Since undeclared gold in excess of the permissible quota is liable to be confiscated and its possession is punishable with seven years' imprisonment, it cannot be expected to find an easy way to the open market except in the form of ornaments. That way, of course, all smuggled gold could be converted into certified gold for official trading. The exclusion of ornaments from the Gold Control Rules is by far the most serious loop-

hole which can make nonsense of the entire policy. Thus it is the declared non-ornament gold which can be the main source of supply for the jewellery trade. But the quantity of such gold is very limited. According to a recent statement made in the Lok Sabha by the Deputy Finance Minister, Mr. B. R. Bhagat, the quantity of declared non-ornament gold at the end of February was only 42.66 million grams valued at Rs. 22.85 crores at the international price. This is too small to feed the jewellery trade for more than a few months. The trade, therefore, may have to depend on the supply of smuggled gold for its existence.

Sustained demand for 14-carat ornaments will push up the demand for gold and with lawful supplies extremely limited, the price of gold can be expected to move up substantially unless the Government takes further measures to restrict the demand. Much has been made in official circles of the somewhat subdued tendency in gold during the past few months. But if the price of gold has been a little subdued, it is mainly because business in gold ornaments has come to a virtual standstill after the promulgation of the Gold Control Rules. The demand for gold is bound to pick up with the large-scale manufacture of 14-carat ornaments. The price of gold has already moved up from Rs. 96 to Rs. 103 a 10 grams within less than a fortnight. This seems to mark the beginning of a new upward trend. Since it is through a decline in the price that the Government's gold control policy is expected to achieve its very limited objective of checking smuggling activity, a rise in the price of gold will be viewed with serious concern. The setback in smuggling activity which has been reported in recent months may prove to be a passing phase if the Government does not take prompt measures to restrict the demand for gold. This is not possible if ornaments are kept outside the purview of the Gold Control Rules.

Attracting Bank Deposits

The decision of the State Bank of India to increase its lending rates marginally is not expected to lead to a further rise in the lending rates of other banks. Although the State Bank's lending rates are generally somewhat lower than those of other banks, the gap between them became wider at the turn of the year when the minimum lending rate of other scheduled banks was increased to 6.5 percent under the interbank agreement. The minimum lending rate was raised on the plea that Bank rate had been increased from 4 percent to 4.5 percent. In order to ensure that the increase in its lending rates does not press on the advance rates of other banks, the State Bank has appropriately timed its move after the peak of the busy season.

It must nevertheless be remembered that the lending rates at present are high and a further increase will retard economic development. Although it is difficult to ascertain to what extent the high interest rates have been responsible for the slow-down in economic activity, it cannot be gainsaid that trade and industry have been forced to curtail their activities because of dearer money. By increasing the lending rates and holding down the rate of interest on deposits, bankers have added to their difficulties in attracting deposits. A survey of deposits shows that time deposits

India's Resources
are Precious

WASTE NOT,
WANT NOT

of scheduled banks have fallen from Rs. 1,258.68 crores to Rs. 1,219.62 crores since the beginning of 1963. It is a reversal of the trend witnessed in previous years. Since time deposits are mainly attracted by the interest rate, it looks as if the banking community has lost them because these funds have been diverted to more remunerative fields.

The evidence indicates that industrial houses have attracted a good deal of funds in the form of fixed deposits in recent months. The Tata hydro-electric companies, it is reliably learnt, have offered to accept time deposits by giving attractive interest rates. Deposits for six months carry an interest of 5.5 percent and those for 12 months 5.75 percent. Industrial houses are finding it convenient to obtain funds in the form of deposits. Even by offering sufficiently attractive interest rates, they have paid less than on bank credit.

Banks will, therefore, have to intensify their efforts to increase deposits. They will have to examine carefully whether the competition for funds can be met better by increasing the deposit rates. There is no doubt that banks enjoy an advantage over rival financial institutions, since they can attract depositors by improving banking services. Meanwhile, the 1963-64 Central Budget has rendered the task of bankers difficult, since the increase in the rates of direct taxes and compulsory deposits will siphon off more than Rs. 110 crores.

Trade with Eastern Europe

With the conclusion of preliminary talks between India and Russia in New Delhi last week, the way has been cleared for a new trade agreement with that country. The final agreement which is due to be signed in Moscow some time in June aims at doubling the trade between the two countries during the next three years, raising the volume of trade (both ways) from the level of Rs. 100 crores in 1962 to Rs. 200 crores in 1966. The agreement visualises the export of more manufactured goods from India. Reliable reports indicate that the Central Ministry of Commerce and Industry is now busy preparing similar long-term trade plans with east European countries—Czechoslovakia, Yugoslavia, Poland, East Germany, Hungary, Rumania and Bulgaria. Long-term trade pacts, it is proposed, will be concluded with these countries covering a period of five years—1964 to 1968. This will enable India to prepare a total plan for the next five years on a "firm" basis, indicating the import and export commitments of the country with eastern Europe as a whole.

The Central Ministry of Commerce and Industry has requested the various Ministries and their departments to furnish details about their import requirements broken down countrywise, commoditywise and yearwise as also suggestions for exports to and from these countries. The import targets are to include the requirements of the private sector as well. It is felt that there should be no difficulty in furnishing firm targets up to 1966 which is the last year of the third plan. For targets pertaining to 1967 and 1968, Ministries and departments concerned will be required to take up their import requirements with the Planning Commission, simultaneously informing the Central Commerce Ministry of their import targets for these two years. The Commerce Ministry has prepared a draft list of commodities which India can import from east European countries, and also what these countries can possibly buy from here. The list includes as many as 168 commodities which are available from east European countries against which India can supply about 129 commodities, covering traditional and non-traditional items.

It may be mentioned that when the Indian trade delegation visited Belgrade last October for discussing the new trade and payments agreement, the Yugoslav authorities had presented draft lists of essential commodities for import and export during the years from 1963 to 1967, which also included final trade plan provisions for 1963. Under the Indo-Yugoslav trade plan, Yugoslavia, it is expected, will buy from India during the current year deoiled cakes worth Rs. 1.8 crores, coffee worth Rs. 1.2 crores, rolled steel products Rs. 1.2 crores, iron ore Rs. 1.61 crores, jute products including raw jute Rs. 1 crore, textiles Rs. 1 crore,

hides and skins Rs. 1.4 crores and manganese ore worth Rs. 60 lakhs. The other items include spices, chemicals, raw cotton and cotton waste, machines and machine tools and tobacco. Commodities which India is to import from Yugoslavia in 1963 include aluminium products (worth Rs. 1.1 crores), tractors and implements (Rs. 80 lakhs), lubricating oils (Rs. 1.5 crores), lead, mercury, zinc, cables, refractories, seamless steel tubes, explosives, wood pulp and paper and machine tools.

Bharat Chamber on Tax Measures

In a memorandum to the Central Finance Minister on the Budget proposals, the Committee of the Bharat Chamber of Commerce says that the funds necessary for defence should and could have been found without the proposed "unprecedented" tax effort. To sustain confidence in the growth of the economy, it emphasises that the super profits tax and the so-called "additional surcharge" should be specifically declared as emergency measures which will be abolished as soon as possible. The additional surcharge is really a central income tax and can hardly be levied under normal conditions. To call any profit in excess of 6 percent of capital as "super profit" creates a very depressing fiscal image at home and abroad, particularly when a return of about 10 percent has been considered necessary even to attract investment in cumulative preference shares.

Concerning additional surcharge, the Chamber suggests that all taxes and donations including contributions to the National Defence Fund should be deducted in computing the residual income. At present, a rebate is allowed only on such donations and contributions; but wealth tax and half of the municipal tax are not allowed in the assessment of income tax and will, therefore, attract additional surcharge. The effective rates of income tax, super tax and additional surcharge would be very steep, and would cripple the saving capacity of the income tax-paying group who have been showing the highest propensity to save and invest all these years. The Chamber has, therefore, suggested that all assesses should be entitled to deduction from the additional surcharge up to 50 percent of the amount of the surcharge, if it is deposited under the compulsory deposit scheme. This will enable some flow-back of savings to the people after the emergency. A man with an income of Rs. 55,000 will be required to pay Rs. 23,126 as tax, and the maximum savings allowed for deduction from tax will be only Rs. 745.

As for super profits tax, the Chamber has suggested exemption of small companies with a paid-up capital of less than Rs. 5 lakhs, and also new companies if the instalments for repayment of loans are not allowed to be deducted in the computation of chargeable profits. Since 1959, the load on small companies has been increased by about 10 percent. The Chamber quotes figures from the Reserve Bank surveys to indicate that the gross profits, as a percentage of sales, for the smaller companies was less than 6 in 1960, compared with over 10 in the larger companies. The smaller companies, on average, could declare a dividend of only 6.6 percent in 1960 when the larger ones declared 11.6 percent. The rate of capital formation in the small sector has also been much lower. The Chamber has suggested that the rate for standard deduction should be increased from 6 percent to 10 percent. The donations for charitable purposes, repayment of loan instalments, dividends on preference shares, profits on exports, inter-corporate dividends, and income of new industrial undertakings exempted under the new Income Tax Act should be deducted in computing the chargeable profits. Even after these modifications, the Chamber says, the yield from super profits tax would not be less than the estimated Rs. 25 crores. It has also suggested changes in the rules to provide for "averaging of profits" in the case of companies with widely fluctuating incomes and for adjustments for unabsorbed losses and deficiencies in the standard deduction.

Relieving Power Shortage

One of the serious problems facing Indian industry is the power shortage. Even before the emergency, the power shortage was hampering

industrial production. The emergency made it more necessary to increase the power generating capacity by the reshaping of certain projects, diversion of more resources to electricity generation and the better use of the available plants. But there does not appear to have been any marked increase in power supply. The increase in supply in the second plan and in the first two years of the third plan has not been satisfactory. Mr. O. V. Alagesan, Minister of State for Irrigation and Power, said at the recent conference of the chairmen of State Electricity Boards in New Delhi that power generation in the second plan amounted to 5.6 million kilowatts, against the capacity target of 6.9 million kilowatts. In the first two years of the third plan, it has been possible to add 1.2 million kilowatts. But it will be necessary to create a generating capacity of some 6.2 million kilowatts in the remaining three years of the third plan in order to achieve the target of 13 million kilowatts. It is not going to be an easy task.

There are many reasons for this unsatisfactory rate of progress. But two important causes are, firstly, the inter-State rivalry about the use of river waters for irrigation and power generation and, secondly, the inability of the State Electricity Boards, set up under the Electricity Supply Act of 1948, to make proper use of their resources. The All-India Manufacturers Organisation has recently suggested that power generation, which at present is a concurrent subject, should be made a Central subject by an amendment of the Constitution. Besides, a National Power Authority should be set up to establish hydel, thermal or atomic stations at appropriate places and make power available to individual State Electricity Boards and private distributors through a national grid.

Mr. Alagesan said that power planning in terms of State boundaries has become out-moded. Planning Commission, in fact, made a great mistake in not realising that power generation should be planned and executed centrally. Now the State Governments are likely to resist the move to make power generation an exclusively Central subject. But in view of the urgency of increasing power generation and the poor performance of the State Electricity Boards, there does not seem to be any choice in the matter.

The State Electricity Boards are either manned by Government officials or hampered by too much official direction and control with the result that in spite of their "autonomous" nature, they have failed to show initiative and enterprise. Rural electrification is not profitable, at least in the beginning, and the policy of the State Electricity Boards to avoid losses at any cost has proved a serious handicap in augmenting the power supply. These Boards undoubtedly suffer from inadequate resources, but they have been unable to make proper use of whatever resources they already have. The proposed National Power Authority should be able to plan power generation on a long-term basis and make proper use of the available resources. It should also be possible for a Central power authority to show more initiative and enterprise in close association with the private sector to help increase the supply and leave the work of regional distribution to the State Electricity Boards and private distributors.

Protecting Sparking Plugs

Opening the public enquiry into the question of continuance of protection to the motor-vehicle sparking plug industry beyond this year, the chairman of the Tariff Commission, Mr. K. R. P. Aiyangar, said in Bombay recently that the industry had been able to stabilise itself under protection which it had been enjoying for over eight years. Its output has increased although economies arising from it are yet to be passed on to the consumers. Mr. Aiyangar stated that the Commission had not received any complaints against the selling system of the manufacturers, although there was a general feeling that the prices were high compared with those of the imported plugs. The present scheme of protection covers motor-vehicle sparking plugs of 14 m.m. and 18 m.m. sizes and parts thereof, including the resistor types but excluding integral

ly screened types. It also excludes sparking plugs adapted for use exclusively as parts and accessories of agricultural tractors. The Tariff Commission, said Mr. Aiyangar, had not received any request either from the manufacturers or from others for modification in the scope of the present enquiry. The current rates of protective duty are 92½ percent *ad valorem* (standard) and 85 percent *ad valorem* (preferential). Under the Finance Bill, 1963, a general surcharge of 10 percent has been levied on all import duties.

There has been no change in the number of units manufacturing motor-vehicle sparking plugs in the country since 1954. Motor Industries Co. Ltd., Bangalore, and Auto Accessories (India) Ltd., Bombay, continue to be the two units in the industry. Their aggregate annual capacity has been given by the manufacturers as 1.02 million sparking plugs on a single shift basis. The Department of Technical Development, Ministry of Economic and Defence Co-ordination, has indicated the capacity of the industry as 1.596 million pieces on the basis of optimum utilisation of plant and machinery installed. The actual production of sparking plugs of different sizes amounted to 1.191 million pieces in 1960, 1.452 million pieces in 1961 and 1.081 million pieces in 1962. The lower output in 1962 has been attributed to reduced offtake.

In 1960, the Tariff Commission had estimated the demand for sparking plugs, both for replacement and original equipment, at 1 million pieces and had expected it to increase at the rate of 5 to 10 percent a year during the next three years. On this basis, the demand for 1963 is expected to reach 1.15 million to 1.30 million plugs. Estimates of demand for 1963 made by other sources vary from 1.005 million to 1.400 million plugs, gradually rising to 1.225 million to 2.563 million pieces by 1966. The apparent consumption of plugs, made up of the sales of domestic product and imports, was 1.348 million pieces in 1960, 1.895 million pieces in 1961 and 1.187 million pieces in 1962. While the demand for original equipment depends on the volume of production of motor-vehicles in the country, that for replacement purposes depends on the number of such vehicles on the road. Except for a small portion of raw materials, namely, sodium silicate solution and free cutting brass rods, other items continue to be imported by the industry. The major item in the raw material group is bright drawn free cutting steel bars and that, in the components group, the insulator. The industry will have to depend on imported bright drawn free cutting steel bars until the domestic alloy steel industry is developed. But as for insulators, Motor Industries expects to start production by about the middle of this year which will fully meet the requirements of both the units in the industry. There has been no export of sparking plugs and the industry does not expect to be able to make any in the foreseeable future. The industry is unable to compete in the foreign markets due to the high cost of production in the country, dependence on imported raw materials and the small size of the production units, compared with those abroad.

Importance of Work Study

The president of the European Work Study Federation, Mr. Russel M. Currie is now in this country as a guest of the Government of India. He participated in a conference on productivity organised in Calcutta on Tuesday by the Calcutta Management Association in collaboration with the Calcutta Productivity Council. The object of industry, Mr. Currie said, is to supply goods and services needed by the community with the minimum consumption of real resources. Modern work study—largely developed in Britain in the past 15 years—is being rapidly adopted by many nations. Its outstanding features are co-ordination of isolated techniques, the intensity of analysis, critical examination and synthesis, and above all its humanity. Britain as well as many other countries are finding that work study helps in reducing the cost of production and increasing productivity. It also helps create employment. Furthermore, work study has the advantage of transcending political divisions, whether local or national. It ultimately bridges the traditional

"tragic division" between management and labour, and unites the team.

Mr. Currie defined work study as "the systematic, objective and critical examination of all the factors governing the operational efficiency of any specified activity in order to effect improvement." Work study is broadly divided into two groups of techniques called method study and work measurement. The rise in productivity is not the only material gain that results from work study. The latter also creates and maintains a constant urge to improve the techniques of production, reveals organisational flaws, tends to reduce labour turnover, and improves trade union relationships.

Mr. Currie elaborated the attitude of labour towards work study at a Press conference at I.C.I. House on Tuesday afternoon. The movement, he said, has received the general support of the International Labour Office. But, the movement in Britain, he frankly admitted, had to contend with the opposition from workers who regard work study as yet another device of the management to get more work out of them. The scheme, it is obvious, cannot be successful without the active co-operation of labour. While Mr. Currie was optimistic on this point as far as Britain was concerned, he had some doubts how far it would be possible to enlist the support of labour in India. Since trade unions in India are dominated by politicians, the scheme—however beneficial it may be in the long run—may not be welcomed by labour. The low level of literacy and factionalism in trade unions in India are undoubtedly the two insuperable obstacles in the way of making the movement a success. Only publicity and propaganda campaigns can help overcome the opposition. But efforts should be made, meanwhile, to show that the results of work study will be equally beneficial to management and labour. This alone can ensure peaceful co-existence when there is opposition to the move to increase productivity through work study.

CORRESPONDENCE

EVASION OF TAXES

(TO THE EDITOR OF "CAPITAL")

Sir,

The recent Budget proposals have cast a wide net of taxation. It is, however, obvious that unless the net is strong and tight enough to catch all those who should be in it, the proposals will defeat their purpose. It makes all the difference between a taxed and an evaded income. In the absence of effective enforcement of the tax measures, those who cannot or do not evade taxes will be crushed by the increasing burdens piled on them while the evaders will go scot-free.

That evasion of taxes is prevalent on a colossal scale is evident from the enormous amounts spent on marriages, fabulous dowries, palatial houses, crowded race courses with ever-increasing betting with bookmakers, crowded hotels, expensive restaurants, expensive motor-cars and last but not least, a huge amount spent on electioneering expenses. All this could not be possible with the small balance available after statutory taxes are paid. The "expense account" aristocracy plays but a minor part in the lavish expenditure which is daily incurred on an enormous scale in all the big cities in the country.

Indeed, income tax evasion is the most profitable industry in the country, because without it, little is left with individuals to spend on themselves, their families, and to invest in property, or to show off their wealth. No wonder so much ingenuity is exercised and so much is spent to evade taxes, leading to the enrichment of income tax experts and contact men. It is accordingly necessary to tighten the administration. Otherwise, the honest man alone will continue to suffer. He is indeed looked upon as a fool by the more clever and unscrupulous ones.

The scrapping of the expenditure tax might have been justified in view of the low revenue yield, but the principle of correlating income and expenditure is a sound one. As a matter of fact, the substitution of expenditure tax by income tax might yield greater revenue, as far as the non-corporate sector is concerned for, in the case of non-

salaried assesses, expenditure is more tangible and verifiable than income.

Unlike the "capitalist" U.S.A., we cannot send top executives drawing lakhs of rupees as salaries a year to jail or dismiss them merely for "fixing" prices, or make the companies concerned pay vast sums as damages. On the other hand, the less efficient units in a particular trade practically force their more efficient rivals in this country not to reduce prices and the latter more often than not, oblige them as a token of *esprit de corps*, particularly as the latter themselves have nothing to lose. Again whereas in the U.S.A., thousands are sent to long terms of imprisonment for evading taxes, one doubts if we have sent even 15 evaders to jail in the last 15 years of independence. The revenue authorities in the U.S.A. make it a point to send some prominent assesses, guilty of evasion, to jail at about the time when the annual returns of income are due, so as to be a deterrent to those about to file them. In the United States, estate duties up to 61 percent, if not more, are charged. In India, in spite of the professed socialistic pattern of society, capital gains are lightly treated. A man may make more than a lifetime's savings in a single deal of land or property situated in metropolitan towns in spite of the fact that he himself has done little towards social development which has led to such a rise in prices. It is as true in socialist India as in the Tory-run Britain that money "made" is treated more lightly than money "earned".

The Government has not paid attention to the sensible suggestion that import quotas should be auctioned, presumably on grounds of political expediency. The allotment of quotas is a very handy weapon of patronage for rewarding Party loyalty and contributions to Party funds. It is ironic that whereas we have liquidated certain vested interests, like the princely order and *zamidari*, we have instead created a new type, namely, the quota-holder. In case one's parents were lucky enough to import certain goods in a particular year, then one might conceivably be assured of a substantial annual pension, through the sale of quota rights. The argument that quota-holders, or more recently, the goldsmiths must be compensated for the loss of their business or profession, does not hold good if only because no such compensation was ever paid before when scientific progress rendered obsolete the old methods of production and transport. The poor bullock-cart driver or the *tonga walla* was not vocal enough to be considered as sympathetically as the quota-holder or the goldsmith.

Yours etcetera,
KRISHNA CHANDRA.

Delhi, 23rd March, 1963.

RAW JUTE EXPORTS

THE total exports of Jute, Rejections and Cuttings to all places for March are 166,324 bales, bringing the total for the first eight months of the season up to 3,037,840 bales. Of this the United Kingdom and Continent of Europe have obtained 2,642,363 bales, including 33,079 bales of Cuttings, and as the estimated consumption of Europe will not exceed, according to the most reliable authorities, 2,500,000 bales during the present year, they have already received more than their actual requirements, so all the remaining exports to the United Kingdom and Continent will simply go home to swell the stocks and the carry over to the next season. By last mail accounts, the trade was bad, and machinery was being stopped. This, of course, means a further curtailment of consumption.

	First 8 months Bales	Last 4 months Bales	Total Bales
1892-93	2,859,044	223,979	2,083,023
1893-94	2,211,252	326,785	2,538,037

DR. HALLSTEIN EXPLAINS E.C.M. TRADE GOALS

By Malcolm Subhan

DR. Walter Hallstein, who is now in India to deliver the Azad Memorial Lectures, has come to the east for the first time. This fact is significant in itself. Hitherto, whenever the President of the Common Market Commission has travelled outside the Old World, his destination invariably has been the New. But Dr. Hallstein's Indian journey has gained in significance since the European Parliament unanimously adopted a resolution recently asking the Commission to draft a development programme which would apply to Asia and Latin America as much as to Africa.

This does not mean that Dr. Hallstein has arrived in India with a ready-made solution to the problems with which India's Ambassador to the European Economic Community, Mr. K. B. Lal, has been wrestling for well over a year. Although the Commission's President has on a number of occasions suggested that India and the Common Market negotiate a trade agreement somewhat along the lines of the comprehensive trade agreements proposed during the British negotiations, the very manner in which Dr. Hallstein's visit has been arranged makes it clear that this is not the time to raise the matter formally. (The visit was planned before the breakdown of the negotiations with the British; but its basic object apparently remains unchanged—to allow Dr. Hallstein to meet Mr. Nehru and his senior cabinet colleagues informally and to find out at first hand something of India's problems as well as her achievements.)

Dr. Hallstein is not simply going through the motions of delivering the Azad Memorial lectures. The fact is that he has welcomed this invitation to deliver the lectures, for it offers him the opportunity not only to explain the Community's aims but also to defend the Common Market before an Asian audience in a key Asian capital. Thus if the first of the two lectures has traced the various stages on the road to European integration, the second has explained how the Community visualises its relations with the developing countries in general, and with India in particular.

Outward-looking

Dr. Hallstein is firmly convinced that the Community is not inward-looking, and that far from shutting its doors against imports from third

countries, it has in fact acted as a powerful stimulus for world trade. The proof of this lies for him in the sharp increase in the Community's trade with third countries. During 1958, the first year of the E.E.C., such trade amounted to \$32,000 million in all; last year, it stood at \$43,000 million. The Community's imports from third countries rose during this period from \$16,200 million to over \$22,000 million.

Unfortunately, only the industrial countries have benefited from this expansion of the Community's trade with the outside world. Although India's trade balance with Belgium for 1962 is expected to show a surplus for the first time, the picture concerning the other Common Market countries remains as bleak as ever. Moreover, India's attempts to diversify her exports have so far received little encouragement from the Six. During the British negotiations, they showed themselves extremely reluctant to make any tariff concessions, whether on items such as cotton textiles and jute manufactures or on the non-traditional items such as light engineering goods or sewing machines and bicycles.

In the Indian view, even in simpler manufactures, the developing countries cannot compete on equal terms with industrialised countries, much less with the real low-cost producers such as Japan. There is, however, reason to believe that not only Dr. Hallstein, but the entire Commission regards as heretical the Indian proposal that an exception be made in favour of the developing countries from the two G.A.T.T. principles of non-discrimination and reciprocity. Of the two, the Commission considers the first as of greater importance than the second. It is generally admitted that developing countries are hardly in a position to negotiate tariff reductions on the basis of a *quid pro quo* and the new Convention of Association between the Community and its 18 African partners explicitly recognises this.

Non-discrimination

The principle of non-discrimination, however, is held to be sacred; it is argued that adherence to it has brought order into world trade. As this principle has been strongly defended by the U.S.A. also, any breach of it—except the most minor—appears unlikely. The Community would no doubt be prepared to con-

cede special terms in the case of items of particular interest to India, for such concessions do not violate the principle of non-discrimination. Hence the readiness to make concessions during the British negotiations on tea, handloom textiles and kips, for instance. Unfortunately, concessions in favour of the developing countries on the simpler manufactures, such as sewing machines or diesel engines, are regarded as violating the principle of non-discrimination.

Sympathetic Listener

On the whole, however, Dr. Hallstein should prove a sympathetic listener. There is no doubt that he is determined to do all he can to destroy the image of the Common Market as a closed, inward-looking Community of the rich. Speaking in Strasbourg, he told the European Parliament recently that the British negotiations had made the Community aware of its responsibilities towards third countries, particularly the under-developed nations. He maintained their export problems could be rendered less acute by a Community policy of tariff reductions, carried out initially through the Kennedy round under G.A.T.T.

There is no doubt that all six member-states agree in varying degrees with Dr. Hallstein's claim that the Community must prove itself outward-looking in its relations with not only the industrialised West, but also the developing countries. As the debate in the European Parliament showed, the Dutch are not alone in thinking that the Community must not confine its horizons to its 18 African partners. The events of the past two months indicate, however, that the Six are far too preoccupied at present with their own internal problems to have the courage to give concrete expression to their desire to aid the developing countries. The recent decision of the German and French governments to co-ordinate their aid suggests that a Community programme of aid to developing countries is not for the near future.

It is clear that the crisis precipitated by the break-down in the negotiations with the British continues to paralyse the Community. Presenting the Commission's report on the breakdown to the European Parliament, Dr. Hallstein urged the six member-states to stop brooding

CAPITAL, 11th April, 1963

on the past and to push ahead with the construction of the Common Market. The fact, of course, is that on both sides, the urge to salvage something from the wreckage of the negotiations has disappeared entirely. A German attempt to call a meeting of the Western European Union before the end of March failed when the French declared they would not participate if the question of the Community's relations with the U.K. was raised.

Although France's partners have obviously abandoned all hopes of associating the U.K. with the Common Market, the ghost of the British negotiations seems to be lingering still. Consequently, further progress in the implementation of the Treaty of Rome appears more or less out of the question at present. This does not mean that the Community as a force is now played out. But as Dr. Hallstein has himself pointed out, the Community's external relations are a function of its internal development. As long as the Common Market does not develop internally, it will lack the will to expand its external relations. The inconclusive debates of the recent weeks are a clear indication that the Community is more divided than ever on the two major problems confronting it—the implementation of the common agricultural policy and the adoption of a common policy towards the forthcoming Kennedy round.

Setback to Farm Policy

The inability of the six agricultural ministers to fix cereal prices means that the common agricultural policy has received a severe setback. Under the terms of the policy cereal prices within the Community must be harmonised. This will be done by the Council fixing each year the upper and lower price limits (which correspond roughly to the German and French prices). In principle, the gap will be narrowed year by year until it disappears seven years hence. The first such step towards harmonisation should have been taken by 1st April. The Germans refuse, however, to reduce their agricultural prices, as this would involve their farmers in a certain loss; at the same time, it is feared that the gradual increase in French prices will lead to an increase in French cereal production.

Obviously, the debate on agricultural prices is being followed with great anxiety by countries such as the U.S.A., for the Common Market is the largest importer of farm products, and accounts for one-third of world agricultural imports. The Americans are increasingly worried that the Common Market plans to pursue a policy of self-sufficiency in agricultural commodities, and they have, therefore, insisted that the forthcoming Kennedy round cover both industrial as well as farm goods. Although Dr. Hallstein, it is believed, favours such a course, the French are strongly opposed to it. The Six have been so far unable to agree among themselves on this vital question, with the result that the tariff negotiations may eventually be delayed.

The crisis within the Common Market could be more easily resolved were the Community's economic prospects uniformly bright. The strikes in France and the demand by German steel workers for an 8 percent wage increase have cast a cloud over the economy, however. Although production remains high, the Commission is expected shortly to advise the member-states on the measures to adopt in the event of a recession. This is perhaps no more than an application of the old adage that to be forewarned is to be forearmed, but it is one more indication of the difficulties which appear to beset the Common Market at present.

CAPITAL, 11th April, 1963.

A Ditcher's Diary

ALL THE REPORTS REACHING ME SUGGEST THAT foreign business reaction to Mr. Morarji Desai's fifth Budget has been much sharper than might be supposed from newspaper and other reports appearing in this country. As befits guests in a friend's household, spokesmen for foreign enterprise here in India are careful to be pretty circumspect in what they say. Apart from the well understood rules of hospitality, there is the simple fact that the Budget has been presented to the country as the minimum national effort required to deal with the emergency and maintain the momentum of the third plan. Foreigners on the spot are much too polite and tactful to insinuate that the two things together might prove too heavy a burden for India to carry, so they leave that sort of thing to Rajaji to wise-crack about. To suggest that you cannot have both guns and butter (not that there is very much of the latter knocking about anyhow) is not very acceptable to Delhi in its present mood of *hauteur*, so, by and large, the foreign business man keeps his own counsel and gets on with the task of calculating his probable liability to super profits tax and how he is going to remunerate his upper middle and top grade staff—that is, if he can keep them. But no such inhibitions need restrain his principals in Europe or America, who are a good deal more critical of the whole trend of recent Indian fiscal policy than is realised by our rulers. My information from reliable sources is that the City of London, for instance, does not find the dominant element in the 1963-64 Budget to be "courage" so much as a certain foolhardiness in assuming that you can go on indefinitely loading up the Indian economy with one impost after another without something vital snapping sooner or later. The closely reasoned memorandum on the Budget submitted to the Government of India by a number of business men from southern and western India has, I understand, been circulating in London and I hear it has made a considerable impact on those who have seen it. So far as overseas opinion is concerned, the result of the 1963-64 Budget to date has been to make India look less attractive in almost every way to the foreign investor, who sees only a heavily taxed country in which industry is being asked to carry more and more of the fiscal burden for less and less reward.

LAST THURSDAY *The Times* CARRIED FROM ITS New Delhi correspondent a piece called "The Tarnished Image of Mr. Nehru", the kind of piece a foreign correspondent produces when he is a little tired of hard reporting and thinks he has

got enough facts or views to sum up a man or an age or phase. Here a reporter really takes on the rôle of an interim historian; and the job is hazardous in the extreme. There are lots of polite reservations and qualifications; but the correspondent's verdict is that while for all these years and with his many unquestionable achievements "Panditji" has stood high in the affection and trust of his countrymen . . . lately there has been a change". The correspondent thinks "the watershed in Mr. Nehru's political life may be seen by history to have lain years before the mountain débâcle of 1962, perhaps round about 1957". What happened in 1957? I can't remember anything earth-shaking. But this analysis seems by and large valid:

As an administrator he (Mr. Nehru) has the high virtues of humaneness and a sense of the importance of detail, but he lacks follow-through, the determination to see that what has been decided should be done. He lacks the true political leader's gift for bringing into government men who share his ideas and have the zest to put them into force. He lacks—and many of his failings are those of virtue—the ruthlessness inseparable from political leadership . . . In every choice he seems to see so clearly the balancing claims of the two sides that choice between them appears to him unjust.

I find the writer's conclusion not only depressing but also a risky bit of prophecy:

The closing years of the Nehru phase of Indian history are likely to be anticlimatic at the least, and perhaps even tragic as time and circumstance continue to undermine the achievements of one of the great men of the age.

I remember *The Times* writing after the movement of Indian troops into Goa in December 1961 that the image of Mr. Nehru had been smashed for ever and that it would never be put together again. Well, well. I think most foreign observers underestimate Mr. Nehru's genius for political survival. He has in the past made many prophets look silly and may yet do so again.

STRIKES ARE AMONG THOSE MANIFESTATIONS OF labour-employer relations I most deplore. I simply cannot remember one which has done any real good; the usual result is to gain a small monetary advantage for one section of workers which is inevitably cancelled out when the others have caught up. In the meantime, the cost to the community, to the employer, and often in the long run to the workers themselves, can be out of all proportion to the results achieved. The New York newspaper strike, now settled after 114 days, is a case in point. It is estimated that the pro-

prietors, the commercial life of the city and those workers outside the industry who were left unemployed because of it, paid for that strike to the tune of around \$600 million. I do not know whether the strikers themselves think the settlement adequately compensates them for the loss they sustained in wages, but I am sure the rest of the community does not. My sympathies, naturally enough, are with the army of freelance journalists who temporarily lost their livelihood due to the strike. But I suspect the workers themselves will be the main sufferers in the long run. Newspaper production must be one of the few manufacturing techniques in the world which has shown no substantial improvements during the past 50 years or so. In the natural course of economic events, it is now due either for a technological revolution or for a rapid decline into uneconomic obsolescence. In fact, it is probably there already, especially in western countries where the new methods and the necessary capital to introduce them are both readily available. If it had not been for the obstructive tactics of production labour, newspapers in the United States, and probably in western Europe too, would now be turned out at much less cost and in far more modern fashion. I often think that labour unions have as great a say in the fortunes and survival of newspapers in the West as governments have on those behind the Iron Curtain. And in neither form of dominance can I find the slightest consolation.

MY VIEWS ON THE CORRECT DEGREE OF relations between politicians and journalists, who have of necessity a great deal to do with one another, are unlikely to be popular with either tribe. Yet I was interested in the get-together last week at the Calcutta Press Club on the Maidan, which I have visited only thrice. I hope the Press Club gets its building, for it is quite ridiculous that in a city like Calcutta, which saw the first newspaper in India, journalists should have to meet in a precarious tent. It is not very exciting being a journalist in Moscow; but the city has a very impressive Dom Zynalistov; parties there are worth attending for the generous hospitality. Fleet Street has so many pubs that you make your own club. In Washington the National Press Club is an enormous building with facilities unobtainable anywhere else in the world; and most statesmen deem it an honour to be invited there, in spite of the ordeal of answering to inquisitorial questioning. In New York the Overseas Press Club is extremely popular, and you meet the most unexpected people. In Manila there is a fabulous Press Club where, someone tells me, no politician can hope to get a well-attended Press conference if he does not serve drinks on a fairly lavish scale. The Press Club in New Delhi is a relatively recent thing; but it is one of the few places in the capital where a civilised man can have a drink with his

ANNOUNCEMENT

THE STATE BANK OF INDIA HAVE REVISED THEIR DEPOSIT RATES

as from the 1st APRIL 1963.

The revised rates are as under :—

Savings Bank Accounts	— 3% per annum
Savings Bank Deposit Accounts	— 3½% per annum
Fixed Deposits for six months	— 3¾% per annum
Fixed Deposits for twelve months	— 4% per annum
Fixed Deposits for twenty-four or thirty-six months	— 4½% per annum

Call Deposits and other Short Term Deposits are also accepted at fully competitive rates.

THE STATE BANK OF INDIA

with its wide net-work of offices numbering over 1000 throughout the country, is at the Nation's service.

Regardless of whether your deposit needs are large or small, your nearest STATE BANK OF INDIA office invites you to make use of the Bank's DEPOSIT SERVICES.

STATE BANK OF INDIA
INDIA'S LEADING BANK

meal; it is thus getting increasingly popular. It is, I think, a shame that Calcutta has nothing comparable to offer to resident or visiting journalists. I do not care for intellectual in-breeding among journalists who, I believe, can learn a great deal from contacts with people in other walks of life. But there ought to be a place where professional journalists from anywhere in the world can meet and relax and exchange notes at a professional level. I happen to know something about the economics of running a club; and I know of none that can provide the elementary amenities without earnings from the bar; and this seems to me the main deficiency of the Calcutta Press Club. In New Delhi, I understand, the Press Club's was the first excise licence to be issued in ten years and this had the blessing of no less a man than the late Mr. G. B. Pant, who, at the opening of the Club, was mildly embarrassed when congratulated on his generosity. Calcutta, thank God, is not dry; and its Press Club should not be either. A thriving Press, in spite of Mr. Gopala Reddi, and a moribund Press Club are a contradiction.

IT HAS BEEN SAID THAT MR. R. A. BUTLER, Britain's Minister in charge of central African affairs, sustained a severe shock when his concession to Northern Rhodesia of the right to secede from the Central African Federation was immediately followed by a claim from Southern Rhodesia for full independence. I have been wondering why; surely it was only to be expected under the circumstances. I have also been wondering what Mr. Butler, or indeed anybody else, can do about it, regrettable though it may be in many ways. Britain's rôle in that area during the past few years reminds me somewhat of the period leading up to the independence of India and Pakistan; it has been hesitant, reasonably well-intentioned, and wholly dominated by events. And once again Britain is being faced with having to hand over power to two governments which will set the final seal of disunity on an area that economically and ethnically ought to be one. There are much the same ominous signs for the future, too. The Government of Southern Rhodesia will be dedicated to white supremacy and, therefore, to suppressing the political activities of its own internal black population as much as those of its northern neighbour. If this cannot be achieved without violence, and it seems unlikely it will be, then the inevitable pull of events may drive Southern Rhodesia into the arms of South Africa. That would mean dividing the whole continent irrevocably into two separate sections. When this happened with India, war was only avoided by a miracle. I cannot see Africa being so fortunate, not when there are so many elements in the world today only too willing to back one side or the other. The most obvious short-term consequences of dividing Africa along the line of the Zambesi will be to delay independence in Mozambique, strengthen the Portuguese hand in Angola, and probably decide the fate of Swaziland, Basutoland and Bechuanaland for generations to come. Whether there will ultimately be a movement of populations between the two regions is more doubtful; the white settlers of southern Africa are not all that fond of doing their own menial work. But open conflict between the rising forces of black nationalism and those of the white settler element will now be difficult to avoid. Ultimately, this could prove far more dangerous for the peace of the world as a whole than the partition of India was at the time.

THE INTERNATIONAL GRAPHICAL FEDERATION in Berne recently got this letter from the Paper Manufacturing Workers Union in Salisbury, Southern Rhodesia: "We are a newly formed union that we cannot stand on our own without the assistance from bigger bodies like yours. It is our hope that your organisation is interested to support both moral and material to such infants Unions like ours. We would also like to let you know that we opened an office but we have not the means to run it." The letter is signed "Yours in the Industrial Struggle."

BUDGET LEVIES OBSCURE TEA SHARE PROSPECTS

(BY A SPECIAL CORRESPONDENT)

IT has been extremely difficult for a fairly long time to deal in tea shares. Buyers cannot be attracted even by lowering price indications. The deterioration in sentiment started when the Chinese launched their invasion of India towards the close of 1962. Although China has decided to release the Indian prisoners of war, the investor's worry about the border situation has not decreased since the possibility of another invasion is not ruled out.

The weakness has now been aggravated by the proposed super profits tax which will hit the plantation industry hard. Nearly all tea estates have a small share capital in proportion to their total assets, since they started with small investments. They have subsequently increased their acreage, equipment and assets by ploughing back money into the business. So they have been seriously affected as the levy has linked the exempted profit to a percentage of the share capital plus reserves. Apart from this, they will suffer considerably since the tax contains no provision for the "averaging" of profits and losses.

The fortunes of this industry fluctuate widely from year to year. If a substantial portion of the profit is mopped up by the proposed levy, tea companies will be forced to cut dividends as well as their retained profits.

Good dividends are a major attraction of these shares since investors have to take a great deal of risk in investing in this industry, where much depends on the vagaries of the weather. As for future expansion and development, the outlook is discouraging. The industry has already been hamstrung by several official controls and regulations. The proposals of the 1963-64 Budget will strain the finances of tea estates seriously. Since the question of raising funds from the open market in the form of new shares or debentures will be nearly impossible in the case of tea, it is feared that the third plan production target of 900 million lbs a year is unlikely to be achieved.

The present lack of interest notwithstanding, the seasonal crystal-gazing into the prospects has started. Investors with large stakes in the industry are anxious to find out what the prospects are for the 1963-64 season. The previous season in north India virtually ended when the last export auction in Calcutta took place on 25th March. In their annual review just published, Messrs. A. W. Figgis and Co. Private Ltd take a mildly optimistic view about the marketing outlook for the 1963-64 season. It is believed that the balance between supply and demand has tilted in favour of the producers since the world crop in 1962 fell to 1,456 million lbs from 1,464 million lbs in 1961. World consumption has, meanwhile, increased somewhat. Considering that the 1962-63 north Indian season has ended with virtually very little carry-over, the 1963-64 season should get off to a good start in early June.

There is little doubt that the abolition of the export duty will prove beneficial as far as exports are concerned, although its good effects may

be neutralised by the levy of the 20 percent surcharge on excise duty. The concession in the form of a refund of the excise duty on exports has been abolished. In spite of this, exports should be better judging from the trends during the 1962-63 season. (Total exports from north and south Indian gardens increased in 1962, compared with 1961.)

The broking firm cannot accurately assess the impact of the Budget on this industry at this moment. It is generally thought that the Budget will accentuate the pressure of inflation. Auction prices during 1963-64 should rise as a result of the 20 percent surcharge on the excise duty. Hence export enquiries at Calcutta auctions might be affected despite the removal of the export duty. The trade may also suffer due to the cut in the purchasing power, especially of the middle classes because of the compulsory deposit scheme, combined with the additional surcharge on income tax. At the time of writing, the weather is not particularly encouraging. There has virtually been no rain in the traditional drought areas. Unless there is a useful amount of rainfall in the near future, Cachar district in particular would be afflicted by drought.

The border situation continues to cast a shadow over the industry. Although energetic steps have been taken to maintain the flow of credit to tea gardens, there is no doubt that the emergency has increased the disinclination of financing institutions to lend to tea estates, especially those situated in the vulnerable forward areas. The emergency risks insurance scheme has allayed the anxiety of financiers to some extent, but it has imposed an additional financial burden on the tea industry. The Budget proposals will impair the financial position of tea gardens. The Assam Government has enhanced the rate of agricultural income tax, increasing thereby the financial burden on the industry. Credit has, meanwhile, become very costly. It is feared that the financial commitments of the industry may be further increased when the Wage Board and the Bonus Commission produce their final reports.

Messrs. A. W. Figgis and Company have pointed out that the diversion of tea estates to C.T.C. manufacture has been increasing. The new product has been promising in many ways. Hence it sees no reason why the trend should not continue. As for instant tea, attention should be given to producing it in India as early as possible. Ceylon has already started this manufacture. The innate conservatism usually attributed to traditional tea drinkers can be shaken by this new product in the future, the firm observes.

Dividends Reduced on S.P.T. Worries

DURING the past week there has been a succession of pruning of dividends already recommended by the directors of some companies for the year ended 1962. The investors who have already been frightened

by the impact of the super profits tax on company profits and dividends, have now found—even before the measure has been placed on the Statute Book—that managements of some companies have been forced to revise their earlier recommendations by a cut in the dividends. Indian Bank has reduced its final dividend to 6½ percent from the previously announced 7½ percent. Indian Overseas Bank has changed its previously announced dividend of 14 percent to 12 percent.

The directors of Andhra Sugars Ltd have reduced the dividend to 12 percent for the year ended September 1962, from the 16 percent announced earlier. Krishna Industrial Corporation Ltd has reduced the dividend to 8 percent from the previously announced figure of 10 percent for the year ended September 1962. The directors of Mysore Coffee Curing Works have revised their earlier dividend announcement of 15 percent to 10 percent.

This downward revision of dividends has created a bearish impact on the market. It is now feared that there will be a substantial cut in the dividends which may be announced in the future. It is now expected in Stock Exchange circles, that there will be some modification in the super profits tax. The standard rate of return on the capital base is expected to be raised to 8 percent from the present 6 percent, although the actual rate of the super profits tax may not be altered to the extent pleaded by the Stock Exchanges.

Good Report from Jessop

JESSOP and Co. Ltd has produced satisfactory results for the year ended October 1962. Sales rose by Rs. 81.43 lakhs to Rs. 12.82 crores, but this does not include the finished stock worth Rs. 42.98 lakhs which could not be despatched because of transport restrictions. The profit has improved from Rs. 1.17 crores in 1960-61 to Rs. 1.53 crores in 1961-62, after increasing depreciation from Rs. 23.09 lakhs to Rs. 29.91 lakhs. A taxable ordinary dividend of 8.58 percent has been repeated. This is covered more than nine times and works out to a yield of 3.9 percent at the present price of Rs. 21.81 a share of Rs. 10 each. Taxation is allocated a higher sum of Rs. 79.07 lakhs (against Rs. 48.78 lakhs) and the proposed super profits tax Rs. 27.12 lakhs. Development rebate reserve absorbs Rs. 9.52 lakhs (against Rs. 9.06 lakhs) and general reserve Rs. 22.50 lakhs (against Rs. 42 lakhs). The carry-forward is Rs. 51,159, against Rs. 92,000 brought in.

The board of management points out that capital expenditure has amounted to Rs. 93.90 lakhs, showing an increase of Rs. 23.80 lakhs over that incurred in 1960-61. This expenditure has largely financed the construction of the new road plant works and the procurement of new machinery. The Company has now recovered from the financial depreciations which had occurred earlier. The position is now encouraging, but

it is necessary to plough back money into the business in view of the expansion and diversification of activities. The coach works has been expanded and bogies for E.M.U. coaches are being manufactured. The wagon works is being rebuilt. The new bogie works has been completed. The new works for producing diesel road rollers has started operating.

The demand for rollers produced by the Company has considerably increased. The output, it is expected, will be raised to 450 a year. The capacity of the mechanical works to produce components for cranes and sluice gates has been raised. The structural works is being expanded. There has been an all-round progress in production during 1961-62. Electric multiple unit trailer coaches have been built and the works are expected to be fully occupied until the end of 1966. About 80 box wagons are being produced every month. The output of electric overhead travelling cranes and wharf cranes has improved. The fabrication of steel work for the foundry-forge in Ranchi has been delayed by the shortage of steel.

The production, though satisfactory, has been interrupted by the shortage of matching steel and welding electrodes. The power supply has also been short. As the demand for the Company's products continues to rise steadily, all resources are likely to be fully employed during the next five years. Referring to the delay in building the new foundry and other works for making machine tools, the board points out it may be found difficult to go ahead with the expansion scheme as previously planned because of the impact of increased taxation. As soon as the various uncertainties are over, the programme of further rationalisation and expansion will be considered. The subsidiary company, Jessops-Calcutta Ltd, London, has issued bonus shares in the proportion of three new shares for each one held. Jessop has already received its quota of these bonus shares. There has been no new development concerning the various suits and claims filed by the Company in connection with the past investments and losses. It has also been mentioned that the value of closing work-in-progress and stocks is made up of actual cost of materials and labour, and overheads at the revised rates of recovery which include administrative and financing charges. If the same basis of recovery were applied to the "opening" work-in-progress and stocks brought forward from the previous year, their value would have been higher by approximately Rs. 5 lakhs. Hence the adoption of the revised basis has raised the profit by this amount.

Raza Buland Sugar Maintains

THE Raza Buland Sugar Co. Ltd has maintained the taxable ordinary dividend at 10 percent for the year ended October 1962. It is covered more than two-and-a-half times and offers a yield of 10.7 percent at the present price of Rs. 9.35 a share of Rs. 10 each. The profit has increased from Rs. 3.91 lakhs in 1960-61 to Rs. 18.80 lakhs in 1961-62, after transferring Rs. 3.61 lakhs (against Rs. 3.27 lakhs) to depreciation and Rs. 62,000 (against Rs. 97,000) to development rebate reserve. A sum of Rs. 5.50 lakhs (against Rs. 4.50 lakhs) has been transferred from dividend equalisation account. Taxation absorbs Rs. 9.60 lakhs (against Rs. 2.10 lakhs), gratuity reserve Rs. 94,037 (against

Rs. 10 lakhs) and rehabilitation reserve Rs. 7.50 lakhs. The carry-forward amounts to Rs. 10,304, against Rs. 24,557 brought in.

The cane crush of the two factories was only 4.1 million quintals. The decline has been due to the shortage of sugarcane and its inferior quality. As a result, recovery also declined from 9.49 percent to 9.11 percent. The directors point to the increased production costs. Wages and prices of raw materials and stores have risen substantially. The Company has also suffered a loss of Rs. 5.05 lakhs on exports. This apart, bigger sugar stocks have strained the Company's finances. As for the prospects for the current season, the directors apprehend that the output will be smaller than in 1961-62, since the cane supply has been short. There has also been a diversion of cane to the production of *khandasari* and *gur*. The directors, nevertheless, welcome the principle of linking the price of sugarcane with recovery, since it will promote quality consciousness among growers. The Company has taken active steps to promote cane development. The expansion programme has made progress, and orders for equipment have been placed. The Company is applying for a loan to the Industrial Finance Corporation to finance the expansion project.

Central Bank Deposits Rise

THE Central Bank of India Ltd has produced satisfactory results during the year ended December 1962. The profit has amounted to Rs. 1.80 crores, against Rs. 1.83 crores in 1961. Interest paid on deposits was Rs. 5.99 crores (against Rs. 5.26 crores) while interest and discount earned amounted to Rs. 11.35 crores (against Rs. 10.16 crores). Bringing in Rs. 23.37 lakhs, the available balance is Rs. 2.03 crores. (Fuller details appear on a later page in this week's issue of *Capital*). A taxable interim dividend of Rs. 2.40 a share was paid earlier, absorbing Rs. 30.24 lakhs. A final taxable dividend of Rs. 2.60 a share has been declared, making 14 percent net for the whole year. The final dividend absorbs Rs. 32.76 lakhs. A pro rata dividend of Rs. 2.60 a share, subject to tax, has also been declared on 1,454 shares allotted to the shareholders of the Jodhpur Commercial Bank Ltd which has been amalgamated with Central Bank. This absorbs Rs. 1,028. Reserve fund is allocated Rs. 38.72 lakhs, special reserve Rs. 58 lakhs, staff gratuity fund Rs. 10.44 lakhs and bonus to staff Rs. 65 lakhs. The carry-forward is Rs. 93,249. As for issuing 634,625 rights shares in the proportion of one new share for every two held, the directors say that although the sanction of the Controller of Capital Issues has been obtained, it has been decided to postpone the issue. They think that the prevailing emergency, the market conditions and the terms of the issue as sanctioned, are not favourable for issuing new shares.

Deposits rose from Rs. 220.19 crores to Rs. 236.06 crores. Cash was shown at Rs. 20.38 crores (against Rs. 23.91 crores). Investments increased from Rs. 49.10 crores to Rs. 55.96 crores and advances from Rs. 161 crores to Rs. 175.45 crores.

Hindusthan-Pilkington Glass Skips

THE Hindusthan-Pilkington Glass Works Ltd has passed the dividend for the year ended October 1962. The ordinary dividend was 12 percent, subject to tax, for 1960-61. The Com-

pany has incurred a loss of Rs. 12.16 lakhs, compared with a profit of Rs. 20.89 lakhs in 1960-61, after providing Rs. 17.88 lakhs (against Rs. 6.73 lakhs) for depreciation, and Rs. 2.55 lakhs for tank repairs. A sum of Rs. 6.96 lakhs has been used to write off a part of the capital assets. A total debit balance of Rs. 23.21 lakhs has been carried forward, after transferring a sum of Rs. 12 lakhs to development rebate reserve.

Explaining the unsatisfactory results, the directors say that production in the factory was suspended from the end of October 1961 to the close of March 1962, as the works had to be reoriented. The more modern "P.P.G." process of glass manufacture has been adopted in order to improve the capacity from 34 million square feet to 54 million square feet of sheet glass a year as well as the quality of the product. The new process started operating from April 1962. Despatches were also seriously affected by irregular wagon allotments. Hence sales fell from Rs. 1.07 crores to Rs. 63.90 lakhs. They think that the new process of production has now gathered momentum as the trend of output has been upward. If despatches are not hampered, satisfactory results can be expected in future years.

The directors point to the increased production costs because of higher prices of raw materials and packaging. The price fixed by the Government for the ordinary sheet glass produced by the Company is considered below production costs. As for the rolled plate project, satisfactory progress has been made. The authorities concerned have been moved for obtaining the necessary construction materials. If the rate of progress is maintained, this factory should start producing by the middle of the current year.

Higher Profit for Bijonagar Tea

THE profit of the Bijonagar Tea Co. Ltd has improved from Rs. 6.46 lakhs for 1961 to Rs. 7.24 lakhs for the year ended December 1962, after providing Rs. 1.78 lakhs (against Rs. 1.68 lakhs) for depreciation. A taxable ordinary dividend of Rs. 5 a share of Rs. 25 each has been declared which will absorb Rs. 1.74 lakhs. Taxation is allocated Rs. 3.45 lakhs (against Rs. 2.62 lakhs) and general reserve Rs. 2.25 lakhs (against Rs. 2.50 lakhs), leaving a carry-forward of Rs. 99,953, against Rs. 1.18 lakhs brought in. The crop rose from 783,367 kilograms to 847,062 kilograms and the average prices realised for the commodity were higher than in 1961. The 1963 crop has been estimated at 753,900 kilograms.

Malhati Tea Earns More

MALHATI Tea Syndicate Ltd has increased its profit from Rs. 2.38 lakhs in 1961 to Rs. 5.23 lakhs for the year ended December 1962, after transferring Rs. 1.15 lakhs (against Rs. 1.14 lakhs) to depreciation. The directors have declared a taxable ordinary dividend of Rs. 2 a share of Rs. 10 each, absorbing Rs. 1.80 lakhs. The yield works out to 10.4 percent at the price of Rs. 19.25 a share. General reserve is allocated Rs. 1 lakh (against Rs. 80,000), and taxation provision Rs. 2.50 lakhs (against Rs. 81,000). The carry-forward is Rs. 10,407, against Rs. 16,654 brought in. The crop increased from 497,780 kilograms to 526,113 kilograms, and the average price of tea rose from Rs. 4.43 to Rs. 4.63 a kilogram. The

crop for 1963 has been estimated at 60,000 kilograms.

Tide Water Oil Earns More

IN their report for the year ended October 1962, the directors of the Tide Water Oil Co. (India) Ltd say that although the Super Profits Tax Bill has not yet been passed, it is desirable to provide for the relevant tax liability. The total tax provision of Rs. 3.17 lakhs (against Rs. 2.02 lakhs) absorbs 71 percent of total profits. The profit has increased from Rs. 4.10 lakhs in 1960-61 to Rs. 4.47 lakhs in 1961-62, after providing Rs. 24,078 (against Rs. 21,376) for depreciation. A taxable ordinary dividend of 35 percent has been maintained. This is more than twice covered and offers a yield of 13.5 percent at the present price of Rs. 26 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 600, leaving a carry-forward of Rs. 12,113, against Rs. 92,708 brought in.

Sales rose from Rs. 85.60 lakhs to Rs. 93.90 lakhs. Commenting on the current prospects, the directors say that the major oil companies have reduced the selling prices of lubricants. The import licences for the six months ended March 1963 have been cut by 50 percent, compared with the previous half-year's licences. So the current results have been affected by the reduced quantity of imported lubricants and the lower selling prices.

Brushware Repeats Dividend

THE Brushware Ltd has made a profit of Rs. 42,717 during the year ended November 1962, compared with Rs. 29,554 in 1961-62, after providing Rs. 948 (against Rs. 894) for depreciation. A taxable ordinary dividend of 8 percent has been maintained, absorbing Rs. 8,000. Taxation provision gets Rs. 21,000 (against Rs. 14,000) and rehabilitation reserve Rs. 14,000 (against Rs. 9,500) leaving a carry-forward of Rs. 3,967, against Rs. 3,407 brought in.

Bharat Collieries To Cut Share Capital

BHARAT Collieries Ltd has called an extraordinary general meeting of the shareholders in Calcutta on 29th April, 1963. It is proposed to reduce the present share capital of the Company from Rs. 2 crores to Rs. 1.70 crores divided into 50,147 cumulative preference shares of Rs. 100 each and 1,200,000 ordinary shares of Rs. 10 each. The reduction will be made by cancelling 29,853 cumulative preference shares of Rs. 100 each. The holders of these preference shares, will be allotted fully paid-up registered debentures of the Company which are of a nominal value of Rs. 100 each, in the proportion of one debenture for each preference share held. The scheme of reduction has been sanctioned by the Calcutta High Court.

East Anglia Plastics Rights Issue

THE East Anglia Plastics (India) Ltd, has extended the time from 31st March to 30th April, 1963, for subscribing to the recent rights share issue. Rights ordinary shares have been offered in the proportion of one new share for each one held at par. The funds will be used to

finance the expansion programme. The Company has launched a large integrated project for producing cellulose acetate and various other chemicals. The cost of the project has been estimated at Rs. 6 crores of which Rs. 2.90 crores will be met by a French credit already sanctioned by the Government of India. The French credit will be used for importing the necessary plant and machinery. The directors are hopeful of the prospects. Being a new industry, the Company will enjoy the usual tax benefits under the Income Tax Act. In view of the tax holiday enjoyed by a new industry, the super profits tax too may not be a burden for the time being. They hope that this levy will be a temporary measure.

Premier Construction Fares Well

SHAREHOLDERS of Premier Construction Co. Ltd who might have felt somewhat disappointed at the Company's inability to maintain the dividend on the increased capital, can derive some consolation from the small improvement in the Company's working results for the year ended December 1962. In spite of a steep rise in the expenses, the Company has been able to report an increase in the gross profit. Although the dividend has been reduced from Rs. 10 to Rs. 9 a share (Rs. 30-paid), it involves a larger distribution as the new shares were entitled to a full year's dividend in 1962. The total distribution on ordinary shares amounts to Rs. 11.69 lakhs, compared with Rs. 11.48 lakhs in 1961. Preference dividend absorbs Rs. 4.69 lakhs.

The Company's income from dividends increased from Rs. 16.15 lakhs to Rs. 18.98 lakhs, and work bills from Rs. 1.87 lakhs to Rs. 3.81 lakhs. Its share in the agency commission, however, was slightly less at Rs. 1.20 lakhs, against Rs. 1.63 lakhs. The other income, too, was lower at Rs. 2.88 lakhs, compared with Rs. 3.11 lakhs. Adjusting the work in progress at the year-end, the Company's total revenue shows an increase of about 19.7 percent from Rs. 22.92 lakhs to Rs. 27.43 lakhs. But expenses show an increase of as much as 50 percent from Rs. 7.17 lakhs to Rs. 10.82 lakhs, with the result that the gross profit is up by only 5.4 percent from Rs. 15.75 lakhs to Rs. 16.61 lakhs.

The provision for depreciation has been raised from Rs. 41,340 to Rs. 66,652, but no provision has been made for taxation, which was Rs. 1.90 lakhs in 1961. After setting aside Rs. 11,414 (against nil) for development rebate reserve and meeting the liability concerning preference and ordinary dividends, there remains a surplus of Rs. 66,935 to be carried forward, against Rs. 88,651 brought in. No provision has been made in the accounts for the super profits tax as full implications are not yet known. The directors have estimated the liability on the basis of the existing proposal at Rs. 1 lakh for which the Company has adequate reserves.

The directors state in their report that during the year, 100 equity shares of Acme Manufacturing Company were sold to an associate of the managing agents, but as doubts were expressed concerning the validity of the sale, the Company repurchased these shares in March 1963. Premier Construction received 35,816 bonus equity shares from the Hindustan Construction Co. Ltd. The Company's investments total Rs. 2.72 crores, of which the quoted investments amounting to Rs. 2.29 crores

have the market value of Rs. 2.60 crores as at the end of 1962. The Company has a paid-up capital of Rs. 1.20 crores, of which equity capital accounts for Rs. 39 lakhs, and this is supplemented by reserves and surplus amounting to Rs. 1.28 crores.

Progress of Associated Bearing

RELIABLE reports indicate that the Associated Bearing Co. Ltd is seeking permission from the Controller of Capital Issues to do away with the restriction relating to the transfer of shares allotted on a firm basis. Firm allotment had been sanctioned by the Government on the condition that these shares would not be transferable for two years. But conditions in the capital market have undergone a marked change in recent months. The Company's share which had once fetched a premium of about Rs. 150 is now quoted only about Rs. 30 above par. At one time, the Rs. 100-paid share could be had around Rs. 110 to 115. The Company has also pleaded with the Government that the shareholders are being put to considerable difficulties as they are unable to raise any money from banks against these shares because of their non-transferability.

Meanwhile, the directors of the Company state in their second annual report for 1962 that the factory in Poona is not likely to be completed until about the middle of 1964. The delay of nearly 12 months in the start of the construction work is attributed to legislation concerning the acquisition of land by limited companies under the Land Acquisition Act. However, the Company has commenced the assembly of S.K.F. pendulum weighing arms at a small rented factory in Bombay. This factory is now working satisfactorily and is making a profit. The sales of pendulum arms in 1962 fetched Rs. 6.55 lakhs. Apart from this, the Company earned Rs. 10.11 lakhs by way of interest on bank deposits and advances, and Rs. 69,000 as miscellaneous income.

After providing Rs. 61,312 (against nil) for depreciation, the year's working has resulted in a net loss of Rs. 1.52 lakhs, compared with Rs. 2.30 lakhs in 1961. The directors have provided Rs. 2.25 lakhs for taxation and have transferred Rs. 20,000 (against nil) to development rebate reserve. The aggregate loss for the year thus amounts to Rs. 4.05 lakhs, which together with the deficit of Rs. 2.30 lakhs brought forward from the previous year, is being carried forward. During 1962, the Company raised the share capital from Rs. 10 lakhs to Rs. 4 crores, 60 percent of which was put up by the foreign collaborators. This money has been deposited in the Company's bank accounts in Europe, and is being used for the purchase of machinery for the manufacture of bearings and textile machinery parts. The directors say that the Central Budget proposals will raise the cost of imported machinery.

Killick Industries Pays Again

THE working results of Killick Industries Ltd for the year ended 30th November, 1962, show a moderate improvement over the previous year's performance. This has enabled the Company to return to the dividend list after a year's break. The dividend for 1960-61 was skipped, for 1961-62, the directors have proposed a dividend of Rs. 5 a share, less tax. The Company's gross earnings are up by about 5 percent from Rs. 41.95

lakhs to Rs. 44.02 lakhs. Income by way of commission and office allowance increased from Rs. 18.94 lakhs to 19.77 lakhs, and other income rose from Rs. 8.09 lakhs to Rs. 10.73 lakhs. Income from trade investment, however, suffered a setback from Rs. 14.92 lakhs to Rs. 13.52 lakhs. The gross profit of the Company increased by about 10 percent from Rs. 22.46 lakhs to Rs. 24.82 lakhs.

After providing Rs. 73,000 (against Rs. 60,000) for depreciation and Rs. 10.60 lakhs (against Rs. 11.60 lakhs) for taxation, the net profit amounts to Rs. 13.59 lakhs (against Rs. 10.23 lakhs) in 1960-61. Allocation to the general reserve has been reduced from Rs. 10 lakhs to Rs. 7.50 lakhs. The proposed dividend absorbs Rs. 6.25 lakhs, leaving a sum of Rs. 17,584 to be carried forward, against Rs. 33,585 brought in. No provision has been made for super profits tax, but the liability for the proposed levy on the basis of the existing provision is estimated around Rs. 3 lakhs.

The directors state in their report that a part of the plant and machinery of Killick Slotted Angles Ltd has been installed and the production of angles has commenced. John Baker and Sons began marketing glacial acetic acid during the year and the profits of this division showed a slight improvement. Efforts are being made to improve it still further. Construction of a factory of Filtrona India Private Ltd has begun in Chandivli (Bombay), and it has been found necessary to expand the factory by one additional bay. This expansion, it is expected, will be completed by about the middle of this year.

Every effort is being made to improve the working results of Killick Caribonum Ltd, another subsidiary of the Company. Snowcem India Ltd, another subsidiary, continued to show improvement in sales and production. Arrangements, it is stated, have been completed for the manufacture of further cement speciality products under agreement with George Lillington and Company Ltd. As against a paid-up capital of Rs. 1.25 crores (all in equity shares), free reserves at the end of November 1963, amounted to Rs. 43.38 lakhs. The Rs. 100-paid share of the Company is currently quoted around Rs. 76.50 cum-dividend, offering a gross return of about 7 percent on fresh investment.

Progress Report on Henley Cables

IN their third annual report for the year ended October 1962, the directors of Henley Cables India Ltd state that approximately 90 percent of the plant had been installed and made ready for production by the end of the year. Production started in May 1962. Sales of the Company's products were valued at Rs. 2.16 lakhs. After providing for Rs. 2.62 lakhs for depreciation and capitalising certain items of expenditure incurred towards the implementation of the project, the Company has suffered a loss of Rs. 7.86 lakhs during 1961-62, compared with Rs. 10,619 in the previous year. After setting aside Rs. 8,170 for taxation for the previous year and bringing in the surplus of Rs. 29,194 from the previous accounting period, a loss of Rs. 7.66 lakhs is being carried forward to the next year.

There has been an addition of Rs. 79.19 lakhs in the value of the fixed assets during the year, reflecting mainly the progressive installation of plant and buildings in completion of the initial project. The Company has obtained an industrial licence for manufacturing winding wires and covered copper wires and

the directors are considering the question of necessary finance for this expansion scheme. In view of the demand for certain types of rubber and thermo-plastic cables beyond the factory's initial range of products, the directors have decided to install an additional plant costing Rs. 6 lakhs, which will increase the range of goods manufactured by the Company. An import licence for the plant is awaited.

Synthetics and Chemicals Plant to Go on Stream

THE synthetic rubber factory of Synthetics and Chemicals Ltd in Bareilly (Uttar Pradesh) will be going into production in a month's time, according to an announcement by the president of the Firestone Tire and Rubber Company, Mr. Raymond C. Firestone, who is on a short visit to India. The Bareilly plant involving an investment of \$40 million (about Rs. 20 crores), of which 25 percent is held by Firestone of the U.S.A., has a rated capacity of 30,000 tons. With the commissioning of this plant, India, together with the country's natural rubber production, would become practically self-sufficient in rubber supply.

Experiments have shown that synthetic rubber has longer life than natural rubber. When in full production, the Bareilly factory will enable the country to save about \$20 million in foreign exchange a year. The plant will also manufacture styrene and butadiene, the principal ingredients of rubber. Both these items would be processed from alcohol received from the cane-growing areas surrounding the plant. Mr. Firestone also disclosed that the Bombay tyre plant would be expanded shortly although the proposed super profits tax had posed a problem for the Company. The programme to expand the present annual production of 672,000 tyres to about 1 million tyres at the Bombay plant, which is being considered actively, is estimated to entail an investment of about \$15 million.

Associated Stone Earns More

ASSOCIATED Stone Industries (Kotah) Ltd has reported satisfactory results for the 13-month period ended 31st October, 1962. Sales at Rs. 73.09 lakhs show an increase of about 16.5 percent over the previous year's figure of Rs. 62.76 lakhs. The gross profit is up by nearly 24 percent from Rs. 14.51 lakhs to Rs. 17.89 lakhs. Production showed an improvement during 1961-62, and the directors seem confident of achieving the production target of 25 million square feet of Kotah stone during the current year.

After providing Rs. 1.91 lakhs (against Rs. 1.74 lakhs) for depreciation and Rs. 8.60 lakhs (against Rs. 6.20 lakhs) for taxation, the net profit for 1961-62 amounts to Rs. 7.38 lakhs (against Rs. 6.47 lakhs) in the preceding year. In spite of the higher profit, the directors have reduced the dividend from 30 percent to 20 percent, subject to tax, that is, from Rs. 3 to Rs. 2 a share. Apparently, this has been done to conserve resources for the tax liability concerning previous years. The Company's claim for exemption from income tax has been rejected by the Supreme Court. The directors, therefore, have had to transfer a sum of Rs. 7.25 lakhs from general reserve to provide a further sum of Rs. 10.75 lakhs for taxation of earlier years.

After providing for the proposed dividends which absorb Rs. 3.88 lakhs

(against Rs. 5.72 lakhs) and setting aside Rs. 15,030 (against Rs. 28,000) for development rebate and making minor adjustments, there remains a small balance of Rs. 777 to be carried forward, against Rs. 12,385 brought in. The directors say that the Company will have to pay a further sum of Rs. 3.70 lakhs by way of super profits tax if the Bill imposing this levy is passed in its present form, but they add that sufficient amount to meet this liability is available as and when it arises. The Government has not sanctioned the Company's scheme for setting up a cement factory in Ramgandmandi.

Commerce Ltd Earns More, Pays Less

ALTHOUGH the dividend has been reduced from Rs. 2.75 to Rs. 1.75 a share, less tax, the working results of Commerce (1935) Ltd for 1962 show a considerable improvement over 1961. The gross profit is up by nearly 25 percent from Rs. 81,579 to Rs. 1,02,088. The directors say that the gross revenue, which had suffered a setback in the previous year, showed an upward trend in 1962 in spite of competition. Income from advertisements was higher whereas that from subscriptions was slightly down.

After providing Rs. 1,623 (against Rs. 549) for depreciation and Rs. 43,800 (against Rs. 37,000) for taxation, the net profit for 1962 amounts to Rs. 56,665, against Rs. 44,030 in the previous year. From this, the directors have set aside Rs. 3,514 (against nil) for additional taxes for the preceding year, and a sum of Rs. 17,000 has been provided for super profits tax. General reserve gets Rs. 10,000, against Rs. 5,000. The proposed dividend absorbs Rs. 26,250, against Rs. 41,250, leaving a small surplus of 280 to be carried forward, against Rs. 380 brought in.

Ouchterlony Valley Shows Loss

OUCHTERLONY Valley Estates Ltd has incurred a substantial loss for the year ended October 1962, because of the poor coffee crop. So the reduction of the dividend to 6 percent from the previous year's 12 percent should not cause any surprise. The directors have announced the dividend for the year by transferring the required amount from dividend equalisation reserve. The Company's working shows a loss of Rs. 5.06 lakhs, before providing for taxation, compared with the previous year's profit of Rs. 6.28 lakhs. Adding to the loss of Rs. 5.06 lakhs, provision for taxation on tea income amounting to Rs. 96,500, the loss amounts to Rs. 6.03 lakhs. From this is deducted Rs. 2.50 lakhs (Rs. 10,333 brought forward from the previous year, Rs. 19,567 is the excess provision for bonus in previous years written back, and Rs. 2.12 lakhs is the refund of agricultural income tax). This leaves a net loss of Rs. 3.52 lakhs. After taking into account provision for development rebate reserve amounting to Rs. 6,100, the debit balance of Rs. 3.58 lakhs is carried forward. The proposed dividend absorbs Rs. 1.17 lakhs.

General reserve stands at Rs. 10.90 lakhs, dividend equalisation reserve at Rs. 43,241, and development rebate reserve at Rs. 84,600. Full provision has been made in the accounts for taxation at the current rates. No provision has, however, been made for any increase in taxation that may

result from the Finance Bill, 1963, and the Super Profits Tax Bill.

The total tea crop for the year amounted to 655,342 kilograms (against 577,573 kilograms). The yield on acre has risen to 445 kilograms, against 392 kilograms. The all-in-cost of production was lower at Rs. 3.96 a kilogram, against Rs. 4.34 a kilogram. The average price realised, however, dropped to Rs. 4.48 a kilogram from the previous year's Rs. 4.84 a kilogram. The coffee crop amounted to 211,742 kilograms, compared with 861,592 kilograms in the previous year. The yield of coffee an acre has sharply declined to 72 kilograms from the previous year's 291 kilograms.

The coffee crop harvested was the smallest for many years. The chairman, Mr. J. N. A. Hobbs, says that the fall is attributable to three main factors. Firstly, unsuitable climatic conditions, including inadequate and untimely blossom showers affected the crop. The total Indian crop for the 1961-62 season was only 45,676 tonnes, compared with 67,794 tonnes for the previous year. Secondly, there was a loss of crop from 568.56 acres in 1960-61 as part of the rehabilitation programme. This area carried little crop in 1961-62, but should be back in full bearing for the 1963-64 crop. Thirdly, many fields which contributed to the Company's average crops in 1960-61 failed to bear much crop in the following year.

As for the prospects, Mr. Hobbs says that the Company's coffee crop for the current year is not as good as was originally expected, partly because of the loss of crop from rehabilitated areas which were not in full bearing during the year. The revised estimate for coffee is placed at 640 tonnes. The current year's tea crop is estimated at 700,000 kilograms, or about 45,000 kilograms more than the record crop just harvested. The prospects for the 1963-64 coffee crop appear to be reasonable. The chairman is confident of harvesting increased tea crops in the years ahead. But he feels that for the next year or two, no appreciable improvement in coffee crops can be expected.

Rajalakshmi Mills Cuts Dividend

THE directors of Rajalakshmi Mills Ltd have recommended a lower dividend of 15 percent for the year ended December 1962, against 20 percent for the previous year. According to the preliminary figures, the profit for the year ended December 1962, amounts to Rs. 13.89 lakhs to which is added Rs. 9.410 being the amount brought forward from the previous year. Thus the total available for appropriation amounts to Rs. 13.98 lakhs. Out of this, provision for taxation gets Rs. 4.85 lakhs. Income tax for previous years amounts to Rs. 66,649. Development rebate reserve accounts for Rs. 87,000. The proposed dividend on equity shares, subject to deduction of tax, will absorb Rs. 4.50 lakhs. The dividend on preference shares at 8.45 percent, subject to tax, accounts for Rs. 16,900. After making these appropriations, there is a balance of Rs. 4,998 which is carried forward.

Travancore Rayons Cuts Dividend

THE directors of Travancore Rayons Ltd have recommended a lower dividend of 15 percent on the ordinary shares for the year ended December 1962, compared with 20 percent for the previous year. The lower dividend has caused disappointment in market circles, although a cut had been more or less expected. But what has caused greater concern

is the substantial drop in profit from the previous year's levels. But for the sharp fall in profit, the equity shares of this Company would not have fallen so much in recent weeks. The quotation which stood at Rs. 29.75 on the eve of the removal of minimum prices on 3rd April, came down to Rs. 23.50 c.d. by the end of last week.

According to the preliminary figures available, the profit of the Company for the year ended December 1962, amounts to Rs. 30,47,865.67, against Rs. 61,92,937. With the amount of Rs. 2,68,721.03 brought forward from the previous year and with a sum of Rs. 300,000 transferred from dividend equalisation reserve, the total surplus comes to Rs. 36,16,586.70. Out of this, the directors have provided Rs. 17,73,000 for tax. The preference dividend accounts for Rs. 3,25,000. The proposed ordinary dividend of 15 percent will absorb Rs. 15,00,000. The balance of Rs. 18,586.70 is carried forward.

Lower Trend in Sugar Company Profits

THE chairman of the India Sugars and Refineries Ltd told shareholders at the recent annual general meeting that the steep fall in sugar prices have affected all companies including bigger units as well as those which are economical and efficient. (The balance-sheet of the Company was reviewed in the 14th March issue of Capital.) Discussing the trend of profits in the sugar industry, the chairman made a reference to the gross profits and the ratio of profit to sales of some eight sugar companies. Comparative figures given about them underline the general trend of working results in the industry, thus affording material for the investor to make some assessment of future prospects.

The Nizam Sugar Factory Ltd, which is one of the companies referred to by the India Sugar and Refinery chairman, has earned Rs. 49.89 lakhs, against 80.34 lakhs in the previous year. The ratio of profit to sales has gone down from 21.1 percent to 9.4 percent. The Mysore Sugar Co. Ltd has shown a profit of Rs. 20.37 lakhs, compared with Rs. 28.28 lakhs in the previous year. The ratio of profit to sales is reported to be just over 6 percent. The Bhopal Sugar Company has shown a profit of Rs. 3.92 lakhs, against Rs. 7.41 lakhs in the previous year. Phaltan Sugar Company has earned a profit of Rs. 12.57 lakhs, against Rs. 14.28 lakhs. The ratio of profit to sales has declined to 9 percent from 17 percent. Deccan Sugar has shown a profit of Rs. 28.30 lakhs, compared with Rs. 30.03 lakhs in the previous year. Travancore Sugars has shown a profit of Rs. 7.03 lakhs, against Rs. 9.40 lakhs. E.I.D. Parry Company's ratio of profit to sales has come down to 6.5 percent for the year. Gwalior Sugar has recorded a marked fall in profit.

The gross profit of India Sugars and Refineries for the year is Rs. 13.18 lakhs, against Rs. 19.09 lakhs. The ratio of profit to sales has fallen to 6.1 percent from 15 percent.

The chairman observed that 1961-62 continued to be a year of great anxiety for the sugar industry, with huge accumulation of stocks, resulting from a record production of about 3 million tons during 1960-61. This Company had a large carryover stock and it had to sell it and the production during the year at uneconomical prices. But the performance for the year, both in points of sugar recovery and the cane crushed, was very much better than during the previous one. This higher recovery was a significant factor in helping to mitigate materially the otherwise rather dismal picture. The chairman also referred to the cycle of scarcity and

overproduction year after year and to the fact that the necessary balance has yet to be struck, and said that these were principally because of the reluctance of the State Governments and the cane-growers to co-operate with the industry fully.

The details of the break-up of the income of the sugar industry given by the chairman provide interesting reading. He says that out of every rupee of revenue earned the industry pays 45nP to sugarcane growers, 35nP goes in taxes, 19nP for manufacturing expenses including labour, establishment and bonus, leaving only 1nP in the hands of the Company to be distributed as profit to shareholders, build reserves and effect expansion.

As for the application made by the Company to the Government for the expansion of its factory from 1,000 tons a day to 1,200 tons of cane crush a day, the chairman said that this application had now been taken up by the Government and the latter had indicated its willingness to grant a licence for this expansion.

Indian Oil Blending: New Indo-U.S. Venture

A NEW company known as the Indian Oil Blending (Private) Ltd representing a joint venture between the Indian Oil Company Ltd, a State-owned undertaking and the Mobil Petroleum Company Incorporated, New York, has been formed in Bombay for blending lubricating oil and greases in India. The Company has been established as a 50-50 joint venture with an authorised capital of Rs. 20 lakhs. Mr. P. A. Gopalakrishnan, chairman of the Indian Oil Company, will also be the chairman of the Indian Oil Blending (Private) Ltd. The directors of the Company include Messrs P. A. Gopalakrishnan, A. K. Srivastava of the Indian Oil Company and Messrs. O. M. Hague and H. C. Goff representing the Mobil Petroleum Company.

The Company will set up two plants, one in Bombay and the other in Calcutta, for blending and packaging high-grade oils, lubricants and oil products including process and chemical products. Mobil Petroleum will subscribe the capital in U.S. dollars towards buying capital equipment for the two plants. It will also provide the technical know-how and train Indian personnel in oil blending operations. The initial capacity of the two plants is estimated to be 100,000 metric tonnes a year.

Engel India and Pioneer Plastic

ENGEL India Machines and Tools Ltd of Calcutta states that there are certain errors in the third paragraph of the item entitled "Processing Machines from Pioneer Plastic" on page 497 of the Guide for Investors section in Capital of 4th April, 1963. It is pointed out that for manufacturing plastic injection moulding machines and moulds, Engel India has made considerable progress since the inception of the Company in April 1962. The collaboration with the Austrian company, Maschinenfabrik Ludwig Engel K.G., has been approved by the Government. The Austrian collaborators are supplying the know-how and participating in the capital of the Indian Company to the extent of Rs. 7.5 lakhs. Land for the factory has been acquired.

Orders for almost all the plant and machinery have already been placed and covered by import licences. Plans and drawings for the factory are being approved by the municipal

authorities, and it is expected that the construction of the factory will commence in the course of next few weeks. Engel India will very soon be issuing shares to the public to the extent of Rs. 30 lakhs, which is being entirely underwritten by the Industrial Finance Corporation, the Life Insurance Corporation of India, the West Bengal Financial Corporation and the Industrial Credit and Investment Corporation of India. Equity capital worth Rs. 20 lakhs has already been privately subscribed by the directors of the Company and the Austrian collaborators. Recently the Industrial Finance Corporation of India has approved the application of the Company for a loan of Rs. 25 lakhs.

The Company will initially produce 300 injection moulding machines a year of three sizes—45-90 grammes, 80-150 grammes and 150-300 grammes. The total investment in the project will be about Rs. 1 crore. The Company will have a turnover of about Rs. 1.6 crores from the second year of operation onwards. At the present rate of progress, it is estimated that the manufacture of machines and moulds will commence by July 1964. It is planned that during the first three years of operation, the Company will be able to produce 85 percent of the components of each machine.

New Capital Issues

SEVEN companies have been authorised to raise capital amounting to Rs. 2.31 crores. The following are the details:

Utkal Machinery Ltd, Bombay: Further capital of Rs. 40 lakhs divided into 40 debenture units of Rs. 100,000 each carrying interest at the rate of 7 percent to be issued to the L.I.C. as security for a loan.

Shree Digvijay Cement Company Ltd: Additional capital of Rs. 50 lakhs in equity shares of Rs. 100 each for cash at a premium of Rs. 10 per share.

The British India Electric Construction Company Ltd, Calcutta: Rs. 10 lakhs in equity shares at a premium of 33 1/3 percent. The capital will be issued to two U.K. companies, namely, Johnson and Phillips Ltd, and the Electric Construction Company Ltd for consideration other than cash.

The Oriental Spun Pipe Company Ltd: A new company to be incorporated in the State of Delhi will raise capital of Rs. 75 lakhs divided into Rs. 60 lakhs in equity and Rs. 15 lakhs in cumulative redeemable preference capital carrying dividend at the rate of 9-2/7 percent for cash at par.

In supersession of the consent accorded previously for issue of capital to the value of Rs. 25 lakhs, the Yemmiganur Spinning Mills Ltd, Yemmiganur, has been allowed to issue capital of Rs. 30 lakhs, divided into 25,000 equity shares of Rs. 100 each and 5,000 cumulative redeemable preference shares of Rs. 100 each carrying a dividend of 9.3 percent (free of company's tax but subject to deduction of all taxes at source at the prescribed rates). All the shares will be for cash at par.

Kottayam Textiles Ltd, Kerala: Rs. 25 lakhs in 200,000 equity and 50,000 preference shares each of Rs. 10 each to be issued for cash at par.

The South India Saiva Siddhanta Works Publishing Society Tirunelveli Ltd, Madras: Further capital of Rs. 100,000 in equity shares of Rs. 10 each, on capitalization of the company's general reserves to a like extent.

The Stock Markets

PRICES OF SELECTED SCRIP IMPROVE IN CALCUTTA

Wednesday Evening.

THE Calcutta stock market has been slightly steadier during the past week. Prices of selected shares have improved somewhat due to two factors. The first is that selling pressure has decreased since most of the weak holders have already sold out. Attracted by the lower prices, bears have covered their open positions to a large extent. As a result, the technical position has become healthier. There have also been some purchases by bargain-hunters.

Lyons Range hopes that the Central Finance Minister will modify the super profits tax during his statement in the Lok Sabha next week. It is rumoured that the percentage of exempted profits may be increased from 6 percent to 8 percent and that the rate of tax will also be cut. It is believed that in calculating the total capital base for the purpose of the tax, loans and debentures of a company will be included. If the adverse effects of the levy are to be mitigated, these modifications are about the least which must be made.

Steel shares have met with scattered support after a fairly long interval. Indian Iron have been quoted up to Rs. 20.15. The support has been based on two favourable developments. The first is that the output of the Company increased during March, compared with February. The output of pig iron rose from 106,428 tons to 116,303 tons and that of steel ingots from 79,233 tons to 83,288 tons. The production of saleable steel improved from 69,816 tons to 87,400 tons. Despatches rose from 84,180 tons to 106,182 tons. Thus the total output during the year ended March 1963 has improved considerably, compared with the corresponding period of 1962. During 1962-63 the output of pig iron has been 1.3 million tons, against 1.2 million tons in 1961-62. The production of steel ingots has increased from 934,498 tons to 1 million tons and that of saleable steel from 734,970 tons to 795,119 tons. The second favourable factor is that the prospect of an increase in the retention price of steel has become brighter. The Government is believed to have decided to raise the retention price in order to compensate the producers for the emergency risks insurance premium and the rises in railway freight, royalty and wages.

In the engineering section, Jessop have recovered on producing an excellent report. Guest, Keen, Williams, Burn, Texmaco and Indian Standard Wagon have also gained. Turnover has increased in coal shares due to hopes of an increase in the price of the commodity. It is reliably learnt that the Government has decided to raise the average price of coal by at least Re. 1 a ton, although the rise will vary according to grades. Bengal, Central India, South Karanpura, Burrakur, East Indian and Equitable have been bought. Except for scattered support for Bharat Commerce, Jay Shree Textiles and Dunbar, cotton mill shares have been generally neglected.

Prices of selected miscellaneous shares have improved all-round due to the absence of selling pressure.

Indian Aluminium, Dunlop Rubber, Hindustan Motor, Indian Copper, Rohtas, Jaipur Udyog and Orissa Cement have been prominent. Union Carbide have also risen. Among managing agency shares, interest has been taken in Jardine Henderson and Martin Burn. Electric Company shares have been subdued and business has been done in Calcutta Electric at lower levels. Among new shares, interest has been taken in Hindustan Twyford and Asiatic Oxygen. Dr. Paul Lohmann have been taken on prospects of a rights issue. In the paper section, Orient and Sirpur have recovered. Titagur and Ballarpur have been steady.

Sugar shares have been freely offered without attracting buyers. Prices have declined on balance. Small turnover has been transacted in tea shares at cut prices. Investors are apathetic because of the border situation coupled with reports of drought in many growing districts.

Although Government securities have been steadier following official support, turnover has been small, since institutional buyers have taken very little interest. Attention has been concentrated mainly on short-dated stocks. The 3 percent Conated loan 1966 is quoted around Rs. 63. State Government loans are easier on a predominance of sellers.

Bombay

PRICES IMPROVE IN DALAL STREET

HOPES OF CHANGES IN SUPER PROFITS TAX

Wednesday Evening.

THERE has been a fair improvement in the Bombay stock market during the past week. Turnover has increased and prices of selected shares are higher. Scattered support has been attracted because of optimism concerning modifications of the super profits tax. Operators have also interpreted bullishly the Chinese decision to release Indian prisoners of war. The move has led to the belief that there might not be any armed conflict between India and China in the near future. As a result of the steadiness, the authorities have scrapped the minimum prices for the remaining 10 clearing shares. They have also decided that there will be no compulsory carry-over in the future. Thus the Bombay stock market will henceforth have freer trading and prices will find their own levels.

The corporate news has, meanwhile, been more favourable. It is reliably learnt that the Government of India has decided to increase the retention price of steel in order to compensate the producers for rises in railway freights and royalties. The increase in the output of the Tata Iron and Steel Company during March has been welcomed. The total production of the Company during 1962-63 has improved, com-

pared with 1961-62. The output of pig iron has increased from 1.6 million tons to 1.8 million tons. The production of steel ingots has risen from 1.6 million tons to 1.8 million tons, and that of saleable steel from 1.3 million tons to 1.4 million tons. Tata Steel have improved to Rs. 121 and Indian Iron to Rs. 20.04. Selected engineering shares have been supported on prospects of expansion. Mukan Iron have gained at Rs. 18.76 on buying by knowledgeable quarters. Premier Construction have been steady at Rs. 132. Tata Locomotive have, however, been subdued because of the rights issue. Among motor-vehicle shares, Hindustan Motors and Premier Automobiles have gained.

Selected cotton mill shares have improved on replacement buying. It is believed that the supply of raw cotton will improve in the coming months because of a bigger domestic crop, combined with larger imports of American cotton under P.L. 480. Bombay Dyeing have improved to Rs. 63, Kohinoor to Rs. 284, Svadeshi to Rs. 248 and Tata Mills to Rs. 57.20. Century have been quiet around Rs. 477 following selling pressure.

There have been some purchases by bargain-hunters in the miscellaneous section. In the cement group, Associated Cement have improved to Rs. 139.50. Digvijay have been taken at Rs. 165 on prospects of a rights issue and further expansion. Sugar shares have been subdued because of uncertainties caused by the decision to enforce the Maharashtra Land Ceiling Act at an early date. Shipping shares have been quiet. Chemical shares have met with scattered support. Tata Chemical and Indian Dyestuff have gained. Bombay Burma have recovered to Rs. 635 on replacement buying. National Rayon have been quiet at Rs. 343, but Voltas have improved to Rs. 256. Little business has been done in bank shares and fluctuations have been narrow. In the insurance section, New India Assurance have been buoyant on prospects of a bonus

issue. Electric company shares have shown little change.

Madras

TURNOVER IMPROVES BUT PRICES FALL

CAUTIOUS OPTIMISM AMONG INVESTORS

Tuesday Evening.

ALTHOUGH turnover has increased in the Madras stock market during the past week, prices have generally declined since the

minimum prices for all shares were scrapped last week. Investors and operators have been somewhat encouraged by higher advices from the Calcutta and Bombay stock markets. Hopes of modifications in the super profits tax have helped abate selling pressure. Investors have nevertheless been cautious and have been unwilling to extend their commitments until the Budget is finally passed. The supply of money has been somewhat easier because the busy season has been drawing to a close.

Government securities have been neglected and turnover has been small. Bank shares have been subdued, and Indian Overseas Bank has declined on selling pressure. Pandyan has also reacted on a predominance of sellers. Electric company shares have met with scattered

support and attention has been concentrated on West Coast at Rs. 18.37. Selected preference issues giving higher yields have been fancied. In the sugar section, Kothari have attracted support at Rs. 7.15 and K.C.P. at Rs. 25.07.

Prices of planting shares have fallen on the whole. Parkside have declared an interim taxable ordinary dividend of 7.5 percent and Peermade a taxable final ordinary dividend of 12.5 percent. Despite good crop reports and fair auction prices, tea shares have moved down. Blue Mountain have declined to Rs. 2.45 and Peermade to Rs. 22.50. Among rubber shares, Teekoy have been sold at Rs. 6.10. Coffee shares have weakened appreciably because of a cut in the dividend of Savamalai, which has paid a taxable ordinary dividend of 15 percent.

Except for South India Viscose, which have improved to Rs. 142, cotton mill shares have been weaker. Anglo-French have been offered at Rs. 140 on paying a smaller taxable ordinary dividend of 12 percent. Travancore Rayon have reacted to Rs. 23.50 on cutting the taxable ordinary dividend to 15 percent. Selected miscellaneous shares have been bought at lower levels. Dalmia Cement have been taken at Rs. 12.25 and Ashok Leyland at Rs. 7.10. Metturr Chemical have been done at Rs. 12.87, but Aluminium Industries have declined to Rs. 16.50. F.A.C.T. have met with support up to Rs. 7.05 and Seshasayee Paper have been steady at Rs. 7.25. Standard Motors have been transacted at Rs. 12 and Madras Rubber at Rs. 19.12. Parry's Confectionery have fallen to Rs. 3.19, but Spencer have been steady around Rs. 12.50.

WELLMAN INCANDESCENT HEAT TREATMENT FURNACES

Wellman Incandescent in collaboration with the Incandescent Heat Group of companies now offer Incandescent Oil Fired general heat treatment furnaces, in a wide range of standard sizes or specially tailored to customers' specifications.

Temperatures between 600°C and 1000°C are maintained with a maximum variation of plus or minus 5°C and heat treatment processes within this range are carried out easily and efficiently—including annealing, normalising, carburising and hardening. Adaptability; rapid attainment of working temperature; low operation and maintenance costs are outstanding characteristics of this type of furnace.

Wellman Incandescent are also specialists in Mechanical Handling Equipment, and are now in a position to manufacture progressively in India many products which hitherto have had to be imported.

A battery of standard oil fired furnaces installed at the works of a heavy automobile manufacturer for spring and general heat treatment work in India. Chamber dimensions: 6 ft. long by 4 ft. wide by 2 ft. high.

WELLMAN INCANDESCENT INDIA LTD.

London

SHARES STEADIER AT CLOSE

BUDGET DISAPPOINTS SPECULATORS

London, 10th April.

THE stock market was completely dominated by the Budget during the past week and the speculative buying that was going on before the Chancellor's statement quickly dried up when it failed to contain all that many had hoped. Nevertheless, few people were prepared to part with good class investments and after an immediate post-Budget shake-out of the speculators, the market looked a good deal steadier with sentiment influenced by a number of favourable factors among which the daily advance on Wall Street was by no means the least important.

Prices were mostly lower than a week ago, but there was now a tendency to edge forward again. Gilt-edged, however, made a very satisfactory showing on consideration of the non-inflationary character of the Budget and the measures to bolster sterling should it be necessary. There was little doing in foreign bonds, but dollar stocks were marked up to match the higher trans-Atlantic levels. Canadian issues were greatly influenced by the general election and mostly followed Wall Street. Gold shares fell out of favour and drifted lower, while coppers moved against holders in the absence of support. Tins, however, made a marked response to the rise in the metal price. Oils moved narrowly and indecisively, but rubbers and teas made quiet headway.

SIXTY-EIGHTH REPORT OF THE BOARD OF DIRECTORS

Gentlemen,

The Directors beg to place before the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1962.

The Net Profit for the year, including the sum of Rs. 23,36,733.88 brought forward from the previous year's account, amounts to Rs. 2,03,32,560.71.

The following appropriations have been made:—

An ad-interim dividend was paid for the half-year ended 30th June, 1962 at the rate of Rs. 2.40 per share, subject to tax, on 12,60,000 shares	Rs. nP.
Amount transferred to Reserve Fund	30,24,000 00
Amount transferred to Special Reserve	38,71,500 00
Amount transferred to Staff Gratuity Fund	58,00,000 00
Amount provided for Bonus to Staff	10,43,810 83
	65,00,000 00
To carry forward to next year's account	2,02,39,310 83
	93,249 88
	2,03,32,560.71

The Directors recommend to the Shareholders payment of a final dividend for the half-year ended 31st December, 1962 at the rate of Rs. 2.60 per share, subject to tax, on 12,60,000 shares (making in all 14% net for the whole year) which will absorb Rs. 32,76,000/- and a dividend @ Rs. 2.60 per share, subject to tax, (pro rata Jodhpur Commercial Bank, Ltd., during the half-year ended 31st December, 1962, which will absorb a further amount of Rs. 1,028.52).

The Bank's business during the year under review showed satisfactory progress. During the year 1 Branch, 12 Sub-Branches and 5 Pay Offices were opened at various centres and 1 Sub-Branch and 2 Pay Offices had to be closed down as they were found to be unremunerative.

With the nationalisation of Banks in Burma, the business of our Rangoon Office was taken over by the Government of Burma on 23rd February, 1963. The manner in which the take-over is to be effected is not yet settled. It may be stated, however, that a sizeable portion of the assets of the Branch is held in India.

During the year, increases in the Capital structure of the Company took place, as mentioned below, on account of the implementation of the Scheme, prepared by the Reserve Bank of India and sanctioned by the Central Government, for the amalgamation of the Jodhpur Commercial Bank, Ltd., with our Bank, in terms of which the Shareholders of that Bank had the right to opt for cash payment or exercise the option to receive cash became entitled to the allotment of a corresponding number of shares of our Company. Some Shareholders opted for Shares of our Company instead of receiving cash payment due to them. Accordingly, 1,454 Ordinary Shares of our Company were allotted during the year under review to such Shareholders and our Authorised and Issued and Subscribed Capital was increased as under:—

(a) The Authorised Capital increased from Rs. 6,30,00,000/- to Rs. 6,30,72,700/-, and
(b) The Issued and Subscribed Capital increased from Rs. 3,15,00,000/- to Rs. 3,15,36,350/-.

Further allotment of Shares of our Company will have to be made to the Shareholders of the Jodhpur Commercial Bank, Ltd., who have not exercised the option to receive cash and have accordingly become entitled to equivalent Shares of our Company.

As the Shareholders are aware, your Company had approached the Controller of Capital Issues for permission to increase its Authorised and Subscribed Capital by issuing 6,34,625 New Ordinary Shares in the proportion of one New Ordinary Share

for every two existing Shares (whether Ordinary and/or Ordinary 'A'). The consent was given by the Controller of Capital Issues on terms and conditions contained in his letters No. R. 298-CCI/62-3575 and No. R. 298-CCI/62 dated 25th October, 1962 and 6th November, 1962 respectively. However, due to the declaration of national emergency and the consequent conditions prevailing in the market, and the terms laid down by the Controller being regarded as unfavourable in the circumstances, the Directors, in their discretion, thought fit to postpone the issue of further Capital.

Four of your Directors, Mr. Cooverji H. Bhabha, Mr. Dharamsey M. Khatau, Sir Jamsetjee Jejeebhoy, Bart., and Mr. Nani A. Palkhivala retire under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and are eligible and offer themselves for re-appointment.

In 1962, pursuant to the provision contained in Section 35B of the Banking Companies Act, 1949, the Reserve Bank of India had approved the appointment of Mr. N. K. Karanjia as Managing Director up to the date of the Annual General Meeting to be held in 1963.

When the question of Mr. Karanjia's re-appointment as Managing Director of the Company came up before the Board, Mr. Karanjia expressed his desire to be relieved from the office at the end of six months from the date of the Annual General Meeting to be held in 1963. The Board have accordingly re-appointed Mr. Karanjia for a period of six months only from the aforesaid date, on the same terms and remuneration as were sanctioned at the Annual General Meeting of the Shareholders of the Company held in April 1962. The permission of the Reserve Bank of India has been applied for accordingly, but has not been received so far.

Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

The attention of the Shareholders is again drawn to the Directors' Report of the previous year regarding the dissolution of the Bank's Subsidiary, the Depositors Benefit Insurance Co., Ltd. The necessary Certificate from the Ministry of Finance, Government of India, allowing the dissolution of the Subsidiary Company has not yet been received.

H. P. MODY, Chairman.

Bombay, 20th March, 1963.

Statement Pursuant to Section 212 of the Companies Act, 1956.

(a) The Bank's interest in its Subsidiary, The Central Bank Executor & Trustee Company, Limited, as at 31st December, 1962, comprised 2,000/- shares of the face value of Rs. 1,000/- on each of which Rs. 500/- per share has been paid up.

(b) The undistributed balance of profit of the Subsidiary Company as at 31st December, 1962, after a transfer of Rs. 25,000/- to General Reserve and Rs. 15,095.50 to Investment Fluctuation Reserve, amounted to Rs. 265.54 which has been carried forward in the accounts of the Subsidiary.

(c) The net aggregate amount of Rs. 11,76,322.50 received as dividends from the Subsidiary Company for its previous financial years, since its inception as a Subsidiary Company, have been dealt with in the Profit and Loss Account of the Bank in the relevant years.

H. P. MODY, Chairman.
C. H. BHABHA, Vice-Chairman.

D. M. KHATAU, CHIMANLAL B. PARIKH, JAMSETJEE JEJEEBHAY, J. A. KRISHNA, HARIVALLABHDAS, S. KHAMBATA, N. A. PALKHIVALA, N. M. WAGLE, MUKARRAM JAH.

N. K. KARANJI, Managing Director.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December, 1962, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of the 156 branches audited by us, 48 branches audited by other auditors and the unaudited returns from 155 other branches not visited by us, in respect of which the Central Government has made an order granting exemption from audit pursuant to section 228 of the Companies Act, 1956. We report that:—

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory.
- The transactions of the Bank which have come to our notice, have been within the powers of the Bank;
- In our opinion proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank not visited by us;
- The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- The reports on the accounts of the branches audited by other auditors have been forwarded to us and the same have been considered in preparing our report;
- In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts read along with the notes appearing thereon give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the Profit, for the year ended upon that date.

Modern construction projects require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites, MILLS

tubular scaffolding has a versatile use: storage racks; temporary buildings; open-air auditoriums or bridges—apart from its normal use as a construction aid.

WHICH FOOT RESTS SURER?

The special spring-steel fittings quickly secure the tubes—with only a ½" spanner as the tool. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle-grip' principle.

All fittings are made by Guest, Keen, Williams, Ltd. and the tubes by The Indian Tube Company (1953) Limited.

THERE'S NO LIMIT TO THE SUPPORT YOU CAN GET FROM MILLS

THE CALCUTTA MONEY MARKET

FAIR DECREASE IN ADVANCES

Wednesday, 10th April.

THE general level of advances has shown a fair decrease in the Calcutta money market during the past week. The requirements of the iron, steel and engineering industries are down, and so are those of the sugar industry. But the credit given to the jute and cotton mills, and to the foodgrains and seeds trade, is unchanged. In the interbank market, conditions have been noticeably easier, and the call rate quotes 5½ percent, after having been down to 5¼ percent.

The exchange market is dull. The supply of gunny bills has been poor, and that of tea bills negligible. The demand for remittance, however, has been stronger. Sterling has improved in relation to most of the major currencies, with the exception of the Canadian dollar.

THE CALCUTTA SILVER MARKET was quiet during the past week due to lack of support and the price fell from the previous week's level of Rs. 278.75 to Rs. 278.25, quoted today for ready delivery. The London and New York prices were 109½d and 127.3 cents. There was no trading in gold.

DURING THE WEEK ENDED 5TH APRIL, Government of India Treasury bills for Rs. 131,14,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 9th April. The total amount offered was Rs. 2,05,00,000. Tenders at 99.410 percent were accepted in full. Lower tenders were rejected. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.360 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received in Calcutta up to 11 a.m. on 16th April, and at other centres up to the close of business on 15th April.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 10th April to 13th April at Rs. 99.426 percent. Sales can be stopped at any percent. Sales can be stopped at any percent without notice if the Government thinks it necessary. These bills sold from 2nd April to 6th April amounted to Rs. 5 lakhs.

THERE WERE SHARP RISES OF Rs. 67.02 crores to Rs. 2,317.54 crores in the total crores to Rs. 2,317.54 crores in the total note issue and of Rs. 59.63 crores to Rs. 2,301.59 crores in active notes, according to the return of the Reserve Bank of India during the week ended 5th April, 1963. The currency expansion was covered by raising rupee securities of the paper currency reserve to Rs. 65 crores to Rs. 1,976.42 crores. Deposits of the Government of India rose by Rs. 46.64 crores to Rs. 102.47 crores partly due to good financing and partly because of State tax collection, while those of State Governments fell by Rs. 23.22 crores to Rs. 8.20 crores. Balances of scheduled banks at Rs. 71.46 crores showed a fall of Rs. 3.45 crores. Balances held abroad fell by Rs. 1.35 crores to Rs. 9.95 crores. Investments at Rs. 219.10 crores showed a rise of Rs. 5.08 crores. Loans to scheduled banks declined from Rs. 71.28 crores to

Rs. 48.21 crores of which advances against usance bills were Rs. 40.66 crores (Rs. 53.30 crores). Ways and means advances stood at Rs. 43.26 crores, against Rs. 28.89 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 29th March, 1963, shows a rise of Rs. 5.91 crores to Rs. 559.03 crores in total deposits. Investments in Government securities are down by Rs. 4 crores to Rs. 210.72 crores, while other authorised investments remain unchanged at Rs. 7.83 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 1.26 crores to Rs. 321.40 crores. Cash and balances are, in consequence, shown at Rs. 23.90 crores or Rs. 4.11 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 29th March, 1963, shows Demand and Time liabilities at Rs. 999.83 crores (Rs. 22.39 crores on account of borrowings from banks) and Rs. 1,219.62 crores (Rs. 15.58 crores), compared with Rs. 981.45 crores (Rs. 22.30 crores) and Rs. 1,288.39 crores (Rs. 16.50 crores), respectively, in the previous week. Cash has declined by Rs. 50 lakhs to Rs. 51.18 crores, while balances with the Reserve Bank have risen by Rs. 4.55 crores to Rs. 74.37 crores. There is a drop of Rs. 3.83 crores. Advances and bills discounted, to Rs. 593.28 crores in investments at Rs. 1,602.40 crores show a rise of Rs. 7.88 crores. The ratios to total of advances and discounts are, in consequence, shown at 5.7 percent and 72.2 percent, against 5.5 percent and 72.1 percent.

