lease of life to the one-man rule that has already firmly entrenched itself under the name of "Revolutionary Council," headed by the military dictator, General Ne Win.

For some time past, there has been a struggle for power in the Revolutionary Council between the moderate socialists and the extreme leftist socialists (Marxist element), the former under the leadership of Brigadier Aung Gyi, head of the Burma Economic Development Corporation till a few days ago, and the latter under Brigadier Tin Pe, Minister of Finance and Chairman of the State Co-operative Organisation. General Ne Win, Head of the Military Government, was away in Europe for four months for reasons of health. On his return, he is reported to have found that the moderates were rapidly gaining the upperhand and Brigadier Aung Gyi was tending to become "influential." It is not known how exactly General Ne Win, himself a strong leftist socialist, managed to force Aung Gyi to resign from the Government and retire to an obscure place in Burma. But he did it. The exit of Aung Gyi was followed by nationalisation of the entire export trade in rice and all the import trade and an extraordinary statement by General Ne Win on the "Burmese way to socialism." Addressing a gathering of businessmen in Burma, he said: "Under the Socialist programme adopted by the Revolutionary Council, the manufacture, procurement, distribution, import and export of commodities shall have to be handled by the State. Private trade will be permitted to continue operation in these fields only until the goal of nationalisation is reached." Shortly after this public statement by the Burmese Chief (on 23rd February 1963, to be precise) came the sudden seizure of all private banks—foreign as well as domestic—in much the same way the life insurance companies in India were seized by the Government of India in 1956, when Mr. C. D. Deshmukh was the Finance Minister. Three days later came the immediate nationalisation of the entire timber trade.

That is the sequence of events leading Burma to blood-red socialism, but it is necessary to dilate on them a little to bring out the magnitude of socialisation of the Burmese economy. As already stated, the entire import trade (ranging from Rs. 115 crores to Rs. 120 crores in value) has been nationalised. Of the total exports (average value Rs. 103 crores per annum), the share of rice is a little over 70 per cent and of timber 10 per cent. Accordingly, well over 80 per cent of export trade has been nationalised. A large number of industries has also been brought under State ownership. The biggest industry, namely, petroleum, in which the Government of Burma and Burmah Oil Company had 50:50 share, is now completely State-owned, the Burmah Oil Company's share having been "expropriated earlier this year," to quote the expression used by the London *Financial Times*. There may be private ownership of land and other assets in Burma, but it is of little value, as the Government has strict control over marketing and prices. Now that banks have been nationalised, there can be no secrecy of funds kept with them or of assets stored in safe deposit lockers. There is a close parallel between Burma of today and China of the early fifties. Just as China was heavily dependent upon Russia in those years, so is Burma on China today. In the early years of Communist dictatorship in China, agriculturists in that country were assured freedom of ownership, but, in a few years, they were all herded into communes. The Marxists in Burma today say that farmers are free in their country, but who knows that agriculture too will not be nationalised in the near future? Indeed, to the extent the entire timber trade has been nationalised, a good part of rural Burma has come under State ownership.

Sources close to the Burmese Government, according to advices from Rangoon, have given reasons for nationalising banks which none but novices can believe. The banks are accused of

making enormous profit. In a special statement issued immediately after taking over the banks, the Burmese Government said: "Last year, private national banks made a profit of more than 40 per cent, while foreign banks earned as much as 43 per cent." It is not clear as to what this percentage is related. Is it to the gross income or to paid-up capital? The business of banks is to gather deposits from the public and lend them to trade and industry, as well as to Government. Their capital and other own funds are always only a fraction—usually 3 to 6 per cent—of their total resources including deposits. And yet this very feature of banking has been cited as a reason for nationalisation. We are not exaggerating, as witness the quotation from the aforesaid special statement: "....on a capital of one Kyat (equal to one rupee), a private national bank could handle K20 and a foreign bank K45 of other people's money. The banks are, therefore, in a position to use large sums of money belonging to the people. A business which can earn such high profits and can command huge sums of public money should not be left in private hands." This line of argument is very similar to that put forward by the Communists in India in support of their demand for nationalisation of banks.

Another reason given for nationalisation of banks is that a section of businessmen was trying to wreck the Burmese economy and discredit the Government of General Ne Win. This also sounds unconvincing. But it is possible that, alarmed by the General's frank statement on the Burmese way to socialism quoted above, people might have started withdrawing their deposits from banks for hoarding their cash. That would only be a natural thing to do. Any way, all this is only a pretext for implementing the Revolutionary Council's Marxist socialism.

Burma's external resources are poor and inadequate to implement its plans for economic development. Burma is also in need of technical know-how and trained manpower. It remains to be seen to what extent its latest economic policies will affect the flow of aid from the Western world. The U.S. Government may, for strategic reasons, continue to aid Burma in much the same way it helps Yugoslavia, notwithstanding the fact that the latter is a communist country. This assumption will prove correct only if it is clear that General Ne Win is not gradually taking his country into the communist camp. The retirement of the liberal-minded Aung Gyi and his followers is bound to cause serious doubts in the Western world about General Ne Win's attachment to the free world. So far as private foreign capital is concerned, there is very little prospect of Burma getting any. But General Ne Win seems to be prepared for this eventuality. In his address to the business community early in February, he is said to have observed: "Burma is no longer interested in foreign investments, unless they can be shown to be of positive value to the economy." It is not known what exactly he means by "positive value," when he has taken over the business of foreign banks, expropriated foreign investments in oil, etc. Anyway, for all practical purposes he has shut out foreign private capital and with it the flow of know-how and skilled workers. He seems to have deliberately created a situation favourable for the flow of Communist (predominantly Chinese) aid into Burma, with all its attendant evils. Rice-hungry and power-thirsty China can and is willing to draw Burma into its fold. It looks as though all the efforts and sacrifices made by India to keep Burma on its side have gone in vain.

INDIAN BANKS IN BURMA

THE Government of India's record in protecting the assets of Indian nationals in foreign countries such as Burma, Ceylon, Pakistan and Africa against expropriation or such acts is by no means commendable, though it has taken care, quite rightly, to pay decent compensation to foreigners whose properties and businesses it nationalised. In its anxiety not to antagonise the Burmese Government, our Government left the Indian nationals high and dry when the former deprived them of their agricultural lands in the post-independence period. The worst sufferers, as is well known, were the Chettiars of Madras State. To give another instance. The Pakistan Government has been continuously refusing Indian companies operating in Pakistan to bring their profits to India, though it freely allows the investors of all other foreign countries to take home their profits. This discriminatory treatment to Indian investors is contrary to the rules of the International Monetary Fund and this country has a good case against Pakistan. And yet the Government of India, for reasons best known to itself, has not cared to raise the question at the I.M.F. meetings. Now what is to happen to the funds belonging to Indian banks operating in Burma? We are glad that the issue was promptly raised in Parliament and Mr. Morarji Desai made a reassuring statement.

Of the 24 banks in Burma, fourteen are foreign and only 10 domestic. Of the fourteen foreign banks, five are Indian, namely, the State Bank of India, the Punjab National, the Central Bank, the United Commercial Bank and the Indian Overseas. They had in all seven branches. Although larger in number, the share of foreign banks in the total banking business in Burma has been rapidly going down, with the formation of the State Commercial Bank of Burma in 1954. The latest figures available with us pertain to the position as of 30th June 1961. They show that the State Commercial Bank of Burma alone had 51.5 per cent of the total deposits in the banking system, accounted for 35.1 per cent of advances, held 61.9 per cent of investments and handled 42.3 per cent of all foreign business. Since then, its position must have improved, while the business of foreign banks must have declined. The number of other Government-owned financial agencies has also risen. According to figures quoted by Mr. Morarji Desai in Parliament, the deposits held with Indian banks in Burma were a little less than Rs. 10 crores and formed approximately 10 per cent of the deposits of all commercial banks. Their advances were approximately six per cent of the total advances, most of it to Indian traders in Burma or against bills arising out of Burma's trade with India and other countries. It is thus evident that Indian banks were operating with a surplus of Burmese funds. This is only as it should be. But they must be having there the initial resources which they took from this country and the accumulated profits which could not be remitted home due to the meagre foreign exchange facilities provided by the Government of Burma. Besides, they must be having their fixed assets in the form of buildings, staff security deposits, provident and gratuity funds, not to mention goodwill. All put together "may not be very large," to quote Mr. Morarji Desai's words, though they may not be negligible in terms of the annual profits of individual banks. It must be remembered that, if the Government of Burma were to default, each bank concerned would have to write off the loss of its fixed and floating assets in Burma from its profits or from undisclosed reserves. From the tone of Mr. Morarji Desai's statement in Parliament, it looks as though he is conscious of this fact. While not criticising the Government of Burma for nationalising the banks (obviously because it was a general policy matter of a foreign Government exclusively within its prerogative), he observed:

> "Our interest in this matter at the present stage is to ensure that the properties and other assets of the banks will be transferred to the proposed new committee of management in an orderly manner and will be taken over at a fair and reasonable valuation, that all the amounts due to be remitted or reimbursed to the head offices of the banks in India, including unremitted profits, staff security deposits, provident and gratuity funds, and other similar items, will be remitted or paid promptly in free foreign exchange which we can accept, and that the employees who are due to be transferred to other offices of branches in India, in view of the recent developments, will be allowed to come back to India and also to bring to India all their savings and other assets. We hope that the Government of Burma will take a fair and reasonable view regarding these matters and settle the dues of the banks to their satisfaction. Our Ambassador is also in touch with the Government of Burma."

It will be observed from the foregoing quotation that the Government is aware of what needs to be done and has clearly told the Government of Burma what is expected of it. The latter, too, it must be said to its credit, has assured the foreign banks that it will pay within three months compensation for their capital in the currencies in which they had brought funds into Burma, as well as for their buildings. This assurance, however, does not appear to be as comprehensive as one would like it to be. The Government and the interests affected should, therefore, pursue the matter with the Burmese authorities to ensure prompt receipt of full compensation. The Chairman of the Indian Overseas Bank Ltd., Mr. M. Ct. T. Muthiah, was fully justified by past experience when he expressed the hope this week that the compensation to be fixed (and paid) by the Government of Burma "would not be as dilatory and unjust as the so-called compensation given to Indians when their landed properties were taken over by that Government." Finally, although the size of Indian banks' business in Burma had been declining in recent years, they were nevertheless playing a notable role in maintaining a valuable link between the two countries. It is no exaggeration to say that nothing brings the peoples of the various countries together as effectively as commercial intercourse through private trade channels does. By nationalising banks and foreign trade and by bringing the major sector of its economy under State ownership, General Ne Win's regime has dropped a curtain between Indians and Burmese.

CRIPPLING BUDGET

"TAX until it hurts," said Prime Minister Nehru. The faithful follower that Mr. Morarji Desai is, he has obeyed his chief's command, much to the chagrin of share markets. Rupees three hundred and six crores of additional taxation (including Rs. 40 crores by way of compulsory savings) and rupees four hundred crores of borrowings from the capital market are the outstanding features of the fifth budget of Mr. Desai. Both are of unprecedented magnitude in the history of India. He has thus established a record for himself and, in doing so, has belied the optimistic hope of the share markets that he would not be harsh on them and that, instead, he would follow in the footsteps of State Finance Ministers and the Union Railway Minister. He has spurned the advice of practical men and followed that of those who live in ivory towers. The theoreticians must be quite happy with his budget for 1963-64, for he has toed their line for defending and developing the country. Past experience not only in this country but elsewhere in the democratic world has been that, when a finance minister takes the cue from theoreticians who never have their feet on the ground, the economy concerned invariably gets into trouble. We have no doubt that this fifth budget of Mr. Morarji Desai, in which he has included tax proposals that "add up in their magnitude and range to very much more than the sum total of the proposals" in his previous four budgets, will undo his achievements so far, achievements that had distinguished him from his predecessors as a practical-minded Finance Minister.

Mr. Morarji Desai has done exactly what the Chinese had hoped he would, namely, make India less safe for democracy by hurting the mixed economy. He has crippled the private sector, the sector that delivers the goods, by imposing taxes in a manner which will make it extremely difficult, if not impossible, to raise the resources it needs for development. By enhancing the effective corporate taxation to 75 to 80 per cent—that is what the super profits tax" means—he has for all practical purposes choked the flow of foreign private capital into India. The system of compulsory savings and the heavy surcharge on personal income-tax will leave little money in the hands of investors to provide the capital that industrial concerns will require to play their part in strengthening the defence of the country. The heavy excise duties on a wide range of goods and the stepping up of duties on imports will perpetuate the high cost character of our economy. The task of export promotion will become harder than it is. Consequently, the dependence on foreign Governments for aid will increase. One, therefore, fails to see how Mr. Desai has served the cause of greater self-reliance. On the contrary, he is putting the Governments of friendly countries in the West to greater embarrassment.

The Finance Minister could have easily minimised the danger to economic growth by reintroducing the salt duty, by telling the States to scrap prohibition, by raising the railway passenger fares, and by cutting down non-essential Plan expenditure. If he has not done so, it is because political and ideological considerations are more important for the present Government than sound economics.

As the time between the receipt of the full text of taxation proposals and the need for this journal to go to press according to the usual schedule is short, we have to content ourselves with these preliminary observations and defer the detailed examination of this historical budget to our next issue.

MARKET GOSSIP

U.S. Loan to India

TO the Government and people of the United States go India's most grateful thanks for the abiding interest they have evinced in the economic development of this country. A striking evidence of this interest is the continuing, massive assistance rendered by the U.S. Including the Rs. 114 crores ($240 million) covered by the loan, the agreement in respect of which was signed at New Delhi on Monday this week, the aggregate economic aid so far undertaken by the U.S. comes to well over Rs. 2,313 crores ($4,800 million). The aid has helped India to meet the major portion of the foreign exchange expenditure involved in the implementation of a wide rangs of Plan projects. Indeed, it is no exaggregation to say that, but for the large aid given by the U.S., the pace of India's economic development would have slowed down considerably.

The latest American loan of Rs. 114 crores ($240 million) is the largest loan of its kind that the U.S. has made anywhere since the days of the Marshall Plan. It is part of the U.S. commitment of $435 million for the second year of India's third Plan. The striking feature of this loan is that it is not tied to any specific projects, though it is tied to U.S. goods. In other words, it is a non-project loan or a general development loan as Mr. Morarji Desai prefers to describe it. The importance of such a loan lies in the fact that it will finance the import of a large variety of capital equipment, components, spare parts and raw materials for the industries many of which have not been able to utilise their capacity fully due to shortages of these developmental needs. Thanks to the chronic scarcity of foreign exchange, the most pressing problem all along has been one of financing maintenance imports so urgent to keep the wheels of industries going. India cannot, as Prof. John Kenneth Galbraith, U.S. Ambassador in India, aptly remarked while speaking after the loan signing ceremony, "risk having its industry operate at less than full capacity at this juncture in her history." And under-utilisation of industrial capacity involves so much waste of capital resources that has been used to build up the capacity. Viewed thus, it is highly gratifying that the U.S. Government has given the latest loan in the form of a non-project credit, instead of committing it exclusively to the import of machinery for specific projects under the Plan. The broad commodity-grouns for which the loan funds will be made available are non-ferrous metals, steel, chemicals, fertiliser, sulphur, lubricants, rubber, tyre cord, carbon black, D.D.T., machinery, earth-moving equipment, rolls and refractories, and vehicles and other components. Since it is precisely in respect of these items that there is an acute shortage of supplies, the American loan will enable Indian industry to use its present capacity more effectively.

It is equally gratifying that the U.S. Government has kept in mind the financial burdens of India in arranging the terms of the loan. The loan is interest-free; only a credit fee of ¾ per cent is to be charged on the outstanding balance of the loan. In his characteristic way, Prof. Galbraith said: "The carrying charge of three-quarters of one per cent constitutes the most economical access to money I know." What is more, the repayment of the loan is scheduled over as long as 40 years, with a 10-year grace period; that is, no payment of principal during the first ten years.

There are some in this country who ask whether the U.S. cannot be more generous by giving India the freedom to utilise the loan, or a portion of it at least, for importing goods and equipment from sources other than the U.S. This is a pertinent question indeed, considering that prices of many articles ruling in the U.S. are much higher than elsewhere. But there are serious limitations, of which two stand out prominently. In the first place, the U.S. itself is faced with balance of payments difficulty. And, secondly, there are laws that do not permit free utilisation of American loan to buy goods in other markets. This apart, one should not look a gift horse in the mouth.

Aid From Britain and West Germany

Almost simultaneously with the signing of the agreement providing for the American non-project loan of Rs. 140 crores comes the heartening news that a series of steps are now being taken by the British and West German Governments to speed up, and make more effective, their aid to India. The British Government is expected to announce in the near future an increase in balance of payments aid to India. The Parliamentary Under-Secretary of State for Commonwealth Relations, Mr. John Tilney, told the House of Commons the other day that the Government was considering further financial assistance to India and announce its decision after discussions with the fellow-members of the Aid India Consortium "which is expected to meet fairly soon." On its part, the West German Government has announced an advance payment of £9.5 million of its aid to India's third Plan for buying West German equipment for power, telecommunications, rail and port construction, exactly those fields where shortages are most acute. Replying to questions put by the Bonn correspondent of the *Times of India*, Dr. Ludwig Erhard, West German Minister for Economic Affairs, assured him that his country "will continue to do all in its power to contribute to the successful conclusion of the economic development of India."

While the keen awareness on the part of the Western countries to give more liberal economic aid to India is encouraging, especially in the context of the urgent defence and development requirements, there is an imperative need for a much greater inflow of private capital into India. Dr. Erhard certainly struck a note of realism when he declared the other day that the best form of development assistance to India would be the investment of private foreign capital. In this manner, he stated, the developing country concerned "does not only receive the capital necessary for the construction of certain projects but simultaneously also the technical knowledge and the economic experience which form the basis of the operation of such projects." The importance of greater private foreign capital investment in India has also been impressively highlighted by Sir Norman Kipping, Director-General of the Federation of British Industries, who had toured this country only recently. In the opinion of Sir Norman, because of the size and growth of the Indian market, the only way to maintain Britain's position in India is by further investment.

It is true that the past three years have witnessed the conclusion of several Indo-foreign collaboration agreements: a total of 1,300 agreements, including 327 with British companies, 221 with American, 201 with West German and 100 with Japanese firms. But the amount of actual capital participation covered in these agreements is not much. The pace of inflow of foreign private capital into direct investment in India is also niggardly. If this pace is to be accelerated, it is of the utmost importance that conditions congenial to foreign private investment activity should be created. It will be appropriate to quote here what Dr. Erhard has said:

> "If the attention of private capital is to be drawn to the development of India, there is no other way but to eliminate those provisions and regulations which today restrict unnecessarily the activities of foreign investors. ... It is advisable to conclude agreements for the protection of investments, similar to those already concluded between the Federal Republic of Germany and 15 developing countries and which have, meanwhile, proved very successful for the encouragement of private investments in developing countries."

The onus of responsibility for attracting private capital into India rests largely on the authorities in this country. Even so, it cannot relieve the developed countries of the obligation to encourage the venturing of private capital investments into new fields in India. A bold lead in this connection has been given by the West German Government which has promoted a special Federal organisation, called the German Development Company with a capital of DM 75 million, more particularly to facilitate investment in developing countries by smaller businesses. The functions assigned to this Company are as follows:

> The Company will join with West German investors in taking up shares in the capital of existing or new commercial enterprises in the developing countries. The Company is, therefore, not a banking institution. In special cases, however, in addition to taking up a share of the capital, it may assist the business by the grant of loans, which would give a title to a share in the profits, by giving guarantees or by any other similar measures. In special cases, the Company will come to the investor's assistance if the funds at his disposal are insufficient to carry through the project, or if, in the case of an important project, the risk involved is greater than a German businessman might reasonably be expected to carry. In the allocation of funds, the primary objective will be to make an effective contribution to the encouragement of smaller and medium-sized firms. The first concern will not be to obtain the highest possible yield on the capital invested. On the other hand, the Company will try to restrict its participation to those projects which appear likely to be sound and profitable. As soon as business is able to stand on its own feet, the Company will sell its holding therein and the German investor and his partner in the developing country will have the first option to purchase the shares. The funds returned in this way will be used to finance new projects. The two methods by which the Company intends to fulfil its function are thus advice and financial assistance.

Whatever be the scale of direct foreign private investment in India or the extent of aid given in the form of loans and grants, the long-term solution, it goes without saying, lies in the ability of India to build up its exports and the willingness of the rest of the world to buy them. It is necessary to stress in particular the latter aspect, what with the recent attempts by the developed countries to introduce some sort of protectionism in world trade under the guise of Common Market, textile import ceiling pacts (entered into by the U.K. with India, Pakistan, and Hong Kong) and G.A.T.T. textile agreement under which the U.S. is seeking to restrict imports of cotton textiles.

Mobilisation of Savings

Some important points bearing on the present emergency and the problems thrown up by it were emphasised by Mr. H. Mackay Tallack, President of the Bengal Chamber of Commerce and Industry, in his speech at the annual meeting of the Chamber held at Calcutta this week. The most notable among them was the role of Government loan policy in stimulating savings, especially small savings. In mobilising funds for defence and development, Mr. Mackay Tallack pointed out, the importance of increasing savings in one form or another could not be overemphasised. Savings, he said, had two advantages over taxes. First, it was a better and less damaging form of levy than taxes, and had at least the advantage of prospective repayment. Second, it represented deferred consumption which meant less pressure on resources for current consumption and on prices.

In view of these advantages, the various Government schemes for small savings deserve all support and encouragement. These schemes in themselves are, however, unlikely to attract the attention of the worker or the small trader. These small investors generally put their modest savings in land or gold or silver which they regard as the only safe and satisfactory media of investment, thereby unduly inflating their values. It requires something more productive than an interest-bearing Government loan to attract the savings of these people. Having regard to this point, Mr. Mackay Tallack advocated formation of unit trusts as the ideal instrument for mobilising and channelling to productive investment the savings of the small man. There is, in Mr. Mackay Tallack's view, a tremendous future for this type of participation by the small investor in industrial equity and preference shares as well as Government securities. Unfortunately, however, the burden of inter-corporate taxation, which involved penal double taxation on dividends passing through an investment company, made the formation of unit or investment trusts out of question in India. Accordingly, Mr. Mackay Tallack felt that there was room for a more enlightened approach to this question. Its benefits, in the present circumstances in particular, would be very great.

Encouragement of more savings is only one way of finding more resources for defence and development. Economy in expenditure is another. Drawing attention to this aspect also, the President of the Bengal Chamber pointed out that there were some types of plan expenditure incurred for furthering certain social objectives, which, howsoever admirable in themselves, could make little contribution to the tasks of defence, at least in the next few years. These, he said, should be pruned. Similarly, the redundant manpower employed by the Government on some non-essential functions should be cut down. Mr. Mackay Tallack cited an instance of how economies could be effected in manpower utilisation. He said that the special organisation unit of the Central Government had located a surplus of 1,750 lower division clerks and had suggested that its dispersal would result in a saving of Rs. 45 lakhs a year to the Central Exchequer.

While the President of the Bengal Chamber was not optimistic about the future, he did not take an alarmist view either. He foresaw hard times ahead for the country. Two developments, which he considered particularly disturbing, are the dangerous shortages, on account of import restrictions, developing in certain branches of industry such as engineering (where indigenous materials are also in short supply) and the appearance of pockets of scarcity in certain types of consumer goods such as woollen clothing and footwear which command high defence priority. Mr. Mackay Tallack was, however, confident that India, which had already demonstrated its ability to undertake the difficult task of planned development, would succeed in its efforts, what with the promise of massive economic and military assistance from friendly countries abroad.

Protection for Steel Files

The engineers' steel files industry, which has been enjoying tariff protection for the last eight years, has pleaded for its further extension. The current lap of protection (at the rate of 35 per cent *ad valorem*), it may be noted, is due to expire at the close of 1963. The industry's plea was considered by the Tariff Commission at a public inquiry held on Wednesday in Bombay. The Chairman of the Commission, Mr. K. R. P. Aiyangar, in his opening speech, conceded that the industry had made substantial progress in recent years in regard to both expansion of production and improvement in quality. But he made no bones about the fact that there was still much room for improvement in quality. He was equally forthright in his assessment of the pricing policy of the industry. The Commission, he disclosed, had received complaints that principal indigenous manufacturers had formed themselves into a "ring" and quoted higher prices on rate contract. Some of the Government Departments had also complained that supplies against rate contract were not prompt. Viewed against this background, it was only appropriate that Mr. Aiyangar should have reminded the manufacturers of the responsibility they had to bear in ensuring reasonable prices for steel files. This is certainly an unavoidable responsibility of any protected industry towards consumers. Only, it has become much more imperative in the case of steel files because of their importance to defence-oriented industries during the present emergency.

It is, however, uncharitable to cast the blame for high prices exclusively on producers. For they themselves are faced with the problem of shortage and rise in prices of their essential raw materials, such as high carbon or high carbon chromium steel. This is true also of essential stores like grinding wheels, tungsten carbide-tipped chisels, lead pots and hardening salts. As Mr. Aiyangar himself admitted, there has been no material improvement in the supply position of these items from indigenous sources. Consequently, the industry continued to depend on imports, except for small quantities of smaller sizes of grinding wheel. What is necessary in this context is to encourage the manufacture of larger-size grinding wheels and other needs of the industry within the country. This, of course, is something beyond the control of either the Commission or the industry. All the same, they may appraise the Government of India and the Development Wing of the present situation for possible solution.

A solution to these problems is urgently called for. Otherwise, they will put a brake on the steady progress being made by the industry. There are now six units engaged in the production

of engineers' steel files, as against only five at the time of the last inquiry held in 1960. The new unit, which went *into production in August 1961*, is located at Surat (Gujarat). Of the five remaining units, Maharashtra accounts for three units and West Bengal two. The total annual licensed capacity of all the six units is 702,000 dozen files, while the installed capacity is much lower at 548,000 dozen. There has, however, been a marked increase in production, such having gone up by about 90 per cent. that is, from 265,000 dozen files in 1960 to 505,000 dozen in 1962. It is also encouraging to find that two units have taken up the manufacture of rasps, and some others have plans to manufacture rasps as well as precision files. Producers have also plans for general expansion.

The scope for expansion is good, viewed from the point of view of demand, which is expected to go up by 15 per cent annually, according to the Department of Technical Development in the Union Ministry of Economic and Defence Coordination. The Department has placed the overall demand for files at 600,000 dozen in 1962, and expects it to go up to 690,000 dozen this year and further to 793,000 dozen in 1964 and 911,000 dozen in 1965.

The statistical projection of overall demand does not, of course, give a clear picture of the increasing demand for high quality files and precision files for defence and other purposes. Although the quality of domestic products has improved, there are still complaints, such as breaking of top of the teeth of files and quick blunting. In this context, one fails to understand why the Indian Standards Institution has failed to publish its specification for steel files so far, though the question was referred to it not less than three years ago. The earlier this is done, the better, for it is not possible to tighten the measures for quality control, until the Indian standards specifications are formulated for steel files.

Freight Concessions for Exports

In less than ten days after presenting the Railway Budget for 1963-64 in Parliament, Sardar Swaran Singh has come out with a new set of proposals seeking to reduce freight rates on export goods which will cost the Exchequer Rs. 2.5 crores annually. This will come into effect from 1st April 1963. The additional surcharge on freight announced in the Railway Budget will be levied on the basis of these new concessions. There are, of course, no two opinions about the need for helping exporters through freight concessions. If anything, the new concessions are much belated, apart from being generally inadequate. Nevertheless, one wonders why the Railway Minister did not include these concessions in the Budget itself. This would have enabled him to make good the loss of earnings resulting from the present concessions through some or other budgetary provisions as, for instance, through an increase in passenger fares, which have now been left unaltered.

It is also rather disappointing to note that the Railway Minister is still not in favour of granting, without exceptions, a general freight rebate, say about 25 per cent, on all goods put on board. This was recommended by the Import and Export Policy Committee (Chairman: Dr. A. Ramaswami Mudaliar) in its report submitted precisely a year ago. It is true that there are already as many as 66 export commodities enjoying preferential treatment at the hands of Railways. But the degree of concession is not adequate. Concessions announced now cover 19 export items and these range from 25 per cent to 50 per cent of the normal traffic rate. None of these concessions will apply to movements for 100 kilometres or less. Apart from modifying the concessional rate for manganese ore, the following commodities have been brought within the scheme: groundnut oil and *vanaspati*, cotton textiles, iron castings, tin containers, steel tubes, electric fans, oil mill machinery, diesel engines, fish (dried and salted), sewing machines, bicycles and bicycle parts, steel trunks, steel furniture, power alcohol, ferro-manganese, ferro-silicon, cast-iron spun pipes, bolts, nuts and rivets and salt. All these commodities figure prominently in India's bid for export promotion. And most of these goods have been facing tough competition in overseas markets. This is particularly true of light engineerings, vegetable oils, manganese ore, and cotton textiles. Exports of most of these goods (barring particularly vegetable oils), it may be noted, suffered a marked setback last year. The disparity between Indian and world prices for many of these goods continues to be too big to be covered by the present concessions.

It is not surprising, therefore, that these concessions have received only a lukewarm welcome at the hands of exporters. The manganese trade, in particular, is dissatisfied with the new measure, which replaces an *ad hoc* concession granted in the beginning of last year. According to it, the new freight rate is even higher than the existing one. For instance, the present freight of Rs. 14 per tonne for distances of 300 to 600 kilometres will be raised, under the new scheme, to anything between Rs. 15 and Rs. 18. Nor is the textile industry satisfied with the new concession. The rebate for textiles will be 25 per cent, whereas exporters have been pleading for a concession of about 50 per cent. The concession in favour of groundnut oil is likely to improve its exports, which are being made under incentive schemes only. The increase, however, will not be much, as the present Indian prices are already about £40 per ton higher than world prices. Similarly, exports of *vanaspati*, under incentive schemes, may be stimulated. Light engineerings also may be in a position to increase their competitive capacity *vis-a-vis* the foreign products, albeit in a small way.

UNITED BANK OF INDIA

PROFIT SLIGHTLY HIGHER

FURTHER all-round progress has been made by the United Bank of India Ltd. (Managing Director: Mr. B. K. Datta, Calcutta) during the year ended 31st December 1962. It is featured, however, by only a small increase of Rs. 3.35 lakhs in the declared profit at Rs. 29.96 lakhs, before allowing Rs. 8.76 lakhs (as against Rs. 6.11 lakhs a year before) for bonus paid to staff. Although the increase in profit is only half of what it was in 1961, it is a noteworthy feature because it has materialised in a year of sharp increases in costs and expenses for banks as a whole, as a result of which the majority of banks have suffered a setback in profit in spite of a further improvement in their operations. The United Bank of India has been no exception to the general trend of higher costs and expenses. Thus, its outward interest has gone up from Rs. 89.09 lakhs to Rs. 113.06 lakhs, staff expenses from Rs. 137.74 lakhs to Rs. 158.78 lakhs and other expenses from Rs. 36.33 lakhs to Rs. 44.89 lakhs. The provision for depreciation has also been raised from Rs. 8 lakhs to Rs. 8.75 lakhs. But the higher expenses have been easily taken care of by a handsome improvement of Rs. 57.67 lakhs in total income at Rs. 355.44 lakhs entirely due to a spurt of Rs. 59.65 lakhs in earnings from banking business proper to Rs. 340.38 lakhs in contrast to a slight drop of Re. 1.98 lakh in income from other sources at Rs. 15.06 lakhs.

Out of the year's profit, a sum of Rs. 4.26 lakhs (as against Rs. 4.11 lakhs a year before) has been set apart for the reserve fund. In the Company's statement of accounts, profit is shown after allowing for bonus to staff, at Rs. 21.20 lakhs, as against Rs. 20.50 lakhs a year before. The appropriation to the reserve fund is, therefore, well maintained at 20.09 per cent of the profit, as against 20.04 per cent in the previous year. The return to shareholders has been left unchanged at 6 per cent per annum, subject to tax, per share of Rs. 10. The carry forward is Rs. 3.26 lakhs, as against Rs. 2.40 lakhs brought in.

The following table gives a clear idea of the progress made by the Bank in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Interest and discount earned ..	289.90	237.54	215.59	197.58
Commission, exchange and brokerage	50.48	43.10	39.02	34.42
Other income	15.06	17.04	15.20	14.56
Interest paid	113.06	89.09	79.15	72.48
Staff expenses	158.78	137.74	129.50	110.07
Other expenses	44.89	36.33	32.45	30.94
Depreciation	8.75	8.00	8.31	4.33
Profit	29.96	26.61	20.40	19.75
To reserve fund ..	4.26	4.11	2.93	2.90
To bonus to staff ..	8.76	6.11	5.77	5.46
Dividend	16.08	16.07	11.44	11.39
	(6%)*	(6%)*	(4.3%)*	(4.3%)*
Carry forward	3.26	2.40	2.07	1.81

	As on 31st December			
	1962	1961	1960	1959
Capital	268.67	268.61	268.54	268.44
Reserves	95.00	90.74	86.63	83.70
Deposits	64,70.13	58,86.99	51,73.68	47,68.20
Borrowings from other banks ..	171.02	6.79	18.01	1.00
Advances	43,90.44	37,61.26	31,62.21	27,51.59
Investments	19,15.85	17,70.54	16,79.24	17,65.83
Cash	791.73	810.25	704.02	575.64
Balance sheet total	83,40.95	75,87.34	67,26.84	60,75.28
Ratio to deposits of—	%	%	%	%
Advances	67.8	63.8	61.1	57.7
Investments†	28.5	30.0	32.1	37.0
Cash	12.2	13.8	13.6	12.1

* Subject to deduction of tax. † Unencumbered portion only.

The increase in profit is apparently due to larger advances which, as at the end of the year, stand at Rs. 43.90 crores, as against Rs. 37.61 crores a year before. Consequently, the credit ratio has expanded by four points to 67.8 per cent. This expansion is despite the further growth in deposits from Rs. 58.87 crores to Rs. 64.70 crores. The bulk of this expansion is in savings deposits which have risen from Rs. 20.53 crores to Rs. 23.31 crores. Current deposits, too, have advanced from Rs. 19.21 crores to Rs. 21.40 crores, while only a marginal improvement has taken place in term deposits, from Rs. 19.04 crores to Rs. 19.90 crores. However, considering that the outstanding amount of borrowings from other banks at Rs. 171.02 lakhs (including Rs. 103 lakhs raised from the Refinance Corporation) is much larger than the mere Rs. 6.79 lakhs a year before, the increase in the Bank's advances during the year has come not entirely from its deposits. Although the year-end figures of investments show an improvement from Rs. 17.71 crores to Rs. 19.16 crores, the ratio of investments to deposits has moved down from 30 to 28.5 per cent. At Rs. 791.73 lakhs, cash balances at the end of the year are slightly lower than Rs. 810.25 lakhs at the end of the previous year, and their ratio to deposits has slipped down from 13.8 to 12.2 per cent. The aggregate liquidity ratio is down over the year by three points at 40.7 per cent, though well above the minimum of 28 per cent stipulated under the amendment to the Act last year.

The paid-up capital has risen marginally from Rs. 268.61 lakhs to Rs. 268.67 lakhs because calls unpaid have diminished from Rs. 22,999 to Rs. 16,909. Reserve fund and other reserves total Rs. 95 lakhs. Because of the impressive rise in deposits the ratio of "own funds" to deposits shows a slight drop from 6.1 per cent to 5.6 per cent.

During the year, the Bank opened one branch at Naharkatia (Duliajan) in Assam, bringing the total to 114.

TREND OF SHARES

OPTIMISM PERVADES ON BUDGET EVE

(From Our Own Correspondent)

BOMBAY, 28*th February*

OPTIMISM regarding the 1963-64 Union budget proposals, to be made known late this evening, pervaded stock exchanges this week. Curiously enough, the same marketmen who had talked before of a heavy tax effort, now expected the budget to be "realistic" and designed to make both defence and development go hand in hand. Their revised opinion seemed to draw support from later newspaper forecasts, contradicting earlier estimates of a big tax load. Lately, the sense of robust confidence in Mr. Morarji Desai as Finance Minister had also come to prevail and set at rest early misgivings about the budget. Whatever the reasoning, the going was good, and values closed with further widespread gains on the eve of the budget.

The marketmen's anxiety to see, hear and talk all good about the next budget was carried a step further with the announcement yesterday of concessions in railway freight, ranging from 25 to 50 per cent of the normal traffic rate, on export business in 19 commodities which included mainly iron and steel and engineering goods. Reports of satisfactory corporate working, coupled with prospects of rights issue in the case of some companies, also contributed to the improvement in the sentiment.

On the other hand, the markets ignored President Kennedy's warning against the danger of recession in a speech to the American Bankers' Association on Tuesday the 26th inst. While saying that he was not predicting a recession this year, Mr. Kennedy stated that the problem of sustaining the U.S. economy under the pressure of deflation had become serious. It will be recalled that the Wall Street debacle in May last had considerably affected sentiment on stock exchanges in this country. If the slump were to recur, its implications would be all the more serious.

The week also saw a swift drift to the left in the present leadership in Burma as manifest in the nationalisation of banks and timber trade in that country. Even normally such a development in a neighbouring country would have caused concern to India. Today, in the light of the Chinese aggression, it must do so all the more, especially when Burma happens to be a participant at the recent six-non-aligned-nation Colombo Conference the proposals of which on the Sino-Indian border issue have been accepted by this country *in toto*. Not only did stock markets in this country ignore this development, but the political leadership also seemed not much concerned about it.

The budget and the political scene will shape the future trend in equities. The former will have been known before this appears in print. The latter is still unpredictable and full of imponderables, and even Prime Minister Nehru, according to what he said in the Lok Sabha yesterday while defending the continuance of the emergency, does not know what may happen in the course of the next few weeks.

The post-budget trading session has been dropped in Bombay, in view of the thin trading recently in the regular sessions and the consequent risk of wide fluctuations even on a small business put through after the announcement of the budget proposals.

• • •

Dalal Street recorded all-round improvement this week. Engineering and Miscellaneous issues, however, continued to be in the forsfront. Voltas spurted by 23 points to Rs. 276 following the Company's Chairman, Mr. J. D. Choksi's hint of a right issue in the near future at the annual general meeting on Monday the 25th inst. Alcock rose by 18 points to Rs. 332 and T.E.L.Co. by 12 points to Rs. 302. In the Miscellaneous section, Amar Dye-Chem advanced by Rs. 18.75 to Rs. 217.50, Poly-Chem by Rs. 12.50 to Rs. 153.75, Indian Dyestuff by Rs. 8.75 to Rs. 421.25, Bombay Burmah by 11 points to Rs. 650, West Coast and Premier Construction by six points each to Rs. 146 and Rs. 135, respectively, and Hindustan Motors by 56 nP to Rs. 18.20.

In Textiles, Mafatlal bulged out heavily from Rs. 702.50 to Rs. 825, with Standard spurting by 48 points to Rs. 820 and Bombay Dyeing by Rs. 3.50 to Rs. 63.50. Kohinoor were up by seven points at Rs. 286, Century by six points at Rs. 549 and National Rayon by Rs. 3.50 at Rs. 394. Steels improved further, Tata Ordinary by Rs. 2 to Rs. 121.50, Mukand by 64 nP to Rs. 19.40 and Indian Iron by 36 nP to Rs. 21.76. In the cash section, T. Maneklal showed a handsome gain of Rs. 40 at Rs. 730, Chemicoat of Rs. 39 at Rs. 195, Hindustan Wired Glass of Rs. 22 at Rs. 168, Permanent Magnets of Rs. 15 at Rs. 225 and Alembic of Rs. 10.25 at Rs. 184.

• • • •

In relation to Bombay, the market in Calcutta was less jubilant, though substantially higher over the week. Among forward shares, a gain of full one point was recorded by Dunlop at Rs. 36.75 and Orient at Rs. 37.10, with G.K.W. showing a still greater rise of Re. 1.25 at Rs. 33.50. Birla Jute improved by 93 nP to Rs. 30.37, Indian Aluminium by 94 nP to Rs. 32.94 and Kesoram by 87 nP to Rs. 21.87. In the cash section, Bharat Commerce showed a gain of 87 nP at Rs. 24.12, Elgin Mills by 82 nP to Rs. 20.69, Barnagore Jute by Rs. 4 to Rs. 191 and Megna Jute by Re. 1.37 to Rs. 13.87, while Nuddea Jute reacted by Rs. 3.25 to Rs. 57. Burn Engineering advanced by 15 points to Rs. 519, British Paints gained Re. 1.31 at Rs. 20.50, Dr. Paul Re. 1.19 at Rs. 18.50 and Philips Carbon Re. 1.37 at Rs. 20.12, while Angelo Bros. declined by Re. 1.68 to Rs. 23.19. Papers and Sugars showed small changes, but Hantapara, among Teas, reacted from Rs. 103 to Rs. 101.

PERSPECTIVES & PROJECTIONS

By Mercator

Maltreated Middle

WITH D-Day intervening between writing and publication; I find it difficult to concentrate on the most important event of the week—the Union Budget. Mr. Morarji Desai must be approaching it with a sense of mission and, while the public fears the worst, our nerves are still steady only because of the confidence that the Finance Minister will pay no heed to wild and desperate counsels. If he belies this faith, it is his business but I continue to wonder at the streak of sadism which makes some of our ordinarily level-headed men indulge in prophecies which in a more sensitive economic climate may wreck business psychology and create more neurotics than tax-revenue. Making allowances for the academic economist's remoteness from the market place and his natural propensity to avoid its sordid atmosphere, I still fail to see how one could wholly ignore the mainsprings of human activity which keep the economic mechanism ticking. An oft-repeated suggestion is that the middle-income groups can be taxed more—because some foreign observers with a radical outlook think so, without much idea of the conditions and social security provisions here. But cannot an economist who knows Indian conditions pause to ask who is most likely to pay it?

It is always the salaried man whose tax is deducted at the source that bears the brunt of every increase in income-tax in these middle ranges. For the others, there is always scope for evasion and a higher tax, if at all paid, will fall on a smaller income than that actually earned. The self-employed or professional men, like doctors, lawyers, brokers of all sorts required in an increasingly complex age, the garage proprietors and small traders who may all be earning as much as a salaried middle manager pay only a fraction of the tax now paid by the fixed income assessee. It is no use saying that enforcement should be tightened, since in such cases it is easy to avoid disclosing unrecorded transactions and most of the current earnings can be used for current expenses. Hence the sight of conspicuous spending on weddings or other social occasions or the pursuit after smuggled goods and other equally scarce commodities like gold ornaments, consumer durables or urban land. The trouble about banning such luxury goods is that they cannot be openly taxed to raise resources; and the scarcity prices in turn go to enrich some spivs who cannot be taken cognizance of for taxation purposes.

I can boldly predict that Mr. Desai will have no new method to announce in the Budget of catching hold of this class of affluent persons and since laws cannot discriminate in principles, the honest fixed-income group's capacity sets limits to what the Finance Minister can exact now or in future. Compulsory saving will not at least deprive such persons of their hard-earned income, though even in this there will be disparity between present sacrifices of the two classes of income-earners. In a country which at other times is often reminded of the need to provide incentives to managerial and technical personnel employed in the private and public sectors, a tax policy which hurts salaried employees working for others while protecting the independent practitioners seems to be the most illogical and absurd thing to suggest to the Finance Minister even in an emergency—but there it is!

• • • •

Hobgoblin of *Self-sufficiency*

An example of how pefunctory our planning for defence and development can be is seen in the Government's policy on cement expansion. The installed capacity today in this industry is a little below ten million tons and production just under nine but shortages are developing even before new schemes sanctioned after the emergency have had time to get started. Very careful rationing of available quantities will become necessary since new units that are likely to mature before the end of the third Plan will have an installed capacity of only three million tons more. Licensing of an additional 6.7 million tons above this level has no firm basis since the construction of these units is tied to the supply of cement machinery by Indian manufacturers. There are six of these but only two have got going and they have enough on their plate just now. When pestered by the licensees for new cement units for supply of machinery, they naturally try to dictate their terms, which, it is reported, include their inability to guarantee either dates for delivery or firm prices for the machines—or even assurances about their performance.

Such matters are not unknown in sellers' markets but the question is why the Government should bolster up one by its policy. The answer is that the foreign exchange shortage compels reliance on indigenous sources to the maximum extent and that the new machinery manufacturers cannot grow, unless orders are guaranteed. We have heard of protection to infant industries and other facilities but a high wall of prohibition as a matter of right is extraordinary, though necessity caused by lack of foreign exchange often compels such a step. Here the question is essentially one of speed in erecting new cement units to produce the material needed for both defence and development projects in sufficient quantities. In a planned economy, it should be possible for the Government to link manufacture of machinery to their phased installation on the basis of firm supply dates, and supplement it with other arrangements for securing the balance.

Instead of doing so, the authorities seem to have stuck obstinately to their old slogan that new capacity must depend only on Indian-made machines, even though it appears that, given the same foreign exchange now given to the machinery manufacturer for each plant, cement licensees were prepared to get essential equipment and supplement it with locally fabricated material. They felt that this would give them machinery within half the time, at lower prices and with guaranteed performance and after-sales servicing facilities which they are not now sure of. It is probable that their attitude also conceals some distrust of indigenous manufacture, which does not deserve to be encouraged in the interests of promoting domestic heavy industry; but cement is not the material in which any risks can be permitted in the present circumstances. Nor can the Government say that it will spend foreign exchange on importing cement to the extent of the deficiency when it is obviously much better to spend it on importing the machines and quickly setting up the new plants. This episode seems to reflect a lack of imagination and resilience than a sense of urgency; and if it is true that the new machinery manufacturers want a captive market without being able to assure delivery, prices or performance, the Government will also be a party to doubtful business ethics.

Mentor in the Market

After the recent buying spree in gold ornaments (which did little credit to us as a nation), people in the capital are witnessing another mad rush for house sites in favoured localities in which the Government is the beneficiary. I am not one of those who think that the Government may be permitted a conduct which will be frowned upon if practised by an individual, though, like all generalisations, this will have exceptions. By auctioning Government-owned sites to the highest bidders (and how frantic bidding can be!), the State is supposed to be appropriating for itself the entire unearned increment in capital values of urban land and thus advancing the cause of socialism. Without denying the substance in this view, one may question the wisdom of persisting in a course which is bound to have other social effects which are not fair to underprivileged sections of society. Obviously those who bid at fantastically high prices are sure of realising adequate returns on their investment which would pay municipal or wealth taxes on such inflated values; yet the Government recently confessed in Parliament that it is unable to control rents in the capital when many persons willingly paid high rents.

If many of the schemes for establishing housing colonies, by preparing and distributing frozen land in the capital under the Delhi Master Plan, had materialised, the current scramble for land might not have occurred. Perhaps the Government also knows this. Besides its own normal procedural delays and susceptibility to pressures from other urban land speculators who do not like to see urban site values being stabilised or brought down by official measures, the Government has now developed a vested interest in its own real estate speculation. Unfortunately, when it is not the sole trader in this kind of property, it sets a standard of prices, land values and rents for the rest of the community. Private owners of land, even in localities not favoured by the elite, tend to establish a definite relationship between the prices and rents charged by them and those in Delhi's West End. A bullish psychology has got hold of the entire landlord class which is all the time engaged in scheming, building and letting out houses—all worthy economic functions no doubt, but defeating the paper schemes for encouraging middle class and low-income groups to own houses or find accommodation at reasonable cost.

The following is a Statement of Ownership and other particulars about "Commerce," Bombay, as required under Rule 8 of the Registration of Newspapers (Central) Rules 1956.

FORM IV

1.	Place of Publication	"Brady House," Veer Nariman Road, Fort, Bombay
2.	Periodicity of Publication	Weekly
3.	Printer's Name	Mr. John Middleton
	Nationality	British
	Address	Brady's Flats, Block No. 6, Flat No. 6, Sohrab Bharucha Road, Fort, Bombay 1
4.	Publisher's Name	Mr. Jamshed Dinshah Kapadia. For the Proprietors, "Commerce" (1935) Ltd.
	Nationality	Indian
	Address	57, New Marine Lines, Bombay
5.	Editor's Name	Mr. Subramanya Venkata Rayan
	Nationality	Indian
	Address	4, Narasingha Bhuvan, Brahmanwada Road, Matunga, Bombay 19

6. Names and addresses of shareholders holding more than one per cent. of the total capital:

Messrs. W. H. Brady & Co., Ltd., 12/14, Veer Nariman Road, Bombay.

Mr. A. H. Baker, Burleigh House, Charing, Kent, England.

Calcutta General Printing Co., Ltd., 3, Wellesley Place, Calcutta.

G. Claridge & Co., Ltd., 12/14 Veer Nariman Road, Bombay.

Cowasji Jehangir & Co. Pvt. Ltd., Readymoney Mansion, Veer Nariman Road, Bombay.

Mr. Jal Dorabji Framji, Barry Villa, Owan Dunn Road, Gamdevi, Bombay.

Industrial Investment Trust Ltd., 61, Apollo Street, Bombay.

Lady Jerbai Byramjee Jeejeebhoy, Mrs. Homi J. B. Jeejeebhoy, Mr. J. B. Jeejeebhoy, Mrs. Cursetbai J. R. B. Jeejeebhoy, "The Cliff," Ridge Road, Malabar Hill, Bombay.

Lady Jerbai Byramjee Jeejeebhoy, Mrs. D. N. Jeejeebhoy, Mr. N. B. Jeejeebhoy and Mrs. Cursetbai J. R. B. Jeejeebhoy, "The Cliff," Ridge Road, Malabar Hill, Bombay.

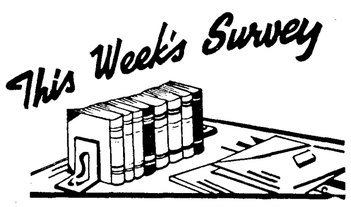
Mr. Himatlal Kantilal, C/o Nahalchand Laloochand Private Ltd., Kantilal House, 14, New Queen's Road, Bombay, 4.

Lady Jerbai Byramjee Jeejeebhoy, Mrs. Dosibai Nanabhoy Jeejeebhoy, Mr. Nanabhoy Byramjee Jeejeebhoy, Mrs. Cursetbai Jeejeebhoy, and Mr. Rustomjee Byramjee Jeejeebhoy, Alice Bldg., Dr. Dadabhoy Naoroji Road, Bombay.

Mr. Douglas Moir, Liroska, 3, Cuminghame Crescent, Bangalore.

Nahalchand Laloochand Pvt. Ltd., Kantilal House, New Queen's Road, Bombay.

Mr. Maneklal Premchand and Mr. Kishore Maneklal Premchand, 63, Apollo Street, Bombay.



Mr. Bhogilal Kuberdas Patel, Mr. Shantilal Choonilal and Mr. Harshadkant Choonilal, C/o Chunilal Manilal & Co., Yusuf Bldg., Bombay-1.

Patel Cotton Company Private Ltd., 6, Veer Nariman Road, Bombay.

I, JAMSHED DINSHAH KAPADIA, hereby declare that the particulars given above are true to the best of my knowledge and belief.

Date: 2nd March 1963.

MORE TAXES VS. ECONOMY IN EXPENDITURE

THE view that the Central Budget for the fiscal year 1963-64 should contain a heavy dose of taxation still finds a large measure of support in certain academic circles. It is pointed out in support of this view, that the twin objective of defence and development, which will be the guiding lights of the Budget, leaves little choice for the Finance Minister but to cast his net deeper and wider. But must he do so? The answer is an emphatic 'No,' according to the author of a timely brochure entitled *Emergency and the Exchequer*, published by the Society for the Propagation of Democratic Thought, Calcutta. He argues that the Government can obtain adequate funds for defence and development at the existing level of taxation and that, far from needing additional taxation, a case can be made out even for granting tax relief. Briefly stated, the argument runs on the following lines:

Economic activity in the country has been greatly intensified during the emergency and this is bound to be reflected in the revenues of the Central Government for the next year. Increased economic activity will also bring in more revenue under income-tax and corporation tax. Already during the current fiscal year there has been buoyancy in revenues. Receipts under excise, customs and income-tax are expected to be substantially higher than the budget estimates. The yield from income-tax and corporation tax is also expected to be higher. Another important source of revenue is the voluntary contribution to the National Defence Fund by companies.

The higher revenues from these sources could be supplemented by savings effected through economy in expenditure for which, according to the author of the brochure, there is considerable scope. The scrapping of prohibition will result in a net saving of Rs. 150 crores. It is estimated that as much as Rs. 447 crores could be obtained during the next financial year without resorting to additional taxation from four principal sources. They are: (1) economy in expenditure: Rs. 205 crores; (2) customs and central excise: Rs. 182 crores; (3) normal increase in income and corporation taxes: Rs. 40 crores and (4) voluntary contributions to N.D.F. Rs. 20 crores.

The author of the brochure estimates that, even after making allowance for a doubling of the expenditure on defence, there will be a net revenue surplus of Rs 242 crores in the next budget, assuming that the economies in expenditure indicated above are effected and the additional revenues as estimated above materialise. There will, therefore, be hardly any need for additional taxation. On the other hand, there is a case for tax relief. The plea for tax relief in a national emergency is not as strange as might appear on the face of it, says the author of the brochure. Even in the U.S., which is called upon to step up its defence spending substantially, it is pointed out, the President has thought it advisable to cut taxes in order to stimulate the economy.

What lends point to the argument of the author of the brochure is not the estimates of revenue and expenditure made by him but the fact, which he strongly emphasises, that there are other ways of raising revenues for development and defence than through additional taxation. Economy in expenditure, reduction of non-development spending, abolition of costly and economically unproductive experiments such as prohibition can result in substantial savings which will minimise, if not completely eliminate, the need for additional taxation. More taxation, howsoever ingeniously devised, has certain disincentive effects. Its effect on the desire to work and save is bound to be particularly adverse in a country like India where the rate of personal income taxation is perhaps the highest in the world. Reference may be made in this connection to an interesting comparison of personal taxation in India with that in some countries made by Mr. D. L. V. Rowe, an eminent British expert on taxation and Company Law serving in India, in the course of a lecture delivered under the auspices of the Chartered Institute of Secretaries India Association at Calcutta last week. Mr. Rowe summarised the rates of personal income taxation (for a married man with two children) in five countries, including India, in tabular form as under:

Income	India	U.K.	U.S.A. (*Old budget*)	Malaya	Japan
Rs.	%	%	%	%	%
13,333	6·9	7·7	2·9	2·5	15·6
26,666	17·9	18·8	11·4	6·9	23·0
40,000	27·7	22·9	14·8	10·3	27·5
53,333	35·9	24·5	16·9	12·9	30·6
66,666	42·5	26·5	18·7	15·6	33·3
80,000	47·7	28·8	19·9	18·7	35·3
93,333	51·5	31·6	21·6	21·7	37·2

N.B.—It must be remembered that in India most, if not all, 'fringe' benefits come within the I.T.O.'s net. They are, therefore, included in the income figures given in the table above.

It is evident that the rate of taxation in India is much higher than in any of the other four countries listed above. Some economists have been asserting that incomes between Rs. 20,000 and Rs. 40,000 are taxed at a much lower rate in India than in the developed countries of the world. The figures quoted above belie that assertion.

While on this subject we may also refer to Mr. Rowe's assessment of the repercussions of the high level of personal taxation on managements of companies. To quote him:

"From the start, a company director is faced by the difficulty of remunerating adequately a staff which he has taken a great deal of care in choosing and training and, for that matter, leading. It may be said these are high income figures, but are they? You look any day in the advertisement columns of the London papers, for instance, and you will see that a qualified man in his late thirties with reasonable experience should expect to receive between Rs. 40,000 and Rs. 60,000 a year, that is, between £3,000 and £5,000 a year. And it is in this income group your mill or colliery manager, departmental head or, for that matter, chief accountant or company secretary should be found; and look at the difference in 'take home pay' which is what matters and which is what I refer to as remuneration.

"I know there is an argument that, in India, differences in income are such that the difference should be reduced, but, unfortunately, this seems to be more often tackled by reducing the mean by taxation rather than what I consider to be the correct method of stimulating every way of increasing that mean. To achieve this I believe it is precisely the group I have mentioned that should be stimulated and rewarded; they are the real leaders of industry, and industry, no less than an army, has to have leaders."

The conclusion of Mr. Rowe reflects the practical approach of a person who is charged with the responsibility of delivering the goods which is far more important than an exercise in socialism especially in the context of the present emergency.

VANASPATI INDUSTRY

The fortunes of the vanaspati industry have always fluctuated in tune with the trends in the availability of groundnut oil and its prices. It is only natural, therefore, that the industry fared very well last year, when there was a halt in the persistent upward trend in the price of groundnut oil witnessed for several years past. Thus the total output of *vanaspati* rose to a record level of 368,000 tonnes in 1962, representing an increase of as much as about 30,000 tonnes over the previous year. It may be recalled here that the corresponding increase was no more than about 2,000 tonnes in 1961 and an annual average of 6,000 tonnes during the last five years. Although the output increased substantially last year, there is no room for being complacent. For even at the current level, as much as about 35 per cent of the installed capacity remains unutilised. The major reason for the large idle capacity is to be found in the high cost and the inadequacy of the industry's basic raw material, groundnut oil, under conditions of steadily increasing demand for oils and fats for edible and industrial purposes.

The supply of groundnut oil cannot be augmented, unless much more attention is given to the cultivation of oilseeds, in general, and groundnuts, in particular. It is only in the fitness of things, therefore, that Mr. P. L. Tandon, Chairman of Hindustan Lever Ltd. and the President of the Vanaspati Manufacturers Association, should have stressed the need for increasing the production of oilseeds at the annual meeting of the V.M.A. held in Bombay on Monday. Mr. Tandon advocated what is called a "crash programme to step up the output of oilseeds. He, however, did not expatiate much on what he meant by the "crash programme." Slogans usually do not take one far. In fact, for oilseeds and groundnut in particular, several development schemes with catchy titles (like package programmes) have already been conceived by the Central Oilseeds Committee and the Government of India. But the implementation of their schemes has turned out to be half-hearted, and, consequently, they have made hardly any material difference to production. So what is required now is not any new slogan or scheme, but effective implementation of the plans already chalked out for the intensive cultivation of groundnuts and other oilseeds.

This is not to suggest that Mr. Tandon is unaware of the real problems involved. In fact, he suggested several measures for expediting the implementation of oilseeds development programmes. He was certainly correct in concluding that the major drawback in the field was the apathy of State Governments to get on with the extension work. Equally correct was his diagnosis that the lag in production of oilseeds was due, to a large extent, to the isolation of the research worker and the plant breeder from the man behind the plough. It is obvious that, unless the findings of research are made available to the farmer, India's bid to increase the *per capita* yield of oilseeds will remain unsuccessful. The third Plan has, no doubt, set a production target of as much as 9.8 million tons for the five major oilseeds. But the prospects of fulfilling the target are bleak, considering the fact that the current output (less than 7 million tons annually) is much below even the second Plan target of 7.6 million tons.

By stepping up the output of oilseeds, India will be able to increase exports of not only unrefined vegetable oils, but also *vanaspati*. In 1962, exports of *vanaspati* rose to about 12,000 tons, from only about 4,000 tonnes in 1961. The increase was mainly the result of the decline in the domestic price of groundnut oil and the higher margin of profits received on imports of copra under the incentive scheme for *vanaspati*. It is a pity that, though India has the world's largest area under groundnut cultivation, exports of groundnut oil and processed goods cannot be expanded without resort to artificial stimulants.

NATIONAL INCOME

The pace of economic growth in India slowed down considerably during the first year of the third Plan, namely, 1961-62. The actual rise in net national output at current prices in that year, as compared with 1960-61, was just 3.3 per cent, as against the advance of as much as 9.3 per cent registered in 1960-61 over 1959-60, according to the tenth issue of the annual White Paper on national income released by the Central Statistical Organisation; the "quick" estimates of income for 1961-62, it will be recalled, were published in October 1962. The extent of the rise will be still less if account is taken of the all-round increase in prices. Thus, the net national output at constant (1948-49) prices went up by only 2.1 per cent in 1961-62, as against 7.5 per cent in the previous year. Even this modest improvement was more than neutralised by the marked increase of 9.65 million to 443.73 million in population, on top of the rise of 9.22 million recorded in 1960-61. Consequently, *per capita* income in real terms suffered a setback, from Rs. 293.7 in 1960-61 to Rs. 213.4 in 1961-62.

The table below indicates the trend of aggregate net national output and *per capita* income at both current and 1948-49 prices since 1960-61, which was the base year for the first Plan.

Year	Population (In millions)	Total net national output (In crores of Rs.)		*Per capita* income (Rs.)	
		At current prices	At 1948-49 prices	At current prices	At 1948-49 prices
1950-51	357.59	9,530	8,850	266.5	247.5
1951-52	363.60	9,970	9,100	274.2	250.3
1952-53	370.00	9,820	9,460	265.4	255.7
1953-54	376.84	10,480	10,030	278.1	266.2
1954-55	383.98	9,610	10,280	250.3	267.8
1955-56	391.37	9,980	10,480	255.0	267.8
1956-57	399.22	11,310	11,000	283.3	275.6
1957-58	407.36	11,380	10,890	279.3	267.3
1958-59	415.84	12,600	11,650	303.0	288.1
1959-60	424.86	12,950	11,860	304.8	279.2
1960-61	434.08	14,160	12,750	326.2	293.7
1961-62	443.73	14,630	13,020	329.7	293.4

The estimates for 1961-62, which are still preliminary and based on partial material, have undergone a slight upward change as compared with the quick estimates released in October 1962. If the net rise in national income during 1961-62 over 1960-61 was modest, it was because of the decline of Rs. 30 crores in the contribution made by agriculture, thanks to the fall of 0.6 per cent in output. The increase in the combined contribution from all other sectors was also not much, being about Rs. 300 crores. This trend compares unfavourably with 1960-61 (last year of second Plan), which it may be noted here, witnessed an all-round improvement in both agricultural and non-agricultural output the total net contribution to national income from these two sectors rising by about Rs. 650 crores and Rs. 610 crores, respectively. The estimates for 1960-61 are based on the detailed methods of estimation followed for the earlier years and show an upward revision over the preliminary estimates published last year. This revision has, *inter alia*, been due to the incorporation, for the first time, of the results of the random sample crop-cutting survey in respect of sugarcane in Uttar Pradesh.

Adjusting for purely statistical differences between the crop production estimates of 1955-56 and 1960-61, the net increase in national income and *per capita* income in *real terms* during the second Plan period works out to 20.4 per cent and 8.6 per cent, respectively. The modest rise of less than nine per cent in *per capita* income is the result of a heavy rise in population. Expressed at current prices, the national income was Rs. 14,630 crores in 1961-62, as against Rs. 14,160 crores in 1960-61 and Rs. 9,980 crores in 1955-56. The *per capita* income at current prices was Rs. 329.7, as against Rs. 326.2 and Rs. 255.0 in the aforesaid two years. The relatively larger rise at current prices than at constant prices, it is needless to mention, was due to the increase in prices. It is thus obvious that, if the community is to enjoy the fruits of economic development under the Five-year Plans, every care must be taken to hold the price line.

OIL ROYALTY

Details of the Nehru Award on oil royalty published this week clearly bring out the reasons for the new basis adopted by the Prime Minister in fixing oil royalty. The most significant feature of the award, as we had pointed out in an earlier issue (*vide* page 844 of *Commerce* dated 17th November 1962), was that it made a departure from the usual practice of fixing oil royalty on the basis of the well-head value or "substantial free market price" of crude oil and adopted, instead, the actual selling price of crude oil in India to refineries in both the public and private sectors as the appropriate standard by which to determine the incidence of royalty. The substantial free market price was unacceptable, because neither the U.S. nor the Middle East, the Prime Minister maintains, could be considered to meet fully the definition of "a substantial free market." Although the U.S. was undoubtedly the largest single producer of crude oil, no imports had been allowed into the American market since 1959, except on a very restricted scale, with the result that American prices continued to be insulated from the world trends. Despite the entry of many new competitors in the field, prices or Middle East crude oil were still controlled and regulated, to a large extent, by the major oil companies whose interests cover also refining operations and marketing of products in many countries to which they supply crude oil.

The well-head value also could not be taken as a basis for the calculation of royalty, because, at the present stage of development of oil industry in India, it was not possible to arrive at any reasonable figure of the actual cost of production based on the cost of exploration of crude oil in different parts of the country and to deduce from this the well-head value. Even in respect of the Oil India fields, where major petroleum resources have been developed, Mr. Nehru points out in his award, the well-head value would fluctuate appreciably, depending upon the actual amount of production. The only alternative, therefore, according to the Prime Minister, is to adopt the actual selling price of crude as the basis for the fixation of royalty. Even this gives rise to the problem of deciding which price is to be taken into account, the ultimate price paid by the consumer or the price at which crude oil is sold to refineries in the public and private sectors. The Assam Government had argued that it was the ultimate price to the consumer of petroleum products manufactured out of crude that should be taken into account. Mr. Nehru does not think that this could be a valid basis, as the ultimate price of the product included various elements like excise duty, distribution and marketing charges, profit-margin of distributors, etc. Therefore, it is the price that refineries in India have to pay for crude oil that provides, according to him, the correct basis, the element of royalty being a direct charge on this price. This price, which is calculated on the basis of the landed cost of Middle East crude (which is comparable in type and quality to the Assam crude) works out to an average of Rs. 75 per ton. Mr. Nehru regards, and rightly so, that 10 per cent of this price, that is, Rs. 7.50, would be an equitable royalty. Quantitatively also it represents a fair compromise between what the Assam Government wanted (Rs. 10 per ton) and what Oil India was prepared to offer (Rs. 4.80 per ton) as per the June 1961 agreement between Oil India and the Union Government.

The award has implications that transcend the dispute in question. In fact, Mr. Nehru himself has suggested that, though his award relates only to the dispute between the parties, namely, the Assam Government and Oil India Ltd., the royalty rate and the principles underlying its fixation should be applied on an all-India basis. In other words, the royalty rate of Rs. 7.50 per ton of crude oil should hold good in respect of oil in other States too. This will bring about uniformity in the revenues that State Governments would be receiving from oil royalties. Such uniformity, it may be pertinent to add, already exists in respect of other minerals such as iron ore and manganese ore. There is no reason why mineral oil should be treated differently.

MADRAS PORT TRUST

The Madras Port Trust has given a good account of itself in recent years not only by expanding its capacity to handle foreign trade, but also by improving the efficiency of its services. A perusal of the latest Administration Report of the Port Trust (for the year 1962-63) reveals that it has maintained this record. The volume of foreign trade that passed through the Madras port touched an all-time peak level during 1962-63. Exports handled by the port rose substantially, that is, by about 32 per cent to 1.14 million tonnes, as compared with 1960-61 when they were only 861,000 tonnes. This strident increase was accounted for mainly by iron ore, groundnut oil and oilcakes, and to some extent, by manganese ore, piecegoods and raw tobacco. The improvement in these exports was more than sufficient to offset the setback suffered by a few other major commodities, namely, iron and steel scrap, mica and raw cotton, etc. Imports too rose, but only fractionally, being higher by about two per cent at 1.39 million tonnes. The relatively small increase in imports was apparently due to restrictions on total imports into the country as a whole necessitated by balance of payments consideration. Besides foreign trade, the port handled a much larger volume of coastal trade also during the year under review.

As a result of the larger volume of trade hauled by the port, the overall financial position of the Madras Port Trust improved during the year. The actual net receipts of the Port Trust amounted to about Rs. 364 lakhs, or an increase of about Rs. 63 lakhs over 1960-61. This figure excludes the sum held under "suspense" and contributions from renewals and replacement fund, revenue reserve fund and pilotage fund. The increase in receipts was accompanied by a larger incidence of expenditure which touched Rs. 232 lakhs in 1961-62, as against only Rs. 191 lakhs in the previous year. The proportion of actual working expenses to receipts was, however, slightly smaller. Thus, the working expenses (after excluding from the gross expenditure contributions to renewals and replacement fund, to general insurance fund, and to capital, interest on loans, repayment of debt and debit to "suspense") amounted to only 54.37 per cent of the receipts, which compare favourably with 54.58 per cent in the previous year. The actual receipts and expenditure on pilotage account amounted to Rs. 8,79,509 and Rs. 8,80,197, respectively.

During the year under review, the implementation of the capital works programme gained further momentum. Thus, the work on the stage one of part A of the Wet dock scheme, costing Rs. 280 lakhs, was almost completed by the close of the year. Besides, dry excavation of the dock from the existing ground level was finished during the year. Several other schemes for expansion and modernisation were under way, particularly for dismantling of the breakwater at the entrance of the wet dock and construction of side walls of the entrance and a coal berth as well as the installation of pipelines around the wet dock. It is essential that these schemes are expedited in view of the growing demand made on the Madras port, which is the major outlet for exports from the South.

E.F.T.A. TO SPEED UP TARIFF CUTS

With the prospects of Britain's entry into the Common Market in the foreseeable future having become dim, the U.K. has now decided to strengthen its trade ties with the other members of the European Free Trade Association. The other members of the E.F.T.A. (Austria, Denmark, Norway, Portugal, Sweden and Switzerland) have themselves reason to share the U.K.'s disappointment at the collapse of Brussels negotiations. For, they were hoping to follow Britain's footsteps. The leader of the British delegation to Brussels talks, Mr. Edward Heath, the Lord Privy Seal, was in Geneva last week, canvassing support for a plan to speed up tariff reductions among the E.F.T.A. countries. Although his proposal for advancing the target date for the *complete* abolition of internal tariffs among E.F.T.A. countries from 1970 to 1965 was not endorsed by the smaller countries, they agreed in principle to do so by 1966. A final decision will, however, be taken only at the next E.F.T.A. Ministerial meeting scheduled to be held at Lisbon within a couple of months.

The E.F.T.A. countries, in the meantime, have agreed to refer to their officials the question of speeding up of tariff cuts and other related measures for further study. The acceleration of tariff reduction is probably aimed at keeping in step with the similar actions being taken by the Common Market countries, which propose to eliminate internal tariffs completely by 1967. It may be noted here that the E.F.T.A. has already reduced internal taxes by 50 per cent (of January 1960 level). The speeding up of tariff reductions by the E.F.T.A. is not likely, in the opinion of some European observers, to make any difference in the approach of Gen. de Gaulle. At any rate, the scope for co-operation envisaged by the E.F.T.A. is very limited. For, unlike the E.C.M., the E.F.T.A. will not have any common tariff. Nor do their tariff cuts cover non-industrial goods for which special arrangements are likely to be made. Thus, while the E.C.M. bids fair to establish an integrated market, the E.F.T.A. intends to remain essentially a loose free trade area.

The proposed tariff reductions between the U.K. and the other members of the E.F.T.A. are likely to raise some problems for the Commonwealth countries like India. Although the E.F.T.A. will not have a common tariff against third countries and associate overseas territories, the Commonwealth will still have to face competition in the U.K. market for its goods from the E.F.T.A. countries on equal terms in a matter of three years from now. As far as India is concerned, the new tariff alignments among E.F.T.A. may affect to some extent its exports of cotton textiles and jute goods to the U.K. because of free entry of these goods from the other members of the bloc. It is, however, a matter for gratification that the E.F.T.A. would follow liberal trading policies consistent with the spirit of the G.A.T.T. Besides, the Commonwealth countries can expect a fair deal because of Britain's predominant influence in the bloc.

AUSTRALIA'S LARGEST COMMERCIAL BANK CAN HELP YOU TO PROMOTE TWO-WAY TRADE WITH AUSTRALIA, NEW ZEALAND, AND FIJI

Want to sell? Want to buy? Want market information? The international Division of the Bank of New South Wales can tell you about the opportunities for trade offering with these countries.

The Bank's complete banking service includes such specialized facilities as trade introductions to buyers and sellers, industrial enquiries, economic and market information, and a complete travel service. The Bank is closely and constantly in touch with industry, business, and agriculture in the areas it serves through more than 1,100 branches and agencies.

● Enquiries may be made through your own bankers or direct to

RATE OF ECONOMIC EXPANSION IN THE YOUNG COUNTRIES

NEED FOR CONTINUED FOREIGN AID STRESSED

By Professor Otto Donner

IN the last twelve-and-a-half years, the amounts made available to the developing countries by the West have totalled some 70,000 million dollars, of which $40 000 million have come from public sources and the balance from private investors. A good many doubts have been expressed on the sense and purpose of assistance on this tremendous scale. A year or so ago, the then president of the International Finance Corporation complained that too many governments were directing most of their energies towards obtaining a maximum of economic assistance, instead of concerning themselves more with utilising the resources of their own countries. Not long ago, an American official was quoted as saying that, in certain development areas, for every dollar which goes in as economic assistance, another dollar finds its way out at the other end into Swiss or American banking accounts. It has been estimated by the American Senator Javits that the capital put away in a safe place by Latin Americans alone amounts to between 9,000 million and 15,000 million dollars.

There is also a certain uneasiness about the principles on which the industrial countries operate in giving effect to schemes for development assistance. Many critics think that development assistance in its present form favours planning concepts of the Soviet type. There are, on the other hand, critics who say that too little is done to co-ordinate the individual projects into a systematic and planned long-term development programme. There are also doubts about the principle under which the countries which are to benefit are selected. Should it be concentrated on those which merely require to be given a vigorous impulse from without in order to reach the stage of independent and progressive economic expansion, or can better results be achieved when development assistance is spread over the widest possible area? Some people say that the needs of the developing areas are boundless and that the well-intentioned experiment of development assistance is, therefore, bound to lead eventually to the "greatest bankruptcy the world has ever known," unless the industrial countries are prepared to make much greater sacrifices. There are others who would prefer to see development assistance entirely abolished. They think it is only right and proper that the present undeveloped countries should be told to work their way up from the bottom without outside assistance and relying solely on their own resources, in the same way as the present industrial countries originally had to do.

Why Development Assistance At All?

Development assistance can be justified in the first place on humanitarian grounds. Throughout the civilised world, the humanitarian and Christian responsibility towards one's family, one's friends and neighbours has never been questioned. The mass of social legislation enacted during the last hundred years and the many other social measures show that this ethical principle has been applied also on a national plane. Now that the world is being brought ever closer together as the result of the increasing internationalisation of all forms of relationship, it seems not merely natural but urgently desirable that this principle should also be established on an international level.

A second justification for development assistance is to be found in the economic field. The days are long past in which it was believed that national prosperity could best be achieved by one nation cutting itself off from the others or by destroying them. Today we realise that precisely the opposite is the case. The more efficient neighbouring countries are, the better markets they offer and the more reliable they are as sources of supplies. So far as development assistance is successful in helping the poorer countries to advance, international trade is encouraged. In this way, development assistance becomes at the same time a factor in promoting the donor country's prosperity. Furthermore, since the productive capacity of the industrial nations is so organised that they produce considerably more capital goods than they themselves need, this arrangement works out to their mutual benefit. It is just these capital goods on which the developing countries are so dependent for the strengthening of their economic structure. Development assistance is, therefore, from the point of view of the industrial countries, at the same time also a stimulus to their exports.

The third justification for development assistance is political. In the countries of Latin America, Africa, Asia and the Middle East, there is a revolt against traditional ways of life and, in many cases, against the abysmal poverty which is rife. These countries have a population of some 1,500 million, and the task of giving them real hope of an improvement in their standard of living is one which merits high priority in the field of foreign policy. If we want to prevent them from losing patience and subscribing to a system which is hostile to us, we must help them to seize the opportunities provided by a system of free economy and free social order. The times are past when our foreign policy could be confined to the traditional methods of pure diplomacy and military policy. Development assistance is thus an integral part of the measures which we take on behalf of our political security and, in particular, is a necessary corollary to our defence policy.

Remarkable Rate of Growth

It is often held that this attempt to help people to help themselves has no chance of success. In spite of all the assistance that has been given, the gap between the rich and the poor nations is becoming wider instead of narrower. This, it is said, is a proof that all development assistance—at any rate, what has been given to date—is ineffective. In fact, however, there is a much greater expansive force in the economies of the underdeveloped areas than the sceptics suppose. The annual report for 1961 of E.C.A.F.E. (Economic Commission for Asia and the Far East), which was recently published, contains the remarkable finding that the rate of growth of the gross national income of a whole series of Asian countries compares very favourably with that of the highly-developed industrial countries. Whereas during the year 1950 to 1959, the gross national income of the United States increased on the average by 3.3 per cent, that of the Philippines was 6 per cent, Indonesia, Cambodia and Ceylon 3.6 to 4 per cent, India 3.1 per cent and Pakistan 2.6 per cent. A comparison of industrial production gives an even more favourable picture. For the years 1953 to 1960, it shows an increase of 63 per cent for Latin America, 104 per cent for Asia (excluding Japan and communist China), but only 39 per cent for the world as a whole.

The Population Explosion

What truth is there in the assertion frequently made that the increase in the gross national product is negatived by the population explosion, with the result that, in the developing areas, the income per head is reduced, so that the gap between rich and poor nations becomes wider and wider? It is very seldom that such a development is so marked; Paraguay is one of the few countries to which it applies. It more often happens that the increase in production only slightly exceeds the growth in the population; Bolivia, Chile, Egypt, Pakistan and certain African territories are in this unhappy position. There are, however, other countries (including Venezuela, Columbia, Brazil, Mexico, Burma and the Philippines) in which income per head has increased in about the same proportion as it has done in the United States. According to a study published by the World Bank, if an average is taken of all developing areas, the income per head in the underdeveloped areas increased at about the same annual rate as it did in North America. If they are compared with Europe, however, they show up much less favourably. It should, however, be said that what has happened in Europe in recent years must not be taken as a standard of what can reasonably be expected from the developing countries. The spectacular rate at which certain members of the Common Market have expanded was in all probability unique. There is thus very little foundation for the assertion that development assistance has proved to be a failure.

Methods of Finance, Then and Now

There are also certain critics who, while approving development assistance in principle, hold that it should be left to free enterprise and that governments should not participate. Two arguments are advanced in support of this view. In the first place, the legitimate capital requirements of the developing countries, so long as their financial and economic policies are directed along proper lines, could be met fully either in the international capital market or by means of direct investment by western business firms. Secondly, it is argued, government grants of development assistance tend to favour collectivisation, and lead to a Soviet type of socialism; their effect is thus not only contrary to the interests of the donor but also to the true interests of the recipient.

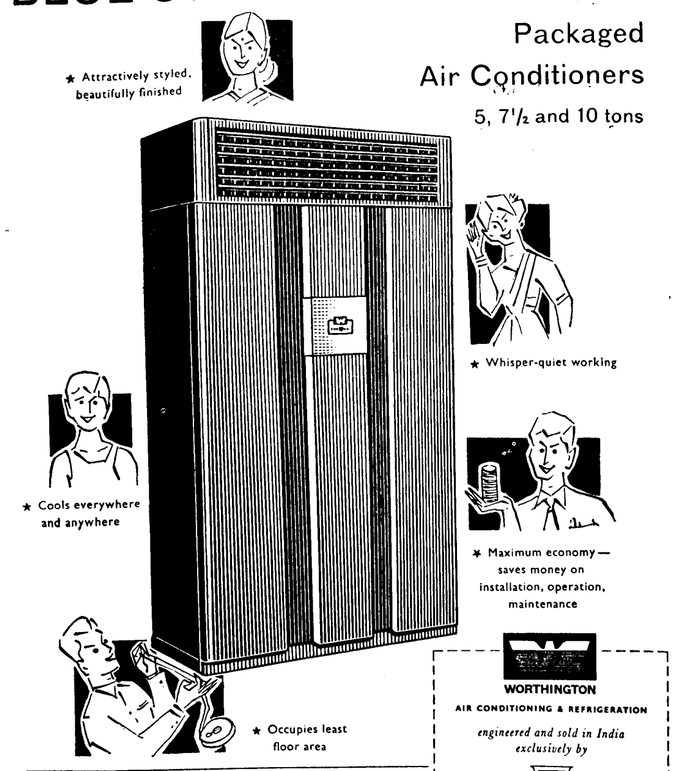
It is quite true, as these critics state, that the United States, France, Germany and other countries of the Western world were also at one time underdeveloped in relation to Britain and that, in the 19th and early 20th centuries, they received from her what may be called private enterprise development assistance. It is also correct that everything possible ought to be done to incorporate the developing countries of today in a similar free enterprise system of assistance, but it would be a mistake to believe that such efforts would make official development assistance superfluous. There is one fundamental difference between present conditions and those obtaining before the First World War: the industrial countries of today are relatively shorter of capital than they were then; this is illustrated by the fact that the level of interest rates is now almost invariably higher. Furthermore, the industrial countries now apply a much higher proportion of their savings to finance domestic expansion. Thus the proportion of funds remaining for overseas investment has been substantially reduced.

On the recipient side, there have also been fundamental structural changes. The developing countries of the 19th century were either European neighbours or settlers (for example, in North America, Argentina, Australia) in which the inflow of European capital kept pace with, and supported, European immigration. The capital remained, as it were, in the family, in the hands of people of the same race and culture, and with similar political and legal systems. The relationship of the developing countries of today to the exporters of capital is entirely different. They have no wish to develop as an "offshoot of European civilisation," nor do they want to adapt their capital investment according to the needs of the country from which it originates. They prefer to go their own way and to emphasise their independence. Some of the hesitation which this instills in private investors would be removed, if the developing countries would treat foreign investors more carefully, enter into agreements for the protection of investment and pursue a more discerning currency and price policy. But even if all these conditions were fulfilled, it is hardly likely that the inflow of private capital would be such as to make it possible to dispense with official assistance, if this did happen, the countries least affected would be those which have already made considerable progress, because experience shows that it is they who exercise the strongest attraction on foreign capital. The more backward areas would still continue to be dependent primarily on government help. For some time to come, we shall, therefore, have to reconcile ourselves to regarding development assistance out of public funds as unavoidable.

Public Assistance?

Nor is the other argument any sounder—that development assistance out of public funds, because it strengthens the hands of governments, leads to a system of centralised State trading under socialist control and would result in the destruction of private enterprise, personal freedom and democracy. If such were the case, Marshall Aid for Europe, which was after all a form of public assistance, would have had disastrous consequences. However, as all the world knows, it proved to be a phenomenal success. That a government should dispense funds is not necessarily a bad thing. Development plans which do not employ totalitarian methods are not only theoretically possible; they have already been put into practice and often with deserved success. Governments which help in this way try to ensure that the various branches of industry expand on balanced lines in accordance with free-market principles, while investment priorities are fixed in conformity and the total volume of all projects is kept within the receiving country's resources. India, whose planning is probably more comprehensive than that of any of the other non-communist developing countries, operates in this way. Contrary to popular belief, private enterprise in India plays a very considerable and increasingly important part in the economy. For instance, during the third Indian Five-year Plan, some 50 per cent of the investment in industry and mining was financed by private capital. Nor should we forget that, even in those economies which we regard as prototypes of free enterprise, a considerable proportion of production is directed through government channels. In the United States, it amounts to 20 per cent. The percentage for India, which is so often charged with the pursuit of an extreme socialist policy, is substantially lower. Professor Galbraith, the American Ambassador in New Delhi, puts it at only 13 to 14 per cent.

Misdirected Investment



It is true that the developing countries' own contributions are often unsatisfactory. For instance, the Secretary-General of the United Nations, who certainly cannot be suspected of having any bias against the emergent countries, complains that, in many cases, their savings are disappointingly low. The amount of saving, which is necessary if a country is to reach the stage of developing into an independent and self-supporting economic unit, is mostly estimated at not less than 12 to 15 per cent. In many developing countries, it falls far short of this figure and there is no indication that an increase may be expected. Capital, which is doubly expensive because it has been borrowed, ought obviously to be used only for purposes where it can be employed with maximum efficiency. In fact, however, it is frequently used for projects which do not stand high on the list of economic priorities.

In almost all Western countries, the relation between the growth in the gross national product and the volume of saving is normally about 1 to 3. Many economists take the view that, if capital investment could be trebled—in the case of the developing countries accompanied by some technical assistance—the gross national product might be increased as much as desired. It is on this basis that estimates have been drawn up to show how much would have to be found to raise the rate of expansion in the developing areas to a politically and socially acceptable level. The well-known pamphlet *100 Countries—1,250 Million People* by Paul G. Hoffmann, chief of the United Nations Special Fund, is an example of this. In this publication, Hoffmann estimates that an aggregate annual expenditure of 3,000 million dollars would be sufficient to raise the gross national income of the developing areas from 3 to 4 per cent. Meanwhile, however, we have been forced to realise that there is no factor of expansion which works automatically in this way, and that capital assistance and the traditional technical aid cannot in themselves accomplish everything. Money alone is no panacea for all ills. How can any country organise an agricultural advisory service on a sufficiently broad basis, if it has only a rudimentary civil service organisation or when it has practically no civil administration? How can any country, where the standard of education is low and illiteracy is widespread, quickly raise a sufficient number of skilled workers, engineers, administrators and businessmen—without whom it is not possible to promote industrialisation? Finally, how can farmers and workers be expected to exert themselves when they are deprived of the fruits of their labour by the operation of an archaic social order? In the case of the developing countries, we have to deal with a wide spectrum of cases ranging from really primitive territories (as in Africa) by way of various intermediate stages (as in India and Pakistan) to those countries which have reached a stage not too far removed from economic independence (such as Mexico and Colombia). The achievements of the countries of the top and middle groups deserve in general our commendation. The cases in which an unfavourable verdict is justified are generally those with serious faults in their social structure. These differences in the conditions for application of capital assistance and technical aid in the various countries make it necessary for the West to adopt its approach correspondingly.—*By courtesy of* Germany, *Bonn.*

AMERICAN LETTER

ANOTHER STEEL STRIKE IN THE OFFING?

MR. WALTER HELLER ON BUSINESS CYCLES

From Our Special Correspondent

NEW YORK, 22nd *February*

ECONOMIC activity in the U.S. has held up remarkably well, despite the very severe winter weather and grave labour disturbances. Retail sales in January and February were well ahead of 1962, with the exception of New York and Cleveland where newspaper strikes are now in their third month. (At this writing, the deadlock continues, despite Federal and local mediation efforts.)

The biggest component factor in the overall spurt of retail sales was a substantial gain in the sale of new automobiles. There is still much optimism in that industry. General Motors, for example, let it be known that it plans to lay in an extra one million tons of reserve steel by the end of July. It is likely to force the hands of many steel users who have been hesitant about inventory plans.

Stockpiles have been watched anxiously lately because of the possibility of another steel strike this year. Discussions are going on at the present time to come to a settlement beforehand instead of waiting until the last moment. Authoritative trade quarters predict that steel industry orders—and presumably production—will rise 10 per cent in March and 10 per cent more in April. The mills are now operating at a little better than 60 per cent of capacity.

Hence, except for the last few days of profit-taking, the stock markets have been quite strong and have recovered most of the losses of last year. Traders also have their eyes on the possibility of tax reductions.

So far as the domestic situation is concerned, tax reduction is being advocated constantly by President Kennedy himself and by spokesmen for the Administration at Congressional hearings and in speeches before private groups. But there is a new twist of urgency in such official announcements.

A New Switch

The best example, perhaps, is a speech made by Mr. Walter E. Heller, Chairman of the President's Council of Economic Advisors, at a dinner of the New York Society of Security Analysis. Mr. Heller said, in part: "If recovery fails to get its second wind from tax reduction this year, the arithmetic of the business cycle confronting us is clear—the danger of a recession.... The history of eight peacetime cycles since 1920 shows that expansion on the average has turned into recession after 28 months. The post-war record, with expansions averaging 36 months, is a bit more reassuring ... the current recovery is now in its 24th month."

Until very recently, the avowed Administration purpose of the proposed tax cut has been to stimulate lagging economic growth. The recession bogey is a new switch which is being repeated over and over again in order to put pressure on the Congress.

Some economists, concerned over what they consider evidence that the long-term business cycle (uptrend) has come to an end following the last war, are wondering whether the Administration's drive for a tax cut may not actually present an effort to avert or alleviate a more serious recession than any of the previous recessions. At this point, this is a strictly academic discussion, but the theory of stimulating economic growth is still very valid, indeed.

In order to boost the Administration's requests for tax cuts, Mr. Heller stated that, in the event of a recession, the losses in taxes to the U.S. Treasury would result in greater Federal Budget deficits than those resulting from tax cuts. The opponents ask: "Can we be certain that economic activity will be stimulated and that a recession would, thus, be avoided, and suppose tax cuts do not achieve that purpose?"

As a matter of fact, the tax reduction programme is not too big a hurdle. The National Association of Manufacturers is in favour of it and so are the trade unions. Naturally, the manufacturers want the reductions to be most effective in the higher brackets and the trade unions want them to be most effective in the lower brackets. It is merely a matter of working out a reasonable compromise among Government, business and labour. At his latest Press conference, President Kennedy appeared quite certain that such a compromise could be worked out.

Dictatorship in Cuba

Greater pressure than in the realm of tax reduction is put on the Kennedy Administration because of its policy towards Cuba. There is a tremendous pressure from U.S. domestic elements and Latin American forces to stop Premier Fidel Castro of Cuba to stop interfering in the affairs of the Americas. This has important implications to the commodity markets of the world. The extremists in both North and South America now call for a multinational force to unseat Senor Castro and "liberate the Cuban people from dictatorship." Indeed, sentiment against Premier Fidel Castro of Cuba has reached boiling point both in the U.S. Congress and among the men in the street. It transcends anti-Soviet feelings, it transcends the antagonism against Premier de Gaulle of France for blocking Britain from the six Common Market countries. It could be compared in one way or another to the feeling between India and Pakistan which, at one time, had a common heritage.

Labour Productivity Up

While foreign developments cast shadows of considerable economic impact, the domestic picture is still of the greatest interest to American bankers and businessmen. Among the somewhat startling revelations were the findings of a productivity study by the Government. It showed that factory productivity outpaced the rise in wages, reversing the post-war trend.

The findings were that for each man-hour of manufacturing, labour increased 18 per cent between 1957 and the present time, while hourly wages climbed only 16 per cent in the same period. Economists see no letup in this trend, despite the outbreak of the labour problems mentioned above. Indeed, it is held that automation drives by produders will spur worker-productivity even more. Also, relatively high unemployment in some parts of the U.S. may force trade unions to temper their demands for higher pay, or push harder for job security. This is not yet accepted universally, but it will be as strikes prove to be futile, because it takes two and three years to recoup losses of pay-checks which could have been received.

In conclusion, it may be said that the U.S. economy is still in very good shape, much better, in fact, than it was 12 months ago. There are still question marks, however. One of them is: How long is it going to last? If the present trend continues, it is going to last for a long time. Spending for defence in the Federal Budget is now greater than civilian expenditures and it is a very strong prop under the U.S. economy. The "loyal" opposition to the present Administration is very weak and there are no indications that this condition is going to change. President Kennedy is in the saddle for better or worse.—*All Rights Reserved.*

(*Concluded from next column*)

nal cost reductions or subsidies remain the two practical approaches.

Next the Report tackles the necessity for an incomes policy and there is every hope that the desirability of a tax on capital gains to balance reduced tax on earned incomes will be discussed by all parties with calmness. Coupled with this issue, so far as labour is concerned, is the cost of re-training manpower which, as a result of planning, has to be shifted from contracting to growing industries. The Report recommends that the Government should bear the major part of this cost. Unless the Government is prepared to kill the creature it has created, Neddy bids fair to becoming a vigorous animal, drawing its strength from Unions, employers and Government and one capable of tackling without inhibition the issue of national prosperity.

LONDON LETTER

NEDDY IN THE NEWS

PLANNING GETS FURTHER STRENGTH

(*From Our Own Correspondent*)

LONDON, 22nd *February*

THIS has been a great week for economic planning; it has also been a week of economic shocks. The total of workless, although not quite as high as at one time feared, has gone up to 850,000, a post-war record; the index of production has fallen a point (comparing the four months September/December 1962 with the previous four months the fall is nearly 1 per cent); the country's visible trade has shown a decline in exports and an increase in the gap between exports and imports from £39 million in December to £42 million in January; finally, the country's official retail price index rose by half a point.

All this has given background to the active and forceful deliberations of the National Economic Development Council (Neddy) which set to work on Sunday, of all days, to examine the Report of their officials. The majority of members and the Treasury apparently intended that only the *agreed conclusions* of the *Council* should be published and not the controversial items or, indeed, the Report of the experts. This plan was blown sky-high by the leak of the full Report from the Council's offices at the week-end and its publication in considerable detail in one of the national papers. The upshot of this is gong to be that the Council will formally publish the Report in full next month, together with agreed recommendations to the Government.

Blue-print on the Way

The effect of this decision has been electric; the Report to the Council by the experts will now be known to the country as a whole, everything in it will be open to public discussion and when recommendations to the Council are not agreed by the Council then explanations will have to be given. The effect also of deciding to throw the whole Report to the public has been to liberate members from shyness in debating all aspects of the Report vigorously; they need only agree to what they are prepared to agree—they can debate everything. It now looks as if this country under a Conservative Government is really going to produce a national plan —or should we say a blue-print for a national plan, since the plan has got to be adopted by the Government before it becomes effective—but at least the country and the world will know what Britain's problems are and how they might be solved.

First and foremost the Report sets a long-term growth rate for the economy of 4 per cent per annum. In view of the lapse of time since the 1962-66 Plan began to be worked out, the growh rate for the current period must obviously exceed 4 per cent and that figure has now become an absolute minimum for all serious discussion about the economy. There is one embarrassment to the Government in this that the present Chancellor inherited and accepted his predecessor's limit of 2½ per cent on incomes. Reports of the Council's meeting on Sunday say that the Trade Unions made very rude noises about this figure and the Chancellor had to make conciliatory ones to restore peace. Indeed, the Trade Union representatives—who, it will be recalled, were reluctant initially to associate themselves with the work of the Council—are now finding it a potential ally and are co-operating with enormous enthusiasm in its work.

Devaluation No Good

The next matter faced by the Report is that exports have got to expand by at least the same percentage as national output. Indeed, the required figure is stated to be nearer 6 per cent. How is this to be done? The Report faces these issues bluntly; leaving aside the possibility that industry will by general competitiveness be able to sell more abroad, it is pointed out that the only direct boosts are direct tax subsidies or a devaluation of the pound sterling. Both these issues will now be openly discussed, but, on the devaluation question, it seems likely that the weight of opinion will point out that, while devaluation is all very well to *recognise* a disparity between home and overseas prices, it is useless as a means of raising a country's standard of living. For a country that devalues its currency is selling its goods more cheaply abroad and will buy less with the proceeds. That is not the way to prosperity. Sheer competitiveness by inter-

(*Continued in next column*)

REGIONAL PLANNING AND NATIONAL DEVELOPMENT—II

SOUTH ITALY SHOWS THE OPERATION OF INDUSTRIALISATION NODES

By Neil McInnes

THE most instructive example is in South Italy, firstly because the extent of underdevelopment there as recently as 1950 was literally comparable with conditions in numerous African and Asian countries; secondly because, after long and apparently hopeless effort, the tide has at last been turned and the region has begun to progress faster, in percentage terms, than the industrialised parts of Europe. Throughout the first decade of investment, South Italy illustrated as well as any Asian country the vicious circle that is widening the gap between advanced and developing economies; these latter achieve some results, but the former get further and further ahead. Living standards in the north were more than twice those of the south, and yet unto those that had more was being given: northern revenues grew by 5.5 per cent annually of their high total, while southern added only 3.6 per cent yearly to their pitiful level. The tendency was reversed only in the last two years. In 1961, revenues in the south grew by 12 per cent *per capita*, and those in the north by 7 per cent. The gap is still immense, but it is being closed. Moreover, there has occurred a change that no figures can reveal: a structural mutation has begun, the region is being transformed into a different kind of civilisation—and, of course, this is what we mean when we talk of development.

Agriculture First

The story of this achievement began in 1950, with the agrarian reform in the south and the foundation of the "fund for extraordinary public works in South Italy." Various other specialised organisations were created in the next few years, some devoted to particular geographical sectors such as the islands of Sicily and Sardinia, others to special tasks such as finance, industry and agriculture. All of these worked as the transmission belts of the directing fund, which based itself on the theory that development called for works which, because of their cost and duration, transcended normal budgetary rules and the competence of the normal administrative machinery. For a population of just under 20 millions, the sums to be invested over 10 years were about Rs. 800 crores. *Of these, no less than 77 per cent were devoted to agriculture.* The rest went to the infrastructure: 11.5 per cent for aqueducts and drainage, 9 per cent for roadworks, and a small balance (2.5 per cent) to tourism. The Italian planners knew as well as any of the *pundits* who harp on it in season and out that, ultimately, it is only the establishment of industry that can cure under-development, "over-population." ignorance and squalor. But they also knew, what the industry-first *pundits* forget to tell us, that industry cannot exist in a vacuum, and that an agricultural renascence has to come first, not because we are especially attached to agriculture but because a revolution on the land represents the phase of "pre-industrialisation." Without a rise in agricultural productivity (in turn closely connected with agrarian reform) and the building of a material infrastructure. no development would have been possible.

Not that it was necessary to wait until this revitalisation of farming was complete before thinking of industry. Once it was under way, and provided the emphasis continued to rest firmly on that sector, industrial projects could be taken up. Right from 1952, loans were raised for public industrial ventures in the south and in the following year regional medium-term credit institutes were set up. Yet it should be noted that these first, and after all modest, industrial efforts were concentrated in places where some industries already existed (Campania, Sicily, Sardinia). It was not until 1957, when the agricultural revival and public works had produced a notable increase in revenues, that the plan was revised and industrialisation became the prime objective. The development plan was then a 15-year plan (targets were pushed back from 1960 to 1965 as earlier illusions about speedy results were given up) and its cost more than doubled: the total resources were increased to Rs. 21 crores. Agriculture continued to receive much attention, and, if public funds for that purpose decreased relatively, it was only because the success of earlier efforts was producing private savings among the peasants for further investments on the farms. Action on the infrastructure was at that point intensified: roads, housing, aqueducts, irrigation, electricity, railways and the like now got more money than ever, because it was seen that any industrialisation that was pressed at the expense of such facilities would be insecure.

Mistakes Admitted and Rectified

With these reservations, industrialisation was henceforth the major aim. The Italians began by making a serious error, of a sort familiar in all developing countries. With the slogan "A chimney for every steeple," they pursued the utopia of industries scattered more or less uniformly throughout the countryside; this vision of "social utility" was placed before the criterion of economic efficacy. The facts soon showed the futility of this proceeding and the Italians admitted their error, adopting the system of industrial nodes. They learned, that is, that no industrial project gives the return one hopes for in terms of development, unless it is situated just where it finds suitable and pre-existing industrial structures, an infrastructure, public services, labour, food supplies and a market—not just one or several of these things but all of them together.

Applying this lesson, they wrote into their plan the two concepts of "industrial development zones" and "industrialisation nodes." The former, the zones, are areas of considerable concentration in which exist numerous industrial enterprises that need each other and all need a suitable social environment. The latter, the nodes, are smaller areas constituted by the proximity of one or two big industrial projects that are situated there for a precise reason, such as the local availability of a raw material or a special facility like a port or power house. An industrial development zone must cover several communes (villages) and must have a population of at least 200,000 people. The terrain must be suitable for industrial extension, with flat, solid ground; the region must possess the essential infrastructure and notably energy supplies; in short, it must have everything that promises the growth of a modern industrial city. Choice of the "industrialisation nodes" is more strict, for it is realised that their power of attraction is much less, both for other industries and for workers and traders. A node, therefore, is not approved until several major enterprises agree on the one spot and submit projects that justify this location and are judged financially, economically and technically sound.

Zones and Nodes

What is the force of the expressions "a zone *must* have . . ." or "a node *must* be . . ."? Simply this, that the State will not found public projects in areas not meeting those requirements, it will not encourage private and foreign industry to go there, it will concentrate the building of roads, schools and other amenities in areas answering its descriptions, and it will encourage and subsidise private groups that seek to form a zone or node. Any entrepreneur is free to ignore this regionalisation if he chooses, but at his own risk. A zone or node can be formed by consortiums of private firms, chambers of commerce and provincial authorities. Theoretically, any one of these could take the initiative, but, in practice, they all collaborate. The consortium formed with a view to creating a zone or node must undertake the following work:

It must draw up a general plan of the industrial concentration it has in mind. It must undertake, improve and administer local works such as railway sidings, road branches, water and power supplies, elimination of industrial wastes, etc. It can buy land and then re-sell it, or rent it out for the installation of new industries. It must meet certain criteria in building factories in the zone. Finally, it promotes any project it judges apt to develop its region.

When a local consortium of this sort has been formed, it submits its plans and its statutes to the central planning authorities for their approval. So far in South Italy, 13 zones and 30 nodes have been officially recognised. They are concentrated in widely separated regions, around Naples, Bari, Brindisi, Syracuse and Palermo; no province can say that it is neglected but none monopolises all the industrialisation ventures. The areas in between these poles of development (and of course such areas make up, geographically, most of the countryside) are within the radius of reverberation of the centres of industry, supposing these fulfill their promise. That they are within calling distance, so to speak, of the development poles is assured by the previous construction of modern roads, for it is realised that the hoped-for multiplier effect of industry cannot operate across open country in the absence of communications. The consortium being established, it is authorised to contract loans from the various credit institutes, and benefits directly from the subsidies dispensed by the planning fund. Moreover, it is then in a position to attract private enterprise from outside the region, for it can offer industrialists the facilities of an existing infrastructure and a receptive economic climate.

Private Enterprise Encouraged

Indeed, the planning authorities, having played a major role in setting up the development poles, now see their task as consisting in putting private industry, whether Italian or foreign, in contact with these organisms. The State offers all the concessions imagined elsewhere to attract industry (tax exemptions, loans on special terms, etc.) but it goes further and seeks to link every parcel of incoming financial or technical aid with the zone or node that best suits it; it is not a question of arbitrary direction, for obviously the outside entrepreneur is only too willing to be introduced to the localities that promise the most profitable climate for his undertaking. This is the function of the recently formed "institute for development assistance," which not only channels capital toward specific zones but sees to it that the new enterprise has access to the relevant credit organisms, finds the labour it needs and even, in case of need, hunts out the possible suppliers of raw materials and parts. It goes without saying that State-owned ventures similarly move toward the zones and nodes of industrialisation. Such ventures, incidentally, continue to be important but the role of private enterprise is growing rapidly, for the State properly considers that, while the initiating role fell largely on the public sector, in the second phase it will be overshadowed by private capital.

In following this regional concept of industrial development, the Italian planners are applying the clearest lesson of development work everywhere. It has been demonstrated repeatedly that industrialisation is sterile if it means the isolated establishment of prestige projects or great schemes that do not fit into the national economy. The most impressive plant, remarkable from the technical point of view, can give disappointing results from the development point of view if it is isolated, not simply economically isolated (remote from materials, markets, complementary activities and communications) but socially isolated (set in a community unprepared to benefit from it). This statement needs elaboration if its full force is to be grasped, for some will conclude that such isolated enterprises are business failures, that they prove to be uneconomic. Not at all. We are not referring to the evident fact that an isolated venture will find that its economic and social overheads are so high that it cannot make a profit. We mean rather that an industrial venture can be a business success and still be a development failure—if it is integrated with remote markets instead of with its own environment. The case is familiar with colonial capital, e.g., extractive industries that sell their produce abroad, send their profits abroad and do next to nothing for local development. (John Stuart Mill said that a

SOME BANKING PROBLEMS

APPROACH OF MR. A. D. SHROFF ASSESSED

THE chairmen of major Indian banks, like their counterparts in Britain, take the opportunity of the annual presentation of accounts to shareholders to review banking and economic policies. Mr. A. D. Shroff, Chairman of the Bank of India, has touched several aspects of banking policies in the statement accompanying the accounts of the Bank for the year 1962. Besides being a prominent banker, Mr. Shroff is an eminent economist, a distinguished industrialist and a champion of competition in day-to-day economic and business activity. A critical assessment of his approach to the banking problems of the day is, therefore, in order.

Before commenting on Mr. Shroff's views on banking matters, it is necessary to review briefly the progress of the Bank of India and the problems it has thrown up in the process. A more detailed review appears on the opposite page. Under Mr. Shroff's able guidance, the Bank has registered an impressive record in all spheres of its activities. The Bank's deposits went up by Rs. 32 crores or 25.7 per cent in 1962, as against Rs. 16 crores or 14.2 per cent in 1961. The rate of growth of deposits of the Bank was more than twice the rate of increase witnessed in the banking system in 1962. This is indicative of the tremendous hold the Bank has on the minds of the depositing public. The Bank has widened its equity base—its equity-deposit ratio at 5.19 per cent is one of the highest among the major banks—and taken several steps to improve its service to the public. The Bank had lent an additional Rs. 28.7 crores in 1962, with the result that the level of advances touched Rs. 127.2 crores by the end of that year. In consequence, its credit-deposit ratio was stretched from 78.8 per cent in 1961 to 80.9 per cent at the end of 1962. The ratio stands probably even still higher now, in view of the further progress in the busy season.

Forward-looking Policy

In view of the maximum utilisation of resources, the Bank succeeded in raising its income from Rs. 6.19 crores in 1961 to Rs. 8.03 crores in 1962—an increase of Rs. 1.94 crore or 33 per cent within a single year. This impressive rise in income enabled the Bank to meet its commitments in several directions. For instance, it had pushed forward its development programme of opening more branches by opening 24 additional offices in India and abroad, thus hitting the target of 100 branches it had fixed for 1962. To pursue the branch expansion programme and strengthening the departments at the head office, the Bank launched an ambitious recruitment drive. There has been, therefore, a substantial increase in salaries and allowances paid to the staff. But the beneficial effects of this additional expenditure will make themselves felt on the Bank's profit when the new branches start earning in the coming years.

In judging this progress, one must take note of two important points. First, the Bank of India's branch network inside the country appears negligible in comparison with other major banks. The 100 branches of the Bank span just 40 major Indian cities and towns. The Bank realised very late—as late as 1958—the need for a comprehensive branch network to play an important role in the economic progress of the country. It has thus had to hasten to compress the progress achieved by the other major banks in a few decades within a few years, so that it might not be left behind. Secondly, it is evident that the Bank has been operating with a minimum liquidity cushion, unlike other banks, probably because of the location of its branches in major cities with well developed remittance facilities and because of the confidence that it can always successfully borrow from the Reserve Bank and the call money market. Accordingly, the Bank has little scope for flexibility in adjusting itself to the credit policies initiated by the Reserve Bank. If it is not to find itself put in a straight jacket, it will have to redouble its efforts at mobilising more deposits.

Branch Banking

We may now look at the points made by Mr. Shroff in his speech. The first one relates to the branch expansion policy of the Reserve Bank. The latter reoriented its branch licensing policy in 1962, with a view to preventing overbanking in urban areas and spreading banking facilities in semi-urban and rural areas. It had circulated in the middle of 1962 a list of 1,400 places without banking facilities and instructed the banks to submit their branch expansion programmes bearing in mind the need for expansion in the areas not covered by any banking facilities so far. The Bank has already devised a method to link up the permission for opening branches in urban areas with the spread of bank branches in semi-urban and rural areas. For instance, whenever permission is given to a bank to open a branch in an urban centre, the bank concerned will have to open simultaneously a branch in a semi-urban or rural centre, so that the profits which may be made from the branch in the urban centre in a short period will nourish the losses of the branch in the semi-urban or rural centre. The Reserve Bank has no intention of prohibiting bigger banks to open branches in bigger towns. Only it does not want overbanking and it wants them to pay attention to semi-urban areas. This is a commendable policy and Mr. Shroff has no quarrel with it, except that its practicability, as also its utility, is not beyond doubt. He has given good reasons for questioning the Reserve Bank's wisdom to restrict the opening of branches in the bigger towns. To quote him:

"The policy of the Reserve Bank of India is likely to place the big banks at a disadvantage with regard to their branch expansion programmes. The nature of the activities undertaken by the big banks is such that they cannot be carried out satisfactorily through representatives or agencies. In the absence of their own branches at particular centres, the big banks have to depend upon other banks operating in those centres. While some functions, such as collection of bills, can be effected through representatives, there are specialised services such as advice on industrial and trade prospects, processing of applications for medium-term credit to industry and export purposes, which cannot be delegated to representatives. The resources and organisation of the small banks are inadequate for such functions. At the same time, the provision of medium-term credit to industries and exporters is regarded as most vital at this stage of our economic development and expert committees which have gone into this question have emphasised the need for giving maximum facilities to industries and exporters."

This is, indeed, a convincing argument for a suitable amendment in the Reserve Bank's policy in regard to branch banking. Mr. Shroff is not asking for too much when he says that the objective of extending banking facilities to smaller towns should be co-ordinated in some definite manner with the immediate need to expand banking in bigger towns with industries requiring finance for their expansion and diversification.

Foreign Banking

Next, Mr. Shroff has pleaded that the Government of India should encourage banks to open branches in foreign countries and offer them facilities to build up trade contacts. Nobody disputes his view that banking is a forerunner of trade and commerce but it would have been better if he had spelt out precisely the type of encouragement he is having in mind or he expects from the authorities. The Government of India and the Reserve Bank, it appears, do not have any objection to banks opening branches abroad. Mr. Shroff's own Bank has opened two branches abroad in 1962, one at Lagos (Africa) and another at Manchester (Britain) and it is difficult to believe that the Bank was able to do so without encouragement from the authorities. The question of encouragement apart, the atmosphere in foreign countries, barring Western Europe and North America, is far from conducive to operations by Indian banks. The latest news that Burma has nationalised the commercial banks, which include five Indian banks, should induce some caution. It is a well-known fact that the Ceylon Government has placed innumerable restrictions on the activities of foreign banks Malaya, Indonesia and Pakistan, too, are going in the same direction. The Middle East is politically unstable. Japanese patronage is difficult to obtain by foreign banks and, among the newly emerging nations of Africa, there is a lot of resentment against Indians, in particular, and Asians in general. In Europe and the two Americas, the Indian banks with their modest resources look like pigmies and may not be able to approach a state of self-sufficiency even over a fairly long period. In view of the chronic foreign exchange scarcity through which India is passing, it is idle to suggest that the Government or the Reserve Bank should set aside sizable foreign exchange to enable the commercial banks to spread all over the globe and go on nourishing them until they attain a state of self-sufficiency. Whatever is legitimately possible—namely, to permit the Indian banks to utilise their foreign exchange earnings to set up more branches if the atmosphere is conducive—the Reserve Bank seems to be doing already. Since Mr. Shroff cannot be unaware of these things, it will be more helpful if he comes forward with a specific plan for implementing his desire for a vigorous expansion of Indian banks' activities in foreign countries.

Credit Policy

Mr. Shroff is also critical of the Reserve Bank's policy of restraining bank credit from the point of view of both banks and trade and industry. His reasons are:

"The revised formula (for central bank credit) would make the basic rate for accommodation from the Reserve Bank of India higher than before, although it may not appreciably affect the average borrowing rate. The total of bank borrowings in the 1961-62 busy season was more or less up to the limits of the basic quota (statutory reserve) and accommodation from the Reserve Bank of India at certain levels would become more expensive under the two-tier system. Over and above this, it must be noted that the Amendment to the Banking Companies Act 1949 passed in September 1962 raises the liquidity ratio to 28 per cent as from November 1964. This legislation is likely to curtail the flow of credit to private sector from now onwards, because banks have progressively to adjust their advances portfolio to enable them to abide by the higher liquidity ratio when it comes into operation. This, in turn, is bound to affect the profit-margin. By compelling the banks to operate on a substantially reduced credit-deposit ratio, the new measure in effect would impose restrictions on the banking system to a greater extent than the measures which have preceded it. The lower profits earned by several banks this year have unmistakably indicated the overall impact of the measures adopted so far."

Many businessmen seem to share Mr. Shroff's view on this controversial subject. But that does not necessarily mean that his stand is correct. For one thing, past experience does not support it. In spite of the "dear money" policy, initiated by the Reserve Bank since September 1960, all the banks have been able to report better profits and improve their profit-margin. For another, the slight setback in the profits of some banks may have been due to "window-dressing" and larger transfers to secret reserves. Further, in 1962, banks lost no opportunity to push up their lending rates, without raising their deposit rates, five medium-banks being the only exceptions. Even granting that our assumption about secret reserves is not correct, the slight drop in profit seems to have been due more to other causes than the credit policy of the Reserve Bank (*vide* page 259 of *Commerce* dated 16th February 1963). So far as trade and industry is concerned, there seems to be an exaggeration of the hardships caused by credit controls. It is time businessmen in this country got accustomed to the disciplinary effects of "dear money," for it is in their own interest to allow the monetary policy to perform its function of restraining inflation. None suggests that credit for genuine productive purposes should be restricted. The Reserve Bank itself has admitted this qualification. Only, it must see to it that no red-tapism is allowed to inhibit the purposeful working of its general, as well as selective, credit controls.

It is too late in the day to argue about the merits and demerits of higher level of liquidity stipulated in the amended banking Statute. It has come to stay, whether Mr. Shroff likes it or not. This is also true of the insurance of deposits. The setting up of the Deposit Insurance Corporation, Mr. Shroff concedes, has helped to restore public confidence in banks which had been badly shaken by the bank failures of 1960 and has helped in no small measure the growth of deposits. The premium paid by the whole banking system comes to a little over Rs. one crore and the lion's share of this has naturally to be borne by the big banks, as they command the major portion of deposits. But one cannot readily agree with Mr. Shroff when he says, even though cautiously, that the big banks "do not seem to need such insurance." Anything that upsets confidence in the banking structure does have an effect on all banks. It will be pertinent to recall here that, in the wake of the Palai Bank crash, there were runs on some of the big banks in the north and south.

The last point made by Mr. Shroff in his statement to shareholders pertains, appropriately enough, to the impact of defence mobilisation on the banking system. He points out that the increase in deposits since the emergency has been only nominal. The crucial problem, therefore, is how to draw in the currency which the community is acquiring through defence spending into the banking system so that it might be utilised for production purposes. He mentions the desirability of devising a nation-wide plan for transforming the accruals of currency into bank deposits. Since the need for such a plan is urgent, it is to be hoped that Mr. Shroff will lend a helping hand to the country by suggesting ways and means of putting the idea into practice.

EVENTFUL YEAR FOR BANK OF INDIA

IMPRESSIVE RISE IN DEPOSITS AND ADVANCES

IN every respect, the year ended 31st December 1962 has turned out to be an eventful year for the Bank of India Ltd. (General Manager: Mr. T. D. Kansara, Bombay). Over the year, deposits have expanded by more than Rs. 32 crores, or 25.7 per cent, to Rs. 157.16 crores, as against the 12 per cent growth for the entire banking system during the year and an increase of Rs. 16 crores, or 14.2 per cent, recorded by the Bank in the previous year. Advances have spurted by Rs. 28.67 crores, or 29 per cent, to Rs. 127.20 crores, as against by Rs. 14.67 crores, or 17.5 per cent, to Rs. 98.53 crores a year before. The spurt has pushed up the credit ratio further from 77.2 to 80.9 per cent, at which level it is well above the maximum level of 75.3 per cent and the average of 70.7 per cent for scheduled banks as a whole (excluding the State Bank) for the year. It may be risky, one may argue, to have so high a credit ratio. But the risk, when properly taken care of, represents dynamism which is real business.

Although the above figures are those as at the end of the year, one will be right in presuming that they also broadly reflect the trend during the year as a whole. It is entirely due to the policy of intensive utilisation of resources that the Bank has been able to report a slightly higher profit (after tax) of Rs. 111.53 lakhs as compared with Rs. 110.32 lakhs a year before and earn thereby the enviable distinction of being one of the two units (the other being the United Commercial) among the "big six" banks, including the State Bank, to have made a higher profit in a year of exceptionally high expenses. For the Bank of India, outward interest has gone up from Rs. 260.10 lakhs to Rs. 354.54 lakhs, staff expenses have shot up from Rs. 161.21 lakhs to Rs. 205.23 lakhs and other expenses have risen from Rs. 68.47 lakhs to Rs. 122 lakhs. Included in other expenses are rent, taxes, insurance, lighting, etc., amounting to Rs. 32.93 lakhs (Rs. 18.65 lakhs a year before), stationery, printing, advertisement, etc., aggregating Rs. 28.73 lakhs (Rs. 16.08 lakhs) and miscellaneous expenditure (including Rs. 5.50 lakhs contributed to the N.D.F.) of Rs. 49.20 lakhs (Rs. 27.80 lakhs). It will be agreed that but for these sharp increases in expenses, the Bank may have shown a larger profit in view of the 32 per cent rise in total income from Rs. 609 lakhs to Rs. 803 lakhs. But it must be borne in mind that a good part of the increase in the expenses of banks represents promotional expenditure the benefits of which will be felt in the coming years. Typical instances of such expenditure pertain to advertising, opening of new branches, diversification of banking business and steps taken to improve the productivity of workers.

Including the interim dividend of 8 per cent, the return to shareholders for the year has been maintained at 20 per cent per annum, subject to tax, on the Rs. 50-paid 100-rupee shares on the increased capital of Rs. 405 lakhs, as against Rs. 300 lakhs in the previous year. However, the dividend which absorbs Rs. 12.60 lakhs more at Rs. 72.60 lakhs, is not fully covered by the profit available, after setting apart larger sums for bonus (Rs. 32.50 lakhs as against Rs. 19 lakhs a year before), for reserve fund (Rs. 24 lakhs as against Rs. 15 lakhs) and for development rebate reserve (Rs. 3.50 lakhs as against Rs. 3 lakhs). The maintenance of dividend on the bigger capital has been possible because of the much larger amount of Rs. 29.16 lakhs brought in from the previous year. Consequently, the surplus to be carried forward is down by Rs. 16 lakhs at Rs. 13.10 lakhs.

The following table mirrors the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Interest and discount earned ..	682.82	509.86	440.02	390.76

† Subject to deduction of tax. * Unencumbered portion only.

Deposits have expanded all round; fixed deposits by Rs. 19 crores to Rs. 79.81 crores, savings deposits by about Rs. 8 crores to Rs. 28.22 crores and current deposits by more than Rs. 5 crores to Rs. 49.13 crores. Nonetheless, as the demand for accommodation from its customers was on the high side, the Bank had to resort to "borrowings from other banks" and the outstanding amount is shown at Rs. 477.33 lakhs, as against *nil* a year before.

A point brought out by Mr. A. D. Shroff, Chairman of the Bank, in his statement to shareholders deserves special mention here. It is that, though one of the major big banks, the Bank of India serves mostly small people. At present over 80 per cent of the Bank's depositors are small, holding deposits of less than Rs. 5,000 each. Similarly, in the case of advances, the pattern is weighed in favour of a large number of borrowers with low limits of accommodation, the average amount per borrower being a little over Rs. 10,000. A breakdown of the advances shows that secured advances of Rs. 5 lakhs and under and unsecured advances of Rs. 1 lakh and under account for about 87 per cent of the aggregate credit granted by the Bank. Thus, individual limit for the bulk of the advances is kept reasonably low, especially where credit is not secured. The pattern of distribution of advances shows that the share of industries has risen from 60.5 to 64.2 per cent, while that of commerce has shrunk from 24.9 per cent to 23.1 per cent and that of other fields of activities has declined from 14.6 per cent to 12.7 per cent. Because of the high level of advances, the liquidity ratio (taking the aggregate of investments and cash in hand after allowing for the encumbered portion of investments) is a shade lower at 25.10 per cent as compared with 26.80 per cent a year before. It will be thus clear that the Bank has been able to improve its profit through maximum utilisation of all available resources. Since banks are required under the legislation amended last year to maintain a higher minimum liquidity ratio of 28 per cent by November 1964, the Bank will have to intensify its efforts at gathering more deposits, if it is to maintain a high level of advances.

The increase in the paid-up capital from Rs. 300 lakhs to Rs. 403 lakhs has materialised on two accounts. In March 1962, the Bank issued 200,000 right shares in the proportion of one share for three shares held at a premium of Rs. 20 per share. Subsequently, on the completion of the procedure relating to the merger of the Gadodia Bank Ltd. and its formal take-over from 24th December, the Bank issued 10,000 shares of Rs. 100 each with Rs. 50 paid-up, for 10,000 shares of the Gadodia Bank of Rs. 100 each fully paid-up. The aggregate reserves at the end of the year amount to Rs. 411.50 lakhs, including Rs. 45 lakhs under the share premium account and Rs. 6.50 lakhs under development rebate reserve. Notwithstanding the sharp increase in deposits, the ratio of "own funds" to deposits works out a shade higher at 5.2 per cent, as against 5 per cent a year before, and is not too low as compared with the 6 per cent goal recommended by the Reserve Bank.

Including the six branches of the Gadodia Bank, the Bank opened during the year 24 branches and brought the total to a hundred. Two of the new branches were overseas, one at Lagos in Nigeria and the other at Manchester in the U.K. With these two new offices the Bank has branches in nine countries, which is the largest representation for any Indian bank.

More business means more organisation, and the Bank has not been lacking in its efforts to strengthen its organisational structure. It has been absorbing experienced persons. This apart, the structure has been strengthened by the setting up of new departments on the lines of well-established institutions abroad. A specialised department of economic intelligence and statistics has been started to collect and analyse economic information. A new industrial finance department processes applications for term loans. The Bank, we are told, is one of the few in this country to set up a separate unit to deal with the peculiar problems of medium-term and long-term credit to industry. A training college for the staff at all levels—junior, intermediate and senior—has been set up by the Bank in Bombay in co-operation with the Bank of Baroda. Mr. A. D. Shroff, Chairman of the Bank, hopes that all these measures will enable the Bank to discharge, even more fully than now, the responsibilities which it has towards its shareholders and customers. Needless to say that the hope is clearly justified.

(Concluded from next page)

ernment securities were raised, the liquidity ratio was practically the same as in the previous year, because of the high level of deposits. The growth in deposits has been under all heads: of Rs. 6.09 crores in term deposits amounting to Rs. 23.96 crores, of Rs. 2.49 crores in savings deposits shown at Rs. 10.20 crores, and of Rs. 4.75 crores in current deposits standing at Rs. 16.72 crores.

The Bank could open only two branches during the year, one at Goregaon in Bombay and the other at Ambernath in Maharashtra. After the close of the year, however, the Bank has received licences from the Reserve Bank to open branches at 14 places in the States of Mysore, Madras and Andhra Pradesh. Two officers of the Bank returned last year, after taking a refresher course at the Deutsche Bank in West Germany. A deputy general manager attended a credit seminar sponsored by the Chase Manhattan Bank at New York. Mr. A. Damodar Pai, Managing Director, and the deputy general manager of the foreign department of the Bank, visited some of the East European and Middle East countries to make personal contacts with the officials of the Bank's correspondents there.

CANARA BANK FARES WELL

CAPITAL TO BE RAISED AGAIN

CONSIDERING that it is still only a medium-sized unit as compared with the major banks, the Canara Bank Ltd. (General Manager: Mr. P. S. Nayak, Bangalore) has fared exceedingly well during the year ended 31st December 1962, thanks to a much sharper expansion in deposits of Rs. 13.32 crores, or 35.4 per cent to Rs. 50.88 crores, as against that of nearly Rs. 7 crores, or 21.8 per cent to Rs. 37.56 crores in the previous year. This expansion in deposits has benefited the Bank in two ways; not only has income grown following a proper use of the larger funds but it has also become unnecessary again to go out for funds from other banks which is, indeed, a great relief in these days of high interest charges. Now that the deposits have crossed the Rs. 50-crore mark, the Bank joins the ranks of "big banks" under the terms of the All-India Inter-Bank Agreement on rates of interest on deposits, as revised last year.

The total income of the Bank has gone up by Rs. 67.62 lakhs to Rs. 264.87 lakhs, with earnings from banking business proper accounting for an increase of Rs. 63.83 lakhs at Rs. 248.44 lakhs. At the same time, however, aggregate expenses, excluding the provision for depreciation which itself has been almost doubled from Rs. 2.93 lakhs to Rs. 5.42 lakhs, have shot up by Rs. 65.79 lakhs to Rs. 238.87 lakhs. Consequently, profit, after tax, is slightly lower at Rs. 20.58 lakhs, as compared with Rs. 21.24 lakhs a year before.

Readers know quite well that 1962 was a year of exceptionally high expenses for banks as a whole because of the cost of insurance of deposits, the burden arising from the implementation of the Desai Award and the opening of more branches. The cost of deposits for the Canara Bank, as represented by outward interest, has gone up from Rs. 85.49 lakhs to Rs. 116.32 lakhs and staff expenses have soared by some Rs. 26 lakhs to Rs. 86.25 lakhs. The provision for bonus to staff has absorbed Rs. 1.14 lakh more at Rs. 5.14 lakhs. A sum of Rs. 1 lakh, as against Rs. 4.50 lakhs a year before, has been set apart for contingencies. After paying the preference shareholders, the dividend on the 50-rupee ordinary shares has been maintained at 15 per cent per annum, subject to tax, on the increased paid-up capital of Rs. 61 lakhs following the issue of 50,000 additional shares to shareholders at a premium of Rs. 15 per share in November 1961. The maintenance of dividend in the face of a slight fall in profit has ment a lower credit of Rs. 5.50 lakhs to reserves, as compared with Rs. 6.70 lakhs provided a year ago.

The Directors propose to increase the capital again some time during the current year, in order to improve the capital-deposits ratio. At present the ratio of "own funds" aggregating Rs. 151 lakhs, including preference capital of Rs. 14 lakhs and share premium account of Rs. 13.80 lakhs, to deposits as at the end of 1962 is slightly lower at 2.9 per cent as compared with a little more than 3 per cent a year before, notwithstanding the Rs. 25-lakh issue in 1961. This is because the growth in deposits last year was quite impressive. As readers are aware, the Reserve Bank has suggested, as a goal for scheduled banks, a 6 per cent ratio of "own funds" to deposits.

In the following comparative table is summarised the Bank's progress from 1959:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

† To inner reserves. * Subject to deduction of tax.

The Bank may be legitimately proud of the encouraging progress made during the year. The expansion in deposits was well ahead of that of advances, so that the Bank could manage its business with a sense of comfort. The credit ratio averaged 59.1 per cent for the year, the highest level touched being 61.5 per cent, the comparable figures for scheduled banks (excluding the State Bank) as a whole being 70.7 per cent and 75.3 per cent respectively. Although investments in Gov-

MR. HAROLD WILSON'S PLAN FOR COTTON

TEXTILE INTERESTS RECALL FINDINGS OF 1957 REPORT

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 19th *February*

NEWS that Mr. Harold Wilson has been elected leader of the Labour Parliamentary Party in Britain has led many cotton textile manufacturers in Lancashire to refer again to a report drawn up by Mr. Wilson in 1957 labelled *Plan for Cotton*. Mr. Wilson's elevation to the leadership and the possibility of his reaching an even more influential position in national life add flavour to the views which are expressed in a concise yet illuminating document setting out the way in which Lancashire's prospects might be approached through legislation proposed by a future Labour Government.

Reading through the summary of recommendations then made, it is interesting to find that several of his ideas have in fact been carried through by the present Administration in the ensuing years. This is notably so in the case of the highly controversial matter of imports. At that time, the volume of supplies being absorbed from India was the chief problem; Mr. Wilson proposed that, if a settlement could not be reached by negotiation between representatives of the industries of the two countries, a Government Imports Commission should be set up, to be responsible for all imports of cotton yarns and piecegoods.

Before the Voluntary Agreements

This proposal provoked considerable discussion in 1957 before any voluntary arrangements had been established between Eastern suppliers and Lancashire. The *Plan for Cotton* went on: "While there should be no limit on the importation of cloth for processing and re-export, there should be a specific limit, preferably negotiated in agreement with the industries of the exporting countries, on the import for home consumption of cloths and yarns produced under conditions involving unfair competition."

This policy has, of course, been implemented in the meantime, but it remains to be seen what support Lancashire would receive from any new Administration for its claim that the permitted ceilings are too high. Mr. Wilson's plan also called for negotiations with textile interests in Hong Kong, "in the hope of fixing a voluntary quota on exports from the Colony to this country."

Last year's introduction of a licensing system on imports to enable the Government to maintain a close watch on any sudden burst of shipments from abroad, coupled with the international agreement to regulate the movement of supplies, seems to fit the pattern suggested by Labour's new leader. There might in the future be adjustments in the quantities involved, but the principle of restricting arrivals would now seem to be well established.

Raw Material Supplies

In other sectors of the industry, however, the *Plan for Cotton* takes a different line to the measures adopted by those still in political power. The first recommendation, for instance, declares bluntly that a Raw Cotton Commission should be re-established, with power to plan and regulate all the imports of raw cotton into the country. Such a scheme would mean a return to the conditions ruling from the war-time control until the resuscitation of the Liverpool cotton market in 1954. The Government, it is suggested, should do all in its power to persuade the United States and other countries concerned to join in establishing an appropriate form of international commodity agreement for raw cotton.

In the intervening years since the *Plan* was made public, the industry has, of course, tackled and emerged from a reorganisation scheme of considerable magnitude. Mr. Wilson's document called for greater capital investment, speedier re-equipment, and widespread modernisation of machinery. He proposed tax incentives, allowing for specially favourable initial or investment allowances for new equipment and also suggested the possibility of State provision of buildings and machinery and of working capital on specially favourable conditions, either by scheduling the whole of the cotton textiles area as a Development Area or through specific legislation.

Another project was that one or more pilot factories should be established, either by the Government or by the industry itself, with the object of providing development contracts to try out new techniques. For this and other purposes, the proposal was made that a Cotton Industry Reorganisation Commission should be set up, consisting of representatives of both sides of the industry, with a full-time independent chairman and independent members.

It is not clear from the document whether this body would be supplementary to or would supersede the original Cotton Board, but whatever the intention, the powers of this Reorganisation Commission would clearly be very far-reaching. It would, for example, be authorised to draw up schemes for amalgamation of firms within the industry, which, if not made effective by voluntary means within a given period, could be compulsorily carried out.

In view of the continual argument as to the future structure of the trade, it is significant that the report suggests that special consideration should be given to the encouragement of "appropriate" vertical groupings. The enforcement of a more rapid rate of re-equipment is also part of the Plan; in this connection, there is more than a hint of a form of nationalisation in the proposals.

"Since it is established procedure that Government controls cannot be used to force the spending of private money," the *Plan* observes, "these powers might have to include arrangements for the State to take a controlling interest, under proper legislative safeguards, in key firms in the industry, particularly in those where inadequate progress is being made, and where monopolistic power is being exercised."

Machinery Orders

The proposed Reorganisation Commission would also be empowered to place bulk orders on the textile machinery industry. In addition, it is suggested that the Government might need to enlarge the capacity of the automatic loom manufacturers by use of a Royal Ordnance Factory or build special plant within the Lancashire development area. Further consideration, says the report, should be given to the Government's taking a controlling interest, by statutory acquisition of shares, in the principal textile machinery firms.

Scarcely original is the comment on overseas trade in textiles. "British export trade, and particularly that of Lancashire, needs to adapt itself to changing world conditions," declared Mr. Wilson. Barter transactions involving the exchange of raw cotton for finished goods should be encouraged, in his view.

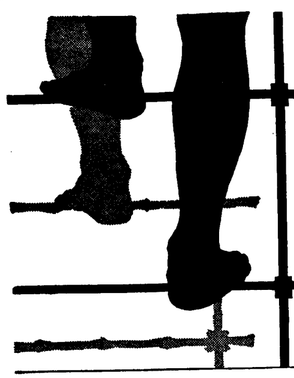
Merchants to Register

Well in line with the opinions of many in the producing branches, however, is his observation that "exports, like production, are suffering from a plethora of merchants and the consequent fragmentation or orders." A registration scheme for authorised merchants is his solution to this longstanding problem, coupled with a scheme to guarantee production of standard lines of goods, with regular deliveries, consistent quality and reasonable prices, to meet the needs of Colonial markets. The re-establishment of an organisation based on British Overseas Cottons Ltd. is proposed as an integral part of the textile export trade, presumably requiring statutory, though not monopoly, powers.

Additional stability, Mr. Wilson urged, should be given to the home market by the use of Government purchases in time of erratic commercial demand. Steps should be taken towards the creation of a new utility-type scheme, based on long-run Government-guaranteed orders for a range of standard specifications.

REGIONAL PLANNING—II

(*Concluded from page* 355)



British trading station in India was not part of the Indian economy, but an outlying part of the British economy). Now what is true of colonial capital can be true of national industrial ventures if they are isolated from each other, even if they all make a profit.

A Typical Illustration

The case has been illustrated more than once in considerable hydro-electric undertakings in backward parts of Europe, in the Alps or Pyrenees, for example. During the period the works are in progress, they exercise a transient stimulating effect locally, which disappears once the structure is in place. This stimulating effect can be limited to the mere appearance of a pocket of inflation: geographical price discrepancies emerge, a few parasitical activities are called up briefly, but the locality has not been able to meet the increase in demand caused by local prosperity. Once the work is finished—and it may be, by the strictest accountancy standards, a fully economic project—the new undertaking's relations are all with distant centres; the local region sinks back into its lethargy. The national income has increased by a fraction, but a backward and under-privileged population has not undergone the transformation of its way of life that we call development. For that, it would have been necessary to give local people the training they needed to help build the installation and then ensure that this training could be used in complementary activities in the same region thereafter; to ensure that the temporary increase in local demand was met by revitalised local activities that remained viable afterwards; and to see that the big project was deliberately used to attract around it other industries, which would benefit, for instance, from locally cheaper power. If those other industries were of comparable size to the initial undertaking, one would have what the Italians call an industrialisation node; if they were a collection of smaller affairs, what they call an industrial development zone.

As the most successful example of regional development, and for its application of the theory of development poles, the progress of the Italian South deserves closer study than it has had from planners in Asia. But, if one wishes to see it in operation, the time is now—because at the current rate of progress "the poor South" will have ceased to exist by the end of this decade. For this is one instance of planned development whose success is incontestable.

(*Concluded*)

Modern construction projects require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites, MILLS tubular scaffolding has a versatile use: storage racks; temporary buildings; open-air auditoriums or bridges—apart from its normal use as a construction aid.

WHICH FOOT RESTS SURER ?

The special spring-steel fittings quickly secure the tubes-with only a ½" spanner as the tool. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle-grip' principle.

All fittings are made by Guest, Keen, Williams, Ltd. and the tubes by The Indian Tube Company (1953) Limited.

UNITED BANK OF INDIA LIMITED

Registered Office: **UNITED BANK BUILDINGS, 4, CLIVE GHAT STREET, CALCUTTA**

ANNUAL REPORT OF THE DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1962

To be placed before the shareholders at the Annual General Meeting to be held at the Registered Office of the Bank at 4, Clive Ghat Street, Calcutta, on Monday the 25th March 1963, at 11 a. m.

The Directors beg to submit to the shareholders the Audited Balance Sheet of the Company as at 31st December, 1962 and Profit & Loss Account for the year ended 31st December, 1962 together with the Auditors' Report thereon.

	Rs. nP.
The Profit for the year after making provision for taxation and including the balance of Rs. 2,30,694.16 brought forward from the previous year's account amounts to.. ..	23,60,006.24
Out of this amount the following appropriations have been made:	
To Reserve Fund under Section 17 of the Banking Companies Act..	4,26,000.00
Leaving an available balance of	19,34,006.24
Out of the above, the Directors recommend the payment of a Dividend to the shareholders @ 6 per cent per annum, subject to deduction of tax at the prescribed rates in accordance with the provisions of the Income Tax Act, absorbing	16,08,000.00
Balance to be carried forward to next year's account..	3,26,006.24

The Bank's business during the year made satisfactory progress.

During the year under report, one branch at Naharkatia (Dulialjan) in the State of Assam was opened.

Sri J. M. Dutt, Sri K. C. Das, Sri M. J. Valdya and Sri S. Gupta retire by rotation and being eligible offer themselves for re-election.

The Directors report with deep regret the demise on the 15th of April, 1962 of Sri Narendra Chandra Datta, a revered member of the Board and the founder of The Comilla Banking Corporation Ltd., one of the amalgamating units. The Board has placed on record its high appreciation of the valuable services rendered by him to the banking industry, as a pioneer in the eastern region of undivided India, as also to the Company.

The Bank during the year under report, made contributions of Rs. 1,50,000 to the National Defence Fund and Rs. 25,000 to Dr. B. C. Roy Memorial Fund.

The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Sri M. J. Valdya, being out of India, could not sign the Report and Accounts.

INDIAN TEA EXPORTS TO AUSTRALIA, NEW ZEALAND AND MALAYA

DELEGATION SUGGESTS PROMOTIONAL MEASURES

HOW is the market for tea in Australia, New Zealand and Malaya? Is there any scope for boosting exports of Indian tea to these markets? If so, what promotional measures are called for? It was to examine these aspects that the Government of India accorded, in September 1962, sanction to the visit of a tea delegation to the aforesaid three countries. The delegation was led by Mr. A. S. Bam, I.C.S., Chairman of the Tea Board, and consisted of three representatives of tea industry and trade, namely, Mr. J. G. Robinson, Mr. B. C. Biyani and Mr. M. R. M. Punja. It left India on 21st October 1962 and returned on 14th November.

The visit of the delegation could certainly not have been more timely. The past few years have witnessed a sharp decline in the quantity of tea imported by Australia from India. The actual imports in 1961-62 aggregated 6.36 million lbs., as against 17.83 million lbs. a decade earlier, in 1950-51 to be precise. In contrast, imports from Ceylon have gone up from 37.27 million lbs. in 1950-51 to over 41.87 million lbs. in 1961-62. Australia is also buying more tea from Indonesia (12.86 million lbs. in 1961-62, as against 4.23 million lbs. in 1950-51) and China (1.24 million lbs., as against 549,000 lbs.). Indian tea exports to New Zealand, too, have declined, from 1.82 million lbs. in 1958 to 1.45 million lbs. in 1961. New Zealand continues to be predominantly a market for Ceylon tea, the latter accounting as it did for as much as 89.39 per cent (14.96 million lbs.) of the total imports of tea aggregating 16.73 million lbs. in 1961. Tea exports from India to Malaya are negligible. Of the total imports of 12.71 million lbs. into Singapore and Malaya in 1961, Indonesia alone supplied 8.73 million lbs., the balance representing the share of Ceylon (2.05 million lbs.), China (1.23 million lbs.), Formosa (365,000 lbs.), Hong Kong (313,000 lbs.) and Japan (26,000 lbs.).

The main reason for the decline in Indian tea exports, according to the Bam delegation, is that, quality for quality, prices at Calcutta have not been consistently competitive with Ceylon. Again, the long period over which Ceylon tea enjoyed fortunate circumstances in Australia has led to a popular taste for blends of Ceylon character. Nevertheless, there is, we are told, no prejudice against Indian tea as such. Indeed, the delegation was assured that Australia would buy much larger quantities of Indian tea, if it were made available at competitive prices in the Cochin auctions. Cochin is preferred to Calcutta because shipping arrangements from that port are more satisfactory. Moreover, South Indian teas being generally similar in character to Ceylon teas, they can be used more generously in blends with the latter than the North Indian teas. Australia, according to the Bam delegation, is likely to consume approximately 60 million lbs. of tea annually for sometime to come. The delegation believes that there is little prospect of this total import increasing, unless advertising and promotion for tea is stepped up substantially. Attention is particularly drawn to the sharp rise in coffee drinking as opposed to tea. The *per capita* consumption of coffee in Australia has gone up from an average of 0.6 lb. during the years 1936-39 to 2.2 lbs. in 1959-60, while that of tea has receded from 6.9 lbs. to 6.0 lbs. In the delegation's view, there is a good chance of the joint promotion scheme for tea succeeding. And, so far as India is concerned, it should not only join such a scheme but also undertake uninational promotion. The other recommendations put forward by the delegation are:

A Tea Centre should be set up at Sydney and Tea Bars at Adelaide, Brisbane, Melbourne, Perth and Sydney.

Due attention must be paid to the establishment of Indian packs.

There is a wide field for public relations which can be exploited in Australia. Social and religious organisations would appreciate donations of tea to be served as light refreshment at their meetings, sporting events and so on, and this can always be accompanied by a talk on India generally and Indian tea in particular.

Indian tea must be made more attractive to the Australian buyer from the points of view of quality, type and price. Recalling the cut in export duty on tea effected in the 1962-63 budget, the delegation says that the cut "has been unquestionably a major factor in making Indian teas more competitive and helping to bring about a most welcome reversal of India's export performance to Australia."

The Tea Board should organise and finance a sampling service to established Australian buyers, large and small. In this connection, the delegation observes:

"The object would be to present to them a wider field of Indian teas suitable for the Australian market, in quality and price. This would be a fairly easy and inexpensive service to organise and many buyers told us that they would appreciate it, provided it in no way cuts across established trade practice, which it need not. Along with the samples should be a regular mailing of weekly market reports, news items, propaganda pamphlets and other promotional literature. We also recommend that tea buyers and blenders of prominent firms in Australia should be invited, one by one, to visit India at an appropriate time in the North Indian season, as guests of the Tea Board, so that they will have an opportunity of visiting tea areas and auctions both in North and South India."

During its stay in New Zealand, the Bam delegation did not find any bias whatsoever against Indian tea on the part of either wholesalers, or packers or the public. The main reason adduced for the little or no progress of Indian exports is that an important section of potential buyers has become very conservative in outlook and unfamiliar with North Indian teas. There is said to be better awareness of South Indian teas, but, even here, buyers can be much better informed.

The delegation met all the principal tea importers and packers and explained to them the recent trends of production and marketing in India, particularly the development of excellent C.T.C. types of tea. It also emphasised how competitive Indian teas had been this year as compared with Ceylon, and the efforts that were being made in India to increase export trade with many countries in the world. To

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December, 1962 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors. The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisions of sub-sections (1) and (2) of section 211 and sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations, which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the bank which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law, have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;

(d) the Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

RAY & RAY,
Chartered Accountants.

JUTE MILLS' CAPACITY FULLY UTILISED

OUTPUT AND OFFTAKE RISE MARKEDLY

JUDGING by the performance of jute industry in India during the first two years of the third Plan, one may confidently expect the industry successfully to hit the production and export targets assigned to it under the Plan. The total quantity of jute goods produced during the calendar year 1962 was 1,186,800 metric tons —an all-time peak. This was just 113,200 tons short of the production target of 1,300,000 tons to be attained in 1965-66. This shortfall can be easily covered, provided the industry is assured of (*a*) plentiful supplies of raw jute and mesta at reasonable prices, and (*b*) good export, as well as internal, demand for jute manufactures, especially sacking. For, by progressive unsealing of looms and by working a marginal portion of the looms in place on double shift, the industry is at present utilising almost the entire installed capacity of about 73,000 looms. Similarly, in regard to exports, the leeway to be covered between the actual shipment of 848,400 tons in 1962 and the export target of 900,000 tons, is negligible, being less than 52,000 tons. Incidentally, the jute industry is the single largest earner of foreign exchange. The total value of hessian, sacking and other jute manufactures actually exported in 1962 was as much as Rs. 154 crores, accounting for over 23 per cent of India's aggregate exports, valued at Rs. 669 crores, in that year.

Production of jute goods in the first two months of 1962 was lower than the level reached in December 1961, but picked up, as the year progressed, to touch a high of 105,100 tons in the month of August. After declining to 100,500 tons in September and 90,000 tons in October, production rose again to 101,400 tons and 104,200 tons, respectively, in the subsequent two months. In January this year, it was 103,100 tons, lower than in December 1962, but above the 96,700 tons produced in January 1962. Despatches of jute goods were maintained at a high level practically throughout the year, as the following table shows:

(In metric tons)

	Production		Despatches	
	1962	1961	1962	1961
January	96,700	87,600	90,800	81,300
February	92,200	78,600	89,900	77,700
March	97,800	88,900	98,200	86,000
April	97,000	80,500	82,300	72,800
May	99,700	79,600	90,000	76,700
June	97,800	67,300	100,900	81,700
July	103,500	64,400	96,700	69,800
August	105,100	78,300	99,900	88,800
September	100,500	76,100	96,800	87,900
October	90,900	77,700	93,300	75,000
November	101,400	93,700	100,700	92,100
December	104,200	97,600	111,900	98,700
Total	1,186,800	970,300	1,151,300	983,500

The production of 1,186,800 tons of jute goods in 1962 was well above the 970,300 tons produced in the previous year which had witnessed a distinct setback from the 1960 level of 1,088,442 tons. The marked rise in output in 1962 was accounted for by all the sub-groups, that is, hessian, sacking and other manufactures. The rise was particularly marked in the case of hessian, the output of which went up by 36 per cent, from 355,700 tons in 1961 to 482,800 tons in 1962. The production of sacking increased by 14 per cent from 483,700 tons to 551,800 tons and that of other manufactures by 16 per cent from 130,900 tons to 152,200 tons.

The aggregate despatches of jute goods during 1962, as already noted, amounted to 1,151,400 tons, representing a rise of 160,200 tons over the 991,200 tons despatched in 1961. The improvement was mainly on account of export, the actual despatches to overseas aggregating 848,400 tons, as against 713,100 tons, a rise of 135,300 tons. Despatches for domestic consumption increased by only 24,900 tons to 303,000 tons. The increase in the latter followed the expansion in the output of agricultural commodities and other packageable goods, notably cement and fertilisers.

The pace of jute goods exports slacked somewhat in the month of January 1963, the quantity despatched for export being 63,700 tons, as against 81,400 tons in the previous month and 63,400 tons in the same month last year. This fall is, however, considered to be temporary and indications are that exports will soon pick up in the coming months.

The rise in jute goods exports from India during the year 1962 reflected the distinct improvement in offtake by all the principal markets with the exception of New Zealand. The following table shows the destination-wise shipments during the first ten months of 1962 and 1961, as well as in the whole of 1961 and 1960:

(In thousand metric tons)

	January-October		Whole of	
	1962	1961	1961	1960
United States	207.5	157.8	198.9	190.0
Canada	40.5	31.8	36.3	39.8
Argentina	43.4	31.2	14.2	37.8
Rest of America	38.2	37.1	71.8	63.0
United Kingdom	35.7	23.3	32.4	50.0
Rest of Europe	96.8	67.2	78.2	65.6
Near East	16.0	8.8	5.8	9.7
Far East	75.2	69.8	52.5	96.5
Africa	97.2	71.4	107.8	82.8
Australia	46.9	42.3	51.3	74.0
New Zealand	10.8	14.6	15.5	17.0
Other countries	19.8	9.1	18.4	13.4
Total of hessian and sacking	728.0	574.4	683.1	739.6
Total of all jute manufactures	789.9	643.1	759.8	810.4

Exports of hessian during 1962 were markedly higher at 433,500 tons, as against 332,900 tons in 1961, representing a rise of 100,600 tons. Exports of sacking were also higher but by only 18,100 tons at 307,700 tons. This quantity is appreciably less than the actual shipment of 439,100 tons in 1956, as is indicated in the following table:

(In metric tons)

	1962	1961	1960	1956
Production:				
Hessian	482,800	355,700	430,614	423,504
Sacking	551,800	483,700	551,514	617,610
Others	152,200	130,900	106,284	73,542
Total	1,186,800	970,300	1,088,442	1,114,656
Equivalent of jute consumption (000 bales)	6,735	5,458	6,236	6,341
Despatches:

The declining trend of sacking exports is attributed to severe competition from Pakistan and reduced overseas demand due to the establishment of a number of sacking mills in other countries. One may, of course, ask: What does it matter if sacking exports are low so long as the trend of hessian exports is upward? But one should not overlook the fact that the possibilities in this direction are limited both by demand and by the availability of the quality jute required. Several new looms to produce sackings are being installed in Pakistan and, when these go into production by the end of next year, Indian sackings will be faced with more severe competition. What is worse, the export subsidy bonus and low prices of raw jute give Pakistan's sackings a distinct price advantage over India's. As Mr. D. C. B. Pilkington, a former Chairman of the Indian Jute Mills Association, said sometime ago, "with Rs. 400 per ton to play with—that is, Rs. 40 per 100 B. twills—Pakistan has only to decide by how much to underquote Calcutta prices to obtain all the world's sacking business as soon as the production permits." Something must, therefore, be done to enhance the competitive capacity of Indian sacking cloth in world markets.

The most important end-use of jute goods is in the field of packing. The world consumption of jute manufactures for packing purposes has remained more or less stagnant in the past few years, though the output of packageable commodities has gone up rapidly in most countries. This has been due to the growing popularity of bulk-handling methods, increased use of substitutes, especially paper bags, and changes in distribution methods to direct consumer-sale packing. Nevertheless, exports of Indian goods can be stepped up from the present levels, provided earnest attempts are made to augment productivity in all the sectors of jute industry, to reduce costs and to ensure stability of prices. The scope for enlarged exports is particularly great in the case of floor coverings, especially tufted carpets with jute backing and linoleum, as well as in respect of jute rope and twine, roofing felts, webbing, upholstery, etc. Another "must" for expanding the exports of Indian jute goods is intensive research in finding new uses for jute goods, coupled with frequent market surveys. Considering the importance and size of jute industry, the amount expanded on these two aspects of research is very small, indeed. Nowadays one rarely hears anything about the work and achievements of the research unit of the Indian Jute Mills Association.

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

PACE OF ECONOMIC LEGISLATION—III

FISCAL, FINANCIAL AND LABOUR ACTS

By Dr. Raj K. Nigam, Ph.D. Econ. (London)

UNDER the broad group of fiscal and financial Acts, in all 71 Acts are reported to be in force, of which 38 relate to the post-independence period and the remaining 33 to the pre-independence period. Among the latter Acts, the most important ones in force today are the Sea Customs Act, 1878, the Indian Stamp Act, 1899, the Land Customs Act, 1924, the Indian Tariff Act, 1934 and the Public Debt Act, 1944. The important Acts passed during the post-independence period are the Taxation on Income (Investigation Commission) 1947, the Estate Duty Act, 1953, the Central Sales Tax Act, 1956, the Wealth Tax Act, 1957, the Expenditure Tax Act, 1957, the Gift Tax Act, 1958 and the Indian Income-tax Act, 1961. Apart from the Acts named above, the other fiscal and financial Acts passed during the post-independence period are the Scheduled Securities (Hyderabad) Act, 1949, the Payment of Tax (Transfer of Property) Act, 1949, the Taxation Laws (Extension to Merger States and Amendment) Act, 1949, Professional Tax Limitation (Amendment and Validation) Act, 1949, the Opium and Revenue Laws (Extension of Application) Act, 1950, the Voluntary Surrender of Salaries (Exemption from Taxation) Act, 1950, the Companies (Donations to National Funds) Act, 1951, the *Khadi* and other Handloom Industry Development (Additional Excise Duty on Cloth) Act, 1953, the *Dhotis* (Additional Excise Duty) Act, 1953, the Taxation Laws (Extension to Jammu and Kashmir) Act, 1954, the Medicinal and Toilet Preparations (Excise Duties) Act, 1955, the Hyderabad Export Duties (Validation) Act, 1955, the Sales Tax Laws Validation Act, 1956, the Terminal Tax on Railway Passengers Act, 1956, the Cotton Fabrics (Additional Excise Duty) Act, 1957, the Estate Duty and Tax on Railway Passenger Fares (Distribution) Act, 1957, the Additional Duties of Excise (Goods of Special Importance) Act, 1957, the Mineral Oils (Additional Duties of Excise and Customs) Act, 1958, the Tea (Alteration in Duties, Customs and Excise) Act, 1958, the Sugar (Special Excise Duty) Act, 1959. Central Excises (Conversion to Metric Units) Act, 1960, the Customs Duties and Cesses (Conversion to Metric Units) Act, 1960, the Preference Shares (Regulation of Dividends) Act, 1960, the U.P. Sugarcane Cess (Validation) Act, 1961, the Union Duties of Excise (Distribution) Act, 1962 and the Estate Duty (Distribution) Act, 1962.

Tax Legislation

The three Acts, namely, the Gift Tax Act, the Wealth Tax Act and the Expenditure Tax Act were passed following the submission of a report by the distinguished Cambridge Professor, Nicholas Kaldor, who carried out an investigation of the Indian tax system in the light of the revenue requirements of the Five-year Plans in the country. He found the system of direct taxation in India inequitable and inefficient as well as suffering from loopholes that made large-scale evasion of tax relatively easy. He suggested the levy of four new taxes, namely, the Capital Gains Tax, an annual tax on wealth, the personal expenditure tax and a general gift tax. Of these four proposals, the last three were accepted and implemented during 1957-58. It may be mentioned here that the full benefits of these taxes have, however, not yet been achieved.

In the post-independence period, excise duties also came to have a special importance, as they provided a good source of revenue to meet the development outlays. Accordingly, it is seen that a number of excise duties Acts pertaining to various commodities have come to be passed during this period. Like the excise duties, sales tax has also proved to be an important source of revenue to the Government. Under the Central Sales Tax Act of 1956, principles have been laid down for determining when a sale or purchase of goods takes place in the course of inter-State trade or commerce or outside the State or in the course of import into or export from India and provides for the levy and distribution of taxes on goods in the course of inter-State trade and commerce and declares certain goods to be of special importance in inter-State trade or commerce and specifies restrictions and conditions to which a State law imposing taxes on the sale or purchase of such goods of special importance shall be subject. The Indian Income-tax Act of 1961, like the Companies Act of 1956, completely remodelled the provisions of the old Income-tax Act of 1922. The Act of 1922 had been subjected to innumerable amendments since its passing and the result of all these amendments was that the Act required revisions with a view to simplification. The Act of 1961 was, therefore, passed taking this need into account and it also gave effect to the recommendations of the Direct Taxes Enquiry Committee. In the new Act, the whole matter has been arranged in a more logical and convenient manner. The long sections of the old Act have been broken up and the provisos have been made into substantive provisions wherever necessary. The present Income-tax Act runs into 298 sections and five schedules. It has made several important changes in regard to exemption in favour of charities. Having regard to the importance of the subject, the new Act has dealt with charities separately from the other exemptions. Properties held in trust in part only for charitable or religious purposes can get exemption only if they have been created before the commencement of the present Act. Accumulation of income by a trust is permitted only to the extent of 25 per cent of the income or Rs. 10,000 whichever is higher. If a trust wishes to exceed these limits, it has got to give notice to the income-tax officer, specifying the purpose for which the accumulation is being made. Even so, the accumulation cannot be for more than 10 years and the money accumulated must be invested in Government securities.

The new law further amplifies the powers of the income-tax authorities regarding discovery, production and evidence. A fine can be imposed on a person who fails to attend, give evidence or produce books, etc. One far-reaching change has also been made in regard to the recovery proceedings, and a new section—Section 281—has been inserted to safeguard the claims of the revenue against an assessee who fraudulently parts with his assets to escape payments. This Section has been drafted on the lines of Section 53 of the Transfer of Property Act but, unlike that section, the transfer can be challenged even during the pendency of the income-tax proceedings and before an assessment has been made.

Banking and Currency

In the field of banking and currency, there are 25 Acts in force in the country, of which 11 were passed in the post-independence period and 14 during the pre-independence period. Among the important Acts passed in the latter period are the Indian Coinage Act, 1906, the Usurious Laws Act, 1918, the Reserve Bank of India Act, 1934 and the Insurance Act 1938. Another important Act passed on the eve of independence was the Foreign Exchange Regulation Act of 1947. Taking into account the post-war exigencies such as the need to conserve foreign exchange in the country, this Act was passed as an expedient measure to provide for the regulation of certain payments dealings in foreign exchange and securities and the import and export of bullion. As discussed earlier, this Act has been amended five times in the subsequent years which made the law progressively more stringent, as the foreign exchange position became steadily more and more acute. While the original Act was in a sense lenient, though not liberal, permitting release of foreign exchange for genuine and *bona fide* purposes and in restricting transactions which would have created difficult foreign exchange position in the short run, the amendments to the Act have been of a restrictive character. The Act gives far-reaching powers to the Central Government in regard to the acquisition of foreign exchange and foreign securities under Sections 9 and 16 of the Act. Under another section, viz., Section 19, the Central Government have powers to direct the owners of foreign exchange or foreign securities to make a return thereof to the Reserve Bank within a period specified by them.

The important banking and currency Acts passed during the post-independence period are the Banking Companies Act, 1949, the State Bank of India Act, 1955 and the Life Insurance Corporation Act, 1956. The Banking Companies Act, 1949 as amended subsequently, envisages close supervision over their affairs by the Reserve Bank of India which had not been there in the past. The State Bank of India Act, 1955 replaced the old Imperial Bank of India Act and was passed consequent on a decision being taken to make the old Imperial Bank a Government bank. By the Life Insurance Corporation Act, 1956, which was preceded by an Ordinance, the life insurance business in the country has been placed in the hands of a statutory Government body named the Life Insurance Corporation of India.

Apart from the foregoing important financial banking and currency Acts, the other Acts in this field passed during the post-independence period are the Reserve Bank (Transfer of Public Ownership) Act, 1948, the Banking Companies (Legal Practitioners' Clients' Accounts) Act, 1949, the Reserve Bank of India (Amendment and Miscellaneous Provisions) Act, 1953, the State Bank of Hyderabad Act, 1956, the Life Insurance (Emergency Provisions) Act, 1956, the Government Saving Certificates Act, 1959, the State Bank of India (Subsidiary Banks) Act, 1959 and the Deposit Insurance Corporation Act, 1961. The purpose of passing the last-named Act is to provide for the establishment of a corporation to provide insurance of deposits and other matters connected therewith. This Act was passed as a sequel to the tragic case of failure of the Palai Bank which spotlighted the need for more effective protection to the depositors, notwithstanding the protection available to them indirectly under the Banking Companies Act through close supervision and surveillance of the Reserve Bank of India. The Deposit Insurance Corporation as per Section 4 of the Act is to be formed with a capital of Rs. one crore which is to be entirely taken up by the Reserve Bank. The liability of the Corporation is defined in Section 16 of the Act.

Social Security

Another important field of economic legislation is that of labour and employment. As at present, 35 labour laws are in force in the country, of which 17 were passed during the post-independence period and the other 18 in the pre-independence period. In the field of labour legislation, our country is among the few in the world which have extended social security to labour to a very commendable extent. The industrial labour in our country does not suffer the risk and hazards, insecurity, ill-health, bad housing, etc. as it did in the pre-independence period. But, even during that period, the country had such important labour Acts as the Workmen's Compensation Act, 1923, the Payments of Wages Act, 1936, the Employers' Liability Act, 1938, the Industrial Disputes Act, 1947, etc. The other important labour Acts enacted during that period are the Indian Boilers Act, 1923, the Indian Trade Unions Act, 1926 and the Employment of Children Act, 1938; and the Coal Mines Labour Fund Act, 1947.

Among the important labour Acts passed during the post-independence period are the Factories Act, 1948, the Minimum Wages Act, 1948, the Employees' State Insurance Act, 1948, the Plantation Labour Act, 1951, the Employees' Provident Fund Act, 1952, the Maternity Benefits Act, 1961 and the Apprentices Act, 1961. Apart from this, the other relatively less important Acts passed during 1947-62 are the Dock Workers (Regulation of Employment) Act, 1948, the Coal Mines (Provident Fund and Bonus Schemes) Act, 1948, the Industrial Disputes (Banking, Insurance Companies) Act, 1949, the Industrial Disputes (Amendment and Temporary Provisions) Act, 1951, the Industrial Disputes (Banking Companies) Decision Act, 1955, the Working Journalists (Conditions of Service) and Miscellaneous Provisions Act, 1955, the Working Journalists (Fixation of Rates of Wages) Act, 1958, the Employment Exchanges (Compulsory Notification of Vacancies) Act, 1959, the Iron Ore Mines Labour Welfare Cess Act, 1961 and the Motor Transport Workers Act, 1961.

Another important field of economic activity is transport and communication. In this sphere, a total number of 45 Acts are in force in the country of which 15 were enacted in the post-independence period and 30 in the pre-independence period. Among the Acts passed in the pre-independence period, the important ones are the Indian Telegraph Act, 1885, the Indian Post Offices Act, 1888, the Indian Railways Act, 1890 and the Motor Vehicles Act, 1939 and the Control of Shipping Act, 1947. In the post-independence period, such important Acts as the Road Transport Corporation Act, 1950, the Air Corporations Act, 1953, the National Highways Act, 1956 and the Merchant Shipping Act, 1958 were adopted.

The Air Corporations Act of 1953 is particularly important, as it was through this legislation the air transport business was nationalised and two Government corporations, viz., the Indian Airlines Corporation and the Air-India International (recently renamed as 'Air India') were formed. Comparatively less important Acts passed during the period are the Calcutta Port (Pilotage) Act, 1948, the Merchant Shipping Laws (Extension to Acceding States and Amendment) Act, 1949, the Delhi Road Transport Authority Act, 1950, the Telegraph Wires (Unlawful Possession) Act, 1950, the Railway Companies (Emergency Provisions) Act, 1951, the Marking of Heavy Packages Act, 1951, the Barsi Light Railway Company (Transferred Liabilities) Act, 1954, the Railway Stores (Unlawful Possession) Act, 1955, the Railway Protection Force Act, 1957, the Control of Shipping (Continuance) Act, 1958 and the Haj Committee Act, 1959.

In regard to mining, six Acts are in force in the country and all of them came into existence during the post-independence period. These Acts include Mines and Minerals (Development and Regulation) Act, 1948, the Coal Mines (Conservation and Safety) Act, 1952, the Mines Act, 1952, the Coal Bearing Areas (Acquisition and Development) Act, 1957, the Mines and Minerals (Development and Regulation) Act, 1957 and the Oils and Natural Gas Commission Act, 1959. It may be mentioned here that the Mines and Minerals (Development and Regulation) Act, 1957 has enumerated a number of amendments to be made in the Act of the same name passed in 1948. These amendments are listed in Schedule 3 of the 1957 Act. By these amendments, the title of the 1948 Act has to be changed to read as the Mineral Oil Resources (Development and Regulation) Act, 1948. Wherever "Mineral" occurs in the aforesaid Act, "mineral oils" has also to be substituted for it. This means that the old Act primarily relates to mineral oils and does not have general application to mines and minerals as such.

Irrigation and Power

In the field of irrigation and power, five Acts are in force, of which three are the product of the post-independence period. Of the Acts passed in the pre-independence period, the important one is the Indian Electricity Act, 1910. The three Acts passed during 1947-62 are the Damodar Valley Corporation Act, 1948, the Electricity Supply Act, 1948 and the River Boards Act, 1956.

