President Kennedy has pledged his Government's support for the Bokaro steel project. The elucidation by the present U.S. Ambassador to India of the President's stand leaves no room for doubt that the U.S. will grant aid to Bokaro. The same inference can be drawn from the statement of Mr. Chester Bowles, U.S. Ambassador-designate to India. Mr. Bowles's remarks, especially because he will be soon taking over as the next Ambassador, can be taken as a reflection of the President's thinking on the subject. Mr. Bowles said, in a television interview this week at Washington, that he was all for private capitalism but that there were situations in developing countries like India where it was not possible to get all the private capital investment that was needed. The private sector in India, he went on to point out, was starved of steel. And unless the Bokaro steel mill was built to provide the steel, manufacturers in the private sector could not really survive. Some of the units in the private sector were operating at 70 or even at 50 per cent capacity because of shortage of steel. In view of this situation, Mr. Bowles argued, helping the establishment of a steel mill at Bokaro would really be stimulating the private sector. In support of this

stand he pointed out the fact that the leaders of private enterprise in India were themselves very much in favour of this steel plant.

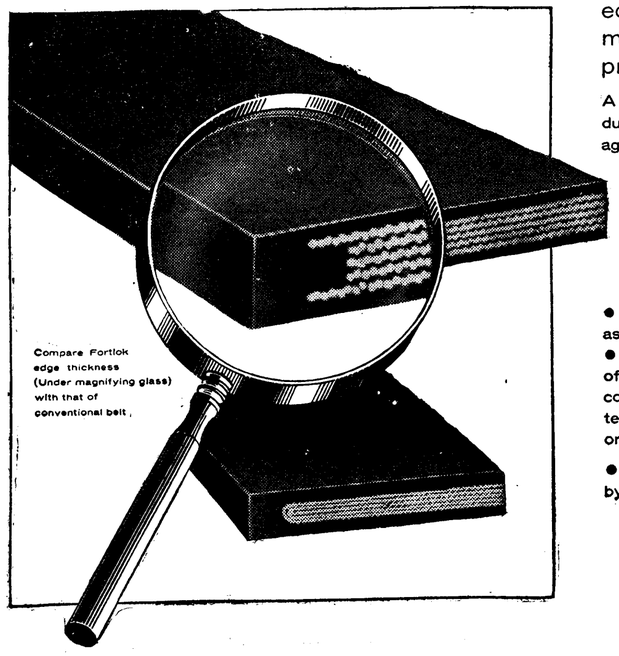
Mr. Bowles has argued the case for U.S. help to Bokaro as well as, if not better than, the Government of India. It is incumbent on the latter to show a matching pragmatism, especially in regard to the management of the plant. Signs of a helpful and more realistic stand on the part of the Government of India on this question are not difficult to discern. One cannot, however, interpret the decision of the Government to set up a separate company for Bokaro as meeting half-way the U.S. demand for a ten-year American management contract, for official spokesmen are reported to have stated that the object behind the proposal for a separate Bokaro corporation is to avoid burdening Hindustan Steel with another major steel plant. Still there is no doubt that it will be somewhat easy to make provision, at the very outset of the proposed company's incorporation, for U.S. management of the plant for a specified period. In fact, it might be easier to provide for American management if Bokaro is an independent company than if it is a part of Hindustan Steel which is already operating according to a set pattern of centralised management.

The latest statement by Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries, at a Press Conference held at New Delhi on the 22nd inst. has not thrown any fresh light on this question. His equivocal remark that the only criterion was how to manage Bokaro efficiently and that the plant would be managed by Americans only to the extent necessary in the interests of efficiency may or may not amount to an acceptance of the American demand for a ten-year management contract. At best, it may be taken as indicative of the Steel Ministry's search for a compromise formula on the question of management and, at worst, of its reluctance, in principle, to go beyond what it has already conceded in the matter of technical execution, by German experts, of the Rourkela Expansion Project. But this kind of hedging cannot go on indefinitely, for the Government has already lost much valuable time by delaying its decision on the issue.

ROURKELA MANAGEMENT'S DEFENCE

[Readers will recall that a part of this note, with the same title, was printed on page 867 of last week's Commerce and that the scheduled continuation thereof on page 868 was conspicuous by its absence. Devil knows how it happened! But the reader's anger may not be so easily mollified. Hence the republication of the note in full.]

With a promptness that is rather uncommon in a public-sector enterprise, the management of the Rourkela steel plant has come out with a contradiction of recent Press reports alleging violation of labour laws in the plant. Describing the report as "misleading," the management deplores that the news should have, as its basis, a report prepared by the Orissa State Labour Directorate for a meeting of the State Implementation and Evaluation Committee, which contained an "ill-assorted mass of exaggerations and repetitions." "It seems," the Rourkela management goes on to point out, "no attempt has been made by anyone to go through the compliance report sent to the Inspector of Factories by the steel plant authorities with the result that the framers of the charges against the plant have remained in blithe ignorance of the real position." "Many of the other irregularities, so much played up," the management adds, "are nothing but pure technicalities of a trivial nature relating to an obsolete period while the plant was still in the construction stage." Last month, it is pointed out, the Inspector of Factories, Orissa, made a very thorough and complete check of the entire plant and could not find any material irregularities. At no time, it is emphatically asserted, has the management adduced ignorance of law as its excuse for the so-called violations of labour laws.



While the promptness with which the Rourkela management has sought to contradict the report deserves to be commended, as it reflects awareness of public criticism, the explanation given is not wholly satisfactory because it is neither detailed nor well-documented. It is not clear from the brief statement appearing in the Press what the reference period and the date of the report of the Implementation Officer are and whether the violations enumerated by him still continue or have been corrected and, if so, when. It is also not clear whether the clean bill of health said to have been given by the Inspector of Factories pertained only to the safety aspects of plant operation or whether it also covered other labour laws and their observance. The Rourkela management admits, albeit by implication, that there were irregularities but they were, according to it, "pure technicalities of a trivial nature and related to an obsolete period." It is difficult to question this claim unless one knows what precisely the irregularities were. But it is significant that the Implementation Officer, who is no less a person than the State's Commissioner of Labour, found them important enough to be listed in his report.

In view of the controversy, which has assumed the dimensions of a question involving what the authorities of the Rourkela steel plant calls the "fair name of the public sector," it would be most desirable for the management to publish, in the form of a brochure, details of the charges made and irregularities enumerated by the Implementation Officer, together with its documented defence against them, so that the Press and the public will be able to get a clear picture of the actual situation.

ADVANCES AGAINST FOODGRAINS

The Reserve Bank of India has issued to banks a revised directive relating to bank advances against paddy, rice and other foodgrains excepting wheat. It will be recalled that, under the directives issued in January and March last, overall ceiling limits were prescribed for such advances against both warehouse receipts and other advances. It was observed that the inclusion of warehouse advances within the system of overall ceilings tended to result in a disproportionate contraction of advances against warehouse receipts, while other advances were comparatively maintained. In the interest of steady and orderly growth of warehousing facilities in the country and the recognised advantage of a security of this type, it is now considered necessary to avoid an undue impact on advances against warehouse receipts. Accordingly, ceilings have been placed, within the overall ceilings prescribed in earlier directives, on banks' advances other than those against warehouse receipts. These lower ceilings are equal, for each two-month period, to the actual levels of such advances in the corresponding period of 1962. The balance will be available for advances against warehouse receipts. Further, as these lower ceiling limits apply to advances other than those against warehouse receipts only, banks can, if they wish to do so, make advances against warehouse receipts, out of the limits fixed for other advances.

NEW FORTLOK CONSTRUCTION GIVES DUNLOP CONVEYOR BELTS AN EDGE OVER OTHERS

Conveyor belts are most vulnerable at the edges. The new Dunlop **FORTLOK** construction more than doubles the life of the belt edge by providing double edge cushioning capacity.

A common cause of belts wearing out prematurely is edge wear due to rubbing against the side of the structure, against the chute, against jammed abrasive loads, or by the excessive use of guide idlers. When the edge has been worn or torn away, further wearing of the edge and consequent belt deterioration is usually comparatively rapid.

Dunlop **FORTLOK** overcomes this problem. Note its construction as shown under the magnifying glass in this illustration of a conveyor belt section.

- The thickness of the edge protection rubber has been doubled as compared with the conventional conveyor belt edge.
- Note, too, that the edge rubber has been keyed into the carcass of the belt which produces an anchorage infinitely greater than in conventional belt edges. This permits the use of thicker edge protection of assured stability—especially important where guide idlers or trippers are used.
- The thicker, stronger edge protects the belt carcass from attack by moisture, grit, acids, alkalis or oils.

AMERICAN LETTER

BLUE CHIPS ON THE ASCENDANT

U.S. APPROACH TO FOREIGN TRADE

From Our Special Correspondent

NEW YORK, *17th May*

THE economic atmosphere in the United States is charged with an enormous amount of optimism. Symptomatic of this feeling were remarks made the other day by a partner of a leading New York Stock Exchange firm, addressing the Financial Analysts' Federation at Chicago. Blue chip ordinary shares of American corporations are headed towards new high ground, he said, supported by institutional buying of about $20 million of high grade equities every day the market is open. He added that the 1962 stock market break was "violent," but it did not signal a change in economic direction. The famous 1929 crash did just that, he suggested. "The 1962 break did not cause any fiscal dislocations as did the 1929 break and it was followed last year by a record boom in auto sales." These remarks are typical of what American business and financial leaders are thinking today, despite the fact that U.S. industry is operating at only about 80 per cent of its capacity.

The successful 22-orbit mission of Air Force Major Cooper contributed further to lifting the spirits of the business community even though there are very articulate spokesmen who dispute the wisdom of the Kennedy Administration in spending additional untold millions for space exploration which has very heavy domestic and international political overtones.

But many uncertainties remain. While unemployment has gained, about three million teen-agers will be leaving school this summer to try and join the labour force. To this must be added potential labour troubles in the steel and railroad fields. Also, almost completely ignored in the rosy estimates is the renewed pressure on U.S. gold stocks which have reached a 23-year-low. This situation might worsen.

The criss-cross of facts, conditions and potentialities can swing either one way or another. Much of the bullishness in the markets is accounted for by the general expectation that tax reduction and tax reform will be enacted in this session of the U.S. Congress to take effect from 1st January next. Tax reduction would make more funds available for dividends as well as for capital investments over and above the more liberal depreciation allowances now in force. Increases in contemplated spending for plant and machinery have already shown up in recent surveys.

Corporate Profits Up

Corporate profits have been better than expected. In the first three months of the year, net income of leading corporations showed an increase over the first quarter of 1962, but a decline over the last quarter of 1962. Oil and petroleum refining companies showed the biggest gain of 14 per cent on a year-to-year basis and even a boost of two per cent over the fourth quarter of 1962. The biggest losers were printing and publishing, of 57 per cent; and iron and steel down 33 per cent, even though the brightest part, or one of the brightest, was the automobile industry and other durable goods' lines. But this showing was not uniform. It was contorted by the shipping strike, closedowns of major newspapers and the extremely severe winter in many parts of the U.S.

There can also be no complaint about retail trade. On an overall basis it has been about seven per cent higher so far this year than in 1962. This is about the same increase as that slated for capital spending and for inventories. The latter build-up may possibly be higher for fear of potential strikes. The consumption ratio has been extremely high. In the first quarter, Americans spent $94 out of every $100 they earned and, thus, saved less than previously.

The comeback of the petroleum industry, outside of its international operations, may be closely related to home developments. The oil and gas operations on Federal lands are hitting new records. They are conducted by private companies for the U.S. Department of the Interior which has also jurisdiction over American Indian Reservation properties.

Under a 1953 law, Washington has also jurisdiction over oil and gas resources in the Outer Continental Shelf which comprises some four million acres offshore from the states of California, Florida, Texas and Louisiana. Since that year, the U.S. Government has collected bonuses, rentals and royalties from Outer Shelf operations of about $1,384 million. Last year, the 3,100 productible wells turned out about 88 million barrels of petroleum products, valued at $360 million, creating approximately $63 million in royalties to Washington.

Foreign Trade

There is much discussion and ado here over foreign trade, as it will be, or may be, affected by the U.S. 1962 Trade Expansion Act. The issues involved are hotly debated by the 44 member nations of G.A.T.T. (General Agreement on Tariffs and Trade) at Geneva and at their respective capitals.

What is envisaged now, at least here, is the most sweeping reduction of tariffs since they were established by the principal trading nations of the world. Naturally, it is a very complicated and debatable as well as a controversial subject. For example, there are those who hold that the European Common Market has an inhibitive influence on foreign trade by discouraging foreign imports. Others hold the opposite view. The outcome must have an influence on world trade and banking practices.

Outside of wrangling among themselves, the six-nation members of the Common Market, up to this point, seemed reluctant to lower duties on U.S. farm products. This was one point made by the U.S. representatives as highly desirable in the view of Washington. Bargaining on that point may be tough.

(Concluded from next column)

lying national authority which can require nations to accept international paper money.

But this orthodox reaction to the idea of international credit monetisation is not the last word. In practice, the system of bank credit survives because the banks inspire confidence. The pooling of resources in the I.M.F. could be on a sufficient scale to inspire the necessary confidence to kill any run on the supreme Central Bank should any country, other than, say, the United States, engineer it.

After all, Mr. Wilson is not suggesting that the I.M.F. should operate credit on the twelve-to-one basis found satisfactory by the British banking system; it is not even necessary to expand credit on a two-to-one basis. The actual figures that he has used are as small as credits of the order of £250 million which could be assigned to the underdeveloped countries through an international investment fund. Strings could be attached to these credits requiring them to be spent in industrial countries with underemployed resources. Demand and expansion must follow. Nor are these proposals more inflationary than those which heralded the beginning of credit banking in the Western world.

LONDON LETTER

WORLD CREDIT SYSTEM

Mr. WILSON'S PLEA FOR REFORM

(From Our Own Correspondent)

LONDON, *17th May*

WE have learnt in London this week that the American balance of payments deficit, which last year hit $2,200 million (nearly £800 million), has in the first months of this year been running at over $3,000 million, that is over £1,000 million per annum. The Americans always calculate their balance of payments by taking into account capital movements. Even if allowance is made for these though, the first quarter of this year was still worse than the average for last year.

The U.K. balance of payments, as was recently explained in this column, is continuing to run at a slight surplus but, if allowance is made for capital movements, particularly long-term investment by this country overseas, then there could be a small overall deficit. Thus the pound and the dollar, which are the world's basic reserve currencies, are, from the point of view of their underlying overall balance of payments, weak currencies, moreover, both of these currencies have tended to weaken over the years and both for fundamentally the same reason—and this is especially true of the American case—that they are investing overseas more than their current trade balances allow.

Yet can anyone doubt that if Britain, and even more the United States, adopted a severely restrictive attitude towards investment in the underdeveloped countries the world would be a poorer place? Your Correspondent in a special article in the Annual Number of *Commerce* dealt with the problem of expanding the gold standard. The British Leader of the Opposition, Mr. Wilson, has taken up the same theme in a speech this week in London to the American Chamber of Commerce. He has argued there quite simply for using the International Monetary Fund as a central bank with power to create international credit.

Liquidity Aspect

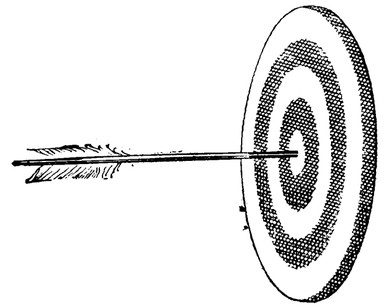
Mr. Wilson's speech, which has attracted widespread attention, pointed out that there were three basic problems which could confront major currencies, such as sterling:

(1) doubts about the currency leading to speculation requiring crisis measures to determine;

(2) its inadequacy because it is tied to a limited accumulation of gold (and all currencies are limited by the increase in annual gold supply) so that it cannot keep in step with the requirements of expanding international trade;

(3) the difficulty stemming from the point above of financing underdeveloped countries out of an inadequate current trade surplus.

The answer lay, in Mr. Wilson's view, in a "major and forward-looking reform of the international monetary and credit system." This must achieve the following:



(1) create a sufficient volume of international liquidity to stifle speculative attacks on the currency;

(2) it must enable industrialised countries, such as the U.K., to make credit far more freely available to the underdeveloped countries; and

(3) it must, through the consequential expansion of production which would follow from (2) above, make it easier for the industrialised countries to maintain their overseas trade in balance without disastrous struggles for markets.

Even those who have sympathy with Mr. Wilson's aims have some doubts about his proposals. They accept that just as the creation of bank credit in the last century in the industrialised countries made possible an enormous commercial expansion, so the creation of credit on an international scale might make possible an enormous international commercial expansion. But credit, it is pointed out, is confidence. Within national boundaries confidence can, to a substantial degree, be bolstered by domestic measures, for instance, in the last resort the Bank of England can meet all claims upon it in paper money. But in the international sphere whether we like it or not—and Mr. Wilson obviously does not—we are still three hundred years behind, moving shiploads of gold about instead of coachloads to settle international balances. And this for the straightforward reason that there is no over-

(Continued in previous column)

TARGET - OIL !

One of the methods used to test a newly completed well for its oil production potential makes use of a special type of gun which is lowered into the hole and fired by an engineer on the surface. The well is first lined with steel casing, cemented to hold it in place. The gun barrel is lowered into the well. When the "trigger" is pulled, 50 or more bullets pierce the casing, and the cement—and the possible oil producing rocks. If any oil is present in the zone being tested, it will run into the well and be brought to the surface. Then the production crew takes over the operations.

But if no oil is encountered the well is classed as a dry hole and the drillers move off to continue the search elsewhere.

BUSY SEASON AND THE BANKING SECTOR

HEAVY DEMAND FOR CREDIT—SLOW EXPANSION OF DEPOSITS

THE busy season in our country starts in November and ends towards the close of April. Money conditions tend to ease with the return flow of funds from upcountry centres. This year, there are as yet no clear signs that the busy season has come to a close. During the week ended 10th May 1963, the deposits of scheduled banks, for instance, declined by Rs. 3.9 crores. There was also a sharp fall in investments—nearly Rs. 1.2 crore—while the borrowings from the Reserve Bank went up by about Rs. 5.6 crores. The money rates continue to be quoted now around the high level of 5 per cent. No doubt, money rates have declined somewhat in the last fortnight from the still higher level of 5 per cent, but this is due to the reported influx of funds from abroad, especially on account of foreign banks. It is obvious that the big banks continue to be under pressure in so far as resources are concerned. Clear evidence to this effect is provided by the statistical indicators of the State Bank during the week ended 10th May. Deposits of the State Bank fell in that week by Rs. 4 crores to Rs. 554 crores. In the context of a nominal increase in advances and the need to build up the cash position, the investment portfolio was liquidated to the extent of Rs. 12 crores. Other big banks, too, have borrowed from the Reserve Bank to keep the requisite liquidity.

Why did deposits remain static in the context of a higher tempo of economic activity? What will be the behaviour of the slack season (end-April to end-October)? These are the important questions which continue to stare at the bankers. It is appropriate to review before answering these questions the developments in the 1962-63 busy season.

Withdrawal of Resources

The 1962-63 busy season witnessed the super-imposition of emergency and increased defence activity over normal seasonal trends. The demand for bank credit increased by over Rs. 200 crores, or same as in the 1961-62 busy season. It has been revealed that industrial production went up during the year 1962-63 by about 8 per cent, or an identical magnitude as in 1961-62. Agricultural production, especially foodgrains, remained stationary. The increased needs of exchequer, consequent on the border trouble, were met by a voluntary drive and foreign help. This meant a withdrawal of resources from the banking system and the organised sector when the demand for credit from trade and industry was gathering momentum. The desire of the Reserve Bank and the Union Government to restrain the inflationary pressures resulted in the initiation of restrictive monetary and credit policies. The Bank rate was raised with effect from the new year, advances against certain commodities were restricted, and forward deals were prohibited in commodity and share markets. Advances against gold was also banned.

In spite of the curbs on demand for bank credit, the banking system experienced a great strain on its resources position in the context of various restrictions, especially the ceilings on borrowings from the Reserve Bank. The Reserve Bank granted special quotas later on to particular banks to extricate them from the difficult position. Subsequently, a few more relaxations were introduced in credit controls by giving special facilities to export bills, etc. The operation of various special factors in the busy season resulted in a disappointing performance in so far as deposits were concerned. The total of deposits, net of P.L.480 transfers from the State Bank to the Reserve Bank, rose during the busy season by only Rs. 40 crores, the corresponding figure in the previous busy season being as much as Rs. 152 crores. The gap between the supply of and demand for credit was bridged by the liquidation of investments to the tune of over Rs. 100 crores, additional borrowings of about Rs. 25 crores from the Reserve Bank, and utilisation of special quotas. Deposits and advances touched fresh peaks in the busy season (1962-63) and there was a record utilisation of bank credit. A part of the busy season earnings is reflected in the working results of the banks for the calendar year 1962. The earnings of 25 scheduled banks showed an increase of 16.8 per cent, from Rs. 88 crores in 1961 to Rs. 102.8 crores in 1962. Relatively speaking, the subsidiaries of the State Bank and 'other banks' recorded a rise of over 20 per cent in income during 1962, but, in absolute terms, the major banks (+Rs. 9.6 crores) and the State Bank (+Rs. 2.8 crores) showed the highest rise. This is net income after making allowance for tax provision, allocations to secret reserves, appropriations for bad and doubtful debts, depreciation of premises, etc.

Banks do not disclose the true income position in their balance-sheets—they are enabled to do so under the Banking Companies' Act—to maintain the confidence of customers. If the true income of banks were revealed, it would easily be twice that shown in balance-sheets. This is because they not only absorbed the increase in wages due to Bank Award and shouldered a variety of burdens like deposit insurance premium, higher taxation, expenditure on branch expansion programmes and normal increase in the wage burden, but also managed still to show the same profits or slightly lower profits in their anxiety to maintain the confidence of the banking system. Most of the banks maintained dividends or effected token cuts to impress upon the shareholders the fact that the banking system has been passing through difficult times. Whatever increase in money burden that was there was passed on to borrowers through an increase in advances rates, including minimum advances rates. Some of the banks were reported to have reached almost 95 per cent utilisation of deposit resources at the fag end of the busy season.

Pressure will Continue

It is easy to imagine that the pressure on the resources of the banking system will continue during the next few months. Industries are flooded with orders for defence which necessarily means enlarged demand for raw materials and, consequently, for more bank finance. In view of the restrictive policies pursued by banks in extending credit, several big industries, it is said, are accepting deposits from the public at more attractive rates than those offered by commercial banks.

There is reason to believe that the deposits of the banking system may not gather momentum even with the onset of the slack season. The Government has plans to come forward with its huge borrowing programme. This time the Central Government would be borrowing on behalf of the States also. This would make a big draft on the resources of the community. Besides, there is the usual drive of small savings, National Defence Fund contributions, impact of compulsory savings deposit scheme and higher levels of indirect taxation which has sent up prices of several necessities which enter into the budget of the average consumer. While the savings of the community are thus withdrawn, the banking system may find it difficult to attract deposits. For it must be remembered that banks might be able to attract deposits from the organised sector provided the deposit potential is there. In the absence of such a potential, they would be subjected to great difficulty.

Competition to Gather Deposits

The economy is likely to be subjected to deflationary forces in so far as resources are concerned. It is quite possible that, when the pace of expenditure is accelerated, an equivalent amount of purchasing power may be pumped into the community again. Whether the additional expenditure results in an increase in deposits would depend on the pattern of expenditure and the possible location of such expenditure, that is, whether it takes place in those areas where the commercial banks have a branch network. Viewed thus, it appears that the commercial banks might face increasing competition to corner whatever deposits they may be able to locate within the organised sector.

It is likely that the advances will continue to remain at a high level in view of the record demands of industry. Any increase in deposits in the next few months will help improve the liquidity of the big banks and thus bring down their credit-deposit ratios to a more reasonable level. It is difficult to expect much relief in so far as big banks are concerned, though the small and medium banks which have a lower credit-deposit ratio and higher liquidity position do not have to bother much.

To put it in a nutshell, the banking system will find heavier demands on its resources which may not keep pace with the former. The slack season is unlikely to make much difference, at least in the case of big banks. The Reserve Bank should, therefore, take care to see that the productive apparatus does not starve for want of credit. If the larger requirements of trade and industry are to be routed through the banking system, it must revise its traditional notions of liquidity and credit-deposit ratios. This is what banks in the United Kingdom have been doing and, since our ideas have been borrowed largely from the English practice, it is high time that we followed suit in this respect.

It is also certain that the working results of banks for the first half of 1963 will show a further improvement in their earnings. For there has been a record utilisation of bank credit at higher rates of interest, while expenses such as interest rate burden and increase in wages may not show a matching increase. The interest rates on deposits have been held down by agreement and, in the absence of these rates being realistic, the banks will be put to great difficulty in attracting the savings of the public from alternative channels. What is urgently needed is a revision of the interest rate agreement on deposits to take into account the present pattern of interest rates. Unless this is done, the efforts of banks to attract more deposits, even those in the organised sector of the economy, may not meet with success.

Notice

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

Registered Office:
9, Wallace Street, Fort, BOMBAY-1

NOTICE

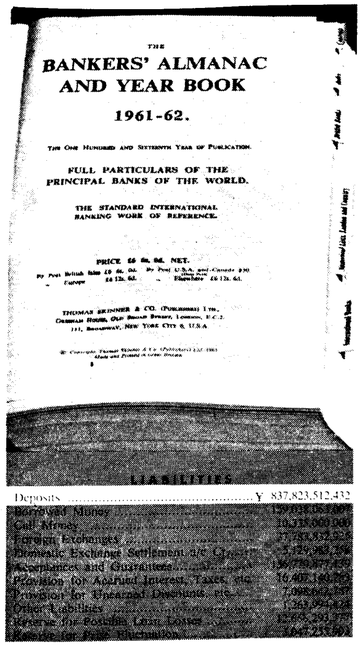
NOTICE IS HEREBY GIVEN THAT THE Register of Members and the Transfer Books of the Corporation will be closed from the 4th June, 1963 to the 18th June, 1963, both days inclusive.

Allotment letters for bonus shares to be issued pursuant to the Special Resolution passed at the Extraordinary General Meeting held on 26th April, 1963 will be posted on or about the 18th June, 1963 to holders of the fully paid shares of the Corporation whose names stand on the Share Registers of the Corporation on the 4th June, 1963.

Circular letters giving notice of the increase in the paid-up value of the partly paid shares of the Corporation pursuant to the same Special Resolution passed at the same Extraordinary General Meeting held on 26th April, 1963 will be posted on or about 18th June, 1963 to the holders of partly paid shares of the Corporation whose names stand on the Share Registers of the Corporation on the 4th June, 1963.

In accordance with the said Special Resolution, the bonus shares allotted as above and the partly paid shares of the increased paid-up value will be entitled to participate in the interim dividend, if declared, and the dividend will be made payable to those shareholders whose names stand on the Share Registers of the Corporation on the 4th June, 1963.

Dated at Bombay this 21st day of May, 1963.



By Order of the Board of Directors,

WALLACE & COMPANY,
Secretaries and Treasurers.

FRENCH LOAN PURCHASE

The Banque de France has purchased from the World Bank $60.7 million of the remaining maturities of a loan made in May 1947 to the Credit National, an agency of the French Government. This was the first loan made by the World Bank, and amounted to $250 million. It was used by the Credit National to finance imports of some of the equipment and services essential to France's post-war recovery programme. The maturities included in the current sale extend from 1st November 1969 to 1st November 1973. The loan as a whole bears interest of 4½ per cent a year, including a 1 per cent commission charge; repayments of principal began in 1952 and will end in 1977.

Commenting on the purchase by the Banque de France, Mr. George D. Woods, President of the World Bank, points out that this loan has been one of the most sought after by investors. In addition to a previous purchase of $60 million in March 1962 by the Banque de France and a French savings institution, a total of $70.7 million has been sold by the World Bank over the past thirteen years to both Government and private institutional investors.

A GREAT BANK?

How do you judge the world's great banks? Deposits are one way. The Mitsubishi Bank's deposits of well over eight hundred billion yen* tell part of the story. For the rest, speak to the world bankers who respect Mitsubishi and the business leaders who prefer to deal with it. The Mitsubishi Bank can make your dealing with Japan easier and faster.

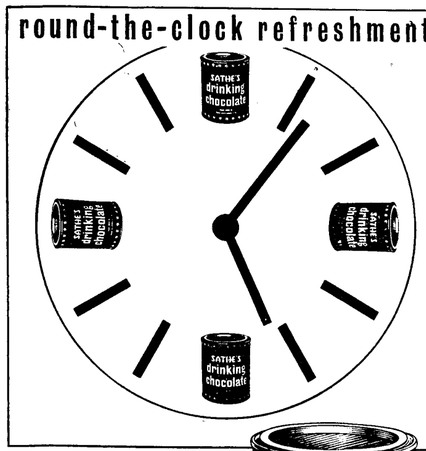
Electroplating Facts

As a manufacturer of goods which have electroplated surfaces for decorative effect, you are no doubt anxious to know whether the plating will last the lifetime of the article or will break down in a matter of months or even weeks, to the extreme annoyance of the customer. Bad plating cannot remain hidden for long and when the ugly rust-spots do show up, remember that the customer will blame *you* for it and not the plater who did the job for you. What can you do, to make sure that the plated finish on your goods—say, an electric iron or a table lamp or a bicycle—lasts and does not let you down? Follow the tips given below and you will be fairly safe:

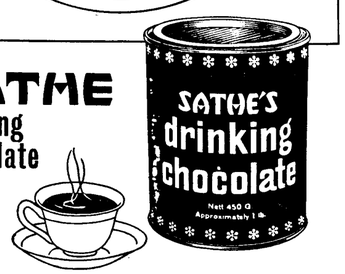
(a) Tell your plater you want the plating done to a standard specification such as IS 1068:1958 or BS. 1224-1959, if what you want is nickel/chromium plating. These standards recognize three grades based on thickness of nickel deposit.

(b) Also tell your plater or mark on your blue-print, which of these three grades you want in a particular case. The choice will depend on whether the article is intended for (i) severe, (ii) moderate, or (iii) mild service.



(c) Mark the "significant" surface on the blue-print before giving to the plater, as it will enable him to give special attention to it. A significant surface is defined as that part of the surface which is visible when the article is in service and where failure of the plated coating cannot be tolerated by the user.

(d) Test the thickness of plating to see if it conforms to standard. Several different types of instruments are available for this purpose, but two of the most modern and reliable are the B.N.F. Thermo-Electric Gauge and the B.N.F. Coulometric. Thickness measurements are made in a few seconds and are, moreover, non-destructive in the former case. Equip yourself with a suitable instrument and keep a regular check on the quality of plating. Otherwise, choose a plater who is so equipped and insist on frequent tests. It is worth paying a little more for high-class finish on your products. Sub-standard plating can lose you valuable business.



For any further advice or information needed on nickel-plating, please contact:
Nickel Information Bureau Private Limited,
United Bank of India Building, Sir Pherozshah Mehta Road, Bombay 1.

SETTLEMENT OF AIR FARES DISPUTE

RELUCTANT AMERICAN COMPLIANCE WITH I.A.T.A. AGREEMENT

By Our Aviation Correspondent

THE recent dispute about air fares, involving, on one side, the United States and Canada and, on the other, the British and thirteen other national governments, has been resolved. It sprang from a disagreement on certain quite minor increases in trans-Atlantic fares and it developed into an extremely explosive situation with both sides striking attitudes from which retreat might have become difficult. Nevertheless, although the immediate crisis has been surmounted, the seeds of future disagreement have been liberally sown; sooner or later, these are going to bear fruit.

The International Air Transport Association—the storm-centre of the controversy—is an organisation to which, with the exception of the Soviet bloc, all the world's international airlines subscribe. The Association—more familiarly known as I.A.T.A.—performs, for the airlines, the same offices as do "shipping conferences" in the maritime transport sphere. Indeed, the regulation of fares is I.A.T.A's principal but by no means sole function. Whether, as is often alleged, I.A.T.A. goes further, in this particular respect, than is strictly in the public interest, remains a matter of opinion. There are those who claim that the Association is essential and irreplaceable; there are those, on the other hand, to whom I.A.T.A. is anathema and who, for the past decade, have been clamouring for its liquidation. All that can be said for certain, perhaps, is that I.A.T.A. has contrived virtually to eliminate all "price-competition" from the operation of international air transport.

Origins of the Dispute

The purpose here, however, is not to argue the pros and cons of this highly controversial issue but, rather, to examine the origins of the recent dispute and, more particularly, the effects which it is likely to exert on the international air transport industry—and, of course, on I.A.T.A. It would be quite misleading to assume that a mere difference of opinion on the fare tariff was the sole, or even the primary, source of trouble. To appreciate the fundamental cause of friction, we must go back to the years immediately succeeding the last world war; to the period, in fact, when most of the agreements which govern the operation of international air transport were negotiated.

This was a period when, in wealth, in organisation, and in equipment, the United States occupied a predominant position in the business of air transport. Moreover, due to the acute foreign exchange situation then prevailing in Britain and Europe generally, it was the citizens of the United States who provided 80 per cent of the trans-Atlantic air traffic. Of still greater significance, perhaps, it was the United States airlines which carried more than 70 per cent of that traffic.

In all respects save, possibly, one, that position has materially changed. Whilst traffic originating in the United States still forms a large percentage of the total, the American carrier's share has steadily dwindled from more than 70 per cent to something less than 30 per cent. This, of course, is due to two factors: firstly, the rapid growth of European and other national airlines and, secondly, the lack of "price-competition" which permits smaller and weaker airlines to operate on more or less equal terms with their more powerful competitors.

Trade rivalry and human nature being what they are, it is only natural that American industry and Government take, to use a colloquial expression, a rather dim view of these changes in the situation. In their view, the two American international carriers—T.W.A. and Pan American—are entitled to a share of the traffic proportional not only to their size and importance but also to the relatively large percentage of that traffic which originates in their homeland. One other factor adds to their resentment. The non-American carriers employ various devices to add to their share of the trans-Atlantic traffic—'pools' for instance. Owing to American anti-trust legislation, American carriers cannot indulge in similar practices.

The Civil Aeronautics Board (C.A.B.) is the authority which deals with the regulation of civil air transport in the United States. However, owing to a lacuna in American legislation, the Board does not enjoy the same authority in the affairs of I.A.T.A. as do the British and other national governments whose airlines are I.A.T.A. members. Whereas these latter have complete power to regulate and enforce whatever fares they choose on routes to and from their respective territories, the C.A.B. can influence I.A.T.A. decisions only through its own two carriers—and this, of course, was the step it took which led up to the recent crisis.

U.S. Climb-down

Space does not permit an account of those events. The crux of the matter was the enforcement of a 5 per cent fare increase on trans-Atlantic routes, agreed by I.A.T.A. but to which the C.A.B. objected. It issued instructions to its carriers to continue to charge the lower fares. A 16-government meeting, convened by the British in London, with the object of persuading the C.A.B. to recant, failed. The British Government, supported by 13 other national governments, named 12th May as the deadline for the introduction of the new fares. Four airlines—T.W.A. and Pan American of the U.S.A. and T.C.A. and C.P.A. of Canada—on the instructions of the C.A.B. and the Canadian Air Transport Board, respectively, did not comply. The British Government called upon the dissenters to comply forthwith at the risk, in the event of failure to do so, of forfeiting their landing rights in Britain—a perfectly legal ultimatum, as failure to honour an I.A.T.A. agreement constitutes a breach of international law.

In the event, the C.A.B. climbed down and instructed the two American airlines to comply. A triumph, on the face of it, not only for the British Government but also for I.A.T.A. What, however, of the future? It would be ingenuous to suppose that the Americans are going to take this "lying down." Their first step, doubtless, will be to arm the C.A.B. with full power to control fares to and from the U.S.A. Once that is accomplished, the next appropriate occasion will see battle renewed—indeed, the first shots are likely to be fired at I.A.T.A's forthcoming meeting in Bermuda.

Nor should there be any illusions as to the strength the C.A.B. can deploy. In view of their policy of holding fare levels where they are, they can—and do—pose as champions of the public interest. In fact, of course, what they really want is an element of price-competition. Only in those circumstances can their large and powerful carriers exert pressure on smaller and weaker rivals. Their outlook is best summed up, perhaps, in the words of their Chairman. Speaking, off the record, after the recent meeting in London, and quoting a well-known saying of President Truman's, he remarked: "If they (the other airlines competing on trans-Atlantic routes) can't stand the heat, they'd better get the hell out of the kitchen"!

If that is to be the spirit of future conflict, the outlook for I.A.T.A., one has to conclude, is stormy. And not for I.A.T.A. alone—the smaller airlines, at any rate on routes which touch the U.S.A., are in obvious peril. After its recent somewhat humiliating defeat, the C.A.B. will not be inclined to offer very much quarter.

Japanese shipbuilders are reported to have received, during fiscal 1962 ended 31st March, orders for a total of 59 export vessels aggregating 2,262,644 tons dw. or 1,475.420 g.t. according to statistics compiled by the Japanese Transportation Ministry. Of the total figures, Mitsubishi Shipbuilding and Engineering Co., Ltd. contributed 20.3 per cent or 12 vessels totalling 457,550 tons dw. (297,100 g.t.). Mitsubishi's contribution comprised seven tankers of a combined tonnage of 261,800 tons dw. and five cargo ships totalling 195,750 tons dw.

SLIGHT RISE IN MILL PRODUCTIVITY

TIGHT SUPPLY POSITION IN NEAR FUTURE?

From Our Special Correspondent

MANCHESTER, 14th May

MANCHESTER LETTER

ONE of the worst features of the image presented to the world by the Lancashire cotton industry has been the way in which figures showing the declining trend have been subject to repetition as they are quoted and requoted in official documents and comments by trade leaders. Strangely enough, it seems that good tidings rarely receive this treatment, but any bad news gets repeated over and over again.

The annual report of the Cotton and Rayon Merchants' Association, although factually correct, is a case in point. The Chairman of the Council, Mr. G. H. K. Rae, while admitting that productivity in Lancashire mills increased to some extent during 1962, points out that the fall in actual yardage of output was the largest in any one year since 1958. In the space of 11 years, production has declined by 1,348 million sq. yards, he adds, twisting the knife in the wound. Output of woven cotton piecegoods has more than halved, and output of man-made fibre piecegoods has dropped by 25 per cent.

The report draws attention, not for the first time, to the violent fluctuations which affect demand within the industry up to the point of retail sale. Such a situation is paradoxical, it goes on, since the actual offtake by consumers is remarkably stable, varying rarely as much as 5 per cent from any one year to another.

Supply Position

Gradual growth in consumption in the home market is created by population trends and a rising standard of living, but the proportions spent on garments appear to be fairly static. Increased spending on household textiles and furnishings is observed, as well as on textiles employed in the manufacture of more durable consumer goods.

The considerable shortfall in the supply of cotton and rayon goods during last year is emphasised in the report, which estimates that consumption is now in the region of 2,400 million sq. yards per annum. Production of cloth and imports of piecegoods and garments, after deduction of exports, only amounted to 2,055 million yards, so that, on the basis of these statistics, a tight supply situation in the near future can scarcely be avoided.

Mr. Rae is somewhat sensitive about the role of the distributors in relation to other branches of the trade. Dealing with the highly topical subject of verticalisation, he says: "It appears to have become the fashion to blame the merchants and the Government for any troubles in the cotton industry." Suggestions that there are too many units in the converting section are refuted by the Association, the report observing: "Economic pressure has been constantly at work, but, because the process of attrition in the converting section proceeds gradually and quietly, the extent of the contraction is not generally realised."

Calling for more distinction to be made between the functions of converters and non-converters, Mr. Rae says that, since 1955, nearly 550 converting firms have ceased to be liable for the Cotton Board levy. He also points out that the cotton interest of some registered converters is small in relation to their interests in other fibres.

The Council of the Merchants' Association joins the rest of the industry in criticism of the Government for its overliberal policy, which it declares has created conditions which hinder the re-establishment of an efficient, compact Lancashire industry. "This makes for instability for all those engaged in the cotton textile trade," the report adds. "Furthermore, it does not benefit the exporting countries, who with greater confidence and stability could almost certainly earn more in the U.K. market for less expenditure of material and effort." Imports, the merchants contend, would have a less disruptive effect if a form of categorisation within the overall ceilings could be applied.

Cotton Board: The Facts

Considering the controversy which surrounds the Cotton Board, particularly every five years when its future comes up for review within the industry, surprisingly little is known about the details of its administration and the services it provides. Rarely do its officials take the opportunity to defend themselves by stating bald facts in reply to the criticisms which are so often levelled against their efforts.

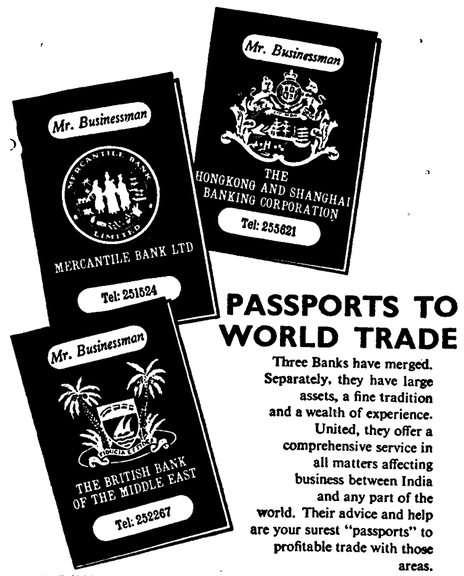
The unemotional account of the Board's history, its present facilities and endeavours, and a brief glimpse at its future, given to the delegates at the annual conference of the United Textile Factory Workers' Association by Mr. James Broatch, now Deputy Chairman of the Board, could well be circulated to every firm which pays the levy, and indeed to many other industries and organisations, as an example of what can be done by joint collaboration.

The cotton industry itself shows up extremely well under this scrutiny, as, despite the objection in some quarters to the principle of Development Councils, it can be said that the idea has worked. As one connected with the Board since the first week of its establishment, Mr. Broatch has every right to act as its historian, a task which he may well set himself in due course.

Historical Background

Delving into the past, he made the point that the idea of a Cotton Industry Board, with an independent chairman, two independent members, nine representatives of producers and merchants and three trade union leaders, was first mooted before the war and would have come into force in November 1939 had it not been for the outbreak of hostilities. Eventually, nearly a decade later, after proving its worth in very different circumstances to those originally envisaged, the Board in 1948 became the first Development Council, with certain amendments from the original scheme.

Although the members are formally appointed by the President of the Board of Trade, Mr. Broatch went on, they are not in any sense subsequently under his direction, nor is there any reason why they should feel in any way subservient to the Government. "There is not the slightest substance in the allegation sometimes made that the Board is an instrument of the Government," he declared.



The levy collected from the industry is paid in different proportions by the various sections. The ratio is 32 per cent spinning, 1½ per cent waste spinning, 6½ per cent doubling, 30 per cent weaving, 17½ per cent finishing, making-up and packing, and 12½ per cent converting. The Board collects £400,000 a year, but, of this sum, £245,000 are handed over to the Shirley Institute, leaving the Board's own revenue at £155,000. Apart from two years when the Board, with the agreement of the industry, was collecting an additional £75,000 annually for a promotion campaign, its income has remained quite unchanged since 1951.

The Board's only compulsory powers, besides collecting the levy, are to register firms in the industry, and to require them to furnish returns and information on such matters as productive capacity, staff, output, orders, sales, deliveries, stocks and costs and so on.

Harmonisation Achieved

After describing in some detail the various departments of the Board, including its Productivity Centre, Statistical Section, Overseas Department, and the Colour, Design and Style Centre, Mr. Broatch declared his conviction that there was very little wrong with the constitution of the organisation. Various sectional interests, which must inevitably conflict quite frequently while the industry was still mainly organised horizontally, he said, could be harmonised to the greatest possible extent through joint consultation, enabling a united view to be presented to the Government or other outside interests.

The presence of trade union leaders with employers' representatives on delegations had strengthened their impact enormously. Moreover, the addition of independent members had assisted the industry, as their support weakened any suspicion that a purely selfish case was being argued, which might be against the public interest. "Without a central body such as the Cotton Board, all the various interests in the industry would make their own separate and distinct approaches to the Government," said Mr. Broatch and added: "More often than not, they would cancel each other out, providing any Government with a perfect and valid excuse for doing nothing at all."

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

AIR CONTROL & CHEMICAL ENGINEERING CO. LTD.

(INCORPORATED ON 13TH NOVEMBER 1961, UNDER THE COMPANIES ACT, 1956)

Registered Office: **Bank of India Building, Bhadra, Ahmedabad**

SHARE CAPITAL:

AUTHORISED:

	Rs.
1,50,000 Equity Shares of Rs. 100 each	1,50,00,000
50,000 Unclassified Shares of Rs. 100 each	50,00,000
Rs.	2,00,00,000

ISSUED AND SUBSCRIBED:

10,000 Equity Shares of Rs. 100 each have already been issued and subscribed by the subscribers to the Memorandum, Directors and their friends and associates for cash at par and a sum of Rs. 75 per share has been paid up in respect thereof, payment having been made in cash 10,00,000

(No underwriting commission or brokerage has been paid or is payable in respect of these Shares.)

PRESENT ISSUE:

90,000 Equity Shares of Rs. 100 each 90,00,000

OUT OF THE PRESENT ISSUE:

	Rs.	Rs.
(a) Sheldons Engineering Limited, one of the Foreign Collaborators, have agreed to subscribe for and will be allotted 5,000 Equity Shares of Rs. 100 each for cash at par	5,00,000	
(b) Air and Refrigeration Corporation, also one of the Foreign Collaborators, have agreed to subscribe for and will be allotted 500 Equity Shares of Rs. 100 each for cash at par	50,000	
(c) Directors, their friends and associates have agreed to subscribe for and will be allotted 35,500 Equity Shares of Rs. 100 each for cash at par, out of which the Company has agreed to the firm allotment to the Industrial Finance Corporation of India of 5,000 Equity Shares of Rs. 100 each of the face value of Rs. 5,00,000	35,50,000	
		41,00,000

NOW OFFERED AT PAR FOR CASH FOR PUBLIC SUBSCRIPTION—

49,000 Equity Shares of Rs. 100 each	49,00,000
Total .. Rs.	90,00,000

The entire issue offered to the public has been underwritten. No Shares are issued or agreed to be issued for consideration other than cash. No other class of Shares is being issued at present.

TERMS OF PAYMENT:

Rs. 25 per share	On application.
Rs. 25 per share	On allotment.
Rs. 50 per share (Balance) ..	Payable in such calls as may be determined by the Directors provided that no such call shall exceed Rs. 25 and the first of such calls will not be made earlier than two months after the date of allotment and that there shall be an interval of at least two months between two calls.

MANAGING AGENTS

HARESHCHANDRA MAGANLAL & CO. PRIVATE LIMITED, 52/54, Nakhoda Street, Pydhonie, Bombay.

EXISTING AND PROPOSED ACTIVITIES

The Company will undertake the manufacture of ventilation. air-conditioning and refrigeration equipments. Ventilation and air-conditioning equipments include all types of fans and blowers rated for all duties, viz., light, medium and heavy; industrial exhausters, cyclone separators, heavy type dust filters, evaporative type cooling equipments such as spray and capillary type air washers, articulated units, scrubbers, conditioning units etc. The Company will manufacture compressors for ammonia and freon which are basically needed for applications such as ice plant, cold storages, tunnel freezers, package type plate freezers, dairy equipments, ice-cream manufacture, marine and research refrigeration and special process equipments for the development of metallurgical and medical processes.

The Company will also manufacture components such as heat transfer coils (both primary surface and extended fins), Unit coolers, heavy duty product coolers, condensers, also accessories such as controls, agitators, etc.

An Industrial Licence bearing No. L/8-B(12)/9/60-AEI dated 16th January 1961 has been issued by the Government of India, Ministry of Commerce and Industry, New Delhi.

In conformity with the approval of the Government of India, the Company has entered into foreign collaboration agreements with (1) SHELDONS ENGINEERING LTD., Canada, and (2) AIR AND REFRIGERATION CORPORATION, U.S.A.

The Company has entered into an Agreement with AKTIESELSKABET THOMAS THS. SABROE & CO., Aarhus, Denmark, which is awaiting approval of the Government of India.

In the light of the Government approval, negotiations with (1) AIR COILS MANUFACTURING COMPANY LTD., Canada, and (2) CANADA-WIDE AIR CONDITIONING AND REFRIGERATION SERVICES, Canada, are in the course of further negotiations and finalisation.

It is estimated that the cost of the Project for this purpose will be Rs. 1.95 Crores, out of which Rs. 80,00,000 will be spent for machinery. The imported contents of the machinery will amount to Rs. 36,00,000. The Industrial Finance Corporation of India have sanctioned a loan of U.S. $756,000 (Seven Hundred Fifty-six Thousand) (equivalent to Rs. 36,00,000) under an AID Loan and have also sanctioned an Indian Rupee Loan of Rs. 24,00,000 (Rupees Twenty-four Lacs). The clearance to the extent of Rs. 36,00,000 (Rupees Thirty-six Lacs) has also been obtained from the Ministry of Commerce and Industry, Government of India, and the Import Licence in respect of the same is awaited. It is expected that when the Company will achieve full production, production value will be about Rs. 5,00,00,000 (Rupees Five Crores).

The Gujarat Electricity Board has assured the Company supply of adequate electric power.

LOCATION OF THE INDUSTRY

The Company's plant will be located at Devdi adjoining Barejadi Railway Station which is on the main broad-gauge railway line about 10 miles away from the Industrial Town of Ahmedabad.

BANKERS TO THE ISSUE

1. The Bank of Baroda Ltd., 12, Apollo Street, Bombay-1.
2. The Bank of India Ltd., Mahatma Gandhi Road, Bombay-1.
3. The United Commercial Bank Ltd., Dadabhoy Naoroji Road, Bombay-1.
4. Devkaran Nanjee Banking Co. Ltd., Horniman Circle, Bombay-1.

UNDERWRITERS

The following institutions and firms have agreed to underwrite the issue as under:—

	Rs.
(1) Industrial Finance Corporation of India, Reserve Bank Building, Parliament Street, New Delhi ...	10,00,000
(2) The Industrial Credit and Investment Corporation of India Ltd., 163, Backbay Reclamation, Bombay-1 ...	15,00,000
(3) Bank of Baroda Ltd., 12, Apollo Street, Bombay-1	10,00,000
(4) Life Insurance Corporation of India, Jeevan Kendra, Jamshedji Tata Road, Bombay-1	5,00,000
(5) Jagmohandas J. Kapadia and Co., Union Bank Building, Dalal Street, Bombay-1	4,50,000
(6) Chimanlal J. Dalal and Co., New Stock Exchange Building, Dalal Street, Bombay-1	4,50,000

BROKERS

Bombay

(1) Jagmohandas J. Kapadia & Co., Union Bank Building, Dalal Street, Bombay.

(2) Chimanlal J. Dalal & Co., New Stock Exchange Building, Dalal Street, Bombay-1.

(3) Batliwala & Karani, Union Bank Building, Dalal Street, Bombay-1.

(4) Merwanjee Bomanjee Dalal, Allahabad Bank Building, Apollo Street, Bombay-1.

(5) Devkaran Nanjee & Co., Stock Exchange Building, Apollo Street, Bombay-1.

(6) A. B. Pandit & Co., 32, Apollo Street, Bombay-1.

(1) Place, Siddons & Gough (Pr.) Ltd., 6, Lyons Range, Calcutta-1.

(2) G. M. Pyne, Allahabad Bank Building, 14, India Exchange Place, Calcutta.

Ahmedabad

(1) M/s. Chinubhai Chimanlal Dalal, Manek Chowk, Ahmedabad.

(2) M/s. Kantilal P. Broker, Manek Chowk, Ahmedabad.

(3) M/s. Chimanlal Lalbhai, Manek Chowk, Ahmedabad.

Delhi

Raj Paul Chadha & Co., Delite Cinema Building, Asaf Ali Road, New Delhi.

ISSUE HOUSE

Industrial Investment Trust Limited, 61, Apollo Street, Bombay-1.

SOLICITORS

Messrs. Amarchand and Mangaldas and Malvi Ranchoddas and Company, Solicitors and Advocates.

Yusuf Building, Mahatma Gandhi Road, Fort, Bombay-1.

Hari Bhakti's Street, Sankdi Sheri, Ahmedabad.

AUDITORS

Messrs. Manubhai and Co., 51, Mahatma Gandhi Road, Bombay-1.

Application Forms along with copies of Prospectus can be had from the abovementioned Underwriters, Brokers and Bankers.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF THE BANKING HOURS ON 30th MAY, 1963, AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 10th JUNE, 1963, OR EARLIER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE THE CLOSE OF THE BANKING HOURS ON 5th JUNE, 1963.

SUITABLE LOCATIONS FOR STEEL PLANTS IN SOUTH INDIA

FEASIBILITY OF SALEM PROJECT DOUBTED

By K. V. Subrahmanyam

PROFESSOR OF MINING ENGINEERING, OSMANIA UNIVERSITY

THE factors that decide the location of iron and steel industries can best be understood from an analysis of the costs of production in a modern integrated steel works. In the first stage, namely, the production of pig iron, raw materials account for 80 per cent of the cost, labour 5 per cent and others, including supervision, taxes, profits ploughed back and dividends, 15 per cent. The percentages are practically the same in the second stage, that is, the conversion of pig iron into steel. In the third stage, namely, the rolling of steel, the labour costs used to be higher, but modern developments like the adoption of continuous rolling and of higher rolling speeds has brought down these figures on a par with those of the other two stages. From this it should be clear that the crucial factor governing the location of a steel plant is the unit cost of assembly of raw materials which are iron ore, scrap and ferro-alloys, fuel and the fluxes.

As regards capital costs, an iron and steel works is exceptionally sensitive to the economics of size, whether it be in terms of vertical integration or of the sizes of individual units like blast furnaces, open-hearth furnaces or electric furnaces. A modern integrated steel works from the production of coke to the rolling of the steel may cost anywhere between Rs. 1,500 and Rs. 2,500 or more per ton of annual capacity depending on the quality of the finished product. This high capital cost has two important effects. As the capital cost is two-and-a-half to three times the annual sales turnover, it is cheaper to expand an existing plant at about 70 per cent of the cost of a new plant for the first million tons and 65 per cent or even less for the second million. Secondly, any attempt at reducing the optimum size results in a disproportionate increase in the unit cost of production due to increases in the consumption of raw materials, especially of fuel. To some extent this disadvantage could be offset if a substantial part of the fuel requirements, except what is indispensable for the chemical process of reduction, is made good by cheap hydro-electric power or electric power from locally available cheap fuels, whether it be coal, oil or natural gas, and either a rich iron ore with a minimum of sulphur and phosphorus or an abundant amount of scrap is used.

Technical Limitations

What, then, are the technical limitations to attaining the optimum size of every steel works, an optimum which has been steadily increasing from half-a-million tons in 1939 to over three million tons of annual capacity with the steady growth of iron and steel works technology? They are mainly metallurgical coke and scrap. The capacity of the blast furnace is limited by the quality of coke; that of the steel furnace, whether open-hearth or electric, by the quality and quantity of scrap, less so with the open-hearth than with the electric; and the creation of modern steel producing giants has been made possible only because of the meticulous attention paid to the preparation of the raw materials so that coke consumption could be reduced and maximum heat is conserved by the integration of all operations from coking to the rolling of the final product.

Whilst the production of pig iron and ordinary carbon steels do not require scrap in large quantities—the use of scrap in the blast furnaces is a wasteful luxury—scrap, ferro-alloys and electricity are the three indispensable prerequisites for the manufacture of alloy steels. And, of the three principal sources of scrap, namely, circulating scrap arising from the steel industry itself, process scrap arising from the industries using iron and steel as raw material and capital scrap arising from worn-out and obsolescent iron and steel products, the first is the only category available at hand for an integrated iron and steel works. The second is most abundant in centres of engineering industry. The third is collected and brought to site by road, rail or sea.

Thus, it will be seen that the ideal location for an iron and steel works will involve the minimum cost of assembly of the three principal raw materials, namely, iron ore, fuel and scrap, the availability of adequate quantities of power and water and an easy outlet for the finished products. If the steel works is engaged in the manufacture of heavy steel products, its location is governed by the availability of iron ore and coking coal. In the early years of the steel industry, when rich iron ores were available in plenty, vertical integration of steel-making industries was still in its infancy, coking coal was cheap and fuel economy was not a major consideration, steel was holding only a subordinate place to pig and wrought iron in the engineering industries and the by-product coke oven had not yet been developed, pig iron plants were located near coking coal mines and steel was produced at centres of engineering industries based on scrap locally available. Such are the fuel-based iron and steel centres of Pittsburgh, Birmingham, Essen, Kulti and Burnpur. However, the backhaul concessions resulting from the fact that a coal-producing area, which usually becomes the focus of a variety of engineering industries, exports a smaller tonnage of goods than it imports make the establishment of iron and steel works at the iron ore mines an economic proposition. The best examples are Duluth in the U.S.A. and Lorraine in France. Where this movement of coal and iron ore involves transshipment, such ports have provided excellent locations for iron and steel works as exemplified by Cleveland and Buffalo. The best instance, however, is the Volta-Redonda steel works near Rio de Janeiro in Brazil which has been located at this port to take advantage of the backhaul rates on coal from the U.S.A. The iron ore is brought by rail from the interior to this port for shipment to the U.S.A.

Foreign Experience

Practically every country in the Northern Hemisphere except Sweden has either exhausted or does not possess rich iron ores in adequate quantities to feed their steel works. And almost every European country, the U.S.A. and Japan are dependent on import of iron ores, the U.S.A. from Canada, Brazil, Peru, Chile, Argentina and Columbia, Great Britain from Canada, Sierra Leone and Liberia, Germany from Sweden and Morocco and Japan from India, Canada, Australia and many other countries. Among the Eastern European countries, both Czechoslovakia and Poland depend on imported ores. The U.S.S.R. and China possess vast reserves of iron ores, but not of a quality sufficient to attract even Poland and Czechoslovakia. When it comes to the other important raw material, namely, coking coal, Italy has none, Japan has only limited reserves of poor quality coking coals, and, except for Poland and, to some extent, Great Britain and France, all the other countries are affected by the high costs of production due to increasing mining depths and a mounting wage bill. Czechoslovakia's production is insignificant, and the only other major producer, the U.S.S.R., has not been favourably placed geographically for building an export market—the high sulphur content of the Donbas coals and the long rail haulage involved in moving coking coal from its other fields have effectively deterred any prospective importer. The increasing dependence on imported raw materials, namely, iron ore, coking coal and even scrap in most cases, as with Japan and Italy, have had the effect of a steady shift in the location of iron and steel works to the seaside.

It is against this essential technical background that we have to study the locational problems of the iron and steel industry of India with special reference to the Southern region. The major limitation to the unfettered development of the iron and steel industry in India has always been that its entire coking coal resources are concentrated in south-west Bihar and in the eastern fringe of Bengal. Non-coking coals, suitable for all other purposes except that of manufacture of metallurgical coke, are however, available in adequate quantities in Madhya Pradesh, Orissa, Maharashtra and Andhra Pradesh. Leaving aside the high-sulphur coals of Assam, and the limited resources of fossil fuels of indifferent

AIR CONTROL & CHEMICAL ENGINEERING CO. LTD.—*(Continued)*

quality in Kashmir, Rajasthan and Gujarat, the only other State with adequate reserves of the lignitic variety of coal is Madras. Clearly, therefore, if integrated iron and steel works are to be erected anywhere in India based on metallurgical coke from within the country, they must depend for their supply of it from Bengal and Bihar. The only alternatives are either to import coking coal or to adopt one of the several expedients for the manufacture of steel without metallurgical coke.

This major geographical limitation—the concentration of the metallurgical coal resources of India in its north-eastern corner—is not a new discovery. It was made as early as the latter part of the last century when the Geological Survey of India was created to look for the fuel to feed the new railway system in the days of Dalhousie and Canning; and the first note of warning against the danger of exhaustion of this metallurgical coal was sounded by Sir Thomas Holland in his presidential address to the Mining, Geological Institute of India in 1907, which is well worth reproducing:

"In trade, as in politics, the most serious time for those responsible for directing the course of events is not in the lean, but in the fat years. In metallurgical industries one mineral requires a certain number of others; but our resources have not been so planned during *Creation* that we find the minerals in the relative quantities necessary for metallurgical operations without waste or excess to sell. When, ultimately, we are in a position in India to bring the raw materials together, shall we find that we had already exported the principal part of some bone necessary to complete the skeleton? The simple export of a raw material that cannot be reproduced and yet is essential to the industrial development of the country is not a form of trade that can be regarded with unalloyed satisfaction. We are paying dividends out of capital. It is this question that ought to concern everyone who has been provided with a trumpet and set in the watchman's tower."

It was as the Director of the Geological Survey of India that he struck this warning note; and he followed it up, soon after he was appointed to the Viceroy's Executive Council, by having two eminent mining engineers of England, Messrs. Treharne-Rees and Foster Brown, brought down to India to report on the remedial measures to be instituted for conserving metallurgical coal. Their report, submitted in 1918, recommended the pit-head generation of electric power to utilise the slack coal that was not only going to waste but was also becoming a source of mine fires and the extraction of the thick coal seams that were characteristic of India in conjunction only with a system of stowing. The first recommendation was turned down on the advice of the then Hydro-electric Adviser to the Government of India, Mr. J. W. Meares, that the entire power requirements of the Bengal-Bihar coalfields could be met cheaply from the Hundru falls at Ranchi. (The Hundru falls at Ranchi is, to this day, merely of sightseeing interest!) As a matter of fact, right down to 1962, neither of these recommendations was taken up seriously by anyone and the best grades of metallurgical coal like those of Giridih, the 12, 13, 14, 14A, 15, 17 and 18 seams in Jharia, the Sanctoria, Dishergarh and Poniati seams in Bengal, were allowed to be mined with singular disregard for conservation and were despatched for bunkering, export or to be burnt in steam locomotives at seven to eight per cent efficiency, and all this despite repeated warnings and not a few legislative enactments. Even as recently as 1959, when the coal crisis in the steel plants was deepening and the issue of banning the export of metallurgical coal was raised in Parliament, the Minister for Steel, Mines and Fuel, on the basis of a set of inflated figures supplied to him by the Geological Survey of India, stated that, far from banning the export, he would have the export of metallurgical coal steadily increased. It was not until a crisis overtook the steel industry in 1961 that he rescinded this decision and banned the exports of this precious commodity. No wonder that today, despite washing, the coke supply to the steel plants is bedevilled by high ash content. In brief, the position today is that India has adequate supplies of coking coals, but which, despite washing, produce a high-ash coke necessitating the import of some low-ash coal for blending to improve plant-efficiency.

Iron Ore Position

As regards iron ores, India's position is far better. Its best quality iron ores are more evenly distributed. The largest of them are, of course, confined to Bihar, Orissa and Madhya Pradesh. Those of importance to the development of the Southern region are the deposits of Bailadila in Madhya Pradesh which have to find their outlet through Visakhapatnam, the deposits of Sandur, Kemmangundi and Bababudan in Mysore State, and the deposits of Goa. These are the only deposits which can provide the basis for coke-based iron and steel works. The iron ores of Salem-Trichinopoly districts with the following average composition: iron 35.27 per cent; silica 47.28 per cent; alumina 1.58 per cent; magnesia 1.34 per cent; phosphorus 0.088 per cent and sulphur 0.007 per cent could only be considered for use after elaborate beneficiation. There are a number of smaller deposits of varying richness in Andhra Pradesh, Mysore and Kerala, some of which are being exported. The richest among them, if conserved, instead of being allowed to be mined as at present in the most wasteful manner and exported, would be of immense value to local steel industries to provide melting stock when the regional electric grid becomes a reality and the developing engineering industries begin to make available process scrap. Otherwise, they are of little significance to the development of the iron and steel industry in the Southern Region.

On the basis of the above assessment of the raw material position—we have left out limestone and dolomite altogether as they are needed only in smaller quantities and are available without difficulty—any major steel plant, wherever located in the Southern region, will have to depend for coking coal either on imports or on the coalfields of Bengal-Bihar brought by rail or sea and for iron ore on Madhya Pradesh or Mysore. This leads us to inquire into the important issue of the sources from which coking coal could be imported. The only countries which have coking coal available in any quantity and of suitable quality for export are China, Australia, South Africa, the Soviet Union, Czechoslovakia, Poland, West Germany, France, Belgium, Holland, the United Kingdom, U.S.A. and Canada. Of these, China and South Africa can be ruled out straightway. The cost of coal production in Belgium, Holland and West Germany is so high that India could ill afford the luxury of importing from these countries. The only countries from which there is any hope of importing coking coal are Australia, the U.S.A., the United Kingdom (if Lord Robens can keep to his promise of bringing down the cost of coal production in the Midlands to below that of the U.S.A. of five dollars a ton), Czechoslovakia and Poland. It is unlikely that we will find it worthwhile to import Donbas coal which is also a high-cost one with its high sulphur content. Even of these, Czechoslovakia and Poland alone are interested in importing our iron ores to enable us to find the foreign exchange to pay for the import of coking coal. In Australia we have a serious rival, Japan, for its coking coal. Moreover, Australian coking coals are no better than the Indian ones as regards ash content so that they would be of little use for blending with the high ash coking coals of India. As regards coking coal from Bengal-Bihar, the farthest they could be hauled south by rail would be Waltair beyond which the railways would be unable to bear the traffic burden. Even here it would be economical to bring the coal from Calcutta port by sea to Visakhapatnam, if provision is available for backhaul cargo.

South Indian Sites

Thus, any integrated iron and steel works located in the Southern region will have to depend on imported coking coal, and the best location for any such works will be, like that of the Volta-Redonda works at Rio de Janeiro, at one of the ports which form the outlet for the export of iron ores from the interior. At present, the most important is Goa. When the Bailadila-Visakhapatnam rail link is completed, it will assume pre-eminence in this regard. The iron ores of Sandur in Mysore State have an outlet either from Goa or from Madras. Bombay involves a longer haul than either port. When the Hospet-Guntakal link is changed to broad gauge, Madras would become as convenient an outlet for the export of Sandur iron ore as Goa. This will provide three suitable locations for three integrated steel plants in the Southern region. The ore carriers which pick up the iron ore from these ports could bring coking coal where the ore is exported to Poland or Czechoslovakia. In the case of Japan, the ships that carry iron ore could, on their return journey, call at Calcutta, unload their cargo, and pick up coking coal there for delivery at these ports. If Australian coal is to be imported, the return journey from Japan will have to be made via Australia. These are the several possibilities for providing coking coal to these coast-based steel plants.

It is only after these possibilities have been exhausted to the fullest extent that we should think of building steel plants based on non-coking coals and inferior ores like the iron ores of Salem-Trichinopoly areas. For plants of this type, the principal considerations are: firstly, to make up for the smallness of the unit with consequent increases in cost of production, the raw material costs should be kept rigorously low; secondly, the poorer the quality of fuel, the more economical it becomes to convert it into electricity and use it for the production of quality steels than to use it in a furnace for smelting. In this connection, the shifting by Messrs. Mahindra and Mahindra of the venue of their proposed alloy-steel plant from Madras to Bombay ought to act as an eye-opener to those engaged in planning for steel production at Salem with Neyveli lignite and magnetite quartzites. Considering that the automotive industries are the biggest users of alloy steels in the world, one would, normally, have expected the Mahindras to have put up the alloy steel plant near their automobile factory in Bombay. That they sought for a licence for its location in Madras must mean that there were overriding considerations like an assured supply of cheap and abundant scrap, and, more than that, cheap, adequate and reliable supply of electricity; and the power position in Madras with no early hopes of improvement, highlighted by the power cuts of last year, could not but have had an unnerving effect on anyone intending to establish an electro-metallurgical industry in the Madras State.

Low-shaft Furnace

So much has been said and written about the low-shaft furnace as a panacea for the ills of India's coking coal shortage that it is worth making the following comments. The primary object of the low-shaft furnace is to make use of the coke breeze and the ore fines that are the by-products of modern blast practices in integrated steel works where tonnage oxygen plants already installed could supply the necessary oxygen; and even the biggest protagonists of this type of furnace lay more emphasis on its capacities as a gas producer than as a producer of quality pig iron. The only low-shaft furnace installation, apart from the pilot plant in the National Metallurgical Laboratory in Jamshedpur, was pioneered by Mr. Bejoy Patnaik, now Chief Minister of Orissa. As the capital investment stage of this plant was nearing completion, he also secured a licence for a similar installation in Andhra Pradesh at Kothagudem. Now he has not only generously handed over this plant at a reduced price to the Orissa Government, although the public of Orissa would have been more happy if he had handed over to them the Kalinga Tube Plant; he has also completely lost interest in the plant he was to have set up in Kothagudem. At Barbil in Orissa, the low-shaft furnace has the advantages of an assured supply of reasonably good quality non-coking bituminous coal and excellent iron ores, easily mined by open-cast methods and needing no beneficiation. For the proposed steel plant at Salem even these do not exist. It is, therefore, necessary to go into greater detail into the history of this proposal and its future prospects.

It was in the inter-war years, when the Great Depression of the thirties set in soon after the completion of the hydro-electric generation facilities at the Mettur Dam, that the then Government began to make Herculean efforts to find consumers for this electricity by offering it at dirt-cheap rates. One suggestion was to establish an electro-chemical industry based on salt from Nagapatam. Another which found a valiant champion in Dr V. S. Dube of Banaras Hindu University, an adviser to the then Madras Government headed by Mr. C. Rajagopalachari, was the electric smelting of these Salem ores with charcoal as the reducing agent. The ores being magnetites, it was quite simple on a laboratory scale to make an excellent separation from the associated silica. Mr. Rajagopalachari was, however, too much of a statesman to fall in for laboratory-scale technology. And, there it lay in cold storage until revived in the wake of the "lignite rush" (it has been producing more intoxicating effects than any of the gold rushes had ever produced) that took by storm the "Deep South" of India.

Lignite and Salem Ore

Once the lignite project passed the stage of investigation and its execution was sanctioned, the Salem steel project was ready for revival. By this time Madras was facing power shortage; and, to complicate matters,

(Continued on page 948)

INDIA ON THE WORLD TEA MAP

COMPETITION FROM OTHER PRODUCERS KEEN

NEXT to jute manufactures, tea is India's largest earner of foreign exchange, accounting as it does for one-fifth of the aggregate annual earnings. Out of the total exports amounting to about Rs. 686 crores in the financial year 1962-63, the share of tea alone was almost Rs. 129 crores. The quantity of tea actually exported was no doubt higher at 220.55 million kg. valued at Rs. 129.19 crores, as against 205.93 million kg. valued at Rs. 122.40 crores in the year 1961-62. But the improvement was achieved to some extent as a result of a reduction in prices. The average price realised per kilogram of tea sold abroad in 1962-63 was just Rs. 5.85, as against the average of Rs. 5.95 obtained in the previous year. These figures indicate that Indian teas are encountering keen competition in world markets. It looks as though the competition will be keener still in the coming years. This at any rate is the conclusion that emerges from the assessment made by the Food and Agriculture Organisation in its latest *F.A.O. Commodity Review* 1963. Here is what the F.A.O. says:

"Apart from the vagaries of the weather, world tea output in the immediate future should ... continue to increase in accordance with the past trend. As further increases in production will consist mainly of plainer teas, competition for markets for these types is likely to intensify. Although more intense promotion activities are expected to support demand in the main importing countries, the equilibrium of the market, particularly in the critical plain tea sector, will continue to depend largely on the capacity of producing countries to absorb domestically the bulk of the increased supplies."

Against this background, the abolition of the export duty on tea, announced by Mr. Morarji Desai in the 1963-64 budget, must be welcomed as a step in the right direction. But the Government has levied an additional surcharge on excise duty on tea partly to make up the revenue loss arising from the abolition of export duty and partly to restrain internal consumption of tea. The tea industry feels that there is no justification at all for the additional surcharge. Mr. S. R. Daga, President of the Tea Association of India, declared recently, when he addressed the annual meeting of the Association's Cachar Branch held at Silchar, Assam, that the excise duty, being made non-refundable at the time of export, played its part in raising the cost of production steeply. When there was need to reduce cost to the maximum extent possible, no additional levy, he pointed out, should be put on export teas. Mr. Daga, therefore, urged the continuance of the drawback of excise duty on tea exported abroad.

Plea Justified

The tea industry's plea for a reduction in tax burden is justified considering the need for enabling the industry to go ahead with their programmes of expansion and development which involve a heavy capital outlay. The industry has to meet a major portion of this outlay from out of its resources. Mr. Daga asked as to wherefrom would the companies get funds to do all these when their profits were taken away by the Central and State Governments through various taxes on incomes. "In recent years," to quote him, "very heavy demands have been made upon the industry as a result of labour legislation, payment of enhanced wages, institution of provident funds and the payment of bonus and many other benefits to labour, including housing, medical facilities and leave provisions. It is virtually impossible for the industry, under present conditions, to raise additional capital from the finance market and, if the industry is to expand as laid down in the third Plan, sufficient finance must be available from profits and from reserves to finance the many commitments which now face tea companies."

The need for tax relief to Indian tea is urgent in the context of the growing competition in world markets. How this competition has affected India will be evident from the fact that the proportion of Indian tea in the world total exports has gone down in recent years, from over 41 per cent in 1954-58 (average) to 40.1 per cent in 1962. In contrast, the percentage shares of Ceylon and Africa have risen, the former from 33.2 to 37.4 and the latter from 5.4 to 9.3. The accompanying table shows the position of India on the world tea map *vis-a-vis* the other producing countries during the year 1962, as compared with that obtaining in 1961, 1960 and 1954-58 (average).

The aggregate world tea production of 1,031,000 tons in the year 1962 was an all-time record, already exceeding the level planned for 1965. The upward trend of production is expected to continue in the current year (1963) also. All the major producing countries are stimulating output by a variety of measures, including subsidies for replanting with higher yielding material, increased fertiliser allocations, expansion of acreages and denser planting of existing areas. The recent sharp upward movement in East African production, in particular, according to the F.A.O. study, is likely to continue, as large areas have yet to reach the bearing stage.

Trade in Tea

The world trade in tea during 1962 showed little change. Imports into Britain, by far the largest market, were higher but by only 2,300 metric tons at 240,000 tons. The rise in imports into most other countries, including the United States and the European Economic Community countries, was also negligible.

Since the termination of joint promotion of tea through the International Tea Market Expansion Board in 1952, the Ceylon Government has continued an extensive publicity campaign designed to increase consumption of Ceylon tea. The Indian Government is now also considering other measures to promote tea exports. New

India Tea Centres have recently been opened in the United Kingdom (London, Edinburgh) and in Dublin, and it is planned to open seven such centres in other European capitals. In 1962, a mission from the Indian Tea Board visited the U.K., the U.S. and other consuming countries in order to assess the possibilities for further promotional activities. In Indonesia, an effort is being made to regain markets for those types of teas which were well known before the war, when production was very much higher. The first London auction of Indonesian tea since the war, took place in London in October 1962 and it was reported that offers would be made in future on a fortnightly basis as has been the practice at the Antwerp and Hamburg auctions. The main sales agency in Indonesia is a Government body, the Badan Pimpinan Umum Pusat Perkebunan Negard, but the country's tea trade is handicapped by the absence of a local primary marketing centre. Sales are reported to have been further hindered by the use of a fair average quality grading which is unfamiliar in the trade.

The relative stability of tea prices in recent years contrasts with the fluctuations experienced by other commodities, such as coffee, cocoa and sugar. However, tea prices in the post-war period have never been exceedingly generous to producers. In 1961, the deflated price of tea in the London auctions was actually below the 1934-38 average, while the prices of other three commodities remained 30-60 per cent above pre-war levels. To some extent, this reflects the relatively attractive pre-war prices for tea resulting from the operation of the International Tea Agreement; but the difference remains quite significant.

Production Costs Rise

The F.A.O. has drawn attention to the rapid increase in production costs and, in some cases, taxes since the end of the war in the traditional Asian tea producing countries. Until now, according to it, the rise in costs has been partially offset by constant advances in productivity, but profit margins have narrowed. Partly for this reason, tea planting has been relatively more attractive in new areas in East Africa and South America. In 1960, these areas accounted for 10 per cent of the world tea acreage, as compared with only 2 per cent before the war. As a large part of the acreage is still immature, a further expansion of production is in prospect. In the face of this situation, some of the Asian countries have taken steps to reduce the burden of taxation, or are contemplating such action, while at the same time actively encouraging further advances in productivity. In India, the target of 410,000 tons established for tea under the third Plan (1961-65) represents an increase of about 15 per cent on the 1962 level of production. Export taxes have been reduced in order to enhance the competitive position of the industry in world markets. In addition, a scheme has been announced whereby loans of Rs. 3,000-4,000 per acre or Rs. 7,000-9,900 per hectare (depending on location) will be advanced to the estates for replanting, replacement and extension of old tea areas. Such loans are repayable over a period of eight years and carry interest at 7 per cent per annum with a rebate of ½ per cent for punctual payments of principal and interest.

Tea in Ceylon

In Ceylon, the Government has been considering the incidence of taxation on the basis of the findings of a committee appointed in 1961 to study the problem. The Committee recommended, among other things, that the *ad valorem* sales tax should be fixed at one-third of the excess in price over Re. 1.90 a pound, subject to the present maximum of 70 cents per pound. Under the short-term implementation programme recently introduced in the same country to revise and stimulate the implementation of targets included in the Ten-year Plan, it is intended to increase tea production in the period 1962-64, mainly through better and more intensive methods of cultivation as in the past. The rehabilitation subsidy scheme, which was introduced in 1959 and applied to small estates of under 100 acres, will be continued. This scheme met with considerable success and, in 1961, Rs. 44.73 lakhs were paid for the purchase of fertilisers, filling of vacancies and soil conservation measures. The subsidy payable under the tea replanting subsidy scheme has been increased from Rs. 2,500 to Rs. 3,500 per acre, which is claimed to present five-sevenths of the costs incurred in replanting. In addition, a subsidy of Rs. 3,000 is being offered to plantations of over 100 acres for each new acre brought under cultivation. The Ceylon State Plantation Corporation and the Highland Colonisation Scheme will each bring 1,000 additional acres under tea cultivation, the latter being concerned with small holdings of about two acres each.

In Pakistan, the Tea Development Committee assists the establishment of new gardens, rehabilitation of old gardens and improvement of existing ones through loans and other forms of assistance. Under the second Five-year Plan, which terminates in 1965, it is planned to increase the area under tea to 100,000 acres from the present 79,000. The annual increase in new gardens is estimated at 11,000 acres and a similar area will be added to existing estates under a Government scheme which requires all estates to expand their acreages by three per cent annually. In order to counteract the effects of droughts which in the past have seriously affected Pakistan's tea output, the irrigation of tea gardens is being considered.

THE PUNJAB NATIONAL BANK LIMITED

REGISTERED OFFICE: **PARLIAMENT STREET, NEW DELHI**

DIRECTORS' 116th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1962

The Board of Directors of the Bank has pleasure in submitting the audited Balance Sheet as at 31st December, 1962 and the Profit and Loss Account for the year ended that date. The Auditors' Report is also annexed.

The transactions for the year after providing for tax, contributing Rs. 15,63,930 to the Employees' Gratuity Fund Trust and Rs. 1,43,219 to Super-annuation scheme have resulted in a profit (including Rs. 10,37,738 brought forward from the previous year) of Rs. 1,24,20,907.

This sum, the Directors have disposed of as follows :—

	Rs.
Ad-interim dividend paid for the year at Re. 1 per share	20,00,000
Transferred to Reserve Fund	25,00,000
Provision for Bonus to Staff	40,00,000
Provision for Charity and Donations	4,00,000
	89,00,000
This leaves for appropriation	35,20,907
The Directors recommend payment of final dividend at Re. 1 per share making 20 per cent for the year subject to deduction of tax	20,00,000
Balance to be carried forward to next year's account	15,20,907

The working of the Bank continues to be satisfactory.

The Bank rate remained stationary at 4 per cent during the year, but it was raised to 4½ per cent from 2nd January, 1963.

A sum of Rs. 4,00,000 was contributed to National Defence Fund.

Shri Shital Prasad Jain and Shri Ashok Kumar Jain resigned from the Board on 1st March, 1963. Vacancies caused by their resignation and by the sad death of Sardar Bahadur Mohan Singh were filled by the Board of Directors by appointing Shri T. S. Srinivasan, Shri S. K. Handoo and His Highness Maharajadhiraj Yadavindra Singh as Directors under the provisions of Section 262 of the Companies Act, 1956 and of Article 70 of the Bank's Articles of Association.

Under the provisions of Section 256 of the Companies Act, 1956 and of Article 65 of the Bank's Articles of Association, Shri Kamalnayan Bajaj, Shri D. D. Puri and His Highness Maharajadhiraj Yadavindra Singh will retire by rotation. They are eligible and offer themselves for re-appointment.

Under the provisions of Section 260 of the Act and of Article 55(b) of the Bank's Articles of Association, the Board of Directors appointed Shrimati Raksha Saran as an additional Director. She will hold office only up to the date of the next Annual General Meeting of the Bank. She is eligible and offers herself for appointment as a Director.

Shareholders are requested to appoint Auditors for the current year and fix their remuneration.

By Order of the Board of Directors,

R. N. GOENKA,
Chairman

27th March, 1963.

BALANCE SHEET AS AT 31st DECEMBER, 1962

AUDITORS' REPORT TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, NEW DELHI.

We have audited the annexed Balance Sheet of The Punjab National Bank Limited as at 31st December, 1962 and also the annexed Profit and Loss Account for the year ended on that date with the books and accounts kept at the Head Office in New Delhi, in which are incorporated the audited returns from 243 branches (of which 14 have been audited by us and 229 by other auditors), and the unaudited returns from 184 branches which we have not visited. These branches are given in Annexure 'A') from the provisions of Sub-sections (1) and (3) of Section 228 of the Companies Act, 1956, in respect of the year ended 31st December, 1962.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are, therefore, drawn up in conformity with Forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory ;
(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank ;
(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank not visited by us ;
(d) the reports on the accounts of Branches audited by other auditors have been forwarded to us and the same have been considered in preparing this report ;
(e) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;
(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

NEW DELHI, 27*th March*, 1963.

This announcement is not a Prospectus and persons interested are requested to apply for a copy of the Prospectus for full details, copies whereof are available from the Bankers, Managing Brokers and Brokers.

The Subscription List will open at the commencement of Banking hours on the 27th day of May 1963, and will close at the discretion of the Directors but not earlier than the close of Banking hours on the 29th day of May 1963.

BOROSIL GLASS WORKS LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, I OF 1956 ON THE 14TH DAY OF DECEMBER 1962 AS A PUBLIC COMPANY, LIMITED BY SHARES)

REGISTERED OFFICE:

CHOTANI ESTATES, PROCTOR ROAD, GRANT ROAD, BOMBAY No. 7

SHARE CAPITAL

	Rs.
(1) AUTHORISED	
20,00,000 Equity Shares of Rs. 10 each	2,00,00,000
(2) ISSUED	
15,00,000 Equity Shares of Rs. 10 each	1,50,00,000
OUT OF THE ABOVE	
(a) 90 Equity Shares of Rs. 10 each (fully paid) have been allotted for cash to the Subscribers to the Memorandum and Articles of Association of the Company	900
(b) 1,50,000 Equity Shares of Rs. 10 each have been issued (credited as fully paid up) shares to Corning Glass Works, Corning, U.S.A., the technical collaborators of the Company, for the supply of technical know-how, continuing technical assistance, etc., in terms of an Agreement dated the 7th day of May 1963 made between Corning Glass Works and the Company and hereinafter referred to as "the Technical Collaboration Agreement"	15,00,000
(c) Corning Glass Works have agreed to subscribe for and will be allotted 5,85,000 equity shares of Rs. 10 each (to be credited as fully paid-up) in consideration of supply of machinery and equipment to be imported and which are listed in the Technical Collaboration Agreement	58,50,000
(d) 1,43,600 Equity Shares of Rs. 10 each (to be credited as fully paid up) have been agreed to be allotted to the existing shareholders of the Industrial and Engineering Apparatus Company Private Ltd. in part consideration of the acquisition of the assets and undertaking of Industrial and Engineering Apparatus Company Private Ltd. (hereinafter for brevity's sake referred to as I.E.A.) in terms of the Scheme of Amalgamation between I.E.A. and the Company	14,36,000
(e) 8,900 Equity Shares of Rs. 10 each (to be credited as fully paid up) have been reserved for allotment to the existing shareholders of I.E.A. representing the maximum possible number of shares to be allotted for the balance of consideration of Rs. 89,000 for the acquisition of the assets and undertakings of I.E.A. in terms of conditions imposed by the Controller of Capital Issues	89,000
(f) 2,29,910 Equity Shares of Rs. 10 each (fully paid-up) have been allotted and agreed to be allotted for cash to Directors and Friends and Associates of the Directors and promoters	22,99,100
NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION	
3,82,500 Equity Shares of Rs. 10 each	38,25,000
	Rs. 1,50,00,000

TERMS OF PAYMENT

Payable as follows:

(a) Rs. 2.50 per share on application.
(b) Rs. 7.50 per share on allotment.

APPLICATION FOR SHARES

Application forms along with the copies of the Prospectus can be had from the Bankers, Managing Brokers and Brokers.

DIRECTORS

Name and Address	*Nationality*	*Description and Occupation*
(1) **Mr. ROBERT D. MURPHY,** President. Corning Glass International, 717, Fifth Avenue, New York 22, N.Y., U.S.A. (*Chairman*).	American	Business. *Director:* 1. Corning Glass Works. 2. Morgan Guaranty Trust Co. of New York. 3. Morgan Guaranty International Banking Corporation.
Alternate Director to MR. ROBERT D. MURPHY: **Mr. GORDON W. FRANKS,** C/o Messrs. Ingersoll-Rand (India) Pvt. Ltd., 17-B, Horniman Circle, Bombay 1. Business. Managing Director, Ingersoll-Rand (India) Pvt. Ltd.	American	4. Morgan Guaranty International Finance Corporation. 5. The Gillette Co. 6. The Japan Fund Inc.
(2) **Mr. NARAYAN DANDEKAR,** I.C.S. (Retd.), Express Building, Churchgate, Bombay 1.	Indian	Chartered Accountant. *Director:* 1. Uttar Pradesh Pulp and Paper Mills Ltd. 2. EXISTING AND PROPOSED ACTIVITIES

The Principal object of the Company is to manufacture Scientific and Laboratory Glassware of the Borosilicate type. Industrial and Engineering and Apparatus Company Private Limited (which is proposed to be merged with the Company) presently manufactures products, such as, scientific and laboratory glassware, neutral vials, Amber and White—petromax lamp chimneys, transfusion bottles, blood and saline bottles, graduated ware, lampware, etc., and has an annual turnover of over Rs. 33.00.000. These products are marketed by I.E.A. under the trade mark "BOROSIL" which is widely known in India. It is proposed to merge I.E.A. with the Company and for that purpose a scheme of amalgamation has been prepared which is subject to the approval of the Court. The Company has entered into a financial and technical collaboration agreement with Corning Glass Works, Corning, U.S.A., who are known the world over as the leading manufacturers of laboratory glassware, industrial glasses, television tubes, optical and ophthalmic glass, glass pipes radiation shielding windows, industrial radiant heaters. Corning will supply to the Company Technical Know-how and plant and machinery required for the project. The Company will undertake manufacture of the range of scientific and laboratory glassware of the Borosilicate type presently being manufactured by I.E.A. but the production by the Company will be by fully mechanised automatic machines. In addition, the Company will undertake manufacture of the range of scientific and laboratory glassware manufactured by Corning. Corning has agreed to grant to the Company licence to use its patents in India, and the right to use the trade mark "CORNING" as a Registered User. The maximum capacity of the Company's plant will be 7,200 tons per annum. It is expected that the Company's plant will reach its maximum capacity of 7.200 tons per annum by the end of 1964. The Planning Commission has estimated the requirement of scientific and laboratory glassware at 21.500 tons per annum during the Third Plan period. The existing plant of I.E.A. is situate at Andheri, while the new plant to be set up will be situate at Marol which is within about a mile of the existing plant.

One special advantage that will accrue to the Company under the Scheme of Amalgamation with the I.E.A., will be that the Company will be beneficiary of the profits that will arise from the business of the I.E.A. as from 1.1.1963. The sales and profit earning capacity of the present plant of the I.E.A. may be had from the following figures:—

Industrial and Engineering Apparatus Company Pvt. Ltd.

	1958	1959	1960	1961	1962
	Rs.	Rs.	Rs.	Rs.	Rs.
Paid-up Capital	98,000	98,000	1,10,500	2,95,000	2,95,000
Sales (Net)	15,50,919	19,70,637	22,85,284	29,20,639	34,30,985
Profit before Depreciation, provision for Taxation, Dividends and Transfers to Reserves	2,76,873	3,67,962	4,93,553	7,50,847	9,24,984

PROFITABILITY

The Directors of the Company are of the opinion that in the absence of any unforeseen circumstances, the Company should be in a position to pay reasonable dividend on the issued Equity Shares of the Company.

APPLICATION FOR SHARES MUST BE IN THE PRESCRIBED FORM AND MUST BE FOR A MINIMUM OF FIFTY SHARES OR MULTIPLE THEREOF.

The application must be forwarded with the full amount payable on application before the date of closing of Subscription List to any of the following Banks:—

United Western Bank Ltd.
(a) Laxmi Building, Sir P.M. Road, BOMBAY-1.
(b) Budhawar Peth, Poona City, POONA.

(g) Kempegowda Road, BANGALORE-9.

An application has been made to the Bombay Stock Exchange to grant official quotation for shares of the Company and permission to deal in them on the Company complying with the usual and necessary formalities after the close of the subscription list.

ITALY'S E.N.I. MODIFYING ITS POLICIES

AGREEMENT WITH JERSEY STANDARD

TODAY, ten years after the formation of *Ente Nazionale Idrocarburi*, the recent crude purchasing agreement with Jersey Standard seems to indicate that the Italian state oil concern may conceivably modify, if not abandon, its characteristic commercial policies. Hitherto, E.N.I. has been largely motivated in its actions by an almost neurotic distrust of the major international oil companies, and in the last few years the group has increasingly relied on oil deliveries from the U.S.S.R. Now, however, apart from the Jersey deal, it may be expected that the next Italian Government, to be formed after last month's parliamentary election, will shortly review the whole policy of the group, in connection with the forthcoming appointment of a new President. After Signor Mattei's tragic death last autumn, Professor Boldrini was made President for an interim period of six months only and, at his advanced age, it is not expected that he will wish to stay in office for very much longer.

Understandably perhaps, the two partners of the new agreement are somewhat reticent about its content. It seems certain, however, that Jersey Standard has agreed to supply E.N.I., over a period of five years, with around 12 million metric tons of crude from its many and diverse sources in the Middle East, North Africa and the Western Hemisphere. Presumably, the quantities to be delivered will be relatively small this year and perhaps next, but will rise correspondingly higher towards the end of the five-year period. The terms are believed to be favourable to E.N.I. There are unconfirmed reports that the crude will be sold at discounts as high as 20 per cent off the posted prices, and that payment will be made, in part at least, through the delivery of equipment.

The two groups differ significantly in their pronouncements on the implications of the deal. Jersey regards it as a first step towards new commercial relations with the Italian concern, and evidently hopes that E.N.I. will, as a result, be less dependent on the Soviet Bloc. E.N.I., on the other hand, stresses the point that the deal is a normal commercial transaction, which will not prevent them from seeking larger supplies from the U.S.S.R. or any other convenient source, so as to cover their rising requirements.

Striking Features

The agreement is certainly by no means the first link between E.N.I. and the majors but most of the earlier links were forged many years ago and, if anything, have lately tended to be weakened. Thus, E.N.I. and Jersey have long been joint owners and operators, through STANIC, of two large Italian refineries, at Leghorn and Bari, and there was previously an arrangement under which Jersey supplied STANIC with crude. In 1960, however, a new arrangement was made under which each partner supplied its own crude for its half-share. Later, E.N.I. inaugurated legal proceedings for the liquidation of STANIC, though these were dropped a few months ago by mutual consent, and in general, Jersey Standard as the largest of the "seven sisters" has often been singled out by E.N.I. for its most violent attacks. Against this background, the new comprehensive agreement seems to indicate, at the very least, a marked improvement in the general atmosphere.

Interestingly enough, the deal with Jersey Standard follows in some particulars the pattern set by the agreement that E.N.I. made some 2½ years ago with the Russians, and which has since been the main basis of E.N.I.'s purchases from that source. The latter agreement provides for Russian deliveries of 12 million tons of crude over the five-year period 1961-65, at comparatively low prices, and in exchange for steel tubing and synthetic rubber. Incidentally, the current trade agreement between the Italian state and the U.S.S.R. also covers the years 1961-65 but this state agreement is merely the framework for commercial deals on oil and on other commodities, while E.N.I's agreement with the U.S.S.R., like its new agreement with Jersey Standard, consists of a series of firm contracts

A proportion of E.N.I's rising crude oil requirements will be matched by increases in E.N.I.-controlled crude oil production, and to this extent increases in future purchases from non-associated sources will be reduced. Production from the Gela field in Sicily presents considerable technical difficulties but will nevertheless be pushed up after the completion of the near-by refinery and chemical complex. In Egypt, COPE (owned jointly by E.N.I. and the Egyptian Government) expects to reach a production of 5 million tons next year—nearly 2 million tons more than in 1962. And in Iran, work is now in hand on the construction of gathering and loading facilities at the offshore field of SIRIP (another E.N.I. subsidiary) whose potential productive capacity is estimated at 2 million tons annually. Even so, E.N.I. is presumably still looking round for more supplies of crude from non-associated sources, and the possibility cannot be excluded that they will wish to negotiate a new supply agreement with the Russians, covering the period from 1966 onwards. In any such negotiations, their new agreement with Jersey Standard would strengthen their bargaining position.

E.N.I's crude oil supply, incidentally, is not only inadequate in quantity but the Sicilian and Egyptian crudes are notoriously of poor quality, because of their low gravity and high content of sulphur. However, the new agreement with Jersey Standard ensures supplementary supplies of a variety of quite different grades, and it is understood that flexibility in the choice of crudes and dependability of supply sources have been important considerations in the negotiations leading to this agreement. It is doubtful whether the Russians are in a position to offer E.N.I. a similarly wide choice of grades.

E.N.I.: New Refineries Under Construction
(All for completion during 1963-64)

	Crude capacity in Th. M. tons p.a.
San Nazzaro dei Burgondi, Po Valley	4,000
Gela, Sicily	3,000
Ingolstadt, Southern Germany(a)	2,000
Bizerta, Tunisia(b)	1,250
Tema, Ghana	1,250
	11,500

(a) To be owned jointly with a group of German banks.
(b) To be owned jointly with the Tunisian Government.

The basic fact underlying the deals both with the Russians and with Jersey is that E.N.I. has large oil refining and marketing interests but lacks adequate resources of crude. Last year, the group refined 6,750,000 metric tons of crude in Italy, and in the course of the year, operations also started at the 1,250,000 tons plant at Mohammedia in Morocco—the first of the overseas E.N.I.-controlled refineries. Over the same twelve months, E.N.I. produced 513,000 tons of crude in Italy, most of it from Gela, and some 2.3 million tons produced by COPE in Egypt were shipped to Italy. To cover the balance of its crude requirements, E.N.I. purchased last year well over 4 million tons of crude from non-associated sources, and this included some 3 million tons from the U.S.S.R.

As is shown in the accompanying table, E.N.I. is currently building as many as five new refineries which will all go on stream in the course of this year or next. Two of them, with a combined capacity of 7 million tons, will be in Italy, and three will be in other countries, with a capacity of 4½ million tons. Also, the capacity of the Marghera refinery, owned jointly by B.P. and E.N.I. will shortly be raised from 2.6 to 4.3 million tons, and E.N.I. will probably supply some crude to Italo-Suisse, for use in the refinery now nearing completion at Aigle in Switzerland. If all the new refining capacity were taken into full use. E.N.I's requirements would soon rise to around 20 million tons annually but the group's actual future demand—though much higher than last year—will no doubt remain well below that figure for some time to come. On the other hand, E.N.I. has plans, some so far of a tentative character, for further refineries in Southern Germany, in Northern Europe, in Tanganyika and in the Congo.

The co-operation now envisaged between E.N.I. and one of the majors is thus dictated by considerations of logic. E.N.I. requires crude—the majors have abundant reserves. In the short run, E.N.I. may have found Russian crude a useful expedient but these supplies are basically insecure, and the Italian Government cannot be entirely impervious to the critical attitude of their partners in Nato and the E.E.C. It may be hoped—though there can as yet be no certainty—that the Italians will in due course accept the whole logic of this situation and accordingly re-arrange their policy of trading.—*By Special Arrangement with Petroleum Press Service.*

SUN-VILLE COLD STORAGES

Mechanical refrigeration, which is the best known means of preservation of fresh fruits and perishable products, is still in its infancy in India. For a developing economy like ours the cold storage facilities are far too inadequate. The inauguration, over the week-end at Bombay, of the *Sun-Ville Cold Storages*, built by the reputed firm of Ahmed A. Fazelbhoy (Private) Ltd., and declared open by Mr. S. K. Patil, Union Minister for Food and Agriculture, goes some way towards meeting a felt need. *Sun-Ville Cold Storages* are well engineered and planned to preserve at different temperatures a variety of fruits and produce of seasonal surpluses, such as apples, strawberries and green peas.

The important features of the storages may be noted here. There are four cold rooms, each having a range of different low temperatures to suit the requirements of the product. The range of temperatures of the rooms varies from 0°F. to 45° F. These rooms are of different dimensions and cubic area. In these rooms can be kept for a long time, without spoilage, frozen foods, packaged shrimps, strawberries, butter, cheese and tinned milk and meat or poultry, as also ice cream. To meet the increasing demand, the building of one more spacious storage room will be undertaken during this year. The total capacity of *Sun-Ville Cold Storages* will be 100,000 cubic feet to serve the city for the preservation of valuable produce and merchandise. Another important feature is the water cooling tower. Water comes down in mist and spray from the 160 overhead sprinklers systematically arranged in rows. This is an atmospheric type tower, economical to maintain, and it will cool water for the compressor located 80 ft. below. Water will gush out as hot springs to return as cold water for the machinery, cooled by the breezes which blow across from the Arabian Sea.

The production of iron ore during 1962 was 13.18 million metric tons. This was higher by about seven per cent, as compared with the output of 12.27 million metric tons in the previous year. Orissa continued to be the leading producer of iron ore followed by Bihar; the output from these States was 5,400,000 metric tons or 40 per cent and 3,002,000 metric tons or 23 per cent, respectively, of the all-India output.

The railments of iron ore for internal consumption totalled 10.02 million metric tons, as against 8.31 million metric tons during the preceding year. The quantity railed to the export market was 2.75 million metric tons, as against 2.22 million metric tons in 1961.

NEW PRODUCTS AND PROCESSES

Pneumatic Tank Trucks

A RAPIDLY growing phase of the transportation industry is the movement of bulk goods in tank trucks which use compressed air to discharge the cargo at delivery points. As in most phases of transportation, aluminium is well suited to this type of vehicle, providing more payload with less dead weight and a bonus of low maintenance costs, pleasing appearance and cleanliness. The pressure-unloading aluminium trailers are being used for the transport of solid granular materials including grain, fly ash, cement and pelletized chemicals such as aluminium sulphate and lime. They are used also for the transport of foodstuffs such as flour, salt and sugar and also can be adapted to carry liquids. The metal's resistance to corrosion results in low maintenance costs. In the food and chemical transport industries, this characteristic is additionally important when materials must be delivered free of impurities. The sealed aluminium tanks protect the cargo from extraneous materials during transit and unloading, saving losses from spoilage. Delivery from this type of vehicle is effected by unloading under air pressure. The use of compressed air gives bulk materials the free-flow properties of a liquid, allowing savings in time and money because it is faster, easier, more sanitary and less expensive to handle a liquid than a solid.

Electrolytic Marking of Metals

Electrolytic marking—speedy, economical, and giving fine detail without damaging the underlying metal—is being increasingly used as a convenient and permanent way of identifying components and applying trade marks and other symbols to metal surfaces. A Brentford firm, Electromark (G.B.) Ltd., has now introduced a compact and self-contained model, the Type B. T. 400, which for the first time allows the mark to be taken to the job rather than the other way round. The new instrument is intended for use by roving inspectors, those concerned with overhaul operations in the field, or anyone who wishes to identify or certify a component on the spot. This transistorised unit is supplied complete with batteries and all accessories in a camera-sized case weighing less than 4 lb. (1.81 kg.). Two bell-type dry cells or a re-chargeable accumulator provide direct current, while a transistorised oscillator supplies a low-voltage A.C. output. The output is fed through a flexible cable to an earthing clip and to a small hand marker which incorporates an absorbent pad containing electrolyte. The mark is made by applying the marker to a special stencil laid on the work, which confines the electrolytic action to the desired pattern. Stencils can be prepared simply by typing or by writing with a ball-point pen.

Quicker Office Printing Machine

Adrema Ltd., a leading British company making power-operated office printing machines for a wide field of operations, has introduced improvements in the speed and quietness of operation of their plate embossing machine. In the new machine the embossing dies are located in a drum which, instead of revolving in one direction through a full 360°, can rotate in either direction—ensuring maximum speed as the selected characters are electronically guided to the embossing position by the shortest route. The plateholder is mounted on a carriage which moves automatically with each embossing action. The selected characters are brought to the correct position and embossed automatically by the slight depression of a key on the electric keyboard. The introduction of servo-brake mechanism and insulated shrouding has eliminated much of the noise associated with such machines. The conventional typewriter keyboard is used and the machine has provision for amendments to be made immediately an incorrect key is pressed. Subsequent alterations to embossed data can be made several times without adverse effect on the quality of the print obtained.

Fire Extinguisher

A simply operated and easily maintained fire extinguisher, designed for fighting fires involving highly combustible material, has been introduced by a British firm, George Angus and Company Ltd. It consists of a metal container, in which water is stored under constant pressurised conditions ready for instant discharge. The interior of the container is protected against corrosion by a lining of a tough plastic substance. The main container is constructed from welded steel, tested to a pressure of 350 p.s.i. (24.6 kg./cm²). Located on the head cap is the actuating mechanism incorporating a stainless steel valve and a high-grade synthetic rubber valve seat. A pressure gauge, bearing a coloured cone which indicates at a glance when re-charging is necessary and a safety blow-off valve, designed to come into operation if the inner pressure becomes excessive, are also incorporated in the head cap. Re-charging of the extinguisher is said to be quick and easy. Overfilling with water is prevented by a special device within the container.

Gloss Printing Inks

A new range of gloss printing inks has recently been produced by a British firm, G. C. Cook and Co. (Printing Inks) Ltd., to meet the need of the lithographic process, and they are said to set more quickly than many other types without any retention of stickiness. Gloss inks have been used extensively for letterpress work, but the demand of late has been for the same result to be produced lithographically. This necessitated the making of new resins and creating new varnishes, with the idea of reducing varnishing and lamination as far as possible. The result obtained is very bright, clean and colourful, which only gloss inks can give. Sheets can be printed in any colour sequence, and the trapping or printing of the colours are of a high quality. These inks set to become non-scratch, which is important as it eliminates all marking in ultimate handling. The firm states that they have good colour strength with gloss, whereas the general run of offset gloss inks are comparatively weak. The firm believes that this range of ink is of a quality which will interest lithographic printers in all spheres.

Reciprocating Compressors

Notable feature of a range of air-cooled reciprocating compressors manufactured by FMA, a subsidiary of Demag, AG, Germany, and sister company of the Mining and Compressor Engineering Company, Limited of the U.K., is that they are fitted with a three-point, anti-vibration mounting, giving absolute stability when running. This enables them to be installed without any foundations. The compressors are available in 13 different sizes, covering capacities from 20 to 310 Scfm, and capable of operating up to a maximum pressure of 142 lb./sq. in. They can be supplied with either electric motor or air-cooled, diesel-engine drive. A further design is available, mounted on a tubular-frame air receiver, which is ready for service immediately it arrives on site. Besides the usual accessories, such as air filters, pneumatic unloaders, and pressure gauges, an armoured flexible hose can be supplied, for fitting the compressor to the workshop air main.

New High-pressure Gun for Spray Painting

A new high pressure equipment for spray painting of large areas of steel, wood, masonry, etc., has been developed by Atlas Copco of Sweden. One of the basic advantages of the new high pressure gun compared with the ordinary type is that a more viscous, time and labour saving paint can be used. Under the high pressure and increased nozzle-velocity the paint explodes and breaks up into millions of small particles. The spray fog appearing when using ordinary spray guns is eliminated with this type of equipment which also means less waste of paint. The Ecco 190 gun belonging to this equipment is made of diecast light metal weighing only 400 grammes. It is fed by a 3-inch double-acting air-driven paint pump with a pressure ratio of 28:1. The container on top of which the pump is placed has a capacity of 20 litres. About 100 different hard-metal nozzles can be used with the gun.

Portable Gauge

An improved portable level gauge for determining fluid levels in sealed pipes and cylinders has been developed by a British firm, Panax Equipment Ltd., Surrey. The equipment uses a radioisotope of such low activity that no film badge is needed. The working principle of the instrument is that radiation emerging in a sharply-defined beam from the source can pass through the container walls and the intervening air to reach the detector on the opposite side, but is stopped or heavily reduced by fluids between detector and source. The indicator shows whether the radiation is arriving or not. It has proved particularly suitable for assessing the contents of liquid carbon dioxide fire extinguishers. In fact any liquid or gas that liquefies under pressure can be measured in this way.

Producing Magnesium at Low Cost

Gustaf Newton Keisebom, 33 Dukvagen, Bromma, Stockholm, Sweden, claims to have developed a continuous cyclic process for the production of magnesium with calcium carbide as a valuable by-product. First, dolomite is melted with finely ground aluminium and the magnesium metal formed distilled off. Calcium carbide slag formed at the same time is reduced during a second stage by carbon in the presence of copper and the calcium carbide tapped off. An important advantage of the process is that cheap aluminium slags can be used instead of the expensive aluminium used in conventional methods.

Detecting Leaks in Gas Mains

Leaks in gas mains can be discovered quickly with a machine invented for the Detecto Corporation of Clarion, Iowa, U.S.A. It consists of a motorised car which follows the line of an underground main thrusting a hollow probe into the earth at intervals. Air in the earth is pumped into an explosion chamber containing a pilot flame. If gas has leaked into the earth, it is pumped up with the air and makes an explosive "pop" in the chamber to warn of the leak.

Non-shrink Wool

Non-shrink treatment plant for wool originally developed in the laboratories of the Wool Industries Research Association is now being manufactured by the Goodenough Engineering Group, 112 Jermyn Street, London S.W.1. Based on the use of dry chlorine gas, the plant is considered to give better results than conventional equipment using wet chlorination processes. Advantages of the dry system include restricting the reaction to the surface of the wool fibres. This means that their strength and other properties are not affected. Furthermore, treatment is light and even so that a high degree of felting resistance is imparted with a minimum of time and chlorine consumption. There is no loss of weight in wool substance during treatment which may be given to wool in any form from loose scoured wool to finished garments.

Jeep vehicles are doing the Nation's work

The versatile Jeep Universal is the only vehicle that can be used in community projects for which men and material have to be transported to the interior parts of the country through mud, sand, swamp or rocky terrain where only pathways exist. Sun or rain, road or no road there is no delay when a Jeep 4-wheel drive is on the job. On normal roads it shifts easily to 2-wheel drive.

Jeep Universal—the world's biggest little vehicle

This is the sign of your Jeep Dealer who is specially trained to solve your transport and maintenance problems. He is equipped to supply you with factory-approved genuine spare parts throughout the life of your Jeep.

INDIAN SUGAR MILLS' ASSOCIATION

MR. M. N. PITTIE URGES INCENTIVES FOR HIGHER OUTPUT

SUGAR INDUSTRY MUST EARN REASONABLE PROFIT

THE need for necessary incentives to maximise sugar production was underlined by Mr. M. N. Pittie, President of the Indian Sugar Mills' Association, in his speech at the Thirtieth Annual General Meeting of the Association held at New Delhi on Wednesday, 15th May 1963. Mr. Pittie suggested the revival of the incentive scheme prevalent in 1959-60 and 1960-61 with certain modifications that might be necessary, in view of the changed circumstances. Coupled with this scheme, steps should be taken, he added, to ensure that the sugarcane produced within the sugar factory areas was crushed by the factories and not allowed to be converted into *gur* and *khandsari*. The sugar industry, he pointed out, was making extremely meagre profits and, if it had to meet its requirements for rehabilitation, modernisation, expansion, etc., which in the ultimate analysis would benefit the consumer, profits had to be raised to reasonable levels. In his opinion, an important remedy that could go a long way towards curing many ills of the sugar industry was the increase in the volume of production per factory. Such an increase, he said, would reduce the cost of production and lend economic stability to the existing units.

The following are extracts from Mr. Pittie's speech:

Events on the sugar front have moved rather briskly. Last year, when we met, the industry was grappling with the problem of surplus. Today we are faced with the problem of inadequate supplies. The principal reason leading to this situation has been an unprecedented rise in offtake, on the one hand, and a precipitous fall in production, on the other. The annual offtake for internal consumption had stagnated around 20.50 lakh tons for four consecutive years prior to decontrol in 1961. The outlook for exports then was equally bleak—the International Sugar Agreement was in operation and the prospects of any increase in our export quota of 50,000 tons were extremely poor. Therefore, while sugar output in 1960-61 reached the peak level of 29.8 lakh tons, there was no outlet for the surplus production and stocks were piling up. Sugar was decontrolled in September 1961 and the offtake for internal consumption rose to about 25 lakh tons. In the meantime, the International Sugar Agreement also broke down and restrictions on exports ceased. The nett effect was the increase in total offtake from 21-22 lakh tons to about 31 lakh tons.

In the background of this increased offtake, the industry was looking forward to higher production, but, to our disappointment, production has registered a precipitous fall and is now estimated to be around 21.50 lakh tons. Unfavourable weather conditions, and the resulting poor cane crop brought in its wake increased diversion of the limited cane supplies to *gur* and *khandsari*. But such fluctuations are inherent in an agro-based industry. The decline in production is, therefore, a natural phenomenon and we should take it in that spirit rather than be weighed down by the occurrence.

Voluntary Regulation

With the fall in production and the apprehension that prices might rise, the industry, conscious of its responsibilities, initiated voluntary measures such as fair-price shops in various zones such as Bengal, Bihar, U.P., Punjab, South and the Deccan. Fair-price shops had already started functioning in New Delhi. We were eagerly awaiting release of a quota, so that the entire scheme could be put into full operation, but, meanwhile, statutory controls were imposed by the Government on 17th April 1963. I wish the Government had given at least a month's trial to the voluntary control scheme of the industry. Had the opportunity been given, it might well have been that the necessity of statutory controls and all the repurcussions thereof could have been avoided.

Control Inhibit Production and Consumption

The history of sugar vis-a-vis controls is indeed enlightening. The history of sugar is one of control, decontrol, recontrol, partial control and control again. Controls as a rule have stifled consumption and reduced production. Production of *gur* and *khandsari* which remain uncontrolled is promoted at the cost of sugar. The consumer too usually is not able to get his full requirements at the prices envisaged. In sharp contrast to this, the policy of decontrol and incentives whenever followed has stimulated both production and consumption. Therefore, the ultimate answer is increased production and not controls.

Control Price

The level at which control prices have been fixed this year has caused great hardships particularly to a large section of the industry in the North where even a fair price has been denied to the units situated in East U.P., Bihar and Punjab. It is an accepted and time-honoured principle of price fixation that the prices fixed should be such as to take into account the cost and provide for a reasonable profit margin.

Much of the hardships could have been avoided had separate prices been fixed for East U.P., South Bihar, North Bihar, Punjab and Meerut Division. One finds it difficult to understand when separate prices have been fixed for smaller number of factories in regions like Rajasthan, West Bengal and Assam where the number of factories is hardly one, two or three, why such large sections of the industry in sub-regions of the North have been denied separate prices. It is, indeed, paradoxical that the lowest prices have been fixed for these regions having the highest costs of production. Unless the prices are revised, factories would be adversely affected. Equity demands that they should be at least given fair prices so as to ensure that they meet their cost of production and are left with reasonable profit margins. Such a step would inspire confidence in the large section of the industry and enthuse them to plan for higher production next year.

1963-64 Sugar Production

All-out efforts should be made to increase sugar output to at least 33 lakh tons in 1963-64 which is the absolute minimum we need to produce in order to meet the requirements of internal consumption and exports. I am convinced that the production target can be achieved provided cane price is suitably increased within the framework of the recovery linking formula. The industry should also be given incentives to start early and maximise production. Coupled with these measures, steps should be taken to ensure that the sugarcane produced within the sugar factory areas is crushed by the factories alone. Bonding of cane should be strictly enforced and those failing to fulfil commitments should be penalised.

Low Profitability

Profits are the very life blood of any industry and their importance in the sugar industry cannot be overlooked in the context of the need to step up sugar production. Unfortunately, the level of profits presently obtained in the sugar industry are far from satisfactory. Studies made by the Wage Board regarding profits during 1958 (when controls were imposed in the North), the analysis of 1961-62 financial results carried out by the Association, the decision of the Tripartite Committee in U.P. and the latest Reserve Bank study published in its *Bulletin* of June 1962 all very clearly point out that the sugar industry is making extremely meagre profits and, if it has to meet its requirements for rehabilitation, modernisation, expansion, etc., which in the ultimate analysis would benefit the consumer, profits have to be raised to reasonable levels.

Price Policy

Although it has been the declared policy of the Government to maintain fair prices in the interest of the growers, the industry and the consumers, in actual practice, the industry is not able to realise a fair price. When there is overproduction, the prices decline and the industry does not realise the "fair" price. Again, in years of shortage, if the prices tend to rise slightly, say by 5 per cent or so, over the fair price, controls are clamped and prices fixed at levels, which in several cases are not commensurate with fair price level.

The three principal elements that constitute the price of sugar are: the cost of cane, State and Central taxes and the manufacturing charges. Usually cane costs account for 45 per cent, taxes 35 per cent and manufacturing charges 20 per cent, of the ex-factory price of sugar. It would thus be seen that over 80 per cent of the price, the industry has no control. Of the balance 20 per cent, costs towards manufacturing, such as salaries, wages, repairs, renewals, interest, stores, etc., account for 18 per cent leaving about 2 per cent as gross profit which is further taxed, leaving less than 1 per cent as net profit to the industry.

Since the last Tariff Commission enquiry of 1957-58, costs have gone up. The emergency risk insurance alone would entail an additional burden of Rs. 1.75 crore and the incidence of the Wage Board Award would be around Rs. 4.5 crores. Further, costs of materials such as coal, firewood, lime, filter cloth and chemicals have gone up by 17 per cent, 47 per cent, 30 per cent, 13 per cent, and 17 per cent, respectively. Interest rates and railway freight have gone up by 25 per cent and 10 per cent, respectively. Moreover, due to the steep decline in production, the incidence of overheads is bound to rise. No doubt the manufacturing expenses have increased, but the rise in these is relatively much less compared to the increase in cane costs and taxes. Thus, over 1952-53, cane costs have increased by over 25 per cent and taxes by over 155 per cent. Exclusive of excise duty, the rise in sugar price over 1952-53 level is hardly 15 per cent, against an increase of over 26 per cent in the general price level.

Expansion

An important remedy that could go a long way in curing many ills of the sugar industry is the increase in volume of production per factory. This should be achieved in a twofold manner—by expanding the existing factories and ensuring that sufficient cane is made available to them to start early in November and close by the middle of May. Just like the yield of sugarcane per acre, production of sugar per factory continues to remain very low in India compared to other countries. The daily crushing capacity in India is extremely low—about 1,100 tons per day, against over 3,000 tons in most of the other countries. Though during the last decade the installed capacity in India increased by about 100 per cent, the daily crushing capacity of the factories increased hardly by 25 per cent. The number of factories increased from 139 in 1951-52 to 183 in 1962-63. Increased volume of production per factory would reduce the cost of production and lend economic stability to the existing units.

Cane Development

Over 30 years have lapsed since the establishment of the industry, but the yield of sugarcane has remained stagnant around 15 tons per acre and the sugar content has also not shown any significant improvement though several crores of rupees have been collected by way of excise duty, cane cess and co-operative commission, etc. The Punjab Government have recently decided to utilise the entire cane cess collections for cane development. Other States like U.P. and Bihar should emulate this fine example.

The intensive cane development scheme evolved by the High Power Committee appointed in U.P. is a step in the right direction and such schemes should be taken up in other States as well. Steps should be immediately taken to increase the irrigation facilities, especially in the East U.P. and Bihar, where they are almost non-existent. Vigorous efforts should be made not only to breed indigenous varieties, but to give fair and extensive trials to foreign varieties as well. In the matter of research, I am convinced that autonomous research board would greatly improve the working of our research stations and will go a long way in bringing the grower, industry and the research institutions closer. Facilities of rail and road transport around factory areas are extremely poor. These need to be improved considerably and the factory areas should be saturated with a network of good roads.

For achieving success in the work of cane development, it is of paramount importance that the agency responsible for the various schemes should be suitable for the purpose. Small committees at the factory level consisting of the representatives of the growers, Government and the factory should be set up. The entire funds for cane development, which should be at least 50 per cent of the cess collected from the factory, should be placed at their disposal to be used at their discretion.

Land Ceilings

In the context of this compelling need to increase cane productivity, it is really unfortunate that Governments of U.P. and Maharashtra are thinking of taking over farms attached to sugar factories under the Land Ceilings Act. These farms do useful extension service and have promoted an industrial outlook in agriculture. It will, therefore, be a retrograde step to take over these farms.

Recovery Linking

The scheme of payment of cane price based on the recovery was enforced from the current season in replacement of the method of paying for cane on the basis of weight. Though much opposition and apprehension was voiced at the time of the introduction of the scheme in practice, it has worked out very well and has been even welcomed by a large number of growers.

Gur and *Khandsari*

In India 35 per cent of the cane produced is converted into sugar and about 50 per cent finds its way to *gur* and *khandsari*. Conversion of a given quantity of cane into sugar, yields about 50 per cent more sugar than its conversion into *gur* and *khandsari*. Sound economic considerations, therefore, demand that production of *gur* and *khandsari* is not encouraged. Under the present set up, due to the inequitable levy of taxes on factory sugar, a fillip has been provided to the production of *gur* and *khandsari*. If sugar production is to be freed from this problem, the disparity of taxes should be removed.

East U.P. and Bihar

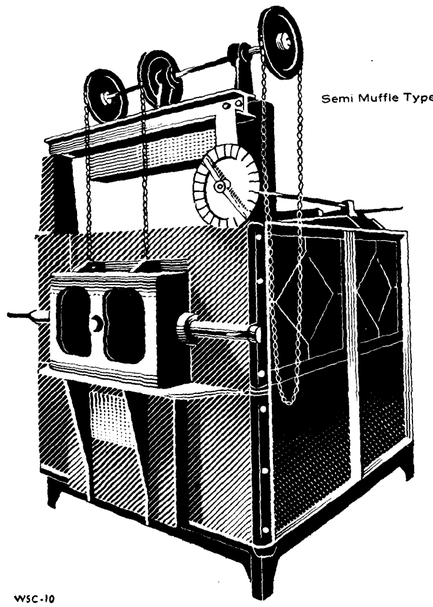
The industry in East U.P. and Bihar, which comprises 61 sugar factories, is the weakest link in the chain of the sugar industry and representing such a big segment, it certainly impairs the health of the industry in general. It is not an impossible task to improve the conditions of these factories, if steps are taken to merge, shift and expand the existing factories, improve road and rail communications and provide irrigation facilities, fertilisers, etc.

Exports

The emergence of India as an exporter of sugar has been a most welcome development during recent years. In 1962, we exported 3.73 lakh tons and, during 1963, our exports are expected to be about 5.00 lakh tons. The foreign exchange earned during 1962 amounted to Rs. 14.82 crores and is expected to be around Rs. 30.00 crores, during 1963.

For the first time in the history of Indian sugar industry, raw sugar was produced to meet export requirements. In all, about 2.50 lakh tons of raw sugar are expected to be produced by 39 factories. Our success in producing raw sugar opens a vast field for export in future.

Indian Sugar is Cheap

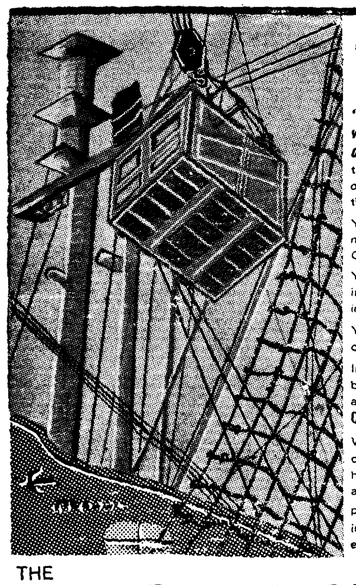


India is one of the world's cheapest sugar producers. The impression that Indian sugar is costly results from the fact that exports of sugar from India have to be normally subsidised, but this is not due to high cost of Indian sugar but due to the extremely low prices which usually prevail in the "free" markets. Comparing the cost of production of various countries, it emerges that India is one of the cheapest sugar producers in the world.

Future Needs

The setback in production this year and the imposition of controls need not cause any apprehension about the long-term prospects of the industry. The industry looks forward to increase in production with the hope that it will bring additional payments to the cane-grower, increased benefits to the worker, larger revenue to the exchequer, greater foreign exchange earnings to the country, plentiful supplies of sugar at reasonable prices to the consumer and an equitable return to the industry.

WELLMAN INCANDESCENT STANDARD OIL FIRED FURNACES



- Made in India by Wellman Incandescent India Ltd
- For forging, reheating & heat treatment
- Available in standard sizes or tailored to customers' specifications
- Accurate temperature control
- Low operation and maintenance cost
- Rapid attainment of working temperature
- Working temperatures ranging from 250°C—1350°C depending on type of furnace

Semi Muffle Type Furnace.

INTERNATIONAL TRADE...

'Export or Perish'—'Import only what and when you must'—'Set right adverse Balance of Payment'—'Conserve foreign exchange' these are the slogans one meets with day in and day out in the press and on the platform. International trade is indeed a complicated matter today.

You may be engaged in import or export of merchandise and may want to open a Letter of Credit or negotiate Bills drawn on a foreign buyer;

You may contemplate the setting up of a new industry or expansion of an existing unit by importing capital equipment from abroad;

You may wish to offer a guarantee to the supplier of foreign machinery for deferred payment.

In fact, whatever be the nature or size of your business in and with foreign countries, you will always find it advantageous to turn to the **CENTRAL** for advice and assistance.

With a wide net-work of Branches throughout the country in the major port-towns as well in the hinterland, with a Branch in LONDON and with agency arrangements with first class Banks in all parts of the world, **THE CENTRAL BANK OF INDIA** is well-equipped to solve all your foreign exchange problems.

THE CENTRAL BANK OF INDIA LTD.

N. K. KARANJIA: Managing Director

Regd. Office: Mahatma Gandhi Road, Bombay-1.

CBI/SA/63

PROGRESS OF THIRD PLAN—II

INDUSTRY—POWER—TRANSPORT

THE index of industrial production (1956=100) registered an increase of about 7.8 per cent in 1961 over the previous year's figures. The increase in 1962 is of about the same order.

While most of the industries recorded a rise in production, the increase was particularly marked in the case of iron and steel, aluminium, engineering industries, mineral oils, cement and chemicals. In the steel industry production is reaching full capacity levels and, with the exception of a few categories, the supply position has generally eased. The increase in the production of steel ingots in the first two years was about two million tons and production in the three public sector projects has been above the rated capacity in March 1963. The production of cement increased nearly by a million tons during the first two years. The production of nitrogenous fertilisers and aluminium doubled during this period. There was a substantial increase in the production of machine tools and industrial machinery. In general, therefore, the achievements in the capital and intermediate goods industries have been considerably larger than would appear from the overall index of industrial production. The position in regard to certain key industries as compared to the five-year target is as follows:—

Industries	Production in 1960-61	Production in 1961-62	Estimated production in 1962-63	Production target in 1965-66
Steel ingots (Mln. tons) ..	3.3	4.27	5.39	9.2
Saleable steel (Mln. tons) ..	2.4	2.9	3.9	6.8
Saleable pig iron (Mln. tons) ..	1.1	0.97	1.06	1.5

* Calendar year.

A significant feature towards the close of the second year of the third Plan has been the considerable improvement in regard to transport, power and coal which impeded industrial production in the early years.

Though the achievements in the first two years have been considerable, the progress in certain crucial sectors has not been up to the required extent in relation to the third Plan targets. The production of pig iron has been inadequate to meet the requirements. The progress of expansion in certain other industries like steel castings and forgings and alloy and tool steels has also not been satisfactory. The progress in installation of additional capacity for fertilisers has been below expectations and it is likely that the third Plan target may not be achieved. The position is kept constantly under review and steps to expedite the implementation of schemes are taken as necessary.

Public Sector Industrial Projects

The most important development in the public sector during the first two years of the third Plan was the completion of the 1-million tonne programmes of the public sector steel plants at Bhilai, Durgapur and Rourkela. In March 1963, the three plants produced more ingot steel than their rated capacity. Substantial progress was made with the implementation of the third Plan expansion programmes of these plants. The tenders for the Alloy & Tools Steel Plant, Durgapur, had been placed. The U.S.A. Techno-Economic Team finalised their report on the feasibility of Bokaro. The Ferro-Silicon Plant at the Mysore Iron & Steel Works was completed in May 1962. The expansion of capacity of Mysore works to 100,000 tonnes of steel ingots was expected to be completed by the end of 1963. Conversion of the Mysore Plant into a special and alloy steel plant was under consideration.

Construction of the Heavy Machine Building complex at Ranchi, including its Foundry Forge unit, made considerable progress. Some initial production was expected in the latter part of 1963-64. The project report for the Heavy Machine Tool unit of the complex had been examined and preparations made for placing orders for equipment. Construction of the Coal Mining Machinery Plant at Durgapur made good progress.

At the Heavy Electricals Project, Bhopal, the programme for setting up capacity for Rs. 25 crores of annual output was expected to be completed by the end of 1963-64. The Supplementary Project Report for expanding the capacity of the plant to Rs. 50 crores of annual output was under examination. This plant started producing saleable output in 1961-62. The project reports for the Heavy Power Equipment Plant at Ramachandrapuram and the High Pressure Boilers Plant, Tiruchi, were received and examined. Preparations for placing orders for equipment were underway. Contract for the preparation of the project report for the Soviet aided Power Equipment Plant near Hardwar was signed and the Report was expected by May 1963.

H.M.T.'s second Machine Tool Plant at Bangalore was completed and went into production. The orders for the imported equipment for the Machine Tool Plant near Chandigarh had been placed and construction had begun. H.M.T.'s proposal for setting up a machine tool plant in Kerala was accepted.

The Nangal Fertiliser Project went into production. Construction work on the Trombay Fertiliser Project was in progress. Orders for imported equipment for the Namrup Fertiliser Project were placed. Negotiations with a Consortium of Japanese firms for the supply of plant and equipment for the Gorakhpur Fertiliser Project reached an advanced stage and a formal contract was expected to be finalised shortly. A proposal for a fertiliser factory in Madhya Pradesh in the public sector had been accepted. Two streams of Rourkela Fertiliser Factory were commissioned in November 1962.

A Techno-Economic Report on the Compressors and Pumps Project had been received from the U.S.S.R. and was under examination. An offer for the preparation of a techno-economic report on manufacture of ball and roller bearings lately received from U.S.S.R. was under consideration.

Project Reports for the four drug projects being set up with Soviet aid were received and examined. Orders for equipment for three of these projects were placed. The Streptomycine plant of the Hindustan Antibiotics went into production in March 1962. Proposal to double the capacity of the plant was approved.

Coal

As compared to a production of 55.51 million tonnes in 1960-61, production in 1961-62 was 55.22 million tonnes, the sector-wise distribution of which is given below:

(In million tonnes)

	1960-61	1961-62
Private sector	44.88	46.34
N.C.D.C.	8.06	6.05
Singareni	2.57	2.83
Total ..	55.51	55.22

Production from the N.C.D.C. collieries was affected by the outbreak of fire in two of their larger collieries, and by curtailment of production. Though output during 1961-62 did not show any increase over that in 1960-61, supplies to consumers during 1961-62 were larger than in the previous year by a little over 3 million tonnes because of the increased rail transport facilities.

The Working Group set up in 1961-62 drew up a year-wise phased programme of production and transport and also made recommendations in regard to rail and road transport facilities required to be established by the last year of the third Five-year Plan. On the basis of the production programme of coal and the transport capacity expected to be available, a target of 61.1 million tonnes was indicated for 1962-63. During the first eleven months of the year, the raisings and despatches were 57.2 million tonnes and 52.65 million tonnes, respectively, which represent an increase of 7.17 million tonnes and 6.36 million tonnes over the raisings and despatches during the corresponding period of last year. The output during 1962-63 is expected to exceed 62 million tonnes. The target for 1963-64 is 67.9 million tonnes.

With a view to recommending measures to put coal transport on a sound footing, having regard to (i) the coal programmes for the third Plan and the projections for the fourth Plan, and (ii) other bulk transport requirements, a study has been initiated by a World Bank Study Team.

During 1962-63 an average increase of 80 nP per tonne was awarded to take care of the interim recommendation of the Wage Board and another 50 nP per tonne to compensate the industry for the enhanced payment of dearness allowance.

Coal Washeries

The washeries at Dugda and Bhojudih were commissioned and the washery at Kargali started operating more or less to its rated capacity. The expansion of the Bhojudih washery is scheduled to be completed during 1963-64.

Neyveli Lignite

With the commissioning of the first two units of the thermal power plant, the lignite quarry at Neyveli went into commercial production. The third and fourth units of the thermal power plant are scheduled to be commissioned during 1963-64.

Oil Exploration

Up to the end of December 1962, the Oil and Natural Gas Commission had drilled a total of 102 deep wells of which 90 were drilled during the third Plan period. A further 28 wells were expected to be completed during the last quarter of 1962-63. Regular production of oil from Ankleshwar was started in August, 1961. The daily despatches to Bombay were progressively increased to 1,800 tons a day from February, 1963.

Refineries

The Nunmati Refinery was commissioned in January, 1962. After getting over some teething troubles the refinery was in operation fairly continuously in the latter half of 1962-63 except for the kerosene refining unit. The first stage (1 million tonnes) of the Barauni refinery is scheduled to be commissioned during 1963-64.

In the context of the revised forecast of demand for petroleum products by the end of the plan period and taking into account the additional requirements of defence a marginal expansion by 0.4 million tonnes of the capacity of the coastal refineries at Bombay and the expansion of Nunmati by 0.5 million tonnes and of Barauni and Koyali by 1 million tonnes each were approved. In addition, it was also decided to establish a new refinery in South India on a participatory basis with majority share holding by Government.

The first stage of the crude oil pipeline from Nahorkatiya to Nunmati was commissioned in March, 1962 and the second stage from Nunmati to Barauni was completed recently. The installation of the crude conditioning plant at the oil fields was also completed.

Oil India

The latest assessment of reserves of crude oil and gas indicate that 45.7 million tonnes of crude oil and about 756,000 million cubic feet of gas would be available.

Kiriburu Iron Ore Project

Trial production of iron ore is expected to commence in the second half of 1963-64. Regular shipments of iron ore are to start from the beginning of 1964.

Power

The physical targets by way of generating capacity set for the Plan for the years 1961-63 and the benefits realised as also the outlook for 1963-64 are set down below:

(In million kW)

Year	Plan Book		Benefits realised or anticipated	
	Benefits during the year	Total at the end of the year	Benefits during the year	Total at the end of the year
End of Second Plan ..	..	5.70	..	5.60*
1961-62 ..	0.60	6.30	0.43	6.03*
1962-63 ..	0.73	7.03	0.69	6.72
1963-64 ..	1.05	8.08	1.03	7.75

* Actual.

The Plan envisaged a power programme requiring an outlay of Rs. 1,089 crores, of which Rs. 50 crores was in the private sector, the balance being in the public sector. The expenditure in the public sector has been Rs. 136 crores in 1961-62 and Rs. 191 crores in 1962-63. The outlay programmed for the year 1963-64 amounts to Rs. 247 crores. These outlays work out to 12.5, 18.3 and 23.8 per cent, respectively, of the total provision in the Plan and show a continuous increase in the tempo of development.

Since the finalisation of the third Plan, additions to the Power programme have been made to make up for certain delays anticipated in the execution of some of the approved projects and also to meet urgent demands. These additions amount to over a million kw. of generating capacity. Part of this is expected to materialise within the current plan period but the bulk will spill over to meet demands in the early years of the fourth Plan. As a short-term measure and in order to bring in quick benefits, some diesel generating sets and gas turbine units have been arranged to relieve the power position in some parts of the country, such as Assam, Andhra Pradesh and Mysore, etc.

Load Demands

The load demands in all the States were recently re-assessed by the Electric Power Survey Committee appointed by the Ministry of Irrigation and Power. According to their assessment, load demands have not risen as steeply as estimated earlier partly due to lags in demands in the industrial sector. Even so there were certain regional shortages such as in D.V.C.-West Bengal-Bihar area. As the supply to certain key industries such as coal and jute were affected, based on the Report of a Study Team, special steps were taken to mitigate these shortages. The Rihand power system was arranged to be inter-connected with the D.V.C.-D.V.C. grid with peaking power to the extent of 100 MW. Hirakud power system is also now tied with the D.V.C. system so that the power position in this area has shown considerable improvement. Also most of the recommendations of a Committee of failure of power supply in West Bengal and Bihar have been accepted. It is expected that the power position in this area will improve progressively.

In addition to certain short-term measures mentioned above such as providing diesel plant and gas turbines to tide over the urgent needs of certain States, arrangements have been made to take up some additional link transmission lines between adjacent States to facilitate exchange of power whenever necessary. In addition, a couple of 12.5 MW. mobile units are being procured for use in an emergency.

As slow progress in the implementation of power projects was one of the main causes of power shortage in many areas, a Study Team visited all the States in 1961 to examine the various aspects of implementation in consultation with the State authorities. As a result of their findings, special cells have been set up in the Ministry of I & P and C.W.P.C. to bestow undivided attention on the progress of construction and to give assistance to the States in removing bottlenecks such as release of foreign exchange and key materials—steel, cement and explosives, etc.

Rural Electrification has made satisfactory progress. During the first two years of the Plan, 7,900 villages have been electrified as compared to the target of 20,000 villages set down for the five years. Consumption of electricity for irrigation pumping during 1961-62 for which the figures are now available show an increase of about 19 per cent over the previous year.

In order to get a comprehensive picture of energy in regard to reserves, consumption and prospective needs in the various sectors region-wise, an Energy Survey Committee has been set up for undertaking the study.

Railways

There has been a significant improvement in the rail transport position generally and coal movements particularly. The originating traffic on the railways increased as follows:—

	(Million tons)
1960-61	153.8
1961-62	158.0
1962-63	173.0
1963-64 (estimate)	190.0

Over the first two years the outlay on the railway development programme is estimated at Rs. 413.4 crores, that is, 45 per cent of the total provision made in the third Plan. The outlay proposed for 1963-64 is Rs. 257 crores. The Planning Commission recently agreed to an additional allocation of Rs. 145 crores for the railways in the Plan—Rs. 120 crores for works and rolling-stock relating to movement of coal, Rs. 10 crores for line capacity works required to increase the target of movement of general goods and Rs. 15 crores for works for facilitating coal movement in the early years of the fourth Plan. The target of originating traffic in the third Plan was 245 million tons. It is now expected that the traffic may go up to 260 million tons in 1965-66.

The production of wagons increased from 11,984 wagons in 1960-61 to 19,111 wagons in 1961-62 and is estimated to have been increased further to about 23,000 wagons in 1962-63 (the numbers are in terms of four-wheelers). The production is likely to increase to 30,000 wagons in 1963-64.

Programmes relating to electrification and doubling of track have also made satisfactory progress in the first two years of the Plan. Electrification was completed on 320 route miles in 1961-62 and further 204 route miles in 1962-63. The total route mileage electrified on the Indian Railways comes to 758 miles. About 900 of railway sections were doubled during the first two years of the third Plan.

With a view to making more effective use of the available rail capacity, efforts are being made to promote rail movement of selected commodities by full train loads. A detailed study of the possibilities in this regard has been made and the various suggestions that were thrown up have since been discussed by the Commission with the Ministries concerned. It is hoped it should be possible to step up rail movements in full train loads in the near future.

The Planning Commission has also been trying to organise studies of transport development of a selected region in the South with a view to evolving suitable methods for planning of transport on a regional basis and against the perspective of potential economic development in the next 10 to 15 years.

Roads and Road Transport

Progress on road programme has been, on the whole, satisfactory. Over the first two years the total outlay on the road programmes in the Central and State sectors is estimated to be of the order of Rs. 187 crores, that is, 52.9 per cent of the provision in the Plan. Recently to meet the requirements of the emergency certain additional works have been taken up on the National Highways in the States of West Bengal, Bihar and Assam. The total additional roads programme undertaken by the Ministry of Transport and Communications is estimated to cost Rs. 34 crores and provides for improvement of about 1,000 miles of roads. These works will go a long way in providing development of a well-knit arterial road system in the eastern States. Moreover, the tempo of work on the road projects financed from I.D.A. loan is expected to be stepped up considerably from 1963-64 onwards.

On the programmes for expansion of nationalised road transport services an expenditure of a little over Rs. 9 crores was incurred in the first two years of the Plan and a provision of Rs. 4.4 crores has been made for 1963-64. The programme for 1963-64 is largely for strengthening the services on the existing routes and the State Governments have been advised that the expansion programmes of nationalised undertakings be curtailed to the minimum and deferred wherever possible. The Ministry of Transport and Communications have set up a special road transport organisation for augmenting road services to Assam. About 100 vehicles were to be acquired for the organisation in the year 1962-63 and additional 100 vehicles in the year 1963-64.

With a view to making fuller use of the available capacity of road transport, the Inter-State Transport Commission has selected certain long distance inter-State routes and has advised the State Governments concerned to issue a certain number of permits for public carriers on a regular basis on these routes. The Commission is studying requirements for regular permits in respect of the other long distance inter-State routes also.

Shipping, Ports and Harbours

The additional shipping tonnage acquired in the first two years of the Plan comes to about 2 lakh g.r.t., bringing the total tonnage on the Indian register to 10.58 g.r.t. The bulk of the tonnage proposed to be acquired in the third Plan has already been ordered. The provision for 1963-64 is intended largely to meet the payments against orders already placed.

The more important schemes completed or likely to be completed at major ports in the first two years of the Plan are river training works at Calcutta, the dredging of the main harbour channel at Bombay, the commissioning of two new berths at Cochin and one new berth at Kandla. The programme for the year 1963-64 provides, among other schemes, for completion of new berths under the Wet Dock Scheme at Madras and two iron ore berths at Visakhapatnam.

A Joint Technical Group for studies in transport planning has been organised by the Planning Commission in co-operation with the Ministries of Railways and Transport and Communications. The Group will collect data and work out projections on transport requirements for the formulation of plan in the transport sector, arrange for detailed surveys of transport requirements in relation to the growth of the economy in different regions and study questions of relative cost in the development of transport. A study on the transport of cement is in progress and will be followed by studies relating to other major commodities.

A study of the transport requirements, both present and prospective covering the Trichy and Madurai Divisions of the Southern Railway and the District of Coimbatore is to be undertaken by the National Council of Applied Economic Research in co-operation with the Planning Commission, the Government of Madras and the Southern Railway. The object of the study is to evolve suitable methods for studying transport and economic problems in the regional context and to prepare the way for similar studies for other regions as an essential foundation for a long-term transport plan. A systematic study of "bottlenecks" in the Indian transport system has also been initiated.

Village and Small Industries

As against the third Plan provision of Rs. 264 crores as expenditure of Rs. 85.7 crores has been incurred during the first two years of the third Plan. For 1963-64 an outlay of Rs. 42.95 crores has been made.

Although no separate production target for handloom cloth has been indicated in the third Plan document, the Handloom Board has provisionally fixed a target of 2,800 million yards by the end of 1965-66. According to the available information, production of handloom cloth is estimated to have steadily increased from about 1,930 million yards in 1960-61 to about 2,100 million yards in 1961-62 and to about 2,280 million yards in 1962-63. A target of 2,452 million yards has been proposed for 1963-64 by the Handloom Board. As for *khadi* the total production of different varieties increased from about 65 million yards in 1960-61 to about 76 million yards in 1961-62. Figures of production for 1962-63 are not available. The total output of mulberry and non-mulberry raw silk during the first half of 1962 was estimated at 8.24 lakh kg., as against 16.55 lakh kg. in 1961.

Unlike the organised sector, no production targets have been laid down for most of the small scale industries. However, despite the shortage of imported as well as certain indigenous raw materials, production in certain directions has increased. Further increase in production as well as diversification and full utilisation of the existing capacities would be possible only if adequate supply of certain essential raw materials could be arranged. This also applies to handicrafts.

Exports of handicrafts have increased from Rs. 9.69 crores in 1960-61 to about Rs. 11.5 crores in 1961-62 and were about Rs. 4.9 crores during April-September 1962. The total export of silk fabrics amounted to about Rs. 76.72 lakhs during the first 11 months of 1962, as against Rs. 61.40 lakhs during the corresponding period of the preceding year. Total exports of coir fibre, yarn and manufactures also increased from 13.96 lakh cwt. in 1960-61 to 14.97 lakh cwt. in 1961-62.

The position regarding progress of the programme of Industrial Estates up to the end of December, 1962 was as follows:

	Second Plan	*Third Plan—up to the end of December 1962 (Cumulative)*
Number of Industrial Estates—		
Sanctioned	119	248
Completed and functioning ..	52	80
Completed but not functioning..	14	25
Under construction	24	27
For which preliminary action like land acquisition, etc., is in progress	29	116

Scientific Research

During 1962-63 the National Laboratories worked on over 120 problems of interest to Defence. The results of several projects have been communicated to Defence and a number of items are under field trial. The laboratories have also started the manufacture of several items on pilot plant scale for meeting urgent Defence requirements. Every effort is being made to utilise indigenous raw materials so as to increase the country's self-sufficiency in strategic requirements. The programme for almost all the national laboratories was reorientated to take up problems directly connected with Defence requirements as also to step up programme for development of a few specific cases of production of items which conserve or earn foreign exchange.

Phone: 23-3351 Gram: "CALAMPWORK"

Calcutta Electric Lamp Works Ltd.
3, Mangoe Lane, Calcutta - 1.

Technical Education

The expansion which has taken place in the engineering and technological fields is given in the table below:

Year	Degree level		Diploma level	
	No. of Institutions	Sanctioned annual admission capacity	No. of Institutions	Sanctioned annual admission capacity
1960-61 ..	100	13,860	196	25,570
1965-66 ..	119	19,090	271	38,390
1961-62 ..	111	15,690	210	27,600
1962-63 ..	116	16,920	228	30,130

During 1963-64, the proposal is to provide, through the expansion of existing institutions, 3,000 and 9,000 additional seats for Degree and Diploma courses respectively. In addition, a special 3-year course for 650 seats in certain fields of engineering for Graduates in Science would be organised. Part-time courses for 25,000 students are also to be organised at selected centres in the States. The questions relating to the introduction of short-term condensed courses are being at present considered by the Technical Manpower Committee. A number of new institutions are feeling difficulties on account of shortage of staff, building materials and equipment.

Housing

A provision of Rs. 142 crores has been made for housing in the third Five-year Plan for the construction of about 3,73,000 houses during the third Plan period. In 1961-62 the expenditure on the Plan was Rs. 32.56 crores involving construction of about 30,000 units. For 1962-63 the expenditure was of the order of Rs. 23.81 crores. For 1963-64 an outlay of Rs. 16.6 crores has been proposed. This is about 35 per cent less than what has been proposed for 1962-63. This reduction in expenditure was in accordance with the decision of the National Development Council to slow down construction programme. It has however been decided recently that the subsidised industrial housing scheme should be given a high priority by the State Governments. A number of steps such as decentralisation of some Central Government offices, conservation of available accommodation, construction of temporary accommodation and of multi-storeyed buildings have been taken to meet the growing demand during Emergency for official and residential accommodation in Delhi.

The production programme of the Hindustan Housing Factory is also being intensified to meet the needs of the present Emergency. The Department of Stationery and Printing has taken a number of steps to bring about economy in the use of office stationery.

Programming in Public Enterprises

The Planning Commission is concerned over the fact that in many public enterprises, costs have considerably exceeded the approved estimates, it has been difficult to adhere to time schedules and the benefits have accrued later than first anticipated. It has also been difficult to measure progress because frequently the programme under implementation has not been mapped out and scheduled in advance in sufficient detail, showing the inter-connections and decisive points of co-ordination between related activities along with the estimates of time, materials, funds, etc., required for them. This is one of the main reasons why complementary action in different fields, which is *assumed* as a necessary condition of fulfilment of targets, does not always come about. With a view to evolving systems suitable for conditions in India, for programming and for reporting on performance in public enterprises, the Planning Commission has initiated a study in co-operation with the Ministries and the projects managements concerned in respect of the following fifteen enterprises: Rourkela Steel Plant (Hindustan Steel Ltd.); Heavy Electrical Plant, Bhopal; Machine Tool Plant, Pinjor (Hindustan Machine Tools); Trombay Fertilizer Project (Fertilizer Corporation); Hindustan Shipyard; Indian Telephone Industries; Bisrampur Coalmines Project (N.C.D.C.); Kiriburu Iron Ore Project (N.M.D.C.); Dugda Coal Washery (Hindustan Steel Ltd.); Chanrapura Power Station (D.V.C.); Dhuvaran Power Project (State Electricity Board, Gujarat); Shipping Corporation of India; Indian Airlines Corporation; Delhi Transport Undertaking; Railway Electrification—Calcutta-Asansol.