FRENCH EXPERT REPORTS ON PETRO-CHEMICALS

(FROM OUR NEW DELHI CORRESPONDENT)

THE development of the petro-chemical industry is essential for India's economic progress. This is the opinion of Dr. Henny of the French Institute of Petroleum who has submitted a report to the Oil and Natural Gas Commission. Petro-chemicals and plastics have taken their place alongside such other basic industries as steel, chemicals and oil, so it is no longer possible for an industrial economy not to have a petro-chemical industry. The failure to build the industry will necessitate imports worth Rs. 51 crores in 1966 and Rs. 140 crores in 1971. According to Dr. Henny, a large-scale petro-chemical industry will need a continuing supply exceeding 150,000 tons of naphtha a year. In order to determine the continuous supply of naphtha, Dr. Henny makes the following assumption about India's refining capacity:

	Refining capacity (in million tons a year)					
	1966	1967	1968	1969	1970	1971
Digboi	0.5	0.5	0.5	0.5	0.5	0.5
Gauhati	1.0	1.0	1.0	1.0	1.0	1.0
Barauni	3.0	3.0	3.0	3.0	3.0	3.0
East India	—	—	—	—	3.0	3.0
Burmah-Shell, Bombay	3.5	3.5	3.5	3.5	3.5	8.3
Esso Eastern, Bombay	2.4	2.4	2.4	2.4	2.4	—
Gujarat	2.0	2.0	2.0	4.0	4.0	4.0
Visakhapatnam	1.0	1.0	1.0	1.0	1.0	1.0
South India	—	2.0	2.0	2.0	2.0	2.0
"	—	—	2.0	2.0	2.0	2.0
Total	13.4	15.4	17.4	19.4	22.4	24.8

Refinery gas: In Visakhapatnam, Gauhati, and Barauni, the quantities of by-product gases appear to be too low for the installation of viable petro-chemical production units based on them alone. The off-gases from the Bombay and Gujarat refineries as well as the future refineries have been integrated into the proposed petro-chemical production facilities. This will give the following region-wise supply of naphtha:

	(In thousand tons a year)					
	1966	1967	1968	1969	1970	1971
Digboi	155	116	14	29		
Gauhati						
East India					371	321
Barauni						
Burmah-Shell	417	307	287	264	240	540
Esso Eastern	178	169	160	380	370	359
Gujarat	43	40	36	32	28	23
Visakhapatnam	50	38	255	241	225	209
South India						

In order to permit the installation of a large-scale petro-chemical complex, there should be a continuing supply exceeding 150,000 tons of naphtha a year. It can be seen, therefore, from the above table that from the point of view of the supply of naphtha it should be possible to start operating major petro-chemical complexes at the following places and times:

	Initial phase	1966	Further large phase	1971
Bombay	Initial phase	1966	Further large phase	1969
Gujarat	Not possible			
Visakhapatnam	Initial phase	1968		
South India	Initial phase			
Digboi	Initial phase	1970	Surplus will exist at the cost	
Gauhati				
Barauni				
East India				

Natural Gas

(a) Natural gas from Nahorkatiya: The actual and already planned use of this natural gas covers power

generation, fertiliser and possible carbon black production in Assam, although the possibility of extracting L.P.G.'s (propane and butanes) has been examined; the matter has not been pursued further, since, firstly, the amount of butane available is too small for feeding a butadiene plant having an economic capacity. Secondly, the cost of C4 fractionation is too expensive and the price of naphtha as possible petro-chemical feedstock is too high. Thirdly, the local market for petro-chemical products in Assam is not large, and injecting these gases, once extracted, into the crude which is to be transported to Gauhati and Barauni, and then, extracting the butanes from the crude once again, will increase the cost of operation prohibitively. Fourthly, the cost of transporting the finished products to other parts of India is high, and fifthly, the cost of

any pyramiding of sales taxes. This does not present a problem where the whole complex is operated by one company. Where, however, the complex is split up among several companies, and there are several stages in petro-chemical production, each stage will naturally try to maximise its profit by selling its intermediate product at as high a price as possible. If, in addition, the Government levies taxes on the sales of each intermediate product, the operation results in a prohibitively expensive final petro-chemical product.

In other parts of the world, the increasing tendency is towards a fully integrated complex entirely under the control of one organisation. This prevents a repetition of taxation at each of the intermediate stages, and allows rationalisation of off-sites, intermediate storage, working capital and, in fact, nearly all the important elements.

In carrying on the programme, the report says, the normal procedure will be for any interested companies to work out the exact nature and definition of the complex and the share to be taken by each participant, and then to present the project to the Government with financing arrangements, for its approval. The setting up of petro-chemical complexes is tending everywhere to result in the whole project being handled by a single company; or else in the erection of a complex by a consortium of companies who create a jointly owned subsidiary which becomes responsible for the whole project, namely, the project is realised under the "umbrella" of a single entity. Whatever happens, it is difficult to visualise a viable complex coming into existence on a piecemeal basis. The use of by-products, the allocation of costs and the value of intermediate streams is sufficiently arbitrary so that their equitable determination must be done on an overall basis. Failure to set prices of intermediate streams in an equitable manner can result in certain aspects of a complex being apparently very profitable, and being eagerly sought after by various interests; while other parts do not find "takers", or only find them under conditions which result in a very high selling price to the consumer. Now a complex must be realised in its entirety if (a) plants are to be rationally designed, (b) raw materials are to be available as needed, (c) adequate partners are to be selected, and (d) coherent financing is to be obtained.

Integrated development means that one organisation must be entrusted with the overall responsibility. This must be established at the beginning since decisions taken early in the planning can vitally affect later stages of the complex. Assuming that a plan exists and that general guide lines of the areas of intervention have been laid down, there are still the problems of how to assure that all of a complex is developed instead of certain pieces only, and to find out the companies who will participate and to ensure co-ordination of their activities.

Where the entire project is turned over to private industry, this presents no extraordinary problem provided one or more of the companies concerned has the technical background

complex of plants capable of absorbing all the by-products. Another reason for integrated complexes is the necessity of avoiding

any pyramiding of sales taxes. This does not present a problem where the whole complex is operated by one company. Where, however, the complex is split up among several companies, and there are several stages in petro-chemical production, each stage will naturally try to maximise its profit by selling its intermediate product at as high a price as possible. If, in addition, the Government levies taxes on the sales of each intermediate product, the operation results in a prohibitively expensive final petro-chemical product.

any pyramiding of sales taxes. This does not present a problem where the whole complex is operated by one company. Where, however, the complex is split up among several companies, and there are several stages in petro-chemical production, each stage will naturally try to maximise its profit by selling its intermediate product at as high a price as possible. If, in addition, the Government levies taxes on the sales of each intermediate product, the operation results in a prohibitively expensive final petro-chemical product.

and the sense of responsibility to plan the whole. Where the entire project is to fall within the public sector, there is again the possibility of rational planning. However, it seems probable that mixed solutions will be adopted, and that several companies will be involved in a complex. To overcome this difficulty, the whole complex should be realised under an "umbrella".

The "umbrella rôle" has been used in various forms elsewhere. It can operate along the following lines:

A complex should be planned and tentative economics worked out based on the Kane and I.F.P. recommendations suitably brought up-to-date, if necessary.

Planning permission for this up-to-date complex should be obtained in principle, subject to whatever financing restrictions are felt to be necessary.

Appropriate Indian and foreign companies should be invited to submit detailed offers for the realisation for such defined segments of the complex as had not been exclusively reserved for the public sector. Public sector companies should be instructed to proceed with the realisation of those segments reserved for their exclusive use.

To the extent that satisfactory offers are received for the individual segments of the complex open for offers, it will be possible to compare these offers and choose the most advantageous for any given segment, and turn the project over to the company or group in question, for realisation. It will be easy to choose the best offer, as by these means all offers will be on a broadly similar basis. Where satisfactory offers are not received, the authorities may instruct a public-sector company to proceed with the realisation of the missing segments. This might be done either alone, or with partners.

The procedure might be initiated by placing a revolving fund—perhaps sufficient to realise one complete complex if proceeding alone—at the disposal of the authorities. Portions of the fund should be quickly freed from the first complex, as other sectors take over certain segments of the complex, as suggested above. This capital, together say, with any earnings by public-sector companies in the original complex could then be utilised to assure the same "umbrella coverage" for subsequent complex.

In this manner, it is possible to ensure that (a) a complex corresponding to India's needs will be built, (b) Competition will result in offers most advantageous to India being accepted, (c) The whole complex will be assured of simultaneous development to an assured timetable, (d) No one segment will achieve an unreasonable profitability at the expense of other segments.

It would be possible to assure the benefits of full integration either by having the off-site facilities operated by an outside authority or by the formation of a consortium of the participants.

Static Policy

Heretofore, there has been a tendency to wait for foreign companies to come along and make offers. This is a static policy, the report says. What is needed is a dynamic one! First of all, firms who are to participate in the petro-chemical programme should be selected because of their suitability.

If a "short list" were to be drawn up of potential candidates for a segment of a project, the firms in question could be approached for a specific proposal. There is a big difference between asking a foreign firm "if they are interested in doing petro-chemicals manufacture in India: and if so will they please make

an offer"; and an approach whereby offers are solicited from among the four or six prominent international polyethylene producers for building a plant.

In order to perform all the functions called for by the "umbrella concept" and for finding out petrochemical participants, it seems clear that it will be necessary to create a specialised agency to co-ordinate and expedite the development of petrochemical complexes.

The "existing licence applications" can be examined in the light of the proposed petrochemical development plan. There are a large number outstanding ones, some schemes are carefully thought out, well planned, economical and will undoubtedly be built. Others are so vague as not even to know wherefrom the raw material will be obtained. Some among the second group will, no doubt, quickly modify themselves so as to fall in with part of this plan; the rest will probably remain dormant.

There is no point in this study discussing individual projects of the second type. The first category merits some further consideration. Some of the main projects are the following: the Shell solvents project, Bombay, the Esso steam cracker project, Bombay, Carbide steam cracker project, Bombay, the Hoechst-Mafatlal project, Bombay, petrochemicals in Assam, and miscellaneous small projects.

Shell solvents project, Bombay: Economic data relating to the Shell

solvents project in Bombay has not been made available to the I.F.P. Considering the size of the units in question, and the source of the raw material, there is no reason to suppose that the project should not be economical and fall well into the "viable petrochemical production unit category". The products from the project fall within the requirements of the plan.

Esso-Carbide steam cracker project and Hoechst-Mafatlal ethylene utilisation: The project in Bombay revolves around the two steam cracker projects. Under the definition of the report, these will be considered as "Class A" projects. It is felt that since none of the training, planning and the petrochemical commercial infra-structure exists in the Indian sectors as yet, the project should be considered separately.

There is an excellent justification for a plant in the Bombay area to produce 50,000 tons of ethylene a year, which by a coincidence represents approximately the minimum really economic size, and about the smallest size to meet the 130-percent criterion. The smaller unit does not meet the definition of a "viable petrochemical production unit".

Amalgamation Urged

Unfortunately, the smaller of the two projects is the most advanced. It has already received its licence, and may well be built unless some swift arrangements can be made to amalgamate it with the larger (50,000 tons of ethylene a year) project on mutually satisfactory terms. If it

should not be possible, there will, in fact, be more ethylene potentially available in the Bombay area than might be considered desirable in view of the interest in bringing a Gujarat steam cracker on stream as quickly as possible.

The smaller steam cracker was authorised during an earlier stage of petrochemical development in India, when the thinking was rather different. One may regret that such a unit should nevertheless be built today; but this should not obscure the fact that the larger of the two projects is already the minimum economic size and its capacity should not be cut to enable the combined output of the two units to equal 50,000 tons of ethylene a year.

It is better to have over-capacity with a proper size new unit, rather than have two small units, both uneconomic.

Any aromatics production requirement imposed on either of the two projects should be withdrawn in view of their uneconomic size and because of the new Gujarat aromatics project. Dependent on the successful outcome of the larger of the two steam cracker licence applications for its raw material, is a large project built around ethylene and caustic-chlorine. This is the Hoechst-Mafatlal project. The economics of the project are very complex and the units closely inter-related. Messrs Hoechst had a long and frank discussion with the I.F.P. representatives and, as far as can be told, the proposed selling prices of major intermediates meet the defini-

CAPITAL, 11th April, 1963.

tion of "viable petrochemical production unit"; though by a rather small margin; with the exception of polyethylene and ethylene oxide.

It is difficult to be precise because much of the economics depend on the price Messrs Hoechst will have to pay for the ethylene. With these reservations the project appears to be an attractive one.

Petrochemicals in Assam: Outside fertiliser and the possibility of producing carbon black, there is "little possibility of any successful petrochemical realisation" in Assam. "This is because of the enormous size that is necessary for petrochemical production from gas to be economic." Added to uncertainties as to the price and availability of natural gas, is the crushing transport burden of finished products to consuming centres.

As for the many small projects which have outstanding licence applications or with any new applications, it is important that other projects do not interfere with the overall plan. This could happen if there is a limited capacity for the market to absorb and if this capacity has already been taken up by the plan. It is most important not to fragment the capacities provided for in the plan.

It is always possible that new schemes will come forward which do not interfere; and here there is no particular objection provided they meet the requirement of a selling price of less than 130-percent of "parity" excluding taxes; and come as close to parity as possible. If they do not meet this requirement, it is nevertheless possible to visualise the unusual case where a project is able to guarantee that it can cover its foreign exchange annual payments by export. If this were to occur, the project might still receive sympathetic consideration.

Profitability Concepts

Private industry tends to seek a theoretical "five-year pay-out" (20 percent return on investment) after taxes. This return is normally calculated on the total investment (equity plus loan) since when a private company pledges its credit to borrow money from banks or elsewhere, it also regards this borrowed money as "risked", and expects it to earn a profit. Of course, the "five-year pay-out" does not mean that the plant is really paid off in five years, "because this will require the usual start-up difficulties; petrochemical plants rarely achieve capacity operation in less than three years, and can only compensate partially for this by charging rather higher prices in the early stages. A normal true pay-out might be taken to be 7.1 years."

"It is interesting to note that the recently published figures of the Reserve Bank of India showed average profits of 18 percent of net worth for the Indian chemical industries.

"Public industry is expected to use other criteria; perhaps because of questions of social or economic policy or for the public welfare; perhaps because it is sometimes the recipient of loans from friendly nations on what can only be described as 'non-commercial terms'."

Whatever the reason, it seems feasible to seek a 20-percent return on the equity capital only, and not on the loan component. The equity normally represents some 40 percent of the total investment, and since the public sector also normally hopes to get a 20-percent return on this equity to help create fresh capital for later investment, this corresponds to a "7.1 year pay-out" on the total investment.

The difference between a "5 year"

CAPITAL, 11th April, 1963.

not seem large, but it has a sizable influence on the final selling cost, and may be a determining factor in whether a plant meets the 130 percent of "parity" criterion of the "viable petrochemical process unit".

It is India's sole prerogative to decide how she chooses to apportion the various plants among the different sectors, however, since the profitability question may have a large influence. All selling prices quoted in this report have been derived both for a 20-percent return on total investment and a 20-percent return on equity only.

Discussion of Programme

(a) P.V.C. manufacture: The problem here is the chlorine balance. Vinyl chloride made from ethylene uses chlorine, but produces large quantities of by-product H.C.I. To produce vinyl chloride from acetylene requires H.C.I. By combining these two units, H.C.I. by-product from the ethylene based unit can be used in the acetylene based unit and thus avoid having to dispose of H.C.I. in the first unit, and to fabricate H.C.I. from chlorine which is considered actually as a costly operation, in the second unit.

Taking into account the supply of salt in the south, the demand for synthetic fibre vinylon based on P.V.A. and the existing facilities for handling P.V.C. in this area, it is proposed to provide a large production of ethylene and acetylene in the south.

(b) Synthetic rubber: Synthetic rubber plants to be viable in India need to have a capacity of at least 20,000 tons a year; preferably as big as possible, with 40,000 tons a year as a comfortable size. In the absence of a huge market for ethylene and with a relative large demand for propylene, it is not possible to meet the synthetic rubber requirements based on steam crackers alone, or based on C₄ chemistry.

A steam cracker making 50,000 tons of ethylene a year produces about 6,000 tons of butadiene by-products a year. Extraction of this amount is economical, but not its conversion to polybutadiene. If steam cracker normal butylenes are dehydrogenated, another 11,000 tons or so of butadiene could be produced, but the dehydrogenation unit will not be economic. It is, therefore, necessary to produce butadiene in an area where further C₄ cuts are available, and preferably where these contain C₄ olefins already.

Simultaneously with the butadiene, some 7,600 tons of isobutylene a year are produced by a steam cracker, and this is automatically made available as a by-product when butadiene is extracted. It is not enough, however, to support a viable plant for making either butyl rubber, or polyisoprene, and here too further C₄ cuts are needed.

The Bombay area is the only one in which the requirements for a rubber plant can be fulfilled immediately.

By-product isobutylene will probably grow over the years as the steam cracker reaches full capacity and as refinery operations become more important, so that eventually a butyl rubber plant of 20,000 tons a year could be installed if it were found desirable at that time to do so.

Because of the lack of immediate demand, it is not feasible to install a large steam cracker in the Gujarat area before 1968. The refinery alone does not make enough feed available for synthetic rubber manufacture on an economic basis. It becomes necessary to install a hydrocracker to make supplementary quantities of isobutane available to feed a dehydrogenation unit for making polyisoprene. By-product normal butanes become available in sufficient quan-

ties so that when the steam cracker is installed later, a second polybutadiene unit can be installed.

The shape of further complexes which must produce additional synthetic rubber tend to be conditioned by the relationship between the demand for ethylene and the future ratio of polyisoprene to polybutadiene. Polyisoprene leads to a hydrocracking type complex; polybutadiene to a steam cracking type. If diene are needed, it is advantageous both to have a steam cracker and a hydrocracker. With the demand for ethylene largely fixed, the question of synthetic rubber then becomes one of paramount importance.

Naphtha has been seen to be the principal raw material on which India's petrochemical industry will be built. The price at which it will become available is, therefore, of paramount importance. A price must be assumed for this basic raw material before proceeding to any economic calculations.

The distribution of costs among products of a refinery is rather arbitrary (and not always logical); this

complicates the problem of fixing a fair price for naphtha.

If straight-run naphtha can be used either directly, or after catalytic reforming, as gasoline, its value will vary from about Rs. 120 to Rs. 140 a ton. The use of naphtha as a petrochemical feedstock did not start until excess naphtha became available on the market. The presence of the excess naphtha drove the price down to a point where it bore no relationship to its value as potential gasoline, so that today it is not possible to consider petrochemicals production from a material that could have been sold as gasoline. It can be asserted that naphtha could be imported into India at a c.i.f. price of Rs. 70 to Rs. 80 a ton; whereas experience has shown that petrochemistry is economically unattractive if naphtha feed is priced at more than Rs. 90 to Rs. 100 a ton. These are the limits of the range within which a price could be justified as well in India as anywhere else in the world, the report says.

Considering that the position of the Indian Government concerning taxes on petrochemical raw materials is not yet known (though it has

been decided to levy an excises duty of 5 percent *ad valorem* on naphtha for fertilisers), a price of Rs. 80 a ton has been taken as the basis for calculation.

Competitive petrochemical production is dependent on raw materials carry no significant tax burden. The same problem has already been faced and solved in India for ethanol and in virtually all other industrial countries, for naphtha. It is equally true of such other feedstocks as natural or refinery gas.

Quite apart from this, it is evident that raw material costs should be held as low as possible.

REQUIRED NEW PRODUCTION FROM PETROLEUM SOURCES FOR 1965-66 AND 1970-71

	Required third plan production	Required additional fourth plan production (in tons)
Ethylene	50,000	122,000
Propylene	42,000	72,000
Butadiene	31,000	83,000
Isoprene	41,000	—
Acetylene	—	16,000
Methanol	59,000	21,000
Benzene	32,700	47,900
O-xylene	—	11,000
P-xylene	—	8,000

BURNPUR — A PORTRAIT IN STEEL

A busy steeltown. Alive to the problems of the day, prepared for the challenge of tomorrow. Thousands live and work here day and night. All of them think in terms of steel — and more steel, for India.

Yet less than ten years ago, the rated annual capacity at Burnpur was about half a million tons of crude steel and a similar quantity of pig iron. A two-step expansion programme has since raised annual production at the integrated steelworks to 1 million tons of crude steel and 1.3 million tons of pig iron. The smallest additional capital cost can expand production further, by another million tons of steel if need be.

Meanwhile, IISCO steel — in all the shapes that steel can take — serves India's developing economy.

CALTEX 54.48.6

STEEL EXPANSION PLANS

THE Government of India has decided to expand the capacity of the Durgapur steel plant by 1.4 million tons to about 3 million tons by 1972. Its expanded capacity by 1966 is expected to be 1.6 million tons. Orders for the current expansion programme are now being placed. The decision is part of the fourth five year plan projection which proposes to raise the steel output to 18 million tons by 1972. An interesting part of the fourth plan programme is that, in spite of the Industrial Policy Resolution reserving further steel production for the public sector, two steel plants in the private sector will be permitted to expand still further: T.I.S.C.O. from 2 million tons to 2.75 million tons and I.I.S.C.O. from 1 million tons to 1.9 million or even 2 million tons. Marginal expansion is also planned for the other two public-sector plants—Bhilai by 750,000 tons to 3.25 million tons and Rourkela by 700,000 tons to 2.50 million tons.

The capacity for the Bokaro steel works is still being discussed. Under the second plan, the lay-out for the Bokaro plant was planned for a capacity of 2 million tons, but in the first phase of development it was provided to install facilities for the production of 1 million tons. Although the final decision on this now rests with the U.S. steel mission, which is said to have submitted its report, current thinking here is to plan the lay-out for 3.5 million tons with the initial output of 1.50 million tons by 1972. All this expansion as well as new plants will create an additional capacity of 7.50 million tons by 1972. This, together with the current expansion, which is expected to create a total capacity of 9 million tons by 1966, should give India 15 million tons by 1972.

Three other projects are being discussed or investigated to add another 3 million tons. Neyveli in south India is expected to produce between 300,000 tons and 500,000 tons. A technical survey has been undertaken to set up plants in the Goa-Hospet region on the west coast, Bilegeli in Madhya Pradesh and Visakhapatnam on the east coast. The third possibility is to raise the capacity of the Bokaro plant to 2.5 million tons initially.

As far as the current expansion programmes are concerned, the one for the Bhilai steel plant is expected to be completed according to schedule. Orders for equipment for the Rourkela plant have already been placed. The British credit for Durgapur has been announced. According to present indications, the expansion programme of both these plants will be completed by 1966.

Tenders for the expansion of the Durgapur steel plant by 800,000 tons have been under examination here. Contrary to earlier anticipations, the Government is likely to accept the tenders of Kopper for the coke oven and Loewy for the skelp mill. Earlier indications were in favour of Simon-Carves and Davy United, respectively. Indications are not wanting of the possibility of the Government making use of I.S.C.O.N. as the co-ordinating agency for the Durgapur expansion scheme, provided the majority of successful tenderers are either already members of I.S.C.O.N. or can be persuaded to become its members.

As for the Durgapur alloy steel project, the Government has accepted the tenders of the Japanese consortium for the bulk of the items, they being the lowest. The British have been completely ousted while the Canadians have been able to secure contracts for some components. It

is a 48,000-ton project with a built-in capacity in certain primary units so that it can be rapidly expanded to 100,000 tons. The implementation of the project has been entrusted to Hindustan Steel with Messrs M. N. Dastur and Company as consultants. Atlas Steel of Canada has been selected as the production adviser. The project is expected to incorporate some of the latest equipment of processes for manufacturing alloy steel. It is proposed to install electric soaking pits in preference to gas-fired ones. In connection with its further expansion, the desirability of using sponge iron instead of scrap as "starting" raw material and of introducing continuous casting facilities are expected to be kept in view, although in the current phase of development, production has been planned on the basis of drawings of pedigree scrap from the adjoining Durgapur steel plant. The project will also produce nickel-free stainless steel for the domestic utensil market.

The Central Minister for Steel and Heavy Industries, Mr. C. Subramaniam, will sign an Indo-German financing agreement for the expansion of the Rourkela steel works in Bonn after Easter, possibly on 16th April. The agreement will peg the West German foreign exchange contribution to the expansion scheme at Rs. 54 crores, which the German Government will grant in the form of long-term credits. The total cost of the Rourkela expansion scheme is estimated at Rs. 120 crores.

The new credit agreement will also cover deliveries for a new heat-treatment plant, for the manufacture in Rourkela of armour plate, designed to bolster India's defence effort. Another point provides for an increase of German technical personnel in Rourkela to 265 (150 for maintenance), with individual contract periods ranging from 12 to 18 months. These contracts may be extended if Hindustan Steel so desires. A credit of 15 million Deutschmarks (Rs. 1.80 crores) has been set aside to finance this team, with the exception of the German general technical superintendent whose salary will be borne by the German Government. This part of the credit will be granted over a period of 20 years at 5½ per cent interest and with a grace period of five years.

Another point of the agreement stipulates the setting up of an liaison office of Hindustan Steel in Düsseldorf, West Germany, to co-ordinate the shipment of deliveries, etcetera. Similarly, a team of ten German engineers will be delegated to Hindustan Steel's Central Design Bureau in Rourkela, in an effort to prevent the lack of inter-departmental co-ordination as experienced in the early years of the construction of the Rourkela plant.

HINDUSTAN STEEL

Setting up Small Furnaces

Hindustan Steel has been asked to prepare—in consultation with the National Metallurgical Laboratory—reports on the setting up of small furnaces using hot coke in Durgapur, Bhilai and Rourkela. They have also been asked to prepare a project report for the installation of the sixth blast furnace in Bhilai.

STEEL

Raising Retention Price

The question of allowing an increase in the retention price of steel due to the rise in railway freight and royalty on minerals, the interim wage board award, and incidence of

the war risk insurance premia is being considered, it is disclosed here.

CARBONISATION PLANTS

Poor Progress

The proposal to set up three low temperature carbonisation plants in the public sector, of which one is to be in Kothagudem (Singareni), has not made any progress for want of adequate resources, both internal and foreign. In the private sector, however, an application by Mr. Hashim Mehdi to set up a low temperature plant in Kothagudem has recently been considered and a letter of intent has been issued, pending the grant of an industrial licence. The project will have an output capacity of 360,000 tons of coke a year, at a capital cost of Rs. 3.5 crores.

DEFENCE

Team to Visit U.S.A.

A high level official team headed by the Secretary to the Central Ministry of Economic and Defence Co-ordination, Mr. S. Bhoothalingam, will leave for Washington on 12th April to discuss India's defence requirements in the light of appraisals made by the British and the U.S. teams with special reference to aid to this country. The team consists of one non-official member, Mr. S. Mulgaokar of Tatas, Mr. M. G. Kaul from the Ministry of External Affairs, Admiral Shanker, Major General Iyappa and Motisagar, Air Commodore K. A. Joseph and Mr. S. Guha from the Central Cabinet secretariat.

The Institute of Economic Growth and the Rockefeller Foundation are sponsoring a study to appraise the impact of the European Common Market on India's economy and, in particular, on its export trade. The study will be made by Mr. G. L. Mehta, India's former ambassador to the U.S.A., Mr. H. M. Patel, former Principal Secretary to the Central Ministry of Finance and Mrs. Dharma Kumar of the Institute of Economic Growth. The team will be shortly leaving for Europe.

The British Government is planning to stimulate exports through the Export Credits Guarantee Department by increasing even the repayment period to ten years. A sum of £25 million is expected to be earmarked for this purpose.

N.C.D.C.

Developing Open Cast Mine

The National Coal Development Corporation signed an agreement with a Russian organisation last week, for the development of an open cast mine in Manikpur, Madhya Pradesh. The agreement provides for the supply of equipment and materials worth Rs. 75 lakhs as well as Russian specialists for the project.

The open cast mine, which is near the Corporation's pilot quarry in Korba, Bilaspur district, has a production target of 1 million tons a year. It will supply coal to a number of industrial undertakings, including the 200-megawatt Korba thermal power-station, which is also being built with Russian assistance.

TOBACCO

P. L. 480 Supplies

The Government of India and at the United States concluded an agreement here providing for the sale of tobacco to India valued at Rs. 1.2 crores under U.S. Public Law 480. India will pay for the supplies

in rupees. The United States will make available to the Government of India 85 percent of the sale proceeds to be used in economic development projects. The United States will supply 2.6 million lbs (1.18 million kilograms) of high quality leaf tobacco which will be used in the manufacture of top quality Indian cigarettes. The agreement is a supplement to the one signed on 26th November 1962, which provided for the supply of long-staple cotton. The commitments under the eight U.S. P.L. 480 agreements which have been concluded between the two countries total \$2,430.9 million (Rs. 1,157.5 crores).

The eight agreements provide for the supply of the following commodities: 27 million metric tons of wheat, 732,000 tons of corn and sorghum, 1.4 million tons of rice, 1.6 million U.S. bales (400 lbs each) of cotton, 6,400 tons of tobacco, 20,900 tons of non-fat dry milk, 3,000 tons of soyabean oil, 13,000 tons of evaporated milk, and smaller quantities of cheese, canned fruit and whole milk powder.

A.I.D.

Rupee Loans Announced

The U.S. Agency for International Development has recently announced the following rupee loans totalling over Rs. 60 lakhs out of the P.L. 480 (Cooley Amendment) funds to the following three companies. McNally-Bird Engineering Co. Ltd, Calcutta Rs. 50 lakhs, Victor-Gasket India (P) Ltd, Bombay Rs. 7.50 lakhs, and Hari-Malik Manufacturing Co. (P) Ltd, New Delhi Rs. 2.85 lakhs, totalling Rs. 60.35 lakhs.

REFINANCE CORPORATION

New Export Credit Scheme

The Refinance Corporation for Industry Ltd has introduced a scheme for the refinancing of medium-term export credits. The refinancing facility will ordinarily be available only in the case of exports of capital or engineering goods. Loans by way of refinance will be granted by the Corporation to banks, which are also authorised dealers in foreign exchange, for periods ranging from six months to five years, up to the extent of the credit allowed by them to the exporters of specified goods, provided that (a) the permission for the deferred collection of foreign exchange proceeds has been obtained, (b) the amount involved is not less than Rs. 1 lakh in any individual case and not more than Rs. 50 lakhs in the case of any one exporter and (c) certain conditions as to the minimum down payment in cash and the insurance of the credit risk with the Export Risks Insurance Corporation are also satisfied.

COAL

Guarantee on Loans

A scheme for partial guarantee on loans to the private-sector coal industry by credit institutions has recently been sanctioned by the Government. The salient features of the scheme are as follows:

1. The Refinance Corporation has been entrusted with the administration of the scheme as an agent of the Government of India.

2. The scheme is applicable to advances which banks may give to colliery undertakings which are importing machinery against the foreign exchange loan granted by the World Bank.

4. In the event of default in the repayment of any loan, the loss will be shared between the guarantee organisation, namely, the Refinance Corporation and the bank concerned in the ratio of 65:35.

London

BUDGETING FOR EXPANSION WITHOUT INFLATION

(FROM OUR LONDON CORRESPONDENT)

MR. Maudling described the intention of his first Budget as being to guide the economy to a target of rigorous expansion without a return to inflation. Increased personal and child allowances, the abolition of Schedule A tax, and massive relief or industry to stimulate development in unemployment areas were the highlights of the proposals the Chancellor put forward, but although he has cut £269 million off the tax burden, this cannot by any stretch of the imagination be regarded as an election Budget. Indeed, there are several pointers that the Conservatives have decided not to have an election until next year. In the meantime, there will be an opportunity to see how the present concessions work out, and whether an election-winner Budget cannot be offered next year, based on much surer foundations.

Whatever disappointments may have been suffered as a result of the Chancellor not being prepared to take risks and plumping for a faster rate of expansion than the 4 per cent annual increase recommended by the National Economic Development Council, it is an undoubted fact that the Budget contains a number of useful and constructive measures. Most promising in the long run is the determination of the Government to use the tax system to steer new industry into the development areas in a more positive way. The inducements now offered to firms who are prepared to put up factories in places where unemployment is high are substantial. The more successful they are in channelling industrial growth into these areas, the less risk will there be in future of over-loading the Midlands and the South and it will be possible to expand demand without running into inflation.

Fighting Unemployment

The Chancellor proposes to exempt from tax some 3.75 million people. His changes will bring benefit to all, but most to those at the bottom of the scale. They will take effect on the first pay day after 5th July. They are:

The first rate of income tax (1s 9d in the £ on the first £60 of income) will be abolished;

The higher reduced rates (4s 3d on £150 and 6s 3d on the next £150) will be replaced by 4s on the first £100 of taxable income and 6s on the next £200.

In addition, personal and other allowances will be increased as follows: single person up from £140 to £200; married couple up from £240 to £320; children up by £15 on each child.

Exemption limit for people aged 65 and over raised for single persons from £300 to £325 and for married couples from £480 to £520. Old age relief is raised to £900 from £800, and the small income relief from £400 to £450.

It is proposed to increase the income limit for the dependent relative allowance. The full allowance of £75 will be given where the relative's income does not exceed £180, the allowance thereafter being reduced by £1 for each £1 by which

the relative's income exceeds that figure.

No more Schedule A tax will be paid after this year. Schedule B on amenity land, and land tax, will also be abolished. The cost of these changes will be £35 million in 1963-64 and about £48 million in a full year. Stamp duty on stock transfers and house conveyance—"an obstacle to growth"—will be reduced from 2 to 1 per cent. Exemptions from stamp duty on house purchases will be raised from £3,500 to £4,000. In all, the changes will cost £27 million in the current year and £40 million in a full year.

The Chancellor announced major steps to deal with unemployment. These included: existing and incoming firms in areas of high unemployment will be able to write off their new plant and machinery at any rate they choose. This will apply to productive industries in the existing development districts, and all of Northern Ireland. The cost this year will be negligible; next year about £25 million; and might rise to £45 million in 1966-67.

Grants of 25 per cent of building costs and 10 per cent of plant and machinery costs will be made to firms starting up or expanding in development districts. Grants to local authorities for the clearance and rehabilitation of derelict sites in development areas will be increased to a ceiling of 95 per cent. There will be special measures to help Scotland

and North-East England. Loans will finance a paper mill at Fort William and development at Lackenby Dock on Tees-side. The Government has allocated £10 million for industrial training boards and is to double facilities in its training centres. The cost of minor tax changes to be introduced, including the abolition of television licence excise duty, will be £10 million in 1963-64 and £26 million in a full year. The changes include:

Business cars—The existing £2,000 tax allowance for business cars will go. It has been more severe in its effects on top-quality cars, such as the Rolls-Royce, than was expected. The new system will provide for an allowance of £1,100 for the first year, and of £500 in succeeding years.

Estate duty—Exemption from estate duty will be raised from £4,000 to £5,000 with appropriate adjustments in the rates for estates just over that amount. Estate duty exemption on outstanding buildings will be extended to include land of outstanding natural interest given or bequeathed to bodies such as nature conservancy trusts.

T.V. licences—To finance the second B.B.C. television channel, the Exchequer will from 1st October give up to the B.B.C. the £1 it now takes from every £4 licence. There will be no extra cost to the viewer.

Tobacco licences—The system of excise licences for the sale of tobacco is to be abolished.

Home-brewed beer—An excise licence will no longer be needed by those who brew beer for their own consumption.

The Chancellor made these proposals for changes in the future:

Turnover tax—Mr. Gordon Richardson, who was a member of the Jenkins Committee on Company Law, will conduct an enquiry into the possibility of a turnover tax. It would either be in addition to existing taxation or would replace purchase tax, or profits tax, or both.

Gambling—Before deciding whether a tax on gambling is desirable or practicable, "I propose that the Customs and Excise should compile a register of all gaming institutions including those very profitable means known as one-armed bandits."

More Purchasing Power

A massive injection of purchasing power is Mr. Maudling's plan for tackling the lethargy which now affects the British economy. By a combination of much higher Government spending and large tax reductions, he expects to increase the overall Budget deficit from a mere £66 million in the last fiscal year to no less than £687 million. The proportion of total expenditure to be met from tax revenue will drop steeply from more than 99 per cent to less than 92 per cent. It is a deliberate experiment in expansion—but not the first one seen in recent years. In 1959, then Chancellor, Mr. Amory, budgeted for an overall deficit of £721 million to counter a trade recession; and although the fiscal year ended with an actual gap less than half that size, the U.K. ran into a balance of payments deficit in 1960 and a sterling crisis in 1961.

This sequence of events must have been vividly in Mr. Maudling's mind while he decided on his Budget. It explains his fervent appeal for co-operation of employers and unions

in retaining incomes. Several times in his speech he repeated that a successful incomes policy was the key to success in "expansion without inflation." There is little obvious vote-catching in this Budget. That has been quickly noted in financial quarters abroad where it was taken to indicate that the Government believes it may have time for another Budget before the general election. However, that may be. Mr. Maudling has directed very large part of his fertilising stream of spending power towards industry and local authority projects, rather than towards individuals. Again, a large proportion of the tax cuts for individuals (as distinct from companies) goes to the lower income brackets. There are not many votes in all this.

Just how quickly the stimulus will start to work may depend largely on the way the Treasury chooses to

finance its Budget deficit. If that is done in the first place by increasing the supply of Treasury bills to the banks, the whole financial system will gain liquid funds than can be lent to persons and firms, but much depends also on the mood of the country. If industry now decided to place more orders for new plant and equipment, or if people decided to take up more new hire-purchase commitments and bank overdrafts, the economic situation could be transformed by midsummer.

The Chancellor has not been held back by the delicate state of sterling from launching his bid for expansion, but it is a sobering thought that he had to borrow \$250 million from a group of friendly central banks (including the Bank of France) to buttress sterling even before the first signs of expansion has appeared. He might have stressed the formidable resources available to defend the sterling currency. A calculated risk has been taken. If the economy responds without rushing into a spending spree or a new wage inflation, the British people should all be much better off in a year's time. Exports are, of course, the real test. If they resume their interrupted growth, the world will gladly give us the benefit of the doubt and hold on to sterling balances.

The City is pleased with the Budget, although somewhat nervous about the risk of inflation. The Stock Exchange has correctly anticipated the Chancellor's actions ever since last autumn. Share prices have risen steeply and steadily since October in the expectation of just such a Budget. Besides having their best hopes fulfilled, investors are also given a reduction in the stamp duty on transfers of stocks and shares from 2 to 1 percent. That should particularly stimulate foreign investment in British securities, and the lifting of the ban on "bearer" securities will help in the same way, but as the Budget had been fully anticipated, the Stock Exchange is now expected to take a breathing spell.

The general effect of the Budget, however, is found uninspiring. Some of the special measures that Mr. Maundling now proposes should add eventually to the underlying strength of the economy, but they will do little immediately to put new life into industry or to spur the country to new efforts. At one point, after referring to the vicious circle in which British economic policy has been caught ever since the war, Mr. Maundling said: "We must break out." He has not done so.

A £3.5 million British loan to India was announced by the Chancellor of the Exchequer, Mr. Reginald Maudling, when he presented his first Budget to the House of Commons. The loan is to enable India to buy steel. Of this amount, at least £2 million will be spent on steel plates, and the remainder on wire rods and billets. The loan is for a period of 25 years, but repayment will not start until after a grace period of seven years. The loan cannot yet be related to orders for particular firms, but the bulk of Britain's steel-plate capacity is in north-east England or in Scotland. There is one major producer in Scunthorpe, Lincolnshire, and a smaller one in the Midlands. Most firms producing wire rods and billets are working below capacity. The loan is in addition to British aid totalling £95 million committed during the first two years (1961-62 and 1962-63) of India's third five year plan.

JUTE MINIMUM PRICE DECISION DEPLORED

improving farm methods and creating good retting facilities.

The Indian Government's decision on the minimum price for raw jute should be particularly welcome to Mr. G. M. Adamjee, president of the Pakistan Jute Mills Association, who has issued a longish statement in Dacca on Monday implying that Pakistan does not enjoy a major competitive advantage over India in the jute goods export trade. The statement does not refer to India's minimum price decision specifically.

The decision represents a total surrender to the farm lobby which has been active in New Delhi over the past few months. Earlier reports indicated that while the minimum price of Assam Bottoms would be retained at Rs. 30 a maund, the differentials for the lower grades would be widened—in other words, the minimum prices for these grades would be reduced. But now it is seen that even this small and sensible step is not to be taken.

Many in the trade wonder if the Government will succeed in maintaining the minimum prices it has bravely announced if the 1963-64 crops now being sown prove to be bumper ones. For the greater part of the current season, the market values of the lower grades have been below the official minima. This is in spite of the fact that massive purchases have been made by the mills and the Jute Buffer Stock Association, apart from smaller purchases by the State Trading Corporation and co-operative societies. The mills are up to their necks in fibre for which they cannot find storage space, yet the lower grades in the Calcutta-Cossipore area are available below the official minima. A main effect of the Government's decision will be that it will tend to increase the already burdensome surplus of these grades during the coming year.

The fundamental fault in the decision is that the basic price of Rs. 30 a maund for Assam Bottoms is far too high. It is not justified by the supply-demand position, as assessed now or as it seems likely to be in the foreseeable future. It is not justified in relation to the prices paid by the Pakistani mills, since the corresponding grades of jute in that country cost only about Rs. 20 or Rs. 22 a maund. And it is certainly not justified by conditions in the jute goods market, where the grand boom of 1962 is already well on the way to fizzling out.

Market circles say that the basic minimum price for Assam Bottoms should have been brought down to Rs. 27 a maund, and even the it might have reflected a measure of the optimism. The differentials of the lower grades should, in addition, have been widened appreciably so as to discourage their cultivation. These grades are required mainly for the manufacture of sacking, the demand for which has not been particularly encouraging. For the manufacture of bright hessian and carpet-backing cloth, high-quality jute is required and its price has long been well above the minimum. Its production now needs to be encouraged further by distributing better seeds,

that without Pakistan's export bonus scheme, her new mills, "built at a cost of Rs. 65,000 a loom, compared with India's Rs. 15,000 a loom, could not be in a position to compete at all with the Indian industry." The proceeds from the scheme, he adds, are being used not only to improve Pakistan's competitive power by offsetting the higher manufacturing costs, but also to provide funds for balancing and modernising her industry.

Mr. Adamjee forgets that nobody has ever said that Pakistan enjoys advantages right down the line. The real test as to whether her advantages are distinctly greater than India's lies in one simple fact: which of the two countries has been capturing a large proportion of the world's sacking markets? It is true that the demand, for sacking as well as hessian, has been extraordinarily high during 1962 because the shortage of supplies in the previous years was acute. Over the past few months, however, India's sacking stocks have risen very considerably, which indicates that the accumulated demand has by now been largely satisfied and India is not retaining her share of the more competitive world markets. Pakistan meanwhile is selling with relative ease all she is producing. She has already captured a large proportion of the markets in Burma, Australia and Peru, and is well set to capture more. Clearly, therefore, the advantages she enjoys in international competition have been greater than India's; and they are greater because of cheaper raw material supplies and the export bonus scheme.

As far as India is concerned, the whole matter has been investigated in considerable detail by the Shrivastava Committee. The preliminary report of the Committee has been in the Government's hands for some time, but has not yet been published. The suspicion is that publication is being withheld because the Committee's findings confirm, at least partially, what the Indian mills have been saying. They may or may not endorse the estimate that Pakistan's cost advantage is Rs. 400 a ton; but, according to reports, the Committee does agree that the advantage is very substantial. The Government is sitting on the Committee's report, since it apparently cannot make up its mind on what is to be done. A policy decision has to be made as to whether India's sacking exports ought to be subsidised, and that is a

At the Jute Commissioner's Press conference early last week, it was stated that the 1962-63 Indian crop was assessed at around 7.1 million bales. Out of this, by the end of March, the I.J.M.A. mills had purchased 5.9 million bales and the non-I.J.M.A. mills, the J.B.S.A. and the S.T.C. about 835,000 bales, leaving a small surplus of around 350,000 bales. Estimating the quantity smuggled from East Pakistan at around 1 million bales, the opening stock in the market in April should have been anything up to 1.35 million bales. With the lifting of the April compulsory purchase quota of 450,000 bales, the balance with the trade and growers at the end of this month should be about 900,000 bales.

With the onset of the sowing season, the attention of raw jute operators has been diverted to the upcountry areas. Latest reports indicate that several areas have received fairly good showers and sowing operations are in full swing there. Elsewhere, soil preparation is in progress. From current weather forecasts, and with the announcement of the floor prices for 1962-63, the indications are that the acreage will at least be maintained and that the farmers will try to raise a bumper crop during the next season. But in some districts the sharp rise in rice prices may upset the forecasts. If rainfall is delayed or inadequate, a portion of the area under jute may be diverted to the growing of paddy. Meanwhile, the authorities are reported to have taken steps to ensure a larger supply of improved seeds and fertilisers to the farmers through the growers' co-operatives.

Stocks of jute goods with the I.J.M.A. mills have risen substantially during March. Hessian stocks have increased by 5,200 tonnes to 29,600 tonnes and sacking stocks by 700 tonnes to 44,700 tons. Stocks of other goods have increased by 2,500 tonnes to 16,300 tonnes. At 90,600 tonnes, total stocks of all categories are 8,400 tonnes higher. Market circles had expected that sacking stocks would rise by 5,000 tonnes and hessian stocks would fall by 3,000 tonnes. So the announcement of the figures has had a bearish effect on hessian and a bullish effect on sacking. At the end of March 1962, total stocks were only 61,400 tonnes—16,200 tonnes of hessian, 29,100 tonnes of sacking and 16,100 tonnes of other goods.

At its meeting yesterday, the Indian Jute Mills Association considered the market situation in the light of the stocks of manufactured goods held by the mills at the end of March. It noted that the stocks had

The Indian Jute Mills Association reports the stocks of jute goods at the end of March as follows:

Grand Total		90.6 (89.2)		82.2 (80.9)		+8.4 (+8.3)		61.4 (60.4)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British measure.

To bring relief in midsummer boredom, wander where you will, in sprightly go-lightly Bata sandals. Sun-lighted shapes and open mellow leathers, Bata sandals are the pure classic, pure sun footwear that evoke cheer for comfort, praise for taste.

Bata

risen by 8,400 tonnes but agreed that the industry should continue to operate at the present maximum level of production for a further period of one month—until the end of May 1963.

THE JUTE MARKETS

Manufactured Goods: Dull conditions have prevailed in the Calcutta jute goods market during the past week. There have been scattered overseas enquiries for hessian but they have failed to materialise into orders. Small business has been done in ready delivery sugar bags and there has been a Government tender for B Twills for April-June delivery. Otherwise trading has been thin. Shippers have shown no inclination to discount prices although some mills have emerged as keen sellers for the near positions. The result is that the prices of both hessian and sacking have eased. Over the week-end, values sagged to their lowest levels, but subsequently sentiment in sacking has improved on the announcement of the I.J.M.A. gunny stock figures for March. Fluctuations throughout have been narrow in small turnover. The undertone is quietly steady at the close.

Quotations on Wednesday were as follows:

	April	May	June	July-Sept.	Oct.-Dec.
40in. 7/oz.	34.40	34.50	34.50	34.50	34.50
40in. 8/oz.	37.15				
40in. 10/oz.	45.80	45.85	45.85	45.90	45.85
B Twills	111.05	111.75	111.95	112.25	112.00
Corn sacks	114.00	114.25	114.50	114.75	114.25
Heavy Cees					
(Plain)	111.25	111.75	111.95	112.25	112.00
A Twills	134.00	134.50	135.00	135.00	135.50
Liverpools	125.00	126.00	126.00	126.00	126.00

Raw Jute: Idle conditions have prevailed in the raw jute market during the past week. With enough stocks in their warehouses, mills have shown little interest in fresh purchases. Sellers are keen to dispose of their holdings, but these consist mainly of the inferior grades, in which the mills are not interested. Transactions have been of a routine nature. In the futures market, Upper Assam White Bottoms for June have suffered a setback due to scattered selling pressure in sympathy with the trend in the spot market. Reports of brisk sowing in the upcountry areas have induced expectations of a good crop and had a bearish effect. Turnover is small and the undertone hesitant at the close.

Quotations on Wednesday were as follows:

Jute Goods Exports Rise

The jute industry's performance last year has been impressive. Its total production amounting to 1,204,000 tons was the highest for 20 years. Exports increased by about 200,000 tons while export earnings showed an increase of about Rs. 15 crores. Speaking at the annual general meeting of the Calcutta Jute Fabrics Shippers Association in Calcutta on Friday, Mr. Gopal Dass Toolsidass, chairman, said that the special circumstances confronting the industry in 1962 were unlikely to recur for some time. The acute raw jute shortage in 1961, which

led to a rise in the prices of manufactured goods, resulted in a severely limited overseas offtake followed by a greatly increased demand in 1962.

The backlog has now been met, and prices are declining steadily, but at the same time mills are continuing full production. Exporters are not, therefore, complacent about last year's results and are making every effort to stimulate exports. But the raising of sacking exports will be difficult since Pakistan has been making severe and rapid inroads into India's traditional markets. The situation has deteriorated so much that India now meets only the demand which cannot be met by Pakistan who, by virtue of its cheaper raw materials, labour and export subsidy, is able to underquote Indian exporters, if necessary by as much as Rs. 400 a ton.

"This puts the Indian exporters", Mr. Toolsidass said, "in an impossible position". The Government should, therefore, take steps to avoid losing further markets. The Association has urged the Shrivastava Committee to introduce an export bonus scheme, but its report has not yet been made available to the public so far. Unless Pakistan is convinced that it will be uneconomical to install additional sacking looms, its rapid expansion programme will continue. Furthermore, for every new loom installed in Pakistan, there may be one, two or more idle looms in India.

This is not a pleasant prospect, since it will have repercussions on all sections of the trade in this country. As for raw jute, it is not sufficient if production shows an overall increase or if yields show a rise. It is necessary to ensure increased production and improved yields of high quality fibre which is required for the manufacture of hessian, particularly carpet-backing cloth, and other specialities. This will help save the foreign exchange required for importing high quality fibre from Pakistan.

Mr. Toolsidass quoted some striking statistics to show Pakistan's rapid expansion. In 1957, she exported 59,400 tons of sacking, against India's 423,000 tons. In 1961, Pakistan exported 137,900 tons and India 279,200 tons. But last year, Pakistan's shipments increased sharply to 161,400 tons, against India's 287,600 tons. Statistics for Australian imports of sacking are also revealing. In 1957, she imported only 600 tons from Pakistan. In 1961 and 1962, the figures were 35,400 tons and 30,100 tons, respectively. The same pattern—if not to such a marked degree—has been repeated in all countries regularly importing sacking goods.

THE U.K. JUTE MARKETS

FIBRE WEAK

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan has been very quiet, and although some E.P.C. values were adjusted last week, this made no difference to actual offers. Demand from all consuming countries at present is small and prices are tending easier. There is no doubt that shippers are anxious for business, but they can make very little headway at present. Prices quoted are very irregular and cover a wide range.

Dundee spinners are holding large stocks of raw material, and at the same time, a substantial quantity is available ex warehouse. This is making the U.K. market rather weak and some holders have been willing to accept very low prices. It is quite obvious that it will take some time

before the bulk of the spot jute held in Dundee is taken up by spinners.

Reports concerning the new crop in Pakistan are quite satisfactory. Sowings in the lowlands have been completed, but operations in the midlands have been held up by lack of rain. New crop offers are being made here and business has taken place in Mill Hearts at £92 for August-September shipment. This is well below the current minimum export price.

Offers of old crop are being freely made especially for the lower grades. The lowest rates were at £142 for Mill Firsts, at £112 for Mill Lightnings at £91 for Mill Hearts and at £77 10s for Grade Hearts c.i.f. U.K., for April-May shipment. Grade Tossa-2/3 is named at £123 10s and Grade Tossa-4 at £108. Dacca Tossa-4 was offered at £141 10s, Dacca Tossa-5 at £126 and Dacca Tossa-6 at £110. Output Tossa-2/3 was available at £94 and Output Tossa-4 at £85 10s, April-May. Cuttings were quiet at £54 for S.N.C. and at £46 for N.C. Spot and float parcels were offered at less than the above rates, but there was not much business taking place as spinners appeared to have sufficient jute at present.

The Siam raw jute market was also quiet, and the tendency was for prices to decline. There were now more sellers willing to accept the lowest quoted rates. Grade A was at £72, grade B at £66 and grade C at £61, delivered mill Dundee for April-May shipment.

The Calcutta goods market remained fairly steady during the past week. Hessian prices were now at the same level for shipment over the next six months. Quotations were at 71s for 40in. 10oz. and at 53/6 for 7/oz. a 100 yards f.o.b. Calcutta for any shipment period April to September. B Twills were at 169s 3d April, at 170s 6d May-June and at 171s 9d July-September.

Dundee spinners and manufacturers are now free to sell yarns and cloth at any price level. However, business continued to take place at previous rates which showed that conversion costs as used by the industry had been at the proper level. More buying interest was again shown, and a fair business took place for delivery two to three months ahead.

THE PAKISTANI JUTE MARKETS

MINIMUM PRICES NOT TO BE REDUCED

(FROM OUR Dacca CORRESPONDENT)

THE E.P.C. registrations during the second half of March totalled 53,550 bales. Although small, they are higher than expected. The largest buyer was India with 9,210 bales, mainly of cuttings. Yugoslavia bought 6,860 bales, Japan 6,661 bales, Italy 5,152 bales, and France 4,000 bales. The Argentine bought 3,920 bales, east Africa 2,740 bales, Morocco 2,550 bales, north Africa 2,351 bales, West Germany 2,025 bales and the U.K. only 1,525 bales.

Sowings are quite satisfactory. The low land crop has germinated, and in some of the very low land areas, first weedings are reported. The midland crop is being sown and scattered rains last week would help the crop. For the time being, there is no reason to believe that the crop will be any smaller than the last one. It is also unlikely that the growers will obey official orders not to grow in the border areas.

The P.J.A. quotations have been reduced twice during the last few days. Nevertheless, prices in the overseas market are still well below the minimum rates. The authorities

have specifically stated that they will not reduce the minimum prices during the coming season. It is unlikely that they will go back on this statement, however, necessary it may be to do so. The present P.J.A. quotations are at the minimum for Output Tossa 2/3s and Output Tossa 4s and for Export Lightnings and Export Hearts. Mill Firsts are £16 above the minimum and Export Firsts are now £9 above. Dacca Tossa 5s are now £13 above, Dacca Tossa 6s £3 above, Dundee Tossa 2/3s £13 above and Dundee Tossa 4s £1 above. There is, therefore, great scope for a further reduction before the end of the current season.

Even if the authorities were to reduce the minima to the same levels as they were in June, Export Hearts—the most difficult mark to sell—would remain unchanged. Export Lightnings will be £2 lower and Export Firsts £6 lower than the present minima or £15 lower than the current P.J.A. quotations. Dacca Tossa 5s and Dundee Tossa 2/3s will be £1 lower than the minima and Dacca Tossa 6s and Dundee Tossa 4s will be £6 lower than the minima. If a larger crop is harvested, it is possible that by reducing the minima to the June level, business may be transacted at about the minimum prices. Meanwhile, it is hard to believe that the market will rise above the present levels. In fact, business has already been reported in new crop at prices considerably below the present discounted prices.

Official Statement

The vice-chairman of the Pakistani Jute Board, Mr. K. S. Islam, has in a statement declared that the Government has no intention of removing or reducing the minimum export prices of jute. He says that the current quietness in the jute market has been greatly exaggerated by certain interested quarters. "The real position is that the present depression is just one of the normal and seasonal fluctuations of the market, and something that was to be expected after the firm conditions and upward trends which prevailed in the month of December last."

Mr. Islam adds: "Although the 1962 crop is undoubtedly substantially larger than what was estimated by the Government earlier in the season, it is not unmanageably large. It is certain that the carryover into the next season will be considerably less than was the carryover from the preceding season. Sales and exports in the present season are normal. Sales were ahead of last season's at the end of the first fortnight of February, but have fallen behind in the second fortnight of the month because in the second fortnight of February 1962, sales were exceptionally heavy at 436,856 bales. Exports to the end of February 1963 are about 100,000 bales higher than in the corresponding part of the last season."

"It is also to be borne in mind that over 900,000 bales were sold in the latter fortnight of June 1962, which sales were carried over into the current season for execution. Thus in addition to the sales of the present season, there are also about 900,000 bales of the arrears to be exported. The Pakistani jute mills' requirements have proved to be larger than estimated earlier and look like topping 2 million bales this season. All the indications, therefore, are that towards the end of the current season, there will be a better balance between supply and disposal and there would only be a normal carry-over into the coming season. Because of the ban in the border belt and the natural inclination of the growers, on account of the low prices they got for the major portion of their last crop, to grow less jute this year, production for the 1963-64 season is likely to be such that supply and demand will be evenly matched."

Commodity Markets

INSUFFICIENT LAND FOR RUBBER IN KERALA

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Kerala Government's scheme to distribute forest lands for rubber cultivation has been suspended. As against a third plan target of 20,000 acres, the Government has been able to distribute only 7,000 acres so far. According to the State Agriculture Minister, Mr. E. P. Poulose, the latest position is that the Government has no more forest land for distribution unless and until the private forests in the Malabar area are nationalised. The nationalisation proposal is only in its formative stage and it is very unlikely that nationalisation will take place in the current plan period.

This new situation has arisen from a recent decision of the State Government to evict forest encroachments in hydel project areas. Over 1,000 families will thus be evicted, and they will have to be provided with alternate lands for rehabilitation. In the absence of other lands, the forest areas earmarked for rubber cultivation by educated unemployed had to be diverted for this purpose.

It was an ambitious third plan scheme of Kerala to plant 100,000 to 200,000 acres with rubber both in the public and private sectors. The Government was hopeful of making at least 100,000 acres of forest lands with it available for rubber cultivation, 20,000 acres out of which the Government proposed to plant directly. Now it does not appear that the total will exceed 30,000 acres including the 20,000 acres set apart for a Government plantation. A public corporation was recently constituted by the State Government for the management of the Government-owned rubber plantation.

The Bareilly synthetic rubber manufacturing plant, which is the first of its kind in India, will go into production in a month's time, according to Mr. Raymond C. Firestone, president of the Firestone Tyre and Rubber Company, which has collaborated in the venture. This factory will have an annual capacity of 30,000 tons. The plant will make use of the molasses available from the sugar factories in Uttar Pradesh. Mr. Firestone told a recent news conference that with the commissioning of the Bareilly synthetic plant it would, together with the country's natural rubber production, make India "practically self-sufficient in rubber supply".

It is pointed out that there is not much substance in the clamour that the small grower is not getting the statutory price for his rubber. The lowest price for which the small grower had to part with his rubber was Rs. 130 a 100 lbs on the Kottayam market at a certain time last year. Kottayam is the main raw rubber market in India. The control price for grade 1 rubber is Rs. 147.50 a 100 lbs. f.o.b. Cochin, excluding the cess of Rs. 6.25 collected from the manufacturers and the sales tax of 2 percent collected at the last purchase point. The small grower's rubber is invariably of low quality and it is usually purchased by the buyer as anything that comes below the second grade. The price differential between the first and the third grade is Rs. 6 a 100 lbs. Another Rs. 6 is allowable on the Kottayam market as the handling charges, including transporting and packaging charges. Therefore, under normal conditions the small grower could expect only Rs. 132.44 for 100 lbs. So what the

small grower actually lost when he had to sell his rubber on the Kottayam market for Rs. 130 was less than Rs. 3 a 100 lbs. It is true that with the changes in the method of collection of cess and sales tax introduced some time ago, the money that comes into the hands of the small grower is less. The main point of the clamour is that, although the price of rubber is statutorily fixed in this country, the law of supply and demand operates in a small way in the rubber market also. When there is a shortage of rubber, the buyer shows the willingness to pay a premium for the available supplies. Before 1962, the rubber growers used to get this benefit because the Rubber Board was carefully adjusting import quota with local supplies. In 1962, ports with local supplies. In 1962, the old system of quarterly release of import quota was abandoned by the

Central Government, probably with the consent of the Rubber Board and released the entire quota for the whole year at the beginning of the year. The manufacturers thus got an opportunity to build up stocks and bargain for cheaper rates with the sellers.

According to reports, three proposals are now being considered by the Rubber Board and the Central Government to ensure the growers the full benefit of the price umbrella provided by the Government. They are: (1) a voluntary co-operative marketing system to cover the small growers, (2) pool system of marketing under which rubber marketing becomes the monopoly of the Rubber Board and (3) the Rubber Board undertaking the responsibility of meeting the tyre manufacturing industry's requirements for raw rubber by opening its own purchasing depots.

Quality Control for Cashew

The pre-shipment inspection and quality control scheme for cashew kernel came into force from 1st April. Under this scheme, cashew kernel intended for export will have to be accompanied by a certificate issued by the Cashew Export Promo-

tion Council. According to Mr. M. K. K. Nair, chairman of the Cashew Export Promotion Council, the introduction of quality control is a very important step from the point of view of stabilisation of the cashew industry, which is the biggest dollar-earner for the country, next only to jute. He claimed at a recent Press conference that the scheme, while assuring the foreign buyer of the quality of the product, would enable the exporter here to get a reasonably better price. It would also make every one engaged in the cashew industry to see that the methods of processing and packing cashew conformed to certain prescribed standards. About 100 million lbs of cashew kernels are exported annually from India and the U.S.A is the major market for this commodity.

Easier Trend at Tea Sales

(BY A SPECIAL CORRESPONDENT)

WITH practically no more tea for export from north India, it is disappointing to note an easier tendency at the Cochin sales where prices have been irregularly easier.

GRADE 1 CENTRE LATHES MODEL 'M.B.D.' 165 mm CENTRE HEIGHT

built to high precision. Inspected and stamped by Government of India. Available in two sizes:

M.B.D. 1—Distance between Centres 600 mm
Bed Length 1350 mm

M.B.D. 2—Distance between Centres 1000 mm
Bed Length 1800 mm

Motor drive situated underneath the bed in cabinet.

Machine fitted with Norton type quick-change gearbox enabling screw-cutting by simply changing levers thus avoiding tedious process of changing gears for different pitches.

MARGINAL CHANGES IN THE BUDGET PROPOSALS

THE changes in the Central Budget proposals for 1963-64, announced by the Finance Minister, Mr. Morarji Desai, in the Lok Sabha on Tuesday evening, constitute a rather confusing mixture of political opportunism and economic sense. The earliest newspaper reports indicated that Mr. Desai had magnanimously agreed to forgo round about Rs. 30 crores of the extra Rs. 345 crores or so he wanted to raise for the Centre and the States through his original Budget proposals. (The Rs. 345 crores consisted of Rs. 275 crores through new taxes and Rs. 65 crores or Rs. 70 crores through the compulsory deposits scheme). A closer reading of his speech on Tuesday, however, suggests that while the Centre will in fact be forgoing around Rs. 30 crores, the States will actually be getting nearly Rs. 10 crores more through the changes in the compulsory deposits scheme. The net concessions for taxpayers and compulsory savers will, therefore, be only around Rs. 20 crores. There was a time, not so long ago, when even changes of this order would have been considered as amounting to almost a brand new Budget. But those happy days are gone: in relation to a herculean money-raising effort intended to siphon not far short of Rs. 400 crores out of private pockets into Central and State Government kettles, Rs. 20 crores is but chicken-feed. And in a country where it is fashionable for Finance Ministers to under-estimate revenues by a cool Rs. 100 crores or Rs. 200 crores each year, concessions worth Rs. 20 crores cannot be welcomed as a sample of stunning generosity.

More important than the total involved is the way Mr. Desai has distributed it. Under powerful pressure from Congress members of Parliament fearing a future visit to irate constituencies, the duty on kerosene is to be reduced—the concession being worth Rs. 11 crores. About Rs. 5 crores—on Mr. Desai's estimate—is to go off the super profits tax, by now accepted as India's greatest monument to fiscal bungling. Most of the other sacrifices have been made at the altar of the compulsory deposits cow, and they are intended to benefit mainly agriculturists, industrial workers, the lower middle-class and earners of income from urban property. Political convenience, and the stupendous administrative task of collecting compulsory deposits, seem to have been major influences here. For example, the decision to exempt farmers paying less than Rs. 5 a year as land revenue should do less damage to the Congress Party's rural vote than the earlier proposal not to exempt any land-revenue-payers at all. State Governments have been given an incentive to face the political odium of collecting compulsory deposits from land-revenue-payers above the exempted category. The Governments have been told that they can keep all they collect, instead of sharing it with the Centre. But their satisfaction on this score will be qualified by the thought that only heaven can help them rake in all they are supposed to; their traditional cowardice about in-

Among the more reasonable changes Mr. Desai has proposed, undoubtedly the best is that the development rebate reserve can now be included

In the capital-reserve base for purposes of calculating the super profits tax. Yet here too the regret will remain that nothing has been done to include loan capital in that base. Several types of companies have traditionally depended heavily on loan capital because of the nature of their business; several others have been compelled to do so because of the prevailing conditions in the capital market. They will nevertheless have their noses cut, because somebody has murmured in the Finance Ministry's ear that risk capital is always a better method of company financing than loan capital, regardless of the industry you are talking about. The inclusion of the development rebate reserve in the capital-reserve base should do something to help expanding companies; the 10-per cent exemption mentioned in the previous paragraph should add to the benefit; and new companies should welcome the holiday from the super profits tax. But for the wide range of Indian industry as a whole, the effect of these concessions will really be quite minor.

A notable feature of the changes Mr. Desai has proposed is that they go some way towards assuaging the very genuine irritation of foreign investors over the Budget proposals. The speed with which schemes for foreign collaboration in Indian industry have been shelved since 1st March will understandably have shaken the Finance Ministry, even if it may not have shaken the wisecracks of the Planning Commission. So Mr. Desai has decided "to exclude dividends, royalties, interest on foreign loans and fees paid to non-residents for technical services from the scope of super profits tax." (It is not clear whether "dividends" here also includes the dividends received by an Indian company or covers only dividends paid to foreign companies.) Although not directly related to the super profits tax, two other amendments are proposed in response to the protests from foreign investors. The first is that companies will not be penalised if they spend more than Rs. 5,000 a month on a foreign employee, although they will be penalised if they spend that much on an Indian employee. The second is that the compulsory deposits can be refunded in less than five years under certain circumstances—for instance, if a foreigner leaves this country sooner.

It is extremely doubtful, however, whether these concessions go far enough in the interests of a country whose industrial future is based on corporate enterprise, and on the foreign capital that might be available to nourish it. The whole scheme of changes smacks of niggardliness; and this is true even of the special concessions relating to the super profits tax for small companies, banks, electricity concerns and export earnings. The basic dilemma posed by the super profits tax is admitted; it constitutes a penalty on efficiency, and unless it is completely scrapped, it cannot be anything else. Yet the regret will remain that Mr. Desai has not been bolder in blunting the sharp edges of this iniquitous levy, if necessary by seeking compensatory revenue through other measures. The virtual backdating of super profits tax, by applying it from the assessment year 1963-64, has not been corrected. Provision for setting off the deficiency of profits in one year against the super profits of the following year has apparently not been made—to the serious disadvantage of companies with widely fluctuating incomes like those belonging to the tea and jute industries. The provision for exempting 10-per cent of pre-tax profits from super profits tax, under certain conditions, goes some way towards alleviating companies' difficulties in paying preference dividends and repaying debts; but quick estimates suggest that, for a large number of companies, the net benefit may be equivalent to raising the super profits tax exemption limit of 6 per cent (on the capital-reserve base) to only about 7 per cent. Finally, the penal rates of the super profits tax itself have not been reduced.

Admittedly, if Mr. Desai had accepted the whole multitude of suggestions showered upon him, the revenue from the super profits tax would have been reduced to the noble figure of nil. But everybody knows, and he must know too, that the levy in its original form would have brought not Rs. 25 crores, but Rs. 60 crores or Rs. 70 crores. The merely marginal changes he has now suggested cannot reduce the figure suddenly to almost one-

third of what it would otherwise have been. The original under-estimation of revenue, as well as the present one, suggests that there was scope for much bolder amendments. As things are, the changes will do little to redeem India's growing reputation as a 6-per cent country susceptible to the influence of 50-per cent wits who write anonymous "special reports" on the Budget. Mr. Desai has made a timid attempt to undo the serious damage done to India's investment reputation by that "special report"—by hinting that the super profits tax and the compulsory deposits scheme are exceptional measures which may be rescinded in

FOREIGN AID PROSPECTS

WHEN delegations from the nations and institutions which are now members of the Aid-India Club meet at the end of this month in Washington, there will be a distinctly new element in the climate for negotiations. The Chinese aggression has given fresh and urgent political meaning to western support for India's development. As Barbara Ward summed up the situation in the *Financial Times* recently, western nations have no choice but to see India through the present period of transition because reluctance to do so would be the equivalent of deciding that, politically, peace and progress in southern Asia are of no special interest. She added the warning that any reluctance might prove in the future more costly than "any figure suggested for present aid". The Economist has estimated that if all needs are added together—essential imports uncovered by aid already committed or likely export earnings, taken together with the additional requirements for arms and defence support—the assistance required may be not the \$1,000 million a year that India has received in the last two years, but nearer \$2,000 million. As it says, the Indian crisis leaves at this point the economics of ways and means and enters the area of strategy and politics. It has gone on to urge the western Powers to make a realistic choice and find the political courage to back India's efforts fully because this country is committed "more than any other Asian power, except Japan", to meeting the challenge of growth in freedom. In the United States, the Clay report has, despite misgivings about "past expression of India's foreign policy and certain aspects of its foreign policy", recognised that there can never be a balance of power in Asia unless the Indian sub-continent is able to maintain its freedom and counter Chinese expansionism. Otherwise, General Clay and his colleagues frankly admit, U.S. involvement in this area could be indefinite and infinitely more costly.

Theoretically, the Aid-India Club is not concerned with these geopolitical issues, but it is naive to think that the verdict on Indian proposals to the Washington meeting will not be influenced by them. This is not to suggest that the aiding nations will not critically appraise India's record in helping herself. Mr. Morarji Desai's Budget, in spite of its serious faults, will demonstrate to them the will and readiness to make sacrifices. But the favourable impact may be largely negated by the Government's failure to make it clear that the new levies do not represent a basic reorientation in fiscal policy. This, more than the actual scale of taxation, has been worrying present and prospective investors; critics may well point out that India's tremendous development needs are ill-served by a policy which strongly discourages, if it does not virtually shut out, the inflow of private capital. The lag in agricultural growth will also come in for scrutiny in the context of self-help because as much as 46 per cent of the aid so far used has been spent on imports of foodgrains and other agricultural commodities. The heavy drain could doubtless have been reduced if agricultural development had been more systematically and intensively pursued from the start. It was in fact the mounting criticism from competent foreign observers, reinforced by pressure from within the country, which brought agriculture back to its rightful place as a key task of the third plan. But the failure to make any progress at all beyond the record levels of the 1960-61 season confirms that large financial allocations will not by themselves take the coun-

try very far without a streamlining of the organisational and administrative apparatus. The recent inter-Ministry wrangling at the A.I.C.C. session in New Delhi will not have gone unnoticed; the Indian delegation to Washington may be well advised to be prepared for some searching enquiries about the stagnation in agriculture which threatens to aggravate balance of payments difficulties.

The more exacting requirements about self-help enunciated in the Clay report find an echo among other western members of the Aid-India Club. It is being asked whether Indian planners are really making an effort to achieve viability and independence from aid within the foreseeable future. On India's behalf, the point is often made that the economy's present plight is attributable to the fact that most of the aid (left over after meeting food deficits) has gone into infra-structure projects with a long gestation period. These projects, like river valley development, power and railways, cannot be expected to contribute directly to easing the balance of payments situation, but they are creating the basis for surer and more rapid industrial progress which will eventually make viability possible. There is substance in this argument but an outside observer not holding the premises of Indian planning as sacrosanct is bound to ask why the pattern of investment should not be modified to obtain a better balance between quick-yielding projects and those from which results must necessarily be long in coming. Smaller projects earning a high profit and permitting a rapid turnover of capital could, in this view, ease India's development bottleneck by generating resources within the country to meet some part of the massive outlays on more ambitious schemes. Capital requirements a unit of output, averaged over the whole economy, are higher in India than in China, despite the latter's progress in such capital-intensive sectors as steel and armaments manufacture.

Even though such doubts about India's self-chosen path may be much in the minds of the Aid-India Club members, the urgency of her needs may still win from the Washington meeting a reaffirmation of support. The amount of further assistance will, of course, have to be left undecided until a clearer picture is available of the supplementary commitments for military aid that some of the members may separately make. A decisive factor will be the stand taken by Commonwealth nations because U.S. policy is committed more than ever to the principle of matching contributions. The latest loan of £3.5 million from the U.K. for steel purchases, which neatly ties aid to support for lagging sectors of the donor's economy, may be a pointer to what other European nations may be persuaded to do, particularly by way of the non-project aid so desperately needed for maintenance imports. As the official *Economic Survey* points out, the availability of non-project assistance must in the present circumstances decide what economic growth can in fact be achieved. Even when projects are undertaken against specific aid commitments, there is still a residual need for imports outside of these arrangements—a fact which reinforces the Government's plea to be allowed some room for manoeuvre in using credits.

Inflexibility, it can legitimately be pointed out, defeats the very purpose of aid, as is evident from the fact that the loans authorised by France, the Netherlands and Belgium as members of the Aid-India Club remain unused so far. France

committed Rs. 7.14 crores in 1961-62 and Rs. 21.43 crores in 1962-63; the entire amount was subsequently authorised, thus making it available for use. No part of it was used up to 1st January, 1963, and no major drawals are, it seems, contemplated in the current year either because the foreign exchange budget assumes no credits from this source. Similarly, the Austrian credits of Rs. 2.35 crores and the Belgian offer of Rs. 4.76 crores remain untouched. This is specially disappointing at a time when the utilisation of foreign aid has on the whole been improving. General credits from the U.S.A., the U.K. and West Germany have been rapidly used up. In 1961-62, drawals from all credits and grants came to Rs. 248 crores, against which utilisation in the first nine months of 1962-63 (April-December) was Rs. 229 crores. Utilisation of U.S. aid rose from Rs. 62 crores in 1961-62 to Rs. 77 crores in April-December 1962, exclusive of P.L. 480 assistance. There is room, as the Government acknowledges, for improving aid utilisation still further, but it would be unfair to put all the blame for tardiness in India. If the total of unused aid at the beginning of this year was still as high as Rs. 1,556 crores, the responsibility rests—in part at least—on the terms on which some of the money was offered.

THE DEFENCE AGAINST MONETARY CHAOS

IN the space of half a year, between October 1960 and March 1961, the possibility of devaluation confronted both the reserve currencies—the dollar first, the pound soon after. The crisis generated intense activity among the monetary authorities of the world. The central banks co-operated to restrict the conversion of weak currencies; a new currency pool and a new gold pool were established. But confidence shaken as severely as it was in 1960-61 is not easily restored, and the efforts of the U.S. and U.K. Governments to accelerate the growth of their respective economies have aroused the latent anxieties of the financial world. Significantly, recent speculative pressure on the pound weakened the dollar, because in the world's financial centres it was argued that if the pound were devalued it would be impossible to maintain the value of the dollar.

The idea that the pound might be devalued is not attributable directly to the failure of the negotiations to bring Britain into the European Economic Community—selling of sterling at the end of January caused no more than a tremor. More important is the predicament of a Government whose internal and external policies are in conflict. The U.K. Government is compelled to promote and increase in the nation's production and trade, and this increase will inevitably raise the level of imbalances of payments requires at least a corresponding rise in exports; to restore completely the world's confidence in the currency it would be necessary to raise exports more than imports. But economic expansion, while it automatically raises imports, does not automatically raise exports. One suggestion for harmonising these conflicting interests is that imports should be temporarily restricted. Another is that exports should be stimulated by changes in taxation that would, in effect, widen the profit margins in export trade, or allow adequate profits to be earned abroad at lower prices. A suggested alternative is devaluation of sterling.

Current News and Comment

Steel: New Assurances

The new-found faith of Mr. C. Subramaniam, Central Minister for Steel and Heavy Industries, in a "mixed" steel economy, as expounded to Parliament on Monday, need cause no surprise. In the context of the Clay report, which has frowned upon the idea of U.S. aid for a steel plant

It is no secret that the U.K. Treasury has been much embarrassed by frank and free discussion of the possibility of devaluation, the more so as a respected economist, Dr. Nicholas Kaldor, of the University of Cambridge, has declared himself in favour of it and a respected organisation, the National Institute of Economic and Social Research, has suggested that it should be seriously considered. This discussion has been widely noticed abroad, where it has made holders of sterling nervous. However, it will probably continue, intermittently, until the authorities devise an effective policy. The argument for deliberate devaluation (devaluation under compulsion is, of course, a different matter) is based on the questionable assumption that British prices in general are too high and that the forces that may eventually bring them into line with foreign prices will take too long to operate. In fact, rising export prices are troubling some European countries, and Japan; and British industrialists believe that economic expansion would lower rather than raise their own prices, by enabling them to use their resources more efficiently.

There is no firm evidence that sterling is overvalued now, and there is no reason to suppose that it will be overvalued when the British economy is more active. A more serious threat is a temporary disparity between imports and exports, caused, particularly, by re-building of industrialists' and traders' stocks. More serious still is possible loss of confidence on the part of banks and other institutions and persons abroad, whose holdings of sterling amount to some £3,500 million. The official reserve of gold and convertible currencies in London is of the order of £1,000 million. Standby credits readily available from the International Monetary Fund effectively increase this figure by about one-third. The reserves may not be strong enough to withstand a full-scale speculative attack against sterling. But such an attack will never be launched if the world is convinced that international arrangements for defending the reserve currencies are adequate and whenever needed, will be resolutely used.

It has been argued that the British Government itself could restore confidence by declaring boldly that it would restrict imports if such action were necessary to protect sterling. Closer accord with the U.S. Government (British and U.S. financial policies are not entirely harmonious at present) would be helpful, though the idea of two weak currencies trying to support each other would not impress sceptics in Europe. More effective would be declaration from the combined monetary authorities of the world that they had devised a scheme that would assuredly maintain the value of the currencies, yet would provide enough liquid resources to facilitate the growth of world trade. Advocates of revaluation of gold will argue that no such scheme is practicable until major adjustments have been made in the world's monetary system. There is, indeed, a risk that the effort to maintain the present relation of currencies, and of currencies with gold, will inhibit world trade and allow the world to drift into a long recession. But the arguments for co-ordinated changes are not relevant to the discussion of unilateral devaluation of sterling. In the present precarious position of currencies, such an act could start a chain of events that would end in monetary chaos. It would be an irresponsible act on the part of the British Government if it were done deliberately, and the world's monetary authorities would have neglected their duty if they allowed it to happen under compulsion.

equivocal assurances of equal treatment and equal opportunity might not have been so readily forthcoming but for the urgent need to allay U.S. Congress's apprehensions. Now Mr. Subramaniam has not only promised expansion of capacity to realise the economies of scale, but has also said that the financial requirements of expansion will be "specially" looked into. That this represents a major shift in policy is obvious because only eight months ago the Ministry rejected the Tariff Commission's recommendations and set prices at a level which amounted to a repudiation of past assurances concerning the financing of second plan expansion. It may also be noted for the record that the approval of Indian Iron's expansion, still "in principle" only, took over a year. The delay is impossible to explain except in terms of ideological resistance, because the soundness of the scheme was not in dispute. If the World Bank had informally indicated its willingness to finance the foreign exchange cost, it must have been on the assumption that the expansion would contribute to Indian Iron's viability.

Whether of its own volition or through force of circumstances, New Delhi's change of attitude towards the private steel industry is to be welcomed. But if the "categorical" assurance to maintain uniform prices for public and private sector plants is not meant solely for foreign ears, the implications of uniformity will have to be clarified for the benefit of Indian investors. Prices are even now uniform, but patently unremunerative. The maintenance of parity between the Hindustan Steel plants and the two private units is not by itself meaningful because State undertakings can always draw upon the Consolidated Fund for resources which others must find for themselves. Low prices do involve Hindustan Steel in loss but this is largely notional since there is so far no obligation to generate resources either for expansion or for reinvestment in the economy. One cannot, therefore, accept at face value the latest assurances of equal treatment unless this crucial inequality is ended and Hindustan Steel's financing placed on a commercial footing.

When Mr. Subramaniam ruled out unhealthy competition between the two sectors in the matter of products, what did he really have in mind? It is no secret that both the private producers feel strongly about the distribution of orders under the official control procedures which leaves them carrying a large proportion of the less remunerative items. While this type of complaint can be readily resolved by adjusting the rolling programmes, will it be equally easy to avoid a clash of interests in deciding the product-mix of the fourth plan expansion programmes? Tatas, for instance, wish to put up a strip-rolling mill but will this not be rendered unnecessary by Bokaro? It is quite likely that the choice will finally have to be made not on the basis of immediate capabilities but the long-range potential of each plant to meet the likely future demand. This presumes that the premises for making these difficult decisions are defined in advance, not through *ex cathedra* statements by the Minister but by independent and objective enquiry to settle the guidelines of long-range steel development.

Steel Plant in the South

The bitter debate over the feasibility of a lignite-based iron and steel complex in south India reflects a major shortcoming in national planning. Whether such a plant should be set up is primarily a technical and an economic issue. Only after these two aspects have been satisfactorily cleared up should policy considerations be brought into play. After 12 years of planned development, it is unfortunate that public debate over a proposal like this should be conducted in terms which can only be described as political.

The facts are quite simple. The idea of using lignite for smelting locally available deposits of iron ore has been subjected to several tests in India and abroad. Two alternative processes have been examined—the low-shaft furnace and electric smelting, and expert opinions obtained from several independent sources. The technical

More important is the factor of transport costs. South India requires certain quantities of pig iron and steel products which in the absence of Neyveli will continue to be drawn from more distant centres in eastern India. In adjudging Neyveli's viability, it will be necessary to consider the delivered cost of supplies from alternative sources, the fact of uniform railhead prices now obtaining being quite irrelevant for judging the intrinsic economic merits of the scheme. This calculation might well prove to be in Neyveli's favour, as would be expected from the world-wide trend for steel plants to be located more and more with reference to markets rather than raw material sources. But before a final decision is made, one would have to take into account not only the delivered cost of supplies from existing sources but also from others that may come up. In the context of the fourth plan target of 18 million to 19 million tons approved by the Cabinet last month, two major new plants are being proposed. The location of one in the Goa-Bellary-Hospet region is a distinct possibility which will bring a steel plant much closer to the south Indian market than any of the present ones. There may still be a valid case for Neyveli because this other unit will be based presumably on imported coal and may, therefore, have to be export-orientated. The essential point is that all these aspects will need to be considered, the appropriate time for which will be when decisions on the fourth plant's capacity are taken early next year. Until then, no useful purpose will be served by people scoring points off each other in impassioned but futile debates.

The A.I.C.C. Debate on Agriculture

Some interesting points have emerged from the A.I.C.C. debate on the Planning Minister, Mr. Gulzarilal Nanda's note about agricultural and industrial production during the first two years of the third plan. Although some members contended that the performance of agriculture during the two years has been unsatisfactory because of bad weather conditions, and insufficient supply of seed, manure and materials like steel and cement, the emphasis in the debate was shifted from "climatic conditions" to weakness in the "human factor". The implication is that weather conditions are not under anybody's control, but the human factor can certainly be taken care of if the efforts are made. The A.I.C.C. decided that high-level study teams, headed by a Central Minister or a Member of the Planning Commission, should visit different States for a 15-day period after 15th April to study the problem at first hand, and to devise a practical method of

increasing farm production, and of achieving the targets under minor, major and medium irrigation schemes, soil conservation and similar other projects.

The A.I.C.C. debate focussed attention on the fact that administrative and organisational defects are the main reasons for the poor performance of agriculture. The arguments that there is lack of co-ordination between different departments of the State Governments, that block development officers are bureaucratic and unmindful of the true interests of farmers and that the community development officers have little touch with the rural people have been put forward times out of number in all discussions on the subject of agricultural planning in India. At the A.I.C.C. session, it was emphasised that one of the main causes of administrative inefficiency in farm planning is the fact that agriculture does not enjoy at the State level the "prestige and status" which it deserves, with the result that first-rate officers have not been put on the job, and adequate funds have not been allotted for agricultural planning by different State Governments. In view of this, it is not surprising that there have been large shortfalls in the outlay on agriculture, and sometimes the funds intended for agriculture have been diverted to more spectacular purposes. It is to be hoped that the study teams will be successful in evolving a method of overcoming this basic defect in agricultural planning when they visit different States. In the past, it was suggested that definite responsibility for achieving results should be put on individual officers and they should be held responsible if the plan targets are not achieved. In the course of the A.I.C.C. debate, it was also suggested that targets of output and performance should be fixed village-wise and an effort should be made by the officials concerned to achieve these village-wise targets. This might sound an attractive proposal, but it is not practical and might in any case involve such heavy administrative work and outlay as not to be worth while.

The argument advanced at the A.I.C.C. meeting that agricultural planning has been more successful in Punjab because the State Government there followed a "farmer-oriented policy", while it has been less successful in U.P. and elsewhere because the State Governments there followed a "consumer-oriented policy" is untenable. In fact, each cultivator is also a consumer, and in planning, it is necessary to safeguard the interests of both producers and consumers simultaneously. It is not possible to distinguish between farmer-oriented and consumer-oriented policies. That the farmer should get a reasonable price for his output as an incentive for higher production has long been recognised as a sound policy. But what has not been properly appreciated is that the benefits of the Government's price support policy do not always reach the actual tiller of the soil and is appropriated, in large measure, by middle men of one kind or another. In order to give the incentive to the farmer, the State Governments should ensure that the farmer gets most of the benefits of the Government's price support policy. Another fact which is not always clearly realised is that in order to improve the economic condition of the farmer, it is absolutely necessary to increase the yield of different crops from each acre tilled. If this were done, the Government's price support policy would become easier to implement and to that extent the complications in enforcing a rational price support policy would be minimised.

E.E.C. and India : Trade Prospects

The observations of Dr. Walter Hallstein, chairman of the European Economic Commission, made at a Press conference in New Delhi last week, have a special significance for the future of India's trade relations with the "Six". According to him, the Common Market wants to adopt liberal trade policies and wishes to conclude comprehensive trade agreements with India, Pakistan and Ceylon. He agreed that India has to reduce her unfavourable balance of trade with the E.E.C. countries, but pointed out that there has already been an improvement in the conditions from India's point of view since the export surplus of the E.E.C. countries against India has been reduced from \$327 million in 1958 to \$143 million in 1962. E.E.C. im-

ports from India in 1958 were worth \$103 million and exports to India were nearly \$430 million in 1962, imports from India rose to \$155 million and E.E.C. exports to this country fell to \$298 million. There is some difference between the trade figures published in India and those given by Dr. Hallstein, but the fact that India's adverse balance of trade with the European Economic Community has narrowed is correct. The adverse balance is still very high and this is causing anxiety to the Planning Commission and the Central Government, because of India's need for foreign exchange and because of the peculiar difficulties which are being experienced in increasing this country's exports not only to the E.E.C. members, but to other countries too.

The most important point to emerge from Dr. Hallstein's Press conference, lectures and discussions with different Ministers of the Central Government is that in the immediate future, India should be able to get some tariff concessions on her exports to the Common Market through bilateral trade agreements with individual member countries, provided the necessary initiative is taken by New Delhi in the meanwhile. When negotiations were in progress concerning Britain's joining the E.E.C., the latter had agreed to give tariff concessions on the imports of tea and eight other commodities from India in the event of the U.K. joining the Community. But since the negotiations have for the time being been suspended, there is no immediate prospect of these concessions becoming available for Indian exports. But it should certainly be possible for India to enter into a comprehensive trade agreement with the E.E.C. not only on tea and eight other commodities, which have so far been considered, but on a larger number when the E.E.C. takes a final shape round about January 1966 with or without Britain joining it.

As Dr. Hallstein has pointed out, the formation of a successful Customs union—and the E.E.C. is a successful Customs union—itself leads in the direction of liberal trade policies, because countries which can stand one another's competition should be able to stand further competition from outside. It is true that at the time the new Association convention was worked out, it was agreed that the Community's outer tariff against non-associated countries should be reduced by some 40 percent on a number of tropical products. The real difficulty is that a cut of 40 percent in tariffs has not yet been secured in the case of all the products to which it was intended to apply this concession, and the number of commodities selected for the concession has been too small to benefit India much. But as Dr. Hallstein pointed out, nearly 64 percent of the E.E.C. imports from India are already duty-free and for the rest of the commodities, the prospect for securing tariff concessions from the E.E.C. after January 1966 is fairly bright. In the immediate future, the Government of India may be able to get some tariff concessions in exchange for equivalent concessions, from individual European countries by means of bilateral trade agreements, but such concessions are unlikely to be adequate for balancing India's trade with these individual European countries.

Tea Production and Prices

Indian tea output in 1962 was 11.5 million kilograms lower at 341.6 million kilograms, compared with the 1961 figure of 353.1 million kilograms. Production in some other major producing countries was also in line with this trend. This brought supply into better balance with demand, and the average price realised at auctions was appreciably higher than that in 1961. The position in 1961 was just the opposite. During that year, north India produced 33.3 million kilograms more, or 58 per cent of the total world increase of 56.9 million kilograms in tea production over that of 1960, and as the supply was generally thought to be in excess of demand, auction prices in India and elsewhere showed a serious drop in the 1961-62 marketing season. Moreover, although India's exports were larger at 205.73 million kilograms in 1961-62, compared with 198.98 million kilograms in 1960-61, the foreign exchange earning was lower at Rs. 122.40 crores in 1961-62, compared with Rs. 123.58 crores in 1960-61.

This problem of higher production reacting adversely on prices was one of the main themes

with which Mr. Ramananda Daga, chairman, Indian Tea Planters Association, dealt at considerable length in his address at the latest annual general meeting in Jalpaiguri recently. Mr. Daga pointed out that as the trends of production and prices of the past few years show, the output of north India, which is the largest common tea producing region of the world, affects world tea prices. The baffling problem for the north Indian gardens now is how to retain their profit earning capacity while fulfilling the expectations of production and export under the third five year plan. If by raising production, Mr. Daga pointed out, the prices of teas are depressed and the industry cannot adjust its cost to maintain the profit margin in the depressed market, the estates can have no incentives to raise production; also, if larger exports do not bring to the Indian exchequer correspondingly higher foreign exchange, there can hardly be any significance in the attainment of the third plan target.

Mr Daga gave comparative figures of the years 1950 and 1961 relating to the working results of tea companies in West Bengal and Assam to show that while production over this period increased by 4 percent from each acre and sale proceeds by 8 percent a lb, the cost of production a lb rose by 45 percent and profit a lb declined by 87 percent. The rise in costs is partly on account of the interim wage increase awarded by the Wage Board. This has had the effect of pushing up the wage bill by 8np an adult worker a day, and of raising the cost by 3np a lb. The emergency risks insurance as well as higher cost of transporting coal by other means than railways have added to costs appreciably, coming on top of the heavy burden which the Central and State levies have imposed on this industry.

Mr. Daga is of the view that the policy of imposing a surcharge on tea excise to discourage domestic consumption is mistaken. Apparently, the authorities wrongly think that the surplus which is available for overseas markets will be unduly reduced by greater offtake at home. Since increased profit in external markets and not merely increased quantities should be the main goal of export promotion, a strong home market could act as a useful cushion to regulate supplies to export markets.

Exporting Engineering Goods

The chairman of the Engineering Export Promotion Council, Mr. S. L. Kirloskar, recently led an eight-man trade delegation to western Europe. The countries the delegation visited were West Germany, Italy, Holland, Belgium, France and the U.K. Mr. Kirloskar said at a Press conference in Calcutta last week that during its visit to western Europe, the delegation found considerable interest among west European manufacturers in setting up enterprises in this country, considering its low labour costs. He suggested, for example, that due to the decline in demand for bicycles in the U.K. because of the keen competition from scooters and motor-cars, many of the manufacturing units may have to curtail their production or go out of business altogether. But if the same units start business here—in collaboration with Indian enterprises—they may profitably export bicycles to Asian markets.

The west European markets, according to the delegation, are dynamic, sophisticated, competitive and have immense potentialities. "To get into these markets is difficult, but once we have been able to do so, the going will perhaps be easy. For this purpose, specialised production, technical ability of a high order, first-class quality and salesmanship are necessary." Manufacturers have to enter these markets not on the basis of short-term business, but with a view to establishing it on a long-term basis. A wrong impression is held in western Europe about India's ability to supply engineering goods and services. She has so far been regarded as a supplier of such commodities as jute goods, tea, cotton and oilseeds. The delegation has tried to convince European manufacturers and buyers that India can be regarded as a dependable supplier of engineering goods and services. Such engineering items as iron and steel castings for machine tools and machine-building industries, tools, dies, jigs and fixtures, free forg-

ings, diesel engines, electric motors, switchgear, sewing machines, small tools, etcetera, can find an export market in Europe. Competitiveness of an Indian product, according to the delegation, has to be proved first on the basis of trial orders. Continental buyers are choosy, and they like to have some organisation next door, whom they can hold responsible in case there is any defect in the exported engineering goods.

The delegation has made a number of recommendations to increase exports of engineering goods to western Europe. The industry, it says, must establish close personal contact with European buyers to know their exact requirements. The idea that India is a supplier of raw materials and agricultural products has to be changed by continuous propaganda. The Government should participate in trade fairs. Besides, missions from west European countries should be encouraged to visit India to see for themselves the progress of the engineering industry here. The delegation's recommendation that India should manufacture a "prestige item", say, a Rolls-Royce type motor-car does not, however, appear to be a practicable proposition. Firstly, India's engineering progress is not yet such that she can produce a motor-car of the technical perfection of a Rolls-Royce. Secondly, considering the progress of plans for self-sufficiency in spares and components of some indigenous manufacturers, one does not feel optimistic that a Rolls-Royce car can be produced in India after a few decades, let alone after a few years.

Warehousing in West Bengal

The West Bengal State Warehousing Corporation started its operations four years ago. One of its main aims is to regulate markets, which should proceed along with the warehousing programme, for ensuring fair prices to the grower of agricultural produce and preventing malpractices. But it is surprising that the enabling legislation for this purpose has not yet been passed. It is also regrettable that the legislation to provide statutory recognition to warehouse receipts for transactions with banks, is still pending. Most other States, incidentally, have already passed such legislation. As a result, except for the State Bank, most of the private banks have stopped giving credit facilities against warehouse receipts. This apart, the Reserve Bank's recent credit squeeze has adversely affected the Corporation's activities. Since private banks have been forced to cut their advances against warehouse receipts for paddy and rice, the Corporation's activities have virtually come to a standstill. Under the circumstances, the directors doubt whether they will be able to achieve the third plan target of providing an additional storage space for 47,500 tons.

In the initial stage, the West Bengal State Warehousing Corporation and the Central Warehousing Corporation were eager to open many warehouses as quickly as possible. But the former now feels that the latter has been intruding on its sphere of activity. A notable achievement of the State Corporation during 1961-62 is the construction of a cold storage for potatoes in the Hooghly district with a capacity of 1,320 tons. Encouraged by its performance, the Corporation wanted to set up another cold storage with a capacity of 60,000 maunds. But the Central Warehousing Corporation has stopped the State Corporation from constructing it on the plea that the building of these storages involving a large capital outlay is an exclusive privilege of the former. The State Corporation, under the circumstances, has incurred a loss of Rs. 1.53 lakhs during the year ended March 1962.

Threats to Industrial Peace

In his address from the chair at the annual session of the All-India Organisation of Industrial Employers in Bombay last week, Mr. D. C. Kothari observed that the present benefits available to industrial workers and the expenditure on their welfare—this latter constitutes an important element in labour costs—could not by any means be considered inadequate in the present economic cir-

cumstances of India. Labour wages have substantially increased in the past few years. By and large, employers prefer strong trade unions to deal with. According to Mr. Kothari, the Industrial Truce Resolution has been observed fairly satisfactorily, although an unnecessary sensation has been created about the violation of this Truce by a few employers in the past two months, by exaggerating stray complaints against them.

An important point which Mr. Kothari made was that the real danger to industrial peace arises not from the attitudes of employers or employees, but on account of the wrong fiscal policies adopted by the Government. Every rise in the prices of commodities which enter into the family budget of industrial workers, creates a demand for further increases in wages, which pushes up production costs. In this way, industry is called upon to bear the burden of any taxation imposed on anything by any State or by the Centre. According to Mr. Kothari's estimates, the indirect taxation in the Central and State Budgets for 1963-64 would increase the cost of living of the people by 5 per cent or 8 per cent. On the other hand, the pay packet of wage and salary earners would be reduced as a result of the rise in income tax and the compulsory deposit scheme. Industry, Mr. Kothari feared, would not be able to meet the demands for higher wages on account of the rise in the workers' cost of living for the simple reason that the prices of finished commodities cannot be correspondingly raised, and there is no scope for increasing wages in the absence of a rise in the prices of manufactured goods. In order, therefore, to maintain peaceful industrial relations, which is vital for stepping up production, the Government should make suitable changes in its fiscal policy. And the extent to which it is not possible for labourers to get higher wages to compensate them for the rising costs of living, the Government should create the necessary climate for the former to accept the implied sacrifice as their contribution to the defence effort. If the Government fails in this effort, the peace in industry is bound to be disturbed in spite of the Industrial Truce Resolution, and in spite of the best intentions of both employers and employees to maintain harmonious industrial relations.

Some recent observations of Mr. Gulzarilal Nanda and other Ministers of the Government indicate that the Government is thinking in terms of further legislation for maintaining industrial peace in the country during the emergency. Mr. Kothari has pointed out that legislation cannot achieve much, for it contains an element of compulsion. It cannot create a sound foundation for peaceful industrial relations, which conventions evolved through voluntary effort alone can ensure. In this connection, Mr. Kothari commended the scheme prepared by the Joint Consultative Board for industry and labour under which a bipartite mediation service would be set up on an industry-region-wise basis for resolving industrial disputes. If employers and employees refer all their disputes to the bipartite mediation service it should be possible to resolve them to the mutual satisfaction of all. The Government should be careful not to refer any issue pending before the mediation service to compulsory adjudication in order to give a fair chance to voluntary conciliation.

Insurance in Pakistan

The *Pakistan Insurance Year-book, 1962*, which has just been published, incorporates data on the working of insurance companies and provident fund societies during 1961. It is an interesting study since Pakistan is one of the few countries in south-east Asia which runs life insurance business as a private enterprise. The new life business effected in Pakistan in 1961 exceeded Rs. 37 crores, of which the share of local insurers was more than Rs. 24 crores and that of foreign insurers about Rs. 13 crores. The new business has steadily increased over the past few years. In 1959, it was over Rs. 25 crores, in 1960 it exceeded Rs. 27 crores but in 1961, there was a distinct progress since the total new business was over Rs. 37 crores.

The total life insurance business in force in Pakistan on 31st December, 1961, exceeded Rs. 135 crores. This amount is shared equally by local

India's Resources

are Precious

WASTE NOT,

WANT	NOT
1. Be specific in your request. "I want to be a doctor" is not specific. "I want to be a pediatrician" is more specific. "I want to be a pediatrician who specializes in treating children with chronic illnesses" is even more specific. 2. Be realistic about your goals. Don't set goals that are impossible to achieve. For example, "I want to be a millionaire by the age of 25" is not realistic. "I want to be a successful business owner" is more realistic. 3. Be flexible in your goals. Your goals may change over time. It's okay to adjust your goals as you learn more about yourself and the world. 4. Be proactive in achieving your goals. Don't wait for opportunities to come to you. Take initiative and create your own opportunities. 5. Be persistent in your efforts. Don't give up when you face challenges. Keep going and you will eventually achieve your goals.	1. Be vague in your request. "I want to be successful" is vague. "I want to be a doctor" is more specific. "I want to be a pediatrician who specializes in treating children with chronic illnesses" is even more specific. 2. Be unrealistic about your goals. Don't set goals that are impossible to achieve. For example, "I want to be a millionaire by the age of 25" is not realistic. "I want to be a successful business owner" is more realistic. 3. Be inflexible in your goals. and foreign companies. For the local companies, the total life business in force on that date was over Rs. 70 crores, against over Rs. 65 crores of foreign companies. The total income and outgo of the local and foreign insurers during 1961 in relation to their life insurance business show that local insurers were able to transfer Rs. 2.46 lakhs to reserve and dividend against Rs. 74,000 by foreign insurers. Sums of Rs. 2.19 crores and Rs. 2.21 crores of local and foreign companies, respectively, represent the increases in the life funds of the Pakistani and foreign insurers in 1961, which now stand at Rs. 11.59 crores and Rs. 14.04 crores, respectively. The net rates of interest realised by Pakistani insurers on their total life funds and by foreign insurers on their mean life funds for Pakistan was 3.45 percent and 3.54 percent, respectively, for 1961, against 3.60 percent and 3.22 percent for 1960. The total management expenses of Pakistani insurers in relation to their life insurance business and of foreign insurers in relation to their Pakistani business—expressed as a percentage of their premium income—show that in 1961 Pakistani insurers had an expense ratio of 37 percent, against 25.6 percent for foreign insurers. In 1961, the ratio was 35.5 percent for Pakistani insurers, against 26.0 percent for foreign insurers. According to the Year-book, the investments as at 31st December, 1961, amounted to

more than Rs. 16 crores in Government securities, more than Rs. 17 crores in Government and other approved securities and over Rs. 23 crores in approved investments.

As for non-life insurance, that is the fire, marine and miscellaneous insurance business, the total gross premium income written direct in Pakistan by Pakistani and foreign insurers during 1961 amounted to Rs. 3.25 crores in fire, Rs. 3.41 crores in marine and Rs. 1.75 crores in the miscellaneous insurance business. The gross premium income, including life insurance, written direct in Pakistan, amounted to Rs. 15.86 crores. The fire premium income showed an increase of Rs. 15.99 lakhs over that of 1960. Similarly, the marine premium income showed a rise of Rs. 77.28 lakhs and the miscellaneous premium income of Rs. 24.24 lakhs over that of 1960. It will be seen that the fire and marine premium incomes, written direct in Pakistan, are evenly balanced and that the premium income in the miscellaneous section also bears good relation to the fire premium income unlike in India where the miscellaneous premium income is sharply rising.

The trend of general insurance business in Pakistan is available from a study of the net premium income. In 1961, the latter was Rs. 4.34 crores, against Rs. 3.89 crores in 1960. There had

been a steady and continuous rise in the net premium income from 1952 to 1961. The claim ratios in relation to the fire, marine and miscellaneous insurance business were 27 percent, 63 percent and 47 percent, respectively, for 1961, against 32 percent, 55 percent and 42 percent for the previous year. The Year-book says that between 1949 and 1961, the gross premium income of Pakistani companies in fire, marine and miscellaneous business has increased to about 1,326 percent, 1,327 percent and 527 percent, respectively, compared with the figures for 1949. The corresponding figures of foreign companies work out to 194 percent, 337 percent and 337 percent, respectively.

CORRESPONDENCE TAXATION IN INDIA

(TO THE EDITOR OF "CAPITAL")

Sir,

It is generally accepted in national finance that when very extraordinary expenditure is to be met by a country, the best method is to inflate the currency for the duration of the emergency.

When the emergency is over and for some years thereafter, the currency is gradually set on a normal basis. This particularly applies to India at present, where inflation of the currency would be considered judicious and the normal influences of trade and exports would, over the course of years, restore the currency to normal. I consequently hope that India will follow suit, as her very high taxation is liable to damage the fabric of business.

Yours etcetera,

ERIC HAYWARD

Chilham, Kent, England, 8th April, 1963.

PRICES AND WAGES

IT is a depressing evidence of the profound ignorance with which much of the pessimistic writing on Indian poverty is saturated that the authors of scores of gloomy articles in the newspapers, the reviews and magazines, seem to use all methods of investigation except the right one. There is the moral method, the political method, the sentimental method, the statistical method, but the plain economic method of investigating the problem is too often ignored. It may be said that the economic method is largely made up of phenomena to which the other methods are at least closely allied, and this in a way may be true. The things, however, which are not true are Mr. Digby's nightmare of the "Drain", the Rupee Famine theory, which assumes that the famine was not a famine of food but a famine of rupees—the Currency theory which declares that India is being ruined on account of the '93 legislation—and there are other theories like unto these. It is easy enough to admit that vast communities in India are poor; but it is ridiculous to jump to the conclusion that this poverty is in some way a direct outcome of foreign administration. The poverty may be, indeed is, coincident with a certain period of British rule, but it springs from causes with which the Administration has little, if anything, to do. Again it is no difficult matter to prove that prices have risen, and that wages especially of the unskilled agricultural labourer, have remained practically stationary; but unless we endeavour to ascertain why wages have remained stationary it should be obvious that we are merely stating a fact which will exist, whether we state it or not. The *Statesman*, the other day, in noticing Mr. Digby's Liverpool address on "Our Failure in India" observed that the abnormal amount of distress that has undoubtedly prevailed among the poorer classes of the population in India in recent years is largely due to the fact that the country, as a whole, is in a stage of transition from low to high prices, as a result of its continued accumulation of the precious metals. The increasing monetary wealth of the country, as a whole, means, in fact, increasing poverty of a large class whom the wealth does not reach, and the purchasing power of whose meagre earnings is reduced by the resulting rise in prices.

A Ditcher's Diary

IN THE RIGHTLY APPREHENSIVE SOUTH AND EAST THERE is a temptation to see, or imagine, a massive Hindi-speaking ogre ramming his language down the throat of the rest of India. I have often wondered how solid and singleminded the Hindi bloc is. Supposing, however, that north India is absolutely united in imposing Hindi and removing English, that there is a master-mind behind the entire campaign, I would say that the recent tactics of this group have been rather clever. It is the champions of Hindi who affect not to like the new Official Languages Bill, subtly suggesting thereby that non-Hindi speaking people should be delighted with it. Of course, they aren't; they can't be. Mr. Lal Bahadur Shastri himself had to come out with the real purport of the Bill when, in placating the Hindi fanatics, he said that, through the Bill, Hindi had in effect for the first time been enshrined as the official language, that after 1965 English "may be used". This is, surely, a far cry from the Prime Minister's unequivocal assurance that English will remain as the associate official language until the non-Hindi speaking people agree to accept Hindi. Much is being said about the Constitutional provision on Hindi. Let me get this argument out of the way once and for all. The Constitution was passed in a psychological climate very different from today's; it was not then clear, although it should have been, that the north wanted its language adopted less for linguistic reasons than for political. Advocates of Hindi should ponder how they have dissipated the good will Hindi once enjoyed. In Madras it was Mr. C. Rajagopalachari who was sending people to jail for opposing Hindi; today he can hardly bear to hear of the language. In Bengal Dr. Suniti Kumar Chatterjee was the president of the Hindi Prachar Samiti; as a member of the Official Language Commission he wrote a dissenting minute for, he said in effect, it was now clear to him what Hindi would mean to the non-Hindi speaking people of India. It may well be that some of the fears are exaggerated; the fact is that they are there. I think it is a pity that the official language question should have to be handled by the Home Ministry, which now happens to be in the hands of a man who is most tolerant but happens to be from a Hindi-speaking area.