To sum up, it will be seen from the foregoing review of economic legislation in India during the post-independence period that the law-making work by Parliament has proceeded with increasing speed and tempo in response, among other factors, to social pressures, the need for cleaning up the mess in certain social and economic institutions, new exigencies or situations created by the adoption of the establishment of a welfare State on socialistic pattern as the goal for the future Indian society, etc. In independent India, it came to be expected of every individual, group organisation and institution in his or its particular social role or area of freedom to exercise his or its freedom to the end that social purpose shall be served and thus the freedom was sought to be co-related to responsibility. Where it was apprehended that this freedom was likely to be divorced from social responsibility and was likely to prove detrimental to the progress towards the goals of planned economy and welfare State, some sort of control by the State was prescribed in the shape of economic laws enacted during the post-independence period.

In Other Countries

Such a control of the individual's freedom has increasingly been in evidence in other democratic countries of the West which are guided by "welfare State" considerations. In those countries today, the State exercises a degree of control over the individual far exceeding in scope and intensity than in any period of history. It has taken over many responsibilities formerly confined to the family and has even added new duties that take the individual out of the family nexus as, for example, responsibility for education, obligations of national service, family allowances, etc. The State has also taken over vast responsibilities in the field of employment, statutory minimum standards of wages and of conditions of work, unemployment insurance and old-age pensions, workman's compensation or industrial insurance. Also the State has everywhere imposed far-reaching restrictions upon the use of private property culminating in various degrees of power to expropriate for public purposes and, in many cases, public ownership and operation of basic industries. There, while no doubt trade remains in private hands, a complex supervisory apparatus regulates the conditions of fair trade by a multitude of statutory provisions and institutional controls from compulsory tariffs on hire purchase transactions to the liberal apparatus of anti-trust laws, restrictions on mergers, monopolies, etc.

Read in this context, therefore, the present trends in India towards the widening of the vista of State regulation of and of State control over economic activity should not be regarded as a disturbing development. Nor there need be any uneasy feeling with regard to the expansion of the Government functions as these have "occurred as a result both of growing complexity of modern life and of minimum postulates of social justice which are now a part of the established public philosophy in all civilised countries."

While the aforesaid observations concern the growth and content of economic laws in our country, a word need be said here about the frequent changes made in law. Changes in law become necessary, as, in the words of Friedmann, "the content of law cannot be determined for all time and all circumstances and it would be a tragedy if the law were so petrified as to be unable to respond to the unending challenge of evolutionary or revolutionary changes in society."

[*Note*: This is the third and final instalment of the series of the article on the pace of economic legislation in India. The first and second instalments appeared in *Commerce* dated 9th and 23rd February 1963.—Ed.]

VOLTAS LIMITED

ANOTHER YEAR OF EXPANDING ACTIVITY

MR. J. D. CHOKSI UNDERLINES THE IMPORTANT ROLE OF MARKETING AND DISTRIBUTION

THE Eighth Annual General Meeting of Voltas Limited was held at Bombay House, Bruce Street, Bombay, on the 25th February 1963.

The following is the Statement by the Chairman, Mr. J. D. Choksi, which was circulated with the Annual Report :—

" This statement comes to you at a critical period in the history of the country. We are living in the shadow, if not in the limelight, of a national crisis. I shall not make any pious pronouncement on this emergency as appears to be the order of the day. The situation is far too grave for that and at all times deeds are to be preferred to words.

" In war and peace your Company will give of its best; but clearly the path of duty requires a renewed concentration and mobilisation of our resources in furtherance of the national effort. The present emergency should lead to a development of the total industrial potential and, I hope, into making India a great industrial country. Your Company has a part to play in such development. I am sure that its performance in the current year and in the years to come in the fulfilment of this cause will be such as to deserve the trust and confidence of the shareholders.

" As shareholders are aware we are essentially a trading company. Our skills lie more particularly in the fields of marketing and distribution. Our origin was that of an import house dealing mainly with the distribution and servicing of foreign goods and equipment of the highest quality. We have represented, and continue to represent, leading manufacturers in many lines and categories of goods, and their names are a byword throughout the world in their particular fields. The products of many of them are still essential for the industrial development of this country and despite the continuously changing policies of Government, we have succeeded in retaining our share of such imports under the various licensing and credit arrangements. We are confident that, in spite of increasing difficulties, we shall maintain our position in the future, because of the excellent relationships that have been established with our foreign associates and with our customers, supplemented by our flexible and efficient nation-wide services.

"Over the years, we have acquired the distributorship of many well-known Indian manufacturers and today Indian-made products form over 43 per cent, against only 7 per cent in 1954-55, of our total turnover. We expect this share to increase substantially in years to come and are confident that technological improvements and the increasing adoption of modern methods of production will result in improvements in quality, making the Indian article the equal in every respect of the foreign-made product.

"The role of a distributor such as Voltas is barely understood or appreciated either by the lay public or by the authorities. Any and every agency which operates between the manufacturer and the consumer is often regarded as unnecessary, dishonest and parasitic. If any country needs the skills and facilities of expert marketing and distribution, it is India in its present stage of development. The honest and efficient distributor is a vital link between the manufacturer and the consumer or end-user. By virtue of his long experience and specialised knowledge of markets, he knows the consumer better and advises the manufacturer better of the consumer's exact wants and preferences. And by being in constant touch with consumer centres throughout the country, he knows the varying demands or requirements of different centres and ensures a smooth and efficient flow and distribution of goods. More often than not, the distributor finances the whole operation of distribution from the point of production to the point of actual sale and even beyond.

"At the present time when most goods are in short supply, selling may not be a very difficult problem. But the role of an honest distributor even under such scarcity conditions remains an important one. With his specialised knowledge, he serves the best interests of both manufacturer and consumer by ensuring equitable distribution and preventing hoarding in certain pockets and the high-jacking of prices in others. Our performance in this respect has been responsible, times out of number, for many scarce items of merchandise reaching consumers or end-users at normal prices. And when the wide range of our activities and the infinite variety of goods handled—700 different product groups—is considered, shareholders will have some appreciation of the service we render to the community.

" It is a regrettable fact that the bias against the distribution trade persists in official and unofficial circles. This bias is reflected in the Government's import policy for the current licensing period, in which further drastic cuts have been made in the import quotas of distributors. Fortunately, in many of our lines, holders of actual users import licences, including Government undertakings, avail themselves of our services to make their purchases abroad and to import their requirements into India. We provide these and other distributing and after-sales services in return for a very reasonable fixed distributor's margin which cannot by any stretch of imagination be termed profit.

" I would like to give you some idea of the principal duties and functions of a Distributor. He must maintain an overseas buying and forwarding organisation for goods that are imported. He must also provide storage and warehousing facilities for imported as well as locally-made goods at important centres throughout the country. Insurance of goods and handling, transport and forwarding are among his other responsibilities. In most cases he is also required to provide finance during transit and storage of goods and give credit facilities to wholesalers, dealers or end-users even after the sale of goods is effected. And a principal distributor like this Company must maintain an all-India sales and delivery organisation as well as specialised departments—such as Publicity and Marketing Research—to assist him in his marketing operations. It is obvious that few manufacturers in India outside the range of major corporations, would be competent or capable of giving this kind of specialised service to market the goods manufactured by them.

"Selling must be backed by service. At Voltas, when we make a sale we back it with SERVICE—with service facilities throughout the country. This factor is of greater significance during the present emergency when machines and equipment must work ceaselessly and to their full capacity. However, maintaining a first class service organisation is only half the battle. No service organisation can function effectively without an adequate supply of spare parts. Unfortunately a situation is developing under which, while we offer round-the-clock service, we are not assured of a steady supply of spares, as under the latest import policy of the Government, our quotas for spare parts have been practically abolished. I fear that this policy may soon lead to a breakdown and the immobilisation of many crores of rupees worth of valuable equipment. It might well be asked whether this policy is in the best interests of the country.

"The success attained by your Company in the field of distribution has resulted in the Company having won on three occasions in the recent past the World's Best Distributor Award for a certain type of construction equipment of a leading manufacturer in this field. It has also resulted in many approaches being made to us for advise and guidance in the development of industries and the better utilisation of equipment within the country. Not long ago, we were paid an indirect compliment, when we were asked by the Government and their foreign collaborators to undertake the servicing and maintenance of all equipment falling under certain categories in use in one of the largest Government corporations—including those supplied by others!

"I should now like to deal briefly with the Company's working during the year ended on 31st August, 1962. Though the profits, as shown in the Accounts and discussed in the Directors' Report are slightly lower than last year, mainly on account of a higher provision for taxation, the Company has in fact had its best trading year since its inception. Fully licensed orders in hand, and the margins expected thereon, are considerably higher as of 31st August, 1962, than in previous years. We have experienced longer delivery periods, particularly from Common Market countries and from Switzerland and the completion of formalities in connection with business financed under Government-to-Government loans has taken more time than originally expected. But for these two reasons, the profits for 1961-62 would have surpassed the results achieved in 1960-61.

"In conclusion, I express the appreciation of the Board to all those officers and employees of the Company who have been responsible for the results achieved during the year."

Note.—*This does not purport to be a record of the proceedings of the Annual General Meeting.*

12-25 April 1963

Milan Trade Fair

The International Trade Fair which has won a world record with 14,500 exhibitors of 80 nationalities and 4,300,000 visitors from 130 countries and five continents. The Milan Fair's essentially commercial functions have been strengthened by its International Trade Centre.

STATE BANK OF INDIA

THE EIGHTH ANNUAL GENERAL MEETING of the Shareholders of the State Bank of India will be held at the Bank's Local Head Office at Apollo Street, Bombay, on Thursday, the 7th March 1963, at 4 p.m. (Standard Time), for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1962 and the Auditors' Report on the Balance Sheet and Accounts.

B. VENKATAPPIAH,
Chairman.

CALCUTTA, *the 21st January* 1963.
1st Magha 1884 (*Saka*).

THE AZAM JAHI MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-second Annual General Meeting of the Shareholders of the Azam Jahi Mills Ltd. will be held at the Registered Office of the Company, 159, Gunfoundry Road, Hyderabad, on Thursday the 28th day of March 1963, at 3.30 p.m., to transact the following business:

1. To receive and adopt the Report of the Directors and the Audited Statement of Accounts of the Company for the year ended 30th September, 1962.
2. To declare a Dividend.
3. To appoint a Director in place of Shri S. Ramayya who retires by rotation, and he being eligible, offers himself for re-appointment.
4. To appoint a Director in place of Shri B. F. Dittia, I.A.S., who retires by rotation, and he being eligible, offers himself for re-appointment
5. To appoint a Director in place of Shri G. Chandrasekharam who retires by rotation, and he being eligible, offers himself for re-appointment.
6. To appoint a Director in place of Shri Lachmichand Challani who retires by rotation, and he being eligible, offers himself for re-appointment.
7. To appoint Auditors for the current year and to fix their remuneration.

The Transfer books of the Company will be closed from the 15th day of March 1963 to the 30th day of March 1963 (both days inclusive).

A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND SUCH A PROXY NEED NOT BE A MEMBER OF THE COMPANY.

The Dividend, when sanctioned, will be payable on and from the 7th day of May, 1963 to those shareholders whose names stand on the Register on the 14th day of March, 1963 and Dividend Warrants will be posted to each member to his last given address.

By Order of the Board,
N. BHAGWANDAS,
Chairman.

HYDERABAD (A.P.)
14th February, 1963.

NATIONAL PIPES AND TUBES COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Nineteenth Annual General Meeting of the Shareholders of National Pipes and Tubes Company Ltd., will be held at the Registered Office of the Company, "NICCO HOUSE," Hare Street, Calcutta, on Friday the 29th March, 1963, at 3-30 p.m., to transact the following business:—

(1) To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1962.

(2) To declare Dividends on the Preference and Ordinary Shares.

(3) To appoint a Director in place of Shri Mahaliram Bajaj who retires by rotation and is eligible for re-appointment.

(4) To appoint a Director in place of Shri Baidya Nath Banerjee, who retires by rotation and is eligible for re-appointment.

(5) To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will remain closed from 16th March to 29th March, 1963, both days inclusive.

By Order of the Board.

FOR NATIONAL PIPES AND TUBES COMPANY LIMITED,
FOR ASSOCIATED INDUSTRIAL DEV. CO. (PVT.) LTD.,

S. C. ROY,
Director,
Managing Agents.

Registered Office:
NICCO HOUSE,
HARE STREET,
CALCUTTA-1.
The 18th February, 1963.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and that a Proxy need not be a Member.

The Dividend, if declared, will be paid to those Shareholders whose names appear in the Register of the Company on 29th March, 1963 or their mandatees and the Dividend Warrants will be posted from 16th April, 1963, onwards.

To all Shareholders and in particular to:

R. R. Bhandary Esq., Mr. Cali Shawakshaw Dinshaw & Mrs. Louise Cali Shawakshaw Dinshaw, Mrs. Chandi Devi, Lt. Genl. Shanker Shum Shere J.B.R. and Rani Jagadamba Kumari Debi, H. H. Lt. Genl. Shanker Shum Shere J.B.R., Rani Saheba Shanker Kumari Devi & Sridhara Shum Shere J.B.R. and Maj. Genl. Pritam Singh Chowdhury & Sm. Tripat Chowdhury.

UNITED BANK OF INDIA LIMITED

Registered Office:
United Bank Buildings
4, CLIVE GHAT STREET, CALCUTTA

NOTICE

NOTICE IS HEREBY GIVEN THAT THE next Annual General Meeting of the shareholders of UNITED BANK OF INDIA LIMITED will be held at the Registered Office of the Bank at the United Bank Buildings, 4, Clive Ghat Street, Calcutta, on Monday, the 25th March, 1963, at 11 a.m. to transact the following business:—

1. To receive the Directors' Report and Audited Accounts for the year ended 31st December, 1962.
2. To declare a Dividend.
3. To elect a Director in place of Sri J. M. Dutt, who retires but offers himself for re-election and to consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:

"Resolved that Sri J. M. Dutt, who has completed 75 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

4. To elect a Director in place of Sri K. C. Das, who retires but offers himself for re-election.
5. To elect a Director in place of Sri M. J. Vaidya, who retires but offers himself for re-election.
6. To elect a Director in place of Sri S. Gupta, who retires but offers himself for re-election.
7. To appoint Auditors and fix their remuneration.

AS ORDINARY RESOLUTION

To consider and, if thought fit, to pass the following resolution as Ordinary Resolution:—

8. "By virtue of the discretion vested in the General Meeting by Section 228(3) of the Companies Act, 1956 as amended in 1960, it is hereby resolved that the accounts of the Branch offices of the Bank in India as well as outside India (including any branch which may be opened hereafter either in India or outside) may be audited otherwise than by the Company's Auditor and it is further resolved that the Directors be and are hereby authorised to appoint from time to time persons qualified for appointment as auditors of the Company for audit of accounts of such branch offices in consultation with the Company's Auditor and pay them such remuneration as the Directors may decide."

AS SPECIAL RESOLUTION

To consider and, if thought fit, to pass the following resolutions as Special Resolutions:—

9. "Resolved that the Company consents to Sri M. J. Vaidya holding appointment as Member, Local Advisory Committee of the Bank at Bombay notwithstanding his appointment as a Director of the Company."
10. "Resolved that in view of the general revision of the Grades and pay scales of Officers introduced with effect from 1st July, 1962, consent of the Company pursuant to provisions of Section 314 of the Companies Act as amended in 1960 be and is hereby accorded to the fitting-in of the undermentioned officers who are relatives of Directors of the Company at the appropriate stages in the Revised Grades and Scales of Pay corresponding to the previous grades in their respective appointments, as mentioned against their names, with retrospective effect from 1st July, 1962, together with the usual allowances, benefits, amenities and facilities applicable to other officers in the respective grades and scales of pay or occupying similar posts."

	Name of the employee	Scale of pay	Related to
1.	Sri Dhires Chandra Dutta Gupta ..	200-15-305—E.B.—15-320-20-440—E.B.—20-480-480-500. Fitted at Rs. 400.	Sri B. K. Datta
2.	Sri Kshiti Bhusan Dutt	330-20-450—E.B.—25-600—E.B.—25-650-650-675-675-700. Fitted at Rs. 650.	Dr. S. B. Dutt
3.	Sri Biswa Ranjan Das Gupta ..	650-30-710-40-750-50-1,000—E.B.—1,050-1,100-1,150-1,150-1,200. Fitted at Rs. 750.	Sri K. C. Das
4.	Sri Pabitra Kumar Sen	1,250-100-1,650-1,650-1,750-1,750-1,850. Fitted at Rs. 1,250.	Sri B. K. Datta

CALCUTTA,
Dated the 15th February, 1963.

By Order of the Board,
A. K. ROY, *Secretary.*

Note: (i) A member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a member.

(ii) The Transfer Books of the Company will remain closed from Monday, the 11th March, 1963 to Monday, the 25th March, 1963 (both days inclusive).

(iii) The dividend, when sanctioned, will be payable on and after the 16th April, 1963, to those shareholders whose names stand on the Register on the 25th March, 1963 and who are entitled to participate in the distribution of the dividend in terms of Article 149 of the Company's Articles of Association.

(iv) Dividend Warrants will be posted to shareholders at their registered addresses or in accordance with their mandatees. Such mandate, if not already given and intimation of any change of address, should be given to the Bank early in time.

The explanatory statement required under Section 173 of the Companies Act, 1956 has been forwarded to the members of the Company.

P.L. 480 ASSISTANCE AND THE BANKING SYSTEM

CONCLUSIONS OF RESERVE BANK ECONOMISTS EXAMINED

By A Special Correspondent

DURING the second Plan period (1956-61), India got sizable commodity assistance from the United States. Such help was received under the U.S. Public Laws 665 and 480 and consisted of foodgrains like wheat and rice, cotton and tobacco. The import of these commodities took place on Government as well as private account. Total imports of wheat, to take an instance, aggregated between 30 and 40 per cent of domestic production during the last last four years of the second Plan period and the bulk of imports came under the P.L. 480 aid. The total of this assistance agreed to between 1956 and mid-1962 amounted to Rs. 1,131.30 crores, of which Rs. 602 crores of aid was actually received till end-March 1962. During 1956-57 to 1961-62, the assistance received under both P.L. 480 and P.L. 665 amounted to Rs. 633 crores, of which Rs. 243.50 crores were disbursed during the period. In an article published in the January 1963 issue of the *Reserve Bank of India Bulletin*, two Reserve Bank economists, Messrs. Bhatt and Khatkhate, have come to the conclusion that the net impact of commodity assistance on money supply in India between 1956-57 and 1961-62 was a contraction of Rs. 390 crores—the difference between the amount received and the amount disbursed. They have, however, taken care to qualify this conclusion by adding that the actual contractionary effect might have been smaller, as it was governed by the magnitude of increase in Government stocks of imported food and/or food sold to the public at subsidised prices. But they have not bothered to give a more precise picture of these influences.

Another conclusion emerging from the analysis is that the impact of the P.L. 480 assistance on money supply was neutral, because the initial expansionary impact on the net bank credit to the Government and money supply was offset by the subsequent re-investment of the funds by the American Embassy in special Government securities. The transfer of funds from the State Bank of India to the Reserve Bank had a similar effect on money supply. In proceeding with the analysis, these economists have assumed, like every theoretical economist, that other influences which govern P.L. 480 and P.L. 665 transactions do not have any significance. They have also presumed that time deposits with the State Bank of India are in the nature of non-monetary liabilities of the banking system to the Government. As will be shown presently, both these assumptions are questionable on the basis of experience.

The Procedure

Before critically examining the point of view presented by the economists of the Reserve Bank, it is essential to go into the *modus operandi* of the transactions under P.L. 480 and P.L. 665. The foodgrain imports were on Government account, while imports of cotton and tobacco took place on private account against valid import licences. The Union Government initially paid through the Reserve Bank to the credit of the U.S. Embassy with the State Bank, Delhi, an amount equal to the cost of these imports. If, at the time of the payment, Government cash balances were short, it issued *ad hocs* (Treasury bills) to the Reserve Bank and the latter, in turn, provided the required funds for payment. The U.S. Embassy kept these funds with the State Bank of India in the form of time deposits pending their disposal. The utilisation of these accumulated balances, which are known as "counterpart" funds took the form of (*a*) grants to the Union Government for agreed projects, (*b*) loans for specific projects designed to encourage the private sector and Indo-U.S. collaborations and (*c*) for meeting the running expenses of the U.S. Embassy in India. The State Bank invested these funds mostly in Government securities. Anticipating such purchase at the time of the issue of Government loans, the Reserve Bank absorbed the required amount of Government securities when they were created.

This procedure was changed in May 1960. As these funds were kept for a very long period—nearly four years—with the State Bank of India pending the settlement of projects and procedures of utilisation, the commercial banks in the private sector represented to the Reserve Bank that the deposit of these funds with the State Bank was placing them at a disadvantage. They argued rightly, under the able leadership of Mr. C. H. Bhabha, the then President of the Indian Banks' Association, that the State Bank had enjoyed an unrivalled position in the Indian banking system by virtue of its State association, its country-wide network of branches and unlimited access to funds of certain public bodies because these were kept with it free of interest. In these circumstances, the keeping of P.L. 480, etc. deposits with the State Bank of India placed the other banks in a position of disadvantage, as the State Bank had been expanding credit with the help of these funds and offering unfair competition to other banks. The private commercial banks had, therefore, urged that the funds should be equally distributed among all the big commercial banks and that they were prepared to observe the same conditions as the State Bank of India if the funds were kept with them.

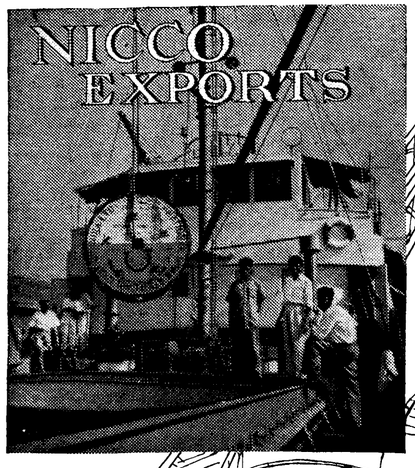
Criticism Recognised

A statement made in the article on the "Pattern of Ownership of Government Debt," published in the *Reserve Bank Bulletin* subsequently (in March 1961), admitted that "a part of the P.L. 480 funds was utilised by the State Bank for investment in Treasury bills and also for extension of credit to the private sector in the initial stages of the accrual of these funds to the Bank." It cannot be denied that the receipt of these special funds enabled the State Bank to maintain a lower liquidity ratio for public purposes and another ratio for actual operations and divert resources which it would have otherwise invested in Government securities to step up commercial credit.

The Government of India at last saw reason and embarked upon the revised payments' procedure in May 1960, mainly to neutralise the impact of these funds on bank credits, but partly to rectify the genuine grievance of banks in the private sector. Under the amended procedure, the U.S. Embassy was requested to invest these receipts directly in non-negotiable special securities issued for the purpose by the Government of India. Thus, the Government got back with one hand what it had paid with the other. When funds are needed by the U.S. Embassy, the Government pays the U.S. Embassy against the backing of these special securities. A part of the accumulated deposits with the State Bank was transferred in monthly instalments of Rs. 12 crores during July 1960 to June 1961 to the Reserve Bank which invested them on behalf of the U.S. Embassy in special securities. Again, after an interval, the State Bank has been transferring Rs. 10 crores every month, beginning from November 1962, to the U.S. Embassy account with the Reserve Bank. During the present financial year, the Finance Minister has taken credit for a sum of Rs. 50 crores under this head. Even then, a little over Rs. 80 crores would still remain with the State Bank by the end of March 1962.

In the case of non-food items of import, the private sector made payment through the normal commercial banking channels. This shows that these funds, if lodged with the commercial banks, would exert pressure on money supply via the net bank credit to the private sector and it was to remove the danger of inflation from the P.L.480 funds that this revised procedure was adopted.

The Reserve Bank economists, however, have assumed that the keeping of such funds in the shape of time deposits with the State Bank was a non-monetary force, because, according to their theory, the time deposits or notice deposits had no impact on money supply at all. Time deposits in Indian conditions are near liquid assets, because they are encashable with a nominal discount or they can be easily pledged for a loan. Further, with unlimited withdrawals in vogue in the savings bank accounts, the time deposits are in effect being converted into current accounts earning 3 per cent interest. To assume under these conditions that time deposits have no impact on money supply is to ignore the realities. Further, according to the Reserve Bank's own admission, in the article cited earlier—we are not sure whether the two economists themselves had any hand in the preparation of that article—the State Bank had taken advantage of the placing of P.L. 480 deposits with it to extend credit to trade and industry by diverting a part of these funds for such purposes. It is true that the State Bank of India was keeping in Government securities an amount equivalent to the P.L. 480 deposits. But, as such investments were available to serve the purpose of maintaining liquidity, according to usual standards, the Bank could channel all the other deposits for expanding its advances portfolio. But for P.L. 480 funds, it would be clear to anyone who cares to reflect a little, the State Bank would have had to invest a part of its deposits in Government securities. To this extent, therefore, the U.S. counterpart funds were having an inflationary impact on the economy.



Again, it is relevant to note here that, for purposes of lending, banks do not make any such distinction in the funds at their disposal as has been made by the authors. They lend not only demand and time deposits, but very often even their capital and reserves depending upon the call money market, or on funds like P.L. 480, for maintaining the statutory and day-to-day liquidity. Is one to assume that the economists working in the Reserve Bank do not have a working knowledge of the banking system? If this assumption is wrong, as it, perhaps, is, then they seem to have tailored their conclusions to fit in with the naive assertions made by persons in authority.

The change made by the Government of India in respect of U.S. counterpart funds in May 1960, whereby it deprived the State Bank of India of the use of these funds, has an interesting parallel in Pakistan. Recently, when the U.S. Embassy kept the P.L. 480 funds in private banks in Pakistan, the State Bank of Pakistan, through the Federal Government, drew the attention of that Embassy to the fact that the depositing of counterpart funds with the private commercial banks contributed to inflationary conditions and defeated its disinflationary monetary policy. The U.S. Embassy in that country then agreed to keep the P.L.480 funds invested with the State Bank of Pakistan in special securities. It is difficult to assume that the Reserve Bank economists are not well informed of current developments in foreign countries, especially in a next-door neighbour like Pakistan.

Need for Revision

It is time that the Reserve Bank revised its analysis of money supply by including time deposits under forces which have an impact on money supply. It must keep itself in touch with changes in the banking system and not necessarily dole out theoretical stuff on the basis of *ceteris paribus* or of other things remaining unchanged. Unfortunately, other things do not remain unchanged in day-to-day life. Any conclusions drawn on the basis of theory are, therefore, apt to mislead the public.

As far as net credit to the Government is concerned, it does not need any elaborate analysis to see that the initial expansionary impact which arises from the sale of *ad hoc* Treasury Bills to the Reserve Bank by the Government of India will be offset when the U.S. Embassy invests these funds again in special Government securities specifically created for the purpose. But what is important is the sequence of events which happen in the intervening time. Although the Reserve Bank economists have drawn attention to the limitations such as the sale of foodgrains to the public, the building up of buffer stocks with imported foodgrains and the subsidisation of the sale of imported food through fair price shops, they have not cared to analyse the impact of these forces in greater detail and to their logical conclusion. It is these various factors, including the allocations for such specific projects as the loan to the Re-finance Corporation for Industries and the withdrawals by the U.S. Embassy for its expenditure in India, which should be taken into account in assessing the impact of the U.S. commodity assistance on money supply. When all these factors are considered and the time deposits kept with the State Bank are treated as monetary liabilities of the Government having an impact on money supply, it will be seen that the conclusions drawn by the Reserve Bank economists cannot be wholly sustained.

Hard Drawn Bare Copper Conductor being loaded for Colombo against order of Dept. of Govt. Electrical undertaking, Ceylon.

RANGE OF PRODUCTS:
- A.A.C. — A.C.S.R. Copper Conductor's — Solids & Strands
- Grooved Contact Wire
- Cadmium Copper Catenary
- Rubber Insulated Cables
- P.V.C. Cables
- V.C. Cables
- Paper & Cotton Covered Wires and Strips
- Enamelled Copper Wires

ISI NICCO products are manufactured strictly according to appropriate ISI specifications.

RURAL ELECTRIFICATION IN MADRAS

PROGRESS MADE COMMENDABLE

MADRAS State has made significant progress in rural electrification and, with every two out of three villages in the State electrified, it ranks first in rural electrification in the whole country today. The Madras Electricity Board's magnificent job of bringing light and hope even to the remote village people of the State has rightly won laurels from the Union Ministry of Irrigation and Power which in a circular has asked other States to follow the Madras example. It would, therefore, be interesting and helpful to set forth in broad outline the manner in which this development has taken place.

At first, the policy of the Madras Government in regard to electricity was to entrust the distribution of power to local authorities in preference to private companies, but more private licensees came into the field than local body undertakings. It is only in areas where no one is forthcoming to take a licence that the Government itself undertook distribution. This policy was found to be not progressive and successful, and contrary to the main objective, that is, of making available cheap and abundant power over the countryside. Electricity is to be regarded as essential even to the poorest of the peasants at the cheapest possible rate. National income and standard of living can increase only with the aid of mechanical power, and electricity is the only means of transmitting to the rural areas a supply of sufficient power load. The Madras Government granted at first licences for limited areas with limited scope. This procedure, which was inevitable in the beginning, resulted in individual and independent undertakings cropping up, each pursuing, in the words of Sir Henry Howard, the then Chief Engineer for Electricity to the Government of Madras, an "unco-ordinated and unrelated policy." Small stations were installed when load conditions attracted private capital. The principal load in those days was domestic lighting, leading to the electrification of the more densely populated municipal areas or local government areas. This placed the rural areas in a particularly disadvantageous position and their electrification raised questions of capital expenditure on what might appear to be unremunerative schemes and of burdens placed upon urban areas. "Had a planned system of electrical development and of management been started earlier," observed the Chief Engineer for Electricity to the Madras Government before the Madras Electricity Board Committee, "this sysem of unco-ordinated electricity development by means of scattered licensed areas selected in a rather haphazard manner mainly to conform to local conditions and private interests to the detriment of national interests would have been avoided." Therefore, the need for a national and unified system of power supply became imperative because of the diversity in regard to stations as well as loads. In certain areas, hydro-electric power was generated cheaply, e.g. Pykara and Mettur, while others were better suited for efficient thermal stations.

Interchange of Power

Load factor also came to vary from area to area. Demand fluctuates with season as do conditions of generation. Thus, the scope for interchange of power is great and this is possible only within the areas of the large generating stations, and it is only by planned development that power could be sent to the lesser towns and villages. Hence the need of insisting on standardisation of frequency and other technical conditions which must be fulfilled if interconnection on a reasonable cost is to be effected. These facts make national policy and its steady enforcement imperative and the Indian Electricity Act of 1910 did not give sufficient scope to deal adequately with the matter, and a new Act was necessary to achieve co-ordination and unified control. As a matter of fact it is not desirable for Government to manage an obviously business concern like that of electricity industry which requires quick decisions. A commercial department like the Government Electricity Department is in many ways different from other public departments and, in order to safeguard the interests of the State Government in electricity undertakings and to ensure a healthy development of electric power, an Electricity Board was constituted to control power development in the State. Since then, the Board directs the generation, especially the distribution of power, on a uniform basis over the State, urban as well as rural.

Madras is performing this work at an average cost of Rs. 40,000 per village in contrast with other States where the averages are not less than Rs. 80,000. About 64 per cent of the 19,000 villages and towns in the State have now power facilities. According to the Madras Electricity Board's plan, no village will be left without electricity by 1965. The Board's secret of success lies in simply putting the minimum of three Ms—Men, Money and Material—to the maximum use. Rural electrification programme is pushed through by systematic allocation of adequate funds for development of electricity in general, and transmission and distribution in particular. Wastage and duplication of efforts is minimised by centralising procurement of materials, standard designs facilities and cost accounting. For rural extensions, local materials are preferred, and sometimes many items are fabricated in the Board's own workshops. Besides using indigenous materials, the Board is also adopting lower factors of safety, lower ground clearance, etc. to cut down construction cost to the minimum.

Power for Agriculture

The underlying idea of rural electrification is not merely to brighten up the homes and streets in the villages but also to water the fields. Whether we take up the number of consumers, consumption or connected load, Madras tops the list in India, so far as the question of using power for irrigation is concerned. About 140,000 agriculturists are benefited by this rural electricity programme and they are consuming more than 500,000 kw. During 1961-62, about 22 per cent of the total production went to the agricultural sector, and Government secured a revenue of nearly Rs. 300 lakhs. The agricultural consumer is the most favoured baby of the Board. The tariff charge for pumpsets is the lowest among low tension consumers; it is just 7.5 nP per kilowatt hour. The Board is also offering free service connection for agricultural consumers, of course, subject to certain ceilings per horsepower of connected load. Recently, along with other concessions, the level of minimum concession consumption guarantee to agriculturists was reduced. The Government of Madras has offered to the Electricity Board to make up any loss that it might incur due to large-scale rural electrification. The total number of agricultural pumpsets in Madras has risen phenomenally from 32,000 in 1956 to 110,000 in 1961. In 1961-62, about 22,000 pumpsets were given connections.

The installed capacity of the electricity system which was of the order of 156,000 kw. at the beginning of the First Plan has now increased to 571,000 kw. With the execution of the Kundah Hydro-electric Scheme, the Periyar Second Stage Extension and the Periyar Hydro-electric Scheme, the generating capacity of the Madras Grid will be increased to 1,131,000 kw. Further, the thermal plant of the Neyveli Lignite Project is expected to feed the Madras Grid to the extent of 226,000 kw. The Kundah Third Stage Extension Scheme with Canadian assistance is envisaged to produce about 245,000 kw. The power generated in Madras Grid during 1961-62 was 2,470 million kilowatt hours, of which hydro plants accounted for about 84 per cent. The Periyar power station produced the maximum electrical energy in 1961-62, that is, about 27 per cent of total produced by Madras State. Next to Periyar, Pykara contributed about 16.4 per cent of the total energy produced in the Grid. As regards consumption, industry accounted for about 44 per cent, and agriculture 22 per cent, the rest being domestic.

Apart from what has been achieved so far, the Madras State is looking out for new schemes. A sum of Rs. 20 lakhs has been allotted solely for investigation of new schemes. Some of the schemes contemplated are establishment of a nuclear power station, the Hoganekal scheme and the Kodayar scheme. Preliminary investigations have disclosed that two power stations with a total installed capacity of 800,000 kw. can be established at Hoganekal. This project, estimated to cost about Rs. 28 crores, depends largely on the co-operation of the Mysore Government. The Kodayar Hydro-electric Scheme in Kanyakumari district is a small Rs. 8-crore project and it is learnt that about 75,000 kw. of power can be tapped from this source. This project consists of constructing a reservoir of about 6,000 million cubic feet capacity at an altitude of 4,600 feet. In the first stage a drop of 2,600 feet will be utilised to generate about 50,000 kw. of power and in the second stage a further drop of 1,200 feet will be used to produce an additional 25,000 kw. of power.

Cheap power is one of the essential conditions of success in modern industrial enterprise and success in economic development is today judged by the quantity of power used by it. National income and the standard of living in the country can be increased only when the outturn of work is increased, and this is possible only with the aid of mechanical power. While in a country like the U.S. each worker is assisted by mechanical power equivalent to 40 labourers, in India each worker gets such assistance to the extent of only half a labourer. The experience of other countries shows that rapid industrialisation is possible on a large scale only after the means of developing and controlling power on a large scale has been perfected and that those countries which had a large supply of the sources of power—coal being the most important—were easily much better placed economically than their less fortunate competitors. Among the sources of power known to modern industry—wood, wind, mineral oil, coal and water power, the last three are the most important, especially from the point of view of cost and efficiency. India's resources of coal and oil are not large, and the latest estimate of the life of India's coalfields is not more than 200 years under existing methods of production and utilisation, while for good metallurgical coal the figure varies from 30 to 40 years. These estimates bring out prominently the economic importance of water power. Further, the concentration of coal within a small area in the north-east parts of the country—Bengal, Bihar and Orissa—has resulted in a concentration of industrial activity around that area and distant centres like Madras could not have such facilities owing to transport difficulties. This concentration of industrial location nearer coal areas has been minimised to some extent by the development of hydro-electric power in centres far away from coal and there is a wide diffusion of industrial activity in the form of small units scattered over a wide area.

Decentralisation

With the development of the Pykara and Mettur hydro-electric schemes, a shift in the localisation of cotton textile industry has already become possible. The predominance of Bombay and Ahmedabad as textile centres has been challenged by the South, and a better distribution of the industry is already in sight. In recent years, a large number of textile mills have sprung up in and around Coimbatore district which today has become the Lancashire of South India. Textile development in South India would not have been so rapid but for the provision of cheap power which is by itself a potent factor of decentralisation. The Government policy regarding loans for conversion and construction, enabling money to be advanced to both old and new mills for the purchase of electrical equipment, the low rates for power, the security of supply and the service features of Government power system—all these have accelerated the development of textile industry in the Madras State. The great facination for electric power among industrialists is that, apart from its reduced power cost, the factory can save on the capital investment. As a result of the greater quantity of power consumed in the aggregate, the cost per unit is less; breakdowns are avoided and reliability of supply is assured. The quantity and quality of the finished product are often dependent on steadiness of drive and uniformity of speed in the machinery and this applies to both spinning and weaving and these are no small advantages to small factories which cannot afford to raise large capital or employ expert engineers to look after their steam or oil engine plants.

In the case of the South Indian industries, the supply of cheap electricity helps much towards a reduction in total costs. Where power costs are a relatively high proportion of total costs, the use of electric power helps to reduce the latter by as much as 5 or 10 per cent, for, apart from the cost of electricity per unit, electric power is highly efficient, in that it replaces long-distance belt and pulley transmission by direct individual drive. Since Madras is not so rich in minerals, the industrial development is likely to be chiefly in the direction of processing the agricultural and forest products of the State. Thus, besides spinning and weaving mills, there is scope for the establishment of bleaching, dyeing and finishing plants as adjuncts to such mills. The silk industry is stimulated by cheap power as may be seen from the fact that, in the Kollegal area of Coimbatore district, Rs. 20 lakhs worth of raw silk is being manufactured annually, and a crore of rupees worth of raw silk is imported into the

NEW PRODUCTS AND PROCESSES

Light Beam as Measuring Tape

U.S. scientists have demonstrated that light can be used as a super accurate measuring tape. The experiment is a major step toward achieving another use for one of science's newest devices, the Laser. The Laser produces an extremely narrow and intense beam of light unlike ordinary light from a bulb, which is emitted helter-skelter. Light from the Laser issues in separate units, like a line of soldiers marching in step. This so-called coherent light can thus be measured with extreme precision. For two years scientists have been devising uses for Lasers, ranging from delicate eye surgery to the piercing of diamonds. The Laser's pure light beam holds great promise as a "clothesline" on which to hang radio signals for communications purposes. In the new experiment, scientists of the National Bureau of Standards sent a continuous Laser-produced light beam back and forth along a 100-metre path. By the use of reflecting mirror and a special prism, they were able to observe the so-called interference pattern formed by the reflected light. This means, according to the Bureau, "that measurements can probably be made over these long distances with an accuracy of better than one part in 200 million." This is equivalent to a 100-metre measuring stick marked of with 2,200 million graduations. The Bureau hopes to apply the technique to measuring baselines at space-launching sites to achieve better tracking of rockets at take off.

An appreciation of the new achievement can be gained by considering that the international standard of length, the krypton 86 wavelength, is accurate only at the short distance of about ¼ metre. Theoretically the Laser could give accurate measurements over several hundred kilometres. However, the Bureau said, the refractive effect of the atmosphere would limit the accuracy somewhat. It would still be far more accurate than conventional surveyor's tape. The Laser experiment also marks the first step in a new determination of the speed of light. With the Laser to provide distance measurements, and an "atomic" clock to provide extremely precise time values, it should be possible to determine the velocity of light more accurately than even before.

Hydraulic Hoist for Car Servicing

An engineering company of Australia has developed a new flush-mounted hydraulic car hoist which combines low initial cost and cheap installation with high efficiency and rugged strength. The hoist, designed and made by Cash Engineering Company, of Melbourne, fills the need of service station operators for a unit requiring no well around the stuffing box to allow removal of the cylinder casing for major service. Consequently, no well draining is involved. The top surface of the hoist collar is flush with the floor and the wiper ring, of superior design, is above floor level and prevents floor wash water and grit from damaging the ram. Installation presents a neat and clean appearance.

Cash Engineering Company, which supplies hoists to automotive service stations operated by big oil companies in Australia, makes the new flush-mounted hoist in both hydraulic and air-operated models. They both have a lifting capacity of 6,000 lbs. and a lift height of 5 ft. 10 in. Special features of the Cash flush-mounted hoist include ram made from heavy walled solid drawn steel tubing; exclusive non-jamb gland, with special packing; ram and gland precision finished for long life, positive oil or air flow safety control valves. The large area body pick up pads can be moved longitudinally and laterally and rotate through 360 degrees. All makes of cars can be driven over the hoist platform without fouling.

Electric Lamp with Bright and Dim Switch

An Australian electrical appliance manufacturer has developed and patented a unique lamp that is claimed to be so versatile it can be used for many purposes ranging from close up reading to a nursery night light. This is the Dim-A-Lite which has passed rigorous electrical safety tests and is priced competitively with conventional lamps. The Dim-A-Lite was developed by Amplion (Australiasia) Pty. Ltd., of Sydney, to satisfy demands for a children's night light which could be varied in intensity. The problem was solved by incorporating a transformer in the lamp base so that, at the flick of a knob, the power is varied to supply sufficient light for a variety of purposes. The knob has four positions: full, half power, quarter power and one-tenth power. At the last position, the lamp sheds just enough light to faintly outline objects in a room, without glare. And, because the transformer reduces electricity consumption without wastage in resistors, the cost of leaving it switched on all night is negligible. The Dim-A-Lite, made in virtually unbreakable ivory plastic, features a separate press type switch to save fumbling in the dark. The lamp's advantages do not stop with its use for reading or in nurseries. The range of intensities makes it ideal for hospitals and sick rooms, for subdued lighting in restaurants, for television viewing, and for a variety of other uses. At the request of architects, the company is now producing an adaption of the same principle, a boxed wall unit for an overhead room or passage light. Amplion makes these lamps for use with 200-250 volts and bayonet sockets 100-115 volts and Edison screw sockets, or for any other voltage required.

Checking on Power Failures

A new British technique for recording the incidence and time of "surging" in high voltage electrical power lines was demonstrated at Leatherhead, near London. Developed by the British Electrical Research Association, Leather-head, Surrey, the equipment is known as the E.R.A. surge recorder. Surging in electrical power lines is sometimes caused by lightning, but more frequently by switching operations which cause very high voltages for periods measured in microseconds. These can often lead to breakdowns in supply. The purpose of the new equipment is to provide statistical and experimental data for the better design of high voltage equipment by pin-pointing the operational conditions under which over-voltage is liable to arise. It consists of a high-speed oscillograph combined with a rotating drum camera and an electronic circuit which continuously monitors the voltages in an electric power system. The cathode ray cameras operate automatically when the system voltage exceeds a predetermined level. At the same instant a separate camera automatically photographs a clock face to establish the time of the event. It is currently being used in connection with international tests on the breakdown characteristics of high-voltage equipment. The tests will be used as a basis for establishing safety factors on power lines and particularly those carrying loads in excess of 400 KV which are already planned for Commonwealth countries.

Preserving Food Through Radiation

The U.S. Atomic Energy Commission (A.E.C.) will seek to demonstrate the technical and economic feasibility of preserving fish products through radiation. The A.E.C. announced recently that it was negotiating a contract with Associated Nucleonics Incorporated, to provide architect-engineering services for the construction of a marine products development irradiator at Gloucester, Massachusetts. The A.E.C. said the facility would be designed to operate at a near-commercial scale, processing the foods at the rate of up to 2,000 pounds an hour. It would use a 300,000-curie cobalt-60 radiation source.

The irradiator is being built by the Commission as part of its radiation-pasteurised foods programme. This programme is directed toward extending the refrigerated storage life of fresh products, such as fish and fruits, from several days to several weeks. Food successfully pasteurised by radiation does not lose its characteristic appearance, taste, or odour, but does have a longer refrigerated shelf-life, A.E.C. explained. The energy—gamma radiation—emitted by radio cobalt passes through the food, destroying bacteria and other spoilage-causing organisms. With a reduction of over 95 per cent of the bacteria as a result of the process, seafood such as haddock, clams, or shrimp can be kept in ocean-fresh condition for over four weeks under normal refrigeration.

Plastic Parts for Hydraulic Turbines

Plastics have been used as a substitute for non-ferrous metals in the manufacture of a 225,000-kw. turbine in the U.S.S.R. This turbine, the 15th of a series, has been built for the Bratsk Hydropower Station on the Angara, the world's largest power station. Laminated wood plastic and capron have been used instead of bronze in all the 120 sockets of the guide blades. The same machine has a bearing of over a metre in diameter whose interior surface is coated not with babbitt, as usual, but with rubber. The use of plastics not only saves large amounts of non-ferrous metals. Parts made of them do not need lubrication by oil, as water will do that job. This makes it possible to simplify the design of hydraulic turbines, dispensing with complex oil conduits. Bronze substitutes with water "lubrication" have proved so efficient that designers are planning to use them in the giant 508.000 kw. hydraulic turbine, the work on which is being carried on in Leningrad. Such turbines will be used at the Krasnoyarsk Hydropower Station on the Yenissei, in Siberia.

Wool as Insulation Against Noise

Following the success of extensive tests, Australian superfine merino wool is to be used in international airliners as insulation against noise. It is now being processed by East-West Airlines Ltd., which operates services in New South Wales, for delivery to two British and one American airlines. The Chairman of East-West Airlines Ltd., Mr. D. Shand, said deliveries of the woollen insulating material would probably begin in about February or March, 1963. He said Australian research had proved that superfine wool fibres could cut noise levels in aircraft by 25 per cent. Wool could be used for the purpose in cabin walls, curtains and furnishings generally. Extensive tests had successfully been carried out by the Australian Department of Civil Aviation and the Commonwealth Scientific and Industrial Research Organisation, and international Wool Secretariat.

Faster Air Traffic Control

A new radar technique by which the height of an aircraft can be determined much faster than with equipment at present in use is announced by a British firm. The basis of it is the fact that the transmission is swept through a band of frequencies, and is not, as in conventional equipment, on one fixed frequency only. This, in conjunction with a new type of radar aerial head, has the effect of electronically tilting the transmitted beam through an arc in the vertical plane. It does electronically, and at a far greater speed, what present equipment does by mechanically "nodding" the whole aerial head. Apart from the increase in speed, the new technique has another considerable advantage: it enables height-finding, range and bearing information to be derived from one radar instead of two.

100 Years of Banking in India

NATIONAL AND GRINDLAYS BANK LIMITED

(Amalgamating National Bank of India Ltd., Grindlays Bank Ltd., and the Eastern Branches of Lloyds Bank Ltd.)

Registered in London under the Companies Act of 1862 on the 23rd March, 1866. The liability of Members is limited.

Bankers to the Government in Aden, Kenya, Uganda and Zanzibar.

Authorised Capital ... ... £ 9,000,000
Issued and Paid-Up Capital ... £ 5,703,000
Reserve Funds ... ... £ 4,760,400

Head Office : 26, BISHOPSGATE, LONDON, E.C.2.

London Branches :

54, Parliament Street, S.W.1.
13, St. James's Square, S.W.1.

BRANCHES throughout Aden, Burma, Ceylon, India, Kenya, Northern and Southern Rhodesia, Pakistan, Somalia, Tanganyika, Uganda, Zanzibar.

The Bank conducts all classes of Banking and Exchange Business throughout the world.

Bombay Branches :

90, Mahatma Gandhi Road ; 270/272, Dr. Dadabhoy Naoroji Road, (Lloyds Branch) ; Mint Road, (Corner of Mint Road and Sir P. M. Road) ; 21/29, Princess Street, (Lloyds Branch) ; 117-119, Kazi Syed Street, Mandvi ; 65F, Linking Road, Santa Cruz ; 2/571, Gowalia Tank Road, Cumballa Hill ; Shivaji Mandir, N. C. Kelkar Road, Dadar.

EXPANSION OF EXPORTS SLOW

SOVIET BLOC ALONE BUYS MORE FROM INDIA

IT is common knowledge by now that India's exports have failed to keep pace with the mounting demands being made on our foreign exchange resources. One might have thought that, with the establishment of a new Ministry for International Trade about a year ago, under the stewardship of Mr. Manubhai Shah, and the subsequent establishment of the Board of Trade, India was about to make a major breakthrough in world trade. This expectation, however, has not been fulfilled. On the contrary, India's performance on the export front is hardly impressive. One has waited for a better turn in export trends, month after month, only to be virtually disappointed. Exports during the month of January, according to provisional figures just released, amounted to Rs. 62.5 crores, or an increase of no more than Rs. 5.5 crores over the corresponding month of 1962. This brings the cumulative total of exports in the first ten months of the 1962-63 financial year (April 1962 to January 1963) to Rs. 572.5 crores, an increase of just 3 per cent. or Rs. 16.5 crores, as compared with the shipments in the same period a year ago. Currently, exports are thus running at an annual average level of Rs. 687 crores, which falls short of the annual target for 1962-63 set by the Board of Trade by as much as Rs. 33 crores. The export performance would have certainly been better but for the slower rate of growth of agricultural and industrial production in 1961-62 and the prevailing uncompetitive cost structure of Indian products.

Plan Target Not Fulfilled

It may be useful to record here that, in the first two years of the third Plan, total exports will have been of the order of Rs. 1,352 crores, leaving a balance of Rs. 2,348 to 2,448 crores to reach the Plan target of Rs. 3,700-3,800 crores in the remaining three years. This means that exports in the next three years will have to be of the order of Rs. 782 to Rs. 816 crores per annum, that is, an increase of over Rs. 100 crores on the average level attained in the first two years. Will India be able to perform this task? The consensus of opinion at present is not optimistic. It would be a miracle, indeed, if events were to belie this reading of India's capability. But the miracle has to be performed, if the nation's external solvency is to be maintained, without jeopardising the pace of economic growth.

It is precisely because of the slow growth in exports that imports have to be curtailed from time to time. During the first ten months of 1962-63, imports were of the order of only Rs. 890 crores, or much the same as in the corresponding period of 1961-62, despite the steadily increasing demand for raw materials, stores and spares and capital goods needed by the various industries. Since imports were stationary while exports moved up by a fraction, the adverse trade gap narrowed down by a corresponding amount.

A detailed account of commodity-wise and country-wise trends in exports for the month of January 1963 is not yet available. But relevant figures for the period upto December has already been released, from which one can get a broad picture of the trends in exports during the calendar year 1962. According to the provisional data made available by the Department of Commercial Intelligence and Statistics, Calcutta (the Government of India), total exports (including re-exports) of merchandise aggregated Rs. 674 crores in 1962, representing an increase of just about 2 per cent (Rs. 14 crores) over those of 1961. This improvement in export earnings is only of a minor nature, especially having regard to the increasing need for imports both on account of development and defence. No wonder then that, during the course of 1962 alone, India drew down its foreign balances by as much as Rs. 53 crores (leaving only a balance of Rs. 97 crores as at the close), despite the generous aid given by friendly countries.

The following table shows the trends in India's exports, imports and the balance of trade in 1962, as compared with the previous year:

(In rupees lakhs)

	1962	1961
Imports	1,062.08	1,078.06
Exports	673.60	660.09
Balance of trade	—388.48	—417.97

No doubt there was some decline in the adverse balance of trade, but it was still equal to about 58 per cent of the export trade. An equally disturbing factor was the decline in the unit value of several goods exported, particularly spices, tobacco, tea, manganese ore, etc. It may be noted here that, although the general volume index of exports (base: 1958=100) rose from 105 in 1961 to 108 in 1962 (January to October period only), the overall unit value fell from 111 to 106.5. This reflects largely the growing pressure of competition in primary commodities from other countries. It is, however, a matter for some consolation that, unlike the other major primary exporting countries, India's imports also consist of several commodities (particularly non-ferrous metals) for which world prices have been declining in recent years. It is only natural then that in 1962, the general unit value index of imports fell from 99 in 1961 to 94 in 1962 (January-October), while the volume index was higher at 117, as compared with 111. As a result, the terms of trade (ratio of export unit value indices to import unit value indices) moved slightly in favour of India, being 113.3 during January-October 1962, as compared with 112 in 1961.

Terms of Trade

The following table shows the trend in India's terms of trade during the last four years:

(Base: 1958=100)

	1962 Jan.-Oct.)	1961	1960	1959
Volume index of exports	108	105	101	107
Unit value of exports	107	111	109	100
Volume of index of imports	117	111	107	110
Unit value index of imports	94	99	98	93
TERMS OF TRADE	**113**	**112**	**111**	**107**

In the following account of export trends, attention is devoted only to the value of exports. The increase in exports in 1962 was accounted for by a small group of commodities, particularly oilcakes, jute goods and tobacco. There was also some improvement in shipments of vegetable oils, raw hides and skins, mica and iron ore. In constrast, a wide range of India's other important traditional exports suffered a setback. These were tea and coffee, cotton textiles, leather, manganese ore, raw cotton, iron and steel scrap, wool, cashew kernels, fish and essential oils. Nor was the performance of new manufactures any better. There was a perceptible decline in shipments of such light engineering goods as bicycles and cycle parts, ceiling fans and sewing machines. Exports of drugs and pharmaceuticals, iron and steel, cement and other building materials also tended to move down.

It is, therefore, disturbing to find that, even in respect of several traditional export goods, India is losing its hold in the old and well-established markets. But for the support coming from Soviet bloc countries, the position in respect of these exports would have been much worse and the total exports from India would have suffered a setback in 1962. Actually, India's exports to the U.K., the U.S., West Germany and most of the other major customers, including Afro-Asian countries, were lower in 1962 than in the previous year.

Table I on this page shows the trends in exports of major commodities in 1962, as compared with the previous year; and Table II highlights the trend in exports to select countries in all regions.

Jute Goods

It will be seen from Table I that jute goods continued to maintain its position as the largest foreign exchange earner, for the third year in succession, displacing tea. The increase (by about Rs. 8 crores) in the shipment of jute manufactures was made possible exclusively by stepping up the quantity of exports. Jute goods prices, as is well known, climbed down last year from the previous year's boom. Several industrialised countries, which had run down their stocks during the boom, increased their offtake under conditions of declining prices in 1962. The sizable expansion in India's jute crop in the 1961-62 season facilitated this trend.

Another commodity which played a major role in securing larger foreign exchange earnings last year was tobacco. The total shipments of raw tobacco rose by about Rs. 4 crores over 1961 to touch an all-time peak of Rs. 18.68 crores. Although there was some increase in exports to the U.K., France and some of the other West European countries, the tobacco market received considerable support from Russia and other Soviet bloc countries.

TABLE I—*Exports (Including Re-exports)*

(Value in rupees lakhs)

	1962	1961	1960
Food Materials	**223,97**	**213,43**	**196,07**
Of which :

Oilcakes and Oils

The tempo of increase in shipments of oilcakes (by about 70 per cent) was much more pronounced than that of either jute or tobacco. The improvement has been the result of larger offtake of defatted groundnut meal by the U.K. and other West European countries, on the one hand, and by some of the East European countries, particularly Poland, Hungary, Czechoslovakia and East Germany, on the other.

There was a marked recovery in exports of vegetable oils, particularly groundnut oil, which had suffered a distinct setback in recent years. No doubt, the domestic price of groundnut oil continued to rule out a parity with world prices, what with the increasing demand within the country for oils and fats for edible and industrial purposes alike and the none-too-satisfactory trend in production of groundnuts. Nevertheless, exports of groundnut oil picked up, thanks to the incentive given to some industrial consumers to import less costly oils of a quantity equal to the exports of groundnut oil. The State Trading Corporation also secured some overseas business. There was also a modest improvement in exports of castor oil and linseed oil in 1962 but they were still considerably smaller than even in 1960. India's exports of sugar also rose last year, following an export quota granted by the U.S., and also sales contracts concluded by the State Trading Corporation with Malaya and Canada.

There was an increase of about Rs. 2 crores in the shipments of raw hides and skins, thanks to better demand from Soviet Russia and the U.S., in particular. This, however, was in distinct contrast to the trends in tanned hides and skins (leather), exports of which declined last year by about Rs. 3 crores, reflecting generally the continuing high tariffs and other obstacles to trade in developed countries against semi-manufactured and manufactured goods.

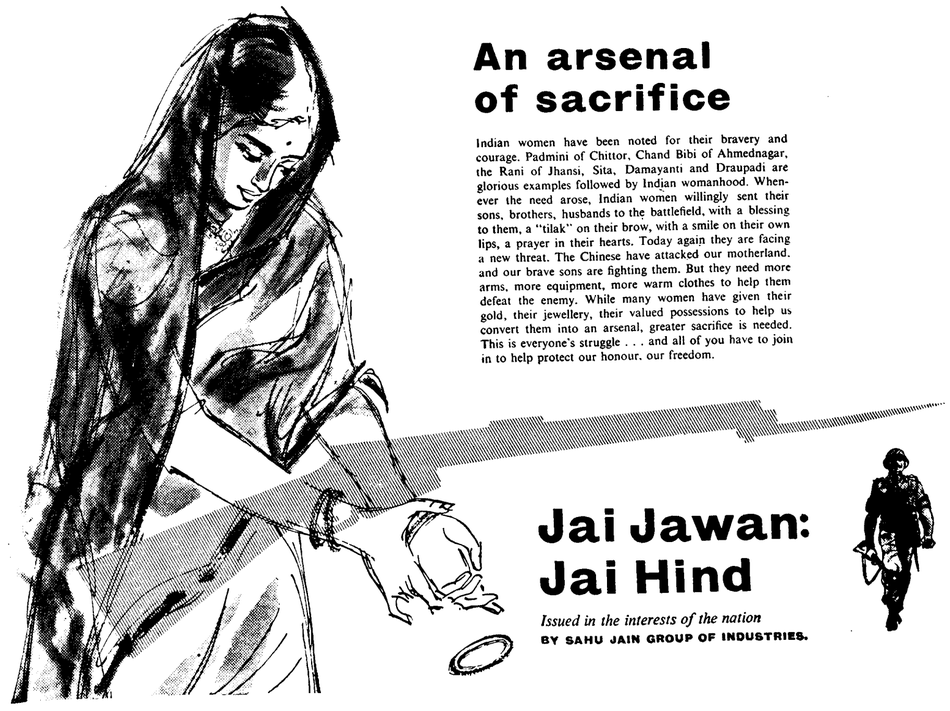
Setback in Tea and Textiles

Among the major commodities which made a poor show on the export front last year were tea, coffee and cotton textiles. The decline in the sale of tea was mainly the result of growing competition, particularly in the U.K. market, from Ceylon. The exports of coffee fell by a greater margin than those of tea, consequent upon the large surplus of coffee accumulated in Brazil and other countries.

The setback in the shipments of cotton textiles was a source of great concern to India. The setback in this item, which has been in evidence for the last few years, was the result of increasing competition in world markets in the face of high cost structure and low productivity in our textile industry. It is also disturbing to note that the erosion in the exports of manganese ore continued unabated, despite the recovery in the U.S. economy. Foreign exchange earnings from raw cotton also were smaller, reflecting the increase in domestic consumption in the face of a pronounced failure of crops in the 1961-62 season. Exports of chemicals, including drugs and essential oils, and also light engineerings also declined during the year under review. This was largely the result of high cost and shortage of raw materials.

A country-wise analysis of exports serves to bring to light the marked deterioration in shipments to most of India's major buyers, except the Communist countries of Europe. The Soviet bloc and Yugoslavia bought about 13 per cent of India's exports in 1962, as against only 8 per cent in 1961. Two of the Commonwealth countries, namely, Canada and Australia, too bought somewhat more last year.

Exports to W. Europe and U.S. Fall



In contrast, India's exports to the U.K. were reduced considerably; so was the case with other E.F.T.A. countries, except Sweden and Denmark. Far more disconcerting is the setback in shipments to the Common Market countries, particularly West Germany, with which India has been having a huge adverse balance of trade. Exports to most of the Common Market countries fell substantially, possibly the result of the new common tariff restrictions imposed by them against all third countries. Exports to the U.S., another leading market for Indian goods, too were lower.

Afro-Asian Countries Buy Less

The same story, is repeated in the case of India's trade with most of the other Afro-Asian countries, including Japan; exception to this trend is provided by only Afghanistan, Iran, Iraq, Egypt, Hong Kong and Tanganyika, which bought a little more from India. One does not know whether the decline in exports to most of the Afro-Asian countries reflects the decline in the popularity of India among its neighbours on the diplomatic front and the ascendancy of China in their affections. It may be noted here that the economic relationship of Indonesia, Burma and Ceylon, in particular, with China is becoming ever closer. In these countries, Indian goods have been rapidly yielding ground to Chinese. To some extent, the setback in India's exports to these markets is also due to the imposition of import restrictions, partly for balance of payments considerations and partly for giving protection to their nascent industries. The Board of Trade, which has already devoted some thought to the question of expanding exports to the countries of the Afro-Asian region, will do well to make an exhaustive study of the factors which threaten to reduce India's share in his intra-regional trade and suggest appropriate steps for bringing about an improvement in this situation.

COVER FOR W. GERMAN EXPORT RISKS

West German exporters are not satisfied with the present facilities to cover export risks. They have demanded better insurance terms from the State in order to stay competitive with other industrial nations. Proposals for the export credit insurance, which have so far been made by Government authorities, have been rejected as insufficient by industry and trade. However, the individual Government authorities themselves have no uniform view on the benefits which should be granted. The West German Economics Ministry has suggested that the proportion of the risks which the exporters have to bear themselves—and which amounts to 30 per cent of the economic risk at present—be reduced by five per cent. The Ministry for Economic Co-operation, in turn, has proposed a cut by 10 per cent. It refers to the more favourable conditions which exist in other industrial countries where the rates for the economic risk are 10 or 15 per cent lower. West German private business has backed its demand with reference to the general slowing down of economic expansion, to the less favourable competitive position of West German exporters, especially in developing countries, which depend on long-term financing, to the stagnation of sales abroad, and to the decline in the amount of new orders.

ALKALI AND CHEMICAL'S PROFIT DISAPPOINTINGLY LOW

INSUFFICIENT EVEN TO COVER DIVIDEND

FURTHER price reductions to cope with growing competition, coupled with the considerable increase in the amount paid by the Company in respect of excise duty on raw materials as well as finished products like paints and polythene granules, appear to have very seriously affected not only the rate of growth in the volume of sales of the Alkali and Chemical Corporation of India Ltd. [Secretaries: Messrs. Imperial Chemical Industries (India) (Private) Ltd., Calcutta] during the year ended 31st December 1962 but also the gross profit earned by it during the year. Thus, although the volume of production sold recorded a substantial increase, the value has risen by a mere 5 per cent from Rs. 662.53 lakhs to the "nevertheless record figure" of Rs. 695.15 lakhs, as against the 22.7 per cent expansion reported in the previous year. As for the gross profit, the upward trend in evidence since 1954 has been suddenly brought to a close and the level has declined to Rs. 112.79 lakhs from Rs. 181.84 lakhs for the previous year or by more than one-third The major cause for this setback has, of course, been the incidence of excise duty which has gone up from Rs. 41.02 lakhs to Rs. 63.42 lakhs but equal blame rests with a higher wage bill of Rs 75.25 lakhs as against Rs. 58.27 lakhs and the increase of Rs. 10.41 lakhs to Rs. 25.06 lakhs in the cost of manufacturing on contract basis, to say nothing of the rise in the cost of raw materials and stores consumed. The extent to which the Company's profit potential has deteriorated will be apparent from the ratio of income prior to taxation but after depreciation to total net assets employed in the business. For the year under review, this ratio works out to just 8.3 per cent as against 19.2 per cent for the preceding year and 17.9 per cent for 1959.

The foregoing experience of the Alkali and Chemical Corporation clearly shows that the growth prospects of investments even in those industries which are not subject to price controls are liable to be damaged by the Government in other ways. Thus, no equity is foolproof against Government's actions. A Government can regulate the profits of an industry to the level it wants not only through price control or direct taxation but also through indirect taxation.

To return to the Company's working results for 1962. The provision for direct taxation is naturally substantially lower at Rs. 27.22 lakhs as compared with Rs. 52.50 lakhs a year before. But that for depreciation has been maintained at a substantially high level—Rs. 41.07 lakhs, as against Rs. 40.56 lakhs last year. The net profit at Rs. 44.50 lakhs is just half of that for 1961 and some 60 per cent down as compared with the record of Rs. 104.32 lakhs earned in 1960. It is not sufficient even to cover the equity dividend which has been maintained at the none-too-high rate of 15 per cent, subject to deduction of tax. Hence the Company had to write back a part of its provisions in earlier years. Needless to say that it could make no net addition to its reserves, whereas in the past year such amounted to Rs. 40.45 lakhs.

The changes in the fortunes of the Company during the past four years will be evident from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

* Income before taxation but after depreciation as percentage of total net assets employed in business.

The heavy expansion plans taken up for implementation by the Company during the preceding year have quite naturally caused a certain amount of strain on its financial structure and these are reflected in its balance-sheet as at 31st December 1962. The share capital, of which Rs. 31.00 lakhs are in 5 per cent cumulative preference shares of Rs. 100 each and the balance in ordinary shares with a nominal value of Rs. 10 each, has remained unchanged at Rs. 341.00 lakhs but reserves and surplus are a trifle lower at Rs. 197.47 lakhs as against Rs. 198.66 lakhs a year ago. Against these owned funds of Rs. 538.47 lakhs, the net block, including Rs. 154.30 lakhs representing capital work-in-progress, amounts to Rs. 593.46 lakhs. The gross block excluding capital work-in-progress is Rs. 644.41 lakhs, the depreciation provided to-date being Rs. 202.43 lakhs. Loans (secured and unsecured) which had aggregated Rs. 84.23 lakhs as at the beginning of the year have expanded more than threefold to a total of Rs. 278.10 lakhs. The outstanding current liabilities and provisions, however, are Rs. 15.21 lakhs less at Rs. 209.36 lakhs. The aggregate indebtedness to outsiders is thus Rs. 487.46, as against which there are current assets, loans and advances and investments amounting to Rs. 438.32 lakhs in all, with cash and bank balances alone being a mere Rs. 4.52 lakhs.

Although the performance of the Company during the year in terms of money has been far from encouraging, in terms of physical output it is distinctly impressive. In spite of shutdowns for construction work on the new intermediate density plant, production of polythene granules was higher than during the previous year and it was also found possible to make significant improvements in raw material utilisation during the year. As a result of the extensions to the paints plant effected during the previous year, production was markedly higher, though difficulties in obtaining adequate supplies of raw materials still subsisted. The demand for pre-treatment chemicals was likewise higher than before. The chlorine/caustic soda plant worked to optimum capacity and the performance of the "Gammaxane" BHC technical unit improved further.

As regards the implementation of the expansion plans, construction of the new intermediate density plant has commenced and imported equipment is arriving at site. Construction of the rubber chemicals plant is expected to be completed early in 1963. A licence has been received for expansion of paints plant and installation of a new resin plant. An interesting feature of these schemes is that both the plants will be designed and fabricated in India; indeed, the design work is already in hand.

At one time in 1962, when the stock exchange boom was at its height, the market price of the Rs. 10 fully paid ordinary shares of the Company had reached as high a level as Rs. 52.52. During the collapse of equities towards the close of that year, the price came down sharply and now stands at Rs. 34 *cum-div*. The net return, on the *ex-div* basis, works out to about 3.2 per cent per annum.

NEW STANDARD ENGINEERING LTD.

The New Standard Engineering Company Ltd. has completed the allotment of 25,000 right shares of Rs. 100 each issued in the proportion of one share for two shares at a premium of Rs. 20 per share. In all, applications for 30,500 shares, including 7,500 additional shares, had come from shareholders. The Company has made, in consultation with the authorities of the Bombay Stock Exchange, allotment of additional shares on the basis of holdings as on 17th November 1962, as follows.

The holders of five shares have been made no allotment. Those holding 10, 11 and 15 shares have been granted one share; 20 and 25 shares, two shares; 30 and 35 shares, three shares; 40 and 45 shares, four shares; 50 shares, five shares; 70 shares, seven shares; 85 shares eight shares; and 99 shares, 10 shares. Shareholders having 400 shares have been given 40 shares; 500 shares, 50 shares; and 1,336 shares, 134 shares.

Allotment letters will be despatched to the shareholders, with the cheques for the excess amount refundable, in the first week of March 1963. Allotment money at Rs. 20 per share is payable by 31st March 1963.

PHALTAN SUGAR'S RESULTS POOR

RESERVES DEPLETED

IN spite of a handsome recovery in net sale proceeds (that is, excluding the excise duty paid) from Rs. 84.04 lakhs to Rs. 136.85 lakhs at which level they have exceeded slightly the recent best figure of Rs 136.31 lakhs for the year 1958-59, the profits of the Phaltan Sugar Works Ltd. (Managing Agents: Messrs. Mafatlal, Apte and Kantilal Ltd., Bombay) for the year ended 30th September 1962 are the lowest for some years. Gross profit has declined for the sixth year in succession, from Rs. 14.28 lakhs for 1960-61 to Rs. 12.57 lakhs for the year under review. This contrary trend in sales realisation and profit has accentuated the fall in profit-margin (ratio of profit to sales) from nearly 17 per cent to a little more than 9 per cent. The previous year itself had seen a setback of 6.7 per cent in the profit-margin. At Rs. 2.76 lakhs, net profit is down over the year by almost 50 per cent and is merely a quarter of what it had been for 1959-60. Apart from the drop in gross profit, the marked fall in net profit was also the result of a larger provision for taxation, namely Rs. 4.87 lakhs as compared with Rs 3.80 lakhs a year before.

The continuous fall in profit has resulted in a further cut in the dividend on the 50-rupee ordinary shares from 18 per cent to 14 per cent per annum, subject to tax. In the past three years, the return to shareholders has been reduced, in all, by 13 points from 27 per cent for 1958-59. The net dividend for the latter year, amounting to 18.9 per cent, was itself lower than the 20 per cent paid for 1957-58. From 1959, it will be recalled, companies had to revise the basis of dividends from tax-free to taxable following the abolition of the system of grossing up. Even the much lower dividend for the year under report has necessitated a net depletion of reserves (after taking into account the transfer to development rebate reserve and the surplus carried forward) of as much as Rs. 5.42 lakhs, as against Rs. 3.46 lakhs withdrawn in the previous year and some Rs. 61,000 in 1959-60.

The Company's progress from 1959 is presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September			
	1962	1961	1960	1959
Sale proceeds, less excise	136.85	84.04	87.80	136.31

Low 80.00	82.00	122.00	158.00	139.00

† Subject to deduction of tax.

During the year, the Company's factory crushed 125,378 tonnes of sugarcane (133,300 tonnes in the previous year) and produced 150,225 bags of sugar (157,019 bags) at an average recovery of 11.94 per cent (11.74 per cent). The production thus showed a setback of 6,794 bags, in spite of a slight increase in recovery. The setback was due to a lower yield of sugarcane per acre. According to the Directors, the lower production, lower realisation after decontrol of sugar from November 1961 and losses on export quota sales have affected profit for the year. Moreover, there were machinery breakdowns during the year, adversely affecting the working of the factory. It will be noted from the table above that, although production was lower, expenses showed very little change from the previous year's high levels. The increase in sale proceeds reflects the utilisation of previous year's stocks.

During the current year, the factory has started manufacturing raw sugar for the export market. This step has been taken in order to effect economy, and the results achieved so far are said to be satisfactory. The Company has launched a programme of expansion and replacement, which is likely to be completed by the 1963-64 season. The Directors believe that, as a result of this programme which is

* This represents Rs. 75,000 transferred from dividend equalisation reserve.
‡ Only a small sum of Rs. 425.
† The dividend for 1962 is on the increased equity capital of Rs. 29,78,400.
§ The dividend for 1961 is on a paid up capital of Rs. 22,33,800.

Extracts from the Directors' report: *Modernisation*:—The Company has taken up the scheme of modernising the present existing 1949 make 12,000 Howa spindles during the year and have also placed firm orders for 6,000 spindles of 7" lift to replace the old spindles and with high drafting equipment. In addition to the above, the Company has placed orders for installation of pneumafils in the spinning department. The above machinery is expected in the months of June, July 1963 and installation of the same will be completed by the end of 1963.

Management:—In accordance with the resolutions passed at the last annual general meeting, the Directors are glad to inform that the Central Government has given its approval for the appointment of Messrs. Rayalaseema Agencies, Adoni, as the managing agents of the Company for a period of five years from 22nd September 1962.

Exports:—The Government has made it compulsory to export 3 per cent of production of mill cotton yarn for the year ended 31st December 1962. As the yarn market in foreign countries was not encouraging, the Mills could not directly export cotton yarn, but have fulfilled the export obligation by paying premium to one of the member mills of the Southern India Millowners' Association, who have undertaken to export cotton yarn on behalf of the Company.

Bonus Shares:—The bonus shares of 7,446 of Rs. 100 each recommended by the Board at the last annual general meeting in the ratio of one bonus share for every three equity shares held, have been completely allotted to the existing equity shareholders of the Company as at 31st December 1962.

Production:—Andhra Pradesh State Electricity Board has imposed restriction on electricity supply for 4 hours between 5-00 p.m. to 9-00 p.m. due to shortage of power. This has come into effect from 24th January 1963. Therefore, the managing agents have made the arrangements to run the Mills in three shifts as usual without any retrenchment of labour, i.e., one shift of 8 hours and two shifts of 6 hours each. The workers also have accepted to work even on Sundays on the sanction of the Chief Inspector of Factories, Hyderabad. The loss of production will be in proportion to power cut.

The Directors regret to state that there was a fire accident in Mills' blowroom on 12th September 1962. Fortunately, the blowroom machinery was not damaged in the fire accident. The Directors have taken all possible efforts to claim the loss on burnt cotton and to put the machinery into operation by the very next day of the accident and made the manufacturing process to continue uninterrupted. It is a matter of gratification to note that the Company has not incurred any loss due to the fire accident as the loss has been completely reimbursed by the Insurance Companies.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	29,78,400	Gross block	58,60,510
Reserves and surplus	6,79,480	—Depreciation	36,05,488
Other liabilities	25,18,238	Net block	22,55,022
		Current assets	25,68,635
		Investments	1,56,093
		Other assets	22,705
		Cash	11,73,663
Rs.	61,76,118	Rs.	61,76,118

* Paid-up capital consists of 29,784 Equity shares of Rs. 100 each. Of the above 7,446 shares of Rs. 10 each are allotted as fully paid by way of Bonus shares.

Thirumbadi Rubber Co., Ltd.

(*Secretaries and Treasurers*: Messrs. Peirce, Leslie and Co., Ltd., Calicut, Kerala State.)

* This represents Rs. 1,00,000 transferred from debenture redemption reserve.
† This represents Rs. 5,24,001 being profit on sale of Calicut Estate.

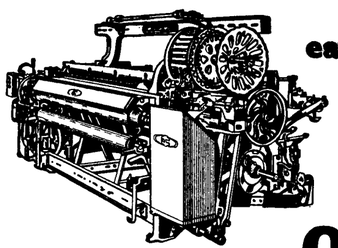
Extracts from the Directors' report: *Crop*: A crop of 2,02,316 kg. (1960-61—2,45,549 kg.) was harvested at a cost of Rs. 3.24 per kg. The average price realised for the year was 3.38 per kg. as compared with Rs. 3.76 per kg. for 1960-61.

Extracts from the Chairman's statement: *Crops and Costs*:—A comparative statement showing the details of crop, costs and average sale price for our rubber for the past three years is given below:—

Year	Crop: Thirumbadi	Crop: Calicut	Estate cost of production per kg.	All-in cost per kg.	Average price realised per kg.
	kg.	kg.	Rs.	Rs.	Rs.
1959-60	1,40,018	1,82,889	2.83	3.39	4.06
1960-61	1,48,951	96,598	2.87	3.31	3.76
1961-62	2,02,316	..	2.94	3.24	3.38

Prices for the off-grades produced were considerably lower than last year in consonance with the general trend of Rubber Market in India, and this has been the main reason for the lower average sale price realised for the year. Consequent on the decision of the Kerala Government to assess sales tax at the last point of purchase in the State, the Government of India decided to exclude the sales tax element included in the controlled prices of Rubber. The revised prices exclusive of sales tax introduced with effect from 28th April 1962 have also affected the average sale price. Increases in labour wages, staff salaries and amenities and replanting expenses have contributed greatly towards the increase in the Estate Cost of Production, but the repayment of Debentures has resulted in a reduced all-in cost.

In addition to the rubber produced in the Estate, the Company has been buying latex and scrap for resale after processing in the factory. These transactions have contributed to the profit for the year.



Future Prospects:—The crop for 1962-63 is estimated at 2,05,000 kg., to be produced at an all-in cost of Rs. 3.23 per kg. This estimate is considered to be satisfactory considering the reduction in the mature areas on replanting and given favourable weather conditions the Company is hopeful of realising its estimate.

Replanting:—An area of 101.86 acres old seedling rubber has been replanted during the year and the Company has received a subsidy permit from the Rubber Board covering this area. The first year's instalment of subsidy amounted to Rs. 40,332, while the total expenditure on replantings was Rs. 63,581. A sum of Rs. 25,000 has been transferred to the rehabilitation and development reserve from the profit and loss account to cover the deficit. A further area of 100 acres will be replanted in 1962-63.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	9,15,300	Gross block	15,73,653
Reserves and surplus	10,73,882	—Depreciation	2,16,168
Other liabilities	2,96,276	Net block	13,57,495
		Current assets	2,87,612
		Investments	1,76,445
		Cash	4,83,906
Rs.	22,85,458	Rs.	22,85,458

* Paid-up capital consists of 9,15,300 ordinary (Equity) shares of Re. 1.00 each. Of the above, 3,05,100 shares are allotted as fully paid-up by way of Bonus shares through the capitalisation of reserves.

NEWS IN BRIEF

THE Japan-Persian Gulf-Japan Conference has decided to admit the Shipping Corporation of India into its pool system with effect from 1st April next. The Corporation will then be the only Indian member of the Conference, with 24 sailings from India to Japan and an equal number from Japan to India.

A trade plan for boosting exports of cashew kernels to the Soviet Union, Czechoslovakia, Yugoslavia, Poland, East Germany, Hungary, Rumania and Bulgaria has been finalised by the Central Government. Actual total exports of kernels to all the East European countries during 1962 were 10,000 tons, as against 6,000 tons in 1961.

Sugar production during the month of January 1963, the third month of the season 1962-63, was 582,000 metric tons, as against the 547,000 tons produced in the corresponding month last season. This brings the total production of 1962-63 season upto the end of January 1963 to 1,203,000 tons, as against 1,080,000 tons a year before.

The effective arrears of income-tax as on 1st January 1963 amounted to Rs. 181.33 crores. The total income-tax assessed during the financial year 1961-62 was Rs. 290.48 crores, as against Rs. 208.49 crores in 1960-61. The actual collections, including collections in respect of previous years, aggregated Rs. 321.85 crores, as against Rs. 278.43 crores.

The Government of Madhya Pradesh has "de-reserved" certain areas in the State with bauxite deposits from the zones reserved for exploitation in the public sector. The applications for grant of mineral concessions covering bauxite in respect of these de-reserved areas will be entertained from 15th May next.

The State Trading Corporation will be exporting about five million metres of cotton textiles to the Soviet Union, in addition to the three million metres already committed for export to that country, during 1963. Details as to quality and price are now being worked out at Moscow. The S.T.C. will also export about 2.4 million metres of cotton textiles to East Germany.

The Planning Commission has approved of the Maharashtra Government's proposal to enact legislation for taking over such private electricity undertakings in the State as are run inefficiently and are unable to meet the requirements of the areas served by them. Similar proposals have also been received from the Governments of Mysore, Kerala and Orissa.

A Bill seeking to amend the Central Sales Tax Act, 1956, was introduced in the Lok Sabha by Mr. Morarji Desai, Union Finance Minister, on 19th February. The Bill provides for the increase in the rate of sales tax on goods sold by a dealer in the course of inter-State trade to the Government from one per cent to two per cent. The enhanced rate will also apply to certain goods sold to a registered dealer other than the Government. The revised rate will come into effect from a date to be fixed by the Central Government.

The Sugarcane Development Sub-committee of the Indian Central Sugarcane Committee, at its meeting held at New Delhi on 21st February, decided to launch in selected districts of U.P., Bihar and Punjab pilot projects for intensive cultivation of cane on the model of the package programme. The object of these projects is to educate farmers in the primary area concerned on the feasibility of stepping up the per-acre yield of cane. In addition, steps will be taken to organise seed nurseries in a few farms of 50 acres each in western and central Uttar Pradesh.

A credit of DM 107 million is to be made available in the near future to India by West Germany for investment purchases in the fields of power production, telecommunications, rail and port construction, and industrial equipment. An agreement covering the credit was signed at Bonn recently between the Governments of the two countries. The agreement is in the form of an amendment to a joint accord, signed last year, by which West Germany undertook to give India capital assistance credits aggregating DM 470 million for the second year of the third Plan.

The Reserve Bank of India has withdrawn with immediate effect its general permission enabling travellers to carry with them or bring into the country Indian currency upto Rs. 75 per person. The amount which a deck passenger to Burma, Malaya, Singapore, Persian Gulf ports, East Africa, Ceylon and Pakistan can carry has now been fixed at only Rs. 20. Passengers to other countries will not be allowed to carry any Indian currency with them. They will, however, be permitted to buy foreign exchange upto the value of Rs. 40 from authorised money changers at air and sea ports.

The trade and payments agreement entered into between the Governments of Bulgaria and India in March 1960 has now been extended upto the end of this year. Two new schedules have, however, been introduced in place of the previous ones. According to schedule 'B', India will export tea, coffee, pepper and other spices, jute manufactures, iron ore, vegetable oils, woollen textiles, cotton fabrics, ropes for ships, mica, leather footwear and leather manufactures, raw goat skins, rolled steel products, cotton yarn, deoiled cakes, cashew kernels, coir products, sports goods, railway wagons, diesel engines, engineering goods, cinematographic films, shellac, etc.

An agreement for the reciprocal recognition of tonnage measurement certificates of Finnish and Indian ships was signed at New Delhi on 20th February. For a long time, Indian ships were being measured and registered under the U.K. Merchant Shipping Act, 1894, and, by virtue of a reciprocal agreement that had been entered into between the U.K. and Finland, tonnage measurement certificates issued by the Government of Finland were acceptable to the Government of India. With the coming into force of the Merchant Shipping Act, 1958, and the registration of Indian ships under that Act, it was considered necessary that a separate agreement in this behalf should be signed between the two Governments. The tonnage measurement rules of Finland are of the same standard as those of India.

From Abroad

The U.K. Coal Board is contemplating long-term contracts for the supply of coal to the new thermo-electric power plants proposed to be built in Italy.

The International Tin Council is scheduled to meet at London on the 12th inst. to consider, among others, the problem of the U.S. Stockpile release.

A group of 11 experts has begun a series of meetings at the U.N. to study the activities of international and inter-Governmental bodies concerned with commodity and trade problems and to suggest how these activities can be most effectively pursued.

Under an agreement signed recently at Cairo between the Governments of the U.S. and Egypt, the former will lend $30.6 million and £E4.2 million for building a new thermal power station at Cairo. The credits are repayable over 40 years and carry an interest of three quarters of one per cent.

Under a protocol signed at Moscow between the Governments of Russia and Rumania, Russia will export to Rumania machine tools, industrial equipment, lorries, coke and coking coal, iron ore, cast iron and household goods and import oil equipment, chemical products, fruits, vegetables and consumer goods.

The Algerian Government has concluded an agreement with Fiat and Someca (the tractor division of Simca) for installing a plant in Algeria to assemble and manufacture tractors and agricultural machinery. This is said to be the first such joint venture between the State and private industry. The Government will hold 75 per cent of the capital of the new company.

Jamaica has become a member of the International Monetary Fund and the World Bank. Its quota in the I.M.F. is $20 million and its subscription to the capital stock of the Bank consists of 267 shares with a total par value of $26.7 million. The admission of Jamaica brings the total of members' quotas in the Fund to $15,208.7 million and the total subscribed capital of the Bank to $20,689.8 million.

The Federation of Commonwealth and British Chambers of Commerce at its meeting held on 19th February, agreed to convene, "as a matter of the first priority," a Commonwealth trade conference in London in May next. Thirty-five delegates from the Federation's national representative committee and individual chambers of commerce are expected to attend the conference.

The next ministerial meeting of the General Agreement on Tariffs and Trade (G.A.T.T.) will be held at Geneva in May next. The second meeting of the Preparatory committee for the World Trade Conference 1964 of the United Nations will also be held there at the same time. The 24 developing countries, representing more than half of the number of G.A.T.T. partners, are not satisfied with the work of the organisation.

An agreement to set up at Chittagong in East Pakistan an integrated steel plant at a cost of $45 million has been signed between the Pakistan Industrial Development Corporation and a Japanese Steel Syndicate. The proposed plant, which will have an annual ingot capacity of 150,000 tons and facilities for producing various steel materials, is to be completed by the Japanese syndicate in four years. Actual construction is expected to begin soon after the formal signing of the contracts next month.

An eight-man British trade and industrial mission (leader: Mr. Henry F. Tlarks, Director, Bank of London and South America Ltd.) sponsored by the Western Hemisphere Exports Council, is visiting Venezuela shortly to explore the possibilities of increasing Britain's trade with this country and examine the scope for launching more industrial and joint industrial ventures. The delegation will also assess the implications for British in industry of Venezuela's £2,000-million four-year investment plan.

The O.E.C.D. Secretariat has circulated for comment among the twenty member-countries a draft convention on the protection of foreign property, which is to be discussed by the Council's meeting in April or May next. The draft convention lays down four main principles governing foreign property, namely, fair and equitable treatment, constant protection and security, no unreasonable or discriminatory measures, and right of the signatories to allow or prohibit acquisition of property or investment of capital in their territory by foreigners.

Although the investment ratio in Norway has been exceptionally high since the second World War and a greater part of the national product has been ploughed back into productive activities, private consumption has also increased considerably by 32 per cent between 1950 and 1960. The Government economists are expecting another 20 per cent increase for the first five years of the sixties, so that, in 1965, private consumption will have increased by 52 per cent in 15 years. The high rate of both investments and private consumption has been made possible only because of the strong expansion of national production.

The Goodyear Tyre and Rubber Company has produced the first tyre in its New Turkish factory, in Izmit, near Istanbul. Although full capacity will not be reached for some time, limited production began on 31st December last. The tyres produced in Turkey will bear the mark "Turk Mali" (Made in Turkey). A large part of the production of the plant, which is scheduled to employ about 300 persons, is earmarked for truck and commercial tyres in order to supply the growing industrial economy of the strategically located nation. Production will also include the full line of passenger, truck and agricultural tyres and tubes as well as tread rubber and other tyre repair materials.

The fifteenth group of government officials holding fellowships granted by the United Nations under its Technical Assistance Programme has joined the G.A.T.T. secretariat for a six-month period of training. Including the present group, nearly one hundred officials have so far undertaken this training course. The training course is not limited to the operation of G.A.T.T., it includes also the general problems which have to be taken into account in the formation of an efficient commercial policy, especially in less-developed countries. The course is practical in its methods and the officials participate in the day-to-day of the G.A.T.T. secretariat, including attendance at the sessions of the Contracting Parties and committees or sub-groups established by them.

The Swedish Riksbank granted during 1962 permits for direct Swedish investments abroad Kr. 430 million. Of this amount 60 per cent was utilised. Permits granted for investments in E.E.C. countries increased from Kr. 78.4 million in 1961 to Kr. 154.6 million in 1962, for E.F.T.A. countries from Kr. 53.9 million to Kr. 133.5 million and for North America from Kr. 12 million to Kr. 51.9 million. A decrease was noted for investments in developing countries, from Kr. 183.2 million to Kr. 42.9 million. This is largely due to the fact that the Swedish investments in the Lamco mining scheme in Liberia are now largely completed. The permits granted by the Riksbank for foreign investments in Sweden were up by 93 per cent to Kr. 321.9 million in 1962. The increase is entirely accounted for by E.F.T.A. countries, whereas application from E.E.C. countries and North America showed a decline. During the year, 61 per cent of the amount authorised was actually utilised.

Sweden's industrial production in 1962 was just over one per cent larger than in the preceding year, according to the statistics of the Federation of Swedish Industries. The figure includes an increase of one per cent for both capital and consumer goods. A branch by branch comparison between output in 1961 and 1962 denotes a decline of 5 per cent in iron-ore mining. Production at the steel and other metal works was up by one per cent, while employment in the engineering industry remained largely unchanged, a somewhat higher employment during the first three quarters being offset by a decline of 4 per cent in the last quarter. Production in the timber industry improved over the year, although the annual average was unchanged as compared with 1961. Pulp production was down by 7 per cent whereas paper output rose by 3 per cent. Output in the food industry increased by 5 per cent, in the textile industry by 1 per cent. Production in the leather and shoe industries, on the other hand, dropped by 4 per cent.

Prominent Swedish scientists and doctors, including three Nobel prize winners, recently called upon the Swedish Minister of the Interior, Rune Johansson, demanding strong action on behalf of the Government towards counteracting the increased use of tobacco. The campaign should be aimed at informing the Swedish people of the dangers involved in smoking. It is pointed out in the delegation's petition that an end to or at least a decrease in smoking would considerably diminish the risk of death caused by cancer of the lung. Cigarette smoking, according to the petition, is a direct cause of chronic bronchitis, contributes towards the aggravation of diseases of the coronary vessels and prevents the healing of ulcers. It weakens the general state of health and pregnant women transfer the nicotine to the bloodstream of their offspring. The hazards of smoking further stand in direct proportion to the amount of tobacco consumed, and there has been an increase in smoking among children and teenagers. It is possible that the question will be brought up as a Government bill this spring.

PERSONAL

MR. Enrico Pacchiarotti has been appointed Assistant General Manager for India and Ceylon of Alitalia, Italian Airlines.

Mr. A. R. Foster and Mr. A. D. Ogilvie have been elected President and Vice-President, respectively, of the Bengal Chamber of Commerce and Industry for the year 1963-64.

Sir James Plimsoll, C.B.E., Australian Permanent Representative to the United Nations, has been appointed High Commissioner of Australia in India.

Mr. Willard Long Thorp of the U.S. has been elected Chairman of the O.E.C.D. Development Assistance Committee. He succeeds Mr. James W. Riddleberger, who has been appointed United States Ambassador in Vienna (Austria).

Notice

WALCHANDNAGAR INDUSTRIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-fifth Annual General Meeting of the Company will be held at the Registered Office at Construction House, Ballard Estate, Fort, Bombay, on Friday the 29th March, 1963, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September, 1962.

2. To declare Dividends on Preference and Equity Shares.

3. To appoint a Director in place of Shri Gulabchand Hirachand who retires by rotation and who is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution in respect of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

"Resolved that pursuant to the provisions of Section 281 and other relevant provisions (if any) of the Companies Act, 1956, Shri Gulabchand Hirachand who has attained the age of 66 years and who retires by rotation be and is hereby reappointed a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

4. To appoint a Director in place of Shri Lalchand Hirachand who retires by rotation and is eligible for re-appointment.

5. To appoint a Director in place of Shri Jyotendra L. Mehta who retires by rotation and who is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution in respect of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

"Resolved that pursuant to the provisions of Section 281 and other relevant provisions (if any) of the Companies Act, 1956, Shri Jyotendra L. Mehta who has attained the age of 69 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

6. To appoint Auditors for the current year and to fix their remuneration.

7. To consider and, if thought fit, to pass the following resolution with or without modifications as an Ordinary Resolution:—

"Resolved that pursuant to the provisions of Section 293 and other applicable provisions (if any) of the Companies Act, 1956, the consent be and is hereby given to the Directors of the Company to sell the Dairy undertaking of the Company at such price and on such terms and conditions as Directors think reasonable."

8. To consider and, if thought fit, to pass the following resolution with or without modifications as a Special Resolution:—

"Resolved that pursuant to Section 360 and other relevant provisions (if any) of the Companies Act, 1956, and subject to the approval of the Central Government the Company hereby approves of the agreement proposed to be entered into between the Company and The Ravalgaon Sugar Farm Limited, Associates of Messrs. Walchand & Company Private Limited, the Managing Agents of the Company, for supply of or rendering of any services by the Company in Bombay and in Delhi to The Ravalgaon Sugar Farm Limited as set out in the draft placed before the Meeting and signed by the Chairman for the purpose of identification and upon the terms and conditions contained therein. The Directors shall have power to modify such agreement so as to comply with any suggestion of the Central Government.

The material terms of such contract shall be that:

(a) The Company shall be allowing and permitting its labourers in Bombay to do the work of The Ravalgaon Sugar Farm Ltd.

(b) The Company's Office in Delhi will look after The Ravalgaon Sugar Farm Limited's work in Delhi.

(c) In consideration thereof The Ravalgaon Sugar Farm Limited, shall pay to the Company:

(i) the actual expenses for packing, labour and despatch of the materials incurred by the Company for The Ravalgaon Sugar Farm Limited.

(ii) 25 per cent of the expenses of Company's Delhi Office.

(iii) This agreement shall be in force for a period of 5 years from the date of execution unless it is terminated by either party by giving 3 months' notice."

9. To consider and, if thought fit, to pass the following resolution with or without modifications as a Special Resolution:—

"Resolved that the Articles of Association of the Company be altered in the manner following:—

(a) To insert the words "or where the cages on the reverse for recording transfers have been fully utilised" between words 'useless' and 'then' in Article No. 17.

(b) To add the following proviso at the end of the first sentence of Article 48:—

"Provided that registration of any transfer shall not be refused on the ground of the transferor being either alone or jointly with any other person or persons indebted to the Company on any other account whatsoever."

(c) To insert the words 'to dividend or' between the words 'right' and 'to' in Article No. 186.

(d) To substitute the words 'till the claim thereto becomes barred by law' for the words 'for six years after having been declared' in Article No. 195.

The Transfer Books of the Company are closed from Wednesday the 30th January, 1963, to Wednesday the 20th February, 1963 (both days inclusive).

By Order of the Board,

S. S. BORKAR,
Secretary.

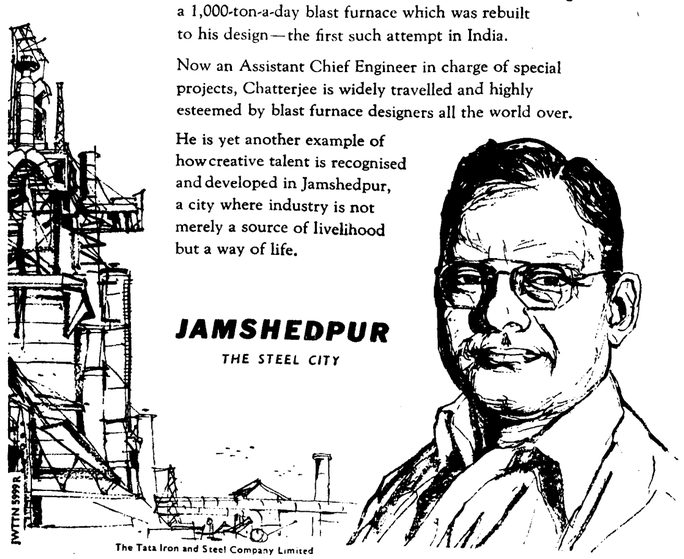
Registered Office:
CONSTRUCTION HOUSE,
BALLARD ESTATE, FORT,
BOMBAY, 12*th February*, 1963.

Note:—(1) A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a member.

(2) The Dividends, if sanctioned, will be paid at the Bank of India Limited, Fort, Bombay, on and from Monday, the 15th April, 1963, to those Members whose names stand on the Company's Register as on Wednesday the 20th February 1963.

(3) Explanatory Statement as required by Section 173 of the Companies Act, 1956, has been separately sent to all members of the Company.

He never looked back...



In 1920, P. K. Chatterjee, a young man just out of school, joined Tata Steel as an apprentice draughtsman.

Full of ambition and zeal to learn, he entered the Company's Technical School which afforded the opportunity to study during leisure. Young Chatterjee was among the first to complete a three-year course in engineering.

Over the years, Chatterjee has worked his way up in the Engineering Department, and blast furnaces have been his enduring interest. He has helped to rebuild the blast furnaces in the Jamshedpur Works, including a 1,000-ton-a-day blast furnace which was rebuilt to his design—the first such attempt in India.

Now an Assistant Chief Engineer in charge of special projects, Chatterjee is widely travelled and highly esteemed by blast furnace designers all the world over.

He is yet another example of how creative talent is recognised and developed in Jamshedpur, a city where industry is not merely a source of livelihood but a way of life.

TREND OF MARKETS

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 27*th February*

Although there was persistent pressure of demand for funds, actual turnover in the short-term money market was much restricted during the week under review. For the floating supplies were extremely scarce. Many banks were compelled to turn to the Reserve Bank for temporary assistance. Call money among exchange and larger Indian banks continued to be maintained throughout the week at the high level of 6 per cent. Conditions at Calcutta also continued to be difficult, the call money rate being ¼ per cent higher at 5¾ per cent.

The prevailing stringency in the money market was reflected in the poor response to the 91-day Government of India Treasury Bills, tenders for which opened on Monday the 25th inst. The total amount offered was no more than Rs. 2 crores. This was also the amount invited and accepted. The average rate of accepted tenders remained unchanged at Rs. 2.365 per cent per annum. The response to the Intermediate Treasury Bills, which were on tap from the 20th to 23rd inst., was very poor, the amount actually fetched being just Rs. 5.75 lakhs, as against Rs. 54.25 lakhs a week before.

The foreign assets of India increased by a further Rs. 1.95 crore to Rs. 107.04 crores during the week ended 22nd February 1963, the whole of the increase being accounted for by the Reserve Bank's balances held abroad which stood at Rs. 11.96 crores. Foreign securities held in the Bank's Issue Department stayed put at Rs. 95.08 crores to which level they had risen from Rs. 88.08 crores a fortnight before (in the week ended 8th February). Loans and advances to scheduled banks went up by Rs. 1.06 crore to Rs. 38.61 crores. The bulk of this amount, Rs. 26.82 crores to be precise, represented credit granted against usance bills. Notes in circulation fell by Rs. 14.05 crores to Rs. 2,194.48 crores.

The total credit made available by scheduled banks rose again but by a smaller sum of Rs. 5.59 crores during the week ended 15th February 1963, as against the increase of Rs. 17.57 crores noted in the previous week; the actual outstandings as on that day aggregated Rs. 1,514.99 crores. The rise in credit was accompanied by a corresponding sizable accrual of Rs. 7.91 crores to the deposit portfolio of banks which stood at Rs. 2,176.44 crores, and an improvement of Rs. 2.54 crores in inter-bank borrowings. Consequently, there was a reduction of Rs. 5.63 crores to Rs. 37.50 crores in borrowings from the Reserve Bank. Investments were lower by Rs. 16.47 crores at Rs. 605.69 crores.

Of significance to the Gilt-edged market is the announcement, by the Government of India, that the whole of the 3 per cent 1963-65 loan, issued on 14th May 1938 and re-issued thereafter from time to time will be repaid at par on 1st June 1963 with all interest due upto date. It has been made clear that interest on the loan will not accrue after this date. The aggregate outstandings of the loan amount to Rs. 116.17 crores. In respect of this loan, the Reserve Bank has raised its buying rate by 5 nP to Rs. 99.05 with effect from the 25th inst. The Bank has also stepped up from the same date its buying rate by 15 nP to Rs. 99.20 in the case of 3½ per cent 1964 loan. The prices actually ruling are higher than the revised rates: Rs. 99.10 to Rs. 99.15 and Rs. 99.25, respectively. Even at these rates, offers are said to be not available.

The upward revision in the buying rates of the aforesaid two Central loans effected by the Reserve Bank had no effect on the Gilt-edged market which continued to rule dull. Both Central and State loans were maintained more or less at last week's levels. The 6½ per cent Gold Bonds were nominally quoted at Rs. 116, giving an yield of Rs. 5.06 per cent.

The Life Insurance Corporation of India has announced a further subscription of Rs. 2 crores to the 4½ per cent National Defence Bonds, bringing its total investment in the Bonds to Rs. 7 crores.

In the foreign exchange market, banks' selling rate for ready T.T. dollars continued unaltered at Rs. 477.50 per $100. Their buying rate, however, was a fraction higher at Rs. 474.25, as against Rs. 474. On the New York Exchange, the £ sterling eased slightly *vis-a-vis* the dollar, the spot rate declining by 0.030 cent to 280.300-280.330 cents and three months' forward by 0.080 cent to 279.750-279.780 cents.

* * *

The total contributions brought into the Central account of the National Defence Fund at New Delhi upto the close of business on 23rd February 1963 amounted to Rs. 45.28 crores. This sum includes Rs. 27.06 lakhs received from Britain and Rs. 40.92 lakhs from other countries. In addition, contributions in gold and gold ornaments amounted to 1,566,891 grammes approximately equal to 134,538 tolas.

BULLION PRICES REACT

(From Our Own Correspondent)

BOMBAY, 27*th February*

Lack of demand at higher levels and renewed threat from the Government to bring down the price of gold produced a reactionary tendency in bullion prices this week. Gold suffered more than the rest, apparently because the demand for it on account of Gold Bonds subscription tapered off with the approach of the closing date for the Bonds, which is the 28th inst. (tomorrow).

The Bombay Bullion Association resumed this week giving the day's official prices of gold and sovereign, besides silver. From 10th January 1963—the day after the Gold Control Rules were promulgated—the Association had stopped giving rates of gold and sovereign.

Against last week's closing level of Rs. 104, gold commenced higher at Rs. 106, but reacted to Rs. 103 within two days and eased further to close today at Rs. 95. Sovereign opened two points lower at Rs. 74, looked up to Rs. 75 on Saturday the 23rd inst., but turned lower subsequently to finish the week at Rs. 72.

Silver, which had scaled a new peak of Rs. 240.50 last week, opened this week at Rs. 238 and steadily lost ground to close five points lower over the week at Rs. 234. The average daily arrivals and offtake were both lower by five bars at 17 bars and seven bars, respectively, as compared with the levels seen last week.

The renewed threat from Government to bring down the price of gold came from Mr. Morarji Desai, Union Finance Minister, in reply to a question in the Lok Sabha on Thursday the 21st inst. The question implied that the gold control policy of the Government had not succeeded, in that much of the country's non-ornament gold had not been declared and the response to the Gold Bonds had been poor.

From the replies given by the Finance Minister and his deputy, Mr. B. R. Bhagat, it appears that the question of further measures in order to bring down the price of gold is under the Government's consideration, though it has no intention to use coercion. Mr. Desai rejected a suggestion for redeeming the Bonds in gold. He thought that, as a result of its recent actions, smuggling of gold had been "very much less," though it could not make a precise estimate.

According to the information supplied to the House, 12,497,494 grammes of gold valued at Rs. 6.70 crores at the rate of Rs. 53.58 per 10 grammes had been invested in the Gold Bonds till the 18th inst. Declarations by dealers, required to be licensed under the Rules, were to be filed by 17th January 1963. The total quantity of gold, including ornaments, declared so far by dealers was approximately 15,380,000 grammes. The following is the State-wise break-up of investments in Gold Bonds:

Andhra Pradesh—Rs. 11.51 lakhs, Assam—Rs. 22.606, Bihar—Rs. 37.97 lakhs, Gujarat—Rs. 1.21 crore, Kerala—Rs. 8.24 lakhs, Madhya Pradesh—Rs. 12.11 lakhs, Madras—Rs. 15.52 lakhs, Maharashtra—Rs. 3.52 crores, Mysore—Rs. 5.07 lakhs, Orissa—Rs. 77,241, Punjab—Rs. 2.72 lakhs, Rajasthan—Rs. 22.52 lakhs, U.P.—Rs. 13.08 lakhs, West Bengal—Rs. 38.89 lakhs, and Delhi and other Union territories—Rs. 26.51 lakhs.

The Government announced on Saturday the 23rd inst. that relief from estate duty would be granted in all such cases where gold left by a deceased person was offered as subscription for the Gold Bonds, provided the date of death of the person did not exceed a period of six months. In such cases, the estate duty would be levied only on the market value of the Bonds and not on the market value of the gold on the date of death.

Bullion prices in New York and London closed unchanged over the week, but the dollar price of gold was slightly lower at 35.07¾ as compared with 35.08¾ a week ago.

The following table shows the trend of prices during the week under review:

	27-2-63 (closing)	High	Low	20-2-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (.996 fine) ..	234.00	238.00	234.00	239.00
London—				
Gold	250*s.3d.*	250*s.4½d.*	250*s.3d.*	250*s.4d.*
Silver Ready	107½*d.*	—	—	107¾*d.*
Silver Forward ..	108½*d.*	—	—	108¾*d.*
New York—				
Silver	125.6 cents	—	—	125.6 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

COTTON FUTURES RECOVER AFTER A FALL

(From Our Own Correspondent)

BOMBAY, 27*th February*

The buoyancy witnessed in the cotton futures market towards the close of last week proved to be a short-lived affair. The spurt in futures on Wednesday, 20th February, was followed by a decline which was extended further during the week under review. Last week's firmness in futures was due mainly to the expectation that tenders against the maturing Jarilla March contract would be small in view of the high level of spot prices, as compared with futures. Tendering differences in respect of the March contract fixed on the 21st inst. by a special committee of the East India Cotton Association, were bearishly interpreted. It was thought that rates improved the prospects for larger tenders. The futures market sharply reacted to this development and recorded a steep fall in prices. The Jarilla March contract, which had risen to a peak of Rs. 701.50 (per three quintals) on 20th February, slumped to Rs. 688 on Saturday, 23rd February. The May contract declined from Rs. 703.50 per three quintals to Rs. 696 during the same period. The market staged a recovery in subsequent sessions. But sentiment was affected by the uncertainties about the budget. The market was closed on Friday, 22nd February, on account of *Mahashivratri* and on Tuesday 26th inst. it being *Ramzan Id.*

The trend of futures prices during the week is indicated below:

(In rupees per three quintals)

	27-2-63	*High*	*Low*	20-2-63
Jarilla March ...	694	701.50	688	697.50
Jarilla May ...	701	703.50	696	700.25

In the spot market at Sewri, mill interest in ready cotton was well maintained. Actual turnover was, however, limited because traders were not prepared to enter into large commitments on the eve of the Budget. They were apprehensive that the Union Budget might contain a cess on cotton, an import duty or foreign cotton and some adjustment or increase in excise duty on cloth. Regular demand was noted for such popular varieties as Vijay, Digvijay, Kalyan, L.147 and CO2.

Bengal *Deshi* continued to be in demand by shippers. Prices consequently firmed up. Short staple cotton was, however, neglected. Mill demand for foreign cotton was confined to U.S. growths. Others were practically neglected.

The Textile Commissioner has amended certain provisions of the notification issued by him in October last introducing the supervising scheme for cotton. This is a sequel to the recent judgment of the Bombay High Court holding certain provisions of the notification *ultra vires* of the Constitution. The amendments now made provide:

(i) that the seller shall not receive and the buyer-mill shall not pay an amount equal to 7½ per cent of the price agreed upon in respect of cotton to be sold unless and until the supervisor has issued a certificate that the contract price agreed to is in accordance with the survey certificate issued by the Zonal Committee or the *Ad Hoc* Committee as the case may be; (ii) that a time-limit of four working days from the date of receipt of intimation from the East India Cotton Association within which the supervisor should issue the certificate. If the certificate is not issued within the above time-limit, the buyers-mill or the seller may refer the matter to the Textile Commissioner. The Textile Commissioner's decision shall be final and binding on the parties. If, however, such decision is not communicated within eight days from the receipt of the reference, the parties shall be entitled to complete the same and pay the price agreed upon; (iii) that if either the buyer-mill or the seller is dissatisfied as to the correctness of the certificate of the supervisor, any of them may appeal and the decision of the Textile Commissioner shall be final and binding on the parties. If such appeal is not decided within eight days from the receipt thereof, both the parties shall be entitled to complete the sale and pay the price agreed upon; (iv) that the mill will intimate if demanded by the supervisor, at the instance of the Textile Commissioner, that the quantity of cotton which is the subject of the purchase is within its quota of Indian cotton; and (v) that the seller shall supply to the supervisor information regarding the quality, weights and price at which the cotton is agreed to be sold.

In view of the reduction in the functions of the supervisor consequent upon the above amendments, the commission for the supervisor has been reduced to ¼ per cent of the invoice value of the cotton sold. Certain other amendments in conformity with the judgment have also been made.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Gadag Laxmi 1,090; CO2 1,280-1,665; American on sample 1,440; Menoufi 1,750.

Listless conditions prevailed in the Karachi cotton futures market during the week. Intervening holidays and lack of incentives made for featureless trading, with small fluctuation in prices.

Cotton futures in Liverpool depicted a quietly steady trend during the week. Interest was lacking, thanks to continued uncertainty about the U.S. cotton policy and the absence of any definite lead from the New York market. Futures values fluctuated in a narrow range and closed, showing negligible net changes over the week. The following are the latest available quotations—in pence per lb.—from Liverpool:

March 24.25; May 23.95; March (Sudan) (29.00).

Cotton futures in the New York market ruled firm during the week. Despite the continued uncertainty about cotton legislation, both nearby and distant positions attracted good buying support. This was because of the sustained firmness of ready markets which was attributed to good spinner demand and the comparative scarcity of spot offerings.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago.

(In cents per pound)

	25-2-63	19-2-63	12-2-63
March	34.80	34.65	34.58
May	34.93	34.87	34.85
July	34.45	34.32	34.32
New York Spot ...	35.70	35.60	35.40

FURTHER GAINS IN YARNS

(From Our Own Correspondent)

BOMBAY, 27*th February*

Continued anxiety over the likely increase in excise duty on yarns accounted for the firm trend of the yarn market during the week under review. Although the supply position was comfortable, stockists seemed to be reserved, pending the announcement of the budget proposals. Consequently, whatever demand that was witnessed accentuated the upward trend in prices. The week closed with further gains ranging from 9 nP to 81 nP per kilo in various varieties of yarns.

Among art silk yarns, 150D National Rayon went up by 9 nP to Rs. 11.22. 120D S.I. Viscose appreciated from Rs. 12.91 to Rs. 13.46. 100D Bright Century rose by 81 nP to Rs. 15.53. In staple fibre yarns, Centurys improved further from Rs. 7.48 to Rs. 7.59, but Kohinoors eased by 4 nP to Rs. 8.14. Among cotton yarns, 20s and 40s Gokak gained 25 nP each to Rs. 34.25 and Rs. 35.75, respectively.

The supplies of indigenous art silk yarns in the local market continued to be satisfactory.

The first lots of art silk yarns produced by the Baroda Rayon Corporation are said to have been well received. The quality of these yarns, it is stated, compares favourably with that of the imported Japanese material. So far, the Company has brought out only the 150 denier variety. A lot of 2,000 cases released at Surat is reported to have fetched Rs. 11.81 per kilo.

Mr. R. Doraiswamy, Textile Commissioner, told the representatives of the Southern India Millowners' Association at Coimbatore on Thursday the 21st inst. that allocation of staple fibre to mills would be made on a quarterly basis instead of on half-yearly basis as had been the case for some time past. In regard to the distribution of yarns to co-operative societies, he preferred fixing of time limit by mills to their entering into firm contract with societies. He disagreed with the Association that further imports of staple fibre be banned. On the same day, Mr. Doraiswamy inaugurated at Coimbatore the South India Textile Research Association's scheme for training technicians for the proposed change-over from the British to the French (metric) system in expressing quantity of yarn. The change will be introduced from April next, though, for the first six months, the quantity will be expressed in both the units. From 1st October 1963, yarn hanks will be in 1,000-metre length, with a bundle weighing 2.5 or 5 kgs. For the change-over, to be checked by a reviewing committee of the Government, 350 persons are to be trained by the Association. The Association is to bring out a brochure explaining the implications of the change-over.

Concern over non-delivery of art silk yarn by the S.T.C. was expressed during the week by the Delhi Hosiery Manufacturers' Association. The Association submitted that the situation had been serious and might throw thousands of workers out of employment, especially when the Government had not only banned import of art silk yarn but also abolished actual users' quotas for hosiery manufacturers.

In this connection, it is significant to find that Mr. Doraiswamy spoke of statutory control on price and distribution of cotton yarn, while addressing members of the Tamilnad Handloom Weavers Co-operative Society at Madras on Sunday the 24th inst. He promised sympathetic consideration by the Government of the weavers' problems, such as accumulation of stocks and installation of more spindles and machinery.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	27-2-1963	20-2-1963
	Rs.	Rs.
Art silk yarn **(per kg.)—**		
National Rayon 120D	12.30	12.10
Century 75D	17.95	17.60
S. I. Viscose 150D	11.55	11.22
Staple fibre yarn **(40 × 2)—**		
Kohinoor (per kg.)	8.14	8.18
Century	7.59	7.48
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.75	17.75
20s Edward	22.25	22.25
2/2s Text	29.25	29.25
40s Hind	35.75	35.50
60s Finlay	67.25	67.25
80s Minerva	80.00	80.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

GROUNDNUTS IMPROVE

(From Our Own Correspondent)

BOMBAY, 27*th February*

Restricted turnover characterised trading in the oilseeds markets during the week under review. This was natural because operators were hesitant to enter into fresh commitments either way on the eve of the Central Government Budget. Section-wise, groundnuts were somewhat firm, thanks to reports of sizable exports of groundnuts oil to Spain by mills directly. Castor-seeds put on a cheerful appearance, despite the none-too-satisfactory outlook for castor oil exports to the U.S. Cottonseeds ruled steady in sympathy with castorseeds and groundnuts. Linseeds, however, suffered a setback in values, following pressure of new crop supplies.

The view that the third Plan production target of 9.8 million tons for the five major oilseeds may not be fulfilled was expressed by Mr. P. L. Tandon, Chairman of the Hindustan Lever, and President of the Vanaspati Manufacturers Association, in his speech at the annual meeting of the Association held in the city on Monday this week. Mr. Tandon advocated a crash programme for the intensive cultivation of groundnuts and other major oilseeds. He also stressed the need for conserving supplies of other oils, particularly cottonseed oil. He felt that, if exploited properly and fully, the domestic output of cottonseed was sufficient to augment oil supply by a further 100,000 tons.

Groundnut July 1963 contract rose by 38 nP to Rs. 216; earlier it had gone down to Rs. 214.12. Khandesh quality rose from Rs. 41.50 to Rs. 41.75. Nizam bold was maintained at Rs. 41. Oil ex-mill spurted by 25 nP to Rs. 17.25 and oil railway receipt by 20 nP to Rs. 17.05. But groundnut April 1963 contract declined from Rs. 207.62 to Rs. 205.25, before rallying to close at Rs. 207.25.

Castorseed March 1963 contract advanced by Rs. 3.13 to Rs. 162. June 1963 contract put on a rupee to Rs. 160.75. Madras small rose by 37 nP to Rs. 31.12. Kanpur bold was higher by 13 nP at Rs. 30.75. Oil commercial, however, shed 5 nP to Rs. 12.70.

Among linseeds, June 1963 contract picked up 38 nP to Rs. 33.12. Bold ready lost 50 nP to Rs. 30.50. Linseed oil eased by 55 nP to Rs. 12.30. Linseed March 1963 contract declined from Rs. 31.81 to Rs. 31.12, but rose towards the close to Rs. 35.25 on speculative support.

Cottonseed July 1963 contract improved by Re. 1.50 to Rs. 94. April 1963 contract strengthened by 50 nP to Rs. 92. Both non-white and berar receded by 70 nP to Rs. 18.10.

The following table shows the closing prices of oilseeds and oils on Wednesday 27th February, as compared with those of two previous weeks:

	27-2-1963	20-2-1963	13-2-1963
Groundnuts	Rs.	Rs.	Rs.
April 1963 contract	207.25	207.62	204.00
July 1963 contract	216.00	215.62	212.00
Nizam bold	41.00	41.00	39.50
Khandesh quality	41.75	41.50	40.12
Oil ex-mill*	17.25	17.00	16.60
Oil commercial*	17.05	16.85	16.50
Castorseed			
March 1963 contract	162.00	158.87	159.50
June 1963 contract	160.75	159.75	160.75
Ready Madras	32.12	31.75	32.00
Ready Kanpur	30.75	30.62	30.50
Oil B.S.S.†	13.45	13.50	13.50
Oil commercial†	12.70	12.75	12.80
Linseed			
March 1963 contract	35.25	31.81	32.62
June 1963 contract	33.12	33.50	34.00
Bold ready	30.50	31.00	32.50
Linseed oil†	12.30	12.85	13.30
Cottonseed			
April 1963 contract	92.00	91.50	91.00
July 1963 contract	94.00	92.50	91.00

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

METALS STEADY

(From Our Own Correspondent)

BOMBAY, 27*th February*

Nonferrous metals ruled distinctly steady during the week under review, barring copper which moved down due to profit-taking at the high levels touched last week and absence of fresh buying. The steadiness was aided by rumours regarding a possible increase in the rates of excise duty on metals in the ensuing Central Budget. Lead moved up on sustained demand in the face of tight supply position. Tin also was well supported. Zinc was fully steady.

In the Bombay market, lead advanced by Rs. 3 to Rs. 178 (per 100 kgs.). Tin put on Rs. 2 to Rs. 302 (per 10 kgs.). Zinc was done at Rs. 274 (per 100 kgs.). In the copper section, electrolytic coils and wire bars lost Rs. 2 each to Rs. 378 and Rs. 368, respectively. Electrolytic ingots fell from Rs. 321 to Rs. 318.

On the London Metal Exchange, non-ferrous metals elicited better support during the week. Lead turned distinctly firm, thanks to large purchases by industrial consumers, coupled with the marked decline in arrivals of the metal from Russia. Tin, after an initial setback, staged a smart recovery, following fresh enquiries from the Continent. Reports that the U.S. authorities did not accept low bids for the sale of stockpile surplus also imparted some strength. According to the latest Bulletin of the International Tin Council, world production of tin-in-concentrates rose from 12,100 tons in September 1962 to 12,700 tons in October, thanks to higher output in Indonesia, Malaya and Thailand, which offset small declines in Bolivia and Nigeria. Consumption of tin, too, improved from 12,000 tons to 13,300 tons. Zinc also maintained a firm front on better demand.

The London Metal Exchange proposes to introduce futures trading in aluminium, on the lines similar to those of other non-ferrous metals. Several companies are, however, said to be opposing the move, as they feel that aluminium does not fluctuate so widely as to make the cost of hedging operations worth while. It is also said that, since unlike other metals, aluminium is sold in a great variety of sizes and shapes they are not suitable for futures business. The L.M.E., it may be noted, has suggested 99.5 per cent ingots as the basis of the proposed contract.

Spot lead at London rose by £1 to £54-7/16 per ton. Three months metal improved from £54-13/16 to £55-11/16. Spot zinc moved up from £69-9/16 to £70¾. Three months metal put on £1 to £69-11/16. Cash tin fell initially from £852½ to £850½, but rallied to close at £851¼. Cash copper maintained at £234⅛ and £233⅜, respectively.

PEPPER RISES FURTHER

(Messrs. Parekh and Co.)

BOMBAY, 27*th February*

The improvement in Malabar black pepper noted last week was extended further during the week under review in sympathy with Singapore, where black pepper was lifted up from $107½ to $112½, despite rather heavy arrivals from Lampong owing to political uncertainty. Continuous inquiries from exporters who sold short to the U.S.A. and the East European countries were responsible for the firmness of ready as well as forward sections.

Ready ungarbled rallied from Rs. 258 to Rs. 272 and garbled from Rs. 268 to Rs. 282. March delivery on the ring was done at Rs. 287 and May was sought after at Rs. 295.

Ungarbled *Chaitra* delivery in Bombay rose from Rs. 300 to Rs. 306 under pressure of buying by both insiders and outsiders. *Vaishakh* was done at Rs. 315, with sellers reserved. Pressure of arrivals at Cochin and Alleppy is slowly receding, as the big planters are unwilling to market at the present price. After the end of *Ramzan*, one has to watch how the pressure of arrivals develop in Tellichery—pepper during the coming month and this will give a better idea for the final production of Malabar pepper, which is variously estimated by traders between 28,000 and 30,000 tons.

At Singapore, white improved from $162 to $165 and black from $107½ to $112½, with buyers unwilling to part with, as the situation between Singapore and Indonesia is deteriorating though the U.N. and other countries are trying to find a solution to avoid possible fireworks in South-East Asia.

Spot in New York is steady at about $0.37, as dealers and grinders, though anxious to collect contracts, do not want to buy aggressively, as they fully know that sellers in pepper, when excited, will not part with their holdings unless at higher prices.

Ready pepper in the local market is quoted at Rs. 145.

NILGIRI TEA IMPROVES

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 21*st February*

A smaller quantity amounting to only 460,000 kgs. came under the hammer in sale No. 8 held on Tuesday the 19th inst. Nilgiri quality improved and there was some brighter medium teas available. A strong general demand prevailed throughout the sale. Selected best quality Nilgiris sold at around last rates, whilst below best there was slightly better enquiry with prices following quality; similar, fannings attracted better support and were dearer. Good medium descriptions ruled firm and there was a good demand for medium brokens, whose fannings were occasionally dearer. Low medium brokens were firm with the brighter kinds dearer and, although clean fannings sold at higher rates, others were only about steady. Plainest sorts came to a fully firm to dearer market. Black leaf brokens were fully firm, whilst Middle East type fannings ruled dearer. Whole leaf grades, particularly orange pekoes, tended dearer, as did tippy sorts. The limited selection of unorthodox teas on offer were well supported at higher levels.

The quotations (per kg.) were as follows:

	1963	1962
	Rs.	Rs.
Low mediums	4.30-4.80	3.85-4.05
Mediums	4.80-5.20	4.10-4.90
Good mediums	5.30-6.00	4.90-6.20
Nilgiri B.O.P.	6.00-11.70	5.50-11.50

The average price realised in sale No. 8 was Rs. 5.20 per kilo as compared with Rs. 5.03 a week ago and Rs. 5.82 in the corresponding sale last year.

A total of 208,000 kgs. was offered in dust sale No. 8 held today. The market met with good general demand. Highgrowns sold at around last rates, whilst C.T.C. types were dearer. Low mediums tended slightly dearer, while better mediums showed an appreciable advance. Black grainy sorts were also dearer.

The average price realised in dust sale No. 8 was Rs. 4.39 per kilo as against Rs. 4.28 a week ago and Rs. 3.96 in the corresponding sale last year.

Colombo: Just over 5½ million lbs. were offered and the market opened to strong demand with best highgrowns dearer, particularly where quality was improved. Below best, prices ruled firm to dearer as was the case with mediums and uvas. Low mediums came to a strong market, whilst lowgrowns were steady. All fannings elicited improved demand at dearer rates, except for black leafy sorts.

London: *North Indian and other growths*: In Monday's auction, there was good demand and prices ruled fully firm to dearer.

Ceylon and South Indians: In Tuesday's sale, there was good demand at generally firm rates, but C.T.C. descriptions were again somewhat easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 9: 444,000 kgs. offered. Good demand. Plain and low mediums firm. Brighter mediums and good mediums dearer. Highgrowns irregular and lower. Unorthodox firm to dearer."

DEMAND FOR TEA IMPROVES

(From Our Own Correspondent)

CALCUTTA, 26*th February*

Strong and improved demand for the 70,962 packages on offer was a feature of the No. 36 leaf tea export sale held here yesterday. The plainest orthodox kinds met with keen competition even at higher levels. The plain sorts and the better liquoring Dooars were steady, but selected lines like exportable fannings improved slightly. Assam teas came in for a firm market and fetched prices according to the liquoring properties.

Quotations in rupees, including excise duty, per kg. were: Clean plain pekoe 4.80 to 5, plain B.P. 4.10 to 4.30, plain fannings 4.10 to 4.40, medium Assam C.T.C. B.P. 5.50 to 5.80, medium Assam C.T.C. fannings 5.20 to 5.50, best Assam C.T.C. B.P. 5.90 to 6.10 and best Assam C.T.C. fannings 5.70 to 6.

The internal dust tea sale No. 35, which was held on Saturday the 23rd inst., also attracted good demand. Offerings totalled 28,806 packages. Although irregular, medium C.T.Cs sold well. The fibrous descriptions fetched more on better support. The plain and medium orthodox teas opened firm and improved further near the close, as demand picked up. Legg-cut teas were sold readily.

Quotations in rupees, including excise duty, per kg. were: Plain orthodox 4 to 4.40, medium Assam 4.40 to 5, legg-cut 5 to 5.40, medium Assam C.T.C. 5.60 to 6.20 and good Assam C.T.C. 6.60 to 6.80.

Exports of tea from India in 1962 showed an increase of over 7,000,000 kgs. at 211,814,249 kgs., as against 204,640,077 kgs. in 1961. Though her offtake during the year was less by more than 2.2 million kgs., the U.K. continued to be the major traditional importer, followed by the U.A.R., the U.S.S.R. and the U.S.A. Exports to the last three mentioned countries showed a steady rise over the previous year's level.

Whereas India has maintained its position in the export markets without exposing the home market to any risk, Pakistan, an exporting country since its formation 15 years ago, has now become an importing nation following its Government's decision to import one million pounds of tea on barter against chrome and *desi* cotton from any source. Imports have been announced by the Government in order to meet internal shortages and arrest rising trend in the price. Since the control was lifted in May 1962, the price of tea has more than doubled. Besides the quantity announced by the Government, Pakistan will buy an extra quota of tea from Ceylon this year, raising its total purchases to one million pounds, according to a joint statement issued by the Trade Ministers of Pakistan and Ceylon on Saturday the 23rd inst. Ceylon is to import about 20,000 tons of Sindhi rice and 4,000 tons of potatoes from Pakistan and is likely to increase its exports of betelnuts to that country.

The U.K. tea stocks in London and provincial warehouses for the week ended 15th February 1963 totalled 146,356,850 lbs., as against 144,905,922 lbs. in the previous week. Deliveries during the week totalled 11,184,166 lbs. and landings 12,635,094 lbs. Total afloat was 37,250,340 lbs., including 18,211,950 lbs. from Calcutta, 810,600 lbs. from Cochin, 12,576,060 lbs. from Ceylon and 5,651,730 lbs. from other ports.

The average price realised at the London auction during the week ended Friday the 22nd inst. was 50.34d. per lb., as against 50.19d. in the previous week and 52.67d. in the corresponding period last year.

FIRM TONE IN FOODGRAINS

(From Our Own Correspondent)

HAPUR, 25*th February*

Steady to firm conditions prevailed in foodgrain prices during the week under review on good consumer demand in the face of a declining stock position because of the fag-end of the season. Wheat, rice and coarse grains sought higher levels and pulses, too, were steadier.

Wheat prices here advanced by 67 nP to 99 nP per quintal according to quality. The average quality was now quoted at Rs. 40.53 to Rs. 40.87 and the farm quality at Rs. 43.54 to Rs. 44.88 a quintal. Local wheat stocks declined sharply to around 50,000 maunds. The coarse quality rice and *basmati* hardened by Re. 1.34 to Rs. 2.67 per quintal on increasing seasonal demand in the face of poor arrivals from producing areas. Local rice end prices were:—Rice *basmati* superior Rs. 83.06 to Rs. 91.09, *sela basmati* Rs. 77.70 to Rs. 83.06, *mainpuri* Rs. 52.92, *ramajwayan* Rs. 61.62, *raimunia* Rs. 64.30 and *gadda* Rs. 50.94 per quintal.

Gram ruled steady. Stocks left with trade were small. Prices were Rs. 41.19 per quintal for the local produce and Rs. 41.53 per quintal for the Punjab variety. Maize prices also tended to rise due to poor arrivals and better demand and improved by 67 nP to Re. 1.34 per quintal during the week to quote at Rs. 26.79 to Rs. 30.38 per quintal.

In pulses, peas improved slightly on better outside buying enquiry. Peas *dara* was quoted at Rs. 28.47 and the farm quality at Rs. 33.49 per quintal. Peas *dal* was quoted at Rs. 33.49 per quintal. Local peas stocks declined to 15,000 maunds. Crop prospects were fair. *Urd dal* prices improved on better demand was quoted at Rs. 72.34 per quintal. *Urd* was quoted between Rs. 60.28 and Rs. 68.30 per quintal. *Arhar* prices were unchanged at Rs. 48.23 per quintal. *Moong*, *masoor* and other *dals* were listless. Week-end prices were: *Arhar dal* Rs. 69.66, *moong* Rs. 45.55 to Rs. 48.23, *moong dal* Rs. 61.62, *masoor* Rs. 50.91 to Rs. 53.58, *masoor dal* Rs. 58.94, gram *dal* Rs. 48.23 and *moth dal* Rs. 48.23 per quintal.

JUTE GOODS DECLINE AGAIN

(From Our Own Correspondent)

CALCUTTA, 26*th February*

Both jute goods and raw jute suffered a further setback in values during the week under review. Jute goods were subjected to persistent selling pressure, following the reported cancellation of shipping instructions covering about ten million yards of hessian. Overseas enquiries for sacking as well as hessian were poor. Nor was the offtake for internal consumption encouraging. In the futures section, B. twills February delivery moved down from Rs. 113.30 to Rs. 111.55 per 100 yards and hessian (40″×10 oz.) from Rs. 49.46 to Rs. 49.04. May deliveries were quoted lower still at Rs. 113.75 and Rs. 47.96, respectively. Ready B. twills fell by Re. 1.50 to Rs. 112.50. Hessian dropped a rupee to Rs. 49.25.

In sympathy with jute goods and in view of the subdued demand for the raw material, fibre prices also drifted lower. Assam bottoms (March contract) eased by a further 50 nP to Rs. 28.50. At Cossipore, Assam bottoms and Jungli mesta lost a like amount, the former to Rs. 27.50 and the latter to Rs. 22.50. Floating stocks were estimated at 350,000 bales.

The jute mills have been asked to buy another 530,000 bales of raw jute next month. This is the monthly purchase quota which the Jute Commissioner, Mr. G. C. L. Joneja, announced on Monday the 25th inst. The quota brings the total release so far out of the current season's output of jute and mesta to 6.77 million bales, leaving a balance of just 330,000 bales. This quantity is considered to be too small to cause any marketing problem, in view of the clear margin of five to six months before the 1963-64 crop appears on the market.

The mills together held as at the end of January a total of 3,025,000 bales of raw jute, including the 625,000 bales held on J.B.S.A. account. No further quota has been allotted either to the Jute Buffer Stock Association (J.B.S.A.) or to the State Trading Corporation. The Jute Commissioner made it clear that the system of compulsory purchase of jute under quotas as a regulatory measure had come to stay. Incidentally, he disclosed that the minimum price for the new crop would be made known in a week or so. He also revealed that sales of raw jute for export so far aggregated 120,000 bales, mostly to East European countries. The total exports for the whole season were expected to be of the order of 150,000 bales.

A threefold plea for (*a*) fixing the minimum price of raw jute at Rs. 35 per maund, (*b*) allowing immediately free export of jute and (*c*) imposing an import duty of Rs. 10 per maund on Pakistani raw jute has been put forward by 129 legislators from Bihar and one Member of Parliament in a joint memorandum submitted to the Prime Minister. The setting up of a commission to inquire into the various aspects of the jute economy has also been urged. It is suggested that the various Government agencies should always be ready to intervene and purchase sufficient quantities of raw jute whenever the price tends to fall below the fixed minimum level.

It is not the legislators alone who have expressed anxiety over raw jute prices. The U.P. Government, too, has done so. In a Press note, the Government says that it has been watching with concern for sometime past the downward trend in the prices of raw jute. This, it is pointed out, will affect the production of jute goods which constitute one of the principal earners of foreign exchange and which are so essential for packing the various materials required for defence purposes.

The Assam Co-operative Apex Marketing Society has started buying raw jute through its branches and service co-operatives under the Assam Government's scheme to check falling prices. The S.T.C. has placed sufficient funds at the disposal of the State Government. The National Agricultural Marketing Federation has agreed to purchase a large quantity of jute from Assam. The I.J.M.A. has also asked its member-mills to purchase jute from Assam on a priority basis. The railway and steamer services have been asked to give priority for the booking of jute to Calcutta.

SUGAR RECEDES

(From Our Own Correspondent)

HAPUR, 25*th February*

After an early sharp advance on continued buying support from the consuming areas of Gujarat, M.P., Punjab and Delhi, sugar prices here reacted following declaration by the Government that it would check the rising trend in sugar prices by releasing adequate stocks. Slackness in demand and eagerness on the part of mills to dispose of stocks were also responsible for a fall of about 25 nP to 75 nP per quintal in prices in the week-end. Enforcement of licensing system for sugar dealers in Delhi had also a bearish effect, as demand from that centre subsided. Trading, however, continued restricted, despite rumours of a likely increase in excise duty on sugar in the coming budget. Cane supply position to factories deteriorated further and most of the mills in West U.P. were forced to close their crushing season. Sugar production in U.P. is likely to be 20 per cent less than last year. Week-end prices of sugar here were: Spot delivery Rs. 113 per quintal, mill delivery (D-30) Amroha Rs. 109.50, Dhampur Rs. 109.25, Seohara Rs. 109.25, Meerut Rs. 112, Bijnore Rs. 109.50 and Simbhauli E-30 Rs. 111.50 per quintal.

Sugar prices drifted lower also in the Muzaffarnagar market, as traders were hesitant to enter into long commitments on expectations of a fall in prices following Government's assurance to release more sugar to check the rising trend in prices of the commodity. Barring a few, all the factories in the region have closed their present crushing season.

Khandsari eased by Re. 1.34 per quintal in the later part of the week, as demand tapered off while stocks rose. During the week, prices ranged between Rs. 96.45 and Rs. 104.49, the corresponding prices last year being much lower at Rs. 66.98 to Rs. 89.09 per quintal according to quality.

DELHI LETTER

FREE TRADE ZONE AT LAST

KALDOR VINDICATED

From Our Special Correspondent

NEW DELHI, *26th February*

THE long-drawn controversy over the feasibility of setting up a free trade zone at Kandla port has been given a decent burial with the Government's approval of the proposal. It is proposed to set up a 60-acre industrial area at this west coast port which will be isolated, enclosed and policed, where foreign or domestic merchandise of every description, except such as prohibited by law, may be brought in without being subjected to customs restrictions, and manufactured, assembled, repacked and exported. The main objective is to enable industries to produce goods at the minimum possible cost by eliminating the customs or excise duties on the raw material imported, without any sort of governmental restrictions or regulations, and thus make the products competitive in overseas markets.

The proposal was mooted three years ago but it met with strong objection from the Planning Commission and some economic ministries of the Union Government on the issues of costly imports of raw materials, components and other goods requiring huge drain of foreign exchange. It was contended that, instead of earning foreign exchange by exports, it would only provide a starting point for large-scale smuggling of prohibited items into the closeby domestic markets. Another objection was that, in case the manufacturers in the zone were unable, or unwilling, to export their products, the Government would not be able to do anything about it except to open up the starved and profitable home market for their manufactures after imposing the usual customs and excise duties. But a sub-committee of the Cabinet, which was specially appointed to examine the proposal in all its aspects, has rejected these objections. It is also suggested that severe penalties should be imposed on goods produced in the free trade zone, if they are despatched to other parts of the country instead of being exported.

Free trade zones have been established in many places in the world, for example, Hamburg and Bremen in West Germany; Copenhagen in Denmark; New York, Seattle, New Orleans and Los Angeles in the U.S.A. It is claimed that these zones have added a great deal to the economic activities and public revenues of their respective countries. As a result of the success of these zones in the U.S.A., it has been decided to add two more free trade zones in that country, one in Peurto Rico and the other in Toledo, Ohio.

In India, the question of setting up a free trade zone has been under consideration for some time. The Export Promotion Committee (1957), in its report, had recommended that the Government should examine the feasibility of encouraging entrepot trade by providing facilities near not-so-congested ports like Kandla and Cochin.

The main considerations for the selection of site for the zone are that it should be near a good harbour with ample transport facilities; availability of plenty of skilled and unskilled labour in and around the area; it should be an area which can be easily isolated from the rest of the country (preferably a nearby island); and availability of sufficient water and power in the area. An officer appointed to examine the suitability of Kandla for this purpose, reported that, "weighing the likely benefit against the pitfalls and dangers, we may well hope that, with determination and a practical approach, we can successfully utilise the mechanism of the free trade zone as one important step in the effort to tilt the balance of foreign trade in our favour."

With the first hurdle crossed, discussions will now begin between the Union Ministries of Finance, Transport and International Trade to find the Rs. 3 crores needed to start the project.

Trade bodies in different parts of the countries have been making representations to the Union Government to set up free trade zones in several coastal areas. A delegation of the All-India Manufacturers Organisation, which toured Kerala last year to study the possibilities of industrial development in that area, recommended that a free trade zone should be set up there. Cochin has been considered highly suitable for this purpose because it has a good harbour with an island near it which can be isolated with a customs cordon. Additionally, plenty of skilled and unskilled labour is available in the area, adequate water and power supply could be arranged, cheap inland water transport facilities are available for movement of raw materials and goods to and from the area.

Another port on the west coast offering similar and more facilities is Goa which till recently was almost a free port. In fact, at the time of reassessing Goa's import and export trade, it was suggested that the possibility of setting up a free trade zone in the Marmagoa area which offer special advantages for this purpose, should be fully explored.

A similar suggestion for Pondicherry has also been received. It has been stated that the development of the port, the existing industries such as textiles, vegetable oil, matches, soap, paper, tobacco products, the proposed industries like leather goods, wood-based industries, sugar, cement, etc., and the new industries such as cycle and cycle parts, agricultural implements, electric accessories, electric motors, starch and sago manufacture, recommended by the special survey report on small-scale industries, should commend the establishment of a free trade zone for the rapid growth of the trade and industry of Pondicherry. There was also a proposal for the revival of Karaikal as a free port as it existed prior to the *de facto* transfer of this former French territory, or even as a free trade zone. But the main obstacle in this direction is that, it being a minor port, the facilities available here are too inadequate for the purposes of a free trade zone.

Among the other ports on the east coast which seem suitable for setting up free trade zones are Vizagapatnam, Paradeep (when developed) and Nagapattinam. The last named though a minor port, commands a large passenger traffic and trade with countries like Burma, Malaya, Singapore and Ceylon.

The official thinking is to limit the free trade zone operations at Kandla for the present, learn from its experience and then, if found a paying proposition, to go ahead and set up similar zone at other suitable coastal areas. But this opinion is not shared by the industrial and business circles. There is already the experience of several free trade zones abroad to draw upon and it is not necessary to wait for the Kandla experiment to show progress which may take anything from three to five years. Moreover, it may even be that a free trade zone, set up at a comparatively more suitable place than Kandla, say Goa or Cochin, may show better results in a shorter period. Their recommendation would be the simultaneous setting up of free trade zones at suitable coastal areas.

Tax Arrears

The first ever probe into the receipts side of the Union Accounts (Civil) by Parliament's Public Accounts Committee has uncovered a sordid tale. In its sixth report, the P.A.C. has exposed a "huge back-log of income-tax arrears—Rs. 253.49 crores by 31st March 1961—out of which Rs. 136.76 crores were effective arrears." In addition, it has also brought to light gross underassessment to the tune of Rs. 120.77 crores. A test audit of 235 out of 1,310 income-tax wards showed underassessment in 1,621 cases.

The continuing nature of this malady was confirmed by Mr. B. R. Bhagat, Deputy Minister of Finance, when yesterday he told the Rajya Sabha that the total effective arrears of income-tax as on 31st March last year amounted to Rs. 149.42 crores, a rise of Rs. 12.62 crores in the course of a year. He also informed the House that the excise duty outstandings had risen by Rs. 1.11 crore to Rs. 4.17 crores on 31st March 1962, as compared with those a year ago.

There have been repeated criticism in Parliament of the Government's failure to effect speedy tax recovery. Assurances have been forthcoming aplenty, but it now appears that they remained confined to mere verbal exercises. The Government had categorically denied knowledge of tax evasion of the order of Rs. 200 crores annually, as estimated by Prof. Nicholas Kaldor. But the findings of the P.A.C. amply vindicates the report of the British economist.

The P.A.C. has also rapped the Government for its habit of underestimating the revenue at the time of framing the tax proposals. In 1960-61, the difference between the estimates and actuals was Rs. 36.34 crores. The actuals of income-tax in the same year were Rs. 278 crores, as against an estimate of Rs. 240 crores.

The Committee's scrutiny has brought to light an astounding case of evasion of income-tax of the order of Rs. 46 lakhs by a foreign company assessed for Rs. 50 lakhs. The company paid only Rs. 4 lakhs provisionally and asked the Central Excise Department to collect the rest from a State Government which was supposed to owe money to it on account of certain contracts. In the meantime, the foreign company was allowed to export its machinery and also terminate its business in India on this assurance. But later inquiry revealed that the State Government referred to owed nothing to the foreign firm.

In the case of the customs, the Committee has shown that they had underassessed a consignment of sugar imports to the extent of Rs. 6.20 lakhs. And several more of similar instances can be cited from official reports to show the tremendous laxness that has crept into our tax collecting machinery.

While the general public will gratefully acknowledge the vigilance of the Public Accounts Committee, there will certainly be questioning of the fresh imposts in the Budget. A pertinent question is: why not make good the arrears by more energetic action to reduce the incidence of new taxes commensurately?

PLANTING

(*Concluded from page 361*)

the blenders in particular, it explained how C.T.C. was now widely used, because even a small percentage of C.T.C. would lift the liquor of a blend. The blenders expressed interest in this discussion and, if this is followed up with samples and good selling, there is considered to be every prospect of Indian C.T.C. being used on a much wider scale than at present in the New Zealand blends.

The New Zealand Government maintains a strict and effective price control on tea, and the margin of profit at each stage of the distribution process is regulated. This again tends to encourage conservatism in blending. At least 80 per cent of packet tea retails at around 7*s.* per lb. Since the total profits allowed by the Government at each stage of the distribution chain are limited, the result is to create a ceiling price above which blend prices cannot go. The effect is to limit New Zealand buyers' interest to about 4*s.* 4*d.* c.i.f. (Rs. 6 approx. per kg. in Indian auctions).

Three notable suggestions designed to augment tea exports to New Zealand have been made by the delegation. One, the Tea Board sampling service should be introduced along lines similar to those recommended for the trade in Australia. Two, tea buyers and blenders of prominent firms in New Zealand should be invited, one by one, at the expense of the Board, to visit tea areas and auctions in both North and South India. Three, a part-time liaison officer should be attached to the Trade Commissioner's office at Wellington, entrusted with the task of organising, in some selected restaurants at both Wellington and Auckland, the service of Indian tea, coupled with suitable promotional activity.

The total internal consumption of tea in Pan-Malaya is estimated at 9.5 million lbs., of which 80 per cent is accounted for by dust tea, the balance being the share of leaf tea. The local Chinese merchants are interested in high-grown dusts. The Pan-Malayan tea market presents a picture of trade dominated by Indonesian teas, because of their price advantage, proximity to the market and trade practices. The delegation, however, points out that some scope does exist for export of Indian tea dust to Malaya, provided prices are competitive and dusts are of black colour and well made.

ENGINEERING

(*Concluded from page 370*)

State for the manufacture of silk fabrics. The forest wealth near the Mettur region affords great possibilities for the development of paper and pulp industry. And at a time when paper scarcity has become a serious problem owing to the war emergency, suitable steps might be taken to develop this industry, which is dependent essentially on the utilisation of hydro-electric power in close proximity to the bamboo-growing areas and on the availability of a large quantity of chemicals like bleaching powder, caustic soda, etc., at cheap rates. Mettur seems to fulfil these requirements. The Mettur Chemical and Industrial Corporation is already producing alkali, bleaching powder and other chemicals. Again cheap power is now available to produce cement and to exploit the ores of Salem. Already the cement factory at Madukkarai near Coimbatore is the largest individual consumer of electric power and the thermal station at Neyveli seems to be full of great possibilities. Thus the further development of industries and their location will be largely governed by the extent to which power resources are developed in the State. It may also be noted that the rapid extension of electricity in the State of Madras has helped to invigorate the countryside by providing cheap power for small industries and, with the radio and electric light, it has tended to make rural life in the State less monotonous and more pleasant.

COMPANY AFFAIRS

(*Concluded from page 374*)

designed to raise capacity to 1,000 tons, the working of the Company will improve considerably.

The Directors feel that the Maharashtra State Agricultural Income-tax Act, 1962, will very adversely affect sugar companies in the region. As the Act is applicable with retrospective effect from the year 1960-61, a provision of Rs. 1.15 lakh has been made in respect of that year. As for 1961-62, the Company does not expect any taxable income chargeable under the Act. Income-tax assessment for the accounting year 1958-59 was completed by the Department last year.

In spite of the recent withdrawals from reserves, the Company's paid-up capital of Rs. 50 lakhs is adequately covered by the retained profits amounting to Rs. 49.87 lakhs. During the year, bank borrowings were reduced from Rs. 66.63 lakhs to Rs. 51.47 lakhs, while unsecured loans were raised slightly from Rs. 3.83 lakhs to Rs. 8.39 lakhs. Together with current liabilities and provisions, the total indebtedness to outsiders works out to Rs. 112.55 lakhs, as against which investments and current assets, loans and advances aggregate Rs. 149 lakhs. The gross block, which increased during the year from Rs. 116.64 lakhs to Rs. 118.79 lakhs, has been well written down to Rs. 59.12 lakhs. Work-in-progress, amounting to Rs. 4.39 lakhs, is shown separately.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CVI. No. 2707 BOMBAY, 9th MARCH 1963 PRICE Rs. 2

COMFORT FOR COMMUNISTS

NEARLY a week has passed since we gave expression to our first thoughts on Mr. Morarji Desai's fifth Budget covering the fiscal year 1963-64 (*vide* page 346 of *Commerce* dated 2nd March 1963). A detailed examination of the Budget during this interval has only served to confirm our first impressions. Indeed, it seems to us that one of the objectives of the tax proposals is to give a fresh push to the country towards the Congress Party's avowed goal of socialist pattern of society which in effect means State capitalism. It will be recalled that the ultra-socialists in the Congress Party and the Communists in this country have been saying that the emergency caused by Communist China may be taken advantage of by the rightist elements in the country to dilute the mixed economy in their favour. Significantly enough, Mr. Khrushchev himself expressed the fear when China attacked India that the reactionary (according to his conception) forces in India had been provided with an opportunity to raise their heads and that progressive (again, according to his conception) forces would be suppressed, if the emergency continued. Prime Minister Nehru, too, has been voicing this misgiving, albeit indirectly; otherwise, there is no need for him to keep on saying that the country would abandon neither its policy of non-alignment nor the socialist pattern of society. The taxation proposals in the Budget have been so designed as to make sure that the rightist elements do not raise their heads and that the mixture of mixed economy is made more red than it is.

The Finance Minister and his officials are highly intelligent people. Of all the Central Ministries, the Finance Ministry is the one that is in closest touch with the world economic organisations and economic thinking in the Western world. They must have surely been aware of the implications of their tax proposals to the private sector even when they prepared them. They knew the state of the capital market. They knew that the need for more foreign private capital and foreign specialists (on management, engineering and science) was imperative. They had been told by businessmen that, while they recognised and conceded that the emergency would call for large additional resources for defending the country, the corporate sector, too, would require more finance to expand industrial production and to provide larger employment and that, therefore, in framing its plans for raising more funds, the Government should see to it that the requirements of this sector were taken care of. Many a Government spokesman, too, had reiterated that the public sector alone would not be able to deliver all the goods needed for defence and strengthening the economy and that the private sector also had a vital role to play in achieving these objectives. Many businessmen, some practical-minded economists and bankers had shown how the Government could raise the money it wanted to face the political emergency without creating a financial emergency. Yet the Finance Minister has come forward with proposals which would, if implemented as they are, drain away the resources of industries and businesses, undermine confidence in the capital market, seriously retard the inflow of foreign private capital and talent, place a premium on inefficiency and extravagance while penalising efficiency, hard work and thrift, and, finally, aggravate inflationary pressures, thereby exposing the rupee to further corrosion, both internally and externally.

What is one to think of a Government which does all these things not unwittingly, but quite knowingly? The only explanation that fits in is the determination to pursue relentlessly a political ideology which, in a democratic set up, favours laziness, corruption and fecundity. The ultimate end of this pursuit will be communism. It is only a question of time. One need not have any doubt about it. The steady growth of the Communist Party in India since the advent of Congress Government is there for all to see. The crafty Communist Party is critical of the inflow of foreign capital, wants nationalisation of banks, export-import trades and strategic industries, misleads the common man by exaggerating the misdeeds of some businessmen and seeks to thwart the growth of private enterprise by advocating measures that would dry up the sources of its sustenance. It is to this Party that Mr. Morarji Desai's fifth budget gives the maximum amount of comfort and satisfaction. And yet, ironically enough, we are asked to believe that this Budget is designed to fight the second largest and most menacing Communist regime in the world.

It is a fashion among Congressmen to argue that, in a country of have-nots, the rich must agree to accept larger burdens of taxation, in order to keep off communism and to protect private enterprise. There is a limit to this sacrifice, especially when it is not put to use effectively to check the spread of communism. It is plain common sense that the only way to rid the poor of poverty is to provide more gainful employment opportunities; in other words, more production and yet more production is the answer. That is the surest way to usher in genuine democratic socialism. But the Super Profits Tax and some other features of direct taxation—such as special surcharges, disallowance, for tax purposes, of the excess of incomes over Rs. 5,000 per month ignoring the realities of the situation—cut at the very root of production. The country will soon be faced with a financial crisis of an unprecedented magnitude, if the inequitable features of the new tax proposals are not eliminated. Both defence and development will suffer.

Before going into the details of tax proposals, one must see why they have been necessitated. The answer is simple: a hundred per cent increase in the estimate of defence expenditure. One is not in a position to judge whether a defence expenditure of this magnitude is necessary. None, however, wishes to question the Government on this issue, lest it should give rise to the impression that one is not supporting the defence effort. Almost everyone, even the ardent Gandhi-ite, now wants the country to be militarily strong. Surely it is the non-communist critics that have been telling the Government that only military strength, based on a strong and efficient industrial-cum-agricultural economy, that will deter an enemy from attacking this country and safeguard its democratic way of life. Nevertheless, one is tempted to ask whether the defence expenditure has not been overestimated and whether it is within the spending capacity of the Government. The same doubt occurs when one considers the developmental expenditure under the revenue, as well as the capital, budget. It seems to us that the Government has unduly inflated the expenditure side, in order to make out a case for imposing heavy taxation on the people. It has also underestimated the impact of its tax proposals in order to sugar-coat the bitter pill.

Another reason for heavy taxation confronting the people is the policy of independent foreign policy, the failure to realise the danger of international communism and to join hands *in good time* with countries that are determined to contain communism, and, above all, the adoption of certain puritan social reforms that discount human nature but which cost a lot of money. However much desirable, these reforms are a luxury for a poor country like India. If we must still indulge in these expensive luxuries just because of our concepts of national pride and prestige and human dignity, we have to pay a price; that price is spelt out in the Budget for 1963-64. If salt duty is reintroduced, it will yield a revenue that will make the Super Profits Tax superfluous. If prohibition is replaced by a temperance movement, the increase in indirect taxation can be minimised to the tune of Rs. 75 to 100 crores. There is no earthly reason except false notions why these easier forms of taxation should not be preferred to the other back-breaking measures the Government has now chosen.

Yet another reason for heavy taxation is the desire to demonstrate to the friendly countries from whom this country has sought aid to meet the Chinese menace that Indians themselves are making all the sacrifices they can to defend their motherland. The Finance Minister is perfectly right when he says that we should tax ourselves pretty hard before expecting the people of friendly countries to make sacrifices for our defence. But that does not mean that taxes should be so levied as to hurt the economy. Excepting, perhaps, Russia, which has been giving only token military help, we wonder whether the friendly countries in the free world such as the U.S., the U.K., Canada and West Germany will feel satisfied with the methods of new taxation adopted by Mr. Morarji Desai. Every one of these countries has been shouting from the housetop that the underdeveloped countries should depend more and more on private capital to meet the shortage of their external resources and to secure for their economy a higher rate of growth. It would be surprising, indeed, if these friendly countries approved of a fiscal policy that would ruin the health of the goose that lays golden eggs, if not kill it. On the contrary, our Government would have made a better impression on them, if it had displayed a high sense of value for money rather than for futile social reforms and visible evidence of economy in expenditure.

The Super Profits Tax contains so many inequitable features and its disincentive effects are so heavy that the best thing to do would be to drop it. Corporate taxation in the country is already one of the highest in the world and so also the taxes on individuals. If, however, for political reasons the corporate sector must be called upon to make further sacrifice, the total rate of corporate taxation may be raised by levying a surcharge of 5 per cent, with a clear undertaking that it will be abolished once the emergency is over. This will easily bring in an additional revenue of Rs. 15 to 18 crores, restore confidence to the capital market, and reassure foreign investors that the extra tax would only be a passing phase. If this cannot be done, the S.P.T. must be drastically modified to make it equitable. The basis for determining the super profit should be broadened on the lines of the Tariff Commission's definition of capital employed, the rate of exemption should be raised from six to twelve per cent, a provision should be made to carry forward not only losses, but also insufficiency of

profits, the powers given to income-tax officers to question certain items of expenditure should be on par with those pertaining to the determination of assessable profits for purposes of income-tax and corporate tax, and an assurance should be given by the Government that the S.P.T. would be abolished as soon as the emergency is over. The most serious among the other objectionable features in the new direct taxation is the enhancement of the surcharge on partnership firms to 20 per cent and the limitation of salaries to employees to Rs. 5,000 per month for purposes of tax. These, too, should be eliminated from the Finance Bill in the interest of rapid development of the country. The scheme of compulsory deposit should be confined only to income-tax payers, small traders in towns and cities and agriculturists whose incomes exceed Rs. 3,500 per year. This would be more economical from the point of administration. In the sphe of indirect taxation, the increase in the duty c kerosene used for household purposes should be given up. The increases in excise duties on raw materials and intermediate goods should be carefully scrutinised and re-adjusted with a view to ensuring that they do not aggravate the cost inflation further. In all an additional taxation of Rs. 200 crores should more than suffice. This may mean an increase in deficit financing to Rs. 225 crores (assuming that all the expenditure budgeted for will be incurred, a big assumption, indeed), but this could be avoided by pruning the non-development expenditure and postponing some of the Plan projects that can conveniently wait for more auspicious times. Failure to readjust the budget proposals on these lines will be even more inflationary, as production facilities will not expand to the extent necessary. Already some of the approved industrial projects of great value to the country are facing the danger of being dropped by the sponsors as a result of the injudicious tax proposals. Another risk is the possibility of a large number of foreign experts migrating to other parts of the free world. It would be a calamity, if these disturbing prospects were allowed to materialise.

THE ECONOMIC SCENE

THE official review of economic developments in the last two fiscal years and estimate of prospects for 1963-64, contained in the *Economic Survey: 1962-63* which forms part of the Union Government's latest budget papers, seeks "to provide a background for the consideration of budgetary and economic policies for the coming year." What a dreary, background it is! Almost in every respect it is a depressing story of lagging performance and stresses and strains. The one sector which has been the biggest single factor responsible for the low rate of economic growth in 1961-62, as also, probably in 1962-63, is agriculture. An increase of only 3.3 per cent in national income at current prices, or 2.1 per cent at constant prices, in the first year of the third Plan, as compared with the last year of the second, had its adverse economic ramifications all round and was, therefore, too significant to be ignored. And yet the authors of the *Economic Survey* have permitted themselves the observation that "in itself, the low rate of growth in 1961-62 could not be assigned much significance, as it reflected, in the main, the failure of agricultural output to advance beyond the record level of the preceding year on account of weather conditions."

But it must be said to their credit that they have subsequently recognised two major consequences of failure on the agricultural front. That the slackening in the rate of industrial growth was in response not only to shortages of power, transport, coal, steel and imported raw materials but also to shortfalls in agricultural production represents the reference to one such consequence. The other reference is to the effect that the absence of any increase in agricultural output, combined with continuing increase in demand, imparted a firmness to prices, with the result that an increase of 9.3 per cent in the prices of foodgrains pushed up the general level of wholesale prices by 6.1 per cent between March and August 1962. If the relatively poorer agricultural performance of 1961-62—poorer as compared with 1960-61—have had these adverse consequences in 1962-63, is there any reason to suppose that the consequences are going to be much different in 1963-64, now that it is clear that agricultural production in the 1962-63 season will be about the same, in the aggregate, as in the 1960-61 season? The authors of the *Economic Survey* themselves have been unable to make any confident forecast of a *substantial* improvement in this sector, as will be seen from their following observations:

"Economic developments in 1963-64 would be influenced greatly by the outturn of the agricultural crop during the 1962-63 season. This year's *kharif* season was marked by deficient rainfall in June over most parts of the country and this was followed by excessive rainfall and floods, as well as locust invasions, in some regions. Despite these adverse weather conditions, the overall prospects for agricultural production during the 1962-63 season appear to be *satisfactory* (italics ours). The total output of foodgrains is expected to be larger than in 1961-62, with the notable exception of rice. There are definite indications of a much better cotton crop, though both sugarcane and jute may register a decline in output."

So, in a base-broadened economy, where the pace-setter for growth continues to be agriculture, *satisfactory* agricultural performance, involving only marginal increases in individual crops in the current season, will still leave things where they were, or, probably in a worse state. Any distinct improvement in the agricultural situation can be expected to flow only in 1964-65 from the renewed emphasis that is being put, in the context of the emergency, on agricultural production programmes in the coming season. Currently, however, the agricultural background to the defence effort is far from reassuring. In judging the impact on the economy of the burden, in diverse forms, of defence mobilisation, the state of the agricultural base thus compels persistent and insistent attention. This does not mean that several other relevant factors are not of much consequence. Far from it, for such factors as industrial production, budgetary transactions, conditions in capital and money markets, prices and cost of living, foreign trade, and balance of payments act and react on one another and are cumulatively no less significant than agricultural production in any appraisal of the state of the economy.

To examine these factors one by one. Industrial production, which in several lines—such as agricultural implements, pumpsets, fertilisers and pesticides—also contributes to agricultural growth, is the first to be considered here. It is well known that the rate of growth in industrial production in 1961-62 was only 6.8 per cent—a rate much lower than the 10-11 per cent achieved in the last two years of the second Plan. There was, however, a slight improvement in the first two quarters of 1962-63, in that the average rate of increase in those two quarters was about 7.2 per cent above the average of the corresponding period of 1961-62. In response to the efforts made both before and after the onset of the emergency, production in a numbr of basic industries this year, according to the *Economic Survey*, is expected to increase significantly over the level reached last year. On current indications, the output of coal in 1962-63 is likely to be 62 million tonnes, as against 55 million tonnes in 1961-62, of cement 8.7 million tonnes against 8.3 million tonnes and of saleable steel 4.1 million tonnes against 3.2 million tonnes. The railways are expected to carry 175 million tons of freight in the current year, as against 160 million tons in 1961-62. The addition to installed capacity for power generation this year, though still small in relation to requirements, is expected to be 650 m.w., as against 580 m.w. in the previous year. In view of the spur provided by the emergency, it is just possible that industrial production as a whole will have increased by not less than 7.5 per cent in 1962-63, as compared with 1961-62. As for the prospects for 1963-64 in this sector, the *Economic Survey* takes a somewhat optimistic view, as will be seen from the following quotation:

"In general, the outlook for industries in the coming year appears promising. The textile industries will do better in view of the adequacy of cotton and raw jute production in the current agricultural season.... The incentive for higher production of cement, through the grant of increased price on additional production, is likely to lead to increase in cement capacity and production.... Prospects for a number of engineering and chemical industries are, however, difficult to judge at this stage, particularly in view of uncertainty regarding availability of imported materials and components.... With greater availability of basic supplies—coal, steel, power and transport—an all-round increase in industrial production can be expected, *provided adequate foreign exchange is available to meet the complementary materials and components which have to be imported from abroad.*" (Italics ours.)

Well, there is the rub, and that is how the balance-of-payments question comes immediately into the picture. It will be recalled that a major disturbing development during the first half of 1962-63 was the continued pressure on balance-of-payments. The overall deficit in balance-of-payments (as measured by the decline in aggregate reserves and net drawings on the I.M.F. (was only marginally smaller in April-September 1962 (Rs. 63.5 crores) than in the corresponding period of 1961 (Rs. 69.5 crores). On trade account, while the increase in imports during the first half of 1962-63, as compared with the corresponding period of 1961-62, was offset by greater utilisation of available foreign assistance for food and capital equipment, export earnings during the period, according to balance-of-payments data, were Rs. 11.6 crores lower than in April-September 1961. There has, however, been some improvement in exports in the October-December 1962 period, with the result that total exports in the year 1962-63 as a whole are now expected to reach about Rs. 680 crores (excluding the value of exports from Goa, Diu and Daman), as compared with Rs. 668 crores in 1961-62. There is no estimate, in the *Economic Survey*, of private and Government imports for the whole of 1962-63. What, however, matters is the deficit on trade account, and this may be expected to be larger in 1962-63 than in 1961-62. The overall balance-of-payments situation, which takes into account the trade balance, will, therefore, continue to be gloomy, though it is not inconceivable that some relief may come not only from recent official measures but also from more "untied" foreign credits. It is in this context that the following observations gleaned from the *Economic Survey* will be read with mixed feelings of hope and despair:

"Restrictions already imposed on imports, foreign travel and gold transactions should have a favourable effect next year (1963-64). On the other hand, interest charges and repayment obligations would be significantly larger.... It is to be hoped, however, that the flow of non-project assistance would increase over the coming year and that the additional claims of defence would not set up significant pressures on free foreign exchange resources.