In these studies, both physical and financial aspects are being investigated, and it is hoped to adopt management techniques which have been developed in recent years to the requirements of different kinds of projects in India, so that targets can be laid down correctly, their effective fulfilment according to schedule emerged, and problems requiring solution anticipated sufficiently in advance. It is, of course, realised that even under the best conditions, as a project proceeds, new problems will arise and adjustments and changes have to be made from time to time. The studies are also likely to throw light on changes in procedures and approach required at other levels, such as the Planning Commission, the administrative Ministries concerned, the Ministry of Finance and the Department of Technical Development, if all the improvements possible at the project level are to be achieved.

(*Concluded*)

THE TRAVANCORE RAYONS LIMITED

CHAIRMAN, MR. AR. RAMANATHAN, ON EXPANSION

COTTON LINTER PULP PLANT'S CAPACITY TO BE DOUBLED

ADDRESSING the shareholders of the Travancore Rayons Ltd., at their Seventeenth Annual General Meeting held at Rayonpuram on Friday the 17th inst., Mr. AR. Ramanathan, Chairman of the Company, reviewed the progress made in the implementation of the expansion programme. The cotton linter pulp plant of the Company commenced production this year and the Directors had considered the advisability of putting up a staple fibre plant also. Expansion of rayon production by five tons a day, as licensed, was, however, held in abeyance, as the import licence was not granted due to foreign exchange difficulties. Giving details about the cotton linter pulp plant, Mr. Ramanathan said that it was proposed to double its capacity, as early as possible, to 20 tons a day in order to minimise dependence on import of this basic raw material. The saving in foreign exchange on the attainment of the enhanced capacity, he added, would be Rs. 36 lakhs per year.

Given below is a summary of Mr. Ramanathan's speech:

Working Results

The working for 1962 has shown a profit of Rs. 30.48 lakhs, after providing Rs. 26.75 lakhs for depreciation, Rs. 1.15 lakhs for development rebate reserve and after payment of Rs. 44.43 lakhs towards excise duty. You will observe the profit has come down to about half the 1961 figure. Although, no doubt, I am sorry about it—as indeed many of you will be—there is no reason to be disheartened. Because, as you might have seen, reduced profits are the general trend at present, in most industries, due to continuously increasing manufacturing costs and burdens of taxation. In fact, I would say that your Company's performance stands quite a favourable comparison—the reason being that, in addition to the general adverse factors, your Company had to face two special problems during 1962, namely, concessional sales for export promotion, and a prolonged

Special Problems

As the Directors have explained in their report, the basic raw material—wood-pulp—had to be imported under the export promotion scheme, which meant that the Company had to surrender a portion of its production of rayon yarn to the weaving sector at prices even far below the cost of production, thereby sustaining heavy loss. Secondly, there was an unfortunate interruption in production due to a prolonged strike, resulting in sharp reduction in output. Thirdly, despite all-round and steep increase in the prices of raw and auxiliary materials, labour costs, service costs, and governmental levies, the prices of rayon yarn remained pegged at the 1957 level. All along, we had refrained from pressing for price increase, and absorbed the burdens by economic and judicious adjustments in the working of your factory, but the time had now come when price increase was quite inevitable. Therefore, your Company, in conjunction with others in the line, have taken up the question with Government through the Textile Commissioner to the Government of India, and look forward to fair and reasonable assistance.

You will appreciate that due to the abrupt decline in the earnings, your Directors had no other alternative but to effect a cut in the dividend on equity shares. But, on due consideration of the part played by equity capital—rightly described as risk capital—your Directors decided to minimise the cut as much as possible. Hence, they have transferred a sum of Rs. 3 lakhs from the dividend equalisation reserve, and recommend a dividend of 15 per cent on the equity capital.

Market Conditions

The market for rayon yarn was normal but in the case of cellulose film, the hang-over of slackness in demand continued—partly due to heavy excise duty and partly due to competition—and, consequently, much of the capacity had to remain unutilised. The production of moistureproof film also registered a setback owing to difficulties in importing essential chemicals. However, the recent trend in regard to our moistureproof film has been encouraging, and I am happy to say that we are now producing more than the rated capacity.

Expansion Plans

Rayon: The expansion of rayon production by five tons a day, for which we hold an industrial licence, is being held in abeyance on account of the non-grant of the import licence, due to foreign exchange difficulties.

Cotton Linter Pulp Plant: An event of major significance is the commissioning of our cotton linter pulp plant. The trial runs have been satisfactory, and commercial production has started this year (1963). Your Company has maintained its pioneering reputation by enlisting itself as the first rayon plant commencing manufacture of rayon grade pulp in India. I expect the teething troubles—which are inevitable in new ventures of this kind—to be completely overcome shortly, so that the targeted production can get into full stride. The quality of pulp is superior, as envisaged. Presently we are using the linter pulp mixed in certain percentages with wood pulp. Though for the present, we are utilising the linter pulp for production of cellulose film only, necessary plans are already on hand to extend its use for rayon production too. As you may know, pulp made from cotton linters forms the finest kind of alpha cellulose—the purity being of the order of 99 per cent and more. Further, it is also free from the impurities commonly met with in wood pulp. The present installed capacity of the plant is 10 tons per day. It is our intention to double the capacity as early as possible, in the interest of greater self-sufficiency—as dependence on imports for this basic raw material is always precarious. The saving in foreign exchange which will accrue when the full installed capacity of the linter pulp plant (ten tons/day) is reached, will be of the order of about Rs. 36 lakhs per year.

While on the subject, I would incidentally point out that linter pulp is a strategic commodity for defence needs and, in the context of the present national emergency, your Company will only be too pleased to be of special assistance to Government, by placing this article at the Government's disposal, if need be, even at some sacrifice to the Company's own needs.

Staple Fibre Project: Your Directors have considered the advisability of putting up a staple fibre plant also. In view of the scarcity of long-staple cotton, the need to conserve foreign exchange on import of this item, and the increasing pressure on land for agricultural requirements, I believe staple fibre manufacture is likely to receive due encouragement in the hands of the Government. We have made an application for licensing manufacture of 20 tons of staple fibre a day, and I look forward to Government's favourable consideration of the same.

The 1963 Budget

No patriotic Indian will spare any sacrifice to meet the Chinese challenge. While, no doubt, we must surely draw consolation from the fact that there could be worse evils than heavy taxation, what is needed are proposals which, without hindering defence, would, at the same time, be of considerable fillip to development. It is a well recognised fact that, ultimately, industrial progress is the means to economic independence—without which political independence is of no avail. Then, the main problem is to produce more and more. The taxation and economic system should be designed to widen the industrial base, especially now, when strong industries are a strategic necessity. It is heartening to note that the Honourable Finance Minister has shown some resiliency, and also agreed to review the working of the S.P.T. and other measures, if they are self-defeating in their effect and if they prove an incubus on industrial growth.

Third Plan and Productivity

The need for greater production was never greater than today. Therefore, without minimising the seriousness of the problems the Government have to face, I would plead for full maintenance imports for industry, so that at least the existing capacity could be utilised to the maximum advantage of the country. Also, I wish to stress that, if the targets of the Third Plan are to be achieved, more emphasis is necessary on discipline in industry. Strikes, lockouts, go slow methods and work stoppages should be seriously discouraged. Due to flagrant breach of agreement and total indiscipline, your Company had to face a prolonged, unjustified and illegal strike. The root of the problem is that there are no effective sanctions against the misconduct and irresponsibility of trade unions and workers. In the national interest, I commend to the urgent attention of the Government, the need for remedying this sad situation. It is, after all, a simple fact—which the employees and the unions must face squarely—that increased emoluments and other benefits can come only from increased earnings of the Company and these are mainly related to increased output and efficiency of production.

Notices

THE BENGAL FLOUR MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company that the Annual General Meeting (being the one hundred and twenty-ninth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 7th June, 1963, at 12.30 p.m., to consider the Accounts of the Company for the year ended 31st December 1962, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 23rd May, 1963 to 7th June, 1963, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co. LTD.,
D. MANSON,
Managing Director,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 1st *May*, 1963.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

STEEL CONTAINERS LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company that the Fifth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 7th June, 1963, at 3.00 p.m., to consider the Accounts of the Company for the year ended 31st December, 1962, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 23rd May, 1963 to 7th June, 1963, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co. LTD.,
D. MANSON,
Managing Director,
Secretaries.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 10*th May*, 1963.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

INDUSTRIAL CONTAINERS LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Fifth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 7th June, 1963, at 3.15 p.m., to consider the Accounts of the Company for the year ended 31st December, 1962, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 23rd May, 1963 to 7th June, 1963, both days inclusive.

By Order of the Board,

THE NEW SHORROCK SPINNING AND MANUFACTURING CO. LTD.

Registered Office:
Asarwa Road, AHMEDABAD 16

NOTICE

To

THE SHAREHOLDERS,
THE NEW SHORROCK SPG. & MFG. CO., LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-first Annual General Meeting of the shareholders of The New Shorrock Spinning & Manufacturing Company, Ltd., will be held at the Registered Office of the Company at Asarwa Road, Ahmedabad 16, on Friday, the 14th day of June 1963, at 9.30 a.m. (S.T.), to transact the business mentioned in Items 1 to 6 as ordinary business and also to consider and if thought fit, to pass the Special Resolutions mentioned in Item 7 of the Notice accompanying the Annual Report and Accounts for the year ended 31st December 1962 being posted to the Members individually at their Registered addresses.

The Explanatory Statement as required by Section 173 of the Companies Act 1956 in respect of the Special Resolutions, is annexed to the Notice.

N.B.—(*a*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY OR PROXIES TO ATTEND AND VOTE INSTEAD OF HIMSELF, AND A PROXY NEED NOT BE A MEMBER.

(*b*) The Articles and the letters confirming the arrangements referred to in Special Resolutions mentioned in Item 7 of the Notice are open for inspection of the Members at the Registered Office of the Company between 12.00 noon to 2.00 p.m. (S.T.), on any working day.

(*c*) The Register of Members and the Transfer Books of the Company remained closed from Monday, the 18th March, 1963 to Friday, the 5th April 1963, both days inclusive.

(*d*) The Dividends as recommended by the Directors when declared by the shareholders, will be paid at the United Commercial Bank Ltd., Bhadra Branch, Ahmedabad 1, from 18th day of June 1963 to 25th day of June 1963 during business hours and thereafter at the Registered Office of the Company between 12.00 noon to 2.00 p.m. except Holidays, to those shareholders whose names are on the Company's Register on 5th April 1963. Shareholders are requested to intimate to the Company change in their Registered address.

By Order of the Board of Directors,
MAFATLAL CHANDULAL & COMPANY LIMITED,
L. D. VASA,
Director,
Managing Agents.

AHMEDABAD,
Dated 28th April 1963.

JAY SHREE TEA AND INDUSTRIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventeenth Annual General Meeting of the Shareholders of the Company will be held on Tuesday, the 18th June, 1963 at 3-30 p.m. at 15, India Exchange Place, Calcutta-1, and its agenda has been/will be duly circulated to all the members of the Company along with relevant Explanatory Statement thereon.

By Order of the Board,
B. C. BIYANI,
Secretary Company Law.

Registered Office:
"INDIA EXCHANGE,"
CALCUTTA-1.
Dated, the 29th April, 1963.

N.B.—1. The Share Transfer Registers will remain closed from 4th June to 18th June 1963, both days inclusive.

2. The dividends on Preference and Equity Shares as sanctioned at the Meeting, will be payable to the Registered Shareholders of the Company as on 18th June 1963 and the relative dividend warrants will be posted on or after 1st July, 1963.

COMPANY NOTICE

INDIAN COPPER CORPORATION LIMITED

(*Incorporated in England*)

DIVIDEND NO. 37

NOTICE IS HEREBY GIVEN THAT AT THE Thirty-ninth Annual General Meeting to be held in Committee Room No. 2 (2nd Floor) of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta, on Wednesday, the 14th August, 1963, at 11-30 a.m., the Directors will recommend payment of a Dividend (No. 37) for the year ended 31st December, 1962 of 18 per cent (4.32 pence, i.e. 24 Naye Paise per unit of stock) subject to deduction of Tax, in respect of the Issued Capital of £1,371,300. Subject to confirmation of members, the dividend will be paid on the 6th September, 1963 to all members registered in the books of the Company at the close of business on the 15th June, 1963.

The Registers of Members will be closed from the 17th June, 1963 to the 6th July, 1963, both days inclusive.

By Order of the Board,
E. A. JOHNSTON,
Assistant Secretary.

GILLANDER HOUSE,
NETAJI SUBHAS ROAD,
CALCUTTA-1.
Dated the 15th May, 1963.

Note: Profit and Appropriation figures have not been given in this Notice in view of Rule 52 of the Defence of India Rules which *inter alia* prohibits a mining undertaking from publishing such figures.

HINDUSTAN LEVER LIMITED

NOTICE OF MEETING

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING of the Company will be held at the INDIAN MERCHANTS' CHAMBER HALL, 76, Veer Nariman Road, Bombay-1, on Wednesday, 12th June 1963, at 4 p.m., to transact the following business:—

1. To receive and consider the Accounts and Balance Sheet, and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration for the year ending 31st December 1963.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member.

The Transfer Books of the Company will be closed from 4th June to 12th June 1963 (both days inclusive).

By Order of the Board,
S. H. GURSAHANI,
Secretary,

INDIA HOUSE, FORT STREET,
BOMBAY-1.
15*th May*, 1963.

THE CHAMPDANY JUTE COMPANY LIMITED

THE DIRECTORS, AT A BOARD MEETING held to-day, decided to recommend to the Shareholders in General Meeting the payment of a final dividend at the rate of 35 per cent or Rs. 3/50 per each share of Rs. 10. The dividend will be subject to deduction of tax.

A notice calling the Annual General Meeting on 11th June, 1963, will be published shortly.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agent.

2, NETAJI SUBHAS ROAD,
CALCUTTA, 14*th May*, 1963.

SAVINGS OF WORKERS AND SALARIED EMPLOYEES

INCENTIVE SCHEMES IN WEST GERMANY

AT no time in the past has the need to stimulate and encourage personal savings been more pressing than now when the country is called upon to face the twin challenges of defence and development. And no section of the people, howsoever small or insignificant, can be ignored as unimportant from the savings point of view. For, as the old adage goes, "Many a pickle makes a muckle." The Compulsory Deposit Scheme, proposed by the Union Finance Minister in this year's budget, was designed to tap a source of savings which has hitherto been only partially harnessed by the existing voluntary schemes such as life insurance and provident fund. The Compulsory Savings Scheme marks a new departure in State encouragement to savings because, as the name itself indicates, under the scheme, saving of a specified percentage of income is made compulsory.

State encouragement of savings in a democracy is nothing unusual although compulsion is not generally resorted to. In many democratic countries of the West, positive encouragement is given to savings through statutory enactments and other measures. The Federal Republic of Germany (W. Germany) has perhaps gone farther than any other country in giving incentives to personal savings and investment, judging from an article on incentives to personal savings and investment by G. Halbach, Councillor, Federal Ministry of Labour and Social Welfare, published in the February 1963 issue of the *International Labour Review*. It is the policy of the Federal Government, Mr. Halbach points out, to encourage more and more people to become property owners and to spread the growth of national wealth among the greatest possible number of persons. People belonging to the medium and lower income brackets, and wage and salary earners in particular, are given special inducements to build up assets of their own. The inducements offered include bonuses on savings, public loans for building private homes and dwellings, tax reliefs for house construction, facilities for the issue of stock to a firm's employees, the transfer of State-owned enterprises to the private sector and assistance to employers who aid their staff to build up personal capital.

Legislative Enactments

Among legislative enactments designed to encourage savings, special mention may be made of a law passed in July 1961 which provides tax incentives and exemptions from the payment of social security contributions for employers voluntarily allocating upto 312 marks a year to employees, provided the allocations are not distributed for five years. To benefit from these tax and social security advantages, the employer is required to make the allocation in one of the following forms:

(*a*) allocations under the Savings Bonuses Act, that is, savings accounts with credit agencies or the initial purchase of securities;

(*b*) savings under the Dwellings Construction Bonuses Act, that is, mainly deposits with building or loan associations towards construction loans;

(*c*) expenditure on the construction, acquisition or disencumberment of a home or dwelling for personal use, provided that they meet the requirements for subsidies or tax incentives under the terms of the second Dwellings Construction Act;

(*d*) expenditure on the purchase of employee stock at preferential rates under the Act on tax incentives in the increase of nominal capital from company funds and the issue of employee shares; and

(*e*) placement of funds by employees in the business of the employer in the form of loans, guaranteed by a credit agency, on which the employer must pay the savings banks' standard rate of interest.

With the exception of (c), contributions towards the acquisition of capital in all cases are blocked for a period of five years so as to ensure the accumulation of stable capital.

The allocation to promote the accumulation of property can be made through contracts with individual employees or through company agreement with the works council. Such allocations, if they are embodied in collective agreements, do not qualify for incentives under the Act. They must be made available either to all employees or all employees in one section of the enterprise or to categories of employees, classified by activity training, length of service or by other objective criteria. In this manner, arbitrary preferential treatment is sought to be limited. The Act leaves individual workers free to choose between cash or equivalent benefits. As an incentive to employees such allocations upto 312 marks a year are free of tax.

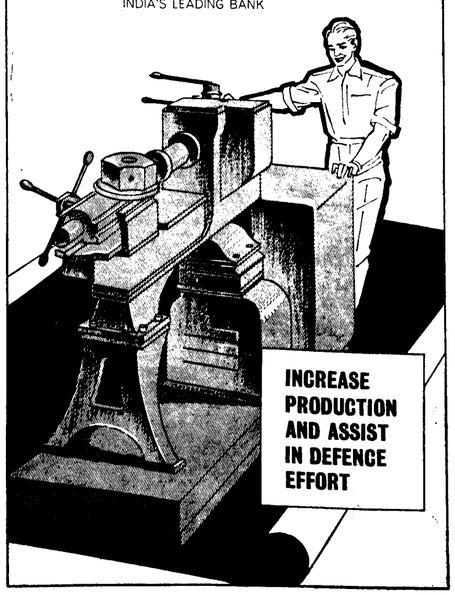
As the Act was passed only in July 1961 and came into force five months later, that is, in December 1961, it is too early to assess its effect on the quantum of savings and the incentive to save and invest. Rough estimates, however, show that, by the end of 1961, nearly 50,000 workers had received a total of 15 million marks in allocations under the Act.

Legislative Measures

Legislative measures adopted in W. Germany for the purpose of encouraging the masses, especially employees, to save and invest have already met with considerable success. But they have not yet succeeded in making employees share in the accumulation of wealth large enough to justify the problem being regarded as satisfactorily solved. It is, however, no doubt true that legislative measures have been instrumental, to some extent, in promoting a wider diffusion of property ownership. According to rough estimates, about 60 to 80 per cent of the privately-owned wealth accumulated between 1950 and 1960 is accounted for by self-employed persons, representing 14 per cent of the population and the remaining 40-20 per cent by employed persons representing 77 per cent of the population.

The savings incentives scheme is only one of the many measures that are considered necessary to facilitate accumulation of wealth at all income levels. Other measures for promoting further individual savings and investment are under consideration. Of these, two deserve special mention. They are: (1) investment wages, and (2) investment participation in profits. Investment wages, which are at present in the foreground of discussions on property accumulation policy, are of many types. But one point common to all investment wage schemes is that payment of a certain portion of wage increases is made not in cash but is blocked for some five years during which the return on them is paid to the worker. There is, however, no unanimity of opinion among those who favour the introduction of investment wages as to whether (1) investment wages should be prescribed by law, (2) trade unions and employers' association should be left free or perhaps encouraged by tax and other incentives to include in their collective agreements not only cash wage increases but also investment wage increases, and (3) individual workers should decide whether or not a part of their wage increases should be allocated to capital accumulation. The economic and social problems connected with investment wages are highly diverse. They are still under discussion and are at present being investigated by the Federal Government.

Like investment wages, investment participation in profits is a term that does not lend itself to precise definition. One point common to all schemes for investment participation in profits is that undertakings over a certain size should be obliged by law to allocate a part of their increased assets, preferably in the form of stock to one or more funds. Out of these funds should be issued shares or investment certificates to employees or consumers. There is no agreement, however, as to whether they should be distributed free of charge or in return for a purchase price scaled according to income or again as a bonus for the amount of the recipient's savings.



INSTALMENT CREDIT FOR EQUIPMENT/MACHINERY

The Plan is specially designed to meet the needs of small and medium sized businesses engaged in approved productive operations, for financing purchases of equipment/machinery.

If you require credit for purchases of equipment/machinery to increase production or for other worthwhile purpose, please contact the nearest branch of the Bank, who will be pleased to furnish you with details and endeavour to tailor credit to your requirements.

THE STATE BANK OF INDIA

INDIA'S LEADING BANK

INDUSTRIAL PRODUCTION IN 1962

PACE OF GROWTH CONTINUES TO BE SLOW

THE rate of growth of industrial production, which slowed down in 1961, did not get significantly accelerated in 1962. This is confirmed by the figures of industrial production for the full year (January to December), just released by the Central Statistical Organisation, Calcutta. According to the C.S.O.'s publication, *Monthly Statistics of Production of Selected Industries of India*, the average index of overall production (base 1956=100) touched a record of 151.3 (crude, unadjusted for seasonal variations). The rate of growth during the year was, however, only just about 8 per cent, which was only marginally higher, as compared with an increase of about 7.7 per cent in 1961. It may be recalled here that the rate of growth of production had touched 11 per cent in 1960, that is, towards the close of the second Plan: this pace of expansion has not even been maintained so far during the third Plan period. In fact, but for a marked increase in production attained during the close of the year, following the declaration of national emergency, the overall industrial and mineral output in 1962 would not have touched even the present level.

Although the trend in industrial production continues to be upward, this has not been shared uniformly by all major industries. In fact, some of the important industries appear to have suffered some setback. Notable among these is India's major industry, namely, cotton textiles. The total output of cloth declined from 4.701 million metres in 1961 to 4.560 million metres in 1962. The output of yarn fell by 2.7 million kgs. to 859.6 million kgs. The decline in the output of cotton textiles was the result of shortage of raw cotton and fuels, aggravated by slack in overseas demand for cotton textiles. The output of tea was also smaller by 4.3 million kgs. at 343.5 million kgs. in 1962, reflecting mainly the decline in output in North-East India, following unfavourable weather conditions in Assam and North Bengal last year. The production of non-ferrous metals industries also fell markedly mainly on account of stringent restrictions imposed on imports of primary metals.

Diversification

The unsatisfactory performance of some of the industries on the production front should not blind us to the fact that a wide range of other industries continues to make good progress not only by expanding output, but also by diversifying the range of production. The diversification of industries into related fields of manufacture and the establishment of entirely new ranges of production are significant pointers to the broad-based nature of India's industrial economy. Among the new items, production of which was commenced in 1962, mention may be made of formaldehyde, heavy water, tyre cord yarn, polyester resins, transistors and diodes, permanent magnets, microscope slides and punch-card sorters.

Another distinctive feature of industrial production last year was the generally smooth switchover from civilian to defence needs in several lines. It is indeed a tribute to the flexible manufacturing pattern of industry in general that, despite short notice, it has undergone a reorientation to meet defence needs without any undue dislocation. This has been so particularly in the fields of steel, engineering, textiles and chemicals.

The upward trend in production during 1962 was particularly marked in jute manufactures and woollen fabrics. The total production of hessian rose by as much as 35 per cent over 1961 to 480,000 metric tons last year. There was an impressive increase in the production of jute sacking as well. The increase in the output of jute goods was the result of a strident recovery in jute and mesta crop in 1961-62, which was placed at a record of 7.97 million bales. The record crop, coming as it did after two consecutive seasons of shortages, provided a fresh impetus to the development of the industry. With the return of normal conditions, the jute industry was able to dispense with restrictions on production imposed earlier and to utilise all its looms without any compulsory sealing.

There was a substantial increase in the production of a wide range of light mechanical industries. Prominent among these are ball bearings, typewriters, sewing machines, hurricane lanterns, bicycles, zip fasteners and leaf springs. Punch-card sorters were manufactured for the first time in the country, while the valves, nail and spring industries diversified their production programmes to manufacture lubricated plug valves, industrial coil spring and upholstery nails. Further capacity for the manufacture of motor cycle and auto-chains, ball bearings, sorters and tabulators, razor blades, beltings and tin-containers was licensed in 1962.

Electrical Engineering Goods

The production of most of the electrical engineering goods showed an encouraging trend. Commendable increase in production was achieved in items like electric lamps, fluorescent lamps, miniature lamps, radio receivers, gramophones, air-conditioners, water-coolers, refrigerators, house-service meters, electrical steel sheets, power-cables, gears, etc. The production of bare-copper conductors, however, declined during the year owing to the switchover from bare-copper conductors to aluminium conductors, to save foreign exchange spent on import of copper. The production of winding wires, power cables, V.I.R. and P.V.C. cables recorded an increase. The production of radio sets was stepped up during the year by use of more indigenous components like transistors and diodes, polyester capacitors, paper cones and loudspeakers.

The pace of progress in most of the metallurgical industries was satisfactory within the limited foreign exchange facilities for raw materials. Almost all the metallurgical industries except antimony, lead, aluminium/brass/copper sheets, circles and electrolytic copper wire and rods, registered significant rise in production. Paucity of ores and concentrates for antimony and lead, and the need to adjust production to availability of aluminium/brass/copper sheets, circles and electrolytic copper wire, and rods, were responsible for the setback in their production. Imports of ore for the production of antimony and of raw materials like calcined petroleum, coke, cryolite, aluminium-fluoride, etc., are being allowed. Aluminium industry is likely to achieve self-sufficiency during the current Plan period.

Chemicals and Drugs

The chemical and pharmaceutical industry, too, put on a good performance during the year, despite the shortage of foreign exchange for the import of raw materials. The chemical units maintained satisfactory level of output, despite foreign exchange shortage. With the going into production of some of the units already licensed, output of soda ash is expected to increase significantly. Production of industrial explosives, safety fuses, polyethylene, polystyrene, potassium permanganate and antibiotics like penicillin, tetracyclin and chloramphenicol recorded considerable increase. Output of aspirin, vitamin B_{12} and sodium hydrosulphite nearly doubled, while that of vitamin C, nicotinic acid and amide was established on regular footing.

In the case of nitrogen gas and argon gas, production went up by 60 and 70 per cent, respectively. Bichromates, calcium chloride, iron-free aluminium sulphate, nitric acid and phosphoric acid also recorded increases. New items like streptomycin, anti-histamines and tranquilisers like buclizine, meclozine, hydroxyzine and meprobamate, formaldehyde, polyester, pyro-technic and aluminium powder were produced for the first time in the country. A scheme was also licensed for the manufacture of picolines, the raw materials for a number of essential drugs such as I.N.H., nicotinic acid and amide and nikethanmide.

The table on this page shows the actual production of selected major industries in 1962, as compared with the previous year, as also 1956 and 1951, the two years corresponding roughly to the beginning of the second and first Five-year Plans, respectively.

IMPORTS BY CONSUMERS' CO-OPERATIVES

New rules have been framed to enable consumers' Co-operative stores to import consumer articles like milk powder, baby food, certain types of drugs and medicines, books, photographic material and X-ray films. Originally, three conditions were laid down for the consumers' co-operatives to become eligible for the import of consumer goods. A consumer society should have a membership of not less than 100 and minimum annual turnover of Rs. 20,000; secondly, it should have been in operation during the last two co-operative years; and thirdly, licences for import were restricted to fourteen items. In order to save foreign exchange, a 50 per cent cut was imposed on licences issued from October 1962 to consumers' co-operatives against their entitlement.

A society is now made eligible to import consumer goods, if recommended by the Registrar of Co-operative Societies of the State concerned and no condition about it having imported the goods in the past is to be imposed. The requirement that a consumers stores should have a minimum membership of 100 has also been relaxed. Many of the wholesale stores which will act as bulk buyers on behalf of their constituent primary stores will have membership varying from 10 to the maximum of 50 normally. As for the primary stores, it has a minimum membership of 100. Wherever wholesale stores have been organised, they will be permitted to import on behalf of their affiliated primary stores and retail branches up to the aggregate entitlement of the affiliated units or branches.

For a primary store having less than 1,000 members and a sales turnover of Rs. 50,000, the maximum value of import licences has been fixed at Rs. 5,000 for all items put together and upto Rs. 1,000 for any individual item. As for the apex society or wholesale store, the combined annual sales turnover of the small units working under it will be taken into account for calculating the entitlement provided the number of such units does not exceed 100. The maximum entitlement of a society, however, cannot exceed Rs. 25,000 in the aggregate and Rs. 2,500 for any individual item. It has also been agreed that the State Trading Corporation should distribute imported consumer goods earmarked for consumers' co-operatives through wholesale societies wherever they are in existence.

MINERAL OUTPUT IN INDIA

India produced minerals worth Rs. 186.8 crores during 1962, as against Rs. 166.2 crores in 1961. Coal was the leading commodity, valued at Rs. 133.8 crores, constituting about 72 per cent of the total value of mineral production during 1962. The value of metallic minerals produced was Rs. 272 crores, and non-metallic minerals accounted for Rs. 25.2 crores. Bihar continued to be the leading State and produced minerals valued at Rs. 721 crores which was about 38.6 per cent of the total production, followed by West Bengal and Madhya Pradesh (21.6 per cent) and (11.3 per cent), Orissa (6.4 per cent), Andhra Pradesh (5.6 per cent), Mysore (4.6 per cent), Maharashtra (3.4 per cent) and Gujarat (3.1 per cent).

RESULTS OF FINLAY COTTON GROUP

MAINTAINING PROFITS AT LAST YEAR'S LEVEL DIFFICULT, SAYS CHAIRMAN

INADEQUATE supplies of long-staple cotton from Sudan and Egypt due to foreign exchange difficulties, increasing costs of manufacture, and higher taxation would appear to have had a serious effect on the working of the three city mills under the management of Messrs. James Finlay and Company Ltd., Bombay, namely, Finlay Mills, Swan Mills and Gold Mohur Mills, during the year ended 31st December 1962. Sales realisation of the first two has remained nearly stagnant and, if the third has reported a higher turnover, it is because the year 1961 had been a particularly lean one for it. Net profits in all the cases have been fairly high in comparison with the previous year, but, since a portion of these has had to be utilised towards meeting expenses relating to prior years, Finlay and Swan have just been able to maintain dividend, while Gold Mohur has actually reduced it, in view of the considerable capital expenditure likely to be incurred during the current year.

Finlay

Although the Finlay Mills has continued to make further progress, this has been none too spectacular. The gross realisation from sale of cloth, yarn and waste has increased by a mere 1.3 per cent—as against the rise of as much as 18.7 per cent in the preceding year—from Rs. 303.14 lakhs to Rs. 307.25 lakhs. Other income, however, has jumped up by Rs. 4.90 lakhs to Rs. 49.13 lakhs. Thanks to this sharp rise and to some comparative saving in cost, the gross profit has improved by Rs. 14.10 lakhs to Rs. 58.74 lakhs. This betterment, quite naturally, has necessitated higher provisions for the Agents' remuneration and taxation. The sum actually provided for the former is Rs. 3.72 lakhs, as against Rs. 3.44 lakhs. Taxation has taken Rs. 22.56 lakhs (including an estimated amount of Rs. 5.00 lakhs for the S.P.T.), as against Rs. 14.35 lakhs. Provision for depreciation, however, has remained virtually unchanged at Rs. 10.02 lakhs, as compared with Rs. 10.11 lakhs previously. The resultant net profit is thus Rs. 22.44 lakhs, as against Rs. 16.74 lakhs for the year before. Unfortunately, a very substantial portion of this, that is Rs. 10.17 lakhs, has been absorbed by expense items relating to prior years. Nevertheless, the Directors have found it possibie to maintain the ordinary dividend at 23 per cent, subject to deduction of tax, claiming Rs. 11.50 lakhs. But this has had to be done at the expense of credits to reserve which have been stepped down from Rs. 3.46 lakhs to Rs. 73,000 only. The carry-forward is Rs. 31,083, as against the Rs. 26,894 brought in.

Swan

The performance of the Swan Mills has been somewhat better in that there has been an all-round improvement in income as well as profits. Gross sale proceeds have advanced by Rs. 9.34 lakhs, or a little over four per cent, to Rs. 228.07 lakhs, while other income has more than doubled from Rs. 7.84 lakhs to Rs. 16.87 lakhs. Despite higher output and turnover, cost of raw materials and stores consumed has declined from Rs. 79.39 lakhs to Rs. 75.20 lakhs and, even though other expenses have registered a rise of nearly Rs. 7.00 lakhs to Rs. 119.53 lakhs, the gross profit has improved from Rs. 34.51 lakhs to Rs. 50.79 lakhs. A major portion of this, however, has been taken up by essential provisions, that for the Agents' commission getting Rs. 3.59 lakhs as against Rs. 2.24 lakhs in 1961, for depreciation Rs. 11.51 lakhs (Rs. 11.92 lakhs) and for taxation, including approximately Rs. 3.00 lakhs for S.P.T., Rs. 19.69 lakhs (Rs. 9.35 lakhs). Even then, the net profit shows a gain of Rs. 5.00 lakhs to Rs. 16.00 lakhs. Supplementing this by Rs. 4.09 lakhs withdrawn from reserves to provide for expenses for prior years amounting to Rs. 4.84 lakhs and transferring Rs. 1.92 lakh to reserve, the Directors have proposed to maintain the ordinary dividend at 36 per cent, subject to deduction of tax. This claims, as before, Rs. 12.96 lakhs, leaving a higher carry forward of Rs. 38,803, as against the Rs. 10,399 brought in.

Gold Mohur

The setback suffered by Gold Mohur during 1961 has fortunately proved short-lived and the Company has reported substantial improvement in both sales and profit. The turnover, which had declined from Rs. 241.62 lakhs to Rs. 227.72 lakhs in the preceding year, has smartly advanced by Rs. 34.57 lakhs to Rs. 262.29 lakhs which is a record level for the past few years. Output of cloth and yarn, too, has been substantially higher, as is evidenced by the enhancement in the value of closing stocks from Rs. 56.28 lakhs to Rs. 68.94 lakhs, though turnover was higher. If, despite, these favourable factors, the gross profit has risen by only Rs. 12.81 lakhs to Rs. 33.63 lakhs, it is because of the all-round increase in expenses. Cost of raw materials and stores consumed has gone up by Rs. 15.11 lakhs to Rs. 98.31 lakhs, and other expenses are at their peak level of Rs. 144.57 lakhs, as compared with Rs. 128.56 lakhs a year ago. Essential provisions, too, have increased—that for the agents' commission from Rs. 1.67 lakh to Rs. 2.51 lakhs, for depreciation from Rs. 3.95 lakhs to Rs. 6.76 lakhs and for taxation from Rs. 7.07 lakhs to Rs. 8.60 lakhs, including Rs. 4.0 lakhs for S.P.T. The resulting net profit is, therefore, Rs. 15.76 lakhs which is lower than even the 1959 figure. The only solace, however, is that, at this level, it is still Rs. 7.63 lakhs higher than what the Company earned during 1961. Notwithstanding this increase, the rate of ordinary dividend, which was maintained at 21.5 per cent for the previous three years, has been lowered to 19.5 per cent subject to deduction of tax, in view of the need to conserve resources for financing the machinery rehabilitation programme now on hand. Ordinary dividends thus claim Rs. 9.75 lakhs, leaving Rs. 29,942 to be carried forward, as against the Rs. 6,562 brought in.

Working results of the Companies for the past four years are presented synoptically in the comparative table appearing at the end of the review.

The financial position of the Companies continues to be sound. The paid-up share capital, made up exclusively of ordinary shares in all the three cases, remains unchanged at the previous year's levels and enjoys a substantial backing of reserves and surplus. After a lapse of quite some years, borrowings have once again made their appearances in the balance-sheet, but these are in no case heavy. Current liabilities and provisions also continue to be low and, together with loans, they are adequately covered by current assets, loans and advances and investments all put together. Due to heavy capital expenditure during the year, the gross block of each mill has no doubt expanded further, but it has been well written down through the depreciation on account to nearly a third of its cost. The balance-sheets of the three Companies as at 31st December 1962 are presented in the following table in a summarised form:

(In lakhs of rupees)

	As at 31st December 1962		
	Finlay	Swan	Gold Mohur
LIABILITIES			
Share capital	50.00	60.00	50.00
Reserves	83.98	62.87	66.33
	133.98	122.87	116.33
Loans	14.72	10.68	11.97
Current liabilities and provisions	77.31	65.12	49.57
Total	226.01	198.67	177.87
ASSETS			
Gross block	239.92	237.05	142.40
Less—Depreciation	139.72	145.55	83.44
Net block	100.20	91.50	58.96
Current assets, investments, and loans and advances	125.81	107.17	118.91
Total	226.01	198.67	177.87

Each of the three Companies continued the rehabilitation and modernisation programme initiated a few years ago. The Finlay Mills spent a sum of Rs. 28.31 lakhs during the year for the acquisition of new assets. It installed one new high speed winding and warping unit and replaced certain automatic pirn winding machinery. Delivery of 38 ring spinning frames ordered previously is expected to commence shortly, and orders for a further 18 spinning frames and a new stenter and mercerising machine have been placed. Further some 16,000 spindles are being converted into modern drafting. The Swan Mills replaced during the year certain doubling and pirn winding machinery, besides installing a new high speed winding and warping unit. The delivery of the 35 ring frames ordered in 1961 also commenced and the frames were under erection as at the date of the balance-sheet. Approximately 10,000 spindles are being replaced and orders have been placed for two water tube boilers. Gold Mohur, which has spent much larger sums on renovation during the past few years than its sister concerns, installed 30 ring frames and a high speed winding and warping unit and replaced some doubling and pirn winding machinery during the year. The Company has just received 24 automatic looms which are under erection. Orders for further 24 looms of the same make have been placed, as also for 23 ring frames. Some 17,000 spindles are being converted to modern drafting.

The present market quotation for the Rs. 100 fully paid ordinary shares of these Companies and the net yield on an *ex-div.* price are set forth below:

	Price	*Net yield*
	Rs.	Per cent
Finlay	320.00	6.0
Swan	300.00	9.2
Gold Mohur	230.00	6.3

As regards the prospects for the three Companies for the current year, it is best to reproduce the following remarks of Mr. C. H. Campbell, Chairman of the Companies, made in the course of his statement to shareholders.

"It is usually expected of me at this time to give some indication of the prospects of your Company for the current year and, once again, I do not find this an easy task. At the time of writing this report, market conditions are satisfactory and there is a good demand for the products of your mills, both of cloth and yarn. The stock of finished goods is also at a satisfactory level. On the other hand, our cotton supply position is far from satisfactory and does not look like improving in the near future. Cotton prices are going up and import duty on raw cotton has now been reimposed. In addition, production costs are rising. All these factors make it difficult to take an optimistic view of the future and frankly I think it may be difficult to maintain profits at the same level as last year."

(In lakhs of rupees)

LOMBARD BANKING LIMITED

Lombard Banking Ltd., London, has accepted the participation of the Bank of Lebanon and the Middle East, Beirut, in the shareholding in the Lombard Bank Lebanon, S.A.L. Both the Banks will be represented on the Board of Lombard Bank Lebanon, S.A.L., which will remain under the same name and management, with the added advantage of the association with the Bank of Lebanon and the Middle East. The Boards of both the Banks are confident that this merging of interests in the Lebanon will prove of considerable advantage to their institutions.

TAXATION TELLS HEAVILY ON HINDUSTAN LEVER

FUTURE PROFITABILITY UNCERTAIN

GREATLY encouraging are the results of Hindustan Lever Ltd. (Chairman: Mr. P. L. Tandon, Bombay) for the year ended 31st December 1962. Net sale proceeds (that is, excluding excise duty paid) have improved sizably from Rs. 46.62 crores to Rs. 50.30 crores. Despite higher costs, gross profit has increased to Rs. 523.63 lakhs from Rs. 470.55 lakhs to which level it had dropped in the previous year from Rs. 502.07 lakhs in 1960.

We are told that soap sales were up by 4 per cent in value, though down by 2 per cent in quantity. Not all the brands fared well, but profits compared favourably with those in the previous year, with the non-soapy detergent *Surf* continuing to show healthy progress. Aided by a stable oil market, the Company did well in sales of and profits from *vanaspati*. An untimely frost, reducing the size of the crop, restricted the test-marketing of *Hima* peas. Cake sales were slightly lower, partly because of the reduced throughput at the oil mill when it was not economic to crush seed and partly because of utilisation of the cake in the manufacture of animal feeding stuffs. Cattle food sales and distribution were extended to some upcountry districts and Bombay. Exports showed an encouraging progress from Rs. 74 lakhs to Rs. 201 lakhs.

The table below compares the performance of the various products during the year with that in the previous three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Soaps, detergents and toilet preparations	2,484.82	2,374.52	2,092.76	1,869.39
Vanaspati, margarine and other foods	2,469.62	2,306.43	2,234.88	2,046.92
Glycerine and other by-products, animal feeding stuffs and oils	430.98	310.87	284.22	263.70

Unlike in the previous year, the Company has reaped during the year under review, in terms of gross profit, the benefits of larger turnover, as witness the improvement in profit-margin (ratio of profit to sales) from 10.1 per cent to 10.4 per cent, as against the setback of 1.5 per cent a year before. Net profit, however, has declined from Rs. 238.39 lakhs to Rs. 200.55 lakhs due to the sharp increase in provision for taxation from Rs. 192.76 lakhs to Rs. 282.35 lakhs, comprising Rs. 242.43 lakhs as normal taxation at the rate of 50 per cent (as against 45 per cent in the previous year), Rs. 6.50 lakhs as tax adjustments of previous years and Rs. 33.42 lakhs as tax on the bonus issue of 2,673,000 shares on 25th May 1962. The Company's tax burden of Rs. 282.35 lakhs does not include the incidence of Super Profits Tax for which the Directors have created a specific reserve of Rs. 70 lakhs out of the profit retained in business. Had an actual provision been made for S.P.T., the net profit would have been lower by that amount. The amount has been estimated pending clarification of the exact liability. Our enquiry reveals that the Company's liability, even after the modifications made in S.P.T., will be about Rs. 60 lakhs.

It is precisely because of the heavy tax burden that the Directors have been obliged to cut the dividend on the 10-rupee shares to 12 per cent per annum (including 6 per cent interim), taxable, on the increased capital of Rs. 824.36 lakhs (following the bonus issue) from 26 per cent for the previous year, which on the increased capital as it now stands would have worked out to 17.6 per cent. The dividend absorbs Rs. 98.92 lakhs, as against Rs. 144.82 lakhs a year before. Credit to the development rebate reserve has been reduced from Rs. 5.30 lakhs to Rs. 4.10 lakhs and so is the provision for gratuity from Rs. 7.58 lakhs to Rs. 1.53 lakh. The surplus retained in business is Rs. 96 lakhs, as against Rs. 80.69 lakhs a year before. But out of this, Rs. 70 lakhs have gone as S.P.T. reserve, leaving Rs. 26 lakhs as the balance to which is added the previous year's net surplus of Rs. 17.72 lakhs, after allowing Rs. 67.36 lakhs utilised (in addition to Rs. 2 crores capitalised from development reserve) for the bonus issue made in 1962, bringing the total to Rs. 43.72 lakhs. Out of this, Rs. 43.18 lakhs (Rs. 20 lakhs in the previous year) have been transferred to general reserve.

The Company's progress in the past four years is mirrored in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Sale proceeds, less excise	5,029.90	4,662.38	4,305.14	3,881.85
Other income	26.42	20.38	19.72	15.45
Cost of raw materials consumed	3,549.06	3,273.84	3,004.52	2,659.34
Other expenses	1,323.60	1,267.80	1,124.64	1,039.69
Including: Staff expenses	382.69	358.24	296.41	273.10

Retained in business	96.00	80.69	104.70	74.67

* Subject to deduction of tax.

The Company is doing its best in the manufacturing activities. It has reorganised smoothly its toilet preparations division and hopes for further progress in sales next year (1964). It has added, as an experiment, five more vegetables to its range of dehydrated vegetables. As dehydrated vegetables mean carrying as little as 3 to 20 per cent of the weight of fresh or canned vegetables, the Company has tendered and already supplied certain quantities to the Army. As regards animal feeding stuffs, a complete range of poultry feeds was introduced in Bombay and Poona in November last. It has shown encouraging progress and exploratory market surveys are now being carried out in other parts of the country. Exports have become very essential for the Company, especially as under the present restrictions its imports are directly related to its sales abroad. It is because of this that the Company has formed a wholly-owned subsidiary which will concentrate on developing export trade in the Company's products and also those of other companies, where the Company can offer specialised export and marketing techniques.

While the foregoing account is quite reassuring, we understand that rising costs present a serious threat to the Company's future profitability. Higher prices of groundnut oil and tin plates, increased freight, and enhanced import and customs duties continue to add to the Company's costs and expenses. On top of all this, taxation is having its full play. The near-term prospects are, therefore, uncertain and the Company, we are told, eagerly awaits the official decision on the plea of the Vanaspati Manufacturers' Association (Bombay) for an upward revision of *vanaspati* prices. The grounds on which the Association's case rests were covered in last week's issue of *Commerce* (*vide* page 893). It may, however, be mentioned that, according to the Association, the manufacturers find it extremely difficult now to continue production at normal level, as they have to buy groundnut oil at high prices and incur a loss of more than Rs. 3.50 per tin of 16.50 kg.

Uncertain profitability is equally responsible, as is the disturbed condition of the capital market after the budget, for the Directors' decision to put off the rights issue of 285,725 shares at a premium of Rs. 25 per share. As such, the dividend for 1962, on the increased capital, has been pruned sharply. The Directors have deemed it unwise to approach shareholders with the rights issue at the heavy premium of 250 per cent, when they are not sure whether the profit for the current year will cover even the reduced dividend of 12 per cent on the capital increased. It is now proposed to come out with the issue later in a totally new form.

The rights issue was intended for financing several new projects under active consideration, besides the milk scheme at Etah which is in hand. It would have brought Rs. 100 lakhs in foreign exchange (needed in addition to the loan of Rs. 25 lakhs from the I.C.I.C.I.) from the subscription by the parent Company, Unilever Ltd. to take care of the foreign exchange component of the milk scheme and other projects. The Directors are, however, taking practical steps in the meantime to proceed with some of the expansion plans already in hand, with the assistance of the proposed loan from Unilever Ltd. of about Rs. 20 lakhs in sterling to cover urgent foreign exchange needs. The plans include the milk scheme and the expansion of the dehydrated pea operation at Ghaziabad. The total cost of the capital projects approved during 1962 was Rs. 60.47 lakhs. Most of the plant for the milk project is on order and land is being purchased. Meanwhile, the *ghee* development unit at Etah continues to provide *ghee* for market tests. The milk project will be ready by the beginning of 1964. Dehydration of peas was extended at Ghaziabad and a beginning was made at Etah. Experimental quantities of dehydrated vegetables have been produced. A small canning unit has been set up at Ghaziabad for experimental purposes. The plant and equipment of a *vanaspati* factory at Howrah have been purchased in order to relieve the pressure created by the exports and also look after the need for substituting imported hard oils.

The Company's "own funds" now amount to Rs. 11.92 crores, comprising Rs. 8.24 crores as ordinary share capital, Rs. 62.62 lakhs as capital reserve and Rs. 3.05 crores as revenue reserves and surplus. Borrowings stand at Rs. 2.97 lakhs, bringing the total resources to Rs. 11.95 crores. As against this, gross block, which has increased from Rs. 6.83 crores to Rs. 7.52 crores, has been written down to Rs. 4.61 crores. Trademarks and goodwill are unchanged at Rs. 6.23 lakhs and so is the value of shares in subsidiary companies at Rs. 3,000. The total of current assets exceeds current liabilities, amounting to Rs. 5.94 crores, by Rs. 7.28 crores.

It is interesting to find that 11,158 shareholders, out of a total number of 14,008, whose holdings vary from one to 37, hold 401,841 shares, while 31 shareholders, whose holdings exceed 1,000, have a total of 87,838 shares. These figures relate to only Indian shareholders, among whom the L.I.C., which held 19,462 shares on 30th April 1963, is the largest single participant. Unilever Ltd. holds 90 per cent of the Company's capital.

Currently quoted at Rs. 36.65 *cum-div.* (final), the 10-rupee shares of the Company offer, on the *ex-div.* basis, a net return of 2.3 per cent per annum.

SHREE RAM MILLS' POLYSTYRENE PROJECT

Shree Ram Mills Ltd., Bombay, has promoted a new company called Hindustan Polymers Ltd., with authorised capital of Rs. 5 crores. The Company will establish at Visakhapatnam a factory for the manufacture of 1.5 million gallons per annum of alcohol from molasses, 10,000 tons per annum of styrene monomer from alcohol and benzene to be purchased from the steel plants in India and 7,500 tons per annum of polystyrene and its copolymers. The total cost of the project is estimated at Rs. 6 crores.

Messrs. Distillers Company Ltd., and its subsidiary, Messrs. Bx. Plastics Ltd., of Manningtree, U.K., will supply the technical know-how for the manufacture of polystyrene and its copolymers. They will participate in the equity share capital of the Company to the extent of Rs. 20 lakhs. Messrs. Universal Oil Products Company Inc., U.S., will supply the technical know-how for the manufacture of styrene monomer. Messrs. Power-Gas Corporation Ltd., of Stockton-on-Tees, U.K., will supply the plant and equipment on the turn-key job basis.

The Government has given the Company the necessary industrial licences and approved the terms of foreign collaboration as well as a total foreign exchange assistance of Rs. 2.36 crores for the purpose of import of plant and equipment, start-up chemicals and erection and commissioning charges. The Company has been authorised to issue 300,000 equity shares of Rs. 100 each, out of which 20,000 shares will be offered to Messrs. Distillers Company Ltd. of the U.K. and 20,000 shares to the C.D.F.C. Ltd., London. The balance of 260,000 shares will be issued in India, of which 127,400 shares will be offered for public subscription for cash at par in October next.

The Company has approached the C.D.F.C. Ltd. (London), I.C.I.C.I. Mercantile Bank Ltd., (London), and I.F.C.I., (New Delhi), for procuring a total amount of foreign exchange equal to Rs. 2.36 crores from them. It has acquired about 300 acres of land for the factory and purchased about 11 acres for the staff colony at Visakhapatnam. The supply of molasses, benzene, electricity and water are assured to the Company by the various governmental authorities. The factory site is well connected both by roads and railway lines for the transport of raw materials and finished products. The plant is expected to go into production in the course of the next two years.

The Board of Directors of the Company consists of Messrs. Kasturbhai Lalbhai (*Chairman*), Bhogilal Leherchand, Ramanlal Gokaldas Saraiya, Jehangir P. Patel, Pratap Bhogilal, N. K. Petigara and Ramnik K. Parikh. Two eminent persons from the State of Andhra Pradesh will be also on the Board of the Company.

KAMANI ENGINEERING'S SALES SPURT

BUT PROFIT-MARGIN SHRINKS

THE most striking feature of the working results of Kamani Engineering Corporation Ltd. [Managing Agents: Messrs. Kamani Brothers (Private) Ltd., Bombay] for the year ended 30th September 1962 is the spurt in sale proceeds from Rs. 268.68 lakhs to Rs. 465.46 lakhs. Two factors have contributed to this spurt. One is the 40 per cent increase in the production of galvanised and painted steel structures from 14,360 tonnes to 20,363 tonnes. It may be noted here that, in the previous year itself, the Company had adopted various measures to achieve greater production, as a result of which output in December 1961 improved to 2,107 tonnes, as against the monthly average of 1,197 tonnes in the year ended 30th September 1961. The monthly average for 1961-62 works out to a substantially higher figure of 1,697 tonnes. The value of manufactured products sold and erection work done is placed 50 per cent higher at Rs. 364.67 lakhs, as compared with Rs. 235.39 lakhs a year before. The other factor leading to the marked rise in turnover is the satisfactory working of the Company's agency activities, business on which account is said to have more than doubled during the year. Gross profit, too, has improved smartly from Rs. 24.81 lakhs to Rs. 39.11 lakhs. But the improvement is not in keeping with the increase in sales, as profit-margin (ratio of profit to sales) has receded to 8.4 per cent from 9.2 per cent, which level it reached in the previous year from 8.8 per cent in 1959-60. The setback is due to all-round increases in costs and expenses as detailed in the table accompanying this review.

The provision for depreciation has been raised from Rs. 5.85 lakhs to Rs. 8.01 lakhs and that for taxation has been doubled to Rs. 15 lakhs, due to the increase in profit as well as in the tax which was stepped up by five points to 50 per cent in the 1962-63 budget. Managing Agents' commission has gone up by Rs. 1.06 lakh to Rs. 2.66 lakhs. Net profit, after these allocations, is higher by Rs. 3.58 lakhs at Rs. 13.44 lakhs. But out of this, Rs. 5.35 lakhs are set apart as reserve for Super Profits Tax. The improvement in net profit has thus been more than wiped off. The transfer to reserves and provisions has, therefore, been increased only slightly from Rs. 1.50 lakh to Rs. 1.80 lakh and the dividend on the 10-rupee ordinary shares stepped up marginally from 9 per cent to 9.5 per cent per annum, subject to tax. The net benefit of increased turnover and gross profit, as measured in terms of plough-back to reserves and return to shareholders, is negligible, due to the big claim of taxation.

The following table compares the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1962	1961	1960	1959
Sale proceeds	465.46	268.68	236.90	167.61
Other income	11.33	8.66	5.20	16.79

Low	11.52	13.76	13.76	10.76	6.80

* Subject to deduction of tax.

Production trend during the year under review point to further improvement during the current year. Orders on hand for towers and structures at the end of 1961-62 amounted to 34,810 tonnes, as against 24,021 tonnes at the end of 1960-61, and the pending orders for erection of transmission lines were for 2,156 kilometres. The Company's research department has successfully tested several new and improved types of tower design in order to economise the weight and conserve steel. The railway electrification department of the Company has completed the construction of track electrification from Kharagpur to Tatanagar. The Company has participated in various tenders for further electrification work proposed to be done by the Railway Board. The Company's export drive is progressing well. During the past year, 4,471 tonnes of material, valued at Rs. 42.83 lakhs, were shipped and orders from New Zealand, Tanganyika and West Africa completed. The Company has participated in a big tender for the supply of 330 kV. transmission lines to the Nigerian Government. It has been licensed to raise its capacity for transmission line towers from 1,500 tons to 2,500 tons per month. It has also obtained the licence for fabricating in a month 500 tons of heavy structurals and a similar quantity of high tensile units of bolts, and is preparing the necessary schemes. Considering all this, the outlook for the current year can be deemed as bright.

The property left at Lahore during partition, which the Company wrote off subsequently, has now been divested from the Custodian of Evacuee Property, Pakistan. The implication of divestment is being examined, and hence the value of the property could not be ascertained and taken in the accounts of the past year.

The paid-up capital of the Company, including Rs. 15 lakhs in preference shares, remains unchanged at Rs. 59.98 lakhs. It is backed by reserves and surplus amounting to Rs. 12.04 lakhs. Borrowings from banks have gone up from Rs. 96.86 lakhs to Rs. 102.17 lakhs and, together with current liabilities and provisions amounting to Rs. 134.43 lakhs, bring the total indebtedness to outsiders to Rs. 236.60 lakhs, as against Rs. 186.78 lakhs a year before. The increased indebtedness is, however, easily taken care of by current assets, loans and advances aggregating Rs. 263.73 lakhs. The gross block has increased from Rs. 76.96 lakhs to Rs. 81.20 lakhs and is written down to Rs. 42.80 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 14.16 *cum-div.* On an *ex-div.* basis, they give a net yield of 5.1 per cent per annum.

SYNOPSES OF COMPANY REPORTS

Budge-Budge Jute Mills Co., Ltd.

(*Managing Agents*: Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—31st May 1963.

Working Results:

	For the year ended 31st October (In thousand rupees)	
	1962	1961
Sale of gunnies	2,61,42	2,15,62
Closing stock of finished goods	20,52	14,30
Gross profit (+) or loss (—)	+46,21	—9,36*
Transfer to Managing Agents' remuneration	2,43	48
,, ,, depreciation	6,09	6,30
,, ,, provision for taxation	19,40†	Nil
Net profit (+) or loss (—)	+18,29	—9,36*
Balance brought forward	—6,91	+34
Adjustments (credit items)	81‡	1,85‡
Appropriations:		
Total available balance	19,19	2,19
To adjustment of loss	8,91	34
To provision against anticipated loss on raw material stock and work-in-progress	Nil	72
To forfeited dividends paid	1	Nil
Transfer to development rebate reserve	2,37	Nil

High	168.00	198.00
Low	125.00	108.00

* Loss after providing for Managing Agents' remuneration and depreciation.
† Includes Rs. 5,30,000 for Super Profits Tax.
‡ This represents items like provisions no longer required; capital profits on block assets sold and unclaimed dividends, etc.

Extracts from the Directors' report: The working results reflect the favourable trading conditions which were experienced during the year under review, particularly during the latter six months. With world offtake of manufactured goods, especially hessian, running at a high level, production was progressively stepped up to the maximum by working accumulated and purchased loom hours, and a 48-hour working week was maintained throughout the year. Supplies of raw jute were available at more economic prices, and simultaneous business was transacted at profitable levels.

Provided a sufficient supply of quality jute is assured during the ensuing season, and a realistic parity can be maintained between the prices of jute and manufactured goods, the outlook for the current year is favourable. However, as a result of the recent Central and State Budgets, and the Emergency Risks Insurance, costs will inevitably increase.

The Government of India, Ministry of Food and Agriculture, continues to lease part of No. 1 Mill for storage purposes.

The Company's mill joined the Jute Buffer Stock Association in March, 1962 in accordance with the recommendations of the Central Government, and expenses incurred during the financial year in connection with the storage of raw jute under the scheme have been shown as a separate item in the accounts.

It has been decided to extend modernisation of the fine side drawing and spinning machinery upto 95 per cent of the mill's registered loomage at an estimated cost of Rs. 3,50,000.

Accounts in brief as at 31st October 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	45,00,000	Gross block	1,22,61,814
Reserves and surplus	14,62,753	—Depreciation	73,96,738
Other liabilities	54,46,287	Net block	48,65,076
		Current assets	64,01,731
		Investments	1,36,078
		Cash	6,155
	Rs. 1,14,09,040		Rs. 1,14,09,040

* Paid-up capital consists of 9,000— 7 per cent. cumulative preference shares of Rs. 100 each and 36,000 ordinary shares of Rs. 100 each.

Polson Ltd.

(*Managing Agents*: Messrs. Polson Agencies Private Ltd., Bombay.)

Twenty-fourth Annual General Meeting—14th June 1963.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1962	1961
Sale of butter, coffee, casein and flour	1,68,05	1,64,46
Closing stocks of raw materials and finished products	16,76	15,67
Gross profit	18,32	17,26
Transfer to Managing Agents' commission	1,31	1,41
,, ,, depreciation	2,64	2,69
,, ,, provision for taxation	7,78	5,90
Net profit ,, ,, super-profits tax	2,19	Nil
Balance brought forward	4,40	7,26
Adjustments	86	68
Appropriations:	Nil	21*

,, ,, equity	3,78	4,69
	(14%)	(17%)
Dividend per equity share	[Rs. 14.00]	[Rs. 17.00]
Carry forward	19	86

Market value of equity shares (in rupees):	1962	1961
High	198.00	188.00
Low	176.00	160.00

* This represents excess provision of income-tax of preceding year written back. † Only a small sum of Rs. 200.

Extracts from the Directors' report: *sales and profits*.—The Company's products, coffee and butter, are meeting with increasing competition in the internal as well as foreign markets. The export business has further suffered because of increasing import restrictions in the importing countries which were hitherto served by this Company.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	47,00,000	Gross block	71,20,721
Reserves and surplus	20,16,207	—Depreciation	31,58,867
Other liabilities	24,55,890	Net block	39,66,854
		Current assets	42,06,744
		Investments	7,177
		Cash	9,88,822
	Rs. 91,72,097		Rs. 91,72,097

* Paid-up capital consists of 20,000—6 per cent. taxable cumulative redeemable preference shares of Rs. 100 each and 27,000 equity shares of Rs. 100 each fully paid up.

Peermade Tea Co., Ltd.

[*Secretaries*: Messrs. Aspinwall & Co. (Travancore) Ltd., Alleppey.]

Twenty-fifth Annual General Meeting—31st May 1963.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1962	1961
Sale of tea	35,15	40,88
Closing stock	9,00	7,22
Gross profit	9,90	13,50
To Secretaries' remuneration	54	60
Transfer to depreciation	1,71	1,60
,, ,, provision for taxation	4,30	5,48
Net profit	3,85	5,82
Balance brought forward	72	27
Adjustments	14	12
Appropriations:		
Total available balance	4,21	6,31
Transfer to development rebate reserve	1	1
,, ,, capital reserve	Nil	23
,, ,, general reserve	Nil	1,00
To dividends (taxable) preference	10	10
,, ,, ordinary	3,40	4,25
	(20%)*	(25%)*
Dividend per ordinary share	[Rs. 2.00]	[Rs. 2.50]
Carry forward	70	72

Market value of ordinary shares (in rupees):	1962	1961
High	25.50	28.50
Low	18.80	22.20

* Includes interim dividend of 7½ per cent.

Extracts from the Directors' report: *Crop*: 1962 established a fresh crop record of 11,04,598 kgs., exceeding the 1961 record by 21,033 kgs.

Comparative Crop Results:

Year	Crop kgs.	Yield per hectare kgs.	All-in cost nP. per kg.	Average sale price nP. per kg.
1958	9,49,363	1,507	350.02	368.80
1959	10,40,288	1,651	363.78	409.88
1960	10,05,181	1,595	384.07	428.93
1961	10,83,565	1,720	371.54	420.00
1962	11,04,598	1,753	364.24	383.78

For 1963 the Manager has estimated a crop of 10,00,000 kgs. at an Estate expenditure of 290 nP per kgm.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	18,50,000	Gross block	46,47,926
Reserves and surplus	13,53,648	—Depreciation	19,04,122
Other liabilities	11,97,186	Net block	27,43,803
		Block in progress	4,384
		Current assets	12,32,278
		Investments	2,26,602
		Cash	1,93,192
	Rs. 44,00,834		Rs. 44,00,834

* Paid-up capital consists of 1,500—6 per cent. tax-free cumulative preference shares of Rs. 100 each and 1,70,000 ordinary shares of Rs. 10 each. Of the above 85,000 ordinary shares are allotted as fully paid-up bonus shares, by way of capitalisation of reserves.

NEWS IN BRIEF

THE Life Insurance Corporation of India has agreed to invest Rs. 6 crores every year in State land mortgage banks, according to Mr. Sriman Narayan, Member of the Planning Commission.

The Union Ministry of Transport and Communications will conduct, with the assistance of World Bank experts, a traffic survey, particularly coal transport, on the different routes in the country.

The first filling station-cum-motel of the Indian Oil Company built at Bhiwandi in Thana District was declared open on Tuesday this week by Mr. S. K. Wankhede, Maharashtra's Minister for Industries.

India will be exporting 12,500 tons of rails worth Rs. 50 lakhs to Sudan. The rails have been specially produced by the State-owned Bhilai Steel Works, according to the specifications given by the Sudanese railway authorities.

Public inquiries into the question of continuance of protection to the power and distribution transformers and electric motors industries after the end of this year will be held in the office of the Tariff Commission on the 28th and 29th inst.

The Union Government has set up two wage boards, one for the iron or mining industry and another for the limestone and dolomite mining industries. Mr. L. D. Dave is the Chairman of both the Boards whose headquarters will be at Calcutta.

The Union Government has no proposal to nationalise the inland water transport services. It was mentioned in certain Press reports published recently that the Government would nationalise these services in stages. The correct position is that the Transport Development Council has urged the State Governments to organise small operators of country-boats on a co-operative basis and encourage them to switch over to larger-sized mechanised crafts as early as practicable.

A committee of senior officials has been constituted by the Central Government to evolve definite guidelines for foreign collaboration agreements. The committee, which is presided over by Mr. S. S. Khera, I.C.S., Cabinet Secretary, has been asked to suggest measures designed to ensure greater co-ordination and pooling of information and experience among the different ministries and departments in matters relating to the various technical aspects of the projects and negotiations proper. It will also find out the ways and means of securing foreign capital and technical know-how for vital industries and reducing the strain on balance of payments due to excessive payments of royalties by the less essential industries.

The Government of India and the United States signed this week an agreement providing for four U.S. loans aggregating Rs. 13.8 crores for power and coal projects. A sum of Rs. 4 crores has been allocated for financing the foreign exchange cost of the expansion of the capacity of the Ramagundam thermal power station in Andhra Pradesh, besides Rs. 3.7 crores made available from P.L. 480 funds to meet the rupee cost of the project. About Rs. 3.7 crores will be given for financing the foreign exchange cost of a ropeway project in the Jharia coal fields and Rs. 2.4 crores for doubling the output of the Dugda coal washery. All the three foreign exchange loans are free of interest and are repayable over a period of 40 years with a grace period of 10 years. They carry a service charge of ¾ per cent per annum.

Under a pact concluded recently, India and Denmark have agreed to exchange information concerning the peaceful uses of atomic energy and research connected therewith, except information of a secret nature or information which either party is not free to exchange because it has been obtained from or developed in collaboration with a third party, or information which is of commercial value and which the party transmitting it desires to be subject to a special arrangement. They will also arrange for the visits of scientists and technical personnel as may be mutually agreed upon from time to time and will extend facilities for the purchase of nuclear materials and equipment required by either party to the agreement. Lastly, the two countries will cooperate with each other in the implementation of such joint projects as may be mutually agreed upon from time to time.

* * * *

From Abroad

The U.S. House of Representatives has accepted the proposal for increasing the national debt limit to a record $309,000 million.

A consortium of West European and British bankers have agreed in principle to grant a $20-million loan to the Argentine Central Bank.

All flour and rice mills in the United Arab Republic have been nationalised with effect from the 19th inst., under a decree issued by the Government.

The Ceylon Government has been assured by Shell, Esso and Caltex that they will do all they can to ensure the supply of petroleum on the basis of quotas allocated to them for the six-month period March-August 1963.

A phosphoric acid and fertiliser plant is to be set up at Le Boucau near Bayonne in France by the big U.S. chemical firm of W.R. Grace, in association with a group of French companies, using the lacq natural gas as its raw material. The factory is expected to be completed by the end of 1964.

The total consumption of coffee in the six Common Market countries is expected to touch 877,000 tons or even 1.01 million tons by 1970, according to a forecast made by the European Marketing Research Institute; the quantity actually consumed during the years 1957 to 1959 was no more than 521,000 tons on an average per annum.

The Australian Government's scheme of tax incentives to encourage exports will be extended for a further period of five years from the end of next month. The scheme was introduced in 1961. It provides for pay-rool tax rebates for companies which increase the level of their exports and a special income-tax allowance to cover expenditure incurred in developing overseas market.

The Council of Ministers of France has approved of a scheme to raise an extra Frs. 774 million in taxation to finance part of the mid-term budget of Frs. 2,191 million. The railway passenger fares will go up by 11.6 per cent, rail freight rates by 3.75 per cent and electricity tariffs by 7 per cent, while gas tariffs is proposed to be reduced by 5 per cent.

The Government of West Germany will extend a loan of 20 million D-marks to Ghana to finance the construction of a bridge across the Volta river near Tefle. This has been provided in a financial aid agreement, which, together with a shipping protocol was signed at Bonn recently. Questions pertaining to civil aviation have been settled by an exchange of letters.

A fresh bid to secure lower selling prices in the U.K. for imported jute hessian cloth for bagmaking has been made by the U.K. Jute Goods Association. The Association has urged the Board of Trade to reduce the jute control "mark up" on standard hessians from 20 per cent to 10 per cent and to extend benefits to certain other cloths. This plea has been supported by the Government of India and the Indian Jute Mills' Association.

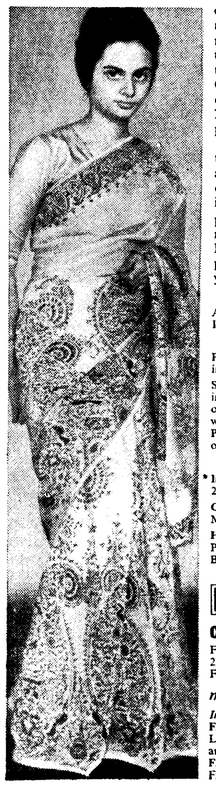
The French Cabinet has ratified tax conventions negotiated between France and Monaco. Accordingly, the customs controls imposed by the former on the latter's frontier will be lifted. The companies of Monaco which do more than a quarter of their business outside the principality will now pay to Prince Rainier a company tax at 15 per cent of profits, going upto 40 per cent. The French men residing in Monaco are to pay income-tax to France unless they had established their residence more than five years ago.

A scientific advisory council to the West German Ministry for Economic Co-operation has been formed to advise the Ministry on all matters of development aid policy and work out expert opinions and recommendations. Twenty-five scientists, including some with international reputation, want to make their contribution to development aid independent of any kind of State control. The team of scientists includes professors of economic and social sciences, ethnology, pedagogics, geography and soil research and other branches of science. The scientists, who have been studying problems of the developing countries for many years want to work out a theory of foreign aid policy which can be actually applied to all developing countries, though the individual chances of development are widely varying.

PERSONAL

MR. D. R. Sundaram, Officer on Special Duty in the Union Commerce and Industry Ministry, has assumed charge as Chief Controller of Imports and Exports, in place of Mr. K. T. Satarwala.

Mr. D. D. Desai has retired from the Managing Directorship of the Hindustan Electric Company.



Mr. Mohamed Yaqub and Mr. S. Nazar Mohamed have been elected Chairman and Vice-Chairman, respectively, of the Tanners' Federation of India for the year 1963.

Mr. L. M. Nadkarni, Joint Secretary, Ministry of Home Affairs, has been appointed Administrative Officer of the Port of Mormugao (Goa), *vice* Mr. T. S. Parasuraman.

Mr. Robert B. Evans, a distinguished agricultural economist and authority on cotton and erstwhile Executive Secretary of the International Cotton Advisory Committee, has assumed charge as Agricultural Officer representing the U.S. Agriculture Department at Bombay *vice* Mr. Roy Sellers.

ARE YOU WEARING Colour-Chem ?

Look around. It's just possible that COLOUR-CHEM is in your clothes, or on the painted walls of your room, or in the fascinating tapestry of your drawing room, and may be in these very printed words you are now reading.

Colour is so much around us that quite often we are not even aware of it. But the pleasant contribution it makes in colouring our 'existence' into a thrill, is a fact—as true as the fact that COLOUR-CHEM is an enterprise very much drenched in colours! Making colours is the sole business of COLOUR-CHEM.

Colour making is a basic industry, in that it lends a dynamic strength to our mammoth Textile Industry by making available an abundant supply of colours of countless kinds and varieties. It's a vital industry, too, being an integral part of the Chemical and Pharmaceutical Industry.

COLOUR-CHEM's speciality is "Pigment" colours, a particular kind that is supremely popular for printing textiles all over the world—besides being a prime material for such industries as Paints, Printing Inks, Rubber and Plastics.

This is a highly technical job, the making of "Pigment" colours. But the technicalities posed no problem, because when COLOUR-CHEM thought of making pigments in the country, they brought the experience of Germany's oldest leaders in the manufacture of dyes and pigments—who not only lent a helping hand, but actually participated in the project. That's how German technical 'know-how' and Indian skill combine and work continuously, giving perfection to the pigments before they are released for the markets. And they are working across the seas, too, for in the laboratories of German collaborators, unceasing research goes on and the benefit of all new discoveries and improvements in the processes is at once shared.

The introduction of indigenous makes of "Pigment" colours by COLOUR-CHEM in 1959 made history in the realm of textile printing in India, because the pace of popularity it set in motion for itself, shows no sign of relaxing. Pigment prints are the preference of the people—more and more, and, more and more. Nothing abnormal, nothing like a passing-phase, for printing with pigments is popular all over the world, and easily snatches a lion's share of the total print order. In countries like Japan it is fantastic.

COLOUR-CHEM cannot yet meet the total demand. A few essential raw materials and foreign exchange are the handicaps beyond control. But one thing is certain, that despite all the limitations COLOUR-CHEM produces a wide range of "Pigment" colours to meet the increasing demands of the consuming industries and that too, at a reasonable price. Of course indirectly COLOUR-CHEM is also very much in Exports—through exports of pigment printed fabrics.

So, when you see the fascinating world of man-made colours around you—spectacular prints on your fabrics, colourful inks in your favourite magazines, red plastic balls for children—remember that COLOUR-CHEM, India's largest makers of famous pigments, is so much a part of your day to day life.

Notices

HERCULES INSURANCE COMPANY LIMITED

(Incorporated in India)

Registered Office:
16, HARE STREET, CALCUTTA

NOTICE IS HEREBY GIVEN THAT THE TWENTY-EIGHTH ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta, on Friday, the 21st June, 1963, at 3 p.m., for the purpose of:

1. Considering the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st December, 1962.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring.
4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. To appoint a Director in the place of Mr. L. V. Apte who holds office as a Director of the Company only up to the date of this general meeting. The Company has received notice under Section 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution:

   "Resolved that Mr. L. V. Apte be and is hereby appointed a Director of the Company."

6. To appoint a Director in the place of Mr. W. Harpham who holds office as a Director of the Company only up to the date of this general meeting. The Company has received notice under Section 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution:

   "Resolved that Mr. W. Harpham be and is hereby appointed a Director of the Company."

7. To appoint a Director in the place of Mr. A. D. Mango who holds office as a Director of the Company only up to the date of this general meeting. The Company has received notice under Section 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution:

   "Resolved that Mr. A. D. Mango be and is hereby appointed a Director of the Company."

8. To consider and if thought fit to pass with or without modifications the following resolution which will be proposed as an Ordinary Resolution:

   "That subject to the approval of the Central Government this meeting approves that Mr. E. K. Srinivasan, Managing Director of the Company, be admitted to the benefits of the Company's Executive Staff Superannuation Scheme introduced with effect from 1st January 1963 and that the agreement dated 9th May 1962 containing the terms and conditions of the appointment of the Managing Director be amended in accordance with the Supplemental Agreement dated 7th May 1963 made between the Company of the One Part and Mr. E. K. Srinivasan of the Other Part (a copy of which was produced at the meeting and signed by the Chairman hereof for purpose of identification) or on such other terms as may be agreed between the Central Government and Mr. E. K. Srinivasan and the Board of Directors of the Company."

9. To consider and if thought fit to pass with or without modifications the following resolution which will be proposed as an Ordinary Resolution:

   "Resolved that the Board of Directors in consultation with Messrs. Lovelock & Lewes, the auditors of the Company shall appoint to audit the accounts of the Branches of the Company at Karachi, Nairobi, Penang and Singapore such person or persons as are qualified for appointment as auditors under Section 226 of the Companies Act or are accountants duly qualified to act as auditors of the accounts of the Branch Office in accordance with the laws of the country in which the Branch is situate on such terms and conditions together with such remunerations as may be fixed by the Board of Directors."

The Share Transfer Books will be closed from the 14th June, 1963 to the 21st June 1963, inclusive.

By Order of the Board,
E. K. SRINIVASAN,
Managing Director.

362, N.S.C. BOSE ROAD,
MADRAS, *16th May*, 1963.

Note: 1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register on the 21st June, 1963.

Explanatory statement as required by Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

THE CHAMPDANY JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting (being the Seventy-third Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 2, Netaji Subhas Road, Calcutta, on 11th June, 1963, at 12 noon, to transact the following business:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1963, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To confirm the Interim Dividend paid on 26th September, 1962.
3. To declare a Final Dividend.
4. To appoint a Director in the place of Mr. R. N. Bangur, who retires by rotation.

AS SPECIAL BUSINESS

5. To consider, and if thought fit, to pass the following Special Resolution for which special notice as required under Section 261(2) of the Companies Act, 1956, has been received by the Company.

   As a Special Resolution

   "That Mr. N. S. Coldwell, a retiring Director and an employee of James Finlay & Co., Limited, the Managing Agents, be and is hereby re-appointed to the Board."

6. To consider, and if thought fit, to pass the following Resolution as an Ordinary Resolution—

   "That the Board of Directors of the Company be and is hereby empowered to borrow moneys for the purpose of the Company's business in excess of the aggregate of the paid-up Capital of the Company and its free reserves but not exceeding Rs. 90 lacs and excluding temporary loans from the Company's Bankers in the ordinary course of business."

7. To appoint Auditors for the current year and to fix their remuneration.

The Share Register of the Company will be closed from 1st to 11th June, 1963, both days inclusive.

Dividend Warrants will be issued and posted to Registered Shareholders only. Persons who have acquired shares are advised to effect registration of scrip in their names before 1st June, 1963.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, NETAJI SUBHAS ROAD,
CALCUTTA, *16th May*, 1963.

Notes:

(1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member. The instrument appointing the proxy shall be deposited at the Registered Office of the Company not less than 48 hours before the time for holding the meeting.

(2) The dividend, if declared, will be paid on or after 11th June, 1963, to those shareholders so entitled, whose names appear in the Company's books on 11th June, 1963 or to their mandatees.

(3) **Explanatory Statement Regarding Item (5) and Item (6).**

Item (5): Mr. N. S. Coldwell was appointed a Director of the Company by a Sepcial Resolution of the Shareholders passed at the Annual General Meeting of the Company held on 16th June, 1961. He retires at the Annual General Meeting to be held on 11th June, 1963, and special notice dated 10th May, 1963, of the intention to propose the above resolution as a Special Resolution has been received by the Company. Special notice has been given in order to comply with the provisions of Sections 190 and 261 of the Companies Act, 1956, as Mr. N. S. Coldwell is an officer in the employment of the Managing Agents.

Item (6): Under Section 293 of the Companies Act, 1956, the Board of Directors has powers to borrow moneys (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) only to the extent of the aggregate of the paid-up capital of the Company and its free reserves. With the recent reduction of Capital by Rs. 29,58,200, the limit is found to be short of the requirements of the Company's business and an Ordinary Resolution is necessary to give the Board of Directors the authority to borrow moneys in excess of the limit placed by Section 293. The limit of Rs. 90 lacs has been proposed in accordance with the Shareholders' resolution dated 18th November, 1925 as it is considered that the same requirement applies today.

Interest of Directors and Managing Agents

The Directors and Managing Agents of the Company are interested to the extent of their shareholdings as set out below:—

Mr. A. I. Murison	50	shares
Mr. N. S. Coldwell	55	"
Mr. B. Gill	50	"
Mr. R. N. Bangur	275	"
Mr. D. N. Kapur	50	"
James Finlay & Co., Limited	1,36,575	"

PHILIPS INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING

THE THIRTY-THIRD ANNUAL GENERAL Meeting of the Members of Philips India Limited will be held on Friday, June 28, 1963, at 11 a.m., at the premises of the Bengal Chamber of Commerce and Industry, Room No. 3, 6 Netaji Subhas Road, Calcutta 1, to transact the following business:

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the year ended December 31, 1962.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. To transact any other ordinary business of an Annual General Meeting.

The Register of Members of the Company will be closed from June 7, 1963 to June 28, 1963, both days inclusive. The Dividend, if approved, will be payable on or after July 15, 1963 to those shareholders whose names are on the Register of Members on June 28, 1963, or to their mandatees.

May 7, 1963.

7, JUSTICE CHANDRA MADHAB ROAD,
CALCUTTA 20.

Notes: 1. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself: such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

2. Shareholders are requested to notify the Company immediately of any change of address.

BENGAL POTTERIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-first Annual General Meeting of the Bengal Potteries Limited, will be held at the Registered Office of the Company at 45, Tangra Road, Calcutta, on Friday the 14th June 1963, at 4 p.m., to transact the following items of business:—

(1) To receive and adopt the Directors' Report, the audited Balance Sheet and the Profit and Loss Account for the year ended 31st December, 1962.

(2) To declare a Dividend.

(3) To elect Directors in place of those retiring.

(4) To consider and if thought fit to pass the following Resolution as an Ordinary Resolution:—

"RESOLVED that the Members of the Company approve of the appointment and continuation as a Director of Bengal Potteries Ltd., of Dr. H. L. Dey who has attained the age of over 65 years, and declare that the age limit of 65 years as specified in Section 280 of the Companies Act 1956 shall not apply to him."

Explanatory Statement Under Section 173(2) of the Companies Act 1956, Regarding Ordinary Resolution Under Section 281.

Special notice has been received by the Company on 17th May, 1963 of this Resolution from three of its Members under the provision of Section 281 of the Companies Act 1956.

Dr. H. L. Dey will retire by rotation at the next Annual General Meeting of the Company. He has attained the age of over 65 years. If appointed Dr. H. L. Dey will get remuneration from the Company as provided in its Articles of Association, and he is interested to that extent. Save as aforesaid no other Director or the Managing Agents have any concern or interest in the above resolution.

(5) To appoint Auditors for the current year and to fix their remuneration.

The Share Transfer Register of the Company will be closed from 7th June to 2nd July 1963, both days inclusive.

A member entitled to attend and vote at a meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,
BHARAT RAM BHAGAT & COMPANY,
Managing Agents.

45, TANGRA ROAD, CALCUTTA.
Dated, 21st May, 1963.

THE DHUNSERI TEA COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-seventh Annual General Meeting of THE DHUNSERI TEA COMPANY, LIMITED will be held on Monday the 24th June, 1963 at 2.30 p.m., at the Registered Office of the Company, No. 5, Mission Row, Calcutta 1, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December, 1962.
2. To declare Dividends.
3. To re-appoint a Director who retires by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 17th June to 24th June, 1963, both days inclusive.

By Order of the Board,
S. L. DHANUKA,
Managing Director.

CALCUTTA, *the 15th May*, 1963.

N.B.—1. A member entitled to attend and vote may appoint a proxy who need not be a member.

2. Dividends as recommended by the Directors, if approved at the Annual General Meeting, will be paid to those members whose names will appear on the Company's Register on the 24th June, 1963 or to their mandatees.

TREND OF MARKETS

MONEY SLIGHTLY BETTER

(From Our Own Correspondent)

BOMBAY, 22nd *May*

The inter-bank call rate in the short-term money market receded from 5½ to 4½ per cent during the week under review. But this decline was due not to any abatement of demand for funds, which actually continued to be pretty heavy, but to a slight improvement in the supply position, following influx of funds from abroad on account of foreign banks. Indeed, it was reported that, even at the high rate of 4½ per cent, a sizable part of the demand for money was not met easily. Conditions at Calcutta were slightly easy, with call rate hovering around 4½ per cent.

The response to the 91-day Government of India Treasury Bills, tenders for which opened on Thursday the 21st inst., was poor, the total amount offered being Rs. 2 crores, as against Rs. 2.62 crores in the previous week. This was also the amount invited and accepted. The average rate of accepted tenders was lower at Rs. 2.355 per cent per annum, as against 2.360 per cent a week before. The Intermediate Treasury Bills, however, evoked more encouraging support. The Bills actually sold from the 15th to 18th inst. amounted to Rs. 1.65 crore, as against Rs. 13 lakhs.

The total foreign assets of India rose sharply by Rs. 6.56 crores to Rs. 119.13 crores during the week ended 17th May 1963. The whole of this rise was accounted for by balances held abroad which aggregated Rs. 14.05 crores. Foreign securities held in the Issue Department of the Reserve Bank, however, were unchanged at Rs. 105.08 crores. Loans and advances to scheduled banks fell by Rs. 21.05 crores to Rs. 24.92 crores, the decline in those against usance bills alone being of the order of Rs. 13.24 crores. Deposits of scheduled banks with the Reserve Bank, on the other hand, rose by Rs. 3.99 crores to Rs. 83.52 crores. Notes in circulation declined by Rs. 22.13 crores to Rs. 2,321.96 crores.

There was a fall of just Rs. 3.87 crores to Rs. 1,589.17 crores in the total credit made available by scheduled banks during the week ended 10th May 1963. But since the deposits declined more sharply, by Rs. 5.08 crores to Rs. 2,232.25 crores, borrowings from the Reserve Bank were larger by Rs. 5.63 crores at Rs. 45.83 crores, of which those against usance bills accounted for Rs. 30.69 crores, a drop of Rs. 75 lakhs. Investments receded by Rs. 11.44 crores to Rs. 606.85 crores.

The Gilt-edged market continued to rule steady. Short-dated and selected medium maturities were in request. Subscription lists for the 4 per cent Loan 1969 and 4½ per cent 1986 were closed at the close of business on the 18th inst. The total amount subscribed by tender of 3½ per cent Bonds 1963 and 3 per cent Loan 1963-65 was Rs. 138.79 crores approximately—Rs. 85.69 crores for 4 per cent Loan 1969 and Rs. 53.10 crores for 4½ per cent 1986.

In the foreign exchange market, the banks' selling rate per 100 dollars was higher by 25 nP at Rs. 478.25, while their buying rate was unchanged at Rs. 474.75. In New York, the pound sterling eased a little *vis-a-vis* the dollar, the spot rate per £ sterling by 0.030 cent to 279.940-279.970 cent and the three months' forward by 0.060 cent to 279.440-279.470 cents.

GOLD DRIFTS LOWER

(From Our Own Correspondent)

BOMBAY, 22nd *May*

While silver moved both ways and closed quietly steady, gold drifted lower this week. Sovereign was maintained at the last week's level.

From the start itself, gold was lower by two points at Rs. 114.50. As the week progressed, it sagged further to close today at Rs. 113, representing a fall of Rs. 3.50 over the week. This sagging tendency followed renewed fears of fresh measures to curb the rise in the price of gold and lack of buying enquiry at higher levels. The easier tone was unaffected by reports today of the Customs authorities having seized in Bombay gold bars, gold utensils and jewellery worth Rs. 10 lakhs, hidden under the floor of a residential flat in a posh locality of the city. But for once, on Friday the 17th inst., when it was quoted higher at Rs. 84, sovereign was maintained throughout the week at the last week's closing of Rs. 83.

Silver opened one point higher at Rs. 233 and, after moving narrowly on the next two days, reached Rs. 234.50 on Monday the 20th inst. This improvement was not, however, maintained, as the price eased to close at the last week's level of Rs. 232. The daily average arrivals increased this week to 18 bars from 14 bars in the previous week, but offtake showed a greater improvement to 14 bars from nine bars.

The following table shows the trend of prices during the week under review:

	22-5-63 (closing)	High	Low	15-5-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine) ..	232.00	234.50	232.00	232.00
GOLD				
Ready (.996 fineness) ..	113.00	114.50	113.00	116.00
Sovereign	83.00	84.00	83.00	83.00
London—				
Gold	250s.7½d.	250s.7½d.	250s.6¾d.	250s.7½d.
Silver Ready ..	110¾d.	110¾d.	110¼d.	110¾d.
Silver Forward ..	110¼d.	110¼d.	110¼d.	110¼d.
New York—				
Silver	128.4 cents	—	—	128.4 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

London silver crossed the last week's highest level of 110½d. to touch a new peak of 110¾d., with the forward quotation improving from 110½d. to 110⅞d. In New York, the price was unchanged at 128.4 cents. Ready gold in London moved between 250s. 6¼d. and 250s. 7¾d. and closed at the last week's level of 250s. 7½d. The dollar price for gold eased from $35.08½ to $35.07¾.

* * * *

About 125 goldsmiths in Bombay demonstrated their protest against the Government's gold policy by going on a three-day hunger strike from Thursday the 16th inst. On the same day, their deputation presented to the State Labour Minister, Mr. M. G. Mane, a seven-point memorandum which the Minister promised to consider sympathetically. Some 4,000 goldsmiths from all over the country yesterday marched through the streets of Old and New Delhi carrying placards which said "withdraw gold control or give us work" and assembled outside the Prime Minister's house to stage a peaceful demonstration. The procession and the demonstration were organised by the All-India Swarnakar Sangh. Representatives of the demonstrators met the Premier and presented him a memorandum which demanded (i) that Government-certified pure standard gold should be made available to goldsmiths from Government agencies, (ii) that representation be granted to goldsmiths and artisans on the Gold Control Board, and (iii) that the highest priority be accorded to alternative employment to goldsmiths, artisans and workers rendered unemployed by the Gold Control Order. While conceding that the Order had caused sufferings, Mr. Nehru was said to have asked goldsmiths to accept the change with patience in the larger interests of the country.

The Union Government has amended the Wealth Tax (Amendment) Rules in the light of the Gold Control Order. For the purposes of filing the return of net wealth in form "A," it has been laid down that (*a*) gold means gold, including its alloy whether virgin, melted, remelted, wrought or unwrought, in any shape or form, of a purity not less than nine carats, and includes gold coin (whether legal tender or not), any gold ornament and any other article of gold, and (*b*) gold ornament means any article in a finished form, meant for personal adornment, or for the adornment of any idol, deity or any other object of religious worship, made of, or manufactured from, gold, whether or not with stones or gems, real or artificial, or with pearls, real, cultured or imitation, or with all or any of them, and includes parts, pendants or broken pieces of gold ornament.

The Government has notified that, except with the general or special permission of the Reserve Bank, no person shall bring or send to India any gold or silver or jewellery. A Press release issued in this connection says that articles shown under Serial No. 256 and 258 of Part IV of Section 11 of the Import Trade Control Schedule have been deleted. Further, Serial Numbers 257, 259 and 262 of Part IV have been modified.

Official sources in New Delhi denied on Saturday the 17th inst. newspaper reports that the Government was considering the question of permitting *mangal sutras* and wedding rings to be made in 22-carat gold. It was stated that no difficulty had been experienced in making such articles in 14-carat gold.

COTTON FUTURES RECOVER

(From Our Own Correspondent)

BOMBAY, 22nd *May*

The cotton futures market ruled firm during the week under review. The firmness was attributed to two factors: (1) the feeling that tenders against the maturing May contract which aggregate 2,500 bales todate, on the remaining notice days would be small, (2) apprehension that the import allocation for U.S. cotton would be delayed. Support induced by these considerations led to a rally in futures. The Jarilla May contract firmed up from the opening rate of Rs. 722.25 per three quintals to Rs. 737 on Friday, the 17th inst. The August contract rose from Rs. 717.50 to Rs. 724.50. These levels, however, could not be maintained. Profit-taking led to a decline in prices. Speculative selling induced by the prospect of large-scale import of U.S. cotton and the early start of the monsoon accelerated the downward trend. Futures values consequently receded in subsequent sessions. Nevertheless, todays closing rates are higher than last week-end closings. The trend of prices of the contract during the week is indicated below:

	Opening	*High*	*Low*	*Closing*
Jarilla May ...	722.25	737.00	722.25	733.00
Jarilla August ...	717.25	724.50	716.25	719.50

In the spot market, mill buying continued to be restricted. Demand, however, tended to show signs of revival towards the close of the week. Several mills purchased sizable lots of popular quality cotton such as L.147, CO2, Digvijay, Kalyan and Wagad. Prices were more or less maintained.

Overseas demand for exportable qualities were slack. The trade is optimistic that Government would be favourably inclined to accept its suggestion that the unutilised portion of the share allocated to co-operative societies of the export quota for Bengal *Deshi* should be converted into a general quota.

There was good spinner demand for foreign cotton, especially Egyptian, Sudan and East African cotton. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Kalyan 970; CO2 1,650; Wagad 1,100.

Karnak 151 1,820; Elpaso 1,550; California 1.355.

Sudan G4S 1,455.

A divergent trend was witnessed in the Karachi cotton futures market. While the maturing May contract edged higher on scattered support, the July contract tended to recede, thanks to lack of domestic mill demand and export interest. The May contract closed 50 nP higher at Rs. 75.50, as compared with Rs. 75 last week-end. The July contract shed 40 nP over the week to finish at Rs. 73.40.

Fully steady conditions prevailed in the Liverpool cotton futures market. Activity was limited owing to the absence of hedging. Price movements were narrow. Mill demand for ready cotton centred round Mexican and South American cotton. American type cottons of medium staple were also in demand. The following are the latest available quotations—in pence per lb.—from Liverpool:

May 23.65; July 23.05; October 23.00; May (Sudan) 29.00.

Cotton futures in New York ruled listless during the week. The continued uncertainty about cotton legislation made for slow trading. Prices moved with in narrow limits.

The final estimate of 1962-63 U.S. cotton crop puts production at 14.80 million bales, as against 14.33 million bales last season and the 1950-59 average of 13.55 million bales. The yield per acre is estimated at 457 lbs., as against 438 lbs. in 1961-62 and the ten-year (1950-59) average of 362 lbs.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago:

(In cents per lb.)

	21-5-63	14-5-63	7-5-63
May	35.95	34.95	34.80
July	—	33.28	33.42
October	33.40	32.53	32.65
New York Spot ...	32.45	35.95	35.95

TEAS EASY

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 16*th May*

A total of 927,000 kgs. was on offer in Sale No. 20 held on Tuesday the 14th inst. Quality from all districts showed a further seasonal decline. There was fair general demand and prices again followed an easier trend. Low medium and medium descriptions met with useful enquiry but were easier by 10/20 nP., fannings selling somewhat better than their equivalent brokens. Good mediums were readily absorbed, though they were lower with quality. The few best liquoring highgrowns sold well, although registering a decline following quality, whilst other brokens took a drop of 20-40 nP. per kilo. Fannings were generally barely steady. Clean black leaf descriptions and teas of unorthodox manufacture sold quite well, although following the lower trend of the market. Whole leaf grades were taken up at easier rates, with the more stylish kinds again selling well. There was good demand for the small selection of tippy teas on offer.

Quotations (per kg.) were:

	1963	1962
	Rs.	Rs.
Low mediums	4.10-4.30	3.90-4.20
Mediums	4.35-4.70	4.20-4.80
Good mediums	4.75-5.40	4.85-5.05
Nilgiri B.O.P.	4.60-8.00	4.50-7.40

The average price realised in sale No. 20 was Rs. 4.51 per kilo as against Rs. 4.70 a week ago and Rs. 4.59 in the corresponding sale last year.

In Dust Sale No. 20 held today, 370,000 kgs. were offered. The market met with good demand at much lower rates. All medium types declined by 30-50 nP. Highgrowns followed the general trend of the market and eased up to 30 nP. Residuals sold well at about 20 nP. below last rates. Clean black grainy descriptions followed the general trend of the market and eased 30-50 nP.

The average price realised in dust sale No. 20 was Rs. 4.03 per kilo, as compared with Rs. 4.35 a week ago and Rs. 3.67 in the corresponding sale last year.

Colombo: In this week's sale the market opened to a good general demand, but prices were irregular throughout the sale. Best liquoring highgrowns were fully firm and sometimes dearer, whilst the plainer kinds and thin liquoring sorts were easier. Mediums and lowgrowns sold at firm rates.

London: North Indian and other growths: In Monday's sale demand was good but selective. Best Assam fannings sold at dearer rates whilst medium descriptions were irregular and occasionally easier. Thin plain teas were firm and plain B.P. is quoted at 2/10d.

Ceylon and South Indians: In Tuesday's Auction there was less demand and prices were lower.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:—

"*Sale No.* 21: 877,000 kgs. offered. Good demand. Plainest sorts easier. Low medium and medium brokens irregular, and often steady. Fannings 10 to 15 nP. lower. Good mediums 20 nP. easier. Highgrowns irregular and easier. Unorthodox lower."

SETBACK IN ART SILK YARNS

(From Our Own Correspondent)

BOMBAY, 22nd *May*

In the absence of fresh buying support at higher levels, the last week's rally in art silk yarns proved short-lived, as the basic factor of excess supplies reasserted itself and led to a renewed setback in prices. The end of the lock-out by the National Rayon Corporation Ltd. at its Kalyan works added the bearish tendency. Staple fibre yarn was also quiet at higher levels. Cotton yarns remained unchanged.

In art silk yarns, weakness was more pronounced in National Rayons, owing to the lifting of the lock-out. 150D dropped from Rs. 11.62 to Rs. 11.48 a kilo and 120D from Rs. 11.55 to Rs. 11.26. S.I. Viscose 150D moved up from Rs. 12.91 to Rs. 13.07, but 120D closed 6 nP lower at Rs. 13.40. Century 100D declined by 55 nP to Rs. 13.40. Among 2 x 40 staple fibre yarns, Century were shaded at Rs. 8.12, as against Rs. 8.14 a week ago, but Kohinoor advanced from Rs. 8.51 to Rs. 8.73. Excepting 30s Madura which eased by 12 nP to Rs. 29.50, cotton yarns were maintained at the last levels.

The Government of India has decided that the French count system will be fully applied to the manufacture of cotton yarn from October next, when the industry will start producing yarn exclusively in hanks of 1,000 metres and in bundles of 2.5 kg. or 5 kg. Yarn for export will, however, continue to be manufactured according to the overseas customers' specifications and packed and invoiced in the manner they desire.

It is reported that, in order to prevent recurring accumulation of stocks, the Union Government has decided to allow rayon spinners to sell in the open market all the art silk yarn that may not be lifted by weavers within the prescribed time. The Government has drawn a procedure for consumers to lift their allotments. According to the procedure, every allottee of indigenous art silk yarn with six-monthly allocation of 36 cases or more will have to take delivery against the quota every month latest by the tenth day of each month. As regards allotments for April last, a deadline of 31st May 1963 is said to have been fixed. Allottees with less than 36 cases must lift at least 50 per cent of the allocation within the first quarter of the six-monthly period and in no case later than the tenth day of the next quarter. The same procedure is to be followed for the balance of the allocation in the second quarter. Genuine difficulties of allottees have to be reported to the Art Silk Yarn Distribution Committee by the 31st inst. in regard to the April allocation and by the tenth of the succeeding month in respect of the balance of the allocation.

When a weaver is found to be in default of lifting his allocation, his monthly or quarterly allocations, as the case may be, will automatically lapse, and the spinner concerned will be free to dispose of the yarn to buyers of his choice at prices fixed by the Textile Commissioner. A defaulting spinner, on the other hand, will be required to effect delivery within a week or such other period as may be fixed by the Complaints Committee, and the allottee will have to lift the material within that time.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	22-5-1963	15-5-1963
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	11.48	11.55
Century 75D	17.95	17.47
Century 150D	13.07	12.91
S. I. Viscose		
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.)	8.73	8.51
Century	8.12	8.14
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18.00	18.00
20s Modern	25.50	25.50
30s Kohinoor	29.50	30.62
40s Hind	35.50	35.50
60s Kasturi	46.50	46.50
80s Laxmi	83.50	83.00

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 22nd *May*

Distinctly firm conditions prevailed in the oilseeds market during the week under review. Groundnuts were in the limelight, thanks to sustained short-covering and heavy bull support, induced mainly by the pronounced strength of spot seeds and oils, following brisk offtake by *vanaspati* manufacturers. Operators welcomed the Government's decision to withdraw the earlier notification fixing minimum prices (Rs. 64 per tonne) for *vanaspati* and to entrust the task of price regulation to the industry on a voluntary basis. Rumours about the possibility of an upward revision in ceiling prices of hedge contracts in oilseeds and the steady improvement in oilcake imparted further strength. Linseeds put on a cheerful appearance on encouraging advices from mustard markets in the North. Cottonseeds moved up in sympathy with other seeds and oils. Castorseeds, which ruled easy in the past two or three weeks, tended to move up towards the close of the week on better support.

Groundnuts July 1963 contract rose by Rs. 3.25 to Rs. 227.87. September 1963 contract firmed up by Rs. 2.25 to Rs. 229.12. Nizam bold improved by Re. 1.25 to Rs. 46.50. Khandesh quality gained a like amount to Rs. 47.25. Oil ex-mill put on 50 nP to Rs. 18.25 and railway receipts 45 nP to Rs. 17.85.

Castorseed June 1963 and September 1963 contracts increased by 50 nP each to Rs. 157.62 and Rs. 164, respectively. Kanpur gold strengthened by 50 nP to Rs. 30. Madras small was higher by 37 nP at Rs. 31.12. Oil commercial hardened by 5 nP to Rs. 12.60. Oil B.S.S. was maintained at Rs. 12.60.

Linseed June 1963 contract advanced by 88 nP to Rs. 37.19. September 1963 contract rose by 82 nP to Rs. 38.44. Bold ready scored a gain of 75 nP to Rs. 36.25. Linseed oil closed 15 nP higher at Rs. 14.15.

Cottonseed July 1963 contract gathered a rupee to Rs. 105. White hardened by 12 nP to Rs. 20.37. Both berar and non-white picked up a like amount to Rs. 22.12.

The following table shows the closing prices of oilseeds and oils on Wednesday 22nd May, as compared with those of two previous weeks:

	22-5-1963	15-5-1963	8-5-1963
	Rs.	Rs.	Rs.
Groundnuts			
July 1963 contract	227.87	224.62	226.25
September 1963 contract	229.12	226.87	226.75
Nizam bold	46.50	45.25	44.75
Khandesh quality	47.25	46.00	45.50
Oil ex-mill	18.25	17.75	17.50
Oil commercial	17.85	17.40	17.35
Castorseed			
June 1963 contract	157.62	157.12	159.25
September 1963 contract	164.00	163.50	164.50
Ready Madras	31.12	30.75	31.12
Ready Kanpur	30.00	29.50	30.00
Oil B.S.S.	13.00	13.00	13.20
Oil commercial	12.60	12.55	12.95
Linseed			
June 1963 contract	37.19	36.31	36.31
September 1963 contract	38.44	37.62	37.50
Bold ready	36.25	35.50	35.62
Linseed oil	14.15	14.00	14.05
Cottonseed			
July 1963 contract	105.00	104.00	103.00

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEA EXPORT SALES OPEN

(From Our Own Correspondent)

CALCUTTA, 21*st May*

The new season's first report auction was held here yesterday, and the feature was the modest interest shown by foreign buyers, especially those on behalf of the U.S.S.R. and the U.K. However, demand for Darjeelings was meagre, and withdrawals were heavy.

An easy trend continued at the internal sale No. 46 held here last week. Offerings totalled 29,648 chests, which met with a good general demand. Plain and medium orthodox dusts suitable for export eased up to 20 nP, while "teas for price" were firm at around the previous rates. Legg-cut teas followed the general trend and eased noticeably. Medium C.T.Cs were irregular and gave way up to 30 nP. The powdery good C.T.Cs were in good demand, but the balance of this category eased up to 50 nP. The quotations per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust Rs. 6.40 to Rs. 6.80, medium Assam C.T.C. dust Rs. 5.20 to Rs. 5.60 and medium Assam dust Rs. 4.40 to Rs. 5.20.

With the opening of the first export auctions of the new season, moderate activity in the freight market for tea was in evidence in the last few days and forward space was claimed up to the end of June. The existence of strong conditions in quality teas at last week's auctions held in Colombo was encouragingly noted here. The forthcoming discussions between British and E.C.M. officials in regard to the proposal to abolish the external tariff—18 per cent on bulk tea and 32 per cent on packaged tea—are looked forward with interest. For, trade investigations in Europe have indicated that there is an immense possibility of an increase in tea offtake by European countries, provided the price of tea is brought in line with the prices of other beverages. The average consumption of tea in the E.C.M. countries is much lower than in the U.K. because of the high prices on account of the tariff wall.

As in Calcutta, prices of dusts in Cochin auctions have also rapidly fallen. In the internal auctions held there on the 16th inst., prices of low mediums and mediums eased by as much as 40 nP per kg. This feature aids further the assumption that the proportion of output of dusts to that of quality teas has increased, and that since internal consumption has not kept pace with the increasing output, prices are falling. The trade is, therefore, urging that measures aimed at increasing internal consumption should be formulated as early as possible. In this connection, the decision to hold fortnightly auctions in Coonoor is welcomed, since the trade hopes that auctions far away from port would stimulate internal buying rather than export. The first auction in Coonoor took place in March, and with Coonoor, there exist in India three auction centres, Calcutta and Cochin being the other two. Auctions in Coonoor will reduce the importance of the Cochin centre gradually. Assam is already demanding an auction centre in that region, and the opening of Coonoor auctions will, it is felt, lead to bringing pressure on this demand. It should be stressed that for the industry as a whole the idea of too many auction centres is not a prospect to be looked forward with favour, as this will only lead to a weakening of the price trend as a result of the probable wasteful and unhealthy competition between regions for increased sales. Further, no single centre will be able to offer tea in the quantities desired by buyers. In other words, buyers will be forced to operate in all the centres, thereby increasing their operational costs.

JUTE GOODS MOVE DOWN

(From Our Own Correspondent)

CALCUTTA, 21*st May*

As foreign buyers declined to follow the rising trend developed last week, as a result of speculation in the wake of a further deterioration in the electric power supply, a reaction set in during the week under review, and jute goods closed below the best levels of the week. Although fair interest was shown in fibre by mills, the continued anxiety of sellers in an attempt to dispose of their stocks even at discounted rates before the commencement of the new season led to dull conditions in the raw jute market. In the last few days, the weather has been dry and the bright sunshine after heavy rains in recent weeks is helping healthy growth of plants. This, against the background of heavy sowings, only increased the anxiety of sellers of fibre. Further, there was the belief that the discounts were not going to narrow down, and a bumper crop once again would only mean that the lower grades would not command the minimum level of prices.

In the month of April, mills worked for 208 hours, and output at 105,400 tonnes showed an increase of 900 tonnes. The fact that, despite higher production, goods in stock with mills as at the end of April fell by 100 tonnes showed that demand was higher than production. This would have normally helped prices to harden, but, since prices had risen last week in anticipation of this news, there was no reaction in the market during the week when the details of output were available. While the output of hessian at 43,800 tonnes fell by 600 tonnes, sacking goods and miscellaneous constructions at 43,200 tonnes and 18,400 tonnes, respectively, rose by 500 tonnes and 1,000 tonnes. Such a change is in accord with the trade belief that the outlook for sacking is improving and that orders for increased quantities of specialities are anticipated. Also, in view of the heavy stocks of fibre fit for production of sacking, it is only natural that the output of mills in this construction should increase. Needless to say, it has been a welcome coincidence that, at a time when increased inquiries for heavy goods from overseas countries are being received, the output of this item is going higher. Otherwise, larger output would have depressed prices. Fair interest was in evidence during the week from buyers on behalf of Australia, the Middle East and Africa. Internal consumption, aided by increased needs for defence purposes, is also going up.

U.S. buyers of hessian, too, showed more interest. It was reported that the U.S. proposed to add modestly to the already existing heavy stocks of burlap. The recent purchase of 10 million yards of hessian by the U.S. underlined this proposal. It was not surprising, therefore, that, in the New York burlap market, heavy hessian 40" 10 oz. duty paid rose from 12.60 cents to 12.85 cents a yard and the lighter hessian from 9.60 cents to 9.80 cents. More business with the U.S. took place during the week, and the increased interest which buyers for the U.S.S.R. have been showing in recent weeks is believed to have led the U.S. to decide to build up further stocks, despite the fact that the existing stocks are equal to nearly four months' consumption. Against this background, the earlier news that U.S. consumption of burlap in the month of April had declined substantially to 77 million yards from 84.7 million in the previous month failed to cause any bearish reaction. Moreover, usually offtake in April by the U.S. is less than the monthly average which for the four months ended April recorded a very satisfactory figure of 79.6 million yards, as against 77.6 million yards in the corresponding previous period. This has been encouragingly noted in the market particularly because, in January this year, landings of hessian in the U.S. recorded a setback due to the dock strike. Despite this, intake during the four months was higher at 318.7 million yards, as against 310.7 million in January-April 1962. Another factor which has also been noted with enthusiasm in the Calcutta market was that U.S. stocks at the end of April at 300.2 million yards fell by 3.8 million yards.

The U.S.S.R. has been showing keen interest in hessian in recent weeks, and exports from India to that country this year are expected to record an appreciable increase. This is also a cause for increased interest being shown by U.S. buyers. Inquiries from the Continent have also increased. In sum, export prospects for jute goods as a whole have improved, and it has been unfortunate that the electric power shortage is holding down output. Production this month has already been interrupted, as, in accordance with the load-shedding programme, power supply is being discontinued for three days in a week, each interruption lasting for about three hours. Production this month is expected to decline by 10 to 15 per cent.

Earlier in the week, holders resorted to nervous selling on the belief that buyers from foreign countries would not follow the rising trend, which had been mainly the result of speculation. The unloading that followed forced down ready B. twills to Rs. 113.60 on Tuesday last from Rs. 115 on the earlier day. Hessian 40" 10 oz. eased from Rs. 51.65 to Rs. 50.25. Overseas buyers kept away, as they did not prefer to enter into commitments when the market was unsteady. These lower levels, however, resulted in increased activity in the futures market on Wednesday last and this, coupled with the receipt of a fair number of shipping instructions by shippers, led B. twills to recover to Rs. 114.50 and hessian 40" 10 oz. to Rs. 51.40. With the deepening of power shortage crisis, mills availed themselves of the opportunity to inform buyers of the possibility that the delivery dates for forward commitments would have to be revised. This was followed by some business with the U.S. on Thursday, when hessian 40" 10 oz. recovered to Rs. 114.65. In sympathy, B. twills hardened to Rs. 114.65. However, on Friday follow-up support was lacking, and this gave strength to the belief that overseas buyers were watching developments before entering into commitments. As a result, hessian 40" 10 oz. declined to Rs. 5.90 and B. twills to Rs. 113.25. Over the week-end, no business of importance took place, but hessian 40" 10 oz. rose to Rs. 51.25, as, with the possibility of increased purchases by the U.S.A., the U.S.S.R., and Argentina, a squeeze in ready goods was not altogether overruled. B. twills were unchanged at Rs. 113.25. Heavy goods met with good support on covering aided by rumours of a Government tender for a substantial quantity of B. twills. As a result, B. twills picked up to Rs. 113.50, while, in the absence of support, hessian 40" 10 oz. sagged to Rs. 50.90 yesterday.

With continued reports of excellent weather conditions in jute districts, sellers of fibre naturally desired to dispose of their holdings. Low grade mesta and white grades were offered at discounted rates. The possibility that production

in mills is likely to be curtailed on account of the electric power crisis worried fibre sellers. As a result of the likely increase in cost of production in mills, sacking would be at a disadvantage in foreign markets, and this possibility has harmful implications, since, with heavy stocks of the lower grades of fibre with mills as well as in the market, mills would have to produce more of heavy goods than hessian and specialities. Transactions in the new crop for forward deliveries are expected to commence and official permission is being awaited.

SUGAR QUOTA LIMITED

(From Our Own Correspondent)

HAPUR, 20*th May*

Sugar supply position here continued unsatisfactory. Sugar is being distributed to consumers through fair price shops, but the quantity made available is hardly sufficient to meet their requirements. They are, therefore, buying also *khandsari* which has spurted to touch new heights. The Central Government has sanctioned for U.P. a monthly quota of 20,000 tonnes, which is kept far below the requirements presumably in view of the heavy stocks of *khandsari* here.

Demand for *khandsari* is very brisk from Eastern U.P., Saurashtra, Punjab and Rajasthan. Stockists have again entered the market as they expect further rise in the price of this commodity. Stockists are reluctant sellers even at higher levels. It is rumoured that the U.P. Government will impose restrictions on the movement of *khandsari* outside the State in order to check the bullish trend in prices and meet the internal demand. Week-end prices of *khandsari* were: Inferior Rs. 115.21 to Rs. 119; superior crystal and non-crystal varieties Rs. 125 to Rs. 142 per quintal.

Ready *gur* recorded further gains during the week in sympathy with crystal sugar and *khandsari* as well as on good buying support from Gujarat. The Union Government has decided to increase the support price for sugarcane for the season 1963-64 by 6 nP per maund, but this has had little effect on the prices of *gur*. Standing crop condition of cane is reported to be satisfactory but final prospects, will depend on the monsoon. Week-end prices here were: *Gur* superior Rs. 65, *dara* Rs. 63.23, *balti* Rs. 64.30 and *shakkar* Rs. 66.98 per quintal.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 21*st May*

Acute shortage of supplies and good demand led to conditions akin to buoyancy in the metal market this week. There was further distribution of virgin copper among actual users, and this was a factor which, despite keen demand, prevented utensil copper scrap from rising from the opening rate of Rs. 568 per 100 kgs. In fact, at one time the price had declined to Rs. 565, but soon recovered. It was realised that, due to the acute power shortage, consumption in the current month would be lower than usual, but depending on greater availability of the virgin metals the current loss of production would be made good after the power supply situation had eased. On the London Metal Exchange, quiet dealings were reported. Spot copper was unchanged at £234 a ton and so was the three months' position at £234½.

On good demand, virgin lead, at Rs. 198 per 100 kgs., scored ten points. Consumers showed increased interest, and the stock position was less satisfactory than a week ago. Strong advices from London, where cash lead closed higher on balance at £60⅝ a ton after opening at £59½, also influenced the trend here. Spot tin, in London, reached a new high of £907½ a ton on the 17th inst., earlier in the week the quotation was £905. A further rise by £2½ will invite the Buffer Stock Manager to sell from the I.T.C. holdings, as he is authorised to sell if the price is between £910 and £965. It will be remembered that in the last uptrend he restored to selling and soon exhausted all his stocks, but since these did not satisfy demand in full, the price moved up. In the process, those buyers who had bought from the buffer stocks were fortunate to make quick profits. Current stocks with the Manager are believed to be in the range of 4,000 tons. The price here jumped from Rs. 3,600 per 100 kgs. to Rs. 3,900.

Electrolytic zinc was also in good demand and the price, at Rs. 270 per 100 kgs., gained Rs. 10. In London, consumer demand was on a larger scale, and the spot metal opened at £76 per ton and closed higher at £77¼.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 20*th May*

The Madras cowhides and calf market remained more or less unchanged in this week. Shipment business was mostly for the lower ends in cowhides and fourth selection in cowcalf. Demand for buffcalf was brisk from the U.K. and the U.S.A. and, as tanners have large orders to ship during the next two months, sellers were reserved.

There was an all-round demand for goat skins from all usual ports and prices remained firm. Prime sheep skins were taken up at higher prices by importers from the Continent. In the tanned skins London public sales held on the 13th inst., very few parcels of goat skins met with demand, though the prices paid were based on current levels. In the sheep skins section, mostly fifths and inferior fifths were sold.

The next German auctions are to take place today. About 56,000 goat skins and 41,000 sheep skins are to be for sale. Consignors do not expect brisk bidding in the auctions, considering the demand in the Continental markets at present.

LOCATIONS FOR STEEL PLANTS

(Concluded from page 922)

the Salem magnetite-quartzites had to contend with the Salem bauxites for the Mettur hydro-electric power. As it should be plain to everyone, the crucial factor determining the location of an aluminium plant is cheap and adequate supply of electric power on the site and not the presence or absence of adequate resources of bauxite. It, in fact, paid the aluminium company of India to import alumina produced from Jamaican bauxite in Canada for smelting it in Alwaye and despatching it to Calcutta for fabrication. The Centre would not, therefore, touch this aluminium venture even with "a tadpole's tail." With Madras having an electro-metallurgical venture for the production of aluminium on hand and anxious to go ahead with the steel plant based on Neyveli lignite, it could not expect to inspire anything but apprehension in the minds of any private investor interested in setting up an alloy steel plant.

Techno-Economic Survey of Madras

It was about this time when so many projects were looking for electric power from Neyveli lignite that the Techno-Economic Survey of Madras by the N.C.A.E.R. was published. According to this report which is dated 1959:

"The investment in mining of lignite estimated for the present target of 3½ million tons is Rs. 7½ crores and additional employment 30,000. With an output of 6 million tons, if the same methods of mining are adopted, additional investment requirements would be roughly Rs. 5.4 crores and additional employment 21,000. As fuel, 2.5 tons of lignite are equivalent to one ton of coal in thermal value. The cost of raw lignite is estimated at Rs. 10 per ton of coal equivalent. Since raw lignite cannot be used directly as fuel, briquetting is essential. The cost of briquetting is expected to be about Rs. 22.4 per ton. According to these calculations the cost of briquettes will be approximately Rs. 42 per ton. In comparison, the cost of Singareni coal delivered in Madras is Rs. 35 to Rs. 45, of Bihar rail-borne coal Rs. 45 to Rs. 50 and of rail-cum-sea-borne coal Rs. 70 to Rs. 80. Lignite briquettes would be a cheaper fuel, as compared with Bihar coal and would also be competitive with Singareni coal on account of their better size and combustibility."

There is clearly something wrong with this method of calculation. If two-and-a-half tons of lignite is equal to one ton of coal, then the cost of the raw lignite alone, the equivalent of a ton of coal, will be Rs. 22.5; and we have to assume, on this basis, that two-and-a-half tons of raw lignite will just yield a ton of lignite briquettes for it to be compared in fuel value with a ton of coal. Again, the cost of briquetting is given as Rs. 22.4 per ton. If this is the cost of converting one ton of raw lignite into briquettes, then the cost of a ton of briquettes will be about Rs. 78. If is the cost of producing a ton of lignite briquettes, even then it will be Rs. 45.

When this report was published, the figure of investment given was Rs. 7½ crores and, on that basis, a cost figure of Rs. 10 per ton of raw lignite was arrived at. Since then, however, that is, since 1959, this investment figure has been steadily increasing and, according to *Indian Information*, the official organ of the Ministry of Information and Broadcasting for October 1962, it now has reached the modest figure of Rs. 27 crores with the end nowhere in sight; and it is only now, as the quarry face at Neyveli moves forward, that the really serious technical problems will have to be faced. I hope Dr. P. S. Lokanathan will soon bring out a new and revised edition of the Techno-Economic Survey of Madras in which he will let us have the effect of the increase in the capital expenditure from Rs. 7½ crores to Rs. 27 crores on the figure of the cost of production of Rs. 10 per ton of raw lignite, based as it was on the earlier figure of Rs. 7½ crores and the resultant cost of a ton of lignite briquettes.

N.C.A.E.R.'s Findings

So much for the lignite briquettes, the fuel for the smelting of the iron ores. As regards the iron ores of Salem which are to be smelted by the lignite briquettes, the Techno-Economic Survey of Madras says:

"With open-cast mining the Salem deposits are capable of yielding a sufficiently large quantity of ore for several years. If labour-intensive techniques are employed for all operations (including hauling, waste-sorting and disposal), mining costs could be kept low without affecting the level of production. Considering the surplus of manpower available in Madras, this technique would offer further opportunities for employment. Capital investment required for mining, say, 700,000 tons of iron ore annually would roughly be Rs. 1.3 crores; and the pithead cost of raw ore Rs. 10 to 12 per ton.

"Beneficiation of the ore by which the high silica content of the ore-body is reduced could be done by one of several known methods. The process suitable for the Salem ore could be found only by conducting a series of experiments. For beneficiating the local ore to 60 to 65 per cent iron content, a plant with a capacity of 1,000 tons per day could be set up at a cost of Rs. 80 lakhs to Rs. 100 lakhs. Most of this plant could be fabricated in India and foreign exchange requirements would not be a complicating factor. It is estimated that beneficiating costs would work out to roughly Rs. 12 to Rs. 14 per ton of run-of-mine ore or Rs. 24 to Rs. 28 of beneficiated ore. Iron ore concentrates (60 to 65 per cent) would thus be available at a cost of Rs. 35 to Rs. 40 per ton, as compared with a cost of approximately Rs. 10 to Rs. 12 in the Northern mines. If these estimates broadly represent the actual cost differential, the feasibility of manufacturing iron or steel in the State would depend on the availability of metallurgical fuel at about the same cost as in the North and on the condition that the importing cost of iron or steel will more or less offset the costs of beneficiating the low grade ore."

This is, indeed, the most remarkable appraisal of the feasibility of a mining project. Dr. Lokanathan begins straightway with the enunciation that, if labour-intensive techniques are employed for all operations, including waste-sorting and disposal, mining costs could be kept low without affecting the level of production. Obviously such a thing has been found impossible even by the Portuguese in Angola and Stalin in Kolyma or Karaganda. He would even employ manual methods for the hauling of the ore! At the same time, he would estimate a capital investment of Rs. 20 per ton of annual capacity which is what is required for a reasonably well-mechanised mine to produce this output. Without any data on the amenability of these ores for beneficiation he would have us believe that the silica content could be reduced by one of several known methods; and without, of course, deciding which of the methods should be adopted, he is able to arrive at the costs of beneficiation and also the amenability of the plant to local fabrication.

Misleading and Dangerous

However, a little later in the same report he would recommend, with reference to the lenticles of gypsum in Trichinopoly, that "the recovery-rate can easily be stepped up by 50 per cent and the cost substantially reduced by introducing elementary mechanisation," and he is even quite confident that mechanisation is necessary to reduce the costs of production in the mining of the clay pockets of Orissa (*vide Techno-Economic Survey of Orissa*). Generous recommendations, like these, for mining, including even hauling of the broken ore by manual methods to keep the costs below that of mechanised mining for producing 2,500 tons of iron ore a day, mechanising in preference to working by manual methods to produce a few hundred tons a month of gypsum from the lenticular deposits of Trichinopoly District or of a few hundred tons a year of clay from the pocket-occurrences of Orissa, must lead to the only conclusion that these Techno-Economic Surveys, excellent though they may be as doctoral dissertations in economics or commerce or geography of some of our Indian universities, are not only misleading but positively dangerous as guides to anyone entrusted with the expenditure of public funds. It is on the basis of this *Techno-Economic Survey* and the hope of mining as much lignite as would be necessary, at whatever cost to the tax payer, that the Salem steel plant project is rolling forward like the proverbial Juggernaut whilst for want of statesmanship the Bokaro steel plant is coming to a creaking halt.

In the final analysis, however, if India's steel production is to be augmented with the minimum cost to the tax payer and the maximum benefit to all the regions, the least that should be done is to eliminate the conditions that made the Mahindras flee from Madras and to concentrate on the utilisation of our best iron ores to produce steel in integrated iron and steel works, with local as well as imported coking coals, sited at Goa, Visakhapatnam and Madras; and this should be accompanied by greater emphasis on the production of high-cost steel products that are required for our machine-building, engineering, chemical plant construction, defence and such other industries, not low-cost steel for export. In this connection it is well worth noting that the German 'miracle' has been rendered possible only because Germany all through favoured the "indirect" export of steel in the form of manufactured and durable goods on which the returns are far higher than on steel itself.

ABBREVIATIONS. N—Nominal. (f) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport [illegible]
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable [illegible]
††Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 19[illegible]
f—Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex Ten instalments but inclusive of accrued interest.
M—At the option of the Government after three months' notice. K—On September 1966 or later at the option of the Government after three months' notice.
T—Liability taken over by Madhya Pradesh. @ Total amount invested in Gold Bonds up to 18th February 1963.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per share.

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

All preference shares are taxable unless otherwise stated.

***These shares carry the right of a preferential dividend at the rate of 8 per cent (of which only 5 per cent cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent of the 10 per cent dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent these shares carry the right to receive a non-cumulative dividend of 3 per cent per annum and also to participate in further dividend of 2 per cent per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

C—Cumulative. R—Redeemable. T.F.—Tax-free. R.O.—Redeemable at option.

(f) Participating preference shares. (g) Redeemable at Rs. 105 at any time on 3 months' notice. (h) Redeemable after 30th September 1966 at Rs. 125. (i) Redeemable at par after 9th November 1955 on 6 months' notice. (j) Redeemable after 28th July 1955 on 6 months' notice. (k) Participating upto 9 per cent. (l) Redeemable at par after 31st March 1952 on 6 months' notice. (m) Rank *pari passu* with ordinary shares after ordinary shares receive 6 per cent dividend. (n) Redeemable after 20th December 1954. (o) Redeemable at any time at Rs. 115 on one month's notice. (p) Redeemable at par after 1st January 1954. (q) Redeemable at par after 17th June 1956. (r) Redeemable at par after 1st October 1956 on 3 months' notice. (s) Participating to 9 per cent. (t) Free of Income-tax upto 6 *sh.* in the £. (u) Redeemable at par on 3 months' notice. (v) Issued on various dates. (w) Redeemable at any time 3 years after the date of Issue at a premium of Rs. 10 per share on 3 months' notice. (x) Redeemable after ten years at a premium of 5 per cent on 6 months' notice. PP—Partly paid.

TREND OF SHARES

EQUITIES QUIETLY STEADY

(From Our Own Correspondent)

BOMBAY, 23rd *May*

AIDED by selective enquiries for some of the leading counters, equities closed this week on a quietly steady note. Fluctuations were two-sided, but narrow, with lower levels attracting scattered support induced presumably by the delay in the Government's permission for restoring normal trading on stock exchanges. Trading was, however, far from exciting and the undertone at close seemed hesitant, as several scrips finished a little lower than their last week's levels.

Speculation over the terms on which normal trading may be restored continued in the absence of any official word on the subject. Marketmen spoke with authority that free trading would be only partial and not complete as asked for by the stock exchange authorities. Market authorities denied all rumours and maintained that they had heard nothing from the Government. At the same time, they expected that free trading would soon be restored and that, too, in full and not in part. While the uncertainty about free trading encouraged professional operators to have a free hand, it discouraged the general public from making any fresh commitments. The sooner the uncertainty is over, the better.

The general public kept out of the market also because of fears of a renewed involvement with the Chinese. These fears were based partly on reports of the Chinese having steadily increased their military strength in Tibet and partly on the official protests by the Government of India against the enemy intrusions into the Indian territory. Absence of any stimulating corporate news was yet another factor which restrained enthusiasm. Due to this general apathy of the public, quite a few cash scrips were neglected, though they were quoted at fairly attractive rates, and the recent new issues commanded only a marginal premium. Not until the live issue of free trading is resolved, there is likely to be any change in the public attitude. Therefore, let the uncertainty end soon.

* * * *

Dalal Street was steady between Friday and Saturday this week, easier during the next three days, and steady again towards the close today. The trend was set by a few market leaders which fluctuated irregularly on alternate bouts of realising and replacement support. The only stimulating corporate news during the week was that the tyre cord plant of Century Rayon had gone into production and that its capacity was to be doubled to 10 million lbs. per annum. The lifting of the lock-out by the management of the National Rayon Corporation Ltd. at the Kalyan works had also an encouraging influence. Century recovered quickly from Rs. 551.50 on Monday the 20th inst. to Rs. 560 the next day and further to Rs. 563 yesterday. Today, the shares eased a little to close at Rs. 559, six points higher over the week. National Rayon, which opened at Rs. 358, recovered gradually to Rs. 367 by Tuesday the 21st inst. But thereafter, they eased again to finish at Rs. 360, as against Rs. 358.50 a week ago. Among other Textiles, Standard were 11 points higher at Rs. 788 and Bombay Dyeing showed a gain of 20 nP to Rs. 61.50, but Kohinoor dropped a further seven points to Rs. 317. In the cash section, Mafatlal declined by Rs. 7.50 to Rs. 720 and Baroda Rayon by Rs. 3.50 to Rs. 99.50.

Tata Steel Ordinary eased during the week from Rs. 134 to Rs. 132.75, but recovered today to Rs. 134.25, at which level they were 75 nP higher over the week. Indian Iron moved in the same fashion—declining at first from Rs. 22.40 to Rs. 22.16, but recovering to close 16 nP higher over the week at Rs. 22.44. Excepting Alcock which closed nine points higher at Rs. 312 and Voltas which showed a gain of Rs. 2.50 to Rs. 261.50, leading Miscellaneous issues were easier, with T.E.L.Co. closing at Rs. 283.50 (as against Rs. 285 a week ago), Hindustan Motors at Rs. 10.08 (Rs. 10.20) and Bombay Burmah at Rs. 66 (Rs. 66.20). Cements were quiet, but Sugars were easier, with Belapur closing six points lower at Rs. 185.50 and Phaltan two points lower at Rs. 87. In the cash section, Colour Chem showed a setback of 10 points to Rs. 322.50, Kirloskar Cummins of Rs. 4.50 to Rs. 104.50 and Tak Machinery of Rs. 3.50 to Rs. 94.50. Other scrips were also generally lower.

* * * *

Forward section on the Calcutta Stock Exchange made a mixed show. Indian Aluminium improved by 37 nP to Rs. 34.44, Rohtas by 37 nP to Rs. 11.12 and Shree Gopal by 19 nP to Rs. 24.31, but Dunlop declined by 17 nP to Rs. 33.25, G.K.W. by 12 nP to Rs. 33.75 and Howrah by 25 nP to Rs 19.75. In the cash section, Bowreah Cotton showed a loss of 25 nP to Rs. 23.25 and Jayshree Textiles of 75 nP to Rs. 14.06. Among Coals, Amalgamated suffered a setback of 54 nP to Rs. 22.37, Central India of 57 nP to Rs. 9.90 and Bengal of three points to Rs. 285. In Jutes, Burnagore improved by five points to Rs. 190, but Bally dropped by five points to Rs. 265, Fort Gloster gained four points to Rs. 376, but Anglo-India closed two points lower at Rs. 224. Trading in the Engineering section was featured by the setback in Burn from Rs. 472 to Rs. 457. Calcutta Chemical declined by Rs. 3.12 to Rs. 14.25 and Alkali eased further by 68 nP to Rs. 33.19. Miscellaneous section showed generally a sprinkling of small losses, while Union Carbide broke rather sharply from Rs. 42.50 to Rs. 38.50. Thus, Philips India declined by 88 nP to Rs. 25.87, American Refrigeration by 75 nP to Rs. 7.37 and Angelo Bros. by 88 nP to Rs. 21.44. Among Sugars, Belsund were 69 nP lower at Rs. 7.81 and S.K.G. 19 nP at Rs. 7. Tea shares were devoid of support and Hantapara reacted by eight points to Rs. 104.

* * * *

Activity was restricted on the Madras Stock Exchange and prices, wherever changed, showed losses over the week. E.I.D. were 50 nP lower at Rs. 37.25. Among Plantings, Periakaramalai declined by 13 nP to Rs. 2.87, Nonsuch by 35 nP to Rs. 21.45, Outcherlony Valley by 10 nP to Rs. 3.65 and Cochin Malabar by 15 nP to Rs. 5.85. In Textiles, Cannanore fell by 10 points to Rs. 110. In the Miscellaneous section, Textools showed a loss of two points to Rs. 154, Mysore Chemical Fertilisers of 90 nP to Rs. 7.85, F.A.C.Ts of 20 nP to Rs. 7.10 and Mettur Chemicals of 10 nP to Rs. 12.15.

BOROSIL GLASS WORKS LTD.

There has been a steady increase in the demand for scientific and laboratory glassware in India, following the growing emphasis laid in development plans on the promotion of higher education and scientific and technological research. The total expenditure on the development of research alone during the third Plan period is expected to be over Rs. 200 crores. As a consequence, the demand for scientific and laboratory glassware is likely to go up (from about 6,500 tons in 1960-61) to as much as 21,000 tons by 1965-66, according to the Planning Commission. There are already a few units engaged in the production of such glassware. The aggregate output of scientific glassware in the organised sector is estimated to have gone up from about 2,500 tons in 1955 to about 4,400 tons last year. Production of this type of glassware is still short of demand, necessitating fairly large imports, amounting to about Rs. 1.3 crores annually. The third Plan seeks to ensure self-sufficiency in glasses, in general, and scientific glassware, in particular.

In India's bid for self-sufficiency in glassware, the new Indo-U.S. venture for the manufacture of scientific and laboratory glassware now launched in Bombay is bound to play a substantial, as well as promising, role. The Borosil Glass Works Ltd., Bombay, has already signed an agreement for technical and financial collaboration with a well-known U.S. firm, Corning Glass Works, for setting up a new plant at Marol, a suburb of Bombay. The new unit, which is now under construction, is expected to go into production by the end of this year. It is expected to attain full production capacity (of 7,200 tons per year) by June 1964. The plant, it is said, will be equipped with automatic machines and other modern devices. Among the products to be manufactured in the new factory are scientific and laboratory equipment, kitchenware and oven glass of all varieties. About 10 per cent of production will be exported by the Company. It is significant to note that the Industrial and Engineering Apparatus Company, Pvt. Ltd. at Andheri will be merged with the Borosil Glass Works Ltd. The Andheri unit, which has a capacity of 1,500 tons of borosilicate glass per year, has been producing a wide range of general laboratory and glass apparatus since its inception in 1940. Dr. S. R. Lele, who runs the Andheri unit, is the Managing Director of the new Company.

The Borosil Glass Works Ltd. is to enter the capital market, with a public issue of 382,500 equity shares of Rs. 10 each, amounting to Rs. 38.25 lakhs. The total issued capital is Rs. 150 lakhs, divided into 1.5 million equity shares of Rs. 10 each. Of this, 585,000 shares will be allotted to the U.S. firm for the supply of machinery and equipment, in addition to 150,000 shares to be allotted to it for providing technical know-how and continued technical assistance. Further details appear elsewhere in this issue (*vide* pages 726 and 727). The subscription list will open on the 27th inst. and will close on the 29th inst.

AIR CONTROL AND CHEMICAL ENGINEERING CO. LTD.

Air Control and Chemical Engineering Company Ltd. is entering the capital market with a public issue of Rs. 49 lakhs in equity shares of Rs. 100 each. The issue has been fully underwritten. The subscription lists will open on the 30th inst. and close on 10th June 1963 or earlier but not before 5th June. The Company's total issued capital is Rs. 100 lakhs, including Rs. 10 lakhs already taken up by the directors and promoters who are to raise their subscription by Rs. 30.50 lakhs. The Industrial Finance Corporation of India is to be made a firm allotment of Rs. 5 lakhs. Foreign collaborators are taking up shares worth Rs. 5.50 lakhs. The Company, which is a new enterprise of the Maganlal Prabhudas group, is setting up at Devdi, a few miles from Ahmedabad, a factory to manufacture ventilation and air-conditioning equipment as well as refrigeration equipment. It is also putting up an engineering unit, with up-to-date sheet metal shop, a machine tool shop and a foundry. It has entered into collaboration with the Sheldons Engineering Ltd., of Canada. Air and Refrigeration Corporation of the U.S., and Thomas Ths. Sabroe of Denmark, and reached the final stage of negotiating agreements with two other Canadian firms, namely, Air Coils Manufacturing Company Ltd., and Canada-wide Air Conditioning and Refrigeration Services. Of these collaborators, Sheldons will take up shares worth Rs. 5 lakhs and Air and Refrigeration Rs. 50,000. The total capital outlay on the project is estimated at Rs. 195 lakhs, to be met by the equity issue of Rs. 100 lakhs, the I.F.C.I. loan of Rs. 60 lakhs (including Rs. 36 lakhs in foreign exchange) and bank borrowings of Rs. 35 lakhs.

The Company expects to start production towards the end of next year. In view of the vast scope for refrigeration industry, the composite nature of production and the versatile nature of the plant and machinery to be installed, the promoters hope that the Company will make, within two years after production starts, substantial profits and pay a dividend. Production in the final stage will reach Rs. 5 crores. The Board of Directors of the Company consists of Mr. Ravindra Maganlal, Mr. Rasiklal J. Chinai, Mr. Rohitbhai Chinubhai, Mr. Khanderao Gaekwar, Mr. Gordhandas J. Ruparel, Mr. Kantilal Nahalchand, Mr. Ratilal Nathalal, Mr. Amratlal G. Sonawala and Mr. Surendra M. Mehta. Messrs. Hareshchandra Maganlal and Co. (Private) Ltd., are the Managing Agents.

BANKS AND THE ECONOMY

IS the considerable rigidity in interest rates which has grown up in the banking world in the last twenty years or so an encouragement to the growth of bank deposits? This was the question that Lord Cromer, Governor of the Bank of England, posed recently when he addressed an anniversary dinner meeting of Martins Bank. Although the poser was addressed only to the banks in Britain, it has greater validity in the case of India. Bank deposits in this country are no doubt rising but not at a rate commensurate with the expanding requirements of the growing economy, as well as the mounting defence needs imposed on the country by the unprovoked Chinese aggression. Indeed, there is no exaggeration whatsoever in the note of warning struck by Mr. G. D. Birla that the pace of growth of deposits of commercial banks is in jeopardy. The Reserve Bank of India has itself admitted, in its annual report on the trend and progress of banking in India during the year 1962, released last week-end, that deposit growth has slowed down since the onset of the emergency in October 1962, while the pressure on banks for credit has increased.

The aforesaid conclusion is fully borne out by statistical data. Thus, between 26th October 1962 (the date of the declaration of national emergency) and 17th May 1963, the fresh accretion to the deposit portfolio of scheduled banks has been no more than Rs. 62.4 crores, whereas the addition in the corresponding period a year before was as much as Rs. 156.0 crores. No one would bother so much about the reduced rate of deposit expansion if the pace of increase in demand for credit were also relatively slower at the same time. But what has happened, and is happening, is that the demand for credit continues to be pretty heavy, so that the average credit-deposit ratio now stands at the high level of 69.9 per cent, as against 62.7 per cent at this time last year. For some individual banks, the ratio is higher still, ranging above 80 per cent. Correspondingly, the proportion of liquid or near-liquid assets has declined. This decline has occurred in the face of the higher liquidity requirements prescribed under the legislation recently enacted. It is true that these requirements will come into force only from September next year, but, unless the banks make a renewed bid to strengthen their resources from now onwards, the liquidity goals will simply not be attained.

The annual report of the Reserve Bank has rightly emphasised that, as the tempo of defence and other expenditure rises, the liquidity position of banks and the flow of deposits should improve. The situation, says the report, calls for a review of banks' policies and efforts at deposit mobilisation, as "the problem of channelling the widely dispersed savings, occasioned by the pattern and scale of public expenditure during the phase ahead, will present new facets." The Reserve Bank has not merely made this exhortation to banks. It has actually indicated, albeit briefly, the lines on which banks should proceed in the task of deposit mobilisation. The relevant passage from its report reads thus:

"A properly planned policy of branch expansion can go a long way in increasing bank deposits at this juncture. This calls, in particular, for extension of banking facilities to the unbanked areas of the country. In such areas, intensive drives through imaginative publicity which is responsive to particular local requirements would pay good dividends. For the ability to attract deposits is intimately linked up with the range and efficiency of services offered which have to be adapted with increasing ingenuity and resourcefulness to cater to the customers' needs."

There is, however, nothing new in the solutions offered by the Reserve Bank, for they have been emphasised *ad nauseam* by bankers and others for quite some time now. Extension of branch banking and improvement in services alone will not bring to the vaults of banks more deposits. This is especially so in the present context when the problem of deposit mobilisation has been rendered greatly difficult by four important factors. In the first place, the National Defence Fund contributions, the usual drive for small savings, the impact of compulsory deposit scheme, and the higher levels of indirect taxation, which have raised the prices of several necessities that enter into the budget of the average consumer, have eaten into private savings, a sizable part of which would otherwise have found its way into the banking sector. Secondly, the forthcoming Central Government loans aggregating about Rs. 255 crores (due to be announced towards the close of next month) will also make a big draft on the resources of the community.

BANKING TRENDS AT A GLANCE
(In crores of Rs.)

	26-10-62 to 17-5-63	27-10-61 to 18-5-62	Whole of 1962	Whole of 1961
Deposits*	+ 62.3	+155.9	+232.8	+167.8
Bank credit	+184.9	+207.3	+146.5	+105.9
Ratio of bank credit to deposits (%)	69.9	62.7	69.7	69.6
Investments	— 93.7	— 54.5	+114.3	+ 50.0
Borrowings from Reserve Bank	+ 15.9	+ 6.0	+ 2.0	— 42.8
Balances with Reserve Bank	+ 1.2	+ 4.8	— 23.1	— 13.6

* Exclude P.L. 480 deposits.

NOTE:—The total outstanding borrowings by scheduled banks from the Reserve Bank for the week ended 8th March 1963 stood at the high level of over Rs. 83.65 crores, as against Rs. 47.37 crores on the same date last year. The figure for the week ended 17th May 1963 was Rs. 25.02 crores.

Thirdly, many industrial houses, as we pointed out on an earlier occasion, are bidding for fixed deposits and deposits repayable at short notice at rates substantially above those offered by banks. Some of them are said to be paying on deposits repayable at 3 to 16 days' notice as much as 5 per cent per annum, as against 3 per cent quoted by banks. Their readiness to pay these rates is quite understandable, because the deposits are just like clean loans for them and are far cheaper than bank credit most of which has to be against hypothecation of assets. And, finally, there is the unorganised banking sector which continues to compete with the organised sector for deposits by paying attractive rates of interest.

Against this background, it is not surprising that deposit banking is now facing intensified competition from more directions than perhaps ever before. Interest rates on deposits, as readers are aware, are fixed at certain levels under the Inter-Bank Agreement. Since these rates are not realistic, the banks are finding it difficult to attract the savings of the public going into alternative channels. If, therefore, the banking sector is to play its due part in providing adequate finance for defence and defence-related and developmental activities, it must be willing to pay enhanced rates of interest on deposits. It is, of course, not suggested here that there should be competition for deposits among banks. Rather, what is meant is that the Inter-Bank Agreement on deposits has to be revised suitably to take into account the present pattern of interest rates. Such a revision is especially urgent in the sphere of seeking new depositors which seems to be, to borrow a phrase from the Bank of England Governor, "infinitely more important."

The one argument advanced against any move to raise interest rates on deposits is that the increase will inflate costs for banks. But the additional incidence of cost will be more than made good by the fuller utilisation of bank credit at high rates of interest. There is no reason why such utilisation cannot be ensured, provided the banks give, as the Reserve Bank's report pertinently points out, greater attention to the ways and means of improving the quality of their services and their all-round efficiency.

Few can take exception to the Reserve Bank's call to banks to curtail credit for less essential purposes. Since September 1960, it will be recalled, the Reserve Bank has endeavoured to exercise general restraint on excessive credit expansion by banks and to prune the less urgent demands through the slab system of lending rates which raises the cost of Reserve Bank credit to scheduled banks progressively with increase in their borrowings from it. Within this general framework, use has also been made of selective credit controls to regulate the flow of bank credit in those sectors where it was likely to give rise to undesirable price movements. While all these may be right steps, the fact cannot be denied that the banks are experiencing considerable pressure on their resources. And in order to meet the increasing credit requirements of their clients, the banks have been compelled to rely more heavily on borrowings from the Reserve Bank at high rates of interest and also to reduce their investment portfolio by selling some of their gilt-edged securities as the accompanying table shows. This is not a happy trend. If the banks are to discharge successfully their twin responsibility of meeting the expanding needs of defence and development and, at the same time, to strengthen their liquidity, they must be helped by the Reserve Bank by way of more liberal lending under the bill market scheme and by the Government through special tax concessions.

WORLD ECONOMIC TRENDS

IT is said that prosperity, like peace, is indivisible. But the state of the world, with its wide disparity between the developed and underdeveloped countries and, within its prosperous nations becoming more prosperous by trading increasingly among themselves, continues to cause anxiety. The summary figures made available this week from the *U.N. Statistical Yearbook* 1962, are the latest ones in this connection, although they pertain only to 1961. To delineate, with light and shade, a picture of world economic activity with the help of fuller figures would be an interesting, in some ways fascinating, statistical exercise. In so far as figures can tell their own story or lend themselves to straightforward interpretation, the relevant statistical effort would be eminently useful and relatively easy too. But, where comparability of national statistics is open to doubt because of the inapplicability of exchange rate conversions or other factors, all comparative interpretation would become difficult, if not impossible. Only, in the latter case, the particular figures would have to be interpreted with caution and with the broadest latitude. Whether easy or difficult to interpret, the figures, however, have a broad validity of their own and, as such, would need to be analysed in any general appraisal of world economic and social trends. Unfortunately, however, the summary figures immediately available are too scrappy to serve the purpose in view.

To begin from the beginning. The question that comes uppermost to one's mind here is whether the world's population is outstripping its means of subsistence. The facts brought out in the 1962 *Yearbook* show that, in the period 1950-61, the world's population had increased at an annual rate of 1.8 per cent and that food production had increased at a rate of 2.5 per cent per year since 1948. These figures, *prima facie*, suggest that the rate of growth in food production has been well above the average annual rate of increase in population. Again, an overall increase, over the period 1950-61, of 22 per cent in world population and about 30 per cent in world food production would also seem to suggest that the population-food balance is rather comfortable. But that is not so, for the levels of nutrition in the larger part of the world have not appreciably increased. The fact that *per capita* food consumption is still less than 2,000 calories per day in India, Pakistan, the Philippines and many other countries in Asia, Africa and South America is an eloquent confirmation of the inadequacy of the rate of increase in food production.

As for world industrial activity, the *Yearbook* has highlighted the fact that manufacturing accounted for more than 90 per cent of the total industrial output during 1961. A comparison between the industrialised countries (excluding the U.S.S.R. and Eastern Europe) and the less industrialised ones no doubt shows a tendency towards a higher rate of growth, between 1960 and 1961, in the latter (8.4 per cent) than in the former (3.4 per cent). But that higher rate was primarily due to mining. What a long way the underdeveloped countries would have to travel in the sphere of manufacturing industry may be inferred from the big gap between them and the industrialised countries in *per capita* consumption of steel which, in 1961, was as high as 544 kilos in Sweden, 488 in the U.S., 314 in the Soviet Union and 308 in France, at the one end, and as low as 0.7 kilo in North Viet Nam, 3.2 kilos in Congo, 9.5 in Thailand and 9.7 in Ghana. This glaring disparity was due mostly to the circumstance that, of the world production of 355 million tonnes of steel during the year, nearly 77 per cent was accounted for by just seven countries, namely, the United States, the U.S.S.R., West Germany, Japan, the United Kingdom, France and mainland China. Another telling indicator of the disparity between the developed countries and the underdeveloped ones is provided by the world production of electric energy. In 1961, of the aggregate production of 2,450 billion kilowatt hours, 42 per cent was accounted for by North America, 30 per cent by Europe, 13 per cent by the U.S.S.R., 10 per cent by Asia, 2 per cent by South America and 2 per cent by Africa.