I HAD WADED THROUGH A FEW PAGES OF *Advise and Consent* and with due respect to Mr. Allen Drury promptly made up my mind not even to try his next novel which is now out under the title *A Shade of Difference*. Mr. Malcolm Muggeridge's review of these, together with that other best-seller that I have no intention of reading, *Fail-*

Safe by Eugene Budrick and some Prof., in the *New Statesman*, is gloriously funny. Muggeridge makes the point, immensely interesting, that the U.S.A. is now reaching a stage of its historical development at which it needs its Kipling—and it has found him in not only the Lippmanns and Alsops but also in writers like Drury, Budrick & Co. Their mission is to assure the great American people that the U.S.A. is now terribly powerful, that this power is being used, with a few exceptions, for the good of the world—yes, exactly as God wished it. Muggeridge points out several authentic Kiplingesque touches and presents at least two excellent epigrams. I shall quote one. Writing of the speeches he had to endure in the U.S. Senate, he adapts the remark attributed to Voltaire and says, "One agreed with everything they said but would die to defend one's right not to hear it". He also has a good Earl Long story: "My brother, Huey, used to buy Congressmen, but I have found it more economical to rent them". Need I explain that the reference is to members of the U.S. Congress and not to those of the Indian National Congress? My own favourite is an adaptation of Charlie Wilson's breathtaking remark which goes like this: "What is good for these United States is good for the world". Does this leave the world with too little choice? Henry Ford to the rescue: "My customers are free to choose any colour they like for their cars—as long as it is black". Mark you, some of my best friends are Americans . . .

THE PREVENTION OF ACCIDENTAL NUCLEAR WAR IS, I see, the ostensible justification for the proposed "hot line" between Moscow and Washington. Well, I suppose that is as good a reason as any why the world's two most powerful statesmen should agree to a more direct method of maintaining personal contact. The trouble is that one cannot imagine the line—probably a teleprinter—remaining restricted to use only in the supreme emergency. A distaste for the restrictions of conventional diplomacy has always been a characteristic of Mr. Khrushchev, and Mr. Kennedy, despite the failures he has had during the past couple of years, still retains something of the young man's preference for tackling difficulties personally and in as direct a manner as may be democratically possible. Do I imply that the two men will use their new channel of contact for settling the world's affairs behind its back? The answer is: Yes, I do. And I am not altogether sure that it will not be a good thing either, never having been too enthusiastic an admirer of the old-fashioned conventional diplomacy or the new method of international haggling

personified by the United Nations' talking shop. My doubts about it stem from somewhat different reasons. For instance, it is practically bound to be copied, and I can picture a new profusion of link-ups—de Gaulle with Adenauer, Nehru with Khrushchev, and so on—all with the declared purpose of avoiding world disaster, but all in fact contributing to international tension by increasing suspicion of secret dealing and behind-the-back personal manoeuvring. There is much to be said for improving contacts between the world's statesmen. But to increase the personal element in world affairs is to help emasculate national Parliaments, weaken the useful and carefully-built-up channels of conventional diplomacy, and generally to strengthen the growing tendency to conduct the world's affairs on the senior executive principle. It might be as well to think out carefully what all this means before welcoming it too unreservedly.

THE VERDICT OF THE CANADIAN PEOPLE IN REJECTING Mr. Diefenbaker and his Party was not, I imagine, an unqualified vote in favour of nuclear arms for Canada, although that was what the election was supposed to be about. And Mr. Kennedy would be foolish, too, if he were to take it as approval of the part he has played in the whole dismal affair. I have not been following Canada's internal politics very closely during the past few years, but I have read enough to persuade me that Canadians had grievances against Mr. Diefenbaker's Government which had little connection with the argument about nuclear weapons. It seems to have suffered too from being at odds with the French-speaking section of voters, and this is something which could have considerable significance for the future of Canadian democracy. French Canadians appear to be developing into something of a militant lot these days. After living more or less contentedly alongside their English-speaking neighbours for centuries, it seems they have suddenly rediscovered their old national identity. They have always, of course, been rather apart culturally, and they have had excellent reasons in the past for resenting some of the more brash manifestations of British domination. But recently this somewhat sentimental attachment to former national roots appears to have become more aggressive, and it is not because the English-speaking section of the population is any more domineering now than it has been before. The reason seems to be the recent national resurgence of France herself, and this contrasted with the comparative eclipse of Britain and the weakening of the links between her and Canada. One cannot begrudge the French Canadians a measure of pride in their ancestry. But when they are prepared—as it is beginning to appear they might be—to let lies which are now more than 200 years old endanger the unity of their adopted country, antagonise their English-speaking compatriots, and risk doing irreparable damage to the

HOW TO GET YOUR BANKING WORK DONE 70 MILES ABOVE THE EARTH

When you order the Union Bank to transact business abroad, they do things in double-quick time, using Telex. Telex transmits the message in radio waves to the ionosphere seventy miles above the earth, from where they bounce back and are picked up abroad, at the required station. The Union Bank is one of the few banks in India subscribing to Telex. Open an account with us to ensure that you get prompt banking service in keeping with space-age speed. The Union bank has correspondents in 50 countries, with 24,007 offices!

future of democracy in Canada by acting always as a single group, then they might do well to think again.

So Mr. KRISHNAMACHARI PREFERS TOP-HEAVINESS in the Government of India! One cannot help admiring this able Minister's penchant for the unpopular view; but I see trouble ahead. The administration would, of course, be better if decisions were taken faster. It is not to be assumed, however, that a proliferation of secretaries and joint secretaries will necessarily eliminate log-rolling; and those who know how governments function may wonder whether there may not be more clerks and assistants with more secretaries and joint secretaries. As Professor Parkinson has shown, a secretary has to have, almost as a law of nature, two joint secretaries; otherwise he feels neither important nor secure enough. Carried to its logical extreme and applied to the Ministers, Mr. Krishnamachari's proposition might lead to the removal of all Ministers save the Prime Minister; the Government would then be really heavy at the top. To some observers it already seems that, on all questions that matter and many that do not, there is none but the Prime Minister. A more basic defect in the Government is that even when decisions are taken, promptly or otherwise, nothing much is done about them. And it is difficult to see a secretary actually doing something, except of course writing on files of which there is enough already. Ministers don't do this much, it is true; they make up for it by delivering speeches. All in all, I see no reason why the slumber of clerks and assistants should be disturbed because of Mr. Krishnamachari's speech. Some, in fact, may expect to be promoted to be secretaries or joint secretaries.

WHAT HAPPENS TO A NATION WHEN IT BECOMES an affluent society? Apparently it gets up to its ears in hire-purchase debt, sends its married women out to work, spends much of its leisure watching television, congregates in suburbs round the big cities, indulges in crimes of violence, grasps after unearned wealth, relaxes its morals and runs up bills for gambling which can be described in a sober official document as "stupendous". At least that appears to be the verdict passed on modern "John Bull" by a survey recently carried out in Britain. I am only glad to see there is another side to the coin. The British people are healthier and wealthier than they were ten years ago, and they certainly appear to be living in greater comfort. They are also better fed; and there is not likely to be any relapse into the working-class poverty of the 1930's. More books are read, despite television, and theatres, concerts, ballet, opera and painting have never been better supported. So the net result would certainly appear to be on the credit side of the account. What interested me most about the survey was its comments on the frustrations of life in Britain today. Not only is this being caused by the increase in commuting on a railway system which was at its best 50 years ago, but, at least so far as British youth is concerned, it seems to be an intrinsic feature of modern Britain itself. This may be because tastes, thanks to advertising and other forms of demand stimulation, have been growing even faster than incomes. But I think the real reason—and this is one I have been unable to find in the reports of the survey which I have read—is that the world is no longer its playground. Fifty years ago an adventurous young Briton could escape the restrictions of his own background by going to any one of a dozen exciting countries, India among them, and could hope to return, if not with a fortune, at least with a comfortable competence and a wealth of mature experience. Now it is not so easy; as Lord Mountbatten said rather surprisingly some time ago, what Britain needs today is not young men with fire in their bellies but highly-trained experts. The trouble with experts, though, is that as a race they are subject to the kind of neuroses and frustrations that the old empire-builders never knew. I suppose that is the price nature exacts for quenching the fire.

THE DITCHER

Guide for Investors

PROSPECTS FOR ENGINEERING SHARES UNCERTAIN

(BY A SPECIAL CORRESPONDENT)

THERE has been a fair recovery in engineering shares during the past week. Although the improvement has taken place along with other classes of shares on the hope that the Central Finance Minister will announce suitable modifications in the proposed super profits tax, the recovery is mainly inspired by the belief that this industry will greatly benefit from the present emergency because of big defence orders. In spite of the unilateral cease-fire, the Government continues to concentrate its attention and energy on raising defence production, although it is not possible for Government to make all information about it public. The industry has yet little knowledge about how the output capacity will be geared to defence production.

The investor, however, is not likely to go wrong if he takes it for granted that most of the engineering units will be asked to divert their productive capacity to making defence materials in due course. But this factor by itself should not give rise to complacency about the prospects for the shares. It is widely known that the output capacity in this industry has not been fully used due to various factors. To the extent the unused capacity has increased, the profitability has proportionately declined. An important factor contributing to a higher unit cost of production has been the under-utilisation of capacity.

The supply of steel, which constitutes the chief raw material for the engineering industry, has been generally short. Although the domestic production of steel considerably improved in 1962, fabricators have found it difficult to obtain the right quality of steel in proper quantities at the right time. There has also been a serious shortage of special quality steel. The engineering units have not been able to obtain the necessary sections and sizes of steel. It is reliably learnt that at least two leading wagon manufacturers lost production to the extent of nearly Rs. 4 crores as matching steel could not be obtained. The shortage of pig iron has been acutely felt. The performance of the industry has suffered because of the scarcity of good quality coke. Several engineering units, particularly those in West Bengal, has been adversely affected by the shortage of electric power. Tin-plate, copper, zinc and welding electrodes have been in short supply. The severe import cuts have made it difficult for the industry to obtain spare parts for maintenance. Costs of replacement and expansion have risen. This apart, it is doubtful whether defence production can be as remunerative as the stock market thinks it will be. The Government is likely to regulate the prices of these goods carefully.

An important attraction of engineering shares has been their growth prospects. Most of the leading units have taken steps to expand and diversify activities and modernise the equipment. Unless the super profits tax is substantially modified, it is likely that the programmes of expansion and modernisation will suffer. The recent emphasis on import substitution is a bull factor, and many engineering concerns have started producing large quantities of plant and machinery. Since the

demand for capital goods is very great, the prospect for this line should be good. If the industry is given the facilities, there is no reason why considerable expansion should not take place. But the industry must be allocated sufficient foreign exchange to import spares and raw materials. Vigorous efforts also need to be made to remove the shortages of transport, power and good coal. But these things will take time to fructify, so investors will be well advised to take a cautious view of the share prospects. Most of the engineering shares appear to be fairly-priced on the basis of current dividends. Since the general dividend outlook is not encouraging, at least in the near term, investors will do well to choose those companies which have already gone ahead with their plans for expansion, modernisation and diversification.

Cawnpore Textiles Maintains

ALTHOUGH the dividend has been maintained at 10 percent—50p on the Rs. 5-paid share—less tax, the working results of Cawnpore Textiles Ltd for the year 1962 show a considerable setback over the previous year's performance. In spite of an increase of 7.4 percent in the sales from Rs. 1.62 crores to Rs. 1.74 crores, the gross profit is down by as much as 37 percent from Rs. 26.12 lakhs to Rs. 19.09 lakhs. After providing Rs. 4.30 lakhs (against 3.79 lakhs) for depreciation and Rs. 7 lakhs (against Rs. 9 lakhs) for taxation, the net profit is down by 45.4 percent from Rs. 11.76 lakhs to Rs. 6.75 lakhs. Allocation to development rebate reserve has been reduced from Rs. 1.61 lakhs to Rs. 76,000 and provision for general reserve is also down from Rs. 5.50 lakhs to Rs. 3 lakhs. The excess provision for depreciation in previous years amounting to Rs. 9.47 lakhs, has been written back and transferred to capital reserve. After providing for the proposed dividend which absorbs Rs. 3 lakhs (the same), there remains a surplus of Rs. 49,055 to be carried forward, against Rs. 47,303 brought in.

The directors state in their report that while the working of the mill was satisfactory in points of production and efficiency, the profit margin was squeezed by the sharp increase in the cost of production on account of higher cotton prices, increase in the wage bill and rise in the prices of stores generally. The Company's export performance also suffered a setback due to keen competition from Indian and foreign exporters. The obligations enjoined under the export promotion scheme have, however, been fulfilled. The drop in export sales is reflected in the fall in the premium on cotton entitlement from Rs. 12.86 lakhs to Rs. 8.84 lakhs. The programme of renovation and modernisation of the mills continues to be implemented. The Company has a paid-up capital of Rs. 30 lakhs (all in equity shares of Rs. 5 each), and it is supported by free reserves amounting to Rs. 62.7 lakhs. At its current quotation (nominal) of Rs. 6.94 an ordinary share, the gross return on Cawnpore Textiles works out to around Rs. 7.8 percent. The book value of the share is high around Rs. 15.5. The gross block of

a little over Rs. 1 crore has been written down to Rs. 32.87 lakhs.

Progress of National Rubber

NATIONAL Rubber Manufacturers Ltd has produced satisfactory results for the year ended December 1962. Both turnover and profits have improved. So the taxable ordinary dividend has been increased from 6.5 percent for 1961 to 8 percent for 1962. The good results have been due to the expansion programme which has recently been completed. The Company has received an industrial licence for expanding the manufacturing capacity of industrial v-belts and fan-belts. The Company also expects to receive a licence to effect a substantial expansion of the capacity for cycle tyres.

In his address at the annual general meeting in Calcutta last Thursday, Mr. K. N. Mookerjee, chairman, points to the progress of General Tyres Ltd of which National Rubber Manufacturers are the managing agents. (A full text of the speech is printed on a later page in this week's issue of Capital.) The construction of buildings has been completed and the equipment installed. Trial production is expected soon. Meanwhile, the Government has issued a licence to the Company to expand its output capacity for tyres and tubes to 300,000 each.

The Company is exploring the possibility of exporting its products. Although a carbon black plant and a synthetic rubber plant are likely to start producing soon, the chairman has expressed his concern over the rising production costs of the rubber manufacturing industry. The latest Central Budget has increased the import duties on various items. The prices of domestic raw materials have also risen due to the imposition of the increased excise duty. As for the super profits tax, Mr. Mookerjee thinks that it will affect the capacity of companies to pay dividends and plough back funds into reserves. Besides, it will affect the flow of foreign capital and technical know-how. So the levy, it is expected, will be substantially modified.

Cawnpore Sugar Skips Again

THE Cawnpore Sugar Works Ltd reports disappointing results for the year ended October 1962. In spite of slightly larger sales, the Company has suffered a heavy loss and the dividend has been skipped for the sixth year in a row. Sales of sugar, molasses, spirits and denaturants recorded a modest rise from Rs. 4.19 crores to Rs. 4.28 crores, but the Company has incurred a loss of Rs. 13.07 lakhs, compared with a profit of Rs. 7.07 lakhs in the previous year. After providing Rs. 7.25 lakhs (against Rs. 6.80 lakhs) for depreciation, Rs. 1.36 lakhs (against Rs. 2.19 lakhs) for development rebate reserve and Rs. 6,500 (against Rs. 5,500) for agricultural tax, the net loss amounts to Rs. 21.74 lakhs, compared with Rs. 1.97 lakhs in 1960-61. Together with the loss brought in, the

total loss amounting to Rs. 25.45 lakhs is being carried forward.

The directors have attributed the adverse trading results to the heavy losses incurred by the Padrauna and Kathkuiyan factories. The cane yield was relatively poor, which was the inevitable consequence of these factories having to continue crushing as late as June 1962 under Government orders to cope with the cane supplies available. There was also a mechanical setback. Besides, the Company sustained a loss of Rs. 9.50 lakhs on exports in fulfilling the export obligations at prices far lower than production costs. The substantial increase in bank interest and other charges added to the losses.

The directors are considering ways to implement certain suggestions for the improvement and rehabilitation of the factories. Heavy floods and adverse weather conditions resulted in a drop in the cane yield in the 1962-63 season, and also in a shorter season. As for the 1963-64 season, the cane development scheme has been revived on an extensive scale so as to make sufficient and better quality of cane available for crush during the season.

National and Grindlays Earns More

THE Indian branches of the National and Grindlays Bank Ltd have earned a profit of Rs. 62.46 lakhs during the year ended December 1962, compared with Rs. 60.99 lakhs in 1961. (Fuller details appear on a later page of this week's Capital.) Interest paid on deposits rose from Rs. 2.54 crores to Rs. 2.87 crores, and interest and discount earned were higher at Rs. 6.08 crores, compared with Rs. 6.71 crores. Deposits improved from Rs. 120.87 crores to Rs. 126.96 crores. Cash stood at Rs. 9.79 crores, against Rs. 9.98 crores. Investments rose from Rs. 18.46 crores to Rs. 20.76 crores and advances from Rs. 106.67 crores to Rs. 119.68 crores.

Non-woven Fabrics from Tata and Digvijay Mills

MANY textile mills are known to have been thinking, for quite some time, of undertaking the manufacture of non-woven fabrics. In fact, two Bombay mills—Digvijay Spinning and Weaving and Tata Mills—and two Kanpur mills—Annapurna and Swadeshi—submitted their schemes to the Government of India some time ago, seeking permission for installing plants. The manufacture of non-woven fabrics is quite new to India. It also involves special technical know-how and techniques. After considering various factors such as the need for the development of new processes in the textile industry, foreign exchange difficulties and the need for export promotion, the Textile Commissioner, it is reported, has recommended to the Central Ministry of Commerce and Industry that mills wishing to set up plants for the manufacture of non-woven fabrics should be allowed to do so only if they fulfil certain basic conditions.

The Textile Commissioner has suggested that any party which is allowed to put up a plant for making non-woven fabrics should give a guarantee to export non-woven cloth produced on imported plant equal to the value of the imported machinery every year for a period of three years starting from one year after the date of installation of the plant. Alternatively, the party should give a guarantee to export additional quantity of any type of cloth equal to the value of the imported plant

every year for three consecutive years after the imported plant goes into production. This export will be in addition to the average exports, if any, made by the mills during the last three years or last year, whichever is higher. Yet another condition is that the foreign exchange required for raw materials such as synthetic fibres and binding agents, and also for collaboration arrangements, should be financed by import entitlements earned by the additional export of fabrics. The Textile Commissioner, it is said, is of the view that composite textile mills which can finance the import of capital goods out of their machinery entitlements under the export promotion scheme should be given priority.

Reliable reports indicate that of the four textile mills which had sought the Government's permission for setting up plants for non-woven fabrics, only Digvijay Spinning and Weaving Mills and Tata Mills are being allowed to set up new plants. Applications of the other two mills from Kanpur are likely to be turned down as they are not prepared to accept the export obligations. Digvijay Spinning and Weaving Company proposes to set up a plant with an annual capacity of 600,000 lbs. on a single-shift basis, of non-woven fabrics to be made entirely from indigenous raw materials—cotton, wool, art silk, staple fibre waste. No foreign collaboration is visualised, but the Company will need to spend Rs. 4 lakhs on the import of capital equipment, which will be against the import entitlements of the mill.

In terms of the export obligation, the Company will be in a position to earn about Rs. 12 lakhs by way of foreign exchange.

Tata Mills proposes to manufacture 417,233 kilograms of non-woven fabrics a year from raw materials which will be procured partly from indigenous sources and partly from abroad. Imported capital equipment will cost about Rs. 10 lakhs and machinery worth Rs. 2 lakhs is being obtained from indigenous sources. Imported raw materials consist of polyester fibre and synthetic polymers valued at a little over Rs. 50 lakhs. In due course, however, these raw materials will become available from within the country. The entire project is to be financed out of the mills' own resources. The Company is seeking the collaboration of the U.S. firm of Buresh of Blandford for advice on the selection and installation of the plant and equipment. The British firm of Lanter Ltd will assist the Company in the operation and marketing of the products.

Digvijay Spinning has agreed to export cloth equivalent to the value of machinery every year for three years, and it has requested the Government to grant at least 75 per cent of its export earnings from non-woven fabrics for the import of necessary raw materials. Tata Mills will earn about Rs. 30 lakhs of foreign exchange a year under the export obligation. In their last annual report for 1961, the directors have stated that they will start the production of non-woven fabrics shortly.

Atul Products to Issue Rights

THE preliminary figures about the working of Atul Products Ltd in 1962, released along with the announcement of the dividend of 12 per cent (the same as in 1961), showed that while sales had fallen by 12.6 per cent from Rs. 4.75 crores to Rs. 4.15 crores, the gross profit has come down by only 6.7 per cent from

Rs. 1.32 crores to Rs. 1.23 crores. According to the directors' report, which is now available, the profit for 1962 includes a sum of Rs. 27.27 lakhs (net) received as dividends from other companies, compared with Rs. 18.06 lakhs in the previous year. However, considering that the Company continued to experience difficulties in the supply of raw materials in maintaining an efficient and economic level of production, the working results for 1962 do not look unencouraging.

As against the quota of import licences which the Company used to have in 1958, it received in 1962 only 41.5 per cent of the value of such licences and it had to make good the deficit by purchases from other sources. In addition to the increase in cost due to this reason, there have been increases in other costs also. The import licences for raw materials have been cut down still further in 1963, and the Company will have to face a difficult situation.

The directors state that although the market for dyes was rather dull during the major part of 1962, the Company was able to maintain, more or less, the value of sales in dyes. On the pharmaceutical side, there were no sales at all of aureomycin and its related products because from the beginning of 1962, Cyanamid India Ltd took over the manufacture of these products. The Company is trying to make good this loss of business by pushing the sales of the remaining pharmaceutical products and by undertaking the manufacture of additional products. It has undertaken the manufacture of many new products like Bon acid, caustic soda, naphthalene intermediates, fast colour bases and chlorosulphonic acid.

The erection of the Bon acid plant is almost completed and initial production, it is expected, will begin shortly. There has been some delay in the setting up of the caustic soda plant due to certain unexpected difficulties. However, the Company expects to start this plant by September 1963, and gradually reach its full capacity by 1964. The building for the naphthalene intermediates plant is being constructed. Orders for the equipment have been placed and the plant, it is expected, will be ready only in the beginning of 1965. The Company applied for an import licence for the equipment for the fast colour bases plant some time in October 1962, and expects to get it soon. It is hoped that this plant will be ready by the end of 1965. The Company is setting up a plant for the manufacture of chlorosulphonic acid and is also extending its present sulphuric acid plant for the manufacture of additional quantity of sulphuric acid needed for this purpose and for the purpose of manufacturing oleum of 65 per cent strength. Orders for the equipment have already been placed, and the plants, it is expected, will be ready by the end of 1964. The Company is also thinking of going into a project for the manufacture of dicalcium phosphate and some other chlorinated products. Both these projects are intended to help the Company in making productive use of chlorine coming out of the caustic soda plant. The industrial licences for these products have already been received.

The Company needs substantial additional finance for its expansion schemes, so the directors have decided to increase its capital by the issue of equity shares worth Rs. 1 crore to be offered to existing shareholders in the proportion of one share for every three held. The Company has applied to the Controller of Capital Issues for his consent to the issue. It is also said to be negotiating with a bank for a medium-term loan to be received during 1963 to 1965 for a total sum

not exceeding Rs. 3 crores, against the security of mortgage debentures which will be covered by a charge on the Company's assets. There has been a delay in the setting up of plants for the manufacture of urea formaldehyde resins and intermediates for sulfa drugs due to various formalities for securing foreign exchange. Orders for machinery have now been placed and the plant for urea formaldehyde resins, it is expected, will be ready by the end of 1964, and that for sulfa drugs intermediates a year later. The Company has taken a further step in increasing its association with Ciba Ltd, Basle. This firm has established a modern and well-equipped research laboratory in Goregaon (Bombay), with the object of doing basic research in some chemical fields. A section for basic research in the field of dyes and their applications has been included in this laboratory. Atul Products will contribute to the expenses of running this section and will also share in the research results achieved by it. The directors add that the Company has by now drawn the entire loan of Rs. 3 crores from the Government of India and has repaid Rs. 53,36,363 up to 31st March, 1963.

In his chairman's statement to shareholders which has been circulated with the directors' report, Mr. Kasturbhai Lalbhai says that while supplies of coal were adequate during the year, the position relating to raw materials was worse than in the previous year. The Company was not only unable to make a proper selection in the purchases of raw materials, but it had also to pay higher prices for what it purchased. With its quota licences drastically cut down, Atul Products has to fall back on whatever other sources it has to procure sufficient raw materials. This condition will be relieved to some extent by the supply of five different intermediates the Company has started to manufacture. But the chairman adds that in spite of this, it will be only with great difficulties that the Company will be able to maintain a satisfactory level of production.

It is expected that by 1965, Atul Products would have invested approximately Rs. 12 crores in fixed assets, in working assets and in fulfilling the investment obligations in the associated companies. The increased requirements of finance, it is proposed, will be met by the issue of equity capital and by raising a medium-term loan from the Company's bankers. The chairman says that the increased duties on some of the imported raw materials, a 10 per cent surcharge on the excise and a levy of super profits tax will, on a rough calculation, impose a burden of Rs. 25 lakhs on the Company. The super profits tax will also affect the income which the Company will receive from the associated companies by way of dividend.

Progress of Permanent Magnets

THE directors of Permanent Magnets Ltd state in their second annual report for 1962 that orders have already been placed for the import of further machinery to complete the project in order to raise the production capacity from the present 90 tons to 180 tons of finished permanent magnets a year. The entire machinery, it is expected, will be received by October 1963, and will be installed by the end of it. The factory went into commercial production in January and was formally inaugurated in February. The Company has obtained a loan of Rs. 12.50 lakhs (\$262,500) from the Industrial Credit

CAPITAL, 18th April, 1963.

and Investment Corporation of India to meet the foreign exchange requirements of the project. Due to an increase in the capital expenditure which, on revised estimates, is now expected to cost Rs. 45 lakhs, Permanent Magnets has been sanctioned an additional loan of \$12,000 by the I.C.I.C.I. to meet the cost of additional equipment to complete the project.

The Company had used up to the end of March 1963, a sum of Rs. 5.92 lakhs equivalent to \$125,307 out of the I.C.I.C.I. foreign exchange loans. It proposes to secure a long-term loan of Rs. 10 lakhs from its bankers in addition to the cash credit arrangements for Rs. 10 lakhs. The directors propose to borrow money in excess of the paid-up capital of the Company to the maximum limit of Rs. 50 lakhs. The Company incurred a loss of Rs. 1.81 lakhs during 1962, after providing Rs. 89,548 for depreciation and transferring a sum of Rs. 1,59,122 as expenditure during construction. Development rebate amounting to Rs. 2.31 lakhs is to be provided as and when the Company is able to earn sufficient profits. After adjusting the small surplus brought forward from the previous year and writing back excess provision for income tax, the Company has carried forward a loss of Rs. 1.80 lakhs. The Rs. 100-paid share is currently quoted around Rs. 190.

Commercial Mills Pays Again

THE Commercial Ahmedabad Mills Co Ltd, which had skipped the dividend in 1961 and had instead given one bonus share for every six equity shares held, has declared a gross dividend of 16 per cent, that is, Rs. 40 a share (Rs. 250-paid), for the year 1962. The Company's sales are down by about 3 per cent from Rs. 2.03 crores to Rs. 1.97 crores, but the gross profit is down by nearly 11 per cent from Rs. 34.24 lakhs to Rs. 30.34 lakhs. The setback in profit is attributable to higher costs of production as a result of the increase in the prices of raw material, stores, coal and power and the enhanced wage bill. While costs increased, selling prices of cloth continued to be fixed. After providing Rs. 8.13 lakhs (against Rs. 9.25 lakhs) for depreciation, Rs. 1.13 lakhs (against Rs. 38,865) for development rebate and Rs. 11.62 lakhs (against Rs. 12.20 lakhs) for taxation, the net profit amounts to Rs. 7.34 lakhs compared with Rs. 10.92 lakhs in the previous year. A sum of Rs. 51,232 (against Rs. 36,338) has been set aside for donation and the proposed dividend absorbs Rs. 6.46 lakhs. The Rs. 250-paid share of the Company is quoted around Rs. 545.

Brady Engineering Does Well

BRADY Engineering Co. Ltd reports satisfactory results for 1962. The production of pulley blocks and other lifting equipment increased substantially during the year, and the proceeds of engineering work increased by about 24 per cent from Rs. 26.14 lakhs to Rs. 32.50 lakhs. The gross profit, however, is only slightly higher at Rs. 9.78 lakhs, compared with Rs. 9.67 lakhs in 1961. The dividend has been maintained at Rs. 2 a share, including a bonus of Rs. 2 a share. After providing Rs. 1.31 lakhs (against Rs. 1.19 lakhs) for depreciation and Rs. 3.90 lakhs (against Rs. 3.70 lakhs) for taxation, the net profit amounts to Rs. 3.74 lakhs, against Rs. 3.95 lakhs in the preceding year. With Rs. 49,445 brought forward from the previous year, the disposable surplus amounts to Rs. 4.24 lakhs. The directors have set aside Rs. 16,316 (against Rs. 24,826) for development

CAPITAL, 18th April, 1963.

rebate reserve and Rs. 1.28 lakhs (against nil) for taxation reserve to meet the liability arising from the proposed super profits tax. The directors have also set aside Rs. 38,948 for taxation for the previous year.

The proposed dividend absorbs Rs. 2.25 lakhs, leaving Rs. 16,853 to be carried forward, against Rs. 49,445 brought in. The directors state that the Company's capacity to maintain the present level of production will depend on an adequate allocation of foreign exchange for the import of carbon steel which is an essential ingredient in the manufacture of pulley blocks and other lifting equipment. The Company has an equity capital of Rs. 20 lakhs of which Rs. 10.4 lakhs is held by the holding company—W. H. Brady and Co. The Company's gross block of Rs. 24.9 lakhs has been written down to Rs. 14 lakhs. The Rs. 80-paid share of Brady Engineering is quoted nominally around Rs. 100.

G. Claridge Earns Less

DESPITE a 5 per cent increase in the gross realisation on printing, binding, litho, box making and stationery sales from Rs. 48.86 lakhs to Rs. 51.31 lakhs, the gross profit of G. Claridge and Company for the year 1962 is slightly down from Rs. 9.79 lakhs to Rs. 9.34 lakhs. After providing Rs. 1.46 lakhs (against Rs. 1.28 lakhs) for depreciation and Rs. 3.20 lakhs (against Rs. 3.67 lakhs) for taxation, the net profit amounts to Rs. 3.88 lakhs, compared with Rs. 3.87 lakhs in 1961. A sum of Rs. 3.04 lakhs has been transferred from the earlier provisions for gratuity and welfare, which raises the disposable surplus to Rs. 6.92 lakhs. The provision for development rebate is slightly higher at Rs. 63,031, compared with Rs. 51,951. A sum of Rs. 34,000 has been provided against short provision for taxation concerning the previous year. Recurring for taxation has been allocated Rs. 1.10 lakhs (against nil) and general reserve Rs. 3.60 lakhs (against Rs. 6.30 lakhs). The proposed dividend of Rs. 15 a share, less tax, on old shares and Rs. 4.10 a share on new shares absorbs Rs. 1,52,600 (against Rs. 2.40 lakhs). After making various appropriations, there remains a small sum of Rs. 840 to be carried forward, against Rs. 9,716 brought in. The Rs. 100-paid share of G. Claridge is quoted nominally around Rs. 180.

Empire Dyeing Pays Less

ALTHOUGH the dividend has been halved from Rs. 5 to Rs. 2.50 a share, less tax, the working results of the Empire Dyeing and Manufacturing Co. Ltd for 1962 show that the Company has done reasonably well—at least, better than in 1961. Income from dyeing, mercerising, bleaching, etcetera, is slightly higher at Rs. 52.43 lakhs, compared with Rs. 52.20 lakhs in the previous year, and the gross profit has increased from Rs. 7.42 lakhs to Rs. 8.34 lakhs. After providing Rs. 1.02 lakhs (against Rs. 52,239) for depreciation and Rs. 2.11 lakhs (against Rs. 3.13 lakhs) for taxation, the net profit amounts to Rs. 4.62 lakhs, against Rs. 3.11 lakhs in the preceding year. Allocation to the development rebate reserve has been stepped up from Rs. 12,468 to Rs. 90,663, while the provision for gratuity to staff has been maintained at Rs. 15,000. Doubtful debts claim at Rs. 2,969 and the directors have had to set aside Rs. 36,000 for taxation for the previous year. An additional sum of Rs. 69,000 has been provided for liability against the proposed super profits tax. Bonus for the previous

year takes another Rs. 1.16 lakhs. After transferring Rs. 1.56 lakhs from the provision for gratuity and Rs. 2.30 lakhs from the reserve for rehabilitation of plant and machinery, the directors have set aside Rs. 3.80 lakhs to general reserve. The proposed reduced dividend of Rs. 2.50 a share absorbs Rs. 1.50 lakhs, (against Rs. 3 lakhs), leaving a sum of Rs. 5,212 to be carried forward, against Rs. 17,679 brought in.

The directors state in their report that the first nine months of the year were very successful and the works maintained production at the peak level. But after the declaration of the emergency in October 1962, there was a considerable fall in the supply of goods for processing, especially from the powerloom sector, due to which the works suffered in production in November and December 1962. The Famatex machine, which was scheduled to be delivered to the works by the end of April 1962, was delivered late due to conditions beyond the control of the manufacturers, and was erected and put into production only towards the end of November. The back-filling machine was received in April last and is now in operation. The Company has a paid-up capital of Rs. 9 lakhs (all in equity shares), of which bonus shares account for Rs. 7.2 lakhs. The reserves and surplus amount to Rs. 10.9 lakhs. The gross block of Rs. 29.1 lakhs has been written down to Rs. 10.9 lakhs. The Rs. 15-paid share of the Company is currently quoted around Rs. 71.50, offering a gross return of about 3.6 per cent.

Bharat Commerce Repeats

ALTHOUGH Bharat Commerce and Industries Ltd has repeated a taxable ordinary dividend of 15 per cent for the year ended December 1962, the directors say that they may find it difficult to maintain it in future in view of the new taxes proposed in the 1963-64 Budget. They posed in the progress and expansion of the Company may suffer from heavier taxation. The staple due to heavier plant in Nagda has fibre spinning plant in Nagda has worked satisfactorily. It has 30,360 ring spindles and 16,544 doubling spindles. The production of staple fibre yarn has increased steadily, but the demand has not kept pace. In fact, the price of staple fibre has been moving downwards due to increased domestic production, combined with imports.

The erection of the Kiran spinning mills in Thana, Maharashtra, has been completed. At present, 10,000 spindles have been operating. A licence for a further 6,000 spindles has been obtained and efforts are being made to get a licence for another 5,000 spindles. The erection of 6,000 spindles has already begun and they may operate soon. An industrial licence for 12,000 ring spindles to produce cotton yarn has also been obtained. The necessary machinery has been ordered and the project may start working towards the end of 1963.

The spinning department of the textile mill in Nanjangud, Mysore, which was recently acquired, is being modernised at a cost of about Rs. 20 lakhs. Orders for new ring frames, high-speed drawings and Simplex fly frames have been given. As a result of the modernisation, the efficiency of the mill should improve. An import licence for plant and machinery to produce H.T. and L.T. porcelain insulators has been obtained, and the directors are considering the implementation of the project. They are thinking of setting up a cotton textile mill in Rajpura, Punjab, and another in Madhya Pradesh. The Company has

acquired one more aircraft. Both the aircraft have been engaged in non-schedule charter flights with satisfactory results.

The profit has fallen from Rs. 55.79 lakhs in 1961 to Rs. 28.05 lakhs in 1962, after transferring Rs. 11.62 lakhs (against Rs. 7.93 lakhs) to depreciation. The ordinary dividend is more than three-and-a-half times covered, and offers a yield of 7.2 per cent at the present price of Rs. 20.75 a share of Rs. 10 each. Development rebate is allocated Rs. 5.88 lakhs (against Rs. 4.37 lakhs), contingencies Rs. 2 lakhs (the same) and taxation Rs. 6.25 lakhs (against Rs. 8.50 lakhs). General reserve absorbs Rs. 5 lakhs (against Rs. 30 lakhs), leaving a carry-forward of Rs. 17,588, against Rs. 1.46 lakhs brought in.

Indian Bank Cuts Dividend

THE working results of the Indian Bank Ltd for the year 1962 indicate some progress, in that the deposits, advances and gross earnings are all higher than those of the previous year. The profit after tax, however, is considerably lower due to an all-round increase in expenses, and the directors have been obliged to reduce the dividend from 15 per cent to 14 per cent, less tax. But since the dividend is on a larger capital—Rs. 88.40 lakhs, against Rs. 83.02 lakhs—as raised by the call made on the partly paid-up shares, making them fully paid-up during the year, the total amount distributed by way of dividend is only slightly lower at Rs. 12.20 lakhs, against Rs. 12.45 lakhs.

The deposits increased by 10 per cent from Rs. 40.05 crores to Rs. 44.03 crores, but with borrowings from other banks moving sharply up from Rs. 98.07 lakhs to Rs. 3.54 crores, the Bank was able to increase its advances by about 18 per cent from Rs. 25.71 crores to Rs. 30.38 crores. The ratio of advances to deposits moved up from 64.1 per cent to 68.9 per cent. The bank's investments rose from Rs. 13.07 crores to Rs. 14.61 crores, and its income from interest and discount increased from Rs. 2.15 crores to Rs. 2.26 crores, while that from commission, exchange and brokerage, rose from Rs. 49.27 lakhs to Rs. 53.21 lakhs. The other income was slightly lower at Rs. 5.05 lakhs, against Rs. 5.19 lakhs.

The increase in earnings, however, was more than offset by the increase in expenses. Interest paid was higher at Rs. 1.23 crores, against Rs. 1.18 crores and staff expenses moved up from Rs. 94.57 lakhs to Rs. 1.05 crores. After providing for taxation and depreciation, the net profit amounts to Rs. 15.25 lakhs, against Rs. 22.12 lakhs in 1961. No provision has been made for sinking fund, gratuity fund and building fund which, between them, received Rs. 4.55 lakhs in the previous year. Allocation to the reserve fund has been reduced from Rs. 9.25 lakhs to Rs. 3.10 lakhs. The proposed dividend absorbs Rs. 12.20 lakhs (against Rs. 12.45 lakhs), leaving a sum of Rs. 1.44 lakhs to be carried forward, against Rs. 1.49 lakhs brought in. As against its paid-up capital of Rs. 88.40 lakhs, the Bank's reserves total Rs. 90.02 lakhs, which include Rs. 14.57 lakhs under the share premium account. The Rs. 100-paid share of Indian Bank is quoted around Rs. 174.50 cum-dividend, offering a gross return of about 8.3 per cent.

Southern Structurals Earns More

A MARKED rise in the profit and turnover and a dividend of 6 per

cent on equity shares feature the working results of Southern Structurals Ltd for the year ended December 1962. The profit amounts to Rs. 11.09 lakhs, after providing Rs. 3.60 lakhs for depreciation and Rs. 60,000 for development rebate reserve. The profit for the previous year was Rs. 3.84 lakhs, after providing Rs. 3.07 lakhs for depreciation and Rs. 77,685 for development rebate reserve. Out of the year's profit, preliminary expenses and brokerage amounting to Rs. 40,883 have been written off. The proposed dividend on equity shares subject to deduction of tax, will absorb Rs. 3 lakhs. The brought-forward loss of Rs. 7.42 lakhs from the previous year is adjusted against the year's profit, leaving a balance of profit of Rs. 26,293, which is carried forward.

Sales of railway wagons amounted to Rs. 1.51 crores, compared with Rs. 89.21 lakhs in the previous year. Proceeds of structural contracts amounted to Rs. 10 lakhs, against Rs. 5.32 lakhs. During the year, additions amounting to Rs. 8.03 lakhs were made to the value of machinery. As a result, the Company's capacity for the fabrication of both wagons and general structurals has appreciably increased. The total value of contracts to be executed for the Railway Board as on 31st December, 1962, was about Rs. 5.6 crores. The Company's licensed capacity for the manufacture of wagons is now 2,000 in terms of four-wheelers. On the structural side also, the Company's licensed capacity has been increased to 6,000 tonnes a year. The structural work which the Company has undertaken for the heavy vehicles factory in Avadi is about 5,200 tonnes. According to the schedule, the entire tonnage should be fabricated and erected well before the end of 1963. During the year, the supply position of steel was better, more especially in relation to the execution of "operational" and "core" projects on which the Company is now largely concentrating. The total output of the factory in 1962, covering both wagons and structural work, was over 8,000 tonnes, which is about 50 per cent more than the 1961 figures.

Prospects for Thirumbadi Rubber

THE rigid price policy for raw rubber, the most rigorous treatment from the agricultural income tax authorities and the disadvantage of planters having replanting and new clearing programmes are some of the highlights of the speech of Mr. A. D. Bolland, chairman of the Thirumbadi Rubber Co. Ltd at the recent annual general meeting. Referring to the rubber plantation industry, the chairman said that it was in a "peculiar position." While it is faced with a higher cost of production over which it has no control, the stagnant controlled prices of rubber have drastically reduced profit margins. Wages and amenities which form the largest single item of cost have been enhanced considerably over the years. Mr. Bolland said that there would have been no cause for complaint if the rubber prices were kept flexible.

Referring to taxation, the chairman said that such profits as the planters were able to make—in spite of the adverse circumstances—were subjected to the "most rigorous treatment" by the agricultural income tax authorities. While there has been no increase in the rates of tax this year, the recent methods of interpretation of the Act and the rules by officers in assessing the allowable expenses run counter to the basic tenets of corporate taxation. According to the chairman, things would not have been too bad if agricultural income tax rules of Kerala were somewhat

similar to those of Mysore and Madras.

The Kerala rules, Mr. Bolland said, do not allow any replanting and upkeep expenses as revenue expenditure for tax purposes. So planters who have replanting and new clearing programmes are at a disadvantage. Viewed against the Government's policy of encouraging the rehabilitation of old rubber plantations and of further extension of the rubber acreage, the taxation methods, Mr. Bolland said, are most unwise.

Mr. Bolland welcomed the news that the depreciation allowance on rubber recommended by the Tariff Commission would in future be treated as a deduction from income for the purpose of assessing agricultural income tax. Although the Central and State Budgets this year may not directly hit the industry, their effects are bound to be felt indirectly as a result of the post-Budget increases in the prices of goods and services. As for the super profits tax, Thirumbadi Rubber, being largely an agricultural enterprise, may not be brought within the scope of the tax.

After considering the financial implications of the seven-year programme of rehabilitation and development, the directors have decided to abandon the development plans and concentrate on a more intensive programme of replanting in 1963-64 and 1964-65 so that whole of the remaining areas are replanted under the current scheme. The Company is contemplating increasing its purchases of latex from outside sources for processing in its factory. This is expected to add to the Company's revenues considerably. In order to augment its cash resources further, the directors have decided to plant as much of the reserve land as possible with cashews. This is expected to bring in a sizable income after five years or so.

Punalur Paper Makes Progress

PUNALUR Paper Mills Ltd, which celebrated its silver jubilee in December 1962, has formulated a scheme to increase production to meet the growing demand for its products. Measures have been taken to produce improved qualities of paper to meet the competition from more modern mills. The Company has placed orders for a modern plant to replace the original paper machine, except

for the Yankee cylinder, which is being retained. The overall cost of the scheme is estimated at Rs. 31 lakhs. Preparatory work, including a double storey extension to the Finishing House is already in hand. The installation of the new machinery is likely to be completed this year. The capacity of the mill will then increase by about 3,000 tonnes a year.

In order to finance the scheme, the Company's share capital is being increased by a rights issue for cash offering two shares for every three held at a premium of Rs. 10 a share. The total amount the issue is expected to raise is Rs. 14.05 lakhs. The Industrial Finance Corporation of India will offer a loan of Rs. 15 lakhs. Meanwhile, the Company has made arrangements for the regular supply of raw materials. The agreement with the Forest Department of the Kerala Government has been renewed for a further period of ten years. The availability of other raw materials, particularly waste paper which is in short supply, will, to some extent, determine the progress of expansion. Nevertheless, schemes are now being worked out for the modernisation of the two paper machines with corresponding development elsewhere in the mill. The development programme is likely to be phased over the next five years. The Company has also initiated active steps to enter the export markets.

Coimbatore Pioneer Mills Earns Less

A DECLINE in the profit and a cut in the dividend feature the working results of Coimbatore Pioneer Mills Ltd for the year ended December 1962. The directors have announced a dividend of 15 percent, against 25 percent for the previous year.

According to the preliminary figures, the gross profit for the year amounts to Rs. 26.06 lakhs, compared with Rs. 30.02 lakhs for the previous year. After providing Rs. 6.48 lakhs for depreciation and Rs. 1.35 lakhs for development rebate reserve, the net profit amounts to Rs. 16.42 lakhs. The previous year's net profit was Rs. 20.12 lakhs, which was arrived at after providing Rs. 5.63 lakhs for depreciation and Rs. 2 lakhs for development rebate reserve. Adding to the year's net profit of Rs. 16.42 lakhs a sum of Rs. 17,916 brought forward from the previous year, and Rs. 9,663

being the balance of the excess provision set apart from the equity dividend in the previous year's accounts, the total available for appropriation is Rs. 16.70 lakhs.

Out of this, the directors have provided Rs. 8.76 lakhs (against Rs. 9.50 lakhs) for taxation. The provision for the proposed super profits tax amounts to Rs. 3.04 lakhs. General reserve gets Rs. 35,000 (against Rs. 32.5 lakhs). The dividend at 8.45 percent on preference shares accounts for Rs. 8,450. The proposed dividend on ordinary shares will absorb Rs. 4.46 lakhs. After making these provisions and appropriations, there remains a balance of Rs. 614 which is carried forward.

Diversification Plans of P. and O.

ALTHOUGH there is nothing on any substantial scale in view at present, P. and O. intends to take a more positive line in the matter of diversification. Attention will be given primarily to businesses allied to, or extended from, its major interests in shipping.

Presiding at the annual general meeting in the absence of Sir Donald Anderson in London recently, Mr. F. E. Harmer, deputy chairman, said that the group would also be receptive to other investment possibilities, the profit from which would help to fill in the troughs which the shipping industry had always experienced. "Material resources" might be set aside for that purpose in the next ten years.

Mr. Harmer also disclosed that the P. and O. board proposes to make some reduction in the depreciation charge, thus diminishing the book profit on the sale of old ships. But it is understood that the difference is not likely to be very large. No forecast was made about the current year's results, although there seems to be a fair prospect of the group maintaining a reasonable cash flow. All the tankers are employed, and the tanker side is being reorganised so that the future fleet of 19 ships will come under a single management—Trident Tankers. Answering questions, Mr. Harmer said that the board would give consideration to a capitalisation of reserves, but he gave no hope that this was an immediate prospect. He saw no advantage in a property re-

Trichinopoly Mills Cuts Dividend

A SUBSTANTIAL drop in the profit and a cut in the dividend feature the working results of the Trichinopoly Mills Ltd for the year ended December 1962. The directors have recommended a dividend of 10 percent, against 15 percent for the previous year. Sales of yarn declined to Rs. 37.42 lakhs from the previous year's Rs. 45.33 lakhs. The net profit, before taxation, amounts to Rs. 2.81 lakhs, after providing Rs. 1.02 lakhs for depreciation. This compares with the previous year's net profit of Rs. 6.74 crores, after providing Rs. 96,430 for depreciation. With Rs. 61,077 brought forward, the total available for appropriation is Rs. 3.42 lakhs. Out of this, income tax paid amounted to Rs. 22,880. A sum of Rs. 24,600 (against Rs. 400) is transferred to development rebate reserve. Provision for taxation amounts to Rs. 1.20 lakhs (against Rs. 3 lakhs). The proposed dividend will absorb Rs. 1.40 lakhs. The balance of Rs. 3,312 is carried forward.

The directors' report says that during the year, there was a scarcity of quality cotton due to the failure of crops. While cotton prices ruled high, Trichinopoly Mills was obliged to sell 40s yarn—the Company's major production—at unremunerative prices throughout, in accordance with the voluntary price control scheme. There was also a power cut for a short duration. These factors were responsible for the lower profits.

New Capital Issues

SEVEN companies have been authorised to raise capital totalling Rs. 3.86 crores. Of these, two are State Government undertakings. Two companies are issuing debentures, three equities and two equity plus preference shares.

The following are the details:

Hindustan Times Ltd., New Delhi, will raise capital of Rs. 65 lakhs in debentures of Rs. 1,000 each carrying an interest not exceeding 7 percent.

The Saraswati Sugar Syndicate Ltd has been allowed (in supersession of a previous consent) to issue debentures of the value of Rs. 60 lakhs privately, carrying interest at 7 percent a year for cash at par.

Kerala State Industrial Development Corporation Ltd., Trivandrum, is to issue further capital of Rs. 100 lakhs for cash at par divided into 10,000 equity shares of Rs. 1,000 each to be issued privately.

The Maharashtra State Farming Corporation Ltd., Bombay, a State Government undertaking, is raising capital of Rs. 75,00,000 divided into 7,500 equity shares of Rs. 1,000 each to be subscribed privately.

S. B. Joshi and Company Ltd., Bombay, is issuing capital of Rs. 19,35,750 in equity shares of Rs. 10 each for cash at par to be made to the public. The consent is valid for a period of 24 months.

Ahmedabad Jupiter Spinning, Weaving and Manufacturing Company Ltd., Ahmedabad, will issue further capital of Rs. 36,40,750 consisting of 20,000 preference shares of Rs. 100 each and 13,126 equity shares of Rs. 125 each. All the shares will be allotted as fully paid to the shareholders of Hind Mills Ltd, Bombay, in terms of the scheme of amalgamation to be approved by the High Court.

Venkata Ratnamba Textiles Ltd., Madras, is issuing capital of Rs. 30 lakhs consisting of equity shares of the value of Rs. 25 lakhs and 9.5 percent preference shares of Rs. 5 lakhs for cash at par.

valuation, or in showing the fleet insurance values.

The Stock Markets

UNDERTONE REMAINS CHEERFUL IN CALCUTTA

Wednesday Evening.

THE stock market closed early today due to the death of a member. Hence it did not have sufficient time to digest the implications of the concessions announced by the Central Finance Minister, Mr. Morarji Desai, in the super profits tax on Tuesday. At the close, the cheerfulness which has prevailed in Lyons Range for some days, continued to influence trading. The clearing on Wednesday was about the most eventful in several weeks. Share prices were marked up substantially and carry-forward charges were somewhat smaller than in the previous settlement. In response to the improvement, the authorities have taken steps to restore freer trading. The remaining minimum prices in the case of clearing shares have been scrapped. There will henceforth be no compulsory carry-over at fixed badias. Restricted forward trading has also been introduced.

So far so good, but it is wondered whether the optimism in Lyons Range has not been exaggerated. Although the tax reliefs announced have been welcomed, in that the Central Finance Ministry is aware of the possible adverse effects of the new tax measures of the Budget, it is doubtful whether they are sufficient to help restore confidence. Since the stock market has been mainly concerned with the super profits tax, the modifications proposed need to be carefully examined. The concessions are considered small and have fallen below market expectations. The regret is that despite strong representations from trade and industry, the Finance Minister has not changed the form and the rate of the levy. The iniquitous principle of introducing progression in corporate taxation has been retained on doctrinaire grounds.

Although it has been proposed to allow a deduction from profits chargeable to the super profits tax, a sum equal to 10 percent of the total income before the payment of any tax, this concession has been hedged in with too many restrictions. The deduction will be permitted if it is used for repaying indebtedness, buying fixed assets, paying preference dividends in excess of 6 percent or it is credited to a reserve not to be used for any other purpose for a period of five years. Hence companies will be somewhat helped in repaying their indebtedness or financing their expansion and modernisation programmes. The decision to include development debate reserves in calculating the capital base for the purpose of the levy, is no doubt an appreciable concession.

As for banks, they are likely to benefit since sums transferred to reserves by them will be allowed as a deduction from chargeable profits, subject to certain conditions. Small concessions have been allowed to electric supply companies. Additional relief has also been given to small companies.

Anyway, even these small concessions are not likely to benefit the shareholders, at least in the near term. It is not disputed that the growth value of companies will be somewhat helped by the concessions given, but it is only a longer-term prospect. For the time being, the dividend outlook is very depressing. Since the 10-percent deduction can-

not be used for paying dividends, it is almost certain that most of the companies will find it extremely difficult to maintain the present rates of distribution. In fact, some leading companies have already been forced to cut the dividend due to the levy. The trend is likely to gather momentum in the near future.

It may be pointed out that during recent months, investors have been less enamoured of growth values since companies have found it difficult to expand, modernise and diversify due to the shortages of foreign exchange, raw materials, transport and power. Hence attention has been diverted to dividends. In view of the rising interest rate following a dearer money policy, ideas about dividends have been revised upwards. In the circumstances, investors will be well-advised to buy shares with greater discrimination than before. Considering that most of the shares have been fully-priced on the basis of current dividends, the possibility of an upsurge in share values in the near future, is remote.

Marketwise, Indian Iron have shot up to Rs. 21.60, partly due to short-covering and partly because of replacement buying. The support has flowed from expectations of an early rise in the retention price of steel. Among engineering shares, attention has been concentrated on Guest, Keen, Williams, Jessop, Texmaco, Indian Standard Wagon, Burn and Braithwaite.

There have been several bright spots in the miscellaneous section. Indian Copper, Indian Aluminium, Dunlop Rubber, Indian Cable, Hindustan Motors and Orissa Cement have gained. Interest has been shown in Union Carbide and Alkali Chemical. Hindustan Aluminium have enjoyed influential support. Kesoram Industries have improved on replacement buying. In the paper section, Orient, Sirpur and Titagur have gained.

Jute shares have been dealt with cautiously. Birla, Nuddea, Ganges, Union, Northbrook and Anglo-India have been prominent. Reliance have been taken by knowledgeable quarters. Investors have been worried by the decision of the Government in fixing the minimum price of raw jute for the 1963-64 season at the same level as in the 1962-63 season.

Hopes of an early rise in the price of coal have induced support for the shares. Bengal, East Indian, Central India, South Karanpura and Equitable have attracted attention. Among cotton mill shares, Bharat Commerce have recovered. The Company has made a smaller profit, but its expansion programme has been making good progress. Bowreah and Dunbar have been sluggish due to the cut in dividends. There has been little interest in bank shares. Sugar shares have been difficult to sell even by cutting prices. A small turnover has been transacted in tea shares at lower prices.

Government securities have been steady mainly due to official support. Institutional buying has been negligible. Prices of short-dated securities have been particularly steady. The 3 percent Conversion loan 1966 has been quoted around Rs. 63.10.

Prices of State Government loans have been easier.

Bombay

TAX CONCESSIONS DISAPPOINT

STEEL SHARES IN GOOD DEMAND

Wednesday Evening.

THERE has been a substantial improvement in the Bombay stock market during the past week. The earlier support stemmed from the belief that the super profits tax would be substantially modified. When the Central Finance Minister announced the modifications in the Lok Sabha on Tuesday, there was a mild reaction. Although the tax concessions given have not come up to market expectations, they have been welcomed considering that the corporate sector will now be able to conserve more resources for repaying its indebtedness and financing its expansion and modernisation programmes. Since the dividend outlook continues to remain discouraging, operators have turned cautious towards the close, and profit-taking has pared top gains. The concessions will not increase the money available for paying dividends. Hence it is doubtful whether companies will be able to maintain existing dividends, not to speak of increasing them.

An encouraging feature is that selling pressure has abated considerably. There has been a great deal of short-covering and the technical position of the market has improved. There has also been some replacement buying. But it looks as if the trend will be unable to sustain itself due to the fact that the essential features of the super profits tax have not been changed. The market will henceforth try to consolidate the gains which have been achieved so far. Attention has been generally concentrated on selected shares. Tata Steel have been prominent and the ordinary shares have improved to Rs. 126. The support has been based on two factors. The first is that the Government is expected to increase the retention price of steel in order to compensate the producers for rises in railway freight, royalty and wages. The emergency risks insurance premia have also inflated production costs. In the engineering section, Mukund Iron have been bought at Rs. 18.76 on expansion prospects. Tata Locomotive have recovered to Rs. 283 on replacement buying. Among motor-vehicle shares, Hindustan Motors have gained at Rs. 16.76 and Premier Automobiles at Rs. 106.25.

Prospects of an improvement in the domestic offtake of piecegoods have induced support for cotton mill shares. Century have gained at Rs. 506, Bombay Dyeing at Rs. 63, Kohinoor at Rs. 289 and Svadeshi at Rs. 248. Standard have improved substantially due to interested support. Interest has also been taken in Khatau, Simplex and India United ordinary.

In the miscellaneous section, cement shares have been bought. Associated Cement have gained at

Rs. 141.50 and Digvijay have improved to Rs. 167.50 on expansion hopes. Shipping company shares have recovered fractionally, and Scindia Steam have been quoted at Rs. 10.72. Mining shares have been subdued, and Shivrajpur Syndicate have been freely offered. There has been little interest in sugar shares due to fears of a cut in the output during the current season. Rayon shares have recovered on replacement buying. National Rayon have improved to Rs. 347 and Gwalior Rayon to Rs. 43.25. Among chemical shares, Tata Chemical have been taken at Rs. 15.88 and Indian Dyestuff at Rs. 392.50. Bombay Burmah have recovered to Rs. 655 on short-covering. Interest has been taken in Voltas at Rs. 260. Although W.I.M. C.O. have repeated a taxable ordinary dividend of 16 percent, the scrip have been fancied due to bigger profits earned. W. H. Brady and Company have been sold freely due to a dividend cut.

Little business has been transacted in bank shares. Bank of India have made Rs. 107 and Central Bank Rs. 56. In the insurance section, New India Assurance have been firm on hopes of a bonus issue. Routine business has been transacted in electric company shares. Ahmedabad, Bombay Suburban and Tata Power have been transacted.

Madras

SELLING PRESSURE DECREASES

SELECTIVE BUYING OF SHARES

Tuesday Evening.

THE Madras stock market has taken a turn for the better and share prices have improved selectively during the past week. Operators have been inspired by higher

advice from the Calcutta and Bombay stock markets. Selling pressure has declined, and investors have been encouraged to buy selected shares at the present low levels. The concessions announced by the Central Finance Minister in the super profits tax have helped revive confidence. It is generally believed that the impact of the levy has now been softened somewhat.

Government securities have been dull, and small turnover has been seen. Bank shares have generally been neglected. Selected electric shares have been taken on dividend considerations. West Coast have come to hand at Rs. 18.37. After a long interval, Deccan Sugar have met with good buying around Rs. 9. The Company has declared an interim taxable ordinary dividend of 6.5 percent. Andhra Sugar has paid a taxable ordinary dividend of 12 percent.

Selected planting shares have improved on balance due to replacement buying. Interest has been taken in Blue Mountain at Rs. 2.40, in Coffee Lands at Rs. 13.50, in Periakaramalai at Rs. 3 and in Consolidated Coffee at Rs. 16.60. Good crop reports have contributed to the support for selected tea shares. Kil Kotagiri have declared a taxable final ordinary dividend of 17 percent, making 25 percent for the year. Ouchterlony have paid a taxable ordinary dividend of 6 percent and Parkside an interim taxable ordinary dividend of 7.5 percent. Peermade have declared a taxable final ordinary dividend of 12.5 percent, making 20 percent for the year.

Although business has been limited in textile shares, selling pressure has abated considerably. Madura have been bought up to Rs. 30.50. South India Viscose have gained at Rs. 146, but Travancore Rayon have been sluggish at Rs. 24.50. Balarama Varma have declared a taxable final ordinary dividend of 7.5 percent, and Coimbatore Pioneer a taxable ordinary dividend of 15 percent.

Turnover has increased in miscellaneous shares. Aluminium Industries

have been bought up to Rs. 17.75. Enfield have come to hand at Rs. 9, India Cement New at Rs. 5.30 and W.I. Plywood at Rs. 185. Southern Structuralists have declared a taxable ordinary dividend of 15 percent. Seshasayee Industries Ltd proposes to increase the authorised capital from Rs. 1 crore to Rs. 1.50 crores by creating 500,000 ordinary shares of Rs. 10 each. Out of this, 200,000 shares will be issued for public or private subscription according to the discretion of the directors. Ashok Leyland have been steady at Rs. 7.30, India Cement at Rs. 5.60 and Mettur Chemical at Rs. 11.92. Parry's Confectionery have been quiet at Rs. 3.19. Seshasayee Paper have found buyers up to Rs. 7.60.

London

SHARP RISE IN INDUSTRIALS

GILT-EDGED HIGHER

London, 17th April.

A SHARP turn round in industrial equities at the opening of the new account last Thursday provided the feature of the stock market during the past week. On the last few days of the old account, prices had drifted lower on a little post-Budget selling, but buyers returned with the opening of the new account and prices forged ahead. The firm trend was maintained after the long holiday week-end and industrials recorded appreciable gains on the week. Further consideration of the Budget measures, the strength of Wall Street and recent good company news were the main influences. The rail strike threat was ignored. Leading industrial issues recorded good gains, and many features developed elsewhere. Gilt-edged continued to improve on a small demand and scored fresh gains. By contrast, banking, hire-purchase, insurance and property shares were often lower. Gold shares moved up after earlier dullness, but business here remained at a low level. Interest elsewhere in mines was small except in tin shares.

Firestone

Your Symbol of Quality and Service

To millions of motorists and truck operators throughout the world, Firestone means value—and with good reasons: Firestone leads the world in tyre and rubber research, constantly meeting the challenge to make the best tyres today still better tomorrow. And for 22 years, this has been the Firestone way of manufacturing tyres in India. In fact, no part of your car is more thoroughly proved than its Firestone tyres. You know what you're getting when you buy Firestone!

For EXTRA SAFETY and ECONOMY choose Firestone New DeLuxe-Champion Tyres

Money

THE CALCUTTA MONEY MARKET

SMALL DECLINE IN ADVANCES

Wednesday, 17th April.

THERE has been a slight decline in the general level of advances in the Calcutta money market during the past week. Most of the fall is accounted for by the sugar industry. There is a slight increase in jute credit. But the advances to the cotton mills, the foodgrains and seeds trade, and the iron, steel and engineering industries are unchanged. In the interbank market, conditions have been easier and the call rate is down to 4½ percent.

The exchange market has been dull, the supply of export bills being meagre. The demand for remittance has been on a moderate scale. Sterling is weaker against the twin dollars, the French franc and the Scandinavian currencies, but shows minor improvements in relation to the rest.

SILVER WAS QUIET IN CALCUTTA during the past week and the price fell from the previous week's level of Rs. 278.25 to Rs. 278, quoted today for ready delivery. There was no business in futures. The London and New York prices were 109½d and 127.5 cents. There was no trading in gold.

DURING THE WEEK ENDED 12TH APRIL, Government of India Treasury bills for Rs. 206,09,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 16th April. The total amount offered was Rs. 2,03,00,000. Tenders at Rs. 99.415 percent and above were accepted in full and those at Rs. 99.410 percent were allotted approximately 98 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.354 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 22nd April.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 17th April to 20th April at Rs. 99.426 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 10th April to 13th April, amounted to Rs. 3.75 lakhs.

ACTIVE NOTES ROSE BY Rs. 26.64 crores to Rs. 2,328.23 crores and the total note issue by Rs. 18.89 crores to Rs. 2,336.43 crores, according to the return of the Reserve Bank of India for the week ended 12th April, 1963. The currency expansion was adjusted by increasing rupee securities of the paper currency reserve by Rs. 20 crores to Rs. 1,996.42 crores. This was done by transferring securities from the Banking Department in which investments fell by Rs. 18.93 crores to Rs. 200.17 crores. Deposits of the Government of India declined by Rs. 8.45 crores to Rs. 94.02 crores and other Government accounts by Rs. 3.46 crores to Rs. 4.74 crores. Balances of scheduled banks were Rs. 14.44 crores bigger at Rs. 85.90 crores. Their loans from the Reserve Bank fell from Rs. 48.21 crores to Rs. 47.81 crores, of which advances against

usage bills were Rs. 40.97 crores (Rs. 40.66 crores). Ways and means advances stood at Rs. 52.91 crores, against Rs. 43.26 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 5th April, 1963, shows a rise of Rs. 11.70 crores to Rs. 570.73 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 8.21 crores and Rs. 1 lakh to Rs. 218.93 crores and Rs. 7.84 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have fallen by Rs. 4.65 crores to Rs. 316.75 crores. Cash and balances are, in consequence, shown at Rs. 21.58 crores or Rs. 2.32 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 5th April, 1963, shows Demand and Time liabilities at Rs. 1,039.96 crores (Rs. 29.01 crores on account of borrowings from banks) and Rs. 1,221.57 crores (Rs. 15.84 crores), compared with Rs. 999.83 crores (Rs. 22.39 crores) and Rs. 1,219.62 crores (Rs. 15.58 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have risen by Rs. 1.08 crores and Rs. 1.30 crores to Rs. 52.26 crores and Rs. 75.67 crores, respectively. There is a rise of Rs. 7.05 crores to Rs. 600.33 crores in investments. Advances and bills discounted at Rs. 1,602.85 crores show a rise of Rs. 45 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.7 percent and 70.9 percent, against 5.7 percent and 7.2 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 19-4-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
19-4-63	22-7-63	2,00.00	Rs. 2.354%
11-4-63	14-7-63	2,00.00	Rs. 2.380%
5-4-63	8-7-63	2,00.00	Rs. 2.370%
29-3-63	2-7-63	2,00.00	Rs. 2.370%
22-3-63	25-6-63	2,00.00	Rs. 2.370%
15-3-63	18-6-63	2,00.00	Rs. 2.370%
8-3-63	11-6-63	2,00.00	Rs. 2.365%
1-3-63	4-6-63	2,00.00	Rs. 2.365%

NATIONAL RUBBER MANUFACTURERS LTD.

HIGHER PROFIT LEADS TO LARGER DIVIDEND

EXPANSION PROGRAMMES COVERING V-BELTS AND FAN-BELTS AND CYCLE TYRES

Chairman's Address by MR. K. N. MOOKERJEE at the Seventeenth Annual General Meeting of the Company held on 11th April, 1963.

Ladies and Gentlemen,

It gives me much pleasure in extending to you all a hearty welcome to the Seventeenth Annual General Meeting of your Company. The Directors' Report and Audited Accounts for the year ended 31st December, 1962 for the year ended 31st December, 1962 have been in your hands for sometime now and with your permission I shall take them as read.

Accounts

You will have noticed from the Directors' Report that your Company's working during the year under review reflected an all-round improvement. Not only sales of the Company's products increased substantially but also there was considerable decline in the finished goods inventory as well as borrowings. The profit for the year after charging depreciation increased by about 66 per cent over that of 1961 and the percentage of net profit on sales registered further improvement. Due to better working results your Directors have recommended higher dividend on Ordinary Shares at 8% as against 6.5% in the previous year.

Industrial Growth

Industrial output in India no doubt improved during the year 1962 but at a slower rate than in previous years chiefly due to shortage of power and transport facilities and imported raw materials and components. Against this background the rubber manufacturing industry reveals encouraging trends, the index of production (with 1956 as the base year) having reached the level of 167.5 for the first 11 months of 1962 as against the general index of 149.6; its progress was striking over the decade upto 1961, output having more than doubled during that period.

Two new units for the manufacture of automobile tyres and tubes are reported to have gone into production in 1962; while certain other rubber manufacturing units effected expansion of their production capacity. The installed capacity relating to rubber footwear, tyres and tubes, hoses, industrial V-belts and fan-belts, transmission and conveyor belting, camel back, foam rubber, etc., registered appreciable increase during the year under review; in terms of volume of production also there was a rise in the manufacture of almost all the major items.

Expansion Programme

You would have noticed from the Directors' Report that major effects of the Company's expansion programme were reflected in its working during the year under review. In fact, the Company's turnover in 1962 exceeded by 17% the target of Rs. 3 crores per annum expected to be achieved through execution of the expansion programme. Your Company have now received a fresh industrial licence from the Government of India for substantial expansion of manufacturing capacity in relation of Industrial V-belts and fan-belts by 6,00,000 Nos. per annum so as to bring the total capacity to 14,40,000

Nos. per annum. A licence to effect substantial expansion of the capacity for cycle tyres is also expected to be received in the near future.

Goodyear Agreement

It is indeed a matter of gratification that throughout the year 1962 your Company received full co-operation and assistance from Goodyear India Limited. The present agreement with them will expire at the end of 1963 and a fresh agreement providing a wider scope for technical assistance to be received from Messrs. Goodyear, the terms of which have been finalised, is awaiting execution.

Managed Company

It gives me great pleasure to announce that General Tyres Limited, of which your Company are the Managing Agents, have made considerable headway. Construction of buildings has been completed. Almost all imported plant and machinery have been received at the factory site and installation thereof, which commenced in July 1962, is almost completed. A team of technical experts has already arrived from Czechoslovakia for putting the plant into operation. The plant for the manufacture of automobile tyres and tubes is expected to go into trial production very soon. Meanwhile, the Government of India have issued a licence permitting General Tyres Limited to effect substantial expansion of their production capacity by 6,00,000 kgs. of tyre retreading materials and by 1,20,000 Nos. each of tyres and tubes per annum so as to raise the aggregate licensed capacity to 3,00,000 Nos. each of tyres and tubes per annum.

Exports

The rubber manufacturing industry forged ahead during the year under review with its export programmes and

consequently exports of rubber products from India reached a level of Rs. 95.1 lakhs as against Rs. 78.5 lakhs in 1961, representing a rise of more than 21%. Your Directors pursued a policy of contributing to the country's export drive. Towards the end of 1962 your Company made an on-the-spot survey of export possibilities in a number of countries in the Middle East and East Africa. These as well as South East Asian regions offer fair prospects for export of Indian rubber products including those of your Company provided both prices and quality thereof are effectively competitive with those of products imported from other countries. The proposed tax rebate of 2% on the export turnover of manufacturing companies including exports by first purchasers from such companies as per the Finance Bill 1963, will, I am sure, give some though not adequate incentive for export promotion.

Raw Materials

A carbon black plant has already gone into production in India and the first synthetic rubber plant is scheduled to commence production shortly so that supplies are expected to be available from these indigenous sources in the near future. Meanwhile, it is disquieting to note that raw material cost for the rubber manufacturing industry is sure to go up in 1963 as a result of the increases in the basic rates of import duty on rubber, carbon black, etc., the imposition of a general 10% surcharge on all import duties as well as the additional Central excise levies on a number of items as per the Central Government's budget for the year 1963-64.

Budget Proposals

The additional levies provided for in the Finance Bill, 1963 are likely to retard the pace of industrial development in India including that of the

rubber manufacturing industry. I have already referred to the impact of the Central Budget on raw material cost. Transport costs will also go up appreciably. Even on a conservative estimate all these levies are likely to impose an additional burden to the extent of 6 to 7%. Besides, the rates of Central sales tax are going to be raised and the duty on industrial consumption of electric power in West Bengal will go up. The 20% surcharge on excise duty relating to tyres and tubes as well as rubber products like camel back and foam rubber will cause further hardship. No industry could possibly bear such heavy imposts. Therefore, it would be rather unrealistic to expect that there would not be any upward movement of the price line.

Higher rates of import duty on machinery, spare parts and tools will raise the capital cost of expansion projects as well as new industrial ventures. Perhaps the heaviest blow will be dealt by the super profit tax which would very seriously affect the capacity of companies to maintain dividend and/or to build up reserves and also their ability to repay borrowed capital. Such a situation in its turn is sure to discourage investment and restrict ploughing back of earnings in the corporate sector and also deter in-flow of foreign capital and know-how. It is, therefore, considered essential that an objective view of the whole situation should be taken and substantial modifications in the budget proposals particularly those relating to the Super Profit Tax should be made with a view to not only maintaining but also accelerating the tempo of industrialisation in order to achieve our twin objects of defence and development.

Acknowledgments

Before I conclude, I am sure, you will join me in expressing our sincere gratitude to all dealers, customers and suppliers of the Company for their ready co-operation and valuable support during the year under review. On behalf of the Board of Directors and on my own, I take this opportunity of expressing our warm appreciation of the cordial relations maintained between the management and labour and the loyalty and devotion of officers, and staff of the Company throughout the year 1962.

NOTE: This does not purport to be a record of proceedings of the Annual General Meeting.

WHICH HOLDS

THE GREATER LOAD?

Modern construction projects, require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites, Mills tubular scaffolding has a versatile use—storage racks, temporary buildings, open-air auditoriums or bridges—apart from its normal use as a construction aid.

The special spring-steel fittings quickly secure the tubes—with a ½" spanner as the only tool needed. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle grip' principle.

All fittings are made from special quality spring steel, by Guest, Keen, Williams, Ltd. and the tubes are manufactured by The Indian Tube Company (1953) Limited.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account as required by law have been kept by the Bank so far as appears from our examination of the records in London and proper returns adequate for the purposes of our audit have been received from the branches in India, none of which has been visited by us. We have examined the above balance sheet and annexed Profit and Loss Account which are in agreement with the said records and returned to us in our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1906 (India) as amended by the Indian Companies (Amendment) Act, 1960 and the Indian Companies Act, 1949 (India) as amended up to 31st September, 1962, and by the Companies Act, 1956 (India) as amended by the Indian Companies (Amendment) Act, 1960 and the Indian Companies Act, 1949 (India) as amended up to 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the state of the affairs of these branches as at 31st December, 1962 and the year ended on that date.

Chief Manager for India

Eight reasons why Timken bearings provide long life... assure minimum maintenance:

1 TAPERED DESIGN

Timken Bearings are tapered to take thrust and radial loads—or any combination. They eliminate extra thrust devices.

2 CASE HARDENED

The races and rollers of Timken bearings are case-carburized for wear-resistant surfaces and shock-resistant cores.

3 FULL LINE CONTACT

Timken bearings carry loads along the full length of rollers for greater load-carrying capacity.

4 POSITIVE ALIGNMENT

Wide area contact between roller and cone rib (arrow) keeps Timken bearing rollers in positive alignment. Soft steel cage spaces rollers.

5 EXTRA ROLLERS

A full complement of rollers—in many cases more than competitive bearings—gives Timken bearings extra capacity.

6 SPECIAL ALLOY STEEL

Timken bearings are precision-made from fine alloy steel extra rich in nickel for uniformly high quality and resistance to wear.

7 SMOOTH FINISH

Run-out tolerances on some Timken bearings are held to within 75 millionth of an inch. To measure surface smoothness, we use a profilograph.

8 PRECISE ROLLER MATCH

Rollers of Timken bearings are matched in size within .000125 (125 millionth) of an inch to share the load, increase capacity.

The Timken Roller Bearing Company, Canton, Ohio, U.S.A. Cable: "TIMROSCO". Timken bearings manufactured in Australia, Brazil, Canada, England, France and U.S.A.

NATIONAL CL 2-351 5063A

ESTIMATES BODY CRITICISES STATE OIL REFINERIES

(FROM OUR NEW DELHI CORRESPONDENT)

IN India, members of Parliament do not devote adequate time and attention to scrutinising financial estimates, so they are passed as a pure formality. The Public Accounts Committee and the Estimates Committee of Parliament are charged with scrutinising the estimates and the audited accounts of State enterprises. But scant attention is paid to their reports, and Parliament does not always adequately consider them. In pre-independence years, reports of the Public Accounts Committee were elaborately discussed by the Central Legislature.

The Estimates Committee, for example, has presented its report on the Indian Oil Company and the Indian Refineries Ltd almost on the eve of the discussion on the Budget demand for grants of the Central Oil Ministry. Referring to the Indian Refineries Ltd, the report says that "during the evidence, the Secretary to the Central Ministry of Mines and Fuel agreed with the suggestion that it would be desirable to have one organisation for both refining and marketing of petroleum products" instead of two separate organisations as at present.

"Such a merger will not only lead to better co-ordination and understanding between the two wings of the same industry, but will also result in economy of overheads. The managing directors of the Indian Refineries Ltd and the Indian Oil Co. Ltd also shared the views expressed by the Secretary of the Ministry.

"During discussion, it had transpired that the third oil refinery in Koyali, Gujarat, would be run by the Oil and Natural Gas Commission. The managing director of the Indian Refineries Ltd stated that organisationally, it would be better if all the oil refineries were put under one company." The Estimates Committee also recommended that the fourth refinery in south India "should be under the integrated organisation suggested by it."

"During the visit of a study group of the Estimates Committee to the Nummati refinery in July 1962, the managing Director informed the Committee that the setting up of the refinery inland, as opposed to a coastal location like Calcutta, had involved an extra expenditure of about Rs. 60 lakhs in the movement of materials from Calcutta to Nummati.

"During evidence, the managing director stated that due to heavy floods in the river Brahmaputra, the production in the refinery had also been affected partially. He added that if the location of the refinery was to be based on technical grounds, it should not have been located in Nummati on account of the difficulty in transporting the finished products from there. It was stated that this and other difficulties had stood in the way of working the refinery to its full throughput resulting in a loss of Rs. 70 lakhs during last year.

"The Committee regrets to note that changes had to be made in the pattern of production of the refinery due to the change in the specification of the crude oil. It understands that the changes in the characteristics of crude oil are not uncommon and should have been taken into account at the time of preparing the project report for the refinery by consultants and

before deciding the original pattern of production."

The Barauni Refinery

As for the Barauni refinery the committee says: "During evidence, the managing director stated that the Government desired that the refinery should be located on the north bank of the river Ganges. The managing director also stated that the location of the refinery at the present site had added about Rs. 2.17 crores extra to the cost of the refinery made up as follows: earth work Rs. 1.27 crores, heavier foundation Rs. 20 lakhs, and on seismic consideration Rs. 70 lakhs, totalling Rs. 2.17 crores.

"Of this amount, the location of the refinery on the north bank of the river necessitated extra expenditure. This could have been avoided if the refinery had been sited elsewhere. It transpired during evidence that the Russians had recommended further investigations for locating other possible sites along the alignment of the Nahorkatiya-Barauni crude oil pipeline and were not happy over the present site.

"The Indian Refineries Ltd has pointed out that Oil India Ltd must guarantee the minimum supplies of 2.75 million tons of crude oil a year in order to feed the Nummati and Barauni refineries to their rated capacity. Oil India Ltd found it difficult to give such a guarantee in view of some unpredictable factors like the drying of wells, etcetera. They have been insisting that they could supply to the Indian Refineries Ltd only what the oilfields were capable of producing.

"The crude oil available in the Nahorkatiya and Moran oilfields is at present estimated at about 44.5 million tons which is just sufficient to feed the Nummati and Barauni oil refineries for a period of 15 years. It is understood that if, as projected, the present capacity of the two refineries is increased from 2.75 million tons to 4 million tons a year, the supplies will last only for about 11 years. This will mean that unless new oilfields are located or crude oil is imported from other countries, the refineries will cease to operate after 11 years.

Heavy Losses

As for the Indian Oil Company, the Estimates Committee says that it "has been incurring losses since its inception. The losses in three years were as follows:

Year	Loss (Rs.)
1959-60	28,808
1960-61	260,714
1961-62	1,395,528

The Committee was informed that if the Indian Oil Company incurred the same expenses towards administration and distribution as prescribed in the Damle Committee's report and the products were sold at the ceiling selling prices fixed by the Government, it would earn a profit element of 56p a kilo litre on H.S.D. and Rs. 17 a kilo litre on superior kerosene. On this basis, the Company should have made a profit of Rs. 29.53 lakhs on its transactions up to 1961-62. It is rather surprising that instead of making any profit, the Company incurred a loss. The committee feels

that there is no justification whatsoever for a distributing oil company to incur such heavy losses.

The committee also says that "the past performance of the company in achieving the object of meeting the full requirements of Government organisations has not been quite encouraging. It regrets to observe that its future plans in this direction are also vague as neither complete information on the estimated requirements of petroleum products of all Government organisations, has so far been collected and compiled nor any detailed plans and targets formulated to meet them progressively."

These are the findings of a committee of Parliament, namely, the Estimates Committee, whose chairman is a senior and respected member of the Congress Party. But during the discussion on the Budget demand for grants for the Central Ministry of Oil, there was no reference to the weighty observations made by the Estimates Committee. It was the officials of the Central Oil Ministry who had approved or advocated the suggestion to amalgamate the refinery and distribution wings of their Ministry. Instead of replying to the points raised against his Ministry, the Minister for Mines and Fuel, Mr. K. D. Malaviya, said that "socialism is a question of life and death with us. It is not a luxury or a question of preaching doctrines and giving lectures, dilating on the ethics of socialism. I have no doubt that in the present state of things, there is no other way, which can save the nation from disaster, poverty and future chaos." But people who require air-conditioned rooms, security guards, expensive furniture and occasional air travel, to mention some of the perquisites enjoyed by Central Ministers, are hardly qualified to talk of socialism. Mr. Malaviya, incidentally, did not explain why the poor taxpayer's money was wasted, as was pointed out by the Estimates Committee.

E.C.M.

Prospects Reviewed

The president of the European Common Market Commission, Dr. Walter Hallstein, gave two lectures here last week. His subject was "Europe and the World". Referring to India, Dr. Hallstein said:

"Already, Europe's record vis-à-vis your great country is not negligible. For the combined years 1961 to 1962 and 1962 to 1963, the contributions of the E.C.M. countries to the so-called Aid-India Club total \$498 million—just over half the U.S. contribution, and a good deal more than that of the World Bank. As far as trade is concerned, 64 percent of the European Economic Community's imports from India already come in duty-free; and in the Dillon negotiations, although ultimately we did not negotiate directly with India, the Community was able to offer concessions amounting to \$8.5 million worth of goods. On cotton textiles and jute, it is true, we have more to answer for: but on the former, under the long-term agreement which came into force in October 1962, the Community countries will by 1967 have enlarged their im-

port quotas to 12,000 tons, against just over 6,000 tons in 1962.

"When one looks at the overall trade balance, it is true that the Community still has an export surplus vis-à-vis India; but this now stands, in 1962, at just over \$143 million, against just over \$327 million in 1958. Community exports to India over the same period have dropped from nearly \$430 million to just over \$298 million; while India's exports to the Community have been climbing steadily from nearly \$103 million in 1958 to over \$155 million in 1962.

"I say this not to claim that we have fulfilled all imaginable obligations, but to show that we have made a start. Obviously, however, there is much more to be done. This became especially clear during the negotiations with Britain which were suspended in January 1963."

Speaking at a Press conference, Dr. Hallstein favoured a comprehensive trade agreement between India and the European Common Market. He added that although the intellectual exercises done to meet India's particular case in the course of negotiations with Britain could not become the basis, they would have a definite place in any fresh negotiations with India. He did not, however, favour any bilateral negotiations between India and the members of the European Common Market largely because of the common external tariffs.

Dr. Hallstein did not see much scope for the international division of labour, since in that case the Common Market countries are to give up manufacturing such items as diesel engines in order to stimulate exports from the developing countries. His view was that such a division of labour could not be a one-way traffic. It is idle to ask western Europe to give up manufacturing certain categories of goods when developing countries are aiming at self-sufficiency in certain categories of goods, irrespective of their natural unsuitability to manufacture them. Dr. Hallstein showed some concern about the price structure of the basic commodities, but defended the arrangement of the European Economic Community had made with some African countries.

INDUSTRIAL LICENCES

Cases of Revocation

As many as 407 licences were revoked during 1962, against 676 in the nine years ended December 1961. In the 14 weeks ended 6th April, 88 industrial licences were revoked, 27 in January, 24 in February, 25 in March and 12 during the week ended 6th April. Some of the licences revoked this year related to synthetic pig iron, glass wool, grey iron castings, steel structurals, cast iron castings, steel ingots, sulphuric acid, jute carpets and writing and printing paper. One regrettable feature of the present situation is that few applicants are coming forward to fill the gap created by the revocation of licences. Foreign collaborators, on the whole, are sitting on the fence to see if there is any appreciable change in the pattern of taxation. The licensing policy followed during the first 18 months of the third plan has killed the public-sector project for manufacturing basic chemicals and intermediates in collaboration with a consortium of West German consultants. The latter included the well-known firm of Bayer. The total cost of the project was estimated at Rs. 19 crores, including Rs. 6.70 crores in foreign exchange. Licences have been issued for manufacturing several intermediates in the private sector, so the German consortium which was to finance the foreign exchange component of the project no longer finds it an economic proposition. It is, therefore, no longer interested in the project. This is not an isolated in-

stance in the sphere of industrial licensing, it is pointed out.

JUTE

Price Support Programme

The Government of India has decided that the current operational price for jute of Rs. 30 a maund, f.o.r. Calcutta, for Assam Bottoms, should be maintained for 1963-64 also and that buffer stock operations and purchase by the State Trading Corporation and the National Agricultural Co-operative Marketing Federation should continue. The corresponding differentials for the lower grades of jute will also continue. Mr. Manubhai Shah, Central Minister for International Trade, announced this in the Lok Sabha last week.

The Minister said: "As a result of price support operations, we have

now been able to build up buffer stock of raw jute to the extent of 750,000 bales in addition to normal stocks held by the industry. The industry itself is holding stocks of more than 5 million bales. As the demand for jute goods abroad and in the country is continuously expanding, the jute industry has been able to register production at the maximum level. Our requirements of raw jute are now at the level at which full production and further expansion can be maintained.

"After making a review of the above position, the Government has decided that the buffer stock operations and purchase operations by the State Trading Corporation and the National Agricultural Co-operative Marketing Federation (N.A.F.E.D.) should continue, and the operational price of Rs. 30 a maund, f.o.r. Cal-

cutta, for Assam Bottoms should be maintained for 1963-64, namely, at the levels decided upon for the current season of 1962-63; the corresponding differentials for the lower grades of jute will also continue.

"The jute industry is now producing proportionately larger quantities of better quality fabrics, namely, carpet-backing cloth and hessian. On the side of sacking, we are facing severe competition from Pakistan whose mills can draw on raw jute supplies at lower prices. In the resultant situation, our jute industry will require a larger proportion of better quality jute if they have to withstand competition. I would, therefore, request the growers to whom we want to give support, to ensure that superior and better varieties of jute are grown, and lower and inferior qualities like B Bottoms and

CAPITAL 18th April, 1963.

Cross Bottoms are grown less and less.

"It is, therefore, necessary to discourage the growth of lower and inferior quality jute. It is also necessary that inferior quality jute is not passed off as better quality and, for this purpose, the grading arrangement should work satisfactorily. The Agricultural Marketing Advisor of the Central Ministry of Food and Agriculture will shortly institute a phased programme for providing facilities for the grading of jute. At present, the differentials between the price for the Assam Bottom and B Bottom is Rs. 2 a maund and the next additional differential for Cross Bottom is Rs. 3 a maund or Rs. 5 below the price for Assam Bottom. We are not disturbing these differentials.

"Over a long period, we should also arrange to supply and grow larger quantities of better quality seeds to growers of jute who will otherwise grow lower grades of jute. The Central Ministry of Food and Agriculture is, therefore, taking up all these related points to multiply better seeds and to supply the same to growers.

"The Government will, therefore, continue to undertake all the necessary operations for stabilising raw jute prices at adequate levels in the interest of growers, in the interest of the jute industry, and in the interest of our foreign exchange earnings."

STEEL

Raising Retention Price

The Central Minister for Steel, Mr. C. Subramaniam, said in the Lok Sabha last week that the question of the future price policy and the manner in which steel prices should be determined are being reviewed by the Government. The Minister said that the retention prices for 1960-62 had been fixed at Rs. 522.50 a ton. The Government had decided that the prices so fixed could be applicable provisionally for the period beyond 1st April, 1962, subject to escalations necessitated by statutory increases in the prices of raw materials and railway freight. The question of allowing an increase in the steel retention price due to the rise in railway freight and royalty on minerals, implementation of the interim wage board's award and incidence of the war risk insurance premium, is at present being considered. An announcement will be made soon, the Minister said.

Mr. Subramaniam added that all the public-sector steel plants were on their way to attaining their full rated capacity. Whatever target was fixed for them is being achieved. The general managers of the plants had been told at their last meeting that production costs should be brought down by about 15 per cent.

DURGAPUR

Steel Output Rises

The Durgapur steel plant shows a rapid increase in production during the past six months. From 46,073 tons in September, the figures rose to 58,735 tons in October, 62,049 tons in November, 77,225 tons in December, and to 83,529 tons in January. The figure of 78,105 tons in February showed an annual rate of 1.08 million tons. The blast furnace output from September onwards also showed a sharp rise. From 78,948 tons in September, production rose to 94,009 tons in October, 97,312 tons in No-

CAPITAL, 18th April, 1963.

ember, 109,134 tons in December, and to 118,123 tons in January 1963. In February, the production of pig iron was 102,427 tons.

After exceeding the ingot production target in February 1963, the Durgapur steel plant touched 100 per cent of its rated capacity in March. The steel-making plant produced 91,028 metric tons of steel during the month. The output of coke in March was 139,737 metric tons and of pig iron 120,401 metric tons.

The foundry industry will benefit greatly by the increase in pig iron production. The output is now 140 per cent of the designed capacity of the plant.

COAL

Achieving Production Target

The Central Minister of Mines and Fuel, Mr. K. D. Malaviya, said in the Lok Sabha last week that the public sector, as a whole, will produce about 11.70 million tons of coal, against the target of 12.65 million tons in 1962-63. The production target for the private sector during the year was fixed at 49.33 million tons, against which production is expected to amount to 52.18 million tons.

Mr. Malaviya explained that proportionately, a greater number of collieries in the public sector have to be developed from scratch in almost virgin areas in fairly inaccessible regions. So production from these collieries could not be increased as rapidly as from those which were already in production. The foreign exchange difficulties are also hampering the development of further production capacity.

FOREIGN CURRENCY

Amount Repatriated

The foreign currency holdings repatriated last year according to the orders of the Director of Enforcement amounted to Rs. 1.99 lakhs and foreign currency confiscated under his orders was of the value of Rs. 17,108. In addition, foreign exchange amounting to about Rs. 2.50 lakhs is yet to be repatriated by the parties in terms of the orders of the Director of Enforcement passed during the same period. Cases of alleged foreign exchange offences involving Rs. 101 lakhs (approximately) are awaiting adjudication.

During 1962, 4,328 applications were received by the Reserve Bank for the release of foreign exchange for business travel abroad, of which 4,100 were sanctioned. During this period, Rs. 1.12 crores was released for business travel. The maximum amount permitted to one individual was Rs. 16,025.

COASTAL SHIPPING

Acquiring More Vessels

The Singh Committee has recommended that 12 specially designed shallow draft vessels of about 10,800 deadweight tons each and a service speed of 12.5 knots should be acquired since the existing coastal ships, including Liberty ships, cannot carry coal to their full capacity due to shallow draft.

AUSTRALIA

Proposed Visit by T.T.K.

The Central Minister for Economic and Defence Co-ordination, Mr. T. T. Krishnamachari, will be visiting Australia for a few days from 23rd April, 1963. During the visit, Mr. Krishnamachari will avail himself of the opportunity to exchange views on the general situation and discuss matters of common interest to both

the Governments. The Minister will be accompanied by Mr. S. S. Kherra, Secretary to the Central Cabinet.

U.K.

New Loan for India

In the course of his Budget speech on 3rd April, 1963, the U.K. Chancellor of the Exchequer, Mr. Reginald Maudling, announced that the British Government was about to make a loan of £3.5 million to the Government of India for purchasing steel plates and other steel products. The loan agreement was signed in Delhi last week. The loan is for a period of 25 years, but repayments of the principal do not begin until after the first seven years. Orders arising under the loan agreement will be placed with British firms by the middle of 1963.

This loan is additional to the British aid totalling £95 million which has been made available so far for India's third five year plan. The steel will be used for a number of important projects in both public and private sectors, including power-house construction and for meeting the requirements of heavy engineering factories, of the heavy electricals project in Bhopal, and for manufacturing railway wagons, ships and road vehicles.

U.S.A.

Grants for India

India has been awarded U.S. grants to finance research and studies on insect nutrition, certain plant diseases, and for the development of new starch products from cereals, the U.S. Department of Agriculture announced last week. A five-year grant of about \$37,925 will finance studies at the Indian Institute of Science in Bangalore, on the specific nutritional requirements of insects which feed on plants, with special emphasis on their need for vitamins and amino acids. This research—employing silkworms as test insects—is expected to lead to the development of an artificial diet for silkworms and other species of plant-feeding insects.

A grant of about \$9,113 was made to Sri Venkateswara University College in Tirupati, for studies on the effects of anti-biotic substances and soil micro-organisms on important plant pathogenic fungi. Data from the three-year project will be used to develop agents from soil organisms to help control plant diseases.

A five-year grant to the Department of Zoology, Loyola College, Madras, will finance a systematic and biological study of Indian thrips to supplement data from U.S. research on this serious agricultural insect pest. This grant is equivalent to \$51,055 in rupees.

A grant equivalent to \$37,199 in rupees will finance the investigation on the preparation and characterisation of new copolymers of cereal starch. This research is to be conducted by the Ahmedabad Textile Industry's Research Association.

The U.S. Department of Agriculture has also announced a five-year grant, equivalent to \$131,100 in Egyptian pounds, to the animal and poultry breeding department of the U.A.R. Ministry of Agriculture, to enable its scientists to evaluate cross-breeding and closed-flock breeding as a means of improving egg production in chickens.

EXPORT-IMPORT BANK

Credit for Hind Aluminium

The U.S. Export-Import Bank announced last week the authorisa-

tion of a \$5 million credit in favour of the Hindustan Aluminium Corporation (Hindalco) of Bombay. The bank president, Mr. Harold F. Linder, said that the credit would be used to purchase machinery, materials, equipment, and related services in the United States with a view to constructing an aluminium fabricating plant in Renukoot, northern India. The new plant will be integrated with an existing aluminium reduction plant which the U.S. Export-Import Bank helped the Company to finance with a \$13.5-million credit in 1960. The new facility will help process ingots into redraw rod, extrusions, and flat and coiled products at a rate of 15,000 metric tons a year.

The total cost of the new plant is estimated at over \$11 million. The \$5-million U.S. Export-Import Bank credit will cover the costs of U.S. aluminium melting, casting and fabricating machinery as well as the engineering design of construction to be undertaken by the Kaiser Engineers Overseas Corporation. The Kaiser Aluminium and Chemical Corporation owns about 25 per cent of Hindustan Aluminium stock with the balance held by Birlas and the Indian public.

GOA

Developing New Industries

The following schemes for setting up new industries in Goa are in various stages of consideration:

Large-scale industries (public sector):

(1) An iron and steel project with a capacity of 300,000 tons to 500,000 tons a year or a steel plant with a capacity of 1 million tons a year.

Private sector:

(1) Two textile mills with 25,000 spindles each, one of them with 500 automatic looms.

(2) Two projects for pelletisation of iron ore fines, each with a capacity of 1,000 tons a day.

(3) A sintering plant for the utilisation of iron ore fines with a capacity of 1,000 tons a day.

(4) A stainless steel manufacturing plant with an investment of about Rs. 3 crores.

(5) A pig iron plant with a capacity of 100,000 tons a year at an approximate cost of Rs. 4 crores.

(6) Two breweries with an investment of about Rs. 30 lakhs each.

Small-scale industries: About 250 schemes for small-scale and cottage industries have been approved. A few of the important approved schemes are as follows: Bakeries, rice and flour mills, strawboard, plywood, paints and varnishes, canning, breweries, printing ink, storage batteries, rice bran oil, zip fasteners, mango flakes, repairing and other workshops, foundries, biscuits, soda water, floating hotel, coconut, husking, nuts and bolts, soap, tyre retreading, bricks, cotton embroidery, saw mills, fishing nets, printing presses, hosiery, fluorescent tubes, salt works, pharmaceuticals, pesticides, fuel injection servicing, mechanical toys, chemicals, macassu oil, rubber products and contraceptives, thick-walled bearings, engine valves, tufted carpets, ghamellas, electroplating, forging plant, sodium silicate, polyurethane, hair solutions, and cosmetics.

Two industrial estate co-operative societies have been registered. They have been given matching share capital contribution to the extent of Rs. 1.50 lakhs. Besides, a society for salt manufacture has been registered

in Diu, and a loan of Rs. 10,000 has been granted to the society.

ROURKELA

Demag Tender Accepted

The Government has decided to accept the tender of Messrs Demag of West Germany for the supply of the electrical sheet mill included in the expansion programme of the Rourkela steel plant. The mill will be capable of producing about 50,000 tons of hot rolled electrical steel sheets a year. The contract will be concluded only after the agreement with the West German Government in relation to the credit for expansion of the Rourkela plant is finalised and some other related matters are settled.

The Government of India proposes to sign an agreement with the West German Government for a loan of 450 million deutschmarks to expand the Rourkela steel works. The actual amount of the loan is 400 million deutschmarks, but in addition 50 million deutschmarks is available from an earlier loan of the West German Government. These two amounts are expected to cover the entire foreign exchange cost of the expansion of the Rourkela steel plant from its present capacity of 1 million ingot tons to 1.8 million ingot tons. The main terms of the loan are that it is for a period of 20 years at the rate of interest of 5½ per cent with a grace period of five years. The loan will be used for making payments to suppliers of plant and equipment from West Germany and Austria in connection with the expansion scheme, and will also cover the cost of any technical personnel which may be needed during the period of construction.

CEMENT

Licences Issued

During the period from 1st January, 1958, to date, 21 licences were issued to private industrialists for manufacturing cement; nine of these were for setting up new factories and 12 were for the expansions of the existing factories. Of these, one new factory has been set up and the expansion programme of one completed. Five licences, four for expansions and one for setting up a new unit, have been revoked. In the case of ten licences, six for new factories and four for expansions, the dates for completion stipulated in the licences have not yet expired. In the case of four licences, one for a new unit and three for expansions, the dates for completion stipulated in the licences, namely, 29th November, 1960, 5th November, 1962, 31st March, 1963, and 24th March, 1963, have expired. The Government is considering the question of revocation or suitable amendment of the licences.

JAPAN

Kubota Power Tillers

A five-man delegation from the Kubota Iron and Machinery Company of Japan recently visited India for setting up a factory to manufacture power tillers. It had discussions with the Governments of Bihar, Orissa and West Bengal and others concerning the import or manufacture of the Kubota power tillers in India. Even before the delegation's visit to India, a private firm had submitted an application for the manufacture of this make of tiller. This application, along with similar other applications, is being considered by the Government.

THE TYRE
MOST
IN DEMAND

DUNLOP

LONGEST MANUFACTURING EXPERIENCE IN INDIA

Dunlop Truck and Bus tyres are most in demand with operators all over the country. They have proved themselves to be the most sturdy, most dependable and most profitable under all conditions of service. Extra strong casing—more re-treads per tyre—lowest cost per mile!

DUNLOP TRUCK AND BUS TYRES
lowest cost per mile

A TORY PLAN FOR EXPANDING U.K. EXPORTS

(FROM OUR LONDON CORRESPONDENT)

MR. MAUDLING'S first Budget as Chancellor of the Exchequer has met with a surprisingly good reception, even the trade unions going so far as to accord it the distinction of being in conformity with the needs of the U.K.'s economy today. Indeed, the approval with which it is regarded everywhere would be complete but for what is equally generally regarded as its most serious deficiency, namely, the granting of incentives to industry to expand exports.

The Chancellor's approach to this question has been meticulously correct. Direct incentives to exporters would create difficulties in many quarters; with G.A.T.T. countries, for instance, and with our E.F.T.A. partners, quite apart from the fact that they could prove a stumbling block if there was any question in future of Britain becoming a member of the Common Market. Then again, what effect would any such moves have on the U.K.'s past pro-

tests against those countries which have directly subsidised exports in the past and have as a result been persuaded to abandon these practices—Japan, for example.

Instead of direct export subsidies, therefore, Mr. Maudling has preferred to depend on achieving a similar result by indirect means. The creation of an expanding home market is one such move, the extension of the credit facilities of the Export Credits Guarantee Department another. Indeed, the whole Budget may be said to aim at creating a climate in which exports might be expected to improve of their own volition. It is evident that the Budget was framed with the need for export incentives very much in mind, but Mr. Maudling may well have been deterred in giving a more definite shape to his thoughts on the subject by the fact that it has been very much to the fore in Conservative policy thinking for some time. Perhaps the Chancellor felt he could

not hope to satisfy the varying views of all his supporters in the party ranks.

The Prime Minister's contention that "exporting is fun" is discarded by a group of his Conservative supporters in a report sponsored by the Junior Carlton Club political council. It is full of suggestions on the more mundane theme that "exports must be profitable to the exporter." "We have had," the report says, "some proof of irritation among overseas buyers at having to waste time meeting representatives of British firms who are nice chaps, but uninformed on the technicalities of their firm's product." What pays best, it appears, is to appoint an agent carrying a minimum of other lines and look on him as "part of the British company's family."

Best Alternative

The best alternative is a representative on the spot who knows the needs of the people to whom he is selling, their language, and also his own industry at home. Among the suggestions made are:

New firms prepared to aim at a certain export target and reach it within two or three years should be given the incentive of special grants for factory extension and machinery, or special facilities for renting factories cheaply.

Britain should consider adopting, within the rules of G.A.T.T. and E.F.T.A., the "value-added" tax, as used by the Common Market.

The Inland Revenue should be "generous with overseas expenses and tough on home expenses."

The appointment of a special Minister for overseas trade would appeal to industry and help to make the public export-conscious.

A central organisation is required to provide the small man with an easy means of getting his packaging designed to suit overseas markets.

Trade associations should be obliged, by law if necessary, to undertake basic market research.

As distinct from "inadequate diplomats," commercial attaché with business flair should be kept in their posts for longer than the usual tour of duty, or even permanently.

There should be recruitment for such posts from outside the Civil Service and more realistic commercial training within it.

A university might set up a faculty to train commercial diplomats.

Because export selling is arduous and unsettled, overseas commercial representatives should have special tax-free allowances from their firms.

The report complains that Britain has had "too much feather-bedding" in its home markets. "What we must do is to initiate a vital drive on the progressive cultivation of markets by top-grade market research, salesmanship, prompt delivery and after-sales service."

The report concludes that time is short, but if Britain can hold the line on exports in the next two or three years, and be energetic in expanding and re-equipping her productive resources and selling skill, she will find opportunities for more trade everywhere. And finally, the report suggests that the City of London should make its facilities better known to British manufacturers outside London. Every en-

couragement should be given to British industry to invest in the E.C.C. countries, "even if this means some loss of production at home."

The study group, which was led by Mr. Kenneth Lewis, M.P. for Rutland and chairman of the Conservative Party's Labour Committee, relied partly on the experience of its members and partly on answers to questions sent to overseas buyers asking where they thought British industry was failing. It reports some proof of irritation among overseas buyers at having to waste time meeting representatives of British firms "who are nice chaps, but uninformed on the technicalities of their firm's product." The views of the study group commit neither the Club nor the party.

A startling new idea about exports, on the other hand, is put forward in another Conservative Party booklet, *The Expansion of Exports*, issued by a group of Conservative Members of Parliament. The thesis is that the Government has been wrong trying so hard to encourage a multitude of small manufacturers to enter the export business. The group, whose chairman is Sir Edwin Leather, insists that, with few exceptions, the small manufacturer simply has not the resources of management, experience and finance to break into export markets successfully. Attempts to do so almost invariably end in loss and disillusion, the argument runs.

For such firms, the traditional export merchants of the City of London are described as the "best channel." On the other hand, firms which are exporting already—and they are predominantly large firms—should be more vigorously encouraged and assisted. As evidence, the group quotes a recent Board of Trade survey which shows that in a large number of industries, the firms which export a high percentage of their output are almost invariably large companies. But, presumably, even the giants are not yet doing as much as they can.

"Poor delivery performance," the authors say, "is probably the most widely heard criticism of British exporters, and in our experience, the most widely justified." They also suggest that exporting companies could greatly improve their performance by raising the standards of their export staffs and this means, of course, paying higher salaries for good men, making sure that they get good training and giving the export managers greater authority.

Market Research

There is a good deal of truth in the criticism that even the large firms, which have the resources to organise a successful export campaign, do not always compare well with their foreign competitors in the quality of market research, salesmanship, and service. Whether the booklet's suggestion that the N.E.D.C. might be given the job of general market research is practicable may well be doubted. Some years ago, the Board of Trade tried to set up such a service for exporters, but it had only limited success.

As for the small exporters, there are too many individual success stories to drop the effort to interest a wider section of industry in international trade. No doubt, there are many small family firms where a senior member regards the annual overseas trip more as a pleasant holiday than as a serious attempt to get orders. But to suggest that this is the rule is defeatist. British prices are only just beginning to become competitive. If they can be held down while those on the Continent are rising fast, the business of exporting may soon become profitable again, and then it will be worth encouraging any firm that can contribute.

RETALIATION AGAINST EXPORT SUBSIDY IN PAKISTAN

THE Indian jute industry and trade have been anxiously awaiting the report of the Shrivastava Committee which was submitted to the Government in January. The report is now being examined by the Central Ministry of International Trade and a special committee of the Board of Trade. The Shrivastava Committee, it is said, has made some important observations and recommendations affecting the industry and the trade. Present indications, it says, are that a good world demand for jute goods is likely to emerge, justifying a "bold and expansionist" policy for the Indian jute mills.