"India's earnings from exports and net invisibles have not been sufficient in recent years to meet the requirements of debt charges as well as of the maintenance of the economy. With the decline in foreign exchange reserves, earnings of interest on foreign assets have dwindled, whereas repayment obligations and interest charges on foreign debt have been growing at a rapid pace.... The growing production of capital goods... is still based on the import of components, spare and materials from abroad. These components, as well as the many indirect requirements of projects included in the Plan, cannot always be covered by available assistance.... There is no scope left for further drawal on reserves which, in fact, need to be strengthened.... With the progressive tightening of import restrictions, a stage has already been reached when any further increase in the degree of restrictions would impair seriously the chances not only of higher production but of higher exports as well. Over a period, the solution of this basic weakness in India's overseas payments position must be found progressively in terms of an increase in exports at a rate much faster than in the case of imports, as well as by a reduction in the proportion of 'hard' debt. But, in the meantime the actual availability of non-project assistance (will be) a major factor in preserving India's external viability."

There is no suggestion in the *Economic Survey* that the prospective pressures on balance of payments can be partly, if not wholly, relieved by more systematic encouragement to foreign private capital to flow into the country. Perhaps, it is just as well that it has not chosen to advance any such suggestion, for quite a few relevant facts go to show that the climate for private investment is not what it should be. For instance, the Centre has already, that is, in the first two years of the third Plan, undertaken additional taxation which is expected to yield Rs. 850 crores over the Plan period, or more than 75 per cent of the target of Rs. 1,100 crores set in the Plan. It is on top of this that the fantastic additional taxation of Rs. 276 crores has been proposed in the 1963-64 Budget. The magnitude apart, there are also other features in the new tax proposals which will surely stifle the flow of foreign private capital into this country. Besides, the question of raising domestic capital itself has been rendered difficult, for private savings which feed the capital market are being heavily drained.

No wonder, therefore, the stock markets have displayed a persistently downward trend in recent months. That the depressed market sentiment has had an inhibiting effect on the flotation of new issues is there for all to see. And yet the *Economic Survey*, which itself has delineated a rather sombre picture of the economy, blandly argues that "the underlying economic conditions in the country offer little warrant for the uncertain and generally subdued trend in stock markets or for any slackness in the economy." But the fact of *subdued* market sentiment is there, and it is, therefore, good to find that the authors of the *Economic Survey* have recognised, in the same breath, that "the performance of the economy in the coming months would depend, to a significant extent, on the confidence of private investors and on their ability to raise the funds necessary for the expansion of essential business." It is, indeed, unfortunate that this market sentiment, which had been greatly weakened already, has been damaged further by the crippling levies proposed in Mr. Morarji Desai's Himalayan Budget.

Perspectives & Projections

By Mercator

FALLEN IMAGE

WHY did he do it? Why, indeed, should Mr. Morarji Desai have chosen to destroy the image he had created of himself as the provider of fiscal incentives to industry and trade? There is no ready explanation, unless it be that the politician's instinct had urged him to rise to the occasion by doing something drastic and show that he could be daring and venturesome, risk unpopularity to do great deeds of fiscal valour and impose stern discipline on the whole nation—minus, it has to be regretfully added, the Government apparatus which recognises no obligation at any time for self-restraint. Nothing—not even the cruel form of taxation—is more galling than the passage in Mr. Desai's Budget speech in which he indulged in casuistry about economy as being only another aspect of efficiency, of improving performance for the same amount of outlay. Did he seriously expect the public to be mesmerised by such words? If discipline like charity had begun at home, all the burden that Mr. Morarji Desai has imposed and even more will be borne with less complaint. The Finance Minister has been powerless even to keep Plan outlay next year at a realistic and feasible level; he helplessly let the N.D.C. fix the outlay at Rs. 1,744 crores but has actually adopted Rs. 1,651 crores for Budget purposes; he knows, however, that even this depends on States being able to find Rs. 350 crores from their own resources, a better utilisation of foreign aid (improvement in it is slow according to the *Economic Survey*) and physical resources including foreign exchange being adequate for both plan and defence. Nor can he deny that there are schemes which can be deferred, but have not been, in the next year's Plan outlay; on the other hand, he posed the issue before the Government as one of refusing to drop or defer feasible schemes for financial reasons—as if anyone had wanted such a policy.

No one can pronounce a verdict on the need for the proposed defence outlay. The Government always believes in inflating its budget expenditure to show it is earnest about things, Plan or defence, irrespective of feasibility. In defence matters, the public knows nothing and even the little it was till now provided has been withheld in the changed form of demand for appropriations for all services under one head. The entire country will want our defences to be strengthened and the price for it to be paid. This being granted, Mr. Desai had the opportunity to make a responsible appraisal of the budgetary position. But here he allowed, even in this time of crisis, the department to carry on its crafty and small-minded ways of exaggerating deficits. Thus came about the huge overall gap of Rs. 454 crores for the next year. This Mr. Desai would not tolerate. Even the increase of Rs. 125 crores in revenues over the estimates both last year and in the current year has not made the Finance Minister pause and inquire whether it was not time to stop misleading the people at least when they are ready for sacrifices to the extent really necessary.

Thus, it happens that the creator and preserver of incentives in the Indian economy in the last five years has also become their most fierce destroyer. Perhaps, the Indian mind, accustomed by its tradition to see these functional aspects as one whole, will not regard it as very odd. But others are bound to ask questions, particularly as we are still assuring foreign investors that their capital is very welcome here and gets cordial treatment. It is not merely the Super Profits Tax which is harsh; surcharges on income and super taxes have already made this country unattractive for career men from abroad whom foreign business houses may like to keep in key positions to make sure of their investments; and even Indian technical personnel living abroad will not be persuaded to come to India. Orthodox financial experts may be satisfied by Mr. Desai's methods of avoiding deficit financing and some foreign observers may also be impressed by the heroic efforts made by the Government and people of India to raise resources before approaching other countries for aid. But these virtues could have been demonstrated without imposing gratuitous hardship; minimum administrative inconvenience seems to have been Mr. Morarji Desai's primary objective, though it should have been only one among several other and more important criteria.

* * * *

MUCH CRY AND LITTLE WOOL

Goldsmiths have had their day and their prospective unemployment has been debated in Parliament. This curious sequel to the Government's gold policy prompts some questions. Do those who now criticise gold policy for this reason want that India should continue to smuggle and secretly spend Rs. 40 crores and more of foreign exchange a year for maintaining employment in this occupation? Will not an equal amount spent in imports of machinery or capital goods or raw materials increase general employment (or prevent a fall in it)? In effect, the objections amount to saying that a patently illegal trade must flourish to give work of a tradional type and that this must have priority over any newer types of jobs that the Government may be able to create by its policy of conserving foreign exchange for development or defence.

So far as existing stocks of the metal are concerned, there has been much cry but little wool as the saying goes. Only Rs. 7 crores worth of gold has been collected by way of gold bonds, so that the Government has left much with the public for conversion into ornaments of 14-carat gold. Actually this rule will make for more work and, considering the last minute rush for ornaments, people have not radically changed their jewellery habits or outlook since the emergency. It may be that the new pattern will take time to form itself and possibly some goldsmiths will have to adapt their skills to new purposes, of which there can never be an insufficiency in an economy placed on a war-footing. The tendency to make political capital out of a wise beginning in social change is the most deplorable aspect of the present opposition to gold policy. The Government, it seems, can be blamed both for the inadequacy of the response it has got for the gold bond scheme and the impact of its policy on employment which must be negligible, if the gold is still left largely in private hands and there is ample scope for black markets to thrive. Mr. Morarji Desai's tenacity of purpose has been useful in meeting the objections, though I should dread an equal tenacity in his adherence to the present tax proposals which I think are quite a different matter. But I suspect that his gold policy is sounder than the fiscal, because he has relied less on departmental advice on details than in the case of taxation in which he could not obviously take outsiders into his confidence.

MARKET GOSSIP

Sugar Prices

SUGAR is much in the news again, thanks this time to Mr. S. K. Patil, Union Minister for Food and Agriculture. Addressing a meeting of the Greater Bombay Food Prices Supervision Committee last week-end, Mr. Patil expressed consternation over the rising tendency of sugar prices and warned that, if the tendency were to persist, the Government would be compelled to re-introduce controls. The daily Press version of his statement is as follows:

"The Government is very much worried about what is happening in the sugar trade, because sugar prices have been pushed up to an unreasonable level. Even some co-operative sugar factories have joined in the race for getting maximum prices for their product. Unreasonable rise in sugar prices is harmful to the country, as it would increase the pressure for enhancing cane prices. All this causes an adverse impact on sugar exports for which the country is paying heavy subsidies. If some elements seek to push up prices at the present moment, the Government will have no alternative but to take necessary measures to protect the interests of consumers. The Government may have to step in and initiate measures to take over the entire sugar trade."

Reiterating Mr. Patil's assertion, Mr. A. M. Thomas, Deputy Minister for Food, declared in the Lok Sabha on Tuesday this week that the Government would not hesitate to clamp down controls on sugar, if necessary. Incidentally, he disclosed that the Centre proposed to reintroduce the licensing system for sugar traders, so that "they will have to declare their stocks and will be able to charge only such margins (in profits) as the Government will allow them."

What, after all, is the provocation for the threat of sugar controls held out by Mr. Patil? It is true that sugar prices have tended to move up in recent weeks; B.29 grade sugar in Bombay, for instance, is currently quoted at Rs. 117 per quintal, as against Rs. 113 three months before, and crystal variety in Hapur at Rs. 112, as against Rs. 104. But it would be wrong to put the entire blame on the sugar industry and trade. For the rise in sugar prices has been the cumulative effect of a number of factors, especially the all-round increase in commodity prices, spiralling of *gur* and *khandsari* prices, fears of a marked setback in sugar production in the current season, mounting pressure of demand, and official pronouncements indicating the Government's determination to export a sizable quantity of sugar, not to speak of the buoyancy of world sugar markets. Prices of *gur*, it may be noted, have advanced to a greater extent than those of white sugar. Superior quality *gur* (*Pansara*) at Hapur, for instance, has advanced from Rs. 39 three months ago to Rs. 49-50 per quintal. Moreover, if some mills have sold sugar at higher prices, it is due to the compulsion of circumstances beyond their control. The industry as a whole is currently working on an inflated cost base, due to the enhanced prices of raw material (that is sugarcane), stores and accessories, as well as heavier wage bill and the burden imposed by the Emergency Risks Insurance. If allowance is made for all these elements of cost and if account is taken of the shorter working season, lower sugar recovery, and greater loss on sugar exports, the fair ex-factory prices of sugar will be much higher than those fixed previously: Rs. 117.22 per quintal bag for North Indian sugar, as against Rs. 101.41, and Rs. 128.87 for Maharashtra sugar (D.29 grade), as against Rs. 113.06. Actually, the currently ruling prices of sugar in Bombay are higher than the so-called fair prices by only a rupee or two per quintal bag. Surely, the rise of this magnitude cannot be considered so alarming as has been made out to be. Nor can one base the price rise on the lowest levels touched some months ago when bearish trends predominated.

Mr. Patil has threatened clamping down controls on sugar, as if such a step would be effective in checking the rising trend of prices. It is unnecessary to dilate at length on this point, as everyone had the bitter experience of control days.

Meanwhile, all available indications go to show that, whether one likes it or not, controls on prices and consumption are very likely in the next few months, unless there is sufficient timely evidence that the output of white sugar in the next season would jump up to about three million tons. For the fact cannot be disputed that the statistical position of sugar is getting pretty tight. The latest estimate of the current season's production is less than 2.10 million tons, as against the 2.70 million tons actually produced in 1961-62 and 2.98 million tons in 1960-61. Including the opening stocks of 1.01 million tons, the total available supply comes to 3.11 million tons, against which export commitments aggregate 450,000 tons and internal consumption is put at 2.5 million tons (according to Mr. Shinde, Parliamentary Secretary to the Food Ministry). The season will, therefore, end (on 31st October 1963) with a carryover stock of no more than 160,000 tons which represents just three weeks' consumption. Such a tight supply position cannot but exert a bullish effect on the market. This state of affairs could easily have been avoided if only Mr. Patil, his colleagues and the State Governments had taken timely steps to ensure adequate cane supplies to the sugar mills by banning *gur* and *khandsari* making in and around factory areas and checking the speculative rise in the prices of these sugar substitutes. As we had pointed out on an earlier occasion, it was clear even at the commencement of the current crushing season, if not earlier, that the sugarcane crop had suffered a distinct setback and that there would be a scramble for the available supplies from *gur* and *khandsari* producers. Their inaction reflects inexcusable complacency.

Defence Bonds

I.C.I.C.I.

Whatever the immediate conditions of the capital market in the country, the industrial enterprises in the private sector can continue to rely on the Industrial Credit and Investment Corporation of India—I.C.I.C.I. for short—for meeting quite a bit of their rupee and foreign exchange requirements for the purposes of establishment of new units, expansion of existing ones and modernisation. This is the reassuring conclusion that emerges from the statement of the Chairman, Mr. G. L. Mehta, circulated to the shareholders of the Corporation, the full text of which is published on pages 398 and 399 of this issue. The Corporation "has," to quote the very words of Mr. Mehta, "to take a longer view of investment and we shall be prepared to finance projects found viable on our examination." Speaking at a Press conference in Bombay on Thursday this week, he disclosed that the Corporation was hoping to get by June next a fifth line of credit for $30 million from the World Bank and another loan of DM 25 million from the Kreditanstalt of West Germany. He also disclosed that he would be proceeding abroad shortly to negotiate these credits, as well as to discuss details of more joint-financing operations with the Commonwealth Development Finance Company in the U.K. and the International Finance Corporation in the U.S. With its present resources and the new lines of credit from outside now being negotiated, the Corporation may be expected to play a more vigorous role in accelerating the pace of industrial development which is so very urgent in the context of the "crisis of confidence" caused by the present state of emergency.

The I.C.I.C.I., it will be recalled, commenced business just eight years ago, on 1st March 1955 to be precise. Within this short span of time, this development bank has expanded remarkably, first under the able stewardship of Dr. A. Ramaswami Mudaliar and then under that of Mr. Mehta since the end of 1958. The aggregate net amount of loans and investments so far sanctioned comes to the impressive figure of over Rs. 60 crores. As many as 199 projects sponsored by 183 companies we are told, have been sanctioned assistance. The bulk of this sum, as is only to be expected, is accounted for by loans and guarantees—both rupees and foreign exchange—the combined share of which is almost Rs. 43 crores. Of this, the rupee and foreign currency loans (net) as of 31st December 1962 are Rs. 9.07 crores and Rs. 18.73 crores ($39.35 million), respectively. The Corporation has also underwritten equity issues to the tune of Rs. 13.33 crores and subscribed directly about Rs. 3.84 crores.

The range of projects assisted by the I.C.I.C.I. is quite wide: paper, wire ropes, cables, fertilisers, spun pipe industry, cement, ceramics and so on. At the Press conference, Mr. Mehta drew special attention to the following aspects of I.C.I.C.I.'s operations:

1. I.C.I.C.I. encourages small operations; in 1962, it approved of many proposals covering both foreign currency loans and underwriting small amounts.

2. The Corporation has diversified its operations by providing funds, particularly foreign currency loans, for balancing equipment such as ancillary textile equipment, boilers and generators; the rate of sanction of foreign currency loans is now approximately $20 million a year.

3. The projects assisted by the I.C.I.C.I. would help relieve specific shortages in the country.

4. I.C.I.C.I.'s sanctions have gone into what might be called non-traditional industries, that is, industries which have no past background in the country.

It is, of course, difficult to assess the exact impact of the I.C.I.C.I.'s operations on the economy. But even the rough calculations made by the I.C.I.C.I. bring out the vital contribution it has made. These show that, as a result of its operations, the I.C.I.C.I. will help ensure a total capital

TREND OF SHARES

ALL GAINS WIPED OUT

(From Our Own Correspondent)

BOMBAY, *7th March*

EQUITIES lost in this week's post-budget trading all the gains scored in not only values but also terms of trading since restoration of normalcy after the debacle which followed the Chinese aggression. The authorities of the Bombay, Calcutta, Ahmedabad and Delhi Stock Exchanges have reimposed in the past two days restrictions on trading in the form of minimum prices and compulsory carry-over of business in order to arrest the rot that set in due to the crippling additional taxation of Rs. 275.50 crores announced in the Central Budget for 1963-64. *It was not merely* the size of fresh tax load but also the levy of an excess profit tax on companies, called Super Profits Tax perhaps because it is more palatable, which made the equities collapse. At close of the week, a great majority of shares were lower than the low levels touched some four to six weeks back.

The immediate reaction of markets to the budget proposals was cheerful, as it was felt that companies had escaped with a relatively minor impost of Rs. 25 crores under the super profits tax. In less than an hour of the budget announcement, however, the markets seemed to have had a more sober assessment of the super profits tax, as values quickly receded. As the week progressed, the real meaning of the tax became clear, especially after a meeting of leading Bombay industrialists on Monday the 4th inst. decided to request the Government to modify the tax on the ground that it would hamper operation of existing companies and retard their growth besides making it impossible for new companies to appear on the scene. Realisation that the new tax would restrict dividends and scare away foreign capital and collaborators depressed the sentiment further. Values slumped on liquidation of speculative purchases made in the past two weeks or so on expectations of a realistic budget. Buyers virtually retired from the markets. Deserted, panicked and nervous, the markets showed signs of an unexpected aggression.

Trade chambers and industrial organisations, economists and tax experts have criticised the new taxation broadly and the super profits tax particularly. The Committee of the Federation of Indian Chambers of Commerce and Industry feels that the tax proposal relating to company profits might well defeat the objective of accelerating the pace of defence and economic capacity. It has also charged the Government of underestimating the overall revenue either deliberately or on account of insufficient application of modern techniques of economic forecasting. Mr. J. D. Choksi, who presided over the meeting of Bombay industrialists, is said to have told reporters afterwards that the super profits tax would raise the aggregate taxation on corporate profits to about 75 per cent. The meeting suggested either relaxation of the tax or its substitution by a higher corporation tax. It appointed two sub-committees; one to study the full implication of the measure and the other to educate public opinion on the issue.

The stand taken by industrialists and others on the issue also provoked stock exchanges and shareholders' association to register their protest to the Government against the proposed levy. In a memorandum, the Madras Stock Exchange explained the implications of the S.P.T. In seperate telegrams sent to Mr. Morarji Desai, the authorities of the stock exchanges in Bombay, Indore and Bangalore expressed the fear that the new levy would accentuate the present depression in the markets, which would hurt not only the rich but also lakhs of small and medium class investors. The Presidents of the Ahmedabad, Delhi and Calcutta Stock Exchanges who were in the city met Mr. K. R. P. Shroff, President of the Bombay Stock Exchange on Tuesday the 5th inst. to discuss the post-budget scene and agreed to forward a joint memorandum on behalf of all the stock exchanges to the Finance Minister on the implications of the budget proposals, especially the super profits tax. Mr. P. S. Nadkarni, Director of the Stock Exchange Division of the Union Finance Ministry, was present at the meeting. The Presidents also decided to consider the budget proposals at the next meeting of the Committee of the Presidents of Stock Exchanges in the country, which is to be held at Hyderabad on the 15th inst. In a telegram to the Finance Minister, the Committee of the Bombay Shareholders' Association protested against the massive burden of taxation and the super profits tax in the budget.

On the 6th inst., when the Governing Board decided to fix minimum prices for all cleared and dividend-bearing cash scrips at the post-budget low levels in the case of the former and the last clearing rate in the case of the latter as well as compulsory carry-over of forward purchases at charges fixed at 9 per cent per annum. The Bombay Stock Exchange was officially closed on that day, in view of the sharp decline in prices. The Board also announced suspension of jobbing in cash section. In forward shares, it may be noted, jobbing has ceased since 5th November 1962. Transactions on hand delivery basis are to be settled twice a week on Thursday and Monday. On the next day, that is, the 7th inst., also the market was closed, because of an informal meeting of the general body on a signed requisition by 236 members, which was called to ask the Governing Board to pass resolutions opposing the budget proposals, particularly the S.P.T., and also to request the Board to work out the incidence of this tax on companies listed on the Exchange. The Ahmedabad Stock Exchange was also closed on the 6th and the 7th inst.

The heavy budget has broken the back of the capital market. It is entirely because of this that Hindustan Lever has decided to put off its proposed 25-for-37 shares rights issue at a premium of Rs. 25 per share. The budget may ensure defence preparations but will certainly harm the economy a great deal. We may recall here for the benefit of all concerned the Finance Ministry's note of 6th November 1962, issued in connection with the debacle in stock markets after the Chinese aggression, which said, among other things that "... there is no doubt, on the whole, the tempo of industrial and economic activity in the country will increase very rapidly and not slide back at all nor would it be realistic to harbour the fear that, while industry increases its production, the remuneration for its genuine efforts will be unreasonably low." How is the Government going to stand by its own word now?

* * * *

The extent of the debacle on Dalal Street will be evident from the table entitled "Week's Stock Exchange Trend" published elsewhere in this issue. Heavy losses were marked in Calcutta. Forward shares were the worst affected, with Birla Jute falling by Rs. 5.12 to Rs. 25.25, Orient Paper by Rs. 5.85 to Rs. 31.25 and Dunlop Rubber by Rs. 4.25 to Rs. 32.50. G.K.W. slumped by Rs. 3.56 to Rs. 29.94, Indian Cable by Rs. 3 to Rs. 31, Indian Aluminium by Rs. 2.94 to Rs. 30, Kesoram by Rs. 2.62 to Rs. 19.25 and Texmaco by Rs. 2.75 to Rs. 19.10. In the cash section, among Textiles, Bharat Commerce were marked down by Rs. 3.12 to Rs. 21 and Jayshree by Rs. 2.18 to Rs. 13.19. Kelvin Jute fell by 28 points to Rs. 176, Anglo-India by 24 points to Rs. 199, Burnagore by 16 points to Rs. 175 and Budge Budge by 13 points to Rs. 153. Burn Engineering showed a loss of Rs. 24 at Rs. 495, Jessop of Re. 1.12 at Rs. 22, Angelo Bros. of Re. 1.44 at Rs. 12.75 and Aluminium Corporation of Re. 1.67 at Rs. 12.75, Goodyear declined by Rs. 2.13 to Rs. 37.87, Metal Box by Rs. 6.25 to Rs. 44.50 and Union Carbide by Rs. 5 to Rs. 37.50. Other sections also showed sizable losses.

* * * *

In Madras, S.I. Viscose slumped from Rs. 157 to Rs. 139. Among others, Mettur Chemical showed a loss of 83 nP at Rs. 12.87 and E.I.D. of Re. 1.43 at Rs. 39.17.

MORE LIGHT ON STATE BANK'S WORKING

Some more light on last year's working of the State Bank of India, a detailed review of which appears on page 395 of this issue, was thrown by Mr. B. Venkatappiah, Chairman of the Bank, at a Press conference in Bombay on Thursday the 7th inst., when his speech at the eight annual general meeting was also released.

Tracing the growth in advances in 1962, Mr. Venkatappiah said that the average level of the State Bank's advances in India rose from Rs. 244.20 crores to Rs. 267 crores and the peak level for the year was Rs. 289.10 crores, as compared with Rs. 267.80 crores in the previous year. The percentage break up of advances as between the public undertakings and State Governments, on the one hand, and the private sector, on the other, was 10 and 90 in 1962, as against 7 and 93 a year before. Net expansion in deposits was of the order of Rs. 41.4 crores to Rs. 496.40 crores, after allowing for a transfer of Rs. 20 crores of P.L.480 funds to the Reserve Bank. The transfer was in pursuance of an arrangement whereby an amount of Rs. 10 crores per month for five months from November last is to be credited to the Reserve Bank.

Defence-based and small-scale industries were given special attention by the Bank, the Chairman said. A study team consisting of two officers of the Bank had visited various centres of small industry in different parts of the country and its suggestions for action were awaited. Response to the Bank's newly sponsored instalment credit scheme for small and medium entrepreneurs desiring to purchase machinery or equipment on suitably easy terms was good. Here, too, defence-based industries were receiving priority over others.

For mobilisation of larger savings, the Bank has been working a pilot deposits scheme in a few selected branches in each of its four circles. It envisages closer contacts with present and prospective customers in order to tailor services to their needs. It aims at getting deposits from outside the monetised sector. It is still a six-month old experiment, but has been encouraging, as, in one particular town, for example, a few months' effort brought in more than 500 savings bank accounts from relatively small depositors.

Speaking of developmental activities, Mr. Venkatappiah stated that 50 per cent of the 416 branches opened during the period 1955-60 showed a profit and the overall position was one of credit and not debit. Performance of all these branches in terms of deposits and earnings was not uniform, because of difference in the nature of operations in different areas. A few years hence, the laggards would pick up. A programme for opening new branches, not only in the rural and urban centres already selected or added to the Bank's list from time to time, but also in the metropolitan areas, cities and bigger towns which in recent years have developed so rapidly is on hand. It is also proposed to open, after consulting the Reserve Bank, a large number of branches at centres not hitherto on the Bank's list but where treasuries and sub-treasuries are located.

Three specific developments in the field of export finance were mentioned by the Chairman. One is a concessional rate of interest in the form of a rebate of ½ per cent on advances utilised for financing exports. The other is the scope offered by a recent amendment of the State Bank of India Act to make available medium-term export credit in suitable cases. The third is the initiation, in collaboration with Government and within the framework of existing import policy, of a small and purely experimental scheme under which a company will get foreign currency loan against the Bank's guarantee for importing raw materials, with repayment to be made out of the export proceeds of finished products.

LONDON LETTER

BRITAIN'S ECONOMIC GROWTH

(From Our Own Correspondent)

LONDON, *1st March*

IS it possible that the country is at last beginning to react to some of the financial stimulus which has been applied to the economy in recent months? That this may be so is suggested by the figures of bank advances, always a reliable index of the activity of business and commerce. Over the past month these bank advances rose by £186 million which is an increase of 5 per cent. The current total for all the London Clearing Banks of £3,733 million is 11 per cent higher than a year ago; although part of the increase is seasonal it can be compared with a rise of £113 million in the corresponding period a year ago. Again, it is suggested that part of the increase is due to the difficulties of traders whose business has been held up by the exceptionally bad weather of the past two months. However this may be, the figure is the highest increase in one month for more than ten years and part of it is certainly due to slightly more optimistic business borrowing.

Oddly enough, this optimism is said to derive from the breakdown of the talks for the entry into the Common Market on the ground that industry knows where it is now and can make its plans accordingly.

The curious thing is that the end of the Common Market negotiations is also apparently going to make it easier for this country to pay its way in the immediate years ahead. For this week has seen the official publication of the Report of the National Economic Development Council. Exports are now only required to rise by 5 per cent per annum, instead of 5½ per cent because our *import* bill will be reduced! The explanation is that the original estimates of the N.E.D.C. where made on the assumption of entry into the Common Market with its certainty of higher prices for agricultural imports. The public Report contains an intriguing table showing that the national output should by 1966 have increased by 22 per cent over 1961. It is nice for the people of the United Kingdom to be able to look ahead and see how much richer they are going to be, expressed with the degree of certainty which the Report shows, *but* all this depends upon the achievement of the now well-known figure of 4 per cent per annum increase in output which the Council's economists have calculated as possible and which the Council itself has endorsed.

Five Per Cent Increase in Output Needed

Unfortunately, last year showed nothing like the required rate of increase. The result, says Neddy, is that the increase in output must now be 5 per cent per annum and, if we do not achieve that figure this year, then the target will be even higher in the successive years which will probably make it impossible of achievement. But, *at the moment*, the 5 per cent rate of increase is considered applicable (*a*) because there will be a growth in the labour force and (*b*) because productivity should continue to rise. There are possibilities of hold-ups, e.g., the electricity and chemical industries may not be able to reach the target; the output of electricity has got to rise by nearly 50 per cent over 1961-66 to enable the rest of the target to be attained—indeed, consumption is expected to rise by more than this figure so that there may be failures at the peaks unless investment over and above what is currently planned can be made. The chemical industry must equally plan for expanded investment and output.

Productivity throughout industry has now to rise in the remaining years of the period by slightly more than 4 per cent so that, allied to an increase in manpower, the 5 per cent target can be attained.

It may be that the Chancellor regards this Report of the N.E.D.C. as enough, hence his decision to scrap the Economic Survey which has appeared for fifteen years past. Unkind critics say that a further reason is that the Treasury in last year's Survey forecast a growth of business activity for 1962 and the Chancellor does not want to risk any repetition of brickbats being hurled against him. Instead, the Government will confine itself to an Economic Report just prior to the Budget which will analyse actual economic development in 1962 and refrain from forecasts.

DELHI LETTER

MASSIVE STRAIN RESULT OF PAST NEGLECT

F.I.C.C.I. ON BUDGET—DEVELOPING AGRICULTURE

From Our Special Correspondent

NEW DELHI, *6th March*

BUDGET 1963-64 will not only be remembered for some years to come for several all-time records, but, let us hope, it will also act as a reminder of what tremendous strain an economy has to bear due to the neglect of a country's security in the past.

The figure of Rs. 867 crores is not much as compared with the defence expenditures in several other countries. As against 9.8 per cent of the gross national product in the U.S., according to a U.N. survey based on the average for 1957-59, ours will be less than 6 per cent. The *per capita* defence outlay will come to even less than Rs. 2.

What causes strain, therefore, is not the total amount, but its impact in a single year. Defence expenditure is admittedly unproductive. Defence build-up has to be spread over a number of years and sustained at a fairly high level, to cushion its impact on the nation's economy. For various reasons these have not happened in our case.

In the decade between 1950-51 and 1960-61, India's annual defence expenditure has grown from Rs. 168.32 crores to Rs. 280.94 crores, an increase of Rs. 112.62 crores. It was during this period that the Chinese mounted an armed aggression on our northern borders. But, it should also be remembered that, in 1959-60, there was an actual reduction in the defence budget by about Rs. 24 crores. In 1961-62, budget allocation for defence at Rs. 314.93 crores was raised to Rs. 327.51 crores mid-way through. But the actual expenditure on defence in that year totalled only Rs. 322.49 crores.

That is why there is a lurking apprehension here that, despite the scope and need for a rapid expansion and strengthening of our national security, the huge sum of Rs. 867 crores may not be fruitfully utilised, having no previous experience of such a massive expenditure. And so the feeling of a woeful tardiness in our defence build-up, though there was never any dearth of exhortations from the leaders of the Government and the public to defence-orientate our economy as well as mental attitudes. A shock treatment need not cause the development of diverse other maladies. A warning has already been given through the *Economic Survey 1962-63*: "It must also be remembered that the major impact of defence mobilisation has yet to be felt," and that the objectives set before the nation "would call for unprecedented effort at resource mobilisation."

Tax on Efficiency

The Committee of the Federation of Indian Chambers of Commerce and Industry, in a statement on the Union Budget, has pointed out that the Finance Minister's proposals to raise additional resources of an unprecedented magnitude of Rs. 275 crores "represent in one single effort the sum total of the tax increments in the last six years." While congratulating Mr. Desai "for taking note of the nation's desire and will simultaneously to accelerate both our defence and economic capacity, the Committee apprehend that his tax proposals relating to company taxation may well defeat this objective."

The F.I.C.C.I. has regretted that no effort has been made to reduce civil expenditure or at least to peg it at the 1962-63 level and that the old practice of underestimation of revenue has been adhered to in the present changed circumstances as well. Along with several other business organisations, the F.I.C.C.I. has also described the Super Profit Tax as "a tax on efficiency of the more well-managed companies," and that it would prove a grievous blow particularly to foreign collaboration and foreign private investment. It has also warned that, after a certain point, the indirect levies "constitute the most inflationary potential." more so in a developing economy. The F.I.C.C.I. contention is that the new levies would also affect our exports adversely.

In Parliamentary circles, however, a strong feeling persists that the Finance Minister would not be too reluctant to have a second look at his proposals and modify some of them, even if *marginally*. *The main* fear expressed by these circles is that the new company taxation would not only dry up the sources of liquid funds for banks, but also bring the money market itself increasingly under the control of the Government and its banking agencies. The taxes on individuals would serve as an obstacle to selling a larger number of insurance policies which in turn would be a severe blow to the development of business and industry which nowadays largely depend upon L.I.C. underwriting.

Holding the Price Line

The majority of the members of the Congress Parliamentary Party's special committee on prices, who met here yesterday, have voiced their fears of "undue rise in prices" as a result of the fresh levies. Two of the senior members, both former Ministers, Mr. A. P. Jain and Mr. Mahavir Tyagi, made a concerted attack on the compulsory deposit scheme, particularly its application to the entire farming community. According to them, it would only lead to widespread harassment of millions of poor peasants who paid no more than Rs. 5 to Rs. 10 annually as land revenue and whose compulsory savings would thus be less than even the cost of collection. One of the Party secretaries accused the Orissa Government of profiteering by selling rice at Rs. 35 per maund, when it had acquired the same at half that rate.

VIVIAN BOSE COMMISSION'S REEORT

Few reports of any fact-finding body in India have excited as much public interest and curiosity as the Vivian Bose Commission's report on the administration of the Dalmia-Jain group of companies. No wonder there has been a virtual scramble for the report. To make matters worse, the Government of India printed no more than 100 copies initially. These copies were distributed only to a favoured few; but, unfortunately, *Commerce* was not one of them. We could not, therefore, give so far an analysis of the Commission's findings and their implications *for policy. The summary of the findings* which appeared in a section of the Press was too scrappy to permit any informed comment. Now that the Government of India, on second thoughts, has arranged to print more copies and put them on sale, we hope to present in our next issue an expert analysis of the impact of the Commission's report on the Company Law and of the Commission's recommendations for a further reform of this legislation.

Ahmedabad Office: **Maskati Market.**

M. J. Maclaren,
General Manager.

AB-22

Planning Minister Mr. Nanda, who was present at the meeting, assured the members that the Government would take suitable measures against rise in prices. He said that the Planning Commission was working out the effects of the new budget proposals on the general cost of living and that Government action would follow.

There was, however, no assurance against the fleecing of the general public that was going on in the intervening period, irrespective of the incidence of the tax proposals.

Gearing up Agriculture

The Economic Survey has also pointed out that "economic developments in 1963-64 would be influenced greatly by the outturn of the agricultural crop during the 1962-63 session." But the preliminary estimates of 1962-63 production do not hold out any bright hope.

The Planning Commission's panel on agriculture which met early last month, recommended a variety of measures to regain the ground lost in 1961-62. The Commission has now put forward several suggestions and recommendations for assured and stable prices for agricultural commodities as an effective incentive for increased production. It has urged upon the State Governments to take the necessary steps for the success of these measures.

Among the measures suggested are immediate setting up of price fixation boards; studies of the cost of production of important crops in different regions under varying conditions and, pending such studies, fixation of parity prices of alternative food and cash crops and the prices of the raw materials such as cotton, jute and sugarcane to be linked with the prices of manufactured articles; announcement of the floor prices well ahead of the sowing time; setting up of Government markets near the growing areas for guaranteed purchases at floor prices; reinforcement of the co-operative marketing organisations so as to cover a larger area and a larger number of commodities; and the enactment of legislation for regulating markets by the three States—Assam, West Bengal and Uttar Pradesh—which have not yet done so.

Another suggestion of the Commission is that, for purposes of intensive development work, cotton and oilseeds area in a State should be divided into three categories of assured irrigation, assured rainfall and other rain-fed areas, so as to adopt the package *programme* approach of popularising all the recommended improvements for the former two and to attempt only the use of improved seeds and large-scale plant protection measures in the third. The Commission has also suggested that, in the southern States, rice fallows under new projects should be largely utilised for growing summer cotton or groundnut.

INCREASED BRITISH SPENDING ON RESEARCH AND DEVELOPMENT

Britain more than doubled the amount spent on scientific research and development between 1955-56 and 1961-62, according to an article in the February *Bulletin for Industry*, published by the Treasury. Recent estimates, the *Bulletin* adds, show that an increasing share of Britain's national product is being devoted to research and development, and that the proportion is about the same as in the United States. Between 1955-56 and 1961-62, research and development in Britain as a proportion of the gross national product (that is, the total production of goods and services) rose from 1.7 per cent to 2.7 per cent. In value terms, expenditure rose from £300,000,000 in 1955-56 to £634,000,000 in 1961-62. Fifty-eight per cent of British research and development work in 1961-62 was by private industry, which provided more than one-third of the money.

More than 60 per cent of the total funds was provided by Government departments and research councils. The Government spent almost £177,000,000 on research done by private industry —about 90 per cent of it in the aircraft, electronics, and electrical engineering industries.

Analysing expenditure, the *Bulletin* says that, in 1961-62, more than half the research carried out by the Government and three-quarters of that by private industry was on development—that is, directed towards the production or improvement of specific products.

The Government has permitted Tata-Finlay (Private) Ltd. to undertake the manufacture of 1.5 million lbs. of instant tea in powder form for export. The product, to be made by the Company by a patented process invented by James Finlay and Company Ltd. of the U.K., will be soluble in hot as well as cold water. The factory will be in Kerala State and is likely to go into production early next year.

African countries, of which 14 are ex-French colonies. Besides, their official representatives at the meeting told the Council that they would not be able to fix a date for the signing of the Convention until new elections were over in their countries. Elections will take place in Italy next month and in Holland a month thereafter. The Convention, which is due to come into force early next year, seeks to grant duty-free entry for the tropical products of the African associated territories, besides providing them financial aid and other facilities.

WAGES BY CHEQUE

Payment of wages by cheque has been made legal in Britain with effect from 1st March 1963. Employers can now dispense with the elaborate security arrangements required to protect cash-in-transit and save the expenses incurred thereon, as also save themselves the trouble and cost of paying out weekly pay packets in cash. Workers, who are unable to deposit their pay in banks during banking hours on pay day, need no longer carry cash home and thereby run the risk of their pay-packet being snatched away. Cheques can now replace cash in wage payment. This will mean a fresh boost to banking habit in Britain and a reduction in the use of cash.

The initial response of both employers and workers to this new facility has, however, been lukewarm. Although several big employers had expressed themselves in favour of payment of wage by cheque, it is reported that few formal approaches have so far been made by employers to workers' unions in this regard. From the point of view of workers, one, and perhaps the only, disadvantage in accepting payment in cheque is that, in the case of a large percentage of workers, the usual banking hours clash with their factory timings so that they might have to find time for cashing the cheque. This problem is engaging the attention of British banks. A solution to it is not as simple as it might appear at first sight. For instance, in the latest annual statement to shareholders, Mr. John Thomson, Chairman of Barclays Bank Ltd., indicated the nature of the problem from the practical standpoint in the following words:

"This (the payment of wages by cheque) may develop but slowly and the consequential problems have been fully discussed, not least the conflicting interests of public and staff over evening opening and the five-day week. The easier course would perhaps be either to stay where we are or else to jump boldly to a five-day week following the lead of so many other countries who aver that the public quickly get used to it. I am not convinced that it would not be better to reach some compromise of limited evening opening and an essential Saturday morning service, at any rate until the whole nature of our Saturday morning has been changed. The problem is not easy of solution, particularly in small places where there may be but one bank with a very small staff, and there are many who object to rendering only a partial service when the Bank's doors are open. Paying-in and paying-out are among the least mechanised of our functions and, while we cannot yet look for Saturday attendance from robots only, we may nonetheless strive towards that end. After all, we have come some way from the times when we had the doors open until 4 p.m. on Saturdays in the places where Saturday was also market day."

Since, even in Britain, where the banking habit is fairly well developed, only a beginning has been made in effecting payment of wages by cheque, it is idle to speculate on the scope for such an innovation in India. It would surely not be popular and practicable with workers in this country. For one thing, the general standard of education among the vast majority of workers in the country is not sufficient to enable them to operate a bank account. For another, the banking habit is yet to develop among workers to a degree that would enable them to appreciate the advantageous transactions through a bank. And, thirdly, the quantum of wages per worker is not as large as in the U.K. But an attempt could be made to popularise the practice among employees above a specified salary limit, say Rs. 500 and above a month.

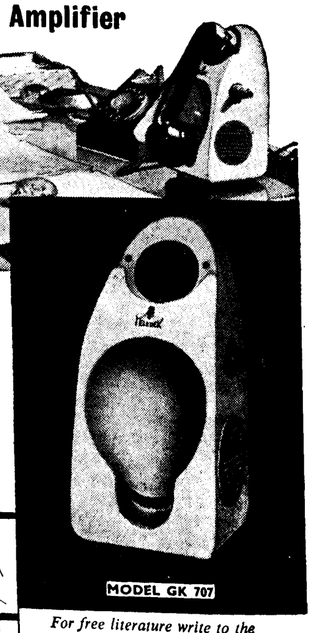
While it might be premature to introduce payment by cheque for all classes of employees, there is one other reform which could be brought about in the mode of wage payment. This is the adoption of the system of weekly wage payment, instead of the existing monthly payment. In many countries abroad, wages are paid weekly. This staggering of payment has two advantages, one for the worker and the other for the monetary and banking system as a whole. The advantage to the worker is that there will be less need for him to run to usurious moneylenders for temporary accommodation as wage payment is spread over the whole month. The tendency to overspend in the first few days of the month, when he receives his pay for the full month, would also be curbed to some extent by the smaller pay packet he receives under the weekly wage payment plan. Further, this would also help to reduce the magnitude of the spurt in notes circulation that occurs during the first few days of every month at present and even out the weekly fluctuations in notes in circulation. It is true that, for employers, weekly wage payment would mean a little more paper work in the preparation of accounts and paying out wages and some loss of interest on deposits. But the disadvantages will be more than offset by the advantages of the arrangement to workers. If workers can be kept happy in this manner, there is no reason why employers should grudge a small addition to their costs.

ELDERS ON RAILWAY BUDGET

The debate in the Rajya Sabha on the Railway Budget would probably have generated a lot of heat if there had been any passenger fare increase to criticise. As the budget had not proposed any fare increase, the members, unfortunately, did not have the opportunity to champion the cause of the poor travelling public. What, instead, they—rather, the Opposition members—could criticise was only the proposed increase in freight and parcel rates. Their criticism was rightly to the effect that the freight increases would add to the inflationary trends, and it was accompanied by the usual suggestion that the railways could earn more by economy in expenditure and by improving efficiency.

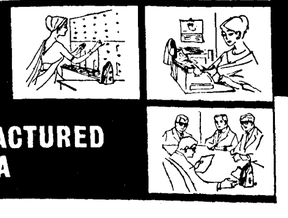
That any improvement in operational efficiency would depend on more rapid replacement and modernisation, for which more liberal depreciation provision would be required, escaped the critics' notice. Equally, the point that outmoded equipment, overage engines and defective tracks necessarily involved relatively higher operational expenses was scarcely noticed by anybody. There was thus no tendency on the part of members to examine the railway problems from the strictly economic angle of conserving and modernising a capital asset with the aid of more revenue from railway users. Merely repeating, parrot-like, that the third class passengers be given a better deal seemed to suggest that parliamentarians, as politicians, were only playing to the gallery. It is, indeed, surprising that even Mr. K. Santhanam, who was once connected with the Railway Ministry, thought that a 4 per cent depreciation provision would be reasonable. That on a capital-at-charge of about Rs. 2,000 crores, this could provide just Rs. 80 crores, as in the latest budget, and that it was not sufficient to replace and modernise, by rapid stages, older and and newer assets alike at present-day costs were ignored by him. The insistent need for stepping up the programme of track and sleeper renewals and replacement of rolling stock and bridges, it would appear, was not quite recognised by any member.

The debate, in short, was a rather tame affair. Even the criticism of freight increases was mild, for its tone had been set by the Railway Minister's prior announcement of extension of railway freight concessions to a larger number of export commodities than at present. These concessions would cover 12 more commodities, the extent of freight reduction ranging from 25 per cent to 50 per cent from the normal rates. In the list of new commodities are to be found groundnut oil and *vanaspati*, cotton textiles, iron castings, tin containers, electric fans, diesel engines, bicycle and bicycle parts, sewing machines, ferro-silicon and ferro-manganese. These freight concessions alone, besides further substantial concessions in the rates applicable to manganese ore exports, would cost the railways Rs. 2.5 crores annually. This is good in so far as it goes. But the rebates, ranging from 25 per cent to 50 per cent, may not aid export promotion significantly so long as the freight structure as a whole is being revised upwards year after year. There must be be a definite ceiling on freight rates. The demand voiced in the Rajya Sabha for freight concessions on items of export other than the ones which are now enjoying or being granted such concessions, is, of course, appropriate and timely. But it has not gone far to reflect the need for evolving a uniformly concessional and stable freight structure for *all* export commodities.



HERE IS

TELEDEK



the amazing new Transistorised Telephone Amplifier

Teledek increases business efficiency and is a boon to busy persons in any business or profession- to executives, secretaries, receptionists and telephone operators. Teledek leaves your hands free for work while you talk and saves your valuable time. Both incoming and outgoing telephone calls can be attended to by merely placing the telephone receiver on the Teledek. It amplifies the sound and facilitates trunk-telephone conversation.

Amsterdam, gateway to Europe—so easy to reach by K

Read why so many experienced travellers and shippers choose reliable KLM jet routes to Rome, Zurich, Frankfurt and Amsterdam with connecting flights to London, Paris, Hamburg, Brussels and 36 other cities in Europe

They know that KLM was the first European airline to fly to the Far East. They know that 'Golden Circle Service' is offered on KLM flights from the Far East to Europe via the South Asian routes and over the Pole. They know that KLM has had longer than any other airline to perfect its reliability—43 years. Read more KLM facts...

1. KLM operates weekly DC-8 jet services to Europe from Calcutta and Delhi and five-weekly flights from Karachi on Tuesdays, Wednesdays, Thursdays, Saturdays and Sundays.

2. In addition, in conjunction with its interline partners, KLM makes it possible for you to fly out of Calcutta, Delhi or Bombay *any day of the week*, by providing connections at Karachi, Cairo, Beirut, Athens, Teheran or Rome (depending on the day of travel), with KLM flights to Europe.

3. KLM has its own fully air-conditioned resthouse at Karachi airport called 'Midway House'. It has spacious, comfortable rooms with shower baths and provides many facilities e.g. a supervised nursery, a barber shop, a souvenir and carpet shop and a floodlit tennis court. The service there matches the standards of a good European hotel.

Jet maintenance at high level

4. After every 3000 hours in the air, a DC-8 jet is completely stripped. Even the seats come out. They go to the carpenters and upholsterers, the precision instruments to the electrical and radio workshop, and the engines to the testing tunnel.

5. KLM believes in double-checking everything. Before every flight a DC-8 jet gets two "walk-around" inspections, one by KLM maintenance crew, one by the flight engineer. He walks around the entire plane to double-check about 60 key points. Including such details as hydraulic fluid, engine intake ducts, tyre treads, brake linings, toilets, lights and power for the galley.

Service for young and old

6. Every KLM DC-8 jet has a luxuriously appointed lounge, located in First Class. It is a perfect place to meet your fellow travellers over free drinks.*

7. KLM prepares special diet food for passengers who request it as they book their seats. KLM pursers are always briefed on these special diets before passengers come aboard.

8. KLM pampers babies—and their mothers. KLM supplies comfortable cribs that hook firmly to the overhead racks, leaving mother's lap free.

Amsterdam — offering so much for so little!

9. On your next trip to Europe, take advantage of 'Hilton Special'—a stay of two days and a night in the Hilton Hotel, Amsterdam; plus sightseeing tours covering a canal boat trip, visits to the Queen's Palace, Rijksmuseum, the Rembrandt House, a diamond cutting factory and other places of tourist interest. And all this for just £.6.1 sh.

10. KLM's DC-8 jet services from Calcutta, Delhi and Karachi as well as its services from Cairo, Beirut, Athens, Teheran and Rome provide excellent connections at Amsterdam to London, Paris, Hamburg, Brussels and many other European cities.

11. When you route your journey via Amsterdam, you have the advantage of going in for tax-free shopping at the airport (including ShipSide cars), and availing of Holland Minitours at a cost of £.1.5 sh. per person.

12. Your Travel Agent will tell you more about the advantages of flying KLM via Amsterdam. Get in touch with him or contact the nearest KLM office. 7 Chowringhee Road, Calcutta; 9A Connaught Place, Delhi; Taj Mahal Hotel, Bombay.

BORROWING PROGRAMME OF CENTRE

BUDGET PROVISION EXAMINED

THERE are several sources from which the Government of India ordinarily meets its requirements of capital outlays. First, regular loans are floated in the market and, in the case of short-term requirements, Treasury Bills are issued, ordinarily for a period of 91 days. Secondly, there are receipts from small savings and Post Office Savings Bank. Thirdly, there are receipts from various depreciation reserve and other funds and under the deposit heads including the National Defence Fund and the investment in special securities of P.L. 480 counterpart funds held with the Reserve Bank. Fourthly, any provision made in the revenue budget for reduction or avoidance of debt is available for meeting the commitments on capital account. In the event of receipts from these sources proving inadequate, the shortfall is made good from revenue, the accumulated cash balances and, if neither is available, by the sale of *ad hoc* Treasury Bills to the Reserve Bank, that is, by deficit financing.

The budget for 1963-64 assumes a credit of Rs. 400 crores, made up of Rs. one crore by way of gold loan (apparently against jewellery), Rs. 6 crores through Premium Prize Bonds and Rs. 393 crores from new market loans to be floated in India, including sale of 4½ per cent. National Defence Bonds (1972), which will be on tap till 9th May 1963, and Rs. 100 crores to be raised on behalf of the States, which will be subsequently advanced to them. The latter provision follows the decision taken by the National Development Council to go in for combined borrowings on behalf of the Central and State Governments.

Mr. Deshmukh's Experiment

It will be interesting to recall, in this connection, that when Mr. C. D. Deshmukh was the Finance Minister, a combined borrowing programme to cover the consolidated requirements of the Centre and States was launched in 1954. Mr. Deshmukh successfully persuaded the States, in spite of the bogey raised that the States' autonomy was in peril, to agree to such a proposal. The principal advantages claimed in favour of such a move were: (*a*) It would enable better planning and co-ordination of borrowing programmes by the Reserve Bank, taking into account the conditions in the money market, (*b*) borrowing could be somewhat cheaper and on uniform terms because the interest rates need not be higher than those paid by the Centre, nor vary for different State loans depending upon the capital market's estimation of the creditworthiness of different States, (*c*) that the institutional investors would find it easy to take up the loan, in view of their dealings with a centralised authority and programme, and (*d*) that the States would be saved the botheration of having to persuade the intending investors—institutions and individuals alike—to extend patronage to their respective flotations. A 3½ per cent National Plan Loan was floated in April 1954 and it was kept on tap until September of that year. In spite of being left open for about six months with an attractive yield under the then prevailing conditions, the receipts amounted to no more than Rs. 125 crores and that too after repeated appeals from the Finance Minister. The amount received, it may be noted, was just about 50 per cent of the expected figure. Subsequently, bickerings arose about the basis of distribution of the loans. Next year, in 1955, the combined flotation of loans on behalf of the Centre and States was given up and the latter were left to stew in their own juice.

We have, however, travelled a long way since 1954. The planned approach has now taken much deeper roots than in 1954. Besides, several State Governments are, financially speaking, in the 'red' and the Central Government had to clear Rs. 70 crores of outstanding overdrafts of some States with the Reserve Bank last year. Thus, the Centre is having a whip-lash in its hand currently, whereas, in 1954, the various State Governments had not yet exhausted the huge post-war development fund balances. It is probable that the States are now in a better mood to co-operate than before. Again, the emergency caused by the Chinese invasion must have spurred the Central and State Governments, in the interests of economy and saving, to experiment with the combined borrowing again. There is no possibility of bickerings over the distribution of the proceeds of borrowings this time, because the Union Government has made it clear that each State Government will be allotted the receipts which it intended to raise in the market after consultations with the Reserve Bank and the Government of India. It may be noted here that, last year, 14 States had sought to borrow Rs. 93.50 crores in all. Accordingly, the Rs. 100 crores now earmarked by the Centre is well in excess of what the States wanted to borrow in 1962.

An important question that arises is whether borrowing by the Centre on behalf of the State Governments is desirable as a permanent arrangement. The answer is: 'NO'. This is because the State Governments must always be made to realise the value of money by being asked to raise their loans and repay them. If the Centre performs this job, the State Governments will take no interest in the borrowing programmes and will not do the canvassing for support from investors which they will be obliged to do if each of them has to float its loan separately. It may be that they may have to pay ¼ per cent more for a shorter period as compared with the terms of the Central loans. But this small price is worth paying, as it will ensure better response from the public than the consolidated loan by the Centre. Besides, to the extent the local population does not feel that it is sharing in the developmental programmes through the media of State Governments, it may promote indifference among them. As a temporary expediency during the emergency, the combined borrowing programme may have some merit, but, as a permanent measure, it is undesirable for reasons just explained.

Prospects

What are the prospects of raising Rs. 393 crores in the market during this year's borrowing season? This total represents only the gross borrowings, that is, including loans that mature this year. On Centre's account, the maturities are Rs. 182.97 crores, made up of Rs. 116.18 crores of 3 per cent 1963-65, Rs. 58.06 crores of 3½ per cent 1963 and two loans of the former Hyderabad State amounting to Rs. 8.73 crores. Then, there are eight State loans aggregating Rs. 38.67 crores that fall due for repayment. Accordingly, net borrowings will have to be of the order of Rs. 171.36 crores on account of both Centre and the States in order to hit the target. The amount is slightly smaller than the net borrowing of Rs. 188.57 crores (Rs. 103.20 crores on account of the Centre and Rs. 85.37 crores on account of the States) in 1963, excluding the subscriptions to the 4½ per cent 1972 National Plan Bonds put on tap on 10th November 1962 and still on tap. Although the net amount of borrowing scheduled for the fiscal year 1963-64 is thus smaller than that in 1962-63, the task will be difficult for more than one reason. The budget contains heavy taxation proposals—about Rs. 276 crores —and a compulsory savings scheme under which the Government hopes to raise Rs. 65 to 70 crores, in addition to Rs. 6 crores of Premium Prize Bonds. Again, the small savings are estimated to yield in 1963-64 a sum of Rs. 105 crores, as against Rs. 80 crores in 1962-63. In view of the fact that the pool of savings of the community is limited, it is obvious that pitching high demands in one direction would inevitably mean reduced availability in other directions.

There is another factor. While, on the one hand, the direct tax levies and compulsory deposit (savings) imposed in the budget will take away a sizable portion of earnings from every section of the community, on the other, the various indirect levies will push up the cost of domestic budgets and thereby impose hardships in making both ends meet.

There is also a third factor. And that is the absence of State Governments' pressure on investors to take up their loans, following the decision to centralise borrowings. It will be pertinent to mention here that, in the past two years, the States were more successful in their borrowing programmes than the Centre. Of course, the timing of State loans was more propitious than that of the Central loan, in that the States came on the market when the slack season was in full swing. Nevertheless, the overwhelming response to State loans in 1962, as well as 1961, was the result of vigorous campaigning done by the State Government for their respective issues.

In these circumstances, in the immediate future, that is, until the huge Government spending of about Rs. 2,800 crores provided for in the Union budget and the expenditure in State budgets percolate back into the community through incomes and savings, it may be difficult to raise resources of the order envisaged through internal borrowing. Probably, the market loans to be floated will have to be kept on tap for a fairly long period, as was done in 1954, in order to make them successful.

Little Surplus with Banks

An important reason for misgiving about the success of Government borrowing programme this year lies in another direction. The main supporters of Government loans now are the institutional investors, namely, the L.I.C., banks, provident funds and other semi-Governmental organisations. With their resources under heavy pressure from rising demands from trade and industry, the banks may not be able to contribute liberally to the borrowing programme, unless they are officially persuaded to cut-back in other directions. But as such cut-back will be undesirable from the point of view of the needs of the private sector, it cannot be thought of as a solution. The L.I.C., the Government Departments and Provident funds will be the only important sources for supplying contributions. The State Governments cannot be expected to exert pressure for subscription to Government loans, since most of them have imposed fresh taxation on top of the Centre's compulsory saving scheme and, if it is possible, they would like to avoid further unpopularity with the taxpayers.

If there is a shortfall in Government borrowing, it is obvious that the net budget deficit for 1963-64 now estimated at Rs. 151 crores will

STATE BANK OF INDIA FARES WELL

SIZABLE GROWTH IN DEPOSITS

INDIA'S largest commercial bank—the State Bank of India—is by the very nature of its constitution both a commercial as well as a service organisation devoted to rural credit and financing small-scale industries, besides extending banking facilities to rural and unbanked areas which is normally not a lucrative proposition. Seen in the light of this preamble, the Bank's performance during the year ended 31st December 1962 bears out further all-round progress.

Gross income has expanded considerably to Rs. 22.59 crores, after having been static at less than Rs. 20 crores (Rs. 19.75 crores to be precise) in the previous year. The improvement has been largely due to earnings from interest and discount showing an increase of Rs. 2.07 crores to Rs. 16.19 crores in contrast with a drop of Rs. 74 lakhs in the previous year. After meeting higher expenses on all accounts, the declared profit is only slightly lower at Rs. 269.25 lakhs as compared with Rs. 271 lakhs a year before. One-fifth of the profit (Rs. 55 lakhs, as against Rs. 75 lakhs a year before) has gone to the reserve fund. Other allocations, except bonus to staff which has taken away Rs. 27 lakhs more at Rs. 72 lakhs, have been either maintained or reduced as indicated in the following table. The return on the 100-rupee share is unchanged at 23 per cent per annum, taxable. The carry forward is lower by roughly Rs. 5 lakhs at Rs. 45.68 lakhs.

The table below compares the Bank's annual progress since 1959:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Gross income	22,58.72	19,74.64	19,53.35	18,52.62
Of which: Interest and discount earned	16,19.07	14,12.24	14,86.91	14,52.94
Commission and exchange earned	6,14.82	5,39.61	4,28.68	3,60.59
Interest paid	7,91.45	6,88.72	8,05.04	7,87.90
Staff expenses	9,41.71	7,97.80	7,31.69	6,99.66
All other expenses	2,25.93	1,91.66	1,77.01	1,57.48
Depreciation and repairs	30.28	25.46	22.03	20.47
Profit	2,69.25	2,71.00	2,17.59	1,87.10
To reserve fund	55.00	75.00	25.00	20.00

* Subject to deduction of tax.
† Including money at call and short notice.
‡ Only the unencumbered portion.

A welcome feature of the year's working is a sizable growth in deposits to Rs. 567.37 crores from Rs. 531.33 crores to which level they had receded in the previous year from Rs. 576.32 crores in 1960. Fixed deposits which had come down from Rs. 312.81 crores to Rs. 251.30 crores in the previous year have increased to Rs. 260.03 crores, savings deposits have gone up further from Rs. 49.87 crores to Rs. 57.88 crores and so have current deposits from Rs. 230.16 crores to Rs. 249.46 crores. If changes in the U.S. P.L. 480 deposits are kept out of account, we are told, the growth in the Bank's deposits in 1962 works out to Rs. 56.7 crores, as against Rs. 31.5 crores in 1961.

The Bank liberalised its savings bank rules from 1st October 1962 by reducing the minimum balance for cheque facilities from Rs. 200 to Rs. 100 and increasing withdrawal facilities from once to twice a week. Further, the limit for maximum deposits in a calendar year was raised from Rs. 10,000 to Rs. 25,000 and that for the maximum balance (excluding unapplied interest) from Rs. 20,000 to Rs. 50,000 on a savings bank account and from Rs. 50,000 to Rs. 75,000 on a savings bank deposit account. All this accounts for the sharp rise in savings deposits in the year under review. A special credit transfer system introduced from January 1962 has proved to be popular and the Bank's widespread network has been instructed to enable the constituents to make extensive use of this new facility.

Thanks to the growth in deposits, the Bank has reduced borrowings from other banks further from Rs. 205.50 lakhs to Rs. 63 lakhs. Advances which have increased over the year from Rs. 255.32 crores to Rs. 270.48 crores, have nearly maintained the previous year's upward trend, though the credit ratio is one point lower at 47.7 per cent. It is, however, investments, to which is evident from the recovery in the investments-deposits ratio from 42.9 to 46.2 per cent, as against 50.3 per cent in 1960, whereas the cash-deposits ratio has fallen from 12.9 to 10.1 per cent. Over the year, the Bank's investments in Government securities are said to have gone up by Rs. 29.3 crores, as against the decline of Rs. 69.2 crores in 1961, which had been entirely due to the transfer of P.L.480 funds.

Between December 1961 and December 1962, the advances granted by the Bank to industry and commerce increased from Rs. 178.6 crores and Rs. 19.3 crores to Rs. 193 crores and Rs. 25.6 crores, respectively. A notable feature was the introduction of the instalment credit scheme designed to finance purchase of equipment or machinery by small and medium sized units engaged in approved manufacturing operations, including those for supplying defence requirements. Under the scheme, the amount of loan is normally Rs. 5 lakhs for a five-year period, with repayment in monthly, quarterly or half-yearly instalments. The scheme envisages advances against hypothecation of equipment or machinery even to parties other than limited companies. A relatively low margin can be retained and details of the scheme varied so as to meet the needs of a much wider clientele than usual.

According to the Directors' report, the volume of the Bank's foreign exchange business recorded further progress during 1962. The number of rupee accounts maintained with the Bank by foreign correspondents increased by nine and the number of accounts maintained by the Bank in foreign countries by six. The Bank also continued to provide banking facilities on a large scale under several barter and other special arrangements entered into by the Government of India and the S.T.C. Total sales of the Bank's rupee travellers cheques, however, increased only slightly from Rs. 95.4 lakhs to Rs. 97 lakhs.

The Bank opened 25 branches under the second expansion programme, as against 12 in 1961, bringing the total to 1,010, excluding 483 branches and 36 pay offices of the subsidiaries. Thus, the Bank has opened within two-and-a-half years 50 out of the 145 branches to be opened under the second expansion programme. The rate is apparently slow, but that is because the Bank had been making during these years necessary preparations for consolidating the expansion under the first scheme. However, the Bank has also opened eight branches outside the expansion programme, and the rate of expansion is expected to rise in future.

The formula in respect of recovery of losses of new branches was reviewed during the year and fresh arrangements with the Reserve Bank were finalised in March 1962. The Bank is also examining, in consultation with the Reserve Bank, a proposal regarding opening more branches at various non-banking treasury or sub-treasury centres during the remaining period of the third Plan.

The Bhor State Bank Ltd. was amalgamated with the Bank under Section 35 of the State Bank of India Act, bringing the total number of minor State-associated banks so amalgamated to five. The Bank of Aundh Ltd. is yet another bank to be similarly amalgamated, pending Government sanction. The Unity Bank Ltd. of Madras, a minor bank which had been under moratorium since 20th March 1962, was taken over from 20th August 1962.

The total number of small industrial units assisted by the Bank rose by 12.2 per cent to 3,153, the credit limits sanctioned by 16.7 per cent to Rs. 11.82 crores and the outstandings by 17.9 per cent to Rs. 5.97 crores. Eighty-three per cent of the limits sanctioned at 'intensive centres' as on 30th September 1962 were for units with limits not exceeding Rs. 50,000 each. As on 31st December 1962, out of the total credit limits amounting to Rs. 896.40 lakhs sanctioned by the Bank and in force at centres covered by the Credit Guarantee Scheme, credit limits aggregating Rs. 602.40 lakhs were actually covered under the scheme by issue of guarantee certificates.

The remittance facilities granted by the Bank to co-operative institutions under the Reserve Bank's remittance facilities scheme rose from Rs. 123.6 crores to Rs. 131.7 crores during the year ended June 1962, but those under the Bank's own scheme receded from Rs. 102.7 crores to Rs. 92.1 crores. Credit limits sanctioned by the Bank to all types of co-operatives during the 12 months ended September 1962 rose from Rs. 24.6 crores to Rs. 33.4 crores and so did the outstandings from Rs. 6.6 crores to Rs. 8.5 crores. In the same period, the credit limits and outstandings against warehouse receipts increased from Rs. 445.5 lakhs and Rs. 155.4 lakhs to Rs. 505.9 lakhs and Rs. 180.1 lakhs, respectively.

In addition to continuing the existing arrangements for the training of clerks and cashiers at the Bank's staff training schools, a scheme of zonal training for new recruits to the clerical cadre was introduced in all the four circles of the Bank. Clerks with not more than one year's service are covered under the scheme. In all, nine such centres were established during the year and 156 clerks were trained. The Bank's staff training college at Hyderabad conducted during the year two regular courses for probationary officers and two short courses for trainee officers. Sixty-seven probationary officers and 61 trainee officers from the Bank as well as eight junior officers from the subsidiaries were trained at the college.

STATE BANK OF MYSORE

PROGRESS SATISFACTORY

SATISFACTORY progress has been made by the State Bank of Mysore (General Manager: Mr. A. Krishnamurthi, Bangalore) during the year-end amounted to Rs. 28.69 lakhs, as against has increased by Rs. 19.53 lakhs to Rs. 145.30 lakhs, with earnings from banking business proper improving by Rs. 19.05 lakhs to Rs. 142.12 lakhs. Expenses, too, have been higher; notably interest paid by roughly Rs. 10 lakhs at Rs. 70.53 lakhs and staff expenses by about Rs. 12 lakhs at Rs. 43.15 lakhs. Consequently, the declared profit shows a setback of 11 per cent, having fallen from Rs. 20.67 lakhs to Rs. 18.41 lakhs. Nonetheless, the dividend on the 100-rupee shares has been maintained at 10 per cent per annum, subject to tax, as it requires only Rs. 10 lakhs. Only the reserve fund has received Rs. 2.10 lakhs less at Rs. 4.50 lakhs. The provision for bonus to staff at Rs. 4.10 lakhs is practically the same as last year.

The following table indicates the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Interest and discount	123.61	104.56	86.81	94.61*
Commission, exchange and brokerage	18.51	18.51	17.22	12.50
Other income	3.18	2.70	2.07	2.14
Interest paid	70.53	60.85	46.41	50.51
Staff expenses	43.15	31.46	24.16	27.40
Other expenses	10.35	10.14	5.52	6.15
Depreciation	2.86	2.65	1.96	1.54
Profit, after tax	18.41	20.67	15.55	19.15
To reserves	4.50	6.60	3.40	3.29
To bonus to staff	4.10	4.25	3.85	3.80
Dividend	10.00 (10%)†	10.00 (10%)†	7.50 (9%)†	11.50 (23%)
Carry forward	0.44	0.62	0.80	5.32

	As on 31st December			
	1962	1961	1960	1959
Capital	100.00	100.00	100.00	50.00
Reserves	64.50	60.00	53.40	100.00
Deposits	25,90.62	22,99.05	19,94.31	19,56.59
Borrowings from banks		6.50	44.75	47.00
Advances	12,97.54	13,14.73	12,43.54	11,47.05
Investments	10,87.74	900.63	5,62.83	800.26
Cash	3,98.77	274.37	1,38.71	214.25
Balance sheet total	31,32.10	27,71.82	26,72.50	25,81.45
Ratio to deposits of—	%	%	%	%
Advances	50.1	57.2	62.3	58.6
Investments‡	41.9	39.2	41.0	41.6
Cash	15.4	11.9	6.9	10.9

* After deducting Rs. 6.14 lakhs being income-tax on interest earned on investments.
† Subject to deduction of tax.
‡ Unencumbered portion only.
Note.—Accounts for 1960 are for 10 months from March to December.

A feature of the year's working is the further expansion in deposits from Rs. 22.99 crores to Rs. 25.90 crores. The growth has been shared by all classes of deposits. Thus, fixed deposits have increased from Rs. 12.14 crores to Rs. 13.83 crores, savings from Rs. 3.33 crores to Rs. 3.75 crores and current from Rs. 7.53 crores to Rs. 8.33 crores. Thanks mainly to this growth, the Bank has been able to close the year with *nil* borrowings from other banks, as against Rs. 6.50 lakhs to which level they had been brought down in the previous year from Rs. 44.75 lakhs in 1960.

A much larger portion of the deposits has gone into liquid assets as is evident from the increase, over the year, in investments from Rs. 9.10 crores to Rs. 10.88 crores and in total cash from Rs. 2.74 crores to Rs. 3.99 crores. With no borrowings to be adjusted against investments, the investments-deposits ratio has gone up by 2.7 per cent, to 41.9 per cent. The ratio of cash balances to deposits at 15.4 per cent shows an increase of three-and-a-half points. Consequently, the ratio of liquid assets to deposits is as high as 57.3 per cent. On the other hand, advances have receded from Rs. 13.15 crores to Rs. 12.98 crores, and the credit ratio has dropped by seven points to 50.1 per cent. Greater attention to advances would have minimised the setback in profit which is attributed to the implementation of the Desai Award, revision of the scales of pay and allowances of the officers and cost of deposit insurance.

During the year, the Bank extended its agency business to six additional centres, bringing the total number of branches conducting Government business to 38. The number of branches increased by four to 63. Under the scheme of rationalisation, the branch at Gulbarga was passed over to the State Bank of Hyderabad, while the business of the Bangalore branch of the State Bank of Travancore was taken over by the Bank. The Bank has been licensed to open eight more branches.

The Bank's advances to small-scale industries recorded a sizable increase during the year. Assistance was afforded to 136 units accounting for a total limit of Rs. 84.15 lakhs, as against 97 units with a total limit of Rs. 82.77 lakhs as at the end of 1961. The outstandings under the sanctioned limits at the end of the year were higher at Rs. 47.58 lakhs, as compared with Rs. 39.58 lakhs a year before. The total outstandings against warehouse receipts at the year-end amounted to Rs. 28.69 lakhs, as against Rs. 21.84 lakhs in 1961. The aggregate credit limit to co-operative institutions at the end of the year improved from Rs. 56.73 lakhs to Rs. 88.84 lakhs and the amount outstanding stood at Rs. 54.05 lakhs, as against Rs. 43.56 lakhs in 1961. The increase represents enhancement of the limits and full utilisation of the sanctioned credit by the co-operative sugar factories.

With the opening of new branches and increase in business, the strength of the Bank's staff rose from 1,380 to 1,535 during the year.

COTTON: A DECADE OF CHANGE

PRICE IS KEY TO SUCCESS IN COMPETITION

By R. T. Baggett

FOREIGN AGRICULTURAL SERVICE, U.S. DEPARTMENT OF AGRICULTURE

THE past ten years have witnessed some striking changes in the sources of the world's cotton supply. Not only is much more cotton being grown abroad now, but more countries are growing it. Much more is being exported, too, and some of it by countries that were markets themselves ten years ago.

A decade ago, nearly a third of the cotton moving in world trade came from five traditional major producing countries, namely, Brazil, Peru, Egypt, India and Pakistan; today, less than a fourth. A number of other cotton-producing countries formerly considered minor—some that exported little or no cotton in 1953—now add up to strong competition for the world cotton market. These newer competitors have increased their combined share of the market from around 28 per cent to nearly 40 per cent.

Still top producer and exporter, of course, is the United States, growing and shipping 30 to 40 per cent of the world's cotton, only fractionally smaller shares than ten years ago. Second place in both categories has been relinquished by the U.S.S.R. Its share of world imports has fallen from 11 per cent to 8—but its cotton moves almost entirely within the Soviet bloc.

Rising Consumption a Big Factor

The rise of the newer producing and exporting areas has not been caused by declines in output among the five traditional "majors." These five countries in fact are all producing more cotton than they did in 1953; but they have had less available for export because they were using more at home.

Meanwhile, the minor producing countries have stepped up their output and moved strongly into world competition. They were spurred on first by short supplies, stepped-up buying, and the sky-rocketing prices of foreign cotton during the Korean war, and later by the increasing attractiveness of cotton as a cash crop, an earner of foreign exchange, and a raw material for textile output, either for domestic use or for export.

During the first part of the decade, cotton consumption rose fastest in exporting countries. For the world as a whole, it hit an all-time peak of over 48 million bales in 1959, and it is still close to that level. Largely responsible for this increased world demand have been rising incomes and standards of living in many countries, along with population growth—all of which has made for bigger textile markets.

Demand for cotton, in its thousand-and-one finished forms, would be even higher except for the vigorous bid that man-made fibres have made for the textile consumer's dollar. But a period of fairly stable world prices at lower levels beginning in 1959 promoted cotton use, even though later price strength provided one incentive for production to soar again to record heights. However, while not benefiting, as man-mades do, from vast expenditures for research and promotion, cotton is making progress in new fabrics, in new techniques, and in market promotion. In addition, growers in all countries are improving the quality of the raw product and of their producing and merchandising.

Production—New Records

World cotton production has set new records for five consecutive years, and the 1962-63 crop of almost 50 million bales is larger than the average outturn in the 1950-54 period by 11 million bales, or 28 per cent. Total use has more than kept pace, however, since the current season marks the first time in seven years that production may exceed consumption.

While the United States has continued its measures to adjust production, nearly all the cotton countries elsewhere have spent the past ten years encouraging production. Some cotton programmes, such as subsidised fertilisers distribution, guaranteed prices, and producer incentives and payments, are aimed at farmers. Others aid farmers in less direct ways, such as research to improve varieties and cultural methods, more efficient marketing services, irrigation expansion, and import restrictions on raw cotton and cotton textiles. In the United States, cotton programmes like these are intended to maintain farm income while adjusting production to the demands of the market; but in many other countries, they have been intended mainly to stimulate production and have succeeded in doing so.

Behind the scene in the world cotton drama, the director is always Price. The level of world cotton prices tends to be set by U.S. cotton because of the volume. But over the past ten years, prices that provide a fair return for the bulk of U.S. producers constituted incentives for growers in other countries to expand production. Moreover, cotton not only provides cash income for the thousands of individual growers to spend for food and other things they previously did without or grew themselves, but has also become extremely important in numerous countries as an earner of badly needed foreign exchange.

Sometimes, when faced with the hard choice between cotton and food crops, the Governments have chosen cotton in the hope that exports of raw cotton or finished products would help pay for imports of the food crops that cotton was displacing. If food or other commodities previously produced domestically are provided by other means such as aid programmes, land and other resources are left for cotton.

Once the choice has been made, and cotton plantings have been increased in response to the prospect for cash income, it does not necessarily follow that they will decrease in the same proportion when prices go down. Instead, farmers hang on and Governments seem to try even harder to maintain or increase production by larger investments in measures to raise yields, increase production efficiency, provide a product more acceptable in quality, and make up for low per-unit returns by increasing volume.

Notices

THE MYSORE PAPER MILLS LIMITED

Asiatic Buildings, Kempegowda Road, P. B. No. 570, Gandhi Nagar P.O., Bangalore 9.

NOTICE TO MEMBERS OF THE COMPANY

ATTENTION OF THE SHAREHOLDERS OF the Company is invited to our Notice dated 1st November 1962 fixing the due dates for payment of 1st and 2nd calls on 2nd January and 31st March 1963 respectively. Shareholders are requested to remit the call moneys in respect of the 2nd call on or before 1st April 1963 as 31st March 1963 happens to be a General Holiday being a Sunday.

N.B.—(1) Shareholders who have not yet paid the 1st call amount (due on 2nd January 1963) are hereby reminded to make payment in terms of the notice dated 1st November 1962.

(2) Shareholders who have paid the 2nd call in advance may please ignore this.

By Order of the Board,
C. V. RAMACHANDRA RAO,
Secretary.

28th February 1963.

THE GWALIOR RAYON SILK MFG. (WVG.) COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of the Company, at their Meeting held on 25th February 1963, have declared the dividend on Preference Shares Series 'A' and 'B' for the year ended 31st March 1963 at Rs. 8.57 per share subject to deduction of tax under Section 194 of the Income Tax Act, 1961.

The Dividends will be paid on or after 1st April 1963 to those shareholders whose names appear on the Register of Preference Shares, Series 'A' and 'B' on the 1st April, 1963.

Register of Members and Share Transfer Books of the Preference Shares Series 'A' and 'B' of the Company will be closed for this purpose from 16th March 1963 to 1st April 1963, both days inclusive.

By Order of the Board,
V. N. BAGRODIA,
Secretary.

Registered Office:
BIRLAGRAM, NAGDA,
28th February 1963.

IMPORT DUTY ON COTTON

REIMPOSITION AFTER NINE YEARS

THE Central Budget for 1963-64 presented to Parliament by Mr. Morarji Desai, Union Finance Minister, on 28th February, contained no surprises for the cotton trade. It is true that the budget proposals contained an import duty of 10 nP per kilogram on raw cotton. But this was not altogether unexpected. In fact, trading in cotton on the eve of the budget was considerably influenced by speculation about the additional burdens that cotton, raw and manufactured, might be called upon to bear. Three levies were generally mentioned as likely. They were a cess on raw cotton, an import duty on foreign cotton and some readjustment, if not increase, in excise duty on cloth. Only one of these anticipated levies, namely, import duty on cotton, has materialised. So far as the cotton mill industry is concerned, while there has been no increase in the excise duty on cloth, cotton yarns have been subjected to a special excise duty (that is, a surcharge of 20 per cent of the prevailing excise duty on cotton yarns of less than 35 counts and of 33½ per cent on cotton yarns of 35s and above) which is expected to yield an additional revenue of Rs. 170 lakhs.

With the proposed levy of 10 nP per kilogram on cotton imported into this country, the cotton import duty has staged a come back after a lapse of about nine years. It may be recalled that the import duty on cotton was abolished in 1954 by Mr. C. D. Deshmukh, the then Finance Minister, as part of his policy of replacing import duties on essential raw materials by excise duties on the goods manufactured from them. In order to offset the revenue effect of this relief Mr. Deshmukh had increased the excise duty on cloth. He had explained the rationale of the abolition of import duty on cotton in his 1954 budget speech as follows:

"The third change I propose to make is to abolish the present import duty on raw cotton. Imported raw cotton enters not merely in the production of cloth consumed internally but, to some extent, in the exports of Indian cloth. I mentioned earlier the arrangements which have been made for the grant of a rebate of duty paid on imports of raw materials which enter into the manufacture of our exports. The whole problem of regulating the import duty on essential raw materials came under review in that context and, while obviously no final view has yet been taken, it is felt that a move towards the gradual replacement of import duties on raw materials by excise duties on the goods manufactured from them could be made. This replacement seems more or less inevitable as the country is progressively industrialised; it will also make the export trade simpler by removing the complication involved in the grant of rebates of import duty. I feel that a useful beginning should be made with the import duties on raw cotton. The loss in revenue is estimated at Rs. 4 crores."

The reintroduction of import duty on cotton suggests that the Government has decided to have both, that is, the duty on raw material and a duty on manufactured goods as well. The proposed duty of 10 nP per kilogram, which works out to Rs. 36 per candy of 784 lbs., is, however, relatively modest as compared with the previous duty of two annas per lb. or Rs. 98 per candy. The yield from the duty is estimated to be Rs. 2 crores for a full year. This compares with the loss of revenue of Rs. 4 crores from the abolition of import duty in 1954. But, with the increase in the excise duty on yarn, the total burden on cotton mill industry has gone up by nearly Rs. 4 crores.

The Finance Minister considers the import duty to be too small to justify an increase in the price of cloth produced from imported cotton. In fact, according to him, the surcharge in excise duty on cotton yarn, as already referred to, and the import duty on cotton taken together, will mean an increase by only a fraction of a little over a naya paisa per square metre in the cost of cotton fabrics and should not therefore call for an increase in prices. If the industry were to concede this argument, it would mean a drop of Rs. 4 crores per annum in its profit on this score alone.

Exports of raw cotton from Pakistan during the last season aggregated 405,976 bales (staple cotton 255,818 and *Deshi* 150,158), as compared with 246,879 bales (staple cotton 147,151 and *Deshi* 99,728) a year earlier. In addition, 128,410 bales of cotton waste, linters and yellow pickings were also exported. Exports in order of size were Japan 146,232 bales, India 114,979 bales and Hong Kong 55,322 bales. While Hong Kong and Japan are traditional buyers of Pakistan and are likely to remain so, the serious shortage of staple cotton compelled India to buy substantial quantities of Pakistan staple cottons during last season. It is noteworthy that, while the Communist bloc countries purchased about 23 per cent or one-quarter of the total exports of Pakistan cottons in 1959-60, these countries did not show any interest last season with the exception of China which purchased 12,799 bales.

OUTLOOK FOR COTTON INDUSTRY

RECOVERY TO MORE NORMAL CONDITIONS EXPECTED SOON

From Our Special Correspondent

MANCHESTER, 26th February

MANCHESTER LETTER

AN improvement in the trade outlook for the British cotton textile industry was forecast by Mr. Roger Lee, Chairman of the Lancashire Cotton Corporation, one of the biggest mill groups in the country. He told shareholders at the annual meeting in Manchester: "Although adverse trading conditions in the textile industry have continued throughout the first quarter of this year, I believe there are now some indications that a recovery to more normal conditions may soon be expected."

Mr. Lee was confident that the group would be able to take advantage of any improvement. "When the upturn in the level of activity comes, as undoubtedly it must do sooner or later, the intense work which has gone into effecting economies and promoting efficiency throughout all our mills during the period of depression will bring great advantages," he said.

The group's results had been affected for some time by considerable disruption of production and the tendency for costs to rise while new equipment was being installed in mills. Although there was a considerable amount of this work to do, the benefits of early schemes would shortly come to fruition and the losses attendant on the disturbances brought to an end. Replying to a shareholder's question on the subsidiary companies, Mr. Lee, said that they were "very successful" but were not large enough yet as a proportion of the investment of the group.

Turning to the question of reorganisation of the industry's structure and the advocacy of more amalgamations of both vertical and horizontal firms, Mr. Lee said that the Corporation had been originally formed to bring about such mergers and it remained the policy of the Board. He added: Naturally we intend to continue to play a very full part in any such re-arrangements provided that we are satisfied that they will be in the interests of the stockholders and the industry."

If the well-regulated trade cycle illustrating the stocking and de-stocking process follows its usual course, there are hopes that the depth of the current recession has been reached. According to recently published figures, the pendulum should by right start to swing upwards again.

Theoretical Cycle

After two years when the surplus of supplies held, on the basis of production plus imports less exports, had remained relatively stable, 1963 saw a sharp decline in the quantities involved in each of these categories. The following table provides comparable data for an elaboration of this theory and the perceptible fluctuation in the volume of stocks since the war, covering both cotton and man-made fibre cloth:

(In million yards)

Year	Output	Imports	Total	Exports	Balance for home trade
1937	4,122	75	4,197	2,001	2,196
1949	2,692	400	3,092	1,078	1,914
1950	2,840	342	3,182	1,017	2,165
1951	2,960	476	3,436	1,105	2,331
1952	2,192	210	2,402	871	1,531
1953	2,132	143	2,275	895	1,380
1954	2,632	335	3,110	812	2,298
1955	2,775	365	2,844	688	2,156
1956	2,479	380	2,694	595	2,099
1957	2,314	490	2,777	567	2,210
1958	2,287	434	2,464	468	1,996
1959	2,030	576	2,502	411	2,091
1960	1,927	796	2,697	383	2,314
1961	1,911	801	2,643	336	2,307
1962	1,842	642	2,255	290	1,965
	1,613				

Output from Lancashire mills last year suffered its sharpest fall since 1958 and this, as is well known, was accompanied by a reversal of recent import trends, for the first time since the same year. The result is that the total quantity of cloth brought to the market was nearly 400 million yards below the 1961 level, being the smallest volume since statistics of this sort were drawn up.

Even though exports continued their unfortunate downward slide, the resultant balance remaining for disposal at home was sharply reduced to the lowest figure since 1953, when the recovery from the first major post-war slump was taking place. Invariably, when the figure in the final column of the above table has dropped below 2,000 million yards, conditions have subsequently altered for the better and, in spite of a still uncertain outlook, there are grounds for believing that history will repeat itself this year.

Certainly the distributive trades have run down their stocks to such an extent that any sudden call from the public would precipitate urgent buying. Those weather forecasters who have been suggesting that this winter's deplorable record will be followed by a transformation into unaccustomed warmth may yet hold the key to the situation.

Within the industry forces are moving towards a freer rate of activity, partly on account of the projected wage application now being considered by the trade unions. It would be surprising if any claim was not resisted strongly by the employers, but its very submission might sow the seeds of more confidence among buyers, which is all that is needed to reverse the current air of frustration.

1962's Record

Output of all types of cloth last year, according to the final returns, fell by nearly 230 million yards to a total of 1,612,610,000 yards. Within this aggregate production of cotton cloth alone totalled 1047,370,000 yards, as against 1,234,730,000 yards in 1961. The reduction in yarn output was even more marked than in the previous year, being nearly 75 million lbs. down, after a drop of 65 million lbs. in 1961. Actual output was 611,900,000 lbs.

November's brief gain in the number of operatives employed in spinning and weaving was short-lived. In the last month of the year, affected as usual by holiday influences, there was a further setback of 1,330 workers in the man-power total. The final 1962 labour force was shown as 151,270, as compared with 169,520 a year previously.

Sectionally, the numbers employed in spinning showed a decline of more than 7,000 from 63,630 to 56,100; waste spinning manpower was a mere 220 down at 6,770 and, in doubling, the reduction was only 560 at 12,780. Weaving, however, suffered the biggest reverse, the numbers on the books being practically 10,000 down at 75,620, as against 85,510 at the end of 1961.

Small Men Still Active

Much is now being heard of the way in which the big firms in the industry are planning their campaigns for re-equipment and indulging in modernisation of machinery which, through force of numbers, sometimes runs into hundreds of thousands of pounds and even into millions. These figures look important in print and it is as well that they receive publicity, so that the outside world can recognise that Lancashire textile firms are not completely idle when it comes to bringing themselves up to date. Sometimes, however, it is possible to skip over the efforts being made on a very small scale at the other end of the business. It can be argued that too many small firms have been the bane of Lancashire's life in the past and that the big battalions should be encouraged to take them over. At the same time, if it were not for the tiny independent unit, often working in an outlying village, the character of the trade would be very different. One of the local papers in the area, published in Heywood, has pin-pointed this aspect of the current industrial scene, saying that, although mill chimneys no longer dominate the skyline as in the past, yet new weaving sheds have lately been built in the town and enterprising small concerns have shown what they can do. Some of these are little more than "one-man-banks" with a handful of semi-automatic looms and perhaps only a dozen employees. They work on the assumption that a small efficient unit turning out goods which are urgently needed by customers can often make more of a success of their business than many of their more influential and substantial rivals. No doubt the experience of these new ventures can be reflected in other towns and no doubt also there will be those who consider that the "little man" should be eliminated, as he tends to undermine the authority of the major suppliers.

GABRIEL INDIA LIMITED

FIVE-FOLD EXPANSION PROGRAMME

GABRIEL INDIA LIMITED, Mulund, Bombay, has recently been granted a licence by the Government of India to increase its production capacity from 120,000 to 600,000 Shock Absorbers per year. A joint enterprise of The Gabriel Company of Cleveland, Ohio, U.S.A., and Anand Automobiles of Bombay and New Delhi, the Company was granted the manufacturing licence in June 1960. Within days after the first prototype shock absorber came off the assembly line on August 8, 1961, the plant was operating at its full licensed capacity of 400 shock absorbers per day on a single-shift basis. To date the Plant has manufactured 225,000 shock absorbers.

Located 20 miles out of Bombay City in the fast growing industrial suburb of Mulund, the Plant is equipped with most up-to-date and highly specialised equipment to manufacture quality shock absorbers. After a careful analysis of the requirements of the vehicle manufacturers in India, special heavy-duty shock absorbers were developed by Gabriel Engineers and for over a year, Gabriel Shock Absorbers have been supplied as original equipment to the majority of vehicle manufacturers for trucks, buses, passenger cars, jeeps, jeep trailers, motor cycles, scooters and three-wheelers. In addition, the Company has been distributing shock absorbers for the replacement market through Firestone Tyre & Rubber Co. of India Private Limited with a network of Sales Offices throughout the country.

Encouraged by the response of Original Equipment and Replacement markets, the Company has embarked on an ambitious expansion programme. The Capital of the Company is being doubled in equal proportions by U.S. collaborators, The Gabriel Company of Cleveland, Ohio, and the Indian Associates, Anand Automobiles of Bombay and New Delhi.

The Expansion Programme promises considerable saving of foreign exchange for the country. The indigenous content of shock absorbers which is currently 60 per cent will go upto 98 per cent by the end of this year, which apart from saving foreign exchange will also help the ancillary industry in the country.

The Company is also contributing to the Defence effort by supplying Gabriel Shock Absorbers for Nissan 1-ton trucks and patrol jeeps currently being manufactured by the Ordnance Factory, Jabalpur.

INDUSTRIAL CREDIT AND INVESTMENT CORP. OF INDIA LTD.

STATEMENT BY CHAIRMAN, MR. G. L. MEHTA

THE Annual General Meeting of the shareholders of the Industrial Credit and Investment Corporation of India Limited will be held at the Registered Office of the Corporation, 163 Backbay Reclamation, Bombay 1, on Thursday, 11th April 1963, at 4 p.m. The following is the statement by the Chairman, Mr. G. L. Mehta, circulated to the shareholders with the Directors' report and accounts for the year ended 31st December 1962.

I have great pleasure in welcoming you and placing before you the eighth annual report of the Board of Directors of the Corporation for the year ended 31st December 1962.

You must have noticed that, over the years, I.C.I.C.I's business has undergone changes not only in size but also in its content. When I.C.I.C.I. was set up eight years ago, conditions in the capital market were very different from what they are today. The capital market was less developed, and facilities for obtaining finance, particularly for obtaining underwriting, were much less adequate. On the other hand, the country still had considerable foreign currency resources, and the foreign exchange scarcity was still not evident. The problem then was to obtain rupee resources while it was much easier to come by foreign currency resources from the Government.

Underwriting

It was natural, therefore, that the demand on this institution, in the early (1955-1958) years of its existence, was for rupee resources, and more particularly for underwriting. In keeping with I.C.I.C.I's objectives, we took up such business even when we knew that, in the conditions then prevailing, we would have to take up a substantial portion of what we underwrote as, in fact, did happen. Such underwriting was done on an analysis of the long-term prospects of the company whose shares were underwritten, which we found to be favourable. The reason for under-subscription to such shares was, as mentioned above, the restricted nature of the Indian capital market as a result of the less developed investment habit of the public as well as the uncertainty about the profit-earning capacity of industrial concerns.

Anticipating a little, I might say that, in fact, our judgment of industrial prospects did prove sound, and many of the industrial concerns which we helped with underwriting have done well after going into production. Moreover, the investment habit, as shown by the happenings on stock exchanges since 1960, has become more widespread, and I.C.I.C.I. itself has made available to the market securities from its portfolio in order to develop the capital market and to be able to spread its assistance over as many concerns as possible.

Going back, you might recall that we had, right from the start in 1955, a foreign currency loan of U.S. $10 million from the International Bank for Reconstruction and Development, which we were unable to utilise until 1957. In 1957-58, shortage of foreign exchange began to be felt which, among other things, led to an appraisal and a re-appraisal of the second Plan. One of the consequences of that situation was that industrialists, unable to obtain foreign exchange from the Government for their projects, increasingly turned to I.C.I.C.I. Consequently, I.C.I.C.I's foreign currency business has grown considerably over the years; and by now, we have already sanctioned almost the whole amount of U.S. $60 million obtained by way of four lines of credit from I.B.R.D. In addition, we have also sanctioned a substantial amount out of the lines of credit obtained from the U.S. Development Loan Fund (now Agency for International Development) and from Kreditanstalt für Wiederaufbau of the Federal Republic of Germany.

I would like to illustrate what I have stated above by reference to the following figures showing the trend of I.C.I.C.I's business:

I.C.I.C.I. Net Sanctions, 1955-61

(In crores of rupees)

Year	Underwriting	Direct subscription	Rupee loans	Foreign currency loans	Total
1955-58 ..	5.25	1.48	3.48	3.14	13.35
1959-61 ..	4.97	1.38	6.73	16.28	29.36

Conditions in the Indian capital market have recently become more difficult, and these are reflected in the figures of I.C.I.C.I's business in 1962—both in respect of the total amount as well as its distribution between various forms of assistance. Towards the end of 1962 particularly, the share markets were in a dull state. I would like to affirm that this is basically "a crisis of confidence" induced as a result of the emergency, and does not reflect upon the inherent strength of the Indian economy and the long-term prospects of industry in India. I.C.I.C.I. has to take a longer view of investment and we shall be prepared to finance projects found viable on our examination, whatever the immediate conditions of the capital market in the country.

Assistance to Industries

I have already alluded to the response of I.C.I.C.I. to the changing requirements of our economy. The foreign exchange shortage, which I referred to earlier, has been with us for a considerable time, despite an increase in the pace of industrial development and the substantial rise in indigenous production. This, I would say, is not unexpected.

Over a period, we have developed a large number of industries, and, as a result, have been able to dispense with the imports of their products. I may mention as instances paper and paperboard, wire ropes, electric cables, steel tubes, electric lamps, and many other goods. As you will observe from our operations, I.C.I.C.I. has played a significant part in the development of several of these industries.

I believe this policy is justified by the results achieved. The most effective means—within limits—of conserving our foreign exchange resources is through import substitution, and this for various reasons: the import policy is strictly of our making and so lies within our discretion; moreover, when defined in advance, it provides a guideline to industrialists for their planning.

I have already mentioned that the policy is sound within limits. The most important limit I have in mind is the fact that it may not be economically feasible to undertake the manufacture of everything in India: while this is obvious in relation to agricultural products whose growth depends upon climatic conditions, it is no less true of manufactures. In accentuating the pace of import substitution, I feel that the Government should keep this limitation in view. Even advanced countries have not found it economic to manufacture everything themselves, and it would not be prudent for us to seek complete self-sufficiency.

Import Requirement

Even apart from this, imports are likely to continue in India, and for a long time. For one thing, our requirements for machinery tend to increase in volume as the total development effort expands. Besides, development leads to maintenance imports—imports required for operating the industries which have been set up. This is most evident when a phased programme of manufacture is undertaken, that is, when it is officially recognised that not all the items included in a final product are taken up for manufacture at the same time. It is no less so when raw materials, components and basic chemicals are required to be imported, so as to sustain the industrial capacity set up in the country.

I would like to illustrate this aspect of import requirement from I.C.I.C.I's operations. The assistance sanctioned by I.C.I.C.I. in 1962 was Rs. 14.09 crores in respect of 40 new projects. The total cost of these projects was estimated at Rs. 76.38 crores (capital cost of Rs. 55.84 crores plus working capital requirement of Rs. 20.54 crores). Of the capital cost, Rs. 22.06 crores would be required in foreign exchange. But this is not all. The cost of goods produced by these projects would amount to Rs. 49.05 crores, of which about Rs. 7 crores would be required in foreign currencies (excluding the amount required to service the I.C.I.C.I. loans in foreign currencies for these projects). This will constitute a recurring demand for foreign exchange over the future until indigenous capacity is developed for the required raw materials, components and basic chemicals. I might add that many of our constituents undertake increasing fabrication of machinery internally in their own workshops when they undertake new projects or expand existing ones.

What, therefore, happens is that, in the process of development, both the demand for final products (including capital and consumer goods) increases, while, at the same time, the demand for the final products gets transformed into a demand for intermediate and basic goods. Over the past five years, while industrial production, as measured by the official index of production, has increased by about 40 per cent, our total import bill (partly through rigid import control measures) has been kept constant at about Rs. 1,000 crores. Moreover, the import of intermediate goods has also remained constant being about 35 per cent of the total imports. While, apparently, our import bill has remained constant over, say, the last five years, imports today sustain a much larger volume of industrial production than five years ago: which means that the proportion of import content in the consumption of industrial products has gone down over the period. And imports have changed in content from more finished goods to raw materials, components and basic chemicals.

Appraisal of Projects

I would like also to refer to the nature of industries to which I.C.I.C.I. has provided funds. From the table given with the Directors' report, it will be noticed that I.C.I.C.I.'s assistance is concentrated in what might be called non-traditional industries like engineering and chemicals. It is, to some extent, the result of a deliberate policy. Qualitatively, therefore, the impact of I.C.I.C.I. on industrial development has been much larger than what the figures of finance provided might lead one to assume. This approach has involved a more careful appraisal of the long-term prospects of projects, to which I had occasion to refer last year. It also requires a more careful watch on the projects both during construction and after they go into production: cost estimates tend to go awry at times, difficulties arise in establishing production and in reaching full capacity, and problems of setting up distribution channels and developing a market for the products have to be tackled. We are conscious of the risks involved in these matters for a financing institution like ours; we have, therefore, set up a separate division for follow-up under a senior officer, which will be concerned with keeping track of the progress and problems of companies assisted by I.C.I.C.I.

I have mentioned these various aspects because they concern vitally the evolution of a development bank like I.C.I.C.I. The functions of a development bank, however, moulded by the changing conditions of an economy, are rooted ultimately in the long-term needs of an industrial economy. We envisage that the industrial structure in the country will not only grow larger in size, but, as a result, will also become increasingly complex in nature. The financing needs of industry will increase and become more sophisticated. We hope that, with the continued support from the Government and from institutions like the World Bank, this Corporation will continue to play an increasing role in meeting these needs.

You will notice that the total assistance sanctioned by I.C.I.C.I. in 1962 amounted to Rs. 19.60 crores. Of this, Rs. 14.09 crores were in respect of new industrial projects. The total cost of these projects, when completed, would amount to Rs. 76.38 crores (Rs. 55.84 crores for fixed assets and Rs. 20.54 crores for working capital); we estimate the total turnover of these projects, when they reach full production, at Rs. 58.69 crores. The financing of these projects is proposed to be met by share capital of Rs. 25.05 crores (Rs. 24.13 crores in ordinary shares and Rs. 0.92 crore in preference shares), long-term loans of Rs. 21.92 crores, and bank borrowings and cash accruals of Rs. 29.41 crores. The total foreign exchange requirement of these projects on capital account amounts to Rs. 22.06 crores, of which Rs. 7.47 crores are being provided by I.C.I.C.I.

I had referred last year to a line of credit being arranged from Kreditanstalt für Wiederaufbau of the Federal Republic of Germany. I am glad to report that a further line of credit of DM. 20 million (about Rs. 2.40 crores) is now under negotiation with this institution, and we hope to complete soon the formalities relating to it.

The year 1962 was notable in the Corporation's activities. Both sanctions (at Rs. 19.60 crores) and disbursements (at Rs. 9.85 crores) were at an all-time high. The year's operations included the floating of the largest debenture issue, that of Oil India Ltd. (a company of which 50 per cent of the capital is held by the Government and half in the private sector) in the country, in which the Corporation played an active part.

Reflecting the increased operations, the Corporation's receipts from interest, dividends and underwriting commission for industrial assistance increased. Profit before tax amounted to Rs. 78.92 lakhs in 1962, against Rs. 74.27 lakhs in 1961. The Corporation made a contribution of Rs. 2.5 lakhs to the National Defence Fund, and, after providing Rs. 32.54 lakhs for taxation, the balance carried to revenue appropriation account is Rs. 46.38 lakhs, against Rs. 46.52 lakhs in 1961. Of this, Rs. 11.60 lakhs is transferred to special reserve; further, the entire capital gain of Rs. 23.10 lakhs has been transferred to capital reserve not available for dividend. The Directors recommend a dividend of 6.5 per cent, same as last year.

I had mentioned in my last year's statement to you about the holding, under the auspices of I.C.I.C.I., of a Regional Conference of Development Banks in Asia. The Conference was held on 29th, 30th and 31st March 1962, and was attended by delegates from development banks from 13 countries in Asia. Fraternal delegates from international and foreign lending institutions such as the International Bank for Reconstruction and Development, the International Finance Corporation and the International Development Association, the Commonwealth Development Finance Company Limited of the U.K., Kreditanstalt für Wiederaufbau of the Federal Republic of Germany, also participated along with officials of the Government of India, the Reserve Bank of India and some of the State Finance Corporations. The Conference helped us to exchange views, identify common problems and also develop contacts with similar institutions in other countries. I am glad to say that the idea of holding the Conference has been generally appreciated, and arrangements are already being made to hold, in the latter part of 1963, a second Conference in Teheran under the auspices of the Industrial and Mining Development Bank of Iran.

We have also tried to develop relations with other development banks through visits. Mr. Nguyen-Huu-Hanh of Societe Financiere Pour le Development de L'Industrie au Viet-Nam, visited I.C.I.C.I. in October 1962, to study our procedures. Two officers of the Nepal Industrial Development Corporation came in December, 1962, to study various aspects of appraisal and follow-up work at I.C.I.C.I. In January 1963, Mr. Yom Tantsetthi, General Manager of the Industrial Finance Corporation of Thailand, visited us for a week to discuss general problems of development banking and I.C.I.C.I.'s operations. We expect to have, later in the year, a trainee from an African country under the U.N. Technical Assistance Programme. We also expect visits from senior officials of development banks in South East Asian countries. These are all examples of practical co-operation between institutions at operational levels and we are glad to be able to make a contribution to it.

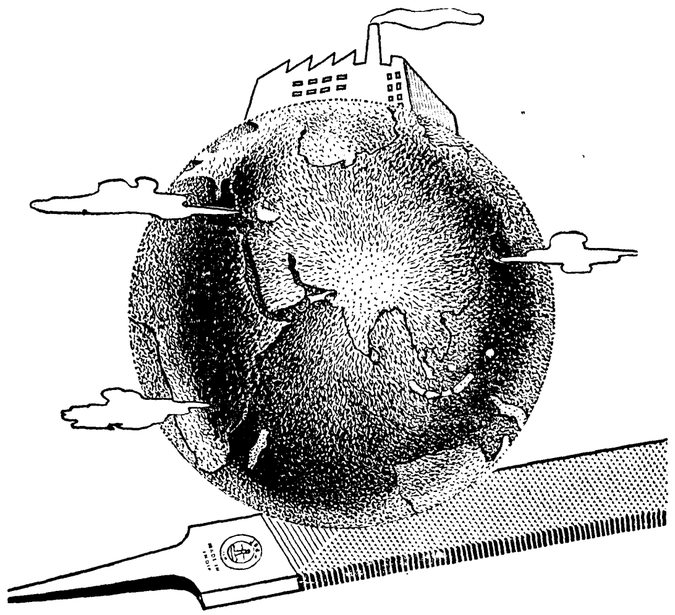
Mr. Black

Before concluding, I would like to refer to the change in the stewardship of the International Bank for Reconstruction and Development. Mr. Eugene Black retired as President of the Bank on 31st December 1962. The World Bank, as it is popularly known, followed an active policy of helping underdeveloped countries during Mr. Black's term and it also helped to set up a large number of development banks including this Corporation. We are deeply indebted to this farsighted economic statesman for his sympathetic insight and his keen interest in the working of this institution.

In the Directors' report, you must also have seen a reference to the resignation of Mr. George Woods from your Board, consequent upon his appointment as President of the I.B.R.D. Mr. Woods was associated with this Corporation even before its formal inception, and had been a Director on its Board since 25th June 1959. His guidance has been of considerable help in the progress of this Corporation. We trust that, in his new capacity, we shall continue to receive his friendly advice in our work.

U.K. and the whole of Europe

The fashionable convenient and comfortable way



Why take an Air France trip this year ? —Because Air France offers really good and fast services by Boeing Jet Intercontinentals to Europe from Delhi and Calcutta. Within Europe you can fly by the Air France Caravelles to all the places of interest ... 700 take-offs every week to 40 major cities, including London and Manchester ...

BRUSSELS AND BANGKOK

ASIAN COMMON MARKET IDEA SUFFERS SETBACK

By K. Krishna Moorthy

BANGKOK, 5th *March*

OFFICIALS of the United Nations Economic Commission for Asia and the Far East at Sala Santhitham, Bangkok, have virtually abandoned the idea, somewhat popular with them early last year, of trying to establish in Bangkok the nucleus of an organisation for Asian economic recovery similar to the E.C.M. in Brussels. At the session of the E.C.A.F.E. last year at Tokyo, U Nyun, E.C.A.F.E. Secretary-General, found himself frustrated when most countries cold-shouldered the idea of an Asian organisation which emanated from the report of three experts—one Indian, one Thai and one Japanese—under the chairmanship of Mr. K. B. Lall, who is now India's Ambassador to Brussels, accredited to Belgium as well as the European Economic Community. U Nyun, however, hopes that the Trade Committee of E.C.A.F.E. member-nations will meet more frequently for a general exchange on common problems, but there is no evidence of any desire to find out common solutions to the region's trade troubles. Anyone who thought that Asian nations could be brought together in organised economic co-operation following the European consolidation trends, have been living in a fool's paradise. Now the E.C.A.F.E. Secretariat thinks that, at best, the E.C.A.F.E. member-nations may be persuaded to declare their acceptance (perhaps token) of a code of trade practices.

The economic survey of Asia and the Far East, 1962, prepared by the E.C.A.F.E. staff for the nineteenth session of the E.C.A.F.E. in Manila from 5th to 18th March, makes a special study of the problems of Asia's trade with Western Europe with particular reference to the Common Market. This special study comprises Part I of the survey and the usual review of current economic development forms Part II. Part I again is sub-divided into three chapters devoted to the problems of the 'developing' countries in Asia and Chapter IV deals separately with Japan's special problems. (The E.C.A.F.E. study uses the term "developing countries" because, as is explained in a footnote on the opening page of the survey, most countries are already in the process of economic development and many of them no longer are purely primary-exporting countries.) Although Japan geographically forms part of the E.C.A.F.E. region, it has been excluded from the general study, as it is a developed country.

Sluggish

The Asian developing region's share in world exports is small and furthermore has shown a tendency to decline. From ten per cent in 1928 it fell to six per cent in 1959-61. In the last decade, the decline was more marked than in previous years. In terms of current prices, world exports which declined by about 57 per cent from between 1928 and 1938, exceeded the 1928 level in 1948 and doubled by 1959-61.

As compared with this world development, the E.C.A.F.E. region's exports in 1948 were still below the 1928 level and, by 1959-61, they had risen by only a third above the 1928 level. The main reason for the sluggishness in the region's exports is the slower expansion of trade in primary products except petroleum (see Table I) below:

TABLE I: *Total value of exports of Developing E.C.A.F.E. region as compared with world totals*

(In million U.S. $)

	1928	1938	1948	1959-61 (annual average)
Exports (f.o.b.)				
(1) World ..	55,222	23,500	57,300	125,213
(2) Developing E.C.A.F.E. region ..	5,595	2,256	4,694	7,482
Percentage of (2) to (1) ..	10.1	9.6	8.2	6.0
Imports (c.i.f.)				
(3) World ..	60,080	25,400	63,500	129,213
(4) Developing E.C.A.F.E. region ..	4,597	1,829	5,089	8,804
Percentage of (4) to (3) ..	7.6	7.2	8.0	6.8

The E.C.A.F.E. region's share in world imports has also fallen, from 7.6 per cent in 1928 to 6.8 per cent in 1959-61.

Although the region's share of world imports declined, the region's imports in absolute terms have increased far faster than exports. Against a one-third increase in exports between 1928 and 1959-61, the region's imports rose by 90 per cent.

In the period 1959-61, one-third of the region's exports found their markets in Western Europe, less than one-fifth in the United States and Canada and more than one-fifth in the region itself. Of the balance of 30 per cent, half was accounted for by Eastern Europe, Japan and mainland China.

The major recent shifts in trade affecting the direction of the region's exports were the relative decline of the E.F.T.A. area (particularly Britain) and the rise of the E.E.C. area as markets for the region. This was a distinct reversal of the pre-war trends.

The E.E.C. area's share in the region's exports rose from 12.5 per cent in 1948 to 13.8 per cent in 1959-61. North America's share of the region's exports, which had fallen after the Great Depression, rose from 17.7 per cent in 1938 to 21.4 per cent in 1948. After 1948, North America's share declined and the Soviet Union, Japan and the E.E.C. area provided new outlets.

Japan's Share

The most spectacular growth in the region's sales has been to Japan, from 1.4 per cent in 1948 to 8.3 per cent in 1959-61. Western Europe, including Britain, has remained the region's largest supplier, accounting for about a third of the region's total imports. But this position is less important than during the pre-war days and the decline has been brought about by the declining share of Britain as supplier.

In 1959-61, the developed countries (including Japan) accounted for two-thirds of the region's exports and imports. Among the developed countries again, Western Europe contributed a half of the region's exports and imports.

Food, including beverages and tobacco, and raw materials (excluding fuels but including fats and oils) accounted in 1960 for almost 70 per cent of the region's total exports and for 75 per cent of its exports to the developed countries. Manufactures formed 22 per cent of the total exports. Exports of manufactures from the region have risen rapidly, especially to Western Europe but in the export of food and raw materials, which form the bulk, the increase has been sluggish.

In 1960, manufactured goods, of which the developed areas supplied more than four-fifths, accounted for more than half of the region's total imports. Among the developed areas, Western Europe supplied about 46 per cent of the region's total imports of manufactures. In 1960 food (including beverages and tobacco) accounted for a fifth of the region's imports but, in this field, the share of Western Europe was insignificant. While the total imports by the E.C.A.F.E. region in the fifties rose by only 11 per cent; the import of capital goods rose by 65 per cent and of materials for capital goods by 45 per cent.

TABLE II: *Developing E.C.A.F.E. region's overall and regional trade balances*

(In million U.S. dollars)

	1928	1938	1948	1959-61 (annual average)
W. Europe	+ 54	+165	— 25	—412
E.E.C.	+334	+ 72	+114	—347
E.F.T.A.	—340	+85	—191	—161
Of which U.K. ..	—303	+86	—175	— 46
W. Europe other than E.F.T.A. and E.E.C. ..	+ 60	+ 7	+ 51	+ 96

Others	+250	+130	+ 14	— 2
TOTAL	+908	+427	—396	—1,322

On the issue of the Common Market developments in Europe, the E.C.A.F.E. survey says:

"It is disheartening to see that West European countries, which are the main trading partners of the region, despite currency convertibility and recent high rates of economic growth, maintain restrictive trade measures. It is by no means clear that such restrictions, many of which are discriminatory against countries of the region, are to be lessened after the formation of trade groupings has been completed. The effects brought about by the E.E.C., which envisages free trade and capital and labour movements within the Community, a common external tariff, common agricultural policies and provision for association of overseas States, will be far-reaching and serious for a number of Asian exports."

The Report, which was prepared before the developments in Brussels led to the humiliating blocking of Britain's entry by General de Gaulle, observes that British entry into the Common Market would make the position even worse.

Although economic or trade integration tends to lead eventually to trade creation through increase in real income, the E.C.A.F.E. survey says that it is not clear that trade creation will compensate the adverse trade diversion effects for Asian exports. The E.C.A.F.E. survey predicts that Asian exports will encounter a serious loss of markets. The E.C.A.F.E. Secretariat calls upon the developing countries of the region constantly and collectively to review the obstacles to their exports and try to obtain the active co-operation of their developed trade partners in removing or reducing them for achieving the object of free entry of raw materials and liberal treatment for processed and manufactured products. Asian exports prospects are gloomy but the import demands from Asia are bound to increase. The deliberate Asian import bias in favour of capital goods will benefit the West European countries.

The plight of the Asian developing countries is illustrated by the fact that, in 1928, they had a favourable trade balance of 998 million U.S. dollars, but, by 1959-61, the trade balance had become an adverse annual, average of 1,322 million U.S. dollars. In this situation, foreign aid is a vital factor for financing the import surpluses. Although the region has vital trade links and large trade deficits with Western Europe, aid to Asia from Western Europe has been insignificant.

Taking 1955, a fairly normal year as the base, in a span for five years to 1960, the exports of all commodity groups from the region rose by 11.5 per cent, but the exports of manufactures rose by 40 per cent. Exports of raw materials increased only slightly, at a rate much below that of the total exports. The exports of manufactured goods are small in absolute terms and this has led to a major structural weakness in Asian exports.

The E.C.A.F.E. study points out that West European countries, though very much advanced, still maintain a structure of tariffs designed to raise the level of protection as primary materials are carried forward into successive phases of processing. A more serious obstacle to Asian exports of manufactures is the quantitative import restriction applied in West European countries. The E.C.A.F.E. Secretariat calls for abolition of these quota restrictions.

Textile Quotas

With special reference to textile quotas, the E.C.A.F.E. survey says:

"The long-term agreement (under the auspices of G.A.T.T.) has allowed for a gradual increase in imports of cotton textiles by the participating developing countries, provided their domestic markets are not unduly disrupted. While such an international agreement is definitely an improvement over individual national import quota restrictions, it still falls short of the expectations of developing countries. If the developing countries possess the conditions for producing cotton textiles more efficiently than the developed countries, then the developed countries should make some permanent arrangements domestically so as to help the old industry shift its resources to more efficient fields of production and thereby make room for the developing countries to increase their export earnings. It is desirable that a timetable for making such arrangements be attached to the agreement. If this is done, the present long-term international cotton textile agreement can really set forth a pace and a model for future international action in ensuring an orderly expansion of exports from the developing countries."

The E.C.A.F.E. suggestions for greater regional co-operation have not found much response from the leaders of the member-countries, but the Secretariat repeats the prescription, albeit in a diluted form, when it observes: "It is a matter of urgency for the developing countries of the world, in general, and for those of the region, in particular, to come together for an examination of the probable effects on their exports of the new attempts to reduce barriers to world trade." In explaining the need for this coming together of Asian nations, the E.C.A.F.E. survey makes the following arguments:

1. The drive towards trade groupings and economic integration in Western Europe and towards the removal of trade barriers among a larger circle of developed countries, including the United States and Japan, tends to bring about a more efficient production of manu-

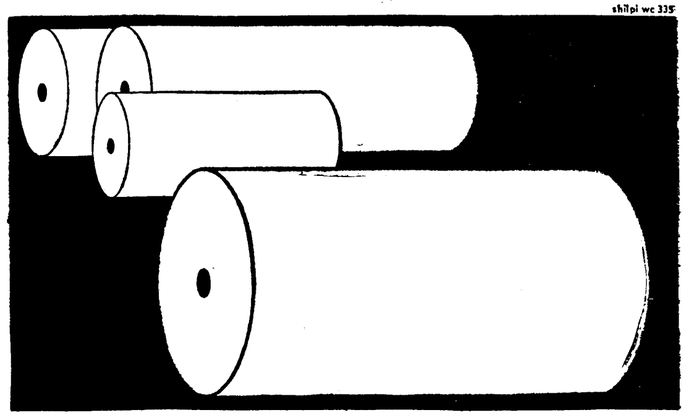
AEG and Dodsal in KOYNA

The first two of the four **AEG** Generators, each rated 70,000 KVA, 300 rev./min., 11,000 V. have been put into service recently.

Soon, all four generators will commence regular supply of urgently required electric power to the industries of Maharashtra. This will contribute to bring prosperity not only to Maharashtra in particular but to India in general.

In close collaboration with the Engineers of the KOYNA Project authorities, **AEG** and **Dodsal** were able to erect and commission the machine in accordance with the programme.



AEG and **Dodsal** are proud to have the privilege of being associated with the KOYNA Project which is truly an outstanding engineering feat.

ECONOMICS OF THE SMALL REFINERY

COMMERCIAL OPERATION POSSIBLE IN FAVOURABLE CIRCUMSTANCES

NO development projects seem to be more popular in the world today than the construction of oil refineries. Governments want them for reasons connected with foreign exchange economy, diversification of industry, improved employment prospects, or simply prestige. Oil companies continue to recommend against essentially uneconomic projects but, even in these cases, their recommendations often have to be tempered by a normal commercial desire to safeguard or enlarge their share of the rapidly expanding market for petroleum products. Hence in no less than 55 countries of the free world there are firm projects for new refineries or extensions to existing units.

In the nature of things many of the new plants must, initially, be small. Fortunately for the countries concerned, this does not mean that they must be uneconomic. For the intensive thought given in recent years to the design of small-scale units has resulted in substantial reductions in costs. A bird's-eye view of many of the factors taken into account in order to make a small refinery commercially viable was given in two papers* presented at the Geneva conference last month. We are indebted to the five authors in question for much that follows.

Pros and Cons

The decision to build an oil refinery in a certain locality will generally result, as do most business decisions, from a careful weighing of pros and cons. A positive decision cannot be taken until oil consumption has reached a certain minimum level, and then only if the pattern of demand by product is reasonably well balanced. It is essential both for the country and for the sponsoring company that, when a refinery has been decided upon, it should be tailor-made to yield the product pattern which most closely matches market demand, and be built in the most suitable location.

A fair choice of output patterns can, of course, be provided by selecting between different possible blends of crude oil to be treated. Thus, from a simple refinery treating Kuwait crude the yield pattern from straight distillation could be: gasoline, 18 per cent; middle distillates, 23 per cent; fuel oil, 59 per cent. From the same plant a half-and-half mixture of Seria and Basrah crudes would yield: gasoline, 29 per cent; middle distillates, 41 per cent; fuel oil, 30 per cent.

The product-mix can be further varied according to the type of equipment installed. Thus, in a recent study for a small refinery with a capacity of 250,000 tons a year, two basic processing schemes were investigated—one incorporating catalytic cracking and the other catalytic reforming. The investment and operating costs would be much the same in each case, but the yield pattern strikingly different:—

Percentage of Saleable Products

	Catalytic Reforming	*Catalytic Cracking*
L.P.G.	2	2
Motor gasoline	25	31
Kerosine and jet fuel ...	11	14
Diesel oil	24	30
Fuel oil	38	23
	100	100

Thus by choosing the appropriate raw materials and refinery processes the designer has a fair prospect of being able to tailor the plant to fit the requirements of the local market.

Within certain limits he will aim at the largest possible capacity for the processing units, since both capital and operating costs per unit of output will tend to fall as the size is increased towards the optimum. According to Messrs. Hagemans and Ingall, if costs per unit for a 4-million-ton refinery without secondary processing facilities are taken as 100, the corresponding figure for a capacity of 2 million tons may be 122, and as much as 228 for 500,000 tons a year. This, of course, assumes capacity working; costs per unit may be almost 10 per cent higher if the plant is operating at 90 per cent of capacity, and 30 per cent higher if working at 70 per cent. But if capacity working can be secured only at the expense of greatly increased transport costs on a considerable proportion of the output, it will generally be better to opt for a smaller plant, even though this means forgoing some of the economies of scale.

Feasibility Aspect

As already mentioned, however, a great deal of thought has lately been devoted to the problem of making small refineries competitive. As a result, not only can a million-tons-a-year plant now be built for 30 to 40 per cent less than would have been possible a few years ago: a small plant with a throughput capacity of no more than 250,000 tons a year can be quite a feasible proposition in favourable circumstances.

Whether circumstances are favourable will depend in part in the attitude and regulations of the government. Costs will, for instance, be raised if the government insists on tankage over and above that required for processing, or on product qualities higher than necessary. Again, the costs of metering products shipments for customs purposes, and of meeting pollution requirements and construction codes, vary widely in accordance with government regulations. Broadly speaking, good regulations may be defined as those which meet local requirements and fit the country and the particular refinery location—which are not, in other words, adopted arbitrarily from elsewhere. Given reasonable government attitudes, costs of small plants may be held down by paying close attention to a variety of design factors and by employing imaginative engineering techniques.

The decisions taken regarding the number, quantity and quality of the products to be made will determine the type, amount and severity of the processing. The designer's initial aim will be simplicity. And experience shows that a crude distillation unit together with a catalytic reformer will generally be sufficient if a low-sulphur crude is available; if not, a de-sulphurising unit will have to be included. If the developing economy subsequently creates a demand for l.p.g., high-octane gasolines, jet fuel and bitumen, this can be catered for by the addition (e.g.) of a hydro-desulphuriser, a catalytic cracker, an isomerisation unit and a visbreaker. Because such additional facilities are generally expensive, and add considerably to operating costs, they cannot be provided economically until demand for the products has reached a minimum level; what that minimum is will depend partly on the alternative cost of importing products from elsewhere.

Design Factors

A variety of design factors which will help to reduce capital and operating costs may be briefly listed:

Improving fuel efficiency by integrating processes and utilising heat from flue gases for steam generation.

Using air cooling instead of water cooling wherever possible.

Using very reliable equipment of high efficiency and simple design, to obviate the need for stand-by equipment.

Having compactly built and fully integrated processing units, utilities, blending and storage facilities, with one central control station and a single administrative building with an annex for combined workshop and stores.

Introducing in-line blending and product-quality measuring instruments in process units and tank farms.

The economics of the plant can also be considerably influenced by locational factors. Ideally, the planners will seek a relatively flat piece of land with good soil-bearing qualities, sloping gradually to a big waterway or to the sea, in a location suitable for the construction of a deep-water terminal. Product distribution costs will be a major item and, where other factors are equal, may be decisive in determining the location of the plant. Good road and rail connections will naturally be looked for.

The crude handling facilities will normally be planned to deal with the largest crude carrier that can be economically justified. But a compromise may have to be reached between the urge to make provisions which will facilitate future expansion, and the objective of keeping the cost of the basic project as low as possible. If such essential services as water, electricity and housing for staff are already available from outside suppliers this is naturally an advantage. Regulations regarding air and water pollution will have to be strictly complied with, but these present few problems nowadays.

In general it must be recognised that these small plants fall into quite a different category from the large-scale refinery, and must be custom designed to meet the particular requirements of the developing country. Given the right combination of circumstances, and assuming that an experienced engineering organisation knows how to take advantage of favourable local conditions, the costs of small-scale plants can be brought reasonably into line with those of much larger and more complex refineries. Unfortunately, the qualification about the right combination of circumstances is all too often ignored.—*By Special Arrangement with Petroleum Press Service.*

"Here are five ways

BOAC Air Cargo can help your business!"

and give your Exchange-earning goods speedy, safe delivery!

★ *Fast* BOAC jetliners slash transit time by *hours*.

★ *Direct* BOAC city-to-city freighting cuts out time-wasting journeys to and from docks.

★ *Simple* (cheap) packaging is all that's needed with careful BOAC handling.

★ *Safe*, efficient BOAC freighting means lower insurance costs, wider coverage.

★ *Experienced* BOAC staff give all goods *individual* attention all the way.

We deliver your goods in hours, instead of days or weeks! And that's only one of the things you gain. Speed alone may not be enough for you—but BOAC Air Cargo gives more and more successful businessmen these extra advantages...advantages that can help and benefit *your* business—and speed up consignments that earn valuable foreign exchange!

Ask for details now—from your Forwarding Agent or BOAC offices at:

AGENTS IN ALL THE PRINCIPAL COUNTRIES OF THE WORLD.

ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-seventh Annual General Meeting to be held at the Kishinchand Chellaram College Hall, Dinshaw Vachha Road, Bombay-1, on Friday, the 22nd March, 1963, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1962

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1962. The Auditors' Report is also annexed.

The transactions for the past year after provisions for Income-tax and Super-tax have resulted in a profit of Rs. 1,11,53,496.92. To this has been added the balance of Rs. 29,16,350.83 brought forward from the previous year, making a total sum of .. .. **Rs.** 1,40,69,847.75

An interim dividend was paid at the rate of 8.00 per cent., subject to deduction of tax at the rates in force, on the Paid-up Capital of Rs. 3,00,00,000 which absorbed 24,00,000 00
Transferred to the Reserve Fund 22,50,000 00
Bonus to Staff 32,50,000 00

The Directors now propose :—
To pay a final dividend at the rate of 12.00 per cent., subject to deduction of tax at the rates in force, making 20 per cent. for the year, on the increased Paid-up Capital of Rs. 4,05,00,000 which will absorb 48,60,000 00
To carry forward to the next account 13,09,847 75
Total .. **Rs.** 1,40,69,847 75

The business of the Company continued to function satisfactorily.

The Bank Rate remained stationary at 4 per cent. during the year.

During the year, increases in the capital structure of the Company took place as follows in accordance with resolutions passed by the Shareholders in general meeting :—

(*a*) the Authorised Capital was increased from Rs. 5,50,00,000 to 10,00,00,000 00
(*b*) the Issued and Subscribed Capital was increased from Rs. 5,50,00,000 to 7,60,00,000 00
(*c*) the Paid-up Capital was increased from Rs. 3,00,00,000 to 4,05,00,000 00

The increase of Rs. 1,05,00,000 in the Paid-up Capital is made up of :—

	Rs.	nP
New rights issue to Shareholders in 1962 of 2,00,000 shares of Rs. 100 each, Rs. 50 paid-up per share, at a premium of Rs. 20 per share	1,00,00,000	00
Issue of 10,000 shares of Rs. 100 each, Rs. 50 paid-up per share, to the Shareholders of the Gadodia Bank Ltd. on the amalgamation of that Bank with the Company ..	5,00,000	00
Total .. **Rs.**	1,05,00,000	00

The Reserve Fund and other Reserves have increased during the year from Rs. 3,28,000 to Rs. 4,11,50,000. The increase of Rs. 83,50,000 is made up of :—

	Rs.	nP
Premium of Rs. 20 per share on the new rights issue to Shareholders of 2,00,000 shares	40,00,000	00
Premium of Rs. 50 per share on 10,000 shares issued to the Shareholders of the Gadodia Bank Ltd. in terms of the Scheme of Amalgamation of that Bank with the Company	5,00,000	00
Transfer from internal reserves to the Reserve Fund before the close of the year ..	12,50,000	00
Transfer from the profits of the year	22,50,000	00
Transfer to Development Rebate Reserve before the profit has been struck ..	3,50,000	00
Total .. **Rs.**	83,50,000	00

For the information of Shareholders, a statement is furnished below giving an analysis of sub-head (vi) of Advances, being :

Debts due by companies or firms in which the directors of the banking company are interested as directors, partners or managing agents or, in the case of private companies, as members.

The Scheme of Amalgamation of the Gadodia Bank Ltd. with The Bank of India Ltd. approved at the Extraordinary General Meeting of the Shareholders of The Bank of India Ltd. held on the 27th November, 1962, was sanctioned by the Reserve Bank of India on the 8th December, 1962, and the Gadodia Bank Ltd. was amalgamated with The Bank of India Ltd., with effect from the 24th December, 1962. From that date, the six Branches of the Gadodia Bank Ltd., at Clock Tower and Khari Baoli in Delhi, at Bank Street in New Delhi, at Cotton Exchange in Bombay, at Golden Temple Road in Amritsar and at General Gunj in Kanpur started functioning as Branches of The Bank of India Ltd. The Directors desire to place on record their appreciation of the co-operation and assistance received from the Reserve Bank of India in the amalgamation.

Branches of the Bank were opened during the year, abroad at Manchester and Lagos, and in India at C. P. Tank, Mahalaxmi, Malad and Wodehouse Road in Bombay, at Delhi Chakla and Mandvi Pole in Ahmedabad, at Margao and Vasco-da-Gama in Goa and at Chaibasa, Gauhati, Gwalior, Hospet, Jullundur, Ludhiana, Ranchi and Tirchirapalli. This increases the total number of Offices to 100.

A contribution of Rs. 5,50,000 was made by the Company during the year to the Prime Minister's National Defence Fund.

The Directors report with deep regret the death on the 18th October, 1962, of Sir Cowasjee Jehangir Baronet, G.B.E., K.C.I.E. Sir Cowasjee rendered great services to the Company as Director from June, 1932, to October, 1946, as Chairman from October, 1946, to February, 1962, and, thereafter, as a Director until his death. By his steadfast integrity, great experience and mature judgment, he contributed vastly to the progress of the Company.

During the year, at the invitation of the Board of Directors, Mr. Pratap Bhogilal and Mr. S. P. Godrej accepted seats on the Board. Under the provisions of Section 260 of the Companies Act, 1956, and of Article 95 of the Company's Articles of Association, they will hold office up to the date of the Annual General Meeting, namely, up to the 22nd March, 1963. They stand for election in the manner provided by the Act and the Articles of Association.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election :—

Mr. A. D. Shroff — Mr. Madanmohan Mangaldas
Mr. Krishanraj M. D. Thackersey — Mr. Girdharilal Mehta

The Shareholders are requested to appoint Auditors and to fix their remuneration.

NOTE:—The Balance-Sheet has been prepared in conformity with Form 'A' of the Third Schedule to the Banking Companies Act, 1949.

NEW PRODUCTS AND PROCESSES

Auger Boring Guide

UNDER-REAMED piles provide a satisfactory and economical foundation in black cotton soils. A necessary condition for such pile foundations and straight bored piles is that the piles should be vertical and holes for that purpose should also be vertical but this is generally not possible when boring is done with hand operated augers. As power driven augers are not available in India, research was conducted at Central Building Research Institute, Roorkee, and a simple boring guide has been designed and fabricated. The guide base is formed by means of two cover plates hinged to a square frame, standing on four legs and welded to the four corners of the frame. Also welded perpendicularly to each of the cover plates is one split half of a cylindrical steel pipe which acts as a guide and keeps the auger vertical as well as in the centre of the hole when cover plates are closed and clamped in horizontal position. A hole of required diameter is first dug and the guide is placed centrally over it and about 6" length of its legs are driven into the earth. The base of the guide is levelled. An auger of required diameter is placed in the hole and cover plates closed and clamped. The auger extension rod is held within the split pipe of the guide. The hole is bored to 1 foot depth and legs of the guide are further driven into ground. Finally when the hole is 2 feet deep, legs are completely driven into the ground, the bore hole is then extended to the required depth. Each time when auger is full of soil, the cover plates are unclamped, the auger is removed and cleaned and then placed in position again and the process repeated.

The guide makes it possible to bore truly vertical holes with hand operated earth augers in stiff clays. Generally for this purpose three persons are required but with this guide only two labourers are needed. The holes for battered bored piles can also be constructed with the help of the guide. For this purpose guide pipe is welded to the base at the required inclination. A number of buildings have been constructed on under-reamed piles with the help of this guide. The instrument has been found quite satisfactory in making the holes for piles straight. No exact idea about the demand of this instrument is available but as under-reamed pile foundations are becoming more and more common, the demand for this tool is expected to be high. In fact one great setback in the popular adoption of under-reamed pile foundation has so far been the lack of such an instrument. Mild steel plates and round bars are required for the fabrication of this guide and these are available indigenously. No special capital expenditure is required as it can be made in an ordinary workshop where welding and steel plate cutting facilities are available. The cost of manufacturing a guide works out to be Rs. 56.86 but the cost is expected to come down when the manufacture is done on a large scale.

Water-tight Holder for Pressed-glass Lamps

A Dutch firm has produced a water-tight lampholder specially developed for so-called pressed-glass lamps, i.e. lamps of rather thick, pressed glass. All vital parts of the holder are vulcanised in a solid, resilient envelope made of (Hycar) synthetic rubber (polychloroprene). The holder is therefore proof against oils, greases, etc. and all inclemencies of the weather. The pressed-glass-lamp holder is provided with double insulation and may therefore not be earthed. The resultant elimination of the earthing cable means appreciable cost savings, especially when the leads are long. To obtain a water-tight seal a heat-resistant silicone ring is placed between the lampholder and the lamp. This ring can also be supplied separately. In the standard version a flex one metre long is supplied with the holder, vulcanised at one end to the holder and at the other to a bipolar plug. If desired, longer connecting leads, say of 5 or 10 metres, can be supplied. Other accessories with the holder are a lamp support with two wing nuts and a wall-mounting plate. If required, the wall-mounting plate can be attached to a probe, obtainable separately, that can be pushed into the ground, while in addition a mesh guard can be supplied to protect the actual lamp from damage. The lampholder can be used anywhere where light—or extra light—is needed, for instance on drives, garages, garden paths between house and shed, etc. It is also suitable for providing temporary lighting, for example for construction work or open-air building sites. In the illumination of parks and pools outstanding effects can be achieved as the holders can also be installed under water.

Pocket Radio with FM Waveband

A Dutch firm has established a world first by bringing out a pocket radio capable of receiving FM stations in addition to long- and medium-waveband transmitters. The receiver, which is 10.5 cm. (4¼") long, 7.5 cm. (3") wide and 3 cm. (1¼") thick and weighs 275 grams (9.7 ozs.) with battery, is equipped with eight transistors and four germanium diodes. By the use of special high-grade band-stop filters, new amplifier circuits and a special loudspeaker, great sensitivity coupled with great acoustic power have been obtained. The components have been adapted to suit a new system of printed circuitry, circuits having been incorporated in the set that have never been used before. The materials and components used are of a very high quality. For long- and medium-wave reception the radio is fitted with a ferroceptor, while for stations on the FM waveband it has a pull-out aerial. On the long wave the frequency range is from 1154 to 2000 metres, on the medium wave from 198 to 580 metres and on the FM waveband from 87,5 to 100 mc/s. The cone diameter of the loudspeaker is 5 cm. (2"). The receiver's output power is 70 mW and battery load 9 mA. A radio is supplied by a 9-volt battery. The pocket radio set is produced in a number of matching colour combinations and sold in a de luxe case.

Radio Altimeters

British radio altimeters, of a new type already undergoing intensive evaluation tests by European and North American airlines, are to be fitted in the British Overseas Airways Corporation's fleet of Vickers VC-10 aircraft. One hundred of the altimeters—known as the STR 51—and the same number of monitors have been ordered by Vickers Armstrong (Aircraft) Ltd. They are to be used in conjunction with the Elliott all-weather landing system—also manufactured in Britain—and will provide two independent installations for each aircraft. The altimeter bounces microwave radio signals off the ground to measure the aircraft's height continuously and with great precision during the vital few seconds before touch-down. The equipment is self-monitoring to initiate immediate automatic change-over to the duplicate unit in case of failure.

Plastic Rainwater Gutters

Plastics rainwater gutters, with "snap-in" joints that can be pressed home by hand yet provide a watertight seal, have been developed in Britain by National Plastics Ltd. Their finish is exceptionally smooth and they need no protection or decoration. Other advantages claimed for them are that they are completely resistant to corrosion, are rigid and robust yet light and easy to handle, and they reduce erection time. The gutters are part of a new range which includes brackets, pipes and heads.

THE BANK OF INDIA — *Continued*

Profit and Loss Account for the year ended 31st December 1962

EXPENDITURE	Rs.	nP
1. Interest paid on deposits, borrowings, etc.	3,54,54,018	08

NOTE:—The Profit and Loss Account has been prepared in conformity with Form 'B' of the Third Schedule to the Banking Companies Act, 1949.

AUDITORS' REPORT TO THE MEMBERS

(1) We have audited the foregoing Balance-Sheet of The Bank of India Ltd. as at 31st December, 1962, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited returns from all the Branches, of which 46 Branches have been audited between us and 53 Branches by other Auditors.

(2) We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from all the Branches of the Bank;

(d) the reports on the accounts of Branches audited by other Auditors have been forwarded to us and the same have been considered in preparing this report;

(e) the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the audited returns;

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

S. B. BILLIMORIA & CO., *Chartered Accountants.*

A. F. FERGUSON & CO., *Chartered Accountants.*

BOMBAY, *7th February*, 1963.

Statement Pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of The Bank of India Ltd. for the year ended 31st December, 1962, does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Ltd. (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Ltd. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U.K.) Nominees Ltd., a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Ltd. shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Ltd. is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1962.

The Directors submit the Balance-Sheet for the year ended 31st December, 1962. The Auditors' Report is also annexed.

No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Ltd., of which the Company is a wholly-owned subsidiary.

S. C. KOTHARI, S. H. BRADFORD } *Directors.*

LONDON, *1st January*, 1963.

Balance-Sheet as at 31st December, 1962

Capital Authorised and Fully Paid-up : 100 Ordinary Shares of £1 each	£100	Cash at Bankers	£100
	£100		£100

Signed on behalf of the Board,

S. C. KOTHARI, S. H. BRADFORD } *Directors.*

REPORT OF THE AUDITORS

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purpose of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance-Sheet which is in agreement with the books of account. In our opinion such Balance-Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1962, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

ESTABLISHMENT OF ZONAL SUPER-GRIDS

ADVANTAGES OF PROPOSAL HIGHLIGHTED

CO-ORDINATED transmission of power through zonal and national super-grids would make for its most efficient and fruitful distribution across State boundries. The third Plan itself has proposed a small beginning, in this connection, by providing for inter-State transmission lines linking up two States. A further step in the same direction would be to set up zonal super-grids, each catering to more than two States. It is, therefore, a welcome development that the recent first meeting of the Executive Group of the Electric Power Survey Committee of the Union Government has recommended the establishment of seven zonal super-grids. Such grids, which would ensure integrated operation of the existing power systems, it is claimed, would also ensure security of power supply to key points and step up the quantum of supply to the various vital industries in order to keep up the tempo of production at a high level. The seven zonal grids recommended by the Group will cover the following areas:

Western Ghat Zone: Kerala, Madras, Mysore and South Andhra.

Eastern Ghat Zone: North Andhra, South Orissa, East Maharashtra and the central and southern parts of Madhya Pradesh.

Satpura Zone: Gujarat, West Maharashtra, West Madhya Pradesh and the southern extremity of Rajasthan.

West Himalayan Zone: Jammu and Kashmir, Himachal Pradesh, Punjab, Delhi and most of Rajasthan.

Central Himalayan Zone: Uttar Pradesh and northernmost part of Madhya Pradesh.

East Himalayan Zone: Bihar, West Bengal, D.V.C., and the northern part of Orissa.

North-Eastern Zone: Assam, Manipur, Tripura, N.E.F.A. and Nagaland.

In recommending the above zonal demarcation of the country, the Group has kept in view the existing and possible future transmission systems in each State and the proximity of the power system in adjacent States. It is envisaged that the zonal agencies, which are to operate the super-grids, will be set up with the common consent of the State Governments concerned. These agencies, incidentally will plan the efficient integrated operation of the constituent systems in such a manner as to ensure that, at any given time, the total amount of electricity generated and transmitted shall give optimum benefits to the region as a whole. It is further envisaged that these agencies will be vested with responsibility for planning of new power stations and major transmission lines. The regional agency will not be a purely official body, for it will include a representative of the Regional Association of the Federation of Electricity Undertakings of India. The most satisfactory financial arrangement, in the opinion of the Group, would be for the zonal power agencies to have their own funds for setting up generating stations and major transmission lines. Till that is achieved, the State Electricity Boards may continue to finance these schemes.

The recommended zonal super-grids should be established as early as possible, instead of at the beginning of the fourth Plan, for, with their undoubted advantages, they may make good, to some extent, the shortfalls in generating capacity in the third Plan period. Already, for instance, the aggregate generating capacity of 6.83 million kw. in 1962-63 has fallen short of the target by 0.20 million kw. How zonal grids can obviate such shortfalls can be seen from two typical instances. One is that the possible inter-connection of the transmission systems of Kerala, Madras, Mysore and South Andhra, where arrangements are already under way for constructing inter-State links during the present Plan period, will result in a saving of 265 M.W. in installed capacity. The other is that the possible inter-connection and integrated operation of the D.V.C., West Bengal, Bihar and Hirakud-Talcher systems, will lead to a saving of 350 M.W. in generating capacity. In other words, any shortfalls in generating capacity targets will not mean corresponding cuts in power availability if zonal super-grids are there to ensure more economic transmission.

The manifold advantages of zonal grids, as described by a spokesman of the Federation of Electricity Undertakings of India, may well be noted in this connection. Firstly, owing to the diversity of load demands, an integrated zonal system would require less generating capacity than that required by individual systems. Secondly, an integrated system would require less stand-by capacity than that required by two or more systems operating independently. Thirdly, large generating stations, including atomic power stations, could be located at the most economical sites in the region as a whole. The generating units could consequently be larger in capacity, thereby involving a reduction in unit costs and an increase in overall efficiency. Fourthly, thermal stations could be used more effectively in conjunction with hydro-electric plants, as also transmission facilities. Fifthly, a systematic development of interconnections would act as an impetus to employing successively higher levels of voltage with consequent overall economy in power system operation. Sixthly, an integrated system would require less capital and could be more favourably financed than two or more independent systems. With such advantages it is no wonder that the practice of interconnecting the neighbouring power systems has been spreading in the West. The European Power Pool comprising France, Italy, West Germany, Switzerland, Netherlands, Luxembourg, Belgium and Austria is an outstanding example of integrated operation of neighbouring systems transcending national frontiers.

It is rightly argued that, if this European power pool transcending national frontiers could be a success, there is no reason why this practice cannot be adopted in this country for interconnecting power systems of contiguous States. Even if a few technical problems should crop up in the initial stages, these cannot be insurmountable. Only, it is essential that a start be made in this direction without delay. An immediate first step, in this connection, would be to integrate the existing grids. The next step would be to establish the zonal super-grids as recommended by the Executive Group of the Electric Power Survey Committee. And the final step would be to set up an all-India grid. This final step would be rendered easier if, as envisaged by the Group, the Central Electricity Authority is made responsible for overall planning and co-ordination, at the national level, of the activities of the proposed zonal power agencies.

LIGHT BEAM AS A T.V. CARRIER WAVE

German engineers have succeeded in developing a new method for picture and sound transmission. An "ordinary" ray of light serves as a "carrier wave." This sensational success was achieved by engineers in the research laboratories of the Grundig Works in the Bavarian city of Fuerth near Nuremberg. In the experiment a high-pressure mercury-vapour lamp served as the light source on the transmission side. After passing a polarisation filter, the light beam, which has been focussed in a converging lens, will penetrate into a Kerr cell which acts as a "modulator" and splits the light beam into two partial wave bundles. If the picture signals from the television camera, and the sound signals from the microphone are conducted into the modulator in the form of electrical impulses, the two partial wave bundles will be dephased as a function of the tension of the rays arriving in the device.

This shift of phases of the partial wave bunbles in the rhythm of the signals fed into the modulator will be converted into changes in brightness by means of a further polarisation filter, the so-called analyser. The modulated light beams will pass over the transmission distance in parallel alignment achieved by a convergent collector lens, to the receiving station, where a photo multiplier re-converts the fluctuations in brightness into electrical signal pulses, which after further amplification will be passed on to the television sets.

The two photoelectric cells used in this process, that is, the modulator and the photo multiplier work so rapidly that even light oscillations of the duration of a one-hundred-millionth part of a second can be transformed without any difficulties into current oscillations. This transmission of modulated light beams, which has been realised for the first time in practice, follows closely the laws of classical optics, that is, the light used is of an absolutely "normal" nature. This claim was proved by Generaldirektor Richter when, during the performance of the sensational experiment, he interrupted the light beam with his hand, which cut off the transmission of pictures and sound.

In the experiments undertaken in the Grundig laboratories so far only relatively short transmission distances have been covered. With growing distance, of course, a better and more precise focussing and bundling of light beams will be required; basically, however, it is already possible to transmit simultaneously by means of correspondingly strong multipliers a frequency band of a width of more than 100 Mega-Hertz with a modulated light beam, that is, fifteen television broadcasts or 20,000 telephone calls.

The enormous significance of this discovery of German engineers for future communication engineering becomes evident from the fact that the requirements of telecommunication are on a steady increase, and that the media available today, that is, wire, cable or radio connections, have grown insufficient to cater for the enormous need of communication in the world.

In addition it should be mentioned that the radio transmission media, even the decimetre and centimetre waves of the V.H.F range and of U.H.F. range, are highly susceptible to interferences. The light beams with even shorter waves, in contrast, are completely free of any jamming or interference phenomena, a fact which particularly for future Telstar projects will open up entirely new perspectives.

AVERAGE AGE OF MACHINES

The Swedish Institute of Industrial Research has recently published the findings of an investigation into the age structure of the machine stock in the engineering industry. About 8,000 machines in use at fourteen medium-sized and large companies have been investigated. According to this investigation, machines have a very long life. The average age of machines when discarded was 28 years, but about 60 per cent of the discarded machines were not scrapped but sold for further use. The actual average life of machines may be as long as 40 years.

The length of time a company can use a machine is primarily a question of economy. The wear and tear appears to play a secondary role. The investigation found no grounds for the common view that repairs and maintenance costs increase with advancing age. Most machines are discarded because technical progress has reduced the demand for their products or, no less important, because they take up too much labour.

The long life of machines can be partly explained by the fact that, economically speaking, they often have several lives. They are gradually transferred to simpler jobs or are used as capacity reserve. This appears to be one of the reasons why machines in the rapidly expanding companies have a longer life than the average. There is a greater variety of use for machines in these companies.

MOBILE CABLE TEST LABORATORY

A revolutionising novelty in power-line and power transmission engineering is the mobile test station for high-tension cables, developed by the industrial enterprise of Siemens-Schuckert in West Germany. According to international regulations, newly laid high-tension cables must be tested thoroughly with direct current of up to 300,000 volt. Previously it had been necessary to set up a test stand at the very place where the testing was to be made, which had required a whole team of testing engineers, and a carload of material. The new test laboratory weighs 4.250 kilogramms and enables engineers to simplify the previously required testing method tremendously. The huge porcelain-type rectifier is mounted on the flat-bed chassis of the vehicle, while the testing desk is accommodated on a trailer; it can be set up without major difficulties at the testing place. The testing apparatus is equipped with a so-called "burn-welding" device by means of which even minute defects of the cable will be artificially enlarged—through high amperage of the current at low voltage—so that they can be clearly recorded by the test equipment. Thereby a maximum of safety is guaranteed for the testing engineers. Apart from the almost unlimited mobility of this test laboratory, the new design also excels in being simple to operate.

GOVERNMENT OF INDIA'S BUDGET

STEEP RISE IN EXPENDITURE—REVENUE DEFICIT RS. 267 CRORES

ONE of the common criticisms levelled against the Central Government budget estimates year after year pertains to under-estimation of revenue and over-estimation of expenditure. This trite is true of the estimates for the coming financial year (1963-64), presented by Mr. Morarji Desai, Union Finance Minister, in the Lok Sabha on Friday, 28th February 1963. The estimates for 1963-64 placed the aggregate revenue receipts at Rs. 1,585.73 crores (without the effect of budget proposals covering Rs. 265.90 crores), as compared with the revised estimate of Rs. 1,500.25 crores for 1962-63. The anticipated rise in revenue thus comes to just Rs. 85.48 crores or 5.7 per cent, as against the increase of Rs. 119.32 crores or 8.6 per cent in the reviewed estimates for 1962-63 over the budget estimates for the same year. The extent of the increase will, in fact, be larger, on the basis of the actual trend of revenues gathered in the previous years. Take 1961-62 when the actual total revenue receipts amounted to Rs. 1,136.73 crores. This sum represented a rise of Rs. 57.62 crores or 5.3 per cent as compared with the revised estimate of Rs. 1,079.11 crores which itself was higher than the budget of Rs. 1,223.79 crores by Rs. 55.32 crores or 5.4 per cent. In other words, the actuals for 1961-62 were 11 per cent greater than the budget estimates for that year. Applying the percentage rise (+8.6 per cent) between the budget and revised estimates for 1962-63, the revenue receipts of the Government of India in 1963-64 may be expected to improve by another Rs. 132 crores to Rs. 1,632 crores, as against the anticipated rise of only Rs. 85.48 crores. The additional revenue will be much higher still if it is projected on the basis of the difference between the revised estimates and actuals for a few previous years and if account is taken of the broadening of the country's economic activity, with an all-round rise in production, consumption and earnings of the people, the factors that influence the capacity of a Government to net in revenues.

While the revenue estimates are conservative, the estimates of expenditure are always inflated. In the year 1961-62, for instance, the revenue expenditure was budgeted at Rs. 1,023.52 crores and the revised estimate placed it higher at Rs. 1,045.15 crores. But the expenditure actually incurred was much less than either of the estimates, being only Rs. 1,011.88 crores. The budget for 1962-63 provided for a markedly higher level of expenditure, namely, Rs. 1,381.65 crores and the revised estimate is now placed as high as Rs. 1,522.31 crores. The expenditure budgeted for 1963-64 is well above this latter figure: Rs. 1,852.40 crores, to be precise. The substantial difference between the budget estimate for 1962-63, on the one side, and the revised estimate for the same year and budget estimate for 1963-64, on the other, is, of course, understandable, in view of the unexpected defence and other civilian expenditure that the Government of India has had to incur following the Chinese aggression. The net Defence expenditure met from revenue is expected to aggregate as much as Rs. 708.51 crores, as against the revised and budget estimate of Rs. 451.81 crores and Rs. 343.37 crores, respectively, for 1962-63. The actual for 1961-62 was no more than Rs. 289.54 crores.

As against the increase of over Rs. 330 crores to Rs. 1,852.40 crores in revenue expenditure during 1963-64 as compared with the current year (revised), the revenue receipts are expected to rise, as already stated, by only Rs. 85.48 crores to Rs. 1,585.73 crores. Consequently, the coming year's budget shows a huge revenue deficit of Rs. 266.67 crores, as against the deficit of Rs. 22.06 crores (revised) and Rs. 60.78 crores (budget before tax proposals covering Rs. 60.80 crores). This deficit has been covered to the extent of Rs. 265.90 crores by means of fresh taxation (as is discussed in detail elsewhere), leaving an uncovered deficit of Rs. 77 lakhs. The additional revenue of Rs. 265.90 crores excludes the sum of Rs. 9.60 crores that will accrue to the States. The total anticipated yield from taxation proposals thus comes to Rs. 275.50 crores. In addition, the Government has introduced a compulsory deposit scheme, under which the total collections are estimated at Rs. 65 to 70 crores. So the total imposts work out to Rs. 340-345 crores. As the Finance Minister has, however, assumed only Rs. 40 crores as the Centre's share of compulsory savings, the total fresh resources available for the Centre in the next year is placed at Rs. 305.90 crores.

Revenue Receipts

During the current year (1962-63), the revenue (originally estimated at Rs. 1,380.93 crores in the budget), is expected to go up to Rs. 1,500.25 crores, or a rise of Rs. 119.32 crores over the actuals for 1961-62. This rise over the actuals is accounted for by the three principal heads, namely, Union excise duties, customs, and corporation and income taxes. The receipts from excise duties show an improvement of Rs. 72.36 crores to Rs. 553.69 crores, due to the progressive increase in the production and clearances of a number of excisable commodities, notably sugar, iron and steel products, and motor spirit. Customs revenue is higher by Rs. 19.40 crores at Rs. 231.65 crores owing largely to greater imports of machinery. Better yield from taxes paid in advance and larger collections at source on dividends, interest and salaries account for an improvement of Rs. 38.15 crores to Rs. 360.00 crores under corporation and income taxes. Of the balance, the major increases are under debt services as a result mainly of larger recovery from States and under the three self-balancing items of receipts from iron and steel surcharge, P.L. 480 grants and emergency risk insurance which are transferred to the respective funds by provision in the expenditure estimates.

DEFENCE EXPENDITURE

(In crores of rupees)

	1963-64 (Budget)	1962-63 (Revised)	1961-62 (Actual)	1960-61 (Actual)
Revenue account	708	452	290	248
Capital account	159	53	23	33
Total	867	505	313	281
National income (at current prices)	15,520*	15,070*	14,030	14,160
Ratio of Defence expenditure to national income (%)	5.8	3.2	2.1	2.0

* Estimates projected on the basis of an annual rise of 3 per cent. (compound) in national income.

The revenue estimates (before the fresh tax proposals) for the next year show an improvement of Rs. 85.48 crores to Rs. 1,585.73 crores over the current year's revised figure of Rs. 1,500.25 crores. Union excise duties are expected to go up by Rs. 30.27 crores to Rs. 583.96 crores and revenue from income and corporation taxes by Rs. 15.00 crores to Rs. 375.00 crores, interest receipts by Rs. 40.56 crores to Rs. 217.05 crores. Of this increase in interest receipts, Rs. 18 crores will be from Hindustan Steel, Rs. 10 crores from State Governments and Rs. 8.43 crores from Railways.

The receipts from Emergency Risk Insurance of goods and factories, if continued at present rates, show an increase of Rs. 27 crores. It has also been decided that, in view of higher costs of Government borrowings, the Railways and the Posts and Telegraphs Department should give, with effect from the coming year, a higher dividend to the General Revenues and, accordingly, the rate will be raised from 4½ per cent to 4¾ per cent. This will give an additional Rs. 4.43 crores. These improvements, however, will on present rates be partly offset by a decrease of Rs. 10.45 crores to Rs. 221.20 crores under customs revenue due to the imposition of further restrictions on imports, a shortfall of Rs. 11.70 crores under iron and steel surcharge and Rs. 9 crores under P.L. 480 grants, and an increase of Rs. 2.68 crores in the States' share of income-tax.

Revenue Expenditure

The revised estimate of revenue expenditure for 1962-63 is markedly higher at Rs. 1,522.31 crores, as against the actual of Rs. 1,011.88 crores for 1961-62, an increase of as much as Rs. 510.43 crores, thanks to Chinese invasion. This increase is accounted for by both defence and civilian expenditure; the former is expected to rise by Rs. 162.27 crores to Rs. 451.81 crores (net) and the latter by Rs. 348.16 crores to Rs. 1,070.50 crores. Of the rise in civil expenditure, the share of debt services alone is Rs. 163.18 crores, the revised provision being Rs. 246.03 crores. Contributions and miscellaneous adjustments (mainly payments of States' share of Union excise duties and grants-in-aid to State Governments) are higher by Rs. 59.84 crores at Rs. 338.50 crores, extraordinary items by Rs. 50.82 crores at Rs. 64.61 crores and miscellaneous by Rs. 27.71 crores at Rs. 108.44 crores.

The total revenue expenditure of Rs. 1,852.40 crores budgeted for the coming year represents an increase of Rs. 330.09 crores over the revised estimate for 1962-63 and Rs. 840.52 crores over the actuals for 1961-62. The bulk of the increase is under defence expenditure (net) which, as compared with the revised estimates for the current year, is expected to go up by Rs. 256.70 crores to Rs. 708.51 crores. Civil expenditure shows a rise of Rs. 73.39 crores to Rs. 1,143.89 crores, the expanding volume and cost of public borrowings alone accounting for an increase of Rs. 34.21 crores to Rs. 280.24 crores. Administrative services will cost Rs. 88.29 crores, that is, Rs. 11.89 crores more, due in the main to additional expenditure on border police. The improvement in their share of Union excise and larger grants to States explain chiefly the rise of Rs. 10.54 crores to Rs. 349.04 crores under contributions and miscellaneous adjustments. While ance would be more by Rs. 27 crores, those in respect of iron and steel surcharge and P.L. 480 grants would be less by Rs. 11.7 crores and Rs. 9.0 crores, respectively. The remaining heads under social and developmental services will show an increase of Rs. 9.84 crores, whereas absence of provision for payment to the Reserve Bank for the withdrawal of Escudo currency will result in a saving of Rs. 9.14 crores.

The net effect of the changes in the revenue estimates for 1962-63 is the increase in revenue deficit from Rs. 72 lakhs to Rs. 22.06 crores, in contrast with the notable surplus of Rs. 124.85 crores for 1961-62 (actual). Considering that, for defence alone, the Government had to provide Rs. 108 crores more than the original estimate, the Finance Minister says that the resultant position cannot be said to be unsatisfactory. As for the ensuing financial year, at the level of taxation and expenditure obtaining before the new tax proposals, there will be a revenue deficit of Rs. 266.67 crores, virtually the whole of which (Rs. 265.90 crores to be precise) has, as already stated, been covered by additional taxation.

Capital Budget

Excluding the adjustment for the transfer of assistance from the U.S. to the special Development Fund, which is notionally treated as capital expenditure, the current (1962-63) year's budget, it will be recalled, had provided for a capital outlay of Rs. 592 crores. The revised estimate is just a crore higher, despite larger provisions for defence capital outlay (+Rs. 20 crores) and Railways, Hindustan Steel and Heavy Engineering Corporation (+Rs. 21 crores). For these increases have been offset by savings under numerous heads, namely, food purchases (–Rs. 14 crores), Oil and Natural Gas Commission (–Rs. 5 crores), National Coal Development Corporation (—Rs. 4 crores), Farrakka Barrage (–Rs. 4 crores), border roads (–Rs. 4 crores) and Fertiliser Corporation (–Rs. 2 crores). In addition to direct capital outlay, the original estimates had provided Rs. 453 crores for loans to States and Rs. 136 crores for loans to other parties, including local bodies, Port Trusts and public sector enterprises. These are now estimated to go up to Rs. 523 crores and Rs. 147 crores, respectively.

The bulk of the excess of Rs. 70 crores under loans to States is attributable to the grant of *ad hoc* loans to seven State Governments to clear their overdrafts with the Reserve Bank. Despite the grant of substantial assistance from the Centre for financing their Plan and non-Plan outlays and the larger share of Central taxes and grants accruing to them as a result of the Third Finance Commission's award, some of the States had overdrawn their account with the Reserve Bank. While agreeing to clear their overdrafts, the Finance Minister had to stipulate that the States must impose tight financial discipline, raise additional resources and keep their expenditures within their means.

The provision for direct capital outlay next year (1963-64) is put at Rs. 827 crores, which is Rs. 234 crores more than the revised estimate of Rs. 593 crores for the current year. Defence capital outlay alone is responsible for a rise of Rs. 106 crores, the sum actually set apart being Rs. 158.72 crores. The projects accounting for the major increases in the non-defence capital outlay are Hindustan Steel (+Rs. 35 crores), food purchases and internal procurement (+Rs. 30 crores), Railways (+Rs. 15 crores), Posts and Telegraphs (+Rs 13 crores), National highways (+Rs. 15 crores), Atomic Energy (+Rs. 8 crores), Oil and Natural Gas Commission (+Rs. 8 crores) and Drugs Corporation (+Rs. 5 crores). The position of group totals under capital outlay of the Centre (in crores of rupees) is shown below, the figures in brackets relating to the revised estimate for 1962-63 and actual for 1961-62, respectively:

Industrial development: 224.00 (179.68; 110.68).

Public Works: 68.11 (55.71; 36.70).

Currency and coinage: 11.54 (13.38; 6.67).

Schemes of Government trading: 49.69 (12.66; 2.24).

Grants for development: 18.55 (19.37; 10.99).

Railways: 218.50 (203.00; 144.90).

Posts and Telegraphs: 28.00 (14.92; 11.25).

Discharge of permanent debt: 231.57 (230.71; 203.50).

Provision is made in the capital budget for 1963-64 for an advance of Rs. 529.14 crores to State Governments and for Rs. 175 crores by way of loans to other parties, including Rs. 9 crores earmarked for giving financial assistance to students of recognised merit. The amount of Rs. 529.14 crores earmarked for loans to States is exclusive of the Rs. 11.94 crores met from special Development and other funds but includes Rs. 100 crores as their share of market

National Development Council to raise combined loans for the Central and State Governments next year.

To sum up, the total outlay by the Centre on the third Plan in 1963-64 will be of the order of Rs. 1,226 crores, as against the budget estimate for the current year of Rs. 1,107 crores. Of this amount, Rs. 1,030 crores represent capital outlay (including loans) and the balance of Rs. 196 crores will be the expenditure on revenue account. In addition, the Railways are expected to provide Rs. 38 crores and Hindustan Steel and other public sector enterprises Rs. 37 crores from their own resources. These estimates include Rs. 400 crores as assistance to the States, of which Rs. 94 crores will be on revenue account and Rs. 306 crores on capital account. The States are expected to find Rs. 350 crores from their own funds. Thus, the total State Plan outlay next year will amount to Rs. 750 crores, which, together with the Central outlay of Rs. 901 crores (that is Rs. 1,226 crores *minus* Rs. 400 crores assistance to States *plus* Rs. 75 crores by the public sector enterprises from their own resources) gives a total Plan outlay of Rs. 1,651 crores in the third year of the third Plan, as compared with the current year's budgeted Plan outlay of Rs. 1,465 crores and Rs. 1,125 crores incurred in the first year of the third Plan. The amount of Rs. 1,651 crores accounts for 22 per cent of the aggregate public sector outlay of Rs. 7,500 crores for the Plan period as a whole, as against 19.5 per cent for the current year and the actual expenditure of a little over 15 per cent in the first year of the Plan, that is, 1961-62.

The total Plan outlay of Rs. 1,651 crores fixed for the third year, it may be noted here, is less by Rs. 93 crores as compared with the Rs. 1,744 crores approved by the Standing Committee of the National Development Council in January last. This reduction has been effected in both Central and State (including Union Territories) Plans, the former from Rs. 944 crores to Rs. 901 crores and the latter from Rs. 800 crores to Rs. 750 crores.

Overall Budgetary Position

In the budget for the year 1961-62, the Finance Minister had proposed fresh tax measures yielding an additional revenue of Rs. 55.03 crores, after taking into account the concessions covering Rs. 5.84 crores announced later. With this extra money, the revenue deficit was expected to be reduced from Rs. 61.00 crores to Rs. 5.57 crores and the overall deficit from Rs. 125 crores to Rs. 69.97 crores which, we had been told, would be met by the expansion of Treasury Bills, that is, deficit financing. The actual figures for the year, however, present an entirely different picture. Thus, as against the anticipated revenue deficit of Rs. 5.57 crores, there was actually a surplus of as much as Rs. 124.85 crores which was well above the budgeted overall deficit of Rs. 68.97 crores. But this distinct improvement was more than offset by shortfalls in open market borrowings, small savings, external loans and P.L. 480 deposits, so that the deficit financing actually resorted to during 1961-62 was to the extent of Rs. 68.69 crores.

Including the net accretion of Rs. 60.80 crores from the new taxation proposals contained in the 1962-63 budget, the overall deficit was expected to be reduced from Rs. 150 crores to Rs. 89 crores. The revised estimate of the deficit is much bigger, Rs. 240 crores (Rs. 22 crores on revenue account, as against the mere Rs. 72 lakhs originally anticipated, and Rs. 218 crores on capital account), the whole of which is being met by way of deficit financing. The

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA,

We, the undersigned Auditors of the State Bank of India, appointed under Section 41 (1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1962.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi, by the Manager, Pakistan Branches and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Offices at Madras and New Delhi and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

12*th February*, 1963.

THIRTY YEARS OF U.S. AGRICULTURAL PROGRESS

ENVY AND DESPAIR OF ALL COMMUNISTS

By Orville L. Freeman
U.S. SECRETARY OF AGRICULTURE

ONE of the most amazing events of the past 30 years in the United States has been the change in American agriculture. What has been accomplished in the past three decades in terms of agricultural productivity and improved standards of living for farm and city people in our country is a most hopeful indication of what can be done in many nations throughout the world to help solve the problems of hunger and poverty.

Thirty years ago, our agricultural economy, like agriculture all over the world, was sick and depressed. The aftermath of World War I had been inflated land values, high costs of operation, and unbalanced production leading to low commodity prices. Prices of farm commodities by 1932 had sunk to tragically depressed levels. Farm families in the great Midwestern corn belt found it cheaper to burn corn for fuel than to sell their corn and buy coal.

Farmers needed credit to pay off their debts, to finance needed equipment and supplies, credit to keep going—but they could not meet the security requirements of the hard-pressed banks and insurance companies.