If the industrialised countries continue to advance industrially, it is because of their relatively lower levels of private consumption expenditure and higher levels of gross fixed investment. The figures of private consumption expenditure, as a proportion of gross national product (total value of goods and services produced), are as low as 68 per cent for Belgium, 66 per cent for Canada, 65 per cent for France, 57 per cent for West Germany, 61 per cent for Italy, 53 per cent for Japan and 58 per cent for Sweden. They are, on the other hand, as high as 72 per cent for Argentina, 72 per cent for Brazil, 87 per cent for Nigeria, 88 per cent for Paraguay, 84 per cent for the Philippines, 78 per cent for Portugal and 81 per cent for Puerto Rico. As for gross fixed investment as a proportion of gross national product, it is, for example, just 13 per cent in Ceylon and 8 per cent in both Paraguay and the Philippines, while it is 22 per cent in Canada, 25 per cent in West Germany, 23 per cent in Italy, 31 per cent in Japan and 17 per cent in the United Kingdom. It is revealing that countries which have experienced high rates of economic growth in the post-war period, countries such as Japan and West Germany, have greatly increased their gross fixed investment by lowering the level of private consumption expenditure. That these two countries have been able to do this without resorting to totalitarian methods is all the more significant.

The disparity between the advanced countries and the less-developed ones is also reflected pointedly in the sphere of world trade. Although the value of world exports in 1961 reached a record level of 133·4 billion U.S. dollars, it should be particularly noted that the developed areas (U.S., Canada, Western Europe and the U.K., Japan, Australia, New Zealand and South Africa) had increased their share of such exports from 65 per cent in 1938 to 67 per cent in the year under review. The share of underdeveloped areas (non-communist), however, decreased from 25 per cent in the former year to 21 per cent in the latter. The figures, in absolute terms, are given below:

(Value in million dollars f.o.b.)

	1938	1948	1961
World exports	23,500	57,300	133,400
Exports of developed areas..	15,200	36,500	90,200
Exports of underdeveloped areas	5,900	17,100	27,600
Exports of communist countries	2,380	3,690	15,650

It may also be worked out from the above figures that, while the exports of developed areas have increased by about 147 per cent since 1948, those of underdeveloped areas have gone up by only 61 per cent during the period. But, at the same time, prices of raw materials exported by the latter areas have decreased more or less steadily since 1951-52, whereas the prices of manufactured goods exported by the former have risen steadily throughout the period. The underdeveloped part of the world has thus been burning its candle at both ends. The aggregate loss incurred by it in more recent years is the subject of a separate note on the "Survey" page of this issue. That many of the developing countries have also been undergoing the additional hardship of inflation is seen from the cost-of-living index figures which have been uniformly placed on a 1958 base equal to 100. For instance, the 1961 index figures are 309 for Argentina, 256 for Brazil, 237 for Uruguay, 209 for Indonesia, 167 for Chile, 144 for Bolivia, 128 for Peru, 126 for Iran, 121 for South Korea, 121 for Colombia, 120 for Yugoslavia, 118 for Nigeria, 113 for Jamaica and 110 for Ghana. It is noteworthy that the index for India stood at just 108 in 1961. This shows that inflationary tendencies in this country have been restrained more successfully than in several other developing countries. The credit for this comparatively satisfactory situation must go, in a large measure, to the monetary authorities.

PLANNING FOR POWER

THE aggregate installed capacity for power generation in the country as a whole, it is expected, will be 13.5 million kw. by the end of the current Plan. Will this expectation be fulfilled? The question can be answered in the affirmative a little more confidently now than some months back when it was thought that there might be a shortfall of more than a million kilowatts. What lends substance to such a confident answer is the report, this week, that the Planning Commission, in consultation with the State Governments, is just finalising the details of a Rs. 202-crore *additional* power development programme designed to complete several major projects of the third Plan ahead of schedule and to initiate action on projects that would yield results in the first two years of the fourth Plan period. Of the estimated additional expenditure, Rs. 86 crores (with a foreign exchange component of Rs. 24 crores) would be devoted to the completion, ahead of schedule, of 27 major projects of the third Plan—projects like Srisailam in Andhra Pradesh, Chandrapura and Durgapur of the D.V.C. system, Sharavathy (second stage) in Mysore, Bhakra (right bank) in Punjab, and Yamuna, Obra and Singrauli in Uttar Pradesh, which, according to the original schedule, are due for completion in the early years of the next Plan. If a comparatively modest additional outlay of Rs. 86 crores can ensure earlier completion of the third Plan projects, no further justification is required for priority allocation of this amount.

It would be equally important to allocate, during the current year itself, an additional Rs. 83 crores (with a foreign exchange component of Rs. 16 crores) for advance planning on at least ten fourth Plan projects. This amount, which is included in the above-mentioned aggregate of Rs. 202 crores, is stated to be absolutely necessary for initiating immediate action on the recommended projects which are to provide an additional two million kilowatts of generating capacity by the end of the second year of the fourth Plan. These projects, incidentally, are Kothagudum and Upper Sileru (third and fourth units) of Andhra Pradesh, the Chandrapura and Bandel extensions of the D.V.C.-Bengal-Bihar power system, the Dhuvaran extension of Gujarat, the Korba and Satpura extensions of Madhya Pradesh, the Neyveli extension of Madras, Koyna of Maharashtra, the Talcher extension of Orissa and the Sharavathy extension of Mysore. The balance of Rs. 33 crores (Rs. 202 crores *minus* Rs. 86 crores *minus* Rs. 83 crores), with a foreign exchange component of Rs. three crores, is required for the construction of additional transmission lines. It is very much to be hoped that the Government would readily sanction the programme on the ground, among others, of its relatively low foreign exchange component of Rs. 43 crores in all. Final acceptance of this programme, if and when announced, will be the best and most cheering news for an industrial sector which is subjected to recurrent power cuts, especially in the vital D.V.C.-West Bengal area.

Another significant development of the week is the Union Government's decision to enact legislation shortly for the purpose of establishing regional agencies which could plan and operate zonal power grids. It will be recalled that the Government has already accepted the recommendations of a special committee which recently reported on the organisational pattern and functions of the proposed regional agencies. The legislation, now under contemplation, is expected to be on the lines of the Committee's recommendations. When the regional agencies, covering seven zones, are constituted, there will be better planning of new power stations and major transmission lines, as also integrated operation of power systems in each region. The resulting efficiency and economy would mean that, at any given time, the region as a whole could derive optimum benefits from the total amount of electricity generated and transmitted. For instance, when the four existing systems of Kerala, Madras, Mysore and Andhra Pradesh are inter-connected and operated on an integrated basis, there will be a saving of 265 M.W. in installed capacity on account of diversity between the systems and reduction in standby capacity; this is expected to result in a saving of Rs. 22.7 crores in the capital outlay and Rs. 2.6 crores in the annual running charges. Similarly, inter-connections and integrated operation of the D.V.C., West Bengal, Bihar and Hirakud-Talcher systems in the Eastern Himalayan region would result in a saving of 350 M.W. by way of generating capacity; this will mean a saving of Rs. 27.2 crores in capital outlay and Rs. 4.8 crores in the annual running charges.

With such manifest advantages, the zonal grid system should readily commend itself to all the States without any exception. But it is strange that the West Bengal Government has chosen to oppose the move on the ground that it must have direct control over the generation and distribution of power and that West Bengal, being already short of power, cannot share it with others. That the State Government should take the narrow stand that production of electricity is a State subject is, indeed, amazing. One has only to recall, in this connection, that even sovereign nations in Western and Central Europe have pooled their power resources to ensure that the requirements of all the participating countries are fully met. The State Government's stand also ignores the consideration that, since West Bengal is deficient in power generation and supply, it will stand to benefit from the power projects of the other parts—Bihar, D.V.C. and Upper Orissa—of the Eastern Himalayan region. To oppose such a healthy modern trend towards grids and super-grids seems to be most shortsighted. Better and more economic planning for power in zonal grids, to begin with, is the need of the day. West Bengal would, therefore, do well to fall in line with the other State Governments.

MARKET GOSSIP

Normal Trading In Shares

IT need not have taken the competent experts of the Union Finance Ministry as long as six months from the date (29th November 1962) when the Government banned forward trading in shares to evolve a scheme of margins as a condition precedent to restoration of normal conditions on stock exchanges. It is true presidents of stock exchanges moved the authorities in the matter only recently—towards the close of last April. But, since the matter directly involved the Government and was not something like the daily routine that market authorities easily attend to, an early initiative on its part would have been appreciated. Indeed, the matter was unduly delayed. What happened in the meantime? Market authorities struggled hard to squash stale business, investors grew more and more defeatist, and company promoters preferred to put off new issues. An early initiative by the Government would have acted as a morale booster. The delay has allowed the frustration to take its natural course. Ironically enough, the ground for lifting the ban on forward trading in shares has been prepared when the Dragon seems to be on the prowl again.

These forthright comments one is tempted to make on the Government's move, all the more because the margin-scheme, made public on 29th May, carries nothing strikingly original as will be seen from the details published on the next page. The basic changes are two. Firstly, the daily and *carry-over margins are now to be imposed on the* total open purchases and sales, instead of the net outstanding position (arrived at after striking the balance of the two) so far. Secondly, a part of the carry-over margin is sought to be collected compulsorily from the clients in order to minimise the current practice of brokers' paying it (to keep business going) on behalf of their constituents. Besides these two, a third important amendment is to bring within the purview of the margins inter-client business as well as principal-to-principal business done by brokers, along with the business done in the market proper which alone attracted the margins so far. Neither the two changes nor the third amendment needed a special study and could have easily been suggested by the market authorities themselves. The proposal to pass on a part of the carry-over margin to clients follows the special deposit *hawala* scheme adopted sometimes in the past, though the context is different in the sense that it relates to making clients shoulder a part of the burden of margin, while the special deposit *havala* scheme sought to freeze a part of the gains as a safeguard against unbridled speculation.

The revised margin scheme is, nonetheless, a welcome step in the right direction of regulating trading in shares. It is good that the margin is to be levied on total and not net positions. On net positions, the margin is invariably minimised and often eliminated, though purchases and sales may both make a sizable figure. The suggestion to transfer compulsorily two per cent of the carry-over margin to clients is greatly commendable. It will not only arrest the tendency of clients to trade beyond their means but also reduce the extent of defaults. It is in the interest of brokers, too, They must welcome it. The escape route in the present scheme of margins has been the exclusion of inter-client business and principal-to-principal business done by brokers from its purview. Through adjustments of *hawalas*, sometimes of total strangers and often of big speculator-brokers, members used to frustrate completely the margin scheme. They will no longer be able to indulge in such dubious practices. Under the revised scheme, the interim automatic margins are to be doubled. There should be nothing wrong with this, especially when fluctuations arising from basic corporate news are being eliminated (as was often suggested) from the scope of these margins which will now touch only the violently speculative scrips. It would have been better had the percentage increase or fall in the price, at which these margins become applicable, been reduced from 10 to, say, 7, especially in the case of speculative issues which are found to have escaped these margins.

The new scheme of margins supersedes the theory of internal autonomy for stock markets as initiated about a year ago and crystallised in the constitution of a standing committee of stock exchange presidents to take care of speculation in shares. It seems to show the committee the way it can function. This has, however, to be read in the context of the sharp fall in prices following the Chinese aggression. Besides drawing a scheme of margins, the Government has laid down sound principles for listing a share on the cleared list. Through these principles (which are also mentioned on the next page) the Government clearly wants to restrict the growth of the forward list, eliminate inter-market speculation which has some questionable properties, and disallow trading in small-sized holdings which leads to sudden and violent fluctuations. The new principles for forward listing are to apply to only new shares and not the existing ones.

The scheme suffers from one drawback. It has left unchanged the levels at which the daily and carry-over margins become applicable. Since the margins are to apply to total positions and not net, the incidence will be much greater than before, despite the fact that the rates of margins have been slightly reduced at the lower levels of business. One cannot expect, in the present disturbed state of the market, any big risks to be taken. But the scheme, in its present shape, may only curb big risks; it may not succeed in its purpose to restore normal trading. Marketmen have pleaded for an upward revision of the levels attracting margins and also a reduction in the rate of margins. Some relief here is necessary, especially because the scheme is to be of a permanent nature. It is to be hoped that the Government will soon make up its mind on the likely relief and notify its sanction for the resumption of normal trading.

Why Cotton Mill Shares Are Depressed

In the present depressed picture of the share market, cotton mill shares constitute a particularly dark spot. The table below, which broadly indicates the trend of prices of some of the leading cotton textile scrips over the past two years, gives an idea of the setback suffered by textile shares in general:

(Stock exchange quotations in rupees)

	29-5-1963	A year ago	Two years ago
Bombay Dyeing ..	61.00	69.70	66.20
Century	556.00	664.00	673.00
Standard	802.00	1,025.00	1,548.00
New Shorrock ..	1,370.00	1,638.00	2,200.00
Shree Ambica ..	1,155.00	1,446.00xr	1,329.00
Calico	734.00	1,118.00	1,110.50
Delhi Cloth	42.12	57.00	44.00
Kesoram Cotton ..	22.00	32.44	34.06

It is noteworthy that the current rates are much below those prevailing a year and two years ago. The general weakness of the share market can only partly account for the lack of interest on the part of investors in textile shares. The industry itself is facing hard times and considering the cost inflation which it suffers from, the outlook for cotton mill shares is rather uncertain. As it is, the profit margin of the cotton mill industry is badly squeezed. Mounting cost of production, on the one side, and the absence of a corresponding increase in sales realisation, thanks to the voluntary price control on yarn and cloth, on the other, have cut into the profits of mills. As a result, in 1962, the profits of cotton mills were lower than in 1961, whereas this year mills are actually incurring losses. Pointed attention to this state of affairs was drawn this week by two eminent leaders of the industry, namely, Mr. Bharat Ram, the outgoing Chairman of the Indian Cotton Mills Federation (details of his speech at the fifth annual meeting of the Federation are given on page 970 of this issue) and Mr. D. W. Law, Chairman of two leading textile mills in the South—the Buckingham and Carnatic Company, Ltd., Madras, and the Bangalore Woollen, Cotton and Silk Mills Company, Ltd., Bangalore. Mr. Law anticipated a substantial increase in cost of production during 1963 as a result of the increase in the price of consumable stores and materials as also of additional charges resulting from such measures as emergency insurance. Mr. Bharat Ram felt that a stage had been reached when it was no longer possible to postpone an upward revision of cloth prices so as to cover the progressive increase in cost of production. He listed the various elements that contributed to cost inflation as under:

"The ceiling prices for Indian cotton have been raised by Rs. 125 per candy from the beginning of the current cotton season. An import duty of Rs. 39.12 per candy has been imposed on foreign cotton. The prices of raw materials and stores have risen steadily. There has been a substantial increase in the wage bill. The workers have been given an increment of Rs. 2 per month under the Wage Board recommendations since January 1962; dearness allowance has also gone up while the rate of employer's contribution under the Employees' State Insurance Scheme has been raised from 1¼ per cent to 2½ per cent. Power tariffs have been raised and electricity duties enhanced by various proportions in the rent centres. Prices of dyes and chemicals, packing materials, etc. have also increased.

"In addition, Emergency Risk Insurance premia and higher rates of inter-State sales tax have contributed to the increase in manufacturing costs. Customs duties have been increased on all imported goods. Excise duties on a number of articles consumed by mills have been revised upwards. Apart from these, the State Governments have also, in their search for additional revenues, added to the burden of mills through their tax measures such as increase in sales tax on cotton and certain important items of mill stores and chemicals, tax on carriage of goods, etc."

In view of the substantial increase in costs, an upward revision in cloth prices is considered inevitable by both Mr. Bharat Ram and Mr. Law. The Tariff Commission, which has just completed its investigation into the industry's selling prices, is expected to submit its report shortly. There is general expectation among mill interests that the Commission, in its recommendation, will give due weightage to the increase in the cost of production.

Freight Rate On West-bound Cargo

As was only to be expected, the proposal for a 15 per cent increase in freight rate on West-bound cargo from India, with effect from 1st August 1963, made by the India-Pakistan-U.K.-Continental Shipping Conference Lines, has met with strong opposition from the representatives of trade and industry. A 15 per cent increase in freight rate on cargo shipped from India to ports in the U.K. and the Continent, it is pointed out, will inflate the price of Indian exports and thereby weaken their competitive position. Such a development at a time when Indian goods are meeting with stiff competition in foreign markets, it is contended, would seriously hit exports and nullify the effects of the export promotion measures being taken by the Government. Representatives of exporters and shippers consider that an increase in freight rate of this magnitude is unwarranted at present. They adduce two reasons in support of this stand. First, the financial position of shipping companies has improved of late, thanks to a decline in their expenses. The latter is the combined result of the rationalisation of services effected by the introduction of the pool arrangement, on the one hand, and the increase in freight rates by 12½ per cent on East-bound traffic brought about last year, on the other. Second, the difficulties in obtaining shipping space has increased as a result of the introduction of the pool arrangement. Shippers, therefore, find no justification for charging more for what is, from their point of view, a less satisfactory service.

Shipping lines have also advanced equally cogent reasons for an upward revision in freight rates. They point out that the operational costs of shipping lines, including cost of building new ships and wages for staff, have gone up considerably. Port charges, demurrage, stevedoring charges, etc., have also steeply increased. To cope with these mounting costs, the freight rates on all East-bound cargo had been increased by 12½ per cent last year. But no change was effected in the rates on West-bound cargo which have remained unchanged for a number of years. An enhancement of the latter is, therefore, said to be necessary not only to cover the increased cost but also to bring about some parity between the freight rates on East-bound and West-bound cargo.

The proposal to enhance the cargo rate has sparked sharp reactions in shipping circles. A delegation representing the Conference Lines concerned, led by Mr. L. G. Hudson, is currently in India holding discussions with representatives of trade and industry on the question of freight revision. By an agreement with the Government of India, the Conference Lines are bound to discuss matters connected with any revision of freight rates with shippers. In the event of disagreement, the matter should be referred to the Government.

There is considerable force in the plea of shippers that a 15 per cent increase in freight would adversely affect the country's export trade and hamper export promotion. For, in a buyers' market—most of India's export items have buyers' markets—even a small rise in price, whether it be on account of higher cost of production or higher transport charges, is enough to bring forth consumer resistance and even loss of markets. But the need for maintaining the freight rates at levels that will not only cover the cost of operation but also leave a reasonable margin of profit to the shipping companies cannot be ignored either, especially because a sizable volume of the pool business goes to Indian flag lines. A conflict of interest is clearly involved in the issue. It should not, however, be difficult to arrive at a compromise solution, say, reducing the percentage increase in freight proposed, which, while providing some relief to shipping lines, would not adversely affect India's export trade.

U.S. Wheat Referendum

U.S. wheat farmers administered a serious blow to the agricultural protectionist policy of the Kennedy Administration, when they rejected last week an official proposal to extend the scope of Federal control on the production of wheat. In a referendum, which was hotly debated for months among the 1.5 million farmers throughout the 3,000 wheat growing counties in the U.S., the official programme was rejected by an overwhelming majority. The consequences of this referendum will be felt not only within the U.S., but also in the world markets for wheat in the coming years. An endorsement of the policy would have enabled the U.S. to eliminate its wheat surpluses within the next three or four years. The U.S., it may be noted, has now the largest amount of surplus stockpiles of wheat in the world, the actual quantity being 1,200 million bushels, more or less its total annual output, and considered to be twice as much as is required for any emergencies. With the rejection of the Government's proposal, it is likely that there will be further accumulation of surpluses in the U.S., which will dampen world wheat prices now assiduously kept in check under the International Wheat Agreement.

The major features of the Government proposal which was rejected were as follows: The farmer would receive an acreage allotment of about 10 per cent less than last year for the 1964 crop, which will be planted in the autumn of this year. He would be assured of a price of $2 a bushel on 80 per cent of the crop and $1.50 on the remainder. Wheat produced on acreage in excess of the farm's allotment would be subject to a penalty of about $1.65 per bushel. The farmer could also receive payment of upto 50 per cent of the wheat support price on acreage voluntarily diverted from wheat production to conservation uses. Thus the official proposal was designed to create an integrated scheme for protection, involving higher prices, strict control on output, heavy penalties for over-planting and liberal inducements for diverting land from wheat crop to others. Controls on wheat farmers, however, is not new in the U.S. In the past, there have, of course, been limits on acreage planted; but never on the number of bushels marketed. Farmers, using improved production methods, were able to produce more wheat on the same number of acres; consequently, the Government's surplus problem was not improved. By limiting output,

TREND OF SHARES

WEAKNESS AT CLOSE

(From Our Own Correspondent)

BOMBAY, *30th May*

AFTER a further recovery between Friday the 24th inst. and Monday the 27th inst., stock exchanges developed considerable weakness, especially towards the close, this week. This renewed setback was on bull liquidation and absence of support following the report in a section of the Press that China had moved 60,000 crack troops into Chumbi Valley, between Sikkim and Bhutan and had stationed its army, composed of para-troopers and fighter squadrons and backed by a large fleet of fighter planes, in South Tibet. This report, coming close on the heels of the Government of India's protest (made public on Saturday) against a Chinese reconnaissance plane having penetrated deep into Indian territory in the direction of Ambala on 6th May, unnerved market-men. Bulls sold in a market devoid of support. Prices, therefore, declined considerably and the market leaders closed the week well below their last week's levels.

Besides fears of a fresh involvement with the Chinese on a scale larger than before in view of their provocative activity across the border, the other political factors, such as the activity of hostile Nagas and the unpredictable attitude of Pakistan on Kashmir issue after the failure of Ministerial talks, also depressed sentiment. Absence of encouraging corporate news was yet another disappointing factor. Moreover, Communist Party leaders talked of launching a nation-wide struggle against the Government's economic policy and the detention of some of their comrades.

Against this unencouraging background have appeared the prospects of early resumption of normal trading. One will, however, welcome this, as free trading will help the market seek realistic levels at which at least those with a big purse may choose to take some risk. Since the market is at present artificially stabilised by maintaining the ban on short selling, prospective investors seem to have preferred to keep aloof on expectations of more favourable rates after free trading is allowed. The uncertainty about normal trading is now nearing its end. Marketmen have sought some relief in the revised scheme of margins. The Government's reply is expected within a fortnight. It is anticipated that some relief will be conceded both in the rates of margins and in the levels at which they become applicable. It appears that, even if no relief is forthcoming, the market authorities will not hesitate to abide by the proposed scheme of margins and obtain permission to restart normal forward trading, considering that the scheme is designed mainly to strengthen the liquidity of the market.

* * * *

Dalal Street opened steady and displayed an improved tone till Monday. On Tuesday came news that the Government had proposed to the market authorities a scheme of margins for allowing free trading. This had a slightly depressing effect the next day. Today, prices dropped considerably on liquidation following the report that the Chinese had moved crack troops into Chumbi Valley. The setback today was quite pronounced in the market leaders. Thus, Tata Steel Ordinary, which were quoted at Rs. 136.75 on Monday, were sold down today to Rs. 132.75 and Indian Iron fell to Rs. 22.16 from Monday's high level of Rs. 22.72. T.E.L.Co. dropped to Rs. 280.50, as against Rs. 291, Hindustan Motors to Rs. 16.84, as against Rs. 17.32, Century to Rs. 546, as against Rs. 563, National Rayon to Rs. 347, as against Rs. 363 and Bombay Burmah to Rs. 64, as against Rs. 66.50. Among others, Indian Dyestuff declined by Rs. 8.75 (over the week) to Rs. 401.25, Standard by Rs. 8 to Rs. 780, Voltas by Rs. 4.50 to Rs. 257, Larsen and Toubro by 52 nP to Rs. 23.24 and Tata Chemicals by 36 nP to Rs. 15.08. Sugar shares were steady, but A.C.C., among Cements, closed Re. 1.50 lower at Rs. 141. Electrics maintained their last levels. Scindia Steam, among Shippings, were easier at Rs. 10, as compared with Rs. 10.08 a week ago. In the cash section, Baroda Rayon were three points lower at Rs. 96.50, notewithstanding the denial by the Company of reports that the factory at Udhna was having difficulties in regard to supply of water and that the saltish quality of water was adversely affecting the quality of products. The Company assured its shareholders that the factory was getting adequate supply of water of the required purity and that production was going on satisfactorily. The speculative T. Maneklal suffered a heavy setback from Rs. 595 to Rs. 560. Among the new issues, popular scrips like Tak Machinery and Hindustan Wired Glass showed a loss of Rs. 2.50 to Rs. 92 and of Rs. 5 to Rs. 129, respectively.

* * * *

Forward shares closed with small losses on the Calcutta Stock Exchange. For example, G.K.W. were lower by 38 nP at Rs. 33.37, Dunlop by 25 nP at Rs. 33, Kesoram by 25 nP at Rs. 22 and Orient Paper also by 25 nP at Rs. 33.60. In the cash section, among Textiles, Bharat Commerce declined from Rs. 22.50 to Rs. 21. In Coals, Amalgamated gained Re. 1.32 to Rs. 23.69. Jutes were a shade better, with Burnagore at Rs. 192, as against Rs. 190 a week ago, and Nuddeah at Rs. 57.50, as against Rs. 55.25. Among Engineerings, Chase Bright broke sharply from Rs. 9.81 to Rs. 6.35. Miscellaneous issues showed small losses, but Goodyear were down by Re. 1.25 to Rs. 34 and Philips Carbon by Re. 1 to Rs. 16.75. Sugars and Tea shares were steady.

* * * *

A sharp setback in South India Viscose from Rs. 144.50 to Rs. 136, following the publication of last year's accounts showing a loss of over Rs. 88 lakhs, was the feature of trading on the Madras Stock Exchange. Other Textiles were also quiet, with Lakshmi closing Re. 1.75 lower at Rs. 135.50. The Miscellaneous section generally showed losses over the week. Thus, Aluminium Industries declined from Rs. 17.40 to Rs. 17 and Madras Rubber from Rs. 17.75 to Rs. 17. Sugar shares disclosed small changes. Cauvery gained one point to Rs. 107 and E.I.D. 10 nP to Rs. 37.35, while Travancore eased from Rs. 7.35 to Rs. 7.31. In Plantings, too, changes were limited. Thus, Kil Kotagiri closed 13 nP lower at Rs. 5.35, Cochin Malabar 15 nP lower at Rs. 5.70, Midland also 15 nP lower at Rs. 10.65, while T.R. and T. showed a gain of 20 nP to Rs. 9.10.

REVISED SCHEME OF MARGINS ON SHARES

The following are the important details of the revised scheme of margins on shares as proposed by the Government; the scheme, which will be enforced as a permanent measure, forms the basis on which the Government will permit resumption of normal forward trading on stock exchanges:

(1) Margin will now be imposed on the carry-over of total purchases and total short sales and not on the net outstanding position (that is, the balance of purchases and sales or *vice versa*) as before. It is to apply to purchases and sales made by a broker whether in the market, or on an inter-client basis, or with his client. Under the rules which prevailed before forward trading was banned by the Government on 29th November 1962, it was levied on the carry-over of purchases and sales made in the market only.

(2) At present, brokers pay the carry-over margin, rather than collect it from the clients. Brokers are now required to collect compulsorily from their clients a part of the carry-over margin at the rate of 2 per cent of the making-up price of purchases or short sales carried over to next account. They will themselves pay the equivalent margin on the carry-over of their own business. This margin is to be collected by giving two special *havalas*, one for purchases and the other for sales, the former at a discount of 2 per cent under and the latter at a premium of 2 per cent over the normal *havala*. For example, if the normal *havala* is Rs. 100, the special *havala* will be Rs. 98 for purchases and Rs. 102 for sales. Members will compulsorily give the contracts for the carry-over transactions of their clients at the special *havala* rates and receive or pay the difference accordingly. All contracts and statements of carry-over transactions at rates other than the special *havala* rates will be deemed void. The 2 per cent margin will apply only once, at the first clearing, and not later, at subsequent clearings, if the deal is not squared up. After the deal is closed, the margin amount will be refunded to the clients.

(3) Since a part of the carry-over margin is to be compulsorily collected from clients as above, the overall schedule of margins on the carry-over of business is slightly reduced in respect of the balance. The free-limit in respect of the balance is Rs. 15 lakhs of the total business (not net outstanding) carried forward. The revised rates of margin and the rates now in force are given below:

Carry-over business (In lakhs of Rs.)	*Margin rates* (Per cent) *Revised*	*Present*
16-20	3	5
21-25	8	10
26-30	15	20
31-40	20	20
Above 40	30	30

(4) As regards the daily margins on outstanding business in all shares, the present system has been changed to some extent. For the purpose of computing the margin amounts, all inter-client transactions and dealings of brokers themselves will be included in the lists. Further, the rate of margin to be paid now will be 5 per cent on open business above Rs. 3 lakhs and under Rs. 5 lakhs; 10 per cent on open business between Rs. 5 lakhs and Rs. 10 lakhs, and 40 per cent on open business over Rs. 10 lakhs. Under the present rules, the rate of margin is 10 per cent on open business from Rs. 3 to Rs. 10 lakhs and 20 per cent on open business above Rs. 10 lakhs. It may be noted that the daily margin is to be paid separately (not on the balance of) on open purchases and open short sales, with a free limit of Rs. 3 lakhs (the same as at present) in either case.

(5) The existing system of automatic interim margins is also amended. So far, the margin on the rise or fall of 10 per cent in any scrip in one clearing used to be 50 per cent of such percentage increase or fall and an additional 50 per cent on a further rise or fall of 5 per cent in the immediately next clearing. It is now proposed to collect as margin the full 100 per cent of increase or fall. Such margin will not be levied, if the rise or fall occurs due to increase in dividend or to issue of bonus or right share, or cut in dividend, or recommendation of no dividend, or such other circumstances. Further, the interim margin will not be imposed in those shares (subject to Government permission) in which business is small.

The Government has also suggested the following changes in the listing regulations for cleared shares:

Cleared shares should be fully paid equity shares, except in the case of a banking company. A security will be admitted to the cleared list only three years after it has been listed on the stock exchange concerned. It should not be listed on any other stock exchange. (This condition will not apply to the existing securities which have been listed on more than one stock exchange.) The company, the share of which is to be placed on the forward list, should be of sufficient magnitude and public importance and have a subscribed capital of at least Rs. 25 lakhs, valued at the ruling market price at Rs. 1 crore. At least 49 per cent of its capital must be held by the public and distributed broadly and evenly among a large number of shareholders.

Calcutta Electric Lamp Works Ltd.
3, Mangoe Lane, Calcutta - 1.

PROFIT OF KOTHARI TEXTILES LOWER

During the year ended 31st December 1962, sales of Kothari Textiles Ltd. (Managing Agents: Messrs. Kothari and Sons, Madras) improved substantially from Rs. 190.10 lakhs to Rs. 214.31 lakhs, but gross profit declined slightly from Rs. 30.84 lakhs to Rs. 27.43 lakhs, due to higher operating expenses, particularly in respect of stores, staff, power and fuel. The cost of cotton consumed has amounted to Rs. 99.42 lakhs, as against Rs. 98.69 lakhs a year before. Staff expenses have increased from Rs. 38.22 lakhs to Rs. 40.63 lakhs. Other expenses, including Rs. 13.26 lakhs on stores (as against Rs. 10.78 lakhs a year before) and Rs. 5.07 lakhs on power and fuel (as against Rs. 4.34 lakhs), have gone up from Rs. 33.49 lakhs to Rs. 42.03 lakhs. Provision for depreciation is slightly lower at Rs. 15.51 lakhs, as compared with Rs. 15.96 lakhs a year before. Taxation has claimed Rs. 1.45 lakh less at Rs. 5.75 lakhs. The total of guaranteed commission and remuneration to Managing Agents stands reduced by some Rs. 30,000 to Rs. 1.17 lakh.

Net profit, after these allocations, shows a setback of Rs. 1.26 lakh to Rs. 5 lakhs. Out of this, a sum of Rs. 1.89 lakh (as against Rs 2.13 lakhs in the previous year) has been transferred to development rebate reserve. The preference dividend absorbs Rs. 1.40 lakh. The dividend on the 10-rupee ordinary shares has been maintained at 8 per cent per annum, subject to tax. But, since the aggregate distribution amounts to Rs. 5.38 lakhs and the profit available is insufficient to cover it fully, a sum of Rs. 3.50 lakhs (as against Rs. 2.50 lakhs in the previous year) has been withdrawn from general reserve. The surplus to be carried forward is Rs. 12,617, as against Rs. 29,146 brought in.

The Company's renovation programme, we are told, has been carried out partly from internal resources and partly from bank borrowings. The programme is to be carried further and for that adequate financial arrangements are said to have been made with the Company's bankers.

MARKET GOSSIP

(Concluded from previous page)

the Government could have reduced acreage allotments without additional legislation, if increased yields per acre resulted in larger surpluses.

Although the Government's programme has been rejected, existing controls on acreage allotments still remain and the price support will continue at the rate of $1.25 a bushel. But the prospects are that the next wheat crop will be bigger and may perhaps depress prices below those fixed by the International Wheat Council. The U.S. Government is under an obligation to the I.W.C. to see that U.S. wheat would not enter the world market at a price below $1.62 a bushel. It is against this background that, soon after the referendum was defeated, President Kennedy issued a directive seeking to prevent any "dumping" of U.S. wheat in world markets. The U.S. Commodity Credit Corporation will buy necessary quantities, if prices fall below the minimum agreed to under the World Agreement.

In the absence of Federal control as is now desired by farmers, the area under wheat in 1963-64 would be about 70 million acres, which is likely to turn out 1,500 million bushels of wheat. A "yes" vote in the referendum would have reduced the acreage to 43.5 million and output to 1,000 million bushels. The annual requirement of wheat for domestic consumption in the U.S. is no more than 500 million bushels and exports, both under commercial and other terms, would be around 600 million bushels. There will thus be a sizable surplus (about 300 million bushels) in 1963-64 alone. The negative vote thus means high production, increased wheat surpluses, and consequently lower prices for the farmer. Such a situation, however, will not be palatable even to those who opposed the referendum. Mr. Charles B. Schuman, President of the Farm Bureau, who spearheaded the opposition against Federal control, has called upon the Government to evolve new legislation to stabilise wheat prices. The Administration had, however, announced, prior to the referendum, that the introduction of any such legislation this year was out of question. But it is not inconceivable that the Administration may relent under pressure from the farmers, with their well-known political strength, and bring in new legislation to avoid any slump in the wheat market.

PERSPECTIVES & PROJECTIONS

By Mercator

Fourth Estate

NOT overlooking a contemporary which has taken due notice of the most important change in recent times of ownership of an Indian newspaper, I am dismayed by the scarcity of comment on the announcement of the change in the proprietorship of the *Statesman*. What factors or calculations caused the change and what does it signify? Such an inquiry should have seemed appropriate to the Indian press which usually gets excited over much smaller matters than the passing of control of one of the country's leading institutions. I am quite sure that reactions are mixed and that in West Bengal where the intellectual had developed an almost spiritual affinity to the Englishman, even this leavening of ownership, by the entry of others who are not sons of the local soil, will be distasteful. Some are bound to say that the paper will never be the same again, or detect unseen influences or pressures on one matter or another since it is our national characteristic to distrust the trend we like to foster most, namely, Indianisation. One can, however, understand the awkward predicament of the existing owners; exclusive British proprietorship imposed a restraint which might have proved impossible consistently with the responsibilities of a leading national newspaper but for the established traditions of freedom from deep prejudices in presenting news or editorial opinions. The English language was doubtless a great asset since it could be as effective in understatement as in hyperbole in which Indian newspapers excel, but this advantage was perhaps gradually disappearing with the diminishing tribe of readers educated in the older English traditions and able to understand the nuances of expression. The Indian politician is today not as sophisticated as Nehru. He loves uncritical praise and usually understands criticism only when it is blunt; businessmen and other readers are not very different, so that the *Statesman* seemed to be suffering from a handicap even while it was widely trusted to remain fair.

Without Indian participation it might have been a difficult task to impart fresh vigour; but at the same time such participation, by those who would normally be eager to provide the capital but would not hesitate to call the tune, would have wrecked its traditions. One section of Bombay businessmen have seemed more suitable than the rest and only time can give the final verdict on this act of faith in associating them with the ownership. Whether this partial transfer of ownership is the first step to a more complete transfer is not known but the distribution of shares among 12 British and Indian business houses and the choice of five trustees to safeguard editorial policy from interference are good as far as they go. Impartiality and independence, however, can never be fully guaranteed by such devices; they depend on the choice of men to be entrusted with the responsibility of running the newspaper and even more on the practice of self-denial by those in a position to bring various knds of influences to bear on them.

On the Calcutta orientation of the *Statesman* there will perhaps now be grafted a Bombay orientation. It is being unrealistic to expect that the even division of the Board on this regional basis, and almost a similar pattern for the trustees (who personally are men unlikely to think in such terms) will not have any effect. This may be a welcome change in the paper too much engrossed hitherto with Calcutta and its environs, though one hopes that, newsprint position permitting, the change will also bring other neglected parts of the country into focus. The comment most frequently heard is that if a change had to come about, this was as good as any other manner that can be suggested; while the anxiety to exclude certain groups, which already control much of the national newspapers, can be readily understood, a slightly wider regional spread might not have been impossible.

* * * *

Now Rajkot

"The most successful politician," said the former U.S. President, Theodore Roosevelt, "is he who says what everybody is thinking most often and in the loudest voice." The opposition candidates in the recent by-elections seem to be doing exactly that, considering the success they have achieved. The Rajkot victory is another proof of the low level of Congress popularity and morale. It is difficult, however, to be categorical regarding the issues which appealed most to the electorate in voting against the Congress, when most of the voters did not vote anyway. But the pattern of opposition to the Congress in this country is familiar. In the north, the challenge comes from the Right and even Dr. Lohia's success was facilitated by the support of the Jan Sangh. In Kerala, the triumph of a Communist in Trivandrum II shows that the alternative to the Congress there is the extreme left, as it may well be in West Bengal if the Chinese threat recedes. The reasons for these trends may lie deep in the social and cultural differences among the north, the south and the east and the Congress still may derive comfort from these heterogeneous forces which may never blend to offer united opposition to its hegemony.

It cannot be said, for example, that in these by-elections the Government's China policy was being disapproved or that people are disappointed with the economic achievements under planning. But clean administration is something which every voter is likely to understand from his or her experience. There are local counterparts in every State of the Malaviya affair at the Centre, and some concrete evidence of better political and administrative standards should help the Congress in future. A welcome development is Mr. Hafiz Mahommed Ibrahim's decision to resign from the Union Cabinet. It needed some strength to take it. But both he and the party will be the better for this proof of adherence to principles in public life. The Serajuddin inquiry is now reported to be proceeding from day to day and the results of the inquiry may also affect the reconstitution of the Cabinet. There is, however, one item of praise which the opposition parties cannot in fairness withhold from the Congress. The recent results show that the emergency did not seriously limit the freedom of expression required for electioneering. Allegations have been made by both sides about the part played by certain officials in Amroha, Farrukhabad and Jaunpur and of some intimidating tactics in Rajkot but even if such occasional excesses are true, the impartiality of India's election machinery has been vindicated.

* * * *

Cloistered Virtue?

It is not in India alone that the judiciary is jealous of its position and apprehensive about its future. Chief Justice Warren is reported to be disturbed by the tendency of many States to support constitutional amendments which will circumscribe the U.S. Supreme Court's authority. Twelve States have passed amendments to remove constitutional restraints on the apportionment of electoral districts for State legislatures so as to maintain unfair practices which the Supreme Court had declared illegal. Eleven States have passed amendments to permit constitutional amendments by State legislatures and three States have approved proposals for forming a union of State Chief Justices to review Supreme Court decisions. It is not expected that these amendments would get the required two-thirds majority among the States but it reveals the extent to which the segregationists will go in challenging the authority of the Federal Government. The use of Federal troops to protect Negro citizens exercising their right of equality is also being questioned before the Courts.

Nearer home, the recent controversy in which the Governor of Bihar figured took an unseemly turn when two High Court Judges of the State questioned the correctness of his facts on the extent of favouritism in Courts and the appropriateness of the Governor mentioning them. Whether or not the Governor was the right person who should have said such apparently disparaging things about the State's judiciary, there is little doubt that the complaints he uttered and the methods of favouritism he described are fairly well known in other States also, though not perhaps on the same scale. If the public is led to believe that there is foundation for such allegations, the prestige of the judiciary will not be as high as it ought to be. That a Governor gives expression to the beliefs widely held by the litigant public will not lower it further; the Law Commission had long ago pointed out some of these drawbacks resulting from political pulls in judicial appointments and the Bihar Governor was making no new discovery, though as a former lawyer he was able to see things for himself and apparently convinced himself that they needed saying aloud.

There have been occasions when high dignitaries have aired their personal views not palatable to those in political office. When the late Dr. Rajendra Prasad referred to the Constitutional provisions concerning the binding nature of the Cabinet's advice on the President and suggested that jurists should study the matter further, there was a mild sensation. That was a constructive suggestion and while many raised their eyebrows, few thought it to be improper for a President in office to say. More recently, Dr. Radhakrishnan referred to the responsibility of the Government of India in defence against China and observed that in the past we were credulous and negligent. So the Governor's general remarks on the kinds of abuses of their position by lawyers (and perhaps some judges) were not wholly inappropriate; if judges had rebutted the complaints with facts or personal knowledge of the actual extent of favouritism, instead of attacking the Governor, they could have done a service. Justice is no cloistered virtue and there is no reason at all why judges should feel that they are wholly immune from criticism, even though they are protected against specific acts of contempt and their independence is safeguarded by the Constitution.

ANOTHER I.D.A. CREDIT FOR INDIA

The International Development Association has extended a credit of $20 million to India for electric power development in the State of Andhra Pradesh. The credit will cover about half the cost of building a 120,000-kilowatt steam power station at Kothagudem, a reservoir to supply cooling water and a 150-mile transmission line to connect the station with other power facilities. The credit is for a term of 50 years. Repayment of principal will begin on 1st December 1973. Thereafter, 1 per cent of the principal will be repayable annually for 10 years and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of ¾ of 1 per cent per annum on the amount withdrawn and outstanding will be made to meet I.D.A.'s administrative costs. The Government of India will relend the proceeds of the I.D.A. credit to the State of Andhra Pradesh in accordance with its usual method of financing power and other major projects; repayment is expected to be over a period of 20 years, after a grace period corresponding to the construction period; at an interest rate of 4½ per cent annually. The State Government will in turn make the proceeds available to the State Electricity Board on the same terms with an additional ½ per cent charge. This credit increases the total amount of I.D.A. credits to India to $300 million.

Sales of savings certificates in 1962-63 recorded an all-time high of Rs. 65.68 crores. Collections from national defence certificates and national plan savings certificates during the year amounted to Rs. 54.26 crores, an increase of Rs. 11.28 crores over the previous year. Defence deposit certificates and treasury savings deposit certificates together brought in Rs. 11.42 crores, as against the previous year's collections of only Rs. 4.82 crores. Cumulative time deposit in 1962-63 aggregated Rs. 5.34 crores. Deposits in the post office savings bank increased by Rs. 9.62 crores, as against the increase of Rs. 39.50 crores in the previous year. The total net small savings collection amounted to Rs. 80.84 crores, as compared with Rs. 87.50 crores. The premium prize bonds introduced in January this year yielded Rs. 3.35 crores at the end of three months, the close of the financial year 1962-63.

DEVELOPING COUNTRIES AND COMMODITY PRICES

THE persistent decline in the prices of world agricultural commodities witnessed since the end of the Korean boom was halted by the close of 1962. In fact, prices of a few commodities like sugar, sisal and olive oil have touched record levels. This improvement in prices, however, has not diverted the attention of international agencies like the F.A.O. from their efforts to ensure stability in prices on a long-term basis. The latest meeting of the F.A.O. Committee on Commodity Problems held at Rome (from 20th to 30th May 1963), which considered several proposals for the stabilisation of commodity prices, is a case in point. These efforts are certainly in the right direction. For the recent recovery in commodity prices has been neither sizable nor of a nature that warrants any complacency on the long-term outlook for primary commodities. The basic balance between supply of, and demand for, most of the agricultural commodities still remains precarious. In fact, the firmness in sugar, sisal and olive oil may not last when the next season's crop, which is expected to be generally better, comes to the market. So the latest recovery in prices cannot be considered to be anything more than a passing phase. Thus there is as yet no indication of any solace to the less-developed countries, which are predominantly exporters of primary commodities, and the economies of which have been hit hard by the decline in the prices of commodities during the last several years.

Viewed against this background, there appears to be no exaggeration in the statement of Mr. B. R. Sen, Director-General of the F.A.O., that the issues confronting the developing countries in the field of commodity prices had not become "any less serious" last year. In his opening speech at the Rome meeting, Mr. Sen made it very clear that the recent recovery in prices was solely due to temporary factors. In any case, he observed, prices for many commodities had already reached such low levels that any further deterioration "would be little short of disastrous." He then listed the major problems facing the developing countries in the field of trade. These are: (i) unfavourable terms of trade for agricultural products, (ii) a disquieting long-term outlook for agricultural exports from the less-developed countries, (iii) the slow economic growth of these countries, (iv) persistently low levels of food consumption in large areas of the world, (v) anxieties arising from regional integration in Europe and, above all, (vi) the continuing disequilibrium between supplies and demand in world markets. Looking ahead, Mr. Sen stressed that the longer-term outlook for agricultural exports from developing countries during the 1960s gave no ground for complacency, particularly when viewed in relation to the needs of these countries.

This assessment of the long-term situation is based on the experience of the last few years, during which period the less-developed countries have had a rough deal at the hands of the industrially advanced countries in the field of world trade. This is fully reflected in the deterioration in the terms of trade of primary exporting countries. According to Mr. Sen, the loss suffered by the developing countries between 1955 and 1961 through the fall in prices of primary products which they exported, and the rise in prices of manufactured goods which they imported, was as much as $20 billion. The prices of manufactured goods have been steadily rising for some time, relative to the prices of primary products. Consequently, between 1955 and 1961, price increases for manufactured goods alone raised the import bill of the developing countries by an estimated amount of $12 billion, while price declines for primary products resulted in a loss of exchange earnings to the tune of $8 billion. "This 'squeeze' on developing countries," he emphasised, "caused them to be $20 billion worse off."

No improvement in the terms of trade of primary exporting countries is possible unless the supply and demand situation of commodities is brought into equilibrium through the concerted efforts of producing and consuming countries. Such inter-Governmental co-operation and consultation is sought to be ensured through the world commodity agreements and study groups formed within the framework of the F.A.O. In this connection, the proposal made at the meeting to constitute an F.A.O. Study Group for tea (on the lines of that for coffee and cocoa) is of particular interest to this country, which is the largest producer and exporter of this commodity in the world. Although tea prices have remained relatively stable in the past, unlike coffee or cocoa, the prospects for maintaining this trend are not quite bright. According to Mr. Sen, who himself placed the proposal on the agenda, there were several indications that, *in the not-too-distant future, there might be an excess of tea supply over demand which could have serious effects on the economies of tea producing countries.* Mr. Sen's warning is quite timely. Equally important from India's point of view is the proposal to set up a study group for jute and allied fibres. The main task of the proposed study group will be to examine the question of promoting long-term equilibrium and greater short-term stability in the industry, besides improving the collection of statistical information, marketing practices and also the quality of the products. A new study group is proposed for bananas as well, which is of particular importance to the economies of some of the Latin American countries. The study groups, no doubt, are beneficial in so far as they seek to study the basic problems of various commodities and indicate the directions in which efforts could be made to solve them. But a lasting solution for commodity problems will not be evolved until production is regulated and expanding markets are assured for these commodities in developed countries, which have now protected their agriculture behind high tariff walls and thus discriminated against the exports of developing countries.

COFFEE EXPORTS

The International Coffee Agreement has at last been ratified by the U.S. Government. Although the Agreement was signed many months ago and 54 nations had either ratified or announced their intention to ratify, it could not come into force, since the U.S., which accounts for over half of world coffee imports, had been prevented from ratifying it by undue delay in the grant of consent by the Senate. The Senate had withheld the consent in an attempt to persuade the Latin American countries to carry out the general economic reforms considered essential to the success of the Alliance for Progress. The U.S. Administration, however, succeeded in making the Senate realise that the Coffee Agreement was vital to the well-being of Latin America and that it should not be jeopardised for the sake of economic reforms which had nothing to do with coffee.

With the ratification by the U.S., the way is now clear for bringing the International Coffee Agreement into operation. India, as readers are aware, has joined the Agreement, its export quota being 21,600 metric tons (360,000 bags). The quota is smaller than is warranted by the prospective production levels and the actual high level of exports amounting to over 31,000 tons maintained in the calendar year 1961; the third Plan output target is 80,000 tons. Even after meeting fully the expanded domestic demand, there will still be left an exportable surplus which will be well above the exportable quota allotted to it under the Agreement. The quota of 21,600 tons, it may be noted here, represents about two-thirds of the estimated output of 52,000 tons in the current season due to end on the 30th of this month.

The pace of coffee exports from India has no doubt slowed down of late, the actual shipments during the financial year 1962-63 aggregating less than 20,376 tons valued at Rs. 7.61 crores as against 24,712 tons valued at Rs. 9.02 crores in the previous year. But the average price realised from exports has gone up from Rs. 3,650 per ton in 1961-62 to Rs. 3,735 in 1962-63. The rise is in keeping with the upward trend of world prices. Unwashed Uganda Robusta grade 10 coffee is currently quoted in London at about £200 (Rs. 2,667) per metric ton f.o.b. Mombasa, as against £143.2/5 (Rs. 1,912) prevailing at this time last year. It looks as though the high level of world prices will continue to be maintained in the coming season (1963-64). This, at any rate, is the conclusion that emerges from the latest assessment made by U.N. Food and Agriculture Organisation. The season 1963-64, according to the F.A.O., will witness a reduction in the exportable surplus of coffee, following the adoption of several measures for improvement and diversification in Brazil and other countries. On the side of consumption, such factors as higher incomes, lower prices in world market, some cut in import duties and taxes, better qualities and expanding use of instant coffee have led to an encouraging rise of over 4 per cent a year in world intake of coffee in the past five years.

All this, though it is encouraging from the point of view of India, should not engender any sense of complacency among coffee interests. For the disequilibrium between production and consumption, which the large surplus stocks, as the F.A.O. has itself emphasised, is likely to persist for some years. "The problem of exportable surplus," to quote the F.A.O., "will remain the main problem. Even on the most favourable assumptions as to large increases in consumption in Eastern Europe and new markets, as well as in producing countries, world production capacity is already sufficient to meet all possible increases in demand over the next eight or ten years."

Viewed thus, it is obvious that, if India is to compete effectively in world markets, it must put in maximum efforts to produce more of better quality coffee, particularly of the exportable varieties, at an economic cost. Due attention requires to be paid to the proper drying, curing and bulking of coffee. It will be recalled, in this connection, that, some years ago, Indian Plantation A coffee fetched a premium over Kenya's coffee, but the position has since been reversed. Export promotional work must be intensified through organised contacts between producers in India and importers abroad. Further, there is the need for revising the system of export marketing. Without giving a fair trial to the policy of selling for export in open auctions, the Coffee Board has reverted to the old and outmoded closed bid system. The Chairman of the Coorg Planters' Association was quite justified when he recently criticised the switchover from open auctions to closed bids. It is only under open auctions that quality coffees fetch their own premium. In due course, the Board could limit its auctions to quality coffee and not sell coffees which can only result in a loss to the pool. After some experience of the open auction system, a refinement could be added in the way of selling by making available for sale each year coffees known by their estate names or distinguishing markets. In conclusion, it may be said that, if steps are taken to improve the quality and to promote measures for greater consumption in the traditional as well as new markets, Indian coffee will doubtless have a bright future.

RUBBER TYRES AND TUBES

The tyres and tubes industry has made good progress in recent years, despite shortage and high prices of essential raw materials. The national emergency has invested this defence-oriented industry with a great responsibility which it is trying to fulfil to the limit of its capacity. The total production of automobile tyres (including giant, motor and motor cycle varieties) touched a record of 1.7 million numbers in 1962, as compared with 1.6 million Nos. in 1961, about 900,000 Nos. in 1956 and about 720,000 Nos. ten years ago. The number of automobile tubes produced in the country also rose to a peak of 1.7 million in 1962 from 1.5 million in 1961, and only about 900,000 by 1956. The industry is expected to make further headway during the remaining part of the third Plan. According to the revised target, production of automobile tyres and tubes will touch 5.2 million numbers each by 1965-66. The upward revision of target has been deemed necessary presumably in order to cater to the growing requirements of tyres for defence.

One of the major difficulties faced by the industry relates to the increasing burden of raw material costs. The industry, however, is not able to increase the price of its products correspondingly, in view of the "fair prices" fixed by the Government on the advice of the Tariff Commission. A pointed reference to this problem was made by Mr. C. C. Desai, I.C.S. (retd.), Chairman of Premier Tyres Ltd., in his speech at the annual meeting of the Company held at Bombay on Monday last. Mr. Desai disclosed, in this connection, that the fair prices were likely to be revised by the Government in view of the increased cost. It is to be hoped that prices will be revised upwards in such a way as to offer sufficient incentives for the flow of capital to the industry for development and expansion. It may be noted here that about 80 per cent of the raw material content of tyres comprises rubber, fabric and carbon black, the prices of all of which have gone up in recent years. Besides, the industry is dependent on imports for a sizable part of its requirements of natural and synthetic rubber. It is true that synthetic rubber will be available for the industry from the Bareilly plant, which has just gone into production. But the price of this raw material will still be higher than that of natural rubber. There have also been increases in the prices of lead wire, pigments and chemicals.

It may be recalled here that the industry had cut the prices of its products in consultation with the Government in the past, although the Tariff Commission recommended their increase in its report in 1955. What the industry asks the Government now is that the price formula originally suggested by the Commission should be restored. This means that tyre companies will be able to raise their prices by 16½ per cent on passenger car tyres, 22 per cent on truck and bus tyres and 11 per cent on A.D.V., tractor and other tyres. The tyre producers feel that an increase of this order is necessary to develop the industry on sound lines. It should not, however, be forgotten that such an increase will have its inevitable impact on the cost of transportation. But there is a great need for encouraging the development of the tyre industry, without which there will be shortage and high prices for its products.

The demand for tyres and tubes has been steadily expanding, which is a good augury for the development of the tyre industry. Mr. Desai felt very optimistic about the outlook for the industry. His optimism was based mainly on the expanding markets for tyres and tubes in the country on account of the development of the automobile industry. On this point, he stated as follows:

"... during the year ended 31st March 1962, there were 640,000 vehicles of various types on the roads in different States of the country, as against 571,000 vehicles a year earlier—both excluding Defence vehicles. Of these, goods vehicles numbered 296,790. Applying the same replacement figures on which I based my calculation on the last occasion, that is about 10 tyres per goods vehicle and bus, the estimated consumption of giant tyres would come to nearly 3 million, besides what is required for original equipment of the increasing production in our automobile plants. So far as passenger car tyres are concerned, for 350,000 units on the road at the rate of two tyres per car per year, the annual requirement would come to 700,000 units plus original equipment for cars now being produced. By the end of the third Five-year Plan, goods vehicles will reach the figure of 365,000 and passenger cars and jeeps will touch 600,000-mark and the total annual demand for replacement tyres will, therefore, touch over 4.5 million-mark, in addition to the increased Defence requirement against which tyre production of units now in operation is estimated to be between 2.8 to 3 million. You will, therefore, observe that the outlet for your full production is assured in this year and for several years to come."

It is essential that the industry should be enabled to meet the growing domestic requirements. This would be possible only if the price structure is rendered flexible, taking into account the increase in the various elements of cost of production. Besides the increase in the cost of raw materials, which was referred to earlier, the incidence of excise duties and other taxes, as well as distribution costs such as freight, wages and warehousing, has also gone up. The growth of the industry will, therefore, be conditioned by its ability to pass on to consumers at least a part of the incidence of higher costs of production.

PAKISTAN'S THIRD PLAN

The tentative outline of Pakistan's third Plan, covering the five-year period 1965-70, which is reported to have been approved by the National Economic Council at Rawalpindi on 25th May, indicates that the outlay under the Plan would be almost double that under the second Plan (1960-65). At Rs. 4,350 crores, the total outlay proposed (in both public and private sectors) represents an increase of Rs. 2,050 crores over the second Plan figure of Rs. 2,300 crores. Of the total outlay of Rs. 4,350 crores, Rs. 2,850 crores or roughly 65 per cent will be in the public sector and Rs. 1,500 crores, or 35 per cent, will be in the private sector. As compared with this, out of a total outlay of Rs. 2,300 crores in the second Plan, the public sector accounted for Rs. 1,240 crores. The balance of Rs. 1,060 crores was divided between the semi-public sector (a new classification introduced to cover Government-sponsored corporations which draw their finances from both the public and private sectors) and the private sector, the former claiming Rs. 380 crores and the latter Rs. 680 crores. Assuming that the figure for the semi-public sector in the third Plan has been merged in the figure for the public sector mentioned above, it can be concluded that the relative share of the public and private sectors in the total plan outlay has been maintained at about the same level as in the second Plan.

The principal objectives of the third Plan, as laid down in the tentative outline, are (1) an increase in national income of 30 per cent as against the second Plan target of 24 per cent, (2) increase in regional income by 34 per cent for East Pakistan and 27 per cent for West Pakistan, (3) reduction in regional disparity in *per capita* income from 25 per cent to 20 per cent, (4) high priority for industries, particularly heavy industries, and (5) promotion of exports.

A notable feature of the third Plan will be reduced dependence on foreign aid. The anticipated external assistance is only 40 per cent of the total outlay envisaged, as compared with about 50 per cent in the second Plan. Although, on a percentage basis, the Plan's dependence on external assistance will be less, external foreign aid required to support the Plan would, in absolute terms, be very much higher, considering that the size of the third Plan is almost double that of the second. Anything like a critical examination of the Plan outline would be possible only after fuller details are made available by official sources.

I.B.R.D. REPORT ON KENYA

The World Bank has just published the report of a survey mission on the economic development of Kenya. The mission, which was sent by the Bank at the request of the Governments of Kenya and the United Kingdom, has made a comprehensive and expert assessment of the development potential of this emerging country. Its report, embodying the findings, is designed to assist the Government of Kenya in development planning during the first years of independence and in the formulation of policies to promote higher standards of living.

The timing of the survey has been very appropriate. Kenya is on the threshold of independence and economic development will be the first and foremost problem with which an independent national Government will have to concern itself. The World Bank mission's report will immeasurably help the Government in seeing the problem in the correct perspective and devising ways and means of solving it. Of course, the mission has not prepared a blue-print for the development of Kenya but it has assessed the development potential, identified the major problems and indicated the lines along which action is to be taken and development has to proceed.

A major finding of the mission is that Kenya has great development potential. The mission has, however, noted that the country is moving towards independence without any appreciable reserve of financial resources and that the market prospects for Kenya's main export crops, especially coffee, are uncertain. The scarcity of funds and the existence of budgetary problems are sure to limit the size and composition of a public investment programme. In the mission's opinion, the next few years, in particular, will call for restraint in spending and for serious concentration of funds and trained manpower on those projects and activities which form the foundation for future economic progress. In view of the limited resources and the many tasks facing the country, the mission has stressed the need for adopting policies to attract the support of private investors and to stimulate the activities of private producers and businessmen. These policies, the mission feels, should encourage other Governments and financial institutions to help provide the external assistance that will be needed.

It is the mission's considered view that the greatest emphasis in development policy over the next few years in Kenya should be placed on the expansion of agriculture, manufacturing and tourism which are the three main income-producing sectors of the economy. Since Kenya's is essentially an agricultural economy, it is through development in this sphere that advances in other sectors of the economy are possible. While the mission concedes that there is scope for expansion of manufacturing having regard to the size of the present market, any large expansion will depend, to a great extent, on increase in purchasing power. This, in turn, would have to come mainly from increased agricultural output which would also stimulate expansion of industrial activity related to agriculture. Investment in manufacturing, the mission emphasises, should remain primarily the province of private enterprise, but Government policy and financial assistance can do much to encourage a vigorous private sector. An important consideration, in the opinion of the mission, is the opportunity to make reasonable profits. The mission has suggested that Government policy in respect of private undertakings should be made clear at the very outset.

The mission has recommended a programme of development expenditure aggregating $160 million for a period of four years, 1963-64 to 1966-67, of which about two-thirds will be in agriculture. An expenditure of this magnitude will, in the mission's opinion, be within the limitations of Kenya's available resources. The mission points out the need to establish farms of adequate size. Emphasis, according to it, should be on the consolidation and enclosure of fragmented farms, the encouragement of individual ownership with title and the introduction of cash crops.

The Government should, the mission feels, continue to play a role in the organised marketing of farm commodities and close collaboration in trade policy should be pursued within the East African Customs Union. There is considerable scope, according to the mission, for the expansion of production of tea, sisal, sugar, rice, vegetable oil, dairy and livestock products in Kenya. But in view of the world supply situation of coffee, the role of this commodity in Kenya's economy needs to be reconsidered, suggests the mission.

In its recommendations relating to basic services in Kenya, the mission cautions against large capital projects which, once begun, could not be adapted to changing circumstances. "Fortunately," states the mission, "we see no need for major projects of this kind which are frequently found in the power and transport sectors." Any expansion of the railway system, the mission suggests, should reflect clear expectations of increased traffic above present capacity. The mission has stressed the need for greater co-ordination in planning the development of infra-structure.

A significant aspect of Kenya's economy highlighted by the mission is the preponderance of skills and capital supplied by non-residents of Kenya—mainly Asian and European. Kenya has also relied heavily on the services of expatriate civil servants. In the mission's opinion, this reliance could be discontinued forthwith only at a heavy cost to the economy. But the mission concedes that this reliance cannot continue for ever. It has, therefore, emphasised the need to speed up the programmes of education and training designed to make Africans increasingly fit to assume positions of responsibility both in industry and in Government services.

RISE IN OLIVE OIL PRICES

Olive oil will continue to be expensive in world markets until the new harvest in late 1963, despite efforts by Governments to keep down its price in countries where it is an important element of the diet. To some extent other edible oils may replace olive oil in the Mediterranean area and elsewhere where olive oil is the favourite cooking and table oil. The olive harvest in 1962-63 was probably the smallest since 1955-56. It might be followed by "good or even bumper" harvests in 1963-64, according to the Food and Agriculture Organisation. Recent developments in the price of olive oil are discussed in a note in the April issue of F.A.O.'s *Monthly Bulletin of Agricultural Economics and Statistics*. The note says that, in December 1962, the export price of olive oil rose to about $800 per metric ton, the highest for almost a decade. The rise continued and in the last week of March the price had reached about $1,200.

The acute shortage of olive oil has led to several measures in the Mediterranean area to ensure supplies on the domestic markets. In Spain, exports have been limited to 5,000 tons a month; Greece has banned exports; Portugal has limited them to 2,000 tons; and Tunisia, which normally does not buy any edible oil, is importing 20,000 tons of vegetable oil from the United States, probably to mix with olive oil for home use. Italy has reduced from 20 per cent to two per cent the duty on the import of olive oil from countries outside the European Economic Community.

In 1962, Turkey appeared as a substantial exporter of olive oil for the first time since the early '30s. It is estimated to have sold 22,000 tons, the bulk of it to Italy. The F.A.O. note says that the higher price of olive oil would encourage substitution by cheaper edible oils, such as groundnut and soyabean, thus tending to sustain their prices in the international market. Such imports, which are likely to be especially large into Spain and Italy, would help to check the rise in olive oil prices, "although it seems certain that in 1963 they will average well above the level of recent years." If previous experience is any guide, adds the note, olive crops in 1963-64 would be much larger than this year, with a return to more normal olive oil prices next year.

DELHI LETTER

PESSIMISM OVER AID PROSPECTS

HIGHER EXPORT TARGET FOR 1963-64

From Our Special Correspondent

NEW DELHI, 28*th May*

THE Capital is gradually tending to take a gloomy view of the aid prospects for the third year of the third Five-year Plan. It is now taken for granted, both in official and non-official circles, that India's hope of securing as much as Rs. 598 crores from the Aid-India Club will not be fully realised. The 4th of June at Paris may not, after all, be the day to heave a sigh of relief.

Instead, in the current developments in the friendly countries are any indication, we might have to suppress that sigh and put up a brave face to hide our utter disappointment. The two most outstanding developments are the rather confused and uncertain picture of defence aid following the T.T.K. mission to Ottawa, Washington and London and the semi-official announcement that the United Kingdom would not be in a position to consider defence aid as something apart from the overall economic aid to be pledged at the Consortium meeting at Paris.

Somehow or other, either owing to our failure to convince them or because of their ways of thinking, India is still not able to secure aid on a long-term basis—both in respect of economic development and defence build-up. In the case of economic aid, it has always been the endeavour of our representatives to make the aid-giving countries recognise the advantages, nay, imperatives, of long-term aid for us. The utility of long-term commitments for India has been noted variously in the past and, in some high quarters in the Western countries, recommended as well. But, in effect, the "hand-to-mouth" policy of year-to-year assessments and commitments has been followed.

Pakistan's Propaganda

There is another cause for a sense of disappointment. There has been a constant propaganda barrage by our neighbour Pakistan against aid to India—it was earlier a subtle one against economic aid and now openly against any aid for defence. India had, undeniably, also opposed military aid to Pakistan some years ago. If one were to take this opposition out of its context, well, the two positions might be equated. But, military aid to Pakistan was mainly and specifically for defence against Communist aggression. The result has, however, been quite the opposite. Pakistan has entered into a deal with Communist China and its President is busy at the moment telling the world that China has no aggressive designs! Pakistan's recent *volte face* over the efforts to solve the Kashmir tangle is only another indication of the new postures after its border deal with the aggressor against India.

India's efforts to secure arms aid is not for any aggressive build-up—the fact that the efforts started only after an actual military debacle should demolish any such apprehension. But the assurance that Mr. T. T. Krishnamachari has received in Washington, according to reports, is again on a year-to-year assessment and commitment basis. Comparison is odious, but in this case it is difficult to refrain from one. The MIGs and the MIG factory agreements had gone through before six months of the emergency was out.

Still another point which rather boldly stands out before Indian public opinion is the fact of the ease with which the Consortium countries have been able to decide on the aid to Pakistan—without any diminution of the quantum asked for.

Current indications are that the Consortium has so far been able to agree to a sum not more than $1,000 million for the third year of India's third Plan, as against nearly $1,250 million which this country had proposed as the rockbottom requirement. Added to it, if the United States sticks to the formula of matching offers and the United Kingdom insists on bundling together military and economic aids, the third year of the Plan will have a bleak outlook. Coming on top of several shortfalls during the past two years, any hope of retrieving the situation will, thus, disappear in thin air. Must this be allowed to happen, particularly when all the Western powers have pledged their goodwill and promised aid in unmistakable terms?

Again, if the situation really comes to such a pass, and clear apprehensions are there, the third Five-year Plan will have to undergo several changes. Some among us might resort to heroics of going it alone. But a theatrical posture can hardly be a substitute for economic aid. A sober appraisal of the situation and a realistic reorganisation of the targets, a demand which has been forcefully raised in some quarters since the emergency, is now called for—irrespective of the decision of the 4th June meeting of the Consortium. Indications are there that these views are now receiving favourable attention in a section of the Planning Commission.

Steps to Boost Exports

Several steps have been taken recently to push up our exports and attain the third Plan target of Rs. 3,700 crores. The export target for 1963-64, third year of the Plan, has been set at Rs. 745 crores despite a much lower performance in the preceding year. This calculation is based on the conviction that, with the steps now taken and the streamlining of various export promotion schemes, the target is attainable if a concerted effort is made.

Among the steps taken, a significant one is the diversion of Rs. 2 crores in foreign exchange to the Commerce and Industry Ministry for export promotion work, particularly the development of markets for non-traditional commodities and locating new markets for Indian export goods. The amount should prove of immense help to the exporters as the budget provision of Rs. 3.8 crores provided for the same purpose is mainly a rupee fund and is not open for spending abroad. This, in essence, would mean that the Government is determined that the lack of foreign exchange should not hamper the export drive. Additionally, it has been decided that study teams would be sent abroad to investigate the export promotion schemes of other countries which have successfully enlarged their exports. To begin with, two teams, one to Japan and another to West Germany, are to be sent to study if the methods used by them could be adapted to our schemes of export promotion with suitable modifications wherever necessary. Two other steps, cash assistance to exporters to face competition in foreign markets and the compulsory quality control schemes which will be applicable to nearly all export commodities by July, are expected to overcome the two most difficult problems facing Indian goods abroad—high costs and sub-standard quality.

With all these measures to help exporters, official circles feel that our exports should not only look up but even cross the targeted figure. For any shortfall now the trade itself will have to bear the blame. True enough; but is it also not a matter for consideration that these measures have come two years too late? Exports are not built in a year. For every new production and for every new market, a period of incubation is a must. To hope that the fruits of these measures will be harvested within ten months is to expect just too much. And there lies the danger. If the Government in its bureaucratic wisdom decides to judge the efficacy of these measures on the basis of the performance in such a short period and, in case of failure to attain the objective, contemplates withdrawal of some or any of them because of the existing financial stringency, it will have done more harm to the export trade than could be possible if the present trend were allowed to drift.

Action on the Coal Front

The series of decisions at the meetings held last week here for improving loading facilities and the strengthening of railway sidings to accelerate coal movement will go a long way to meet a crying need. It has now been decided to set up three tripartite committees in three coal zones—Bengal-Bihar coalfields, Pench-Chanda coalfields and Korba-Rewa coalfields—to work out the practical steps to this end. The committees will include representatives of the Coal Controller, zonal railways and the coal industry. The programme for improving loading facilities would be implemented in the first phase in respect of collieries with a monthly raising of 20,000 tons and above and, in the second phase, those with 10,000 tons or more per month. An important rider is that the Ministry of Mines and Fuel will review the implementation programme after every three months.

Despite the steps taken last year to augment coal movement by road, river and sea, the bottlenecks in the railways' coal movement performance largely continued as before, although some notable improvements were achieved. The object of these meetings here between the Planning Commission, Ministries of Railways and Mines and Fuel and the representatives of the coal industry was, therefore, to locate the cause of the bottlenecks and devise ways and means to remove them. The solutions, now mutually agreed to, include some of these proposed at the conference on transport held here last year under the auspices of the Federation of Indian Chambers of Commerce and Industry.

A major decision is the setting up of a special technical unit in the office of the Coal Controller, which will survey the existing and required loading facilities in co-operation with the railways and the coal industry, and the latter will endeavour to give effect to the recommendations of the technical unit. The coal industry and the railways will have a separate conference early in June in Calcutta to devise measures necessary for strengthening the assisted sidings and private sidings. The Ministries of Railways and Mines and Fuel and the Planning Commission have been considering various solutions to overcome this perennial problem. They have been anxious to put into operation such a machinery as would speedily achieve the strengthening of railway sidings and improve loading facilities. The measures now devised, it is hoped, will pave the way for a much higher rate of coal movements.

COMPULSORY DEPOSIT SCHEMES

The Government of India has just issued a notification bringing into force the provisions of the Compulsory Deposit Scheme Act 1963 with effect from 1st June, 1963. Two schemes (under the Act) relating to (i) income-tax payers and (ii) salaried employees with annual income from salaries of Rs. 1,500 or above but below the income-tax level have also been announced. These schemes will come into force from 1st July, 1963. The deposits under the two schemes will be accepted at all head post offices and departmental sub-post offices and all offices of the Reserve Bank of India and branches of the State Bank of India and its subsidiary banks. The depositors will be issued a separate pass book in each case and the amount in deposit, together with simple interest at 4 per cent per annum, will be repaid five years after the end of the year in which the moneys were deposited. The interest will be free of income-tax. The schemes provide for the declaration of nominees to whom payments will be made in the event of the death of the depositors without the production of succession certificates or other legal proof of title. The deposits are exempt from attachment under any decree or order of any Court in respect of any debt or liability incurred by the depositors.

The maximum limits of the deposits, under the first scheme, are an amount equal to three per cent of the residual income where such income is Rs. 6,000 or less; but where it exceeds Rs. 6,000, three per cent of the first Rs. 6,000 and two per cent of the balance thereof. There is no obligation on the employer to make any deductions on account of compulsory deposits from the monthly salary paid by him to his employees who are subject to income-tax. The assessees themselves will be responsible for depositing the amounts under the scheme at the nominated offices any time during the course of the financial year ending 31st March, 1964.

The second scheme applies to all employees of (i) Central and State Governments, (ii) local authorities, (iii) companies, including foreign companies and Government companies, (iv) corporations, including co-operative societies, and (v) individuals or associations of persons or bodies of individuals liable to payment of income-tax and entitled to deduct the salary paid to their employees for purposes of computing their income—whose annual income from salaries is Rs. 1,500 per annum or above but below the income-tax level. It has been made obligatory for the employers to make deductions of compulsory deposits at source at the time of payment of salary to their employees in all such cases. The scheme provides for the recovery of compulsory deposit at three per cent of the annual salary. In view, however, of the fact that the scheme is being enforced with effect from 1st July 1963, provision has been made for the recovery of compulsory deposits at a proportionately reduced amount for the current year. The compulsory deposits in 1963-64 will, therefore, amount to 2½ per cent of the annual salary of the employee for this year. An important feature of the scheme is the exemption allowed under the Act in the case of those employes who are already contributing a sum not less than 11 per cent of their income from salaries in the form of life insurance premia, contributions to provident funds and deposits in the 10 and 15-year Cumulative Time Deposit Accounts with the post offices. In their case, no further recovery of compulsory deposits will be enforced.

SMELTO

H.O.: Baroda

Branches in London, Nairobi, Mombasa, Moshi, Mbale, Mwanza, Jinja, Kampala, Kisumu, Dar-e-salaam, Naraingani (E. Pakistan), Port Louis (Mauritius), Suva (Fiji Islands), and correspondent banks acting as agents in all the other principal cities of the world.

SOME PROBLEMS OF BANKING

VIEWS OF TWO MORE LEADING BANKERS

THE annual speeches of some well-known bankers have been reviewed in these columns. It is now proposed to examine the observations of two more leading bankers, Mr. Ramnath Goenka and Mr. G. D. Birla, Chairmen of Punjab National Bank and United Commercial Bank, respectively. A summary of Mr. Goenka's speech was published on pages 884 and 885 of *Commerce* dated 18th May 1963, while the full text of the statement of Mr. Birla is published elsewhere in this issue (*vide* pages 976 and 977). The Punjab National and the United Commercial enjoy the distinction of being the second and fifth biggest banks in the private sector. Also, both Mr. Goenka and Mr. Birla have come forward with the assessment of banking problems after the final shape of various fiscal measures is known. In fact, Mr. Birla specifically mentions in his speech that the presentation of the Bank's accounts has been somewhat delayed in order to enable the management to take into account the burden of Super Profits Tax liability. Several banks which presented their statement of accounts, like the Bank of India, deferred the new tax liability to be provided in the current year. The two Banks played a particularly useful role in the critical period of the emergency. Far more significant than the routine reference to their role in that critical period is the forthright and critical expression of views by Mr. Birla and Mr. Goenka on current problems facing the banking industry. They are veteran industrialists with a reputation for sturdy commonsense approach to problems, so that their views merit a detailed appraisal.

Both the Punjab National and the United Commercial had a due share in the growth of deposits during the year 1962. The former's deposits went up by over Rs. 16 crores to cross the Rs. 165-crore mark and the latter's exceeded Rs. 100 crores to touch a high of Rs. 105 crores. Unlike some of the big banks, these two Banks maintained a very satisfactory liquid position: 42 per cent and 44 per cent, respectively. Thus they did not seek to offset the rising expenses caused by various factors beyond their control, such as the Desai Award for bankmen which pushed up the salaries bill of banks by about 10 per cent on an average, the deposit insurance premia and the increasing corporate tax burden, by raising advances and reducing liquidity. In spite of this conservative and prudent policy, the two Banks managed to maintain dividends at the previous year's (1961) level—a tribute to the skill and foresight of the management of these institutions.

Growth of Deposits

The gathering of more deposits is the biggest problem facing bankers. Mr. Goenka and Mr. Birla have done well, therefore, to analyse at length the factors which influence the growth of deposits. The accrual of deposits, according to Mr. Goenka, depends not only on the capacity of banks to tap them but also in the main on the ability of the banking system to generate enough deposits. For reasons beyond the control of the banking system, the pace of deposit accrual has been inhibited since the beginning of the busy season (1962-63). In the current fiscal year, the Government has decided to make larger demands by way of higher taxation and compulsory deposits on that sector of the economy which has a propensity to save. On the other hand, due to the combined impact of defence and development needs, the growth of new industries would make heavier demands on bank credit, particularly long-term capital. Even assuming that the heavy expenditure on defence and development would accelerate the tempo of economic activity, the resultant rise in savings will have to be preceded by the financing of economic activity at a higher level. Since the banking system has already lent to its maximum capacity, it will have to be enabled by the Reserve Bank to raise additional resources by liquidating its investments or, in the alternative, institutional channels will have to be explored for financing the expansion of the economy. Nothing should be done to hamper production, for increased production is of paramount importance to hold the price line. Mr. Goenka has stressed the need to improve the productivity of workers to bring down the costs of branch operation. This is the only way by which the banks can shoulder the considerable initial expenses and the annual losses in opening new branches in unbanked areas. There is also the urgency for building up secret reserves in order to be able to face risks in financing new types of production for both defence and civilian uses.

Let us now take a look at the approach of Mr. Birla to the problem of deposits. He agrees with the diagnosis of Mr. Goenka that the various fiscal measures would inhibit the growth of deposits in the banking system. The Government spending does not immediately, or even automatically, get reflected in an augmentation of banks' deposits, inasmuch as a considerable portion of such expenditures flows into the 'unmonetised' sector. The import surplus in balance of payments and the slow tempo of deficit financing are the other two factors which have adversely affected the growth of deposits. The theory that loans create deposits has very limited applicability in the conditions currently obtaining in our country, because such loans may be utilised for financing import of capital goods or making large payments of wages or meeting enhanced costs of construction. Banks are unable to increase their already extended positions. It is obvious that the growth of deposits, as Mr. Birla says, depends squarely on increased industrial production, improvement in balance of payments position, deficit spending by Government and a non-deflationary open market policy of the central banking institution. There can be no two opinions on his masterly elucidation of the factors influencing the growth of deposits.

Securities Market

A much more interesting suggestion thrown by Mr. Birla relates to the securities market. The orderly pattern of interest rates requires that the three-tier Bank rate should be suitably adjusted to remove anomalies. When Bank rate is 4½ per cent (official rate) and when borrowings from the Reserve Bank and inter-bank call money costs as much as 6 per cent maximum, it is somewhat strange to expect support for Government borrowing programme which offers a yield around the Bank rate. The elimination of the penal tiers is essential for the success of the programme. A revised interest rate policy would encourage banks to invest more in Government securities than the bare minimum which the banks would have to invest with effect from September 1964. Although the combined borrowing programme of the Centre and the States is to be welcomed, in that it will remove instability in securities market, such a hope would be better realised if only the anomaly of three-tier interest pattern were removed. The structure of interest rates—especially the borrowing rate of banks from the Reserve Bank—should be linked to the basic Bank rate as in the U.K. The inter-bank agreements on deposit and advances rates should aim at evolving a structure of interest rates which revolves round the Bank rate. It is also for consideration whether the yields on three months' Treasury Bills should not be brought closer to the Bank rate in order to enable banks to build up really liquid assets from which they are now deterred by the current very low rate of discount. These are refreshing views on the structure of interest rates which the Reserve Bank should take note of. The Bank has of late veered to a dearer money policy under pressure from the International Monetary Fund. The structure of interest rates should be such as to portray the supply of and the demand for funds. There should not be one rate for Government and another for private sector and, even if such a differential pattern is considered essential in a developing economy, the gap should be as narrow as possible. Mr. Birla deserves to be congratulated for having boldly come out with the solution which several bankers have evaded.

BRANCHES ALL OVER INDIA

S.P.T.

Mr. Birla has expressed satisfaction over the modifications in Super Profits Tax by exempting transfers made by banks to reserves. The Tax has repercussions on the banking system through other ways. The distributable surpluses of companies would be adversely affected and hence the dividend-paying capacity. Capital would turn shy and, if stagnation in the sphere of industries is to be avoided, the industrialists have to rely more on bank borrowings. The Government's views seem to be opposite to those of Mr. Birla in this regard. The higher tax demand and the compulsory deposit scheme would exert a powerful contractionist influence on deposit growth. It is, however, possible that, after a time lag, the higher Governmental disbursements might reappear as deposits. But the assessment of the Reserve Bank, especially in respect of growth of deposits, is somewhat different from that of the leading bankers (like Mr. Birla), because the Reserve Bank has expressed in the *Annual Report* (1962) that the banks would experience no great difficulty in getting deposits. The banks should not overlend and adhere to the new liquidity rule. There is need to reconcile these differing views.

The United Commercial Bank Chairman has ruled out mechanisation of banks to reduce costs of operation. While Mr. Goenka has not elaborated how the productivity could be improved, Mr. Birla has dealt with the problem more squarely. The modern electronic accounting machines require a vast volume of business transactions for processing and no branch of any bank in India has such a huge business. The import policy of the Government was such that it did not permit even the import of ordinary calculating machines. The suggestion relating to mechanisation in the present context is neither practicable nor economical.

State Bank Criticised

The Inter-Bank Agreement on Interest Rates helped banks to hold down costs of operation. The State Bank has recently stepped up its rates on deposits to the level quoted by the big banks. This action means that the Bank is no longer confident that its inherent advantages will attract deposits or that it represents a more flexible interest rate policy to attract deposits. The State subsidiaries are allowed to quote the same rates as medium and small banks, although they are subsidiaries of the State Bank and share the prestige of the institution. Naturally, this action of the State Bank is a source of anxiety, because it may initiate a sort of rate war among big banks to attract deposits. No such rate war has, of course, emerged so far, but its possibility cannot be ruled out.

It is evident that Mr. Birla is voicing the feelings of big banks at the action of the State Bank. It has become painfully evident recently that the State Bank is not able to attract deposits by its prestige as before and, if it has to offer competition, it has to step up the rate of interest. The comparative rates of growth of deposits during 1962 would convince any intelligent observer of this trend. Probably Mr. Birla does not like any measure which increases competition for deposits, especially in the context of his assessment that the banking system will have a difficult time, at least for a period, in attracting deposits. He is of the opinion that the branch expansion programme of branches in the countryside would be helping the monetisation of the economy and that the Reserve Bank has done the right thing in requiring banks to formulate their branch expansion programmes during the next few years. Banks should aim at giving more personalised service to attract customers, in view of the fact that personal deposits constitute nearly 50 per cent of total deposits in the banking system. The banks are aware of their responsibilities and they would perform their work with missionary zeal, if some flexibility is permitted.

DEVELOPMENT NEEDS THE BUSINESS MAN

A NEW APPROACH TO TECHNICAL ASSISTANCE EFFORT

By Michael L. Hoffman

[In its issue of April 1963, the Lloyds Bank Review *carries a stimulating article by Mr. Michael L. Hoffman of the World Bank on the role that businessmen can play in the development of aid-receiving countries. There is a great gap in the West's technical assistance effort, he says, and businessmen feel no involvement as businessmen in that effort. Mr. Hoffman's suggestions are intended to meet this gap.]*

IN all the efforts being made to help the poor countries of the world get started up the ladder of economic growth, one problem seems to be increasingly baffling. It is this: nearly every one in control of the policies of the major industrial countries of the West believes that an active and healthy growth of private enterprise is an important, indeed essential, element in economic development; yet very little is being done to assist such a growth in the poor countries. Our speeches encourage others to follow the free (at least, fairly free) enterprise path. But our help goes mainly to governments and government-owned and -operated affairs of one kind or another. This article argues that there are some inherent difficulties about helping the private sector in less-developed countries grow by means of public aid or assistance programmes. At the end, some suggestions are made about a possible new approach.

Several Western governments and the larger inter-governmental organisations have by now a good many years of experience with what has come quite generally to be known as technical assistance to less-developed countries. It has turned out to be a much more difficult field of operations than many thought fifteen years ago when the effort began to get under way.

There was certainly a widespread belief at that time that simply by informing a large number of people in the less-developed countries about known industrial, administrative, financial, engineering and other techniques generally applied in North America and Western Europe, one could expect that these techniques would rather rapidly be adopted and applied to the underdeveloped resources in other parts of the world. It was also rather generally hoped, certainly in the United States, that a large-scale programme of technical assistance would before very long make large-scale financial assistance unnecessary as societies that had not benefited very much from the evolution of the Western economies of the 19th and 20th centuries began to develop under their own steam. It was, indeed, common doctrine that today's less-developed countries could telescope into one or two generations those processes that took one or two centuries in the West because they would not have to discover technologies, merely to follow them.

What Technical Assistance Really Means

To anybody who has had any responsibility for making technical assistance work, these views seem in retrospect to have been incredibly naive. We now know that the job is both difficult and long. Indeed the task is only beginning to be clearly defined. It is hardly at all the comparatively simple operation of transferring a known technique from here to there. To a very large extent Western technology cannot be simply adopted in less-developed countries—it has to be adapted. The process of adaptation turns out to be nearly as complicated and time-consuming as the process of invention, and to require skills and attitudes on the part of the recipients of technical assistance scarcely more abundant than the skills and attitudes involved in the discovery and adoption of entirely new technologies. Above all, the business of giving technical assistance has turned out to be a highly professional task in itself, requiring personal qualities, training and institutional arrangements that are themselves among the world's scarcest resources. To paraphrase a well-known military cliché, technical assistance is far too important and difficult a matter to be left to technicians. In the process of learning some of these things, both suppliers and recipients of technical assistance have suffered great frustration and witnessed colossal wastes of time and money. All this is fairly common ground to professionals by now. And yet hardly any of us involved in the business doubt that the effort should and must go on.

Note: The author is Director of the Development Advisory Service of the International Bank for Reconstruction and Development (World Bank). The views expressed are his own and are not necessarily those of the Bank.

One of the healthy signs is that there continues to be a good deal of self-criticism in the profession. We know a great deal by now about how not to do things. Unfortunately, neither the people who make the decisions in the developed countries about what kind of assistance should be financed from public funds, either nationally or through the inter-governmental agencies, nor the people in the developing countries who frame the requests, can be easily persuaded to accept the lessons of recent experience. As a consequence, governments and international agencies are required to continue to operate in ways that the professionals know to be ineffective and governments in less-developed countries continue to insist on receiving assistance of kinds that the professionals know to be comparatively unproductive, if not completely useless. To take only one example, but perhaps the most common, it has been patently obvious for years that it does very little good and often harm to send a sequence of individual experts to a country to deal with the problems of getting an unfamiliar technology widely adopted, each of whom has to spend from three to six months learning about the country and coping with problems of administration, language and supply, only to pack up at the end of a year and leave the field to a new man who has to go through the same tiresome and irritating process. And yet this continues to be done because of the terms on which appropriations are made or the conditions under which leaves of absences from home offices are granted and contracts of employment written.

Despite all this, we are making progress in a number of ways. It seems to me that in many aspects of agricultural development, in public health, in some fields of education, and in power, transport, engineering and public administration, one can now find a good many examples of effective technical assistance being conducted by both national and inter-governmental agencies in many parts of the world.

One field of which this cannot be said, however, at least so far as the West is concerned, is that roughly covered by the term "industrial development." The failure so far to invent any effective method of responding to the insistent clamour in underdeveloped countries for assistance in this field strongly suggests that the frame of reference in which the problem is discussed is wrong and that some fundamental rethinking is required as to what technical assistance for industrialisation might conceivably mean and how it might conceivably be done. In particular, it seems to me that the greatest gap to be bridged is that between the great, largely private, industries of Western Europe and North America and the industrial sectors in the really underdeveloped countries.

Key Role of Business Men

I suggest that the forgotten man in the international technical assistance effort is the struggling businessman in a really backward country or region, trying to make something useful to sell to his fellow countrymen. And yet it seems to me that the evidence is overwhelming that unless there arises in these countries a vigorous and competent class of businessmen, devoted to national progress, economic development without the use of communist methods is unlikely to go forward at a politically satisfactory rate. I would like to add at once that I do not wish to be taken as implying that economic development in any meaningful sense would, in fact, go forward if the communist method were applied in the present non-communist underdeveloped parts of the world. Indeed, it seems to me that the evidence at hand points strongly in the other direction. It seems equally clear, however, that this evidence has not so far led to any noticeable diminution of the probability that the breakdown or persistent weakness of existing régimes will lead in many cases to the choice of the communist alternative. It may not work but it is likely to be tried.

The starting point for the difficulties may lie in the term "technical assistance" itself. While there are exceptions, technical assistance in most fields tends by its very nature to be something that governments do, either directly or indirectly, through international agencies. It involves government to government relations. And the techniques that are slowly being developed are effective to the extent that governmental machinery in supplying and receiving countries functions properly.

There are, however, inherent difficulties about attempting to provide assistance for the development of private enterprises through government machinery. The history of various efforts to support, defend and promote "small business" in the United States, for instance, does not give one much confidence that even when the political climate is highly favourable government can play more than a minor rôle as a development agent in this field. In most of the countries with which we are concerned, the political climate is not particularly favourable to private enterprise. And if governments are interested at all in promoting it, the organs of the State charged with this function are likely to be rather feeble, compared with those that for one reason or another tend to confront private enterprise as policeman, prosecutor, tax collector or general busybody.

Specialised Agency

The point is that to the extent that governments are incompetent as agents for the development of private enterprise where it does not now thrive, other governments, interested in giving technical assistance, are equally incompetent to help. It seems to me that the same applies *a fortiori* to inter-governmental agencies, with the single exception of the International Finance Corporation, which can give technical assistance to those enterprises that it finances. All other efforts to "do something" about industrial development through international agencies have proved rather frustrating. Every debate in the United Nations on the proposal to create a specialised agency for industrial development founders on the issue of what such an agency would do, where it would get staff, and where it would operate.

This has not noticeably relieved the pressure from the less-developed countries for the creation of such an agency but it has led to enough resistance from the countries who would have to provide the major inputs, both financial and technical, so that the proposals have never been approved. In default of a specialised agency in the field, the United Nations has been making valiant efforts to build up a staff capable of advising member-governments on industrialisation policies and one can only wish them every success in this field. But it seems to me that the difficulties are inherent and do not stem from the absence of additional administrative machinery.

How to Promote Private Enterprise

It is no less true for being a cliché that the one thing governments must do if they wish to promote private initiative for industrialisation is to establish a climate in which private enterprise can operate and prosper. Beyond this there are probably a few other things that governments can do to promote the kind of private enterprise that they would or should consider desirable as a contribution to economic development. One such action is the establishment of industrial estates in which sites, utilities and technical advisory services can be provided to budding enterprises. A good deal is known about the techniques involved and it is clearly an area in which outside technical assistance can help the private sector in developing countries.

Another kind of action that has had some success is the establishment of what are now widely known as development banks: investment institutions which can help finance private enterprise and also provide advice and assistance with technical and management problems. In some countries such banks can be established with nothing more than government blessings for private organisers, but in most really underdeveloped countries considerable government financial support and possibly forms of subsidy for the technical assistance and advisory functions of the development bank seem to be required.

The World Bank believes an essential condition for the success of a development bank is that, whatever the sources of its capital, it should be privately controlled. There is a mass of evidence to indicate that development banks both financed and controlled by governments show a strong tendency to become diverted from the paths of sound development finance. Nevertheless, government-owned and- controlled development banks exist and will doubtless continue to be created. Government and inter-governmental assistance to both private

and public development banks is one other area in which some beneficial effect on the development of the private sector can, at least conceivably, be expected.

One could doubtless think of other kinds of direct promotion of private enterprise by government that stand some chance of success, but not very many. And when every possible kind of action has been surveyed, I suspect that by far the largest part of the private sector in less-developed countries would still prove unreachable by any present form of national or international technical assistance.

In fact, the man who can help one businessman with his problems is another businessman. The people who can help launch and operate industrial production in less-developed countries are people who know something about launching and operating industrial production. These people are not found to any great extent in either Western governments or international agencies. They are in business enterprises.

Nor is any way out of the difficulties with which I am concerned to be found in putting people of the sort I have in mind into governmental agencies. If they metamorphose into effective government officials, they lose their tone and colour of businessmen. If they continue to act like businessmen, the best that can happen is that they can be walled off into little units where their furious activities stand no chance of disrupting the main stream of government operations. This is fairly expensive but relatively harmless. The worst is that they be placed in positions of authority, while retaining the conviction that running government is just like running business, only easier. It would be too much to claim that the main thing wrong with American aid programmes has been the persistent preference given to third-rate businessmen over first-rate civil servants when the senior jobs were being apportioned, but there are many critics who would come very close to this position.

I suggest that the problem of technical assistance for industrialisation and for the promotion of private enterprise generally in less-developed countries is primarily a problem of putting Western private enterprise directly in touch with the actual and potential managers and directors of enterprises in the less-developed countries. I suggest further that this is not likely to be accomplished through any conceivable form of inter-governmental organisation—certainly not one with mixed communist and non-communist membership.

Foreign Investment as Educational Medium

There is, of course, one very important way in which Western business gets directly in touch with enterprises in less-developed countries. This is where there is an investment interest or some other direct business interest in the success of the enterprise in the less-developed country. International investment is probably by far the most effective medium for technical assistance to the private sector of developing countries. Mr. Robert Garner, the first President of the International Finance Corporation, has often said that the contribution of foreign investment in spreading technical and management know-how was probably one of the most important aspects of foreign investment as a factor in economic development. The fact that so many less-developed countries have joined the I.F.C.—a kind of international development bank operating with capital supplied by governments—indicates that when governments are asked directly whether they wish to favour foreign investment in their countries, there is a widespread tendency for them to answer affirmatively.

It is gradually being recognised in many countries that foreign enterprises, willy-nilly, act as training centres for the regions in which they operate. It is not really necessary to pass laws requiring the training of nationals and the gradual substitution of locally trained for imported personnel. Western companies with long experience in foreign operations have long known that foreign branches become really profitable only when it is possible to reduce the number of expatriate staff to the minimum consistent with maintaining head-office policy control. The inducement is even stronger where only licensing agreements or joint enterprises are involved. New comers to the field of foreign operations may start with different views but they tend to learn this lesson rapidly when brought face to face with the current costs of establishing and maintaining European or American personnel in field locations. Exportable branch managers are no longer easy to find, or cheap. Full employment and good prospects at home, not legislation designed to get rid of expatriates, are the effective forces here.

But the benefits, in a technical assistance sense, associated with foreign investment, whether private or through the I.F.C., are obviously going to be confined to those enterprises in which the capital is invested. And I doubt if anybody seriously believes that a very large part of the industrial or commercial sector in today's less-developed countries is likely to be developed by or with the assistance of private Western capital or the I.F.C. What is needed, in addition to everything that can be done to promote foreign investment, is the means of providing the technical assistance that only Western private enterprise can give to private enterprise in less-developed countries in cases in which there is no investment interest.

Training Foreigners in Western Countries

One fairly obvious thing that Western companies could do to help technicians and managers from the less-developed countries would be to provide opportunities for them to learn and work in Western enterprises. Many people seems to think that a great deal of this is being done. This impression may be the result of the large number of touring groups of earnest and slightly bewildered young persons from distant parts of the world that one meets or sees pictures of. They are herded about, usually under government auspices, for a period of two, six or ten weeks, shown some factories, given lunch here, dinner there, and speeches everywhere, and very often treated with great kindness and warmth by their European or American hosts. The pattern is one which probably dates back to the touring European productivity teams that visited the United States during the high period of the Marshall Plan. It had relevance in the original context. It has almost none as technical assistance for less developed countries.

There is, in fact, very little training of foreigners in the private sector in any Western country. Business firms will bring in a man whom they intend to use in one of their own subsidiaries or personnel from a closely associated enterprise. But it is almost impossible in the United States, at least, to find a private enterprise that is willing to take a person for two or three years in-service training without any commitment of his future services.

The resistance to accepting foreign trainees is probably more philosophical than it is a matter of pecuniary calculation. It may be based on the mercantilist logic deeply implanted in the bosom of most businessmen. They tend to see a general threat to established industrial communities in the development of industry overseas. It ought to be possible, with a modest effort on the part of industrial leaders, to mobilise enough of the overwhelming evidence of the foolishness of this doctrine to persuade the Western business community that this is something it simply need not worry about. But even where no reason based on false philosophy or calculation of competitive advantage exists, not much training of benefit to the less-developed countries is being done in Western private enterprise.

The main reason, again, is surely that the governmental machinery to which the Western technical assistance effort has been confided is not well adapted to bring together the people who need the training and those able to give it. Whatever their attitude toward aid for foreign countries as public policy may be, businessmen feel no involvement as businessmen in the technical assistance effort. In the less-developed countries, on the other hand, the kinds of persons who might welcome an opportunity to study and work in an American or European company will often be reluctant to put themselves in the hands of their own or other governments to the extent involved in fellowship programmes of the prevailing type. Besides, existing channels simply do not provide the businessman or managerial employee in an underdeveloped country with the kind of information he ought to have about even such opportunities as there are for this kind of training outside his own country.

Something might be done to improve this situation by attempting to delegate responsibility for this kind of "inward" technical assistance (helping people to learn new ways of doing things by bringing them into places and establishments in Western countries where those things are now done) to organised business groups in the West. I see nothing inappropriate in government financial support for a programme administered by private business organisations. There are many industrial associations, boards of trade or chambers of commerce in the United States, Canada and Europe which would be quite capable of mobilising regional and industry support for this work and of taking good care of the trainees when they arrive. Furthermore, there is no reason why a company that happens to be the right one to train an individual or group should have to bear the cost of this training. I think there is a good deal to be said for making it moderately advantageous for small companies to contract for this work, just as they would contract under a national or international foreign aid programme for consulting services abroad.

Fundamental Weakness

The fundamental weakness of all inward technical assistance for the private sectors of developing economies is that the kind of person one would really like to reach is not likely to be prepared to spend from one to three years away from his business or occupation. There is too much going on in those countries for an enterprising person to want to be out of affairs for that length of time. The real leaders of the emerging business communities will have to be reached largely by bringing whatever the West has to offer to them to their home ground.

What is really needed most in private (and for that matter in public) enterprises in the less-developed countries is continuing assistance with management and in the training of management personnel. If there is one thing we have learned in the past fifteen years, it is that it is comparatively easy to build something or even to tell a previously inexperienced person how to build it. It is much more difficult, under the conditions one faces in most underdeveloped countries, to operate and maintain the enterprise that has been built. And it is more difficult yet to convey from one culture to another the capacity to manage an affair. Present technical assistance programmes fail to assist significantly in this area.

It is risky, complicated and generally unattractive for public officials to spend public funds on management contracts designed to help a private enterprise increase its profits. A clear showing of "public interest" has to be made. The processes involved in doing this are likely to be unpleasant for the proposed beneficiary. Only a few large enterprises can be helped, at best. And most national aid programmes do not provide funds specifically for the purpose of giving assistance to the private sector. The World Bank can include in loans funds to pay the foreign exchange costs of consultants for private firms or public enterprises that it finances, but this obviously touches only the very large and already highly developed enterprises in the countries that concern us. It is another link between technical assistance and external finance and this, as has been noted, is of limited effect on the larger problem. And yet any field representative of any national or international agency that is at all

COTTON BOARD ON TEXTILE TRENDS

MILLS PRODUCE MORE WITH FEWER WORKERS

From Our Special Correspondent

MANCHESTER, *21st May*

MANCHESTER LETTER

A SLIGHT but distinct improvement in the state of trade in the Lancashire cotton textile industry is reported by the Cotton Board. Latest output and employment figures for four weeks ended 30th March show sales of single yarn were the best for any month since October 1960, except for an isolated jump in October last year. Average weekly output of yarn totalled 12,510,000 lbs. and cloth output per week reached 32,270,000 yards—an increase in both sections. Mills have achieved better production with fewer workers. There are now 148,480 employees in spinning and weaving, as against 150,000 last month.

Continuing the brighter note, the Cotton Board adds: "Order books in all sections expanded somewhat, particularly in spinning, and weavers' stocks of cloth were further reduced."

Cotton Board Import Pledge

Mr. Frank Rostron, Chairman of the Cotton Board stressed in Manchester the need for the Lancashire cotton industry to be protected from further increases in imports of cheap textiles from overseas. Speaking at the annual meeting of the Overall Manufacturers Association of Great Britain, he said that the increase in cotton imports from Portugal was "rather frightening."

On cotton imports in general, Mr. Rostron stated that the Cotton Board would continue its efforts on this vitally important issue. He said the industry and the Board must continue to make "strong representations" to the Government for some form of categorisation of textile imports. "We would," he pointed out, "hope for a re-negotiation of the Ottawa agreement to remedy the major disaster to our industry in the agreement both as regards imports and Commonwealth preference." "Can there be any new thinking—any new United Kingdom Government commercial policy—to bring some degree of relief to the ever-growing threat to the textile industry?" he asked. He added: "It is becoming increasingly obvious that H.M. Government is inclined towards a policy of trade liberalisation. All I can do is to hope that, in some way and before very long, between us we can find a way of putting this industry back in the position where it can not only export but where it is not being undermined in this country by 30 per cent of low cost Commonwealth imports coming in duty free."

More Cotton Firms Will Close

A forecast that many more firms in the cotton industry will go out of business was made by the 45,000-strong Weavers Amalgamation, the largest of the cotton trade unions. Commenting that the re-equipment programme for the mills appeared to be flagging, the union stated in its annual report: "Original applications for re-equipment grants totalled £96,840,000. So far only a little over one-third has been taken up. It looks as if a number of firms have become depressed and discouraged and do not intend to go ahead with their plans." This was bad for the industry's future and suggested that "a lot more" firms would eventually go out of business.

French Mills Merging

On a national basis, one of the success stories in the world's cotton trade since the war has been the recovery of the French industry. Not only in the realm of exports but in productivity generally the mills of France appear to have made strides which leave even her partners in the European Economic Community well behind. Yet, in spite of apparently satisfying reports which are received from across the Channel, difficulties are being experienced in the French industry and some of the tactics recently pursued in Lancashire are being reflected in similar closures and mergers.

News that five mills, employing about 1,300 workers, are to close in Alsace-Lorraine came last month and a merger of four companies, involving co-operation in sales, administration and technical operation, was also effected. Compared with Lancashire's large redundancy programme, with its very heavy closures, the fact that some 40 French cotton firms have shut down in the past ten years, throwing about 6,500 people out of work, seems relatively unimportant. Yet this new move to curtail the activities of further mills shows the problems being faced, even in an industry which appears to be flourishing.

Merger operations now believed to be underway in the same area are said to involve about 30 firms. The operation is sponsored by a special organisation set up by the industry itself and a group of French banks last September to stimulate developments of this kind. According to a report from Paris, the main function of this body is "to point out the hard facts of life to the more stubborn directors of some of France's less productive cotton firms and to provide them, once they see the light, with the finances for the merger solution of their problems."

Machinery Exports

Thanks to a substantial rise in exports of textile machinery in March, the quarter's total of such shipments showed a marked improvement on the same period last year, and set this branch of the industry well on the way towards yet another year of record earnings. To the end of March, exports amounted to 421,615 cwt., valued at £17,586,082, as against 403,668 cwt. last year, the value then being £16,154,819.

India and Pakistan seem to be taking turns to be Britain's best customer for textile plant, the comparable figures between this year and last being India 46,919 cwt., as against 42,181 cwt. and Pakistan 38,517 cwt., as against 51,896 cwt. After a year of rather small imports, the Soviet Union has returned to purchasing and so far has absorbed 33,339 cwt. against 15,763 cwt. A big rise has also taken place in shipments to South Africa, which in the quarter amounted to 26,791 cwt., as against 11,044 cwt., while Australia has taken 23,903 cwt., as against 15,132 cwt.

One other interesting aspect of the figures is the purchase of more than £1 million of machinery by the United States in shipments of 16,704 cwt. Another is the reversal of the positions of Peru who took only 1,575 cwt. in the first quarter last year, and 16,727 cwt. in 1963, while exports to Brazil declined from 20,048 cwt. to 4,084 cwt.

"TECHNICAL PROGRESS AND TEXTILE MARKETING"

It will be recalled that the International Federation of Cotton and Allied Textile Industries held a Congress under the theme "Technical progress and textile marketing" at Deauville (France) in June last year. The deliberations of the Congress have been published in book form by the Federation, Postfach 280, Zurich 39, Switzerland. The book contains the opening address by the President of the Federation, the various papers read at the Congress and the address by M. Michel Maurice-Bokanowski, the Industry Minister of France, at the official banquet. The book also includes the statement and resolutions adopted at the Congress. An appendix at the end of the publication gives the scope and structure of the Federation. In the course of the preface to the publication, Dr. Mario Ludwig, Director of the Federation, hopes that the book will not only be a source of reference but also a source of inspiration. Alluding to the discussions at the Congress, he says:

"During the discussions, it became evident that the textile industries are today at the beginning of a new era, in which fundamental changes in textile technology and marketing are likely to take place. Indeed, the most important practical tasks of the industry during the next decade are the adaptation of mills and machinery to the latest, and in some instances revolutioary, technological innovations, coupled with the intensive application of modern methods of marketing. Progress in textile technology and marketing can, however, only be achieved against a background of stable economic and social conditions. . . ."

STAMPING OF WOOLLEN YARN

With a view to ensuring the sale of woollen yarn at statutory prices, the Textile Commissioner to the Government of India has, by a notification dated 25th May 1963, specified the markings and the manner of markings which shall be observed by all manufacturers in respect of woollen yarn packed on or after 1st June 1963. They are: name of the mill, count of yarn, quality of wool top or raw wool or shoddy wool or admixture, percentage of different fibres in case of mixed yarn, quality of yarn (weaving or hosiery or knitting), actual net weight of the yarn in the bundle-cone-cheese and in the bales-packages, ex-factory price, and month of packing.

The markings prescribed shall be made in letters and figures not less than 1.27 centimetres (½") in height on a paper label securely stuck to the outside wrapping of every bundle or cheese in which the woollen yarn is packed. In case of cone yarn, the label shall be pasted inside the cone. On every bale or other package of woollen yarn, the markings specified shall be stamped on the outside of such bale or package in letters and figures not less than 1.91 centimetres (¾") in height.

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

CONTINUING DIFFICULTIES OF COTTON MILL INDUSTRY

MR. BHARAT RAM'S PLEA FOR PRICE REVISION

THE futility of price manipulation and decontrol and such other facile methods in increasing cotton production was emphasised by Mr. Bharat Ram, the retiring Chairman of the Indian Cotton Mills' Federation, in his speech at the fifth annual meeting of the Federation held at Bombay on 24th May. Cotton, according to Mr. Bharat Ram, continued to be the major problem of the cotton textile industry. The production target for cotton, despite its downward revision in the second Plan, continued to remain elusive because of the pathetically low yield per acre. It was indeed impossible to think of self-sufficiency in cotton, the Chairman of the Federation asserted, by ignoring the necessity of raising the level of productivity. In Mr. Bharat Ram's opinion, this aspect of cotton problem did not appear to have received the degree of consideration it deserved.

The Chairman of the Federation deplored the plea for decontrol or frequent revision of cotton prices. Price manipulation, he pointed out, could not achieve the desired result. He disputed the validity of the argument that low production was due to the fact that 87 per cent of the crop was grown under rainfed conditions. In this connection, he recalled that in the U.S., where, some fifteen years ago, the percentage of non-irrigated area in the total was as high as 90, the yield per acre had averaged 274 lbs. The yield per acre on non-irrigated land in that country, he continued, was as much as 325 lbs. per acre at present, about three times the average yield in India in both irrigated and non-irrigated areas. Mr. Bharat Ram conceded that the absence of the capricious monsoon and of the evil of uneconomic holdings might be partly responsible for the high yield in the U.S. But they cannot, by themselves, account for the enormous disparity that exists in the yield per acre in the two countries. In other words, they are not the only or even the principal cause of low yields in India. Mr. Bharat Ram referred, in this connection, to a disturbing feature of the agricultural economy, namely, the failure to utilise fully the irrigation facilities created by the giant irrigation projects.

Mr. Bharat Ram felt constrained to invite attention to these facts because, in his opinion, the farmer was being encouraged to claim a kind of vested interest in the low level of his output. Deploring the tendency on the part of those, who professed to speak for farmers, to raise a hue and cry when cotton prices were tended to rule Rs. 50-60 below the ceiling and also the tendency of the Government to give dire threats to mills for their alleged default in making cotton purchases briskly, Mr. Bharat Ram said:

"While this may have suited the temporary purpose of diverting the unjustified wrath of the farmer to quarters which deserved it least, the farmer's cause and the country's interests will be better served if more attention is given to the problem of increasing the yield per acre, for which immense scope seems to exist."

Reiterating the stand of the cotton mill industry on the question of cotton prices, Mr. Bharat Ram pointed out the dangers of an increase in raw material price in the following words:

"We are all in favour of the farmer obtaining better returns for his produce but he should seek them not by demanding nothing less than the ceiling price for all that he sells, but by claiming due assistance to increase the yield per acre. It is certainly not in the larger interests of the country that cotton, which accounts for more than 50 per cent of the manufacturing costs, should become increasingly expensive. The resulting rise in cloth prices may well condemn its consumption to stagnation inside the country and will certainly handicap the drive for larger exports."

Untenable

The Chairman of the Federation dismissed as untenable the plea that cotton growers were not getting a fair deal. He referred in this connection to an expert study submitted by the Indian Central Cotton Committee in October last, according to which the cotton growers' remuneration for his produce compared most favourably with that earned by his counterparts raising other competing crops. Among all crops in India, the increase in the area under cotton during the past twelve years was the greatest in respect of cotton. If cotton cultivation had been as unprofitable as was made out, Mr. Bharat Ram asserted, it was unthinkable that the farmer would have persisted in devoting more and more area to cotton. He appealed to the Government to use its resources, influence and authority for the more fruitful purpose of educating and assisting the farmer in raising a bigger crop per acre, "instead of holding the mill industry and the cloth-consuming public to ransom."

Answering critics who questioned the wisdom of spending precious foreign exchange on import of cotton on the ground that the exchange spent on import of cotton was a national waste as it served no other purpose than that of pandering to the tastes of the richer classes, Mr. Bharat Ram said:

"I wonder if these people realise that about 25 per cent of the entire cloth produced by the three sectors of the industry, viz., the handlooms, powerlooms, and mills is woven from foreign cotton. The three sectors provide direct employment to some 60 to 70-lakh people and if imports of cotton are stopped, not only will it lead to unemployment for a quarter of these people, but our population also will have to suffer a corresponding cut in its already meagre supply of cloth.

"It is also difficult to understand why the foreign exchange spent on imported cotton is debited to the foreign exchange earning of the cotton mill industry. The cotton mill industry cannot be held responsible either for the foreign exchange spent on imports of raw cotton or for the foreign exchange earned through exports of raw cotton. If the Reserve Bank's approach to this problem is correct, I wonder if our oil industry should get credit for the exports of oilseeds and the jute industry for the exports of raw jute!"

Use of Man-made Fibres

Substitution of cotton by man-made fibres has been suggested in some quarters as a solution to the perennial problem of cotton shortage. Referring to this, Mr. Bharat Ram said that this belonged to the same category of "unhelpful suggestions." He conceded that there was certainly a good case for diversifying textile production by making judicious use of artificial fibres but a wholesale substitution of cotton by staple fibre was out of the question.

The Chairman of the Federation dilated at length on the question of revision of cloth prices. A stage had been reached, he pointed out, when it was no longer possible to postpone a revision of cloth prices so as to cover the progressive increase in cost of production that had occurred since 1961 when the current prices were fixed. The profits of mills in 1962 were lower than in 1961 and in the current year mills were actually making losses. Acceptance of the obligatory export scheme also involved a financial strain on the mills. It was, therefore, no longer possible to continue to work under the 1961 price level. Mr. Bharat Ram indicated that the matter would be taken up with the Government so that an early revision of the price structure could be made.

Mr. Bharat Ram referred to the handicaps in the way of export of cloth. A major handicap, according to him, was the kind of productive equipment mills in this country had. This was the result of the short-sighted policy of the Government. When foreign exchange was more readily available, brakes were applied to the mills' programme of acquiring the latest type of imported machinery on the ground that they would affect the employment position in the industry. The realities of the situation brought about some change in official thinking in favour of modernisation. But by that time imports of machinery become very difficult, thanks to the foreign exchange situation. Domestic textile machinery manufacturers were fully booked in advance for the next two to three years and the speed with which they had to execute their orders and the size of the orders left them neither the time nor the inclination to keep abreast of the latest technological development and to incorporate them in the indigenous manufacture of textile machinery. Mr. Bharat Ram suggested a possible solution to the problem which would involve a twofold approach. This was, first, to allow imports of textile machinery on a liberal scale, especially with a view to strengthening the competitive position of those exporting mills that were good foreign exchange earners and, secondly, to intensify research on textile machinery with a view to inducing indigenous manufactures to take to the production of more advanced types of machinery. Both this approach, however, has its limitations. Liberal imports of machinery, involving a large foreign exchange outlay, are not immediately feasible, the foreign exchange position being what it is, while research on textile machinery with a view to evolving latest types will take time to bear fruit. How to overcome these limitations in the near future is the question.

DEVELOPMENT NEEDS THE BUSINESS MAN

(*Concluded from page 968*)

in touch with developments in the private sectors of aid-receiving countries could quickly produce a large number of cases in which assistance at the management level is what is really needed, and often all that is really needed, to keep a struggling enterprise alive or make a new venture go.

My argument may appear to ignore the contribution being made by the various programmes of management training that are now being carried on in many countries, notably by the International Labour Office. I have no wish to belittle the importance of this work, which may indeed soon begin to produce a new class of intelligent and adaptable managers for public and private industry. There are, however, limits to the extent to which formal training of any sort can substitute for experience gained by working under or along with competent management in a particular enterprise producing a particular line of products. Generalised management training may produce good raw material for industry but it cannot be relied upon, it seems to me, to fill the gap in technical assistance to which I have referred in the sense of meeting the immediate needs of the private sectors in the less-developed countries.

Writing from the point of view of an international civil servant, one ought perhaps to stop here and add only that, having posed the problem, it is now up to the Western business community to propose solutions. I should like, however, to put forward some suggestions as to a possible way forward.

Two Instruments Needed

I suggest that two new kinds of instruments are needed. One is a non-governmental agency operating in, and as part of, the industrial and commercial communities of the less-developed countries capable both of accepting management contracts and providing consultant services to private firms or companies. I conceive of a kind of hybrid between the British concept of the managing agent, as exemplified particularly in India, and the essentially American concept of the independent consulting engineer as broadened during the last two decades into the management-cum-engineering consultant firms.

Such an agency could be established in certain countries with substantial immediate local participation. In others it would have to be staffed at first almost entirely by expatriate personnel. In some countries such an agency might even be profitable. In most really underdeveloped countries, I suspect, it would have at first to be subsidised for quite a long time —and it would be expensive. The salaries required to induce the kind of men needed to remain for several years at a time in these countries would be very high by present European or American standards. This is not a matter of sending one or two retired businessmen to the national capital as industrial wise men. It is a matter of establishing well diversified teams of men prepared to become involved for substantial periods in the life and problems of the country.

The second new instrument would be an international organisation, or at least a network of national organisations, of private companies that could tackle the problem of creating conditions under which personnel could be made available to man the agencies referred to above. This would mean, in particular, getting a very large number of companies, small as well as large, to agree to adopt policies that would permit and encourage senior personnel to devote two or three years of their careers to technical assistance to enterprises in the developing countries. Company policies would have to be amended and provide long leaves without loss of seniority or retirement rights. Arrangements would have to be made for the use of public technical assistance funds to compensate private companies for some or possibly all of the costs that they would be asked to incur. Leaders of business opinion would have to be persuaded to support the programme.

I believe that a large-scale effort to meet this great gap in the West's technical assistance effort would be a far more fruitful investment of the energy and ingenuity of the Western business community than the pursuit of schemes to replace governments by business groups in the administration of government to government aid, as has recently been suggested in some leading American business circles.

MANAGEMENT TRAINING PROGRAMMES

DEVELOPMENTS IN INDIA AND ABROAD

By Dr. K. K. Saxena
UNIVERSITY OF LUCKNOW

THE emergence of a managerial class as a ruling elite in the twentieth century, beginning in the United States of America, has been a unique development in the unfolding of industrial civilisation. The ever-increasing worldwide competition and rising investment per worker have finally established that the future of an industrial organisation will be determined by the availability of skilled leadership. Never before has management been called upon "to act and to plan for future—in the face of constant change: change in the level of economic activity; change in the nature of the country's defence effort; change in markets, products, and technologies; change in the international trade situations; change of every kind, every day." (*The Dynamics of Management*—American Management Association—Management Report Number 14.) "The emergence of management as an essential, a distinct and a leading institution is a pivotal event in social history. Rarely, if ever, has a new basic institution, a new leading group, emerged as fast as has management since the turn of this century. Rarely in human history has a new institution proven indispensable so quickly; and even less often has a new institution arrived with so little opposition, so little disturbance, so little controversy." (Drucker, Peter, F.—*The Practice of Management*, Harper and Brothers Publishers, N.Y.). Obviously, the role of management in this context becomes increasingly technical, complex and difficult. One definition of management is the "art of getting things done through people." If the technology of metallurgy, for example, is complex, the task of coordinating the job requirements and personal needs of thousands of machinists and chemists, material handlers and time study analysts etc. is even more so, because of the unknowns of human behaviour. Management today indicates the integration of techno-economic and human resources to satisfy the aspirations and goals of an organisation. It is not only concerned with the most effective utilisation of available resources, but also directs it to the most desirable objectives. In every industrial economy, therefore, the interest in the function of management and the action of managers is growing.

Developing Better Managers

The recent research report published by the National Industrial Conference Board, *Developing Better Managers—An Eight Nation Study*, has revealed certain interesting features in management development in some of the industrialised countries. It would be of some use to highlight here some of the more important observations made in that report.

The report has indicated that the main reasons for the interest in management development are largely economic. In Chile, for example, whose economy has been primarily concentrated in one industry, namely, copper mining, it is felt that greater industrialisation is limited because of the inadequate number of managers. The Italian economists also feel that there is a vital need for managers competent to organise and lead more effective economic units. The report adds that the situations are in no way better even in highly industrialised countries. In countries like France, Germany, Great Britain and the United States, the economic pressures have focussed attention on development of managers. During recent years the firms have grown rapidly, the innovations in production and management techniques have been introduced with startling rapidity, and the ratio of administrative to direct production work has enormously increased. Appearance of new competitive pressures and new market opportunities has further complicated the task of manager. The job of managing firms in all these economies has become more complex and has led to the training of large numbers of new managers and the retraining of more experienced men. Japan has been a highly industrialised nation for many years. Even there the resurgence of Japanese industry and the adaptation of primarily western management practices to an oriental culture have required extensive training of Japanese managers. Though these nations may differ considerably in their concepts of just who is a manager, they largely agree on the essential elements of the function of management. It has been felt that there is need both to train new managers and to help present managers acquire new skills. The need to train managers is being met in so many ways. The report adds that in most countries, manager development activities are confined to schools and management associations. However, in Japan and in the United States, and a few other countries, in manager development in addition to other methods, companies themselves are active in training.

Management Education

Without a clear recognition of the need, the emphasis on, and planning for, management education would not have come about. There is still a lot to be achieved in this direction in the highly technologically developed nations, and far more in the developing countries. In the latter countries, therefore, the schools of business have to evolve their educational programmes in relation to the requirements of their economy and society. Nevertheless, it should not be forgotten that business is only an aspect of life and not the whole life. Business training which is not set in a framework of intellectual understanding of a nation's culture and world civilisation will be shallow rooted and its value of short duration. As business conditions change, this fact has been very well recognised by the schools of business administration in the United States. There business education "has now been assimilated into the academic structure of the country, as contrary to the situations abroad, yet there remain many problems to be solved. The vocational approach that has all too often characterised these schools in the past is now considered inadequate. A few institutions have been experimenting with new curricula designed to provide a more rigorous professional training within the context of a liberal education. The results achieved todate are highly promising. In such a programme, increased emphasis is being placed on the application of the fundamental disciplines of the social and behavioral sciences to the problems of business administration. Previously only the relevance of economics had been fully appreciated. Another promising development is the growth in the application of modern mathematical and statistical methods to business problems." (Gordon, Robert Aaron and Howell, James Edwin—*Higher Education for Business*, Columbia University Press.) And business education, like any other educational system, must maintain a dynamic rhythm. What is true of education in general is probably more true of business education in particular, because it deals with social and economic life of the community which is fast changing. Asked the question as to what should be the aim of business education, any sensible person would answer: "to give a mental training to the students to assist in the solution of management problems and responsibilities." So that the role of management education may be well appreciated, it is necessary to visualise the functions of the business executive.

Management Functions and Needs

Peter F. Drucker writes that the manager does not do one kind of work but four different kinds of work, and that in each of these kinds of work he needs development, he needs knowledge, he needs standards, and he must perform. There is first the functional areas, the areas of specific skills, such as marketing or finance, engineering or production organisation, personnel or operation research—the technical world of the manager. Secondly, there is the specific managerial task, the task of managing the work of people who are engaged in a common venture.... Next is the specific entrepreneurial function of the manager. And finally, there is the social performance, the leadership function. "The executive becomes a stateman as he makes the transition from administrative management to institutional leadership." (Selznick, Philip—*Leadership in Administration*—Row Peterson and Company.) Thus, forecasting, setting objectives and policy, planning, organising, supervising, motivating, leading the subordinates, controlling results, and co-operating with other executives of the organisation are some of the elements basic to the management function. There is no question that in the last quarter century the work load of the executive has greatly increased. With this has come the controversial problem of the "span of control"; and the task of manager development has become increasingly important and it has become a continuous process.

A manager who has to perform such a variety of functions has to be properly trained and skilled. The executive who is inadequately equipped to cope with this task may only succeed in arresting the progress and development of the enterprise leading to its ultimate failure. The broader perspective "can be provided only as the result of long continued exposure to a process designed to expand the intellect, to endow it with the capacity to reason logically from cause to effect, to capitalise the time-binding qualities... and to provide a measurably complete cultural orientation. (Hopf, Hary Arthus—*New Perspectives in Management*—General Electric Company.) This has underlined the need for management development all over the world.

An executive who performs such important tasks would find a formal education in liberal arts and sciences, social sciences and in dynamics of personal development invaluable. Management education is needed at different levels —top, middle and lower. The content of the courses will, however, depend on the level in management for which the persons are being trained, on the capacities of the institutions and on the needs of the individual executives. Individual needs may arise from three reasons. Niles, Mary Crushing,—*The Essence of Management*—Orient Longmans):

(i) External reasons such as changing industrial techniques or market conditions, may influence companies to seek methodical improvement of management performance.

(ii) Internal changes in organisational structure may redefine jobs and require managers to adapt and improve their capacity. The consequence of such changes is a general shifting of people at the top level and also within the various divisions.

(iii) Broad interests—the objective may in general be to make it possible for managers in their present positions and in the organisation as it exists, to do a better job. The aim is quite consciously better management of the company as a whole.

Management education has become increasingly important because of these demanding needs of the industry.

Indian Environs

In India, unfortunately, in the past, management development needs have been greatly neglected. Except for a few leading companies, the problem of training has not properly been dealt with. Even the training needs of industry have not been assessed and a definite policy has yet to be evolved. There is neither machinery for building a background of experience for managers nor a widespread institution for exchanging experience among managers. The latter has been considered to be an extremely important element in the process of manager's self-development. There is immense scope for training in technical, managerial, entrepreneurial and leadership functions. The need is also great.

In a growing economy like India, which aims at optimum utilisation of available resources, management development has a pivotal role to play. The growing needs of industry cannot suitably be met without both technically and non-technically trained personnel. Whether enterprise is large or small, whether it is highly technical or even automated, or whether it is composed of work gangs, such as have built the great buildings of history, there is need in modern India for managers and more managers—leaders capable of thinking through the problems of production and distribution, of human relations and control. Management development is a key social responsibility and a prime necessity for fulfilling national goals. The future growth of leading businesses in India and the country's economy itself will largely depend on an effective managerial group of people; without it much of the country's resources will be wasted.

During the past ten years the industrial production has practically doubled, the index having risen from 100 in 1950-51 to 194 in 1960-61, and the rate of investment in economy going up from 5 per cent to 11 per cent during the same period. Industry today occupies the foremost place in the plan for economic development and has a leading role in securing rapid economic advance and creating conditions of self-reliant and self-sustained growth. In any scheme of rapid development and technological progress, education is the most important single factor, for education is the acquisition of the art of utilisation of knowledge. There was a time when the traditional Indian businessman refused to recognise that any kind of education was in any way useful to the business except the practical experience which one acquires at the *gadi* (the proprietor's seat). It is, therefore, a matter of congratulation to him for the rapid pace at which his outlook has become progressive so that he now feels the

need for some training and education to meet the complex needs and requirements of modern business and industry.

In India, in the early days of industrialisation when neither enterprise nor capital was plentiful, the managing agency provided both; and India's well established industries like cotton, jute, steel, etc. owe their present position to the pioneering zeal and fostering care of several well-known managing agency houses. There was also a shortage of trained managerial personnel. This gap was filled by European managing agents who, apart from promotion and finance, met the requirements of managerial talent and skill. Later on, this system was extended and Indian managing agents came into the field. The Indian managing agents were mostly either family units or small private companies dominated by single family members. Through inheritance key positions came to be occupied by a mix of qualified and unqualified managers; against this competition foreign managing agents had the advantage of bringing in personnel from outside. After Independence, with the adoption of planned economy, the Government undertook operation of heavy industries. The new demands for trained executives in India, therefore, have become a far more urgent matter. Dean, George W. Robins, of the University of California, Los Angeles, in his recent report to the Government of India for the establishment of an All-India Management Institute, estimated that the shortage of management manpower at middle and top levels, both line and staff, range from five thousands to twenty thousands per year in the next ten years. The third Five-year Plan has also indicated the dearth of experienced persons in managerial posts and the planners have recognised that the lack of quality of managerial personnel is a factor which prejudices the success of an enterprise. It even indicates that often the key positions as general managers, production managers, maintenance superintendents etc. are held by people who do not have the requisite training and experience to do their jobs effectively.

It has been recognised that the efficient functioning of an enterprise will depend not only on giving training to men for positions of responsibility in the organisation but also on the development of personnel to serve as second line for eventual selection to key appointments. For all this specifically devised courses and practical ways, such as giving opportunities to selected persons for providing their managerial capacity in suitable posts, would be needed. To build up competent managers who know their own job and have the ability to lead is one of the key tasks in every sector of the third Five-year Plan. Both within the Government and in projects, there has been greater pressure at the higher levels, and enough attention has not been given to the development of the middle grades of personnel. This object can be achieved if the persons from these grades are given a greater share of responsibility in the day-to-day work and have the opportunity of gaining experience in the higher functions of management. Along with this, within each project, it is essential to establish the practice of consultation and exchange of views as between the different levels within the organisation as well as at each appropriate level.

Recent Developments

It is gratifying to note that in India there is a widely increasing recognition of the great need of training managerial power and to disseminate the modern scientific management techniques. The All-India Management Association has affiliated several management associations in India, and is heavily concerned with the task of management development. A series of advanced management programmes have been organised by it. Some of the management associations have also tried to develop their own training programme, some on full-time basis and some on a part-time basis.

The Universities have also made some efforts to develop management courses. A part-time three-year course for a Diploma in Business Management has been introduced at the instance of the All-India Council for Technical Education in the Universities of Bombay, Madras and Delhi and in the All-India Institute of Social Welfare and Business Management in Calcutta. The University of Andhra has introduced an M.B.A. programme. Further, evening Diploma courses in Industrial Management have also been introduced at the Indian Institute of Technology, Kharagpur, Indian Institute of Science, Bangalore and the Victoria Jubilee Technical Institute, Bombay.

Among the other autonomous institutions, the Ahmedabad Textile Industry Research Association (A.T.I.R.A.) has played a very important role in the management development programmes in India. The Administrative Staff College, Hyderabad, modelled on the pattern of the Administrative Staff College at Henley in England, provides training for officers of Government, and the executives in the public and private enterprises. The National Productivity Council also offers courses in industrial engineering, work methods and management development. Development Councils set up for many industries and other organisations representing private industry are useful means for bringing the best leadership in each industry to bear on the solution of common problems and the achievement of high standards of management and welfare. Further, some of the big foreign companies like Burmah-Shell, Esso, Hindustan Lever and Imperial Chemical have organised their own management programmes. Amongst the Indian companies, the Tata Groups has a Tata Staff College and holds an annual Tata Management Conference. Some of the companies, especially with foreign collaboration, have also tried to get their personnel trained either by sending them abroad or by recruiting personnel with foreign qualifications and experience. Thus management development today is a crucial part of Indian economic planning.

Management Institutes

Recognising the need for management education and development, the third Five-year Plan proposed to establish two All-India Institutes of Management. One institute has been set up at Ahmedabad under the direction of the Graduate School of Business Administration, Harvard University, and another at Calcutta, under the sponsorship of the School of Industrial Management, Massachusetts Institute of Technology. The Ford Foundation has provided the dollar grant. Both these institutes will perform the vital functions of teaching and conducting research in the management field and management consultancy. It is hoped they will assist in meeting the managerial manpower requirements through well directed programmes of professional education, executive development and teacher development. Through their contact with the nation's industry they will be able to contribute not only to the development of management literature but will also be able to assist in the solution of management problems. Even with the high calibre of work expected in view of the sponsorship, it seems unlikely that the growing industrial needs of the entire country can ultimately be met by two institutions only.

At this stage it would be worth noting as to what should be the objectives of the institutes of business management who plan to produce persons competent to take up responsible positions as business administrators. In the United States these objectives have been very well recognised and the purposes of business education are:

(1) To develop over all executive capacity for *action* (*via* stress on case method);

(2) to develop skills of business specialists;

(3) to develop understanding of social sciences;

(4) to develop mathematical sciences with application to industry; and

(5) to increase *knowledge* of business and industry through research and training of business teachers.

The approaches of the business schools in the U.S. may be viewed as taken from a spectrum of a *Yoga* of 'action' typified by Harvard, and *Yoga* of 'knowledge' at the other end typified by the Universities of Chicago and Columbia, which is the more traditional academic approach. The Massachusetts Institute of Technology could be viewed as somewhere between these two, being both theoretical and pragmatic, but with a high degree of concentration on more technical aspects. The Carnegie Institute of Technology may also be viewed in the middle, but it is much more highly specialised in developing business specialists, through mathematical model techniques and electronic computers. Many other schools use the case method but even more are still using the traditional educational approaches with a mixture of cases to suit their requirements. It may be advocated here that a similar diversity would be needed for management development in India. A beginning has got to be made towards case method of teaching. Through this would not only be built up research literature for business teaching, but the students would know better the actual situations of the industry and would be in a position to develop their decision-making power under situations of reality. The early beginnings of case method at Harvard can be traced to the fact that there was a need for business literature in the twenties, and the case collection was thought to be the best method to meet this requirement. The developing countries, including India, would have to adopt this method of teaching with a view to develop their programmes of business education and training.

The programmes of business education and training in India are thus increasingly becoming vital for the industry. And hence management development will have to be planned to suit the needs and requirements of the industries. It seems that at the moment it is more efficient to have schools of management in various parts of the country, as against having individual company programmes on account of limited resources. Unlike the U.S., where companies have even evolved their own management training programmes, in India centralised efforts by the various organisations will have to be continued. This is a pointer to the need for closer association of industry with management institutes and organisations. These institutes can, like American business schools, provide researches, consultation practice, and executive development and case collection and thus be in touch with the dynamics of modern business in many real ways. The conscious co-operation of industry with the academic world in the U.S. is much more pronounced than anywhere else. The close contact between management institutions and industry is maintained through a series of efforts:

(1) The co-operation of industry in the training of executives while they are attending school through summer job and scholarship funds: At Harvard and other case method schools, companies invite case writers and research teams to study their operations. This not only provides teaching material for future classes but is often quite valuable to the management in that they learn in the process the ways of cutting costs and increasing sales and in encouraging closer co-operation both from workers and from members of management. This type of association between the industry and management institutes is of the utmost importance in India today.

(2) The companies participate in seminars and in management programmes which serve both as refresher courses and in re-training programmes for members of middle management and top management, whose training has been exclusively within the company. Particularly with the more rapid growth of Indian economy and changes in technology, retraining becomes far more important today than in the past, because without it capable executives may find that they no longer will have the technical ability to advance and even to hold their present positions against younger and better trained candidates. The seasoned experience of executives, however, combined with periodic retraining allows them to grow personally with their companies and to increase their usefulness and value to their organisation.

(3) The professors in the U.S. serve industry in many ways. In addition to training of young potential executives and technical specialists because of their intimate knowledge of latest developments in management methods and thinking in their own country and internationally, they are in a position to provide consultative services directly to business and through research organisations. They can conduct seminars for specific industries and can serve as Board members of industry councils. Many of the more qualified and experienced business administration professors sit on the company Board of Directors and thereby add to the breadth of view of the entire Board. Teachers sometimes also serve as impartial arbitrators in the settlement of industrial disputes both between companies and for management labour disagreement.

Thus a great responsibility lies on the shoulders of Indian industry for management development through direct co-operation, association and assistance in all possible ways. They should learn from foreign industrialists how to build up traditions in management development programmes for their own future growth, if not survival. The Indian industrialists even today are not prepared to part with their business situations and conditions. They are secretive in giving information and do not want to part with their major internal problems. They ar

CALCUTTA, *22nd May*, 1963.

HECTIC RISE IN WORLD SUGAR PRICES

OUTLOOK FOR INDIAN EXPORTS HIGHLY ENCOURAGING

BOTH sugar millowners and traders in India have noted with great satisfaction the distinct improvement in the prospects for sugar exports following the phenomenal rise in prices in world markets of late. Never in the history of the London commodity market had the price of raw sugar touched such a high level as at present. On 24th May, sugar was quoted at £101 per ton (c.i.f. London), the all-time peak. At this level, the rate is nearly £39 above the previous post-war record of £62 touched on 16th April 1957. The price has more than doubled since the beginning of this year and is nearly five times the level (just £21) prevailing a year ago.

The persistent unprecedented increase in world sugar prices, more especially since the last five-six weeks, has been due to the anxiety in sugar circles about the overall statistical position, made all the more acute by the recent decision of the U.S. Administration to step up the import quota by 600,000 tons to 10.4 million tons for the current calendar year. The apprehensions of a serious imbalance in world sugar economy have stemmed from the reported sharp setback in world sugar production in the context of the continuously expanding consumption. The latest estimate of world sugar production in the current season (September 1962-August 1963) places the total at no more than 51.31 million metric tons, as against the earlier estimate of 52.39 million tons and the actual production of 51.97 million tons in 1961-62. It may be interesting to note here that, as compared with 1960-61, the estimated world sugar output shows a fall of 4.07 million tons, while consumption has risen by an equal quantity, with the result that there has been a considerable depletion of stocks. The current season is expected to close (on 31st August 1963) with a carryover stock of just 8.90 million tons, as against 17.21 million tons two years before. The following table indicates the statistical position of world sugar:

(In million metric tons—raw value)

	September-August			
	1962-63	1961-62	1960-61	1959-60
Opening stocks	14.39	17.21	14.63	13.77
Production	51.31	51.97	55.38	50.08
Of which:				
Cane sugar	29.49	29.62	31.10	29.77
Beet sugar	21.82	22.35	24.28	20.31
Total supply	65.70	69.18	70.01	63.85
Consumption	56.80*	54.79	52.80	49.22
Closing stocks†	8.90	14.39	17.21	14.63

* Rough estimates only. † As on 31st August.

It will be seen from the above table that the decline in world sugar production is accounted for by both cane sugar and beet sugar. The decline in cane sugar output is due largely to the precipitous fall in Cuban production which is now considered unlikely to exceed 3.0 million tons, as against the 3.5 million tons recently predicted and the 4.5 million tons originally forecast. The two other large cane sugar producers are India and Brazil. The cane crop in India has been severely damaged owing to floods in the Punjab, premature dry weather in Uttar Pradesh and Bihar, and pest attack in the Deccan. The actual reduction in cane yield is put at 25 per cent in Bihar, 15 per cent in Maharashtra and 12 per cent in Uttar Pradesh. Consequently, the combined production of white sugar, *gur* and *khandsari* is substantially less than in 1961-62. Beet sugar production in Western Europe is now estimated at 7.96 million tons, as against the 8.37 million tons produced in the previous season and that in East Europe at 10.53 million tons, as against 10.95 million tons.

U.S. Purchases

Reviewing the recent trends in world sugar economy, Mr. Lawrence Myers, head of the U.S. Agriculture Department's sugar policy staff, declared, in an address before the U.S. National Confectioners' Association held at Washington last week, that the sugar market was in a state of panic. Mr. Myers stated that the late recognition of the change from a surplus to a tight supply situation *might* "account for a large part of the violence of recent market reaction." At the same time, he said, there was in sight, or in reasonable prospect, more sugar than U.S. users would consume during the current year. There has been, according to him, some stockpiling of supplies and this had affected the situation. But he made it clear that the U.S. would be forced to shop among friendly exporting countries and that the U.S. buyers would have to pay the world price for their sugar.

The hectic rise in sugar price at London has, as is only to be expected, caught the attention of the British authorities who are now said to be examining ways and means of preventing the rise from causing an increase in retail prices. The introduction of distribution payments—a kind of surcharge in revenue—so that consumers can enjoy the benefit of prices well below world prices was hinted at by the Agriculture Minister, Mr. Christopher Soames, in the House of Commons the other day. About two-thirds of the U.K.'s annual sugar consumption of about 2.8 million tons is purchased by the Sugar Board under a negotiated agreement with the Commonwealth producers at £46 per ton. According to its rules, the Board has to resell the sugar at the actual world prices, "thus giving it a huge profit while the shortage lasts." But it is stated that a compensation payment by the Board to refiners to reduce the pressure on retail prices may be arranged.

Will Rise Persist?

Some interesting comments on the trend of the world sugar market have been made by *The Financial Times*, London. This paper admits that the market's behaviour in the last few days is perhaps no more than might have been anticipated. But it clearly warns that it would be dangerous to assume from this (behaviour) that there is now nothing to hold prices back. For it observes:

"Sugar is grown all over the world, and only a relatively small proportion is traded on the world free market rather than through special arrangements such as the Commonwealth Sugar Agreement. Undoubtedly there is at present a shortage, but a period of good weather in an important producing area could do much to redress the balance and, with prices at their present level, there is a considerable inducement to growers to expand their acreage. Moreover, the market is now in the sort of situation in which the first appearance of profit-taking could easily cause a sharp and sudden fall, just as it did some months ago in the tin market. In addition, switching from sugar to cocoa and back again is a common practice in New York and, with rumours circulating about the possibility of disease causing a drop in Ghana's cocoa output in the next few years, the speculative pressure on sugar could be lifted for reasons quite unconnected with conditions in the sugar market."

The key element in world sugar situation in the next few years will be the trend of production. A favourable European beet harvest can ease the situation and high prices are providing a strong incentive to increased output in tropical areas, though it is usually 18 months before the first cane can be harvested from new plantings. Mentioning this aspect, the *Monthly Review* (February issue) of the Bank of Nova Scotia makes the following remarks:

"For the longer view, the position of Cuba remains an enigma. Currently it appears that Cuba will have difficulty in fulfilling her export *commitments* to the Communist countries. However, questions remain regarding the disposition of future Cuban supplies in view of the planned increases in domestic output in the Communist countries and the potential in Cuba for a sharply higher output from the present reduced level. Larger production could develop also in many other areas and, indeed, there would appear to be a longer-run danger that an excessive response to present high prices will lead to future difficulties. Production can be increased only after a time lag, yet, once stepped up, it is not easily restrained. Heavy investment in processing facilities tends to encourage maximum production; cane sugar in many areas is the predominant crop and, in Europe, sugar beets play an important role in the agricultural economy.

"World consumption (of sugar) in coming years is expected to continue to rise, though perhaps a little more slowly than in the past decade. Estimates by the Food and Agriculture Organisation forecast an increase of around 3½ per cent per year through the sixties. Potentially the areas of most rapid gain are the less-developed countries with low sugar consumption; in the more advanced countries, expansion is closely tied to growth in population. Even with such expansion, however, prices are most unlikely to remain at recent levels, and sugar producers may well again be faced with the problems of excess supplies. Furthermore, there is little indication that nationalistic policies will be changed."

Export At A Profit

While indications thus point to the possibility that the upward trend of sugar prices may not continue for ever, it would appear that there is no likelihood of prices receding to touch the low levels of last year. The distinct firmness of the world free market for sugar at present no doubt provides an excellent opportunity for Indian sugar exports, in that India can sell sugar abroad not only without any subsidy for covering loss but with a handsome profit. As against the London quotation of over Rs. 1,300 per ton, the Indian export price comes to about Rs. 730 (after the full remission of excise duty of Rs. 291.25 and cane cess of Rs. 51.72), or a profit of Rs. 570 per ton. Even after paying excise duty and cane cess, the profit earned by exporting one ton of sugar comes to Rs. 227. Such an excellent opportunity cannot, however, be availed of by India right now, in view of the tight supply position, following the sharp setback to production. The country has to confine itself to the sugar export programme of 1963 which covers a total of 540,000 tons, including the spillover of last year. Since the possibility of world sugar prices declining very sharply is not there, India can certainly hope to earn much precious foreign exchange through sugar exports at least in the next few years. Referring to exports, Mr. S. K. Patil, Union Minister for Food and Agriculture, in his speech at the last annual meeting of the Indian Sugar Mills Association, said:

"... it has been possible for us to secure for the industry a regular foothold in the international sugar market. It is no longer a problem of exports as a means of disposal of unwanted surpluses; on the other hand, it is the necessity of exporting sugar as a regular foreign exchange earner which has been recognised. We have taken a very significant step this year in this field in that, with the co-operation and enterprise of some of your members, we have been able to manufacture raw sugar to the tune of 250,000 tons and shall be in a position to export it to Japan, U.S.A., and a number of other countries. This and the fact that even refined sugar has become a regular feature of export trade would appear to call for a revision of our ideas regarding the basis on which the industry was participating in these exports hitherto. My Ministry has this problem actively under consideration and I am sure that, with your co-operation and assistance, it could work out a scheme of things which would place sugar on a par with other export commodities particularly in view of the prevailing price trends."

That India has considerable scope for increasing its exports was impressed upon the British Government by Mr. Patil recently. Mr. Patil discussed with the British Minister for Agriculture the question of including India in the Commonwealth Sugar Agreement which is due for revision in 1966. Pending this revision, he suggested to the British authorities that, as an interim measure, India be allowed a slice from the Commonwealth discretionary quota of about 200,000 tons.

If India is serious to maintain the existing export markets for sugar and build up new ones, three things are necessary. In the first place, every effort must be made to maximise production of quality sugar at an economic cost. Secondly, delivery schedules should as far as possible be adhered to. And, finally, the packing of sugar must be proper. This is of very great importance, for sugar, being highly deliquescent, will suffer great damage in quality if it is exposed to moisture.

"KHANDSARI" IN U.P.

The reported decision of the U.P. Government not to issue any new licences for the manufacture of *khandsari* in the whole of the reserved areas this year, though belated, must be widely welcomed. The decision will surely release to the sugar mills a large portion of cane that would otherwise have found its way to *khandsari* producers. Even so, sugar production in Uttar Pradesh during the 1963-64 season is not expected to increase by more than 10-12 per cent, as compared with the current season (1962-63). For, according to first estimates, the area sown to the crop in this State is not larger than that in 1962-63. After the Cabinet meeting, the Chief Minister for Uttar Pradesh, Mr. C. B. Gupta, is understood to have told newsmen that the sugar production target of 3.2 million tons fixed for 1963-64 could not be achieved unless sufficient encouragement was given to the industry. He reiterated the demand for increasing the cane prices, as the recent increase, in his opinion, was not sufficient. Since enough has been written in the columns of *Commerce* on cane prices it is not proposed to dilate on the issue again. Suffice it to say that, considering the heavy incidence of cane cost in sugar manufacture, the tendency on the part of the U.P.'s Chief Minister to repeat the plea for higher cane prices is deplorable in the extreme.

The Government of India has decided to reduce the existing rates of compounded excise levy on *khandsari* by one-third for the period from 1st July to 31st October 1963. This decision is a sequel to the representation made by the industry to the effect that, during the *galawat* period, the recovery of sugar being low, the rates operate to their disadvantage. It will be recalled that, for the convenience of the manufacturers of *khandsari* sugar in the matter of maintaining accounts and discharging other obligations under the Central Excise Law, an alternative procedure of compounded levy had been introduced in 1960 and suitable rates of compounded levy fixed.