The committee is reported to have declared that India may be justified in adopting "retaliatory measures" against the "extraordinary and unpermissible" subsidies offered by the Pakistani Government to boost the country's jute goods exports. Such "retaliatory" subsidies or incentives, the committee thinks, should be financed by the industry rather than the Government. It is also necessary to adopt two other concurrent measures, namely, invoking the protection offered by the G.A.T.T. and the I.M.F. regulations prohibiting the type of subsidy offered by the Pakistani Government.

The committee is reported to have advocated direct negotiations between the two Governments to end this cut-throat competition. For every Rs. 100 worth of jute goods shipped out of Pakistan, the exporter gets Rs. 20 worth of free foreign exchange for importing any consumer goods he likes. This blank authorisation is a lucrative source of income to the exporter, since it helps him to earn much more by selling the imported goods in the open market. The blank permit also accentuates the vicious circle of the movement of contraband goods within the country and promotes a thriving smuggling trade across the frontier. The Pakistani Government of late has tried to modify the subsidy scheme. But the exporter is still left with sufficient financial incentive to undercut Indian jute goods prices in the overseas market.

The Shrivastava Committee is reported to have recommended a "critical review" of the working time agreement under which a sizable percentage of looms in the Indian jute mills remained sealed. Referring to raw jute, it has pointed out that the production of fibre has been sharply increased through the diversion of land under foodgrains and not through the increase in productivity. In view of the chronic foodgrains shortage, no further addition to jute acreage should be allowed. So any increase in the production of fibre has to be achieved through the introduction of better farming practices and the use of improved seeds and mixed fertilisers.

I.J.M.A. Output Figures

The latest I.J.M.A. production figures show a 10.6 percent increase in output—from 94,400 tonnes in February to 104,500 tonnes in March.

Of this, hessian constitutes 44,400 tonnes (42.4 percent), against 40,700 tonnes (43.1 percent), sacking 42,700 tonnes (40.9 percent), against 39,800 tonnes (42.2 percent), and other goods 17,400 tonnes (16.6 percent), against 13,900 tonnes (14.7 percent). The total number of hours worked has increased by 24 to 208 in March. The percentages of various goods pro-

duced show a fall of 0.7 percent in hessian and 1.3 percent in sacking, which was compensated by a rise of about 1.9 percent in other goods. In March 1962, the number of working hours was 200, with a total output of 97,800 tonnes—comprising 38,400 tonnes (39.2 percent) of hessian, 45,200 tonnes (46.2 percent) of sacking and 14,200 tonnes (14.5 percent) of other goods.

U.S. Burlap Consumption

Jute circles in Calcutta are not perturbed over the slight fall in the U.S. burlap consumption in March from the peak figure reached in February. January was a lean month with a low intake due to the U.S. dock strike which left a considerable quantity of jute goods afloat. The pent-up demand during that month was satisfied in February after the dock strike ended. U.S. burlap consumption has fallen by 5.2 million yards from 89.9 million yards in February to 84.7 million yards in March, but shows a rise of 16.7 million yards over January. The January-March consumption totals 242.6 million yards. End-March stocks remain unchanged at 304 million yards. At last month's rate of consumption, stocks could last three-and-a-half months.

Jute Prices in Pakistan

In a desperate bid to stabilise raw jute prices, the Pakistani Government has introduced a scheme for restricting acreage in 1963-64. The Government has advised the growers to produce the right quantity of jute to keep with the demand. This, it says, will ensure a fair return to it, and check the wide price fluctuations resulting from a glut of jute. Announcing the latest measure, a Press note says that so far Pakistan has enjoyed the advantage of offering quality jute in the world market. But of late, the average quality has deteriorated; an abundance of sub-standard fibre has created a problem for disposal and has depressed the prices to uneconomic levels. Due to higher production during the last two seasons, large jute stocks have accumulated. In order to assist the growers to get a reasonable price, the authorities introduced the minimum price scheme for the internal market. Since the offer a permanent solution to the complicated problem of price fluctuations, the Government has decided that the proportion of acreage in 1963-64 in relation to the basic 1940 acreage should be 50 percent in Dacca, Mymensingh, Kishoreganj, Comilla and Rajshahi; 31 percent in Faridpur; 22 percent in Noakhali; 44 percent in Bogra and Barisal; 44 percent in Pabna and Kustia; 25 percent in Jessore; and 16 percent in Khulna. As for Sylhet, the same acreage should be sown this season as in 1962. Besides, the growing of jute has been banned along the border belt with some minor exemptions. The measure is intended to reduce the chances of large-scale smuggling of Pakistani fibre to India across the long land frontier.

Jute Goods Exports Up

There was an all-round rise in jute goods exports during the first seven months of the 1962-63 season, according to the statistics recently released by the Indian Jute Mills Association. During the seven-month period, total exports of hessian rose from 261,400 tons in 1961-62 to 346,500 tons in

1962-63. Sacking exports rose from 172,000 tons to 180,000 tons. At 526,500 tons, total exports during the period showed an increase of 93,100 tons over the figures for the corresponding period of the previous year.

Among western countries, the U.S.A. raised her hessian offtake from 123,700 tons in July-January 1961-62 to 159,100 tons in the same period of 1962-63. In Europe, the U.K. consumed 5,000 tons more at 21,300 tons. The offtake in Africa rose by 800 tons to 19,100 tons and that of Australia by 1,900 tons to 11,000 tons.

As for sacking, there was a setback in the U.K.'s consumption from 4,500 tons to 2,900 tons. The U.S.A. also registered a lower offtake at 1,500 tons, against 3,400 tons and New Zealand 6,000 tons, against 8,200 tons. But Africa's consumption improved from 62,300 tons to 63,000 tons.

Satisfactory Showers

Satisfactory April showers have fallen during the past week over all the jute-growing areas of West Bengal, Assam, Bihar and Orissa. These have helped the sprouting of seedlings in the sown areas and in the preparation of soil in the hitherto dry zones. If the weather is favourable, the prospects for a satisfactory jute crop during the season will improve.

THE JUTE MARKETS

Manufactured Goods: Trading was interrupted in the raw jute and jute goods markets by the Easter and the Bengali New Year's Day holidays during the past week. In the absence of fresh developments, and because of less working days, the turnover declined to a trickle, although sentiment remained firm in the manufactured goods market due to the absence of selling pressure. There were scattered overseas enquiries and a small volume of business was transacted in ready and near-delivery goods. Towards the close, sentiment was stimulated by reports of satisfactory burlap consumption in the U.S.A. during March. This offset the bearish impact of a rise in Indian jute goods output during that month and also the prospects of a further rise in production during April and May at the present level of maximum production. In spite of the slender business, mills were reserved and shippers keen on squeezing a lower price for covering their positions. The prices of both hessian and sacking, however, registered a modest rise for ready and near positions. The undertone was steady at the close.

Quotations on Wednesday were as follows:

	April	May	June	July	Oct.
40in. 7/oz.	34.85	34.90	34.90	35.00	35.00
40in. 8oz.	37.65	—	—	—	—
40in. 10oz.	46.35	46.40	46.45	46.50	46.25
B Twills	111.85	112.50	112.55	112.65	112.50
Corn sacks	114.50	115.00	115.25	115.25	115.00
Heavy Cees	111.50	112.50	112.55	112.65	112.50
A Twills	135.00	135.00	135.00	136.00	136.50
Liverpools	127.50	127.00	126.50	126.50	126.50

Raw Jute: Sluggish conditions prevailed in the raw jute market during the past week due to the reluctance of mills to purchase low-grade fibre at present prices. Sellers were keen on liquidating their stocks even at a discount. Sentiment was also disturbed by reports of widespread showers all over the jute-

growing areas helping the sowing operations. Transactions were of a routine nature in small lots of selected grades at lower than the prescribed minimum rates around Rs. 27 a maund, basis Assam Bottoms, for ready delivery, f.o.r. Calcutta. In the upcountry markets, daily arrivals declined to around 15,000 or 20,000 maunds due to the gradual depletion of stocks with farmers. Buyers were holding out while sellers were evincing a keen desire to dispose of their holdings at lower prices. So prices tended to sag further to around Rs. 25.50 a maund, basis Assam Bottoms.

A quiet trend also prevailed in the futures market in sympathy with the spot market. Upper Assam White Bottoms for June declined from the previous closing rate of Rs. 30.24 to Rs. 30.16 after fluctuating narrowly between Rs. 30.32 and Rs. 30.16 on alternate bouts of short-covering and profit-taking. The turnover was moderate and the undertone hesitant at the close.

Quotations on Wednesday were as follows:

	Landed at Mills (Basis Bottoms)		T.D.S.	
	Current Rs. A Ql.	Minimum Rs. A Ql.	Rs. A Ql.	Rs. A Ql.

THE U.K. JUTE MARKETS

FIBRE REMAINS WEAK

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was quieter in Pakistan during last week and a further reduction in E.P.C. values took place. The official rates for the medium and higher grades of both white and Tossa jute have been reduced by £1 to £5 a ton. The lower grades remain unchanged, as they have been at minimum export prices throughout the entire season.

The lower E.P.C. values in force have made little or no difference to the position in Dundee as sellers have been discounting the market for some time. Offers of the better qualities of jute have been very scarce, and only small quantities are available.

The spot market in Dundee was rather weak, and the fact that Pakistan has reduced E.P.C. values, did not help the position. Some movement was taking place in ex-warehouse parcels, but the prices paid were well under current shipment rates. It will still take some time before all the spot jute in Dundee is taken up by spinners.

There were reports that rain had fallen in some of the jute-growing areas in Pakistan, and this should allow sowing of the new crop to proceed. There were sellers of new crop, but the prices quoted were irregular. Mill Lightnings were named at £107 and Mill Hearts at £92, but less was accepted for the latter for August-September shipment. The quantity of new crop jute purchased this year was much smaller than usual, and this appeared to be due to sellers being willing to accept less than minimum prices for the lower grades of the current crop.

Prices of old crop were lowest at £112 for Mill Lightnings, at £91 for Mill Hearts and at £77/10 for Grade Hearts, c.i.f. U.K., or April-May shipment. Grade Tossa-2/3 was rather

BRIGHT OUTLOOK

ATLANTIS (EAST) LIMITED (Incorporated in England)

FWTBR 5447

scarce with prices ranging from £123/10. Grade Tossa-4 was quite freely offered at the ruling minimum level of £106/10. Outport Tossa-2/3 ranged from £94 and Outport Tossa-4 from £85, April-May. Cuttings were also quiet with S.N.C. at £54 and N.C. at £43/10s.

The Siam market was about unchanged, but no buying interest was shown by spinners here. Grade A was at £72, grade B at £66 and grade C at £61, delivered mill Dundee for April-May shipment.

The Calcutta goods market was quiet and prices became easier after it was known that stocks held by the mills at the end of March were increased by approximately 8,400 tons. Quotations were at 70s for 40in. 10oz. and at 52s 6d for 7½oz. a 100 yards f.o.b. Calcutta for April shipment, and at 69s 9d and 52s 6d May-June and also July-September. B Twills were at 168s 9d, 169s 3d and 170s for the respective shipment periods. A

request by the Indian mills for lower minimum prices for raw jute was rejected by the Indian Government.

The jute industry in Dundee is busy, and orders are being received for forward delivery. The quantities are not large but sufficient to maintain production at maximum levels. Some fair orders have been placed for sackings and tarpaulins. Prices have been firm and producers are refusing to accept lower rates.

A pay rise granted by the Wages Council comes into force on 3rd May, and the 14,000 jute workers in Dundee and district will benefit. The extra annual cost to the industry will be £197,000, bringing the wage bill up to £6.25 million.

U.K. JUTE AGREEMENTS HELD AGAINST PUBLIC INTEREST

The Restrictive Practices Court in Edinburgh decided recently that

the seven price agreements in the British jute industry are contrary to the public interest. The respondents were the British Jute Trade Federal Council. The reading of the judgment took almost two-and-a-half hours. Lord Cameron, Scottish judicial member and chairman of the Court, said that the respondents had failed to overcome the presumption that the seven agreements were contrary to the public interest. He said the Court had been left with the impression that the average standard of efficiency in the industry had not been proved to be in any marked degree lower than it would have been without the restrictions.

They thought the seven registered agreements were inter-related and produced a fixed system of prices. From the figures which had been produced it seemed that the protection offered by the uniform prices had very much less importance than

the respondents attached to it. It was not proved that the apprehended consequences of the emergence of a "jute controller's gap" would be likely to follow removal of the restrictions, said Lord Cameron.

The respondents had failed to establish that large-scale speculation in imported goods would be likely to follow removal of the restrictions. The respondents had failed to show that the removal of the restrictions would be likely to have a serious effect on the level of employment in Dundee. This, he said, was sufficient for the disposal of the case. The issues of benefits and detriments were not live issues. After the decision, a spokesman for the British Jute Federal Council said: "The whole industry will be very disappointed by the Court's decision. We remain convinced that the agreements which were 'registered under the Act are indispensable.' Successive post-war Governments had adopted and operated the system, he said. It met the special need of the industry for protection against abnormal competition and safeguarded employment. Now that the agreements have to be abandoned, a difficult situation will certainly be created. The Board of Trade has acknowledged obligations to maintain its safeguards and the employment in the industry and the area. The Court has assumed that the Board of Trade will continue to do this. They will no doubt have to examine the new situation immediately and consider how to maintain and complete the safeguards."

I.J.M.A. PRODUCTION FIGURES FOR MARCH

The Indian Jute Mills Association reports the total production of jute goods for March as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	(5,823 tons)
5,916 tonnes	
1,66.69 thousand metres	(1,82.3 lakh yds.)
1,30.2 lakh nos.	
(b) Sacking	
41,486 tonnes	(40,831 tons)
9,05.56 thousand metres	(9,90.3 lakh yds.)
4,48.2 lakh nos.	
2. Gunny Cloth	
(a) Hessian	
38,494 tonnes	(37,886 tons)
13,20.77 thousand metres	(14,44.4 lakh yds.)
(b) Sacking	
1,247 tonnes	(1,227 tons)
26.70 thousand metres	(29.2 lakh yds.)
3. Other Manufactures	
17,402 tonnes	(17,121 tons)
4. Total Production	
(All Kinds)	
1,04,545 tonnes	(1,02,894 tons)

Summary

	(000 metres and 00,000 yds.)	Mar. '63	Feb. '63	Mar. '62
Hessian	14,87.46	13,79.84	13,33.09	
	(16.27)	(15.09)	(14.58)	
Sacking	9,32.26	8,66.79	9,77.41	
	(10.20)	(9.48)	(10.89)	
(000 tonnes and tons)				
Hessian	44.4	40.7	38.4

Commodity Markets

Falling Trend in Tea Prices

(BY A SPECIAL CORRESPONDENT)

WEATHER reports from all tea-growing districts in north India state that climatic conditions are too hot and dry and rain is badly wanted. Rain has since been reported and the outlook should be more seasonable. But another late start to the 1963-64 plucking season looks likely, and as last year's world crop figures are expected to be lower than in the previous season, while some additions to consumption is expected, it remains difficult to understand why tea prices show a tendency to fall. One could reason that buyers expect the higher excise levy will reduce internal consumption in India and thus make more tea available for export.

Crop figures from the major producing countries for 1963 do not indicate any startling change in output. In spite of the lower crop from north India in 1962, 218.7 million lbs have been shipped to the U.K. The figure for the previous year was 209.17 million lbs. Total shipments from Calcutta port were 341 million lbs in 1962 and 337.38 million lbs in 1961.

There does not appear to be much wrong with the industry apart from the cost of production spiral. A puzzling problem is if consumption is going ahead on the lines indicated by the chairman of the Indian Tea Board, why do not commodity prices respond, for there is no surplus tea in sight? Exports have improved slightly to most destinations apart from Canada, the Sudan, the Persian Gulf and Turkey. The losses to these countries are quite appreciable, totalling round 5 million kilograms worth about Rs. 2½ to Rs. 3 crores. It is good to note that the figures for the U.S.A. justify recent optimism. Despatches from north India were: this season 15,465,000 lbs, 1961-62 14,888,000 lbs and 1960-61 only 12,194,000 lbs.

As already reported, Russia is buying more of Ceylon teas. In 1961, Russia took only 3.19 million lbs from there. In 1962, it is believed, about 5 million lbs were imported, and for 1963, it is stated, Russia will purchase 6 million lbs.

For some reason not clarified so far tea is not included among the exportable commodities to benefit by an additional rebate on income tax for exports which will apply to jute, textiles, plywood, iron ore, plastics, etcetera. No doubt, the authorities will reason that abolition of the tea export duty should satisfy the trade, but that benefit has been neutralised by the levy of a 20 percent surcharge on excise duty. The Tea Board is doing fine work, but the cause of India's loss of markets is due to high costs, and Ceylon, Indonesia and east Africa have an advantage in this matter.

The Indian Tea Board will soon inaugurate a Tea Centre in London. The Board is making a good effort to stop further cutting into India's tea exports, and it has been reported that at forthcoming fairs in Moscow and Geneva, Darjeeling tea will be served. That sounds all right, but is it? Darjeeling district produces the finest teas with its second flush and later on in the autumn. But the district also manufactures a large proportion of fairly ordinary teas. Which is to be used? Surely, a good strong India blend might be a better advertisement. What about blends to suit the local water which can make quite a difference to tea brewing?

COMPANY AND PUBLIC NOTICES

Situations Vacant

RESERVE BANK OF INDIA

APPLICATIONS are invited for the following posts in the various departments of the Reserve Bank of India:—

(A) POSTS AND SCALES OF PAY:

(i) Deputy Chief Officers: Rs. 1275-75-1575

(ii) Banking Officers

(iii) Research Officers

(iv) Industrial Finance Officers

Rs. 375-55-815 EB-55-925-60-1045.

(v) Probationary Assistants for Economic Department

Rs. 250-25-450 EB 25-650.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates in all categories mentioned above will be eligible to draw local pay (at centres where it is admissible) and house allowance at rates prescribed from time to time. Dearness Allowance is not admissible to category (i).

(B) QUALIFICATIONS:

(i) Deputy Chief Officers, Department of Banking Operations: Applicants should have a minimum of 15 years commercial banking experience out of which not less than five years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy.

(ii) Banking Officers, Department of Banking Operations: Applicants should (a) have a minimum of five years' commercial banking experience out of which not less than three years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy or

(b) be Chartered Accountants with a minimum standing of five years.

(iii) Research Officers, Economic Department: Applicants should possess first or high second class Master's degree in Economics or Commerce of an Indian or foreign University or a Doctorate degree in Economics of an Indian or foreign University, and a period of research work in one or more of the following subjects: (a) Monetary Economics, (b) Banking Theory and Practice, (c) International Trade and Finance, (d) Agricultural Economics and (e) Planning and Development. Applicants are expected to be proficient in economic analysis. A period of practical banking training will be an additional qualification in respect of applicants with specialisation in (a), (b) and (c) above and experience of agricultural surveys in respect of (d) above.

(iv) Research Officers, Department of Statistics: Applicants should possess (i) first or high second class M.A./M.Sc. in Statistics/Mathematics of an Indian or foreign University, M (Stat) of Indian Statistical Institute, Calcutta or an equivalent qualification, (ii) experience in the application of statistical methods to economic problems, (iii) Research experience in one or more branches of applied statistics like sampling, econometrics, etc. A doctorate in Statistics, experience in handling of official statistics, etc. will be considered as additional qualifications.

(v) Industrial Finance Officers, Industrial Finance Department:

Applicants should have a minimum of 3 years' experience in a commercial Bank or a term lending institution in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy.

(vi) Probationary Assistants, Economic Department: Applicants should possess a first or high second class Master's degree in Economics or Commerce of an Indian or foreign University. A period of research work done in one or more of the following subjects, namely, (a) Planning and Development, (b) International Trade and Finance and (c) Econometrics will be considered as an additional qualification.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND/OR ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

(C) AGE LIMITS AS ON 1ST APRIL, 1963:

(i) Deputy Chief Officers: Candidates should not be over 45 years of age.

(ii) Banking Officers, Research Officers and Industrial Finance Officers: Candidates should not ordinarily be over 35 years of age but the age limit may be slightly relaxed in the case of candidates with exceptionally good qualifications and/or experience of value to the Bank.

(iii) Probationary Assistants: Between 21 and 25 years. The maximum age limit is relaxable but not beyond 30 years in the case of:—

(i) Candidates possessing special qualifications and experience of value to the Bank;

(ii) ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;

(iii) personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges; and

(iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post and the department for which they have applied.

3. Applicants for the above posts must remit with their applications a fee of Rs. 7.50 for each post by cheque or bank draft on a Scheduled Bank payable at Bombay or by Postal Order. The application fee is in no case refundable. Bonafide refugee candidates not in employment applying through Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Hyderabad, Trivandrum, Lucknow and Patna accompanied by copies (originals should not be sent) of certificates regarding age and

educational qualifications, statements of marks secured in the Graduate and Post-graduate degree examinations and two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 18th May, 1963.

5. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

7. Candidates must be prepared to serve in any office of the Bank in India or group of departments to which they are posted, and to undertake tours when required.

8. Selected candidates will have to appear for interview/s before the Selection Board at any of the Bank's Offices.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post-Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing in any form will be regarded as disqualification.

BURN AND COMPANY LIMITED

NOTICE is hereby given that the Registers of Members and Share Transfer Books for 6% and 7% Preference Shares in the Company will remain closed from the 24th to the 30th April, 1963, both days inclusive for the purpose of payment of Preference Dividends for the half-year ending 30th April, 1963, on or after the 10th May, 1963, to those Preference Shareholders whose names appear on the Company's Registers of Members for 6% and 7% Preference Shares on the 30th April, 1963, or to their mandates.

By Order of the Board.

INDUSTRIAL INVESTMENT TRUST LIMITED

NOTICE is hereby given that the Thirtieth Annual General Meeting of Industrial Investment Trust Limited will be held at the Registered Office of the Company at 61, Apollo Street, Fort, Bombay, on Monday the 13th day of May, 1963 at 4 P.M. (S.T.) to transact the following business:

Ordinary Business

- To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year ended 31st December, 1962.
- To declare a dividend.

- To appoint a Director in place of Mr. Kishore M. Premchand, who retires by rotation and being eligible for reappointment offers himself for re-election.

- To appoint a Director in place of Mr. Jal H. Mehta, who retires by rotation and being eligible for reappointment offers himself for re-election.

- To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting and to fix their remuneration.

Special Business

- To consider and, if thought fit, to pass with or without modification the following resolution as an ordinary resolution:—

"RESOLVED that subject to the right of the Board of Directors of the Company to appoint additional Directors under Section 260 of the Companies Act, 1956, the number of Directors of the Company be Eight."

- To appoint a Director in place of Mr. S. K. Handoo who was appointed an Additional Director on the 5th day of April, 1963, and who holds office only upto the date of this Meeting and in respect of whom notice in writing has been received from two members signifying their intention to move the following resolution proposing him as a candidate for the office of Director.

"RESOLVED that Mr. S. K. Handoo be and he is hereby appointed a Director of the Company."

NOTICE is also hereby given that the transfer books of the Company will remain closed from Monday the 22nd day of April, 1963 to Monday the 13th day of May, 1963, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

By Order of the Board,
KISHORE M. PREMCHAND,
Director.

Registered Office:
61, Apollo Street,
Fort,
Bombay, dated 5th day of April, 1963.

Notes:—1. The dividend when declared will be made payable at the State Bank of India, Bombay, on and after the 14th day of May, 1963. The dividend warrants will be posted to those shareholders whose names stand on the Register on the 13th day of May, 1963.

2. Change of address, if any, should be notified to the Company immediately.

A copy of this notice and the Explanatory Statement required to be annexed thereto are being circulated to the Members.

S. P. T. CHANGES: SHARES UP, BUT CAUTION RETURNING

THE stock markets seem to have completed the first—and possibly not the last—phase of their celebrations over the changes in the Budget proposals announced by the Finance Minister, Mr. Morarji Desai, during the past nine days. The prices of ordinary shares have risen quite rapidly. The bears have been covering the large short positions they had built in spite of the stock exchanges' trading restrictions, and investors with a speculative instinct have been moving in to make modest replacement purchases. The stock exchange authorities are beginning to get worried about the rapidity of the rise in prices—in contrast to earlier worries centring on the slump which began seven weeks ago. Special measures have, therefore, been taken to discourage the bulls so as to keep the technical position healthy.

nearer equity values get to their pre-Budget levels, the more necessary will it be for genuine investors to become cautious. They may draw some consolation from the fact that Rs. 20 crores or Rs. 25 crores would have gone from companies anyway—if not through the super profits tax, then through a straight increase in the corporation tax. They can say that the disincentives to efficiency and expansion have been reduced, so there may not be any fundamental change in company plans. Finally, they can argue, doubtfully, that the super profits tax is going to be a temporary measure which will be scrapped after one, two or three years. But, after all is said and done, there is no escape from the fact that the proof of the pudding will be in the eating.

The feature of the past week's trend is that "blue chips" have led the recovery. The fact is understandable considering that shares in this category were the ones to suffer the most originally. The shares represent companies with a high rate of profitability derived from efficient management, and often also companies with ambitious expansion plans. The Super Profits Tax Bill, as first presented, would have been disastrous for these companies. The amendments now made reduce the damage. Investors, therefore, assume that the incentives to increase profits, to improve efficiency and to expand have in the process been partially restored. But certain major doubts remain. The first is that the revenue of Rs. 20 crores which the Government expects from the super profits tax is likely to prove a very substantial under-estimate; even if it is not, the sum is large enough to affect companies quite badly in so far as it is equivalent to an increase of around 10 percent in the revenue from corporation tax. The second doubt is that the prospects for dividends on ordinary shares might not have improved. The inclusion of development rebate reserve in the capital-reserve base will increase the distributable surplus from after-tax-profits—for companies which do have a development rebate reserve. But the exemption of 10 percent of before-tax profits, for the purposes of the super profits tax, most probably will not increase that surplus, since the exemption is allowed only for certain purposes, and those purposes do not include the payment of ordinary dividends. Finally, the thought remains that if the Government is going to get Rs. 20 crores or more, the money must come from somewhere. The indications are that most of it will come from the amounts which would otherwise have been distributed to ordinary shareholders.

If the dividend prospects for ordinary shareholders are unpromising, their main hopes will inevitably centre on the scope for capital appreciation. The unsatisfactory trend of dividends might itself reduce the scope for such appreciation considerably to begin with. Thereafter, if the appreciation is to occur, it will tend to be selective, and will be based on the expansion plans of the companies in question. It will be some time before the many concerns which have put their expansion plans on the shelf during the past seven weeks will take them down again and give them a fresh look-over. Until they do, and until their decisions are known, there is no reason to assume that a grand boom of industrial expansion is imminent. Different companies will react differently; some may not think much of Mr. Desai's assurance that the super profits tax (or the compulsory deposits scheme) will be scrapped when he is convinced it ought to be.

To the extent that the stock markets are celebrating the Budget changes, therefore, the celebrations cannot be based on the view that ordinary dividends can be increased, or even maintained. The welcome, if anything, is a negative one: the prospect is not going to be as dismal as it might have been. This, in essence, is at the root of the recovery in share prices—they are merely making an upward readjustment after a sharp slump. Any assumption that a boomlet is round the corner, and would be justified, would be premature. The

The crucial factor, as ever, will be the reaction of foreign investors, since they will have to provide much of the foreign exchange without which expansion in the private sector will be seriously retarded. The first reaction to the Budget was that a host of plans involving foreign investment in India went straight into cold storage. Nobody can say for certain yet how many of these plans are going to be brought out and implemented. Mr. Desai has undoubtedly done something to reassure foreign investors, but the initial psychological damage caused by the Budget will take a long time to repair. Many investors abroad may decide that if Mr. Desai can wait to see if the super profits tax does any harm, they in turn can wait to see if the super profits tax is going to be abolished. Some may even take the view that if investment continues on the same scale as before, the case for abolishing the tax will to that extent be weakened. Mr. Desai's argument that the super profits tax is an unconventional measure necessitated by the emergency is unlikely to carry much conviction. Investors may reply that the emergency only requires that a certain amount of revenue be raised, not that risky fiscal experiments be undertaken. If the Finance Minister has retreated from his original super profits tax proposals, there is no reason to assume yet that the retreat has gone far enough to restore investment confidence even to the point existing just before the Budget.

FACE-LIFT FOR THE SUPER PROFITS TAX

By K. C. Khanna

THE formidable list of amendments to the Super Profits Tax Bill confirms earlier impressions that the original Bill was a half-baked measure which did not correctly portray the Finance Minister's intentions. The fact that even the revised version of the Bill is expected to yield revenue almost equal to, if not more than, the original estimate of Rs. 25 crores (the figure of Rs. 20 crores given by the Finance Minister being again an underestimate), leads to the inevitable conclusion that most of the changes now announced are only by way of filling in the gaps and omissions in the original Bill. Some of the modifications, no doubt, mitigate to a certain extent the hardships of the new levy but it is a fallacy to regard the amendments in the nature of tax concessions for the term "concession", strictly construed, can only mean an abatement or relief from an existing levy and not a reduction in a proposed additional impost. While it is admitted that certain amendments, like the inclusion of development rebate reserve in the capital-reserve base and the exclusion of dividend income from the scope of super profits tax, will confer definite benefits, the basic inequities contained in the Bill remain; and the aggregate burden on the corporate sector will, in spite of the improvements, still be of such a high order as to inhibit capital formation and growth.

A major change, which relates to the computation of chargeable profits, provides for the exclusion from the total income of a sum equal to 10 percent of the amount of total income computed under the Income Tax Act, as reduced by the amounts referred to in clauses (i), (ii) and (iii) of Rule 1 of the First Schedule. Broadly speaking, the effect of this change is that unless a company makes a gross taxable profit of over 15 percent of its capital and reserves, it will not be liable to super profits tax. This may be illustrated by the following figures:

Total capital and reserves	100
Gross total profits	15.0
Less 10% thereof	1.5
Balance of total income	13.5
Less income tax and super tax on total income at 50%	7.5
Chargeable profits	6.0
Deduct Standard deduction at 6% of capital and reserves	6.0
Net chargeable profits	Nil

Another effect of the exclusion referred to above is to enhance the basic exemption or standard deduction from 6 percent to 7.5 percent of the capital-reserve base and to prescribe, in a broad sense, a variable standard deduction, varying with the profitability of a company. Thus, for every increase in the gross taxable income equal to 10 percent of capital and reserves of the company, the standard deduction will rise by 1 percent as shown by the following figures:

Total income as percentage of capital and reserves	Basic exemption as percentage of capital and reserves
15	7.5
25	8.5
35	9.5
45	10.5
55	11.5
65	12.5
75	13.5
85	14.5
95	15.5

and so on.

The effective rate of corporate taxes, including super profits tax, will vary between 50 percent and 70 percent, depending upon the profits made. The figures below show the combined impact of income and super profits taxes on a company with reference to the percentage of total income on capital and reserves.

Total income as percentage of capital and reserves	Effective rate of corporate taxes as percentage of total income
15	50
25	58
30	60½
40	64
50	66
60	67½
80	69
100	70

The above analyses are based on the assumption that the total income does not include any items exempt from super profits tax, and that standard deduction at 6 percent of the capital-reserve base exceeds Rs. 50,000. For the benefit of small companies, an amendment has been made which fixes the standard deduction at 6 percent of capital and reserves or Rs. 50,000, whichever is greater. Thus, in addition to the basis outlined above, a further provision has been made which has the effect of removing from super profits tax liability those companies whose paid-up capital and reserves are less than Rs. 8½ lakhs or whose chargeable profits do not exceed Rs. 50,000.

The deduction of 10 percent of total income, as stated above, will be allowed to all companies, excepting banking and electric supply companies, subject to certain conditions. These conditions will apply only from the assessment year 1964-65; for the assessment year 1963-64, namely, the current year of assessment, no condition will be imposed. The conditions stipulate that an amount equivalent to the 10 percent deduction should be spent during the previous year (a) on the repayment of money borrowed or debts incurred by the company for the acquisition of capital assets; or (b) for the acquisition of any capital assets in India for the purpose of the company's business; or (c) for the payment of dividends on preference share capital of any sum exceeding 6 percent of such capital; or (d) for the creation of a reserve for a period of five years to be used only for any of the above-mentioned purposes.

The conditions are not cumulative and the fulfilment of any one of them will meet the statutory requirements. The drafting of the provision leaves much to be desired; and the purport of the second condition, which lays down that the amount represented by the deduction allowed can be spent only for "acquisition of any capital assets in India for the purpose of its business" is not quite clear. Does this mean that the capital asset must be acquired in India besides being used for the purpose of the business in India? The possible intention is that the asset may be acquired anywhere but it must be used in a business in India. This should be clarified. It is, however, clear that the amount can be used for the replacement and modernisation of existing capital assets and it is not necessary that the acquisition must result in "the creation of additional fixed assets" as stated by the Finance Minister.

The reserve to be created shall either be equal to the amount of the 10 percent deduction referred to above or, if any amount has been spent during the previous year for any of the purposes listed above, then an amount equal to the sum by which the amount already spent falls short of 10 percent of total income. If any part of the reserve is utilised for purposes other than those mentioned earlier, then the exclusion of 10 percent of total income from the charge to super profits tax shall

be deemed to have been wrongly made and the assessment shall be rectified. It is, however, not understood how the condition of the reserve being utilised for specific purposes will be regulated. A reserve is used in a business for its various purposes and it is normally not kept as a separate investment or in cash for that would be an uneconomical way of using the company's resources. It would appear that as long as the reserve is maintained for the prescribed period or is available for specified purposes, it would be immaterial in which form the investment is kept. But the point needs clarification.

In the case of a banking company, the amount to be deducted in arriving at the chargeable profits will not be equal to 10 percent of the total income but it will be equal to the higher of the following two sums: (a) any sum transferred by it during the previous year to any reserves in India, including hidden reserves, if any, to the extent that the sums so transferred are attributable to income chargeable to tax under the Income Tax Act and have not been allowed as a deduction in computing its total income under the Act and in so far as the aggregate of such sums does not exceed the highest of the aggregate of such sums, if any, so transferred during any one of the three years prior to the previous year; or (b) any sum which during the previous year is transferred by it to a reserve fund under Section 17(1) of the Banking Companies Act, 1949, or is deposited by it with the Reserve Bank of India under Section 11(2) of that Act, subject to the maximum permitted under the said provisions. An electric supply company, it seems, will get a straight deduction of 10 percent of its taxable income from the chargeable profits without the imposition of any conditions!

As has been stated before, the basic exemption or standard deduction will increase with every rise in the profits of the company. But in case the profits in a particular year are less than those of the earlier year, the standard deduction too will come down, notwithstanding the fact that capital and reserves employed in the business remain at the same figure, and that the decline in the profits may be due to circumstances beyond the control of the company. It is wrong to prescribe a standard deduction based on a percentage linked to the capital and reserves and the future profits of the company. A more equitable base would have been the past performance of the company averaged over a number of years, say three to five, and it is unfortunate that "valuable suggestions" made in this respect have not been accepted.

The next important modification relates to the exclusion of certain other items, besides the 10 percent exclusion referred to above, from the total income while computing chargeable profits. These items include the following:

- Profits on fixed assets sold, discarded or destroyed.
- Profits and gains derived from a new industrial undertaking.
- Interest on tax-free securities.
- Donations to approved charities or the National Defence Fund.
- Dividends from an Indian company.
- Royalties received from the Government or a local authority or any Indian concern.
- Interest or fees for technical services received from the Government or a local authority or an Indian concern by a non-resident company.
- Tax relief on profits derived from exports.

The exemption from the charge to super profits tax of the above-mentioned items is of considerable benefit and foreign companies, in particular, will be relieved to learn of the exclusion from chargeable profits of interest on loans, fees for technical services, royalties and dividend income because these mainly represent the various forms of income derived by foreign investment in India.

To provide for the above exclusions, the necessary provisions of the First Schedule have been recast and the basis of computation of chargeable profits has been revised. The amended basis lays down that after excluding

items (a) to (h) listed above, in addition to capital gains, compensation moneys, profits of life insurance business and the 10 percent deduction already discussed, from the total income as computed under the Income Tax Act, the balance of the total income shall be reduced by the amount of income tax and super tax payable by the company on its total income under the Income Tax Act, after making allowance for any relief, rebate or deduction in respect of income tax and super tax to which the company may be entitled under the provisions of the Income Tax Act or the Finance Act. The ambiguity which prevailed in respect of calculation of taxes deductible from the total income has been removed and it has now been made clear that the tax to be deducted is the tax payable by the company and not the tax chargeable at a notional rate. It would appear that, in arriving at the figure of chargeable profits, both the income exempt from super profits tax and the income tax or super tax payable thereon will be deducted, with the exception of incomes under the head capital gains, compensation and profits of life insurance business, the amount of tax payable in respect thereof being excluded from the total tax payable. The provisions of the First Schedule are somewhat complicated and may be illustrated by the following example (tax calculations shown herein are approximate only):

XXX MANUFACTURING CO., LTD.

	Rs.	Rs.
Capital and reserves as at 1st January, 1962		5,00,00,000
Total income as computed under the Income Tax Act for the accounting year ended 31st December, 1962		2,50,00,000
1. Interest on tax-free securities	1,00,000	
2. Profits of Business	2,30,00,000	
(These include Rs. 20,00,000 profits from a new industrial undertaking of the company entitled to exemption under Section 84. The company has contributed Rs. 10,00,000 to the National Defence Fund and has obtained tax relief of Rs. 30,000 on profits from exports).		
3. Dividends from a subsidiary Indian company formed before 1st April, 1961	16,00,000	
4. Capital Gains	3,00,000	
	2,50,00,000	
Chargeable profits will be computed as under:		2,50,00,000
Total income as per Income Tax Act		
Exclude:		
(a) Capital gains	3,00,000	
(b) Interest on tax-free securities	1,00,000	
(c) Profits of new industrial undertaking	20,00,000	
(d) Dividends	16,00,000	
(e) Contributions to the National Defence Fund	10,00,000	
(f) Tax rebate on export profits	30,000	
(g) 10% of total income excluding capital gains	24,70,000	
		75,00,000
Balance of total income		1,75,00,000
Less		
Income tax and super tax payable on total income of Rs. 2,50,00,000 after taking into account rebates, reliefs and deductions allowable, say	1,08,40,000	
Deduct		
Tax on capital gains	90,000	1,07,50,000
Chargeable profits		67,50,000
Standard deduction at 6% of Rs. 5,00,00,000		30,00,000
Net chargeable profits		37,50,000
Super profits tax at 50% on an amount upto 4% of Rs. 5,00,00,000 (that is, Rs. 20,00,000)		10,00,000
Super profits tax at 60% on balance of Rs. 17,50,000		10,50,000
Total super profits tax		20,50,000

Note: The above example should not be taken as representative of the total super profits tax liability; it has been compiled mainly

to clarify some of the new provisions and amendments.

An exemption from super profits tax has been granted on the amount of profits and gains derived by a company from an industrial undertaking on which, under Section 84 of the Income Tax Act, income tax is not payable. But this exemption is not likely to be of much use because most of the companies hardly make "super profits" during the early period of their life. And when they start making profits after the period of five years, the super profits tax imposed will be at a rather high figure because no new company will by then have accumulated sufficient profits to create substantial reserves, with the possible exception of development rebate reserve. As stated earlier, development rebate reserve is now specifically included in the capital-reserve base by virtue of an amendment to the Second Schedule, but only such amounts as have been credited to the reserve in accordance with the statutory provisions will be so included. The period of five years' tax holiday is too short for the purposes of the super profits tax levy and this should have been increased to, say, a period of 10 years.

Other changes introduced include exemption from super profits tax of donations to approved charities and funds, interest on tax-free securities and the tax rebate allowed on profits from exports. The total saving of tax in respect of these items is not likely to be substantial.

The new provision in respect of "deficiency" is welcome but this again is a half-hearted measure. Whereas a "deficiency" can be carried forward to be set off against future profits, there is no provision for the set-off of the deficiency against earlier super profits in case the company fails to make super profits in years subsequent to the year of loss. Take the case of a tea company which makes good profits in the year 1963-64 and pays super profits tax thereon. In the year 1964-65 it incurs a huge loss and in the two subsequent years its profits are not sufficient even to absorb the minimum standard deduction allowable for the year 1964-65. The company will suffer an irrecoverable loss, because it will not be allowed to set off the deficiency of the year 1964-65 against the super profits tax paid for the year 1963-64. The Business Profits Tax Act allowed such a set-off and granted relief by repayment of tax already paid. Why should the super profits tax not contain a similar provision? Secondly, the limit for the carry-forward of deficiency over a period of three years is too rigid. When ordinary losses can be carried forward for a period of eight years, there is no justification for limiting the period to three years only in the case of a deficiency of super profits.

In spite of strong representations to the effect that super profits tax should not apply to profits made during the previous year 1962-63 and that, in any case, profits earned prior to November 1962 should not be liable to super profits tax, the retrospective operation of the Act has been retained. The principle of progressive taxation on corporate incomes has also been maintained and no reduction has been made in the penal rates of the tax. Loan capital is still excluded from the computation of the capital-reserve base. The 10 percent of total income allowed as deduction from chargeable profits is regarded as a panacea for all ills of the super profits tax levy. It is, however, obvious that the changes announced do not go far enough and the net effect of the various improvements, although beneficial in some respects, will not be sufficient to restore investors' confidence. In the case of companies subject to a minimum statutory distribution of profits, the further obligation to reserve 10 percent of total income for specific purposes, in addition to the existing statutory development rebate reserve, will hardly leave any balance for the other requirements of their business. It has been clarified that super profits tax payable by such companies for any assessment year shall be deductible from the total income for that assessment year while computing the distributable income for the purposes of the Income Tax Act.

In spite of numerous changes made, the super profits tax still remains an wholly inequitable and unfair piece of fiscal legislation. It is true that the Finance Minister has given an assurance that

if the effect of the super profits tax is to retard development and the growth of the corporate sector, he would be the first person to ask for a repeal of the provision. But is not prevention better than cure? A fiscal ailment can soon turn into a chronic malady causing irreparable damage before remedial treatment can prove

GETTING MORE UNTIED AID

NEW Delhi has given no indication so far of the proposals that the Indian delegation is carrying to Washington for the meeting of the Aid-India Club to be held next week. It may safely be assumed, however, that the Club members will be requested both to increase the amount of aid and to offer a larger share as non-project assistance. In his Budget this year, Mr. Morarji Desai has taken credit for Rs. 462 crores of foreign loans, against Rs. 376 crores actually available last year. The details furnished in the *Explanatory Memorandum* on the Budget show that Rs. 347 crores out of the total are assumed to come from the Rs. 1,556 crores of authorised assistance outstanding at the beginning of this year, and only Rs. 115 crores from new credits. Even these new credits need not necessarily come from fresh commitments that the Aid-India Club may make this year because some Rs. 305 crores have still to be authorised from the pledges given at earlier meetings of the Consortium in June 1961 and July 1962.

From this statistical picture, it is reasonable to conclude that the emphasis of Indian proposals will fall not so much on the immediate requirements (except in relation to the breakdown between "tied" and "untied" aid) as on the long-term needs. The delegation is reportedly taking with it a list of new projects that New Delhi wishes to sponsor with the aim of strengthening the economy to meet the Chinese challenge or to push up growth in key sectors like fertilisers and special steels where the lack of private foreign capital has held up progress. Foreign exchange requirements for these projects will not arise until some time after India is enabled to plan for them with the confidence that their import needs will be met.

Quite apart from the new schemes, the task of obtaining aid to balance the third plan's foreign exchange budget is still only half-done. Up to January this year, the total assistance secured for the plan, including the carryover of Rs. 700 crores from the second plan period, was Rs. 1,556 crores. Even adding Rs. 305 crores still to be authorised out of Consortium assistance of the last two years, the balance to be found to bring external assistance up to the target of Rs. 3,200 crores assumed in the plan is of the order of Rs. 1,300 crores. While considering these broad magnitudes, one may note that the foreign exchange gap of Rs. 3,200 crores assumed in the plan may itself be an underestimate. On this point, the Reserve Bank's recent study of India's balance of payments has valuable comments to offer. After comparing the actual position obtaining in 1961-62, the first year of the plan, with the assumptions made earlier, it notes several disquieting features. Invisibles, excluding official donations, were estimated by the planners to yield a surplus of Rs. 22 crores in 1961-62, against which the actual position was a net payment of Rs. 19 crores. The Reserve Bank fears that the size of net payments may "substantially" increase during the rest of the plan in view of the rising liability on account of foreign investments and debt service. From a net liability of Rs. 13.5 crores for private investments at the beginning of the second plan, this rose to Rs. 29 crores in 1961-62, and will go up further in coming years. The assumption made for the five-year plan period that the inflow on invisibles will balance the outgo now appears certain to be falsified.

More serious in its effect upon the balance of payments is the large underestimation of the economy's maintenance requirements which account for three-fifths of the total import bill. To cite only one example, total imports of steel required during 1961-66 were estimated at Rs. 230 crores, against which the actuals in the last two years will be close to Rs. 200 crores. Similar over-optimistic assumptions about the import-saving ability of new industries, still to get into stride, have been made in many other instances. The result is

effective. It is regrettable that the Finance Minister should have thought it fit to retain on the statute book a piece of fiscal legislation of extremely doubtful value. It is to be hoped that if the measure has to be retained for any length of time, the suggestions made above will be adopted before its final enactment.

that the plan formulations about the country's overall exchange gap have gone completely haywire. This is now being keenly realised in New Delhi, and the *Economic Survey* speaks, therefore, of the availability of non-project assistance to meet these larger maintenance requirements as the "main" factor in preserving India's external viability.

Judging from the past record, getting such non-project assistance is not going to be easy. In the case of the United States, which has provided more than half of the aid from all sources, 60 percent of the assistance comes in the form of surplus agricultural commodities offered for sale against payment in rupees. While food imports under P.L. 480 have undoubtedly been useful in enabling India to resist inflationary pressures and in increasing the amount of savings available for capital formation, their rôle in promoting or maintaining industrial activity is only marginal. (A study by the Institute of Economic Growth, Delhi, shows that the share of U.S. aid earmarked for food imports rose from 44.8 percent in the first plan to 64.6 percent in the second.) Imports of industrial raw materials out of aid proceeds account for just over 4 percent of the total so far used, the bulk going into purchases of steel and fertilisers.

According to a Reserve Bank analysis, 57.9 percent of the aid authorised up to March 1962 was tied to specific projects, more than half of this being tied further to purchases in specified currencies; 38.9 percent of the aid was tied only to purchases in the donor country, but this suggests greater flexibility than what actually obtained since included here are such aid agreements as the U.S. and Canadian wheat loans. The proportion available for importing capital goods and industrial materials at India's discretion is not specified either in this analysis or in the separate one carried out by the Delhi Institute. It is, however, known that the bulk of British and West German loans were freely usable for developmental purposes, some from the latter country being available for purchases anywhere in the world. This factor of flexibility is sufficient to explain the high rates of utilisation of credits from these two countries, particularly from West Germany. Japanese credits, except the one specifically earmarked for ore development, were also freely usable, but no one has explained why two-thirds have remained unused. Is it because Japanese capital equipment and other supplies were not popular either with the public or the private sector? Assuming that this was so, the resistance is now disappearing under pressure of necessity and yen credits are to be used for the alloy steels plant in Durgapur and the heavy machine tool factory in Ranchi.

It is likely that the Indian delegation will press the Aid-India Club to make more assistance available on the flexible pattern of the British and West German credits. The ground for this is already laid as one would conclude from the \$240-million

non-project assistance which the U.S.A. gave last year. Whether the U.S.A. can be persuaded to increase the amount of such aid remains to be seen, but the Indian delegation will undoubtedly point out that any shortfall in essential maintenance needs cannot but result in a cut in industrial output which will have the effect of widening the foreign exchange gap. The delegation will also be urging the Club to note that each aided project gives rise to certain residual requirements which cannot be met out of the exchange specifically earmarked for it. These residual requirements have so far been met out of "free" exchange but this has meant cutting down on imports needed by existing industries, or using uncommitted aid for such purposes or making a draft on currency reserves. In the case of the three new State steel plants, for example, aid specifically committed to the projects has met only 44 percent of the total foreign exchange expenditure in Durgapur, 56 percent in Rourkela and 70 percent in Bhilai. These figures may be exceptional but they point to the nature of the problem that India faces in executing even projects for which aid is assured.

With foreign aid and private capital inflow already paying for 30 percent of the economy's import requirements, against only 5 percent in 1951-55, the question may well arise whether it is safe to go on piling debt upon debt. In 1961-62, the ratio of investment payments to total exports had already risen to 8.7 percent from about 1.1 percent in the first plan period. While the ratio is still below the danger line (10 percent was reportedly regarded as the cut-off point by the World Bank in considering its investments), anxiety about repayment liabilities is fully justified both here and among the aiding nations. The point the delegation will perhaps be stressing is that the present phase is one of transition when payments deficits have reached a hump. As the new industrial capacity built over the past ten years gets into gear, greater viability should follow, especially when new industries begin to make some contribution to the export effort. The related problem of securing admittance of Indian exports into western markets may not be discussed in Washington but there is no denying that the issue has great relevance in any discussions on the long-term outlook.

It would be equally relevant to support the plea for reorientation in aid-giving so as to bring repayment and interest obligations in accord with the capacity of developing nations. In the case of the Rourkela plant for example, the 660-million deutschmarks credit granted in 1958 at an interest of 6.3 percent was for as short a period as three years. This entailed repayment liabilities of over Rs. 61 crores up to March 1963, even before the plant reached full production. Taking all loans and deferred payment arrangements together, India will have to repay over Rs. 500 crores during the third plan period, of which Rs. 170 crores are on account of interest alone. But even after these repayments are made, the total outstanding debt will be reduced by only 30 percent, as the Delhi Institute study points out. The problem this represents is not India's alone; it is shared by many countries in Asia, Africa and Latin America, including such relatively prosperous nations as Brazil. World opinion is veering towards a more understanding approach to the problem of development, as evidenced by the setting up of the I.D.A. by the World Bank. The campaign to extend this understanding may not be launched in Washington next week but vigorous efforts will have to be begun fairly soon.

made several public statements over the past few months which left hardly any room for doubt about a substantial increase in the floor price of cotton. But the increase in the latter has no practical significance because nobody really imagines cotton prices declining to anywhere near the new floor level in view of the continuing lack of balance in the demand and supply position of cotton. Production has been persistently lagging behind the steadily growing demand of the cotton textile industry. The short-

age of cotton might easily have precipitated a crisis if the Government had not been able to arrange large imports over the past few years causing a considerable strain on the country's scarce foreign exchange resources. The average annual consumption of domestic and imported cottons by the industry was 5,240,000 bales during 1956-62. Indian cotton production during this period averaged only 4.7 million bales. The cotton import bill has increased when cotton textile exports have been gradually declining year after year.

The cotton floor price has been raised in order to encourage farmers to grow more cotton. But over the past few years, cotton prices have been keeping nearer the ceiling than the floor price and often they have been fetching sizable premiums. It will, therefore, be naïve to suggest that higher floor prices can act as an incentive for growing more cotton. If the Government thinks that higher prices can help raise cotton production without upsetting the overall pattern of agricultural production, it might as well consider doing away with price control over cotton. After all, cotton is in no way more important than foodgrains and oilseeds, and there is no control over their prices. One may argue that higher cotton prices will make Indian cotton textiles still more uncompetitive in foreign markets. But it could also be argued that the cost of subsidising cloth exports might be much smaller than the cost of importing cotton. It may be pointed out here that India spent as much as Rs. 81.74 crores and Rs. 62.65 crores on cotton imports in 1960-61 and 1961-62, respectively. Against this, exports of cotton textiles fetched Rs. 57.55 crores in 1960-61 and Rs. 40.40 crores in 1961-62.

The plain truth, however, is that the incentive in the form of higher prices—it is the "ceiling" rather than the "floor" which really matters here—cannot bring about any material increase in production, certainly not without upsetting the overall pattern of agricultural output. Time was when Indian cotton was about the cheapest in the world, but it is the other way round now. Excepting a few varieties like Deshi, cotton prices in India are now quoted higher than the world parity. India has the largest area under cotton in the world, but the yield an acre is about the lowest around 100 lbs, compared with 200 lbs to 500 lbs an acre in other cotton producing countries. The low yield in India is attributable mainly to the poor standard of crop husbandry. Cotton production can be raised only through intensive cultivation which implies increased irrigation facilities, more fertilisers, better seeds and necessary technical and financial assistance. An all-India on-the-spot survey of cotton areas by the Government, which has recently been completed, shows that none of the plan's special agricultural schemes for raising cotton production has been implemented by the States. The much-talked about package programme does not seem to have gone beyond the blueprint stage. Considering the importance of the cotton textile industry in India, the question of raising cotton production needs to be tackled urgently.

Worries of Cotton Mills

Speaking at the annual general meeting of the Millowners Association, Bombay, Mr. Pratap Bhogilal, chairman, referred to the inadequate and uncertain cotton supplies. The situation appears to be deteriorating as a result of the steady increase in the industry's consumption of cotton without any corresponding rise in domestic production. Mr. Bhogilal's view that the cotton problem should be tackled urgently both in relation to quantity and quality will be widely endorsed. India can ill-afford to import large quantities of cotton indefinitely to make good the shortfall in the industry's requirements, especially when the latter is unable to earn sufficient foreign exchange to pay for such imports, let alone making any net contribution to the country's foreign exchange earnings. The chairman complained about the inadequate quota for the import of cotton this year—more particularly of the extra long staple cotton—because, apart from nor-

mal demand, defence requirements for such cotton had also been sizable.

But considering that cloth production has been virtually static—it is, in fact, slightly down—over the past many months, the industry has apparently been meeting defence needs only by diverting supplies from the civilian sector. Defence needs, therefore, can hardly be put forward as an argument for importing larger quantities of cotton from abroad. The lack of balance between demand and supply has pushed the prices of Indian cotton above world parity. The relative cheapness of home-grown cotton, which had always been of decisive advantage to the industry in its export drive, has now disappeared almost entirely, making export promotion extremely difficult. Cotton is certainly the single major item of cost, accounting for more than 50 percent of the industry's production costs. But there has been a substantial increase in other production costs also. While costs have been mounting up, prices of cloth have remained stationary because of voluntary price control, with the result that the industry's profit margins have been gradually shrinking. Mr. Bhogilal has, therefore, urged a suitable revision of cloth prices.

On the much-discussed subject of cloth exports, Mr. Bhogilal said that it was only wishful thinking to suppose that by merely reiterating the export goal, India would be able to achieve it now or in the years to come. Export aspirations are bound to remain utopian unless the mills are equipped with up-to-date machines and are able to produce goods which can compete in the world market both in price and quality. But the difficulties faced by the industry in the matter of modernisation are stupendous. Domestic production of textile machinery is still limited while imports are becoming increasingly difficult because of the foreign exchange shortage. Taking into account the current prices of machinery as well as new taxes on them, the mill sector, according to Mr. Bhogilal, will have to find as much as Rs. 1,000 crores for rehabilitation and modernisation—a staggering sum indeed. While finance is the single largest obstacle in the way of modernisation, compulsory transfer to textile machinery manufacturers of machinery entitlements earned under the export incentive scheme is another problem. The diversion of entitlements, Mr. Bhogilal says, is coming in the way of the modernisation programme of the mills. He has urged the Government to do away with the compulsory transfer and make separate arrangements for the textile machinery manufacturers to import whatever components and raw materials they need by making adequate foreign exchange available to them.

Mr. Bhogilal made a pointed reference to the need for market research. It is no longer possible for the industry to take the consumer, domestic or foreign, for granted. The study of market conditions is particularly urgent for export promotion. In a keenly competitive world market, exports can be increased only if the industry is able to offer to overseas buyers the goods they require and in a manner attractive to them. A carefully drawn-up scheme, based on market research, will go a long way in stimulating the demand for Indian goods abroad. Mr. Bhogilal said that along with other 20 less-developed countries, India has put forward a seven-point programme for the consideration of the G.A.T.T. secretariat. Important among these points are that no new tariff or any other barriers should be imposed against products supposed to be of particular interest to the underdeveloped countries; and that industrialised countries should prepare a schedule for the reduction and elimination of tariff barriers on exports of semi-processed products from the less developed countries, providing for a reduction of at least 50 percent of the present duties over the next three years.

Referring to the question of staple fibre, Mr. Bhogilal said that before any extensive use of staple fibre for replacing cotton was advocated, an expert study should be made on four basic aspects which were of paramount importance from the consumer's point of view, namely, the utility of fabrics made out of staple fibre, their wearable life, cost of conversion of such fabrics into garments and the cost of maintenance of such garments. One should have thought that

the Indian Cotton Mills Federation had made a careful study of all these aspects when it recommended to the Tariff Commission the import of large quantities of staple fibre to make good the continued shortfall in the industry's raw cotton requirements.

Expanding Refinancing Facilities

The decision of the Refinance Corporation for Industry to expand and diversify its activities is welcome since the shortage of term finance is likely to increase in the coming months. Although commercial banks have started the business of industrial term financing, their activities may shrink because their resources have been heavily used in offering short-term advances. Meanwhile, industry has been experiencing an acute shortage of medium and long-term capital, since it has become difficult to obtain finance in the open market. Under the circumstances, trade and industry have been forced to rely on financing institutions for their requirements.

Commenting on the Corporation's activities in his chairman's address at the annual general meeting in Bombay last week, Mr. P. C. Bhattacharyya predicted that its activities would increase steadily in the near future. An encouraging factor is that the Corporation is likely to use about Rs. 26 crores, which has been earmarked from P.L. 480 funds for this purpose, before the end of the current year. The chairman foresees the need for more funds. Effects are being made to obtain them soon.

Since the State Financial Corporations have been authorised to avail themselves of the refinancing facilities, they are expected to borrow more from the Corporation. Their borrowings have been encouraged by the fact that the Corporation has decided to extend its long-term loan facilities for up to ten years. The State Financial Corporations have, meanwhile, taken steps to increase their advances, especially to medium and small industries. In view of the emergency, attention is being given to promoting the growth and development of small industries, especially for defence production. Commercial banks, which have hitherto been chary of advancing money to these industries, will, it is hoped, take greater interest in financing them under the Government guarantee scheme. Since the Government has devised a similar guarantee scheme for loans to the coal industry, the demand for refinancing facilities is expected to increase from this source. The industry has not yet taken the full advantage of the World Bank loan amounting to about Rs. 17 crores because several collieries have not been able to obtain the required rupee finance. In order to encourage the financing institutions, especially banks, to extend term loans to the industry, the Government has decided to encourage the grant of advances by sharing the risk with the financing institutions. A good portion of the loans given to the industry are likely to come up for refinancing from the Corporation.

The Corporation has also decided to extend its refinancing facilities to export credit. It will refinance medium-term credits, ranging from six months to five years, granted by eligible financing institutions to exporters. So the move will help the financing institutions to extend term-credit to exporters and thus help the export drive. During recent years, the Indian exporter has not always been able to sell in foreign markets because of his inability to offer deferred payment terms to foreign buyers.

Incentives for Oil Exports

The oilseeds export trade has every reason to feel happy over the Government of India's recent decision to extend the export incentive scheme to linseed oil and castor oil and to allow the facility of *ad hoc* rebate on excise duty on all exports of vegetable non-essential oil and vegetable products made up to 15th May. The facility of *ad hoc* rebate on excise duty is aimed at overcoming the inconvenience and hardship arising from the fact that certain quantities of duty-paid oils and vegetable products made from duty-paid oil are still awaiting shipment. Unprocessed vegetable non-essential oils have been exempt from the whole

Current News and Comment

Cotton Floor Price Raised

The Government of India has at last raised the floor price of cotton by Rs. 100 a candy of 784 lbs for the 1963-64 season. This raises the minimum price for Moglai fine 25/32in., which forms the basis of the hedge contract in Bombay, from Rs. 600 to Rs. 700 a candy. The official announcement on the higher floor price has come as no surprise because responsible Government officials, including Central Ministers, had

These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning and other rough scaling propositions and rough castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

which still confuse people in the East, but it is questionable whether he is not replacing them with something much worse. The acceptance of a spiritual god, however imperfect, is to my mind better than the worship of technical achievement and material possession. And I have never been one to subscribe to the theory that the scientist makes a better priest than the theologian. I suppose the primitive reason for religion arises from the need to compensate for personal inadequacy in the face of destructive and ungovernable nature, and that when man can control his environment he does not feel the same compulsion to turn to god. If so, then I suspect he is not only exaggerating his own powers, but under-rating the continued importance to himself of living at peace with his own fundamental emotions. When the alternative to religion is the psychiatrist's couch, then we need more religion. But with it we do not need sectarian quarrels and conflicting denominational loyalties. Thus, to a layman like myself, the unity of these two Christian churches seems a good idea. So, eventually, would be a union between Anglicans, Greeks and Romans, or even between Christianity itself and the many other forms of religion there are in this world. Perhaps then religion could serve to unite mankind instead of, as it has so often done in the past, tending to divide, embitter and antagonise.

REFERRING TO MY REMARKS ON THE SUBJECT LAST week, a correspondent writes: I see nothing but wisdom in President Kennedy's reported decision that the "hot line" between White House and the Kremlin will be a teletype rather than a telephone. Reason: a few heated words over a hot-line phone might lead to war. A cartoonist, Abu in the *Observer* I think, found another reason, almost as good. He showed an agitated Mr. Kennedy tearing his hair and an equally excited Mr. Khrushchev—no, not tearing his hair; look at his shiny pate—walking up and down, while Mrs. Kennedy is chattering away calmly with Mrs. Khrushchev at the other end, perhaps about the latest Paris fashions. Neither husband can get at the telephone to discuss war and peace! Lines of communication between the two wielders of super-power should certainly be the best and fastest and mostest that modern science can offer; but elimination of voice seems an elementary precaution. The slightest inflexion can make a difference between life and extinction not only for the gentlemen concerned but for all mankind. Yet I doubt that teletype is fool-proof, for I have some experience of teletypewriters. It has happened to me to wait for hours for a mutilated message to be re-created; and typographical errors come by the dozen, especially in Calcutta during the monsoon. The Indian Posts and Telegraphs Department looks after these machines in India; it has a monopoly, while in West Germany and elsewhere many newspapers own and run their own teletypes. Thanks to extensive theft of copper wires, to say nothing of the inadequacies of P. & T. men, lines break down only too often; and business houses know what losses this may entail. (Airlines and newspapers are perhaps the worst sufferers.) But then I have no business to assume that the line between Washington and Moscow will not be more competent; countries that communicate with satellites can perhaps be trusted to manage things better.

A LAWYER WAS DEFENDING A PARTY TO A MOTOR accident, and was cross-examining a girl who was undeniably beautiful.

"Have you any idea what caused this accident?" asked the attorney.

"I think so," sweetly replied the girl.

"Then tell the court what happened," said the lawyer.

"Well," said the girl, "I was standing at the corner. That man turned to look at me and ran into the other car."

"Ah!" snapped the lawyer. "He turned to look at you. That makes you an accessory before the fact, madam."

"Actually, I think it was my accessories he was looking at," she murmured in reply.

THE DITCHER

Guide for Investors

COAL SHARES RISE, BUT SUPPORT STILL SELECTIVE

(BY A SPECIAL CORRESPONDENT)

THE broadening support for coal shares during the past few days has stemmed partly from the general improvement in the stock market and partly from the special incentives given to the industry. Burrakur, for instance, have gained from Rs. 14.87 to Rs. 17.69, Bengal from Rs. 265 to Rs. 304, East Indian from Rs. 29 to Rs. 34.12 and Central India from Rs. 8.75 to Rs. 10.69 over the past month. The investment climate in general has taken a turn for the better due to the concessions Mr. Morarji Desai has announced in relation to the super profits tax. Since companies will be able to deduct a sum equal to 10 percent of the total income before the payment of any tax prior to calculating the super profits, they are expected to have a bigger disposable profit after paying all taxes. The provision to carry forward the deficiency in profits to set off against the super profits of three succeeding years, is expected to benefit the jute and tea industries in particular, whose fortune fluctuates from year to year.

In addition to these general concessions, the coal industry has been given two important privileges. Firstly, the development rebate for the industry has been increased from 20 percent to 35 percent. Secondly, the import duty on machinery and equipment to be purchased by the coal and fertiliser industries from abroad will be cut. These incentives have obviously been given with a view to increasing the production of coal. Since the output during 1962-63 has been the highest ever, the Government is keen on maintaining the upward trend. The increased development rebate will be of great help to the industry, especially at a time when it has made preparations to invest heavily in fixed assets in order to expand and mechanise production. Considering that some collieries have been forced to resort to deep mining for raising production, the increase in development rebate should be a useful incentive. Collieries have invested heavily in stowing in recent years. The resultant costs have not been fully made good by the Government subsidy. So the increase in development rebate is likely to be regarded as a relief by collieries. As for the cut in import duty on plant and machinery, the benefit will depend on the amount of reduction. Since the duty has raised the prices of equipment, the production costs have sharply increased. As the price of coal has been statutorily held down to an uneconomic level, it was extremely necessary to cut the import duty for keeping the production costs down.

Nobody questions the beneficial effects of these concessions and incentives, but they do not by themselves give sufficient grounds for taking an optimistic view about coal shares. Investors have, therefore, been discriminating in buying these scrips. Investment in the coal industry is more risky than in other industries because the commodity is a wasting asset. In addition, the return on investment in the industry has been poor, compared with that in other industries. Except for a few first-class collieries, the industry, by and large, has found it very difficult to make profits. So several coal companies have either paid no

dividends or have declared only nominal dividends in many years. Even the dividends paid by some first-grade companies have rather been moderate. Under the circumstances, the dividend outlook needs to be assessed carefully. This apart, the industry's dividend-paying capacity has further been affected by the super profits tax. There is no doubt that the expanding companies have installed, and it is expected to improve the quality of output. Estimates for the current 1963 season have been framed for a crop of 1,100 quintals.

This is not to belittle the importance of the industry's expansion prospects which have now improved due to the timely measures adopted for ensuring a bigger flow of funds to the industry. The World Bank sanctioned a loan of about Rs. 17 crores for the industry's expansion some time ago. But a fair part of it has not been used since many collieries have found it difficult to secure the matching rupee finance. In order to encourage the financing institutions, especially banks, to lend medium and long-term funds to the industry, the Government has announced a guarantee scheme under which the risk of loans will be shared by the Government and the financing institutions. The incentive to lend has further been promoted by the decision of the Refinance Corporation for Industry to offer refinancing facilities against the advances given to the industry. As a result of these measures, the collieries are expected to overcome the shortage of rupee finance to an appreciable extent.

It is difficult to assess whether the present prices of coal shares have discounted these concessions and incentives. It is nevertheless almost certain that investors will be cautious until the price of coal is suitably raised. Investors have not apparently been impressed by the verbal assurance of the Central Mines and Fuel Ministry that the price of the commodity will soon be raised and that it will henceforth be fixed on a more scientific basis. The past increases in the price were disappointing, since they did not even compensate the producers for the rise in production costs. Unless the price is fixed at a remunerative level, it will be difficult to attract investors to coal shares.

Mim Tea Pays More

THE Mim Tea Co. Ltd (a Darjeeling garden) has increased the taxable ordinary dividend from 20 percent to 27.5 percent for the year ended December 1962. The dividend absorbs Rs. 43,725 and offers a yield of 14.4 percent at the present price of Rs. 191.50 a share of Rs. 100 each. The profit has risen from Rs. 77,616 to Rs. 1,54 lakhs, after providing Rs. 20,885, (against Rs. 20,732) for

depreciation. Taxation absorbs Rs. 81,000 (against Rs. 31,000) and general reserve Rs. 25,000 (against Rs. 15,000), leaving a carry-forward of Rs. 17,193, against Rs. 14,563 brought in.

The crop at 1,088 quintals shows an increase of 69 quintals, compared with that in 1961. The average sale price rose from Rs. 8.21 to Rs. 8.99 a kilogram. A Rotorvane has been installed, and it is expected to improve the quality of output. Estimates for the current 1963 season have been framed for a crop of 1,100 quintals.

New Asiatic Skips Dividend

THE New Asiatic Insurance Co. Ltd has derived its income mainly from interest, dividends and profits on the sale of investments during the year ended December 1962. After making adjustments and transferring further sums to reserve for bad and doubtful debts, the outstanding loss has been reduced by Rs. 13,311. The dividend has again been passed. The Company has not yet received the sanction from the Controller of Insurance for transacting business other than insurance, but the directors hope to get the necessary permission soon.

W.I.M.C.O. Pays the Same

THE Western India Match Company Ltd reports encouraging results for 1962. As against an increase of 4 percent in the gross sales from Rs. 18.04 crores to Rs. 18.76 crores, the gross profit is up by about 9.4 percent from Rs. 1.66 crores to Rs. 9.82 crores. The ratio of gross profit to sales works out to 9.7 percent, against 9.2 percent in 1961. The improvement in the profit margin is due to economies in expenses and raw material costs, although the wage and salaries bill was higher. The Company contributed to the Central exchequer as much as Rs. 10.65 crores by way of excise duty alone, against Rs. 10.09 crores in the previous year.

The total tax provision, including the amount set aside for the proposed super profits tax, works out to 67.4 percent of the pre-tax profit. Shareholders' share at Rs. 44 lakhs works out to only 24 percent of the gross profit of Rs. 1.82 crores. After providing Rs. 21.87 lakhs (against Rs. 20.52 lakhs) for depreciation, Rs. 68.60 lakhs (against Rs. 57.10 lakhs) for taxation and deducting other charges the net profit amounts to Rs. 78.27 lakhs, compared with Rs. 74.37 lakhs in 1961. With Rs. 5.11 lakhs brought forward from the previous year and taking into account the tax refund of Rs. 3.75 lakhs for previous years, the disposable surplus amounts to Rs. 87.13 lakhs.

The directors have set aside Rs. 6.50 lakhs for additional tax liability for 1961 and 1960, and a large sum of Rs. 25.50 lakhs is being earmarked for the anticipated liability on account of the proposed super profits tax. Allocation to the general reserve has been drastically reduced from Rs. 10 lakhs to Rs. 3 lakhs, and development rebate reserve gets Rs. 1.35 lakhs, against Rs. 1.46 lakhs.

The provision for gratuity, however, is higher at Rs. 5.96 lakhs, against Rs. 3.23 lakhs. No provision has been made for gratuity which receive Rs. 15 lakhs in 1961. The proposed dividend of 16 percent (the same absorbs Rs. 44 lakhs, leaving a surplus of Rs. 82,645 to be carried forward).

The directors state in their report that the Company's match factories worked well during the year, and their production was fully disposed of. Demand for matches in the country continues to increase and as the industry's output was not sufficient to meet the increased demand, marked shortages occurred at various points. The Company could not meet many complaints of shortages due to the Government ban on any addition to the Company's installed capacity. The paper mill worked satisfactorily but suffered from cuts in imported pulp supplies. The management is negotiating to obtain supplies from indigenous sources. It has decided to go ahead with the project for the extraction of salt and other chemicals from the sea. The Company hopes to get land on lease from the Madras Government shortly. The project is being undertaken to meet the Company's requirements of potassium chloride which is in short supply in the country and it is difficult to obtain licences for its import. Consequently, the Company has not been able to expand its potassium chloride factory. The manufacture of potassium chloride from sea water cannot be undertaken as such without first producing salt. The balance-sheet position of the Company as at the end of December 1962 is sound. Its paid-up capital of Rs. 2.75 crores—all in equity shares—is supported by free reserves amounting to Rs. 2.08 crores. The Rs. 100-paid share is currently quoted around Rs. 243 cum-dividend, offering a gross return of a little over 7 percent.

Mahindra and Mahindra Earns More, Pays Less

THE directors of Mahindra and Mahindra Ltd have recommended a gross dividend of 12½ percent (Rs. 1.25 a share on 1.32 million shares) on old shares for the year ended October 1962, against 15 percent, including a cash bonus of 2½ percent, for the previous year. They have also recommended a pro rata distribution (26p on 660,000 new shares) on the partly-paid shares issued during the year 1961-62. The total distribution of dividend works out to Rs. 18.22 lakhs, against Rs. 19.80 lakhs. The preliminary figures about the Company's working results show that it has fared better than in the preceding year; in spite of a 10 percent fall in the sales from Rs. 15.42 crores to Rs. 13.38 crores, the gross profit is up by nearly 11 percent from Rs. 1.11 crores to Rs. 1.23 crores.

The shareholders might feel somewhat disappointed with the directors' decision not to repeat the previous year's dividend along with the bonus in spite of improved working results. But this is due mainly to the sharp increase in the tax liability and high bonus payment. While recommending the dividend, the directors have expressed awareness of the burden which the latest Budget proposals have imposed on the corporate sector, particularly for growth companies like Mahindra and Mahindra. They are at the same time fully conscious of their responsibilities both for providing a reasonable return to shareholders and for discharging their obligations to the employees. They feel that in continuing to pursue a growth policy for the Company, they will be fulfilling both these responsibilities in spite of the adverse currents which

HERE IS
TELEDEK
the amazing new Transistorised
Telephone Amplifier

Teledek increases business efficiency and is a boon to busy persons in any business or profession, to executives, secretaries, receptionists and telephone operators. Teledek leaves your hands free for work while you talk and saves your valuable time. Both incoming and outgoing telephone calls can be attended to by merely placing the telephone receiver on the Teledek. It amplifies the sound and facilitates trunk-telephone conversations.

have been set in motion by the new tax measures.

Allocations of the year's profit include depreciation Rs. 15.79 lakhs (against Rs. 15.38 lakhs), development rebate reserve Rs. 3.87 lakhs (against Rs. 60,000), bonus to staff Rs. 24.02 lakhs (against Rs. 21.54 lakhs), taxation Rs. 55.65 lakhs (against Rs. 21.54 lakhs) and general reserve Rs. 3.50 lakhs (against Rs. 10 lakhs). No provision has been made for research and development fund which received Rs. 50,000 in 1960-61. The directors have transferred Rs. 1.39 lakhs (against nil) from taxation and development rebate provisions no longer required. Preference dividend absorbs Rs. 4.49 lakhs (the same) and ordinary dividend takes away Rs. 18.22 lakhs (against Rs. 19.80 lakhs) leaving a sum of Rs. 80,000 to be carried forward, against Rs. 2.55 lakhs brought in.

The directors state that the Company was able to show improved results during 1961-62 due to the exercise of rigid control on costs and increased efficiency. The production of jeans during the year was slightly higher, but sales were lower due to the freezing of stocks at the close of the year by the Government following the Chinese invasion and the declaration of national emergency. The Rs. 10-paid share of Mahindra and Mahindra is currently quoted around Rs. 17.52.

Alembic Glass Disappoints

THE Alembic Glass Industries Ltd reports disappointing results for the year 1962 and the dividend has had to be reduced from 30 percent to 25 percent. Against a 7.8 percent fall in the sales from Rs. 2.17 crores to Rs. 2.01 crores, the gross profit is down by as much as 37 percent from Rs. 92.90 lakhs to Rs. 58.55 lakhs. The poor working results are attributed to the numerous jerks, trippings and stoppages of power supply and competition from new units. The directors explain in their report that glass manufacturing is a continuous process requiring the maintenance of specific temperatures in the various stages of production. Any sudden stoppage of power not only stops production during the period of the power stoppage, but it also spoils all the work that is under process. Further, it takes a considerable amount of time and expense to re-start the jobs.

Unfortunately, the Company experienced as many as 144 such jerks during 1962. The loss to the Company due to loss of production time and due to spoil material was considerable. The emergence of competition from the new units set up in the country was, however, not unexpected. While the Company could maintain its sales at about the same level as in the preceding year, it could do so only at reduced profit margins. The directors expect better working results during the current year in spite of competition because of the improved electric supply.

After providing Rs. 11.04 lakhs (against Rs. 12.77 lakhs) for depreciation and Rs. 20 lakhs (against Rs. 33 lakhs) for taxation, the net profit amounts to Rs. 23.83 lakhs, compared with Rs. 42.13 lakhs in 1961. Appropriations include development rebate reserve Rs. 1.10 lakhs (against Rs. 3.25 lakhs), provision for super profits tax Rs. 7.50 lakhs (against nil), additional provision for taxes for 1961 Rs. 4.50 lakhs (against nil), general reserve Rs. 2 lakhs (against Rs. 24 lakhs), and gratuity reserve nil (against Rs. 2 lakhs). After providing for the proposed dividend which absorbs Rs. 12,12,142

(against Rs. 12,74,170), there remains a small surplus of Rs. 10,248 to be carried forward, against Rs. 4.38 lakhs brought in.

The directors state in their report that all the import licences for the plant and machinery for the Company's new factory in Bangalore are now received and orders worth Rs. 27 lakhs have been placed. The work on the factory building will be completed during the current year. Orders have been placed for machinery for the manufacture of insulators at the Baroda factory. The Baroda Dies and Tools Corporation in which Alembic Glass is a partner and has invested a sum of Rs. 7,500 by way of capital has not yet started activities except to the extent of renting factory premises. It hopes to acquire machinery on hire purchase. The Company has a paid-up capital of Rs. 54.31 lakhs, which is supported by reserves and surplus amounting to Rs. 95.49 lakhs.

W.H. Brady Results Unsatisfactory

THE drastic cut in the dividend of W. H. Brady and Co. Ltd for 1962 from Rs. 52 to Rs. 31 a share (Rs. 150-paid), less tax, follows the sharp decline of 49 percent in the Company's gross profit from Rs. 37 lakhs to Rs. 18.85 lakhs. The profit is down in spite of a modest increase in the sales from Rs. 1.94 crores to Rs. 1.96 crores. The directors point out in their report that the Company's trading operations resulted in a small fall in the profit, but this was more than made up by the substantial increase in the commission earned on the indenting side of the business from Rs. 9.68 lakhs to Rs. 12.96 lakhs.

The managing agents' commission earned from managed companies fell from Rs. 10.28 lakhs to Rs. 7.33 lakhs, due mainly to the steep fall in the profits of one of the managed companies—Belapur Company. There was, however, a substantial increase in the income from trade investments from Rs. 39,000 to Rs. 3.24 lakhs due not only to the higher dividends declared by some of the Company's subsidiaries, but also to the inclusion in the year of account of dividend received from the Belapur Company for its year ended September 1961, which could not be included in the previous year's accounts. The Company's subsidiaries generally showed satisfactory results. It has been appointed secretaries and treasurers of Special Steels Ltd since 28th April, 1962. The Company has invested Rs. 10 lakhs in the equity capital of that Company and also given a loan of Rs. 5 lakhs.

After providing Rs. 53,000 (Rs. 36,000) for depreciation and Rs. 8.50 lakhs (against Rs. 13.50 lakhs) for taxation, the net profit for 1962 amounts to Rs. 9.85 lakhs, compared with Rs. 23.15 lakhs in the preceding year. After taking into account Rs. 2.85 lakhs brought forward from the previous year's account, Rs. 2,250 by way of profit on sale of fixed assets, Rs. 49,570 being profit on the sale of investments, Rs. 25,937 being the amount written off on investments in previous years relating to those sold during the year and transferring Rs. 6.76 lakhs from gratuity provision, the disposable surplus amounts to Rs. 20.23 lakhs. Out of this, the directors have set aside Rs. 20,000 for contribution to superannuation (pension) scheme, Rs. 2.67 lakhs for taxation reserve and Rs. 7.50 lakhs for general reserve. After providing for the proposed dividend which absorbs Rs. 9.30 lakhs (against Rs. 15.60 lakhs) and making minor adjustments, there remains a small balance of Rs. 5,668 to be carried forward

Against its paid-up capital of Rs. 45 lakhs—all in equity shares—the Company's free reserves total Rs. 87.2 lakhs. At its current quotation of about Rs. 350, the share offers a gross return of about 9.7 percent on fresh investment. In 1962, the Company suffered a loss of Rs. 2.41 lakhs due to embezzlement in its Kanpur branch.

Punjab National Bank Fares Well

THE working of the Punjab National Bank during 1962 shows all-round progress, with deposits, advances, investments and gross income improving appreciably. Only the profit is down, although only slightly and this is due, as in the case of the other banks, to the increase in expenses resulting from the Desai award, higher interest rates on deposits and the introduction of the compulsory deposit insurance scheme. Although the dividend has only been maintained at 20 percent, less tax, it involves a substantially larger distribution because of the increased capital.

The bank's deposits rose during the year by 11.2 percent from Rs. 150.68 crores to Rs. 167.52 crores; advances were up by 6.78 percent from Rs. 93.22 crores to Rs. 99.54 crores; investments moved up by 22.7 percent from Rs. 45.53 crores to Rs. 55.88 crores and the gross income increased by 12.4 per cent from Rs. 9.16 crores to Rs. 10.30 crores. The balance-sheet total has gone up from Rs. 205.12 crores to Rs. 223.96 crores. The increase in deposits is shared by all categories of deposits. Fixed deposits are up from Rs. 71.59 crores to Rs. 78.48 crores, savings bank deposits from Rs. 40.89 crores to Rs. 47.44 crores and current and contingency accounts have risen from Rs. 37.73 crores to Rs. 41.16 crores. Because of the smaller increase in advances compared with deposits, the credit ratio fell a little from 61.8 percent to 59.4 percent. Investment-deposit ratio, on the other hand, rose from 30.2 percent to 33.4 percent.

Income from interest and discount increased from Rs. 7.32 crores to Rs. 8.37 crores; commission, exchange and brokerage fetched Rs. 1.75 crores, against Rs. 1.63 crores. Interest paid on deposits and borrowings increased from Rs. 3.71 crores to Rs. 4.27 crores; the salary bill rose from Rs. 3.27 crores to Rs. 3.76 crores, and other expenses increased by Rs. 13 lakhs to Rs. 1.13 crores. As a result of the higher expenses, the bank's profit fell from Rs. 1.19 crores to Rs. 1.14 crores. After bringing in the surplus of Rs. 10.38 lakhs (against Rs. 4.23 lakhs) from the previous year, the directors have transferred Rs. 25 lakhs (against Rs. 45 lakhs) to the reserve fund, Rs. 40 lakhs (against Rs. 37.50 lakhs) to the staff bonus account and Rs. 4 lakhs (against Rs. 1 lakh) to the charity and donation account. The dividend of 20 percent on the increased capital absorbs Rs. 40 lakhs (against Rs. 28.75 lakhs), leaving a surplus of Rs. 15.21 lakhs to be carried forward.

Kohinoor Mills Maintains

ALTHOUGH the total dividend has been maintained at Rs. 18 a share less tax, the working results of Kohinoor Mills Company for the year 1962 have risen impressively over those of the previous year. As against an increase of only 5.7 percent in the sales from Rs. 7.20 crores to Rs. 7.60 crores, the gross profit is up by as much as 41 percent from Rs. 50.20 lakhs to Rs. 83.87 lakhs. This

CAPITAL, 25th April, 1963.

indeed is an excellent performance as the cotton mill industry is known to have had a difficult time last year because of the all-round increase in production costs.

After providing Rs. 18.52 lakhs (against Rs. 17.02 lakhs) for depreciation and Rs. 12.62 lakhs (against Rs. 15.68 lakhs) for taxation, the net profit amounts to Rs. 49.98 lakhs, compared with Rs. 22.71 lakhs in 1961. The directors have set aside Rs. 4.99 lakhs (against Rs. 4.90 lakhs) for development rebate reserve, and a huge sum of Rs. 36.71 lakhs has had to be provided for employees' bonus for the years 1957, 1959, 1960 and 1961. The balance of the profit is not sufficient for payment of dividend which absorbs Rs. 18 lakhs. Accordingly, the directors have transferred Rs. 10 lakhs from machinery reserve. After making various appropriations, there remains a surplus of Rs. 29,116 to be carried forward, against Rs. 1,555 brought up.

The directors state that trading conditions during the first quarter of the year were reasonably good. But conditions thereafter began to deteriorate gradually due to high incidence of excise duty. Various adverse factors led to the accumulation of huge stocks with the mills towards the end of the year. Yarn stocks, however, were lower as most of the production was diverted to defence requirements. New machinery worth Rs. 32.51 lakhs was received by the Company and machinery erected during the year totalled Rs. 33.39 lakhs. Machinery on order is placed at Rs. 28.04 lakhs. The Company has a total paid-up capital of Rs. 1 crore—all in equity shares of Rs. 100 each—and it is supported by free reserves amounting to Rs. 1.02 crores. At its current market price of Rs. 294 cum-dividend—final dividend is Rs. 11 a share—the share offers a gross return of about 6.4 percent.

Precision Bearings Share Offer Soon

PRECISION Bearings India Ltd is a new Indo-U.S. venture for undertaking the manufacture of anti-friction ball and roller bearings and components. It will shortly enter the market to raise Rs. 28 lakhs—all in equity shares—through public subscription. The Company has been promoted by Kamlashankar P. Joshi and Company, and the East Asiatic Company (India) Private Ltd in collaboration with the world-renowned Norma-Hoffman Bearings Company of Stanford, U.S.A., which recently merged with the parent Company—Universal American Corporation, New York. Precision Bearings has been licensed to manufacture 800,000 bearings a year on a single shift basis.

The factory will be located in Makarpura, near Baroda, where the Company has already acquired 22 acres of land. The factory and other buildings, it is expected, will be ready by the end of this year, and production, it is expected, will start early in 1964. The Company will produce ball bearings of different sizes, varying from 8 millimetres to 100 millimetres internal bore diameter with all components including steel balls manufactured from the start. It is claimed that the Company will be the first in India to manufacture straight roller bearings. It has entered into a collaboration agreement with Universal American Corporation which provides for the supply of technical information, engineering data, know-how, lay-out of the plant and service facilities for a period of ten years. The collaborator has also assumed responsibility for the management of the project for this

CAPITAL, 25th April, 1963.

period. For all this, the foreign collaborator will be paid a research fee at 2 percent net, clear of all taxes, on the sale price within the country and at 3 percent net on all exports. In addition, equity shares of the value of \$150,000 will be allotted for initial technical know-how, drawings and designs.

The entire project is estimated to cost Rs. 2.27 crores. This will be met by a share capital of Rs. 1.05 crores, medium-term loans from financial institutions for Rs. 90 lakhs and short-term bank borrowings to the extent of Rs. 32 lakhs. The International Finance Corporation, Washington, has granted a loan of \$520,000 (equivalent to Rs. 25 lakhs) carrying interest at 7 percent a year, and repayable in 20 instalments starting from October 1965. The Industrial Credit and Investment Corporation of India has also sanctioned a rupee loan of Rs. 25 lakhs, and a foreign currency loan of Rs. 10 lakhs. The Company has also arranged for an unsecured loan of Rs. 30 lakhs from the Agency for International Development. The foreign exchange requirements of the project which are estimated around Rs. 75.50 lakhs, are being met from foreign exchange loans, capital participation of the U.S. collaborators and the International Finance Corporation. This is perhaps the first time that the International Finance Corporation is participating in the equity capital of a Company in India, although in another instance, it has reserved its right to participate in the equity capital of that company.

The authorised capital of the Company is Rs. 2 crores in equity shares of 100 each. The issued capital will be Rs. 1.05 crores, of which the promoters will take up Rs. 24 lakhs. The foreign collaborators will subscribe for Rs. 30 lakhs, and the I.C.I.C.I. will take up Rs. 5 lakhs. The International Finance Corporation has agreed to subscribe for Rs. 28 lakhs. The balance of Rs. 28 lakhs will be offered for public subscription some time in May. The entire public issue has been underwritten. The board of directors includes Mr. Palle Duchwald (chairman), Dr. Harry M. Day, Mr. Donald E. Lee, Mr. Tage Woldike Schmith, Mr. Kamlashankar P. Joshi, Dr. Chunibhai S. Patel, Mr. Mahendra K. Joshi and Mr. Charles Dean Alexander (managing director).

I. I. Trust Pays the Same

AFTER providing Rs. 3.34 lakhs, against Rs. 2.61 lakhs for taxation, Rs. 1.446 (against Rs. 745) for depreciation, and Rs. 1.85 lakhs (against nil) as net loss on the sale or redemption of investments, the working results of the Industrial Investment Trust Ltd for 1962 show a net profit of Rs. 4.43 lakhs, compared with Rs. 6.78 lakhs in the previous year. In order to maintain the dividend of Rs. 6.50 a share, the directors have been obliged to transfer Rs. 1.10 lakhs from the investment reserve and after taking credit for unclaimed balances being written off and refund received on 1959 taxes, the disposable surplus amounts to Rs. 6.53 lakhs. The proposed dividend absorbs Rs. 6.50 lakhs, leaving a sum of Rs. 3,254 to be carried forward, against Rs. 30,418 brought in.

Income by way of dividends on shares and interest on debentures and securities is down from Rs. 11.37 lakhs to Rs. 10.93 lakhs. The investment portfolio of quoted securities has been reduced from Rs. 1.23 crores to Rs. 1.03 crores while that of unquoted securities is up from Rs. 20.33 lakhs to Rs. 21.22 lakhs. The approximate valuation of the

Company's investments, at market quotations as on 31st December, 1962, or in the case of unquoted investments at the book value, was higher than the total book value by nearly 23 percent, compared with 23.70 percent at the end of 1961. Since December 1962 up to 8th April 1963, the Company has received Rs. 6,000 by way of redemption of debentures. Investment in shares amounting to about Rs. 1.72 lakhs has been made during this period. During the year, the Company undertook the work of registrars and transfer agents of the Modella Woollens Ltd and also rendered "issue house" services to them. The Company has also rendered "issue house" services to Sandvik Asia and Arlabs for their public issues.

Indore Malwa Mills Cuts Dividend

THE cut in the dividend by the Indore Malwa United Mills Ltd for the year 1962 from 10 percent to 7 percent follows the steep fall in the Company's profit from Rs. 30.52 lakhs to a mere Rs. 13.85 lakhs. The gross profit is down by about 120 percent, even though the sales are up by about 14.5 percent from Rs. 3.38 crores to Rs. 3.97 crores. The directors attribute the fall in the profit to the year-end sales of cloth at uneconomic prices. In order to meet the export obligations and also to keep stocks at the minimum, the Company sold its products in an unfavourable market and incurred heavy losses. The working of the yarn section, however, was satisfactory, although the target of realisation of Rs. 80 lakhs could not be reached. In view of the raw cotton shortage, the Textile Commissioner refused to renew permission for running 3,800 extra spindles.

The directors state that the implementation of the renovation and modernisation programme is in full swing. About Rs. 1.68 lakhs were spent on additions and extensions to the existing buildings. New machinery worth Rs. 34.28 lakhs was received in 1962, of which the textile machinery accounted for Rs. 22.03 lakhs. Most of this has been installed. In addition, electrical equipment worth Rs. 11.97 lakhs was also received and installed during the year. Negotiations with the State Bank of India have been finalised for a medium-term loan of Rs. 50 lakhs for financing the Company's expansion schemes. Out of this, a sum of Rs. 38.5 lakhs has already been used.

Out of the year's gross profit of Rs. 13.85 lakhs, the directors have provided Rs. 6.26 lakhs (against Rs. 4.55 lakhs) for depreciation. Rs. 3 lakhs (against Rs. 1.10 lakhs) for development rebate. The provision for taxation is substantially lower at Rs. 1 lakh, against Rs. 12.75 lakhs in the previous year. No provision has been made for the general reserve and dividend equalisation reserve, which received Rs. 2 lakhs and Rs. 5 lakhs, respectively, in 1961. The proposed dividend absorbs Rs. 3.75 lakhs (against Rs. 5 lakhs), leaving a balance of Rs. 8,880 to be carried forward, against Rs. 26,590 brought in. The Rs. 100-paid share of Indore Malwa Mills is quoted around Rs. 180.

Sarangpur Cotton Profits Down

THE Sarangpur Cotton Manufacturing Co. Ltd, Ahmedabad, has fared badly in 1962, with both sales and gross profit recording substantial declines from the previous year's figures. The total distribution to the shareholders has, however, been maintained—in fact, it is slightly

higher—although the dividend is reduced from 33.2 percent to 26.8 percent. The capital was increased last year by a one-for-four bonus issue. Sales are down from Rs. 4.95 crores to Rs. 4.60 crores and the gross profit has declined from Rs. 109.21 lakhs to Rs. 71.97 lakhs.

After providing Rs. 3.51 lakhs (against Rs. 5.67 lakhs) for managing agents' commission, Rs. 29.20 lakhs (against Rs. 26.67 lakhs) for depreciation and Rs. 22.20 lakhs (against Rs. 35.23 lakhs) for taxation, the net profit amounts to Rs. 17.06 lakhs, compared with Rs. 41.64 lakhs in the previous year. The directors have set aside Rs. 1.01 lakhs (against Rs. 93,000) for donations and Rs. 7.74 lakhs (against Rs. 5 lakhs) for development rebate and rehabilitation reserve, leaving a surplus of Rs. 8.31 lakhs which is insufficient for the payment of the proposed dividend. The directors have, therefore, withdrawn Rs. 5.75 lakhs from the dividend reserve to meet the shortfall in the dividend distribution which absorbs Rs. 13.35 lakhs, against Rs. 13.23 lakhs for 1961. In 1961, the directors had allocated as much as Rs. 21.16 lakhs to reserves. The Rs. 250-paid share of Sarangpur Cotton is quoted nominally around Rs. 1,590.

Rights Share Issue by Madras Rubber

MADRAS Rubber Factory Ltd has sought the sanction of the Controller of Capital Issues to issue rights shares at par in the ratio of one share for every two held. Announcing this at the recent shareholders' annual general meeting, the chairman, Mr. K. M. Cherian, said that besides providing the necessary additional funds for expansion and working, the increase of issued

The Challenge

Defence effort necessitates development of a great ability to produce weapons and equipment and to transport them. At the same time, adequate supplies of essentials for civilian consumption must be maintained. All this involves tremendous finance. But to meet the requirement, the less we have to depend upon deficit financing the better for our economy.

The resources of the nation must be mobilised to feed the various needs for production and distribution. Bank is the most suited agency for this purpose. Put all your money in your bank account and make your payments by cheques. That will be your yet another direct contribution to the nation's defence effort.

United Bank of India Ltd.

REGD. OFFICE: 4, CLIVE GATE STREET, CALCUTTA-1

capital by Rs. 62-1/2 lakhs would stabilise the capital base of the Company and create a proper balance between the share capital and the loan capital. The chairman also stated that the Company had overcome all the teething troubles and the regular production of tyres had started at the factory. The tyres from the main plant have been introduced in all the principal cities in India, and they had been well-received both by the trade and consumers.

The Company has received a licence for substantial expansion for the manufacture of an additional 60,000 tyres and tubes a year, and necessary steps have already been taken to achieve the increased production capacity by installing the second high-speed Banbury and three more giant mixing mills. The Company has also received permission from the Government for the import of special army type moulds required for the manufacture of tyres to meet the defence needs. The chairman added that the Company's foreign collaborators, Mansfield Tire and Rubber Company, had the experience of having worked with the U.S. Defence Department for the evolution of highly centralised tyres, such as bullet-proof combat tyres during the second World War.

Mr. Cherian has suggested that the Government of India should stop

further licensing of rayon cord manufacture and create some capacity for nylon tyre-cord manufacture in view of the fact that nylon-tyres are more economical than rayon tyres. Besides, the tyres made out of nylon cord are tougher and are not hygroscopic as the rayon tyres. He has also suggested that modern highways should be constructed on the pattern of autobahns of the Continent and the turnpike roads of the U.S.A. This, he said, would result in a saving of about 25 lbs a tyre of costly raw materials which are mostly imported at present. Nearly 15 to 25 percent of the tyres manufactured in India are said to meet with premature failure because of the bad conditions of roads. Mr. Cherian assured shareholders that the Company looked forward to better results in the years to come.

India United Mills Pays Less

THE directors of India United Mills Ltd. have reduced the dividend on the ordinary shares for the year 1962 from 14 percent to 11 percent (i.e. from Rs. 1.40 a share to Rs. 1.10 a share). The dividend on the deferred shares has been reduced from 37.25 percent to 25.25 percent (i.e. from Rs. 37.25 to Rs. 25.25 a

share). The proposed cut in the dividends gives little indication of the company's disappointing performance during the year.

The preliminary figures about the company's working released along with the dividend announcement show that the gross profit is down by about 52 percent from Rs. 181.60 lakhs to Rs. 86.62 lakhs. The provision for depreciation has been reduced from Rs. 14.92 lakhs to Rs. 13.54 lakhs and tax liability is also substantially lower at Rs. 15 lakhs compared with Rs. 62 lakhs in 1961. The net profit is shown at Rs. 58.08 lakhs against Rs. 104.68 lakhs. After bringing in a surplus of Rs. 4.20 lakhs (against Rs. 9.70 lakhs) from the previous year, including Rs. 12.90 lakhs being excess provisions made in previous years and writing back the provision for bonus for 1959 and 1960 amounting to provided Rs. 3.26 lakhs (against Rs. 13.75 lakhs, the directors have provided Rs. 3.26 lakhs (against Rs. 4.97 lakhs) for development rebate reserve. They have also set aside Rs. 46.22 lakhs for payment of bonus for the years 1959 and 1960 and to meet the short provision for bonus for 1961, against an ad hoc provision of Rs. 35 lakhs made out of the 1961 profits. A sum of Rs. 82,607 has been set apart for taxation for the previous year. Last year, the provision for taxation included

Andhra Bank Repeats

THE working of the Andhra Bank Ltd during the year ended December 1962, has resulted in a net profit of Rs. 8,34,052.71, after meeting all expenses and after providing Rs. 2,38,972.13 for depreciation, leaving Rs. 2,38,972.13 for depreciation. The net profit for the previous year was Rs. 10,97,044, after providing Rs. 1,00,226 for depreciation. With the amount of Rs. 12,941.76 brought forward, and with a sum of Rs. 250.40 being the excess dividend provided for 1961, the total amount available for appropriation comes to Rs. 8,47,244.87.

Out of this, the directors have transferred a sum of Rs. 2,10,000 to reserve fund under Section 17 of the Banking Companies Act, 1949. The provision for taxation amounts to Rs. 3,00,000. The directors have recommended the payment of a dividend of 8 percent subject to tax, the same as in the previous year. This dividend will absorb Rs. 3,34,000. The balance of Rs. 3,244.87 is carried forward. The directors state that the progress of the bank was satisfactory during the year. The net profit is, however, lower consequent on the revision of pay scales under the award of the National Tribunal and the payment of the deposit insurance premium. Deposits as on 31st December, 1962, stood at Rs. 18,17,52,527, against Rs. 15,78,89,865 on the same date last year. Advances stood at Rs. 10,25,31,990, against Rs. 9,09,12,950.

New Capital Issues

FOUR companies have been authorised to raise capital amounting to Rs. 3.26 crores. Three will issue equity shares and one rights shares. One bank is raising further capital. The consent in all cases is valid for 12 months. The following are the details:

In supersession of the consent accorded previously for the issue of capital to the value of Rs. 2.5 crores, **Lakshmi Machine Works Ltd.**, Madras, has been allowed to issue equity capital of Rs. 2.50 crores for cash at par. Out of this, shares of a value of Rs. 28.11 lakhs (equivalent to Swiss francs 2.6 million) will be offered to Reiter Machine Works Limited, Switzerland.

In supersession of consent given previously for issue of capital of Rs. 4,37,500 (nominal), the **Mysore Lamp Works Ltd.**, Bangalore, has been authorised to issue capital of Rs. 6,30,520 (nominal) in 63,052 equity shares of Rs. 10 each for cash at a premium of Rs. 25.07 a share to the General Electric Company, U.S.A.

The **Bank of Maharashtra Ltd.**, Poona, is to issue further capital to the value of Rs. 50,00,000 divided into 100,000 equity shares of Rs. 50 each to be fully paid up for cash at par on rights basis.

The **Tamilnad Cardboards and Paper Mills Ltd.** Madras, will issue further equity capital of Rs. 20 lakhs in shares of Rs. 100 each for cash at par.

Rs. 8 lakhs for previous years. No provision has been made for the general reserve which received Rs. 15 lakhs in 1961. The proposed dividends—ordinary and deferred—absorb Rs. 34.62 lakhs against Rs. 46.62 lakhs. After making all these appropriations there remains a surplus of Rs. 3.99 lakhs to be carried forward. The Rs. 10-paid share of India United Mills is currently quoted around Rs. 22.72.

The Stock Markets

PRICES RECOVER ON BROAD FRONT IN CALCUTTA

Wednesday Evening.

THERE has been a substantial improvement in the Calcutta stock market during the past week. Prices, especially of clearing shares, have hardened on a broad front due to frantic short-covering, combined with replacement purchases. Sentiment has taken a turn for the better after the Central Finance Minister, Mr. Morarji Desai, announced the various tax concessions last week. Operators have been particularly cheered by the modifications in the super profits tax. In its present frame of mind, Lyons Range seems to forget that the levy will hit the corporate sector hard in spite of the concessions. It is doubtful whether the operators are justified in taking the view that the levy might be scrapped if it is found to retard industrial expansion. Judging from experience, it looks as if any tax measure is difficult to abolish once it has been imposed. Anyway, investors have little cause for jubilation since the concessions will do little to help the companies maintain the dividends, not to speak of increasing them. Although the expanding and more profitable companies will benefit somewhat from the concessions, it remains to be seen whether the various expansion schemes will be proceeded with as freely as before the Budget.

The rise in share prices during the past few days has been so sharp that the authorities have been greatly disturbed, lest the health of the market should deteriorate. The following table shows the extent of the improvement before and after the concessions were announced:

	Prices on 24-4-63	Prices on 11-4-63
Indian Iron & Steel	22.40	20.45
Guest, Keen, Williams	34.50	31.00
Textile Machinery	23.65	21.25
Indian Copper	4.39	4.23
Indian Aluminium	33.50	31.31
Dunlop Rubber	35.44	33.31
Hindustan Motors	17.50	16.19
Indian Cable	32.62	32.00
Kesoram Industries	24.00	20.69
Orient Paper	35.15	32.30
Burrakur Coal	17.00	15.50
Birla Jute	29.69	28.25

The speculative fraternity, in particular, has been cheered by the prospect that the Government may again permit free forward trading as before because of the recovery. Since the Government is keen on maintaining stability in the stock exchanges, it is hoped that it will permit forward trading subject to proper restrictions. It must be remembered that the improvement which has occurred so far has been largely due to speculative activity. In spite of some replacement buying, investors have remained cautious. Since the rise has taken place very quickly, it is doubtful whether the gains have been consolidated. In the circumstances, the authorities should concentrate their attention on ensuring that the health of the market is not affected by speculation. This apart, it is time to consider to what extent forward trading in shares should be permitted. As long as forward trading is done on the basis of actual delivery of shares, there can be little objection. But trading in clearing shares, as it is generally done, constitutes what is called a futures contract. It is more often than not

closed by paying the difference in prices. Whether a futures contract in shares is necessary under the present circumstances must be considered carefully.

Steel shares have been fancied since it is thought that these companies will suffer less from the S.P.T. It is also hoped that the Government may soon increase the retention price of steel to compensate the producers for rises in royalty, wages and other production costs. The optimism, however, seems to have been exaggerated since the shareholders are not directly benefited by the increase in the retention price. Besides, the Government was very niggardly in raising the retention price in the past. Indian Iron have closed at Rs. 22.40, after touching Rs. 22.70. Among engineering shares, support has been confined to Guest, Keen, Williams, Jessop, Texmaco and Burn. The various concessions given to the coal industry have helped induce support for selected coal shares. Burrakur, Bengal, East Indian and Central India have improved.

The prices of selected miscellaneous shares have risen all-round. The clearing shares in particular have met with strong support but sellers have been reserved. Among new shares, attention has been concentrated on Hindustan Tywofords, India Carbon, Phillips Carbon and Asiatic Oxygen. In the paper section, Orient, Titagur and Sirpur have been prominent. Bank shares have been sluggish.

Satisfactory dividends paid by the Andrew Yule group of jute companies have helped maintain steadiness in jute shares. Support has been extended to Birla, Budge Budge, Cheviot, Delta, Megna, Ganges, Northbrook, Union and India. Among cotton mill shares, Bharat Commerce, Dunbar and J. K. Rayon have recovered. Sugar shares have been neglected. Turnover has been small in tea shares since this industry will suffer greatly from the S.P.T.

Government securities have been steady but turnover has been small.

Scattered business has been done in short and medium-dated securities. The 3-percent Conversion loan 1986 has been quoted at Rs. 63.15. State Government loans have been generally quiet. Scattered interest has been taken in selected preference shares.

Bombay

BUOYANT CONDITIONS IN DALAL STREET TAX CONCESSIONS HELP SENTIMENT

Wednesday Evening.

BUOYANT conditions have prevailed in the Bombay stock market during the past week and share prices have gone up on sustained support, combined with short-covering. The tax concessions announced by the Central Finance Minister, Mr. Morarji Desai, have given the stock market a shot in the arm. The optimism has stemmed from the belief that the super profits tax is a temporary measure and would be scrapped if it retarded economic development. Operators were especially cheered by the thought that the Tata Iron and Steel Company would be exempted from the super profits tax in view of its accounts position. Since the concessions will benefit companies with greater profitability and those having substantial development rebate reserves, the support was concentrated on blue chips. Considering that there was a sharp fall in share prices after the Budget, the recovery was quick as soon as sentiment took a turn for the better in response to the tax reliefs. Towards the close, there has been a modest reaction due to profit-taking. Several bulls, who could not lighten their commitments so long, have started selling their

It was with the guidance and assistance of the Bank of India Ltd., that he was able to set up his industrial unit.

He continues to ask for guidance and assistance from the Bank, and the Bank gives it willingly, efficiently, promptly.