Farmers needed to share more adequately in the comforts and conveniences of modern American living. For example, in the early 1930's only one farm in 10 had electricity.

More families needed to own the land they farmed. More than two-fifths of U.S. farms were operated by tenants.

Farmers and the nation needed to conserve the soil which was being washed away by rain into the rivers or carried thousands of miles across the continent and out to sea in vast dust storms.

In the past 30 years, all of these major problems have been attacked with remarkable success. Programmes were provided to protect the prices and incomes received by farm families. Farmers were helped to store reserves of grain, cotton, and other crops in good years for use in lean years—and these reserves were invaluable during the early years of World War II. Price supports were employed throughout the war and post-war periods to encourage farm production and protect producers against the collapse of prices and income that is the historic aftermath of war. Price supports are still the bulwark of agricultural income today.

Farmers and other rural residents cooperated in national programmes to control soil erosion, build up protection against floods in local water-sheds, and assist in the wise use and management of the nation's timber resources. Nearly all U.S. farm land is now in locally governed soil conservation districts where conservation assistance is available to those who desire it.

Adequate credit has been provided to help millions of farm families purchase equipment and supplies and buy, enlarge, or improve their farms. Along with credit, management advice and plans are provided to help farm families become more efficient and to achieve a better and fuller life.

In the past three decades, the Farmers Home Administration alone had loaned more than $6,000 million to two million farmers. This is in addition to other credit extended through the Farm Credit Administration, private banks and other commercial lending agencies.

Loans for electrification have been, and are, provided by Government—with the result that today 97 per cent of all U.S. farms have electric power. Partly as a result of a telephone loan programme, about seven out of 10 U.S. farm families now have improved and efficient telephone service.

Today about four-fifths of U.S. farms are operated by families that own them and most of the others are operated by tenants working toward the goal of farm ownership.

U.S. agriculture stands before the world today as one of the most outstanding achievements of the free enterprise system. Its capability to produce abundance is at once the envy and the despair of all the Communist countries.

In the early 1930's, each person working in agriculture provided food and fibre on the average for himself and nine other persons. Now he provides for himself and 26 others. Less than one person out of 13 in our labour force is now engaged in agriculture—this compares with more than one in five in the early 1930's. Only 18 per cent of our national population now lives on farms—as compared with 30, 50 and even 70 per cent or more in various other nations—yet they provide more than adequately for all our domestic and export markets. And they do it with fewer of our acres under cultivation than at any time since record-keeping began in 1909 and with fewer persons working in agriculture than at any time within the past 100 years.

Our food supplies are of high quality, wholesome, and clean. Our people are eating better than ever before and they are purchasing their diets on less than one-fifth of their take-home pay—a smaller proportion than anywhere else in the world.

This remarkable progress does not mean that we no longer have farm problems. Change always brings a need for adjustment, and the spectacular advance in our agricultural productivity has brought with it new problems of adjustment. To cope with the new conditions, the United States is endeavouring with the utmost vigour to make its agricultural abundance more widely available in areas of need, to bring about a better balance between production and needs, to conserve and improve natural resources, and to develop new economic opportunities in our rural communities. These are our agricultural goals for the 1960's.

The fact remains, however, that the United States has achieved an amazing success in agriculture, while the Communist experiment in collective farming is failing miserably all over the world.

In Communist China the much-heralded commune agricultural system has completely broken down. In Cuba, after four years under Castro's Communist regime, agricultural production *per capita* has dropped more than 20 per cent. In the Soviet Union, Premier Khrushchev openly confesses a need to "radically rebuild the apparatus of agricultural management." Throughout Eastern Europe, shortages of meat, milk, cheese, butter and eggs are widespread. Almost all of these Communist satellite countries have been forced to introduce some form of food rationing.

The free, family-farm, profit-system pattern of agriculture in the United States has already accomplished what the Communist Governments hold out to their people as a goal to be reached sometime in the far distant future—if indeed it can ever be reached under a Communist-dominated agricultural system.

I mention these things not in a spirit of boastfulness, but in the interests of truth and peace. It is a vitally important fact of economic development that people make the most progress in agriculture when they have incentive to work, to study, to learn, and to go forward—in other words, when the family unit owns the land, operates it, exercises initiative, and reaps the rewards of its own success.

We in the United States are eager to share both our abundance and our agricultural "know-how" in the interests of world peace and freedom, including freedom from hunger. We recognise that we ourselves have much to gain from a sharing of knowledge, plants, and techniques with the farm people of other lands. Knowledge is one thing that can be shared without being diminished.

We believe the progress of U.S. agriculture in the past 30 years is a story to hearten and encourage farm people everywhere in the world. It charts a path not only to freedom from hunger in the world of tomorrow; it points a steady finger also in the direction of world peace.

CANNED FOR CONVENIENCE After a tiring day's work how pleasant it is to relax, sipping your favourite fruit juice from a chilled small can! How convenient these 5½ oz cans are! They are easy to handle and take less storage space ■ Poysha, one of the leading tin container makers in the country, pioneered the manufacture of these cans. This made possible greater utilisation of our fruits and vegetables and helped create a new export item. First marketed a year ago, hundreds of thousands of these containers, made by Poysha, have already been used by leading canners to export fruit juices to the countries of the Middle East ■ Poysha are thus helping India develop new industries and also earn valuable foreign exchange.

DONATE GENEROUSLY TO THE NATIONAL DEFENCE FUND

CENTRAL BUDGET AND THE CONSUMER

IMPLICATIONS OF THE TAX PROPOSALS

THE Central Budget for the fiscal year 1963-64 presented to Parliament by Mr. Morarji Desai, Union Finance Minister, on Thursday, 28th February, his fifth budget, contains proposals that, on the Minister's own admission, add up in their magnitude and range to very much more than the sum total of the proposals during his previous four budgets. It represents a fiscal effort to raise for defence and development during the year 1963-64 a sum of Rs. 275.50 crores by way of taxation pure and simple—Rs. 87.39 crores from customs and Rs. 106.61 crores by way of excise duties and surcharges on excise duties and Rs. 80.50 crores from direct taxes, besides Rs. 65 to 70 crores by way of compulsory savings on individuals. Apart from all these the incidence of Central sales tax is being doubled through an amendment to the Central Sales Tax Act. This will yield some Rs. 30 crores in a full year, of which Rs. 28 crores will be for the States. This figure is exclusive of the yield of Rs. 4.60 crores expected from the increase in postal rates which has not been taken into account of the Central Government, because the surplus of the Posts and Telegraph Department, like the surplus of the Railways, after payment of the dividend to the general revenues, is credited to its renewal reserve fund. It will not, therefore, have any net effect on the revenue budget.

Taxation of this magnitude is bound to have far-reaching effect on the income, consumption and living standards of the people. One can readily visualise the new taxes squeezing taxpayers from two sides—the expenditure side and the income side. While customs and excise levies tend to push up the general price level, direct taxes, as well as the compulsory savings, tend to reduce the income after tax. The net effect of these two developments on individual consumers will depend upon the magnitude of the price rise and the extent of the reduction in income on account of the surcharge on income-tax and compulsory savings which varies from one income group to another.

Objectives

Mr. Morarji Desai observed in his budget speech, that the additional customs levies, apart from raising a substantial sum, were designed to ease the pressure on balance of payments and to encourage domestic production of import substitutes. Changes in excise duties had a two-fold objective: to raise revenue and to restrain consumption, especially consumption of articles which aggravated balance of payments position. Under this rationale, changes in excise duties fall into two parts, first, a selective increase in duties to restrain consumption of specified goods and second, surcharges of varying order on a large range of commodities but excluding the major items of mass consumption such as matches, sugar and footwear and a number of basic intermediate goods.

A Typical Example

The levy of a general surcharge of 10 per cent on all import duties, and the increase in import duties on certain articles will affect the consumers in a direct manner. The increase in import duty on petroleum products and motor vehicle parts, coupled with corresponding increases in excise duty on motor spirit and diesel oil, will increase the cost of motor transport. The cost of moving goods by road will go up, which in turn will mean a higher price for almost all consumer goods, because there are no goods which are not moved by road at some stage or other. For folks in cities and towns, the prices of vegetables, fruits and groceries all will rise. Bus and taxi fares are bound to go up all over the country. In Bombay City, for instance, it has been estimated that the B.E.S.T. Undertaking, which supplies electricity and runs the municipal bus services in Bombay City, will have to spend Rs. 45 lakhs more on motor fuel, bus accessories and electrical equipment on account of the increase in duties. This is in addition to the anticipated increase of Rs. 15 lakhs by way of enhanced dearness allowance which the Undertaking will be called upon to pay its employees on account of the increase in living cost that is bound to follow as a sequel to the increase in prices caused by the budget. This, together with the higher surcharge on electricity payable by the Undertaking, is expected to swell the deficit of Rs. 70 lakhs already faced by the Undertaking in its budget for 1963-64 to Rs. 160 lakhs, that is an increase of more than hundred per cent. Only a part of this (Rs. 90 lakhs, to be precise) will be covered by the increase in minimum bus fare in the City from 7 nP to 10 nP proposed before the Budget. This proposal is still pending because the consent of the Bombay Government has not yet been received. The B.E.S.T. will, therefore, have to find other ways and means of raising its revenue. More efficiency in operations will yield some saving, of course, but that itself will not be sufficient. A further increase in fares is, therefore, inevitable.

The increase in import duty on motor vehicle parts and the enhancement of excise duty on motor spirits will make car ownership costlier than it is now. The increase in excise duty on superior kerosene from Rs. 79.88 to Rs. 210 per kilolitre and on inferior kerosene from Rs. 64.20 to Rs. 160 per kilolitre will enhance the fuel bill of millions of consumers who use kerosene for lighting and cooking.

The Ones That Got Away

Although the Finance Minister has not proposed any new excise duty this year, effect of the enhanced rates for some items and the levy of selective surcharge on several articles will be to increase the price of many articles of common consumption. Among the articles of common consumption on which a surcharge of 20 per cent is proposed are tea, coffee, unmanufactured tobacco, soap, cigarettes, vegetable products, cosmetics, cotton yarn of less than 35 counts, woollen fabrics and art silk. The highest surcharge of 33⅓ per cent which falls on such items as cigars, rayon and woollen yarn, cotton yarn of 35 counts or more, silk fabrics, refrigerators and airconditioning machinery, radio sets, radiograms and motor cars is obviously meant to impinge heavily on the relatively more well-to-do classes. In fact, the Finance Minister has sought to arrange the surcharge on excise duty in such a way that it bears lightly on selected intermediate goods and rather heavily on luxury items. It is in pursuance of this policy that such items of mass consumption as sugar, cotton cloth, footwear, matches and cycle parts and patent and proprietary medicines, have been excluded from the scope of the increase in excise duty and the surcharges and the duty on ordinary edible oils has been removed. Anticipating criticism about the effect on prices of the higher excise duties and surcharges proposed by him, the Finance Minister observed in his budget speech, as follows:

"I share the anxiety of the House about the price effect of the changes in excise duty. I should, therefore, like to mention the exact price effect on items of common consumption on the assumption that the entire duty is passed on to the consumer which, in actual fact, should not be the case. As the duty on ordinary edible oils has been removed, their prices should go down. In the case of matches, sugar and footwear, where there has been no change in duty, there should be no increase in prices at all. The surcharge on cotton yarn and the import duty on raw cotton will mean increase only of a fraction over a naya paisa per square metre in the cost of cotton fabrics and should not call for an increase in their prices also. Increase in the duty on tea is of 3 to 9 naye paise per kilogram, varying according to its quality, while that for vegetable product is 6 naye paise per kilogram. Increase in washing soap is of the order of 1.5 naye paise per bar of 45 tolas. The main increase which is in kerosene will be 10 naye paise per bottle of superior kerosene and 7 naye paise for that of inferior kerosene. In order to ensure that there is no profiteering through unwarranted price increases, suitable orders are being issued under the Defence of India Rules."

The contention that there should be no increase in prices of items not subjected to an enhanced excise duty is not realistic, for as already stated, transport costs will go up. Besides when the prices of many other items move up, there will be indirect upward effect even on food, footwear, etc.

Permissible Increases

In any case, the Government has conceded that, as a result of the changes in rates of duty, some adjustment in the selling price of the affected commodities might become necessary in due course. After taking into consideration the effect of the proposed changes, the Government has, by an order called the Essential Articles (Price Control) Order, 1963, notified the maximum price increase that would be permitted in the case of certain consumer articles, namely, kerosene, refined vegetable oils (or *vanaspati*), washing soap and printing and writing paper. Under this order, every dealer dealing in these commodities and who has actually purchased these goods on payment of duty at the enhanced rates, is required to display prominently the past prices of these articles as prevailing on or immediately before 1st March 1963 and the price at which he proposes to sell the articles in future.

This order further prescribes that, in all such cases, the price of superior kerosene should not increase by more than Rs 2.40 per tin of 18.5 litres or 10 nP for a bottle of ¾th litre. In the case of inferior kerosene, the corresponding increase should not exceed Re. 1.70 for a tin and 7 nP for a bottle. For refined vegetable oil products, the order stipulates, the price increase should not exceed 7 nP for a tin of one kilogram, 13 nP for a tin of two kilograms, 25 nP for a tin of 4 kilograms and Re. 1.05 for a tin of 16.5 kilograms. In the case of washing soap, the rise in price should not be more than 2 nP for a bar soap weighing less than 454 grams or a pound. Similarly, in the case of printing or writing paper, the increase in price should not exceed 2.2 nP per kilogram. As there are no changes in the rates of duty on certain essential commodities like sugar, matches, patent or proprietary medicines, footwear, cycle parts and iron and steel products, there should be no increase in the prices of these commodities.

It remains to be seen whether these injunctions would prevent prices from rising more than in proportion to the increase in taxes. Retail prices of certain articles have already gone up. In some cases, an artificial scarcity has been created as traders are withholding supplies, in order to charge consumers more. Unless stern measures are taken and exemplary punishment inflicted on the offenders, there is no doubt that profiteering on a large scale would be practised.

Additional Powers

Not being sure of the full impact of the enhanced levies on prices and supplies, Mr. Morarji Desai wants the Government to have authority to be able to act at short notice to check profiteering and to regulate resources and demand. The Government has already powers to reduce excise or customs duty, but not for enhancing it. The Finance Bill, therefore, proposes to give power to the Government to enhance the duties or to impose a customs duty within specified limits in the course of the year. These limits are 10 per cent *ad valorem* for goods subject to excise duty and 10 per cent *ad valorem* or 25 per cent of the existing statutory rate, whichever is higher, for import duty. This, it is said, will enable the Government to adjust fiscal policy promptly in response to changing circumstances.

Consumers will feel the pinch of the higher prices more because of the simultaneous increase in the incidence of direct taxes resulting from the levy of an additional surcharge which varies from 4 per cent to 10 per cent on income after taxes of individuals, Hindu undivided families, unregistered firms and associations of persons. The fact that a part of this additional tax liability can be discharged through a compulsory deposit under the compulsory savings scheme does not alter the fact that the disposable income of individuals will be reduced.

In spite of heavy taxation of the order already indicated, introduction of compulsory savings, and large borrowings from the capital market, there will be deficit financing of the order of Rs. 151 crores. This, too, will have an inflationary effect on the economy and reduce the buying power of the rupee. There is thus another burden to be borne by the people, the impact of which will be felt more severely by the common man than by the rich.

In the prevailing circumstances in the country, the only way to keep down price increases to the minimum is to reduce consumption as far as possible and to invest the savings resulting therefrom for productive purposes. While the enhanced customs and excise levies might restrain consumption to some extent, there can be no doubt that the super-profits tax would definitely discourage new investments and hinder expansion of existing industries. This in turn will retard the growth of employment opportunities, more especially in the private sector. In effect, the Central budget for 1963-64 means a smaller take-home pay, higher cost of living, more expense on postage account, reduced savings and restricted growth in employment prospects as compared with what it might have been otherwise. The taxes imposed in the various State budgets for the coming year will only serve to aggregate this large measure of privation for the common man.

DIRECTORS OF THE BANK AS ON 31st DECEMBER 1962

1. SHRI B. VENKATAPPAIAH, Chairman, State Bank of India, "Dunedin," 5, Harkness Road, Bombay-6. — Director Ex-officio under clause (a) of Sub-Section (1) of Section 25 of the State Bank of India (Subsidiary Banks) Act, 1959.
2. THE DEPUTY CHIEF OFFICER, Reserve Bank of India, Department of Banking Operations, 16-A, Jayachamarajendra Road, Bangalore-2. — Director appointed by the Reserve Bank of India under clause (b) of sub-Section (1) of Section 25 of the State Bank of India (Subsidiary Banks) Act, 1959.
3. SHRI B. MUKERJI, Managing Director, State Bank of India, Bombay.
4. SHRI S. M. RAMAKRISHNA RAO, "Lakshmi Nivas," Krishnarajendra Road, Fort, Bangalore-2.
5. SHRI V. H. CHANNABASAVIAH, Cottonpet, Kolar. — Directors appointed under clause (c) of Sub-Section (1) of Section 25 of the State Bank of India (Subsidiary Banks) Act, 1959.
6. SHRI A. H. ELIAS, Chief Officer, State Bank of India Subsidiary Banks Section, State Bank of India, Central Office, P. B. No. 12, Bombay-1.
7. SHRI RAJENDRA PRAKASH GOYAL, Staff Officer, Subsidiary Banks Section, State Bank of India, Central Office, P. B. No. 12, Bombay-1. — Directors appointed under clause (c) of Sub-Section (1) of Section 25 of the State Bank of India (Subsidiary Banks) Act, 1959.
8. SHRI S. RAMANATHAN, 23, Krishnarajendra Road, Basavangudi, Bangalore-4.
9. SHRI D. M. SHANKARAPPA, Merchant, Tiptur. — Directors elected under clause (d) of Sub-Section (1) of Section 25 of the State Bank of India (Subsidiary Banks) Act, 1959.

Report of the Board of Directors to the State Bank of India and the Reserve Bank of India in terms of Section 43 (1) of the State Bank of India (Subsidiary Banks) Act, 1959

PERIOD COVERED BY THE REPORT: 1st JANUARY 1962 TO 31st DECEMBER 1962

CHANGES IN THE BOARD OF DIRECTORS

On the 1st March 1962 Shri B. Venkatappiah took over as Chairman of the State Bank of India and in that capacity he became a Director of the Bank in place of Shri P. C. Bhattacharyya in terms of clause (a) of Sub-Section (1) of Section 25 of the State Bank of India (Subsidiary Banks) Act, 1959. In terms of clause (c) of Sub-Section (1) of Section 25 of the State Bank of India (Subsidiary Banks) Act, 1959, Shri Rajendra Prakash Goyal, Staff Officer, Subsidiary Banks Section, State Bank of India, Central Office, Bombay, was nominated to the Board in place of the Agent, State Bank of India, Bangalore, with effect from the 15th November 1962. The names of the Directors of the Board of the Bank as on the 31st December 1962 are listed in Annexure I.

ACCOUNTS

The Balance Sheet and Profit and Loss Account for the year ended 31st December 1962 as approved by the Board of Directors are given in Annexure II.

The working of the Bank showed a net profit of Rs. 18,41,214.96 and with the addition of Rs. 62,466.16 brought forward from the previous year the total amount available for appropriation is Rs. 19,03,681.12 which the Board of Directors have appropriated as under :—

Transfer to Reserve Fund	Rs.	4,50,000 00
Bonus to Staff	Rs.	4,10,000 00
Dividend at 10 per cent (subject to tax)	Rs.	10,00,000 00
Carried forward	Rs.	43,681 12
	Rs.	19,03,681 12

The Accounts of the Bank have been audited by Messrs. Fraser & Ross, Chartered Accountants, who were reappointed as Auditors by the State Bank of India in exercise of the powers conferred by Sub-Section (1) of Section 41 of the State Bank of India (Subsidiary Banks) Act, 1959, with the approval of the Reserve Bank of India.

CAPITAL AND RESERVES

The Authorised Capital of the Bank at Rs. 2 crores and the Issued and Paid-up Capital at Rs. 1 crore remain unchanged. With the transfer of Rs. 4.50 lakhs from the Profits of the year under review the Reserve Fund of the Bank now stands at Rs. 64.50 lakhs.

DEPOSITS AND OTHER ACCOUNTS

The deposits and other accounts of the Bank stood at Rs. 25.91 crores at the end of the year as against Rs. 23.99 crores as on 31st December 1961 and are higher by Rs. 2.92 crores.

CASH BALANCES AND MONEY AT CALL AND SHORT NOTICE

The Bank's Cash Balances (including Balances with the Reserve Bank of India, State Bank of India and its subsidiaries) at the end of the year 1962 stood at Rs. 1.83 crores as against Rs. 1.41 crores at the end of 1961. The Balances with other Banks aggregated to Rs. 0.07 crores as against Rs. 0.09 crores at the end of 1961. The ratio of Cash and Bank Balances to Demand Liabilities was 19.75 per cent. Money at Call and Short Notice as on 31st December 1962 stood at Rs. 2.09 crores as against Rs. 1.25 crores at the end of 1961.

INVESTMENTS

The Bank's Investments recorded an increase of Rs. 1.78 crores during the year under review and as at the end of the year the Investments at or below the market value stood at Rs. 10.88 crores which was 41.99 per cent of Deposits.

ADVANCES

Advances outstanding as on 31st December 1962 amounted to Rs. 13.08 crores as against Rs. 13.15 crores at the end of the year 1961. The ratio of Advances to Deposits being 50.09 per cent on 31st December 1962 as against 57.20 per cent at the end of the year 1961.

PROFIT AND LOSS

The income of the Bank for the year amounted to Rs. 1,45,29,733.32 as against Rs. 1,25,76,782.90 for the year 1961. After making the usual and necessary provisions and providing for taxation, the net profit of the Bank amountedto Rs. 18,41,214.96for the year as against a sum of Rs. 20,67,023.69 as on 31st December 1961. Inspite of the higher income during the year, the net profits show a decrease mainly because of the heavy incidence of additional establishment charges incurred due to the implementation of the Award of the National Industrial Tribunal (Bank Disputes) and the revision of the Scales of Pay and Allowances of the Officers of the Bank and the cost of Deposit Insurance.

GOVERNMENT AND AGENCY BUSINESS

In terms of the agreement entered into with the State Bank of India and in pursuance of Section 36 of the State Bank of India (Subsidiary Banks) Act, 1959, the Bank had extended its Agency businesss to six additional centres, thus bringing the total number of Branches of the Bank conducting Government business to 38.

BOARD AND EXECUTIVE COMMITTEE MEETINGS

During the year six Meetings of the Board and twenty-two Meetings of the Executive Committee were held.

OFFICES OF THE BANK

The Bank had in all 59 branches as on 31st December 1961 including the Head Office. To this four Offices (including a Pay Office) were added during the current year. Under a scheme of rationalisation approved by the State Bank of India, the branch at Gulbarga was closed and our business thereat was handed over to the State Bank of Hyderabad and under the same scheme, the business of the Bangalore Branch of State Bank of Travancore was taken over by us.

A list of the Offices of the Bank as at 31st December 1962 is given in Annexure III.

DEVELOPMENTAL ACTIVITIES

(a) Expansion Programme

Three Branches and a Pay Office have been opened during the year under Report. Licences have been obtained from the Reserve Bank of India to open 8 more Branches.

In terms of Section 48 of the State Bank of India (Subsidiary Banks) Act, 1959, the subsidy expected to be received from the State Bank of India to reimburse losses incurred by the Bank on account of the Branches opened under the Expansion Programme for the year under Report will be Rs. 2,24,073.00 which has been taken into account in the Profit and Loss Account for the year.

(b) Small Scale Industries

The Bank's advances to Small Scale Industries recorded sizable increase during the year under review. Assistance was afforded to 136 units accounting for a total limit of Rs. 84.15 lakhs as against 97 units with a total limit of Rs. 82.77 lakhs as at the end of 1961. The outstandings under sanctioned limits as at the end of 1962 was Rs. 47.58 lakhs as against Rs. 39.85 lakhs as at the end of 1961.

(c) Warehouses

Advances against Warehouse receipts showed considerable improvement. The total outstandings against Warehouse receipts were Rs. 28.69 lakhs as on the 31st December 1962 as against Rs. 21.84 lakhs on the same date of the previous year.

(d) Co-operative Institutions

The total advance limits granted to Co-operative Institutions as at the end of 1962 was Rs. 88.84 lakhs as against Rs. 56.73 lakhs as on 31st December 1961 and the outstandings stood at Rs. 54.05 lakhs as against Rs. 43.56 lakhs as at the end of 1961. The increase represents enhancement of the limits and full utilisation of the sanctioned limits by the Co-operative Sugar Factories.

STAFF

With the opening of new branches and with the increase in the business of the Bank, the strength of the staff rose from 1,380 as on 31st December 1961 to 1,535 as at close of the year under review.

The Award of the National Industrial Tribunal (Bank Disputes) was published in June 1962 and was also implemented by the Bank as the Award governs the Bank and its staff.

The salaries and allowances of Officer staff have also been revised commensurately with effect from 1st January 1962.

The relationship of the staff with the management was cordial and co-operative and the Board of Directors wishes to place on record its appreciation of the services rendered by all categories of the staff during the year.

By Order of the Board,

A. KRISHNA MURTHI,
General Manager.

13th January 1963.

REPORT OF THE AUDITORS

We, the undersigned Auditors of the State Bank of Mysore, appointed under Section 41 (1) of the State Bank of India (Subsidiary Banks) Act, 1959, do hereby report to the State Bank of India upon the Balance Sheet and Accounts of the Bank as at 31st December 1962.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Head Office and the Accounts, and report (i) that, in our opinion, the Balance Sheet incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair Balance Sheet containing all the necessary particulars and properly drawn up so to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the competence of the Bank; (iv) that the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of Profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with Law and (vii) that in our opinion, Books of Account have been kept by the Bank as required by Law.

IMPLICATIONS OF SUPER PROFITS TAX

SERIOUS BLOW TO INDUSTRIAL PROGRESS

By S. V. Ghatalia

THE keynote of the Central Budget for 1963-64 is the introduction of the principle of ceilings on income and gradual but virtual extinction of the private sector. No person can deny the fact that the Government is in need of large resources to finance the defence expenditure, but it is one thing to raise finance, it is another thing to do so wholly through taxation. I believe no person can quarrel with the Government that sizable finances are required and one can quarrel with the public only if they are not ready and willing to contribute the necessary finance. There are, however, ways and means of raising the finance and the question is how to raise the resources in a manner which will not retard industrial development; which will not throttle the enterprise and incentive and which will not break the will of the people.

Taxation has its limits—a limit beyond which taxation is undesirable, a limit beyond which taxation is dangerous and a limit beyond which taxation is fatal. We have already crossed the limits of undesirability and danger. Now this budget has crossed the third and last limit of taxation, namely, its fatal effect on the economy.

The most alarming feature of the budget is the size of the additional taxation—which admittedly is more than the total additional taxation imposed in the last four years. If one takes into account the additional taxation by States, the tax burden assumes an unprecedented magnitude. The question which any sane person would like to consider is whether our economy can stand such a heavy burden and whether there is no alternative means of raising the finances other than such a heavy crushing burden of taxation.

In this article, I propose to deal in detail only with the Super Profits Tax. I believe the principle underlying the Super Profits Tax is unexceptionable. It is a very equitable type of tax, but the manner and method by which it is sought to be imposed makes it a type of tax which will deal a serious blow to the financial structure of the industry; will act as a brake on industrial progress; will put into serious jeopardy those industries which have already undertaken plans of expansion on the basis that certain tax structure will continue for years to come.

Too Low a Return

The first objectionable feature of the Super Profits Tax is the low rate of standard return. Six per cent return, in my opinion, is too low a limit for computing super profits. It is well known to all, except those in power, that a dividend cannot be computed on the basis of 100 per cent distribution of profit. Normally, a company will plough back at least half the profits and only the other half will be distributed. If you examine the dividend policy of companies which are progressive, you will find that the distribution of dividend is even less than half the divisible profit. If this basis is accepted, then the standard rate of return should be at least 12 per cent.

I can justify the rate of 12 per cent from another angle. The interest rates are as high as 7 to 8 per cent. The return on preference share capital is expected at about 9 per cent. Since the equity capital in a new industry bears higher risk than moneys borrowed or preference share capital—a minimum return of 12 per cent should be assured to the equity capital. If the proposed standard rate of return is retained, I am afraid, the return on the equity share capital will be too low to attract investment.

The next effect of the Super Profits Tax is on the amount of profit ploughed back in industry. The ploughing back of the profit is indispensable for expansion projects. Let us take an expansion project of Rs. 4 crores. The usual method of finance would be to raise half the amount by way of long-term loans from financial institutions, about a crore from the issue of new equity share capital and about a crore out of the profits and depreciation. The high rates of Super Profits Tax will seriously curtail the amount of profit ploughed back and will seriously curtail the dividend on the equity shares. It should be appreciated that a financial institution will grant finance equal to half the amount of the project finance, provided the basic condition that the other half will be brought in by the owners is fulfilled. If the contribution of the owners of the company is less, *pro tanto* there will also be a reduction in the finance available from the financial institutions.

Paying Back Loans

The second angle which is required to be understood is that a financial institution will, before granting long-term loan, examine the pay-back period. The pay-back period is computed on the basis of how soon the capital invested in the new project will be returned by way of profits and depreciation. The high rate of Super Profits Tax will extend the pay-back period. I would like to ask a question: has anybody considered what will happen to those companies who have already committed themselves and embarked on expansion programmes, relying on a cash flow forecast on the basis of the rates of tax hitherto prevailing? These cash flow estimates will be completely thrown out of gear and it will be impossible for the companies to meet their obligations, already entered into with financial institutions. Those companies who have expansion plans under consideration will not be able to obtain the requisite finance from the financial institutions because of the longer pay-back period, on account of the difficulty in getting equity capital to match the contribution of the financial institutions towards the cost of the project.

The proposed rate of tax comes to 75 per cent on profits between 6 to 10 per cent and 80 per cent on profits above 10 per cent. The actual rate will be much higher and may reach 100 per cent because the income-tax officer is given power to increase the total income for the purpose of Super Profits Tax, by an expenditure incurred on account of commission, entertainment and advertisement to the extent such expenditure, in his opinion, is excessive, having regard to the circumstances of the case. The income-tax officer can exercise this power only with the previous consent of the Inspecting Assistant Commissioner of Income-tax. The effective rate of tax may be more than 80 per cent, because certain legitimate business expenses are not being allowed, e.g., excessive expenditure on entertainment beyond the limit prescribed under Section 37. There are other legitimate expenses which, even though incurred wholly and exclusively for the purpose of the business, e.g. expenses incidental to the issue of fresh capital which today almost amounts to ½ to ¾ per cent of the capital issued, are not deductible.

A Serious Omission

Now, I will explain another serious omission in the Super Profits Tax and that is in regard to contributions to the National Defence Fund. About 60 per cent of the defence contributions will be paid again by the company by way of Super Profits Tax. By what process of reasoning, can you ask the company to pay Super Profits Tax on the profits which have already been surrendered to the Government by way of contribution to the National Defence Fund. This is a serious omission in drafting the Super Profits Tax Bill and I hope the Government will grant this small mercy.

The Super Profits Tax will create tremendous difficulties in respect of those companies who have issued preference shares recently at high rates. Wherever the rate of dividend on the preference shares is high, the equity share capital will suffer in dividend.

The overall effect of Super Profits Tax is that the value of equity shares of those companies which are profitable and efficient will tumble down in the market. It will penalise the efficient companies and such companies will find it difficult to raise further capital.

Super profit is computed with reference to capital and reserves. The rules for computing the capital of a company have been framed by persons who probably are not acquainted with company finance and much less corporate accounting. The proposal is to compute capital with reference to the opening amount of capital and reserves subject to adjustments in regard to new capital added during the year. The profits earned during the year also constitute the capital employed and, on this principle, half the profits earned during the year, on an average, should be added to the capital employed. This is an outstanding omission and I do not know whether it is due to ignorance or out of deliberate design.

Foreign Capital

The Super Profits Tax will hit very seriously those companies which are rendering services, e.g., companies rendering technical services, managing agency companies, advertising companies, who do not employ large capital. Since the super profit is computed with reference to capital, practically all their profits will become super profits.

Another serious effect of the Super Profits Tax is that the flow of foreign capital, in the shape of equity participation, nay, even long-term loans, will stop. Loans will be denied because of longer pay-back period and the consequent increase in the risk; capital will be denied due to low dividend income. In respect of such foreign equity capital which has already come, the present rate of taxation almost amounts to breaking faith with those who, trusting our Government, invested their money in India.

The Super Profits Tax will be cumulative in effect, that is, the dividend received by a company in excess of 6 per cent of the original cost of its investments will again bear Super Profits Tax, because the capital raised is computed on the basis of the original cost of the shares and not on the basis of the present market value. In view of this, it appears that the investment companies will be hit hard.

Another unique feature of this taxation is that it imposes a tax merely on a company and not on partnerships, individuals, Hindu undivided families, associations of persons. This amounts to discrimination, but it is not a discrimination of the type which can be challenged under the Constitution.

Development Rebate

Another serious mistake in the rules is that the reserves are to be included so far as the amounts credited thereto, have not been allowed in computing the profits for the purpose of income-tax. This raises a question in regard to the development rebate reserve, being 75 per cent of the development rebate allowed. Since the benefit in tax is to the extent of 50 per cent only, it follows that to the extent of 25 per cent, the development rebate reserve is created out of profits and not out of the savings in tax. It is but fair that this portion of a development rebate reserve which has come out of the profits should be added to the reserves.

Another consequence of the Super Profits Tax which is not appreciated by the Government is that investment in the corporate sector is not necessarily by people with high income and large wealth. Many a common man has tried to save and put his savings in the corporate sector in the hope and expectation of earning a fair return on capital. These persons with small income having an investment in the corporate sector will suffer grievously on account of the Super Profits Tax.

Double Taxation

A ceiling on income is sought to be introduced by amending Section 40 of the Income-tax Act to the effect that total remuneration exceeding Rs. 5,000 per month after 28th February 1963, to an employee of a company will not be allowed as a deduction. This will entail colossal double taxation if an executive gets a remuneration of Rs one lakh, the Company will have to pay extra tax of Rs. 32,000, in addition to the tax payable by the employee which will amount to about another Rs. 32,000, making the total tax of Rs. 64,000 on an extra remuneration of Rs. 40,000.

Note—This article is an adaptation of the author's lecture on Central Budget Proposals for 1963-64 on 4th March 1963 under the auspices of the Junior Chamber of Commerce, Bombay.

Notice

THE PULLANGODE RUBBER AND PRODUCE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THIS Company will pay on the 31st March 1963 to the Registered holders as at that date interest due on the Preference Shares for the year ended that date at the rate of 6.131 per cent per annum (calculated in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960).

Preference Share Transfer Register will be closed from 28th March 1963, to 31st March 1963, both days inclusive.

By Order of the Board,

ASPINWALL & CO. LTD.,
Managing Agents.

COCHIN, *1st March* 1963.

GOVERNMENT OF INDIA'S BUDGET

(*Concluded from page* 409)

deficit is so huge notwithstanding the improvement of Rs. 60 crores under several heads, including Rs. 47 crores attributable to receipts on account of the National Defence Fund and Rs. 9 crores to the Emergency Risk Insurance. This is because of the shortfall of Rs. 78.5 crores to Rs. 376.5 crores in foreign loans and of Rs. 30 crores to Rs. 60 crores in receipts from P.L. 480 deposits. The borrowing programme, of course, shows a shortfall of Rs. 20 crores in small savings from the original estimate of Rs. 365 crores, but this is more than made up by the sale of National Defence Bonds introduced after the emergency. Referring to the deficit, the Finance Minister observed:

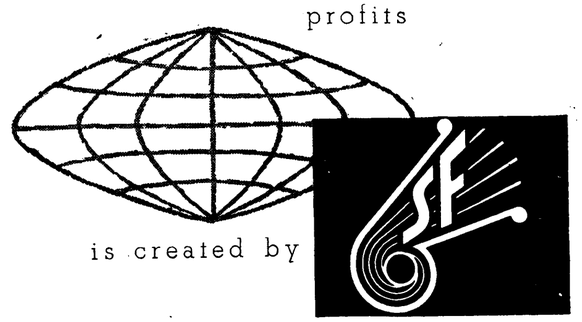
"It is not unlikely that the actual budgetary deficit for the current year would be somewhat smaller than what I have just indicated. But the fact remains that, despite the improvement in revenues and the sizable contributions to the National Defence Fund and the National Defence Bonds after the onset of the emergency, the overall deficit would show a large increase over what was anticipated. The shortfall under small savings and the larger ways and means assistance to some of the States reflecting their financial weakness are matters of particular concern. Honourable members, I am sure, would agree that, although prices have remained reasonably stable over the past two years, there is little room for complacency in regard to the size of the deficit we might safely incur over the years to come."

The budget estimates for the coming financial year (1963-64) take a credit of Rs. 400 crores from market borrowings (including Rs. 100 crores to be raised on behalf of the States), as against the actual total subscriptions amounting to Rs. 366 crores (Rs. 257 crores for the Centre and Rs. 109 crores for States) in the current year. Receipts from small savings have been assumed at Rs. 105 crores, same as in 1962-63. Credit has also been taken for Rs. 462 crores from fresh foreign loans (Rs. 376.5 crores in 1962-63) and Rs. 90 crores (including Rs. 30 crores to be transferred from the moneys formerly deposited with the State Bank of India) from P.L. 480 deposits (Rs. 60 crores).

The overall budgetary position next year may be summarised thus: The total disbursement of the Central Government amounts to Rs. 2,041 crores, comprising a revenue deficit of Rs. 267 crores, direct capital outlay of Rs. 827 crores, loans aggregating Rs. 716 crores to States and other parties, and debt repayments to Rs. 231 crores. This amount is expected to be met to the extent of about Rs. 266 crores from additional taxation, Rs. 967 crores from internal and external borrowings, Rs. 248 crores from repayments of loans by the States and others, Rs. 90 crores from investment of P.L. 480 funds, and Rs. 282 crores from miscellaneous debt and deposit heads, leaving an overall deficit of Rs. 188 crores. Taking into account the net improvement of Rs. 37 crores in capital receipts, the uncovered gap comes to Rs. 151 crores which, we are told, will be covered by expansion of Treasury Bills, that is deficit financing. The Finance Minister has said that, considering everything, it would not be unreasonable to expect that deficit financing of this order will not have any adverse effect on the economy.

WORLD OUTPUT OF HARD FIBRES

The world production and export of hard fibres—mainly sisal, henequen and abaca—in 1962 was about the same as in 1961, according to the Food and Agriculture Organisation. Production in 1962 aggregated 891,000 tons, as against 882,000 tons in 1961. Total production of sisal alone was 587,000 tons in 1962. The biggest producers were Tanganyika and Brazil, followed by Angola, Mozambique and Kenya. Almost all the world's abaca is produced in the Philippines and the total was 106,000 tons last year. Henequen production, mainly in Mexico, was 166,000 tons. The main uses of hard fibres are in agricultural twine, cordage, nets and netting and, to a lesser extent, in carpets and padding for upholstery.



World exports of sisal are estimated at 551,000 tons, the bulk of it coming from Tanganyika and Brazil. Exports of abaca were 95,000 tons and of henequen 35,000 tons. Plentiful supplies of hard fibres led to a fall in their prices, in the first ten months of last year. In the four months since last November, however, prices of sisal had increased by about 20 per cent. This was partly due to the rebuilding of stocks by manufacturers who had depleted their supplies because more twine was needed to bind the big grain harvest in Western Europe last year. Another reason was smaller offers of sisal from Brazil. Prices of lower grades of abaca were influenced by the prices of sisal, and also rose. Yet, for the first time in a decade, many grades of abaca were cheaper than sisal.

These are some of the salient features of the current situation of hard fibres contained in a document prepared for an F.A.O. meeting on hard fibres at Rome. The meeting will also consider several other documents dealing with the trends and factors affecting the production and trade in hard fibres, and fluctuations in international markets. The meeting will advise F.A.O.'s Committee on Commodity Problems whether the problems of hard fibres require that an inter-governmental study group be set up. The Committee on Commodity Problems already has study groups dealing

In Textile Industry...

THE RIGHT "CLIMATE"

for greater profits

is created by

In your mill, the quality of the products is dependent on climatic conditions. SF Humidifiers create the right "textile climate" not only for improving the quality of products but also for increasing the efficiency of workers.

A series of humidification towers, each connected directly to its own distribution channel, when placed along the walls in suitable numbers according to requirement of each department, ensure uniform distribution of moisture and a high degree of ventilation. Because of their low power consumption, excellent flexibility, low installation cost and long life, hundreds of textile mills in India with a total spindlage of about 3 millions have already installed SF Humidifiers.

SCHEME OF COMPULSORY SAVINGS

By P. C. Jain
UNIVERSITY OF ALLAHABAD

THE scheme of compulsory savings which Mr. Morarji Desai announced in his 1963-64 budget speech is calculated to yield Rs. 65 to 70 crores per annum, out of which Rs. 40 crores would accrue to the Central Exchequer, thereby augmenting the net additions of small savings estimated for the budget year at Rs. 105 crores. The chances are that the yield of compulsory savings deposits would be much more, provided the scheme is successful, though there is no way to find out, with the limited statistics at our disposal, the exact yield which might be expected from it.

The proposed scheme of compulsory savings deposits is broadbased and includes not only persons paying income-tax but also agriculturists paying land revenue, employees both in the public and the private sector earning more than Rs. 1,500 per annum but not liable to income-tax, professions, trades and shopkeepers whose annual turnover is Rs. 15,000 or more and who are not subject to income-tax. The full details of the scheme have not yet been worked out but the maximum limit of compulsory savings, except in the case of agriculturists for whom the maximum limit has been fixed at 50 per cent of the basic land revenue on 1959-60 assessment, at 3 per cent of annual rental value of property for property owners, and in the case of professions and trades where it is fixed at a level equal to the amount of the tax they pay, has been fixed at between 2 and 3 per cent of their residual income for different categories of persons.

The main advantage claimed for the scheme of compulsory savings by Mr. Morarji Desai is that, first, it would reduce the pressure of purchasing power in the market and would to that extent help in keeping the inflationary forces under control and, secondly, it would help to inculcate the saving habit in the people. While helping the Government to raise the much-needed funds for financing its defence and development outlay, the compulsory savings scheme would provide an earning asset to the people (which from their point of view is better than having to pay additional taxes) as the deposits would bear simple interest at 4 per cent per annum (free of tax) and would be repayable at the end of five years.

Keynesian Touch

On its face, the scheme appears to offer many advantages and has a Keynesian touch—and everything Keynesian seems to be welcome—as a similar scheme was introduced in England during the Second World War by the late Lord Keynes. If Britain could introduce such a scheme why cannot India do so, no matter what the differences in the condition of the people in the two countries might be? Besides, the Indian people are patriotic and should rise to the occasion by making every possible sacrifice to meet the Chinese aggression. Although Mr. Morarji Desai has not said much, others who have proposed a scheme of compulsory savings have placed much emphasis on the right mental attitude of the people in the context of the national emergency as a justification for introducing such a scheme.

But the scheme of compulsory savings proposed by Mr. Morarji Desai, though it is highly spectacular, raises many difficulties and problems. And for all that we know at this stage, in the end we might have to come to the conclusion that, as in the case of the expenditure tax, the experiment was not after all worth making.

Since compulsory savings would also be imposed on agriculturists, shopkeepers with reference to their annual turnover, professions and trades, a legal difficulty may arise, because these classes fall in the State Governments' tax jurisdiction. It is true that compulsory savings are not a tax but all the same they are "compulsory." What is, however, still more important, is that, by forcing these categories of persons to make compulsory savings, the Central Government would be reducing their capacity to bear additional taxation by the State Governments. It does not meet the legal point that the State Governments would be sharing in the proceeds of compulsory savings. It would be open to any State Government or to any person in the above categories affected by the scheme of compulsory savings to question the Central Government's legal right to impose them.

So far as the "poorer" people not subject to income-tax are concerned, the assumption is that they are not making enough savings out of their income. But somehow the Finance Minister does not appear to have considered the fact that, after paying higher prices for consumer goods, railway travel, postal facilities and other services which these people use and after paying the ever-increasing indirect taxes, there does not remain much scope for increasing the rate of savings. Each taxing authority feels that, after all, it is imposing a small additional burden and the people should have no difficulty in bearing it. Similarly, the shopkeepers seem to think that a small increase in the price of goods they sell should not make much of a difference. But nobody seems to realise that the sum total effect of these "small" increases in postal rates, railway fares, indirect taxes of all kinds and higher prices of consumer goods on this class of people is enormous and is completely beyond their bearing capacity. In fact, it would not be wrong to say that, by and large, this class of people is underfed and underclothed and is not in a position to increase savings. It is not only naive but cruel to talk of forcing these people to tighten their belts further by reducing their consumption levels. It is not a question of their patriotic fervour and their willingness to make sacrifices but the question is that of their complete incapacity to make further sacrifices.

Cost of the Scheme

Another important consideration which seriously vitiates the scheme of compulsory savings is the enormous cost of collecting such savings from the relatively poor people, of keeping accounts and refunding the deposits after the lapse of five years. One of the reasons for exempting this class of persons from income-tax is the high cost of collection and the administrative difficulty involved in collecting taxes from them. Similar difficulties will have to be faced in connection with the compulsory savings scheme. The Government might be thinking of entrusting this work to the district officials and the sales tax officers of State Governments or some such agency. But all such departments are already "overworked" and are finding it difficult, due mostly to inefficiency, lack of proper organisation and wrong habits of work acquired in the past, to cope with the work already entrusted to them. If the work of collecting compulsory savings is also given to this machinery, there may be much too much evasion, harassment of the poor people and further slackness in work. If an entirely new machinery is created for this purpose the cost of it would be prohibitive.

Both these arguments, however, are not applicable to the same extent in the case of persons subject to income-tax. Under the scheme of compulsory savings, persons whose income after the payment of tax does not exceed Rs. 6,000 will be called upon to make compulsory savings not exceeding 3 per cent of such *residual* income and persons whose *residual* income after paying the tax exceeds Rs. 6,000 per annum would be required to make compulsory savings deposits at a rate not exceeding 2 per cent of their residual income. The income-tax department could very well collect such compulsory savings as they collect taxes and, though the work of income-tax officers and their subordinates, who are already overworked, would increase, the cost of collecting compulsory savings from this class of persons would not be high. It is true that the high prices of consumer goods and other services have also quite considerably reduced the *real* income of this class of persons, but they could certainly save 2 to 3 per cent more of their income if they made a serious effort.

But the underlying assumption in the scheme of compulsory savings that the "richer" classes are indulging in wasteful expenditure and that this scheme would to some extent prevent it is altogether untenable. It cannot be denied that the "richer" classes—or at least some of them—not only in India but all over the world indulge in wasteful and sometimes harmful expenditure. But their ways could not possibly be corrected by any scheme of compulsory savings or for that matter by prohibition, restrictions on entertainments or by any other compulsion. An improvement in their habits is necessarily a slow process and is possible only through moral persuasion and moral uplifting, in which compulsion by the Government or by anyone else has no part to play.

A compulsion in the matter of savings will only result in these people diverting a part of their voluntary savings to compulsory savings deposits. This will not only defeat Mr. Morarji Desai's object of increasing the rate of national savings through his scheme of compulsory savings but might create fresh difficulties for the private sector to the extent to which such a diversion of voluntary savings reduces people's investment in the shares and debentures of private enterprises. In a mixed economy in which both public and private enterprises have to work together and in which private enterprise is already facing difficulties in raising adequate capital for its smooth working and expansion, this is not an insignificant consideration.

There is nothing in Mr. Morarji Desai's scheme to prevent the diversion of voluntary savings to compulsory savings deposits. The restriction that such deposits cannot be withdrawn before the end of five years would not make much difference from the point of view of persons who are already saving a fairly high proportion of their income. It is possible that, in this class of "rich" persons, there might be some spendthrifts who are making zero savings, though this is highly improbable. The scheme of compulsory savings would only increase the personal indebtedness of this class of persons and, to the extent to which it is possible, it would force them to evade making such compulsory savings deposits. It is not possible to hope that the mere fact of compulsory savings would force these persons to change their habits.

How to Raise Savings

How, then, could the rate of national savings be increased quickly above its present level of some 8½ per cent of the national income, if the scheme of compulsory savings is not likely to be successful in doing so? There is no doubt that, in order to make it possible to increase the investment on development and defence without creating highly inflationary conditions, the national savings in India must increase. It is also equally true that savings cannot increase, unless the level of current consumption is reduced. But the unfortunate thing is that, on account of the excessive burden of taxation and the inflationary rise in prices, the people's level of consumption in real terms has already been drastically reduced and they may not be able to reduce the level of consumption much further without suffering unbearable hardships. In order to increase the rate of national savings, it is, therefore, necessary to reduce the burden of taxation on the people and to stabilise the price level.

Since the State needs increased revenues for development and defence, it may not agree to reduce the overall burden of taxation, although this should have been done in the best national interest. But, in order to increase the rate of savings, it is absolutely necessary to stabilise the price level in India. In his budget speech, the Finance Minister drew satisfaction from the fact that the general index number of wholesale prices in January 1963 averaged 126 against 127½ at the beginning of the third Plan. It is true that, due to special circumstances, the general index of wholesale prices in India in 1961 actually declined by a little over 2 per cent and in 1962 it did not rise by more than 2 per cent. But it is equally true that, from April to August 1962, the general level of prices increased by 6½ per cent and, at the present moment, there is a high inflationary potential in the economy due to higher Government expenditure and a very high level of taxation. The stabilisation of prices would not, therefore, be an easy task. And, unless prices are stabilised, it would not be possible to increase the rate of national savings as quickly as is desired. It is, therefore, necessary for the Government to make an all-out effort to stabilise the price level.

In order to achieve an abiding increase in the rate of national savings in India, it would be necessary to accelerate the country's rate of economic growth. With an average annual rate of economic growth of 2¼ to 2¾ per cent in the first two years of the third Plan, the vast majority of people belonging to the poor and middle classes are finding it difficult to make two ends meet. It is only when India's national income increases at a considerably faster rate than the increase in the country's population that there would be some scope for increasing the rate of savings after meeting the basic and minimum requirements of the people. With a low level of national income, low rate of economic growth and a small *per capita* income, it is not surprising that the rate of savings in India is low and is not responding to pressures and incentives improvised by the Government for increasing national savings.

SETBACK FOR MADURA MILLS

DIVIDEND SAME—RESERVES GET LESS

A MODERATE but all-round setback has been suffered by the Madura Mills Company Ltd. (Managing Agents: Messrs. A. and F. Harvey Ltd., Madurai) during the year ended 31st December 1962. Sale proceeds at Rs. 16.14 crores show a setback of Rs. 1.10 crore, after deducting railway, steamer freight, etc., amounting to Rs. 38.06 lakhs, as against Rs. 45.23 lakhs a year before. Gross profit has declined by Rs. 30.25 lakhs to Rs. 168.35 lakhs. The ratio of profit to sales is one point down at 10.4 per cent. Net profit shows a relatively greater fall of Rs. 36.76 lakhs to Rs. 51.51 lakhs, because of a considerable increase in the provision for depreciation from Rs. 32.94 lakhs to Rs. 43.53 lakhs. All the same, the dividend on the 15-rupee fully paid ordinary shares has been maintained at 15 per cent per annum, subject to tax. This has, however, been possible only by reducing the aggregate transfer to reserves to Rs. 27.20 lakhs from Rs. 58.28 lakhs, that is, even less than half the amount set apart in the previous year.

The following table summarises the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Sale proceeds, less freight	1,614.30	1,724.39	1,740.53	1,240.01
Other income	47.44	42.30	31.88	17.33
Closing stocks	99.65	75.45	136.52	50.85
Materials and stores consumed..	1,045.58	1,043.01	1,249.44	823.02
Staff expenses	380.57	371.18	336.48	271.17
Railway, steamer freight, etc..	38.06	45.23	45.89	40.23
Other expenses	101.53	92.83	74.61	63.09
Gross profit	168.35	198.61	197.34	66.24
Managing Agents' commission..	7.64	8.00	14.61	5.79
Depreciation	43.53	32.94	25.72	19.94
Taxation	65.67	69.40	71.71	..

Income of previous years ..	..	..	..	3.50
Provisions written back ..	..	1.50	..	..
Transfer to reserves	27.20	58.28	53.88	20.39
Dividend	26.25	26.25	26.25	21.88
	(15%)*	(15%)*	(15%)*	(12.5%)*
Carry forward	10.85	12.46	7.21	2.05
Equity shares' market value (In rupees):	1962	1961	1960	1959
High	43.25	43.25	36.25	31.00
Low	32.30	34.75	30.50	25.00

* Subject to deduction of tax.

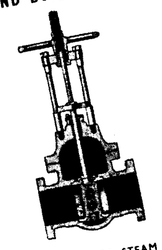
Deducting from the net profit of Rs. 51.51 lakhs, as shown in the table above, the amount transferred to development rebate reserve, the profit for purposes of computing super profits tax, as proposed in the 1963-64 Union budget, amounts to Rs. 41.81 lakhs on the aggregate "own funds of Rs. 619.69 lakhs, including a permissible amount of some Rs. 20 lakhs under development rebate reserve, but excluding capital reserve shown at Rs. 100 lakhs. The profit exceeds the free limit of 6 per cent on "own funds" by only Rs. 4.63 lakhs. The Company's liability under super profits tax, on the basis of 50 per cent of the super profit as now proposed in the Union Finance Bill, works out to Rs. 2.31 lakhs, which, however, is easily taken care of by the surplus of Rs. 10.85 lakhs being carried forward.

The provision for taxation at Rs. 65.67 lakhs for the year under report comprises Rs. 55.65 lakhs, being the estimated tax on the year's profit at the enhanced rate of 50 per cent, and Rs. 10.02 lakhs being the under-provision for the previous year mainly due to the five per cent increase in the tax on company profits in the 1962 Finance Act. Taking the liability under the proposed super profits tax at Rs. 2.31 lakhs, the Company will be paying tax on the 1961-62 profit at the rate of 52.07 per cent. Thus, there is a net addition of 2.07 per cent in the tax rate for this Company because of the super profits tax. If the increase is only small, it is because the profit for 1962 is much lower than the normal level for the Company. If one were to take the Company's profit for 1961 (which is Rs. 77.49 lakhs for this purpose), for instance, the super profits tax alone would take up Rs. 20.15 lakhs, raising the tax liability approximately to Rs. 99.57 lakhs. The aggregate rate of taxation to the Company would be nearly 62.7 per cent. It must also be noted here that the Company's profit for 1961 itself was a little less than normal.

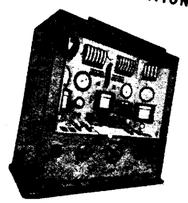
According to the Directors, the profit for the year under report has declined because of the high cotton prices resulting from a partial crop failure, increased electricity tariffs, considerable wage increases as recommended by the Wage Board unaccompanied by rationalisation of workloads inherent in the Wage Board report and lastly constant selling prices for indigenous cotton yarns.

In the current year, however, some measure of rationalisation of workloads is expected to be achieved. The long-hoped-for revision of yarn prices has also recently materialised. But, at the same time the new budget will raise the cost of operations following the proposed 10 per cent duty on imports of raw cotton, a 20 per cent surcharge on cotton yarns of less than 35 counts and a 33⅓ per cent surcharge on cotton yarns of 35 counts and more. The revised selling prices of yarns obviously do not cover these new increases in cost, and the industry will surely have to do a lot of explaining to the Government before it gets permission to revise the prices further in order to accommodate such increases. This will be a long-drawn-out process; meanwhile, the Company's profit-margin will have been squeezed again.

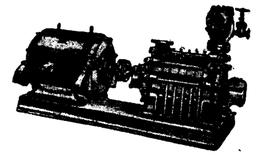
The Company's 450-loom project is expected to be implemented in full this year. Most of the preparatory machinery has been shipped, and the first batch of looms will be commissioned in April next. The question of ordering a further quantity of automatic looms is under consideration, while work is progressing on construction of a modern weaving shed at Ambasamudram.



Financially, the Company is sound. Its paid-up capital of Rs. 175.02 lakhs is supplemented by reserves and surplus aggregating Rs. 559.86 lakhs (including Rs. 100 lakhs of capital reserve created by revaluation of assets in....). Loan capital has gone up from Rs. 137.83 lakhs to Rs. 215.20 lakhs following the issue of Rs. 125 lakhs 1974-76 7 per cent debentures in November last and the increase in the N.I.D.C. loan from Rs. 47.89 lakhs to Rs. 63.53 lakhs, as a result of both of which, however, the total of bank borrowings and other credits has declined from Rs. 89.94 lakhs to Rs. 26.67 lakhs. Unsecured loans amount to Rs. 9.88 lakhs, as against *nil* last year. Together with current liabilities and provisions shown at Rs. 191.48 lakhs, the total short-term indebtedness to outsiders amounts to Rs. 288.03 lakhs, which is far exceeded by current assets, loans and advances standing at Rs. 740.23 lakhs. Investments total Rs. 47.38 lakhs, including Rs. 9.78 lakhs being quoted and commanding a market value of Rs. 13.16 lakhs. The gross block, which increased during the year by Rs. 62.81 lakhs to Rs. 827.93 lakhs, has been written down by more than 50 per cent to Rs. 339.06 lakhs and, inclusive of Rs. 21.85 lakhs being the value of work-in-progress, the net block is shown at Rs. 360.92 lakhs.



The Rs. 15 fully paid ordinary shares of the Company are currently quoted at Rs. 32 *cum-div.* On an *ex-div.* basis, they give a net yield of almost 5 per cent per annum.



EAST ANGLIA PLASTICS' RIGHTS ISSUE

Letters of rights, offering new 10-rupee ordinary shares of the aggregate value of Rs. 1 crore in the proportion of one share for one share held as on 16th February 1963, have been posted by the East Anglia Plastics (India) Ltd. to its shareholders. The last date for acceptance of the offer is 31st March. The proceeds of this issue will go towards the cellulose acetate flakes project to be set up at Visakhapatnam, which, together with the plasticisers plant to be erected in a year or so, will make the Company self-sufficient for its raw material requirements. The Government has given its approval for importation of capital equipments for the flakes project to the extent of Rs. 2.90 crores under the second French credit which the Andhra Pradesh Industrial Development Corporation Ltd. had agreed to guarantee.

The Calcutta unit of the Company has commenced production of cellulose acetate and P.V.C. moulding powder from imported raw materials. The products have been competitive in quality and well received by the plastic moulders. It may be mentioned that this is the only unit of its kind in the country. Under the restrictive latest import licensing policy, the Company can meet 80 per cent of India's requirements of acetate moulding powder. Although this production will be less than the installed capacity, it is expected to ensure a gross turnover of nearly Rs. one crore and a substantial profit. The balance capacity may find use in the next licensing period when imports may be stopped altogether. As the flakes and plasticisers projects are expected to treble production of the compounding unit, shareholders can hope to earn a reasonable return on the increased capital when all the schemes are completed.

HOPKINSONS
VALVES AND BOILER MOUNTINGS

COMPLETE RANGE OF STEAM FITTINGS FOR ALL POWER AND PROCESS REQUIREMENTS.

High	94.00	94.00
Low	72.00	67.00

* Only a small sum of Rs. 316.

Extracts from the Directors' report: *Trading Conditions*: The trading conditions during the year under review were not as satisfactory as in the previous year. As mentioned in the last year's Report, due to heavy rains continuing even towards the end of the year 1961, the cotton crop for the season 1961-62 was very much affected in quality and quantity. The supply position of cotton was far below the demand and due to the forces of this disequilibrium, the prices of cotton ruled very high all throughout the year and much above the previous year's ruling rates. There was a state of all round increase in the prices of stores, dyes and chemicals and other items required by the mills for the manufacture of cloth and yarn.

Apart from general increase in the cost of consumable materials, fresh incidence of cost such as, enhanced rate of Company's Contribution to Employees' State Insurance Scheme, wage increase by Rs. 2 per worker per month from January 1962, as per the Central Textile Wage Board Award and levy on cotton and export obligation to augment Export Promotion Fund, increased the total expenses. Thus, while there was a rise in the expenses and consequent increase in the cost, the cloth and yarn prices remained static under voluntary control.

The cotton prices have further gone up in the season 1962-63 as a result of increase in the ceiling rates allowed by the Government of India. The Emergency Risk Insurance for Factory and Goods introduced from January 1963, will cost a handsome amount by way of premium and these factors will have their effect on the earning capacity of the mills in future.

The Directors are glad to report that the Company's mill has obtained a sanction from the Government of India for expansion by 6,000 spindles and ancillary machinery and when the expansion is complete, the Company's earning capacity will improve.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	72,00,000	Gross block	2,28,63,268
Reserves and surplus	21,63,568	—Depreciation	89,84,936

	13.62	16.31	16.12
	13.00	12.87	11.37

Extracts from the Directors' report: As mentioned in the previous year's report, due to import restrictions caused by the acute shortage of foreign exchange, the Company has, for quite some time now, been experiencing increasing difficulty in arranging for the timely flow of basic raw materials such as copper, electrical grade steel sheets, insulators, oil etc., which are imported. The Company's import quotas during the year under review were further curtailed. Though full satisfaction cannot be expressed, under these trying circumstances, the results of working of the Company for the year under review are considered satisfactory.

The Company's profits were also affected to a great extent by the inflationary trend which prevailed in the prices of indigenously procured raw materials as well as further imposition of excise duties and increase in import duties.

The 1961-62 sales totalled Rs. 214.61 lakhs an increase of approximately 25 per cent over the 1960-61 sales figure of Rs. 171.47 lakhs. The year has been one of record sales and improved earnings despite the various adverse circumstances.

Finance: With the increase and expansion in the activities of the Company the financial requirements have also increased. In view of further expansion already under execution it is considered desirable to raise further Capital by issue of equity and or preference shares for which the permission of the Examiner of Capital Issues has also been received.

Prospects: The requirement of the products manufactured by the Company has been steadily increasing even in the emergent situation created because of the Chinese aggression. Top priority has been accorded by the Government for the generation and distribution of power. It is reported that the Government is contemplating to raise the third Plan target generation capacity by 1 million kw. As most of the products being manufactured by the Company are required for the transmission of power the directors hope the development of the industry would continue unabated inspite of the emergent conditions. The Vizag Factory after the initial teething trouble due to difficulty in transport and availability of raw materials is now working in full swing. The *Switchgear* and *Lifts* manufacturing unit at Budge Budge also commenced production according to schedule from November 1962. Due to unusual delay in receipt of import licence for equipments the Meter Factory project could not be completed in 1962. The construction work at Hyderabad for the same is now under progress and the directors hope to put this unit into operation towards the latter part of 1963. The Company is also contemplating to put up a factory for the manufacture of transformers and switchgears at Sonepat in Punjab for which an application for an industrial licence has already been made. The land has also been purchased and the work on constructing the factory will be taken in hand immediately after the industrial licence is sanctioned by the Government.

Accounts in brief as at 31st October 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	61,10,300	Gross block	85,76,388
Reserves and surplus	20,34,311	—Depreciation	21,66,888

High	9.25	10.25
Low	6.50	7.44

* This includes Rs. 3.14 lakhs being depreciation for the previous year.

† Represents income relating to previous year.

Extracts from the Directors' report: During the year under review, the aggregate production of *vanaspati*, refined oil and hard oils was about 15,000 tons as against about 12,500 tons during the previous year. The working results were adversely affected due to high cost of raw materials without corresponding increase in selling prices owing to keen competition.

The Company exported de-oiled cake valued approximately at Rs. 60 lakhs in addition to the export of hydrogenated groundnut oil valued approximately at Rs. 1,60,000 thereby earning the much needed foreign exchange for the country.

The rebate in excise duty on slab basis on *vanaspati* was withdrawn and the ceiling fixed for exemption from excise duty for soaps was lowered since 1st April 1962, which resulted in further increase in the incidence of excise duty on these products.

In regard to the Development Licence for installation of a cotton seed oil crushing plant, details of the project are being reviewed with a view to implement the same at an early date.

By Agreements dated 7th December 1962 and 25th January 1963 entered into between the Company and the Aryan Industries (Private) Ltd., this Company has secured the right to crush vegetable non-essential oils and to manufacture hydrogenated groundnut oil, vegetable tallow, refined oil, castor oil, tin containers, soaps, etc. at the factory owned by the latter Company and situated at Secunderabad, for one year with option to this Company to renew the arrangement for two terms of one year each. Accordingly the said factory is being worked by this Company.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	30,58,950	Gross block	77,98,874

		Investments	14,051
		Cash	1,94,364
	Rs. 1,31,92,387		Rs. 1,31,92,387

* Paid-up capital consists of 3,05,895 ordinary shares of Rs. 10 each fully called up.

COMPANY MEETINGS AND DIVIDENDS

PUNJAB MINERALS CO., LTD. Annual General Meeting, Calcutta, 15th March 1963. Dividend: *Nil*. Transfer books remain closed from 2nd to 15th March 1963, both days inclusive.

BIRDS INVESTMENTS LTD. Twenty-sixth Annual General Meeting, Calcutta, 19th March 1963. Dividend: 10 per cent or Re. 1.00 per share, subject to deduction of tax. Transfer books remain closed from 5th to 19th March 1963, both days inclusive.

MADURA MILLS CO., LTD. Annual General Meeting, Madurai, 21st March 1963. Dividend: 15 per cent or Rs. 2.25 per share, subject to deduction of tax. Transfer books remain closed from 22nd February to 21st March 1963, both days inclusive.

ALKALI & CHEMICAL CORPORATION OF INDIA LTD. Twenty-sixth Annual General Meeting, Calcutta, 21st March 1963. Dividend: Re. 1.50 per ordinary share, subject to deduction of tax, payable on 6th April 1963. Transfer books remain closed from 7th to 21st March 1963, both days inclusive.

ELGIN MILLS CO., LTD. Annual General Meeting, Kanpur, U.P., 25th March 1963. Dividend: Re. 1.75 per ordinary share, subject to deduction of tax. Transfer books remain closed from 5th to 25th March 1963, both days inclusive.

UNITED BANK OF INDIA LTD. Annual General Meeting, Calcutta, 25th March 1963. Dividend: Re. 0.60 per share, subject to deduction of tax. Transfer books will remain closed from 11th to 25th March 1963, both days inclusive.

MARTIN BURN LTD. Annual General Meeting, Calcutta, 27th March 1963. Dividend: Rs. 2.50 per ordinary share, subject to deduction of tax, payable on or after 1st April 1963. Transfer books will remain closed from 14th to 27th March 1963, both days inclusive.

AZAM JAHI MILLS LTD. Thirty-second Annual General Meeting, Hyderabad, Andhra Pradesh, 28th March 1963. Dividend: 3½ per cent or Rs. 3.50 per share, subject to deduction of tax, payable on and from 7th May 1963. Transfer books will remain closed from 15th to 30th March 1963, both days inclusive.

WALCHANDNAGAR INDUSTRIES LTD. Fifty-fifth Annual General Meeting, Bombay, 29th March 1963. Dividend: 12 per cent or Rs. 12.00 per ordinary share, subject to deduction of tax, payable on and from 15th April 1963. Transfer books were closed from 30th January to 20th February 1963, both days inclusive.

NATIONAL PIPES & TUBES CO., LTD. Nineteenth Annual General Meeting, Calcutta, 29th March 1963. Transfer books will remain closed from 16th to 29th March 1963, both days inclusive.

ALLAHABAD BANK LTD. One Hundred and Fortieth Annual General Meeting, Calcutta, 3rd April 1963. Transfer books will remain closed from 11th March to 3rd April 1963, both days inclusive.

UNITED NILGIRI TEA ESTATES CO., LTD. Taxable interim dividend of 7½ per cent or Re. 0.75 per share, subject to deduction of tax, for the year ending 31st March 1963. Transfer books remain closed from 8th to 15th March 1963, both days inclusive.

VAIKUNDAM RUBBER CO., LTD. Taxable final dividend of 20 per cent or Rs. 2.00 per share (making a total of 35 per cent or Rs. 3.50 per share) for the year ended 31st December 1962. Transfer books will remain closed from 18th to 23rd March 1963, both days inclusive.

DECCAN SUGAR AND ABKHARI CO., LTD. Taxable ordinary interim dividend of 6½ per cent or Re. 0.325 per share, for the year ending 31st May 1963. Transfer books will remain closed from 17th to 30th April 1963, both days inclusive.

PARRYS CONFECTIONERY LTD. Taxable dividend of 8 per cent or Re. 0.08 per share, for the year ending 31st March 1963. Transfer books will remain closed from 22nd March to 5th April 1963, both days inclusive.

NEWS IN BRIEF

THE Bill seeking to set up an Agricultural Refinance Corporation for granting medium and long-term credits for the development of agriculture has been passed by Parliament.

The Presidents of all the recognised stock exchanges in the country are scheduled to meet at Hyderabad on the 15th and 16th inst. to discuss various problems pertaining to stock exchanges.

The provisions of the Income-tax Act 1961 will be extended to the Union territories of Goa, Daman, Diu, Dadra and Nagar Haveli with effect from the beginning of next month.

The Shipping Corporation of India has signed an agreement with the Caltex India Ltd. for chartering a tanker to ply between Vishakapatnam port and the Persian Gulf. The tanker will be built by Messrs. Hitachi of Japan.

The Government of India has approved of a Rs. 3.5-crore programme to expand facilities for ship construction and ship repairs at the State-owned Mazagoan Dock. The programme envisages the building of a new shipway, an impounded wet basin and ancillary workshop facilities.

The Jammu and Kashmir Government has decided to set up a committee to examine the working of public sector industries. These industries are reported to be running at a loss, the total loss actually incurred in the past three years being of the order of Rs. 80 lakhs.

A delegation sponsored by the Textile Machinery Manufacturers' Association has left for Rangoon to explore the possibilities of exporting Indian textile machinery to Burma for installation of complete textile mills by the Joint Venture Corporation of Burma.

The prices of coal and coke (both hard and soft) have been raised by 80 nP and Rs. 1.07 per tonne, respectively, with effect from the 1st inst., with a view to compensating the coal industry for the additional incidence of costs following the implementation of the Central Wage Board's recommendations.

The Union Government has decided to grant a loan of Rs. 2 crores to the British-owned joint steamer companies in Assam for the rehabilitation of their craft. It is proposed to construct 14 self-propelled carriers and six harbour tugs. Two self-propelled carriers are expected to be completed this year and four more next year.

The Kirlampudi Sugar Mills at Pithapuram in Andhra Pradesh will be auctioned shortly, following its failure to pay the cane growers arrears amounting to nearly Rs. 25 lakhs, according to Mr. A. Balarama Reddy, Andhra's Minister for Agriculture. Prosecution is also being launched against the mill management.

A Fisheries Corporation for deep-sea fishing as well as for encouraging consumption and export of fish is to be set up in the public sector. A team from a leading U.S. fisheries firm is already in India to study the resources aspect of the project. The terms of collaboration with the firm are yet to be finalised.

The amalagamation of Air-India and Indian Airlines Corporation cannot be undertaken until 1965, owing to the loans obtained by Air-India from five American banks for financing their Boeing project, according to Mr. Ahmed Mohiuddin, Union Deputy Minister for Civil Aviation. The Union Government has asked Air-India to practice economy in its expenditure on advertisements.

India will export 450,000 metric tons of sugar during the calendar year 1963, according to Mr. A. S. Shinde, Parliamentary Secretary to the Food and Agriculture Minister. The loss on subsidy for sugar export has been declining; in 1962, it amounted to Rs. 14.44 crores on exports of 373,000 tons, as against Rs. 13.26 crores on exports of 266,000 tons in 1961.

The Government of India has decided to raise the production capacity of the Khetri copper mines to 21,000 tons of electrolytic copper per annum, as against the target of 10,000 tons fixed in the third Plan. The project is being worked by the National Mineral Development Corporation. The technical and economic feasibility report of the project has been prepared by the Western Knapp Engineering Company of the U.S.

The work on the construction of the 260-mile long pipeline between Gauhati and Siliguri for carrying aviation spirit, petrol, kerosene and diesel oil from the Nunmati refinery began on the 1st inst. under the guidance of the Bechtel Corporation of San Francisco. The refined products will be carried in a continuous stream, a new technique to be used for the first time in this country. The throughput capacity of the refinery is 750,000 tons per annum.

What is claimed to be the biggest single unit paper plant in Asia is being erected at Amlai in Madhya Pradesh. It is sponsored by the Orient Paper Mills Ltd. and is expected to go into production by the middle of next year. The foreign exchange part ($17 million) of the estimated cost of Rs. 15 crores is being met by the U.S. Export-Import Bank. The new unit, which will have a rated capacity of 200 tons per day, will produce fine bleached paper for writing and printing. The entire plant and machinery will be erected by the Beloit Corporation of Wisconsin.

A settlement was reached at Calcutta last week betwen ESSO Standard Eastern Inc. and its clerical and labour staff on payment of bonus and revision of wage scales. Under the agreement, the Company will pay bonus for 1962 and 1963 to all permanent labour staff, equivalent to 4½ months' basic earnings, and to all permanent clerical staff in the Calcutta industrial area equivalent to 3½ months' basic salary earned by each employee during these years in full and final settlement. The agreement, which will be in force for two years, also covers all other terms and conditions of service, including wage scales. On their part, the employees have agreed to co-operate with the Company in maintaining discipline, improving efficiency and productivity, and avoiding waste of time.

• • • •

From Abroad

The *per capita* consumption of coffee in West Germany during the year 1962 was higher at 3,836 kgs., as against 3,715 kgs. on 1961, according to the Association of Hamburg Coffee Traders.

Excess capacity has declined in many U.S. industries, though the present levels are above those prevailing in the mid-1950's, according to the Federal Reserve Board figures covering 17 basic industries, including metals, chemicals and petroleum. The actual extent of the industrial production capacity in operation during 1962 was 80 per cent, as against 77 per cent in the previous year.

The Government of France is considering a request by the U.S. for a loan of $100-$150 million in francs, repayable after 15 months. The loan will be similar to the loans aggregating $430 million already made to the U.S. by West Germany, Italy and Switzerland in their respective currencies repayable after two years. The U.S. is also proposing to request Belgium, Holland and Sweden to grant loans on the same lines.

The rise in labour costs in West Germany was the second highest in Europe during the last few years, according to the calculations made by the U.N. Economic Commission for Europe. Between the first half of 1960 and the first half of 1962, they went up by 11 per cent. Only the increase in Austria was stronger. Labour costs rose by 9 per cent in Britain and Norway, 8 per cent in the Netherlands, 7 per cent Sweden and Finland, and 3 per cent in France. In the U.S., the labour costs actually declined by 2 per cent.

Czechoslovakia and Cuba will increase their mutual trade by 45 per cent this year under an agreement signed between the Governments of the two countries. Cuba has agreed to supply nickel, copper, chromium and manganese ore, tobacco, silk, fibres, sugar, fruits and other products. In return, Czechoslovakia will supply machinery, capital goods, malt, hops and consumer goods. Cuba has also signed a trade pact with China under which China has extended a ten-year credit without interest to Cuba for the outstanding balance of payments on 1962 and 1963 trade agreements.

The International Monetary Fund has created a new facility to increase its balance of payments support of member-countries which experienced temporary declines in their export earnings due to circumstances beyond their control. The new facility, which permits increased drawings from the Fund, is designed largely to help the primary products exporting countries which suffer from price fluctuations for such products. Under its established practices, the Fund has financed in the past deficits resulting from declines in export earnings suffered by member-countries.

The average American works an hour and 39 minutes out of an eight-hour day to pay his Federal taxes, according to a study recently completed by the Tax Foundation Inc., a private research organisation. Including State and local taxes, he spends about two hours and 17 minutes a day to meet his tax bills. Altogether, Federal, State and local taxes took $131,700 million from individuals and businesses during 1960, or 28.6 per cent of the national net output, that is total production of goods and services minus an allowance for capital sources used up each year.

PERSONAL

MR. Pravinchandra V. Gandhi, Mr. M. A. Master, Mr. G. P. Kapadia, Mr. Pratap Sinh Mathuradas and Mr. P. A. Narielwala have been co-opted on the Committee of the Indian Merchants' Chamber for the year 1963.

Mr. Eugene R. Black, former President of the World Bank, has been appointed Special Financial Adviser to the United Nations. He will be specially responsible for the payment of arrears by the U.N. member-States. He will also advise the Secretary-General on all financial questions concerning the U.N.

Mr. Donald G. Strokes, Managing Director of Leyland Motors Ltd. and Sales Director of the Leyland Motor Corporation, has arrived in India to maintain personal contacts with Leyland's associate companies, branches and agents. While in India, he will discuss the expansion programme of the Madras factory of Ashok Leylands Ltd., which produced 3,600 Leyland Comet vehicles last year and which plans to turn out 5,000 this year.

and now
THE LITRE

From April 1963, metric capacity measures will be compulsory in trade throughout the country. • The kilogram and the metre became compulsory last year; thus the metric system of weights and measures is now the only legal system in India. • The simplicity of the metric system will be obvious if you use the units (litre, metre and kilo) as they are, for their intrinsic value. • Do not equate metric measures to old units like seer, viss or ollock.

Notices

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

Registered Office:
METTUR DAM R.S.

THE BOARD OF DIRECTORS HAVE declared an interim dividend of 3 per cent tax-free in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act 1960 on Preference Shares and 6.25 per cent subject to deduction of tax on Equity Shares for the year 1962-63.

The Directors have also resolved that the new equity shares allotted on 21st April 1962 will rank for dividend from the date of allotment on the then paid-up value of Rs. 5 per share. Both the Preference and Equity dividends as above, are subject to relief under Sections 84 and 85 of the Income-tax Act 1961 and the Income-tax Officer, Salem, has determined under Section 197 that 25 per cent of the dividends is exempt from tax.

The dividend warrants will be posted to shareholders on or after 4th April 1963.

The Register of Members and Share Transfer Books will remain closed from 27th March 1963 to 4th April 1963, both days inclusive.

By Order of the Board,
SESHASAYEE BROTHERS (PRIVATE) LIMITED,
Managing Agents.

METTUR DAM R.S.
23rd *February* 1963.

MARTIN BURN LIMITED

NOTICE

THE ANNUAL GENERAL MEETING (BEING the Seventeenth Ordinary General Meeting) of the Company will be held on Wednesday, 27th March, 1963, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1962 and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend on the Ordinary shares in the Company.
3. To appoint a Director in place of the retiring Director Sir N. R. Pillai.
4. To appoint Auditors and to fix their remuneration.
5. Special Business.

To consider and if thought fit, to pass the following resolution as a Special Resolution—

"That pursuant to Section 314 and other applicable provisions of the Companies Act 1956, consent be and is hereby accorded to Mr. Thomas Acquin Martin, a relative of Mr. T. Leslie Martin, a director of the Company, holding or continuing to hold for a period of five years as from 1st April 1963, an office or place of profit under the Company as an Assistant on a higher remuneration, namely, a basic salary of £3,000 per annum, fixed, plus such other allowances, benefits, perquisites, bonus, gratuity, leave, etc., as are usually admissible to the senior covenanted staff of the same status serving in the United Kingdom."

The Ordinary Share Register and Transfer Books of the Company will be closed from 14th to 27th March, 1963, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
A. G. GIDLEY,
Secretary.

CALCUTTA,
1st *March*, 1963.

Note—The Dividend, if sanctioned, will be paid on or after 1st April, 1963, to those Shareholders so entitled whose names appear in the Company's Register of Members for Ordinary Shares on the 27th March, 1963, or to their mandatees.

An Explanatory Statement annexed to the convening notice as required under the Companies Act, 1956, has been forwarded to the members of the Company.

BRUSSELS AND BANGKOK

(*Concluded from page 400*)

factured goods. This favourable effect will benefit developing countries, if the higher productivity is passed on to them in low prices, especially for capital goods on which they depend significantly for their economic development. But fears do exist that such benefits may be retained within developed countries if the increase in productivity induces a similar increase in wages and if a discriminatory price policy is pursued by big business against purchasers abroad.

2. Economic integration and freer trade tend also to raise the rate of income growth in developed countries. It is most likely that the first favourable effect will be creation of trade among developed countries. The resultant export expansion in developing third countries, if any, will be only secondary.

3. The danger to developing countries stems from the fact that manufactured goods whose trade accounts for 80 per cent of world trade and which are, therefore, subject to tariff reduction negotiations between the United States and the E.E.C., may include only a few present or potential exports of developing third countries.

The E.C.A.F.E. survey also examines the problem of external resources to finance the increasing trade deficit of the region. India was largely responsible for widening the aggregate current account deficit in recent years, though India also had inflow of foreign funds, especially from the United States and Canada. In spite of the heavy current deficit with West European countries, there has been no significant flow of foreign funds into the region from these countries. North America was the major source of foreign funds for financing the current deficit, the proportion of total foreign capital coming from North America being 91 per cent in 1953-55 and 75 per cent in 1959-60.

Two points are stressed by the E.C.A.F.E. Secretariat: first, Asian countries do not seem to offer sufficiently attractive business and investment opportunities; secondly, the eventual economic integration of Europe may diminish the flow of capital to Asian countries, because it will offer more attractive business opportunities for both internal and outside capital as, for instance, American private capital.

BANKING

(*Concluded from page 394*)

broaden to that extent, other things remaining the same. Taken in the context of various indirect levies, which are likely to push up living costs substantially, a bigger dose of deficit financing will aggravate inflationary conditions in the economy. It is heartening to note, in this connection, that the Planning Minister, Mr. Nanda, has promised that a close vigil will be kept on the price level and that no pains would be spared to hold it within reasonable limits.

I.D.A. CREDIT FOR ETHIOPIA

The International Development Association, an affiliate of the World Bank, has extended a development credit equivalent to $13.5 million to Ethiopia for a continuing programme of road development. The credit will assist the third phase of the programme. It will provide the foreign exchange needed to complete the new roads now being built, to build two new roads with a total length of 135 miles, six small bridges, and the asphalting of 500 miles of roads. It will also finance the procurement of accounting machines for the Imperial Highway Authority and the foreign exchange costs of consultants to assist the Authority in organisational and engineering matters, and to conduct a survey and feasibility study of a proposed road through the Awash Valley leading ultimately to the new port of Assab, which at present can be reached from Addis Ababa only by a mountainous and much longer route.

The total cost of the project is estimated at the equivalent of $23.2 million. The I.D.A. credit will cover the foreign exchange requirements and the Government will be responsible for providing the local currency requirements for the project and for the continued maintenance and betterment of existing roads.

This is the first I.D.A. credit to Ethiopia. It is for a term of 50 years, repayment of the principal will begin on 1st November 1973. Thereafter, 1 per cent of the principal will be repayable annually for 10 years and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of ¾ per cent per annum on the amount withdrawn and outstanding will be made to meet the I.D.A.'s administrative costs.

WORLD BANK LOAN TO NICARAGUA

The World Bank has announced a loan equivalent to $2.6 million for the first large-scale irrigation project in Nicaragua. The loan will help to finance the Rivas irrigation scheme, under which water will be brought to 22,000 acres of land in western Nicaragua, between lake Nicaragua and the Inter-American Highway. The Irving Trust Company, New York, is participating in the loan, without the World Bank's guarantee, to the extent of $135,000, representing the first four maturities which fall due between March 1967 and September 1968.

The total cost of the project is estimated at $4.6 million; the Bank loan will cover the foreign exchange requirements. The loan is for a term of 25 years and bears interest of 5¼ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin in March 1967.

A world congress of the International Advertising Association is to be held at Stockholm from 27th to 29th May 1963. It will be the first of its kind in Europe and an estimated 1,500 persons from 40 countries are expected to attend. The motto of the congress will be "Advertising on the World Market." Prince Bertil of Sweden will deliver the opening speech. Among the speakers will be Finland's Prime Minister, Ahti Karjalainen, industrial designer Sigvard Bernadottee, Professor of Journalism at the University of Wisconsin, U.S.A., Watson Dunn, head of one of the largest advertising agencies in France, Jean-Michel Agostini and Dr. Sture Linner, head of the U.N. information office in Athens.

Reflecting the vigorous expansion of international demand for nitrogen fertilisers and technical nitrogen, the aggregate world exports of nitrogen rose by 13.7 per cent to 3.16 million metric tons in 1961-62, according to a special report on world nitrogen trade issued by the British Sulphur Corporation. A striking feature was the marked expansion of urea exports which for the first time exceeded 500,000 tons, accounting for one-sixth of world trade. West Germany continued to be the world's biggest exporter of nitrogen, with shipments of 583,000 tons in 1961-62, followed by Japan's (413,800 tons), Italy (351,400 tons), Belgium, Canada, Holland, Norway and the U.S. (the exports ranging from 180,000 tons to 250,000 tons).

The LKAB, Sweden's Artic iron-ore mining company, has decided to build a new concentration plant with a capacity of 750,000 tons a year and a new pelletising plant for 1,500,000 tons a year at its Kiruna mines. The pelletising plant will be the largest of its kind in Europe. The total cost of the expansion scheme, to be completed by 1965, is estimated at Kr. 90 million. Full production is expected to be reached by 1967.

TREND OF MARKETS

MONEY EXTREMELY TIGHT

(From Our Own Correspondent)

BOMBAY, 6*th March*

Conditions in the short-term money market continued to be extremely tight during the week under review, the call rate standing at the high level of 6 per cent. The supply of available funds was too small to meet the persistent pressure of demand. Borrowers found it very difficult to obtain their requirements. Several banks were compelled to take recourse to larger borrowings from the lender of last resort, that is, the Reserve Bank. The total loans and advances granted by the Reserve Bank to scheduled banks jumped up during the week ended 1st March 1963 by Rs. 18.57 crores to Rs. 57.17 crores, of which those against usance bills alone accounted for almost Rs. 38 crores, a rise of Rs. 11.18 crores as compared with the previous week. Conditions at Calcutta were tighter still, with both fresh money and renewals fetching 6½ per cent, as against 5¾ per cent last week. Even at this level, there was a large unsatisfied demand.

Thanks to the persistent stringency in the money market, the response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 5th inst., continued to be poor. The total amount offered was just Rs. 2 crores, same as last week; this was also the amount invited and accepted. There was, however, no change in the average rate of accepted tenders, namely, Rs. 2.365 per cent per annum. The Intermediate Treasury Bills, which were on tap from the 6th to 9th inst., also evoked poor response, the amount of tenders actually sold being a bare Rs. 50,000, as against Rs. 5.75 lakhs a week before and Rs. 54.25 lakhs two weeks before.

A further rise of Rs. 1.24 crore to Rs. 108.28 crores in India's foreign assets was registered during the week ended 1st March, bringing the total improvement since the beginning of the year to Rs. 11.50 crores. The rise was accounted for entirely by balances held abroad by the Reserve Bank in the Banking Department. These stood at Rs. 13.20 crores. Foreign securities held in the Issue Department were unaltered at Rs. 95.08 crores. Notes in circulation showed a slight fall of Rs. 51.39 lakhs to Rs. 2,193.97 crores.

The week ended 22nd February 1963 witnessed a rise of Rs. 9.58 crores to Rs 1,524.57 crores in the total credit made available by scheduled banks. Deposits, too, went up but by only Rs. 5.24 crores to Rs. 2,181.68 crores. Inter-bank borrowings, however, declined by Rs. 2.97 crores to Rs. 38.16 crores. Borrowings from the Reserve Bank were a shade higher (by Rs. 1.19 crore) at Rs. 38.69 crores. There was a distinct improvement of over Rs. 10.90 crores to Rs. 616.60 crores in investments.

The Gilt-edged market is awaiting details of the borrowing programme. The Union Government budget for 1963-64 provides for a total market borrowings of Rs. 400 crores, including Rs. 100 crores to be raised on behalf of the States. In other words, there will be no separate State loans. In 1962-63, it will be recalled, the Centre raised Rs. 277 crores and the States Rs. 109 crores, both including conversions. Pending the publication of the details of the borrowing programme, the Gilt-edged market is ruling quiet. Turnover is restricted, with values moving narrowly. The State Bank of India was reported to have bought Rs. 2.5 crores worth of 3½ per cent 1968 loan (at Rs. 98.75) and 3½ per cent 1969 loan (at Rs. 96.95) from other banks in need of cash. The 6½ per cent Gold Bonds are nominally quoted at Rs. 116, giving an yield of Rs. 5.06 per cent.

In the foreign exchange market, the rupee eased a little *vis-a-vis* the U.S. dollars, the banks' selling rate for ready T.T. dollars being Rs. 477.75 per $100, as against Rs. 477.50 a week ago. Their buying rate was also higher at Rs. 474.50, as against Rs. 474.25. On the New York Exchange, the £ sterling eased again *vis-a-vis* the dollar, the spot rate declining by 0.140 cent to 280.160-280.190 cents and three months' forward by 0.160 cent to 279.590-279.620 cents.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, 6*th March*

In thin trading and restricted movements, bullion prices presented a steady front this week. The only highlight of the week's trading was renewed strength in gold near the close, which was due to both paucity of stocks and criticism of Government's gold policy in the Lok Sabha.

Spot gold opened unchanged at Rs. 95, but gradually edged forward to Rs 100 by Monday the 4th inst. Yesterday, it gained two points more and improved further today to close at Rs 104 which was the level a fortnight ago. Sovereign was quoted initially at the last week's close of Rs. 72, but improved in sympathy with gold to finish today at Rs. 75.

Silver was unchanged at Rs. 234—last week's closing level—till the mid-week. But, thereafter, it edged forward to round off the week a shade higher at Rs. 235.50. Business was poor, with the daily average arrivals exceeding the offtake by ten bars at 17 bars.

In a memorandum forwarded to the Union Finance Minister this week, the Bombay Bullion Association has expressed the view that, in the light of the experience gained with regard to unduly wide fluctuations in silver prices in the various centres after the ban on forward trading, forward market in silver has proved beyond doubt to be a necessity to the economy of the country. In support of its plea for resumption of forward trading, the Association has stated that, in the absence of hedge facility, industries making use of silver will be put to great inconvenience. According to the memorandum, the seasonal changes in demand and supply on account of the social and religious use of silver call for a forward market in the metal. The annual turnover in silver is estimated by the Association at Rs. 12 crores. The memorandum also mentions that thousands of persons have been rendered unemployed following the imposition of ban on silver futures. The Association has requested the Finance Minister to grant its spokesmen an interview.

Serious apprehensions about the success of the Government's gold policy were voiced in the course of a two-day debate in the Lok Sabha, which began yesterday, and at the Congress Parliamentary Party's meeting on Monday the 4th inst. While both Party members and M.Ps. were agreed with the Finance Minister on the basic objective of the policy, namely, to arrest smuggling of gold into this country by bringing down the price of gold, they believed that the policy might create more problems than those it would solve. Communist M.Ps. said that the policy had failed in view of the poor response to the Gold Bonds, estimated at Rs. 7 crores. One M.P. observed that, while smugglers, numbering about 40 to 50 only, had been highly influential, the masses were made to suffer for the misdeeds of such bad elements. Some members blamed the Government for having been too hasty in its approach to gold, while almost all Party men and M.Ps. spoke of the resultant large-scale unemployment. Defending the policy, Mr. Morarji Desai dismissed the talk of great unemployment on the ground that the number of goldsmiths could not have exceeded the figure of 400,000 estimated in the 1951 census to any appreciable extent. He also turned down a suggestion that the Government should enter the market and buy gold at the current price, for he believed that would only increase smuggling.

Spot silver in New York and London advanced further from 125.6 cents to 126.2 cents and 107⅝d. to 107⅞d., respectively. Forward silver, in London, also edged forward from 108¼d. to 108⅜d. Ready gold closed more than two penny higher at 250s. 5¼d.

The following table shows the trend of prices during the week under review:

	6-3-63 (closing)	High	Low	27-2-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (.995 fine) ..	235.50	235.50	234.00	234.00
London—				
Gold	250s. 5¼d.	250s. 5½d.	250s. 2¾d.	250s. 3d.
Silver Ready	107⅛d.	107⅞d.	107⅛d.	107⅛d.
Silver Forward ..	108⅛d.	108⅜d.	108⅛d.	108⅜d.
New York—				
Silver	126.2 cents	126.2 cents	126.0 cents	125.6 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, 5*th March*

The cotton futures market ruled distinctly firm during the week under review. A combination of bullish factors made for the strength of futures. The most important of these was the absence of any fresh excise duty on cloth or cess on cotton in the Central Budget as was apprehended by the trade. The Budget, of course, contained an import duty on cotton but, in so far the duty tended to increase the price of imported cotton, it bullishly affected the market. The probability of prices of all commodities going up as a result of the Budget proposals also imparted strength to the market. The bullish fervour was further fanned by the absence of tenders against the March contract on any of the two notice days during the week. The release of the balance of 25 per cent of Indian cotton for mills was also a helpful factor. Under pressure of large-scale buying the Jarilla March contract firmed up from Rs. 694 (per three quintals) to Rs. 714.50 yesterday, although the finish was a shade lower. The May contract rallied from Rs. 701 last week-end to Rs. 709.50 yesterday, but closed today at Rs. 704.

In the spot market at Sewri, ready prices ruled firm. Turnover was, however, limited because of the high prices quoted by sellers. Popular varieties such as Vijay, Digvijay, Co2, Surti, Kalyan, 197/3 and L.147 attracted attention. The price of the first mentioned variety was particularly firm due to scarcity of supplies. Out of an estimated crop of 600,000 bales of this growth, nearly 450,000 bales, or 75 per cent of the crop, are reported to have been sold already. The balance is said to be with co-operative societies

Patels and Volkarts, a leading firm cotton traders has, scaled down its end-January estimate of Indian cotton crop during the current season from 5.4 million bales to 5.35 million bales. Commenting on the reasons for the downward revision in crop estimates, the firm observes:

"Responsible for the reduction were less-favourable yield reports from U.P., the Moglais, Saurashtra and the Westerns and Comptahs. It now looks as though 5,350,000 bales are the maximum we can expect, since any further adjustments will probably be downwards rather than upwards. As usual, arrivals have been heavy during January. A total of some 1,150,000 bales arrived in inland market places during the month. The following table compares the total arrivals per end-January with those at the same time during the previous two seasons:

Total arrivals upto 31st January

	1962	1961	1960
Punjab/U.P./Rajasthan..	781,000	892,000	668,000
Oomras	1,321,000	917,000	1,625,000
Gujarat/Saurashtra ..	363,000	54,000	488,000
Westerns/Comptahs ..	3,000	42,000	40,000
Assam/Comilla	..	..	..
Total ..	2,468,000	1,905,000	2,821,000

Qualitywise, we have unfortunately come in for a few unpleasant surprises as far as the later crops are concerned. Contrary to earlier expectations, the Kalyan, Wagad and Kalagin crops of North Gujarat and Saurashtra are deficient in staple merits when compared with previous standards. In the Western and Comptahs, the first pressings of Farm and Jaydhar confirmed earlier fears that these crops were below normal in quality; in case of the Laxmi crop, where previously we expected a uniformly good quality, first pressings were rather disappointing."

Export demand for Bengal *Deshi* during the week showed signs of falling off presumably because Japan, the principal buyer, covered most of its immediate requirements. Spinners interest in foreign cotton centred round selected Sudan, East African and U.S. growths. The proposed import duty of 10 nP per kilogram would increase the imported cost of foreign cotton by Rs. 36 per candy.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 715; Co2 (Nagar) 1,550; Kalyan 935; American on sample 1,330; Elpaso 1,400. Sudan G5S 1,335. Giza 45 1,760.

Cotton futures in Karachi market ruled firm during the week. Good mill demand prompted by keen export interest and firm advices from the spot market imported strength to futures. N.T.R.G. March firmed up from Rs. 69.50 last week-end to Rs. 71.45. The May contract rose from Rs. 72.30 to Rs. 73.30. Spot prices too ruled firm.

The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 72.00; Punjab *Deshi* 69.00; 4F Punjab Roller 78.30; S.G. 83.30. L.S.S. Punjab Roller 80.30; S.G. 85.30. N.T. Roller 83.80; S.G. 85.30. AC-134 Roller 86.30; S.G. 92.30.

Steady conditions prevailed in the Liverpool cotton futures market during the week. In the absence of any new development, trading continued to be dull. Prices moved in a narrow range showing little net change over the week. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week-end closings:

March 24.25 (24.25); May 23.90 (23.95).

March (Sudan) 29.00 (29.00).

Cotton futures in the New York market ruled steady during the week under review also. The continued firmness in spot prices was the main bullish factor. Uncertainties about the proposed cotton legislation was an unsteadying influence but futures values were well maintained.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago.

(In cents per pound)

	5-3-63	25-2-63	19-2-63
March	34.72	34.80	34.65
May	34.85	34.93	34.87
July	34.20	34.45	34.32
New York Spot ...	35.75	35.70	35.60

PEPPER RECOVERS

(Messrs. Parekh and Co.)

BOMBAY, 5*th March*

Malabar black pepper during the week ruled quiet steady with sellers reserved. Ungarbled improved to Rs. 275 and garbled to Rs. 285 under pressure of good inland demand, coupled with the anxiety on the part of exporters to cover their remaining short sales to the U.S.S.R. Garbled March delivery on Cochin Ring recovered from Rs. 282 to Rs. 287 in sympathy with steadiness in the spot.

Singapore ruled quiet at $107½ for black pepper under pressure of heavy arrivals from Indonesia and owing to the news of some easiness in the political situation between Indonesia and Singapore.

Spot in New York climbed down to $35, as the importers there were anxious to reduce their prices to test the market.

Chaitra delivery on the Bombay ring, after going down to Rs. 304, improved to Rs. 310. *Vaisakh* delivery rallied to Rs. 319 under speculative buying. The future of the market is uncertain, inasmuch as it depends more upon the political situation in South-East Asia, Cuba and the Middle East. Ready improved to Rs. 154 with fair demand.

TAX IMPORTS ON YARNS

(From Our Own Correspondent)

BOMBAY, 6*th March*

The imposition of a 10 per cent surcharge on the import duty and a special surcharge of 33⅓ per cent on the basic excise duty on rayon, synthetic and cotton yarns in the 1963-64 budget, which Mr. Kantilal Nahalchand, President of the Bombay Yarn Merchants' Association and Exchange Ltd., feared, would retard progress of the industry and trade, produced a mild all-round setback in the local market this week. Buyers were markedly restrained following the imposition of the additional levies.

In the art silk yarn section, 150D National Rayon moved down from Rs. 11.22 to Rs. 11.18 per kg. 120D S.I. Viscose dropped 26 nP to Rs. 13.20. 100D Century receded by 13 nP to Rs. 15.40. In 2 x 40 staple fibre, Centurys were down by 18 nP at Rs. 7.41 and Kohinoors by 9 nP at Rs. 8.05. Among cotton yarns, 80s Madura fell by four points to Rs. 76 and 40s Meenakshi showed a loss of 50 nP at Rs. 37, while 20s Gokak improved further from Rs. 24.25 to Rs. 25.50 and 30s Madura gained 25 nP at Rs. 29.25.

The Bombay Yarn Merchants' Association and Exchange Ltd. has clarified, as per the informa-

tion received from the Customs authorities, the basis of calculating the increased levies on synthetic, art silk and cotton yarns. On 900 kgs. of indigenous art silk yarn below 75 deniers, the excise duty at Rs. 4 per kg. comes to Rs. 3,600, and 33⅓ per cent of it, being the special excise duty now imposed, works out to Rs. 1,200. The total duty now is Rs. 4,800. Similarly, the import duty on 900 kgs. of foreign rayon and art silk yarns below 75 deniers is Rs. 4,365 at the rate of Rs. 4.85 per kg., and the 10 per cent surcharge as is now imposed takes the total duty to Rs. 4,801.50. On the other hand, the countervailing excise at Rs. 4 per kg. on the 900 kgs. of imported yarns amounts to Rs. 3,600, and 33⅓ per cent special excise duty, as is imposed in the budget, lifts the burden to Rs. 4,800. The total of revised import duty and excise will be Rs. 9,601.50. Duty on synthetic and cotton yarns can be worked out on the same lines.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	6-3-1963	27-2-1963
	Rs.	Rs.
Art silk yarn **(per kg.)—**		
National Rayon 120D	12.10	12.30
Century 75D	17.47	17.95
S. I. Viscose 150D	11.42	11.55
Staple fibre yarn **(40 s 2)—**		
Kohinoor (per kg.)	8.05	8.14
Century	7.41	7.59
Cotton yarn **(per bundle of 10 lbs.)**		
10s Podar	17.75	17.75
20s Edward	22.50	22.25
26s Text	—	29.25
40s Hind	35.75	35.75
60s Pinlay	—	67.25
80s Minerva	76.00	80.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

HIGHGROWN TEAS DEARER

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, *28th February*

Offerings in sale No. 9 held on the 26th inst. amounted to 444,000 kgs. Quality from Nilgiris district was well maintained, whilst there were some brighter teas among mediums. The market met with good demand at slightly irregular rates. There was useful enquiry for plain teas which were firm. Low medium brokens were irregular, the brighter kinds were often dearer, whereas their fannings are quoted firm. Teas under medium category were also slightly irregular, but, here again, the brighter kinds met with good support and sold at dearer rates. Good mediums encountered keen competition and were fully firm to dearer, particularly those with improved quality. The limited selection of best highgrowns were dearer, but others attracted fair support and occasional invoices were dearer with improved quality, otherwise they were about steady. Clean black leaf descriptions continued in demand at dearer rates. Whole leaf grades were also strong and sold at rates above last. Unorthodox descriptions were fully firm to dearer whilst tippy teas came to a lower market.

The quotations (per kg.) were:

	1963	1962
	Rs.	Rs.
Low mediums	4.30-4.80	4.00-4.20
Mediums	4.80-5.30	4.20-5.10
Good mediums ...	5.30-6.00	5.15-6.10
Nilgiri B.O.P.	6.00-12.00	5.50-10.20

The average price realised in sale No. 9 was Rs. 5.49 per kilo as compared with Rs. 5.20 a week ago and Rs. 5.48 in the corresponding sale last year.

In dust sale No. 9 held today, 263,000 kgs. were offered. The market met with useful demand. All medium categories were well supported and sold at firm rates with cleaner types tending dearer. Teas from Wynaad were also well supported, although these can be quoted only irregularly firm. Grainy black descriptions were strong and sold at rates above last. Highgrowns sold readily but came to an irregularly lower market. Unorthodox descriptions were irregular, true C.T.Cs. and Legg-cut were about firm whilst their types were generally lower.

The average price realised in dust sale No. 9 was Rs. 4.35 per kilo as against Rs. 4.38 a week ago and Rs. 4.06 in the corresponding sale last year.

Colombo: There was strong demand. Highgrown brokens and fannings were irregularly dearer, buyers following quality. Mediums and uvas were dearer by 5 cents. Lowgrowns came to a fully firm to dearer market.

London: North Indian and other growths: The best were irregular, but others, particularly teas from Dooars were 1d. to 2d. lower.

Ceylon and South Indians: In Tuesday's sale 25,978 packages were offered of which 8,880 packages were from South India. There was less demand for Ceylons which were generally 1d. to 3d. easier. South Indians met with irregular support and tended easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 10: 389,000 kgs. offered. Fair demand. Low mediums steady, with brighter types dearer. Good mediums firm. Highgrowns irregular. Unorthodox tending easier."

SEEDS AND OILS FALL

(From Our Own Correspondent)

BOMBAY, *5th March*

The Central Government Budget proposals for 1963-64 contained a pleasant surprise for the oilseeds trade. For the excise duty on non-essential vegetable oils (extracted with the aid of power) has not only not been raised, but abolished completely; these oils were subjected to a duty of [illegible] per metric tonne. According to the latest official clarification, filtered oil also has been exempted from excise duty. But the excise duty on processed vegetable oils has been maintained at Rs. 110.25 per tonne. The removal of duty on oils, it is said, will involve a revenue loss of Rs. 10.25 crores annually, which would be made good partially through upward adjustment in the rates of duty on vegetable products, soap and certain varieties of paints and varnishes. In respect of vegetable products (like *vanaspati*, for instance, the duty has been raised by Rs. 12 to 32 per quintal. Naturally, the traders were generally happy at the exemption granted to vegetable oils, although the vegetable products industry was disappointed at the increase in duty.

Following the exemption of vegetable oils from excise duty, oilseeds and oil prices moved down on short sales. The sentiment was also adversely affected by the heavy dose of taxation imposed and the weakness in the equities and the consequent closure of the stock exchange. Groundnut, in particular, came in for heavy selling. Castorseeds too drifted downward, under the pressure of new crop supplies. Linseed suffered a distinct setback on larger offerings of the new crop and on reports that mustardseeds were weak in North Indian markets. Cottonseeds, however, put on a cheerful appearance in sympathy with the raw cotton market.

Groundnut April 1963 contract eased by Rs. 4.13 to Rs. 203.12. July 1963 contract closed Rs. 2.88 lower at Rs. 213.12. Nizam bold lost a rupee to Rs. 40 and Khandesh quality 75 nP to Rs. 41. Oil railway receipts receded by 45 nP to Rs. 16.60. Oil ex-mill shed 5 nP to Rs. 17.20.

Castorseed June 1963 contract retreated by Rs. 2.25 to Rs. 158.50, after an initial spurt to Rs. 161.50. March 1963 contract improved from Rs. 162 to Rs. 165, before closing at Rs. 160, the net loss over the week being Rs. 2. Kanpur bold drifted downwards by 50 nP to Rs. 30.25 and Madras Small by 37 nP to Rs. 31.75.

Linseed March 1963 contract suffered a setback of Rs. 4.75 to Rs. 30.50. June 1963 contract was lower by 43 nP at Rs. 32.69. Bold ready declined by 50 nP to Rs. 30. Linseed oil fell by 20 nP to Rs. 12.10.

Among cottonseeds, April 1963 contract rose by a rupee to Rs. 93. Both non-white and berar spurted by Re. 1.10 to Rs. 19.20.

The following table shows the closing prices of oilseeds and oils on Wednesday 6th March, as compared with those of two previous weeks:

	6-3-1963	27-2-1963	20-2-1963
	Rs.	Rs.	Rs.
Groundnuts			
April 1963 contract	203.12	207.25	207.62
July 1963 contract	213.12	216.00	215.62
Nizam bold	40.00	41.00	41.00
Khandesh quality	41.00	41.75	41.50
Oil ex-mill*	17.20	17.25	17.00
Oil commercial*	17.00	17.05	16.85
Castorseed			
March 1963 contract	160.00	162.00	158.87
June 1963 contract	158.50	160.75	159.75
Ready Madras	31.75	32.12	31.75
Ready Kanpur	30.25	30.75	30.62
Oil B.S.S.†	13.35	13.45	13.50
Oil commercial†	12.75	12.70	12.75
Linseed			
March 1963 contract	30.50	35.25	31.81
June 1963 contract	32.69	33.12	33.50
Bold ready	30.00	30.50	31.00
Linseed oil†	12.10	12.30	12.85
Cottonseed			
April 1963 contract	93.00	92.00	91.50
July 1963 contract	—	94.00	92.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

• • • •

The Central Government has, on the recommendation of the Forward Markets Commission, issued notifications applying Section 15 of the Forward Contracts (Regulation) Act, 1952 to groundnut oilcake (both expeller cake and deoiled meal) throughout the country. Outstanding contracts entered into on or before 2nd March 1963, and remaining to be performed after that date should be closed out at the rate prevailing at the time at which the forward market closed on that date. The effect of the notifications is that, from the date of the notifications, forward contracts, other than non-transferable specific delivery contracts, in groundnut oilcake (expeller variety) can be entered into only between or through or with the members of the recognised associations mentioned above. Forward contracts (other than non-transferable, specific delivery contracts) in groundnut deoiled meal will not be permitted to be entered into for the time being, as no association has been recognised for the purpose. The trading in hedge contracts under the auspices of the respective recognised associations is expected to commence shortly. Recognition has been granted to the following four associations to conduct forward trading in groundnut oilcake (expeller variety) for a period of three years: The Bombay Oilseeds and Oils Exchange Ltd., Bombay, The Saurashtra Oil and Oilseeds Association Ltd., Rajkot, The Adoni Oilseeds and Oil Exchange Ltd., Adoni, and the Hyderabad Oils and Seeds Exchange Ltd., Hyderabad.

BUDGET AND TEA EXPORTS

(From Our Own Correspondent)

CALCUTTA, *5th March*

While the tea trade and industry are grateful to the Finance Minister for the proposal to abolish the export duty, they are disappointed over the withdrawal of rebate of excise duty on tea exports. According to the Finance Bill memorandum, these changes will involve a loss of Rs. 5.38 lakhs on customs duty, but will bring in an additional revenue of Rs. 3.23 lakhs on account of the withdrawal of rebate of excise duty. The industry will benefit by Rs. 2.15 lakhs. This inference of benefit is based on the assumption that the estimates prove approximately correct. However, since the favoured practice with the Finance Minister has in recent years been to understimate revenues and overestimate losses and expenditures, the trade thinks that the industry is hardly likely to enjoy any benefit. Welcoming the decision to abolish the export duty which has been a long-standing demand of the industry and trade, Mr. M. G. Patel, President of the Calcutta Tea Merchants' Association, thought that this decision would in effect only neutralise withdrawal of the refund of excise duty. The excise duty on tea has been increased by 20 per cent as surcharge, which works out to 3 to 9 nP per kg. depending on quality.

It is common knowledge that tea is facing a buyer's market abroad, and the industry has been demanding effective concessions to expand exports. Almost all producing countries are increasing output. Although the world tea output in 1962 was less than in 1961 due to the drought in India, Pakistan and Ceylon, this year a surplus is anticipated. From about 50 million lbs. a decade ago, East African production has now reached the 100-million mark. Pakistan has taken effective measures in order to make good the reverses of 1962 and provide a measurable export surplus this year. It is expected that Ceylonese production this year will reach 530 million lbs., as against only 445 million lbs. in 1961. Thus, it is a safe guess that the marketing outlook for this year is not very encouraging. The budget proposals aim to collect as much increased revenue as Rs. 275 crores, and it follows that this will be reflected in increased cost of living and cost of production. Such a development will be regretted, especially when the need is to reduce cost of production, improve quality, and export more. If these aims can be achieved despite the budget proposals, it will be a miracle indeed. Any increase in cost of living will lead to demand for more wages.

The need for reducing prices of Indian tea becomes only too evident when it is known that as a result of improved quality, lower price, and effective propaganda, Ceylon has been able to increase its exports to several overseas markets mainly at the cost of India. For example, Australia's aggregate offtake has been static at 60 million lbs. a year for over a decade now, but Ceylon has increased its exports to Australia from 34 million lbs. in 1957 to 43 million lbs. in 1961, while India's exports have dropped from 8 million lbs. to 4 million lbs.

According to the Tea Board delegation, which recently visited Australia, New Zealand, and Singapore, India has also been losing market in New Zealand because of the cheapness of Ceylonese tea. In Singapore, Indonesian tea is preferred because of lower price and proximity. Ceylon is aiming at capturing markets in the Middle East. Meanwhile, Ceylon is ahead of other producing countries in the manufacture of instant tea in collaboration with a German firm. At present, green leaf is used for processing instant tea.

Ceylon has also made a reasonable success in increasing markets in Europe and the United States. Ceylonese share of the Irish tea trade was only 13.6 per cent in 1958, but this has gradually increased to 20 per cent. With the Irish man's present improved economic condition, Ceylon is naturally paying more attention to Ireland. The report that the U.S.S.R. is taking large quantities of Ceylonese tea—these totalled 6 million lbs. in the last two months—has caught attention here. For the U.S.S.R. had hitherto paid little attention to the Colombo market, from where it bought only 1 million lbs. in the whole of 1961. In Pakistan too, Ceylon has succeeded in marketing more tea, thus pushing away Indian tea. Following the recent visit of the Pakistani Trade Minister to Colombo, it was announced that Ceylon would sell to Pakistan 1 million lbs. against barter of rice and potatoes. Ceylon is also exporting more to the U.S.A., where total imports in the eleven months to November last were 116.71 million lbs. The increase of 13.92 million lbs. over the corresponding previous period is considered here far from satisfactory for the large publicity campaigns undertaken in that part of the world by producing countries including India.

In the internal sale held here last week, dust tea on offer totalled 32,042 packages, which met with a strong general demand. The strongest feature was legg-cut teas, which realised higher prices. Plain and orthodox teas were firm at irregular prices. Keen competition was offered to lesser medium CTCs and prices rose. Good CTCs realised higher prices. Quotations, inclusive of excise duty, were: Good Assam CTC dust Rs. 6 to Rs. 7, Assam CTC dust Rs. 5.60 to Rs. 6.10, legg-cut dust Rs. 5 to Rs. 5.50, medium Assam dust Rs. 4.40 to Rs. 5, and plain orthodox dust Rs. 4 to Rs. 4.40.

Good demand was seen at yesterday's leaf sale, when offerings totalled 70,767 packages. Whole leaf grades were fully steady, while tippy teas eased. Good support was accorded to the plain orthodox teas prices of which rose. The plainest sorts accounted for the largest advance. However, the better liquoring Dooars and Assam BOPs eased, but similar fannings recorded an irregular trend, with exportable types showing a dearer tendency. CTCs generally eased, although selected lots commanded higher prices. Keen competition was noted for fibrous teas prices of which rose impressively. Legg-cut teas were steady. Quotations, inclusive of excise duty, were: Best Assam CTC fannings Rs. 5.60 to Rs. 5.90, best Assam CTC BP Rs. 5.80 to Rs. 6, best Assam CTC fannings Rs. 5.30 to Rs. 5.50, medium Assam CTC BP Rs. 5.40 to Rs. 5.70, plain fannings Rs. 4.30 to Rs. 4.40, clean plain pekoe Rs. 4.80 to Rs. 5 and plain BP Rs. 4.30 to Rs. 4.40.

FRESH TAXES ON JUTE GOODS RESENTED

(From Our Own Correspondent)

CALCUTTA, *5th March*

If the Weber-Fechner law on relativity of sensations requires any practical demonstration, the budget proposals of Mr. Morarji Desai provided the same in an ample measure. The business community had certainly prepared itself for more taxes, in view of the emergency, and the most pessimistic of expectations had placed the same

around Rs. 150 crores. As the increases now proposed have gone far beyond these expectations, the shock which was beginning to be felt as the proposals were announced passed the stage of causing sensation and, by the time the announcements came to an end, market circles had absolutely become sensationless in view of the apparent overload.

The jute market was surprised, inasmuch as, against the background of the need to increase the consumption of jute fabrics both within the country and outside, the cost has been increased by the enhancement of excise duty by 10 per cent on these products. Production costs will also go up by the 10 per cent surcharge on all imports which means that the mills will have to pay increased duty on imports of spares and other essential stores. The various changes proposed in excise duties of several other manufactures, coupled with the compulsory savings scheme which will affect all those getting a monthly income of Rs. 125 and above, market circles apprehend, would result in demands for increased wages. Considering the abundant size of the jute crop, it is imperative that mills should continue to produce to their maximum capacity. Prices of jute goods should be competitive, if exports are to increase. If prices increase as a result of the new imposts, foreign consumers may as well be encouraged to switch over to substitutes. Against this background, market circles would appeal to the Finance Minister to spare jute goods from the proposed increase in excise duty.

A quiet trend was in evidence in jute goods during the week under review which was short of two working days, while fibre was steady. The report that a large U.S. buyer was proposing to lessen his commitments appreciably caused bearishness, but the effect of the same was soon minimised by rumours of a likely increase in the U.S. offtake, in view of U.S. differences with Cuba. The fall in U.S. burlap consumption during January 1963 by 6.2 million yards, that is, from 73.8 million yards in December 1962 to 67.6 million yards, also caused understandable disappointment, since usually at this time of the year consumption is high. In January 1962, consumption was as satisfactory as 88.2 million yards. Similarly, the phenomenal increase in U.S. stocks at the end of January 1963 to 306.1 million yards from 277.3 million yards in the previous month caused anxiety. This increase is attributed to large purchases by the U.S. at the time of the Cuban crisis and open hostilities in the Sino-Indian border. At the end of January last year, stocks were only 241.4 million yards. Since the existing stocks in the U.S. are equal to about five months' consumption, it is feared that U.S. buyers can afford to give only sparing support to the market here.

Stockists are naturally concerned with such a possibility. Since Sino-Indian relations have not improved and nobody knows exactly if the Chinese would recommence their adventures across the Himalayas, it is also possible that U.S. buyers would prefer to continue building up their stocks. However, market circles do not like to rely much on this possibility and so it is apprehended that mills may find it difficult to dispose of all their hessian output and may have to switch over a portion of the hessian looms to the production of sacking and miscellaneous manufactures. At the same time, it should be stated that sacking sales to overseas markets have not expanded in recent months, and the increase in excise duty may also come in the way of increased internal offtake. The heavy stocks of fibre which mills have been forced to carry have caused them severe financial strain in recent months, and the uncertain marketing outlook for hessian as well as sacking in both overseas and internal markets against the background of the continued need for mills to maintain production at the enhanced rate may as well lead to accumulation of finished goods also with mills, thus accentuating the already acute financial stress. The prospect of increased costs of production as a result of the budget and higher freight rates has, therefore, come as a severe shock to mills.

The steady conditions in the fibre market during the week was caused by the release of purchase quotas on mills by the Jute Commissioner for the month of March. The I.J.M.A. members are being directed to buy 500,000 bales and non-I.J.M.A. mills 30,000 bales. As at the end of February, about 2.93 million bales were remaining to be marketed. The crop has been estimated at 7.1 million bales and, adding the estimated carry-over of 2.6 million bales, the total availability for this season is placed at 9.7 million bales. Purchases by mills up to the end of February aggregated 5.78 million bales, including 640,000 bales allocated as the February quota. Stocks with the State Trading Corporation amount to 60,000 bales and those with the Buffer Stock Association 400,000 bales. Meanwhile, arrivals have started declining and are estimated at 50,000 maunds a day during the week. Existing stocks with mills are sufficient to enable them to continue the enhanced rate of production for about five to six months, after which only the new crop would commence arriving. Mills are likely to have a sizable carryover to the next season. The Jute Commissioner estimates smuggled jute across the border at 600,000 bales, but feels that, even taking this into consideration, there would not be any marketing problem. Fibre exports to East European countries are expected to total 150,000 bales, of which commitments so far total 120,000 bales. As such, there is no possibility of fulfilling the export quota. Sowing time for the next crop is near at hand, and it was appropriate for the Jute Commissioner to call on the jute-growing States to take measures to improve quality. The lack of adequate water for retting has been a constant complaint of jute growers, and early measures to alleviate this problem are essential. Now that the crop has crossed the self-sufficiency target, it would also be advisable not to grow any jute in sub-marginal soil, but at the same time cultivation in areas of good quality soil should be intensified. With the increased demand for specialities in the export market, mills' need for supplies of better quality fibre is very urgent.

Mills continued to buy fibre against their quotas and the fall in the daily arrivals prevented stockists from discounting quotations. White meesta was offered freely, while Daissee and Tossa commanded premium. The quotations for February-March shipment were: Assam bottoms Rs. 30.00 per maund, northern bottoms Rs. 29.50 and Daissee bottoms Rs. 34.00.

With two holidays intervening, the goods section was quiet. Export demand was at a low ebb. The report of increased burlap stocks and lower consumption in the U.S. caused a subdued trend. Further, the report of quiet conditions in the New York burlap market also caused concern. The force of the decline in hessian 40" 10 oz. on Wednesday was slowed down by local covering for ready goods. The quotation was Rs. 48.70 against Rs. 48.90 on the earlier working day. However, activity in sacking was listless, and ready B. twills moved down to Rs. 112.25 from Rs. 112.85. Prices eased further on Thursday, as business taking place was poor. B. twills gave way to Rs. 111.00 and hessian 40" 10 oz. to Rs. 48.60. Towards the week-end, a Government tender for 2,000 bales of B. twills against March delivery was announced, and this pushed up ready B. twills to Rs. 111.75. Hessian 40" 10 oz. was better at Rs. 49.90. During yesterday, B. twills rose further to Rs. 113.25, while hessian 40" 10 oz. eased to Rs. 49.40.

COPPER EASY

(From Our Own Correspondent)

CALCUTTA, *5th March*

Although the increase in the Central excise duty on copper by Rs. 200 per tonne, which pushes up the total duty payable to Rs. 500 per tonne, has not been altogether a surprise to metal circles, it has been naturally noted with concern, and the feature in the metal market during the earlier part of the week under review prior to the budget proposals was a tendency for prices to move up. As the budget was announced, this tendency did not persist; but, in fact, prices gave way. The increase in the duty is at the ingot stage, so that the rate of duty of Rs. 200 per tonne at the finished product stage stands unchanged. Since this is a question of enhancement of duty and not a new imposition, it has been interpreted that all existing stocks of copper, whether in ingot, scrap, billet, or finished product form as at midnight of 28th February 1963 would attract duty. In other words, stock of finished products as on 28th February 1963 awaiting clearance through A.R.I. would attract duty at the rate of Rs. 300 per tonne, instead of Rs. 100 as hitherto, if they had been manufactured from duty-paid ingots. Stock of goods as on 28th February, if they had been manufactured from duty-free ingots, would naturally attract duty at the rate of Rs. 500 per tonne. The *ad valorem* duty of 10 per cent on brass and copper pipes and tubes, and electrical cables stand unaltered. The specific duty of Rs. 300 per tonne on zinc sheets also remain unchanged.

The Finance Minister, introducing the proposed addition to duty, explained that this was aimed at reducing consumption of copper, on the import of which huge sums were being spent. Market circles are surprised at this statement. For, copper and copper alloy products are being used for essential needs, such as castings for machinery and spare parts, tubes for locomotives and automobiles, busbars, hinges, earthing, etc. If consumption is restricted, that would mean hampering of industrial progress. Already imports of copper stand curtailed, and a further curb on consumption by increasing the excise duty would, it was apprehended, be reflected upon industrial activity. This industry in India is yet in its infancy, and continues to receive tariff protection. The interpretation that all existing stocks of copper, irrespective of form, would attract an additional duty of Rs. 200 per tonne has been given, but the trade's opinion is that enhancement is in respect of further arrivals of copper ingots, and that there is no change of duty involved in stock of finished products, scrap, and ingots as on 28th February. An authoritative clarification is necessary in this regard.

During the week under review, copper scrap was in keen demand, and this, coupled with the paucity of supplies, led to utensil scrap rising from Rs. 562 to Rs. 569 per 100 kgs. However, since at the higher level, support was difficult, the price gave way to Rs. 554.

On the London Metal Exchange, cash copper was steady at £234 a ton. The backwardation was unchanged at 10s. a ton. The trade here noted with enthusiasm that the U.S.A.'s non-project loan to India of $240 million would be used for importing several commodities, including non-ferrous metals. In London, spot tin rose from £850 a ton to £852½, following increased internal buying. In Calcutta, tin was at one time quoted at Rs. 3,100 per 100 kgs., but soon eased to Rs. 3,050, as against the opening for the week of Rs. 3,090. Electrolytic zinc was quiet at Rs. 290. In London, the price after easing from £70-5/8 a ton to £70, recovered to £70-1/8. Lead here was one point higher at Rs. 175 per 100 kgs., but the closing quotation in London was lower at £55-1/8, as against opening of £55-3/8.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *4th March*

Foodgrain prices turned quiet this week. Stockists were anxious sellers, as the new *rabi* produce would begin to arrive in the market within a fortnight. Crop prospects were fair and harvesting of early peas had already begun. Wheat and gram eased fractionally. Pulses ruled quiet.

Wheat prices eased 67 nP to 99 nP per quintal according to quality on selling pressure by stockists in the face of poor buying support. The average quality was quoted at Rs. 39.85 to Rs. 40.19 and the farm produce at Rs. 42.87 to Rs. 44.21 per quintal. Arrivals were almost *nil*, and local stocks declined to around 45,000 maunds. Rice ruled steady on better consumer demand and small arrivals from producing areas. Stocks with trade were around 9,000 maunds. Week-end prices were:—Rice *basmati* superior Rs. 83.06 to Rs. 91.09, *sela basmati* Rs. 77.70 to Rs. 83.06, *mainpuri* Rs. 52.92, *ramajwayan* Rs. 61.62, *raimunia* Rs. 64.30 and *gadda* Rs. 50.24 per quintal.

Gram prices declined by 67 nP to 99 nP per quintal according to quality owing to slack demand. The Punjab quality was quoted at Rs. 40.19 and the local produce at Rs. 38.85 per quintal. Local stocks were poor. Maize moved down by 67 nP to Rs. 1.34 per quintal on better arrivals. Demand was also slack. Arrivals averaged 300 to 400 maunds a day. Prices were quoted between Rs. 26.79 and Rs. 30.14 per quintal. Local stocks were put at 8,000 maunds. Barley and *bejhar* prices drifted lower in the absence of demand and were quoted at Rs. 24.11 and Rs. 24.11 per quintal, respectively. *Juwar* declined sharply to Rs. 28.13 per quintal on large arrivals. *Guwar* prices, however, improved slightly on good demand. *Bajra* and other grains were listless. Week-end prices were:—*Bajra* Rs. 30.81, *guwar* Rs. 29.47 to Rs. 34.16, *methi* Rs. 58.94 and oats Rs. 33.49 per quintal.

SUGAR REACTS

(From Our Own Correspondent)

HAPUR, *4th March*

After past several weeks of bullish activity influenced by brisk buying support from all consuming areas, sugar prices turned easy this week on Government's announcement to release more sugar to check rising trend in prices. Contrary to earlier rumours of a likely increase in excise duty on sugar, budget proposals did not impose any further taxation on sugar industry and prices reacted sharply on that account recording a fall of about Rs. 2 per maund. Many factories here in west U.P. have already closed their cane crushing season because of short supplies. Last year, factories crushed cane up to mid-May and even later. The early termination of the season this year will result in a substantial fall in sugar production. Sowing of cane for the next season is being done these days and, thanks to interest taken by both State and Union Governments, cane acreage is likely to improve.

The past few weeks' rising tendency in crystal sugar prices was not only halted in Muzaffarnagar during the week but values also developed a sagging tendency on slack demand. During the week, prices in mill delivery section drifted lower by Re. 1 to Rs. 2 per quintal. After the budget announcement, mills were anxious sellers and dealers were also keen to sell the R/R's in respect of consignments despatched to Saurashtra and Gujarat to avail themselves of benefit from likely enhancement of duty.

The Indian Sugar Mills Association has again approached the Government to fix minimum prices of sugar at Rs. 40.58, Rs. 40.95, and Rs. 41.70 per maund for D29, C29 and B 29 grades, respectively.

Khandsari prices recorded a sharp fall during the week, as demand from the main consuming areas of Punjab and Rajasthan was almost dormant. Expectations of stockists that excise duty on *khandsari* would be increased were belied and this too had a bearish effect on the prices of the commodity. Following closure of cane purchasing centres of factories, supplies of cane to units manufacturing *khandsari* has improved considerably and production season is likely to be prolonged to the third week of the month. Week-end prices were:—*Khandsari* inferior Rs. 83.06 to Rs. 91.09, superior Rs. 93.77 to Rs. 101.81, crystal Rs. 93.77 to Rs. 101.81 and *boora* Rs. 101.81 to Rs. 112.40 per quintal.

Slack buying enquiry as a result of loading restrictions to consuming areas in the South accounted for a subdued trend in ready *gur* prices. Prices slipped down by Rs. 1.34 to Rs. 2.67 per quintal. Arrivals per day improved to 1,200 to 1,500 maunds. Total arrivals here during the current season were put at 3.58 lakh maunds. The corresponding figure last year was 3.90 lakh maunds. Stocks were now put at 26,000 maunds. Week-end prices were:—*Gur pansera* superior Rs. 49.57 to Rs. 49.85, average Rs. 48.90, *dara* Rs. 48.23, *balti* Rs. 49.57 to Rs. 50.24, inferior Rs. 48.23 and *shakker* Rs. 61.62 per quintal.

DULL TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, *4th March*

Trading in kips this week was thin due to Ramzan holidays because most of the merchants were away from Madras. Arrivals of stocks from the tanneries were poor and clearances small. Export business was patchy. Importers were not willing to improve their buying limits. A few inquiries were received for light weight kips all selections and for medium weight fifths. Cowcalf and buffcalf were firm.

The E.I. tanners quoted stiff prices for skins because of the strength in the raw section. Goat skins were quoted higher for all tannages. In the sheep section also, prime class were placed very high. Importers did not follow sellers' prices.

In the German tanned skins auctions which commence today, about 62,000 goat skins and 42,000 sheep skins will be available for sale. Prospects of obtaining good prices are not bright.

Shipments of skins in February, were 1,749 cow, 183 cowcalf, five buffs, 600 buffcalf, 358 goat and 233 sheep to the U.K.; 39 cowcalf, 95 buffcalf, 911 goat and 551 sheep to the Continent; 67 cases chrome goat and 822 pickled goat to Odessa; 28 buffs, 165 buffcalf, 240 goat and 31 sheep to the U.S.; and 49 sheep to Japan.

* Provisional.

Notes: 1. Production figures relate to agricultural year, July-June; 1951 figures correspond to 1950-51, and so on for subsequent years. These estimates up to the year 1955-56 are adjusted with 1956-57 revised production as the base. Figures for 1956-57, 1957-58 and 1958-59 are based on Revised Estimates, for 1959-60 and 1960-61 on Partially Revised Estimate and for 1961-62 on Final Estimate of production.

2. Net production has been taken as 87.5 per cent. of th egross production, 12.5 per cent. being provided for seed requirements, wastage and non-food purposes.

3. Population figures relate to mid-year estimates framed by the Office of the Registrar General of India and exclude Sikkim.

ABBREVIATIONS. N—Nominal. (f) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport.
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable.
††Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1955.
f—Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex Ten instalments but inclusive of accrued interest.
M—At the option of the Government after three months' notice. K—On September 1986 or later at the option of the Government after three months' notice.
T—Liability taken over by Madhya Pradesh. @ Total amount invested in Gold Bonds up to 18th February 1963.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per share.

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

(*Concluded from page 387*)

mobilisation of more than Rs. 300 crores, resulting in an increase of over Rs. 200 crores in gross domestic production and of 60,000 in jobs.

Indicative of the distinct progress achieved by the Corporation is the growing interest evinced in its activities by investors abroad, individuals and institutions alike. Since the last two years, two West German banks, two Japanese banks and one American bank have purchased the shares of the I.C.I.C.I. One more American bank is wanting to buy shares. It will be interesting to note here that about 28 per cent of the share capital of the Corporation is held by non-Indians, including 16 per cent British and 5 per cent American. The biggest Indian shareholder is the Life Insurance Corporation.

Investment Research by Banks

Commercial banks in the West have been vying with one another in providing subsidiary services to their customers in the field of international trade and investment. But none of these will probably be more appealing to the business community than the investment analysis services offered by a new body at Paris. The new organisation, called Eurofinance, has been set up jointly by five U.S. banks and five European banks. Eurofinance will provide the member-banks with frank and highly confidential reports on companies, industries and national economies, covering Britain and the Continent (but not the U.S. for the time being). It will also supply information regarding portfolio investment, besides providing merchant banking services in giving advice on direct investment projects. The member-banks will be free to pass on the necessary information to their clients, or to firms which they agree to sponsor.

It is claimed that Eurofinance is the most efficient means of helping banks and their customers to reach sound decisions on investing and doing business on both sides of the Atlantic. The scheme, it is said, is the most advanced and comprehensive approach yet made in assessing international economic developments for this purpose. The European partners in the venture are Credit Suisse, Banca Commerciale Italiana, Dresdner Bank, Societe Generale (Paris), and Nederlandsche Handel-Maastschappij. A British and a Spanish bank are also expected to join later. The American members have been chosen with an eye on geographical spread. They are Mellon National Bank of Pittsburg, Bankers Trust Company of New York, First National Bank of Boston, Norther Trust Company of Chicago and Wells Fargo Bank of San Francisco.

Fifth U.S. Recession in the Offing?

President Kennedy startled a group of New York bankers last week with the statement that the fifth post-war recession in the U.S. would arrive "in the not too distant future," if his tax reduction proposals were not endorsed by the Congress. He was speaking at a symposium arranged by the American Bankers' Association at New York. The President was, however, not predicting an immediate threat of recession, but was only pointing to a contingent possibility and highlighting the counter-cyclical effect of his tax proposals. He conceded that the tax reduction proposals were under attack from both the Right and the Left, though for different reasons. And he felt that the proposals would not be approved if each economic group treated growth "as a melon to be divided instead of a crop to be harvested." Challenging his critics who are scared of deficit financing, the President asked them to present a better alternative solution to the lagging economic growth. The proposals, it may be recalled here, include a cut in the top corporate tax rate from 52 to 47 per cent and top individual tax rate from 90 to 65 per cent.

The fate of the President's tax proposals apart, there are as yet no significant signs in the U.S. economy that lend credence to the prediction of a recession in the current year. Those who feel that a recession is ahead are basing themselves mainly on the theory of business cycles so peculiar to the modern U.S. economy. Thus, it is argued by some that the present recovery has been going on for over two years (25 months to be precise), a duration which is the same as that of the last recovery after the 1958 recession. It is pointed out by them that so far since the Korean boom the U.S. has not gone through a continuous period of four years without being disturbed by a recession and that the gap between two recessions has been narrowing down over time. Accordingly, it is felt that the present phase of recovery is nearing its end. But conclusions derived from such calculations do not find much support from the recent trends in the various economic indicators. In fact, certain Western economic commentators say that, even if the tax proposals come up against stiff Congress opposition and their implementation is postponed (from 1st July next) to, say, 1st January 1964, there may still be just enough momentum in the economy to prevent a downturn.

This optimistic view of economic growth is based mainly on two factors: one, steadily increasing consumer expenditure and, two, larger investments by businessmen in stocks and new plants and equipments. Consumer expenditure, already running at a high level, has shown no signs of tapering off. Retails sales last month aggregated almost the $20.000 million level that had been achieved in the previous three months. Car sales were about 500,000 last month; it is expected that the annual sales of cars for the whole year will be no less than 7 million. Demand for other durables, particularly expensive items like colour television sets, has also been at an impressive level during the last two months. In addition, sales of soft goods have tended to recover. There is, however, one snag in the trend of consumer expenditure. For the latest figures for personal income (for January), which is the major determinant of consumer expenditure, are not promising. In January, wages and salaries from private sources declined, although there was some increase in those from Government sources, following a special payment during the month. Thus, a clear picture of the outlook for retail sales will be available only after the trends in personal income in February become clearly visible.

The improvement in business investments, however, continues to be distinctly encouraging. Although official surveys earlier this year had predicted a drop in the volume of investment in new plants during the first quarter, it does not seem to have happened. On the contrary, some industries have revised their plans upwards. For instance, the motor industry which had expected earlier only a 5 per cent rise in investment, now hopes to achieve an increase of 13 per cent. Even those industries like steel, which are still operating far below capacity, have planned substantial increases in investment. On top of these, new orders for construction of buildings, for freight cars, machine tools and other capital goods appear to be rising. Encouraging as these factors are, they do not, nevertheless, add up, in the opinion of foreign observers, to anything indicating continuance of expansion on a substantial scale. For, they say, the economic indicators for the first two months of the year alone are not a sufficiently reliable guide to business prospects for the whole year.

Interest Rates and Payments Stability

A warning that, if West European countries pursued policies that tended to preserve their balance of payments surplus at a time when the U.S., Canada and the U.K. were taking measures to stimulate their domestic economies, the stability of the world payments system would be endangered has been given by the Federal Reserve Bank of New York. The Bank, in its latest annual report, points out that, though some progress was made last year towards closer alignment of interest rates in the world's money market centres, there were several countries, with large payments surpluses, which held capital flows in check by manipulation of interest rates and continuation of direct controls. As a result, despite the significant reduction in the threat to major currencies, arising from short-term imbalances in the payments position, much remained to be done in relaxing restrictions and in achieving parity in interest rates prevailing in the major industrial nations. This disparity, in so far as it influenced international short-term capital movements in directions that were not altogether desirable, posed a threat to the stability of world payments system.

The report concedes that measures to stimulate the economy in the U.S., the U.K. and Canada might have short-term adverse effects on the balance of payments of these countries as they might encourage imports. But a fast growing economy would improve investment opportunities and capital outflow in the long run. In the interim period, complementary steps such as reduction of tariffs and removal of restrictions on imports and capital movements would have to be taken by the Continental countries.

To the extent the payments difficulties of the three countries mentioned above, especially the U.S., are due, in a large measure, to the massive military and economic aid given to West European countries under the Marshall Plan, the N.A.T.O. alliances, etc., the demand that the latter countries should extend a helping hand in times of need is justified on moral and economic grounds. Moreover, the stake involved is not the external solvency of the U.S. or the U.K. only, but the stability of the entire free world.

Wealth Tax in Britain?

The British Labour Party, which is said to have an even chance for winning the next General Election and forming the Government, is initiating a general study into the British tax system as a whole, with a view to suggesting important reforms. Apparently, these reforms will form part of the Party's next election manifesto. The Party proposes to include in the study a detailed examination of possible methods of introducing a wealth tax in Britain.

Although Mr. James Callaghan, the Opposition's "shadow" Chancellor, has of late been dropping hints and suggesting broad ideas on the subject, no specific proposals have so far been put forward. The Labour Party leaders, however, expected substantial support for a wealth tax from the National Economic Development Council, NEDDY, for short. In fact, the introduction of a wealth tax would appear to have been favoured by a draft report, prepared for NEDDY by the office of its Director-General, which is reported to have suggested that economic growth was better encouraged by taxing personal wealth itself than by taxing differentially the income produced by wealth. Whatever means the Labour Party might adopt to implement a wealth tax, if and when it is in a position to do so, its leaders are said to be determined that the wealth tax should not involve "snooping" into the individual taxpayer's personal possessions. Advocates of wealth tax in the Party believe that it is possible to frame a satisfactory tax on financial wealth as such by relating it to income. This would call for no more than filling up normal income-tax returns.

Wealth tax is not entirely new to Britain. It was introduced by the late Sir Stafford Cripps, but only for a period of one year, as a once-for-all levy to tide over a national economic emergency. What is now being considered is, however, a wealth tax that will continue year after year.

INDIA AND THE BRITISH INVESTOR

AMONG the most reliable and understanding friends of India in the West, whose steadfastness seems to be growing with the years, there is one whose name is particularly familiar to people in this country. He is Sir Norman Kipping, Director-General of the Federation of British Industries, who has visited India more than once. His latest visit, undertaken in January last, has been devoted as much to an appraisal of the new problems and opportunities which have arisen here for British companies as exporters and investors as to a sympathetic understanding of this country's own problems and requirements. Flowing out of this visit is a brief but weighty report of impressions and suggestions. The impressions, formed in the light of some relevant facts, are those of a perspicacious observer. And the suggestions, constituting friendly advice to British industry and India alike, are those of an enlightened businessman. As an observer, Sir Norman Kipping is quite objective in his assessment of facts and trends. As a friendly adviser, he is equally impartial, having laid down at the outset that "the prosperity of the British-based factory and that of the country in which it is located go hand in hand," and ending on the note that, "if British investors wish to prosper in India, they must accept the challenge of playing their due part in helping India to prosper."

The Government of this country can ill afford to ignore the studied impressions of such an enlightened businessman and friend. For instance, when Sir Norman says that several potential investors from abroad "have been deterred by the fact that Indian policy has increasingly sought to ensure that the majority holdings of equity capital should be in Indian hands," the authorities here would do well to sit up and think afresh. Again, when he points out that "power supply and rail transportation have not fully kept pace with the growth of demand" and that "India will have difficulty in catching up with the power and transportation backlog," the Government of India should lose no time in revising its policy governing power expansion in the private sector and in encouraging road transport on more systematic lines. Sir Norman's axiomatic observation that "it is characteristic of private enterprise that, if permitted, it will race ahead at a pace not achieved by State enterprises" is most apposite in this context. As for the prospects for those foreign investors already in India and for those who may yet come, the disquieting factors, in the words of Sir Norman who had drawn up his report before the latest Union Budget, are:

"There may well be pressure on profits. The Chinese aggression must lead to higher taxes, but whether or how much industry itself will be called on to pay has yet to be seen. Personal taxation, which already presents considerable difficulties, would, if further increased, act as a serious deterrent to overseas staff in India. There is a new heavy burden on companies for Emergency War Risks Insurance, and another for increasing provident fund contributions. There is often difficulty in securing corresponding increases in selling prices. Overshadowing even these heavy costs, there is the question of import licences to enable a company's operations to be conducted with efficiency."

If, in spite of these discouraging factors, which have become even worse in the wake of the latest Budget proposals, Sir Norman has pleaded for the continuance of the British policy of maintaining its position in India by investment, he has done so in the long-term interests of British industry. But, as he is also fully aware of India's difficulties in the matter of foreign exchange and export promotion, he has given some wholesome advice to the British Government and the British investor alike. Firstly, after pointing out how India's desperate shortage of foreign currency is affecting both the British exporter and the British investor, Sir Norman has opined that "we shall surely be wise in our own interests to stretch the amount of our aid to the limits of economic prudence." And he has gone a step further by suggesting that any *additional aid* which can be afforded should be earmarked as "maintenance aid," that is, aid for India's maintenance imports, for, as he has himself put it, "it cannot make sense to continue to build new industrial capacity, if what is already built is thereby to be operated with ever-reducing efficiency." Again, he has raised the question whether it would not be prudent on the part of Britain to join the United States in seeking such agreement as will ensure that aid is genuinely aid, and will not impose an insupportable repayment burden upon India. In other words, Sir Norman has questioned the wisdom of providing credits at commercial or near-commercial terms. His preference for soft loans to India is, incidentally, supported by the following frank arguments:

"Though the circumstances are in no way comparable, if we in Britain are to reconsider the terms of our aid, it is perhaps worth reminding ourselves of the days when we were at the borrowing end. The terms we were accorded were certainly soft. We shall be repaying the 'Marshall Aid' loans and those from Canada for many years yet. . . .

"It is worth pointing out, too, that British direct investment in India is also in the nature of a credit offering, for it is the provision of sterling for the supply of British capital goods in the expectation of repayment by dividends. If the projects in which these investments are made are well selected and well managed, there is every prospect that they will turn out to represent better terms of repayment than those obtained through Government loans. Such, at all events, is the current experience of many British-based companies in India."

No less forthright is Sir Norman's advice to the British investor in India to play a more active role in the country's export promotion. This advice he has given against the background of two trends—one critical and the other salutary. The critical trend pertains to India's heavy repayment obligations which currently represent some 15 per cent of its annual export earnings, and continue to increase. And the salutary trend is that the Government of India is not only not seeking to fund its *commercial* debt but continuing to give priority to its obligations, including the remission of dividends, to the foreign investor and commercial creditgiver. As both these trends underline the need for expansion of India's exports, Sir Norman has done well to urge that British investors should give serious thought to devising some ways, even if initially perhaps limited, of agreeing to franchise concessions to their Indian associates. The idea here is that Indo-British companies should be free to export to some third-country markets. That any such extension of franchise rights might not recoil upon the activities of the British home factories concerned is Sir Norman's view. For, as he has pointed out, in a number of cases, the product in India has diverged from the product in Britain, because the underdeveloped country needs something more sophisticated, and it, therefore, happens that the Indian product is found more suited to the market in other underdeveloped countries than the British. The parent companies in Britain can thus afford to revise their policy of franchise limitations which often prevent British-based companies in India from making sales in third countries.

Another direction in which British investors can give active help to India as an exporter has also been indicated by Sir Norman. The great British-based India houses, which have developed the export markets for jute goods, tea and other plantation products, have all the skills of the world trader. Sir Norman seems to think, in this connection, that these same skills could now be applied to the marketing of, for example,

cotton goods and some categories of engineering and other goods in the markets of the world. As some of these companies have made a start in this direction, he has suggested to others the possibility of extending the idea. It is, indeed, good of him to have given this advice to British businessmen in India. But the task of export promotion will still be difficult, of course, for there are at least three factors which are responsible for the high production costs in this country. One is the excessive protection afforded by import restrictions to some of India's domestic producers. The second is that excise duties have the cumulative effect of adding to production costs. And the third is that the pattern of foreign aid, to some extent, results in the use of high-cost materials, and of high-cost plant leading to high overheads. In due course, however, according to Sir Norman, there can be no doubt that this country, with its indigenous raw materials, its modern factories, its undoubted skill and determination and its low wage rates, ought to be able to make itself competitive in manufactured goods. India's best short-term prospects, on the other hand, seem to lie in the further development of its primary products. Sir Norman's considered opinion here is that, with the increased use of fertilisers, more could be done to develop these products, and that, with the expansion of world markets, the prospects of increased sales seem good. It only needs to be added that such modifications as may be required in the fiscal, production and export policies governing these products should be effected at the earliest in the interests of export promotion.

Sir Norman's report is also notable for its constructive suggestions relating to maintenance imports from Britain. Besides urging that any additional British aid should be devoted to financing maintenance supplies, he has brought to the notice of the Government of India the critical situation facing such of those factories as are dependent on sterling supplies. As 80 per cent of the foreign investment in India is British and as British companies since 1959 have concluded 367 out of a total of 1,300 "collaboration agreements" with Indian companies, one can roughly figure out the large number of companies depending on sterling maintenance supplies. It would greatly help these companies if, instead of having to apply piecemeal for sterling import licences for their various needs, they could be granted blanket authority expressed as a sum of money equal to the value of the individual licences they had had. Sir Norman's representations, on these lines, to the Government of India, it is noteworthy, have been accepted in principle. This promised change in licensing procedure will enable the British-based companies and those making products under British licence agreements to have greater personal control over the use of their allotments and thus turn a given amount of sterling to better use. But this will still not solve the problem of an overall shortfall in the sum needed to finance the import of components, specialised raw materials and spare parts needed from Britain, especially for the metal-working and engineering factories in which dependence on sterling imports predominates. Sir Norman's estimates, based on the allocations made in 1962-63, show that this shortfall will be of the order of £7 million a year. If the Government of India is unable to make good this shortfall from its free sterling resources, it is to be hoped that the British Government will provide some additional aid in the form of *maintenance aid* in response to Sir Norman Kipping's plea.

BUDGET AND ROAD TRANSPORT

THE additional measures of indirect taxation proposed in the Union Government's Budget for 1963-64 will add to the costs of a number of goods and some services figuring in common consumption. Among the services affected is automobile transport, on which the combined incidence of import and excise duties is going to be exceedingly and unbearably heavy. According to an estimate made by the Motor Vehicles and Allied Industries Association, Madras, the increase in cost of operation of transport vehicles (trucks and buses) as a consequence of the Budget proposals will be Rs. 4,540 per average vehicle in a full year. That this steep increase will necessitate substantial increases in goods freight rates and passenger fares is a foregone conclusion. In fact, transport operators in Bombay, of whom there are over two hundred, have already increased their rates for goods freight by a rupee per quintal. Such of these operators as are engaged in transporting goods to and from Gujarat have begun to charge one naya paisa more per kilogram. Under the increased rates, a customer will have to pay Rs. 16 for moving a quintal of goods to Delhi, Rs. 26 to Calcutta and Rs. 16 to Madras. These rate increases have become inevitable, because, as the Federation of Bombay Motor Transport Operators Ltd. has estimated, the proposed imposts would mean an increase of about Rs. 4,800 in the operational cost per vehicle per annum. Calculated in a different way, the incidence of the additional taxation on the motor transport trade would work out to nearly 40 per cent of the current cost of operation of each goods vehicle and thus lead to higher freight rates. The Federation has, therefore, decided to raise the freight rate generally by 20 to 25 per cent. And yet the Finance Minister, while referring to price effect of the changes in excise duty on commodities of common consumption like tea, vegetable products, washing soap and kerosene, has simply ignored the possible increase in the cost of transport services used by the common man.

How the many levies proposed in the Budget will hit automobile transport hard may be seen from the following list:

(i) Import duty on certain motor vehicle parts to be raised from 25 per cent to 50 per cent.

(ii) A general surcharge of 10 per cent on all import duties.

(iii) The basic excise duty on motor spirit to be increased from Rs. 325.10 to Rs. 410 per kilolitre.

(iv) The basic excise duty on refined diesel oil to be increased from Rs. 305.25 to Rs. 390 per kilolitre.

(v) A surcharge of 10 per cent on the Central excise duty on electric storage batteries, motor spirit and diesel oils, exclusively for the benefit of the Centre.

(vi) A surcharge of 20 per cent on the Central excise duty on tyres, rubber products and motor vehicles other than motor cars, exclusively for the benefit of the Centre.

(vii) A surcharge of 33⅓ per cent on the Central excise duty on motor cars, exclusively for the benefit of the Centre.

Besides these taxes, it is proposed to raise the Central sales tax from one per cent to two per cent on all commodities. As a result, a vehicle costing Rs. 28,000 will have to bear an increase of Rs. 280 on this score. The additional levies on a number of intermediate goods which go into the manufacture of vehicles and vehicle parts are also there. As a consequence of the listed and unlisted levies, by way of customs and excise duties, the selling price of an indigenously manufactured car is expected to go up by Rs. 1,425, and that of a truck by Rs. 2,775, while the annual operational expenses of a truck or bus may go up by Rs. 4,540 (of which as much as Rs. 2,940 will be accounted for by the increase in excise duty on petrol or diesel oil). The Motor Vehicles and Allied Industries Association has further estimated that this additional burden, by way of increase in operational costs, on the entire road transport industry consisting of 240,000 trucks and buses will work out to an aggregate of about Rs. 109 crores in a year.

The incidence of the proposed Super Profits Tax on companies will also fall heavily on such transport companies as are now functioning. In this connection, the Madras Association has represented to the Finance Minister that the transport companies and the nascent automobile and ancillary industries, particularly in South India, have a low capital base and that, therefore, the Super Profits Tax will be crushing in their application to them. What is worse, this tax may seriously affect the ability of these industries to repay the debentures and loans they have taken for purchase of capital equipment. All in all, the combined incidence of S.P.T., increases in the relevant customs and excise duties and the Central sales tax, as well as increases in the taxes in States, may cripple the road transport industry which is already groaning under the burden of taxes levied by the Centre and the States in the past. It is a well-known fact that taxation of road transport in India, even at the pre-budget levels, has been the heaviest in the world. What is more, the majority of vehicles in this country are overaged. Consequently, the cost of maintenance is pretty heavy and their capacity to render regular, efficient and economic service is limited. This is also true of their capacity to yield profits. The transport fleet is, therefore, badly in need of urgent replacement of vehicles. If, at this juncture, fresh heavy taxes are heaped on this means of transport, how is the capital expenditure to be financed? The Association's fear that the latest massive dose of additional taxation might kill initiative and enterprise and reduce the industry to bankruptcy is, therefore, not unwarranted. Ere long, the industry will cease to be the milch-cow that it has been for the tax gatherers. And that will be a tragedy, for this industry plays a vital role, especially in the present emergency when the railways are unable to cope with the entire additional traffic on account of both defence and development. An industry such as this, which has all along been carrying more than its fair share of the tax burden, has a good case for considerate tax treatment not only on the ground of its own solvency but also on that of the user's interest.

RAILWAY DEBATE IN LOK SABHA

THE Lok Sabha debate on the Railway Budget, which concluded on the 8th instant, was on familiar lines—several members championing the cause of third class passengers, some others pleading for the construction of more branch lines for serving particular local regions, and yet others vaguely pointing to the scope for greater operational efficiency and economy in expenditure. There was thus no freshness in the approach of members to the Railways' achievements or even failures, their problems of replacement and modernisation, the continuing losses on the coaching services, the progress towards self-sufficiency in the manufacture of rolling stock, equipment and stores, and so on. It was left to the Railway Minister, Sardar Swaran Singh, to dilate on some at least of these aspects and drive home the point that the Indian Railways compared favourably, in their working, with other railways in the world.

On two specific counts, this country could certainly be proud of its railway system. First, there is no doubt that it is a paying system, unlike several other railway systems in the world. And, secondly, it is an expanding system, while many others in the world are not. Both these points are broadly true, but the Minister's attempt to exaggerate their significance is not quite understandable. For, if the Indian Railways are a paying system, they are also not paying well and adequately enough for providing a fair return on capital employed and for effecting rapid replacement and modernisation. Again, if they are an expanding system, they are also not expanding their line capacity fast enough for hauling more traffic more expeditiously. For instance, only 900 miles of track have been doubled in the first two years of the third Plan. The money and material that will go into the construction of several uneconomic new lines, which are not strictly required for mineral or forest development but only for meeting the clamour of local politicians and pressure groups, could as well be diverted to the programme for expanding line capacity through the doubling of track. The idea of opening up new areas should not weigh unduly with the Railway Ministry, for this is a function which, in the present-day context of accelerated road transport development in several countries of the world, is better left to that mode of transport. The expansion potential of the Indian Railways is much greater in such directions as track doubling and renewal, and replacement and modernisation, and it is, therefore, good to find that Sardar Swaran Singh firmly told the Lok Sabha that no further new lines could be sanctioned for construction during the rest of the third Plan period. At the same time, it may be added that the 225 miles of new railway lines for the development of the coal industry and the 500 miles of new lines for the development of the iron ore mining industry in East India would need to be completed, according to schedule, in the next few years of the current Plan.

In his reply to the debate in the Lok Sabha, the Railway Minister sought to take credit for the supposed hundred per cent self-sufficiency attained in wagon-building. As against 19,100 wagons—in terms of four-wheelers—manufactured in 1961-62, the number of wagons expected to be turned out in the current year is estimated at 22,300. This figure is further expected to increase to 30,000 in 1963-64. So much so, the Railways, according to the claims of the Minister, are in a position even to export some wagons, if there is a demand for them. The Railways, however, would do well not to underestimate the internal demand for wagons in the next few years when the additional traffic requirements of both defence and development will increase steeply. It will be recalled that not long ago wagon-building was drastically curtailed by shortages in power and raw materials, leading to a serious wagon shortage on the Railways. Such a thing should not recur, if there is self-sufficiency in wagons. The official claim relating to self-sufficiency cannot be taken at its face value, for the Deputy Minister for Railways himself has confessed to a shortage of wagons for moving low-priority commodities.

MARKET GOSSIP

S. P. T. and Banks

PROMINENT among the corporate activities that will suffer most as a result of Super Profits Tax is banking. Unlike the industries that manufacture goods, banking is a service industry. It buys and sells money. Its activity is essential to lubricate the wheels of trade and industry and to preserve the tempo of economic activity. Its capital base is relatively narrow in relation to its turnover and the profit assessable for taxation as a percentage of capital and reserves is, therefore, relatively higher as compared with many other industries. But it has to fulfil certain statutory obligations in regard to building up reserves and maintenance of liquid assets. As readers are aware, the banks have to set apart 20 per cent of their declared profit to reserves irrespective of the level of reserves in relation to the paid-up capital. The banks have also been told by the Reserve Bank that they must continue to aim at reaching the goal of having "own funds" (capital and reserves) at a level which is equal to 6 per cent of their deposits. In addition, the banks have to build up secret reserves. The stress has all along been that banks should endeavour to improve their profit-margin, raise their paid-up capital and conserve a good part of their profits. The principles underlining the S.P.T. and the mechanism of S.P.T. run counter to the objectives thus placed before the banks. Indeed, even the prevailing corporate taxation at 50 per cent of assessable profit has been proving onerous in the context of the burdens imposed on them by the Desai Award and the Reserve Bank's stress that banks should open more branches in the semi-urban areas. It is surprising that the framers of the S.P.T. Bill had no regard for the special features which distinguish banking from other industries and failed to provide suitable safeguards for banking companies.

The banks were, therefore, justified in getting together early this week, under the auspices of the Indian Banks' Association, to consider the impact of S.P.T. on them and to make appropriate representation to the Finance Minister. A Press note issued by the Indian Banks' Association immediately after the meeting of chairmen and chief executives of member-banks sets out the conclusions reached at the meeting as follows:

"It was decided unanimously to oppose strongly the Super Profits Tax upon joint stock companies, in general, and upon banking companies, in particular, and to demand the withdrawal of the Tax. The position of banking companies was special, inasmuch as they had been asked by the Finance Minister himself in a conference with chairmen of banks to increase their paid-up capital and to build up inner and published reserves. They had also to pay the deposit insurance premia and higher emoluments for the staff as directed by the National Tribunal and to establish branches in semi-urban areas, which could not be remunerative for some time. The Life Insurance Corporation of India was exempted from the tax, and the case for exemption of banking companies was much stronger. It was further felt that, with the heavy taxation and compulsory deposits of about Rs. 300 crores and the loans amounting to Rs. 400 crores, the shortage of funds in the money market would be felt most keenly and the operations of trade and industry would suffer much on account of extreme shortage of funds from banks. The meeting expressed the opinion that, if the Super Profits Tax Bill was passed, there would be a crisis in the country and that the financial markets would be hit very badly."

The best thing to do would be to exempt the banks from the S.P.T. If, for some reason or other, this is not possible, the statutory requirement in regard to conservation of profit should be allowed as a charge against the profit assessable for S.P.T. This suggestion is based on the assumption that the Government will modify the entire scheme of S.P.T. by raising the exemption rate from six to at least ten per cent and reduce the rates of S.P.T. to half of those proposed now.

Deposits Rates and Service Charges

At the aforesaid meeting of bankers, two other matters were also considered, namely, the rate of interest on deposits and the extension of inter-bank agreement to cover the service charges as well. The decisions taken at the meeting are described in the Association's Press note thus:

"The meeting decided that no changes in the rates of interest on deposits and advances were called for, as the expenses of banks were increasing rapidly and as they were required to strengthen their financial position. The meeting realised that the spread between the deposit and advance rates of interest was not higher than that prevailing in the other countries of the world. The rates must be regarded as normal and not unreal.

"The meeting decided that the question of standardising service charges should be considered further."

It remains to be seen whether the decision not to raise the rates of interest on deposits is a wise one. Time alone can tell. Meanwhile, viewed against the prevailing conditions of scarcity of funds in the money market, slow growth of deposits with banks and the growing demand for bank credit, the decision not to pay more on deposits does not appear to be right. But reliable reports suggest that both the Government and the Reserve Bank themselves are not in favour of a rise in deposit rates. Apparently, the authorities seem to have come to the conclusion that the time has arrived for stopping any further increase in interest rates in the country. Whether or not this impression is correct will be known when the Government launches its borrowing programme in the coming months.

So far as service charges are concerned, the views set forth in these columns ere now still hold good. It is comforting to learn that some of the big banks themselves are strongly opposed to standardisation of service charges, as it will run counter to the principles of free enterprise and bring the danger of nationalisation nearer. It would be highly desirable to drop the move, instead of pursuing it further.

Silver Soars

Continuing industrial demand, falling speculative stocks and buying by mints in some countries have exerted considerable pressure on prices in the world silver markets of late. Refined silver in New York is currently standing at the high level of 127.7 cents (Rs. 6.08) per ounce, representing a rise of as much as 7.2 cents in just ten weeks. This price is only 9.8 cents below the all-time peak of 137.5 cents touched on 25th November 1919 and well above the record low of 24.25 cents reached on 29th December 1932. If another 1.59 cent is added to the present price, silver in New York will be around 129.29 cents, the point at which redemption of silver certificates in standard silver dollars or bullion becomes the cheapest way of getting the metal in large quantities. Halves, quarters and dimes will not, of course, be worth their silver-content unless the price of the metal rises above 138.24 cents. The possibility of silver reaching such a melting point (129.29 cents) is considered very likely. Here is what Messrs. Handy and Harman of the U.S. say in their latest (the forty-seventh) *Annual Review* of the silver market:

"We believe that the price trend for silver in 1963 will continue upward and that, within the year, the quotation in New York could well approach the so-called monetary price of 129 cents an ounce. It would appear that world demand in 1963 probably may be met by market supplies without the need for recourse to Treasury monetised stocks, but only at prices perhaps even higher than have occurred so far. Furthermore, we must conclude from the evidence at hand that, looking beyond 1963, industry will have need for Treasury silver and that the price will then be around the 129 cent level at which silver certificates can be redeemed."

Although the *Review* is dated 31st December 1962, the prediction contained therein may be said to have almost proved correct. One need not wait till the end of this year to see the New York silver price touching the U.S. monetary value of 129.29 cents, for report of such a ceiling having been reached may be received any day. The quantity of silver needed over and above new production in 1963 to satisfy demand is estimated at about 90 million oz. which, according to Messrs. Handy and Harman, may come from five sources: (1) speculative holdings aggregating 15 million oz. at the beginning of the year (these are being liquidated fast following the persistent rise in prices), (2) surplus inventories of 25 million oz., (3) demonetised coin amounting to an estimated 20 million oz., (4) U.S. Treasury stocks for defence needs of 10 million oz., and (5) miscellaneous sources, including the possibility of further sales by China. An idea as to how the users of silver have met a substantial part of their needs from sources other than new production can be had from the following table:

(In million ounces)

	1962	1961	1960
Industrial uses	230.3	236.0	226.1
Coinage uses	126.6	111.9	103.9
Total world demand ..	365.9	347.9	330.0
Less—U.S. coinage*	75.6	54.2	46.0
Balance	290.3	368.7	284.0
After deducting new production	199.0	205.9	210.0
There remains a balance of ..	91.3	162.8	74.0
Which was met from the following sources:			
Liquidation of speculative holdings	35.0	—	—
Sales by China	25.0	55.0	9.7
Demonetised coin ..	20.0	20.0	10.0
U.S. Treasury stocks ..	0.9	62.6	21.5
Official stocks of other countries	4.5	7.3	12.0
Salvage and other miscellaneous sources ..	5.9	17.9	20.8

* Silver for U.S. coinage requirements is obtained entirely from Treasury stocks and is not part of market demand.

It will be seen from the above table that a negligible portion of the world demand for silver was met from U.S. Treasury stocks during the year 1962. For the sales of non-monetised (or free) silver by the Treasury continued to remain suspended under the Presidential directive of 28th November 1961. Since the elimination of the U.S. Treasury as an active market influence abruptly ended a period of world-wide stability which had lasted nearly three years, the trend of the world market is being influenced by the unpredictable changes in the forces of supply and demand. It is not surprising, therefore, that price fluctuations during 1962 were frequent and at times violent. Even so, the return to free market conditions, in the opinion of Messrs. Handy and Harman, remains incomplete so long as the silver transactions tax is in effect. To quote them: "This tax, amounting to 50 per cent of the profits realised, has discouraged the establishment in the United States of a market for trading in silver futures and the domestic silver industry has been deprived of the advantages of such a market." They have accordingly urged the repeal of all existing silver purchase legislation with respect to both domestic and foreign silver, including the aforesaid tax. It is hoped that the U.S. Congress will vote for full repeal.