WORLD PRODUCTION OF IRON ORE

CROSS-FRONTIER TRADE INCREASINGLY IMPORTANT

BETWEEN 1946 and 1962 world steel production, it will be recalled, more than trebled—from 110 million tons to 361 million tons. But the availability of scrap tended to lag behind ferrous requirements in this period of rapid steel expansion. There was, in consequence, a rapid growth of pig iron consumption in steel making and, therefore, of iron ore consumption. In these circumstances a general fear developed of a possible long-term shortage of iron ore and especially of high grade ores. This stimulus quickly produced a major response in the form of massive investment in three sectors, namely, (i) the search for new ore reserves; (ii) the provision of further iron ore mining capacity and the increase in production which went with it, and (iii) the provision or improvement of transport facilities. The progress achieved so far in each of these three sectors has been described in detail in a special article appearing in the April 1963 issue of *Steel Review* published by the British Iron and Steel Federation. The article is of particular interest to India which, as a substantial producer of iron ore, is seeking to expand its exports.

It is, indeed, remarkable that the search for new ore reserves has led to the discovery of vast new sources throughout the world. Thanks to such discovery, the estimated world reserves increased from about 100,000 million tons in 1950 to about 250,000 million tons in 1962. The U.S.S.R., with reserves of 77,000 million tons, now accounts for nearly one-third of the total known world reserves of iron ore. Considerable parts of the new Soviet reserves are, however, located in remote areas in Asia, particularly in West Siberia, and the economic value of much of these is at present limited, although they may affect the future location of steel making. Bolivia comes next with newly located deposits estimated at 50,000 million tons. These reserves are, however, awkwardly situated geographically and are unlikely to be of early significance. India, Brazil, Australia and Canada each now have known reserves of over 10,000 million tons. Many of these consist of high grade ore and are reasonably accessible. Canada's reserves alone, it is said, may be of the order of 30,000 million tons. Other countries, including, notably, Sweden, France, the U.K., South and West Africa, Venezuela, Chile and China, also have valuable reserves of commercial value. Total world known reserves, even if those in Bolivia and Siberia are excluded, represent, at the current rate of consumption, over 250 years' supply.

Greater Mining Capacity

The second response to the stimulus of demand for ore involved greater investment in ore mining capacity. But capacity calculations, according to the article in *Steel Review*, are difficult. Figures of world ore production, however, show that it rose from 242 million tons in 1950 to 513 million tons in 1961. The countrywise details of production may be noted in the following table:

(Million tons)

Country	1950	1961
Canada	3.2	20.4
U.S.A.	98.0	71.5
Venezuela	0.2	14.3
Brazil	2.0	10.0
Peru/Chile	2.9	12.8
U.K.	13.0	16.5
Scandinavia	14.0	25.3
France/Luxembourg	33.4	73.0
West Germany	10.7	18.6
Spain	2.0	5.9
East Europe	4.1	11.7
North Africa	4.5	5.2
West Africa	1.1	5.0
Union of South Africa	1.2	4.0
U.S.S.R.	39.1	116.1
China	2.0	59.0
India	3.0	12.0
Malaya	0.5	6.7
Australia	2.4	4.7
Other Countries	5.0	20.7

The third response to the stimulus of greater demand for ore has involved heavy investment in the installation or improvement of ore transport facilities. Since output has been expanded in large measure to satisfy home demand or to meet demand in neighbouring countries, this has involved considerable investment in rail facilities, including the construction of larger and more efficient ore wagons and of equipment to handle them. For example, the British industry today moves its ore in very high-capacity wagons, usually in complete train loads, and has spent heavily on specialised discharge facilities to match. Still more striking has been the heavy investment in the overseas movement of ore. The economies to be secured by carrying ore in special purpose carriers has led to the construction of a world fleet of 335 ore carriers. The deadweight capacity of this fleet has increased from 2½ million tons at the end of 1956 to nearly 6½ million tons in mid-1962 and is scheduled to rise to over 8 million tons in 1965. This excludes the other cargo vessels able to carry ore, in which over 40 per cent of Japan's imports are still carried. Moreover, the intensive operation of these ore carriers has in turn involved considerable development of both loading and unloading ports, in terms both of the size of ship which they can accommodate and of their turn-round rates.

What effects these developments have had on the cross-frontier trade in ore may next be studied. Of course, the greater part of the total movement of ore to steel-works—some 366 million tons out of 513 million tons in 1961—still takes place within the countries concerned. But important changes, which have taken place since the war, have increased the scale of cross-frontier movements. The extent to which some of the leading steel-producing countries depend on imported ore (both seaborne and non-seaborne) is indicated below:

	Ore imports (In million tons)		Ore imports as per cent of consumption	
	1950	1961	1950	1961
U.S.A.	8.2	25.8	8	28
U.K.	8.4	15.0	41	47
W. Germany (including Saar)	8.4	32.2	34	63
Belgium/ Luxembourg	8.1	20.2	52	75
Japan	1.4	20.7	63	94

Import trade is dominated by a limited number of countries. The sources of the seaborne ore used by the three main areas, namely, Japan, U.S.A., and the European Coal and Steel Community and the U.K., importing such ore, and the quantities imported, as of 1961, are given in the following table:

(In thousand tons)

Source	Imports by Japan	Imports by U.S.A.	Imports by E.C.S.C. and U.K.
Canada	1,097	9,683	4,335
Federation of Malaya	6,534	..	..
India	4,783	..	2,626
Brazil	419	889	3,598
Chile	2,142	2,604	814
Peru	2,348	1,209	1,764
U.S.A.	931	..	2
Philippines	1,209	..	..
R. of South Africa	446	..	57
Other	647	149	405
Sweden	..	78	18,457
Venezuela	..	10,480	4,015
Liberia	..	715	2,099
Sierra Leone	..	..	165
Denmark	..	..	48
Finland	..	..	4
Greece	..	..	105
Norway	..	..	1,169
Portugal	..	..	154
Turkey	..	..	215
Algeria	..	..	2,657
Angola	..	..	309
Guinea	..	..	242
Morocco	..	..	1,059
Tunisia	..	..	729
Total	20,556	25,807	48,554

A rapid change from a sellers' to a buyers' market has taken place in the world ore market since 1957. Thus the official quotation for Itabira ore from Brazil in 1957 was $14.60 a long ton f.o.b. Vitoria; this has fallen to $11.25 a ton, a fall of about 22 per cent. A recent long-term contract with Japan is reported to have been negotiated at $8.50 a ton which would represent a fall of over 40 per cent. C.i.f. prices have fallen even more than f.o.b. prices, reflecting the rapid change in the shipping position from shortage to excess supply. Over 3 million tons (4 per cent) of dry cargo shipping capacity, including over 200,000 tons of ore carrier capacity, is laid up and there is much spare capacity in ships actually operating. Between 1956 and 1958 the Chamber of Shipping Index of Freights fell from 157 to 67 (1952=100) and has since remained depressed.

Taken together, these falls in both the f.o.b. prices of overseas ores and their transportation costs have created a situation where seaborne ores are becoming increasingly competitive with marginal home suppliers in Western Europe. In fact, the battle in W. Germany is already clearly moving in favour of imports. A number of mines in Western Germany have already been closed. Salzgitter ore is no longer to be sent to the Ruhr and some foreign ore is actually being used at the Salzgitter Steelworks. Indeed, it is now suggested that owing to the low level of transatlantic freights, even the comparatively nearby high grade Swedish ores will come under pressure from South American ores, whose prices delivered to the Ruhr are now fully competitive.

Prospects

The article in the *Steel Review* has also outlined the future prospects for world production of, and trade in, iron ore in the 'sixties. The relevant findings are:

"In attempting to assess the likely pattern of world production and trade in the 'sixties, one major uncertainty is whether the U.S.S.R., Eastern Europe and China, after meeting all their own requirements out of their own abundant resources, will seek to sell in quantity to the West. On the whole, this seems unlikely in this decade; although the longer-term possibility cannot wholly be discounted. Another uncertainty is whether Japan will continue to be satisfied with tapping ore resources around the Pacific-Indian Ocean basin, including the substantial development of Japanese-Australian ore trade which appears to be in prospect, or whether she will widen her catchment area and so compete still more directly with North America and West European ore importers.

"Leaving these aside, the two main issues for the 'sixties are whether the main steel producers of North America and Western Europe will continue to rely to an appreciable extent on their domestic ores or whether they will turn increasingly to foreign ores; and if so, whether they will tend to draw on distant or nearby sources. In short the crucial questions seem to be: firstly, is the recent reduction in f.o.b. prices of new overseas ores likely to be maintained or will it be reversed as trade revives?; and secondly, will sea freights continue to be low under the influence of the ore carrier and port developments under way, or will they tend to rise under pressure of growing demand for shipping space?

"As regards f.o.b. prices, it is significant that there is already considerable spare mining capacity available. Moreover, many countries are further enlarging their home ore mining capacity, while the schemes recently initiated with the help of foreign capital will alone raise capacity by at least a further 70 million tons if they all materialise fully, notably in Canada (+30 million tons), Liberia (+15 million tons), Brazil (+10 million tons) and Mauritania (+6 million tons). As regards transport costs, although increased ore demand must increase pressure on shipping space, there is, as noted earlier, considerable spare shipping capacity to cushion the impact on freights.

"Moreover, an important factor is the remarkable increase in the average distance over which seaborne ore is carried. As the size of an ore carrier increases up to at least some 35,000 tons, the costs at sea fall more steeply than the costs at ports rise, the gain increasing with the length of voyage. With the lengthening of voyages illustrated above, therefore, the growing employment of larger ore carriers should provide increasing economies in freight costs.

"There should also be economies in port handling costs. Ore exporting countries are conscious of the need for providing port facilities for larger carriers; and after developments which are at present in hand have been completed, there will be few of the important loading ports which will not be able to cater for ships upto at least 35,000 tons. Many of the major ore unloading ports are already able to berth large vessels and notable further improvements are envisaged.

"Taken together, these various developments suggest that, throughout the 'sixties, overseas ores will become still more competitive with the lower grade local ores of Western Europe; and that distant new ore suppliers will increasingly challenge nearer traditional ore suppliers. This competition should suffice to keep imported ore prices under reasonable discipline throughout this decade."

What is likely to be the position in the 'seventies? On the basis that world steel production in 1972-5 may reach 620 million tons, it is figured out that well over 200 million tons of seaborne ore (as compared with just over 100 million tons in 1960) may be needed. At the same time many of the exporting nations will also have to produce more iron ore for use in their own steelworks.

NEW PRODUCTS AND PROCESSES

Low-cost Prefabs for Buildings

LOW-COST Australian-made buildings that can be erected with little more than a spanner and a screwdriver have attracted world-wide attention. They are modular pre-fabricated structures suitable for use as houses, schools, hospitals, clinics or workers' barracks. Their designer-manufacturer is O'Neill Industries Pty. Ltd., of Brisbane, Queensland. The buildings are designed to provide comfortable living in any climate. They are insulated against tropical heat, stressed to withstand the battering force of cyclones and are immune to termite attack. All units of an O'Neill building (it can be a one-bedroom house or a 40-bed workers' barracks) are made on the one module. Most frequently used measurement is 4 ft. but a 3 ft. module is sometimes employed. The buildings have unique steel or aluminium section frames, for which patents are being sought. The sections are tied into a single structural unit with specially-designed connections, which are also covered by patent applications. Walls—either solid panels, banks of louvres, or movable shutters—are fitted into the frame to complete the building. The job is so simple that a crew of unskilled workmen, under a single trained builder, can erect any O'Neill building. Sandwiched between the two skins is a core of styrene foam, a material with extremely high insulating properties. Flooring can be either concrete slab, timber or steel. Roofing of either corrugated galvanised iron or corrugated asbestos cement can be supplied to suit buyers' requirements. With each building, O'Neill Industries provides easily read plans and specifications. The Company has stock plans immediately available for 23 types of buildings, not including its range of one, two and three-bedroom houses and will design buildings to fit customers' precise requirements.

For mining and construction companies, a great advantage claimed for O'Neill prefab buildings is that they can be dismantled as easily as they are erected. Wiring of the buildings for electricity is extremely simple and the amount of work needed to install plumbing depends only on the foundation chosen. To facilitate wiring and plumbing, suitable ducts are provided in the interior partitions. These interior partitions also feature banks of louvres to ensure maximum cross-ventilation. This ventilation, plus the walls' insulating properties, keep O'Neill buildings cool in hot climates. The building materials used are termite-proof.

Whistler Warns of Below-pressure Tyres

A tyre, it has been calculated, will lose as much as 30 per cent of its mileage life if consistently run at only four-fifths of the inflation pressure proper for its load. Flexing caused by under-inflation will increase normal tyre temperatures, shortening its life. The rolling resistance of the tyre will also be increased, and with it petrol consumption. To obtain maximum service with minimum depreciation it is therefore, essential to maintain correct inflation pressures, states the Natural Rubber Bureau in its quarterly journal *Rubber Developments*. And this factor is particularly important in the economic running of haulage fleets where high-pressure tyres are used. So a "below pressure" warning device now on the British market should prove a boon to heavy truck and bulk transporter operators. This little gadget, known as the Trico Tyre Whistler, is quickly and easily installed by a simple bracket, using either one of the wheel fixing nuts or a hub nut. It is connected to the tyre valve by a flexible tube and the tyre is subsequently inflated through the Whistler itself. As soon as the tyre pressure drops below the set minimum the Tyre Whistler emits a loud—120 decibel—warning whistle. As continuous sounding of the alarm will deflate the tyre, the whistle valve is then turned off and the tyre re-inflated to its correct pressure as soon as possible. Developed in France, the Tyre Whistler is now made and marketed under licence in this country by Trico-Folberth Ltd., of Brentford, Middlesex. Supplied in a range of four models covering pressures from 65-110 p.s.i., its internal mechanism is simple yet effective, working on the spring pressure balance system. The spring is set to the minimum safe-working pressure of the tyre, and while the pressure remains above this it maintains the valve in a closed position. As soon as the pressure drops to the set figure, however, the spring overcomes the pressure in the tyre, opens the valve and allows air to escape—causing a strident protest that cannot be ignored.

New Tyre Design "Computer"

After many years of research the Dunlop Rubber Company Limited has developed an instrument which in some ways can be described as a "tyre design computer." It enables to set objectives for long-term research more clearly and obtain the maximum advantage from new materials and methods of manufacture. During the time this machine has been in use, valuable information is said to have been obtained. This has included data on vertical force distribution, cornering force intensity coefficient, the effects of various factors upon cornering force measurements, lateral distortion and slip of the tread band, the effect of vertical load sideways stiffness, the steering properties of World's Land Speed Record tyres, and so on. More recent work has concerned the distribution of tyre-to-ground forces during the combined action of braking and cornering, the reactions developed when a tyre rolls over asymetrically placed objects like "cat's eyes" and the reactions developed as a tyre crosses a raised ridge at a low attitude angle such as a white traffic line. In these and other directions, the new machine is claimed to have provided a factual basis for things which previously had to be assumed, confirming some and showing others to be incorrect. It is making it possible to say with greater confidence what the ideal properties of a tyre should be, and to guide tyre designers and engineers in obtaining maximum advantage from new materials and manufacturing processes.

Wood-Plastic Material

A totally new combination of solid wood and plastic has been produced at West Virgina University, U.S.A., under a contract with the U.S. Atomic Energy Commission, Washington 25, D.C., U.S.A. The result is a remarkable material with all the characteristics of the timber added to resistance to insects, rot, water, and atmosphere. It also has increased strength. The trick is worked by first of all impregnating the wood with the monomer in liquid form under pressure, much in the same way as rot-prevention fluids are forced in. After a thorough impregnation the monomer is turned into a cross-linked polymer by irradiation with penetrating gamma rays. The plastic is thus cured hard in the interstices between the wood fibres. The first experimental work was done with a cobalt-60 source of gamma rays giving 350 curies but later a much more powerful source of 10,000 curies was used. The work must of necessity be done in a well-shielded radiation-proof enclosure. The product has been considerably evaluated and details are given in a booklet purchasable from the A.E.C. at $1.25.

Grained Finish for Hardboard

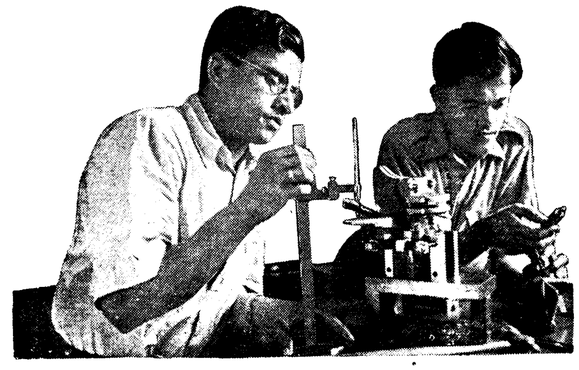
An Australian furniture manufacturer, Ogden Bros. P/L., of St. Peters, Sydney, has developed a new process to provide hardboard with a grained finish comparable with highclass veneering. The process, called Duraplex, gives the hardboard a hard attractively-grained and coloured coating which is heat and scratch resistant and impervious to solvents. Duraplex involves the printing of timber grain patterns on hardboard in specially developed inks and the application of a polyster finish. The first step is the application of a neutral coloured base coat to the hardboard sheet which is then passed through a printing machine in which an etched steel roller applies the grain pattern and colour. A polyster finish is then applied. Six different grain patterns can be given to the hardboard in an infinite range of colours and shades to suit modern trends in decor.

New Line of Photo Chemicals

"Cronalith" liquid chemicals, consisting of a high-contrast developer, a concentrated fixer and a development control solution, are available to industrial and graphic arts users from the Du Pont Photo Products Dept. The new control solution, intended for Du Pont ortho litho films, permits starting and stopping film development several times without affecting the quality of the image.

"Hypalon" Rubber Curbs Slipping

New traction treads with an extra dash of colour combine safety underfoot with a decorative touch for show place areas in offices, public buildings or even in homes. Trademarked "Scotch-Tred" resilient nonslip surfacing by Minnesota Mining and Manufacturing Co., the treads are both thinner and brighter than prior products. The result is safe, attractive footing at entrances to buildings and elevators, on stairways, in lobbies and corridors and in home kitchens, laundries and gamerooms. In addition to standard harmonising gray, black and brown textured surfaces, the treads also come with a bright white finish for bathtubs, shower stalls, swimming pools, diving boards and boat decks. "Scotch-Tred" may also be painted any colour with a water-base paint. The brighter colours and unusual toughness of the thin, 45-55 mil-thick treads are made possible by "Hypalon" synthetic rubber, and elastomer known for colour stability and resistance to wear, weather and sunlight in such applications as crack-free tyre whitewalls, roofing systems and durable shoe soles and heels. Besides resisting common detergents, oils and solvents used in offices and homes, "Scotch-Tred" is waterproof; normal exposure to rain at entrances and scrubbing with soap and water won t weaken the product's adhesion. It can be used indoors or outdoors because it won't soften with heat or become brittle with cold. And it provides the extra safety feature of being resistant to flame. "Scotch-Tred" is made by bonding a formulation of "Hypalon" to a dimensionally stable plastic film backed with pressure-sensitive adhesive. To install it, the user simply strips away a treated-paper backliner and presses the tread firmly to a clean, dry surface. It can be walked on immediately. "Scotch-Tred" surfacing is sold nationally in 60-foot rolls varying in widths from two inches to three feet. It is also available in strips and squares that can be applied in stripe or tile patterns. Unusual or decorative shapes can be cut from rolls or squares with a knife, pair of scissors or razor edge. Special home kits of ten precut smaller strips can be bought for installation in bathtubs and showers.



New Cacti Crops for Central Asian Deserts

Parallel to a long range programme of building new canals and water reservoirs in the sandy wastes of Central Asia the Uzbek and Turkman scientists have planted, in several localities in the desert, cacti as a short term measure. The cacti survived their first winter and have grown considerably since. The species chosen was a spineless opuntia, which grows well in arid regions of North and South America, Africa and Australia. It produces abundant shoots and fruit on stony soils where not a blade of grass is to be found. The tissues of this plant are capable of storing water for months. Livestock that feeds on it—and animals eat it willingly—therefore does not need water. The prospect of turning arid regions into grazing areas by planting opuntia is highly attractive. Furthermore, the cacti will help to anchor the sands and prevent damage to neighbouring districts. Researchers at many botanical gardens in the Republics of Central Asia and the Caucasus are now working on the acclimatisation and selection of opuntia. The Main Botanical Gardens of the Academy of Science of U.S.S.R. have also joined in the programme. Through selection they hope both to improve the existing species of opuntia and to breed hardier and higher-yielding varieties.

Whatever the job you do...

YOUR JOB
IS A JOB
DONE FOR INDIA

You, your life, the work you do—all are a part of an India striving today for efficiency, for strength. Whatever your job, let it be done efficiently so that hold-ups and slackness are obliterated. Victory is built of the sum total of millions of just such resolute efforts as yours.

THE UNITED COMMERCIAL BANK LIMITED

MR. G. D. BIRLA DEPLORES UNHEALTHY COMPETITION FOR DEPOSITS

"WE SHOULD AVOID ANY REGIMENTATION OF BANKING SYSTEM"

THE urgency of attracting new deposits into the banking sector was impressively highlighted by Mr. G. D. Birla, Chairman of the United Commercial Bank Limited, in his statement circulated to shareholders at the Twentieth Annual General Meeting of the Bank held at Calcutta on Friday, 24th May 1963. But Mr. Birla deplored unhealthy competition for deposits. He emphatically urged that any regimentation of the banking system should be avoided at all costs, though he agreed that there should be guidelines. One such guideline he suggested was the linking of banks' interest rates with the Bank rate as is the practice in the U.K. He was inclined to feel that, if, through the Inter-Bank Agreement on both deposit and advance rates, the banks succeeded in building up a structure of interest rates *vis-a-vis* Bank rate, then satisfactory margins for banks' earnings would be ensured, so that the banking sector could proceed in an orderly manner to consolidate its position and strengthen itself. In this connection, he asked the authorities to consider whether the yields on three months' Treasury Bills should not be brought closer to the Bank rate to enable banks to build up really liquid assets from which they were now deterred by the current very low rate of discount.

The following is the full text of Mr. Birla's speech:

GENTLEMEN,

The Directors' report and the accounts of the Bank for the year ended 31st December 1962 have been in your hands for some time and it is a matter for satisfaction that the progress of the Bank has been maintained in a somewhat difficult year for banking. There has been some delay in the presentation of the accounts, but this has been due to the understandable desire of the Board to finalise the balance-sheet only after the Super Profits Tax proposals adumbrated by the Finance Minister in his Budget speech had taken final form, so that any liability to the new tax to which the Bank might become subject could be squarely faced and taken into account.

You would have noticed from the report of the Directors that Mr. G. L. Bangur and Mr. M. L. Shah, who retire by rotation this year, are not seeking re-appointment as Directors by reason of their having attained the age of 68 years. Mr. Shah joined the Board in December 1946 and Mr. Bangur in January 1948. The Bank has benefited greatly by their long association and I wish to acknowledge on your behalf the valuable services rendered by them. Mr. Shrenik Kasturbhai was invited to join the Board as an additional Director during the year and you will be asked to confirm his appointment. I am confident that his participation as a Director will continue to be of great value to the Bank.

The Emergency

The Finance Minister's inclusion of such an innovation as the Super Profits Tax in an unprecedented Budget was, of course, directly in consequence of the dastardly Chinese aggression upon Indian soil. Faced with this challenge to the nation's integrity, the people have responded magnificently and, what is far more important, unitedly. Spontaneous contributions have been forthcoming both in the form of money and in greater productive effort. Banks for their part have had an even more responsible role in the functioning of the economy. On the one hand, in the front-line areas, there has been the need to finance stocks and distribution of essential consumer supplies. On the other hand, defence production has also necessitated suitable accommodation from the banking system. It is satisfactory to record that banks rose to the occasion and were not found wanting when essential financing endeavours were called for. Indeed, they took more care than ever before in the screening of requests for advances, for, in the conditions created by the emergency, they had to make doubly sure that their facilities were not abused for the speculative withholding of stocks.

Resuming the review of the Bank's affairs, I am happy to state that, during the year, the deposits of the Bank crossed the Rs. 100-crore mark and stood at Rs. 105.74 crores at the close of the year. This figure compares with Rs. 98.90 crores a year previously and thus showed a rise of Rs. 6.84 crores or 6.9 per cent.

Cash on hand and with banks and money at call and short notice were Rs. 11.24 crores and represented 10.6 per cent of deposits. As the proportion of the Bank's holding of Government securities to its deposits was already higher than the ratio for the banking system as a whole, the addition to the securities portfolio is only of the order of Rs. 1 crore, the rest of the accretion to our deposits being utilised for meeting the rising demand for credit from our industrial and commercial borrowers. Nevertheless, our quick assets consisting of cash on hand and with banks, money at call and short notice and unencumbered Government securities totalled Rs. 46.84 crores forming 44.3 per cent of deposits, the corresponding percentages for the two previous years being 43.31 and 43.80.

Profit and Loss Account

The net profit of the Bank has shown a slight rise from Rs. 72.61 lakhs to Rs. 73.33 lakhs, but, in judging this figure, it should be borne in mind that, apart from the normal increase in working expenses, the Bank had to bear an additional burden resulting from the implementation of the Desai Award, make provision for depreciation in the value of holdings of Government securities and pay the deposit insurance premium, all of which in the aggregate substantially eroded the increase in gross earnings during the year. We did not seek to offset these charges by reducing our liquidity ratio and increasing our advances; we preferred throughout the year to adhere to our conventional standards of a high degree of liquidity. As stated in the Directors' report, the Board have transferred out of the profit Rs. 28 lakhs to the reserve fund and Rs. 4 lakhs to the gratuity trust fund. After allocating Rs. 16.50 lakhs for bonus to the staff, the Directors have recommended the maintenance of the dividend of 12 per cent, *less* tax on the old shares and the payment of a *pro rata* dividend on the new shares. The Directors have contributed Rs. 2 lakhs to the National Defence Fund from the 1962 accounts and a further sum of Rs. 2 lakhs early in January 1963, thus making our total contribution stand at Rs. 4 lakhs.

Capital Deposits Ratio

In my statement last year, I had informed you that the Board had decided to increase the capital of the Bank by the issue of 200,000 ordinary shares at a premium of Rs. 25 per share and that an application had been made to the Controller of Capital Issues for sanction of the proposals. This sanction was obtained on 14th April 1962, but a condition of the approval was that the issue should be made only after 31st August 1962. When the issue was actually made, conditions in the capital market had changed, and the Chinese aggression aggravated the situation therein. Notwithstanding these adverse factors, applications were received for 160,000 shares which were allotted in full. The share premium of Rs. 40 lakhs realised, together with the year's allocation of Rs. 28 lakhs to the reserve fund, has brought the total of published reserves of the Bank to the impressive figure of Rs. 3.03 crores. The amount called-up on the new shares on capital account is Rs. 80 lakhs, the bulk of which has since been paid in, with the result that the capital base of Rs. 5.83 crores, comprising Rs. 2.80 crores in paid-up capital and Rs. 3.03 crores in reserves, gives an equity-deposits ratio of 5.5 per cent, against the target of 6 per cent. I think it will be generally conceded that our Bank for its part has spared no effort, whether by way of the quantum of transfer to the reserve fund or in the form of raising fresh capital through right issues, in striving to increase the ratio of equity plus reserves to deposits. Indeed, had the capital market been slightly better, even the target of 6 per cent would have been hit.

The Desai Award has imposed a heavy strain upon the banking system, inasmuch as the number of categories of banks and the classes of areas have been reduced from four to three (though with some measure of relief), the salary structure has been radically revised and new burdens like leave-fare concessions and accumulation of medical benefits, for all workmen, have been introduced.

Although banks in their need to add to the reserves, both inner and published, can ill afford such increases in operating costs, with a view to ensuring cordial relations and in the hope of this, in turn, effecting an improvement in labour productivity, the Award has been accepted in its entirety and implemented. Also, with the coming into being of the Deposit Insurance Corporation, the premium payable in this regard constitutes a new and not inconsiderable item of expenditure in the profit and loss account. The increase in costs on account of the premium is, however, of small consequence when set against the background of increased confidence in banks which was one of the factors which made it possible for bank deposits to rise more than sufficiently to cover the expansion in advances during 1962.

The deposit insurance scheme now covers six million accounts with balances not exceeding Rs. 1,500 each, which form 77.6 per cent of the total number of accounts in banks. The Reserve Bank is to be congratulated on the speedy implementation of this scheme; for, the restoration of public confidence in banking is now complete.

In passing, I may mention that mechanisation has often been suggested as a solution to counteract the ever-increasing establishment charges. If the present-day ultra-modern electronic accounting machines are to be used profitably, they need a vast volume of business transactions for processing and no branch of any bank in India has such a volume of business. The import policy of the Government of India at present is such that it does not permit import of even ordinary adding or calculating machines, not to speak of sophisticated accounting machines. The suggestion of mechanisation in banks in a big way is, therefore, at present impracticable and uneconomical.

Inter-Bank Agreement on Interest Rates

In the meantime, an important development during the year, which may go some little way to compensate for the increased expenditures to which I have just referred, was the adoption of the Inter-Bank Agreement on interest rates on advances. It was unfortunate that, almost immediately after the Agreement came into force, an automatic upward revision of the prescribed minimum took effect by reason of the raising of Bank rate, but the fact remains that we have now made a beginning towards evolving an orderly structure of interest rates for the banking system. For, despite minor and infrequent complications in its working, the Inter-Bank Agreement on deposit rates has been operating satisfactorily. The small and medium banks have been seen to benefit in a fairly big way from the differential they were permitted to offer. The subsidiaries of the State Bank of India who are signatories to the Inter-Bank Agreement have had a double advantage. They were naturally in a position to quote the enhanced rates on deposits allowable for the "small" and "medium" categories of banks. Apart from the differential in interest rates, the fact is that the subsidiaries have enjoyed the other differential stemming from their status as subsidiaries of the State Bank. In the same way, I regret to say that, recently, the State Bank of India increased its deposit rates to bring them on par with those in the Inter-Bank Agreement. Does the State Bank of India really need to offer the lure of interest rates on a par with the commercial banks, particularly with the privileged position which it enjoys? Surely, the State Bank of India already has an inherent edge over the commercial banks, even as the old Imperial Bank used to; and the Imperial Bank never felt obliged to be on par with the commercial bank. Does this departure from the old policy on the part of State Bank of India signify an all-out effort being launched to capture a greater share of deposits, which till now the other scheduled banks were able to get? Or are the authorities of the State Bank thinking on the same lines as the Governor of the Bank of England, who very recently, in the context of a somewhat slow growth of bank deposits in the U.K., questioned the wisdom of the rigidity of the British banks' structure of interest rates on deposits and suggested the advisability of competing in terms of flexible interest rates to attract deposits? The situation now, of course, is that the pace of growth of deposits of the commercial banks is in jeopardy.

The crux of our problem is the need to attract new deposits and potential bank customers as much from among those enjoying newly generated income in industrialised areas as from rural areas and to attract into the banking system a substantial part of the currency in circulation so that the cheque may replace currency as the normal mode of payment. Under present Indian conditions, there is much to be said in favour of the recent agreement on interest rates. Fortunately, so far, nothing as been done to precipitate a rate war, and the commercial banks have shown commendable restraint, but there is the distinct possibility of a new and unhealthy spiral of interest rate increases through competition for deposits.

Avoidance of Regimentation

It is, let me make it clear, unhealthy competition for deposits that I would deplore. On the other hand, over the range of banking facilities and services, banks should be entirely free to vie with one another in a healthy spirit of competition; and it is the satisfaction they proffer to constituents which will be a telling factor as far as winning of new customers and retaining of existing ones are concerned. Thus, we should, at all costs, avoid any regimentation of the banking system. There should be guidelines, naturally; and one such that I would suggest is the linking of banking interest rates with Bank rate, as is the practice in the United Kingdom. Whereas such a firm link is established through convention in that country, we have perforce to rely upon agreements. But if, through the Inter-Bank Agreements on both deposit and advance rates, we do succeed in building up a structure of interest rates *vis-a-vis* Bank rate, then we shall have ensured satisfactory margins for banks' earnings, such that we can proceed in an orderly manner to consolidate our position and strengthen ourselves. In this connection, it is a matter for consideration by the authorities whether the yields on three months' Treasury Bills should not be brought closer to the Bank rate to enable banks to build up really liquid assets from which they are now deterred by the current very low rate of discount.

Encouragement of Investment in Government Securities

Orderly interest rates obviously require that the anomaly of the three-tier Bank rate be set right. I am afraid that all the devices we have had woven in and around the Bank rate, possibly with a view to avoiding a straight increase in it, have served merely to add to the complexity of our interest rates. For example, at a time when the Bank rate, *de jure*, was 4 per cent and borrowings from the Reserve Bank and also inter-bank call money cost as much as 6 per cent maximum, the monetary authorities still presumably expected support for Government's borrowing programme offering a yield around Bank rate. This constitutes a real deterrent to investment in Government securities and has caused a considerable narrowing of the securities market. The fact is, that there is little or no justification for charging more than the Bank rate for borrowings against Government securities. Although the higher tiers of interest rates have only marginal and seasonal applicability, nevertheless the fact remains that there is reluctance to invest in Government loans which give a return of, say, 4 per cent, but borrowings against which could cost 6½ per cent. If for no other reason, the elimination of the penal tiers is essential for Government's borrowing programmes to succeed. A revised interest rate policy would encourage the banks to invest more in Government securities than the bare minimum which, from the autumn of 1964, they would have to, in terms of the new liquidity standards effective from that time.

No Direct Borrowings by State Governments

A wise decision in regard to the Governmental borrowings is that, this year and until the emergency is over, the State Governments will not come individually to borrow from the market and only the Central Government will resort to market borrowings for itself as well as for the State Governments. For the gilt-edged market is extremely narrow; and it has happened almost without exception that each year the State loans have been quoting at discounts even before their subscription lists had opened. Understandably, the States, anxious as they were to secure resources for putting their development plans through, used all the persuasion they were capable of; and many companies and individuals, who were not habitual investors in Government securities, were obliged, though reluctantly, to take up parcels of State loans—but their clear intention was to dispose of their holdings as swiftly as possible notwithstanding any loss they would suffer. In one sense, therefore, the very persuasive tactics of the States was responsible for the market for State loans being perennially in the doldrums, and this, in turn, has meant a loss for the banks year after year, since they, from a sense of duty, subscribe substantially to the State loans. With the State Governments desisting from direct borrowings, there is hope of a relatively stable market for Government loans and of firmer gilt-edged prices—and the realisation of this hope will be assisted by the penal tiers being done away with.

Super Profits Tax

The emergency has also been responsible for an unprecedented Budget. Our defence estimates have risen from Rs. 350 crores to over Rs. 850 crores. From 2½ per cent of our national product that we spent on defence formerly, its cost now goes up to nearly 6 per cent. The Finance Minister proposes to find the resources for this massive effort by a stiff dose of taxation and not by resorting to the printing press. He has shown conservatism in discharging his responsibilities in an orthodox manner. The tests of the soundness or otherwise of any taxation proposals are, however, firstly, whether they would help or retard development and progress of industry; and secondly, whether they would not usher in an era of diminishing returns. The Super Profits Tax, as originally proposed, did not stand up to these tests well. This tax is bad in principle in so far as it imposes a penalty on efficiency, rides rough-shod over the claims of industry for self-financed expansion and disregards the right of the shareholder to a reasonable dividend on his investment. It is, however, a matter of satisfaction that the rigours of this tax have been modified though not to the full extent the situation called for, and a concession has been made in favour of banks by exempting from liability to Super Profits Tax the transfers to the reserves made by them. Another implication of the Budget is that, with its vastly higher tax demand and the novel and comprehensive scheme of compulsory deposits, there may now be a powerful contractionist influence at work upon the deposits of the banking system. Partly, banks would be able to derive a benefit, in the sense that higher governmental disbursements would, after a time-lag, find themselves reappearing as deposits. But the time-lag may very well mean that they will again have to prepare themselves for considerable strain and pressure, particularly if industrial production for civilian needs and defence should both, as they should, show signs of increase.

To hark back to the Super Profits Tax, I may mention that repercussions will be felt by the banking system in other ways. First of all, there can be little doubt that the distributable surpluses of companies will be adversely affected. Dividends in many, if not all, cases will have to suffer cuts; a generality of dwindling dividends will depress stock exchange sentiment. Listlessness of the stock markets will cause capital to turn shy. But for none of these reasons can the growth of industrial production be allowed to suffer: whether from the standpoint of the emergency or of planning endeavours generally, it would be retrograde—and therefore unthinkable—even to consider the prospect of stagnation in the industrial sphere. Our entrepreneurs, with their sense of participating in the nation's progress, will continue to advance with their new schemes. But their reliance on borrowed as distinct from equity capital will increase in proportion.

Growth of Bank Deposits

A factor that in recent years has aggravated the problem of resources for the banking system deserves to be mentioned. For quite a number of years now, the Budget estimates of revenue have been wide of the actual receipts. There have recurrently been large revenue surpluses. The mopping up of moneys by Government through taxation has meant that to a corresponding extent the growth of the deposit resources of banks has been inhibited. Nor does Government spending immediately or even automatically get reflected in an augmentation of banks' deposits. This is because a considerable proportion of the planned disbursements of Government flows to the "unmonetised" sector and gets lost there; and though currency circulation expands, it is the parallel money market in cash—and not the organised money market constituted by the banking system—which benefits. Then, too, the continuing import surplus effects a drain on deposits; and with Government reducing the quantum of deficit financing, deposit growth has decelerated. Furthermore, the theory that loans create deposits has only very limited applicability in Indian conditions. In a highly industrialised country where the banking habit is widespread, one man's cash credit gets immediately transformed into another man's deposit. But, in India, the loans obtained from the banking system are not, upon their disbursement, certain automatically to find their way as deposits. The loans may be taken for financing import of capital goods; there is in this case quite clearly no question of new deposits being created. On the other hand, the industrial borrower may be making large payments towards construction or even as wages to factory labour; and the expenditure in these two categories are in the "cash" or parallel money market. By a slow and tortuous process, there is some element of seepage back to banking; if, as and when consumer goods are purchased, the trader—if he is large enough—and, in any event, the industry receives back the money involved in such transactions and banks it. But, broadly speaking, it will be seen that loans, in Indian money market conditions, cannot be expected, *per se*, to create new deposits. One more point in this context is, in the present state of the money market, the banks are already fully extended. Can they really be expected, for the sake of "creation" of new deposits, to increase further their already high credit ratio? Thus, the growth of deposits would appear to depend quite squarely on increased industrial production, on improvement in the balance of payment position, deficit spending by Government and upon a non-deflationary open market policy of the central banking institution.

Branch Expansion

While, therefore, for a number of reasons, the rate of growth of bank deposits has not, *vis-a-vis* the needs of the economy, been sufficiently high, the industrial and other demand for bank finance shows no signs of becoming moderated. Pending the spread of education, which is the crux of our economic problems, and the emergence of the banking habit among the rural population, all that the banks can do—and this at first sight appears a trite solution—is to formulate and execute more ambitious branch expansion programmes for the development of the banking habit. The Reserve Bank of India have, therefore, rightly asked the banks to formulate their programme for expansion of branches during the next two years, both in banked and unbanked areas. By taking banking to the countryside, they can hope that more of the economy will become "monetised" and "organised" and that, in due course, there will be a diminishing time-lag between Government expenditures and accretion of banks' deposits. Personal deposits constitute about 50 per cent of the total deposits of banks and it is this aspect of the economic structure of the country which deserves more attention on the part of banks. Banking should be taken to the doors of depositors so as to give personalised service and with this end in view a wide network of branches in urban areas should be built up. Opening of branches by banks cannot be governed by means of geographical or mathematical formulæ. What is important is to ensure that there would be competition among the banks for better service to depositors and the policy of branch expansion should be devised on this basis. Unbanked sectors in rural areas will have to be tapped by the banks but the inherent difficulties of these areas such as lack of transport, meagre postal facilities, inadequate security arrangements, and the reluctance on the part of staff to go there due to lack of educational and medical facilities are some of the dampers for such development which would require to be remedied with the co-operation of the Government. I am sure the banks are aware of their responsibility in the new context. Given a flexible policy, they will be able to fulfil this objective with missionary zeal.

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO. LTD.

EIGHTIETH ANNUAL GENERAL MEETING

MR. D. W. LAW SAYS EMERGENCY HAS RESULTED IN COST INCREASES

THE emergency and the subsequent legislation have resulted in increases in costs of many items, including the contribution to the Emergency Insurance Fund and additional excise and import duties, according to Mr. D. W. Law, Chairman of the Bangalore Woollen, Cotton and Silk Mills Company Ltd. Mr. Law made this observation in the course of his speech at the Company's Eighteith Annual General Meeting held at Bangalore on Tuesday, 28th May 1963. He hoped that the Tariff Commission, the report of which was shortly expected, would have taken special note of rising costs while making its recommendations for cotton piecegoods selling prices. Notwithstanding higher costs, the Chairman was confident of the Mills working to full capacity during the current year. He, however, felt that the Government would find it possible to issue import licences for raw materials for the manufacture of a reasonable quantity of *Cotswol* and *Angola*—the two popular products of the Company—for civilian consumption.

Reproduced below is the full text of Mr. Law's speech:

GENTLEMEN,

I have pleasure in welcoming you to the eightieth annual general meeting of the Bangalore Woollen, Cotton and Silk Mills Company, Ltd. The Directors' report and the accounts for the year 1962 having been in your hands for the prescribed period, I shall, with your permission, take them as read.

Trading Conditions and the Home Market

Throughout the country the demand for your Company's products was well maintained and once again gross sales exceeded Rs. 6 crores, an achievement that reflects the continuing desire for quality textiles. However, the accounts record increasing costs, and the results would not have shown an improvement but for the sale of the Hebbal plant.

In the cotton section, selling prices are controlled and thus profit margins gradually shrink as costs rise. The products of your union plant—*Cotswol* and *Angola*, now household names throughout India—were available in larger quantities and sales rose by 28 per cent compared with 1961, which proves the increasing popularity of these special cloths. As a result of the emergency, *Angola* is being manufactured in bulk for the Defence Services; thus supplies of *Cotswol* for the civilian market will be reduced in 1963.

"Varsity"

Varsity—a terylene woollen suiting—was introduced and, in spite of teething troubles, satisfactory sales were made. The output of this fabric was limited only by processing capacity which it is our intention to enlarge as supplies of terylene staple fibre become more readily available, for I am confident an excellent future awaits this new development.

In the silk section, looms worked to capacity and sales were 20 per cent higher than in 1961. While much progress remains to be made by the indigenous sericulture industry, it was possible by careful and discriminating selection to obtain from Mysore State adequate supplies to spun and filature silk, to augment the limited allocation of imported spun and filature silk granted to your Company.

Exports

Shipments of cotton textiles overseas were slightly less than in 1961 and were on the whole disappointing. There is no doubt that the closing of the Ceylon market during the latter part of the year affected our business.

To the extent the specified export target of 12½ per cent of sales value was not achieved, your Company was penalised, having to contribute Rs. 1.73 lakhs to the Indian Cotton Mills Federation. Overseas competition is becoming more severe each year and it will be difficult to maintain exports at present levels, especially if the Ceylon market continues as a minor importer instead of a substantial one as in the past. Efforts to increase sales in other markets will be intensified.

Healthier results were achieved by the union section as exports of *Cotswol* and *Angola* increased from Rs. 4 lakhs in 1961 to Rs. 7 lakhs. Soviet Russia placed repeat orders, and at last efforts to break into the Canadian and American markets are showing signs of success.

Incentive schemes proved of value, but I consider exporters of finished goods should be more liberally treated and should be able to obtain their dyestuff requirements at prices approximating to world rates, which after all are those enjoyed by their competitors overseas.

Cotton

In 1961-62, the Indian cotton crop did not come up to expectations and the carry-over was below that of the previous year. Measures were introduced to keep prices below ceiling and towards the end of the year, as a result of Government introducing a further supervisory scheme, the situation improved. I am happy to report the current crop is estimated to be 53½ lakh bales, which should suffice. If due importance is attached to measures designed to increase the cotton yield per acre, there is no reason why, in spite of the growing demand for Indian cotton by spinners and weavers, recurring shortages should not be avoided.

Improvements

For balancing purposes your Company has been permitted to install another 5,200 spindles in the cotton section and orders for the necessary spinning frames have been placed with indigenous manufacturers.

Two imported sizing machines were installed during the year. These machines have considerably improved the productivity and efficiency of the section concerned.

In replacement of the 61 woollen looms rendered inoperative by the sale of the Hebbal plant, an equivalent number of looms will be added to the union section; 27 looms have already been installed and a further 34 looms are expected during 1963.

Modernisation plans for the carding and spinning sections are in hand. New equipment is on order for the dyehouse so as to maintain the efficiency and modernity of this most important department.

For some years now difficulties in obtaining adequate supplies of coal have caused repeated inconvenience and the risk of production being interrupted. In 1961, it was decided to convert the mill boilers from coal to oil firing. By the end of 1962, this conversion was virtually completed and now all boilers are oil fired.

The Company's financial position continues to be excellent.

Dividend

A final dividend of Rs. 12 per share has been recommended, bringing the total ordinary dividend for the year to 18 per cent gross, which is the same as that declared for 1961. Your Board considers a repetition of the previous year's dividend is justified by the results.

Future Prospects

The emergency, and legislation which has followed, has resulted in cost increases in many items, including contribution to the Emergency Insurance Fund and additional excise and import duties. It is thus to be hoped that the Tariff Commission, whose report is shortly expected, will have taken special note of rising costs when making its recommendations for cotton piecegoods selling prices.

Nevertheless, I am confident your plant will work to capacity this year. It is hoped Government will find it possible to issue import licences to provide raw materials for the manufacture of a reasonable quantity of *Cotswol* and *Angola* for civilian consumption. These fabrics have now established themselves as necessities, especially during the cold weather months in Northern India.

Labour

I am happy to report cordial relations with labour have persisted, but, as in other mills, excessive absenteeism remains a problem; in fact, it is a grave social problem and it is retarding India's advance by losing to the country untold man-hours.

The Emergency

Much has already been said concerning the unprovoked attack on India's borders which took place towards the end of the year. The response of all sections of the community has been remarkable, and much admired by all free peoples. The Company's employees spontaneously donated Rs. 34,000, the Company contributed Rs. 1,00,000 and the dealers in Mysore State Rs. 20,000 to the Defence Fund.

Acknowledgment

In conclusion, I am sure you will wish to join me in expressing thanks to all the officers, staff and employees who have contributed to the satisfactory results. I would also like to express my appreciation to my colleagues on the Board for their support and co-operation throughout the year.

Note:—*This document does not purport to be a report of the proceedings at the Annual General Meeting.*

The cotton textile mills' production in April 1963 is provisionally placed at 72 million kilograms of cotton yarn and 368 million metres of cotton cloth. At the end of April 1963, the composite mills of the cotton textile industry held an estimated cloth stock of 152,000 metric bales as unsold and 134,000 metric bales as sold (unlifted).

PREFABRICATED TUBULAR ROOFING STRUCTURES

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions.

Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Single Span	Bay Lengths
SLS/20	20 ft.	10 ft.
SLS/30	30 ft.	10 ft. and 13 ft. 4 in.
SLS/44	44 ft.	10 ft. 1/8 in. and 13 ft. 4.1/8in.

DUNLOP RUBBER COMPANY LIMITED

HIGHER SALES TURNOVER

CHAIRMAN, SIR G. EDWARD BEHARRELL'S SPEECH AT ANNUAL MEETING

THE Sixty-fourth Annual General Meeting of the Dunlop Rubber Company Ltd., was held on 20th May at London.

Sir G. Edward Beharrell, Chairman, in the course of his speech, said:

For the year under review we were able to achieve a higher sales turnover than in 1961, and if account is taken of selling price reductions, we estimate that the actual volume of sales was some 3 per cent higher. The prices of some of our principal raw materials, particularly rubber—both natural and synthetic—were lower and there were worthwhile savings from increased efficiency and the higher volume. In the main, however, these benefits were more than offset by lower selling prices and increased labour and other costs.

New Projects

I would like to say a word about new projects in which we have made substantial investments but which had not reached the profit-earning stage during the year. I refer particularly to our road vehicle disc brake activities, the manufacture of suspensions, our new rubber estates in Nigeria and our recently opened tyre manufacturing plants in Nigeria and Malaya. Together these should make a significant contribution to the Group profit in the future.

Dividend

The final dividend which the Directors are recommending at 1s. 1d. per 10s. unit, is the same rate as the final dividend for the previous year and, gives the same total distribution.

Decentralisation

For many years we were a centralised Company. By that I mean that, although the structure of the Company had its present shape with well-defined product groups, many of the more important decisions in our day-to-day operations in the United Kingdom were taken centrally at head office. This form of organisation is not without its advantages, and it served the Company well when it was smaller.

The change that has been taking place steadily over the past decade to allow for the problems of greater size is a move to decentralisation. General Managers have been placed in charge of divisions, with a large measure of autonomy, and required to make a satisfactory return on the capital under their control.

We expect decentralisation to provide an increasingly vigorous form of organisation for many years to come. It can give us the best of both worlds; the strength and stability of the group combined with the flexibility and initiative of smaller units.

Marketing

We manufacture goods to last and because of this there is a natural tendency to be concerned with their technology, to become "production oriented" with special emphasis for quality and safety.

The problem arises when all of us, in our role of customer, change, and in recent years we have shown a great unwillingness to stand still. Not only has the community's standard of living grown, but tastes have been altering, and so have the ways in which purchases are made and the channels through which trade flows.

As you would expect, changes have been taking place in tyre distribution. Its traditional structure has been altering with new outlets like tyre shops and petrol stations taking an increasing interest in the market.

At the same time relations between distributors and manufacturers are getting closer, and there is a trend towards greater brand selectivity with individual distributors concentrating on a narrower range of makes than in the past.

Selling

These transitions are not confined to the tyre industry. Parallel changes are taking place in most of the trades in which we find ourselves. And it has become increasingly necessary to keep up with and anticipate our customers' new tastes and habits. In this we have had some success.

Mass production demands mass selling, just as mass selling requires mass production. But selling almost for selling's sake can bring its own dangers. It can draw attention away from the considerable costs of selling. The laws of productivity and profitability must apply to it as much as to any other part of the business. Indeed, because of the complex nature of many of our products a balance has to be struck between what is technically possible and what the customer wants.

It is readjustment that has been the theme of my address today. Our readjustment has been taking place quietly, with reasonable speed, and with real concern for personal needs and problems. In the process we have taken on a slightly new form with somewhat different attitudes. We accept that, so great is the rapidity of change, this form and these attitudes will have to change again. But the process will be a continuing one. To keep up with it we are maintaining vigorous and enquiring minds, the real safeguard for the future of the business.

The Present Year

You will now wish me to say something of our trading experience so far this year. Naturally we did not escape the repercussions of the very severe winter in this country and on the Continent, and for the first two months our profits were not quite up to the level of the previous year. I am glad to say, however, that from March onwards there has been a considerable improvement and the ground lost has been more than made good. The provisional profit figures to the end of April are higher than in the same period of 1962 and current orders are encouraging; but of course much depends on holding costs.

The report was adopted.

THE STERLING GENERAL INSURANCE COMPANY LIMITED

EXCELLENT RESULTS — REMARKABLE PROGRESS

INCREASE IN PREMIUM, PROFIT AND RESERVES

Extract from the Chairman's Speech and Directors' Report placed before the Annual General Meeting of the Company held in New Delhi on May 25, 1963.

1962 has been a good year for the Company, in fact the best year for some time. The business has shown an all-round progress, and the steps taken during the last few years to improve the organization and internal controls, have enabled the Company to further consolidate its position and show very satisfactory results.

INCREASE IN PREMIUM—REDUCTION IN CLAIMS

Gross premium has increased from Rs. 101.31 lacs in 1961 to Rs. 107.69 lacs in 1962 while net premium increased from Rs. 30.54 lacs to Rs. 31.83 lacs. Simultaneously, there has been a sharp decline in claims from Rs. 24.23 lacs in 1961 to Rs. 18.48 lacs in 1962.

REDUCTION IN MANAGEMENT EXPENSES

Despite the increase in premium, commission and management expenses have also been reduced, and amounted to Rs. 10.13 lacs during the year, as against Rs. 11.72 lacs in 1961.

INCREASE IN RESERVES

Underwriting Reserves including additional reserves have increased from Rs. 15.86 lacs in 1961 to Rs. 17.22 lacs in 1962, and a General Reserve has been started with a transfer of Rs. 75,000 from the Profit and Loss Account. The percentage of capital and reserves to net premium has increased successively from 71.3% in 1958 to 102.4% in 1961, and to 104.9% in 1962.

INCREASE IN PROFIT AND DIVIDEND

Profit subject to tax amounted to Rs. 4,04,662 (Rs. 1,34,486 in 1961) and after providing for tax and making appropriations for General Reserve, Gratuity Fund, etc., the Company has declared a dividend of 10% subject to tax on Preference capital and 6% subject to tax on Equity capital (5% in 1961).

BUCKINGHAM AND CARNATIC COMPANY LTD.

CHAIRMAN, MR. D. W. LAW'S SPEECH

STRESS ON MODERNISATION FOR EXPORTS

MR. D. W. Law, Chairman of the Buckingham and Carnatic Company Ltd., stressed the need for modernisation in the textile industry in order to increase exports, when he addressed shareholders at their Forty-second Annual General Meeting held at Madras on Monday, 27th May 1963. Mr. Law anticipated that, in normal conditions, the size of the export market would continue to shrink. If, therefore, India was to retain its position as an exporter of cotton piecegoods, it was, he said, vitally necessary for the industry to lower its costs and improve the quality of its products. To achieve those objectives, the industry must be equipped, Mr. Law added, with modern machinery and be encouraged to increase the productivity of its labour.

The following is the full text of Mr. Law's speech:

GENTLEMEN,

It is my pleasure to welcome you to the forty-second annual general meeting of the Buckingham and Carnatic Company Ltd. Since you have had an opportunity to study the Directors' report and the accounts for the year ended 31st December 1962, I shall, with your permission, take them as read.

Trading conditions were generally satisfactory and gross sales were again a record. This is an encouraging indication that production continues at a high level and that the quality of your Company's products attracts a full measure of consumer demand. On the other hand, the accounts before you show that the proceeds of an increased turnover have been entirely absorbed by cost increases and it must be remembered that the selling prices of your Company's products for the home market are controlled. The margins your Company can earn are, therefore, under greater pressure from rising costs than would be the case in a free market. This factor, coupled with the further costs arising from emergency legislation, will inevitably affect the results of the future.

Exports

Your Company has continued to be a substantial earner of foreign exchange, but there was increased competition from other exporting countries for a gradually shrinking world market. As a result export sales fell to Rs. 1.64 crore, which is Rs. 38 lakhs less than in 1961. A severe blow, not only to your Company's export trade but also to that of many other Indian mills, was the almost complete closure of the Ceylon market during the last five months of 1962. A resumption of exports to Ceylon on the scale previously established depends upon factors beyond our control and particularly upon the acute shortage of foreign exchange being experienced by Ceylon at the present time. Demand from Malaya and Burma has also fallen off and every effort is being made to obtain orders from these markets. I am glad to report, however, that exports to the United Kingdom increased to Rs. 24.78 lakhs, as against Rs. 18.00 lakhs in 1961.

Export incentive schemes have proved useful, but however desirable it is to create a reliable indigenous textile machinery manufacturing industry, it is still more important that sufficient quantities of the most modern machines from overseas are available for import. I therefore doubt the wisdom of Government's decision to permit only 50 per cent of the machinery incentives earned by exporting mills to be used for importing plant and equipment.

While the export incentive schemes applicable to cotton, dyestuffs and chemicals operate successfully, greater freedom should be given to mills, which export finished goods, by permitting them to use a greater proportion of their incentive licences for their own dyestuff and chemical requirements; otherwise, although the indigenous dyestuff industry provides your Company with a considerable part of its requirements, the absence of imports of equivalent products will result in lack of competition, which in turn will result, and has already resulted, in excessively high prices being charged by the indigenous industry. The growing necessity to export finished, as against grey goods, makes it increasingly essential that manufacturers are able to obtain dyestuffs and chemicals at prices comparable with world price levels.

With regard to the future of exports, I expect that in normal conditions the size of the export market will continue to shrink. If, therefore, India is to retain her position as an exporter of cotton piecegoods, it is vitally necessary for the industry to lower its costs and improve the quality of its products. To achieve these objectives the industry must be equipped with modern machinery and be encouraged to increase the productivity of its labour force. Only low cost and high quality goods will sustain the interest of overseas buyers. During 1962 the ceiling prices of Indian cotton fixed by Government were raised almost to world levels for equivalent varieties and the industry is therefore losing a valuable differential in support of the export drive.

Cotton

The 1961-62 Indian cotton crop was disappointing and the carryover at the end of August was about 14½ lakh bales, which is 4 lakh bales less than in 1961. In spite of the introduction of a compulsory survey system by Government with the object of keeping prices below ceiling, mills had difficulty in purchasing cotton at reasonable levels. However, this situation changed for the better in September when Government introduced a further supervisory scheme to improve cotton marketing.

There are encouraging reports of the current crop which is estimated at 53½ lakh bales. It is therefore to be hoped that the crisis conditions which have often occurred in the past will not recur this year, although, as against this guarded optimism, the offtake by Indian mills has grown in proportion to the installation of new spindles.

A steady and adequate home crop is of first importance to the industry and efforts to increase the yield per acre should be vigorously maintained. Yields per acre today are still far below those of other major cotton growing countries and improvement can only be achieved by intensive and scientific farming and the proper use of fertilisers. There are encouraging signs that the authorities are aware of this urgent need.

You will observe a substantial decrease, as compared with 1961, in the Company's borrowing position on loan and overdraft account, which is mainly due to stocks of cotton and finished goods being lower at balance-sheet date than in 1961. The financial position of your Company continues to be strong and the modernisation and rehabilitation of the mills proceeds as planned, being only limited, as far as imported equipment is concerned, by the extent to which machinery incentive licences can be earned.

As mentioned in the Directors' report, Rs. 5 lakhs has been allotted to the debenture redemption fund, bringing the total amount now set aside to Rs. 55.43 lakhs. With nine years remaining before the final redemption date, the debenture redemption fund is being built up as planned. During the year, the balance of the fund account was largely utilised in the purchase and cancellation of debenture scrip.

Labour

Proposals for the rationalisation of the spinning department were negotiated during the year with labour representatives and I am glad to report that early in 1963 a settlement was signed, whereby labour productivity was improved and the savings achieved shared with the workpeople. Negotiations for rationalisation in other departments are in progress.

There has been a disturbing tendency in recent months for minor unions to attempt to upset the good relations which exist between the Company and its recognised unions, by raising demands on matters which either have been settled or are under negotiation with a recognised union. The activities of these small groups can only be classed as irresponsible and constituting a danger to production and efficiency, as well as being contrary to the Code of Discipline in Industry and the Industrial Truce Resolution. This regrettable state of affairs is not confined to your Company alone but exists throughout industry and I hope Government will take cognisance of this threat to industrial peace and curtail the activities of these elements.

The problem of absenteeism remains with us and I regret to report no improvement in this respect in your mills. Although certain departments carry generous leave reserves, these are often exceeded and there was an appreciable loss of production due to this cause.

The manner in which the Employees' State Insurance Scheme is administered has much to do with excessive absenteeism because, in spite of representations to the authorities, workers are still granted long medical leave for minor ailments and even obtain medical leave on frivolous grounds. It does not seem to be realised that the granting of excessive medical leave increases the cost of everything the public buys. Absence from work disrupts production and increases industrial overheads.

Your Directors have recommended a final dividend of Rs. 12 per share, which brings the total ordinary dividend for the year to 18 per cent gross and maintains the increased dividend of 1961. Your Directors consider they are justified in repeating an 18 per cent dividend as the Company has had another successful year in which shareholders should participate to the extent declared for 1961.

Future Prospects

1963 is expected to be a year of substantial cost increases. Not only do prices of consumable stores and materials continue to rise but the Company will be obliged to meet certain specific increases as a result of the emergency legislation. The first of these is in respect of the Emergency Insurance Fund and will cost over Rs. 8 lakhs per annum. Secondly, the import duties levied on various commodities have been increased and this means a further burden of over Rs. 7 lakhs in a full year. Thirdly, the increase in excise duties will cost your Company an additional Rs. 9 lakhs.

The Tariff Commission appointed by Government to investigate, among other things, the industry's selling prices, is expected to issue its report shortly. It is to be hoped the Commission will have given due weight to rising costs when making its recommendations for selling prices.

In October 1962, this great and peace-loving country was the victim of an unprovoked assault on its northern and north-eastern borders. The immediate and sustained response of the Indian people to this attack has evoked the wide admiration and the cordial support of all free peoples. Requests for donations in kind and in money were made to your Board and to your Company's workpeople. Appeals to industrial workers not to raise disputes were heeded. I am proud to report that the workpeople of the Buckingham and Carnatic Mills, on their own initiative, contributed to the Defence Fund the sum of Rs. 1,04,000. Your Company gave Rs. 1,50,000 and collected donations from its distributors amounting to Rs. 2,70,000.

As a result of the emergency, a larger portion than usual of your Company's production is being supplied to the Defence Forces and, with other mills doing likewise, the quantum of cloth available in the market will not be as large as in previous years. Caution and prudence in consumer purchasing and in the use of cotton cloth during the emergency are necessary, if all are to obtain their fair share at reasonable prices. It is to be hoped the great efforts now being made in all industries and in all parts of the country to build up the strength of the Defence Forces will shortly reap their reward, and that India will soon be able once more to devote her entire energies to creating wealth for the benefit of her people, thus providing the tools for the further expansion of her industrial structure.

The 1962 results would have been impossible of achievement without the continued loyalty and efforts of the officers and staff of your Company who, in spite of new problems and difficulties, have continued to serve with that efficiency and steadfastness which we have come to expect. I am confident you will wish to join me in expressing our thanks to them for the services they have rendered during the year.

In conclusion, I would like to record my thanks to my colleagues on the Board for their loyal support and co-operation.

Note:—*This document does not purport to be a report of the proceedings at the Annual General Meeting.*

BRAITHWAITE AND COMPANY (INDIA) LIMITED

STATEMENT BY MR. J. V. JARDINE PATERSON

PROCEDURAL DELAYS STALL EXPANSION PLANS

A GLARING instance of official procedural delays blocking expansion plans has been highlighted by Mr. J. V. Jardine Paterson in the course of his statement circulated among the shareholders of Braithwaite and Company (India) Ltd., in connection with the Thirty-third Annual General Meeting of the Company to be held at Calcutta on 20th June 1963. The expansion plans of the Company's Angus Works have been delayed because of the protracted procedural formalities involved in getting the import licences for the requisite machine tools and equipment. According to Mr. Paterson, the final sanction of foreign exchange for imports was not given until March this year, "since when there has continued to be an unfortunate delay in the issuing of the required licences."

The full text of Mr. Paterson's statement is reproduced below:

The profit for the year, after providing Rs. 9,96,276 for depreciation and transferring Rs. 4,60,976 to Development Rebate Reserve, amounted to Rs. 1,06,44,579. This is indeed a satisfactory increase over preceding years and again reflects the benefit to be obtained from the policy which the Company has pursued of ploughing back money for the continual modernisation and expansion of production facilities. It is unfortunate that this excellent result has been offset to a large extent by the Super Profits Tax introduced in 1963, and it will be noted that in addition to taxation of Rs. 58,42,526, the Company will be liable for Super Profits Tax of Rs. 16,75,000.

As explained in the Chairman's Statement last year, it is necessary to build up again the Company's reserves to provide for the amortisation of the foreign exchange loans which are being finalised and for the rupee requirements of the expansion plan. It is in these circumstances, therefore, and taking into account the former provision no longer required and the changed accounting procedure with regard to the provision for gratuities, that the Directors have recommended the transfer to General Reserve of Rs. 28,80,210 leaving available for payment of dividends the sum of Rs. 14,90,000. The amount available for payment of the Ordinary dividend is approximately the same as last year and the first interim dividend on the Redeemable Preference shares amounting to Rs. 90,000 has already been paid. It is the Directors' intention that, in accordance with normal practice, the Preference dividend should be payable half-yearly at the end of June and December.

Production and Development

Clive Works: In spite of the shortages referred to in the Directors' Report, total output was 27,479 tons, which was some 16 per cent above the best previously achieved in 1957. It will be remembered that the available capacity in the Structural Shop was not fully booked in 1961 and it is to be regretted that, in spite of an increase in output of nearly 50 per cent in 1962, there was still idle capacity. This situation has, however, been general throughout the industry and has been the subject of many reports in the Press and elsewhere. With the further demands that are being made as a result of the national emergency and the determination that the industrial development of the country should not be slowed down, it is now more than ever essential that Government should establish an efficient organisation to lay down priorities for orders that are placed and that all the necessary raw materials should be made available as soon as these priorities have been decided.

Structural Shop

Notable contracts that have been booked during the year for the Structural Shop either directly or as a constituent of the Braithwaite, Burn and Jessop Construction Company Limited are:

1,800 tons for extensions to the Indian Tube Company's plant at Jamshedpur.

2,000 tons for the double track main line girders for the Yamuna Bridge, New Delhi.

7,000 tons for the Alloy Steel plant at Durgapur.

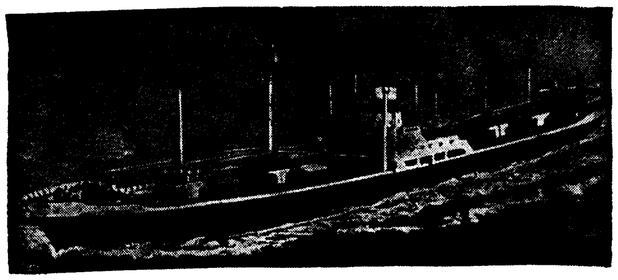
Wagon building capacity is fully booked for a further eighteen months.

Angus Works: Reference is made in the Directors' report to the delay experienced in receiving from Government the import licences required for the machine tools and equipment necessary for the Company's expansion. It will be remembered that the chairman referred last year to the application which had been made for these licences and expressed the hope that they would be forthcoming shortly after our foreign exchange requirements had been provided for. Owing to procedural delays, the final sanction of the Reserve Bank of India was not received until March this year since when there has continued to be an unfortunate delay in issuing of the required licences.

Progress in the Works has been greatly restricted by the limitations of the foundry caused by the shortage of pig iron and coke. There was a virtual shutdown in that department for three months on this account and, throughout the year, the quality of coke received has resulted in considerable increases in costs. Some improvement is hoped for, following allocations under priority for orders linked to defence requirements. The housing development and expansion of essential services that has been undertaken is handicapped by the shortage of cement and steel and this position is unlikely to improve.

Despite difficulties, however, satisfactory progress is being made and it is hoped that turnover will show an increase of at least 50 per cent during the current year.

The Company's exports continue to be limited to pressed steel tanks and we are grateful to our Technical Consultants, Braithwaite and Co. Engineers Limited, who have continued to co-operate closely with us in the development of the South-East Asian markets. I would again suggest that there is scope for the expansion of exports of other engineering products, if the raw materials required by the industry are made available. This obviously can only be achieved through imports, but it could be expected to result in a net gain in foreign exchange, if not in a profit for the exporting company.



Labour

Relations with labour have continued to be good and the workers have been able to earn high rates of pay through production bonus. The quantum of annual bonus to be paid was settled under a bipartite agreement and the Company has made every effort to ensure implementation of the Code of Discipline. It is to be hoped that no disputes will disrupt these cordial relations which must be recognised as being the basis for the continued prosperity of the Company and all its employees.

Management and Directors

I would like again to pay tribute to our Managing Director, Mr. J. E. Bingham, who has worked tirelessly throughout the year to further the interests of the Company. The results of his work are to be seen in the increasing prosperity of the Company and to him and his senior executives, Messrs. Sawtell, Tayal and Morley must go the gratitude of all shareholders for what has been achieved. Our thanks are also due to the other executives and members of the staff of the Company, who have all played their part in producing the satisfactory results which are now before you.

Finally, I have to record the retirement from India of Sir John Brown, who for the last five years has been Chairman of the Company. We are most grateful to him for his invaluable work during those years in guiding the development and expansion of the Company. We were particularly fortunate to have his specialised knowledge at our disposal at a time when the lease of the Angus Works was finalised, the Company's capital was reorganised and very large foreign exchange loans were negotiated. I am pleased to be able to tell you that he will be visiting India from time to time in the years ahead and that his valuable experience and advice will be available in the interests of the further development of the Company.

JUST OUT

ALPHABETICAL LIST OF JOINT STOCK COMPANIES AT WORK AS ON 31st MARCH 1962

An alphabetical list of joint stock companies at work as on 31st March, 1959 (uptodated to 31st March, 1962 by a separate supplement) has just been published by the Department of Company Law Administration. Only a limited number of copies are available. Intending buyers may contact the Registrar of Companies, Bombay, Calcutta or Madras or the Research and Statistics Division of the Department of Company Law Administration, New Delhi, with a crossed cheque for Rs. 40.

FOOD SITUATION IN ASIA AND FAR EAST

NEED FOR FOURFOLD EXPANSION OF OUTPUT OVER FORTY YEARS

THE World Food Congress, which will be held in Washington from 4th to 18th June 1963, will be a unique international gathering. The major aim of the Congress is to broaden and make more effective the international efforts to lessen hunger and malnutrition in many parts of the world. The Congress, sponsored by the U.N. Food and Agriculture Organisation, is looked upon as "the major event and mid-point" of the F.A.O.'s five-year Freedom From Hunger Campaign, which was launched in 1960. It also marks the 20th anniversary of the founding of the F.A.O. at Hot Springs, Virginia, in 1943. Over 100 nations will be represented at the Congress by about 1,200 delegates. The Indian delegation is being led by Mr. S. K. Patil, Union Minister for Food and Agriculture. Among those who will address the Congress are Mr. V. T. Krishnamachari, former Deputy Chairman of the Planning Commission of India, Mr. Arnold Toynbee, the noted British historian, Mr. K. Gunnar Myrdal, Swedish economist, and Mr. Orville L. Freeman, the U.S. Secretary of Agriculture. It is expected that the Congress will turn out to be an organised effort to pool existing world experience in the fight against hunger and malnutrition. It will examine, in particular, ways in which food production and use can be improved in developing countries and can aid the development of their economies.

In order to serve as background materials for the deliberations of the Conference, the F.A.O. Secretariat has brought out a series of research documents highlighting the problems of, and prospects for, world agriculture. Two of these documents, the *Third World Food Survey* and the *Possibilities of Increasing World Food Production* deserve special mention. The first publication concentrates on a study of the existing situation and future pattern of world demand for food, while the second seeks to assess the physical resources potential in the world for expanding the food output. The *World Food Survey* provides a rough estimate of the world's requirements of food supplies until the end of this century. It is based on food balance sheets of 83 countries covering about 95 per cent of the world's population. These include provisional food balance sheets for Soviet Russia and Mainland China, and many other countries for which information so far has been scanty or for which estimates are based solely on intelligent guesses. The *Survey* confirms the findings of an earlier pioneering statistical study made by an Indian expert working with the F.A.O. (Dr. P. V. Sukhatme) that about 10 to 15 per cent of the world's population is undernourished (or hungry) and that between one-third and one-half suffer from hunger or malnutrition or both.

World Population

If the world population were to grow according to the United Nations projections under the "medium" assumption (and recent indications are that the population growth is likely to be larger), then by 1975 world food supplies, according to the *Survey*, would need to be increased by over 35 per cent merely to sustain the world's population at its present "unsatisfactory" level of diet. If, in addition, a reasonable improvement in the level of nutrition is to be brought about, world food supplies would have to be increased by over 50 per cent and, in particular, food supplies of animal products would have to be increased by some 60 per cent. In the less-developed areas, where the population increase will be faster, the corresponding figures are much higher. In these areas, total food supplies will have to be increased by about 80 per cent and those of animal foods by over 120 per cent.

In order to achieve these targets by 1975, the less-developed countries would need to aim at an annual rate of increase in per caput food supplies approaching 2 per cent. Since the income elasticity of the demand for food in these countries may be expected to be of the order of .7, this in effect implies a rate of growth in per caput income approaching 3 per cent. Should the population grow at a rate of about 2.0 per cent suggested by the United Nations projections, the aim should be to increase the aggregate national income by some 5 per cent per annum, which is compatible with the target for the decade 1960-70 in the plans for activating economic development through the joint efforts of the United Nations and its specialised agencies.

The targets for 1975 are only a first step in improving the level of food consumption and nutrition. The *Survey* also looks further ahead and concludes that should the population grow according to the United Nations "medium" projection, the world's total food supply would have to be trebled by the year 2,000 in order to provide a reasonably adequate level of nutrition. For the less-developed areas, total food supplies would need to be quadrupled and the supplies of animal products should be raised to six times the present volume.

Regional Analysis

The regional analysis of food production brings into sharp relief the fact that, in Asia and the Far East, the food situation is most acute. More than half of the world's population, says the *Survey*, lives in the Far East on only one-quarter of the world's food supply. This is made up of one-fifth of the world's animal and fish protein and less than one-half of food crops from the land. On the other hand, 29 per cent of the world's population living in Europe, Oceania and North America has available to it 57 per cent of the total world food supplies, 69 per cent of animal and fish protein food and 38 per cent of land food crops.

The supply and demand position of food in the Far East is likely to worsen further, on account of the steady increase in population. The population in the Far East is expected to be doubled by the end of the present century. The *Survey* shows that as much as a four-fold increase in food production in this region will be necessary by that time, if the people of this region are to be assured of an adequate diet. The increase in output needed in Africa, on the other hand, is between two and three times the present level by the end of this century, three-fold in the Near East and between three and four times in Latin America.

Resource Potential

Although production has to be raised considerably in all the regions, there is sufficient resource potential in most regions, barring perhaps the Far East, to accomplish this objective. Referring to the situation in the Far East, the document on *Possibilities of Increasing World Food Production* says that the need for a more than four-fold increase in food production in the Far East "definitely raises the question of the adequacy of the basic physical resources," unlike the other regions. It is against this background that Mr. B. R. Sen, Director General of the F.A.O., pointed out the other day that the balance between supply of, and demand for, food in the Far East "could more properly be described as precarious than delicate." This is a region in which, says the F.A.O. study it is becoming a matter of some urgency to study *in fondo* the future potentials for food production in relation to needs and to determine the patterns of land and water utilisation that would enable the maximum benefit to be derived from the scarce resources. The chances of bringing about a better balance between needs and production are better, if Governments go about their task of planning agricultural development, armed with a clear and realistic knowledge of the feasible goals. In this connection, reference has been made to a detailed study of the Lower-Ganges Brahmaputra basin conducted a few years back by the F.A.O' experts. The conclusion of the study was that production could be increased about four-fold in this particular area. This is, however, an area where unutilised potential is probably substantially above average for the region as whole, because a large part of the area can be brought under perennial irrigation, and present crop and livestock yields are low even by the standards of Southern Asia.

There is thus scope for increasing food production in India and other countries of Asia and the Far East too, if the available land and water resources are put to better use. The same holds true for the other regions as well. The F.A.O. publication highlights, in this connection, the possibility of increasing food output through improving productivity, besides through extension of area which is found feasible in the equatorial regions of Africa, South-East Asia and Latin America. Referring to higher crop yields, the study reveals that "production of cereals in underdeveloped regions could be doubled and, perhaps tripled, on the present area." Alternatively, present production could be obtained from one-half or one-third of the present area. This could happen, if farmers were in a position to grow improved varieties adapted to their conditions, took advantage of modern knowledge regarding soil fertility and followed generally good cultivation practices. "In fact," says the study, "the yield achieved by the average farmer is usually well below what is possible by using the best practices, even in a country where farmers are well-educated." For instance in Iowa (United States), the average maize yield in a good year reached 38 quintals per hectare, as against 82 quintals in the special variety tests in the same State. Average potato yields in Maina had reached 320 quintals per hectare, as compared with 620 in variety tests. Only a detailed study, requiring an enormous amount of work, could show with some accuracy how greatly production could be increased by more intensive use of fertilisers, manures and legumes. "It, however, would be a conservative estimate... that production could be increased by at least 50 per cent, and in many parts of the world doubled" simply through better soil fertility practices. According to the study, vast opportunities existed for wheat, rice, barley and hybrid maize. Even in the developing countries, high-yielding varieties had been evolved in laboratories, but it is regretted that they were not in wide use.

Livestock

Analysing the possibilities of increasing livestock products, the study says "resources and technical basis exist" for a level of production of livestock products of "certainly not less than five times the present world output." This estimate takes into account potentially available feed for bigger livestock populations and the scope for increased production per animal. It assumes that farmers in the developing countries become as efficient as farmers in the better-off countries, although not necessarily those in the best countries. The study points out that heavy investment in research, extension and capital expenditures would be required. A separate study alone could discuss at what rate this five-fold increase could be achieved. It would depend upon investments, training of personnel, research and overcoming adverse institutional conditions.

A lot more milk and beef could be obtained from the present number of cattle in the more-advanced countries. "The efficiency of production for Europe as a whole is not high when one considers the possibilities of prevention of losses, correct feeding, proper managements and breeding." Most of the developing countries could reach European standards of productivity in respect of cattle. As compared with Europe, the meat and milk yields in the Far East were only one-tenth, in the Near East one-eighth, and in Latin America one-fourth. The most remarkable proof of this came from the achievements of Israel, where local breeds originally gave low yields. Through a planned programme of selected breeding, feeding and management, Israel now topped the world in milk yields.

The prescriptions laid down in these publications, as conceded by the F.A.O. Secretariat itself, are in the nature of broad indications. These need to be supplemented by further field surveys and experimental work, before they can be set into a pattern for evolving an overall strategy for a world-wide policy of agricultural development. The need for pursuing this matter in a vigorous way cannot be over-emphasised so far as the developing countries are concerned. It is only through mobilisation and better utilisation of domestic resources that the food problem can be solved in these countries. The F.A.O. Secretariat is certainly on strong grounds when it rules out imports of food from wealthier countries to the less-developed countries as an alternative, as they can never provide more than a small part of such needs.

WORLI DAIRY PROJECT

The U.N.I.C.E.F.-aided Rs. 3-crore Worli Dairy Project of the Government of Maharashtra was formally inaugurated on 25th May by Mrs. Vijayalakshmi Pandit, the State Governor. The dairy, claimed to be one of the largest milk treatment and bottling plants in the world, is situated on a 20-acre plot of land at Worli sea face in Bombay City. It may be recalled here that the first phase of the project was commissioned in November 1961. With its second phase just commissioned, the entire plant has now an hourly capacity to receive and wash 1,500 cans of milk in addition to reception of tanker milk, to pasteurise 40,000 litres of milk, to wash and fill 1,500 cans of outgoing bulk milk and to wash and fill 96,000 bottles. The dairy has also been equipped with a toned milk making plant, with a capacity to dissolve two tons of milk powder in 30,000 litres of water per hour. A storage capacity of 240,000 litres of milk in tanks and 290,000 litres in bottles and cans in the cold storage has been provided. In the near future, the making of by-products will also be taken up by the project.

DISTRIBUTIVE JUSTICE AND INCREASE IN PRODUCTION

I.N.T.U.C. PRESIDENT HARPS ON THE FORMER AND IGNORES THE LATTER

ONE would expect the speech of the President of the Indian National Trade Union Congress (I.N.T.U.C.) at its annual session to contain not merely an objective analysis of labour problems and the deficiencies of policy but also constructive suggestions for tackling them. Such an expectation is quite natural, considering that the I.N.T.U.C. is the largest and most representative trade union organisation in the country. The annual session is surely not a platform for making political speeches but an august forum for a searching study of the policies and actions of the Government, employers and trade unions as they affect workers and for projecting the reactions and views of organised labour on matters of national import. And the presidential address is expected to set the tone and direction of the discussions, highlight the urgent problems and indicate their probable solutions.

Viewed from this standpoint, the presidential speech of Mrs. Maitreyee Bose, at this year's annual session of the I.N.T.U.C., held at Jaipur on 25th and 26th May, is a great disappointment. For it neither gives a lead to trade union opinion, nor contains any constructive criticism of labour policy or suggestions to meet the twin challenges of defence and development. Instead the speech contains sweeping generalisations and unsubstantiated allegations which hardly advance the cause of labour or redound to the credit of a trade unionist of Mrs. Bose's standing. Take, for instance, her reference to "the reactionary forces trying to use the emergency to push the country back to the days of uncontrolled private enterprise" and her charge that these forces are "opposing the growth of the public sector by overt and covert action." Nowhere in her long speech does Mrs. Bose make it clear as to where and in what form these forces are working against the national interest. Even more surprising is her comment on the inadequacy of social security measures in India, as compared with Western countries. Here is what she said: "Unfortunately, the capitalists in our country have yet to travel a long way to accept these measures (social security) as inescapable for peace and prosperity of the country, as also their very existence." Does Mrs. Bose realise that, with the best will in the world, it will take years for a country like India to attain the standards of social security obtaining in the affluent countries of the West—standards which have not been brought about overnight but have resulted from the economic development achieved in the past century and more. Her regret at the recent concession granted in respect of the Super Profits Tax (which, in her opinion, showed lack of determination on the part of the Government) and her dissatisfaction with the present machinery for settlement of industrial disputes because "it did not help change the structure of society"—both these seem to stem from a bias against the capitalist class. She does not pause to reflect that, howsoever socialistic a distributive policy is, it cannot distribute non-existent wealth and that equal distribution cannot ensure adequacy of income and wealth as long as what is available for distribution is far too inadequate. It is strange that the President of the I.N.T.U.C., who wants the incomes and standards of living of workers to go up, has not cared to emphasise that this is possible only if production and productivity increase. In her preoccupation with distributive justice, Mrs. Bose seems to have ignored the equally important concept of productive efficiency.

National Minimum Wage

Though more a politician than a trade unionist, Mr. D. Sanjivayya, President of the Congress, who inaugurated the session, was more constructive in his approach. He stressed the need for a national minimum wage and pointed out that, in the case of agricultural labour, in spite of the two Five-year Plans, wage levels had remained static. Many States had not fixed minimum wages for agricultural labour. And even where they were fixed, they were as low as 60 nP to 90 nP per day. The time had now come, according to the Congress President, for the fixation of a national minimum wage for all workers, whether in industry or in agriculture. He suggested that, as a modest beginning, it should be possible for the Government to fix at least one rupee a day as the national minimum wage and to give this matter top priority. Emphasising the need for organising agricultural labour, Mr. Sanjivayya asked I.N.T.U.C. leaders to evolve a scheme for this purpose in selected districts, to start with.

As co-partners in industrial enterprises, workers, Mr. Sanjivayya averred, could legitimately expect a living wage and a share in the profits of the industry. The concepts of minimum and fair wages and the legislative and other measures taken to achieve these standards, the Congress President emphasised, were only interim steps towards the ultimate goal of ensuring a living wage for workers.

Referring to the problem of unemployment, Mr. Sanjivayya made the familiar point that, while the development schemes of the Government were calculated to generate additional employment potential, the continuous addition of fresh manpower to the labour force was outpacing the employment opportunities created. In view of this situation, the most effective way of tackling this problem of growing unemployment on a long-term basis, according to him, would be to control population growth. In this context he did well to emphasise that trade unions could do much in this respect by educating workers on the need for planned parenthood.

Effective Share in Management

Both Mr. Sanjivayya and Mrs. Maitreyee Bose wanted workers to have a share in management. Mr. Sanjivayya viewed workers' participation in management as a logical extension of the principle of co-trusteeship and co-partnership of workers and employers in the management of the enterprises in the larger interests of the community. Mrs. Bose made it clear that what she wanted was effective participation by workers in management and not what was involved in the scope of the works committees. She also wanted a guarantee of the right to work, although she did not indicate what such a guarantee would mean in practical terms—or, in other words, whether it would mean that jobs be provided to all those who are willing to work.

The I.N.T.U.C. session adopted several resolutions of which one pertained to industrial truce. The resolution urged the Central and State Governments to take effective steps, including the use of Defence of India Rules, to see that the employers, too, discharged fully their obligations under the industrial truce resolution adopted in November last and that it became a "live force" in industrial relations both in the private and public sectors, with special reference to the machinery of voluntary arbitration. Labour, the resolution added, had faithfully kept up its understanding not to go on strike even under normally justifiable circumstances. It would be very difficult, the resolution went on, for labour to continue to make this one-sided sacrifice. It was, therefore, necessary, according to it, to get the employers to carry out their obligations under the truce. Failure to give effect even to the agreed emphasis on voluntary arbitration by appropriate Governmental action had resulted in a serious default, the resolution added. The new psychology created and the enthusiasm released by the national emergency, according to the resolution, could have been better utilised for the lasting benefit of industry, labour and the country, if only timely steps had been taken to capitalise the new upsurge and canalise the new enthusiasm.

Another resolution urged the constitution of wage boards for paper, engineering, chemical and electricity industries and a second wage board for working journalists. Yet another resolution urged that only such organisations, whose policies were consistent with the Government's and which represented the largest number of workers, should be recognised for representation at tripartite conferences. Obviously, the I.N.T.U.C. wants to be recognised as the sole representative organisation of labour—a demand which will certainly be opposed not only by the Communist-dominated All-India Trade Union Congress but also by other apex trade union bodies.

MANAGEMENT TRAINING PROGRAMMES

(Concluded from page 972)

either afraid of the government or tax authorities or even their own existence through greater competition. This attitude is going to harm them in the long run, and hence it calls for a drastic change in their views. They should not forget that the foundation of management development has to spring from within the industry.

Further, if the management training programmes have to be very successful it is inevitable that the executives at senior management level must also participate in the programmes specially suited for them. The need for training should not be limited to young but should be spread over. In India one of the reasons for the failure of some of the programmes of A.T.I.R.A. has been the lack of participation of the top executives, as they feel that there is no need for their training. The top management in India has yet to develop an awareness as to the utility of management development programmes. The absence of this awareness comes out of their own sense of inferiority complex and is not healthy for management development. It is because of this reason that they also fail to understand the attitudes and suggestions of their junior executives when they return from such training. It has been found by experience that in most of the countries, a management programme which is most successful is the one in which the chief executive of a company sits. Hence, it is necessary for the top executives to develop the sensitivity so very essential for the success of junior and middle management programmes. The older people must have an understanding and appreciation of training. To this end, the Indian Management Association deserves congratulations in organising a course for the senior executives in collaboration with the Massachusetts Institute of Technology.

Finally, the need for training is urgent as much in not only the less centralised and highly technologically advanced industries but also in others. The exponents of management development must guard themselves against this danger. The author does not seem to agree with the view that, by and large, "firms with highly centralised control and single technology that are functioning in a seller's market are neither interested in nor likely to be interested in management development programmes." (Chaudhary, Kamla and Tarneja, Ram S.—see Report on India, in *Developing Better Managers—An Eight Nation Study*—National Industrial Conference Board Inc.) It may be argued that the need for management training is all-pervading, it is only a question of degree and extent, varying according to the needs of the executives and industries. It is true that in highly capital-intensive and technologically developed industries like steel making, processing and manufacturing, there may be greater need for application of management techniques. Yet there are many of the traditional types of industries, for example, even the processing of cashew nuts, and even such industries may need systematic management. Even where technology is not effecting the industry, the management techniques of the modern business world can always find application. The new firms which will be the first within these industries will outstrip in competition. The more backward family businesses may then find that what they had aimed at to be a safe monopoly will have become a thing of the past. Therefore, the industries like even cashew or, say, retail merchandising should not consider that these techniques do not apply to them. They can benefit as much by the use of newer techniques. There is a lot to be learned from the U.S. in the modern techniques of marketing, production, control, finance, labour relations and organisational practices.

Systematic management, although including highly specialised skill, involves the operation of business as a whole and it, therefore, has application to every kind and size of business. A great challenge faces the management world today, and the demands on their skill and ingenuity are exacting. Managements can succeed in taking on this challenge only if they evolve their training programmes tailored to their present and future needs. The decline of the managing agency system, the increasing competition and growth of industries beyond the immediate consuming areas, ever widening capital investment, wider use of technology, greater collaboration of foreign experts and foreign aid—all these are the compelling forces working today in India for better and better management.

MAFATLAL COTTON GROUP'S RESULTS

PROFITS DECLINE—STANDARD AND SASSOON CUT DIVIDENDS

WORKING results of the four Mafatlal group textile mills, namely, Standard Mills Company Ltd., Sassoon Spinning and Weaving Company Ltd., Mafatlal Fine Spinning and Manufacturing Company Ltd. and New Shorrock Spinning and Manufacturing Company Ltd., for the year ended 31st December 1962 focus once again the investors' attention on the very onerous conditions faced by the cotton mill industry of the country in that year. With prices pegged at the 1961 level but costs of manufacture increasing quite appreciably, each of the companies, with the exception of Mafatlal Fine, has reported a large-scale erosion of profits, despite improved turnovers and higher carry-forward stocks. Drastic reductions in the plough back have been effected by these three and, barring New Shorrock, the other two have cut the dividends drastically. For some reasons to which no reference has been made in the Directors' report, the gross profit of Mafatlal Fine has actually improved and the Company has been able to maintain the dividend with no cut in the credit to reserves, though the carry-forward is slightly reduced. With this drop in profits, none of the three City mills is liable to Super Profits Tax, while the liability of New Shorrock has been estimated at Rs. 3.88 lakhs and included in the tax provision.

Standard Mills

Notwithstanding the rise of Rs. 25.38 lakhs to Rs. 881.28 lakhs in sales and the expansion of Rs. 14.70 lakhs to Rs. 92.68 lakhs in value of closing stocks, the gross profit of Standard Mills has contracted by as much as Rs. 58.93 lakhs to go down to the very much reduced level of Rs. 117.63 lakhs. Although this deterioration in profit margin has been due mostly to the spurt in total expenses from Rs. 704.66 lakhs to Rs. 791.46 lakhs—with contributions coming proportionately from the cost of raw materials and stores consumed and other expenses—a part at least of it has been due to the drop in other income from Rs. 23.80 lakhs to Rs. 13.11 lakhs, owing to a substantial decline in processing charges. As a result of the lower gross profit, provision for Managing Agents' commission has been stepped down from Rs. 8.23 lakhs to Rs. 5.53 lakhs and that for taxation from Rs. 64.05 lakhs to Rs. 42.64 lakhs, inclusive of Rs. 6.49 lakhs for the preceding year. Provision for depreciation, on the other hand, is higher at Rs. 38.49 lakhs, as against Rs. 34.05 lakhs. This reduction of Rs. 17.67 lakhs in essential provisions has not, however, improved the situation and the net profit still shows a decrease of about 67 per cent from Rs. 72.23 lakhs to Rs. 30.97 lakhs. A sum of Rs. 13.73 lakhs (Rs. 32.76 lakhs previously) out of this has had to be compulsorily transferred to the development rebate reserve and a further sum of Rs. 0.69 lakh set aside for the preference dividend in respect of the year. Since the balance, inclusive of the amount brought in from the preceding year, has been too inadequate to pay a reasonably high ordinary dividend, Rs. 12.50 lakhs have been withdrawn from the development rebate reserve. The ordinary dividend, which has been reduced by 5 per cent for the second year in succession to 20 per cent subject to deduction of tax, claims Rs. 30.73 lakhs, leaving Rs. 7,338 to be carried forward, as against the Rs. 1.75 lakh brought in.

Sassoon Spinning

The performance of Sassoon Spinning has been slightly better than that of Standard. The gross realisation from sale of cloth has increased from Rs. 640.69 lakhs to Rs. 685.95 lakhs, while closing stocks have improved from Rs. 48.68 lakhs to Rs. 59.26 lakhs. Other income, too, is fractionally higher at Rs. 24.24 lakhs, as against Rs. 23.42 lakhs earlier. Although expenses have risen, the decline in gross profit has been arrested at 15.4 per cent from Rs. 80.23 lakhs to Rs. 67.87 lakhs, as compared with 67 per cent in the case of Standard. As a corollary, provisions for Managing Agents' commission and taxation have also gone down, the former by Rs. 0.98 lakh to Rs. 3.38 lakhs and the latter by Rs. 3.23 lakhs to Rs. 17.72 lakhs, despite the inclusion of

(In lakhs of rupees)

Investments (at cost)	5.69	2.08	71.79	75.56
Total	682.96	492.00	359.22	601.38

The present market price of the scrips and the net return on fresh investment are as follows:

	Price Rs.	*Net yield* %
Standard Mills	730.00	1.9
Sassoon Spinning	50.00	1.4
Mafatlal Fine	712.50	3.0
New Shorrock	1,330.00	2.4

Rs. 1.75 lakh to meet the tax liability in respect of the previous year. Since, however, provision for depreciation is sizably higher at Rs. 27.36 lakhs, as against Rs. 23.17 lakhs, the fall in net profit is somewhat more sharp, being about 39 per cent from Rs. 31.75 lakhs to Rs. 19.41 lakhs. A major portion of this—Rs. 12.14 lakhs, to be precise—has been transferred to the development reserve. But instead of drawing upon accumulated reserve for dividend disbursement, the Directors have thought it prudent drastically to reduce ordinary dividend from 20 per cent to 10 per cent, both subject to deduction of tax. At this rate, the total dividend requirement is Rs. 7.54 lakhs. A sum of Rs. 3.192 is being carry-forward, as against the Rs. 30,196 brought in.

Mafatlal Fine

The working results of Mafatlal Fine for the year 1961 were definitely disappointing in contrast to those of the other two City mills of the group, that is, Standard and Sassoon Spinning. As if to make good this loss of face, the Company has put up a performance which, in the prevailing conditions, can be considered really encouraging. Turnover is up by Rs. 24.71 lakhs at Rs. 309.00 lakhs and closing stocks by Rs. 4.37 lakhs at Rs. 28.83 lakhs. Though other income has contracted by Rs. 2.00 lakhs to Rs. 7.75 lakhs, the contraction has not affected the gross profit which has increased from Rs. 63.07 lakhs to Rs. 67.29 lakhs. Keeping step with this betterment in profit, the Managing Agents' commission has gone up from Rs. 5.02 lakhs to Rs. 5.15 lakhs and taxation is higher at Rs. 19.04 lakhs—inclusive of Rs. 5.62 lakhs for the preceding year—as against Rs. 16.63 lakhs. Provision for depreciation, too, has risen from Rs. 15.51 lakhs to Rs. 17.58 lakhs. These essential provisions have thus claimed a much larger amount of Rs. 41.73 lakhs, as against Rs. 37.10 lakhs, so that the net profit actually shows a minor decrease of Rs. 0.39 lakh to Rs. 25.52 lakhs Notwithstanding this and the further increase of Rs. 0.21 lakh to Rs. 6.48 lakhs in the amount credited to development reserve, it has been found possible to maintain the ordinary dividend at 30 per cent subject to deduction of tax, claiming Rs. 17.40 lakhs. But with the preference dividend absorbing Rs. 1.86 lakh, the carry-forward is lower at Rs. 18,095, as compared with the Rs. 40,575 brought in.

New Shorrock

Cotton textile mills in Ahmedabad have so far enjoyed the reputation of being bigger profit earners than their counterparts in Bombay. The 1962 working results of most of these mills, however, have given a lie to this claim and the general performance of the mills has been none too different than that of the Bombay companies. The accounts of New Shorrock for the year 1962 substantiate this statement. An improvement has been witnessed in sale proceeds, other income and value of closing stocks. The first has expanded by Rs. 18.64 lakhs to Rs. 595.85 lakhs, the second by Rs. 2.91 lakhs to Rs. 15.83 lakhs and the third by Rs. 5.78 lakhs to Rs. 50.86 lakhs. Nevertheless, the gross profit has declined by no less than Rs. 11.49 lakhs to Rs. 137.39 lakhs, due obviously to spiralling expenses which during the year have risen by Rs. 26.77 lakhs to Rs. 460.07 lakhs. Along with this drop in gross profit, provision for Managing Agents' remuneration has declined from Rs. 7.68 lakhs to Rs. 7.28 lakhs, while that for taxation has risen by Rs. 6.60 lakhs to Rs. 58.60 lakhs, due to the inclusion of Rs. 5.62 lakhs for the preceding year and Rs. 3.88 lakhs for the S.P.T. Provision for depreciation is also higher, though marginally, at Rs. 23.84 lakhs, as against Rs. 22.72 lakhs. The resulting net profit thus discloses a drop of Rs. 16.81 lakhs, or roughly 25 per cent to Rs. 47.67 lakhs. The ordinary dividend, however, has been maintained at 36 per cent subject to deduction of tax and gets Rs. 35.42 lakhs as earlier. But this has been done by effecting a cut of Rs. 12.63 lakhs to Rs. 15.38 lakhs in credit to reserves and lowering the carry-forward from Rs. 3.30 lakhs to Rs. 17.249.

The table appearing at the foot of this review compares the working results of the four companies for 1962 with those for the three preceding years.

The financial position of all companies is sound. The share capital in each case enjoys a substantial backing of reserves. With the exception of Sassoon Spinning, borrowings are negligible and current liabilities and provisions are well covered by the total of current assets

NATIONAL RAYON SUFFERS A SETBACK

EXPORT PROMOTION SCHEME RESPONSIBLE

DURING the past calendar year, the National Rayon Corporation Ltd. (Managing Agents: Messrs. Chinai and Company (Private) Ltd., Bombay) suffered a setback in net sale proceeds (that is, excluding excise duty paid) from Rs. 686.10 lakhs to Rs. 639.86 lakhs and the gross profit, as a consequence, fell from Rs. 243.63 lakhs to Rs. 225.02 lakhs. This setback, especially in profit, is attributed by Directors primarily to the export promotion scheme. The Company, together with other spinners, had agreed, at the Development Council meeting in December 1960, to purchase only 10 per cent of its pulp requirements at a premium of 50 per cent against supply of yarn at a price substantially lower than the basic price. However, the actual allocation of yarn under the scheme showed that the Company was required to buy not just the agreed 10 per cent but as much as 89 per cent of the pulp requirements. On account of this, it lost, like all other spinners, very heavily. As a result of protests made to the Government, the spinners were permitted during the October-December 1962 period to load the basic price of yarn to compensate for any further excess loss suffered on the export promotion scheme.

It is known that, in spite of the continuous increase in the cost of materials, power and fuel, and wages, the basic prices of yarn have remained unchanged in accordance with the gentleman's agreement between the Government and the industry, arrived at in 1957. This factor is also responsible in no small way for the setback suffered by the Company during the year. It may be noted, however, that the Government has asked the Tariff Commission to examine the cost structure in the man-made fibre industry and recommend fair prices for manufacturers and consumers. The increases in costs and expenses of the Company during the year are detailed in the table accompanying this review. It may be mentioned that the excise duty which the Company had to absorb increased by Rs. 8 lakhs, the total burden itself having risen from Rs. 124.32 lakhs to Rs. 187.59 lakhs, and that the interest on borrowings went up by Rs. 16 lakhs to Rs. 30.99 lakhs.

The increase in costs during the year has been all the more greater in view of the substantial expansion in the volume of output following the full year's working of the 12 spinning frames installed during the last four months of 1961 and the phased introduction of additional 12 frames in the last quarter of 1962. The larger output is reflected in the marked rise in closing stocks from a bare Rs. 43.02 lakhs at the end of 1961 to as much as Rs. 157.98 lakhs at the end of 1962. Gross sales (inclusive of excise) show an improvement of Rs. 17 lakhs from Rs. 810.42 lakhs to Rs. 827.45 lakhs, comprising yarn and waste of Rs. 738.25 lakhs and chemicals and miscellaneous of Rs. 89.20 lakhs, as against Rs. 747.52 lakhs and Rs. 62.90 lakhs, respectively, a year before.

The provision for depreciation has been raised sharply from Rs. 85.18 lakhs to Rs. 128.40 lakhs on account of depreciation for tyre cord plant and machinery having been provided. The tax liability is estimated at Rs. 37.50 lakhs (as against Rs. 53 lakhs in the previous year), but only a part of it has been met out of the year's profit, as Rs. 26.10 lakhs (as against Rs. 12 lakhs) have been withdrawn from deferred taxation reserve to meet the bulk of it. The transfer from taxation reserve has again become necessary apparently because, in the first place, the gross profit is lower and, secondly, the depreciation provision has been put up substantially. Managing Agents' commission has been lower by Rs. 2.50 lakhs at Rs. 6.46 lakhs. Net profit, after these allocations, shows a setback from Rs. 108.49 lakhs to Rs. 78.76 lakhs. Out of this, Rs. 25.10 lakhs, as against Rs. 49.25 lakhs in the previous year, have been ploughed back to reserves. Not only the amount of profit retained in business is lower, but the dividend on the 100-rupee ordinary shares has also been cut by six points to 16 per cent per annum, subject to tax.

According to the published data, the percentage distribution of net earnings (with the previous year's comparative figures given in brackets) is shown as: employees 31.08 (29.58), income-tax and excise duty 56.10 (44.16), shareholders 5.17 (11.76), retained in business 6.08 (12.27) and Managing Agents 1.57 (2.23).

No mention has been made in the Directors' report of the S.P.T. liability for the year, which may be presumed to be *nil*. But our own working shows that the year's profit may attract the tax, in its amended form, of Rs. 2.34 lakhs.

The following comparative table brings out the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

* After allowing Rs. 26.10 lakhs in 1962 and Rs. 12 lakhs in 1961, as withdrawal from deferred taxation reserve.
† Subject to deduction of tax.

The caustic soda chlorine plant is said to have worked very efficiently during the year and no difficulty was experienced in disposing of the surplus caustic soda and the increased quantity of chlorine released. The expansion of this plant is proceeding satisfactorily. Orders have been placed for the import of entire equipment and it is expected that the plant will be ready for operation by about the end of the current year. By October last, the teething troubles of the tyre cord plant had been over and the standard quality guaranteed by the collaborators was commercially produced. From discussions with the Government and tyre manufacturers, it is expected that the regular offtake of production will soon be assured. Work on the pulp project at Nanjangud (Mysore State), where land admeasuring about 161 acres has been purchased, can now make satisfactory progress, as the major points, including the State Government's insistence on the transfer of the Company's registered office to Mysore, have been settled. The A.I.D. has intimated the Company to send its representative to Washington to finalise the terms of a loan of Rs. 6 crores to finance the import of plant and machinery for the project. However, in view of the depressed conditions in the stock market, the Directors would like to consider whether or not it is prudent to go ahead with this project at this stage.

The second 15-year (1972-77) debenture issue of the value of Rs. 150 lakhs, carrying interest at the rate of 6.5 per cent and ranking *pari passu* with the first (1965-70) debentures, which was made during the year was fully subscribed. The option given to the old debenture holders, at the time of the issue of new debentures, to have their debentures redeemed during 1965-70 was exercised by holders of debentures worth Rs. 55.91 lakhs. The secured loans, including bank borrowings of Rs. 136.09 lakhs (as against Rs. 119.50 lakhs a year before), now stand at Rs. 436.12 lakhs (as against Rs. 273.66 lakhs). Unsecured loans have gone up from Rs. 140.29 lakhs to Rs. 186.55 lakhs. The paid-up capital, including Rs. 174.25 lakhs in 100-rupee preference shares, is unchanged at Rs. 415.81 lakhs. Reserves and surplus aggregate Rs. 239.62 lakhs. The total of "own funds" and borrowings works out to Rs. 12.78 crores, that a year before being Rs. 10.71 crores. As against this, the gross block has increased from Rs. 16.69 crores to Rs. 18.89 crores and is written down to Rs. 10.74 crores. Machinery in transit is valued at Rs. 36,628. Investments amount to Rs. 1.63 lakh. The excess of current assets over current liabilities is quite comfortable at Rs. 197.06 lakhs. Debenture issue expenses, amounting to Rs 5.31 lakhs, are still to be written off.

The Rs. 100-fully paid ordinary shares of the Company are currently quoted at Rs. 361 *cum-div.* On the *ex-div.* basis, they give a net yield of 3.2 per cent per annum.

B.I.C. FORGES AHEAD

DIVIDEND STEPPED UP

THE results of the British India Corporation Ltd. (Chairman: Mr. Satish Chandra, Kanpur) for the year ended 31st December 1962 disclose a steady improvement. Net sale proceeds (that is, excluding the excise duty paid) have spurted from Rs. 730.40 lakhs to Rs. 858.86 lakhs. Gross profit has gone up from Rs. 115.15 lakhs to Rs. 142.88 lakhs. Profit-margin (ratio of profit to sales) has risen further from 15.7 per cent to 16.6 per cent, after having expanded by 2.3 per cent in the previous year. The growth in profit-margin during the year under review is less as compared with that in the previous year because of considerable increases in costs and expenses as detailed below in a table. Net profit shows only a marginal increase from Rs. 58.65 lakhs to Rs. 59.26 lakhs, due to the sharp rise in the tax provision (including Super Profits Tax) from Rs. 48 lakhs to Rs. 75 lakhs. Depreciation has absorbed a little more: Rs. 8.62 lakhs, as compared with Rs. 8.50 lakhs a year before. The return on the 5-rupee ordinary shares has been raised by two points to 9 per cent per annum, subject to tax. This increase has been proposed by the Directors, though the net profit does not show any marked improvement, apparently in view of the sacrifices made by shareholders in the recent past. Moreover, it may be pointed out that, even at 9 per cent, the return to shareholders is in no way flattering. In looking to the shareholders' interests, however, the Directors have been able to plough back to reserves a smaller sum of Rs. 20.88 lakhs, as against Rs. 27.29 lakhs. The carry-forward, too, is lower at Rs. 2.53 lakhs, as compared with the Rs. 3.92 lakhs brought in.

The percentage distribution of revenue during the year with comparative figures for previous year given in brackets is shown as: materials, power and fuel, services, etc., 49 (same), staff expenses 20 (21), interest, insurance, selling and other expenses 7 (same), depreciation, repairs, etc., 3 (same), income-tax, excise duty, rates and taxes, etc., 15 (12), dividends 4 (same) and retained in business 2 (4).

The following comparative table gives a synoptical view of the Corporation's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Sale proceeds, less excise	858.86	730.40	736.49	682.43

* Subject to deduction of tax. † For the years 1959 and 1960.
‡ For the years 1957, 1958 and 1959.

The Corporation's two woollen branches—the New Egerton Woollen Mills at Dhariwal and the Cawnpore Woollen Mills—are said to have worked satisfactorily during the year. They are now producing woollen materials for the Armed Forces. For the rehabilitation and modernisation of these branches, licences worth Rs. 20 lakhs have been obtained, while efforts are being made for additional licences for modernising the machinery. The results of the Cooper Allen branch at Kanpur, we are told, have been disappointing due to a number of factors. However, certain reorganisations have recently been carried out in order to improve the working. The boot factory of the branch, which was lying closed for several years, has started operating recently to meet defence requirements.

The Corporation has four subsidiaries, namely, Elgin Mills Company Ltd., Calico Processors Ltd., Cawnpore Textiles Ltd. and Brushware Ltd. Sales of Elgin Mills during the year ended 30th September 1962 increased to Rs. 630.67 lakhs from Rs. 581.54 lakhs in the previous year. Net profit improved from Rs. 47.29 lakhs to Rs. 52.85 lakhs. The dividend on the 10-rupee

shares has been unchanged at Rs. 1.75, taxable. The Company has been allowed to install 12,000 spindles and the preliminary work in this connection has been taken in hand. Additional spindleage for balancing purposes is being secured. The Calico Processors earned during the year ended 30th June 1962 a profit of Rs. 22,754, as against Rs. 9,899 in the previous year. The Cawnpore Textiles suffered a setback in net profit from Rs. 11.77 lakhs to Rs. 6.76 lakhs, despite an increase in sales from Rs. 161.88 lakhs to Rs. 173.55 lakhs. The setback is due to higher prices of cotton and increased wages. The dividend on the 5-rupee ordinary shares is unchanged at 50 nP per share, taxable. Modernisation and renovation of the mills are continuing. Sales of Brushware Ltd. during the year ended 30th November 1962 increased from Rs. 4.79 lakhs to Rs. 6 15 lakhs and net profit improved from Rs. 34,894 to Rs. 49,948. The dividend on the 10-rupee shares is the same at 80 nP per share, taxable.

The paid-up capital of the B.I.C. is unchanged at Rs. 406 lakhs, of which Rs. 81 lakhs are in two types of preference shares and the balance is in ordinary shares. Reserves and surplus stand at Rs. 221.72 lakhs. Bank borrowings amount to Rs. 226.18 lakhs, as against only Rs. 129.03 lakhs a year before. These loans and current liabilities, amounting to Rs. 243.88 lakhs, bring the total indebtedness to outsiders to Rs. 470.06 lakhs, as against which are available current assets, loans and advances of Rs. 880.76 lakhs. Investments are shown at Rs. 146.19 lakhs, including Rs. 102.06 lakhs in subsidiaries. The gross block, which has expanded during the year from Rs. 310.22 lakhs to Rs. 317.13 lakhs, is written down to Rs. 66.73 lakhs. Inclusive of work-in-progress, the net block amounts to Rs. 71.55 lakhs

Currently, the 5-rupee fully paid ordinary shares of the Corporation are quoted at Rs. 8.60 *cum-div.* and offer, on the *ex-div.* basis, a net yield of 3.8 per cent per annum.

MAFATLAL COTTON GROUP

(*Concluded from page 984*)

and loans and advances. The heavy borrowings resorted to by Sassoon Spinning are indicative of the stress to which the Company's finances have been subjected to by the renovation and modernisation programme. But even in this case, the outside interest, made up of loans and current liabilities, is adequately covered by current assets. Substantial sums have been invested by Mafatlal Fine and New Shorrock mainly in equity shares of companies belonging to the group, but their current market value exceeds the book value by a wide margin.

Considerable progress has been made by the Companies in their reorganisation and renovation programmes which are still continuing. A sum of Rs. 74.59 lakhs was spent by the Standard Mills on new buildings and plant and machinery, and orders have been placed for new assets worth Rs. 19.96 lakhs. Sassoon Spinning expended Rs. 1.56 lakh on buildings and Rs. 42.20 lakhs on additions to plant and machinery and has placed orders for new plant and buildings worth Rs. 6.00 lakhs. Additions to plant, machinery and buildings during the year involved Mafatlal Fine in an expenditure of Rs. 29.30 lakhs and further commitments are to the tune of Rs. 4.14 lakhs. The total expenditure incurred by New Shorrock on its new unit at Nadiad was Rs. 1.72 lakh. The Company has entered into a contract with Messrs. Gannon Dunkerley and Company Ltd. for the construction of buildings for the new unit at an estimated cost of Rs. 45.00 lakhs. Orders have been placed for plant and equipment valued at Rs. 16.54 lakhs.

ULTRAMARINE AND PIGMENTS LTD.

The Ultramarine and Pigments Ltd. has commenced regular production during the current year. The product has been well received in the market. In quality, it is similar to the German material. The Company has placed orders for additional machinery from abroad in order to reach the full capacity of 100 tons per month.

During the year ended 31st December 1962, the second year of its working, the Company earned an income of Rs. 8,698. It incurred expenses of Rs. 50,692, of which Rs. 44,769 are transferred to expenditure during construction account and the balance of Rs. 5,922 is adjusted against the income earned. After allowing Rs. 6,008 for depreciation and Rs. 1,500 for taxation, there is a loss of Rs. 4,732 which is adjusted against the previous year's surplus of Rs. 2,159, leaving a net deficit of Rs. 2,573 to be carried forward.

During the year, the I.C.I.C.I. granted the Company an additional loan of Rs. 5 lakhs, in addition to the foreign exchange loan of about Rs. 4.70 lakhs and a rupee loan of Rs. 2.30 lakhs granted earlier.

SYNOPSES OF COMPANY REPORTS

Adoni Spinning and Weaving Co., Ltd.

(*Managing Agents*: Messrs. Kothari and Sons, Madras.)

Eighth Annual General Meeting—12th June 1963.

Market value of equity shares (in rupees):	1962	1961
High	13.25	13.15
Low	10.00	9.75

Extracts from the Directors' report: During the year under review, all the 24,000 spindles worked 3 shifts on six days of the week and two shifts on Sundays. The total number of days worked were 342 days as against 346 days in 1961.

Debentures of the face value of Rs. 10 lakhs issued in favour of State Bank of India were redeemed during the year as against the scheduled redemption of Rs. 5 lakhs. The debentures outstanding as on 31-12-1962 amount to Rs. 10 lakhs.

Cotton: Indian cotton position during the year under review was very difficult and the prices ruled considerably higher than in the previous year. Consequently, the Company's cotton bill during the year was higher by more than Rs. 6.25 lakhs, but this was offset by the increase in the realisation from yarn.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	49,90,600	Gross block	83,14,765

* Profits of New Industrial units exempt from tax.
† Dividend is paid out of general reserve No. 2 (profits of New Industrial units exempt from tax).

Extracts from the Directors' report: *Operations*: The total sales turnover during 1962 was Rs. 2,33,55,188 which means an increase of Rs. 66,82,384 over the 1961 performance. The contribution of the Kumhari factory to the total sales turnover of 1962 was of the order of Rs. 44,00,861. The working of the Kumhari factory, during 1962, however resulted in a loss as the sales were insufficient to break even with the costs. The sales at Kumhari have however picked up considerably during 1963.

The turnover of the Ambernath factory during 1962 was Rs. 1,89,54,327 as compared to Rs. 1,66,72,804 achieved during 1961.

A significant feature of the 1962 operations is the fact that 2,409.5 metric tons of *Alumina Sulphate* were exported by the Company to Egypt despite intense International Competition. The Company's product was well received in the Egyptian market, and further substantial orders have been secured for export during the year 1963. Continuous efforts are being made to increase export sales.

With two factories functioning at strategic locations the Company now has the flexibility of making its products available to its customers, over a wide area at a cheaper delivered price.

Expansion: *300-ton per day contact Sulphuric Acid Plant*: Civil construction work of this project has commenced. Orders for substantial part of the imported and indigenous components of plant have also been placed. All efforts are being made to complete the project and commence production as early as possible.

The Directors are happy to state that the Industrial Credit and Investment Corporation of India Limited, Bombay, have agreed to lend to the Company a sum of Rs. 30,00,000 to meet a part of indigenous financial requirements of this project.

Alumina Sulphate: *100-ton per day Project at Ambernath*: The Company has now reached a production capacity of approximately 50 tons per day. While demand has now picked up, particularly in the export market, production capacity cannot be increased beyond the present level due to paucity of *Sulphuric Acid* and *steam*. More *Sulphuric Acid* and *steam* will become available after the commissioning of 300-ton *Sulphuric Acid Plant*, and steps will be taken to raise the capacity of the *Alumina Sulphate Plant*, along with or after the 300-ton *Sulphuric Acid Plant* goes into production.

50-ton per day Project at Kumhari: In view of the increasing demand in Madhya Pradesh and Orissa States, the Company applied for a licence to undertake a substantial expansion to the existing capacity from 10 tons per day at Kumhari to 50 tons per day which the Government of India was pleased to grant. The work of expanding the capacity has been taken up in hand, and will be completed shortly.

Borax and Boric Acid Venture: A scheme for the manufacture of 17,000 tons *Borax* and 3,000 tons *Boric Acid*, per annum respectively, in collaboration with the well-known firm of Messrs. Borax (Holdings) Limited of London, has been sanctioned to this Company by the Government of India. It has been proposed that this new undertaking will be brought about through the medium of a separate Public Limited Company, in which this Company will hold substantial shares. The details of the new Company formation and the Collaboration Agreement between this Company and Messrs. Borax (Holdings) Limited are now being worked out, and the shareholders will be approached for permission to invest in the new Company, under Section 372 of the Companies Act, 1956, as soon as possible.

Industrial Explosives: It is the intention of the Directors that this Company should participate with the Khatau group in establishing an undertaking for the manufacture of *Industrial Explosives*, demand for which is expected to rise considerably in future. A licence has already been issued for the purpose by the Government of India under the Industries (Development and Regulation) Act, in the name of Shri Dharamsey Mulraj Khatau. Technical and financial collaboration arrangements are now being discussed with certain well-known foreign parties. As soon as the details of the project and collaboration arrangements are finalised, the shareholders will be approached for permission to invest in the new Company, in accordance with the provisions of Section 372 of the Companies Act, 1956.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	31,83,300	Gross block	1,53,60,333
Reserves and surplus	51,22,405	—Depreciation	69,34,176

* Loss after providing for Managing Agents' remuneration and depreciation.
† This includes profit on sale of Champdany Mill premises amounting to Rs. 30,84,677 and other credit items like excess provisions and interest earned on deposits, etc.
‡ Includes credit items like profit on sale of machinery, etc.

Extracts from the Directors' report: *General*: Market conditions during the year under review were in sharp contrast with those of the previous year: 1961 saw an acute shortage of jute and fibre prices rose to unrealistic levels. In 1962, however, the pressure of a very large crop brought prices down, and Mills generally were able to trade with a reasonable margin of profit, while the accumulated demand for finished goods enabled them to step up their production. Exports rose substantially in both volume and value and the Industry was in the happy position of being able to recover its earlier very heavy losses and to build up much needed rehabilitation reserves.

The full effects of closing down Champdany Mill and concentrating the manufacturing operations of this Company at Wellington Mill are now being felt and the year has seen a very substantial reduction in manufacturing costs, and the trading results of the Company for the year are satisfactory.

During the year the first stage of expansion of the *Broad Loom Plant* was completed making a total of 30 looms working on a treble shift basis, while the second stage of expansion to bring the installed capacity up to 46 looms is well under way. At present a total of 39 looms have been installed and commissioned and the balance are scheduled to be in commission by the end of June this year. The *Broad Loom Section* is now working 7 days a week and making a very positive contribution to the Company's working.

The outlook for the current year is satisfactory. It is, however, becoming more apparent that, having regard to the prospects of another good jute crop coupled with the very heavy stocks of jute being carried by the Mills as a result of compulsory buying quotas issued by the Jute Commissioner and the present level of maximum production, the margin of trading profit will be only moderate unless there is a marked increase in world offtake of finished goods.

Sale of Champdany Mill Premises.—The Conveyance of the Champdany Mill property was finalised on 30th July, 1962, and the sanction of the Court was subsequently received for the reduction of the authorised capital of the Company from Rs. 60,00,000 to Rs. 30,00,000. The repayment to shareholders of Rs. 50 per Rs. 100 share has been largely effected.

Accounts in brief as at 31st March 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	29,58,200	Gross block	1,90,52,861
Reserves and surplus	1,00,01,844	—Depreciation	1,06,68,483

Proposed dividend (taxable) ordinary	(10%)	(10%)
Dividend per share	[Re. 1.00]	[Re. 1.00]
Carried forward	Nil	45

Extracts from the Directors' report: In the allocation of Rs. 2,13,293 to general reserve the Board has included the sum of Rs. 63,293 which would normally have been carried forward at the credit of the profit and loss account. This has been done in order to ensure that in computing the reserves of the Company for the purpose of Super Profits Tax credit will be given for all undistributed profits.

Operations.—Satisfactory deliveries of steel sheet and increased order bookings during the year resulted in a substantial increase in the profit earned as compared with 1961. However, after providing for the increased taxation thereon and for the estimated liability to Super Profits Tax the amount available for distribution is insufficient to enable the Board to recommend the payment of a dividend at a higher level than last year.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,00,070	Gross block	9,49,932
Reserves and surplus	3,56,629	—Depreciation	2,19,746
Other liabilities	28,09,162		
		Net block	7,75,186
		Current assets	35,87,803
		Investments	2,000
		Cash	872
	Rs. 43,65,861		Rs. 43,65,861

* Paid-up capital consists of 1,20,007 ordinary shares of Rs. 10 each.

Pesticides Ltd.

(*Chairman*: Madanmohan R. Ruia, Esq., Bombay.)

Third Annual General Meeting—20th June 1963.

Extracts from the Directors' report for the period nine months ended 31st December 1962:—

The account shows a deficit of Rs. 21,983 after transferring the sum of Rs. 2,32,978 to the 'Expenditure during Construction' account and after making a provision for taxation of Rs. 8,000 but before making any provision for depreciation. This deficit has been adjusted against the previous year's profit of Rs. 12,303 and the net deficit of Rs. 9,680 has been carried forward to the next year.

Benzene Hexachloride Plant: This plant was commissioned on 1st January, 1963 and the performance trial of the plant was taken from third week of January, 1963. The plant has gone into full production from 1st February, 1963. The plant is working very satisfactorily and it has achieved figures guaranteed by the Company's Japanese Collaborators, and has achieved full capacity.

Malathion Plant: Malathion plant, the first of its kind in India, has gone into production from the first week of February 1963. This plant is entirely designed by the Company's technical personnel. This plant has already achieved the full licensed capacity and the production and the specification of the finished product is satisfactory.

The Government has recently granted this Company, a license to triple the licensed capacity and the expansion programme of this Plant will be carried out before the end of this year.

Copper Plant: The Company has purchased the Copper Plant of Messrs. Kirti Chemical Works. The plant which was transferred to the site has been modified and reinstalled, and this plant has also gone into production in the second week of January, 1963. This plant is producing *Copper Oxychloride*, and *Cuprous Oxide*.

Zinc Phosphide Plant: Zinc Phosphide Plant which was previously expected to be implemented only during the third quarter of 1963 has already gone into production on a small scale from the beginning of April, 1963. This plant has been designed by the Company's technical personnel and fabricated at the Company's Workshop.

Accounts in brief as at 31st December 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	34,11,050	Block	36,86,257
Other liabilities	15,01,482	Expenditure during construction	4,65,090
		Current assets	4,03,520
		Cash	1,71,405
		Miscellaneous expenditure	1,76,580
		P.L. a/c deficit	9,080
	Rs. 49,12,532		Rs. 49,12,532

* Paid up capital consists of 5,00,000 equity shares of Rs. 10 each—Rs. 7.50 per share called up. Allotment money in arrears = Rs. 3,200. Calls in arrears = Rs. 3,35,950.

* Paid-up capital consists of 10,000—7 per cent. cumulative preference shares of Rs. 100 each and 3,85,825 ordinary shares of Rs. 10 each. Amount paid up on shares forfeited is Rs. 2,500.

Notices

BRAITHWAITE AND COMPANY (INDIA) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-third Annual General Meeting of the members of Braithwaite & Co. (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Thursday, 20th June 1953, at 11 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1962.
2. To confirm the interim dividend on the Preference shares and to declare a dividend on the Ordinary shares.
3. To elect Directors in place of those retiring and in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

"That pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir Asoka Kumar Roy, who has attained the age of 76 years and who retires from the Board by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specially declared that the age limit for directors prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification the following resolutions of which numbers 5, 6 and 7 will be proposed as ordinary resolutions and number 8 as a special resolution.

5. (As an ordinary resolution)

"That pursuant to the provisions of Section 294 of the Companies Act, 1956, the appointment of Marshall, Sons & Co. (India) Limited in terms of an agreement executed by the Company on the 25th day of February, 1963, as the Company's sole selling agent for the Overhead Travelling Cranes, Level Luffing Cranes, Locomotive steam or Diesel Cranes and Spare Parts for such cranes manufactured by the Company for the whole of the Union of India be and is hereby approved."

6. (As an ordinary resolution)

"Resolved that in variation of the ordinary resolution passed at the annual general meeting held on 29th March, 1957 and in compliance with clause (d) of subsection (1) of Section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company borrowing from time to time any sum or sums of money which together with moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) exceeds the aggregate for the time being of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose, provided that the total amount of moneys borrowed by the Board in excess of the limit prescribed by clause (d) of subsection (1) of Section 293 of the Act shall not exceed Rs. 1,50,00,000 at any one time."

7. (As an ordinary resolution)

"That consent be and is hereby accorded to the creation of first legal mortgages of all present and future immovable properties of the Company in favour of the Commonwealth Development Finance Company Limited and the Industrial Credit and Investment Corporation of India Limited so far as and to the extent (if any) that the creation of such mortgages may be deemed to be a disposition of the undertaking of the Company within the meaning of Section 293(1)(a) of the Companies Act, 1956."

8. (As a special resolution)

"Resolved that the regulations contained in the printed document submitted to the Meeting and for the purpose of identification signed by the Chairman thereof be and the same is hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof."

The Transfer Books of the Company in respect of the ordinary shares will be closed from the 6th June 1963 to the 20th June 1963, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of such dividend as may be declared on the ordinary shares will be made on or after 27th June, 1963 to those members whose names are on the Company's register on the 20th June, 1963.

By Order of the Board,

Y. S. TAYAL,
Secretary.

4, CLIVE ROW,
CALCUTTA,
9th May, 1963.

"*Note*: The Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been forwarded to the members of the Company."

TEXTILE MACHINERY CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-third Annual General Meeting of TEXTILE MACHINERY CORPORATION LIMITED will be held on Friday, the 28th June, 1963, at 4.00 p.m., at the Registered Office of the Company at Belgharia, 24-Parganas, West Bengal, to transact the following business:—

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 31st December, 1962.
2. To declare dividend on Preference and Equity Shares.
3. To appoint Directors in place of Shri J. M. Goenka and Shri Surottam P. Hutheesing, who retire by rotation and are eligible for re-election.
4. To appoint Auditors and fix their remuneration.
5. AS SPECIAL BUSINESS:

To consider and, if thought fit, to pass with or without modification the following resolutions:

A. *As an Ordinary Resolution*:

"Resolved that the reappointment of Messrs. Islamistan Traders (Regd.) of Bashir Manzil, Montgomary (West Pakistan), as sole selling agents for the sale of all items of textile machineries and accessories in West Pakistan for a period of 3 years with effect from 16th May, 1963, on the same terms and conditions as contained in the previous agreement dated 6th June, 1960, be and is hereby approved."

B. *As a Special Resolution*:

"Whereas Messrs. Birla AG incorporated in Switzerland, an associate of Messrs. Birla Brothers Private Limited, the Managing Agents of the Company, maintain an office in ZUG in Switzerland and whereas the said Company is established to carry on business *inter alia* of acting as Agents in the Continent, United Kingdom and other countries for purchase and sale of goods including stores, plant and machinery, etc., and propose to have dealings and business connections with parties all over the Continent, United Kingdom and other countries and operate on a large scale and whereas their expenses of maintaining their office establishment are likely to amount approximately to Swiss Francs 200,000 per annum in the initial stages and whereas expenses which can be attributed to the work to be done for and on behalf of the Company would depend on the value of purchase effected through the said Company in relation to their total turnover in each year, now it is hereby resolved that Messrs. Birla AG be and are hereby appointed to act as Buying Agents and Selling Agents of the Company for periods of 3 years and 5 years respectively with effect from 1st October, 1962, in the Continent, United Kingdom and other countries on the following terms as to commission.

(a) For purchase of stores, etc. 5% of the invoice price.

(b) For purchase of plant and machinery 2½% of the invoice price, and

(c) For sale of goods manufactured/produced by the Company 2% of the invoice price,

Provided that if anything to be done in pursuance of the above arrangements requires permission of the Central Government or the Reserve Bank of India, as the case may be, the same will be done with such permission.

The Register of Members and the Share Transfer Registers of the Company will remain closed from 16th June, 1963 to 28th June, 1963, both days inclusive.

By Order of the Board,

R. C. MAHESHWARI,
Finance Officer.

BELGHARIA,
21st May, 1963.

N.B.—(1) A member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a member.

(2) The dividends, when declared, will be paid to the registered shareholders whose names are on the Company's Register on the 28th June 1963, or to their order or to their bankers on/or after 21st July 1963.

(3) An Explanatory Statement relating to the special business is being forwarded to the members.

SHAW WALLACE AND COMPANY LIMITED

THE FIFTH ANNUAL GENERAL MEETING OF KHANDELWAL FERRO ALLOYS LIMITED WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY, "KHANDELWAL BHAVAN," 166, DR. DADABHAI NAOROJI ROAD, BOMBAY-1, ON THURSDAY, THE 27TH JUNE, 1963, AT 4-15 P.M., TO TRANSACT THE FOLLOWING BUSINESS:

(1) To receive and adopt the Directors' Report and Audited Balance Sheet as at 31st December, 1962 and the Profit and Loss Account for the year ended upon that date.

(2) To elect a Director in place of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who retires by rotation and to consider and, if thought fit, to pass the following Resolution for which special notice as required under Section 281 of The Companies Act, 1956, has been received by the Company:

"RESOLVED that pursuant to the provisions of Section 281 of The Companies Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who has already attained the age of 75 years and who retires by rotation, be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit prescribed by Section 280 of The Companies Act, 1956, shall not apply to him."

(3) To elect a Director in place of Shri Kamalnayan Bajaj, who retires by rotation, and being eligible, offers himself for re-election.

(4) To elect a Director in place of Shri H. T. Niblette, who retires by rotation and being eligible, offers himself for re-election.

(5) To consider, and if thought fit, to pass the following Resolution as a Special Resolution with or without modification:

"RESOLVED that pursuant to Section 360 and other applicable provisions (if any) of the Companies Act, 1956 (as amended), the Company hereby approves all arrangements already entered or to be entered into hereafter with Messrs. Khandelwals Ltd., London, who are, or may be deemed to be associates of the Managing Agents of the Company for sale of property and goods by the Company, the material terms whereof being:

(a) That the prices thereof shall be at the prevailing market rate at the place of disposal and if there is no market rate at the place of disposal, then such rate as is deemed reasonable by the Board of Directors;

(b) That all sales so made will be sanctioned by the Board of Directors from time to time;

(c) That for any property or goods sold by the Company, Messrs. Khandelwals Ltd., London, shall make payment to the Company within one month from the date of the sale of property or goods."

(6) To appoint Auditors and to fix their remuneration.

By Order of the Board,
For & On Behalf of KHANDELWAL FERRO ALLOYS LTD.,
KHANDELWAL INDUSTRIES PRIVATE LTD.,
Managing Agents,
RAMPRASAD KHANDELWAL,
Director.

BOMBAY, *16th May*, 1963.

(2) The relevant explanatory statement pursuant to Section 173 of the Companies Act, 1956, is being posted to all the shareholders individually, along with the Notice of the aforesaid Meeting.

(3) The Register of Members of the Company will be closed for transfers from the 21st June, 1963 to the 27th June, 1963, both days inclusive.

HOPE'S METAL WINDOWS (INDIA) LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Fifth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 13th June, 1963, at 3.30 p.m., to consider the Accounts of the Company for the year ended 31st December, 1962, to transact other ordinary business and the undernoted special business:

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolutions:—

(*To be proposed as Ordinary Resolutions*)

1. "That 1,20,107 ordinary shares of Rs. 10 each (ranking for dividend in the manner mentioned in Resolution No. 2 set out below and in all other respects *pari passu* with the existing issued shares of the Company) be issued and offered for susbcription for cash at par in the first instance to the members of the Company as at 14th June, 1963 in the proportion of one new share for each ordinary share in respect of which the members of the Company are respectively registered on that date with the right to renounce all or any part of the shares so offered and upon the footing that the full amount of each share taken up shall be paid to the Company on application and that applications for the said new shares be invited by notice specifying the number of shares for which members may apply, and limiting a time not being less than fifteen days from the date of the said notice within which applications accompanied by remittances in payment for the shares applied for must be received by the Company failing which the invitation will be deemed to have been declined, and that the Board of Directors of the Company be and is hereby empowered to dispose of the shares, applications for which accompanied by remittances are not received within the time limit aforesaid, in such manner as it considers expedient in the interests of the Company and in particular to such other persons in whose favour the right to apply for any new shares has been properly renounced, provided that the allotment of the said new shares shall be subject, in the case

of members not resident in India, to the consent of the Reserve Bank of India being obtained thereto in accordance with the provisions of The Foreign Exchange Regulation Act, 1947."

2. "That the said new shares shall be entitled to participate in the dividend, if any, which may be declared on the shares of the Company in respect of the year ending on the 31st day of December, 1964."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 11th June, 1963 to 8th July, 1963, both days inclusive.

THE MAHARASHTRA SUGAR MILLS LIMITED

NOTICE

To

THE MEMBERS OF THE MAHARASHTRA SUGAR MILLS LTD.

NOTICE IS HEREBY GIVEN THAT THE TWENTY-NINTH ANNUAL GENERAL MEETING of THE MAHARASHTRA SUGAR MILLS LIMITED will be held on MONDAY the 24TH DAY of JUNE 1963, at 4-0 p.m., at the Registered Office of the Company, Industrial Assurance Building, Churchgate, Bombay. The Notice of the Meeting setting out the ordinary and special business to be transacted thereat and the Explanatory Statement attached thereto, together with the Balance Sheet and Profit and Loss Account for the year ended 30th September 1962 and the Auditors' Report thereon and the Directors' Report are already sent by post to the Shareholders at their Registered addresses.

By Order of the Directors,

THE MAHARASHTRA SUGAR MILLS LIMITED,

M. L. DAHANUKAR & Co. PRIVATE LTD.,

D. M. DAHANUKAR,
Director,
Managing Agents.

BOMBAY,
Dated 28*th May*, 1963.

N.B.:—(i) The Transfer Books of the Company will remain closed from 16th to 30th June 1963, both days inclusive. If the issue of Bonus shares as recommended by the Directors is sanctioned by the Members at the General Meeting, the Transfer books will be closed therefor from 27th July to 6th August 1963, both days inclusive.

(ii) A Member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a Member.

(iii) If dividends as recommended by the Directors are sanctioned at the Meeting, the dividend warrants will be posted to those Members whose names stand on the Company's Register as on 30th day of June 1963. The payments will be made on and after 1st day of July 1963.

NEWS IN BRIEF

THE next session of Parliament will commence on 13th August next.

Under an agreement reached between India and Switzerland, Air India will operate three services a week through Switzerland via Geneva and Swissair will operate services through India, two via Bombay and one via Calcutta.

The State-owned Shipping Corporation of India has started its new India-U.S.A. Service with effect from 29th May. The ship M.V. *Vishva Maya* will be proceeding on its maiden voyage from Calcutta to the U.S.A. in the first week of this month.

A five-man Australian mission (Leader: Mr. M. Ryan) is arriving in India shortly to advise on the organisation and development of the wool industry. The visit has been sponsored by the Colombo Plan. In particular, the mission is expected to suggest improvements in shearing and marketing methods.

A uniform set of standing orders will henceforth govern the labour employed in Central Government undertakings throughout the country in accordance with the decision taken by the Government recently. Amending legislation to give effect to the decision has been approved by it. At present, public sector enterprises are subjected to the standing regulations in force in the respective States.

The Bishrampur colliery in the Surguja District of Madhya Pradesh is expected to go into commercial production by the end of this year. It is expected to produce annually 2.7 million tons of average quality grade one coal. The total reserves in the area are estimated at 77 million tons, of which 35 million tons are quarriable. The colliery is being developed by the National Coal Development Corporation.

The Government of India has decided that walnuts exported from India will have to be compulsorily graded under Agmark from August next. It has been felt in recent years by the trade as well as the Government that quality control and preshipment inspection of walnuts are essential for stabilising and promoting the export trade. Walnuts worth about Rs. 1.30 crore are exported every year from India to the U.K., Canada, the U.S.A. and Australia.

Development of a strong co-operative structure is felt essential in Goa for improving marketing of agricultural produce, according to a survey conducted by the Research Wing of the Directorate of Marketing and Inspection under the Union Ministry of Food and Agriculture. The result of the survey indicates that, for providing more incentive to farmers in Goa to increase production, it is necessary that they obtain a fair share in the price finally paid by consumers for their produce. They can only be possible by organising marketing co-operatives of primary producers. All major agricultural commodities produced in Goa like paddy, cocoanut, cashew, pineapple, mangoes and arecanut are also covered in the survey.

A four-member F.A.O. team of experts arrived in New Delhi this week to carry out a special study on routing agricultural finance through co-operatives and farmers' organisations. This study is intended to help strengthen the existing institutional framework for channelling financial assistance to farmers. It will also try to provide a basis for the most effective use of finances available in order to increase agricultural production and improve the processing and distribution of agricultural products. The experts will have talks with the officials of the Ministry of Community Development and Co-operation, Ministry of Food and Agriculture, Planning Commission and the Reserve Bank of India. They will also hold talks with non-official leaders of the co-operative movement in the country.

The Central Government has set up a committee to review the position of explosives and electric detonators for the collieries. The Deputy Coal Controller is the convenor of the Committee which includes the representatives of Imperial Chemical Industries, Indian Detonators, and Joint Working Committee of the coal industry. The committee meets periodically to review the demand and supply position of explosives and the shipping programmes of permitted explosives and detonators. The Government has already licensed the Imperial Chemical Industries and the Indian Detonators for the import of explosives and detonators from abroad. Two consignments of two million ordinary detonators and 500,000 electric detonators were airlifted from Hungary to Delhi in March this year to meet the shortages. A large consignment of detonators has also arrived by sea.

As a result of discussions between the Governments of Japan and India regarding Japan's additional yen credit of $15 million (Rs. 7.14 crores) for the first two years of India's third Plan, announced by the Government of Japan at the Consortium meetings held at Washington on 28th May 1962 and 30th July 1962, an understanding was reached on Thursday last week to the effect that the 5.4 billion yen credit (Rs. 7.14 crores) would be made available for the first two years of the third Plan, in addition to the second yen credit of 28.8 billion yen by the Export-Import Bank of Japan, together with private Japanese banks, to assist in the financing of India's purchases from Japan. The credit will be used for the Durgapur special steel and alloy project as well as for purchases from Japan. The credit of 5.4 billion yen is repayable over 15 years, with a grace period of five years. Including the present credit, the amount made available by Japan since the commencement of the third Plan is approximately Rs. 50 crores (37.8 million yen). The grand total of the assistance extended by Japan to India so far amounts to Rs. 102.37 crores (77.4 billion yen).

The twenty-third general body meeting of the Central Silk Board was held at Bombay on Tuesday this week. Addressing the meeting, Mr. R. Doraiswamy, Textile Commissioner and Chairman of the Board, revealed that the total silk production registered a rise of 10 per cent during the year 1962, when the quantity actually produced was 1.82 million kg., as against 1.66 million kg. in 1961. He further stated that exports of pure silk fabrics touched a record of Rs. 86.07 lakhs last year, representing an increase of 28 per cent over 1961; this figure does not include exports of silk tasar fabrics worth Rs. 36.37 lakhs to the U.S. He, however, warned that the buoyancy would be short-lived, if the recent spiralling prices remained uncontrolled. In this context, he observed that, although the recent price-hike in raw silk was to a certain extent due to rise in international silk prices, yet the problems required an imaginative policy and pragmatic approach before it impaired the silk export trade.

An agreement on the maximum prices at which *vanaspati* may be sold by manufacturers, wholesalers and retailers in different parts of the country has been reached between the Government of India and the *vanaspati* industry. This follows the offer voluntarily made by the industry to maintain prices of vegetable oil products, ex-factory and through wholesalers and retailers. Early last week, the Government announced its decision to withdraw the Essential Articles (Price Control) Order 1963, issued on 1st May 1963, in so far as it relates to *vanaspati* and to permit the industry to regulate prices on the basis of its offer. For the purpose of these prices, the country has been divided into six zones. At the factory level, the price is limited to between Rs. 2.56 and Rs. 2.68 per kilo when sold in large packs containing 16.5 kg. or more of *vanaspati*. An increase of 10 nP is permitted in the case of sale in large packs by persons other than the producer or his agent. A further 10 nP is permitted for loose sales in small quantities. Maximum wholesale and retail prices have been also announced for all zones in respect of sales in small packs of 8 kg., 4 kg., 2 kg., 1 kg., 500 gms. and 25 gms. In Delhi, for instance, the maximum retail prices of packs containing one kg. will be Rs. 3.34 and of packs containing 2 kg. will be Rs. 6.48. These ceiling prices will also apply to the Punjab, Uttar Pradesh, Rajasthan, Himachal Pradesh and Jammu and Kashmir all of which will be in the same zone as Delhi.

The State Trading Corporation delegation has just returned to India after concluding an agreement for the export of iron ore to Japan. Under the contract, Japan will import 2.54 million tons and 2.65 million tons of various grades of iron ore during the year 1963-64 and 1964-65, respectively. Japan is the largest buyer of Indian iron ore and imported 1.75 million tons of ore in 1962-63. In addition to the normal annual purchases, Japan will be taking another two million tons of iron ore per year from 1964 onwards for a period of ten years from Kiriburu area and four million tons per annum from Belladila area for a period of 15 years commencing from the middle of 1966. A separate agreement has also been reached for the import of steel products in India during the period 1963-65 valued at Rs. 4.58 crores at prices to be negotiated.

* * * *

From Abroad

The West German Government has forwarded the drafts of an agreement on economic and technical co-operation and of an agreement on mutual capital protection to the Government of Iraq.

The Government of New Zealand has approved the proposals of the Fibre Makers (Australia), a subsidiary of British Nylon Spinners and I.C.I., and the Von Kohorn International Corporation for the manufacture of nylon yarns and staple fibres in New Zealand.

The gross hourly wages paid by the industries in West Germany rose by 42 per cent between 1958-62. This compares with a rise of about 33 per cent in France and Italy and almost 12 per cent in Britain. In the U.S., wages went up by 11 per cent.

Although the world's newly-mined gold supplies rose in 1962 by only 700,000 ounces to 43.2 million ounces, private gold hoarding, including "investment" accounts, absorbed 23.2 million ounces—an increase of 7.2 million ounces over the previous year, according to Union Corporation, one of South Africa's leading gold mining groups. The total free world production last year was 37.2 million ounces, an increase of 2.2 million ounces as compared with that of 1961. The Soviet Union produced 6 million ounces as against 7.5 million ounces in 1961. South Africa produced 25.5 million ounces, an increase of 2.5 million ounces. Canada's output at 4.2 million ounces and that of the U.S. at 1.5 million ounces showed a decline. Australia's production improved slightly to 1,075,000 ounces.

MR. J. H. Shah and Mr. A. K. Bhimani have been elected President and Vice-President, respectively, of the Bombay Industries Association for the year 1963-64.

Mr. Ramnath A. Podar and Mr. G. K. Devarajulu have been elected Chairman and Deputy Chairman, respectively, of the Indian Cotton Mills' Federation for the year 1963-64.

Mr. L. K. Jha, Secretary, Department of Economic Affairs, Union Ministry of Finance, arrived in New Delhi on 27th May after his visit to Washington, London and Geneva.

Mr. Thomas W. Childs of Bermuda has been appointed Chairman of the International Nickel Company (Mond) Limited and Vice-President of the Canadian parent company.

A series of agreements for stimulating and safeguarding German investments in Greece will be coming into operation in the next few weeks. The first agreement, which came into force on 24th May, provides for a general stepping up of German investments and expansion of credit facilities to Greek importers. It will be followed soon by measures for safeguarding foreign investments against nationalisation.

The world's scheduled airlines earned an estimated overall operating profit of about $60 million during 1962, in distinct contrast to the loss of $118 million suffered in the previous year, according to the International Civil Aviation Organisation. The airline fleet consisted of 5,107 aircraft, as compared with 5,103, the number of jet airliners rising from 609 to 756.

A special committee of the Organisation for Economic Co-operation and Development (O.E.C.D.) will investigate the difficulties of shipbuilding industries. Japan, the main competitor of American and European shipbuilders, has agreed to lend its co-operation to the Committee in its investigation. The Committee will examine the means and ways by which individual countries are backing their shipbuilding industries and how the present crisis can be solved.

The U.S. Treasury is considering new methods of increasing depreciation allowances by compensating for the rise in replacement costs caused by inflation. In many industries, notably steel, the replacement cost of productive machinery is far greater than the original cost on which depreciation is based. However, no new legislation will be presented in this behalf to the Congress this year, in view of the priority attached to President Kennedy's tax reduction proposals, but it may have new depreciation proposals to offer during the year 1964.

The Trust Companies Association, the Investment Dealers Association and the Stock Exchanges of Canada have jointly put forward certain proposals regulating take-over bids. It is suggested that the name of the bidder be disclosed to the Company's directors and the directors be given adequate time properly to consider the terms of any offer. At the same time, it is emphasised that the Directors should inform shareholders as soon as possible of any offer made. It is also suggested that a take-over bid should embrace the entire share capital of company or the class of shares concerned.

The Norwegian Parliament has unanimously approved the Government's plan for a 20-member Norwegian Peace Corps created for voluntary work in the developing countries. It is intended that the corps will eventually be extended to 60 members when some practical experience has been gained in the field. The members of the Corps will be sent to developing countries according to agreement with the countries concerned. They will work in these countries for a period of two years on a technical assistance basis in various fields: as teachers, technical consultants in forestry, agriculture, fishing, manufacturing, handicrafts, medical advisers, assist with organisational work, or take part in the building of roads, bridges, schools, etc. Minimum age for members of the Peace Corps will be 21. Norway is the first country after the U.S.A. to set up such a Corps.

TREND OF MARKETS

MONEY SLIGHTLY EASY

(From Our Own Correspondent)

BOMBAY, 29*th May*

There was a slight improvement in the tone of the short-term market during the week under review. The supply of funds was quite large and borrowers found no difficulty in obtaining their requirements. Since demand for accommodation was comparatively less, business actually put through was restricted. Today, however, conditions were stringent and inter-bank call rate, which had receded from 4½ to 3¾ per cent, rose again to 4 per cent.

The question of stepping up standard rates of interest on deposits was considered by the Indian Banks Association at its meeting held on Friday the 24th inst. No decision was, however, taken, as it was thought that the question should be considered again after some time in the light of more experience. Presumably the bankers might have thought that, if they were to revise the standard rates upwards, the State Bank, which has enhanced its deposit rates to parity with the standard rates quoted by big banks since 1st April 1963, would effect a further rise in its rates so as to maintain parity with standard rates.