He makes full use of the diverse facilities offered by the Bank and therefore he has more time to devote to his business—

He is on his way up.

holdings, but all offers have been absorbed without much difficulty. Operators have also been encouraged by the prospect that the authorities might soon introduce forward trading on a normal basis.

Tata ordinary have improved to Rs. 131.25 and Indian Iron to Rs. 22.32. Among engineering shares, Tata Locomotive have gained at Rs. 295, Premier Construction at Rs. 146.50 and Larsen and Toubro at Rs. 24.24. Mukand Iron have been supported up to Rs. 18.76. Among motor-vehicle shares, Hindustan Motors jumped to Rs. 18.08 and Premier Automobiles to Rs. 113. Prices of cotton mill shares have recovered on a broad front because of short-covering, combined with replacement buying. The prospect of an improvement in the internal cloth offtake has also helped induce support for these scrip. Century have gained at Rs. 554 on repeating a taxable ordinary dividend of 30 percent, despite a small decline in profits. Kohinoor have been supported at Rs. 308, Bombay Dyeing at Rs. 63, Svadeshi at Rs. 260, Khatau at Rs. 430 and India United ordinary at Rs. 21.

Miscellaneous shares have improved in sympathy with the general trend. In the cement section, Associated Cement have recovered to Rs. 146 and Digvijay to Rs. 170. Among sugar shares, Belapur have been absorbed at Rs. 184 and Phalton at Rs. 79. Mining shares have been quiet, and Shivrampur Syndicate have been sold freely down to Rs. 21. In the shipping section, Scindia Steam have recovered to Rs. 10.80 on short-covering. Chemical shares have been steady, and support has been extended to Tata Chemical at Rs. 15.36 and to Indian Dyestuff at Rs. 415. After a long interval, National Rayon have improved to Rs. 373 on bear-covering. Bombay Burmah have been higher at Rs. 674. Interest has been taken in Voltas at Rs. 271 and in Gwalior Rayon at Rs. 47.

Bank shares have met with scattered support because of the special concessions they have been given in calculating the super profits tax. Bank of India have been transacted at Rs. 109.50 and Central Bank at Rs. 59. Among insurance shares, New India Assurance have been bought up to Rs. 59.50 on prospects of a bonus issue. In the electric supply section, Ahmedabad have met with scattered interest at Rs. 90 and Tata Hydro at Rs. 100.

Madras

MARKET SENTIMENT IMPROVES SCATTERED INTEREST IN PLANTING SHARES

Tuesday Evening.

THE Madras stock market has improved during the past week in response to higher advices from the Calcutta and Bombay stock markets. Selling pressure has abated considerably and replacement buying has taken place on a modest scale. Investors have welcomed the concessions given in the super profits tax; however, they have been cautious and are still busy examining the full implications of the concessions. Operators have extended their commitments in clearing shares rather slowly in view of the shortage of credit, which has also become more costly.

Government securities have been quiet and several State Government loans have been offered at attractive prices. In the banking section, Indian

Overseas have recovered to Rs. 152 and Indian Bank to Rs. 174.50. Among electric supply companies, support has largely been confined to Vellore at Rs. 13.60 and to West Coast at Rs. 18.37. Selected sugar shares have met with renewed support. E.I.D. have recovered to Rs. 38.50 and Deccan to Rs. 9. Kothari have been bought up to Rs. 7.85.

Investors have shown scattered interest in selected planting shares on the view that the planting companies need not pay super profits tax on that portion of their income which is considered agricultural in nature. Savamalai have declared a taxable ordinary dividend of 15 percent. Blue Mountain have been transacted at Rs. 2.48, Cochin Malabar at Rs. 6, Consolidated Coffee at Rs. 17.25 and Ouchterlony at Rs. 3.83. Support has been extended to Periakaramalai up to Rs. 3.08.

Interest has revived in selected textile shares after a long interval. South India Viscose have recovered to Rs. 149 and Travancore Rayon have been wanted at up to Rs. 24.50. Madura have been firm at Rs. 33. Turnover has increased in miscellaneous shares and prices have hardened selectively. Aluminium Industries have recovered to Rs. 18.60 and their rights have met with support. Ashok Leyland have been done up to Rs. 7.65, Dalmia Cement at Rs. 12.25, India Cement at Rs. 5.90 and Metturr Chemical at Rs. 11.92. Seshasayee Paper have been firm at Rs. 8.10 and Parry's Confectionery have gained at Rs. 3.19.

Money

THE CALCUTTA MONEY MARKET

MODERATE DECLINE IN ADVANCES

Wednesday, 24th April.

THE general level of advances in the Calcutta money market showed a moderate decline during the past week. The decline is explained by the slight fall in the advances to the jute and sugar, and the iron, steel and engineering industries. There is no change in the advances to cotton and woolen mills and the foodgrains and seeds trade. In the interbank market, conditions have been somewhat easier, the call rate being 4½ percent.

The local exchange market is quiet. The supply of gunny and tea bills has been poor. The demand for remittance has been low. Sterling has suffered fractional losses in relation to all the important currencies, with the exception of the Danish kroner.

NARROW FLUCTUATIONS IN READY silver marked trading in the Calcutta bullion market during the past week. The price closed at Rs. 278 for ready delivery. There was no transaction in forward. The London and New York prices were 110½d. and 127.50 cents. Trading in gold continues to be suspended.

DURING THE WEEK ENDED 19TH APRIL, Government of India Treasury bills for Rs. 149,14,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 23rd April. The total amount offered was Rs. 2.05 crores. Tenders at Rs. 99.415 percent and above were accepted in full and those at Rs. 99.410 percent were allotted approximately 95 percent. The total amount accepted was Rs. 2 crores. The average rate of acceptance was Rs. 2.349 percent a year approximately. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 28th April.

IT IS STATED THAT 91-DAY INTER-mediate Treasury bills will be sold from 24th April to 27th April at Rs. 99.431 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 17th April to 20th April amounted to Rs. 34 lakhs only.

A DECLINE OF Rs. 11.01 CRORES TO Rs. 2,317.22 crores in active notes was a notable feature of the return of the Reserve Bank of India during the week ended 19th April while the total note issue was Rs. 55 lakhs larger at Rs. 2,336.95 crores. Notes held in the Banking Department consequently rose by Rs. 11.55 crores to Rs. 19.76 crores. Deposits of the Government of India fell by Rs. 30.62 crores to Rs. 63.40 crores and those of State Governments by Rs. 76 lakhs to Rs. 3.98 crores. Balances of scheduled banks at Rs. 78.56 crores showed a fall of Rs. 7.34 crores. Their loans from the Reserve Bank declined from Rs. 47.81 crores to Rs. 30.23 crores, of which advances against usance bills were Rs. 27.76 crores (Rs. 40.97 crores). Ways and means

advances to the Governments stood at Rs. 60.12 crores, against Rs. 52.91 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 12th April, 1963, shows a drop of Rs. 7.17 crores in total deposits. Investments in Government securities are down by Rs. 4.70 crores to Rs. 214.23 crores, while other authorised investments remain unchanged at Rs. 7.84 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 2.62 crores to Rs. 319.37 crores. Cash and balances are, in consequence, shown at Rs. 20.48 crores, or Rs. 1.11 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 12th April, 1963, shows Demand and Time liabilities at Rs. 1,030.89 crores (Rs. 25.96 crores on account of borrowings from banks) and Rs. 1,229.44 crores (Rs. 13.05 crores), compared with Rs. 1,039.96 crores (Rs. 29.01 crores) and Rs. 1,221.57 crores (Rs. 15.84 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.18 crores and Rs. 3.81 crores to Rs. 53.44 crores and Rs. 79.48 crores, respectively. There is a drop of Rs. 5.49 crores to Rs. 594.84 crores in investments. Advances and bills discounted at Rs. 1,609.39 crores show a rise of Rs. 6.54 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 71.2 percent, against 5.7 percent and 70.9 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 26-4-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

THE DUNLOP RUBBER CO. (INDIA) LTD.

MR. M. L. BEXON'S ADDRESS

The following is the speech delivered by Mr. M. L. Bexon, M.C., Managing Director of The Dunlop Rubber Co. (India) Ltd., at the 37th Annual General Meeting of the Company held in Calcutta on the 24th April, 1963.

I have much pleasure in welcoming you to the 37th Annual General Meeting of the Company. The Directors' Report and Accounts have been in your hands for some time, and with your permission I should like to take them as read.

The Year's Trading

During the year under review, our sales of all categories of tyres continued at a satisfactory level, constituting the highest yet achieved, which resulted in our factories not only working to full capacity but also extra days to meet the urgent defence requirements.

We continued to supply a major share of the vehicle manufacturers' Original Equipment tyre requirements and we were able to maintain our position in the Replacement field with the aid of our widespread dealer organisation which has been built up over the years. Supplies to State Transport Organisations increased during the year in line with the expanding transport networks throughout the country.

Since the emergency, we have had to divert additional supplies for Government purposes but this has been accomplished without a significant effect on the retail trade.

Sales of our large Earthmover tyres continue to make a worthwhile contribution to our turnover in addition to the important part in the National Projects which are so vital for development and industrial progress.

The popularity of the Dunlop Cycle tyre has been maintained and we lead the market in this field with our sales limited only by capacity.

In the Industrial Rubber Products field demand continued to outpace production in most of our items.

In the case of Conveyor Belting, demand during the year did not show any appreciable rise over the 1961 figure. With the expansion recently implemented in our Sahaganj factory, we are in a position to manufacture belts up to 1524 mm width. We feel that the capacity now available in the country is fully adequate to meet the all-India demand and that a ban on imports is warranted, particularly having regard to the large-scale influx of belting from Rupee payment countries.

As an addition to our existing range of Conveyor Belting, we have now developed a range of cotton/nylon ducks, which we are confident will find a wide acceptance in Heavy Industrial Projects. We are already manufacturing our first order for 6,000 metres of this belting for a Mining Project.

Dunlopillo sales were strictly limited by our production capacity. There has been a marked increase in the usage of latex foam cushioning for industrial applications, and it would therefore be a misnomer to rate latex foam cushioning as a luxury product.

Exports

Further progress was made in the export field and with the help of our Associates abroad, we were able to increase our export achievement for the year to a substantial figure. The value of this amounted to over two and a half times the equivalent figure for 1961. New markets were developed, and I am

pleased to say that we are now selling our products in Asia, Africa, Europe, North America, South America and Australasia.

Cycle tyre exports again showed a substantial increase and registered an improvement of over 60% on sales in the previous year.

Our efforts to expand our export business met with a sharp setback towards the end of the year, when an export ban was imposed by Government on most types of tyres. Whilst appreciating the circumstances which brought this about, I must tell you that we were placed in a very difficult position with our customers overseas through having to cancel offers that had been made and withdraw delivery promises. Although the ban has been gradually relaxed, it has made an impact on our relations with foreign buyers and time will be needed to rectify the position.

Raw Materials

I am glad to report that we were able to obtain raw materials during 1962 to maintain full production at both factories, although the delay in receipt of import licences caused us some worry.

We are playing a full part in supporting indigenous production of a number of raw materials required by us, and are already obtaining our entire requirements of cycle rim strip and cycle valves from local sources. During 1963 we shall be taking large quantities of indigenous rayon, carbon black and synthetic rubber, although their higher costs will have a serious impact on our cost of production.

A most important point is that all our raw materials should be fully up to specification and we are engaged on a planned test programme to ensure that this transition to indigenous materials is carried through without endangering the quality of our finished products.

Recent increases in Excise and Import duties will substantially enhance raw material costs, and these, together with a change to the Letter of Commitment method for AID items, will throw a heavy strain on our finances.

Productivity

Although productivity was affected by power cuts, it is pleasing to record that at both factories the year's output was a record.

At Sahaganj, severe power cuts were experienced but the co-operation of the labour force in altering hours of work and the close team work between management and labour have minimised losses which would otherwise have occurred. Targets for increased production have been set for 1963 and we are hopeful of achieving these with the co-operative effort of all concerned with corresponding reward to our workers.

At Ambattur productivity has improved considerably, although the power shortage in Madras State caused by the late arrival of the rains affected the middle of 1962. I am glad to tell you that output has now risen by about 15% following successful negotiations for increased incentive rates.

It is a source of satisfaction that the principle of increased productivity for increased wages has been accepted by our factory Unions and the results of this co-operative approach are apparent in the increased output being achieved at both factories.

The history of your Company's operations in 1962, then, shows higher pro-

ductivity, higher sales and higher profits—up to this point a sound and satisfactory year's trading. But now I must turn to the Budget proposals. No one doubted the necessity for enhanced revenue to meet defence requirements and, indeed, some additional taxation was anticipated. The original Budget proposals, however, went far beyond all our worst expectations and imposed a crippling levy on efficient and expanding companies such as yours.

The proposed super-profits tax is bad in theory and worse in practice and although some relief has now been given which we welcome it is still a heavy burden, particularly following the higher tax imposed by the Finance (No. 2) Act 1962. These increased taxes are a direct drain on liquid funds required by companies to support new expansion, increased productivity arising from improved efficiency, and the financing of increased costs arising from enhanced Import and Excise duties.

The effect of the new tax has been stagnation on the Stock Exchanges and a pause for further consideration on the part of companies with substantial expansion plans. We ourselves must review our own expansion schemes and for that reason I am not in a position to give you any positive report on their progress at this time.

Profit and Loss Account

The profit for the year after providing for depreciation and interest was Rs. 3,30,38,375, an increase of approximately Rs. 53,00,000 over the corresponding figure for 1961.

Taxation estimates are, however, higher by approximately Rs. 1,12,00,000 of which Rs. 63,00,000 represents the super-profits tax contained in the original 1963 Budget proposals. However, this is now some Rs. 24,00,000 in excess of what will be required as a result of the later amendment to the Budget and this amount if confirmed will be brought to credit in 1963. The Finance (No. 2) Act 1962, promulgated after our 1961 Accounts had been approved by the shareholders, resulted in extra tax on 1961 profits of Rs. 18,00,000 which has had to be included in the 1962 taxation provision, together with an under-provision of Rs. 7,00,000 in respect of the previous year.

Excise duty continues to absorb an ever increasing amount of working capital and to date we have found no ready-made solution for this unremunerative burden on the Company's finances.

Contributions to Provident and other Funds are up by approximately Rs. 10,00,000, the main reason being that the Company introduced during 1962 a non-contributory Pension Scheme for officials.

Advertising was less than in the previous year, which had included our expenses in connection with the Indian Industries Fair.

The net profit for disposal after tax, Rs. 95,59,317, is lower than last year by approximately Rs. 69,00,000.

The compulsory transfer to Development Reserve is only Rs. 3,00,000 for the year.

The proposed transfer to General Reserve is Rs. 20,00,000 as compared with Rs. 62,50,000 last year.

The Directors recommend a dividend for 1962 of 15% subject to tax as opposed to 20% paid in respect of 1961. This reduction is very much regretted

but is entirely due to the heavy impost of additional taxation.

Balance Sheet

On the Assets side both Inventories and Debtors are higher, this being in line with the higher level of output and sales. Advances Recoverable in cash and in kind show a substantial increase, the main reason being amounts advanced in respect of the new depot premises at Calcutta and Madras.

The Capital and Liabilities require no special comment.

Employee Relations

The improvement in labour relations mentioned last year was maintained. At Sahaganj a two-unit level Workers' Education Scheme has been started and the results have been very gratifying. At the Union's request, the factory worked on two holidays, the entire wages paid for these days at overtime rates being presented to the National Defence Fund.

In the Ambattur factory, the past four years' experience of joint consultations have proved successful, and relations are good. This is of particular interest as the factory was started with a new and young labour force with little or no industrial experience, and the results achieved reflect great credit on all concerned. This factory also worked extra days to aid the Defence effort and the overtime earnings were also contributed to the National Defence Fund.

The Head Office and Depots continued to operate satisfactorily.

I am sure that you would like to join the Directors in thanking the employees for their loyalty and hard work, which has contributed to the successful year's trading.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

SHORTCOMINGS IN THE POLICY FOR INDUSTRIAL LICENSING

(FROM OUR NEW DELHI CORRESPONDENT)

THE Prime Minister has made a statement in Parliament this week about the controversy raised by the Minister for International Trade, Mr. Manubhai Shah. Mr. Shah had complained that the industrial licensing policy followed by the Ministry of Commerce and Industry since he left his former Department is frustrating the socialistic objective of preventing the concentration of the means of production in fewer hands. The criticism has surprised many here, since Mr. Shah, as Minister for International Trade, is a Minister of State who is supposed to function under the supervision, direction and control of the Central Cabinet Minister for Commerce and Industry.

Meanwhile, the Government has made an analysis of the licences issued to leading business houses in India during 1960 and 1961. According to this analysis, the Birlas have been granted 37 licences, Tatas 30, the Shri Ram group 15, Surajmall Nagarmall 14, the Kasturbhai Lal-bhai group 13, the Walchand group 12, J. K. Singhania ten, the Bangur (Somani) group eight, Imperial Chemical Industries seven, Sahu Jains seven, the Seshasayee group seven, Martin Burn five, Dalmia enterprises five, the Chinai group four, the Jardine Henderson group three, the Goenka group two, the Andrew Yule group two, W. H. Brady and Nowrosjee Wadia group two, Killicks one, B.I.C. one, Macneill and Barry one, and Shaw Wallace one. All this was done during the stewardship of Mr. Shah. It should, however, be presumed that the allocations were made to further the socialistic objectives so dear to the Minister concerned.

As already reported in these columns, practically all the foreign exchange allocated for industries in the third five year plan was exhausted during the first 18 months of the plan by the Minister who is now criticising his colleagues. The licensing was done so hastily that as many as 407 licences had to be revoked during 1962 and 88 in the first three months of 1963. As for "socialistic objectives," the licensing has even affected certain public-sector projects. As reported last week, because of some licences granted to the private sector, the West German consortium including Bayers has lost interest in the public-sector project to manufacture intermediates for chemicals. This is one example, according to New Delhi sources, of how "socialistic objectives" were kept in the forefront by the Minister for International Trade when he was in charge of industries.

Mr. Shah might think that one criterion for judging the tempo of industrialisation is speech-making. But the fact is that the tempo cannot be maintained because Messrs Reddy and Kanungo find that the resources are lacking. India is desperately short of foreign exchange. Due to the emergency and the new taxation policy, fresh applicants are not readily coming up to fill the gaps created by the revocation of licences. In addition, there are shortages of raw materials, transport and power. Industrialisation has so far been on a faulty basis. Instead of building an engineering base with specialisation, "independent republics" have

been created through units making equipment for, say, the sugar, cement or paper industries. A process of rationalisation to avoid duplication and prevent the growth of idle capacity is now on. Small-scale industries depend heavily on imports of raw materials from abroad. No attempt has been made to co-ordinate their working with that of big industries, for example, by getting small-scale industries to produce ancillary items for big industries. This defect is also now being remedied.

As far as the main allegation is concerned, many here feel that the Prime Minister should refer this case

also to the Attorney-General. The latter can examine impartially who has been favouring whom in building so-called industrial empires. The enquiry into the working of the Development Wing, now in progress, should throw much light on the controversy.

AGRICULTURE

Reasons for Failure

The deputy chairman of the Planning Commission, Mr. Gulzarilal Nanda, has been unhappy about the

progress of agriculture in this country. Being deputy chairman of the Planning Commission, he is naturally concerned about the targets which have been fixed by common consent but are not being reached. Being also the Minister for Labour and Employment, he should be worried about the targets for employment, which are not being reached either.

The Central Ministry for Agriculture has a case. It is dealing with a subject which was transferred to the States in 1921. It has neither land nor irrigation under its control. Even in the case of fertilisers, their procurement is entrusted to one agency and distribution to another—both outside the control of the Ministry for Agriculture. In the States, the resources for developing agriculture, such as irrigation, agricultural credit, fertilisers and seeds, are all in the hands of departments other than agriculture. The Agriculture and Co-operative Departments work at cross-purposes, often, almost without knowing it. The Co-operative Department handles at least three of the most important items of agricul-

...if you are trying to dent high costs, here is something to get your teeth into! By making use of the Caltex "Stop-Loss" Programme you cut costs by proper lubrication. Programmed maintenance practices will help you to keep your equipment and your machinery in top condition and will also boost profits. It is not a mere question of more oil or more grease. The Caltex "Stop-Loss" Programme will help you to select the proper lubrication practices, to train your personnel to proper maintenance procedures. Help your operation to greater profit with the Caltex "Stop-Loss" Programme.

CALTEx (INDIA) LIMITED Bombay · New Delhi · Calcutta · Madras

tural operations—credit, fertilisers and seeds.

The *kisans*—those who are members of the primary co-operatives which cover about half the farmers—get credit at the exorbitant interest rate of 8.75 percent. It is pointed out that a State co-operative bank, which is the apex body for rural financing, gets short-term loans from the Reserve Bank at an interest rate of 2 percent. But in passing the loans on to primary producers through the intermediate agencies—the district co-operative bank and the primary co-operatives—the rate of interest rises to 8.75 percent. In this context, it has to be noted that since the abolition of the *zamindari* system, *kisans* have acquired proprietary rights in their lands and are entitled to *taccavi* loans which work out at 6 percent interest. But since the Government's policy is to boost co-operatives, *taccavi* loans, which are given by the Revenue Department, are discouraged and are not easily available. That this works to the disadvantage of agricultural production, especially as nearly half of the *kisan* population is not covered by co-operatives, is recognised but not remedied because of the Government's policy.

It is further pointed out that there is no check to ensure that loans from co-operatives are used by *kisans* for agricultural operations. Often, they are used for other purposes, such as marriages, births, deaths and family ceremonies. Fertilisers can play a major part in increasing agricultural production, but their distribution too is handled by the co-operatives. Then comes the "miracle-making" Ministry of Community Development and Panchayati Raj. More than one State Government has written to say that, instead of helping agriculture, the Ministry had been busy collecting contributions for the National Defence Fund. It is also engaged in

training a village defence force to combat Chinese aggression.

Meanwhile, the country is systematically being denuded of its forests. This process will before long affect rainfall in many areas and create deserts. The Dandakaranya project has necessitated the cutting down of forests. Many power projects are implemented at the cost of extensive forest areas. Land is given freely to people in the hills, such as Himachal Pradesh, although every bit of land so given means less forests.

The National Forest Policy Resolution of 1952 lays down that India as a whole should aim at maintaining one-third of her total land area under forests. As an insurance against denudation, however, a much larger proportion of land, about 60 percent, is to be kept under forests for their protective function in the Himalayas, the Western Ghats and the Eastern Ghats and other mountainous tracts liable to erosion. In the plains, where the ground is flat and erosion is normally not a serious factor, the proportion to be attained is placed at 20 percent. The resolution states that an even distribution of forests in all physical regions is as important as the overall proportion, and that forest areas in excess of the indicated proportion, if any, should not be sacrificed.

While the discretion of State Governments to regulate the details of forest administration in the respective territories is left unfettered, it is laid down that the general principles of the policy should, in the national interests, be observed by them in framing their policies and legislation for the conservation of their forest resources; that the forest policy of every State should be so framed that it does not impinge adversely on the general economy and physical plans of an adjoining State; and that it should be in consonance

with the general principles underlying the forest policy.

From the available data, it is found that except in Assam, Maharashtra, Kerala, Madhya Pradesh, Orissa, the Andaman and Nicobar Islands, Himachal Pradesh, Manipur, Tripura and N.E.F.A., the area under forests is appreciably below the standards laid down in the forest policy. According to the available statistics, the area under forests went down from 277,232 square miles in 1950-51 to 271,634 square miles in 1955-56, or by about 2 percent. One of the factors responsible for the reduction in the forest area in recent times is the submergence of vast tracts under river valley projects. This aspect has been examined by the Central Board of Forestry at its earlier meetings, and recommendations have been made to the effect that equivalent areas should be brought under forests to compensate for the loss. It is, however, not known how far the losses have been made good. Besides, there have been demands on forest areas for cultivation, and for the rehabilitation of displaced persons.

TRADE

Commonwealth Talks

The Commonwealth Trade Conference meeting in London shortly will discuss the after-effects of the breakdown of the Brussels talks on U.K. entry into the European Economic Community. It will also discuss the possibilities of increased intra-Commonwealth trade. The proposed World Trade Conference might be another topic for discussion.

Buying Mining Machinery

The Cheddi Lal Mission, which has been visiting Poland, France and

CAPITAL, 25th April, 1963.

Belgium to purchase coal-mining machinery, will now visit the U.K. also.

U.K. AID

Long-term Credit

Reference was made in these columns to the British plan to give long-term credits ranging from ten to 20 years to finance certain exports to India. The items now being discussed under the proposal are textile machinery, steel pipes and even aeroplanes.

SUGAR

Controls Reintroduced

The Central Minister for Food and Agriculture, Mr. S. K. Patil, made a statement in Parliament, reintroducing certain controls over sugar. He said: "It is quite clear in the context of recent developments that the system of regulating prices through releases to the market would no longer avail us in dealing with the situation. I have, therefore, decided to impose certain regulations simultaneously with the release. Orders are being issued under the Defence of India Rules to prescribe quotas for the various States and to secure that these quotas are released by the factories at ex-factory prices determined having regard to the estimated cost of production according to the Tariff Commission's formula, with adjustments in relation to increased costs and the ex-factory prices prevailing during the appropriate time between 1st January and 31st March, 1963.

"We have deliberately excluded from our calculations the periods subsequent to 1st April in view of the abnormal situation that prevailed on the price line since then. The State Governments would be empowered

CAPITAL, 25th April, 1963.

to prescribe, in accordance with our instructions, the margins of the wholesale trade, and will also be in a position as before to ensure that within the quotas allotted there is equitable distribution at reasonable prices within their jurisdiction. The quantity that would be released this month with these regulations would be 200,000 metric tons, which is roughly the average of the monthly releases for internal consumption since 1st November.

"I am aware that the industry is trying to come to an arrangement with the trade with a view to maintaining a certain level of prices and that some State Governments, particularly Maharashtra, had formally or informally discussed with the industry ways to maintain a certain level of prices. We have found, however, that these levels are generally in excess of what is justified with reference to the considerations that I have mentioned above, and that the territorial coverage of the various schemes would not be adequate to meet the needs of the entire country. In the circumstances, there was no escape from the regulations that we have settled upon. I am convinced that we have devised a scheme of regulations that would be fair to the industry, trade and the consumers."

Following this announcement, sugar, according to local newspapers, has disappeared from the market, although many units of the industry operate wholesale and retail shops. Mr. Patil has not explained why sugar exports were allowed when the Government knew of the poor cane crop. The consumer is taxed far too heavily when he buys sugar. He has to pay a heavy subsidy for exports, which give only the emotional comfort of earning foreign exchange. He also has to pay perhaps the highest price in the world for this commodity.

LATIN AMERICA

Promoting Exports

The Minister for International Trade, Mr. Manubhai Shah, has explained in Parliament that there are various difficulties in stepping up Indian exports to Latin America. Some of these are the long distances, the comparable economies of India and these countries, language problems, and keen competition from nearer countries such as the U.S.A. and Japan. Efforts are being made to develop contacts between Indian exporters and their counterparts in Latin America. Some of the difficulties, such as those concerning language and competition, are faced by almost every country, and not by India alone. They have been successfully overcome by Japan, a country mentioned by the Minister. The main obstacle for India's exports is that the home market is unsatisfied and growing. The lack of export houses is another difficulty. The organisations set up by industries to promote exports can hardly meet the requirements of the export trade. Lastly, the schemes for incentives or subsidies are faulty.

ROYALTIES

Coal and Bauxite

The Government does not intend to revise the existing rate of royalty on coal. For bauxite the question of revising the royalty rate is being considered and a decision will be taken shortly.

FOREIGN LOANS

Servicing Liabilities

The following statement shows the estimated liabilities of the Govern-

ment of India, on account of repayment of principal and payment of interest charges for the years 1963-64 to 1965-66, on foreign loans contracted up to the end of the second plan period (in crores of rupees):

	1963-64		1964-65		1965-66		1963-64 to 1965-66	
	Principal	Interest	Principal	Interest	Principal	Interest	Principal	Interest
(A) Repayable in foreign currency	32.93	25.99	32.32	25.83	37.87	24.60	103.12	76.42
(B) Repayable in rupees in the first instance, the rupees being utilised for the purchase of Indian goods	1.08	2.59	10.67	4.07	19.63	5.29	31.38	11.95
(C) Repayable in rupees without the rupees being tied to exports	9.00	15.42	10.54	17.34	11.75	18.05	31.29	50.81
Total A+B+C	43.01	44.00	53.53	47.24	69.25	47.94	165.79	139.18

This statement does not include (1) drawings from the International Monetary Fund and foreign loans repayable by public-sector autonomous bodies and private-sector parties.

NEYVELI

Steel for Thermal Station

The Neyveli Lignite Corporation is importing 1,174 metric tons of steel from Russia for the 50 MW unit (sixth unit) of the Neyveli thermal expansion scheme at 115.20 roubles, or roughly Rs. 609.20, a ton, c.i.f. Madras port. The steel is being supplied under the 337.5 million rouble Russian credit of September 1959, and will be delivered within the first half of 1963. The supply of steel for the 100 MW unit (seventh unit) will be on terms which are to be mutually agreed upon between the Corporation and the Russian organisation after the project report for the expansion scheme is received and accepted.

U.K. BODY STRESSES NEED FOR AN INCOMES POLICY

(FROM OUR LONDON CORRESPONDENT)

AS a sequel to its preliminary report justifying the suggestion for an annual growth rate of 4 per cent, and as a prelude to its first real "business" meeting at the start of its second year next month, the National Economic Development Council has issued another report—*Conditions Favourable to Faster Growth*. This emphasises the country's principal economic need as being an incomes policy, and helps to clear the ground for this to be discussed. It is unlikely to achieve more than that, however, for although the report carries the support of all the members, its carefully non-committal wording indicates beyond doubt that the T.U.C. representatives at least retain certain misgivings.

Unless costs and prices go up "considerably more slowly" than in the past, the report points out, it is unlikely that Britain can maintain its competitive position in world markets. "There will thus be a need for policies to ensure that money incomes (wages, salaries, and profits) as a whole rise substantially less rapidly than in the past." But it stresses that if its target of a 4 per cent annual rate of growth is achieved, real incomes will rise much faster than in the past.

On its estimates, real incomes would in that case double in 20 years and even in 10 years would be up by nearly 40 per cent. These figures foresee an increase of real income a head of 3½ per cent a year. The Council warns that "a policy for prices and money incomes can only succeed if those concerned are convinced that it is a necessary part of a wider programme for growth of real incomes and that restraint by one section will not merely result in a gain by others."

Wage Problems

The Council recognises that the implementation of an agreement on a general price and income objective will create difficult problems for

management and trade unions. But, it comments, "there is opened for both the prospect of a new and more constructive rôle in the formulation of national economic policy." This is the sum of what the Council has to say about an incomes policy after discussions which have stretched over several months. The report adds: "The Council regards the solution of the difficult problems involved as a necessary part of its task."

Agreement on a growth objective involves the Government in a commitment to give it a high priority in policy. In the last resort, the Council says, the Government is responsible for ensuring that sectional interests do not frustrate the achievement of the objective. Restrictive practices introduced in conditions of bad trade and unemployment have no place in favourable conditions of employment and economic expansion, it goes on. Changing this depends on both managers and workers. "The problems of communication are aggravated by the complexity of trade union structure, by weaknesses in union workshop representation and by negative managerial attitude towards joint consultation."

The report argues that it cannot be expected that the export target of an increase of 5 per cent a year will be achieved unless "at the least," Britain's export prices do not rise in relation to those of its competitors. They may well have to fall relatively. Even if measures such as import control, financial assistance to exporters, control of overseas investment or the use of reserves were adopted, the effect on the country's external position would be only temporary or once for all. If the trends were unfavourable, there would be no easy way of improving the balance of payments, the Council believes. "Of the measures which could have a substantial effect, only the reduction of the rate of increase of costs and prices is free from serious disadvantages as far as international considerations are concerned."

Demand Level

The report casts doubt on the once popular argument that a low level of demand at home benefits the balance of payments. Studies by the Council's "office"—its staff of economists—"lend little support to the view that a higher pressure of demand discourages exports by attracting potential exports into the home market or by driving away potential customers." Similarly, the office has found no clear tendency for the growth of productivity to be faster with high or with low unemployment. The Council agrees that a sudden increase in demand can cause severe short-term strains, but it continues: "If the economy is run permanently at a higher rather than a lower level, the balance of payments will not necessarily suffer and may benefit if growth in productivity is thereby speeded up."

It agrees that the immediate risks for the balance of payments are smaller if demand is maintained at around its present level. But the long-term results could be less favourable, it comments. Its conclusion is clear, if not precise: "It is thus desirable to aim at a level of employment in 1966 substantially above the level of 1962. It is hard at present to say exactly what that level should be or to lay down the exact path to it."

In a section on redundancy, the Council says that measures will have to be taken to facilitate mobility of labour and avoid hardship. "Unless these measures are taken, the fear of redundancy will make workers oppose change and employers will be less willing to release unnecessary labour for employment elsewhere." The measures discussed include the provision of houses, increased transfer and resettlement allowances, better training facilities, and larger

CAPITAL, 25th April, 1963.

financial provision for redundant workers. The Council wants a special "industrial mobility" housing subsidy to local authorities to be considered to provide houses for transferred workers. Similarly, it says, there is a case for relieving a worker willing to transfer the financial burden involved and even giving him a financial incentive to move.

Unemployment benefits, it states, are much too low in relation to earnings to give adequate financial protection against redundancy. But with flat-rate contributions and benefits, the cost of raising the benefits to a level satisfactory to higher paid workers is too heavy. "There seems much to be said for the replacement of the existing National Insurance Scheme by a comprehensive wage-related contribution and benefit scheme. The higher level of benefit in relation to earnings, which would then be practicable, would substantially reduce the financial hardship of unemployment," the report comments. For higher grade staff, non-transferable pension rights were a serious obstacle to mobility. The Council asks for consideration to be given to making the preservation of pension rights on transfer of employment a condition of approval of a pension scheme by the Inland Revenue.

High Unemployment Areas

As for areas of high unemployment, the Council believes that the rate of return on Government money invested in encouraging firms to set up there is at least 100 per cent. It calculates this by comparing the capital assistance given with the extra annual output resulting from extra employment. "Even if the cost of production to a firm were somewhat higher in the less prosperous regions, the national output might be increased very considerably if it established itself there rather than elsewhere. A subsidy might thus be justified from a national point of view."

The report discusses sympathetically three types of measures to strengthen the positive inducements to firms to expand in areas of high unemployment. Two of these are an increase of financial incentives and higher spending on local facilities. This section was written before changes on these lines were made in the Budget. The third is that the Government might direct its efforts to those places which have obvious potential for growth inside larger areas of high unemployment.

The report is hopeful that the high unemployment areas may become self-sustaining after an interim period. But if they were allowed to run down, the problems in five years might be even more difficult to solve than it is now. It believes that industrial development certificates for controlling expansion in congested areas will continue to be necessary for some years. But its summary is again impressive. "The real regional issue is hardly the choice of two extremes: taking the work to the workers or the workers to the work. Both will certainly be necessary to national growth and both will happen." Where the balance will be struck, it adds, "it is not possible to predict."

On the shortage of skilled man power, the Council says that the gains from economic expansion are too valuable to be jeopardised by avoidable bottlenecks in the supply of well-trained workers. It warns "If the boards which are to be set up in individual industries to supervise industrial training do not tackle their task quickly enough, more radical solutions will have to be sought."

CAPITAL, 25th April, 1963.

Jute

SHORTAGE OF ELECTRIC POWER CAUSES ANXIETY

OCCASIONAL load-shedding due to the electric power shortage during the summer months from April to June in the Calcutta area has been worrying industries in general and the jute industry in particular. The jute mills have been working to full capacity; the threat of power cuts tends not only to dislocate production schedules but also to push up the costs through wastage of capacity and labour-hours. As power-shedding may be resorted to during any part of the day, the working shifts cannot always be easily staggered according to schedule. Already the electricity authorities have enforced some cuts in the power supply to engineering establishments and certain sections of the jute mills during peak hours, namely, 6 p.m. to 8 p.m. The working hours of the weaving sections, which were working two shifts only, have been adjusted suitably.

The notice issued by the Calcutta Electric Supply Corporation to H.T. and L.T. consumers last week produced an immediate reaction in the jute goods market. The C.E.S.C. and the D.V.C. are trying their best to avoid power cuts. But it seems that the difficulties in running the power stations at their rated capacities during the summer months are acute. Since Saturday, there has been no load-shedding, and the power supply position is reported to have improved appreciably since Monday. With an adequate supply of better quality coal, the C.E.S.C. has reached its full rated capacity of 280 MW. The D.V.C. is also said to be supplying to the C.E.S.C. 137 MVA, which is 32 MVA higher than the contracted load. Some relief is expected when the two new 75 MW generating units of Durgapur Projects Ltd are commissioned by October.

Progress of Sowing

With adequate rainfall all over West Bengal, Bihar and Orissa, jute sowing operations are reported to have been completed in the growing areas. In the lowlands, the seedlings have already reached a height of six to nine inches, while in the midlands and uplands, they have germinated well. The cyclonic storm over parts of Cooch Behar and East Pakistan has not caused any damage to the new plants. With the floor price of jute fixed at Rs. 30 a maund for Assam Bottoms, f.o.r. Calcutta, for the next season, farmers are reported to have sown jute extensively. Weather conditions remaining normal, there is a chance of a second crop in the low-lying areas. It is believed that the acreage under the fibre in India during 1963-64 will at least be equal to that in 1962-63, if not higher, since the farmers seem happy over the return they have got from the current season's crop.

Reports from East Pakistan point out that the recent measures adopted by the Government of Pakistan to restrict the jute acreage have been announced long after the commencement of sowing in that country. Vast areas have been put under jute, and the plants are already 9 to 12 inches high. Jute circles in both Pakistan and India doubt whether the authorities will succeed in their efforts to ban the cultivation of the fibre along the long land frontier. Reports reaching Calcutta say that even before the announcement of the restrictions, the farmers sowed jute along the border areas in all the districts,

presumably with a view to availing themselves of the opportunity of feeding the Indian market with better Pakistani fibre, which fetches a higher price.

THE JUTE MARKETS

Manufactured Goods: Trading was thin in the manufactured goods market during the past week. Early in the week, sentiment suffered a setback on reports about the lower offtake of jute goods during March. Even the rise in exports did not have a bullish impact. Overseas business remained a trickle, while enquiries were few and far between. During midweek, there was hectic activity on covering by shorts for the ready and near positions on the announcement of intermittent power-shedding by the C.E.S.C. Later, there were some rumours of fresh business with Russia in sacking. D.W. flour bags

were in fair demand for internal consumption. Besides, there were some Government tenders for A Twills and B Twills for ready and April-May delivery. Mills were reserved and avoided entering into commitments. So, except for a short-lived rally, prices softened and the week closed with a marked decline in prices for all positions.

The futures market presented a similar trend. Sentiment eased on reports of heavy unloading by a prominent bull during midweek. Except for stray covering at the lower levels, transactions were of a routine nature. The turnover was moderate and the undertone hesitant at the close.

Raw Jute: Dull conditions prevailed in the raw jute market. With enough stocks in their warehouses, mills took only limited interest in lifting small lots of selected grades for blending purposes. Sentiment

was depressed by reports of exten-
sive sowing in the jute-growing
areas, following widespread showers
during April. Sellers were keen to
dispose of their holdings of inferior
fibre at discounted rates. Routine
transactions were reported in selected
grades on the basis of Rs. 27 a
maund for Assam Bottoms, ready
delivery f.o.r. Calcutta. The upcountry
markets were quiet. Buyers
were sitting out, while sellers with
limited stocks of low-grade fibre made
frantic efforts to clear them even at
cut rates. Daily arrivals came down
further to about 15,000 maunds.
Prices ruled unchanged around

Rs. 25.50 a maund, basis Assam Bot-
toms for ready delivery.

Quotations on Wednesday were as
follows:

	April	May	June	July- Sept.	Oct.- Dec.
40in. 7oz.	34.75	35.00	35.00	35.15	35.15
40in. 8oz.	37.50

THE U.K. JUTE MARKETS

RESTRICTED ACTIVITY
IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market has been
quiet in Pakistan, and prices being
quoted for both old and new
crop have been very irregular.
Evidently, shippers are anxious to
dispose of their present holdings be-
fore entering seriously into new crop
business. Demand from Dundee spin-
ners was of a very small size, and
was mainly confined to spot parcels
during last week. The prices being
paid for ex-warehouse jute was well
below current shipment values, and
this was making the local market
very weak. Although there is still a
substantial quantity of jute in Dun-
dee unsold to spinners, estimated to
be at least 75,000 bales, all the better
quality parcels have already been
taken up.

Offers of new crop jute were being
more freely made, and some business
took place. Mill Lightnings ranged
from £105 and Mill Hearts from £92,
c.i.f. U.K., for August-September
shipment. Grade Tossa-4 was named
at £105 and Outport Tossa-2/3 at
£96 for October-November shipment.
Although these prices looked attrac-
tive, spinners were in no hurry to
buy for forward shipment.

The lowest offers being made for
the present crop were at £112 for Mill
Lightnings, at £90 10s for Mill Hearts
and at £77 10s for Grade Hearts, c.i.f.
U.K. for April-May shipment. Grade
Tossa-2/3 was at £123 10s and Grade
Tossa-4 at £106. Dacca Tossa-5 was
named at £126 and Dacca Tossa-6 at
£108 10s. Outport Tossa-2/3 ranged
from £93 and Outport Tossa-4 from
£85 April-May. Cuttings remained
quiet at £54 for S.N.C. and at £45 10s
for N.C.

There was again a slightly easier
trend in the prices of Siam jute.
Grade A was at £71, grade B at £65
and grade C at £61, with cuttings
named at £46, delivered mill Dundee
for April-May shipment. The qua-

CAPITAL, 25th April, 1963.

lity of some parcels which have
arrived here has been very poor.

The Calcutta goods market was
steady, and some buying interest was
shown in the U.K. Quotations were
at 70s for 40in. 10oz. and at 53s for
7oz. a 100 yards f.o.b. Calcutta for
any shipment period April to Septem-
ber. B Twills were at 170s 6d April
at 171s 3d May-June and at 171s 9d
July-September.

Mills and factories in Dundee have
been busy and a good demand is be-
ing shown for many descriptions.
Linoleum hessians were very quiet
and deliveries of orders already
placed have slowed down. However,
on the other hand, the carpet trade
is taking regular deliveries of both
yarns and cloth. More buying inter-
est was again shown in sackings and
tarpaulins, and the heavy-end of the
trade was busy.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption last month
was 4.6 million yards less than
during February 1963, but 10.1 mil-
lion yards more than March a year
ago. The average consumption for
the first three months is slightly high-
er than the comparable period a year
ago. Last month's bag cut-up was
62.3 million yards and piecegoods
deliveries 22.4 million yards, com-
pared with 57.7 million yards and
16.9 million yards, respectively, in
March 1962. U.S. spot stocks and
floats increased by 400,000 yards.
At 304 million yards, 160.4 million
yards were spots and 143.6 million
yards were float. Both spot and
float stocks are larger than normal,
possibly due to the heavy buying at
the time of the Chinese-Indian crisis.
Appearing below are two tables
which include the March figures—(1)
based on member reports to the Tex-
tile Bag Manufacturers Association,
and the Burlap and Jute Association,
and (2) projected to represent the
estimated consumption and stocks
for the entire industry. (All figures
in millions of yards.)

Commodity Markets

PRICE OF RAW CASHEWNUTS RISES SHARPLY

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE cashew market is almost in
a stalemate due to an unwork-
able raw nut price. There has been
a sharp increase in the price of raw
cashewnuts recently with the latest
quotation from Quilon for imported
African nuts being at Rs. 675 a ton.
African nuts were available at Rs.
540 a ton some time ago when the
kernel price was 42 cents a lb. The
price has improved by only 2 cents,
the latest New York offer being 44
cents a lb. According to a spokes-
man of the cashew processor's as-
sociation in Quilon, the small rise in
the kernel price justifies only an in-
crease of Rs. 50 a ton at the most in
the price of raw nuts. According to
him, anything above Rs. 600 a ton
for raw nut is an "unworkable price"
for the present U.S. offer of 44 cents
a lb for processed kernels.

The ostensible provocation for the
"unhealthy" increase in the raw nut
price is the report that the Indian
crop will be 50 percent down this
year. The crop is late, and there
were recently few showers also in
the cashew producing areas on the
west coast of India. It is believed
that the crop has thus been damaged,
but there is no agreement among
buyers concerning the extent of the
damage. Many of the processors in
Quilon, who are the principal buy-
ers of the commodity, refuse to give
full credence to the report that the
crop will be 50 percent down. In
their opinion, this is an exaggerated
report. They do not anticipate a
loss of more than 10,000 tons in the
Indian crop, the normal size of which
is 60,000 tons to 65,000 tons.

Paradoxically, there are proces-
sors who are willing to pay a hand-
some price in order to stock raw
nuts. Speculative buying by a sec-
tion of processors, it is said, was
responsible for the recent sharp in-
crease in the raw nut price rather
than any other factor, including the
possible shortage in supply. Specu-
lation has been the bane of the
cashew processing industry, and it
had to face several crises in the past
due to this. It appears that the bulls
in the market are eager to rig up
kernel prices.

Meanwhile, there are complaints
from labour that the owners of some
cashew processing factories in Kerala
are making a calculated bid to
escape from the statutory obligations
to their workers including contribu-
tions to the recently introduced pro-
vident fund scheme. They are re-
ported to be disengaging the work-
ers on the pay rolls of the factories.
At the same time, they are said to
have opened several small cottage
type processing units which will not
come under the purview of the Fac-
tories Act and other labour legisla-
tion. After receiving several repre-
sentations from the trade union
organisations, the State Government
is now exploring the possibilities of
checking the tendency for disintegra-
tion in one of Kerala's largest labour
intensive industries. It is worth
remembering in this connection that
the Government was not able to
arrest a similar tendency in the coir
manufacturing industry.

Tea Output Up

There is a feeling that the tea plan-
ting industry in south India has en-
tered a phase of overproduction.
Last year, south India produced over
81 million kilograms of manufactur-
ed tea, showing a marginal rise over

the 1961 crop. A larger volume of
medium-grade teas were produced.
Until the Chinese aggression and the
strike of the Joint Steamer crews
distorted the markets, buyers in
Cochin were unwilling to pay for
these teas. Consequently, the aver-
age price realised by export teas at
the Cochin auctions fell by 10nP a
kilogram. Dust was heavily dis-
counted—particularly very brown
residual types—and the average price
was about 70nP a kilogram below
that of 1961. Quality teas at the same
time realised very good prices. The
average for high-grown teas exceed-
ed the 1961 figure by some 32nP a
kilogram. In their desire to com-
pensate for the increasing cost of pro-
duction, the tea gardens produced a
larger volume of tea. In doing so,
they were not able to pay proper at-
tention to quality. The manufactur-
ing facilities at their disposal were
limited, and they were not in a posi-
tion to cope with the larger crop.
The 1962 results were not encourag-
ing, so the producers are said to be
reviewing their production pro-
gramme. Improving quality even at
the risk of reducing the quantity
might be a better production policy
under the present circumstances.

Rubber Production Rises

The production of natural rubber
registered a 16-percent rise in 1962
over that of the previous year. The
actual quantity produced in 1962

was 31,357 tonnes, according to the
estimate of the Rubber Board. This
was a welcome and encouraging re-
cord in view of the country's fast
growing need for more raw rubber.
It is said that if the weather does
not become unfavourable, produc-
tion this year will also register a
similar improvement. The chair-
man of the Rubber Board, Dr. Rama
Varma, told a recent meeting of the
Board that the importance of small
holders was steadily increasing. So
the Board will have to reorientate
its policy in order to be of real assis-
tance to them. Referring to the
future planting of rubber, the chair-
man said that according to new rules
licences would be issued only to
planters with approved planting
material. This year it had been pos-
sible to get the maximum foreign
exchange released to import seeds
from Malaya. The chairman pointed
out that in Malaya, replanting had
become a regular estate practice. It
is being done at the rate of 3 percent
of the planted area every year.
Unless some such measures are taken
here, a situation may arise when
only a few enterprising estates will
complete their replantings while
others will continue to remain as un-
economic units. This will create
serious economic and social problems
and will defeat the purpose of the
subsidised replanting scheme spon-
sored by the Rubber Board in India,
the chairman said.

The Rubber Board's delegation
which visited Malaya in October last
has stressed the need for research
and advisory service in India too. In
its report the delegation has drawn
a lengthy comparison between the
conditions in Malaya and India and
has said that India has many things
to learn from the Malayan rubber
planting industry. The cost of pro-
duction in India, compared with

Malaya, is very high. The Malayan
worker gets a higher wage, and this
is possible due to higher productiv-
ity. The delegation has recom-
mended that in developing new
rubber estates in places like the
Andaman and Nicobar Islands block
planting schemes should be tried.
The report says that the Madras
Government should be requested to
establish a seed garden in the Gov-
ernment plantations in Kanyakumari
district. The import of germinated
seeds from Prang Besar and Chemara
Gardens should also be taken up, it
says.

Exporting More Tea to Australia

(BY OUR NEW DELHI CORRESPONDENT)

A DELEGATION which recently
visited Australia and New
Zealand has made the following
recommendations for improving tea
sales in that region:

AUSTRALIA:

(1) Besides joint promotion, the
delegation has recommended a uni-
national campaign, which could take
the form of setting up a tea centre
in Sydney and tea bars in the big
cities.

(2) India should launch pure
Indian packs depending on the re-
sponse to the unnational campaign.

(3) Steps should be taken in India
to make Indian tea more attractive
in the Australian market.

(4) The Tea Board should organise
and finance a sampling service to
established Australian buyers, large
and small, with a view to presenting
a wider field of Indian teas suitable

contributing to the country's
industrial and
commercial growth...

THE BANK OF BARODA LIMITED!

There are over 165 offices in India, and in London,
Kampala, Dar-es-Salaam, Mwanza, Jinja,
Kisumu, Mbeke, Moshi, Mombasa, Nairobi,
Naraingunj (East Pakistan), Port Louis (Mauritius),
and Suva (Fiji Islands).

THE BANK OF BARODA
LIMITED (Est'd. 1908)
Head Office: Baroda

The Calcutta Offices are at:
Brabourne Road, Burra Bazar,
• Bhowanipur, • Dum Dum,
• India Exchange (Main Branch),
M. Gandhi Road, Sham Bazar,
Lake Market.

• Branches where Safe Deposit
Lockers/Vaults are provided.

in quality and price, for the Australian market.

(5) The tea buyers and blenders of prominent firms in Australia should be invited to visit India so that they may have an opportunity of visiting tea areas and auctions in India.

NEW ZEALAND:

(1) A substantial improvement in Indian exports could be attained by introducing the Tea Board sampling service along the lines recommended for the trade in Australia.

(2) With a view to improving the buyer's knowledge of the very large variety of teas available from India, invitation to the trade to visit India will give an ample opportunity for

pushing up Indian teas in that market.

SINGAPORE:

(1) With a view to overcoming the reluctance to trade with India, samples of Indian teas, carefully chosen for suitable quality and competitive prices, should be distributed to the local tea merchants' associations, to Indian traders and to the large British firms.

(2) With a view to pushing up quality packet tea trade among the well-to-do in Singapore, it is necessary to get in touch with a few large quality stores in Singapore to stock a fair range of Indian tea packets. The Indian enterprises should push up their packet exports to such

chain stores with advertising materials.

A Tea Council of Australia has been formed recently in which Australian trade has agreed to participate with Ceylon and India. Action has been initiated for introducing sampling service for the Australian and New Zealand trade.

Rising Costs in Tea Industry

(BY A SPECIAL CORRESPONDENT)

TEA competes with jute for the lead in earning foreign exchange. The industry is also among the

CAPITAL, 25th April, 1963.

largest contributors to railway revenue in the form of freight. In addition, it employs approximately 1 million workers and remains a supporter of many ancillary industries pertaining to agriculture, fertilisers, and machinery and engineering industries. There is no question about the value of tea production to the Indian economy, and there is equally no difference of opinion on the importance of reducing the cost of tea, especially for the overseas buyer. Therefore, the exclusion of tea from the list of industries entitled to concessions in railway freight in the recent Budget has caused some disappointment to the trade.

The cost problem baffles solution, for in addition to taxation, workers'

CAPITAL, 25th April, 1963.

wages continue to increase and so do prices of all other items. Government policy is naturally keen on higher exports, and the abolition of export duty was a sound move. Having regard to the general expectation of increasing supplies from all producers in the world, the increase in excise on teas used internally seems a decision of questionable value. It may, however, be reasoned that the armed forces will require ever-increasing poundage for all branches of the services.

The emergency risks insurance is also expensive, although it may be noted that as from 1st April, 1963, rates have been reduced on factories and goods from 25nP and 15nP to 15nP and 10nP.

The Board of Assam Agricultural College in Jorhat has decided to introduce a special course on tea. The Tea Board, it is understood, will be contributing a grant of Rs. 3,70,000 (non-recurring) plus a recurring grant amounting to Rs. 30,500.

The Central Government's call for more and more tea for export is only sensible on the basis of more exports and more foreign exchange, but unfortunately, that has not worked out in practice over the past three seasons. This was brought out by the figures published in these columns in the 28th March issue. They demonstrated a record output sold at lower rates. In other words, the larger crops, after paying cost of plucking, manufacturing, packing, despatching and selling charges brought no more profit to the manufacturers than the smaller crops in the 1960-61 or in the 1962-63 season.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to March 1963. As compared with February, the March indi-

ces for Food, Fuel, and Lighting and Miscellaneous show rises of 10 points, 8 points and 3 points, respectively, while that for Clothing remains unchanged at 598 points.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 6 points during March 1963.

TURNING THE CORNER

Although great care is taken to drill wells as vertical as possible, some wells are deliberately drilled at an angle in order to tap oil deposits inaccessible by vertical drilling. This technique is known as directional drilling. By means of a series of deflections of the drilling bit, drillers can bend a hole in a broad arc until its direction deviates 20, 30 or more degrees from the vertical. The tool used for this operation is the whipstock, a long thin wedge of steel which

fits tightly into the hole at the required depth. The drilling bit cannot force its way into the steel, so it takes the alternative course, is deflected from the path it had been following, and then goes where the driller wants it to go.

Many ingenious devices have been invented to help the oil prospector tap deposits concealed in awkward places, but their effective use always depends on the skill and experience of the driller.

officers as per Bank's rules from time to time and the Board of Directors or a Committee thereof be and they are hereby authorised to grant a higher increment in the scale at their discretion."

Note:

1. A Member entitled to attend and Vote at the Meeting is entitled to appoint a proxy to attend and Vote instead of himself and the proxy need not be a member.

2. (a) The transfer books of the Bank will be closed from Monday, the 6th May, 1963 to Friday, the 24th May, 1963, both days inclusive. (b) The dividend, if sanctioned, will be payable on and after the 25th May, 1963, to those Members whose names appear on the Company's Register on the 24th May, 1963.

- (c) Dividend warrants will be posted to the Members at their registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any.

Explanatory Statement Required by Section 173 of the Companies Act, 1956.

ITEM No. 7.

The Bank has been fortunate in securing the services of Mr. Shrenik Kasturbhai who agreed to join your Bank as a Director and he was appointed as an Additional Director under Article 84 of the Bank's Articles of Association. Mr. Shrenik Kasturbhai vacates his office at the forthcoming Annual General Meeting by operation of the said Article and Section 260 of the Companies Act, 1956 and the approval of the members in General Meeting will be necessary for his appointment to the Board. Your Directors feel that it is in the interests of the Bank that the Board should receive the benefit of Mr. Shrenik Kasturbhai's experience and able guidance.

ITEM No. 8.

Mr. G. H. Wandrek is a relative of Mr. M. L. Dahanukar, a Director of the Bank. His employment in the Bank was approved by a Special Resolution passed at the meeting held on the 28th March 1956. His present salary is Rs. 380/- plus the usual allowances and benefits applicable to his grade as per Bank's rules. It is now proposed to put him on a time scale which attracts the provision of Section 314 of the Companies Act, 1956.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

Calcutta,
22nd April, 1963.

BANKS: AN UNDERCURRENT OF ANXIETY

BARELY a year ago, prophecies were being confidently made that the profits of banks in India would be a good deal bigger in 1962 than they had been in 1961. Deposits were increasing at an encouraging pace after the temporary setback suffered in the wake of one or two important bank failures in 1960. The demand for advances was strong, reflecting the expansion of trade and industry and the growing monetisation of the economy. In spite of occasional disputes, the banks were achieving considerable success in their years-old effort to hold down interest rates on deposits while increasing interest rates on advances. The net effect of all these developments, it was thought, would be that the growing prosperity of the banks would be greatly accelerated; India would then have taken a major step forward towards getting herself a sound, vigorous and enterprising banking system. The annual statements made by the chairmen of Indian banks to their shareholders so far this year, however, indicate that the high hopes of early 1962 have not come true. Gross earnings have risen substantially. But operating costs have shot up too. The result is that in most banks, if net profits have increased at all, the increase is only marginal. The brave effort to maintain dividends has not always been successful.

Against this background, it is not very surprising that the feature of the bank chairmen's speeches this year should be a deep undercurrent of anxiety. Mr. V. P. Varde, of the Bank of Maharashtra, has expressed it bluntly by saying that "we have been passing through critical and uncertain days." Sir Homi Mody, of the Central Bank of India, has mentioned that the profitability of the banking industry is being threatened from several directions. In contrast, Mr. Tulsidas Kilachand, of the Bank of Baroda, has been more circumspect: he hopes that his Bank will continue to make the progress which it has striven hard to achieve during the past few years, although he does not clearly state the factors on which his hopes are based. A surprisingly large proportion of the other bank chairmen have offered no forecast at all. They have confined themselves to a rather routine narration of their woes and worries, without being very precise about how these ought to be tackled. It is recognised that the crux of the problem facing banks in India is: (1) to keep their operating costs down; and (2) to garner more deposits in order to increase turnover and profits. But on both these points the bank chairmen's statements reflect a remarkable dearth of fresh ideas. The rise in costs appears to be accepted as more or less inevitable—as something the banks have got to learn to live with. As for the growth of deposits, the general attitude seems to be that it is as much a matter of luck as of the banks' own efforts; all the banks need to do is to keep their doors open four hours a day, in the hope that potential depositors strolling by might one day lose their way in.

The helplessness is in part a by-product of the current economic mood. During the first nine months of 1962, bankers had the pleasure of seeing their deposits grow quite rapidly. Since the

Chinese attack in October last year, the growth has been negligible. But hardly any of the bank chairmen have cared to analyse in detail what the reasons for the slow-down might possibly be. Dr. N. N. Law, of the United Bank of India, rides an old hobby-horse by insisting that deposit rates should not be allowed to rise. Other bankers mourn the shift from current deposits to time and savings deposits (on which interest rates are higher). Yet others pay the customary lip-service to the need for branch expansion. But the basic question remains unanswered as to why, at a time when the currency in circulation has been increasing rapidly due to heavy deficit financing, the growth of bank deposits has suddenly slowed down. It is arguable that the liquidity preference of the public has increased in a period of uncertainty, although the relatively minor scale of speculative hoarding in the commodity markets indicates that the feeling of uncertainty cannot be all that strong. The more important explanation, it has been suggested, may be that the money has found newer and more profitable uses outside the banking system, for example as deposits with trade and industry. In that case, the interest rates which banks offer would have to be improved before deposits again start to grow. The point is one which bankers could usefully have investigated; it might have led them to revise their ideas on deposit rate ceilings.

For the time being, admittedly, the question might appear to be of secondary importance. The stiff new taxes imposed in the Central Budget, combined with the compulsory savings scheme, threaten to stop the growth of deposits altogether, regardless of the deposit rates the banks may offer. The bank chairmen have been noticeably timid in their comments on the possibility, although it is known to be worrying them deeply. Mr. Kilachand has suggested that the services of the banks should be used for collecting compulsory savings, which sounds reasonable. Other reports, however, indicate that the State Bank might be saddled with the herculean and expensive privilege, which it may not welcome with joyous abandon. It seems sensible that, if such a huge draft has to be made on the people's savings, the existing media for those savings should not be embarrassed by a sharp depletion. Under the latest amendments to the compulsory deposits scheme, something has been done for the Life Insurance Corporation and small savings organisations. But the banks, along with these institutions, are still going to be badly hit by the scheme. For the banks particularly, the point is of major importance since the new taxes and the compulsory savings scheme together are likely in the end to affect mainly those classes of people who have traditionally been their best depositors.

The danger is that if deposits suffer, the incentive for banks to go in more vigorously for branch expansion programmes is likely to be reduced. Not only will less money be available for investing in such programmes; the feeling might spread that the draft on private savings has been so great

that there are no deposits left to mobilise. Much of the vigour shown in branch expansion over the past year or two has been inspired by hopes that profits would rise fast enough for financing such expansion. Those hopes are already beginning to be revised since the growth of profits has been sharply retarded. Now the fear is widespread that advances cannot be increased since the advance-deposit ratio is already high enough. Nor can interest rates on advances be raised much further without accentuating the cost inflation in the economy. The expenditure on staff, which has already jumped up sharply during the past year, is likely to increase still more. Finally, the adjustment to the dearer money policy has probably not yet been completed; considerable sums may have to be set apart for covering the depreciation on investments. Above all, there is the dark ogre of the super profits tax which has been threatening to play havoc with banking profits; only later will it be known whether Mr. Desai's amendments are going to reduce the burdens of the super profits tax for all banks appreciably. Present indications are that banks which have been transferring large sums to reserves will be reasonably well off, but others will suffer a considerable additional liability.

For the time being, the effects of a shortage of banking funds may be alleviated by special measures, such as those for the rediscounting of export credits and advances to small-scale industries. But these are minor palliatives, and the longer-term problem of the banks being able to mobilise their own resources remains. Although the fiscal climate is unfavourable, there is still scope for the banks to show greater initiative and enterprise in tackling their problems. The unit cost of staff could be reduced in the process of branch expansion by transferring surplus employees to new areas. Fresh ideas could be devised for attracting customers; among the few such ideas mentioned in the bank chairmen's statements this year are those concerning mobile banks and the credit transfer system. Finally, the range, speed and quality of banking services could be greatly improved. Admittedly, some of these improvements depend on the discipline and efficiency of bank employees. But the wide differences between banks in terms of the quality of the services they provide indicate that in a number of cases the managements themselves are not entirely blameless. In an era of stronger competition for deposits, efficiency may prove to be the pre-condition for expansion.

In his address from the chair at the annual meeting of the Indian Banks Association in Bombay a few days ago, Mr. Tulsidas Kilchand has spoken in some detail about the increase in Bank rate from 4 percent to 4½ percent at the beginning of 1963. He thinks that the rise was agreed to largely because of persuasion from the International Monetary Fund, the World Bank and other international financial authorities. The consequences of the dearer money policy, however, have not been analysed in any detail. The use of the interest rate as an anti-inflationary weapon need not be questioned. But the fact is that the effectiveness of monetary control in India is very limited since a large volume of credit comes from outside the organised sector. The fact that inflation has not been checked in recent years shows that monetary and fiscal measures by themselves cannot produce results. There is no clear evidence that savings have risen in proportion to the increase in interest rates. The growth of voluntary savings in fact is certain to slow down with the heavy financial burdens imposed by the 1963-64 Budget. The adverse effects of a further rise in Bank rate, therefore, need to be properly appraised. This country already has a high-cost economy; the rise in production costs has not only promoted inflation but has also retarded the expansion of exports. This apart, the steady increase in interest rates has led to distortions, in that Government undertakings have to a large extent been insulated from the consequences by being able to get their requirements from the State Bank at concessional interest rates while the private sector has been forced to borrow at far higher rates of interest.

Many wonder whether the Government will this year again raise the rates of interest on its

borrowings in response to the increase in Bank rate. Institutional investors, such as banks, provident funds and the Life Insurance Corporation, might benefit from higher rates of interest since they have been forced to invest substantial sums in Government securities, but the benefit will be reduced by the depreciation in the value of existing investments. The Government will have to increase its borrowings in order to finance development and defence. Since the burden of servicing the public debt is already heavy, it is questionable whether the rate of interest on Government loans can be raised further. The rise in debt servicing charges has already necessitated heavier taxation.

The outstanding weakness of the Government's borrowing programme is that the securities market has been seriously debilitated. In recent years, official flotations have had to be supported heavily by the Reserve Bank itself. If

popular interest in Government securities is to grow, two measures are necessary to revive the market. The first is that the Reserve Bank should operate in the open market more frequently. Along with the State Bank, it should consider lending funds, especially to scheduled banks, against Government securities at Bank rate. The need for such a move is emphasised by the growing pressure on banking resources. Since bank funds are fully employed for financing the legitimate credit requirements of trade and industry, banks have to be offered additional credit if they are to increase their investment portfolios. The second change which is required is that dealers should be able to borrow funds from banks against Government securities by paying concessional rates of interest. If additional funds are provided for buying securities which can be bought and sold freely, institutional investors will be encouraged to put more money in Government loans.

PROBLEMS OF PAPER INDUSTRY

CONSIDERABLE significance attaches to the speech of Mr. I. A. Macpherson, chairman, at the annual general meeting of Indian Paper Makers Association in Calcutta last Friday. Although investors in paper shares have been rewarded sufficiently in the past, they have grounds for taking a cautious view about the future outlook, considering that the development during the past two years has been much slower than was expected. The public has been feeling the shortage of paper since the emergency was declared towards the close of 1932. Not only has the supply fallen far short of the demand during recent months, but the prospects of any big improvement in the near future are also poor. Mr. Macpherson has pointed out that the shortage has arisen because of the increase in Government demand. (A full text of the speech is printed on a later page in this issue of *Capital*.) Since the Government's take of printing and writing paper is substantial, some shortage is expected to continue in the market, at least for the time being.

The most disturbing factor is that the profitability of the industry has been affected by the uneconomic prices of paper which have been statutorily fixed by the Government. Since paper prices were fixed at the beginning of 1960, there has been a steady decline in the support for these shares. In fact, the shares of several new companies have been quoted substantially below their par value. Although paper prices were raised by 60p a kilogram from 21st June, 1962, the increase has not covered the rise in production costs. This apart, the decision of the Government to permit only a return of 12 percent on the capital employed in pursuance of the Tariff Commission's recommendations is regrettable, since such a small return leaves no scope for ploughing back funds into the business for expansion, modernisation and rehabilitation. Furthermore, the return in this industry compares poorly with that of other industries. For 1961-62 the percentage of gross profits to sales in the paper industry has been only 11.4, compared with 11.5 in other industries, whereas the percentage of gross profits to total capital employed amounts to only 8.9, compared with 9.83 in other industries. Again, the profitability of share capital as measured by the ratio of profits after tax to net worth has been well below the average for other industries. For 1961-62 it has amounted to only 7.8 percent, compared with 9.5 percent in other industries. Out

of the total profits of the paper industry for 1961-62, only 20.1 percent has been allocated to reserves, compared with 32.2 percent in 1959-60.

Since the production costs are barely covered by the selling prices, it has become difficult for the industry to fulfil the target set for it in the third plan. At the beginning of the first five-year plan, the production of paper and board was about 137,200 tonnes. It is expected to amount to 400,000 tonnes in 1962-63, but, meanwhile, the demand has also gone up, being estimated at about 579,000 tonnes. Assuming that the rate of production will rise annually by 70,000 or 80,000 tonnes during the next three years, the output at the end of the third plan may be about 550,000 tonnes, which falls short of the target of 711,200 tonnes. Manufacturers cannot plough back sufficient funds into the industry for expansion and modernisation. Since the profitability of the industry is very limited, it has become difficult to attract fresh capital. The new units have been more handicapped, considering that they require a much heavier capital investment a ton of capacity than the long-established mills. The latter have been responsible for the major part of the existing production. The cost of erecting a ton of capacity has been estimated at Rs. 3,000 in the case of a new unit. Thus it will cost nearly Rs. 9 crores to set up a new unit with a capacity of 30,000 tons. The depreciation of such a unit will work out to about Rs. 90 lakhs a year. In the circumstances, a return of only 12 percent on the capital employed is too small. It is not difficult to understand why the expansion of the industry during the past couple of years has fallen below schedule. Judging by current indications, it will call for great optimism to say that the third plan production target will be achieved.

The disappointment of the investors has been the greater because the 1963-64 Budget has placed a heavier tax burden on the industry. Notwithstanding the concessions made in the super profits tax, the impost is bad in principle and may aggravate inflationary tendencies. Mr. Macpherson even hints at the possibility that the total tax burden may convert profits into a debit balance. In any case, several industrial units will find it extremely difficult to meet their loan commitments. There has, meanwhile, been a substantial rise in the cost of borrowed funds because of the dearer money policy. He has also listed the various difficulties facing the industry. Although several types of plant and equipment are manufactured in India they are not generally available on credit. It is time that the domestic producers of plant and machinery considered the possibility of selling their goods on credit terms such as are available from foreign suppliers.

The prices of several raw materials used by the industry have increased considerably. Bamboo has become very expensive and the State Governments concerned have demanded high royalties for the leased areas. The State Governments should consider developing their forests on more healthy and scientific lines in order to promote the supply

of bamboo and other products. Steps should also be taken to ensure the supply of various chemicals to the paper industry at reasonable prices. The cost of coal has moved up because a large part of it has to be transported by road. Besides, the deterioration in its quality has pushed up manufacturing costs. Experiments are being made to

use unconventional raw materials like bagasse, jute sticks and some hardwoods. But it will involve considerable capital expenditure to remodel the existing plant and equipment before any profitable use can be made of these materials. The change-over will also involve considerable foreign exchange expenditure.

NEW GOVERNMENT LOANS

THE borrowing programme for 1963-64 announced by the Central Government on Monday has caused no surprise since it is in accordance with expectations. In fact, the Reserve Bank has been grooming the securities market for the new loans since the beginning of last week. Apart from buying only a few selected short-dated securities, the Bank stopped all open market operations from Tuesday of last week. All switch deals have been suspended but the Bank continues to buy outright the 3½ percent loan 1964 by raising its price from Rs. 99.25 to Rs. 99.40. The increase has been made to bring the purchase price of the Bank in line with the market trend. Considering that good institutional support has been forthcoming for this loan during the past few days because of easier money conditions following the end of the busy season, turnover in this loan has been small in the absence of sellers. The Bank has also been buying the 3 percent loan 1963-65, the 3½ percent loan 1963 and the 3 percent loan 1964. The Government has suspended selling the 4½ percent National Defence Bonds 1972.

Two new loans have now been offered. The 4 percent loan 1969 has been issued at a price of Rs. 99.50 percent and is repayable on 8th May, 1969; the 4½ percent loan 1986 has been issued at the par value of Rs. 100 and is to be repaid on 8th May, 1986. These loans have been offered to the holders of the 3½ percent loan 1963 and the 3 percent loan 1963-65 for converting their holdings. The total sums outstanding are Rs. 116.17 crores on account of the 3 percent loan 1963-65 and Rs. 58.06 crores on account of the 3½ percent loan 1963.

The terms of the medium-dated 4 percent loan 1969 are attractive in that the interest offered is higher than what is available on the existing comparable securities. The running yield of this new loan is 4.02 percent and the redemption yield is 4.10 percent, while the existing 3½ percent loan 1969 gives a running yield of only 3.61 percent and a redemption yield of 4.04 percent at the current price of Rs. 99.50. Hence it is possible that the prices of the existing medium-dated securities will move downwards in order to align themselves with the new medium-dated loan. Since banks, in particular, are interested in securities with short maturities, the new medium-dated 4 percent loan 1969, the terms and conditions are similar to those of the existing comparable securities. During 1962-63, a similar loan—the 4½ per-

cent loan 1985—was issued. The new long-dated loan may suit the interests of the Life Insurance Corporation, provident funds and similar institutions who generally want to derive higher returns by investing in long-dated securities. In any case, the response to the conversion offer is expected to be satisfactory.

The higher interest offered on the new medium-dated security suggests that the Government is determined to continue the dear money policy, at least for some time. Hence the cost of institutional credit is likely to harden in the coming months. Since the pressure of the busy season started wearing off from the middle of April, the supply of interbank money has been easier. The call rate has also moved down. But the benefit of a decline in the call rate is unlikely to be passed on to the ordinary borrowers of institutional funds.

The offer of two loans for conversion at this time of year has obviously been made in view of the fact that the 3 percent loan 1963-65 and the 3½ percent loan 1963 will mature soon. They will be accepted for conversion at par and interest thereon will be paid at 3½ percent and 3 percent a year up to and inclusive of 11th May and 31st May, respectively. The interest on the new loan will be liable to tax under the Income Tax Act. Subscriptions for the new loans will be received from 8th May to 18th May. Since these loans have been offered only for conversion, it is obvious that the Government will issue further new loans later to collect cash subscriptions. A borrowing target of Rs. 400 crores has been set for 1963-64. Of this, a sum of Rs. 100 crores will be raised by the Central Government on behalf of the State Governments, since a combined borrowing programme for the Central Government and the State Governments has been decided upon. Incidentally, it may be mentioned that the State Governments will have to repay loans to the extent of Rs. 38.67 crores during 1963-64. The Central Government will have to repay a sum of Rs. 5.38 crores on account of the 2½ percent Hyderabad loan 1963-63. It is expected to come out with the second tranche of loans for cash subscriptions in a couple of months' time when money market conditions are expected to be easier. The later borrowing programme may include a short-dated loan designed to attract bank funds. In order to suit the Life Insurance Corporation and provident funds, two more loans—one medium-dated and another long-dated—are likely to be offered at the second stage of borrowing.

Current News and Comment

Cloth Output Down, Stocks Up

The output of cloth by Indian mills in March is provisionally placed at 402 million yards, compared with 369 million yards in the preceding month, and 416.97 million yards in March 1962. The March figure brings the total production for the first quarter of the current year to 1,181 million yards, which compares with 1,249 million yards in January-March 1962 and is the lowest for any quarter last year. Yarn production in March is placed at 159 million lbs, compared with 147 million lbs in February and 159.7 million lbs in March last year. The total output of yarn in the first quarter of this year at 466 million lbs is nearly 10 million lbs less than the corresponding figure for 1962, and is also the lowest for any quarter last year. The cotton textile industry's perfor-

mance in the matter of production is far from creditable when viewed in the context of the national emergency. The setback in cloth and yarn output is indeed difficult to appreciate, especially when the cotton supply position is known to be much better than in the previous season. Cloth output in the last quarter of 1962, when the industry was faced with an acute shortage of cotton on the one hand, and huge accumulation of cloth stocks on the other, was higher than in the first quarter of 1963. Can it be that the industry does not find the existing profit margins sufficiently attractive for stepping up its production?

Cloth stocks with the mills, which had registered a substantial decline of 198,700 bales of 1,500 yards each during January and February,

are up again in March by 30,900 bales at 332,000 bales. Unsold stocks have risen from 180,830 bales to 191,000 bales, and there has been an increase of 20,700 bales under "sold but delivery not taken" from 120,300 bales to 141,000 bales. Unsold stocks of yarn have also recorded a sizable increase of 4,800 bales (of 400 lbs each) from 32,800 bales to 37,600 bales.

Shipments of cotton piecegoods from the Bombay port, which usually account for nearly 90 percent of India's total export trade in cotton textiles, are provisionally placed at 44.75 million yards, valued at Rs. 3.4 crores. This compares favourably with 39.52 million yards worth Rs. 2.5 crores in the previous month and 34.59 million yards valued at Rs. 2.8 crores in March last year. The March figure raises the total for the first quarter of the current year to 132.01 million yards, valued at Rs. 9.3 crores, compared with 127.27 million yards worth Rs. 10.2 crores in the corresponding period last year. It is significant to note that while the quantity of cloth exported is larger, the value is lower. The average price realised during the first quarter of this year works out to 70p a yard, compared with 80p a yard in corresponding period last year. The steady fall in prices from about the middle of last year shows that the mills have been compelled to offer their goods at progressively lower prices in order to fulfil their commitments under the compulsory export schemes.

Handloom Fabrics Exports Rise

Exports of handloom fabrics from India during the 11 months ended February 1963, are valued at Rs. 12.4 crores, compared with Rs. 1.2 crores in the corresponding period of last year and Rs. 11.1 crores in the full year 1961-62. The improved performance of handloom fabrics is in marked contrast to the sharp fall in the exports of mill-made cloth during this period. While there was some decline in exports of the former to the traditional markets in 1962, there was a significant increase in exports to the non-traditional markets, namely, the U.S.A. and Continental countries. The setback in exports to traditional markets is due partly to the development of textile industries in these areas and partly to competition from Japan and Hong-kong which produce cheaper quality imitation cloth.

The All India Handloom Fabrics Marketing Co-operative Society, Bombay, has appointed a number of commercial travellers with a view to stepping up the exports of handloom goods to new areas in addition to the emporia already in existence in Aden, Colombo, Kuala Lumpur, Singapore and Jaffna. In order to ensure quality which is essential for export promotion, the Government has introduced pre-shipment inspection and quality marking scheme for handloom fabrics. This is compulsory in the case of "Bleeding Madras" and Etawah bedspreads. The Export Promotion Advisory Committee for handloom goods set up last October, it is reported, has made several useful suggestions for stepping up exports of these goods. Reliable reports indicate that the Government of India is trying to include specific quotas for handloom fabrics in bilateral trade agreements.

Industrial Progress Impeded

The main point of Mr. S. T. Sadasivan's address at the annual general meeting of the Indian Chamber of Commerce, held in Calcutta last week, is that the country will not be able to pursue its defence effort successfully as long as industrial production does not substantially rise. In fact, the international prestige of nations is ultimately judged not by their ideological policies but by their productive power and their economic strength, he emphasised. "The development and maintenance of a modern fighting force involves a tremendous increase in the productive capacity of a country, as also a very large expenditure on that account." He referred to the Prime Minister's statement that in preparing to meet the Chinese threat, the nation cannot afford

India's Resources

are Precious

WASTE NOT,

WANT NOT

the risk of slowing down its economic progress. Yet ideological concepts are still paramount in influencing Government decisions in matters affecting industrial growth, and there is no evidence of new industries coming up. The pace of economic progress has distinctly slowed down.

Already there has been a decline in the rate of increase of the per capita national income, the index number of which rose from 111.9 in 1959-60 to 117.7 in 1960-61, but fell to 117.5 in 1961-62. The index number of national income at 1948-49 prices, which increased from 137.1 in 1959-60 to 147.4 in 1960-61, stood at only 150.5 in 1961-62. Mr. Sadasivan said that this emphasised the need to raise production expeditiously. Shortages have developed in all the key sectors of the economy, and the task of keeping prices under check is becoming increasingly difficult. The solution, however, does not lie in imposing more controls, because controls, far from holding the price line, would lead to corruption and create more unbalances in the economy. The Government should, therefore, concentrate on removing the difficulties which stand in the way of larger production.

Output can be increased by investing more in industries. But the Government's taxation policy continues to discourage capital formation and investment. The additional levies proposed in the 1963-64 Budget will raise the cost of new industries as well as of all expansion projects. Manufacturing costs will continue to increase because of the excise duty on raw materials, import surcharges and higher transport costs. The methods adopted to raise additional revenues strike at the root of the expansion of the corporate sector. The monetary policy of the Government has also been affecting industrial expansion adversely. Restrictions on bank credit have been tightened. The Reserve Bank has, no doubt, to control credit in the interest of stability, but this should be done after ensuring availability of sufficient funds for genuine productive purposes. If the banking system is not able to provide sufficient credit because of inadequacy of deposits, the Reserve Bank should help by making more money available through the bill market scheme, rather than impose overall restrictions on advances.

The Bokaro Impasse

The idea of U.S. aid for Bokaro has run into a curious impasse. As far as is known, India has still to make a formal request for assistance to the Agency for International Aid, for which in any case there has not been much time. The report of the U.S. Steel Corporation team was received only a few days ago in New Delhi, and its examination could hardly have begun at the policy level since Mr. Subramaniam, Minister for Steel and Heavy Industry, was away in Austria and West Germany to sign the credit agreement for Rourkela's expansion. Yet the A.I.D. chief, Mr. David Bell, has announced from Washington that consideration of India's "request" has been "indefinitely" postponed.

But what does "indefinitely" connote? Basing again on published reports, one assumes that negotiations on Bokaro are to commence this month as soon as Mr. William Gaud, head of A.I.D.'s far-east division, can make the time to come to New Delhi. He had earlier been expected in India this week along with Mr. Dean Rusk but is now to come only towards the end of the month. A beginning may, however, be made earlier if Mr. Subramaniam chooses to discuss the issue with Mr. Rusk. Is one, therefore, to assume that "indefinitely" means only until the talks are concluded? If so, "indefinitely" was hardly appropriate, and one can only guess that its choice was prompted by the desire to put Congressional critics off the scent. Ever since General Clay and his committee, consisting of bankers and others of proved probity, took exception to the use of the U.S. taxpayers' money to support the building of socialist edifices like Bokaro, the Administration has been painfully searching for alibis.

First came Professor Galbraith's statement, released simultaneously with the Clay report, that its objections did not really apply to Bokaro because

there was ample room in India for both public and private sector steel plants. Then followed Mr. Bell's own statement to an N.B.C. television network that A.I.D. had been assured by the Indian Government that every encouragement would be given to private sector plants to expand to the limit of their capacity. Just before this television statement, Mr. Galbraith had said in New Delhi that the "only right, responsible, and practical course" was to entrust the construction of Bokaro to an American firm, as also its management for a "considerable" period. Commentators noted at the time that if American control was a pre-condition to aid, this could have been put across more discreetly during the course of negotiations. But then the critics were unaware of the pressures which were presumably at work. An advance assurance of a lucrative contract to the interested American firms was undoubtedly reckoned as an asset in the uphill task which the U.S. Administration faces in getting aid for Bokaro through Congress. Personal predilections of the Ambassador may have pointed in a different direction but he, and the many others interested in seeing Bokaro go through, perhaps considered it prudent to take one step backward to go two steps forward. Apparently, the one backward step has not been sufficient to assuage feelings, and a further retreat has been considered necessary so much so that a bold and indefinite postponement has had to be announced.

Where does this leave us in India? Bokaro, as Mr. J. R. D. Tata said, is an "important" project which the U.S.A. should aid without any hesitation since it would not come in the way of the private sector steel plants. The flat products that Bokaro is to make are indisputably needed by the economy. If the U.S.A. should now drag its feet and there is a long period of wait-and-see before a commitment is made, the delay and the sense of frustration will detract from the impact that this showpiece was intended to achieve.

Prospects for Fruit Preservers

The prospects for the fruit preservation industry have vastly improved following the large army orders for canned foods. But unless official policy towards this enterprise is suitably modified to make allowance for the seasonal character of its products, the industry may not be able to reap the full benefit of the improved conditions. An interesting analysis of the prospects as well as problems of the food preservers in India was made by Mr. K. U. Patel in his speech from the chair at the recent annual conference of the All India Food Preservers Association. He pointed out that the absence of any emphasis on protective foods such as milk, eggs, vegetables, fruit and fish was a serious flaw in the third plan. The result is that in the battle between cash crops and cereals, nutrition has been a casualty. It has possibly escaped the notice of the planners that "fruit trees can be grown at places where cereals cannot be grown."

Mr. Patel gave examples of countries which have made rapid strides in this enterprise. But Indian industry is still to grow out of its infancy. Taking the case of pineapple alone, Mr. Patel pointed out that in the tiny islands of Hawaii, there were as many as 70,000 acres under this fruit in 1957, compared with 15,000 to 20,000 acres in the whole of India. Malaya increased her pineapple fruit area from 23,900 acres in 1946 to 45,500 acres in 1957, and 80 percent of the crop in that country is canned for export. South Africa has increased her pineapple production by 50 percent in five years. The Australians, who took to its cultivation only recently, have also made phenomenal progress. But in India, the majority of licensed fruit preservers, numbering less than 1,000, are working on a small scale basis. Mr. Patel suggested that the Indian industry could develop rapidly if only it received assistance and encouragement from the Government.

Discussing some of the immediate problems, Mr. Patel said that a serious one arose from waste in transit. The railways have neither listened to the plea for introducing refrigerated vans for transporting fresh fruit and vegetables nor sup-

plied well ventilated and insulated wagons. Rising costs pose another serious problem. The subsidy of Rs. 500 a ton on tinplate, which had been granted to the industry as a result of many representations, has been withdrawn since 1st April, 1963. This would correspondingly raise the costs which are already higher than those of other countries. Sugar costs 200 percent more, while cases and labels are equally more expensive; the costs of colours, chemicals and other items which are imported, are also higher. These are serious disadvantages from the export point of view. One more has been added by the authorities' latest decision that whatever stocks of cans are available in the country should be used for meeting defence requirements, and that cans should not be supplied for civilian and export packs. This decision has been taken because the country is unable to import tinplate in sufficient quantities. But it has hit the domestic civilian market and the export drive.

Hemp Exports Rise

In his speech from the chair at the annual general meeting of the Indian Hemp Association in Calcutta on Monday, Mr. G. S. Poddar said that Indian hemp exports increased to 51,610 bales in the July 1961-June 1962 season from 15,818 bales in the previous season. There is, however, no room for satisfaction over this performance, since exports are still much lower than those in 1957-58 (83,531 bales) and in 1956-57 (125,792 bales). The United Kingdom continues to be the single largest buyer of Indian hemp, while the United States, West Germany and France are other important consumers. The 1961 crop, Mr. Poddar said, amounted to about 60,000 bales of Banaras and 20,000 bales of green hemp. The slight rise in the price is responsible for a larger crop sown, and the new crop, it is expected, will yield about 50,000 bales of Banaras and 20,000 bales of green hemp. There is at present a good demand for Indian hemp in foreign markets, so it will not be difficult to export the entire crop of the season. While it is necessary to increase exports, steps should be taken to enable Indian hemp to stand competition from such substitutes as Russian and Chinese flax and tows.

The cost of Indian hemp, Mr. Poddar said, is steadily going up because of the heavy expenses incurred by the trade in fulfilling various formalities connected with agmark, cost of labelling, enhancement of freight rates, increased port charges, levy of sales tax and increase in baling charges. The Ad Hoc Advisory Committee appointed by the Government of India investigated the causes for the recent decline in hemp exports. Although its recommendations have been accepted by the Government, no action has been taken to implement them. Exporters, therefore, continue to incur expenses in fulfilling various formalities. Complaints are often made against Indian shippers, that they are unable to maintain deliveries in terms of the contract entered into with foreign buyers. This is mainly due to the delay in the movement of sann hemp offered for despatch to baling centres.

Mr. Poddar said that hemp meant for export should be treated on the same basis as cotton textile exports and should be given the same priority at the time of movement from despatching stations. The Association has repeatedly urged the Government to upgrade the movement of hemp in the list of preferential traffic. This matter was also examined by the Advisory Committee which endorsed the Association's suggestion to the Government. In spite of this, members continue to experience difficulties because of the irregular and inadequate allotment of wagons. Mr. Poddar says that there should not be any delay in the movement of hemp to baling centres if exporters are to maintain deliveries in terms of their contracts with foreign buyers.

Problems of Development

For most people in India looking at the Government from outside, the process of thought by which it arrives at its decisions remains something

of a mystery. Mr. H. V. R. Iengar is one of the few who can fathom the mystery because he was himself "inside" not so long ago but is now, as chairman of two very large and important firms, very much "outside". This lends special interest to the analyses he made in Calcutta last week of the economy's present plight in which the difficulties that were already there before the emergency have been greatly aggravated by the need to pursue both development and defence at the same time.

Mr. Iengar did not mince matters. The administration, he declared, was "caught napping" when the Chinese invasion of last October brought the country face to face with the greatest challenge it has known since independence. Even now, the plan to cope with the new situation was in many ways incomplete, and he confessed to a sense of frustration at the Government's indecisiveness and ambivalence which were holding back progress in many directions. Illustrating his point, he cited the Government's attitude towards foreign capital. Many statements testify to its anxiety to encourage foreign investment, and assure it reasonable treatment. It realises that India's share in the total long-term capital, which the main capital-exporting countries invest abroad, is negligible—just over 1 percent. The size of the market in India—a country which accounts for 14 percent of the world's population—should, if other things were equal, justify a much larger share. A wide range of efforts is being made under official auspices to attract more capital, among them being the investment information service started by the I.C.I.C.I. and the tax concessions offered to new entrepreneurs.

If these efforts are failing to stimulate investment interest, it is largely because of two major handicaps. Firstly, there is the apprehension about the attitude of the Government pledged to mould India in a "socialist" pattern which, as Mr. Iengar said on an earlier occasion, creates semantic difficulties. Even if these can be overcome by patient explanation, nervousness and misunderstanding are revived all over again by injudicious public utterances of individual Ministers which apparently run counter to the declared policy of the Government. This hazard of ministerial indiscretions is something which every democracy in faces, although the problem is far more acute in India at the present time. While little can be done to restrain a politician's ebullience, it should be possible at least to remove the delay and red tape which stand in the way of an increased inflow of private investment.

Mr. Iengar was not suggesting that the existing controls designed to regulate foreign investment should be scrapped. A country faced with as difficult and uphill a task as India in her endeavour to accelerate economic growth needs to exercise controls in many directions, especially in any matter involving foreign exchange liabilities. With an annual trade deficit ranging between Rs. 300 crores and Rs. 400 crores, there is really no choice but to subject all foreign commitments to a searching scrutiny. Yet the stage has now been reached where controls frequently exceed their legitimate purpose and can only be described as "ridiculous" and "fussy". The result is delay which often exhausts the investor's patience, and he decides to take his money elsewhere.

The distortion of controls, away from their limited original purpose, is largely because of administrative defaults. With administrative tasks having increased manifold over the past decade, the experience available in the permanent civil service cadres has become "enormously" diluted, and the whole machinery is splitting at the seams. The only way out is to adopt consciously a policy of gradual relaxation of controls so that the task of administering them is made more manageable. This will, of course, have to form part of a gradual policy of "disengagement" to abridge the rôle of economic stewardship that the Government has assumed.

Tax Burden on Motor-vehicles

The Central Finance Minister, Mr. Morarji Desai, has imposed heavy taxation on the motor-vehicle industry in his Budget. The industry has

been the target of annual assaults in the Budgets during the past few years. The latest levies are a 33 1/3-percent surcharge on excise duty on motor-cars, a surcharge of 20 percent on commercial vehicles, enhancement of import duty on parts from 25 percent to 50 percent, a 20-percent surcharge on excise duty on tyres and batteries, an increase in excise duty on petrol from Rs. 325.10 a kilo litre to Rs. 410 a kilo litre, a rise in excise duty on diesel oil from Rs. 305.25 a kilo litre to Rs. 390 a kilo litre and an increase in Central sales tax from 1 percent to 2 percent. Speaking at the annual general meeting of the Motor Industries Association in Calcutta last week, Mr. R. R. Aiyer, chairman, said that although Mr. Desai had granted relief in certain directions, the claim of motor-car users and operators had been totally ignored. The Government estimates that a sum of Rs. 54 crores will be collected as additional revenue by taxing motor-cars, components, fuel, etcetera, whereas, according to calculations based on a vehicle census, it will actually collect anything between two to two-and-a-half times that amount.

The industry, according to Mr. Aiyer, gives the Government the maximum revenue, yet it is being burdened with levies year after year. Road transport contributed over Rs. 200 crores to the Government in 1961-62, which is equal to about 16 percent of the total tax revenue of the Central and State Governments. It will be harmful to cripple this revenue yielding industry. In addition to the load of taxation from the Centre, the State Governments have also raised the taxes on motor-vehicles, including sales tax. An objectionable feature is the discrimination in the rate of road tax payable by individual owners and companies, the variation being as high as 100 percent. An average motor-vehicle in India, it is estimated, pays taxes, including that on fuel, of over Rs. 3,200 a year, against Rs. 1,300 in the U.K., Rs. 800 in France and Rs. 500 in the U.S.A. "This is in addition to the tax levied under various headings such as Central, State, local and municipal. These multiple taxes and vexatious laws only serve to upset efficiency, continuous operations and optimum utilisation". In a country which does not have sufficient roads and motor-vehicles to facilitate fast communication, one would expect the Government to stimulate transport by tax and other reliefs.

As a result of the increase in taxation, which incidentally is the highest in the world, the cost of operation a bus or truck mile is expected to increase by 15 percent. Because of additional taxation, there will be an increase in carrying costs, causing further inflation at a time when attempts are being made to hold the price line. About 30 percent of the cost of a motor-vehicle, Mr. Aiyer said, is represented by direct or indirect taxes, in spite of the fact that the indigenous content of motor-vehicles is increasing year after year.

Problems of Co-operative Credit

Inaugurating the two-day conference of the State Co-operative Banks in Lucknow last week, U.P.'s Minister for Co-operation, Mr. Chaturbhuj Sharma, said that although 64 percent of the total number of co-operative societies in India are at present agricultural primary credit societies, co-operative credit forms only a fraction of the total agricultural credit requirements of the country. He added that the third plan target had been fixed at Rs. 530 crores for providing short and medium-term finance through co-operatives. The amounts lent by the end of 1961-62 were only Rs. 225 crores. The third plan target is modestly viewed in the light of the actual agricultural credit requirements. But even this modest target may not be realised unless vigorous efforts are made to increase co-operative credit. One of the major weaknesses of the co-operative credit movement is the low proportion of owned funds. Unless the members of the different co-operative credit societies are encouraged and persuaded to place more of their savings at the disposal of these societies, it will be difficult for the movement to make any real progress.

The Reserve Bank, the Central and State Governments make funds available to co-operative

societies in various ways. It is, however, necessary to increase these funds. At present, there is some reluctance on the part of local bodies, educational institutions and other Government-controlled bodies to invest their funds in co-operative banks. This state of affairs could be improved if, as suggested by the conference, the Central and State Governments issue directives to these institutions to invest their funds in co-operative banks. There may be some legal and administrative difficulties in doing so, but it should be possible to remove them if the importance of co-operative credit for Indian agriculture—especially in the context of the present emergency—is appreciated by all concerned.

The conference also recommended that each central co-operative bank should invest at least 75 percent of its reserve fund in the State Co-operative Bank. This will certainly increase the funds available to the State Co-operative Banks for investment in the rural sector. But the main difficulty appears to be that the State Co-operative Banks do not in all cases offer attractive terms to the central co-operative banks and hence lose some of their reserve funds to other agencies. If the State Co-operative Banks show greater initiative and offer better terms and do not open branches in centres where a district co-operative bank is already operating, it will be possible to increase the mutual help between the different co-operative institutions at the top. The conference also recommended that early steps be taken to implement the Mehta Committee's recommendations on the constitution of the National Agricultural Credit Stabilisation Fund and the Relief and Guarantee Fund. If the rules governing these funds are properly framed and if the co-operative agencies know beforehand the circumstances under which assistance from these funds will be available, they will be able to manage rural credit better even with their present limited resources.

The conference stressed that it was not only the availability of credit which was important, but also the manner in which it was actually used. Some method should be devised to canalise rural credit efficiently and effectively for increasing agricultural production not only to meet the needs of the present emergency but also to increase the earning capacity of the farmer. For this purpose, it is necessary to offer loans on the basis of production plans, to extend credit separately for the *kharif* and *rabi* crops, to recover co-operative loans only at the harvest time through marketing societies by the sale of surplus agricultural produce of the farmer and to issue credit not only in cash but also in kind in the shape of seeds, fertilisers, and implements.

An important recommendation of the conference was that the State Co-operative Banks should have an all-India organisation to represent their viewpoints before the Central and State Governments, the Planning Commission and the Reserve Bank. It should also study common problems facing the member-banks and advise them on various problems in their day-to-day working. The conference also suggested that the National Co-operation Union should convene within the next two months a meeting of the chairmen of all the State Co-operative Banks to consider the different aspects of this important issue.

Scrap Export Policy Criticised

Despite numerous representations made by the scrap trade from time to time, the Government of India has continued to pursue a restrictive policy on the export of ferrous scrap. It is difficult to appreciate this policy in face of the pressing need to increase the country's foreign exchange earnings, especially when there exists a large exportable surplus after meeting all domestic requirements. Apart from the generally depressed conditions in overseas markets, the sharp fall in India's ferrous scrap exports from 375,000 tons in 1961 to a mere 140,000 tons in 1962, has been attributed to the Government's lack of imagination. The export policy for the half year ended September 1963,

announced early this month, is being severely criticised as it incorporates only a few of the suggestions made by the trade. Subject to an overall quota to be fixed by the Iron and Steel Controller, ferrous scrap would be allowed to be sold overseas by established exporters who have done this business during any part of the three-year period ended March 1963, excluding the export of skull scrap and de-tinned scrap. If the quota allocated for export is not used by the end of June, the Iron and Steel Controller has the right to cancel the unused quota and reallocate it to other established exporters or newcomers. Exporters will be allowed to import finished steel against their foreign exchange earnings. The existing ban on the export of No. 1 quality sheet cuttings will continue; nor will the export of heavy melting scrap be allowed under any circumstances. De-tinned factories, however, will be permitted to export their production of de-tinned ferrous scrap without any quantitative restrictions. The export of main producer's steel scrap will not normally be allowed, while the export of electric furnace skull scrap will be permitted on application by exporters, and the export of cast iron skull scrap will be considered if the material is not accepted by the All India Foundry Association, Calcutta, to whom it should be offered for sale to foundry owners within the period of six weeks from the date of offer.

The export trade is critical of the policy for continuing the ban on the export of No. 1 sheet cutting scrap and also the imposition of an overall quota for export of the grades permitted for shipment. The trade has always maintained that in the absence of adequate domestic demand, No. 1 sheet cutting scrap gets rusted and is being exported as No. 2, involving considerable avoidable loss of foreign exchange to the country. The trade has, however, welcomed the Government's decision to exclude past exports of skull scrap for claiming individual quota as this will help in a more equitable distribution of the overall quota. Equally welcome is the freeing of de-tinned scrap from quota exports. Under the last policy, even the export of de-tinned scrap was restricted. The change which has now been effected will enable de-tinning factories to obtain export licence for their entire output of de-tinned scrap. The facility to import finished steel against scrap export has for the first time been declared in the scrap policy itself. This should help build confidence and thereby promote the export effort.

Marine Insurance in Poor Countries

Speaking at the annual general meeting of the Liverpool Underwriters Association recently, Mr. J. R. Brocklehurst, chairman, discussed some of the underwriting problems of the newly developing countries of the East. The chairman spoke in favour of what he called "responsible competition" and deplored "irresponsible competition." Underwriters, Mr. Brocklehurst said, have little or no defence against Government-sponsored legislation decreeing that imported goods can only be purchased on an f.o.b. basis with freight and insurance charges compulsorily payable only to operators within the importing country, although such action may be taken on economic grounds.

Pakistan was the first country in the East to introduce such legislation. Justifying the move, the Pakistani Government said that it was necessary to protect local insurers from the competition from established markets. To guard against irresponsible competition, it has foisted a comprehensive import tariff on insurers there. The results so far have not been unsatisfactory. The gross direct marine premium of Pakistan jumped from Rs. 1.65 crores in 1955 to Rs. 2.10 crores in 1956. When Pakistan enforced the legislation. Thereafter, there was a steady rise in the premium income. In 1961, the premium income rose to Rs. 3.41 crores from Rs. 2.04 crores in 1960. The claims ratio in 1961 was 63 percent, against 55 percent in 1960. The ratio, by and large, is satisfactory. Such legislation, however, militates against the freedom of insurance. Marine insurance—sanctioned over years by the usage of maritime commerce—has all along been untrammelled by artificial barriers in established markets.

These tenets, it has been suggested are unexceptionable in principle. But they can only

apply to trading among developed countries each having an established market of its own. There is a different approach for the newly developing countries. The avowed aim of nationalisation, Mr. Brocklehurst said, is to eliminate competition. This tendency reflects "the fundamental divergence of approach between the old established markets and those in the newly developing or emergent countries." The approach—as in all aspects of economic development in underdeveloped countries—is characterised by a fiercely insular outlook. Mr. Brocklehurst had the insight to recognise this trend, although he deplored the tendency on behalf of the established markets. In India, an agitation has been started by some local insurers to have a comprehensive marine tariff to guard against what Mr. Brocklehurst called "irresponsible competition". But since the Government of India is a signatory to the General Agreement on Tariffs and Trade as well as for other reasons, it has so far refrained from introducing legislation like that of Pakistan. So no progress has so far been made by the sponsors in this direction.

Industrial Activity

Corrected for seasonal fluctuations, there was a drop of 29.1 points during April 1962 in Capital's Index of Industrial Activity. There were declines in sugar, jute, yarn, cloth, cement, coal, pig iron, finished steel, paper, tyres, motor-cars, bicycles and railway ton-miles. Tea and electricity showed increases.

CORRESPONDENCE ACTIVITIES OF RUBBER BOARD

(To THE EDITOR OF "CAPITAL")

Sir,

The Rubber Board was constituted to protect the interests of the rubber planting industry and that of the country. The interest of the country can be protected only by making India self-sufficient in rubber, particularly natural rubber. The interest of the industry can be protected only by enabling it to produce all the rubber the country requires—rubber of good quality at a price level that can stand competition with natural rubber from outside and synthetic rubber from inside or outside. The Rubber Board has been in existence for more than a decade with crores of rupees at its command. Has the Board achieved its objects or is it well on its way to achieve them?

Instead of trying to find out the reasons for its colossal failure and to reshape its policy to achieve its legitimate goal, the Board is engaged in a wild goose chase. It is now trying to protect small growers by obtaining for them a fair price for rubber. It is well known that even small growers got the control price or even more when there was demand for rubber and that even large growers cannot get the control price when there is no demand for rubber. It is an irony of fate that rubber, which is in short supply in India and when the country has to spend so much of precious foreign exchange for its import, has no demand. This is simply because of the Government's import policy. If the Rubber Board cannot direct or suggest a proper import policy, how is it going to control the whole market? Let it evolve a proper import policy and Indian rubber will always fetch the control price. If there is no demand for local rubber, the surest remedy is to cut by prohibiting import.

The Rubber Board is reported to be formulating a voluntary co-operative marketing scheme for small growers and a pool system for tyre manufacturers, ostensibly with the intention of helping small growers and tyre manufacturers. The history of the co-operative movements in Kerala from the time of the communist Government and before is well known, and the State Assembly proceedings and the findings of the Court of Justice will show the wanton and criminal waste of public funds for this pet idea. The rubber plan-

ting industry was practically free from this disease. Now the Board, which should try to remove Phytophthora and Oidium from the planting industry, is trying to introduce "co-operation". Probably some interested persons are out to swallow the Board or considerable part of its funds through these co-operatives.

The price of rubber has been controlled for many years now. During the price fixation of 1960, the protection given to the small growers was removed. Since that year, the cost of production had gone up sharply. Furthermore, the Wage Board had recommended an interim increase in the price of rubber, along with the recommendation for an interim increase in wages. It will be interesting to know what the Rubber Board did when the protection given to small growers was removed by the Tariff Commission in 1960 and the Government of India denied the interim increase recommended by the Wage Board.

While addressing the Rubber Manufacturers Association in Bombay last year, the chairman of the Rubber Board said that the price of rubber might be reduced by Rs. 20 a 100 lbs within the next few years. Can the small growers exist if the price is reduced by another Rs. 20 a 100 lbs or has the lot of the small grower (for that matter even that of the large grower) so much improved that he can withstand this reduction of Rs. 20?

Tyre manufacturers and the planting industry cannot have forgotten the experience of the monopoly purchase of rubber by the Government during the second World War, nor are rubber producers unaware of the fate of the coffee growers and the coffee pool. It is time that producers saw where the Board is drifting and tell quarters which count what the Board should do and how it should be done.

DOMESTIC SERVANTS

REX writes under "Current Coin": "There is a great deal being said on the servant question in Calcutta at present, much to the discredit of the servants, on account of the grievous ways in which some of them have been afflicting their employers of late. For our present purpose it is not at all necessary to throw any doubt whatever on the specific statements of ill-treatment which certain employers allege they have received at the hands of their domestics. Undoubtedly bad servants do exist. There are black sheep in every flock. But perhaps it might be useful to emphasise, just at this juncture, the correlative truth, that the great body of Indian servants are unsurpassed anywhere for their personal loyalty to their masters and mistresses, their entire devotion, without stint of time, to their work, their respectful and courteous demeanour, and their prompt obedience to the orders of their masters. There are exceptions doubtless, but these only go to prove the general truth of the recognised rule, and nowhere more than in India, that 'good masters make good servants.' What an Indian servant wants from his master or mistress is summed up in that fine word 'fairplay'. The servant likes a firm government. He enjoys a paternal despotism but it must be of the 'paternal' order, that is, firm but kind. And whenever you see masters acting under the law of firmness penetrated by kindness and the spirit of fairplay, towards their servants, there also you see, as the counterpart, servants who would not scruple to lay down their lives, if need be, for the sake of their masters. It is by no means an uncommon thing in India for servants to be with the same master for a long term of years. I know cases where servants have been with their sahibs during the whole time their masters were in India in some instances for twenty or thirty years. Sometimes, of course, a good servant gets a bad master, and a good master a bad servant, and in these cases the masters have to be rectified, but let it be borne in mind with reference to the present outcry against bad servants, that with equal truth, the servants might get up an outcry against bad masters."