Developments in world silver are of no significance in so far as India is concerned. For there is a ban on imports, and exports are virtually non-existent. There is hardly any smuggling of silver, as it is neither as easy nor profitable as smuggling of gold. Whatever little quantity of Tibetan silver coins that was flowing into India has completely ceased. How then is the consumption of silver, now running at an annual rate of 1.5 million oz., being met? Evidently from the melting of the demonetised rupee silver coins, of which some are still outstanding. What will happen after this source also dries up is anybody's guess. Considering this and since gold is subjected to severe controls, there is bound to be increased pressure of demand (for industrial consumption and ornament-making) on available supplies. How else is one to explain the markedly high price of silver? The latest available quotation is Rs. 241 per kilogram, as against the world price of Rs. 214.48. The price of silver at this time last year was no more than Rs. 216.90 when the world price stood at Rs.170.47.

Sterling Under Pressure

For the first time since August 1961, the British pound sterling fell below its parity exchange rate against the dollar in the London foreign exchange market this week. In large-scale turnover, the sterling weakened, dropping by 3/32 cent to $2.7931/32 on Monday the 11th inst., as against the parity rate of $2.80. This sudden fall, which occurred despite the extension of support to sterling by the Bank of England, has taken many by surprise. For it was hardly a week ago, when the February figures of gold and convertible currency reserves were announced, that sterling ruled strong. In fact, commenting on the temporary decline and the quick recovery of the pound sterling on the day of the announcement (that is, 4th March) of the sterling area's gold and convertible currency reserves (disclosing a fall of £24 million to £999 million in February), the *Financial Times*, London, wrote in its issue of 5th March:

"The striking fact about the market is, in fact, the consistent underlying strength of the pound. For a variety of reasons—among them growing confidence in British economic management and a feeling that the balance of payments is in better shape than for some time—sterling seems fairly shock-proof at the moment. In the autumn, the pound withstood a series of crises in the international field and this year it has stood the Brussels breakdown with only minor difficulty. The continued outflow of dollar from the U.S. and the fact that all the favoured European currencies—with the exception of the French franc—have their own troubles have helped further to butress the position of the pound."

Last Monday's decline, which took the value of the pound *vis-a-vis* the dollar to the lowest level for the last eighteen months, shows how vulnerable the pound sterling is. Many reasons have been given for the debacle. But the main reason is said to be speculative pressure induced by the following factors: (1) The probability of the next Government in Britain being that of the Labour Party; (2) political troubles in Iraq and the Middle East in general; (3) apprehension about the Government's policies in the forthcoming budget; and (4) comments and suggestions in the Press on devaluation of the pound sterling. In fact, thanks to the combined effect of these factors, sterling had already started falling. The movement gathered momentum on Monday, leading to an outflow of capital from London estimated at the equivalent of $40-$60 million in one day.

There is, however, no tendency in London to get panicky over this fall. In fact, the consensus of opinion is that the downward trend will not continue. Sterling is aided by the Basle agreement among central bankers. Moreover, Britain has an immediate stand-by credit of $1,000 million available from the I.M.F. on which it can draw at any time. The position of the U.S. dollar is also not such as to make the going rough for sterling. Dollar has serious problems of its own. The U.S. Treasury Secretary Mr. Dillon himself has pointed out that the continued weakness in the U.S. balance of payments position might be one of the most helpful factors in keeping any movement out of sterling within narrow bounds.

The fortunes of sterling in the coming months will depend, to a large extent, on what remedy the next Budget prescribes for the economic ills of Britain. The breakdown of the Brussels negotiations, increase in unemployment and the sluggishness of exports make it difficult for Mr. Maudling to resist the temptation to budget for economic expansion. But increased business activity by causing imports to rise faster than exports might strain the balance of payments position. Many ways out of this impasse have been suggested. Import controls, export subsidies, floating exchange rate and outright devaluation are some of the remedies advocated by the City pundits. Each one of these measures has advantages and disadvantages; it will also have effects on Britain's individual position as also on world trade as a whole.

Post Mortem on Brussels Talks

The European Parliament, which is the legislative assembly of the European Economic Community (E.E.C.), comprising members selected from the national Parliaments of the Six, is scheduled to meet on the 25th inst. at Strasbourg to make a sort of post mortem on the U.K.-E.E.C. negotiations which were called off in January last. The ensuing debate will centre round a report on the progress of the negotiations prepared by the Common Market's Executive Commission at the instance of the European Parliament. The report,

AMERICAN LETTER

NEWSPAPER STRIKE SETTLED IN PRINCIPLE

GROWING U.S. INTEREST IN COMMON MARKET

From Our U.S. Correspondent

NEW YORK, *8th March*

THE U.S. economy is in a relaxed state and is likely to remain so for the time being. There are no signs of a substantial improvement, nor are there signs of a substantial decline.

At this time, observers in the financial and business world have their eyes on Washington. They would like to know what fiscal policies will be adopted by the Congress. Uppermost in everyone's mind is, of course, the Tax Bill which combines tax reduction with tax reform. Many *pros* and *cons* have been advanced and specific proposals have been attacked vehemently.

As President Kennedy said in his message to Congress earlier in the year, it is impossible to please everybody with a tax reduction and tax reform Bill. The chances are, however, that a compromise Bill will be enacted.

Labour disturbances have had a discouraging effect on business. At the time of writing, the New York newspaper strike is settled in principle but final details remain to be settled and it may be another week or two before this largest city of the U.S. returns to normal and retail trade is revived by advertising in the usual media. As much as radio and television tried, the three months' black-out of the printed word could not be replaced.

There are other threatened walk-outs which have a discouraging effect on business and there is also the furore over Soviet armaments in Cuba and the non-admittance of Great Britain to the Common Market, the threat to the North Atlantic Treaty Organisation at the behest of President de Gaulle of France.

U.S.-European Co-operation in Banking

So far as the Common Market and N.A.T.O. are concerned, American interest is keen, indeed. Morgan Guaranty International Corporation, a subsidiary of Morgan Guaranty Trust Company, New York, has acquired a 14 per cent interest in two Dutch banking houses, R. Mees & Co., Rotterdam, and Hope & Co., Amsterdam. In addition, Morgan Guaranty, New York, through its Paris affiliation, Morgan & Cie., has acquired a leading minority interest in a West German mail order and department store chain.

Another group of five American and five European banks got together to form a research organisation providing business data on European countries and companies. The American group is headed by Mellon National Bank and Trust Company, Pittsburgh. Others are Bankers Trust Company, New York, First National Bank of Boston, Northern Trust Company, Chicago and Wells Fargo Bank, San Francisco.

The co-operating European banks are Swiss Credit Bank, Zurich, Banca Commerciale Italiana, Milan, Dresdner Bank, Frankfurt, Societe Generale, Paris, and the Netherlandsche Handels-Maatschappij, Amesterdam. The new group will have its headquarters at Paris and will start out with a staff of at least 50 persons.

The name is Eurofinance which will be financed by equal contributions from its ten members and by fees paid for special studies over and above the basic studies which are contemplated. Some of the Eurofinance members already have banking and finance connections beyond the borders of their domicile, but they consider this move an important enough venture so that they may participate in the rapidly growing markets in Europe. Incidentally, there is firm belief here that President de Gaulle, single-handedly, cannot stop the course of history and that Britain will be admitted to the Common Market.

Tax Reduction and the Consumer

Consumer expenditures have been expanding in this country. Retail sales have held at an annual rate of $240,000 million for several months and various polls suggest that a growing number of families think of making considerable purchases in the months ahead. Perhaps these expectations are based on the assumption that, if and when a tax cut comes, it is likely to benefit consumers more than business. The sentiment in industry seems to run along the same lines.

Thus, while individuals plan on spending more, industrial expenditures for plant and equipment show no such tendencies, according to the polls. Yet, the avowed purpose of the tax reduction programme, originally, was to stimulate capital spending and U.S. economic growth in terms of production and jobs.

The tax reduction and reform Bill has many angles. Testifying at Washington, for example, livestock men had opinions from good to disastrous. The whole point is that the U.S. Treasury wants to stop "tax gimmick investments." Yet, there is need for outside capital to maintain the livestock industry.

The Treasury accuses some investors of financing livestock just for the sake of tax loses because it inflates the price of land. The other side of the story is cited by cattlemen who stress the necessity of outside risk capital to prevent the forced liquidation of many large Western operations. There are many such specific proposals which produce headaches in the writing of an equitable new tax Bill. The strange part is that, after all the criticisms of specific proposals made by the Kennedy Administration, everyone seems to be in favour of tax reduction and tax reform, but everyone wants to go about it in a different way.

Balance of Payments

The U.S. balance of payments problem continues to be a matter of concern. The outflow of gold continues in one degree or another. Debate about this seems to be never ending in the Western world. There are those who maintain that the U.S. long-term fixed income investment rate of 4 per cent is too high and others say it is too low.

Nearly everyone forgets that the commercial international payments position of the U.S. is favourable and that the imbalance is brought about largely by expenditures for maintaining bases overseas. Withdrawal of missile bases in Europe and Asia in favour of submarine-based Polaris missiles is likely to alleviate this situation. Also, the build-up of N.A.T.O. forces, notably those of West Germany, will reduce the number of required American soldiers in Western Europe. All this is apt to help the U.S. international payments position.

In the meantime, American bankers keep anxious eyes on the possible fate of the present Governments of Canada and Great Britain which can mean so much, economically. At this point, nobody can be positive about any important facets of the news.

India, however, is coming more and more in the news. The other day, the National Broadcasting Company telecast an hour-long programme which tried to relate the economic and social consequences of caste distinction in India to the problems faced between whites and non-whites in the south of the U.S. The spokesmen for India were upright and outstanding. As a whole, it was a success.

(*Concluded from next column*)

circumstances, the maladjustment between home and overseas prices already exists, currency control has hidden the difference, the consumer is not helping the economy and, therefore, the adjustment should be made openly.

But that is not the case with the U.K. today and the anti-devaluationists point out that devaluation is in no circumstance a long-term solution, since, if devaluation is an attempt to snatch an advantage, it will weaken the effect just as fast as internal prices begin to rise as a result of higher import costs. Playing about with the exchange value of a currency cannot, except under the artificial conditions of a totally controlled external economy, have any effect on the prosperity of a country. And, today, the prosperity of the U.K. is what all the debate concerning N.E.D.C. and Government policy is about.

LONDON LETTER

STERLING SOFT

EFFECT OF DEBATE ON DEVALUATION

(*From Our Own Correspondent*)

LONDON, *8th March*

BECAUSE the different pointers to the health of the British overseas Balance of Payments turn up at different times, it is difficult to draw deductions and one must fall back on explanations. This week, for instance, we have the figures of sterling balances in the last quarter of 1962 showing holdings of non-sterling countries having gone up by £34 million—an obvious pointer to the confidence of foreigners in sterling. But, in the same week, we find that gold and convertible currency reserves fell by £24 million in February, an equally obvious pointer to weakness of confidence in sterling. And since the latter figures are also the most recent, one would be led to suppose that there is less confidence now than there was before Christmas!

But further enquiry suggests that the fall in the reserves took place on the day at the end of January when the Common Market talks came to an abrupt end but, through lags of accounting, the record of these withdrawals fell into the month of February. Yet this is not quite a sufficient explanation, since this week has also seen the pressure on the pound continuing, so that the premium on the dollar parity rate is now extremely narrow. There is no reason in the country's trade figures why this should be so. During the last few months, the deficit in the balance of trade has been declining. In the three months November 1962-January 1963, it averaged £43 million a month (of course, this is the difference between c.i.f. figures for imports and f.o.b. figures for exports), while in the previous three months the gap was £47 million. The figures are strictly comparable because they have been seasonally adjusted. If one takes the comparison further back over the whole of 1962, this accrued deposit was £45 million, so, on any period of comparison, the U.K. is doing slightly better on its overseas trade than over the past year. Admittedly, there has been nothing exciting to note in the export figures and the improvement has come in recent months from reduction in imports. It can be expected that this trend will be reversed as soon as the domestic economy becomes more active, but there is certainly nothing in these trade figures to make the position even slightly more pessimistic than it was through the latter part of 1962, when sterling was so strong. That strength, incidentally, continued through January, so that the weakness is entirely current.

Devaluation Talk

The City is inclined to put the blame on the devaluation talk which has gone on—in those sections of the Press where these matters are usually debated—as a result of the publication of the N.E.D.C. Report on the task before the U.K. The need to make British exports more competitive was put in that Report in words which made some commentators think it hinted at devaluation. The Secretary of the N.E.D.C. has hastened to point out that no such interpretation was intended when it was written, so that not even the stamp of the question having been raised by the Government fact-finding body can be placed upon the suggestion of devaluation.

It is, however, well known that the economic and financial Press love to explore problems of this kind, sometimes with great heat on the part of their correspondents, and it gives no indication whatever that the policy under debate is one with which the Government will associate itself.

The debate can, indeed, be summarised in this way: on the pro-devaluation side, it is said that the only way in which British exports can be stimulated and in which the true return to the wage increase grasping worker can be reduced is through devaluation. On the other side, it is pointed out that this is a policy of defeatism; that devaluation can bring momentary relief to the Balance of Payments by giving a boost to exports and putting a break on imports and, of course, reducing the real income of the wage earners by making the price of their purchases higher. There are occasions when a devaluation is necessary, in order to face the reality that the internal value of a currency is not the same as the external value. In these

(*Continued in previous column*)

PERSPECTIVES & PROJECTIONS

By Mercator

Each Unto Himself

MR. Morarji Desai gave an inkling in his reply to the Rajya Sabha debate last week of how he would defend his Budget proposals. His own firm conviction that he has not imposed an unreasonable burden and expression of doubts regarding the patriotism of critics, or their will to repel Chinese aggression, may serve as conclusive and crushing arguments. After nearly two weeks of the Budget, Mr. Desai has succeeded in finding the quarters where he can get maximum support: three members of the Planning Commission and some academic economists whose influence for good or bad in our economy has fortunately been slender. This is not the kind of support over which the Finance Minister can feel happy in the face of mounting criticism in all other quarters, but Mr. Desai has an extraordinary capacity for self-satisfaction, which is only another aspect of his self-righteousness, and I will not be greatly surprised if critics fail to make any impression on his smugness.

That the Bombay markets took heart after Mr. Desai's visit is a matter for some satisfaction as it indicates hopes for adjustments. But this also contains some sinister implications: there is a danger of Mr. Desai feeling that, if market sentiment is revived by some concessions on the Super Profits Tax Bill—by raising the limit to 8 or 9 per cent or slightly reducing the rate—he can get away with the rest of his heavy tax Bill. For this view, however, he alone is not responsible, since the business community, which is always singularly blinkered in its outlook, has given ground for this impression. It is natural that businessmen should concentrate their attention just now on the most important measure affecting their operations; and no one who really understands the Super Profits Tax Bill and its effects on company (especially banking) reserves, capital formation and future growth, efficiency of operation and foreign collaboration, will underestimate its capacity for inhibiting development in the private sector. At the same time, the business community seems over-eager to do a deal with the Government on this issue and let it do what it likes with the others, since this community's own prosperity in a sellers' market, under more Government expenditure, seems assured. With such an attitude, it should not complain if the public also reciprocates with equal indifference and lack of sympathy to businessmen's grievances. Such undue preoccupation with group interests is likely to weaken the democratic process, since it helps the Government to divide its critics and offer concessions to the most vocal among them. With an active agricultural lobby vigilant all the time to resist any increase in burdens in that sector, the net effect of such exclusive attitudes will be to tax the urban lower and middle income groups most, since they happen to be the politically least articulate sections of the community.

• • • •

Myopia—No State Monopoly

Very few have yet analysed the implications of the new additional surcharge on residual incomes. A university professor has gone on record for the view that the rates are low and inadequate but this indiscretion may perhaps be excused in those who, however knowledgeable on economic theory, know very little of law or accounting to work out the practical effects of the clauses of a Finance Bill—into which the Central Board of Revenue packs much ingenuity even in the best of times. With a heavy responsibility on the present occasion, the C.B.R. has almost over-reached itself in finding a basis for the proposed surcharge. The C.B.R.'s object (or assignment) apparently was to raise more revenue from personal income-tax and super-tax but without giving the States the usual two-thirds of the yield. The Constitution permits this step through the device of the surcharge on income and super-tax "for purposes of the Union" and such surcharges are already being levied. The proper course would have been to increase the existing surcharges up to 100 per cent or even more; or, alternatively, to raise the basic rates and to declare that, for the duration of the emergency, the additional rates shall not be shared with the States. Such exceptions or modifications are permissible under Article 354 of the Constitution. Not satisfied with these proper ways of achieving the immediate object, the devious course of levying an additional surcharge on the "residual income," which means total income *minus* the gross tax payable on it. This will have the effect of bringing all incomes, including tax-exempted incomes, into the net. Thus, for example, even the lowest income group for which the first Rs. 3,000-3,500 may be exempted (according to the status of the individual) will have to bear the additional surcharge on it at the lowest rate of 4 per cent on the first slab. The result is there will be a "surcharge" of Rs. 200 on a person now paying a tax of Rs. 42—a distortion of language if ever there was one—though a portion of this surcharge will be treated as compulsory deposit, frozen for a period of five years.

The issue is not whether the levy is equitable but whether this constitutes an "increase of a tax" through a surcharge, within the meaning of Article 271 so as to exclude it from the State's divisible pool. Neither income-tax or super-tax has been increased by this surcharge: the tax on residual income is a new second tax on a different income base, and subjects the same income to double taxation. Indirectly, it taxes certain incomes which are recognised even by the Government to be tax-free, like returns from certain tax-free securities, etc. It is for the State Governments to agitate the principle of exclusion of their legitimate share, but taxpayers have a genuine grievance if items hitherto set off as expenses for earning the income are also to be taxed up to 10 per cent in the higher brackets. The effect is to make the marginal rates work out to about 50 per cent on additional income above Rs. 25,000 per year which will operate as a serious disincentive to professional and salaried persons for seeking superior positions involving higher responsibility or obligation for performance. If the Government thinks that it can achieve efficiency in either sector by this system of taxation of professional classes, it is gravely in error.

Without Pretences

There was, indeed, much irony in the news last week about the water and power bills of Central Ministers during the last six months of the emergency, which, by a fortunate coincidence, was printed in most newspapers alongside Mr. Desai's passionate appeal for sacrifices by every section to repel Chinese aggression. Further comment is needless and the publication has had the effect of at least moving one Minister—Mr. Lal Bahadur Shastri, who on an earlier occasion had shown much sensitivity to public opinion when he resigned as Railway Minister—to offer to pay up the recent heavy bills from his own pocket. But that his example has not been followed by others equally at fault is, I think, very significant. It shows utter indifference to the importance of maintaining even the pretence of austerity and simplicity by Ministers who tend to think that they are in a special position, while mouthing the slogans of the socialist pattern to justify their exercise of power. Has Mr. Desai no responsibility at all to secure conformity to the spirit of the times within the Government before he ventures to ask others to accept his demands as reasonable? Perquisites, it seems, are offensive only in the private sector but fantastic expenditure on furnishing Ministers' residences are treated as a routine matter, which the public must accept for the benefit of the democracy and socialism they are promised. And what is worse, the perquisites extend to a coterie of favoured party members and hangers-on, who have to be provided with free houses in the capital on some pretext or other, even if they are not Ministers.

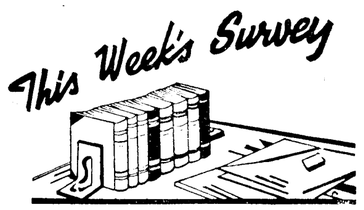
How Khadi Thrives

Such keen interest in the fleshpots—which is considered an unworthy pursuit for the rest of the nation—may even be condoned, if, otherwise, the Government takes care of the taxpayers' money and spends it well. Indeed, the crux of all criticisms of the Budget is that there is no general confidence that the money will be well and truly spent. Debating skill inside Parliament these days is not what it used to be; otherwise, there should have been many to stop Mr. Desai in his harangue and ask him what he thought of the latest Public Accounts Committee's report in general and its strictures on the Khadi and Village Industries Commission in particular. The disclosures are shocking by any standard. During seven years since 1953, the All India Khadi and Village Industries Board (later upgraded into a Commission in 1957) had disbursed loans and grants of Rs. 72 crores (to which was added another Rs. 21 crores in 1960-61). Of this disbursement, utilisation certificates had not been furnished for Rs. 34 crores; and on the basis of certificates furnished for the balance, unused sums recoverable from the institutions concerned had not been recovered to the extent of Rs. 4 crores, of which half related to the period prior to 1957. This is the kind of development (there is no doubt that all these misdemeanours come under the Plan), to which people are asked to contribute unreservedly and without asking questions. The Public Accounts Committee could get neither the utilisation certificates nor even the list of organisations which had not furnished them. In this predicament, it could only give expression to the vague suspicion whether it "does not indicate that the amounts had not been utilised in all cases for the purpose for which they had been sanctioned." For others, the inference will appear almost a certainty. The grant to the Commission this year was Rs. 12 crores and next year it will be Rs. 10.74 crores, showing that nothing will stop because of financial irregularities or waste. The Ministry of Commerce and Industry has agreed that many loans were irregularly granted, to enable loanees to make repayments of old loans and not for development, and the Public Accounts Committee observe in euphemistic terms: "In accounting matters, such transactions are the least expected from a missionary organisation like the Khadi Commission." Of the loans granted, repayments are overdue to the extent of Rs. 3.2 crores and instances have been cited of persons organising co-operatives only to take the loans, not to develop village industries. In spite of these, Mr. Desai, I am sure, will cite the level of expenditure as absolutely the final test of Plan implementation. The P.A.C.'s report is the worst indictment on the Government's methods of spending taxpayers' money and the extraordinary lack of integrity in the activities of the Khadi and Village Industries Commission.

FOREIGN INVESTMENT



West German industry fully supports the principles and ideas laid down in the draft of an international convention for the protection of foreign property, worked out now by the Organisation for Economic Co-operation and Development (O.E.C.D.).

West German industrialists feel that such a multilateral treaty should be given preference over bilateral agreements of similar nature simply because the proposed international convention would be a catalogue of general, basic principles in the field of protection of foreign property. However, such a convention would neither affect the already existing bilateral capital protection agreements, nor would it exclude the conclusion of such agreements in the future. It is obvious that bilateral agreements tailored to meet special conditions and needs have been and will be necessary.

West German business executives reckon that there are good prospects that the O.E.C.D. convention will be approved by a large number of countries. The reason is that the convention is strictly limited to the protection rights and their application while previous moves of the same kind, like the Havana Charta, for example, have failed to become effective since they included too many other provisions, like those concerning the right of domicile.

Of course, it is true that the proposed convention does not comply with all demands. But it contains the main provisions which will encourage investors to place their capital abroad. These main provisions are: non-discrimination of foreign investors against their domestic counterparts; contracts cannot be lifted unilaterally; expropriation is possible only if it does not conflict with existing agreements and if adequate compensation is granted; a neutral, international arbitration court is to be set to settle all disputes which may come up and to which also individual firms or entrepreneurs can submit their claims.

The realisation of the proposed O.E.C.D. convention should interest all countries throughout the world which are eager to take part and to profit from a world-wide integration of trade. The convention cannot be expected to unleash a wave of investments abroad but it would most certainly create the "climate" for a steadily expanding, international investment activity, since it would give investors the feeling that capital placed abroad is protected and safe.

TOO HUMAN

THE Joint Select Committee of Parliament on the Constitution (Fifteenth) Amendment Bill has managed to make some modifications in the Government's proposals in the original Bill. The Committee has rejected the move to raise the maximum limit for the tax on professions, trades, callings and employment from Rs. 250 to Rs. 500 per year; this will be hailed as a timely and appropriate safeguard, when powers to tax the urban sectors have been stretched to the utmost. The Committee has also negatived the proposal to make demotion of a Government servant a minor penalty, not requiring the usual procedure for inquiry into charges against him. One must hope that the Government will see the wisdom of maintaining the existing rules for inquiry, instead of reducing the opportunities for defence now open to an accused public servant.

The other changes relate to the judiciary and, because of a recent case involving the question of the appropriate authority for determining the age of a judge when it is disputed, elaborate constitutional provisions are suggested. A very curious proposal, which has its origin in the Home Ministry's hurry for emotional integration, is that High Court Judges should be encouraged to accept transfers from one High Court to another by paying him a compensatory allowance for transfer outside his own State and by being eligible to practice after retirement in all High Courts, except the last one in which he serves for five years. This latter part of the inducement has been rejected by the Select Committee—and very properly too—but it seems judges after all are much inferior in their outlook towards money than other officials of the Centre who can be moved from place to place without any such compensation, even though the same reasons should hold good in their case also. In fact, with a special retiring age of 62 and other safeguards concerning their position, a judge ought to be the first to forgo monetary inducements—as indeed they are supposed to do when they abandon a lucrative practice and join the Bench for the status and prestige it offers. But the Government's proposal will at least make us all feel that they are just as human—and no more—as any of us.

NEW ALL-INDIA SERVICES

The decision of the Government of India to constitute three new all-India services, namely, Indian Service of Engineers, Indian Forest Service and Indian Medical and Health Service, is a welcome but belated step. The suggestion to create more all-India services, apart from the two existing services, namely, Indian Administrative Service and Police Service, was made by the States Reorganisation Commission (Chairman: Mr. S. Fazl Ali), in its report on the reorganisation of States submitted in 1955, as a corrective to separatist trends that might develop as a result of the reorganisation of States on a linguistic basis. The National Integration Council not only endorsed the suggestion but also strongly recommended that more all-India services should be created to promote national integration.

It is only logical that the Government, which had accepted and implemented the recommendations of the S.R.C. in respect of reorganisation of States, should have also accepted the suggestion which the Commission considered necessary to counteract the undesirable effects of its main recommendation. It is typical of the piecemeal approaches made by the present Government, even to questions which call for an integrated approach, that it has taken eight years to make up its mind on what was obviously a natural corollary of an earlier decision.

Now that a decision has at last been made, the new all-India services should be established soon. It is said that a Bill to create the new all-India services will be introduced in the next session of Parliament. It is noteworthy in this connection that a resolution to the effect that it is necessary and expedient in the national interest that Parliament should by law provide for the creation of an Indian Service of Engineers, an Indian Forest Service and an Indian Medical and Health Service was adopted by the Rajya Sabha as early as in December 1961. Details of the scheme for introducing the new services are reported to have been worked out at a conference of Chief Secretaries held at New Delhi last week. According to the scheme, executive engineers, civil surgeons, conservators of forests and officials of higher ranks in the engineering, medical and forest departments will be included in the respective services. Each State will have a cadre of its own. Remuneration of the members of the new services will be on par with that of Class I officials of the Central Government and other conditions of service will be similar to those of the I.A.S. and I.P.S. Recruitment will be by open competition.

The *raison d'etre* of creating all-India services, as the S.R.C. emphasised, is that officers, on whom the brunt of the responsibility for administration will inevitably fall, may develop a wide and all-India outlook. It will also help in increasing efficiency and securing greater inter-State co-ordination for more effective implementation of all-India policies.

The need for more all-India services has been enhanced by the increase in the subjects in which the Union Government has exclusive or concurrent powers. Even in fields where it exercises no direct controls, the Union Government gives advice and guidance to State Governments in order to ensure uniformity and co-ordination between the policies followed by them. Prior to the 'twenties, the British had created, apart from the Indian Civil Service, a few other all-India services, the Indian Service of Engineers, to mention an instance. The decision to abolish the latter was made in 1921, following the transfer of the subjects from the Central to the Provincial list, though some of them were continued till 1935.

An important consideration that should be borne in mind is that the objectives of having all-India services would be defeated, if provincial considerations were brought into the posting of members of the services, especially to the States, and if the officials were allowed to remain too long in the service of any particular State or of the Centre. Even now this problem exists and the Government is said to be tackling it, though there is no visible evidence of the success of its efforts. It is to be hoped that the new services to be created will be helped to steer clear of this pitfall right from the beginning. We advisedly say "will be helped," for it is the politicians in power who have to create the appropriate conditions, considering that civil servants in a democratic society have to take orders from the ministers. The new services can be effective instruments for strengthening the unity of the country, only if the politicians themselves appreciate and respect the purpose for which they are created.

EXCESS CAPACITY IN REFRACTORIES

A distinctly perceptible change has taken place, of late, in the supply and demand position of refractories in India. Five years ago, industrial consumers of refractories, such as steel, cement, glass and foundries, had been faced with the problem of scarcity of this material. But several new units have since entered the field; the existing units have also expanded their capacity. Consequently, a buyers' market appears to have developed in refractories. In fact, some of the units have already curtailed their output, particularly of fireclay refractories, owing to lack of sufficient demand. It may be recalled here that the total installed capacity of the refractory industry almost doubled during the second Plan period, having gone up from 464,000 tons in 1957 to 818,000 tons by 1961. It rose further to 850,000 tons last year. It is estimated that, when the licensed schemes are implemented and those under construction are completed, the figure is likely to be as much as 1.4 million tons by the end of the third Plan. The total output of refractories, too, moved up, that is, from 329,000 tons in 1956-57 to 550,000 tons in 1960-61. Currently, production is running at an annual average rate of about 600,000 tons.

The increase in both installed capacity and production of refractories has been quite impressive by any standards. But this progress has not come as an unmixed blessing to the industry. For it has brought in its wake serious problems of overproduction and idle capacity during the last two or three years. What are the factors that have led to the present plight of the industry? An answer to this question can be had from Mr. D. Gopalakrishnan, Chairman of the Indian Refractory Makers' Association. In his speech at the annual meeting of the Association held at Calcutta last week-end, Mr. Gopalakrishnan observed that domestic demand for refractories had slackened of late for various reasons. One of the important reasons, according to him, is that the steel industry, which normally utilised 70 to 75 per cent of the refractories produced in India, has not progressed at the rate envisaged by the Planning Commission. What is more, the consumption of refractories per ton of ingot steel has also been declining as a result of improved techniques and greater efficiency in the steel-making processes. The anxiety of the industry about its outlook is fully reflected in Mr. Gopalakrishnan's statement that the idle capacity in the industry is likely to continue throughout the third Plan period, and that it may even increase, as more refractory manufacturing units are coming into production "without there being any prospect of an appreciable increase in the overall demand."

No wonder, then, that he felt apprehensive about the prospects for the industry. The justification for his apprehension is as follows:

"It is disturbing to note that, although two years of the third Five-year Plan have passed, the refractory industry has not, so far, received any substantial order for the constructional requirements of the steel plants. It appears the steel plants will be changing their open hearth furnaces to an all-basic construction much more quickly than was expected. As a result, there will be a rapid decline in the demand for silica bricks for the roof of open hearth furnaces, and the silica brick plants which have been built up during recent years—and which represent a considerable capital investment—will be rendered idle. The chances of utilising these plants for basic brick manufacture is remote as the existing capacity, and the expansion on hand for basic brick manufacture, will be more than sufficient to meet the future demand.

"Moreover, the future for the basic brick is very uncertain. There is a growing preference for L.D. and other oxygen processes, for the manufacture of steel and these processes do not use the conventional basic refractories being manufactured at present. They require, instead, only a comparatively small quantity of tar-bonded dolomite bricks. In fact, it was indicated that the proposed plant at Bokaro is also being planned for making steel by the L.D. process. It is quite likely that most of the steel plants coming up in the fourth and the subsequent Plan periods will be by the L.D. or other oxygen processes. The outlook, on the whole, is, therefore, a gloomy and uncertain one for the industry."

It is, however, a pity that the policy-makers in New Delhi have not grasped the gravity of the problems confronting the industry. What is one to think of the proposal now being broached by the Union Steel Ministry to set up a few more large-scale refractory plants as adjuncts to public-sector steel plants, as recommended by a group of Soviet experts sometime back? The Government, it is said, is earnest about establishing at least one large unit for the manufacture of basic bricks required by the Bhilai steel plant. Needless to say that the new ventures contemplated by Government, involving considerable foreign exchange, would spell "economic disaster" to the existing manufacturers, besides causing waste of resources. Therefore, Mr. Gopalakrishnan's plea that the proposals for new factories should be turned down outright seems one that deserves to be examined carefully. He was on strong grounds when he took exception to the Government's decision to import 82,000 tonnes of refractories from Soviet Russia for the constructional requirements of the expansion project of the Bhilai steel plant. The Government's decision is certainly ill-conceived, as the domestic industry has already assured the Government that it is in a position to supply all the requirements of refractories, except a few small quantities of special varieties, such as carbon blocks and fireclay carborundum bricks, which are not manufactured in India at present. It would be most unfortunate if the Government were to proceed with its proposals either for establishing new units or for arranging imports, after having encouraged the domestic industry to grow fast during the last few years.

ASIAN STUDY GROUP FOR MARKETING

The regional conference on agricultural marketing arranged jointly by the E.C.A.F.E. and the F.A.O. at New Delhi came to a close last week-end. The discussions at the meeting were briefly reviewed in these columns last week. It is now proposed to follow up this review with an account of the final recommendations made at the meeting. The participants in the meeting were firm in the belief that the individual countries in the region would benefit much by promoting exchange of information on marketing policies pursued by the different Governments. With this object in view, the meeting has recommended various means of increasing the scope for co-operation in the region. It has, for instance, urged the F.A.O. and the E.C.A.F.E. regional offices to act as a clearing house for information and circulate regularly among Governments and officers concerned a newsletter incorporating developments in the fields of agricultural marketing and price policies in the region.

An important suggestion made by the meeting relates to the establishment of a regional study group for marketing and price policies. The Study Group is expected to review and assess the programmes for the improvement of marketing drawn up in different countries, besides promoting frequent exchange of experience among the various countries. The scope of the Study Group's task of assessing price policies will be limited by the lack of data on the marketing of various commodities in the countries of this region. It is precisely to remove this lacuna that the meeting has called upon the Governments concerned to initiate more comprehensive surveys of marketing by extending the present coverage. It is said that the F.A.O. could help such projects by providing technical assistance.

There is no doubt that intra-regional co-operation in this field as envisaged above would be beneficial to the various Governments in the formulation of marketing policies. But these measures will remain ineffective, unless efforts are made in each country to educate farmers in improved marketing techniques through extension services, etc. The regional meeting has also laid stress on the need for increasing storage facilities, provision of more rural credit and regulation of markets as a means to control middlemen. It has expressed the opinion that measures taken in this sphere in India and Pakistan would be worth studying by other countries. Another important problem which remains to be solved is the scarcity of trained personnel in the field of marketing and co-operation. In order to solve this problem, the meeting has advised the Governments of this region to establish full-fledged national institutes for research and training in marketing and co-operation. There is, of course, not much in these recommendations that is new to this country which has already made some progress in the direction of providing rural credit, warehousing facilities and machinery for regulation of agricultural markets. Nevertheless, India, like other neighbours, stands to benefit much, if the suggestions for the establishment of the Study Group and the publication of the newsletter are implemented.

BARAUNI REFINERY

It is indeed a great relief to hear from Mr. K. D. Malaviya, Union Minister for Mines and Fuel, that the Barauni refinery in the public sector would come on stream "as scheduled." The Minister is reported to have made this statement at New Delhi on the 7th inst. to reassure members of the Informal Consultative Committee of Parliament who had expressed concern at the delay in the commissioning of the Barauni refinery on which much store has been set to meet the oil requirements of the country during the current Plan period. But the target dates for the completion of the first and second phases of refinery construction at Barauni have been extended so many times in the past that the expression "as scheduled" used by the Minister calls for elucidation so that those who had lost track of the shifting dates might know what is the latest position.

As scheduled at present, according to Mr. Malaviya, the first unit of the refinery would be commissioned in the fourth quarter (October-December) of this year, in spite of difficulties in strengthening the refinery site and unprecedented rain in the area last year. The second unit would be ready, we are told, in the second (April-June) quarter of 1964. The ancillary units such as the kerosene plant and the lubricating oil plant are expected to be commissioned during the first half of next year. It is gratifying to hear that the 720-mile pipeline for bringing crude from the Naharkotiya oilfields in Assam has been completed and is ready for operation.

Considering that the successive extension of the commissioning date has acquired a degree of notoriety, one would very much wish that the aforesaid schedules would be strictly adhered to. The first phase was originally scheduled to be completed by September 1962 and the second phase by March 1963. The dates were extended at least three times in the last two years. Many reasons have been cited officially for these changes. The most important of these are: (1) delay in the delivery of equipment for the first stage of the refinery by Soviet Russia which collaborates in the project; (2) inability of the major contractors for civil and mechanical works to accept early dates for completion of work; (3) certain technical difficulties such as appearance of fine sand and clay at six to seven feet depths at the project site when excavations for the power plant and atmospheric vacuum unit foundations were started; and (4) adverse weather in the form of heavy rainfall.

While not questioning the validity or genuineness of these reasons, one would like to ask Mr. Malaviya as to why he should insist that further expansion of refining capacity should take place only in the public sector when it is subject to so many uncertainties and difficulties. It is not argued that such difficulties would not be there in the case of private sector which, too, may sometimes be faced with similar problems. But why stake the achievement of the plan target for refinery expansion on doctrinairism when the country is short of foreign exchange and would, therefore, do well to import crude rather than finished petroleum products.

ASSAM BUDGET

The Finance Minister of Assam, Mr. Fakhruddin Ali Ahmed, deserves to be congratulated on his realistic budget for 1963-64 presented to the State Assembly on Thursday last week. He has, unlike other Finance Ministers, neither underestimated revenue nor inflated expenditure. And, what is more, he has not hesitated to raise resources through additional taxation. The revenue receipts for the coming year are estimated higher by Rs. 4.22 crores at Rs. 49.64 crores (as against Rs. 45.43 crores in 1962-63) and expenditure on revenue account is expected to rise by just Rs. 3.62 crores to Rs. 50.97 crores (from Rs. 47.35 crores in 1962-63). The anticipated deficit on revenue account, therefore, is smaller than in the current year, being Rs. 1.33 crore, as against Rs. 1.92 crore. Even this deficit has more than been fully covered by fresh tax proposals yielding an additional revenue of Rs. 1.62 crore, excluding Rs. 12 lakhs that will go to municipal boards and town committees. Actually, the revenue budget (after new taxations) reveals a surplus of Rs. 29 lakhs. There is also a surplus of Rs. 1.20 crore on capital account, so that the overall position is a sizable surplus of Rs. 1.49 crore. Since, however, this surplus has been adjusted against the opening deficit of Rs. 4.38 crores, the ensuing financial year will close with a negative balance of Rs. 2.89 crores.

Seven additional tax measures have been proposed by Assam's Finance Minister. They are: (1) an upward revision of agricultural income-tax so as to bring it in line with the recent increases in non-agricultural income-tax; (2) an increase in the existing taxes on public transport vehicles; (3) imposition of a new tax on immovable property in urban areas at the rate of 3 per cent of the annual letting value of such property; (4) a further rise in sales tax on luxury goods (from 6 nP to 10 nP in the rupee) and petrol (from 8 nP to 10 nP), as well as a new sales tax at 2 nP per litre on kerosene; (5) an increase in stamp duties; (6) a further increase in excise duty on country-made liquor; and (7) rationalisation of royalty rates on timber.

The total Plan outlay fixed for the year 1963-64 is Rs. 29.4 crores. The Planning Commission had put the outlay only at Rs. 20.2 crores, but it had agreed to an additional allocation of Rs. 9.2 crores subject to the condition that this amount would be available as loan if the State was prepared to raise its resources by Rs. 150 lakhs. It is gratifying that the Finance Minister of Assam has more than fulfilled this condition by fresh tax proposals yielding an additional Rs. 1.62 crore annually.

49 years ... not even a scratch

The rate of industrial accidents in India has increased from about 24 per thousand workers in 1938 to about 44 in 1959. Every year, over 93,000 workers are involved in accidents and 250 lives are lost. Also wasted annually are a million man-hours—enough to produce 170 broad guage locomotives or 700 coaches for the Indian Railways.

Safety has always been Tata Steel's watchword as efficiency is hardly possible without it. 'No-accident month' as an annual feature, safety exhibitions, training in safety, safety awards, safer working conditions, a continuing campaign under the direction of joint councils to turn safety into a habit ... these are some of the means adopted in Jamshedpur to prevent accidents in the Plant.

Safety, however, depends largely on the worker himself because about 75 per cent of industrial accidents are found to be caused by human negligence. This is where men like Jamuna Dube, the oldest employee in Tata Steel, come in. He has worked for 49 years without ever sustaining an injury, not even a scratch.

The importance of safety was one of the first things that Jamshedpur taught Dube when he arrived in the Steel City half-a-century ago ... a city where industry is not merely a source of livelihood but a way of life.

CENTRAL BUDGET'S CRIPPLING EFFECT ON CAPITAL FORMATION

SUPER PROFITS TAX GROSSLY UNJUST

By George Carvelho

THE most depressing feature of the Budget proposals for 1963-64 which Mr. Morarji Desai placed before the Lok Sabha on 28th February 1963 is not the unprecedented magnitude of increased taxation which he has called upon the nation to shoulder. A nation whose security is threatened should not count the cost of the defence effort needed to preserve its freedom and honour. Nor will any Indian worth his salt take issue with the Finance Minister when he says, as he did in the Budget speech, that, "given the magnitude of the task that confronts us, we shall succeed only to the extent that we are prepared to put forth an effort of a kind that transcends ordinary incentives and rewards." Neither the business community nor anyone else has the right to object to the tax proposals simply on the ground that the burden they impose is heavy or to plead that the burden be lifted from their shoulders and laid on someone else instead.

Much of the unresponsiveness and even resentment aroused by the strong criticism of the Super Profits Tax by business groups appears to spring from the idea that these represent vested interests, with no spark of national sentiment, who demand their pound of flesh in the shape of profits, at a time when others, less endowed with the good things of life, are called upon to sacrifice not only money but, in some cases, even life.

A Travesty of Reality

This state of mind, which appears to be reflected in some recent utterances by those in high places, is a travesty of reality and a baseless slander against those who, though perhaps not so vociferous in their protestations of patriotism as some others, are no less devoted to the national interest and consider no sacrifice too great for the preservation of national freedom.

More useful than this sort of posturing and heroics, with their accompanying recriminations, would be a cool assessment of the basic economic realities and necessities of the present situation. It can be shown that the mental gulf that separates the Government from the organised business community is neither so vast nor unbridgeable as it appears. The Budget proposals and, specially, the Super Profits Tax can then be assessed as they should be, objectively, set against the criterion of whether and how far they help towards the twin aims of defence and development.

The inter-relation of these two basic tasks, defence and development, has been repeated so often as to have become almost a platitude. Yet it is no platitude but a fundamental premise that should underlie all thinking on current economic and fiscal matters. The pity is that constant repetition breeds indifference and metal apathy to full awareness of its validity and its implications.

The Finance Minister himself has stated the problem simply and clearly. "First and foremost," to quote him, "there is the need to increase production and accelerate the pace of development. The growing claims of defence and development cannot be met except on the basis of an expanding volume of production. By far the greater part of the responsibility for increasing production rests with the private sector, including (he hastened to add) millions of peasants and artisans. We shall have to make every possible effort to ensure that the productive potential of our agriculture and industry, both big and small, is harnessed to the fullest extent to the task in hand." Mr. Morarji Desai knows as well as anyone else that, when the inevitable political gesture towards "millions of peasants and artisans" had been made, the increase in production that the country needs would have to come overwhelmingly from the corporate sector of organised industry, though one can appreciate and sympathise with the difficulty which a Minister in a 'socialist' Government would have in saying this in so many words.

Freeze on Corporate Growth

In the light of this, the Super Profits Tax simply does not make sense. The arguments by which this fiscal novelty is sought to be justified are a jumble of bad economics and good socialism. The only explanation that fits the facts seems to be that, finding himself compelled to impose heavy burdens on every section of society, he thought it necessary to bring those incorporeal beings miscalled corporations into his fiscal net, lest he should expose himself to the gibe of being soft towards the private sector. It is a pity that a man who had the political courage to abolish the wealth tax on companies and the excess dividends tax, to cut the tax on bonus issues and to abolish the expenditure tax, should be associated with a measure that will do indefinitely more harm to the aims of development and defence than the good done by all his earlier concessions combined.

It needs to be emphasised that opposition to the Super Profits Tax is not a plea that dividends should be maintained unchanged. Every reasonable man will be at one with the Finance Minister that this is no time for the argument of monetary incentives. It would be right and proper to expect shareholders to accept lower dividends, as their contribution to the national pool of resources for development and defence. The real case against the Super Profits Tax is that, superimposed on the already existing corporate tax structure, it amounts to draining away anything up to 75 per cent or 80 per cent of the earnings of companies, thus rendering it almost impossible for profits to be ploughed back. Replacement of plant and equipment at prices well above the historical cost at which they were originally acquired would thus become difficult. So would modernisation and expansion. There is not much point in advising companies to seek the resources they need from the capital market. The debacle in share prices in the wake of the Budget, rules this out. In short, this tax imposes a freeze not only on profit incomes but

also on corporate expansion and growth. How can the Finance Minister reconcile his high-souled exhortations to private enterprise to play its part in the great tasks of defence and development, while, at the same time, he makes it impossible for it to do so by appropriating the necessary funds? When the rate of economic growth in the corporate sector slows down, as it must, will the Finance Minister acknowledge his responsibility for this? Or will he be found on the side of those who are only too ready to charge private enterprise that, in its greed for profit, it failed the nation in its hour of peril?

Ideological Prejudice

The very name of this measure carries more than a tinge of ideological prejudice. Super profits are, by implication, not only superfluous but undesirable and illegitimate, specially in a country where the socialist drum is so incessantly beaten. Public opinion has been so conditioned that the Pavlovian reaction to profits of any kind, let alone super profits, is one of animosity. How many among those whose sense of judgment has been warped by such value-changed terminology will realise that what the Bill tags as super profits are corporate earnings over 6 per cent of capital and reserves after payment of income and super tax, notwithstanding the fact that banks charge about 8 per cent for advances, debentures cannot be issued at less than 7 per cent, as also preference shares at less than 9.5 per cent and industrial financing agencies like the I.F.C. charge 7 per cent to 8 per cent on their loans? At a time when interest rates are under upward pressure from a deliberate policy of credit restriction, this attempt to peg down the return to capital at less than current interest rates appears a move designed to discourage equity investment. It was only a year ago that the same Finance Minister expressed gratification at the spread of the investment habit among middle income groups and the good response to new issues. At the time of the fall in share prices in October-November last year, the Government tried to reassure investors that there was no cause for anxiety and that they would share in the fruits of economic development. Will a similar reassurance be given now, after the proposal for a Super Profits Tax? Ordinary investors have reason for resentment. They have been given a raw deal.

Penalising Efficiency

The argument for the Super Profits Tax, as given in the Budget speech, makes strange reading. "In our system of corporate taxation," said the Finance Minister, "there is no correlation between the rate of tax and the percentage of profit. This shortcoming needs to be remedied." Why should a flat rate, instead of a graduated scale of corporate taxation, be considered a shortcoming? This is hardly the occasion for entering into an academic discussion of the implications of ability to pay in the case of individuals and companies. The official view appears to be based on a false analogy between these two taxable entities. More important is the consideration (and it ought to be decisive) that progression in corporate taxation is a particularly onerous way of penalising efficiency. Companies which, by dint of greater efficiency in the utilisation of their investible funds, are able to earn a high return will be heavily penalised on the excess over 6 per cent. Would it be surprising if, in spite of appeals to national sentiment, such companies decided that the trouble of earning super profits was not worthwhile? Even in a time of emergency, it is not sound policy to discriminate, through taxation, against socially desirable action.

It is even harder to make sense of the sentence that immediately follows the statement of the rates of Super Profits Tax. "It is hoped that this tax will act as a disincentive to excessive profits and will help to keep down prices." A disincentive to 'excessive' profits, if it means anything at all, must be a disincentive to 'excessive' earning. Is it the Government's desire that companies should not carry out the productive activities that result in what are dubbed excessive profits? In other words, should companies limit their activities to the point where profits will not be excessive? Or would the Government prefer that companies should work to the utmost of their resources, earn super profits and then turn them (or at least the greater part of them) over to the Exchequer? If that is so, the expression "disincentive to excessive profits" is scarcely appropriate.

Danger of Inflation

It is just as baffling how this tax will help to keep down prices, except to the extent that the super profits would otherwise have been distributed as dividends to shareholders who would spend such income on consumption. If that were desired, it could have been achieved by some sort of restriction on dividend distribution. That would not only help to check inflation, it would accord with the spirit of the call for nation-wide sacrifice and austerity. But the Super Profits Tax also appropriates resources that would otherwise have been retained and reinvested and which would thus have helped to increase production and hold prices in check. By inhibiting corporate expansion and growth, the Super Profits Tax, so far from keeping down prices, will accentuate the upward thrust of prices.

For a revenue of Rs. 25 crores, out of Rs. 275 crores of additional taxation proposed which the Finance Minister estimates from this levy, this is a high price to pay. Corporate growth will be arrested, and in many cases companies will find themselves forced into reverse gear. Efficiency and economy will be at a discount, the market for new capital issues will dry up, the investment habit will receive a setback, foreign private capital will turn away from India to more congenial investment fields. But so long as growth in the corporate sector, as a whole, is not completely stifled, as, in all probability, it will not be even with the Super Profits Tax, we shall again be treated in the future, to the argument that taxation was not excessive or harmful, because revenue continued to increase even without a rise in tax rates. To reply, one will again be reduced to dealing in hypothesis and might-have-beens. Granted that the present rate of growth of the economy is far from adequate and far below Plan targets, how can one demonstrate to an unsympathetic Government that lower tax rates would have released pent-up forces of growth and that the economy would have been in much better shape?

Foreign Investment

While domestic entrepreneurs and investors may be exhorted, in the name of patriotism, to go on as before, regardless of profit, one wonders whether foreign investors are expected to do the same. Given the proven need to make every effort to attract

foreign capital, the Super Profits Tax stands condemned. There could be no surer way of stopping altogether the already thin trickle of such capital that has flowed into India in recent years. Those among foreign investors who have already invested in India and whose prospects of profitability have been blighted by this impost may feel that they were inveigled into investing in India on expectations that have since been falsified. Their experience is unlikely to induce others to follow in their footsteps.

If the Finance Minister is really counting on no more than Rs. 25 crores of revenue from this tax, that is, if he is not indulging in the old game of underestimating revenue, it would be a simple matter to replace the Super Profits Tax by a straight increase in the rate of corporate taxation of about 6 per cent. On estimated earnings of Rs. 400 crores over the corporate sector as a whole, this would yield about the same revenue and do infinitely less damage than the Super Profits Tax.

The case against this measure is irrefutable. But it would be overoptimistic to hope that it will be scrapped or even radically altered. The Finance Minister, both on personal and political grounds, will find it very difficult to make major concessions. It is, therefore, necessary to assume that companies will have to live with this tax for a year or two. Even Mr. Morarji Desai must realise that, if it lasts longer than this, that would be the end of anything in the nature of an active capital market in this country. His record of the past five years does not suggest that he would welcome this prospect.

Incidence of S.P.T.

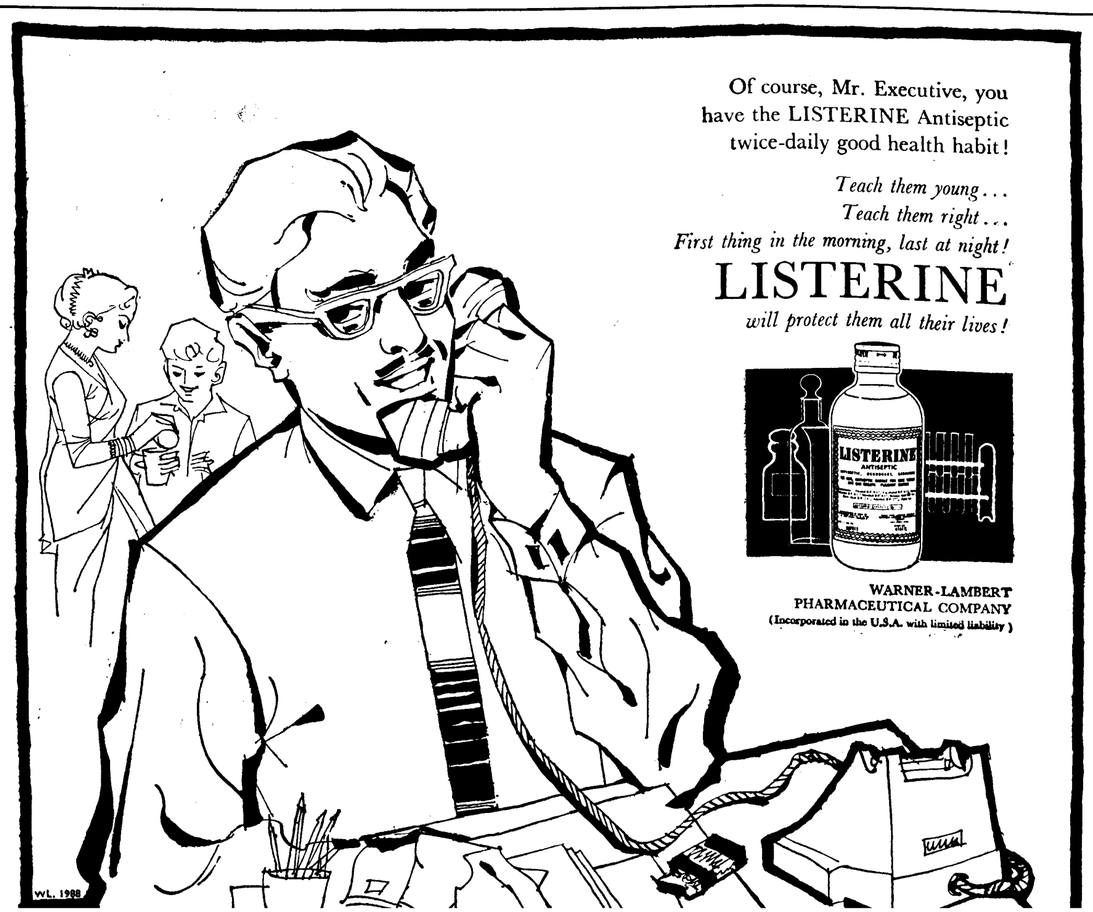
Assuming that this is an emergency measure and, therefore, temporary, investors would want to know something about its probable incidence for different companies and for different industries. The simple and economically paradoxical rule is: the higher the ratio of earnings to capital funds, the greater will be the burden of the tax. How great a difference this makes is seen from an estimate, based on the last published balance-sheet of the two private sector steel companies. Indian Iron and Steel Company Ltd., on paid-up capital and reserves of Rs. 37.61 crores (excluding development rebate reserve) earned a profit before tax of Rs. 8.31 crores. Its liability to Super Profits Tax would be Rs. 97 lakhs. On the other hand, Tata Iron and Steel Company Ltd., on paid-up capital and reserves of Rs. 53.40 crores, earned only Rs. 3.30 crores of profit before tax and would, therefore, pay nothing by way of Super Profits Tax.

Trading companies and others engaged in non-manufacturing activities will be specially hard hit because the nature of their business is such that the ratio of earnings to capital is comparatively high.

Tea companies will be at an advantage, in that 60 per cent of their income is treated as agricultural income, which will not attract Super Profits Tax. The rate of Super Profits Tax estimated for 40 per cent of their income will represent a much lower rate in relation to their total income.

Jute companies are particularly unfortunate, because, after two years of uneconomic working, the industry had just entered a phase of high profitability, only to find that a large part of the profits will be appropriated by the Government through the Super Profits Tax. There is no provision in the Act that, if a company's earnings in a particular year are less than the standard deduction of 6 per cent of capital and reserves, the deficiency can be accumulated and set off against future earnings in excess of the standard deduction of those years. This is hard on industries like jute and tea which look to the profits of good years to make up for the losses of bad years.

Incentives Nullified



New industrial undertakings which are entitled to the tax holiday up to 6 per cent of capital employed for five years will find, to their dismay, that the holiday is restricted to income and super tax and does not extend to Super Profits Tax. In the Bill as it now stands, the income that is exempt under the tax-holiday provision will be added back for purposes of computing Super Profits Tax liability. One wonders whether it is the intention of the Government to take back with one hand what it gave with the other. If the incentive to new undertakings is not to be nullified, the holiday from taxation should be extended to cover liability to Super Profits Tax also.

New companies which have taken large loans from industrial financing institutions and others will find themselves in a tight spot. The earnings on which they counted to pay back the instalments on their loans, being taxed away as super profits, they will find it hard to keep to their repayment schedule.

Companies that have issued preference capital at higher rates than the standard deduction permitted for Super Profits Tax will find that the cost of servicing their preference capital has risen substantially. To take an example, a company with ordinary and 10 per cent preference share capital in the ratio of 4:1 will find that its preference capital would have to earn a pre-tax return of 30 per cent as against 20 per cent before the introduction of the Super Profits Tax.

Banking companies will be in a difficult position first because the standard deduction for Super Profits Tax will be based on capital and published reserves only. The substantial secret reserves which every sound bank should maintain will not enter into such estimates and they will be denied the advantage of the standard deduction in respect of such reserves. Secondly, banking companies now have a legal obligation to make a contribution to reserves until their capital and reserves amount to 6 per cent of their deposit liabilities. With the squeeze on disposable profits on account of the Super Profits Tax and the obligatory contribution to reserves, prospects of dividends for shareholders of banking companies will be adversely affected.

Finally, companies which employ a large number of high-paid technical and managerial personnel, whose remuneration, including perquisites, exceeds Rs. 5,000 a month, will find payments in excess of this limit disallowed as expenses and added back to income for purposes of income and super tax as well as Super Profits Tax. This is both unfair and inexpedient, unfair because contracts already intered into, specifying terms and conditions of service, cannot be subsequently modified and inexpedient, because the country needs highly qualified personnel, specially foreigners, who would be naturally reluctant to conform to standards of austerity which the Government considers appropriate.

ANNOUNCEMENT REGARDING THE ISSUE OF 2,50,000 EQUITY SHARES OF RS. 10/- EACH AT PAR

(Applications are invited on the basis of the Prospectus copies of which are available from the Bankers and Brokers named below)

THE ENGLISH ELECTRIC COMPANY OF INDIA LIMITED

(INCORPORATED ON 13TH MARCH, 1957)

Registered Office: **D-3 Gillander House, 8, Netaji Subhas Road, Calcutta**

EXISTING AND PROPOSED ACTIVITIES

The Company was incorporated on the 13th March 1957 with the objects stated in its Memorandum of Association and in particular to deal in all kinds of property and to carry on the business of electrical, mechanical, hydraulic and general engineers and contractors, manufacturers of and dealers in electric magnetic and galvanic apparatus, machinery and appliances, manufacturers and suppliers of all kinds of light, heat, sound, power and any articles or things being used in connection therewith.

The Company was converted into a public company on 21st February 1963.

The Company is the wholly owned subsidiary of The English Electric Company Ltd. of "English Electric House," Strand, London W.C. 2, United Kingdom.

The Company's Works are located at Pallavaram (near Madras) and the Company presently undertakes the manufacture of overhead busbar chamber equipment, combination fuse switch units, distribution fuse boards, distribution pillars, high rupturing capacity cartridge fuse links switchgear components and relays (Relays are specialised electrical protection equipment for power generation and distribution systems).

The Company has been working to a phased programme of expansion of manufacture which it is hoped to complete by 1964. This programme included an expansion of existing facilities and the introduction of certain new products for which the Company has obtained the necessary industrial licences from the Government. The production of Relays commenced in 1962.

The Works extension for the manufacture of Control Panels has been completed and production is expected to commence in 1963.

SHARE CAPITAL

Authorised

10,00,000 Equity Shares of Rs. 10/- each	Rs. 1,00,00,000
10,00,000 Unclassified Shares of Rs. 10/- each	Rs. 1,00,00,000
	Rs. 2,00,00,000

Issued, subscribed and fully paid up

4,00,000 Equity Shares of Rs. 10/- each	Rs. 40,00,000

Present Issue

6,00,000 Equity Shares of Rs. 10/- each	Rs. 60,00,000

Out of the present issue

(1) The English Electric Company Ltd. of London, United Kingdom, has agreed to take up 3,50,000 Equity Shares of Rs. 10/- each at par and the Company has agreed to allot such Shares credited as fully paid up in considerstion partly for plant and machinery supplied and/or to be supplied by that Company, the balance to be paid for in cash .. .. Rs. 35,00,000

(2) **NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION**

2,50,000 Equity Shares of Rs. 10/- each .. .. Rs. 25,00,000

Rs. 60,00,000

DATES OF OPENING AND CLOSING OF THE SUBSCRIPTION LIST

The Subscription List will open at the commencement of banking hours on 25th March 1963 and will close at the close of banking hours on 28th March 1963 or later at the discretion of the Directors.

DIRECTORS

Name	*Address*	*Description and Occupation*
ALAN BARRACLOUGH	English Electric House, Strand, London W.C. 2, England.	Deputy General Export Manager, The English Electric Company Ltd.

STATE BANK AND ITS SUBSIDIARIES

RATIONAL THINKING REQUIRED

By A Correspondent

THERE were several changes in the top set-up of the State Bank of India last year. There was a new Chairman, a new Vice-Chairman and a new Managing Director. The new Chairman, Mr. B. Venkatappiah, was no novice, since he was one of the architects of the Rural Credit Survey Committee Report which had recommended the nationalisation of the former Imperial Bank to enable it to undertake the branch expansion programme in the countryside and assume some developmental functions like the financing of co-operatives and small-scale industries. He was also associated with the working of the State Bank since its inception as a nominee of the Reserve Bank of India. His appointment as Chairman of the State Bank was widely welcomed last year, and it was expected that he would impart a new momentum to the Bank's activities.

Three Other Aspects

The speech of the Chairman highlighted three other important aspects. Firstly, the Bank played a useful role in the grave situation which followed the Chinese invasion of the Indian territory by making available credit when the usual channels of credit were dislocated in the Assam area. The State Bank and its subsidiaries, through their very wide network of offices—now numbering more than 1,500—have been playing a vital role in the work connected with National Defence. Secondly, it was emphasised by the Chairman that the developmental activities of the Bank, including the financing of co-operatives and small industries, showed some further progress and the aggregate profit of its subsidiaries has shown a decline mainly due to an upward trend in expenses. The State Bank opened 25 new branches in 1962 under the second expansion programme, bringing the total number of these branches to 50 during the first 2½ years of the programme, leaving 95 branches to be opened. This deliberate slow down was in pursuance of the recommendations of the Karve Committee Report. The Bank has proposals to open a large number of branches at centres not hitherto on the list but where Treasuries and Sub-treasuries are located. The Bank has started opening branches not only in the countryside without banking facilities but also in the metropolitan areas, cities and bigger towns. Thirdly, with the increased demand for credit, especially from trade and industry, the problem of raising resources has been engaging the Bank's attention. The Bank has not neglected the problem of improving service facilities. One such facility is the Credit Transfer System for savings bank transactions. The second is the introduction of additional facilities for savings bank depositors such as the reduction of minimum balance for cheque accounts from Rs. 200 to Rs. 100 and liberalisation of withdrawal facilities from once a week to twice a week. The third is the Pilot Deposits Scheme in a few selected branches in each Circle of the Bank to establish closer touch with the customers, present as well as prospective, and tailor the services to their needs. The Chairman claimed that the results at some of the pilot centres were quite encouraging. In one particular town, for example, a few months' effort led to the opening of more than 500 small savings bank accounts by relatively small depositors.

A regretable development which affected the Bank during 1963 was the nationalisation of the Bank in Burma. The Chairman consoled the shareholders that the Bank's business at Burma was not large. He expressed the hope that the Burmese Government would pay the Bank a fair and reasonable compensation.

An Omission

A noticeable omission in the speech is the absence of any reference to the steps which have been taken or proposed to be taken to reform the Bank's internal structure or to decentralise the power of taking decisions. The Bank, together with its subsidiaries, which are completely controlled from the Central Office in respect of their operations, is a huge monolithic structure. By and large, it is operating with procedures and outlook inherited from the former Imperial Bank. Such a huge structure with a conservative outlook, which is just like an inverted pyramid, must be a very difficult affair to be managed by a couple of persons from the top, however efficient and painstaking they might be.

A question which arises here is the problem of State Bank's subsidiaries. Why not the State Bank abolish the theoretical independence of the subsidiaries, instead of retaining the facade of their individual existence? This question arises because the autonomy they enjoy now is only in name and their separate existence without substance is adding to the problems of the Bank. The State Bank with its prestige and long familiarity in various regions need not cling to the regional patriotic feelings engendered by the external form of the subsidiaries, which, operating in the former Indian States, have no worthwhile standards and traditions of their own. A complete merger of these units may speed up the upgrading process and will be a prelude to internal regions. It is heartening to note that the first shot in the direction of consolidation has been fired by the State Bank by amalgamating the State Bank of Bikaner and State Bank of Jaipur and by closing the duplicate branches of subsidiaries in places like Hyderabad. But the process of consolidation needs a vigorous push. Surely, there is an urgent need for rationalising the branch banking of the State Bank's subsidiaries in the Fort area of Bombay and other cities, before the State Bank itself launches on its programme of opening more branches in these areas. The sooner the State Bank gives up the myth of separate existence of subsidiaries and avoids duplication in set-up, the better it will be to tone up their standards. In any case, the process of consolidation seems to be going at snail's pace now.

Decentralisation

After absorbing the subsidiaries, the Bank's set-up needs to be decentralised *de novo* in the light of developments in commercial banking structure. Without absorbing the subsidiaries, any decentralisation will increase inefficiency and thus put the clock backwards. The importance of decentralisation in the Bank's set-up will be appreciated when it is realised that the Bank is slowing down probably under its own weight. The Bank's deposits showed no more increase than the aggregate average increase (10 per cent) in scheduled bank deposits in 1962. It must be noted here that the Bank is having a huge network of more than 1,000 branches, the prestige of State ownership, the monopoly of several State undertakings, etc. The Bank has introduced several new features such as Credit Transfer Scheme and liberalisation of savings bank facilities, but these various baits do not seem to have attracted many fresh accounts and, therefore, deposits commensurate with the effort and prestige. This only shows that the State Bank has been losing in the game to other "bigger" banks in the private sector. This will be evident when a comparison is made with the progress made by the Bank of India, for instance, during the year (1962). That Bank succeeded in securing during 1962 an increase of about one-third over its total deposits (in 1961), with less than 100 branches spread over in just 40 towns and cities all over the country. Probably, this is one of the reasons behind the State Bank Chairman's decision that the State Bank should venture into cities and metropolitan areas and not necessarily confine itself to opening branches only in the unremunerative countryside.

Interest Rates

One thing, however, is evident. The State Bank can no longer count on its inherent advantages. They are fast disappearing in the context of vigorous campaigning and resilience shown by the banks in the private sector. The State Bank must, therefore, pay urgent attention to the question of streamlining its set-up. Its savings bank rules should be revised on the lines prevailing in other "big" banks. It must pay interest at 3 per cent, as is done elsewhere for savings bank accounts in cities and towns. Again, there is need to experiment with the payment of a higher rate of interest in underdeveloped countryside where higher interest rates are the rule. To put it differently, the Bank should experiment with a regional variation in its interest rates structure for attracting deposits. In most places in the countryside, there is no competition from other banks and, as the Bank is also outside the purview of the interest rate agreement, there is no reason why it should not experiment with such a measure.

An important direction in which the State Bank of India has to reform itself is, as mentioned earlier, in the sphere of decentralisation. This is necessary, because most of the business proposals brought on the initiative of the agent after a great deal of effort are simply torpedoed by superiors with conservative outlook and without the knowledge of local conditions. The State Bank agent thus works in a frustrated atmosphere with little or no powers to secure fresh business and losing valuable customers to the more enterprising neighbours.

There seems to be need to separate the Treasury work from traditional commercial business and leave sufficient time to the agent to perform the latter. As it is, an agent's time is, by and large, taken up by attending to the Government's business and dancing before the various district authorities and superiors. The poor head cashier—the Brahma, Vishnu and Maheswara—of the State Bank has neither time nor the incentive satisfactorily to perform his role, as he has to be simultaneously all the three things. The small salary increase given to staff in 1962 may not do the trick unless there is a rational distribution of workload.

Personal Touch

As the State Bank becomes bigger and bigger, the personal touch between the top bosses and the client and the agent seems to be diminishing. It will be an impossible task for one or two Managing Directors to know even what is happening in some of the major branches; the task of the Chairman must be still superhuman. The size of any commercial organisation in Indian conditions, particularly an institution like the State Bank, must be such as to enable the Managing Director to keep in touch with every development minutely, visit once a year at least its major branches and most of the important offices. If this is not done, the Bank's development *vis-a-vis* other commercial banks is bound to suffer. This seems to be what is happening. Just as the State Bank's external activities have been meticulously programmed after nationalisation, there seems to be a need to reform the structure of the Bank to suit the modern conditions of the "survival of the fittest." Unless this is done urgently, there is the danger of the Bank slowing down under the weight of its own structure in its traditional businesses. The present Chairman, Mr. B. Venkatappiah, who has successfully fashioned the co-operative movement of the country, is the most fitting leader to steward the Bank through internal reforms. It is to be hoped that he would pay attention to this important aspect of the problem.

I.C.I.C.I. DOES WELL AGAIN

ALL-ROUND IMPROVEMENT IN OPERATIONS

THE operations of the Industrial Credit and Investment Corporation of India (General Manager: H. T. Parekh, Bombay) expanded at a much faster pace during the calendar year 1962 than in 1961 both in respect of the quantum of assistance sanctioned and disbursed and in regard to its distributions as between the various forms of assistance. The gross sanctions actually accorded in 1962 were higher by Rs. 5.84 crores at Rs. 19.60 crores, as compared with the rise of Rs. 3.26 crores to Rs. 13.76 crores noted in the previous year. The amount disbursed was also higher by Rs. 3.90 crores at Rs. 9.85 crores; the increase in the previous year was only Rs. 2.84 crores, the sum disbursed being Rs. 5.95 crores. The number of operations, too, was larger by 31 at 119, as against the improvement of 24 to 88 operations in 1961. The gross sanctions in 1962 (at Rs. 19.10 crores) were almost 50 per cent higher than in 1961, with disbursements jumping up by two-thirds. The rise in the assistance sanctioned as well as in disbursements (excepting in the case of direct subscription) was accounted for by all the three spheres of the Corporation's activities, namely, loans and guarantees, underwriting, and direct subscription, as the following table shows:

(In crores of rupees)

	Loans & guarantees	Underwriting	Direct subscription	Total
No. of operations:				
Upto end of 1960	99	50	45	194
During 1961	72	5	11	88
During 1962	90	14	15	119
Total upto end of 1962 ..	261	69	71	401
Amount sanctioned:				
Upto end of 1960	22.93	12.42	3.36	38.71
During 1961	12.58	0.71	0.47	13.76
During 1962	14.70	3.91	0.99	19.60
Total upto end of 1962 ..	50.21 (42.99)	17.04 (13.33)	4.82 (3.84)	72.07 (60.16)
Amount disbursed:				
Upto end of 1960	7.51	2.96	1.99	12.46
During 1961	4.46	0.84	0.65	5.95
During 1962	8.03	1.28	0.54	9.85
Total upto end of 1962 ..	20.00	5.08	3.18	28.26

Note:—Figures in brackets relate to net sanctions.

The Corporation received last year (1962) 109 applications for financial assistance and several more inquiries, but it considered 99 applications for a total assistance of Rs. 22.38 crores, of which 92 applications for a total of Rs. 19.60 crores (gross) to 56 companies were approved. A sum of Rs. 2.15 crores to six companies representing assistance sanctioned was withdrawn, reduced or not proceeded with by applicant companies. Four applications were not approved. By the end of the year, 47 applications were under examination. Rupee assistance in the form of loans, underwriting and direct subscriptions to ordinary and preference shares amounted to Rs. 9.83 crores to 32 companies and foreign currency loans for the equivalent of Rs. 9.77 crores to 44 companies. Twenty companies were sanctioned assistance in both rupees and foreign currencies. Seven underwriting operations were completed during 1962 for a total amount of 2.42 crores, against which the Corporation was called upon to take up scrips of the value of Rs. 1.68 crore.

Out of the rupee loans and guarantees sanctioned aggregating Rs. 14.56 crores, the amount disbursed up to the end of 1962 was Rs. 8.70 crores. Out of the foreign currency loans sanctioned of Rs. 28.43 crores, the amount disbursed was Rs. 11.30 crores. Similarly, out of Rs. 13.33 crores sanctioned for underwriting up to the end of 1962, the Corporation completed operations in all amounting to Rs. 11.72 crores, against which it was called upon to take up Rs. 5.69 crores in shares and debentures, on which an amount of Rs. 5.08 crores was paid up. Out of the direct subscriptions to ordinary and preference shares sanctioned of Rs. 3.84 crores, the Corporation subscribed to Rs. 3.50 crores, on which Rs. 3.18 crores were paid up. The Corporation thus disbursed a total amount of Rs. 28.26 crores up to the end of 1962.

A wide range of industries has obtained assistance from the I.C.I.C.I. The actual amount sanctioned to the different industries and the percentage amount sanctioned to each industry to total sanctions to date are indicated below:

Industry	Net amount sanctioned (In Rs. crores)	Ratio of amount sanctioned to total sanctions (per cent.)
Iron and steel	9.39	15.6
Chemicals and chemical products	8.21	13.6
Electrical equipment	5.96	9.9
Machinery manufacture (other than electrical)	5.94	9.9
Paper and pulp	5.38	8.9
Automobiles and cycles	4.57	7.6
Glass, pottery, etc.	3.05	5.1
Electricity, gas and steam	3.02	5.0
Metal products (ferrous and non-ferrous) ..	2.76	4.6
Cement	2.68	4.5
Sugar	2.16	3.6
Textiles	1.97	3.3
Oil pipe line	1.50	2.5
Wood, cork and hardboard	1.03	1.7
Shipping	1.00	1.7
Rubber products	0.74	1.2
Leather products	0.08	0.1
Miscellaneous	0.72	1.2
Total ..	60.16	100.0

The Corporation was able to augment its operations quite considerably during the year 1962 because of the fourth line of credit equivalent to Rs. 9.52 crores ($20 million) granted by the World

COMPULSORY DEPOSIT SCHEME

SALIENT FEATURES—ECONOMIC SIGNIFICANCE

By Professor Russi Jal Taraporevala

IN the Union Budget for 1963-64, the Finance Minister has proposed the introduction of a Compulsory Savings Scheme. He justified the introduction of this Scheme in his budget speech by saying: "Apart from taxation, we have relied on the voluntary savings of the people to meet our growing requirements of development. Voluntary savings and contributions have an important part to play in the present emergency also. In view, however, of the sharp increase in our requirements, it would be appropriate to introduce a comprehensive scheme of Compulsory Savings to supplement the effort by way of additional taxation and voluntary savings. Like taxation, compulsory saving will restrain demand in the immediate future, whereas, unlike taxation, it would provide an earning asset to the people and generally help in introducing the saving habit in the country."

The details of this Scheme are contained in the Compulsory Deposit Scheme Bill 1963 introduced in the Lok Sabha by the Finance Minister. This article outlines the various provisions of the Scheme as contained in the Bill and assesses their economic and administrative implications.

Broad Coverage

The Scheme will extend to the whole of India and will come into force on such date or dates as notified in the Official *Gazette* by the Central Government. The Scheme will be applicable to the following very wide variety of persons:

(*a*) Persons liable to pay land revenue, whether or not such persons are liable to pay income-tax;

(*b*) Persons liable to pay income-tax;

(*c*) Holders of immovable property situate in urban areas assessed to tax whether known as Property Tax, House Tax or by any other name; the urban area is defined as an area having a population of 10,000 or more persons;

(*d*) Employees of the Central and State Governments, of local authorities, of companies (including Government companies), and of other corporations (including co-operative societies) whose annual income from salary is Rs. 1,500 or more but who do not pay income-tax;

(*e*) Shopkeepers whose annual turnover is Rs. 15,000 or more and who do not pay income-tax;

(*f*) Persons other than shopkeepers liable to payment of tax on professions, trades, callings or employments, who are not liable to pay income-tax; and, finally,

(*g*) All other categories of persons whose annual income exceeds Rs. 1,500 and who do not pay income-tax, as may be specified by the Central Government by notification in the Official *Gazette*.

It will be seen that the coverage of the Scheme is extremely wide. It is likely to embrace many millions of people in the population who are not liable to pay direct taxes at present. The Government's broad aim in introducing the Scheme seems to be to apply it to individuals having an annual income of more than Rs. 1,500 who do not pay income-tax. It will, however, be seen that there are certain categories of persons to whom the Scheme will apply even if their annual income is below Rs. 1,500, as in the case of persons paying land revenue, holders of immovable properties, shopkeepers, etc., as outlined above.

Compulsion

The Bill provides that every category of person to which it is applicable, except those who are liable to pay income-tax, must make the Compulsory Deposit at such rates as may be laid down by the Government. However, the rates at which the Compulsory Deposits must be made will not exceed the maximum laid down in the Bill and the Government may issue different notifications on different dates governing the different categories of persons covered by the Bill. Thus, it is only those liable to pay income-tax who have an option to place deposits under the Scheme or not, though, in fact, this option is theoretical as is shown later. All other categories of individuals are compulsorily covered by the Scheme.

Maximum Rates of Deposit

The maximum rates of deposits under the Scheme are prescribed for the various categories of persons covered by it thus:

(*a*) In the case of persons liable to payment of land revenue, the maximum rate shall be 50 per cent of the land revenue payable in the year 1959-60 in respect of land or lands held by them in the year in which the deposit is required to be made;

(*b*) In the case of holders of immovable properties situate in urban areas, the rate shall be 3 per cent of the annual rental value of the property with reference to which the property assessed to the Property Tax, House Tax or similar taxes in the year in which the deposit is required to be made. It is provided that, where the property is assessed to such tax with reference to the estimated value thereof or with reference to other standards, the maximum rate of deposit shall be 3 per cent of the annual rent at which the property might be reasonably expected to be let from year to year;

(*c*) In the case of employees of Government, local authorities, companies and corporations, whose annual income exceeds Rs. 1,500 but who are not liable to pay income-tax, the maximum rate will be 3 per cent of their annual income from salaries;

(*d*) In the case of shopkeepers whose annual turnover is Rs. 15,000 but who do not pay income-tax, it will be one-third of the annual turnover during the year immediately preceding the year in which the deposit is required to be made;

(*e*) In the case of persons other than shopkeepers, liable to payment of tax on professions, callings, or other employments, etc., and not liable to pay income-tax, it will be equivalent to the amount of tax on the professions, trades, callings or employments payable by them during the year in which the deposit is to be made; and, finally,

(*f*) In the case of other categories, all persons as may be notified in the Official *Gazette* by the Central Government and whose annual income exceeds Rs. 1,500 but who do not pay income-tax, it will be Rs. 60 per annum.

It will thus be seen that the burden of Compulsory Deposit Scheme will probably amount to 3 per cent or more of the gross income of the persons covered by it.

Income-tax Deductions Through Deposits

Those who pay income-tax are technically given an option to make the Compulsory Deposit under the Scheme, but it is provided that the compulsory deposit made by them shall be deductible from the proposed additional surcharges to be levied on their incomes under Finance Act 1963 to the extent of the deposits made or 3 per cent of the residual income (that is gross income minus income-tax and super-tax up to Rs. 6,000 and 2 per cent of the residual income in excess of Rs. 6,000, whichever is lower. Thus, those who pay income-tax are given an odd option: either to pay substantial increased tax by way of surcharges, or to discharge a part of their tax liability by placing Compulsory Deposits which are refundable to them. Hence, it is obvious that the latter course is not really an alternative, but the only reasonable course of action which assessees can follow.

The Bill provides that the Compulsory Deposits made by those who pay income-tax will be deductible from the income-tax payable by them to the extent of the limit laid down on production of proof before the Income-tax officer concerned of the fact of such deposits having been made. Similarly, employees are entitled to claim a reduction in the tax deductible under the head "Salaries" on production of proof of payment of deposits having been made being given to their employers or those who deduct tax at source from their salaries. Also the amount of Compulsory Deposits can be deducted from the advance tax payable by income-tax assessees on their producing proof before the income-tax officer concerned of the fact of such deposits having been made. The Bill is vague as to the period within which such deposits have to be made, in order to secure a deduction from the liability to surcharge, i.e. whether the deposits should be made during the financial year of the assessee or during the assessment year. This point should be clarified. When the person falls under two or more categories of individuals covered by the Scheme, he will have to make deposits at the rate applicable to each of those categories.

It will be seen from the above that all categories of individuals, including even foreigners resident in India and, for all practical purposes, those liable to pay income-tax, will be forced to make deposits under the Scheme at various rates which are laid down by the Central Government through notification and in the Bill.

Interest Insufficient

It is provided that the deposit made under the Scheme will be entitled to a simple interest of 4 per cent per annum and the amount on such interests shall be free of income-tax and super-tax. However, it is not clear whether the interest paid on the deposits will be totally excluded from the computation of total income or whether it will be included in such computation and only be exempted from tax at the average rate of income-tax and super-tax payable by the assessee. It is difficult to understand how the rate of interest on the deposit has been fixed at the low figure of 4 per cent free of tax when various bonds issued by the Government, such as National Savings Certificates, etc., now pay rates of interest ranging from 4½ per cent upwards free of income-tax. Equity demands that those who are forced to make deposits under the Scheme should at least be paid the prevailing rates of interest paid by Government on its small savings certificates, the interest on which is free of income-tax. The rate of interest should be raised to at least 4½ per cent, if not 5 per cent, and it should be provided that the interest on compulsory deposits will be totally excluded from the computation of total income for purposes of income-tax.

Five Years' Maturity

Any deposit made under the Scheme is repayable with interest thereon only after the expiry of five years from the end of the year in which the deposit is made. Thus, from the point of view of those who make the deposits, the capital sum placed as deposit *plus* the interest thereon will be frozen and irrecoverable for a period of five years. This provision makes it all the more necessary that interest paid on the deposits should be totally excluded from the computation of total income of income-tax purposes. Otherwise, it will increase the average rate of tax payable by the assessee, whereas he will not receive the interest on deposits during the period in which his tax liability is enhanced.

It is rather ironical to find that, in the event of the death of a depositor, the Bill does not provide for an unconditional refund of the deposit. On the contrary, it is provided that the refund of the deposit on the death of a depositor, before the period of five years from the end of the financial year on which the deposit is made, will be given only if the authority empowered "to make such repayment is satisfied that genuine hardship will be caused, unless such repayment is made." It must be pointed out that to prove genuine hardship to the authorities will be very difficult, if not almost impossible. There is no justification for leaving this type of discretion in the hands of the authorities. Surely, the amount deposited should be released to the heirs of the depositors when he dies, without any condition. It should also be provided that deposits placed by foreigners should be refunded to them unconditionally when they leave the country on a permanent basis.

Appeals Not Allowed

Individuals who are covered by the Compulsory Deposit Scheme are deprived of their normal right of appeal to administrative authorities or courts in respect of matters of doubt or dispute connected with the amount to be deposited under the Scheme. The Government has taken powers in this matter which may be abused by authorities when administering the

Notice

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have decided to declare a second Interim Dividend on 28th March 1963 (additional to the Interim Dividend of 2½%, subject to tax, declared on 28th August 1962) in respect of the Company's financial year ending 31st March 1963, of 2½%, subject to tax, payable on or after 11th April 1963 to registered shareholders whose names appear in the Register on 28th March 1963 or to their mandatees.

The Share Transfer Books of the Company will be closed from 25th to 28th March 1963 and transfers received at the office of the Registrars of the Company, Jardine Henderson, Limited, 4 Clive Row, Calcutta, before close of business on 23rd March 1963 will, if in order, be registered in time for the transferees to receive the Dividend.

By Order of the Board.

B. GRANGER PEARSON,
Secretary.

VIRGINIA HOUSE,
37 CHOWRINGHEE,
CALCUTTA.
8th March 1963.

Scheme. Perhaps, the most inequitable part of the Scheme is the clause which deprives the depositors of all rights of appeal and which reads thus: "If any doubt or dispute arises as to the amount to be deposited by any person under this Act or as to the date on which such amount is to be deposited or as to any other matter in relation to any deposit to be made under this Act, the decision thereon of the Government or any authority empowered by the Government in this behalf shall be final." This provision should be amended to give rights of normal appeal to assessees as given in other tax statutes.

Protection of Deposits

It is provided that deposits made under the Scheme will not be liable to any attachment under any decree or order of any court in respect of any debt or liability incurred by the depositor, and at the time of his death shall vest in and will be paid to his nominees or heirs. This is, indeed, the only protection offered to depositors under the Scheme.

Penalty

The penalty for not paying deposits as laid down under the Scheme is the liability to pay the amount equal to the sum of deposits which was payable. In respect of the penalty, it is provided that, before a penalty is levied, the person "shall be given a reasonable opportunity of being heard in respect of the same." But, here again, no rights of appeal to courts are given.

Penalty for Non-deduction at Source

Companies or corporations are required to deduct the amounts payable as Compulsory Deposits from the salaries of their employees earning more than Rs. 1,500 per year who are not liable to pay income-tax. Failure to deduct the amount of the Compulsory Deposit will render the companies or corporations liable to the extreme penalty of not being able to deduct the total salaries of such employees from their income or profits for income-tax purposes.

Administrative Problems and Costs

The administrative implications of the measure may be now analysed. The official memorandum attached to the Compulsory Deposit Scheme Bill 1963 states that "the Scheme of Compulsory Deposits is proposed to be operated through the existing agencies of the Central and State Governments and the Local Authorities. For this purpose, these agencies will have to be suitably strengthened." The memorandum says that the additional cost of strengthening the existing administrative machinery is approximately estimated at Rs. 25 lakhs non-recurring and Rs. 50 lakhs recurring per annum. But this seems to be underestimated. The Scheme will probably apply to over 10 million people within the country. Its administration through the existing agencies of the Central and State Governments and Local Authorities will only mean that these agencies which are already overworked in many cases will have to administer the new Scheme and carry the enormous administrative tasks thereof. Hence, if only the existing agencies are used and they are strengthened at a cost of Rs. 25 lakhs non-recurring and Rs. 50 lakhs recurring, it is likely that the administration of the scheme will be haphazard and very inefficient. One of the main arguments against lowering the minimum level of annual income for income-tax purposes to Rs. 1,500 per year has been that the additional costs of collecting taxes from millions of assessees earning over Rs. 1,500 per year but less than the present exemption limit would absorb a very substantial portion of the additional revenue, if not exceed it altogether. Hence the cost of efficient administration of the Compulsory Deposit Scheme will be very substantial and will involve problems and complexities of administration which may even outweigh the benefits expected from the Scheme.

Yield

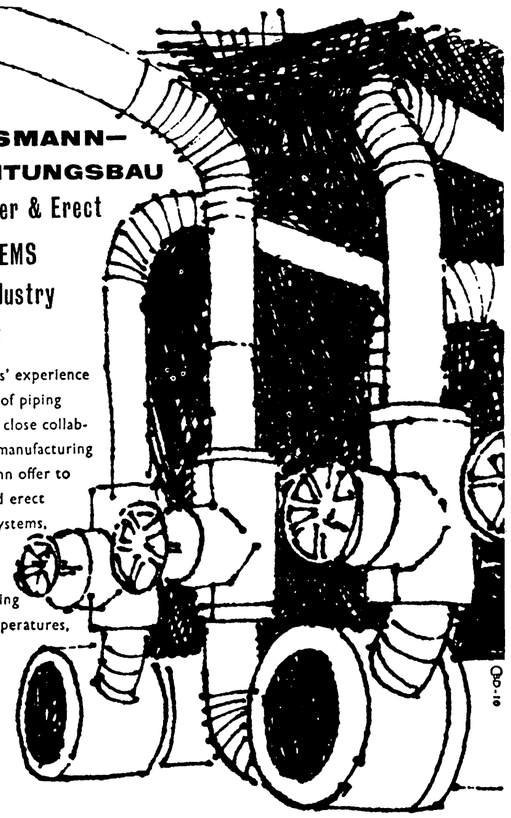
The Finance Minister has taken credit for a net increase in resources of Rs. 40 crores by way of proceeds of Compulsory Savings, although he has admitted that "the total collections under the Scheme and its net contributions of additional resources are difficult to estimate; but, on an approximate basis, total collections under the Scheme might amount to between Rs. 65 and Rs. 70 crores." It is conceivable that, if this Scheme is properly implemented, its yield may exceed even the latter figures. This Scheme will result in the withdrawal of very large sums of money compulsorily from the hands of individuals. Since the amount will not be repayable for five years, the short-run economic effects of the Scheme will be the same as those of an increase in the direct taxation of incomes, of a similar magnitude.

It may be asked whether the introduction of this Scheme is likely to increase the total savings made in the economy. It is conceivable that, in respect of the lower income groups, say, those earning between Rs. 1,500 and Rs. 3,000 per year, the Scheme may enforce a measure of saving which did not exist hitherto. However, it must be pointed out that such savings, if compulsorily collected, will entail substantial sacrifices on the part of persons in these income groups, because they are already hard-pressed by inflation which has reduced their real standard of living in the past few years. On the other hand, the effect of the Compulsory Savings Deposit Scheme on those who pay income-tax or the more affluent section of the society may be to transfer voluntary savings, which would have been made and invested in Government securities or bonds or shares of industrial concerns in the private sector, to the Compulsory Savings Scheme. Thus, a large volume of voluntary savings may be drained away into the Compulsory Deposit Scheme and the total savings effected by those liable to pay income-tax and super-tax may remain the same even after the introduction of the Scheme.

The Scheme may, therefore, take away savings and resources which would have been available for investment in the private sector into the coffers of the Government. It may starve the private sector of capital which is badly required for further expansion and industrialisation. It may also result in a drop in the subscriptions to small savings, bonds, and securities, issued by the Government in so far as voluntary savings which have hitherto been invested in them will now be diverted into the Compulsory Savings Scheme.

Conclusion

To sum up, the Compulsory Deposits Scheme will cover many millions of people and will be extremely difficult and costly to administer. It may not increase the total savings in the economy to any appreciable extent but may merely drain off the voluntary savings of the community. It may thus reduce the resources available for investment in the private sector. The various provisions of the Scheme need amendment and reconsideration.



FIFTY YEARS OF INCOME TAXES IN U.S.

On 25th February, 50 years ago, the Federal income-tax became a legal reality and, since then, virtually every American wage earner has felt its effect. At first, the tax rate was only one per cent and a person had to be earning a substantial sum before he was subject to the annual mathematical chore of figuring exactly how much he owed the government. Today, the rate runs from a minimum of 20 per cent to a maximum of 91 per cent on wage earners in the highest brackets and some 63 million people file returns. Corporations, too, are taxed: in the early years of the income-tax, they paid one per cent of their profits in excess of $5,000. Today, the rate stands at 52 per cent.

While a few Americans every year are brought into court on tax evasion charges, the overwhelming majority perform their annual ritual with, at worst, mournful grumbling. This is offset by Americans—admittedly a small number—who contribute voluntarily more than their required share. Amounts mistakenly overpaid are returned by the U.S. Treasury. Although the income-tax law marked its golden anniversary recently, Federal taxes were levied before 1913 on occasion. During the Civil War, citizens paid taxes to help finance the conflict. The tax lapsed afterward and the Federal Government once again was financed by tariff collections and excise taxes on tobacco and alcohol. In 1894, Congress approved a Federal income-tax. The Supreme Court ruled it unconstitutional a year later on grounds the Government had no right to levy direct taxes on its citizens.

Fifteen years later, Congress approved a constitutional amendment legalising Federal income-taxes, a step that required agreement by three-quarters of the States before becoming effective. In 1913, four years later, sparsely-settled Wyoming won lasting historical fame by becoming the 36th of 48 States to ratify the amendment; the Federal income-tax became law. In 1962, the public paid in Federal taxes $99,400 million—about $550 for every person living in the United States—with 97 per cent of that amount coming from self-assessment on tax returns and through taxes withheld for employees by their employers.

The Director of the Internal Revenue Service, Mr. Mortimer Caplan, says that this is a record unequalled anywhere in the world. "It is a tribute to our people, their traditions of honesty, and their highest sense of responsibility in supporting our democratic form of government," Mr. Caplan said in a letter to taxpayers that accompanied their 1963 tax forms.

MANNESMANN—
ROHRLEITUNGSBAU
Design, Deliver & Erect
PIPING SYSTEMS
for every industry
and capacity

Backed by 40 years' experience in the installation of piping systems, always in close collaboration with the manufacturing plants, Mannesmann offer to design, deliver and erect complete piping systems, calculated and processed to meet ever-increasing pressures and temperatures, according to individual requirements, which ensure complete safety and economy

CLOTH IMPORTS RISE AGAIN

TALKS ON WORKERS' DEMAND FOR HIGHER WAGES

From Our Special Correspondent

MANCHESTER, *5th March*

MANCHESTER LETTER

TRADERS dealing in cotton goods in the United Kingdom received a chilly reminder of the excessively cold weather conditions experienced in the midst of the winter when they learned this week that imports of all types of cotton cloth in January had again broadened to a substantial extent.

Already, in the months from September to November last year, imports had been significantly higher than during the earlier part of 1962 when this trade had slackened. After a sharp reduction in December, January arrivals from all quarters increased yet again—to the largest total for fully 18 months.

Cotton grey cloth imports, indeed, were double the quantity absorbed in the previous month, reaching 51,751,000 yards. Purchases of finished fabric show no diminution, being nearly 13,500,000 yards.

Attention has been drawn to the increasingly narrow gap which separates the volume of Lancashire's own production of purely cotton cloth and the quantity of imports. To the local spinner and weaver the position is preposterous and to all who have the good of the industry at heart the situation must appear senseless.

Suppliers of Finished Goods

For the first time in the monthly returns issued by the Board of Trade a detailed country-by-country analysis of imports of finished cotton cloth is now provided. This shows that the major suppliers in January were Belgium, who provided 2,419,000 yards, Western Germany 1,513,000 yards, India 1,417,000 yards and Portugal 1,205,000 yards.

Arrivals of foreign grey cloth showed a marked expansion, particularly from the traditional supplying areas. India sent 19,027,000 yards against 13,813,000 yards in January last year. Pakistan put on a huge spurt, delivering 9,437,000 yards against only 557,000 yards in 1962. Imports from Hong Kong were also up from 5,207,000 yards to 8,130,000 yards.

Grey cloth arrivals from several European countries were distinctly smaller than last year, although Portugal stepped up her shipments. The only other supplier of any note was China, who distributed 3,518,000 yards against 2,055,000 yards.

Owing to changes made in the statistical tables of the Trade and Navigation Accounts, strict comparisons in exports are no longer obtainable. Cotton cloth shipments amounted to 20,736,000 yards against 21,069,000 yards in 1962, with no major variation in the destinations to individual countries.

Cotton yarn and thread trade both in and out of this country is now combined and the overall total of exports was rather higher this year, being 1,959,130 lbs. against 1,739,094 lbs. in January, 1962. Big increases were recorded in the quantities shipped to the Irish Republic and to Indonesia.

Praise for World Pact

"It is greatly to be hoped that the need for international arrangements to safeguard the legitimate aspirations of both Western and Eastern textile producing countries will continue to be recognised. Without such arrangements no country can feel assured of the long-term prosperity of its textile industry."

With these words Mr. James Broatch, Deputy Chairman of the Cotton Board, ends his message in the series of annual contributions made by cotton textile authorities to the monthly journal issued by the All-Japan Cotton Spinners' Association. There would be no argument in Lancashire with the sentiments expressed, although many traders contend that the agreements as they now stand offer too much to their competitors, and only therefore provide a limited safeguard for the home industry.

Mr. Broatch insists that the magnitude of the import problem cannot be overemphasised, nor can attention be drawn to it too often. To those who have somehow missed the many references to its vital effect on Lancashire's trade in recent years, he repeats the fact that the total figure of imports in 1961 for domestic consumption represented 30 per cent of total home consumption in the United Kingdom.

Even more forcibly he re-emphasises that this percentage compares with only 5½ per cent for the United States, 7 per cent for Germany, 1 per cent for France and an average of just over 3 per cent for the United States and Western Europe.

Wage Claim Meeting

Lancashire cotton employers have agreed to meet the unions to discuss the latest pay claim on behalf of 150,000 operatives. The talks will take place in Manchester on 22nd March.

A decision to put in a fresh claim for an increase was made at a meeting in Manchester on 11th February of executives from the leading cotton unions.

No amount has been stipulated by the unions, but they stress that the last pay award, which was paid from 1st October last year, still leaves them below the pay rates of workers in comparable industries.

The October award, of 7d.-in-the-£, was given by the Industrial Court after more than a year of wrangling between unions and employers. The unions had asked for 2s.-in-the-£, and have since described the award as "niggardly" and "an insult."

A union spokesman has pointed out that cotton wages had risen by an average of 1 per cent over the last three years, compared with increases of up to 5 per cent in other industries.

Compensation Plea

Cotton workers thrown out of work through mill closures in Lancashire are getting "scant consideration" from employers and in many cases are receiving no redundancy compensation payments at all, claims Mr. James Whitworth, General Secretary of the Operative Spinners' Association.

In his quarterly report to union members, he said the inequality of compensation was causing "considerable dissatisfaction."

Although some workers made redundant by re-equipment schemes were receiving compensation under the 1959 Cotton Industry Act other employees who lost their jobs when mills closed down received recognition for long service "at the whim of individual employers."

"It is difficult to understand the refusal of the employers to make provision centrally and to adopt a standard code for the payment of compensation for all redundancies and thus remove this inequitable discrimination," he added.

Comparative Price Trends

Price fluctuations in both the raw material and the products of cotton and man-made fibre industries have not been extensive during the past year or two although, as so often happens at a time of difficult trading, pressure on selling rates has been persistent and producers have been forced to accept terms which they would have rejected out of hand on other occasions when the tide was flowing in their favour. This has been clearly illustrated in the recent trend of company results, which indicate a marked deterioration in margins.

The only official analysis of price levels is published by the Board of Trade on the basis of average types of goods, covering many different commodities and products. The index figure of 100 is calculated on the levels ruling in 1954 but in the meantime, occasional changes are made in the individual series, so that in some sections the figures given are not strictly comparable with earlier returns. The following table shows the relative movements of raw cotton, yarn and cloth on an average basis per annum:

	Raw cotton	Cotton yarn	Spun rayon yarn	Cotton cloth	Rayon fabric
1955	95·9	98·5	95·1	98·2	97·1
1956	95·1	101·1	95·3	98·1	97·1
1957	90·7	100·6	99·6	98·1	100·2
1958	77·6	93·8	98·3	95·2	100·6
1959	68·6	85·8	94·0	90·0	104·0*
1960	75·0	99·5	103·7	95·5	112·0*
1961	74·8	98·8	99·1	100·6	114·3*
1962	73·2	90·4	91·8	96·8*	112·8*

* Revised series.

Adjustments in the types of material covered by the cloth section make the latest position difficult to assess, but it is reasonable to assume that the rates now being quoted for all types of cotton fabric are now substantially cheaper than in 1961. Both cotton and spun rayon yarn prices have shown a marked decline in the past year and the additional pressure of imported goods is a major influence.

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

REVISION OF FLOOR PRICES FOR COTTON

MAHARASHTRA GOVERNMENT WANTS CEILINGS TO BE THE MINIMUM

THREE weeks have passed since Mr. R. Doraiswamy, the Textile Commissioner, stated at Coimbatore, on 20th February to be precise, that the Government of India would announce increased floor prices for cotton to be grown in the coming season in a fortnight's time. But no announcement has been made upto the time of writing (12th March). The upward revision of floor prices is meant, according to the Textile Commissioner, to reduce the gap between the existing floor and ceiling prices which was as much as Rs. 347 per candy in respect of the basic variety, namely, Moglai Jarilla 25/32" staple. This gap is considered too wide by cotton growers. This wide difference is the result of an arbitrary increase in the ceiling price by Rs. 125 per candy for the basic variety (with appropriate increase for other varieties), unaccompanied by a corresponding rise in the floor price. If anybody is to be blamed for the wide difference between the two limits it is the Government of India. Be that as it may, reflecting the belated dawning of wisdom on the Government, Mr. Doraiswamy said that, in order to minimise fluctuations in cotton prices, especially during a year when the crop was a good one, the difference had to be reduced.

The Textile Commissioner did not indicate the extent of the increase in floor prices contemplated. It may, however, be recalled that, at the recent meeting of the Indian Central Cotton Committee, a strong plea was made on behalf of cotton growers that the difference between the floor and ceiling prices should be reduced to Rs. 150 by raising the floor price from Rs. 600 per candy for the basic variety to Rs. 795 per candy. It is not known whether members of the Committee representing the trade and industry had indicated what price they considered to be the desirable floor price, but there was general agreement among the members of the Committee that the present gap was too wide and should be reduced.

While the announcement regarding revision of floor prices has yet to be made, the Maharashtra Government is reported to have requested the Central Government to "guarantee ceiling prices" for cotton growers in the State for a period of three years as an inducement for them to continue cultivation of cotton. Disclosing this, Mr. D. S. Desai, Minister for Agriculture, Government of Maharashtra, told the State Assembly this week that his Government was also seeking to reduce the gap between the floor and ceiling prices of cotton. The Government, he added, was keen on reducing the number of middlemen in cotton and on encouraging cooperative societies to protect the interests of growers and make cotton cultivation a profitable proposition.

Rationale of Floors and Ceilings

It is not clear what exactly Mr. Desai meant when he said that the ceiling prices should be guaranteed. If that means anything it is that the buyer of cotton should be ensured supply of cotton at ceiling prices, for the ceilings are meant to protect the interests of buyers, while the interests of growers are sought to be protected through the floor prices. If, however, one takes the context in which Mr. Desai made that statement, and assuming that he has been correctly quoted, it would appear that the Maharashtra Minister for Agriculture wants the farmers themselves to get the ceiling prices. In other words, what the Maharashtra Government wants is that the ceiling prices for cotton should be treated as the floor prices for the next three years.

This plea makes nonsense of the very basis of fixing floor and ceiling prices. Floors and ceilings are fixed to protect the interest of both the producers and consumers of cotton. Floor prices, as just mentioned, are a guarantee to the grower that the actual price realised by him would not be allowed to fall below that level while ceiling prices are meant to ensure that mills get cotton at prices not above the ceilings. Within these broad limits, prices should be allowed to fluctuate according to the supply and demand position.

A tendency that is becoming increasingly evident of late on the part of growers and those who profess to speak for them is to regard the ceiling price as the price that growers should get and to raise a hue and cry when prices tend to fall below the ceiling. This only reflects a one-sided view of the question. Pointed attention to the dangers of such an approach was drawn by Lala Bharat Ram, Chairman of the Indian Cotton Mills' Federation, in a statement issued this week. The object of prescribing the floor and ceiling prices, the Chairman pointed out, was to allow for a certain flexibility in the movement of prices. He warned that, if this salutary principle were ignored and if it was insisted that prices should invariably rule at the ceiling, it would mean that ceiling prices would become the minimum prices. This, Lala Bharat Ram averred, was a "patently untenable proposition."

Serious Implications

In an obvious reference to the tendency on the part of the authorities to compel mills to buy cotton when prices tended to fall, the Chairman said:

"The prices of a number of varieties of cotton have pierced the ceiling even though the ceiling was revised upwards only in the current season. The revision, amounting to an increase of Rs. 125 per candy (784 lbs.), was made in response to the demands of the cotton grower. When the prices ruled below the new ceiling by Rs. 50 to Rs. 60 per candy (a few weeks ago), a mighty hue and cry was raised on behalf of the growers, who, it was alleged, were being unjustly denied an economic price for their produce. Ministers considered it necessary to admonish mills to buy cotton promptly, so that the gap between the market prices and official ceilings should be closed."

Lala Bharat Ram underlined the serious implications of an increase in the price of the raw material to the cost structure of the industry and export of cotton textiles. The cost of production, which was already high, he pointed out, would be pushed up still higher, in view of the present tendency for the prices of a number of varieties to pierce even the enhanced ceiling. Under the prevailing circumstances, any rise in the cost of production would cause great hardship to the domestic consumer and be detrimental to the industry's efforts to promote exports.

This is a timely warning against hasty action to impart a bullish twist to cotton prices by manipulating floor and ceiling prices. Indian cotton prices are already well above world parity and any attempt to push up the prices further will not only jeopardise exports of textiles but would also increase the domestic price of cloth. It will not yield any compensating benefits because higher prices, as past experience has borne out, do not necessarily lead to any significant increase in cotton production.

RECORD WORLD PRODUCTION OF COTTON

For the fifth year in succession, world production of cotton will set a new record during the current (1962-63) season. The U.S. Department of Agriculture has estimated the season's crop at 49.6 million bales (of 478 lbs. each), an increase of 300,000 bales over the Department's November estimate and 2.1 million bales or 4 per cent higher than the 1961-62 crop of 47.5 million bales and about 6 million bales more than the 1955-59 average of 43.5 million bales.

The upward revision of estimate reflects the significant increases in production in India, Mexico and Pakistan which more than offset the sizable declines in output in Brazil, U.S.S.R., Egypt and a few other countries. It is noteworthy that the increase in production is confined only to the free-world countries, whereas output in the communist countries taken as a whole is lower by 100,000 bales at 13.8 million bales.

The total area sown to cotton in the present season, estimated at 83.8 million acres, increased for the fourth consecutive year and is 0.9 million acres more than the 1961-62 acreage of 82.9 million acres. Higher acreage and the exceptionally high average yield of 285 lbs. per acre, as compared with 275 lbs. per acre in 1961-62, are responsible for the increased output.

In the free-world outside the U.S., major increases in production are expected in Egypt, India, Mexico, Uganda, Syria, Pakistan, Nigeria and Gautemala. In Egypt, higher yields under favourable growing conditions indicate a bumper crop, despite a substantial reduction in acreage following the last season's unfavourable weather and insect damage. More normal crops are expected in India and Uganda where yields are estimated to be substantially higher than during last season.

But what can I do to help?

There is so much that every Indian woman can do, *now*, to strengthen and defend the Home Front. Take part in Defence through local women's organisations. There is plenty to be done. Contribute, and *encourage* contribution, to National Defence Fund and buy Defence Certificates. There are, too, the many personal efforts you can make—in discipline, behaviour and attitude :

- *Wage war on waste; check thoughtless buying and resist inflated prices.*
- *Do not buy gold. Give your gold for country's cause.*
- *Be resolute in work, whatever it may be, because each task done just that little more efficiently helps the national drive, strengthens India's position.*
- *Rouse yourself from apathy, and Take Action.*

BE VIGILANT

—take part in national preparedness

One Purchase Officer with a headache cut his inventory down from 30 products to only 8!

The Caltex "Stop-Loss" plan was the headache antidote... When each department in a-plant specifies a lubricant it wants without reference to the purchases of other departments, there is bound to be a lot of waste and costly over-lapping. The Caltex "Stop-Loss" programme helps to eliminate this waste of lubrication by effectively reducing the total plant lubricant inventory. Caltex "Stop-Loss" is a complete plan for organising lubrication on an efficient basis. There is no other programme like it.

Find out today how Caltex "Stop-Loss" can specifically stop the problem in your plant. Help your operation to greater profit with the Caltex "Stop-Loss" Programme.

EXPORT DUTY ON TEA ABOLISHED

BUT EXCISE RAISED—IMPACT OF S.P.T. SEVERE

THE Government of India's budget for 1963-64 contains three important changes in indirect taxation in so far as the tea industry is concerned. First, the export duty on tea—which was reduced from 44 nP to 25 nP per kg. last year—has been completely abolished. Secondly, the refund of excise duty at 15 nP per kg. on tea exported abroad, which was allowed for the first time last year, has been withdrawn. Thirdly, a surcharge of 20 per cent on excise duty on tea has been imposed. As a result of this surcharge, the actual rates of excise duty now applicable on tea are as follows:

(nP per kg.)

Zones	Revised rates	Previous rates
I	18	15
II	30	25
III	36	30
IV	42	35
V	54	45

The above changes, according to the Finance Minister, involve a loss of Rs. 5.38 crores on the customs side and an additional revenue of Rs. 3.23 crores under excise duty, so that the relief to the tea industry comes to Rs. 2.15 crores annually.

The complete abolition of export duty on tea has been widely welcomed by both producers and exporters, though it is pointed out that the benefit of this abolition has been neutralised to a great extent by the withdrawal of the refund of excise duty on tea exported. No other tax, as Sir Richard Duckworth, Bart., the retiring Chairman of the Indian Tea Association, aptly said, in his speech at the annual meeting of the Association held at Calcutta on Friday last week, "has been more difficult to explain to our overseas customers and no tax has been more inconsistent with an export drive." The abolition of export duty has certainly enhanced the competitive capacity of Indian teas in the world market which, it is common knowledge, has turned out to be a buyers' market. East Africa, Ceylon and Pakistan have taken effective measures to augment their tea exports to several overseas markets at the cost of India.

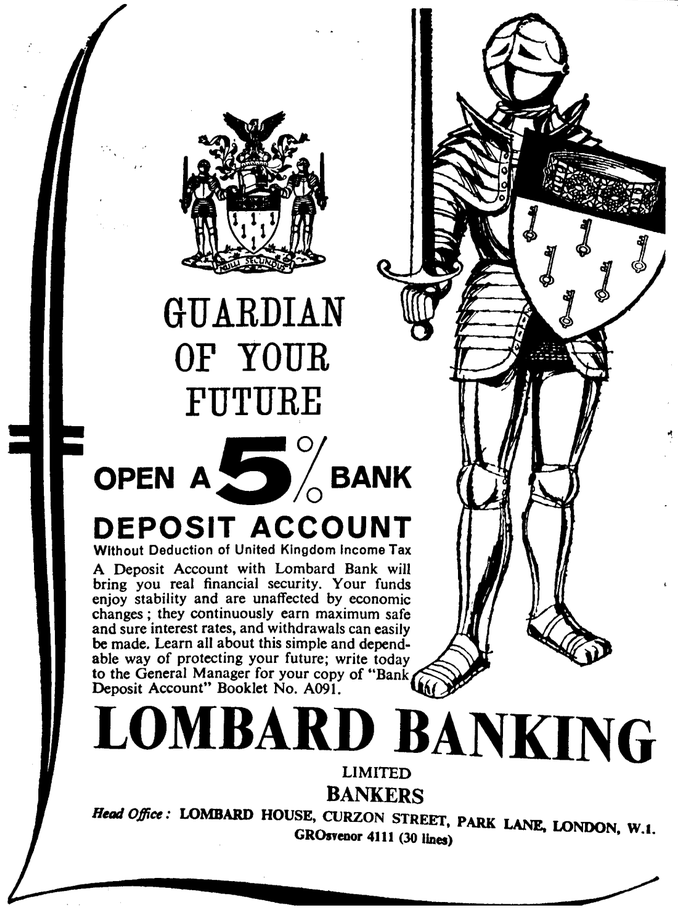
Simultaneously, with the abolition of export duty, the Finance Minister has sought to ensure a larger exportable surplus of tea by discouraging domestic consumption through a substantial increase of 20 per cent in excise duty. While the benefit of export duty abolition is enjoyed by both the tea estates and the exporters, the initial burden of the additional excise duty falls entirely on the estates, since the duty is collected before the tea actually leaves the gardens. The increase in excise, therefore, adds to the tea industry's difficulties of finance and interest charges. Nevertheless, Sir Richard considered the relief given in the budget with some satisfaction. He, however, suggested some modifications in regard to payment of excise and cess. One of the grave disabilities of the tea industry, according to him, was that it had to pay much in excise before it had sold its teas, a disability which the current budget had made more marked; until this duty was paid, no tea could leave the estate. He wanted that the industry must be allowed to pay excise duty in arrears in the form of a promissory note or post-dated cheque. He also wanted that the export cess should be added to the excise duty for purposes of collection; the burden of cess must be shared equally by all teas, whether leaf or dust, exported or not, and sold in auction or privately. In this connection, Sir Richard observed:

"...This (the export) cess was imposed sixty years ago to finance tea promotion. At the time of the imposition, there was no excise duty and no machinery for collection at the estate, the only opportunity for collection being when the teas passed through the customs at the time of export. These old conditions no longer exist, and it appears to us illogical, particularly at a time when Government seeks an increase in exports, that only export teas should pay the cess, and that leaf teas auctioned in Calcutta should receive what is in effect a subsidy from the producers. This is a topsy-turvy arrangement....It cannot be successfully argued that internal teas do not benefit from tea promotion campaigns or from the many other services which the Tea Board, financed by the cess, now renders to the industry as a whole. Moreover, if it can be arranged that we should pay our excise duty and our cess at the same time, a good deal of injustice to the exporter, and a vast amount of unnecessary documentation, will be avoided. All we ask is that the total collection of this cess from all teas should not exceed that which is now collected from export teas alone.

"We have preferred the idea of 'payment of excise in arrears' to the alternative of bonded warehouse, because we believe that the existence of bonded warehouses will necessitate a great deal of extra documentation, a virtual duplication of the excise staff, and are a more possible source of delay and confusion to the industry and trade. There must always be excisemen on the estates to see what teas leave the gardens and to collect duties on those which leave on direct sales or for destinations where there are no bonded warehouses. There must always be an excise staff available or on call at each bonded warehouse, while problems of identification would be numerous if excise rates continue to vary from district to district.

"It is true that payment in arrears would constitute a new system, but I do not think that novelty in itself is bad, particularly when there is already the complete machinery for the control of the system in position at the gardens and when the Central Board of Revenue has already accepted the principle that excise may in future be paid at estates by cheque."

The effects of Super Profits Tax on tea industry were also analysed by Sir Richard. He expressed serious concern about the likely impact of this tax on tea industry. This is understandable, since this industry will be hit harder than several other industries. For tea, as Sir Richard very pertinently pointed out, has always been an undercapitalised industry and a great deal of its expansion has been achieved *not by raising more capital but by ploughing back profits.* As a matter of fact, the capital structure of many companies has remained unchanged for years, though their acreage under tea and value of investment have increased enormously. "Such companies," to quote Sir Richard, "are bound to be hard hit by a tax which is based upon the percentage which their profits bear to their capital, even if certain classes of reserves are taken into account. What is more, tea's fortunes fluctuate, and we look to the occasional bumper year to make good the lean years. Tea must, therefore, view with anxiety any form of tax which regards profits of over 6 per cent as 'super-profits' and which apparently makes no provision for 'averaging' in an industry as susceptible as our own."



The Tea Association's President dilated at some length on the tea industry's various obligations to labour. He referred first to the workers' plea for more wages—the industry has already been paying since June enhanced wages to the great bulk of workmen—and their complaint against the conditions in which they lived. Appropriately enough, he asked: How will the Wage Board reconcile the relative priorities between the position of the tea industry as a national exporting industry, the payment of increased wages and the provision of improved working conditions? In this connection, Sir Richard alluded to the cost structure of the sample gardens. It is rather disquieting to learn from him that, even on the basis of existing wage levels, every garden (covered in the sample) in Cachar, 11 per cent of the gardens in Darjeeling and 25 per cent of the gardens in Assam are incurring losses. Sir Richard had a few pertinent observations to make on bonus to tea estate labour. He claimed that the industry's current scheme was the most comprehensive in the whole of India and was best suited to other industries too. Explaining the scheme, he said:

"The fortunes of a tea company vary so much that to impose a uniformly high wage would only result in the ultimate extinction of many tea estates or in their decline into producers of a commodity unlikely to attract overseas customers. On the other hand, tea has been known to have occasional years of admitted prosperity, and to deny the workers a share in this prosperity, even though it may be a prosperity owing little to the workers or even to the management, would be unfair. We have, therefore, accepted the principle of profit-sharing, and we have agreed that, i. we make profits, a share of those profits will go to our workmen. Such an arrangement is very flexible, it imposes no additional burden when times are bad and allows all our workmen to participate when times are good. So far as the individual's share is concerned, our practice is that the worker will share in the profits in accordance with the number of days which he has worked in the year; the more days worked, the greater his share in the profit.

"Our agreement also provides for an equalisation fund which is intended to ensure that each year something is set aside, so that, when the inevitable lean year comes along, there is a reserve from which a payment can be made.

"Since our agreements started, we have paid out over nineteen crores in bonus, the equivalent of nearly fifteen million pounds sterling."

The Bonus Commission will do well to take note of these observations. If the scheme adopted in the tea industry is, as is claimed, not only comprehensive in coverage but also flexible in approach and if it is fully agreed to by both managements and labour unions, it will be better to leave the scheme as it is, instead of foisting on the industry an altogether new scheme.

A FREE MERCHANT LANDS IN MADRAS

The Madras Presidency of 1788 consisted of Fort St. George, the surrounding hamlet of Madras City and the Northern Circars. It was in that year that Thomas Parry completed his five month voyage from England and set foot in Madras and established himself as a Free Merchant, trading in various commodities.

Could he have dreamt then that, 175 years later, the firm founded by him would be contributing so much to the economy of the country, being engaged in the manufacture of fertilisers, sugar, confectionery, industrial and potable alcohol, chemicals, acids, essences, sanitaryware and light railway equipment, in the formulation of plant protection product, in the distribution throughout India of light and heavy machinery, pharmaceuticals and consumer goods, and in insurance, and shipping.

THOMAS PARRY

The E.I.D.-Parry Group of today consists of E.I.D.-Parry Ltd., Parry & Co., Ltd., and a number of subsidiary and associated concerns, in all nine companies of substance, providing employment for more than 10,000 people.

The Group continues to increase and broaden its activities, to provide employment to increasing numbers and to play its full and responsible part in the country's drive to achieve economic independence and raise the standard of living.

THE E.I.D.—PARRY GROUP, MADRAS.

FDS/PP/1-A

DEBT POSITION OF UNION GOVERNMENT

INTEREST BURDEN HEAVY

THE amount which the Government of India will be paying as interest on public debt in the financial year commencing from 1st April next is estimated at Rs. 274.24 crores, representing a rise of Rs. 34.21 crores over 1962-63 (revised) and of Rs. 65.80 crores over 1961-62 (actual). The interest payments in respect of the year 1952-53 aggregated no more than Rs. 70.66 crores. Of the total interest payments of Rs. 275.24 crores to be made in 1963-64, interest on ordinary debt raised in India is put at Rs. 142.64 crores and that on debt raised outside India at Rs. 59.40 crores. Interest on unfunded debt is estimated at Rs. 64.96 crores. The other interest payments are Rs. 6.51 crores on reserve funds, etc., and Rs. 1.73 crore on other obligations.

The appreciable increase in interest payments has been due to the substantial loans raised in India and outside by the Government of India year after year. The total outstanding public debt of the Government as at the end of the next financial year (31st March 1964) is expected to be of the order of Rs. 7,036 crores, as against less than Rs. 5,951 crores at the end of this month and Rs. 2,113 crores ten years before (31st March 1953). The marked rise of Rs. 1,035.36 crores between this and next year is accounted for by both debt raised in and outside India, the former moving up (by Rs. 674.22 crores) from Rs. 4,571.56 crores to Rs. 5,245.78 crores and the latter (by Rs. 411.16 crores) from Rs. 1,379.03 crores to Rs. 1,790.19 crores. The table below compares the debt position of the Central Government at the end of next year with that at the close of the current year and before the war:

(In crores of rupees)

	As on 31st March		
	1939	1963	1964
Debt raised in India :			
Current loans ..	437 87	2,851.04	3,068.27
Treasury Bills ..	46 30	1,414.98	1,868.98

Bank of India, Tokyo ..	..	0 06	0 05
New credits ..	..	5.00	120 00
Total ..	464 95	1,379.03	1,790.19
Total—Public debt ..	949 77	5,950.59	7,035.97

In addition to the above debt, the Government of India is liable to repay the investments of the deposits of the P.L. 480 counterpart funds, the balances in the various provident funds, the Post Office Savings Bank, the Post Office Cash, National Savings, National Plan, National Plan Savings, National Defence, Treasury Savings Deposit and Defence Deposit Certificates, deposits under the Cumulative Time Deposits Scheme, the Depreciation and Reserve Funds of the Railways, Posts and Telegraphs, etc., and certain other deposits, mainly relating to deposits of income-tax, super-tax, etc. These balances are estimated to amount to Rs. 2,066 crores at the end of the current year and Rs. 2,349 crores at the end of 1963-64. Taking the regular debt and these liabilities together, the debt position of the Government of India will stand as follows:

(In crores of rupees)

	As on 31st March	
	1963	1964
Regular loans ..	5,950 59	7,035.97
Other liabilities ..	2,066 42	2,348.84
British War Loan ..	—20.62	—20 62
Total ..	7,996.39	9,364.19

This outstanding debt may be analysed with reference to the purpose on which the money has been utilised or the assets by which it is covered. An analysis is given below:

(In crores of rupees)

	As on 31st March	
	1963	1964
Railways ..	1,885.98	2,104.48
Posts and Telegraphs and other commercial departments (including Damodar Valley Corporation)	260.60	303.21
Investment in commercial concerns (industrial development) ..	901 26	1,125 39
Loans and advances ..	3,340.53	3,789.02
Amounts recoverable from the U.K. and the States on account of purchase of annuities for sterling pensions ..	18.17	17.54
Subscription to the International Monetary Fund ..	282 00	282 00
Purchase of shares of the I.B.R.D. ..	37 00	37.00
Subscription to the International Development Association ..	11 82	15 52
Purchase of U.N. Bonds ..	0 95	0 95
Debt due from Pakistan ..	300 00	300 00
Cash and other investments ..	101 93	115.90
Total ..	7,140 24	8,091.01

Allowing for these, the uncovered debt will amount to Rs. 1,273 crores at the end of the budget year, as against the pre-war figure of Rs. 188 crores. The whole of this cannot, however, be called unproductive, since the large grants to State Governments for development in recent years which increase the productive capacity of the country as a whole are not entirely unremunerative. Similarly, the large capital outlay on Central property, the value of which is either not shown at all in the Government's accounts or is shown as non-commercial (such as the Delhi capital outlay and defence capital outlay) is not without value. Besides, a considerable portion of the capital outlay has been incurred on schemes of State trading such as foodgrains, fertilisers, iron and steel, etc., of which there are reserve stocks, particularly of foodgrains.

The statement below analyses the interest-bearing obligations of the Government of India and the interest-yielding assets held by them:

(In crores of rupees)

	As on 31st March		
	1939	1963	1964
Interest-bearing obligations :			
In India			
Public Debt :

SUCCESSFUL AND NOT-SO-SUCCESSFUL AIRLINERS

TYPICAL CASES EXAMINED

By Our Aviation Correspondent

WHAT are the principal factors involved in the success or non-success of an airliner? What, for instance, makes airliner A a "best-seller" and causes airliner B to be "left at the post"? It is a fascinating study. At first sight, price, reliability, and economics generally, ought to govern sales but, important though these factors undoubtedly are, the record does not seem to give them pride of place. Nor, for that matter, are passenger appeal and public confidence more than contributory advantages—though their absence can, of course, be decisive. It is timing, one suggests, which counts more than anything else. There is a tide, as Shakespeare puts it, "which taken at the flood, leads on to fortune." It may be of interest to examine, in that light, a few of the outstanding cases, in recent years, of successful and not-so-successful aircraft.

The Unsuccessful Tudor

Let us start with an early example—that of the Avro Tudor. This was a comparatively simple, unsophisticated, piston liner, built by the firm which produced that wonderfully successful war-time bomber, the Lancaster. Launched, with a considerable fanfare of publicity, in the later forties, initial trials and, indeed, first production were without incident. The timing, however, was not propitious. B.O.A.C.—obviously its best potential customer—was already looking elsewhere, influenced, presumably, by the greater productive capacity and then wider experience in the commercial aircraft field of the United States.

In the event, the Tudor was selected by only one of the then existing three air corporations. It was destined for operation on routes to South America. There followed sensation—first one, and then a second. Tudor disappeared without trace over the south Atlantic. We shall probably never know the cause or causes. The aircraft virtually perished in a blast of bad publicity and political controversy. Not, it might be argued, a case of timing at all, but attributable solely to those initial disasters. That is conceivable—but, one suggests, debatable. Had the British transport industry supported the Tudor, and had the subject not become a political football, despite those early mishaps, it could quite easily have gone on to eventual success. The few Tudors which were built did yeoman service, in later years, with an independent operator. Consider, also, the Lockheed Constellation. This started with just such a handicap—a series of disastrous fires. It emerged, however, as one of the most successful piston liners of our time.

The Successful Viscount

On the credit side of the British ledger, the Vickers Viscount springs instantly to mind. It is now more than a decade since the first Viscounts went into service, and, since then, more than 420 have been sold to airlines all over the world—including quite a substantial number to domestic airlines in the United States. It is no small achievement, in the face of intense American competition, to break into this market and for a British aircraft this is the accolade, the very hallmark of success. What is the Viscount's secret? It is a very reliable and extremely economical short/medium haul transport. From the very outset, its lack of vibration and comparative quietness gave it immense passenger appeal. Both these factors counted, but the fact that it was the very first turbo-propeller airliner, and well ahead of competition in that field, counted for more. The timing, in fact, was superb and, barring any serious defect, the aircraft was assured of success.

The Bristol Britannia

Coming to more recent times, we find two turbo-propeller aircraft to whom fortune has by no means been so kind—the Bristol Britannia and the Lockheed Electra. One cannot, of course, class either of these aircraft as failures—in the sense that the Tudor, the Brabazon, or the Short Princess flying boats were failures. Both the Britannia 313 and the Electra are still in service. By the same token, however, they certainly do not rate as successes. In the case of the Britannia, initial production suffered many and serious delays. Indeed, almost two years elapsed between the first, and much-publicised, delivery dates, and its eventual debut with B.O.A.C. By the time it was ready, the big jets were almost ready, too. Its market had disappeared.

In all fairness, one has to record that, during the six years the Britannia 102s served B.O.A.C., completing, incidentally, 5,000 million passenger-miles, it had a clean record. Not one single passenger received so much as a scratch! That was a remarkable achievement—unequalled, one believes, by any other airliner. One more feather in its cap—according to El Al, who took delivery of their Britannia 313s in 1957, these aircraft have given, and are still giving, trouble-free and splendid service.

The Lockheed Electra

The Lockheed Electra is, perhaps, a rather similar case. Not that there was any delay in delivery dates but it came on the market at a time when the air transport industry had turned to jets. It had an added handicap—it suffered a number of initial setbacks. Twice, once in 1959 and again in 1960, structural failure of a wing led to disaster. After an investigation, comparable in thoroughness to that which followed the early Comet disasters, the cause of the failure was traced and rectified. It is now, however, probably too late for the Electra. The loss of public confidence, to which the initial troubles gave rise, can, perhaps, now be discounted. The fact remains, however, that for turbo-propeller aircraft the times are out of joint.

Other Interesting Cases

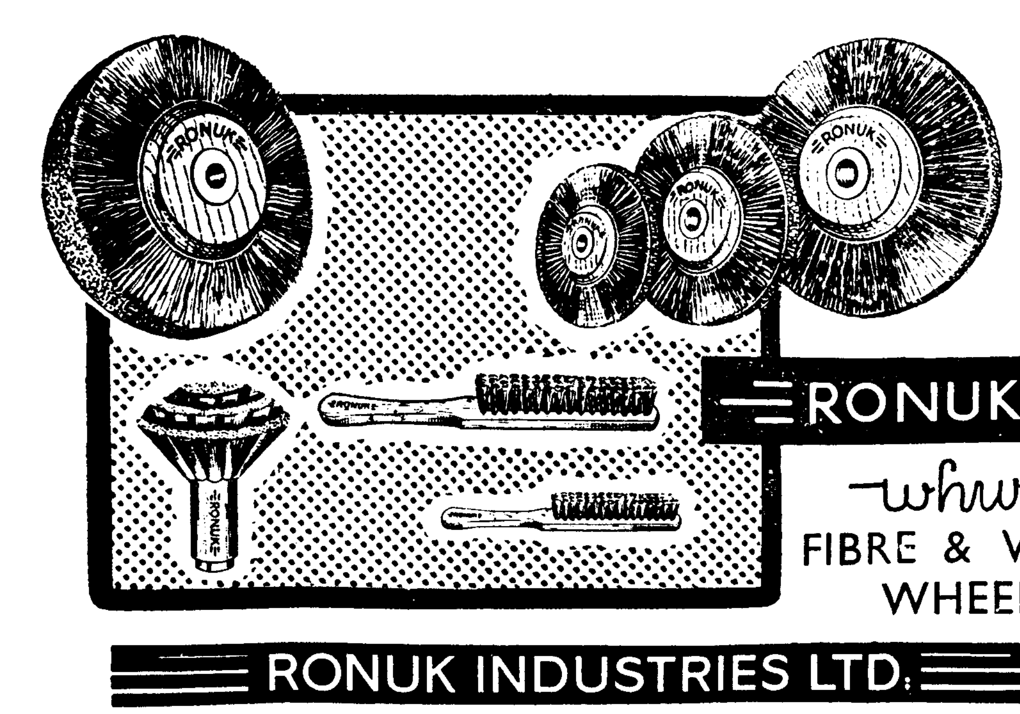
There are, of course, many other interesting cases—the Comet, for example, once so far ahead of its competitors but dogged by ill-fortune, the the Convair 880/990, and others. There are, too, such newcomers as the VC-10, the DH Trident, and the Boeing 727. But their destinies lie in the future and are as matter for speculation rather than assessment. One simply cannot leave this subject, however, without some reference to that hoary old 'ever-green,' the Douglas DC-3. Here—more by good fortune, perhaps, than design—is the supreme example of successful timing. Well in advance of its contemporaries, it was the natural choice for mass production as a war-time transport. Produced in thousands, it was later, as war-surplus material, sold in thousands. It became, in fact, the very corner-stone of post-war air transport. Its inimitable qualities include unflagging strength, reliability, docility, and versatility. Some day—the more's the pity—this venerable old aircraft will be retired. We shall not see its like again.

TEN YEARS OF LUFTHANSA

It was no more than ten years ago when—unnoticed by the public—aviation specialists from among the ranks of the old German Lufthansa got together in Cologne-on-Rhine and founded the "Aktiengesellschaft fuer Luftverkehrsbedarf," the public limited liability company for aviation transport. Within a very few years this inconspicuous enterprise developed into one of the leading international airlines; since 1st April 1955, the "blue bird on yellow ground" (the staff of Lufthansa likes to describe its emblem as a stylised crane) in peaceful competition has conquered one foreign "aerie" after another. Today the forty aircraft of Deutsche Lufthansa fly to 31 countries in four Continents. The total length of their serviced lines amounts to approximately 112,000 kilometres and holds thus the eleventh rank in world air traffic. Every three minutes somewhere in the world between Tokyo, Johannesburg, Santiago de Chile and San Francisco an aircraft with the blue crane on its tail will take off.

Among aviation experts the rapid post-war rise of Lufthansa was observed with surprise. For the successor to the old German Lufthansa, which once had a fine reputation but was destroyed during the Second World War, took off very late for its first post-war flight and with severe handicaps: while the large European and North-American airlines directly after the war had begun to establish and expand their international network of flight routes and had assured for themselves all flight rights in the Federal Republic by establishing connections to West Germany as well as to West Berlin, to the Federal Republic of Germany any construction of aircraft and training of flight personnel was strictly prohibited. However, the Cologne "AG fuer Luftverkehrsbedarf" discovered a loophole in the Occupation Statute; the purchase of foreign aircraft and the employment of foreign pilots had not been expressly interdicted. Thus from 1st April 1955, English and American pilots flew as captains the Convairs and Superconstellations of the newly founded Lufthansa. One year later the first new West German co-pilots were permitted to fly as captains.

In 1955 the flights across the Atlantic to New York and Chicago were resumed. Until today this "classical race track" of international aviation has remained the most frequented route of Deutsche Lufthansa. In 1962 the German airlines held the fifth rank on the North-Atlantic route after the American mammoth airlines PAN AM and T.W.A., the British B.O.A.C. and the French Air France.



On all overseas routes operated by Lufthansa modern jet giants have ousted the old piston aeroplanes; also in European traffic the German airlines intend to employ exclusively jet aircraft as from 1964. Apart from the expansion of the flight network in Central and South America and in Africa, a greater frequency of flights in their European service together with a reduction of flight time and transit hours are at present the main goal aimed at by Lufthansa planners.

BRITAIN'S BIGGEST HOVERCRAFT

Britain's biggest Hovercraft, the Westland SRN-2, will give its first oversea demonstration later this year—in Canada. The Westland Company says that the 70-seat, 70-knot craft will operate on the St. Lawrence River—and possibly in other areas—as a continuation of its evaluation programme. It will be shipped from Southampton and is due to arrive in Montreal in Mid-April. The demonstrations will be watched by a cross-section of Government, military and industrial representatives.

Canadian interest has been increasing since the Westland Company and Autair Helicopter Services of Montreal concluded an agreement last year to sponsor the SRN-2 in Canada. A Westland spokesman said: "The large, fast SRN-2 has an acknowledged potential for operation over the snow, ice, river, lake and muskeg of the northern sub-continent. Possibilities for the future are considerable, not only in the developed areas of Canada, but in opening up the undeveloped regions north of the 'tree line'."

In the last four years, the Company has developed the Hovercraft from its basic concept into a fast, manœuvrable and seaworthy vehicle. The operation of the SRN-2 in an oversea environment to which it is particularly suited, it is said, will emphasise the practicability of using it as a freight and passenger-carrying vehicle.

VIVIAN BOSE COMMISSION REPORT—I

IMPACT ON COMPANY LAW

(Contributed)

HISTORY has been made by the publication of the Vivian Bose Commission Report on the administration of the Dalmia-Jain companies in January 1963, as never before in the annals of the corporate activities in our country had such a detailed and deep study of a group of companies been attempted by a competent authority or tribunal. The significance of the Report is all the more greater, for it is going to leave a permanent imprint upon the Company Law of our country. The Union Minister of Commerce and Industry, Mr. K. C. Reddy, in answer to a question in the Rajya Sabha on 25th February 1963, said that "the Government are also considering the recommendations of the Commission on the amendment of the Companies Act, in order to prevent the recurrence of such malpractices," as have been limelighted in the Commission's Report, in future. The said Report has been the product of painstaking investigations that spread over a period of nearly six years. It was placed before the two Houses of Parliament on 23rd January 1963 and, since then, it has been the focus of public attention and a subject of most avid interest and discussion in the Press and public in the country.

Much of the discussion that has taken place so far (or might take place in future) on this Report has centered on the more sensational findings of the Commission relating to certain fraudulent transactions, the use of questionable means to make personal gains at the expense of the investing public, etc. While these findings constitute one facet of the Report which we have no doubt will be dealt with by the Government properly, the other more significant aspect of the Report which has gone largely unnoticed but at the same time is of fundamental importance for students of corporate law and practice, is that certain basic recommendations have been made in the Report for improving the contents of Company Law in our country so that many of the malpractices that are noticeable in the Indian industrial and commercial life do not re-occur, and are controlled in a suitable manner. The purpose of the present article is to study the basic recommendations of the Commission's Report which aim at improving the Company Law and reforming the corporate sector in the country, against the background of the development that has taken place since the passing of the present Company Law of 1956 and its subsequent amendment in 1960 and also against the backdrop of trend of current thinking on the role that the Companies Act is expected to play in a modern industrial community whose development is guided and inspired by concepts and objectives of a welfare and socialist society.

Role of Company Law

The new role of the Company Law has been sufficiently emphasised in the statutory reports on the working and administration of companies submitted to Parliament in the past by the Department of Company Law Administration. In this context, it would be pertinent to quote from the latest report, namely, that for 1961-62, which was presented to Parliament very recently. It says:

"The traditional role of Company Law, as an instrument for the maintenance of law and order in trade and industry and as a regulator of the rights and duties of different interests which combine to organise and operate a joint-stock company, is now, by and large, fairly well recognised in the business world, but the new role of company law, which stems from the emergence of the joint-stock company as the dominant social and economic institutions of our times, has yet to produce its impact on the normal thinking of the average company management in this country. In the years ahead of us, this will result in growing private and public preoccupation with the problems connected with the exercise of significant power on a large scale, associated with the management of companies. In this situation, the role of company law as an instrument for regularising and rationalising the use of this power, in a manner which subserves the legitimate private ends of business and at the same time fulfils the essential social purposes of trade and industry, will become increasingly important."

Now, before we come to discuss the basic recommendations made by the Bose Commission's Report, it would be useful briefly to recall the events leading to and following the appointment of the Commission and the scope of the Commission's job. It is equally relevant to mention that the unsavoury facts relating to the functioning of the group of companies and management thereof concerned, narrated in the Report, had occurred in a period which was covered by the old Companies Act of 1913 which was far too lax and liberal, as compared with the Companies Act of 1956, to check effectively cleverly perpetrated malpractices. On top of this, the old administrative machinery was a decentralised and loosely-knit one and produced little impact over the corporate sector, much less to cause and strike fear among the erring elements of the corporate life in the country. So the use of anti-social practices continued in a cavalier fashion.

Now to give the background of the inquiry into the affairs of the Dalmia-Jain group of companies. It was in December 1956 that the Ministry of Finance of the Government of India made known to the public their decision to cause an inquiry into "the administration of a number of companies, the nature and extent of the control, direct and indirect, exercised over such companies and firms" by certain important persons belonging to the so-called Dalmia-Jain group. This inquiry was ordered under Section 3 of the Commission of Inquiry Act of 1952. It arose as a sequel to certain alleged irregularities, breaches of trust, dishonest and bad commercial and company practices, defaults and contraventions of the Company Law committed by the directors of the companies belonging to the concerned group. The nine companies specifically named in the Government notification of 11th December 1956 were: the Dalmia-Jain Airways Ltd., Dalmia-Jain Aviation Ltd. (name changed later to Asia Udyog Ltd.), Lahore Electric Supply Company Ltd. (name changed later to South Asia Industries Ltd.), Shapurji Broacha Mills Ltd., Madhowji Dharamsi Manufacturing Company Ltd., Allenberry & Co. Ltd., Bharat Union Agencies Ltd., Dalmia Cement and Paper Marketing Co. Ltd. (name changed later to Delhi Glass Works Ltd.) and Vastra Vyavasaya Ltd. The Commission had also been given the power to add other companies for their investigations and, in exercise of this power, the Commission included within the scope of its inquiry Dalmia Dadri Cement Ltd. in 1958. Thus, the Commission went into the affairs of ten companies of the Dalmia-Jain Group.

Set up of the Commission

Initially, the Commission of Inquiry was constituted with the late Mr. Justice S. R. Tendolkar of the Bombay High Court as Chairman. He was to be assisted by two other members, one drawn from the Accountancy profession and the other from the Indian Revenue Service. Later, on the resignation of Mr. Justice Tendolkar, Mr. Justice Vivian Bose was appointed as the Chairman and the voluminous report produced by the Commission is reported to be overwhelmingly the handicraft of this eminent jurist. Later in 1960, the Commission was strengthened by inclusion of Mr. Justice V. R. Sen of the Madhya Pradesh High Court who towards the concluding phase of the inquiry succeeded Mr. Justice Bose as Chairman. The expert team of the Commission has brought out a report of 815 pages, divided into two Parts, of which Part I contains seven volumes. In Part I, the first volume gives a general survey of the Commission's task, the second volume deals with the group as a whole and the issue of dissolution of the group and the remaining five volumes of Part I and Part II of the Report deal with the various companies inquired into separately. While the specific abuses practised by the management of the group, discovered and unravelled by the Commission, are scattered over some 800 pages of the Report, the general recommendations regarding the improvement of the provisions of the Company Law are succinctly given in the last 15 pages of the Report and it is with reference to these that an objective study has been attempted in the following paragraphs of this article.

Now, for the convenience of our discussion, we shall first mention in brief the general findings of the Commission regarding the past and present malpractices in the corporate sector which have, by and large, been covered by the Companies Act 1956 and by its amendment Act in 1960 and then take up the suggestions of the Commission regarding the broad issues of Company Law and other related legislation, particularly the Taxation law.

To touch upon the findings of the Commission on company practices, a close study of the Report reveals the prevalence of the following unhealthy practices in the corporate sector which came to light during the investigation of the group of companies referred to the Commission:

First, the bad practice of improper transfer of assets of one company to another with the concealed purpose of benefiting the management at the expense of the investors.

Secondly, the practice of advancing funds of companies as loans at relatively low rates of interest and without any adequate security to the closely held private companies with weak and vulnerable financial position and to the directors.

Thirdly, the practice of investing the funds of public companies, including banks and insurance companies, for purchasing the shares of other companies with large reserves in liquid form with a view to obtaining control over them.

Fourthly, the practice of transfer of assets of public companies under the control of a management, to closely held private companies and then convert the public companies into private companies and thereafter take the converted private companies into liquidation by appointing liquidators who are considerate towards the management. The liquidators in such cases also avoided looking into the details of transactions.

Fifthly, the practice of appointing dummy concerns and firms as selling agents at high rates of remuneration for long durations and subsequent termination of their contracts within a short period of their appointment and thereby obtain large sums by way of compensation by the persons in control of the management of companies which had appointed selling agents.

Sixthly, the practice of non-declaration of dividends by public companies even though they were making profits, with a view to depressing the value of their shares, so that the shares belonging to the outside general public, who would get frightened by the fall in share prices, were purchased by the management and after the shares had been cornered, lush dividends were declared and these accrued to the cornerers.

Seventhly, the practice of fraudulent payment of underwriting commission to themselves by the promoters of companies by clever manipulation of transactions and that of allotment of shares to non-existent persons.

Eighthly, the practice of avoidance of income-tax by various ways.

Ninthly, the practice of fabrication of books of accounts, manipulation of annual accounts, destruction of records, etc.

These are the illustrative examples of practices often indulged in by the company management of uncommon character.

Objects Clause

The first general issue touched by the Commission in its chapter on recommendations relates to the omnigenous nature of the objects clause of the Memorandum of Association. Various Committees on Company Law as well as the witnesses who tendered evidence before them in the past pointed out that the octopus nature of the objects clause was fraught with great dangers and risks for the existing and potential investors of companies. First, there is the danger that the long list of objects gives enormous degree of discretion to the management in power to take up or dispense with any of the many activities without bringing the change to the notice of the shareholders or the Government who could judge the matter on merits. As it is, the scope of the objects clause is kept so wide as to make the application of provisions of Section 17 of the Companies Act, 1956 ineffective and thus completely "obviate applications to the Courts when some new venture is contemplated" which would have required the consultation of the existing shareholders as necessary and offered a chance to the Government through the Registrar of Companies to express their views.

The second danger emanating from the present prolific nature of objects clause is that the more unscrupulous managements often give some ostensible business prominence in the Memorandum by stating it at the top of the objects clause, while the activities which the company intended to pursue are mentioned down in the string of objects and purposes in an omnibus manner. In this way, the innocent and gullible investors are misled and often financially ruined.

While studying this important matter, the Commission examined the observations of the Bhabha Committee on Company Law. Although the Committee "considered the question of imposing certain restrictions on the wide powers taken by companies in their Memoranda to carry on every conceivable business" and appreciated the necessity of imposing restrictions, it failed to "evolve a practical method to distinguish between the two types of businesses and to recommend the basis of an effective legal provision." Instead, it preferred to rely, as the Commission says, "on the responsible judgment of the management and the periodical vigilance of the shareholders." Thus the Bhabha Committee leaned upon the traditional and conservative approach, even though within the comity of the Anglo-Saxon laws, which for a long long time had served as the basis for codification of laws in our country, an example existed in the Canadian Corporation Law of 1934 (Sections 7 and 14) which distinctly distinguished between the principal and the incidental and ancillary business of a company. So to say, the Bhabha Committee was guided by the decision of the British Parliament which rejected the radical suggestion on this matter put forward by the Cohen Committee on Company Law in England in 1946. This Committee, it will be recalled, "admitted that the existing prolixity in defining the objects of a company in its Memorandum of Association was neither in the interest of shareholders nor of creditors, and as Memoranda of Association were now drafted, the doctrine of *ultra vires* was an illusory protection for shareholders and a pitfall for third parties dealing with a company" and took the view that "the prevailing practice was largely a consequence of the rigidity of the then existing provisions of the English Company Law relating to the alteration of a Memorandum" and, therefore, recommended considerable relaxation in these provisions and in particular suggested that a company should have as regards third parties the same powers as an individual. The Vivian Bose Commission, however, has, on a balanced consideration of the issue, come to the conclusion that the Company Law should be amended "to provide that every company shall clearly state its purposes and objects under two separate categories, namely, (*a*) the principal and ancillary objects which the company intends at the time of its incorporation to pursue; and (*b*) all other objects which are separate from the principal and ancillary ones mentioned in item (*a*) above."

Thus, the Commission's recommendation regarding the objects clause is a progressive one and derives inspiration from the Canadian Corporation Law. It goes much beyond the suggestion made by the Jenkins Committee in England recently which merely suggested that "the Act should be amended to provide that every company should have certain 'common form' powers which would apply automatically to every company unless excluded or modified, and that the Act should make it clear that the powers listed in this way should be merely ancillary powers exercisable in the course of carrying on a company's business and not specific objects." This recommendation, though expected to lead to some simplification of the Memorandum, offers only a nominal remedy or safeguard against the extensive and wide-ranging nature of the objects and purposes of the company.

Diversification

Arising out of the question of the objects clause, the Commission has also discussed the desirability or otherwise of the practice of companies to diversify their activities into totally unconnected lines of business, which, though might have been covered by the objects clause and were perfectly legal, are otherwise quite objectionable. In recent years, the Government's policy on this subject has become clearer and, by and large, diversification is now discouraged and disfavoured. To a limited extent, diversification tendencies are today controlled by the instruments of licensing committee, etc. The official opposition to diversification is based on several grounds, such as that, through this, tax evasion and avoidance are practised and that it helps in the generation of powerful speculative forces and tendencies by premature and loose talk about the impending diversification moves by the well-established companies and, as a result, unhealthy conditions of boom start ruling over the stock exchanges which eventually do more harm than good to the interests of the general class of investors. Further, it is believed that diversification tends to reduce competition and creates difficulties in the way of small and medium-sized businesses to come up. Also, insofar as it limits the opportunities for participation in new fields of industrial activities only to the existing investors who enjoy the right of pre-emption under Section 81 of the Companies Act, 1956, it stifles the growth of property-owning democracy in the country. Another ground for opposing the new trend of diversification is that it leads to a messy production of financial accounts from which investors cannot make out the performance of new and old lines of manufacture. Lastly, an overwhelmingly important ground for objecting to diversification is that it leads to concentration of economic power in the hands of a small group of people. Such concentration has to be checked under the mandate derived from the directive principles of the Constitution.

However, of the foregoing objections put forward against the diversification moves by companies, the Commission has taken note of only the objection based on taxation. It observes that "in recent times, there have been instances where companies have gone in for diversification and diversified their activities into lines other than the principal object or objects ancillary thereto. We are not necessarily condemning diversification as such, and feel that this tendency may largely be due to the system of inter-corporate taxation of dividends." But, while noting this, the Commission has also pooh-poohed the suggestion of formation of separate subsidiary companies and observes that, "in countries where inter-corporate taxation does not exist, the tendency for a group is to form separate subsidiary companies under the main holding company; but this would prove to be far too expensive from the tax point of view in this country, owing to dividends being taxed at each stage of its corporate travel." Instead of clearly opining against diversification, the Commission has made a recommendation which, in effect, means that, when such a move is planned, the shareholders of the company should be taken into confidence. The Commission has also suggested that "a provision should be made in the Act to the effect that a company shall not engage itself in any activities coming within the scope of ancillary objects other than the principal one, unless such activities are sanctioned by a special resolution of the company in general meeting."

Underwriting of Share Issues

Two other matters having a bearing on the issue of capital for initial or expansion needs by the companies touched by the Commission relate to underwriting commission and issue and allotment of shares. In regard to the underwriting of shares which is governed by Section 76 of the Companies Act, 1956, the Commission discovered that, often, a company acted as underwriter of another public company in which the directors of the first company had a major interest and commission was paid for issue of capital which was disclosed in the prospectus to have been paid in full by directors themselves. Thus, by this device, persons in control of the first company earned some money in the shape of underwriting commission "at the cost of the investing public although the underwriter was not exposed to any risk." In order to counteract this objectionable practice, the Commission has recommended that the underwriting commission "shall not be paid to any persons on such shares or debentures as are actually subscribed for at the time of the filing of company's prospectus or statement in lieu of prospectus" and further that "a copy of the contract or agreement for the payment of the commission shall be delivered to the Registrar simultaneously with the filing of the prospectus or the statement in lieu of prospectus."

Issue and Allotment of Shares

Much more pernicious in nature than the aforesaid practice of earning underwriting commission by the directors of interconnected public companies was the possibility of issue and allotment of shares in the names of fictitious or non-existing shareholders as the provisions of the Company Law in force did not require affirmation regarding the genuineness of applicants. The Commission noted with some satisfaction that such a practice was not "widespread" but even then felt that it required to be checked. To eradicate this practice, the Commission has recommended that "a provision should be made in the Companies Act, whereby any person who either makes an application to the company or otherwise induces the company to allot or transfer its shares in the names of fictitious or non-existent persons, shall be punishable with imprisonment which may extend to five years" and that this penal provision "shall be inserted at a prominent place in every prospectus issued by a company and in every form of application for shares that is issued to any person."

Blank Transfers

Close to the question of existence of holdings in the names of fictitious or non-existent persons, comes the much prevalent practice of holding of shares in "blank transfers" and nominee holdings which, though quite legal, was fraught with considerable harm. The Commission recalls in its Report the advantage that accrues from "blank transfer" insofar as *inter alia*, it saves the payment of stamp duty by the successive buyers. As against this gain, the Commission makes mention of four types of abuses flowing from this practice, namely, (a) it helps concealment of the identity of the real beneficial owners behind their nominees, (*b*) it helps the evasion of tax by suppression of "secret profits" invested in holdings on blank transfers, (*c*) it also facilitates window-dressing of balance-sheets of companies by reshuffling of shares held in "blank tranfers" between associated companies with the object of substituting inter-company loans and advances at the time of the closing of the accounts by investments, and (*d*) it brings into existence fictitious or antedated transactions in the books of companies in order to create fictitious losses in investments for the purpose of reducing the taxable profits.

From the string of recommendations made by the Commission on this subject, it appears that the Commission attached the greatest importance to the abuse of concealment of the identity of the real beneficial ownership behind the nominees which, even with the aid of the powers conferred on Government under Section 247 of the Companies Act, 1956, could not be established by the Government. The Commission, however, has not recommended outright abolition of the blank transfer system but has fashioned its recommendations in this regard broadly on the lines of those made by the Jenkins Committee on Company Law in England which, in turn, following the American example, recommended that the identity of holders of 10 per cent shares in quoted companies and the extent of their individual holdings of and transactions in the equity shares should be recorded by the company in a new register within, say, three working days of the notification to it and this register should be kept open by the company for inspection by the same persons and on the same terms as the register of members of the company. The recommendations of the Commission, in fact, are more onerous than those proposed by the Jenkins Committee, as the Commission has recommended the fortification of provisions of Sections 307 and 308 of the Companies Act by a new provision requiring disclosure of beneficial owners of 5 per cent or more of the equity capital of a company and the compulsory filing of all such disclosure of beneficial interests in holdings of and transactions in the shares, as recorded by the company, with the Registrar of Companies along with its Annual Return under Section 159 of the Companies Act, 1956. The only important relaxation from the various new obligations on this point made by the Commission is that the recommended disclosure, etc. "should not apply to holdings in a private company" or should "affect the operation of Section 153 of the Companies Act, 1956."

Besides devoting its attention to the question of the strengthening of the provisions of the Companies Act for disclosure of beneficial ownership of a stipulated limit, the Commission has also made suggestions for rationalising the mechanics and use of blank transfers. Among others, the more important suggestions made by the Commission are that

(*a*) suitable statutory provisions (presumbably in the Securities (Contracts) Regulation Act, 1956) be made to permit shares being held on blank transfer only for a limited period, say, for a period of six months in the case of listed securities and two months in the case of non-listed securities;

(*b*) the transfer form should be standardised and a form for execution of the instrument of transfer to be delivered to the Company for having the transfer of shares registered; and

(*c*) reduction in the rate of stamp duty chargeable on the transfer of shares which would operate as an incentive against keeping the transfers blank and the resulting loss in revenue on this account may be more than made up by the volume of transfers as well as by the possibility of reducing evasion in the matter of direct taxes.

Board of Directors

As is well known, the board of directors of companies in many a case is composed of persons who are subservient to some other persons in accordance with whose directions or instructions they or the board of directors are accustomed to act. Such directors go by the name of 'deemed' directors or 'dummy' directors who in many companies happen to be employees, even such as, stenotypists, typists, personal secretaries, domestic staff, etc., whose job merely is to carry out loyally the dictates and wishes of others having controlling interests without disclosing the identity of the latter and if the occasion arose cheerfully to bear responsibility and consequences for questionable and illegal transactions conducted by them in their capacity as directors, which ought to have rested on the shoulders of the real 'masters' or bosses. While, over a long period, the character of board of directors in Indian companies has considerably improved qualitatively, that is, in terms of responsibility, technical competence, independence, status, etc., numerous instances of appointment of incompetent persons who know nothing about corporate management, of ladies and boys

STATE BANK OF INDIA

LIBERAL EXPORT CREDIT INTRODUCED

CHAIRMAN, MR. B. VENKATAPPIAH'S SPEECH

AS a concrete expression of its desire to help exporters in view of the urgent need for stepping up foreign exchange earnings, the State Bank of India has introduced a scheme for providing liberal export credit. This was revealed by Mr. B. Venkatappiah, Chairman of the Bank, in the course of his speech at the Eighth Annual General Meeting of the Bank held at Bombay on Thursday, 7th March 1963. Among other points made by the Chairman were the initiation of an instalment credit scheme for small entrepreneurs, the launching of a pilot deposits scheme in a few selected branches in each of the four circles of the Bank in order to mobilise more savings and the valuable assistance rendered by the Bank to tea interests and the State Government in Assam during the period following the Chinese invasion.

The following is the full text of Mr. Venkatappiah's speech:

GENTLEMEN,

I am glad to welcome you here today.

The report of the Central Board of Directors is before you. Along with it have been circulated the Bank's profit and loss account for the year 1962 and the balance-sheet as at 31st December 1962.

Operations

It is usual to divide the operations of the State Bank of India into two categories: the traditional and the developmental. In time, of course, the developmental becomes the traditional. But the distinction is useful and I will come back to it presently. Meanwhile, I am happy to tell you that the Bank has during the year 1962 made progress in both these respects and therefore also in its operations as a whole. The average level of the Bank's advances in India rose from Rs. 244.2 crores in 1961 to Rs. 267.0 crores in 1962; and the peak from Rs. 267.8 crores in 1961 to Rs. 289.1 crores in 1962. At the same time the Bank's investments rose by Rs. 29.3 crores over the year. As a result of these and other factors, income rose from Rs. 19.7 crores in 1961 to Rs. 22.6 crores in 1962. The Bank's lending rates, it may be mentioned, were substantially the same as in 1961.

The rise in income was more than offset by a rise in expenditure. The increase in expenditure was largely in establishment expenses. In turn, the main item of increase in establishment expenses was that pertaining to the wage bill of our workmen staff. In pursuance of the Award of the National Industrial Tribunal, the salaries and allowances of this category of our employees were raised with retrospective effect from 1st January 1962. Moreover, we sanctioned a proportionate—and substantial—increase in their bonus. May I add that your Directors felt that this increase was justified as a measure of goodwill to the staff, though in no way obligatory under the Award? During the course of the year, we also effected an improvement in the pay scales of our sub-accountants and head cashiers. Further, we introduced more liberal terms, including a running pay scale, for our staff assistants and probationary assistants, now re-designated staff officers and probationary officers respectively. An additional item of expenditure was the premium paid by the Bank to the deposit Insurance Corporation which started functioning in January 1962. Also, the amount of interest paid by us on our deposits was larger this year than in the previous year. Mainly as a result of these items, the Bank's total expenditure rose from Rs. 17.0 crores in 1961 to Rs. 19.9 crores in 1962.

The net profit of the Bank, after due provision had been made for the usual and necessary items, amounted to Rs. 2.69 crores as against Rs. 2.71 crores last year. The dividend retains its previous level; it is Rs. 23 per share, subject to deduction of tax. For the reasons I have stated, there is a large increase in bonus to workmen staff. It was Rs. 45 lakhs in 1961. It is now Rs. 72 lakhs. An amount of Rs. 7.62 lakhs has been transferred to the pension funds as compared with Rs. 7.42 lakhs in 1961. To the reserve fund has been added Rs. 55 lakhs; this is less than last year's Rs. 75 lakhs, but more than the corresponding figure for any of the six years preceding. Rupees 5 lakhs, as compared with last year's Rs. 10 lakhs, have been transferred to the staff welfare fund. Similarly to the staff co-operative housing fund has been transferred an amount of Rs. 5 lakhs, as against Rs. 10 lakhs in 1961. The balance carried forward at the close of 1962 is Rs. 45.68 lakhs as compared with Rs. 50.41 lakhs the previous year.

National Emergency

Before I proceed to other matters, I should like to refer to the national emergency and make a brief mention of the part we played in the grave situation which followed the Chinese invasion of Indian territory. There was a certain degree of dislocation of the usual channels of credit; there was also some threat to normal production, especially of tea in the frontier districts of Assam; and in a few instances, particularly of food articles, it became necessary for the State Government of Assam to enter more largely into the business of distribution. We collaborated promptly with both industry and Government, including the Tea Board, and in so far as it fell within the sphere of the State Bank, did all we could to help restore normality. On the hypothecation of stocks, we granted loans to the State Government for the purpose of distribution of certain foodstuffs; on their guarantee, we made funds available to the Assam Co-operative Apex Bank for the financing of some of the smaller tea gardens; and we took upon ourselves the financing of a certain number of the bigger tea gardens, especially in those areas where such a course would have the greatest effect psychologically, since, as I have said, our main objective was to assist in restoring the normal functioning of commercial credit. In regard to industries of importance to the defence effort, we are in close touch with the authorities and interests concerned. It is now generally recognised that small industries too have a great deal to contribute to such effort. Since the biggest institutional scheme in the country for the financing of small industries, especially their requirements of working capital, is that which has been developed over the last few years in the State Bank, we are at the moment conducting a review of its working in order to gear it to such tasks as small industry may be called upon to undertake in the new context. A study team consisting of two officers of the Bank has visited various centres of small industry in different parts of the country and we hope to have before us in the near future its suggestions for action. Meanwhile, the State Bank's instalment credit scheme, of which details will be found in the Report of the Directors, is of special relevance to those small and medium entrepreneurs who, in connection with defence production or otherwise, desire to purchase machinery or equipment on suitably easy terms. May I add, before I pass on from the subject of emergency, that the State Bank and its subsidiaries, through their very wide network of offices—now numbering more than 1,500—have been playing a very active part in all work connected with the National Defence Fund, Defence Bonds and so forth? I would also add that, as a gesture of goodwill to the members of the armed forces, the Bank has extended certain special facilities to them during the present emergency. These facilities include the waiving of charges for maintaining accounts and free remittances in settlement of children's school or college fees or for maintenance of dependents. Further, the Bank has agreed to collect free of charge, for members of armed forces, cheques drawn on any of our offices. These facilities are available to all officers and other ranks of the Army, Navy and Air Force as well as for Special Armed Constabularies set up for frontier duties and members of the Army Nursing Services.

Among the problems to which a new dimension of gravity has been added by the emergency is that of foreign exchange; and an important facet of the problem is the need to step up exports. In so far as export finance has a bearing on this, we are of course intimately concerned; and accordingly we have been in touch with the relevant interests such as jute manufactures, tea, cotton textiles and engineering goods. As concrete expression of our desire to help, we have taken a number of steps. Three specific items may be mentioned. We have introduced, subject to certain conditions, a concessional rate of interest in the form of a rebate of ½ per cent on advances utilised for financing exports. We have made use of the scope offered by a recent amendment of the State Bank of India Act to make available medium-term export credit in suitable cases. Lastly, in collaboration with Government and within the framework of existing import policy, we have initiated a small and purely experimental scheme whereby, against the Bank's guarantee, a company may get a loan in a foreign currency for importing raw material on the understanding that repayment will be made out of the proceeds of the export of the finished product.

More Facilities

The Bank's normal or traditional business, as reflected in its advances and deposits, continues to expand. Since the close of 1962, advances have further risen and now stand at Rs. 293.4 crores (on 22nd February 1963). With the increased demand for credit, especially from industry, the problem of raising resources has become all the more important. This of course is a problem for all banks and for the country as a whole. We on our part have been taking several steps to increase our deposits. We have now a programme of opening new branches, not only in the rural and semi-urban centres already selected or added to our list from time to time, but also in the metropolitan areas, cities and bigger towns, which in recent years have developed so rapidly. We are endeavouring at the same time to improve the facilities and services we offer to our customers, whether these be borrowers or depositors, large account holders or small ones. One such facility is the credit transfer system. As you are aware, this was introduced last year; and advantage is being taken of it by an increasing number of our customers. We have introduced certain new facilities for savings bank depositors. The minimum balance on cheque-accounts has been reduced from Rs. 200 to Rs. 100. The maximum amount that can be deposited by a savings bank depositor in a year as also the maximum balance at any given time have been substantially raised. Withdrawal facilities have been increased from once a week to twice a week.

We have been working a pilot deposits scheme in a few selected branches in each of our circles. Under this scheme, we endeavour to establish closer contacts with our customers, present as well as prospective, and also seek, as far as possible, to tailor our services to their needs. The deposits we aim at getting are mainly those outside the banking system. We are still in the process of learning from the experiment, for it is only six month old, but the results in some of the pilot centres have been encouraging. In one particular town, for example, a few months' effort led to the opening of more than 500 savings bank accounts by relatively small depositors.