Despite the easiness of the money market, the response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 28th inst., continued to be poor. The total amount offered was no more than Rs. 2 crores (same as last week), which was also the amount invited and accepted. The average rate of accepted tenders was lower again at Rs. 2.350 per cent per annum, as against Rs. 2.355 a week ago. The response to Intermediate Treasury Bills was also poor, the Bills actually sold from the 22nd to 25th inst. being only Rs. 80 lakhs, as against Rs. 1.65 crore in the previous week.

The prevailing easy conditions in money are reflected in a further sharp fall of Rs. 22.13 crores to Rs. 2,295.75 crores in notes in circulation during the week ended 24th May 1963. Loans and advances to scheduled banks also fell by Rs. 16.16 crores to Rs. 8.76 crores, of which those against usance bills accounted for Rs. 6.28 crores, a fall of Rs. 11.21 crores. India's foreign assets rose again, albeit by a smaller sum of Rs. 34 lakhs to Rs. 119.47 crores. The rise was due to the sharp increase of Rs. 5 crores to Rs. 110.08 crores in foreign securities which more than made good the decline of Rs. 4.65 crores to Rs. 9.39 crores in balances held abroad.

The total credit made available by scheduled banks to their clients receded appreciably by Rs. 19.45 crores to Rs. 1,569.72 crores during the week ended 17th May. Since, at the same time, deposits spurted by Rs. 12.31 crores to Rs. 2,244.56 crores and inter-bank borrowings by Rs. 8.90 crores to Rs. 52.16 crores, the scheduled banks reduced their borrowings from the Reserve Bank to the extent of Rs. 20.81 crores. The total outstandings amounted to Rs. 25.02 crores, of which the sum borrowed against usance bills was Rs. 17.45 crores, a decline of Rs. 13.24 crores. The banks also strengthened their investment portfolio by Rs. 10.57 crores to Rs. 617.42 crores.

The notable development of the week in so far as the Gilt-edged market is concerned was the resumption, with effect from Monday the 27th inst., of open market operations by the Reserve Bank with tap sales of the new two loans which the Government offered as conversion loans. The loans are available at their issue price, namely, Rs. 99.50 in the case of 4 per cent. 1969 and Rs. 100 in respect of 4½ per cent 1986 loan. The Reserve Bank has also reduced the selling price of 3½ per cent 1969 loan by 50 nP to Rs. 97 and increased the purchase price of 3½ per cent 1964 loan by 10 nP to Rs. 99.60.

In the foreign exchange market, the banks selling and buying rates per 100 dollars were lower by 25 nP each at Rs. 478 and Rs. 474.50, respectively. In New York, the pound sterling strengthened *vis-a-vis the dollar, the spot rate per £ rising* by 0.090 cent to 280.030-280.060 and the three months' forward by 0.080 cent to 279.520-279.550 cents.

SILVER SAGS

(From Our Own Correspondent)

BOMBAY, 29*th May*

Silver sagged and gold and sovereign closed easier this week. The white metal turned distinctly weak, after a slightly lower start, as the pressure of arrivals increased to 30 bars a day on average, while offtake dwindled from 14 bars to nine bars. Gold and sovereign eased largely in sympathy with silver.

Silver opened on Thursday 23rd May one point lower at Rs. 231 and receded further to Rs. 229 on the same day. The downward trend continued uninterrupted till Monday 27th May, when the price declined to Rs. 224. Yesterday, the price hovered round Rs. 224.50, but today it rallied to Rs. 226, at which level it was six points lower over the week.

Till the mid-week, gold was steady at the last week's closing level of Rs. 113, after having opened at Rs. 114. From Monday, it gradually eased to round off the week at Rs. 111. Sovereign was quoted higher at Rs. 84 from Thursday to Saturday, but, on Monday, it eased to Rs. 82 at which levels it closed today, as against Rs. 83 a week ago.

Silver in New York moved down from 128.4 cents to 127.8 cents on the slowing down of demand. In London, too, the ready rate eased from 110½d. to 110¼d. and so did the forward quotation from 110¾d. to 110⅝d. Gold closed lower at 250s. 6d., as compared with 250s. 7¼d. a week ago. The dollar price for gold also slipped down from $35.07⅞ to $35.07½.

An important development overseas was the decision of the New York Commodities Exchange on Monday 27th May to prepare standard contracts for resumption of futures trading in silver after the lapse of 29 years. A futures market, forbidden by U.S. law since 9th August 1934, is expected to even out wide fluctuations in silver prices. Commercial users, such as photographic supply houses and electrical manufacturers, will be able to place futures contracts and know how much the metal will cost them when needed for their manufacturing activities. The Exchange said that it did not know when the futures trading would start, since the Bill repealing the Federal ban had not been signed by President Kennedy. It was finally enacted by Congress last week and sent to the White House. However, market sources speculated that 4th June would be the earliest date for starting the futures market. The revocation of the ban on silver futures trading is only one aspect of the Bill now awaiting Presidential approval which is certain. The Bill also removed the provision that the U.S. Treasury must buy all U.S.-produced silver at 90.5 cents per ounce—the price is now around $1.28 per ounce. It also eliminated the need to hold 1.3 billion ounces of silver as backing for dollar bills. This Treasury silver can be used for small coinage as the need arises.

British embassy sources at Washington denied on Monday 27th May a report in the *U.S. News and World Report* that the British Government was pressing the U.S. to double the international price for gold from $35 to $70 "in order to assure the world financial resources to support an expanding foreign trade."

Defending the Gold Control Rules in the course of his speech at Muzaffarpur on Sunday this week, Mr. Morarji Desai, Union Finance Minister, denied that contraband gold was still flowing into the country. He stated that the State Governments had been instructed to help gold artisans by providing them employment or assistance for setting up some other business.

The Government has decided to grant incentives for sale in foreign exchange of *zari* goods and silverware and brocades of real *zari* to tourists visiting the country. The incentives are in the form of entitlements of 75 per cent value of such sales for the import of gold, silver, glass beads, chattons, copper, synthetic fibres, art silk yarn, guilding chemicals, raw silk and polishing materials. The scheme is to take effect from July next. Licences for the import of gold and silver will be issued by the Reserve Bank of India and the use of gold will have to be reported in accordance with the provisions of the Gold Control Rules.

The following table shows the trend of prices during the week under review:

	29-5-63 (closing)	High	Low	22-5-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine)	226.00	231.00	224.00	232.00
GOLD				
Ready (.996 fineness)	111.00	114.00	111.00	113.00
Sovereign	82.00	84.00	82.00	83.00
London—				
Gold	250s 6d.	250s. 7d.	250s.6d.	250s.7¾d.
Silver Ready	110¼d.	110⅝d.	110¼d.	110¼d.
Silver Forward	110¼d.	110⅝d.	110¼d.	110¼d.
New York—				
Silver	127.8 cents	128.4 cents	127.8 cents	128.4 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.78 tolas). London and New York quotations are per ounce.

JARILLA MAY GOES OFF THE BOARD

(From Our Own Correspondent)

BOMBAY, 29*th May*

The most important development of the week in the cotton futures market was the expiry, on 25th May, of the second hedge contract of the current season, namely, Jarilla May 1963. The last known quotation for the contract was Rs. 729.50 per three quintals. 550 bales of cotton were tendered against the contract of the last day which brought the total to 3,700 bales, comprising 1,050 bales of Laxmi A, 1,050 bales of Gaorani, 400 bales of Punjab American 216F, 300 bales of Kalyan, 300 bales of Laxmi B, 250 bales of Cambodia "C", 150 bales of L.147, 100 bales of Vidarbha Jarilla, 50 bales of Jaydhar and 50 bales of Buri/American.

It is noteworthy that the May contract has attracted a much larger volume of tenders as compared with the previous contracts, namely, Jarilla March 1963, tenders against which aggregated only 200 bales. The large volume of tenders is taken as an indication of the improved supply position of cotton, thanks to the prospects for a good crop which is currently estimated at over 5.4 million bales.

With the expiry of the May contract, the August contract became the centre of attraction. Prices, however, showed a sagging tendency because of the near-certainty of a record crop this season and reduced activity in the ready section. The contract, which had firmed up from last week's closing rate of Rs. 719.50 per three quintals to Rs. 726 on 24th May, in sympathy with the May contract, declined to Rs. 720.50 at close.

In the spot market at Sewri, mill demand was very limited. Needy mills, however, bought moderate quantities of such popular varieties as L.147, Co2, Digvijay, and Kalyan. Prices generally ruled easy. Demand for foreign cotton was fairly good. Spinners evinced interest in Sudan, Egyptian and East African cotton and sizable quantities changed hands. U.S. cotton also attracted some attention.

The export section was devoid of any activity. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Kalyan 1,000; Wagad 900; Co2 (Nagar) 1,600; L.147 1.220; American (on sample) 1,360; Sudan G5S 1,398; Egyptian Menoufi 1,570.

Cotton futures in Karachi ruled firm during the week under review. The N.T.R.G. May contract went off the board on 25th May. The July contract attracted fresh support and rose from last week's closing rate of Rs. 75.40 to Rs. 73.80. Ready prices were well maintained.

Barring the May contract, which ruled easy, cotton futures in Liverpool depicted a generally steady trend. Activity was, however, limited and price movements narrow. In the absence of any fresh incentives, trading interest was lacking. In the spot section, spinner inquiry for American type and long-staple cottons showed some improvement. Sudanese, Pakistan, and Egyptian cotton also attracted attention. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May 23.25; July 23.05; October 23.00.

Sudan: May, July, September 29.00.

Cotton futures in New York suffered a modest setback during the week. Moderate volume of hedge selling induced by the absence of any new developments resulted in a decline in prices. Further fall was, however, prevented by the emergence of support for the nearby July contract and the continuing firmness of spot prices. Traders were generally inclined to think that export prices of the U.S. cotton were unlikely to undergo any significant change in the near future.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago:

(In cents per lb.)

	28-5-63	21-5-63	14-5-63

YARNS STEADY

(From Our Own Correspondent)

BOMBAY, 29*th May*

Steady to slightly better conditions were discernible in the yarn market during the week under review. Some varieties of art silk yarns staged a moderate recovery, due presumably to reports that spinners were to ask the Textile Commissioner for an increase in the price of yarn supplied to the indigenous manufacturer-exporter of rayon fabrics under the export promotion scheme. Staple fibre yarns were a shade higher. Cotton yarns maintained their previous levels.

In art silk yarns, National Rayon 120D rose smartly from Rs. 11.26 to Rs. 11.75 a kilo and S.I. Viscose 120D gained 6 nP to Rs. 13.46, but Century 100D eased further from Rs. 13.40 to Rs. 13.33. Staple fibre yarn 2 x 40 spot Kohinoor was up by 7 nP to Rs. 8.80 and City by 9 nP to Rs. 8.54. Among cotton yarns, 40s Gokak eased from Rs. 35.50 to Rs. 35.

Spinners of rayon yarn are likely to approach the Textile Commissioner for an increase of about 67 nP in the price for all deniers of yarn supplied to the indigenous manufacturer-exporters of rayon fabrics under the export promotion scheme. The price is fixed on the basis of the rates in Italy, which have been raised for all counts of viscose yarn by 3.25d. (18 nP) to 97d. per kg. since 17th May 1963, and hence the spinners' plea for the proposed increase. Under the export promotion scheme, the manufacturer-exporters of art silk fabrics surrender 30 per cent of their import entitlements to spinners for the import of rayon grade wood pulp, who, in turn, provide them with 0.75 lb. of yarn at concessional rates for every rupee of entitlement surrendered by them. It is estimated that, under the scheme, the spinners provide the manufacturer-exporters with a third of their production, which at the present level of output works out to 8 million kg.

The Southern India Millowners' Association has urged the Cotton Textiles Export Promotion Council to request the Railway Board to extend the present 25 per cent concession in railway freight on cotton textiles meant for export to cotton yarn for export as well, in view of the highly competitive conditions in foreign markets and the increased production costs.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	29-5-1963	22-5-1963
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	11 75	11 26
Century 75D	18 28	17 95
S. I. Viscose 150D	13.46	13.07
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.)	8 80	8.72
Century	8.12	8.12
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	18 00	18 00
20s Modern	25 50	25 50
30s Kohinoor	29 50	29 50
40s Hind	35 00	35 50
60s Kasturi	47 00	46 50
80s Laxmi	83.50	83.50

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 29*th May*

Oilseeds continued to forge ahead during the week under the leadership of groundnuts. Groundnut July hedge contract pierced the weekly ceiling range of Rs. 5 and touched Rs. 231.12 on Friday and moved up further in unofficial dealings to Rs. 232.50. Spot seeds and oils also ruled firm, thanks to steady offtake by *vanaspati* manufacturers, following the withdrawal of the official control on prices, and encouraging advices from the extraction dealers induced by large purchases by some East European countries. There was, however, a pause in the uptrend towards the close, reflecting disappointment of a section of operators over the small increase in maximum prices for *vanaspati* which the Government has brought into force on the basis of the offer made by the industry. But the closing prices were still much higher than those a week ago. Castorseeds also put on a cheerful appearance on account of some export enquiries for castor oil. Linseeds ruled steady on better advices from the North Indian mustard markets. In sympathy, cottonseeds were well supported.

Groundnut July 1963 contract rose from Rs. 227.87 to Rs. 231.12 (weekly ceiling) on Friday, but moved down subsequently to Rs. 231. September 1963 contract improved from Rs. 229.12 to Rs. 231.12 initially, but declined later to Rs. 228.75. Khandesh quality spurted by Re. 1.75 to Rs. 49 and Nizam bold by Re. 1.50 to Rs. 48. Oil railway receipts strengthened by 65 nP to Rs. 18.50. Oil ex-mill improved from Rs. 18.25 to Rs. 18.90, before winding up at Rs. 18.50.

Castorseed September 1963 contract closed higher by 75 nP at Rs. 164.75; it had touched Rs. 166.37 earlier during the week. June 1963 contract closed today at Rs. 158, as against Rs. 157.62. Madras small put on 50 nP to Rs. 31.62. Oil B.S.S. rose by 35 nP to Rs. 13.35.

Linseed bold ready gathered 75 nP to Rs. 37. Linseed oil scored a gain of 35 nP to Rs. 14.50. Linseed September 1963 contract moved up initially from Rs. 38.44 to Rs. 39.19, but suffered setback thereafter to Rs. 38.06.

Cottonseed July 1963 contract firmed up by 75 nP to Rs. 105.75. Both non-white and berar increased by 88 nP to Rs. 23.

The following table shows the closing prices of oilseeds and oils on Wednesday 29th May, as compared with those of two previous weeks:

	29-5-1963	22-5-1963	15-5-1963
	Rs.	Rs.	Rs.
Groundnuts			
July 1963 contract	231 00	227 87	224 62

Cottonseed			
July 1963 contract	105.75	105.00	104.00

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

QUALITY TEAS DECLINE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 22*nd May*

Offering in Sale No. 21 held on 21st May 1963 amounted to 877,000 kgs. Quality from all districts showed a seasonal decline. Good demand prevailed throughout the sale, but all descriptions were generally easier, particularly towards the close. Plainest sorts were easier by about 15 to 20 nP per kilo. Brokens grades of low medium and medium descriptions encountered fair support, though they were generally easier. Cleaner descriptions were better supported. Equivalent fannings were sold at a drop of 10 to 20 nP per kilo. Good mediums attracted quite good demand but registered a decline of about 20 nP per kilo. The best highgrowns fell considerably, while other highgrown brokens were barely steady. Similar fannings were also easier. Clean black leaf types were fairly steady, whereas white leaf grades followed the general trend of the market at irregularly easier rates. Teas of unorthodox manufacture were well supported, but registered a decline.

The quotations were (per kg.):

	1963	1962
	Rs.	Rs.
Low mediums	4.00-4.30	3.90-4.20
Mediums	4.30-4.55	4.20-4.80
Good mediums	4.60-5.20	4.75-5.50
Nilgiri B.O.P.	4.60-7.20	4.50-6.20

The average price realised in sale No. 21 was Rs. 4.34 per kilo, as compared with Rs. 4.51 a week ago and Rs. 4.42 in the corresponding sale last year.

In Dust sale No. 21 held today, 410,000 kgs. were offered. The market met with good demand but at easier rates. Low medium and medium dusts declined irregularly by about 10 to 20 nP and sometimes more towards the close. Good mediums, particularly the Wynaad types, were well supported, though prices for these followed the easier trend of the market. Highgrowns and dusts of unorthodox manufacture were barely steady on last prices. Black grainy descriptions sold well but at easier rates.

The average price realised in dust sale No. 21 was Rs. 4.03 per kilo, as against Rs. 4.03 a week ago and Rs. 4.34 in the corresponding sale last year.

Colombo: Offerings at this week's sale were, for the most part, plain and came to a lower market. There was little change in the prices realised for lowgrowns, but highgrowns declined by 15.13 cents and mediums 5.15 cents per lb.

London: North Indian and other growths: There was active demand on Monday at fully firm rates except for the poorest teas which came to an irregularly easier market.

Ceylon and South Indians: In Tuesday's auction, 25,654 packages were on offer, of which 6,430 packages came from South India. Lowgrown Ceylons came to a much easier market, whilst others met with little change. Quality of offerings is beginning to decline. South Indians were quoted irregularly easier, plain types in particular selling at lower rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 22: 784,000 kgs. offered. Good general demand. Plain and low medium irregularly 15 to 20 nP easier. Mediums 20 nP lower. Highgrowns irregular and often easier. Unorthodox slightly lower."

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 28*th May*

Despite good demand, the price at this season's first tea export sale last week, failed to reach the expectations because of the stockpiling done by foreign buyers in the closing months of 1962 in view of the apprehension that supplies from India might be interrupted by the Chinese aggression. Nonetheless, fair activity was in evidence this week in the freight market for tea, though in view of the measured support of foreign buyers, no hurry was displayed in booking forward space.

It has also been a source of anxiety that at the last week's sales in London only a few lines of North Indian tea met with strong demand. The price trend in the export auctions held at Cochin on 21st May was also similar. Although a seasonal fall in quality was indicated in Cochin, the fall of 10 to 15 nP in prices cannot entirely be attributed to this. It is presumed that reports of good weather in both South India and North India and the expectation of a higher crop have led bidders to expect a decline in prices as the season progresses. Reports from Colombo, referring to increased exports of tea from India in the last nine months, emphasise the need to reduce prices there. This has perturbed the trade here, since as a result of increased crop, Ceylon will offer greater competition. The price trend in recent auctions held in Colombo has shown a downward tendency.

In the internal sale held here last week, offerings amounting to 30,290 chests met with a fair general demand at easier prices. Plain and medium orthodox teas gave way by 30 nP while "teas for price" were absorbed at around the last rates. C.T.C. teas were irregular and eased up to 30 nP, but the few selected lines were steady. The fibrous C.T.Cs met with support at easier rates. The quotations per one kg., inclusive of the excise duty, were: Good Assam C.T.C. dust Rs. 6.20 to 6.60, medium Assam C.T.C. dust Rs. 5.10 to 5.40, medium Assam dust Rs. 4.35 to 5.00 and plain orthodox dust Rs. 4.20 to 4.35.

In the first export sale held last week, leaf on offer totalled 17,723 packages. Despite the weak opening, demand improved as the sale progressed, though support generally was available at only lower prices. There were no quotations owing to the limited quantity of tea on offer. Darjeelings, which formed a good portion of the total quantity on offer, were irregular. Flavoury Darjeelings were taken up at prices below brokers' expectations, but a few selected lines were steady. Withdrawals were heavy. All brokens and fannings were fully steady. C.T.Cs met with good support. Orthodox teas met with good attention, with buyers showing preference for teas with flavour and the whole leaf grades.

MIXED SHOW IN METALS

(From Our Own Correspondent)

CALCUTTA, 28*th May*

The local metals market made a mixed show this week; tin and lead recorded further gains, but zinc and copper scrap eased. The trade is very much disappointed over the excise authorities' view that copper and brass square rods and flats having sizes above .375" are within the scope of the excise duty. When the duty on "plates, sheets, circles, strips, and foils" of copper and copper alloy products having a copper content of 50 per cent and above was imposed in February 1961, the authorities had ruled that all sizes of square rods and flats came within its purview. Following representations from the trade and industry, however, the authorities accepted in April 1962, the specification of the Indian Standards Institution, according to which square rods and flats of sizes higher than ⅜" (.375") do not come within the meaning of strips and/or plates. Hence, from 1st April 1962, clearances of these products commenced without the payment of duty. The excise authorities have now interpreted the purview of the duty differently and in view of that not sanctioned the industry's claims for the refund of duty paid on these products for the period from 1st March 1961 to 31st March 1962.

The authorities have now ruled that they can go beyond the I.S.I. specification and bring square rods and flats under excise, if trade and commercial practices term these products as plates and/or strips. These products have now been brought under excise without inviting the trade opinions and the industry has been asked to pay the duty for clearances of square rods and flats above .375" despatched duty-free from 1st April 1962 onwards.

The industry has pointed out that calling these stores plates and/or strips is not in conformity with the trade practice both in India and in other highly industrialised countries in the West as well. At the same time, payment of excise duty on irregular brass and copper sections used in the electrical goods and signal equipment manufacturing industries has been demanded. Although these interpretations of the excise authorities are being disputed by the trade as well as the industry, it should be pointed out that if duty is to be paid on despatches of stores done for the past one year, it will cause embarrassment to both sellers and buyers. For, on the basis of the seller's invoice, the consumer has used the product, while, having regard to the fact that the seller recovers the excise duty on the sales point, the seller will now have to claim it from the buyers of these products in the past one year. The clarification by the authorities must, therefore, be made applicable only from the date it was made and not with retrospective effect.

Utensil copper scrap opened here at Rs. 568 per 100 kgs. and eased to Rs. 562 on consumer resistance. Quiet dealings were reported in cash copper on the London Metal Exchange, the price remaining unchanged at £234 a ton. Tin rose to Rs. 4,000 per 100 kgs., after opening at Rs. 3,950, due to the acute shortage of supplies. In London, tin opened at £905 a ton and eased to £905½ in sympathy with the declining trend in Singapore. Lead, in London, closed higher on balance at £62½ a ton, after opening at £61. Following increased consumer demand, lead improved here to Rs. 200 per 100 kgs. from Rs. 198, while zinc eased from Rs. 270 per 100 kgs. to Rs. 268. In London, spot zinc closed higher on balance at £77½ a ton, as against £76⅜ at the opening.

JUTE GOODS STEADIER

(From Our Own Correspondent)

CALCUTTA, 28*th May*

Although jute goods fluctuated within narrow limits, steady conditions were in evidence during the week under review. On the other hand, fibre remained quiet, as most of what was on offer was of inferior quality which the mills have in stock in plentiful quantities both on their own account and on buffer stock account. In anticipation of more orders from foreign buyers, speculative support was extended to jute goods in an even measure, and modest gains in prices were recorded in futures trading too. Sentiment was stimulated by hopes of good offtake for due-date. Further, the earlier news that despatches from mills in the month of April totalled 104,800 tonnes showing a substantial rise of 9,600 tonnes over the previous month and of 22,500 tonnes over April 1962 had been very encouragingly noted against the background of the expected fall in output this month as a result of the acute power shortage experienced for several days. Incidentally, offtake last month was the second largest for recent months, after the high of 112,000 tonnes touched in December 1962. The keen competition which Indian sacking is facing from Pakistan mills has been evident, inasmuch as sacking despatched for export in April fell to 19,800 tonnes from 23,000 tonnes in March, while hessian despatched for export was higher at 41,600 tonnes, as against 35,300 tonnes. While a small fall in hessian despatched for local purposes has been recorded at 3,500 tonnes, sacking sent for internal consumption rose from 18,600 tonnes to 22,600 tonnes. At 15,000 tonnes, miscellaneous constructions for export were higher by 3,400 tonnes.

The keen competition with which Pakistan mills have been able to build good export markets for their heavy goods should highlight recent complaints of poor quality of Indian cornsacks from Australia, which is a substantial consumer of Indian sacking for packing agricultural produce for export. According to the complaints received by the Indian Jute Mills Association through the Australian Jute Goods Association, a bad odour is left in the sacking which has damaged flour packed in these sacks. It is pointed out that Australia can ill-afford to export flour in Indian sacks, and the I.J.M.A. has been requested by the Association to investigate this matter with a view to removing the bad odour.

Considering that not only the quality of Pakistani sacking is better in view of the superior fibre available in that country but the mills across the border are able to under-quote Indian offers, the proposal of the India-U.K.-Continental Shipping Conference to increase the freight on all cargoes from Indian ports to all U.K. and Continental ports has been disconcertingly received. High cost of production has become a stupendous problem restraining attempts to increase export of not merely jute goods but other Indian products as well.

When the mills are making every attempt to operate more economically and pass on the benefit of any reduction in cost of production to the consumer in the interests of increased turnover, it is unfortunate that developments which have the opposite effect take place. *In view of the* bumper fibre crop, mills have been compelled to carry huge stocks of fibre, thereby leading to blocking of funds which the mills would have otherwise used for normal trade purposes and also for modernisation and diversification plans. A huge quantity of such fibre bought has to be stored in the open, in view of lack of godown space. Continued open storage leads to a fall in quality and increases the danger from fire. Acute electric power shortage this month has meant a disturbance to production, without reducing costs. However, it has been happy news during the week that the Calcutta Electric Supply Corporation has now been able to recommission the new 50-megawatt turbo alternator and, accordingly, there would be no more load-shedding at least for the time being.

Fair activity was in evidence in jute goods during the week under review. Encouragement was derived by the price movements in the New York burlap market where the 40" 10 oz. hessian at 12.85 cents a yard closed higher on balance by 10 cents, after being higher at 12.95 cents for a time. The 7½ oz. hessian opened at 9.70 cents a yard and, after rising to 9.85 cents, closed at 9.80 cents. In the Calcutta market on Tuesday last, ready hessian 40" 10 oz. rose from Rs. 50.90 to Rs. 51.70 following receipt of a good number of inquiries by shippers. Short-covering soon followed. In sympathy, ready B. twills hardened from Rs. 113.50 to Rs. 113.80. The feature on Wednesday was some due-date covering in hessian, as a result of which the 10 oz. rose to Rs. 52. In the rising trend, mills were sellers for forward delivery even extending beyond October, and in the result ready B. twills eased to Rs. 113.35. On Thursday, excepting for some scattering sales, interest generally declined leading to pushing down hessian 40" 10 oz. to Rs. 51.50 and B. twills to

Rs. 112.65. At this stage, keen activity developed in the futures market, and mills took the opportunity to sell as much as possible in the forward positions. Hessian 40" 10 oz. improved fractionally to Rs. 51.75, while B. twills were quiet at Rs. 112.60. Over the week-end, with B. twills quoting at Rs. 112.50 and hessian 40" 10 oz. at Rs. 52.00 prices were steady. Although prices eased yesterday, there were more inquiries than over the week-end and trading in the futures marketing was lively. Hessian 40" 10 oz., although lower, closed firm at Rs. 51, and B. twills were quoted at Rs. 111.75.

FOODGRAINS IMPROVE

(From Our Own Correspondent)

HAPUR, *27th May*

A steady to firm trend was witnessed in foodgrain prices here during the past week, as new *rabi* crop arrivals continued small. Consumers were main purchasers, though stockists too entered the market. Winnowing and threshing operations were completed and it was gathered that cultivators were withholding their surplus produce on expectations of better prices later.

Wheat prices recovered by 25 to 75 nP per quintal during the week on small arrivals, with the average quality quoted between Rs. 40.60 and Rs. 42 and the farm produce at Rs. 42.50 to Rs. 46.25. Arrivals averaged 1,200 to 1,500 maunds a day and were readily lifted by stockists. Stocks at the week-end were placed around 20,000 maunds. Rice, *basmati* quality, improved up to Rs. 2.67 per quintal on better consumer demand, but the other qualities were almost stationary. The week-end stocks were placed around 15,000 maunds. Week-end prices were:—Rice *basmati* superior Rs. 88.41 to Rs. 96.45, *sela basmati* Rs. 85.74 to Rs. 88.41, *mainpuri* Rs. 57.60, *ramajwayan* Rs. 61.62, *raimunia* Rs. 64.30 and *gadda* Rs. 52.91 per quintal.

Steadier conditions prevailed in gram on higher advices from Punjab. Prices moved up by 37 to 67 nP per quintal according to quality, with the Punjab variety quoted at Rs. 42.87 and the local produce at Rs. 42.20. Arrivals mostly from Punjab and Rajasthan were considerably higher at 8,000 maunds and were lifted by stockists. Local stock improved to 10,000 maunds. Barley and *bejhar* registered gains of 67 nP and Rs. 1.34 per quintal, respectively, at Rs. 29.47 to Rs. 30.14 and Rs. 31.50 to Rs. 33.50 per quintal, respectively. *Juwar* and *guwar* were almost unchanged at Rs. 29.47 to Rs. 30.14 and Rs. 33.49 to Rs. 35.50 per quintal, respectively. Smaller arrivals of new crop *methi* and *oats* were lifted by consumers at higher prices. *Methi* was quoted at Rs. 51 to Rs. 52 and *oats* at Rs. 32 to Rs. 32.50 per quintal.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, *27th May*

Sugar ruled steady this week, as supplies to consumers were available through fair-price shops. The U.P. Government has decided to ban the setting up of any new *khandsari* unit in the reserved areas for sugar factories. At 8.5 lakh tonnes sugar production in U.P. in *1962-63* was substantially lower than 12 lakh tonnes in 1961-62. Supply of sugar here is reported to be unsatisfactory, and the seasonal demand is on increase. Week-end prices were:—E30 Simbhauli Rs. 112.50, A30 Daurala Rs. 118.21, B30 Rs. 116.51, C30 Rs. 114.51, and retail Re. 1.14 to Re. 1.16 per kilo.

With crystal suyar remaining in short supplies, *khandsari* prices recorded further gains during the week on all-round brisk buying support. *Khandsari* spurted up to Rs. 10 per quintal on sustained demand even at higher levels, but later reacted slightly following the imposition of loading restrictions to some centres outside the State. Week-end prices were:—*Khandsari inferior* Rs. 120.57 to Rs. 125.92, dry superior crystal and non-crystal Rs. 133.96 to Rs. 147 per quintal according to quality.

Ready *gur* continued firm during the week on good buying support from Bombay and Gujarat side in the face of fast dwindling local stock position. Week's offtake aggregated 12 wagon loads. From mofussil markets, offtake of *gur* was also heavy and stockists were reluctant sellers even at higher prices, expecting further rise in prices in the off-season period from July to August. Standing crop prospects were uncertain and will depend mostly on the monsoon. Week-end prices were: Superior Rs. 69.66 to Rs. 70.33, selected *kotha* Rs. 69.50 to Rs. 70, *shakker* Rs. 68.60 to Rs. 69 per quintal.

SLOW CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, *27th May*

Arrivals from the tanneries in the local kips market this week were normal, but clearance by the shippers was slow. Importers' buying was selective in cowhides, but brisk in cowcalf, especially fourths and inferior fourths selection. Buffcalf remained steady.

Due to good inquiries for tanned goat skins from the U.K. and the Continent, prime class goat skins advanced and were sold at higher levels. The U.S. interest in heavy weights was keen, but sellers were reserved, as stocks were small. Shippers of pickled goat skins were operating briskly in the raw centres and the raw products were hardening. Tanned sheep skins remained firm. There were good inquiries from the Continent for the lower grades middle class sheep skins.

The ruling prices per lb. in the local market for all-round parcels were: tanned cowhides 8/8½ lbs. average Rs. 2.20 to 2.25, tanned cow calf 1½/2 lbs. average Rs. 2.20 to 2.25, cow calf 1½/2 lbs. average Rs. 375 to 4, buffhides 12/14 lbs. average Re. 1.70 to 1.72 and buff calf 1½/2 lbs. average Rs. 3.50 to 360.

Notices

THE INDORE MALWA UNITED MILLS LIMITED

Registered Office:

Seksaria Chambers, 139, Medows Street, Fort, Bombay

NOTICE

THE FIFTY-SIXTH ANNUAL GENERAL Meeting of The Indore Malwa United Mills, Ltd. will be held at the above address on Wednesday, the 26th day of June 1963, at 4 p.m., to transact the following business:—

Who else must sweat and toil and gain but scanty fare."*
William Blake.

VOL. CVI. No. 2720 BOMBAY, 8th JUNE 1963 PRICE Rs. 2

COMPULSORY LIFE INSURANCE?

MR. Morarji Desai has just thrown yet another bombshell. His statement, at the two-day meeting of the National Savings Central Advisory Board held at New Delhi this week, that the compulsory deposit scheme would be followed up, after a suitable interval, with a scheme of compulsory life insurance has, of course, this frightening aspect. But it has also the redeeming characteristic of bringing the concept of compulsory life insurance from the theoretical plane down to the realm of practical policy. The Finance Minister, however, did not give any details of the proposal nor did he make it clear whether the compulsory deposit scheme would be replaced by compulsory life insurance, or whether the two would be in force concurrently. At least, he left no one in doubt as to the object of the proposal, which is to augment the savings of the people for meeting the nation's mounting liabilities in the twin fields of defence and development.

That the country needs to save more than it does is clear from the large gap between the resources available and the growing needs of a developing economy. In spite of conscious efforts to stimulate and encourage savings, voluntary savings have proved to be inadequate. While, on the one hand, inflationary tendencies in the economy, like the rise in prices and the high cost of living, have set severe limits to the citizen's capacity to save, on the other, larger defence outlay and development expenditure have made the need for higher savings more urgent than ever before. The compulsory deposit scheme is an attempt to find a partial answer to this problem. In this context, compulsory life insurance would seem to be no more revolutionary or radical. The underlying principle here is more or less the same as that of the provident fund scheme. But there is the difference that, while, under the latter scheme, an employee is forced by law to set aside a specified percentage of his income as provision for the future, under compulsory life insurance, cover against the risk of death is made legally obligatory. Both life insurance and provident fund are essentially social security measures and they constitute, perhaps, the only protection against indigence to which the working people might otherwise be exposed in a country where a comprehensive social security system of the type obtaining in the modern welfare States of the West has yet to be established.

The element of compulsion, which a scheme of compulsory life insurance would involve, would be something novel. No democratic country outside the Communist world has so far tried it. It is true that contributions to social security schemes, even in the advanced democratic countries, are compulsory. But these schemes, it must be remembered, work on different principles and differ fundamentally from life insurance in their aims and objectives.

In the absence of any indication as to the exact scope and coverage of the comtemplated scheme and the place that may be assigned to such a scheme in the larger framework of savings mobilisation, it is difficult to make any informed comment on its merits and demerits. But it would be pertinent to raise some questions that may be relevant to the formulation of a practical scheme. The first question is whether compulsory life insurance is intended to supplement the compulsory deposit scheme or to supplant it. If the former is the case, it raises the further question whether there is scope for both the schemes to run concurrently. Efforts to sell new life insurance business are said to be already meeting with considerable resistance from prospects who plead inability to save anything for insurance after meeting the enhanced charges on their income by way of compulsory deposits and surcharges on income-tax. A further burden in the form of compulsory insurance, notwithstanding its attractive elements of family provision and risk coverage, may prove to be the proverbial last straw on the camel's back.

The Government already seems to have recognised this limit to the saving capacity of a section of the people, for it has granted exemption from the compulsory deposit scheme for non-income-tax payers, provided their present savings in the form of life insurance, provident fund and cumulative time deposits together aggregate 11 per cent of their income. Obviously, the Government thinks that 11 per cent is a reasonable limit of savings for this income group. By the same logic, it is conceivable that this group will be exempted from compulsory life insurance also, unless the Government revises its concept of a reasonable savings limit. In that event, the coverage of the scheme will have to be confined to those belonging to the income-tax-paying class. The insurance habit among this class is fairly well developed; this is due as much to a better awareness, on its part, of the benefits of life insurance as to the incentive provided by income-tax rebates. Any increase in life insurance business coming from this group will, therefore, be at best only marginal if the minimum savings limit is not fixed on the high side. Savings from compulsory life insurance can be substantial only if those who are not at present covered are brought within its purview. Such people largely belong to the rural and trading sectors and it would be as difficult to sell life insurance to them, even if it is made compulsory, as it would be to bring them effectively under the scope of the compulsory deposit scheme. However, life insurance has certain selling points which compulsory deposits do not have. These points, if properly highlighted, can make compulsory insurance more acceptable.

A pertinent query, in this connection, is whether compulsory life insurance can be thought of as a substitute for compulsory deposits. It is possible that compulsory life insurance will serve both the purposes of encouraging the savings habit and making available funds for Government purposes which the compulsory deposit scheme purports to do. In addition, it will extend the benefits of insurance to a wider section of the people, which is one of the objectives of nationalisation of life insurance.

From the revenue point of view also compulsory insurance may not compare unfavourably with compulsory deposits, because provisions could be made to ensure that the entire funds accruing from the former are invested in Government securities. At present, it may be noted here, investment of life insurance funds are split between the public (including investments in Government securities) and private sectors, the former accounting for about 78 per cent and the latter for the balance.

These comments are not intended to be exhaustive. They only touch upon certain issues of practical import. Moreover, the proposal is still nebulous and has yet to acquire the contours of a concrete scheme. But basic to the success of any plan of life insurance, be it voluntary or compulsory, is a well-planned campaign to educate the people on its benefits. This is not so much of a problem in urban areas as in rural areas where new ideas are hard to sell. The existence of rival political parties, aspiring to assume the reins of Government, makes the problem more difficult. It would, therefore, be wiser to make a beginning, if at all, in the urban areas and to allow a period of time to elapse, and a fund of practical experience and urban example to accumulate, before the scheme is introduced in the countryside. But even this opinion is expressed here on the twin assumption that compulsory life insurance would be generally regarded as less obnoxious than the compulsory deposit scheme and that, like compulsory primary education or compulsory provident fund, it might be thought of as being in the best interests of the national economy and the individual alike.

NOT SO DISAPPOINTING

WHILE the outcome of the Aid-India Consortium's meeting at Paris this week has belied this country's expectations to some extent, it would be clearly wrong to describe it as wholly disappointing. May be, the quantum of aid voted by the Consortium for the third year of the third Plan, that is, Rs. 435 crores ($914.8 million), is well below the credits aggregating about Rs. 598 crores ($1,256 million) asked for by India. But there is the hope—a justifiable hope indeed—that the amount of aid might be stepped up. For the Consortium has announced, thanks to the initiative of the U.S. Government, that it would meet at Washington some time next month "to consider additional grants for the year." It would be appropriate to recall here that, in respect of the last financial year (1962-63), too, the final authorisations of aid (Rs. 509 crores or $1,070 million) turned out to be much more than the initial commitments (Rs. 443 crores or $930 million). Incidentally, Mr. K. B. Lall, Indian Ambassador at Brussels, has himself expressed the hope that, "when the Consortium meets again in July, the member-Governments will, as indicated, increase their pledges and enable the U.S. to increase its own as stated."

The aforesaid hope apart, India has reason to feel gratified at the outcome of the Paris meeting for three other reasons. In the first place, the Consortium has considered it to be of the greatest importance that the pledges announced should be translated into firm commitments as soon as possible. Secondly, it has conceded India's plea for making available "a substantial part" of the commitments in the form of non-project aid which can be used to finance imports required for the maintenance of the economy. And, finally, the Consortium has recognised the need to extend a sizable portion of aid as grants or long-term loans at low rates of interest.

All this is no doubt to be widely welcomed, though one would ask whether the Consortium could not have voted the entire amount of Rs. 598 crores asked for by India, instead of postponing final decision again. The Consortium has had ample time to study India's *aide memoire* which has so impressively highlighted the urgency of early aid commitments and clearly indicated the scale and nature of assistance absolutely necessary to maintain the tempo of economic development. After all, the

gap between the amount of aid sought (Rs. 598 crores) and that authorised now (Rs. 435 crores) is not big. Surely, the sum of Rs. 163 crores representing the gap is not beyond the means of the Consortium member-countries.

It is particularly deplorable that, of all countries, West Germany has again reduced its assistance drastically, from Rs. 107 crores and Rs. 66 crores given in the first and second years of the third Plan, respectively, to a bare Rs. 31 crores for the third year. As we had pointed out on an earlier occasion, if there is any country which can afford to be more generous in extending aid to India, it is West Germany. It is also deplorable that France, which had raised its aid from Rs. 7 crores for 1961-62 to over Rs. 21 crores for 1962-63, has cut it to Rs. 14 crores for 1963-64 and that Britain has pegged the offer at the previous year's level of Rs. 40 crores. For the economy of these countries is highly prosperous, with a high level of production and plentiful holdings of gold and foreign exchange. West German holdings now stand at almost $6,500 million, as against less than $1,000 million ten years ago. The corresponding figures for France and Britain are $3,600 million and $2,800 million, as against $686 million and $1,958 million. India has contributed in some measure to the economic prosperity of these nations; it has been one of the major outlets for a number of goods, especially capital goods, produced by them. Thus, between 1950-51 and 1962-63, the total value of imports into India from West Germany, France and Britain has gone up considerably, while India's exports to them have risen to a lesser extent, with the result that this country continues to have heavy deficits in balance of trade.

India has spent very large amounts of foreign exchange to import goods from West Germany, France and Britain all these years. Since such imports have contributed quite significantly to the economic prosperity of these countries, India can justifiably expect them to be more liberal in aiding its development programmes. It is necessary to mention here one important point. How can India continue to buy goods on a large scale from the industrially advanced countries unless its economy is strengthened sufficiently and speedily through grant of adequate financial as well as technical assistance? Japan has been shrewd enough to appreciate this aspect. It is the only country that has stepped up its aid, albeit slightly, the amount pledged for the current year being Rs. 29 crores, as against Rs. 26 crores authorised for 1962-63 and Rs. 24 crores for 1961-62.

The aid commitments aggregating Rs. 435 crores now announced for the year 1963-64, as already stated, fall short of the estimated actual foreign exchange requirements of Rs. 598 crores by as much as Rs. 163 crores. The estimate of requirements is based on certain projections prepared for the consideration of the Aid-India Consortium. The projections show that India's imports other than those covered under the P.L. 480 programme will touch the peak of Rs. 1,265 crores in 1963-64, as against Rs. 1,015 crores in 1962-63, while earnings from exports are expected to be only nominally higher at Rs. 710 crores, as against Rs. 692 crores. Taking into account the deficit on invisible account, the overall deficit in external payments account is expected to be of the order of about Rs. 640 crores. A portion of this deficit may, of course, be covered by aid from Russia and other Communist countries. Even so, the uncovered gap will be pretty large. Unless this is filled by the Aid-India Consortium, the progress in the implementation of many important projects which are either half-way through or remaining to be commenced will be thwarted. The country can ill afford this, especially in the present context of urgent defence requirements as a result of the Chinese aggression. We are not alone in expressing this opinion, for no less a paper than the *Financial Times* of London has pleaded vigorously for generous Western aid. Let us quote it *in extenso*:

"India's major problem today is to devise means of meeting a possible renewed Chinese threat on her Northern border without further endangering the success of the current development Plan which has run into quite enough difficulties as it is. There can be no doubt that it is in the interest of the whole Western world to do whatever possible to help India to solve this problem. . . . So far as the donor countries are concerned, the main point to make is that cheeseparing at this stage might endanger the success of India's development in which they have already invested very large sums. What India needs above all at present is balance-of-payments aid which is not tied to specific projects. It seems rather pointless to erect vast industrial complexes in India and then withhold the funds to pay for the imports without which Indian industry cannot run at all. That both Britain and the U.S. should tie loans to purchase in their own countries is, however, regrettable in principle, perfectly natural given their own problems. But India should be given the greatest possible freedom in determining how the money should be spent, and donor Governments should do what they can to ensure that the price of anything the Indians want to buy is not bid up against them just because they are tied to suppliers in one country."

This is, indeed, a forceful plea which had possibly weighed with the Consortium members in deciding to give a substantial part of the aid commitments in the form of non-project or untied credits. Such credits are of vital importance because of the supreme urgency of financing maintenance imports which cannot be paid for from out of the aid already given either by the Consortium members or by the Soviet group, inasmuch as the aid is to a large extent country-wise and project-wise. India is no longer in a position to draw its foreign assets (now standing at no more than Rs. 117.5 crores) to finance its development. The recognition, by the Consortium, of the need to extend as much of the aid as possible in the form of grants or long-term loans at low rates of interest is to be greatly appreciated. This need is much more insistent now than at any time before. The interest and amortisation payments already account for some 17 per cent of India's foreign exchange requirements. The total liability in respect of repayment of principal and interest charges on foreign loans contracted up to the end of the second Plan period are estimated at over Rs. 87 crores in the current financial year, rising to Rs. 101 crores in 1964-65 and Rs. 117 crores in 1965-66.

Of no less significance is the decision of the Aid-India Consortium to translate pledges announced at the Paris meeting into firm commitments "as soon as possible." It may be noted, in this connection, that, as against the Consortium's aid authorisations of Rs. 1,126 crores for the first two years of the third Plan, firm commitments at the end of December 1962 amounted to less than Rs. 821 crores, so that the balance yet to be committed was over Rs. 305 crores. These figures indicate the long delay between the date of aid authorisation and the date of actual release. It must, however, be pointed out that this delay has been due as much to the procedural formalities in the release of funds by the aid-giving countries as to the red-tapism and lack of high level efficiency in administration at both Central and State levels in India. Now that the Consortium members have decided to expedite the release of funds, it is for the authorities in India to take prompt steps to ensure the utilisation of aid equally expeditiously.

INDUSTRIAL MAINTENANCE

MAINTENANCE is continuity. Anything that is good must, of course, become better. But it can do so only if what is good is maintained as the base for the better to rest on. Thus maintenance, as distinct from *status quo* and in the sense that it is a continuous process, is a further step to progress. To this country, which is engaged in a daring and necessary bid to telescope into a few years the economic development that took the advanced countries decades to achieve, industrial maintenance is as vital as a totally new effort for development. Since, however, development itself is of recent origin in this country, little has been done in the field of maintenance. It is necessary, however, that maintenance should become an equal partner with production, so that the common objective of maximum output of quality goods, with minimum interruptions and at optimum cost, can be realised. This is the suggestion of a productivity team on industrial maintenance (Leader: Mr. S. Chander, Chief Superintendent, Maintenance, Tata Iron and Steel Company Ltd.), which has recently made a study of the latest practices and techniques in plant maintenance in West Germany, the U.K. and the U.S. The team was sponsored by the National Productivity Council of India with the assistance of the U.S.-A.I.D.

Maintenance in any industrial enterprise, the team writes in its report, is intended primarily to keep in efficient operating condition the productive plant and equipment, their auxiliaries, general engineering services, material handling units, etc., as well as to keep in a good state of repair the buildings and structures. Maintenance also aims at keeping, to the minimum possible level, the down-time of such plant and equipment so as to ensure their highest availability for production. As an ancillary, maintenance has to ensure ready availability of necessary spare parts, to pre-plan the schedules for renewal of wearing components, to organise resources to achieve these schedules, and to co-ordinate researches to improve equipment or component life and performance. Ultimately, good maintenance leads to higher output through lower down-time of plant and equipment, better quality of products through improved efficiency, and lower unit costs through reduced breakdowns. It would thus be clear, the team adds, that maintenance has an important role to play in any industrial concern. The plant must be utilised fully; there must be no hold-up and the limited quantity of imported spare parts that are available must be made to suffice, and yet all this must be done economically. Good maintenance is, therefore, good management. In India where, due to shortage of foreign exchange, neither replacement machines nor spares are readily available, the task of maintenance becomes even more difficult and, consequently, the system of maintenance must necessarily be planned more thoroughly than in other countries.

Twelve are the elements of good maintenance, according to the team. These are organisation, engineering records, inspection, lubrication, engineering analysis, planning and scheduling, inventory control of maintenance stores and spares, tool and maintenance facilities, standardisation, training of maintenance personnel, maintenance standards, and, lastly, budgeting and cost control. Depending on the industry, the degree to which these elements are applied will naturally vary; but, all the same, the introduction of these vital elements is a necessity. The recommendations the team has made for attaining a sound maintenance system can be broadly classified under two heads. The first one pertains to the purchase, operation and replacement of plant and machinery, including spares. Here the team advocates standardisation of purchases from reputed manufacturers, adoption of scientific management techniques, such as method study, scheduling and planning, process study, work study and statistical controls, and salvaging work through welding, chromium-plating, hard-facing, stelliting, thermit welding, metallising, grinding, etc., to minimise the scope for replacements. As regards standardisation of purchases, the team readily concedes that the plight of the Indian industrialist is more difficult, since he has to purchase equipments from different manufacturers for reasons of easier availability, lower cost and restrictions on foreign exchange resources. The scientific management techniques are still to be seriously developed in the country. Not all types of salvaging work, too, have been developed. The team's suggestion in regard to the first head is thus based on conditions obtaining in the advanced countries of the West, which, no doubt, we will have increasingly to adopt. The team has, however, stressed the importance of building up standard specifications for indigenous products. The need for this cannot be overemphasised, and it must receive the priority attention of the authorities concerned.

The second group to which the team's recommendations relate is the creation of a pool of maintenance staff. The team has analysed the significant role universities can play here on the lines similar to those adopted in Western countries. One may readily welcome the suggestion that industrial maintenance should form part of the curriculum of an engineering institution and that the industry should refer its problems to universities, so that they can undertake research in the related fields. Unfortunately, Indian universities have still to realise their immense practical role beyond their mere academic field, a role which foreign universities have fully grasped. There are two reasons for this shortcoming in India. For one thing, the universities themselves never visualised their practical role. For another, those outside do not see any practical role for universities. In this context, the Government's decision to form an Indian Institute of Foreign Trade and an Indian Council of Trade Fairs and Exhibitions under a governing body consisting of nominees of the Government and universities is highly commendable. This is the first recognition of the practical role of universities which can serve as the rock-base for development in all walks of life.

However desirable these recommendations may be, it must be recognised that a sound maintenance programme cannot be implemented overnight. It has to be a gradual process and the progressive managements should think and act to instal the programme by stages. Of course, the team is conscious that maintenance is not an end in itself but only the means to an end. But it must be emphasised that maintenance cannot be construed as an alternative to modernisation and renovation. In India, what the traditional industries need first is rationalisation which spells progress. Maintenance comes later to keep the progress going as well as to enable the industry to reap the maximum benefit from the advance already made.

MARKET GOSSIP

Uncertainty Over Bokaro

A LIMITED fillip has been provided to stock markets in Calcutta and Bombay by the news of promised assistance of about Rs. 435 crores by the Aid-India Consortium. But an even greater fillip may well be provided to the depressed markets if it turns out that the U.S. Government and the Government of India have reached an agreement in regard to the Bokaro project. So crucial is this steel project to the further industrial development of the country that a favourable decision of the American Government on its financing would send up a wave of jubilation. But the hopes which have been aroused in the public mind, generally, and in industrial circles, in particular, do not unfortunately seem to be fructifying yet. The latest forthright statement by Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries, that the Government of India would press for an early 'yes' or 'no' decision by the United States on the question of aid to the Bokaro Project has been made against the background of some vague suggestion for a second technical survey of the project. In Mr. Subramaniam's view, no such second survey is called for, because all the technical difficulties raised by the U.S. expert team in its recent report have been satisfactorily cleared by the Government. He has also expressed the confident opinion that it would be possible for the Government to ensure the supply of all raw materials for the project even within a much shorter time schedule than what has been visualised in the U.S. team's report. The Minister has done well to point out that there has been a delay of two years in the matter of starting work on this project and that the country can ill afford to wait any longer.

While this forthright statement by Mr. C. Subramaniam has been made not a day too soon, it is a matter for some anxious consideration whether the Government would be well advised to seek Russian assistance in the event of American refusal to finance and construct the Bokaro plant. Of course, the Minister has not said in so many words that Soviet assistance is likely to be sought or accepted. The Americans themselves might not be happy over such a development, if it happens. It is, therefore, all the more incumbent on them to take an immediate decision on the question of aid for the project. Now that the Minister has cleared the doubts on two points, namely, suitable arrangements for the efficient management of the project and possible private capital participation, the U.S. Government should see its way to financing the project. The Minister's assurance that the Government would consider all suggestions for efficient management carries with it the implication that the American suggestion for a ten-year management contract might be ultimately accepted in the interest of efficient management. And, secondly, his reiteration that the Government would not rule out private capital participation in the project on mere ideological grounds is equally reassuring. It may be recalled, in this connection, that the Union Deputy Minister for Steel and Heavy Industries had said recently that private capital might also be asked to invest in the Bokaro steel plant. Of course, as Mr. Subramaniam opined, private capital might not be forthcoming for a slow-yielding steel project like Bokaro. But that is not the real point. Whether private capital comes forth adequately or not, the acceptance in principle of its participation in a public-sector project would go a long way towards rendering the industrial policy of the Government more flexible and pragmatic. In any case, such a welcome change in the actual implementation of the Government's industrial policy might convince the Americans of the flexibility of this country's industrial policy and planning.

Steel Decontrol In The Offing?

There is a lot of speculation in the press about steel decontrol. The speculation has followed the report that the Union Ministry for Steel and Heavy Industries is in favour of implementing the major recommendations of the Raj Committee on Steel Distribution and Control. It may be recalled that this Committee had recommended the removal of distribution control on steel products in all fields barring two, namely, plan projects and the small-scale sector. At present there is distribution control only in respect of sheets and plates which are very much in short supply. The contention of the Committee, which is yet to submit its final report, seems to be that, if no distribution control has been considered necessary in regard to other steel products which have been equally in short supply, there is no reason why sheets and plates should not also be decontrolled.

The Committee, it will be further recalled, had also recommended, in its preliminary report, the introduction of a limited free market in steel for non-priority uses after its first sale by the main producers. The Ministry's preference for the introduction of a free market in steel has, however, come up against opposition not only from the Department of the Iron and Steel Controller but also from a section of the trade itself. The Iron and Steel Controller is reported to be of the view that decontrol at the present juncture would result in a steep price rise and that this would adversely affect industrial growth. This point presumably does not apply to all industrial projects, whether inside or outside the Plan, for the Raj Committee itself had recommended the retention of control on iron and steel only in two fields, namely, plan projects and the small-scale sector. As for opposition from the trade, the view of the All-India Iron and Steel Stockholders' Federation that there are dangers in an abrupt decontrol of steel cannot be lightly ignored. Although the Federation has expressed the opinion that decontrol is desirable, it has, at the same time, expressed the fear that any hasty measure of decontrol might place the trade, small industries and consumers at the mercy of speculators. Such consequences, according to the Federation, are quite likely because of the general shortage in the supply of most steel products.

Even the steel re-rolling industry has recently raised some doubts about the wisdom of removing controls on steel abruptly. Of course, the Steel Re-rolling Mills' Association has not opposed decontrol *in toto*. It has only pleaded for the adoption of such decontrol measures as would not place the re-rolling industry in a disadvantageous position *vis-a-vis* the main producers. Steel decontrol, though acceptable in principle to sections of trade, seems to involve these and other practical difficulties. In the circumstances, the Government might have to examine the question more carefully, taking into account the conditions in the market. Perhaps a free market in steel can be introduced only by stages. In any case, Government spokesmen would do well not to hint at possible decontrol measures pending submission by the Raj Committee of its final report, so that undesirable repercussions in the market may be avoided.

Unemployment On The Increase

The lag in agricultural production and the slackening rate of increase in industrial production during the first two years of the third Plan, revealed by the Planning Commission's recent review, are bound to be reflected in the employment situation in the country. No data regarding the additional employment created during the first years of the Plan have been made available by the Planning Commission; nor has the extent of the shortfall in employment creation been disclosed. But if the latest employment exchange statistics are taken as indicative of the trend in employment/unemployment in the country, the failure of the Plan on the agricultural and industrial fronts seems to have aggravated the unemployment situation. A 30 per cent increase in unemployment at the end of 1962, as compared with the position a year ago, is disclosed by the data collected officially. The number of applications on the live register of employment exchanges —this can, at best, be taken as only a rough indication of the unemployment position—increased from 1.83 million to 2.38 million, that is, by 30 per cent. This deterioration in the employment situation has occurred despite the increase in the number of vacancies and placements. It indicates the pressure on the labour market of the yearly addition to the labour force.

A State-wise analysis of the unemployment figures throws some revealing light on the comparative intensity of unemployment in different States. The increase in unemployment is the highest in West Bengal, followed by U.P. In fact, of the total of 2.38 million applicants on the live register of employment exchanges at the end of December 1962, West Bengal, U.P. and Maharashtra together accounted for 1.04 million or 44 per cent. Of the remaining applicants, Kerala accounted for 200,000, Bihar 180,000, Madras 160,000, Andhra and Madhya Pradesh 120,000 each and Mysore 110,000.

Along with the increase in registrations, the number of placements also increased but less than proportionately. Consequently, there has been a net increase in the number of unemployed registered at the employment exchanges. The number of registrations in 1962 increased by 615,000, as against a rise of 500,000 in 1961. The number of placements by the exchanges increased from 404,000 in 1961 to 458,000 in 1962.

The ratio of placements to vacancies increased by one per cent from 57 per cent in 1961 to 58 per cent in 1962. The gap between vacancies and placements, which this ratio represents, is attributed to the shortage of technical and trained personnel. This is also reflected in the high percentage (68.8) of applicants without any professional or vocational training in the total.

Plea For Fresh Taxation Enquiry

The scope of taxation as an instrument of economic policy has widened considerably since the last Taxation Enquiry Commission (Chairman: late Dr. John Matthai) studied the issue in 1953-54. During the last one decade, the overall pattern of taxation has undergone perceptible changes and the range of fiscal levies has multiplied. The innovation of Super Profits Tax and compulsory savings scheme in the latest Budget has introduced virtually new dimensions in India's fiscal policy. The novel schemes of taxation have been evolved apparently without any detailed study of the taxable capacity or of their impact on the tempo of industrial development. Viewed against this background, the plea made by Mr. K. C. Mahindra, Chairman, Mahindra and Mahindra Ltd., for the appointment of a high-powered Commission for reviewing the tax structure with particular reference to its consequences on prices, export and growth, is quite sound. Mr. Mahindra, who was speaking at the annual meeting of the Company in Bombay last week, observed that, in the context of novelties introduced in this year's budget, the fundamentals of policy of public finance needed to be reviewed afresh, "lest this branch of State administration deteriorates into a mere revenue-collecting agency."

Mr. Mahindra was particularly concerned over the possible adverse effects of Super Profits Tax on industrial development. He stressed the fact that the principle of progression in corporate taxation went contrary to what were universally accepted as sound canons of public finance since it eroded the very base of revenue. Its major effect on capital formation, he emphasised, was dissuasiveness—"dissuading people who have money to spare from investing in an industrial venture when there is a significant restraint on the quantum of profits and where taxation directly affects efficiency." He struck a note of warning when he reminded the authorities that the flow of investible funds from private households, which accounted for over 80 per cent of savings in India, might be adversely affected by the heavy burden of taxation which rendered returns uncertain.

Mr. Mahindra was equally critical of the compulsory deposit scheme which, he felt, would be harmful to the middle class people. His stand is that the C.D.S. scheme would only fan the flame of inflation, instead of being a deterrent to it as expected by the authorities. There seems to be some truth in his assessment which is as follows:

"There is the Compulsory Deposit Scheme which agitated the minds of a considerable number of legislators, because it affects very severely the middle class people. As an illustration: in accordance with the regulations made by the Maharashtra Government, a portion of bonus paid to the worker must be invested in National Defence Certificates. I know, as a matter of fact, that many of our workers have been compelled to pledge their Defence Certificates for cash on prohibitive rates of interest within a few days of their receiving them. The further draft on their cash resources by the Compulsory Deposit Scheme would mean increased resort to private moneylenders. We are all familiar with the widespread operations of the non-banking sector which forms a considerable handicap to the restraints and controls which the Reserve Bank of India tries to administer in respect of inflationary credits. The boost thus given to usurious operations will further defeat the ultimate purpose of keeping prices within check."

A Tactful Move

Ruling out any relaxation in the new margin schedule for reviving forward trading in shares, the Union Finance Minister, Mr. Morarji Desai, is reported to have told Mr. K. R. P. Shroff, President of the Bombay Stock Exchange, at the latter's talks with him here on the subject on Saturday last, that the Government, on its part, was not keen on allowing forward trading on the stock exchanges. Mr. Desai went on to add that the national economy was not likely to suffer in the absence of forward business in shares. In fact, he added, the Government was according sanction for resuming forward trading in response to the applications made by the market authorities. These remarks of the Finance Minister lead at once to some pertinent questions. Is the Government allowing forward trading just because the market authorities want it? Is it suggested that forward trading is to be summarily condemned as gambling and unhealthy speculation and has, therefore, no place? The answers to these questions can only be in the negative. The Government is the only authority to decide when to lift the ban it imposed on forward trading in shares towards the close of November last. It cannot be that it has chosen to surrender its authority to the market administration. It cannot be so even on the humane consideration of providing income to stock brokers who have been idling their time for the last six months.

The Government is fully conscious of the importance and advantages forward trading commands. Even in the changed circumstances of the emergency, and immediately after the ban was imposed, partial forward trading, under severe restrictions, had been allowed. The market authorities had gradually relaxed most of the restrictions in order to allow the markets to regain their equipoise and instil confidence in investors. They had maintained only the restriction on short selling and on jobbing. This had given the markets a sort of artificial stability, which it was pointless to maintain indefinitely. The need for discounting the fear of short selling was felt all the while in order that the artificial part of the stability might end and the investors might know where they stood. In recognition of this, the market authorities moved the Government in the matter of reviving normal trading. The Government, too, appreciated the need therefor and acquiesced in it.

The stock market is not a gambling den. For those who think it is, the consequences are more often than not dire. Through forward trading, it acts as the barometer of the economy and performs the crucial job of mobilising private savings in economic channels, which is even more important in the emergency than in normal times. All concerned must welcome measures to regulate forward trading in order to minimise the scope for unhealthy speculation. The new margin schedule is admittedly a step in that direction. Market authorities in Bombay and Ahmedabad also accepted it in that spirit. They objected, however, to its harshness which was feared to disillusion hopes of normal trading. Since the scheme is designed as a permanent reform, Mr. K. R. P. Shroff impressed on the Finance Minister to reduce its harshness. The idea was not to leave scope for another reform at a later stage to mitigate the harshness of the main reform. The Finance Minister's contention was that there was no harshness in the reform. Apparently, he advanced his usual line of argument that the reform be accepted as such and be allowed to reveal, in practice, its drawbacks, if any.

The acceptance in full of the new margin scheme, as a condition precedent to resumption of normal trading, by the Governing Board of the Bombay Stock Exchange on Tuesday the 4th inst. is to be viewed against this background. It is a tactful move. For it allows normal trading and also gives the opportunity to highlight any serious drawbacks in the new margin scheme. If the scheme had not been accepted, there would have been no normal trading. The uncertainty about normal trading has now ended—Bombay and Madras Stock Exchanges have just been allowed to resume forward trading—though one may look forward to any future concessions in the margins.

TREND OF SHARES

SUPPORT FOR STEEL SHARES

(From Our Own Correspondent)

BOMBAY, *6th June*

STEEL shares were actively supported this week on expectations of an early announcement of steel retention prices. Otherwise, support was generally lacking. Closing prices disclosed fair gains in Steels but small changes in other sections. Turnover was a shade better, following prospects of early resumption of normal trading.

Besides the expected price increase, the higher output figures for May of Tata Iron and Steel Co. and Indian Iron and Steel Co. also accounted for support for Steels. The T.I.S.Co. produced in May 122,900 tonnes of saleable steel (as against 122,200 tonnes in the previous month), 168,400 tonnes of pig iron (161,600 tonnes) and 164,800 tonnes of steel ingot (161,700 tonnes). The production figures of the I.I.S.Co. were: saleable steel 65,015 tonnes (as against 55,282 tonnes in April), pig iron 116,102 tonnes (109,650 tonnes) and steel ingot 91,208 tonnes (80,807 tonnes), with despatches of saleable steel improving from 46,374 tonnes to 60,978 tonnes. Following the announcement of these production figures, both Tata Steel Ordinary and Indian Iron gathered a fresh momentum on the Bombay Stock Exchange and closed a shade lower than the week's best levels, the former at Rs. 136.50 and the latter at Rs. 22.52, as against Rs. 133 and Rs. 22.20, respectively, a week ago.

This strength in Steels produced occasional rallies in other market leaders, which, however, could not be sustained for lack of follow-up enquiries because of absence of any encouraging corporate news. Prospects of early resumption of normal trading induced buyers to book profits on a small rise. The news that the Aid-India Consortium had pledged about $915 million as aid for the third year of the third Plan was welcomed. But it did not produced any significant impact on the trading sentiment, as the amount fell short of what this country had asked for.

The week under review saw the Madras Stock Exchange accept without reservation the new scheme of margins, as a condition precedent to revival of normal trading. The Governing Board of the Bombay Stock Exchange also accepted the scheme in full and notified the necessary amendment to its margin rules, after its President, Mr. K. R. P. Shroff, tried in vain to seek relief in the margin schedule in his talks with the Union Finance Minister, Mr. Morarji Desai, at Bombay on Saturday the 1st inst. Just before Mr. Shroff met Mr. Desai, some members of the Exchange requested the Board not to seek any modifications in the margin scheme from the Government but obtain early permission for normal trading. Taking cue from Bombay, the Ahmedabad Stock Exchange also sought relief in the margin schedule. It was, however, expected that it would revert its stand in line with Bombay. The Calcutta Stock Exchange which had also found the margins stiff was expected to endorse the new scheme. Permission for forward trading is now a matter of procedural delay which is expected to end soon. It is believed that the Bombay Stock Exchange would be allowed to start normal trading from the next settlement which begins on Monday the 10th inst. This will be for the first time, since 5th November 1962, when the market will be back to normal. It will be interesting to watch its behaviour then.

* * * *

Market leaders on Dalal Street rallied in sympathy with Steels, but encountered realising at improved levels. Thus, T.E.L.Co. rallied from Rs. 279 to Rs. 285, but dropped again to Rs. 279 at close today, as against Rs. 280.50 a week ago. Century recovered from Rs. 542 to Rs. 556, but eased to finish lower at Rs. 552.50, as against Rs. 546.50 a week ago. Hindustan Motors rose briskly from Rs. 16.76 to Rs. 17.08 before closing with a gain of 8 nP at Rs. 16.92. National Rayon finished one point higher over the week at Rs. 348, after moving up earlier from Rs. 342.50 to Rs. 350. Among other prominent issues, Bombay Burmah finished unchanged at Rs. 64, Indian Dyestuff disclosed a gain of Re. 1.25 at Rs. 402.50, Standard were six points higher at Rs. 786, while Kohinoor were 50 nP easier at Rs. 309 and Voltas one point down at Rs. 256.

Among the less active counters, B.R. Cotton showed a big loss of Rs. 8.50 to Rs. 67.50 and Digvijay Cement of Rs. 14 to Rs. 150. Alcock, in the Engineering section, gained four points to Rs. 314, but Larsen lost 48 nP to Rs. 22.76. Premier Automobile were four points up to Rs. 108, but West Coast Paper were four points down to Rs. 138.50. In the cash section, active scrips made a mixed show. Universal Dyestuff declined by four points to Rs. 29, while Synthetics closed six points higher at Rs. 141. Bombay Oxygen, the factory of which was inaugurated today, showed a gain of Rs. 7.50 to Rs. 87, but Permanent Magnets eased by Rs. 6.25 to Rs. 167.50.

* * * *

Forward shares on the Calcutta Stock Exchange displayed a mixed tendency. Orient Paper rallied from Rs. 33.60 to Rs. 34.15 and so did Jaipur Udyog from Rs. 11 to Rs. 11.50, but Indian Aluminium declined from Rs. 34.75 to Rs. 34.25, J.K. Cotton from Rs. 13.66 to Rs. 12.75 and G.K.W. from Rs. 33.37 to Rs. 32.81. Coal shares, in the cash section, were steady, with the exception of Bengal which dropped 10 points to Rs. 275. Jutes evoked selective support, with Alliance rising from Rs. 104 to Rs. 118, India from Rs. 18 to Rs. 18.19 and New Central from Rs. 12.81 to Rs. 13.12, while Anglo-India moved down from Rs. 224 to Rs. 222, Champdany from Rs. 24.50 to Rs. 23.75 and Khardah from Rs. 19.25 to Rs. 18.87. In the Miscellaneous section, Rallis India closed one point lower at Rs. 116 and Hindustan Twyford eased by 64 nP to Rs. 13.50, with others showing generally small losses. Indian Paper pulp eased by 50 nP to Rs. 16.94, but Ballarpore gained 38 nP to Rs. 16.69.

* * * *

Small changes generally predominated on the Madras Stock Exchange. However, among leading issues, E.I.D. fell from Rs. 37.35 to Rs. 37, Peermade Tea from Rs. 21.87 to Rs. 21.65, Cochin Malabar from Rs. 5.70 to Rs. 5.60, Madras Rubber from Rs. 17 to Rs. 16.75 and Lakshmi Mills from Rs. 135.50 to Rs. 134.50. On the other hand, Aluminium Industries improved by 15 nP to Rs. 17.15, Coimbatore Cotton by one point to Rs. 156 and Kil Kotagiri Tea by 25 nP to Rs. 5.60.

HIND AUTO TO ENTER MARKET

Hind Auto Industries Ltd., incorporated on 20th August 1962 in U.P., is entering the market with a public issue of Rs. 20.19 lakhs—Rs. 15.19 lakhs in equity shares of Rs. 10 each and Rs. 5 lakhs in 9.5 per cent, taxable, cumulative redeemable preference shares, also of Rs. 10 each. The lists for subscription will open on the 10th inst. and close on the 17th inst. or earlier, but not before the 12th inst. Applications have to be made for 50 shares or for multiples of 50 shares. On application, Rs. 2.50 are to be paid on equity shares and Rs. 5 on preference shares. The entire public issue has been underwritten by the U.P. State Industrial Corporation Ltd., two banks and a stock broker's firm of Bombay. The public issue is out of the total capital of Rs. 29.07 lakhs (including Rs 5 lakhs in preference shares) being issued at present.

The Company is setting up at Lucknow a plant with an annual installed capacity to produce 200,000 tie rod ends, 40,000 universal joint couplings, 22,000 water pump repair kits, 234,000 king bolts, and 750,000 spring shackle bolts and pins. This will be the capacity in the first year of production. In the second year, it is expected to increase to 360,000 tie rod ends, 48,000 universal joint couplings and 26,400 water pump repair kits. The Company will also manufacture crown wheels and tail pinions, the capacity of which is yet to be fixed. Messrs. Alfred Sell Autoteilefabrik GmbH of West Germany, one of the largest manufacturers in that country, are collaborating with the Company in the manufacture of tie rod ends, king bolts and spring shackle bolts and pins. The collaboration agreement provides for free export to all parts, except Europe and the whole of American continent, including Canada and West Indies. The Company is negotiating collaboration with reputed manufacturers in West Germany and the U.S. for the manufacture of the rest of the items, which is expected to be finalised shortly.

The Industrial Finance Corporation of India has agreed to sanction a loan in Deutschemark equivalent to Rs. 14 lakhs for the purchase of capital equipment. An import licence for plant and machinery worth Rs. 8.15 lakhs has been obtained and another worth Rs. 4.50 lakhs is expected to be issued shortly.

LAND MORTGAGE BANK DEBENTURES

The Union Ministry of Community Development and Co-operation has requested the State Governments to avail the support of the Life Insurance Corporation while floating the debentures of central land mortgage banks. The question of obtaining substantial support to the debentures of central land mortgage banks from institutional investors like the L.I.C. has been engaging the Central Government's attention for some time. The Planning Commission, the Finance Ministry, the Food and Agriculture Ministry and the Life Insurance Corporation have discussed the matter in detail and it has now been decided that the L.I.C. would contribute 30 per cent of the debentures floated by each central land mortgage bank during the remaining period of the third Plan. This contribution will be subject to a maximum of Rs. 6 crores a year. The Reserve Bank of India is already contributing up to 20 per cent of the debentures and the State Bank of India 10 per cent. The remaining 40 per cent will come from co-operatives and other sources. The debentures are to be for 15 years' duration with the issue price at 98. The rate of interest on debentures will be 4½ per cent.

Messrs. J. R. Motishaw and Co., a leading firm of stock and share brokers of Bombay, have brought a revised edition of their popular publication, *Stock Exchange Quotations* which is useful to investors in shares and securities for tax purposes. The publication gives the closing prices of shares and securities on the stock exchanges in Bombay, Calcutta, Madras, Ahmedabad, Delhi and Bangalore as on the last working day of the calendar years 1961 and 1962, as well as on 7th November 1961 (*Diwali*, S.Y. 2017), 28th October 1962 (*Diwali*, S.Y. 2018), 31st March 1962 and 31st March 1963, with the comparative quotations for 4th January 1954. It is priced at Rs. 3 per copy.

(Concluded from previous column)

Nevertheless, in our renewed effort to establish greater economic co-operation with the countries of South and South-East Asia, we shall not be totally without credit. Under the Colombo Plan, India has made available technical assistance to Burma, Ceylon, Indonesia, Laos, Malaya, Nepal, North Borneo, Pakistan, the Philippines, Singapore, Sarawak, Thailand and Vietnam. India's financial aid to the Mekong river project in Cambodia is to the tune of Rs. 12.5 lakhs, besides the lending of river valley experts like Mr. Kanwar Sain, former Chairman of our Central Water and Power Commission. Besides, India has also made available a number of technical experts to these countries despite her own increasing need of qualified hands. They have been engaged in several of the vital economic fields like iron and steel, railways, electrical engineering, sugar technology, tractor engineering, forestry, road research and several others.

DELHI LETTER

INDIA AND S.-E. ASIA

CLOSER ECONOMIC TIES POSSIBLE

(From Our Special Correspondent)

NEW DELHI, *4th June*

THAT our political relations with South-East Asia depends largely on our economic ties with a number of small and emerging nations in this sensitive region is a truism that should not normally need repetition. If our diplomats in this region have been specially briefed, at their recent conference here, on the need to strengthen economic ties with these countries, it is because this very important aspect of our foreign relations has so far remained largely unattended to at the highest level. Indian envoys in this region will now be expected to take the initiative in exploring every possible avenue of mutually beneficial economic co-operation. India will endeavour to provide as much economic assistance to her neighbours as possible at the present level of her own economic development.

This might seem to some as a belated entry into a field already occupied and exploited by China. Moreover, having secured a position for itself in some of the non-aligned countries of the region, China will not be showing a friendly disposition. That, too, is a foregone conclusion. Thus our task will be doubly difficult. Seven years or so ago, when China made its way into the South-East Asian markets in a big way, we had to face severe undercutting. Our experience in textiles is still fresh. Of course, in this particular case, we had to face severe competition from Japan also in respect of variety and quality, and in prices too. But Japan was always there except for a brief period during and immediately after the Second World War. However difficult the task, political compulsions have forced us to undertake this responsibility which should have been a normal activity for us if we had not ourselves shut our eyes to the developments in this region. Concerted effort now can make it fruitful because there are several countries in this region which refuse to accept Peking's supremacy in South-East Asia. Thailand is one country which is prepared to offer several useful avenues of close economic co-operation, including an open invitation to Indian capital for collaborative ventures in engineering and construction industries.

It will, however, be suicidal for India to compartmentalise this region into pro-Peking and anti-Peking groups and forget about the former, while concentrating on developing and strengthening trade and economic ties with the latter alone. For, it must be recognised that although Indonesia, Burma and Cambodia choose to be neutral between India and China, mainly because of certain inner compulsions, they are not Communist countries and often enough their economic interests conflict with those of China. Additionally, in almost all the countries of this region, the reins of commerce and industry are still in the hands of foreigners—the overseas Chinese. The nationalists in these countries are making a sustained effort to seek their own position in their countries' economies. If Tungku Abdul Rahman is so keen on Malaysia, one of the basic reasons for it is his desire to overcome the present majority of overseas Chinese which does not allow the Malays any scope to advance. The riots in Indonesia, with all their racial aberrations, are symptoms of the same affliction. China had to settle the question of rural Chinese retailers in Indonesia more in favour of the local nationalists.

Any effort, therefore, on our part to further develop economic ties with the countries of this region must be accompanied by this basic understanding that the nations in South-East Asia, irrespective of their size and population, are as much aspirants of a viable national economy as we ourselves are; and it is as much in our interest, both political and economic, to take advantage of a geographically closer market, as it is in theirs. If we have not so far discovered any substantial economic mutuality with a number of countries in this region, it is mainly because we have not been seriously looking for them. Since in many cases they were not apparent, we had not made the necessary effort to probe deeper.

Indonesia has agreed to sell its oil to China in exchange for rice. That will, no doubt, augment China's military potential and help to overcome its acute shortage in that strategic material. But, then, Britain is selling planes and Australia its wheat to China, while having close economic ties with us. A team of Australian defence experts will be among us shortly to help us plan our defence production on a rational basis. We, too, are importing crude and might have to import additional quantities to feed the refinery at Barauni in the initial stages. Indonesia's geographic proximity and its abundant surplus (Indonesia produced an estimated 22 million tonnes of crude in 1962), should make a profitable deal possible in exchange for several types of engineering goods and machinery industries which Indonesia wants us to help them set up in the archipelago.

But a warning sounded at the Indian diplomats' meet here is of tremendous significance to our future relations, both in the near future and long-term, with this region. Because of several of our past acts of omission and commission, India's image in certain important quarters in this region has been that of a supercilious big brother, however mischievously fostered by our detractors. We must do everything to pull down that image and replace it with one that should represent us as one of them and part of them, with our own peculiar problems. Our close trading relations with the West should in no case be allowed to stand in the way of our building a new edifice of closer economic ties with these neighbours of ours.

PERSPECTIVES & PROJECTIONS

By Mercator

Whither Gold Control?

SHOULD the discontent of goldsmiths, which is becoming a weapon in the hands of the Government's critics, be the only reward for Mr. Morarji Desai's bold gold policy? It has been claimed that smuggling has been reduced and consequently the drain of foreign exchange; the evidence is not conclusive. Some foreign sources sent out reports earlier that there was less demand for the kind of gold bars normally required by smugglers; the report from London last week of the theft of half a ton of gold in transit may indicate that new ways of smuggling may have been perfected during the interval in which there was an apparent respite. If gold prices had fallen as a result of the Government's policy of licensing and debasement of new gold ornaments, revival of smuggling on the old scale could not have occurred. But prices remain firm, at over double the official price, and the stakes are high for anyone who is willing to risk breaking the tightened-up regulations. Perhaps some who were already in possession of gold stocks are making regulated releases surreptitiously of gold they had not declared before; such persons will not be interested in letting the prices in the black market decline by making too rapid releases. Nor has the public practised the self-denial expected of it in the early days of the emergency, though it is not entirely responsible for acquiring a relaxed mood.

This sustained demand in the context of a possible decline in smuggled gold may even push up prices further and make the attractions of smuggling greater. Internal stocks may be disgorged in times of distress but not for the slightly higher prices offered in the market. The risks of clinging on to whatever gold one may possess are small; the 14-carat rule for new ornaments may be evaded if goldsmiths oblige and at the moment they have no particular reason to carry out the Government's policy faithfully. It may well be that owners of gold ornaments or bullion will in practice conform to the 14-carat rule, since it will make their existing stocks of gold go a longer way in adorning their progeny; but in any case the difficulty in obtaining new gold in future must make every gold-holder think twice before pledging or selling it in case of need.

So the Gold Board and the Government have no choice but to tighten their enforcement against those who did not declare their stocks within the allotted time, though this is not going to be easy business. Such difficulties were only to be expected in this country where craftsmen are self-employed for the most part and evasions by them are hard to detect. Only the State Governments can enforce such laws; but even if they were enthusiastic and efficient —and that is a big if—they will be hardly inclined to court unpopularity among both users and makers of gold ornaments. The psychological barrier has, therefore, to be broken, but Mr. Morarji Desai is too complacent and self-righteous by temperament to undertake it himself. He is most likely to be angry with the people who have not appreciated his high intentions. Whether outsiders, who may have twitted him about the unchecked foreign exchange drain, when India was going around with the begging bowl for aid, are now satisfied with the steps he has taken is not known; but some murmurs of appreciation have been heard. Mr. Desai must take a more active interest in the rehabilitation of the unemployed goldsmiths and there should be enough opportunities for them both in the defence production organisation and in public sector industries engaged in making precision instruments. With some training during which they may be given stipends, younger goldsmiths, who are not past the stage of adapting themselves to new occupations requiring such skilled hands, may be persuaded to take a more hopeful view of the future. The immediate need is not to accomplish all these difficult tasks in a short time but to give the practical proofs of such steps proposed and some evidence of the concern felt by the Government for this class of workers. It calls for imagination of a high order but that is becoming a rare virtue.

* * * *

In the Classless Society

Commenting on gold, the *A.I.C.C. Economic Review* observes that we are even now "heading towards a socialist pattern of society." A recent report offers a glimpse of the conditions prevailing in the Soviet Union where gold mining is a State monopoly but co-operative enterprises are permitted to mine gold by primitive methods and deliver the metal to the Government. These private prospectors, it seems, are able to dispose large quantities in the black market. Theft by supervising officials seems to be common. Dealers and speculators go to the goldfields in summer and sell the gold they obtain to jewellers and dental-aid makers at high prices. Seizure and confiscation of hoards of jewels and bullion has not eliminated illegal operations of this kind, in which very well-educated people were often involved. Many with an excess of cash are apparently interested in investing in such hoards by buying gold even at a premium, though the system of pricing gold in the U.S.S.R. for procurement by the State may also be responsible for some of the black market transactions. The recent introduction of the death penalty for unauthorised dealings in gold shows the lengths to which even a totalitarian State has to go to suppress the craze for gold. It is not surprising that Mr. Desai failed to make any impact on the gold problem in a free democracy.

* * * *

Much Cry and Little Wool?

It is not unlikely that the compulsory deposit scheme will end up with nothing more substantial to show except the deposits made by income-tax payers in order to get equivalent concessions in the additional surcharge levied on them. Much unpopularity has been caused by this measure; even though the depcsit will not normally exceed 3 per cent of income and a fairly high interest of 4 per cent will be paid, critics have classed it with gold control and characterised it as expropriatory. This is doubly unfortunate for the Government, especially after the concessions recently announced for the lower income groups among employees whose contribution in the current year will not be above 2½ per cent and who may be able to get totally exempted from contributions if they now save up to 11 per cent in approved forms. Besides provident fund and life insurance, the facility of making cumulative time deposits in lieu of compulsory deposits may appeal to many employees, so that employers on whom responsibility has now been cast for verification of the actual contributions and enforcement of the rule may find that their collections will not be large.

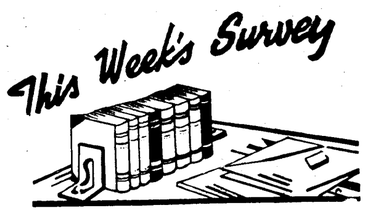
A very interesting clarification has been made by the Finance Ministry to explain why employers have not been asked to deduct deposits from salaries of income-tax payers. It is pointed out that they will in any case pay the additional surcharge and that it is up to them to take steps if they want any portion of it to be treated as a repayable deposit—that, in other words, the deposit is *optional* for them and not *compulsory*, thus repudiating even the justification for the name. Anyhow, it is now stated that an employee can authorise the employer to make the deposit on his behalf by diverting part of the additional surcharge on income-tax to be deducted from his salary; formerly it seemed that a salaried income-tax-paying employee should earn the rebate by himself making a deposit and offering proof of it to his employer though it was most convenient for all these matters to be dealt with at one point at which income-tax was calculated and paid.

Now Mr. Morarji Desai has added another curious justification for his pet scheme by saying that it is intended to compel people to save if they did not do so voluntarily. If so, why shouldn't most income-tax payers who have been eagerly increasing their life insurance premia, to get the tax benefits available for contributions to provident fund and insurance up to one-fourth of one's income, get a similar exemption from the obligation to make a fresh deposit? This should be most easy to arrange; in many of these cases present saving may go up to 30 per cent of income and a further deposit is vexatious, if not always onerous, and serves no purpose.

The deposit scheme will make a real contribution to saving only when the rural and the trading sectors make a significant addition to the total. State Governments have been slow in making up their minds on enforcement in the agricultural sector; even when it is enforced, the deposit may well take on the character of an additional impost, since most agencies concerned with the collection of land revenue (who may be empowered to act in this matter) do not know any other way than exercise of *zulum* over the peasant. There may be a double advantage therefore in enlisting the help of co-operative societies, by treating fixed deposits with them as approved savings.

* * * *

Safety in the Air



The air tragedy near Pathankot this week was a poignant reminder both of the excellence of I.A.C.'s record of safety in recent years and the imponderable element—human or mechanical—which can most unexpectedly and cruelly mar it. To the three families of foreign nationals involved in it there will be much sympathy since their fate was in some ways more tragic than the others'. First reports spoke of generally good weather in the region when the aircraft took off from Amritsar at noon on its way to Srinagar; there were no mountains where the disaster occurred. I.A.C.'s crew do not normally take great risks and often one hears of planes returning to airports after take-off owing to some failure in performance. Whether tests of airworthiness made on the ground are adequate should be again investigated. Dakotas are ageing and I.A.C. has been saying that they are becoming uneconomic in operation; but the prospects of replacement are not bright, since the five Friendships now in operation and the Caravelles proposed to be bought will not suffice to meet the traffic. Of over 40 Dakotas still with the I.A.C., many will have to be used on short routes and kept in trim for the purpose (though it may be considered whether other aircraft may not be used for tourist centres like Srinagar).

Though the Alitalia aircrash in July last was the worst in recent years in India, the last major accident to any I.A.C. scheduled passenger service occurred in March 1959 at Hailakandi on the Agartala-Silchar route in which 20 passengers and four crew were killed. That was also a Dakota, but since then I.A.C. has been able to reduce its Dakota fleet by about 20, or one-third of its fleet in April 1959. The rest are getting old and foreign exchange is the main difficulty in replacing them as fast as possible. The Estimates Committee recently indicated some shortcomings in the investigation of components which fail prematurely and suggested an expert committee. There have been other suggestions that the accident investigation branch should be made independent of control by the Director-General of Civil Aviation, like the Government Inspectors of Railways. Also the Committee noted that it took a very long time to implement suggestions for improving the system of passing weather information to aircraft made in the inquiry concerning the Dakota crash at Hailakandi. These may not have any connection with the Pathankot accident, but they only prove the scope for continuous improvement on such a vital issue as safety in the air.

WORLD BANK LOAN TO I.C.I.C.I.

The World Bank has announced a loan equivalent to $30 million to the Industrial Credit and Investment Corporation of India. Like the four earlier Bank loans to the I.C.I.C.I. aggregating $60 million, this loan also will be used to meet the foreign exchange requirements of projects financed by the Corporation. Under the terms of the Bank loan, interest charged on each part of the loan will be at the Bank's current rates when that part is committed for one of I.C.I.C.I.'s projects. At that time, the Bank and I.C.I.C.I. will agree on an amortisation schedule for repayment of that part of the loan. These amortisation schedules will provide for semi-annual repayments and for final repayment of the entire $30 million loan not later than 1st December 1978. The loan is guaranteed by the Government of India. Including this loan of $30 million, the Rs. 17.5 crores advances and credits from the Government of India lines of credit amounting to $5 million from the U.S. Agency for International Development and DM 25 million from Kreditanstalt fur Wiederaufbau, the I.C.I.C.I.'s total resources amount to Rs. 72.3 crores. The paid-up capital of the Corporation is Rs. 5 crores, of which 71 3/5 per cent is held by Indian shareholders and the balance by British, American, German and Japanese private interests. Surplus and reserves amount to about Rs. 1.6 crore.

The World Bank loan of $30 million, together with the balance still available from existing loans, is expected to meet the Corporation's foreign exchange requirements until the early part of 1965. The Corporation is also making arrangements to obtain some additional Rs. 10 crores of rupee funds.

CONTROVERSY OVER D.V.C. DAMS

RIVER valley development in India presents some very difficult problems pertaining to integrated multi-purpose utilisation, inter-State co-operation and Centre-State co-ordination. The Damodar Valley Corporation, which brings into focus, from time to time, one or other of these problems, is an instance in point. The latest problem that has come to the fore relates to the control over two D.V.C. dams, namely, the Panchet and the Maithon. A controversy between the Centre and the West Bengal Government has arisen over this question—the latter contending that (i) no compensation is payable by it for the acquisition of control over the irrigation canals of the two dams and (ii) the headworks of these dams should be made over to the State on the ground that the transfer of canals alone would be of no use. The first contention has, of course, been upheld by the Attorney-General who has just advised the Centre that West Bengal need not pay any compensation in respect of irrigation canals. But the second bone of contention remains, for the Government of India has so far refused to concede the demand that the two dams be transferred to the State Government. As of today, it is not clear how the dispute is going to be resolved at the high-level conference to be held shortly at New Delhi.

It would be interesting, in the meantime, to find out if either side has a strong case. As far as the Centre is concerned, it has taken the stand that, unless the two dams continue to be controlled by the D.V.C. authorities, their regulated operation for power generation and flood control cannot be ensured. The West Bengal Government, on the other hand, has argued that, unless it has control over the dams, continuous planning and readjustments necessary to meet the demands of agriculture and of the growing industrial complex in the Asansol-Durgapur area will not be possible. The State Government has also found fault with the entire planning of the D.V.C. irrigation system which, in its opinion, has not given any impetus to double-cropping by making water available for *rabi* crops also in *kharif* areas. Further, the navigation canal too, according to the State Government, has become a liability.

On the face of it, the stand taken by West Bengal seems to have a logic of its own in the light of D.V.C. experience to date. It may be recalled, in this connection, that there were reports, from time to time, about the rather poor performance of the D.V.C. in the matter of irrigation, navigation and flood control. The D.V.C., it was said, had provided no greater irrigation than what was formerly available under the weir system. Technical flaws in the construction of the D.V.C. canal were stated to have limited its navigational utility. And, above all, the flood control purpose was ill served in at least one disastrous flood—a flood of the kind which the Damodar and its tributaries used to cause before the D.V.C. dams were constructed. The only purpose which seems to have been fairly well served by the Corporation is power generation, though even here things have gone wrong sometimes. But this is by far the most important purpose of the D.V.C. system. Supply of water to the growing industries in the region is no less important. Irrigation comes only third in order of importance. If West Bengal accepts the regional super-grid idea and agrees to merge its separate electricity system in the proposed super-grid for the Eastern Himalayan region (comprising West Bengal, Bihar, D.V.C. and Upper Orissa), a solution will, perhaps, be more easily found for the present dispute between the Centre and the State over the control of the dams in question.

U.K. SHIPBUILDING INDUSTRY

The British shipbuilding industry has been passing through a crisis for some time now, thanks to the decline in the intake of orders from about seven million tons in 1957 to 1.9 million tons at the end of March 1963. The crisis has led to a pretty steep fall in the number of people working in the industry, the current employment figure being 35,000, as compared with 42,000 in 1962, 53,000 in 1961 and 60,000 in 1960. Surely, the industry is very sick and depressed. It is with the object of lifting it out of the depression that the U.K. Government has just announced a loan scheme whereby £30 million will be made available, over the next 12 months, for granting five per cent ten-year loans to British shipowners placing orders with British yards. The reason why British shipowners are going to be so loan-aided is traceable to the fear that British shipping orders might go increasingly to foreign yards. This fear is not unwarranted, for a British shipping company (the Court Line) recently placed its order for new ships with a Japanese shipbuilding concern.

It is expected that this valuable "shot in the arm" will enable British yards to secure anything up to £50 million of new business over the next twelve months. This expectation is just likely to be fulfilled, for British shipowners, who normally constitute 80 per cent of the market for British shipyards, have recently begun to think in terms of replacing their older ships. Since their replacement demand may well run at an average annual rate of about one million tons, a turn for the better is expected in the fortunes of British yards. Of course, the assumption here is that most British shipowners continue to be firmly committed to "buying British." Even if they are not, the Government's loan scheme, which offers to British shipowners the same favourable credit terms that foreign shipowners can already obtain in U.K. yards, should be a fair incentive to them in the matter of placing orders with British yards.

Whether it will turn out to be a *wholly adequate* incentive remains, however, to be seen. There is reason for some doubt here, for the price factor is not quite favourable to the British shipbuilding industry. It is reported, in this connection, that Japanese and Swedish quotations suggest prices which are about £400,000 cheaper than could be obtained in Britain for, say, tankers in the 50,000-60,000 deadweight tons range. The fact that the Government's aid scheme can do nothing to help British shipyards in the matter of prices may be noted here. Will some kind of subsidy, which, in the opinion of the U.K. Government, "is a course to avoid if at all possible," become ultimately inevitable? If that happens, it will mean that even in an advanced country like Britain there are no practical alternatives to the kind of incentives that have to be provided in India, for instance—incentives like subsidy for shipbuilding and liberal loan assistance to shipowners.

CEMENT PRICE INCREASE

The increase in cement prices, which the Government has permitted this week, falls short of the expectations of the industry. It is, therefore, doubtful whether the present modest increase in prices will enable the industry to secure an adequate return on investment and step up production. The selling price of unpacked cement has been raised, by just Rs. 3.75 to Rs. 97.75 per tonne, with effect from the 1st inst. The rise in ex-works price is Rs. 2.75 per tonne, the balance representing the higher margin for distribution costs, particularly those arising from the increase in the incidence of freight rates. Apparently, what the Government has done is to fix cement prices more or less at the level suggested by the Tariff Commission in its report as early as in 1961. It may be recalled here that the Government of India had scaled down the prices suggested by the Commission and that the revised prices were brought into force in November 1961. The industry is dissatisfied with the present gesture of the Government, for there has been a considerable increase in the cost of fuel and raw materials, particularly coal, power, and limestone, since the Commission last reported. The rise in the incidence of costs on these counts has been much larger than what could be made good by the present increase in prices. It is surprising to note that the industry's representatives were not even consulted before fixing the new prices. Nor does it appear that the question was referred to the Tariff Commission for its opinion.

Although the Government has raised the ex-works price by Rs. 2.75 per tonne, the actual price accruing to producers will be much less than this. For there has been a reduction of 25 nP per tonne in the industry's commission as selling agents, which brings down the actual price increase to only Rs. 2.50. Besides, the increase in price now includes the element of premium payable towards the Emergency Risk Insurance, for which the industry wanted an extra margin. The industry is equally worried over the Government's decision not to enforce the new price on a retrospective basis. The industry has been pleading for an upward revision of price for over one year because the controlled price had proved to be unremunerative even within a few months of its enforcement. There is, therefore, nothing new or unfair in its claim for a retrospective enhancement of the cement price.

The Government's desire to peg down the cement price at a low level is understandable, when viewed against the background of its anxiety to keep down the cost of construction—a field in which the public sector has an important role. There is, of course, an element of justice in this approach. But it should not be forgotten that any unremunerative price structure imposed on the cement industry will, by slowing down production, retard the tempo of construction itself. Already, there is a shortage of cement in several parts of the country. What is worse, production has been increasing only at snail's pace. In 1962, the total output of cement was 8.59 million tonnes, which represented an increase of just 0.34 million tonnes over 1961. The industry has thus a long way to go before it can fulfil the third Plan target of about 13 million tonnes, corresponding to a capacity target of 15 million tonnes, as we pointed out in these columns a few weeks ago (*vide* page 674, *Commerce* dated 20th April 1963). The targets are now being revised upwards on account of the mounting demand for cement in both civilian and defence construction. The revision of targets will be fruitful, only if it is followed by the provision of necessary incentives for the flow of capital into the industry on a much larger scale. This cannot be done by maintaining prices at the present levels. It is also necessary to see that the industry gets a better deal in the allocation of foreign exchange for the purpose of importing machinery and equipment meant for new projects and for modernisation of existing plants. Unless such conditions conducive to the rapid expansion of the industry are created, mere appeals to the industry to increase the efficiency of its operations and to reduce its costs will be of no avail.

WORLD SUGAR

The distinct firmness of world sugar markets noted in the past few weeks, more especially since the beginning of last month, seems to have abated, at any rate for the present, though the currently ruling prices are still nearly five times the level prevailing a year ago. Raw sugar in London, which went up in less than four weeks by as much as £35 to touch the peak of £101 per ton on 24th May, has since come down to £89. Similarly, the spot price for world sugar at New York has receded by two cents to 10.60 cents per lb. What has brought about the fall in prices? Will this downward trend persist in future and, if so, to what extent? These questions can be answered only in broad, general terms, because of so many uncertain elements in the world sugar economy which cannot be assessed accurately at present.

To take first the first question. The chief cause that has led to the drop in sugar price at London is the British Government's decision to authorise the Sugar Board to begin "distribution payments" to the trade at the rate of 6d. a pound or £56 a ton on refined sugar. Immediately following this decision, the sugar trade (wholesale and retail) effected cuts in prices, the actual extent of the cut in many cases being 10d. a pound. The warning against the severe impact of the high prices given by the Executive Director of the International Sugar Council, Mr. Ralph Stedman, might have also had a sobering effect on the world sugar markets. Speaking at the meeting of the F.A.O. Committee on Commodity Problems at Rome recently, Mr. Stedman declared that the present extraordinary state of the market was fraught with extreme peril—not only for the importing countries which had to pay "a price" but also for exporting countries. Characterising the present price as quite unprecedented in times of peace, he said: "The price yields only short-term advantage to the exporting countries and that only in respect of a part of sugar which is being bought by importing countries at the present prices. In the longer-term, the present situation threatens the export markets and the livelihood of many exporting countries heavily dependent upon the export of sugar."

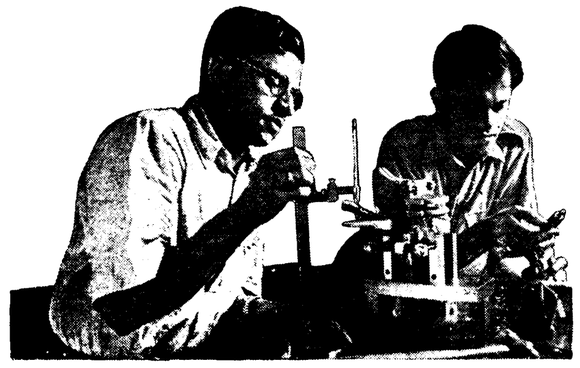
As for the second question, the downward trend of sugar prices may be expected to gather momentum in the next few weeks, though the possibility of a sharp fall in prices can be ruled out. This expectation is based on reports that the Soviet Union has allowed Cuba to divert this year one million tons of sugar to the world market in order to take advantage of the high prices. Since the U.S. cancelled the Cuban sugar quota in 1960, it will be recalled, Soviet Russia has been buying the entire sugar production of Cuba, though it pays much less than what the U.S. was paying before. It is estimated that Russia imported some six million tons of Cuban sugar in 1961 and 1962 at a maximum price of 3.5 cents per lb. It now has, we are told, stocks aggregating ten million tons which, if sold at the currently ruling price, will earn for it a handsome profit running to millions of roubles. Since large-scale sales of sugar will depress world sugar prices and thus reduce the profit, Russia may be expected to unload only small parcels of sugar periodically on world markets. The President of the New York Sugar Market, Mr. Earl McHardy, seems, therefore to be correct when he says that there will be no "major drop" in world sugar prices before one or two years. Presumably due to the attempt on the part of Russia to corner sugar stocks, the U.S. Senate Finance Committee has begun an investigation into the soaring prices of sugar in the U.S.

Whatever be the finding of the U.S. Senate Finance Committee, it is clear that the key element in the world sugar situation in the next few years will be the trend of production. There is no doubt much force in the statement of Mr. Stedman that the quickest way to get the extra sugar needed is by raising production in the developed countries that have been restricting their output. But it must be emphasised that the action to remedy the present crisis should not be to the long-term detriment of world sugar trade or at the long-term expense of the developing countries' exports. It is indeed gratifying that Mr. Stedman has himself pinpointed this aspect. To quote him: "A new International Sugar Agreement will be out of key with the times if it does not play a more effective role in the urgent task of promoting the advancement of developing countries. The technical means of doing so are very readily to hand and it is only the political will that will be required." Incidentally, he has disclosed that the U.N. Secretary General has in mind to convene a "short conference" at London in the first week of next month for the specific and limited purpose of prolonging the present International Sugar Agreement and keeping the Sugar Council in existence. The deliberations of the conference and the decisions taken thereat will surely be watched with great interest by sugar millowners and traders, as well as the authorities, in India which wants to earn as much foreign exchange as possible through sugar exports.

U.N. TECHNICAL ASSISTANCE

The Technical Assistance Committee of the U.N. Economic and Social Council will meet at Copenhagen on the 17th inst. to chart out programmes for continued multilateral technical aid. The deliberations of the Committee will be of considerable importance in view of the steady increase in the range and volume of technical assistance granted within the framework of the Expanded Programme. The provision of technical know-how under U.N. auspices has come as a great succour to developing countries, the economic progress of which has been hampered by the dearth of technically skilled persons. The Expanded Programme of Technical Assistance has done a good deal of service not only by providing training facilities and expert assignments for various projects, but also by acting as an international agency for mobilising such resources from developed nations for the benefit of other countries.

An idea about the growth of the various activities under the Expanded Programme has been given in the latest report of the Technical Assistance Board, just released. In 1962, direct assistance under the Expanded Programme was given to about 124 countries, excluding 21 countries which participated in regional projects. This is the largest number of countries ever aided in one year under the Programme. The number of experts provided and the number of fellowships awarded in 1962 also touched record levels. In all, 2,552 experts were in the field in 1962, as against 2,381 in 1961. They worked in 119 countries and territories. About 5,860 fellowships were awarded in the last two years, 2,029 in 1961 and 3,831 in 1962. The awards were made to the nationals of 140 countries and territories, for study in 96 different countries. There was a corresponding increase in the figure for the number of experts who were recruited from the developing countries. In 1960, the figure was 574, in 1961 it was 709 and in 1962 it was 705. The provision of experts accounted for 71.8 per cent of all expenditures, while the fellowship programme accounted for another 17.8 per cent and the provision of equipment the other 10.4 per cent. Total obligations incurred under the Expanded Programme during 1961 and 1962 together amounted to $89.7 million, including $13.8 million for administrative and operational costs. The cost of the field programme, that is, direct project cost, was $44.6 million in 1962 and $31.3 million in 1961. The uneven division, as the Board explains, was due in large part to the African Programme, which was still being worked out during 1961. Leaving Africa aside, assistance provided in 1961, measured in financial terms, reached about 90 per cent of the level originally planned, with the corresponding figure for 1962 being 114 per cent.



The enlargement of the scope of operations was made possible by an increase in contributions made by various countries towards financing the work. The total pledges by various Governments rose from $42.4 million in 1961 to $45.3 million in 1962. Contributions announced so far for the current year have aggregated $50.3 million. Of the major projects financed by now, mention may be made of the Guddu barrage in Pakistan seeking to provide irrigation facilities there. Another notable project is a combined venture by the U.N., the F.A.O., U.N.E.S.C.O., and W.H.O. in rural community development in Afghanistan, which involves health work, educational activities and the building of certain public utilities.

A notable feature of the working of the Expanded Programme has been the readiness with which it seeks to modify standard procedures and to adopt new approaches in programming and administration. A case in point is the biennial programming put into force for 1961 and 1962. According to the Committee, the adoption of biennial programming has removed the difficulties experienced in completing certain projects within the span of a particular year on account of technical drawbacks. Besides such reforms, it is gratifying to note that the Committee has initiated thorough evaluation of its projects, including the grant of fellowships, for rectifying mistakes and improving the implementation of schemes for technical aid.

Whatever the job you do...

YOUR JOB
IS A JOB
DONE FOR INDIA

You, your life, the work you do—all are a part of an India striving today for efficiency, for strength. Whatever your job, let it be done efficiently so that hold-ups and slackness are obliterated. Victory is built of the sum total of millions of just such resolute efforts as yours.

HEAVY INDUSTRIES DOING VERY WELL

LABOUR LIKELY TO MAKE FRESH DEMANDS

From Our Special Correspondent

NEW YORK, 1st *June*

BUSINESS continues to be much better than expected. There has been improvement in nearly all lines. But there is some eye-brow-raising in banking and business circles. Apprehension is widespread that, because of the unexpected extent of the upturn, labour leaders may overreach themselves in their demands for new contracts with management. Quite a few are expiring this year.

Another really disturbing element is the racial crisis in the United States. It has reached enormous proportions in the Southern part of the country and it is spreading North even into New York which has not been threatened by any such upheaval for about two decades. It is, of course, detrimental to business, to smooth working conditions, to human harmony and understanding. A mob psychology has developed in the South of the U.S. and is threatening to develop in some parts of the North as well. Mob psychology, unfortunately, cannot be legislated out of existence and this is what the U.S. Justice Department and the Federal courts have been trying to do. The fault is as much with the whites as with the negroes who, encouraged by equality legislation, do not want to wait for another 100 years for the process of evolution to take place. Emotions are erupting because of traditions and because of the lack of them. It is a sorry spectacle and it is difficult to understand for the impartial observer and chronicler of news, as this reporter, who was exposed to two revolutions in Europe where reason ceased and emotions took over.

In the meantime, the heavy industries are doing extremely well. For example, on the basis of production figures for the first five months of the year, it looks as though steel production for the year as a whole may be just a little short of 110 million tons. During the last five years, output has been below 100 million tons. This development has naturally boosted the overall production index of the Federal Reserve Board. There will, of course, be the natural summer letdowns in output, owing to vacations.

Automobile Industry

Another heavy industry which has been doing extremely well is the automotive field. There have been successive increases in production schedules which would seem to indicate that, by the end of the 1963 model year, close to 7.3 million automobiles will have been assembled. The model year ends in August. This would be a new record. The former high was 7,131,000 cars for the model year 1955. Last year (1962 models), about 6,687,000 cars were assembled.

This latter development, as in the past, brought about an increase in hire-purchase transactions, or consumer credit. In the first quarter, automobile paper had been rising at a seasonally adjusted rate of close to $3,000 million. This compared with $3,700 million in 1955 when credit terms were more liberal. But at present, the rate of repayment is higher than in 1955. Instalment credit now amounts to about 14 per cent of disposable personal income which is quite high, historically.

Currency Deal With Britain

The securities markets have given a very good account of themselves. Equity prices have been creeping up and in many instances made new highs and the bond markets held their own. Some optimism was generated by the announcement of the $500-million Anglo-American currency deal to protect both the dollar and sterling. This move is very closely linked to the continued threat of an adverse imbalance in international payments and to what is described in some quarters as a "run on gold." Dollar assets held in countries around the world are estimated to amount to about $20,000 million. Against that, the U.S. monetary gold fund stands at about $15,800 million. This discrepancy is a matter of concern.

The new arrangement, in effect, permits the U.S. to borrow up to the equivalent of $500 million in sterling, or Britain to borrow from the U.S. an equal amount in dollars, if such funds are required for short-term periods to stabilise one or the other currency. A Federal Reserve Board statement said that the new system "provides a major reinforcement of the world payments' system and of international liquidity by increasing the availability of foreign exchange in case of need." The Federal Reserve has similar arrangements with other countries, totalling $1,550 million. They are in effect, at present, with the national banks of France, Switzerland, Canada, West Germany, Italy, Austria, Sweden and the Bank for International Settlements.

While U.S. foreign trade, as a whole, continues satisfactory, actions of the European Economic Community and their unwillingness to make concessions for certain portions of U.S. trade is causing headaches in some quarters. The feeling here is that the Common Market and the "Outer Seven" and similar other trade groups are becoming laws and economic empires of their own which may restrict rather than liberalise trade. An exception, perhaps, is the Organisation for Economic Co-operation and Development which has under study possible Japanese entry into the O.E.C.D. Earlier talks on this subject were held in May in Paris. The tough issues are liberalisation codes on current invisible transactions and capital movements.

United Nations News

The United Nations are still wrestling with the problem of erasing the Organisation's $100 million deficit and with plans for meeting future costs of "peace" operations such as in the Congo and in the Middle East. The Soviet bloc maintains its inflexible position of not contributing, but the 56-nation Afro-Asian group is hopeful of a short-term solution. Under the U.N. charter (Article 19), a member who has not paid its assessments for two years has no vote in the General Assembly. The cut-off date for the Soviets will not be reached until early next year. Hence, the desire for a short-term solution not only by the Afro-Asian nations but also by Latin America.

Committees have been in conference for some time. Up to this point, peace-keeping U.N. operations are costing an average of $11.6 million a month. Funds for that have been raised and spent for the past several months from emergency bond sales proceeds. This, obviously, cannot go on indefinitely, but the question of finding a permanent solution to the problem is a very complex one. The bond proceeds are almost exhausted.

(Concluded from next column)

I.M.F. and the World Bank are dominated by very conservative banking schools) and prefer to push on with their own plan for short-term credits.

In doing so, the Americans, of course, accept the principle of mutual aid and it seems to be primarily a question of whether the mutual aid should come about through private arrangements made between banks and between currencies or whether it should come about through the International Monetary Fund, using this as a repository of all currency resources. Certainly this last must come to pass in due course.

Meanwhile, the significance of the present arrangements is that the two major world currencies are admitting that they need each other's support and that their own resources, even coupled with their rights to draw on the I.M.F., are not in themselves sufficient. The international credit expansionists are proving their point. But let it not be assumed that this is as good as a pool arrangement through the I.M.F.: for sterling and the dollar, although the world's major currencies, are not the world's strongest currencies—both are liable to have heavy balance of payments pressure put against them as well as straight-forward speculative pressures. One might almost say the two weak giants are propping each other up in the hope that the smaller, tougher men will be chary of knocking them over. The battle for international liquidity through the central pool of the I.M.F. will still continue.

LONDON LETTER

U.K.-U.S. MUTUAL CREDIT

$ AND £ PROPPING EACH OTHER UP

(From Our Own Correspondent)

LONDON, 31st *May*

THIS week has seen an arrangement between the British and American Treasuries whereby a sum of $500 million (£178 million) will be made mutually available in case of need. The initiative in this matter has come from the American side in pursuance of their principle to defend the dollar by opening short-term credits with all the major world currencies. Last year the U.K. was drawn into this network but to the extent of only $50 million, one-tenth of the present arrangement. The European and other banks concerned with these short-term credits have not been enthusiastic about them but have felt under obligation to make some gesture. The present very large mutual credit is of a different order.

The reason why the initiative has come from the American side is because the dollar for the last five years has been persistently weak as a result of an overall balance of payments deficit. It is often difficult to comprehend why America should have this problem: the reason is simply this, that over the past five years, although the U.S. has had a surplus on its current overseas trading of nearly $2,500 million per annum (only in 1959 was there a slight deficit), the U.S. Government has been spending overseas, whether for defence or for aid, an average of $3,000 million and, on top of this, there has been a continuous outflow of private investment equal to the amount of the current trade surplus. Now the United States could either limit its outflow of private investment or its outflow of dollar aid or dollar defence expenditure. A selective reduction amounting to half of America's capital exports would resolve the dollar problem but the U.S.A. does not wish to choose this way out. It has hoped that its exports to Europe would expand, it has hoped that some of its private capital outflow—only about half of which is direct investment—would naturally diminish and that its own overseas defence expenditure could be limited. There is at present no indication that any of these hopes are on their way to fulfilment and American policy remains still obscure in the matter of how its external deficit is to be put right.

The Dollar Weakness

But that, after all, is an American domestic problem. As far as the rest of the world is concerned they know that the deficit is within the American competence to put right; it is a matter of policy. But meanwhile, the world is faced with a persistent dollar weakness which has led to speculation against the dollar and the Americans are thus seeking ways of protection against such speculation and for short-term financing while they cast about for their own long-term policy remedies.

The U.K. has been very willing to enter into this swap arrangement because, if the ambitions of either of the major political parties in this country are to come to fruition, there is to be a major industrial expansion in the U.K. over the next couple of years, an expansion which may well cause a surplus of imports and a weakening of sterling in a year's time. It is important to add that there are no signs of such pressure on sterling at the moment, but it would logically follow if economic expansion does get substantially under way. In such circumstances, the U.K. will obviously run up against the old drearily familiar problem of a balance of payments deficit, pressure on sterling and an expectation on the part of overseas bankers that the U.K. will adopt a policy of "retrenchment and reform." And that is the last thing, after all the warnings of the post-war years, any U.K. Government would wish to have. Hence the enormous interest in this country in an expansion of international credit facilities and devices have been proposed both by the Chancellor of the Exchequer and by the Leader of the Opposition.

It will be recalled that the plan of the Chancellor of the Exchequer, put forward at the last meeting of the International Monetary Fund, was for "gold monetisation" of all currencies mutually held by central banks. Thus a deposit of sterling, whether by the U.K. or any other central bank with the I.M.F., would count as gold. It will also be recalled that the Americans cold-shouldered this plan (both the

(Continued in previous column)

New York—gay, glorious, glittering...so easy to reach by ***KLM***

Facts you should know about KLM's remarkable reliability and friendly personal service before your next flight to the USA, Canada, Mexico or other parts of the world.

A KLM plane takes off or lands every four minutes somewhere in the world. KLM was the first European airline to operate a regular service across the North Atlantic after World War II. KLM's attention-to-detail from overhauling jet engines to catering for passengers' special diets is well-known to experienced air travellers. Read on...

1. KLM carries an average of 3830 passengers *every day*—about twice the capacity of a big ocean liner.

2. KLM was the first non-American airline to order DC-8 jets, and the first to operate them. KLM pilots started their jet training a year and a half before the first DC-8's arrived.

3. DC-8 jets are operated by KLM on its weekly westbound services from Calcutta on Friday night and from Delhi on Tuesday night and also on its five-weekly flights from Karachi on Mondays, Wednesdays, Thursdays, Saturdays and Sundays. All these services provide immediate connections at Amsterdam to New York. Frequent services also operated by KLM from Amsterdam to Montreal, Houston and Mexico City.

4. In addition, in conjunction with its interline partners, KLM makes it possible for you to fly out of Calcutta, Delhi or Bombay *any day of the week*, by providing connections at Karachi, Cairo, Beirut, or Teheran (depending on the day of travel), with KLM flights to Amsterdam and onwards to North America.

5. During the tourist season, KLM flies more than 30 scheduled flights between Europe and the USA every week.

Comfort—the keynote of KLM jets

6. Travelling First Class on a KLM DC-8 jet, you sit in unstinted comfort. Your seat is as wide as an armchair, has built-in table lamp, pre-focussed reading lamp, air blower and finger-tip control panel. Each seat costs KLM US $ 1500.

7. The nose of every KLM DC-8 jet contains a radar set. With it, the captain can see what the weather is like 150 miles ahead—and fly around turbulence and storms. This helps guarantee a smooth flight.

8. Every KLM DC-8 jet has a luxuriously appointed lounge, located in First Class. It is a perfect place to meet your fellow travellers over free drinks.*

Competent, careful crews

9. KLM spends US $ 236,000 to train the flight crew for one DC-8 jet.

10. All KLM pilots get a psychological test for aptitude, character and emotional stability. These tests are conducted at the Netherlands Institute for Psychological Testing in Utrecht.

11. A KLM jet captain never stops learning. KLM sends him back to school 7 times a year for refresher courses. They keep him up-to-date with new developments.

**Outside prohibition areas*

Service aloft and on the ground

12. KLM has its own fully air-conditioned resthouse at Karachi airport called "Midway House". It has spacious, comfortable rooms with shower baths and provides many facilities e.g. a supervised nursery, a barber shop, a souvenir and carpet shop and a floodlit tennis court. The service there matches the standards of a good European hotel.

13. KLM prepares special diet food for passengers who request it as they book their seats. KLM pursers are always briefed on these special diets before passengers come aboard.

Stopover in Amsterdam

14. Things to do at Amsterdam International Airport between planes: Shop for luxury bargains at the Tax-Free Shopping Centre. Buy a tax-free car at ShipSide Showroom. Take a Minitour of Amsterdam. Visit the airport's fascinating aeronautical museum.

15. Take advantage of "Hilton Special"—a stay of two days and a night in the Hilton Hotel, Amsterdam; plus sightseeing tours covering a canal boat trip, visits to the Queen's Palace, Rijksmuseum, the Rembrandt House, a diamond cutting factory and other places of tourist interest. And all this for just US $ 17.00.

16. You can save US $ 38.00 on your normal Economy Class return fare to New York by availing of KLM's DC-8 jet services to Amsterdam and back, and flying across the Atlantic on KLM DC-7C.

17. KLM's Multi-Stopover Plan lets you make more than one stop en-route to your final destination at no extra airfare. Get in touch with your Travel Agent or contact the nearest KLM office. CALCUTTA—7 Chowringhee Road; DELHI—9A Connaught Place; BOMBAY—Taj Mahal Hotel.

TOWARDS PLANNING IN NEW ZEALAND

MONETARY AND ECONOMIC COUNCIL'S REPORT

By Dr. H. Gielb

EVIDENCE is accumulating that the methods of economic planning through which the French economy has made a spectacular recovery after the war continue to influence economic thinking all over the world. One of the latest countries which is turning towards the French methods of planning seems to be New Zealand, a country twelve thousand miles away from France (*vide* page 1044 of *Commerce* dated 15th December 1962).

The search for an orderly planned, free enterprise economy prompted the New Zealand Government in 1961 to appoint the Monetary and Economic Council. The Act establishing this council provided that its main functions would be to report periodically to the Minister for Finance on the extent to which price stability, economic growth, full employment and higher living standards were being achieved, and to recommend both short-term and long-term measures to promote economic growth and raise living standards, while maintaining full employment and stability of prices. In addition, the Council was empowered to report on the economic and financial problems affecting cost and price stability, on the provision of finance for the expanding industries, and on other matters. The legislation also provided for the Council to be "completely independent and free from political control," to have an independent secretariat and to be free to publish its reports.

Economic Growth

In September 1961, in view of the "increasingly serious economic posittion confronting New Zealand, the Council decided to publish its first report in which it recommended a number of financial and fiscal measures aiming at the revitalisation of the economy. In May 1962, the Council published its second report under the heading of "Economic Growth in New Zealand." This report covers the completed initial survey undertaken by the Council after its appointment, and makes far-reaching recommendations on economic planning and the setting up of an appropriate national planning authority.

The second report emphasises that, in the last decade, New Zealand has not followed the lead of several other democratic countries "which have succeeded in achieving a fast rate of growth by deliberately adopting an overall plan for national growth which looks forward over a period of years and attempts to ensure that all the major elements of growth are provided for in proper proportion and as integral parts of a unified whole." Having reached this conclusion, the Council stressed "the need for planning" in New Zealand which it substantiated in the following terms:

"The considerable success of France, the Netherlands, Norway and several other countries with a democratic form of planning has stimulated the British Chancellor of the Exchequer to propose the setting up of a National Economic Development Council in the hope that it will assist the Government to stimulate growth, moderate inflationary pressures, and correct the tendency towards adverse balances of payments. New Zealand's difficulties have clearly been of the same general kind as those of the United Kingdom and the Government would, in our view, be wise to consider whether the country could benefit from the establishment of some form of planning agency."

In the opinion of the Council, planning of a stimulating and creative kind can be done by investigation, consultation and agreement, without having to embrace the rigidly authoritarian direction of the economy in great detail as is found in the East European countries. The Council set out its views because "the word 'planning' easily conjures up visions of the kind" of economic planning known in the authoritarian countries.

Numerous Recommendations

After these considerations, the Monetary and Economic Council made numerous recommendations of long-term economic planning, sometimes reminiscent of the French planning system. As the main components of a long-term economic plan, the Council recommended a set of objectives to be achieved in production, employment, price stability, balance of payments, and above all, "a determination of a rate of growth." Particular attention was recommended to expenditure which "is crucial" for continued growth, such as investment in productive facilities and in improving the efficiency of labour and management through education and research.

The Council considered that tentative programming of Government expenditure over a period of, say, five years, within a programme of an overall plan, is essential. The same applies to local-government bodies and to major private enterprises. It also recommended adoption of measures to ensure that an adequate rate of capital formation is achieved and that efficiency in the private sector of the economy is improved.

The Council considered that the important task of long-term national economic planning should be undertaken by a specialised authority set up for this purpose. It recommended the appointment of a "planning agency" to reconcile the economic programmes of the Government with those of the private sector, which is "an essential element in the planning process." It further recommended that the advice of the planning authority should be made public and that the Government must be prepared to offer publicly its reasons for rejecting any of the planning agency's recommendations.

The Report concluded that "New Zealand would gain greatly by bringing all these and related matters into the open for public discussion and voluntary adoption." The Council considered it "essential that there should be widespread and informed participation in planning by all sections of the community."

In the view of the Council, the most suitable planning authority for New Zealand would be an "independent committee or council of persons chosen for their qualifications in fields relevant to economic planning, provided with an adequate staff and given authority to call for views and information from all sections of the community, including Government." The Council recommended, however, that the final decision on the rate of growth and other major points of the plan should be reserved for the Government which alone is responsible for the national economy.

(*Concluded from next column*)

40 and 80 rupiahs a kilo, depending on quality. The price of lower quality rice has risen in recent months because, when cooked, the lower quality rice swells more than the better varieties. A kilo of tomato costs 150 rupiahs, or more than three U.S. dollars at the official rate of exchange. A kilo of potato comes for 50 rupiahs. An electric bulb costs 200 rupiahs, or more than four U.S. dollars. A car battery sells for between 9,000 to 12,000 rupiahs and a car tyre for 80,000 rupiahs or around U.S. $1,600. A bicycle sells for 75,000 rupiahs. A taxi from the airport into the city, four or five kilometres, costs 500 rupiahs. One is lucky to get a taxi for 400 rupiahs an hour.

The salary of a senior Indonesian official or professor in a college is about 4,000 rupiahs a month. His daily wage will be enough scarcely for a cup or two of coffee in any reasonably good restaurant. But, at the same time, one finds hundreds of new expensive American cars on the road. A new Chevrolet costs around five billion rupiahs or about U.S. $100,000 at the official rate of exchange.

If the people in their thousands have not risen in revolt in Djakarta, it is because of a complicated subsidy system which helps hundreds of thousands of regular and non-regular Government servants. The rise is sold at subsidised shops, so too soap, kerosene and cloth. The houses, requisitioned by the Government, costs often only 100 rupiahs a month, or two U.S. dollars at the official rate of exchange.

About a million tons of rice are imported annually to feed the people in the cities, following the failure of the rice self-sufficiency campaign. The rice levy on the farmers has also failed. The Government spends the equivalent of about Rs. 50 crores on import of food and a similar amount on subsidising the food sales.

The till is empty on the foreign exchange account and the heavy spending on arms and armaments last year left little for imports to maintain the few local industries. Negotiations with the International Monetary Fund have been long drawn out and the I.M.F. wants some fiscal reforms as a condition to support. Relations with European communist aiders have become unhappy and it is freely said by Indonesian officials and Ministers that the Americans are about the only foreign assisters who are willing to "co-operate."

INDONESIA'S ECONOMY

PRICE INFLATION ACUTE

By K. Krishna Moorthy

ON 1st May 1963, the Indonesian revolution fulfilled its territorial aims with the acquisition of West Irian. In this hour of triumph, of which Indonesians in every walk of life would be proud, the reservoir of Indonesian economic strength had reached its lowest water level yet. Although victory in West Irian was achieved without clash of arms, as was at one time feared, the economic disruption caused by the national mania over West Irian has been extensive and has become a deep-rooted factor.

The economic chaos of Indonesia is illustrated vividly in its most modern enterprise: Hotel Indonesia, the 14-storey luxury hotel built with Japanese reparations assistance. Under the roof of this hotel one can experience the tremendous confusion of Indonesia's economy. The Japanese provided the foreign exchange expenditure for building the hotel. If one assumes that the Japanese assistance for this hotel was not diverted to other projects—accounting is a lost art in Djakarta—the foreign exchange cost of the hotel comes to around U.S. $10 million. As for the local rupiah currency costs, that is anybody's guess. There is no official figure available. Therefore, there is no way of knowing whether the hotel is earning a profit or not. Under present Indonesian concepts knowing the profit or loss is not an important factor; the most important fact is that the hotel has been built and is in operation.

Countries in general are proud of their own currency but in Hotel Indonesia local currency is not legal tender for payment of bills by foreigners. The hotel bills have to be paid in dollars or sterling. The official rate of exchange is 45 rupiahs to the U.S. dollar. Those with a tourist visa get 180 rupiahs to the dollar. The free market rate is around 1,300 rupiahs to the dollar. In the restaurants attached to Hotel Indonesia you get a bill with a double entry. There is an amount in rupiahs; the equivalent shown in dollars is converted at the rate of 500 rupiahs to the dollar. The charges naturally are inflated to sustain this high exchange rate. But very few people use even this rate, because the rate available outside is 1,300 rupiahs to the dollar. Since the bills for food are accepted in local currency, visitors change their dollars outside. When I inquired how the hotel made such an arrangement, I was told that the 500 rupiah rate was fixed in days when the black market rate was at that level!

Deficit Budgets

To trace the flight into outer space of the exchange rate in Djakarta. When I visited Djakarta in the middle of 1961, the official rate was 45 rupiahs to the dollar. The black market rate at that time was 200 to the dollar. But this year the rate in the free market is more than 1,300 rupiahs to the dollar.

On the basis of 100 in 1955, the Djakarta consumer price index went up to 2,000 in February-March this year. At the end of 1960 the index was only 273; in June 1961 it went up to 327, in December 1961 to 1,000. The doubling from this level occurred during 1962, the year of the big military spending.

The budget receipts of Indonesia in 1960 were a little over 50 billion rupiahs and the deficit about eight billion rupiahs. In 1961 the budget expenditure was 86 billion rupiahs and the deficit 23 billion rupiahs. In 1962, in the full fury of the West Irian campaign, the expenditure was shown as 115.8 billion rupiahs and the deficit at 39 billion rupiahs. But this was an illusion. Later it was admitted that there was a special West Irian budget of 23 billion rupiahs.

As for money in circulation, the Government has shown no restraint in the issue of notes. Money in circulation rose from 46.2 billion at the end of 1960 to 64.5 billion rupiahs at the end of 1961 and about 125 billion rupiahs towards the end of 1962.

With the end of the West Irian affair President Soekarno was expected to devote his attention to the rectification of economic affairs. But the priorities he gave for projects were again somewhat peculiar: they were the beautification of the Djakarta waterfront, the purchase of three Convair 990 jet airliners for his international airline and the construction of a department store.

As the President started on his prestige projects the prices of consumer necessities have continued to rise. The subsidised price of rice for Government servants is 10 rupiahs a kilo; the free market rate has been ranging between

FINANCES OF STATE GOVERNMENTS

HEAVY OVERDRAFTS FROM RESERVE BANK TO MEET BUDGETARY DEFICITS

THE State Governments' financial position does not attract as much attention as that of the Centre for several reasons. Firstly, the States are dependent on the Union Government for loans and grants and, though some State Governments are temporarily in red, the final position would be known only after the loans and grants are paid. Secondly, the States, probably for political reasons, play much on the magnitude of their expenditures and not so much on the revenue side, with the fond hope that the resources would somehow stretch themselves. Thirdly, even if resources fall short of expenditures, the States can have recourse to ways and means advances from the Centre, as well as temporary overdrafts like any private individual, from the Reserve Bank. Such advances and overdrafts are adjusted against future payments due from the Centre. Fourthly, the States, in the immediate years of the post-war period, had accumulated huge balances in various developmental funds and, for a long time during the first Plan period, these funds had enabled them to spend lavishly without bothering much about their resources position.

The financial position of States has become difficult especially in the past two or three years. The overall deficit of State Governments widened sharply from Rs. 86.7 crores in the first Plan period to Rs. 157.6 crores in the second Plan period. For 1961-62, it was placed at Rs. 37.5 crores. During 1962-63 and 1963-64, the deficits are estimated much higher at Rs. 58.6 crores and Rs. 74.2 crores, respectively. The size of overall deficits in the case of individual States has been large during the current financial year. Maharashtra, for instance, has budgeted for a deficit of Rs. 17 crores, West Bengal for Rs. 13 crores, Gujarat for Rs. 11 crores, Andhra Pradesh for Rs. 10 crores and Mysore for Rs. 7 crores. This has been done in spite of sizable additional assistance from the Centre which accrued with retrospective effect, following the recommendations of the third Finance Commission.

Special Loans

In the process of meeting the mounting overall deficits, some States have had to resort to unauthorised overdrafts from the Reserve Bank, besides depleting the securities held in the cash balance investment accounts. In order to enable them to clear these overdrafts, the Central Government had to make special loans to seven States to the extent of Rs. 74 crores during 1962-63, over and above the Rs. 30 crores made to four States in 1961-62. Even so, the negative balances of the States as a whole rose by Rs. 10 crores in 1962-63 and they are expected to rise by a further Rs. 61 crores in 1963-64. The growing strain on the States' financial position is due to a variety of reasons such as growing Plan commitments, revision of the emoluments of Government employees and their reluctance to exploit fully their sources of revenue which are, relatively speaking, inelastic, unlike the Central heads. The reluctance of State Governments to tap more intensively revenue heads like land revenue is understandable, since they are local authorities with an eye on the agricultural vote in the elections.

It was against this background that the Union Finance Minister stated, in his budget speech for 1963-64, that "the States must impose tight financial discipline, raise additional resources and keep their expenditures within their means." He also issued a warning to the States that, henceforth, unauthorised overdrafts would not be honoured by the Reserve Bank.

The need for remedying the situation has acquired new urgency with the approach of the closing of accounts of the Reserve Bank. The Reserve Bank closes its annual accounts on 30th June each year and, like any other banker, insists upon the clearance of overdue amounts by that date. The Union Finance Ministry is said to be worried over the financial position of certain State Governments. It is reported that the Governments of Kerala, Madhya Pradesh and Bihar overdrew their accounts during the current financial year and their position is such that they would not be able to clear their overdrafts. Of the fifteen States, it is only two States, namely, Rajasthan and Andhra Pradesh, which took energetic action to improve their position by resorting to additional taxation. Bihar has so far levied extra taxes to the tune of only Rs. 1 crore, besides failing to pay its share for the second year of the Plan and has been taking more aid from the Centre. The Chief Minister is reported to have declared that the Plan expenditure of Bihar would have to be scaled down for want of resources. The Bihar, Kerala and Madhya Pradesh Governments were issued a directive by the Finance Minister once again a few days ago to set their houses in order.

The Background

Why did the Central Government permit the States to run these unauthorised overdrafts with the Reserve Bank? Having allowed them to do so, how can the States pay these overdrafts? These are very important questions, because the State Governments are also constituent units in the body politic of the Indian Republic and nothing should be done, if possible, to bring them down in public estimation. Before answering these questions, it is necessary to inquire into the background of the arrangements with the Reserve Bank.

Under the present arrangements governing maintenance of currency chests, the State Governments are permitted to withdraw money from such chests regardless of their balance with the Bank. This is perhaps allowed with a view to safeguarding the creditworthiness of State Governments, since the flotation of Treasury Bills by them, as in the case of the Centre, is not in vogue now. The State Governments do not have any other means at their disposal to bridge the gap between their receipts and expenditure and the Reserve Bank has been permitting them (the States) to run the overdrafts as any normal banker would have done to a creditworthy client. These overdrafts are, however, against the provisions of the Reserve Bank of India Act and the agreements entered into by the State Governments with the Reserve Bank. Matters came to a head in June 1961. As the annual accounts of the Reserve Bank were about to be closed in June 1961, the Bank was forced to insist that the State Governments should clear their overdrafts, in view of adverse comments from the auditors. The State Governments expressed their inability to pay and the Centre had to step in to save their faces. This was repeated in 1962 also.

Embarrassing Situation

Thus an embarrassing situation has been allowed to develop once again which does not redound to the credit of either the Centre or the States or even the Reserve Bank. A stage seems to have now come when the Centre has to review the financial viability of each State. In India, the unitary type of control that is exercised has made the States completely dependent upon the Centre and the Reserve Bank even for meeting their minimum needs. They have developed the habit of looking to the Union Government for everything and, in practice, the States have been reduced to the status of large-sized local municipalities.

When once the Centre has given them the lenience, it cannot turn round and say that it cannot permit them any overdrafts. If the overdrafts are stopped, the States may fail to honour even the normal commitments like the payment of salaries and this in turn would lead to chaos and confusion. If, on the other hand, the Central Government once again comes to the rescue of the States and clears the unauthorised overdrafts, the entire affair will be no more than a mere technical book adjustment to satisfy or eyewash the auditors and the public.

In whatever way these overdrafts are adjusted, it is clear that it is going to reduce correspondingly the receipts of States, probably from borrowing, and push up their overall deficits. Else, it would result in further deficit financing by the Central Government, of course, through the back door.

Apart from these considerations, there is the urgent need to devise some method for the State Governments to cover the short-term gap between receipts and expenditure. There is surely a case for reviving the sale of State Government Treasury Bills. The Central Government should permit the States to reduce Plan expenditures, if their resources do not warrant the scale of such expenditures. In addition, the States which are in the red should economise in non-Plan and non-developmental expenditures so that the temporary loan advanced by the Centre for a third time might be cleared. While the Centre and the Reserve Bank have the right to insist upon the payment from States within the banking year (30th June), the way the whole issue is being handled requires to be modified, since the washing of dirty linen in the open would bring down the prestige of State Governments in the public eye.

MAHARASHTRA STATE FINANCIAL CORPORATION

The Maharashtra State Financial Corporation, which came into existence on 14th August 1962 consequent on the reconstitution of the Bombay State Financial Corporation, earned a gross income of Rs. 25.50 lakhs during the year ended 31st March 1963. Earnings from interest alone amounted to Rs. 24.65 lakhs, the balance being the share of commission. Interest paid on deposits, bonds and debentures, and borrowings aggregated Rs. 13.27 lakh, staff expenses Rs. 2.44 lakhs, and other expense Rs. 1.67 lakh. Profit after taxation, which has claimed Rs. 3.75 lakhs, has been Rs. 4.37 lakhs. Out of this, Rs. 10,000 have been transferred to general reserve and Rs. 75,000 (at the rate of 10 per cent of the taxable profit) to special reserve. Out of the balance of Rs. 3.52 lakhs, a sum of Rs. 3.50 lakhs has been distributed as dividend on the 100-rupee shares at the rate of 3.5 per cent per annum, taxable, as guaranteed by the State Government, and the surplus of Rs. 1,730 is carried forward. The Directors are gratified that the Corporation has been in a position to pay the guaranteed dividend out of its profit for the year under review without approaching the State Government for subvention. Given below are some important comparative figures (in lakhs of rupees) of the Corporation's working in the past four years:

	1959-60	1960-61	1961-62	1962-63
Gross income	16.87	16.61	16.92	25.50
Management expenses	2.56	2.38	2.88	3.60
Profit	8.47	8.89	6.09	8.12
Subvention	4.28	Nil	1.09	Nil

From 1953-54 to 1961-62, the progressive amounts of State subvention received aggregate Rs. 27.59 lakhs and provision for taxation payable to the Central Government is Rs. 25.07 lakhs. The total subventions include Rs. 9.30 lakhs transferred to the Gujarat State Financial Corporation, and a sum of Rs. 1.09 lakh has been received during the year under review. The balance at the close of the year stood at Rs. 19.39 lakhs.

The bonds outstanding at the end of the previous year were of the total face value of Rs. 223.51 lakhs. During the year under review, the Corporation purchased its own bonds worth Rs. 10 lakhs for cancellation and transferred bonds worth Rs. 39.29 lakhs to the Gujarat State Financial Corporation. The balance out of the old issues at the end of the year was thus Rs. 174.22 lakhs. Further, according to the scheme of reconstitution, the shares of the former Bombay State Financial Corporation, amounting to Rs. 1 crore, were converted into 4½ per cent Maharashtra State Financial Corporation Bonds 1971 bringing the total of bonds at the close of the year to Rs. 274.22 lakhs. In addition, *ad hoc* bonds worth Rs. 60 lakhs have been issued for replenishing the Corporation's resources.

During the year, the agency arrangement with the State Government was continued on the basis of the arrangement set out under a resolution dated 13th March 1961, since when a total guarantee has been received from the Government, which has been utilised up to Rs. 133.39 lakhs. Guarantee for Rs. 15.76 lakhs has, however, lapsed, as the loans of that amount were cancelled.

In keeping with the general trend of lending rates of interest, the Corporation increased its rate of lending from 6.5 to 7 per cent per annum on 27th July 1962. The Corporation received during the year 605 application for loans aggregating Rs. 953.25 lakhs, of which 234 were new application for loans (aggregating Rs. 122.50 lakhs) up to Rs. 1 lakh and 97 were new applications for loans (aggregating Rs. 498.28 lakhs) over Rs. 1 lakh. The number of loans sanctioned was 114 which together covered Rs. 206.39 lakhs, against which total disbursements were Rs. 265.40 lakhs, the largest amount disbursed in any year since the inception of the Corporation. At the close of the year, 248 applications were pending.

Out of the 605 applications received for consideration, 166 were sanctioned 28 for procuring new premises by existing concerns, 46 for setting up new concerns and 92 for completing expansion programme and for manufacturing new products. Since its commencement up to 31st March 1963, the Corporation has sanctioned 697 applications, covering in all Rs. 10.36 crores, from small, medium and large-scale concerns, which comprise 452 applications relating to small-scale concerns for Rs. 256.09 lakhs, 234 to medium scale concerns for Rs. 646.10 lakhs, 10 to large-scale concerns for Rs. 129.90 lakhs and one towards subscription for debentures worth Rs. 3.75 lakhs. The Corporation continues to offer loans from Rs. 10,000 to Rs. 20,000 (the limit was doubled recently to Rs. 20,000 in respect of public limited companies and registered co-operative societies by amendment to the State Financial Corporation's Act, 1951), while applications for loans from Rs. 10,000 to Rs. 75,000 and, in exceptional cases up to Rs. 1 lakh, are generally considered under the liberalised terms under the new agency-cum-guarantee arrangement with the State Government.

GUEST, KEEN, WILLIAMS, LIMITED

CHAIRMAN, MR. RAGHAVAN PILLAI, OUTLINES FUTURE DEVELOPMENT PLANS

SPEECH AT THIRTY-THIRD ANNUAL GENERAL MEETING

ADDRESSING the shareholders of Guest, Keen, Williams, Ltd. at their Thirty-third Annual General Meeting held at Calcutta on Friday, 31st May 1963, the Chairman, Mr. Raghavan Pillai, outlined some of the future development plans of the Company. Mr. Pillai said that detailed planning of the proposed expansion of steelmaking capacity for the manufacture of special steel at the Calcutta Works, which had been the subject of intensive study for the past 12 months, was virtually complete and that excavation work on the site would start shortly. Associated with that project was a proposal for the reorganisation of the rolling mills, partly necessitated by the forthcoming rise in steel production. Application, the Chairman disclosed, had been made to the Government for approval of the proposal.

The following is the full text of Mr. Pillai's speech:

It is with great pleasure that I welcome you to this, the thirty-third annual general meeting of your Company. The Directors' report and the accounts have already been circulated and I propose, with your permission, to take them as read.

I am glad to tell you that Mr. S. Lloyd joined the Board of Directors on 28th June 1962. Mr. Lloyd is a Director of our associate company in the United Kingdom, Guest, Keen and Nettlefolds Ltd., and your Company is fortunate in gaining the benefit of his counsel and experience.

It is with regret that I report the resignation from the Board of Mr. T. K. Walshaw on his retirement from India. Mr. Walshaw first joined the Company in February 1935 and was appointed to the Board in May 1959 whilst serving as General Works Manager at the Calcutta works. Mr. Walshaw is to be succeeded by Dr. A. K. Bose whose appointment to the Board is the subject of a resolution at today's meeting.

Production

The raw material shortages which affected production in 1961 and to which I referred in my statement to you last year were, I am glad to say, relieved to some extent in 1962, and this permitted the steady growth of output throughout the period.

Nevertheless, whilst the total tonnage of steel billets supplied by the integrated steelworks was substantially increased, it has not yet been possible to secure a steady and regulated supply in the numerous categories and sizes required, and in 1962 the irregular flow of certain categories still imposed a serious limitation on production. This imbalance in billet supplies is reflected in a considerable increase in billet stocks involving substantial working capital.

Calcutta Works: A further substantial increase in the rolling mills output was achieved in 1962, and the new mills, commissioned early in 1961, made a welcome contribution to the year's operations. Meagre supplies of indigenous special steel billets were supplemented by imports, and the Company was able to improve its output of special steel bars and sections for the railways and the automotive industries.

In spite of an acute shortage of free cutting steel, the bright steel bar plant, installed in 1961, reached a satisfactory level of output in the latter months of the year and is proving to be a valuable addition to the unit.

Production of forgings improved and the construction of a new die shop to supply tools to the forge has undoubtedly contributed to this advance. A planned programme for further additions to tool-making facilities is expected to lead to the progressive improvement of productive efficiency and will assist in the trend towards the manufacture of precision products, which I mentioned to you last year and which is continuing steadily.

Some revival in the demand for railway track and signal items was apparent but the manufacture of steel crossing sleepers was again severely restricted by lack of raw material. Production of this material by Hindustan Steel Ltd. was started in the latter months of the year, however, and the Company's sleeper plant has since been operating satisfactorily.

The production of fastenings in the bolt works was maintained at about the same level as in the previous year. Plans are now being made for the next stage of plant rehabilitation and modernisation in that department.

The shortage of power in 1962 has been the cause of grave anxiety and frustration in industries that are striving to expand, and I do not hesitate to reiterate what has been said so many times in recent years, that power planning must be performed with courage and with confidence in the growth potential of consuming industries; that power must lead development, not follow reluctantly behind. The irrecoverable waste of industrial resources and development potential that is synonymous with the shortage of power is immense compared with any temporary loss that might result from overplanning power output; it is consoling to know that Central and State Governments now recognise the vital need for a bolder and more objective approach to power planning, and in the present emergency I would hope that such action as is taken will eliminate any possibility of a repetition of the tragic waste that we have witnessed in recent years.

Bhandup Works: Production and sales of woodscrews and other light fastenings made at the Bhandup Works rose again, in spite of the shortage of the special steel wire and strip required for various minor products. The manufacture of self-tapping screws to the highest international standard quality, which was started in the previous year, was successfully established at the full rated capacity of the plant.

You will be glad to know that the increased level of export achieved in the previous year was maintained and surpassed in 1962. Direct export sales are as yet a very modest element of the Company's turnover and conditions of demand in neighbouring countries fluctuate to such an extent that a positive pattern of sales has not yet emerged. However, your Company is making an indirect contribution to the export drive which is of considerable importance. Every year large quantities of fastenings and other products are shipped abroad by other manufacturers in India who use your Company's products in assembling equipment for sale overseas. The importance of exports is fully recognised and it is your Directors' intention to promote their growth as rapidly as conditions permit.

Operating Results and Dividends

Turning now to the accounts, the income from sales in 1962 improved to Rs. 13,06,09,872 from Rs. 10,65,88,480 in the previous year, representing an increase of approximately 22.5 per cent. As I have already explained, the shortage of certain categories of raw material prevented the achievement of an even higher turnover and it is clear that the programme of expansion and rehabilitation undertaken during the past few years has now started to contribute appreciably to your Company's activities. A small part of the increase in sales was due, however, to the inclusion of excise duty amounting to Rs. 16,36,712 imposed on iron and steel products with effect from 24th April 1962.

Increased turnover coupled with economies effected in operating costs has made it possible for your Company to earn a higher trading profit before tax of Rs. 1,15,38,310 compared with Rs. 83,83,644 for the previous period. The total surplus before tax, in spite of a reduced return on investments in subsidiary companies, amounted to Rs. 1,27,55,590 which shows an increase of Rs. 23,29,326 over the corresponding figure for the previous period.

Owing to a reduced claim for development rebate and provision at the enhanced rate of 50 per cent for corporate taxation, the charge for taxation for 1962 is Rs. 55,60,000 compared with Rs. 30,50,000 for 1961. After setting aside a sum of Rs. 1,20,000 for Super Profits Tax, the surplus after taxation for the period under review has been reduced to Rs. 61,63,670 compared with Rs. 63,07,072 for 1961.

The provision of Rs. 1,20,000 for Super Profits Tax was based on the original proposals in the Super Profits Tax Bill and I am happy to say that, as a result of reliefs since announced, there will be no liability on this account in respect of the Company's 1962 profits. Similarly, the initial estimate of Rs. 13,00,000 provided in the accounts of your subsidiary, Sankey Electrical Stampings Ltd., for 1962 will now be reduced to Rs. 8,50,000. The accounts of both Companies were closed before the reliefs were announced, and, in consequence, the Directors of Sankey Electrical Stampings Ltd. recommended a lower dividend at the rate of 10 per cent compared with 17½ per cent declared for the previous period. This reduction in your Company's dividend income for 1962 has been largely offset by the declaration on 18th April of an interim dividend of 5 per cent for 1963.

I mentioned last year that taxation on the Company's profit for 1961 was under-provided to the extent of Rs. 2.70 lakhs as a result of the increased rates of corporate taxation, announced in last year's budget proposals, which were published after the Company's accounts for 1961 were closed. This liability has been assessed at Rs. 2.60 lakhs and is a charge against 1962 profits.

After the statutory transfer of Rs. 5,54,677 to the development rebate reserve and the transfer of Rs. 5 lakhs to the debenture sinking fund, the balance available for distribution is Rs. 49,85,391. Your Directors consider it desirable to draw upon the Company's general reserve for an amount of Rs. 6,14,609 to meet the recommended final dividend of 80 nP. per share. An interim dividend of 60 nP. per share has already been paid making a total distribution of Rs. 1.40 nP. per share for the 52 weeks ended 29th December 1962.