A Ditcher's Diary

IT MAY BE lèse-majesté to ASK WHAT THE WEST Bengal Political Conference was in aid of, although we might be nearer the answer if we asked "whom" instead of "what". Let that pass. Let me ask, instead, "Why Digha?" The place has a fine beach and almost nothing else. It is too small to be able to provide even the most elementary amenities for the thousand or more people who descended on it this week. Too much is made by some about the money spent on looking after the Prime Minister in out-of-the-way places; that he used a helicopter merely deprives him of the right to ridicule again those Swatantra candidates who used aeroplanes in their election campaign. (I never quite understood that one, for the difference between Mr. Biju Patnaik's jeeps and the Maharaja of Patna's plane, in terms of election morality, was never great.) From the taxpayer's point of view, the helicopter was perhaps a good idea; it saved time and spared the Prime Minister discomfort. The more basic question is whether it was fair to Mr. Nehru to expect him to come to a conference like Digha's. Did not even Mr. Lal Bahadur Shastri have more important things to do in New Delhi? Political conferences have their uses, mainly educative; the good work done in Britain in the 'thirties by the Fabian Society and men like R. H. S. Crossman paid the Labour Party good dividends in the mid-forties. A conference with a plenipotentiary of stars from New Delhi is a show and ought besides. I concede that shows too have their political uses; but not at a time like this. I don't know about others, but when I see the Prime Minister addressing mass meetings where he has nothing new to say and other Ministers opening flower shows, I simply do not have a sense of emergency; I get a feeling that while all this talking is going on, some files are not being attended to and some decisions are not being taken. Mr. Nehru is an extraordinary man; he can talk, think and do half a dozen other things at the same time. I do not believe this is true of lesser men who, on becoming Ministers, assume certain specific responsibilities and obligations to the people who pay them and keep them in more than reasonable comfort. What is more difficult to explain is why the West Bengal Congress thought it necessary to hold the conference; politically, the Congress "has never had it so good" since independence.

EVEN AFTER THE ASIAN GAMES AND MOSHI I COULD not quite decide just where the balance of ad-

vantage lay: to attend these Afro-Asian meets to place the Indian point of view so that the Chinese do not get a walk-over, or to leave the dubious get-togethers severely alone. Now I know; and so should New Delhi. The Chinese spend a lot of money on countries obliging enough to organise so-called Afro-Asian conferences; whatever India may do, they will remain obliged to China and behave in a manner supposedly neutral between India and China but, in fact, obviously to the advantage of the latter. India may be hurt but has no right to blame them too harshly; she herself has been neutral too often in the past. Again, countries like Indonesia, where Afro-Asian journalists gathered for purposes that had very little to do with journalism, have reasons to be afraid of China. Why should they for India's benefit go out of their way to incur the wrath of China? The best thing in the circumstances, then, is to stop wasting foreign exchange on being present at these conferences, whose aims are now only too obvious. I shall be told that the Indian case will then go unrepresented. The answer is that the difference between sulking in a hotel near the conference and staying put at home is not so big as to justify the effort and expense involved. More than that; in trying to force something like the Indian view on the agenda, relations are worsened with the sponsoring country. Nor am I particularly happy over the sight of Indian diplomats almost grovelling before some prime ministers and foreign ministers who have made it their business to persuade New Delhi and Peking to start talking again. If India once adopted the holier-than-all attitude to all and sundry and thus offended many, as she undoubtedly did, she may fare no better by appearing to make herself a doormat now. I know individuals who are temperamentally incapable of meeting men as equals; everyone is either inferior or superior; and this does not make for friendly relations. It is not very different in international relations. Dignity and friendship are not incompatible. Indeed, I know of no enduring friendship which is not based on mutual respect.

If I HAD LESS RESPECT FOR THE ABILITY OF Dr. Adenauer to wriggle out of any situation he might find not altogether to his liking. I should now be welcoming with enthusiasm the choice of Dr. Erhard as the next Chancellor of West Germany. But I still feel that it is too early to do anything of the kind: the fact has to be faced that Dr. Erhard will only assume the office for which

the Christian Democratic Party has nominated him over Dr. Adenauer's dead body (metaphorically speaking, of course). My partiality for Dr. Erhard as Chancellor arises from the admiration I have for his achievement in making economic liberalism pay such handsome dividends in West Germany; although I often wonder whether such a policy will be equally successful in maintaining progress during the era of comparative deflation which western Europe now seems to have embarked upon. It is, for example, no coincidence that economically France is making the pace at the moment with her technique of "voluntary" planning, and that West Germany is becoming a prey to some of the problems the British economy has been faced with during the past five years or so. But internal economic policy apart, the impact of a Dr. Erhard in power is bound to be felt in Europe, if only because he is now the best hope there is that Britain will eventually be admitted to the Common Market. And I am still of the opinion that such a contingency would not only be good for the western world generally, but best for the underdeveloped countries as well, at any rate in the long run. With Dr. Erhard in the saddle, there would be an excellent chance that the current drift towards an inward-looking economic restrictionism in the European Community could be reversed. Politically, too, the effect should be beneficial, because unlike Dr. Adenauer, his chosen successor is known not to share President de Gaulle's dream of west European military self-sufficiency. That is certainly all to the good. The combination of de Gaulle's illusions of grandeur and Adenauer's impenetrable conservatism has been threatening to revive on a larger scale much of the old-style ultra-nationalism from which Europe and the world have suffered so badly in the past.

THOSE WHO HAVE READ MY RECENT COMMENTS on the peculiar twist in the Hindi versus English controversy, will have no need to ask my views about the wisdom of Swami Rameshwarananda's "sacrificial fire". As so often seems to happen in this country, the greatest dangers can arise from the most honest and sincere of motives. But all that apart, I have been wondering whether the supporters of English have paid any attention to its recent comparative decline as the world's number one international language. Certainly its opponents appear not to have done so, or I am sure they would have made more use of their findings. English does still lead the field, and its use continues to grow. But compared with a few years ago, it has suffered considerably in popularity compared with French. Of course, these things tend to go in cycles; it is less than 100 years since French itself yielded to English as the world's second language. If the trend is now being re-

versed, then it is probably a tribute to changing tastes and fashions as much as to the virtues of the French language itself. But it is also a tribute to the vigour with which the modern, revitalised France has been deliberately seeking to spread her cultural influence; because it is the cultural attractions of the language rather than its commercial uses, or even its prestige as the "language of diplomacy", which is at the root of its growing popularity. The fact that it is the leading tongue in newly-independent Africa also has much to do with its revival; while the growth of European unity, over an area which has traditionally accepted French as its second language, has increased its teaching among school children. As one who has watched for years the growing popularity of the language classes held in Calcutta by the Alliance Francaise, all this comes as no surprise to me. And those readers who remember the comments I have made in past years about the effectiveness of the British Council, will no doubt draw their own conclusions as to why I can understand that English is in comparative decline. But that would be unfair to the British Council; it cannot do more for English teaching than the British Government is prepared to finance, and it is no coincidence that Britain's balance-of-payments problem should be the most intractable in Europe whereas France's appears to be a thing of the past. But if Britain wants English to stay as the world's number one international language, she will have to pull her socks up. It is all too significant that at a U.N.E.S.C.O. conference last December, 36 delegates spoke in French compared with 40 in English. It would not have been so a few years ago.

AS A PERSONAL FRIEND OF BOTH, THE SUDDEN DEATH within a fortnight of R. K. Sirkar and George Gates-Reed came as a severe shock to me. Advertising as a profession is not conducive to longevity; but they were the liveliest of companions, and death was something impossible to associate with them. My last meeting with Noeltie was less than a fortnight ago, and no one would have thought at the time that this active, cheerful personality would be passing away so soon. As for George, a former ditcher wrote from London recently that he had been in hospital with a heart condition and was looking anything but fit. But it was still difficult to believe that his health had deteriorated to the danger point since he left here less than a year ago. For me, George was not only a friend, but in a sense a colleague; the owners of *Capital*, W. H. Targett and Co. Ltd, are also the publishers of the *Monthly Review*, the magazine of the British community in India which George edited for most of the three years which elapsed between the editorships of Mr. L. G. Sneathman. George was in fact responsible to a large extent for carrying on during that period the programme of expansion and improvement which has made the *Monthly Review* the success it is today. He was planning to visit India on business in a few weeks' time, and I was looking forward to seeing him again. Both Noeltie and George were enthusiastic and energetic workers, apart from being the most convivial of friends. As leading and popular personalities in Indian advertising circles, they will be remembered with affection by many.

HOW ON EARTH COULD I MAKE TAGORE'S *Tasher Dosh* (Country of Cards) *Tasher Ghar* (House of Cards) in this diary last week? Haste, carelessness. Or, have some readers found in it a Jungian, perhaps even Freudian, slip? There was a Bengali film, not very good I'm told, called *Tasher Ghar* some time ago; I may have seen the ads at the time and then, last week, the title came back to mind, quite uninvited. At the time I was also reading a novel in which part of the story takes place in Nigeria; naturally there is much about dash (tip, bribe) and I may have thought of *desh* (pronounced in East Bengal as *dash*) with a certain distaste; and so *Desh* may have been replaced by *Ghar*. Well, I could continue such speculation almost indefinitely and get nowhere. The fact is that there was an error, which is hereby corrected with many apologies to those who noticed the mistake and none to those who didn't.

THE DITCHER

Guide for Investors

GROWTH PROSPECTS FOR INDIAN ALUMINIUM

THE ordinary shares of Indian Aluminium Co. Ltd have risen to Rs. 34.27 during the past few days partly because of the general improvement in the stock market following the tax concessions and partly because of the prospects for these shares. The confidence has been reinforced by the Company's excellent results for the year ended December 1962. The taxable ordinary dividend has been increased from 15 percent for 1961 to 17.5 percent, including an interim of 7.5 percent, for 1962. At the present price, the yield works out to 5.1 percent. As in the two previous years, the benefits of Sections 85 and 101 of the Indian Income Tax Act, 1961, arising out of the profits of some new industrial undertakings, will be available on these dividends. So 42 percent of the dividends will be exempt from income tax and super tax payable by shareholders. The new ordinary shares issued this year qualify for the exemption under Section 99 of the Indian Income Tax Act, 1961, and dividends on these shares, if paid to a company, will be exempt from the payment of super tax.

The shareholders must nevertheless appreciate the additional burdens which have been placed on the Company by the super profits tax, as has been pointed out by Mr. H. V. R. Iengar in his chairman's address at the annual general meeting in Calcutta last Friday (a full text of the speech is printed on a later page in this week's issue of *Capital*). Under the amended super profits tax, the liability of the Company to this levy has been reduced from 20 percent to 12.5 percent of the total profit which is expected to be earned during 1963. The chairman nevertheless thinks that the basic objections to the impost have not been removed by the changes made in the original form of the tax.

The Company will celebrate its silver jubilee this year. From a small beginning, its growth has been remarkable. It has now built a completely integrated aluminium industry. It has an aluminium plant with an annual capacity of 55,000 tons, two aluminium smelters with a total capacity of 26,000 tons, two extrusion presses with a capacity of 3,760 tons and a powder and paste plant. The capacity of the rolling mill in Belur has been expanded to produce 16,800 tons of rolled products a year. Mr. Iengar forecasts that the aluminium industry will grow further in the near future. The expansion will be governed partly by the growth of the electrical conductor industry and partly by the development of uses for aluminium as a substitute for other metals. The Company has done a great deal in promoting a wide range of uses for aluminium. Mr. Iengar stresses the importance of reducing the production costs which have risen because of the high costs of electric power and domestic raw materials. He nevertheless urges the industry to effect economies in various ways to cut production costs.

The chairman also suggests that the aluminium producers should form an "Aluminium Development Association." The Association should disseminate technical knowledge and promote economic applications of aluminium. Steps should also be

taken to substitute imported metals by aluminium as far as possible.

The Company's net profit has risen from Rs. 1.1 crores in 1961 to Rs. 1.3 crores in 1962, after increasing the development rebate from Rs. 45 lakhs to Rs. 61 lakhs. But during 1962, the working was interrupted since new production facilities had to be installed. The integrated expansion programme was also completed. The results of 1962 have only been modestly better than those of 1961, since a large part of the costs for creating the new production facilities was incurred in the past year. The benefits of expansion will, however, be felt in the future.

Jessop Makes Progress

THE ordinary shares of Jessop and Co. Ltd have met with support for some time because of growth prospects. A strong bull factor is that the Company has now recovered from the serious depredations made on its financial resources by those who were formerly in its control. There has been considerable improvement since a board of management was appointed by the Government to look after the Company. In his address at the annual general meeting in Calcutta last Monday, Mr. A. K. Chanda, chairman, said that the Company had turned the corner and regained its position as one of the leading producing units. (A full text of the speech is printed on a later page in this week's issue of *Capital*.) Since Jessop has been expanding and diversifying its activities, the chairman forecasts that a major part of the profits will continue to be ploughed back into the business. So the taxable ordinary dividend has been maintained at 8.55 percent which offers a yield of 3.8 percent at the present price of Rs. 22.69 a share of Rs. 10 each.

Although the gross profit during the year ended October 1962 was Rs. 38 lakhs larger, the net profit declined from Rs. 70.20 lakhs in 1960-61 to Rs. 50.42 lakhs in 1961-62, due to the additional provision for taxation, including the super profits tax. Sales were substantially higher at Rs. 12.82 crores, against Rs. 12.01 crores. But this figure does not take into account Rs. 42.98 lakhs, being the value of completed stocks which could not be despatched due to the shortage of transport. The super profits tax will absorb Rs. 27.12 lakhs, which works out to about 17.32 percent of the gross profit. Mr. Chanda did not conceal the fact that the heavy burden of taxation might make it difficult for the Company to go ahead with the expansion scheme. Referring to the construction of the new foundry and other works for making machine tools, steelworks duty cranes, etcetera, he made it clear that the directors would take time to consider resuming the programme of rationalisation and expansion, although the period of uncertainty might soon be over. He nevertheless took an optimistic view about the future outlook, since the demand for the Company's products continued to be good. The Company's resources are likely to be fully employed during the next five years

provided an adequate supply of matching steel is obtained.

The coach works in Dum Dum, near Calcutta, has been completed and bogies for E.M.U. coaches have been manufactured. The final stage of rebuilding the wagon works has been proceeding. The new bogie works has been completed. The new works for manufacturing diesel road rollers has been completed. The demand for these rollers has risen and the output capacity has been doubled to 450 a year. The capacity of the mechanical works to produce components for cranes and sluice gates has increased. The structural works has been expanded. The factory for producing electric multiple unit trailer coaches will be fully engaged until the end of 1966. The production of box wagons has increased to 80 a month. The output of electric overhead travelling cranes and wharf cranes has improved. The chairman also referred to various difficulties which retarded production. The shortage of matching steel, hand welding electrodes and power has been felt. Coal and coke have not only been in short supply, but their quality has also deteriorated.

Progress of Dunlop Rubber

THE speech of Mr. M. L. Bexon, Managing Director of the Dunlop Rubber Co. (India) Ltd, at the annual general meeting of the Company in Calcutta last week was of special interest to the shareholders. (A fuller version of the speech was printed in last week's issue of *Capital*.) In spite of higher productivity, sales and profits, the taxable ordinary dividend has been cut from 20 percent for 1961 to 15 percent for 1962. The reduction has been due to the heavy burden of additional taxation. Although the concessions given in the super profits tax have been welcomed, the levy is "bad in theory and worse in practice," Mr. Bexon said. Because of heavier taxation, the Company has been forced to increase the provision for taxation out of the 1962 profits by Rs. 1.12 crores, of which Rs. 63 lakhs represents the super profits tax. The latter provision has nevertheless been cut by Rs. 24 lakhs as a result of the concessions recently announced. The increased taxes have strained the liquid resources of all companies; so their productivity and expansion schemes are likely to be retarded. Since the directors have been reviewing Dunlop Rubber's expansion schemes, it is difficult to get any positive idea about them at the present stage. Excise duty continues to absorb an ever increasing amount of working capital and companies in general wonder how to get relief from this burden.

The Company's working in 1962 was satisfactory. Sales of tyres touched a new record. The demand for Dunlop cycle tyre has risen, and the output of various industrial products has fallen behind demand. Since the domestic output of conveyor belting has been sufficient to meet the requirements, its imports should be banned. The Company has also developed a wide range of cotton and nylon ducks which have been well received by heavy industrial projects.

Dalmia Cement Maintains

THE preliminary results of the Dalmia Cement (Bharat) Ltd show an increase from Rs. 54 lakhs in 1961 to Rs. 1.16 crores in the gross profit for the year ended December 1962. A taxable ordinary dividend of 12 percent has been repeated, which offers a yield of 9.2 percent at the present price of Rs. 13.06 a share of Rs. 10 each. A part of the dividend will be exempt from the tax which is to be deducted at source. Hence the net dividend in the hands of the shareholders may work out to 10.4 percent. Depreciation absorbs Rs. 22.23 lakhs (against Rs. 23.85 lakhs) and taxation Rs. 75.50 lakhs (against Rs. 24 lakhs). A sum of Rs. 97,000 (against Rs. 1.19 lakhs) has been provided for development rebate reserve. The allocation to general reserve has been increased from Rs. 3 lakhs to Rs. 13.50 lakhs.

No Rights Now from Central Bank

BECAUSE of the heavy impact of the tax burden imposed by the Central Budget, the Central Bank of India Ltd has decided to postpone its rights issue for the time being. The Controller of Capital Issues permitted the bank to increase its authorised and paid-up capital, but the directors have decided not to go ahead with the share issue for the time being. This is because the investment climate has deteriorated and the terms offered by the Controller of Capital Issues for issuing the new shares are not considered favourable under the present circumstances. In his chairman's address at the annual general meeting of the bank on Monday, Sir Homi Modi said (a fuller version of the speech is printed on a later page in this week's issue of *Capital*) that to levy a super profits tax on the banking industry was unsound and unusual.

Judging from the steady dividends paid by banks for several years, it looks as if they do not make abnormal profits. Their dividend-paying capacity has been affected as a result of the impost. It is unfortunate that the tax has been levied at a time when the banks are expected to increase their share capital for bringing the capital plus reserve to 6 percent of their deposits. The chairman said that the banking community would find it difficult to reinforce their resources since the compulsory savings scheme would siphon off considerable savings. So the Government is not justified in levying as heavy a tax burden as it has imposed. The financial estimates of the Government, it is regrettable, have generally been inaccurate during the past few years. Furthermore, it is difficult to say whether the entire revenue which is being raised can be spent usefully. The chairman also drew attention to the inefficient way

in which several State enterprises were being run.

Meanwhile, the profitability of the banking industry has been threatened from several directions. In spite of the usefulness of deposit insurance, it has placed an additional burden, especially on big banks. Their operating expenses have increased by the payment of larger emoluments to the staff under the Desai award. The bigger rise in time than in demand deposits has also forced banks to pay more interest charges.

Assam Match Repeats

THE Assam Match Co. Ltd has produced satisfactory results for the year ended December 1962. Sales rose from Rs. 2.05 crores in 1961 to Rs. 2.12 crores in 1962. The profit has risen from Rs. 18.72 lakhs to Rs. 24.28 lakhs, after transferring Rs. 1.87 lakhs (against Rs. 1.75 lakhs) to depreciation and Rs. 5.121 (against Rs. 14.953) to development rebate reserve. The provision for gratuity is Rs. 60.468 (against Rs. 9.11 lakhs). A taxable ordinary dividend of 20 percent, including a bonus of 2 percent, has been repeated, which is covered more than four times and offers a yield of 7.1 percent at the present price of Rs. 28.25 a share. Taxation absorbs Rs. 12.75 lakhs (against Rs. 12.65 lakhs) and a sum of Rs. 5.50 lakhs has been provided for super profits tax reserve. Hence the total tax provision works out to nearly 75.17 percent of the total profit. Additional taxes on 1961 profits absorb Rs. 1.40 lakhs, leaving a carry-forward of Rs. 12.842, against Rs. 1.50 lakhs brought in.

The directors point to the increased demand for matches. In fact, shortages have developed at various points. Although the Company has been trying to persuade the Central Government for allowing the Company to increase its output capacity, it has not yet been able to obtain the necessary sanction. The ban on the expansion of the mechanical match manufacturing sector has been continuing.

Brooke Bond Raises Interim

BROOKE BOND, the tea and coffee Company, is raising its interim dividend from 1½d a share tax free to 1½d a share tax free, and there is a strong hint of a higher final of 2½d against 2½d in the autumn. In the maiden half-year report, the board discloses that pre-tax profits in the first half of the year rose by 16 percent from £2.74 million to £3.18 million, while turnover increased from £55.77 million to £58.05 million.

This is a very satisfactory performance, although part of the rise can be attributed to the inclusion for the first time of Doom Dooma. The improvement bears out the chairman's comment in November that they had got away to a "flying start." The increase in net profit is less impressive. Like many other U.K. firms, Brooke Bond has felt the bite of India's higher profit taxes, and as a result, the net profit is only 24 percent higher at £1,305,000, against

£1,270,000. For the year as a whole, the directors estimate that group net profits may be only slightly higher than in 1961-62. Nevertheless, even the indicated higher dividend of 7.1 percent tax free would still be covered nearly three times.

Runglee Rungliot Cuts Dividend

THE Runglee Rungliot Tea Co. Ltd (a Darjeeling garden) has cut the taxable ordinary dividend from 20 percent to 7.5 percent for the year ended December 1962, absorbing Rs. 10,500. The Company has incurred a loss of Rs. 3,382, compared with a profit of Rs. 32,976 in 1961, after providing Rs. 24.126 (against Rs. 14.215) for depreciation. Bringing in Rs. 8,123 and transferring Rs. 50,000 from hail reserve and Rs. 5,000 from excess taxation provision no longer required, there is a disposable balance of Rs. 75,741. Development rebate reserve absorbs Rs. 8,500, and revenue reserve Rs. 50,000. At the present price of Rs. 386 a share of Rs. 100, the dividend yield amounts to 1.9 percent. The carry-forward is Rs. 6,741.

The disappointing results have been due to the hail experienced in the early part of 1962. The crop fell from 105,192 kilograms to 85,234 kilograms, but the average sale price rose from Rs. 6.02 a kilogram to Rs. 6.64 a kilogram. A crop of 95,000 kilograms has been estimated for 1963 at a cost of Rs. 6.45 lakhs. The directors mention that the start of the current 1963 season has not been satisfactory in view of the drought.

Murphulani Tea Pays More

THE Murphulani (Assam) Tea Co. Ltd has increased the dividends for the year ended December 1962. The preferred ordinary dividend has been increased from 20.63 percent for 1961 to 30.63 percent for 1962 and the ordinary dividend from 15 percent to 25 percent; the dividends are subject to the deduction of tax at source and absorb Rs. 1.05 lakhs. The ordinary dividend offers a yield of 9.4 percent at the present price of Rs. 26.50 a share of Rs. 10 each. The profit has increased from Rs. 2.23 lakhs to Rs. 5 lakhs, after providing Rs. 89,936 (against Rs. 88,019) for depreciation. Taxation is allocated Rs. 3.06 lakhs (against Rs. 75,000), development rebate reserve Rs. 2,000 (against Rs. 7,500) and general reserve Rs. 80,000 (against Rs. 50,000). The carry-forward is Rs. 35,314, against Rs. 28,760 brought in. The increase from Rs. 6.01 to Rs. 8.41 a kilogram in the average sale price reflects an excellent standard of manufacture. Capital expenditure was Rs. 1.36 lakhs. The 1963 crop has been estimated at 2,000 quintals.

Burmah Oil Debentures Oversubscribed

THERE was an enormous demand for the £54 million 6½ percent debenture stock recently offered by Burmah Oil, the subscription lists being open no longer than it took to announce the heavy oversubscription. The price was £99 10s percent, of which £25 was payable on application, £25 on allotment, and the remainder by 24th June. The yields offered are £6 5s 7d percent flat and £6 6s percent to redemption in 1978. There is a favourable margin in the redemption yield of about 5 percent over the broadly comparable British

Petroleum 6 percent debenture 1976-80.

This helps to balance one disadvantage of the new stock for big institutional investors, namely, its relatively short average life. A sinking fund provides for repayment of the entire issue in equal annual instalments between June 1969 and June 1978. The average life is thus about ten years, or half what the market expects for issues of this kind. One novelty is the backing. The debenture is secured in the first place by a specific charge on part of Burmah's holding of B.P. and "Shell" ordinary shares. Burmah's total B.P. holding is unchanged at 24½ percent of the latter's equity. The number of "Shell" shares is up 110,400 since the last published figure to 16,140,480—3½ percent of the "Shell" equity.

The issue is designed to help replace the bank credit on which Burmah has drawn to meet its commitment in the Oil India pipeline scheme. Burmah is joint owner of Oil India with the Indian Government, and agreed to find about £10 million towards the £34 million the scheme is costing. In addition to the debenture issue, Burmah has arranged for a £5 million five-year loan from the Bank of Scotland and the Chartered Bank, against which the Company is issuing a 5½-percent unsecured loan stock and also depositing "Shell" and B.P. shares as security.

Century Mills Pays the Same

THE directors of Century Spinning and Manufacturing Co. Ltd have recommended a final dividend of Rs. 18 a share, making a total of Rs. 30 a share, less tax, for the year 1962, which is the same as in 1961. The total amount distributed is, however, higher at Rs. 76.47 lakhs, against Rs. 70.35 lakhs since the interim dividend absorbed a larger amount of Rs. 30.59 lakhs, against Rs. 24.47 lakhs because it was payable on the increased capital as a result of the one-for-four bonus issue in October 1961. The preliminary figures about the Company's working results which have been released along with the dividend announcement show that the gross profit is down by 3.5 percent from Rs. 3.92 crores to Rs. 3.78 crores. But considering that the textile industry had a rather difficult time last year because of the all-round increase in manufacturing costs without any increase in cloth prices, the performance of the Century Mills should be considered reasonably satisfactory.

After providing Rs. 11.06 lakhs (against Rs. 4.09 lakhs) for donations, Rs. 1.11 crores (against Rs. 86.15 lakhs) for depreciation, Rs. 41.28 lakhs (against Rs. 13.62 lakhs) for development rebate and Rs. 87 lakhs (against Rs. 1.36 crores) for taxation, the net profit amounts to Rs. 1.19 crores, compared with Rs. 1.38 crores in 1961. Bonus liability for previous years amounts to Rs. 77 lakhs, but since Rs. 40 lakhs had been set aside from the previous year's profit for contingencies, the same has been used to meet a part of the bonus liability. The balance liability of Rs. 37 lakhs is being met from the 1962 profits. No addition has been made to the capital redemption reserve which had received Rs. 10 lakhs in the previous year. A sum of Rs. 43.50 lakhs has been transferred to the dividend equalisation reserve, against Rs. 10 lakhs in 1961, but the directors have had to withdraw as much as Rs. 45.88 lakhs from this reserve for payment of the final dividend, which absorbs Rs. 45.88 lakhs.

Dividends, preference and ordinary, take up Rs. 87.28 lakhs, against Rs. 81.06 lakhs in the previous year, the difference being accounted for

entirely by the larger interim dividend disbursement. After making all these appropriations, there remains a small surplus of Rs. 28,000 to be carried forward, against Rs. 3.83 lakhs brought in. The larger amount provided for depreciation is said to be the result of commissioning the tyre cord plant. The overall taxation liability is substantially lower because of the higher development rebate and a large bonus payment.

Travancore Rayons Slashes Dividend

THAT Travancore Rayons fared badly in 1962 was evident from the 5 percent cut in the dividend (from 20 percent to 15 percent) and the preliminary profit figure which had been released along with the dividend announcement. The directors' full report which has now been made available shows that the Company's performance has been truly disappointing. While sales of rayon yarn, cellulose film and other products have fallen by about 14.5 percent from Rs. 3.67 crores to Rs. 3.13 crores, the gross profit is down by as much as 46 percent from Rs. 1.11 crores to Rs. 59.72 lakhs. Several factors contributed to this disappointing performance.

The Company's production was affected by a strike which lasted for over a month. The production of cellulose film was not up to the full installed capacity partly because of a fall in demand due to competition and partly due to the heavy incidence of excise duty—Travancore Rayon paid a record excise duty of Rs. 44.43 lakhs in 1962 on a smaller turnover, compared with Rs. 32.80 lakhs in the previous year. The production of moisture-proof film also suffered a setback due to difficulties in the procurement of essential chemicals. The production of rayon yarn was, however, nearly maintained at the previous year's level. The anticipated increase in production with the installation of new Butterworth rayon spinning machines was not achieved during the year because of the delay in placing orders for the machinery due to the formalities which had to be completed for obtaining the necessary foreign exchange credit through the Industrial Finance Corporation. These formalities have, however, now been complied with, and orders placed for machinery which, it is expected, will be shipped by June this year. It is expected that these machines will be commissioned by December.

The directors point out that even though there was an increase in the cost of raw materials, power and labour, the price of rayon yarn was still kept at the 1957 level, except for a portion of the increased excise duty. Since wood pulp—the main raw material—was imported under the export promotion scheme, the Company had to surrender a portion of its production of rayon yarn to the art silk weaving industry at prices even lower than the cost of production. After providing Rs. 26.75 lakhs (against Rs. 40.13 lakhs) for depreciation, Rs. 17.73 lakhs (against Rs. 30.60 lakhs) for taxation and deducting other charges, the net profit amounts to only Rs. 13.60 lakhs, compared with Rs. 35.57 lakhs in the preceding year. With Rs. 2.69 lakhs brought in from the previous year and adding Rs. 3 lakhs drawn from the dividend equalisation reserve, the disposable surplus amounts to Rs. 19.59 lakhs. The preference and ordinary dividends absorb Rs. 18.25 lakhs, and a sum of Rs. 1.15 lakhs (against Rs. 2.75 lakhs) has been provided for development rebate. No provision has been made for employees' gratuity reserve which received Rs. 1.50 lakhs in the preceding year. Besides, a sum of Rs. 8

lakhs had been transferred to the dividend equalisation reserve in 1961. After making various appropriations, there remains only a small sum of Rs. 18,587 to be carried forward.

The directors state that the erection of electrical carbon-disulphide plant and cotton linter pulp plant is almost over and trial runs were completed early in 1963. Full production, it is expected, will be reached shortly. The scheme for further expansion of rayon production by five tons a day could not be pursued because of licensing difficulties. The Company's application for import licence has not been favourably considered by the Government because of the foreign exchange shortage. The financial position of Travancore Rayon is very satisfactory. Against a paid-up capital of Rs. 1.50 crores of which equity capital amounts to Rs. 1 crore, the free reserves total Rs. 1.07 crores. The Rs. 10-paid share is currently quoted around Rs. 27 cum-dividend, offering a gross return of about Rs. 5.9 percent. In 1962, the share had touched a high of Rs. 46.10.

Hindustan Lever Earns More but Pays Less

THE directors of Hindustan Lever Ltd have recommended a final dividend of 60p a share (Rs. 10-paid), less tax, for the year 1962, which, together with a like amount already paid as interim, makes a total Rs. 1.20 a share (12 percent), against Rs. 2.60 a share (26 percent) paid in 1961. The previous year's dividend would be equivalent to Rs. 1.76 a share on the capital as increased by the 12-for-25 bonus issue last year which is also entitled to the dividend for 1962. The dividend has been reduced in spite of record sales and record pre-tax profit. This is mainly because of the heavier tax liability.

The preliminary figures about the Company's working which have been released along with the dividend announcement, show that the Company has done extremely well during the year. The total turnover is up by 8 percent from Rs. 49.91 crores to Rs. 53.85 crores and the gross profit has gone up by 14 percent from Rs. 4.18 crores to Rs. 4.77 crores. Exports have risen impressively from Rs. 74 lakhs to Rs. 2.01 crores. The net profit is only marginally higher at Rs. 2.35 crores, against Rs. 2.25 crores because of the increase in corporation tax from 45 to 50 percent.

In addition to this, the Company had to provide a further Rs. 33.4 lakhs for tax on the bonus issue made last year and Rs. 6.5 lakhs for tax adjustments of previous years, leaving a balance of Rs. 1.95 crores. The directors state that while the exact liability for the super profits tax will be known only after the Bill becomes law, they have set aside Rs. 70 lakhs for reserve relating to this tax. The proposed dividend will absorb Rs. 98.92 lakhs, against Rs. 1.45 crores in the previous year. The quotation for Hindustan Lever has come down from Rs. 45 to Rs. 40 following the announcement of a lower dividend.

National Rayon Cuts Dividend

NATIONAL Rayon Corporation has announced a dividend of Rs. 16 a share (Rs. 100-paid), less tax, for the year 1962, against Rs. 22 a share paid in the previous year. Even for the payment of the reduced dividend, the directors have had to withdraw the large amount of Rs. 26.10 lakhs, against Rs. 12 lakhs, from the deferred taxation reserve. But the Company's performance during the year is not as disappointing as the dividend cut would seem to suggest.

Gross revenue is down by a mere 2.37 percent and the gross profit, too, is down by not more than 7.4 percent. The cut in the dividend has apparently been necessitated by the sharp fall in the disposable surplus due to a very substantial increase in the provision for depreciation.

Sales of yarn, waste, chemicals and miscellaneous items fetched Rs. 8.27 crores, against Rs. 8.10 crores and miscellaneous income was slightly higher at Rs. 5.47 lakhs, against Rs. 3.18 lakhs, bringing the total gross revenue to Rs. 8.33 crores, against Rs. 8.13 crores in 1961. Gross profit fell by about 7.4 percent from Rs. 2.44 crores to Rs. 2.25 crores, because of the all-round increases in production costs. Operating expenses have gone up from Rs. 3.11 crores to Rs. 3.60 crores and the Company has had to pay Rs. 1.8 crores, against Rs. 1.25 crores by way of excise duty. Employees' remuneration and benefits are up from Rs. 1.05 crores to Rs. 1.17 crores and office and selling expenses are also higher at Rs. 28.29 lakhs, against Rs. 25.24 lakhs.

Out of the year's gross profit of Rs. 2.25 crores (against Rs. 2.44 crores), the directors have provided Rs. 1.29 crores (against Rs. 85.18 lakhs) for depreciation, Rs. 25.10 lakhs (against Rs. 39.25 lakhs) for development rebate reserve and Rs. 37.50 lakhs (against Rs. 53 lakhs) for taxation. The balance of the profit available for disposal is only Rs. 27.56 lakhs, compared with Rs. 57.24 lakhs in 1961. From this the directors have had to set aside Rs. 6.25 lakhs (against nil) for additional taxation concerning the previous year. Since the profit is insufficient to meet the proposed dividend liability, the directors have transferred Rs. 28.10 lakhs (against Rs. 12 lakhs) from the deferred taxation reserve. The preference dividend absorbs Rs. 9.67 lakhs (the same) and ordinary dividend Rs. 38.57 lakhs (against Rs. 53.05 lakhs), leaving a sum of Rs. 9,486 to be carried forward, against Rs. 93,407 brought in. No allocation has been made to the debenture redemption reserve which had received Rs. 10 lakhs in the previous year.

The preliminary report on the Company's working indicates that the tyre cord plant is working satisfactorily; the teething troubles have all been overcome and the plant is now producing standard quality products guaranteed by the foreign collaborators. Negotiations are in progress with the Government and the tyre manufacturers in India for the sale of the Company's product and the management expects that regular offtake will be assured shortly. The full benefits of the Company's two-stage expansion will be reflected in the current year's working results. Production of finer deniers, it is expected, will be substantially higher this year. Sales of finer deniers are said to be more remunerative. It needs to be mentioned, however, that while 1962 is the third year in succession for which the gross profit has suffered a setback from a high of Rs. 2.76 crores in 1959, the dividend has been reduced only for the first time. The Company's dividend record up to 1961 has been good; the dividend was 10 percent in 1954 and it had been progressively raised to 22 percent by 1959. The shares of National Rayon, which was marked down from Rs. 375 to Rs. 350 on the kerbs immediately after the announcement of the dividend cut, have gone up again to around Rs. 377 on renewed support based on better prospects for the current year.

Silver Cotton Pays Less

THE directors of Silver Cotton Mills Co. Ltd, Ahmedabad, have reduced the dividend for the year 1962

from Rs. 32 to Rs. 15 a share, less tax, but the total amount distributed among the shareholders is only a little lower at Rs. 1.96 lakhs, against Rs. 2.09 lakhs in 1961, because the reduced dividend is payable on double the capital following the one-for-one rights issue. Like most other cotton textile mills, Silver Cotton also has fared rather badly. Its sales are down by about 10 percent from Rs. 1.62 crores to Rs. 1.46 crores, and the gross profit has fallen by nearly 31 percent from Rs. 22.06 lakhs to Rs. 15.10 lakhs. After providing Rs. 5.34 lakhs (against Rs. 5.30 lakhs) for depreciation, Rs. 1.22 lakhs (against Rs. 93,000) for development rebate and rehabilitation reserve, Rs. 4.68 lakhs (against Rs. 7.05 lakhs) for taxation, Rs. 22,159 (against Rs. 11,388) for donations and Rs. 90,000 (against Rs. 5.50 lakhs) for other reserves, the net profit amounts to Rs. 1.75 lakhs, compared with Rs. 2.06 lakhs in the previous year. After making certain minor adjustments, and providing for the proposed dividends, there is a small sum of Rs. 6,039 to be carried forward. The Rs. 100-paid share of Silver Cotton Mills is currently quoted around Rs. 495.

Monogram Mills Sales Up, Profit Down

IN spite of an increase of about 15.4 percent in the sales from Rs. 1.95 crores to Rs. 2.25 crores, the gross profit of the Monogram Mills Co. Ltd of Ahmedabad for the year 1962, is down by 40 percent from Rs. 17.27 lakhs to Rs. 10.32 lakhs. The directors have recommended a dividend of Rs. 9 a share, less tax, against Rs. 12 a share in 1961, but since the dividend is on the increased capital, the total amount distributed at Rs. 3.11 lakhs is almost the same as in the preceding year. Allocations include Rs. 5.99 lakhs (against Rs. 5.15 lakhs) for depreciation, Rs. 3.26 lakhs (against Rs. 1.89 lakhs) for development rebate reserve and development and rehabilitation reserve, for taxation nil (against Rs. 4 lakhs) and Rs. 24,205 (against Rs. 25,325) for donations. A sum of Rs. 45,000 (against Rs. 1.48 lakhs) has been provided for income tax for the previous year. The directors have withdrawn Rs. 3 lakhs from the general reserve. After providing for the payment of dividend, there remains a surplus of Rs. 27,254 to be carried forward, against Rs. 50,274 brought in. The Company spent about Rs. 23 lakhs on new machinery and equipment during the year. The Rs. 100-paid share of Monogram Mills is quoted around Rs. 155.

Ambica Mills to Pay Again

THE directors of Shri Ambica Mills Ltd of Ahmedabad have recommended a gross dividend of Rs. 40 a share for 1962. The Company had skipped the dividend in 1961, and had issued instead bonus shares in the proportion of one for every three held. In 1960, the Company paid a dividend of Rs. 50 a share. The dividend of Rs. 40 a share which has now been recommended for 1962 is payable on the increased capital following the bonus issue and it absorbs Rs. 34 lakhs, against Rs. 31.88 lakhs in 1960. The preliminary report on the Company's working shows a small setback in sales as well as profit, which, however, is in line with the general performance of the cotton textile industry in 1962.

Sales are down by about 5.7 percent from Rs. 5.89 crores to Rs. 5.55 crores, and the gross profit has fallen by a little over 6 percent from Rs. 1.60

crores to Rs. 1.50 crores. The directors have provided Rs. 15.15 lakhs (against Rs. 15.49 lakhs) for depreciation, Rs. 4.67 lakhs (against Rs. 2.70 lakhs) for development rebate, Rs. 68.20 lakhs, including Rs. 7 lakhs for super profits tax (against Rs. 65.20 lakhs) for taxation, Rs. 6.80 lakhs (against Rs. 1.46 lakhs) for donations and Rs. 13.53 lakhs (against Rs. 53 lakhs) for general reserve. No provision has been made for investment and gratuity reserves which received Rs. 10 lakhs and Rs. 5 lakhs, respectively, in 1961. After providing for the proposed dividends, ordinary and preference, there remains a small sum of Rs. 750 to be carried forward. The Rs. 100-paid share of Ambica Mills is currently quoted around Rs. 1,238.

New Capital Issues

EIGHT companies have been authorised to raise capital totalling Rs. 4.08 crores. The following are the details:

Phillips (India) Limited, Calcutta, is to issue capital of Rs. 16.66 lakhs in equity shares of Rs. 10 each for cash at a premium of Rs. 5 a share; 50 percent of the capital will be issued to the existing non-resident shareholders and the balance to the existing Indian shareholders.

Tecalemit (India) Limited, Calcutta (Proposed) has been authorised to issue capital of Rs. 40,00,000 divided into 400,000 equity shares of Rs. 10 each. Of this, 212,000 shares will be offered to Tecalemit Ltd, U.K., and the balance 188,000 shares will be issued in India.

Napco Bevel Gear of India Limited, a public Company to be floated for the manufacture of bevel gears, etcetera, in collaboration with Napco Industries Inc. of the U.S.A. has been given consent to issue capital of Rs. 126.70 lakhs divided into 1,267,000 equity shares of Rs. 10 each. Out of this issue, equity shares of the value of Rs. 47.50 lakhs will be offered to the foreign collaborators and the balance will be issued to Indian nationals for cash at par. The foreign participation will be made into Rs. 23.75 lakhs against part payment of the price of equipment to be transferred and Rs. 23.75 lakhs against supply of technical know-how.

The Bharat Mining Corporation Limited, Calcutta, is to issue capital of Rs. 19.56,350 in equity shares of Rs. 10 each for the development of its two collieries.

Andhra Steel Corporation Private Limited, Calcutta, is raising capital of Rs. 20 lakhs in equity shares for completing its re-rolling mill project at Visakhapatnam.

Borosil Glass Works Limited, Bombay, is to raise Rs. 1,49,99,100 in equity shares of Rs. 10 each at par partly for cash and partly for consideration other than cash. Out of this, shares of the value of Rs. 73.50 lakhs will be issued to Corning Glass Works of the U.S.A.

The Singh Engineering Works Private Ltd, has been given consent to issue further capital of Rs. 10 lakhs divided into 10,000 equity shares of Rs. 100 each to be issued as bonus shares on capitalisation of the Company's reserves to a like extent.

In supersession of the consent granted in December, 1962, for Rs. 20 lakhs in equity shares, Sri Sai Baba Textile Mills Limited, Andhra Pradesh, has been given a revised consent for Rs. 25 lakhs in the form of equity shares of the value of Rs. 20 lakhs and preference shares of Rs. 5 lakhs. All the shares will be issued for cash at par. The consent is valid till 20th December, 1963.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base : 1953) has now been brought up to April 1962. Compared with the preceding month, there were declines in sugar 144.42

points, jute 1.11 points, cloth 0.89 points, cement 14.06 points, coal 6.46 points, pig-iron 22.77 points, finished steel 62.25 points, paper 8.61 points, tyres 3.46 points,

motor-cars 147.93 points, bicycles 4.19 points and railway ton-miles 107.73 points. Tea and electricity increased by 43.44 points and 0.88 points, respectively.

Combining all the factors, the Capital Index of Indian Industrial Activity declined by 29.1 points during April 1962.

The Stock Markets

CAUTIOUS TRADING IN LYONS RANGE

Wednesday Evening.
At the settlement on Wednesday, the

Rs. 311 and India United ordinary at Rs. 22.32.

In the miscellaneous section, selected sugar shares have been steadier. Belapur have been transacted at Rs. 192 and Phaltan at Rs. 93. Cement shares have been rather quiet. Associated Cement have been freely available at Rs. 145 and Digvijay at Rs. 164. Mining shares have been subdued, and Shivrajpur Syndicate have been offered down to Rs. 21. Among steamship company shares, Scindia Steam have reacted to Rs. 10.68 on pressure. Chemical shares have been steady. Tata Chemical have risen to Rs. 15.72 and Indian Dyestuff to Rs. 442.50. Rayon shares have been steady, and National Rayon have recovered to Rs. 379 on short-covering. But towards the close, the scrip has been easier on news of a cut in the dividend. Voltas have been steady at Rs. 271. Interest in cash shares has been at a low ebb, but scattered support has been extended to Synthetics and Chemicals at Rs. 159 and to Permanent Magnets at Rs. 180.

Routine business has been transacted in bank shares. Bank of India have been done at Rs. 109.50 and Bank of Baroda at Rs. 88. Among insurance shares, New India Assurance have been firm at Rs. 59.50 on prospects of a bonus issue. Electric company shares have been quiet. Ahmedabad have been sold at Rs. 91.30 and Tata Hydro at Rs. 104.

Madras

PRICES OF SELECTED SHARES HARDEN

MOVE MADE TO RESUME FORWARD TRADING

Tuesday Evening. The Madras stock market has been steady during the past week. Turnover has increased and prices of selected shares have hardened on bigger investment buying. Selling pressure has abated considerably since holders have been encouraged by higher advices from Calcutta and Bombay. In response to more active conditions, the authorities have asked the Government to permit the resumption of normal forward trading.

Towards the close, operators and investors have turned cautious because of the substantial increase in prices. The shortage of credit has been felt, and it is likely to be aggravated because the forthcoming Government borrowing programme may siphon off substantial funds from the market. Prices of selected State Government loans have hardened somewhat. Interest has broadened in high-yielding preference shares. Electric company shares have generally been neglected. In the banking section, Pandyan have met with support on prospects of amalgamation.

Sugar shares have met with fresh support, and E.I.D. have hardened to Rs. 38.70. Support has been forthcoming for Kothari at Rs. 7.85 and for Deccan at Rs. 9. Good planting shares have been bought on hopes of satisfactory crops. Blue Mountain have been transacted at Rs. 2.47 on reports that the fertilizer department of the Company has been doing well. Cochis Malabar have come to hand at Rs. 6. Consolidated Coffee at Rs. 17.25. Oxytelony at Rs. 3.60 and Periakaramalai at Rs. 3.06. Nonsuch have declared an interim taxable ordinary dividend of 5 percent. Tropical a taxable ordinary dividend of 8 percent and

Parkside an interim taxable ordinary dividend of 7.5 percent.

Cotton mill shares have been selectively higher on replacement buying. Bangalore Woollen and Buckingham have declared a final taxable ordinary dividend of 12 percent each. Binny have paid a final taxable ordinary dividend of 13 percent. South India Viscose have reacted to Rs. 147 while Madura have been bought up to Rs. 32.50. Lakshmi have been done at Rs. 138. Travancore Rayon have been easier at Rs. 25.

Turnover has increased in miscellaneous shares. Aluminium Industries have been wanted at up to Rs. 18.50 and Ashok Leyland have met with support at Rs. 7.60. Dalmia Cement have been taken at Rs. 12.25 on repeating a taxable ordinary dividend of 12 percent. India Cement have been steady at Rs. 5.75 and Mettur Chemical at Rs. 12.25. Business has passed in Enfield at Rs. 9.25, in F.A.C.T. at Rs. 7.55 and in Parry's Confectionery at Rs. 3.30. Aspinwall have declared a taxable ordinary dividend of 6 percent and the scrip has been quoted up to Rs. 8.30. Standard Motors have been done up to Rs. 11.87. Seshasayee Paper have jumped to Rs. 8.05 on strong support.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

Money

THE CALCUTTA MONEY MARKET

FAIR DECREASE IN ADVANCES

THERE has been a fair decrease in the general level of advances in the Calcutta money market during the past week. The decrease has stemmed from the slight decline in the credit given to the jute and sugar mills, and to the iron, steel and engineering industries. There is no change in the advances to cotton and woollen mills, and the foodgrains and seeds trade. In the interbank market, conditions have continued to be easier, the call rate remaining at 4½ percent.

The local exchange market continues to be inactive. The supply of gunny and tea bills has been poor as before. The demand for remittance has been keen. Sterling has weakened further in relation to most of the major currencies except the Swiss franc, against which it remains unchanged.

SILVER WAS QUIET IN CALCUTTA during the past week. The price fell from the previous week's level of Rs. 278 to Rs. 277.50, quoted today for ready delivery. There was no business in forward. The London and New York prices were 110½d and 127.50 cents. Gold was not transacted, but the unofficial price was indicated around Rs. 109 a 10 grammes.

DURING THE WEEK ENDED 26TH APRIL, Government of India Treasury bills for Rs. 59,77,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 30th April. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.410 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.350 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received in Kanpur up to the close of business on 4th May and at other centres up to the close of business on 6th May.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 1st May to 4th May at Rs. 99.431 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 24th April to 27th April amounted to Rs. 1.45 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 19th April, 1963, shows a rise of Rs. 83 lakhs to Rs. 564.39 crores in total deposits. Investments in Government securities are up by Rs. 13.19 crores to Rs. 227.42 crores, while other authorised investments remain unchanged at Rs. 7.84 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have declined by Rs. 2.46 crores to Rs. 316.91 crores. Cash and balances are, in consequence, shown at Rs. 23.28 crores or Rs. 2.81 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 19th April, 1963, shows Demand and Time liabilities at Rs. 1,042.06 crores

(Rs. 31.65 crores on account of borrowings from banks) and Rs. 1,241.12 crores (Rs. 13.08 crores), compared with Rs. 1,030.89 crores (Rs. 25.96 crores) and Rs. 1,229.44 crores (Rs. 13.05 crores) in the previous week. Cash has increased by Rs. 37 lakhs to Rs. 53.81 crores, while balances with the Reserve Bank have declined by Rs. 2.39 crores to Rs. 77.09 crores. There is a rise of Rs. 14.24 crores to Rs. 609.08 crores in investments. Advances and bills discounted at Rs. 1,605.14 crores show a drop of Rs. 4.25 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.7 percent and 70.3 percent, against 5.9 percent and 71.2 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 3-5-63.				
Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate	
3-5-63	6-8-63	2,00.00	Rs. 2.350%	
26-4-63	29-7-63	2,00.00	Rs. 2.349%

INDIAN PAPER MAKERS ASSOCIATION

CHAIRMAN, MR. I. A. MACPHERSON'S REVIEW

Speech delivered by the Chairman, Mr. I. A. MACPHERSON, at the Annual General Meeting of the Association held in the rooms of the Bengal Chamber of Commerce and Industry, Calcutta, at 11-30 A.M. on Friday, 26th April, 1963.

Gentlemen,

I have pleasure in welcoming you all to this Annual General Meeting.

With your permission I will take the notice convening this Annual General Meeting as read.

This meeting is being held under the shadow of the National Emergency promulgated as a result of the Chinese aggression on our Northern and North Eastern borders. I am glad to report that member mills and their employees responded generously to the Prime Minister's call for contributions to the National Defence Fund. The practical impact of the National Emergency on the Industry has been a demand for the particular varieties of paper and paper board required for defence purposes. The Industry was also requested to make an all-out effort to ensure that Government Departments should suffer no shortage of paper and, as a result, supplies to the civil market have inevitably suffered. Due to restrictions on the transport of goods in strategic areas, certain mills relying on raw materials from these areas have experienced difficulties in maintaining adequate supplies.

Third Plan Targets

We are now entering the third year of the Third Five Year Plan and I would therefore like to review the performance of the Industry over the past year, to consider the progress which has been made towards achieving the targets set under the Third Five Year Plan and to pinpoint the obstacles which will have to be overcome if the Industry is to attain its future targets.

As you will be aware, at the beginning of the Third Five Year Plan, the annual capacity of the paper and paper board industry stood at 4,10,000 tons (4,16,560 metric tonnes) against the capacity target of 4,50,000 tons (4,57,200 metric tonnes). The actual production during 1961-62, the first year of the Third Five Year Plan period was 3,67,000 metric tonnes. On the basis of an estimated progressive increase in demand of 12½ per annum during the Third Five Year Plan period, the Planning Commission estimated that demand during 1962-63, the second year of the Plan period, would be 5,06,000 tons (5,14,096 metric tonnes) and according to the latest official statistics available, production during the first 8 months of 1962-63 was in the region of 2,57,000 metric tonnes, i.e. just half the estimated demand. However, I am glad to say that in November, 1962, production reached a peak level of 35,000 metric tonnes and assuming that this level was maintained for the remaining 4 months of the year, production for 1962-63 should be in the order of 4,00,000 metric tonnes. The estimated demand during the third year of the Plan period, which we are now entering, is 5,70,000 tons (5,79,120 metric tonnes).

In 1951-52, at the beginning of the First Five Year Plan, the production of paper and paper board was 1,35,000 tons (1,37,160 metric tonnes) and while it is most creditable that in the short period of 12 years the industry's annual production should have been increased by nearly threefold to 4,00,000 metric tonnes, the progress made during the last two years has not been satisfactory in the context of the target

fixed for the Third Five Year Plan period, since it would appear that even if the current rate of production is increased annually by as much as 70,000 or 80,000 metric tonnes during the next three years, production at the end of the Plan period will be in the order of 5,50,000 metric tonnes as against the target of 7,00,000 tons (7,11,200 metric tonnes).

A cause of the Industry's failure to meet its target is the non-materialisation of the new units for which licences have been granted and I will elaborate later on the factors inhibiting the materialisation of these projects when I touch on the financial state of the Industry.

Total Capacity

It will be recalled that for the Third Five Year Plan period 18 new units and 18 expansion schemes, with a total capacity of 4,99,260 tons (5,07,248 metric tonnes) per annum, were either licensed or recommended for licensing and that further licences were envisaged for the expansion of 3 small mills and for 83 new small mills of extremely limited capacity, the total capacity of these units being 2,36,000 tons (2,39,776 metric tonnes) per annum. The total capacity of the Industry's existing installed capacity of approximately 4,10,000 tons (4,16,560 metric tonnes) at the beginning of the Third Five Year Plan period would give a total capacity of about 11,50,000 tons (11,52,400 metric tonnes) per annum and to this end about 7,60,000 tons (7,72,160 metric tonnes) per annum of the estimated additional capacity has been licensed. It is now understood that the licences for 50 new units have been cancelled and that notices have been served on a further 20 units and with this reduction in licensed capacity it is apparent that the Industry will fall short of the ultimate target of 7,00,000 tons (7,11,200 metric tonnes) and it is estimated that this will be by some 1,50,000 tons (1,52,400 metric tonnes), i.e. by slightly more than the Industry's total production in 1951-52 at the beginning of the First Five Year Plan.

The major reason why the Industry will not be able to fulfil its targets during the Third Five Year Plan period is the Industry's financial position as a result of the unrealistic price policy adopted by Government on the recommendations of the Tariff Commission in 1960. As you are aware, the Industry's basic and, I might add, perennial problem is that of rising production costs vis-à-vis fixed selling prices. This is basic since a level of prosperity is necessary firstly in order to allow for profits which can be ploughed back for expansion and, secondly to attract fresh capital. The margin between production costs and parafixed selling prices is therefore of paramount importance because on it depends the ability of the Industry to finance the expansion programmes as envisaged in the Plan.

A few remarks regarding the financial state of the Industry are not out of place. I refer to two studies which have been made, viz., the analysis by the Reserve Bank of India of the accounts for 1959 and 1961 in respect of 1,001 Joint Stock Companies covering 24 industries, including 18 units of the paper industry and the study of the finances of the paper industry recently carried out by the "Economic Times" in respect of 18 paper companies. These two studies reveal a

decline in the Industry's profits against a general trend of rising profits and also bring out the following points:—

(1) Gross profits as % of sales

	1959-60	1960-61	1961-62
against	14.6 (10.0)	13.2 (10.2)	11.4 (11.5)
rates for all industries			

(2) Gross profits as % of total capital employed

	1959-60	1960-61	1961-62
against	12.1 (9.8)	10.2 (10.1)	8.9 (9.6)
rates for all industries			

These figures bring out that in 1961-62 gross profits expressed as percentages of sales and total capital employed were not only lower than in the two previous years but were for the first time below the average rate for all industries. Additionally, the small ad hoc increase of 6 pf per kilo allowed in June, 1962, has been inadequate to maintain the profit margin in that it was inadequate to meet the rising costs of raw materials and manufacturing costs.

The profitability of share capital, as measured by the ratio of profits after tax to net worth was well below the average of all industries, viz.:

	1959-60	1960-61	1961-62
against	12.4 (10.5)	10.1 (10.8)	7.8 (9.5)
average for all industries			

As regards the allocation of profits, retained profits ploughed back into the Industry fell from 37.3% in 1959-60 to 32.2% in 1960-61 and again to 20.1% in 1961-62.

General Trend

The general trend is therefore one of increasing prices and decreasing profits. Furthermore, many of the shares issued by new companies are quoted at a high discount while the higher grade scrips are quoted at low prices in the market. It is therefore most unfortunate that at a time when the internal resources of the Industry are shrinking, the chances of mobilising funds by capital issues have also become somewhat remote. This must also be viewed in the context of Government's general dear Money policy of higher bank rates which, coupled with an increase in Banks' finance charges, has made it increasingly difficult for the Industry to obtain the finance required to meet the progressive increase in working capital requirements consequent upon an all-round increase in costs.

While existing units are therefore experiencing considerable difficulty in financing their expansion schemes, the overall financial position of the Industry is unattractive to newcomers. Another deterrent to the setting up of new units is the Tariff Commission's recommendation of a return of only 12% on capital employed.

As you are aware, 80% of the Industry's expansion in the Third Five Year Plan period is to be obtained from the setting up of new units and these will require a much heavier capital investment per ton of capacity than the long-established mills responsible for the major portion of the existing production. It is estimated that the cost of erection of a new plant is of the order of Rs. 3,000 per ton of annual output. Accordingly, a new plant of 30,000 tons capacity will cost at least 9 crores of rupees at present day costs. Depreciation alone will be in the order of Rs. 90 lakhs. For a capital intensive Industry such as paper, a return of 12% on capital employed is most

have to import most of their requirements of plant and equipment.

Having referred to the Industry's general financial position and the factors inhibiting the entry of newcomers, I would like to revert to the Industry's major problem of fixed selling prices and ever-increasing production costs. Ever since the Tariff Commission's Report on the Paper Industry was accepted by Government and brought into effect at the beginning of 1960, spokesmen for the Industry have repeatedly outlined the essential weaknesses of the Report and pressed for a more substantial return of capital. The question of rehabilitation has been emphasised on many occasions. During this period the steadily rising costs have tended to shift the emphasis away from these considerations towards the immediate concern as to whether production costs will completely outstrip selling prices. It is fortunate indeed that as a result of the Industry's representation mentioned in our Chairman's speech last year, the Government of India sanctioned a price increase of 6 NP per kilo with effect from the 21st of June, 1962. This was an *ad hoc* increase. Since that date, there has been a systematic increase in the cost of materials for papermaking and it now appears that there will be further increase as a result of the Budget proposal to levy a surcharge of 10% on all import duties, and the additional road transport costs following the increase in the Excise Duties on tyres, petrol, etc., and heavy road taxes. Additionally, there is the burden of the Emergency Risk Insurance premia.

As for increases in the cost of the Industry's basic raw materials, the cost of bamboo has been rising in price rapidly since 1.4.62 and the indications are still that it is increasing and not likely to decrease and that the different States are demanding very high royalties for the leased areas.

The price of coal is increasing and there is no guarantee of the quality with the result that consumption of coal per tonne of paper is bound to increase.

Experiments are being made with unconventional raw materials such as bagasse, jute sticks and some hardwoods and it would mean considerable capital expenditure to remodel the existing plant and equipment involving foreign exchange before any profitable use could be made of these various materials.

Over and above the Industry's existing difficulties in regard to finance, the recent Finance Bill will naturally add to the burden which must be borne by the Industry, but we have reached the point where a distinction must be drawn between tightening our belts and almost facing starvation.

Super Profits Tax

As regards the Super Profits Tax, while the concessions announced by the

Finance Minister are welcome, the fact nevertheless remains that the Super Profits Tax is bad in principle and may even result in inflationary tendencies which is contrary to its avowed intention of being an anti-inflationary measure. In any case, the tax structure as approved by Parliament will leave no profit to be ploughed back for financing expansion programmes and increased working capital requirements. As it is not unlikely that the result of the Super Profits Tax would be to turn profits into a debit balance, it will be difficult for industrial units to meet their commitments to the Industrial Finance Corporation or the Banks in due time. The present taxation proposals must also be considered in the light of price trends. In 1962, prices were five times those prevailing in 1939, the pre-war norm year. This inflationary trend is primarily the result of over-investment in the public sector. The country's investment outlays have exceeded the availability of funds through the normal channels of finance. In the last five years, price indices have risen rapidly at the rate of 7.29% (wholesale) and 6.25% (consumer) annually. As you are aware, any increase beyond 2% is considered to be "galloping" inflation and I fear that the present taxation proposals will merely aggravate the situation.

At the Central Government Rate Contract Meeting which took place in Delhi on March 15th, 1963, it was agreed that firm prices could only be established for a period of six months. The Industry must again submit its representations to the Ministry of Commerce & Industry in the light of the Finance Bill and the many recent cost increases, in an effort to secure a favourable decision not later than September this year.

Transport Shortage

The Paper Industry's other major problem is that of transport. There is no doubt that the Indian Railways are probably carrying more traffic than ever before. In spite of their creditable performance there is still an acute shortage of wagons for movement of basic raw materials to the Paper Industry and for coal.

Some mills are obtaining 50% of their coal requirements by lorry, involving an enormous expenditure on this road transport and in view of the price structure it is essential that the road movement should be substantially reduced and larger number of wagons should be made available to the Industry in view of the recent change in the pattern of coal traffic as units consuming more than 1,500 tonnes of coal per month will in future be supplied by BOX rakes. A large number of BOX wagons are being assembled in the country at the present time and which we hope in the near future will help to overcome the shortage of raw materials at the Mills.

So far as the Railways are concerned, the Association has endeavoured to persuade the Railway Board to upgrade again the priority of bamboo despatched to paper mills from priority "D" which was granted in 1961 to priority "C" under the preferential traffic schedule but I regret that this has met with no success. Although these current transport difficulties have from time to time caused great concern to the mills concerned as a result of their raw material stock position being reduced to a few days' consumption, it is the effect of the transport situation on the future development of the Industry which is of even greater concern since, if there is no material improvement in the transport situation to cope with the additional raw material requirements necessary for the Industry's development programmes when they cannot cope with supplies of raw materials and fuel at the existing level of production?

In the context of supplies of raw materials, my predecessor last year

stressed the need to plan the development of forests on healthy and scientific lines in order to make available the bamboo and other products required by the Paper Industry and other industries relying on them as their raw materials. During last year, considerable difficulties were experienced by mills in obtaining their full requirements of essential chemicals such as Caustic Soda, Sodium Chloride, Sodium Sulphate and dyestuffs from indigenous sources as a result of the physical shortages of some of these items and especially because of the increased selling prices that were being charged. In view of the fixed selling prices of paper, it is very difficult for mills to cope with sudden—and in some cases considerable—increases in the cost of the basic raw materials required for paper production and the Association accordingly requested Government to take special measures to stabilise the price of indigenous supplies of essential raw materials. I regret to say that, as yet, there are no signs of any such steps having been taken.

During the year, complaints have been received regarding shortages of paper in the civil market. The position has undoubtedly worsened since the promulgation of the National Emergency when the Industry was requested to make an all-out effort to ensure that Government Departments should suffer no shortage of paper. Moreover, for the new Rate Contract period 1963-64, the Government of India requires approximately a further 9% of national production for its own consumption. Since Government's outtake is predominantly printing and writing papers, it is inevitable that some shortage will continue to be felt in the civil market.

Labour Problems

Turning to the Industry's labour problems, it is encouraging to note that the challenge of the Chinese aggression gave a new outlook to the prevailing attitude of the workers in respect of the necessity of higher production, and spontaneous offers of working on holidays and shut days were received from the workers in the industry. However, it devolves upon both the Management and Labour Unions to maintain discipline and exercise restraint and forbearance to create an atmosphere wherein the maximum effort could be made by the workers to achieve maximum production.

I should, however, mention the current news reports regarding the move of the Government of West Bengal to introduce legislation against retrenchment without the Government's approval. This step contemplated by the Government is a matter of great concern to us all and in my opinion it is a highly retrograde step. I would therefore strongly request the State Government not to pursue this scheme, which will increase incidence in cases of indiscipline among the workers and thus lower industrial efficiency at a time when there is a call for more production, greater efficiency and better discipline.

During the year under review your Association submitted its reply to the questionnaire issued by the Bonus Commission and were asked to give evidence in January of this year. We have argued before the Commission that if any Bonus on some agreed basis is to come into operation it should be related to productivity and the workers should be rewarded regularly for their extra efforts either weekly or monthly regardless of the profits or loss which accrue to the business at the end of the year. We also emphasised that there should be only one kind of bonus and this is in the shape of an incentive related to productivity.

The Technical Commission set up last year to look into the question of an increase in the Provident Fund contribution rate has since submitted its report to the Government of India recommending an increase in the Provi-

dent Fund contribution rates to 8% in the paper industry and it has been brought into force from the 1st of January, 1963. The employer's contribution under the E.S.I. Scheme and the cash benefits under the Workmen's Compensation Act have been roughly doubled and it is quite heartening to note that the average annual total wage per employee in the paper industry compares very favourably with the total wage received in other industries and that the fringe benefits account for 24.8% of actual wages.

I have dealt with the three main problems facing the Paper Industry, viz., costs and prices, transport and raw materials, and I have briefly touched on labour matters. There are two other matters which I would like to mention before I close.

Raising Exports

The first is in regard to exports. While the Paper Industry does not lag behind other industries in realising the vital necessity to increase exports and in its desire to participate in exports, its basic problem is the lack of raw materials of the quality and at the cost available to established paper exporting countries. However, as a first step in the right direction, the Association, jointly with the Indian Paper Mills Association, has agreed to depute three delegations to selected countries of the Middle East, the Far East and South East Asia, with which the representatives of the paper trade and, if need be, paper converters will be associated, in order to carry out market surveys as to the possibilities of exporting our paper to these countries. Once their reports are received, it should then be possible to investigate a suitable scheme of export promotion. The Government of India has been advised of the Industry's intention and it is hoped that the necessary official recognition and release of foreign exchange will be received shortly.

The other matter is the recent formation of a Joint Committee of the Paper Industry, consisting of the nominees of this Association and of the Indian Paper Mills Association, and through which all major problems affecting the Industry will now be processed. This is a step in the right direction and should allow the Industry to speak with one voice on matters vital to it and, conversely, make it easier for Government to deal with the Industry as a whole. The present separate identity of the two Associations remains undisturbed.

Turning for a moment to the Association's own affairs, we were glad to admit the Murali Paper Mills, New Delhi; to membership of the Association early this year. I feel that, despite the formation of the Joint Committee for the Paper Industry, there are still considerable areas of activity where the Association performs, and will continue to perform, a very useful function and can provide a most useful service to member mills and I therefore hope that all members will do their utmost to encourage new members.

I take this opportunity of thanking the Development Wing of the Ministry of Commerce and Industry for the assistance rendered during the year and I would also like to thank, on behalf of the Industry, the Cellulose and Paper Branch of the Forest Research Institute for all the research work they are doing and which is so vital for the Industry's future wellbeing.

Before I conclude, I would like to thank my fellow Committee members for their co-operation and assistance during my terms of office and I would like to express on behalf of my Committee and myself our appreciation of the work put in by the Secretaries during the year.

N.B. This does not purport to be a record of the proceedings of the Annual General Meeting.

JESSOP AND COMPANY LTD.

CHAIRMAN, MR. A. K. CHANDA'S REVIEW

Chairman, Mr. A. K. Chanda's Address to the Shareholders at the Thirty-first Annual General Meeting held on 29th April, 1963.

The Board of Management's Report and Accounts for the year ended 31st October, 1962 are being circulated with this statement. Your Board feels that it would be an advantage if the statement, usually made by the Chairman at the Annual General Meeting, were to be incorporated in the report. It would give you a clearer picture of the trends in the year under review and also of the future plans and prospects of the Company.

The unprovoked invasion of India's territory by the Chinese and the cease fire proposals made by them later clearly stress the need for us to be in a state of preparedness to meet any future aggression. This would not, however, deflect us from the task of building up our economy, and of bringing employment and prosperity to our people.

Immediately after the commencement of hostilities I wrote to Government offering the fullest support of your company in the manufacture of any equipment required for defence purposes. This offer has been well received. Your company has made also a donation of Rs. 3,00,000 to the National Defence Fund, and in addition the staff and workmen have contributed Rs. 48,635.

Sales

Sales for the year under review reached Rs. 12,82.28 lakhs against the previous year's sales of Rs. 12,00.85 lakhs. There is thus an increase of Rs. 81.43 lakhs, or 6.78%. This figure does not take into account Rs. 42.98 lakhs being the sale value of completed stock which could not be despatched for lack of transport. Had we been able to despatch this stock the increase in sales would have been over 10%.

Profit, Taxation and Dividend

After providing for depreciation and all taxation including liability for the new super profits tax, the profit will be Rs. 50.42 lakhs as compared with Rs. 70.20 lakhs in the previous year. The details of the various tax provisions are contained in the Board of Management's report. It should, however, be noted that although the gross profit before taxation for the year exceeds the previous year's profit by Rs. 28 lakhs, or 32%, there is a drop in the net profit from Rs. 70.20 lakhs in 1960-61 to Rs. 50.42 lakhs in the year under review. This is due to the additional provision for super profits tax of Rs. 27.12 lakhs, which by itself works out to 17.32% of the gross profit.

Your company has thus not only maintained but has improved upon the pace of progress in the year under report. This is in no mean measure due to the diligence and devotion to duty of the staff and workmen and I am sure you will join me in offering them our congratulations.

You are aware of the serious deprivations in the past on the financial resources of the Company and the investments made by those then in control in spurious shares of some other companies. This led to intervention by Government which appointed a Board of Management to manage the affairs of the company. The uphill task of rehabilitating its finances, and re-equipment and modernisation of its

works have been ably handled by the Board under the wise counsel and guidance of the late Sir Bejoy Prasad Singh Roy. The company has now definitely turned the corner and has regained its position as one of the leading production units in the country. All this has been called for the mobilisation of its exiguous resources in rebuilding its production potential. It has thus been necessary and will continue to be necessary for some time to come to utilise the profits largely for the purpose of expanding and diversifying the production of your company.

The net profits of the company has also been reduced considerably as a result of the additional taxation imposed as an emergency measure. In these circumstances, I consider it only prudent to recommend that the dividend should be left at the same level as in the last year. The financial picture is, however, encouraging and you can look to the future with faith and confidence.

Modernisation and Expansion of Dum Dum Works

During the year under review the 130 ft. extension to the Coach Works was completed and is proving of great assistance in handling the extra work involved in the manufacture of bogies for E.M.U. coaches which were previously imported.

A start was made towards the rebuilding of the main machine and assembly bays of the Wagon Works by the construction of two 80 ft. bays each 225 ft. long. Only one of these bays could, however, be commissioned due to shortages of corrugated sheets, cement and stone chips. The final stage of rebuilding is in hand.

The new Bogie Works was completed and this unit has functioned most successfully.

The completion of the new Works to specialise on the manufacture of diesel road rollers was greatly delayed due to shortages of corrugated sheets, cement and stone chips. I am happy to inform you that these difficulties have now been overcome and this works has been commissioned for operation from the 6th February, 1963. The decision to build this works has indeed proved to have been a wise one. The demand for our rollers has increased considerably, as a part of the defence programme. We are stepping up production and expect to double the previous rate of output to 450 per annum.

The capacity freed in the Mechanical Works where road rollers were previously produced is being utilised to increase output of mechanical components for cranes and sluice gates. The congestion in the Mechanical Works of manufacturing road rollers, cranes and sluice gates has now been removed.

The extension of the two 80 ft. assembly bays in the Structural Works had to be delayed due to shortages of cement and stone chips, but I am glad to tell you that we are now making a start and the driving of the concrete piles has just commenced.

Production

After an interval of 12 months we resumed despatches of electric multiple unit trailer coaches for the Western Railway in Bombay in August 1962. This order, together with a

second and the promise of a third order which is now under negotiation with the Railway Board, will keep us fully occupied on this line of production until the end of 1966.

Production of fully furnished metre gauge passenger coaches was maintained. Orders in hand for the present design of riveted coaches will keep us busy until April 1965 when we will take up production of an all-welded integral design which is now under preparation. We thus have two years in which to plan and re-equip for manufacturing coaches to the new design.

The production of BOX wagons reached the target of 80 Nos. per month.

The output of electric overhead travelling cranes and wharf cranes improved. Fabrication and erection of the vertical wheel gates for the Kosi Barrage were however retarded for a time due to shortage of matching steel.

Production of road rollers increased from 229 to 250 numbers. During the year we commenced the complete manufacture of the transmissions for our road rollers which were previously imported. This has saved valuable foreign exchange.

Future Prospects

The demand for the full range of your company's products continues to be large and with many large projects now being taken in hand I feel our resources will be fully employed for the next five years provided the problem of the supply of matching steel, to which I refer separately, can be solved.

Further Expansion of Activity and Needs for Additional Finance

I regret to advise that our plans to acquire approximately 100 bighas of land at Titagur have had to be abandoned as there were no prospects of our obtaining vacant possession of the land in the near future because of legal proceedings between the owner and the West Bengal Government over ownership of the land. Negotiations are in progress for the purchase of an alternative site which is admirably suited to our needs.

Delay in the acquisition of land has come in the way of our undertaking construction of the new foundry and other works for making machine tools, steelworks duty cranes, etc. Even were the land available, the present burden of taxation, however inevitable it may be, is likely to make it difficult for us to pursue the scheme of expansion actively. It is too early to forecast the future trends in the money market and the reactions of the investing public to the new proposals for taxation. We have, therefore, to wait and see. I do hope the period of uncertainty will be over in the near future and we will be able to resume our programme of rationalisation and expansion.

Matching Steel

The shortage of matching steel continues to be a source of great anxiety and it is the single factor limiting any substantial increase in output. The shortage of matching steel has created a difficult situation not only for us but for other fabricators also. As a result, your company is unable to

make the contribution it is in a position to make to the acceleration of other programmes in the fields of transport and production. Government have been made aware of this bottleneck which has rendered installed productive capacity idle and I trust that they will take necessary steps immediately to remove this imbalance in supplies.

Welding Electrodes

Yet another serious shortage has developed in the supply of hand welding electrodes, the main reason for this being the supply of low carbon rimmed steel for the core wire. Here again I hope positive steps are being taken by the Government of India to solve this problem as the electrode shortage is affecting almost every branch of engineering in India.

Power Supply

Restrictions on the use of electricity for industrial purposes still continue between 7 a.m. and 5 p.m., but it is expected that there will be a progressive improvement towards the end of the year when the new 50 MW Generator of the Calcutta Electric Supply Corporation goes on load, to be followed by the commissioning of the Bandel Power Station in mid-1964.

Coal and Coke

Shortages continued through the year under review but I am happy to report an improvement in supplies. The quality of the coke with its high ash content has shown no improvement.

Apprentice Training School

You will be glad to know that the nucleus of the apprentice training school has now been established. We have recruited 82 new trade apprentices who are undergoing training in the basic workshop under the new Apprentice Act. The second and final stage in the construction of the training school to include lecture halls, etc., will be taken in hand by the middle of this year and completed as expeditiously as possible.

Before I conclude, I should like to reassure you, if indeed this is necessary, that your company has recovered fully from the setback of mismanagement and is now pursuing a progressive policy of modernisation and expansion, the effect of which is being increasingly reflected in the annual accounts presented to you.

INDIAN ALUMINIUM COMPANY, LIMITED

CHAIRMAN, MR. H. V. R. IENGAR'S ADDRESS

The following is the address to members of the Company delivered by the Chairman, Mr. H. V. R. Iengar, at the twenty-fifth Annual General Meeting of Indian Aluminium Company, Limited held in Calcutta on Friday, 26th April, 1963.

I have particular pleasure in welcoming you to this Annual General Meeting of the Company because this is the year when the Company will be celebrating the Silver Jubilee of its founding. The occasion is also a special one for myself because I am meeting you for the first time. I feel that this is an appropriate occasion for making a review of the past and probing a little into the future.

During the twenty-five years of its existence the Company has grown from small beginnings to one of the major business enterprises in India. In the field of production facilities, it has, from a nucleus of a small 2,500-tonne rolling mill at Belur in West Bengal, built up a completely integrated aluminium industry. We have now on stream an alumina plant with an annual capacity of 55,000 tonnes, two aluminium smelters with a total capacity of 26,000 tonnes, two extrusion presses with a capacity of 3,760 tonnes and a powder and paste plant; and the rolling mill at Belur has been expanded to a capacity of 16,800 tonnes of rolled products per annum.

Rise in Sales

In keeping with the growing range of its production facilities, the Company has maintained very satisfactory results in sales. These increased from Rs. 7 million in 1944 to Rs. 105 million in 1962. It is to be particularly noted that the Company has devoted a great deal of attention to the encouragement of new uses of aluminium and, in fact, we can justifiably claim that the acceptance of aluminium in a variety of industrial uses has, to a large measure, been attained through planned and persistent development work carried out by the Company. In doing so, it has helped to create a new consumption pattern for aluminium in this country which is more consistent with those obtaining in other industrially advanced countries.

A survey of the Company's activities which I, as a newcomer, can perhaps do very objectively reveals one dominant feature more than anything else, viz. the consistent and continuous policy of expansion followed by your Company since its establishment

twenty-five years ago. Such a policy would not have been possible but for two factors—the faith the shareholders have always had in the future of the industry and their restraint in the matter of dividends. Since the Company became a public limited company in 1945 it has earned a total profit, after taxes, of Rs. 64 million. Out of this, Rs. 22 million or 35% has been paid in dividends to the ordinary shareholders. After accounting for the usual dividend to preference shareholders, Rs. 40 million or 62% has been ploughed back into the business and utilized for further expansion of the production facilities. This in itself is impressive but we should not forget that the broader equity base created by the ploughing-back of profits into the business has helped the Company in raising loan capital to finance its several expansion programmes. Nor must it be forgotten that for seven years between 1945 and 1954 no dividend was declared for ordinary shareholders and their confidence over this period made possible the subsequent growth and development of the Company.

Spectacular Growth

In the context of the Company's expansion over the years, particular mention has to be made of the role played by the principal shareholder, Aluminium Limited of Canada who hold 59.7% of the preference and ordinary shares together. Our spectacular growth would not have been possible but for the faith and confidence shown by Aluminium Limited in the economic future of India. Some of you will be able to recall that in 1950 when there was a certain hesitancy in the minds of many foreign investors in India, Aluminium Limited demonstrated their confidence in India's economic development and the future of your Company by purchasing a large block of shares which became available at that time. The equity participation and loans from Aluminium Limited have gone a long way to meet the foreign exchange requirements of our expansion projects which have also benefited greatly from our technical collaboration with the Aluminium Limited Group of Companies. In my opinion, there should be more awareness in our country of the value of equity participation of foreign shareholders, as many a project in India today would be stillborn were it not assured of an adequate foreign exchange base to build upon and technical assistance to launch it. That we have been fortunate in having an overseas shareholders which has provided more than a base for our development, merits attention. I may add that I was in Canada a short while ago during the present emergency and I was greatly struck by Aluminium Limited's favourable reaction to the Company's further development programmes and the confidence they expressed in the Company's future.

Foreign technical assistance, valuable as it is, cannot be a substitute for our own efforts in the field of technical development and research. It has been the consistent policy of Aluminium Limited that the Indian Company should be self-reliant to the maximum possible extent. To this end they have thrown open their own facilities in Canada for the training of Indian personnel with the consequence that today the entire technical staff of the Company with the exception of the Managing Director consists of Indian

nationals. The greater part of the technical work in connection with the recent expansions of the Company's activities has been carried out by the Indian staff but, wherever they felt it necessary, they were able to rely on the resources of Aluminium Limited which, because of its vast resources and experience gained in operating in many countries, has unrivalled opportunities of remaining in the forefront in aluminium technology. It would be useful and relatively extremely cheap for us to continue to have the benefit of Aluminium Limited's research facilities and this, of course, will be our policy. At the same time there are a number of directions in which we feel that more and more research should be carried out in India itself. We are therefore in the process of strengthening our technical development departments so that more local research can be carried on in the fields in which the Company operates. Our association with the Aluminium Limited Group of Companies will help us in avoiding duplication of effort.

No review of the past activities of the Company, in particular its whole approach to the problem of development and Indianisation of its technical department, would be complete without a reference to my predecessor, Mr. K. C. Mahindra. Over a period of 14 years he has played a distinguished part in guiding the affairs of the Company and I take this opportunity of paying him, on your behalf, a tribute and our hope that he may long be spared to play his role as an elder statesman in the industrial sector of our economy.

Sense of Urgency

Impressive as our record of development is, we cannot rest with past achievements. India is developing rapidly and, even to maintain our share in contributing to the national economy, we have further to expand our activities. In the context of the present emergency we must do so with a sense of urgency. This sense of urgency is not only to be directed towards further expansion but also towards better utilisation of our present facilities and resources. We have to co-ordinate our efforts with the Government and the new aluminium producers so that idle capacity in the plants imposed by artificial circumstances can be eliminated; so that the industry is able to offer metal and fabricated products in a form matching the demand; and so that a soundly based industry-wise programme of development can be pursued. I will illustrate the need for such co-ordination by mentioning an instance in 1962 when there was a national surplus of metal in ingot form concurrently with a shortage of metal in the form of wire-bar, rod and billet. Similarly, there are other areas in the planning of the growth and development of the aluminium industry where close co-ordination between the Government on the one hand and the industry on the other will bear fruit.

On the future growth of the industry I will content myself by expressing two thoughts. It is quite clear that there would have to be a further large scale expansion of aluminium production in the country, the pace and extent of such increase being determined partly by the needs of the electrical conductor industry and partly by the development of the use of aluminium as a substitute for other scarce metals. But it is not enough that we aim only at a

CAPITAL, 2nd May, 1963.

large scale expansion of aluminium production in the country. A stage has been reached in our development where we must endeavour to reduce costs of production. We are conscious of the factors influencing the industry's high cost of production, particularly the high incidence of the cost of electric power and some of the other locally procured raw materials, but nevertheless we should employ all means at our disposal to achieve maximum economies of production. Latest management methods must be adopted, means of increasing productivity must be developed, and care must be taken to plan new projects on the soundest economic grounds possible. The size of new units must be planned bearing in mind the economies of quantity production. Their location must take into consideration such basic economic factors as transport requirements for raw materials and finished products, local availability of supplies and services, and potential for future expansion. The co-operation of Government authorities at both the Centre and State levels is also essential in viewing these efforts in the light of national rather than regional needs. It is also imperative that we secure the co-operation of trade unions and industrial workers in order to achieve a standard of productivity which is comparable to those outside India. This is essential in the overall interest not only of the Company and its employees but also of the national economy. It is only through the fullest efforts of all concerned that the aluminium industry will ultimately achieve this goal of reducing costs of production.

Since we last met Hindustan Aluminium Corporation Limited has gone into production. The Madras Aluminium Company Limited is expected to go into production next year and we gather a company may soon be formed for exploiting the bauxite reserves of North Kolhapur with the help of power from Koyana. I am sure the industry will be served more fully by the establishment of the new companies, and as the oldest in the field we welcome them. In our view it will be a great advantage if all the aluminium producers found and operated on a comprehensive basis an "Aluminium Development Association" entrusted with the task of developing the use of aluminium and improving the manufacturing techniques of our customers. Such an Association could assist in the dissemination of technical knowledge and in developing economic applications of aluminium and of its further substitution for other materials currently being imported.

Net Profit Up

Turning now to the financial results of your Company's operations in 1962, you will have noted from the Annual Report which has been circulated to you that the Net Profit of the Company increased to Rs. 12.6 million from Rs. 11.1 million in 1961. This increase in profit was realized in spite of an increased provision for Development Rebate of Rs. 6.1 million against Rs. 4.5 million in 1961, and in spite of unavoidable disruption of operations while new production facilities were installed and started up to complete the integrated expansion programme initiated in 1959. Thus the results of 1962 although showing only a modest increase in Net Profit compared to the heavy investments made over the past three years, bore the brunt of the costs of starting up the new production facilities of which the benefits will be felt only over future years. Bearing these points in mind, the financial results of 1962's operations can be considered satisfactory.

Members are aware the Directors have proposed a final dividend of Re. 1.00 on each fully paid Ordinary Share, a dividend of Re. 0.50 on each partly paid Ordinary Share and a dividend of Rs. 0.25 (subject to Income-tax payable by the Company) on each

CAPITAL, 2nd May, 1963.

Preference Share. I now have pleasure in announcing that, as in the two preceding years, the benefits of Sections 85 and 101 of the Indian Income-tax Act of 1961 (corresponding to Section 15C of the 1922 Act) arising out of profits from new industrial undertakings will from new industrial undertakings will be available on these dividends. Accordingly, 42% of all the aforesaid dividends will be exempt from income-tax and super-tax payable by the respective shareholders.

I also have pleasure in informing you that the new Ordinary Shares issued this year qualify for the exemption provided under Section 99 of the Indian Income-tax Act 1961 (corresponding to Section 56A of the 1922 Act) and dividends on these shares, if payable to a company, will be exempt from payment of super-tax.

Additional Taxation

The meeting of the Directors to consider the Accounts for 1962 and to recommend dividends was held, in accordance with normal procedure, in the month of February. It was believed at the time that Government would be compelled to impose additional taxation and that this taxation might press heavily on all sections of the community. No one, however, was prepared for the proposal that was actually put forward by the Finance Minister through the Super Profits Tax Bill. The total quantum of additional tax required to be paid by the Corporate Sector, namely Rs. 25 crores, was not unexpected; and indeed if this had been met by means of an Emergency Surcharge on corporate profits, industry would have had little cause for complaint. The Surcharge would have been of the order of some 6½%. The Super Profits Tax Bill introduced, however, an innovation in fiscal philosophy. I do not propose at this meeting to traverse the various grounds on which responsible business opinion in India has characterised this philosophy as based on a misconception of the structure of business corporations, and as certain to lead both to a discouragement of efficiency and to progressive inability of the Corporate Sector to plough back adequate profits for expansion. If the Bill had gone through in the form in which it was originally presented to Parliament it is estimated, on the basis of forecasts of earnings for the year 1963, that the Company might have to pay in respect of the profits for that year a Super Profits Tax which would have been equivalent to a Surcharge of over 20%. On the basis of the changes which the Finance Minister has recently announced, the Super Profits Tax payable by the Company will be reduced to an equivalent Surcharge of some 12½%. The changes proposed do make improvement and it is a matter of gratification that Government have responded so quickly to the representations made to them by the business community. Nevertheless, the additional burden on the Company still continues to be high and the basic objections to the Bill continue to be valid. It is hoped that an early opportunity will be taken by Government to abandon this Legislation.

The country is passing through a very difficult period and I am sure that I speak for all of you when I assure the Government of our fullest co-operation in carrying out any task allotted to us.

Before I conclude, I am sure that the shareholders would wish me to convey their thanks to the Company's workers and staff who have served the Company ably during the past year 1962 has been a year of considerable activity for the Company and I am glad to inform you that the employees have ungrudgingly fulfilled the tasks allotted to them.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE CENTRAL BANK OF INDIA LIMITED

CHAIRMAN, SIR HOMI MODY'S SPEECH

Summary of the Speech delivered by the Chairman, Sir Homi Mody, at the 52nd Annual General Meeting of the Shareholders of the Central Bank of India, Limited, on Monday, the 29th April, 1963.

During his speech at the Annual General Meeting of the Central Bank of India on Monday, the 29th April, 1963, Sir Homi Mody discussed at length the impact the recent Budget proposals of the Central Government were likely to have on the economy of the country. No one could dispute the urgent need for substantial resources at a time of crisis like the present, but one had a right to enquire whether the levy of new and additional taxes adding up to the colossal figure of Rs. 275 crores—now reduced to Rs. 260 crores—was really warranted and necessary. There were three main reasons for questioning the validity of the enormous additional burden. First, it had been repeatedly proved that the annual estimates presented to Parliament by the Government were largely inaccurate. For the financial years 1959-60, 1960-61 and 1961-62, as years 1959-60, 1960-61 and 1961-62, against the budgeted revenue deficits of Rs. 59 crores, Rs. 61 crores and of Rs. 6 crores, respectively, there had actually been surpluses of the order of Rs. 43 crores, Rs. 51 crores and Rs. 125 crores! Secondly, the public had a right to question whether, as had a right to question whether, as had the experience of the last few years had shown, it would at all be possible to spend, fruitfully and to good purpose, the amount which was sought to be obtained for additional Plan and Defence expenditure. Had we the organisation, material and resources, to achieve such highly inflated targets of expenditure? Thirdly, had the public expenditure? Thirdly, had the public no justification for demanding that the public enterprises, on which the Government had spent such vast sums, should be run with sufficient care and competence? The Reports of the Public Accounts and Estimates Committees of Parliament must be regarded as sufficient condemnation of the way in which the Public Sector was being run.

Super Profits Tax

Taking up the question of Super Profits Tax, Sir Homi said that there could be no justification whatsoever for imposing on the Banking industry, a tax so thoroughly unsound and unusual. The steady level of dividends paid by the banks for several years past proved that their profits had never been abnormal, and to regard them as 'Super Profits' hardly made sense. The dividends paid to the shareholders, a large proportion of whom were men of very modest means, were bound to be affected, with the result that share values would be depressed. The raising of fresh capital so necessary for increasing the credit deposit ratio from the present 3½ per cent to the stipulated target of 6 per cent would become even more difficult. Bonus payments to the staff also would have to be curtailed. Also, the capacity of the banks to play a more purposeful role than before in the development of the country by mobilising the savings of the people would be seriously impaired, particularly as a sizable proportion of savings was likely to be drained away by way of compulsory deposits.

Turning to the agricultural front, Sir Homi drew attention to the fact that the total agricultural production as at June 1962 had remained more or less stagnant. The output of foodgrains declined by 1.1 million tons and it looked as if for the current year food-

grains production might be no higher than 80 million tons—which was almost the same as for 1960-61. In other words, the output of foodgrains for the first two years of the Third Plan had shown no improvement, while the population had increased by 16 millions.

Continuing, Sir Homi said that on the industrial front the index number of production during the first six months of the year recorded an increase of 6 per cent over the monthly average of the corresponding period of the previous year. There was a notable increase in the production of coal, jute manufactures, iron and steel and aluminium and in power generation. Sugar production recorded a fall of 5 per cent and cotton mill cloth of 2 per cent. The output of cement remained practically unchanged. What was, however, disquieting was the fact that a substantial part of the installed industrial capacity still remained unutilised. A recent survey conducted by the Government of 103 industrial units covering a wide cross-section disclosed that in 74 industries the capacity utilisation was below 63 per cent, while in 29 other industries the utilisation varied from 63 to 75 per cent.

Foreign Trade

The country's foreign trade, Sir Homi regretted to note, continued to show an adverse balance with total foreign exchange reserves dropping from Rs. 316 crores at the beginning of the year to Rs. 243 crores at the end. There was no marked improvement in the export trade in spite of the talk about it. The sterling balances had continued to decline and now stood at Rs. 117 crores.

Sir Homi then analysed some of the difficulties faced by the banks during the year. The total deposits of Scheduled Banks had moved up steadily during the first 9 months of the year, but thereafter the pace had slackened perceptibly, with the result that at Rs. 2,035 crores at the end of the year, the increase over the 12 months was only Rs. 210 crores. On the other hand, there had been a steep increase in the volume of Scheduled Bank credit from Rs. 1,276 crores to Rs. 1,421 crores. This slackening in the growth of deposits coupled with the insistent clamour for more bank credit had imposed an unduly heavy strain on the banking system as a whole. Banks, therefore, had to lean more heavily on the Reserve Bank for augmenting their resources with which to meet the genuine demands of trade and industry. However, the Reserve Bank had freely employed the monetary weapon in its armoury with the object of putting a curb on an unbridled expansion of bank credit. The Bank Rate had been raised from 4 per cent to 4½ per cent. In January this year. Simultaneously, the Reserve Bank had effected a further drastic revision in its policy concerning the grant of advances to Scheduled Banks by placing a ceiling on the borrowing limit of banks even if the latter were prepared to pay penal rates of interest. It was not surprising therefore that the call money rate had risen to an unprecedentedly high level of over 6½ per cent in recent weeks. The Reserve Bank have since liberalised their lending policy and granted 'ad hoc' additional facilities to the banks which needed them.

Deposits and Advances

Consequent on the sustained and keen demand for bank credit throughout the year, Sir Homi said, the Bank's Advances remained fairly high, the increase of Rs. 14 crores corresponding more or less to the increase of Rs. 16 crores in deposits. Out of the total Advances, about 41 per cent was absorbed by industry, 42 per cent by Commerce and 17 per cent by other categories. The portfolio could, therefore, be said to be well-balanced.

Sir Homi went on to point out that the gross earnings of the Central Bank had been improving from year to year; there had been an addition of Rs. 5.26 crores or 62 per cent between 1958 and 1962. During the same period, the establishment charges had also mounted

INSIST ON

CALCUTTA ELECTRIC LAMP
WORKS LTD., CALCUTTA-1.

up, the increase, exclusive of bonus, being of the order of Rs. 1.53 crores, or 50 per cent. During the year, the increase was as much as Rs. 56 lacs, of which Rs. 24 lacs represented arrears paid to the clerical and subordinate staff retrospectively for eleven months under the adjustment formula of the Desai Award.

Attention of the shareholders was then drawn by Sir Homi to two new items on the expenditure side of the Profit and Loss Account. One was the sum of Rs. 10,87,000 being the premium paid by the Bank to the Deposit Insurance Corporation, which started its operation in January, 1962, and the other was the Bank's contribution of Rs. 9 lacs to the Prime Minister's National Defence Fund—the largest single contribution to the Fund from amongst banking companies. As far as the Deposit Insurance Corporation was concerned, Sir Homi said that with every addition to deposit resources, the premium payable would correspondingly increase. This item, therefore, was expected not only to be a recurring feature, but also to assume higher and higher dimensions.

Total Earnings

Even though the total earnings over the year recorded an improvement of Rs. 1.54 crores, the net profit, on account of the above factors, had been less than that of the previous year by Rs. 3 lacs.

Out of the declared net profit of Rs. 203 lacs, a sum of Rs. 38,71,500/- had been transferred to the Reserve Fund, taking its total to Rs. 4 crores. Even so, the ratio of Capital and Reserves to Deposits lagged behind the target of 6 per cent prescribed by the Reserve Bank.

Sir Homi then referred to the nationalisation of the Government of Burma of the 24 banking institutions operating in that country. The Rangoon Branch of the Central Bank which had served the people of Burma for many years had accordingly been taken over. Though the terms were not yet settled, the Bank had every hope that the Burmese Government would adopt a reasonable and equitable basis for the valuation of assets, payment of compensation and settlement of other outstanding matters.

Before concluding, Sir Homi made a touching reference to the impending retirement of Mr. N. K. Karanjia. Though as a fitting testimony to the confidence and respect he had earned for himself by his meritorious services for 45 years, the shareholders had, at the last Annual Meeting, unanimously approved of his appointment as Managing Director for a period of three years. Mr. Karanjia had been urging the Board for a long time to relieve him of his exacting office. But the Directors had kept on asking him to carry on as long as he could. In the course of this year, Mr. Karanjia repeated his request and in view of the fact that he had lately been feeling not too well, the Board could not but accede to his request. No one, observed Sir Homi, could have served the institution for the best part of his life as ably, devotedly and unsparingly as Mr. Karanjia had done. While, therefore, the Board greatly regretted his retirement, they were hoping that even after he laid down his office, he would make available to the Bank in an advisory capacity the benefit of his rich experience, mature judgment and wise counsel.

Sir Homi concluded by expressing the hope that though difficult times were ahead, if the Bank continued to enjoy the confidence and co-operation of the public, it would maintain its position as the largest banking institution in India in the Private Sector.

Note: This does not purport to be a record of the proceedings at the Annual General Meeting.

BICC

SIR WILLIAM McFADZEAN'S STATEMENT

The following are extracts from the circulated Statement of the Chairman, Sir William McFadzean, C.A., Companion I.E.E., on the 1962 Accounts.

1962 was not an easy year in many respects but overall the BICC Group made steady progress and further expanded its interests.

As a result of the change in content of our sales, the enjoyment of more realistic prices for some of our products, and the fact that we were able to contain increased costs through still further efficiency, Surplus on Trading improved by some £1.8 million.

HOME AFFAIRS

Power Cables. Substantial orders were received from the Nationalized Industries and from overseas, and all our home factories operated at a high level of activity, particularly in the high voltage cable field.

Important overseas orders include those from the China Light and Power Company for 66 kV 3 core cable, value £409,000, and for 3,000 yards of 33 kV, 3 core cable supplied on a drum 15 feet diameter and weighing 66 tons gross; from the Electricity Commission of New South Wales for 132 kV, 3 core cable, total value £271,000; and from Electrim, Poland, for 150 km of 15 kV cable, value £173,000.

Construction. Our Construction Company, wholly concerned with the installation and/or erection of our Group products, had another successful year and now employs some 9,000 people throughout the World.

Overseas, cables were supplied and laid in Australia, Malaya, Hong Kong, Pakistan, Portugal and South Africa.

As widely announced in the Press, an agreement was concluded with British Railways for the design, supply and installation of overhead equipment for the electrification of the main-line from Euston to Crewe. This order for approximately 1,000 track miles, is the largest of its kind ever to be placed by a railway undertaking and we were indeed proud to be entrusted with it.

Overseas our main activity in railway electrification has again been in India where we have been fully occupied. It is gratifying to report that further orders have been received with a value of over £24 million, bringing our total such orders up to some £8 million over the last few years. It is

a striking fact that when these orders have been completed there will be more a.c. railway electrification in India than in any other country—the great majority installed by British Industry and won against fierce international competition.

The export market was very active with orders received from 44 countries including five 265 foot towers supplied for the new television network in Northern Nigeria and erected by our Nigerian subsidiary.

OVERSEAS AFFAIRS

For 1962 the value of export orders and sales effected abroad totalled some £47 million or 31% of our total sales. This does not include the value of our products sold to other manufacturers and incorporated in the goods they send overseas—a substantial contribution to exports which unfortunately cannot be accurately assessed.

All our main companies overseas in Australia, Canada, India, Malaya, Rhodesia and South Africa had good years and our overseas operations in general made most satisfactory progress.

Of particular satisfaction to us was the swing by our Canadian Company from a loss in 1961 to a reasonable profit in 1962, and the further marked progress achieved by our operating units in Australia.

To the latter we have been privileged to add, towards the end of the year, Metal Manufacturers Ltd. and its Subsidiaries. This Company was started in 1916 with an initial Capital of A£80,000 and with the old B.I. Company as one of the five original shareholders.

Over the years we have added to our shareholding and have acted as technical advisers and sales agents for many of their products. Together, branched into new fields in Australia, and today the Issued Capital of Metal Manufacturers is A£8,000,000. Our employees in Australia now number 7,500 and the Group Net Assets employed there exceed £23 million sterling including some £20 million relating to the new members of the Group.

Mr. M. L. Baillieu, the Chairman of Metal Manufacturers, and all his colleagues share our view that this will be to the benefit of us all in facilitating an even closer co-operation and

co-ordination of overall effort in Australia.

We are determined too that this is and will be developed as an Australian/British partnership, and the fact that there are large and influential Australian shareholdings is something we greatly value.

And so we give further proof of our belief in the Commonwealth in which the BICC Group today has such substantial investments.

But this does not blind us to the necessity and duty of our endeavouring to increase our exports and business everywhere and we have been active in most countries of the World. I mentioned last year the steps we had taken to increase our business in Europe. The breakdown of the Brussels negotiations was a great disappointment to us, but far from relaxing we are pursuing our efforts with even greater vigour, and I am glad to say with increasing success.

FUTURE PROSPECTS

Nothing is surely of more fundamental importance to the supply of the material needs of the people of the whole World than the provision of electricity for power, light, heat and communication purposes. What is principally required of us in BICC is that we should be able successfully to meet competition from home and overseas companies within our field in supplying the means of providing this vital source of energy. In 1962 we feel we have made further good progress to this end.

As regards 1963, the abnormal weather in January and February has very severely restricted the activities of our Construction Company in the United Kingdom and has caused a build-up of stocks, particularly power cables, awaiting installation. We shall, of course, do our utmost to catch up with this backlog, but with the heavy programme of work we have on hand it will take time. Fortunately many of our other activities were not affected and in the absence of any further exceptional circumstances, I am confident that our results for the year as a whole will be satisfactory.

I am equally confident of the future of the BICC Group, for we are in grand fighting trim, with ever increasing efficiency our constant aim.

BICC

consists of 66 Operating Divisions and Companies, employing 46,000 people in manufacture in 16 countries and trading in over 100.

SALES amounted to £153 million of which £47 million or 31% represented Direct Export and Sales of Overseas Concerns.

TRADING PROFIT, and Investment Income amounted to £8.580 million, but after providing for Taxation and crediting Exceptional Items

NET AVAILABLE PROFIT of the Group was £5.036 million.

TOTAL ASSETS EMPLOYED, including those of the new Australian Members of the Group are £140 million.

PROVIDED BY Profits retained in the business, Debenture Loan Stock and Share Capital owned by some 42,000 Stockholders.

New Delhi

U.S. STEEL MISSION ON PROBLEMS OF BOKARO PLANT

(FROM OUR NEW DELHI CORRESPONDENT)

THE U.S. steel mission's report on the Bokaro project is now available. It makes no recommendation that the U.S. Agency for International Development should assist the project financially. Its purpose is to help the A.I.D. in deciding on its response to the Indian request for assistance. The report analyses the technical and economic aspects of the proposed steel plant and discusses the problems which are likely to be encountered.

Bokaro, which is in Bihar State, is about 150 miles north-west of Calcutta. The plant there will be India's sixth integrated steel mill and the fourth built and operated in the public sector. An integrated steel mill is one which undertakes the production of steel from the primary raw materials stage to the finished products stage. The Government of India wishes to start the construction of the Bokaro steel plant during the third five year plan.

For its services under the contract with the A.I.D., the U.S. Steel Corporation received \$686,344. Sub-contracts for parts of the survey work were performed by the Bechtel Corporation, the Bessemer and Lake Erie Railroad Company, Koppers Company, Inc., Arthur G. McKee and Company, and the Stone and Webster Engineering Corporation. In addition, the engineering and cost data were furnished to the U.S. Steel Corporation by 32 other American firms. The contract was awarded in April 1962. The principal findings of the report, which are briefly stated here, are the following:

The report stresses the fact that India needs greater steel-making capacity, even after taking into account the planned expansion of the existing plants. Bokaro can partially fill the need by a three-phased programme providing 1.4 million metric tons of ingot capacity by 1971, 2.5 million tons by 1975 and 4 million tons by 1980. The tonnage of products made from these ingots will be 1 million tons in 1971, 1.8 million tons in 1975, and 2.9 million tons in 1980.

A successful plant in Bokaro will require (a) qualified operating personnel, both Indian and American, (b) a steady supply of important raw materials which should be brought under ownership and control of the Bokaro steel plant management; and (c) adequate provision—in some cases by agencies other than the Central Ministry of Steel and Heavy Industries—for (1) adequate rail transport, (2) adequate supplies of power and water, the (3) expansion of coal mining and washing facilities, and (4) adequate highways in the area.

Total Investment

The total investment in phase I will be \$919,428,000, of which the foreign exchange component will be \$512,588,000. For purposes of analysis, the U.S. Steel Corporation assumed a 20-year loan at 5 1/2 percent interest. The total investment over a period of years will be \$1,504,766,000, of which \$891,522,000 will be from external sources and \$613,244,000 from Indian sources. Other items cited in (c) above are estimated at \$133,857,000, including the foreign exchange needs not yet determined.

The Bokaro project will not be profitable in the first phase. But it will

become profitable with full production in phase II. Manpower problems are of "special importance" to Bokaro, the report says. "Unless fully qualified personnel, whether Indian or American, could be supplied right from the start of the project's implementation, there would be grave risks—as can be seen from the experience of other recent steel plants in India—that very costly equipment would be unproductively used or even damaged. And, on the other hand, whatever American personnel might be needed during the early period of the plant's existence should be replaced by Indians as rapidly as possible in the interest of operating economy."

"Under the most favourable circumstances at present, the manning of a sixth integrated steel plant will be extremely difficult." This is because a large number of technical personnel will be needed and the only source of experienced personnel is the five existing steel plants. These, however, have expansion plans of their own. "Thus Bokaro will, to a very large extent, have to develop its own Indian organisation by hiring untrained people and training them for their respective jobs. A considerable number of Americans familiar with U.S. equipment and methods will consequently be required to provide this training and to assure proper operation until Indian personnel are fully qualified."

Supply of Labour

The report says that the Bokaro area has virtually no useful labour supply except in lowest categories. It is rural, remote and poorly served by transport facilities. It is unattractive to the great majority of potential Indian employees, who will come from elsewhere. "The situation is even worse for American employees... and will make it difficult to attract good expatriate personnel." Thus an adjacent townsite must be built and operated with medical, recreational, educational, transport and shopping facilities.

Because of the present characteristics of Indian labour concerning physique, discipline, language and other factors as well as special considerations arising from extensive Government involvement in labour relations matters, it is necessary to prepare an overall plan for manpower. The plan suggested by the U.S. Steel Corporation consists of eight closely co-ordinated programmes in manpower and recruitment, training, personnel placement, use of personnel resources, compensation, employee and union relations, safety, and employee communications. Its implementation will have a direct effect on the profitability of the mill.

A ten-year American management contract is assumed for the project, although some technical help will be necessary for a longer period. Twenty Americans will be needed immediately, increasing to 670 in 1968—the expected year for starting production—decreasing to 40 in 1977. The peak figure includes 270 management and supervisory personnel and about 400 production and maintenance workers. The Indian work force is expected to be about 8,200 for phase I. The American management contract is a prerequisite to attaining 100 percent capacity four years after the work starts and to maintaining

a relatively small and efficient work force. The construction of the project will involve about 20,000 men.