You will be glad to note that our deposits increased by Rs. 41.4 crores to Rs. 496.4 crores in 1962. This was after allowing for a transfer of Rs. 20 crores of U.S. P.L. 480 funds to the Reserve Bank. The transfer was in pursuance of an arrangement whereby an amount of Rs. 10 crores per month for five months is to be credited to the Reserve Bank, beginning from November 1962. Our deposits now stand at Rs. 487.1 crores (on 22nd February 1963).

Developmental Activities

I turn next to the developmental activities of the Bank. As mentioned in the annual report, we opened 25 new branches during 1962 under the Second Expansion Programme, bringing the total number of these branches to 50 during the first 2½ years of the programme and leaving 95 branches yet to be opened. As you are aware, the pace of branch expansion has, in pursuance of the recommendations of the committee which went into this question, been deliberately slowed down in order that various arrangements concerning recruitment and training might be completed and the results of the previous expansion consolidated. We have at present before us a proposal to open a large number of branches at centres not hitherto on our list but where treasuries and sub-treasuries are located. We are examining the proposal in consultation with the Reserve Bank of India. I may mention here that, of the 416 branches opened during the period 1955-60, a large number is now working at a profit.

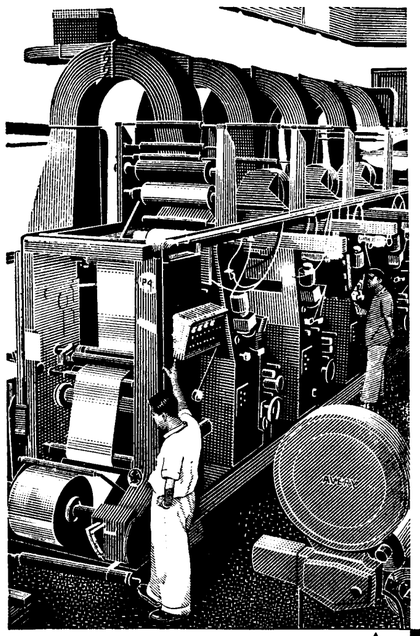
I pass on to small industries and co-operatives which represent two important aspects of the Bank's developmental activity. The Bank's scheme for financing small-scale industries has been making further progress. As mentioned in the report, the number of unit assisted, the credit limits sanctioned and the corresponding outstandings have all increased from 2,811, Rs. 1 012.9 lakhs and Rs. 507.0 lakhs in 1961 to 3.153, Rs. 1,181.8 lakhs and Rs. 597.8 lakhs respectively in 1962. Similarly, in regard to our scheme for financing co-operatives, the Bank continues to show progress. The total credit limits sanctioned by the Bank to all types of co-operatives and the corresponding outstandings increased from Rs. 24.6 crores and Rs. 6.6 crores on 30th September 1961 to Rs. 33.4 crores and Rs. 8.5 crores respectively on 30th September 1962. Finally, our advances against warehouse receipts issued by the Central and State Warehousing Corporations have continued to rise; the credit limits sanctioned by the Bank and the corresponding outstandings have risen from Rs. 445.5 lakhs and Rs. 155.4 lakhs to Rs. 505 9 lakhs and Rs. 180.1 lakhs, respectively.

I am glad to be able to tell you that all our subsidiaries have recorded further progress in their commercial banking business as well as in the developmental sphere. There was an increase in their total deposits, advances and investments. Their agregate net profits, however, have declined to some extent, mainly because of the additional cost pertaining to three items: the Desai Award, the revision of pay scales of officers, and the payment of deposit insurance premia. The State Bank of Eikaner, the State Eank of Hyderabad, the State Bank of Indore, the State Bank of Mysore and the State Bank of Travancore have, nevertheless, all declared the same dividend as in the previous year. I should add that, as from 1st January 1963, the State Bank of Bikaner has been renamed the 'State Bank of Bikaner and Jaipur,' having taken over the assets and liabilities of the State Bank of Jaipur under Section 38 of the State Bank of India (Subsidiary Banks) Act. The State Bank of Patiala and the State Bank of Saurashtra did not find it possible to declare any dividend.

Staff Training

We have nearly doubled the capacity of our staff training college at Hyderabad and, to a limited extent, made the facilities available to our subsidiaries as well. As mentioned in the Directors' report, there are staff training schools and zonal training centres in each circle for the training of clerks and cashiers, including those newly recruited. We are expanding these arrangements. It is on the standards of our recruitment and training that the quality of our customer service will ultimately depend. It also depends on a contented staff and good staff relations. I welcome from that point of view the cessation of uncertainty as to the service conditions of clerks and other workmen staff consequent on the publication of the Desai Award to which I have already made a brief reference. The Tribunal has authoritatively fixed the terms in regard to almost all the important conditions of service of workmen staff, such as scales of pay, dearness and other allowances, hours of work, overtime, leave privileges, medical benefits, travelling and halting allowances, retirement age and so on. The way is therefore clear for what I sincerely believe can be an enduring and harmonious relationship between staff and management: a relationship that will be of benefit to the staff, to the Bank, to the Bank's customers, and indeed to the community generally. The subject is one we propose to keep under constant review for the purpose of taking suitable steps in consultation where necessary, with the relevant organisations of the employees. Meanwhile, I should like to compliment all categories of the staff on the good work they have put in during the year and thank them for the devotion they have shown to the interests of the institution.

Before I conclude, I should like to make a passing reference to a very recent development, namely, the nationalisation of banks in Burma. The order issued by the Burmese Government on the 23rd of February covered 24 banks, of which 10 were Burmese and 14 foreign. Included in the latter category was our branch at Rangoon. Our business there has not been large —it has dwindled in recent years, more especially after the establishment of the State Commercial Bank of Burma in 1954—but of course that in no way alters the fact that the nationalisation came upon us as a complete surprise. The Union Finance Minister has already made a statement on this subject in the Lok Sabha. I have little to add to the particulars he has given. I am sure all of us share with him the hope that the Burmese Government will take a fair and reasonable view regarding valuation of assets, payment of compensation and other related matters and settle all dues promptly to the satisfaction of those affected.



Lastly, may I on behalf of the Board of Directors, including myself, place on record our high sense of appreciation of the valuable services rendered to the Bank by Mr. P. C. Bhattacharyya who relinquished his office as Chairman on 28 h February 1962? We are grateful to him for the progress made by the Bank during his stewardship. We are also grateful to Professor D. G. Karve for the guidance available from him on more than one committee; we record our high appreciation of the valuable services he rendered to the Bank as Vice-Chairman, and are glad that he remains associated with the Board as a Director nominated by the Reserve Bank. I would also place on record our high appreciation of the services rendered to the Bank by those who during the year ceased to be Directors of the Central Board or members of the Local Boards.

Note: *This does not purport to be a record of proceedings at the Annual General Meeting.*

WORLD BANK LOAN TO THAILAND

The World Bank has announced a loan equivalent to $6 6 million to Thailand for increasing the capacity and area served by the transmission system of the Yanjee Electricity Authority. The project consists of the installation of a second high voltage circuit between the Yanjee hydro-electric plant in north-west Thailand and Bangkok 281 miles to the south, and the construction of 446 miles of transmission lines to serve 12 towns in the central part of the country. Nine commercial banks are participating in the loan, without the World Bank's guarantee, for a total amount of $740,000, representing the first six maturities which fall due between April 1966 and October 1968. The participants are Bank of America National Trust and Savings Association, San Francisco; Irving Trust Company, New York; Girard Trust Corn Exchange Bank, Philadelphia; Fidelity-Philadelphia Trust Company; Bank of Tokyo Trust Company, New York; Mitsui Bank, Limited, New York Agency; Crocker-Anglo National Bank, San Francisco; First National City Bank, New York; and Grace National Bank of New York. The loan has been made to the Yanjee Electricity Authority, an agency established by the Government in 1957 with responsibility for the generation and transmission of electric energy in the most developed and populated part of Thailand—a service area covering 35 of Thailand's provinces. The project is scheduled for completion in 1966 at a total cost equivalent to $11 million. The Bank loan of $8.6 million will cover the foreign exchange requirements and the remaining costs will be met by the Yanjee Electricity Authority.

The loan is for a term of 20 years and bears interest at the rate of 5½ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin on 15th April 1966. The loan is guaranteed by the Kingdom of Thailand. Including the latest loan, the Bank has now made 10 loans aggregating the equivalent of $137 million to Thailand for railway, port and irrigation projects as well as the Yanjee multipurpose project.

U.P. LETTER

SUGAR INDUSTRY IN DIFFICULTIES

STATE FINANCES BASICALLY SOUND

From Our Special Correspondent

LUCKNOW, 13*th March*

THE sugar industry in U.P. is faced with a serious 'crisis'. Not only has the production of sugar in most U.P. factories declined as compared with the previous crushing season, but the industry is also facing financial difficulty which has made it impossible for it to clear all the arrears of cane price, purchase tax and the other dues owing to the Government and others. U.P.'s Chief Minister, Mr. C. B. Gupta, told the U.P. Branch of the Indian Sugar Mills' Association earlier this month that sugar production in U.P. has dwindled from 60 per cent of the total all-India output in 1952-53 to 45 per cent in 1961-62. Complete figures for the current season are not yet available, but the chances are that U.P.'s output of sugar has fallen to a still lower level. Since the sugar industry is the chief industry of Uttar Pradesh and nearly two million cane growers and workers are associated with it in addition to the huge capital investment which has been made in the industry, the decline in production and profitability of the sugar industry is naturally a cause for deep concern to the Government and the people.

Why has the sugar industry in U.P. come to this low level of production and profitability and how could it possibly be helped to rise out of the morass? An answer to some of these questions was provided in the presidential address of Lala Hari Raj Swarup to the U.P. Branch of the I.S.M.A. One of the difficulties of the sugar industry is the high cane prices and the basic cause for it, at least so far as U.P. is concerned, is that the per acre yield of sugarcane here is only 12 to 14 tons, as against 28 to 30 tons in Maharashtra and South India. What is worse, due to poor quality of cane, the recovery percentage of sugar in U.P. averages only 9.5, as against 11.8 in some other States. Another factor partly responsible for the difficulties of the U.P. sugar industry is that, due to the low *per capita* income of the people and to a greater use of *gur* and *khandsari* by the people, especially in the rural areas, the *per capita* consumption of sugar in U.P. is only 7.3 lbs. as against 17.5 lbs. in the Punjab and 21.5 lbs. in Bombay. The consequence is that the U.P. sugar mills have to find a market for most of their output outside U.P., thereby suffering some disadvantage.

Reasons

The crisis in the current crushing season, however, is due to the poor supply of sugarcane to the factories. This is partly due to the fact that, at the time of sowing, the U.P. Government, in obedience to the instructions issued by the Central Government, tried to curtail sugarcane production by 10 per cent and somehow it succeeded in this effort. The output of sugarcane was still further reduced because of the part failure of crop in western and central U.P. due to failure of monsoon and in the eastern districts of U.P. due to floods. It is apparent that the Government's efforts to divert sugarcane from the *gur* and *khandsari* units to the sugar factories has not succeeded, as the former are paying higher prices for sugarcane than the factories could pay on account of the formula linking the price of sugarcane with the recovery percentage of sugar which in U.P. is rather low.

The Union Food Minister, Mr. S. K. Patil, told the Rajya Sabha that, in 1962-63, there has been a shortfall of 4.9 lakh acres under sugarcane in U.P. as compared with 1961-62. He further said that he would make all possible effort to help U.P. grow more sugarcane in 1963-64. But, though that might help the sugar industry in the future, it is not going to help it now. Another suggestion for helping the U.P. sugar industry is that the entire system of area reservation, system of cane cultivation and cane supply to the sugar factories should be drastically changed. But even this would not help the industry in its present 'crisis'. In order to help the sugar industry, one practical suggestion is that the diversion of sugarcane from sugar factories to the *gur* and *khandsari* units should be prevented for the remaining few months of the current crushing season by imposing some restrictions on the *gur* and *khandsari* units and by suspending the formula linking the price of sugarcane to sugar recovery. This would enable the sugar factories in U.P. to get more sugarcane, thereby increasing their production. U.P.'s Chief Minister told the I.S.M.A. meeting that the U.P. Government were averse to imposing restrictions on *gur* and *khandsari* production, as the bulk of the State's population consume *gur* and *khandsari* and they would be harmed if any such restrictions were imposed. The Government of India is not prepared to suspend the working of the formula linking the price of sugarcane with sugar recovery in the case of Uttar Pradesh, as this formula seems to be working satisfactorily in other States. Unless the two Governments change their attitude and revise their policy, it is not possible for the U.P. sugar industry to get effective help in overcoming the current crisis.

It is creditable to the sugar mills in U.P. that, out of the outstanding sum of Rs. 6.63 crores due to the canegrowers up to 1st June, 1962, they have already paid more than Rs. 6 crores and only a sum of Rs. 57¾ lakhs is now outstanding. U.P.'s Chief Minister is hopeful that, in 1962-63, the realisation of purchase tax from sugar mills in U.P. would amount to Rs. 7½ crores, as against only Rs. 3½ crores in 1961-62. But the sugar industry in U.P. would get effective help if the rate of purchase tax is reduced for the remaining period of the current crushing season.

Financial Position

The Finance Minister, Mr. Kamlapati Tripathi, told the U.P. Legislative Assembly, in the course of the debate on the 1963-64 Budget, that the finances of U.P. were basically sound as was shown by the fact that, as against the total liabilities of the State amounting to Rs. 562 crores, the total assets were Rs. 596 crores and the State of Uttar Pradesh had never defaulted in repaying its loan instalments. But the real weakness of U.P. finances lies in the fact that the revenue reserve fund has been wiped out, the 1963-64 State Budget shows a huge deficit of Rs. 4.97 crores and the State Government has so far failed to levy additional taxes to cover this deficit. It is true that the Government had already levied additional taxation in the first two years of the third Plan, but it was expected that some additional taxation would be imposed in the 1963-64 budget as well. It is a welcome sign that the first measure of new taxation was announced when the U.P. Large Land Holdings Tax Bill was introduced in the Legislative Assembly early this month. Under this Bill, a tax at a graded scale would be imposed on some 14,000 large land holdings exceeding 30 acres each whose annual value exceeds Rs. 3,600. The tax is expected to yield only a nominal revenue of Rs. 25 lakhs annually, as the number of large holdings has been reduced, due to fragmentation of holdings. But this tax measure makes a good beginning. Another notable feature is that the U.P. Government is making serious efforts to realise the arrears of tax. On 1st January 1963, the arrears of sales tax in U.P. amounted to Rs. 4.7 crores. It is expected that these arrears would be realised during the year 1963-64, thereby showing a marked improvement in the State Government's finances.

Co-operation

The Minister for Co-operation, Mr. Chaturbhuj Sharma, told the Legislative Assembly that co-operative movement had made satisfactory progress in U.P., as about half of the one crore rural families were already covered by it. The Government proposes to start 7,500 depots of consumer goods in the rural areas and some 2,000 more service co-operatives in U.P. in 1963-64. If the number of societies and the number of persons covered by co-operation were the true indication of progress, U.P. would be said to have made good progress. But the progress of co-operation is generally judged by the amount of assistance which co-operative credit societies are able to give, the amount of goods handled by the purchase and sale societies and the actual work which the consumer stores are able to do. On the basis of these tests, U.P. is still very backward in the matter of co-operation and, what is worse, there has been a deterioration in the past few years. The Uttarkhand Kumaon regional co-operative seminar made some practical suggestions for invigorating the co-operative movement. It has recommended that short-term loans should be granted for a period of 15 months and loans for winter and summer sowing should be granted together, so that the cultivator is able to plan his work better. The State Government should subsidise and bear a part of the expenses of starting consumers' co-operatives in the hill districts. Even in the case of consumer co-operatives in other areas, it would be necessary for the Government to bear a part of the initial cost to make such societies successful. The biggest handicap of co-operatives in U.P. is the excessive official interference in their working. The co-operative movement in U.P. would not produce satisfactory results unless official interference in it is reduced and the rural people are allowed to manage their own affairs with official help and support.

VIVIAN BOSE COMMISSION REPORT—I

(*Concluded from page* 459)

of business aristocracy who had just become major and but yet in schools or colleges, etc., have been cited in the Statutory Reports on the working and administration of Companies Act, 1956 and by knowledgeable observers of corporate scene in the country. To a lesser extent this uncomplimentary position existed even in the U.K. and has been commented upon by the expert committees on Company Law Reforms. It was upon the recommendations of the Bhabha Committee on Company Law that the practice of packing the board of directors by nominee directors by managing agents has been controlled under the relevant provisions of the Companies Act, 1956 and further by such provisions of Sections 295, 369, 370, etc., of the aforesaid Act certain fiduciary responsibilities, curbs, etc., on the powers of the directors have been put. Notwithstanding all these checks, the question of catching the 'illusive' master brains behind the 'dummy' or 'deemed' directors has remained unresolved, as the fact "as to whether a person is acting in accordance with the directions or instructions of another or not, being a question of fact" is not easy to prove in respect of either all or even the majority of the directors on the board.

The Vivian Bose Commission went into this matter. While refraining from making a recommendation that the appointment of directors who may be employees of companies be prohibited, suggested that the definition of 'officer' contained in Section 2(30) be so modified or expanded as to "include (as an officer) a person in accordance with whose directions or instructions the directors of a company or any of them are accustomed to act" in the hope that it might bring the 'illusive' persons within the mischief of Section 252 and others of the Companies Act.

Alongside the problem of "deemed directors" the Commission also looked into the question of absentee directors who absented themselves from board meetings at which questionable decisions were taken and thus escaped from the responsibility for the malpractices or decisions arrived at. That is to say, they merely served as 'decorative' directors, attending the meeting of the board at will for reasons of fulfilling the barest requirements of law in this regard. The Commission took due note of the existing provisions of Section 283(1)(*g*) of the Companies Act which lays down that a director will vacate his office if he absents himself for three consecutive meetings of the board or from all meetings of the board for a continuous period of three months whichever is longer without obtaining leave of absence from the board and also felt that a further tightening up of these provisions might cause hardships. Considering the difficulties involved, the Commission has not recommended any legislative measures and, instead, has merely suggested that the matter be left "to the force of public opinion and the opinion of the shareholders," the latter being informed of absenteeism of the directors "through the Directors' Report" which should contain a reference to the occurrence of such a practice.

Also, quite incidentally, the Commission has recommended the conferment of powers on courts to disqualify a person from holding or ceasing to hold the office of director in a company under certain circumstances in the same way as has been suggested by the Jenkins Committee. The relevant recommendations of the Jenkins Committee commended for adoption by the Commission are that the court should have power to disqualify any person (*a*) who has been convicted of any offence involving fraud or dishonesty whether in connection with a company or not, (*b*) who has been persistently in default in complying with the provisions of the Companies Act, and (*c*) who has been shown to have acted recklessly or incompetently in relation to the affairs of any companies of which he is, or has been, a director or otherwise concerned with the management of the Company.

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1962

To

THE MEMBERS OF

DEVKARAN NANJEE BANKING CO., LTD.

1. Your Directors beg to submit herewith the audited Balance Sheet and the Profit and Loss Account of the Company, hereinafter called the Bank, for the year ended 31st December 1962. The Auditors' Report is also annexed.

2. The Bank has, during the year, made generally good all-round progress. The Bank's deposits, at the end of the year have increased to over Rs. 50½ crores, the total working funds to over Rs. 55½ crores, and the number of accounts to over 2,50,000. Five branches were opened during the year—all in Greater Bombay, at Jogeshwari (East), Mahim, Mulund (East), Santa Cruz (East), and Wadala—bringing the total number of Bank's branches to 112 at the end of 1962. Five Safe Deposit Vaults were opened—at Jogeshwari (East), Malad (East), Santa Cruz (East), Tardeo, and Wadala—bringing the total number of Safe Deposit Vaults to 34. Steps were also taken to expand the activities of the present branches.

3. During the year, after obtaining the necessary consent from the Controller of Capital Issues, Government of India, the issued, subscribed and paid-up Capital of the Bank was increased to Rs. 1 crore from Rs. 5 lakhs, by issuing 1 lakh equity shares of Rs. 50 each, at a premium of Rs. 2 per share. The newly issued shares rank for dividend with the existing equity shares to the extent of 25 per cent of the dividend to be declared for the year ending 31st December 1962 and in all other respects *pari passu* with the existing shares.

Your Directors are happy to state that the Reserve Funds of the Bank have also now reached the figure of Rs. 1 crore, which is equal to the present paid-up capital of the Bank.

4. In the context of the present national emergency caused by the Chinese aggression, the Bank has been doing its mite in support of the Government's defence effort. The Bank has contributed Rs. 1¼ lakhs to the National Defence Fund and subscribed Rs. 50 lakhs to the National Defence Loan. The Bank has placed the services of all its 112 offices for receiving contribution to the National Defence Fund free of any charge. The Bank is also extending the required facilities to the employees who wish to join the Territorial Army and the Lok Sahayak Sena.

5. The Bank has made a net profit, after providing for taxation, of Rs. 24,08,322.17, which, together with the sum of Rs. 13,51,096.09 brought forward from last year's account, amounts to Rs. 37,59,418.26. Out of this your Directors have made the following appropriations:

	Rs.	nP
To Ad-Interim Dividend paid for the half-year ended 30th June 1962 at the rate of Rs. 2.00 per old share	2,00,000.00	
To Reserve Fund under Section 17 of the Banking Companies Act	23,00,000.00	
To Pay bonus to staff	4,50,000.00	
and propose to appropriate the balance as under :		
To Pay a Final Dividend for the half-year ended 31st December 1962 at the rate of Rs. 3.50 per old share [making in all 11% (Eleven per cent) per annum, subject to deduction of tax]	3,50,000.00	
To Pay a proportionate Dividend of Re. 1.40 per new share (subject to deduction of tax)	1,40,000.00	
and To Carry Forward	3,19,418.26	
Total .. Rs.	37,59,418.26	

6. Shri Laxmikant S. Dabholkar had attained the age of 65 on 20th July 1962 and, as such, under Section 280 of the Companies Act 1956, he will vacate his office as a Director at the conclusion of the ensuing Annual General Meeting. The Board of Directors have received the requisite notice from members proposing his re-appointment as a Director. Shri M. A. Master, who is aged 78, also retires at the ensuing Annual General Meeting. The Board of Directors have received the requisite notice from members proposing his re-appointment as a Director. In accordance with Article 100 of the Articles of Association, Shri Natvarlal S. Choksey and Shri Harshadrai B. Parekh retire from the Board of Directors by rotation, but being eligible offer themselves for re-appointment.

7. You are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Yours faithfully,
For the Board of Directors,
LALITCHANDRA C. D. NANJEE,
Chairman.

NOTE :—
(1) Remuneration received by three Directors for their own use from other companies by virtue of nomination by the Bank on the Board of other companies amounted to Rs. 1,765.00 during the year.
(2) *Includes Allowances calculated in accordance with the Income Tax Rules.
(3) The Balance Sheet has been prepared in conformity with Form 'A' and the Profit and Loss Account in conformity with Form 'B' of the Third Schedule to the Banking Companies Act, 1949.
(4) Owing to regrouping of the Accounts certain figures of the previous year have been recast; the provision for bonus has been made in the Appropriation Account this year.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the DEVKARAN NANJEE BANKING CO., LTD., as at 31st December 1962 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 41 Branches audited by us, 24 Branches audited by other Auditors and unaudited returns from 46 Branches. Exemption from the provisions of Section 228 of the Companies Act, 1956, has been obtained from the Central Government for all the unaudited Branches.

We report that—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;
(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;
(e) the reports on the accounts of the Branch offices audited by other Auditors, so far as were received till the date of our audit, have been dealt with in the manner considered necessary by us ; and
(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts, together with the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

REGULATION OF U.K. STEEL INDUSTRY

HOW PRICES ARE DETERMINED

BRITAIN'S steel industry has experienced in the last 30 years sweeping changes in controls—from the elementary regulations of pre-war years to the all-embracing war-time controls, and from post-war nationalisation to de-nationalisation. The process of de-nationalisation is practically completed now, leaving only one large steel group in the hands of the Government. The industry thus is now almost entirely in private hands, but it is still subjected to regulation and that too to an extent unparalleled outside the nationalised industries. How this control is being exercised and what changes have taken place therein in recent years have been exhaustively examined in a study appearing in the February 1963 issue of the *Midland Bank Review* (London). It is on this study that the article here is based.

The present machinery of regulation is headed by the Iron and Steel Board which was established under the Iron and Steel Act 1953, as part of the process of de-nationalisation. The Board's duty is to "exercise a general supervision over the iron and steel industry... with a view to promoting the efficient, economic and adequate supply under competitive conditions of iron and steel products." The Board, however, is not a Government department. But the Minister concerned—the Minister of Power at present—appoints the members and has authority to issue directions to the Board on matters of general policy. Broadly, the Board acts as an independent supervisory authority, taking into account the interests of both producers and consumers. It keeps under continuous review steel prices, the productive capacity of the industry, the supply and distribution of raw materials and fuel, and such other matters as research, training and education.

Consultation with Industry

The most notable feature of the Board's activities is that, although it has the powers and the sanctions it needs to achieve its objectives, in practice it has relied largely upon persuasion and discussion. Thus, it keeps in close touch with the industry's own representative organisation, namely, the British Iron and Steel Federation which, since 1934, has been acting as a central trade association and has continued to provide common services for different sections of the industry. The Federation's functions, incidentally, are wide, including the survey of development programmes of member-companies. How close is the contact between the Iron and Steel Board and the Federation may be inferred from the practice of the former's observers attending the principal committees of the latter and its agency companies.

The manner in which the Board discharges its functions in consultation with the Federation may now be briefly described. As the main duty of the Board is to keep under review the capacity of iron and steel production and to see that it is adequate for expected needs, it estimates the probable demand for some years ahead and furnishes a "special report" in this connection. The Board's most recent survey, the one published in April 1961, has given estimates of the demand for iron and steel upto 1965 and also looked fo ward in a general way upto 1970. With this estimate of demand in mind, including the likely level of exports, the Board then has to be satisfied that the capacity of the industry will meet it. All major schemes of development or replacement, except in the iron and steel foundry sections, have to be submitted to the Board for its approval. Proposals for development, of course, come from the individual producing companies which are responsible for the planning, financing and implementation of the schemes they put forward. But these schemes are first screened by the Federation which expresses its views upon technical and industrial prospects. The ultimate responsibility for approval of any particular scheme rests, however, with the Board whose consent to a development project may be refused only if it considers that it would prejudice the efficient and economic development of the industry. In practice, all along, the Board has seldom found it necessary to refuse consent to any scheme, though it has often modified or expanded several schemes in consultation with the companies concerned.

Another major function discharged by the Board pertains to the general supervision of arrangements for procuring and distributing raw materials and fuel from home sources and abroad, and for the development of overseas ore resources. But the actual importing of ore and some other raw materials is in the hands of companies set up by the British Iron and Steel Federation. The British Iron and Steel Corporation, in particular, undertakes the purchase and distribution of imported pig iron, scrap and semi-finished steel, although, in the present circumstances, central imports of these materials are not significant. Such scrap supplies as are imported by the Corporation are resold to producers at the U.K. stabilised prices agreed between the producers and the Scrap Federation which is composed of merchants dealing in indigenous scrap, any loss being carried on the "Industry Fund" referred to in the next paragraph. As prices of scrap are low in comparison with those of pig iron, and since they are generally interchangeable as raw materials, buyers of scrap pay a levy to the "Industry Fund," and a "remission" is paid to users of pig iron. It may be further noted, in this connection, that, since 1958, when control over distribution and prices of scrap ceased, scrap prices have been kept at the same level by agreement between producers and the Scrap Federation. As the general aim of the Government and the industry is to use all available indigenous scrap, exports of scrap have generally been forbidden, except in times of plentiful supply.

A subsidiary of the British Iron and Steel Corporation is responsible for all imports of iron ore and manganese ore required by the industry, and for ensuring future supplies. It also arranges shipping and distributes the ore, charging the industry stabilised prices, according to grades. The finances of this subsidiary company are intended to be self-supporting in the long term, though a temporary increase in the costs of imported ore may be offset by a grant from the "Industry Fund" which is financed by a levy on producers and administered by the Iron and Steel Federation, subject to the supervision of the Iron and Steel Board. This Fund, incidentally, is also used to provide a number of services, such as facilities for research and training.

Price Determination

Price determination is another important function discharged by the Iron and Steel Board. The Board keeps under review the prices of most iron and steel products and determines the maximum prices at which such products, other than forgings and castings, may be sold in the United Kingdom. Quotations are made on "basis prices" for ordinary sizes and qualities, with "extras" for variations in size, quality, finish, and so on. There are hundreds of "basis prices" and several thousands of "extra." At present most quotations are "delivered" prices to any part of the country, but there may be extras for some areas. This "delivered" price system does not apply to rails, tinplate or forging ingots, which are quoted ex-works.

The Board carries out its "price determination" by undertaking every two or three years a comprehensive assessment of operating and capital costs, as established in a modern plant of optimum size, well situated for materials, labour and markets, and operated efficiently. From this assessment, estimates are made of prices for various steel products, covering the operating costs and capital charges of the plant, including a "reasonable" return on the capital employed. The allowance for profit is made on the basis of "reasonable" interest and dividends payments, with the consideration in mind that "the return on capital employed in the steel industry should be high encugh to warrant investment in this as against other industries." In preparing these estimates, the Board is now posted with more precise information on "new-plant costs" which, incidentally, are used by producers, to an increasing extent, as a yard-stick for measuring the profitability of their own development projects. Between any two full-scale price reviews, the Board also makes interim adjustments in prices to take into account significant changes in prices of materials, fuels and other costs. In this the Board is helped by monthly returns on costs from producers. The maximum official prices, so determined, usually become the prices generally applied. Meanwhile, the Iron and Steel Federation examines the principles of price policy that emerge and, when found necessary, makes representations to the Board on behalf of the industry.

Thus, in the British price system, maximum prices are established for iron and steel products by the Board, and producers rarely quote below these. Then, too, prices are quoted on a uniform basis for delivery over wide areas. In other words, steel costs the same wherever the works of the buyer may be situated within an area. It must, however, be noted that Britain is a country of small distances. The British system, incidentally, may be compared with that of the European Coal and Steel Community. There the European producers concerned are free to fix their own prices, subject to various broad considerations, no maximum prices being laid down by the High Authority except in special circumstances. Prices charged by the Community's producers comprise published prices at a particular "basing point," with transport costs added from there to the consumers' works, so that delivered prices vary. Also, in order to allow producers to compete for orders, they may sell below this "basing point" price *plus* freight, by "aligning" their quotations so as to compete with any lower prices available to the buyer. In this Community system, quotations may be adjusted at any time, provided the High Authority is informed one day in advance and the new prices are published. This is described as a more flexible pricing arrangement than that to which Britain is accustomed.

Now that the question of Britain's entry into the European Common Market has been indefinitely postponed, there is no immediate likelihood of the system of regulation of Britain's iron and steel industry being placed in the melting-pot so as to bring it in accord with the Continental system. The present system in Britain may, therefore, be expected to continue. Further, Government intervention in various ways, particularly to influence the location of new plant and to adjust supplies coming from abroad, may also be expected to continue and even intensify, if Labour, by any chance, comes to power in the next General Elections. How this British experience, characterised by Government regulation as well as self-regulation by the industry itself, can be applied, if at all, to conditions in our own country is a matter calling for close study.

RUBBERISED RUNNING TRACK

Four years' research work by the En-Tout-Gas Company Ltd.—recognised internationally as running-track and tennis-court experts—has recently led to the development of a composition of rubber and plastic for surfacing sports tracks. This composition track is said to offer two main advantages over conventional surfacings. Although more expensive to install, it is claimed to be virtually maintenance-free—and exhaustive tests seem to suggest that it returns appreciably faster times. Trial runs-from-start taken over a distance of 30 yards, in which starting blocks were used, returned a mean result of 4.03 seconds, against a figure of 4.21 seconds recorded on the conventional college track.

The track is composed of ¼ in. granular-crumb-rubber bound together with a plastic binder, and sets into a rough, hard yet resilient surface affording maximum traction. The whole substance is porous, and what at first sight appear to be spike marks are, in fact, myriad tiny airholes. There is no loose surface or dust, and weather conditions do not appear to affect it. Rain is absorbed immediately, and it has passed a 500-hour test involving alternate freezing and thawing with flying colours. To further increase efficiency a light fibre glass net can be laid over the surface and incorporated into the track. Short running spikes are unlikely to cause any damage, but when repairs—caused perhaps by a misaimed javelin—are necessary they can be carried out quickly and simply.

INDIAN ELECTRICAL MANUFACTURERS

Except for certain heavy electrical equipments which are also planned to be manufactured indigenously, India now produces all sorts of electrical items for domestic, commercial and industrial uses. Especially since 1957 the electrical industry has made rapid, all-round progress. The Indian Electrical Manufacturers Association (India Exchange, Calcutta-1), which published the second edition of its *Directory* in 1957, has, therefore, just brought out a third edition. The *Directory*, which is well got up and exquisitely printed, presents to the purchasers of electrical equipment in India and abroad, in a concise and compact manner, the range and types of electrical products manufactured by the members of the Association who account for about 80 per cent of the output of electrical goods in the country.

U.K.'S ADVANCED GAS-COOLED REACTOR

The advanced gas-cooled reactor at Windscale, Cumberland, in north-west England, has just begun to supply electricity to Britain's national grid at a net output of 28 M.W. This reactor represents an improvement over the basic Calder Hall type of graphite-moderated gas-cooled reactor which was adopted as the basis for early British nuclear-power stations, the first two of which began to supply electricity to the grid at the end of last year. The new reactor can operate at much higher temperatures than the Calder Hall type. It has been designed with a view to reducing generating costs and increasing thermal efficiency.

NEW PRODUCTS AND PROCESSES

Electronics Replace Operator in the Telephone Exchange

BY pressing a button Mr. Stuecklen, the West German Minister of Postal Affairs and Telecommunication, put the first electronically controlled public telephone exchange of the world into operation in Munich. The inauguration of this new telephone exchange is a milestone in the history of telecommunication engineering. Wrong connections will be impossible in future, for the novel system has no mechanically movable parts. The official name of the new system is "Electronically Controlled System With Magnetic Field Couplers," the official abbreviation is "E.S.M." The system has been developed by the Federal Post Office in co-operation with the internationally known German firm of Siemens.

The secret of the E.S.M. system is the use of electronic elements of construction with printed "wiring" instead of the hitherto used highly delicate relays with their many wires and contacts. In the conventional technical process of putting through a telephone call, the number-impulses directly controlled a series of mechanical selectors, while in the new electronically controlled system the impulses are received by a kind of "nervous centre"—comparable to that of the electronic brains—where they are evaluated and passed on to the contact levers. Since electronic control is effected with lighting speed, correspondingly fast contacts had to be selected for the new switch system. The technical device permitting the putting through of a call with electronic speed was found by German engineers in the "dry reed." This device consists of nickel-iron reeds gold-plated at the points of contact. The reeds are embedded in a glass tube filled with a protective gas (usually a mixture of nitrogen and hydrogen) in order to protect the fine apparatus from atmospheric influences and dust particles. For the operation of these dry reeds the metal reeds in the glass tube are exposed to a magnetic field generated by electric coils, whereby the reeds are pressed apart with a "power" of 20 grammes. A switching operation by means of this novel system does not take any longer than two thousands of a second.

Since the new switching operations are effected so rapidly, they can no longer be checked visually; a new supervisory system had to be developed which also works electronically and does not only trace and indicate any failures on the spot, but also isolates the defective parts of the system automatically and switches over to substitute elements. Thus the telephone exchange operating according to the "E.S.M." system has been rendered faultless to all intents and purposes.

New Type of V-belt

A new type of V-belt for driving machinery—which, the makers claim, incorporates the simplicity, flexibility and unitary strength of flat belts—is being produced under licence by a Lancashire firm, Turner Brothers Asbestos Company Ltd. The new belt also retains the properties of high power, high speed ratios, shorter distances and freedom from slip associated with conventional multiple V-belt drives. With conventional V-belt drives several belts have to be matched to perform the driving operation, but only one belt of the new design is required. To achieve this, the belt is composed of a single endless synthetic rubber length, with a series of parallel longitudinal V-ribs forming its driving face. The pulleys for this drive are machined with parallel V-shaped grooves to engage with the driving face of the belt. The new V-belt makes full contact on every part of the pulley's driving face and, since it is not an assembly of separate belts, the load is evenly distributed. The multiple V-grooved pulley face offers approximately three times the driving surface area of a conventional flat pulley of equal belt width.

Railway Freight Bogie

A new type of high speed railway freight bogie, which is rubber sprung and claimed to be particularly suitable for use on rough tracks and industry countries, is being manufactured by Gloucester Railway Carriage and Wagon Company, Ltd., a British firm of railway wagon and carriage engineers. Special features are simplified design and assembly and easy maintenance—there are no bolster guide wearing surfaces and no lubricating surfaces. It has controlled flexibility in all planes to accommodate rough track; and shock and noise are minimised by the elimination of direct metallic connection between wheels and body. Plain or roller bearing designs are available and the bogies can be interchanged with existing ones. The springs allow for controlled pitching and transverse angling and are claimed by the manufacturers to be practically indestructible. The bogie is available to suit all gauges from 2 ft. 6 in. (.762 m.) to 5 ft. 6 in. (1.676 m.) and for axle loads of up to 17½ tons (17.78 tonnes).

Spring-end Grinder

A new high-speed automatic wet or dry twin head spring end grinder, which can process up to 8,000 springs an hour, has been developed by a British firm, Bannett Tools Ltd., England. The grinder was designed primarily for simultaneously grinding both ends of compression springs to precision limits, but it is now undergoing trials in grinding circlips, piston rings, magnets, tool bits, ceramics, carbon and other small components. Production depends on the size of the springs and the ability of operators to insert them in the turntable. One operator can handle 4,000 to 5,000 an hour, while two operators can increase throughput to 8,000 springs an hour, and with maintained accuracy. The six piece segmental work table has an infinitely variable speed and reversing mechanism. There are four hand wheels for independently adjusting each spindle. The grinding wheels can be changed without disturbing the table setting. The machine, which has a separate control panel, can be used solely as a dry grinder, solely as a wet grinder—particularly useful for stiff springs and stainless steel springs—or as a wet or dry machine as required.

New Type of Wheel-barrow

A new type of wheel-barrow, which, it is claimed, will save up to 50 per cent on brick-handling costs on some building sites, is being produced by a London firm, Goodenough Pumps Ltd. The barrow is fitted with 2 main and 2 auxiliary wheels, which enable it to be wheeled across rough ground and over small obstacles, or to be pivoted and wheeled on to a higher level, such as a hoist platform, with a minimum of effort. It incorporates a single action clamp capable of lifting a stack of 50 or more bricks at one time. This is done by moving the barrow as close as possible to a stack of bricks, so that the clamping arms lie on either side of the bottom row of bricks. By means of a simple lever operation, the arms are closed to hold the bricks firmly, and the barrow wheeled away. It is easily adjustable for different sizes of bricks or blocks.

Rubber Sheets Protect the Blast-room

Any one of the millions of steel shots blasted against metal objects in shot-blasting operations rebounds with sufficient force to pierce glass ¼ in. thick. The protection of blast-room walls, until comparatively recently something of a problem, is now generally effected by the use of rubber sheeting. Rubber sheet features prominently in the new shot-blasting unit at the works of the Swedish company, ASEA—one of the biggest manufacturers of water-power generators in the world. Both walls and ceiling in the 33 by 46 ft. blast-room shown here are covered with ¼ in. thick rubber sheets supplied by Trelleborgs Gummifabriks AB. The shock-absorbing properties of the rubber has been further strengthened by hanging the sheets about 2 in. off the bare walls. Altogether the walls required some 660 running feet of 4 ft. 5 in. wide soft-grade natural rubber sheet. Perforated sheets were chosen for the ceiling.

Portable Hardness Tester

Rubber is being used to an ever-increasing extent in practically every branch of industry. So a new, low-priced but high-precision portable hardness tester should find a ready market. Known as the Bareiss Exacta and manufactured in Germany, it is now available in Great Britain through Industrial (Laboratory) Services, Waltham Cross, Herts. The frictionless design Exacta may be used either as a portable or as a bench-mounted instrument. It weighs only 6 oz. and is graduated in steps of 1° Shore hardness, ranging from 0°-100°. Even with very soft materials its maximum tolerance is claimed to be less than + 1 per cent. It can be used on many non-metallic materials to establish differences or uniformity of hardness or softness, and can be applied to raw materials or finished articles—as supplied, after storage, after treatment or usage, and at various temperatures.

HOW TO ORDER ABOUT 2476 PERSONS WITHOUT BEING AN EMPEROR

The moment you open a current account with Union Bank, you acquire the right to order about 2476 fully trained banking personnel in its many branches. "Pay my children's school fees regularly," you say. (Yes, Sir). "Pay my car taxes every quarter." (Yes, Sir). "Remit my insurance premiums yearly." (Yes, Sir). "Collect the dividends on my shares." (Yes, Sir).

Prompt, unquestioned and never-failing obedience to your wishes. Open a current account with Union Bank and feel like an Emperor.

PROGRESS OF EXPORT RISKS INSURANCE

RAPID EXPANSION IN RANGE AND SCOPE

MANY bright spots and favourable trends characterise the working of the Export Risks Insurance Corporation (Managing Director: Dr. S. P. Chablani, Bombay) during the year ended 31st December 1962. Preliminary results of the Corporation for 1962, just published, show that the Corporation not only maintained the progress made in the previous years but also improved upon it, so that it is now firmly set on the road to a steady expansion of business. Judged by the common indicators of growth such as the number of policies issued, the premium income and the maximum liability in force or by the value of risks covered, which is the real yardstick of growth measurement in credit insurance, the performance of the Corporation has been creditable. Thus, as compared with 1961, the number of policies issued and premium income rose by 30 per cent and 61.6 per cent respectively, the maximum liability in force by nearly 50 per cent and the value of risks covered by as much as 72.3 per cent. The average rate of premium per Rs. 100 of insured value, which indicates the cost of insurance to the exporter, was lower during the year at 27 nP, as compared with the average rate of 29 nP in 1961, 34 nP in 1960, 36 nP in 1958-59 and 33 nP in 1957-58.

The following table indicates the progress of the Corporation during the period 1957 to 1962:

Progress of Export Risks Insurance

	1962	1961	1960	1958-59	1957-58
No. of policies issued	554	426	324	302	146
Maximum liability (Rs. in crores)	19.26	12.9	7.7	7.9	7.5
Value of risks covered (Rs. in crores)	20.7	12.0	7.0	7.4	1.3
Bank finance availed of by exporters (Rs. in crores)	5.1	3.7	2.4	2.4	..
Premium income (Rs. in lakhs)	5.63	3.48	2.36	2.65	0.43
Average rate of premium per Rs. 100	27 nP	29 nP	34 nP	36 nP	33 nP

As a result of the steady expansion of business, the premium income of the Corporation has also increased substantially. It aggregated Rs. 5.63 lakhs in 1962, as compared with a mere Rs. 43.109 in 1958. Claims paid have also increased; so have recoveries made against the claims. The table below gives a broad picture of the financial position of the Corporation as at the end of 1962:

Financial Position of the Corporation

(Rs. in lakhs)

	1962	1961	1960	1959	1958
Income:					
Premium	5.63	3.48	2.36	2.65	0.43
Interest	2.26	2.85	2.00	2.59	1.66
Expenses*	3.57	2.75	2.35	2.35	1.68
Claims paid (less recoveries)	0.52	0.01	2.73	0.29	..
Transfer to reserves	4.85	2.97	—0.71	2.60	—0.16

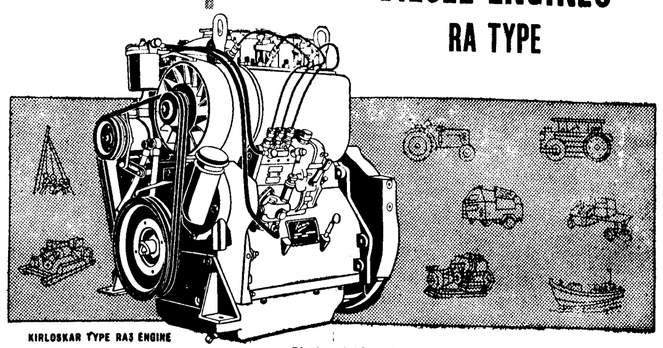
* Salaries, remuneration to field workers, rent, publicity and other administrative expenses.

The value of risks covered by the Corporation, as will be evident from Table I above, increased from Rs. 1.3 crore in 1957-58 to Rs. 20.70 crores in 1962, an increase of fifteen times in five years. The figure for 1962 works out roughly to 3 per cent of India's exports. But, considering the fact that nearly 50 per cent of India's export trade is in traditional items, in respect of which Indian exporters have well-established connections and, therefore, do not need this insurance cover, and that a sizable percentage of export trade is done against letters of credit, this figure is not insignificant. In fact, if due allowance were made for these factors, it would be seen that the Corporation covers about 8 per cent of the normally insurable risks. Since the coverage of even long-established credit insurers such as the Export Credit Guarantee Department of the U.K. does not exceed 20 per cent of total exports this record of the Corporation, which started operations only as late as in October 1957, is very satisfactory. But measured in relation to the urgent need for boosting exports, on which hinges the success of the country's Five-year Plans, the coverage is still inadequate. Past performance of the Corporation, however, strengthens the hope that the Corporation will be able to insure a substantial percentage of exports in the not-too-distant future. Success in this direction depends on how far the Corporation will be able to sell the idea of export risks insurance to exporters. Despite its many advantages to the exporters, export risks insurance, like other forms of insurance, has got to be sold. Ignorance, and sometimes even prejudices, prevent exporters from going in for insurance cover, even though the cost is only nominal. It may be noted that the premium rates charged by the Corporation is perhaps the cheapest in the world.

A quick glance at the various types of policies issued and services rendered by the Corporation will bring home the advantages of export risks insurance to shippers. In this connection, readers' attention is invited to an illuminating article contributed by Dr. S. P. Chablani, to our 1962 *Annual Number*. As stated by him therein, an important advantage is that, apart from offering financial protection to the exporter against all commercial and political risks, the policies issued by the Corporation enhance his financial standing in the eyes of his banker, for the Corporation's policies are acceptable as collateral to most banks. On the basis of this policy, the exporter can secure a line of credit by assigning the policies to banks. The exporter thus enlarges his business without unduly deploying or straining his financial resources. The Corporation also furnishes, in its endeavour to improve the quality of its own risks, valuable information to the exporter about the status, the probity and resources of his overseas clients. It also assists its policy-holders in the collection of their dues and debts and renders advice on legal and procedural matters.

A brief resume of Dr. Chablani's description of the various types of policies issued by the Corporation will not be out of place here, especially as the commercial public is not yet fully conversant with them. The main types of policies issued by the Corporation are the following:

(1) Shipments (comprehensive risks/political risks) policy. (2) Contracts (comprehensive risks/political risks policy). (3) Packing credit policy. (4) Manufacturers' credit insurance policy. (5) Exporters credit insurance policy, and (6) Market development policy. The first mentioned policy covers the risks of the insured from the date of shipment, whereas the second, namely, contracts policy, covers risks from the date of the contract. In either case, the exporter may seek a cover for commercial as well as political risks. He has also the option to insure himself against political risks only, if he so chooses. Ordinarily, the Corporation does not indemnify the exporter in respect of losses incurred on account of quality disputes. However, in view of the difficulties experienced by Indian exporters, especially the small exporters, it has undertaken to cover "non-acceptances risks," provided the goods have been subject to pre-shipment inspection.



The third policy, namely, packing credit policy, is a relatively new innovation. It is designed to help the exporter to secure a line of credit from the banks for the purpose of buying, processing and packing goods destined for the export market. The need for this type of policy arises, because, quite often, exporters have firm orders in hand for financing which they need credit in excess of the banks' normal rating of their capacity. In such an event, the Corporation is ready to step into the breach and share the risks with the bank for a nominal charge. The manufacturers' credit insurance policy and the exporters' credit insurance policy are designed to help exporters who have to supply goods to overseas buyers on credit terms and who, in turn, may have to have recourse to their own suppliers on similar credit terms. Conversely, exporters may have to finance the supplier to produce goods due to be exported. In either case, credit risks would be involved which are covered under these policies.

The market development policy is primarily designed to assist Indian exporters to survey new markets and conduct advertising and sales promotion campaigns. Under this policy, if the expenses incurred in respect of sales promotion are not recouped by the exporter within a given period, the Corporation would share the loss with the exporter on a 50 : 50 basis.

The rapid progress of the Corporation during the short span of its existence is due in large measure, to the enthusiasm and initiative of its first Managing Director, Mr. T. C. Kapur, who retired last year after firmly laying the foundations for further growth. The mantle has now fallen on the able shoulders of Dr. S. P. Chablani. He has taken the helm of the Corporation at a time when the urgency of increasing exports is more than ever before. Dr. Chablani proposes to intensify the publicity and public relations programmes of the Corporation, to strengthen the field organisation, to review the premium structure with a view to offering an element of incentive to the insured and to improve liaison with export promotion councils, commodity boards and chambers of commerce. These are undoubtedly steps in the right direction.

GOVERNMENT IMPORTS GO UP, DESPITE CURBS

PAYMENTS SITUATION CONTINUES TO CAUSE CONCERN

DESPITE the consistently restrictive import policy pursued by the Government of India, there has not been any decline in the import bill. In fact, aggregate imports appear to be steadily going up. This is by no means surprising when viewed against the background of growing domestic needs for raw materials and capital goods, besides foodgrains. But as merchandise exports have failed to improve and invisible items have caused a net draft on foreign exchange resources, the balance of payments situation has continued to deteriorate. Pointed attention to this none-too-satisfactory trend in India's external solvency has been drawn in the *Economic Survey* 1962-63, presented to Parliament by the Union Finance Minister along with Budget proposals. The *Survey* makes it clear that there is no scope left now for further drawal on foreign reserves which in fact need to be strengthened if there is to be some room for manœuvre in shaping plans and policies. It is, however, naive to imagine that the situation can be improved to any marked extent by reduction in imports. As the *Survey* says, with the progressive tightening of import restrictions, a stage has now been reached when any further increase in the degree of restrictions on imports would impair seriously the chances not only of higher production but of higher exports as well. Incidentally, this may well be the guiding principles on which the Government would frame its import policy for the next year, scheduled to be announced in a matter of few weeks.

In an analysis of the recent trends in balance of payments during the first half of 1962-63 (April-September 1963), the *Survey* reminds us of the marked deterioration of the situation witnessed in the first quarter (April-June), when India's foreign exchange reserves declined by as much as Rs. 56 crores. This situation, it may be recalled, led to stringent restrictions, particularly on foreign travel, and a mid-term cut in import quotas for the April-September period. It was in this context that a standby credit of $100 million was arranged with the International Monetary Fund, of which $25 million (Rs. 11.9 crores) was drawn in July 1962. As a cumulative result of all these measures, the pressure on balance of payments was abated during the July-September quarter, when there was actually an increase of Rs. 4.5 crores in the foreign exchange reserves (after taking credit for the drawing on the I.M.F.). Even so, the overall deficit in balance of payments (as measured by the decline in aggregate reserves and net drawings on the Fund) during April-September was only marginally smaller, that is, by Rs. 6 crores at Rs. 63.5 crores. A table depicting the overall trends in balance of payments situation in recent years was published on page 427 of our issue dated 9th March 1963.

Private Imports Fall

It may be noted that the total imports during the first half of 1962-63 were higher by Rs. 42.3 crores at Rs. 534.3 crores, as compared with the corresponding period of 1961-62. The increase was accounted for exclusively by imports on Government account. There was an increase of as much as Rs. 51 crores in imports on Government account due to larger purchases of foodgrains (Rs. 25.6 crores), of capital equipment for Government projects (Rs. 9 crores) and of Railway stores (Rs. 12.8 crores). In contrast, there was actually a decline of Rs. 8.7 crores (to Rs. 320 crores) in imports by private parties. An inescapable conclusion is that import restrictions have affected only the private sector (who are the worst to suffer from shortage of raw materials and machinery and equipments), whereas imports by Government go on unhindered. Table I on this page shows the recent trends in Government and private imports.

The aforesaid figures of imports, it should be borne in mind, are based on Exchange Control data, which usually vary much from those released by the Director-General of Commercial Intelligence and Statistics, which are based on customs returns. The D.G.C.I. and S. has already published trade figures upto the month ended December 1962, from which one is able to get a comprehensive picture of import trends during the whole calendar year 1962. (Relevant export trends were analysed in these columns a fortnight ago). Before analysing the trend of imports in 1962, it is necessary to stress that the figures available now are provisional; in particular, they do not include figures of certain Government imports because of the delay in getting the necessary data on account of the "note pass" procedure adopted by Customs Houses for the clearance of such imports. It is, therefore, possible that the figures of aggregate imports in 1962 may go up by Rs. 50 to Rs. 60 crores when they are finalised.

Other road vehicles	47	1,45	1,51
Aircrafts	9,57	11,82	10,46
Ships and boats	2,06	1,18	83
Mineral Fuels, etc.	94,59	80,46	78,46
Of which:			
Petroleum	40,19	28,79	22,87
Petroleum products	54,04	51,52	55,55
Grand Total (including others)	1,062,08	1,078,06	1,081,93

Subject to this qualification, imports in 1962 are estimated provisionally at Rs. 1.062 crores, which, though they represent an increase of Rs. 47 crores over the provisional figure for 1961 (Rs. 1.014 crores), are lower by Rs. 16 crores, as compared with the revised figure for 1961 (Rs. 1.078 crores). There is no doubt that imports even at this level have been far short of the demand for raw materials, on the one hand, and for machinery and equipments, on the other. It is only true to say that the stringent restrictions on imports (particularly on private imports) have been one of the major factors behind the slower rate of growth of industrial production last year.

Machinery

Table II on this page shows group-wise and commodity-wise pattern of imports (provisional) in 1962, as compared with those (revised) in 1961 and 1960. The broad commodity pattern has not changed much in recent years, except for small variations. Thus the percentage share of machinery and transport equipments increased from 35 per cent of the total imports in 1961 to 37 per cent in 1962 and of raw materials from 21 to 22. Thus, the major components of both development and maintenance imports have increased their respective share. The share of other manufactured goods, however, fell from 21 to 20 per cent. This trend reflects mainly the increase in domestic production of certain items of manufactured goods, the imports of which have been curtailed rigorously. The percentage share of food imports, too, was lower at 13, as against 15; but this proportion is likely to change when the final figures are published.

As was only to be expected, there were divergent trends in the imports of different commodities. To take the commodities, the imports of which suffered a decline in 1962, first. Imports of iron and steel declined by as much as Rs. 18 crores to Rs. 106 crores. Among the other manufactured goods, imports

of paper and paperboard, glass and glassware, refractory goods, rubber manufactures, as also zinc and nickel, have been smaller. Although there was a general increase in the import bill for machinery and transport equipments, metal working machinery, motor and other road vehicles, aircrafts and tractors were exceptions to this trend. Imports of general chemicals, including coal tar dyestuffs, pigments and paints, certain organic chemicals, medicine and pharmaceuticals also moved down.

Besides manufactured goods, some of the raw materials also showed a declining trend in their imports. Thus, imports of raw cotton were lower, but still at a high level of Rs. 58 crores. But for the setback suffered in the domestic production of raw cotton, the foreign exchange cost on this commodity would have been much smaller. This, however, actually happened in the case of raw jute, imports of which have gone down because of a bumper domestic crop in 1961-62 and another good crop this year. The foreign exchange cost on account of metals scrap was also lower, apparently because of the increase in the availability of domestic scrap, following the severe restriction on exports of this raw material (that is, scrap).

More Foodgrains Imported

In the food group, wheat imports have been lower, according to provisional figures. But this estimate seems to err on the lower side. When final figures on Government imports of wheat become available, it is possible that they will show an upward trend. The total quantity of foodgrains imported into India was actually higher in 1962. The *Economic Survey* 1962-63, for instance, says that the actual quantity of imports of foodgrains in 1962 was 3.58 million tons, as compared with 3.44 milion tons in 1961. Imports of rice, in particular, were of a high order, following the decline in its output within the country in 1961-62.

Among the other major types of imports which have gone up, particular mention may be made of such machinery items as power generating machinery (other than electric), mining, construction and other industrial machinery, agricultural machinery, as also railway vehicles, ships and boats. There has been a notable increase in the intake of fertilisers, both manufactured and crude, reflecting the growing demand for them from farmers, and the delay in the establishment of new fertiliser manufacturing units within the country. There was also a marked improvement in imports of several non-ferrous metals, particularly copper, aluminium, lead and tin.

There was a significant expansion in the imports of petroleum as well as petroleum products, which together accounted for Rs. 95 crores, as compared with only Rs. 80 crores in 1961. The expansion was mainly the result of larger purchases of petroleum products, particularly from Soviet Russia. The increase in the imports of vegetable oils and fats was mainly due to larger intake of palm oil and copra, under the incentive scheme governing exports of groundnut oil.

Increase in U.S. Supplies

Table III shows the country-wise trends in imports. It will be seen from this table that the U.S. continued to be the leading supplier of merchandise to India, with imports from that country amounting to Rs. 297 crores in 1962, or an increase of Rs. 21 crores over the previous year. Besides, India bought more from some of the Afro-Asian countries, particularly Ceylon, Burma, Ghana, Sudan, Pakistan, Afghanistan, Iran, Bahrein, Tanganyika, Zanzibar and Pemba.

Imports from the communist countries of Europe, with which India has made arrangements for rupee payments, rose by almost 60 per cent to a record level of about Rs. 109 crores. Imports from Russia were more than doubled over a year.

Imports from U.K. Decline

In contrast, India's purchases from the U.K., the second largest supplier to this country, fell by about 14 per cent to Rs. 179 crores. Imports from the other members of the European Free Trade Association did not differ much from this trend. There was also a distinct fall in purchases from West Germany and other Common Market countries (except the Netherlands), with which India has a large adverse trade balance. Australia, New Zealand, Canada and Japan also could not sell more in India. Imports from such Afro-Asian countries as Egypt, Syria, Kenya, Nigeria, Indonesia, Thailand, Malaya, Singapore, Hong Kong, Saudi Arabia, Aden and Kuwait also suffered a setback during the year under review.

PAPER INDUSTRY'S PROGRESS IMPRESSIVE

PLEA FOR UPWARD REVISION OF FAIR PRICES

WITH the increase in the tempo of industrialisation and the spread of literacy, the demand for paper has been steadily going up. There were several occasions in the past, when consumers had to put up with shortage of paper and blackmarketing. But, of late, the supply position has steadily improved, particularly since the latter part of the second Plan period. At the beginning of the second Plan, it may be recalled here, there were only 20 paper factories in the organised sector, with a total annual installed capacity of 210,000 tons of paper and paperboard. Although one of the units at Madras (Pudukotah Mills) went out of production in the course of the second Plan period, as many as eight new units came into existence by 1960-61 (the last year of the second Plan) and sixteen of the existing units expanded their capacity. Altogether, the total installed capacity for paper and paperboard stood at as much as about 410,000 tons in that year. Since the beginning of the third Plan, another seven units have gone into production bringing the installed capacity to 480,000 tons.

With the expansion of capacity and better utilisation of capacity in some of the mills, there has been a marked improvement in the production of paper and paperboard. The total output rose by nearly 100 per cent from 187,000 tonnes in 1955-56 to 364,000 tonnes in 1961. During the first ten months of 1962, the output aggregated 316,000 tonnes, or an annual average of 378,450 tonnes.

Self-sufficiency

Although the industry has thus made considerable progress, much leeway still remains to be made before India can become self-sufficient in this essential commodity. In fact, the output is still markedly below demand. Drawing attention to this aspect, Mr. Umashankar Bajoria, President of the Indian Paper Mills Association, stated, in his speech at the annual meeting of the Association held at Calcutta last week, that the supply of paper and paperboard might fall short of demand by about as much as 71,000 tons in 1962-63. Mr. Bajoria's conclusion is based on his expectation that the total availability of paper in 1962-63 will be 435,000 tons (410,000 tons of output *plus* imports *less* exports of about 25,000 tons). The Planning Commission, it may be noted, has estimated the demand for paper in 1962-63 at 506,000 tons and expects it to go up by 12½ per cent annually.

It is on this basis (of consumption trend) that the Planning Commission has laid down for paper and paperboard targets of capacity and production at 820,000 tons and 700,000 tons, respectively, for 1965-66. Already the Government of India has licensed an additional capacity of 759,000 tons. Mr. Bajoria was, however, rather sceptical about the possibility of attainment of all this licensed capacity according to target. His scepticism stems mainly from the belief—not ill-founded—that the price policy for paper pursued by the Government of India is not conducive to inspire the confidence of investors. Mr. Bajoria was highly critical of the Tariff Commission's formula for fair prices for paper, brought into force from 1st January 1960. Although an *ad hoc* increase of 5 to 6 nP per kg. was permitted in June last, "this increase is," in his view, "not only insufficient to cover the rise in costs of production since the last Tariff Commission's enquiry (1959), but also does not rectify the various anomalies created by the Commission." Mr. Bajoria drew particular attention to the fact that companies selected for costing by the Commission did not represent a fair cross-section of the industry "as there was a predominance of mills with a comparatively low cost structure." Besides, since white printing paper was adopted as the basis for fixing the prices of other varieties also, the Commission's formula, Mr. Bajoria said, did not take into account the higher cost of production of the latter types of paper.

Return on Capital Low

The profitability of paper ventures has been further reduced by allowing only 12 per cent return on capital employed, based on historical value of the block of the industry. According to Mr. Bajoria, the gross margin available to the industry (after adding depreciation) worked out to about only Rs. 250 per ton on, an average, subject to interest, managing agents' commission and bonus to employees. Explaining the inadequacy of the profit margin now permitted, Mr. Bajoria observed as follows:

"The cost of erecting a new plant, as will be apparent from the figures of block of some of the new units, which have come into production, is of the order of Rs. 3,200 per ton of annual output. Taking into account, the slightly lower cost of expansion, I put the average cost of new installations at Rs. 3,000 per ton. The gross return, therefore, of about Rs. 250 per ton, subject to interest, depreciation, etc., can hardly service a large investment of this order. For instance, a new plant of 20,000 tons per annum capacity, taking into account the present-day cost of machinery and plant, will cost at least Rs. 6 crores and the gross profit-margin will be of the order of Rs. 50 lakhs, while depreciation alone on such a plant will be of the order of Rs. 60 lakhs. This speaks for itself and requires no elaboration about the complete inadequacy of the profit-margin.

"While this is the case with paper, the position in respect of implementation of pulp and newsprint schemes is even worse. I feel that the profitability for a pulp mill or a newsprint mill is bound to be lower than that on an integrated pulp and paper mill. The cost of erecting a new pulp plant is of the order of Rs. 2,500 per ton. I have not taken into account additional costs that have to be incurred in drying the wet pulp and transporting it to the paper producing centres. In view of these additional costs, I am of the opinion that the ratio of profitability on the pulp mill will be even less attractive. For instance, a 20,000-ton pulp mill will cost approximately Rs. 5 crores in which I expect a gross profit of Rs. 150 per ton only, as against the profit of Rs. 250 per ton in an integrated pulp and paper mill. Therefore, a gross profit of Rs. 30 lakhs against the capital investment of Rs. 5 crores can by no means be considered adequate. While this is the case with pulp mill, the position of newsprint plant is in no way better. The cost of erection of a 60,000-ton newsprint plant will be about Rs. 14 crores and I do not expect profitability to be more than Rs. 1.2 crore even at Rs. 200 per ton subject to interest, depreciation, etc. It is a matter for regret, therefore, that the Tariff Commission, which had acknowledged that the rapid expansion of the paper industry was mainly due to larger availability of internal resources, should have fixed the return on employed capital in an arbitrary manner, thereby making it difficult for the industry to fulfil its obligations.

"I may also mention that the return of 12 per cent on employed capital allowed by the Commission is subject to managing agents' commission, interest on borrowings, bonus to labour besides deduction of income-tax. The net amount left in the hands of the Company after payment of these charges is so small that it does not leave any sum for taking to reserve or payment of reasonable dividend to equity shareholders which is evident from the prices of shares of most of the paper mills, new as well as old, which are available at or below par. This no doubt has made it very difficult for the industry to raise capital for new projects from the market."

Apart from the unremunerative prices fixed for paper, the industry is also facing difficulties in securing raw materials and machinery and equipment. Mr. Bajoria was much concerned about the rapid depletion of the supply of conventional raw materials such as bamboo and grass in the country. In this connection, he called for an expert survey of the availability of bamboo and other forest resources used by the industry, preferably by the National Council of Applied Economic Research or any similar research body. On the question of substituting bagasse for bamboo, he was of the opinion that sugar factories would not release bagasse to the paper industry unless they were assured of adequate supply of coal or alternative sources of fuel required by them.

NEW SORBITE FACTORY

Sarabhai-Merck Ltd., a joint venture of the Sarabhai concern and E. Merck AG, Darmstandt, West Germany, has commissioned a new plant for the manufacture of sorbite at Baroda. Sorbitol, the company's new product, it is claimed, signifies new progress in the technical development of India. Sorbite, manufactured in Germany by Merck, is a product for various uses in the food, paper and pharmaceutical industries, where it is needed as diet sweetner for diabetics, as impregnating compound and as a humidity stabilising agent, as well as a general exchange agent for glycerin, respectively. With the help of hydrogen gas (compressed to over 150 atmospheres), glucose is being hydrated in the autoclave to gain sorbite.

Sarabhai and Merck have together blueprinted the new sorbite factory at Baroda. The engineering design for the manufacturing process came from Merck, while the civil engineering work was conducted by the Indian partner. DEMAG-Elektrometallurgie GmbH, Duisburg, W.-Germany, supplied the water electrolyser for the production of pure hydrogen and oxygen which are essential for sorbite manufacture. The erection and taking into operation of the installations was supervised by Sarabhais with the support of Merck's and Demag's technical know-how. The water electrolyser, supplied by the latter, incorporates a rectifier plant. Its hourly capacity is 17 cu. metres of hydrogen and 8.5 cu. metres of oxygen.

FALL IN PROFIT-MARGIN OF SEN-RALEIGH

NEAR-TERM OUTLOOK NOT BRIGHT

THE newly-named Sen-Raleigh Ltd., which was formerly called Sen-Raleigh Industries of India Ltd. (Chairman: Mr. Abhijit Sen, Calcutta), has fared no better during the year ended 30th September 1962 than it had done in the previous year, inasmuch as, while expansion in sale proceeds has continued, its accompanying benefits have been swallowed again by higher costs. Net sales realisation (that is, excluding excise duty paid) has grown sharply by Rs. 87.11 lakhs to Rs. 479.33 lakhs, as compared with a rise of Rs. 35.61 lakhs to Rs. 392.22 lakhs in 1960-61. This growth is explained by the growing popularity of, and the rising demand for, the bicycles and almost all the components produced by the Company. The trend in demand is said to have matched well the considerable rise in production. Gross profit, on the other hand, is only marginally higher at Rs. 45.23 lakhs, as compared with Rs. 44.16 lakhs for the year before and Rs. 44.50 lakhs for 1959-60.

This near stagnancy in the profit-curve is attributed by the Chairman, Mr. Abhijit Sen, to ever-rising costs and erratic supply of raw materials, resulting in unduly high costs of production. As a result, the ratio of profit to sales has declined further to 9.4 per cent from 11.2 per cent to which level it had dropped in 1960-61, after a recovery from 11.3 to 12.5 per cent in 1959-60. Taxation has claimed Rs. 1.78 lakh more at Rs. 11.86 lakhs, because of the higher aggregate tax (excluding the proposed S.P.T.) on company profits. Other allocations and appropriations do not show any important change from the previous year's levels. Dividend on the 10-rupee ordinary shares has been maintained at the rather modest level of 8 per cent per annum, subject to tax.

After deducting Rs. 57,757 set apart for development rebate reserve, the profit, for determining super profits tax liability, amounts to Rs. 10.93 lakhs on aggregate "own funds" of Rs. 143.55 lakhs, comprising a paid-up capital of Rs. 100 lakhs and permissible total reserves (as calculated by us) of Rs. 43.55 lakhs. A six per cent return on the "own funds" works out to Rs. 8.61 lakhs. This leaves the balance of Rs. 2.32 lakhs as super profit, which being less than 10 per cent of own funds will attract tax at 50 per cent, that is, Rs. 1.16 lakh. Adding this Rs. 1.16 lakh to the normal tax provision of Rs. 11.86 lakhs, the total works out to Rs. 13.02 lakhs, claiming about 56.5 per cent, as against the normal 50 per cent, of the Company's profit.

The comparative table below sums up the Company's progress from 1959:

(In lakhs of rupees)

	For the year ended 30th September			
	1962	1961	1960	1959
Sale proceeds, less excise paid	479.33	392.22	356.61	293.57
Closing stocks	88.92	86.84	66.19	43.43

Market value of equity shares (In rupees):	1962	1961	1960	1959
High	22.56	26.50	27.25	19.00
Low	18.87	22.00	19.50	14.06

* On account of 30 per cent. of the preference dividend payable as prescribed by the Preference Shares (Regulation of Dividends) Act, 1960, for the year 1958-59.
† Subject to deduction of tax.

The Chairman has made a pointed reference to insufficient improvement in efficiency in and absence of tighter controls on the Company's working and has suggested a streamlining of the activities in order to bring future profits in line with the scale of operations. He has also promised to go ahead with the schemes for expansion of bicycle production and diversification into the manufacture of house service meters, which will cost the Company over Rs. 2 crores in the next two to three years.

Finance for these schemes has been raised partly from the issue of 650,000 new ordinary shares at a premium of Rs. 4 per share in November last and the balance is to be obtained internally. To the extent of the 334,000 new shares taken up by Raleigh Industries Ltd., U.K., out of the rights issue, the foreign exchange requirements of the schemes will be covered, but not fully met. A foreign exchange loan from the I.F.C. is, therefore, being considered.

A technical aid agreement with the British firm, reducing royalty by 50 per cent of the previous rate till 1968 and eliminating it thereafter, was adopted by the general body at its meeting in November last. Trade mark agreements with that firm and also with Union Sils, van de Loo and Company and Wittkop and Company have been amended consequent to the revision of the Trade Mark Act in this country. The first consignment of the "Balaka" bicycles will soon be on its way to Africa and later to the major cycle importing countries. The Associated Electrical Industries Ltd. of the U.K. has signed a ten-year technical collaboration agreement with the Company for its house service meter scheme, which allows it to export them. Planning work is well advanced, and subject to import licences for plant and equipment being received on time, trial production will commence next year.

While the above account speaks of a promising long-term outlook, the near-term picture is not rated as bright by the Chairman for reasons such as the changed order of priorities following the emergency and further cuts in imports as well as divergence of the limited quantity of indigenous steel to defence production. The dock strikes in the U.S., from where much of the raw materials for the industry has been coming, have been a further retarding factor affecting supply lines. As a result of all this, both bicycle and component production has suffered a considerable setback. The proposed expansion of bicycle production will also be dependent on the availability of raw material and components. At the same time, however, the Company is eminently equipped to undertake production of defence stores and will welcome any orders for defence production.

The Rs. 100 lakhs paid-up capital of the Company comprises Rs. 70 lakhs in ordinary shares and Rs. 30 lakhs in preference shares. It is supplemented by reserves and surplus aggregating Rs. 58.81 lakhs. Secured loans of Rs. 252.62 lakhs (of which Rs. 184.98 lakhs are from banks, Rs. 65.70 lakhs from the I.F.C. and Rs. 1.93 lakh from the Government of India) show a rise of Rs. 3.20 lakhs over the year. Current liabilities and provisions total Rs. 148.36 lakhs and bring the aggregate short-term indebtedness to outsiders to Rs. 333.34 lakhs, which exceeds slightly the available current assets, loans and advances shown at Rs. 320.15 lakhs and investments amounting to Rs. 8.54 lakhs. The gross block, which increased during the year from Rs. 288.29 lakhs to Rs. 303.26 lakhs, has been written down by nearly a third of the value to Rs. 187.01 lakhs, and the net block is shown, inclusive of capital projects in progress, at Rs. 231.10 lakhs.

Currently quoted at Rs. 14 *cum-div.*, the Rs. 10 fully paid ordinary shares of the Company offer on the *ex-div.* basis a net yield of 4.1 per cent per annum.

(Concluded from next column)

view of the present emergency. But the benefits derived from this section may not carry the Company far, as the other groups may not show much improvement over their last year's working and the Company's trading activities continues to be restricted. The current year's prospects, therefore, do not appear to be better in any significant way than last year's.

Financially, the Company is sound. Its paid-up capital of Rs. 207.12 lakhs, including Rs. 60 lakhs in preference shares, is supplemented with reserves and surplus aggregating Rs. 124.93 lakhs. Secured loans have gone up from Rs. 81.65 lakhs to Rs. 121.67 lakhs, but current liabilities and provisions are shown lower at Rs. 484.98 lakhs as compared with Rs. 584.05 lakhs a year before. The total indebtedness to outsiders works out to Rs. 606.67 lakhs, as against which are available, on the assets side, current assets, loans and advances at Rs. 670.87 lakhs and investments at Rs. 197.39 lakhs, including Rs. 187.91 lakhs in quoted investments which command a market value of Rs. 404.94 lakhs. The gross block, which increased during the year from Rs. 90.45 lakhs to Rs. 93.25 lakhs, has been written down to Rs. 70.44 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 30.50 *cum-div.* On the *ex-div.* basis, they offer a net yield of 6.1 per cent per annum.

MARTIN BURN LTD.

DIVIDEND CUT—S.P.T. HEAVY

A SHARP drop of Rs. 87.80 lakhs to Rs. 770.08 lakhs in sale proceeds is the outstanding feature of the financial results of Martin Burn Ltd. (Chairman: Mr. T. Leslie Martin, Calcutta) for the year ended 30th September 1962, especially as it contrasts with the recovery of Rs. 108.57 lakhs to Rs. 857.88 lakhs noted in the previous year. It is, however, a consolation that the gross profit has declined only slightly, from Rs. 83.78 lakhs to Rs. 81.06 lakhs. Consequently, the profit-margin, that is, percentage of gross profit to the aggregate of sale proceeds and income by way of allowances and commission, has edged forward to 9.8 from 9.2 to which level it had moved down in the previous year from 10.7 in 1959-60.

In spite of the lower profit, the provision for taxation has been raised by Rs. 3 lakhs to Rs. 36.50 lakhs owing to expectations of additional taxation measures in the present emergency. This has reduced the net profit by Rs. 6 lakhs to Rs. 41.67 lakhs. And the lower net profit has affected the return to shareholders, which has been cut by 2.5 per cent to 25 per cent per annum, taxable, on the 10-rupee ordinary shares.

Effect of S.P.T.

The net profit of Rs. 41.67 lakhs is on the aggregate "own funds" of Rs. 330.69 lakhs comprising the paid-up share capital at Rs. 207.12 lakhs and reserves, excluding capital reserve, at Rs. 123.57 lakhs. A 6 per cent return on the "own funds" works out to Rs. 19.84 lakhs, leaving Rs. 21.83 lakhs of the profit as the amount assessable for super profits tax. Since this assessable amount is well over 10 per cent of the "own funds," the first 4 per cent over the standard rate, amounting to Rs. 13.23 lakhs, will attract super profits tax at 50 per cent and the balance, namely Rs. 8.60 lakhs, will be taxed at 60 per cent. The total super profits tax will thus amount to Rs. 11.77 lakhs and the aggregate tax burden to 66.1 per cent, assuming that the provision of Rs. 36.50 lakhs as tax for the year is at the normal rate of 50 per cent. The implications of a further draft of Rs. 11.77 lakhs on net profit will be clear to readers. On this basis, the profit available for appropriation is only Rs. 29.90 lakhs. After allowing for the claim of preference shareholders, the balance is Rs. 26 lakhs, as against Rs. 36.78 lakhs required to pay the proposed lower dividend on ordinary shares. It remains to be seen what adjustments the Directors will make in their appropriations at the annual meeting of the Company scheduled for 27th March 1963.

A summary of the Company's progress in the past four years is presented in the comparative table below:

(In lakhs of rupees)

	For the year ended 30th September			
	1962	1961	1960	1959
Sale proceeds	770.08	857.88	749.31	767.50
Closing stocks and work-in-progress	201.49	197.36	197.07	159.83
Other income	105.69	105.71	113.97	101.68

Low	28.00	25.50	25.37	25.87

* Subject to deduction of tax.

The setback in turnover and therefore also in profit has been attributed by the Directors to the limitations on the Company's trading activities owing to the restrictive import policy. The effect of such limitations is said to have been countered by an increase in income from managing agents' commission. The increase has, however, been only slight from Rs. 51.13 lakhs to Rs. 52.25 lakhs. This is because, while the engineering group of companies under the management of the Company showed some improvement in profit in spite of adverse trading conditions, the electric supply companies could barely maintain their profits notwithstanding the expansion in generating and distributing power and the railway group of companies showed a setback in profits due to the growing competition from road transport.

The engineering companies may reasonably be expected to fare still better this year in

(Continued in previous column)

WALCHANDNAGAR FARES BETTER

DIVIDEND MAINTAINED—NO S.P.T. PAYABLE

IT is really heartening to note that the forebodings of the Directors of Walchandnagar Industries Ltd. [Managing Agents: Messrs. Walchand and Company (Private) Ltd., Bombay], expressed in their report last year, that the results of the Company for the year ended 30th September 1962 would be far from promising, have failed to materialise and that the Company has actually scaled greater heights than ever before both as regards the turnover and the gross profit. Benefiting from the briskness in demand consequent on the withdrawal of restrictions on and the decline in the price of sugar, the Company was able to sell in 1961-62 a larger quantity of sugar—a fact revealed by the drop from Rs. 122.19 lakhs to Rs. 83.73 lakhs in the value of closing stocks of finished products—and thereby realise a sum of Rs. 325.79 lakhs or as much as Rs. 50.23 lakhs in excess of the realisations in the previous year. Gross proceeds from the sale of sugar machinery, too, substantially improved from Rs. 128.51 lakhs to Rs. 212.92 lakhs. This improvement has been shared by the gross profit as well which has expanded to Rs. 67.11 lakhs from Rs. 53.74 lakhs for 1960-61.

With the realisation of a higher gross profit, a larger provision for the Managing Agents' commission has become necessary and accordingly Rs. 3.79 lakhs have been set aside as against Rs. 2.41 lakhs previously. Provision for depreciation has also been slightly increased from Rs. 28.49 lakhs to Rs. 29.13 lakhs but the major rise is in the tax provision which has gone up sixfold from Rs. 2.50 lakhs to Rs. 15.50 lakhs. Consequently there has been a further, albeit marginal, decrease in the net profit from Rs. 20.34 lakhs to Rs. 18.69 lakhs. Out of this, the Directors have credited a sum of Rs. 4.31 lakhs to the development rebate reserve and, after setting aside Rs. 5.00 lakhs to meet the preference dividend liability, have proposed the same dividend as for the previous year, namely, 12 per cent per annum, subject to deduction of tax. Since, however, a full year's dividend has become payable on equity shares issued during the preceding year, the amount required for this purpose is higher at Rs. 18.12 lakhs as against Rs. 17.04 lakhs. As the profit assessable to S.P.T. for the year under review is much less than 6 per cent standard deduction on capital and reserves, the Company does not have to pay any S.P.T. for 1961-62. It is a moot point whether its profit for the current year will be any significantly higher to attract S.P.T., the equivalent of 6 per cent on capital and reserves (Rs. 289.06 lakhs) being Rs. 17.34 lakhs.

The table below shows the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1962	1961	1960	1959
Sale proceeds (gross)	538.71	404.07	391.28	404.95
Other income	16.37	25.69	7.77	6.99
Closing stocks	152.14	183.42	112.97	64.29

Low	140.00	158.00	248.75	264.50

Note :—All dividends are subject to deduction of tax.

Continuing its efforts at installing additional equipment in its machinery division to cope with that department's expanding activities, the Company acquired, during the course of the year under review, new assets worth Rs. 41.64 lakhs over and above assets worth Rs. 42.31 lakhs added during the previous year. This has raised the gross block account to Rs. 498.28 lakhs. A sum of Rs. 209.52 lakhs has been provided as depreciation so that the net block is Rs. 288.76 lakhs. Current assets, loans and advances amount to Rs. 477.73 lakhs, investments to Rs. 9.31 lakhs and miscellaneous expenses and losses yet to be written off to Rs. 2.60 lakhs.

There has been no change in the Company's paid-up capital at Rs. 201.49 lakhs comprising Rs. 50.00 lakhs in 10 per cent cumulative preference shares of Rs. 100 each and Rs. 151.49 lakhs in equities. This is supported by Rs. 128.43 lakhs in reserves and surplus. Indebtedness to outsiders aggregates Rs. 448.40 lakhs, of which Rs. 100.00 lakhs are in debentures, Rs. 164.55 lakhs in loans from banks and others, and the balance, namely, Rs. 183.93 lakhs as current liabilities.

Recently, the Company entered into a collaboration agreement with Cochran and Co. Ltd. of the U.K. for the manufacture of steam accumulators and with Technoexport of Czechoslovakia for the manufacture of water tube boilers. Similar agreements for manufacture of cement manufacturing machinery and ancillary equipment are under negotiation. The Union Government has given licences to start three more sugar factories in the co-operative sector and one in the private sector. The Directors report that negotiations are under way to secure orders from some of these. Efforts are also being made to quote for supply of complete sugar plants to foreign countries.

The Rs. 100 fully paid ordinary shares of the Company are currently being quoted as low as Rs. 133 *cum-div.* On the *ex-div.* basis, the net yield works out to over 6.7 per cent per annum.

McNALLY-BIRD ENGINEERING LTD.

A dollar loan of Rs. 50 lakhs, equivalent of $1,058,000, has been granted by the U.S. Agency for International Development from the "Cooley" Funds to the McNally-Bird Engineering Company Ltd. towards the latter's plant at Kumardhubi (Bihar) for the manufacture and sale of coal washeries and allied equipment. Beginning with 70 per cent indigenous manufacture, a phased production programme of the Company is expected to turn out within five years products made entirely in India. This will mean a foreign exchange saving of over Rs. 4 crores within the third Plan period. Items to be made include heavy medium washeries, jig type washeries, heavy medium cyclones, crushers, screening plants, belt conveyors, bins, car hauls and chain conveyors. A newly-erected heavy engineering shop is said to be ready to handle heavy fabrication and machine shop work. McNally-Bird is a 60 : 40 joint venture of McNally-Pittsburgh Manufacturing Company of Pittsburgh, Kansas, which has been making coal washing equipment in the U.S. for 70 years, and Bird and Company of Calcutta, which is managing agent for a number of mining companies in this country. The American partner is assisting the Company in its project with active technical aid and also by training Indian personnel.

(*Concluded from next column*)

nary and vendors shares, but there has been a further accretion to reserves which now aggregate Rs. 211.39 lakhs partly because of the plough back during the year and partly because of the increase of Rs. 13.17 lakhs in capital reserve representing excess depreciation. This latter addition was written back. There has also been an increase of Rs. 37.84 lakhs to Rs. 198.23 lakhs in the indebtedness to others, but most of it is due to the rise of Rs. 29.32 lakhs to Rs. 58.25 lakhs in bank borrowings and an increase of Rs. 14.52 lakhs to Rs. 121.98 lakhs in current liabilities set off partially by a reduction of Rs. 6.00 lakhs to Rs. 18.00 lakhs in unsecured loans. But the liabilities are fully covered in current assets, loans and advances standing at Rs. 304.35 lakhs. The investment portfolio at cost is shown at Rs. 88.07 lakhs but most of it is of doubtful value, being in shares of Shree Madhav Mills, which is in liquidation, and of Calico Printers, the financial position of which is none too sound. The net block stands at Rs. 95.40 lakhs and has been arrived at by reducing a gross block of Rs. 249.58 lakhs by Rs. 166.23 lakhs representing the depreciation provided so far. New additions to fixed assets during the year amounted to Rs. 14.38 lakhs, as against Rs. 23.62 lakhs during the previous year.

The programme of renovation and modernisation of both the mills, initiated in 1959, continues to be implemented. Besides the assets acquired during the year, commitments for capital expenditure have been made to the tune of Rs. 20.10 lakhs. Besides, the Company has received a licence for the installation of 12,000 spindles for balancing purposes.

The Rs. 10 fully paid ordinary shares of the Company are currently being quoted at Rs. 20.69 *cum-div.* and fetch a net return of 6.3 per cent per annum on the *ex-div.* price.

ELGIN MILLS' PROFIT LOWER

COSTS HIGH—LOSS ON EXPORTS

NOTWITHSTANDING difficult trading conditions within the country and the setback suffered in its efforts on the export front, both of which have been principally responsible for inflating the closing stocks of goods by as much as Rs. 27.81 lakhs to Rs. 112.68 lakhs, the Elgin Mills Company Ltd. (Secretaries and Treasurers: Messrs. The British India Corporation Ltd., Kanpur) has finished the year ended 30th September 1962 on a highly satisfactory note. Proceeds from the sale of the Company's reputed products—after adjusting for the excise duty on cloth and yarn—which had been upward since 1958 experienced a further improvement and crossed, for the first time, the Rs. 6-crore mark to stand at Rs. 630.69 lakhs or Rs. 49.13 lakhs higher than the level reached during the previous year. Unfortunately, the Company was not able to repeat this performance in the matter of gross profit which has declined, albeit marginally, from Rs. 87.19 lakhs to Rs. 85.34 lakhs. This was so for two reasons. There was a further increase in the cost of production, owing to higher prices of cotton, a bigger wage bill and the rise in price level generally. This increase more than neutralised the efficiencies and economies achieved by the two units of the Company. And, secondly, loss was suffered on account of the compulsory export obligations undertaken by the Company in national interest.

The reduced profit has quite naturally meant a lower provision for the remuneration payable to Secretaries and Treasurers, that is, Rs. 3.96 lakhs, as against Rs. 4.12 lakhs last year. The other two provisions, depreciation and taxation, on the other hand, have claimed larger amounts, the former getting Rs. 11.27 lakhs as against Rs. 9.57 lakhs and the latter Rs. 35.30 lakhs as compared with Rs. 31.75 lakhs a year ago. Consequently the net profit has gone down rather perceptibly by Rs. 7.14 lakhs to Rs. 34.61 lakhs, that is, by 17 per cent. To this has been added Rs. 0.81 lakh brought forward from the preceding year and Rs. 1.87 lakh withdrawn from past provisions, thereby bringing the profit available for appropriation to Rs. 37.31 lakhs. From this Rs. 2.28 lakhs have been written off as debits for prior years while a sum of Rs. 21.69 lakhs has been credited to reserves. Out of the balance, the Directors have proposed a dividend of 17.5 per cent, subject to deduction of tax, on the equity shares, absorbing Rs. 11.03 lakhs. A sum of Rs. 1.41 lakh is taken up by preference dividends, leaving a carry forward of Rs. 0.89 lakh as against Rs. 0.81 lakh brought in.

On a rough estimate, the super profits tax payable by the Company works out to Rs. 7.92 lakhs. If the proposed dividend has to be kept unchanged this liability can be met by pruning the transfer to reserves. On this basis, the total rate of taxation for the Company works out to 63.2 per cent.

The following comparative table presents synoptically the results achieved by the Company during each of the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1962	1961	1960	1959
Sales less excise duty	630.67	581.54	399.76	356.60

Low	19.09	18.37	17.00	11.50

Note :—All dividends are subject to deduction of tax. Dividends for 1960 relate to two years, viz., 1959 and 1960. Dividends for 1959 were declared but not paid.

There has been a further strengthening of the Company's financial position during the year under report, particularly in respect of own funds. There has, of course, been no change in the paid-up capital which continues to stand at Rs. 78.20 lakhs, of which Rs. 15.20 lakhs are in preference shares and the balance in ordi-

(*Continued in previous column*)

NEWS IN BRIEF

THE Rs. 35-crore fertiliser factory project site at Trombay near Bombay is nearing completion and is expected to start production by June or July next. At present, more than a thousand people are employed in the project.

The Central Government has deferred the setting up of a Central Salt Board as, in its opinion, the objectives for which it had been proposed are being achieved through the existing Central and regional advisory boards.

The Union Government has approved the establishment of 32 new cement factories with a total capacity of 6,322 million tonnes during the third Plan. However, the number of factories that will actually be commissioned depends on the availability of foreign exchange and the speed with which the licensees will implement them.

A proposal to create "steel cadets" is now under the consideration of the Union Government, according to Mr. Subramaniam, Minister for Steel and Heavy Industries. Under the scheme, young men of 17 or 18 years of age, not possessing engineering or metallurgical degrees, will be given intensive steel oriented engineering training. Details of the scheme are being worked out.

An agreement covering the grant of a dollar loan of Rs. 7.6 crores for the expansion of Delhi 'C' power station has been signed by the Government of India and the U.S. Agency for International Development. Simultaneously, a rupee loan of Rs. 8.1 crores from P.L. 480 proceeds has also been provided by the U.S. Government for the same purpose.

The Government of India is still awaiting the detailed project report from Messrs. Prommashexport of Moscow on the proposal to set up with Russian aid a precision instruments factory at Kotah in Rajasthan. Work at the factory site is expected to commence after the receipt of the report. The scheme for training Indian technicians in Russian factories has already been finalised.

Deposits of coal have been found in the Kamptee area in Maharashtra and Patharkhera in Madhya Pradesh. The National Coal Development Corporation is preparing a detailed project report for Kamptee coalfield where the coal reserves are estimated at 15 million metric tons. The project report for an annual production of 450,000 tons of coal from Patharkhera coalfield has already been sanctioned and work is likely to commence shortly.

An association of management and industrial consultants has been formed at Bombay, with Mr. H. N. Thadani, Managing Director of IBCON Private Ltd., as its first President. The objectives of the Association are to promote better understanding and appreciation of the techniques of management and industrial consultancy practice, to provide for inter-change of ideas in the field, and to formulate and sustain a code of professional ethics amongst these consultants.

The State Trading Corporation of India and the A.B. Sukab of Sweden have concluded a link deal, under which the S.T.C. will import machinery worth Rs. 35 lakhs for the Chambal project, machinery and drilling equipment worth Rs. 60 lakhs, ball bearing worth Rs. 35 lakhs and special steels worth Rs. 25 lakhs. The foreign company will buy from India cotton textiles, manganese ore, chrome concentrates, mica, deoil, coffee, tea, rayon fabrics, leather manufactures, jute manufacture, handloom fabrics, carpets, linoleum, unmanufactured tobacco, semi-tanned and tanned skins and woollen fabrics.

A six-member Land Reforms Commission with Mr. A. L. Dias as Chairman has been appointed to recommend to the Union Government measures for improving the existing system of land tenure and land revenue administration in Goa, Daman and Diu. The Commission has been asked to examine in particular questions such as security of tenure to the tenant, levy of fair rent on agriculture lands and prevention of fragmentation and consolidation of holdings. The commission is expected to submit an interim report within three months.

The Government of Maharashtra has fixed Rs. 139.02 as the price per metric tonne of cement acquired against ex-works despatches effected from 1st March. Wholesale or retail traders (other than the State Trading Corporation) holding a licence in the prescribed form under the Bombay Cement Control Order, 1959 will be allowed to sell cement at this rate. The price now fixed by the State Government includes profit margin and godown rent but does not cover the cost of loading and unloading at a railway station, transport from a railway station to a godown, stacking in a godown and the amount of the State and inter-States sales tax.

A scheme for a partial guarantees of loans to the private sector coal industry by credit institutions in the country has been sanctioned by the Central Government. The scheme will enlarge the supply of institutional credit to the industry by granting a degree of protection to the lending institutions against any possible losses in respect of advances. It provides for the sharing of losses between the lending institutions and the Government of India. It will be administered by the Refinance Corporation for Industry Ltd., which will act as an agent of the Government. The Corporation has been designated as the "guarantee organisation" for the purpose. It is applicable in respect of advances sanctioned to private sector colliery undertakings by the World Bank for the purchase of machinery and equipment required during the third Plan period. The loan granted by the World Bank was Rs. 17 crores. The application for guarantee may be made before or after the sanctioning of an advance. The application should be for one year, or in the case of a loan for a fixed period exceeding one year, for the period of the loan, at the option of the credit institution, subject to a maximum period of 10 years from the date on which the loan is availed of.

The Governments of India and the U.S. have concluded an agreement for an American loan of $25.1 million (Rs. 11.95 crores) for the 300,000 kilowatt Satpura thermal power station, the largest in Central India. The U.S. has approved a loan of Rs. 14.8 crores ($31 million) from the sale proceeds of its agricultural commodities supplied to India under U.S. Public Law 480 to meet the rupee expenditure of the project. Thus total U.S. assistance for the construction of the power station will amount to Rs. 26.8 crores ($56.1 million). The foreign exchange loan of $25.1 million has been made available by the U.S. Agency for International Development. It will finance most of the foreign exchange cost of the plant. Terms, as on other A.I.D. loans are arranged to reduce the burden on India's economy and foreign exchange resources. The loans is repayable over a period of 40 years with a grace period of 10 years. There will be a minor service charge of three quarter of one per cent, but the loan will be free of interest. The credit of Rs. 14.8 crores from the P.L. 480 funds will meet the cost buildings, purchase of materials produced in India, payments to labour and other expenses incurred in Indian currency. Power from the Satpura thermal station will be shared by Rajasthan and Madhya Pradesh and will meet the rapidly growing energy needs of a region rich in natural resources.

From Abroad

The International Cotton Council is meeting at Scheveningen, in Holland from the 20th to 22nd inst. to discuss, *inter alia* European prospects and problems of cotton.

Japan will export 7,000 tons of special steel worth $3.33 million to China during 1963 under a non-governmental agreement signed last week at Peking. A Japanese Steel mission signed the contract. The payment is to be made on a two-year instalment basis.

The Tokyo Electric Power Company of Japan has signed a contract with the Siemens and Halske of West Germany and the Fuji Electric Machinery Co., a siemens partner in Japan, for the purchase of 175,000 kw. Siemens thermo power generator.

The U.S. Agency for International Development signed on the 7th inst. an emergency loan agreement to provide Indonesia $17 million worth of American imports. It is a part of a $36 million programme initiated by Indonesia to stimulate its industrial production by importing needed raw materials and spare parts.

A British trade mission, sponsored jointly by the London and Birmingham Chambers of Commerce and led by Lord Ebbisham immediate past President of the London Chamber, is visiting the U.S.S.R. for ten days from 6th May next. The object of the visit is to explore the prospect for a further expansion of two-way trade between the two countries. The mission has the full support of the Board of trade and the foreign office.

The Economic Commission for Asia and the Far East currently holding its conference at Manila has unanimously approved of a proposal, put forward by Japan, Indonesia, India, Thailand and the Philippines, establishing an Asian Economic Development Institute at Bangkok, to help train Asian economists in economic development, planning programming and execution. The outlay on the institute is estimated at $3.3 million.

The aggregate world output of man-made fibres touched a new peak of 8.665 million lbs. in 1962, as against 7.777 million lbs. in 1961, according to the *textile organon* of New York. Synthetic fibres, showed the most marked advance, with the record output of 2,355 million lbs., as against 1,842 million lbs. The production of Filament and staple yarn was 1,380 million lbs. (975 million lbs. in 1961), rayon and acetate 6.310 million lbs. (5,935 million lbs. in 1961).

PERSONAL

SIR Walter Michelmore, Chairman of Bird and Co. (Private) Ltd. and F. W. Heilgers and Co. (Private) Ltd., has retired after 34 years of service.

Mr. E. F. G. Hunter, a Director of the Binny Group of Companies, is retiring after 32 years of service with the firm. He is leaving this country on the 22nd inst.

Mr. A. Mendieta and Mr. S. P. S. Talyarkhan have been elected President and Vice-President, respectively, of the Public Relations Society of India for the year 1963-64.

Mr. V. D. Sonde, Assistant Commissioner of Income-tax, Bombay, has been appointed Director of the Stock Exchange Division, Ministry of Finance, Government of India, *vice* Mr. P. S. Nadkarni who has retired. Mr. Nadkarni will, however, continue his position as the Financial Adviser to the Maharashtra State Electricity Board.

A British trade mission, sponsored jointly by the London and Birmingham Chambers of Commerce and led by Lord Ebbisham immediate past President of the London Chamber, is visiting the U.S.S.R. for ten days from 6th May next. The object of the visit is to explore the prospect for a further expansion of two-way trade between the two countries. The mission has the full support of the Board of trade and the foreign office.

The Economic Commission for Asia and the Far East currently holding its conference at Manila has unanimously approved of a proposal, put forward by Japan, Indonesia, India, Thailand and the Philippines, establishing an Asian Economic Development Institute at Bangkok, to help train Asian economists in economic development, planning programming and execution. The outlay on the institute is estimated at $3.3 million.

The aggregate world output of man-made fibres touched a new peak of 8.665 million lbs. in 1962, as against 7,777 million lbs. in 1961, according to the *textile organon* of New York. " " " ordinary	6,00	6,00
	(20%)	(20%)
Dividend per ordinary share	[Rs. 2.00]	[Rs. 2.00]
Carry forward	52	67

Market value of equity shares (in rupees):	1962	1961
High	35.75	30.50
Low	29.25	21.00

Extracts from the Directors' report: In the last report importance of adequate supply of raw materials in the interest of better production had been emphasised. Unfortunately the supply position of raw materials continued to be unsatisfactory during the year under review. This position coupled with shortage and irregular supply of power had an adverse effect on production. As a result, sales during the period under review have been lower, this together with increased expenditure under heads—repairs and maintenance, consumption of stores, power and fuel, increased contribution towards Employees' Provident Fund consequent to applicability of statutory provident fund rates to Head Office employees also has adversely affected the working results. In addition, in view of the settlement with the employees—both in Head Office and Factory—certain monetary benefits had to be granted to the employees. Moreover, the Company has also introduced a scheme of gratuity, covering all employees who were in the service of the Company on the date of introduction of the scheme, the benefits accruing from the date of joining services subject to certain conditions in regard to length of services, eligibility and quantum of payment. Accordingly, the amount due in this regard for past services of the employees has been provided for under this head in the accounts.

The demand for the Company's products continues to be satisfactory although other competitive units have come into the market.

The Company's import licence applications for plant and machineries in connection with the expansion scheme are under the process of examination by the various Government Departments and it is expected that the licences will be issued shortly.

The supply position of raw materials even now continues to be unsatisfactory. The Company is, however, making all possible endeavours to secure more raw materials and for that purpose representations are also being made by the Company from time to time to the Government Authorities.

The prospect for the current year is, therefore, dependent on the improvement of the supply position of raw materials and adequate power supply.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	40,00,000	Gross block	53,48,856
Reserves and surplus	34,79,269	—Depreciation	30,80,392
Other liabilities	34,96,478		
		Net block	22,68,464
		Current assets	68,63,268
		Investments	8,000
		Cash	18,36,015
	Rs. 1,09,75,747		Rs. 1,09,75,747

* Paid-up capital consists of 10,000—5½ per cent (tax-free) cumulative redeemable preference shares of Rs. 100 each and 3,00,000 ordinary shares of Rs. 10 each.

Indian Wood Products Ltd.

(*Managing Agents*: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta.)

Forty-third Annual General Meeting—26th March 1963.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1962	1961
Sales	69,35	56,51
Gross profit	24,86	19,29
Transfer to Managing Agents' remuneration	2,25	1,79
" " depreciation	89	1,17
" " provision for income-tax	11,81	7,26
Net profit	9,91	9,07
Balance brought forward	1,85	1,29
Appropriations:		
Total available balance	11,76	10,36
Transfer to development reserve	Nil	1
" " general reserve	2,50	2,50
To dividend (taxable) ordinary	6,00*	6,00*
	(30%)	(30%)
Amount of dividend per share	[Rs. 3.00]	[Rs. 3.00]
Carry forward	3,26	1,85

Market value of equity shares (in rupees):	1962	1961
High	33.50	34.94
Low	30.75	25.87

* This includes Rs. 2 lakhs representing the interim dividend at 10 per cent or Re. 1.00 per share, taxable.

Extracts from the Director' report: The profit before tax increased substantially but most of this was taken away by higher taxation. The Company's year ends on 30th September and the directors are thus unable to make provision for any increase in taxation in the Budget introduced in Parliament in the Spring of the following year. In this way consequent upon the Finance Act 1962, tax was undercharged to the accounts for the year ended 30th September, 1961 to the extent of Rs. 83,144 which, with the increased tax on the higher profits, has put up the tax charge by Rs. 4,54,727 in the year ended 30th September, 1962,

The Company continues to buy its raw material, Khair trees, at auctions and in October 1962 it was somewhat more successful in obtaining its requirements although prices continued to rule at very high levels. The cost of raw material is now higher than in the year under review and market conditions do not at present allow any rise in selling prices to offset this. There will therefore be some setback in profits in the current year.

Stocks of raw material have risen very slightly in quantity but considerably in value and the probability is that the Company will have to pay additional tax as a result of the Central Government Budget.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,00,000	Gross block	23,30,101
Reserves and surplus	31,24,730	—Depreciation	20,72,887
Other liabilities	50,44,190		
		Net block	2,57,217
		Current assets	69,70,343
		Investments	2,000
		Cash	29,30,360
	Rs. 1,01,68,920		Rs. 1,01,68,920

* Paid-up capital consists of 2,00,000 ordinary shares of Rs. 10 each. Of the above 80,000 shares have been allotted as fully paid up bonus shares, by way of capitalisation of reserves.

Andhra Sugars Ltd.

(*Managing Agents*: Messrs. Ranga Rao and Co., Tanuku, Andhra Pradesh.)

Fifteenth Annual General Meeting—30th March 1963.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1962	1961

Carry forward	9	7

Market value of equity shares (in rupees):	1962	1961
High	22.90	28.65
Low	18.20	22.75

* The dividend for 1962 is on the increased equity capital of Rs. 39,96,670.

† For the year 1961 the dividend was on a paid-up equity capital of Rs. 30,00,000.

Extracts from the Directors' report: As anticipated in the last years report the working results for this financial year have shown considerable improvement. The profit before taxes has gone upto Rs. 26.57 lakhs from Rs. 15.69 lakhs last year. The policy of diversification of the activities of the Company in directions other than sugar has justified itself. Other units have since gone into production and the Directors expect that the current years' results would be substantially better.

Sugar: During the year under report the factory commenced sugarcane crushing on 27-11-1961 and stopped on 6-5-1962. The sugarcane crushed during the season was 1,65,978 metric tons and the sugar manufactured was 1,64,902 bags with a recovery of 9.94 per cent as against 1,69,717 metric tons of cane, 1,73,430 bags of sugar and 10.19 per cent recovery for the last season. The fall in recovery is mostly due to the fact that by the time the Company's crushing season has started for the season 1961-62, the yellow spot disease (a new variety of disease) had spread in this area.

The crushing season 1962-63 has started on 4th December, 1962. It is progressing well with good rate of crushing.

Superphosphate: During the year of account 23,450 metric tons of superphosphate were produced and sales amounted to 25,886 metric tons (including that of the opening stock) as against 15,272 tons of production and sale of 12,434 tons of the previous year.

Industrial Alcohol—Acetic Acid Units: The Industrial Alcohol Plant has gone into production in July 1962 and has produced 6,64,304 litres of spirit and the Acetic Acid Plant has gone into production at the end of September 1962. Both the Industrial Alcohol Plant and the Acetic Acid Plant will be in full production in the current year and both the units are expected to contribute substantially to the prosperity of the Company.

Caustic Soda—Chlorine: Work continued on the *Caustic Soda—Chlorine plant* at Kovvur. Plant and machinery from the German Democratic Republic arrived late in the year 1962, and hence could not be commissioned as anticipated earlier. The Directors have finalised arrangements for supply of the plant and machinery required for the expansion of *Caustic Soda—Chlorine Plant* from Japan and the Government of India have been pleased to give their consent to the same. The *Caustic Soda Plant* will now have a capacity of 30 tons per day and is expected to go into production during 1963.

Andhra Foundry and Machine Co., Ltd., Hyderabad: The above Company which has been promoted by this concern has established itself and its workshop will be shortly going into production. The Government of India have given permission to invest Rs. 5 lakhs in this new Company, and this Company has subscribed for 49,476 Equity shares of Rs. 10 each in that new concern.

Fertiliser Plant at Kothagudem: Considerable progress has been made with regard to the *Fertiliser Project* at Kothagudem. Most of the preliminary work associated with the project has been completed. A new company is therefore to be registered shortly with foreign financial and technical participation. The collaboration agreement, which has been approved by the Government of India provides for investment of Rs. 40 lakhs by The Andhra Sugars Ltd., in the New Company. Permission has already been obtained from the Government of India for investment of Rs. 15 lakhs in the new Company, and the Directors seek the shareholders' approval for the investment of the additional Rs. 25 lakhs in the new Company.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	69,98,335	Gross block	2,57,78,538
Reserves and surplus	39,99,010	—Depreciation	52,95,135
Other liabilities	1,97,52,815		
		Net block	1,84,83,103
		Current assets	1,14,66,438
		Investments	4,57,380
		Cash	3,43,239
	Rs. 3,07,50,160		Rs. 3,07,50,160

* Paid-up capital consists of 30,000—9.3 per cent cumulative redeemable preference shares of Rs. 100 each and 3,99,667 equity shares of Rs. 10 each.

Coonoor Tea Estates Co., Ltd.

(*Secretaries and Treasurers*: Messrs. Matheson, Bosanquet & Co., Ltd., Belmont, Coonoor, Nilgiris.)

Thirty-sixth Annual General Meeting—29th March 1963.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1962	1961

Low	22.47	26.50

* Only a small sum of Rs. 272.

Extracts from the Directors' report: The Company produced a record crop of 4,30,748 lbs. (1,95,386 kgs.) against the crop of 3,83,556 lbs. (1,73,980 kgs.) harvested last year. The average sale price also improved resulting in a considerably higher profit for the year.

In view of the improved results the Directors are pleased to recommend a final dividend of 10 per cent to the ordinary shareholders which together with the interim dividend of 7½ per cent already paid brings the total dividend for the year to 17½ per cent compared with 15 per cent paid for the previous year.

The total area of the estate is 441.25 acres (178.57 Hectares) distributed as follows: Tea in full bearing 381.50 acres (154.39 Hectares); tea in partial bearing 7.50 acres (3.03 Hectares) and tea replanted 3.00 acres (1.21 Hectares). Fuel clearings, buildings, roads and waste land account for 49.25 acres (19.94 Hectares).

The estate cost of production per lb. of made tea for the financial year ended 30th September 1962 was Rs. 1.50 per lb. (Rs. 3.30 per kg.) which is approximately equal to the estimate. The cost of production includes payment of bonus to labour and interim increase in wages granted to labour which were not originally estimated.

The average sale price realised for the season improved to Rs. 2.32 per lb. (Rs. 5.11 per kg.) compared to Rs. 2.17 per lb. (4.78 per kg.) realised last year. The Directors have given much attention to improving the quality of the teas produced and it is hoped that the selling price will improve further in the coming years subject of course to the general market conditions. The factory alterations and improvements mentioned in previous reports were completed during the year with the installation of an 8" *Rotorvane*. The question of additional withering capacity to balance increasing crops, remains and will have to be tackled in the next year or so.

The directors have approved Budget Estimates for the season 1962-63 and these provide for a crop of 4,00,000 lbs. (1,81,437 kgs.) of tea to cost Rs. 1.57 per lb. (Rs. 3.46 per kg.).

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	7,16,750	Gross block	23,50,608
Reserves and surplus	13,78,010	—Depreciation	2,65,047
Other liabilities	2,64,719		
		Net block	21,85,561
		Current assets	1,51,563
		Investments	2,500
		Cash	20,135
	Rs. 23,59,479		Rs. 23,59,479

* Paid-up capital consists of 1,500 six per cent cumulative preference shares of Rs. 100 each and 56,673 ordinary shares of Rs. 10 each. Of the above 4,986 ordinary shares are allotted as fully paid up by way of bonus shares through the capitalisation of reserves.

TREND OF MARKETS

CALL RATE 6¼ PER CENT

(*From Our Own Correspondent*)

BOMBAY, 13*th March*

Call money rate rose by a further ¼ per cent to 6¼ per cent during the week under review. There was persistent pressure of demand for funds, but, since the available supply was restricted, borrowers had to look around for accommodation. The Reserve Bank was reported to have received requests for temporary assistance from several banks. The short-term money market at Calcutta, too, continued to rule extremely tight, the call rate there standing at the high level of 6½ per cent. Lenders even at this rate were virtually absent.

The prevailing acute stringency of money is reflected in the continued poor response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 12th inst. The total amount offered was no more than Rs. 2 crores, same as last week, which was just the amount invited and accepted. The average rate of accepted tenders, however, was slightly higher at Rs. 2.370 per cent per annum, as against Rs. 2.365 in the past four weeks. The response to Intermediate Treasury Bills, which were on tap from the 6th to 9th inst., was distinctly better, the amount of Bills actually sold being Rs. 129.75 lakhs, as against a bare Rs. 50,000 a week ago and Rs. 5.75 lakhs two weeks ago.

India's foreign assets spurted by a further Rs. 3.92 crores to Rs. 112.20 crores during the week ended 8th March 1963. The improvement occurred despite the fall of Rs. 1.08 crore to Rs. 12.12 crores in balances held abroad. But as against this fall, foreign securities held in the Issue Department of the Reserve Bank advanced by Rs. 5.00 crores to Rs. 100.08 crores. Loans and advances to scheduled banks spurted by as much as Rs. 26.22 crores to Rs. 83.40 crores. Of this rise, advances against usance bills accounted for Rs. 20.90 crores, the total usance bills outstanding of these advances being Rs. 58.90 crores. Notes in circulation jumped up by Rs. 41.90 crores to touch a total of Rs. 2,235.86 crores.

The total credit made available by scheduled banks to trade and industry rose again by Rs. 12.04 crores to Rs. 1,536.61 crores during the week ended 29th February 1963. But deposits fell by Rs. 15.34 crores to Rs. 2,166.34 crores and inter-bank borrowings by Rs. 73 lakhs to Rs. 37.43 crores. Consequently, borrowings from the Reserve Bank jumped up by Rs. 18.05 crores to Rs. 56.74 crores, of which those against usance bills alone accounted for Rs. 38.07 crores, a rise of Rs. 11.29 crores. At the same time, the investments of banks were reduced by Rs. 4.45 crores to Rs. 612.15 crores.

The Reserve Bank of India has extended the scope of credit control to include scheduled bank advances against the pledge of warehouse receipts except for "other foodgrains" (excluding wheat) except those granted to co-operative marketing and/or processing societies. A directive to this effect has been issued to all the banks; it is on the same lines as the one issued in respect of paddy and rice on 23rd January 1963. A minimum margin of 25 per cent is required to be maintained on advances against "other foodgrains," as in the case of paddy and rice. The ceiling limits for advances have been fixed for each two-month period commencing from March-April 1963, at levels equivalent to the average aggregate levels of such credit maintained in the corresponding period of 1962. Justifying the move, the Reserve Bank says:

"It has been observed that a large part of the rise in advances against 'other foodgrains,' as in the case of paddy and rice, was accounted for by the increase in advances against warehouse receipts; these advances also now form a substantial proportion of total advances which come within the purview of regulation (on an average about 63 per cent during 1962). While it was advisable to exempt advances against warehouse receipts so long as these formed a modest proportion of total advances, it is now considered necessary to bring advances against warehouse receipts covering 'other foodgrains' (except those granted to co-operative marketing and/or processing societies) also under the scope of credit control. The output of 'other foodgrains' for 1962-63, on present indications, is expected to be much the same as in 1961-62, and at best to show an inappreciable increase over the output of last year. The prices of the more important foodgrains in this category are higher than the levels a year ago. It is, therefore, necessary to maintain the framework of control to guard against possible pressures on prices..."

The Gilt-edged market was devoid of interest, with all quotations practically unchanged in the absence of business. 3 per cent 1963-65 met with special support and improved by 25 nP to Rs. 99.50. 3 per cent 1986 Conversion gained 5 nP to Rs. 63.25.

The rupee softened again *vis-a-vis* the dollar, the banks' selling rate for ready T.T. dollars being Rs. 478 per $100, as against Rs. 477.75 a week ago. Their buying rate was also higher by 25 nP at Rs. 474.75. On the New York Exchange, the £ sterling continued to rule easy *vis-a-vis* the dollar, the spot rate receding by 0.200 cent to 279.960-279.990 cents and three months' forward by 0.290 cent to 279.300-279.330 cents.

SILVER SCALES NEW PEAK

(*From Our Own Correspondent*)

BOMBAY, 13*th March*

A spurt in spot silver to a new all-time peak of Rs. 242 per kilo, or Rs. 282.38 per 100 tolas, which was recorded yesterday, was the feature of this week's trading in the bullion market. A year ago, the rate was Rs. 216.90 per kilo, or Rs. 253.09 per 100 tolas. The new high level marks a small improvement over the recent best rate of Rs. 240.50 per kilo, or Rs. 280.53 per 100 tolas, reached on 19th February 1963. Closing today at Rs. 241, the price was up by Rs. 5.50 over the week. This marked strength in silver also pushed up ready gold, albeit slightly, as it did sovereign, too. Much to the chagrin of the authorities, the market closed on a distinctly firm tone.

Firmness in silver was attributed to paucity of stocks and excellent offtake which matched arrivals averaging daily 20 bars. In the previous week, arrivals had exceeded offtake by seven bars at 17 bars. The start was, however, easy, with the opening quotation at Rs. 227, as against last week's closing level of Rs. 235.50. The price moved down further to Rs. 226 on the opening day, that is, Thursday the 7th inst. But the next day itself, it recovered to Rs. 240, and thereafter proceeded upward.

The firmness prevailed in spite of Union Finance Minister Morarji Desai turning down on Monday the 11th inst. a request from a delegation of the Bombay Bullion Association for resumption of forward trading in silver. The Association, it will be recalled, had submitted last month to the Forward Markets Commission Chairman, Mr. A. S. Naik, that if it were not allowed to resume forward trading in silver, it would be forced to close down its activities. At its meeting with the Finance Minister, the Association's delegation is said to have appealed for partial forward trading in non-transferable specific delivery contracts, which, too, Mr. Desai did not see any reason to allow. While turning down the delegation's pleas, the Finance Minister is said to have pointed out the likely effects of forward trading in silver on the spot price. The fact, however, remains that even without futures trading, the spot price has continued to be up.

Commencing two points lower at Rs. 102, ready gold recovered fully to close the same day, that is, Thursday the 7th inst., at Rs. 104. Thereafter, under the influence of silver, it moved up to Rs. 107 on Monday the 11th inst. Today, it opened lower at Rs. 104.50 to close at Rs. 105.50. Sovereign was quoted initially at Rs. 75—the same price at which it had closed last week. On Monday, it was placed at Rs. 77. But today, it eased again to close unchanged over the week.

Silver prices in New York and London moved up to new peak levels on increasing domestic offtake on industrial account, falling speculative stocks and buying by foreign mints. The price appreciated more in London—from 108¾*d.* to 110*d.*—than in New York—from 126.2 to 127.7 cents, with the trend in the former influencing that in the latter. The price in New York was a shade lower than the price of 129.29 cents (roughly 110¼*d.*) at which silver certificates may be cashed at the U.S. Treasury. The forward quotation in London moved up during the week from 108¾*d.* to 110½*d.* Spot gold advanced from 250*s.* 6¾*d.* to 250*s.* 10¼*d.*, with the dollar price of gold at $35.10, its highest level since early November last.

The following table shows the trend of prices during the week under review:

	13-3-63 (closing)	High	Low	6-3-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (.996 fine)	241.00	242.00	226.00	235.50
GOLD				
Ready (.995 fineness)	105.50	107.00	102.00	104.00
Sovereign	75.00	77.00	75.00	75.00
London—	250*s.* 10¼*d.*	250*s.* 10¼*d.*	250*s.* 0¾*d.*	250*s.* 5¼*d.*
Gold	110*d.*	110*d.*	108¾*d.*	107¼*d.*
Silver Ready	110¼*d.*	110¾*d.*	108¾*d.*	108¾*d.*
Silver Forward				
New York—				
Silver	127.7 cents	127.7 cents	126.2 cents	126.2 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

• • • •

Further steps at "appropriate" time to end smuggling of gold into the country and a possibility of the Government putting a ceiling at a "later" date on possession of jewellery by individuals were hinted at by Mr. Morarji Desai, Union Finance Minister, during the Lok Sabha debate on the Gold Control Order on Wednesday the 6th inst. In his reply to the debate and later in the course of his speech on the budget and gold policy at Bombay on Saturday the 9th inst., Mr. Desai defended the Government's policy on gold on familiar grounds such as, the need for defence, the avoidance of the estimated annual drain of foreign exchange of Rs. 50 crores to Rs. 60 crores because of smuggling and the need to wean away people from the lure of gold. He claimed a fair measure of success in these objectives of the policy and asserted that, since the promulgation of the Gold Control Order, the price of gold had fallen to Rs. 96 from the peak level of Rs. 129.90 per 10 grams. On Thursday the 7th inst., the Finance Minister gave the following details of declarations of gold under the Order:

Number of declarations received from persons other than dealers and refineries—6,300.

Quantity (in grams) of gold declared by persons other than dealers and refineries (*a*) manufactured article other than ornaments—353,616; (*b*) all other forms, other than ornaments—3,165,435.

Number of returns in Form Gold Series No. 3 received from dealers—27,166.

Quantity (in grams) of gold declared by dealers (*a*) ornaments, old—6,612,943; (*b*) ornaments, new—13,287,347; (*c*) manufactured articles other than ornaments, old—130,756; (*d*) manufactured articles other than ornaments, new—370,825; and (*e*) other forms of gold, old and new—2,870,801.

Number of returns in Form Gold Series No. 3 received from refiners—526.

Quantity (in grams) of gold declared by refiners (*a*) ornaments, old—7,881; (b) ornaments, new—519; (c) manufactured articles other than ornaments, old—86; (*d*) manufactured articles other than ornaments, new *nil*; and (*e*) other forms of gold, old and new 81,322.

On Saturday the 9th inst., the Gold Control Board finalised at Bombay its clarification in regard to the return of unfinished ornaments of more than 14-carat purity lying with goldsmiths and jewellers since the Gold Control Rules came into force. It was officially stated that these unfinished ornaments could be returned to the customer only in one specific case, namely, where the customer had given the gold for making ornaments and where both the customer and the jeweller countered had specifically made the necessary declaration, under the Rules to the effect that such gold was being used in the making of ornaments at the time the Rules came into force. The jeweller has, however, to return the unfinished ornament. They cannot complete it. In all other cases of unfinished ornaments, the jeweller or goldsmith will have to remelt the unfinished ornaments and prepare ornaments of 14-carat or less purity, or sell the unfinished ornaments to a licensed dealer and refund the money to the customer. A ten-member technical advisory panel to assist the Board in dealing with problems connected with the making of 14-carat ornaments will have its first meeting at New Delhi on the 19th inst. Dr. N. A. Sarma, member-secretary of the Board is the convenor of the panel which comprises representatives of the gold trade, jewellers, goldsmiths and refiners, besides official members.

The Maharashtra Government has decided to give ex-gratia relief in the form of a quota of foodgrains and kerosene to individuals and families of goldsmiths in distress following the promulgation of the Gold Control Rules. The relief will be for a limited period. The Government is also considering a scheme for training artisans in the preparation of 14-carat ornaments and details of the scheme will be published by the Director of Technical Education as soon as it is finalised.

A seven-point plan to help gold artisans in Gujarat was announced by Chief Minister Dr. Jivraj Mehta in the State Assembly on Monday the 10th inst. The seven points are: 1. Giving Government lands for cultivation. 2. Forming goldsmiths' co-operatives for work in salt pans. 3. Granting *taccavi* loans. 4. Priority in the issue of licences for small industries. 5. Granting easy loans for the purchase of sewing machines and *Ambar charkhas*. 6. Relaxing limits on age and educational qualifications for consideration for Government service. 7. Granting freeships, free books and other benefits to the children of the affected artisans.

According to Mr. M. Bhaktavatsalam, Finance Minister, a proposal for organising industrial co-operatives is under the consideration of the Government of Madras.

Meanwhile, a deputation of 20 jewellers' associations from important trading areas in the country is said to have told President Dr. Radhakrishnan on Wednesday the 6th inst. that nearly 25 lakh families of jewellers, goldsmiths, *sarafs* and others engaged in jewellery and allied crafts were facing hardship following the promulgation of the Gold Control Rules.

COTTON FUTURES DECLINE

(*From Our Own Correspondent*)

BOMBAY, 13*th March*

After having ruled distinctly firm in the opening day of the week under review, cotton futures tended to decline on Friday, the 8th inst. The downward trend gathered momentum in subsequent sessions and persisted till the close today. The earlier firmness was attributed to the absence of any tenders on the third notice day (7th March) and the strength of ready prices. The apprehension that the proposed, upward revision of floor prices would push cotton prices higher bullishly affected the market. Influenced primarily by the absence of tenders, the maturing Jarilla March contract spurted from the last week-end rate of Rs. 712 (per three quintals) to Rs. 728.50 on Thursday, the 7th inst. The May contract rose in sympathy from Rs. 704 to Rs. 711. In view of the spurt in price, a special clearing was introduced at Rs. 729 for the March contract and Rs. 710 for the May contract. The trend of prices of the contracts was downward since then. Bearish advices from the stock exchange and discouraging news from the piecegoods market prompted heavy selling. The March contract was only nominally quoted at around Rs. 725, despite the absence of any tenders yesterday, the fourth notice day. The May contract too ruled subdued and closed at Rs. 703 today, as against Rs. 704 last week.

In the spot market at Sewri, ready prices ruled firm. Spinners were reluctant to make large purchases in view of the high prices. Southern and Ahmedabad mills showed particular interest in popular varieties, especially Gujarat cotton, Laxmi and Jaydhar. Regular mill demand was also reported for CO2, L. 157, Buri and 1973. Traders are eagerly awaiting the announcement of the revised floor prices for cotton to be effective from the next season.

Export demand for Bengal *Deshi* was very slack. Sales registered for export against the current quota till the 8th inst. were placed at 33,789 bales. Although good interest was shown by mills in foreign cotton early in the week, it dried up later. Stray business was, however, reported in certain American, Egyptian and East African growths.

U.A.R. Government is reported to have offered to India 28,000 bales of current crop Egyptian cotton against payment in rupees. The offer and manner of its distribution, if it is accepted, are reported to be under consideration.

The following are the latest available quotations—in rupees per candy of 748 lbs.—from the spot market at Sewri:

Bengal *Deshi* (Fine) 721; Ganganagar (S.F.) 768, L. 147 1,000-1,110, Gadag Laxmi (new) 1,190; CO-2 (Nagar) 10,570; American on sample 1,201.

Quiet conditions prevailed in the Karachi cotton futures market during the week. Mill demand tended to fall off, thanks to last week's spurt in prices. Export inquiries were few and far between.

Cotton futures consequently ruled subdued. The N.T.R.G. March contract improved fractionally to Rs. 71.90, as against last week's closing rate of Rs. 71.45. The May contract receded from Rs. 73.30 last week to Rs. 73.25.

Steady conditions prevailed in the Liverpool cotton market during the week. Generally quiet spinner enquiry and slow trade demand made for listless trading. Futures prices remained practically unchanged. Mill demand for ready cotton covered a wide selection of American type cotton, some varieties of Pakistan staple cotton and a few Turkish and Brazilian growths.

The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being last week's closing prices:

March 24.25 (24.25); May 23.90 (23.90); March (Sudan) 29.00 (29.00).

Cotton futures in the New York market ruled steady during the week. Sustained firmness of spot prices continued to impart strength to futures. Scattered commission house selling was absorbed in short-covering. Turnover was, however, limited, thanks to uncertainties about cotton legislation.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago.

(In cents per pound)

	12-3-63	5-3-63	25-2-63
March	34.86	34.72	34.80
May	34.82	34.85	34.93
July	34.12	34.20	34.45
New York Spot ...	35.85	35.75	35.70

DULL TRADING IN YARNS

(From Our Own Correspondent)

BOMBAY, *13th March*

Trading in the local yarn market was dull this week. The overall tendency remained easy, with closing prices generally either unchanged or lower over the week. Buying inquiries were scattered and limited.

Among art silk yarns, 120D S.I. viscose moved down further from Rs. 13.20 to Rs. 13.07 per kg. and 100D Bright Century showed a loss of 16 nP at Rs. 17.31. Century 2 x 40 spot staple fibre was down by 6 nP at Rs. 7.35, but Kohinoor recovered from Rs. 8.05 to Rs. 8.10. With the exception of 30s Madura and 40s Gokak which gained 25 nP each to Rs. 29.50 and Rs. 36, respectively, cotton yarns were held at last week's levels.

According to reports, rayon spinners in Bombay have decided to pass on to consumers the entire burden of the special excise levied on rayon yarn under the 1963-64 Union budget on the ground that such burden is always intended to be passed on to consumers. The yarn producers are stated to be passing on to consumers the premium paid for emergency risks insurance. On the invoice value of each consignment, a sum of 15 nP per Rs. 100 by way of the insurance premium, it is said, is to be added.

The Joint Textile Commissioner discussed with the representatives of rayon spinners at Bombay yesterday questions relating to production of viscose yarn as per denierwise pattern fixed by the Textile Commissioner and its distribution according to denierwise requirements of allottees. Spinners are understood to have pointed out that production by them conformed to the requirements laid down by the Textile Commissioner. Allotment was agreed to be on a six-monthly basis, with a three-month advance intimation to producers by consumers of their denierwise requirements. It was decided that weavers must lift at least 50 per cent of allotments in the first three months and defaults should be reported to the Textile Commissioner in order to help him decide either diversion or open sale of the unlifted allotment. As regards fixing of price differentials for the various deniers of yarn, it was agreed to maintain the *status quo* till the close of the current financial year.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	13-3-1963	6-3-1963
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12.10	12.10
Century 75D	17.31	17.47
S. I. Viscose 150D	11.55	11.42
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.)	8.10	8.05
Century	7.35	7.41
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.75	17.75
20s Edward	22.25	22.50
30s Kohinoor	29.50	29.25
40s Hind	36.00	35.75
60s Kasturi	48.00	48.00
80s Madura	75.00	76.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

GROUNDNUTS EASY

(From Our Own Correspondent)

BOMBAY, *13th March*

Oilseeds ruled easy during the week under review, barring linseeds and cottonseeds which elicited renewed enquiries at lower levels. There was, of course, a perceptible recovery today on scattered speculative buying. But the closing prices were still generally below those prevailing a week ago. Groundnuts ruled depressed, owing to heavy accumulations of tenders against the April hedge contract and the lack of follow-up support for extractions by shippers. Castorseeds moved down in the wake of large offerings of new crop. But for the revival of some demand for castor oil from the U.K., prices would have gone down further. Linseeds were subdued during the earlier sessions, but recovered thereafter on better support from upcountry interests. Cottonseeds moved up in sympathy with the raw cotton market.

Groundnut July 1963 contract fell from Rs. 213.12 to Rs. 210.12, before closing at Rs. 211.75. April 1963 contract, declined by Re. 1.37 to Rs. 202.00; at one time, it was still lower at Rs. 199.75. Oil ex-mill was quoted at Rs. 16.30, as compared with Rs. 17.20. Railway receipts eased by 45 nP to Rs. 16.15. Khandesh quality seeds were quiet at Rs. 41. But Nizam bold picked up 50 nP to Rs. 40.50.

Castorseeds June 1963 contract dropped Rs. 2.50 to Rs. 156, Madras small eased by 25 nP to Rs. 31.50. Oil B.S.S. receded by 25 nP to Rs. 13.10 and oil commercial by 20 nP to Rs. 12.55.

In the linseeds section, March 1963 contract improved by 37 nP to Rs. 30.87. June 1963 contract rose by 6 nP to Rs. 32.75. Bold ready put on 37 nP to Rs. 30.37. Linseeds oil hardened by 5 nP to Rs. 12.15.

Cottonseed April 1963 contract advanced by Rs. 2.25 to Rs. 95.25. Both non-white and Berar strengthened by 30 nP to Rs. 19.50.

The following table shows the closing prices of oilseeds and oils on Wednesday 13th March, as compared with those of two previous weeks:

	13-3-1963	6-3-1963	27-2-1963
	Rs.	Rs.	Rs.
Groundnuts			
April 1963 contract	202.00	203.12	207.25
July 1963 contract	211.75	213.12	216.00
Nizam bold	40.50	40.00	41.00
Khandesh quality	41.00	41.00	41.75
Oil ex-mill	16.30	17.20	17.25
Oil commercial	16.15	17.00	17.05
Castorseed			
March 1963 contract	161.00	160.00	162.00
June 1963 contract	156.00	158.50	160.75
Ready Madras	31.50	31.75	32.12
Ready Kanpur	30.25	30.25	30.75
Oil B.S.S.	13.10	13.35	13.45
Oil commercial	12.85	12.75	12.70
Linseed			
March 1963 contract	30.87	30.50	35.25
June 1963 contract	32.75	32.69	39.12
Bold ready	30.37	30.00	30.50
Linseed oil	12.15	12.10	12.30
Cottonseed			
April 1963 contract	95.25	93.00	92.00
July 1963 contract	95.25	—	94.00

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

KIPS RULE FIRM

(From Our Own Correspondent)

MADRAS, *11th March*

Arrivals of kips this week were on the usual scale and clearance was fair. Prices ruled firm around last levels. Export trading was patchy, as tanners stuck to their price ideas which only a few importers seemed willing to follow with great reluctance. Export demand for the lowest grades in cowhides was poor, but inland call was good. Prices of buffcalf were firm for all tannages and for cowcalf slightly quiet, especially for lower grades. The tanned skins market was firm and importers were finding it uneconomical to follow prices for both goat and sheep skins. Tanners were quoting very high prices for the lines in demand. There were good inquiries for 11/12 lbs. goat skins and light weight sheep skins, but sales were patchy on account of high prices.

In the German tanned skins auctions only 20 per cent of the goat skins and 13 per cent of the sheep skins on offer were sold. Sales were selective and buyers were not prepared to pay current prices quoted at Madras.

FAIR SUPPORT FOR TEA

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *7th March*

A reduced quantity amounting to only 380,000 kgs. was offered in sale No. 10 held on the 5th inst. Quality generally showed a slight improvement. Demand was not so strong generally at last week but prices often ruled dearer. There was only fair support for highgrown brokens which were generally lower, with the exception of a few selected lines which were dearer with quality; similar fannings were about firm on last rates. Good medium and medium descriptions were fully firm and dearer where quality was improved and whereas low medium brokens were irregular, their fannings were generally dearer. Plain sorts met with keen competition at dearer rates and the same applied in the case of black leaf types. Whole leaf grades sold readily and tippy teas although sold well inclined easier. Teas of unorthodox manufacture shaded in price.

The quotations (per kg.) were as follows:

	1963	1962
	Rs.	Rs.
Low medium	4.45-5.00	3.95-4.15
Mediums	5.00-5.40	5.15-5.10
Good mediums	5.45-6.20	5.15-6.50
Nilgiri B.O.P.	6.20-12.40	5.00-10.90

The average price realised in sale No. 10 was Rs. 5.59 per kilo as compared with Rs. 5.59 a week ago and Rs. 5.25 in the corresponding sale last year.

Export Duty: In the budget last week export duty was abolished but a 20 per cent increase in excise duty has been imposed.

In dust sale No. 10 held today, 187,000 kgs. were offered. The market met with a strong demand. All medium categories were well supported and sold at enhanced rates but the better mediums ruled firm to dearer. Black, grainy, exportable kinds followed the general upward trend of the market. Highgrowns and C.T.C. types sold at around last rates.

The average price realised in dust sale No. 10 was Rs. 4.55 per kilo as against Rs. 4.35 a week ago and Rs. 4.06 in the corresponding sale last year.

Colombo: Just over 5½ million lbs. were offered this week and met with less general demand, but best liquoring sorts were strongly supported and were dearer with quality. The plainer highgrowns, medium teas and uvas eased 10 to 15 cents whilst similar fannings were correspondingly lower. Low-growns shed 5/10 cents.

London: *North Indian and other growths*: In Monday's auction there was a better demand, although at lower rates, for most descriptions except best liquoring sorts which were fully firm.

Ceylon and South Indians: In Tuesday's sale there was a better demand for Ceylon teas but South Indians came to an irregular and generally lower market.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 11: 396,000 kgs. offered. Fair demand. Low mediums and mediums irregularly 10 to 15 nP dearer. Good mediums fully firm, sometimes higher. Highgrowns less demand and easier. Unorthodox lower. Whole leaf strongest feature."

PLAIN ORTHODOX TEAS FIRM

(From Our Own Correspondent)

CALCUTTA, *12th March*

With the season having come almost to a close, whatever tea offered these days has been meeting ready demand at hardening prices. Last week's sale for internal consumption fully confirmed such a trend. Meanwhile, with progressive decline in export offerings, demand for space for tea has become insignificant. Forward bookings are yet too early. Weather reports from most tea districts in North-East India speak of drought conditions. A few days back some rain fell. But more is required, if the existing drought conditions are not to affect the outturn.

With the keen competition India is facing from other producing countries, especially Ceylon, the trade feels that India's publicity campaigns abroad should be made more livelier. There have been enough indications in recent months that world output has been increasing at a faster rate than consumption. That production costs in Africa and China are much lower than in India and that these two producing countries are determined to increase their exports have been only too evident in recent years. Competition is also reported from Brazil and in Argentine Republic. The publicity campaigns should be extended to areas where consumption is increasing, and the trade feels that the E.C.M. countries and South America require more attention. In this connection, it is noted with considerable satisfaction that the Tata-Finlay's proposal to set up a plant for the manufacture of instant tea has taken final shape. It is stated that the factory will be located in Kerala and will manufacture 1.5 million lbs. for export.

The trade apprehends that the increase in the excise duty on tea will curb internal consumption. There is little export demand for the poorer varieties and if internal consumption drops, the Government will have to consider reduction in the excise duty. With India's plan to raise output to 900 million lbs. by 1966, the industry will have to explore all possible markets.

The tea industry could now examine more closely implications of the budget proposals. While expressing gratitude to the Finance Minister for the abolition of the export duty, the Tea Association of India has expressed concern over the super profits tax, which, it says, is a penalty on efficiency and which will impede capital formation and affect growth of companies. The Darjeeling branch of the Indian Tea Association has stated that all taxes combined take away about 80 per cent of profits of gardens, thus offering no inducement whatsoever for expansion and development.

Now that the Government of India has taken, by abolishing the export duty, a concrete measure to encourage exports, it is expected of the State Governments to rationalise internal levies in order to encourage exports. The least that is expected of the Assam and West Bengal Governments is to do away with the carriage and entry taxes in the respective States. Improvement in transport facilities between Assam and West Bengal is desired. The Indian Tea Planters' Association at Jalpaiguri has urged an alternative chord line through North Bengal to Assam connecting the Ganges and the Brahmaputra as well as the construction of bridges over the Torsa and Teesta rivers. Regretting the Railway Ministry's decision not to extend the broad-gauge line to Assam, the I.T.P.A. has said that the broad-gauge line was of strategic importance to North-East India and the development of trade between Assam and the rest of the country.

There was strong demand at the internal sale held last week, when offerings totalled 29,359 packages. Plain orthodox teas were conspicuously dearer, and the bright liquoring Assams were a favourite of bidders. Legg-cut teas were fully firm. Medium C.T.Cs recorded a slight easing tendency, but the selected smaller lots were steady. Good C.T.Cs were absorbed at firm rates. Quotations (in rupees), including excise duty, were: Good Assam C.T.C. dust 6.60 to 7.00, medium Assam C.T.C. dust 5.60 to 6.10, legg-cut dust 5.10 to 5.70, medium Assam dust 4.50 to 5.10 and plain orthodox dust 4.10 to 4.50.

Good demand was in evidence at the export sale held yesterday, when offerings totalled 44,861 packages. Fibrous C.T.C. teas realised higher prices. Best C.T.Cs were fully firm and medium C.T.Cs evoked good support at last rates. Good demand was accorded to the plain orthodox teas, and, among these, fannings were a strong feature. Keen competition was in evidence for "teas for price." The better liquoring orthodox teas generally eased. The medium B.O.Ps met with poor demand, and there were many withdrawals. Quotations (in rupees) per one kg., inclusive of excise duty, were: Best Assam C.T.C. fanning 5.60 to 6.10, best Assam C.T.C. B.P. 5.90 to 6.10, medium Assam C.T.C. fannings 5.20 to 5.70, clean black pekoe 4.90 to 5.10, medium Assam C.T.C. B.P. 5.50 to 5.70, plain B.P. 4.30 to 4.40 and plain fannings 4.20 to 4.40.

JUTE GOODS LISTLESS

(From Our Own Correspondent)

CALCUTTA, *12th March*

Apart from a mid-week rise in the prices of heavy goods, caused by speculative buying, listless conditions prevailed in the jute goods market during the week under review, while fibre remained firm and, in fact, mofussil quotations rose above Calcutta's parity, as a result of the fall in fresh arrivals. That arrivals have now fallen to about 40,000 maunds a day is an index that the marketing of this season's crop is almost complete. According to the Indian Central Jute Committee, as and when mills complete the purchase of March quota, only about 350,000 bales of jute and mesta would remain for marketing. It is expected that, since the new season's fibre would begin to reach the market only after the middle of August, fibre prices may look up. Fibre stocks with mills, the Jute Buffer Stock Association and the State Trading Corporation aggregating 3.1 million bales would, of course, act as a sobering influence, but if, as is expected, there is an improvement in quality and a reduction in the output of the lower quality as a result of the difficult marketing conditions which the latter witnessed, prices for the next season must be maintained at firm levels.

Satisfaction has been expressed by the Committee over the massive purchase operations since November last which have avoided any severe depression arising from a glut. While this view is authoritarian and it is supported by the trend of prices in the fibre market, it is surprising that there is opinion among legislators in West Bengal that fibre prices should be raised in the interests of growers. A memorandum sent to the Prime Minister by some Congress and Opposition M.L.As of West Bengal suggests that, in the jute market, monopolistic trends prevail and that they should be checked by the abolition of the export duty on raw jute and permitting its free export irrespective of quality. It is common knowledge that there is little demand overseas for such of the varieties of fibre as are surplus in India. At the same time, India's production of the higher grade fibre is insufficient to meet the demand of mills in full. If, therefore, indiscriminate exports are allowed, higher grade fibre would go out of the country, fibre prices would certainly be pushed up, and mills' production of superior goods and specialities, for which overseas demand is growing, would decline. What is more, cost of production in mills would rise, and this would encourage India's competitors to undercut Indian quotations. All these would mean lowering of economic activity in India and reduced export earnings from jute goods. It is very unlikely that the Government would seriously consider giving permission for indiscriminate export of raw jute.

Stocks of fibre with mills and other agencies are sufficient for six months' consumption and, assuming that the next crop does not come up to expectations, the current stocks of fibre would be a boon not only to mills but also to cultivators. For mills would be enabled to continue production at a satisfactory rate, thus fulfilling overseas commitments and ensuring regular supplies. A point of special importance to which attention has been drawn is that the present levels of goods prices which are low are really the levels at which jute goods can be considered realistically priced to be readily acceptable to users. Throughout the present season so far, good quality fibre has been commanding a premium, while the poor quality fibre has been selling below the minimum prices. The trade would urge the Government not to disturb the normal law of supply and demand, as it strongly feels that, if prices of low quality fibre are lower on account of its quality, it is natural that cultivators would pay more attention to quality in the next season and produce more of such fibre which commands a premium. In high lands, it is true that only low quality fibre can be grown; even so, if water for retting is available in abundance, quality can be improved.

The demand for a rise in fibre prices does not take into consideration the long-term interests of the industry as well as the cultivators. It is true that, as a result of the large crop for some time, prices were lower. But, as Mr. I. S. Boyed, President of the Calcutta Jute Brokers' Association, stated at the annual meeting of the Association held last week, the concerted efforts of the Government and the Indian Jute Mills Association through the medium of the minimum price quotas and buffer stocks remedied the situation. Mr. Boyed recognised that the mills could not afford to go on building up stocks, and that therefore the emphasis for the next crop should be on quality and not on quantity. At the same time, measures are necessary to prevent smuggling of jute rom across the border. The fall in prices in the border areas has been due to availability of plenty of smuggled jute. The Union Minister for International Trade, Mr. Manubhai Shah, stated in Parliament that the Pakistan Government was concerned about this and that he understood that that Government proposed to prohibit jute growing along a five-mile belt of the border. Mr. Manubhai Shah said that, because of the price support scheme in India, the prices which cultivators got were 75 per cent more than the price in Pakistan. This served as an incentive for smuggling. It is significant that, against the background of the view in the momorandum by a section of West Bengal M.L.As that the jute market is inhibited by monopolistic trends, Mr. Shah was all praise for the I.J.M.A., inasmuch as it had co-operated fully with Government in the price-support scheme. He added that, but for the I.J.M.A.'s assistance, it would not have been possible to work the scheme.

During the week under review, only little interest was displayed in hessian by buyers on behalf of the U.S.A. In view of the heavy stocks of burlap in that country, U.S. buyers can afford to wait before entering into further commitments. U.S. buyers have made it known that they consider the present prices as high. The trade here would not agree with this view. The price of hessian 40" 10 oz. has never been as low as at present since the past two years. If buyers desire that prices should move down further, this can only be at the expense of mills. On Tuesday last, ready hessian 40" 10 oz. was quoting at Rs. 49.50, as against Rs. 49.40 on the previous day. However, the rise in ready B. twills to Rs. 114.00 from Rs. 113.25 was more marked, as, in this construction, speculative interest was keen following the publication of a Government tender and a number of inquiries from neighbouring countries. On Wednesday, some scattered business in hessian took place and that explained the small rise in the price of hessian 40" 10 oz. to Rs. 49.60. With the release of more speculative interest, B. twills gained to Rs. 115.50. On Thursday, there was nothing of importance passing, and hessian 40" 10 oz. was unchanged at Rs. 49.60, but B. twills receded to Rs. 113.75. On Friday, these rates were maintained, although no interest was in evidence. Over the week-end, details relating to stock of goods with mills as at the end of the last month were available. These showed a total decline of 7,000 tonnes, with sacking accounting for the largest share of the fall by 5,100 tonnes. The market was closed on Saturday, and quotations were unchanged at Rs. 113.75 for B. twills and at Rs. 49.70 for hessian 40" 10 oz. With hessian 40" 10 oz. quoting at Rs. 49.30 and B. twills at Rs. 112.10, conditions were easy. Mills announced that they will continue the present enhanced rate of production for April also.

The feature in the fibre market was the disinclination of sellers to discount prices. For the rapid fall in arrivals indicated that the marketing of the last crop was nearing completion. Further, the delay in the commencement of preparations for sowing in certain areas, including Assam and northern Bengal districts, has been due to the current parity in the prices of jute and paddy. Summer showers were reported from northern Bengal and Assam, and these would help preparation of land. More rains are, however, required. Quotations for March-April delivery were unchanged as follows: Assam bottoms Rs. 30.00; Northern bottoms Rs. 29.50; and daissee bottoms Rs. 34.00.

FOODGRAINS RECEDE

(From Our Own Correspondent)

HAPUR, *11th March*

With the exception of rice which was steadier, foodgrains eased here this week on anxious selling by stockists induced by reports of rains in the growing areas having enhanced the *rabi* crop prospects. Harvesting of some coarse grains has begun and the new crop will reach the market from next week.

Wheat prices declined by 67 nP to Re. 1.34 per quintal according to quality. The average quality was now quoted at Rs. 39.52 per quintal and the farm quality at Rs. 42.87 to Rs. 43.54 per quintal. Local wheat stocks were now put at 40,000 maunds. Rice improved on better demand and small arrivals. Prices moved up by 67 nP to Rs. 2.67 per quintal according to quality. Local rice stocks were put at 11,000 maunds. Week-end prices were:—Rice *basmati* superior Rs. 85.74 to Rs. 91.09, *sela basmati* Rs. 80.38 to Rs. 85.74, *mainpuri sela* Rs. 53.58, *ramajwayan sela* Rs. 61.62, *raimunia sela* Rs. 64.30 and *gadda* Rs. 50.91 per quintal.

Gram eased by 99 nP to Re. 1.34 per quintal according to quality owing to slack demand in the face of good arrivals of new gram from Agra and old-stuff from Punjab. The Punjab quality was now quoted at Rs. 39.52 per quintal and the local produce at Rs. 38.18 per quintal. Maize prices also moved down by 67 nP to Re. 1.34 per quintal, as seasonal demand was subsiding. Arrivals were better and local stocks were placed at 13,000 maunds. Prices ranged between Rs. 24.46 and Rs. 30.14 per quintal. Barley and *bejhar* prices were almost unchanged at Rs. 24.78 and Rs. 24.78 per quintal, respectively. *Juwar* prices also sought lower levels, as arrivals from M.P. improved to 4,000 maunds. *Guwar* prices, however, ruled steady on poor stocks position. Week-end prices were: *Guwar* Rs. 30.81 to Rs. 34.83, *juwar* new Rs. 27.46 to Rs. 28.13, *bajra* Rs. 30.81, *methi* Rs. 58.94 and oats Rs. 33.49 per quintal.

In pulses, peas eased slightly on poor buying enquiry. Peas *dara* was now quoted at Rs. 28.13 to Rs. 28.47 per quintal and the farm quality at Rs. 30.14 to Rs. 30.81 per quintal. Peas *dal* was quoted at Rs. 33.49 per quintal. Stocks were estimated around 18,000 maunds and during the week four wagons were despatched to the South. Harvesting of peas has begun and new peas will reach the market shortly. *Arhar* prices were stationary at Rs. 48.23 per quintal. *Urd* ruled quiet in poor trading and prices were quoted between Rs. 58.94 and Rs. 66.98 per quintal. *Masoor* prices drifted lower, as new produce arrivals increased. Other *dals* were listless. Week-end prices were: *Arhar dal* Rs. 69.66, *urd dal* Rs. 72.34, *moong* Rs. 45.55 to Rs. 48.23, *moong dal* Rs. 61.62, *masoor* Rs. 50.91 to Rs. 51.58, *masoor dal* Rs. 58.94, *moth dal* Rs. 46.89 and gram *dal* Rs. 46.89 per quintal.

SLACK DEMAND FOR SUGAR

(From Our Own Correspondent)

HAPUR, *11th March*

Slack demand accounted for an easy trend in the sugar market here this week. Mills were anxious sellers, as they were keen to dispose of the released quota. Demand from consuming areas of Gujarat, Punjab, Maharashtra and Rajasthan was poor. All factories here in West U.P. have closed their cane crushing season. Sowings of cane for the next season is being done these days and total acreage is likely to increase. During the week, spot delivery prices eased one point per quintal and mill delivery prices declined by Re. 1 to Re. 1.75 per quintal. Week-end prices were:—D30 per quintal—Amroha Rs. 108.50, Dhampur Rs. 108.20, Seohara Rs. 108.20, Meerut Rs. 110.50 and Simbhauli (E30) Rs. 109.75.

Sugar prices were depressed in Muzaffarnagar. Losses of 50 nP to Rs. 1 per quintal were recorded in the mill delivery section. Various factors influenced the market sentiment. Supply position in the consuming centres was quite easy, as dealers there had built up sizable stocks on fears that excise duty on sugar would be increased in the budget. This fear having proved unfounded, these dealers turned sellers. Besides, demand was poor throughout the week. Only modest business could be done towards the week-end for Delhi and local areas. Week-end prices (in rupees) were:—A30 Panipat 112.50, Mansurpur 112.50, B30 Buland 110, C30 Deoband 110.75, Khatauli 110.50, Jagadhri 110.50, Rohana 110.25, D30 Amroha 108.50, Bijnore 108.20, Meerut 109.50, Modinagar 110.25, E30 Simbhauli 109.75, Shamli 109.50 and Sawarawa 108.50.

Khandsari ruled subdued for lack of buying inquiries. Arrivals were satisfactory. After declining by about Rs. 2 to Rs. 2.67 per quintal, prices rallied by about 67 nP towards the week-end on revival on Punjab demand. The wet quality was quoted at Rs. 83.06 to Rs. 91.09 and the dry crystal and non-crystal variety at Rs. 93.77 to Rs. 101.14. Prices on the corresponding date last year were between Rs. 69.66 and Rs. 89.75. Ready *gur* prices sagged during the week on poor demand. Daily arrivals dropped to an average of 500 to 800 maunds, and thanks to easy loading facilities, the week-end offtake aggregated 18 wagonloads to Gujarat, Bengal and Rajasthan. Local *gur* stock was now put at 25,000 maunds. Shakker prices also sought lower levels, as Rajasthan and Punjab support was lacking. Sowing of cane for the next season was being done these days. Week-end prices were: *Gur* Rs. 49.57 to Rs. 50.24, balti quality Rs. 48.23 to Rs. 50.91 and shakker Rs. 60.28 per quintal.

Sweden ranked fourth among the world's shipbuilding nations, after Japan, the U.K. and Western Germany, in tonnage launched in 1962, according to Lloyds *Register of Shipping*. Out of a total of 8.37 million gross register tons launched, Sweden accounted for 841,022 tons. The 1962 world total means an increase of 434,749 tons over 1961. This fieure includes an increase of 98,954 tons for ships launched at Swedish yards. In the construction of tanker tonnage, Sweden ranked second after Japan with 479,515 tons launched in 1962, or 58,301 tons more than in 1961. As a builder of ships for foreign owners Sweden comes third after Japan and Western Germany. Over 70 per cent of the tonnage launched at Swedish yards in 1962 was for non-Swedish owners.

Notice

THE INDIA SUGARS AND REFINERIES LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Twenty-ninth Annual General Meeting of the Company will be held at the Registered Office of the Company at Hospet (Bellary District) on Saturday, the 30th March 1963, at 4 p.m., to transact the following business:—

(1) To receive and adopt the Directors' Report and audited accounts for the year ended 30th September 1962.

(2) To declare a Dividend on Preference Shares.

(3) To declare a Dividend on Ordinary Shares.

(4) To elect a Director in place of Lala Ramgopal Gupta, M.P., who retires by rotation and is eligible for re-election.

(5) To elect a Director in place of Sardar Baldev Singh, who retires by rotation and is eligible for re-election.

(6) To appoint Auditors for the year 1962-63 and fix their remuneration.

The Register of Members of the Company will be closed from 24th March 1963, to 30th March 1963, both days inclusive.

By Order of the Board,
Per pro THE INDIA SUGAR AGENCIES PRIVATE LTD.,
C. D. CHOUDHARY,
Managing Agents.

BOMBAY, *2nd March* 1963.

Notes.—(1) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself and such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

(2) The Dividends, when declared, will be payable on or after 15th April 1963, to those shareholders whose names are on the Register of Members on 30th March 1963, or to their mandatees.

(3) Shareholders are requested to notify the Company of any change in address.

DELHI LETTER

T.T.K.'S COMING ODYSSEY

FEDERATION MEETING—PATRIOTISM ON WITNESS STAND

From Our Own Correspondent

NEW DELHI, *12th March*

MR. T. T. Krishnamachari's impending visit to the U.S.A. and the U.K. next month to seek long-term aid for defence build-up, as well as for economic development, will be of tremendous significance to the country at this juncture. As the Minister for Economic and Defence Co-ordination, he has an unenviable responsibility, particularly at a time when resources are meagre and the task gigantic.

Defence production in the country has, no doubt, been stepped up and certain sophisticated modern weapons are reported to be under production. But, keeping in view the possibility of a renewed Chinese activity on the northern borders with the advent of summer, there is hardly any time to wait and watch. From the Chinese refusal to accept the Colombo powers' proposals, the safe deduction is that they mean to make a fresh move in the near future. We have thus not only to finalise our defence requirements and ask for whatever is readily available from the friendly countries, but also to start production of the necessary equipment without much loss of time.

The U.S. and the Commonwealth teams of military experts are to submit the reports of their recent assessment of India's defence needs by the month-end. Mr. Krishnamachari's visit early next month will, therefore, be very opportune.

Another aspect of his mission, and perhaps more important, will be his talks with the Government leaders in the U.S.A. and the U.K. in regard to the economic aid expected from the Aid-India Club. The consortium is expected to hold its preliminary session some time in April and resume a little later for final allocations. It will be the primary interest of Mr. Krishnamachari to see that this time the aiding countries make up their minds to announce not only long-term loans, if possible to cover the rest of the three years of the Third Plan, but also make a major part of their advances available in the shape of untied credits.

A big handicap in the utilisation of the Club's credits so far experienced is that the authorisations by its members have been rather slow and tardy. Besides the World Bank and the I.D.A., the number of Club members have swelled from six in 1961 to ten in 1962 and the total commitments for the first two years have aggregated Rs. 1,126.18 crores. But authorisations upto the end of 1962 came to only Rs. 820.52 crores, leaving a balance of Rs. 305.66 crores.

The friendly countries of the consortium are well aware of the predicament that India has been pushed into. The extent of help they render will depend upon Mr. Krishnamachari's success in convincing the Club members that a friend in need is a friend in deed, that not only should they speed up the authorisation of the balance of their past commitments, but their fresh commitments must also cover the needs for the rest of the three Plan years. If they required any proof of India's own efforts, nothing could be more convincing than the defence outlay of Rs. 867 crores, massive taxation of the order of Rs. 275 crores and a Plan outlay of Rs. 1,650 crores for the fiscal year 1963-64 alone.

F.I.C.C.I. Annual Session

The 36th annual session of the Federation of Indian Chambers of Commerce and Industry will be facing issues and problems not encountered in its life earlier. It is natural for one to compare and contrast the situation obtaining today and that during the Second World War. The F.I.C.C.I. played an important role then and paved the way for the coming of age of India's business and industrial acumen. It was on the basis of its lead and wise guidance that Indian businessmen and industrialists had made a place of their own in the international market.

In today's near-war conditions, heavier responsibilities lie on its shoulders. It is no more a struggle against a set of foreign rulers stifling the growth of India's nascent industry and commerce. But today it has to be an active participant in the nation's efforts not only to defend its sovereignty but also to strengthen its economic base to make that defence effort more meaningful.

This session of the Federation, however, faces the danger of side-tracking the main issues of growth by getting enmeshed in the considerations of the tax burden, not that the tax burden is of no consequence. No doubt, the Federation members will be exercised over the Super Profits Tax and other imposts, and must certainly engage itself in working out a happy and convincing solution.

But still bigger things await consideration by them. One of the most urgent problems will be in regard to export promotion and allied issues. The forthcoming World Trade Conference and the relations with the Common Market are other important subjects. A new suggestion that has come India's way, namely, the feasibility of joint ventures in the E.C.A.F.E. region, also needs careful consideration. Thus, there will be ample opportunity for the Federation to avoid for once the oft-beaten track and raise its deliberations above the pedestrian. Of course, much will depend upon the inaugural speech of Prime Minister Nehru and the direction he gives to it.

In the midst of such momentous developments, it is rather regrettable that the Federation should be beset with internal disharmony, emasculating it and weakening its voice. The resignation by the three big industrial houses of Bombay —Tatas, Mafatlals and Ghias—is something of a bolt from the blue. But, perhaps, the Federation did require a shake-up, and the action is but providential.

Rajya Sabha Budget Debate

The Finance Minister's eloquent speech in reply to the Budget debate in the Rajya Sabha is notable more for its political overtones than for any economic justification of the new imposts.

Mr. Desai's speech was replete with such trites as the call of the conscience, the duty, the responsibility, the need of the hour, the imperatives, but there was no indication that, having opted for such a huge expenditure, the Government had geared its administrative machinery to make the best use of the funds made available. His main theme was that every Indian citizen had to prove his patriotism by parting with a portion of his income.

The bulk of the people have been asked to sacrifice and bear the privations cheerfully, because there is no other alternative to what has been prescribed. But there is no answer to the popular demand that much needed revenue should not be frittered away by fads like prohibition. The handsome income apart, a huge saving can be effected by the disbandment of the utterly unproductive enforcement machinery. It is difficult to convince the people of the logic of prohibition, if there be any, when a number of State Governments have either refused to introduce it (West Bengal) or have decided against any expansion of the partially dry areas under their jurisdiction.

On the other side, a strange matamorphosis has been noticed among those who have been initially most vociferous in criticising the Budget proposals. The earlier speeches in the debate contributed, in no uncertain measure, to the somewhat rhetorical assertions of the Finance Minister. To be precise, Mr. Desai's speech was but the logical finale to a rather indifferent study of the economic situation by the members of the Rajya Sabha. Not that the members did not mention the important economic issues on which depend both our defence build-up and economic development; but all their efforts were drowned in their own generalisations. Given such a tremendous opportunity and scope, a situation in the life of the country the like of which had never appeared before, one expected the debate to rise to a much higher level, injecting new ideas and thought in an otherwise morbid psychology that has overtaken the country. Even the earsplitting harangue of the Communist spokesman merely tinkered with the problems, ending with the oft-repeated demand for a series of acts of nationalisation.

Exports Fall Short of Target

The year's exports, estimated at Rs. 680 crores, will again be short of the targetted annual average of Rs. 740 crores. The calculation in some quarters is Rs. 695 crores (estimated) by adding Rs. 15 crores expected from the exports of Goa, Daman and Diu. But since the Plan target was fixed without reckoning the performance expected of the former possessions of Portugal, it is better to stick to the estimates minus them, so as to be able to really assess the magnitude of the efforts still to be made. Even then, the performance of 1962-63 will be considered creditable because its rise by about Rs. 18 crores was brought about by a much larger quantum of exports in the midst of a general decline in prices of primary commodities.

During the year, our earnings have gone up by Rs. 50 crores from exports of jute goods, oilcake, tobacco, tea, vegetable oils and iron ore, but have lost ground in respect of leather, cotton goods, raw cotton and waste, raw wool, coffee, fish, manganese ore and metals and scrap.

While we have more than doubled our export trade with East European countries from 5.32 per cent in 1958 to 12.7 per cent at present, we have suffered serious setbacks in Western Europe, Africa and Asia. Our exports to the Common Market have declined by Rs. 6 crores, West Germany accounting for over 80 per cent of the decline. There has also been a decline in exports to the U.K. and Japan.

Our exports during the first two years of the Third Plan account for Rs. 1,357 crores, leaving Rs. 2,343 crores to be attained during the remaining three years of the Plan—a formidable task when the annual average comes to Rs. 781 crores.

At the same time, the outlook for 1963-64 and the years following it does not seem reassuring. The needs of the defence as well as development under emergency conditions will naturally keep the imports level high and, therefore, the hope of servicing foreign debts from the export earnings will remain unrealised for some more years to come.

Additionally, the Minister for International Trade has already expressed the apprehension that the new taxes would adversely affect our exports.

WEEK'S STOCK EXCHANGE TREND

MARKET GOSSIP

(*Concluded from page 439*)

which has already been released, does not, however, say unambiguously whether the negotiations could have succeeded in the absence of the French veto. There has been quite a lot of controversy on this point between France and the U.K. While President de Gaulle considered the progress of negotiations halting and tardy, Mr. Edward Heath, leader of the U.K. delegation, it may be recalled, stressed at the Commons, soon after the collapse of talks, that they were on the point of "near-success." Prof. Hallstein, President of the E.C.M. Commission, apparently in a bid to strike a mean between the two opposing views, expressed the view recently that it was as impossible to assert that negotiations could not have succeeded as to state categorically that they could not have failed. This dilemma has not been resolved even in the expert report, whatever may be its other merits.

Although the authors of the report have taken care not to take sides on the issue, they have pointed out that many questions still unsettled by January were, in fact, of minor consequence in the tariff field. Their settlement, the report adds, was merely delayed by the inevitable tactical manœuvring, but "there was no reason to believe that they could not have been resolved." On other aspects, however, the Commission is of the view that there were several important issues which eluded a solution. Even here, the report concedes, significantly enough, that the lack of progress on some issues stemmed from the fact that the Common Market itself has not worked out common policies for them. These include certain tariff problems, agricultural finance regulations and agricultural policies for dairy products, beef and veal, sugar and rice. The most prominent among the outstanding issues related to temperate foodstuffs. No doubt, broad solutions had been proposed for Commonwealth cereal exports, but their extension to other products, says the report, might have raised difficulties. Secondly, although a measure of agreement was reached on British agriculture in the final stages of negotiation, transitional arrangements still remained to be agreed.

The third major outstanding problem, according to the report, was raised by the U.K.'s relations with the other E.F.T.A. members. It would appear that France, and probably some other E.C.M. members, were not happy that the success of the negotiations with the U.K. was tied to the question of admission of the other E.F.T.A. members. This objection, however, appears to be an exaggeration at least in the eyes of non-Europeans. According to the original assurances by the Six countries, any non-communist country in Europe was welcome to the Common Market. Thus, the other countries of Europe should naturally be welcome to the club, be they small or big. It is possible that the Commission is not so much against their entry as against the terms they bargain for. Although Denmark and Norway were prepared to accept the membership and subscribe to the Rome Treaty, Austria, Switzerland, Sweden and Portugal preferred to seek only "association" with the Common Market. It must be admitted, in fairness to the Six, that the term "association" is vague and has not even been defined in the Rome Treaty. But still nothing prevented the Six and others from agreeing to certain broad principles on which "associated status" could be offered to those E.F.T.A. members who prefer it. As the saying goes, "where there's a will there's a way." Obviously, the hitch arose because the will was not there.

Among the other unresolved matters are several tariff questions of interest to India, Pakistan and Ceylon, the existing Commonwealth preferences for British exports and arrangements for Rhodesia, Nyasaland, Hong Kong and other colonial territories of Britain. These questions, it must be admitted, came up for heated discussion at several meetings between the U.K. and the Six. But the U.K. and most of the members of the Common Market, except France, were in a compromising mood. Provisional agreements were also reached on several questions, including transitional arrangements for trade with India and other Commonwealth countries in respect of several goods. Had France, too, shown a sympathetic understanding of the difficulties facing Britain because of its special obligations, agreeable solutions could have been found for outstanding problems. Unfortunately, the report itself has not examined the specific question whether the negotiations would have succeeded but for Gen. de Gaulle's veto. Nor has the report attempted to give a positive direction to the future course of policy to be adopted by the Common Market in regard to applications for admission. There is also no indication in the report regarding a possible reopening of the suspended negotiations between the U.K. and the Common Market.