Sankey Electrical Stampings Ltd.

A further substantial increase in turnover was achieved by your Company's expanding subsidiary, Sankey Electrical Stampings Ltd. A good deal of development work was undertaken and the policy of diversifying the range of products was actively and successfully pursued. A proposal to acquire from the Tata Iron and Steel Company Ltd. their shareholding in your subsidiary forms the subject of a resolution later at today's meeting.

Future Development

A year ago, I referred to the proposed expansion of steelmaking capacity for the manufacture of special steels. This large project is to be located at the Calcutta works and has been the subject of intensive study during the past twelve months. Detailed planning is virtually complete and excavation work on the site will start shortly. Associated with this project is a proposal for the reorganisation of the rolling mills, partly necessitated by the forthcoming rise in steel production. Application has been made to the Government of India for approval of this reorganisation. The rolling mills are of vital importance to your Company, being the main source of raw material for the fabricating departments, and this scheme will be of great benefit to your Company's development.

The Government of India has granted approval for the expansion of the woodscrew plant at Bhandup and the bright steel bar plant at Calcutta works. Contracts for the purchase of machines have been placed, and the benefit of increased production should be apparent within eighteen months.

These are but a few of the development projects that your Company proposes to execute during the next few years aided by the valuable guidance of the technical consultants in the United Kingdom, Guest, Keen and Nettlefolds Ltd. In forward planning the emphasis remains on serving the transport industries, and the proposed investment in Sankey Wheels Ltd., which forms the subject of a resolution at this meeting, is complementary to this trend by virtue of their programme for the manufacture of wheels for commercial vehicles. The railways and road transport services have relied for many years on your Company for the manufacture of an ever-widening range of products, and in the context of the present national emergency, which has revealed only too clearly the urgent need for improved rail and road communications, it is essential that the Company should not falter in its planning for expansion. It is in this belief that the groundwork for further development over several years ahead is now being vigorously prepared.

Finally, I should like to record special appreciation on your behalf of the conscientious work of the staff and all employees whose loyalty and wholehearted enthusiasm is making possible the increasing success of your Company's operations.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

EXTRA-LONG STAPLE COTTON

RECORD SUPPLIES PREDICTED

A CONTINUING surplus of supplies over distribution has been a feature of the world extra-long staple cotton (cotton having a staple length of more than 1⅜") situation in recent years. The International Cotton Advisory Committee, (I.C.A.C.) Washington, has predicted that supplies during the current season (1962-63) would easily be the largest on record. Stocks at beginning of the current season were 110,000 bales (of 478 lbs. each) more than the opening stocks a year ago. Production, in spite of a reduction in acreage sown to extra-long staple cotton during the season, is expected to set a new record of 2.1 million, an increase of a quarter of a million bales or 13 per cent over last season's output. The increase is concentrated in the U.A.R. where, with record yields, production has recovered to the 1960-61 level. Relatively, the increase in production in the U.S. is very marked but, in absolute terms, the increase in production aggregates less than 50,000 bales. Yield per acre in Sudan this season is expected to be significantly lower than last season's record but still higher than average.

With an increased carryover and much larger crop, supply of extra-long staples this season is expected to reach the record total of about 3 million bales, as compared with 2.6 million bales in 1961-62. Supply in the United Arab Republic is higher by over 200,000 bales but is still significantly lower than in the three seasons prior to 1961-62. In the Sudan, a smaller crop is more than offset by the much larger carryover and supply will rise to a new record, almost double that of two years ago. Supplies in other producing countries show little change from last season. In the United States, however, supply was augmented by the release in November last of 47,500 bales from the strategic and critical materials stockpile.

The following table indicates the supply and distribution of extra-long staple cotton in the main producing countries:

(In thousand bales of 478 lbs. each)

	1959-60	1960-61	1961-62	1962-63
Stocks, 1st August	897	655	773	883
Production	1,901	1,813	1,851	2,095
Supply	2,798	2,468	2,624	2,978
Exports	1,945	1,500	1,550	..
Of which :				
To non-Communist countries.	1,263	904	1,040	..
„ Communist areas ..	682	596	510	..
Consumption*	163	167	190	..
Disappearance ..	2,108	1,667	1,740	..
Destroyed	35	28	49	..
Ending stocks, 31st July ..	655	773	883	..
Change in stocks	—242	+118	+110	..

* Consumption of domestic cotton in producing countries.

As regards consumption, with one major exception, namely, the United Kingdom, the trend last season was more favourable in respect of extra-long staples than for cotton in general. In fact, in a number of countries, consumption of extra-long staple cotton actually increased last season, whereas consumption of other cottons declined. Little information is yet available for the present season but the presumption is that the increased demand may, to some extent, be indicative of rising consumption of this type of cotton in certain countries.

Exports

Exports of extra-long staples were slightly higher in 1961-62 and a rising trend has been apparent during the first half of the present season. Exports from the major producing countries are estimated to have increased by roughly 20 per cent during the period August 1962 to January 1963, as compared with the same period of 1961-62. The increase in demand, however, has been primarily for Sudanese cotton.

With a record crop and influenced no doubt by the limited availability in the United Arab Republic, exports of extra-long staples from the Sudan rose to a new peak last season. The rising trend in exports has continued through the first half of the present season, with exports approaching double the corresponding 1961-62 rate. Exports from the Sudan to all the main destinations, particularly India, are significantly higher. There has also been a marked increase in shipments to the U.S.S.R. and Mainland China.

With an abnormally small carryover on 1st August 1962, exports from the United Arab Republic fell sharply during the opening months of the current season and, despite a marked recovery subsequently, exports over the first half of the present season were still lower by comparison with a year earlier. Exports to most destinations are lower and again the proportionate share of total exports of these cottons going to the Communist countries has increased. Exports from Peru are on a par with those a year earlier and trade reports indicate that virtually the entire 1962 crop of extra-long staples has already been sold. The increase in demand for extra-long staples is in sharp contrast to the demand for cotton generally. While this may be attributed to purchases in anticipation of requirements—engendered by lower and more stable prices—it also may reflect the more favourable consumption outlook for these cottons in certain countries.

Prices of extra long-staple cotton in the two major markets, namely, U.A.R. and Sudan, continue to display a remarkable degree of stability, though, as supplies have become more limited, prices in Peru have tended to rise recently. Price prospects during the rest of the season are uncertain, but, in view of the continuing large supply, the dominating factors are likely to be the official selling price in the U.A.R. and the reserve price in Sudan.

Outlook for Next Season

As regards the outlook for the next (1963-64 season), the I.C.A.C. makes the following forecast:

"Even with a much higher rate of offtake, the presumption is that, with another large crop now being harvested in the Sudan, substantial stocks will be carried forward into the 1963-64 season. In the United Arab Republic, the authorities are desirous of building stocks up to a more normal level in the near future.

"There is a distinct possibility that there will be an increase in total extra-long staple acreage next season. In the United Arab Republic, the permitted acreage for these cottons for 1963-64 is 956,000 acres, as compared with an actual planted acreage of 894,000 acres during the present season. It is reported that the authorities are making every effort to encourage growers to plant nearer to the full allotment this year. No radical change is expected in the acreage distribution by varieties. In the United States, the national acreage allotment for extra-long staples for 1963 season has been set at 150,000 acres, as against 100,000 acres in 1962-63. Acreage in Peru has remained relatively stable in recent years and no significant variation in acreage is anticipated in the Sudan. In assessing the production potential, however, it should be noted that yield per acre in the United Arab Republic during the present season reached an all-time record high and was above average in the Sudan."

In fine, it is clear that the probable increase in acreage next season and higher carryover stock point to a further increase in supplies unless, of course, these are offset by a corresponding increase in consumption which, on present reckoning, seems unlikely, or an increase in exports to communist countries, which it is difficult to predict.

PAKISTAN COTTON

Production of cotton in Pakistan during the current season (1962-63), according to the sixth trade estimate, is placed at 2,112,000 bales (staple varieties 2 million bales and *Deshi* 112,000 bales) as against 1.76 million bales (staple 1.61 million bales and *Deshi* 157,000 bales) reported in the corresponding period last year (1961-62), an increase of about 19.7 per cent. The increase in production of staple cotton is shared by all the varieties except Lassani-11, whereas the decline in production of *Deshi* cottons is shared by all the varieties except Comilla.

Based on this estimate, the per acre yield during the current season works out to be 252 lbs. (staple 271 lbs. and *Deshi* 112 lbs.), as against 212 lbs. (staple 224 and *Deshi* 137 lbs.) estimated in the corresponding period last season.

With the latest figures of production estimated at 2.11 million bales, the last year's carryover stock of 121,100 bales (staple 91,300 bales and *Deshi* 29,800 bales) and the imports of about 40,000 bales, the total supply of cotton is estimated at 2.27 million bales (staple 2,131,300 bales and *Deshi* 141,800 bales) as against 1.89 million bales.

SUPPLY AND DISTRIBUTION OF COTTON

Trade estimate of the current season's (1962-63) cotton crop in India has been further revised upwards by 50,000 bales. The crop, as per the latest (end-April) estimate of Messrs. Patels Volkarts, a leading cotton firm, is 5.50 million bales, as compared with the end-March estimate of 5.45 million bales. If the actual crop turns out to be in line with the estimate, it will set a new record in production. On the basis of the latest crop estimate, the aforesaid firm makes the following estimate of the supply and distribution of cotton during the current season:

(In thousand bales of 400 lbs. each)

	Indian	Foreign	Total
Carryover as on 1-9-1962 ..	1,390	242	1,632
Production	5,500	..	5,500
Imports	..	890	890
Total supply ..	6,890	1,132	8,022
Mill consumption	4,750	975	5,725
Exports	350	..	350
Carry-over as on 31-8-1963..	1,790	157	1,947
Total distribution ..	6,890	1,132	8,022

It is evident from the above table that stocks of Indian cotton at the end of the season will show an increase of 400,000 bales, as compared with the opening stocks. Stocks of foreign cotton on the other hand would be lower by 85,000 bales, although total stocks of Indian and foreign cotton would be higher. Commenting on the stocks position of cotton, the firm makes the following observations:

"End-season carry-overs over the last few seasons seasawed between a 'barely adequate' level (some 4 months' consumption) and a 'precariously low' level (some 3 months' consumption). Considering that, after the close of a season, it takes normally at least 4 months for new crop to start arriving at mills in volume, a 'comfortable' carry-over should consist of the equivalent of some 5 months' consumption.

"Over the past few seasons, an improvement in the end-season carry-over level was unfortunately invariably followed by a poor crop, thus creating 'famine' conditions at least once in every two years. At the end of the present season, we now expect a carry-over equivalent to about 4 months' consumption. In order to maintain just an 'adequate' supply position for the next season, we need a local 1963-64 production of minimum 5,100,000 bales plus imports of some 900,000 bales.

"Quality-wise, the unmarketed part of the carry-over per end of this season will hardly be attractive. Due to the fast deterioration of the selection in Gujarat (CO2/Kalyan/Wagad) and the Westerns/Comptahs (Laxmi/Jaydhar/Farm), unsold stocks will mainly consist of low grades and short staples."

DEFOLIAGE MAKES COTTON PLANTS HEALTHIER

A simple way to curb the growth of fungi and bacterial pests which hurt cotton quality was outlined to an international symposium at Washington on humidity and moisture control recently. American scientists at the U.S. agricultural experiment station at Stoneville, Mississipi told the 15-nation meeting that proper defoliage induced a 100 per cent increase in both horizontal air movement and sunlight and dramatically reduced the close, humid condition on which cotton pest thrives.

RAMTIRTH BRAHMI OIL

Special No. 1. Registered.

NOW ADDED WITH VITAMIN 'C' IS MORE EFFECTIVE!

An invaluable hair tonic for the prevention of dandruff and falling hair. It is manufactured scientifically with many precious ingredients, which cools brain, improves system and brings sound sleep. Most ideal for body massage. Useful to every one in all seasons.

Available Everywhere.

M.PS' PROPOSALS TO BOARD OF TRADE

IMPORT CEILINGS FOR TEXTILES MUST BE RECONSIDERED

From Our Special Correspondent

MANCHESTER, 28*th May*

MANCHESTER LETTER

REACTION to the rising trend of imports, which has been a feature of overseas trading in cotton goods during the first quarter of the current year, has been swift. Trade leaders remain in constant touch with officials of the appropriate Government departments who are rarely left for long in ignorance of what the industry thinks about so vital a topic. Pressure is frequently being exerted to ensure that even the current scarcely satisfactory safeguards are not whittled away by action which could create further complications for the local mills.

Opportunity is to be taken to confront the President of the Board of Trade with the new position when he visits Manchester in little over a fortnight. In the meantime, the Lancashire Conservative Members of Parliament have been adding their strength to the representations already made to the President for reconsideration of the ceilings. That the quotas fixed to operate until the end of 1965 are too high is the first plank in the argument, although Government adherence to the terms agreed with the three Commonwealth countries concerned seems unlikely to be shaken.

As business shows signs of emerging from the inertia so noticeable for many months past, the prospect of overseas suppliers gaining more ground at the expense of Lancashire has become a real threat. The suggestion that the carryover of unused quotas from one year to another should be banned is of considerable importance to local producers. When imports dwindled last year, it was widely believed that any revival of demand would reopen the flood gates for purchases from abroad; the latest statistics certainly seem to justify these fears.

The third point in the proposals submitted to the Board of Trade by the M.Ps appears to be a matter more for the Chancellor of the Exchequer, but Mr. Erroll's support would be invaluable, if he could be persuaded to back up a call to his colleague for the removal of the 10 per cent increase imposed last year on purchase tax on all home-produced textile goods.

In the Picture

It is just as well that publicity is given to these meetings, because, to the rank and file of traders in the industry, it sometimes seems that very little is being done to ease their burden. The fact that conferences on the vexed question of imports are taking place almost from week to week tends to be obscured by takeover topics and other developments, particularly in the financial sphere. Keeping the "man-in-the mill" in the picture is a wise procedure for the trade organisations and one which should be cultivated.

Meanwhile, from the mills themselves comes fresh evidence that hope has not been given up about the future. Advertisements appearing in trade and national press this week describe ventures which justify the comment that there is still an adventurous spirit to be found in and around the county.

Big changes, involving substantial expenditure within a single unit, have been carried out at the Tulketh Mill at Preston, whose reputation has been among the highest in the trade for many years. Productive capacity has been greatly strengthened by the introduction of the most modern machinery and the transformation provides a pattern for other similar concerns.

Machines and Men

Figures showing the drain on the labour force in the industry during little more than the past decade are sometimes used by outside observers to underscore their comments on Lancashire's inability to keep pace with the rest of the textile world. Constant repetition of the reduction in manpower has the same effect of denigrating the many important projects which have lately been carried out in the sphere of re-equipment and increased mechanisation. The fact that the available labour force had been reduced to below 150,000 by the end of the first quarter of the current year has been taken in some quarters to mean that the output of the mills would be correspondingly curtailed.

This, as everyone close to the trade knows full well, is by no means the case. Every modern industry has dispensed with manual labour, as machines have been able to take over jobs which formerly required human participation on a wider scale. Mechanical handling has so improved that the number of actual workers employed in the mills would have been curtailed in any case, irrespective of the decline in the number of actual units.

At the same time, it is useful to keep track of events by watching the trend of labour movements portrayed in the following table, showing the operatives available for employment in the various sections since the peak post-war manpower total was reached:

Year-end	Total	Spinning	Waste spinning	Doubling	Weaving
1951	317,750	123,820	7,320	31,650	154,960
1953	288,130	113,190	7,250	26,730	140,960
1955	256,080	100,130	7,070	22,250	126,630
1957	241,160	98,750	7,520	20,560	114,330
1958	207,990	85,920	7,420	16,270	98,380
1959	192,230	75,510	7,280	16,730	92,710
1960	184,790	71,580	7,250	16,080	89,880
1961—					
June ..	178,940	69,420	6,770	14,700	88,050
December ..	169,520	63,630	6,990	13,340	85,510
1962—					
March ..	164,100	61,730	6,920	13,070	82,380
June ..	158,100	58,570	6,940	12,840	79,750
September..	153,280	56,370	6,900	12,720	77,290
December ..	151,270	56,100	6,770	12,780	75,620
1963—					
March ..	148,480	54,950	6,550	12,760	74,220

While it is obvious that some diminution in the fall in manpower must take place as the numbers available become smaller, the above figures emphasise that the dismal trading experience during the past year or two has caused just as sharp a reduction in manpower as during the widely publicised redundancy period which followed the launching of the reorganisation scheme. Each section appears to have suffered approximately the same reverses, although, in waste spinning, the position was held to a large extent until the past six months.

Training schemes organised by most of the big groups, fully supported by the sustained activities of the Productivity Centre of the Cotton Board, provide ample facilities for newcomers to the industry to gain a detailed knowledge not only of their particular operation but of the trade as a whole. Entrants who some years ago would have needed several months to reach efficiency can now learn their job in a matter of weeks, purely by the use of more skilled methods of training.

Not only do these recruits become effective operatives quicker, but they are thus able to earn higher wages at an earlier age. As a result, their prospects in the industry are by no means as gloomy as some commentators would have us believe.

TEXTILE EXPORTS TO EAST AFRICA

The East African territories of Kenya, Uganda and Tanganyika have raised import duties on textiles with effect from 17th April 1963. The present tariff is 60 cents per sq. yard on greys, 90 cents per sq. yard on all other cotton textiles, 70 cents per sq. yard on blankets and 1s. per sq. yard on artsilk fabrics or 36⅓ per cent *ad valorem* whichever is greater. Although, the increase in *ad valorem* rate is only 3⅓ per cent the rise in specific duties expressed in terms of percentage is 9 per cent on greys, 28 per cent on cotton fabrics other than grey and 11 per cent on artsilk fabrics. The bulk of East Africa's imports are of a value where the application of *ad valorem* duties seldom arises and specific duties are levied. Hence the net effect of the increase in tariffs is, according to TEXPROCIL, that imports from India which consist of greys and other cheap fabrics will be very much affected as the incidence of duty on such articles whose average price is around 13½*d.* per sq. yard will be heavier than on others.

In terms of quantity, imports from India accounted for about two-third of East Africa's total imports of cotton piecegods upto 1959, and about 48 per cent in 1960 and 51 per cent in 1961. In 1962, India's share fell to 40 per cent, the lowest ever since the war, and Japan emerged as the largest supplier in terms of quantity for the first time. The decline in the imports has been due to the increase in the local production (25 million square yards, annually) of grey sheeting, dyed drills, leopard, etc., which items have been the mainstay of India's exports; and the shift in the consumer preference away from traditional lines of textiles like greys, cheap suitings, bedticking, gadlapat, sucis, to better processed fabrics. As a result of increased earnings and improved standard of living of the Africans, the demand for bleached and dyed poplins, twist twills, casement cloth, printed dress materials, kitange and printed khangas has been going up since 1960. The total imports of all these items in 1962 were of the order of 60 million square yards compared with 25 million square yards in 1959. The bulk of this growing trade has gone to Japan.

Modern construction projects require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites, MILLS tubular scaffolding has a versatile use: storage racks; temporary buildings; open-air auditoriums or bridges—apart from its normal use as a construction aid.

WHICH FOOT RESTS SURER ?

The special spring-steel fittings quickly secure the tubes-with only a ½" spanner as the tool. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle-grip' principle.

All fittings are made by Guest, Keen, Williams, Ltd. and the tubes by The Indian Tube Company (1953) Limited.

THERE'S NO LIMIT TO THE SUPPORT YOU CAN GET FROM MILLS

EXPORT TRADE IN INDIAN TEA

PLEA FOR EXCISE DUTY REBATE ON SALES ABROAD JUSTIFIED

THE Government of India has set the export target for the current financial year (1963-64) at Rs. 745 crores, which represents a rise of Rs. 59 crores, as compared with the actual exports amounting to Rs. 686 crores in the previous year (1962-63). Although the commodity break-down of the target is not given, it may safely be presumed that tea will continue to account for quite a significant proportion of the anticipated exports. Tea is the second largest foreign exchange earner of India, the value of tea actually shipped abroad in 1962-63 being Rs. 129 crores, which was almost one-fifth of the total exports.

What are the prospects for tea exports in the current financial year? It is rather difficult to give a categorical answer to this question, for only two months have elapsed since the year began. Broadly speaking, however, the prospects seem to be good. This, at any rate, is the conclusion that emerges from the assessment of outlook as made by Messrs. J. Thomas and Company, a well-known firm of tea brokers at Calcutta, in their latest annual report. Although the assessment is in respect of the calendar year 1963, it may be taken to represent the financial year 1963-64, inasmuch as both the years have the same nine common months, that is, from April to December. Expecting little, if any, world surplus of tea during 1963, the report hopes that the usual crop increase may well be absorbed in the coming season as far as the Calcutta market is concerned. Incidentally, it may be noted that the bulk of the tea exported by India passes through the Calcutta port. The report also judges the crop outlook in North India as promising. Despite the dry spell in most districts and some loss due to hail damage, the actual crop, it is said, may be approximately

Other Countries	3.11	2.75	12.96	11.65
Total ..	53.36	44.02	211.81	205.25

equal to the 1961 plucking. "Given improved weather conditions, it should not," to quote the report, "be beyond the capacity of the industry to harvest 275 million kg. of tea (in 1963), as compared with 272 million kg. in 1961 and 261 million kg. in 1962."

A note of optimism that India should be able to expand its tea exports to the countries of the European Economic Community and compete on equal terms with trade rivals has been struck by the Calcutta firm. The optimism is based on two grounds. In the first place, nil tariff on tea gives it a competitive edge *vis-a-vis* coffee which is E.E.C.'s chief beverage. This advantage has naturally to be consolidated by a publicity effort which the Tea Board is sponsoring. Secondly, consumption of tea in West Germany and the Netherlands, the principal importers among the Six, is absorbing about 15 to 16 million kg. each year.

The statistical review accompanying the report of Messrs. Thomas and Company gives an interesting idea of the trends in tea export trade during the calendar year. The main highlights revealed therein are as follows:

During the year 1962, India's tea exports to the U.K. showed a sharp fall at 117 million kg. which were lower than in any year since 1955. Ceylon improved its position in this important market to the full extent of India's loss. This fall is, presumably, attributable to lower despatches during November and December as a consequence of the steamer strike and the unsettled conditions in Assam for a brief period because of the Chinese menace. With the settlement of the river strike, exports picked up once again and are now slightly ahead of the last season. In 1962, the U.S.S.R. increased its purchases by 12 per cent in terms of value. It bought appreciably more from South India than in 1961, but reduced the offtake from Calcutta auctions. The purchase by the United Arab Republic (U.A.R.), India's third best customer, in 1962 was the highest ever from both North and South India. The U.A.R.'s purchases last year showed a threefold increase over the level of 1955 in quantitative terms. In Australia, India significantly improved its share of the market in 1962 at Ceylon's expense. The bulk of the exports to this country was made from South India, and reflected the relative cheapness of common and medium teas following the fiscal concessions granted in the 1962 budget. Other markets in which gains were made are the U.S., the

TABLE B: *Tea Exports from India and Other Countries*

(In million kg.; 1 kg=2.2 lbs.)

	1962	1961	1960	1959
India	211.81 (42.9)	205.25 (44.2)	195.11 (42.3)	214.32 (45.9)
Ceylon	204.86 (41.5)	193.10 (41.6)	185.88 (40.3)	173.95 (37.4)
East Africa	45.41 (9.2)	29.99 (6.4)	41.52 (9.0)	38.23 (8.2)
Indonesia	26.90 (5.5)	33.40 (7.1)	36.14 (7.8)	32.34 (6.9)
Pakistan	4.32 (0.9)	2.33 (0.7)	1.83 (0.6)	5.85 (1.6)
Total ..	493.30 (100.0)	464.07 (100.0)	460.48 (100.0)	464.69 (100.0)

Note:—Figures in brackets indicate percentage shares in the total.

Irish Republic, West Germany, the Netherlands, and the rest of Europe.

The destination-wise exports of Indian tea during the first quarter of 1963 and 1962, as well as in the whole of 1962 and 1961, are indicated in Table A, while Table B shows how Indian tea has fared in world markets during the last four years, as compared with the other principal exporting countries. The figures in the latter table clearly bring out the competition encountered by Indian tea in world markets. Thus, in the combined exports of tea from India, Ceylon, Pakistan, Indonesia and East Africa, the share of India has gone down from 45.9 per cent in 1959 to 42.9 per cent in 1962, whereas that of Ceylon has risen from 37.4 to 41.5 per cent, of East Africa from 8.2 to 9.2 per cent.

Most of the increased output in the other producing countries will find its way to the world markets and increase the competition against Indian tea. The majority of gardens in Africa are new and the fact that soil has not been over-worked, as in India, gives a decided advantage in their cost of production. With the increased excise duties on several tea garden stores and more amenities for labour, thanks to the shift in the emphasis from a minimum national wage to a living wage and a fair wage without a link with productivity, it is no wonder that the tea gardens in India are groaning under the weight of increased costs. Against the background of the tendency of increased competition in world markets and the F.A.O.'s warning of a glut in supplies by 1965, the trade earnestly pleads for greater incentives for export and for increased production.

The abolition of the export duty on India tea has no doubt been appreciated by foreign buyers and welcomed by tea circles in this country. But it is pointed out that the benefit has largely been nullified by the surcharge on tea garden excise duty. Alluding to this, Messrs. Thomas and Company express the hope that the Government, having seen how the removal of duty helps exports, may be persuaded to offer a rebate of the excise duty on the tea sent out of the country. The plea is quite justified. They have done well to urge that the tea producers should be allowed to make and retain sufficient profits. There is considerable force in their contention that the tea industry can hardly be expected to plough back funds on a scale sufficient to achieve the high production target (900 million lbs.) set under the third Five-year Plan unless reasonable after-tax profits are assured. On its part, the industry, too, should spare no effort to reduce production costs and improve the quality of manufacture.

TO EUROPE FROM INDIA

LT-LK starters couldn't have made a better start! Exported to Denmark and Holland, these Indian motor starters have now broken through into Europe and the Common Market...to countries that have long been the home of quality products. Manufactured by Larsen & Toubro at Powai, Bombay, these LT-LK starters are marketed by Laur. Knudsen Ltd., of Denmark, L&T's technical collaborators. The export of LT-LK starters to the highly competitive markets of the West demonstrates their high standard of workmanship. A wonderful start for Indian motor starters!

LARSEN & TOUBRO LIMITED

This is not a Prospectus, but only an announcement regarding the proposed issue of Capital and persons interested are requested to apply for a copy of the Prospectus for full details.

Application forms along with copies of the Prospectus can be had from the Underwriters, Bankers and Brokers to the issue and from the Company's Registered Office.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open for public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed with regard to them.

	15,19,000	5,00,000

TECHNICAL COLLABORATORS

Messrs. Alfred Sell Autotellefabrik GmbH, Eschborner Landstrasse 55 59, Frankfurt (Main), West Germany.

EXISTING AND PROPOSED ACTIVITIES

The Company has been incorporated as a Public Company on 20th August, 1962, with the objects mentioned in the Memorandum of Association of the Company. It has obtained industrial licences for the establishment of new industrial undertaking for the manufacture of automobile components at Lucknow in U.P., with the following installed capacity :—

Name of Item	1st year	2nd year
1. Tie Rod Ends	2,00,000	3,60,000
2. Universal Joint Couplings	40,000	48,000
3. Water Pump Repair Kits	22,000	26,400
4. King Bolts (King Pins)	2,34,000 Tons 291	2,34,000 Tons 291
5. Spring Shackle Bolt and Pins	7,50,000 Tons	7,50,000 Tons
6. Crown Wheels	Capacity yet to be fixed.	
7. Tail Pinions		

This is one of the important ancillary industries to the Automobile Industry. The wide range of automobile components to be manufactured by the Company will partly satisfy the large demand, both for original equipment supplies and of replacements for automobiles, trucks and tractors. The industry also enjoys priority in the development programmes as recently announced by the Government of India.

The Company will have the collaboration for the manufacture of items No. 1, 4 and 5 mentioned above with Messrs. Alfred Sell Autoteilefabrik GmbH, Eschborner Landstrasse 55/59, Frankfurt Main, West Germany, who are one of the largest manufacturers of automobile components in the country. They have also agreed to participate in the share capital and have given to the Company the rights of export for its products to all countries except Europe and whole of American Continent including Canada and West Indies. For collaboration of the rest of items, the Company is in negotiations with reputed manufacturers of West Germany and U.S.A., and it is expected to be finalised shortly.

The Industrial Finance Corporation of India have in principle sanctioned under their letter No. LA 665/FCL/63—3384 dated 12th February, 1963, a loan in Deutsche Marks equivalent to Rs. 14,00,000 which will help towards the import of Capital goods of the project.

An Import Licence No. 978569/IFC Loan/2, dated 15th April, 1963, of Rs. 8,15,375 for import of machinery has been obtained from the Chief Controller of Imports and Exports, Government of India. Another import licence for about Rs. 4,50,000 is shortly expected to be issued in favour of the Company as indicated by the Ministry of Steel and Heavy Industries, Government of India, *vide* their letter No. A.E. Ind. 7 (121)/60, dated 29th April, 1963.

DATES OF OPENING AND CLOSING OF SUBSCRIPTION LIST

Applications for shares must be made in the form accompanying the Prospectus and must be for a minimum of 50 shares or for multiples of 50 shares, equity and/or preference.

The subscription list will open at the commencement of banking hours on 10th June, 1963, and will close at the close of banking hours on 17th June, 1963, or earlier as Directors may decide, but in no case will the list close before the close of the banking hours on 12th June, 1963.

ANOTHER FAVOURABLE YEAR FOR INDIA REINSURANCE CORPORATION

PREMIUM BASE ENLARGED

1962 was yet another favourable year for general insurance. In spite of the reduction in fire tariff rates with effect from July 1962, fire premiums recorded an appreciable increase, while there were no major fire losses during the year. The overall experience in respect of fire business was, therefore, satisfactory. Marine insurance, barring cargo business, which continued to be a drag on the account, also showed good results. For miscellaneous insurance, too, the past year was a generally favourable one.

The working results of the India Reinsurance Corporation (General Manager: Mr. R. M. Desai, Bombay) for the year ended 31st December, 1962, reflect the favourable experience in respect of general insurance. The Corporation has maintained the satisfactory growth pattern established during the past few years. The total gross premium written by the Corporation increased from Rs. 5.06 crores in 1961 to Rs. 5.87 crores in 1962. This increase, though substantial in absolute terms, is smaller, as compared with the previous year. In his statement to shareholders, the Chairman of the Corporation, Mr. A. D. Shroff, attributes this smaller percentage increase to the larger premium base acquired by the Corporation. The net premium, on the other hand, showed a sizable increase. It amounted to Rs. 3.28 crores, as against Rs. 2.59 crores in the previous year.

Rise in Net Premium

The increase in net premium income was shared by all the three departments, namely, fire, marine and miscellaneous. The increase was Rs. 22.08 lakhs in the fire department, Rs. 14.44 lakhs in the marine department and as much as Rs. 32.88 lakhs in the miscellaneous department. Along with the rise in premium, the overall claims cost also increased from 46.9 per cent in 1961 to 51.1 per cent in 1962. Commission and other charges were, however, a shade lower at 33.7 per cent, as against 33.8 per cent in the previous year. In spite of the general increase in prices and cost in the economy, the expenses of management of the Corporation during the year remained stationary at the 1961 level of two per cent. Consequently, there is a larger underwriting profit of Rs. 6.46 lakhs, as against Rs. 5.25 lakhs in the previous year, which works out to 2 per cent of net premium, as compared with 2.03 per cent in 1961. As a result of the larger allocation made to the taxation reserve and the creation of a reserve for depreciation on investments aggregating Rs. 4.17 lakhs, the net profit has declined from Rs. 9.79 lakhs in 1961 to Rs. 9.06 lakhs in the year under review. The dividend has, however, been maintained at the last year's level of 8 per cent (Rs. 40 per share), subject to deduction of tax. The following table summarises the salient features of the working of the Corporation during the three years ended 31st December 1962:

(In lakhs of rupees)

	For the year ended 31st December		
	1962	1961	1960
Fire:			
Net premium	136.00	114.00	83.21
Net claims	62.20 (45.7)	48.90 (42.9)	37.68 (45.3)
Commission, etc.	55.90 (41.1)	44.91 (39.4)	32.62 (39.2)
Expenses of Management	3.46 (2.5)	2.84 (2.5)	2.31 (2.8)
Fire Fund	68.04	57.00	41.60
Marine:			
Net Premium	74.12	59.68	41.57
Net Claims	55.01 (74.2)	38.90 (65.20)	30.77 (74.0)
Commission, etc.	17.00 (22.9)	14.52 (24.3)	9.43 (22.7)
Expenses of Management	0.94 (1.3)	0.74 (1.3)	0.58 (1.4)
Marine Fund	74.12	59.68	41.57
Miscellaneous:			
Net Premium	118.00	85.17	65.59
Net Claims	50.57 (42.8)	33.61 (39.5)	27.72 (42.2)
Commission, etc.	37.58 (31.8)	28.13 (33.0)	20.96 (32.0)
Expenses of Management	2.25 (1.9)	1.59 (1.9)	1.36 (2.1)
Miscellaneous Fund	59.02	42.58	32.79
Net profit	9.06	9.79	6.54
Provision for taxation	6.00	3.50	2.80
Dividend	8.00 (8%)	8.00 (8%)	6.00 (8%)
Carry forward	0.12	2.58	0.78

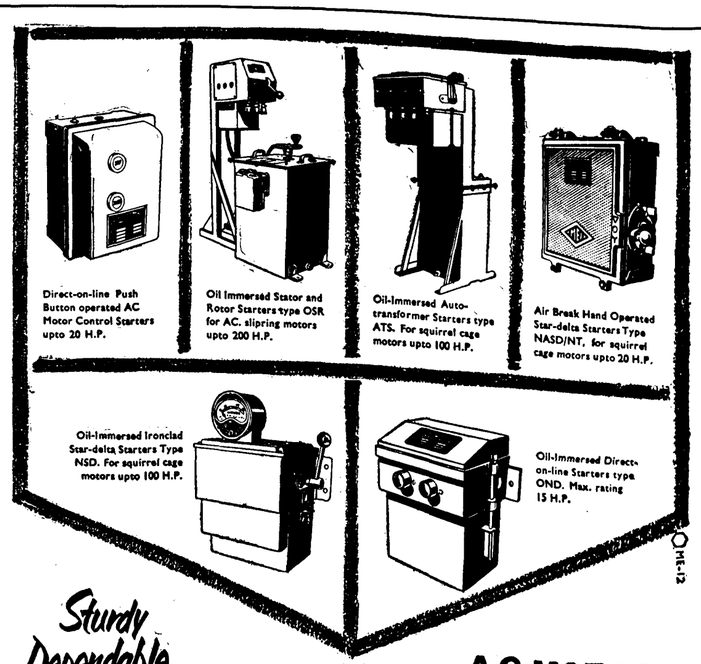
Note:—Figures in brackets are percentage of net premium.

Department-wise, the net premium in the fire section amounted to Rs. 1.36 crore, as against Rs. 1.14 crore in the previous year. Net claims increased from 42.9 per cent in 1961 to 45.7 per cent in 1962. Commission and other charges accounted for 41.1 per cent of premium, as compared with 39.4 per cent in the previous year. Expenses of management worked out to 2.5 per cent, the same as in the previous year. After maintaining the reserve for unexpired risks (including an additional reserve of Rs. 13.61 lakhs) at Rs. 68.04 lakhs, being 50 per cent of the premium, the account shows an underwriting surplus of Rs. 5.23 lakhs, as compared with Rs. 3.33 lakhs in the previous year.

Explaining the reasons for this satisfactory result, the Chairman, Mr. A. D. Shroff, observes:

"In the fire department, Indian business again contributed a satisfactory profit. Due to the several measures we have taken to increase our retention on this business, there has been a very significant increase in 1962 in our net Indian premium income. On the other hand, our net premium income from foreign business shows only a modest rise during the year. Fire losses in the United Kingdom reached a record figure in 1962, and the results of the fire treaties accepted by us from British companies could only be marginal. Our experience from other territories, taken as a whole, was generally satisfactory, though there is a tendency in several markets towards declining profitability of fire business."

The marine department recorded a substantial increase in net premium both from business in India and abroad. At Rs. 74.12 lakhs, net premium in 1962 was Rs. 14.44 lakhs higher than in the previous year. Claims experience was adverse, the ratio of net claims to premium having increased from 65.20 per cent in 1961 to 74.20 per cent in 1962. Consequently, in spite of the fact that commission and other charges and expenses of management remained more or less unchanged, the account continued to be in red. The underwriting loss aggregated Rs. 11.40 lakhs, as compared with Rs. 11.18 lakhs in the previous year. The marine fund has been maintained at 100 per cent of net premium. Commenting on the experience of marine business the Chairman says:



"From the point of view of experience, Indian cargo business showed marginal results, the profit on Indian hull business was very satisfactory; foreign business, both hull and cargo, appears to be yielding a modest profit, though the ultimate result could of course be known only after the run-off of the accounts is complete."

Net premium in the miscellaneous department showed a very substantial increase from Rs. 85.17 lakhs in 1961 to Rs. 1.18 crore in 1962, reflecting the continued rapid growth of miscellaneous insurance in the country. The claims ratio increased from 39.5 per cent in 1961 to 42.8 per cent in 1962, while commission and other charges were lower at 31.8 per cent as against 33.0 per cent in the previous year. Expenses of management were 1.9 per cent of premium, the same as in the previous year. After maintaining the reserve for unexpired risks at Rs. 59.02 lakhs, being 50 per cent of premium, there is an underwriting profit of Rs. 12.62 lakhs, as against Rs. 13.10 lakhs in the previous year.

Appropriation

The departmental contribution to the profit and loss account, that is, the underwriting profit, is, as noted above, Rs. 6.46 lakhs. After taking into account interest and dividend and other miscellaneous income and outgo, the gross profit aggregated Rs. 15.06 lakhs, out of which Rs. 6 lakhs has been set apart as provision for taxation, leaving a net profit of Rs. 9.06 lakhs. To this has been added Rs. 2.58 lakhs brought in from the previous year, making available Rs. 11.65 lakhs for distribution. Of this Rs. 3.50 lakhs has been transferred to the general reserve and Rs. 2,750 to the reserve for doubtful debts. The proposed dividend of 8 per cent will absorb Rs. 8 lakhs, leaving a balance of Rs. 11,948 to be carried over.

The Corporation had, as on 31st December 1962, capital and reserves aggregating Rs. 3.05 crores, comprising a paid-up capital of Rs. 1 crore, general reserve of Rs. 3.50 lakhs and departmental reserves (funds) amounting to Rs. 2.01 crores.

Sturdy Dependable Safe... A.C. MOTOR STARTERS

Manufactured by:
THE MYSORE ELECTRICAL INDUSTRIES LTD.
P.O. Box 561, Bangalore 21.

MEI

Safest for everything in electric power control.

Sales & Service:
I.A.E.C. (BOMBAY) PRIVATE LTD.
43, Forbes Street, Bombay 1.

Branch and Associated Offices:
I. A. E. C. (BOMBAY) PVT. LTD., "K" Block, Chawdhary Bldg., Connaught Circus, New Delhi. I. A. E. C. (HYDERABAD) PVT. LTD., Barman Bldg., Gunfoundry, Hyderabad,. I. A. E. C. (CALCUTTA) PVT. ...fifty years of significant achievement

1913–1963: That's the milestone marking fifty of the sixty-seven years during which the House of Brady has progressively participated in the different spheres of the nation's industrial development — covering Sugar Industry, a wide range of Engineering Products, Textile Machinery, Printing and Publishing. The foundation of this famous House was laid in 1895, the company became a limited concern in 1913 and has, over the years, accumulated a store of specialised skill and knowledge.

THE HOUSE OF BRADY HANDLES:

Engineering Equipment:
Mechanical Handling Machinery
Steam and Diesel Engines
Steam Turbo Generator and Alternator Sets
Valves and Boiler mountings
Industrial Instrumentation
Exhaust Fans and Blowers
Power Transmission Drives
Sprinkler and Hydrant Installations
Industrial Counters

Textile Machinery:
Yarn Preparatory Machinery
Winding, Warping, Sizing and Dye Package Winding
High Speed Knitting Machines
Stores and Sundries for Spinning and Weaving
Woollen Carding, Spinning and Finishing Machinery
Bleaching Range Equipment.

THE BRADY GROUP
W. H. Brady & Company Limited
The Belapur Co. Limited
G. Claridge & Company Limited
The Brady Engineering Co. Limited
The Empire Dyeing & Manufacturing Co. Ltd.
Morris & Brady Limited
Commerce (1935) Limited
The Dalton Property Co. Limited
The Gangapur Sugar Mills Limited
Special Steels Limited

W. H. BRADY & CO. LTD.
Bombay • Calcutta • Madras • Kanpur • Ahmedabad • Coimbatore • New Delhi and Manchester.

The House of Brady is proud to be part and parcel of Shapoorji Pallonji Enterprises, who have played a prominent role in the industrial advancement of this country.

Another Shapoorji Pallonji Enterprise

ELECTRICAL TRANSFORMERS INDUSTRY

SHORTAGE OF RAW MATERIALS HAMPERS GROWTH

THE Tariff Commission has taken up the investigation into the claim of the power and distribution transformers industry for extension of protection beyond the current year. The public enquiry into the question was held last week at Bombay, with Mr. K. R. P. Aiyangar, Chairman, Tariff Commission, presiding. The industry, it may be recalled here, has been enjoying protection for the last ten years. Under the shelter of protection, it has made good progress. Between 1952 and 1962, its capacity has risen by more than four times, that is, from 370,000 KVA to 1.78 million KVA. The industry has also undertaken progressive manufacture of transformers of higher ratings and effected considerable improvement in the quality of its products.

The present enquiry conducted by the Tariff Commission is the fourth one, the others having been held in 1952, 1956 and 1960. In 1953, the Government granted protection to the industry for three years by enhancing the revenue duty of 5 per cent *ad valorem* to 10 per cent., *ad valorem* (exclusive of surcharge which was 5 per cent of the duty) on power and distribution transformers upto 2,500 KVA and 37.5 KV on the HT side. Furnace, rectifier and flame-proof transformers were excluded from the scope of protection. In consultation with the Commission, the period of protection was extended by another year. The second inquiry, held in 1956, led to the continuance of the protective duty upto 31st December 1960 widening the scope of protection to include power and distribution transformers upto 3,000 KVA and 37.5 KV on the HT side. The last inquiry into this industry was undertaken in 1960 and protection was continued at the same rate of duty upto 31st December 1963 and, having regard to trends in the industry, extended the scope of protection to include power and distribution transformers upto 10,000 KVA and 132 KV on the HT side and parts of such transformers not otherwise specified.

Scope of Protection

The scope of the present scheme of protection covers transformers upto 10,000 KVA and 132 KV on the HT side and parts of such transformers not otherwise specified. The Indian Electrical Manufacturers' Association has now suggested that the scope of this inquiry may be extended to cover transformers upto 20,000 KVA and 132 KV on the HT side, as some of the producers have installed equipment for the manufacture of transformers upto 20,000 KVA and that Heavy Electricals, Bhopal, has at present facilities to produce transformers of 25,000 KVA.

At present, there are seventeen units engaged in the production of power and distribution transformers, the same as that at the time of the last enquiry in 1960. Although two units in West Bengal have closed down since 1960, two new units came into being last year, one in Gujarat and the other in Andhra. Of the seventeen units now in production, five are in Maharashtra, three each in West Bengal and Madras, two in Mysore and one each in Bihar, Kerala, Andhra Pradesh and Gujarat. The aggregate capacity of these 17 units is 1.78 million KVA. This does not include the capacity of Heavy Electricals, Bhopal, which will have an annual capacity of 6 million KVA., when fully established. Eight of the existing units have secured licences for expansion to the extent of 1.391 million KVA. A new unit is also proposed to be set up in Kerala with Japanese collaboration. Side by side with the increase in capacity, production has registered a steady increase. The total output rose from 1.291 million KVA in 1960 and 1.796 million KVA in 1961 to 2.296 million KVA in 1962. It is expected to touch 3 million KVA in 1963. One of the striking features of production is an increasing tendency to shift from the manufacture of small-sized power transformers to medium and large-sized ones.

The expansion of production of transformers has been stimulated by the steady increase in the tempo of electricity generation and distribution. The Commission estimated in 1960 that, during the third Plan period, the generating capacity would increase by 6 million kw. On this basis, it was expected that the total requirements of transformers during the third Plan period would be 30 million KVA, or an average of 6 million KVA per year. According to the Department of Technical Development and the Development Council for Heavy Electrical Industries, the assessment of generating capacity has risen by 25 per cent and the overall requirement of step-up, step-down and distribution transformers should average 12 million KVA per annum. The following table shows the trends in demand for transformers, as estimated by the Department of Technical Development:

Years	Additional generating capacity (In million KW)	Demand for transformers (In million KVA)			
		Step-up transformers	Step-down transformers	Distribution transformers	Total
1961–62..	1.3	1.62	4.06	4.85	10.53
1962–63..	1.4	1.75	4.35	5.25	11.35
1963–64..	1.5	1.90	4.70	5.65	12.25
1964–65..	1.6	2.00	5.00	6.00	13.00
1965–66..	1.6	2.00	5.00	6.00	13.00
Total ..	7.4	9.27	23.11	27.75	60.13

Assumptions: (a) A power factor of .8 for arriving at the requirement of step-up transformers; (b) 2.5 times the requirement of step-up transformers for arriving at the requirement of step-down transformers; and (c) 3 times the requirement of step-up transformers for arriving at the requirement of distribution transformers.

The estimate of demand made by the Department of Technical Development varies, as usual, from that made by manufacturers and their representative bodies. However, a rough measure of the increase in demand is provided by the actual increase in consumption in recent years, made up of both indigenous production and imports. The total consumption rose from 1.506 million KVA in 1960 to 2.055 million KVA in 1961 and 2.647 million KVA in 1962.

Imports of Raw Materials

The major difficulty of the transformer industry arises from its dependence on imports for some of the essential raw materials. The principal raw materials required by the industry are: (1) electric sheet steel, alloy sheets, (2) insulated copper strips and wires, and other insulation materials, (3) porcelain bushings, (4) cooling tubes and radiators, (5) mild steel sheets and sections, and (6) transformer oil. Mr. Aiyangar gave a detailed account of the present position and prospects for augmenting the supply of raw materials. It would appear that raw materials constitute roughly three-fourths of the total ex-works cost of a transformer, while electric sheets steel and copper wire and strips account for about half of the cost of raw materials. The greater part of the raw material is imported. The entire requirement of transformer grade electric sheet steel is now imported. A capacity of 50,000 tonnes per annum for the manufacture of sheets steel, however, has been included in the expansion programme of Rourkela Steel Plant which includes transformer grade sheet steel also and is expected to materialise by the end of third Plan period. There are two producers of whom one still meets the bulk of the industry's requirement of laminations. Some of the transformer manufacturers have their own processing facilities and make their own laminations from imported sheets steel. The installed capacity of the two units manufacturing laminations is 7,840 tonnes only which appears inadequate, taking into consideration the future requirements of laminations for augmented production of transformers. The producers of laminations have complained about the difficult supply position and high prices of electric sheets steel because of restriction on imports and their being channelled through D.L.F. Absence of capacity working and avoidable diversity of specifications prevent economies in cost.

At the time of last inquiry, some of the major producers of transformers agreed to standardise two or three grades of sheets steel. There is now a definite trend towards standardisation of 86 grade sheet and the next popular grade is 80. In connection with this inquiry, Department of Technical Development has advised that most of the progressive manufacturers abroad have almost completely changed over to the use of cold rolled grain oriented sheets. It has been suggested that the indigenous industry should follow this lead. We would like to have your views on this matter as the technological advance in use of cold rolled grain oriented sheets is likely to result in saving of raw materials and reduce cost of production substantially, particularly for transformers of medium and higher ratings. Where such materials are at present being imported, there will also be less demand in foreign exchange. The requirements of copper strips and wires, porcelain bushings (low voltage) and up to 11 KV. cooling tubes and mild steel sheets are met indigenously. There are still complaints regarding supplies of mild steel sheets against quota certificates. The industry continues to depend on imports for high voltage bushings, transformer oil and paper based varieties of insulating materials.

Quality

Despite the difficulties involved in securing adequate raw materials, the industry has endeavoured to improve the quality of its products. At the time of the 1960 inquiry, the consensus of opinion among consumers was that the quality of indigenous transformers was generally good and comparable with that of imported ones. The manufacturers state that they are now fully equipped for carrying out all the tests on transformers manufactured by them, excepting high voltage test and impulse test. Most of the consumers and Government Departments which have replied to the Commission's questionnaire have stated that the quality of the indigenous product is satisfactory. As regards standards, the Indian Standards Institution has published the I.S. Specification for power transformers covering all single phase and three phase transformers upto 80,000 KVA. and 220 KV.

There have still been some imports of transformers. For regulation of imports, power and distribution transformers are classified under Serial No. 42 (a) and (d) of Part II of the Import Trade Control Schedule. No licences were granted to established importers for the import of transformers since April-September 1961, licensing period. However, actual users' applications were considered by Government on *ad hoc* basis. The total imports of power and distribution transformers amounted to 12,563 numbers, valued at Rs. 247.08 lakhs in 1960, 5,568 numbers, valued at Rs. 401.76 lakhs in 1961, and 2,462 numbers valued at Rs. 147.51 lakhs in 1962. During 1962, imports came mainly from West Germany, Japan, the U.K., the U.S. and Italy. The industry has also made modest beginning in the direction of exports. The manufacturers are exploring further possibilities of exports, but high cost of raw materials is mainly responsible for the lack of progress in this regard. The change-over to cold rolled grain oriented sheets may make certain economies possible. Mr. Aiyangar expressed the view that further incentives and full rebate on duty on exports may help promote exports.

ELECTRIC MOTORS

The vital need for stepping up exports of electric motors was stressed by Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, in his opening speech at the public inquiry into the industry held last week in Bombay. The inquiry was held as part of the Commission's investigation into the claim of the industry for extension of protection beyond 1963—protection which the industry has been enjoying for the last fourteen years. As the industry is now "fairly well established," he observed, it may reasonably be expected to orient its activities to earn foreign exchange for the country. In order to serve this objective, he called upon producers to have a broader outlook in adopting the latest designs and techniques followed by their counterparts in foreign countries for improving quality and also to effect all possible economies in their cost of production. He was of the opinion that the performance of the industry on the export front was not encouraging, actual shipments being only 69 motors, valued at Rs. 83,000, in 1962.

Mr. Aiyangar was confident that exports of electric motors would go up still further, provided Indian producers, like those elsewhere, adopted modern techniques. In this connection, he said that foreign motors were made with 'E' class insulations, which made them smaller and cheaper. He wanted the domestic industry to follow suit. Apart from promoting exports, according to Mr. Aiyangar, the use of 'E' class insulations will stimulate domestic consumption through a possible reduction in cost of production and also reduce imports of copper-based products used by the industry. He, however, deplored the reluctance of some of the Indian manufacturers to fall in line with this new trend.

At any rate, the aggregate production of electric motors has been going up in the country in recent years. At the time of last inquiry in 1961, there were 27 units in the large scale sector manufacturing electric motors, with a total capacity of 1.136 million h.p. on single shift. Since then there has been no change either in the number of producing units or in their installed capacity. However, Government has accorded sanction for installation of additional capacity to the extent of 1.433 million h.p. Apart from large-scale units, there are 107 small-scale units with a total capacity of nearly 0.3 million h.p. The total production of both the sectors increased from 0.817 million h.p. in 1960 to 0.947 million h.p. in 1961 and 1,128 million h.p. in 1962. Although the bulk of production continues to be in the range of 1 to 30 h.p., manufacture of higher horse power motors has been steadily increasing.

FIXATION OF AGRICULTURAL PRICES

NO SINGLE FORMULA IMMEDIATELY SUITABLE

By K. P. Jain

SETH G. B. PODAR COLLEGE, NAWALGARH (RAJASTHAN)

PRICE policy is one of the major strategies under democratic planning. It aims at securing an integrated and stable development of the economy, avoiding the dangers of inflation and deflation, and so regulating and directing the different sectors of the economy as to strike a harmony between production and consumption, as well as between saving and investment, to make the best utilisation of its resources. It is a fundamental point to remember that the prices of agricultural products, in general, and of foodgrains, in particular, are the basis for a sound price policy in India. This is so for the following reasons:

(*a*) Experience and various studies have shown that foodgrains and agricultural products have higher differential price flexibility in terms of both frequency and amplitude. Fluctuations in prices are relatively greater in agricultural industry. It is so because it is difficult to adjust supply to changes in demand in agriculture.

(*b*) Agricultural raw products form the whole rationale for trade, production and manufacture, and ultimate consumption. Hence, if we can regulate the prices of these farm products, the prices of other goods at different levels of production and distribution can be effectively regulated.

(*c*) Foodgrains and other agricultural products form about 50 per cent of the country's income.

(*d*) Foodgrains constitute the single largest commodity which enters the market and so greatly influences the general price level. It is a commodity consumed by every one of the 440 million in the country, so that, on the one hand, its price touches the country generally and fundamentally and, on the other, its reactions on the popular psychology gather with tidal force drawn from apprehensions closer to life.

(*e*) Foodgrain constitute the largest single item of expenditure in the budgets of workers and, as such, every increase in its price travels the whole length of the productive activities of the country.

It is thus clear that in the price of agricultural products is found the bed level on which the superstructure of other prices rest. Hence the basis for the fixation of prices of agricultural products is vital for a sound price policy. The price-fixing programme may be studied, analysed and followed after considering the lights and shades of the devices usually considered in the establishment of a price policy, namely, cost of production approach, parity price formula, forward price basis and moving average approach.

Cost of Production Approach

Economic theory tells us that, under perfect condition, as is generally true in agriculture, the long-term equilibrium price is obtained on the fulfilment of a double condition: (*a*) Marginal cost (M.C.) should be equal to marginal revenue and (*b*) average cost (A.C.) should equal average revenue. In other words, M.C. and A.C. for all those firms or farms which are to continue operation in the long run should be equal. Thus average total cost (A.C.) is the main determinant of the long-run equilibrium price. But the cost-price relationship is a very complex affair. It is not easy to work it out because of the following difficulties:

1. It is said that, in manufacturing industries, there is more direct relation between cost and price. In farming, cost of production does not produce much impact on future agricultural production and future prices, especially in subsistence farming where farmers produce more for "auto-consumption" than for the market.

2. There is no doubt that the farmers will like to charge on a "cost plus basis," but there are great variations in the cost of production of an agricultural commodity owing to differences in soil, climate and physical resources on different holdings. Really speaking, calculation of cost of production is a very complex process and "it raises so many questions of judgment with respect to values to be placed on the labour of the farmer and his family and on farm land and equipment and profits to be allowed, that it has generally been passed over whenever an effort was made to work out a practical or administrable approach." (G. S. Shepard: *Agricultural Price Control.*) This difficulty assumes still greater dimensions in the context of Indian farming where the cost of production per acre varies greatly among smaller-sized holdings and also cost of a crop differs from field to field. In such circumstances, the cost of calculating the production cost per acre will become astronomical which poses the question whether the study of farm costs has any practical value in the context of fixing agricultural prices.

3. Further, another question crops up: how to locate the levels of cost that would be fair to the vast majority of our small producers on the ground of social justice and also to the low income group of urban consumers from the economic standpoint?

In this context, there may be two cases of extreme producers: on the one hand, there may be the highest cost producers, that is, the least efficient ones, and, on the other, there are the lowest cost producers, that is, the most efficient ones. But it is obvious that we cannot fix prices on the basis of costs of either of these two types of producers, for, in the former case, the consumer would be the victim, while, in the latter, a majority of cultivators would go broke.

Average Cost

In such circumstances, one alternative is to base the price fixation on the average cost of production of agricultural produce. The average cost of production is understood to be that of a farm of average efficiency. Let us see how the situation stands in this context in India. Farm management surveys in India have brought into sharp focus that about half the holdings surveyed are those on which the cost of production is higher than the average. Any price based on average cost is inadequate and will not, therefore, serve the purpose in India. But here, one can argue as to why the cost of inefficiently run farms should be comprehended into the average cost? The average cost (or representative cost) can be calculated in two ways: it may be statistical average of the production costs of randomly selected holdings, or it may be the production cost of a holding which can be regarded as representative or typical of the general run of holdings in the region. For example, in the Netherlands, in the early stages, price levels were determined on the basis of average costs of production on sample holdings. But the experience forced the Netherlands to adopt the second type of average production cost, that is, cost of production of the typical and predominant type of farm, and now it is being increasingly used as it is considered to be more realistic.

Bulk-line Cost

Still another alternative in the context of cost is the concept of "bulk-line cost," which covers the bulk of the producers (say, about 85 per cent usually adopted to define bulk-line cost). Obviously, a price so fixed would provide a greater measure of incentive to cultivators as compared with average cost. "In using cost figures in connection with the formulation of price and other agricultural policies, the question of the level at which costs should be considered assumes importance. For instance, prices of agricultural products related to the cost of production near the average level would be in the interest of the consumer, while the level represented by the bulk-line cost is likely to provide a greater incentive for increasing production."

But we should have a clear understanding regarding the basis of bulk-line costs. Should the price be fixed at a level so as to cover the cost of production of producers, say supplying 85 per cent of the *total supply* of a commodity? Or should it be fixed at that level which would comprehend the cost of production of, say, about 85 per cent of the producers of that commodity?

It is common knowledge that, in India, statistics relating to the production costs of commodities for different sizes of holdings in different parts of the country are woefully inadequate. Dr. V. G. Panse (in his article, "Problems and Techniques in the Study of the Cost of Production in Agriculture" in the *Indian Journal of Agricultural Economics*, July-September 1958) has indicated the possibility of the use of cost figures for the formulation of price and other agricultural policies and also come to the conclusion from his study of production cost figures relating to sugarcane in U.P. and Bihar that "statistically, the questions concerning cost level are related to the frequency distribution of cost .... The major portion of the distribution would account for 83 per cent of the frequency which is close to the limit of 85 per cent usually adopted to define bulk-line cost. The important point to note is that, since, in considering cost levels, the frequency distribution of cost forms the basis, it is essential that distribution should be strictly representative of the population in view."

In India, since the small cultivators constitute the bulk of the farming population, it is essential to calculate the percentage of the producers who supply about 85 per cent of the total supply of a commodity. It is quite possible that 35 to 45 per cent of cultivators having larger farming units might be contributing to about 85 per cent of the total supply of the commodity. Thus, in the context of calculating the level of bulk-line producers, it would be proper to have a vast study of the cost of producing important commodities on different strata of holdings.

We can have a clear understanding of the concept of bulk-line cost by an imaginary example given below:

Average total cost per unit of 'A'	*Percentage of total output supplied*	*Percentage of farmers producing at cost shown in column one*
Upto Rs. 12	1	1
14	6	10
16	21	20
18*	85*	75*
20	95	80
22	99	95
26	100	100

*Bulk-line

From the above table, it is clear that the bulk-line cost at Rs. 18 per unit covers 85 per cent of the total produce supplied by 75 per cent of the cultivators. Further, it is to be noted that, at the bulk-line cost price, 20 per cent of cultivators providing 21 per cent of the total supply will earn extra profit above their total average cost. But, simultaneously 25 per cent of the cultivators supplying 15 per cent of the total output will bear a loss owing to high average total cost consequent on the use of inefficient methods of cultivation; in such circumstance, it is possible that these farmers may ultimately abandon the production of the commodity. But can we afford this in the face of shortage of foodgrains and other raw materials? It is essential, therefore, that the Government should subsidise these inefficient cultivators having very meagre means of their own, by providing facilities like irrigation water, cheap credit, fertilisers, improved seeds and implements.

Three Types of Costs

There is also the problem pertaining to the apportionment of common expenditures such as rent, interest, depreciation and bullock labour among individual enterprises like different crops. Now this difficulty can be solved if the Indian economists, by exchange of views, come to establish some common conventions. The Indian economists have already adopted certain uniform standards in connection with farm management surveys. This has been pointed out by Dr. V. G. Panse. The Indian economists, as he has pointed out, have grouped costs into the following three classes:

Cost A includes all expenses in cash and kind as those on items like seed, manures, fertilisers and insecticides, wages of hired labour, cost of bullock labour, rates, taxes and interest actually paid, other miscellaneous expenditure and depreciation on and repairs to implements and farm structures. By adding the rent paid to the landlord, we get this cost appropriate to the tenant farmer.

Cost B is obtained on the analogy of commercial firms by addition of the imputed rent on owned land and interest on owned capital to cost A.

Cost C further includes the imputed value of the farmer's own and his family labour.

Dr. Panse rightly observes that, "while the structure of cost will depend on the purpose in view, it would seem that it is the direct expenditure as represented by cost A that weighs with the Indian peasant and affects his response to price changes, his decisions and his farming efficiency." But there is no doubt that costs B and costs C are to be taken into account.

Farm-to-farm and village-to-village differences in cost of production provide great difficulty in the use of cost of production data for price determination. But this can be done away with to a great extent by appropriate selection of farms, or villages by random sampling as is done in the cost of production studies under farm management surveys. Further, in determining prices for different States, the price differentials are permitted, keeping in view the surplus-deficit nature of the area and the direction of the movement; the price differentials thus allowed may not be in consonance with those based on cost of production data.

In conclusion, it may be said that, though the calculation of cost data is a complex, difficult and costly process, yet we cannot ignore it, for it has many developmental uses, in addition to the basis for fixation of prices. By adopting some standard conventions, most of the difficulties can be done away with. In order to obviate the difficulty of heavy cost in estimation, Dr. Panse has suggested, "An index

for the cost of production can be computed annually by taking as the basis stable estimates of the various physical components of cost, collected through a comprehensive investigation over, say, three years."

As a matter of fact, the estimates of production cost can be used merely as a broad indicator towards price fixation just to see that prices are not wide off the production costs of cultivators. It is enough if the picture presented by available data is "like a charcoal sketch, instead of a perfect acquarelle" (*vide* the article on "Problems of Price Fixation" by Mr. Ram Dayal in the *Agricultural Situation in India*, July 1960). It is further suggested, "if the role of cost of production in price determination is visualised in this way, it will be useful to adopt a standardised yield rate based on the average yield in the preceding few years. This would make it possible to determine the cost of production of the latest crop for which prices are to be determined. In Australia, the standard or normal yield rate is taken in working out cost of production." Hence it is clear that some conceptual and methodological orientation will be essential in the estimating cost of production, so that cost data may serve useful guide in price fixation.

Parity Approach

An alternative method of price fixing is what is known as the "Parity approach" or "Parity formula." According to this approach, the relative cost-price structure of the base year within agriculture and between agricultural products and non-agricultural products is to be maintained, so that the agricultural products maintain their purchasing power of the base period, assuming that price-relationship in the base period was ideal. To put it differently, Parity approach signifies that the price of an agricultural commodity in a particular year should bear the same relationship to the "prices paid" by the farmers as in a selected base year. "Prices paid" connote the prices of the goods and services which the farmer buys for farm production as well as for his family living. Thus, parity prices connote relationship or exchange ratio between the average prices paid by farmers and the average prices received by them. The idea behind the parity approach is that the purchasing power of a particular agricultural commodity should not fall or diminish in relation to the base period. A parity price is a price that makes it possible for the seller of a unit of an article to buy as much of other things and services as he used to purchase with a unit of the same article in a given period. It is calculated by multiplying the price of the article in the base period by an index of the price paid. For example, if the base period average price of a commodity is Rs. 18 per unit and the current index of price paid is 120, as against 100 in the base period, the current support parity price will be $\frac{18\times120}{100}$ =Rs. 21.6.

The parity approach differs from the cost of production approach in the following respects:

"Firstly, unlike the cost of production, the parity formula does not take into account the yield per acre. Both the parity price and the cost of production are based on prices of goods and services that enter into the cost of cultivation, but the parity price includes, in addition, the prices of goods and services that enter into the farmers' family living.

"While the cost of production approach rests on the absolute level of production costs in the latest year, the parity formula is concerned not with the absolute level of prices of goods and services bought by the farmer, but with changes in these prices from the base period.

"Thus, while under the cost of production approach, the relationship is sought to be maintained between the price and the latest estimate of production cost, under the parity approach, the base period relationship between the price of the agricultural commodity and prices paid by the farmer is sought to be maintained for the latest year also."

The parity system is in force in the U.S. The problem there is one of preventing prices from falling too low and, hence, the price fixed by the Government is called the support price. In Japan also, parity approach is used, but there it is used for determining fair prices for rice, wheat and barley, because Japan does not enjoy a surplus like the U.S.

A fundamental objection to the parity approach is that it has its basis in the past and it assumes the equity and the correctness of price-relationship in the base period and attempts to sustain that relationship. But pragmatic approach does not warrant it in India. Changes in relative costs are inherent in a developing economy; the prices received and prices paid indices will get out of tune in the context of rapid economic development, owing to the changes in technical improvement and, consequently, in the relative cost structure of farm products. Thus, the parity formula, as pointed out by Mr. Boulding in *Economic Analysis and Agricultural Policy*, pays no attention to relative changes in alternative costs which make any parity ratio obsolete. Any practical approach to fixing the price of an agricultural commodity should take into account the changing demand and supply conditions of that commodity, but the parity formula ignores this.

Owing to this reason, even in the U.S., attempts are made to make the parity formula less rigid and as flexible as possible. In that country, the base price of a commodity 'A', which is multiplied by the index of prices paid to obtain the parity price for the current year, is not the price in any fixed period but in the moving ten-year period immediately preceding the current year. Moreover, the price of the commodity 'A' is to be supported at an appropriate level within the broad range of 75 per cent and 90 per cent of the parity price. The actual price to be fixed within this range is to be decided upon taking into consideration several factors including the size of the current crop in relation to the normal size of the crop. In Japan, too, the parity formula was revised in 1952, but, even after that, the changing demand and supply conditions in the case of some commodities, say, wheat, rice and barley, place the Government of that country in difficult and tight conditions. Thus the experience in this context in Japan and the U.S. are not happy.

Another point to be noted is that the parity formula comprehends only the prices received by the farmer and not the quantities sold by him. This situation favours the big farmers in comparison to small farmers who have relatively very little marketable surplus to sell. This point also gets support by the experience in the U.S.

Long-term Objective

Further, a progressive farm price policy in tune with the developing and expanding economy should countenance the mobility of resources. In underdeveloped countries, it is essential that a large proportion of farm families should turn to non-farm employment in order to reduce the number of persons dependent upon agriculture. But parity approach ignores this; instead of fostering any shifts from overpopulated farm population, it tends to remove incentives for adjustment and perpetuates, even accentuates, the fundamental maladjustments. It is evident in the Indian context that this will run counter to the long-term objective of removing the surplus population from land.

In the U.S., the main purpose of parity approach is not to reduce price fluctuations but to do some sort of justice by keeping down the differences in costs and prices. But the conditions are different in the U.S. as compared with India; in the U.S., food and fibre are relatively plentiful and parity-price is a policy that keeps farmers on the farm.

Further, in India, the construction of the index of prices paid by farmers, which is essential for price fixing under parity approach, is being done at present only in a few States, no such index is being prepared for India as a whole. Still further, these State indices are not comprehensive, for example, the total number of commodities used in the construction of the index in the Punjab State is 25, as against about 400 in the U.S. and 175 in Japan. This situation may be owing to non-availability of rural prices for many items in India and also due to the difference in the economic position of Indian farmers.

Keeping in view the above analysis, the following observations can be made about parity approach for India:

1. Considerable improvement in the construction of index is required before it can be pressed into service for the purpose of price fixation; and all the States in India will have to take up this and also attempts will have to be made at the all-India level.

2. The base year in which the relationship between agricultural prices and the prices paid by the farmers were in good balance will have to be chosen.

3. The experiences in the U.S. and Japan and also the differences in economic conditions in India as compared with these countries, argue against any rigid acceptance of the parity approach in India. At the most, it can only be one of the many factors in price determination.

Forward Price Basis

Forward prices appear to be the superior alternative. Under this approach, prices of agricultural produce are announced well in advance, keeping in view the demand and supply conditions, so as to allow the farmers to adjust their production in response to prices. A fundamental difference between forward prices and parity prices is as follows: Forward prices policy is based on the recognition that the main function of prices is that of allocating resources into those channels of production which are indicated by changes in demand from time to time; on the other hand, at the back of the policy of parity prices is the idea that the prices should bring about some desired distribution, even at the cost of efficiency in resource allocation. There are four important features of the system of forward prices which distinguish it from "parity prices" and also from "free market prices." They are:

(a) The prices would be announced well in advance so as to guide the cultivators in drawing up their production programme for the next season in accordance with the announced prices.

(b) The prices would cover a sufficient period of time to enable the cultivator to complete at least one production period.

(c) The announced prices would be sufficiently clear and precise for each cultivator to interpret their implications in terms of his own operations.

(d) The announced prices would be such as would achieve the desired output.

Though the farmers would make their production plans in the light of the announced prices, yet the response may vary with different farmers and with different commodities. It is not wholly true that the Indian cultivator will not make use of the guaranteed prices owing to family farming, close farm-household relationship and social set up. A significant point to be noted is that, on the average, guaranteed forward prices will not be much different from the competitive level, as they do not interfere much with the ordinary operations and interplay of market forces. If the demand were greater or the supply lesser than anticipated, the open market price would be higher than the estimated price and the cultivators would receive the actual prices. If the case is the reverse, the support price will be maintained in the case of durable commodities by the Government. It will be easier for the Government to finance price support operations on the basis of forward prices, because the forward prices will tend to be in tune with actual prices expected to result from the interplay of supply and demand conditions. But the possibility of a sizable gap between estimated prices and support prices cannot be ruled out altogether.

In the Indian context, the utility of forward prices may be enhanced by fusing it with free prices, that is, by resorting to some sort of synthesis of both. This type of arrangement may be advantageous on many counts. It will reduce some of the instability of farm prices. Prices of some commodities influence the prices of related commodities. "If the prices of rice and wheat are successfully held by Government action within predetermined limits, the prices of other cereals and many non-cereal food crops will tend to adjust themselves within the corresponding limits." (Famine Inquiry Commission Report.) The underlying significance of this statement is that the Government will have to decide which commodity prices should be guaranteed and which should not so as to maintain an appropriate relationship, within reasonable limits, between the prices of competing crops within agriculture and between farm products and non-farm products usually purchased by Indian cultivators. There may be a possibility of shifting of production from free goods market to guaranteed market goods, but the Indian experience in the context of farming does not fully conform to this. *The Economic Survey of Asia and Far East* 1949 has pointed out, "selective price control does not seem to have caused so much shifting of production from essential (price-controlled) to non-essential (free-markets) goods, as it might be expected to cause in Western Europe or America." Production pattern may be disturbed only little. This system of synthesis will be of significant advantage in the context of exports, because it would be more in line with global prices and would not, therefore, interfere with movements of products into international trade. Further, since flexibility of adjustment from season to season is possible, better adjustment to changes in the price levels of the countries having trade connections with India can be secured.

"A growing economy must have sufficient flexibility in its price structure to induce the movement of real resources into those sectors which experience the greatest growth" (*Economic Development with Stability*, I.M.F. Mission). To counteract the possible error in yield estimates, the forward prices may be set about 10 to 15 per cent above and below the equilibrium price. The difference between the lower buying and upper selling prices will help the Government make good the cost.

Now in the context of fixation of relative prices, we will have to take into account the elasticities of demand and supply of related commodities. Such elasticities can be roughly calculated by an analysis of past relationships between quantity supplied, quantity demanded and price. In addition to such econometric analysis, the planning authority would have to revise the relative prices on the basis of trial and error as well. It is true that, in actual practice, there is a large number of crops whose relative prices have to be kept in line with one another and thus the task becomes quite complicated. But there are two relieving factors. Firstly, the Planning Commission has to start the programme of forward prices with a given complex of relative prices and not in a complete vacuum. Thus, the problem of fixing relative prices is not that of conceiving of the supply and demand elasticities for all crops at all possible price relationships, but only of making marginal changes in relative prices to bring about marginal changes in the supply of and the demand for various products. Secondly, the Commission should fix forward prices not at one rigid level but at maximum and minimum levels.

We should certainly bear in mind some of the important prerequisites for the successful implementation of forward prices or a synthesis of forward prices and free prices in the context of the mixed economy of India. These prerequisites are:

The very programme of forward prices hinges on the capacity and the ability of a central authority to form correct price expectations. This connotes that the central authority must possess an accurate or detailed knowledge of supply and demand conditions of important agricultural commodities, both inside and outside the country. A rough estimate of elasticities of demand for and supply of various products is also necessary to anticipate the probable outcome of a price change. Further, a similar rough idea of income elasticity of demand for various consumers' goods, which require agricultural products as raw materials, is also essential. It is common knowledge that, in all these, the statistics are extremely inadequate. Hence, forward price programme is to be preceded by an establishment of an authority which possesses useful econometric indicators and is in a position to collect necessary data required for its operations.

This programme also needs the provision of adequate storage facilities. In this respect, too, conditions in India are extremely poor; this glaring structural defect will have to be removed before launching this programme.

Another important question is posed: in a democracy, to what extent the programme can be carried out without being influenced by pressures of various powerful sectional interests? Past experience in the U.S. and the U.K. bears testimony to the fact that the Government price policy tends to be influenced by political and other non-economic considerations. In this context, the only way out is that the fixing of forward prices is entrusted to a non-political and autonomous body, organised on a basis similar to the Reserve Bank of the country. Still a careful watch and a constant assessment would be a desideratum in order that a completely impartial body could be evolved and maintained in a democratic set-up.

Moving Average Approach

Another method is suggested, keeping in view and balancing the interests of both producers and consumers. The best possible course appears to be to fix prices at levels equal or approximating to the average of the past few years, say, five or ten years. During the last five or ten years, prices would have fluctuated widely. But their average represents the level around which prices can be stabilised. "The logic behind adopting this method, which is called the moving average approach, is that the average price in the most recent five years is the product of the interaction of long-term trends in various supply and demand factors. These factors include the trends in cost of production, prices of goods and services that the farmers buy, prices of competing crops, international prices, population growth, increase in purchasing power of the people, etc." In Canada, this method is followed to prevent excessive fluctuations in prices. There the Agricultural Stabilisation Act provides for establishing guaranteed prices for agricultural commodities which may be a certain percentage of the average price of that commodity for the previous ten years. For few commodities, the minimum level of guaranteed prices is to be 80 per cent of the immediately preceding ten-year average price.

In India, the basic price can be determined at 100 per cent of the average price in the past five years or more. But in the calculation of average price, certain broad points should be kept in mind. Firstly, the use of the quinquennial average price for fixing basic price assumes that free market prices for the latest five years would be available. If the degree of Governmental price control is so large that free market prices are either not available or are greatly disturbed by price control, the validity of the moving average formula would be impaired. Adjustments for Government's interference and control are to be made. Secondly, the basic price based on this method should also take into account production trends. It will hold water if production in the current year is also nearly equal to the average of the past five years. If the current year production is higher or lower than the quinquennial average, the basic price is to be decreased or increased accordingly; this will also help promote the objective of income stability of farmers. Further, a general point is that price fixation should take into consideration the relationship with the prices of competing crops so as to promote a desired pattern of production. Hence, factual studies will have to be taken before price policy can really serve the purpose for bringing about the planned pattern of production.

From the study of the four important methods of fixing prices of agricultural commodities, one thing is clear that parity-price formula does not suit Indian conditions. Regarding the other three methods, it is difficult to say which of them is the most ideal; their merits and demerits have already been discussed. Some *ad hoc* basis may be tried by taking into account all the three. After a few years of working on such a basis, a particular standard method will come out which may suit India. I agree with the finding of the Foodgrains Enquiry Committee (1957) that no single formula should be announced or relied upon. While a number of formulæ may be taken into account, "we recognise that the final decision would have to be taken by the Board (that is, the Price Stabilisation Board, a high-powered policy-making body, the establishment of which the Committee has suggested in its report) on a somewhat *ad hoc* basis, particularly owing to the importance of prospective price trends in any assessment of the reasonable prices which might guide the operations of the Organisation (that is, the Foodgrains Stabilisation Organisation, the executive organ of the Price Stabilisation Board), for no formula can satisfactorily reflect the prospective position. It has indeed been the experience of most countries that no formula can fully cover all contingencies. On the other hand adoption of a particular method makes the price policies so rigid that it becomes very difficult to introduce any flexibility even when broader considerations require it."

Notice

DUNCAN BROTHERS AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-fourth Annual General Meeting of the Shareholders of Duncan Brothers & Co., Ltd. will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta, on Friday, the 21st June, 1963, at 11 a.m., for the following purposes:—

1. To consider and adopt the audited Accounts for the year ended 31st December, 1962 and the reports of the Board of Directors and the Auditors.
2. To declare dividends on the Preference and Ordinary shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.

The Register of Members and Share Transfer Books of the Company will be closed from 12th to 21st June, 1963, both days inclusive.

By Order of the Board,

S. K. MITRA,
Secretary.

CALCUTTA, *27th May*, 1963.

Note:—A member entitled to attend and vote at the meeting may appoint a proxy to attend and, on poll, to vote on his behalf. The proxy need not also be a member of the Company.

NEW PRODUCTS AND PROCESSES

Reciprocating Pump

A HIGH pressure electrically-driven hydraulic pump that can automatically adjust its speed to meet a varying demand—maintaining a constant delivery pressure—has been developed by a British firm, Tangyes Ltd., Birmingham, England. The pump is a double-acting, reciprocating piston pump, utilising oil power transmission and specifically designed to handle water and other aqueous fluids. It will also, however, handle other liquids. Continuous output is achieved by two opposed single-acting pumping pistons arranged on either side of, and actuated by, a double-acting hydraulically driven piston. A high pressure pump for general duties, it has been designed to give wide flexibility, both in its range of duties and control. It is packaged unit of compact design, easily installed, and requiring no special foundations. Output is variable between zero and maximum rating of 75 gallons a minute and control can be either manual or automatic. Constant pressure control is the standard automatic control, which adjusts the pump's speed to balance the circuit demands, maintaining a constant pre-set delivery pressure.

Improved Gramophone Pickup

A device which makes it possible to locate any desired position on a gramophone record, and eliminates the risk of damage when the pickup slips as it is being placed on the record, has been developed by a Surrey firm, Auriol (Guildford) Ltd. The device pneumatically lowers the stylus, eliminating the "handshake" which can spoil a record. It is calibrated to locate immediately the exact groove required anywhere on the record. With it, it is impossible to drop the pickup accidentally on the record, and positions the stylus with a feather-like touch. With manually-operated pickup arms (as used for most hi-fidelity equipment) the control is also used for lifting the pickup from the record at any required position without risk of damage, and the pickup can be retained at any such position and playing recommenced at any time. It enables a passage of music on a record—an aria in an opera, for example—to be played without having to listen to the rest of the record. It is useful for language study, where it is necessary to replay a small item over and over again, and for educators who use gramophone records for teaching children.

Disposable Syringe

Single-use, plastic disposable syringes, apart from contributing to the reduction of cross-infection, are cheaper than conventional syringes, claim Johnson and Johnson Export Ltd., London, manufacturers of plastic syringes. The normal procedure in many hospitals both in Britain and overseas is generally considered to be inadequate—steam can accidentally be shut off, boiling period be too short or chemicals over-diluted and other human errors. An independent cost examination among three large British hospital groups has shown that it is cheaper to use these syringes, pre-sterilised at the works, than to wash and clean glass syringes, clean and sharpen needles, and sterilise by orthodox methods. Each injection in Britain (and there are about 300 million a year in hospitals alone) costs about 8d., using usual methods, whereas use of the new syringes reduces the cost of each by 1d. The gamma-irradiation method of factory sterilisation is the result of close co-operation between the United Kingdom Atomic Energy Association and the company's experts.

Anti-Corrosion Coatings

A new range of resin coating to guard against corrosion, abrasion, and erosion in a variety of vessels, heat exchangers, and engineering equipment, is offered under licence to Commonwealth countries by Wolseley Holdings Ltd., Lancashire. One of these resin coatings is claimed to be the first that is really suitable for duties involving steam, hot water, condensate, demineralised water and water with a high oxygen content. This is a silicone/phenolic resin with a special inorganic filler or laminar type which blocks the passage of water molecules and increases the resistance to thermal shock. The basic range of five thermally hardened coatings and three catalytically hardened coatings enables a wide variety of corrosive conditions to be met. It is claimed that mild steel fabricated plant protected with these resins can be much cheaper than alloy or stainless steels.

Clean Long-lasting Carpets

An improved chemical treatment that is claimed to make carpets and similar floor coverings better able to resist wear and less likely to become soiled has been developed in France. It is said to be equally applicable to wool, nylon, cotton, rayon and acrylic fibres. The fabric or fibre is soaked or sprayed with a mixture composed of an organic compound that contains titanium and a colloidal suspension of silica; it is then dried for a couple of hours at about 90 degrees C. M. Paquet, of Route de Nice, Cuers (Var), France, who has developed this treatment, says that the two chemicals jointly interact with the material to give a protection which cannot be removed either by dry cleaning or hard washing.

Refrigeration for Transport Vehicles

Polarstream liquid nitrogen refrigeration system for transport vehicles has been developed by Union Carbide Corporation, America. The system is completely automatic, provides controlled refrigeration down to minus 20 degrees Fahrenheit and basically consists of spraying liquid nitrogen into the air space inside an insulated compartment. A 3-inch air space above the cargo is required and the equipment takes up little room and needs practically no maintenance. Temperature control is flexible—for instance one haul can be made at minus 20 degrees Fahrenheit and the next immediately made at plus 40 degrees by changing a dial.

MAHINDRA AND MAHINDRA LIMITED

COMMISSION TO STUDY TAX POLICY URGED

MR. K. C. MAHINDRA, CHAIRMAN, ANALYSES BUDGET PROPOSALS

MR. K. C. Mahindra, Chairman of Mahindra and Mahindra Ltd., devoted the major part of his speech at the Seventeenth Annual General Meeting of shareholders, held at Bombay on Thursday, 30th May, 1963, to analysing the main proposals of the 1963-64 Union budget. Discussing Super Profits Tax, Mr. Mahindra said that it remained to be affirmed again that the principle of progression in corporate taxation ran contrary to what were universally accepted as sound canons of public finance. He believed that the further draft on the cash resources of workers by the Compulsory Deposits Scheme would mean increased resort to private moneylenders. The increases in customs and excise duties, he pointed out, would add to the rising cost of production. Summing up, Mr. Mahindra suggested that taxation as an instrument of economic policy should be submitted to a fresh examination by a high-powered commission, especially in view of the novelties introduced in this year's budget. He envisaged for the proposed panel a triple role: to inquire into the fundamentals of tax policy; to study the consequences of that policy on prices with particular attention to spheres where we desire exports to flourish; and to gauge the influence of such policy on growth.

The following is the full text of Mr. Mahindra's speech:

The occasion of the annual general meeting this year should be of special interest to the shareholders. They are active participants in basic developments, and as such, they contribute substantially to the building of the infrastructure of our economy. The delay in the submission of Directors' report to you was almost wholly due to the fact that the original budget proposals presented on the 28th of February caused considerable confusion in interpretation of their impact on company finance. Your Directors at their meeting on 1st March hoped to be able to approve the audited accounts, but it was not possible at that date to translate the precise incidence of new taxation on the profits of the Company.

Bonus to Staff

Provision for Super Profits Tax payments in respect of the accounts as presented has been calculated at Rs. 11.26 lakhs for your Company. This has meant that, despite an increase of over 11 per cent in gross profits the shareholders, in accordance with the Directors' recommendations before you, suffer a loss of one-sixth in the quantum of dividends (as compared to the previous year); the plough-back, or generated cash retained in the Company, has declined from Rs. 29 lakhs to Rs. 24 lakhs. The Government has increased its cut from Rs. 36.80 lakhs to Rs. 55.65 lakhs. In respect of bonus, however, the Directors have decided to retain the same basic pattern as of last year. With the knowledge of the marginal subsistence of many of our industrial workers, and particularly in recognition of the pressure on family budgets of rise in prices of basic commodities (which has become quite perceptible in the last three months) and which, in my opinion, will continue, despite what economic advisers and experts attached to Government bureaus may say, the Board felt that the case of the employees deserved the maximum sympathy. The decision in respect of bonus was also in recognition of the all-round effort by everyone in the organisation at increasing productivity. I trust that this approach will meet with your approval.

Super Profits Tax

Much has been written about the Super Profits Tax proposals—and I would have refrained even from this mention had the matter rested with the solemn assurance by the Finance Minister in his concluding speech that he will not hesitate to abolish the measure if it is found to retard corporate expansion. But he has now categorically stated that "S.P.T. has nothing to do with the present emergency in the country" and that both S.P.T. and Compulsory Deposit Scheme were desirable in themselves. It remains, therefore, to be affirmed again that the principle of progression in corporate taxation goes contrary to what are universally accepted as sound canons of public finance. It erodes the very base of revenue. Its major effect on capital formation is dissuasiveness—dissuading people who have money to spare from investing in an industrial venture, when there is a significant restraint on the quantum of profits and where taxation directly affects efficiency. Capital emerges from savings and 84.1 per cent of total savings in India come from the household sector, that is, from private savers. Government and corporate sectors account, respectively, for 13.9 per cent and 4.7 per cent. This means that savings of private households feed both Government as well as corporate sectors with their investible funds, and such funds are bound to shy away from commitments when returns become uncertain and when public finance comes to mean mere gathering in of funds from the public.

That the Super Profits Tax is a tax on efficiency, has been questioned in responsible quarters. Surely, it does not require any detailed arithmetical calculations to come to the conclusion that corporate taxation ranging from 60 per cent to 75 per cent is not an inducement for exercising severe and rigid controls over expenditure, nor do such heavy imposts provide the motive power for pursuing vigorously the drive for productivity.

The views of a distinguished American analyst may aptly be quoted. Dr. E. Schmidt, Director of Economic Research, U.S. Chamber of Commerce, has this to say of corporate taxation:

> "Its incidence is capricious and uncertain. It raises the general price level. It is largely a disguised sales tax. It has put the corporate form of doing business at a disadvantage.... It retards new investment. It reduces investment per worker. It raises the average age of plant and equipment.... It distorts investment decisions because of its severe bite."

Novel Concepts

Apart from S.P.T., the Finance Minister has introduced certain novel concepts in his search for additional revenues. Increases in customs duties for import of capital plant and machinery is justified as a protective measure, that is, a measure which would encourage growth of indigenous machine building industry. The reasoning is superficial for there is a rigid control on the issue of import licences and the technical department, hitherto known as the Development Wing, does not clear any application for import licence when indigenous machinery is available. Prices do not come into the reckoning. This is protection enough. The only consequence of such imposts is increases in the cost of production. There is the Compulsory Deposit Scheme which agitated the minds of a considerable number of legislators, because it affects very severely the middle class people. As an illustration: in accordance with the regulations made by the Maharashtra Government, a portion of bonus paid to the worker must be invested in National Defence Certificates. I know as a matter of fact, that many of our workers have been compelled to pledge their Defence Certificates for cash on prohibitive rates of interest within a few days of their receiving them. The further draft on their cash resources by the Compulsory Deposit Scheme would mean increased resort to private moneylenders. We are all familiar with the widespread operations of the non-banking sector which forms a considerable handicap to the restraints and controls which the Reserve Bank of India tries to administer in respect of inflationary credits. The boost thus given to usurious operations will further defeat the ultimate purpose of keeping prices within check.

The Compulsory Deposit Scheme has been justified on grounds of reasonable restraint of individual's rights to spend his earnings in the interest of social economy as a whole. So economics gets mixed up with morality, and legislation under another guise is enacted to improve the citizen's behaviour. Are we "dreaming of systems so perfect that no one will need to be good" (T.S. Eliot) and forget for the nonce what a Roman philosopher wrote 2000 years ago: "Virtue alone is not sufficient for the exercise of Government; laws alone cannot carry themselves into practice."

Another odd feature introduced in this year's budget is the palpable discrimination shown in favour of foreigners employed in India in the matter of remuneration. Attempt is made to justify this measure also on grounds of social restraint. Despite the urgency and the need to enlarge and strengthen our technical and managerial cadres, this kind of restraint is more likely to drive the capable and the energetic to other lands than attract those who are already earning ampler emoluments abroad. The Council of Scientific and Industrial Research stated in 1961 that more than 4,900 Indian scientists and technicians were gainfully employed overseas and bemoaned the fact that no correspondingly attractive outlets or opportunities were being made available within the country to draw them back into our economy. The discriminating legislation now introduced as a finance measure will certainly not improve the situation. Perhaps it was thought that a tax on remuneration paid to Indian nationals above a certain figure would restrain the payment of so-called high salaries to Indian managers and technicians and that somehow it will lead to equality in earnings. It is conveniently forgotten that a rupee today is hardly worth more than 25 per cent of its intrinsic value 25 years ago and the salary levels which were not considered unusual then are now being declared the ceiling! It is also amiably forgotten that liberty is given to recruit and engage foreign staff as you will. What becomes of the drive to 'nationalise' completely as soon as practicable the managerial and technical cadres of all business organisations operating in India?

High Costs

One of the major handicaps to the export of our products is the high cost of production. For reasons I need not elaborate, India furnishes today an example of a country which has converted itself from a low cost producer of steel to a land where retail steel prices are amongst the highest in the world. Export drives will have no meaning, if fiscal measures and multiple taxes, levies, tolls, and surcharges keep on adding to costs of production.

It has been heard in responsible quarters that the additional excise duties have been so carefully framed as not to impinge on the prices of basic commodities. Literally it may be so, but it is well known that retail prices do not follow the convolutions of a statistician's mind, particularly when he tries to prove that a circle ends in a point. Apart from the recognised multiplier effect of a push in one direction, there is the infection attached to every rise in retail prices. Government attempts to open fair price shops are like segregating the patients of a hospital after the infection has widely spread. With what results we have still to see.

You may manage a smile at the definition of "excise" given by Dr. Samuel Johnson, in his famous Dictionary:

> "A hateful tax levied upon commodities and adjudged not by the common judges of property, but wretches hired by those to whom excise is paid.
>
> "With 100 rows of teeth the shark exceeds,
> And on all trade like cassawar she feeds."
>
> *(Marvell.)*

Tax Commission

May I humbly suggest that taxation, as an instrument of economic policy, should be submitted to a fresh examination by a high-powered commission. In the context of the novelties introduced in this year's budget, the fundaments of the policy of public finance need to be reviewed afresh, lest this branch of State administration deteriorates into a mere revenue-collecting agency.

The health of an economy is judged in some countries by the puffs of smoke over mills and factories, in other countries by the shining cavalcade of automobiles and queues at super-markets and pubs. In our country it is the long lines of men at factory gates and employment exchanges and of women and children at retail groceries for sugar and rice and oil which attract attention; if not these it is the teeming millions who sleep on pavements of the streets of Bombay and Calcutta, even of the capital city of Delhi, who cry for shelter. These are essentially economic problems whose solution or non-solution is related directly to the structure of the economy, its capacity for rapid growth in the matter of urgent basic needs, the climate of opportunity and the discipline and desire amongst the people for hard work. While finance is the limitation, financial and fiscal measures are the catalysts for progress toward redemption of the poor and the needy. Solemn, therefore, is the responsibility of those who devise these things—planners and administrators, financial pundits and economists, and they should welcome a continuing review and examination afresh of the problems and features which retard growth and development.

A more cogent argument for a tax commission is the danger of a drift toward Communist ideology when by accident or design a tax structure is imposed which breaks down the motive power, the sinews of our economy. Didn't Karl Marx propose in the famous *Communist Manifesto* the use of heavy progressive taxation as the means for making "despotic inroads on the rights of property and on the conditions of bourgeoisie production?"

I envisage for the Tax Commission a triple role: to enquire into the fundaments of tax policy; consequences of such policy on prices with particular attention to spheres where we desire exports to flourish; and influence on growth.

Bureau of Information

Those who are engaged in commerce and industry—essentially a non-political activity—have another duty to perform. The range and standard of debates in the Parliament this year displayed a pathetic non-knowledge of principles and guide-lines of public finance. By and large, the case for industrial development went by default and I feel that this happened not because the legislators were wedded to the ideology of socialism or were biased against the private sector. Full knowledge was not there. I, therefore, plead for the establishment of a bureau of information in Delhi—an office disseminating from time to time correct facts about industrial economy, without prejudice or favour to any interests or preconceived notions. I visualise the agency not as a platform but as an organ for publicising the trend and the course of industrial development, the factors which advance or retard growth, the principles which govern the minds of people engaged in such vocations. Attention of the bureau will naturally be directed toward the furnishing of full information on varied subjects to our legislators primarily. Novel ideas and concepts have emerged this year in the Finance Act. I feel sure that the consequences, both light and serious, of such novelties were not comprehended by the framers of the legislation. There is urgent need for educating Delhi in the whole palaver involved in establishing and operating an industry. There is need for understanding the overall thinking of members of the Planning Commission. There is need for informing the theoreticians of the Commission with relevant factors about industrial finance and industrial operations which assist or retard accomplishment. There is equal need to supply illumined data to the technical wings of the executive departments of Government. I feel that the Bureau will fulfil a very necessary need by advancing information on these matters of basic policy and which deserve a close and continuous watch.

I should like to suggest to my colleagues in industry that a dozen of them, like-minded and of kindred spirit, whose integrity is above question and who are imbued with national service, should band together and set up in Delhi a bureau of information. The proposed bureau will not serve any sectional interest nor will it propound dogmatic theories which have little bearing on practical considerations that determine development. The bureau must remain essentially non-political in its approach, non-sectarian in its relays of information and distinctively labelled as a service.

Aura of Suspicion

Another reason which I may advance in favour of such a bureau is the necessity to remove the general aura of suspicion against private industry and industrialists in general which has been engendered during the Parliamentary debates on the Vivian Bose Commission report. It is not suggested that industry should present itself in sack-cloth and ashes for it is not proven that the alleged evils disclosed in the report are widespread and rampant. Because industry has been generally branded it does not follow that we should remain quiet and silent until a case is proved. I am however of the opinion that it is time that individual industrialists should come forward and declare adherence to certain minima of ethical conduct in the exercise of their business procedures. Certain practices and arrangements which have been highlighted by the Vivian Bose Commission deserve unequivocal condemnation and one can do so without affirming or denying the allegations against individuals. Too much suspicion between Government and industry, between legislators and individual entrepreneurs, between political parties and chambers of commerce is both unhealthy and derogatory of individual dignity. The permutations and combinations of mistrust are manifold and attempts must start now to resolve the vicious equation. The remedy for abuses of economic power is both legal and social. As individuals we should abhor and condemn; as citizens we should assist the Government in cleaning up the Augean stables; as businessmen we should affirm our strict adherence to ethical practices.

Defence and Development

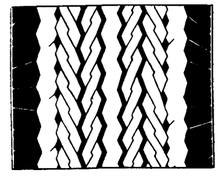
Defence and development are stated to be the twin motives for the current economic and financial policy of the Government. Supplementing the premise that the new taxation measures will definitely not encourage savings and therefore will retard capital formation, it is worth repeating that defence, totality of defence, is intimately linked with industrial development—in the long run it is the spread and range of the industrial base alone which can ensure the military security of the country. It is our experience that a worthwhile project takes many months, in some cases several years, to fructify and for a company like ours deliberately set on a growth pattern it would be extremely disappointing if several years' efforts to chart a design for development have now to be halted. Your Board, therefore, has resolved to push ahead, knowing that perhaps they are taking a calculated risk in promoting at this moment of time large new schemes in particular the alloy steel and the tractor projects. They require substantial financing. I hope we will be able to place them on the market before the next annual meeting comes round. This decision has been taken despite the maleficent influence of current taxes and duties, because your Directors believe fundamentally that development and disciplined work must go on and we, both in the private and public sectors, in Government or private living, cannot afford to go slow. Did not our recent visitor—John Strachey, the British Labour leader, tell us the other day that "India is condemned to live dangerously, for, otherwise, she may not live at all? I commend these thoughts and our future plans to our shareholders.

Jeeps for Civilian Use

Before I conclude, I should like to tell the shareholders that the Company's jeep production continues to be under strict security controls. On repeated representation, Government has been pleased to release about 20 per cent of our production of vehicles in the current year for civilian uses, but priority of user-allotment will continue to be controlled by the Government.

Steel division has not been so active during the last six months as in the previous year, but it is the untiring effort of the personnel of this division of the Company which has now matured into the alloy steel project.

Machine tools division has broadened the base of its operations by inclusion of certain lines of indigenous machines in its portfolio, as well as promoting the beginning of manufacture of tools and gauges in a small way.



I opened my remarks by referring to the operations of the year as being more efficient from the productivity angle. For this accomplishment the management, the staff and the workers deserve your compliments. On your behalf I pay them tribute for their contribution and wish them success in the further goals of proficiency and skill which marks the industrial sectors of more advanced countries.

Note: *This does not purport to be the proceedings at the Seventeenth Annual General Meeting of the Company.*

Firestone

New Deluxe Champion Tyre

Outlasts any other tyre. Here's why—

The safety-engineered, exclusive-designed tread is provided with thousands of non-skid angles that adjust automatically to furnish skid protection in starting, stopping and on turns. Less skidding means longer wear.

The wear-resistant tread rubber compound used is specially formulated to suit Indian road and climatic conditions, and the safety-fortified, gum-dipped cord body is your surest protection against impact damage and road hazards

Firestone – Your Symbol of Quality and Service

JARDINE HENDERSON JUTE GROUP

WORKING RESULTS HIGHLY SATISFACTORY

IN contrast to 1961, which was a year of utmost difficulty for the Indian jute industry, 1962 witnessed happier and easier trading conditions. Forgotten were the days of high raw jute prices, lack of opportunity for profitable simultaneous operations, shorter working weeks, sealing of looms and block closure of entire mills. On the contrary, with a high level of demand for jute goods throughout the year—stimulated at first by the shortage created by lack of raw materials in previous years—the mills could work to their maximum capacity almost from the beginning of the year. And aided further by the satisfactory offtake of goods, the majority of mills could earn a vastly improved profit sufficient at times to wipe off all previous losses. This is well demonstrated by the working results of the two jute companies under the management of Messrs. Jardine Henderson Ltd., Calcutta, namely, Kamarhatty Company Ltd. and Kanknarrah Company Ltd. for the year ended 31st December 1962.

Kamarhatty

Although the gross sales realisation of the Kamarhatty Company has declined somewhat from Rs. 431.71 lakhs to Rs. 415.78 lakhs, the fact that the Company has had fair trading conditions is revealed first by the increase of Rs. 35.88 lakhs to Rs. 120.47 lakhs in the value of closing stocks and second by the realisation of a gross profit of Rs. 64.84 lakhs in place of the loss of Rs. 6.36 lakhs suffered in the previous year. This has been possible partly because the Company operated throughout the year as many as 1,963 looms, as against its registered complement of 1,797 looms, by purchasing accumulated and current loom loans from other mills and partly because of the substantial savings in expenses which have dropped from Rs. 454.89 lakhs to Rs. 387.38 lakhs. The effect of these two factors has been to elevate the Company's profit margin (ratio to sales of gross profit or loss) from −1.5 per cent to +15.6 per cent. Although this betterment in gross profit has, naturally, necessitated increased provisions for Managing Agents' remuneration (from the minimum amount of Rs. 50,000 provided in 1962 to Rs. 3.41 lakhs), and taxation (from *nil* to Rs. 23.50 lakhs), there is a net profit of Rs. 31.05 lakhs, which is in distinct contrast to the net loss of Rs. 13.76 lakhs suffered in the previous year, after providing Rs. 6.88 lakhs (as against Rs. 6.90 lakhs) for depreciation. The net profit, together with the Rs. 4.76 lakhs written back from past provisions, has been found adequate to recoup the whole of the previous year's carry forward loss of Rs. 17.21 lakhs, after transferring Rs. 7.33 lakhs (Rs. 3.85 lakhs in 1961) to reserves, paying Rs. 2.50 lakhs as preference dividend for two years and proposing an ordinary dividend of 20 per cent, subject to deduction of tax, claiming Rs. 8.64 lakhs.

Kanknarrah

The resumption of payment of dividend by the Kanknarrah Company Ltd., after a lapse of six years, is fully justified by the results achieved by it during 1962. Like its sister concern, this Company also has been able to operate the full registered complement of 1,527 looms through the year, besides purchasing loan looms from other mills so as to bring the total number of looms operated to 1,834. But the performance in so far as it relates to sales and profits has been even more encouraging. Turnover has expanded, albeit modestly from Rs. 372.16 lakhs to Rs. 391.46 lakhs, even though closing stocks have nearly doubled in value from Rs. 69.99 lakhs to Rs. 118.14 lakhs. As a result, the Company has been able to convert the loss of Rs. 6.72 lakhs suffered during 1961 into a profit of Rs. 68.64 lakhs which happens to be the highest on record for a number of years. A good portion of the profit has, of course, been neutralised by higher essential provisions which have collectively gone up from Rs. 6.63 lakhs to Rs. 19.34 lakhs, the resulting net profit is still as high as Rs. 49.30 lakhs, in contrast to the net loss of Rs. 13.35 lakhs for the year before. To this has been added Rs. 1.45 lakh withdrawn from past provision so as to get an amount of Rs. 50.75 lakhs which, after recouping the brought forward loss of Rs. 30.80 lakhs, leaves a balance of Rs. 19.95 lakhs for appropriation. Out of this, Rs. 4.05 lakhs (as against Rs. 2.67 lakhs in 1961) have been transferred to reserves and a further Rs. 7.69 lakhs set aside to meet the liability in respect of preferred dividend for the years 1956-62, inclusive. Side by side with this, an ordinary dividend at 15 per cent, subject to deduction of tax, has been proposed. This claims Rs. 8.10 lakhs.

The relative performance of these two Companies in the past four years is presented synoptically in the table appearing at the foot of the page.

Consequent on the sudden turn of fortunes, the financial position of the two Companies has undergone some material improvement as is revealed by their balance-sheets as at 31st December 1962. The share capital, predominantly in equity shares of Rs. 100 each, has no doubt remained unaltered, but a change has been brought about in the reserve position which has improved from Rs. 10.00 lakhs to Rs. 32.31 lakhs, in the case of Kamarhatty, whereas, in respect of Kanknarrah, a deficit of Rs. 21.36 lakhs has been turned into a surplus balance of Rs. 13.60 lakhs. Loans have declined moderately. Current liabilities, together with loans, are adequately covered by current assets, loans and advances put together. The gross block in each case vastly exceeds the own funds, but it has been written down, through depreciation account, to about a fifth of its cost. Investments, mostly in the shares of the partnership firm of Jardine Mills Agencies have also shown a rise. The summarised balance-sheets of the Companies as at 31st December 1962 are given below:

(In lakhs of rupees)

	Kamarhatty	Kanknarrah
LIABILITIES		
Share Capital—		
Preference	16.00	14.23

Current assets, loans and advances	164.35	154.23
Total	238.20	219.22

As regards prospects for the current year and beyond, the Directors' reports observe thus:

"Offtake throughout the year was most satisfactory as is reflected in the financial results of your Company, but, with the building up of stocks in overseas markets, prices have fallen in 1963. In particular, the competitive position of sacking is causing concern as India is undoubtedly losing her makets to Pakistan whose industry is rapidly expanding. The price advantage which they enjoy on account of cheaper raw material and export subsidies is such that their sacking output can always be sold before consumers turn to India. Mills have already switched as many looms as possible from sacking to hessian and continued erosion of our overseas sacking markets must be of serious consequence to the industry.

"In October and November, stability was shattered by the Chinese attack in N.E.F.A., and the consequent disruption of communications aggravated by the strike of boat crews of the Joint Steamer Companies made the maintenance of any price for Assam jute impossible. With the restoration of more normal conditions and the continued issue of purchase quotas raw jute prices have been well supported, although the eventual size of the 1962-63 crop and the low quality of much of it have imposed a great strain on the mills. The decrease in sacking looms referred to above and the necessity to compete in quality as well as price in world markets must result in a decrease demand for low quality jute, and it is particularly disappointing to the industry that, for the 1963-64 crop, the Government have not as yet seen fit to discourage production of low quality jute by a reduction in the minimum prices for the lowest grades. Demand for high quality jute, especially for carpet backing cloth, will continue to ensure prices above minimum for those who produce it."

The current *cum-div.* prices and the net yield fetched by the scrips on an *ex-div.* basis are as follows:

	Price	Yield
	Rs.	%
Kamarhatty	200.00	7.0
Kanknarrah	141.00	8.0

HINDUSTAN ALUMINIUM CORPORATION LTD.

The proposed expansion of the capacity of the Hindustan Aluminium Corporation Ltd. (Managing Agents: Messrs. Birla Gwalior Private Ltd., Renukoot, U.P.) from 20,000 tons to 50,000 tons per annum has been approved by the Government. The application for setting up the Corporation's own thermal station for additional power requirement has also been sanctioned. Steps are now being taken to implement the expansion scheme with the least possible delay. The Government has also approved in principle the Directors' proposal to issue further equity capital at the appropriate time to meet a part of the financial outlay on the expansion programme. At present, the paid-up capital is Rs. 8.49 crores, including Rs. 2.49 crores in 9 per cent redeemable cumulative preference shares of Rs. 100 each. The authorised capital is Rs. 20 crores, comprising Rs. 10 crores in equity shares of Rs. 10 each, Rs. 2.50 crores in preference shares and Rs. 7.50 crores in unclassified shares of Rs. 10 each.

The year 1962 marked the successful completion of the programme of setting up an integrated aluminium plants with the rated capacity of 20,000 tonnes of aluminium ingots, including the necessary facilities for producing the required quantity of alumina. Both the smelting and alumina facilities were brought into operation. The two sections, namely, reduction and alumina, are now working to their full capacity. Provisional orders for almost the entire fabrication facilities to be imported have been placed and, with the application for a loan of adequate foreign exchange having now been approved by the Export-Import Bank, they will be finalised as soon as the import licence is issued by the Government. Out of the entire equipment, two machines have had to be purchased in Europe, namely, properzi machine for making re-draw rods and one scalper for milling of slabs meant for rolling. Foreign exchange for these purchases has been arranged from the I.C.I.C.I.

The production of ingots since the start-up in May, 1962 upto the end of the year aggregated 8,333 tons, of which the major portion was electric grade. About 5,707 tons were delivered against sales, and the product was well received by the market. For initial operations of the reduction plant, alumina was partly purchased from the Indian Aluminium Company Ltd., but mainly imported from the U.S. However, the Corporation's alumina plant was started in October. Sale proceeds amounted Rs. 202.43 lakhs and closing stocks amounted to Rs. 95.18 lakhs. The year has closed with a trading loss of Rs. 42.72 lakhs, after allowing Rs. 183.52 lakhs for raw materials consumed, Rs. 11.69 lakhs for stores and spares consumed, Rs. 41.04 lakhs for power and fuel, Rs. 26.95 lakhs for staff expenses and Rs. 114.98 lakhs for other expenses. The total expenses amount to Rs. 378.18 lakhs, of which a sum of Rs. 36.73 lakhs has been transferred to balance-sheet as expenditure during construction period. Including the provision of Rs. 156.40 lakhs for depreciation for the year 1962 and the previous years, the loss amounts to Rs. 199.12 lakhs which, however, has been reduced to Rs. 194.06 lakhs, after taking into account the previous year's credits amounting to Rs. 5.08 lakhs.

Borrowings from the Export-Import Bank have increased during the year from Rs. 477.70 lakhs to Rs. 614.28 lakhs and these, together with a bank loan of Rs. 107 lakhs, bring the total secured loans to Rs. 721.28 lakhs. Besides, there are unsecured loans of Rs. 230.15 lakhs. The total resources thus work out to Rs. 18 crores. As against this, the gross block amounts to Rs. 14.59 crores (Rs. 11.15 crores a year before) which is written down to Rs. 13.03 crores and shown, together with work-in-progress, at Rs. 13.18 crores.

BRAITHWAITE'S RESULTS IMPRESSIVE

TAXATION CLAIMS 62 PER CENT OF GROSS PROFIT

VERY impressive results have been reported by Braithwaite and Company (India) Ltd. (Chairman: Mr. J. V. J. Paterson, Calcutta) for the year ended 31st December 1962. Turnover, measured in terms of contracts invoiced, has gone up again sharply from Rs. 504.34 lakhs to Rs. 643.10 lakhs and gross profit has spurted from Rs. 76.21 lakhs to Rs. 121.02 lakhs. The rise in profit is, indeed, steep, and hence, as a ratio to turnover, the profit has gone up by 3.7 per cent to 18.8 per cent, as against the rise of 2.7 per cent to 15.1 per cent a year before. This highly satisfying performance is naturally in line with the urgent demand in the country for the products the Company manufactures. Its activities include bridge and structural engineering, railway wagon building and manufacture of pressed steel tanks and cranes. In spite of the shortage of matching steel (a situation which the Directors state has been aggravated after the emergency), the total output from the Clive works rose to 27,479 tons from 13,734 tons a year before, and was some 16 per cent above the best level achieved in 1957. There was, however, still idle capacity in the structural shop. In the Angus works, steady progress was made throughout the year and a satisfactory increase in turnover was achieved. Exports, restricted to pressed steel tanks, increased, and a sales tour of South East Asian countries was undertaken in collaboration with the technical consultants, Braithwaite and Company Engineers Ltd., of London.

These encouraging results are not carried to the level of net profit, after depreciation and taxation, which has actually suffered a setback from Rs. 38.23 lakhs to Rs. 35.88 lakhs, due mainly to the marked rise in the tax burden from Rs. 32.25 lakhs to Rs. 75.18 lakhs, at which level it claims 62.1 per cent of gross profit. The tax amount includes Rs. 5.43 lakhs as the tax on the issue of 434,021 ordinary shares of Rs. 10 each as fully paid bonus shares on 10th May 1962 and Rs. 16.75 lakhs as the estimated Super Profits Tax. Besides the net profit of Rs. 35.88 lakhs, a sum of Rs. 12.40 lakhs is obtained by transferring and writing back some of the past provisions, bringing the total available for distribution to Rs. 48.28 lakhs. But the appropriation of this sum is again on conservative lines, as a fat sum of Rs. 33.41 lakhs (as against Rs. 26.87 lakhs a year before) has been ploughed back to reserves. Out of the balance, Rs. 90,000 have gone by way of a taxable dividend at the rate of Rs. 2.25 per share for a period of three months on the 40,000 9 per cent 100-rupee redeemable cumulative preference shares issued in October 1962. The setback in net profit, the conservative appropriation policy and the claim of preference shareholders have all led to a sharp cut in the ordinary dividend from 25 per cent to 14 per cent which is, however, on the increased capital of Rs. 100 lakhs following the bonus issue.

In the table below are given the synopses of the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December

* Subject to deduction of tax.

The policy conservatively to appropriate profit has continued, according to the Chairman, in order to provide for amortisation of foreign exchange loans now being finalised and for the rupee requirements of the expansion plan. When the preference issue was made last year, it was estimated that the expansion plan would cost Rs. 400 lakhs. It was also disclosed then that the Company was to obtain a foreign exchange loan of Rs. 45 lakhs from the I.C.I.C.I. and another Rs. 43 lakhs from the C.D.F.C., London. Terms and conditions of these loans have since been finalised. Import licences for the machine tools and equipment necessary for the expansion programme, which is to be carried out at the Angus works, have been delayed even after the Reserve Bank's final sanction was obtained in March last following the finalisation of foreign exchange loans. Meanwhile, further areas of land have been secured on lease from the Port Commissioners and this has made possible the more economic storage of components. The manufacture of electric overhead travelling cranes has started and it is expected that about 20 cranes will be completed during the current year.

Discussing the current year's prospects, the Directors report that the Company's order book remains well filled and, despite shortages of almost all commercial sizes and qualities of steel and acute scarcity of welding electrodes, it is expected that production will show a further increase. According to the Chairman, turnover from the Angus works will show an increase of at least 50 per cent. Notable contracts booked during the year for structural shop, either directly or as a constituent of the Braithwaite, Burn and Jessop Construction Company Ltd., are cover 1,800 tons for extensions to the Indian Tube Company's plant at Jamshedpur, 2,000 tons for the double track mainline girders for the Yamuna bridge, New Delhi, and 7,000 tons for the alloy steel plant at Durgapur. The wagon building capacity is fully booked for a further period of 18 months. The Chairman has emphasised that, as a result of national emergency and the determination that the industrial development of the country should not be slowed down, it is now more than ever essential that the Government should establish an efficient organisation to lay down priorities for orders placed and that all the necessary raw materials should be made available as soon as these priorities have been decided. If the raw materials required are available, he feels, there is scope for expanding exports of other engineering products, besides pressed steel tanks.

The Company's paid-up capital, including Rs. 40 lakhs in preference shares, now stands at Rs. 140 lakhs. It is backed by reserves and surplus amounting to Rs. 94.58 lakhs, including capital reserve of Rs. 30.70 lakhs, formed on an upward revaluation of fixed assets as on 31st December 1955. Borrowings are again *nil*. Current liabilities aggregate Rs. 242.08 lakhs and are easily taken care of by current assets, including investments, shown at Rs. 321.31 lakhs. The gross block, which shows a net addition of Rs. 43.97 lakhs to Rs. 164.16 lakhs, has been written down to Rs. 132.86 lakhs. Inclusive of capital work-in-progress of Rs. 20.34 lakhs, the net block is shown as Rs. 153.21 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 29.50 *cum-div.* On the *ex-div.* basis, they yield a net return of 3.4 per cent per annum at the reduced scale of dividend for the year under review.

Notice

THE DURGAPUR PROJECTS LIMITED

(A Government of West Bengal Undertaking)

SALE OF SODIUM PHENOLATE
(38/40% Strength)

OFFERS are invited from *bonafide* consumer/manufacturer for purchase of Sodium Phenolate of the following specification:—Free alkali—9.8 (W/V); Total Phenol—38/40% (V/V); Napthalene—Trace; Neutral Oil—0.7% (V/V). The material can be successfully employed in extracting Pure Phenol, Cresylic Acid, Phenolic Resins, etc., owing to its high tar acid content. Interested parties may contact Sales Officer (Chemicals), The Durgapur Projects Ltd., 10, Middleton Row, 1st floor, Calcutta-16, on or before June 15, 1963 with their offer of price indicating expected monthly offtake. Disposable quantity at present is 100 metric tonnes.

SHREENIWAS COTTON'S PROFIT DECLINES

LESS RETURN ON MORE CAPITAL

DESPITE an improvement in sales from Rs. 447.87 lakhs to Rs. 472.42 lakhs, the Shreeniwas Cotton Mills Ltd. (Managing Agents: Marwar Textiles (Agency) Ltd., Bombay) has suffered a setback in gross profit from Rs. 83.48 lakhs to Rs. 63.31 lakhs during the year ended 31st December 1962. The sales figures mentioned here are gross, inclusive of the excise duty paid which is said to have amounted to Rs. 73.72 lakhs during the year, as against Rs. 64.71 lakhs in the previous year. Even after excluding this excise portion, turnover shows an increase of Rs. 15.54 lakhs to Rs. 398.70 lakhs. The setback in profit is attributed partly to the payment of an additional Rs. 11 lakhs by way of gratuity and retrenchment compensation to introduce rationalisation in the various departments of the mills. According to the Directors, the Company has spent Rs. 1.80 crore in the last five years on its modernisation and renovation programme which is still to be completed to achieve the goal of making the mills one of the most modern and up-to-date units in the country. The year under review itself saw further additions to plant and machinery, amounting to Rs. 34 lakhs. Lest one should conclude that rationalisation has meant only retrenchment, attention has to be drawn to the increase in the average earning per worker from Rs. 2,564 to Rs. 2,967. The total of staff expenses during the year has gone up by Rs. 10.30 lakhs to Rs. 157.53 lakhs. Moreover, the Directors state, the year witnessed an acute shortage of cotton and a continuous rise in manufacturing costs. Against this background is to be viewed the decline in gross profit. Since profit and sales have followed divergent trends, the profit-margin (ratio of profit to sales) has dropped sharply from 18.6 per cent to 13.4 per cent.

Net profit, after allowing for essential provisions, has fallen from Rs. 40.60 lakhs to Rs. 22.97 lakhs. There is no mention in the Directors' report of the Super Profits Tax liability for the year's profit apparently because it is *nil*. The net profit is reduced further to Rs. 12.95 lakhs by provisions for the previous years' liabilities, amounting to Rs. 10.02 lakhs, comprising Rs. 2.40 lakhs as additional taxation for the year 1961 and Rs. 7.62 lakhs as the excess payment of bonus for the years 1957, 1959 and 1960. The dividend on the increased equity capital of Rs. 100 lakhs, following the issue of 10,000 new shares of Rs. 100 each at par in May 1962, has been pruned by six points to 14 per cent per annum, subject to tax. It absorbs Rs. 14 lakhs, as against Rs. 18 lakhs a year before. Since the profit available for distribution is insufficient to cover the dividend fully, it is supplemented by making a net withdrawal of Rs. 1.63 lakh from reserves, which is in contrast to increase of Rs. 21 lakhs in reserves in 1961. The surplus to be carried forward is Rs. 51,723, as against the Rs. 1.06 lakh brought in.

The following table compares the Company's progress since 1959:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

SYNOPSES OF COMPANY REPORTS

Phillips Carbon Black Ltd.

(*Secretaries & Treasurers*: Messrs. Duncan Brothers & Co., Ltd., Calcutta.)

Third Annual General Meeting—31st May 1963.

Extracts from the Directors' report for the period from 1st April to 30th November 1962:—

The accounts show a loss of Rs. 3,25,139 (loss of Rs. 3,00,865) after providing Rs. 69,351 (Rs. 75,495) for depreciation.

Development: In the last report it was envisaged that production of carbon black at Durgapur would have been started well before the end of 1962, but in the event further delays were unavoidable. Although the unit for conversion of raw material was operating from October onwards, it was not until the closing weeks of the year that the full plant could be brought into production. However, in the afternoon of 5th December, 1962 the battery of reactors was at last brought successfully 'on stream' and the first-ever pellets of Indian-made black began to appear in the big storage tanks. There were, of course, many difficulties still to overcome, but production quickly began to gather momentum and by the end of the month a stock approaching one million pounds had already been accumulated. The first commercial deliveries were made early in January this year and the Technical Advisers certified that the quality meets international standards. Substantial sales have since taken place.

Not all the technical difficulties have yet been resolved, particularly in regard to the raw material conversion unit, but good progress is nevertheless being made and it is anticipated that production at the full rate of 30 million pounds annual capacity will be achieved before the end of the current year. Meantime the Government of India have licensed a further expansion of 10 million pounds annual capacity.

It is appropriate to record here the Board's appreciation of the technical assistance provided during the period of construction and commissioning by Phillips Petroleum Company, the U.S. collaborators.

Raw Materials: Supplies of coal tar have continued to arrive at the plant fairly regularly, and storage capacity was kept almost completely full for a period of several months. However, with increasing production supplies from existing sources will be inadequate and it will be necessary to supplement them with some imported feedstock. Meantime, the maximum practical use is being made of raw materials obtainable from indigenous sources.

Capital and Finance: Reference was made in the last report to the *Rights issue* of 312,500 equity shares offered to shareholders in August and September, 1962. There was an enthusiastic response to this offer and the amount of Rs. 40.6 lakhs realised from this issue including the premium of Rs. 3 per share, was duly applied towards meeting the balance of capital outlay on the enlarged plant to the extent that this was not covered by the original issue and the fixed bank loan. Negotiations are in progress for securing additional borrowing facilities so that in spite of a delayed start the Company may be assured of an ample supply of working capital to meet all eventualities during the early months of operation.

Accounts in brief as at 30th November 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.

* Loss after providing for depreciation.

† Total loss after taking into account provision for development rebate reserve.

Extracts from the Directors' report: *Trading*: The net value of completed work billed during the year was Rs. 77,23,973 against Rs. 1,33,66,878 in 1961. The drop in the figure of billing was due to the fact that no major new construction work was completed during the year. The Company's Workshop, however, remained fully occupied, the work-in-progress at the end of the year having increased to Rs. 1,30,15,563 from Rs. 60,11,804 at the beginning.

The Directors have every reason to anticipate that, under present circumstances and with the earlier unremunerative orders now behind, the Company's trading results will continue to be satisfactory. The order book of the Company is full till the end of 1964.

In view of the loss suffered in the previous year there will be no liability for income-tax or Super Profits Tax on the profits for the year.

Issue of Rights Shares: The Directors recommend that in order to provide funds for the purchase of new equipments for the Company's Workshop 10,000 shares of Rs. 50 each be issued to the members of the Company at a premium of Rs. 25 per share. An extraordinary general meeting will be held on Wednesday, the 26th June 1963 for this purpose.

Accounts in brief as at 31st December 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	12,50,000	Gross block	71,41,529
Reserves and surplus ..	6,50,901	*Less*—Written off ..	18,56,196

		Cash	27,549
	Rs. 1,34,42,121		Rs. 1,34,42,121

* Paid-up capital consists of 25,000 shares of Rs. 50 each. Of this 21,663 shares were allotted as fully paid up by way of bonus shares issued on capitalisation of reserves.

† This amount was written off by the order of the Court dated 14th September 1929.

Mahendra Electricals Ltd.

(*Managing Agents*: Messrs. Jashbhai C. Patel & Co., Bombay.)

Second Annual General Meeting—22nd June 1963.

Extracts from the Directors' report: With a view to have administrative convenience, the Directors, with the consent of the Income-Tax Authorities, have changed the accounting year from April/March to January/December.

Finance: During the year ended 31st December, 1962, the Company has earned a sum of Rs. 27,714 by way of interest on short-term deposits of funds which could not be immediately otherwise utilised. It will be observed that a sum of Rs. 3,76,014 has been transferred from the profit and loss account to the "Expenditure During Construction Account" and is shown in the balance-sheet and that the accounts show, after deducting interest received from bank deposits and other sundry receipts and after providing Rs. 13,500 for taxation and Rs. 38,410 for depreciation, a net debit balance of Rs. 58,964 for the period under report.

Expenditure on raw materials during the year amounted to Rs. 15,11,798. Towards this expenditure, the Directors arranged for cash credit arrangements by hypothecation of raw materials to a limit of Rs. 20,00,000 from the Company's Bankers and the Company utilised this facility to the extent of Rs. 2,33,252 upto 31st December, 1962.

Issued Capital: 2,083 Equity Shares of Rs. 100 each being the balance out of 13,333 Equity Shares agreed to be taken up by Messrs. Johnson & Philips Ltd., London, were allotted to them during the period under report.

Project: During the period under report, structural and civil works of the main factory buildings, electric sub-station, water tower and pump house, stores buildings and officers' quarters have been completed and the Gujarat Electricity Board made available to the Company bulk power at 11 Kv. on the 1st October, 1962.

All the plant and machinery, both indigenous and imported, have been installed and trial runs on various items have been taken and steady progress was being made during the period under report towards commencing commercial production and the training of operatives for the second shift on the various machines. In the middle of January 1963, the Company has commenced production of some of the items the Company anticipates to manufacture and these products are well received in the market.

Accounts in brief as at 31st December 1962 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.

Proposed dividend (taxable) ordinary ..	88	75
	(17½%)	(15%)
Dividend per ordinary share	[Re. 1.75]	[Re. 1.50]
Carry forward	18	15

* This includes a sum of Rs. 5,000 for super profits tax.

Extracts from the Directors' report: *Amalgamation*: The scheme of arrangement between this Company and Killcott Tea Co., Ltd., as approved by shareholders at the last annual general meeting, was later sanctioned by the Hon'ble High Court to take effect from 11th February 1963. Accordingly, all the properties, rights and liabilities etc., except for a sum of Rs. 87,500 retained against payment of dividend have now been transferred to Killcott Tea Co. Ltd. In terms of the Court's Order the dividend for 1962 will be payable to shareholders whose names appeared on the share register as on 10th February 1963 and the Company will stand dissolved as from 30th June 1963.

Trading results for 1962 *season* show a substantial improvement as compared with those of the previous year and this is attributable mainly to a bigger outturn and the higher level of prices obtaining for most of the time.

The total *crop* harvested in 1962 was 317,061 kgs. as compared with 288,960 kgs. in the previous year, while the average price realised was Rs. 4.74 per kg. in 1962 as against Rs. 4.29 per kg. in 1961. The *planted area*, including seed reserve, is now 214.44 hectares.

Estimates for 1963 in respect of Hansqua estate provide for a crop of 275,000 kgs. at an outlay of Rs. 11,51,000 including inland freight and sale charges as well as depreciation and all administrative expenses. The start of the new season has not been satisfactory in that there was practically no rain between last October and March this year. Welcome rain was however experienced during April.

Accounts in brief as at 31st December 1962 are as under:—

High	325.00	460.00CR	423.75
Low	312.50	331.25XR	380.00

Extracts from the Directors' report: The working of the Company should be considered satisfactory particularly having regard to the fact that the Company's factories had to remain closed for a fortnight during January/February for want of coal.

Share Capital: Last year the Company had issued 3,635 ordinary shares of Rs. 100 each as bonus shares to conserve the cash resources of the Company on account of the heavy capital cost of the photographic paper project. As the need still exists to conserve the cash resources of the Company, the Directors have thought fit not to recommend declaration of cash dividend on ordinary shares and have instead recommended the issue of bonus shares in the proportion of one ordinary share for every ten ordinary shares held by members. Messrs. Distributors (Baroda) Private Ltd., the Managing Agents of the Company have waived their right to their quota of bonus shares in respect of 5 ordinary shares out of their holding.

Camera Factory: The working of the camera factory showed further improvement during the year. As against 27,405 cameras produced during 1961, 30,788 cameras were produced during the year under report.

Photographic Paper Factory: The Directors are glad to inform the shareholders that trial production of photographic paper was commenced in February 1963 and the results have been encouraging. Regular production has commenced from March 1963.

Accounts in brief as at 31st December 1962 are as under:—

* Paid-up capital consists of 15,000—8.57 per cent. redeemable cumulative preference shares of Rs. 100 each and 59,985 ordinary shares of Rs. 100 each. Of the above 18,135 ordinary shares are allotted as fully paid-up bonus shares.

KAMANI ENGINEERING CORPORATION LIMITED

NEW RECORD IN PRODUCTION

SPEECH OF CHAIRMAN, MR. R. H. KAMANI

ADDRESSING the shareholders of the Kamani Engineering Corporation Ltd. at the Seventeenth Annual General Meeting held at Bombay on Friday, 7th June, Mr. R. H. Kamani, Chairman, reviewed the all-round progress made by the Company. He disclosed that production set a new high record in 1962, and that the Company successfully completed the construction of 110 miles of 132 kV double circuit line in Bihar in a record time of eight months. The following is a summary of Mr. Kamani's speech:

Extending a cordial welcome to the shareholders of the Company, Mr. R. H. Kamani, Chairman of the Kamani Engineering Corporation Ltd., Bombay, presented the Directors' report, audited profit and loss account and the balance-sheet and proposed them to be adopted.

Referring to the attack on our country's territory by the Chinese as unprovoked and dastardly and their subsequent cease-fire as tricky, the Chairman assured those present that these tactics on the part of the invaders will not stop our country from contributing its mite towards building of national economy and bringing prosperity through industry. Sacrifice will have to be made all round, he said, and added that all should be determined to face the situation bravely. He went on to inform the shareholders that their firm has offered the industry's services to the Government and that the Company would be able to serve the country in many ways. He was happy to state that the workers, staff and the management together have contributed about Rs. 2 lakhs to the National Defence Fund.

Satisfactory Progress

The working of the Company, Mr. R. H. Kamani stated, had shown satisfactory progress with sales and profits touching new heights, viz., from Rs. 2.68 crores last year to Rs. 4.65 crores and from Rs. 24.60 lakhs before providing for depreciation and Managing Agents' remuneration, to Rs. 39.10 lakhs.

He then recounted the allocations. The lion's share in allocation had gone to taxation, viz. Rs. 15 lakhs, as against the previous year's Rs. 9.25 lakhs while the Managing Agents' remuneration was Rs. 2.66 lakhs against Rs. 1.60 lakh in the previous year. Depreciation rose from Rs. 5.85 lakhs to Rs. 8 lakhs. Reserve for Super Profit Tax was Rs. 5.35 lakhs and the figure for general development reserve was reduced from Rs. 0.40 lakh to Rs. 0.35 lakh, the general reserve and gratuity absorbing Rs. 1.15 lakh and Rs. 0.30 lakh respectively, as against Rs. 1.00 lakh and Rs. 0.10 lakh respectively for the previous year.

Mr. Kamani pointed out that the Directors in their report forwarded to the members of the Company had recommended a slightly higher dividend of 9.5 per cent, subject to tax deduction at source, despite the substantial burden imposed by Super Profit Tax and by the provision of Rs. 8 lakhs for depreciation; they had also declared dividend on preference shares. After providing Rs. 4,95,994 for proposed dividend a sum of Rs. 4,403 has been carried forward as against Rs. 5,162 brought in.

Factory Working

The Chairman informed the Company that the production tempo has been maintained and the factory has crossed the production mark of 20,000 tons and the production for August 1962 reached over 2,500 tons, that is, 25 per cent higher than the previous record production of 2,100 tons achieved during December 1961.

The supply position of steel, Mr. Kamani remarked, was positively improving but the lighter sections, especially steel plates, still estimated to be difficult and irregular. However, special efforts were being made to cover up the requirements in order to maintain the tempo of production, he added.

While on the subject Mr. Kamani mentioned that national emergency was bound to affect, to a certain extent, the industrial production in general and as a result import of raw materials would be reduced to the minimum which would have certain repercussions, especially in galvanising activities.

The Company had under active study the schemes of expansion and diversification. As far as expansion was concerned Mr. Kamani informed that the Company had received an industrial licence for substantial expansion of the existing capacity from 1,500 tons to 4,000 tons per month—2,500 tons more per month for towers and light structurals and doubling the capacity of heavy structures to 1,000 tons per month, adding that this licence provided also for manufacture of new items of high tensile bolts and nuts upto 500 tons per month. Regarding diversification, Mr. Kamani said that the Company had under active consideration the participation in ropeway installation and taking up the manufacture of certain categories of defence requirements.

Erection

Mr. Kamani informed the shareholders that their Company had successfully completed the construction of 110 miles of 132 kV double circuit line in Bihar in a record time of eight months, for which it had earned the praise of the Project Authorities. The Company had also received orders from Maharashtra, Assam, Andhra Pradesh and W. Bengal States for construction of further important transmission lines, Mr. Kamani said, and added that the work was in progress in various places and that the erection department had kept pace with the production by doubling the activities over last year's performance. He expected that the same tempo would be maintained during the current year also provided required equipments were received.

Railway Electrification

Mr. Kamani was happy to report the completion of the first contract awarded to the Company for electrification in the Eastern Zone and lines constructed had been put to commercial use satisfactorily. The Company intended to participate in future business of similar type also in South and West Zones, he declared.

"Tractamount" Road Rollers

An improved model of "Tractamount" road roller to work in conjunction with various types of tractors has been put in the market and research and experiments were being conducted so as to further improve the standard of performance, Mr. Kamani said.

Export

Referring to the Company's effort towards export promotion Mr. Kamani said that the transmission line towers valued at over Rs. 40 lakhs had already been exported to various countries, including New Zealand, West Africa and East Africa. He said great importance was being attached to the matter of export for earning the much-needed foreign exchange and added that to do that, great sacrifice will have to be made as competition in foreign markets was severe from internationally known manufacturers which could not be overcome without adequate facilities and support from the Government, to whose notice the matter was being continuously brought. Mr. Kamani hoped that the Government would give due and serious consideration to these difficulties which would greatly help our export business turnover.

Research

The research and testing department had successfully tested several new and improved types of tower designs with a view to economising in weight and thereby saving steel so vital to the national economy, Mr. Kamani informed the meeting.

Agency Business

Mr. Kamani referred to the agency business and said that the same has increased and the Company continued to receive large orders as, for example, orders for large quantities of H.T. Insulators, underground telecommunication cables and one more complete Thermal Power Plant for Bihar State Electricity Board and added that erection of two more similar power units was nearing completion.

He attributed the good results to the good efforts and co-operation of workers and the members of the staff as also to the encouragement and the backing of the shareholders received from time to time and thanked them all for the same.

Note: *This does not purport to be a report of the proceedings of the Annual General Meeting.*

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

SHREENIWAS COTTON MILLS

(*Concluded from page* 1025)

year were 96 automatic looms, a high speed sizing machine, and a shearing, cropping and printing machine. The Company has obtained sanction for the remaining 16,000 spindles out of the 20,000 additional spindles for which it applied for balancing purposes. Nearly 5,000 spindles have already started working and the balance will be commissioned next year (1964). There is sufficient back process capacity to feed these additional spindles. Machinery worth Rs. 8.50 lakhs, including one hot air stentering machine, has already been erected since the beginning of the current year. The Company has further plans to install, apart from the spindles referred to above, one single process blow room line, a Sanforizing machine and one high speed sizing machine. The total additions to plant and machinery during the current year are expected to be Rs. 40 lakhs.

Effective steps are being taken to improve the efficiency of the subsidiary, Shree Madhusudan Mills Ltd. One Reiters new blow room has started working and another will be installed very soon. Two sets of combing machinery and two high speed sizing machines will be added in the current year. To conform to the consumer's taste for finer varieties, the subsidiary has changed its pattern of production from grey sorts to processed sorts and from coarser to finer varieties. The Shree Gopal Industries Ltd., another subsidiary, has fully wiped off losses of previous years and is expected to show satisfactory results in 1963.

The paid-up capital of the Company, including Rs. 4.80 lakhs in 100-rupee 4 per cent, tax-free, redeemable cumulative preference shares, stands now at Rs. 104.80 lakhs. It is supplemented by reserves and surplus amounting to Rs. 86.88 lakhs. Secured loans have increased from Rs. 139.20 lakhs to Rs. 160.19 lakhs, comprising Rs. 39.72 lakhs as debentures and Rs. 120.47 lakhs as borrowings from banks. Unsecured loans have moved down from Rs. 8.99 lakhs to Rs. 1.80 lakh. Current liabilities and provisions aggregate Rs. 115.58 lakhs. The total short-term indebtedness to others thus amounts to Rs. 237.85 lakhs, against which are available current assets, loans and advances amounting to Rs. 211.71 lakhs and investments of Rs. 94.50 lakhs. The gross block has increased during the year from Rs. 237.59 lakhs to Rs. 275.65 lakhs and this has been written down to Rs 160.16 lakhs.

Currently, the 100-rupee fully paid ordinary shares of the Company are quoted at Rs. 235 *cum-div.* and offer, on the *ex-div.* basis, a net yield of 4.3 per cent per annum.

NEW PUBLICATIONS

(*Concluded from page* 1023)

(*a*) give greater freedom in the choice of domestic policies for full employment and expansion by member Governments, (*b*) reduce the I.M.F., and (*c*) check the periodic speculations against currencies which are a feature of the present system.

Indian Electrical Year Book—Seventh Edition (1962-63). Edited and published by M. Largo-Afonso, 75, New Stock Exchange Building, Fort, Bombay. Over 500 pages. Price: Rs. 12.50. Post free in India.

This latest edition of the well-known *Indian Electrical Year Book* has been completely revised. It contains many new features, such as Indo-Foreign collaboration in the electrical sector, electro-technical standards, procedures of submitting tenders, development of electricity, progress of Electricity Boards, besides the usual ones about public electricity supply, import and export statistics and growth of electrical manufacturing, which have been brought up-to-date. In ten sections, the Year Book gives a comprehensive coverage of all aspects of electrical and allied manufacturing and lists thousands of addresses in separate sections entitled 'Manufacturers', 'Traders and Contractors', etc.

A significant departure from the previous editions is the arrangement of Section IV, which used to list electrical contractors and traders on a State-wise basis, but which now lists them town-wise, thus making it far easier for reference. The Product section lists over hundred products with the names of manufacturers and constitutes a very useful Buyers' Guide. The publication has been increasingly patronised by advertisers, and this is a good indication of its utility to the electrical industry and trade.

NEWS IN BRIEF

THE price of coal has been enhanced by 6 nP per ton with effect from the 1st inst. in order to compensate the collieries for the increase in wages.

The total, number of telephones installed under the 'Own Your Telephone' scheme is about 58,000, the amount of deposits from subscribers being more than Rs. 13.50 crores, according to the latest official figures.

The Government of India proposes to abolish the system of licensing export of coir yarn and coir products with effect from 1st July next, according to Mr. M. P. Alexander, Chairman of the Coir Board. Coir exports will, however, continue to be confined to registered shippers.

The Central Government has accepted the recommendations of the Central Board of Trustees of the Employees' Provident Funds Scheme to increase the rate of interest from 3¾ per cent to 4 per cent per annum. This interest would be credited to the account of members, including members of the Staff Provident Fund, for the year 1963-64.

An expert committee, with Mr. G. C. L. Joneja, Jute Commissioner, as Chairman, has been set up to evolve a more scientific basis for the quality classification and grading of jute. The decision to appoint this committee was taken at the first meeting of the reconstituted Central Supervisory Body for Jute held at Calcutta on Wednesday last week.

The Employees' Provident Funds Act has been extended to the confectionery industry with effect from 31st March 1963, and to laundry and laundry services, buttons, brushes, plastic and plastic products and stationery products with effect from 30th April 1963. By the end of February 1963, as many as 22,274 establishments with 3,520,591 subscribers had been covered under the Scheme. The total employment strength of these establishments at that time was 4,236,922. The number of industries covered by the Act at the end of April 1963 was 76.

Contracts for the supply of Czech equipment worth about Rs. 9 crores for three major public sector industrial projects in India were signed at New Delhi on 30th May by the Governments of India and Czechoslovakia. The machinery is being supplied under the Indo-Czech economic collaboration agreement of November 1959 which provided for a Czech credit of Rs. 23.1 crores to India. The contracts cover supply of plant and other equipment for the setting up of the heavy machine tool plant (Ranchi), the third stage of the foundry forge plant (Ranchi) and the establishment of the high pressure boiler plant at Tiruchi in Madras State.

Steady progress has been made in all States in the growth of primary consumer co-operative stores. The number of stores increased from 6,435 in 1957-58 to 7,281 in 1961-62. Maharashtra with 1,145 stores had the largest number of societies, followed by Madras with 932 stores. The membership of these stores is about 1.09 million. The combined share capital of the societies increased during this period from Rs. 2.13 crores to Rs. 2.65 crores. Maharashtra with Rs. 53.41 lakhs accounted for more than one-fifth of this total. The aggregate working capital of the societies went up from Rs. 7.12 crores to Rs. 9.20 crores. Sales of consumer goods effected by these co-operatives rose from Rs. 22.6 crores to over Rs. 35 crores.

The thirty-third annual research session of the Central Board of Irrigation and Power will be inaugurated by Mr. M. S. Kannamwar, Chief Minister of Maharashtra, on the 11th inst. at Bombay. About 48 papers contributed by experts on the science of irrigation and power, covering a wide range of subjects, including hydrology, design of river valley structures, construction material and practices, hydraulics, soil mechanics, foundation engineering and power engineering will be discussed at the conference. The session will also review research work carried out at the various research stations in the country and will evolve a programme of research for the next year.

The Union Ministry of Irrigation and Power has asked the State Governments to take flood control and flood relief measures well in advance of the flood season, so that human suffering and damage to property are reduced to the minimum. A four-point programme has been suggested by the Ministry. Under the programme, a survey of the existing embankments should be made and action for reinforcing and strengthening them should be taken before the floods. The States have been asked to introduce a suitable system of issuing flood warnings so that people can move to places of safety when necessary. Raised platforms should be provided where villagers and their cattle could take shelter. Lastly, the States have been advised to stock food, fodder, boats, etc., at strategic places before the advent of actual floods.

All persons who have taxable income are required to furnish voluntarily a return of their income in a prescribed form. The return for the assessment year 1963-64 has to be furnished before 30th June 1963 or, in the case of persons having income from business or profession, before the expiry of six months from the end of the relevant accounting year, whichever is later. Every person assessable to tax has to comply with these provisions. In special cases, these time limits may be extended up to a prescribed maximum by the Income-tax Officer on an application being made to him in this regard. Persons who fail to furnish their returns of income within the time allowed, without reasonable cause, are liable to penalties under the Income-Tax Act.

In less than a year from now, the jute industry is expected to have adequate spindlage of the modern high-speed type to produce sufficient yarn for its looms and, if necessary, to run a second shift in weaving. The basis of licensing is being so revised as to conform to the long established I.J.M.A. norms for the installations of spindles under the working time agreement. The new scheme makes it possible for the mills to augment the import of preparing machinery and spindles by slightly over 33 per cent. This will enable spinning sheds to work on two shifts to match the looms working on single shift. Spindles are proposed to be put up on the basis of 17.6 per loom on the fine side for hessian and sacking and 6.8 per loom on the coarse side for sacking. The import entitlements in this regard have hitherto been more restrictive, based on the principle that the preparing and spinning capacity must work three shifts to match the one-shift working of looms.

The Government of India has decided to permit consignees to transport chemical fertilisers by road instead of by rail under certain conditions, in order to overcome the difficulties caused by inadequate supplies of rail wagons and operational restrictions and to accelerate movement of fertilisers from ports and indigenous factories to the godowns of consignees. Road transport charges up to a distance of 250 kms., calculated on the basis of the shortest and cheapest route, will be reimbursed. A deduction of Rs. 2 per metric tonne will, however, be made, as the consignee would have incurred at least this much expenditure in case of rail transport, on unloading of wagons at the destination, loading into trucks or other conveyance and transport from the railway station to the godown. The consignees are free to transport beyond 250 kms., but reimbursement will be limited to 250 kms., the balance being borne by the consignees. This concession will also be applicable to distributors of fertilisers of plantation crops namely, tea, coffee and rubber.

From Abroad

The Commission on Unemployment Insurance in Sweden has recommended the doubling of the maximum unemployment benefit to Kr. 40 a day.

Gross capital formation in the European Economic Community increased by 11 per cent to $49,000 million during 1962, according to the annual report of the European Investment Bank.

Japan is likely to liberalise import restrictions on a fairly wide range of items by September next, according to Mr. Eukuda, Japanese Minister for Trade.

Britain will be providing up to £10.4 million (£5.1 million in the form of gift and £5.3 million as loan) for land settlement and other development projects in Kenya during the financial year 1963-64.

Production of electricity in the E.E.C. member countries has risen by about 15 per cent to 309,000 million kw.h. in the last three years. West German electric power production alone has increased by 17 per cent to 127,000 million kw.h. in 1962, representing about 41 per cent of the total E.E.C. electricity production.

A £2.3-million sugar refinery is to be built at Batu Tiga in Selangor (Malaya) by the United Malay States Sugar Industries. The refinery will have a capacity to produce 150 tons of sugar daily. This is the first time that Malaya is attempting to start such a venture. The public is invited to subscribe £580,000 to the Company's capital.

The Ways and Means Committee of the U.S. House of Representatives has tentatively approved a new category of capital gains taxation, in which individual tax payers will include in taxable income 30 per cent of the gain on the sale of certain property if it is held for at least three years. The new category includes stocks, securities and real estates.

The British Government proposes to rename the Colonial Development Corporation as the Commonwealth Development Corporation and extend its activities to allow it to undertake new development schemes in countries which have become independent since the Corporation was first established. A bill to give effect to these proposals has been introduced in the House of Commons.

The Shell, Standard Vacuum and Caltex oil companies have reached an agreement with the Indonesian Government on the terms for the takeover of oil installations. The agreement gives the companies the position of contractors to the Indonesian Government which will take over the marketing and distribution of oil internally within five years and the companies' refineries in 10 to 15 years.

The British firm of Messrs. Ashmore, Benson, Pease and Company, a member of the Davy-Ashmore group, is to supply the sinter plant and blast furnace for Tunisia's first major iron and steel works at Menzal Bourguiba. The Work is due for completion in about 2½ years. This firm has previously built blast furnaces in India, Australia, and Southern Rhodesia. Two more are being built in South Africa.

The world's first plant to manufacture synthetic lysene, an important cattle-feed additive, will be built at Geleen in Holland by the Netherlands State Mines, at a cost of several million pounds. The plant is expected to go into production sometime during 1966. Lysene is an amino-acid, an essential protein constituent. So far Japan is the only country known to produce lysene industrially but by a different and relatively expensive process of fermentation.

A new machine called Sakartvelo, built by the Gruzselmash plant, has appeared on the tea plantations in Georgia, Russia. A row of tea shrubs 500 metres long was plucked by the machine in a matter of 30 minutes, with 42 kg. of tender shoots in the bunkers. A simple calculation revealed that, in a shift, the unit is capable of collecting 700 to 1,000 kg. of tea leaves, while a highly-qualified plucker woman gathers only 40 to 60 kg. daily.

The Government of Brazil has issued an outline of the policy it intends to follow for the 1963-64 coffee crop. Under the new policy, an increase in the producers' price will be allowed to compensate for the rise in costs and the Coffee Institute will introduce a new method of purchase with the aim of reducing its rigidity and avoiding the present concentration of sales at certain times of the year. Incidentally, the current year's crop which is estimated at 23 million bags, is considered to be insufficient to cover the export quota fixed under the International Coffee Agreement and to provide for internal consumption without the use of stocks.