Raw Materials Needed

The raw materials needed for the project are iron ore, limestone for blast furnaces and for steel making, and metallurgical coal. Among important assumptions made for the supply of iron ore and blast furnace limestone are that mining and quarrying will be integrated with steel-making operations. The supply will be under the management of the Bokaro plant and should be available at cost. Among assumptions about the supply of limestone for steel making and coal are that they will be purchased at market prices, largely from Government agencies.

The mission says in its report: "It became apparent to us at an early stage in our investigation that wholly insufficient consideration was being given to the raw materials aspect of the Bokaro project. This deficiency appears to be due primarily to the fact that present plans are for the three principal raw materials to be supplied by the three separate Government entities. No individual or group with overall steel making raw materials experience has been made responsible for co-ordinating Bokaro's raw materials programme. We do not believe that any modern integrated steel project should be undertaken in any country without such co-ordination of raw materials planning."

"In addition to this lack of co-ordination, work in relation to raw materials has lagged behind planning of other aspects of the Bokaro project. Arrangements on iron ore and coal sources are still undergoing important changes and the exploration work on the proposed source of limestone is only just beginning. We, therefore, found it necessary to make certain major assumptions on the supply of raw materials for Bokaro. We wish to stress this point and emphasise the importance of verifying the reasonableness of these assumptions or developing adequate alternatives if the project is to be undertaken. This work of verification will be a considerable undertaking in terms of personnel, time and funds; from the standpoint of time alone, for example, it will take two years or more, to find satisfactory long-term solutions to the basic raw materials problems."

It is considered, however, that "the adequacy of the transport system is far from assured and that the fulfilment of present plans for construction of track and supply of rolling stock is a prerequisite for efficient and fully productive operation of Bokaro." Further warnings are firstly, "there will be very little point in granting steel mills top priority if the rest of the economy has to suffer such shortages of transport that the steel produced cannot be further processed and distributed for consumption;" and, secondly, steel, power and transport development programmes are absolutely inter-dependent and must proceed at equal pace.

The mission has accepted the assurance of the Central Minister of Steel and Heavy Industries that he is aware of the necessity to work closely with the Railway Board and that the steel programme should not be al-

lowed to suffer for want of transport. But it stresses "that the plant's successful operation will be gravely prejudiced if transport plans are not fulfilled."

Priority for Power

As for power, the report assumes that priorities necessary for ensuring adequate power for Bokaro will, in fact, be granted. It is further assumed that the report of the Sachdev committee recommending priority for railway traction, coal, iron and steel production and waterworks, will be implemented. New generating capacity at points in the D.V.C. system is essential and must be installed at least concurrently with the construction of steel plants.

As for water, the key element here is the construction of a dam and reservoir in Tenughat by the Damodar Valley Corporation for needs of Bokaro and other new industries, in addition to a supply canal to Bokaro. It is also stressed that "investments and construction programmes must, therefore, be carried out in time to meet Bokaro's requirements and closely co-ordinated with the construction and step-by-step expansion of the steel plant."

INDUSTRIAL LICENSING

Policy Clarified

The Prime Minister, Mr. Nehru, made a statement on industrial licensing in the Lok Sabha last week. He categorically denied that there had been any change in the official policy. He explained the mechanism of checks and counter-checks to ensure its correct implementation. Mr. Nehru referred to a statement laid before Parliament earlier in April. It gave the analysis of licences issued to certain leading industrial houses in 1960 and 1961. The Prime Minister said: "I have had figures collected for 1962. During these three years, out of the total number of 4,211 industrial licences issued, the number of licences which had gone to ten leading industrial houses were 182. These figures include not only new industrial undertakings, but also projects for substantial expansion of existing undertakings in order to ensure economies in size."

"In considering India's industrial policy, we should not confine ourselves to the sector which is governed by the Industries (Development and Regulation) Act. Outside this, there is a large and growing sector of small-scale industries which, collectively, are of considerable economic significance. The number of such small-scale units which have been registered up to date run to over 52,000. There are, in addition, a very large number of such units which function without being registered. It is the Government's policy to give to this sector all the help that is possible to make it expand, although I must admit that difficulties of foreign exchange tend to affect this sector as badly as the large-scale industries."

"The Government's industrial policy is clear and the machinery for its implementation by way of licensing appears to be adequate. As the House is aware, we have appointed a committee with Professor Mahalanobis as chairman, to study, among other things, the extent to which the operation of the economic system has resulted in the concentration of wealth and the means of production. When the report of that committee is available, there will, no doubt, be further opportunity to consider whether any changes are called for in the policies or procedures relating to industrial licensing."

Replying to supplementaries, the Prime Minister said it was unfortu-

nate that there should sometimes be differences of opinion between two Ministers in the same Ministry. "On the other hand, there is one healthy aspect of it, any mistakes committed are found out."

In this case, Mr. Manubhai Shah, who is a Minister of State in the Department of International Trade has made certain allegations against his senior partner, Mr. K. C. Reddy, Central Minister for Commerce and Industry. But the Prime Minister ignored the basic issue in an attempt to please all sides. The basic issue is that in a Cabinet form of Government, Ministers do not lodge complaints against their colleagues, much less find fault with the policies of their senior partners. It is always open to a Minister to disagree with the latter. But in such cases, the Cabinet is the final arbitrator, and a Minister failing to convert his colleagues to his viewpoint has either to abide by the decision of the Cabinet or go out of it altogether.

The case of Mr. Manubhai Shah versus Mr. K. C. Reddy stood on a different footing. Not being a Cabinet Minister, Mr. Manubhai Shah, however, had a remedy in asking the Cabinet to allow him to place his viewpoint before it. He, however, chose a different method. He wrote to the Prime Minister, bringing to his notice some deviations made in the industrial policy resolution, since he had left that wing of the Ministry. In his reply, the Prime Minister pointed out that no undue favour had been shown to the ten leading industrial houses. Secondly, the Mahalanobis Committee, whose report, he said, was expected shortly, should indicate whether "the operation of the economic system has resulted in the concentration of wealth and the means of production."

It is, however, not yet known, whether the Mahalanobis Committee will confine its enquiry only to industrial and commercial houses or extend it to others. It has also been considered whether it is the licensing policy or the larger policy of closed market which has aggravated wealth inequalities. Meanwhile, Mr. Manubhai Shah has done some service in raising these issues, for an enquiry is proposed to be made into the whole mechanism of export promotion vis-à-vis concentration of wealth.

EAST PAKISTAN

Helicopter Service Planned

While India is busy making roads and railways in the border in order to make her north-east frontier more accessible from the rest of the country, Pakistan is launching a helicopter plan for East Pakistan, since further extensions of surface transport there will be exceptionally difficult and costly. For example, a hundred miles of railway going east or west may require up to 75 bridges in its construction, apart from having to divert many miles to find suitable sites for bridges. According to reports, the Pakistan Government has now approved of a plan for a scheduled helicopter service beginning from October next. It is planned initially to purchase two twin-engine turbine helicopters with 25 seats.

Sites for about 20 helicopters have been surveyed throughout East Pakistan. It is proposed to expand the services to all the points within a year bringing even the most remote point on any border within an hour and a half of Dacca—the capital. A striking example of the helicopter's time-saving advantage is on the jour-

ney between Dacca and Khulna, which by surface transport takes over 21 hours and only 37 minutes by a helicopter.

I.A.C.

Acquiring Caravelles

The Indian Airlines Corporation will shortly add three Caravelle VI-N passenger aircraft to its fleet. The Government of India has authorised the Corporation to enter into negotiations with the manufacturers, Messrs Sud Aviation of France. The aircraft are expected to be available for operation by the end of the current year. A twin-jet aircraft powered by two Rolls Royce engines, the 80-seater Caravelle has a cruising speed of 496 miles an hour and can cover the distance between Bombay and Delhi in about 1 hour and 45 minutes. Plans for the operation of the Caravelles are already under way. Since the three new acquisitions will not be adequate to meet the entire traffic demand on the trunk routes, it is tentatively planned to operate them initially on the "very high density" routes and supplement the capacity with Viscounts. The latter which will be released by the introduction of the Caravelles—these are not expected to be many—will be used on the longer regional routes. These, together with the Friendships and a few Dakotas, will cater largely to the requirements of the regional routes until the Corporation is in a position to secure additional aircraft.

S.T.C.

Exporting Iron Ore

The State Trading Corporation will export 800,000 tons of iron ore to Czechoslovakia during April 1963-March 1964. An agreement to this effect was signed by Dr. Husek on behalf of Messrs Metalimex Czechoslovakia.

Czechoslovakia is the second largest buyer of Indian iron ore after Japan. India's iron ore export to that country last year amounted to 670,000 tons.

ROURKELA STEEL

Credit for Expansion

The West German Economics Minister, Dr. Ludwig Erhard and the Government of India's Central Minister of Steel and Heavy Industries, Mr. C. Subramanian, recently signed in Bonn the Indo-German financing agreement for expanding the Rourkela steel works. Under this agreement, West Germany will contribute Rs. 48 crores worth of deutschemarks in fresh credits for the expansion plans. The latter will increase Rourkela's output to 1.8 million tons a year.

The agreement will help execute delivery orders which have been awarded by Hindustan Steel to German supplier companies earlier this year. These orders are designed to increase Rourkela's installed output potential from 1 million to 1.8 million tons of pig iron a year by the end of 1968. The firms include Krupps, A.E.G., Demag, G.H.H., Koppers, Ludwig, C. Otto, Siemens, Siemens and Voest of Austria.

RUSSIA

Credit for Projects

The following projects have been financed with Russian credits:

Credit	Amount of loans (Rs. crores)	Projects
Credit for Bhilai	64.74	The Bhilai steel plant.
Credit for industrial projects	59.53	The heavy machine-building plant, coal mining machinery plant, special glass factory, Korba coal mining projects, and the Neyveli lignite thermal power-station.
Credit for drugs projects	9.52	The antibiotics project, synthetic drugs project, and surgical instruments project.
First credit for third plan projects	178.58	Expansion of the Bhilai steel plant, expansion of the Neyveli power plant, Singrauli power-station, expansion of heavy machine-building plant, precision instruments project, expansion of the coal mining machinery plant, expansion of Korba thermal power-station, Barauni oil refinery, heavy electricals plant, and exploration of oil and gas.
Credit for the Barauni refinery	11.91	The Barauni oil refinery.
Second credit for third plan projects	59.53	Bhakra right bank hydro-electric power-station, oil refinery in Gujarat, coal washery in Kathara, refractories plant, and exploration, development and production of oil in Cambay, Ankleshwar and in other areas.

A.I.D.

Loan for Power Project

The U.S. Agency for International Development has recently approved in principle a loan of \$16 million for the second phase of the Chandrapura power project. The terms of the loan are likely to be as follows: The credit fee on the loan shall be three-quarters of 1 percent a year on the disbursed balance of the loan. The principal shall be repaid within 40 years from the date of the first disbursement under the loan, including a grace period of ten years. Provision shall be made for repayment of the principal and payment of credit fee in U.S. dollars. Equipment, materials and services, except marine insurance to be financed under the loan, shall be procured in the United States.

The first phase of the Chandrapura power project envisages the installation of two units of 140 MW and the second phase will add one more unit of 140 MW. The unit under the second phase is expected to be commissioned by the middle of 1966.

INDONESIA

Trade Pact Signed

A three year trade agreement between India and Indonesia was signed here last week. It envisages the expansion of trade between the two countries on a gradually increasing basis. The total trade to the extent of Rs. 13 crores has been provided for in the first year of the agreement, compared with the present level of about Rs. 7 crores. Provision has been made for half-yearly reviews concerning the implementation of the agreement.

The principal commodities which India will buy from Indonesia are petroleum products, copra, rubber, palm oil, metal concentrates and other agricultural products. Indonesia will buy engineering equipment, machinery, textiles, jute goods, paints and varnishes, chemicals and drugs and other manufactured articles from India.

YUGOSLAVIA

Trade Talks with India

A Yugoslav trade delegation led by Mr. Faust Ljuba, Deputy State Sec-

retary for Foreign Trade, has arrived here to discuss the possibilities of developing trade between India and Yugoslavia on a long-term basis. It is expected to be in India for about three weeks during which it will visit various industrial centres. Trade between India and Yugoslavia has increased considerably in the past two years. The total trade both ways is now of the order of Rs. 20 crores.

IRAN

Trade Prospects with India

Trade talks were held here last week between an Iranian delegation and the Government of India. The progress in the implementation of the current Indo-Iranian trade agreement, which is due to expire on 15th August, 1963, was reviewed and preliminary talks on a long-term trade agreement were held. It was agreed that further talks should be held in Teheran before the expiry of the present agreement.

COAL

Credit Guarantee Scheme

In order to assist the coal industry to secure the matching rupee finance, which may be needed for using the World Bank loan of \$35 million (granted for the development of collieries in the private sector), the Central Government has formulated and sanctioned a scheme for a partial guarantee of advances given by credit institutions to these collieries. The terms and conditions under which this guarantee is to be given are as follows:

The eligible credit institutions, which can apply for and obtain a guarantee in relation to any loan advanced by them, include 58 leading Indian banks, 15 State Financial Corporations (including the Madras Industrial Credit and Investment Corporation), the Industrial Finance Corporation and the Industrial Credit and Investment Corporation of India; the eligible institutions will bear 35 percent of the loss, the balance of 65 percent being borne by the Central Government.

The guarantee will become effective immediately in the event of a

CAPITAL, 2nd May, 1963.

default and the amount will be paid within 20 days of the default.

The loans and advances will be guaranteed for periods ranging from one year to ten years at the option of the borrower.

A service charge of three-quarters of 1 percent a year on the amount of the loan or advance as sanctioned will be levied to cover administrative expenses; and the guarantee scheme will be operated by the Refinance Corporation for Industry Ltd., as the Central Government's agent.

JAPAN

Electric Locos Ordered

A formal order for the supply of 45 electric locomotives has been placed with a group of three Japanese firms led by Messrs Hitachi Ltd. The contract will be signed as soon as the Government of Japan's approval for financing it from the second yen credit is received. The broad details of the contract are as follows:

Cost: The total c. and f. value of the order is Rs. 4.87 crores, which includes a rupee content of Rs. 10.31 lakhs towards the charges of technical staff and the agent's commission in India. Each electric locomotive (without spare, etc.) will cost Rs. 10.11 lakhs, ex-works.

Terms of payment: (i) 30 percent of the total f.o.b. cost as soon as the import licence is issued and on furnishing the necessary bank guarantee.

(ii) Balance payment on production of necessary shipping documents and subject to furnishing a bank guarantee for 10 percent of f.o.b. cost.

(iii) Cost of ocean freight incurred has to be paid in yens on production of the shipping documents.

Delivery schedule: The first two locomotives are to be shipped by January 1964 for prototype trials and the remaining 43 from September 1964 to January 1965.

Indigenous content: The firm has agreed to utilise components partly or wholly, to the extent available, from indigenous sources such as air blast circuit breakers, tap changers, pantographs, centre buffer couplers, compressors, vacuum exhausters, brake equipment, cattle guard and side buffers. The value of all the above components forms about 13 percent of the cost of locomotives, but the exact amount of credit to be given in the contract value cannot be precisely assessed at present.

These locomotives are 25 K.V. A.C. B.G. freight type developing 3,280 horse-power and weighing about 85 metric tons. They will be equipped with silicon rectifiers and dynamic braking.

N.P.C.C.

New Works in Agra

The National Projects Construction Corporation has set up a workshop in Agra. It undertakes repairs of machinery and will also in due course manufacture such of the spare parts as can be economically manufactured in the workshop. As a result of the expansion of the Corporation's activities, it will also be used as a base for the fabrication work and the erection of steel structural works.

Machinery and equipment worth Rs. 40 lakhs will be purchased for the latter purposes. With the help of this equipment, it will be possible to achieve the following targets: fabrication 4,000 tons a year, and erection 6,000 tons a year. It is expected that with gradual development and increase in the workload, it will

be possible to reach an "erection" target of 15,000 tons a year in due course.

RAIL-WAGON TIPLERS

Orders for U.K. Firm

Four orders for Rotaside rail-wagon tippers worth £216,000 have been received from India by Strachan and Henshaw Ltd of Bristol. The tippers will be used to unload coal from double-bogie wagons at power-stations in Harduaganj, U.P., and Durgapur, West Bengal, and by the Tata Power Co. in Trombay, near Bombay. The orders are a result of the introduction of rapidly increasing numbers of large double-bogie mineral wagons on the Indian railway system.

A further two high-speed Rotaside tippers for 90-ton wagons are being manufactured under licence in the U.S.A. for installation at an ore-shipping plant at Visakhapatnam port. These machines will be capable of unloading 1,500 short tons of iron ore an hour.

MAZAGON DOCK

Expanding Repair Facilities

A scheme for expanding the facilities at the Mazagon Dock Yard has been approved by the Government and work on the initial phase has been taken in hand. Although mainly designed to allow heavier new construction, ship repair facilities will also be augmented. The estimated cost of the expansion programme is Rs. 3.5 crores, with a foreign exchange component of about Rs. 1.28 crores.

STEAM TURBINES

Imports from U.S.A.

Fourteen steam turbines are to be imported in bulk for various thermal power projects under A.I.D. and Export-Import Bank credit from the United States. These are to be progressively shipped from September 1963 to December 1964. Normally, it takes two months from the date of shipment for the stores imported from the United States to reach India.

POWER

Micro-hydel Scheme

The following micro-hydel schemes have so far been approved for implementation during the third plan: (i) Uttar Kashi (2,100 kW) in U.P., (ii) Chamoli (2,100 kW) in U.P., (iii) Bhedaghat (2,120 kW) in Madhya Pradesh, (iv) Bharmour (15 kW) in Himachal Pradesh, and (v) Bomdila (3,30 kW) in N.E.F.A.

SHIPPING CORPORATION

Construction of Colliers

The Shipping Corporation of India Ltd is negotiating with Garden Reach Workshops, Calcutta, for the construction of colliers for the coastal trade. The Central Ministry of Home Affairs has also placed on order with the Garden Reach Workshops for a touring vessel for the India-Andaman service.

I.I.S.C.O.

New Coal Washery

The Indian Iron and Steel Co. Ltd has been permitted to set up a coal

NEWSPRINT

Import Programme

During 1963-64, 83,000 tons of standard newsprint will be imported from Russia, Poland, Scandinavian countries and Canada under agreements concluded with suppliers in those countries. In addition, 5,000 tons of glazed newsprint will be allowed for import by actual users from the general area.

MACHINERY

Production Statistics

The following statistics will show production in 1961 and 1962 in relation to some important items of industrial machinery:

Name of industry	1961	1962
(In Rs. crores)		
Textile machinery	11.5	14.00

SCOOTERS, MOTOR-CYCLES

Importing Components

The foreign exchange released for the import of components for manufacturing scooters, motor-cycles and three-wheelers during 1961-62 and 1962-63 is as follows:

Year	Value of foreign exchange release
1961-62	Rs. 1.45 crores
1962-63	Rs. 1.93 crores

The production target for scooters, motor-cycles and three-wheelers by the end of third five year plan is 60,000 numbers a year. Production during 1962 was 25,002 numbers.

The existing manufacturers have been assisted with foreign exchange required for the import of capital goods to enable them to quicken the implementation of the phased manufacturing programmes. Meanwhile, necessary foreign exchange is being made available to the industry for importing components. In addition, a few more firms have been licensed for manufacturing motor-cycles, scooters and mopeds during the past two years.

JAPAN

Industrial Surveys

Two productivity teams sponsored by the Japan Productivity Centre

visited India during March 1963. They visited a number of countries in south-east Asia to study the general industrial situations and to explore the possibilities of mutual co-operation in the region. The teams will submit their reports to their sponsor—the Japan Productivity Centre.

FERTILISER

Plant in Private Sector

The long-drawn discussions for setting up a fertiliser plant in the private sector in Visakhapatnam have been finalised. The Central Ministry of Finance, it is reported, has given its consent to the scheme. Parry and Company has been licensed to set up a factory with financial and technical collaboration from California Chemicals Company and International Minerals and Chemicals Corporation of the U.S.A. It is proposed to produce under the project about 80,000 tons of fixed nitrogen a year in the form of 365,000 tons of ammonium phosphates of various grades and 16,500 tons of urea. The raw material for the project will be naphtha.

Caltex, it is reported, has given up duty protection. The other two oil companies, namely, Burmah-Shell and Esso had already done so last year.

London

U.K. NATIONAL INCOMES BODY CONDEMNS WAGE PACTS

(FROM OUR LONDON CORRESPONDENT)

THE National Incomes Commission, in its first report, just published, condemned the 40-hour week agreement in the Scottish building industry and rebuked the Scottish plumbing employers for not consulting other sections of the construction industry before conceding a similar agreement. The Commission's recommendations are:

(1). That immediate steps be taken to bring about an effective re-arrangement of the employers' side of the construction industry to allow proper prior consultation.

(2). That both sides of the construction industry should tackle the question of overtime working in order to remedy abuses, reduce costs, and promote greater efficiency and output.

(3). With a similar aim, both sides should consider abuses of the payment by results system and other extra payments.

(4). That although no justification exists for the Scottish building agreement or for any extension of it into England and Wales or into civil engineering, it has been made to operate in Scotland from November.

"The benefit of this agreement in terms of increased wages, coupled with the sliding scale increase in February 1963, will amount to a total increase in the year 1963 of approximately 9 percent. We, therefore, recommend that this should be regarded concerning about two-thirds of it as a payment in advance, and that it should be accepted as covering a period of about three years.

"It should be clearly understood that in making this recommendation, we are not intending to convey the impression that we exclude the possibility that the agreement might, with the consent of both sides, be abrogated. Nor are we suggesting that the agreement, coupled with its treatment in the way we have recommended, should be taken as a

precedent to be adopted elsewhere. We are doing no more than trying to indicate the best course to be adopted after an agreement which is contrary to the national interest, has been made."

(5). There are two possible courses for the building industry in England and Wales and for the civil engineering industry nationally, since at present, there is no practical difference between a straight wage increase and a reduction of hours.

One is that there should be a straight wage increase not exceeding in total the long-term rate of increase in national production, or, if preferred, of annual increases of the same order for an agreed period of years.

Annual Wage Increase

The second is to forgo annual increases in wages calculated at a level equivalent to the long-term rate of increase of national production until their accumulation equals the increase in wages involved in reducing the normal working week by two hours. The Commission prefers the first, saying it recognises the principles of an incomes policy, avoids deferment of benefit, and even out wage increases.

The report, after describing procedural arrangements, has a long chapter on incomes policy generally. This quotes the relevant sections of recent Organisation for European Economic Development and Organisation for European Co-operation and Development reports on rising prices and price stability, and points out that the cost of each unit of national production in 1961 was, on average, 59 percent greater than in 1950.

In accepting the principle that money incomes should not rise quicker than the long-term rate of growth in national productivity, the Commission acknowledges that an incomes policy is not an arithmetical exercise, but must be sensitive and flexible, ready to give effect to exceptional cases. But it must be observed that, to the extent that these cases exist and are made effective, other cases not in this exceptional class should be the subject of smaller increases, if the requisite balance is to be maintained. Their justification, therefore, must be sought, found, and be seen to be found in some circumstances truly of an exceptional nature."

In deciding on a guiding light for wage increases, the report has followed the line taken by the Chancellor in his Budget speech, preferring this to the evidence given by the Treasury at the Scottish building and plumbing hearings. No actual reference is made to the Budget, the report arguing instead on the two views put to it directly. The Government urged at the hearings that the Commission should work on "actual performance rather than promise, until we can feel more confident, as a nation, that the necessary conditions for faster economic growth will be met."

This led to the former guiding light of 2 to 2½ percent. But the Director of the National Institute of Economic and Social Research thought this was not realistic in creating an incomes policy, and that in order to avoid the disastrous consequences of not getting such a policy, it would be

"expedient to take a figure which had some real chance of general acceptance." He suggested 3½ percent, and said it would then be for the Government to secure that the growth in productivity was pushed up to that figure. The Commission recognised "the caution and the logic of the course advocated by the Government spokesmen," but "were impressed by the purely practical considerations" from the Director of the National Institute. Any figure would be subject to revision from time to time, but at present "for the limited purpose for which we have found it necessary to bear in mind a standard to represent the long-term rate of increase of national production, we are inclined to assume a higher range than 2-2½ percent and to adopt the range of 3-3½ percent."

The report then examines the "traditional" collective bargaining system, and says that the way this has worked hitherto is inadequate to secure that an agreed increase shall not be of an inflationary degree. "We believe that in conducting their negotiations both sides may well have the joint interest of their industry at heart, but in the context of to-day's conditions, in which sustained growth and full employment without inflation are the desirable objectives, this is no longer enough. There is a third party, not present at the negotiating table, whose interest includes that of the two negotiating parties, but also takes in the interests of all other sections of the community. This is referred to as the national interest, to which we are commanded by our Royal Warrant to have regard.

"We think that it is well that the true meaning of this term should be clearly understood. The national interest is not an impersonal entity remote from and unconnected with each individual employer and worker. It is the sum of the interests of every member of the population: the worker whose interest lies in the real value of his pay packet; the housewife whose domestic budget suffers from every new 'shock' of a price increase; the employer whose interest is to be able to fix his prices and to plan the success of his enterprise on the basis of stable costs; the man or woman whose income is adjusted only partially or at long intervals to make good the downward steps in the value of money; above all, the indivisible interest of everybody that the nation should continue on a course of growing prosperity in the highly competitive conditions of international trade. It has been a significant and vitally important feature of our enquiry that this comprehensive interest has been represented and cared for at all our public hearings."

Full Employment

The report acknowledges that this is "a hard lesson to be learned." It may mean a broader negotiating structure in many areas of employment. It will require unions not to exploit their dominant bargaining power in conditions of full employment, and will require employers not to surrender easily and pass on the cost to the consumer. "It has been said that an incomes policy of the nature we have indicated must be a policy designed to keep wages and salaries down. We do not see it as

CAPITAL, 2nd May, 1963.

such. If for a time, the application of the principle of keeping wage and salary increases within the limits of production leads to the acceptance of a lower rate of increase of incomes than has been the habit of recent years, this is only because recent levels have been at variance with the principle and in consequence have made their contribution to the inflation of the post-war years.

"An incomes policy which accepts the standard of the long-term rate of increase of national production will itself contribute to and help to make possible a rate of growth of output which is both faster and more continuous, thereby producing the very conditions in which incomes may properly rise."

From the immediate reactions to the report it became clearer than ever that the Commission is to be ignored by the trade unions, but that its reports may be a factor in stiffening the resistance of employers to wage and hours claims. The National Federation of Building Trade Employers said that it "noted" the Commission's advice about the Scottish agreement as "payment in advance" for three years; that the advice from a body outside the industry "of the standing of the Commission" was valued, but that it remained the responsibility of the employers and unions to settle the claim before them.

The last part of this statement accorded with the views of Mr. George Woodcock, general secretary of the T.U.C., on whose advice the building unions declined to give evidence to the N.I.C. He said: "They are really in a field in which they are completely irresponsible. They have not got any responsibility either for regulating relations or defining the national interest. The best thing they can do is to leave these things to the people who have responsibility."

Wage Negotiations

This comment is in line with the consistent attitude taken by Mr. Woodcock and the T.U.C.—that only the Government itself, with all the general economic power that it holds, can represent the national "interest," just as only the employers and unions can represent the other "interests" in wage negotiations. The sections of the report dealing with profits will particularly irritate the unions. In the specific case before it, the Commission concluded that the evidence put to it by the Government was not sufficient to allow it to form a conclusive opinion. All that it could say was that there was no evidence before it that the general level of profits, profit margins, and dividends of the construction industry at present were excessive or unreasonable. This is scarcely a searching conclusion.

On the general issue of profits, the report comments in a long chapter headed "Incomes Policy," which deals at length with wages and salaries. The Commission recalls that it is required by its terms of reference to report from time to time on the need, if any, for restraint on profit to match that in wages. "It is too soon for us to say whether since the date of our appointment any general restraint in earnings has occurred to any significant degree, but if and when it does we shall comply with the demand in this regard. The Government... has publicly undertaken to submit evidence to us in due course on the relationship between the growth of aggregate profits and that of earned incomes. We have accepted that undertaking." The charge made against the Commission here will be that, in leaving the initiative on profits to the Government, it is abdication any right it might have to be regarded as a custodian of the national interest.

CAPITAL, 2nd May, 1963.

Jute

ANOTHER BUMPER RAW JUTE CROP EXPECTED

WITH the completion of sowing jute on about 850,000 hectares and mesta on about 400,000 hectares, and the fixing of a floor price of Rs. 30 a maund, basis Assam Bottoms, f.o.r. Calcutta, the prospects of another bumper crop in 1963-64 have become bright. The weather, too, has been congenial, and last week's moderate showers all over the jute-growing areas have helped plant growth.

In spite of the efforts of the authorities and the co-operation of the industry and trade, it was not possible to support the prices during the current jute season for Assam Bottoms and the lower grade fibres. During recent weeks, short-selling has pushed the price of fibre down; the decline has invited scant attention from mills. The latter apparently have enough stocks of these grades in their warehouses. J.B.S.A. stocks held by the mills are also being turned over. Meanwhile, routine business is being transacted mainly in better grade fibres even at a premium, for these small purchases are being used for blending purposes.

With an increase in the offtake of hessian and other speciality goods like carpet-backing cloth, cotton packs and wool sacks, Indian mills now produce more of these varieties, so they require a higher percentage of better grade fibre. The average grades of Indian jute being used by the mills have to be blended with Pakistani fibre which is imported officially or smuggled across the frontier. These command a premium in the market. It is this price differential which has maintained the flow of the contraband at around 1 million bales. The quantity is equivalent to about 13 percent of the all-India jute crop. If Indian farmers can manage to produce this fibre, they will not only earn a better return for themselves but also stem the heavy drain of resources from the country.

So the authorities, in collaboration with the I.J.M.A., have embarked on a scheme for improving the standard of fibre by using better seeds and improved farming techniques. These alone are unlikely to yield the desired result unless arrangements are made for adequate retting facilities in the villages. Although some progress has been made in this sphere, much ground has still to be covered.

Retting Facilities

Discussing the steps taken during the first two plan periods, a spokesman of the Central Government agency for jute development recently said in Calcutta that about 15,000 tanks had been dug for retting purposes. But they have failed to meet the bare requirements. During the 1962-63 season, there was inadequate rainfall in some jute-growing areas. As a result, retting water was in short supply and ripe plants dried in the fields and were used as fuel or cattle feed. So it is time that a comprehensive survey was made forthwith and immediate action taken to excavate new tanks and resuscitate the derelict ones for providing this essential facility.

The Indian Central Jute Committee is reported to have prepared a scheme for jute retting tanks and circulated it among the jute-producing States for their immediate consideration and implementation. The Government, it has been suggested, should

subsidise middle-grade farmers for digging tanks and advance loans to top-grade growers. The panchayats should be entrusted with community retting tanks. In canal areas, such tanks may be excavated along the canals and linked up with the latter by narrow drains. Spill-water flowing through the canals during floods may profitably be stored in these tanks. Similar tanks, it is urged, should be dug around big irrigation tube wells. The Committee has also laid considerable emphasis on the steeping material. The present practice of using clods of earth has been discouraged, for the mud dissolves in water, not only filling up the tank but also spoiling the colour and quality of the fibre. The Committee has suggested that concrete slabs may be profitably used for the purpose. The authorities, it is hoped, will take immediate steps in this direction in order to make the country self-sufficient in quality jute. This alone can ensure a remunerative return to the farmers without affecting the acreage under foodgrains.

Removing Malpractices

The wide difference between the prices of jute in the Calcutta markets and the prices at which rural procurement agents (farahs) purchase it in the villages, paying scant attention to the quality of fibre, emphasises the need for removing the malpractices in the trade. At present, a farmer has little incentive to produce quality jute, for he can hardly expect a reasonable return from the farah for better stuff. So a suggestion has been made that adequate legislation should be introduced banning the operations of the procurement agent within the State as has been done in Bombay.

This apart, proper grading facilities should be introduced in all the markets ranging from rural hats to the Cossipore wholesale market. The advantages of producing and trading in quality jute should also be ex-

plained to all cadres of the trade. If the farmer produces better fibre, it will always help him to earn a premium. It is more paying to sort the goods according to grades and charge differential rates for them. The attempt to blend off-quality goods or pass off inferior fibre as good by offering some direct or indirect baits to procurement agents not only spoils the reputation of the farmer and the middleman but also damages the goodwill of the entire zone. The Agricultural Marketing Directorate of the Central Government may profitably use its experience in enforcing the grading of sann hemp, which has already paid good dividends.

Problem of Jute Fires

The high incidence of jute godown fires in and around Calcutta poses a serious problem for the industry and the trade. With the increasing stocks of raw jute—the latest directive from the Jute Commissioner under the Jute (Licensing and Control) Order, 1961, enjoins that the mills will have to hold a minimum stock, equivalent to 20 weeks' consumption—in the mill godowns, warehouses and in open yards, the problem has assumed considerable importance. In a memorandum to the West Bengal Fire Services, the Indian Jute Mills Association said that there were 467 jute fires between 1948 and 1962, involving a loss of Rs. 6.50 crores. According to the former, the frequency has increased sharply this year with 15 fire-outbreaks reported during the five-week period ended 8th February. The matter was recently discussed at a tripartite conference of representatives of the West Bengal Government, the I.J.M.A. and the Insurance Association of India.

Thanks to the all-out effort at making the country self-sufficient in jute, India has by now reached an era of plenty in this fibre, although at the cost of a decline in the paddy acreage. The fibre is essential for keeping the wheels of the industry

moving to meet the internal demand and also to earn much-needed foreign exchange. It should, therefore, be stocked with utmost care, for once burnt and spoilt, it can never be replaced although the owners of the goods may reimburse themselves for the losses from the insurance companies.

Raw jute in loose bales is an extremely hazardous commodity and is highly combustible. Baled jute, cotton and even paper are not so hazardous, since fire cannot spread so easily because of the existence of less air in the godowns and within the pucca bales. Besides, there is the practice of increasing the weight of fibre by moistening it with water, which generates methane gas and renders it spontaneously combustible. When these stacks catch fire, it is difficult to control the blaze. Another hurdle in extinguishing jute fires is the difficulty in locating the exact spot of fire. The owners or lessees of the godowns are also alleged to be not very particular in conforming to the fire brigade regulations and insurance cover conditions by providing live chemical fire extinguishers, adequate water supply, etcetera. With godowns and warehouses overflowing with jute stocks, very large quantities of jute bales are piled sky-high in open yards obstructing the movement of fire brigade vehicles and fire service personnel.

As the problem has assumed considerable importance, it is proper that the State Government, the fire services authorities, the jute industry and trade and the insurance companies should set up a joint consultative machinery and devise effective and fool-proof measures to reduce the incidence of fires to the minimum.

Raw Jute Purchase Quotas

The Jute Commissioner has issued compulsory purchase quotas of raw jute to the jute mills for May under the Jute (Licensing and Control) Order, 1961. A total of 325,000 bales of jute has to be purchased by mills belonging to the I.J.M.A. group and 25,000 bales by the rest. The mills are also required to hold a minimum stock of jute equivalent to 20-weeks' consumption.

TEA LABOUR ASKED TO CUT ABSENTEEISM

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE fears of the planting industry in South India concerning some of the proposals put forward to meet the emergency have been voiced by the chairman of the Nilgiri-Wynaad Planters Association, Mr. R. W. Thrope. Addressing the annual general meeting of the association, last week, Mr. Thrope said: "I am afraid that some of the proposals which have been made under the Industrial Truce Resolution for the emergency lack realism, particularly so far as plantations are concerned".

He said that the proposed emergency production committees were unworkable in tea factories, not only because the tea factory was an incidental department of the plantation industry employing a very small fraction of the labour forces, but also because the volume of production was to a great extent dependent on seasonal or climatic conditions which were beyond human control. He hoped that this aspect would be appreciated and tea factories would not be asked to form emergency production committees and submit fortnightly reports.

As for the scheme to run co-operative stores to stabilise prices, he said that the mechanics which had been proposed were to throw the entire responsibility on the management. Their experience in running co-operative stores on the plantations was not encouraging in the past. "What has not been possible over years cannot be achieved overnight whatever be the pressure of emergency", Mr. Thrope added. The need for co-operative stores should be felt first by the workers. Any amount of effort on the part of the management, even if it were practicable, would not make it a success. In his opinion, the scheme was "impracticable and hardly any plantations can assume today the financial burdens expected of them". He, therefore, appealed to the Government to reconsider the scheme and endeavour to run co-operative stores at certain centres in plantation areas through the department concerned. Such a programme would have greater chances of success than the present scheme, Mr. Thrope said.

The proposal to lay open the waste lands with the estates for cultivation by deserving workmen in order to increase food production was also dangerous, he felt. Any encouragement to extensive cultivation within estates might increase absenteeism as was the experience with the "Grow More Food Campaign" during and immediately after the second World War. It might adversely affect the production of tea and prove in the ultimate analysis to be a self-defeating policy. Under the Plantations Labour Act, there is provision for the maintenance of kitchen gardens attached to or near the workers' quarters, and generally, the practice in the industry is to allow one cent of land for each quarter for this purpose subject to availability of land. Mr. Thrope's argument was that this arrangement was "more than sufficient". He added, "one concrete way in which labour can contribute to the defence effort is to reduce absenteeism to the minimum and turn out a fair day's work. Workers have already received an interim increase and the final award

of the Wage Board is awaited. It is now for the workers to respond with equivalent efforts".

The chairman said that tea production in his district during 1962 was 5,840,306 kilograms, against 5,687,723 kilograms in 1961. In spite of this increase, the average price in 1962 was Rs. 4.55 a kilogram, compared with Rs. 4.79 a kilogram in 1961. The financial performance of tea in the Nilgiri-Wynaad had thus shown a marked decline last year. Production of coffee was 625 tonnes, against 318 tonnes for 1961. In spite of an increase in 1962, the district was much behind the 1960 crop and the coffee growers were still undergoing a period of crisis. Referring to the power cut, he cautioned the Government that unless the electricity requirements of the tea factories were fully met, production would be endangered. He also urged the Electricity Board to sanction without delay the additional power load needed by tea factories, which had undertaken to modernise their machinery and production techniques.

Ginger prices have been sky-rocketing recently, and the present price of Rs. 265 a quintal (Cochin quotation) is the highest for the past one decade. Shippers say that even at this "fantastic" rate, it is difficult to get sufficient quantity. It is said that the main reason for the steep rise is the fall in production. The crop this year, it is believed, will be 20 percent to 25 percent less than last year's. Revival of domestic demand, coupled with brisk business with the middle-east countries, have helped the prices to move up. India is the largest producer of ginger with an estimated crop of about 12,000 tons. Next come Nigeria, Jamaica and some African countries which produce around 10,000 tons each. The main buyers of Indian ginger are Aden, Saudi Arabia and other Persian Gulf countries. The U.K. and the U.S.A. also take some quantity.

According to reports from abroad, Nigerian ginger is quoted in London firmly around 240s a cwt. to 245s a cwt. while Sierra Leone quality is placed at 360s a cwt. It is contended that Cochin ginger holds its own as the grinders prefer this quality. Russia has started buying Indian ginger after a lapse of about ten years, her offtake being about 40 tons so far this year. Malaya, Singapore and some other countries, too, have entered the market. It is reported that some of them are re-exporting to South Africa as direct export from India to that country is prohibited. Traditional buyers from the west have been induced to rush for Indian ginger by the entry of new buyers into the market.

The planting belt of south India is having some useful showers since March and both tea and rubber have benefited. Coming as they did after a period of drought, the plants show signs of vigorous growth. South Indian production of tea to the end of March is estimated at around 37 million lbs, which is slightly less than the previous year's crop. Rubber production also is running closely behind last year's. If weather continues to be favourable as it is today, 1963 will see south India producing more of these crops.

COMPANY AND PUBLIC NOTICES

KUMARDHUBI ENGINEERING WORKS LIMITED

NOTICE is hereby given that an Annual General Meeting of KUMARDHUBI ENGINEERING WORKS, LIMITED will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 31st May, 1963, at 3-40 P.M., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 30th November, 1962, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Auditors and fix their remuneration.

As Special Business

4. To appoint a Director in place of Mr. G. L. Bangur, who retires by rotation and being over 65 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281(2) of the Companies Act, 1956, has been received by the Company from a Shareholder which will be proposed as an Ordinary Resolution.

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. G. L. Bangur and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

5. To consider and, if thought fit, to pass the following resolution which will be proposed as a special resolution:—

"That the provisions of the Articles of Association of the Company be altered in the manner following, that is to say:—

(a) That in Article 92 (line 6) the words "and such one of them as from time to time and at any time shall be named by the Managing Agents shall be Chairman of the Board" be and are hereby deleted.

(b) That Article 116 be and is hereby deleted and that the following new Article 116 be substituted therefor.

"116. The Directors may elect some one of themselves to be Chairman of the Board to preside over their meetings and determine the period for which he is to hold office. If no such Chairman is elected or if at any meeting the Chairman is not present at the time appointed for holding the same, the Directors present shall choose some one of their number to be Chairman of such meeting."

The Share Transfer Registers of the Company will be closed from the

17th to the 31st May, 1963, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Registered Office:
Chartered Bank Buildings,
Calcutta, 25th April, 1963.

Notes—

- (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.
- (b) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all members.
- (c) The Dividends, if declared, will be paid on or after 26th June, 1963 to those Shareholders so entitled whose names appear in the Company's books on the 31st May, 1963, or to their mandatories. No application for Dividend Warrants will be necessary.

ESCORTEX LIMITED

26, Fale Bazar,
Delhi-6.
(Registered Office)

NOTICE is hereby given that the 18th Annual General Meeting of the above Company will be held in its premises at 16, Barakhamba Road, New Delhi-1, on Monday, the 27th May, 1963, at 10-15 a.m. to receive, consider and adopt the Directors' and Auditors' Reports and audited accounts for the year ended 31st December, 1962, and to consider other matters as Ordinary and Special Business of which notice is being given to the Members.

By Order of the Board,
P. L. JAITLEY,
Secretary.

Date: 16th April, 1963.
Delhi 6.

- Note:—1. The Transfer Register and Members Register (both of Equity and Preference share capital) shall remain closed from 7th May to 27th May, 1963, both days inclusive.

2. The Mandates for payment of dividend will be noted only if received before the closing of the Transfer Register and Members Register.

3. The Directors have recommended a dividend of 11% on the Equity shares.

4. Explanatory statements as required under Section 173 of the Companies Act, 1956, in regard to the items under special business will be forwarded to the Members with the notice.

On Cumulative Preference Shares @ 6.5% p.a.
On Ordinary Shares @ 45 nP. per share.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.
Managing Agents.

Registered Office:
Chartered Bank Buildings,
Calcutta,
25th April, 1963.

GUEST, KEEN, WILLIAMS, LIMITED NOTICE

THE Thirty-third Annual General Meeting of the Members of Guest, Keen, Williams, Limited will be held at the offices of Jardine Henderson Limited, 4, Clive Row, Calcutta, on Friday, the 31st day of May, 1963 at 11-30 a.m., to transact the following business:—

1. To adopt the Directors' Report and the Audited Accounts for the 52 weeks ended 29th December, 1962.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following resolutions, a Special Notice as defined by Section 190 of the Companies Act, 1956 having been received by the Company under Section 281 of the Act in respect of Resolution No. (i) hereunder:—

(i) As an Ordinary Resolution

That Sir A. Ramaswami Mudaliar, who retires at this Meeting and who has attained the age of 75 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956 shall not apply to him.

(ii) As an Ordinary Resolution

That, due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Dr. Anjali Kumar Bose be and is hereby appointed, subject to the approval of the Central Government under Section 269 of the said Act, as a Director of the Company.

(iii) As a Special Resolution

That, in view of the foregoing resolution that Dr. Anjali Kumar Bose be appointed a Director of the Company, consent be and is hereby accorded to Dr. Anjali Kumar Bose holding and continuing to hold an office or place of profit under the Company as General Works Manager of the Company's Calcutta Works or such other office or place of profit as the Directors may from time to time decide, upon such terms as to remuneration and otherwise as the Directors may from time to time determine, subject to the Central Government's approval and, in the meantime, on the terms presently applicable to him.

(iv) As a Special Resolution

That, notwithstanding the provisions of the Articles of Association of the Company, the Directors be and they are hereby authorised (subject to the approval of the Central Government) to issue and allot to The Tata Iron and Steel Company Limited 2,14,583 fully paid Equity Shares of Rs. 10/- each in the Company and to accept in full satisfaction of the said shares, 15,606 fully paid Equity Shares of Rs. 100/- each in Sankey Electrical Stampings Limited now registered in the name of The Tata Iron and Steel Company Limited and that accordingly the Directors of the Company shall not be required to offer such 2,14,583 Equity Shares in the Company

to members of the Company in accordance with Article 6(2) of the said Articles of Association.

(v) As an Ordinary Resolution

That, subject to the approval of the Central Government, sanction be and is hereby accorded to the investment by the Company in Sankey Wheels Limited to the extent of 3,82,000 fully paid Equity Shares of Rs. 10/- each at par to be satisfied and paid for partly by the transfer to Sankey Wheels Limited as on 1st June, 1963, at an independent valuation, of the car and jeep wheel plant of the Company at its Calcutta Works, and as to the balance in cash.

The Register of Members of the Company will be closed from the 14th May, 1963 to 31st May, 1963, both days inclusive.

By Order of the Board,
R. B. RITCHIE,
Secretary.

Registered Office:
41, Chowringhee Road,
Calcutta-16.
1st May, 1963.

Note:—1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and such proxy need not be a member of the Company. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

Note:—2. No application for warrants will be necessary and payment of any Dividend declared will be made on or after the 18th June, 1963 only to those Members whose names are registered in the books of the Company on the 31st May, 1963 or to their Mandatories. Claims on behalf of holders of shares held on blank transfer will not be entertained.

Note:—3. An Explanatory Statement pursuant to Section 173 (2) of the Companies Act, 1956 has been issued to all Shareholders.

STEEL CONTAINERS LTD.

THE Board of Directors of the above Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Dividend of 20 per cent for the year ended 31st December, 1962.

DIMINISHING PROSPECTS FOR MORE TRADE AND AID

INDIA'S foreign economic aid prospects do not, after all, appear to have been materially increased by the Chinese aggression. This is disappointing and calls for some explanation. The persistence of the Kashmir dispute is by no means the only reason, much as this undoubtedly inhibits the generosity of Pakistan's allies. More important is the recent growth of the anti-aid opinion in the western world, and particularly the United States. The most recent expression of this is the Clay report. This document is likely to go on finding more support among the American public than from within the Kennedy Administration itself. But it is sure to discourage the U.S. Government in the pursuit of its present comparatively open-handed policies even more than the continued reluctance of America's west European allies to co-operate in more ambitious aid plans. This reluctance is probably growing stronger, with the possible exception of Britain's attitude, which has become vaguely linked with the need for new outlets for the production of the depressed regions of her internal economy. Britain's present approach to economic aid is, however, closely circumscribed by her continued balance-of-payments problem. Those west European nations most able to increase their contributions, France and West Germany, are unlikely to do so on any appreciable scale for reasons of their own. So the present outlook for any substantial increase in foreign aid for the third year of the five year plan is not particularly encouraging. Whether this inference was in fact borne out by the results of the aid consortium meeting in Washington on 30th April is, of course,

will not do it without cost, however. The West Germans have already served notice that they will not co-operate in such action merely for the sake of maintaining unity within the E.E.C. This attitude, in effect, contravenes the former spirit of the Common Market and could eventually lead to its break-up. It is clearly due to the influence of West Germany's new Chancellor-designate, Dr. Erhard; and indeed the prospects of Dr. Adenauer being replaced at an earlier date than originally expected may be about the best chance of reversing the present drift in western Europe and one of the brightest hopes for the future.

The chances of a fresh initiative on Commonwealth trade ought to be good. With an election in prospect in Britain within the next year, and with one of the big criticisms levelled against Mr. Macmillan's Government being that it has not paid sufficient attention to trade potential within the Commonwealth, something can surely be expected very soon now. In fact, what has held it up so far is not clear, unless it is that the question of timing is now of particular importance to the Conservative Government's future. What form it might take remains as vague as ever, a fact which could indicate that there are no firm ideas in London at the moment as to how the problem should be tackled. But some progress might be recorded in the foreseeable future; the British electorate will certainly demand it.

The chief short-term hope for India's trade would, therefore, seem to lie in the return of prosperity in Britain and the improved internal economic prospects in the United States. In the international field, there is scarcely anything in view at all. Britain's progress remains slow; a boom of 1960 dimensions seems unlikely to develop.

PLANNING FOR POWER

ANGRY protests from industry over the mess in planning for power invariably bring the familiar reply that past omissions are now being rectified with the greatest possible speed. But is this really so? Some 15 months ago when crippling shortages in eastern India and elsewhere had become something of a national scandal, the Planning Commission is said to have worked out a number of specific measures and procedures to ensure accelerated and co-ordinated development in deficit areas. But this notwithstanding, additions to the generating capacity made in 1962-63 were only 650 MW, against the third plan target of 730 MW for the year. The gap between promise and performance has thus widened from a shortfall of about 20 MW between the actuals and the target for 1961-62 to 80 MW last year. On this showing, it seems certain that the overall target for the third plan will remain substantially unfulfilled, repeating the sad experience of the second plan.

Since the third plan target, on the Ministry's own admission, falls short of demand, the effect will be to aggravate the deficit and perpetuate the under-utilisation of industrial capacity. The Lok Sabha Estimates Committee, which completed an enquiry into the planning and execution of power schemes earlier this year, reproduces an official projection showing that the generating capacity will continue to lag behind anticipated demand throughout the current plan period, even assuming that all schemes are completed on schedule. This calculation shows a deficit of 455 MW in 1966 in the country as a whole, which means that the shortage will be greater than at the beginning of the plan. It will be especially acute in the Bihar-D.V.C.-Bengal region, accounting for almost half of the total shortage. That planning had gone wrong was forcefully brought home by the power famine which eastern India suffered in 1961. The Sachdev enquiry occasioned rethinking in New Delhi as a result of which new schemes were sanctioned to add 499 MW to the total third plan target. Eastern India gained directly from the decision to raise the generating capacity at the Durgapur coke oven station by 75 MW and some benefit may accrue from the addition of a 50 MW unit at Rihand now that the grids have been in-

terlinked. But even so, the gap between demand and supply is far from closed.

Current thinking in New Delhi promises relief only in 1967 or 1968 by taking steps now to initiate new schemes which will come to fruition by then. Extension to existing projects are expected to yield 2 million kW while another 2 million kW is to come from new schemes. The additional expenditure involved is about Rs. 160 crores, with a foreign exchange component of Rs. 43 crores. Presumably, the search for aid to underwrite the foreign exchange costs is now in progress. Some of these schemes have undoubtedly been included in the list of new projects that the Indian delegation has discussed with members of the Aid-India Club in Washington. Of special interest in the context of future power planning is the idea of inter-connecting power plants to form zonal or regional grids. The experience in the U.K. is that such pooling increases the efficiency of generation by raising the load factor, and by permitting concentration of output at the most efficient stations. Capital costs can be saved by reducing standby capacity. Such savings in the eastern region alone are estimated at Rs. 27 crores in capital costs, plus Rs. 4.8 crores in the recurring annual expenditure. The benefits of inter-connection have already been conclusively established and there is no reason why the setting up

of regional power agencies should be delayed. Planning cannot be related to the needs of individual States since the resources for power generation are not uniformly distributed throughout the country. Thermal stations must increasingly be sited near the coalfields to avoid the cost and capital outlay that transport must involve—a point forcefully made by the Coal Council at its meeting last year.

Planning for power is only one part of the exercise, the effective implementation of the scheme being another equally important aspect. The continuing shortfalls point unmistakably to the need for better and speedier execution. It is customary in official circles to put all the blame for the failure to achieve the second plan target on the shortage of foreign exchange. But was this really the case? A sum of Rs. 425 crores was in fact made available for both domestic and foreign expenditure on power development, against Rs. 476 crores originally asked for by the Central Water and Power Commission—a cut of about 11 percent, while the physical shortfall was about 18 percent. Belatedly the C.W.P.C. is acknowledging that there were delays in the execution of important projects like Bhakra-Nangal, Koyna, Rihand and Hirakud. Administrative defaults are by no means confined to the C.W.P.C., and reflect the general failure of the Government's executive machinery to cope with new and unfamiliar responsibilities within the framework of rules and procedures designed for entirely different circumstances. In fact, there is reason to believe that the defaults on the part of the C.W.P.C. and the State organisations executing power projects are compounded by the delays in the several Ministries in tackling the bottlenecks relating to foreign exchange, key construction materials like steel, cement and explosives, and the procurement of plant and equipment from indigenous and overseas sources.

OUTLOOK FOR U.K. EXPORTS

THE most important statistics in Britain's economic plan are very simple. Over a period of a few years, the gross national product should increase by 4 percent annually and exports should increase by 5 percent annually. The two figures are related. A growth rate of production of approximately 4 percent could not be sustained for long if the growth rate of exports was appreciably less than 5 percent, for the increase in imports involved in the acceleration of economic activity would overstrain financial resources. The British Government is stimulating the economy by increasing its spending and by reducing taxes. If the

of regional power agencies should be delayed. Planning cannot be related to the needs of individual States since the resources for power generation are not uniformly distributed throughout the country. Thermal stations must increasingly be sited near the coalfields to avoid the cost and capital outlay that transport must involve—a point forcefully made by the Coal Council at its meeting last year.

Planning for power is only one part of the exercise, the effective implementation of the scheme being another equally important aspect. The continuing shortfalls point unmistakably to the need for better and speedier execution. It is customary in official circles to put all the blame for the failure to achieve the second plan target on the shortage of foreign exchange. But was this really the case? A sum of Rs. 425 crores was in fact made available for both domestic and foreign expenditure on power development, against Rs. 476 crores originally asked for by the Central Water and Power Commission—a cut of about 11 percent, while the physical shortfall was about 18 percent. Belatedly the C.W.P.C. is acknowledging that there were delays in the execution of important projects like Bhakra-Nangal, Koyna, Rihand and Hirakud. Administrative defaults are by no means confined to the C.W.P.C., and reflect the general failure of the Government's executive machinery to cope with new and unfamiliar responsibilities within the framework of rules and procedures designed for entirely different circumstances. In fact, there is reason to believe that the defaults on the part of the C.W.P.C. and the State organisations executing power projects are compounded by the delays in the several Ministries in tackling the bottlenecks relating to foreign exchange, key construction materials like steel, cement and explosives, and the procurement of plant and equipment from indigenous and overseas sources.

The need for greater co-ordination among these various agencies has long been clear. In September 1962, a seminar on irrigation and power specifically recommended three steps to speed up power projects—quicker sanction and release of foreign exchange, advance planning of the requirements of plant and equipment to facilitate procurement and streamlining of the system of allocating scarce construction materials. With this idea in mind, an implementation cell was set up in the C.W.P.C. charged with the responsibility of ensuring timely sanctions and supplies to projects under construction. While this will make for some improvement, the basic deficiency at the stage of investigating a project and drawing up a scheme for it remains. The Lok Sabha Estimates Committee notes that many schemes come up for sanction to New Delhi without the essential details on the basis of which a technical and financial scrutiny can begin. The difficulty here is possibly that the States do not have adequate manpower to undertake the task of planning, and the deficiency pointed out by the Estimates Committee will persist until consulting engineering services develop more extensively in the country. There are only a few private firms in this field and the C.W.P.C. itself gets the consulting service from abroad. Commitments already made on this account for third plan schemes exceed Rs. 7 crores, according to the figures cited in the Estimates Committee report.

growth rate seems to be too slow a few months hence, the Government will stimulate it more. It is obviously possible to attain, by some means, approximately the desired rate of increase in production. But exports cannot be regulated, although they can be promoted by favourable taxation. Britain's Chancellor of the Exchequer, Mr. Reginald Maudling, has rejected (for the current fiscal year, at least) advice to promote exports by this means. He believes that Britain's balance of payments will deteriorate only temporarily (he is ready to use the facilities of international credit to offset the deterioration), and that expansion of

the national market will soon enable many industries to reduce their costs a unit of production.

However, some economists who commend Mr. Maudling's financial policy in general regard his faith in the automatic growth of exports as naïve. They agree that increasing production will reduce unit costs (if increases in salaries and wages can be limited to 3½ percent as intended), but they are not convinced that when trading conditions are easier at home many firms will strengthen their efforts to export. They are sceptical of the idea, prevalent recently in Britain, that industrial costs are rising faster abroad than in Britain. And they cannot, anyway, accept Mr. Maudling's assumption that competitive pricing alone will increase exports enough. Last year, wages rose faster on the Continent than in Britain, and this year the rise may be gaining impetus in France and Italy. But the latest annual report of the Economic Commission for Europe observes that in West Germany, Britain's most formidable European competitor, the upward pressure of wages has eased in recent months. The E.C.E. report suggests, moreover, that Britain has not gained any appreciable advantage from the faster rise of wages on the Continent, because productivity has increased faster on the Continent than in Britain—where, indeed, according to the index compiled by *The Guardian*, productivity was static in the second half of last year, when it was increasing particularly fast on the Continent.

It is likely that productivity in Britain will, as Mr. Maudling assumes, increase this year, and that Britain's exports, though not gaining much from low pricing, will not be impeded by high pricing. But they will not increase spontaneously. It is necessary to sell abroad more aggressively than most British firms do at present. And it is necessary to offer the goods that are most required. *The Times* published recently a study by Professor T. Barna, the eminent statistical economist, of the character of exports from Britain and her principal competitors, particularly the United States and West Germany. Its implications are disturbing. Professor Barna's argument, based on extensive statistical research, can be summarised thus. Between the World Wars, Britain was slow in replacing the great nineteenth century trade in

cotton goods and coal, and her exports suffered accordingly. Since the second World War, she has rapidly developed the engineering and chemical industries, the fastest-growing sectors of a modern economy. But these dynamic industries are divisible into more and less dynamic product-categories, and Britain has consistently produced the less rather than the more dynamic products. Britain is a relatively successful exporter of the less dynamic products, such as bicycles and electric batteries, but a relatively unsuccessful exporter of the more dynamic products, such as machine tools and civil engineering plant. In trades other than machinery and chemicals, Britain exports more than the United States or West Germany. But other industrial countries, such as Japan and Italy, are replacing the leading industrial exporters in these miscellaneous trades.

Professor Barna's study reveals a systematic relationship over the whole trade in manufactures; "the faster world demand is expanding for product-group, the more inferior is Britain's share in that market". The products in which trade is growing fastest, such as office machinery, scientific instruments and plastics, are, of course, the most technically-advanced products of industry. Britain's inferior trading position (it is, for example, worse in electric than in non-electric typewriters, in the newer than in the older plastics) is thus an indication that Britain is technically backward. Professor Barna offers the reminder that as long ago as 1903, when Britain's prestige seemed to many observers unassailable, economist Alfred Marshall remarked: "Her imports of electrical plant and aniline dyes show that her leadership is insecure". It is a sombre thought that a technological trend that has repeatedly disturbed Britain's balance of payments in the second half of this century could be foreseen, by a perceptive mind, at the beginning of the century. If this is, indeed, the basic cause of Britain's difficulties, a tremendous effort is needed to stimulate research and development. Mr. Maudling's tax concessions (announced late last year) on firms' expenditure on research and development will certainly help. But his apparent belief that exports will expand automatically if prices are competitive may be unrealistic. The Government cannot alone modernise industry, but it should at least modernise its own ideas.

Current News and Comment

State Finances in Sorry State

For the past few years, the State Governments have been showing a negative cash balance, and securing overdrafts from the Reserve Bank. The Central Finance Minister, Mr. Morarji Desai, recently told the Lok Sabha that the States had been informed that, in future, the Reserve Bank would not honour their overdrafts. This unhappy state of affairs is due mostly to the State Governments' incapability to raise sufficient additional resources from taxation. In a developing economy, the Government may well incur an overall deficit but it must be able to raise additional resources to bridge as much of the gap in its finances as possible. The State Governments have not done so. Their consolidated budgetary position, excluding Jammu and Kashmir, shows an overall deficit of Rs. 61 crores for 1963-64, against Rs. 8.75 crores in the revised estimates for 1962-63. Most of these States have made fresh tax proposals to raise an additional revenue of nearly Rs. 26.25 crores, but as some of them have subsequently announced tax concessions, the additional tax revenue in 1963-64 is unlikely to exceed Rs. 22.50 crores. This would reduce the overall deficit in 1963-64 to Rs. 38.50 crores at the existing levels of taxation. This huge deficit would increase the negative cash balances of the State Governments taken together, from Rs. 9 crores at the end of 1962-63 to Rs. 47.50 crores at the end of 1963-64. As the Reserve Bank will not honour any more overdrafts from the States, the situation for the latter would become exceedingly difficult unless they can devise ways and means of raising additional resources or get greater assistance from the Central Government.

The audit report on the Central Government's finances for 1961-62 shows that a total of Rs. 443.47 crores was advanced by the Centre to the States in 1961-62, thereby raising the latter's debt to the former to Rs. 2,219.14 crores. In 1962-63, the Central Government advanced a further loan of Rs. 525.50 crores to the States, and it is expected to advance Rs. 540.50 crores in 1963-64. There would have been nothing disquieting about this level of indebtedness to the Centre, had the State Governments been regularly paying interest and repaying the loans when they became due. But the audit report on the Central Government's finances for 1961-62 points out that although the terms and conditions of the repayment of loans were revised at the instance of the State Governments and the dates of repayment were extended in many cases, a number of them have not been able to discharge their obligations. It is still more disquieting that in some cases, fresh loans had to be given to enable them to repay the old loans and pay interest charges. The State Governments are obviously spending much beyond their means. The choice before them is either to raise additional revenues, or to curtail their plan and non-plan outlays.

Although the development expenditure of the State Governments in 1963-64 would be nearly 58½ percent of their revenue and capital budgets taken together, it would be only a little more than 49½ percent of the total revenue expenditure. This shows that more than 50 percent of the total revenue expenditure of the States is being incurred on administration and other items of a non-developmental nature. With proper efforts, it should be possible for the States to reduce this

expenditure. It has somehow been possible for them to live beyond, much beyond, their means in the past. But it may not be possible much longer.

Improving Road Transport

The present emergency seems to have drawn the Government's attention to the woeful condition of inter-State road transport and the lack of proper co-ordination between the different means of transport. In his inaugural address at the meeting of the Transport Development Council in New Delhi last week, Mr. Jagjivan Ram, Central Minister for Transport and Communications, pleaded for an effective increase in the transport capacity. Not only is mobility the very nerve-centre of all defence preparations, as Mr. Jagjivan Ram emphasised, but it is also a pre-condition for the country's industrial development. It is unfortunate that this fact has not been fully realised so far, and inter-State road transport has been neglected on the plea of avoiding duplication and waste of transport capacity. It now appears that alternative means of transport and sufficient surplus transport capacity will be developed in all the sensitive areas where there is a chance of sudden interruption of communications. This will not only help the war effort, but will also effectively help India's economic development. At present, the Indian railways are not able to handle more than 75 percent of the total long-distance haulage of some 200 million tons of goods a year.

Some of the recommendations of the Council, if implemented, will considerably improve matters. The Inter-State Transport Commission, the Council has recommended, should grant regular all-India permits up to the ceiling of 50 tourist taxis and ten contract carriages. These ceilings are much too low, but the important thing is that a beginning will be made in the right direction because up to now, for some inexplicable reason, the Commission was granting only some limited temporary permits. What the Council did not emphasise is that the Commission's powers and authority are not adequate to cope with its responsibilities and unless they are increased, it will not be able to play an effective rôle in increasing the haulage of goods by inter-State road transport.

Instead of each State taxing inter-State road transport separately, the Council recommended that the goods tax, the passenger tax and the motor-vehicles tax should be collected by the State in which a vehicle is registered. The proceeds might be distributed on an agreed basis between the different States through which the vehicle operates. This will reduce wastage of time and save the operators from harassment. But the Council should have emphasised that the incidence of taxation on inter-State as well as intra-State road transport at present is heavy and should be reduced in order to encourage road transport for both development and defence. Another fact which the Council did not emphasise was that the State Governments' outlay on road development is utterly inadequate and vehicles plying on long-distance routes are frequently handicapped because of lack of suitable bridges for heavy loads, absence of links connecting the national highways and poor road surface. It is only when the State Governments increase their outlay on road development commensurate with the revenue which they obtain from road taxation that conditions will improve. If the Council's recommendation that the State Governments should construct parallel roads in factory areas along the national highways is accepted, the congestion on main roads in busy sectors will be considerably reduced.

Devaluation not Advisable

Although Mr. Morarji Desai, Central Finance Minister, may not have been correct in saying that the rise in prices in India since 1949 has been far more moderate than in most other countries, he was quite right in telling the Rajya Sabha in the course of a debate on the Finance Bill that the Indian rupee was not overvalued. So it would be suicidal for the economy to suggest devaluation of the rupee at the present time. Some economists in India have suggested devaluation of the

rupee in order to increase exports and to reduce the gap between the Indian and foreign prices of gold. They argue that all the other methods so far used by the Government to secure an increase in India's exports have failed to bear fruit and that devaluation of the rupee by, say, 25 per cent, will improve the competitiveness of Indian goods in foreign markets by reducing their prices in those markets. This will increase India's exports which at present do not exceed Rs. 700 crores a year, against the third plan annual average of Rs. 740 crores. Devaluation of the rupee, according to these economists, will also restrict imports by making them more costly. This two-sided movement will reduce India's foreign exchange deficit. Incidentally, devaluation will also increase, in terms of rupees, the officially fixed price of gold in U.S. dollars and thus help in checking the smuggling of gold.

But these arguments in support of devaluation are based on some faulty assumptions. India's traditional exports such as jute manufactures and tea are, on the whole, price inelastic and devaluation may not produce much of an effect. Secondly, there is no reason to believe that, in the event of devaluation of the rupee, India's competitors in these markets will not also reduce the prices of their goods by different methods which are available to them. Furthermore, at present India is not able to export commodities of the right type and of the desired quality. Devaluation of the rupee may not, therefore, be of much help. True, exports of some items like bicycles, sewing machines, electrical and general engineering goods may, to some extent, pick up because of devaluation, but they constitute such a small proportion of India's exports that even a cent percent increase in their exports will not justify the use of such a drastic method as devaluation.

The argument that devaluation will discourage imports by making them more costly is again specious because India's imports have already been cut to the bone. The only result of devaluation will be to make the cost of production of commodities, which depend on imported raw materials, machinery and equipment, higher. This will not only intensify "cost inflation", but also discourage the export of goods produced from imported materials. India has already incurred heavy foreign indebtedness. Even under the present conditions, the payment of interest and repayment of capital will be exacting. With devaluation of the rupee, India's debt liability will increase further.

Worries of Steel Re-rollers

In spite of the shortage of essential raw materials, the performance of the steel re-rolling industry was satisfactory during the past year. During the nine months ended December 1962, the total output of all classes of re-rollers was 700,000 tonnes. The final figures up to 31st March, 1963, it is expected, may show production to be about 1 million tonnes. In his speech at the annual general meeting of the Steel Re-rolling Mills Association of India held in New Delhi on Sunday, Mr. Viren J. Shah, chairman, said that re-rolling mills were an essential part of the steel industry of the most advanced nations. Current thinking among steel technicians is that a steel plant, to be economic, should have a production capacity of 3 million tonnes a year. But with every increase in the size of the plant, the size of the minimum order which can be accepted rises correspondingly. On the other hand, steel consumption has an inexorable tendency towards diversification. The huge integrated plants are at a disadvantage in catering to limited demands. "Under optimum conditions of work and unhindered by discriminatory measures, it is possible for re-rolling units to compete with larger plants when meeting regional and variable demands."

Following the recommendations of the Raj Committee, the Government is reported to be considering the lifting of controls on distribution and price of re-rollers' products. Mr. Shah said that although the industry, in principle, would welcome decontrol, the Government should bear in mind the special circumstances of the industry. Firstly, the inhibiting conditions of a controlled economy, under which the industry has laboured for over

two decades, have hindered the modernisation of equipment and expansion of the industry. Secondly, the continued raw material shortage has weakened the industry. Thirdly, an anomalous situation has been created by the facility given to the main producers to quote f.o.r. prices at all rail-heads, while for identical products the re-rolling industry is compelled to add the freight element to basic costs. This has impaired the industry's competitive ability. Fourthly, there is the discriminatory incidence of Central sales tax on billets. This has pushed up the price of merchant sections rolled by the re-rolling mills, compared with identical merchant sections produced by the integrated plants. Furthermore, during the last eight years, the retention price of steel has been raised on seven occasions, but during the same period, the re-rollers' conversion charges have been seriously cut on three occasions.

In his inaugural address, Mr. C. Subramaniam, Central Minister for Steel and Heavy Industries, said that the Government was considering in what fields decontrol could be introduced in the steel industry. He added that the Government's recent decision to decontrol re-rollable scrap would prove beneficial to the industry. But prestige, the Minister said, would not stand in the way of the Government reversing its decision. As for revising the charges for converting scrap into re-rolled steel, the Minister said they would be examined by the Government, and a decision would be announced soon.

New Refinery in Cochin

Details of the proposed oil refinery to be set up in Cochin were recently announced by Mr. K. P. Goenka, chairman of Duncan Brothers, who are the Indian sponsors of the project. The Government of India will own 51 percent of the Company's share capital, Phillips Petroleum Co. of the U.S.A. 25 percent and the remaining 24 percent will be held by Duncan Brothers and other Indian investors. Its authorised capital will be Rs. 18 crores, of which Rs. 7 crores will be issued and paid up. A loan capital of Rs. 10 crores will be obtained by Phillips. This is the first time in India that a foreign company with just 25 percent share holding has undertaken to meet the entire foreign exchange requirement of a project, partly in the form of its subscription to equity capital and partly in the form of loan to be raised from a U.S. bank. Named Cochin Refineries Ltd, it will have an initial capacity of 2.5 million tons a year, which will be raised to 3.5 million tons after about two or three years of continuous operation, making it one of the largest refineries in the country.

Mr. Goenka claimed that, considering the products which it will turn out, it will be the cheapest refinery, costing only about \$750 a ton of refining capacity. He explained that it was the first time that an international company had agreed to supply oil products at prices recommended by the Damle Committee. Crude oil will also be supplied at a cheaper rate than others. Furthermore, the foreign collaborators have given an undertaking to export all the petrol, which is surplus to the requirements of the country. This will help pay the cost of imported crude and the collaborators' share in the profits.

Cochin has been selected as the site for the refinery because of its natural advantages such as harbour facilities, nearness to the sources of crude (which are in the Middle East) and the large supply area it commands in southern India. To be constructed by a subsidiary of Phillips Petroleum Co.

India's Resources

are Precious

WASTE NOT,

WANT NOT

a fixed sum basis, the refinery is scheduled to be completed within 30 months from now. There is also a proposal to construct a lubricating oil plant at a cost of about Rs. 8 crores. Negotiations for this project are in an advanced stage.

Hire-purchasing in India

With the growing production of durable consumer goods and rising money incomes in India, the hire-purchase business is gradually establishing itself. However, compared with the volume of business in affluent countries like the U.S.A. and the U.K., the business in India is very small. But the economic function of hire-purchase in stimulating consumer demand is being increasingly recognised. The Central Government will shortly introduce legislation to regulate the trade in the interests of both borrowers and lenders; on its part, the trade is considering ways to increase its attractions for potential clients. At the first annual general meeting of the Hire Purchase Association held last week in Calcutta, Mr. R. P. Patodia said that in India the business started with motor vehicles—in fact, they still remain the largest single item—and now included many household articles like radios, radiograms, watches, musical instruments, refrigerators, typewriters, etcetera. However, the financial facilities for hire-purchase are not correspondingly increasing. For example, bank advances against hire-purchase securities have been inadequate, and the restrictive credit policy of the Reserve Bank has made the position even more difficult. In the U.K., banks are the main supporters of the trade, and credit provided by them totals about Rs. 1,300 crores, whereas in India it is unlikely to exceed Rs. 10 crores. Mr. Patodia hoped that the Reserve Bank would do something to encourage the trade, and that the proposed legislation by the Centre would be liberal.

The chairman of the Hindustan Motor Corporation, Mr. B. T. Thakur, who addressed the meeting said that the sellers should, in their own interest, do nothing to cripple the borrower with unbearable interest and service charges. These transactions must not be viewed as mere monetary loans or as credit sales. "It is an arrangement or partnership in assistance to help a person to earn or enjoy what he is unable to do himself." At present, the amount of business totals only Rs. 50 crores, of which about Rs. 40 crores has gone to the transport industry. This is an insignificant portion of the total volume of lending in this country, where the size of non-institutional credit is still very large. It works out to a little over Re. 1 per capita. As production and buying power increase, hire-purchase institutions must also grow and develop. Mr. Thakur foresees a large scope for this type of business.

Case for Textile Expansion in South

Addressing the annual general meeting of the Southern India Millowners Association recently the chairman, Mr. D. C. Kothari, discussed at length the scope for expansion of the textile industry in the south. Pointing out that the southern region has the skill and resources to set up new units without much difficulty he pleaded for the allotment of more spindles. He suggested to the Government that spindleage to the southern States should be increased by allotting unused spindles elsewhere in India. Referring to the quota allocated to Madras State under the third five year plan, Mr. Kothari said that this was inadequate; Madras had been allotted only 75,000 spindles, compared with 225,000 spindles to Andhra, 100,000 spindles to Mysore and 150,000 spindles to Kerala. According to him, the south has specialised in working medium-sized spinning units and these units have been consistently catering to the needs of the handloom industry. Production has gone up substantially during the last decade.

In view of the rising consumption of cotton in the country, he says, the textile industry has very often to pay high prices for its raw material. While the Central Government has permitted the import of 100,000 bales of staple fibre, the total estimated requirement of cotton during the cur-

rent season has been put at 8.4 million bales. As against this requirement, the domestic cotton supply is estimated at about 7 million bales. Since the gap between requirement and indigenous supply can be filled only by imports, steps have to be taken to step up the domestic production of raw cotton, especially of the grades which are suited for spinning fine counts of yarn. Referring to the fall in the export of yarn and cloth, Mr. Kothari attributed the poor performance to the keen competition from other countries. In order to combat this competition and maintain a satisfactory level of exports, he has suggested that all facilities should be provided to the Indian industry to manufacture the latest textile machinery; financial assistance should also be given to the cotton mill industry for modernising its equipment.

Uneconomic Prices for Sugar

In a motion on the Sugarcane Committee's annual report in the Rajya Sabha last week, a member pointed out that the Central Government had fixed the sugar price for the factories in eastern U.P. at Rs. 108.50 a quintal, which is nearly Rs. 2.50 a quintal less than the price recommended by the Tariff Commission. In the case of north Bihar factories, the price fixed is Rs. 5.92 a quintal less, and in the case of the south Bihar factories Rs. 14.83 a quintal less than the price suggested by the Tariff Commission. In recommending the prices, the Tariff Commission had assumed a return of 12 percent on capital. But with the sugar prices now fixed by the Government, some factories, especially those in eastern U.P. and northern Bihar, would actually incur losses. The U.P. Government, it is reported, has requested the Central Government not to fix a single price, as has been done for the entire northern region, but to fix separate prices for different areas in the region, after taking into account the cost structures of the sugar factories.

The Central Deputy Minister for Food and Agriculture, Mr. A. M. Thomas, has pointed out in the Rajya Sabha debate that the average yield of sugarcane in the sub-tropical northern States of U.P. and Bihar is only 12 tons to 15 tons, an acre compared with 25 tons to 30 tons in the tropical south. Furthermore, the average crushing season in U.P. and north Bihar is usually much shorter than in Maharashtra and Andhra; the average recovery in the north is also less than in the south. However, in spite of these deficiencies, no one will suggest that the sugar industry in the north should be allowed to languish. An important point which the Central Government appears to have overlooked is that the uneconomic price now fixed by it for the U.P. and Bihar factories would inevitably reduce the output of sugar in the region during the next season, thereby making the supply position difficult. According to official estimates, the total output of factory sugar in India up to the middle of April 1963 amounted to nearly 2 million tons, compared with 2.3 million tons during the corresponding period last season. The fall of 300,000 tons in production has taken place mostly in U.P. It is expected that for the entire season, the output of factory sugar may amount to only 2.4 million tons, compared with 2.7 million tons last season. Including the carry-over from the past, the total supply in the market may be just sufficient to meet the demand from the internal market and for export. Unless, therefore, the total output in the next season is increased to over 3 million tons, there may be scarcity of sugar during the fourth year of the plan. But the sugar output could not possibly be increased to this level, unless an economic price is fixed not only for the sugar produced in Maharashtra and south India, as has been done, but also for the tonnage produced in U.P. and Bihar. The latter are the main producers of this commodity in the country.

Apart from fixing an economic price, it would be necessary to help the sugar industry in U.P. and Bihar to increase its productivity and reduce its production costs. The U.P. Chief Minister, Mr. C. B. Gupta, told the Sugar Industry Advisory Committee in Lucknow last week that the State Government would extend the intensive sugarcane development scheme, which is at present operating in 25 factory areas, to all the 71 fac-

tories provided the Central Government, which bears one-third of the cost, agrees to it. The scheme, it is expected, will improve the quality and increase the yield of sugarcane an acre. The Advisory Committee has recommended to the U.P. Government to place a "rotating" capital of Rs. 5 crores at the disposal of some lending agency to extend assistance to sugar factories.

Outlook for Manganese Ore Exports

Despite all talk about promoting India's exports, no concrete measure seems to have been taken so far to arrest the fall in the export of manganese ore, which was once an important foreign exchange earner. Its exports declined from 1.7 million tons in 1957 to about 850,000 tons in 1962, and consequently the foreign exchange earnings fell from Rs. 32 crores to Rs. 9 crores. Early in 1963, the State Trading Corporation planned to export about 80,000 tons on the basis of barter deals. A Calcutta firm has also been permitted to export the ore against the import of steel materials for the full value on c.i.f. basis. Furthermore, the Government of India has been trying to negotiate a barter deal with the U.S. Commodity Corporation. But it is doubtful whether these measures will help to regain the ground which has been lost in foreign markets. The main reason for the fall in exports is that Indian ore has been priced out. The fact that the State Trading Corporation has taken over a major portion of the export business from the private trade has also weakened the confidence of foreign buyers. The future outlook is considered more discouraging since the fall in world steel production is likely to reduce the demand for the ore and aggravate the competition from rival suppliers.

Domestic production costs have been inflated during the past few years by several factors. Royalty rates for the ore with lower than 45 per cent manganese content have recently been increased. The sales tax and other State levies have gone up. The railways have discontinued the 50-per cent concession in freight hitherto enjoyed by the manganese industry. The fees for siding plots, especially on the South-Eastern Railway, have been raised. The prolonged delay in loading the ore on ships at port has also added to costs. Several manganese ore companies have been severely hit by the 1963-64 Budget. The super profits tax, in particular, will greatly strain their finances.

As a result of the substantial fall in exports, several mines have stopped production. Almost every mine has been embarrassed by the accumulation of stocks, the total of which was estimated at more than 30,000 tons at the end of last December. A major part of the output has to be exported because domestic consumption is not more than 60,000 tons against an estimated annual supply of more than 160,000 tons. If the industry is to be revitalised it will be essential to step up exports. This can be done only if vigorous steps are taken to reduce costs and various incentives are given.

Tax Burden on Tea Estates

In his address at the annual general meeting of the Cachar branch of the Tea Association of India held in Silchar on Saturday, Mr. S. R. Daga, president, said that the production of Indian tea had recently been increasing at a slow pace. But in 1962, the total output amounted to 343 million kilograms, against 353 million kilograms in 1961, a fall of 10 million kilograms. India exported 214 million kilograms in 1962, compared with 205 million kilograms in 1961. Although there was an increase of 9 million kilograms in exports over those in 1961, there was no corresponding rise in the amount of foreign exchange earned. In 1962, a sum of Rs. 125 crores was earned through exports, against Rs. 124.6 crores in 1961. The reason, according to Mr. Daga, is that Indian tea did not fetch high prices in foreign markets. "Our internal consumption is increasing and exports as a proportion of total production have been falling. It is, therefore, of the utmost importance that every effort should be made to increase production so that the growing internal demand may not

act as a drag on exports". It is necessary that the planners should fix the production target well in advance. The tea target for the third plan was announced only at the lag end of the second plan. This naturally left no time for the producers to undertake measures to achieve the desired output.

Mr. Daga has welcomed the abolition of export duty on tea in the 1963-64 Central Budget. But the Government has sought to make up the revenue loss by levying an additional surcharge on excise duty. The duty, it is said, has been increased with a view to restraining internal consumption. But being non-refundable at the time of export, it plays its part in raising the cost of production. When it is necessary to reduce costs to the utmost extent, no additional levy should be imposed on export teas. Mr. Daga has, therefore, urged that the drawback of excise duty should be continued. The financial difficulties of Cachar gardens have increased with the raising of excise duty. To alleviate this, he has suggested that deferred payment of the duty should be allowed for Cachar gardens.

The Assam Government proposes to raise further the rates of agricultural income tax. The last increase in the tax took place only in April 1962, and at that time the rates were substantially raised. Planters have been urging the Central and State Governments to reduce the burden of taxation since it has been standing in the way of the industry's development. In recent years, heavy demands have been made on the industry as a result of labour legislation, payment of enhanced wages, institution of provident funds, grant of bonus and other benefits such as housing, medical facilities, and leave.

SPECIAL TRAINING

THE Rev. Dr. Price, lecturing on "Education in the Future", said: "I am no lover of things or methods simply because they are old. It would be absurd to prefer a candle now we have the electric light," and he quite agrees with the Chambers of Commerce and business men everywhere, who are denouncing the old-world system of training for boys who have to fight "the hard battle of life", and earn their bread by trade. A little Latin, and less arithmetic did very well for our grandfathers, but fail and fail utterly now. The American and Germans are giving their sons a special business training, and this is being felt in the world's markets. We may be conservative, and we may try to ignore facts; but education, like machinery, must be up to date and the very best that is simply cruel to send a boy to a school in which old methods survive, and in which instruction is droned out to a crowd of pupils. Expert teaching is essential if boys are to begin like with a fair chance of success. Pupils should be educated as individuals not as herds." Parents cannot be too anxious. They should carefully watch the writing, test the spelling, insist that the instruction in arithmetic, commercial geography, and commercial correspondence is thoroughly sound and modern. In all but the most elementary schools, bookkeeping, shorthand, and business routine should be subjects of instruction. A boy's future depends largely on his school. If the school is antiquated, the teaching inefficient, and the pupil's precious time is being trifled away, it is clearly the parent's duty to insist on a change. A smattering of the "dead languages," and a neglect of those subjects absolutely necessary, mean that the pupil must begin his commercial education when he leaves school. Many a bright and promising youth has been discouraged, and perhaps ruined, because he has had to begin life with an education that has given him the last place in the fierce struggle. Dr. Price is the distinguished Principal of Boxley College. A teacher of great experience, he has closely studied the American and German school systems, and the object he has in view in his lecture is to point out to parents and teachers the importance of school efficiency and parental watchfulness. He warned his hearers against cram and examinations, and reminded them that the world's greatest, best and most successful men were not always the first at school. Individualism should mean careful training for the backward, the delicate, and those unable to succeed with class instruction.

IMPROVING THE BASIS OF INDO-E.E.C. TRADE

By Malcolm Subhan

BRUSSELS:

NOW that the removal of the common external tariff on tea appears to be only a matter of time, India has decided to ask the Six to adopt the various tariff measures which had been visualised for her products during the negotiations concerning the U.K.'s entry into the E.C.M. The request was contained in an *aide-memoire* which Mr. K. B. Lal presented to the Belgian Foreign Minister, Mr. Paul-Henri Spaak, and Professor Hallstein last week.

The adoption of these tariff concessions is regarded as only the first step, however. The *aide-memoire* expresses the hope that it will be followed by more comprehensive arrangements for expanding the existing economic relations between India and the E.E.C. These arrangements, in the Indian view, could be negotiated either bilaterally or multilaterally. The arguments advanced recall those contained in the Indian memorandum of last May. However, the Chinese threat to her borders has given added urgency to the problems posed by India's growing trade deficit with the Six.

The *aide-memoire* points out that at a time when India needs higher export earnings—and increased loan assistance—her exports to the E.E.C. are declining. It maintains that the heavy deficit is having an inhibiting effect on the Six's exports to India, and in consequence, on her development programme. Professor Hallstein, who has on several occasions expressed the view that the proposals for comprehensive trade agreements should not be lost sight of, has commented favourably on the *aide-memoire*, praising it for its flexibility of approach.

Mixed Blessing for India

The break-down of the negotiations between Britain and the Common Market has proved to be a mixed blessing for India. Now that her exports will continue to enter the U.K. duty free, the Six give the impression that they no longer regard India's export problems as urgent. As Dr. Hallstein stated in New Delhi, India's trade deficit with the E.E.C. is not particularly large. (The difference between Dr. Hallstein's figure and that advanced by the Government of India is due, in the view of certain Community officials, to the fact that the Six often buy goods of Indian origin from the U.K.).

Moreover, it is commonplace that life does not stand still. For the Six, the negotiations with the U.K. are already a part of their history. Other problems, at least one of which, that of the "Kennedy round", is of equal importance, have taken the place of those which were raised during the British negotiations. If the Six were prepared to regard the export problems of the Commonwealth countries as a Community responsibility during the Brussels negotiations, their present attitude appears to be that they are best discussed at an international level—in the framework of G.A.T.T. for instance. Finally, the break-down of the negotiations has precipitated within the Community itself a crisis which is far from being resolved.

India has, therefore, had to adjust herself to the fact that her problems no longer preoccupy the Six to the same extent as, say, six months ago.

They are aware of the political importance of India in the present state of world affairs, and while they recognise the gravity of her present economic situation, they feel that for problems on so vast a scale such as India's, help must be international in nature. Although Dr. Hallstein has on a number of occasions expressed his belief that the proposals for comprehensive trade agreements with India and Pakistan deserve to be revived, he has obviously received little direct encouragement from the Governments of the Six.

Changed Circumstances

It is clear, however, that in the changed circumstances, these proposals offer a convenient point of departure. While the various contacts which Indian officials have had with the E.E.C. Governments suggest that this view is shared by the Six and the Commission, the fact remains that the latter have shown considerable reluctance so far to commit themselves formally. On the other hand, from the Indian point of view, no official approach can be made to the Six in the absence of firm assurances which once embarked upon, the negotiations with the Community will be successfully concluded within a reasonable period of time. (There is nothing to prevent India from simply requesting the opening of negotiations for a trade agreement. But as the Iranian—or Israeli or even Turkish—experience has shown, such negotiations can be a tedious business, not because of any hostility on the part of the Six, but simply because of their inability to agree among themselves on the terms which they are prepared to offer.)

India has, therefore, made a number of attempts to persuade the Six to debate her problems officially. Both the Dutch and the Germans were asked to see whether a discussion on one aspect or another of India's problems could not be held in the Council of Ministers. Similarly, it is hoped that Dr. Hallstein's visit to India will result in a report to the Commission, if not to the Council of Ministers.

It is too early even to speculate on what the final results of these various attempts will be. Dr. Hallstein has not yet spoken to his colleagues of his visit. One reason is that most of them have been away; the first meeting of the Commission since Easter was held last week. It was devoted inevitably to the German proposals for a Community programme of action for the next 15 months. However, as Dr. Hallstein's visit was an unofficial one, he is not expected to present a formal report to either the Commission or the Council of Ministers.

Dutch Proposal on Tea

The Dutch proposal that the common external tariff on both tea and tropical woods be reduced to zero was adopted by the Council on 2nd April. It is significant, however, that the reduction, which in the first instance will be a suspension of the tariff, should have been made dependent on Britain's readiness to reduce her own tariffs on these items to zero also. This stipulation has little to do with the fact that the proposal for a zero tariff on tea was originally made during the British negotiations. One of the reasons for it is technical. As Indonesia and not India is the Community's principal supplier, the Six

cannot offer so substantial a concession to the latter without offering compensation to the former—in this case, duty-free entry into the U.K.

But a more fundamental reason is the changed attitude of the Six since the announcement of the so-called Kennedy round. Although these negotiations are primarily between the U.S.A. and the E.E.C., and subsidiarily, between the industrialised countries generally, the Americans want them to be the occasion for concessions to the developing countries. The Six are reluctant, therefore, to grant concessions on a bilateral basis in advance of the Kennedy round. Their offer on tea and tropical woods is not an exception: under the mechanism visualised by them, the Community would as a first step merely suspend the tariff on tea and tropical woods. It would later negotiate with the U.K. to have the reduced tariffs bound in G.A.T.T. after negotiations with the principal suppliers. Significantly enough, the first contacts between the Common Market and the U.K. on this subject took place in Geneva earlier last week, although the talks will be continued in Brussels.

The Six's action on tea suggests that they are prepared to grant India at least some of the concessions offered during the British negotiations. The German proposals for a Community programme of action appear to confirm this view. These proposals, which were presented in Brussels earlier last week, are substantially those put forward by the German Foreign Minister, Dr. Schroeder, in the Council of Ministers on 2nd April, when he urged his Common Market colleagues to give priority to the problems of the developing countries.

German Move

What the Germans have done is to list the more important problems facing the Community and to indicate the order in which they should be dealt with. Their programme of action is in fact divided into three stages. Among the problems to be taken up in the first stage, which would end by September, is that of tariffs on tropical products. The Germans maintain that during this stage, the tariffs on tea and tropical woods should be reduced to zero, and the earlier promise to reduce tariffs on eight tropical products under the terms of the new Convention of Association, be redeemed.

During the second stage, which in principle would end in December of this year, the Germans want the Community to define the principles of the common commercial policy vis-à-vis Japan, Latin America, the communist bloc, but also the low-cost countries. As matters stand at present, the Six have a clearly defined policy as regards the 18 African States associated with the Community. This is a policy which they are prepared to extend to the English-speaking African States also.

They have devoted little thought so far to the problems of the Latin American countries, however, in spite of the flow of memoranda from the latter. The decision to reduce the common external tariff on coffee appears to be the only concession to the Latin Americans so far. Some of the Six feel that Latin American problems should be given priority over

CAPITAL, 9th May, 1963.

Asian, although as a number of tropical products are involved in both cases, it is obviously difficult to compartmentalise the problems.

While the adoption of the German programme of action would force the Six to take a number of important decisions concerning the developing countries—notably, India and Pakistan—within the next nine months, it must not be forgotten that these proposals do not reflect the majority view. They must be viewed in fact in the light of the dispute between the French and the Germans over the future development of the E.E.C. The point at dispute is not new. It concerns a sector of the economy in which protectionist forces are the strongest—agriculture. The French problem is how to dispose of their growing agricultural surpluses. Germany, as the largest importer of agricultural products after the U.K., is the logical market for these surpluses. Although the mechanism of the common agricultural policy favours intra-Community trade, French farmers will be able to benefit from it only after the policy has been fully implemented.

An important element of the policy is the gradual harmonisation of agricultural prices throughout the Community. The first step in this direction should have been taken by the end of April. But as it involves a reduction in German cereal prices, which are the highest in the Community, the German Government has strongly resisted such a move. Any reduction in the price paid to German farmers for their wheat would lead to a fall in farm incomes. Obviously, no Government which is strongly backed by farmers can afford to alienate them.

The Germans have, therefore, proposed that the harmonisation of cereal prices begin next year only. This means that the agricultural programme would be at a standstill for a year at least. This is clearly unacceptable to the Six, who regard the common agricultural policy as the only viable alternative to the extremely expensive—and often ineffective—forms of protectionism in force at present.

The French Stand

The French are, therefore, not alone in pressing for a reversal of the order of priorities as established by the Germans. They argue that the E.E.C. cannot extend its external relations until it has made a good deal more progress towards the common market stage, especially in the field of agriculture. There is general agreement within the Community that the implementation of the agricultural policy should not be delayed in spite of the obstacles which must be overcome.

This does not mean, of course, that Germany's partners attach little importance to the elaboration of a common commercial policy, especially as it affects the developing countries. But the general feeling appears to be that to the extent that such a policy involves tariff matters, it were best done within the framework of G.A.T.T. As for financial aid, it is argued that it is easily extended in co-operation with other industrial countries as through the Aid-India Club.

The debate on the German proposals will be resumed by the ministers of the six E.E.C. States when they reassemble in Brussels this week. It is expected that it will be heated, if inconclusive. Observers here feel that with summer not far off, the Common Market will mark time for the next few months; it is only after the vacation season that the important problems will be taken up again.

CAPITAL, 9th May, 1963.

A Ditcher's Diary

IN VAIN HAVE I LOOKED IN OFFICIAL STATEMENTS for some confirmation of the endless Press reports on western, specifically British, attempts to link the question of Kashmir with that of western military aid to India to meet the challenge of China. In public at any rate both Mr. Rusk and Mr. Sandys keep saying that the two are separate, as indeed they ought to be. Has the whole thing then been made up by the Press, as Mr. Macmillan once remarked on some other subject? It would be comforting to think so. But anyone familiar with the ways of diplomatists and political journalists will see in most of the reporting the hand of the former. While publicly proclaiming that the British and the Americans, though very keen on a Kashmir settlement, see the Chinese threat as real and independent of Indo-Pakistani differences, certain embassies in New Delhi have been "briefing" special correspondents very tactfully. I have often wondered to what extent journalists are justified in letting themselves be used so. Some of my colleagues, I know, want nothing more than a "story" to file before anyone else; but ethical considerations can reduce a newspaperman to virtual silence and subsequent unemployment. Yet there must be a line to be drawn somewhere. The mischief can go farther when a New Delhi journalist, "briefed" by a foreign embassy, carries the story to an External Affairs official for his "off-the-record" reaction. With these two versions the correspondent sits down to compose his masterpiece. The result is what you and I read in the papers the next morning. Meanwhile, the talks between the two sets of Ministers have been reduced to a complete unreality, for neither is repeating at the conference table what each has said to the chosen journalists. I have a suspicion that this unreality never left Mr. Dean Rusk and Mr. Duncan Sandys during their recent visit to the Indian capital.

NOBODY, WITH THE POSSIBLE EXCEPTION OF THE Chinese, can withhold admiration for the magnitude of the American feat in climbing Mount Everest; and there may be more on the menu. Agreeably but somewhat surprisingly, Mr. Ullman, the team's historian, seems uncharacteristically reticent about the whole thing; even the name of the latest American hero was not known for days after the triumph. Here is something the Americans have done ahead of the Russians; and

the world isn't full of noise yet! Heads must be shaking hard in Madison Avenue. Come to think of it, it is amazing that the team has photographers, geologists, biologists and what have you—but not a P.R. man. Instead, there is a historian whose scholarly assessment of the successful effort may take years. No, it ain't right; and President Kennedy must be told so quite plainly. Madison Avenue's participation in a future American expedition in the Himalayas suggests wonderful possibilities. In Japan sky advertising is vastly popular; so many balloons proclaim so many products that you can hardly see the sky. What could an advertising desk at a height of 29,000 feet not do? I can see a really high-powered advertising genius (the trade has no time for anything less) sipping his Coca-Cola, chewing his gum and smoking his cigar, smoothly "selling" the Himalayas to his prospective client. Don't be sure that there will be nothing about the purity of snow, the abode of the gods, the serenity of climbing for climbing's sake, the mountains being temples of rock; oh no, advertising needs its serenity and sanctity. At the end will come the real sales talk. And don't think the products to be advertised will be only woollens and cures for chilblains. As a matter of fact I can think of few consumer goods that cannot be profitably advertised on or from the Himalayas. Think of a commercial radio station located right there on Everest. Mr. Walter Lippmann and Mr. James Reston may once or twice be invited to discuss summitry in lean listening hours; but the real "hot" hours will be too high-priced for political discussion; these will go to jazz and Twist. It is simply not true that physical elevation elevates all minds. Still and all Mr. Dyhrenfurth has my heartiest congratulations.

WINSTON CHURCHILL, ONCE NOT VERY POPULAR IN his own country, did or said little during most of his long political career to endear himself to India and her people. In fact he once said some very nasty, and very silly, things about Mahatma Gandhi. (To re-phrase a famous Churchillism, "I have not always been right"). An agreeable and continuous surprise for me has been to watch how the general Indian attitude to Churchill has changed over the years since independence. I have heard many speak of Churchill with warmth and admiration in recent years; but when

Mr. Nehru mentioned him at the height of the national emergency I knew that the few blind spots of the great man had been forgotten. His recent decision to retire from active politics must have been received in this country with a sigh not dissimilar, I imagine, from that heaved and heard in Britain. Retirement at around 89 is in no sense a surprise; yet the decision seems a sudden break with an era. In recent years he did not attend the House of Commons very often; but nobody who has seen him in the House, as I did in 1951, is ever likely to forget his presence there. I have profound differences with Mr. Nirad C. Chaudhuri, the Unknown Indian; but his speculation that the Indian empire might have had a different course if Churchill had come out in the 'thirties as Viceroy of India was a brilliant and fascinating, if futile, intellectual exercise. It can also be argued, as it has been, that India's progress to freedom would have been a different story if the British had returned Churchill to power in 1945. All this speculation is in the line of Pascal's aphorism on Cleopatra's nose. What is certain is that Churchill's name shall be remembered as a source of inspiration for a long time by peoples confronted with a national calamity and determined to convert it into a national glory. In those dark days of 1940, Britain's defence consisted, really, of just this one man's optimism; and how it worked! Politics and economics apart, in both of which Churchill made many mistakes (remember Keynes's joke), Churchill will be read here as long as the English language "may" or "shall" be used.

THOSE WHO ARE APPALLED AT THE IDEA OF A Stalinist revival in the Soviet Union would do well to ask themselves whether the world has indeed been a more comfortable place to live in since Mr. Khrushchev came to power. That is precisely what I have been doing; and the answer which keeps coming back is that it certainly has not. I have never concealed my admiration for Mr. Khrushchev both as a man and as the world's brightest hope for the spread of economic liberalism. But I cannot pretend that his interference in international affairs has not occasionally given me some very bad moments indeed. At least in retrospect, I cannot recall so many, when Stalin was in power. In those days, the Russians tended to mind their own external business and get quietly on with their purges and exploitations internally. So whatever the advantages for the Soviet Union of Mr. Khrushchev's accession, it is difficult to see what good it has done the rest of the world. Except perhaps in one respect: it would be foolish to deny that much of the western powers' willingness to aid the under-

JUTE SHARES RISE ON GOOD DIVIDEND NEWS

(BY A SPECIAL CORRESPONDENT)

THE improvement in jute shares during the past week has been the most encouraging feature of the Calcutta stock market. Since considerable investments have been made in the industry, a rise in the prices of these shares is expected to exert its effect on other shares. The support has been sparked off by some excellent dividend announcements. The Kamarhatty Co. Ltd has declared a taxable ordinary dividend of 20 percent, including an interim of 5 percent, for the year ended December 1962. The dividend was passed for 1961. The Kanknarrah Co. Ltd has announced a taxable ordinary dividend of 15 percent, including an interim of 5 percent, but the Company passed the dividend for the past six years. Reliance have also been a firm feature, and the price of the shares has risen from Rs. 7.05 to Rs. 10 due to influential support. A change in the Company's management has also been rumoured.

There is no doubt that the industry had enjoyed some measure of prosperity during the past year. This was due to an abundant supply of fibre at reasonable prices. The price of hessian was also maintained at a fairly remunerative level. The relation between the price of raw jute and that of hessian helped the industry to earn satisfactory profits. The manufacture of carpet-backing cloth and other specialities was also profitable. The jute mills, however, did not make much profit as far as sacking was concerned, since the price of this fabric was held down to a low level. The demand for heavy goods was also at a low ebb since in overseas markets, Indian sacking was priced out by the Pakistani product. The jute mills there continue to enjoy the advantages of cheaper fibre and export subsidy.

In spite of the past week's improvement, jute shares seem to have now reached a plateau. It looks as if the erstwhile prosperity of the industry has already been discounted. The industry enjoyed prosperity during the first quarter of 1963 but the tide has turned since. Although several mills have been able to sell their products for some months ahead at remunerative prices against substantial raw jute stocks bought at reasonable prices, the future outlook has become rather uncertain. Current enquiries for jute goods have declined substantially. The outlook for hessian is being assessed cautiously. The U.S.A. has shown little interest for some time past. In view of adequate stocks, the latter is unlikely to extend any great support in the near future.

Although scattered buying in hessian has been made by the Argentine and Russia, it is difficult to forecast the size of their buying in the near future. The prospect for sacking is less encouraging. Since Indian goods have been uncompetitive in comparison with those from Pakistan, foreign markets are not expected to buy from the Indian mills until they have bought whatever is available from the Pakistani industry. As far as domestic buying is concerned, it does not look as if the Government has bought for defence as much as was expected earlier. In any case, the trend of jute goods prices has shown a tendency to decline for some weeks. It is almost a universal principle that in a falling market no buyer

is inclined to meet his requirements except on a day-to-day basis. Taking a view of the trend, there is little ground for being bullish. The Indian industry will be working at the maximum level of production with all looms unsealed up to the end of May. Although the power shortage has interrupted the working of mills, the loss of output is considered negligible. In any case, the shortage is likely to be overcome in a few weeks' time.

The prospect of an abundant raw jute supply during the coming 1963-64 season is no doubt an encouraging factor. The jute mills at present hold sufficient fibre stocks equivalent to more than 20 weeks' consumption. So it is hoped that the present season will end with a substantial carry-over. Indications are that the next crop will also be at least as big as the 1962-63 one. Weather in both India and Pakistan has been favourable, so the plant has grown satisfactorily in all low land areas. The seeds have germinated well in mid- and up-lands. The quality of the Indian jute crop, it is hoped, will improve due to energetic efforts made in this direction. But the problem is that the Government has decided to maintain the minimum price of raw jute during 1963-64 at the same artificially high level as in the 1962-63 season. So it is feared that the competitive power of the Indian industry will suffer due to the high cost of fibre. It may be pointed out in this context that the price of Pakistani raw jute is much lower than that of the Indian fibre.

Guest, Keen, Williams Earns More

GUEST, Keen, Williams, Ltd has produced satisfactory results for the 52 weeks ended 29th December, 1962. The profit has improved from Rs. 1.04 crores in 1961 to Rs. 1.28 crores in 1962, after increasing depreciation from Rs. 45.21 lakhs to Rs. 51.19 lakhs and transferring Rs. 6.08 lakhs (against Rs. 6.22 lakhs) to additional depreciation reserve. Sales rose from Rs. 10.66 crores to Rs. 13.06 crores, but Rs. 16.37 lakhs represented the additional excise duty on rolled and forged iron and steel products. A taxable ordinary dividend of 14 percent, including an interim of 6 percent, has been maintained. It is more than twice covered and offers a yield of 4.1 percent at the present price of Rs. 34.37 a share of Rs. 10 each. Taxation provision for the current period is Rs. 55.60 lakhs (against Rs. 30.50 lakhs). A sum of Rs. 9.12 lakhs (against Rs. 10.69 lakhs) has been transferred to taxation equalisation reserve. Additional taxation reserve due to the super profits tax is Rs. 1.20 lakhs. A sum of Rs. 6.15 lakhs (against Rs. 11.24 lakhs) has been transferred from general reserve. Tax provision for previous periods absorbs Rs. 2.60 lakhs (against Rs. 24.420) and provision for tax equalisation in relation to the previous period is Rs. 1.46 lakhs. Development rebate reserve is allocated Rs. 5.55 lakhs (against Rs. 12.21 lakhs) and the debenture sinking fund Rs. 5 lakhs (the same).

The directors say that supplies of billets for re-rolling improved steadily during the second half of 1962, but production was adversely affected by

intermittent deliveries of good quality billets and matching materials from the main producers. Additions to fixed assets amounted to Rs. 53.09 lakhs (against Rs. 1.05 crores). Development rebate earned on these additions was Rs. 7.40 lakhs, of which a statutory transfer of Rs. 5.55 lakhs has been made to development rebate reserve.

An ordinary resolution will be moved at the Company's annual general meeting due to be held on 31st May, 1963. The resolution is that, subject to the approval of the Central Government, "sanction be and is hereby accorded to the investment by the Company in Sankey Wheels Ltd to the extent of 382,000 fully-paid equity shares of Rs. 10 each at par to be satisfied and paid for partly by the transfer to Sankey Wheels Ltd as on 1st June, 1963, at an independent valuation, of the car and jeep wheel plant of the Company at its Calcutta works, and as to the balance in cash." A special resolution will also be moved to authorise the directors to issue and allot to the Tata Iron and Steel Co. Ltd 214,583 fully-paid equity shares of Rs. 10 each in the Company and to accept in return 15,606 fully-paid equity shares of Rs. 100 each in Sankey Electrical Stampings Ltd, now registered in the name of Tata Steel, and that, accordingly, the directors of the Company shall not be required to offer these 214,583 equity shares in the Company to members of the Company. After acquiring 11 percent of the total shareholding, G. K. W. will have the S. E. S. as a wholly-owned subsidiary.

Sankey Wheels: A New Venture

THE Sankey Wheels Ltd has been incorporated as a new Company for the production of commercial and passenger car wheels. Guest, Keen, Williams is now manufacturing passenger car wheels at its Calcutta works with technical aid from Joseph Sankey and Sons Ltd, a subsidiary of Guest, Keen and Nettlefolds Ltd of the U.K. At present, Sankey is manufacturing in England a substantial part of all commercial vehicle wheels imported into India for replacement purposes. Some time ago, the Government of India licensed B. K. Sahney and Sons to manufacture commercial and passenger car wheels, and Sankey agreed to provide the necessary technical aid. It has been felt that more economic production will result and foreign exchange will be saved if both types of wheels are manufactured under one combined scheme. So it has been proposed to form the new Company in collaboration with Sankey. The licences to produce commercial and passenger car wheels have been given to the new Company.