GOVERNMENT AND STEEL COMPANIES

Some significant observations about expansion plans of and Government assistance to the two major steel producers in the private sector were made by Mr C. Subramaniam, Union Minister for Steel and Heavy Industries, in the Rajya Sabha on Thursday the 7th inst. while replying to questions raised by members. The Minister told Mr. S. N. Mishra that the Government had approved in principle the Indian Iron and Steel Company's proposal to raise the production capacity by 300,000 ingot tonnes per annum and had called for details of financial implications. The Tata Iron and Steel Company did not propose, according to the Minister, to undertake any further expansion programme during the third Plan period. Whether more expansion in those two units in the fourth Plan period was either necessary or practicable was being considered by the Government. Mr. Bhupesh Gupta wanted to know from the Minister whether, in view of the non-repayment of either the principal or interest of the Rs. 10-crore loan received by each of the two units, the Government would seek participation in their equity capital while agreeing to their expansion schemes. Mr. Subramaniam pointed out that these schemes had been examined on merits and that participation of Government in equity capital could not be done unless the Companies agreed to it. While the financial implications of the I.I.S.Co.'s expansion had not been worked out, nothing compelled the Company, the Minister conceded, to offer the Government a share in its equity. In the initial stages, he went on, any expansion in equity would have to be offered to the existing shareholders and, unless the law was changed, it would not be possible for the Government to participate in capital. The Minister, however, significantly added that all these matters were under the consideration of the Government. Does this mean that the Government is contemplating a suitable change in the law that may permit it to participate in the capital of the private sector companies which it has assisted in their expansion plans?

Speaking about arrangements for the recovery of loans to steel companies, Mr. Subramaniam said that the loans were given on the basis of an agreement with the companies and that the recovery would be governed by its terms. He was candid when he stated that one of the terms was that a special allowance in retention price should be given for the purpose of repaying the loans and the interest thereon, which the Tariff Commission last year recommended at Rs. 8 per ton but the Government did not accept. He added, however, that the whole matter was now under consideration.

ENGLISH ELECTRIC COMPANY'S ISSUE

The English Electric Company of India Ltd., a wholly-owned subsidiary of the English Electric Company Ltd. of London, which was recently converted into a public company, is to issue an additional 600,000 ordinary shares of Rs. 10 each at par, which will raise the issued capital to Rs. 1 crore. Out of the new issue, the parent Company has agreed to take up 350,000 shares partly as consideration for plant and machinery already supplied and also to be supplied in future and partly for cash subscription. The balance of 250,000 shares will be offered to the public. The list will open on the 25th inst. and close within three days thereafter. Although the public issue is not underwritten, the parent Company has agreed to take up the unsubscribed shares without charging an underwriting commission.

Considering that its proceeds will go towards a Rs. 60-lakh expansion programme of this well-established, six-year-old company, the new issue must not fail to evoke the expected support from the public. The Company's plant at Pallavaram (near Madras) manufactures different varieties of fusegear electrical equipment. Between 1958 and 1962, the output increased in value from Rs. 3 lakhs to Rs. 97 lakhs. The total sales in the year ending 30th September 1963 are expected to be of the order of Rs. 120 lakhs. The expansion programme is to be completed next year. Last year, the Company commenced production of relays. Extension of the works for the manufacture of control panels has been completed and production is to start this year. The Company has obtained a licence for the manufacture of switchgear, but does not propose to proceed with the scheme for the time being. On completion of its expansion programme in technical collaboration with the parent Company, the Company is expected to make sufficient profits and pay satisfactory dividends.

BANKING

(*Concluded from page 448*)

Bank. The Corporation's foreign currency resources at present aggregate $65 million (Rs. 30.94 crores), comprising $60 million from the World Bank and $5 million from the U.S. Agency for International Development.

Thanks to the marked expansion of business, the gross income of the Corporation registered a notable rise of Rs. 51.82 lakhs to Rs. 167.38 lakhs during 1962. The increase in the previous year was only of the order of Rs. 27.72 lakhs. Since, however, a large part of the rise was offset by the appreciable increase of Rs. 40.73 lakhs to Rs. 69.80 lakhs in interest paid, of Rs. 1.98 lakh to Rs. 10.43 lakhs in establishment expenses and of Rs. 1.95 lakh to Rs. 4.32 lakhs in other expenses, the gross profit has gone up by just Rs. 7.17 lakhs to Rs. 82.83 lakhs. And in view of larger provision for taxation (Rs. 32.54 lakhs, as against Rs. 27.75 lakhs), higher depreciation (Rs. 1.41 lakh, as against Rs. 1.40 lakh) and donation to National Defence Fund (Rs. 2.50 lakhs), the net profit for the year 1962 is a shade lower than that for 1961 as is shown in the table below:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Gross Income	167.38	115.56	87.84	62.46
Profits before tax	78.92	74.27	62.61	50.66
Profits after tax	46.38	46.52	37.67	28.23
Dividend per share (Rs.)	6.50	6.50	5.75	5.00
Net worth per Rs. 100 share	132	125	115	108
Market value as on 31st December per Rs. 100 share	92	82	71	88

In keeping with their judicious policy of conserving a sizable part of profits, the Directors of the Corporation have set apart Rs. 11.60 lakhs out of the distributable profit for reserves. Including this provision and the realised profit of Rs. 16.80 lakhs on investments, the total reserves of the Corporation stand at the impressive level of Rs. 1.58 crore which is equal to nearly one-third of the paid-up capital of Rs. 5 crores. The balance-sheet total as at 31st December 1962 is Rs. 31.88 crores (as against Rs. 22.55 crores a year before), of which investments (at or under cost) account for Rs. 10.41 crores, loans and advances for Rs. 16.64 crores, and fixed and current assets for Rs. 4.76 crores.

TREND OF SHARES

RELIEF IN S.P.T. EXPECTED

(*From Our Own Correspondent*)

BOMBAY, *14th March*

HOPES of some relief in Super Profits Tax on companies led to a steadier feeling on the stock exchanges this week. Such hopes emerged from the talks held here from Saturday to Monday between the Finance Minister, Mr. Morarji Desai, and some industrialists and representatives of the Bombay Stock Exchange and the Bombay Shareholders' Association. The hopes turned into expectations following reports that Mr. Desai had indicated, at the meeting of the Congress Party's Executive Committee in New Delhi on Tuesday the 12th inst., that he had an open mind on the question of adjustments in the S.P.T. to so-ten its adverse effect on industrial investment. The Finance Minister was also reported to have said that it was for the companies to supply him with statistics in support of their claim that the new tax would act as a disincentive to capital formation and foreign collaboration. Because of all this sentiment the markets turned slightly better, and closing prices today indicated generally gains over the week. The week's trend, however, is also to be judged in the light of the fixation of minimum prices and ban on short-selling in the markets, as a result of which prices could either remain steady or move up. Turnover during the week was small and gains were due more to speculative buying than to investment support.

Latest reports indicate that the Finance Minister will announce whatever relief he thinks fit in the S.P.T. on the 22nd inst., when he will move for consideration of the Finance Bill. Speculation rests now on the nature of the relief. From reports covering his speeches on the issue this week, it appears that he is unlikely to favour replacement of S.P.T. by an increase in the normal 50 per cent tax on company profits because such an increase, he apparently feels, may uniformly penalise all companies—new and old, efficient and inefficient alike. What may, therefore, be expected from the Finance Minister is a possible upward revision to, say, 8 to 9 per cent, of the proposed standard deduction of 6 per cent of profit on "own funds," before determining the liability under the S.P.T. Some quarters do not rule out a standard rate of 50 per cent, as against 50 and 60 per cent as proposed, of tax. The upward revision in standard deduction to 8-9 per cent is suggested in the light of the current rate of dividend on preference shares and the charge on loan capital. It is quite likely that, in order not to put new companies on par with the established ones, the S.P.T. may be made applicable to new units at a later stage, after five years, if not earlier. Such special treatment to new ventures is especially necessary for the promotion of foreign collaboration and capital participation. One will perhaps be right in anticipating that the Finance Minister will be liberal in regard to new ventures.

What about the stock market? Will it be satisfied, if the standard deduction in tax is raised to 9 per cent? A two-to three-point increase in the standard deduction is not going to alter basically the implications of S.P.T. which is more a dividend control measure than an excess profits tax. Even if the standard deduction were revised as suggested, the companies would be hard put to pay any attractive return to shareholders. Basically, equity shares seem to be in for a bad time. It is quite a different thing, however, if stock markets decide to be jubilant over what is likely to be a marginal mercy in a killing proposition.

* * * *

Speculative buying lifted market leaders in Dalal Street. That buying was speculative and not on investment account was clear from the fact that only the forward quotations moved up, while the cash rates for such shares remained practically unchanged. Besides, the purely cash scrips made a mixed show, with gains recorded largely in those for which minimum prices had been fixed. Among the leading counters, Standard was up by Rs. 35 at Rs. 790, Indian Dyestuff by Rs. 22.50 at Rs. 402.50, Bombay Burmah by Rs. 10 at Rs. 625, T.E.L.Co. by Rs. 7 at Rs. 280, Kohinoor by Rs. 6 at Rs. 280 and Bombay Dyeing by Re. 1.80 at Rs. 63.80. Among Steels, Indian Iron rallied from Rs. 19.70 to Rs. 20.32 but reacted to close 4 nP lower over the week at Rs. 19.92. Tata Ordinary eased to finish at Rs. 117.50, after an early improvement from Rs. 116.50 to Rs. 119.25, but were 50 nP higher over the week. Among other forward shares, Scindia attracted attention with a gain of 68 nP to Rs. 10.80. Premier Construction rose by five points to Rs. 134. In the Cash Section, whereas Permanent Magnets improved by Rs. 15 to Rs. 202.50, Colour Chem by Rs. 13.75 to Rs. 338.75 and Dharamsi Chemicals by Rs. 8.75 to Rs. 125.25, Chemicoat showed a loss of Rs. 6.50 to Rs. 165.50 and Barium Chemicals of Rs. 3 to Rs. 70.

* * * *

A recovery in those shares which had fallen sharply last week was the feature of trading at Calcutta. Thus, in the forward list, Birla Jute rallied from Rs. 25.25 to Rs. 26.62, Orient Paper from Rs. 31.25 to Rs. 32.50 and Texmaco from Rs. 19.10 to Rs. 20.60. Gains varying from 40 nP to 60 nP were recorded in the other leading counters. In the Cash Section, Jaychree Textiles improved by 93 nP to Rs. 14.12, Dalmia Iron gathered Rs. 1.94 to Rs. 13, J.K. Synthetics rallied by 75 nP to Rs. 11.12, Bengal Papers were up by Re. 1.25 at Rs. 31.25 and India Steamship closed 69 nP higher at Rs. 6.56. Other shares were held around their previous levels.

* * * *

Minimum prices were introduced on the Madras Stock Exchange this week on the basis of the closing quotations as on Wednesday the 6th inst. With the sole exception of Madras Rubber which closed 25 nP lower at Rs. 18.87, values showed no change over the week.

William Blake.

VOL. CVI. No. 2709 BOMBAY, 23rd MARCH 1963 PRICE Rs. 2

NATIONAL EMERGENCY AND THE BUDGET

THERE was little that was new in the presidential address of Mr. Shriyans Prasad Jain, delivered at the thirty-sixth annual session of the Federation of Indian Chambers of Commerce and Industry held at New Delhi last week-end. It was mostly a recollection of the statements made by the Federation from time to time on the national emergency, defence preparations and the Central Budget for 1963-64. But that was not his fault. The subjects dealt with by him and later covered in separate resolutions were and still are the most important ones before the nation. Naturally, they had to figure at the annual session and the reiteration of views expressed earlier by the businessmen of this country, both outside and inside the Federation, reflects a remarkable consistency in their approach, besides evidencing that their first thoughts did not represent hasty or ill-considered conclusions. Leaders of Government, who participated in the Federation's annual session as its guests, including the Prime Minister, and the numerous delegates who took part in the three-day debates were agreed on one thing, namely, the supreme necessity to throw the Chinese out of Indian soil and to stand united in the face of continuing threats to the independence of the nation. Mr. G. D. Birla's call to businessmen to support the Government unflinchingly, to pay the taxes cheerfully, and to take a long-range view was met with acclamation. His remark to the effect that there would be no private enterprise if the Chinese were not kept in their place and that every Indian should stand by the present Government in its efforts to strengthen the defence of the country was highly appreciated and endorsed by the audience. In fact, a full-fledged resolution expressing confidence in Prime Minister Nehru and the ability of the country to meet Chinese aggression under his leadership was adopted at the session without a single dissentient voice. None questioned the expanding role allotted to the pubic sector in both defence and development. Signs of rightist doctrinairism were conspicuous by their absence in the speeches of the President and delegates alike. On the contrary, their approach was characterised by a keen sense of realism and a desire to play an active part in the defence of the country.

The speeches made by the Prime Minister, the Minister for Steel and Heavy Industries and the Defence Minister were notable for their restraint and friendly attitude towards the private sector. They were also free from leftist doctrinairism and the usual sermons to the private sector. Those who had been apprehensive that the Prime Minister would be very harsh on the private sector, in view of the disclosures made by the Vivian Bose Commission in its report on the affairs of the Dalmia-Jain group of companies, felt greatly relieved when they found that he did not take advantage of this development to run down the private sector in general. Indeed, by agreeing to continue his practice of inaugurating the annual session of the Federation—a task which he has performed ever since Independence—despite the Vivian Bose Commission's findings and strictures on the businessmen connected with the Dalmia-Jain concerns, he has prevented the creation of an impression among the general public that the whole private sector is corrupt. It is refreshing to find that Mr. Nehru had the breadth of vision and generosity to appreciate in public that the Commission's report pertained only to a group of concerns which "may not be representative of all." It was in this context that he gave the wholesome, as well as entirely pertinent, advice to the business community that it was up to it (the community) "to give thought to this matter" and that it was "of the utmost importance" that trade and industry in this country "should maintain the highest standards." Reiterating his desire that both public and private sectors should make progress, he added: "If an impression gets abroad that the private sector is not maintaining moral and ethical standards that one expects of it, it is that sector that will suffer in public estimation. On the other hand, if it maintains them, it will advance in growth."

None can aver that, in saying these things, Mr. Nehru was presumptuous. Unfortunately, there was scarcely any among the leaders of businessmen, who had gathered at the Vigyan Bhawan, to follow the lead given by Mr. Nehru and propose a resolution on the vital need for maintenance of a high level of moral and ethical standards. In a resolution on red-tape and slackness in administration, the Federation charged the Government with "administrative inefficiency and unproductive time-consuming work all round," as also with "indecisiveness and slackness in administrative machinery and proliferation," and said that the root cause for all these was "the multiplicity of legislative measures, rules and regulations." Some one cited the Company Law of 1956 and the subsequent amendments to it as an instance of marathon law that stifled the freedom of private enterprise. But look at what had happened in the corporate sector before the new Company Law (of 1956) was enacted. While not denying the appropriateness of the resolution on red-tapism, condemning inefficiency at Government level, one feels that it would have been more appropriate if this resolution had been balanced by another drawing attention to the deficiencies in the private sector and emphasising the need for eradicating them through self-purification. The absence of this balanced approach becomes conspicuous, especially as the Prime Minister was candid enough to accept the Federation's criticism of delay in Government procedures and conceded that they should be changed and improved. The time has come when the Federation has to add to its responsibilities the task of creating a proper image of the business community before the public of this country.

This single lapse, however, must not be allowed to detract one's attention from the other valuable resolutions adopted at this year's annual session of the Federation and the speeches made therein. The resolution on national planning and emergency, as well as the one on fiscal and monetary policies, are of prime importance. The two are interlinked, in that both aim at enabling the country to attain its twin goals of defence and development speedily, economically and without endangering our democratic way of life. The Federation believes that, much as we have accomplished in the industrial sphere during the past ten years, when industrial output has nearly doubled and many new industries of strategic importance have been set up, much more remains to be done. Today, the organised industries account for only 10 per cent of economic activity. "In the new situation that has developed," it says, "our strategy must be to bring about a rapid augmentation of domestic capacity to produce all critical items which are essential as much for peaceful economic growth as for defence potential. Many hardware industries have to be established; in addition, a number of soft and consumer goods industries have to be expanded and new ones brought into being to avoid imbalances in the economy. Power and transport capacity must necessarily be augmented ahead of demand. It is equally necessary to ensure that our outlays are speedier and more productive than they have been in the past.... We have to think in terms of probable requirements over the period of 10 to 15 years, so that inter-sectional balances may be achieved and arrangements for production or import of equipment and training of personnel can be taken up sufficiently ahead of time." In order to bring about the massive national efforts implied in the accepted goals of stronger defence and speedier economic growth, the Federation has advocated a reorientation in official policies and attitudes. More specifically, it wants:

1. A liberal implementation of the Industrial Policy Resolution of 1956 which will provide fuller opportunities for the private sector also to engage itself in as many industrial activities as possible.

2. An alteration in planning techniques; those engaged in industry must not only be taken into confidence but also entrusted with the task of working out plans that will be possible of achievement within a measurable period of time. Collaboration with the private sector rather than negative controls will be more beneficial to the nation.

3. The preoccupation with taxation as the key to development to yield place to a purposive programme of financial and fiscal encouragement to private industry.

The basic premise here is that public sector enterprises alone will not be in a position to meet the country's increasing and urgent requirements. This point was ably proved by Mr. B. M. Birla who moved the resolution on national emergency and planning. He quoted facts and figures to illustrate the colossal task of equipping the country with a modern defence force that would be a match to those nations that were trying to impose their will on us. His conclusion was that the country would not be able to meet the challenge on its own, without the help of friendly foreign countries, that there was a limit up to which foreign Governments would be able to help us by giving loans and that, therefore, foreign private capital should be encouraged to flow into the country on a massive scale. In other words, his stand was identical to the one advocated by this journal. He gave an eloquent reply to those (including some Union Ministers, such as Mr. K. D. Malaviya and Mr. C. Subramaniam) who have been saying, even after the Chinese aggression on India, that, by admitting large amounts of foreign private capital, India would mortgage its future. He said that the alternative to this mortgage, if it were a mortgage, would be to mortgage the people of this country to poverty and, possibly, to China too. He debunked the revival of the myth against foreign capital by pointing out that the gains would far outweigh the remittances out of the country of dividends on such capital. The country has to produce an immense amount of a variety of modern defence equipment, engineering products and consumer goods, if it is to remain as a viable independent nation. This cannot be done within a foreseeable distance of time without the help of foreign Governments and foreign private capital.

It is from this angle that the tax proposals in the current budget and the fiscal policy in general have to be considered. Even as it is, the pace of increase in production has been slowing down. May be, the public sector units are

in a position to produce more, for they do not have the problem of finding the money. But the public sector accounts for only a small portion of the country's industrial production. If production in the private sector slackens, or does not grow fast enough, the defence effort would be hampered in two ways: shortage of goods and inflation. This is a simple proposition. How are the units in the private sector to expand if they cannot get more capital, domestic as well as foreign? The answer to this question is also obvious. It is surprising that, even after the inhibitory effects of the Super Profits Tax and its inequities have been clearly brought to the notice of the Finance Minister, he insists on having more proof before he could concede the arguments. Already, some leading companies have reduced their dividends and one or two have postponed their expansion schemes. Foreign lending agencies are doubtful of Indian companies' capacity to repay the loans and have deferred consideration of the pending applications. If the Finance Minister wants more concrete proof of the adverse implications of the S.P.T., he has only to wait for a year and see. But this kind of fiscal experimentation will be ruinous, for the damage once done cannot be made good easily. After all, the administration and the policy-makers are expected to have a certain amount of foresight to anticipate the effects of the tax proposals they make on investment in the future. Fortunately, the time for saying the last word on the S.P.T. by the Finance Minister is not yet over. It is to be hoped that wiser counsels will prevail on him and that, as a result, this crude fiscal weapon would be refined into a fine instrument, to be used for taking away only that profit which is really excessive.

The monetary policy has been tagged to the fiscal policy by the Federation as something that should be modified in order to promote investment and production. Surely, the monetary policy is not as bad as the fiscal policy. One notices a certain amount of self-contradiction on this point in the speech of Mr. Babubhai M. Chinai, who impressively argued the case against the present fiscal policy. The prevailing high rates of interest are quoted as an argument against the 6 per cent allowed as the standard deduction for purposes of S.P.T. And yet he, as well as others who supported him, want the interest rates to be lowered. There is apparently a lot of confused thinking among businessmen who want the best of both worlds, cheap money and fiscal incentives. They frequently quote Dr. Erhard, but they conveniently forget his prescription of monetary policy. To ask for liberal credit for genuinely productive purposes is one thing, but to ask for cheap credit is not the same thing. The former may help check inflation, while the latter will abet inflation. Much of this confusion is the result of the Reserve Bank's failure to educate public opinion on the merits of its monetary policy which, in turn, is traceable to the lack of an abiding faith among the monetary authorities themselves in the policy of high interest rates.

UNION FINANCES: TWO ECONOMIC MAGNITUDES

THE aggregate expenditure of the Central Government on both current and capital accounts has registered a steep increase from Rs. 1,867 crores in 1961-62 (Actuals) to Rs. 2,431 crores in 1962-63 (Revised) and further to Rs. 2,970 crores in 1963-64 (Budget). These figures, which exclude the operating expenses of departmental and non-departmental commercial undertakings, constitute the overall economic magnitude of the Government's budgetary transactions on the expenditure side. How much of this expenditure represents capital formation, that is, creation of fixed capital assets? How much of it represents the Government's current consumption expenditure, that is, expenditure on account of wages and salaries and commodities and services? To answer these questions would be to deal with two of the most significant magnitudes in the Union finances. The answers cannot, of course, be had, at a glance, from the budget figures as presented to Parliament, although it is from these figures alone that such meaningful economic magnitudes like consumption expenditure and capital formation would have to be derived. It is only the Economic Division of the Ministry of Finance that is in a position to do this economic classification of the budgeted expenditure. But even that Division, which has been doing this job year after year since 1957-58, is unable, this time, to provide, for instance, a break-up of consumption expenditure in 1961-62 and 1962-63 into (i) wages and salaries and (ii) commodities and services because of the summary presentation of defence estimates. In the absence of such a break-up, any examination of the trends, over a period of time, in the "wages and salaries" component of expenditure on account of civil administration and defence services is simply not possible.

But it is still possible to draw other broad inferences from the consolidated figures of consumption expenditure provided in the economic classification of the Budget for 1963-64. One obvious inference is that the Government's consumption expenditure, which has increased from Rs. 503 crores in 1961-62 to Rs. 1,094 crores in 1963-64, has *now more than doubled*. This increase is, of course, mostly due to the proposed additional defence spending. It is, however, noteworthy that, in spite of the phenomenal increase in defence expenditure, consumption expenditure *in relation* to total expenditure will have gone up from about 27 per cent in 1961-62 to only 37 per cent in 1963-64. The relevant figures are brought together below:

(Rs. crores)

Year (1)	Consumption expenditure (2)	Total expenditure (3)	(2) as per-cent of (3) (4)
1961-62 (Accounts) ..	503	1,867	26.9
1962-63 (Revised) ..	714	2,431	29.4
1963-64 (Budget) ..	1,094	2,970	36.8

From 26.9 per cent to 36.8 per cent is not too steep an increase. Even if it is thought steep, there is probably the saving feature that the "commodities and services" component of consumption expenditure will continue to represent, in absolute terms, a big market for a variety of agricultural and industrial goods. If it is assumed, rather arbitrarily, that the "commodities and services" component will continue to be at the level of about 45 per cent of consumption expenditure as in 1960-61 and earlier years, it will account absolutely for as much as Rs. 495 crores out of an estimated consumption expenditure of just under Rs. 1,100 crores in 1963-64. The Government's *additional* direct demand for goods and services, on the above assumption, may well be of the order of about Rs. 300 crores. If this demand is not to result in scarcity conditions in the market generally, output increases in the industrial, agricultural and other relevant sectors will have to be stepped up further on an emergency basis.

Let us now consider the other economic magnitude pertaining to fixed capital formation. The Central Government alone, including the departmental commercial undertakings like Railways and Posts and Telegraphs but excluding non-departmental commercial undertakings, will be creating fixed capital assets and inventories of the order of Rs. 580 crores (gross) in 1963-64, or Rs. 509 crores (*net*) after allowing for the renewals and replacements of buildings and other construction, as well as machinery and equipment. In addition to this, the Central Government will be providing financial assistance to the rest of the economy (that is, State Governments, non-departmental commercial undertakings like Hindustan steel and other Government companies, local authorities and others) to the tune of Rs. 868 crores for net capital formation, as against Rs. 749 crores in 1962-63 and Rs. 619 crores in 1961-62. Both items together will amount to Rs. 1,377 crores in the budget year, as compared with Rs. 1,159 crores in 1962-63 and Rs. 907 crores in 1961-62.

It is, indeed, remarkable that the Central Government will continue to maintain, more or less, the same level of net capital formation *in relation* to its total expenditure as in previous years: 46.4 per cent in 1963-64, as against 47.7 per cent in 1962-63 and 48.6 per cent in 1961-62. In effect, this means that the national emergency will not stand in the way of a high level of capital outlay on development even after allowing for some additional outlay (to the tune of Rs. 106 crores) on defence projects in the capital budget. That is as it should be, for to slow down economic development would be to undermine defence preparedness itself.

ASIAN ECONOMIC GROWTH

INDIA and the twenty-two other countries of the E.C.A.F.E. region together account for a little over one-fifth of the world total area, but their share in the aggregate population is almost three-eighths. This region, barring Japan and, perhaps, Communist China, continues to be economically backward, where the average real income is only one-tenth of the level in Western Europe and is growing at just two-thirds of the European rate. With the solitary exception of Japan, all the countries are faced with more or less identical problems: weakness of agriculture, vast idle industrial capacity for lack of raw materials, components or spare parts, shortage of power, and inadequate transport facilities. Although efforts have been made and continue to be made to solve these problems, the progress actually achieved is not quite encouraging, thanks to the persistent paucity of capital and technical know-how. The nineteenth session of the E.C.A.F.E., which concluded at Manila on Monday this week, did well, therefore, to call upon the industrially advanced countries, particularly Western Europe, to display a more positively forward-looking policy towards this region. For long have the financial orthodoxy and inertia made the majority of Western countries tend to view the development problems of the E.C.A.F.E. region very much in the same way as a business concern would view them in relation to its own desire for expansion, so that it is time they woke up to the grim realities of the situation.

The growth of Asian exports has been discouragingly slow, despite efforts by many countries to increase them. The world markets for raw materials, as the E.C.A.F.E. Secretariat aptly points out in its latest *Economic Survey* (1962), can hardly be expected to grow satisfactorily for the region, and the region's changing structure of exports towards manufactures has not been so substantial as to help achieve a rate of increase in total export earnings sufficient to support even a modest rate of economic growth. The export lag is, in every sense, formidably deterring the economic development of the region. How can the E.C.A.F.E. countries, then, finance the continuously rising imports of capital goods from the developed countries and discharge their huge loan repayment obligations unless the obstacles encountered by the exports of manufactured goods to the developing countries are removed? Here, unfortunately, the restrictions practised by the developed countries are much more severe than those on raw materials. This aspect has been impressively and cogently highlighted by the E.C.A.F.E. *Survey*.

Besides expansion of export opportunities for Asian countries in the developed nations through the removal of import and tariff curbs, the need for more liberal economic aid is imperative. In particular, the grant of soft, loans—loans with low interest and long period of maturity—wherever feasible, is desirable. So far as the Common Market countries are concerned, it is also important that their commitment to supply development funds to their overseas associates will not reduce their willingness to extend financial aid to the developing countries of the E.C.A.F.E. region.

No less urgent is the need for larger inflow of private long-term capital into the Asian countries. The E.C.A.F.E. *Survey* is inclined to feel that the rate of such inflow will continue to be disappointing in the near future, in view of the stagnation in the region's one-time lucrative export sector in which foreign funds used to be invested and in view of the availability of alternative profitable avenues for investment in the developed countries. The Governments of the developed countries must take all possible steps to encourage private investors to participate more actively in the economic development of the Asian countries. On their part, the Asian countries, too, should spare no effort to make the climate for foreign capital as congenial as possible. The Manila session of the E.C.A.F.E. would certainly have done a signal service if only it had urged the countries of the region to bear this point always in mind. Foreign private capital, as Mr. H. D. M. Barton, Chairman of the Hongkong and Shanghai Banking Corporation, very aptly remarks in his latest annual statement, has an advantage over official aid in that it automatically brings with it continuing managerial and technical skill and is inherently unwilling to waste money and effort on potentially unprofitable enterprises. "It cannot be too strongly emphasised," he observes, "that investment is dependent on confidence and that this is, in turn, dependent not merely on programmes and promises but on the efficiency of administration and the consistency of Government policy over a long period." Mr. Barton has, indeed, placed the finger on the right spot when he says that persistent neglect of the private sector has contributed to the slowing down of the rate of industrial growth in India, in common with most other Asian countries in recent years. Since the private sector has the capacity to deliver the goods to the community more speedily and economically than the public sector, it behoves the Governments of the Asian countries to stimulate both domestic and foreign private investment not merely by pursuing sound economic and fiscal policies but also by offering suitable incentives.

MARKET GOSSIP

Coal Industry's Pressing Need

ONE major problem which continues to cause concern to the coal industry pertains to prices. On this vexed question Mr. M. Sen Gupta, Chairman, Indian Mining Federation, has just had much to say at the Golden Jubilee Celebration session of the Federation held at Calcutta this week. The industry's price structure today is rather rigid and uneconomic. It is so because the Government is yet to give fuller effect to the report of the Price Revision Committee of 1957 which had recommended the constitution of a standing committee for an examination of changes in cost of production, taking all elements into consideration, as the basis for an economic price structure. The statutory coal prices, in spite of increases which have been mostly occasioned by additional labour costs, have generally failed to reflect the increases in other elements of cost. Of course, the more recent increase in coal prices does reflect the changes in some at least of the other cost elements. But its good effect has been virtually nullified by the conversion, with effect from June 1962, of Grade II coal prices to ceiling prices, in the teeth of opposition from the industry.

Apart from reflecting, in full, all the elements of cost increase from time to time, the coal price would also have to provide for higher rates of depreciation than the present ones, which were fixed at a time when mines were more labour-intensive, for a depletion allowance as in the case of the oil industry, and for a return adequate enough to make possible the re-investment of a substantial part of it for further growth. Unless the coal price policy is so shaped as to meet all these vital requirements of the industry, there will be no relief from the desperate situation in which it (the industry) finds itself today. This desperate situation pertains to the inability of the industry to take full and prompt advantage of the World Bank loan, by raising the counterpart rupee resources, for modernisation and expansion. According to Mr. K. D. Malaviya, Union Minister for Mines and Fuel, who addressed the Federation's session, although import licences valued at Rs. 14.8 crores under the World Bank loan have been issued up to February this year, firm orders against these licences have amounted to only Rs. 6.8 crores. This big gap in the utilisation of the loan has been attributed by the Minister himself to the difficulty experienced by the industry in raising the rupee resources. Of course, the Government has decided, in this connection, to stand guarantee for the colliery owners for obtaining loans from the financing institutions. Under this guarantee scheme, the incidence of any loss is to be shared in the proportion of 65 : 35 by the lending institutions and the Government, respectively.

While the industry may welcome this governmental assistance, it cannot help feeling that it would have been unnecessary if coal prices had been fixed at an adequately higher level—adequate for the creation of more internal resources for modernisation and expansion. It is, indeed, unfortunate that, although the industry's acute shortage of rupee finance has directly resulted from its uneconomic price structure, the Minister for Mines and Fuel has held out no hope of a general price increase. The current proposal for fixing new coal prices for different grades on the basis of energy content may have the virtue of simplicity, but it may not provide any substantial relief to the industry by way of additional money returns. If, at the same time, the West Bengal Government pursues its proposals to raise the royalty rate on old mining leases from 2.5 per cent of coal price to the uniform level of 5.0 per cent as in the case of new mining leases, the industry's pressing need for additional rupee resources will become even more pressing.

State-sponsored Investment Trust

Mr. Morarji Desai, Union Finance Minister, announced this week, in the course of his reply to the five-day debate on the Central Budget in the Lok Sabha, that the Government intended to set up an investment trust to encourage and help small investors belonging to the middle-income group to invest their savings in the equity capital of corporate enterprises. He pointed out that the basic idea of the investment trust was to afford the common man a share in the growing prosperity of the country resulting from rapid industrialisation. Although the Finance Minister did not give any details of the proposal, he indicated that it involved some taxation and other considerations and that a decision would be taken before long by the Reserve Bank.

Judging from the timing of the announcement and the stated objective, it would appear that the proposal to set up an investment trust is a partial answer to the widespread criticism that the Super Profits Tax would sap the springs of corporate savings and investment. By giving encouragement and providing facilities for investment through the proposed investment trust, the Finance Minister perhaps hopes to make up for any possible decline in investment and capital formation resulting from the Super Profits Tax.

If this is the objective of the investment trust, it is extremely doubtful whether it will be achieved. For one thing, the middle-income group, which might normally display interest in the proposal, will not be in a position to save anything substantial for such investment, in view of the currently proposed surcharges on personal income-tax and compulsory saving deposits and of the expected increase in their level of consumption expenditure consequent on the levy of additional excise duties on a wide range of commodities. For another, even assuming that the investment trust succeeds in attracting some small investors, it would hardly offset the adverse effects of the Super Profits Tax on the overall investment climate for both domestic and foreign capital.

It can, however, serve the purpose of promoting investment consciousness and wider share ownership to a limited extent if a well-thought-out investment trust plan is devised and implemented efficiently. Investment trusts, it may be noted here, are not new to this country, although they had a late start here, as compared with the U.K. or the U.S.A. The low volume of savings available for investment and the absence of adequate investment outlets account for the slow development of investment trusts in this country. Several investment trusts were formed in the thirties of this century, some of which are still going concerns. But, by and large, the role of investment trusts in the promotion of savings and the channelling of such savings into productive investments in this country has so far been a very limited one. Apart from the shortcomings of the investment policies followed by some of these investment trusts, one of the main factors responsible for the stagnation and stunted growth of investment trusts is the uncongenial fiscal policy pursued by the Government. It is to be hoped that the question of giving incentives to investment trusts, say, by way of tax concessions, will also be taken up for consideration now that the Government itself proposes to establish an investment trust.

Indo-Czech Trade in Chemicals

Czechoslovakia seems to be making a concerted bid to promote its trade with India. It was only last month that a Czech purchase mission visited this country to study the prospects of increasing mutual trade. Pending the submission of that team's report, efforts have been initiated by Czechoslovakia to conclude business in certain specific groups of products with Indian exporters and importers. An instance in point is the current visit to India of Dr. Z. Mojzisek, President and General Manager of Chemapol, the Czech foreign trade corporation for export and import of chemical and pharmaceutical products. Talking to Pressmen in Bombay last week, Dr. Mojzisek expressed the view that there is good scope for expanding trade in chemicals between India and

Your Savings Buy Nation's Needs

Czechoslovakia. India's exports of chemicals to Czechoslovakia have been only very small so far, consisting of a limited range of products such as shellac and crushed bones. Czechoslovakia is now studying the possibilities of buying from India such other chemicals as certain tanning materials, pharmaceutical raw materials, medicinal plants, gums, certain types of plastics, ilmenite and inorganic chemicals.

Czechoslovakia is also interested in stepping up sales of its own chemicals in India. In this connection, Dr. Mojzisek sought to remove any fear that the development of chemical industry in this country would limit the scope for imports. According to him, the more developed the general economy and the chemical industry are, the more striking would be the increase in consumption (and imports) of chemicals, be it in quantity or assortments. For instance, although the chemical industry in India has developed considerably during the last ten years, Czechoslovakia has continued to increase its sales of chemicals in this country. Between 1953 and 1962, the total volume of India's imports of Czech chemicals have gone up six-and-a-half times. There is, of course, the fact that the structure of these imports has changed considerably. So, for example, while India's purchases of Czech dyestuffs have declined, there has been a fivefold increase in imports of organic intermediates from that country. Some of the important chemicals and drugs now being bought by India from Czechoslovakia include sulphathiazol, sulphaguanidine, Vitamin C, glucose, glutamic acid and calcium benzoate. Dr. Mojzisek was of the opinion that Czechoslovakia could meet India's requirements of a large number of other chemicals as well, particularly antibiotics, seras and vaccines, laboratory chemicals, dental products, tar dyestuffs, auxiliary products for rubber industry and fertilisers and agro-chemicals.

Productivity in Steel Industry

Higher levels of output can be legitimately expected from the iron and steel industry in this country, because the bulk of its productive capacity is technologically up-to-date. This is one of the main conclusions of the report of an eight-member productivity team (Leader: Mr. R. D. Lalkaka) which recently returned to India after a two-month tour of the U.S.S.R. and Czechoslovakia. The team, which made a special study of the iron and steel industries in these countries, had also made a survey of the Indian industry prior to its departure. It has thus been in a position to compare the iron and steel industry in India with that in the other two countries and to point out the shortcomings, if any, of the industry in this country, as also to suggest suitable measures for its improvement.

The team has made a number of recommendations for improving productivity in the Indian industry. It has placed special emphasis on two aspects: (1) competent management to ensure adequate forward planning and speedy implementation of new techniques, and (2) better motivation of labour through well-conceived incentives, financial and otherwise. Forward planning, the team points out, presupposes that top management positions be filled by men who have had industrial experience, preferably in steel plants. In the U.S.S.R., according to it, not only the heads of individual steel plants but even the directors of top co-ordinating agencies are competent technical men who have worked their way upto these posts. In the team's opinion, the fact that non-technical men are placed in top management positions in the steel industry in India cannot but delay decision-making.

Giving its impressions of the iron and steel industry in the U.S.S.R., the team points out that the common notion that the Soviet industry is a vast, State-controlled bureaucracy which operates without competition and considerations of cost is wrong. There is, in fact, it avers, considerable competition between plants in matters of output, operating costs and new techniques. In addition, there is also constant striving to do better than capitalist countries.

One of the findings of the team is that labour productivity in the iron and steel industry in the U.S.S.R., and Czechoslovakia is only 55 to 60 per cent of that in the U.S., but it is rising by 5 per cent and 8 per cent a year, respectively. Even at the present level, labour productivity in these two countries is almost double that in India.

Despite the impressive economic growth achieved by the U.S.S.R., capital is still scarce in that country, according to the team. The existing plants and machinery are utilised to the maximum to get the most out of them, with the result that equipment-productivity and capital-output ratios in Russia are among the best in the world. It has taken note of the fact that a fourth of the total increase in steel output envisaged in the current Soviet plan is to be achieved only from better and more intensive utilisation of the existing equipment.

Productivity drive is an integral part of the campaign for higher output in the U.S.S.R. The team points out that under-pinning the productivity drive is a massive campaign for workers' self-improvement. Workers are trained through evening classes, in-plant training and correspondence courses. Effective suggestion schemes enable the whole working force to participate in the drive for new ideas.

The team has found that the regional dispersal of the steel industry is an accepted article of Soviet policy. It has recommended that there should be such dispersal of the industry in India too. But the difficulty here, in our opinion, is that India's coal resources are so heavily concentrated in a few areas of the country that dispersal of the iron and steel industry would not be quite practical. Of course, widely dispersed coastal steel plants near iron ore mining centres are possible, if they can be economically based on imported coal. The Government's current consideration of some proposals for coast-based steel plants may not, however, lead to hasty decisions, for the problem here is one of ensuring cheap, adequate and prompt supplies of coking coal from foreign countries. A substantial, new steel complex, as suggested by the team, can conceivably be created in South India on the basis of Bellary iron ore and Singareni coal. Otherwise, wider dispersal of the industry does not seem to be a feasible proposition except on the basis of imported coal, in view of the relatively small reserves of high-quality coking coal within the country.

Stabilising Hard Fibre Prices

There have been hectic fluctuations in the international prices of hard fibres, mainly sisal, abaca and henequen, in recent years. It may be recalled that, during the first ten months of last year, the price of sisal, for instance, had suffered a setback under the pressure of large supplies from Tanganyika and Brazil. But by the end of last year, this trend was reversed, with prices soaring to new high levels. Sisal is now quoted in London at £148 per ton (B.E.A. No. 1, c.i.f. basis), as against only £97 a year ago, which shows an increase of as much as 50 per cent over a year. It was to examine the scope for removing such wide fluctuations in the prices of hard fibres that the F.A.O. called a meeting of both producers and consumers, including India, of hard fibres at Rome a few days ago. Dr. Norman Wright, Deputy Director General of the F.A.O., put the problems of hard fibres in proper perspective when he stressed that they faced the spectre of possible overproduction, year-to-year price fluctuations and increasing competition from synthetic fibres. He was particularly concerned over the possibility of wide price fluctuations in hard fibres, which would adversely affect the incomes and export earnings of developing countries like Tanganyika, Brazil, Philippines, Kenya, Angola and Mozambique.

Although the F.A.O. meeting conceded the need for eliminating wide short-term price fluctuations, it did not consider it feasible at present either to implement measures of control on production and exports or to regulate the market by buffer stock schemes. There was a proposal to set up a Study Group under the auspices of the F.A.O. similar to that on cocoa, but its consideration was postponed, as the consensus of opinion was that it was premature to do so. The meeting also considered it impracticable to establish buffer stocks, as their capital cost would be

TREND OF SHARES

WEAKNESS REAPPEARS

(From Our Own Correspondent)

BOMBAY, 21*st March*

WEAKNESS reappeared on the stock exchanges this week, as the Union Finance Minister, Mr. Morarji Desai, indicated possibility of only minor concessions in Super Profits Tax in his reply on Saturday the 16th inst. to the five-day debate on general budget in Lok Sabha. On expectations of a reasonable relief in S.P.T., values had turned steadier last week after the post-budget fall. But as it came to be known that the expectations were rather high, prices dropped again on tired liquidation and absence of support, though yesterday and the day before hopes of Government reassessing the impact of S.P.T. developed from the talks held by some leading industrialists first with the Prime Minister and later with the Finance Minister. The week closed with a note of total diffidence. Losses predominated, with some of the leading counters unofficially placed well below their minimum levels fixed by the market authorities.

In his reply to the Lok Sabha debate, Mr. Morarji Desai clearly hinted that whatever concessions he might propose in S.P.T. would not be substantial. He did not want the sources of revenue to be choked, but neither did he want profits to be "unrestricted." He proposed, however, to announce the likely concessions only after a full examination of the various suggestions received by him. He said that the impact of the Tax on new companies and the difficulties that would arise because of the Tax in paying 9 per cent dividend on preference shares were being considered. If the Government was convinced that the Tax would inhibit production, it would, he stated, provide the necessary remedies. He ruled out the suggestion for raising the corporation tax and dropping S.P.T., as that would hit more severely companies making lower profits.

A team of prominent industrialists led by Mr. J. R. D. Tata discussed the Union Budget, especially S.P.T., with Prime Minister Nehru on Monday the 18th inst. for 20 minutes, when it opposed S.P.T. as a wrong and economically unsound concept which went contrary to the accepted theory and practice of company taxation all over the world. It also pointed out that taxation at a progressive rate should not be applied to corporate profits, for a corporation comprised both poor and rich shareholders, while steep taxation could be levied only on the rich. From the Finance Minister, whom it met on Tuesday the 19th inst., the team is understood to have secured a promise to give serious consideration to the points raised by it on the basis of a memorandum submitted to him earlier.

At its meeting on Tuesday the 19th inst., the Governing Board of the Bombay Stock Exchange decided to lift minimum prices in respect of all non-cleared shares and all but ten leading counters in the cleared list. Compulsory *badli* is confined now only to the ten market leaders, the minimum and making-up prices for them being maintained at existing levels, if the ruling prices are above these levels. In cases where transactions are not possible at rates above the minimum levels, the prices will be reduced by 3 per cent. Fresh purchases in cleared shares will be subject to a ceiling of Rs. 1 lakh in any one scrip and of Rs. 3 lakhs in all scrips collectively on open business, with a margin of 5 per cent on business exceeding Rs. 75,000 in any one scrip.

Minimum prices for textiles, engineering, paper and miscellaneous shares in the cash list were removed at Calcutta from today. At Ahmedabad, too, minimum prices were lifted from today for all shares, except five cleared shares for which compulsory *badli* would also be maintained.

The decisions of the market authorities to lift minimum prices during the present depression may appear strange. The underlying motive, however, seems to be to permit values to seek their own levels and spotlight the real effect of S.P.T. on stock market. It may be noted that it is because of S.P.T. that Union Carbide has cut its dividend for 1962 to 12.5 per cent, including interim of 7.5 per cent, on the 10-rupee shares from 18 per cent for the previous year and that the Board meeting of Braithwaite and Co. (India) Ltd. for considering the accounts and declaring the dividend for 1962 was postponed this week. These are two cases of big companies affected by S.P.T. Some other small companies have already announced that they would reconsider their dividends declared before the budget.

* * * *

Market leaders were sold down on Dalal Street, though Bombay Burmah and T.E.L.Co. evoked support at setbacks and closed unchanged over the week at Rs. 625 and Rs. 280, respectively. Standard lost heavily from Rs. 790 to Rs. 742 and so did Bombay Dyeing from Rs. 63.80 to Rs. 61.10. Indian Dyestuff was down by 15 points to Rs. 387.50 and Voltas by six points to Rs. 251. Tata Steel Ordinary closed one point lower at Rs. 115.50 and Indian Iron 22 nP lower at Rs. 19.70. Hindustan Motors dropped 36 nP to Rs. 16.28. Among other forward shares, the much boosted B.B. Petrol slumped by Re. 1.44 to Rs. 2.76 on reports that the British Treasury had won its appeal at the Court of Session in Edinburgh against action for claims of more than £60 million by the four subsidiaries of Burmah Oil Company as damages caused by the Japanese forces in 1942. In the cash section, Colour Chem declined by Rs. 26.25 to Rs. 312.50, Permanent Magnets by Rs. 15 to Rs. 187.50 and Chemicoat by Rs. 9.50 to Rs. 156.

* * * *

At Calcutta, among forward shares, Birla Jute suffered a loss of Re. 1.37 to Rs. 25.25, Orient Paper shed Re. 1.25 to Rs. 31.25 and Dunlop Rubber 50 nP to Rs. 32. Others showed small losses. In the cash section, Bengal Coal fell by 15 points to Rs. 267, with Amalgamated declining by Rs. 3.81 to Rs. 21 and North Beerbhoom by Re. 1.75 to Rs. 17.62. Among Jutes, Bally suffered a heavy setback from Rs. 277 to Rs. 256 and so did Fort Gloster from Rs. 399 to Rs. 382. Dalmia Iron reacted by Re. 1.94 to Rs. 11.06 and Philips Carbon moved down from Rs. 24 to Rs. 20.12. Alkali Chemical showed a loss of 56 nP at Rs. 29.44 and India Steamship of 62 nP at Rs. 5.94.

* * * *

With the minimum prices maintained, values showed small or no changes on the Madras Stock Exchange. Thus, Aluminium Industries moved down from Rs. 21 to Rs. 20.37, Mysore Sugar from Rs. 51.40 to Rs. 51.30 and Travancore Chemicals from Rs. 21.75 to Rs. 20.75, while Textools recovered from Rs. 153 to Rs. 157 and Madras Rubber from Rs. 18.87 to Rs. 19.12.

STOCK EXCHANGES' MEMORANDUM ON S.P.T.

A joint memorandum submitted by the eight recognised stock exchanges in the country to the Union Finance Minister, Mr. Morarji Desai, on the subject of Super Profits Tax, points out that the tax will have adverse effect on the stock market which in turn will hit hard the investing public. Indeed, it has warned that, since the tax will materially reduce the profit-earning and dividend-paying capacity of different companies, the structure of stock exchange prices will be distorted, and the continued and unequal fall in prices, differing from industry to industry and company to company, may deepen the present depression in the market. In order to mitigate the defects in the tax, it has sought the following modifications in it:

Capital employed should include all shareholders' free reserves (e.g., development rebate reserves) as well as debenture and long-term loan capital and bank borrowings;

standard return on capital employed should be increased from 6 to 10 per cent with power to prescribed a higher percentage where necessary;

option should be given to companies to calculate standard deduction either with reference to a percentage return on capital employed, or in comparison with "normal profits" earned in a base-period, say, the last year or the average of the last two or three years;

profit chargeable to Super Profits Tax should be reduced by preference dividend in excess of the amount of dividend calculated at the standard rate of return on capital employed;

the Super Profits Tax rates should be substantially reduced to less than 20 to 25 per cent;

provision should be made for carry-forward and carry-backward of losses and deficiency of profits and for set-off and grant of refund;

exemption should be given to industries where there is price regulation or statutory control, and also to special industries like banking;

exemption should also be given to companies 'in which the public are substantially interested' within the meaning of Section 2(18) of the Income-tax Act, failing which, as recommended by the Income-tax Investigation Commission (1949), provision should be made for refund or credit of Super Profits Tax to shareholders of such companies; and

tax holiday should be given to all new companies.

BANGALORE STOCK EXCHANGE INAUGURATED

"Stock exchanges should attract the middle-class investors and not shake their confidence." Thus said Mr. S. Nijalingappa, Chief Minister of Mysore, at Bangalore on Sunday the 17th inst., while inaugurating the Bangalore Stock Exchange at the premises of the Mysore Chamber of Commerce. The function of a stock exchange, he observed, was to mobilise savings into industrial development. The State's Industries Minister, Mr. K. Mallappa, who presided over the function, stated that 17 textile mills and six other industrial units would be started soon in Mysore. Earlier, Mr. M. L. Gopala Shetty, President of the Bangalore Stock Exchange, appealed to all companies registered in Mysore as well as companies registered in other States but having shareholders in Mysore to lend their co-operation by getting their shares listed on the Exchange as soon as possible. He was optimistic that the Exchange would usher in a new era of industrial expansion in the State. Mr. P. S. Nadkarni, former Director of the Stock Exchange Division in the Union Ministry of Finance, asked the State Government to permit its industries to participate in the Exchange.

The Bangalore Stock Exchange was granted recognition by the Government on 16th February 1963 for an initial period of five years for trading on spot delivery basis, with delivery and payment to be made within 14 days of the contract. The recognition, which is under Section 13 of the Securities Contracts (Regulation) Act, 1956, involves doubling the membership security deposit to Rs. 5,000. There are now eight stock exchanges in the country, three of them working exclusively on spot delivery basis.

a helping hand...

As far back as 1921, Tata Steel established a Technical Institute in Jamshedpur to develop a cadre of fully qualified technical personnel to take up positions of responsibility in India's first steel works. Subsequently, the Company instituted training courses for skilled artisans and other categories of employees.

During the last four years, the Jamshedpur Technical Institute has planned and provided special training programmes to meet the urgent needs of Hindustan Steel. Over 1,800 technicians from the Government steel plants at Rourkela, Bhilai and Durgapur have availed themselves of the accumulated training experience and facilities placed at their disposal by Jamshedpur, where industry is not merely a source of livelihood but a way of life.

Postal Peaks

IT is an established custom to complain of increases in postcard rates but on this occasion I must confess that my sympathies incline towards Mr. Desai, even though I do not accept his calculation that it costs 8 naya paise to carry a postcard. Such an exact calculation of the separate cost for postcards lends itself to suspicion; overhead charges for transport and delivery cannot be distributed fairly according to numbers, weight or bulk of postcards and there was undoubtedly some arbitrariness in the calculation. The new rate of six naya paise for a postcard cannot be considered a substantial additional burden on those who mainly use it for communication. But 5 nP was a convenient monetary unit which, besides facilitating transactions in small change, enabled the operation of a slot machine for selling postcards, which created some mild enthusiasm when installed in the new premises of the New Delhi Postal Directorate. The abolition of the local postcard rate is also a matter for regret (if not for complaint) as social and educational bodies, libraries and such institutions saved costs on this facility. I am less sorry over the higher bookpost rate of 10 nP, which will affect wedding and other invitations of a snobbish character; the habit of sending greeting cards on every possible occasion has grown, is growing and can be taxed, if not checked.

The volume of postal traffic has increased enormously in recent years. Postal articles handled every year have risen to 10 per head of the population. Money orders and registered articles, in spite of apparently heavy charges, totalled 124 and 80 million, respectively, in 1961-62 and 40 million telegrams were transmitted during that year. Telephones, the most expensive in respect of outlay but still the most profitable among the P. & T. departments, have crossed the half-million mark. All these make the Postal Department still the most endearing of our public-sector enterprises and I am not inclined to suspect the veracity of the statement in the annual report that this expansion was "achieved at a comparatively small addition to the staff and expenditure of the Department." I do not, however, overlook the shortcomings, when my telegrams or express delivery mail reach the addressee (especially when he happens to be the impatient and, possibly also, annoyed editor) long after ordinary letters. Human nature being what it is, I have ceased to look for what seems an increasingly impossible improvement in standard of speed. Perhaps the Department in an honest mood will withdraw altogether or restrict the express delivery system; and I do not know whether it still persists in the deception of sending telegrams by airmail from certain centres. These are blots on its escutcheon and, if I am prepared to overlook them, it is due in no small measure to the indefatigable interest the P. & T. has shown in issuing delightful commemorative stamps—there were sixteen of them in 1961-62—which have adorned many a missive and pleased discerning youthful eye of eager philatelists, not only in India. Post office paper and ink have been subjects of much sarcasm in my younger days but these special stamps have brought out the other, more æsthetic, aspect of the postal system, just as telephone facilities—when they really work to help a caller get the right number or to wake him up at the proper time—are highly prized. Though post offices were slightly in the red in a financial sense during 1960-61, net P. & T. returns are now satisfactory; having made up for higher costs after the Pay Commission award, their finances seem in good shape, even if judged by purely commercial standards.

* * * *

I.A.C.'s Junk Trade

The Indian Airlines Corporation has, it seems, managed to dispose of some of its junk —or what it had condemned as such but was unable to get off its hands for several years. Eight Herons were bought in 1955 for Rs. 60 lakhs but within two years they were found to be too uneconomical to operate. One was sold to Hindustan Steel for Rs. 5.2 lakhs and the remaining seven, with a depreciated value of Rs. 22 lakhs, have now fetched about Rs. 14 lakhs, six years after they have been grounded. Not all have accepted the theory of the Herons being uneconomic as they are still operated for running short-distance shuttle services in some foreign countries. Our fleet of herons was practically new and some doubt whether they were so uneconomical as to be permanently grounded when there were seasonal shortages of services on many routes; there were 12 other Vikings in the same category which have been now sold for the nominal sum of Rs. 3 lakhs. The Public Accounts Committee recently gave the book value of stores relating to these Vikings and Herons as Rs. 67.58 lakhs. Whether these spare parts and accessories have also been included in the bargain is not known. I.A.C. had built up other kinds of redundant stores for Rs. 50 lakhs, much of which had been acquired by private airlines before nationalisation. The Public Accounts Committee has for long urged the Corporation to be more businesslike, but it was not only the problem of "obsolescence which got out of I.A.C.'s control. It is difficult for airlines to show profits even under the most favourable conditions for efficiency and I.A.C.'s operational costs have been high due to poor control of workloads of staff, even after their remuneration had been revised upwards and there was greater need to secure higher productivity.

Though three of the Herons will be shipped to Australia, the rest will remain in this country. So there is no net loss to the country; indeed there may even be some gain because the aircraft will be serviceable, give opportunity for some of the unemployed pilots and perhaps also provide evidence of how right or wrong I.A.C. was in writing them off as uneconomical.

* * * *

Salt Losing Its Savour?

Few are happy with a system in which Government departments increasingly trust to committees more than their common sense, but at least it makes them tick and turn their attention to problems which may not have a chance otherwise. Committees—described variously as sub-committees, expert panels, study groups, technical teams and so on—generally manage to do what diligent departmental officials should have done of their own accord if they had the will; in addition, they also save the officials the trouble of making up their mind on vexed issues. But when committees themselves have to be goaded into activity, it becomes pretty awkward for every one concerned. The Estimates Committee of the Lok Sabha had once asked the Education Ministry to appoint a small expert committee to evaluate the working of Janata colleges, which seemed to be unable to achieve the purposes for which they were originally started by the Government. Accordingly the Government appointed a committee in March 1960, with four members (of whom three were in New Delhi) for inquiring into the actual causes of the failure of Janata colleges and to suggest ways of serving their main objectives. For sixteen months thereafter nothing happened and then it met only once in July 1961. Again, nothing occurred thereafter, and the Estimates Committee has been so irked by such passivity that it has expressed its dissatisfaction with the progress. Such inertia is indeed disquieting; when departmental morale or interest flags, it can be reinforced by committees, but if the salt loses its savour, whereof shall it be salted? One hopes that this example will not spread and that committees will continue to excavate and process the raw materials for policy making—which departments may later refine further or reject at their will and pleasure. Perhaps the subject of Janata colleges was an embarrassing theme which the committee felt it would be unwise either to commend or condemn; there are many such products of misplaced enthusiasm in our society whose evaluation presents difficulties. Janata is a charmed word which evokes associations with equality and the Welfare State; to disapprove may look churlish but to praise will savour of opportunism. Thus may the socialist pattern be saved from a gratuitous dilemma!

MORE PIPES

to meet the nation's needs

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

BOMBAY CHAMBER ON S.P.T.

THE annual general meeting of the Bombay Chamber of Commerce and Industry, held at Bombay on the 15th instant, was brief and businesslike. Its highlight was the presidential speech of Mr. F. E. H. Goddard (of the Chartered Bank). As an experienced banker, Mr. Goddard was severely practical and realistic in his approach to the problems posed by the twin imperatives of defence and development and to the issues thrown up by the Central Government's Budget for 1963-64 and its proposals for additional taxation. He was all in favour of "judicious" taxation as a better alternative to public donations to the National Defence Fund. But he could not, at the same time, bring himself to support the massive and "killing" additional taxation proposed by the Finance Minister. This tax effort was ill-timed, for, in his view, "had a sizable burden of additional taxation been imposed immediately after the Chinese aggression, public opinion would have been better prepared to shoulder it." Still he frankly realised that a large measure of the cost must necessarily fall on the business community.

What, on the other hand, had caused grave disquiet to the 550 members of the Chamber was the method of financing some of that cost. Mr. Goddard rightly singled out, in this connection, the proposed Super Profits Tax. His critical analysis of its implications, as also his constructive alternative suggestions, would bear quoting *in extenso*:

"Its first effect is to tax most heavily and progressively the efficient producers.... This is a wholly new taxation measure and disagreements between tax collectors and taxpayers will inevitably arise, occasioning additional work and much vexation and delay. It should be remembered that because of genuine disagreement between tax collectors and taxpayers in respect of the Business Profits Tax, which was only in force from 1946 to 1949, there is still litigation pending in our courts on the subject fourteen years later. The Corporation tax is ready to hand and its implications are already well understood by all concerned. It is already regarded as onerous but, to meet our specific immediate problems, it could be increased by a special emergency surcharge of 6¼ per cent, which would produce the desired money with the minimum of administrative trouble and the maximum of speed. Apart from the administrative problems and the reduction in business morale caused by the Super Profits Tax, there is also its effect on further development in the private sector. As at present drafted, the Bill does not even mention that it is imposed for the emergency only and, in the absence of amendment, must give the impression that it is intended as a permanent levy on efficient producers. It should be firmly linked with the emergency, even to the date from which the tax becomes payable. Even before the emergency, companies of the highest class were unable to raise preference share capital at less than around 9.3 per cent and subscribers to equity capital in future will know that any profits above 6 per cent will largely disappear in taxes. As a result, it will not be possible to raise any fresh capital locally. Just as bad, the potential foreign collaborators whom we welcome and whose interest our Government has done so much to stimulate by such organisations as the Indian Investment Centre, will certainly find that the return on investment will be far more attractive in other parts of the world. So far as the State of Maharashtra is concerned, I know that the future of investment schemes in the private sector involving well over Rs. 50 crores are quite definitely imperilled, and those concerned are marking time until matters are more clearly resolved. Those whose projects are half completed are, I fear, regretting their precipitation.

"Another problem is that existing companies will not have any funds left to them to carry out schemes of expansion which they have already planned or which they have in mind for the future, since their cash resources will all be taken by payment of this proposed Super Profits Tax. Companies now coming into production will find, if they are efficient, that the income which they had planned to use to repay loans under deferred payment terms will no longer be available in view of the crippling incidence of the new tax, and Government will have forced them to default."

These comments made by a banker of Mr. Goddard's eminence and experience are so compelling in their logic that the authorities cannot but consider them most carefully. In fact, the Governor of Bombay, Mrs. Vijayalakshmi Pandit, who was the chief guest at the Chamber's meeting, acknowledged that the question deserved further consideration, though she added cautiously that the result, if any, of such consideration was in the laps of the gods. Well, one may add as a postscript, that it is now in the lap of the Finance Minister who is giving the paradoxical impression of being both firm and flexible.

IMPETUS TO AGRICULTURE

An agonising re-appraisal of agricultural programmes seems to be under way, at least at the top echelons of the Planning Commission and the Union Ministry of Food and Agriculture. Though belated, this is a move in the right direction, for it reflects their desire to lift agricultural programmes from the rut of stagnation into which they have fallen during the last two or three years. Even at the risk of repetition, it is necessary to stress that much of the responsibility for the slow growth of agricultural production lies with the State Governments. It is only by toning up the State machinery for the implementation of agricultural plans that the situation can be improved. In this context, the news that three high-powered Central teams, representing the Planning Commission and the Union Food and Agricultural Ministry, have been asked to visit various State capitals and selected districts next month is most heartening. The teams have been instructed to make sure that "all essential technical and administrative measures needed to step up agricultural production are adequately provided for in the current year's (1963-64) State plans and that these are fully and effectively implemented." While the function assigned to the teams is quite comprehensive and admittedly relevant, it must be recognised that they cannot tackle this immense job merely by whirlwind tours alone. The Commission will, therefore, do well to create adequate machinery at the Centre to follow up the activities of the State Governments and to assess whether they are in consonance with the prescriptions laid down by the respective Central teams. It is, however, not possible to hazard any judgment on the effectiveness of the Central teams now, as their impact, if any, will be felt only during the 1963-64 crop year (beginning next June) which coincides roughly with the third year of the third Plan.

During the first two years of the third Plan (1961-62 and 1962-63), agricultural output has lagged far behind targets. According to the latest annual report of the Union Ministry of Food and Agriculture, output of foodgrains actually fell to 78.6 million tons in 1961-62, from 79.7 million tons in 1960-61. Among commercial crops, jute put on a good performance in 1961-62. The output of groundnuts was marginally higher. But cotton suffered a distinct setback. As to the crop estimates for 1962-63, the Report claims that the outlook for agricultural production is "satisfactory," despite bad weather conditions. As we have pointed out several times in the past, no sizable increase in output can be expected this year. Foodgrains output may be around 80 million tons at best. This means that the annual foodgrains output will have to be raised by 6-7 million tons in the remaining three years of the Plan (ending 1965-66), in order to fulfil the target. The gap between target and achievement is equally wide in respect of most of the commercial crops as well, except perhaps jute and tobacco.

The generally slow growth in agricultural production has led to a steady increase in India's dependence on imports both for food and raw materials, besides reducing the prospect for exports. Imports of foodgrains, for instance, amounted to Rs. 200 crores during the first eighteen months of the third Plan and those of raw cotton Rs. 100 crores. These are certainly disconcerting trends, for which a solution can be found only by increasing agricultural production. This is a matter of concern as much to industry as to Government. It is, therefore, only in the fitness of things that the Federation of Indian Chambers of Commerce and Industry should have undertaken a special study of the agricultural problems. A sub-committee of the Federation (Chairman: Mr. S. S. Kanoria) which undertook the study, has now brought together its findings in a small report, entitled *Development of Agriculture*. Needless to say that one cannot be too original these days on matters pertaining to agriculture, for they have been discussed threadbare several times before. Still, the Sub-committee, while traversing the familiar ground, has been able to indicate in which manner purposive action can be initiated to fortify and develop the agricultural potential. The Committee has made out a strong case for extending the scope of intensive farming through the supply of improved seeds, fertilisers, agricultural implements, irrigation facilities and credit, in a more co-ordinated manner. A noteworthy suggestion made by the Sub-committee in this connection is that the Government of India should establish an Agricultural Machinery Marketing Corporation for the purchase and supply to agriculturists of farm machinery and implements like tractors on hire-purchase or credit terms. The Sub-committee has been critical of the imposition of ceiling on land holdings as it deprives the farmers of the economies of scale. It has urged the Government to permit joint stock companies, at least on an experimental basis, to undertake farming, both of foodgrains and commercial crops.

These are, indeed, practical suggestions which have a close bearing on increasing agricultural productivity. The Sub-committee has also done well to stress the need for administrative reforms, for which the Malagarh Committee had made several recommendations as early as in 1958. It is, however, amateurish to suggest, as has been done by the Sub-committee, that, both at the Centre and the States, all matters pertaining to food and agriculture, irrigation and power and community development should be looked after by one Ministry only. Such a remedy will be worse than the disease. For, if all these matters are left to one Ministry alone, there will only be excessive bureaucratic centralisation and paralysis of action in respect of a sector which accounts for half of the aggregate national income. What is required, on the other hand, is better co-ordination of the activities and action programmes of the various Ministries concerned.

INDUSTRIAL GROWTH

The rate of growth of industrial production, which had been of the order of 10-11 per cent per annum in the last two years of the second Plan, slowed down to 7-8 per cent during the first year of the third Plan (1961-62). There is as yet no indication of any marked improvement in this trend and the rate of increase in output is likely to remain almost unchanged at this level in 1962-63. The index of industrial production (base: 1956=100), according to the latest annual report of the Union Ministry of Commerce and Industry, touched an average of 149.8 during January-September 1962, which means an increase of about 8 per cent, as compared with the corresponding period of the previous year. But for the strict control on private imports, the none-too-satisfactory trends in agricultural production and the growing competition in world markets for traditional exports like cotton textiles, aggregate industrial output would have gone up at a much higher rate. One of the important reasons for the slow increase in the general index is the stagnation in the production of cotton textiles, which has a high weightage in it. It is estimated that the output of cotton cloth in 1962 was lower at 4,168 million metres, as compared with 4,701 million metres in 1961. The production of cotton yarn remained unchanged at the previous years' level of about 860 million kgs. This stagnation is not surprising in the least, viewed against the background of the decline in overseas demand for cotton textiles and the shortage of raw cotton.

The decline in the output of cotton textiles was made good, to some extent, by the marked rise in the output of other manufactures, such as jute goods, woollen fabrics, as also steel, aluminium, machine tools, railway wagons, electric motors, power transformers, cables and wires, soda ash, calcium carbide, viscose staple fibre, H.T. and L.T. insulators and coated abrasives. The improvement in jute textiles, which worked to full capacity in 1962, following a record jute crop in 1961-62, was a particularly marked feature of industrial production last year. Besides, substantial additions in capacity were

made last year in a number of industries, such as tyres and tubes, aluminium, caustic soda and cables and wires, as a result of which their output also tended to expand. Production of a wide range of new products was also commenced in 1962, important among them being formaldehyde, heavy water, tyre cord yarn, polyester resins, transistors and diodes, permanent magnets, microscope slides and punch-card sorters.

An important point to note here is that the number of licences granted under the Industries (Development and Regulation) Act fell to 1,058 in 1962, from 1,353 in 1961. This fall may be partly attributed to the foreign exchange shortage and partly to the fact that, for a number of industries, third Plan targets had been covered by licences already issued. Licensing of industries at any rate is only the first step. More emphasis deserves to be given to the actual implementation of licensed projects. This is to a large extent dependent upon how far the industrialists are able to overcome the various subsequent procedural delays caused by the Government. Defective and unhelpful fiscal policies are also bound to affect adversely the trend in the implementation of projected new schemes.

INCENTIVES TO SUGAR INDUSTRY

The Government of India is considering a scheme to provide incentives to sugar mills in the next season commencing on 1st November 1963. This was disclosed in the Lok Sabha the other day by Mr. S. K. Patil, Union Minister for Food and Agriculture. The scheme, Mr. Patil said, contemplated that the States should spend a portion of the sugarcane cess for creating conditions to increase sugar production and the Centre, on its part, would give a matching grant. The U.P. Government, we are told, has already accepted the scheme and the matter is being discussed with the Bihar Government. Although Mr. Patil did not give any details of the scheme, it is apparent that the incentives for higher sugar output will be granted by the State Governments and not by the Centre unlike during the seasons 1959-60 and 1960-61 when it was the Centre that had given the incentive in the form of 50 per cent rebate in excise duty on the sugar produced above the average of the two preceding seasons.

The decision to provide incentives to sugar mills to produce more will be widely welcomed in view of the tight supply position that may otherwise develop in the coming season. It will be recalled that, in view of the marked setback in sugar production in the current season (about 2.1 million tons, as against the 2.7 million tons produced in 1961-62), on the one hand, and larger domestic consumption (2.5 million tons, as against 2.4 million tons) and higher export commitments (450,000 tons, as against 330,000 tons), on the other, the season is expected to end (on 31st October 1963) with a carryover stock of no more than 160,000 tons which represents just three weeks' consumption. Whatever be the nature of incentives, the level of sugar output will depend largely on the supply of cane to the factories which, in turn, will be influenced by the size of the crop as such and the prices of white sugar substitutes, that is, *gur* and *khandsari*. In the current season, the cane crop has suffered a distinct setback, which, together with the high prices commanded by *gur* and *khandsari*, has resulted in large-scale diversion of cane supply to the manufacture of these brown sugars. It is gratifying to be assured by Mr. Patil that he would "go all out" to help U.P. and other States in order to grow more cane next year. But the mere increase in cane yield may not be of much avail, unless Mr. Patil succeeds in persuading the State Governments, especially U.P. and Bihar, to ban *gur-khandsari* making in and around factory areas and to check the speculative rise in their prices. Otherwise, in the next season, too, the scramble for the available supplies of cane from the decentralised sector will continue and the sugar mills will again find it difficult to maintain their crushing operations at the optimum level.

The need to ensure a higher level of sugar production is especially urgent in the context of rising domestic consumption and the necessity to earn foreign exchange through exports. World sugar prices have registered an appreciable improvement in recent months and indications are that the trend will persist in future also. Sugar in London is now standing at about Rs. 720 (£54) per ton, as against Rs. 320 (£24) a year before. Thanks to this marked rise in prices, the loss on account of subsidy for sugar exported from India has declined considerably. The gap between Indian export price (after the full remission of excise duty of Rs. 291.25 and the cane cess of Rs. 51.72) and the world price is now only Rs. 10, as against Rs. 410 a year before. The actual loss on the estimated exports of 450,000 metric tons in 1963 is expected to be much less than the loss of Rs. 14.44 crores on exports aggregating 373,000 tons in 1962—or an average of Rs. 387 per ton—which was itself considerably lower than the loss of Rs. 13.26 crores on exports amounting to 266,000 tons in 1961 (an average loss of Rs. 495 per ton). The export commitments for about 450,000 tons made in respect of 1963 comprise 250,000 tons of raw sugar (to Japan, U.S.A., Chile, U.K., etc.) and 200,000 tons of refined sugar (100,000 tons to Canada, 70,000 tons to Malaya and 30,000 tons to other destinations). Since the export sale price of sugar is based on the ruling London price, India can certainly take advantage of the high prices ruling in world markets.

SOME LABOUR PROBLEMS

In his speech at the forty-third annual general meeting of the Employers' Federation of Southern India, Mr. N. G. Bowen, Chairman of the Federation, dealt at length with some of the major issues of the country's labour policy. The bonus question, which is at present under study by the Bonus Commission (Chairman: Mr. M. R. Meher), naturally received the pride of place in the speech as it was by far the most important single issue affecting employers and employees, in particular, and the country, in general. Mr. Bowen, of course, did not anticipate the findings or the recommendations of the Commission but he did refer to the nature of the problem, the magnitude of the Commission's task and the need for a rational approach to bonus, as also to the larger question of wage policy. If, as was conceded by representatives of both employers and employees, bonus was a source of friction between workers and management, why not abolish it, whatever the inconveniences and pains involved, asked Mr. Bowen? He expressed the hope that the Commission would suggest a solution acceptable to all concerned.

The Chairman of the Federation emphasised the close relationship between wages, productivity and cost. He pointed out that the inextricable link between wages and productivity, which was freely acknowledged by industrially advanced countries, was bound to assume increasing importance in an export-oriented economy like that of India. At present, as Mr. Bowen pointed out, the cost of most of India's exportable products is substantially higher than that of its competitors, even after allowing for the various export incentives offered by the Government. This disparity in costs and therefore in prices, is due to a number of factors such as the high cost of raw materials, interest charges, insurance, freight and management costs. Contrary to the belief in some quarters, the Indian economy, according to Mr. Bowen, is not a cheap wage-cost economy. May be, individual earnings of workers in this country compare less favourably with those in the more advanced countries. Even managerial emoluments in India for that matter, in his estimation, are correspondingly lower. But in the sphere of practical economics, it is the wage cost per unit of production that is important and, judged by this standard, India is actually a high-cost economy. Cost or price and quality, as Mr. Bowen emphasised, are the two important factors determining success in the export field. Maintenance and improvement in quality are the responsibility of the management. But management, in his opinion, has little or no control over the other aspect, namely, cost because it depends on many elements like wages and cost of raw materials over which it has no control. Unless a rational wage policy is followed, India cannot compete in the world market, according to Mr. Bowen. By a rational wage policy Mr. Bowen seems to mean a policy that takes full account of the fact that, in the ultimate analysis, wages cannot outrun the industry's capacity to pay and that they cannot be out of tune with productivity.

A pertinent point to which the Chairman of the Federation referred is the question of implementation of the industrial truce resolution unanimously adopted by representatives of employers and workers in November last in the wake of the Chinese aggression. Complaints about violation of the resolution by both employers and workers have been not infrequently heard of late. No less a person than Mr. G. L. Nanda, Union Minister for Labour, has expressed concern over the deterioration in the implementation of the resolution and a tripartite conference has been called to discuss the matter. Mr. Bowen in his speech vigorously defended employers from the charge of violation of the resolution and asserted that employers had been discharging their obligations loyally and faithfully to the utmost extent possible. But he admitted that there was a danger that the sense of urgency created by the Chinese aggression would disappear now that the emotional stimulus of actual fighting was fading out.

What is needed to prevent such an eventuality is that the Government itself should set an example for others to follow. There should be no slackening of effort on the part of the Government to mobilise the nation's resources to meet the twin challenge of defence and development. No amount of propaganda or impassioned speeches, as Mr. Bowen rightly pointed out, can bring a sense of urgency to the people if they find no such sense in the Government itself.

CIBA RESEARCH CENTRE

A new chapter in the development of industrial and scientific research in India has opened, with the inauguration of the CIBA Research Centre at Goregaon, near Bombay, by Prime Minister Nehru this week. The Centre, put up at a cost of Rs. 2.5 crores, is the first institute of its kind for fundamental chemical and biological research to be established in the private sector in India, and, perhaps, in the whole of South Asia. In a plot of 70 acres adjoining the Western Express Highway and the Aarey Milk Colony, there stands today a network of 28 modern buildings, housing as many as 80 separate laboratories, in addition to an up-to-date library of scientific literature and cosy living quarters for scientific personnel. An important feature of the project is that it is manned exclusively by competent and talented Indian scientists, numbering 24, who have had extensive training in foreign countries. It is certainly befitting that CIBA should have secured the services of one of India's topmost organic scientists, Dr. T. R. Govindachari, as the Director of the Centre.

Besides conducting routine research and testing of CIBA chemical products, the scientists will devote their attention to basic research with a view to widening the frontiers of knowledge by original contributions. Pharmaceutical research is an important part of the Centre's programme. In the pharmacology laboratories, including endocrinology and toxicology, scientists test new compounds for reaction in the circulatory, respiratory and nervous systems of animals. Also in the microbiology laboratories, including parasitology and bacteriology, new compounds are tested to determine their effectiveness in the treatment of diseases caused by bacteria, fungi, viruses, and parasites. The source of the new compounds for the above-mentioned biological laboratories is provided by a third group of laboratories that synthesise drugs or isolate new compounds from natural plant and animal products. In addition to pharmaceutical research, a programme has also been undertaken in the field of dyestuffs in collaboration with Atul Products Ltd. A special wing of the Centre houses laboratories for the synthesis, development and application of dyestuffs. The analytical section, comprising laboratories for micro-analytical determinations, optical methods and paper chromatography is another important unit of the Centre.

The Centre is an outstanding instance of Indo-Swiss co-operation, having been sponsored by CIBA of India Ltd., a subsidiary of CIBA of Basle (Switzerland) which has to its credit about a century of experience in the field of chemical research, particularly in pharmaceutical products, synthetic dyes, plastics, agro-chemicals and cosmetics. This is the fourth large-scale research centre established anywhere in the world by CIBA, the others being situated in Switzerland, the U.K. and the U.S. CIBA's association with India, it may be recalled, dates back to 1888, when the firm opened trading of its oldest product line, dyes, in India. CIBA (India) Ltd. was formed in 1928 to deal with dyes trade. Its pharmaceutical counterpart, CIBA Pharma Ltd., was set up two decades later. These two companies merged themselves in 1961 to give birth to CIBA of India Ltd., which has now one manufacturing plant at Bhandup, a suburb of Bombay. The plant, commissioned in 1958, has now ambitious expansion plans on hand. CIBA has also collaborated with Atul Products in the manufacture of synthetic resins and pharmaceutical intermediates in Gujarat. CIBA's earnings from its ventures in India will be ploughed back for the maintenance of the Research Centre, which is expected to incur a recurring annual expenditure of Rs. 40-50 lakhs.

DELHI LETTER

F.I.C.C.I. SESSION—ROUGH TIME FOR S.P.T.

MR. DESAI'S REPEAT PERFORMANCE

From A Special Correspondent

NEW DELHI, 19*th March*

WITHIN a couple of hours three important speeches were made here on Saturday, which would have a significant bearing on the country's economic life for the coming fiscal year. The presidential address and the Prime Minister's inaugural speech at the annual session of the Federation of Indian Chambers' of Commerce and Industry, and the speech of the Finance Minister in the Lok Sabha covered similar and complementary grounds. It was but natural that these three speeches were divergent in many respects if only because of the different angles from which their authors approached the issues. But refreshingly enough, there was also a large measure of commonness in their expressions despite the two different sets of audience they addressed.

There was unanimity in respect of the urgent need for defence and the massive efforts required. There was no difference of opinion on the imperatives of a faster rate of economic growth to sustain an unprecedented enlargement of defence preparedness. In short, these speeches showed that the line of thinking between the business community and the Government leaders coincided in many respects on the broad strategy on which rest the present policies of the country. The policies to be pursued in the coming days, as spelled out by the Prime Minister in his inaugural speech, have been largely endorsed by the presidential address of Mr. Shriyans Prasad Jain.

Mr. Nehru said: "The external danger that faces us is not of today only. It may last for a considerable time and if we stop our developing processes or delay them, then it will not be good for us. Later we will not be as prepared as we should be tomorrow and the day after. Therefore, we came to the conclusion that difficult as the task was, we must shoulder the burden of both meeting external danger in the present and push on our developing processes so as to strengthen the country for the future."

Mr. Jain put it this way: "A faster rate of economic development is a pre-condition to better defence effort, and a faster growth of defence-oriented industry creates conditions in which a higher rate of economic development is possible."

But the divergences appeared the moment implementation of these policies was considered. The raging debate between the private sector and the Government was then onwards carried on with some feeling at the F.I.C.C.I. session by the leaders of Indian commerce and industry and in Parliament by the Finance Minister. Commenting on the Budget proposals, Mr. Jain said: "I am quite alive to the fact that the Finance Minister had to make a massive tax effort in order to meet the growing defence requirements of the country." At the same time he was convinced that the tax burden, particularly the Super Profits Tax, would hinder economic growth and retard the tempo of production.

Two Basic Demands

Besides the general attack on the latest taxation proposals and specifically the S.P.T., and the virtual freeze on expansion and development of industry by the refusal of the Commerce and Industry Ministry to entertain licence applications for 211 industries, the two basic demands raised at the F.I.C.C.I. session were, firstly, a larger share for the private sector in defence production and, secondly, freedom from the strangling effects of bureaucratic red-tapism and procrastination.

Mr. B. M. Birla's forceful speech, showing the inadequacy of our defence production by contrasting it with the defence expenditure by the U.S.A. and the U.K. during and after the Second World War, secured the unanimous approval of the resolution on the "National Emergency and Planning." The resolution, calling for flexible application of the Industrial Policy Resolution of 1956, asked for measures "which will provide fuller opportunities for the private sector also to engage itself in as many industrial activities as possible, for public sector enterprises alone cannot meet our increased and urgent requirements."

By another resolution the F.I.C.C.I. averred that "the twin challenge of development and defence cannot be met except on the basis of an expanding volume of production from the existing units and through the establishment of new ones" and that the S.P.T. "will damage the very source of development, namely, capital formation." It requested the Government to revise the "fiscal and monetary policy in such a way as to encourage investment and production." A resolution was also adopted on efforts to promote exports.

The speeches at the session concentrated their vehement attack on the S.P.T. Even the official slackness, the mismanagement and delay in the offices of the licensing authorities, which had been having the roughest time in so many earlier conferences and businessmen's conclaves, received a much milder treatment. The Congress M.P., Mr. Babubhai Chinai, who piloted the related resolution on the "Fiscal and Monetary Policy—Need for Revision," cited instances of the potential foreign investors having "backed out" since the Budget.

While the F.I.C.C.I., in session, deliberated over the adverse effects of S.P.T., a deputation led by Mr. J. R. D. Tata and including representatives of business houses which have recently severed their connection with the F.I.C.C.I., met the Prime Minister to apprise him of their arguments against the S.P.T. According to sources close to this deputation, Mr. Nehru was told that the S.P.T. sought to introduce a system of multi-point tax on company profits. The damage to the corporate sector, it was stated, would be much more than the amount of Rs. 25 crores expected to accrue from the levy. The deputationists said that while they were conscious of the emergency and were prepared to share the burden for defence, they were opposed to the very principle of the S.P.T. They urged that it should be replaced by something else like a surcharge on the ordinary corporation tax. Today the deputation is meeting the Finance Minister who has already been supplied with a well-documented memorandum on the ill-effects of the impost.

Finance Minister's Reply

Replying to the general debate on the Budget in the Lok Sabha on Saturday afternoon, Mr. Desai totally ruled out any substantial modification of his taxation proposals. There was no question of abandoning the S.P.T., although he was agreeable to look into its effect on new companies. His speech in the Lower House differed little from what he had already said in the Rajya Sabha. The only exception was his announcement that an investment trust would be set up to afford small investors in the middle-income group facilities to invest in the equity capital of corporate enterprises.

Nor did the pattern of the debate here differ in any way from that in the Upper House. The members first conceded the absolute necessity of a Budget of this magnitude and dimension, and in the next breath berated the Finance Minister either for imposing hardship on the common people or for circumscribing industrial growth. There were a number of suggestions to raise more revenue, but these remained confined to better collections rather than possible new sources. Consequently, Mr. Desai's reply to the debate produced more of platitudes and moral justification for the new imposts. He did not agree that the S.P.T. would discourage foreign participation in Indian industry because he was sure that the foreign collaborators did not want excessive percentage of profits for themselves! In another vein, he said that the levy on paper was to prevent its going into the black market and to stop the intermediaries taking more profits from its sale. In reply to the critics of prohibition, he had a statement of Mahatma Gandhi readily available.

The cotton textile mills' production in the month of February 1963 is provisionally placed at 67 million kilograms of cotton yarn and 338 million metres of cotton cloth. Stocks of cotton cloth (unsold and unlifted) which stood at 415,000 metric bales at the end of January 1963 came down to 365,000 bales by the close of the first fortnight of February 1963. Clearances during February 1963 increased substantially, bringing down the end-February 1963 stocks to 275,000 bales, comprising 165,000 bales unsold and 110,000 bales as sold but not lifted stocks.

LONDON LETTER

PRESSURE ON £ EASING

PROSPECTS FOR OUTPUT EXPANSION

(From Our Own Correspondent)

LONDON, 16*th March*

THE general impression in the City is that the sterling flurry is at an end and that it has been got through cheaply. At the cost of how much gold we shall know when next figures are published—unless the authorities have been using one of the much canvassed co-operative channels for supporting sterling without drawing overmuch on the published reserves. The impressions of last week seem also confirmed, namely, that the general discussion about devaluation induced importers to cover their exchange requirements six months ahead. If this is right, then the pressure on sterling will be correspondingly less in the late summer.

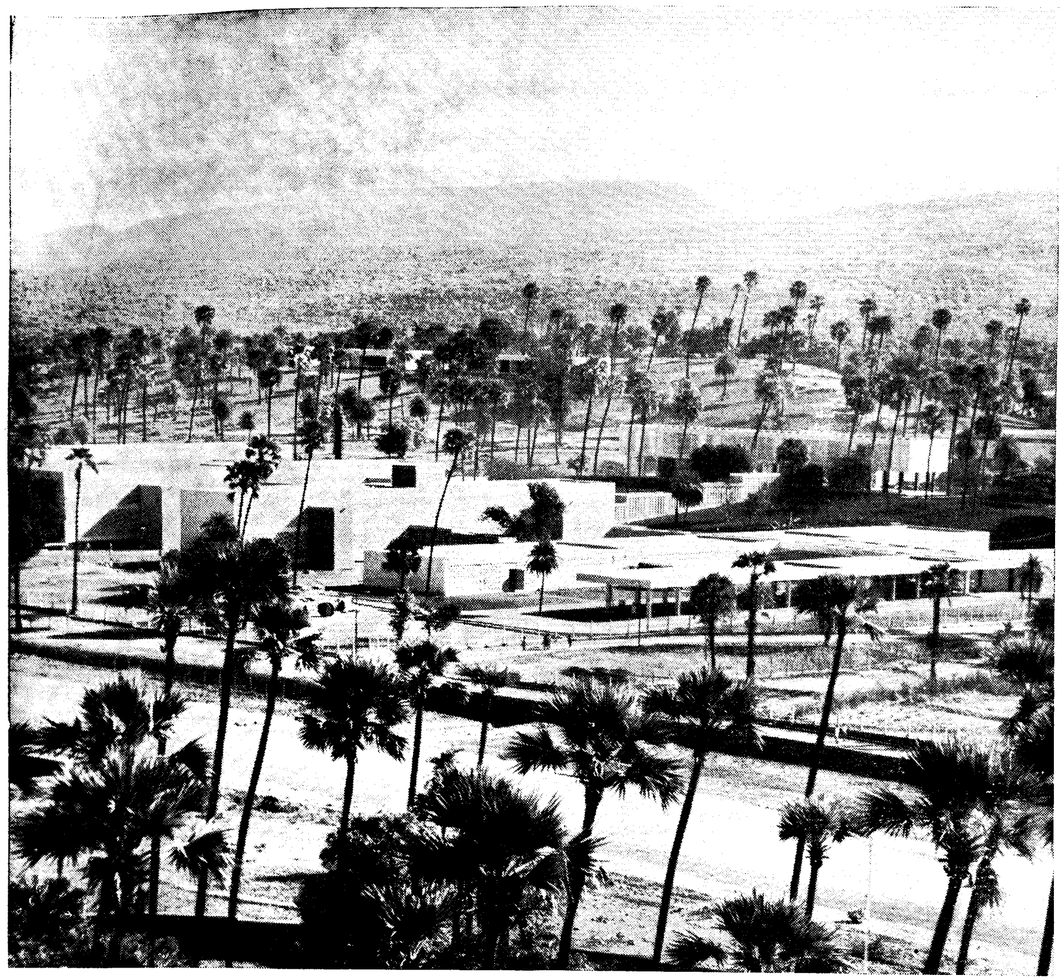
Not much part appears to have been played in the recent shake-up by hot-money holders, which implies that there is not much "hot-money," in the traditional sense, about.

Conclusions have ranged from the fear that the Chancellor, all set for an expansionist budget, will now revert to caution, to exhortations to him to press ahead with the necessary stimuli to domestic expansion. Sterling has shown, it is argued, that it can ride a speculative storm easily and, anyway, if the balance of payments should turn adverse, the U.K. had better bring into action her international reserves.

Industry's Unused Resources

This was good background for the end-week report of the Institute of Directors (the power of this curious "club" rests in its members rather than in its corporate self) on the unused resources of British industry. 167 large firms replied to six basic questions: first, could you expand output up to 10 per cent without using any more labour? The frightening answer (from the point of view of the unemployed) is that 60 per cent could and that another 18 per cent could expand *more* than 10 per cent. So only one-fifth of these large firms would need to take on more labour in order to expand output.

Second question: suppose you took on 2 per cent more labour? (The point of this is that unemployed labour except for the hard core would then be absorbed; or this is the extent of labour absorption before general shortages of labour became apparent.) About half the firms would then increase output by *over 10 per cent* and most of the rest would expect production to bound ahead.



All this means that industry has plenty of spare capacity and that substantial expansion is going to be necessary if the unemployed are to be found jobs. But what about the effect on the balance of payments? Here the report is reassuring. To the question whether more raw material imports would be required, the answer was 'No' by 60 per cent of the firms—that is, for production increases up to 10 per cent. The rest would need more imported raw materials: 5 per cent more.

Exports

What about exports? One-fifth of the firms reckoned they could cut unit costs 5 per cent or more with a 10 per cent production increase, and nearly all the rest expected to make some cuts. As a result, the majority of the firms considered that though their export prices were already pared to the bone, they could, with bigger total output, lower their quotations and they would expect an increase in exports as a result.

The last question concerned the encouragement to imports of an active domestic market. Oddly enough, less than one-sixth of the firms thought foreign exporters would be able to cash-in. Most thought—for unspecified reasons—that the home market would supply the demand for increased consumption within the limits considered.

So there is industry's green light to the Chancellor: stir up demand and output will rise, without more labour, without more raw material imports, without encouraging manufactured imports, but stimulating British exports. Apart from the unemployment problem it couldn't be more encouraging!

"...to ensure for the people of the country all the benefits that can accrue from the acquisition and application of scientific knowledge"

Government of India Policy Resolution on Scientific Research, March 13, 1958

On March 21st, at Goregaon, Bombay, the Prime Minister inaugurated the first centre in South Asia offered by private industry for fundamental chemical and biological research. It has been established by the international chemical organisation C I B A.

Initially the Centre's scientific programme will comprise two main fields. Basic research in pharmaceuticals is to include chemical and biological investigations of Indian medicinal plants and the elaboration of new synthetic drugs. Dyestuff research will be conducted in collaboration with Atul Products Limited.

This new venture supports one important goal of the Third Five-Year Plan: increased efforts in basic research by private industry for economic development of the country. The project has been carried out in a spirit of goodwill and the most cordial cooperation. The 80 laboratories are now a functioning reality whose future rests in the hands of scientists dedicated to the task of improving the health and well-being of Man.

COMPENSATORY FINANCING OF EXPORT FLUCTUATIONS

IMPLICATIONS OF I.M.F.'S SCHEME EXAMINED

THE International Monetary Fund announced, in the first week of March, certain special facilities for member-countries facing difficulty in the external payments position due to fluctuations in export receipts. It will permit them to draw additional amounts up to a normal maximum of 25 per cent of the member's quota, even if this should require a waiver to permit outstanding drawings to rise above the normal limit of 125 per cent of the quota. Further, the Fund will give "sympathetic consideration" to requests for increases in quotas where these are relatively small and the country is specially vulnerable to sharp fluctuations in overseas earnings. The assistance provided will be subject to two conditions. First, the shortfall in export earnings should be of a short-term character and be attributable largely to circumstances beyond the control of the member. Secondly, the member-country should co-operate with the Fund in an effort to find, where required, appropriate solutions for its balance of payment difficulties.

A Serious Handicap

In view of the fluctuating fortunes of primary producing countries during the last decade, especially after the Korean war boom, and the insufficiency of drawing power from the Fund to meet such eventualities, the problem of providing some special compensatory financing has come to the forefront in the last three years. The primary producing countries, in particular the Latin American countries, depend for their political stability on stability in export earnings. The U.N. Committee of Experts, responsible for producing *International Compensation for Fluctuations in Commodity Trade*, calculated that 14 out of the 46 primary producing countries experienced, over the years 1953-59, cumulative shortfalls of exports as compared with the average annual exports over the three preceding years. The shortfalls were of such magnitude that to compensate them fully would have compelled them, after using up 125 per cent of their Fund quotas, to dip into their own reserves to an extent exceeding 30 per cent of reserves at the end of 1959. If only the 25 per cent of quota constituting the gold transche had been made available by the Fund to meet the cumulative export shortfalls. 20 of the countries concerned would have had to drawn down their reserves by more than 30 per cent to achieve full compensation. Thus, these near-automatic facilities, they implied, were insufficient; and even if a reasonable degree of progress were made by the Fund in extending the automatism of drawing in many cases, the uncertainty of drawings would, they considered, offer a serious handicap to the object of continuity in development expenditure.

A number of United Nations agencies have therefore been searching for a means of compensation of the fluctuations in primary producers' incomes. For instance, the Organisation of American States (O.A.S.) had considered a proposal by Chile in August 1961 that the Fund members affected by the decline in the prices of important export commodities should be enabled to draw from the Fund amounts determined by the magnitude of the price decline in question relative to the average price in the three preceding years and by the volume of exports affected. Again, the United Nations Committee of Experts had suggested that any significant increase in the percentage of quota which would be automatically available to a country whose export proceeds fall "would be a valuable step towards proving compensatory financing to meet the needs of primary producing countries when threatened with the adverse impact of a decline in export proceeds."

It is evident that the Fund has rejected the schemes for automatic compensation. This is because no formula can indicate whether in any year the fall in a country's export earnings is a deviation from trend or the beginning of a new one. The report by the Fund makes it clear beyond doubt that a permanent solution demands in several instances a broadening of the economies. Naturally, this would depend on action by developing countries to promote or provide markets and their willingness to give economic aid. What the Fund promises to give, therefore, boils down to payment of compensation to certain countries at the Fund's discretion. The Fund is unwilling to abandon its usual banker's judgment or the basic principles underlying the policies.

Under present Fund policies, members are given the overwhelming benefit of the doubt in relation to requests for transactions within the "gold transche," that is, for drawings which do not increase the Fund's holdings of the currency beyond an amount equal to the member's quota. The Fund's attitude to requests for transactions within the "first credit transche"—that is, transactions which bring the Fund's holdings of a member's currency above 100 per cent but not above 125 per cent of its quota—is a liberal one, provided that the member itself is making reasonable efforts to solve its problems. Any request for transactions beyond these limits requires substantial justification. It is likely to be favourably received when the drawings or standby arrangements are intended to support a sound programme aimed at establishing or maintaining the enduring stability of the member's currency at a realistic rate of exchange. In the higher transches, the Fund wishes that a sound set of policies should be followed. The Fund may reach the conclusion before the question of a drawing arose—if it has a standby arrangement with the country in question. If such policies are being followed, no change in them would be required to meet payments difficulties which are due solely to temporary situations in foreign markets or to such factors as a temporary fluctuation in crops. The mere fact of a decline in exports would not be taken as an indication that a corrective programme was necessary or that the corrective programme envisaged should be intensified. On the other hand, a need for corrective policies might arise either because the decline in exports appeared to foreshadow a lasting weakening of the country's balance of payments or because the country's monetary and financial policies were such as to provoke, sooner or later, balance of payments difficulties even under satisfactory export conditions.

No Benefit to India

When the Fund's assistance to primary producers is hedged with so many conditions, is it going to be of assistance to underdeveloped countries? According to interesting calculations made by the Fund setting out the likely requirements against available reserves and credit, the countries that stand to benefit most from the liberalisation are the small Latin American countries and countries like Indonesia, Syria and Iran. Countries like India which are troubled by the continuing inadequacy of external receipts naturally do not stand to benefit from the liberalisation.

Although the extra facilities provided by the Fund are limited in scope and in benefit to underdeveloped countries, they nevertheless constitute a progressive step, in that they augment the facilities which the Fund offers to underdeveloped countries. So far, the Fund has been somewhat lukewarm in providing any special facilities to primary producers because of the feeling in advanced countries that the former's problems stemmed from the efforts to force the pace of development. The present move is welcome, since it broadens the activity of the Fund on constructive lines.

Why has the Fund been emboldened to liberalise the facilities at this critical juncture? The talk of an American recession, in view of persistent deficit in balance of payments, is in the air once again. The pound sterling is also in rough weather. Probably, the informal agreements concluded between the central banks on both sides of the Atlantic and the consequent swapping operations conducted by the authorities of the two "key currencies" (the pound and the dollar) to stave off pressure must have prompted the Fund modestly to extend the sphere of operations. The countries benefiting from the liberalisation are those closely linked to the United States and any further adverse fluctuations in their export earnings might have made the apparent political stability precarious in the event of a slow down of the U.S. economic activity.

If a way also could be found out to help countries, such as India, which are by far the biggest borrowers from the Fund, it would be better. Probably, there is a case for routing foreign assistance which India and other developing countries are getting from various sources through the United Nations Agencies like the I.M.F. and the World Bank with some sort of co-ordination between the drawing power of the Fund quotas made available to these countries and the magnitude of assistance available from elsewhere. If the latter can be taken into account, present and prospective, in permitting a liberalisation of drawings from the Fund, it would be doing a distinct service to the developing countries like India with a different set of problems than one of fluctuations in foreign trade.

WORLD BANK LOAN TO PERU

The World Bank has announced a loan of $13.25 million for financing a programme to rehabilitate and modernise the two principal railway systems in Peru. Four commercial banks are participating in the loan, without the World Bank's guarantee, for a total amount of $497,000 representing parts of the first three maturities which fall due between December 1967 and December 1968. The participants are the Pennsylvania Banking and Trust Company, Philadelphia; Girard Trust Corn Exchange Bank, Philadelphia; Manufacturers Hanover Trust Company, New York; and the Royal Bank of Canada, New York Agency. The loan has been made to the Peruvian Corporation Limited, a private company which owns and operates the railways, and is incorporated in the U.K. The loan is for a term of 16 years and bears interest at 5½ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin in December 1967. The loan is guaranteed by the Republic of Peru.

CANARA BANKING CORPORATION

LIQUIDITY POSITION AT PEAK

A NEW peak level of liquidity and a drop in advances, in contrast with the previous year's spurt, due to the restrictions imposed by the Reserve Bank near the close of the year on bank credit against gold, are the highlights of the working of the Canara Banking Corporation Ltd. (Chairman: Mr. U. Gopalkrishna Nayak, Mangalore) during the year ended 31st December 1962. On the basis of the year-end figures, the credit ratio shows a setback of more than 10 points at 50.5 per cent, as against an expansion of nearly five points to 60.8 per cent in the previous year, whereas the liquidity ratio stands at the formidable level of 55.5 per cent, as against 48.2 per cent in the previous year and 51.6 per cent a year before that.

Keeping a substantially large portfolio of liquid assets—investments of as much as Rs. 437.17 lakhs, as against Rs. 385.31 lakhs a year before, and cash balances of Rs. 207.84 lakhs, as against Rs. 105.38 lakhs—is certainly not the most profitable use of the available resources. For cash in coffers rarely multiplies. And the bulk of the investments of a bank (in the case of Canara Banking Corporation, Rs. 436.87 lakhs, as against Rs. 385.02 lakhs in the previous year) is in Central, State Government and other trustee securities which fetch a return of about 4.5 per cent in a year. As against this, advances bring in 7 to 8 per cent. However, as noted at the outset, the drift from advances to liquid assets in the case of Canara Banking Corporation occurred only from late October, when the Reserve Bank asked banks to consider recalling, in suitable cases, advances against gold for the dual purposes of a credit restraint during the emergency and a check on tendencies that tended to defeat the Government's gold policy. One would, therefore, be justified in presuming that advances had maintained their growth during the major part of the year under review.

This presumption is all the more confirmed by the slightly higher profit of Rs. 8.55 lakhs reported by the Bank for the year, as against Rs. 8.22 lakhs for the previous year, before allowing for a provision of Rs. 4 lakhs, as against Rs. 3.90 lakhs last year, for taxation. Although the improvement in profit is marginal, it is quite an achievement during a period characterised by a substantial increase in the cost of deposits as well as in staff expenses, as a result of which not a few even among the big banks have reported a setback in their profits. For the Canara Banking Corporation, outward interest has gone up from Rs. 32.71 lakhs to Rs. 37.28 lakhs, staff expenses from Rs. 18.31 lakhs to Rs. 22.76 lakhs and other expenses from Rs. 7.68 lakhs to Rs. 9.32 lakhs. Out of the profit, after tax, amounting to Rs. 4.55 lakhs, a sum of Rs. 1.75 lakh (Rs. 1.65 lakh in the previous year) has been set apart for the reserve fund. The dividend on the 50-rupee ordinary shares has been maintained at 15 per cent per annum, subject to tax. It is payable on a larger paid-up equity capital of Rs. 17.76 lakhs, as against Rs. 12.50 lakhs in the previous year, following the issue of 25,000 50-rupee new shares on which half the amount has been called.

A comparative picture of the Bank's progress during the past four years is presented in the table below:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Interest and discount earned	63.30	53.94	48.63	41.07
Commission, exchange and brokerage	15.56	13.62	11.09	9.45

* Unencumbered portion only. † Subject to deduction of tax.

Deposits of the Bank have expanded over the year by Rs. 1.49 crore to Rs. 11.61 crores. The increase exceeds the growth of Rs. 1.40 crore noted in the previous year. It has also enabled the Bank to bring down borrowings from other banks from as much as Rs. 12.77 lakhs to a mere Rs. 77,317. The bulk of the growth in deposits has been under time deposits which have grown from Rs. 6.70 crores to Rs. 7.71 crores, with savings deposits at Rs. 2.08 crores and current deposits Rs. 1.82 crore, sharing equally the balance of the increase. As the new shares issued during the year are only partly paid, the ratio of "own funds" to deposits shows a marginal improvement from 4.5 to 4.7 per cent.

Out of the deposit liability of Rs. 17.80 lakhs of the Bank of Citizens Ltd. which was amalgamated with the Bank on 17th October 1961, a sum of Rs. 13.19 lakhs, constituting 74 per cent. of the deposits as on the date of the take-over, has been paid so far to the depositors out of the collections account in accordance with the terms of the scheme of amalgamation. Further efforts are being made to recover advances and other assets held by the Bank under the collection account. Three of the branches taken over from the Bank of Citizens were closed during the year, as they were found uneconomic. The total number of the branches of the Bank stood at 75, as against 78 a year before.

UNION BANK'S PROFIT UP

MARKED GROWTH IN DEPOSITS

NOTWITHSTANDING sharp increases in cost of deposits, staff expenses and other operational expenditure, in common with the banking sector as a whole, the Union Bank of India Ltd. (General Manager: Mr. F. K. F. Nariman, Bombay) earned a higher profit of Rs. 22.07 lakhs, after tax, during the year ended 31st December 1962, as against Rs. 21.62 lakhs in the previous year. Total income went up by Rs. 38.48 lakhs to Rs. 223.56 lakhs, the earnings from interest and discount alone improving by Rs. 31.84 lakhs to Rs. 164.67 lakhs and those by way of commission, exchange and brokerage by Rs. 6.11 lakhs to Rs. 48.90 lakhs. On the expense side, outward interest increased by Rs. 17.57 lakhs to Rs. 76.15 lakhs, staff expenses moved up by Rs. 11.90 lakhs to Rs. 80.49 lakhs and other operational expenditure rose by Rs. 7.14 lakhs to Rs. 40.17 lakhs.

A larger sum of Rs. 4.68 lakhs has been provided for depreciation, as compared with Rs. 3.26 lakhs a year before, while the reserve fund has got less, Rs. 6 lakhs, as against Rs. 6.50 lakhs. But including the Rs. 1 lakh set apart for contingencies, the total transfer in the year comes to Rs. 7.50 lakhs. Bonus to staff has been raised from Rs. 6.25 lakhs to Rs. 7.66 lakhs. The dividend on the 5-rupee ordinary shares has been maintained at 11.4 per cent per annum, subject to tax. It is, however, on the increased paid-up capital of Rs. 100 lakhs following the issue of 800,000 new shares at a premium of 50 nP per share during the year. The return on new shares is only for three months. The total amount taken up by the dividend is Rs. 7.96 lakhs, as against Rs. 6.84 lakhs a year before. The surplus carried forward is Rs. 1.40 lakh, as against Rs. 1.45 lakh brought in.

The following comparative table mirrors the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Interest and discount earned	164.67	132.83	133.42	128.93

Investments	24.7	25.1	26.2	22.9
Cash	24.5	21.3	16.5	16.4

* Subject to deduction of tax.

The feature of the Bank's working during the year was the marked growth of 29.8 per cent (15 per cent in 1961) to Rs. 42.62 crores in deposits. The Bank had borrowings to the tune of Rs. 15.12 lakhs from the Refinance Corporation for Industry Ltd. This must be because of rising demand for bank credit. Over the year, advances improved from Rs. 18.50 crores to Rs. 23.23 crores, though the credit ratio dropped further from 56.3 to 54.5 per cent. Investments, too, increased sizably from Rs. 8.25 crores to Rs. 10.51 crores, though their ratio to deposits was also down from 25.1 to 24.7 per cent. With the much higher cash balances of Rs. 10.45 crores, as against Rs. 7.01 crores a year before, the cash-deposits ratio expanded by more than three points to 24.5 per cent. As a result of this, the aggregate liquidity ratio was higher by nearly three points at 49.2 per cent.

In spite of the increase in share capital, the transfer of Rs. 4 lakhs to the share premium account following the issue of new shares and also the amount set apart out of the year's profit for the reserve fund, the ratio of "own funds" to deposits works out to 4 per cent, as against the 6 per cent goal suggested by the Reserve Bank. It may be noted that, while increasing its issued capital, the Bank also doubled its authorised capital to Rs. 2 crores. On a suitable occasion, it may go in for a further issue.

The Chairman, Mr. K. R. P. Shroff, is retiring after associating with the Bank for over 33 years. Though eligible, he does not wish to seek re-election because of old age and indifferent health.

CANARA INDUSTRIAL AND BANKING SYNDICATE

YEAR OF AMALGAMATIONS

FOR the Canara Industrial and Banking Syndicate Ltd. (Managing Director: Mr. T. A. Pai, Udipi, Mysore State), the year ended 31st December 1962 has proved to be one of amalgamations. For the Bank took over during the year, in pursuance of the Reserve Bank's policy of merging small uneconomic units with the economic ones in order to strengthen the banking structure in the country, three banks in the South, namely, the Salem Ammapet Sengundar Bank Ltd., the Hindu Bank Karur Ltd. and the Kerala Service Bank Ltd. After the close of the year, the Citizens Bank Ltd. of Robertsonpet was amalgamated with the Bank. All the take-overs have been effected on the basis of transfer of assets and liabilities but not capital. As a result of these mergers, the total number of branches of the Bank has increased sharply from 159 to 176, including 14 in Madras State and 26 in Kerala. The amalgamations have enabled the Bank to extend its services to new areas in the South.

It is in the light of these take-overs that one has to view the Bank's traditional business which has progressed considerably. The total deposits of the Bank have expanded sizably again from Rs. 24.63 crores in 1961 to Rs. 32.65 crores in 1962. Advances, which have risen from Rs. 15.45 crores to Rs. 18.27 crores, have nearly maintained the previous year's rate of increase, though, because of the sharp rise in deposits, the credit ratio has dropped by seven points to 55.6 per cent. Investments have gone up by a further Rs. 3.10 crores to Rs. 12.04 crores and, as a percentage of deposits, they stand at 36.7, as against 35.6 a year before. Notwithstanding these sharp increases in both advances and investments, the Bank has closed the year with cash balances aggregating Rs. 4.40 crores, as against only Rs. 1.96 crore at the end of 1961, and, consequently, the cash-deposits ratio has bulged from 7.9 to 13.5 per cent. The total liquidity ratio shows an improvement of almost seven points at 50.2 per cent.

The profit for the year shows a setback from Rs. 32.10 lakhs to Rs. 30.33 lakhs, before providing Rs. 12 lakhs for taxation, as against Rs. 12.25 lakhs in the previous year. The setback is due to reasons well-known to readers: higher cost of deposits, staff expenses and other operational expenditure. The extent of the increase in the cost of deposits and other expenses is indicated in the accompanying tables. Because of the drop in profit, the transfer to the reserve fund has been reduced from Rs. 11 lakhs to Rs. 6.50 lakhs. Bonus to staff has claimed Rs. 75,000 more at Rs. 3 lakhs. The return (subject to tax) on the "A", "B" and "C" class of ordinary shares of Rs. 100, Rs. 10 but Rs. 5 paid-up and one rupee each, respectively, has been maintained at 20 per cent per annum, including 10 per cent bonus. The return is on the increased paid-up equity capital of Rs. 51.86 lakhs following the issue of 500,000 "B" class shares at a premium of one rupee per share. The total distribution to shareholders by way of both dividend and bonus works out to Rs. 6.66 lakhs, as against Rs. 4.80 lakhs a year before. The amount carried forward is Rs. 77,782, as against Rs. 34,750 brought in.

The Bank's progress in the past four years is depicted in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Interest and discount earned	180.40	142.37	121.40	99.65

Dr. T. M. A. Pai, Chairman of the Bank, observes, in his statement circulated along with the annual report, that the Bank's schemes of pigmy deposits, cash certificates and cumulative deposits have served to attract savings of the middle and lower middle classes. The novel experiment started by the Bank, which has 260 ladies on its staff, in order to mobilise more savings and also to make women customers more at home is an all-women's branch at Seshadripuram, Bangalore, has been commended, we are told, not only in this country but also abroad. The Bank has recently started an industrial finance division to assist industries with short-term and medium-term advances.

POWERLOOMS AND THEIR OPERATIONS

INQUIRY COMMITTEE ISSUES COMPREHENSIVE QUESTIONNAIRE

By Mohanlal P. Gandhi

THE Powerloom Inquiry Committee (Chairman: Mr. Ashok Mehta), appointed by the Central Government early this year, has issued a comprehensive questionnaire running into 26 closely typed foolscap size pages. The wide scope of the inquiry, covering not only the cotton powerlooms but also the art silk, woollen, and pure silk looms registered as well as unregistered, and the numerous others which go by the category of unauthorised looms in all sectors, is reflected in the questionnaire. For those who choose to send in a reply to it have been asked to furnish information on all sorts of points, ranging from the history of growth of the powerloom industry in a particular area and the reasons for fragmentation of the industry (or consolidation, as the case may be) to the causes which make unauthorised looms continue to hide their whereabouts and the way this sector obtains its looms and parts or both. Detailed information is also sought on relevant points affecting the powerloom industry such as distribution of expenditure on yarn, other materials, preparatory processes, wages, overheads, repairs and maintenance, power, rent, stores, workers' welfare etc., the working of looms in terms of shifts, or incidence of idleness, number of workers engaged in the four main divisions in the industry (preparatory, weaving, post-weaving and supervisory or clerical), and whether they are male, female or children. Information has also been sought as to the actual working of powerlooms. The Inquiry Committee has thought of three different ways in which powerlooms could be worked commercially: first, they may be run independently by the owners engaging wage-earning labour for their operations. Secondly, the owners may operate them themselves but get the work done on job-basis. And thirdly, they may give them to others for being worked on rental or lease basis.

In grouping powerlooms numberwise, the Inquiry Committee has adopted more or less the same procedure as the excise department in dividing the powerlooms in strength of upto two, three to four, five to nine, ten to twenty-four, twenty-five to forty-nine, fifty to ninety-nine and one hundred upwards. It has specifically sought information pertaining to the manner of packing for obtaining the yarn they use for weaving, whether in hanks or in cones, sized beams, unsized beams, pirns or any other. If the Committee were to obtain adequate information on this point, the controversy that has been raging for over two years now on the quantum of production of powerlooms as against handlooms would be carried a stage further.

Differences in Estimates

It is the contention of those who hold handlooms responsible for the major share of production in the decentralised sector in the cotton textile industry that the handlooms use yarn on hanks, which powerlooms do not, and a good measure of the respective proportions of handlooms and powerlooms could be obtained by getting at the figures of yarn supplied to trade by mills in hanks and otherwise. The relevant data for a recent year placed the delivery of yarn on hanks by cotton mills to trade at nearly 70 per cent and estimated the handlooms' share at 1,350 million yards and powerlooms at 600 million yards in a total estimated production of 1,950 yards. The cotton textile industry, on the other hand, has estimated the share of powerlooms in the production of the decentralised sector at a much higher rate, 800 million yards for handlooms and 1,365 million yards for powerlooms in an estimated total production of 2,165 million yards. Thus the respective importance of handlooms and powerlooms in their combined production is almost reversed in these two contrary viewpoints. The gap is too wide to be bridged by any argument and it is only to be hoped that the Powerloom Inquiry Committee will be able to gather sufficient data to arrive at even some approximate figures relating to the production of powerlooms to resolve this controversy.

The efforts of the Powerloom Inquiry Committee, if directed at deriving an approximate figure of production by powerlooms would be helpful in another direction too. The importance of powerloom production in the cotton textile trade has grown enormously in recent years. The consumption of yarn of finer counts by powerlooms and handlooms has also grown by more than 160 per cent in the last five years. With increased production in finer types of cloth, its trade has expanded to such an extent that, in a number of principal textile markets in the country, the powerloom cloth trade enjoys a position comparable to the mill cloth trade. But the problems of these two divisions of the cotton textile trade are different. The pattern and practices in the two trades are not alike. As a general rule, the powerloom trade needs larger financing. Moreover, funds are locked up for a longer period in the trade and the banks as a financing agency are not so much in evidence in the powerloom trade as they are in the mill cloth trade. Towards the close of last year, when the cotton textile industry was faced with an acute financial crisis, it was generally argued that the large amounts of funds invested in the powerloom trade had not a little to do with the crisis. Be that as it may, the fact remains that the production of powerlooms, particularly in the finer types of cloth, has grown enormously in the past few years. The growth is so large that it has posed difficult problems for the trade. Yet its extent remains to be probed. The Powerloom Inquiry Committee has included in its questionnaire queries bearing on the type of cloth produced, thread ends per inch, length and breadth of the piece and its weight. Such information, if systematically collected and collated, may prove to be of material help in properly assessing, in quantitative terms, the importance of powerlooms in the cotton textile trade.

Important Questions

Apart from seeking information relating to powerlooms and their operations, the Inquiry Committee has, at a number of places in its questionnaire, sought suggestions and invited opinions of individuals and associations (to whom the questionnaire has been sent). Some of the questions are suggestive, as, for instance, the following:

Would you advocate a scheme of collective purchase of yarn by the powerlooms on a co-operative basis?

Would you advocate introduction of decentralised small-scale spinning units in order to facilitate ready supply of yarn to the powerlooms?

Would you recommend the establishment of co-operative finishing plants?

What is your idea about the relative role which the powerloom industry has to play in the economy of the country *vis-a-vis* the handlooms and the mill sector and what, in your opinion, should be a reasonable target which can be assigned to this sector?

The Powerloom Inquiry Committee has elicited opinions on the process of gradual change-over from handlooms to powerlooms, and on the effect, if any, of the growth of powerlooms on handloom workers. It has sought information about the handloom operators themselves switching over to powerlooms and adding mechanical devices which would enable them to run their handlooms adjusted to power. And it wants to know the "experience in regard to the scheme of introducing 35,000 powerlooms in the handloom sector" itself in the second Five-year Plan. In this respect, the Committee has sought to ascertain the views of those to whom its questionnaire has been sent whether they would recommend a phased programme of replacement of handlooms by powerlooms in the country as a policy.

THE FIRST CHOICE OF BUILDERS

Snowcem

FOR OFFICE BUILDINGS

AND FACTORIES

Calcutta Insurance Building, 24, Chittaranjan Avenue, Calcutta. Architect: Mr. K. N. Sinha, 13L, Ballygunge Place, East, Calcutta.

Snowcem has once again been chosen to redecorate for its attractive colour and waterproofing qualities!

Easy to mix, easy to apply, Snowcem does not rub, flake or peel off...can be cleaned. Provides a hard, durable, waterproof and damp-proof surface, ideal for both interiors and exteriors.

Snowcem is the first choice of builders—for office buildings, hospitals, factories, housing colonies, hotels and other structures.

FOR DECORATION PLUS PROTECTION...

CONCERN OVER TEXTILE TRADE BARRIERS

EXPANSION OF EXPORTS URGENT

From Our Special Correspondent

MANCHESTER, 12*th March*

MANCHESTER LETTER

A TECHNOLOGICAL revolution in the British textile industry equivalent to the invention of the spinning jenny or the introduction of the powerloom has taken place in recent years, Mr. J. Angus Orr, Chairman of Clegg & Orr Ltd., the Littleborough spinning and weaving firm, said in his annual report. Potential output and the need for technical skill and managerial competence and for a new marketing concept have far outrun the industry's organisation, current financial capacity and educational training facilities. In consequence, further concentration and closure, amalgamation and all forms of industrial "deck clearing" seemed inevitable.

Many good jobs were still waiting for industrious young people willing to be trained and not afraid of hard work, Mr. Orr continued, but there was no place for the faint-hearted. If the best textile firms in Lancashire could get together and create a situation which investors would be willing to underwrite, so absorbing substantial new capital into the industry, it would be possible to finance the new generation of young, competent and well-trained personnel, equipped with the latest machinery and with marketing methods appropriate to its high and varied output.

Tariff Barriers Rise

Among the basic considerations on which virtually week-to-week contact is maintained between the industry's official organisations and the various departments of the Board of Trade is the tangled web of tariff and quota regulations which so restrict the free passage of goods between the countries of the world. Some significance can be read into the fact that many of the chief offenders in this respect have lately been the Commonwealth areas where trade barriers are rapidly rising. This is underlined in the annual report of the Furnishing Fabrics Federation which stresses the frustration experienced by traders through the action taken by a few overseas countries in limiting imports by licensing controls or by applying higher tariffs to protect domestic manufacturers.

Both Australia and New Zealand are very much concerned in this connection and, as the report states, hardly a year goes by without one section of the British furnishing fabric industry being affected by some adjustment to the Australian tariff. As recently as October, basic duties on most woven fabrics were raised substantially and a new application has since been submitted to provide still higher protection on more imported goods.

Impact on Yarns

Another section of the Lancashire trade likely to be adversely affected by this trend is the spinning branch. An import duty of 25 per cent, together with other tariff changes, has now been imposed on single and folded yarns within the 50s to 60s counts range, aimed apparently at encouraging an increase in Australian production of these qualities. From being one of Lancashire's stable outlets for such goods, Australia shows signs of diminishing rapidly as a consumer. In the fine counts range, it seems that indigenous output is likely to be around 2,500,000 lbs., with a similar amount available for importing countries. Spinners in Lancashire, accustomed to shipping yarns of about 50s counts to Australia, now contend that they have been priced out of the market. Trade of approximately 2,500,000 lbs.—a substantial percentage or current total sales abroad—is at stake.

Continental Retrospect

Breakdown in the Common Market talks still causes widespread discussion, even to the extent of many traders wondering what the final outcome would have been had Britain's entry been approved. Individual opinions have been expressed on the subject, with particular relation to our local industry, so that one contribution from Mr. G. R. Taylor, Director of the Textile Finishing Trades Association, at a recent meeting of the Manchester branch of the Clothing Institute, still deserves attention in spite of the changed circumstances.

For one thing, he made it abundantly clear that the present position of preference on exports to the Commonwealth was unlikely to be maintained. The countries involved, he emphasised, had been cutting back their dependence on imports from Britain, partly because they had been developing their own manufactures and partly because they wanted to be free to import from other countries. Imperial Preference has, indeed, been a declining asset in recent years.

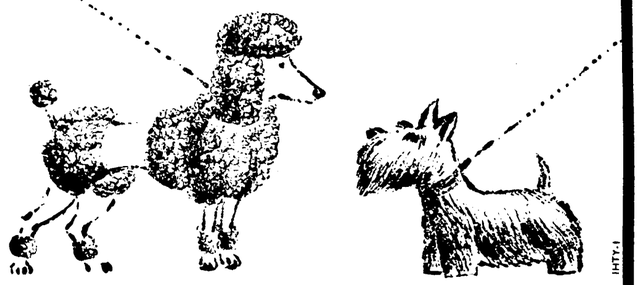
Had the long-anticipated change in the United Kingdom's relationship with the Continent and the Commonwealth taken place, a complete revision in traditional trading patterns would have occurred. More competition on the home market, new export opportunities on the Continent, and a major readjustment in export thinking are just a few of the vital revisions which would have become necessary. In order to compete more effectively, Mr. Taylor declared, greater standardisation of products might have been called for, together with co-operation with Continental firms and possibly amalgamation with other companies, either in this country or on the Continent.

Complexities in the negotiations affecting textiles centred round the system of Imperial Preference which permitted Hong Kong, India and Pakistan to export a substantial volume of yarn, cloth and made-up garments on duty-free terms to the United Kingdom. Although the cotton industries of the Community had objected strongly to this arrangement, a formula for reconciling these interests was being negotiated at the time when the Brussels talk broke down.

Prospects of entering the Common Market had inspired a vast amount of reorganisation and rethinking in British industry, Mr. Taylor added. Expansion of exports remained the most urgent task, which involved further development of competitive power. Close contacts established in recent years in Europe, said Mr. Taylor, should certainly continue.

INDIAN TEXTILE EXPORTS TO U.S.

The Union Minister for International Trade, Mr. Manubhai Shah, stated in the Lok Sabha on Friday last week that the Government was "very much concerned" over the restrictions proposed to be imposed by the United States on the export of Indian textiles to that country. Mr. Shah, who was replying to a member, said that the restrictions had come at a time when Indian textiles were picking up in their volume of exports in countries like the U.S.A. which could absorb them. The Government of India had made necessary representations to the U.S. Government to relax the limit. As this was a global question, the U.S. Government felt somewhat helpless, he added. The restrictions applied to all countries which were exporting different categories of textiles to U.S.A. Asked whether export of textiles to the U.S. had gone down from 32 million yards annually three-four years ago to seven million yards and whether it was due to the restrictions placed by the U.S. on the ground that Indian exports disrupted their textile industry, Mr. Shah said:



"It is true that the exports in earlier years were higher. In 1958-59, exports amounted to 30 to 32 million yards, but, in 1960-61, they fell very sharply. The exports picked up in 1962, running to more than 30 to 35 million yards. It is these years which are taken by the U.S. as the basic years in putting the restrictions. They cannot put on a different basis from other countries."

In reply to a further question, the Minister told that the Government of India hoped that the restrictions would be of temporary nature.

PHENOMENAL GROWTH OF RUSSIAN MAN-MADE FIBRES

WILL JAPAN AND U.S. BE LEFT BEHIND?

FIVE years ago Soviet man-made fibre industry was at least a decade behind that of the U.K. or the U.S.A. But the progress of the industry since 1958 has been so remarkable that, if the rate of increase in the output of man-made fibres achieved during the period is maintained, by 1966 the Soviet Union may emerge as the largest producer of the man-made fibres in the world. In 1961, man-made fibre production in Russia aggregated 560 million pounds which was equivalent to the output of man-made fibres in the U.K. in the same year, although it was less than one half of the man-made fibre production in the U.S. or Japan. This represented an 18 per cent increase in production during the year over the previous year, as compared with the world average of seven per cent and an increase of nine per cent in Japan. Output of Russian man-made fibres increased by 50 per cent from 372 million lbs. in 1958 to 560 million lbs. in 1961. One of the main reasons for this remarkable rate of growth was the increased attention and resources devoted to the development of man-made fibre industry as part of the larger policy of developing consumer goods industries adopted by the Soviet authorities in 1958.

Soviet production of man-made fibres in 1961 accounted for only seven per cent of the world output of 7,800 million lbs. Soviet authorities envisage a fivefold increase in man-made fibre production from 560 million lbs. in 1961 to 3,000 million lbs. in 1970 and 7,000 million lbs. in 1980. If the target of 3,000 million lbs. is achieved by 1970, the Soviet Union will have exceeded the combined output of Japan and U.S., the two leading producers in the world.

Popular Fibres

A wide range of man-made fibres has been developed in Soviet Russia. A brief account of some of the important synthetic fibres popular in Russia has been given by a special correspondent in *The Times Review of Industry* for February 1963. The main points about Russian man-made fibres brought out by the correspondent are the following:

"The production of nylon (known as Kapron) is already quite large, probably amounting to 60 million lbs. a year. It is nylon 6, the kind of nylon made from caprolactam, which is popular on the Continent and in Japan. This type is also known as Perlon. The Russian equivalent of nylon 66, the original nylon that is mostly made in the United States and Britain, is known as Anid, but as yet it has been made only in small quantities.

"Acrylic fibres are making good progress. The best known Russian fibre of this class is Nitron; in 1961, about 20 million lbs. was made and production is rising fast. Lavsan is the Russian polyester fibre and is equivalent to Terylene; extensive production is only just beginning.

"Soviet policy for the 1958-65 period is to concentrate the production of synthetic fibres on these four; Kapron, Anid, Nitron and Lavsan—corresponding approximately to Perlon, nylon, Courtelle and Terylene. It is worth noting that rapid progress is also being made with polypropylene and this may constitute a fifth main production fibre.

"Plant, machinery, processes, and technical skill have been purchased to make those fibres that are already established in the West; this applies particularly to polyester and acrylic fibres, and it seems now that the same policy is being extended to include new kinds of acetate fibre. The Soviet Union deems it more economic to buy conventional machinery to produce conventional products and to spend the research appropriation on really new developments—on new fibres that will be better than any available today. No one who has worked on fibre research and development will question the wisdom of this policy. It is fortunate for the Russians that the original research has been carried out in the West.

"In 1961, Russian production of synthetic fibres was probably less than 100 million lbs. out of a world production of 1,840 million lbs. In that year, Russia made about 7.5 per cent of the world's man-made (synthetic and rayon) fibres.

"Russian scientists have made great progress with several development fibres, but these have probably been allowed to idle a little so that the plan for concentration on the main four synthetics could be followed. Khlorin is a p.v.c. fibre with its characteristic chemical and microbiological immunity. Okson is a plasticised polyester, rather like Terylene, but it dyes more easily; the greater affinity for dyestuffs, however, is coupled with poorer thermal stability. Enant is a nylon-7 made by an interesting synthetic route, a fibre that has been available on a small scale for some years; on balance, its properties are not quite so useful as those of Kapron. Ftorlon is a fibre discovered and developed by the Russians themselves; it is based on a fluorinated compound and is said to have chemical resistance comparable to that of the American fibre Teflon. All of these are past the stage of teething troubles and there is no technical reason (although there are probably reasons of supply) why they should not go on to large-scale production right away."

Besides the above mentioned fibres, there might also be, according to the correspondent, experimental fibres which have not been disclosed for obvious reasons. Some of the research-stage fibres, about which something is known, are indicative of rapid advances in research on man-made fibres. There is, for instance, nylon-10 which, it is said, will yield a very high tenacity typecord. There are also polymers with silicon atoms in the molecular backbone which may lead to fibres that will withstand high temperatures. Russia has also taken the first steps with polymers built on metallic chain backbones. The correspondent's assessment of Soviet research on man-made fibres and its results is as follows:

"There is ample evidence that an intensive and costly research programme has been undertaken to discover and develop new fibres. The results so far are indicative of a depth of thinking that exceeds what we have known in the last decade in the U.S., Japan and Britain.

"In 1961 Russia made 7 per cent of the world's man-made fibres and included in this was 5 per cent of the world's true synthetics. The rate of growth is faster than that in any other country which already has a large production of man-made fibres. In 1961 Russia made about 470 million lbs. of rayon and 90 million lbs. of synthetic fibre; in 1965, the corresponding figures should be 1,000 million lbs. of rayon and 400 million lbs. of synthetic fibre. Between 1965 and 1970 Russia will come abreast of and overtake the United States and Japan, which lead the man-made fibre industry today. Technical information and plant for fibres already established in the West are bought, so that Russia's own research and development people can look for outstanding new fibres. Some of these can already be seen on the horizon and they may well shake the industry in another few years."

The phenomenal development of man-made fibres is sure to produce repercussions on natural fibres such as cotton and wool. Already, the share of the natural fibres in the total apparel fibre consumption of the world is progressively declining. Whether natural fibres will be able to withstand competition from the fast expanding family of synthetics depends to a large extent on the price-factor.

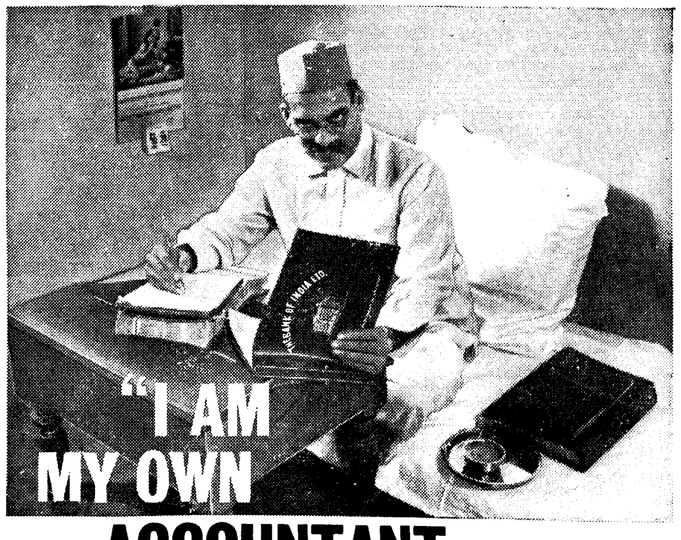
U.S. COTTON POLICY CRITICISED

A scathing attack on U.S. cotton policy was made by Dr. M. K. Horne, Jr. Chief Economist of the National Cotton Council, in the course of an address to the Western Cotton Production Conference held at Phœnix, U.S.A., recently. Dr. Horne warned that the market for American cotton will decline to a shocking level if the present Government policy continued.

"We hear of drastic measures being proposed in Washington to bring this country (U.S.) a faster rate of growth and reduce its unemployment. People will see little consistency between this and a cotton policy which throws land, people and capital out of employment and sends them into competition with other parts of the economy for the market that are left," Dr. Horne stated.

Pointing out the general direction in which the present policy is taking cotton, Dr. Horne noted that:

(1) In the past two years, cotton has suffered a competitive loss of 1,150,000 bales in the domestic market, and mill consumption is down to eight million bales per year at an average stage of textile cycle.



(2) The price situation largely responsible for producing these losses has not changed.

(3) At the rate of competitive loss for 1962, and ignoring any further decline in the textile cycle, domestic consumption next season would be 7.3 million bales—and headed still downward.

(4) An upturn of the textile cycle in some countries and rebuilding of stocks might give U.S. cotton a good export year in 1963-64. However, it could be a poor one if foreign production continues its rapid expansion. For the longer run, the new upward trend in foreign production is a threatening sign.

(5) If the present two-price system remains as it is, there is a danger of losing the export subsidy and the export market for U.S. cotton in just a few years.

(6) With exports at 4.7 million—the average of last season's level and the official estimate for this season—and with domestic consumption projected downward at last year's rate of competitive loss, the total market for U.S. cotton in 1963-64 would be 12 million bales. It would be headed lower at an average of perhaps a million bales per year.

PROBLEMS OF JUTE INDUSTRY

I.J.M.A. CHAIRMAN URGES RELIEF AGAINST PAKISTAN COMPETITION

CONSIDERING the exigency arising from defence and the pressing urgency of earning foreign exchange, it is creditable that the jute industry in India is endeavouring to maintain as high a level of production as possible. Almost the entire installed capacity of the industry consisting of about 73,000 looms is being utilised at present. If, however, the utilisation of capacity has not been to the maximum extent, it is because of two handicaps, namely, shortage of spinning capacity and restrictions on power supply. The latest move of the Government of India to remove these handicaps will, therefore, be widely welcomed. The Government has decided to permit freely further expansion of spinning capacity with a view to meeting increased demand for jute goods in the third Plan period and installation of captive power-generating sets for own consumption in jute mills. The details of the decision which Mr. Manubhai Shah, Union Minister for International Trade, gave in the Lok Sabha last week in the course of a written answer, are as follows:

With a view to enabling the jute industry to obtain its requirements of machinery on a priority basis to achieve increased production, it has been decided to permit the import of such machinery to the extent it is not available indigenously within a reasonable period of delivery. The import of captive power-generating sets for own consumption in jute mills will also be allowed under this scheme subject to usual clearances. Such of the jute mills as are able to arrange for credit with foreign supplier for the import of spinning, preparatory and post-spinning machinery will be given licences for the import of such machinery subject to screening from indigenous angle. Import licences will permit remittance of the value of machinery in two equal annual instalments or four half-yearly instalments as may be desired, the first instalment being payable after the completion of the installation of machinery.

One important condition is attached to the grant of import licences for spinning machinery and power-generating sets. Thus the applicant mills are required to execute a bond to effect additional exports to cover the value of each remittance by additional exports before the payment falls due. The Press report of Mr. Shah's statement does not, however, indicate as to what will happen if any mill fails to effect the additional exports as required.

Competition from Pakistan

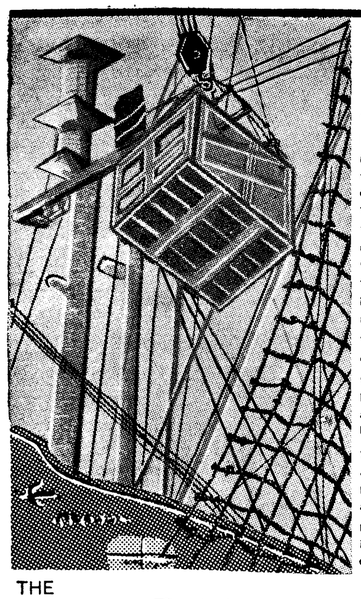
While the jute industry has reason to feel gratified at the aforesaid decision of the Central Government, it is greatly worried about the growing competition in the world jute goods trade not merely from Pakistan but also from alternative packaging materials such as paper and plastic bags and bulk handling methods. How severe is the competition offered by the Pakistan jute industry was highlighted by Mr. C. L. Bajoria, the retiring Chairman of the Indian Jute Mills Association, in his speech at the annual meeting of the Association held at Calcutta on Friday last week. He said:

"As things are at present, the jute mills in Pakistan enjoy the advantages of cheaper and better quality raw material, lower wage rates and, above all, an export bonus system, which together give them a cost advantage, in the case of sacking, of the order of Rs. 400 a ton, or about Rs. 40 per 100 bags of B. twills. This difference in costs between Pakistan and India is so great that it is quite impossible for us to compete effectively and, even with the advantages of superior organisation and greater efficiency, we are helpless to prevent the loss of our export markets. Seeing that the Pakistan mills can underquote us, foreign buyers naturally place their orders first with Pakistan and it is only when the industry there is booked to capacity that they turn to India. This has meant that, as the manufacturing capacity in Pakistan has expanded, there has been a corresponding contraction of the Indian export market, except to the extent to which world consumption has grown at the same time. The statistics of sacking exports since 1957 tell a dismal story of the gradual erosion of our traditional markets. Already 60 per cent of the market in Burma, 37 per cent in Australia and 63 per cent in Peru have been lost as a direct result of Pakistan competition.

"What is still more disturbing is that, emboldened by success, Pakistan has launched an ambitious programme of expansion. Within the past year, the Pakistan industry has increased its loomage from about 8,000 to 10,000 looms and the expansion programme visualises an addition of about 2,000 looms a year. But 1965, therefore, the total loomage will have risen to 14,000 which, on the basis of 2¼ shift working, will be equivalent to 35,000 looms; and as things are, we shall lose a corresponding portion of our export markets. This is the grim prospect that we face and this is why we have been asking for some assistance to enable us to compete on more level terms. The assistance, I believe, would be needed only for a short time, but the essential point is that defensive action on our part is now imperative."

Export Price Lower

It is true that the quantum of jute goods exports during the calendar year 1962 was substantially higher than in 1961, being 848,400 metric tons, as against 715,600 tons, representing a rise of 19 per cent. But, despite such a quantitative increase, the foreign exchange actually earned was higher by a little over 6 per cent at Rs. 154 crores, as against Rs. 145 crores. In other words, the industry has had to reduce its prices drastically to maintain larger exports. The average price of jute goods exported in 1962 was Rs. 1,815 per ton, as against Rs. 2,026 in 1961 to which level it had risen from Rs. 1,580 in 1960. What is more, the export earnings during the years 1962 and 1961 were made possible by the backlog of overseas demand which had accumulated in 1961. Now that this has been largely satisfied, India's sacking exports are again beginning to decline. Drawing attention to this aspect, Mr. Bajoria observed:



"Our sacking exports are again beginning to decline and we shall only be able to maintain our export earnings if remedial measures are taken to arrest this trend. . . . It is true that the jute industry as a whole is at present in a position to earn reasonable profits; but I do not consider that this vitiates our case for assistance to offset Pakistan's export bonus. The profits which are now earned come mostly from hessian, including the rapidly expanding production of carpet backing cloth. So far as sacking is concerned, the position has deteriorated since the middle of 1962. Prices have declined much more steeply for sacking than for hessian and, from May onwards, there was an alarming increase in sacking stocks from 36,500 tons at the end of May last year to 49,200 tons at the end of January. But for the fact that consumers abroad had been forced to draw on their stocks during the period of the raw jute scarcity, our stock position in Calcutta would have been even worse. It was the release of this pent-up demand that created an illusion of expanding markets when, in fact, the demand was only temporary. For sometime past, there have been indications that it is petering out and it would be most unfortunate and extremely shortsighted if the industry's plea for assistance were rejected on the ground that it was making profits and, therefore, needed no help. . . .

"Surely, if corrective action is to be taken and our sacking markets are to be saved, it is pointless to delay such action until the disaster which it seeks to avert has actually submerged the industry. Would it be reasonable to argue that flood protection measures are not required because the flood has not yet engulfed us, though the water level is rising and is only a little below flood point? I cannot understand Government's reluctance to extend to the jute industry the assistance that is already being given to other industries, including cotton, woollen and other textiles."

The I.J.M.A. Chairman minced no words when he said that "the alternatives before the country are either to compete effectively with Pakistan or to resign ourselves to the decline of our jute industry," and that there was no third course. The position of the jute industry, he added, had worsened as a result of the new Central imposts, the most disturbing of which was the Super Profits Tax. In its present form, the Tax "would," to quote him, "have the most serious and far-reaching effect on the future of the Indian jute industry and its ability to compete in export markets. Already the industry's financial resources are strained to their utmost. If, where the mills have managed to wipe off the losses of 1961, they are now to lose much of their 1962 profits, further modernisation and expansion in the industry will be brought to a standstill. For India's principal export industry, this is a grim prospect."

Raw Jute Price

It was in this connection that Mr. Bajoria sought to drive home the pertinent point that the jute industry could sell its goods and provide the nation with valuable foreign exchange only to the extent to which it could offer consumers abroad products which compared favourably in price and quality with substitute packaging materials and with the jute goods produced by competing countries. It is, therefore, imperative, as he said, that no action should be taken which tends to push up costs. Since raw jute accounts for over half of the cost of producing goods, its price has a great bearing on the demand for goods. This aspect must always be kept in mind in considering the price support policy for raw jute. No less important is the consideration that the jute grower should be assured of a reasonable minimum price so as to ensure a regular, adequate supply of raw material to the industry. Along with the fixation of such a reasonable minimum price, steps must be taken to augment the productivity of jute lands through multiplication of improved seeds, supply of more fertilisers preceded by intensive soil testing surveys, and adoption of other improved cultural practices. The cultivators should be discouraged from growing large quantities of low grade jute for which there is comparatively little demand, as in the case of some varieties from Bihar. It is on the extent to which the quality and yield of raw jute per acre improve that the capacity of the jute industry to expand its markets both at home and abroad will depend.

INTERNATIONAL TRADE...

'Export or Perish'—'Import only what and when you must'—'Set right adverse Balance of Payment'—'Conserve foreign exchange'

these are the slogans one meets with day in and day out in the press and on the platform. International trade is indeed a complicated matter today.

You may be engaged in import or export of merchandise and may want to open a Letter of Credit or negotiate Bills drawn on a foreign buyer;

You may contemplate the setting up of a new industry or expansion of an existing unit by importing capital equipment from abroad;

You may wish to offer a guarantee to the supplier of foreign machinery for deferred payment.

In fact, whatever be the nature or size of your business in and with foreign countries, you will always find it advantageous to turn to the CENTRAL for advice and assistance.

With a wide net-work of Branches throughout the country in the major port-towns as well in the hinterland, with a Branch in LONDON and with agency arrangements with first class Banks in all parts of the world, THE CENTRAL BANK OF INDIA is well-equipped to solve all your foreign exchange problems.

THE CENTRAL BANK OF INDIA LTD.

N. K. KARANJIA: Managing Director

GROWTH OF INDIAN SHIPPING

SEVERAL GAPS YET TO BE FILLED

By G. L. Mehta

THE present emergency in the country has induced a new sense of urgency. Development plans are being re-examined in order to assign fresh priorities, so that the requirements of defence may be fully met. Undoubtedly, defence effort must be given the highest priority. At the same time, the pace of economic development cannot be allowed to be retarded to any appreciable extent. In fact, in the strategic sectors which form the "hinterland" of Defence, the pace of progress has to be stepped up. It is in this context that we should recognise the importance of merchant navy to a country like India, the role which it can play in the defence of the country, the extent to which the merchant navy of the country has developed so far and the gaps which still exist and which have to be filled.

India needs a merchant navy not for the mere purpose of recording its name among the maritime nations of the world—although that may be a legitimate national aspiration in itself—but much more for playing a vital role in the economic development of the country and in its defence efforts. The country has a vast coastline, a number of important and fairly well-developed ports and a considerable foreign seaborne trade. The total overseas trade of India exceeds on an average Rs. 1,500 crores in value. Millions of tons of foodgrains, machinery and equipment have to be imported from abroad; similarly, large quantities of cargoes, such as tea, gunnies, textiles, coffee, cashew-nuts, iron ore, manganese ore, etc. have to be exported in order to earn foreign exchange. Until our independence practically all the imports and exports of the country were moved in foreign shipping. Freight had to be paid in foreign currency and this was a heavy, though invisible, drain on our resources. It is generally estimated that our total freight bill even today is about Rs. 150 crores per annum. While no country can legitimately aim at carrying all its import and export trade in national shipping, it is considered legitimate to aspire to carry at least one-half of the total trade. In other words, were adequate Indian shipping available, at least Rs. 75 crores of freight could have been earned by our own national vessels, saving the country extremely valuable foreign exchange year after year. We have made appreciable progress towards achieving this objective, but of this more would be said later.

Second Line of Defence

Saving of foreign exchange is, no doubt, important in itself, but today it is another aspect of this vital though silent transport service which has to be underlined: For the defence of the country, vital supplies have to be imported from friendly countries. For this purpose, shipping is essential. Emergent and immediate requirements have been met by airlifts but such supplies must necessarily be limited. It is the merchant navy, which is rightly called the second line of defence or the navy of supply, that brings in large quantities of much-needed "special cargoes."

The third aspect is that of the training and employment of personnel. Merchant ships provide an important field for the employment of young men and for giving them training and experience in the seafaring vocation. These officers and men can and do provide a first-class recruiting ground for the navy in times of need.

Whatever the angle from which we may look at the problem of the development of a merchant navy, the conclusion must necessarily be that an adequate, efficient and well-balanced fleet comprising different types of ships must be built up at as rapid a pace as the resources of the country permit. In assigning priority, merchant shipping would appear to deserve a place in the "upper brackets."

Pace of Development Since 1947

Fortunately, the importance of merchant shipping has been recognised by the planners of India from the inception of planned development. The pace of progress has been steady and recently Indian tonnage crossed the one-million-ton mark. India thus has already joined the front rank of maritime nations of the world. This is an achievement worthy of note because progress has been achieved at an accelerated pace in recent years despite forbidding foreign exchange difficulties. The progress of shipping tonnage is indicated by the following figures:—

Year	Total No. of ships.	Total G.R.T. Coastal	Total G.R.T. Overseas
1946	49	127,083	..
1951	103	217,202	173,505
1956	124	236,863	280,476
1961	175	344,862	563,280
1962 (December) ..	187	405,902	610,266

The progress which has been achieved is the result of several steps taken by the Government of India to assist the development of national shipping as also of the enterprise and initiative shown by Indian shipping companies. Among the steps taken by the Government of India, mention may be made of the following:—

(i) *Reservation of Coastal Trade*: The coastal trade of India was reserved for national shipping in 1950. Consequently, non-Indian shipping could not operate on the coast of India without a special licence issued by the Government authorities concerned. Foreign tonnage on the Indian coast was, therefore, progressively reduced. In fact, today, the entire dry cargo trade on the coast is carried by national shipping. A considerable volume of oil traffic moves on the coast and there are three Indian tankers carrying about one-third of this cargo, the remaining two-thirds being still carried by non-Indian vessels. This gap has not been filled because the pattern of oil movement in the coming years is likely to be changed and it is not yet certain whether the volume of coastal oil cargo would continue at the existing level. Once a clear picture has emerged, it should not be difficult to fill this gap.

(ii) *State Participation in Shipping*: Direct participation by the State in the development of shipping was another important step. The first Shipping Corporation, namely the Eastern Shipping Corporation, was set up in 1950 and the second, namely the Western Shipping Corporation, in 1956. Both these Corporations have now been merged into one organisation called the Shipping Corporation of India. This Corporation at present owns 26 ships aggregating 1,90,305 g.r.t., representing a financial outlay of about Rs. 30 crores. The bulk of this fleet is being operated on overseas routes where valuable foreign exchange is being earned or saved.

(iii) *Financial and Other Assistance*: Apart from direct participation in the development of shipping, the Government of India took special steps to assist Indian shipping companies in the private sector by granting them loans at concessional rates of interest. Such a scheme was introduced in 1951 and, since then, loans aggregating about Rs. 55 crores have been sanctioned to various shipping companies in the private sector. In order to provide continuous resources for the advancement of loans to shipping companies, a statutory Shipping Development Fund was set up which is administered by a Committee vested with statutory administrative and financial powers. Loans are advanced from this Fund and repayments are credited back to the same Fund. The fund of money thus keeps revolving and the various companies are assisted in this way towards the acquisition of shipping tonnage.

(iv) *Canalisation of Government Cargoes*: Acquisition of tonnage is merely a means to an end, the end being the transportation of cargoes and the conservation of foreign exchange. With this end in view, administrative steps have been taken to canalise Government-owned and controlled cargoes to Indian ships wherever possible. This task is being centrally co-ordinated through a Committee in the Ministry of Transport and Communications. A Chartering Organisation has also been set up in order to charter foreign tonnage on the most economical terms when Indian ships are not available.

for India

Shipbuilding

The shipping activities of a maritime country have to be supported by a well-organised and well-developed shipbuilding industry. It is, of course, always possible to purchase ships from abroad and, in fact, the bulk of the merchant navy under the Indian flag was built in various foreign shipyards. All this involves an expenditure of foreign exchange. When ships are built within the country, another important step is taken towards saving foreign exchange. India's shipbuilding prowess was known to the world in days gone by. For us, therefore, it was a question of resuscitating our old abilities and traditions and of developing modern techniques of ship construction. Prior to independence, the Scindia Steam Navigation Company had taken the pioneering step of setting up a shipbuilding yard at Visakhapatnam. This was a venture, however, which needed State assistance for further development. Accordingly, in 1952, the Shipyard was taken over by the Government of India and was further expanded. It is perhaps not well known that first-class modern cargo liners are being built at this Shipyard and are being utilised by Indian shipowners in the transportation of foreign trade. So far, this yard has constructed 33 ships aggregating over 168,000 gross tons. Some of these ships, especially those built in recent years, are fast cargo liners of 12,500 deadweight tons, doing a speed of about 17 knots.

Personnel

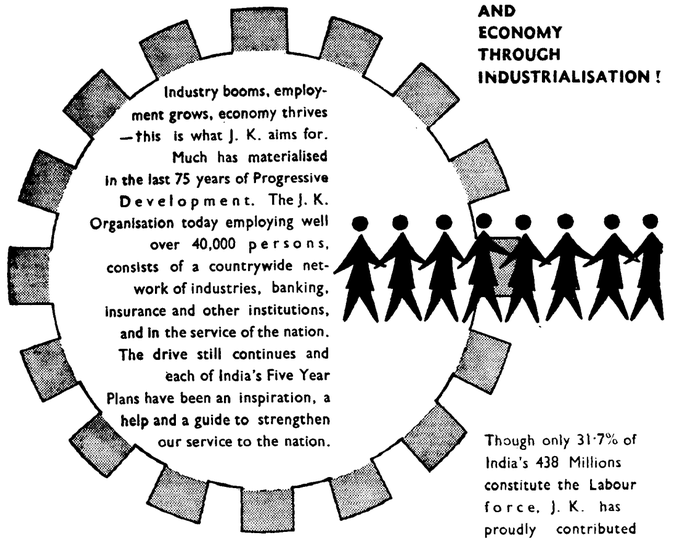
Ships are only as good as the men who man them. Fortunately, there is no dearth of young men suitable for the merchant navy profession. In fact, Indian ratings man several hundred foreign ships. The operation of merchant ships is, however, becoming more and more specialised and this necessitates adequate and proper training of personnel. To meet this requirement, the Government of India has set up six different training institutions of which one, namely, the Training Ship *Dufferin* was established prior to 1947. Three of these institutions are devoted to the training of merchant navy ratings and the other three are reserved for the office cadres on the navigating and engineering sides. The Training Ship *Dufferin* accepts 80 boys per annum for pre-sea training for a period of two years. The *Dufferin* boys then join the merchant navy as cadets for practical apprenticeship at sea. About three years' practical training entitles them to appear for their first professional examination and then to join the officers' ranks. On the engineering side, the Directorate of Marine Engineering Training accepts 100 young men for a four-year co-ordinate training practice in approved marine workshops and in a specially organised Marine Engineering College in Calcutta. The standards of training in these institutions is good and the certificates of competency issued by Indian Government authorities have Commonwealth validity.

A novel feature in the field of merchant navy porsonnel has been the establishment of Seamen's Employment Offices which register all available seafarers and regulate their recruitment on the principle of rotation. Those who are discharged from ships get their names entered on rosters maintained by the Employment Offices and these men are called up from their home towns when their turn arrives. This has been a helpful measure of welfare for the men because they are now completely independent of intermediaries and brokers who were formerly operating in the field and doing brisk business. Other measures of welfare such as provision of residential hostel accommodation, medical aid, both indoor and outpatient, recreational facilities, etc. have also been arranged at the port towns. The men are looked after by special Seamen's Welfare Officers.

If one were to take a broad view, it may be stated that earnest efforts have been made for the development of merchant shipping. Tonnage has been acquired, cargoes have been canalised, personnel has been trained and the efforts of various branches of Government have been co-ordinated to good purpose. The result is that Indian ships are now carrying the flag of India to distant parts of the world and Indian vessels are sailing practically all the seas. The following figures would show that Indian ships are now operating in various sectors in reasonable strength:

Sector	No. of ships	Tonnage
OVERSEAS		
India/U.K. Continent	32	247,844
India/Persian Gulf	1	591
India/Australia	4	24,361
India/Japan/Far East	5	40,640
India/Malaya	1	8,580
India/East Africa	1	8,521
India/West Africa	2	12,520
India/U.S.S.R.	8	64,754
India/U.S.A.	7	64,471
India/South America	2	17,074
India/Red Sea	4	25,899
Tramp: Dry cargo	10	74,593
Tanker	1	20,418
COASTAL		
Dry cargo	106	382,073
Tankers	3	23,329
Total ..	187	1,016,168

But although the progress till now has been appreciable, further substantial development is still essential. The National Shipping Board, with which I have been associated from its beginning, has devoted constant attention to this task. An examination of the merchant fleet of India today and of its performance shows that whereas in some sectors of our foreign trade Indian ships have done remarkably well, in other sectors the performance has been poor. The bulk of overseas shipping of India is employed at present in the transportation of what are known as "Liner Cargoes." This covers machinery, equipment, etc. in respect of imports, and jute, tea, textiles, etc. in respect of exports. In some sectors the ultimate objective of carrying 50 per cent of such trade in national shipping has already been achieved. In others, the share of Indian shipping varies from 25 to 50 per cent. There is no doubt that in these sectors Indian shipowners are on the way to achieving the target. But "Liner Cargoes" constitute only one-third of our country's total foreign trade. The remaining two-thirds is distributed almost evenly between dry bulk cargoes such as ore, wheat, fertilisers, etc. and liquid bulk cargoes such as crude oil and petroleum products imported from abroad. In respect of the transportation of such cargoes, our progress has been poor.

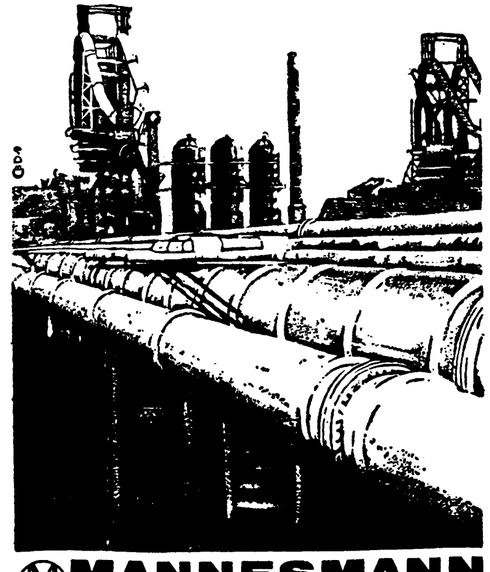


It is well known that India is importing about four million tons of wheat per annum from the United States. Similarly, there is an export of five or six million tons of iron ore. How much of these millions of tons does Indian shipping carry? Only 3 to 4 per cent! And the position is no better in respect of oil trade; in fact, it is even worse. Here are two sectors, therefore, where a great deal has yet to be achieved. In respect of bulk cargoes, specially-designed vessels are necessary. Recently, such vessels have been ordered by a new shipping company and these are expected to be delivered within the next two years. When these vessels have been added to India's operative merchant fleet, a fairly appreciable portion of the bulk cargoes will be transported in national shipping. In respect of the oil trade also, one overseas tanker has been acquired and another two are being ordered for construction. There is need for a few more and efforts will undoubtedly be made to fill this gap.

Passenger Shipping

We are deficient also in passenger shipping tonnage. In the overseas trades, two passenger ships are being operated at present, but these are not quite suitable. In the more important passenger runs in which India has special interest, such as the passenger trade between India and Europe, Indian shipping is unrepresented. Unfortunately passenger ships are so expensive that their acquisition in the context of present-day foreign exchange difficulties cannot be contemplated. Air services also offer keen competition in this sphere. This gap would, therefore, continue to remain unfilled for quite some time.

With a million tons of shipping, India has already acquired the requisite maritime stature. There are, however, several gaps still to be filled but there is evidence to show that shipping companies, both in the public and the private sectors, are alive to their responsibilities. The dearth of foreign exchange poses a challenge to the ingenuity of Indian shipowners. The latter have already shown resourcefulness. They have acquired 35 ships aggregating 183,187 tons on a self-financing basis, i.e. either by taking foreign exchange loans or by "pay-as-you-earn" arrangements. Similar initiative and resourcefulness will have to be shown in the years to come and there is reason to hope that the combined efforts of Government and of shipowners would lead to the achievement of objectives which the country has set itself in the field of shipping.



A DRIVE TO FULL EMPLOYMENT AND ECONOMY THROUGH INDUSTRIALISATION!

Though only 31·7% of India's 438 Millions constitute the Labour force, J. K. has proudly contributed to a very commendable percentage for this employment.

MONTHLY ECONOMIC REVIEW OF U.K.

THOUGHTS ON THE COMING BUDGET

WILL IT ADMINISTER A FURTHER DOSE OF REFLATION?

By W. T. C. King

EDITOR OF THE *BANKER*, LONDON

A MAJOR question for the business and financial community in Britain in this season concerns the pattern of the impending annual budget this year due to be introduced on 3rd April and looming rather larger than usual in all attempts at economic forecasting. This will be not only the first budget to be introduced by Mr. Reginald Maudling—who succeeded Mr. Selwyn Lloyd as Chancellor of the Exchequer last July—but also the first since British economic policy swung over from restraint to stimulation, after the sterling crisis of 1961. It is, therefore, a budget of special significance.

The task of determining its appropriate scale and pattern is, however, more than usually complex. It was evident several months ago that one of the complications would be the difficulty of estimating with tolerable accuracy how much effective stimulation would be given to the economy in the coming year or so by the measures already taken—including credit relaxations started as far back as last June, important tax reliefs and other fiscal concessions announced in the autumn, major increases in expenditures by the public sector and increases in social security benefits that have still to take effect. Now, however, several other major complications bedevil the calculations—notably, the distortion of the behaviour of the economy for almost three months by a winter of unprecedented severity; uncertainty about the implications of the breakdown of the negotiations with the European Common Market; and the problem of relating immediate, reflationary policy to the longer range objectives of achieving a faster average rate of growth. Important additional information bearing on each of these problems has become available in the past month, but it does not all point in the same direction, to give a clear guide to the budget-makers.

Production and Employment

Recent experience has, however, altered unofficial expectations in one important respect. Early in the new year, many city observers were inclined to think that the series of reflationary steps already taken or in train had largely forestalled the budget. Now city opinion is virtually unanimous that the budget will administer a further dose of reflation, though very few expect additional reflation on the scale recently advocated by some unofficial bodies of economic opinion, such as the National Institute of Economic and Social Research. None of the business indicators has yet shown that the level of activity is benefiting from the stimuli already applied, but unfortunately the indicators that are most up to date (and, therefore, most likely to relate to the period when stimulation was having its effect) are the very ones most distorted by the abnormal weather. The index of industrial production is not, at the moment of writing, available beyond December, in which month the distortion had begun, but was much less than it eventually became; in that month, the index corrected for "normal" seasonal influences dropped back one full point to 115, the same as for October and two points below the summer's peak (1958=100). Its average for the four months September to December was ½-1 per cent lower than that for the preceding four months, but 2-2½ per cent above that for the corresponding months of 1961.

Figures of unemployment are available for the count of 11th February, probably around the peak of the winter's dislocation. These showed a rise in the total unemployed in Great Britain by 63,257 over four weeks, following the highly abnormal rise of 248,474 in the previous five weeks, and carrying the total to 878,356—by far the highest figure since the war, except for the period of the fuel crisis in the winter of 1947 (when shortages of fuel compelled drastic shutdown of wide sectors of industry). Of this increase over the nine weeks, 176,000 represented workers classified as "temporarily stopped." Excluding these workers and also excluding juveniles that had just joined the labour force, the increase amounted to 85,000 in the first period and 42,000 in the second, as compared with the "normal" seasonal increase of about 41,000 and 2,000, respectively. A substantial part of the difference between these two sets of figures was certainly attributable to the whether, but the best guess available (it can hardly be more than a guess) is that the underlying trend of unemployment was still rising, though fairly slowly, at this period. The true, seasonally corrected, figure of total unemployment is being guessed at around 2.6 per cent compared with the actual figure of 3.9 per cent (at the February count). The average for the whole of 1962 was just over 2 per cent and for the whole of 1961 just over 1½ per cent.

These figures tend to support other evidence to suggest that the margin or under-utilised productive capacity in the economy is wider rather than narrower than it was at the end of last year. The survey of industrial trends that is undertaken every four months by the Federation of British Industries concluded on the basis of replies to questionnaires given in the second half of January that, broadly speaking, there was no indication of a material change in the level of output over the whole period since the corresponding survey conducted in mid-1961. Between October and January last, however, the proportion of respondent firms reporting that they were operating below a "satisfactory full rate" rose from 66 to 68 per cent and at the latter date 28 per cent of the below-capacity operators reported that their margin of unused capacity was wider than that in October. The proportion of firms reporting that they were less optimistic about the general situation in January than that in October was 30 per cent (a larger proportion than that shown four months previously), whilst only 18 per cent was more optimistic. These answers, it should be noted, were all given after the warning of a breakdown in the E.E.C. negotiations that emerged from General de Gaulle's mid-January Press conference. It is in the light of evidence such as this that the Government will think some additional reflation necessary. On this assumption, there has been a notable advance in equity prices on the stock exchange, and some turning away from gilt-edged (fixed interest) stocks.

Budgetary Reliefs Needed

It is most unlikely, however, that investors' expectations have been geared to anything approaching the degree of reflation advocated by the National Institute of Economic Research. The Institute suggested, in its February review, that the stimulation already applied to the economy might cause total output (gross domestic product) to rise by about 3½ per cent this year, as compared with its rise of 1½-2 per cent in 1962, but that such a rise would not make much inroad into the present underlying level of unemployment (as distinct from the level reflecting the normal as well as the abnormal seasonal influences of the winter). The Institute thought that the Government ought to be aiming at raising output by 5 per cent this year and suggested that, to achieve that rate of expansion, it might be necessary to give budgetary reliefs totalling some £400,000,000. This goes well beyond anything that most city observers would think it sensible to attempt this year—which is not to deny that the economy might be capable of expanding for a time at the rate of 5 per cent, and conceivably even more, once it gets moving upward again. The scope for any such exceptional expansion comes from the abnormal margin of under-utilised resources, but the existence of these resources does not guarantee that it would be safe to try to engineer a very rapid take up.

Nor is the immediate scope for expansion yet being increased as a result of the comprehensive studies now being made by the National Economic Development Council set up last year by Mr. Selwyn Lloyd, and including representatives of the Government, employers and trade unions. The office of the N.E.D.C., after detailed

assures you of these advantages:

1. Each Timken tapered roller bearing is made of the finest nickel-rich steel, giving bearing after bearing the internal strength and uniform mechanical properties you need.
2. The Timken bearing cup, cone and rollers are case hardened, making them hard on the outside to resist wear, tough on the inside to resist shock.
3. All Timken bearings are precision made and for applications where extreme accuracy is required, Timken bearings can be furnished accurate to 75 millionths of an inch total runout. There are 30 types and 10,594 sizes of Timken bearings. Your Timken bearing authorized distributor will make sure you receive the right bearing for your application ... and it will be "factory-fresh". Look for the black and orange carton.