The International Development Association has extended a credit of $20 million to Turkey for the development of irrigation farming on the Adana Plain in Southern Turkey. The credit will finance the first stage of the Seyhan Irrigation Project under which 130,000 acres will be drained and irrigated, making possible a large increase in the volume and value of commercial crops. The total cost of the project is estimated at $50 million, of which 40 per cent will be financed by the credit. The remaining cost will be met by the Turkish Government. The public drainage and irrigation works is expected to be completed and in operation by March 1966. The I.D.A. credit is for a term of 50 years; repayment of the principal will begin on 1st June 1973. Thereafter, one per cent of the principal will be repayable annually for 10 years and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of ¾ of 1 per cent per annum on the amount withdrawn and outstanding will be made to meet I.D.A.'s administrative costs.

Two soda recovery boilers each capable of recovering 780 tons of dry solid per day are being constructed for the Soviet Union by the Mitsubishi Zosen (Mitsubishi Shipbuilding and Engineering Company Ltd.). The Mitsubishi earlier exported three such boilers to that country. This machinery is used for recovering effective elements (various kinds of soda) in black liquid form by enriching the liquid in the evaporator and burning in the boiler. This process, at the same time, produces the steam necessary for electric generation and other chemical processes. This is known as a circular system of pulp production on an economical basis. The Mitsubishi manufactures its CER-type boiler under a technical agreement with Combustion Engineering Company of the United States.

PERSONAL

DR. S. Radhakrishnan, President of India, left New Delhi on the 2nd inst. on a 21-day State visit to the U.S. and the U.K.

Mr. T. T. Krishnamachari, Union Minister for Economic and Defence Co-ordination, returned on Monday this week after a three-week tour abroad.

Mr. L. M. Nadkarni, I.C.S., Joint Secretary, Union Ministry of Home Affairs, has assumed charge as the Administrative Officer of the Port of Marmugao.

Mr. Pravinchandra V. Gandhi, Managing Director, Dena Bank, has been elected President of the Commerce Graduates' Association for the year 1963-64.

Sir Paul Gore-Booth, British High Commissioner in India, is leaving for London today in connection with the visit of President Dr. S. Radhakrishnan.

Mr. Sukumar Roy has been elected President of the Bengal National Chamber of Commerce and Industry for the current year. Mr. K. K. Roy and Mr. M. M. Sur have been elected Vice-Presidents.

Mr. S. R. Vasavada and Mr. T. V. Anandhan have been elected President and Vice-President, respectively, of the National Federation of Indian Railwaymen for the current year.

Mr. Nilamoni Routroy, Minister for Home, Supply, Labour and Commerce, Government of Orissa, is the leader of the Indian delegation to the 47th Session of the International Labour Conference now in session at Geneva.

TREND OF MARKETS

MONEY STRINGENT AGAIN

(From Our Own Correspondent)

BOMBAY, 5th *June*

The short-term money market turned extremely tight again during the week under review. There was persistent pressure of demand for funds, while the supply actually available was too inadequate to meet it. Consequently, interest rates moved up. Renewals were done today at 4¼ per cent and fresh money at 4¾ per cent, whereas both were quoted last week at 4 per cent. After the closing hours today, borrowers had to look around for accommodation and, even at 5 per cent, funds were not readily available. Conditions at Calcutta were tighter still, the call rate jumping up from 4 per cent to 5½ per cent.

The stringency in money conditions is reflected in the poor response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 4th inst. The total amount offered was unchanged at just Rs. 2 crores which was also the amount invited and accepted. The average rate of accepted tenders was also unaltered at Rs. 2.350 per cent per annum. The Intermediate Treasury Bills, too, evoked limited response, the Bills actually sold from 29th May to 1st June, being no more than Rs. 50 lakhs, as against Rs. 80 lakhs a week before and Rs. 1.65 crore two weeks before.

India's foreign assets declined by Rs. 2.05 crores to Rs. 117.42 crores during the week ended 31st May 1963, according to the statement of the Reserve Bank of India for this week. The decline is accounted for by both balances held abroad and foreign securities held in the Issue Department, the former receding by Rs. 1.05 crore to Rs. 8.34 crores and the latter by Rs. 1.00 crore to Rs. 109.08 crores. Loans and advances to scheduled banks spurted by Rs. 8.84 crores to Rs. 17.60 crores, of which the share of those against usance bills was Rs. 8.70 crores, a rise of Rs. 2.42 crores. Deposits of scheduled banks were lower by Rs. 4.18 crores at Rs. 78.42 crores. Notes in circulation fell by Rs. 14.30 crores to Rs. 2,281.44 crores.

There was a further drop of Rs. 16.37 crores to Rs. 1,553.35 crores in the total credit made available by scheduled banks to their clients during the week ended 24th May 1963. Since, side by side, the deposits went up by Rs. 7.11 crores to Rs. 2,251.62 crores and inter-bank borrowings by Rs. 3.51 crores to Rs. 55.67 crores, borrowings from the Reserve Bank were reduced by over Rs. 15.30 crores to Rs. 9.72 crores, of which those against usance bills accounted for Rs. 6.49 crores, a decline of Rs. 10.96 crores. Simultaneously, the banks strengthened their investments by Rs. 12.83 crores to Rs. 630.25 crores.

It is reported that the Reserve Bank of India has turned down the F.I.C.C.I. President's plea for relaxing the restrictions recently imposed on banks' advances against sugar; the banks are now required to maintain a margin of 45 per cent on credit limits granted to parties other than sugar mills. The reasons for the rejection of the plea by the Reserve Bank, as set out in the reply believed to have been sent by the Executive Director of the Reserve Bank to the F.I.C.C.I. President, are as follows:

The minimum margin of 45 per cent was prescribed after careful thought and consideration had been given to the likely impact of the physical controls proposed by the Government on sugar prices and releases from factories. The situation which prompted the Reserve Bank to stipulate a higher margin reflected hoarding of sugar stocks by the trade with the help of bank finance. It is still not clear that the situation has changed in the sense that the supply or distribution position has eased. The effectiveness of the Government's Sugar Control Order is closely linked to the success with which sugar supplies start moving into the market, and it is in this light that the credit curb becomes relevant. In the prevailing circumstances, the prescribed higher margin constitutes a complementary measure to the Government control of the sugar trade. Nevertheless, the F.I.C.C.I. President has assured that the situation will be watched carefully "with a view to considering any needed modification when conditions warrant."

Steady conditions prevailed in the gilt-edged market. Spot and medium-dated loans evoked good enquiries. Turnover was, however, restricted.

In the foreign exchange market, the bank's selling rate per 100 dollars was unchanged at Rs. 478, but their buying rate rose by 25 nP to Rs. 474.75. In New York, the pound sterling was irregular *vis-a-vis* the dollar. Thus, the spot rate declined by 0.040 cent to 279.990-280.020 cents, while the three months' forward improved by 0.120 cent to 279.640-279.670 cents.

SMART RALLY IN GOLD

(From Our Own Correspondent)

BOMBAY, 5th *June*

While silver continued to be depressed following large arrivals, gold staged a smart rally this week on scattered buying enquiry in the wake of limited stock position. Sovereign, too, edged forward in sympathy with gold.

The yellow metal opened one point lower at Rs. 110, but recovered to Rs. 112.50 on Saturday the 1st inst. It rallied further to Rs. 114 yesterday and Rs. 114.50 today, at which level it was Rs. 3.50 higher over the week. Sovereign, which was maintained till the mid-week at the last week's closing of Rs. 82, improved to finish higher at Rs. 83.

The daily average arrivals in silver, which had spurted last week to 30 bars, dropped during the week under review to 15 bars, but were still much in excess of the daily average offtake of eight bars, as against nine bars. Due to this inflow, the price declined from Rs. 225.50 on Thursday, 30th May, to Rs. 223 yesterday. Today, it edged up to Rs. 223.50, but was Rs. 2.50 lower over the week.

Silver continued to rule easy in New York and London, too, at 127.6 cents and 110½d., respectively, after having dipped to 127 cents and 109⅞d. earlier in the week. The forward quotation in London closed at 110½d., as against 110⅝d. a week ago. Ready gold moved between 250*s.* 6½*d.* and 250*s.* 5½*d.*, and closed at 250*s.* 5⅝*d.*, a quarter penny lower over the week. The dollar price for gold slipped down from $35.07½ to $35.06¾.

While the U.S. Treasury officials are keeping a close watch on the gold situation, they do not foresee any heavy run on gold so long as the dollar remains sound. They estimate the total of "dollar assets" held by foreign countries at $20 billion, against which the U.S. monetary gold fund is about $15.8 billion. They expect that, even if all the potential claims against U.S. gold are suddenly presented for payment, the supply will not be lacking. According to Mr. J. Dewey Daane, the Treasury's "No. 2 man" in the international payment field, the U.S. is "bending every effort to defend the dollar." One related step was announced on 30th May 1963. The Federal Reserve Board and the Bank of England raised from $50 million to $500 million a reciprocal currency arrangement designed to maintain the stability of the dollar and the pound. The arrangement in effect permits the U.S. to borrow up to $50 million worth of British pounds and the British to borrow a like amount in American dollars for short-term periods, when they are needed to stabilise the currencies. The Federal Reserve has similar arrangement with other countries—arrangements are in effect with West Germany, Italy, Austria and Sweden and the Bank for International Settlements—totalling $1.55 billion. The heavy holding of "dollar assets" around the world is tied with the American balance of payment deficit which Mr. Daane describes as serious.

At home, the Gold Control Board met the Union Finance Minister, Mr. Morarji Desai, at New Delhi on 30th May to discuss rehabilitation of goldsmiths and administrative problems, concerning particularly staffing of offices for implementing the Gold Control Order. The Union Government is understood to have allotted Rs. 2 crores for rehabilitating goldsmiths and assured State Governments of more funds, if required. Goldsmiths are required to register themselves with employment exchanges. The unemployed among them will be granted loans to form co-operatives for making 14-carat jewellery or establishing any other productive unit. A Gold Board spokesman is reported to have said that, despite States giving assistance up to Rs. 2,000 to individuals on furnishing personal bonds, the majority of goldsmiths are not prepared to accept help. The Board will meet again in Bombay next month.

The following table shows the trend of prices during the week under review:

	5-6-63 (closing)	High	Low	29-5-63 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine) ..	223.50	225.50	223.00	226.00
GOLD				
Ready (.995 fineness) ..	114.50	114.50	110.00	111.00
Sovereign	83.00	83.00	82.00	82.00
London—				
Gold	250*s.*5½*d.*	250*s.*6¾*d.*	250*s.*5¾*d.*	250*s.*6*d.*
Silver Ready ..	110¼*d.*	110¼*d.*	109¾*d.*	110¼*d.*
Silver Forward ..	110¼*d.*	110¼*d.*	110¼*d.*	110⅛*d.*
New York—				
Silver	127.6 cents	127.8 cents	127.0 cents	127.8 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.72 tolas). London and New York quotations are per ounce.

COTTON FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, 5th *June*

The declining trend witnessed in the cotton futures market towards the close of last week gathered further momentum during the week under review. In fact, the market developed considerable weakness which was reflected in a sharp fall in futures prices. The weakness was attributed to three factors. First, the recent upward revision of the season's crop by 50,000 bales to a record 5.5 million bales. Second, the possibility of an early start of the monsoon. In fact, fairly good rains were reported in Berar, Khandesh and Akola areas. Third, the hope that the current negotiation for a fresh P.L. 480 agreement would bear fruit and that the level of imports of U.S. cotton would therefore be maintained, if not increased. These factors, coupled with poor mill demand in the ready section, prompted large-scale selling by local and upcountry operators. Futures values consequently suffered a sharp setback. The Jarilla August contract declined from the week's opening rate of Rs. 714.75 to Rs. 705.50 yesterday. There was a feeble recovery today, thanks to short-covering and the contract finished at Rs. 702.50 today, a net loss of Rs. 7.25 during the week.

Mill demand for ready cotton was on a restricted scale. Most mills would appeared to have covered their requirements and as such seemed to be bargaining for lower rates. Fair business was reported in such selected lots of popular varieties as C*o*2, L.147, Kalyan, 197/3 Wagad and Laxmi. Prices tended to rule easy.

It was reported that, a few days ago, the Indian Cotton Mills' Federation entered the market and purchased 30,000 bales of U.S. cotton under P.L. 480. These purchases would seem to have been made against the allocation issued to the Federation by the Textile Commissioner out of the unutilised portion of the U.S. cotton allotments released to the mills a few months earlier. The allocation to the Federation was presumably made following the reported reluctance, on the part of the U.S. authorities, to issue the remaining half of the quantity already allocated to India under the agreement signed a few months ago, unless the current purchase authorisation is fully utilised. Trade circles consider it quite likely that the Textile Commissioner may issue additional quotas of this cotton against the allocation issued to the Federation to mills who may wish to have extra quotas.

Spinners showed considerable interest in foreign cotton, especially Sudan and Egyptian cotton for July, October/November shipments. The trade is hopeful that the U.S. will issue allocation for the balance of P.L. 480 cotton. Rumours are also current that India might obtain a sizable quantity of Pakistan cotton under a special barter agreement.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Ganganagar 693; Khamgaon 997; Co*2* 1,635; Hubli Laxmi 1,505. Sudan PIL 1,505.

Cotton futures in Karachi market ruled quietly steady during the week. Values moved in a narrow range, showing negligible net change over the week. The N.T.R.G. July contract attracted moderate support and rose from Rs. 73.80 to Rs. 73.90. The January contract edged higher on short covering from the last week-end quotation of Rs. 71.00 to Rs. 71.50, but declined to close at Rs. 70.90, a net loss of 10 nP over the week.

Listless conditions prevailed in the Liverpool cotton futures market. In the absence of any fresh developments, trading was devoid of any interest. Futures values ruled practically unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

May 23.05; July 23.00; October 23.10.

Trading on the New York cotton exchange was featureless during the week. Operators preferred to keep to the sidelines, in anticipation of fresh legislative developments pertaining to the new crop. Prices, however, recorded a modest rise, thanks to scattered commission house support and buying influenced on firm spot advices.

Exports of U.S. cotton from the beginning of the current season till mid-May amounted to 2.86 million bales, as compared with 3.89 million bales in the corresponding period of the previous season. If the trend so far witnessed were to persist, exports during the current season are sure to be at least one million bales less than last season's exports of 5 million bales.

The U.S. Department of Agriculture has announced that 10,000 bales of foreign grown extra long-staple cotton would be offered for commercial sale by the end of 1963. An additional 25,000 bales of this cotton would also be offered for the sale under P.L. 480 by the end of this year. The sales would be made under an export quota that could not exceed the 10,000 bales for commercial sale and the 25,000 bales under P.L. 480. The cotton would be sold on competitive bids "at not less than the world market price as determined by the Commodity Credit Corporation." These sales, the Department added, will be made in a manner consistent with orderly procedures designed to avoid the disruption of world markets.

The following are the latest available quotations—in cents per lb.—from New York as compared with those a week and a fortnight ago:

(In cents per lb.)

TEA EASY

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 30th *May*

A total of 784,000 kgs. was on offer in sale No. 22 held on Tuesday the 28th inst. Quality from all districts showed a slight further seasonal decline. The market opened to good demand, but prices again followed an easier trend. Plainest kinds attracted quite useful support, but were lower by around 10 nP per kilo, with the most fibrous sorts dropping 15-20 nP. Low medium and medium descriptions were well supported, although registering a drop of around 10-20 nP. Good mediums followed the lower trend of the market. Highgrowns were irregular and easier with quality, particularly the better sorts which registered a marked decline. Lesser brokens were up to 20 nP lower, fannings following similar tendency. Clean black leaf descriptions were sold well again, whilst whole leaf grades were only slightly lower. The larger graded unorthodox teas were sold well, but fannings were a weak feature. Tippy teas came to a steady market.

The quotations (per kg.) were:

	1963	1962
	Rs.	Rs.
Low mediums	4.00-4.20	3.80-4.10
Mediums	4.25-4.45	4.10-4.80
Good mediums	4.50-5.10	4.65-5.50
Nilgiri B.O.P.	4.50-7.20	4.30-6.35

The average price realised in sale No. 22 was Rs. 4.23 per kilo, as compared with Rs. 4.34 a week ago and Rs. 4.26 in the corresponding sale last year.

A total of 385,000 kgs. was on offer in dust sale No. 22 held today. The market elicited strong demand, but at generally easier rates. Low medium and medium sorts were sold at 10-15 nP below last prices, though the better mediums were about steady on last levels. Highgrowns were in good demand, but prices were irregular. Unorthodox types changed hands at last rates, though the more fibrous kinds were often dearer. Black grainy descriptions shared in the general trend of the market.

The average price realised in dust sale No. 22 was Rs. 3.95 per kilo, as against Rs. 4.03 a week ago and Rs. 3.25 in the corresponding sale last year.

Colombo: There was good general demand and a few best dimbulas sold at dearer rates. Other kinds were irregular and generally slightly easier with quality. Coloury mediums again sold well, but the plainer sorts followed a slightly lower trend. Lowgrowns were steady at last rates.

London: *North Indian and other growths*: In Monday's auction, there was good demand. Liquoring teas were firm, while all others were easier. Plain B.P. is still quoted at 2/10*d.*

Ceylon and South Indians: In the sale held on Tuesday, demand was fairly good and prices were firm for all descriptions with the exception of thin liquoring teas. South Indian low medium B.O.P. is quoted at 3/9*d.*

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 23: 822,000 kgs. offered. Good demand. Plain and low medium brokens irregular, generally steady. Fannings 5 to 10 nP easier. Good mediums and highgrowns generally lower. Unorthodox firm."

STAPLE FIBRE YARN IMPROVES

(From Our Own Correspondent)

BOMBAY, 5th *June*

An improved tone in 2 x 40 spot staple fibre yarn and further weakness in art silk yarns were the features of this week's trading in the yarn market. In staple fibre yarn, Century rose from Rs. 8.12 to Rs. 8.25. Kohinoor from Rs. 8.80 to Rs. 9.22 and City from Rs. 8.54 to Rs. 8.80 on higher consumer demand. Weakness in art silk yarns was extended further, though with some exceptions, due to absence of buying support. Thus, National Rayon 120D lost 20 nP to Rs. 11.55 a kilo and Century 100D declined rather sharply from Rs. 13.33 to Rs. 13.07, while 75D rallied further from Rs. 18.28 to Rs. 18.50 and S.I. Viscose 150D gained 9 nP to Rs. 13.55. Among cotton yarns, Hind 40*s* moved down from Rs. 35 to Rs. 34, while Kohinoor 30*s* gained 25 nP to Rs. 29.75.

The Development Council for Art Silk Industry is reported to have recommended a review of the Export Incentive Scheme in the light of the suggestions it received at its recent meeting here. At the meeting, the spinners had pointed out that exporters of art silk fabrics were importing yarn against incentive entitlements (10 per cent of f.o.b. value) given for import of machinery and spares. They had suggested that the scheme be modified to enable them to get entitlements for the import of machinery needed by them. It was felt that the Government should compel exporters to surrender to spinners their machinery entitlements, if they did not use them for the import of machinery.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	5-6-1963	29-5-1963
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	11.25	11.75
Century 75D	18.50	18.28
S. I. Viscose 150D	13.46	13.46
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.)	9.22	8.80
Century	8.25	8.12
Cotton yarn (per bundle of 10 lbs.)		
10*s* Podar	18.00	18.00
20*s* Modern	25.50	25.50
30*s* Kohinoor	29.75	29.50
40*s* Hind	34.00	35.00
60*s* Kasturi	47.50	47.00
80*s* Laxmi	83.50	83.50

According to informed circles in Bombay, India has failed to secure orders for the supply of cotton yarn to Burma against the tenders for 30,000 bales of yarn, worth approximately Rs. 3 crores, which the Burmese Civil Stores Committee No. 2 invited towards the end of February last. The tenders were called under a tripartite agreement with the U.S., under which 65 per cent of the payment for such yarn was to be in the form of purchase authorisation for P.L. 480 cotton and the balance 35 per cent to be paid in foreign exchange. India's competitors in the field were believed to be the U.K., Japan, Pakistan and Hong Kong.

OILSEEDS REACT

(From Our Own Correspondent)

BOMBAY, 5th *June*

The steady increase in prices of oilseeds and oils noted in the past few weeks was arrested during the week under review. In fact, there was a perceptible decline in prices due partly to technical considerations and partly to reports of favourable weather conditions from major producing centres. Groundnuts ruled easy, thanks to heavy bull liquidation, and weakness in the spot section. *Vanaspati* manufacturers and crushers were hesitant to enter into fresh commitments in seeds and oils, in view of the possibility of a seasonal decline in prices at the onset of the monsoon. In the absence of any encouraging advices from shippers, castorseeds ruled listless. Linseeds and cottonseeds, too, encountered selling pressure.

Groundnut July 1963 contract fell from Rs. 231 to Rs. 228.12, before recovering to Rs. 229.25 today. September 1963 contract lost Re. 1.63 to Rs. 227.12; it had fallen to Rs. 226.87 yesterday. Nizam bold declined by Re. 1.25 to Rs. 46.75 and Khandesh quality by Re. 1.13 to Rs. 47.87. Oil railway receipts eased by 40 nP to Rs. 18.10. Oil ex-mill sagged by 25 nP to Rs. 18.75.

Castorseed June 1963 contract dropped a rupee to Rs. 157. September 1963 contract moved down by a like amount to Rs. 163.75. Madras small closed lower by 50 nP at Rs. 31.12. Kanpur bold shed 25 nP to Rs. 30. Oil commercial fell initially from Rs. 12.65 to Rs. 12, but recovered to Rs. 12.75 towards the close.

Linseed June 1963 contract declined by 38 nP to Rs. 36.37. Bold ready suffered a loss of 50 nP to Rs. 36.50. Linseed oil reacted by 40 nP to Rs. 14.10.

Among cottonseeds, white retreated by Rs. 2 to Rs. 20.62. Both non-white and berar shed 25 nP to Rs. 22.75. Cottonseed July 1963 contract, however, closed lower by 75 nP at Rs. 105.

The following table shows the closing prices of oilseeds and oils on Wednesday 5th June, as compared with those of two previous weeks:

	5-6-1963	29-5-1963	22-5-1963
	Rs.	Rs.	Rs.
Groundnuts			
July 1963 contract	229.25	231.00	227.87
September 1963 contract.. ..	227.12	228.75	229.12
Nizam bold	46.75	48.00	46.50
Khandesh quality	47.87	49.00	47.25
Oil ex-mill	18.50	18.75	18.25
Oil commercial	18.10	18.50	17.85
Castorseed			
June 1963 contract	157.00	158.00	157.62
September 1963 contract.. ..	163.75	164.75	164.00
Ready Madras	31.12	31.62	31.12
Ready Kanpur	30.00	30.25	30.00
Oil B.S.S.	13.40	13.35	13.00
Oil commercial	12.75	12.65	12.60
Linseed			
June 1963 contract	36.37	36.75	37.19
September 1963 contract.. ..	37.62	38.06	38.44
Bold ready	36.50	37.00	36.25
Linseed oil	14.10	14.50	14.15
Cottonseed			
July 1963 contract	105.00	105.75	105.00

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER AT NEW LOW

(Messrs. Parekh and Co.)

BOMBAY, 4th *June*

During the past fortnight, Malabar black pepper slipped back and established a new low level of Rs. 266 for ungarbled in the wake of the news that Indonesia had devalued its currency and introduced a liberal inducement system for encouraging its export of all produce, which was falling off recently. Singapore is reported offering Lampong at $0.28½ per lb. c.i.f. New York, but without result.

Garbled pepper moved down to Rs. 272 and the July delivery at Cochin went abegging at Rs. 281 with August nominally quoted at Rs. 287. The *kuthi* delivery in Bombay sagged to Rs. 285, with more sellers and few buyers, while *Shirawan* was pressed down to Rs. 296 on stale bull liquidation. There was a reactionary improvement of a couple of rupees following some short-covering, but weaker advice from Singapore proved a depressing factor and the market at the time of writing was jittery.

Black pepper at Singapore dropped to M. $95 and White to M. $140, with buyers holding off. Indonesia is reported pressing sales, but without response. Spot, in New York, was quoted at $0.31, with some sales to grinders. They are reported to be covering their immediate requirements with no disposition to buy long even at the present low price. New York dealers are reported nibbling by giving their buying indication but no firm bids. It is possible that they may withdraw the moment Singapore accepts or offers at a lower rate. Ready demand in Bombay is disappointing and holders are marking down their prices to attract buyers. Ready pepper is nominally quoted at Rs. 148 per 50 kilos.

TANNED GOAT SKINS IN DEMAND

(From Our Own Correspondent)

MADRAS, 3rd *June*

The Madras kips market remained more or less unchanged this week. Shipment business was slow and importers showed no interest. Inquiries centred round the lower ends of cowhides and calf, and sales were patchy. Importers expected prices to recede by three pence per lb.

Tanned goat market continued firm and all average weights and grades were in demand. The E.I. Tanners have been in an unenviable position. Though they are getting higher prices from the importers, they are not able to buy raw stocks at economic levels due to the keen competition from exporters of pickled goat skins to East European ports where attractive prices are obtainable. So long as this state of affairs continues, tanners will have little profit in their industry. In the sheep skins section, prime classes ruled firmer. Middle classes also hardened in sympathy with the trend in the goat section. Needless to say that the prices in the raw centres are on the upward swing; and tanners have no option but to go slow with their output, as the situation is pretty complex.

TEA INDUSTRY NEEDS TAX RELIEF

(From Our Own Correspondent)

CALCUTTA, 4th *June*

The tea trade, like the other export trades such as jute goods and cotton textiles, has noted with considerable relief that the united opposition of trade as well as industry against the India-Pakistan-U.K.-Continent Conference Lines proposal to increase the freight on all West-bound cargo by 15 per cent has had some result. The representatives of the Conference Lines decided, after their recent discussions here, to go back to London and consider the views of the Indian interests before the final decision is reached.

Time and again, tea industry in India has pointed out that tea is threatening to become a surplus commodity in the world and that India will be able to retain its overseas markets with only goodwill abroad. For this, it is essential that prices to the overseas consumer must be reduced. This can be done if only the industry can reduce costs. With the stress on welfare and the country's progress towards a socialistic pattern of society, it is realised that nothing can be done with regard to relating wages to productivity of the worker or profitability of the industry. But, the Government can heed to the industry's demand for a rationalised taxation structure and reduce the burden on the industry.

As a result of the recent meeting of the G.A.T.T. in Geneva, the prospect of duty-free entry of tea into Europe has become nearer. This will go a long way towards increasing the consumption of tea. According to estimates, tea production in the world has not yet begun to exceed current demand. In 1962, world production was 1,485 million lbs., showing a fall of 6 million lbs. as compared to the 1961 figure. Although a glut may be far off, the tea trade here believes that aggressive salesmanship abroad will be necessary.

SPURT IN "KHANDSARI"

(From Our Own Correspondent)

HAPUR, 3rd *June*

The sugar supply position have continued tight this week, and sugar was available to consumers only in small quantity through fair price shops. Consequently consumers switched over to *khandsari*, prices of which spurted to new heights. As sugar supplies remained poor and seasonal demand was fairly heavy, bulk business of *desi khandsari* was done during the week for centres of Punjab and Rajasthan. Stockists also made bulk purchases at even higher levels in anticipation of further rise in prices. Speculative buying aided the bullish sentiment. Since the enforcement of control on sugar, *khandsari* prices have advanced by as much as Rs. 25 to Rs. 40 per quintal. Further rise in prices is somewhat checked due to the imposition of ban on despatch by rail from the Delhi area. Week-end prices were:—Inferior Rs. 123.24 to Rs. 128.60 and superior Rs. 139.32 to Rs. 155.39 per quintal.

Khandsari also improved appreciably in the Kanpur market on good demand accentuated by shortage of sugar. Prices touched new heights up to Rs. 55 per maund.

Gur remained firm during the week, thanks to good buying support from the South and Gujarat. Local *gur* stocks were fast running down, with those of the *kotha* quality now put around 20,000 maunds. Cane crop prospects were reported fair. Diversion of cane to *gur* and *khandsari* manufacture will continue in the next season also, as due to the very high prices of these commodities this year there will be again a keen competition between sugar industry and *gur-khandsari* manufacturing units for procuring sugarcane. Week-end prices of *gur* were:—*Gur* superior Rs. 72.36, *dara* Rs. 68.38 to Rs. 70.34, *shakker* Rs. 75.02 to Rs. 80.38 per quintal.

In the Muzaffarnagar market, too, *gur* and *shakker* prices firmed up on encouraging demand from consuming centres. The abnormal rise in *khandsari* prices also aided the upward trend. *Gur chaku* was now quoted at Rs. 29.50 to Rs. 30.50 and *pansara* at Rs. 28.29 per 40 kilo. *Shakker dara* prices hardened to Rs. 29.50 to Rs. 32 per 40 kilo on demand from Rajasthan, Punjab and South India.

LARGER JUTE CROP EXPECTED

(From Our Own Correspondent)

CALCUTTA, 4th *June*

Despite reports of damages to jute plants from the northern coastal areas of East Pakistan by a virulent tornado a week ago and of floods in Assam giving rise to apprehension of damage to areas already sown, fibre prices at Calcutta moved within narrow limits during the week under review. There were also reports of destruction from Tripura, but, since the cyclone was followed by welcome rains in several jute districts of Assam and North Bengal, there was no tendency for prices to harden. Although a good amount of business was put through in goods and inquiries from overseas countries were received in larger numbers, prices fluctuated only narrowly. With no load-shedding, production programmes of mills have once again become smooth, and it is natural that the rise which followed the recent curtailment of power supply should be erased. Further, advices from the New York burlap market were quiet. From 12.75 cents a yard, 40" 10 oz. hessian dropped to 12.55 in New York, with the 7¼ oz. construction closing at 9.55 cents a yard, as against the opening of 9.75 cents. Prices at Calcutta also weakened. The trend of the market in recent weeks indicates that export demand can be maintained at a high level only if prices are maintained at a steady level. Overseas buyers put off commitments as and when there is speculative pressure. It has also been clear that, if prices were to rise, the industry in India would have to be content with a lower volume of business, and thus the choice is between a rise in prices with the concomitant of a decline in turnover and maintenance of fair prices with increased demand.

Against this background, the proposal of the U.K.-India-Conference Lines to raise the freight on all west-bound cargo from India by 15 per cent is causing concern. It is reported that both Pakistan and Ceylon have rejected the proposal. The representatives of the Conference Lines have been urged by the trade in India not to come to any decision on the proposal without giving further thought to the matter and considering the circumstances that have resulted in the trade's plea to drop the proposed rise. India's exports are already meeting with severe competition in overseas countries and, if the rise in freight rates is passed on to the consumer abroad, it is apprehended, shipments from India will decline, and thereby the shipping companies will lose cargo.

Alternatively, if the current level of freight is maintained, there is every chance that shipments from India will increase, and the shipping lines will be able to make up any overall increase in operational costs. It has also been represented that shipping lines should consider the question of reducing operational costs by modernisation. In this sphere, the port authorities in India should also be of help. The representatives of the conference would now return to the U.K. and place the views of the trade and the Government of India before the shipping companies. Following this, the trade as well as the Government will again be consulted, it is stated.

Any attempt to increase prices paid by overseas consumers will naturally lead to encouragement of substitutes, and it is significant that the proposal to increase the freight rate led to a diminution of forward business during the week under review. The industry in India is endeavouring to keep down costs as much as possible, and the impressive rise in exports of jute goods in the past one year has been due to successful competition which mills in India have been able to offer. The continuance of a steady export demand is essential as, with heavy stocks of fibre, mills will have to continue the enhanced rate of production. Mills are already worried as a result of keener competition from Pakistan mills. That country has an ambitious plan to increase the number of looms in the next few years. In the nine months ended March last, production in Pakistan aggregated 221,281 tons, recording an increase of 9 per cent over the corresponding previous period. Constructionwise, hessian output increased by 14.6 per cent and sacking 9 per cent while miscellaneous goods declined by 32 per cent. Pakistan has established a good market for its jute goods abroad. In the same period, exports amounted to 168,431 tons or 75 per cent of total output. These consisted of 1,469 tons of miscellaneous goods, 46,629 tons of hessian, and 120,333 tons of sacking. While the U.S. was the largest single buyer of hessian from Pakistan, Australia was the largest single buyer of sacking. Figures relating to U.S. purchases indicate that this country buys approximately 10 per cent of its requirements from Pakistan. It is considered that, for a country which has just entered in the export field, this proportion is not meagre.

A fair amount of business in goods took place during the week under review. The decline in prices made several buyers active. Further, with the proposal to raise the freight rates on all West-bound cargo from India, there was a tendency to do more business in ready goods. Hessian was bought by a number of countries, including the U.S. and Argentina. Australia showed fair interest in heavy goods, on which domestic demand was also fair. On Tuesday last, ready B. twills eased from Rs. 111.75 to Rs. 111.60, while ready hessian 40" 10 oz. remained unchanged at Rs. 51. At this stage, both the Continent and the U.K. showed interest in hessian, but, since the quantity involved was not large, the price dropped to Rs. 50.35 on Wednesday. However, B. twills continued to be steady at Rs. 111.60. Heavy goods met with demand on Thursday on reports of a Government tender and active dealings were also reported in the futures market. This was on Thursday, when ready B. twills rose to Rs. 111.80. In sympathy, hessian also rose, but, at higher levels, there was selling pressure in the futures market, with the result that ready hessian 40" 10 oz. closed lower on balance at Rs. 50.20. On Friday, short-covering in ready goods was a feature, though overseas support was meagre. Hessian 40" 10 oz. hardened to Rs. 50.50 and B. twills to Rs. 111.90. Although business put through over the week-end declined, the inquiry from Cambodia raised B. twills to Rs. 112.25. In sympathy, ready hessian 40" 10 oz. was higher at Rs. 50.75. The market remained closed yesterday on account of holiday.

Despite support from mills, fibre prices continued quiet. With the report of good rains from several jute districts, after the recent dry weather and the healthy bright sunshine, the expectation that the crop would be ready for harvesting earlier than usual is being aided. Naturally, holders of the poorer varieties displayed an anxiety to sell, and both mesta and white bottoms were offered at below the minimum prices. Mills are concerned to learn that there has been some amount of flooding in Assam. The need of mills for the better variety of fibre is evident from the fact that August guaranteed shipment of Assam middles realised Rs. 34. Quotations for May-June white and daisee bottoms were: Assam bottoms Rs. 30, northern bottoms Rs. 29.50, and daisee bottoms Rs. 33.50. The trade's expectation that the coming crop would be higher than the last crop is aided by the announcement at the last week's meeting held here of the reconstituted Central Supervisory Body for Jute that higher sowings had occurred in West Bengal, Bihar and Orissa. However, the late news that floods in low-lying areas of Assam if followed by reports of serious damages to plants should enable revision of this expectation. The question of sinking shallow tube wells along with retting tanks in order to provide adequate retting facilities to farmers in areas with uncertain rainfall was also discussed at the meeting. Measures for streamlining of the machinery for jute support scheme in an attempt to ensure maintenance of the minimum prices were also examined. The subject of grading, too, received attention, and an expert committee under the chairmanship of the Jute Commissioner, Mr. G. C. L. Joneja, would go into the question of evolving a more scientific basis for the quality classification and grading of jute.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, *4th June*

A steady trend was in evidence in the metal market during the week under review. Shortage continued to have its impact on the price trend. The details of the new Indo-U.S.S.R. trade agreement, which is expected to be finalised as a result of the visit of Mr. Manubhai Shah, the Union Minister for International Trade, to Moscow, are looked forward with interest, since it had been earlier indicated that the U.S.S.R. would be able to supply non-ferrous metals also. India's requirements of copper, zinc, tin and lead will continue to increase, and it is natural that the country makes arrangements for increased imports of these, since indigenous production is only a small percentage of the requirements. At the same time, import of non-ferrous semi-manufactures, such as brass and copper alloy rods, tubes and sections and electrical cables, will be reduced progressively.

The plan to put up a non-ferrous extrusion press and rolling mill in Kotah (Rajasthan) with both technical and financial collaboration from the well-known New York firm of Revere Copper and Brass Inc. is progressing. The capacity of the proposed plant will be 1,800 tons of copper and copper alloy hollow and solid sections and 5,000 pieces of printing rolls a year. At present, there are three commercial extrusion presses in India. The one, located near Calcutta, is the pioneer in the field and produces semi-manufactures of a wide range, which is consumed throughout the country. The other two plants are located in Bombay, and being comparatively new, have not yet reached full capacity. Production at the pioneer plant in Calcutta is limited by raw material shortages.

Advices from the London Metal Exchange were encouraging. Lead was fully steady at £64⅜ a ton. Tin, at £908 a ton, gained £1. Earlier in the week, the quotation for the three-months metal was the same as that for the ready metal, but as the week progressed the forward rate fell 10*s.* below the spot rate on the expectation that the price would not advance further. Further, as and when the price reaches £910, the Buffer Stock Manager in London, now a buyer, will turn a seller, thus preventing a further rise in price. It will be remembered that the last time when he turned a seller he soon exhausted his stocks and prices rose above the upper ceiling fixed by the International Tin Council. This is not expected to be repeated in view of the present weekly releases from the U.S. stockpile. The acute shortage in India continues to maintain a high price trend. Zinc, in London, opened at £76⅞ a ton, but due to lack of demand eased to £75⅜. Cash copper was maintained at £234 a ton.

GOOD SUPPORT FOR WHEAT

(From Our Own Correspondent)

HAPUR, *3rd June*

A steadier trend continued in the foodgrain prices during the past week due to poor arrivals of new *rabi* grains in the market and brisk consumer support.

Wheat attracted good support from consumers and advanced further by 50 nP to Rs. 1.25 per quintal according to quality. The average quality was now quoted at Rs. 40.75 to Rs. 42.50 per quintal and the farm produce at Rs. 42.50 to Rs. 46.25. Red stuff was traded between Rs. 39.75 to Rs. 40.25 per quintal. Arrivals averaged 1,000 to 1,200 maunds a day, which were mostly lifted by consumers and stockists. Local stocks were estimated around 21,000 maunds. Rice also improved by 67 nP to Rs. 1.34 per quintal according to quality on better consumer demand in the face of poor stocks estimated around 14,000 maunds. Week-end prices were:—Rice *basmati* superior Rs. 89.41 to Rs. 96.45, *sela basmati* Rs. 85.74 to Rs. 88.41, *mainpuri* Rs. 57.94, *ramajwayan* Rs. 62.96, *raimunia* Rs. 65.64 and *gadda* Rs. 52.92 per quintal.

Gram, however, declined by 32 to 67 nP per quintal on heavy arrivals from Punjab and Rajasthan. The Punjab quality was now quoted at Rs. 42.20 and the local produce at Rs. 41.53 per quintal. Arrivals were 6,000 maunds during the week. *Barley* and *bejhar* sought higher levels on brisk buying support in the face of small arrivals. Latest prices were Rs. 31 to Rs. 31.75 for *barley* and Rs. 32 to Rs. 33.50 per quintal for *bejhar*. *Juwar* and *guwar* prices eased fractionally for want of support and were quoted at Rs. 29.47 to Rs. 30.14 and Rs. 32.82 to Rs. 35.50 per quintal respectively. *Mathi* and *oats* arrivals were lifted at lower prices. *Bajra* and other coarse grains were almost stationary. Week-end prices were:—*Methi* Rs. 48.50 to Rs. 49.50, *oats* Rs. 31.50 to Rs. 32.50, *bajra* Rs. 30.81 to Rs. 32.15, *maize* Rs. 30.81 per quintal.

Among pulses, small arrivals of peas were lifted at better prices from stockists, and prices improved 67 nP to Rs. 1.34 per quintal according to quality. The *dara* quality was now quoted between Rs. 33.75 and Rs. 34 and the farm produce between Rs. 34.50 and Rs. 36 per quintal. Arrivals were around 800 to 1,000 maunds daily, and local stocks improved to 58,000 maunds. *Arhar* also hardened with the *dara* quality quoting Rs. 51.25 to Rs. 52.40 per quintal and the superior stuff at Rs. 58.50 to Rs. 60.28. *Urd* and *moong* prices ruled unchanged at Rs. 67.50 to Rs. 72.34 and Rs. 48.23 to Rs. 54.93 per quintal, respectively. Week-end prices were:—*Peas dal* Rs. 37.51, *arhar dal* Rs. 66.98 to Rs. 80.38, *urd dal* Rs. 80.38, *moong dal* Rs. 62.96, *masoor* Rs. 49.57 to Rs. 54.92, *masoor dal* Rs. 63.63, *gram dal* Rs. 49.57 and *moth dal* Rs. 49.57 per quintal.

Under the Colombo Plan for co-operative economic development in South and South-east Asia, India has made available technical assistance of over Rs. 1.2 crore to Asian countries. Since the inception of the Plan in 1950, India has provided over 2,000 seats in training institutions in different fields, which have been availed of by 17 countries. Among the countries of the region, India is the largest donor of technical aid. Indian aid to Nepal so far amounts to about Rs. 25 crores.

Notices

ABBREVIATIONS. N—Nominal. (f) Income-tax free. * Loans held entirely by the Trustees.
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. † Bombay State Transport.
††Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1935. D—Domestic Loan not marketable.
f—Interest free for first 12 years. t—Interest free for first 7 years. Z—Ex Ten instalments but inclusive of accrued interest.
M—At the option of the Government after three months' notice. K—On September 1986 or later at the option of the Government after three months' notice.
T—Liability taken over by Madhya Pradesh. @ Total amount invested in Gold Bonds up to 18th February 1963.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per share.

Accounts:—Figures in the Accounts Closed column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

CLOSER THAN EVER

THE edifice of Indo-American understanding, which has weathered many a political storm over the last ten years and more, has just been reinforced further by President Radhakrishnan's State visit to the United States. There can be no gainsaying that the relationship between the world's two largest democracies has become much closer than ever before. For this happy result the credit must go in great measure not only to the Indian President but also to President Kennedy. President Radhakrishnan has just left the United States "with a comforting sense of mission accomplished," as one Washington paper has put it. The closer understanding between the two countries that has flowed from the Indian President's visit has also been confirmed in the joint *communique* issued by the two Presidents. This *communique* concludes with the words that "President Kennedy and President Radhakrishnan consider that their highly satisfactory talks have contributed to closer understanding between their two countries and their two peoples."

What are the basic elements of this closer Indo-American relationship? By far the most important one is, of course, the common commitment of the two countries to the goals of democracy, as well as to the goals of peace and international co-operation. The United States has been most favourably impressed by President Radhakrishnan's eloquent reiteration of the Indian Government's determination to preserve India's territorial integrity and, at the same time, to improve the living standards of the people "within the framework of a liberal parliamentary democracy." President Kennedy, for his part, it is even more significant, has reiterated the U.S. Government's abiding interest in the Indian Government's endeavours for defence and development and also emphatically given the word that "India could count on the warm sympathy and effective assistance of the United States" in such endeavours. It would appear that this intimate Indo-U.S. understanding is an impressive demonstration of the common commitment of the two countries to the defence of democracy and to economic development within a democratic framework.

It is, indeed, a great thing that this Indo-American understanding also comprehends a more or less identical attitude on the part of the two countries towards the communist world. Most significant, in this context, was the Indian President's statement in an American TV interview that "given the healing power of time, the resilience of human nature, the mutability of social and political institutions and, above all, the mercy of Providence," the conflict between the communist and the non-communist worlds might "fade into insignificance" in due course. President Radhakrishnan's optimistic outlook on the present-day conflict between the two worlds—a conflict which is analogous to the other great conflicts of history like those between the Greeks and the Barbarians, the Romans and the Carthagenians, the Catholics and the Protestants, the Axis Powers and the Allies—is rooted in his faith that "human beings as human beings are interested instinctively in survival, in self-preservation." The Russian people are no exception to this. This approach is so refreshingly in accord with that of President Kennedy himself who, in another context on the 10th June, reaffirmed America's strategy of peace. The U.S. President, incidentally, had this to say, namely, "that no government or social system is so evil that its people must be considered to be lacking in virtue" and that, "among the many traits the peoples of the United States and the Soviet Union have in common, none is stronger than their mutual abhorrence of war."

But there is still the question whether any genuine co-existence would be possible between the communist and the non-communist worlds. Here, again, there seems to have emerged a broad understanding between the U.S. President and President Radhakrishnan in regard to the approach to this question. According to President Radhakrishnan, Russia's Krushchev is most interested in building a welfare state in his country, and it is only because of the lack of communication between the East and the West, there is lack of understanding between them. What the Indian President has not said is whether a totalitarian society, which is the very antithesis of a pluralist tolerant society like that of India or of the United States, could live in permanent peace and friendship with the democratic world. It has been left to President Kennedy to make up for this omission and affirm that there are winds of change in the communist world—winds which augur well for liberalisation in that world. So, in a sense, both Indians and Americans share the common hope, if not a common conviction, that ultimately there will be genuine co-existence and co-operation between the two parts of the world.

Even in regard to the question of India's non-alignment policy, there seems to have emerged, thanks to President Radhakrishnan's visit, a broad mutual understanding between this country and the United States. It has been eloquently conveyed to the American public that India, though non-aligned from the point of view of military alliances and the like, is spiritually aligned to the democracies. There can thus be no mistaking India's alignment to democracy, to freedom, and to peaceful solution of all outstanding disputes. The most telling point that the Indian President has made, in this connection, is that the policy of non-alignment has been helpful to the United States itself on such occasions as when a non-aligned Chairman was required for the Korean Commission, as well as for the Laos Commission. It is, indeed, significant that the U.S. President has not raised even remotely this question of non-alignment. Perhaps it is the hope of the United States that a big non-aligned country like India may be sometimes useful in keeping the dialogue between the United States and the Soviet Union going and in working for understanding between them.

Apart from these basic issues on which both India and the United States have come to understand each other better, there is the more immediate issue of how best the economic relationship that has been established between the two countries can be enlarged in scope and made more enduring. It is no doubt a big fact that the United States has so far provided bilateral economic aid to this country to the tune of $5.4 billion (including the latest U.S. pledge as part of Consortium aid for the third year of the third Plan). Of this aid, only about 25 per cent is in the form of loans repayable in dollars, over 27 per cent is in the form of outright grants to the Government of India and 47 per cent is for local currency repayments, most of which are in turn used for further rupee loans and grants to the Government of India. But the combined needs of both defence and development are increasingly pressing, and there is happily a better awareness on the part of the Kennedy Administration of these needs, as witness Secretary of State Rusk's latest statement before the U.S. Senate Foreign Relations Committee. It is ten to one that an expansion in aid to this country, as well as in its opportunities for trading with the United States, might come about in due course, thanks to the present closer understanding between the two nations. As of today, what is most important is that the people of the United States should no longer entertain any feeling that beneficiaries tend to dislike their benefactors. President Radhakrishnan has, therefore, done well to convey spontaneously and unequivocally the gratitude of this country for the generous assistance provided by the United States in support of its (India's) development and defence. Such spontaneity and warmth in the expression of India's gratitude are bound to have the most profound impact on the heart of the aid-giving country. In the ultimate analysis, it is a meeting of hearts, not merely a meeting of minds, that will provide the sheet-anchor for an enduring structure of Indo-American relations.

I.L.O. IN A CHANGING WORLD

IT is, indeed, strange that the daily press in India has not taken any notice of the opening address of Mr. David A. Morse, Director-General of the International Labour Office, to the forty-seventh session of the I.L.O. which began at Geneva on the 5th of this month. It is stranger still that even the New Delhi office of the I.L.O. has failed to release at least a summary of the address. May be, the address was more a repetition of the points raised by Mr. Morse in his 206-page report circulated for consideration at the session. Even so, one fails to understand why the opening speech of Mr. Morse has not been given the publicity it so richly deserves. In his report (*vide* our reference on page 840 of *Commerce* dated 11th May 1963), the Director-General has posed a very important question: Are the structure and activities of the I.L.O. adequately adapted to changing world conditions? Emphasising that the I.L.O. is at one of the critical stages of its history, the Director-General has pinpointed what he calls the five "constellations of problems" challenging the I.L.O. and its constituent member-countries. These "constellations" cover (*a*) improvement of skills and fuller utilisation of labour force for economic development; (*b*) distribution of incomes and its relation to general economic and social objectives; (*c*) growth of trade unions and labour relations in developing countries; (*d*) various current issues affecting the status and conditions of the worker; and (*e*) implications for labour of automation and other forms of advanced technology.

The current session of the I.L.O. may not offer ready-made solutions to the aforesaid problems. But it will surely have served its purpose if at least a broad measure of agreement can be found on the purposes of the I.L.O. in

the world today—not as to fundamental principles which, as Mr. Morse has said, should not be in dispute, but as to their meaning in action in present world conditions—and if there is a clearer view of programme priorities. It is just such an agreement that would give "a new and powerful impetus to the I.L.O.'s work." But the question is whether this type of agreement can, in fact, be found, what with the clash of ideologies between the communist and non-communist countries, as well as the conflicting interests of the developed and developing nations in the free world itself. Mr. Naval H. Tata, employers' delegate from India to the I.L.O. session, has done well to drive home the fact that, bearing in mind the social objectives in which the I.L.O. is principally interested, it is absolutely necessary that all views and shades of economic opinion are brought together through the medium of international organisations and exposed to each other's viewpoints. For a long time to come, the delegates to I.L.O. conferences, as he has rightly declared, would have to undergo a process of reconciliation between the ideology of those who are industrially developed and that of the countries undergoing the evolutionary process of economic self-sufficiency.

Almost all international organisations, it is common knowledge, are believers in the principle of universality. And this holds good especially in the case of the I.L.O. But in clinging to the doctrine of universality, the I.L.O. member-countries should not, as Mr. Naval Tata has warned, sabotage the sacred tenet of tripartism and permit violation of collective bargaining at international level by seeking the path of least resistance because of political sensitivity. One may well recall here that, when the I.L.O. was first established, it was intended to create at the international level the process of collective bargaining with Government representatives as conciliators or mediators, so that the decisions arrived at could ultimately be implemented at the national level. Otherwise, it was felt, the decisions would be of no real value to the parties concerned. There is as yet no evidence at all to suggest that the doctrine of tripartism has become outworn, outmoded and obsolete. On the contrary, it continues to be the most effective instrument employed to lay down codes governing employer-employee relations. Mr. Naval Tata is quite right when he says that the time has "still not come to replace this doctrine."

During the process of political, social and economic revolution that is taking place in the world and the evolution from an underdeveloped to a developing stage, the concept of freedom of association must grow progressively till the member-States of the I.L.O. can learn to tolerate and appreciate the full freedom of the worker and the employer within the sovereignty of the State. This aspect has been impressively highlighted by Mr. Tata. Without mincing words, he has stated that, in the period of transition, the concept of freedom has of necessity to be nursed with care. Elucidating this point, he says:

"Some member-States will, no doubt, try to camouflage the resistance to the progressive growth of such freedom by spurious pleas of the sovereignty of the State in domestic matters. To suppress its growth by refusing to give moral support to it, by disputing our action to expose such violations, will stifle and stunt the growth of such freedom. To our friends from the totalitarian world, I would appeal for justice to our stand. Our action is directed not towards their economic system but towards their non-observance of a basic principle to which all member-States are committed through membership of this Organisation.

"This raises a fundamental issue as to who should decide whether the freedom of worker or employer is in jeopardy in a particular State. If you believe, as I do, that our Conference is an agency for collective bargaining, then the parties to bargaining have a right to decide whether the bargaining agent is genuine or not. Then, surely, such adjudication rests within the joint autonomy of workers and employers, and the Government delegate should stand aloof. So long as the disputed worker or employer has opportunities to participate in the deliberations of the Committee, the Government group should not mind such disputed representatives losing their right to vote..."

There is considerable force in the aforesaid observations of Mr. Tata. These observations have the added significance that they are based on his intimate knowledge and experience of the working of employers' and workers' organisations. With refreshing candour, Mr. Tata has averred that, imperfect though they may be as compared to those of some of the industrially developed countries, the trade unions and employers' organisations in India "breathe freedom from interference to a degree which would do credit to any democratic Government." And appropriately enough, he has warned that many developing nations would be deprived of this benefit, if there is a growing tendency at I.L.O. conferences to jettison such basic principles.

The note of warning struck by Mr. Tata is quite timely and pertinent. Equally pertinent is his call to the I.L.O. to deal more closely with the United Nations in the interests of many new member-States with developing economies. What he means apparently is that the I.L.O. should also address itself to the task of assisting the underdeveloped countries to attain higher rates of economic growth. The necessity for such assistance, it is needless to say, is most urgent and insistent, and the I.L.O. should play a more dynamic role in helping the member-countries in the development of human resources through education and imparting of technical, vocational and managerial skills.

WHAT IS "CAPITAL EMPLOYED"?

TO ascribe different meanings to one term may be expedient and even wise in politics, but to do so is catastrophic in commerce and economics. Business is politic, but not political. In politics, "mediation," for instance, may not mean the same thing to all politicians, but the term "middleman" connotes the same sense to all in trade and industry. Be it either as an exception to the rule, or as sheer proof of ingeniousness, the concept of "capital employed" has, however, come to mean in this country different things to different people at different times. There is the management's meaning of the concept. The Tariff Commission takes it in a different sense. The Industrial Tribunals have their own way of computing capital employed. The authoritative Central Statistical Organisation, preparing vital industrial statistics, looks at "productive capital" from yet another angle. And now there is the legal sense of capital employed as enunciated in the Super Profits Tax Act.

The management's approach to the concept is described as strictly practical. It takes into account the assets available to the management for carrying on the business, and, therefore, capital employed is taken as "total assets," meaning the total of the assets side of the balance-sheet *plus* the depreciation deducted, but excluding any expenses or losses previously incurred and carried forward on the face of the balance-sheet. This approach is called practical in two senses; firstly, because the total of assets is taken, and, secondly, because the ratio of profit to the total will definitely be less than the ratio of profit to a part of the assets. The Tariff Commission computes capital employed on the basis of the net block *plus* the working capital, before deducting the borrowings. It is the practice of the Tariff Commission to arrive at the net block after excluding goodwill paid by an industrial unit to the vendor and capital expenditure in progress. Capital employed, as taken into account by the Labour Tribunals, is made up of the paid-up capital and the reserves used as working capital.

According to the Central Statistical Organisation, capital employed consists of fixed capital and working capital. Fixed capital comprises net block, including intangible assets. Working capital comprises current assets, work-in-progress and the algebraic sum of sundry creditors, as represented by (*a*) outstanding payments, for example, rent, wages, interest and dividend, (*b*) purchases of goods and services, and (*c*) short-term loans and advances, and sundry debtors on account of amounts due to the company for sale of goods and services as well as advances towards purchase and tax payments. The basis of capital employed under the Super Profits Tax Act is to take the paid-up capital and the reserves as at the beginning of the year. This is a legal concept of capital employed inasmuch as various adjustments will be made according to the requirements of the Act. This concept takes the block at the net depreciated value as per books. It does not take into account all the reserves and surplus, as it excludes the balance of profit and loss account shown under "reserves and surplus." Further, where any income is not to be taken into account for S.P.T., for instance, dividends, then the cost of the investments (in excess of borrowings, if any) will naturally be deducted from the total capital employed.

It will thus be seen that, while there is an area of agreement in the different interpretations of the concept of capital employed, there is considerable disagreement as well, which makes confusion worse confounded. Rigid conformity in ideas may be a totalitarian talk. Conformity in business practice is, however, customary and always desirable in any society. For, without it, business will be difficult. A standard definition of the term capital employed is all the more necessary, in view of the fact that the term has very significant application in determining industrial profits, prices and efficiency, bonus to employees and, above all, the vital statistical data on industries and in evolving appropriate economic policies.

According to Mr. S. N. Cooper, chief accountant of the A.C.C. Ltd., no fixed definition of capital employed can be given before considering some of the practical questions relating to its determination. The questions, which he raised in his paper on "Concept of Capital Employed" at the week-end seminar on "Accounting and Auditing Techniques" organised by the Bombay Chartered Accountants' Society, are: Should the "own funds" only or the borrowed capital also be included? Should depreciation be computed by the "straight line" or by the "diminishing balance" method? Should the "net assets" be taken at original cost or at current replacement values? Should the total "working capital" be measured in the usual manner of striking the surplus of current assets over current liabilities and provisions or on the basis of a calculated optimum value of current assets required for conducting the business?

Dealing with these questions in the order they are presented, Mr. Cooper believes that "own funds," including the surplus profit, will normally mean the total resources, though, for comparing the earning capacity of one organisation with that of another in the same field, long-term and short-term borrowings will have to be included in determining the total capital employed. He feels that not *net* but *gross* block should be taken into account, which, together with working capital, will give the total capital employed. Depreciation in that case should be on the "straight line" method, but if net block is considered, it should be on the "written-down value" method. He prefers current replacement value to original cost for determining the worth of fixed assets, notwithstanding the fact that the current value of the fixed block cannot be easily ascertained, especially when the buildings, plant and machinery, etc., have been acquired and brought into use at different dates. According to him, this method may be regarded as ideal, and if the paper work and cost involved in it can be justified, there is no reason why it should not be followed by large organisations, having resources in men and money, to compute for the management the true capital employed on current values. He arrives at working capital by taking the surplus of the total of investments deposited with outside parties for the business of the company and current assets, including loans and advances, over current liabilities, excluding the year-end provisions made for managing agents' remuneration, bonus to employees, proposed dividend and provision for taxation as reduced by the advance payment.

Clear in his mind about the primary questions, Mr. Cooper commends the concept of taking the total assets as capital employed for the acceptance of operating management. It may, however, be noted that not all his professional colleagues endorse his concept. One strong point of difference arises on including depreciations as part of capital employed, to which the stick-to-the-book specialists seriously object. Mr. Cooper takes depreciation as a mere financial adjustment to provide funds for replacement. Management operates on the total block, and, therefore, capital employed should be based on gross block, he argues. His argument is right, but will need a lot of convincing. Moreover, his definition is from the employer's point of view, and employees, keen on obtaining a high ratio of profit to capital employed, will always insist on taking net block into account. Incidentally, the Tariff Commission's formula of capital employed does not include paid goodwill and capital expenditure in progress, which is wrong. The Labour Tribunals have a questionable basis of arriving at the "prior charge" for return on capital, as no return is available on reserves used as fixed capital and lower rate of return is allowed on reserves employed as working capital. It is high time we had, after 12 years of planned economic development, a standard norm for measuring capital employed in industry. The lead must come from the Government, but, of course, in consultation with experienced chartered accountants. This may involve many changes, including a change in the already computed statistics. But that will be for the good, for uniformity in a matter like this will go a long way towards eliminating some of the contradictions in current economic policies.

MARKET GOSSIP

General Insurance

GENERAL insurance, which has been lagging behind industrial production in annual growth rate since 1955 (a peak year for this class of insurance) would appear to have taken over the lead from 1960, according to the figures given in the *Indian Insurance Yearbook*, 1962, just published. Thus the index number of general insurance (base: 1951=100), which stood at 157.9 in 1959, increased by 21.3 points to 179.2 in 1960 and further by 21.4 points to 200.6 in 1961. The index number of industrial production (base 1951=100), which stood at 152.1 in 1959, increased by only 17.6 points to 169.7 in 1960 and by 11.5 points to 181.2 in 1961. The following table indicates the rate of growth of general insurance, as compared with industrial production:

(Base: 1951=100)

Year	Index No. of general insurance	Index No. of industrial production
1953	104.7	105.6
1954	112.2	112.9
1955	135.3	122.4
1956	139.9	132.6
1957	140.4	137.3
1958	146.8	139.7
1959	157.9	152.1
1960	179.2	169.7
1961	200.6	181.2

The gross premium written direct in India by Indian and non-Indian insurers under the three heads, namely, fire, marine and miscellaneous, increased from Rs. 37.27 crores in 1960 to Rs. 43.30 crores in 1961, and the net premium rose from Rs. 26.49 crores in 1960 to Rs. 31.94 crores in 1961.

It is noteworthy that this higher volume of business was done by a smaller number of companies. The number of companies at the end of 1961 was 155, as against 166 at the end of 1960. Of the 155 companies at the end of 1961, 82 were Indian and 73 non-Indian. Eight more insurers (four Indian and four non-Indian) ceased to exist during 1962, while one new insurer was registered during the year, so that the number of insurers at the end of 1962 declined by 7 to 148. Of the 148 insurers at the end of 1962, 78 were Indian and 70 non-Indian.

A State-wise classification according to registration shows that 36 Indian insurers having their registered offices in Maharashtra (out of a total of 86 Indian insurers transacting general insurance business during the year 1961) accounted for about 73 per cent of the total net premium income. About 71 per cent of the total premium income in India of non-Indian insurers went to 55 insurers of British incorporation.

New Trade Pact With Russia

The new five-year trade agreement between India and Soviet Russia, signed the other day at Moscow, is notable for the firm determination of the two countries to expand the scope of mutual commercial relations. It will replace the agreement of 1958, which is due to expire at the end of this year. A major feature of the new pact is that it seeks to double the volume of mutual trade in the short period of the next three years. Accordingly, from an expected level of Rs. 80-85 crores in 1964, the quantum of trade each way will be raised to Rs. 90-95 crores in 1965 and further to Rs. 100-105 crores by 1966. The volume for the next two years will be fixed in due course. If the projected increase in trade is actually realised, Russia will figure as one of the leading markets for India's exports, next only to the U.K. and the U.S. It is a matter of particular satisfaction to this country that the pact seeks to ensure that about 40-45 per cent of exports to Russia will be processed and manufactured goods. Besides such traditional goods as tea, coffee, mica, tobacco, wool, cotton and spices, Russia will buy from India cotton textiles, jute goods, shoes as well as chemical and pharmaceutical products, including insecticides.

The Soviet Union will continue to provide largely capital goods and equipment, including heavy electricals, machine tools and steel, and also such goods as petroleum products, wood pulp and certain chemicals. Significantly enough, it has also agreed to supply aeroplanes and helicopters to this country. Some of these goods are, no doubt, strategic; but, then, India's exports to that country also include goods which are of strategic significance. While there is every reason to be happy about the expansion of Indo-Soviet trade, it is essential to ensure that it does not disturb unduly the traditional channels of India's foreign trade. In particular, it is necessary to see that India's exports of such goods as tea and textiles (products in which Soviet Russia itself figures as an exporter) are not re-exported to Western countries. There have been some such complaints in regard to India's trade with some of the East European countries. It would have been proper, had the agreement provided for some assurances against any such diversion of trade.

On the question of terms of payment, there has not been any change, as the mutual trade will continue on the basis of rupee payments and thus on a balanced basis, as is the case in the existing agreement of 1958. As Mr. Manubhai Shah, Union Minister for International Trade, who was in Moscow to sign the agreement on behalf of the Government of India, pointed out, rupee payment arrangements go some way towards easing India's foreign exchange difficulties, which have put a break on imports badly needed for industrial development. India's imports of capital equipment and other goods from Soviet Russia will not, therefore, aggravate the scarcity of foreign exchange. All the same, the Government of India will do well to give some thought to the allegation that the prices of imported goods from the Communist countries do not compare favourably with those offered by Western countries. It is, therefore, necessary to keep a watch on the degree of "price mark-up," if any. It would be worth while to set up a study unit in the Union Ministry of Commerce and Industry to examine the comparative prices of imported goods, as recommended by the Import and Export Policy Committee. Equally necessary it would be to devote more resources for market research and publicity in Russia for Indian goods there. The forthcoming trade fair in Moscow, in this context, is commendable. But more lasting and sustained efforts will be needed to fulfil the apparently ambitious targets for trade to which the two countries have committed themselves.

More P.L. 480 Food For India

Mr. S. K. Patil, Union Minister for Food and Agriculture, has had a successful time of it in the United States. He has had fruitful discussions with the U.S. Agriculture Secretary—discussions which have led to an American commitment to extend the period of the present P.L. 480 agreement by one more year after it expires in June 1964. Thanks to this promised extension, India can now look forward to importing the balance of eight million tons of wheat and 350,000 tons of rice within less than two years from now. Of the quantity of rice that still remains to be imported, 150,000 tons are due to be despatched from the U.S. immediately to meet the present shortage in the supplies of this cereal. The remaining 200,000 tons will be shipped before the current year is out.

The second American commitment is in respect of a fresh P.L. 480 agreement for which talks are scheduled to commence by the end of this year. It is visualised that this agreement will be for a period of four years from July 1964 and that it will cover a further eight million tons of wheat and two million tons of rice. Thus, the entire third Plan period and the earlier part of the fourth Plan period, too, will have the benefit of continued P.L. 480 food imports. Of course, such imports do mean that the goal of food self-sufficiency is as far away as ever. According to Mr. Patil, there is no need for any despondency on this score, for food imports will still constitute only four per cent of the country's total food requirements. The point that is sought to be made out is that this insufficiency is only of a marginal character. One has only to recall, in this connection, that this kind of marginal shortage has been in evidence for nearly a decade now. There can be nothing marginal about the misery that this continuing food shortage causes to the country. If there is to be an end to this national misery, Mr. Patil's Ministry should live up to its word and make a supreme effort to redeem the pledge that no further food imports will be effected after 1968. It is to be hoped that the Ministry will not again say in 1967 or 1968 that the goal of food self-sufficiency is an "ever-receding" (!) one.

E.C.M. Tariff On Tea

The Common Market countries have proposed to grant tariff concessions for tea and tropical woods. According to reports from Brussels, the E.C.M. countries have agreed to reduce their common external tariffs on tea in packets (above three kilos) from 18 per cent to 5 per cent. The tariffs on loose tea and tropical woods, including teak, would be suspended entirely. There is no doubt that the reduction in common tariffs is an E.C.M. gesture towards the developing countries like India and Ceylon which have a considerable stake in European tea markets. But the proposal has fallen short of earlier expectations. The U.K., it will be recalled, had asked for *nil* tariffs for tea (both packed and loose), when the question was taken up during the Six-U.K. negotiations at the end of last year.

Although the negotiations broke down, there was some hope that the concessions agreed to with the U.K. would still be honoured by the E.C.M. in regard to developing countries like India, Pakistan and Ceylon. The spokesmen of the Common Market countries had also given assurances to this effect. The latest annual report of the E.C.M. Commission, too, stresses that it will endeavour to carry out certain of the formulæ agreed to in the then negotiations between the E.C.M. and the U.K. on the agreement for the major agricultural commodities and for co-operation with Commonwealth countries in Asia, Africa and West Indies. The report further states that the Commission will try to conclude special agreements for trade and co-operation with India and Pakistan, as was promised at the time of the U.K.-E.E.C. negotiations. This is again a welcome assurance, which, one hopes, will be fully honoured when the appropriate time comes.

Attracting Foreign Capital

Many leading industrialists and businessmen in India have consistently stressed the urgency of creating a favourable climate for foreign private investment. In the course of their recent tour of the U.S., Mr. G. D. Birla, Mr. G. L. Mehta and Mr. Bharat Ram, for instance, sought to assess the outlook for the inflow of capital into this country. That this assessment was quite dispassionate and appropriate has been fully borne out by the testimony given by one of the top U.S. industrialists who has been seeking to expand the operations of his Company in India. He is none other than Mr. E. F. Kaiser, President and Chairman of the Kaiser Industries of California. Mr. Kaiser stated at Madras the other day that his Company had invested in India on a substantial scale which itself was sufficient to prove the basic soundness of the climate for foreign investment. He disclosed that his Company proposed to expand its interests further in India. As is well known, Kaisers have already invested in this country about Rs. 6 crores and have collaboration arrangements with Birlas and Mahindras in the fields of aluminium and automobile manufacturing, respectively. It has also a small interest in Mysore Cements.

Mr. Kaiser was no doubt aware that there were certain problems in India concerning taxes and foreign exchange from the point of view of foreign investors. But he conceded that this was understandable in the present context of India's development. He did well to urge prospective U.S. investors to come to India without inhibitions. He called upon them to visit this country, move with the people and understand their problems. He added: "By just sitting in the U.S., you cannot solve them." Mr. Kaiser's optimistic estimate of opportunities in India deserves much publicity abroad, inasmuch as it certainly is the voice of a foreign industrialist who has a thorough knowledge of the investment climate in the country.

This American testimony is also in accord with what Mr. Manubhai Shah, Union Minister for International Trade, said at a recent seminar held in Berlin to study the climate for private investment in developing countries. Mr. Shah has drawn particular attention to the observed experience of treatment accorded to foreign capital by a capital-importing country like India. India's record in this respect has been what investing countries would desire most. Fair compensation in the event of acquisition of property by the State, remittance of the compensation proceeds, the present tendency to concentrate on the establishment of new enterprises in the public sector rather than on the nationalisation of existing ones, permission for repatriation, including any capital appreciation—all these elements have invested India's policy towards foreign investment with a degree of fairness. But all this does not mean that nothing more can be done to stimulate further foreign investment. A larger flow of foreign private capital can be ensured by such measures as tax concessions, guarantee and insurance of investment against the risk of loss, and so on. But this is only one side of the picture. On the other side, capital-exporting countries, too, would have to stimulate an outflow of private capital by themselves granting tax concessions on the foreign investments of their nationals.

Compulsory Insurance Or Deposit?

Much confusion and bewilderment have been caused by Mr. Morarji Desai's statement at the recent meeting of the National Savings Central Advisory Board that compulsory deposits would be followed up with a scheme of compulsory life insurance. This is because it has not been made clear whether compulsory insurance is thought of as a substitute for the compulsory deposit scheme or whether both would be in force concurrently. His remarks on the subject this week at Madras have not clarified the position either. Mr. Desai is reported to have stated that "compulsory life insurance would be introduced in the country if the compulsory deposit scheme proves to be a success." According to another version, Mr. Desai is reported to have said that "compulsory life insurance would be introduced one day" and that "it would be a much more difficult job than (the introduction of) compulsory deposit scheme." Whichever statement is taken as correct, the basic question is whether, if and when compulsory insurance is introduced, the compulsory deposit scheme would be continued or abandoned; this question remains unanswered. The Finance Ministry would do well to issue a clarification.

Compulsory insurance, in the Finance Minister's opinion, is likely to present far more practical difficulties than the compulsory deposit scheme. Hence, presumably, a beginning has been made with the latter. If its success or failure is to determine whether or not compulsory insurance could be introduced, does it not mean that, if it fails and thus comes to be abandoned, the compulsory insurance idea, too, would be dropped? "Either both or none," or "either the one or the other"?

If the choice is between the compulsory deposit scheme and the compulsory insurance proposal, the balance of advantage would seem to favour the latter, its practical difficulties notwithstanding. If there is no such choice, it is extremely doubtful whether there would be scope for both. If, on the other hand, neither the one nor the other is likely to form a permanent part of the structure of national saving, it would be a different matter altogether.

World Coffee Agreement

Although full ten months have elapsed since the new five-year International Coffee Agreement was evolved after six weeks of deliberations at the United Nations Coffee Conference held at New York, the Agreement has still not come into force. And it looks as if there will be further delay. Some three weeks ago, there were reports that the U.S. Government had ratified the Agreement. Basing ourselves on these reports, we stated, in the course of a note published on page 962 of *Commerce* dated 1st June 1963, that, with the ratification by the U.S., the way was clear for bringing

TREND OF SHARES

EQUITIES DEPRESSED

(From Our Own Correspondent)

BOMBAY, 13*th June*

INITIAL steadiness in equities noted immediately after the resumption of forward trading on the Bombay Stock Exchange on Monday the 10th inst. proved to be a shortlived affair, as values sagged subsequently under selling pressure following the withdrawal of restrictions on short selling as well as jobbing. The normal trading, which started with the opening of the new account, was revived with a ceremonious *puja*, performed by the Vice-President of the Exchange, Mr. Kantilal Ishwarlal, in order to make an auspicious beginning. The *moorat* session on Monday morning saw some courageous buying in hectic trading, and the session closed on a steady note. However, from Tuesday onwards, a downward tendency gained momentum, as buyers withdrew from the market and sellers appeared on the scene. The selling was very largely short and not in the nature of investment unloading. Nonetheless, the disappointing economic prospects in the light of the defence problem, the heavy burden of taxation with the resultant shrinkage in industrial profits, the absence of any stimulating corporate news, and the increasingly complex political situation served to keep investors away from the market. The operators were disappointed with the annual speech of the Chairman of the National Rayon Corporation Ltd., expressing dissatisfaction with the scheme for allotment of rayon yarn and cautious optimism about the Company's expansion. On the other hand, rumours that the Premier Automobiles Ltd. had secured a big order from a Middle East country caused a momentary spurt in the Company's shares from Rs. 108 to Rs. 114.50 on Monday, but, later, the shares reacted and touched Rs. 109.50 today, as against Rs. 108 a week ago. Steel shares also failed to retain the gains scored earlier on strong professional support. Over the week, Tata Steel Ordinary closed Rs. 1.75 lower at Rs. 138.25, while Indian Iron were unchanged at Rs. 22.52, after having been quoted earlier at Rs. 22.72. The only bright spot were Indian Copper which recorded, over the week, a gain of 38 nP to Rs. 4.88 on informed buying based on the Company's decision to issue one-for-two bonus share, subject to the consent of the Controller of Capital Issues.

The Calcutta Stock Exchange, where "free" forward trading is still to be revived, shared in the downward trend exhibited by Dalal Street. The Committee of the Exchange, after reiterating its protest against the new scheme of margins earlier in the week, decided on Tuesday the 11th inst. to accept the terms and conditions stipulated by the Government for the resumption of forward trading.

The Madras Stock Exchange, which was permitted simultaneously with the Bombay Stock Exchange to restart forward trading, commenced normal business only on Wednesday the 12th inst. The resumption of normal trading was greeted with distinct relief, with a formal preliminary ceremony to denote the market's satisfaction. However, the trading was quiet, and the closing prices showed a mixed pattern over the week.

Since the Government accorded permission to the Bombay and Madras Stock Exchanges to resume forward trading subject to certain restrictions, identical restrictions in the shape of Government conditions regarding amendments to by-laws and the tightening of margin regulations were accepted in entirety by the Ahmedabad, Delhi and Indore Stock Exchanges. The Government permitted these Exchanges also to resume forward trading. On the Ahmedabad Stock Exchange, normal trading was revived on Tuesday the 11th inst. The trading was marked with cautious optimism, in view of the stiff restrictions imposed by the Government on forward business. The tendency, as the week progressed, was easier. Mr. Ratilal Nathalal, President of the Exchange, addressed the members before the resumption of trading and asked them to be restrained in their business and accept the new situation of stringent regulations. The Board of Management of the Delhi Stock Exchange decided, at its meeting on Tuesday the 11th inst., to resume forward trading under the conditions laid down by the Government from Friday the 14th inst., after the *budla* in the afternoon.

The next week will see all the stock exchanges working under normal conditions of forward business, which, it is feared, will depress the sentiment further.

* * * *

Among market leaders on Dalal Street, National Rayon were the weakest spot at Rs. 333.50, as against Rs. 348 a week ago. The weakness was due to selling inspired by rumours (later borne out in the Chairman's statement at the annual general meeting today) that the Company was still not in a happy situation. Sharing in the weakness of National Rayon, Century reacted from Rs. 550.50 *ex-div.* to Rs. 533.50, at which level they were Rs. 6.50 lower over the week. Standard lost Rs. 14 to Rs. 772, Svadeshi Rs. 10 to Rs. 238, Kohinoor Rs. 5.50 to Rs. 303.50 and Bombay Dyeing 60 nP to Rs. 60.50. Bombay Burmah declined by Rs. 2.80 to Rs. 61.20, notwithstanding the publication of a higher crop for the last financial year. Voltas dropped 10 points to Rs. 246 and T.E.L.Co. seven points to Rs. 272. Hindustan Motors showed a loss of 24 nP to Rs. 16.68. Indian Dyestuff fell by Rs. 22.50 to Rs. 380, Belapur by Rs. 8.50 to Rs. 174.50 and A.C.C. by Re. 1.25 to Rs. 140.75. Among others, Amar Dye-Chem slumped by Rs. 36.25 to Rs. 160. Maharashtra Sugar were lower by Rs. 3.50 at Rs. 148 and West Coast Paper by three points at Rs. 135.50. In the cash section, T. Manekial rose sharply from Rs. 555 to Rs. 590 and Colour Chem gained Rs. 7.50 to Rs. 330. But, among the new issues, Tensile Steel showed a loss of seven points to Rs. 98. Synthetics shed Rs. 6 to Rs. 135. Asian Cables and Ceat Tyres declined by Rs. 2.50 each to Rs. 88 and Rs. 137.50, respectively.

* * * *

Forward shares on the Calcutta Stock Exchange displayed a weak tone. Thus, Dunlop declined from Rs. 33 to Rs. 31.62, Birla Jute from Rs. 28.69 to Rs. 28.25, Guest Keen from Rs. 32.81 to Rs. 32.69, Indian Aluminium from Rs. 34.25 to Rs. 34.25, J.K. Cotton from Rs. 12.75 to Rs. 12.56 and Orient Paper from Rs. 34.15 to Rs. 34. In the cash section, among Textiles, Bharat Commerce eased by two points to Rs. 19, Bowreah by 69 nP to Rs. 22.50 and Jayshree by 75 nP to Rs. 13.50. Coal shares were a shade better, with Bengal showing a gain of five points to Rs. 280. Among Jutes, Alliance improved from Rs. 118 to Rs. 120 and Barnagore from Rs. 192 to Rs. 199, but Champdany declined from Rs. 23.75 to Rs. 20.25 and so did Kelvin from Rs. 185 to Rs. 184. Engineering issues showed small changes either way. Alkali Chemical were lower at Rs. 31.37, as compared with Rs. 33.19 a week ago.

SOUTH INDIA STEEL AND SUGARS LTD.

The South India Steel and Sugars Ltd. is offering for public subscription 410,000 equity shares of Rs. 10 each and 140,000 cumulative redeemable 9.3 per cent, taxable, preference shares, also of Rs. 10 each, for cash at par. Its authorised capital is Rs. 2 crores, including Rs. 50 lakhs in preference shares. It has already issued equity shares worth Rs. 34 lakhs, out of which Rs. 27.45 lakhs have been subscribed and paid up. It is now issuing 573,300 equity shares and 165,000 preference shares. Out of this issue, 150,000 equity shares are reserved for offer and allotment to cane growers, 13,300 equity shares and 20,000 preference shares are to be subscribed by the Directors and their friends, and 5,000 preference shares are reserved for allotment to the United India Fire and General Insurance Company Ltd. The public issue of the remaining 410,000 equity shares and 140,000 preference shares is fully underwritten.

The Company, the Chairman of which is Mr. M. A. Chidambaram, was incorporated on 8th May 1944 as the Madras Circle Registered Stockholders' Association Ltd. On 20th June 1961, it amended its memorandum of association in order to carry on the business of steel rolling mills and re-rolling mills as well as to take up the manufacture of sugar. It has now obtained an industrial licence for establishing a sugar factory at Mundiyampakkam in Villupuram Taluk of South Arcot District, Madras State.

Since its inception, the Company has declared substantial dividends. The dividend for 1961, for instance, was quite satisfactory at 22 per cent per annum, gross, though that for 1962 was much lower at 9 per cent per annum, gross. In respect of the present issue of shares, all dividends will be apportioned and paid proportionately to the amounts paid on the shares during any part or parts of the period in respect of which the dividends are paid, with the shares ranking for dividends from their respective dates of allotment.

MARKET GOSSIP

(Concluded from previous page)

the Agreement into operation. The latest reports coming from the U.S., however, have clarified that it is only the Senate and not the Administration that has ratified the Agreement. What, then, is holding up the ratification by the U.S. Administration? It is, we are told, an internal enquiry on the question whether the U.S. Government has adequate powers to implement the provisions of the Agreement which aim at strengthening the control over coffee exports from producing countries by controlling imports into consuming countries and, in addition to this general control, also impose limits on coffee imports by member-nations from countries outside the Agreement.

There is, as is only to be expected, much speculation on the duration of the above enquiry as well as on its findings. Some are inclined to feel that the U.S. Administration may introduce a new Bill in the U.S. Congress. Here is what the City Editor of the London *Times* says:

"If it (the inquiry) arrives at the conclusion that new legislation is needed to equip the United States Government with adequate authority to meet its formal obligations under the Agreement—and the odds appear to be in favour of such a conclusion—there would necessarily be a hold-up in the completion of the United States ratification procedures—and thus in the implementation of the International Coffee Agreement—of several months, until the necessary legislation was passed by Congress. The United States could, however, complete its ratification formalities on condition that the implementation of its national import controls was suspended until the relevant authority had been granted by Congress. As the United States Government was one of the main sponsors at last year's United Nations Conference on coffee, which worked out the International Agreement, and as the recent vote by the Senate confirmed that there is strong support for the Agreement in the national legislature, the hold-up need not prove serious. Nevertheless, the hitch that has caused the delay in the United States ratification procedures will have to be clarified soon to enable the first meeting of the International Coffee Council still to be held before the August holiday. Its timing is of considerable practical interest, as the new five-year Agreement of consuming as well as producing countries was to have come into force early enough to render superfluous a further extension of the producing countries' short-term Agreement beyond the end of September."

Unless the U.S. Government ratifies it, the Coffee Agreement cannot come into force, even though the Governments of most other signatories to the Agreement ratify it. For the U.S. alone accounts for over half of the world coffee imports. A provision in the Agreement, it may be noted here, lays down that the Agreement should be ratified by at least ten importing countries representing 85 per cent of world coffee imports and 20 exporting countries representing the same percentage of world exports, the base year for both being 1961-62.

PERSPECTIVES & PROJECTIONS

By Mercator

Sea Change

IDIOSYNCRASIES of political leaders of both India and the U.S.A. have played an important part in the relations between the two countries in the last 15 years. Many of the vicissitudes can be explained in these terms but there has always been a basic core of common interests which brought them together again and again. The Chinese attack on India was perhaps a turning point in Indo-American relations since the prompt military aid, unreservedly sought and given, contributed much to mutual understanding. But it still left scope for weaknesses which others could exploit; President Radhakrishnan's visit has brought about a miraculous transformation in the atmosphere, after Mr. T. T. Krishnamachari's preliminary talks and clarifications of Indian attitudes had prepared American minds for the philosopher-President's impressive eloquence which in the past had swayed Oxford audiences. A Head of State cannot naturally make statements or expound policy in the sense in which a head of the Government in a parliamentary democracy is expected to; but Dr. Radhakrishnan interpreted India and her present attitudes in a manner which carried conviction. His words came spontaneously and he had the reputation of not being ideologically predisposed on issues of non-alignment; by his mastery of the language he could express himself with great felicity and by the force of his personality he could compel attention.

The joint *communique* of the two Presidents reaffirmed that relations between the two countries are "based on a large measure of agreement on basic values and objectives," that India could count on the "warm sympathy and effective assistance of the United States in its development and defence" and that the two "share a mutual defensive concern to thwart the designs of Chinese aggression against the sub-continent." The President seems to have enlisted the American press on his side; the television interview was an impressive performance by any standard, particularly the portions in which he gave credit to Mr. Khrushchev's capacity to laugh at himself and saw in it the hope for a detente. The President did not allow himself to be tripped by questions about passive resistance and its applicability to the negro problem in the U.S. but very tactfully and rightly pointed out that India had its own difficulties in implementing civil rights for untouchables; nor did he agree that passive resistance was one of the truly great forces in the world today (as any less sophisticated Indian politician might have done), for then he would have been confronted by the question of its applicability to Chinese aggression or Goa. The President handled these issues with great finesse and diplomatic skill. President Kennedy, who has been meeting many Indian leaders personally to make his own assessment of the temper and attitude of the people here, was apparently satisfied that the Indian President truly symbolised the Indian attitude. For him who always honoured intellectuals and sought their advice (though he said that Americans will not go so far as to make a President of a professor), Dr. Radhakrishnan's clarity and frankness must have seemed refreshing.

This role of the President was perhaps without precedent since the late Dr. Prasad was different by temperament and in his ways. But at this juncture only Dr. Radhakrishnan could play that role effectively, since he was uncommitted to the earlier confusions and contradictions in India's policies. With British hesitations in offering military or economic aid to India on the one hand, and Pakistan's propaganda on the other, India had every need to be persuasive and reasonable in making demands on the U.S. Mr. Krishnamachari had found the climate congenial enough to feel optimistic that the U.S. authorities would assist in terms of military hardware, if not in impressive sums of dollars. There may still be a residue of differences on the kind of defence which India should attempt to have: they depend on the kind of assessment of Chinese intentions, and, judging by past errors in our appraisal of the threat on our northern border, there is no reason to feel that American military intelligence is not giving due weight to all factors in indicating the probabilities.

The Other Country

Comparable results are not perhaps to be expected from the President's visit to Britain where policies may depend on cold calculations of British interests. And the President's visit is taking place at a wrong moment, when the Government is in the throes of a crisis created by the Profumo affair. But in British Labour circles there is a fund of goodwill towards India just now and, if circumstances compel a general election leading to a possible Labour victory, public opinion may be willing to take a more positive view of British responsibilities to India.

The Profumo affair will upset many Indians who have accepted without question that standards of public life in Britain are, whatever the party in power, among the highest practicable in a democracy. Though an inquiry has now reassured the public that there was no security risk, questions have arisen about the extent of the Prime Minister's knowledge of the affair, especially when he allowed Mr. Profumo to make a wrong statement to Parliament. There have been other security breaches in recent times in which officials were involved and their personal life had much to do with official conduct. That the latest scandal will not affect the party's prospects at the next election is one of the amusing comments that one hears. A Cabinet reshuffle seems inevitable but whether it will restore the image of the Tory Party in the eyes of the British electorate is one of the imponderables. Mr. Macmillan has pulled off many personal triumphs since he resolved the Suez crisis and there is no need to feel that he has exhausted his reserves of political skill. He can be drastic when the occasion demands, as the summary exclusion of Mr. Selwyn Lloyd from his Cabinet last year showed. But there are

Peace Through Strength

other factors to reckon with like the failure at Brussels and indifference in Washington to some British policies. If Mr. Macmillan should postpone a general election until next year, it will mean that the two leading Western democracies will remain guarded and unable to commit themselves to positive courses of action on the world's major issues now requiring attention.

* * * *

Stern Chancellor

Mr. Mohammed Shoaib, Pakistan's Finance Minister, has continued the strict fiscal discipline he has imposed on his country all along by budgetting for a surplus on revenue account and covering a deficit on capital receipts through taxation, leaving no inflationary deficit even in the fourth year of the second Plan. Such prudence has certainly contributed to economic stability but has it helped growth? It was only in 1961-62 that *per capita* income at constant prices showed an upward tendency and increased to Rs. 261, after fluctuating below Rs. 244 for over a decade since 1950-51. Population growth of over two per cent per annum has been mainly responsible for such stagnation but is it also true that a clean administration, which President Ayub has given, is not necessarily adequate to stimulate vigorous growth? It may be that considering the conditions in which democracy operated in Pakistan, there was little hope for either stability or growth; at least one is preferable to the absence of both. Pakistan's credit in international circles has perhaps been enhanced by the increase of her foreign exchange reserves (mainly because of external assistance) and the relative stability in prices, besides the Government's willingness to adopt policies which foreign investors like to see in underdeveloped countries seeking investment. The Aid-Pakistan Consortium recently commended the progress made in Pakistan, though it also hinted at the need for greater efforts to raise domestic resources. Pakistan's efforts to get aid have been relatively more successful partly because there are no ideological barriers or resistance to suggestions from aid-giving countries.

For the first four years of the second Plan, Pakistan has been able to secure $1,600 million, which was the original estimate of the total foreign exchange resources needed for the entire second Plan; but apparently in a bid to secure even more in rivalry with India, the Pakistani authorities doubled this figure, after including the foreign exchange cost of the Indus basin replacement works—which seems to be going up further. But Plan implementation has not been smoother because of prompt aid; in the first three years, outlay totalled about Rs. 1,200 crores (out of Rs. 2,790 crores) and in the coming year it is estimated at Rs. 397 crores. An increasing proportion of the revenue budget goes for defence in spite of massive military aid equal to what is spent from the revenues of the Centre; the Consortium's suggestion that internal resources should be raised has been acted upon, but heavy indirect taxation has been imposed, all but Rs. 2 crores out of the total additional taxation of Rs. 30 crores coming from that source. Pakistan has, however, flattered India by imitating her gift, capital gains and wealth taxes, though at slightly varying rates; this gives an appearance of egalitarianism in a budget which otherwise seems to be regressive. Concessions to middle class income-tax payers may be gesture for political as for economic reasons; educational allowances, exemption of dividend income and higher earned income relief are all in the right direction. But until defence is put in the proper perspective and expenditure on it assumes a reasonable proportion of the revenue budget, development will remain secondary to defence.

AID-INDIA CONSORTIUM'S COMMUNIQUE

In our second editorial last week, we dealt with the decisions reached at the Aid-India Consortium's meeting held at Paris on the 4th and 5th inst. The Consortium *communique*, which has since been made available to us, is reproduced below for purposes of record:

"The Consortium of Governments and institutions interested in development assistance to India held its eighth meeting in Paris on 4th and 5th June 1963 under the chairmanship of the World Bank. The meeting was attended by representatives of the Governments of Austria, Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, the United Kingdom and the United States and by representatives of the World Bank and the International Development Association (I.D.A.). The International Monetary Fund sent an observer. The purpose of the meeting was to discuss aid for India during 1963-64, the third year of India's third Five-year Plan. The Consortium had held preliminary discussions on the same subject in Washington on 30th April and 1st May.

"At the beginning of the third Plan, the Government of India assessed the total requirement of external assistance from all sources, including non-Consortium countries and private foreign investment, at $5,460 million. Against this, the members of the Consortium have already pledged $2,365 million of aid to India for the first two years of the third Plan. At the meeting just concluded, they undertook to make additional aid available for commitment during the third year of the Plan in the amount of about $915 million, subject as appropriate to legislative action or other necessary authorisation. The new pledges for 1963-64—we have supplemented these by giving the amounts pledged for the first two years of the third plan and the total for the three years—are as follows:

(In million U.S. dollars)

Countries	1961-62	1962-63	1963-64	Total for three years
United States ..	545.00	435.00	375.00	1,355.00
United Kingdom ..	182.00	84.00	350.00	616.00
West Germany ..	225.00	139.00	65.35	429.35
Japan	50.00	55.00	60.00	165.00
Italy	..	53.00	35.00	88.00
Canada	28.00	33.00	30.50	91.50
France	15.00	45.00	20.00	80.00
Netherlands	..	11.00	11.10	22.10
Belgium	..	10.00	10.00	20.00
Austria	..	5.00	3.85	8.85
World Bank and I.D.A.	250.00	200.00	220.00	670.00
Total ..	1,295.00	1,070.00	914.80	3,279.80

"Some members of the Consortium said that they might be in a position to increase their pledges later in the year. On the initiative of the United States Government, it was accordingly agreed that the meeting should be reconvened in Washington in July to consider additional pledges for 1963-64. Depending on the amount of additional pledges forthcoming from other sources, the United States representative indicated that his Government would be prepared to raise its own pledge for the year up to a maximum of $450 million.

"The Consortium considered it to be of the greatest importance that the pledges announced at the meeting should be translated into firm commitments as soon as possible, and that a substantial part of these commitments should be in the form of non-project aid which could be used to finance imports required for the maintenance of the Indian economy. The Consortium also recognised the need to extend as much of the aid as possible in the form of grants or long-term loans at low rates of interest. Several members of the Consortium announced that their aid for 1963-64 would be on more favourable terms than in previous years."

WORLD FOOD CONGRESS

THE deliberations of the World Food Congress (from 4th to 18th inst.) at Washington are of more than ordinary interest to developing countries like India, where the scourge of hunger and/or malnutrition is widespread. The Congress, sponsored by the U.N. Food and Agricultural Organisation, provides a forum for world's statesmen, economists and administrators to exchange views on how best to tackle the world's food problem. The F.A.O. has all along been endeavouring to remove hunger and malnutrition through international co-operation. But what it has been able to achieve is negligible, considered against the colossal task of providing minimum food requirements. The F.A.O. itself has estimated that one-third to one-half of the world's population, that is, between 1,000 and 1,500 million people, still suffer from hunger and malnutrition. Region-wise, the food problem is most acute in India and other countries of the Far East, where agricultural progress has been slow but where a big increase in population has taken place. In India alone, according to official sources, as many as 250 million people, or well over half of the total population, are malnourished. Future prospects are not good either, for by the end of this century, at least a third of India's population is still likely to be below the "bread line."

It is against this background of widening gulf between the supply of, and the demand for, food that the F.A.O. has called upon the world, particularly the Far Eastern countries, to remove all obstacles in the way of agricultural progress and press into service modern technological and organisational devices to step up output. The F.A.O. has deemed it necessary to emphasise that India and other Far Eastern countries will have to make greater efforts towards increasing agricultural productivity by the full exploitation of the resources potential. It has pointed out that this region will have to increase food production fourfold within the next 35 years, if the people are to be fed at a reasonably adequate level. This warning should have been an eye-opener to the Food and Agriculture Minister of India, Mr. S. K. Patil, who leads this country's delegation to the Food Congress. It is only reasonable to assume that he will come back wiser, determined to take more concerted steps to increase agricultural production, rather than simply deplore all criticism of the Food Ministry's failures.

The broad directions in which agricultural performance has to be improved were indicated by President Radhakrishnan who addressed the opening session of the Food Congress along with President Kennedy. Dr. Radhakrishnan stressed the need for an "intensive educational programme" to utilise modern scientific techniques and provide better fertilisers, seeds and irrigation facilities and take this knowledge "to the doors of people working in the fields." The dissemination of this knowledge would be possible in developing countries like India only if the administration and extension services were competent. Dr. Radhakrishnan was acutely aware of this problem and he called for an end to "administrative sluggishness" which impeded agricultural development programmes.

Unless the defects in the administrative machinery are removed, the possibility of expanding production will remain remote. That there are latent potentialities for increasing production in the Far East has been pointed out by Dr. B. R. Sen, Director-General of the F.A.O. A recent F.A.O. study of the lower Ganges-Brahmaputra basin of India and Pakistan, according to him, has shown that production can be increased fourfold in this area. This particular area, of course, is marked by exceptionally good resources and environmental conditions for cultivation, which is not the case in other parts of the Far East. Dr. Sen, however, is optimistic that the challenge of hunger could still be met, if only the political and social apparatus of the nations acting in concert were geared to the task.

However complex this task may be, there is urgent need for meeting the challenge, without which the world's basic requirements of food will not be met. It would be most unfortunate if the developing countries expect to depend, for all time, on the food surpluses of developed countries as a substitute for their own effort at increasing production. As President Kennedy, who pledged full support for the F.A.O. in its campaign against hunger, himself said, dependence on surplus food is no permanent solution. He added that, even if all the surplus food in North America and elsewhere were to be distributed evenly to all the under-nourished of the world, this would provide them with a "balanced diet for less than one month" only. There is, therefore, no alternative to a vigorous drive, both through national planning and international co-operation, for increasing food production in the developing countries and thereby reducing their dependence on surplus food imports.

It is precisely to facilitate such a vigorous production drive that a proposal for the establishment of an international pool for food production resources has been made at the Food Congress. Under the proposal, developing nations would borrow needed resources for financing self-help programmes for increasing their food and fibre production. The pool, to be established by governments of developed nations, would make available long-term, low-interest loans to enable developing countries to buy the agricultural materials and equipment they need to increase agricultural production. It is proposed that an existing world organisation would operate the pool, authorising loans for the purchase of only such material and equipment as the borrowing country could use effectively. The proposal is now being sent for the endorsement of all the member-countries of the F.A.O. If the proposal goes through, it will be the first such international venture catering to the credit needs of agriculturists.

IRRIGATION AND POWER RESEARCH

Ways and means to ensure judicious utilisation of irrigation and power resources, both potential and those already tapped, were highlighted at the 33rd research session of the Central Board of Irrigation and Power, held in Bombay this week. In his opening address, Mr. K. P. S. Nair, President of the Board, underlined the need for promoting basic research in the country to serve this objective. It was in furtherance of this objective, he added, that the Board had sponsored a programme of basic research covering river valley projects, flood control works and power research. Already, twenty-one problems relating to hydraulics, soil engineering and construction materials had been allotted to twenty research organisations in this country for study. Although some of the projects like the sedimentation studies are now under way, the programme has been adversely affected by a 50 per cent cut in the current year's budget for the work. Mr. Nair urged the Government to restore the original allocation. He felt that the present reduction in expenditure on basic research was "undesirable" because the results of the work would be of direct benefit to Plan projects. In fact, he feared that the suspension of research studies would eventually impede the efficient execution of Plan projects.

Mr. Nair laid particular emphasis on devoting more resources for encouraging power research. The progress so far achieved in this field, he observed, was only "an infinitesimal fraction of the ultimate goal." In this connection, he urged the State Electricity Boards to put in more efforts towards the progress of research and establish research centres where no such facilities existed at present. In view of the steady increase in the generation and distribution of power now envisaged in development plans, Mr. Nair's plea to Electricity Boards was quite appropriate and timely.

The development of irrigation and power in the country, it is common knowledge, has been hampered in some places because of controversies over inter-State division of waters. It is to remove such controversies that the Government of India has decided to set up River Boards for some of the inter-State rivers. Mr. Nair felt that these Boards might be able to make objective appraisals of water resources and ensure rational utilisation of maximum benefits. Mr. M. S. Kannamwar, Chief Minister of Maharashtra, who inaugurated the meeting, was not, however, as optimistic as Mr. Nair about the role of River Boards. The Chief Minister expressed the view that it would be difficult even for these Boards to operate effectively, unless some rational principles were laid down for water distribution between riparian States. It is, no doubt, advisable to have general principles governing the distribution of water and power, but the obstinacy of some of the State Governments seems to have stood in the way of evolving such principles. In a climate surcharged with emotion, which is created by interested groups, the voice of engineering experts runs the risk of not being heard at all.

INDONESIAN OIL AGREEMENT

The Indonesian Government, it will be recalled, enacted a controversial piece of legislation in 1960 with the object of making fundamental changes in the law governing oil operations in Indonesia. This legislation has come to be known as the 1960 Nationalisation Law. The precise role of private enterprise under this law has been the subject of negotiations between the three long-established foreign oil companies—Shell, Caltex and Stanvac—and the Indonesian Government. The bone of contention in these negotiations has been the Government's demand for a 60/40 division of profits—after the deduction of costs—expressed in oil in its favour. It has not been possible till recently to work out a satisfactory basis for the agreement between the oil companies and the Government. But the oil imbroglio seems to have been just resolved, thanks to the agreement reached between the companies and the Government last week.

Under this agreement, which formalises the position of the three oil companies in Indonesia under the Nationalisation Law, the present export patterns will not be affected. But the agreement visualises the gradual take-over of distribution facilities and refineries of the three oil companies over a period of time. The major points in the agreement are as follows:—

(i) The companies are to provide oil products at cost to a State-owned oil corporation which will market them domestically.

(ii) All domestic distribution facilities, such as petrol pumps, service stations and trucks, belonging to the companies, will be taken over by the Indonesian authorities within five years.

(iii) Refineries are to be taken over by the Government within 10 to 15 years. If the take-over occurs at the very end of the 15-year period, virtually no compensation will be paid since the facilities will then be amortised.

(iv) The State is not to take over actual production of crude oil. The companies will be free to search for new oil resources and exploit the fields under new contracts.

(v) The companies will no longer be concessionaires but will operate under 20-year contracts. The profits are to be shared in the ratio of 60 per cent for the Indonesian Government and 40 per cent for the companies.

Both the American mission, which participated in the negotiations, and the Indonesian Government seem to be happy over their successful outcome. It fact, President Sukarno has hailed the agreement reached with the oil companies and also thanked President Kennedy of the United States for sending the negotiating team. A representative of one of the oil companies has also hailed the agreement, describing it as one which would be to the mutual advantage of oil companies and Indonesia. It looks as though the probability of American aid being cut off has weighed with the Indonesian authorities and made them reasonable in the negotiations. In a longer-term sense, this agreement may thus work to the good of Indonesia, for the American Government is likely to extend economic aid to that country on a larger scale than hitherto. This is, indeed, a happy augury for the future of Indonesian-American economic relations. The agreement is also bound to help the Indonesian economy directly by giving a fillip to new exploration in a number of areas. It may be noted, in this connection, that the foreign oil companies have not done any exploration in new areas during the last 20 years. The undoubted possibility of a big increase in oil production will thus be of immense benefit to Indonesia.

PUBLICITY FOR HANDICRAFTS

Publicity is not India's *forte*. Instances of missed opportunities and ill-managed publicity campaigns are legion. India has consequently lost much goodwill abroad and its policies are much less appreciated than would otherwise have been the case. This is not because this country lacks first-class publicity men but because most of the publicity work is entrusted to bureaucrats who have little or no training in this highly specialised line.

The position in regard to commercial publicity is no better. If anything, it is worse. The realisation that good commercial publicity has a direct bearing on export promotion has only lately dawned on us. Efforts made in this direction so far, however, are perfunctory. They lack both range and depth. Imaginative and well-directed publicity should form an essential adjunct of export promotion. It is not only goods such as textiles, tea and jute (which meet with stiff competition in international markets) that stand in need of sales promotion. Even handicrafts, curios and handloom textiles, which do not have to face direct competition by virtue of their uniqueness, need publicity to stimulate demand for them. The negligible share of these items in the total export earnings of this country exposes the deficiency in this regard.

Last week Indian handicraft received a rare kind of publicity from an unexpected quarter. The Standard Oil Company of New Jersey, U.S.A., the largest oil company in the world, presented four hundred hand-made Indian brass trays to guests at its Annual Press Dinner held at New York on the 6th inst. Along with the trays an attractive brochure, extolling the virtues of this exquisite Indian art, was also distributed. Every year, it may be noted, Standard Oil holds a dinner for Pressmen at which guests are presented with a memento from the country of one of its foreign affiliates. This year the choice was India, where one of Standard Oil's affiliates, namely, Esso Standard Eastern, operates.

Although this small export earned for this country the equivalent of only Rs. 10,000 in dollars, it gave a big publicity boost to India's handicrafts, in general, and brassware, in particular. This was publicity at its best. Here is a convenient starting point for an imaginative and vigorous publicity campaign for Indian handicrafts. It is to be hoped that the Handicrafts and Handloom Export Corporation would follow up this gratuitous publicity with some of its own. By all accounts, there seems to be a vast potential market for Indian handicrafts in the U.S. and several other foreign countries which could be exploited to India's advantage.

COFFEE INDUSTRY

In just a fortnight from now—on the 30th inst.—the current coffee season will end and the new season (1963-64) will commence on the following day. What are the prospects for the coffee crop in 1963-64? The prospects will be better than in 1962-63, according to Mr. H. Sitarama Reddy, Chairman of the Coffee Board, who spoke at the fifty-sixth meeting of the Board at Bangalore last week. The aggregate yield is estimated at 60,000 metric tons, as against the 52,000 tons plucked in the current season and 47,000 tons in 1961-62. The blossom and backing showers, we are told, have been received in all the coffee growing districts, and the season has been favourable for a good blossom, subsequent set and development of the berries. The rise in production is expected to be accounted for by both Arabica coffee and Robusta; the estimate of the former is placed at 35,150 tons, an increase of 2,150 tons, and that of the latter at 24,800 tons, an increase of 5,800 tons.

While the anticipated improvement in coffee output during the coming season is a matter for satisfaction, it must be pointed out that such an improvement will simply not be of any avail to coffee growers unless the prices realised from sales are reasonable. The basis for the minimum release price of Rs. 2.20 per point is considered to be inadequate fully to cover the all-round increase in cost of production and to leave a decent margin of profit. How also can one expect the coffee growers to put in efforts to maintain maximum production of quality coffee at an economic cost? This is a very pertinent question considering the wide gap that yet remains to be filled to achieve the third Plan production target of 80,000 tons fixed for the year 1965-66. As against this target, the estimated output in the 1963-64 season, corresponding to the fourth year of the Plan, is only 60,000 tons, so that the shortfall to be covered in just one season, that is, 1965-66, is to the tune of as much as 20,000 tons.

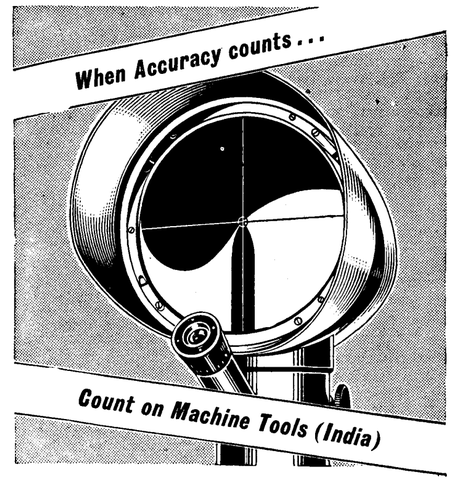
The coffee growers are greatly worried over the downward trend of export prices lately. According to Mr. Sitarama Reddy, the price secured in export sales, which started from an average of Rs. 200.90 per 50 kg. (half a quintal) for Plantation. A coffee earmarked to bilateral countries in the first sale in February last, came down to Rs. 189.57 in the export sale held on 15th May. In the last two sales, most of the coffees earmarked to non-bilateral countries had to be withdrawn due to the low prices offered. The prices for non-quota countries have more or less remained unchanged. The coffee producers attribute this downward tendency in prices partly to the replacement of the system of open auctions by the old and outmoded method of closed bids. Here is what the Chairman of the Savamalai Estates Ltd., Mr. M. L. Gopala Setty, stated when he addressed the last annual meeting of the Company recently:

"I expressed my pleasure at the system of open export auctions when I addressed you last year, but, after operating so successfully, it has now been discontinued on the recommendation of a sub-council for the promotion of trade with West Europe constituted by the Coffee Board Marketing Committee. It is not clear why this has been done. It is said that, by the reversion to sealed tenders, more buyers can participate in the auctions, but it is my feeling that, by abandoning the system of open auctions, we shall see a decline in prices with a consequent fall in return to producers."

This journal has itself repeatedly stressed that it is only under open auctions that quality coffees fetch their own premium. The Coffee Board ought to have given a fair trial to the policy of selling for export in open auctions, instead of hastily reverting to the closed bid system. The Marketing Committee of the Coffee Board has itself recommended, after reviewing the results of export sales from February to April, the reversion to open auction. Mr. Reddy alluded to this recommendation but did not indicate whether it had been accepted, while he revealed that the Committee's suggestion for the issue of a single tender without specifying the destination had been given effect to from the sale held on the 4th inst. The Board will do well to switch over from closed bids to open auctions. After some experience of the open auction system, a refinement, as we mentioned in these columns only two weeks ago, could be added in the way of selling by making available for sale each year coffee known by their estate names or distinguishing marks.

CEYLON'S OIL POLICY

The Government of Ceylon has just taken another far-reaching decision in regard to oil distribution. The decision will involve the take-over of the entire internal distribution of petroleum products in the country by the State-owned Ceylon Petroleum Corporation with effect from 1st January next. Only bunkering and aviation fuels will be handled by the foreign oil companies themselves. The State-owned Corporation, which is handling about 42 per cent of the internal distribution of petroleum products at present, will thus be responsible for the entire oil distribution business within Ceylon. It will be recalled, in this connection, that this Corporation commenced its business in April 1962 with the taking over of about 175 petrol stations from the three foreign oil companies operating in Ceylon, namely, Esso, Caltex and Shell. A dispute, it will be further recalled, has been pending between the companies and the Ceylon Government in the matter of compensation payable for the properties taken over from the former. The Government's present decision is not directly relevant to this pending issue of compensation.



But it seems to have some relevance to the issue of import prices at which the companies are to bring in supplies. A compromise has already been reached on this issue of prices. As a result of the compromise, the oil companies have been assigned a foreign exchange quota equivalent to the share of sales of certain petroleum products at the c.i.f. prices at which the Ceylon Petroleum Corporation has been importing them. This foreign exchange allocation, on the basis of a six months' quota, enables the companies to import petroleum products to the extent possible. The foreign exchange quota, however, has the effect of curtailing the companies' quantum of imports, Whether the Ceylon Government's latest decision to take over the entire internal distribution of petroleum products would further affect the imports by oil companies is not clear at the moment. Nor is it known immediately what attitude the oil companies are going to adopt towards this question. Perhaps, the Government's decision does not represent a final scheme of distribution—final in the context of the curtailment, both present and prospective (?), of the companies' quota of imports. It is possible that further negotiations between the oil companies and the Ceylon Government may take place on this question, as also on the unresolved issue of compensation.

HINDUSTAN LEVER

How Hindustan Lever is managed is the theme of this year's speech of Mr. P. L. Tandon, Chairman of the Company (the full text of the speech is published on pages 1068 and 1069 of this issue) at the latest annual meeting of shareholders held this week in Bombay. This is a subject of considerable interest to the Company's shareholders who might like to have an insight into the technique by which their enterprise is managed. But it has a wider appeal. Hindustan Lever has earned the reputation of being a well-managed concern and the principles and practices followed by it are, therefore, of interest to the general public as well.

The picture Mr. Tandon unfolds is one of a management which is enlighted, dynamic and forward-looking, and which anticipates problems and challenges and prepares itself in

INTERNATIONAL OCEAN EXPEDITION

U. S. WEATHER PLANES TO HELP MAP INDIAN MONSOON

By Dr. Robert H. Simpson

Deputy Director, U.S. Weather Bureau Office of Meteorological Research

FOUR research aircraft of the United States Weather Bureau Research Flight facility are playing an important role in the International Indian Ocean Expedition. These planes and their 37 crew members and researchers normally are stationed in Miami Beach in Florida where they investigate hurricanes, storms, tornadoes and other atmospheric phenomenon. But they have been in Bombay since 30th April doing research on the monsoon in India. They are here as part of United States participation in the International Indian Ocean Expedition. The research aircraft and their teams of scientists will make repeated sorties over the Indian Ocean during the next three months. The data they collect through their highly sensitive instruments will help meteorologists better to probe the mysteries of the monsoons which play so important a part in the economies of countries bordering the Indian Ocean.

Indian meteorologists have for many years been impressed with the importance of the monsoons to the economy of India. Although they have carried out considerable research in the field, they have been seriously handicapped by lack of observations from critical areas in the Arabian Sea and the Bay of Bengal. It is, of course, well known that the onset of the monsoon is geared to the wind circulations in these two oceans. Since there never have been facilities for observing the atmospheric structure and circuits in these two oceans, the physical processes which cause the monsoons have been subjects of hypothesis and speculation which couldn't be verified. Understanding of these processes is necessary to predict the onset of the monsoon. The facilities of the four U.S. Weather Bureau planes will furnish the information necessary to make this possible.

Importance of Monsoons

The importance of monsoons extends far beyond that of local concern to India and her economy. To understand the monsoon is to understand global wind circulation which is closely associated with and may even foreshadow such long-term weather fluctuations as extreme drought, flooding and extremes of temperature in middle altitude around the world. Some of the experiments being carried out by the research aircraft in collaboration with oceanographic vessels of the Indian Ocean Expedition are designed to provide information on processes by which heat flows rapidly to the air on some occasions to form severe storms at sea: tropical cyclones, hurricanes, typhoons, etc. All these, of course, are of paramount interest to the research group of the Weather Bureau which holds the responsibility for warnings of hurricanes and storms.

The fund of information which can be gathered through the collaboration of scientists from many lands will advance man's knowledge of the atmosphere, the oceans, and the interaction between air and sea which is so important to the welfare of people everywhere. The United States is proud to play an important role in this expedition by furnishing these aircraft facilities and the supporting scientific personnel.

The four-long range aircraft can fly from a few hundred feet off the surface to more than 40,000 ft. in the air. Their participation in the Expedition is supported by the U.S. Science Foundation and the U.S. Weather Bureau. The four aircraft include two DC-6 planes which fly up to 23,000 feet and which have a nominal range of 3,000 miles. The W-57 is a converted Canberra jet which flies up to 48,000 feet and has a range of 1,700 miles. The fourth plane is a W-26 converted World War II military craft which flies primarily at lower levels and has a range of 1,700 miles. These aircraft are equipped not only with regular meteorological instruments to measure pressure, temperature and humidity, but also special sensitive instruments to determine the wind direction and measure its speed at flight level, the turbulent character of the atmosphere and the liquid content of the air. Each plane is equipped with long-range radar to detect the presence of rain in clouds and the turbulence which is associated with rain. Each plane also has a Doppler radar which measures the speed and flight characteristics of the plane so that the navigation is automatic and the geographical position of the plane is kept up to date at all times.

In addition to these instruments, the planes carry photographic equipment to take time-lapse pictures of clouds encountered in flight. These pictures are made at the rate of one frame per second so that when developed as regular movies the clouds encountered during an eight-hour flight can be viewed in twenty minutes. All of the meteorological observations made by these probes are recorded on magnetic tape in digital form so that when the plane returns to home base, having made at least one complete observation every second, the entire record of the flight can be printed out by an electronic computer in a matter of minutes. Esso Inc., Bombay, is co-operating with the Expedition by making a 1,401 computer operated by them, available to record the observations taken by the aircraft.

Bombay is especially suitable as a base for the kind of research in which we are engaged. The City has a fine airport, with fine parking facilities for planes. The City is within reach of the crucial areas, and is very conductive to scientific endeavour. It has been gratifying to find Bombay so suitable for our job.

WEATHER SATELLITES

A top U.S. scientist, Dr. Richard W. Porter, has predicted that weather satellites may eventually take over as the exclusive means of forecasting the world's weather. In a summary report of 1962 U.S. space science activities prepared for presentation to the opening 14-nation meeting of the Committee On Space Research (C.O.S.P.R.) at Warsaw in Poland. Dr. Porter, chief U.S. delegate of the meeting, says that there is every expectation that the new information provided by U.S. Tiros satellites "will eventually lead to new and rapid ways of weather analysis and predictions based extensively, if not exclusively, on satellite data." The six Tiros satellites, according to him, have returned 200,000 television pictures of cloud cover, "of which more than 70 per cent were meteorologically significant." This included detection of major tropical storms over the Atlantic, Pacific and Indian oceans. Furthermore, new insight has been gained into the genesis of both major and localised storms.

SURVEY

(Concluded from previous page)

advance for meeting them. The functional set-up of the managerial hierarchy enables problems to be identified quickly and tackled effectively. Hindustan Lever's management is ever aware of its fourfold responsibility to the parent company, the Indian shareholders, the employees and the consumers (community). Its policies and actions seek to reflect this awareness. It also believes in the inevitability and need for changes in policies and operational methods to suit changing circumstances. This is evident from the following words of Mr. Tandon:

"History and purpose therefore define the job of managing Hindustan Lever. The task never remains constant. People and economies are always changing, more so in a developing country like ours. There are constantly arising new leads and pressures, in response to which changes in our organisation are also necessary. These changes are seldom radical, but they must be made as we meet new problems."

It is an article of faith with the management of Hindustan Lever that the Company's future depends on the men and women who make up the organisation. Hence the importance attached to the selection, training and promotion of staff. Every care is taken to see that each individual is given the opportunity to develop his abilities and aptitudes to the fullest extent. For this purpose powers and responsibilities are decentralised and delegated. This also helps to spread the burden of management. Controls are sometimes brought back to the centre in the interest of efficiency. In other words, a judicious balance is struck between centralisation and decentralisation and control and delegation. In all such matters flexibility in approach is a distinguishing feature of the management of Hindustan Lever, efficiency being the ultimate objective.

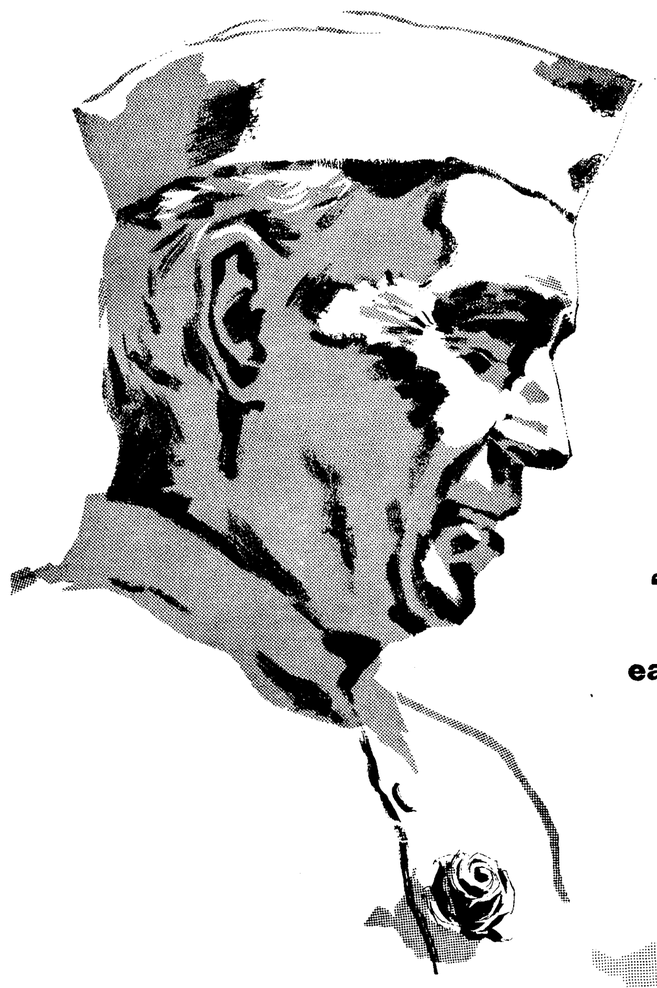
LONDON LETTER

RISE IN RESERVES

STERLING STRONG AT PRESENT

(From Our Own Correspondent)

LONDON, *7th June*



SINCE last July, when a speculative burst against sterling caused a drop in the reserves of over £170 million, the sterling area's gold and convertible currency reserves have remained remarkably stable within a maximum fluctuation of 5 per cent—roughly between £1,000 million at the bottom and £1,050 million at the top. After July 1962 the reserves still dropped slightly but in the autumn rose strongly to a November peak from which they only suffered a modest drop in December, although in that month there were substantial payments to be made on post-war American/Canadian loans. By January the reserves had almost recovered their November level but they then had to face a smaller speculative attack in February and March which cost a net £107 million. From that point, April showed a rise of £12 million and the current figures for May showed a rise of £29 million bringing the reserves back to a peak level for the period under review of £1,046 million.

The published reserves, indeed, recorded a rise of £6 million in March and alone in 1963 the month of February showed a drop of £24 million. It is here that the gold figures need interpretation, for the speculative attack on sterling in February/March was not met by the reserves alone. Nor did the Bank of England go to the International Monetary Fund as it might have been expected to have done. It went instead to the "European Bankers' Club" on the grounds, may be, that since sterling was being converted to European currencies it would not be a bad idea to get the money back again out of the same currencies! (Thus a sum of $250 million was borrowed from the Banking Consortium between February and March; this sum converted to sterling yielded £89 million which, deducted from the gold outflow of £107 million, left only £18 million to be found by the reserves.)

Policy of Stability

Thus, although at the end of 1962 the reserve stood at £1,002 million (at the end of February they were £999 million) and the latest figures show £1,046 million, the apparent increase of £44 million over the year to date is a *real* decrease of £45 million, the difference, of course, being the loan of £89 million from the Central Banks. British banking is highly traditionalist; a great believer in the fetishes of mystical figures. The Bank of England shares with the joint stock banks a deep respect for figures such as the 8 per cent reserve ratio which the joint stock banks must keep in cash against their deposits (before the war it used to be 10 per cent) and other such sums and ratios as seem right and appropriate. Another piece of mystique was the habit of the joint stock banks in forcing the market into the Bank at the year-end in order to reduce their figure of discounts and increase their cash balance with the Bank. One is, therefore, left to wonder whether the Bank has now elevated the sum of £1,000 million as the published gold and convertible currency reserve to the level of a mystical figure. Otherwise, why should not the Bank have paid off the £89 million it borrowed three months ago? Sterling is strong at the present time and, indeed, the European Bankers' recent meeting in Hamburg provided specific proof.

It is reported that there was no talk at all at that meeting of possible devaluation of sterling; there was not a breath of rumours unfavourable to sterling and, on the contrary, the general atmosphere was one of faith in sterling. This may partly have been because of continuing worries about the American Balance of Payments distracting attention from the weakness of the dollar but there is no doubt that the basic reason has been lack of any peg on which to even hang a disadvantageous breath against sterling. Now, the European bankers are more competent than most people to interpret the published figures for gold reserves, so it is not for their benefit that the Bank of England has been aiming at this flattening out of fluctuations in gold reserve movements. It is perhaps for the benefit of operators who are more inclined to take popular symbols as keys to a market movement, as indeed they often are. Whatever the reason, at the moment the Bank does appear to be following a policy of enforced stability.

Opening a research centre recently, our Prime Minister, Jawaharlal Nehru said, "If I were much younger and inclined to do research, I would rather like to do research in the conditions here."

The Prime Minister, a scientist himself, has always advocated the limitless power of research to improve the lot of the common man.

Under his brilliant and dedicated leadership, pure and applied research in India has forged ahead.

In the public sector there are 23 national and regional laboratories, and many other research centres. These work in close collaboration with research units attached to the private sector and the universities. The ultimate aim: "To confer the benefits of science on the man in the street."

"One of the first things we thought of from the early days of independence was...RESEARCH!"

In the field of research, as in many others, we can never repay our debt to Jawaharlal Nehru.

On 12th June 1963, the Prime Minister laid the foundation stone of a new, trail-blazing research project-- THE RUBBER RESEARCH CENTRE sponsored by the MADRAS RUBBER FACTORY. The first of its kind in India, the Centre will work on research towards providing the public with new and quality rubber products.

The Rubber Research Centre is to commemorate the full scale production of Mansfield tyres in record time at the Madras Rubber Factory.

MADRAS RUBBER FACTORY LIMITED

MRF

FINANCES OF LAND MORTGAGE BANKS

INTERNAL RESOURCES POSITION NEEDS TO BE STRENGTHENED

THE Union Finance Minister, Mr. Morarji Desai, inaugurated the thirty-second annual conference of primary land mortgage banks at Madras last week-end. Madras, along with Maharashtra and the Punjab, is one of the pioneer States in the co-operative movement in our country and the Finance Minister might have thought that the occasion required his presence. Far-reaching changes are taking place in the sphere of long-term agricultural credit and the Finance Minister did well to focus attention on these changes. Mr. Desai advised the land mortgage banks to increase their own resources (share capital and deposits). Unless they did so, they could not, he made it clear, advance much further in the useful work they were doing. He did, of course, admit that co-operative institutions would not be able to depend on their own resources for all their activities, but he stressed that, "depending on finances from other agencies alone might prove disastrous and would not make the movement as strong and virile as it should be." He also emphasised that the loans given to recipients should be used for productive purposes. Incidentally, he called upon the land mortgage banks to reduce their operation expenses. Mr. Desai referred to the two steps taken recently by the Government to accelerate the progress of long-term finance for agriculture, namely, establishment of the Agricultural Refinance Corporation and the decision of the Life Insurance Corporation to subscribe 30 per cent of the land mortgage banks' debentures for the next three years with a ceiling of Rs. 6 crores per annum. The Agricultural Refinance Corporation is expected to start functioning from August or September next. The Corporation is expected to provide finance for a longer period than the land mortgage banks, but it is not intended to build up the banks' resources.

Presiding over the Conference, Mr. N. S. Ramalingam revealed that the land mortgage banks had decided that, with effect from the current year, 70 per cent of loans should be for productive purposes and that only the balance of 30 per cent had to be used for the discharge of prior debts. The disbursements last year amounted to Rs. 2.8 crores, of which as much as 60 per cent was spent on productive purposes. An important suggestion made by him was that the land mortgage banks should be given representation on the Investment Committee of the L.I.C. He suggested that the Reserve Bank policy must be liberalised in favour of land mortgage banks. A change in the pattern of building up sinking funds, Mr. Ramalingam said, seemed necessary and the Reserve Bank should re-examine the question.

Progress of L. M. Banks

Before examining the various points of view put forward at the Conference, it is desirable to take a peep into the progress of land mortgage banking. Land mortgage banking has come into greater prominence in our country since the beginning of the first Five-year Plan. The emphasis in the first and second Plans was more on the building up of short-term credit structure for financing agriculture, and relatively less stress was placed on long-term finance. With the shortages in agricultural sector becoming prominent, provision of long-term finance for agricultural operations has been receiving more importance lately. The outstanding loans of land mortgage banks, which amounted to just Rs. 13 crores in the first Plan, rose to Rs. 38 crores at the end of the second Plan, and they are expected to touch Rs. 150 crores or increase nearly five times by the end of the third Plan.

Debentures account for over three-fourths of the working capital and constitute the most important source of finance for land mortgage banks. The outstanding debentures were of the order of Rs. 37-38 crores at the end of 1961; they have now increased to Rs. 50 crores and are expected to go up during 1963-64 by Rs. 29.5 crores, an amount which is higher than the maximum for any previous year. Thus the land mortgage banks have been receiving good encouragement. It is against this background that the various remarks made by the Finance Minister as well as the President of the Conference require to be viewed.

An important question that requires clarification in this connection relates to the relative roles of land mortgage banks and the Agricultural Refinance Corporation. The intention of the Government in setting up the Corporation is to supply finance on a much bigger scale and for longer periods tailored specially to suit individual projects. The land mortgage banks are lending small amounts for a maximum period of 15 years—there is a ceiling for lending of individual amounts in various States—and insist upon starting immediate repayment. It has been realised that certain projects like canal digging for irrigation, experimentation with new crops and cattle breeding, and agricultural operations like plantations, require finance with a longer gestation period. Between the receipt of loan and its first repayment, a period of four to five years might easily elapse. The resources for the Agricultural Refinance Corporation are expected to come from the P.L. 480 funds now lying with the Reserve Bank. The Corporation intends to utilise the technical facilities available with the State Governments for assessing the financial feasibility of various projects. The actual set up, the precise procedures which govern the granting of loans, and the actual relationship between the Corporation and the land mortgage banks are yet to be worked out. It is, however, clear that the object is to make the Corporation function in a complementary way with that of the land mortgage banks, so that no aspect of agricultural credit is left uncovered.

Will the provision of agricultural credit by itself increase food production? It has been our experience that, in spite of the massive pumping of money into agricultural sector since the commencement of the first Plan, agricultural production has been increasing only by fits and starts. The mechanism through which finance is being routed is lacking adequate strength, with the result that it is giving rise to abuses. One is glad to note that the Reserve Bank authorities are aware of the need to strengthen the mechanism from down below. The hope is that State participation at different levels would give necessary strength to the mechanism. Unfortunately, the experiment has been taking a long time to yield results, in view of the mixing up of politics with co-operation.

Building up Resources

It is recognised by all that land mortgage banks should build up their own internal resources. The Finance Minister has struck the right note in this regard. The Standing Committee of the All-India Co-operative Central Land Mortgage Banks suggested the collection of larger share capital from the borrowing members on the following basis in order to augment internal resources:

Loans	*Per cent of borrowings*
Up to Rs. 1,000	5
From Rs. 1,001-5,000	7½
Over Rs. 5,000	10

In the context of deficit in savings in the rural sector and a variety of demands on available savings, the possibility of obtaining deposits from the public seems rather limited. The contribution to share capital from the State Governments appears to be likewise limited, in view of the difficult financial position of these Governments. This, therefore, leaves the only other possible source, namely, share capital contribution from borrowers.

Since the long-term loans issued by land mortgage banks are secured by mortgages on land, the success and development of banks depend on the free mortgageability of the land. The land reforms legislation passed in the various States contain certain provisions which seriously affect the free transferability of land. Under the Bombay Tenancy and Agricultural Lands Act, the tenant becomes a full owner only after paying the last instalment of the purchase price. The tenants purchasing land cannot also transfer their lands even after the purchase is complete without the previous permission of the Collector. During the period the purchase price is paid in instalments, the tenant owners do not have a clear title to land. The principal effect of tenancy reform legislation in Maharashtra is thus the exclusion of a large body of tenant owners from the purview of land mortgage banks. The Andhra Pradesh Ceiling on Agricultural Holdings Bill does not provide for conferring the right to mortgage their rights in land on the new class of purchaser-tenants in the Telengana area. Again, the transfer of lands beyond the ceiling would be invalid and land mortgage banks would have naturally to exclude the portion of land belonging to a person in excess of ceiling for the purpose of granting loans. Thus, a number of problems affecting the working of land mortgage banks would arise in respect of their outstanding loans and in respect of future business. The Technical Committee on Land Mortgage Banks examined this question and suggested that the State Governments should give a definite guarantee to land mortgage banks to make good any losses sustained by them due to land reforms. Mortgages executed in favour of a land mortgage bank should get priority in the settlement of debts and the tenants in the process of becoming owners be given unfettered right to mortgage their ownership to a co-operative society, etc. The Standing Committee on Agricultural Credit also endorsed these recommendations.

Stress on Land Improvement

There has been a suggestion that all *taccavi* loans should be routed through co-operatives. The Saurashtra Government adopted the policy of entrusting the work entirely to land mortgage banks as early as in April 1955. In Maharashtra, the Government subsidises the central land mortgage banks to give loans for digging wells, etc., at the same rate of interest at which loans for similar purposes are given by the Government. These are healthy trends to strengthen the land mortgage banking structure. In course of time, the objective of these measures is to promote co-ordination among the various agencies providing long-term finance for agriculture. In recent years, emphasis on the grant of loans is being shifted, as the President of the Conference revealed, from redemption of prior debts to improvement of land.

It is, however, somewhat difficult to support the suggestion of Mr. Ramalingam that land mortgage banks should be given representation on the L.I.C. The L.I.C. is a semi-Government body and there is adequate liaison in financial matters between the Reserve Bank, the L.I.C. and the Government of India. To elevate a particular recipient of benefit to the Board of the L.I.C. might result in demands from various housing agencies receiving L.I.C. assistance demanding representation on the L.I.C. Board. The other suggestion, that pertaining to the pattern of building up of sinking funds, requires careful study by the Reserve Bank, because the borrowing powers of land mortgage banks are now linked to balances in the sinking fund plus the outstanding demand for loans against mortgages. Any concrete suggestions which build up sinking funds without jeopardising the repayment of debenture instalments would strengthen the structure of land mortgage banks. The question of reducing the cost of loans is bound up with reduction of intermediaries between the creditor (Reserve Bank) and the final debtor.

It is evident from the foregoing brief review that the scope for land mortgage banks building up their own resources is severely circumscribed by the lack of saving capacity in the agricultural sector and the uncertainties connected with land reforms in the various States. They have, therefore, to depend for a long time to come on Governmental assistance obtained through subscription to debenture issues.

WORLD BANK LOAN TO COLOMBIA

The World Bank has made a loan of $8.8 million for the continuing development of electric power in the Cauca Valley of Colombia. The loan will help finance the addition of 60,000 kilowatts of generating capacity, the extension of the transmission system to Buenaventura, Colombia's main Pacific port, the expansion of the distribution system in Cali, and new machinery to mine coal for the system's thermal plant. Four commercial banks are participating in the loan, without the World Bank's guarantee, for a total amount of $400,000 representing the first two maturities and part of the third maturity which fall due between February 1966 and February 1967. The participating banks are The Bank of California, San Francisco; Wells Fargo Bank, San Francisco; the New York Agency of the Royal Bank of Canada; and the first Pennsylvania Banking and Trust Company, Philadelphia. The total cost of the project is estimated at $11.2 million. The Bank's loan will cover the foreign exchange requirements and part of the local currency costs of engineering; the remaining costs will be met from CVC/CHIDRAL's own resources. The generating units have been procured through international competitive bidding and all other major equipment will be obtained on the same basis.

The Bank loan is for a term of 20 years and bears interest at the rate of 5¼ per cent per annum, including the 1 per cent commission which is allocated to the Bank's Special Reserve. Amortisation will begin in February 1966. The loan is guaranteed by the Republic of Colombia. This is the Bank's twenty-first loan to Colombia, bringing the total lent to this country to $278.9 million.

U.N. CONFERENCE ON TRADE AND DEVELOPMENT

CONSTRUCTIVE PROGRAMME OF ACTION WANTED

By Jiri Ryska

[The preparatory meetings for next year's U.N. Trade and Development Conference are now being held at Geneva. Thirty-two nations are represented at these meetings. The developing countries, some of which are communist, are hoping that the forthcoming U.N. Conference will assist them to find markets for their produce. In this context the following article by a Czechoslovak writer presents one possible approach to the question.]

A CURSORY glance at the first draft of the programme of the United Nations Conference on Trade and Development (scheduled to be held sometime next year) enables one to realise the scope of unsolved issues in world economic relations, the impossibility to settle them in a hapazard manner, by the free interplay of market forces. It also reveals the paradox that, while, in other spheres of human endeavour, a high degree of international co-operation has frequently been achieved, the sphere of the economy, which affects the most basic needs of mankind, its living and social standard, shows major gaps in co-operation between individual countries. The establishment of a socialist world system and the disintegration of the colonial system underlined the requirements of rapid and comprehensive economic expansion. Questions of the rate of growth have also become prominent in the theory and practice of industrial capitalist countries. In the international division of labour, countries which have entered on the path of an independent political and economic life are seeking a fairer and more advantageous position. The economic potential of socialist countries is at the same time steadily increasing. Their share in world output has already reached 37 per cent and will reach one-half of the world's industrial production in the near future.

Specialisation of production and international division of labour have already now reached such a degree that virtually no country in the world is capable of ensuring a rapid and effective expansion of its economy merely through its own resources. Different countries enter the world market with different criteria and aims. The idea has cropped up several times at the first session of the Preparatory Committee of the United Nations Conference on Trade and Development that certain principles of economic relations between countries should be formulated and that these principles would in practice respect the sovereignty and national interests of all countries.

Two Conflicting Views

In considering the agenda of the Conference, two conflicting views are usually put forward as to the aim of the Conference. Those countries which are interested in maintaining their positions of power attempt to narrow as far as possible the range of problems to be dealt with by the Conference to a close circle of practical obstacles which impede the expansion of trade of developing countries. Against this, the socialist countries, together with numerous developing countries, are striving for a broad conception of the Conference which would embrace all major problems of world trade in their broad ramifications and create the conditions for their solution both from the point of view of immediate needs as well as from the long-range viewpoint. To this effect, the Brazilian memorandum and its convincing arguments are remarkable for their scientific conception and for the logic and concreteness of their conclusions.

The approved draft agenda of the Conference represents a compromise between both attitudes. It contains a broadly conceived introductory part which should make it possible to review further specific problems in their broader ramifications. By following this approach, the Conference could consider the perspectives of disarmament, of the de-colonisation of the economy and of the gradual normalisation of international trade. The Conference could thus outline the prospect of a gradual elimination of discrimination from normal economic relations between countries. These are highly topical questions. The policy of economic aggression and pressure has of late been revived as the world witnessed in the case of the economic blockade against Cuba or in the case of the N.A.T.O. embargo on the export of oil pipes to socialist countries. These symptoms have once more seriously harmed trust in the normalisation of economic relations between countries. Socialist countries have reached in their development the stage when their economy can, to a major extent, take advantage of international trade. Such an orientation, however, requires the existence of a necessary atmosphere of assurance that trade is going to develop normally, that socialist countries are going to be able to import what they need and that discriminatory practices are not going to prevent them from earning the means to pay for their imports.

The problems of economic development and expansion of trade of the less developed countries have an undoubted priority on the agenda of the Conference. After all, they represent the most serious disproportions in the world economy and trade, and it is, moreover, becoming apparent that the present haphazard marketing system is further deepening these disproportions. The result is that the share of the less developed countries in world trade is declining and that the conditions under which these countries trade are deteriorating. For instance, the less developed countries receive in return for their products steadily fewer goods in the form of their imports.

The Solutions

The Cairo Conference of uncommitted countries emphasised the rule of the home resources and domestic strength of each individual country in economic expansion. It underlined the necessity to maintain the newly won independence and to strengthen it by building firm economic foundations. It rejected political conditions attached to the granting of aid and supported the demand for equality in international economic relations, particularly in international trade. The implementation of these demands cannot be easily pressed in institutions which were set up under a different balance of power in the world and whose mechanism, despite the facade of noble preambles, is in its substance conservative and geared to the defence of formerly gained positions. The forthcoming Conference should, therefore, concentrate on the solution of the following three major issues:

1. Finding ways and means of stepping up the exports of the economically less developed countries and methods of protecting these exports from undesirable swings;

2. finding ways and means of fully normalising trade between countries with different systems and of fully exploiting all opportunities for promoting trade between them; and

3. solving problems created for world trade by the setting up of integration groupings which overlook the interests of third countries and which place serious obstacles to their trade.

It is obvious that these problems can no longer be solved merely by so-called free trade based in substance on "equal conditions for unequal partners" and enabling, therefore, the strongest to expand. The necessity for purposeful actions, whether in the national policy of individual countries or in joint schemes, comes to the fore more than at other occasions. Socialist countries can, in view of their planned system, purposefully adapt themselves to the changes which have become historically inevitable, and they are not tied down by private vested interests. They can seek efficient forms of specialisation which are in their own interest and which simultaneously aid the economic expansion of less developed countries. It must, however, be also said that socialist countries cannot take it upon themselves to rectify the historical deformations caused by colonialism but rather to help in speeding up the process which is gradually eliminating this injustice.

Three Stages

The forthcoming Conference should proceed in roughly the following three stages:

First of all to determine the main problems and discuss ways and means of their solution;

secondly, to carry these problems forward to practical and operational conclusions; and

thirdly, to outline specific programmes of how to implement these conclusions within the framework of the economic policy of each individual country as well as by joint actions of all or of certain countries involved.

Such a procedure would enable the Conference to avoid the danger of dissipating its energies in academic discussions and general declarations of good intentions. The way would thus be open for outlining a constructive programme of practical action. The forthcoming Conference should logically result in the setting up of a mechanism which would make possible a systematic confrontation and co-ordination of the trade policies of all countries.

COTTON AND COMPETING FIBRES

LONG-TERM TRENDS FAVOUR THE LATTER?

THE contrast between the performance of cotton and other textile fibres in world apparel fibre consumption in 1962 has been particularly striking. Thus while consumption of rayon and other synthetic fibres continued to rise even at an accelerated rate, consumption of cotton declined. On a world basis, consumption of all textile fibres (cotton, wool, rayon and other synthetic fibres) increased at a slightly higher rate in 1962, as compared with the previous year, while cotton consumption declined to its lowest level since 1959. The following table gives the relative shares of cotton, wool and man-made fibres in world fibre consumption during the decade 1952 to 1962:

World Consumption of Cotton, Wool and Man-made Fibres
(In '000 metric tons)

Calendar year	Cotton	Wool	Rayon: Filament yarn	Rayon: Staple	Other man-made fibres
1952	7,670	1,088	831	773	151
	(73.0)	(10.3)	(7.9)	(7.4)	(1.4)
1953	8,221	1,220	947	930	184
	(71.5)	(10.6)	(8.2)	(8.1)	(1.6)
1954	8,534	1,182	926	1,115	225
	(71.2)	(9.9)	(7.7)	(9.3)	(1.9)
1955	8,728	1,226	1,047	1,237	302
	(69.6)	(9.8)	(8.3)	(9.9)	(2.4)
1956	9,061	1,322	1,021	1,262	356
	(69.1)	(10.0)	(7.8)	(10.4)	(2.7)
1957	9,396	1,360	1,057	1,421	467

N.B.—The figures in brackets relate to percentages.

It is evident from the following table that cotton's share of the total has declined from 73 per cent in 1952 to 65.3 per cent in 1962. The decline was accelerated in the past few years, with the share declining from 70 per cent to 65 per cent in just five years, 1958-62, and the long-term trend continued to be downward. By contrast, consumption of man-made fibres steadily increased. Rayon consumption registered the sharpest increase for several years, by as much as six per cent over the 1961 record. The increase in consumption of synthetics is estimated at 28 per cent, the largest percentage gain in the history of these fibres.

Concept of Utility Poundage

In terms of actual weight, total consumption of man-made fibres now amounts to about four million metric tons per year or over one-quarter of the total market for the textile fibres. If the concept of utility poundage is considered, then the relative importance of these fibres, particularly the synthetics, is greatly increased.

In its extreme form, according to the International Cotton Advisory Committee, the seriousness of cotton's present competitive status *vis-a-vis* the other fibres is best demonstrated in the recent experience of the United States. In the late 1950's and early in 1960, cotton was making competitive gains against rayon. In the last two years, according to a report presented to the recent meeting of the National Cotton Council, "rayon has moved into cotton's markets at a most alarming rate." There has been a straight competitive loss of more than 400,000 bales to this one fibre on just the cotton type of spindle. In addition, there has been a loss of about 300,000 bales to the non-cellulosic fibres. Last year, consumption of all man-made fibres on the cotton system rose from an annual rate of 1.5 million equivalent bales to nearly 1.9 million bales. By contrast, cotton consumption went down from an annual rate of 9.5 million bales in December 1961 to 8.3 million in December 1962.

Cotton in W. Europe

In Western Europe, cotton consumption declined by nearly four per cent last year while consumption of rayon and the synthetic fibres rose by nearly five per cent and eight per cent, respectively, and were in both instances at record high levels. According to the latest available figures, aggregate production of man-made fibres for the O.E.C.D. and Finland increased by about 12 per cent, as compared with about 22 per cent for the United States. The most marked increases were in Spain, Italy and the Federal Republic of Germany, but impressive gains were also evident in other countries. The total production of man-made fibres in Japan was held down by lower production of rayon and acetate staple fibre and filament but there was continuing advance in the output of synthetic fibres.

The dwindling share of cotton in world fibre consumption and methods to improve its competitive position were discussed at the recent plenary meeting of the I.C.A.C. Delegates from many countries expressed concern at the setback suffered by cotton and the corresponding gain made by other fibres. The Committee recognised that competitive price and quality were very important factors determining the future of cotton, but promotion, it conceded, had a vital role to play in expanding the overall demand for cotton. It found the promotional efforts so far undertaken wholly inadequate and suggested that producers of cotton should be encouraged to take a more active part in cotton promotion. Whatever the role of producers and manufacturers in promotion, it is clear that the total effort would have to be considerably enlarged if cotton is to hold its own against competition from man-made fibres.

INTERNATIONAL WOOL TEXTILE CONFERENCE

The 32nd annual conference of the International Wool Textile Organisation was held in Palma, Majorca, from 27th May to 1st June 1963, at the invitation of the Spanish members of the I.W.T.O. It was attended by representatives of all sections of the non-Communist wool processing industry.

Mr. William J. Vines, Managing Director of the International Wool Secretariat and a vice-president of the I.W.T.O. this year, reviewed the work of the Organisation.

This year's conference dealt with a wide range of economic, commercial and technical subjects affecting wool textiles. The delegations discussed wool textile advances and technological developments as well as their own statistics and trade needs.

Mr. Renato Lombardi, of Italy, in his presidential address lent support for a reduction of world trade barriers. He said that the organisation had always been opposed to the "distortion of international trade either by high trade barriers or by subsidies and other unfair practices. In the United States, about one-quarter of the duty on wool cloth was due to raw wool duties which were supposed to protect the American woolgrower but which, over the years, "have provided the protection under which man-made fibres have grown to their present proportions, "depressing per capita consumption of wool to 2.4 lb., compared with 6 lb. in Switzerland, 5.3 lbs. in Britain, 3.1 lb. in Canada and 3.3 lb. in Australia. It was also surprising that the Japanese industry should need high protection.

Mr. Lombardi said that the wool textile industry had participated in the "remarkable achievement" of increasing productivity to offset increased labour costs since the war. It would take the greatest interest in technical improvements in machinery and in ways of giving wool better performance qualities.

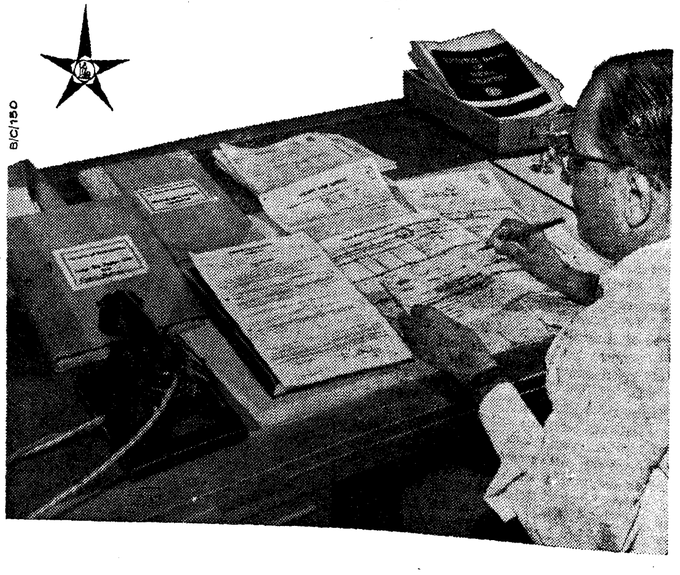
The "certain prospect" of a continuing fall the price of synthetic fibres was the main problem for the wool industry, according to Mr. William J. Vines, Managing Director of the International Wool Secretariat. He said that the I.W.S. had been working on a five-year plan, defining the specific problems wool faced in the future and observed:

"We believe that, given a peaceful future, there will be an ever-expanding market for quality wool products, and therefore for wool itself, in a world in which living standards are constantly improving and populations increasing rapidly. On the other hand, we have to face the certain prospect of a continuing decline in the selling prices of the synthetic fibres which are capable of being directly substituted for wool."

This would come about, in his opinion, as a natural consequence of a greatly increased volume of sales, reduced manufacturing costs and "the intensification of the battle between the chemical giants" for a share in an expanding market.

"Our great problem in the future," Mr. Vines added, "is to establish consumer demand for pure wool products at a level which will ensure that the textile and carpet industries are able to pay economic prices to the growers for wool."

Mr. Vines said that a very important part of the five-year plan was the development of a series of internationally related national trade marks for use in pure wool products of excellent performance and quality. Preparatory work to develop standards of purity of fibre content and performance was well advanced. The trade marks for wool would be promoted heavily and continuously, in addition to existing I.W.S. campaigns.



He believed that it was in the interests of wool processors, as much as of the growers, that wool prices should be maintained at levels high enough to encourage the greater production of the fibre. These prices would be higher than those for substitute fibres.

We can help EXPORTERS to expand their business by providing pre-shipment finance. We can advise EXPORTERS of trade enquiries, put them in touch with foreign buyers, and obtain credit information and status reports on foreign buyers. We can give to EXPORTERS effective Letters of Introduction on our Foreign Branch Managers and Correspondents, provide them with Travellers' Cheques, Foreign Currency Notes, and Letters of Credit—when they travel. We can collect and negotiate for EXPORTERS all types of foreign bills; give Excise guarantees where necessary and guarantees under Export Promotion Schemes; and buy various foreign currencies, at the finest rates, both "spot" and "forward". We can advise EXPORTERS on matters concerning import restrictions, duties, etc. in foreign countries. With our 14 branches overseas and correspondents in almost all parts of the world, we are well equipped to handle FOREIGN EXCHANGE BUSINESS of any description.

TEXTILE SITUATION IMPROVING

CLOSER INTEGRATION OF SECTIONS URGED

From Our Special Correspondent

MANCHESTER, 4th June

CONFIRMING the rather better trend now being encountered in many sections of the Lancashire cotton textile industry, Mr. H. Bannister, Chairman of Bannisters of Trawden Ltd., reports much greater activity at all the Company's mills and an order book well in excess of last year at this time. "We are certainly not discouraged as to the future," he says in his annual report. Margins still remain too fine, he adds, and consistent effort is required to keep the order book in a healthy state, but the group is able to start the current year stronger than ever before. Capital expenditure of £71,654 was incurred last year and modernisation of the spinning mill has commenced. Initial trials on the new machinery, reports Mr. Bannister, are most encouraging. A 5,000-square-foot extension to the sample unit has also been started and additions to the dye house and preparation departments will be carried out during the current year.

MANCHESTER LETTER

Main reason for the lack of business over the past 12 months was over-production in the preceding period, coupled with increased imports and a certain amount of general national under employment. Mr. Bannister points out that this probably affects the textile industry greater than ever before, as so many average families in the country are now committed to a very high weekly instalment payment of hire-purchase, so that they cannot afford when their income is reduced to purchase the extra garments they would normally acquire. The Company, with confidence in the future, had bought and would continue to buy the best and most efficient machinery, but he warned that because of the cost of this plant the outlay can only be effectively recovered by maximum utilisation.

Cotton Unions Demand Import Pledge

Lancashire cotton union officials have decided to ask for further talks with the Home Policy Committee of the Labour Party, which is preparing a policy statement on the industry. Union leaders will argue the case for the setting up of a Cotton Imports Board to control imports of cheap cottons, and for European countries to share the burden of low-cost textile goods. Last month a six-man team of Lancashire union officials met the Committee to discuss what the policy of a future Labour Government should be towards the industry.

Union Man Backs Mergers

Appeals for closer integration of the various sections of the Lancashire textile industry to achieve greater efficiency have been supported by a cotton trade union leader. Mr. James W. Whitworth, General Secretary of the Operative Spinners Amalgamation, said that unless there was an early integration of producers, merchants and distributors, "the greater will be the deterioration of the living standards of those engaged in the industry."

Referring to the extension of shift working in Lancashire, Mr. Whitworth said in his quarterly report that the unions had "gone further than is considered reasonable." "It is in the minds of some of the employers that it should be automatically accepted that the full 24 hours a day should be covered by shift working," he said. "Why employees in the cotton industry should be expected to work the clock round because of the use of more modern machinery, whilst very few other industries do, equally with modern and expensive machinery, we cannot quite understand." Over 60 per cent of the cotton industry's labour force were women. When they were employed on double-day shifts these women were working until 10 p.m. "This seems to us to be an extremely unreasonable imposition," said Mr. Whitworth.

Fibre Demand

A continued demand for man-made fibres in world export markets and an improved trend in the home market are reported by the Manchester-based British Man-Made Fibres Federation. Latest output figures for April show that British factories produced 57,600,000 lbs. compared with 46,570,000 lbs. in the same month last year.

The Federation says that production was running at a high level in April, although not as high as the record monthly output of 60,460,000 lbs. achieved in March—a thirty-one-day month. In the first four months of the year, total output reached 229,650,000 lbs., as against 227,250,000 lbs. in the previous period, and 193,240,000 lbs. for the same months last year.

Princess Margaret's Visit to Lancashire

At the start of a two-day visit to Lancashire, Princess Margaret opened a new £450,000 chemistry and finishing building at Shirley Institute, Manchester, the internationally-known headquarters of the Cotton, Silk and Man-Made Fibres Research Association. In a tribute to the research work done at the institute, she said: "We must apply the results of technical development very quickly and match them with an awareness of modern trends in both design and colour so that the result is not only practical but desirable. This can only be done by the technologist and the designer working closely together."

Sir Cuthbert Clegg, President of the Association, said that the Lancashire textile industry had been passing through a severe and testing time and some people might believe the industry had lost confidence in itself. On the contrary, the opening of the new building demonstrated that the industry had every confidence in the future and was determined by every endeavour to restore its fortunes.

The Princess accepted souvenirs of her visit symbolising the three main groups of textile fibres on which research is carried out at the institute—cotton, silk and man-made fibres. The new chemistry and finishing building is the final stage in a development programme which began 41 years ago when the Princess's father, then Duke of York, opened the first laboratories at Shirley Institute.

WORLD WOOL POSITION

A paper read at the International Wool Textile Organisation's annual conference held recently at Palma (Majorca), gave interesting figures relating to the industry. World sheep (woolled) numbers, according to the paper, show a total of 920 million for 1961-62, one per cent more than in the previous year. Australia, the world's biggest wool producer, has 158 million sheep, 20 million more than in the Soviet Union. Next is China with 57 million, followed by New Zealand 49 million, Argentina 46 million, India 40 million, South Africa 34 million, Turkey 33 million, the U.S. 31 million and Britain 30 million. In non-Communist countries, there were 680 million sheep, as compared with 240 million in the Communist States. Biggest increase in the past ten years has been in Russia where sheep numbers have almost doubled.

Production figures show a near-record at 4,500 million lbs. in the non-Communist countries and 1,150 million lbs. in the Communist countries.

Britain continues to buy more wool than any other country. In 1962, it consumed 448 million lbs., 56 million lbs. more than the U.S. The third biggest consumer last year was Japan with 297 million lbs., closely followed by France. The world consumption aggregated 3,295 million lbs. (clean weight), much the same as that in the record year of 1961. In the non-Communist countries, it was 2,500 million lbs. and 780 million lbs. in the Sino-Soviet bloc. The Common Market remains heavily dependent on the outside world for one major commodity at least—wool. The six Common Market members used about 770 million lbs. (clean weight) of wool in 1962. Their production totals only about nine per cent of their needs.

talking about banks

There is more in banking with the STATE BANK OF INDIA than the mere possession of a bank account—first class service, security and safety and ability to obtain friendly and helpful advice and information when required.

The wide experience of the State Bank is at the disposal of the customers whether their accounts be large or small. The State Bank can be of assistance to your business and its problems. If the business covers a small-scale industry, you will find special attitudes aimed at earnest desire to help. In the co-operative sector too, the Bank has similar attitudes with schemes offering special facilities. Every kind of foreign exchange business is transacted. Why not contact the nearest office?

SIGTAS 68-56-A

I.S.M.A. PRESIDENT ON SUGAR PROBLEMS

PLEA FOR HIGHER CANE PRICES UNJUSTIFIED

THE new President of the Indian Sugar Mills Association, Mr. G. M. Mody, has reiterated the suggestion for an upward revision in cane prices which his predecessor, Mr. M. N. Pittie, put forward in his speech at the last annual meeting of the I.S.M.A. held at New Delhi a month ago. Unlike Mr. Pittie who did not indicate the extent of the possible increase, Mr. Mody has urged the raising of cane price by more than 24 per cent from the very start of the ensuing crushing season due to commence on 1st November next. Speaking to Pressmen at New Delhi on Friday last week, Mr. Mody said that the only way of attracting cane was by paying higher prices by the factories and this was possible only if factories could pay, from the start, *not less than Rs. 2 per maund* (italics ours), as against Rs. 1.62 now paid. In support of his plea, he said: "In the past, legislative measures were enforced under which cultivators were compelled to sell their cane to sugar factories. Such measures lead to strained relations between the industry and the cultivators."

The open plea of Mr. Mody for a straight increase of 38 nP per maund of cane is, to say the least, astounding. Mr. Mody ought to know that, as it is, the incidence of cane cost in sugar (white) manufacture is pretty heavy, being as much as three-fourths of the total production cost. The incidence will be heavier still, if the price of cane is enhanced further. Only recently, the Central Government announced that, for the coming season, the minimum price of Re. 1.62 per maund would have to be paid for cane with a recovery of 9.4 per cent, instead of 9.8 per cent as had been fixed earlier. If Mr. Mody's plea were conceded, the minimum price per maund of cane with a sucrose content of just 9.4 per cent would be Rs. 2 which, under the sliding scale of discount or premium depending on the certified recovery of the factory, will work out to Rs. 2.09 per maund of cane with 10 per cent recovery, as against Re. 1.44 fixed for the seasons prior to 1959-60. The consolation, however, is that Mr. Mody has not pleaded for a corresponding increase in sugar price, for which the consumers will doubtless be thankful to him. For he wants the Government to allow, as a compensation to sugar mills paying higher cane prices, appropriate concessions in excise duty and cane cess. Instead of pleading for enhanced cane price, the I.S.M.A. President could have easily urged for the grant of a rebate of a part of the excise duty on the sugar produced in excess of the average of the peak outputs touched in any two previous seasons.

Diversion of Cane Supplies

The anxiety of Mr. Mody to ensure sufficient cane supplies to mills, so that sugar production could be maintained at a high level in the coming season, is, of course, understandable. But the point is that, even without a further increase in cane prices, such supplies could be ensured. The sowing of the cane crop has already been completed and the next season's crop, as Mr. Mody has himself admitted, is expected to be normal and satisfactory. The sugar mills may not, therefore, find it difficult to secure sufficient cane supplies, provided the State Governments take proper steps to check large-scale diversion of cane supplies to *gur* and *khandsari* production. What these steps can be has been indicated by the U.P. Branch of the Indian Sugar Mills Association.

The system of area reservation, cane supply and cane cultivation, according to the U.P. Branch of the I.S.M.A., needs a radical revision, if the recurrence of surplus and short-season is to be avoided. It is suggested that the U.P. Sugarcane Act and Rules should be brought in line with the Punjab Government Order which recently banned the manufacture of *gur* by power-driven mills with a view to stopping the diversion of cane meant for factories. In addition to these measures, control on the movement of *gur* wagons has been suggested, as the absence of this is bound to raise *gur* price. As crushers are subject to a nominal excise duty, the result is keen competition for cane supplies. Besides, they also pay a lower price in the beginning and raise it gradually to compete with the statutory minimum price. The I.S.M.A. feels that, in pursuance of Rule 92-B of the Central Excise Rules, 1944, the Union Government should issue orders fixing the rate of excise duty at 10.69 nP per maund of *khandsari* sugar produced within the reserved area of a factory and ten miles therefrom, and in the manufacture of which sulphitation process is used.

The measures suggested above, together with constant vigilance to see that the prices of sugar substitutes are held within reasonable limits, and continuation of the ban on forward trading in *gur*, will certainly prove effective in averting large-scale diversion of cane supplies to *gur-khandsari* manufacture. The I.S.M.A. President has done well to stress the need for some control on the movement of *gur* and *khandsari* from one State to another. "Unless such control were imposed," to quote him, "the market might fall in the hands of speculators, as is happening these days, with the price of *khandsari* unrealistically raised at every opportunity." The official decision on these measures must be taken well before the coming crushing season begins and not postponed to a later date. For, as Mr. Mody pointed out, on account of the high prices of *khandsari* this year, power crushers and *gur* producers will start crushing early in October, while the sugar mills will not find it possible to commence crushing before the cane gets partly matured so as to give an yield of at least eight per cent. By the time the sugar factories commence crushing operations, quite a bit of the cane in Northern India will have been converted into *gur* and *khandsari*. Similarly, when the cane gets fully matured, that is, some time in the third week of February, the power crushers will be able to pay higher prices for cane, even as high as Rs. 2.50 per maund, as against the Rs. 1.62 for cane with recovery of just 9.4 per cent that the factories will be paying. In the circumstances, while the cane will remain standing around the factories, it will not be available to the factories for crushing and they will be bound to close down by the end of February. If this was going to be repeated, Mr. Mody warned, it would lead to a fall in production.

Cane Development Scheme

The I.S.M.A. President made a special reference to the new scheme of intensive cane cultivation around the sugar mills formulated by the Central Government. Under the scheme, it will be recalled, it is designed to supply better needs—this does not apply so far as the current season is concerned, since sowings are already over—cheap manure, increased facilities for irrigation by subsidising and granting loans for sinking masonry wells and tube-wells, control of pests and diseases, and improvement in communications. One-sixth of the total outlay on the scheme has to be contributed by the sugar mills and another one-sixth by the cultivators, the balance of two-thirds being shared equally by the Central and State Governments. Mr. Mody felt that the scheme was taken on hand half-heartedly and that the desired results appeared to be doubtful. For he said that the scheme had been applied not to all the factories but to only a third of them in Uttar Pradesh. Even in these cases, it will not extend to the entire reserved areas; just a third of the inside gate area will be covered. The reason for extending the scheme to only a limited area is said to be non-availability of adequate funds. This is surprising. Appropriately enough, Mr. Mody drew attention to the crores of rupees collected by State Governments by way of cane cess every year, with the definite provision that the same would be utilised for cane development. But, except in the case of the Punjab, the cane cess is merged with general revenues in other States.

Sugar Prices

On the question of sugar prices, the I.S.M.A. President said: "The industry is not happy even with the result of last year's working, because the Government did not fix the sugar price taking into account the low recovery and shorter period of crushing. The Food Ministry has come out with the reasoning that the industry should not always expect profit, but there could be losses too. Without profit there can be no improvement in any industry nor can it survive for long. This is also evident from the fact that the stocks of about 30 sugar factories have been attached on account of their failure to pay the State cane cess and cane price to the cultivators." Mr. Mody criticised the calculation of the working season on an average in the case of the whole of U.P. and North Bihar. In these regions, there were certain areas where factories did not work even for half the number of days, as compared with other areas, and recoveries have been lower. He said that it was not possible for prices to be fixed at reasonable levels, unless the areas were divided into zones where the duration and recovery did not substantially differ.

Since the sugar millowners have persistently pleaded for a revision in sugar prices, the Government of India may refer the whole issue to be examined again by the Tariff Commission. Considering that there is already a ready-made formula evolved by it, the Commission can surely make a quick study and submit its report.

AMAR DYE-CHEM LIMITED

CHAIRMAN, MR. A. K. DOSHI'S SPEECH AT ANNUAL MEETING

HEAVY TAX BURDEN ADDS TO COSTS AND EXPENSES

HOW the heavy tax burden continues to add to the costs and expenses of Amar Dye-Chem Limited was explained by the Chairman of the Company, Mr. A. K. Doshi, in the course of his speech at the Ninth Annual General Meeting of the Company held at Bombay on Wednesday, 12th June 1963. Mr. Doshi revealed that, out of the Company's total revenue of Rs. 167.68 lakhs, as much as Rs. 48.10 lakhs were being distributed towards duties, taxes and fees to the Central and State Governments. One could well imagine, he said, the plight of a dye manufacturer who had to pay to the Exchequer 30 per cent of his selling price of dyestuff produced from intermediates imported at 60 per cent premium paid to a textile exporter and from basic indigenous chemicals costing anywhere from two to six times the prices ruling in the world market. He also referred to the voluntary contributions to political parties and charity, including complimentary advertisements under political and social pressure. Speaking about the prospects for the future, Mr. Doshi stated that the Company was trying to diversify its production. He criticised large-scale imports of napthols and bases. And he urged the Government to establish conditions that enable the dyestuff industry to play its role effectively and make its contribution to the economy of the country.

Extracts from Mr. Doshi's speech are published below:

GENTLEMEN,

On behalf of the Board of Directors, the management of the Company and myself, I have great pleasure in extending to you a cordial welcome this afternoon on the occasion of the ninth annual general meeting of the Company and placing before you for consideration the Directors' report on the working of the Company for the year ended 31st December 1962, together with the statement of accounts for that period. These have been in your hands for some time now and, with your permission, I shall take them as read.

Company's Operations

The Directors' report reveals the salient features of the Company's activities. The results achieved during the year under review, though not so favourable, have to be judged in the context of the circumstances which faced the dyestuff industry, in general, and your Company, in particular. There has been a steep fall in the gross profits from Rs. 67,56,682 in 1961 to Rs. 41,88,798 in 1962, and in the net profits from Rs. 54,97,833 to Rs. 21,92,887 in the respective periods. Although the performance of the Company during the year in terms of money has been far from encouraging, but, in terms of physical turnover, it is not so unimpressive. The turnover totals to 732 tons in 1962, as against 751 tons in 1961.

The upward trend in net profits that was in evidence in the year 1961 has not only been arrested but declined to Rs. 21,92,587. This may create, and very rightly, an impression that the year under review has proved to be a very lean year and it will take some time for the Company to recover from the present position. The specific reasons for the setback are as under:

(1) *Change in the Policy of the Government*: Removal of naphthols and fast bases from tariff valuation to *ad valorem* basis for the purpose of assessment of custom duties had its full effects felt in the year under review. This is mainly responsible for thinning down the profits.

(2) *Provision of Depreciation for Plants and Machinery*: The rate of depreciation in case of chemical industry has been increased from 10 to 15 per cent. While depreciation for plant and machinery was provided at the rate of 10 per cent for the year 1961, it has been provided at 15 per cent for the year under review. This has reduced the profits by Rs. 4,00,000.

(3) *Interest on Borrowings.*

For the reasons as above, the profits for the year under review are low as compared to those in the years 1960 and 1961. Yet they have been sufficient enough to provide for all the statutory allowances. All the same, the dividends have been maintained at the rate of Rs. 9 per cent per annum subject to taxes as was done in the last year.

As rising costs present a serious threat to the Company's profitability, it would be worthwhile to note what a big portion of the total revenue of the Company, namely, Rs. 167.68 lakhs is being disbursed towards duties, taxes and fees to the Central and State Governments jointly and severally. They are roughly as under:—

	Rs.
Excise duty on sale of products ...	22,51,000
Import duty on raw materials, etc.	13,91,000
Taxes on profits	9,63,000
Sales tax	1,05,000
Excise duty on purchase of indigenous raw materials	45,000
Duty on electricity	37,000
Licence fees	18,000
	Rs. 48,10,000

This comes to about 29 per cent of the total revenue. Thus excise duty, enhanced custom duties and taxes, etc., continue to add to the Company's costs and expenses. Besides this, there are voluntary contributions to political parties and charities, including complimentary advertisements under political and social pressure.

You can well imagine the plight of a dye manufacturer, who has to pay 30 per cent to the Exchequer of his selling price of dyestuff manufactured from intermediates imported at 60 per cent premium paid to a textile exporter, and from basic indigenous chemicals costing anywhere from two to six times the prices ruling in the international market and still being constantly finger-pointed for his high prices against c.i.f. prices of manufacturers, who don't have to pay most of the above charges and have written off their plants half a century ago!

Issue of Capital

As already intimated in my speech last year, we agree to the Government's advice that industries should broad-base their equity capital structure. Besides providing the necessary additional funds for expansion and working, the issued capital of the Company must bear proper balance between share capital and loan capital.

With the above purpose in mind, the Controller of Capital Issue was approached in the year under review to secure his consent to an increase in the capital of your Company to the extent of Rs. 45 lakhs at a reasonable premium.

On due consideration of all the requirements of your Company, it was, thereafter, decided by the Directors that an issue of Rs. 30 lakhs, instead of Rs. 45 lakhs, would serve the purpose of the Company in the present circumstances, as yet, no final decision has been taken by the Government on the various applications of your Company for the manufacture of intermediates.

Sales and Trading Conditions

The Company is trying to diversify its production. T.P.M. plant has been commissioned in March 1963 and production of methylene blue started. Malachite and brilliant green units have also been put on stream last month. It is expected that by the close of the current year, the Company will be manufacturing all the items included in first stage of T.P.M. The Company has already started manufacturing reactive dyes and has put in the market one item and three more items will be introduced soon. Pigment plant is expected to go into production in the third quarter of 1963. It is expected that addition of these new ranges of dyestuffs will improve the sales.

Production

You must have looked at the charts for sales and production, graphically drawn on the last pages of the report. I would now reproduce below figures of production along with the figures of imports for the last three years for comparison:

	(In tons)		
	1960	1961	1962
Production:			
Amarthols	429.0	517.0	435.8
Fast Bases	408.0	344.0	289.9
Imports:			
Amarthols	116.9	134.4	220.0
Fast Bases	644.0	409.1	488.0

As was stated in my speech last year, large-scale imports of naphthols and bases were taking place through various agencies. This situation continued throughout the year, which is obviously substantiated by the slump in the above figures of production. It forced your Company to reduce production in order to avoid holding excessively large stocks.

Is it not paradoxical that such large-scale imports are allowed at the cost of indigenous industry when the country is governed by a planned and controlled economy? As a matter of fact, we ought to conserve foreign exchange, because the industry has developed and organised itself for targeted production. It was only towards the end of the year under review that percentage of imports of dyes against that of export incentive licences of textiles was curtailed from 65 per cent to 25 per cent. Also, in the last Finance Act, the import duty on naphthols and fast bases, which was suddenly and very unwisely reduced to 20 per cent *ad valorem*, has now been increased to 50 per cent *ad valorem*, to correct the evils of the ill-advised step. This should reduce imports and increase offtake of our products. However, there persists a severe financial stringency amongst the textile industry as well as handloom industry and they are buying just enough to meet their immediate requirements. It is, therefore, likely to take some time before your Company can revert to its normal production.

Future Obscure

While, on the one hand, the above situation prevails at present, the future of the dyestuff industry seems rather difficult and obscure. The programme to manufacture intermediates in the public sector in a Central plant near Panvel has been delayed for a very long time and even its future appears uncertain at the moment. At the same time, the private sector is not allowed to proceed with its own plans to make intermediates for their use, under the apprehension that the output of the Central plant, when it comes into existence, may not be easily sold. Efforts are being made to reassure the Government about the fallacy of such an apprehension and they appear to realise it. Unfortunately, a considerable amount of time is wasted in the process and the dyestuff industry continues to depend on imports, which are at the same time being progressively curtailed due to foreign exchange difficulty. The industry is asked to buy export incentive licences of textile mills at a premium of 60 per cent. Uptil now, imports from rupee area were freely permitted, but now they have also been subjected to a ceiling. All these factors tend to increase cost of production to a level that the consuming industry will grudge to pay. It is, well known that, in a chemical industry, a minimum optimum production has got to be maintained to run the industry efficiently and economically and keep the prices down. You will see from the production figures quoted above that amarthol plant has worked at 67 per cent and fast base plant at 45 per cent of the installed capacity. The Government must give serious consideration to a definite policy to establish conditions that should enable the industry to play its role effectively and make its due contribution to the economy of the country.

Exports

I am glad to inform you that your Company has succeeded to some extent in exporting quite a number of items, although the prices realised are much lower. This is inevitable, in view of the fact that we have to compare against well-known brands established since decades. Moreover, the indigenous raw materials like solvents, acids and alkalis, required in the manufacture, are relatively far more costly than those available in highly-advanced countries. This makes your Company's products unremunerative. Nevertheless, I am glad to inform you that, during the year 1962, the Company has exported 20 tons of dyes at the total amount of Rs. 1,50,282. The prospects during the current year appear to be brighter. No efforts are spared to increase the exports. The orders received during the first five months of the current year amount to 20 tons at the total amount of Rs. 1,90,000 and I do hope that the figure will multiply several times by the end of the year. Although there are no profits worth the name, this is done with a view to fulfil our obligations to the country. However, the Ministry of International

JOB SECURITY IN INDUSTRY

WORKERS BETTER PROTECTED BY LAW IN INDIA THAN ABROAD

AN important issue that figures prominently in industrial disputes and discussions regarding the terms and conditions of industrial employment is the job security of workers. This is natural because assurance of a reasonable measure of continuity of employment is the only guarantee to workers that their means of livelihood would not be summarily and arbitrarily denied to them. In view of its intensely human, as distinguished from legal and economic implications, job security has been the subject of industrial (labour) legislation in many countries which have modified the contractual rights and obligations of workers and employers in the light of the principles of industrial law and social justice. India has perhaps gone farther than any country in the free democratic countries of the world in safeguarding workers against unjust dismissal by employers. A comparative study of the extent of job security enjoyed by workers in India *vis-a-vis* their confreres in other countries, made by The Employers' Federation of India, bears out this conclusion. The study, which is a factual account of the position in regard to job security in India and abroad, has been published as a monograph* by the Federation. It should go a long way towards correcting the false impression created by trade union propaganda that industrial workers in India are a persecuted lot, always at the mercy of employers.

The study traces the history and evolution of legislative and other developments regarding job security. The most important piece of legislation, which sought to remove the fear of insecurity and ensure the right of appeal against dismissal, the study points out, was the Industrial Disputes Act, 1947. It provided elaborate legal protection and remedies to workers. To mention here some of the more important provisions of the Act. First, it prohibited the employer from altering the conditions of employment of workers in respect of important matters without giving 21 days' notice. Secondly, it set up various authorities for the settlement of industrial disputes. Thirdly, it prohibited the dismissal or punishment of a worker during the pendency of an investigation, except with the permission of the prescribed authority. Fourthly, it prescribed the conditions to be fulfilled by the employer wishing to lay-off or retrench workers.

Apart from legislative measures, the awards of industrial tribunals and the judicial interpretation of legislation have also played a very valuable role in conferring job security on workers. Tribunals and courts have approached the question of security of employment from the wider perspective of social justice.

Collective Bargaining

Another factor which has helped to promote job security is the development of collective bargaining. Although its influence remains confined to a few industries or establishments, where workers are organised in strong unions, collective bargaining as a system has made a good beginning as is evident from the increasing number of agreements negotiated between employers and unions in recent years.

The code of discipline in industry, adopted by the Indian Labour Conference at its fifteenth session held in 1958, has also helped to give workers job security. As a result of these measures, the security of employment now engaged by workers in the organised industries is much greater than in the past.

The study examines in detail the nature of the protection enjoyed by industrial workers under various enactments. Workers in India enjoy threefold protection. First, there are the procedures and rights laid down in the Standing Orders. Secondly, there is the right appeal to the management as provided under the Governance Procedure or the Code of Discipline. Finally, there is the legal remedy of resort to industrial courts. The nature of the protection afforded under each of these heads and the practical effectiveness of the various provisions in law are scrutinised in the study. The conclusion emerging therefrom is that the job security which the Indian worker enjoys today compares very favourably with that obtaining in some of the more advanced countries.

By contrast, according to the study, job security of workers in countries like the U.K. and the U.S.A. depends mainly on the provisions of the law of contract (that is, common law) and not on any special statutes as in India. The terms of contract, which determine the employment relationship, are themselves governed by collective bargaining agreements. Consequently, the job security prevalent in these countries varies considerably according to the terms of agreement from industry to industry and even from undertaking to undertaking. In contrast with the safeguards available under voluntary agreements and common law, the legal provisions obtaining in India confer much more substantial powers on workers and protect their right to (*a*) continuity of employment, (*b*) appeal against unjust or summary dismissal or discharges, and (*c*) compensation and re-employment, much better than in many foreign countries.

Right of Dismissal Restricted

The employer's right of dismissal, the study points out, is greatly restricted by law in India except in cases of misconduct or serious offences committed by an employee which again are specified under the provisions of an Act, namely, the Industrial Employment (Model Standing Orders) Act, 1946. In the United Kingdom and the United States, the employer's right to 'hire and fire' the worker summarily is customarily recognised by the parties concerned, and as such, employers can exercise their right in case of any misconduct or for a "just cause." Secondly, in India, the power of dismissal can be exercised only by the highest level of the management who must conduct an internal enquiry and take into account other extraneous factors such as the gravity of offence, the past record of the employee, etc., before ordering a dismissal. In the United Kingdom and the United States, on the other hand, the power of dismissal generally lies with the foreman, although, in the post-war period, there has been a shift towards assigning this power to the personnel manager. Lastly, the worker in India can be reinstated by order of an industrial court or tribunal if the dismissal effected by the management is found to be unjustified or wrongful. Such reinstatement is not possible under common law in the U.K. or the U.S.A. At best, the worker can sue the employer for damage.

The Indian worker, the study continues, is better off than his counterpart in the U.K. or U.S.A. even in regard to the issue of notice prior to discharge, retrenchment or lay-off. In India, the law requires the giving of one month's notice or pay in lieu thereof to a monthly-rated worker and two weeks' notice or pay in lieu thereof to any other workman. In foreign countries, on the other hand, the length of notice period varies considerably from industry to industry, and even from firm to firm. In any case, there is no statutory obligation.

No less striking, according to the study, are the differences in the manner in which discharges or dismissals are effected. In India, there must be a proper enquiry by the management before the services of a worker can be terminated. The record of this enquiry must be carefully maintained, as, in the event of an appeal, it provides the necessary basis for cross-examination. In the United Kingdom and the United States, on the other hand, no such enquiry is required to be held except when the worker refers his dispute or grievance for settlement to in-plant organs such as joint committees set up under agreements, from which it may go to a neutral umpire or the arbitration tribunal in the event of difference of opinion among the members of the committee or if the aggrieved worker remains dissatisfied with the decision of the committee. Under common law, the aggrieved worker may only institute a suit to secure compensation (damages) from his employer for a breach of contract if the employee thinks that he has been wrongfully dismissed. In the United Kingdom, such a suit is tried by the regular judicial tribunals. By contrast, the worker in India can always appeal against the decision of the management to the tribunals set up under industrial law. Moreover, there is an appeal from there to the highest courts of the land such as the High Court and the Supreme Court. Thus in India, a worker has more than one opportunity to secure a review of the employer's decision. The scope for such review is rather limited in the U.K. and U.S.A. In the latter countries, dispute is generally settled by a reference to voluntary arbitration or by negotiation between the trade union and the employer concerned. Even when the aggrieved worker seeks relief in a court of law, he cannot obtain reinstatement nor can he be sure of securing adequate compensation.

The security provisions pertaining to lay-off and retrenchment and compensation in India are also more favourable than those prevailing in the U.K. or the U.S.

A significant conclusion that emerges from the study is that, by and large, the Indian worker enjoys, in theory, a higher degree of security or employment than his counterpart in the West. But, in practice, the latter (that is, the worker in the West) also enjoys a high degree of job security. This, however, is not the result of legislative enactments as in India, but of a combination of factors, such as, strong trade unionism, widespread practice of collective bargaining, a high degree of economic growth which provides for increasing employment opportunities, the existence of skilled labour force and regional and occupational mobility of labour. It is the absence of such factors in India which lies at the root of the fear of insecurity among industrial workers. The remedy, therefore, lies in fostering such healthy developments and not in multiplying legislative enactments of which there is already a plethora in this country.

U.S. LABOUR DISPUTES

New techniques for settling serious labour disputes in the U.S. will be studied by a 12-man team of professional negotiators which has just been appointed by President Kennedy. The team will examine how far the Administration can exert its influence early in the course of negotiations, instead of waiting till the crisis is near.

ROAD DEVELOPMENT IN INDIA

UNCERTAIN AND INADEQUATE FUNDS HAMPER PROGRESS

By R. A. Deshpande

IN a vast country like India, which is known for its long distances and for the variety of its terrain and modes of transport, roads constitute one of the important means of communications. At the present time, we have a network of railways, a fast developing airways and a system of river transport, both traditional and modern; yet an advance in the manner and speed of transport has not detracted from the importance which roads occupy in our system of communications. In actual fact, the importance of roads is being realised all the more. In the present emergency, particularly in view of the recent reverses in N.E.F.A. for want of adequate communication facilities, the value of roads for defence purposes cannot be overemphasised. The *autobahns* of Germany demonstrated during the Second World War the importance of an efficient network of road system in the defence of the country. Since then all countries have been constructing a network of roads, as an essential defence equipment. The U.S.A., which already possesses a splendid road system, is currently spending 25 billion dollars on a 40,000-mile "National System of Inter-State and Defence Highways." Of this they say: "Today's crucial defence needs lie in improving to modern standards the 40,000 miles Inter-State Highways System. This vital network must be able to handle the tremendous volume and weight of military, industrial and civilian traffic that would flood our arterial highways in the event of a national emergency."

Apart from pedestrians, roads cater for three types of vehicles in the country, namely, bicycles, bullock carts and motor transport. The demand for bicycles rose from about 29,000 in 1912-13 to 260,000 in 1947-48 and further to 1,050,000 in 1960-61. The Planning Commission has estimated that, by 1965-66, two million bicycles are required to be produced. Similarly, in 1943, there were about eight million bullock carts in the country. Today the number of carts in the country is estimated at about 10 million. The first motor vehicle appeared in this country in 1898; their number was 422,041 in 1955-56 and, in 1961, they were about 664,535 and, by 1965-66, it is estimated that they would increase to about 800,000. The utility and importance of roads in the national economy cannot, therefore, be minimised and, in regard to its relative role, our bullock carts alone handle the same volume of freight as the railways.

Present Mileage Inadequate

The present road mileage in the country is only 394,000, of which the mileage of surfaced roads is only 144,000. During the third Five-year Plan, it is roughly estimated that it will be possible to add about 25,000 miles of surfaced roads to the existing network, as against about 22,000 miles added during the second Plan period. Taking the area of the country and population into consideration, the total mileage of roads in existence at present is admittedly inadequate to the needs of the country, particularly in view of the all-round development envisaged in the successive Five-year Plans. A comparison with other advanced countries will show how great is the leeway that has to be made up. For example, the road mileage per 100 square miles of area and per lakh of population in some of the developed countries is:

Country	Road mileage per			
	100 sq. miles of area		Lakh of population	
	Surfaced roads	All roads	Surfaced roads	All roads
U.K.	218.7	218.7	393	393
U.S.A.	69.2	97.1	1,396	1,945
West Germany	159.0	229.1	285	411
Italy	48.6	109.0	115	257
Ceylon	39.2	46.8	101	112
Japan	417.9	417.9	638	638
Philippines	17.2	23.7	72	100
India	11.9	34.4	33	96

The number of motor vehicles excluding motor cycles and auto-rickshaws in relation to road mileage area and population in India and some other countries as on 31st March 1960 is given in the table in the next column. These statistics reveal the extent to which we are deficient in respect of road mileage alone. If we add to it other deficiencies such as poor proportion of surfaced roads, the need to provide modern surfaces on them, lack of bridges, lack of proper geometric design and lack of two-lane carriageways on the major portion of National Highways, the picture becomes all the more gloomy. A country-wide road development programme which will provide, within a reasonable distance of time, sufficient communication facilities for the country's economic needs, particularly the needs of rural areas is, therefore, necessary.

Chief Engineers' Plan

Fortunately some attention has been given recently to the problem of increasing the existing mileage and upgrading of certain roads. The Government of India convened a conference of Provincial and States Chief Engineers at Nagpur in the year 1943 to consider the problem of post-war road development in India. This conference made two very important recommendations. The first was that the roads in India were classified according to their functions into four classes, namely, national highways, State highways, district roads and village roads. The national highways were defined as main highways serving predominantly national and district from State purposes, running through the length and breadth of India which together forms a road system of connecting major posts, foreign highways and capitals of States and including highways required for strategic movements for the defence of the country. The State highways would be the main arteries of commerce by roads within a State. District roads are the main branches from national or State highways and would take traffic into the interior of each district or similar unit of areas. Village roads would be, in essence, farm tracks, but their construction and maintenance are to follow a designated and regulated pattern.

The second recommendation of the conference was that the Centre should assume complete financial liability for the development and maintenance of national highways and that it should have an effective say in the use and control of these highways. This recommendation accorded with the practice in other countries which had developed a good highway administration. After taking into account the finances available, the Government of India accepted, with effect from 1st April 1947, complete financial liability for the development and maintenance of national highways. According to the National Highways Act of 1956, the responsibility to develop and maintain all existing national highways has been entrusted to the Central Government. Power is also vested in the Central Government to declare by notification, any other important highways as national highways. Power is also given to the Central Government to enter into agreements with the State Governments or municipal authorities with respect to the development or maintenance of national highways.

Under First Two Plans

The road development programmes in the first two Plans were formulated in the perspective of post-war road development plan, known commonly as the "Nagpur Plan" which was drawn up as far back as 1943. The Plan as applied to the post-partition India envisaged completion of a total length of 123,000 miles of surfaced roads and 208,000 miles of unsurfaced roads with the programme undertaken in the first and second Plans, the target envisaged in the Nagpur Plan have been exceeded in regard to both surfaced and unsurfaced roads. Despite this considerable expansion of road mileage over the last ten years, the road network remains deficient in certain respects such as unbridged river crossings, substandard surface and narrow carriageway. About 60 per cent of the total mileage consists of earth roads only. Of the total road mileage in the country, about 15,000 miles constitute the national highways but only about 2,300 miles of these have a two-lane carriageway, the rest is all one lane. There are also about 1,000 miles of national highways which have only one-lane waterbound macadam or low surface, instead of cement concrete or bitumen surface. The national highways as well as State highways have a crust thickness of nine to ten inches which, according to technical experts, is inadequate for the present volume and intensity of traffic. Moreover, there are numerous missing bridges on the arterial routes and, on the national highways alone, about 80 major bridges remain to be provided at the end of the second Five-year Plan. Work on 47 of these is in various stages of progress. The expenditure actually incurred on road development was Rs. 155 crores in the first Plan period and Rs. 224 crores in the second Plan.

Roads Under Third Plan

The cost of the road development programme included in the third Plan is about Rs. 324 crores. The programmes in the State sector are estimated to cost about Rs. 244 crores and those in the Central sector Rs. 80 crores. The latter cover both national highways and roads of inter-State and economic importance. The programmes have been formulated in accordance with the broad objective laid down in the 20-year road development plan for the period 1961-81, which has been recently drawn up by the Chief Engineers of the State and Central Governments. The objective is that no village in a develop and agricultural area should remain more than four miles from a metalled road and more than 1½ miles from any type of road. The plan takes into account the special requirements of developed and underdeveloped areas. Under the plan, the total mileage proposed to be reached at the end of the 20-year period, that is, 1981, is 252,000 miles for surfaced roads and 405,000 miles for unsurfaced roads. The target envisaged in the new plan will give a density of 52 miles of road for 100 sq. miles of area, as compared with the existing 31 miles. The plan aims at bringing every village (*a*) in a well developed agricultural area within three miles of *pucca* road, (*b*) in a semi-developed area within 5.5 miles of a *pucca* road and (*c*) in an underdeveloped area within nine miles of a *pucca* road. The expenditure involved in the tentative plan is roughly estimated at Rs. 5,200 crores in 20 years. According to this plan, an outlay of Rs. 590 crores is required to be incurred during the third Plan period, as against the Plan provision of Rs. 324 crores actually provided.

The rapid development of the economy over the past decade has placed demands on the transportation system, the magnitude of which is not generally appreciated. The railways, on which the main burden falls, are handling 100 per cent more freight traffic and 27 per cent more passenger traffic than they were handling before the commencement of the first Five-year Plan. During the same period, the capacity of the road transport industry has more than doubled and that of the major ports has also increased by about 35 per cent. The experience of this decade should serve to focus attention on the crucial importance of transport and communications in economic planning.

Goods Traffic

In an expanding economy like that of India, with production rising from 130 million tons in 1950-51 to over 700 million tons by 1975-76, it is essential to develop all modes of transport. Road transport must, therefore, play its part wherever it is most beneficial to the country. According to the Chief Engineers' report on the road development plan for India 1961-81, the total goods traffic likely to be generated in the country during the period 1965-66 to 1980-81 will be approximately as follows:

	1965-66	1970-71	1975-76	1980-81
Total estimated production	371	540	758	996
Originating traffic likely to require haulage over long distances	300	440	610	800
Feeder traffic operating over short distances to carry from and to terminals the originating traffic handled by the railways and shipping	188	246	320	400
Local traffic to carry over short distances agricultural products required for local consumption	71	109	148	196
Feeder and local traffic combined	259	355	468	696

The Chief Engineers' estimate of its movement by rail, shipping and roads is as follows:

	1965-66	1970-71	1975-76	1980-81
Railways	228	305	403	523
Coastal shipping etc	12	17	23	31
Road	60	118	184	246
Total	300	440	610	800

The Indian Roads and Transport Development Association has revised upward the Chief Engineers' estimate pertaining to road transport for three major reasons. Firstly, the recent difficulties over the transportation of coal by the railways have underlined the need for transporting coal by road in the Bihar-Bengal area. Secondly, the possible development of trailers on a bigger scale than at present will add to the carrying capacities of our main roads. Thirdly, additional provision would have to be made under local traffic for carrying materials for construction as well as road work. Accordingly, the aggregate road traffic as estimated by the Association is as under:

	1965-66	1970-71	1975-76	1980-81
Originating traffic (Million tons)	78	162	293	415
Feeder and local traffic	345	500	643	835

Road transport is securing a rapidly rising ascendancy because of purely economic advantages that it offers. Road transport is three times as fast as rail transport. It renders service from field or factory direct to the market place, thus avoiding the need for any other supplementary mode of transport. Road transport is free from the heavy losses and damage to goods experienced in railways and consequently. Packing charges are lower for road transport. Road transport is specially advantageous for perishable and consumer goods and gives a quicker turnover. And a mile of excellent concrete highway can be built at one-third the cost of a mile of railway line. These basic advantages of road transport have influenced most of the advanced countries to lean increasingly on this form of transport. The volume of traffic carried by road transport is consequently growing day by day in such countries. Thus, while in India road transport is estimated to carry only about 10 per cent of all goods traffic, it carries about 20 per cent in the U.S., 55 per cent in Great Britain and about 52 per cent in Australia.

To achieve a high degree of productivity in road transport, good roads and heavy vehicles with free flow of traffic are absolutely essential. We, therefore, need a well-planned and adequate network of roads for efficient marketing of agricultural produce, to carry raw materials to manufacturing centres and for effective distribution of industrial output. When we consider the fact that almost three-quarters of inland transport in all advanced countries is done by road, the importance of roads in an underdeveloped country with about 86 per cent of population in rural areas cannot be overemphasised. In the absence of roads bringing the far-flung villages within the network of communication system, social amenities like schools, hospitals and libraries will remain out of reach for India's teeming millions who need them most.

Roads and Defence

Roads have a vital role to play in the defence of the country. Ours is a vast country and it is not practicable to post military units at every point throughout the length and breadth of the land. The effectiveness of defence, therefore, depends on the ability of our armed forces to concentrate at any threatened point within the shortest possible time. Armed forces are now mechanised and move on wheels and wheels require roads to run on. In the final analysis, therefore, the effectiveness of our defence depends, to a large extent, on the efficiency of our road system. This functional aspect of roads in defending the country has been fully and painfully realised in the recent occurrence of wholesale and unprovoked invasion of our country by the unfaithful neighbouring country of China. For want of proper roads in the Himalayan region, our troops, equipments and food could not be moved in time to the needy areas to stand against the pre-planned massive attack by the enemy. Our jawans and officers who were more or less watching the border were taken aback by surprise attack and pincer moves by China which had built up its roads to high standards on the other side. There were not enough communications for our troops to withdraw, which is one of the most tactical moves in warfare.

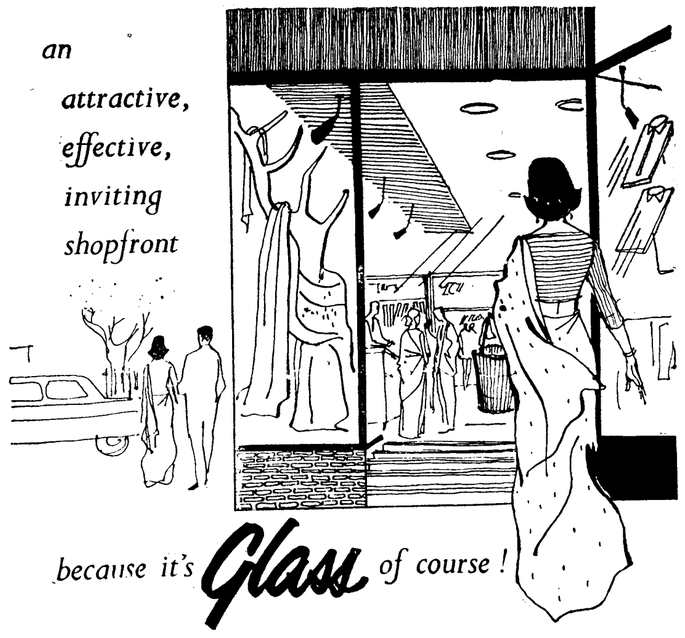
The problem of financing road development is admittedly very complicated and difficult. The Motor Vehicle Taxation Enquiry Committee thoroughly investigated this problem and made a number of recommendations on this subject. The Taxation Enquiry Commission has also made a useful contribution on the problem of road development finance. The suggestion for the creation of road funds in every State in addition to the Central Road Fund is thoroughly sound. It has also approved the principle of earmarking revenues for road development and has suggested the creation of an all-India Rural Communications Fund which should be more substantial and non-lapsable. Similarly, there will not be opposition to the proposal of levying a cess of one anna per rupee of land revenue if substantial funds are made available for the development of rural roads. The proposition that the entire revenue from the road user taxes and levies should be placed in the Road Fund and that its diversions to any other purpose should be statutorily prohibited is economically sound and justifiable.

Revenue and Expenditure

According to the latest available statistics, revenue from road transport and expenditure on roads in India during the year 1959-60 are as under:

		(Rs. in crores)
REVENUE:		
Central (import and excise duties):		
Motor vehicles and accessories		14.23
Motor vehicle tyres and tubes		10.71
Motor fuel		54.58
	Total	79.52
States (including Union Territories):		
Motor vehicles taxes and fees		25.73
Sales tax on motor fuel		13.76
Passenger and goods tax		13.41
	Total	52.90
	Grand total	132.42
EXPENDITURE:		
Development:		
National highways		7.63
Central Road Fund		4.24
Roads of economic or inter-State importance		4.82
Roads in Union Territories		4.90
State roads		31.81
Urban roads		3.60
	Total	57.14
Maintenance:		
National highways		5.20
Other roads		30.12
	Total	35.32
	Grand total	92.46

It is thus seen that, at present, the expenditure on roads is much less than the users' taxes collected by the Centre and the States. It would go a long way towards improving the standard of our roads, if all the taxes collected from road users were solely reserved for the development of roads.



Among the road users, the motorist and the truck-owner pay perhaps the highest taxation. The same may not be true in the case of bullock carts. Suggestions for imposing wheel tax have been coming up now and again, but, for certain reasons, it has not been possible to take up this form of taxation seriously and an important source of revenue is being missed.

It is estimated that the number of bullock carts in this country is in the neighbourhood of 10.2 million and, even if a tax of Re. 1 per month is imposed, the total revenue from this source alone would be about Rs. 12 crores. Were this money to be set apart entirely for development of rural roads, it would mean that something like 5,000 to 6,000 miles of *kutcha* village roads would be metalled and made all-weather roads every year. What this would mean to the rural road user is lowering the cost of transport of his village produce, heavier loading capacity of his bullock cart, increase in the life of his cattle and appreciation in the value of land and property does not need to be emphasised.

Road Tolls

The Chief Engineers, in their report on the 20-year road development plan for India, have observed that roads in general should be free from toll. Tolls can, however, be justified for projects of major magnitude like big bridges or specific high class roads which are intended to provide special facilities. Already in some States, effort is being made to raise money from tolls on bridges, but, in this matter, particular care has to be exercised to avoid hindrance to traffic by extending toll levy to small works. In Japan, toll roads are an accepted feature of road development and a separate body, the Japan Highway Public Corporation has been created and made responsible for their construction and administration. While in the main, the general opinion is held that road funds should come partly from road user taxes

For the finest, most durable glass you can depend on HPG

A customer is inside this shop long before she actually steps in! And no wonder. Thanks to the clear, bright, glass exterior, your display has gone half way out to greet her.

Inside too, glass counters are hard to beat. Goods are effectively displayed but stay protected at the same time.

And glass is so elegant, so easy to clean and so very functional. It lets in natural light but shuts out the dust and noise of the street.

Available in a wide variety of sizes and thicknesses, and quality tested at every stage of manufacture, there's an HPG sheet glass to suit every purpose.

NATIONAL RAYON CORPORATION LIMITED

CHAIRMAN'S SPEECH AT ANNUAL MEETING

NEW SCHEME FOR YARN ALLOCATION MAY NOT GIVE RELIEF

DISSATISFACTION with the new scheme evolved by the authorities for the distribution of rayon yarn was expressed by the Chairman of the National Rayon Corporation Ltd. in the course of his speech at the Sixteenth Annual General Meeting of the Company held at Bombay on Thursday the 13th inst. Discussing details, the Chairman said that the scheme was likely to cause delays and gave no relief in reducing the stocks with spinners. He suggested that the cardholder who did not lift his quota in a prescribed time should lose his right of obtaining the yarn. The Chairman disclosed that the Corporation had proposed to get its share in the increased capacity of 100 million pounds for staple fibre industry as recommended by the Development Council for Rayon during the third Plan period. While the management was most anxious to undertake all sound schemes of expansion, he pointed out, it would have to proceed with the schemes with caution, in view of the heavy taxation and the uncertain climate of the emergency in which stock exchanges had found themselves.

The following is the full text of the Chairman's speech:

GENTLEMEN,

I have great pleasure in welcoming you this afternoon and placing before you for adoption the Sixteenth Annual Report of the Directors and the statements of accounts for the year ended the 31st December 1962. These have been in your hands for sometime now and, I believe, I have your permission to take them as read.

This year, in consultation with the Company's auditors the mode of presentation of the statements of accounts has been modernised so as to give the shareholders a clearer and fuller picture of the state of the Company's affairs. The necessary consent to such presentation was obtained from the Department of Company Law Administration.

Rayon Yarn Allocation

At the outset, I propose to touch briefly in a general way on the working of the Company and related matters. Our production of rayon yarn is distributed in consultation with the Textile Commissioner's office. Our regular customers' share of the yarn has been fixed and each party has been given a quota. The reluctance of quota holders during the last quarter of the preceding year, to lift in time, the allocation of yarn under the distribution scheme, has confronted the Company with the problem of accumulated stocks. Though it appeared it was due to the emergency, the situation eased a little during the first three months of the current year but at the beginning of the second quarter, the Company is again faced with the same problem.

Delays and No Relief

Due representations were made to the authorities concerned and they have evolved a scheme by which those cardholders, who are having a six-monthly allocation of less than 36 cases for the period April-September 1963, are required to lift 50 per cent of it before the end of June or latest by the 10th of July, and the balance before the end of September or latest by the 10th of October; and those cardholders, whose total six-monthly allocations is 36 cases and above, are required to lift one-sixth thereof regularly every month or latest by the 10th of the succeeding month. So far as lifting of allotment for the month of April is concerned, they should do so by 31st May 1963. In the event of their failure to do so, the matter is to be referred to the Textile Commissioner who, we understand, has appointed a committee to go into the question and to report to him in the matter. I am afraid, this is likely to cause delays and give no relief in reducing the stocks with the spinners. The cardholder who does not lift his quota in a prescribed time, should lose his right of obtaining the yarn.

You might have observed from the papers that the entire question of fixing up of prices for rayon yarn and other man-made fibres has been referred to the Tariff Commission.

Production

We have been successfully manufacturing finer deniers of yarn such as 55, 60 and 75, in sizable quantities for sometime past and they have been well received by the weaving industry.

In the context of the Government forcing the rayon industry to purchase the bulk of their pulp requirements under the Export Promotion Scheme, it is difficult to understand why the staple fibre industry is permitted to obtain all its requirements through the free exchange resources. This issue has been suitably taken up by the Company, together with other spinners, through the good offices of the Association of Man-Made Fibre Industry and the Development Council.

Two of the leading tyre manufacturers have placed bulk orders with the Company and have been using our yarn for some time; the third leading tyre manufacturer has just placed a trial order with the Company; the fourth has approved our yarn and we expect its orders very shortly.

The Development Council for Rayon has recommended that the target for staple fibre industry should be increased to 100 million pounds during the third Five-year Plan. We have expressed a desire to get our share of this capacity.

The installation of 100-ton-per-day plant for the manufacture of sulphuric acid is progressing satisfactorily and it should be possible to commission this unit towards the beginning of next year. The bulk of the plant and machinery for expansion of the caustic soda plant has been received at the plant site.

Labour Relations

The labour relations which had been quite cordial these years have unfortunately been strained on the question of bonus for the year 1962. In spite of the fact that there is no "available surplus" according to the bonus formula justifying the payment of any bonus, the management offered *ex-gratia* 1½ months' wages as bonus for the year 1962. The management further offered to pay an interim bonus in respect of the Company's working for the year 1963.

Unfortunately, due to the intimidation of the Rayon Mazdoor Union, which is not a recognised union, the workers who normally could have been expected to avail themselves of this offer did not venture to do so. The Company's efforts to have this question settled by recourse to voluntary arbitration or adjudication also failed, as such a course of action did not find favour with the Union leaders. Instead, a notice was served on the Company, saying that if the workers' demands were not met they would go on strike sometime from the 13th May 1963. It was pointed out to the workers that, if the strike was resorted to, it would be illegal inasmuch as the bonus issue for the year 1960 was *sub judice*. Even before the expiry of the notice period, the workmen started remaining absent in concert, and also resorted to acts of sabotage, indiscipline, etc. Under the circumstances, the Company had no option but to declare a lockout from the 12th May 1963, in order to protect the Company's property and personal safety of the loyal staff and workmen. The Government of Maharashtra intervened and referred the dispute for adjudication by Mr. M. R. Meher and directed the Company to lift the lockout, which was done with effect from 21st May 1963. The rayon plant is still suffering from the after-effects of the recent labour trouble and it is hoped this plant will reach its normal working soon. All the other plants of the Company, however, reached normal working since the lifting of the lockout.

Taxation Heavy

The unprovoked aggression of the Chinese on our north and north-eastern frontiers has been responsible for the present emergency and the unprecedented budget occasioned by it. The sharp rise in defence expenditure from Rs. 350 crores to Rs. 850 crores has compelled the Union Finance Minister to resort to a stiff dose of taxation in order to meet the vastly increased resources required. Nobody in this country will dispute the necessity to counter the Chinese aggression or refuse to make the utmost sacrifice possible to meet the emergency. I, however, fear their latest tax proposals will have the effect of retarding industrial development. For the year under review, your Company is not likely to attract the Super Profits Tax. The Super Profits Tax is bad in principle, in that it does not conform to the known canons of sound taxation.

Be that as it may, the cumulative effect of the heavy taxation *per se* and the incidence of the Super Profits Tax will adversely affect dividend distribution, and therefore, equity values. In the uncertain climate of the emergency, in which the stock exchanges are finding themselves today, it is difficult to envisage the response to any scheme for raising additional finance in the capital market. While your management is most anxious to undertake all sound schemes of expansion, consistent with the needs of the situation, you will appreciate that it will have to pause at every stage, probe the outlook and proceed with caution with future expansion schemes.

I must say a word in conclusion that the hard and sincere work of both the staff and workmen contributed in a large measure to the smooth working of the plants. I also appreciate the loyalty of the staff and some of the workmen who stood by the management during the recent labour trouble at the factory.

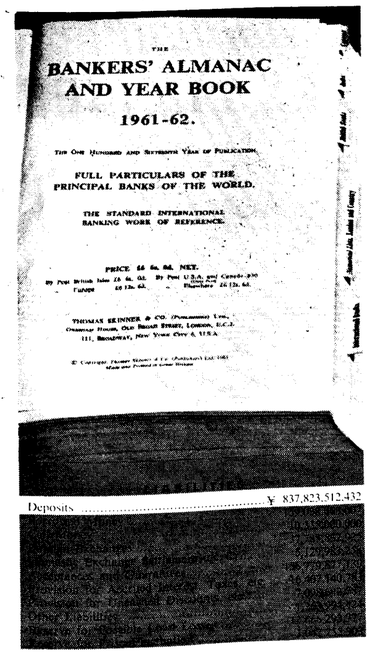
With these observations, I commend the report and the statements of accounts for adoption and propose the following resolution:

"The Sixteenth Annual Report and the Statements of Accounts for the year ended the 31st December 1962 be and they are hereby adopted."

Thank you, gentlemen.

Note.—*This does not purport to be the proceedings at the Sixteenth Annual General Meeting of the Company.*

Notice



STATE BANK OF INDIA

NOTICE

WITH REFERENCE TO THE NOTICE OF the 10th April 1963 issued in terms of Regulation 29(2) of the State Bank of India General Regulations regarding the holding of a Local Meeting of the shareholders of the State Bank of India on the Branch Register of shareholders at the Bombay Local Head Office of the Bank for the sole purpose of electing a person to be a Member of the Local Board at Bombay in pursuance of Regulation 48 of the State Bank of India General Regulations, 1955, in place of Shri Jehangir P. Patel, a Member of the Local Board, whose term of Office will expire on the 30th June 1963, NOTICE IS HEREBY GIVEN that I have accepted as valid the nomination proposing the name of Shri Jehangir P. Patel of 19 Graham Road, Ballard Estate, Fort, Bombay, as a candidate for election as a Member of the Local Board of the State Bank of India at Bombay. The said nomination being the only valid nomination received, Shri Jehangir P. Patel shall be deemed to be elected a Member of the Local Board of the Bank at the said Local Meeting of the shareholders proposed to be held on the 19th June 1963, which Meeting in terms of Regulation 40(1) of the said General Regulations now stands cancelled.

MANAGEMENT

The Management of the Company rests with the Board of Directors, of which Mr. M. A. Chidambaram is the Chairman.

OBJECTS

The Company was incorporated on 8th May 1944 under the name and style of the Madras Circle Registered Stockholders' Association Limited, for the purpose set forth in the Memorandum of Association. By a special resolution passed at the Extra-Ordinary General Meeting of the Shareholders, held on 14th June 1960 and confirmed by the order of the High Court, Madras, dated 20th June 1961, in Company Petition No. 57, of 1960 the Memorandum of Association was amended so as to enable the Company to carry on the business of Steel Rolling Mills and Re-rolling Mills in all its branches and also to carry on the business as Manufacturers of Sugar in all its branches. The following are the main objects of the Company :—

To acquire from the Deputy Iron and Steel Controller, Madras, the stocks of Iron and Steel materials now held by him and for such purpose to enter into and carry into effect with or without modification the agreement referred to in Article 3 of the Articles of Association of the Company. To enter into contracts with Central Government for the purpose of being appointed stockholders of controlled stock (which expression shall mean and include all such Iron and Steel materials as are declared to be controlled stock by the Central Government) of one or more categories of Iron and Steel specified in the Second Schedule of Iron and Steel (Control of Distribution) Order 1941.

To hold and handle such Iron and Steel materials as are placed in controlled stock by the Central Government on consignment or in transit.

To buy, sell and deal in such Iron and Steel materials as are placed in controlled stock by the Central Government in accordance with the terms and conditions of the contracts entered into with the Central Government as specified in Sub-clause 2 hereof.

To carry on the business of Steel Rolling Mills and Re-rolling Mills in all its branches.

To carry on business as manufacturers and traders and dealers in all goods manufactured of iron and steel including structural steel, beams, rafters, tubes and similar products, and all goods in which iron and steel are used as components or otherwise incorporated.

To carry on the business of merchants, dealers, traders, exporters and importers, distributors and stockists, dealers and commission agents of steel and iron and goods made of iron and steel of every kind.

To carry on the business as manufacturers of sugar in all its branches.

HISTORY AND BUSINESS

The Company was incorporated on 8th May 1944, under the direction of the Iron and Steel Controller, to deal in Iron and Steel of the controlled categories, the membership being restricted only to the Registered Stockholders within the meaning of the Iron and Steel (Control of Distribution) Order 1941. The Company soon commenced business after obtaining certificate of Commencement of business, dated 2nd June 1944 from the Registrar of Companies, Madras.

It has declared substantial dividends since the inception. We append hereunder the particulars of dividends for the five years immediately preceding.

Year ending 30th June of	*Dividends Declared*
1958	10% free of tax
1959	13% gross
1960	15% ,,
1961	22% ,,
1962	9% ,,

As advised by the Deputy Iron and Steel Controller, it was decided to throw open the membership to non-registered stockholders also.

PROSPECTS

The Company has obtained a Licence under the Industries (Development and Regulation) Act, 1951 for establishing a Factory for the manufacture of Sugar in Villupuram Taluk in South Arcot District of Madras State. The South Arcot District is well known as a good sugarcane area next only to Maharashtra. The Company is fortunate in having most of the area in the belt as dry lands (garden lands) with lift irrigation facilities. The region selected is very well known for its plentiful supply of underground water. A large number of wells have been sunk by the agriculturists in the area to supplement the irrigation water from river sources and tanks. Electrically operated pumpsets are in use in the area to a very large extent and some are also using oil engine pumpsets. The area has, therefore, all the essential requirements for the cultivation of sugarcane, namely, good land and plenty of water, combined with good drainage facilities. The ryots in the area have been growing cane for a long time and are capable of raising the crop efficiently. Another good feature is that most of the cane to be supplied to the Factory will come from an area within a radius of about 10 miles from the Factory so that the lapse of time between cutting the cane and crushing it can be reduced to the minimum which is a factor favourable for good recovery. The Factory will be at a distance of about 5 miles from the Municipal Town of Villupuram and about 93 miles from the City of Madras so that marketing will be easy.

The price of sugar is controlled and the Government can be expected to provide reasonable margin of profit to the manufacturers of sugar. The future for the industry is bright.

LOCATION OF THE FACTORY AND FACILITIES AVAILABLE

The Factory will be at Mundiyampakkam in Villupuram Taluk, South Arcot District. An ideal site with the Southern Trunk Road on one side and the railway line on the other side, has been selected. 96.43 acres of land has been acquired for the Factory, Seed Farm and Quarters. The Factory will be adjoining the railway line, thus facilitating the provision of a railway siding. There are about 10,000 acres suitable for Cane Cultivation with facility for water supply in the area. A Factory with a 1,000-ton crushing capacity will require about 5,000 to 6,000 acres on the basis of an average yield of about 35 to 40 tons of cane per acre.

There are six wells in the lands acquired for the Factory and Quarters and there will be abundant supply of water from them for the requirements of the Factory, Farm and Staff Quarters. There is facility for sinking a few more wells, if necessary.

BANKERS TO THE ISSUE

1. STATE BANK OF INDIA, 1st Line Beach, Madras-1.
2. THE UNITED COMMERCIAL BANK LTD., 310/311, Linghi Chetty Street, Madras-1.
3. THE INDIAN BANK LTD., 32/33, Linghi Chetty Street, Madras-1.

AUDITORS

MESSRS. FRASER & ROSS, CHARTERED ACCOUNTANTS, McLean St., Madras-1.

Application forms along with copies of Prospectus can be had from the above-mentioned Underwriters, Brokers and Bankers.

The Subscription List will open at the commencement of the Banking hours on the 17th June 1963 and will close on 27th June 1963 at 2.00 p.m. or later at the discretion of the Board of Directors. Subscription for shares reserved for Cane Growers will be collected by the Company immediately after the issue of this Prospectus.

HINDUSTAN LEVER LIMITED

MR. P. L. TANDON EXPLAINS HOW THE COMPANY IS MANAGED

"CEILING ON HEALTHY GROWTH INVITES STAGNATION"

THE technique and philosophy behind the management of Hindustan Lever Limited were lucidly described by Mr. P. L. Tandon, Chairman of the Company, in his speech at the Annual General Meeting of the shareholders held at Bombay on Wednesday, 12th June, 1963. The task of managing a business organisation in a changing world, Mr. Tandon pointed out, never remains constant. People and economies are always changing, more so in a developing country like India. New leads and pressures constantly arise in response to which changes in organisation are also necessary. These changes are seldom radical, but, all the same, they are necessary to meet new problems. An organisation can, therefore, never remain static. It must be dynamic and continue to grow. In order to facilitate healthy growth, there must be an atmosphere that encourages such growth.

The following is the full text of Mr. Tandon's speech:

It gives me great pleasure to welcome you to this annual general meeting of the Company. The report and accounts for the year 1962, in which is incorporated the report of the Directors on our activities, has been with you for some time. May I therefore take it as read, except perhaps to say that your Company has had the good fortune of experiencing a year of record sales and profits before tax. Our performance in the nationally vital field of exports, where there has been a big jump from Rs. 71 lakhs to Rs. 201 lakhs in 1962, has also given us much satisfaction. Later in the proceedings I shall be happy to answer any questions you may wish to ask.

Continuing our past practice of choosing a particular aspect of your Company, I shall today talk to you about the management of Hindustan Lever.

Hindustan Lever is a concern whose main activities in the past have had to do with oils and fats, though it is now branching out more widely in the field of foods, both human and animal. The primary purpose is to manufacture and sell a wide variety of products, mainly consumer goods to be used by the housewife, including cooking oils and fats, soaps and non-soapy detergents, toilet preparations and dehydrated vegetables. The extent of our business is largely governed by the standard of living of the average household; as the standard rises, the wider the range of the products becomes and the more we sell of them. The organisation of the company is designed to fulfil this purpose to the best advantage.

Ancillary to the manufacture and sale of goods is the side of the business which is concerned with the procurement of materials. We purchase oils and fats and other basic commodities mostly within the country and partly, though decreasingly, in world markets. Part of our local purchases is in the form of oilseed to be crushed in our own oil mill.

All our activities are carried out in a highly competitive environment.

An Integrated Company

Ours is today what we call an integrated company. All its activities, ramifications and products, including buying, production and marketing are contained within the one Company. But this was not always so. Upto 1944, we operated as three main companies, each with its own managing director and its own set of services such as buying, accounts and transport. At that time, although the three companies continued as separate statutory entities, their entire operations were combined under a single control at the top to obviate the overlapping and duplication of services. While a common pool of all services was formed, marketing still continued in three separate groups, each known by the name of one of the three companies. The Hindustan Vanaspati Manufacturing Company Ltd. handled vanaspati, Lever Brothers (India) Ltd. soaps, and United Traders Ltd. toilet preparations. The head office and the main branches in Bombay, Calcutta, Delhi and Madras offered to each of the three marketing companies all services from the common pool.

1956 was a historic year for us. We became a public limited company and placed a part of our share capital on the market. The operations of the three private companies, named above, were amalgamated into one under the name of Hindustan Lever Limited. This made our integration complete, for now all our activities and products were grouped under the single new name, which is our image to the public.

Fourfold Responsibility

In the running of the Company we have always been guided by our responsibilities to the parent company, the employees, the consumers and the community. When we became a public company, to these responsibilities was added yet another, namely, to the Indian shareholders. This introduced a new influence on our thinking insofar as we had to ensure a balance between the current interests of the shareholders and their future interest in the development of the Company. And out of the public shareholding arises the duty to conform with the utmost care to the elaborate Company Law with its meticulous but understanding administration. We have much appreciated the opinions, criticisms and advice which we have received at our annual general meetings, and the integration of Unilever with Indian shareholders has been a happy and stimulating one.

History and purpose therefore define the job of managing Hindustan Lever. The task never remains constant. People and economies are always changing, more so in a developing country like ours. There are constantly arising new leads and pressures, in response to which changes in our organisation are also necessary. These changes are seldom radical, but they must be made as we meet new problems. This is therefore a description of the organisation just as it is at the present moment.

Size of Operation

Before describing the organisation, may I give you a few figures to illustrate the size of the operation. We have 6,521 employees, of whom 363 are managers, 717 office staff, 538 engaged in the field, 554 service staff, 347 technical and 4,002 general operatives in the factories. Of the managers, 55 per cent have risen from within the ranks while 45 per cent were recruited either directly as managers or as management trainees. There are only 13 expatriates, mainly in technical specialist functions and training Indians to take over. It is possibly true to say that Hindustan Lever is foremost today among the large Indian companies forming part of international groups, in having vested its management and control in the hands of Indian managers.

Moreover, our Company was among the first of the many overseas companies within the Unilever group to start this process and today has probably gone further along this road than any. The process itself is so well known inside Unilever and is progressing, at differing rates, in so many countries that a new word "Isation" has been coined as a generic term of reference.

The number of Board members has varied upto a maximum of eight. They are all in the whole-time employment of the Company and have risen from within. They have no stake in the Company other than the very important one that, as professional managers, they are wedded to their jobs. They do not participate in the profits, nor invest in the Company; they are subject to the same terms and conditions as other managers, perhaps with added self-restraint. I would not like to venture any generalisations about working directors against outside advisory directors, an oft-discussed issue in India. It is argued that a working director is so immersed in the day-to-day operations, his nose so close to the ground that he is apt to miss the fresh, unpreconditioned approach of the outsider, who has the added advantage of not being personally, much less emotionally, involved in the problems. We have no doctrinaire views on this subject, but for the recurring day-to-day affairs of the Company, we think that a working board is the practical answer, which is also the experience of many progressive companies elsewhere. As for advice, we have plenty within the concern, but whenever we feel the need we do not hesitate to look for it outside.

Our Board at present consists of a chairman, vice-chairman and five other directors—the co-ordinating director, the administrative director, the marketing director, the technical director and the personnel director. Each director, except the chairman and vice-chairman, is in charge of one or more functions: the co-ordinating director looks after the service departments such as planning, economics, operational statistics, marketing research, exports and public relations. The administrative director has under him finance and accounts, branches' administration, organisation and methods, internal audit and buying. The marketing director looks after the three marketing divisions: soaps, foods and toilet preparations, and the growing one of animal and poultry feedingstuffs. The technical director has all the factory production units reporting to him, while the personnel director takes care of employee relations, management recruitment, training and development, welfare and medical services, head office administration and services and, as an innovation, the transport department. The latter helps him to keep in touch with the operational side of the Company.

These portfolios vary from time to time, and with the specialisation of an individual director. The vice-chairman, with only scientific research reporting to him, generally assists the chairman and takes over automatically in his absence. He also co-ordinates the development of a new project till it reaches the stage when it can be taken over by those with functional responsibility.

Dual Role

It will be observed that the grouping of these responsibilities, which changes from time to time, only to a certain extent follows the specialisation of an individual director and the functions he is allotted. It is, firstly, a matter of spreading the total workload among the number of directors available, naturally bearing in mind their individual skills and inclinations; and, secondly, sometimes a deliberate widening of a director's responsibilities to include sides of our business with which he may not be familiar. There are two special features of our Board. The chairman and, since recently, also the vice-chairman, though full-time directors like the rest, are non-functional. This enables the chairman to concentrate on the general direction of the Company and the many external duties that come his way, and the vice-chairman to underpin him. Both however work very closely with each other, so that the vice-chairman is fully conversant and ready to take over without a break in continuity. Further, the directors, in addition to their own portfolios, combine with the chairman and the vice-chairman to function as a committee for keeping in touch with the progress of the Company and deciding matters of overall policy. Each functional director has therefore a dual role, since as a member of the Board he has to take a Company view and not only a departmental one—something which on occasions requires a delicate balancing.

Ad-hoc Committees

A further and typical part of our method of management is the periodical setting up of small committees on an *ad hoc* basis to investigate and report upon some major problem that the business faces. These committees are small but high-powered with experts on each of the fields impinging on the problem; usually not more than three or four people in all—sometimes including Directors, sometimes not. We find this device a very useful one. The members of the committee take some time off from the normal pressure of business to consider calmly and dispassionately the particular problem. The problem is always of sufficient magnitude that it is clear to all concerned that the best decision is important to the Company as a whole. We value these committees also because they provide an opportunity for the younger executives for training and development and for participating in the overall management of the Company at a high level and as part of a team in such a way that it will help them to take on ever more important duties of management.

Advisory Departments

As I have already explained to you, our main purpose is the manufacture and sale of consumer goods, and the departments responsible for these are termed operating. All other functions of the Company exist to assist manufacture and sale, and are called service and/or advisory. The aim of the technical and marketing departments is straightforward, but I would like to say a little more about the role of the service and advisory departments. These are departments like economics, operational statistics, planning, marketing research, organisation and methods, legal, who are primarily advisory; and others like transport, accounts, buying and personnel, who both advise and give service.

The quality of decisions in the Company rests primarily on the quality of top management, but can be enormously improved by the effectiveness of its advisory services. Their whole purpose is to offer experience and knowledge of a specialised quality in specialised fields. As the name suggests, the advisory and service departments do not give orders, they can only suggest, recommend or persuade. Whether their advice of service should be accepted or not must always rest with the operating units, who have the ultimate responsibility for their results. To be successful, the advisory and service departments should have a broad understanding of the different operations of the Company, for their opinions are unlikely to impress with theory alone. Also necessary is complete intellectual integrity. To make their advice acceptable, tact is a primary qualification. As advisers never have the satisfaction of personally putting their ideas into practice, and indeed sometimes the chagrin of seeing things going wrong because their advice was not accepted, to tact must be added considerable self-control. Ultimately success depends as much on those who advise as on those who do the job.

Control of the Company rests basically on four devices:

1. The operating plan.
2. The capital expenditure budget.
3. The overheads budget.
4. The review of top management.

Annual Operating Plan

In September each year, marketing plans with clearly defined objectives for the ensuing year are fully discussed with the Board. At this meeting, advertising, distribution, establishment, sales tonnages, margins and estimated profits for the coming year are put forward. It should be mentioned that, although the detailed plans apply to one year only, the long-term objectives of the Company are forcefully kept in mind and discussed. Once these plans have been accepted by the Board, the respective divisions take all the necessary action required to carry them out. Thus, within the perimeter of the plan, they can make arrangements for their own production requirements, adjust selling prices or reorganise staff. Should they want to amend the plan, they must refer it back to the Board. This means that only vital policy decisions are kept as the prerogative of the Board; operational responsibility is delegated to the marketing controllers and their senior managers.

Capital Expenditure

The second control is the capital expenditure budget. This includes all foreseeable items on which money will be spent during the coming year. It also includes any expenditure on new projects which will bear fruit after some time, and it must of course provide for future demands of current products. It is therefore the instrument of focussing medium and long-term policy. This budget calls for most careful consideration by the Board, because, where additional finance is required, in agreeing that the money may be spent we have undertaken to find the additional money.

Approval of the capital expenditure budget is only in principle and does not mean that units are empowered to go ahead and incur the entire expenditure without further reference. Each major item of capital expenditure is resubmitted for Board approval immediately prior to the time when it is proposed that a start shall be made on the particular project. This capital proposal brings the facts and figures right up-to-date, sets out a concise summary of how the money is proposed to be spent and also gives reasons why it is necessary.

In addition, the proposal shows what additional earnings or savings of expense may be expected to accrue and expresses these in terms of yield on the capital to be expended. It is the factory manager or project team managers in our new operations who are primarily concerned with incurring expenditure, and in order not to hold them up unnecessarily, we allow them to spend up to a limit on any new job without reference. You will notice that the control of capital expenditure is centralised and closely controlled. This is but natural, because in spending money effectively on capital, we must be able to look at the whole field of the Company's interests, existing and potential, in relation to the resource available or likely to become available. There can be competing claims on capital, and these can only be evaluated and judged at the centre and closer to the time when it is going to be incurred.

Overheads Budget

We now pass on to the overheads budget which includes all items of expenditure not covered by the marketing plans and capital expenditure budget. There is one for each factory, for each head office department and for each branch. In these are included all items of expenditure together with a statement of personnel required for the coming year. These are subject to the same discussion and scrutiny as the other aspects of the business, and by the time they are completed the Board has a full picture of the aims and requirements of the business for the next twelve months. The overheads budget, once approved, can be implemented without any reference back to the Board.

Management Review

The planning of personnel in the overheads budget enables the personnel department to build up what we term the Management Review, which forms the subject of a separate meeting. Here, requirements of management for the entire business are assessed and reviewed against the availability from inside the business. This leaves a clear picture of the recruitment requirements for the year and allows the personnel department to go ahead with a clear-cut programme of recruitment.

Our future planning is done in three layers: a detailed plan for the ensuing year, a close estimate for the following year and an approximate estimate for three years after that. Marketing will thus estimate their sales over the next year; production, their capital expenditure; buying, the raw materials needed to meet sales and production estimates; personnel, the management needs; and finance, the sources of funds and their application: but all of them will give us estimates for the year after next and for three years beyond that.

Communications

After planning, there must exist some controls to communicate and gauge implementation. The first is a weekly sales statement from all three sales divisions. This enables all concerned to query at short notice anything unusual that may be building up into an unexpected trend. Then there is a rough weekly profit and loss statement (usually correct to within +5 per cent) which gives an up-to-date trend of results. Each month there is a Board meeting, when we consider the profits for the last month together with sales trends, margins, prospects and progress of our plans. The heads of the three marketing divisions attend the part of the meetings that concern them. At this monthly meeting the Board also considers any items affecting policy, such as changes in organisation, movement of personnel, union matters and projects. Other items which require Board consideration are dealt with at a weekly meeting, which is normally concerned with matters that require special consideration and are not covered by the Company rules and practices. In addition to review of progress and making policy decisions, an important part of our Board meetings is communication. The directors will report on their affairs to keep other members of the Board in touch, and at each monthly meeting they will also decide what matters should be communicated to department and unit heads throughout the Company.

The controls mentioned above do not of course include those which are instituted by each director in running his own department, such as production schedules, raw material and packed stock cover, distribution etc.

Apart from the weekly and monthly evaluation, the business as a whole is reviewed three times a year in addition, of course, to the most detailed review at the time of the annual plans in September. In January each year, the three marketing divisions consider their sales estimates (that were made and approved in September of the previous year) for the current year in the light of their performance so far. Any alterations are discussed with the Board. The second review is on completing the half-year, which is in the nature of a progress report. The last review is in October, which, with only three months to go, is in the nature of a close estimate of the whole year.

Delegation

The balance between centralisation and decentralisation and between Board control and delegation is a sensitive one. It is neither possible nor desirable to set the conditions within some rigid framework. As times and conditions change both within the Company and outside in national and international affairs, we find it necessary to change the degree of centralisation or control, sometimes giving a little more, sometimes bringing control back to the centre. Naturally, in fixing such matters the contribution of individuals is also important. The Board takes into account not just an arid organisation chart but the capabilities, skills and needs of the group of people who collectively make up the management of the Company. In general, our policy is to decentralise and to delegate as much as possible. This not only spreads the burden of management a little more evenly and thereby helps to ensure that each individual contributes his best and to the fullest extent but also has the important advantage of helping to train and develop our executives.

But we operate in a controlled economy, where wide authority is exercised over many fields—on licences to manufacture, introduction of new brands, production capacities, imports of essential raw materials, raising of capital, labour welfare etc. With these restrictions it becomes necessary to direct the best use of available resources and to have a clear understanding of the implications of our major decisions taken at any one unit on the remainder. We expect therefore to be informed before such action is taken, to prevent the units getting out of line with each other or our falling out of line with the controls from outside. But on the whole, I would emphasise that we do believe in giving as large a measure of responsibility as the circumstances would permit; and what is more, we believe in giving it at a relatively early age, usually by the middle thirties, sometimes even earlier.

Growth Problems

Looking into the future, we are conscious of problems in three areas—growth, more efficiency, and management development.

An organisation can never sit still, no more than can a society or culture. We must go forward or backward; we must therefore continue to grow. The problems of growth are both internal and external. Within the organisation we must possess the constant desire and endeavour to grow successfully; without, there must be an atmosphere that encourages healthy growth and does not stifle it. A ceiling on healthy growth in a developing economy invites stagnation and contraction. To argue that one must not grow beyond a point is to say that there must be a limit upon efficiency. When we look at the pitifully small *per capita* consumption levels in the country—of fat at half an ounce per day against a nutritional desirable of 2½ ounces, and a soap consumption of 2½ lbs. per annum against even Malaya's 11 lbs. (U.S.A. 32 lbs.)—scope for development for all is enormous. Restrictions, apart from those of scarce resources like foreign exchange, have to be carefully examined if they are not to slow down growth and expansion.

It has been considered desirable that as growth spreads into fields not directly connected with the mainstream of a company's activities, it should be on the basis of forming new companies. This is perhaps a good way of diversifying control and capital, and in the long run encouraging the development of new reservoirs of management, but to encourage this objective, the obvious impediment of taxing inter-company profits must first be abolished.

New growth, or for that matter growth of current operations, must always be efficient and economic. In the post-war inflationary world, where needs of social welfare and expansion of economies has meant a steady rise in costs, it becomes the responsibility of management to do what it can to hold these costs. This is an area where perhaps family management scores over professional management. We have been conscious of this, and last year

(*Continued on next page*)

PROGRESS OF ELECTRIC MOTOR INDUSTRY

PRODUCTION GOING UP, BUT EXPORTS MARKING TIME

THE first tariff inquiry into the electric motor industry, it will be recalled, was held in 1948. Protection was then granted to the industry upto 31st March 1960 by converting the then existing duty of 10 per cent *ad valorem* on electric motors into an equivalent protective duty. The second inquiry was undertaken in 1949 and continuance of protection to the industry was recommended for a further period of three years by the imposition of a protective duty of 15 per cent *ad valorem* on imports of electric motors upto 20 h.p., including fractional horse power motors and component parts thereof. The Government agreed to continuance of protection but did not consider it necessary to increase the duty. Subsequently, protection was extended upto 31st December 1955. The protective duty on complete motors and component parts was raised to 10½ per cent *ad valorem* by the Finance Act, 1951 and later the duty on component parts was further increased to 20 per cent *ad valorem* by the Finance Act, 1954. The third inquiry was undertaken in 1955 and the Tariff Commission recommended that protection to the industry be continued for a further period of three years and that the scheme of protection should cover squirrel cage induction motors of brake-horse power not exceeding 100 but not less than ¼ horse power and slip ring motors of b.h.p. not exceeding 100 but not less than one h.p., excluding flame-proof motors and variable speed commutator motors. As regards protective duty, the Commission recommended 15 per cent *ad valorem* for complete motors and 20 per cent *ad valorem* for component parts of such motors. The Government accepted the above recommendations. After the fourth inquiry into the industry in 1958, the same scheme of protection was further continued for a period of three years. The Commission undertook the last inquiry into this industry in 1961 and extended the scope of the inquiry to cover motors upto 500 h.p. including flame-proof motors, single phase motors upto and including 3 h.p. and fractional horse power motors. As regards protective duty, it recommended 15 per cent *ad valorem* for squirrel cage induction motors, and slip ring motors, single phase motors and f.h.p. motors, 20 per cent *ad valorem* for component parts of the above motors and 35 per cent *ad valorem* for fractional horse power motors of less than ¼ h.p. and parts thereof. The Government accepted these recommendations, and protection has been continued for a further period of two years ending 31st December 1963.

Expansion of Capacity

The Tariff Commission has just taken on hand its sixth inquiry into the industry since the present scheme of protection is due to expire by the end of this year. At the public inquiry which opened on 29th May 1963 at Bombay—a brief report on this has been published on page 1016 of our last week's issue—Mr. K. R. P. Aiyangar, Chairman, Tariff Commission, reviewed the progress of the industry in recent years. In 1961, he recalled, there were 27 units in the large-scale sector manufacturing electric motors with an aggregate annual capacity of 1,136,040 h.p. on single shift. There has been no change since either in the number of producing units or in their installed capacity. The Government, however, has accorded sanction for installation of additional capacity aggregating 1,433,620 h.p. This additional capacity would involve the establishment of 21 new units with an aggregate capacity of 822,400 h.p. and the expansion of seven existing units by 611,220 h.p.

In the small-scale sector, there were in 1961 no less than 74 units with an aggregate capacity of 260,000 h.p. per annum. The number of small-scale units has now increased to 107 with a total capacity of 300,000 h.p.

As for production of electric motors, the large-scale sector accounted for 740,648 h.p. in 1960, 854,641 h.p. in 1961 and 972,138 h.p. in 1962. In the small-scale sector, the output was 76,186 h.p., 92,446 h.p. and 156,156 h.p., respectively, in the said three years. Although the bulk of production in both the sectors continues to be in the range of 1 to 30 h.p., manufacture of higher horse-power (100 h.p. and above) motors has steadily increased in recent years—from 13,485 h.p. in 1960 to 44,716 in 1961 and 57,320 h.p. in 1962. Many producers are stated to have plans to produce higher h.p. motors and special types of motors like flame-proof and explosion-proof motors, variable speed motors, multi-speed pole changing motors, synchronous motors, etc.

Estimate of Domestic Demand

The Chairman of the Tariff Commission has also dealt with the question of domestic demand for electric motors. In 1961, he has recalled, the Commission estimated the domestic demand at one million h.p. and expected it to increase to 2.6 million h.p. in 1964. In the light of the revised target of power generation, the additional generating capacity in 1965-66 is expected to be 2.3 million kW. As the appropriate factor for multiplying additional generating capacity to arrive at the requirements of electric motors in terms of h.p., is "two," it may be supposed that demand for electric motors in that year would be of the order of 4.6 million h.p. But the Development Council for Heavy Electrical Industries has worked out the figure of demand for motors upto 300 h.p. as 4.3 million h.p. for 1965-66. This estimate, however, is on the basis of an addition of 2.3 kW. of electricity in that year, a load factor of 40 per cent and availability of 45 per cent of energy generated for industries where electric motors are used. The Council has also estimated the demand for fractional horse-power motors of ¼ h.p. and above, excluding those used in domestic appliances, at 200,000 numbers by 1965-66. The Indian Electrical Manufacturers' Association, however, has estimated the demand for electric motors upto 300 h.p. at 1.6 million h.p. for 1962-63 and 2.5 million h.p. for 1965-66.

Import-Export Figures

The apparent consumption of electric motors, made up of indigenous production and imports, amounted to 976,343 h.p. in 1960, 1,114,464 h.p. in 1961 and 1,242,606 h.p. in 1962. A majority of consumers, who have replied to the Tariff Commission's questionnaire, are stated to have expressed satisfaction about the quality of indigenous electric motors. As for imports, 32,215 motors valued at Rs. 2.7 crores were imported in 1960, 31,441 valued at Rs. 2.9 crores in 1961 and 16,885 valued at Rs. 2.7 crores in 1962. On the export side, the performance of the industry has not been encouraging. The exports were only 49 numbers valued at Rs. 18,675 in 1960, 100 numbers valued at Rs. 63,219 in 1961 and 69 numbers valued at Rs. 82,646 in 1962. The Producers' Association has informed the Tariff Commission, in this connection, that prices offered by the European countries are so low that, at such prices, it would not be possible even to cover the cost of raw materials for indigenous products. It is said that foreign motors are made with class E insulation and that they are, therefore, smaller and cheaper. This only shows that Indian producers should adopt similar techniques to compete in overseas markets. In the opinion of the Department of Technical Development, exports of motors should be possible at prices lower than those for domestic consumption. Adoption of uniform standards, use of improved types of raw materials and improved techniques of production, according to the Department, may contribute towards establishing exports. The Chairman of the Tariff Commission has also expressed the opinion, that, as the electric motor industry is now fairly well established and organised, it may reasonably be expected to orientate its activities in earning foreign exchange for the country. But any substantial exports may be possible only if the industry adopts the latest designs and techniques followed in foreign countries for improving quality and effects all possible economies in its costs of production.

SYNTHETIC DIAMONDS

Natural industrial diamonds, it is well known, are used for cutting, grinding and polishing and also in ornaments. These, however, are not only rare but also very expensive in refining. Of late, the demand for their use in industries has grown so enormously that new methods of producing them artificially are being thought of. De Beers, who control almost 80 per cent of the world's natural diamonds, it will be recalled, started a plant in South Africa some years back to produce such synthetic diamonds. They have just opened another factory at Shannon, Ireland. This is their first factory in Europe, and it is very close to the main markets in Europe and North America.

The process of producing synthetic diamonds commercially is a simple one. It involves, first, the squeezing of graphite, most commonly used as pencil lead, in hydraulic presses. The squeezed graphite is heated simultaneously and thereby turned into diamond. The synthetic diamonds thus produced have all the characteristics of natural diamonds that are dug out of the ground; they are hard and are used in cutting, grinding etc. A unique feature is that they are virtually indistinguishable from the natural industrial diamonds. What is more, they cost about the same as natural diamonds (£1 a carat). Gem quality diamonds can be made by accurate control of the present process and, when they are made on a large scale, they will really have an impact on the natural diamond markets. But so far, no method has been evolved to distinguish them from natural diamonds.

It may be noted, incidentally, that the development of synthetic diamonds has a fairly long history behind it. As far back as 1878, Hannay, a Scotlander, had some success in making them and, in 1904, Meissan, a Frenchman, had also tried a method. However, it was only in 1955 that the first repeatable process for making diamonds was invented by the American General Electric Company. It involved compressing graphite with powerful presses and heating it electrically at the same time. The details are supposed to be a well-guarded secret. The relevant patents are not disclosed because diamonds are classed as a strategic material in the U.S. But some of these secret patents are stated to have been infringed. In this connection, it is reported that a big case is in the offing and is likely to be heard in the South African Courts.

HINDUSTAN LEVER LIMITED

(Concluded from previous page)

a committee was appointed to examine all expenditure, to make sure that consistent with growth and expansion our costs are kept in check. It was also charged with the task of creating within the Company a climate of cost-consciousness. The results so far have been rewarding and the life of this Committee is being prolonged by another year. Also, one of its recommendations to experiment with quarterly follow-up of overheads budgets and actual expenditure is being adopted.

Lastly, the future of the Company depends upon the men and women who make up the organisation. Upon their proper recruitment, training and promotion; upon ensuring that everyone is given a fair chance and upon a constant review of their progress and welfare, our organisation at all levels spends a lot of its time. We thus maintain proper procedures for selection, promotion, job evaluation and increments which will never neglect nor leave the fate of an employee to one individual. The Board will periodically discuss management development, our requirements and plans for succession, and annually it will receive a report on each manager and discuss his progress, future training needs and salary increments. It will also carefully look at all those among general staff who are ready to go into management. We believe that we shall continue to get our fair share of the limited though growing talent available only if, in addition to giving good and fair terms of service, conditions are provided where a man can develop to the best of his abilities and be given responsibility early.

This is a short description of our organisation and its thinking. It is continually on the move and adapting to change. It has its weaknesses and its strength, but we are constantly striving for development and greater efficiency.

Note:—*This does not purport to be a record of the proceedings of the Annual General Meeting.*

NEW PRODUCTS AND PROCESSES

Surface Coatings from Castor Oil

IT is well known that by dehydration castor oil can be converted to a drying oil for use in surface coatings. It has perhaps not been generally appreciated that the secondary hydroxyl group of recinoleic acid, which constitutes 85-90 per cent of the constituent fatty acids in castor oil can be esterified with fatty or rosin acids and the resultant ester modified to yield a product which may find use in surface coatings. Investigations have been conducted at the Regional Research Laboratory, Hyderabad, to modify rosin-castor oil condensate to obtain a product with good drying characteristics. As a result, conditions have been standardised for obtaining light coloured varnishes with good drying characteristics. The process consists in heating castor oil with rosin till a desired acid value is obtained. Maleic anhydride is added to the condensate and heating continued for some more time. Glycerol is then incorporated and the esterification is completed by further heating at a fixed temperature. Any remaining hydroxyl groups in the products are dehydroxylated by heating with anhydrous sodium bisulphate.

The novel features of this product are that a set of reactions comprising esterification, adduct formation, dehydroxylation and inter and intra polymerisation leading to extensive cross linking, all take place *in situ*. Stability of rosin esters, harness, pale colour, colour retention and durability of maleic resins, rapid drying characteristics of dehydrated castor oil and plasticising property of branched chain recinoleic acid esters are all imparted to the product in a single process. The product is unaffected by basic pigments such as zinc oxide basic lead sulphate and white lead. The surface coating materials basically derived from castor oil, have been designated as "Ricin varnishes." Optimum processing conditions have been worked out on the basis of extensive studies in the laboratory. Some pilot plant experiments have also been conducted where batches of 25 lbs. have been successfully prepared. Raw materials used are castor oil, rosin, glycerol, sodium bisulphate and maleic anhydride. Except maleic anhydride all these materials are available from indigenous sources. Similar products are not known to be manufactured in India or abroad. Consumer acceptance trials have not been undertaken and it is not possible to make any forecast of the possible demand in India. Equipments required are simple and consist of reaction kettle, oil pump, portable stirrers, storage tank and stainless steel vessels. These can be fabricated locally. The process is said to be of particular interest to established manufacturers of varnishes who may already be having many items of equipment. Total capital outlay for starting a new plant producing 5,000 lbs. of varnish per day is estimated at about Rs. 1.85 lakh.

16mm. Sound Projectors

A new range of 16mm. sound projectors, incorporating a number of advanced features are to be marketed by a London firm Associated Electrical Industries Ltd. They are noteworthy for ease of operation, quiet running, versatility and high quality of sound and picture reproduction, as well as attractive appearance and portability, it is said. The new series offers a choice of projector to meet all instructional or entertainment requirements. Two of the versions are for reproduction of optical sound tracks only, while two others can reproduce both optical and magnetic sound tracks. Another version can deal with both types separately or simultaneously, has facilities for magnetic recording and a four-way mixer control panel. This enables speech or music to be recorded, sound to be totally or partially erased, and with half-striped film, the sound to be transferred from the optical track onto magnetic. Most of the models have external loudspeakers as well as the case cover speakers. An overhead projector, which gives teachers, lecturers and instructors a device which for many purposes can replace the blackboard, the episcope and the slide projector, has also been developed by the same firm. With this projector, the speaker is now able not only to face his audience but, under normal daylight conditions, to show a bright and well-defined picture on the screen. In addition, he can make any change to the projected picture without losing contact with his audience. Note-taking is easy because the light level is high and does not change. The lecturer has at his disposal some techniques similar to those of the flannel graph and the magnet board, and others which progress some way towards the techniques of the animated film. The operation of the equipment is based on the use of large transparencies projected from a 10 in. square illuminated stage.

Fatigue Tester

A plus or minus 20-ton hydraulic fatigue testing machine, claimed to be the first in the world that can be used both for block programme testing and also for assessing the actual random conditions as encountered in service (as opposed to random blocks), has been developed for high frequency fatigue testing combined with low frequency creep testing. Dowty Rotol Ltd., the manufacturers, claim that the machine's servo-controlled hydraulic load application gives it a far greater degree of flexibility than that obtained with constant load amplitude machines and that random signalling as well as block programming of pre-load, superimposed load and frequency is possible without pause for readjustment. The wave form is constant from one cycle in 10,000 seconds to 50 cycles per second. The machine can perform all the functions of all conventional equipments plus its random loading facility. It is claimed that the machine is much cheaper than the nearest comparable machine.

Carpet Tester

Three new testing devices have been developed by Britain's Wool Industries Research Association. One device, known as the dynamic loading machine, provides information on the "bedding down" of carpet pile by simulating the two main actions of walking: compression and the shearing effect at the edge of the shoe. Another device, the carpet thickness gauge, measures the thickness of the carpet under compression up to 12-lb. per square inch which represents the maximum pressure exerted during walking. The readings obtained give an indication of the thickness and softness of the carpet. The third device, the tuft withdrawal tensometer, provides a simple method of measuring the force required to withdraw single tufts from a carpet. The instrument grips each tuft by means of a pincer clip attached to a calibrated spring balance. The machine can be used on any part of the carpet, and replaces larger, costlier instruments which can only test cut samples.

Metal Working Press

A metal working press, which is designed both to cast tools for sheet metal pressing and carry out the pressing operation with these tools, has been developed by a British engineering firm, Jewel Engineering (Leicester) Ltd. Designed particularly to meet the needs of the component manufacturer who produces a range of pressings in small and medium sized batches, the new press abolishes the normal expense of stocking costly dies for each individual type of component to be produced. Unit cost of production can thus be reduced very considerably. With the new process the machine casts the dies in the exact position in which they will work, using a special low melting temperature alloy to form the dies. These tools then press out the components and when the job has been completed they can be melted down again for new dies to be cast.

Commercial Use of Fuel Cells

Two steps towards commercial use of fuel cells to produce electric power have been reported by the Research Laboratory, General Electric Company, P.O. Box 1088, Schenectady, New York. One is a cell which uses natural gas and air, instead of pure hydrogen and oxygen, as reaction materials to produce power. This system has the further advantage that it operates at the comparatively low temperature of 250 to 400 degrees Fahrenheit. The lower temperature means plastic parts can be used instead of refractory metals and that vacuum pumps are not necessary. The chief disadvantage is that expensive platinum electrodes are needed. The second system uses less expensive molten silver and carbon as electrodes. However, the reaction is carried on at a higher temperature—about 2,000 degrees—to keep the silver melted. This system also uses natural gas.

Cross-carriage Cutting Machine

A new cross-carriage cutting machine, introduced by a leading British firm, is intended mainly for use in medium and large engineering workshops. It has a cutting area of 80 in. by 80 in. Extra track may be added in 5 ft. or 10 ft. lengths. It can be fitted with six cutters for cutting mild steel up to 6 in. thick. Greater thicknesses can be cut with fewer cutters. Profiles, circles and straight line bevels can be cut with an accuracy of plus or minus 1/32 in. of true nozzle position. It has a laterally floating boom mounted on a cross-carriage unit running on longitudinal tracks. Between the tracks is a 5 ft. long tracing table. A large drawing tolerance of plus or minus 6 in. either side of centre allows a width of cut up to 92 in.

New Reamer

A new reamer, developed by the Production Engineering Research Association, Melton Mowbray, Leicestershire, England, is said to produce reamed holes of higher quality and at a faster rate than is possible with the normal reamer, and is also said to have a longer life. Major improvements in performance have been achieved by high feed rates in conjunction with low bevel lead angles and a negative axial rake on each tooth. Use of the negative axial rake simplifies regrinding of the reamer and eliminates swarf blockage at the high feed rates. Quality of hole surfaces at these rates has been guaranteed by using fewer flutes and giving them a particular type of unequal spacing.

Industrial Greases

Careful combination of two industrial greases that are normally used separately enables their individual limitations to be cancelled out and their individual advantages to be retained, claims the Research Laboratory of Riuniti S.p.A., at San Donato Milanese, Italy. The first grease, one based on lithium, is known for its good lubricating properties under high pressure and also for its undesirable tendency to allow its oil content to settle out during storage; the second one, based on a clay, performs well at high temperature but yields its oil reluctantly. The product of the two yields its oil exactly as required, it is claimed; it also resists both high temperatures and high pressure.

New Type of V-belt

A new type of light-weight, rustproof link V-belt is now being manufactured by a British firm, Dunlop Rubber Co., Ltd. It has no small parts to lose, each link being a unit with its fastener. The fasteners, made of aluminium alloy, are specially designed to reduce wear, and have flat heads which eliminate metallic contact with the pulley. The belt is a 40° laminated link V-belt made from top-quality cotton fabric impregnated with specially developed rubber compounds, the links joined by the aluminium fasteners to form a continuous V-belt designed and manufactured to give long and trouble-free service. It is normally supplied in 50 ft. coils.

Mobile Laboratory for Oil Exploration

Two mobile laboratories, designed for use in the worst conditions of climate and terrain, will be used in various parts of the world, including India, by geologists of a British petroleum company. Samples of rock strata will be washed, sorted and dried in one compartment and analysed and recorded in another. Each laboratory, 32 ft. long and 10 ft. wide, is mounted on skids and has rubber dustproofing, false roof sun canopy, metal window shields, fly screens and air conditioners.

Develop India—
Defend India

BRITISH INDIA CORPORATION LIMITED

FINANCIAL STRENGTH GREATER THAN EVER BEFORE

CHAIRMAN, MR. SATISH CHANDRA'S ANNUAL SPEECH

THE financial strength of the British India Corporation Ltd. in the past calendar year was greater than in any other year. This was the view expressed by Mr. Satish Chandra, Chairman of the Corporation, in his speech at the shareholders' Forty-third Annual General Meeting held at Kanpur on Saturday, 8th June 1963. Citing figures of interest in appraising the financial strength, the Chairman stated that the ratio of profit to turnover was 14 per cent and that of profit to net worth 21 per cent, with profit itself rising by Rs. 28.02 lakhs to Rs. 133.38 lakhs. The Chairman observed that, in view of the emergency, the entire capacities of the Corporation's units had been at the disposal of the Government and added that the key industries of the B.I.C. Group would not hesitate to give second place to commercial contracts.

Reproduced below is the full text of Mr. Satish Chandra's speech:

GENTLEMEN,

It gives me great pleasure to greet you and welcome you to the forty-third annual general meeting of the Corporation. You have already received the audited accounts and balance-sheet for 1962, together with the Directors' report, and with your permission, I shall take them as read.

Important Year

The year under review was an important one in the Corporation's history. It was marked by the restoration of a Shareholders' Board, after periods of receivership and judicatory control, following a much-publicised crisis which occurred some years ago in the affairs of your Company. Many complicated problems arose, and until the Corporation could revert to a normal Shareholders' Board, its management was meantime delegated to a Committee appointed by the Allahabad High Court. That Committee dutifully fulfilled the obligations of a transitory care-taker Board, but ceased to function last year, when having regard to the ensuing circumstances, a further order was passed by the Court, directing the election of a Shareholders' Board. The new Board which was duly constituted on an elective basis, met for the first time on 1st November, 1962. The appointment by the Board of Mr. B. P. Bajoria as Managing Director for a period of 5 years, was subsequently sanctioned by the Central Government, and a resolution in that regard will be considered later in this meeting. I myself had the honour to be appointed Chairman of the new Board, as from 1st November, 1962, and a resolution concerning this appointment will similarly be placed before you today. For a period of some three months immediately preceding the first meeting of the new Board, I also served in accordance with the Court's orders, as Chairman of the outgoing Committee of Management, my predecessor, Mr. H. S. Chaturvedi, having earlier relinquished his charge, and requested to be relieved of his responsibilities.

Interim Board

I should like to take the opportunity at this meeting to pay a tribute to Mr. Chaturvedi, who from May 1958 to July 1962, guided the affairs of the B.I.C. with wisdom, dignity, and patience. Soon after he assumed office, the Corporation's financial and trading position improved and the confidence of the market in the stability of the B.I.C. was largely regained. It was perhaps inevitable that an interim Board, should by its very nature function within a restricted sphere, and confine itself primarily to regulative management, rather than engage in any long-term reorganisations and development schemes calling for major policy decisions. The interim Board, however, rendered other necessary and useful services, which not only preserved the credit and reputation of the Corporation, but paved the way for a smooth changeover at the appropriate time. I am now optimistic enough to hope that the new Board will by virtue of the wider discretion it can exercise, not only adopt bolder methods to tackle many pre-existing problems, but be in a position to plan far ahead, and venture forth into new fields of industrial enterprise and development. This will naturally entail some reorganisation, a certain amount of which is already in hand, chiefly in respect of production programme and sales policies. Side by side with development work on the existing range of products, it is hoped that the search for new products will enlarge the scope of the Corporation's activities, and materially improve its prosperity in the coming years. As you all know, the B.I.C. Group, which has a work force of nearly 27,000 employees, ranks among the leading industrial establishments of Northern India. The total turnover of the Corporation and its managed companies for the year under review was approximately Rs. 25 crores.

Donation to N.D.F.

Of greater concern than the immediate problems of the B.I.C. in 1962, was the declaration of an emergency in the country, following the use of military force by China to settle a border dispute. The unprovoked shooting war aroused a new spirit of national duty and solidarity, and there was unanimous recognition of the need to strengthen the country's defences in every way possible. As was to be expected, most industrial houses made substantial contributions to the National Defence Fund, and you will be glad to know that in keeping with our past record of timely service to the defence forces, the B.I.C. Group were among the first to come forward with their contributions. A sum of Rs. 7 lakhs was donated to the N.D.F. by the Corporation and its managed companies, besides gifts in cash and kind through the Red Cross, Air Headquarters, and local agencies. Voluntary contributions of various kinds were also made by our staff and workmen.

A swift change was effected in the manufacturing programmes of our woollen textiles and leather units, and to a lesser extent of our cotton textile units. Needless to say our entire productive capacities were, at the disposal of the Government of India. Government has utilised our productive capacity to a very large extent, and until military requirements are satisfied, it will be necessary for us to curtail production of woollen materials for the civilian market. So long as the emergency continues, the key industries of the B.I.C. Group will not hesitate to give second place to commercial contracts, and if necessary in exigent circumstances, even hold capacities in reserve for defence needs.

Rise in Profit

I shall now turn your attention to the trading results for the year, which have been satisfactory. The Accounts show an improvement in profit. As compared with Rs. 105.36 lakhs in 1961, the profit for the year under review amounted to Rs. 133.38 lakhs, reflecting an increase of Rs. 28.02 lakhs. As a result of higher profits and the introduction of the Super Profits Tax, provision for taxation is Rs. 75 lakhs as against Rs. 48 lakhs last year. This absorbs approximately 60 per cent of the profit. After including items relating to previous years and the credit balance brought forward from 1961, there is a surplus of Rs. 60,20,654.

Certain percentages will be of interest in appraising the current financial strength of the Corporation, which is greater than in any other year. The ratio of profit to turnover is 14 per cent and of profit to net worth, 21 per cent. I would also draw your attention to the table of graphs showing the worth, sales, and net profit in the Annual Report for 1962, wherein an upward trend continues to be maintained.

Having regard to this position, and to the general level of production now obtaining, the Board feel justified in recommending the payment of dividend at 45 nP per share on the equity capital as compared with 35 nP last year, representing an increase of 2 per cent.

The balance-sheet shows on the liabilities side a bank overdraft of 226 lakhs on 31st December, 1962, as against 129 lakhs on the same date in the previous year. This is firstly attributable to record levels of production, necessitating substantial increases in stocks. The figures showing work in progress and finished production aggregate Rs. 2.84 crores, or about half a crore more than the aggregate in 1961. The second contributory factor to the increase in the overdraft this year was the payment of accumulated tax arrears of earlier years, totalling over Rs. 50 lakhs. I am glad to say that all pending assessments have now been completed, and no outstanding tax liabilities remain, other than provisions for the current year.

Trading results in various parts of the Group have been mixed, and I shall briefly review, in accordance with past practice, the results shown by our branches and managed companies.

Record Woollen Sales

Despite certain handicaps due to restricted import licences for raw materials and machinery, the woollen branches have shown good results. The total sales of the two woollen branches manufacturing the well-known Lal-Imli and Dhariwal products, reached a new record figure, and the entire production of the mills was sold. There was no increase over the previous year in the value of licences issued to the two branches for imported wools, but the licensing policy which was altered to a yearly basis proved to be very helpful, insofar as a definite assessment could be made of the total raw materials to be made available during the year. The difficulties experienced during the preceding year in regard to the short supply of spare parts were also largely removed and machinery could be kept running satisfactorily.

Losses were, unfortunately, incurred on account of the compulsory sale, in terms of an official ordinance, of mill-spun yarn of specified quality to small-scale weaving and hosiery units in Ludhiana and Amritsar. In view of the inadequacy of licences to fulfil their own manufacturing commitments, the woollen branches could only comply with the order by purchasing yarn of the prescribed quality at high prices exacted by the open market, and selling it again at controlled rates to the notified units.

Since the declaration of the emergency, production for military and civil requirements is in the ratio of 80 to 20 per cent in our woollen branches, as against the reverse ratio in previous years of 20 to 80 per cent. Production against defence orders has been in full swing during the current year, but civil production has been marking time. It is hoped that the manufacture of fine worsted fabrics and other products for which there is a good demand in the civil market, will not be unduly delayed and that there will be no brake on the utilisation of productive capacities. We are hopeful that production targets will be suitably balanced, taking into account that certain plant is equipped for manufacture of products saleable only in civil markets.

Some progress was made in the rehabilitation projects of the woollen branches. Three licences have been obtained for capital goods, and it is expected that by 1964, new machinery to the value of about Rs. 20 lakhs will be installed. This, however, is only the first phase, and I hope that we shall eventually obtain licences for a much greater value, for the modernisation of the two mills.

Leather Units

Trading results in the leather branches, I regret to say, again served as a painful reminder of the need for concentrated reorganisation, in all departments of the tannery and shoe factory. Despite higher levels of activity in some sections such as the sole and industrial leather departments, tanning extract, and leather board departments, these were offset by losses incurred in the manufacture of chrome leather.

Exports of civilian shoes to the value of Rs. 11.17 lakhs were made to the U.S.S.R. and of chrome leather to the value of Rs. 1 lakh to the United Kingdom. The decline in exports to Russia was largely due to the increasing popularity of handmade shoes, offered at competitive prices by cottage industries, as against the machine-made products of factories handicapped by outdated plant.

The Cooper Allen Boot Factory which was closed for several years has now been reopened to meet defence needs. Efforts are also being made to explore the possibilities of diversifying the activities of the Branch into other low-priced lines of popular footwear, and negotiations with prominent manufacturers are expected to materialise in the near future.

On the cotton side, turnover was maintained, but the net profits of the two managed companies owning three mills, i.e. the two Elgin Mills and Cawnpore Textiles, fell short of expectations. This was on account of difficulties in the cotton textile industry as a whole. Due to overall increases in the cost of raw cotton, stores, power, fuel, dyes and chemicals, etc., there was a disproportionate shrinkage in profit margins. With further increases by 10 per cent to 15 per cent in 1963 prices of raw cotton, it is feared that unremunerative prices may continue to affect profits adversely unless there is a suitable revision of internal selling prices, which since 1960 are still governed by the voluntary selling agreement with the Indian Cotton Manufacturers' Federation, Bombay. An enhanced wage bill has also to be met in accordance with the Wage Board and Dr. Sampurnanand Awards.

Export Performance

Export performance was disappointing, largely on account of very keen competition from other countries. The working of the Export Obligation scheme in its existing form also led to decline in prices of Indian cotton textiles, which dropped by more than 10 per cent. To meet the specialised demands of the overseas market for fabrics of faultless weave, Elgin Mills have now ordered 240 automatic looms, some of which are already in commission.

Nearly 60 per cent of Elgin products such as drill, cellular shirting and canvas are at present being manufactured against defence orders. The production of the tent department is almost exclusively allocated for defence requirements.

The rehabilitation and modernisation programme of the cotton group is proceeding satisfactorily. A licence has been received for the installation of 12,000 additional spindles, and steps are being taken to commission these as early as possible.

The sugar side of our business, which operated under very adverse conditions during the 1961-62 season, added to our worries. Due to rigid factors in the cost of sugar production, any operational economies could not be effected and there were heavy losses in both the managed companies. The percentage recovery of cane content suffered a steep decline due to production spreading over an unusually prolonged season. The sugar factories were more or less forced to crush cane during the dry summer months. This factor, coupled with an abnormally large carryover of stocks, resulted in the paradoxical situation of unremunerative overproduction. Distress sales had to be made in a falling market as temporary expedients for storage and financial difficulties.

Fall in Sugar Output

An unfortunate anti-climax in the shape of a short crop was experienced at the start of the current year, when sowing of cane was drastically reduced, consequent on the announcement of a ten per cent cut in the season's production. As a consequence, the crushing season was very short and the production in our sugar factories during the year declined sharply.

An overall rehabilitation, modernisation and expansion programme of the Group's six sugar factories is now long overdue. The present capacities are uneconomic and the plants are old and outdated. The matter is receiving close attention, and subject to the availability of funds for capital expenditure, it is hoped to take up a phased programme of modernisation as early as possible.

The Corporation continue to serve as Secretaries and Treasurers for Saran Engineering Company and Brushware Ltd., and as Secretaries of Beta Picker Company Ltd. A development programme is under consideration for Saran Engineering, which is one of the oldest workshops in India manufacturing various items of sugar plant and machinery.

Directors of joint stock companies have, in recent years, been obliged to draw the attention of shareholders to the incidence of increasing tax demands on company profits. Our own case is no exception, and I have to draw your special attention to the tax provision of Rs. 75 lakhs made for 1962 which is exactly double the amount recommended for dividend payments to shareholders, after making necessary transfers to reserves out of the available credit balance.

There have been some vigorous expressions of opinion by industrialists on the one hand and Government spokesmen on the other in regard to the ultimate effects on the country's economy of the Super Profits Tax levied on the corporate sector. Opinion has been undivided in regard to the imperative need for fully mobilising the country's economic resources to meet the extra cost of defence expenditure. But industrialists as a class have differed from Government economists on the question of the proportion of tax levies which organised industry can reasonably sustain, without draining itself of self-generating resources. Every industrial concern is responsible for keeping its plant and machinery up-to-date, and it is necessary to spend increasingly substantial sums to replace older and less productive machinery. The cost of plant replacement is now vastly higher than the outlay on original installations, and the money required for modern productive plant can only be found from what is left out of a company's profits after taxation, i.e., largely from 'retained' or 'ploughed-back' profits. Further, there is the additional finance required to support expansion in production which, in the case of your Corporation, is very considerable.

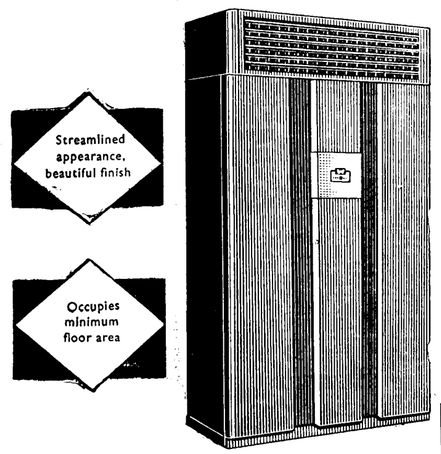
With so many shades of opinion on taxation and its effects, one cannot help being reminded of George Bernard Shaw's remark, that if all the economists in the world were laid from end to end, they would never reach a conclusion. I myself am of the view that while the recent reliefs in Super Profits Tax are very welcome, some further adjustments will probably have to be made in due course.

A bonus provision at the rate of 18.75 naye paise in the rupee on basic earnings of 1962 has again been made. The Board of Directors are of the view that it will not, however, be in the best interest of the B.I.C. to continue paying bonus to employees of units which incur losses. After careful consideration it has been decided that as a special case bonus will be paid this year to the industrial workers of the leather units on the clear understanding that they will make every endeavour to improve their performance. Bonus has to be earned by hard work and shared out of the profits of the Company. The Board are of the view that bonus cannot be claimed as a right, particularly in the case of units which continue to incur losses year after year. They have therefore reserved to themselves the right to withhold or postpone payment to staff not covered by the Industrial Disputes Act, until the performance of the unit concerned shows marked improvement.

Labour Relations

Labour relations have been harmonious and it is a matter of satisfaction that remuneration to workmen of the Corporation are higher than the average prevailing in Kanpur. The Corporation has always been alive to the needs and welfare of their workers. Financial allocations have recently been made for certain improvements in the MacRobertganj colony, and work has already been taken in hand.

I should now like to record the thanks of the Directors to all categories of employees for their efforts during the year. We have a large number of employees who have been with us for a number of years, as well as comparatively new staff who have joined the Group recently. I am happy to say that all have been working very harmoniously.



So far as the current year is concerned, production and sales generally continue at a comparatively higher level than in 1962. While it is never easy to make forecasts, I am confident that the new management will function to the advantage of the Corporation and its shareholders. We are, like all other business houses, subject to Government financial policy, which in turn is dependent upon the exigencies of the national economy from time to time, and many other factors. But whatever our difficulties, it is not our intention to sit back and blame Government, but to work actively to resolve our problems, by healthy discussion and adjustment.

In the end, I would like to thank all my colleagues on the Board, and in particular the Managing Director, Mr. B. P. Bajoria for the hard work he has put in, and the assiduity with which he has applied himself to various problems. I should also like to express our special thanks to the Secretary, Mr. K. M. Wilcox, who has a longstanding association with the Board, for his valued services.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

4 outstanding features

4-way economy

BLUE STAR-WORTHINGTON

Packaged Air Conditioners

5, 7½ and 10 tons

Plus this economy

★ Single units from 5 to 10 tons, *cut costs on tonnage*

★ Units can operate without ductwork, *save installation costs*

★ Single units can be connected to form multiple system, *reduce expansion costs*

★ Every unit tested individually for performance *ensures low operation and maintenance costs*

WORTHINGTON

AIR CONDITIONING & REFRIGERATION

INDIA'S EXPORT TRADE IN 1962-63

FURTHER SETBACK IN COTTON TEXTILES AND MANGANESE ORE

LIKE the proverbial curate's egg, India's export performance has been partly good and partly bad. During the year ended March 1963, India's exports (including re-exports) aggregated Rs. 694 crores, which were higher by Rs. 34 crores, as compared with the previous year. The improvement was shared by such commodities as jute manufactures, tea, sugar, tobacco, oilcakes, and engineering goods like electric fans and sewing machines. But, at the same time, some of India's leading traditional exports such as cotton textiles, raw cotton, leather, pepper and coffee have suffered setbacks. What is worse, the present rate of growth of exports falls much short of the targets laid down in the third Plan. For instance, actual exports in 1962-63—second year of the third Plan—were smaller by as much as Rs. 26 crores, as compared with the target for that particular year. It may be noted here that the third Plan target for exports is Rs. 3,700 crores (for five-year period), or an annual average of Rs. 740 crores. During the first two years, exports aggregated Rs. 1,354 crores, leaving a gap of Rs. 2,346 crores to be attained within the next three years, the annual average being Rs. 782 crores. It would certainly be an uphill task, the fulfilment of which is open to serious doubt. This doubt is not unwarranted, considering the fact that the authorities have now fixed the export target for 1963-64 at only about Rs. 740 crores.

Exports from Goa

In this context, it is necessary to add that the aforesaid figures of exports do not take into account those effected from Goa. In 1962-63, exports from Goa amounted to Rs. 16.29 crores. Iron ore accounted for the lion's share (95 per cent) of Goa's total exports, the actual value of its shipments in 1962-63 being Rs. 15.69 crores. Shipments of manganese ore amounted to Rs. 18 lakhs, those of ferro-manganese Rs. 31 lakhs and cashewnuts Rs. 5 lakhs.

Exports from Goa are excluded from the table below, which shows the value of major items of exports from India in 1962-63, as compared with the previous year; these figures are taken from the *Monthly Statistics of the Foreign Trade of India—March* 1963, published by the Department of Commercial Intelligence and Statistics, Calcutta (Government of India):

Exports of Major Commodities **

(Value in lakhs of rupees)

	1962-63	1961-62
Food materials and tobacco :		
Tea	129,19	122,26
Coffee	7,61	9,02
Cashew kernels	19,36	18,17
Oilseed cakes	33,30	18,86
Pepper	6,57	8,08
Sugar	18,03	15,33
Raw tobacco	17,99	14,05
Manufactured tobacco	87	91
Crude (raw) materials :		
Raw cotton	17,07	20,35
Silk	61	54
Raw hides and skins	10,84	8,22
Wool and other animal hair	6,64	9,19
Raw jute	1,30	5
Mica	10,36	9,66
Iron ore and concentrates	19,82	17,41
Iron and steel scrap	1,99	6,25
Manganese ore	7,88	10,42
Manufactures (except chemicals and machinery) :		
Jute goods	156,17	144,78
Cotton yarn and fabrics	52,13	53,31
Iron and steel	2,27	9,68
Leather and leather goods	22,75	25,45
Rubber manufactures	72	48
Glass and glassware	24	24
Paper and paperboard	78	75
Metal manufactures	2,68	2,15
Chemicals :		
Inorganic chemicals	44	25
Organic chemicals	90	1,04
Essential oils	4,30	4,51
Pigments and paints	21	16
Pharmaceuticals	1,07	98
Machinery and Transport :		
Electric machinery	1,38	1,02
Other machinery	2,41	2,38
Transport equipment	62	50
Sewing machines	46	44
Electric fans	93	69
Mineral fuels :		
Petroleum products	4,13	3,48
Coal	2,81	2,42
Vegetable oils :		
Groundnut oil	7,83	1,03
Castor oil	4,29	4,00
Linseed oil	13	8
Miscellaneous manufactures :		
Footwear	2,70	2,40
Furniture and fixtures	21	27
Total exports (including others)	693,69†	660,34

* Including re-exports.

† Excluding exports from Goa, which amounted to Rs. 16 crores in 1962-63.

N.B.—This table contains only selected major export commodities, and, therefore, the figure of total exports does not tally with the total of the given individual commodities.

For the third year in succession, jute goods have figured as the largest foreign exchange earner, displacing tea. This has been made possible by the strident recovery in raw jute output during the last two seasons, which enabled mills to step up production. At the same time, several industrialised countries, where there was a marked depletion of stocks earlier during the boom, increased their offtake last year. Shipments of tea went up by about Rs. 7 crores. But the pace of increase in exports was nowhere more conspicuous than in the case of oilseeds cakes, particularly groundnut meal, following brisk purchases by the West European and East European countries alike. Exports of oilcakes rose by about 70 per cent over 1961-62 to Rs. 33 crores. Exports of sugar, too, made good headway, thanks to the scramble for the commodity in world markets, following smaller beet crop in Western Europe and sugarcane crop in Cuba. There was a perceptible recovery in the shipment of groundnut oil, following heavy purchases by Spain, induced by the shortfall in its olive crop.

Manufactured Goods

Although India's attempts to diversify the pattern of exports have not been successful to any large extent, it is somewhat gratifying to see that several manufactured goods continue to increase their share of exports. But for the steady increase in cost of production, the shortage of raw materials and fuels, and the larger civilian and defence needs within the country, their contribution to exports would have been still better. Mention may be made here of electric fans, including ceiling fans, pedestal fans and table fans. Exports of sewing machines, several machinery items, rubber goods, metal manufactures, paper (mainly cigarette tissues), drugs and pharmaceuticals and footwear have also shown an upward trend.

Among the goods which have fared badly on the export front, the prominent item is cotton textiles. Exports of cotton textiles continue to decline, despite several incentives and fixation of export targets for individual mills at the rate of 12 per cent of their turnover of cloth and 3 per cent in the case of yarn. The decline is largely due to the steady increase in competition in world markets, on the one hand, and the lack of perceptible improvement in productivity within the country. Besides cotton textiles, export of raw cotton have also suffered a setback.

Disappointing

Shippers of manganese ore had another disappointing year in 1962-63, despite the decontrol of exports in October last and the reduction in railway freights and royalty rates. The major reason for the debacle in manganese ore exports, started from 1958 onwards, has been technological developments resulting in its smaller percentage utilisation by the steel industry, apart from recession in the production of steel in the U.S. Defective official policies in the past and inadequate incentives have also adversely affected its exports. Increased competition from other countries has hit the exports of pepper and leather. The decline in overseas sales of raw wool is the result mainly of larger domestic consumption, following the emergence of large-scale defence demand for woollen cloths. Some of the engineering goods have also failed to maintain their contribution on the export front. Exports of bicycles and bicycle parts, for instance, fell by about Rs. 9 lakhs over a year to Rs. 10 lakhs in 1962-63.

The disappointing performance of a wide range of export items is a grim reminder of the arduous task ahead in India's bid to promote exports. In the context, Mr. P. C. Bhattacharyya, Governor of the Reserve Bank of India, did well the other day to urge the business community, in particular, to take up the challenge of export promotion with unremitting zeal and steadfastness. In his inaugural address to the tenth annual general meeting of the Indian Council of Foreign Trade held at Bombay on the 7th instant, he advised the industry and trade to take full advantage of the incentives and other facilities offered by the Government. Neither Mr. Bhattacharyya nor Mr. Murarji J. Vaidya, President of the Council, had any new suggestion to make either to supplement the present efforts for export promotion or to improve the working of the existing schemes. Mr. Vaidya welcomed the export credit scheme introduced by the Reserve Bank with effect from 23rd March 1963. According to Mr. Bhattacharyya, there was already evidence that the scheme had had an "all-round effect in bringing down the discount rates" in respect of export bills.

IMPORT OF RAW MATERIALS AGAINST A.U. LICENCES

The Government of India has issued clarifications in respect of the provisions of Commerce and Industry Ministry's Public Notice No. 19-ITC(PN)/63 dated 18th March 1963 relating to the import of raw materials/components and spare parts against actual user licences granted to industries in the scheduled and non-scheduled sectors including small industries. The following are the clarifications:

Quantitative Limit: A.U. licences are issued normally with value alone as limiting factor and in cases where quantity is to be the limiting factor, it is shown in the licence both in value and quantity. The words 'quantitative limit' have been used in para 2 of the public notice referred to above in the general sense to cover the value limits indicated in the licences for import of various items.

Scope of the Facilities Allowed: The facility allowed in para 2 of the notice will be applicable only to A.U. licences for raw materials/components, and not to the licences granted for machinery and/or spare parts A.U. licences for components would be these where certain components are allowed to be imported for the assembling of the finished product.

The facility to import permissible spare parts and small tools required for licence holders factory upto 25 per cent of the face value of A.U. licences for raw materials and/or components, will be available even where the licence does not cover more than one item. The permissible spare parts are those required for the servicing, maintenance and replacement purposes of the plant, machinery and equipment, installed in the licence holders' factory. Bit spart parts of machinery which are specified elsewhere in the Red Book, such as ball bearings, bolts and nuts etc., will not be allowed to be imported. The small tools are the tools covered by S.No. 20/II. Small tools falling under S.No. 20/II other than those specified in Appendix 15 of the Red Book, and which are shown as licensable to actual users, will be considered as permissible small tools. The instructions contained in the Public Notice will apply to all valid licences already in possession of the importers. The provisions of the Notice will also be applicable to the licences granted under Aid-Loan from U.S.A.

UNION CARBIDE'S NEW VENTURE

The ground-breaking ceremony of the Carbon Products Company was performed by Mr. Keshab Chandra Basu, Speaker, West Bengal Assembly, at Cossipore, Calcutta, on 7th June 1963. Work on the construction commences immediately, and the plant is expected to be completed in 1964. This plant marks the entry of Union Carbide into the carbon products field, and brings the number of the Company's manufacturing units in the country to six. The world-famous "National" brand of projector carbons manufactured at this plant will not only help meet the country's demand, but also save valuable foreign exchange, since at present nearly all projector carbons are imported.

The carbon arc has often been referred to as a "man-made miracle of light." This brilliant light comes from tiny carbons not much larger than pencils. Yet this light is brighter than the sun itself—it enlarges the tiny pictures on a film as much as 300,000 times! This plant will be equipped with the most modern machinery of its kind in the world, and will utilise a revolutionary new manufacturing process to produce the finest quality "National" brand of projector carbons.

Union Carbide Corporation of the U.S. is a pioneer in carbon arc lighting. It has, for instance, perfected the new yellow flame carbon arc for use in colour photography. This development won an "Oscar," symbol of the highest achievement in the motion picture industry. Union Carbide India has drawn upon the world-wide resources, technical know-how and experience of Union Carbide Corporation, U.S., to make the Carbon Products Company possible.

BHOPAL HEAVY ELECTRICALS FACTORY

The Heavy Electricals Factory at Bhopal has successfully completed the manufacture of the core of the giant size 75,000-kVA transformer—the first ever to be made in India. Over 28,500 punchings were used to build up this giant core weighing 42 tonnes. When placed end to end these punchings will measure more than the distance between Bhopal and Sanchi (45 kilometres).

This is one of the six such cores being made for six Nos. of 75,000 kVA transformers which this factory has undertaken to manufacture against the orders of the State Electricity Board of Orissa and Maharashtra. While four of these transformers are required for the Talcher scheme of Orissa, two are needed for power development scheme at Paras and Bhusawal in Maharashtra. When completed, one such transformer alone would be capable of supplying five times the present power requirements of Bhopal City and Heavy Electricals township put together, or the entire power requirement of a big city like Lucknow. The entire transformer has been designed in the factory itself by Indian engineers. Hardly 18 months back the first 1,000 kVA transformer had rolled out of this factory. Today the factory is well on its way to complete the first unit of 75,000 kVA transformer.

DIGVIJAY CEMENT'S MARGIN OF PROFIT DROPS

TWO-LAKH TONNE EXPANSION PLAN IN PROGRESS

INCREASED production costs and expenses have brought down the profit-margin (ratio of gross profit to sales) of Shree Digvijay Cement Company Ltd. (Managing Agents: Shree Laxmi Agents Ltd., Sikka, Gujarat) to 16.3 per cent for the year ended 31st December 1962 from 20.5 per cent to which level it had spurted in the previous year from 13.4 per cent for 1960. The setback in profit-margin for the year is due entirely to increases in costs and expenses as detailed in the table accompanying this review. For, as a result of such increases, the gross profit has gone up by only Rs. 10.80 lakhs to Rs. 76.08 lakhs, whereas sale proceeds have jumped up from Rs. 318.02 lakhs to Rs. 464.50 lakhs. In 1961, the profit had spurted by Rs. 21.35 lakhs to Rs. 65.28 lakhs, though turnover contracted by Rs. 8.21 lakhs to Rs. 318.02 lakhs.

The Directors of the Company say that the gross profit for the year under review has shown improvement over the previous year mainly on account of the increase in the retention price of cement. They, however, add that, due partly to the unremunerative price fixed in respect of cement sold from the clinker grinding plant at Sewree (Bombay) and partly to the increase in steamer freight on transport of clinker from Sikka to Bombay, which became effective from June 1962, the overall working results for the year have fallen short of expectations. They have noted that, close on the heels of the last revision in the ex-works price of cement in November 1961, there came the increases in pit's-mouth price of coal, railway freight and electricity duty, etc., followed by enhanced contributions towards provident fund and the additional incidence on account of war risks insurance. The industry has been pursuing its claim with the Government for a general revision in the retention price consequent upon the enumerated Governmental actions, as recommended by the Tariff Commission.

Net profit for the year amounts to Rs. 32.83 lakhs, as against Rs. 28.21 lakhs for the previous year. This figure is arrived at after allowing Rs. 21.75 lakhs (Rs. 18.86 lakhs in the previous year) for depreciation, Rs. 17.65 lakhs (Rs. 14.50 lakhs) for taxation and Rs. 3.85 lakhs (Rs. 3.71 lakhs) for Managing Agents' commission. Almost half the net profit, Rs. 16.16 lakhs, to be precise, as against Rs. 7 lakhs a year before, has been ploughed back to reserves. The dividend on the 100-rupee ordinary shares has been maintained at 10 per cent per annum, subject to tax. It absorbs a little larger sum of Rs. 13.49 lakhs, as compared with Rs. 13.44 lakhs a year before, because it is payable also on the 13,500 shares allotted to Messrs. Johns Manville Corporation, New York (which are the Company's collaborators) on 21st December 1962, in addition to the 134,484 shares already issued to other shareholders. The surplus to be carried forward is much lower at Rs. 56,953 as against the Rs. 2.58 lakhs brought in.

The following comparative table mirrors the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Sale proceeds	464.50	318.02	326.23	277.23
Other income	6.01	10.57	1.84	5.21
Closing stocks	20.99	26.10	6.03	12.69
Materials, stores, spares, etc., consumed	210.86	121.09	117.35	90.45
Other expenses	178.06	162.29	156.39	135.89
Gross profit	76.08	65.28	43.93	48.09
Managing Agents' commission	3.85	3.71	1.64	2.06
Provision for—				
Depreciation	21.75	18.86	18.08	19.41
Taxation	17.65	14.50	10.25	10.40
Net profit	32.83	28.21	13.96	16.22
Withdrawals from reserves and provisions	..	..	4.07	4.50
To reserves	16.16	7.00	1.21	3.00

Low	140.00	157.75	147.00	140.00	129.00

* Subject to deduction of tax.

The output of clinker during the year was 4.26 lakh tonnes, as against 4.23 lakh tonnes in the previous year. With the full working of the clinker grinding plant at Bombay, the Company attained during the year a record performance in the output and despatch of cement, amounting to 4.72 lakh tonnes and 4.75 lakh tonnes, respectively. Consequently, turnover expanded, but the profit proved to be just sufficient to meet statutory provisions (it may be noted that, out of a total of Rs. 16.16 lakhs transferred to reserves, Rs. 11.21 lakhs have gone to development rebate reserve) and to declare the modest dividend of 7 per cent net. The future profit-margin of the Company, and, therefore, its capacity to step up the dividend and strengthen reserves, depend on the likely upward revision in the retention price of cement.

The expansion programme of the Company for increasing the installed capacity by two lakh tonnes of cement is in full progress. The first shipment of machinery from the U.S. has already arrived at site, and the remaining machinery is expected to be received this month. The supply of equipment from Europe and the fabrication of other components to be obtained from within the country will be completed by the third quarter of the current year. The civil construction work has made substantial progress. It is to complete the expansion programme by early next year. The plant under erection at Ahmedabad for the manufacture of asbestos cement pipes and sheets was commissioned in the last quarter of the year under review, and trial production commenced in November. Messrs. Johns Manville Corporation of New York, with whom the Company has arrangements for collaboration, have deputed their expert for technical advice and consultation, and the plant is steadily geared to attain the rated capacity. The entire project, originally to be set up by the subsidiary, Laxmi Asbestos Products Ltd., has been taken over by the Company, after paying the subsidiary Rs. 50,000 towards expenses incurred by it. The subsidiary has not carried out any other business during the year. The clinker grinding plant and the asbestos cement factory have involved an aggregate capital expenditure of Rs. 132 lakhs. In order to meet a part of the outlay on the expansion programme referred to earlier, the Directors decided to raise capital by issuing 50,000 equity shares of Rs. 100 each at a premium of Rs. 10 per share. The issue, which has been sanctioned by the Controller of Capital Issues, has been offered to the existing shareholders in the proportion of one equity share for three equity shares held.

Since the new issue was made after the close of the year and on the basis of shareholdings as on 20th May 1963, it is not reflected in the capital as at 31st December 1962, which is paid up to Rs. 227.98 lakhs, including Rs. 79.94 lakhs in preference shares. It is supplemented with reserves and surplus amounting to Rs. 84.83 lakhs. Excluding institutional borrowings and Government loans, the total liability to outsiders works out to Rs. 289.51 lakhs, which exceeds slightly investments and current assets aggregating Rs. 260.43 lakhs. Following the completion of the asbestos cement factory, the gross block has expanded sizably from Rs. 475.30 lakhs to Rs. 575.14 lakhs. It has been written down to Rs. 352.88 lakhs. Capital work in progress, amounting to Rs. 9.58 lakhs, is shown separately.

Quoted currently at Rs. 99 *cum-div.* but *ex-right*, the Rs. 100 fully paid ordinary shares of the Company offer, on the *ex-div.* basis, a net yield of 5 per cent per annum.

BOMBAY BURMAH'S CROP HIGHER

The tea crop of the Bombay Burmah Trading Corporation Ltd. for the financial year ended 31st May 1963 amounted to 84,53,827 lbs. (38,33,935 kgs.) of made tea. This represents a gain over last year of approximately 4½ lakh pounds (2 lakh kgs.). All estates, with the exception of the Nilgiri properties where weather conditions were not as satisfactory as in the previous year, showed a welcome progress in the increased output, without any reduction in the usual high standard of quality. Coffee crop for the year is estimated at 18,465 cwts., compared with an actual crop of 15,443 cwts. in the previous year.

The International Computers and Tabulators Indian Manufacturing Company Ltd., a new company recently incorporated in the State of Maharashtra for the manufacture of data processing equipments in India in collaboration with the International Computors and Tabulators Ltd. of London, has been allowed to issue capital of Rs. 50 lakhs divided into 50,000 equity shares of Rs. 100 each at par. Out of this, shares of the value of Rs. 30 lakhs will be offered at par to the British firm against the import of machinery and plant, technical know-how and/or cash.

PHILIPS INDIA RAISES DIVIDEND

NEW SCHEMES START PAYING

AN increase of one point to 13 per cent per annum in the taxable dividend on its 10-rupee ordinary shares has been announced by the Directors of Philips India Ltd. (Chairman and Managing Director: Mr. W. A. C. H. Bosschaart, Calcutta) for the year ended 31st December 1962. The need for benefiting shareholders from expansion of the Company's activities, the Directors say, was appreciated all along. The opportunity has come during the year, when sale proceeds have increased by 29.7 per cent from Rs. 682.06 lakhs to Rs. 884.65 lakhs and gross profit has soared by 60.3 per cent from Rs. 93.63 lakhs to Rs. 150.17 lakhs. The realisation of a few manufacturing schemes for light products in the factory at Bombay, together with the satisfactory level of production achieved by the unit at Calcutta, which is engaged in the manufacture of light fittings and accessories, has contributed substantially to the year's turnover. At the same time, however, shortage of lamps continued during the year, due to the general production capacity being lower than demand. Expansion of both commercial and manufacturing activities has naturally led to an increase in the absolute level of operational expenses, but, in terms of percentage of total turnover, there has been, we are told, a better absorption, and hence the spurt in gross profit. In contrast, net profit shows but a small improvement from Rs. 38.19 lakhs to Rs. 43.71 lakhs, because the provision for taxation has been raised sizably from Rs. 36 lakhs to Rs. 85.50 lakhs, including Rs. 20 lakhs for S.P.T. The Directors state that, if the present high rate of taxation continues, it will tend not only to influence the future dividend policy but also to affect accumulation of reserves for internal financing. The year's dividend absorbs Rs. 2.20 lakhs more at Rs. 28.60 lakhs and the amount transferred to reserves and provisions is higher at Rs. 15.15 lakhs, as compared with Rs. 11.99 lakhs a year before. The carry forward is Rs. 1.40 lakh, as against the Rs. 1.43 lakh brought in.

The following table compares the Company's progress from 1959:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959

The factory at Bombay has turned out a sizable quantity of fluorescent lamp starters and commenced production of glow switches required for the assembly of these starters. Burners for gas discharge lamps have started coming off the factory's production line, after a number of trial runs conducted towards the close of 1962. The factory at Calcutta has successfully completed its production programme for fluorescent light fittings of different types and various accessories thereto. The factory at Loni, which embarked in 1958 on an integrated manufacturing programme for radio components, has been able to step up the process of integration for the items introduced earlier, as well as to record an appreciable increase in the level of their production, resulting in a saving of foreign exchange. The completion of a new building at Loni by the end of the year marks a further step towards realisation of the Company's scheme to manufacture components to cater more satisfactorily to the demands of both large-scale and small-scale radio manufacturers, besides meeting internal requirements.

Difficulties in procuring indigenously such basic parts and raw materials as were hitherto imported have impeded a more rapid expansion and diversification of production of components. In order to get over this problem, the Company has been paying continuous attention to ancillary industries. A chemical

SPURT IN N.M.M.'S SALES

BUT NET PROFIT FALLS SHARPLY

NOTWITHSTANDING the difficulties experienced in obtaining adequate and timely supplies of essential materials, the National Machinery Manufacturers Ltd. (Chairman: Mr. K. M. D. Thackersey, Bombay) has been able to report further substantial improvement in turnover as well as in profits during the year ended 31st December 1962. Over and above the rise of Rs. 66.91 lakhs realised in 1961, the gross realisation from sale has advanced further by Rs. 60.33 lakhs to reach the record level of Rs. 425.67 lakhs. Although costs of production have continued to rise, their effect appears to have been fully absorbed by stepping up the output—as is evidenced first by higher sales and second by the rise of Rs. 22.74 lakhs in the value of closing stocks—so that the betterment in gross profit is even more marked, being from Rs. 61.17 lakhs to Rs. 87.63 lakhs or 43.2 per cent, as against the increase of 16.8 per cent in sale proceeds. Unfortunately, nearly 50 per cent of this profit has been claimed by taxation, provision for which has been made for the first time at Rs. 44.00 lakhs, including approximately Rs. 6.00 lakhs for S.P.T., while another Rs. 15.61 lakhs (Rs. 15.14 lakhs) have been taken up by provision for depreciation. These two essential provisions themselves have thus claimed Rs. 59.61 lakhs out of the gross profit, with the result that the net profit has declined quite sharply from Rs. 46.03 lakhs to Rs. 28.02 lakhs. Adding to it the Rs. 1.38 lakh brought in, the amount available for appropriation works out to Rs. 29.40 lakhs. Out of this, Rs. 4.09 lakhs (Rs. 18.89 lakhs) have been utilised for writing off sundry expenses, while the whole of the balance amount of Rs. 25.35 lakhs has been credited to general reserves. The Directors have recommended the maintenance of dividend at the previous year's level of Rs. 6 per share (aggregating Rs. 15.14 lakhs), subject to deduction of tax. The dividend will, however, be paid out of the general reserve and no provision has been made therefor under "proposed dividend."

The progress made by the Company during the past four years is clearly brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Sale proceeds (gross)	425.67	365.34	298.43	221.97

* Paid out of the general reserves. † Subject to deduction of tax.

The steady improvement in working realised in the past few years is well reflected in the financial position of the Company. The share capital, unchanged at Rs. 252.40 lakhs all in equity shares of Rs. 100 each, now derives the support of Rs. 36.46 lakhs in reserves and surplus. Although loans at Rs. 126.41 lakhs still continue to be very much on the higher side and they, together with Rs. 311.24 lakhs in current liabilities and provisions, bring the total outside interest to Rs. 437.65 lakhs, as against the Company's own funds of Rs. 288.86 lakhs, they are adequately covered by current assets, loans and advances aggregating Rs. 555.94 lakhs. The gross block at Rs. 333.22 lakhs, including Rs. 1.33 lakh as unallocated capital expenditure, is also much in excess of capital funds, but has been well written down to Rs. 170.57 lakhs.

The year witnessed, according to the Directors' report, a general increase in production of ring frames, spares and conversion materials, in spite of difficulties experienced in obtaining adequate and timely supplies of essential raw materials such as pig iron, hard coke and more particularly of tin plates.

Reference was made in the last year's report about the manufacture of NMM-RUTI automatic looms in collaboration with Ruti Machinery Works Ltd., Switzerland. Initial difficulties inherent in the manufacture of these looms have been overcome, production commenced in October 1962 and is progressing satisfactorily. All the imported components for the first phase-wise programme of looms have already arrived.

ELPHINSTONE MILLS' PROFIT LOWER

FOUR-POINT CUT IN DIVIDEND

GROSS profit of the Elphinstone Spinning and Weaving Mills Company Ltd. (Secretary: Mr. C. N. Shah, Bombay) for the calendar year 1962 has declined by nearly Rs. 29 lakhs to Rs. 13.98 lakhs, despite a small improvement in sale proceeds from Rs. 289.57 lakhs to Rs. 297.86 lakhs. This sharp setback in profit is due mainly to the provision of a large amount of Rs. 19.91 lakhs as bonus for the years 1959, 1960 and 1961 under the formula recommended by the former Chief Minister of Maharashtra, Mr. Y. B. Chavan. The question of any "set-off" on account of the losses suffered by the Company during the period 1953 to 1958 was not considered under the formula for bonus calculations. Besides the bonus liability, the "abnormal increase" in the excise duty on processed cloth, higher cotton prices, increased staff expenses in accordance with the recommendations of the Central Wage Board, slack market at home and the *status quo* in respect of cloth prices are the other factors listed by the Directors to explain the setback in profit. Stocks at the close of the year have been higher at Rs. 105.30 lakhs, as compared with Rs. 89.31 lakhs a year before.

Depreciation has claimed a little more at Rs. 9.82 lakhs, as against Rs. 8.08 lakhs. But, with profit itself being lower, provision for taxation has been scaled down substantially to only Rs. 60,000 from Rs. 16 lakhs a year before. The net profit after these appropriations amounts to Rs. 3.56 lakhs, as against Rs. 18.70 lakhs. Since the amount is too small, a sum of Rs. 6.50 lakhs has been withdrawn from general reserves. These, together with the Rs. 1.37 lakh brought in, bring the total available for distribution to Rs. 11.43 lakhs. Out of this, a sum of Rs. 3.07 lakhs has been set apart for development rebate reserve and another Rs. 1.02 lakh for development reserve. Thus, there is a net depletion of Rs. 2.41 lakhs from reserves, as against an addition of Rs. 9.01 lakhs in the previous year. The dividend on the 50-rupee ordinary shares has been cut by four points to 18 per cent per annum, subject to tax. This cut wipes off fully the increase allowed in the previous year. The surplus to be carried forward is only Rs. 5,844.

The following comparative table gives a clear idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1962	1961	1960	1959
Sale proceeds	297.86	289.57	226.71	240.40

* Subject to deduction of tax. † For three years.

The paid-up capital of the Company, including Rs. 25 lakhs in 7 per cent 100-rupee cumulative preference shares, is unchanged at Rs. 55 lakhs. It is backed by reserves and surplus amounting to Rs. 48.62 lakhs. Secured loans have gone up from Rs. 75.58 lakhs to Rs. 86.32 lakhs, comprising bank borrowings of Rs. 57.64 lakhs and a loan of Rs. 28.68 lakhs from the National Industrial Development Corporation Ltd. Unsecured loans amount to Rs. 1.80 lakh. Including the current liabilities of Rs. 57.64 lakhs, the total short-term indebtedness to outsiders works out to Rs. 154.95 lakhs, as against which are available current assets and investments aggregating Rs. 154.63 lakhs. On the gross block amounting to Rs. 237.37 lakhs (Rs. 215.77 lakhs in the previous year), the total depreciation provided so far is Rs. 105.06 lakhs.

Currently, the Rs. 50 fully paid ordinary shares of the Company are quoted at Rs. 99 *cum-div.*, and offer, on the *ex-div.* basis, a net yield of 6.7 per cent per annum.