NATIONAL CL 2-222 1563

POSTS AND TELEGRAPHS

ALL-ROUND PROGRESS IN SERVICES

THE communication system plays the role of a catalytic agent in promoting the tempo of industrial development. It is only natural, then, that it has figured prominently in the Five-year Plans in India. In this context, the activities of the Indian Posts and Telegraphs Department, enumerated in the *Detailed Annual Report* 1961-62, just released to the Press, makes interesting reading. The report reveals that as many as 5,384 post offices were opened during the year under review, a majority of them being located in rural areas. This, indeed, is a good performance, considering the fact that the third Plan provides for an annual (average) increase of only 3,400 in the number of post offices. The total number of post offices in India has risen to 82,223 as at the end of the year 1961-62. The total number of telegraph offices established during the year was 167, bringing the total to 11,896. The number of departmental telephone exchanges at the end of March 1962 was 1,626, which compares well with 1,374 at the end of the previous year. There was also a marked increase in the number of private branch exchanges which had gone up from 6,383 to 6,934 in 1961-62. The number of telephones rose by 58,120 to 520,917.

Activities Expand

The volume of work handled by the postal, telegraphic and telephone departments has also gone up considerably. Thus the total number of postal articles handled by the Department was 4,312 million in 1961-62, or an increase of 283 million over a year. The number of money orders (both inland and foreign) which passed through the Department rose from 76.5 million to 80.6 million, with a corresponding increase in their value from Rs. 334 crores to Rs. 359 crores in 1961-62 (and Rs. 386 crores in 1962-63). The total balance in Savings Banks Accounts was higher at Rs. 466.5 crores at the end of 1961-62, as compared with Rs. 431.4 crores in 1960-61. But there was a decline in the total amount invested with the Department under the 12-year National Plan Savings Certificates, that is, by Rs. 2.6 crores, to Rs. 79.8 crores. The aggregate number of telegrams sent during the year under review rose to 40.4 million, from 38.1 million in 1960-61. The following table provides a bird's-eye view of the activities of the P. and T. Department, besides a gist of the revenue position of the Department:

P. & T. Facts At A Glance

	1960-61	1961-62	1962-63 (estimated)
No. of Post offices	76,839	82,223	88,223
Kilometres of surface mail routes	546,965*	547,931	..
Kilometres of air mail routes	40,005	47,159	..
No. of postal articles (including those on P. & T. service) (in millions)	4,029	4,312	4,615
Money orders (inland and foreign) (in millions)	76.5	80.6	84.9
Registered articles (million)	116.7	129.0	140.4

Telephones	26.4	31.1	35.4
Radio	0.1	0.1	0.3
Total	77.1	87.9	96.4

* Revised figures.
N.B.—Revenue figures for 1962-63 are revised estimates.

An analysis of the financial results of the working of the Department shows that there was a record surplus of Rs. 12 crores during 1961-62, as compared with about Rs. 8 crores during the previous year. The total receipts (from post offices, telegraphs, telephones and radios) was of the order of Rs. 87.89 crores, of which working expenses amounted to Rs. 70.55 crores. An amount of Rs. 4.98 crores was set apart for dividend to General Revenues. The total accumulated surplus of the Department under the previous arrangements, which stand merged in the General Revenues, was Rs. 29.61 crores as on 31st March 1960. The total dividend-bearing capital outlay during 1961-62 amounted to Rs. 11.25 crores, while the cumulative capital outlay as at the end of that year came to Rs. 151.26 crores (excluding Rs. 1.05 crores financed from ordinary revenue). Incidentally, this aggregate capital outlay is expected to be Rs. 175.27 crores at the end of 1962-63 and Rs. 203.77 crores at the end of 1963-64).

Plan Expenditure

It may be noted here that there was good progress in the implementation of third Plan schemes during the year under review. Consequently, an amount of Rs. 12 crores was spent on Plan schemes in 1961-62, the first year of the third Plan. It may be recalled here that during the second Plan period, the average annual expenditure on Plan schemes was of the order of only Rs. 9.98 crores.

An important feature of the activities of the P. and T. Department in 1961-62 was the vast strides made by the Telecommunication Research Centre. Many of the equipments designed earlier were brought to successful mass production and use. A number of new designs has been evolved and new improved services have been provided by utilising the later techniques evolved in the Research Centre. In addition, the activities of the Research Centre included active advice and participation in increasing production and setting up of manufacture. The work with which the Research Centre has so far been occupied was confined essentially to the design of carrier telephone and V.F.T. system, switching systems utilising the existing components and to instruments for maintenance. The activities are being further extended to cover other branches of great importance to the P. and T. Development plans. These new branches would cover the engineering, planning, design and manufacture of microwave equipments, the development of telegraph switching system equipment for speeding up the telegraph service, investigation of pulse and logical circuitry in connection with better instruments, electronic switching and computer technology.

Manufacture of Equipment

During the year under review, large-scale manufacture of the following items were taken up: 8 channel carrier telephone system; 24 channel voice frequency telegraph equipment; testing and measuring instruments of different types; transistorised privacy equipments; small private automatic branch exchanges; and single-link and multi-link operator dialling equipments and associated signalling units. In addition, the production of stackable carrier system continued on a large scale and a new design utilising transistors and cables to be of use in the rural areas went into production.

The total volume of production during the year of the items designed in the Research Centre was approximately between Rs. 80 and Rs. 90 lakhs. It represents not only a considerable saving in foreign exchange, but also availability of these equipments to the P. and T. on a large scale. In addition, the manufacture of these equipments indigenously has enabled rapid expansion of the tele-communication facilities.

While the progress made by the Department is impressive in statistical terms, there is no gainsaying the fact that there is still a long way to go in improving the quality of its services. How else could one explain the increase in the number of complaints registered with the Department from year to year?

REVIVAL IN U.K. STEEL OUTPUT

British steel production was nearly four per cent higher in February than in the previous month (seasonally adjusted), according to the Iron and Steel Board, London. Output in February averaged 418,000 tons a week. The February rise, it is said, suggests that the long-awaited revival in steel production has at last begun, although the position will become clearer after another month's figures have appeared, completing the picture for the first quarter.

The Iron and Steel Board has also revealed that capital expenditure in the iron and steel industry in the U.K. during 1962 on major schemes of modernisation and expansion was about £170 million. Although this is less than the record expenditure of nearly £200 million in 1961, it is higher than in any other previous year.

A compact quick-freezing plant, specially designed to enable small fishing vessels with restricted headroom to freeze their catch at sea, has been announced by a British firm. Jackstone Froster Ltd., Lincolnshire, developed with the needs of operators fishing for shrimps, prawns, and other crustacea particularly in mind, the plant can also be used ashore by small commercial food processors who find space limitations a problem. The freezer is easy to operate and requires a minimum of maintenance. Constant, accurate freezing times and operational reliability are ensured by the positive control of refrigerant to each pair of freezing plates.

PIPELINE TO BARAUNI

JUST READY FOR OPERATIONS

INDIA'S first crude oil pipeline, put up at a cost of Rs. 50 crores in N.E. India, is now in operational readiness, with the completion of hydraulic testing of the installations last month. The 720-mile-long pipeline of Oil India Limited, a joint venture of the Government of India and the Burmah Oil Company, was completed in two stages. The first sector, consisting of 250 miles of 16-inch diameter pipeline from Nahorkatiya to Gauhati—where the Noonmati refinery is located—was commissioned in March 1962 and is making regular supplies of crude oil to the refinery. The work on the second sector of 14-inch diameter 470-mile pipeline from Gauhati to Barauni started in October 1961 and the main pipe-laying operation on this sector was completed in June 1962. Since that date hydraulic testing of the line has been in hand.

It is claimed that Oil India's pipeline, the second longest in the East, is one of the most technically advanced pipelines of its size anywhere in the world. It will now permit full utilisation of the production potential of the oilfields (Nahorkatiya, Rugrijan and Moran) in Assam, discovered in 1953-54 by the Assam Oil Company and now operated by Oil India Limited. At present, it is designed to carry 2.75 million tons of crude oil through its 16-inch diameter pipeline upto Noonmati, a distance of 250 miles from the oilfields, and thence onwards 2 million tons through its 14-inch diameter pipeline to Barauni, covering a distance of 470 miles from Noonmati. This quantity of oil, when refined, will enable the country to save foreign exchange of over Rs. 35 crores annually and contribute to the development of industry and transport in the country. The present pipeline capacity of 2.75 million tons could be expanded to transport 4 million tons of crude oil with certain additional pumping facilities, if it proves possible to increase the crude oil production potential of the Assam fields, or if new productive areas are discovered there.

Oil India Limited was required to construct this pipeline when it was decided to locate refineries at Gauhati (capacity 0.75 million tons) and Barauni in Bihar (original planned capacity 2 million tons). Under an agreement with the Government, the Burmah Oil Company (Pipe Lines) Limited, a subsidiary of the B.O.C., undertook the construction of the project on a no-profit no-loss basis. The pipeline has nine crude oil pumping stations to ensure a continuous flow of oil in the pipe. The operation as a whole will be controlled from its headquarters at Noonmati by a tele-control and tele-communication system which employs V.H.F. Radio. Automatic radio stations have been installed at pump stations which are approximately 90 miles apart and a further seventeen repeater stations situated at approximately 30 miles interval to give as much information as possible about the flow of oil to make the automatic working of the line feasible. Apart from the major crossing of the Brahmaputra river on the newly constructed railway bridge, on its long journey to Barauni, the pipeline crosses 78 rivers varying in width from 100 to 3,000 feet, depending on the season, as also many smaller rivers and streams.

The 16-inch pipe required for the first sector (250 miles from Nahorkatiya to Noonmati) weighed about 32,000 tons and was mostly imported. The 52,000 tons required for the second 14-inch sector was supplied by the H.S.L.; 27,000 tons from their pipe mill at Rourkela and 25,000 tons by imports from outside sources.

One unique feature of the new pipeline system is the crude conditioning plant which was specially designed and constructed to put in operation the research findings made in Digboi and London under the ægis of the B.O.C., the object of which was to reduce the viscosity of the waxy Nahorkatiya crude in order to make it pumpable during the cold seasons. This research showed that if this crude was heated upto 200° F. and was then allowed to cool statically—under control and without any disturbance—the viscosity of the crude would be reduced and its pour point would come down from 89° F. to 65° F. Based on this finding, new plants, the first of their kind in the world, were designed for installation at Nahorkatiya and Moran at an estimated cost of over Rs. 2 crores. The latter plant is still to be completed, but the former is in operation.

The foreign exchange cost of the project was met from a loan of £10 million made available to Oil India by the Burmah Oil Company and U.K. Government's loan of £3 million to the Government of India for this purpose. The rupee finances were met by overdraft facilities made available by the State Bank and Government loans which were later refunded when the Company successfully floated its recent Rs. 30 crores debenture-stock.

RAILWAY EQUIPMENT FROM U.K.

India has placed its first British order for alternating current equipment for suburban railway systems. It is for a prototype set of 25kV 50 cycle equipment, which is to be supplied jointly by Associated Electrical Industries Limited and the English Electric Company Limited to the Eastern Railways. The bulk of the equipment which is for 12 ft. wide coaches on 5 ft. 6 in. gauge lines will be underframe mounted. Self-ventilated motors, control gear and auxiliaries will be made by AEI at Trafford Park, Manchester and Sheffield; chokes and transformers will be made at Stafford by English Electric, who will also supply the silicon semi-conductor rectifiers.

NEW PRODUCTS AND PROCESSES

Electric Wire-stripper

A NEW rotary electric wire-stripper developed in Britain is capable of dealing with 1,000 cables an hour. It will strip up to 1½ in. (38 mm.) of insulation from solid and stranded conductors of up to ⅜ in. (9.5 mm.) in diameter. The machine is foot operated, allowing the operator both hands free to feed in the cable ends and is driven by an electric motor of ¼ h.p. Cutting blades are available to give angled cuts of 45 and 90 degrees.

Letter-sorting Machine

Automatic letter sorting in Britain has taken a step forward with the introduction of new types of ultra-rapid equipment. By printing phosphoresent code marks on the envelope, the new machines will sort entirely automatically at all stages. For the first sorting, a machine will select for 20 areas at 20,000 letters an hour. An improved version of E.L.S.I.E. (Electronic Letter Sorting Indicator Equipment), it is claimed, will sort for 144 areas at 7,000 letters an hour. It will also incorporate many improvements which are the result of experience.

New Finishing Process for Carpets

A new finishing process developed by a British firm, Carpet Trades Ltd., will substantially increase the life of a carpet. With the new process, foam-rubber is machine-blown completely through the base material from the back, locking each piletuft into position. While ordinary carpets soon show bare patches where the tufts have been kicked out, the new technique makes them virtually irremovable. The carpets, to be marketed initially for halls, landings and stairs, are hard-wearing and fray-resistant—they can be cut to any floor plan without binding the edges.

Mechanical Floor Sweeper

A new mechanical floor sweeper, claimed to be the cheapest of its type available, is being manufactured by a British firm, Motor Rail Ltd. Suitable for sweeping a wide variety of floor and pavement areas, such as those in factories, warehouses, docks, markets and garages, it can cover an area of 1,200 sq. ft. (111,484 sq. m.) in five minutes. Highly manœuverable, the machine can turn in its own length and pass through a 30 in. (76.199 cm.) opening, making it ideal for gangways, congested areas or sweeping round bins. Simple to use, the machine has only two driving controls—a clutch lever on the steering handle for disconnecting the motor from the driving wheels and a throttle control.

Slag for Blasting Reduces Risk of Silicosis

A new material for blasting steel and other metals, which eliminates the hazards of silicosis, has been launched by the Swedish Boliden Mining Company. Made from slag from the Company's copper works at Rönnskär it consists of granulated and sifted grains with sharp edges but contains no free silicic acid. Experiments started at Rönnskär five years ago with a view to developing an inexpensive and efficient blasting material to replace quartz sand, which has the drawback that it may produce silicosis owing to its 90 per cent content of free silicic acid. The tests showed that it was possible to manufacture a blasting material that was more efficient than sand, yet produced less dust. Extensive chemical and physical investigations proved that the silicic acid in the slag was bound to its content of iron, forming an iron silicate.

Coal-cleaning Filter

Improvements to a widely-used British coal-cleaning filter, bringing reductions in weight and cost, have been announced by the manufacturers, Simonarco Ltd., Cumberland. The filter, used for final filtration, is a continuously operated machine separating solid-liquid mixtures, notably in furnacite and other solid fuels composed mainly of dust. Used for the filtration of froth concentrate from flotation plants as well as for the treatment of flocculated slurries, the latest version incorporates a new type of hollow plastic filter disc replacing a wooden type. This is made from sectors of paper-based industrial laminate, which has halved the weight of these components and reduced their cost by about 20 per cent. The drainage area of each sector and the life of the filter cloths which cover them have also been increased. Tough enough to withstand continuous bombardment by fragments of all sizes, it is also accurate enough to prevent the finest dust particles from escaping.

Liquid Helium Refrigerators

A liquid helium refrigerator, costing £100,000 and believed to be the largest of its type in the world, has been ordered by Britain's National Institute for Research in Nuclear Science from the British Oxygen Company Ltd. The refrigerator is for use with a liquid helium bubble chamber being constructed for the study of interactions between high energy particles at the Rutherford High Energy Laboratory at Chilton, Berkshire, England. Maintaining the temperature of the system at minus 270° C. over periods of 30 days of continuous operation, the principal feature of the refrigeration cycle is the use of expansion turbines equipped with helium gas lubricated bearings running at speeds up to 350,000 revolutions a minute. High thermodynamic efficiencies will be attained and the plant will be completely independent of pre-cooling fluids, such as liquid nitrogen or liquid hydrogen.

Fertiliser from Coal

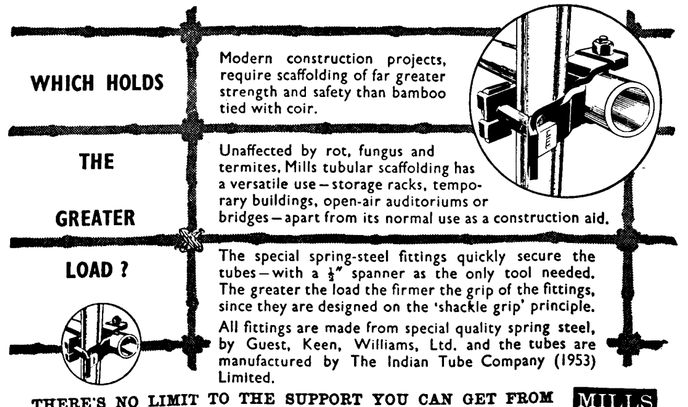
An American and a Japanese company are preparing the production of fertilisers, whereby coal is used as raw material. For this purpose, a process has been developed by scientists of the Pennsylvania State University 14 years ago. In this production process, rather volatile bituminous coal is pulverised, treated with concentrated nitric acid and afterwards this mixture will be neutralised with concentrated ammonium hydroxide. After the extraction of water from the mixture, complex compounds are formed of humus substance containing ammonia and nitrogen, the active content of chemical fertilisers. As demonstrated by different greenhouse and field trials, the application of the new fertiliser to maize, wheat and barley crops, should sustain a comparison with the traditional fertilisers.

Industrial Production of Potassium Nitrate

The Southwest Potash Corporation in Vicksburg, U.S.A., erected a factory for the manufacture of potassium nitrate (saltpetre), at the expenditure of 7 million U.S. dollars. This potassium nitrate contains 13 per cent N and 44 per cent K_2O. The fertiliser value of potassium nitrate results above all from the presence of its two major nutrients, its low chlorine and sulphur content and its outstanding physical properties. It is suitable both for direct application in agriculture as well as for the preparation of multinutrient fertilisers. Till some time ago, the industrial production of potassium nitrate as a fertiliser was not economical on account of the high costs involved. The process developed by the American Metal Climax Inc., the parent company of the Southwest Potash Corporation, seems, however, to permit a profitable production. Potassium chloride from the indigenous Carlsbad production and nitric acid, which is supplied via a pipe-line system by the Spencer Chemical Company, serve as raw materials. The Southwest Potash Corporation offers its potassium nitrate for the fertilising of tobacco, citrus, potatoes and garden crops.

Addressing Machine for Small Firms

A Swiss precision engineering firm has put on the market a simplified form of addressing machine. "Maxadres," as this new machine is called, is hand-operated simply by pressing on a lever and works according to the chemical reproduction principle. The addresses are written by means of hectograph carbon paper on rolls of paper, on which it is always possible to cut out or add addresses, by means of adhesive labels. The rolls of addresses take up much less room than the collections of plates required with standard machines and can be used 50 to 100 times, depending on the circumstances; this number is quite sufficient for despatching a considerable number of trade journal's, reports to members of a society and any other regular communications which would otherwise involve the tedious and expensive job of writing or typing the addresses one by one. As the machine uses no ink, the work is quite clean and can be left to even a junior member of the staff, owing to the simplicity of the operations to be carried out. The "Maxadres" addressing machine, which is fed by hand, automatically ejects the printed envelopes: it can be supplied with or without automatic feed of the addresses and in models for addresses of 5 or 8 typed lines.



Precision-boring Machines

An Austrian firm, Ernst Krause and Co., is specialising in the manufacture of precision boring machines of all usual sizes, as they are used for finishing bore holes. They range from simple hand-operated models to big-sized fully automatic precision boring machines, working as part of big roll trains. A 4-spindle precision drill has been specially designed for the finishing of completely gastight valve seats due to the perfect alignment of valve guide and valve seat. The perfect turning of the valve seat gives it an exact conicalness with a flawless surface not marred by the wear of the knives. The machine is fully automatic and has a transfer installation. It is intended as an element of roll trains. For the precision boring of crankshafts, cam shafts and oil pumps in automotive vehicle motor blocks a 3-spindle precision boring machine has been designed. Its special design guarantees highest precision. The bladeholders are supported by precision bearings placed on either side of the work-piece. The control and the layout of all control elements are designed to simplify operation as much as possible and are foolproof. A 2-spindle hydraulic precision boring machine serves, among others, for finishing the boreholes of different diameters in hydraulic castings. Its most characteristic feature is the concentration of all feeding devices. The play of all movements is reduced to a minimum, all canting and getting out of alignment is excluded. This results in a superior finish of the surfaces and in a precision as they are essential for the longevity of the tools.

The firm also manufactures precision boring machines for different workpieces turned out in smaller series.

Electrostatic Coating Device for Polyester Resins

An Austrian firm, Messrs. J. Coudenhove, Strauchgasse 3, Wien I., Austria, has developed a low-pressure electrostatic coating device for polyester resins. Equipped with an additional glass cutter, the device is used in the manufacture of vehicle body parts, machine coverings, transparent domes, boats and containers and by the building industry, e.g., for lining concrete silos and for the insulation of flat roofs. The device can be operated with one hand and requires only a supply of compressed air. The main part of the installation is the novel resin-glass spray gun having a total weight of 1,650 grams (inclusive of turbine drive). This gun is superior to all others of its kind in handiness and light weight. The small dimensions enable the spray-coating even of small, intricate parts, containers, etc., because the access is much simpler than with spray guns which must be operated with both hands. The resin spray guns are pneumatically controlled. The two nozzle needles are retracted by compressed air. Compared to spring-operated spray guns this increases the accuracy and reliability of operation. The air-driven turbine motor is accommodated in the plastic handle of the gun and drives the fibre cutting mechanism disposed between the resin spray nozzles. The cutters consist of inserted razor blades, which are very easily replaceable. One set of razor blades will be sufficient for about 100 kilograms of glass fibres. The extremely economical rubber-coated pressure rollers can also be easily replaced. Due to the provision of glass-resin nozzles, the two resin jets hit the cut fibre laterally immediately after it has left the chamber and throw the fibre onto the surface to be coated. The spray gun is designed to avoid electrostatic charging. The fibre is uniformly applied to the surface. The rates of glass and resin feed can be independently and continuously controlled. Any desired resin-glass ratio may be adjusted without difficulty. A glass-resin mixture can be sprayed at a rate of 150-5,000 grams per minute. The electrostatic coating method enables considerable savings in material and labour.

THE UNITED COMMERCIAL BANK LTD.
(HEAD OFFICE : CALCUTTA)
G. D. BIRLA
Chairman

CAPITAL :
Subscribed ... Rs. 5,60,00,000
Paid-up ... Rs. 2,23,33,937
Reserve Fund & Other Reserves ... Rs. 3,00,00,000

- Branches throughout India.
- Foreign Branches in Pakistan, Malaya, Singapore, Hongkong & United Kingdom.
- Agents in other places.
- Provides world-wide Banking Service for Business and Individuals.

S. T. SADASIVAN,
General Manager.

UCO.9/63

THE UNION BANK OF INDIA LIMITED

(REGISTERED 11TH NOVEMBER, 1919)

APOLLO STREET, FORT, BOMBAY 1

FORTY-THIRD REPORT

The Directors have pleasure in submitting to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1962.

The net profit for the year, after providing for taxation and including the sum of Rs. 1,45,390.70 nP brought forward from the last year's account, amounts to .. Rs. 23,52,338 02

The following appropriations have been made :—

		nP
Amount transferred to Reserve Fund under Section 17 of the Banking Companies Act, 1949	6,00,000	00
Amount written off Premises Account	50,000	00
Amount provided for Bonus to Staff	7,66,431	00
	14,16,431	00

The Balance of Rs. 9,35,907.02 nP., the Directors propose to dispose of as follows :—

		nP
To pay a dividend of 57 nP. per share or 11.2/5 per cent. per annum, subject to deduction of tax, on 12,00,000 old shares and at the rate of 14 nP. per share, subject to deduction of tax, on 8,00,000 new shares for 3 months from 1st October 1962 to 31st December 1962	7,96,000	00
To carry forward to next year's account	1,39,907	02
Total .. Rs.	23,52,338	02

The Directors beg to report that Shri K. R. P. Shroff who retires by rotation this year and is eligible for re-election does not wish to seek re-election. His decision to cease his association of over three decades with the Bank has been prompted by his age and indifferent health. The Board of Directors have accepted his decision with great regret and recorded their deep sense of appreciation of the long and meritorious services extending over a period of 33 years rendered to the Bank as a Director and Chairman of the Board by Shri K. R. P. Shroff who with his vast and varied experience and unimpeachable integrity was a source of strength and prestige to the Institution.

The business of the Bank during the year under review continued to show satisfactory progress. The Bank opened two new branches during the year, at Khand Bazar (Bombay) and Jabalpur (Madhya Pradesh).

A contribution of Rs. 1,00,000 was made by the Bank during the year to the National Defence Fund.

The Directors beg to report that the deposits which stood at Rs. 32,84,00,000 as at the end of December 1961 rose to Rs. 42,62,00,000 at the end of December 1962. Advances increased from Rs. 18,50,00,000 as at the end of December 1961 to Rs. 23,23,00,000 at the end of December 1962.

As stated in the Directors' Report submitted to the Shareholders last year, the Paid-up Capital of the Bank has been increased from Rs. 60,00,000 to Rs. 1,00,00,000 by the issue of 8,00,000 new shares of the face value of Rs. 5 each fully paid-up at a premium of Re. 0.50 nP. per share, which are now fully subscribed.

With the transfer of Rs. 6,00,000 from the Bank's profit and Rs. 4,00,000 received by way of premium on new shares, the Reserve Fund of the Bank now stands at Rs. 70,00,000.

Pursuant to the Resolution passed at the last Annual General Meeting of the Company, your Bank applied to the Central Government for exemption from audit for the year 1962 under Section 228 of the Companies Act, 1956, in respect of 18 branches and the Central Government has by its Order dated 11th June 1962 granted such exemption. The remaining branches have been either audited by the Bank's Statutory Auditors or by firms of Chartered Accountants entrusted with the audit in consultation with the Statutory Auditors. In order to avoid considerable delay and expenses involved in having the accounts of all the Branch Offices of the Bank audited by the Company's Auditors and considering the satisfactory arrangements made by the Bank for audit and surprise inspection of the Branches by the Bank's Statutory Auditors, other well-known firms of Chartered Accountants and by responsible and competent officers of the Bank, your Directors propose to apply for a similar exemption with regard to the auditing of the accounts of the Branch Offices for the year ending 31st December 1963 to the extent permissible under the Rules framed by the Central Government. Resolutions in this behalf, under Item 6 of the accompanying Notice, are commended for approval.

Under the provisions of Section 256 of the Companies Act, 1956, three of the Directors of the Company, Shri K. R. P. Shroff, Shri Ratansi Mulji and Shri Hamir Karsondas Vissanji retire by rotation. Being eligible for re-election, Shri Ratansi Mulji and Shri Hamir Karsondas Vissanji offer themselves accordingly.

You will be required to appoint Auditors for the ensuing year and fix their remuneration.

By Order of the Board,

K. R. P. SHROFF,
Chairman.

BOMBAY, *4th March* 1963.

BALANCE SHEET AS AT 31st DECEMBER, 1962.

CAPITAL AND LIABILITIES	Rs.	nP	Rs.	nP
1. Capital—				
AUTHORISED— 40,00,000 Shares of Rs. 5 each	2,00,00,000	00		
ISSUED, SUBSCRIBED AND PAID-UP:— 20,00,000 Shares of Rs. 5 each Fully Paid-up			1,00,00,000	00
2. Reserve Fund and Other Reserves (Includes Rs. 4,00,000 received in cash as premium on new shares issued during the year).			70,00,000	00
3. Deposits and Other Accounts:—

PANCHAYATS AND RURAL DEVELOPMENT

SOME VITAL DESIDERATA HIGHLIGHTED

By Prof. V. G. Ramakrishna Aiyer

INDIA is passing through a period of rapid change and daring innovations are being introduced at the village level to provide the foundations for a broad base of people's participation. What prospects these experiments have in store? Will *Panchayat Raj* prove to be the agency for social change in India from tradition to modernity? It is now realised on all hands that planning under democracy can succeed only if we are able to release the latent potentialities of the masses for helping themselves, and unless we are able to develop the sense of initiative and resourcefulness of the people in every village, it will hardly be possible for us to find the necessary resources for implementing the various projects and schemes under the National Plan. In other words, economic planning, in order to be successful in a democratic country, must be decentralised as wide as possible. The Constitution of India envisages the village communities or *Panchayats* to become the basic units of administration and planning. Vinobaji's Gramdan movement has helped greatly in focussing attention on this aspect of development or decentralisation of economic and political power in the form of more or less self-sufficient and self-governing village communities.

Since *Panchayat Raj* as a dynamic step in rural self-government affects the needs of about 90 per cent of India's population in rural areas through representative bodies charged with the responsibility of formulation and execution of rural development programmes, one cannot over-emphasise the necessity for avoiding the interplay of political and personal factors. Where there is power and pelf, there is politics. The first thing to be done is to prevent members of State legislatures and Parliament from being eligible for election to executive positions and this is precisely what one State, namely, Andhra Pradesh, has already taken up in right earnest; that is, after July 1964 when the term of the existing samithis and parishads expires, members of State legislatures and Parliament would be ineligible for election to executive positions as chairman or vice-chairman and president or vice-president of the parishads and samithis respectively. M.L.As, M.L.Cs and M.Ps aspiring to these offices would have to choose between them and legislative membership. Such a reform is urgently required because, for one thing, besides teaching self-reliance, it emphasises the fact that these crucial positions in the rural administrative set-up which are wholetime jobs should not be occupied by legislators who would be frequently away from the main sphere of village work and, for another, we must prevent concentration of influence and power in rural areas in the hands of a few individuals who combine membership of legislature or Parliament with samithi or parishad presidentship.

The impact of the conflict with China has been felt throughout the country even in villages remote from the centre of administration, and it is just the proper time to enthuse the people to play their part in building up a massive defence motivated not merely for the present emergency but to put the entire rural areas on an organised basis for purposes of meeting the needs of war-time and peace-time through the C.D. and *Panchayat Raj* machinery. In order to do this a scheme of Village Volunteer Force and Labour Bank is to be initiated. The idea of Labour Bank is the giving of free labour at the minimum rate of one day a month of every able adult or a monetary contribution in lieu of it. C.D. Blocks—5,200 of them—now cover all the villages and there are 203,000 *panchayats* and 212,000 co-operatives within the blocks with a million of official personnel. It is well to emphasise that it is not so much labour and capital that is lacking as the spirit of innovation and enterprise. If the proposed voluntary force scheme is to play a key role, its main task should be increasing farm production.

Apart from the imperative need for a proper administrative set-up, the proper organisation of the machinery connected with *Panchayat* finance is vital for any enduring work to be done. The question of resources for *Panchayat Raj* institutions is being studied by a Committee under the presidentship of Shri K. Santhanam. It may, therefore, be appropriate to stress at this stage what one might consider as the cardinal points that should receive due consideration. The standing committees occupy a key role in the scheme of *Panchayat Raj* institutions because they scrutinise and pass the budget of village *panchayats* and samithis allocating grants-in-aid for different areas and programmes, decide the priorities, and make the crucial recommendations for rural improvement, and, as the composition of these standing committees is essential for impartial administration of village funds, the men for these committees should be chosen by some system of proportional representation of the single transferable vote instead of a simple majority, as it is at present. It is only by this modification that adequate and balanced representation on standing committees can be ensured to different parties or groups, and the present practice of the District Collector being chairman of these standing committees is a healthy provision to safeguard against political, group or personal considerations in the sanctioning of schemes and grants and distribution of the equalisation fund. There is great need for putting down corrupt practices in view of the enlarged scope for collecting and administering public funds at the village and block level. In order to stabilise *Panchayat* finance, specific rates for specific benefits seem to be expedient so that the ratepayers may feel that they are asked to bear a burden for which there is a direct return, for example, education cess for the village schools, water and drainage tax to improve local amenities, etc. Since the villager's patriotism centres round the village, it is difficult to evoke enthusiasm towards schemes remote from his village. There is no difficulty in raising additional taxation once the villagers are assured

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1962

EXPENDITURE	Rs.	nP	Rs.	nP
1. Interest paid on Deposits, Borrowings, etc.			76,15,408	66
2. Salaries and Allowances and Provident Fund—	Rs.	nP		
(I) To the General Manager	48,000	00		
(II) To the Staff	80,01,204	31		
			80,49,204	31
3. Directors' and Local Committee Members' Fees and Allowances			23,350	00
4. Rent, Taxes, Insurance, Lighting, etc.			14,55,438	27
5. Law Charges			42,225	17
6. Postage, Telegrams and Stamps			3,03,480	43
7. Auditors' Fees (includes Rs. 8,100 for Branch Audit Fees to Statutory Auditors)			14,600	00
8. Depreciation on and Repairs to the Banking Company's Property			4,68,476	71
9. Stationery, Printing, Advertisement, etc.			8,50,540	67
10. Loss from Sale of or Dealing with Non-Banking Assets			Nil	
11. Other Expenditure (includes Rs. 1,00,000 contribution to National Defence Fund)			13,25,963	69
12. Balance of Profit Carried to Balance Sheet			22,06,947	32
Total .. Rs.			2,23,56,135	23

INCOME (Less provision made during the year for bad and doubtful debts and other usual or necessary provisions)	Rs.	nP
1. Interest and Discount	1,64,66,507	54
2. Commission, Exchange and Brokerage	48,89,759	32
3. Rents on Buildings	3,02,234	11
4. Net Profit on Sale of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves or any particular Fund or Account)	Nil	
5. Net Profit on Revaluation of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves or any particular Fund or Account)	Nil	
6. Income from Non-Banking Assets, and Profit from Sale of or Dealing with such Assets	Nil	
7. Other Receipts	6,97,634	26
Total .. Rs.	2,23,56,135	23

This Profit and Loss Account has been prepared in conformity with Form 'B' of the Third Schedule to the Banking Companies Act, 1949.

Note :—1. Total remuneration to General Manager, including Salaries and Allowances (shown under item 2 of 'Expenditure') and Bonus Rs. 56,000.
The General Manager is allowed the free use of Bank's Motor Car.
2. Provision has not been made in respect of additional tax liability, if any, consequent upon changes proposed in the Finance Bill, 1963.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the Union Bank of India Ltd. as at 31st December, 1962, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the returns of 16 Branches audited by us, 29 Branches audited by other Auditors and the unaudited returns from 18 other Branches not visited by us, in respect of which the Central Government has made an order granting exemption from the audit pursuant to Section 228 of the Companies Act, 1956.

We report that :—

(*a*) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(*b*) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(*c*) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us;

(*d*) the reports on the accounts of the Branches audited by other Auditors have been forwarded to us and the same have been considered in preparing our report;

(*e*) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(*f*) in our opinion, and to the best of our information and according to the explanations given to us the said accounts read along with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

VIVIAN BOSE COMMISSION REPORT—II

REFORM OF COMPANY LAW MAY NOT BE TOO OPPRESSIVE FOR CORPORATE SECTOR

(Contributed)

ANOTHER question gone into by the Vivian Bose Commission is the protection of interests of dissenting minority shareholders in a scheme or contract approved by the majority in control of management of a company. In such a deal at times, shares of a flourishing company are acquired by a newly floated private company by paying nominal or small consideration and, in this way, the minority shareholders are made to suffer a loss. The present provisions of Section 395 of the Companies Act, 1956, which have relevance to this matter, run on parallel lines to those of Section 209 of the English Companies Act, 1948. The Commission considered the fresh recommendations of the Jenkins Committee regarding the disclosure of adequate information in a take-over offer to the shareholders, so that they could be allowed to judge for themselves whether or not to accept the offer and suggested that the Jenkins Committee's recommendations should be accepted in this country also. In specific terms, the Commission recommended that suitable provisions should be made in the Companies Act to the following effect for governing the procedure to be followed and the information to be disclosed in a take-over offer and circular:

(a) The Central Government should have power to frame rules prescribing the information to be disclosed in every offer of a scheme or contract by a transferee company under Section 395 and in every circular containing such an offer, or recommendation to the members of the transferor company by its directors to accept such an offer;

(b) every offer of a scheme or contract under Section 395 offering cash for the shares to be acquired, should contain a statement, binding on the transferee company, saying that what steps it has taken to ensure that the necessary cash will be available;

(c) the circulars containing, or recommending acceptance of, the offer of a contract or scheme should be required, before their circulation to be sent for registration to the Registrar of Companies;

(d) the Registrar should be empowered (subject to appeal to the court) to refuse to register any such circular which does not set out the information required to be given by the statutory rules suggested above or does so in a manner likely to create a false impression;

(e) the issue of such a circular, which has not been accepted for registration, should be made an offence; and

(f) circulars by directors or the members of the transferor company recommending rejection of the offer of a contract or scheme should not be required to be registered or subject to statutory rules suggested in (a) above.

In addition to the above, the Commission suggested that sub-section 3 of Section 395 should be suitably amended to provide that the transferor company shall, within a month from the date of registration of the transferee company as holder of the shares of the dissenting shareholders, intimate to them the fact of such registration and the receipt of the amount or other consideration representing the price payable to them by the transferee company and shall forthwith proceed thereafter to pay the money to the dissenting shareholders.

Inter-corporate Loans and Investments

Some restrictions have been imposed on the loans by companies to directors, etc., and on inter-company investments within and without the "same group" by the provisions of Sections 295, 369, 370 and 372 of the Companies Act, 1956. The ambit of Section 372 was expanded by the Companies Amendment Act of 1960. As it is, Section 372, after incorporation of the amendments made to it in 1960, provides that the board of directors of the investing company shall be entitled to investment in the shares of any other body corporate upto 10 per cent of the subscribed capital of such other body corporate, but this overall provision is subject to two provisos, namely, (a) the aggregate of the investments so made by the board in all other bodies corporate shall not exceed 30 per cent of the subscribed capital of the investing company and (b) the aggregate of the investments in all other bodies corporate in the same group shall not exceed 20 per cent of the subscribed capital of the investing capital. Any investment which is in excess of the percentages specified above would require the backing of a resolution of the investing company at general meeting and the approval of the Central Government. For according approval, the Government have laid down certain guiding principles designed to protect the interests of the shareholders of the investing company. The guiding principles formulated by the Government, *inter alia*, include:

(a) A company could be allowed to make the investment only if it had adequate liquid resources for making it and if the depletion of the working capital would not adversely affect the company's own working;

(b) the company in which investment is proposed should have earned profits and declared dividends in the past or should at least clearly be capable of making profits and declaring dividends within a reasonable period of time;

(c) the purchase price should be reasonable taking into account the net worth, prevailing market prices and future expectations of profitability;

(d) the proposed investment should provide an expected return on capital at least equal to the return on gilt-edged securities;

(e) except in the case of trade investments, the shares or debentures proposed to be acquired should preferably be readily marketable; and

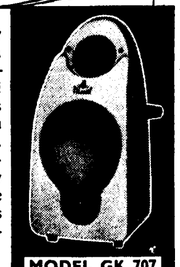
(f) although industrial and trading companies are not investment and it is not their primary business to give financial accommodation to, or make investments in the shares and debentures of other companies, they may be allowed to make trade investments in other companies, viz., investments which are likely to create conditions conducive to the interests of the investing company as well as to more economic working and betterment of production of other companies.

Administrative Policies

Corresponding to the above guiding principles, certain administrative policies have also been formulated for according approval under Section 295 of the Companies Act dealing with the loans. Both the restrictions prescribed in the Act and the administrative principles laid down by the Government now provide adequate protection against the activities of unscrupulous directors and managements. Notwithstanding these, the Vivian Bose Commission has suggested some further safeguards. It has suggested that inter-company loans should rank at par with inter-company investments and accordingly some limit on the amount of loans that can be advanced to companies in the same group be prescribed, and, if the loans were to exceed the specific limits, then it shall be necessary for the lending company to obtain prior approval of the Central Government, as also the backing of a special resolution. These ideas have been developed in more definite terms in the following recommendations of the Commission:

(a) Section 370 of the Companies Act should impose a limit on the amount of loans the lending company can give and for this purpose the limit be 20 per cent of the subscribed capital and free reserves of the lending company in respect of loans to companies within the same group but with the sanction of a resolution of the shareholders;

(b) the section should be further enlarged to include also loans made to companies not in the same group so that the aggregate of all the loans made by the lending company should not exceed 30 per cent of its paid-up capital and free reserves and such loans should also be the subject of a resolution of the shareholders; and



(c) loans in excess of the limits prescribed above should be sanctioned by a special resolution of the shareholders followed by the approval of the Central Government.

Some mild restrictive provisions pertaining to the appointment of sole selling agents had been incorporated in the substantive Companies Act, 1956. The subject came up once again for discussion before the Sastri Committee on Amendment of Companies Act in 1957. It was urged before that Committee that, very often, selling agency commission was equivalent to the entire profits earned by the company and the remuneration paid to selling agents varied over a fantastic range from commodity to commodity, time to time and area to area. Though it was not possible to fix a ceiling on selling agency commission, it was considered desirable by the Sastri Committee that power should be taken by the Government to notify industries or commodities like textiles, cement and sugar, in which sole selling agencies could be given for any area only on such terms and conditions as the Government might approve and the Government's approval was to be obtained within a certain stipulated period of the appointment of the sole selling agents. Further, it was suggested that the unhealthy tendency of managing agents to resign their office and take up sole selling agencies should be effectively checked. The recommendations of the Sastri Committee as regards imposing further restriction on the appointment of sole selling agents were given effect to in the Companies Amendment Act of 1960. Under the amended provisions of Section 294 now, no sole selling agents can be appointed for any area for a term exceeding five years at a time and the appointment made by the board of directors of a company is subject to the condition that it would cease to be valid if it is not approved by the company at the first general meeting held after the date of appointment. Apart from the curb put on the appointment of ex-managing agents as selling agents, under Section 294, the Government have been empowered to order investigation where it appears to the Government that there is good reason to believe that a company has a sole selling agent by whatever name called for an area and that on an order from the Government to furnish information regarding the terms and conditions of the appointment of the sole selling agents, the company refuses to furnish the same.

HERE IS
TELEDEK
the amazing new Transistorised Telephone Amplifier

Teledek increases business efficiency and is a boon to busy persons in any business or profession, to executives, secretaries, receptionists and telephone operators. Teledek leaves your hands free for work while you talk and saves your valuable time. Both incoming and outgoing telephone calls can be attended to by merely placing the telephone receiver on the Teledek. It amplifies the sound and facilitates trunk-telephone conversations.

Sole Selling Agents

The Bose Commission also went into the question of sole selling agents' appointment and termination of their contracts and felt that some further safeguards were called for in this matter. The Commission emphasised in particular that, often on the termination of the selling agencies, large compensations were paid mainly with a view "to denude their reserves and with the object of obtaining the compensation free of tax in the hands of the recipient company." On this question, the Commission observed that "we do not wish to suggest that selling agents are not useful, nor that all selling agencies are entered into with a collusive purpose; but we feel that there should be some safeguard in the payment of compensation on the termination of selling agencies similar to those in respect of managing agents and managing directors." Accordingly, the Commission made two specific recommendations for further amendment of the relevant provisions relating to sole selling agents in the Companies Act. These recommendations are:

(i) A company shall not pay or be liable to pay its sole selling agent any amount by way of compensation for the loss of his office in the following cases: (a) where the appointment of a sole selling agent ceases to be valid under Section 294 (2A); (b) where the sole selling agent resigns his office, in view of the reconstruction of the company or of its amalgamation with any other body corporate or bodies corporate, and is appointed as sole selling agent of the reconstructed company or the body corporate resulting from the amalgamation; (c) where the sole selling agent resigns his office, otherwise than on the reconstruction of the company or its amalgamation as aforesaid; (d) where the sole selling agent has been guilty of fraud or breach of trust in relation to, or of gross negligence in the conduct of his duty as the sole selling agent; and (e) where the sole selling agent has, whether directly or indirectly, himself initiated, or has taken part in bringing about, the termination of the sole selling agency.

(ii) The compensation which may be paid by a company to the sole selling agent for loss of office shall not exceed the remuneration which he would have earned if he had been in office for the unexpired residue of his term, or for three years, whichever is shorter, actually earned by him during a period of three years immediately. This shall be calculated on the basis of the average remuneration preceding the date of cessation or termination of the office, or when he held the office for a lesser period, during such period.

Thus the foregoing are the more important matters in regard to which the Commission has made very significant suggestions for amending the existing provisions of the Companies Act. Besides these, there are a few more recommendations too. These relate to the amendment of provisions of Section 69(4) for securing prohibition of allotment until receipt of minimum subscription; Section 400 as to cover cases other than those of oppression or mismanagement; Section 530 relating to recovery of taxes on income from companies in liquidation being treated as preferential payment; Section 396 read with Section 391 dealing with amalgamation and/or reconstruction; and Section 550 relating to preservation of books of account to also cover the case where a company has been amalgamated with another without liquidation.

Integrated Administrative Machinery

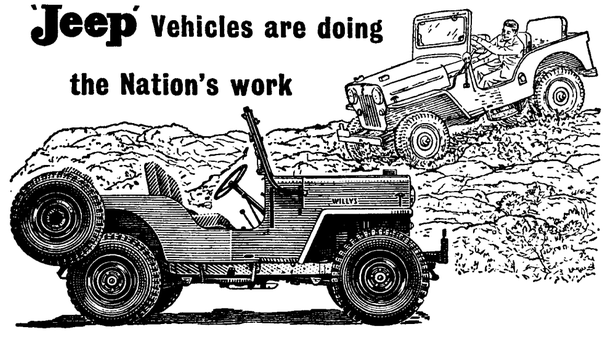
Apart from these suggestions regarding the amendment of Company Law, one recommendation of great administrative significance has also been made by the Commission. It has observed that "the Department of Company Law Administration deals generally with the working of the Companies Act, ensures its compliance, and is the regulating authority where Central Government sanction is necessary under the various sections of the Act: but there are other departments which deal with different aspects of the matter, such as control over capital issues and stock exchange regulation. These departments come under a Ministry different from the Ministry under which the Department of Company Law Administration functions, and the Commission feels, as the Bhabha Committee did, that there is the need for integrated administration of the Companies Act as well as other matters connected with the corporate sector." The implications of this suggestion of the Commission are that, in addition to the Company Law, the Department of Company Law Administration should also deal with subjects like stock exchanges, financial corporations and capital issues control which were once with the Department before its dissection in 1957. In fact, this is a matter which has forcefully been brought out in all the six Annual Statutory Reports on the working and administration of the Companies Act, 1956 so far presented to Parliament since the present Companies Act came into force in our country in April 1956. The latest Statutory Report has commented upon this matter in the following words: "The inadequacies of the existing administrative set-up under which the Department of Company Law Administration was concerned only with the administration of the Companies Act and not with the other measures and institutions operating in the capital market and closely connected with the formation, financing and working of joint-stock companies and how this organisational defect hindered the realisation of the objects implicit in the enactment of the Companies Act, were pointed out in the earlier Annual Reports." What the Government's decision on this long pending matter will be is yet to be seen.

No Finality

Now, before we come to the end of our present discussion of the recommendations of the Vivian Bose Commission, it would be of general interest to refer to its concluding observations which purport to point out that there is no finality and foolproofness about the Company Law and that the law can not provide absolute remedies to stop malpractices, as human nature cannot be cured by legislation but it is a matter of public education. The Commission says:

"In making these (i.e., various recommendations about amending the Companies Act), our endeavour has been not to impose any unnecessary burden on the corporate sector, its directors and executives—such restrictions as would not yield any useful results. At the same time, we have striven to make recommendations, so that the deficiencies which exist can be eradicated. As the Jenkins Committee has remarked, finality cannot be expected in the field of company legislation; and they go on to comment that it is necessary for the protection of shareholders, creditors and the intending investors, that the activities of companies and those responsible for their management, should be subjected to a considerable degree of statutory regulation and control. But they also may say that controls and regulations carried to excess, may defeat their own objects, and in this respect, they share the view expressed by the Greene and Cohen Committees as to the undesirability of imposing restrictions, which would seriously hamper the activities of the honest man, in order to defeat an occasional wrongdoer and the importance of not placing unreasonable fetters upon business which is conducted in an efficient and honest manner. We are in respectful agreement with this view.

"No law can provide absolute remedies to stop malpractices and a balance has to be achieved between attempting to stop malpractices and imposing fetters on honest businessmen, particularly when legislation can be defeated by human ingenuity as unfortunately sometimes happens. In such circumstances, the wrongdoer succeeds anyhow and the honest businessman is saddled with a considerable amount of technical difficulties. It is this aspect of the matter that the Commission has borne in mind in making its recommendations."



The above observations of the Commission have a ring of what was said a few years ago in Parliament during the discussion on the Companies Bill. It was asserted by more than one legislator that it was a truism to say that man could not be made moral by legislation. And yet, it was also true that, if law could make bad people good, it did certainly prevent good people from becoming bad and it also prevented bad people from making good people bad. It had its own value, and it had its own preventive effect. It was true that most people did not want to infringe the law if there was a law and at least they would hesitate to infringe the law. Mr. C. D. Deshmukh's observations in this context also bear repetition. He said:

"It is futile to claim perfection for a measure of this size and complexity and I am fully aware that, notwithstanding the amendments which we intend to move and which perhaps other members might wish to move, the Bill, even after it is passed by the House might contain defects and deficiencies which might not have come to light. Nobody who is familiar with development of Company Law in other parts of the world, need feel unduly depressed by this fact. It is in the essence of Company Law that it must not only grow with the growing needs of trade and industry, but also be reshaped from time to time to meet unforeseeable changes in company practice as may result from either developments in techniques of production or investment, or may be contrived by the wit of man to evade the provisions of the existing law and for what I know many wits are already busy at this game. Indeed, the success of Company Law in any country depends on the promptitude with which it can adjust itself to meet changes in the structure and functioning of companies in future as well as in the alterations that take place in basic philosophies."

These basic truths, it must be said, are to be realised by the Administration as well as by the captains of trade and industry in our country. And if we have quoted at some great extent on the general character of Company Law, it was to bring home certain basic truths to all those concerned with the working of the corporate sector. Thus, in the light of the foregoing observations, it would not be unreasonable to expect that the consequent action on the Vivian Bose Commission Report regarding the reform of Company Law would not be made far too oppressive or burdensome for the corporate sector in our country.

(Concluded)

'Jeep' Vehicles are doing the Nation's work

There is no limit to the usefulness of the Jeep Universal. It can go virtually anywhere—on good roads—bad roads—and where there are no roads. With its front wheels pulling and rear wheels pushing, the 4-wheel drive Jeep Universal goes through impassable roads, where conventional 2-wheel drive vehicles stall and stop. On normal roads it shifts into 2-wheel drive.

'Jeep' Universal—the world's biggest little vehicle

This is the sign of your Jeep Dealer who is specially trained to solve your transport and maintenance problems. He is equipped to supply you with factory-approved genuine spare parts throughout the life of your Jeep.

PMH-AD-43

THE CANARA INDUSTRIAL & BANKING SYNDICATE, LIMITED

(INCORPORATED IN INDIAN UNION WITH LIABILITY OF SHAREHOLDERS LIMITED)

DIRECTORS' REPORT

The Directors have pleasure to submit to the shareholders the 37th Annual Report for the year ending 31st December, 1962. According to the audited Balance Sheet annexed hereto, the net profit of the Bank for the year 1962 was Rs. 30,33,234.80 (after paying Rs. 1,51,000 to the National Defence Fund) which, with the balance of profit of Rs. 34,750.56 of the previous year brought forward, comes to Rs. 30,67,985.36.

After providing Rs. 6,50,000 to the Statutory Reserve Fund, a sum of Rs. 24,17,985.36 is available for appropriations. The Directors recommend the following appropriations :—

	Rs.	nP
To pay a dividend at 10 per cent. per annum and bonus at 10 per cent. per annum on "A," "B" and "C" Class Equity Shares, subject to deduction of tax	6,60,152	18
To pay a dividend at 8.57 per cent. per annum on Cumulative Preference Shares of Rs. 100 each and at 7.15 per cent. per annum on Cumulative Preference Shares of Rs. 10 each, subject to deduction of tax in both cases	1,80,051	03
To provision for taxation	12,00,000	00
To provision for Bonus to Staff	3,00,000	00
To carry forward to next year's account	77,782	15

The Directors have pleasure to state that the total Reserve Fund and other Reserves stand at Rs. 66,00,000.00 as against Rs. 53,50,471 (inclusive of share premium) last year. The total Paid-up Capital and Reserves (including share premium) now stand at Rs. 1,42,04,986 against Rs. 1,01,57,343 at the end of last year.

The Equity Capital of Rs. 50 lakhs in 5,00,000 'B' Class Shares of Rs. 10 each issued at a premium of Re. 1 per share during the year was heavily oversubscribed. The Authorised Capital of the Bank has been raised to Rs. 2 Crores.

100 Branches of the Bank have been audited by the Statutory Auditor and other Branch Auditors appointed under the provisions of Section 228 of the Companies Act, and besides, regular inspections have been carried out by the Bank's Inspection staff in respect of all branches including the aforesaid 100 branches.

The Directors are happy to welcome to the Board Dr. B. S. Jirge, M.R.C.S. (Eng.), M.R.C.P. (Lond.), Belgaum, Shri Vaidalam N. Gangadhar Setty, Bangalore, and Shri K. Velayudhan Nair, B.A., B.L., Ernakulam, people who are rich in experience and have made a mark in their respective spheres. They have just joined our Board and their services will no doubt contribute to our future development.

During the year, 3 Banks were taken over by the Syndicate under schemes of transfer of assets and liabilities. They are (1) The Salem Ammapet Sengundar Bank Ltd., (2) The Hindu Bank Karur Ltd., and (3) The Kerala Service Bank, Ltd. Consequently, our Branches have been opened at the following places :— Salem-Ammapet, Karur, Dindigul-Main, Dindigul-Nagal Nagar, Tirupattur, Dovakottai, Tiruchirapalli, Udamalpet, Erode-Court Street, Changanacherry, Kayamkulam, Pandalam, Ponkunnam, Punalur, Thodupuzha, Quilon, and Trivandrum-Local. During the current year we have taken over The Citizens Bank Ltd., Robertsonpet, and have opened our branch at Robertsonpet (K.G.F.). We have also received licences for opening our branches at Sanquelim and Curchorem, both in Goa, and steps are being taken to open these branches early.

The solid and unstinted support of the staff under their able and energetic Managing Director, the increasing goodwill and co-operation of the shareholders and the rapidly growing clientele of the Syndicate, we trust, will enable us to reach yet another landmark with still greater progress during the current year.

(By authority of the Board)
(Sd.) T. M. A. PAI,
Chairman.

NEW PUBLICATIONS

Marketing of Cotton Piecegoods in India. By M. P. Kacker. Publishers : Vora and Co. Pvt. Ltd., Bombay-2. Pages : 195. Price : Rs. 12.

CONSUMPTION is the ultimate end of all production in any economy. Hence a study of how the products are made available to the consumer has become a special branch of human knowledge. Today every manufacturer is giving serious thought to the remodelling of his marketing organisation so as to provide maximum satisfaction to the ultimate consumer.

The present study under review is a bold attempt to examine the methods and machinery used in the marketing of cotton piecegoods—a very common and essential item of human consumption. In selecting the product for study, the author had kept in view its association not only with the common man but also with India's leading industry. Judged from the criteria of productive capital employed, the value of finished products and the size of employment, the cotton textile industry of this country comes on the top of all large-scale industries.

The study has been divided into nine chapters. In the first chapter, the significance and structure of Indian cotton textile industry have been examined. The three sectors of the industry, namely, mills, handlooms and powerlooms have been separately studied with reference to regional distribution of manufacturing units, employment, specialisation of products, etc. The nature and pattern of demand for cotton textiles in India is given a brief review in the subsequent chapter. This is followed by a detailed study of the sales organisation and marketing problems of cotton mills—the largest sector of the Indian cotton textile industry. An account of the problems of marketing of handloom fabrics in our country are dealt with in chapter IV. The contribution of the powerloom sector being quite limited, a brief note on the marketing of powerlooms fabrics has been added in the same chapter.

In the latter part of the book the functioning and organisation of the wholesale and retail trade in cotton piecegoods has been given a detailed analysis which is followed by a study of the problems of overseas marketing of Indian cotton piecegoods. A special attempt has been made by the author in the last two chapters where the organisation, current problems and future prospects of export trade in this product are studied. The various State measures which serve to regulate and promote the marketing of manufactured products have been examined in the last chapters of the book with special reference to cotton piecegoods. An analysis of the functions and activities of trade associations interested in the promotion of cotton piecegoods trade is attached in the end.

With a view to keep the subject matter of study within reasonable limits, the author has confined the analysis to cotton piecegoods manufactured by mills, handlooms and powerlooms in India. But, in spite of its keen analysis, the study lacks in statistical data support, as the author himself acknowledges in his preface. Perhaps this may be due to the great apathy and reluctance shown by the manufacturers and traders in disclosing information regarding marketing costs, trade margins and volumes of sales.

The book is written in a simple and lucid style and gives a pen-picture of the marketing methods and problems of the three sectors of the industry—mills, handlooms and powerlooms. An illuminating foreword by Mr. Nityanand Kanungo, a summary of the analytical findings of the author at the end of the book and a well classified index are other salient features of this book.

The Negotiable Instruments Act. By J. S. Khergamvala. Published by N. M. Tripathi (Pvt.) Ltd., Bombay. Pages : 266. Price : Rs. 10.

This is the twelfth edition of the book under review. The first edition was published in 1920. The book was originally exclusively meant for law students. It has been suitably rewritten to be useful for practising lawyers as a handy reference book. The commentary is written in simple and clear language. The case law has been brought up-to-date. The author has cited English case law wherever necessary, and especially in respect of provisions which have not yet been construed by the Indian Courts. The book contains, in addition to the commentary, lists of amending Acts, adaptation order, the English Bills of Exchange Act, a few new kinds of *hundis* and relevant portions from the Law Commission's report.

One has to be aware of the changes suggested by the Law Commission in the existing Act. The Law Commission has opined that as the enactment is not exhaustive and as the Courts in India have followed the principles of English law wherever there has been a gap, these principles must be included in the Act. The Commission has, therefore, codified the same. The provisions applicable to the various types of instrument are today mixed up and there is confusion. The Law Commission has separated them instrument-wise and further kept the common provisions separately. It has suggested that in respect of negotiable instruments the *lex loci contractus* must apply which is in consonance with international thinking and dealings. Grace time or period in the enactment has been retained in spite of representations by commercial organisations in the country as the Commission rightly felt that the deletion of the said provision would mean confusion in the circumstances prevailing in our country. The words "bearer and holder" and similar definitions have undergone changes to suit the modern conception and thinking in the commercial world. There are very many suggestions but this is not the place for discussing them. Mr. Khergamvala has done a distinct service by including and bringing the same to the notice of persons concerned with the enactment. His book will be found not only useful to students and lawyers but also to accountants, banks, commercial houses and businessmen in general.

Eastern Economist Budget Number. New Delhi, March 8, 1963. Editor : V. Balasubramanian. Price : Rs. 5.

As many as six leading articles and four special articles in this Budget Number of the *Eastern Economist* are devoted to the Union Government's Budget for 1963-64 and its proposals for additional taxation. They provide a critical appraisal of the issues thrown up by the budget and an equally critical examination of the taxation proposals and the compulsory deposit scheme. The criticism is vigorous, nay, withering. But it is not purely negative, for it is accompanied by constructive alternative suggestions. Also notable are the charts which graphically bring out the growth in taxation in relation to selected economic indicators, underestimation of revenue and overestimation of expenditure, and defence expenditure in relation to tax revenue, national income, and so on.

"INDUSTRIAL BOMBAY"

The inaugural number of "Industrial Bombay" (Editor: Mr. K. A. S. Rao), published by the Bureau of Economic and Technical Information, Thaoomal House, Cowasji Street, Fort, Bombay 1, has devoted special attention to the problems of, prospects for, industries in this metropolitan city. The number begins with an interesting article on the economic potential of Bombay city. Appropriately enough, it carries extracts from the lecture on the economic implications of Chinese aggression, which Mr. H. V. R. Iengar delivered under the auspices of the Commerce Graduates Association in Bombay sometime ago. A succinct account of the history of Indian shipping forms the subject matter of an interesting article entitled "How Bombay Built Indian Shipping?" by Mr. M. A. Master. There are, besides, articles on specific industries, such as plastics, cycles, caustic soda, ceramics, and petroleum additives. The issue contains some interesting statistical data; particular mention may be made of the table on financial position of 23 giant industrial and commercial concerns in Bombay. Also included in the issue are a list of the prominent personalities associated with Bombay's industry and trade, the names and addresses of associations and chambers of commerce in the city, and consulates and trade commissioners.

AUDITOR'S REPORT TO THE SHAREHOLDERS

I have audited the foregoing Balance Sheet of The Canara Industrial and Banking Syndicate, Ltd., as at 31st December, 1962, and the Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 36 branches audited by me and 64 branches audited by other auditors and 75 branchcs exempted from audit, under Exemption granted under Rule 4 of the Companies (Branch Audit Exemption) Rules 1961, Order Nos. 1 (21)-CLVI/62 of Government of India, Ministry of Commerce and Industry, Department of Company Law Administration, dated 25th August, 1962, 16th October, 1962 and 22nd January, 1963.

The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing my report in the manner considered necessary by me. I report that :—

(a) I have obtained all the information and explanations which, to the best of my knowledge and belief, were necessary for the purpose of audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to my notice have been within the powers of the Bank ;

(c) in my opinion, proper books of account as required by law, have been kept by the Bank so far as appears from my examination of these books, and proper returns adequate for the purpose of audit have been received from the branches of the Bank ;

(d) the foregoing Balance Sheet and Profit and Loss Account dealt with by this Report, are in agreement with the books of account and the returns ;

(e) in my opinion, and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis, the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

WAGE POLICY FOR ECONOMIC DEVELOPMENT

INDIAN PLANNERS' APPROACH EXAMINED

WAGE policy, in so far as it impinges on the lives of millions of wage earners, is one of the toughest problems for policy-makers in any country. But in underdeveloped countries, set on the road to economic development through democratic planning, the problem of wage policy is far more complex. For an economically sound policy, if it is to be politically acceptable, has to reconcile a medley of conflicting claims and objectives. A perceptive study of the dilemmas of wage policy in the context of economic planning in a democratic framework is made in this book* by Dr. Palekar, one of the ablest students of labour economics in India. Dr. Palekar, who has done some original work in the field of real wages—his thesis on real wages in India during 1939-50 was awarded a doctorate by the Harvard University in 1955—has addressed himself in the book under review to the task of examining the larger problem of wage policy in underdeveloped countries with special reference to the Indian Five-year Plans. The result is a scholarly study of not only the problems of wage policy in India but also a critical evaluation of the wage policy in the Five-year Plans from an economic and pragmatic standpoint. Besides, it outlines an alternative wage policy which subordinates ideological considerations to the supreme goal of capital formation and economic growth.

Dilemmas of Wage Policy

Dr. Palekar sets out the dilemmas of wage policy in the introductory chapter. These, he points out, spring largely from the apparent conflict between the objectives of higher wages and larger employment and of more equal distribution of wealth and faster economic growth. This is followed by an examination of the empirical setting of wage policy which forms the background against which the wage problem is studied. The main problems of wage policy in underdeveloped countries, according to the author, are related to two concepts, namely, inflation and capital formation. There is, in the first place, fear of the inflationary dangers of wage policy and, secondly, the apprehension that a rise in money wages, by diverting resources from investment to consumption, may retard the process of capital formation. The argument for wage restraint or wage freeze that is advanced on this score is only part of a general approach which overemphasises the financial aspect of capital formation and neglects its real aspect. There is, he avers, nothing automatic in a wage freeze to ensure that higher profits resulting from a wage freeze will necessarily result in higher savings and investment. In fact, the problem of capital formation in underdeveloped countries has many dimensions. Nevertheless, it is basically true that, given a certain rate of increase in national income, relatively stable money wages and prices are essential for accumulating capital at a constant marginal rate. In fact, the experience of developed countries shows that, during the early stages of industrialisation, real wages as well as the share of industrial workers in the national output remained stable or even declined.

Real Wages

It is, of course, not argued by the author that real wages should be freezed at the existing level, which, judged by any civilised standard, is too low in most underdeveloped countries. But it is possible, he maintains, to improve the real wages of workers while giving them an initially declining, though subsequently a constant, share of the net factory output. For this, the minimum requirements to ensure physical efficiency, such as food, clothing and shelter, should be made available cheaply. If the industrial surplus is to be maximised both money wages and prices of agricultural foodstuffs must be pegged at a level at which the worker is able to buy the minimum requirements necessary for maintaining health and efficiency. If prices of these minimum requirements are spiralling upwards, the level at which money wages are to be pegged would become indeterminate. This indeterminateness is bound to reflect itself in industrial strife and in vagueness and drift in wage policy. This will be the case especially in the initial years of development when the supply of agricultural foodstuffs will be inelastic and when development has to be brought about by monetary inflation. A well-defined wage policy, if it is to be a successful instrument of fulfilling the targets of production plan, must find a way out of this deadlock.

The question whether a rise in wages would reduce employment also poses certain difficult problems for practical policy. In Dr. Palekar's opinion, modern economic theory, which analyses the effect of wage changes from the standpoint of the economy as a whole, furnishes only an agnostic conclusion which cannot serve as a basis for a meaningful wage policy for economic development. In underdeveloped countries, where workers' nutrition and health are at a sub-human level, a reduction in real wages brought about either directly by lowering wages or indirectly through monetary policy may not lead to higher employment. By impairing the workers' efficiency, it may even reduce productivity and employment.

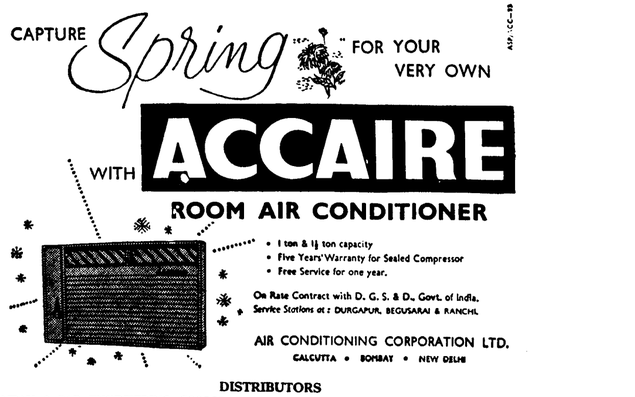
Wages and Inflation

Analysing the relationship between wages and inflation, the author points out that whether or not a rise in wages will lead to rise in prices depends on a number of factors. As a broad generalisation, it may perhaps be true to say that wage increases, which are not matched by productivity increases, lead to a wage-price spiral in some sectors of the economy. In India, however, there is a close relationship between wholesale prices, particularly cost of living and money wages as a result of the peculiar system of paying dearness allowance which varies from month to month according to the movement of the official index of cost of living. If there is any inflationary threat from wage movements in India, it would seem to arise from this rigid system of linking wages to the cost of living. Under this system, it is cost of living that pushes wages so that the causal relationship, if any, runs from prices to wages rather than from wages to prices.

Dr. Palekar critically examines to what extent wage policy in the first and second Plans have sought to grapple with these problems. According to him, the first Plan adopted a rather cautious and, in many respects, a realistic approach, while the second Plan appeared to have taken the whole problem of wage policy into the realm of social conflict. And hence discussion on wage policy in the Plan tended to be unduly and prematurely burdened by some sort of class struggle hypothesis. Consequently, instead of coming to real grips with the problems of wage policy and such vital subjects as training of skilled workers, the authors of the Plan were obsessed with the idea of giving labour "a fair deal" and "the laying down of principles to bring wages into conformity with the expectations of the working class in the future (socialist) pattern of society." The approach in the third Plan was no different either, according to Dr. Palekar. It virtually neglected the question of wage policy. Instead of addressing themselves to really urgent problems, the authors of the Plan dissipated their attention and energy in dealing with such problems as joint management councils and workers' education which, in his opinion, do not deserve immediate attention.

An Alternative Policy

After having discussed the problems of wage policy and pointed out the defects of the wage policy under the Indian Five-year Plans, the author suggests a wage policy for underdeveloped countries which subordinates all other goals to the supreme aim of capital formation and economic growth. This policy envisages drawing up industry-wise wage plans, limitation of wages to a fixed percentage of net factory output, and distribution of this "money wage fund" among the workers, classified into a few broad categories. Dr. Palekar suggests that, in order to enable the workers to buy the necessaries required to maintain health and efficiency with the wages thus distributed, the Government should commandeer the required quantities of "wage goods" at fixed prices from the producers for distribution amongst workers. Other elements of the policy are wider application of piece-rates for wage payment, laying down of output norms and factory-wise production targets, permanent wage boards for important industries, curbs on the activities of political-y-oriented trade unions and abolition of the present system of paying dearness allowance and introduction of annual profit-sharing bonus.



The author concedes that the above policy has certain flaws. In fact, he visualises many questions being asked by the discriminating reader. Does it not amount to totalitarianism? What guarantee is there that a Government, which adopts these measures in the field of wage policy, will not encroach upon other liberties of the people? The author is clear in his mind as to the answer to these questions. It is that you cannot eat your cake and have it. Authoritarianism, in his opinion, is an inevitable imperative of economic planning.

Dr. Palekar is at his best in the analysis of the problems of wage policy. His comments on wage policy in India are, naturally, controversial as all points of view on policy matters are. But they have the virtues of logicality and consistency. If he is unduly critical of the labour policy in the Five-year Plans, it is because, as a labour economist, he strongly disapproves of the planners' mixing of politics and economics in a field where success depends so much on courage to pursue economically sound but politically unpopular policies. One may not agree with all the conclusions of Dr. Palekar or his prescriptions, but one may still be inclined to concede that he has made a significant contribution to a clearer understanding of the problems of wage policy in India and other underdeveloped countries.

STANDING ORDERS

A Bill to amend the Industrial Employment (Standing Orders) Act was introduced in the Rajya Sabha on the 18th inst. by the Deputy Minister for Labour and Employment, Mr. Pattabhiraman. It is proposed to amend the Act so as to make the model standing orders operative in all industrial establishments until such time as the standing orders are certified. The Industrial Employment (Standing Orders) Act, 1946, at present imposes an obligation on the employer to submit draft standing orders to the certifying officer concerned within six months from the date of application of the Act to his industrial establishment.

STATE GOVERNMENT UNDERTAKINGS

A DIFFERENT POLICY APPROACH SUGGESTED

By L. Kothandaram and Dr. S. Subbaramaiah

IN India there are public enterprises sponsored by the Government of India and those belonging to the State Governments. This article, which is concerned exclusively with public enterprises in the States' sector, otherwise referred to as State public enterprises, sets out to pose the following two questions and examine their relevance with a view to indicating some of their policy implications:

1. Are there any distinguishing features between the Central and State public enterprises? If so, what are they?

2. If these distinguishing features are significant, do they call for a separate policy for State public enterprises?

State public enterprises may be grouped under two categories, namely, (i) public utilities like road transport and electricity undertakings, and (ii) industrial and commercial undertakings (financial institutions excluded). While the enterprises in the first category are common to almost all States, the regional differences and peculiarities are revealed in the nature of undertakings grouped under category (ii) above. The manufacture of cooking medium at the Government Hydrogenation Factory, Kerala, at one end, and the Iron and Steel Works of Mysore, at the other, show the range of varieties of State public enterprises.

The extent of road transport undertakings varies from one State to another but, together, they account for more than 30 per cent of the passenger transport industry in India. The extent of State public enterprises in the electricity industry is steadily rising and the estimates made for 1960-61 show that they account for 58.2 per cent of the installed capacity and 56.7 per cent of total energy generated in the country.

With this background we may set out to distinguish the State public enterprises from Central public enterprises. Among others, the bases for distinction appear to be the following:

A. *Economic*: (i) Size of undertakings, (ii) production complex of these undertakings.

B. *Management*: The predominant form of organisation.

C. *Control*: The effectiveness of legislative control.

In considering the size of State public enterprises it is helpful to retain the classification into (1) public utilities and (2) industrial and commercial undertakings, for the former are bigger from most criteria of size. The size of the latter group, measured in terms of capital invested, ranges widely. Thus, as shown in Table 1, the aggregate capital invested in Travancore-Cochin (Kerala) marks the lowest point in the range while Mysore points to the highest. But the State public enterprises as a group are far smaller when compared with the investment size of some of the Central public enterprises.

Table 2 presents a comparison between the 24 completed and fully operating undertakings of the Central Government with those of the public enterprises of Mysore State.

TABLE 1—*Commercial and Industrial Undertakings of State Governments*

(Rupees in crores)

Sources:
A: *Taxation Enquiry Commission*, Vol. I, 1953-54.
B: *Programmes of Industrial Development*, 1956-61.
C: *Third Five-Year Plan*.
Miscellaneous schemes of State Governments costing less than 50 lakhs each is Rs. 15.61 crores.
In C § refers to spill-over projects from the Second Plan, two in Mysore and one each in Bengal and Andhra. Total provision of * Of these 19 relate to schemes of expansion. Total provision of Rs. 23 crores Rs. 32 crores for these schemes is distributed as follows: Rs. 23 crores in the State Plans and Rs. 9 crores in the Central Plan.

Table 2 dramatises the difference in size between the Central and State public enterprises. While more than 76 per cent of the State enterprises fall within the range of below Rs. 0.50 crore, more than half of the Central enterprises are found in the range of Rs. 2 crores and above. The comparison of Government companies of Central and State Governments shows an almost identical picture. The State Governments account for more than half of the total number of Government companies and less than 3 per cent of the aggregate paid-up capital.

The investments in electricity and road transport undertakings, however, are relatively larger than in other State enterprises, although they are still small in comparison with one single public utility of the Central Government, namely, the railways. Thus:

1.	Outlay on State-owned public utilities at the end of the Second Plan (Electricity only) ...	Rs. 790 crores
2.	Capital-at-charge of railways (excluding worked lines) in 1960-61	Rs. 1,520.86 crores
3.	Per cent of 2 to 1	52

Another dividing line between Central and State public enterprises is the kind of goods and services produced by them. Among the State public enterprises, with the exception of the Mysore Iron and Steel Works, the rest are all consumption-goods or light-engineering industries. On the other hand, the Central enterprises are largely "basic," "strategic" and/or "heavy" in character.

The form of organisation is another aspect in which the State and Central public enterprises differ. The latter enterprises are as a rule organised either as Government companies

TABLE 2—*Size Distribution of Some Central and State Public Enterprises*

Range of capital	No. of undertakings		Per cent to total No. of undertakings (approximately)	
	Central	State*	Central	State*
Less than Rs. 0.50 crore ..	6	16	25.0	76.0
Rs.0.51 crore to Rs. 1.99 crore ..	5	2	21.0	9.6
Rs. 2 crores to Rs. 4.99 crores ..	4	2	17.0	9.6
Rs. 5 crores and above ..	9	1	37.0	4.8

Note: * Refers to the industrial and commercial undertakings of Mysore and *not to all the State public enterprises*.
Sources: *Central*, *cf.* Central Statistical Organisation *Principal Public Sector Undertakings in India*, 1960-61.
State, *cf.* Government of Mysore: *Appropriation Accounts* 1959-60 and *Audit Report*, 1961.

or as public corporations. The departmental form is discarded on policy. In the States, the practice, however, is almost contrary to that of the Centre. But for the road transport and electricity undertakings which are organised as corporate bodies under the compulsion of a Central Act, all other undertakings are departmentally managed. The State Government companies are not full public enterprises but are mixed in character as a part of the capital and management is private. Perhaps, the only State Government companies are in Mysore State, namely, the Mysore Iron and Steel Works, and the Kolar Gold Fields which will be taken over by the Central Government shortly.

Even where corporations are set up by the States they retain to a large extent departmental characteristics. Personnel working for the Electricity Boards in South Indian States, for instance, are Government employees. All these Boards have the appropriate Ministers for their Chairmen. This practice is in marked contrast to the Boards of Central enterprises. In fact, the dissatisfaction at the Central level is that the Minister does not appear anywhere on the Board.

In the legislative control exercised over the State public enterprises also, there is a marked difference. Theoretically legislative control is as comprehensive over the State public enterprises as the Parliamentary control is over Central public enterprises. But in practice the difference is not limited to their jurisdiction. There seems to be a qualitative distinction also. To make a bold statement, the extent and effectiveness of Parliamentary control over Central enterprises is only matched by the absence of such control over State public enterprises. The number and the type of questions raised and answered on the floor of the legislature is but one of the indicators of legislative performance in this regard. An analysis of such questions in a particular State legislature, that is, of Mysore, revealed the following:

(i) On an average, one in forty questions was on public enterprises. (During the two sessions in 1958, 43 questions out of 1,797 related to public enterprises.)

(ii) Some questions related to getting elementary education on the policy and practice of public enterprises, rather than eliciting information with a view to increasing the substance of their control. One example: "Is it not a fact that the public sector contains mostly basic industries"? (The member was referring to the Government—owned industries of Mysore) (Mysore Legislative Assembly, 1st December 1958.)

(iii) Some questions were so far out of the way as to be regarded as even irrelevant. Thus a question relating to the number of managing

TABLE 3—*Working Expenses of Mysore Government Commercial Undertakings*

Name of enterprise	Final grant or appropriation (Rs. in lakhs)		Per cent of excess (+) or saving (—)

secretaries was aimed at an altogether different purpose. The latter part of the question asked: (1) "To which community do they belong?" (2) "How many of them belong to backward communities?" (Mysore Legislative Assembly, I Session, 1959.)

If these questions are indicative of the general ability of the legislature to control public enterprises it is likely that its control tends to be directionless and ineffective. Perhaps it is because of these that the Ministers of State Governments assume readily responsibilities that their counterparts at the Centre hesitate to be associated with.

If these differences are meaningful, should a different policy be laid down for the State public enterprises? The purpose of this article is in fact to argue for a different policy to govern the organisation of State public enterprises. The differences pointed out in the previous pages are to make out a case for a differentiation in policy.

The general policy governing the organisation and management of public enterprises in India has been outlined in the third Plan as follows:

(1) There should be autonomy in management and this is best secured either through a company form or a corporate form of organisation.

(2) Democratic control of public enterprises is essential but the enterprises should possess sufficient degree of autonomy from Government and Parliament. To secure an informed criticism the need is felt for a third committee of Parliament.

(3) The efficient running of public enterprises should be reflected in their larger earnings and surpluses.

With regard to the objective of public enterprises in (3) above, however, there is no need for any differentiation between Central and State public enterprises. The current policy is after all based on the experience of the State Governments in their management of public enterprises, where non-tax revenues figure more prominently than at the Union level. Some of the States like Mysore, traditionally followed a "bold policy" of public enterprises and earned significant additions to revenues. Thus it is clear that the current policy of profit maximisation objective for public enterprises is only a confirmation of the validity and soundness of the practice of State Governments.

But it is with regard to the form of organisation and control in items (1) and (2) above that we find a great deal of divergence between the general policy and the practice of State Governments. The departmental management is retained by the State Governments, it seems, with the same conviction as the policy declaration disapproves of them. Maybe the departmental management has an advantage and relevance for State public enterprises and it would be unwise to discard it in favour of another, as will be shown presently.

The relatively small size of the State undertakings is unlikely to justify an elaborate company structure, for the management costs may inflate further the already high costs of production in these enterprises. For instance, in the Mysore Iron and Steel Works, the costs of management (administrative expenses *plus* Directors' fee and T.A.) as shown in the profit and loss account for 1960-61 is only 0.5 per cent of the cost of manufacture (as shown in the

manufacturing account). For undertakings already burdened with a small size of operation the advantage of minimum management costs is a decisive consideration and cannot be easily sacrificed.

The other advantages of the company form, such as freedom from Government and legislature, are more imaginary than real. It is possible that real control through interference may be minimised when the controlling authority knows that he can control and that his control is accepted. Thus the departmental form confronts or at least provokes fewer interference than another from where such interference is resented. The peculiar difficulties faced by the Rourkela Steel plant and the award of more freedom to the general managers belies once again the alleged inherent advantages of the company or the corporate form over the departmental form of organisation. In essence it is a question of form or substance and not the superiority of one form over another.

What above the interference of the legislature? Even here, as in the case of the ruling Government, the interferences are fewer than is feared to be, as shown earlier. The State legislatures are yet to educate themselves on the features, functions and problems of public enterprises to think of possibilities of frequent interference. This inadequacy sometimes may manifest itself in an extreme demand. The introduction of a resolution in the Mysore legislature recently for the constitution of a committee of legislators for managing the Government-owned industries in the State is a case in point.

Another shortcoming of the departmental form, making it unsuitable to the needs of public enterprise, is the feature of budgetary control. Such a control on public enterprise entails two consequences. One, the finances of the enterprise are subject to, and fluctuate with, the General Budget. This type of financial uncertainty, particularly if it is a downward revision, renders it impossible for the enterprise to enter into advance commitments.

This objection against the departmental form is accepted as a tradition. However, there are two tendencies which question the relevance of the above objection. One, the departments are undergoing a series of changes, some of which at least tend to introduce commercial practices. Two, the budget itself is undergoing changes both in its structure and in its dimensions. Instead of being a routine statement of revenue and expenditure of a Government, it is becoming the lever on which all economic development mechanisms operate.

To illustrate the second tendency mentioned above, a comparison is made between the annual appropriations and the actual expenditure of some public enterprises of Mysore (Table 3). Characteristic of developmental budgets, most enterprises secured larger appropriations in 1960-61 over the 1959-60 figures, and none got less than was obtained in the previous year. Nine enterprises in 1959-60, and eight in 1960-61, saved a noticeable percentage of the sums appropriated in the budget. Further, the percentage of savings was distinctly far above the "excess expenditure" of some. All these tend to indicate that public enterprises were not stifled in their financial activities because of their association with the budgetary practices. On the other hand, they had more funds to stimulate them into new lines of activity.

If these arguments are valid, there seems to be a clear case for a different policy regarding the managerial organisation of State public enterprises. They should be left to remain as departmental units. In Indian conditions and particularly in the context of State Governments, the rearrangement of the governmental departments so as to suit the new functions should have a preference over the adjusting of business forms to governmental purposes. It will be a fruitful and revealing study to inquire into the departmental characteristics retained in public corporations and Government companies, on the one hand, and the assimilation of commercial attitudes and practices into governmental departments, on the other. Most personnel running the corporate and company organisations are all former departmental men. The departmental form must have shown a persistent capacity for change to meet the challenges of new forms of organisation, and must have characteristics of its own which justify its utility even now. Otherwise, it is hard to account for their continuance as the predominant form of State public enterprises. The new policy suggested only demands a recognition of this fact.

INDIANOIL

brings back
THE FLYING
RED HORSE
Mobil lubricants
return to India

Mobil*

The familiar landmark, the famous Flying Red Horse, is back in India. The Indian Oil Company has become the exclusive distributor of Mobil industrial and automotive lubricants.

Now Mobil premium products, known and trusted for wellnigh 50 years in this country, will be marketed once again in India.

Today, Indianoil can readily supply the entire range of your requirements of lubricants.

Please specify your requirements to:

Indian Oil Company Ltd.

Mas. IOC. 1954 B

INDIA SUGARS CUT DIVIDEND AGAIN

BIG SLUMP IN PROFIT-MARGIN

ONCE again—that is, for the year ended 30th September 1962—the India Sugars and Refineries Ltd. [Managing Agents: The India Sugar Agencies (Private) Ltd., Bombay] has cut the dividend on the 10-rupee ordinary shares by two points, as against four points in the previous year, to 8 per cent per annum, subject to tax. This further cut is the inevitable outcome of a big slump in profit-margin (ratio of profit to sales) from 15 to 6.1 per cent, following, on the one hand, a sharp rise in sale proceeds from Rs. 127.14 lakhs to Rs. 214.44 lakhs and, on the other, a big fall in gross profit from Rs. 19.09 lakhs to Rs. 13.18 lakhs. Although the previous year's results showed an all-round setback, the profit-margin improved by four points because the sale proceeds declined more sharply from Rs. 204.53 lakhs to Rs. 127.14 lakhs than did gross profit from Rs. 22.50 lakhs to Rs. 19.09 lakhs.

Improvement in sale proceeds is the combined result of an increase in sugar production from 18,890 to 19,186 tonnes and a substantially large stock of Rs. 67.71 lakhs carried over from the previous year. The output increased, though the quantity of cane crushed was lower at 186,340 tonnes as compared with 206,203 tonnes the year before. The setback in profit is attributed by the Directors to the slump which followed the removal of controls on prices, movement and distribution of sugar. It was more pronounced, since the bulk of the previous year's stock was disposed of at prices well below the high costs. Besides, the increase in sales raised the burden of excise duty and gallonage fees from Rs. 29.23 lakhs to Rs. 52.83 lakhs.

Provision for depreciation has been reduced from Rs. 5.54 lakhs to Rs. 4.79 lakhs and so also that for taxation from Rs. 4.70 lakhs to Rs. 4.10 lakhs. Managing Agents' remuneration has taken Rs. 87,353, as against Rs. 1.21 lakh a year before. The net profit after these allocations is down by over 55 per cent at Rs. 3.42 lakhs, as against Rs. 7.64 lakhs in the previous year. This profit does not cover fully even the reduced dividend of 8 per cent of ordinary shares, absorbing Rs. 5.12 lakhs. Since, however, the amount brought in from the previous year was quite large, being Rs. 3.17 lakhs (almost as much as the year's net profit), withdrawals from reserves have been avoided. The sum allocated to reserves (and provisions) is just Rs. 5,000 including Rs. 2,500 (as against Rs. 4,000 in the previous year) set apart for development rebate reserve, and the amount carried forward is Rs. 68,747.

In the table below is presented the Company's progress from 1959:

(In lakhs of rupees)

	For the year ended 30th September			
	1962	1961	1960	1959

* For the years 1956-57 and 1957-58.
† Subject to deduction of tax.

The Company had to bear during the year under review a loss of Rs. 1.42 lakh on sugar exports in the previous year. The loss in respect of 1961-62 sales has not been ascertained, as the accounts relating to such sales have not been finalised by the Export Agency.

The distillery unit of the Company produced during the year 113,887 gallons of spirit, as against 81,662 gallons in the previous year. Steps are being taken to expand the unit's capacity from 600 gallons to 3,000 gallons a day.

As the Company's profit, after allowing for the transfer to development rebate reserve, amounts to only Rs. 3.40 lakhs, representing 3.7 per cent of the "own funds" aggregating Rs. 89.68 lakhs, there is no liability under Super Profits Tax.

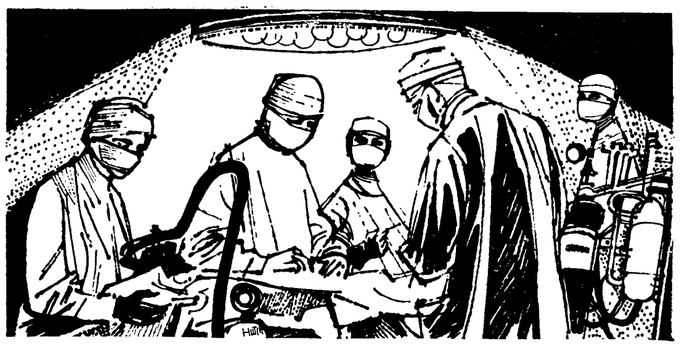
In common with other sugar factories, the Salar Jung Sugar Mills Ltd., a subsidiary of the Company, suffered a setback in its gross profit from Rs. 6.76 lakhs to Rs. 2.34 lakhs during the year ended 30th June 1962. The unit's expansion scheme for raising the present daily capacity of 600 tons to 1,000 tons is to be implemented in stages.

Another subsidiary, the Majula Confectionery Ltd., suffered a net loss of Rs. 85,745 during the year ended 31st August 1962 as against the loss of Rs. 72,446 in the previous year, before providing depreciation on plant and machinery.

The paid-up capital of the Company, including the preference capital of Rs. 11 lakhs, stands at Rs. 74.98 lakhs. It is supplemented by reserves and surplus aggregating Rs. 15.97 lakhs. Secured loans have been reduced from Rs. 65.18 lakhs to Rs. 49.61 lakhs, of which Rs. 48.38 lakhs represent bank borrowings, the balance being the advance obtained from the Government. Current liabilities and provisions amount to Rs. 64.71 lakhs. Total short-term indebtedness to outsiders works out to Rs. 113.09 lakhs, against which are available current assets, loans and advances aggregating Rs. 99.03 lakhs and investments shown at Rs. 63.90 lakhs. The gross block, which shows an increase of Rs. 1.33 lakh to Rs. 86.23 lakhs during the year, has been written down to nearly 50 per cent of its value at Rs. 42.34 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 10.25 *cum-div.* On an *ex-div.* basis, they offer a net yield of 5.7 per cent per annum.

WYETH LABORATORIES LTD.



A Rs. 2-crore multi-purpose organic synthetic chemical plant, 74 per cent of the capital for which has been provided by the American pharmaceutical firm of Wyeth International Ltd., was inaugurated at Bombay on Friday the 15th inst. Equipped to process steroids and steroidal compounds—from the basic material, the dioscorea root, to the finished product—the plant is expected to put India on the map as a world supplier of steroidal compounds at highly competitive rates. Of the many wonder drugs discovered in the last decade or two, none is comparable to steroids, it is claimed. Hitherto the manufacture of steroids was a near monopoly of a few Central American countries. A substantial part of the factory equipment was made locally. Highly complex equipment, including stainless steel and glass piping, was imported from the U.S. The overall foreign exchange saving effected by the plant is expected to be Rs. 30 lakhs annually. An additional Rs. 20 lakhs will be earned through exports. The plant has the largest licensed capacity in India for steroids and steroid intermediates, 3,000 kilograms annually.

Inaugurating the plant, Mr. Raymond B. Osborne, Director of Operations for Asia of Wyeth International, said that the Indian pharmaceutical industry had grown from the annual level of a mere Rs. 10 crores to Rs. 95 crores. The steroid plant, he added, would contribute a great deal to the progress of the industry and would provide urgently required medicines, besides making a complete range of steroids available for export. In his welcome speech, Dr. J. G. Samson, head of the Wyeth Organisation in India, referred to the encouragement given by Mr. Robert C. Hodgman, President of the Wyeth International, and said that the plant would put India on the map as a producer of fine chemicals and that the export of these would earn valuable foreign exchange.

AMERICAN EXPRESS EARNS MORE

Gross earnings of the American Express Company Inc. during 1962 rose by 22 per cent from $77.4 million to $86 million and profit by 10 per cent from $9.2 million to $10.1 million. The year's profit works out to $2.27 per share, as against $2.06 a year before. The Directors have declared a quarterly dividend of 35 cents per share, payable on 1st April 1963, to shareholders as on 8th March 1963.

American Express has a network of 389 offices around the world which provide various financial, travel, credit card and shipping services. According to its President, Mr. Howard L. Clark, the year 1962 was one of growth for the Company. Credit card operations improved and became profitable during the year, with buildings amounting to $189 million. Sales of travellers' cheques rose to an impressive new record. New markets and increase in facilities outside the U.S., especially West Europe, are proposed to be developed in this field in order to make the Company a truly world-wide organisation.

In Hospitals, Factories, Schools, Public places...

PUT AN END TO THE DANGERS OF

SUDDEN DARKNESS

In hospitals sudden darkness can be a danger to life. Emergency lighting is the obvious safeguard—and that's where Keepalite comes into its own. Keepalite is an automatic emergency lighting system employing lead-acid storage batteries which are automatically triggered into operation by the actual mains failure. Modern methods of control and 'trickle' charging mean that Keepalite equipment has outstandingly long life and requires minimum of maintenance. That's why architects everywhere specify Keepalite as sure inexpensive protection for hospitals, factories, schools, banks and public places.

NIZAM SUGAR'S RESULTS DISAPPOINTING

DIVIDEND PRUNED—S.P.T. LIABILITY SMALL

THE Nizam Sugar Factory Ltd. (Managing Director: Mr. R. Vithal Rao, I.A.S., Hyderabad), which has changed its accounting year from June to September, has reported disappointing results for the 15-month period ended 30th September 1962. Gross profit has suffered a further sizable setback to Rs. 49.89 lakhs, as against Rs. 80.34 lakhs earned in the year ended June 1961. The setback has occurred despite the marked recovery in net sale proceeds (that is, excluding excise duty paid) from Rs. 380.28 lakhs to Rs. 527.41 lakhs. Consequently, the profit-margin (ratio of profit to sales), which had declined by more than three points to 21.1 per cent in 1960-61, has gone down again to just 9.4 per cent in the period under review. The profit on manufacturing account has slumped further from Rs. 67.40 lakhs to Rs. 37.17 lakhs and the working of the confectionary department has resulted in a larger loss of Rs. 2.47 lakhs as compared with Rs. 1.65 lakh a year before. The profit from agricultural operations has no doubt improved but only marginally from Rs. 14.59 lakhs to Rs. 15.19 lakhs. Sale proceeds, as already stated, have registered a notable rise, though sugar production has fallen from 65,219 tonnes to 57,566 tonnes. This is because of the substantially large stock worth Rs. 362.11 lakhs brought in from the previous year, whereas the stock at the close of the period under report was lower at Rs. 308.85 lakhs.

The net profit shows a setback from Rs. 44.37 lakhs to Rs. 27.30 lakhs. This is after providing Rs. 12.15 lakhs (Rs. 7.45 lakhs a year before) for depreciation and Rs. 10.44 lakhs (Rs. 27.62 lakhs) for taxation. No provision has been made for Managing Agents' commission (last year, the sum allocated was Rs. 90,484), for the Industries (I.F.) Department of the Government of Andhra Pradesh ceased to be the Managing Agents since 16th August 1960. Out of the net profit, a sum of Rs. 8.22 lakhs (as against some Rs. 60,000 in the previous year) is set apart for development rebate reserve. The dividend on the 25-rupee ordinary shares is pruned from 23 to 18 per cent per annum, subject to tax. Since the amount left after meeting the preference shareholders' claim is insufficient to cover fully the proposed dividend which absorbs Rs. 19.87 lakhs, a sum of Rs. 2.60 lakhs has been withdrawn from the dividend equalisation reserve. The carry forward is some Rs. 3,000 as against about Rs. 10,000 brought in.

A summary of the Company's progress in the past four years is provided in the following comparative table:

(In lakhs of rupees)

	For 15 months from 1-7-1961 to 30-9-'62	For the year ended 30th June		
		1961	1960	1959
Sale of sugar and molasses, less excise	527.41	380.28	452.52	450.84

Low	59.50	60.50	58.00	58.00

* Subject to deduction of tax.

Explaining the setback suffered during the year, the Directors state that the fall in profit is due mainly to the absorption of three months' extra expenditure amounting to nearly Rs. 22 lakhs as a result of the change in the financial year of the Company. Besides, lower realisation on sale of sugar—a factor common to the industry as a whole—has also affected the profit.

The factory farms produced during the year 239,282 tonnes of cane at an average of 44.26 tonnes per acre, as against 207,354 tonnes at an average of 38.27 tonnes in the previous year. The quantity of cane crushed was lower at 600,267 tonnes, as against 648,916 tonnes a year before, and so also the average recovery at 9.59 per cent as against 10.05 per cent.

Eighty-eight units out of the proposed 260 two-room tenements for workers were constructed during the year at an expenditure of Rs. 9.92 lakhs. The remaining units will be put up shortly. Towards this construction, the Company received a loan of Rs. 3 lakhs from the Union Government.

The profit for the 15 months ended September 1962, after the transfer to development rebate reserve, amounts to Rs. 19.08 lakhs which works out roughly to a return of 7 per cent on the aggregate "own funds" of Rs. 270.65 lakhs. Allowing for the 6 per cent standard deduction, the profit assessable for Super Profits Tax is Rs. 2.70 lakhs. Half of this amount will be claimed as S.P.T., lifting the aggregate tax burden on the Company to 56.4 per cent.

The paid-up capital of the Company is unchanged at Rs. 145.89 lakhs, including Rs. 35.80 lakhs under 25-rupee preference shares of two types. It is backed by reserves and surplus aggregating Rs. 136.11 lakhs, including Rs. 11.35 lakhs under development rebate reserve. The loan liability, excluding the Union Government advance of Rs. 3 lakhs for housing, has gone up from Rs. 165.46 lakhs to Rs. 232.58 lakhs and this, together with current liabilities and provisions, brings the total short-term indebtedness to outsiders to Rs. 619.95 lakhs, which is, however, fully covered by current assets, loans and advances aggregating Rs. 700.98 lakhs. The gross block of the Company, which has expanded during the year from Rs. 349.89 lakhs to Rs. 414.20 lakhs, has been written down conservatively to Rs. 199.85 lakhs.

The Rs. 25 fully paid ordinary shares of the Company are currently quoted at Rs. 62.25 *cum-div.* On the *ex-div.* basis, they offer a net yield of 5.3 per cent per annum.

ASIAN CABLES CORPORATION

The Asian Cables Corporation Ltd. which is to diversify its activities by taking up production of power cables and magnet wires in collaboration with Messrs. Enfield Standard Power Cables Ltd. of the U.K. and Messrs. Phelps Dodge Copper Products International Corporation of the U.S., has placed firm orders for plant and machinery in consultation with its collaborators. It has also finalised recruitment of Indian technicians living abroad, who will be trained for a year to 18 months at its collaborators' plants. Mr. S. H. Kotak, a Director of the Company, has just returned from a tour of the U.S. and the Continent after contacting leading manufacturers of power cables and magnet wires.

The Company has been authorised to issue additional capital of Rs. 55 lakhs divided into 55,000 equity shares of Rs. 100 each for cash at par. The entire issue will be made to the American collaborator.

LOMBARD BANKING'S PROFIT HIGHER

After considering the working results for the full year 1962 and in the light of current trends, the Directors of Lombard Banking Ltd., London, have recommended a final dividend of 7½ per cent making, with the 2½ per cent interim dividend already paid, 10 per cent less income-tax for the year, which is the same as that distributed in 1961. The profit of the Group for 1962, including investment income but before charging depreciation, interest on debentures and registered notes of subsidiaries, Directors' emoluments and Auditors' charges, is higher at £1.14 million, as compared with £1.10 million for 1961. The consolidated net profit before tax is £601,414, as against £591,227 a year before.

U.K. taxation amounts to £346,634 (£322,159 a year before), after crediting an over-provision of £6,974 (£49,468), and overseas taxation to £45,791 (£61,178), after crediting an over-provision of £890 (*nil*). The consolidated net profit for the year after taxation and after allowing for minority interest is £183,625 (£271,546).

USHA SPINNING'S MILL INAUGURATED

The 12,000-spindle cotton mill of the Usha Spinning and Weaving Mills Ltd. at Badarpur, a village 12 miles from Delhi, was inaugurated by Mr. Pratap Singh Kairon, Chief Minister of Punjab, on Sunday the 17th inst. In his welcome speech at the inaugural function, Mr. Babubhai M. Chinai, Chairman of the Company, said that the building of the factory had been so designed as to accommodate additional 13,000 spindles for which an industrial licence had been obtained. The Government's permission was sought, he said, to install also 500 looms. Mr. Chinai disclosed that the mill could switch over to the manufacture of various kinds of yarn and special yarn for defence needs.

MONTHLY ECONOMIC REVIEW OF U.K.

(*Concluded from page 498*)

discussions with 17 major industries and estimation of the capacities of others, has been drawing up a proforma blue-print to show whether it would be possible for Britain's output to rise by an average of 4 per cent over the period 1961-66, or the equivalent of 3.2 per cent per man-year, whereas, in the period since 1951, it has been growing at 2-2½ per cent a man-year.

After studying the first two sections of the resultant report (published at the end of February by H.M. Stationery Office under the title *Growth of the United Kingdom Economy to 1966*), the Council approved this 4 per cent growth target, and the report itself concluded that its attainment "should not prove impossible" —provided certain conditions are satisfied. Since the "office" study of these conditions has not yet been agreed by the Council, no detailed statement of them has been officially published (though an early draft of the "office" document has recently found its way into the British Press). The published document emphasises, however, that "there are undoubtedly difficult problems to be tackled, the solution of which will call for changes in policies, arrangements and attitudes. A vital element will be a determination to succeed on the part of Government, management and the trade unions." In other words, though this exercise offers promise of achievement, nothing can yet be taken for granted. Not until positive steps have been taken to improve the rate of productivity—that is, efficiency measured in terms of output per worker—will it be reasonable to accept the assumption of faster long-run growth as the basis for other policies (such as the amount of demand stimulation that can safely be injected through the budget, or by credit relaxation).

Notices

THE BENGAL PAPER MILL CO. LTD.

NOTICE OF FIRST CALL

NOTICE IS HEREBY GIVEN THAT BY A resolution passed on the 25th February 1963 the Board of Directors of the Company have decided to make First Call of Rs. 5.50 per share (inclusive of Rs. 3 on account of premium) on 1,80,000 Equity Shares of Rs. 10 each issued at Rs. 22 per share. The call money is payable to the Company at its Registered Office on or before 30th April 1963 by the Shareholders registered as on the 30th March 1963. The holders of shares with blank transfer deeds are requested to lodge them with the Company for registration of transfer.

The Transfer Books of the Company will remain closed from 25th March to 30th March 1963, both days inclusive.

By Order of the Board,
H. P. DHANUKA,
Director

Registered Office:
14, NETAJI SUBHAS ROAD,
CALCUTTA-1.
11*th March* 1963.

THE TATA MILLS LIMITED

THE SHARE TRANSFER BOOKS OF THE Tata Mills Limited will be closed from Monday, the 15th April to Monday, the 13th May 1963, both days inclusive.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
N. H. TATA,
Director.

Registered Office:
BOMBAY HOUSE, 24, BRUCE STREET, FORT,
BOMBAY 1, 18*th March*, 1963.

THE AHMEDABAD ADVANCE MILLS LIMITED

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Secretaries and Treasurers,
N. H. TATA,
Director.

Registered Office:
BOMBAY HOUSE, 24, BRUCE STREET, FORT,
BOMBAY, 18*th March*, 1963.

NEWS IN BRIEF

UNDER an agreement signed by the Oil and Natural Gas Commission with the Soviet Union, India will get drilling equipment worth Rs. 4 crores.

The Government of India has a proposal to set up a self-financing deferred scheme for speeding up the installation of more broad terms for jute manufacture.

Air-India will introduce a third Boeing service to Tokyo from 1st April. The new service will leave Bombay every Monday, Wednesday and Friday for Tokyo. The Monday service will be routed via Delhi and the other two via Calcuttta.

The Emergency Production Committee (Chairman: Prof. M. S. Thacker) has constituted high-level study groups to investigate and recommend measures to step up productivity in the cement, fertiliser, engineering, cotton textile and jute industries, as also to undertake studies on absenteeism.

The Caltex Refinery at Visakhapatnam has achieved a million man-hours without lost-time accident for the fourth time since the Refinery went on stream in 1957. The performance is claimed to be outstanding in the history of petroleum refining in India.

A two-member trade delegation consisting of Mr. J. P. Patel, a leading member of the Bombay cotton trade, and Mr. G. K. Devarajulu, Vice-President of the Indian Cotton Mills' Federation, is now in Sudan at the invitation of the Government of that country to acquaint itself about the progress in the cultivation and marketing of cotton. It will also assess the prospects for imports of Sudan cotton by India.

The State-owned Shipping Corporation of India has decided to acquire six coal carriers out of the dozen proposed by the Union Government for the movement of coal along the coastal ports, according to Mr. C. P. Srivastava, Managing Director of the Corporation. Efforts are being made to construct such ships at the Garden Reach Works Shops, Calcutta, Hindustan Shipyard, Visakhapatnam, as well as in Belgium and Yugoslavia.

A scheme for establishing in Kerala a heavy machine tools plant with a capacity of 1,000 machine tools per annum has been approved by the Central Government. The proposed plant, which is expected to involve a capital investment of Rs. 7.5 crores, will be in the public sector. The erection and management of the plant will be entrusted to the Hindustan Machine Tools Ltd., Bangalore. It will be recalled that H.M.T. is already putting up a similar plant at Pinjore in the Punjab.

The Central Government has decided to grant an *ad hoc* rebate of Central excise duty on woollen yarn, jute manufactures, and synthetic organic dyestuff and derivatives used in the manufacture of woollen shawls exported from India. The rate of rebate is fixed at Rs. 2.25 per kg. of woollen shawls. The manufacturers of woollen shawls who wish to export these under the claim of *ad hoc* rebate are required to contact the Collector of Central Excise in whose jurisdiction their factory is situated for detailed information.

Kilburn and Company Ltd. organised a compact exhibition of laboratory equipment manufactured by Gansons Private Limited, Bombay, from the 14th to 19th inst. An array of specialised laboratory equipment and appliances used by laboratories in educational institutes, science colleges, various industries and research centres was displayed at the exhibition. A feature of the exhibition was remote control isotope handling equipment complete with brick shielding and specially designed remote control tongs and can opener.

In order to give industry greater flexibility in the use of the foreign exchange released to it, certain modifications have been made in the procedure regarding the import of raw materials, components and spare parts against actual user licences granted to industries in the scheduled and non-scheduled sectors including small-scale industries. Accordingly, the holders of actual user licences for raw materials may, in their discretion, import more or less of any items of raw materials and components covered by their licences, subject to the condition that the excess in respect of any individual item will not exceed 25 per cent of the quantitative limit, if any, indicated in the licence itself. Further, within the face value of the licence, the licence-holder will be allowed to import permissible spare parts and small tools required for the purposes of his factory, provided the value of such imports do not exceed 25 per cent of the face value of the licence. Banned items of spare parts and small tools should not be imported under this scheme.

The Central Training Institute of the Directorate General of Employment and Training, Ministry of Labour and Employment, was inaugurated at Bombay on Thursday this week by Prime Minister Mr. Jawaharlal Nehru. Technical assistance will be made available to the Institute through a co-operative programme between the United States Agency for International Development and the Government of India. The A.I.D. will contribute advisory staff, machinery, equipment and books. Its planned expenditure on this assistance programme will be about $1,000,000 in foreign exchange. The complementary investment by the Government of India will be about Rs. 120.40 lakhs. Five advisers from Dunwoody Industrial Institute, Minneapolis, Minnesota, U.S., will work with the teaching and administrative staff of the Institute. Four additional advisers will arrive sometime later. This training institute will be one of the most modern craft-instructor training institutes in the country. Its workshops have been equipped with up-to-date machines. Latest techniques in teaching will be employed at the Institute, including audio-visual aids such as films, film-strips, tape recordings, charts and models of all kinds. The Institute will enroll about 250 trainees annually.

From Abroad

The West German Cabinet Economic Committee has decided to concede the longstanding demand of the industry for increased insurance cover of all risks, commercial and political. The exporters will be given improved export credit guarantee facilities by the semi-official Hermes Insurance Scheme.

Under the contract signed at Tokyo last week between the Export-Import Bank of Japan and 12 other commercial banks and the Government of Pakistan, the Japanese banks are to make a loan of 9,000 million yen to Pakistan. The loan bears interest at 6 per cent repayable over 10 years with a five-year grace period.

All labour exchanges in Norway have been brought under Government control with effect from the 1st inst. The last to be taken over was the labour exchange in Oslo. The decision to transfer labour exchanges from municipal to State control was taken by the Norwegian Storting (Parliament) in 1960.

Losses amounting to $593 million have been suffered by Costa Rica, El Salvador, Guatemala, Honduras and Nicaragua since 1957 owing to the steady decline in coffee prices, according to the World Coffee Information Centre. During the year 1962, alone, the five Republics incurred losses aggregating $187 million.

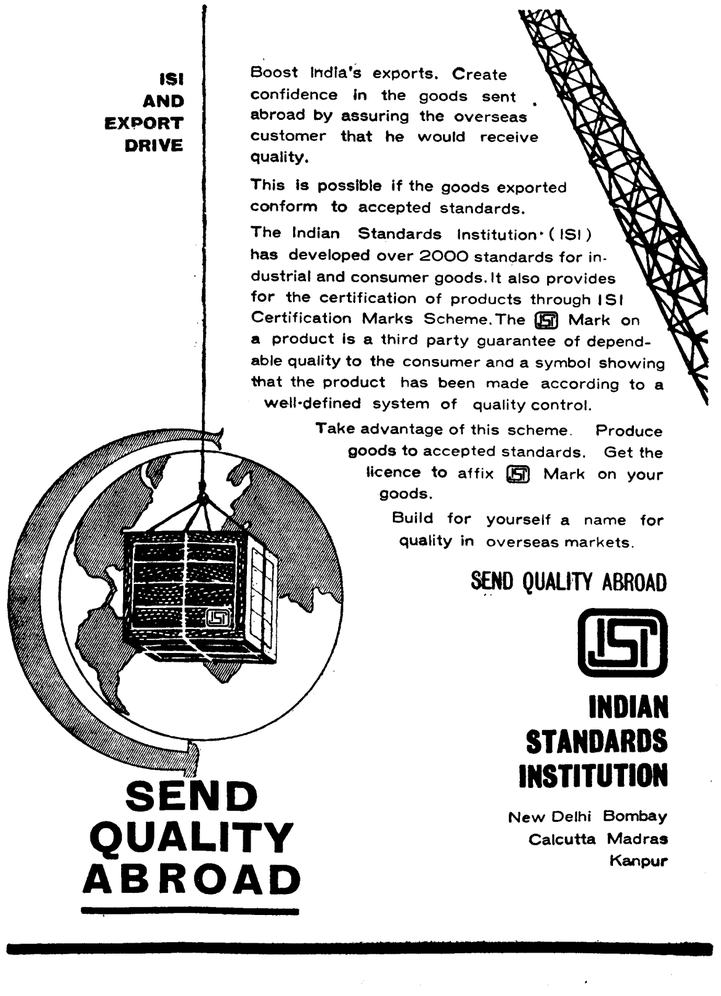
The aggregate sales of the Ford Motor Company in 1962 amounted to $8,090 million, representing a rise of 21 per cent as compared with 1961. The Company has plans envisaging a substantial increase in capital expenditures by foreign subsidiaries to meet the anticipated further growth in international markets during the current year.

The Ivory Coast Republic has become a member of the International Monetary Fund, the World Bank, the International Finance Corporation and the International Development Association. Its quota in the Fund is $15 million and its subscription to the capital stock of the Bank consists of 200 shares with a total par value of $20 million. The subscriptions to the I.F.C. and I.D.A. are $111,000 and $1.01 million, respectively.

PERSONAL

SIR James Plimsoll, High Commissioner-designate of Australia, presented his letter of credence to President Dr. S. Radhakrishnan on the 16th inst.

Mr. B. S. Dua of the American Refrigerator Company, Ltd., has been elected President of the Air-Conditioning and Refrigeration Council of India for the current year.



Field-Marshal Viscount Slim, a member of the board of Imperial Chemical Industries Ltd., London, has arrived in Calcutta for a first-hand study of the working of the I.C.I. group of companies in this country.

Mr. D. N. Mitra, Chairman of Durgapur Projects Ltd., and a former Director of the State Bank of India and the Reserve Bank of India, has been elected Chairman of the United Industrial Bank Ltd., Calcutta, *vice* Mr. Jadhu Nath Roy, who resigned for reasons of age.

Mr. C. P. Srivastava, Managing Director of the Shipping Corporation of India, Mrs. Sumati S. Morarjee, Executive Director of the Scindia Steamship Company, and Dr. A. Ramaswami Mudaliar, Chairman, India Steamship Company, left for London to attend the meeting of the Karmahon Conference. The Conference is an organisation of shipowners running the India-Pakistan-U.K.-Continent line.

Mr. Vasant J. Sheth, Director of the Great Eastern Shipping Company, Ltd., and Mrs. Sumati S. Morarjee, Executive Director of the Scindia Steamship Company, Ltd., have been elected President and Vice-President, respectively, of the Indian National Steamship Owners' Association for the year 1963-64. Dr. A. Ramaswami Mudaliar, Mr. Dilipsinh Shoorji and Mr. N. H. Dhunjibhoy have been elected Committee members of the Association.

Mr. Bharat Ram, Chairman of Delhi Cloth and General Mills Company, Ltd., and Mr. K. P. Goenka, a leading industrialist of Calcutta, have been elected President and Vice-President, respectively, of the Federation of Indian Chambers of Commerce and Industry for 1963-64. Mr. Ambalal Kilchand, Mr. Arvind N. Lalbhai, Mr. M. L. Nopany, Mr. T. S. Rajam and Mr. P. N. Talukdar have been elected associate members. The members representing industry are Mr. Ramabhai B. Amin, Mr. K. P. Goenka, Mr. S. S. Kanoria, Mr. Thapar and those representing trade are Mr. Madan Mohan R. Ruia, Mr. M. L. Khaitan, Mr. B. P. Poddar, Mr. Surottam P. Hutheesing and Mr. Naval H. Tata.

SYNOPSES OF COMPANY REPORTS

Star Paper Mills Ltd.

(*Managing Agents*: Messrs. Bajoria & Co., Calcutta.)

Twenty-sixth Annual General Meeting—29th March 1963.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1962	1961
Sales of paper	2,96,50	1,73,69
Closing stock—finished paper	19,10	4,46
,, ,, —paper-in-process	2,53	1,41
Gross profit (+) or loss (—)	+14,29	—2,26*
Transfer to Managing Agents' remuneration	50	50
Profit (+) or loss (—) before provision for depreciation	+13,79	—2,26
Balance brought forward (credit)	+1,72	+3,97
Adjustments (credit items)	+ 2	+ 1
Appropriations:		
Total available balance	+15,53	+ 3,98
To provision for depreciation (for 1960-61)	14,97	Nil
To adjustment of loss for the year	Nil	2,26
To dividends	Nil	Nil
Carry forward	5	1,72

* Loss after providing for Managing Agents' remuneration.

Extracts from the Directors' report: With the installation of the additional machinery supplied by the machine suppliers, free of charge, as referred to in the Directors' last report, the bottlenecks in the *Pulp Plant* were overcome in April 1962, but unfortunately normal production on the new plant could not be achieved before July 1962 due to stoppage of the new Paper Machine No. 3 on account of unexpected damage to the *M. G. Rubber Presser Rolls*. Normal production on the new plant was thus obtained for only three months of the year under review.

The Wage structure at the mill has been revised from January 1962 under a Five-Year Agreement with the workmen which has resulted in an increase of the wage bill. The agreement also provides for a yearly bonus of minimum one month's basic wages.

Due to allotment of insufficient forest areas of twisted pine by the U.P. Government, supplies of wood from U.P. forests were grossly inadequate and purchases of wood had to be made from the market at prohibitive prices. Due to high transport and labour charges together with an increase in the forest royalty, the extraction cost of pine wood has also been higher than anticipated. The prices of chemicals and stores rose further during the year. All these unforeseen factors have considerably affected the working results of the year.

The quality of paper produced on the new plant has been well received by the market. The Directors are now contemplating certain additions to the plant with a view to increasing production further. An application has been made to the U.P. Government for allotment of additional raw-material for this purpose.

An *ad hoc* increase of only 6 nP per kg. in paper prices was sanctioned by the Government with effect from 21st June, 1962 which is quite inadequate to meet the increased cost of production. As pointed out by several spokesmen of the paper industry, the present price structure does not give sufficient incentive for further expansion. It is hoped that the Government will seriously consider the question of a further increase of paper prices in the near future.

Accounts in brief as at 30th September 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	2,19,31,975	Gross block	5,05,00,808
Reserves and surplus	9,08,778	—Depreciation	63,60,688
Other liabilities	3,62,75,590	Net block	4,41,40,170
		Live stock	1,310
		Current assets	1,39,57,503
		Investments	1,88,989
		Cash	3,77,808
		Miscellaneous expenditure	4,50,563
	Rs. 5,91,16,343		Rs. 5,91,16,343

* Paid-up capital consists of—(a) 10,000—5 per cent. C. Tax-free redeemable preference shares of Rs. 100 each; (b) 30,000—6½ per cent. C. Tax-free redeemable 2nd preference shares of Rs. 100 each; (c) 40,000—7 per cent. C. Tax-free redeemable 3rd preference shares of Rs. 100 each; (d) 29,901—7 per cent. C. Tax-free redeemable Convertible 3rd preference shares of Rs. 100 each; (e) 10,00,000 Equity shares of Rs. 10 each and (*f*) 1,00,000 "A" Equity Shares of Rs. 10 each. Calls in arrears on Equity shares amount to Rs. 67,125.

Kumergode Estates Ltd.

(*Managing Agents*: Messrs. Peirce Leslie & Co., Ltd., Mangalore.)

Twelfth Annual General Meeting—27th March 1963.

Working Results:

	For the year ended 31st October (In thousand rupees)	
	1962	1961
Income from crops:		
Coffee	4,46	4,95
Minor produce	9	10
Gross profit	1,57	1,83
Transfer to Managing Agents' remuneration	9	11
,, ,, depreciation	32	39
,, ,, provision for taxation	39	39
Net profit	77	94
Balance brought forward	24	15
Appropriations:		
Total available balance	1,01	1,09
Transfer to general reserve	10	15
To taxation (for previous year)	18	Nil
Proposed dividend (taxable) ordinary	60	70
	(15%)	(17½%)
Dividend per share	[Re. 0.30]	[Re. 0.35]
Carry forward	13	24

Extracts from the Directors' report: In view of the possible imposition of Super-tax under the Mysore Agricultural Income-tax Act on the profits of the Company for the year ended 31st October 1961 the Company may be required to pay additional tax of Rs. 17,729. Provision for this has been made in the profit and loss appropriation account.

Crop and Costs: A total crop of 129.778 metric tonnes was harvested during the year and delivered of the possible imposition of Super-tax under the Rs. 2.30 per point or Rs. 3.440 per metric tonne. A comparative statement of production and costs for the previous 2 years is given below:

Year	Crop	Estate expenditure per hectare	All-in-cost per hectare
	(Metric tonnes)	Rs.	Rs.
1959-60	193.192	1,393	1,712
1960-61	182.301	1,336	1,652
1961-62	129.778	1,303	1,510

The 1962-63 crop has been estimated at 170 metric tonnes and the all-in-cost of production at Rs. 2,408 per metric tonne.

Accounts in brief as at 31st October 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	4,00,000	Gross block	9,94,191
Reserves and surplus	4,12,870	—Depreciation	2,37,237
Other liabilities	2,00,346	Net block	7,56,954
		Current assets	1,43,586
		Investments	250
		Cash	1,12,426
	Rs. 10,13,216		Rs. 10,13,216

* Paid-up capital consists of 2,00,000 ordinary shares of Rs. 2 each. Of the above, 1,00,000 shares have been allotted as fully paid up by way of bonus shares through the capitalisation of reserves.

Bombay Oxygen Corporation Ltd.

(*Managing Agents*: Messrs. Ruia Chinai & Co. Private Ltd., Bombay.)

Chairman: Mr. Madanmohan R. Ruia.

Second Annual General Meeting—9th April 1963.

Extracts from the Directors' report: After transferring an amount of Rs. 3,07,545 (Rs. 3,44,826 last year) to the "Expenses During Construction Account" and after providing Rs. 79,000 (Rs. 98,400 in 1961) for taxation, the profit and loss account shows a surplus of Rs. 41,610 (Rs. 1,12,662 for last year) to which is added the surplus of Rs. 1,12,662 brought forward from the previous period, making a total of Rs. 1,54,272 to be carried forward to next year's account.

It will be observed that a sum of Rs. 6,52,371 has been shown in the balance-sheet as "Expenses During Construction Account." It will be adjusted to the appropriate accounts on the completion of the factory buildings and erection of machinery.

Finance: The balance of Rs. 50 per share had been called up during the year and the Directors are pleased to inform that 95 per cent of the amount called up has been received.

Progress of the Project: The *Acetylene Plant, Oxygen Cylinders, Regulators* and *Welding* and *Cutting Torch Sets* have been received from abroad. The Company has been granted an import licence for import of *Acetylene Cylinders* from U.S.A.

The Oxygen factory buildings and the administrative building have been completed. Erection of Oxygen plants is completed and trial production is to start as soon as power connection is obtained. Work on construction of Acetylene factory buildings has also commenced and the erection of the plant is expected to be completed by the third quarter of this year.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,44,42,500	Block	58,21,933
Reserves and surplus	1,54,272	Current assets	7,06,071

	(6%)	(10%)
Dividend per ordinary share	[Rs. 6.00]	[Rs. 10.00]
Carry forward	1,21	2

Extract from the Directors' report: During the year under report, the total quantity of sugarcane crushed was 139.798 M. tonnes inclusive of 44.741 M. tonnes purchased from outside cultivators. As against this, the total quantity of sugarcane crushed during the previous year was 165.229 M. tonnes inclusive of 58.468 M. tonnes from outside cultivators. During the year under review, the total production of sugar was 157.724 bags (of one quintal each) whereas the total production of sugar during the previous year was 185.430 bags (of one quintal each). The recovery of sugar for the year under report is slightly higher that is 11.28 than that of the previous year. As the jaggery prices are ruling high at present, supply of cane in usual quantity cannot be expected from outside cultivators during the current season. Consequently, there will be considerably less production of sugar during the current season than that of the previous year which is likely to affect the profits. A co-operative sugar factory established near by will start its production soon, and the Company's factory will not get adequate supply of cane from outside cultivators. In view of the crushing capacity of the Company's factory, it is feared, unless other arrangements for adequate supply of such cane are made, it will be difficult to run the factory economically.

Accounts in brief as at 31st July 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	48,80,800	Gross block	1,05,31,070
Reserves and surplus	25,70,296	—Depreciation	50,15,751

Carry forward	Nil	Nil

Extracts from the Directors' report: In the last report, the Directors referred to the receipt of 8 American combers. For the purpose of housing the new machinery, extension of the factory building by about 11,160 sq. ft. became necessary. The construction of the extension was taken on hand and it is nearing completion. The construction would have been finished this year itself but for the acute shortage of building materials, mainly cement and asbestos sheets.

There has been a fall of about Rs. 7 lakhs in the net profit for the year 1962 as compared with the previous year. This fall is mainly attributable to the short realisation in the sale of staple fibre yarn.

The Company could not adequately make up this short-fall though it was realising higher prices compared to last year for finer counts of yarn to which it switched over in the cotton section.

Raw Material: During the year under reference, there was a short-fall in the cotton crop, 48 lakh bales against an expected 58 lakh bales. Due to this, the prices of Indian cotton ruled much above the ceiling rates for the respective grades. The quality also was far inferior.

Additional burdens: The levy of cess on Indian cotton consumption came as an additional burden to the Industry. Increase of tariff on electricity, particularly for the textile industry in the Madras State was yet another burden which Cotton Textile Mills situated in Madras State had to face. As a result of the Wage Board Award, the Company had to pay Rs. 2,14,000 more as wages than in the previous year.

With the further revision of ceiling prices of cotton yarn and considering the present market trends and the estimated availability of cotton, the Company can hope for better results during the current year.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	35,99,600	Gross block	1,38,89,521
Reserves and surplus	39,80,473	—Depreciation	71,51,825
Other liabilities	52,44,300	Net block	67,37,696
		Current assets	52,37,406
		Investments	8,29,875
		Cash	19,396
	Rs. 1,28,24,373		Rs. 1,28,24,373

* Paid-up capital consists of 35,996 Equity shares of Rs. 100 each. Of the above 6,000 shares were allotted as fully paid Bonus shares by Capitalisation of reserves.

Notice

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE SHARE TRANSFER BOOKS OF THE SVADESHI MILLS COMPANY, LIMITED will be closed from Monday, the 15th April to Monday, the 13th May 1963, both days inclusive.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
N. H. TATA,
Director.

Amsterdam, gateway to Europe—so easy to reach by KLM

Read why so many experienced travellers and shippers choose reliable KLM jet routes to Rome, Zurich, Frankfurt and Amsterdam with connecting flights to London, Paris, Hamburg, Brussels and 36 other cities in Europe

They know that KLM was the first European airline to fly to the Far East. They know that 'Golden Circle Service' is offered on KLM flights from the Far East to Europe via the South Asian routes and over the Pole. They know that KLM has had longer than any other airline to perfect its reliability—43 years. Read more KLM facts...

1. KLM operates weekly DC-8 jet services to Europe from Calcutta and Delhi and five-weekly flights from Karachi on Tuesdays, Wednesdays, Thursdays, Saturdays and Sundays.

2. In addition, in conjunction with its interline partners, KLM makes it possible for you to fly out of Calcutta, Delhi or Bombay *any day of the week*, by providing connections at Karachi, Cairo, Beirut, Athens, Teheran or Rome (depending on the day of travel), with KLM flights to Europe.

3. KLM has its own fully air-conditioned resthouse at Karachi airport called 'Midway House'. It has spacious, comfortable rooms with shower baths and provides many facilities e.g. a supervised nursery, a barber shop, a souvenir and carpet shop and a floodlit tennis court. The service there matches the standards of a good European hotel.

Jet maintenance at high level

4. After every 3000 hours in the air, a DC-8 jet is completely stripped. Even the seats come out. They go to the carpenters and upholsterers, the precision instruments to the electrical and radio workshop, and the engines to the testing tunnel.

5. KLM believes in double-checking everything. Before every flight a DC-8 jet gets two "walk-around" inspections, one by KLM maintenance crew, one by the flight engineer. He walks around the entire plane to double-check about 60 key points. Including such details as hydraulic fluid, engine intake ducts, tyre treads, brake linings, toilets, lights and power for the galley.

Service for young and old

6. Every KLM DC-8 jet has a luxuriously appointed lounge, located in First Class. It is a perfect place to meet your fellow travellers over free drinks.*

7. KLM prepares special diet food for passengers who request it as they book their seats. KLM pursers are always briefed on these special diets before passengers come aboard.

8. KLM pampers babies—and their mothers. KLM supplies comfortable cribs that hook firmly to the overhead racks, leaving mother's lap free.

Amsterdam—offering so much for so little!

9. On your next trip to Europe, take advantage of 'Hilton Special'—a stay of two days and a night in the Hilton Hotel, Amsterdam; plus sightseeing tours covering a canal boat trip, visits to the Queen's Palace, Rijksmuseum, the Rembrandt House, a diamond cutting factory and other places of tourist interest. And all this for just £.6.1 sh.

10. KLM's DC-8 jet services from Calcutta, Delhi and Karachi as well as its services from Cairo, Beirut, Athens, Teheran and Rome provide excellent connections at Amsterdam to London, Paris, Hamburg, Brussels and many other European cities.

11. When you route your journey via Amsterdam, you have the advantage of going in for tax-free shopping at the airport (including ShipSide cars), and availing of Holland Minitours at a cost of £.1.5 sh. per person.

12. Your Travel Agent will tell you more about the advantages of flying KLM via Amsterdam. Get in touch with him or contact the nearest KLM office. 7 Chowringhee Road, Calcutta; 9A Connaught Place, Delhi; Taj Mahal Hotel, Bombay.

TREND OF MARKETS

MONEY EXTREMELY TIGHT

(From Our Own Correspondent)

BOMBAY, 20th *March*

The short-term money market continued to rule extremely tight during the week under review, with the inter-bank call rate standing at the high level of 6½ per cent. The rate in Calcutta was higher still at 6¾ per cent. Besides the normal requirements of industry and trade, there was the pressure of demand for funds to finance payment of income-tax, a usual feature at this time every year. Several banks are reported to have taken recourse to "special" borrowings from the Reserve Bank at the penal rate of 6¾ per cent. For the credit demand from their clients have increased markedly, unaccompanied by any fresh accrual of deposits. In the week ended 8th March 1963, the total credit made available by scheduled banks to trade and industry spurted by a further Rs. 43.93 crores to Rs. 1,580.54 crores, while deposits declined by Rs. 11.98 crores to Rs. 2,154.36 crores and inter-bank borrowings by Rs. 79 lakhs to Rs. 36.64 crores. It is not surprising, therefore, that the borrowings from the Reserve Bank went up by another Rs. 26.91 crores to Rs. 26.92 crores, of which those against usance bills alone accounted for Rs. 38.71 crores, a rise of Rs. 20.64 crores. Besides resorting to increased borrowings from the Reserve Bank, the scheduled banks have also been forced to sell a part of their investments, the total outstanding of which as on 8th March being lower by Rs. 24.27 crores at Rs. 587.88 crores.

In the aforesaid context, it is gratifying that the Reserve Bank has announced provision of accommodation at the Bank rate of 4½ per cent to scheduled banks in excess of their statutory reserves against advances to small industries and co-operatives. As a result of this relaxation, the scheduled banks (particularly the State Bank), we are told, will be able to borrow an additional Rs. 10 crores at the Bank rate in excess of the overall amount of Rs. 70 crores. Simultaneously, the Reserve Bank has announced its decision to provide, with effect from the 23rd inst., accommodation to scheduled banks against their holdings of eligible usance export bills drawn in Indian rupees or foreign currencies. Such accommodation will, however, be subject to the overall limits, quotas and interest rates for borrowings from the Reserve Bank. As a measure of export promotion, the Reserve Bank will grant the banks additional borrowing quotas at the Bank rate—in excess of the overall limits—under the Export Bills Credit Scheme in respect of eligible bills drawn in Indian rupees, provided the borrowing banks, in turn, do not charge commission, interest or discount on these bills at a rate exceeding 1½ per cent over the Bank rate.

Meanwhile, the Refinance Corporation for Industry has raised its lending rate from 5 to 5½ per cent with effect from the 14th inst. This is the first time since its inception in 1958 that the Corporation has stepped up the lending rate. The revised rate will not, however, be applicable to the refinance of medium-term credit (six months to five years), including pre-shipment credit, which will continue to be made available at a concessional rate of 5 per cent.

To revert to the short-term money market. The persistent stringent conditions are reflected in the continued poor response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 19th inst. The total amount offered was just Rs. 2 crores which was also the amount invited and accepted. The average rate of accepted tenders was, however, unchanged at Rs. 2.370 per cent per annum. The response to the Intermediate Treasury Bills, too, was very poor; the amount of Bills actually sold from the 13th to 16th inst. was a bare Rs. 50,000, as against Rs. 129.75 lakhs a week before.

There was a further accretion of Rs. 3.76 crores to Rs. 115.96 crores in India's foreign assets during the week ended 15th March 1963. Balances held abroad no doubt declined by Rs. 1.24 crore to Rs. 10.88 crores, but this decline was more than made good by a rise of Rs. 5.00 crores to Rs. 105.08 crores in the foreign securities held in the Issue Department. Loans and advances to scheduled banks fell by Rs. 6.73 crores to Rs. 76.67 crores, including Rs. 58.90 crores (fall of Rs. 2.35 crores) advanced against usance bills. Notes in circulation increased by a further Rs. 5.93 crores to Rs. 2,241.79 crores, bringing the total increase for the two weeks ended 15th March to Rs. 47.83 crores.

In the foreign exchange market, the rupee was unaltered *vis-a-vis* the dollar, the banks' selling rate for ready dollars being Rs. 478 per $100. Their buying rate was also unchanged at Rs. 474.75. On the New York Exchange, the £ sterling was irregular *vis-a-vis* the dollar. Thus, the spot rate improved slightly from 279.960-279.990 cents to 279.990-280.020 cents, while the three months' forward eased from 279.300-279.330 cents to 279.120-279.150 cents.

* * * *

The total cash collections brought into the Central account of the National Defence Fund upto 16th March 1963 amounted to Rs. 47.98 crores, including Rs. 28 lakhs from Britain and Rs. 42 lakhs from other countries. Contributions in gold and gold ornaments aggregated 1,650,534 grammes.

BULLION PRICES REACT

(From Our Own Correspondent)

BOMBAY, 20th *March*

After last week's hectic rise especially in silver, the bullion market developed a reactionary trend this week due mainly to heavy arrivals and absence of new demand for silver at higher levels. Closing prices indicated small losses over the week.

Silver, which was bid up last week to a new all-time peak of Rs. 242 per kilo, commenced this week lower at Rs. 240.50 and closed at Rs. 241.50 on Thursday the 14th inst. Within three days, it moved down to Rs. 239 and was stagnant at that level till close today, as against Rs. 241 a week ago. The inflow increased to 30 bars, while outflow was poor at 10 bars; last week daily average offtake matched arrivals at 20 bars.

As against last week's close of Rs. 105.50, ready gold opened lower at Rs. 104, but recovered to Rs. 105 on Thursday the 14th inst. Thereafter, under the influence of silver, it moved down to Rs. 102 by Monday the 18th inst. and closed at that level today. Sovereign lost during the week two points to Rs. 73.

Silver prices eased in New York and London, too. In London, spot silver closed a half penny lower at 109½*d.* than the last week's new peak of 110*d.* at which level it was quoted early this week. The forward quotation was also a half penny lower at 110*d.* Spot silver in New York made a new peak of 128 cents this week, but turned lower to close unchanged over the week at 127.7 cents. Ready gold moved narrowly in London to close at 250*s.* 8¾*d.*, as against 250*s.* 10½*d.* a week ago. The dollar price of gold, however, moved up $35.10 to $35.10⅛.

The following table shows the trend of prices during the week under review:

	23-3-68 (closing)	High	Low	13-3-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (.996 fine) ..	239.00	241.50	239.00	241.00
GOLD				
Ready(.996 fineness) ..	102.00	105 00	102.00	105.50
Sovereign.	73.00	75.00	73.00	75.00
London— ..	250*s.* 8¾*d.*	250*s.* 0½*d.*	250*s.* 7¾*d.*	250*s.* 10½*d*
Gold	109½*d.*	110*d.*	109½*d.*	110*d.*
Silver Ready ..	110*d.*	110½*d.*	110*d.*	110½*d.*
Silver Forward ..				
New York—	127.7	128.0	127.7	127.7
Silver	cents	cents	cents	cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

* * * *

Intervening in the Rajya Sabha debate on the Government's gold policy on Wednesday the 13th inst., Mr. Morarji Desai, Union Finance Minister, defined the Government's long-term objective as one of seeing that all the gold in the country remained with the country and that no gold was kept by any private individual. Mr. Desai was, however, prompt in ruling out any official action to confiscate or forcibly take over gold holdings of private individuals. While conceding that gold was needed to strengthen the economy, he observed that force was not the right way to do so. Speaking about the Gold Control Order, Mr. Desai said that what was necessary was to tighten and not water down the measure. He indicated that a series of firm steps would be taken in that direction. One of the steps, he hinted, was the fixation of ceiling on individual holdings of gold.

* * * *

The office of the Gold Board is now located in Lakshmi Building (ground floor), 22, Pherozeshah Mehta Road, Bombay 1. The telephone numbers are: Chairman 263372, Member-Secretary 263368, and office 263377.

COTTON FUTURES SUBDUED

(From Our Own Correspondent)

BOMBAY, 20th *March*

Barring a spurt in the maturing Jarilla March on Tuesday, the 19th inst., which resulted in the quotation for the contract rising from Rs. 725 (per three quintals) to Rs. 735, the cotton futures market ruled generally subdued during the week under review. Easy advice from the spot market, following lack of mill demand and the consequent decline in price, was the main factor influencing futures. Tuesday's rally in the March contract was attributed to heavy speculative buying prompted by the absence of any tenders on Monday, the 18th inst. also. Not a single bale of cotton has been tendered so far and it is unlikely that there will be any tenders against the contract. Sentiment was also favourably affected by the rumour that the export duty on ¾" cotton would be abolished. The firmness of the March contract imparted some strength to the May contract which was languishing due to lack of support. It attracted some replacement buying. The quotation for the contract consequently recovered from the lowest level of Rs. 961.25 touched on Monday, the 18th inst., to close at Rs. 697.25 as against last week's closing price of Rs. 699.25.

The announcement of the revised (higher) floor prices for cotton is eagerly awaited. As almost a month has passed since the Textile Commissioner stated that the revised prices would be announced in a fortnight's time, traders are now inclined to think that the announcement will be made only after the meeting of the Cotton Advisory Board scheduled to be held early next month.

In the spot market at Sewri, mill demand for ready cotton was very much restricted. Although prices ruled easy, offtake was limited. Needy mills purchased limited quantities of such popular varieties of cotton as Vijay, Digvijay, L.147, CO2, Kalyan and Wagad. There was good export demand for Bengal *Deshi* early in the week, although interest receded towards the close. Stray deals were reported in Zoda and Yellow Pickings. Foreign buyers have not so far evinced any interest in ¾" cotton. Foreign cotton was rather neglected. Barring limited buying of U.S. cotton, spinner interest in other growths was generally lacking.

A meeting of the States' Directors of Agriculture and representatives of the cotton trade and industry, convened by the Textile Commissioner was held at Bombay on the 19th inst. The meeting discussed in general the problems affecting cotton, but no definite conclusions were reached or recommendations made. Two more meetings are expected to be held before any final suggestions are made. A sub-committee is reported to have been appointed by the meeting to go into the question of reclassification of the present cotton price scheduled so as to include cotton grown in new areas in the revised classification for the next season.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri: Kalyan 935; Wagad 900; Khamgaon 990. Hubli Laxmi 1,185; CO2 (Nagar) 1,500. American on sample 1.375; B.P. 52 1,970; Sudan G4S 1,425.

Cotton futures in Karachi suffered a further setback during the week under review. Continued slow mill demand and poor export offtake initiated selling which resulted in a decline in prices. N.T.R.G. March receded from Rs. 71.90 to Rs. 71.60. The May contract eased from Rs. 73.25 to Rs. 72.95. Spot prices too ruled subdued.

The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few varieties of Pakistan cotton prevailing at Karachi.

Sind *Deshi* 73.00; Punjab *Deshi* 68.00. 4F Punjab Roller 78.45; S.G. 83.45; LSS Punjab Roller 81.45; S.G. 86.45; N.T. Roller 84.45; S.G. 89.45. 289F Punjab Roller 86.95. S.G. 91.95.

Listless conditions prevailed in the Liverpool cotton futures market during the week. Trading was inactive as operators were awaiting developments in legislation for U.S. cotton. In the ready section, spinner demand largely centred round American, Turkish, Brazilian and Pakistan cotton. Sudan cotton contracts were neglected. The following are the latest available quotations—in pence per lb.—from Liverpool:

March 24.25; May 23.90; March (Sudan) 29.00.

The New York cotton futures market ruled fully steady during the week under review also. Absence of any definite indication of the lines on which legislation on cotton was taking shape made for slow dealings and limited turnover. Prices, however, were well maintained, thanks to the firmness of spot prices.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago.

(In cents per pound)

	19-3-63	12-3-63	5-3-63
March	—	34.86	34.72
May	34.89	34.82	34.85
July	34.25	34.12	34.20
New York Spot ...	35.90	35.85	35.75

TEA INDUSTRY AND S. P. T.

(From Our Own Correspondent)

CALCUTTA, 19th *March*

The Finance Minister's speech in the Lok Sabha on Saturday the 16th inst. held out no prospect of a big revision of the Super Profits Tax Bill, about which the tea industry, in common with other industries, is much worried. To the criticism that this tax would hit growth of companies, Mr. Morarji Desai's reply was that, if he found harm caused to production or industrialisation, he might provide a remedy. In other words, unless concrete harm has been done, he is not prepared to hear any argument or plea that the tax is capable of doing harm. It is widely held that this tax will not only check growth of the existing companies as well as new capital formation, but will also retard inflow of foreign capital.

Tea trade and industry regret that their earnest plea for relief from the tax has been ignored. Tea gardens require funds for replantation and expansion, and all of a sudden now they find that the traditional method of financing these from profits has been limited. Taxation on the tea industry has reached such a high level that the gardens are even finding it difficult to pay interest on replantation loans offered by the Tea Board. This problem is so acute now that in his address to the annual meeting of the Tea Trade Association of Cochin last week, Mr. R. I. Bishop, Chairman of the Association, suggested grant of a replanting subsidy from cess collected from tea exports. It is a pity that the point that the tea industry's fortunes depend on weather is being missed in New Delhi. If it is remembered that a good crop period is more often than not followed by a bad one, no further argument is necessary to stress the need for provision in the Super Profits Tax Bill that loss in one period can be taken into consideration in another period of prosperity.

The Finance Minister's claim that the tea industry will benefit from the abolition of the export duty stands refuted. For, the Government's loss from the export duty will amount to Rs. 5.38 crores, whereas the industry will have to pay an additional sum of Rs. 5.48 crores in excise duty following withdrawal of the relief on export.

The proposal in the Assam State Budget to raise the rate of agricultural income-tax has been unpleasantly received. According to the Tea Association of India (Calcutta), the proposal will greatly affect development programmes of tea gardens and will weaken competitive position of Indian tea in world markets. In fact, the tea industry had anticipated abolition of the entry and carriage taxes on tea in West Bengal and Assam; instead, the load has been increased.

Tea shipments were very limited during the week under review, and, as the season was closing, forward declarations to the U.K. were very few. Tea stocks in the U.K. in the week ended 8th March 1963 rose by 2.50 million lbs. to 152.70 million lbs. This was not surprising, as in recent weeks end-of-the-season shipments to the U.K. were heavy. That buyers in the U.K. are now more interested to buy quality teas was once again in evidence in the last week's sales held in London, when quality teas realised higher prices. However, the poorer varieties eased. Total offerings in London were 78,390 packages, including 32,685 packages from North India and 258 packages from Pakistan.

In the internal sale held here last week, dusts on offer totalled 30,695 packages which met with a good general demand. Good C.T.Cs were a strong feature. Medium C.T.Cs were irregular and eased, but the better liquoring teas were firm. Fibrous teas having strong liquors were dearer but the remainder of this category eased. Legg-cut teas were weak. Quotations per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust Rs. 6.70 to Rs. 7.10, medium Assam C.T.C. dust Rs. 5.50 to Rs. 6.10, legg-cut dust Rs. 5.10 to Rs. 5.60, medium Assam dust Rs. 4.50 to Rs. 5.10 and plain orthodox dust Rs. 4.10 to Rs. 4.50.

ART SILK YARNS DEPRESSED

(From Our Own Correspondent)

BOMBAY, 20th *March*

A further depression in art silk yarns was the feature of trading in the yarn market during the week under review. The renewed setback was due to persistent selling pressure, while fresh buying support was absent. Staple fibre yarns and cotton yarns were quiet.

Among art silk yarns, 150D N.R.C. slumped from Rs. 11.18 to Rs. 10.31 per kilo and so did 120D S.I. Viscose from Rs. 13.07 to Rs. 12.78. 100D Bright Century recorded a heavy loss of 90 nP at Rs. 14.43. Other varieties also showed moderate to big losses. Century 2 x 40 staple fibres yarn edged forward from Rs. 7.35 to Rs. 7.37, but Kohinoor was unchanged over the week at Rs. 8.10. Cotton yarns were generally steady, though 10s Podar and 30s Madura were down by 25 nP each at Rs. 17.50 and Rs. 29.25, respectively. 80s Madura gained a point to Rs. 76.

Exporters of certain art silk yarn items, such as twines and cords, are to represent shortly to the Government that they should be issued import licences as incentives to exports on the basis of the actual cost of export consignments and not on the f.o.b. value as at present. It is felt that the current international prices of the goods exported are a third of what they are in India and, on the f.o.b. basis, the value of import entitlements is reduced considerably. Some three months ago, it will be recalled, twine, cord, hosiery and certain other art silk yarn products were brought under the special export promotion scheme, under which import entitlements up to 100 per cent of the f.o.b. value of export goods are issued.

A complaint on behalf of the doubling art silk yarn manufacturers about non-delivery by the S.T.C. for the last 18 months of their quota of yarn withheld from them following the cut of 34 per cent in the industry's import quota for the October-March 1962 period was made by Mr. B. J. Shah, Chairman of the Bharat Artsilk Doubling Mills' Association, at a Press conference in Bombay on Tuesday the 19th inst. According to Mr. Shah, assurances given to the industry that the cut in its import quota would be made good from by the S.T.C. from its imports of art silk yarns has not materialised, though allotment letters have also been issued in the light of such assurances. Under the current import policy, no quota is issued to the industry at all, and it is expected to meet all its requirements from the S.T.C. The S.T.C. has, however, supplied no yarn, nor is there any indication that it would do in the near future. While the situation is pretty serious, Mr. Shah said that a move was afoot to cut the industry's quota of indigenous yarn from 6 to 4 per cent, which, if upheld, would make the position much worse.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	20-3-1963	13-3-1963
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	11.44	12.10
Century " 75D	16.63	17.31
S. I. Viscose 150D	11.53	11.55
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.)	8.10	8.10
Century	7.37	7.35
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.50	17.75
20s Edward	22.25	22.25
30s Kohinoor	29.25	29.50
40s Hind	—	36.00
60s Kasturi	48.00	48.00
80s Madura	76.00	75.00

Note.—Quotations for 120 and 150 Japan and Italy are not available, since there has been no trading in view of paucity of stocks.

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 20th *March*

The oilseeds market put on a distinctly cheerful appearance during the week under review. Bull support was well sustained and there was also bear-covering. Castorseeds were in the limelight on reports of good offtake of castor oil by East European countries. Even large arrivals of new crop were of no avail. Groundnuts moved up following better demand from vanaspati manufacturers and crushers. Linseeds ruled distinctly firm on heavy speculative support. In sympathy, cottonseeds continued to make headway.

The Bombay Oilseeds and Oils Exchange, in a communication addressed to the Government of India, has urged the release of a fresh export quota of groundnut expeller cake. The Exchange is of the view that the present is the most suitable time to secure business from overseas countries. The earlier quota of 26,500 tons has already been exhausted.

The Forward Markets Commission has given permission to the Saurashtra Oil and Oilseeds Association, Rajkot, to commence trading in the groundnut oilcake futures contract for July 1963 delivery. Trading, it is laid down, should be subject to the limit of Rs. 15 per metric ton (Rs. 0.25 per 15 kgs.) on the weekly rise in the price of the contract and a limit of 2,000 metric tons on the net open position of each individual member. The basis of the groundnut oilcake hedge contract to be traded under the auspices of the above association is the groundnut expeller variety containing oil and albuminoids not less than 52 per cent, sand and/or silica not more than 2 per cent and free from castorseed and/or castorseed husk and containing fibre not more than 14 per cent. In addition to the basis variety, goods containing oil and albuminoids upto 47 per cent are tenderable at appropriate discount prescribed in the bye-laws. Appropriate premia are prescribed for goods containing oil and albuminoids upto 54 per cent. The unit of trading will be 35 bags of 75 kg. each. Sellers will have the option to deliver groundnut oilcake at such mofussil centres as prescribed in the bye-laws.

Castorseed, March 1963 contract advanced by Rs. 9 to Rs. 170. June 1963 contract firmed up by Rs. 3 to Rs. 159. Madras small rose by Re. 1.12 to Rs. 32.62 and Kanpur by 75 nP to Rs. 31. Oil commercial hardened by 15 nP to Rs. 12.70.

Groundnut July 1963 contract improved by 25 nP to Rs. 212. Nizam bold and Khandesh quality put on 50 nP each to Rs. 41 and Rs. 41.50, respectively. Oil ex-mill picked up 10 nP to Rs. 16.40. Railway receipts were also higher by a like amount at Rs. 16.25.

Linseed March 1963 contract strengthened by Rs. 2 to Rs. 32.87. June 1963 contract gained Re. 1.25 to Rs. 34. Bold ready gathered 38 nP to Rs. 31.75. Linseed oil closed higher at Rs. 12.25, as compared with Rs. 12.15.

Cottonseed April 1963 contract was marked up by Re. 1.75 to Rs. 97. July 1963 contract spurted from Rs. 95.25 to Rs. 96.75. Both non-white and Berar gathered 10 nP to Rs. 19.60.

The following table shows the closing prices of oilseeds and oils on Wednesday 20th March, as compared with those of two previous weeks:

	20-3-1963	13-3-1963	6-3-1963
	Rs.	Rs.	Rs.
Groundnuts			
April 1963 contract	201.50	202.00	203.12
July 1963 contract	212.00	211.75	213.12
Nizam bold	41.00	40.50	40.00
Khandesh quality	41.50	41.00	41.00
Oil ex-mill	16.40	16.30	17.20
Oil commercial	16.25	16.15	17.00
Castorseed			
March 1963 contract	170.00	161.00	160.00
June 1963 contract	159.00	156.00	158.50
Ready Madras	32.62	31.50	31.75
Ready Kanpur	31.00	30.25	30.25
Oil B.S.S.	13.10	13.10	13.35
Oil commercial	12.70	12.85	12.75
Linseed

Cottonseed			
April 1963 contract	97.00	95.25	93.00
July 1963 contract	96.75	95.25	—

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

JUTE GOODS RECEDE

(From Our Own Correspondent)

CALCUTTA, 19th *March*

The news of a fall in output of mills during February and reduction in stocks of goods with them as at the end of the month failed to check the downward trend in the prices of jute goods during the week under review. For the business that took place with both internal buyers and overseas consumers was extremely limited. Good rains were reported during the week from almost all parts of the jute-growing areas in Assam and West Bengal, and these gave rise to expectations of an earlier and better crop. As a result, interest in fibre was at a low ebb, and, since the sellers of inferior varieties rallied to locate buyers, prices fell. The decline in the output of goods in February was due to the shorter working month. While hessian and sacking goods produced declined by 4,400 tonnes and 4,900 tonnes to 40,700 tonnes and 39,800 tonnes, respectively, miscellaneous constructions rose by 600 tonnes to 13,700 tonnes, resulting in an overall decline of 8,700 tonnes as compared with the previous month. It should, however, be noted that stocks at the end of February were lower by only 7,000 tonnes at 83,400 tonnes, leading to the discomforting conclusion that demand in February was poor. For, adding to production the stocks, 90,400 tonnes as at the beginning of the month, the total availability was 184,800 tonnes. If stocks at the end of February were deducted, demand was in the order of 101,400 tonnes which was less than the January output or normal output.

It is unfortunate that, at a time when measures are necessary to reduce cost of production in mills not only to enable them to reduce selling prices but also to provide them sufficient funds for expansion and modernisation, the budget proposals, which are bound to raise costs, have come as an unpleasant surprise. As Mr. C. L. Bajoria stated in his presidential address at the annual meeting of the Indian Jute Mills Association last week, the Central budget has made the serious problem of growing competition from Pakistan mills much worse. In order to meet effectively the growing threat from Pakistan, which is shaking the foundations of Indian mills, the I.J.M.A. President urged the Government to render effective assistance to the industry, and declared that defensive action was now imperative.

Very little genuine business took place in goods during the week under review. As a result, prices eased and holders became nervous. The unloading that followed further underlined the downtrend, and foreign buyers were encouraged to wait before entering into commitments. On Tuesday last, ready B. twills were nominally higher at Rs. 112.35, as against Rs. 112.10 on the previous day, while hessian 40" 10 oz. eased to Rs. 49.20 from Rs. 49.30. Despite a fall of 4,400 tonnes in hessian output, stocks of this construction at the end of February dropped by only 600 tons. This factor against the unlikelihood of U.S. buyers showing interest for large quantities in the near future was much discouraging. There was no surprise, therefore, when speculative selling by holders took place on Wednesday to push down hessian 40" 10 oz. to Rs. 48.85. B. twills were quiet at Rs. 112.30. On the following day, hessian 40" 10 oz. lost further to Rs. 48.10 and in sympathy B. twills gave way to Rs. 112.25. Dullness arising from poor interest by overseas buyers was forceful on Friday, when hessian 40" 10 oz. declined to Rs. 47.55 and B. twills to Rs. 111.60. Over the week-end, prices eased further to Rs. 47.40 and Rs. 111.45 respectively. There was selling pressure during yesterday, and B. twills eased further to Rs. 111 and hessian 40" 10 oz. to Rs. 46.50.

METALS TURN EASY

(From Our Own Correspondent)

CALCUTTA, 19th *March*

Following the release of some quotas of zinc and copper by the State Trading Corporation, metal prices here eased during the week under review. However, shortage was again in evidence in copper scrap, the price of which hardened as the week progressed. Trade circles have pointed out that the delay occurring in the release of materials by the S.T.C. adds to the difficulties of the industry. If import of metals is handed over to the established trade such delays as are occurring now can be avoided. Supplies have now become uncertain, and the quotas of actual users have also been cut. In this connection, it may be noted that in the annual report of a non-ferrous

THE BANK OF INDIA LTD.

CORRIGENDUM

In the balance-sheet of the Bank of India Ltd., published in *Commerce* dated 9th March 1963 (*vide* pages 404, 405 and 406), the names of Directors, General Manager, Committees of Directors and Advisory Committees were inadvertently omitted. These have been given below:

DIRECTORS

A. D. Shroff (*Chairman*), Krishnaraj M. D. Thackersey (*Vice-Chairman*), Ambalal Sarabhai, Ramniwas Ramnarain, Bhagvandas C. Mehta, Madanmohan Mangaldas, N.K. Petigara, Jugmohan Prasad Goenka, Jaisinh Vithaldas, Girdharilal Mehta, Pratap Bhogilal and S. P. Godrej.

General Manager: T. D. Kansara.

COMMITTEES OF DIRECTORS

Ahmedabad—Ambalal Sarabhai and Madanmohan Mangaldas.

Calcutta.—Jugmohan Prasad Goenka and Girdharilal Mehta.

ADVISORY COMMITTEES

Bullion Exchange—Ramanlal Dalsukhbhai, A. G. Sonawala, Navnitlal L. Shah, Kantilal K. Sheth and Chandulal Mohanlal.

Kalbadevi—Manilal S. Kapadia, Sobhraj Jhamatmal, Chimanlal B. Shah, A. M. Pittalwalla and Navnitrai B. Oza.

Mandvi—Vallabhdas V. Mariwala, Chhaganlal Velji, Hirji Keshavji Kesharwala, Sevantilal M. Sheth, Natvarlal M. Shah and Seth Khatau Valabhdas.

In the Directors' Report, the reserve fund and other reserves are shown to have increased during the year from Rs. 3,28,000 to Rs. 4,11,50,000. The former figure is wrong; it should be read as **Rs. 3,28,00,000.**

extrusion plant attention is drawn to the shortage of raw materials, which resulted in a decline in production for the last accounting period. Producing units are not assured of improvement in supplies this year. Planning of production is, therefore, hampered, and there is hardly any incentive to go ahead with expansion plans.

After easing from Rs. 556.50 per 100 kgs. to Rs. 554, utensil copper scrap recovered to Rs. 557.25. On the London Metal Exchange, cash copper remained unchanged at £234 a ton, though business was good. This clearly indicates that the apprehension of excess output of copper continues to prevail even after recent cut-backs in production. World output of copper for this year, after allowing for cut-backs, has been estimated at 4.38 million tons. As consumption has been placed at 4.35 million tons, representing an increase of 150,000 tons over the level in 1962, the surplus this year will be about 60,000 tons. The price should, therefore, not move up. In New York, March copper registered a fractional rise at 29.60 cents a lb. on satisfactory business. The announcement in Parliament that deposits of copper, zinc and lead estimated at about 800,000 tonnes have been located in South Arcot district of Madras State was noted.

Tin was in good demand, but the price eased from Rs. 3,090 to Rs. 3,050 per 100 kgs. In London, spot tin closed at £856½ a ton, after moving up initially from £856 to £857. Market circles awaited a detailed report of the last week's meeting of the International Tin Council in London. The meeting had been convened to review the situation arising out of the U.S. stockpile disposal. World tin output this year is expected to increase by 6,000 tons, but consumption is also expected to rise by the same margin. This will result in a deficit of 15,000 tons, which can be made good only by the U.S. releases. In other words, the U.S. releases have now become imperative, if a rise in prices is to be prevented. However, if the price is kept down at the present level, there will be little incentive for Malaya to increase production, though Indonesia, Thailand, Nigeria and Bolivia may produce more.

Electrolytic zinc lacked buying support and eased from Rs. 292 to Rs. 286 per 100 kgs. In London, the spot metal hardened from £71 a ton to £71¼. Lead, in London, was unchanged at £55⅝ a ton. In Calcutta, the metal eased from Rs. 176 to Rs. 175 per 100 kgs.

GOOD INQUIRY FOR KIPS

(From Our Own Correspondent)

MADRAS, 18*th March*

The Madras kips market remained very firm this week. There were several export inquiries for cowhides light weights all selections and lower grade medium and heavy weights. Importers sought slight reductions in prices, but sellers were adamant and able to book orders freely. There was no appreciable change in the cowcalf and buffcalf section. American importers showed interest in buffcalf to a small extent only.

Tanned goat market remained firm. Tanners quoted high prices for lines in demand, and sales were patchy. There was good call for 11/12 lbs. all selections and 5½/6 lbs. lower ends. Sales were reported at 19s. for 11/12 lbs. run selection, which is a high price indeed.

Demand for tanned sheep skins was strong to good. Sellers raised prices all-round, with the result that sales were limited.

Importers in the U.S. evinced interest in goat skins, but business bocked was small, with demand mostly for heavier averages.

The London tanned skins public sales commence today. Quantity on offer will be 40,000 goat skins and 80,000 sheep skins. The results are awaited with interest.

EASY TONE IN FOODGRAINS

(From Our Own Correspondent)

HAPUR, 18*th March*

An easy tone was witnessed in foodgrain prices this week due to selling by stockists in view of the expected arrival of new *rabi* crops. Harvesting of coarse grains was being done and that of wheat would begin early next month.

Wheat, average quality, eased by 32 nP to be placed between Rs. 39.18 and Rs. 39.52, but the farm quality was almost unchanged at Rs. 42.20 to Rs. 42.87 per quintal. Stocks declined to 35,000 maunds. Rice, coarse variety, hardened on poor arrivals in the face of better demand from consumers. Local rice stocks were estimated around 8,000 maunds. Week-end prices were:—Rice *basmati* superior Rs. 85.74 to Rs. 91.09, *sela basmati* Rs. 80.38 to Rs. 85.74, *mainpuri* Rs. 53.58, *ramajwayan* Rs. 61.62, *raimunia* Rs. 64.30 and *gadda* Rs. 50.91 per quintal.

There was a decline of 32 nP to 67 nP per quintal in gram prices according to quality, as buying support was poor while arrivals were satisfactory. The Punjab quality was quoted between Rs. 39.30 and Rs. 39.52 and the local produce at Rs. 38.18 per quintal. Stocks with the trade were meagre.

SHARP RISE IN SUGAR

(From Our Own Correspondent)

HAPUR, 18*th March*

Sugar prices recorded sharp gains this week on brisk buying support from Punjab, Delhi and other consuming areas. The trade interests were anxious to check the rising trend and at a meeting fixed prices of certain grades of sugar. A fall in prices is not expected, as this season's estimated production at 24 lakh tons will be substantially lower than last year's figure of 28 lakh tons. With a carryover of 10 lakh tons from the last season, the total supply will be 34 lakh tons. Domestic offtake is put at 26.50 lakh tons and about 4.5 lakh tons will be exported, thus leaving at the end of the year a small balance of about 4 lakh tons. Most of the factories in U.P. have closed their crushing season.

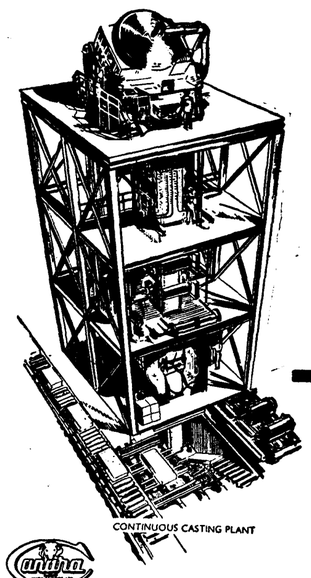
Khandsari ruled quietly steady, with good business done in the damp quality at Rs. 83.06 to Rs. 91.09 per quintal and also in the dry stuff at Rs. 93.77 to Rs. 101.14. Crystal *boora* was quoted at Rs. 109.85 to Rs. 112.53 per quintal. Production was being done at some centres, but cane supplies were fast dwindling. Production may not continue beyond the end of this month.

With a substantial fall in daily arrivals and fair demand from Gujarat and Saurashtra, *gur* prices turned steadier during the week. In all, 10 wagons were sent to the South. *Shakker* continued to attract demand from Punjab and Rajasthan. Week-end prices were: *Gur* superior Rs. 50.91 to Rs. 51.58, average Rs. 50.24 *dara* Rs. 48.86, *balti* Rs. 50.24 to Rs. 52.90 and *shakker* Rs. 58.94 per quintal.

PANCHAYATS AND RURAL DEVELOPMENT

(Concluded from page 503)

of the benefits. For instance, the variety of taxes, which at the request of the *Panchayats* are now levied in Madras State, ought to convince those who despair of persuading the villagers to pay taxes over and above those paid for State and Central Governments. The *Panchayats* should be encouraged to adopt a self-supporting policy to the maximum extent.



In fact, if the *Panchayats* are to function as efficacious units, certain fundamental principles must be enunciated. Firstly, development work should be done by departmental officers arranged in units to secure, on the one hand, best control of their subordinates and best assistance from their superiors. The district has so far proved to be the best co-ordinating unit and there is no reason why the concatenations above and below should be disturbed. The staff should work on a single plan which may be a five-year or seven-year plan without distractions from separate plans for different bodies. *Panchayats* may participate in drawing up each plan and revising it when this is justified by circumstances.

Secondly, if local taxation is to yield enough, the tax jurisdictions should be as few as possible because the narrower the limits of tax jurisdiction, the more clear are the benefits to the village people and the greater the willingness of the people to submit to further local taxation. But the trouble at present is that the local bodies' slender resources do not permit of the maintenance of an efficient staff of tax collectors. So, for some time to come, provincial control of the machinery of assessment and collection of local taxes seems to be the only remedy, as the tendency is some centralisation even in countries like the U.S.A. at present, and collection of taxes would be more efficient if it is the work of a unified agency.

Thirdly, the vital need for sustained and efficient work at the village level is the right kind of rural leadership. The encouragement of young men as presidents of village *panchayats* will be a move in the right direction and it is gratifying to note the emergency of young educated people as presidents of *Panchayat* samithis in Andhra Pradesh. At present leadership rests with those politicians who participate in *Panchayat* elections with a view to advance their personal interests. It is also desirable to interest women in the work of the *Panchayats*. It appears that there are a few cases in Andhra Pradesh and Rajasthan of the dominant part played by women and this is likely to exercise a wholesome influence in village organisation. A change in the social outlook could be more quickly achieved by the emergence of the right kind of rural leadership.

Canara will make its own steel for Springs

To keep up the renowned tradition of Canara, to build up the national economy and to assist the Country in saving and earning foreign exchange, Canara found it as the only way, to establish its own steel plant for making the best alloy steel for springs employing latest techniques and most modern equipment.