Subject to the consent of the Controller of Capital Issues, the issued share capital of Sankey Wheels will be Rs. 1.7 crores divided into ordinary shares of Rs. 10 each. G.K.W. will subscribe for 382,000 shares, Sankey 385,000 shares, Mr. Sant Singh Sahney and his relatives 216,000 shares, the Commonwealth Development Finance Company 100,000 shares, the directors of Sankey Wheels and their friends 17,000 shares and Indian

public 600,000 shares. The existing car and jeep wheel plant of G.K.W. will be transferred to Sankey Wheels on an independent valuation which is estimated at about Rs. 30 lakhs. It will be transferred in exchange of the allotment to G.K.W. of fully paid-up 300,000 shares at par. Besides, G.K.W. will also subscribe for 82,000 shares in cash at par. In consideration of offering technical aid to Sankey Wheels, Sankey of the U.K. will be allotted fully paid-up 170,000 shares. It will also subscribe for 100,000 shares in cash at par in sterling and 150,000 shares in rupees. Sant Singh Sahney will subscribe for the shares in cash at par in rupees. The subscription of the Commonwealth Development Finance Company will be in sterling in cash. The latter will also give a sterling loan equivalent to Rs. 30,00,000 to Sankey Wheels for buying plant and equipment in the U.K. The directors of Sankey Wheels will subscribe for the shares in rupees in cash at par. When the subscriptions are completed, it is proposed to issue the remaining 600,000 shares for subscription by the Indian public.

The directors of G.K.W. think that the investment in the proposed new Company will be valuable since they visualise a rapid increase in the demand for commercial vehicle wheels in view of the high priority which the Government has given to the production of these vehicles for defence and other purposes. They have, however, reminded the shareholders that it will take some time before full production from the new plant is achieved. The substantial return which the directors expect from the new Company will be available in the long-term, not immediately.

Jay Shree Tea Preference Share Offer

THE offer of 24,800 cumulative redeemable preference shares of Rs. 100 each by Jay Shree Tea and Industries Ltd, it is expected, will have a favourable reception, as the attention of investors has been diverted to preference shares because of the super profits tax. The shares carry a fixed dividend of 9.3 percent, free of company tax but subject to the usual tax deduction at source. They are redeemable at par on 31st December, 1973. Since a part of the profit of the Company is subject to the agricultural income tax, the yield on these shares is considered attractive by market standards. (Fuller details appear on a later page in this issue of Capital.) The shareholders will get a net cash return of Rs. 6.51, after the deduction of tax at source, but they will get a credit of Rs. 2.79 for the tax deducted and paid on their behalf. The gross yield for a corporate shareholder works out to Rs. 10.46, including a rebate of Rs. 1.16 under Section 235 of the Income Tax Act. On the basis of the profit for 1962, the dividend on these shares has been adequately covered. The satisfactory performance of the Company during the past few years should help generate confidence. The funds will be used to finance the expansion and modernisation programme. They will also be used to reduce the borrowings of the Company from banks.

Its profit has improved from Rs. 34.54 lakhs for 1961 to Rs. 41 lakhs for the year ended December 1962, after increasing depreciation from Rs. 10.84 lakhs to Rs. 17.30 lakhs and providing Rs. 3.25 lakhs (against Rs. 4.50 lakhs) for development rebate reserve. A taxable ordinary dividend of 12.5 percent has been repeated, which is more than three-and-a-half times covered and offers a yield of 7.4 percent at the present price of Rs. 16.87 a share of Rs. 10

developed countries in recent years has been due to the fear of communist encroachment. If the Russians were to return to the exclusive cultivation of their own back-garden, then there might be a danger that the present reaction to current aid policies which is developing in some western countries, will be accelerated. And that would be a very bad thing indeed. But this contingency apart, I am not inclined to regret the eclipse of Mr. Khrushchev, if in fact this is in prospect. I am, of course, aware that the Soviet Union now has world responsibilities which she cannot just shrug off overnight, and I agree that a combination of Stalin's ruthlessness and Mr. Khrushchev's international adventurism would be a difficult thing to deal with and much worse than the state of affairs we have at present. But there is no evidence that the neo-Stalinists are plotting world domination and not just hoping to safeguard the unity of the communist camp. What they are probably planning, of course, is the speedy abandonment of Mr. Khrushchev's policy towards the Sino-Indian border dispute. In this respect India may have much to lose from a political change in Russia, and Mr. Nehru may be faced with finding an alternative to his present policy of dividing the two communist giants. Much as I have always approved this motive in principle, however, I have never regarded it as anything more than a temporary expedient until such time as a lasting basis can be devised for ensuring India's strategic defence. If Mr. Khrushchev is now on his way out, then there is no time to lose in doing just that.

YET ANOTHER PICTURESQUE TRADITION OF BRITISH life has, I see, come under considerable criticism lately. I am referring to the Guards picquet at the Bank of England. This somewhat quaint institution dates back from the Gordon Riots in the second half of the 18th century. It has always been, avowedly, a device for defending the country's gold resources from the covetous intentions of its own citizens; however, one would have thought that the main danger nowadays came from the activities of non-British financiers in such international centres as Basle, Paris and New York. For myself I had always regarded it as being purely ceremonial, and I was surprised recently to read that it was not. But whatever its functions so far as the Bank of England is concerned, the Guards themselves now consider it as nothing more than another exasperating example of the "bull" about which they have recently been complaining so loudly. I can appreciate that the life of a member of the Brigade of Guards, when not on overseas posting at any rate, can be one of the most dreary in all of Britain's fighting services. It appears to consist of little more than a ceaseless round of ceremonial guard duties occasionally interspersed by full-scale parades and constantly accompanied by what is known in polite parlance as "spit and polish". So if the Guards are now complaining about their lot, I am not at all surprised, although one would have thought they had only themselves to blame for joining in the first place. It appears the Bank picquet has for years been accepted in the Brigade as just a minor and unnecessary nuisance, and a job which could be done better by the police. But apparently the Bank does not agree; indeed it feels so strongly on the matter that it has offered in future to pay all expenses. So the picquet is to continue and the tourists will still be thrilled by the occasional sight of its bright tunics swinging along the Victoria Embankment. But the soldier's grievance will remain, despite the tribute to the Brigade's efficiency and the acknowledgement that Guards are better than the police when it comes to safeguarding the national property. I was never one to deride a useful tradition, and I would be sorry to learn that the Guards picquet had passed into history. But the Bank of England's claim for complete security would perhaps be more convincing if it did more itself to ensure that the nation's gold resources—also those of the sterling area incidentally—were not periodically removed from its vaults by methods against which the Brigade of Guards is no protection whatever.

THE DITCHER

each. Taxation is allocated Rs. 22.50 lakhs (against Rs. 15.50 lakhs). A sum of Rs. 3 lakhs has been transferred from taxation no longer required. General reserve absorbs Rs. 5 lakhs (against Rs. 8.49 lakhs) and dividend equalisation reserve Rs. 5 lakhs. The carry-forward is Rs. 42,303, against Rs. 18,455 brought in.

The paid-up ordinary share capital is Rs. 87.47 lakhs, divided into shares of Rs. 10 each. The Company issued bonus shares by capitalising reserves in the proportion of one bonus share for every two held in 1954 and in the proportion of one bonus share for every four held in 1961. The Company was incorporated in 1945 under the name of Jay Shree Tea Gardens Ltd. Later it was changed to the present name in view of the diversification of activities. The total area under tea is 2,202.12 hectares, and the gardens are spread over in Assam, Darjeeling and Madras State. In 1963, the Company has acquired a group of three tea estates, near Silchar, Assam. The total output of tea was 73,283 maunds in 1961, and 70,684 maunds in 1962. High quality teas have been produced. It owns a plywood factory in Assam with a licensed capacity for producing commercial and decorative plywood. At its Khardah factory, near Calcutta, all types of decorative plywood, block boards and flash doors are produced. It manufactures plywood packing cases in its factory at Ultadanga, near Calcutta. Its chemical and fertiliser plant in Khardah has an output capacity of 100 tons of superphosphate and 50 tons of sulphuric acid a day. It has also various trading and warehousing activities. It has obtained an industrial licence for setting up a hard board factory in Madhya Pradesh. Steps have already been taken to import the necessary equipment for this factory.

Rights from Phosphate Company

THE ordinary shares of Phosphate Co. Ltd have been steady around Rs. 255. The Company is offering rights shares for Rs. 9 lakhs divided into shares of Rs. 100 each at par to the existing shareholders in the proportion of two new shares for every five held. It proposes to set up a ferro-alum plant. The rights issue will raise the Company's ordinary share capital from Rs. 22.50 lakhs to Rs. 31.50 lakhs. In October 1961, it issued 7,500 ordinary shares at par to the existing shareholders in the proportion of one new share for every two held.

The Company has produced satisfactory results for the year ended June 1962. Sales rose from Rs. 80.50 lakhs in 1960-61 to Rs. 82.21 lakhs in 1961-62. The profit has increased by Rs. 2.83 lakhs to Rs. 13.48 lakhs, after providing for depreciation, development rebate and taxation. A taxable ordinary dividend of 17.5 percent has been declared, absorbing Rs. 3.94 lakhs. The yield is 6.9 percent at the present price.

Dr. Paul Lohmann Rights Offer

DR. Paul Lohmann (India) Ltd is offering rights ordinary shares of Rs. 10 each at par to the existing shareholders in the ratio of two new shares for every share held. The share is now quoted at Rs. 16. Although the Controller of Capital Issues has sanctioned the issue of shares for Rs. 60 lakhs, the existing shareholders are being offered only Rs. 53.04 lakhs. The remaining Rs. 6.96 lakhs is being reserved for sub-

scription by the foreign collaborators. The shareholders have also been given the right to renounce their rights in favour of their nominees.

The funds will be used to finance the Company's expansion programme. The construction of the fine chemicals factory in Dum Dum, near Calcutta, is nearing completion and production will start soon. The licensed capacity of the factory is 1,500 tons a year. The Company has also obtained an industrial licence for producing oxalic acid, formic acid and sodium formate. These basic chemicals have wide industrial application, but they are largely imported. They will also be partly used by the Company's fine chemicals factory. In view of the good demand for the products which the Company will manufacture, the directors expect to sell them without any difficulty. They are also exploring the possibility of exporting these products. Out of the funds to be raised by the rights issue, Rs. 30 lakhs will be required to finance the capital cost of the fine chemicals' project. The remaining Rs. 30 lakhs will be invested in the basic chemicals project.

Kumardhubi Engineering Pays More

THE Kumardhubi Engineering Works Ltd has increased the taxable ordinary dividend from 35p to 45p for 1960-61 to 45p for 1961-62. The profit has risen from Rs. 4.15 lakhs to Rs. 8.47 lakhs, after transferring Rs. 11.51 lakhs (against Rs. 3.65 lakhs) to taxation, Rs. 1.65 lakhs to super profits tax and Rs. 5.98 lakhs (against Rs. 6.20 lakhs) to depreciation. A sum of Rs. 36,924 has been transferred from provision for bad and doubtful debts. Development rebate reserve is allocated Rs. 77,100 (against Rs. 38,300) and general reserve Rs. 3.25 lakhs. The usual preference dividends have been paid. The ordinary dividend is more than four-and-a-half times covered, and offers a yield of 5.6 percent at the present price of Rs. 8 a share. The carry-forward is Rs. 3,088, against Rs. 13,579 brought in.

Orissa Cement Cuts Dividend

THE ordinary shares of Orissa Cement Ltd have been easier around Rs. 13.31 because of the dividend cut. The net profit has declined from Rs. 1.13 crores in 1961 to Rs. 95.46 lakhs in 1962, after transferring Rs. 36.62 lakhs (against Rs. 36.81 lakhs) to depreciation and Rs. 3.30 lakhs (against Rs. 2.91 lakhs) to development rebate reserve. Provision for taxation has been raised from Rs. 44 lakhs to Rs. 51 lakhs. The taxable ordinary dividend has been cut from 15 percent to 10 percent, which offers a yield of 7.5 percent at the present price. General reserve absorbs Rs. 13.50 lakhs (against Rs. 30 lakhs).

The directors say that if the dispute with the Government of Orissa concerning the electricity rate is settled against the Company, it may have to bear an additional burden of Rs. 60 lakhs to Rs. 70 lakhs on the power bill. This will hit the Company hard unless the price of cement is suitably increased.

United Commercial Bank Maintains

THE United Commercial Bank Ltd has produced satisfactory results for the year ended December 1962. Interest paid on deposits rose from Rs. 2.61 crores to Rs. 3.01 crores while interest and discount earned improved from Rs. 4.10 crores to Rs. 4.84 crores. The profit has risen from Rs. 72.61

lakhs to Rs. 73.33 lakhs. Fuller details appear on a later page in this issue of Capital. A taxable ordinary dividend of 12 percent has been maintained and *pro rata* dividends have been paid on new shares. The dividend offers a yield of 8.5 percent at the present price of Rs. 71 a share of Rs. 100 each on which Rs. 50 has been called up. An amount of Rs. 28 lakhs has been transferred to the reserve fund. Bonus to staff absorbs Rs. 16.50 lakhs and the gratuity trust fund Rs. 4 lakhs. The carry-forward is Rs. 25,151, against Rs. 2.07 lakhs brought in. On 11th July, 1962, 200,000 rights shares were offered to the existing shareholders at a premium of Rs. 25 a share. The paid-up capital is now Rs. 2.23 crores which will rise to Rs. 2.80 crores when all the allotment money is received. Since the close of the financial year, the banking business in the Union of Burma has been nationalised. But the Burma Government has decided to pay compensation for the bank's buildings and fixed assets.

Deposits rose from Rs. 98.90 crores to Rs. 105.74 crores. Cash increased from Rs. 8.86 crores to Rs. 11.24 crores. Investments increased to Rs. 36.90 crores from Rs. 35.97 crores and advances to Rs. 71.08 crores from Rs. 64.21 crores.

United Flour Cuts, Hooghly Skips

THE latest results of the flour mills under the managing agency of Shaw Wallace and Co. Ltd have been published. The United Flour Mills Co. Ltd has made a profit of Rs. 2.26 lakhs for the year ended November 1962, against Rs. 1.15 lakhs for 1960-61, after providing Rs. 30,201 (against Rs. 29,113) for depreciation. Sales rose from Rs. 93.05 lakhs to Rs. 1.10 crores. The taxable ordinary dividend has been cut from 10 percent to 7.5 percent absorbing Rs. 37,500. The yield is 2.5 percent at the present price of Rs. 30 a share of Rs. 10 each. Taxation is allocated Rs. 1.92 lakhs (against Rs. 80,977), leaving a carry-forward of Rs. 6,571 (against Rs. 10,571) brought in. Production was 252,082 quintals, compared with 213,412 quintals in the previous year.

The Hooghly Flour Mills Co. Ltd has again passed the dividend for the year ended December 1962. The profit is Rs. 2.19 lakhs, against Rs. 6,269 in 1961, after transferring Rs. 32,721 (against Rs. 35,630) to depreciation. Sales increased from Rs. 1.03 crores to Rs. 1.31 crores. Taxation absorbs Rs. 1.84 lakhs (against Rs. 21,683) leaving a carry-forward of Rs. 32,614, against a loss of Rs. 4,336 brought in. Production was 301,951 quintals, against 236,947 quintals.

The directors of both companies point out that the Government of India reduced the maximum selling prices of flour and *atta* during the first half of 1962. The extraction percentage of wheat produced was also controlled by the West Bengal Government. The demand for *atta* was good, but that for flour was rather poor.

Philips India Pays More

PHILIPS India Ltd has produced satisfactory results for the year ended December 1962. The profit has improved from Rs. 66.20 lakhs in 1961 to Rs. 1.20 crores in 1962. The taxable ordinary dividend has been increased from 12 percent to 13 percent. It offers a yield of 5.1 percent at the present price of Rs. 25.69 a share of Rs. 10 each. Taxation is allocated Rs. 85.50 lakhs (against Rs. 36 lakhs). The dividend has been raised after an interval of three years.

The Company has been licensed by the Government of India to produce

tungsten and molybdenum wire and tungsten coils, which have hitherto been entirely imported. The project will help the Indian lamp industry to become more self-sufficient in the supply of raw materials. As a result of the products manufactured by Philips, there is likely to be a foreign exchange saving of about Rs. 12 lakhs a year. The products will be manufactured at the Company's factory in Bombay. N. V. Philips' Gloeilampenfabriek, Holland, will be the technical collaborator.

The Company has also been permitted to issue rights ordinary shares for Rs. 16.66 lakhs at a premium of Rs. 5 a share of Rs. 10 each. The non-resident shareholders will be offered 50 percent of the new issue. The balance will be offered to the existing Indian shareholders.

Mafatlal Group Mills do not Impress

OF the three textile mills belonging to the Mafatlal group—Mafatlal Fine, Standard Mills and Sassoon Spinning—only the Mafatlal Fine Spinning and Weaving Company has been able to maintain the dividend for the year 1962 at Rs. 30 a share (Rs. 100-paid) less tax, and report some improvement over the previous year's performance. The Standard Mills has reduced the dividend from Rs. 25 to Rs. 20 a share (Rs. 100-paid), less tax, and Sassoon Spinning and Weaving has cut down the dividend by half from Rs. 2 to Re. 1 a share (Rs. 10 paid), although along with the dividend, it has announced the issue of bonus shares in the proportion of two shares for every 25 held. The bonus shares are being issued out of the share premium account. The preliminary figures about the working of these Companies which have been just released along with the announcement of dividends, show that while all the three mills have increased their sales, only Mafatlal Fine has made a larger profit.

Mafatlal Fine: The gross sales of Mafatlal Fine are up by about 9.7 percent from Rs. 3.20 crores to Rs. 3.51 crores and the gross profit also shows an increase of nearly 10 percent from Rs. 63.88 lakhs to Rs. 70.26 lakhs. After providing Rs. 17.58 lakhs (against Rs. 15.51 lakhs) for depreciation, Rs. 4.29 lakhs (against Rs. 3.96 lakhs) for statutory development rebate reserve, Rs. 1.43 lakhs (against Rs. 1.32 lakhs) for development rebate reserve and Rs. 18.65 lakhs (against Rs. 16.63 lakhs) for taxation, there remains a surplus of Rs. 23.14 lakhs, against Rs. 21.42 lakhs in the preceding year. With Rs. 40,575 brought in from the previous year and adding Rs. 46,564, being excess provision for taxation, the disposable surplus amounts to Rs. 24.01 lakhs. From this, the directors have set aside Rs. 2.96 lakhs (against Rs. 81,567) for donations and provided Rs. 86,088 for additional provision for taxation for 1961.

Preference dividends absorb Rs. 1,86,470, and ordinary dividend accounts for Rs. 17,40 lakhs (the same). A sum of Rs. 75,000 (against Rs. 1 lakh) has been transferred to dividend equalisation reserve. After making all these appropriations, there remains a small surplus of Rs. 18,095 to be carried forward. The Rs. 100-paid share of Mafatlal Fine is currently quoted around Rs. 815.

Standard Mills: Against an increase of nearly 5.8 percent in the gross sales from Rs. 9.50 crores to Rs. 10.05 crores, the gross profit of the Standard Mills is down by as much as 28.4 percent from Rs. 1.76 crores to Rs. 1.26 crores. The Company paid Rs. 1.23 crores by way of excise duty compared with Rs. 94.63

lakhs in the previous year. Closing stocks are up by Rs. 14.70 lakhs. After providing Rs. 38.49 lakhs (against Rs. 34.05 lakhs) for depreciation, Rs. 13.73 (against Rs. 7.76 lakhs) for development rebate and Rs. 36.15 lakhs (against Rs. 64.05 lakhs) for taxation, the net profit amounts to Rs. 31.72 lakhs, against Rs. 61.98 lakhs in 1961. With Rs. 1.75 lakhs brought in from the previous year and including Rs. 12.50 lakhs transferred from the development rebate reserve, the disposable surplus amounts to Rs. 45.96 lakhs. The directors have set aside Rs. 6,48,500 for additional taxation for 1961 and provided Rs. 7.99 lakhs (against Rs. 1.32 lakhs) for donations, leaving a balance of Rs. 31.49 lakhs. No provision has been made for the dividend equalisation reserve which had received Rs. 15 lakhs in the preceding year. After providing Rs. 68,640 (the same) for preference dividend and Rs. 40.73 lakhs (against Rs. 38.41 lakhs) for ordinary dividend, there remains a small sum of Rs. 7,338 to be carried forward. The Rs. 100-paid share of Standard Mills is currently quoted around Rs. 838.

Sassoon Spinning: The gross profit of Sassoon Spinning is down by 11.5 percent from Rs. 80.97 lakhs to Rs. 71.65 lakhs in spite of an increase of a little over 8 percent in the gross sales from Rs. 6.85 crores to Rs. 7.41 crores. The Company paid Rs. 55.13 lakhs, against Rs. 44.05 lakhs by way of excise duty. The closing stocks increased by Rs. 10.59 lakhs. Appropriations of the year's profit include depreciation Rs. 27.36 lakhs (against Rs. 23.17 lakhs), development rebate Rs. 8.39 lakhs (against Rs. 10.61 lakhs), donations Rs. 3.77 lakhs (against Rs. 74,000) additional provision for taxation for 1961 Rs. 1.75 lakhs (against Rs. 41,439) and general reserve Rs. 3.75 lakhs (against Rs. 6 lakhs). The proposed dividend absorbs Rs. 7.54 lakhs (against Rs. 15.08 lakhs) leaving a modest sum of Rs. 3,192 to be carried forward, against Rs. 30,196 brought in. The two-for-29 bonus issue will require the capitalisation of Rs. 5.20 lakhs out of the share premium account. The Rs. 10-paid share of Sassoon Spinning is currently quoted around Rs. 49.50.

Century Mills Fares Well

THE preliminary figures about the working results of the Century Spinning and Manufacturing Co. Ltd for the year 1962 which had been released with the announcement of the final dividend—the total distribution has been maintained at Rs. 30 a share—showed a small decline in the gross profit from Rs. 3.92 crores to Rs. 3.78 crores. The full accounts which are now available show that the profit is lower in spite of a modest increase in the sales from Rs. 15.29 crores to Rs. 15.45 crores. But the performance seems satisfactory considering the all-round increase in production costs which have affected the fortunes of the entire textile industry. Raw materials costs are up at Rs. 5.63 crores, against about Rs. 5.09 crores, salaries and wages are higher at Rs. 4.28 crores, against Rs. 3.61 crores and manufacturing, administrative and other expenses have gone up from Rs. 3.24 crores to Rs. 3.62 crores.

The directors state that the profits of the textile section were adversely affected by the higher cotton prices, increase in wages on account of the Wage Board's recommendations, increase in dearness allowances and the compulsory export of cloth which had to be sold abroad at prices considerably below the Indian prices. Profit of the rayon section was affected by the sale of yarn at concessional rates to exporters of rayon products for

allotment of foreign exchange for the import of pulp. The directors add that the cumulative effect on all these factors would have been much worse but for "better efficiency and economic management" as a result of which the profit declined by only Rs. 14 lakhs.

The directors state that the construction of the tyre cord factory has been completed and trial and test runs are in progress. Initial production is expected to start in May. The construction work relating to the caustic soda plant is in progress and the machinery has also started arriving. The erection work, it is expected, will be completed by early 1964. The proposal to set up a separate textile unit has been dropped for the time being as suitable land could not be obtained. The additions to the fixed assets of the Company during 1962 amounted to Rs. 1.05 crores of which the cotton textile unit accounted for Rs. 16.99 lakhs and the rayon unit for Rs. 87.95 lakhs. The cost of works under construction at the end of the year amounted to Rs. 2.18 crores. In view of the substantial additions to the fixed assets made during the year, the Company has had to raise the allocation to the development rebate reserve from Rs. 10.22 lakhs to Rs. 30.96 lakhs, out of the profits for 1962, and with the further additions during the current year, the provision for development rebate is likely to remain at a high level. The Company has a paid-up capital of Rs. 3.80 crores of which Rs. 2.55 crores is in equity shares. The Company's free reserves total Rs. 4.31 crores. The total gross block of Rs. 16.13 crores has been written down to Rs. 9.54 crores.

Marsden Mills Disappoints

THE Marsden Spinning and Manufacturing Co. Ltd, Ahmedabad, reports disappointing results for the year 1962. Although sales have been almost unchanged at Rs. 1.86 crores, against Rs. 1.87 crores in the previous year, the gross profit is down by as much as 45 percent from Rs. 19.84 lakhs to Rs. 10.09 lakhs. The directors have recommended a gross dividend of Rs. 9 a share, against Rs. 12 a share in 1961, but since the reduced dividend is on the increased capital—36,104 shares, against 27,310 shares—the total amount distributed among the shareholders is only slightly less at Rs. 3.25 lakhs (against Rs. 3.27 lakhs). Allocations include depreciation Rs. 6.32 lakhs (against Rs. 5.35 lakhs), development rebate reserve Rs. 1.85 lakhs (against Rs. 2.63 lakhs), development and rehabilitation reserve Rs. 61,831 (against Rs. 87,703), taxation nil (against Rs. 3.70 lakhs) and donations Rs. 26,294 (against Rs. 22,175). A sum of Rs. 3 lakhs has been withdrawn from the general reserve. The Company has, however, provided Rs. 42,500 for income tax for the previous year. After providing for the proposed dividend, there remains a sum of Rs. 34,669 to be carried forward. The Rs. 100-paid share of Marsden Mills is quoted nominally around Rs. 162.50.

Nagri Mills Earns Less, Pays Same

NAGRI Mills Co. Ltd of Ahmedabad has declared a gross dividend of Rs. 85 a share which is the same as in the previous year. The gross profit of the Company is down by about 10 percent from Rs. 20.50 lakhs to Rs. 18.27 lakhs. Appropriations include depreciation Rs. 4.79 lakhs (against Rs. 4.64 lakhs), statutory development rebate Rs. 62,170 (against Rs. 1.89 lakhs), development and rehabilitation reserve Rs. 20,724

(against Rs. 62,912), taxation, including super profits tax, Rs. 6.40 lakhs (against Rs. 4.30 lakhs), under-provision of income tax for 1961 Rs. 45,000 (against nil), bonus to workers Rs. 1.29 lakhs (the same), donations Rs. 35,705 (against Rs. 40,369) and the reserve fund Rs. 1 lakh (the same). No provision has been made for the dividend reserve fund which received Rs. 1 lakh in the previous year. The proposed ordinary dividend absorbs Rs. 2,49,900 (the same), and preference dividend accounts for Rs. 12,613. After making all these appropriations, there is a small balance of Rs. 34,148 to be carried forward, against Rs. 14,767 brought in.

Vikram Mills Pays the Same

LIKE most other cotton textile mills, the Vikram Mills Ltd of Ahmedabad has fared badly during the year 1962, although the dividend has been maintained at Rs. 20 a share (Rs. 200-paid), less tax. The Company's sales are down by a little over 12 percent from Rs. 2.36 crores to Rs. 2.07 crores, but the gross profit at Rs. 23.39 lakhs shows a decline of nearly 22 percent over the previous year's figure. After providing Rs. 6.27 lakhs (against Rs. 6.62 lakhs) for depreciation, Rs. 26,550 (against Rs. 48,045) for statutory development rebate and Rs. 11.82 lakhs, including Rs. 2.46 lakhs for super profits tax, (against Rs. 9.62 lakhs) for taxation, the net profit amounts to Rs. 3.51 lakhs, against Rs. 11.31 lakhs in the preceding year. From this the directors have set aside Rs. 79,200 (against Rs. 2.41 lakhs) for bonus and Rs. 31,000 (against Rs. 15,000) for donations leaving a balance of Rs. 2.41 lakhs, against Rs. 8.83 lakhs. The Company has had to provide Rs. 61,600 for additional taxation for 1961. The surplus left being insufficient to provide for the payment of the proposed dividend which absorbs Rs. 3.30 lakhs, the directors have withdrawn Rs. 1.81 lakhs from the general reserve. The Rs. 200-paid share of Vikram Mills is quoted nominally around Rs. 317.50.

Davangere Cotton to Issue Preference Shares

THE Davangere Cotton Mills Ltd which raised Rs. 18.75 lakhs in last January through the issue of 15,000 equity shares of Rs. 100 each at a premium of Rs. 25 a share, is again entering the market to raise an additional Rs. 18 lakhs through the issue of 18,000 94 percent taxable redeemable cumulative preference shares. (Fuller details of the issue appears on a later page). The shares are redeemable at par at any time after 31st March, 1976, but not later than 31st March, 1979. Out of the Rs. 18-lakh preference issue, the directors and their friends have taken up shares worth Rs. 3.5 lakhs and another Rs. 4 lakhs are being subscribed by two insurance companies—Jupiter General Insurance Rs. 2.5 lakhs and Madras Motor and General Rs. 1.5 lakhs. The balance of Rs. 10.50 lakhs which is being offered for public subscription has been underwritten by a prominent stockbroker's firm of Bombay. The subscription list will open on 15th May, and will close on 30th May or later at the discretion of the directors.

The list may close earlier, but not before 18th May. The Company has an unbroken record of dividends since 1939-40. In the year ended March 1962, it made a profit of Rs. 25 lakhs. The proposed preference issue will absorb Rs. 1.71 lakhs, which is covered nearly 14 times.

The additional funds are required to meet a part of the finance required

for the Company's expansion programme, which is estimated to cost Rs. 1.83 crores. Davangere Cotton has applied for a loan of Rs. 70 lakhs and for a guarantee of deferred payment to the extent of Rs. 53 lakhs from the Industrial Finance Corporation of India. The balance of the requirements, it is proposed, will be met out of future earnings. The Company is equipped with 40,832 spindles, a waste spinning plant of 360 spindles and 300 plain looms with a modern bleaching unit. After the proposed expansion, the installed capacity of the Company will be 52,832 ring spindles, 360 waste spinning spindles, 518 plain looms and 500 automatic looms. The automatic looms are being allowed to be installed on the condition that the Company will export 75 percent of the production from such looms. The Rs. 100-paid share of Davangere Cotton is currently quoted around Rs. 132.50.

Amar Dye-Chem Rights Issue

THE directors of Amar Dye-Chem. Ltd have decided to go ahead with the issue of 30,000 equity shares of Rs. 100 each at a premium of Rs. 25 a share. These are being offered to existing shareholders in the proportion of one new share for every three held. The sanction of the Controller of Capital Issues has already been obtained. The directors propose to call a sum of Rs. 50 a share including the entire premium of Rs. 25 on application and the balance before February 1964. The new issue should, in fact, have come a year ago, when it was proposed to issue fresh capital of Rs. 80 lakhs to cope with the requirements of additional funds for the Company's expansion programme, but then the Government insisted on a much higher premium. The Company, therefore, did not proceed with the application for the rights issue. The additional capital now being issued will raise the issued capital of the Company to Rs. 1.40 crores, comprising Rs. 20 lakhs in preference shares and Rs. 1.20 crores in equity shares. The Company's Rs. 100-paid shares is currently quoted around Rs. 202.50.

Kamani Engineering Results Impress

THE modest increase in the dividend for the year ended September 1962 from 9 percent to 9 1/4 percent by Kamani Engineering Corporation Ltd provides little indication of the Company's excellent performance during the year. Both sales and profit have set new records; sales are up by about 73 percent from Rs. 2.68 crores to Rs. 4.65 crores and the gross profit has gone up by 58 percent from Rs. 24.80 lakhs to Rs. 39.10 lakhs. Appropriations include depreciation Rs. 8 lakhs (against Rs. 5.85 lakhs), taxation Rs. 15 lakhs (against Rs. 9.25 lakhs including Rs. 1.75 lakhs for previous years), reserve for super profits tax Rs. 5.35 lakhs (against nil), development rebate Rs. 35,000 (against Rs. 40,000), general reserve Rs. 1.15 lakhs (against Rs. 1 lakh) and dividends Rs. 4.94 lakhs (against Rs. 4.04 lakhs).

The directors state that the production of galvanised and painted steel structures showed an increase of 40 percent, from 14,360 metric tonnes to 20,836 metric tonnes. The sales value of manufactured products and erection work undertaken amounted to Rs. 3.64 crores, against Rs. 2.35 crores in 1960-61. The Company's export performance was also good; it shipped 4,471 tonnes of materials valued at Rs. 42.82 lakhs. The Company has obtained an industrial licence for

substantial expansion of the existing capacity from 1,500 tons to 2,500 tons a month for transmission line towers. A licence has also been received for fabrication of heavy structurals. The Company's agency department worked satisfactorily during the year, with its turnover more than doubled. The directors add that the Company has substantial orders on hand at the close of the year which holds out the promise of better results for the current year. The Rs. 10-paid share of Kamani Engineering is quoted nominally around Rs. 14.16.

Elpro International to Enter Market Soon

ELPRO International Ltd is a new Company which has been jointly promoted by General Electric Company of the U.S.A. and the Investment Corporation of India Ltd—a Tata concern—to undertake the manufacture of different types of x-ray equipment, alnico magnets, calrod heating elements, lightning arrestors and other electrical products. The factory has been constructed in Chinchwad, near Poona, and it is expected to be commissioned by the last quarter of this year. Indian engineers have already been trained by the General Electric Company in its factories in the U.S.A.

The authorised share capital of the new Company is Rs. 2 crores and its subscribed and paid-up capital is Rs. 35,000. The Company now proposes to raise Rs. 84.65 lakhs, of which Rs. 42.50 lakhs will be subscribed by General Electric and/or one of its subsidiaries, Rs. 12.40 lakhs by the Investment Corporation and Rs. 8.50 lakhs by the Indian employees of International General Electric Co. (India) Private Ltd—a subsidiary of General Electric of the U.S.A. The balance of Rs. 21.25 lakhs is to be offered for public subscription. The Company, it is expected, will enter the market towards the end of this month.

Dharamsi Chemical Fares Well

DHARAMSI Morarji Chemical Co. Ltd has maintained the dividend for the year 1962 at 16 percent (Rs. 8 a share of Rs. 50), less tax. The total amount distributed is, however, higher at Rs. 5.09 lakhs, against Rs. 4 lakhs in the preceding year because the bonus shares issued in October were not entitled to a full year's dividend. In 1961, the Company had paid Rs. 8 a share on 45,474 old equity shares and Rs. 2 a share on 18,190 new shares. The dividend for 1962 is payable at Rs. 8 a share on all the equity shares. The preliminary report on the Company's working results shows that it has done very well during the year, with the gross profit recording an increase of about 30 percent from Rs. 27.60 lakhs to Rs. 35.80 lakhs.

After providing Rs. 15.37 lakhs (against Rs. 11.66 lakhs) for depreciation, Rs. 1.62 lakhs (against Rs. 5.25 lakhs) for development rebate, Rs. 4 lakhs (against Rs. 60,000) for taxation and Rs. 4.51 lakhs (against Rs. 3.75 lakhs) for bonus to employees, the disposable surplus amounts to Rs. 8.76 lakhs, compared with Rs. 5.14 lakhs in 1961. To this has been added Rs. 1.58 lakhs (against Rs. 92,000) being excess provision made for taxation in previous years, raising the surplus to Rs. 10.34 lakhs, against Rs. 6.06 lakhs. The directors have appropriated Rs. 5 lakhs (against Rs. 2.50 lakhs) to general reserve No. 1 and Rs. 5.17 lakhs (against Rs. 4.31 lakhs) to general reserve No. 2, representing profits of new industrial units exempt from tax. The directors have withdrawn a sum of Rs. 5.09 lakhs from general reserve No. 2 for the

payment of the proposed dividend. As the dividend is being paid out of the profits exempt from tax, the distribution in the hands of shareholders is expected to be free of tax. An application in the matter is being made to the income tax authorities under Section 197(3) of the Income Tax Act. The Rs. 50-paid share of Dharamsi Chemical is quoted around Rs. 132.50 cum-dividend, offering a gross return of a little over 9 percent on fresh investment.

Maneklal Harilal Cuts Dividend

THE directors of Maneklal Harilal Spinning and Manufacturing Co. Ltd of Ahmedabad have reduced the dividend for the year 1962 from Rs. 55 to Rs. 21 a share (Rs. 200-paid), less tax. The drastic cut follows the Company's extremely disappointing performance during the year. Although the sales are down by only 6.2 percent from Rs. 2.89 crores to Rs. 2.71 crores, the gross profit has declined by as much as 40 percent from Rs. 44.01 lakhs to Rs. 26.79 lakhs. Appropriations include depreciation Rs. 15.57 lakhs (against Rs. 11.28 lakhs), development rebate reserve Rs. 5.56 lakhs (against Rs. 6.68 lakhs), taxation Rs. 2.25 lakhs (against Rs. 9.73 lakhs), contingency reserve Rs. 85,000 (against nil) and donation Rs. 11,000 (against Rs. 54,000). The dividend on ordinary and preference shares absorbs Rs. 2.13 lakhs. The directors have transferred a sum of Rs. 60,000 from the reserve. The Company's gross block of Rs. 2.07 crores has been written down to Rs. 1.10 crores.

Cipla Pays Less

THE Chemical Industrial and Pharmaceutical Laboratories, Bombay, popularly known as Cipla, reports disappointing results for the year ended October 1962. This has compelled the directors to reduce the dividend from 10 percent to 5 percent. In spite of a modest fall in the sales from Rs. 52.76 lakhs to Rs. 51.83 lakhs, the gross profit is down by as much as 27.2 percent from Rs. 7.21 lakhs to Rs. 5.25 lakhs. The profit margin has been squeezed by the marked increase in the costs of chemicals and packing materials. After providing Rs. 1.11 lakhs (against Rs. 95,000) for depreciation, Rs. 18,500 (against Rs. 12,600) for development rebate and Rs. 2.75 lakhs (against Rs. 2.50 lakhs) for taxation, the net profit amounts to Rs. 1.21 lakhs, against Rs. 3.63 lakhs in 1960-61. With Rs. 3.36 lakhs brought forward from the previous year, the disposable surplus amounts to Rs. 4.57 lakhs. The directors have set aside Rs. 50,000 (against nil) for dividend equalisation reserve and Rs. 25,000 (against Rs. 35,000) for staff gratuity reserve. The proposed dividend absorbs Rs. 93,865, against Rs. 1,87,730. After making minor adjustments, there remains a balance of Rs. 2.44 lakhs to be carried forward.

Good Outlook for Killick Industries

KILICK Industries did well during the year ended November 1962. The gross earnings were up by about 5 percent from Rs. 41.95 lakhs to Rs. 44.02 lakhs. From what the chairman, Mr. A. N. Haksar, said at the Company's annual meeting on 3rd May, the outlook seems quite promising. The shareholders who went without a dividend in 1960-61 and who were receiving Rs. 5 a share for 1961-62, have been assured of much better times ahead. The diversification of

the Company's interests is now beginning to yield results, and Mr. Haksar has expressed the hope that in the years to come when the new ventures are established, the shareholders will receive "bigger and better dividends." The decision to resume the payment of dividend on a small scale, it is said, will have been taken after careful consideration of the need to conserve the Company's resources in view of the expansion of its overall business. The shareholders have every reason to feel happy over the management's decision to appoint a committee of directors for looking into the question of effecting maximum economies in the working, and the chairman has stated that by the end of the current financial year, the Company will be able to reduce the expenditure to some extent.

The chairman expressed his inability to divulge information on the working of all but one of the managed companies on account of the Defence of India Rules, but he informed the shareholders in general terms that the electricity companies are functioning well within the limitations placed upon them by the legislation. Mr. Haksar said that while the coal companies are now expected to do better, the market for manganese does not show any signs of improvement, and "there is nothing which can be done about it."

As for the Kohinoor Mills, the chairman stated that the Company has had a very good year in spite of the general depression in the textile industry and that the Company had now regained the pre-eminent position it once enjoyed. Referring to the diversification of the Company's activities which is already beginning to bear fruit, Mr. Haksar said that the Government had recently permitted the Company's collaboration with Bohler Brothers of Austria for John Baker's steel files division. The report of the foreign collaborators is awaited. The Killick Engineering Works is showing very good results and the directors have decided to provide accommodation for more machines and enlarge production in view of the tremendous scope for this field of activity. The Snowcem factory has shown results far beyond expectations and the management is in touch with the associates in the U.K. for licences to diversify its activities. Killick Slotted Angles factory went into production three months ago.

Once the bottlenecks like the availability of finishing machinery and raw materials are overcome, this factory will add greatly to the revenues of Killick Industries. The Filtrona factory, it is said, is nearing completion, and will, it is expected, start production in the last quarter of this year. Killick Caribonum has not yet shown the anticipated results for various reasons, but the U.K. collaborators are soon sending out top technical men to reorganise the factory and sales procedures. Killick Industries has been recognised as an export house by the Directorate of Export Promotion and the Company is endeavouring to establish itself in various markets for all the exportable commodities.

Tensile Steel Starts Trial Run

THE directors of the Tensile Steel Ltd state in their second annual report for 1962 that the entire plant and machinery imported from Japan for the tensile steel plant in Baroda has been received and erected and that the plant has started the trial run. The Company has received an import licence for Rs. 8 lakhs under D.L.F. The necessary order for high carbon wire rods to be imported has been placed and the first consignment is due to reach the factory before the end of May. The directors point out

CAPITAL, 9th May, 1963.

that the total cost of the project which had been estimated at Rs. 88.40 lakhs at the time of the public issue has gone up to Rs. 1 crore on account of various increases.

As the total available resources of the Company will be Rs. 87.09 lakhs, there will be a shortfall of Rs. 12.91 lakhs and in order to meet this, the Company is negotiating for financial accommodation. The factors responsible for pushing up the cost of the project are the acquisition of further lands and the land development expenses, increase in the cost of civil construction consequent on the expansion of the built-in area, increase in the expenditure on railway siding, increase in the cost of electric installation and the rise in taxes and duties as well as the general increase in prices. The Company's profit and loss account shows a loss of Rs. 1.85 lakhs, after providing Rs. 6,429 for depreciation and Rs. 6,250 for taxation. The entire amount of Rs. 1.85 lakhs has been transferred to expenditure under construction account. The Rs. 100-paid share of Tensile Steel is currently quoted around Rs. 108.50.

Adoni Spinning and Weaving Repeats

IN spite of a marked decline in the net profit of Adoni Spinning and Weaving Co. Ltd for the year ended December 1962, the directors have maintained the dividend on ordinary shares at 8 percent. The usual preference dividend of 6 percent is recommended. The net profit for 1962 amounts to Rs. 2.78 lakhs, against Rs. 8.08 lakhs. Depreciation amounts to Rs. 7.11 lakhs (against Rs. 8.04 lakhs) and provision for taxation Rs. 6.75 lakhs (against Rs. 2.35 lakhs) including Rs. 40,000 for the super profits tax.

New Capital Issues

THE Controller of Capital Issues has authorised six companies, including a new concern, to raise capital amounting to Rs. 3.42 crores. The following are the details:

Ownership Offices and Flats Ltd: A company proposed to be incorporated in West Bengal, is to issue capital of Rs. 70 lakhs divided into 300,000 equity shares of Rs. 10 each, 100 mortgage redeemable debenture stock 1974 in stocks of Rs. 1,000 each at 7 percent interest and 30,000 non-mortgage debenture stock in stocks of Rs. 100 each at 7 percent interest with right of conversion into ownership of flats.

In supersession of consent accorded previously, *South India Steel and Sugars Ltd*, Madras, will raise capital of Rs. 73,83,000 consisting of equity shares of the value of Rs. 57,33,000 and 9.3 percent preference shares for Rs. 16,50,000. All the shares will be issued for cash at par to the public. The consent is valid till 30th June, 1963.

Madras Rubber Factory Ltd is to issue further equity capital of Rs. 62,50,000 for cash at par. The consent is valid up to 31st July, 1963.

True Tools Ltd, Madras, is raising equity capital of Rs. 50 lakhs in shares of Rs. 100 each for cash at par.

J and P Coats (India) Private Ltd, Bombay, will issue further capital of Rs. 36 lakhs in equity shares of Rs. 100 each for cash at par. The entire issue will be allotted to J and P Coats Limited, Glasgow.

Kashmir Ceramics Ltd, incorporated in the Jammu and Kashmir State, is issuing share capital of Rs. 50 lakhs in equity shares of Rs. 100 each, partly for cash and partly for consideration other than cash. Out of this issue, 49 percent of the issue will be subscribed by the State Government.

CAPITAL, 9th May, 1963.

The Stock Markets

MODEST REACTION IN CALCUTTA MARKET

Wednesday Evening.

THERE has been a modest reaction in the Calcutta stock market during the past week. Since share prices had risen sharply after the concessions in the Budget proposals were announced, a corrective movement has been expected. Although the technical position has improved, it is difficult to say whether the gains will be consolidated. A disturbing feature is that activity has largely been speculative; investment support has been negligible. This probably explains why the forward prices have been generally higher than the cash ones. Although selling pressure has not been pronounced, support has shrunk considerably. Several bulls, who had bought earlier, are inclined to take profit and reduce their commitments. The prospect of an early resumption of forward trading under restrictions has put operators on their guard because short-selling, if it is again permitted, might push down prices.

Lyons Range has, meanwhile, been taking a cautious view of the political developments. Although an armed conflict between China and India is not foreseen, concern has grown since the former has not yet accepted the Colombo proposals in full. The settlement of the Kashmir dispute between India and Pakistan is again not in sight.

The economic indicators have not been favourable from the investors' point of view. Despite a bigger turnover, corporate profits have generally declined because of the impact of the rising production costs and heavier taxation. The latest company results confirm the impression that the dividend paying capacity has been sufficiently impaired by the super profits tax. Companies have also found it difficult to plough back funds into business. Although some companies have made a token increase in their dividends, it is doubtful whether they will be able to maintain them in future. In the circumstances, investors have been more discriminating in their purchases.

The authorities are, meanwhile, thinking of introducing some improvements into the activities of the stock market. It is proposed to accord official recognition to the badla rates which have hitherto been unofficially fixed. Henceforth, these rates may be regularly fixed and quoted under official supervision. Steps are also being taken to expedite the publication of information relating to the delivery of shares in each clearing. If this service were to be improved, it would help assess the trend on the basis of facts rather than guesses.

Indian Iron have moved downward following the disappointing output figures for April. The production of pig iron has declined from 116,303 tons in March to 109,650 tons in April while that of steel ingot has fallen from 93,288 tons to 80,807 tons. The output of salable steel has been smaller at 55,282 tons, against 87,400 tons. Despatches of salable steel have declined from 106,182 tons to 46,374 tons. Engineering shares have shed gains all-round. Despite growth prospects, Guest, Keen, Williams have lost on profit-taking. Kumardhubi have been barely steady on declaring a higher dividend.

Jute shares have been cheerful and the prices of selected scrip have hardened. Kamarbhaty and Kankarnarrah

have gained on paying higher dividends. Reliance have improved on interested buying. A change in the control of the Company has also been rumoured. Interest has been taken in Union, Northbrook, Birla, Anglo-India, Ganges, Gourepore and Fort Gloster. Caledonian have been taken on declaring a higher dividend. The earlier support for coal shares has fizzled out, since investors are inclined to wait until the Government decides on an increase in the price of the fuel.

The prices of miscellaneous shares have fallen after an earlier rise. Turnover has shrunk considerably. The corporate news has been mixed. Attention has largely been concentrated on clearing shares which have closed below the best levels touched by them. Among new shares, support has been confined to Hindustan Aluminium, Hindustan Twyford, Philips Carbon, India Carbon and Asiatic Oxygen. Paper shares have reacted. In the cotton mill section, Bharat Commerce and J. K. Rayon have lost. Interest has been negligible in bank shares. Scattered support has been extended to Calcutta Electric. Sugar shares have been difficult to deal in because of the absence of buyers. Stray business has been done in tea shares, but prices have shown little change.

Turnover has been small in Government securities. In spite of a strong demand for short-dated loans, business has been limited because of the shortage of offer. The 3 percent Conversion loan 1986 has been quoted around Rs. 63.55. Selected preference shares and debentures have been supported.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production for iron and steel at the steel works in Jamshedpur during April 1963 was: iron 161,600 metric tons; steel ingots 161,700 metric tons and salable steel 122,200 metric tons.

Bombay

BULLS ANXIOUS TO CUT COMMITMENTS

BUSINESS CONFINED TO CLEARING SHARES

Wednesday Evening.

THE Bombay stock market has closed the past week in a cautious mood. Although share prices have reacted modestly, fresh support has been conspicuous by its absence. There has been evidence of tired long liquidation. Bulls have been inclined to reduce their commitments since most of them seem to have bought up to the maximum limit permitted by the authorities. The ground for caution is the prospect that the Government may soon permit the resumption of forward trading under certain restrictions; it is apprehended that the trend might be downward if short-selling were permitted freely.

Turnover has meanwhile been confined largely to clearing shares. Cash

shares have been sluggish because of the lack of interest on the part of investors. The dividend outlook is not considered encouraging since the super profits tax will mop up a substantial portion of the after-tax profits. The latest corporate news has generally been depressing because most of the companies have either repeated the dividends or cut them.

Steel shares have reacted after an earlier smart rise. Tata ordinary have fallen to Rs. 134.75 on smaller production figures for April. Indian Iron have been subdued at Rs. 22.28 on pressure from Lyons Range. Among engineering shares, attention has been concentrated on Tata Locomotive, Mukand Iron, Larsen and Toubro and Premier Construction. Mahindra and Mahindra have been sluggish on reports that the directors of the Company may have to reconsider the various new schemes. In motor-vehicle shares, Hindustan Motors and Premier Auto-mobles have declined on profit-taking.

The cotton mill shares have closed below their best levels. Century, Bombay Dyeing, Kohinoor, Svadeshi and Simplex have fallen. Khatau have nevertheless been prominent on prospects of a bonus issue, but Standard have declined on pressure. India United ordinary and Morarjee have been easier.

In the miscellaneous section, sugar shares have been steady on hopes that the implementation of the Maharashtra Land Ceilings Act would be delayed. Belapur have met with support, as have Maharashtra Sugar, on prospects of a bonus issue in the proportion of two bonus shares for every five held. Cement shares have been quiet. Associated Cement and Digvijay have lost. Mining shares have been subdued, and Shivrajpur Syndicate have fallen on a predominance of sellers. Steamship company shares have been quiet. Scindia and Great Eastern Shipping have been sold freely. Bombay Burmah have reacted. Rayon shares have been easier. Indian Rayon have lost on unfavourable corporate news. National Rayon have also reacted. Scattered support has been extended to Voltas and Western Match. Chemical shares have been quiet, and Tata Chemical have lost. Indian Dye-stuff have, however, been steady.

Small business has been done in bank shares. In the insurance section, New India Assurance have been firm on prospects of a bonus issue. Electric supply company shares have been quiet. Ahmedabad and Tata Power have lost on balance.

Madras

SUBSTANTIAL FALL IN TURNOVER

OPERATORS BECOME CAUTIOUS

Tuesday Evening.

ALTHOUGH the Madras stock market has been fairly steady during the past week, turnover has shrunk considerably towards the close. Because of lower advices from Dalal Street, operators have turned cautious. They are inclined to wait until the decision of the Government

about the resumption of forward trading becomes known. Investors have been cautious because the heavy impact of the super profits tax on dividends has been reflected in the latest company results.

Turnover in Government securities has been small, although prices have been somewhat steadier. In the banking section, Pandyan Bank have met with support on the news that the Bank will be taken over by the Canara Bank. Among electric supply companies, West Coast have been fancied on the news that the Government of Kerala will be acquiring this undertaking in the near future.

Selected planting shares have met with support on good crop reports. Good tea shares have been bought because of satisfactory auction prices realised for the commodity. Coffee scrip have been steady in view of the fact that the international price of the commodity has moved upward. Interest has been taken in Blue Mountain, Periakaramalai, Consolidated Coffee and Peermade. The last-named Company has declared a final taxable ordinary dividend of 5 percent, making 20 percent for the year. Nonsuch have declared an interim taxable ordinary dividend of 5 percent, Tropical a taxable ordinary dividend of 8 percent, Ossor an interim taxable ordinary dividend of 5 percent, Lingapur an interim taxable ordinary dividend of 5 percent and Cowcoody an interim taxable ordinary dividend of 7.5 percent.

Except for support in Bangalore Woollen and Buckingham because of the declaration of satisfactory dividends, cotton mill shares have lacked interest. South India Viscose have been available at Rs. 145, Madura at Rs. 32.50 and Travancore Rayon at Rs. 26. Vijayalakshmi have declared a taxable ordinary dividend of 15 percent and Binny a final taxable ordinary dividend of 13 percent, making 21 percent for the year.

Miscellaneous shares have generally been subdued, although scattered support has been extended to selec-

THEY ROLL LONGER AT LESS COST ON TIMKEN TAPERED ROLLER BEARINGS

When it's harvest time, a faulty bearing can be a costly delay. For this reason, farmers depend on Timken tapered roller bearings to keep their machinery moving. Terms like high-nickel steel, precision honing, minimum friction and tapered design—the things our bearings are made of—may not mean much to a farmer. But one name does: "Timken". It stands for low maintenance and

London

EARLY RISE IN PRICES CHECKED

ELECTION TALK RESTRAINS OPERATORS

London, 8th May.
THERE was much to help sentiment in the stock market over the past week with the steady flow of good company statements and encouraging reviews from company chairmen of particular influence. Economic trends helped in no small measure and the Chancellor of the Exchequer had some encouraging things to say. But buyers were taking courage from all this at the beginning of the week, but the old election bogey reared its head in the last few days and this brought a halt to the advance in prices. Equities took on an easier appearance although there was no pressure to sell as investors preferred to take the longer-term view which appeared very promising.

Money

THE CALCUTTA MONEY MARKET

MODERATE DECLINE IN ADVANCES

Wednesday, 8th May.

THE general level of advances has shown a moderate decrease in the Calcutta money market during the past week. There has been a slight decrease in the credit given to the jute mills and to the iron, steel and engineering industries. The advances to the foodgrains and seeds trade too have declined. But there is no change in the advances to cotton and woollen mills and to the sugar industry. In the interbank market, conditions have become tight and the call rate has hardened to 5 percent.

The local exchange market continues to be very dull. The supply of gunny and tea bills has been extremely scarce. The demand for remittance has been poor. Sterling has lost further ground in relation to most of the major currencies, with the exception of the Danish kroner and the Italian lira.

SILVER WAS QUIET IN CALCUTTA during the past week. Turnover was small. The price fell from the previous week's level of Rs. 277.50 to Rs. 275.25, quoted today for ready delivery. There was no business in forward. The London and New York prices were 109½ and 127 cents. Gold was not transacted.

DURING THE WEEK ENDED 3RD MAY, Government of India Treasury bills for Rs. 85,77,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 7th May. The total amount offered was Rs. 2.04 crores. Tenders at 99.415 percent and above were accepted in full and those at Rs. 99.410 percent were allotted approximately 97 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.354 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 13th May.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 8th May to 11th May at Rs. 99.426 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 1st May to 4th May amounted to Rs. 11.25 lakhs only.

A RISE OF RS. 15.90 CRORES TO Rs. 2,320.24 crores in active notes was an outstanding feature of the return of the Reserve Bank of India for the week ended 3rd May, 1963, but the total note issue fell by Rs. 2.86 crores to Rs. 2,334.80 crores. Notes held in the Banking Department consequently fell by Rs. 18.76 crores to Rs. 14.56 crores. Deposits of the Government of India were Rs. 10.62 crores smaller at Rs. 51.49 crores, and those of State Governments fell by Rs. 1.08 crores to Rs. 6.08 crores. Balances of scheduled banks were Rs. 4.49 crores larger at Rs. 79.09 crores. Balances held abroad declined by Rs. 1.23 crores to Rs. 7.60 crores. Investments at Rs. 202.70 crores showed a rise of Rs. 3.92 crores. Loans given to scheduled banks rose from Rs. 31.16 crores to Rs. 41.86 crores, of which advances

against usance bills were Rs. 31.06 crores (Rs. 26.24 crores). Ways and means advances stood at Rs. 62.45 crores, against Rs. 57.93 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 26th April, 1963, shows a drop of Rs. 4.37 crores to Rs. 560.02 crores in total deposits. Investments in Government securities are up by Rs. 3.09 crores to Rs. 230.51 crores, while other authorised investments remain unchanged at Rs. 7.84 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 5.33 crores to Rs. 311.58 crores. Cash and balances are, in consequence, shown at Rs. 20.35 crores or Rs. 2.93 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 26th April, 1963, shows Demand and Time liabilities at Rs. 1,038.26 crores (Rs. 30.61 crores on account of borrowings from banks) and Rs. 1,246.07 crores (Rs. 13.85 crores) compared with Rs. 1,042.06 crores (Rs. 31.65 crores) and Rs. 1,241.12 crores (Rs. 13.08 crores), respectively, in the previous week. Cash has increased by Rs. 42 lakhs to Rs. 54.23 crores, while balances with the Reserve Bank have fallen by Rs. 3.54 crores to Rs. 73.55 crores. There is a rise of Rs. 5.73 crores to Rs. 614.81 crores in investments. Advances and bills discounted at Rs. 1,596.93 crores show a drop of Rs. 8.21 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.6 percent and 69.9 percent, against 5.7 percent and 70.3 percent.

THE UNITED COMMERCIAL BANK LIMITED

REGISTERED OFFICE: 2, INDIA EXCHANGE PLACE, CALCUTTA-1.

REPORT OF THE DIRECTORS

The Directors have pleasure in submitting their Twentieth Annual Report together with the Accounts of the Bank for the year ended 31st December, 1962.

The net profit for the year, after providing for taxes and for all known and anticipated charges, and including Rs. 2,07,428=02 brought forward from the previous account, amounts to Rs. 75,40,053=91

The Directors have contributed Rs. 2,00,000 to the National Defence Fund and Rs. 15,000 to Dr. B. C. Roy Memorial Fund, transferred Rs. 28,00,000 to the Reserve Fund and Rs. 4,00,000 to the Gratuity Trust Fund, and provided Rs. 16,50,000 for bonus to staff. They now recommend the payment of dividend as follows:

On 4,00,000 Old Shares at Rs. 6=00 per share, less tax ... Rs. 24,00,000=00

On 79,220 New Shares in respect of which application moneys were received on or before 1st October, 1962 at Rs. 0=375 per share, less tax ... Rs. 29,707=50

On 80,780 New Shares in respect of which application moneys were received after 1st October, 1962 at Rs. 0=25 per share, less tax ... Rs. 20,195=00

which will absorb Rs. 24,49,902=50, leaving an unappropriated balance of Rs. 25,151=41 to be carried forward.

Pursuant to the Resolutions passed at the General Meeting of the Shareholders held on 11th July, 1962, 2,00,000 shares of the Bank were offered for subscription in cash at a premium of Rs. 25 per share. Applications were received for 1,80,000 shares which were allotted in full. After crediting the premium of Rs. 45,00,000 to the share premium account, the Reserve Fund and other Reserves of the Bank stand at Rs. 3,03,00,000. The Paid-up Capital stands increased to Rs. 2,23,33,937=50 and will further rise to Rs. 2,80,00,000 when the allotment moneys payable on or before the 31st January, 1963 are received.

The working of the Bank during the year was satisfactory with deposits crossing the Rs. 100 crore mark to stand at Rs. 105.74 crores.

Since the close of the financial year to which this report relates banking business in the Union of Burma has been nationalised with effect from February 23, 1963 and the branches of our Bank at Rangoon, Mandalay and Moulmein have been taken over by the Banking Business Nationalisation Committee. The Government have authorised the repayment of foreign Head Office capital of K. 500,000 originally brought into Burma and

have announced that compensation will be given for buildings and fixed assets taken over after deduction of liabilities, if any.

During the year branches of the Bank were opened at Bangalore Cantonment, Sandhurst Road (Bombay), Defence Colony (New Delhi), Jamshedpur, Chomu, Nadiad, Chetput (Madras), Adyar (Madras), Mirza Ismail Road (Jaipur), Sikar, Rohtak and Hissar and the office at Chittagong (East Pakistan) was closed.

The Directors are thankful to the Shareholders and the clients of the Bank for their continued support. They also express their gratitude to the Bank's Advisers and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the services of the General Manager and the Officers and Staff of the Bank during the year.

Mr. Shrenik Kasturbhai who was appointed an additional Director during the year vacates office under Article 84 of the Bank's Articles of Association and, being eligible, offers himself for election.

Mr. G. L. Bangur, Mr. G. D. Kothari, Mr. M. R. Ruia and Mr. M. L. Shah retire by rotation under Article 92 of the Bank's Articles of Association. Mr. G. D. Kothari and Mr. M. R. Ruia, being eligible, offer themselves for re-appointment. Mr. G. L. Bangur and Mr. M. L. Shah who have attained the age of 68 years are not seeking re-appointment. The Board have accepted their decision with regret and wish to place on record their high appreciation of the valuable services rendered by them during their long period of Office.

Notices have been received from some members of their intention to propose at the forthcoming Annual General Meeting that Mr. Rang Nath Bangur and Mr. Govardhanas Binani be appointed Directors in the vacancies thus caused and the Directors recommend their appointment.

The Shareholders are requested to appoint Auditors for the current year and to fix their remuneration.

On behalf of the Board,

G. D. BIRLA
Chairman.

Calcutta,
22nd April, 1963.

REPORT OF THE AUDITORS

TO THE MEMBERS OF THE UNITED COMMERCIAL BANK, LIMITED.

We have audited the attached Balance-sheet of The United Commercial Bank, Limited, as at 31st December, 1962, and the Profit and Loss Account of the Bank for the year ended upon that date annexed thereto, in which are incorporated the Branch returns audited by the Statutory or other Auditors. The reports on the accounts of the Branches audited by other Auditors have been forwarded to us and dealt with in preparing our report in the manner considered necessary by us.

We report that:

- we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
- the Bank's Balance-sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;
- in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and, on such basis, the said Balance-sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS

Announcement regarding the Proposed Issue of 18,000 9.5% (without deduction of Tax Payable by the Company on its Profits, but subject to deduction of tax at source under Section 194 of the Income-tax Act 1961) Redeemable Cumulative Preference Shares of Rs. 100/- each.

(Redeemable at par at the option of the Company at any time after 31-3-1976 but not later than 31-3-1979.)

Applications are invited on the basis of the Prospectus Copies of which may be obtained from the Registered Office of the Company, its Bankers, Underwriters or Brokers mentioned hereunder.

A copy of the Prospectus, together with the documents specified therein has been duly filed with the Registrar of Companies in Mysore, Bangalore. In terms of Section 60 of the Companies Act 1956.

The Subscription list will open at the commencement of Banking hours on the 15th day of May, 1963, and will remain open until the close of banking hours on the 30th day of May, 1963, or later at the discretion of the Board of Directors. But, if the entire issue is subscribed for before 30th day of May, 1963, the list will be closed immediately, but not earlier than the close of banking hours on 18th day of May, 1963.

THE DAVANGERE COTTON MILLS LIMITED

(Incorporated on 22nd June, 1936, under the Mysore Companies Regulation VIII of 1917)
REGISTERED OFFICE: 'Hanumanthappa Buildings', Chitradurga Road, DAVANGERE.

HISTORY AND PROSPECTS

The Company started working in 1939 with 9,090 spindles and it has now 40,832 spindles, a waste spinning plant of 360 spindles and 300 plain looms with modern bleaching unit.

After the proposed expansion the installed capacity of the Company will be 52,832 Ring spindles, 360 waste spinning spindles, 518 plain looms and 500 automatic looms.

PROFITABILITY

Competitive prices, coupled with high quality, have contributed to an ever growing demand for the Company's products. The progress of the Company has as fully described in the Prospectus been quite steady.

From the very inception, i.e. 1939-40, the year when the Company started production, it has been declaring a fair dividend without any break. The dividend declared by the Company, during the last five years, is:—1957-58 9% free of tax, 1958-59 9% free of tax, 1959-60 12%, 1960-61 12% and Cash Bonus of 5% and 1961-62 12%.

Though the Company has agreed to export its products on the automatic looms at internationally competitive prices, it is expected that, in the absence of any unforeseen circumstances, the Company would make reasonable profits not only for payment of dividends on the Preference Shares, but also to maintain the dividend level on the Equity Shares and to build up reserves for future developments.

THE PUNJAB NATIONAL BANK LIMITED

Registered Office: PARLIAMENT STREET, NEW DELHI.

DIRECTORS' 116th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1962.

The Board of Directors of the Bank has pleasure in submitting the audited Balance Sheet as at 31st December, 1962 and the Profit and Loss Account for the year ended that date. The Auditors' Report is also annexed.

The transactions for the year after providing for tax, contributing Rs. 15,63,930 to the Employees' Gratuity Fund and Rs. 1,43,219 to Super-annuation scheme have resulted in a profit (including Rs. 10,37,738 brought forward from the previous year) of Rs. 1,24,20,907.

This sum, the Directors have disposed of as follows:—

	Rs.
Ad-interim dividend paid for the year at Re. 1 per share	20,00,000
Transferred to Reserve Fund	25,00,000
Provision for Bonus to Staff	40,00,000
Provision for Charity and Donations	4,00,000
	89,00,000
This leaves for appropriation	35,20,907
The Directors recommend payment of final dividend at Re. 1 per share making 20% for the year subject to deduction of tax	20,00,000
Balance to be carried forward to next year's account	15,20,907

The working of the Bank continues to be satisfactory.

The Bank rate remained stationary at 4 per cent. during the year, but it was raised to 4½ per cent. from 2nd January, 1963.

A sum of Rs. 4,00,000 was contributed to National Defence Fund.

Shri Shital Prasad Jain and Shri Ashok Kumar Jain resigned from the Board on 1st March, 1963. Vacancies caused by their resignation and by the sad death of Sardar Bahadur Mohan Singh were filled by the Board of Directors by appointing Shri T. S. Srinivasan, Shri S. K. Handoo and His Highness Maharajadhiraj Yadavindra Singh as Directors under the provisions of Section 262 of the Companies Act, 1956 and of Article 70 of the Bank's Articles of Association.

Under the provisions of Section 256 of the Companies Act, 1956 and of Article 65 of the Bank's Articles of Association, Shri Kamalnayan Bajaj, Shri D. D. Puri and His Highness Maharajadhiraj Yadavindra Singh will retire by rotation. They are eligible and offer themselves for re-appointment.

Under the provisions of Section 260 of the Act and of Article 55(b) of the Bank's Articles of Association, the Board of Directors appointed Shrimati Raksha Saran as an additional Director. She will hold office only up to the date of the next Annual General Meeting of the Bank. She is eligible and offers herself for appointment as a Director.

Shareholders are requested to appoint Auditors for the current year and fix their remuneration.

By Order of the Board of Directors,

R. N. GOENKA,

Chairman.

March 27, 1963.

MODERNISING STATISTICS AND FINANCE

(BY A CORRESPONDENT)

A DEVELOPMENT that is seldom spectacular but whose cumulative effects are potentially very important is the modernisation of systems concerned with figures. The Americans are more advanced than most peoples in the matter of statis-

tical information, but the Kennedy administration is strengthening its fact-finding services. Politicians and business men in Britain are urging their Government to provide more statistical information, and to provide it sooner. (Industrial associations could improve their services, too. Such vital information as orders for machine tools has lost half its value if it is months old when published.) More basic, as it affects the whole economy, is reform of the tax system.

In his Budget speech on 3rd April, Mr. Reginald Maudling, Britain's Chancellor of the Exchequer, did not announce any change in the tax system, as many people had expected; but he did announce an important move in this direction, an enquiry (to be conducted by an eminent merchant banker, Mr. Gordon Richardson, chairman of J. Henry Schroder, Wagg and Company) into the practical effects of a turnover tax of the type that is familiar in western Europe. Mr. Maudling acknowledged that this type of tax was controversial, and he intimated that in his opinion it was urgently necessary to resolve the controversy.

Added-value Tax

There is, of course, no urgent need to harmonise Britain's taxes with those of the European Economic Community, but as systems of taxation have been studied more thoroughly in the Community than in Britain, many Britons feel that a system that is favoured there is probably suitable for Britain. The added-value tax has, therefore, many advocates in Britain. But, as Mr. Maudling said, it might be applied either in addition to existing taxes or in substitution for either purchase tax or profits tax or both. A new system must be considered not only on its own merits, but also in relation to any system that it replaces.

Britain's purchase tax, levied at a single point of sale, at various rates

for various goods, is muddled and illogical; but it can be argued that an added-value tax, levied indiscriminately at each stage where products change hands, is not fundamentally different, as it involves no change between direct and indirect taxes. An added-value tax that replaces a profits tax represents a transfer from direct to indirect taxation; and such a change is particularly significant when it is necessary to stimulate exports, as indirect taxes are not levied on goods intended for export.

The profits tax, as such, is disliked. It penalises efficiency, in so far as efficiency increases profits and, therefore, the liability to tax. An added-value tax is an incentive to minimise costs, for at minimum prices, the liability to tax is minimal. But economists cannot decide—even the European Community's special expert on taxation, Professor Neumark, cannot be sure—how a change from direct to indirect taxation affects prices. The idea that direct taxes are a component of the price of goods, and are thus paid ultimately by the buyers of goods, is less readily accepted in Britain than in the European Community—and even Professor Neumark has said (at a conference in London a few months ago) that "a general sales tax or excise is by its very nature much more likely to be shifted than a general income tax or even a corporation tax". Even so, it can be argued that a system that raises prices of goods for the home market but not of goods for export will strengthen a nation's economy—if it does not promote demands for more wages.

Corporate Taxation

Another idea under discussion in Britain is that a single corporation tax should combine the income tax and profits tax that companies pay at present. It might be thought that British industry would approve such

a simplification; but the Federation of British Industries, in a statement on the subject this year, said that company taxation should be simplified "by means less radical". What the F.B.I. fears (although it is naturally reluctant to say so) is that if taxation of companies and of individuals were separated (income tax is at present applicable to both at the same rate), Governments could too easily shift some of the burden of taxation from individuals to companies.

Taxation, it is argued, should not only be simplified and made generally more efficient, but also be modernised, in the sense that it would include some of the services on which people spend an increasing proportion of their income. There is no logical reason to distinguish between goods and services—between toilet goods and hairdressing, between textile goods and laundering. But (as Mr. Maudling discovered this year when he tried to devise a tax on gambling and betting) the administrative difficulties of taxing services may be disproportionate to the yield.

Modernising taxation is certainly difficult, but it is arguably as important as modernising industry, for the whole economy may be distorted by a bad tax system. A taut and simple tax system is, moreover, an efficient economic regulator. It would be more efficient if the Budget were not fixed within a narrow range of time, but were formulated at any time when circumstances required important changes in taxation or in economic direction generally. The financial mechanism is not yet as flexible as it should be.

Neither Government nor industry can plan rationally if it lacks information on the state of the economy. Britain's statistics, although recently improved, are neither adequate nor always reliable. The statistics of the balance of payments, for instance, include "balancing items" so big and variable that no set of figures can be accurately compared with another. And, by a process that was not revealed until later, the exceptionally important figures of the gold and currency reserve for March were made to show a gain, although the "true" reserve suffered a considerable loss!

New Delhi

STEEL MINISTER CLARIFIES U.S. POLICY ON BOKARO PLANT

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Minister for Steel and Heavy Industries, Mr. C. Subramaniam, made two important statements in the Lok Sabha last week, referring to the Bokaro steel project. Mr. Subramaniam said: "On 28th April, the U.S. Agency for International Development released in Washington a summary of the technological survey report of the U.S. steel team on the Bokaro plant. The same summary was also released by the Indian Press. This presumably is based on reports that the U.S.A. has decided to postpone indefinitely a decision on this project. Due to the keen interest evinced by Hon'ble members in this subject—this is a natural because Bokaro is of vital importance to us—I would like to deal with the matter in some detail.

"In releasing the summary to the U.S. Press, the Agency for International Development said that the U.S. Government had taken no decision on the question of participation in the financing of the proposed steel mill in Bokaro and that no deadline had been set for its final determination. It also said that the report answers many questions, but raises others which will require further exploration. There are, as a matter of fact, many questions raised which require examination not only by the Agency for International Development but even more by the Government of India. As far as I have been able to ascertain from authoritative sources, there was no statement by A.I.D. that a decision on the Bokaro project has been postponed indefinitely, as reported or interpreted by some newspapers here.

Initial Capacity

"The object of the U.S. steel team's report was to assist the Agency for International Development in taking a decision on financing the Bokaro project. The report, in brief, has found that the demand for steel, and of the products that Bokaro will produce, will justify a new steel works. It has proposed a modern steel works with an initial capacity of 1.4 million tons of ingot steel, rising in two stages to 4 million tons. It also recommends that the raw material assumptions made by it should be rechecked and supplies ensured in time. Bokaro will be—according to the report—a capital-intensive plant, unremunerative in the first stage but profitable later. The report has emphasised the problems of training and management and suggested American direction of construction and initial operation of the plant. The report, in short, is generally favourable and provides the basic data on which the Agency for International Development can take a decision on the project. The A.I.D. is, like us, studying the report. Prima facie, the estimated capital costs are high and the phasing too prolonged. These are, however, matters for which satisfactory solutions could be found after discussion.

Demand for Pig Iron

"The demand for pig iron is at present much in excess of availability—the production of pig iron in the country is about 1 million tons, against the present estimated foundry capacity of about 2 million tons (1.1 million tons of the Central list foundries and about 900,000 tons of the State list foundries). A number of schemes for the production of pig iron of a total capacity of 541,000 tons have been licensed in the private sector. Except for Kalinga's in Barbil (Orissa), others have not materialised. Even Kalinga's expansion will take some time. The question of cancelling the licences of the schemes which are slow in coming up is also being considered.

"To ensure that available supplies are equitably distributed to all types of consumers, a revised scheme of distribution has been introduced, effective from 1st April, 1963. Within the overall availability of about 1.1 million tons during 1963-64, an allocation of 120,000 tons has been earmarked for the State list foundries and 176,000 tons for the Central list foundries. This is in addition to what they may get for executing orders placed by various Government departments on them. The

plant will be in the public sector. I hope that realising this, our American friends will communicate to us very early their final decision on this project."

Prospects for U. S. Aid

Replying to supplementaries, Mr. Subramaniam said that the first thing awaiting a decision was whether or not U.S. aid would be available for a public-sector project. His understanding was that the aid would be available, notwithstanding the recommendations of the Clay Commission. The latter, as is well known, expressed itself against aid for a public-sector project competing with a private-sector one. As for the comprehensive fear of the American management of the plant as recommended by the steel mission, Mr. Subramaniam did not see any difficulty in reaching a workable solution, once the main decision had been taken. He parried questions relating to the reported Russian offer to build the plant, in case the Americans did not, by requesting that the question should not be pressed at this stage.

In another statement on pig iron, Mr. Subramaniam said: "The main reason for the present shortage of foundry-grade pig iron is that while the demand has gone up considerably—due to the foundry capacity having developed rapidly—the availability has not correspondingly increased, as the schemes licensed for the production of pig iron have not materialised as originally anticipated. Remedial measures are, therefore, being taken such as the import of pig iron, implementing short-term schemes for increased production, etcetera, to increase the availability as quickly as possible.

"The third five year plan envisaged a production of 1.5 million tons of pig iron by 1965-66. The position has since been reviewed in consultation with the Planning Commission and the production is now being planned on the basis of a probable demand of about 2 million tons at the end of the third plan period.

Water Transport Facilities

"In addition, to relieve the immediate shortage, since the other schemes may take a little time to mature, the possibility of importing certain quantity of pig iron is also being explored.

"7. Instructions are being issued to reduce the allocation of pig iron for the larger sizes of spun pipes so as to increase their availability for other foundry uses."

FERTILISER

Namrup Project in Assam

The Namrup fertiliser project in Assam, included in the third five year plan, is expected to go into production by December 1965. The project is being executed by the Fertiliser Corporation of India Ltd. When completed, it will produce 100,000 tons of ammonium sulphate and 55,000 tons of urea. Contracts for the main plants—except the ammonium sulphate plant—will be departmentally designed, engineered and installed. The total cost of the factory is estimated at Rs. 18.03 crores, including a working capital amounting to Rs. 1.58 crores. The total foreign exchange component will amount to about Rs. 6.64 crores. The foreign exchange cost of the project will be

met mostly from the £30-million British credit.

SHIPYARD

Report on Cochin Project

The Japanese technical mission's report on India's second shipyard to be located in Cochin has been received. For the preliminary work, such as the training of personnel, selection of an appropriate site, a provision of Rs. 75 lakhs was made in the second plan. The project is included in the third plan with an estimated cost of Rs. 20 crores. Since it is not likely to go into production during the third plan, no provision for the payment of subsidy to the new yard has been made in the plan. An early implementation of the project depends on the availability of the Japanese credit outside the normal yen credit given to India by Japan. Although no offer of Japanese credit has so far been received, the Government is expecting that such offer will be forthcoming, in the absence of which the project will be left over for the fourth plan.

HINDUSTAN STEEL

Locos for Durgapur

Hindustan Steel has placed an order worth about £500,000 with a British engineering firm for 15 diesel-electric locomotives for the Durgapur steel works. The firm is Yorkshire Engine Co. Ltd. of Sheffield. The locomotives, built primarily for steel works, have a high starting tractive effort and good low-speed performance. With a maximum speed of about 30 miles an hour, they are suitable for transfer duties over long distances, such as will be experienced in Durgapur. Ten of the locomotives will be of 600 horse-power and weigh 77 tons each, and the remaining five will be of 300 horse-power and weigh 38 tons each. All will be fitted with Rolls-Royce engines and Associated Electrical Industries' power equipment. The larger locomotives will develop 50,000 lbs tractive effort and the smaller ones 25,000 lbs.

The firm supplied ten 230 horse-power diesel-electric locomotives to the Durgapur steel works in 1959.

ASSAM

Water Transport Facilities

The Government of Assam has asked for Central assistance for providing water transport facilities for the river Dhaleswari in Mizo Hills. The Mizo Hills are located in an area which is badly provided with communications with the rest of the country, and their only outlet is through Cachar district. At present, trade trickles through by the use of jeeps and three-ton lorries, operating from Silchar along hilly tracks. The freight charged by this road haulage is perhaps the highest in India.

There appears to be a great scope for the improvement and modernisation of river transport operations to the Mizo Hills along the Dhaleswari-Katakhal waterway with the resulting benefit to the trade and commerce of this isolated part of Assam. The main obstacles to navigation on this reach of the river are: (1) The snags almost completely block the upper reaches of the river up to Ghamura; (2) rapids, and (3) boulders—right from Sairang throughout the length up to Bhairabi.

A scheme has been prepared recommending a single Harbour Master unit powered by a 40 horse-power diesel engine. The estimated cost of each of these three vessels complete with engine and the Harbour Master unit is placed at

THE PUNJAB NATIONAL BANK LIMITED—Cont'd.

AUDITORS' REPORT

TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, NEW DELHI.

We have audited the annexed Balance Sheet of The Punjab National Bank Limited as at 31st December, 1962 and also the annexed Profit and Loss Account for the year ended on that date with the books and accounts kept at the Head Office in New Delhi, in which are incorporated the audited returns from 243 branches (of which 14 have been audited by us and 229 by order dated 27.7.1962 has exempted the said 184 branches (names of the branches are given in Annexure 'A') from the provisions of Sub-sections (1) & (3) of Section 228 of the Companies Act, 1956 in respect of the year ended 31st December, 1962.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to Sub-sections (1) & (2) of Section 211 and Sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are, therefore, drawn up in conformity with Forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that: (a) We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory; (b) the transactions of the Bank, which have come to our notice, have been within the powers of the bank; (c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches; (d) the reports on the accounts of Branches audited by other auditors have been considered in preparing this report; (e) the Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns; (f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies; and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

New Delhi, March 27, 1963.

ANNEXURE 'A'

LIST OF BRANCHES EXEMPTED FROM BRANCH AUDIT

Ahmedgarh Mandi, Amritsar Putlighar, Anantnag, Banga, Dalhousie, Dharamsala, Dhariwal, Dinanagar, Doraha, Fazilka, Ferozepur Cantt., Ferozepur City, Garhshankar, Gobindgarh, Goraya, Hoshiarpur Railway Road, Jallalabad, Jandiala Guru, Jammu Jain Bazar, Jammu Tawi, Jullundur Cantt., Jullundur Chowk Sudan, Kangra, Kartarpur, Kuli, Luthiana Kesarganj, Mahipur, Malout, Mandi, Mukerian, Mandi Mulanpur, Nakodar, Nawanshahr Doaba, Palampur, Patli, Phagwara, Phillaur, Qadian, Samrala, Srinagar Amtrakadal, Srinagar Maharigani, Tanda, Umrar, Tarn Taran, Ambala City, Ballabhgarh, Barnala, Bhilwari, Gurgaon, Hodal, Jind, Kalika, Karnal, Kurail, Mansa, Nabha, Nahan, Narwana, Palwal, Patiala Mail, Rampura Phul, Rohtak, Rupar, Samalkha, Sangrur, Shahbad Markanda, Simla, Sissa, Tohana, Tarn Taran, Ambala City, Ballabhgarh, Barnala, Bhilwari, Gurgaon, Hodal, Jind, Kalika, Karnal, Kurail, Mansa, Nabha, Nahan, Narwana, Palwal, Patiala Mail, Rampura Phul, Rohtak, Delhi Khan Market, Delhi Vinay Nagar, Firozabad, Hardwar, Jawalapur, Kanakhal, Kaungani, Kosi Kalan, Mawana, Meerut Cantt., Mussoorie, Muzaffarnagar City, Sikandrabad, Vrindavan, Alambagh, Lucknow Sadar Bazar, Moghalsarai, Nagina, Najibabad, Nihitaur, Shahjahanpur, Tanda, Robertsganj, Kiratpur, Chapra, Dinapur Cantt., Dumraon, Jehanabad, Mokameh, Road, Bombay Labaugh, Dhandhoka, Gandhidham, Hinghantah, Jamnagar, Kadi, Kikkee, Limbdi, Mandvi Kutch, Nadiad, Nasik Road, Poona Camp, Pusa, Wadhawan City, Yeotmal, Bombay Chembur, Cambay, Nanded, Bombay Lalji Ramji Building, Abu Road, Ashoknagar, Baran, Bhawani Mandi, Bhopal, Dholpur, Guna, Indore Siya Ganj, Katni, Kotah, Lashkar Sarafa Bazar, Mandia, Morar, Sambharlake, Saugor, Sehore, Sheoganj, Sirohi, Karachi,

V. SANKAR AIVAR & CO.,
Chartered Accountants.

Rs. 70,000, ex works Bombay. Transport and transit insurance to Assam may be of the order of Rs. 5,000 a vessel. The total cost a vessel will amount to about Rs. 75,000 c.i.f. Silchar to Karimganj.

In addition to the three vessels, two ghat establishments with godown facilities, one each in Lalaghat and Sairang, will have to be provided. The estimated cost of both these establishments will be Rs. 60,000. In addition, a small maintenance cum-repair shop in Lalaghat is recommended. It is assumed that inland water transport operations on the Katakhal-Dhaleshwari river will be confined to the Lalaghat sector (terminus of the Badarpur to the Lalaghat Railway) to Sairang (near Aijal), a total approximate riverine distance of 96 miles. The total freight requirements of Mizo Hills, both to and from, are estimated at 3,000 maunds a day, which works out to 109,000 maunds a year.

RUSSIA

Bilateral Trade Pact

Mr. Manubhai Shah, Minister of State for International Trade, will go to Moscow in the first week of June to sign a five-year bilateral trade agreement with Russia. Mr. Shah said at a Press conference that for the first time, India will export to Russia a wide variety of manufactured articles such as light engineering goods, textiles, jute manufactures, handicrafts and even some capital equipment. Certain details of the agreement are yet to be finalised. Mr. Shah said that he would discuss these matters with the Russian Government before signing the agreement. Besides machinery and capital equipment, these details relate to India getting from Russia considerable quantities of industrial raw material, such as special steels, non-ferrous metals and chemicals. As a result of the new trade agreement, Mr. Shah hoped that the present volume of trade of the value of Rs. 100 crores passing both ways would be doubled at the end of five years.

Mr. Shah is leaving New Delhi for London on 9th May on a four-week tour to attend various international conferences. He will first attend a four-day Commonwealth Trade Ministers' conference in London, then go to Geneva to attend the ministerial conference of the General Agreement on Tariffs and Trade and visit the countries of the European Common Market. While in London, Mr. Shah will explore the possibilities of greater trade between India and Britain. Time permitting, he will also explore the chances of increasing India's trade with other Commonwealth countries, such as Australia and Canada.

From 23rd to 29th May, Mr. Shah will visit Paris, Brussels, Bonn and Rome. In these capitals, he will meet top representatives of the E.C.M. Commission and the Government representatives of the E.C.M. countries and will discuss with them the huge adverse balance of trade which India is having with the E.E.C. members. Mr. Shah will also urge these countries to allow India, Pakistan and Ceylon to retain the benefits gained by them such as nil tariff on tea when Britain was negotiating to enter the E.C.M. He will also urge these countries to allow the nil tariff for a few other items, such as East India kips, as enumerated in the memorandum submitted by the Government of India to members of the E.C.M. He will also visit Budapest towards the end of this month to negotiate the broad terms of a five-year trade agreement with Hungary.

Mr. Shah said that India was now in the process of negotiating five-

year trade pacts with all east European countries. An important feature of all these agreements will be that payment will be made in rupees and that 10 percent of Indian exports will consist of non-traditional items.

G.A.T.T.

Topics for Next Session

The ministerial conference of the General Agreement on Tariffs and Trade (G.A.T.T.) will hold its next session in Geneva from 16th May to 21st May. The main topics for discussion have been finalised by the G.A.T.T. Council as follows:

1. Measures for the expansion of trade of the developing countries as a means of furthering their economic development.
2. Arrangements for the reduction or elimination of tariffs and other barriers to world trade.
3. Measures for increasing access to world markets of the products of agricultural and other primary producers.

EXPORT-IMPORT BANK

Loan for Bharat Forge

The U.S. Export-Import Bank announced the authorisation of a \$3.9-million loan to the Bharat Forge Co. Ltd, Poona. The Steel Improvement and Forge Company (S.I.F.C.O.) of Cleveland will be technical advisors to Bharat Forge and will also assist in arrangements for the purchase of materials and equipment in the United States. Part of the responsibility of S.I.F.C.O. will be to supply technicians to guide the construction of the new forging plant and to train Indian technicians in this country, and when necessary, in the United States.

Purchases from the United States include forge equipment, saw and shear machinery, heating and finishing equipment, and materials handling, maintenance and inspection items. A sizable order of finished dies will also be procured. The bank loan is to be repaid over a period of nine years beginning in 1966.

RAILWAYS

Loans Sanctioned

During February-March 1963, a railway delegation negotiated the following three loans for the railways in Washington: (a) Rs. 32.14 crores credit from the International Development Association, an affiliate of the World Bank; (b) Rs. 9.05 crores loans from the U.S. Export-Import Bank; and (c) Rs. 7.54 crores from the U.S. Agency for International Development.

The credit for Rs. 32.14 crores is for procuring railway materials and equipment, mainly components for indigenous manufacture of rolling stock, such as steam and electric locomotives and wagons, and also track materials and other equipment. The credit bears no interest, but only a service charge of 1 percent a year on the amounts withdrawn and outstanding, and is repayable in 50 years, repayment commencing after a grace period of ten years. The credit is available for use up to 31st March, 1964.

The loan for Rs. 9.05 crores from the U.S. Export-Import Bank will cover the foreign exchange costs of the following:

- (i) Plant and machinery to be imported from the U.S.A., for the diesel locomotives works in Varanasi of a value of Rs. 6 crores; and

- (ii) the components to be imported from the U.S.A. for 29 diesel locomotives of a value of Rs. 3.05 crores, to

be manufactured at the diesel locomotive works, Varanasi during 1963-64 and 1964-65.

This loan bears an interest of 5 1/2 percent a year on the amounts withdrawn and outstanding, and is repayable in 15 years. It will be used before 31st December, 1965. The loan bears no interest, but only a "credit fee" of 1/4 percent a year on the amounts withdrawn and outstanding from time to time. It is repayable in 40 years, repayment commencing after a grace period of ten years. It is expected to be used during 1964-65.

S.T.C.

Link Pact Concluded

The State Trading Corporation concluded a link agreement with Messrs A. B. Sukab of Sweden on 7th March, 1963, for the exchange of goods valued at Rs. 1.56 lakhs each way in a period of one year. The following items are proposed to be imported under the agreement:

Chambal project machinery	35
Machinery, including drilling equipment	60
Ball bearings	35
Special steel	25
	155

The S. T. C. has also concluded an agreement for the export of 600,000 tons of iron ore to Rumania during 1963. India commenced exporting iron ore to Rumania for the first time in 1959 when she exported 18,000 tons.

The S. T. C. has entered into a contract for the supply of opium to Russia. The contract was concluded on 21st March, 1963, for the supply of 70 tons of opium valued at about Rs. 47 lakhs. A consignment of 20 tons of opium was air-lifted in three equal lots on 2nd, 3rd and 4th April, 1963. Of the balance 50 tons of opium, a quantity of 30 tons is to be despatched by 30th June, 1963, and the remaining 20 tons in the third quarter of the current year.

MORMUGAO

New Development Scheme

A broad development scheme for Mormugao port has been drawn up. The details of the scheme are now being worked out. Meantime, advance action has been taken in relation to urgent items. Sanction has been given for the purchase of a new dredger and a power-driven mooring launch, which are estimated to cost more than Rs. 1 crore. An order for the dredger will be placed shortly. Dredging of the approach channel and the inner basin has also been completed at a cost of about Rs. 12 lakhs. This will ensure minimum depths for taking 28 feet draft ships throughout the year.

QUALITY CONTROL

Scheme for Farm Products

The Government of India has decided to bring the following agricultural commodities under the compulsory quality control and preshipment inspection scheme for promoting exports: sann hemp, unmanufactured tobacco, raw wool, bristles, goat hair, sandal wood oil, lemon-grass oil, palmarosa oil, black pepper, cardamom, chillies, myrobalam, and cashew kernels. The pattern of commodities excepting cashew kernels are graded and marked with Agmark labels by the Agricultural Marketing Adviser under the Agricultural Produce (Grading and Marking) Act and Rules. Exports of these goods are not allowed by the Customs unless they carry the Agmark label. In relation to cashew kernels, grading and marking is done by the Cashew

CAPITAL, 9th May, 1963.

Export Promotion Council. Export are not allowed unless the package carry the label of the Cashew Export Promotion Council.

In addition to the agricultural commodities stated above, the introduction of quality control is being considered for the following: pulse onion, ginger, turmeric, walnut vegetable oils (such as groundnut oil, castor oil and linseed oil), vetive oil, senna leaves, and senna pod tendu (biri) leaves, edible mushroom and potato.

PIG IRON

Plant for Punjab Proposed

The Punjab Government has applied for the grant of an industrial licence for setting up a plant for manufacturing pig iron using iron ore of Mohindergarh district. The plant will have a capacity of 100,000 tons a year and it is estimated to cost Rs. 2.5 crores to Rs. 3 crores with the foreign exchange component of about Rs. 38 lakhs. No foreign collaboration is said to be envisaged at present. The Government is examining the application.

COAL

Programme for Washeries

Ten coal washeries are expected to be completed by 1966, of which three have been carried forward from the second plan. The following three washeries were also included in the second plan, but they will be completed in the third plan:

Hindustan Steel Ltd	2.4
Dugda I	1.2
Bhojudih	2.0
Patherdih	
Hindustan Steel Ltd	2.4
Dugda II	0.8
Bhojudih (expansion)	
National Coal Development Corporation	3.0
Kathara	
Chalkari (Kargali extension)	0.5
Swang	0.75
Ramgarh	1.5
Gidi (Karanpura)	2.84

The following washeries were set up before the commencement of the third plan:

Location	
Private sector	
Jamadoba	1.4
West Bokaro	0.7
Lodna	0.4
Newrozabad	0.5
Public sector	
Kargali	2.2
Durgapur	1.5

CEMENT

Licences for New Factories

Schemes for setting up 33 new cement factories in the country have so far been licensed. It is, however, difficult to say at present how many of these factories will actually be set up during the third plan period. This will depend on the availability of foreign exchange, the capacity of indigenous manufacturers of plant and machinery and the speed with which the licensees will prosecute their schemes.

MOTOR CYCLES, SCOOTERS

Licence for Escorts

Escorts Ltd, New Delhi, has been granted a licence under the Industries (Development and Regulation) Act, 1951, for manufacturing 150/175 c.c. motor-cycles and scooters, in collaboration with Messrs Cekop of Poland. The capacity licensed is 6,000 numbers a year.

CAPITAL, 9th May, 1963.

London

WIRED BROADCASTING FOR LESS DEVELOPED COUNTRIES

(FROM OUR LONDON CORRESPONDENT)

THE main problems confronting the broadcasting authorities in many less developed countries are both economic and geographic. The economic aspect finds expression in two ways. Firstly, many less developed countries have insufficient resources at present to establish and maintain the radio and television services which they require. Secondly, low per capita incomes inhibit the purchase of suitable radio receivers. The geographic aspect stems from the fact that many less developed countries tend to have a peasant economy and to occupy very large land areas. Consequently, considerable problems of population coverage by broadcasting tend to exist.

The compromise solution usually adopted for sound broadcasting is to cover heavily populated areas by medium wave transmissions and, in the more sophisticated areas, where a mains electricity supply is available, by ultra short wave frequency modulated transmissions, while the remoter and more sparsely-populated areas are served only by short wave transmissions. Where a television service exists, coverage is generally confined to the capital or to a few of the larger towns.

How does such a policy affect what, for want of a better term, one may call the average man? Such an individual will live in a small community and be engaged in agriculture. His town or village will usually have no mains electricity supply, no radio repair facilities, and road and postal communications which are subject to considerable disruption during the wet season. He will have an income within the bracket £25 to £100 a year. His sole regular means of communication with other parts of his own country and the remainder of the world will be by H.F. radio reception using a battery powered receiver, if he can afford to buy one. Such a receiver will suffer from many limitations—fading, the necessity of retuning in accordance with daily and seasonal schedules of frequency changes, and a battery life which, because of extreme climatic conditions, slow distribution, and inefficient shelf-life control, may be much shorter than advertised. It is to the problems which have been briefly described that wired broadcasting developed in Britain, offers a solution which is both effective and appropriate to the economic conditions obtaining in many less developed countries today.

Wired broadcasting may be defined as the transmission of sound and television programmes to individual premises by means of physical circuits. Assuming that the wired broadcasting organisation (henceforth abbreviated to W.B.O.) does not originate programmes the first stage in the process is satisfactory reception of the broadcast signals. In areas, where reception is poor it may be necessary to bring in the signals over special circuits which it may be the prerogative of the Department of Posts and Telegraphs to provide on rental. Otherwise, the signals may be received locally at a carefully selected site using professional grade equipment.

The second stage is amplification and sometimes frequency conversion of the signals at one or more amplifying stations. The final stage is distribution of the signals to individual

homes by cables. As in the case of electricity supplies, distribution is at more than one voltage level to minimise power losses in the distribution system. High voltage distribution is used to bring the signals to convenient points in distribution areas. Service level distribution is employed thereafter to convey the signals to individual homes.

Hiring the Service

To obtain the service, which may consist of one or more radio or television programmes or a combination of the two, an individual or body concludes a contract with the W.B.O., whereby the service is rented for a specified minimum period and, usually, a nominal connection charge to cover the cost of connection to the home is payable. The type of installation in the subscriber's premises will depend upon the service provided. Where sound radio programmes only are supplied, one or more loudspeakers with switch volume controls are installed. Where television programmes are supplied the main factor determining the type of installation is whether the system employs distribution at the original V.H.F. for operation with standard domestic television receivers, or H.F. distribution requiring wired television receivers. In the U.K., W.B.O.s include television set rental among the services which they offer to the public.

A major consideration connected with the distribution network is the necessity for the W.B.O. to obtain wayleaves for wires or cables to cross or to be attached to property. In the U.K., legislation exists which prescribes the authority for granting wayleaves over Government property and, in practice, private property owners do not generally place obstacles in the way of W.B.O.s, since it is generally conceded that these are providing a most useful service to the community. Wayleave payments tend to be nominal. It would, of course, be possible for the Government of a less developed country wishing to encourage the rapid spread of wired broadcasting to enact legislation aimed at removing wayleave obstacles.

The advantages of wired broadcasting over conventional methods of reception are considerable. Indeed, in the special circumstances considered here, they are almost overwhelming. By virtue of the resources at its disposal, a W.B.O. can use professional grade equipment to provide programmes with a technical quality quite unobtainable with normal domestic receivers. To the subscriber this means that programmes are relatively free from atmospheric and man-made interference, and excellent sound reproduction is provided on account of the high technical standards adopted to maintain a level audio frequency response and low distortion.

The subscriber enjoys a reliability of service which is normally unobtainable with domestic equipment. This is achieved by using professional grade equipment and providing throughout the system spare equipment which are switched manually or automatically to replace any which fail. In addition, standby power supplies at amplifying stations enable sound radio programmes to continue even if the public electricity

supply fails. An indication of the degree of reliability is that statistically, a Rediffusion subscriber in the U.K. may expect the installation provided in his home for sound radio programmes to fail only once in every five years. It is not possible to quote comparable figures for television programmes, but statistics confirm that, due to its much simpler design, a wired television receiver has a fault incidence of only 40 percent of that of the equivalent standard domestic receiver.

The subscriber has no servicing problems since the W.B.O. offers complete servicing of the whole system including the installation in his home, as part of the service which it provides. Unlike the owner of a mains or battery-powered radio receiver, the wired sound radio subscriber is not involved in separate power costs. He may use the service continuously at a cost which, in many cases, would not even provide mains or battery power for a comparable radio receiver. The subscriber is spared the necessity of erecting aerials which are often expensive and unsightly. The subscriber is not required to perform any delicate tuning adjustments or to be aware of scheduled frequency changes. He can select the programmes provided by the turn of a switch.

Maintenance Costs

The financial advantages which must necessarily weigh heavily with low per capita income groups, are twofold. Firstly, no capital outlay is required by the subscriber, only a 10s connection fee is levied. Secondly, the subscriber's financial commitment is clearly defined and limited to rental payments of about 7s a month for a specified minimum period. Consequently the subscriber is spared unpredictable maintenance costs.

There are other advantages which do not affect the subscriber directly, but are, nevertheless, of considerable interest to the Government. The establishment of a W.B.O. provides employment of a technical and semi-technical nature which it is usually the policy of the Government of a less developed country to encourage. Assuming that radio receivers are not manufactured locally, the export of currency required to provide a service to a given number of subscribers over a period will be less than that required to provide a corresponding number of receivers and batteries for them to buy. Since no capital expenditure is required on the part of the subscriber, the establishment of wired sound broadcasting may be expected to accelerate the growth in the number of listeners. This can be a material factor in providing both juvenile and adult education. The extensive use of wired broadcasting can result in an economy in the number of broadcast frequencies required. Finally, wired broadcasting can result in an economy in the number of broadcast frequencies required. Finally, wired broadcasting can become a powerful factor in the unification of a newly independent country since subscribers virtually constitute a captive audience. Such a situation is obviously not without inherent dangers but, with proper safeguards, a wired

broadcasting system can be of immense value in times of war or internal disorder.

In July 1952, an agreement was concluded between the Government of Nigeria and Overseas Rediffusion Ltd providing for the establishment by the Company of a W.B.O. to distribute throughout Lagos and the western region of Nigeria the sound radio programmes broadcast by the Nigerian Broadcasting Service. By the end of July 1954, the service was being received by 39,500 subscribers in six towns. By the end of August 1962, the total number of subscribers had risen to 80,500 and the number of towns and villages served to 88.

The British Colonial Office Handbook on Broadcasting, 1960, quotes, from a recent survey, the average number of listeners to a wired subscriber's installation as eight. From these figures and the latest Nigerian Government population estimates, one may deduce that approximately 9.5 percent of the population of Lagos and the western region are wired sound broadcasting listeners. This is surely a material contribution to the development of Nigerian broadcasting, and compared favourably with a figure of 4 percent for the whole Federation for radio receiver coverage on a comparable basis. In the latter case, a figure of 275,000 operational receivers and a listeners per receiver figure of six, taken from the same Colonial Office Handbook, has been applied to a population figure of 40 million.

A plan to take radio to more than 1,000 million people in the developing areas of Asia and Africa, where at present only 12 million people can hear radio broadcasting, attracted considerable interest among delegates to a U.N. Conference on Science and Technology in Geneva recently. Drawn up by Rediffusion, it provoked enquiries from many countries, including India, Formosa, Gabon, Colombia and Brazil, all of whom, apparently, are most anxious to bring radio to their populations, but had not realised that a wired service offered an alternative means. The plan provided for either a concession being granted to Rediffusion to operate a service in which case it would cost a Government nothing; or for the country to sponsor the service itself and pay the Company for setting up the system.

Indian Journalists in Britain

Four Indian financial and economic journalists, who are now in Britain, at the invitation of the Commonwealth Relations Office, were received last week by the Duke of Devonshire, Minister of State for Commonwealth Relations. They are Mr. Dinesh Bahl, managing editor, Capital, Calcutta; Mr. S. V. Rayan, editor, Commerce, Bombay, Mr. H. Z. Gilani, editor, Vajrapar, Bombay, and Mr. P. S. Narayan, chief of the Madras news bureau of Economic Times, Bombay. The journalists have a crowded programme this week in London. They will visit the Treasury and the National Economic Development Council, which was formed last year as part of the British Government's plan to secure economic stability and sustained growth. At the Midland Bank, in the City, they will hear a talk on bank mechanisation and will meet the managers who deal with Indian business. Britain's coal-mining industry will be described during a visit to the National Coal Board headquarters. Journalists will also tour the Fleet Street offices of the Daily Telegraph, the headquarters of the Conservative and Labour Parties, the London Commodity Exchange and London Chamber of Commerce, the Board of Trade, the offices of Political and Economic Planning, and the National Institute of Economic and Social Research.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to December 1962. As compared with November, the December index for Government securities

shows a rise of 0.3 points, while that for preference shares remains unchanged at 68.1 points.

There were increases in cottons 0.4 points, coals 3.0 points, jutes 2.8 points,

cements 0.5 points, engineering 25.9 points, papers 23.8 points and miscellaneous 3.1 points. The indices for banks, minings and oils, teas and sugars remained unchanged.

Combining all the factors, the Capital variable yield securities index rose by 7.1 points during December 1962.

Jute

PROSPECTS FOR CARPET-BACKING CLOTH IN U.S.A.

THE desire for improvement, changes in style and consumer tastes as well as efforts to reduce the cost of production in the U.S.A. pose a serious threat to the future of the Indian jute industry, although jute-backing cloth continues to hold pride of place in the American tufted rug market. This observation highlights a recent expert survey of the U.S. carpet market made on behalf of the Indian Jute Mills Association. At a time when the industry in India is trying to increase the broad loom capacity at a heavy cost in order to cater to the expanding U.S. demand, an objective assessment of the forces at work will help remove any sense of complacency which might have been generated by the heavy backlog of orders since the middle of last year.

The great potential of the American carpet market is recognised by producers of synthetic yarns and fibres, of paper yarns and non-woven textile fibre products, of foam rubber and synthetic foams, etcetera. The survey points out that Calcutta mills may retain their share of the expanding demand by constant efforts to improve the tufting and finishing qualities of the carpet-backing cloth.

The total carpet output in 1960 was estimated by the American Carpet Institute at 148 million square yards. It is expected to increase to 175 million square yards by 1965. About 67 percent of the 1960 yardage was tufted carpeting, ensuring a market of 100 million square yards for tufted rugs at the current levels. Since most of the increase will be in tufted rugs, the size of the market is likely to expand to 125 million square yards. The wide jute hessian cloth is used in tufted rugs both as primary backing into which pile yarns are needed and as secondary or added backing. The total potential demand for jute fabrics is estimated at 250 million square yards for primary and added backings.

Use as Primary Backing

At present, jute enjoys nearly all of the primary backing usage of 100 million square yards. Besides, another 39 million square yards of jute cloth is used for added backing in the tufted rug industry. The scope is, therefore, left for increasing hessian cloth consumption by 61 million square yards in the added field if kraft cord is replaced by secondary backings. Thus the potential demand for backing cloth is likely to rise to 221 million square yards by 1965.

The American tufted carpet industry has achieved a phenomenal progress. Jute backings came into vogue early with the introduction of wide tufted carpets, and the shift to lighter weight Hessians for better needling efficiency paved the way for the increasing use of added backings. These secondary backings narrowed down the gaps of quality between the tufted and woven products to the extent that the tufted carpet is now completely acceptable as a top quality floor covering. In this fast moving scene, jute cloth has suffered competition primarily from kraft cord or paper yarn fabrics used for the added backing. These paper yarn structures have a styling advantage in colour and convey the impression that the tufted rug is a woven one. One important feature of the tufted carpet is the advantage of piece dyeing. It not only ensures economies in processing

but adds the flexibility of styling. Wet processing further serves to stabilise shrinkage and to set the pile. In order to facilitate the manufacture of tufted structures, the primary backing must be light in weight, but strong. It should permit easy and uniform access of the tufting needle, and be flexible and sufficiently permeable to allow a free passage of liquefied dyes.

Major Recommendation

As its major recommendation on the primary backing, the survey has advised the I.J.M.A. mills to produce a fabric which should possibly be of even lighter weight and structure than nine ounces a square yard, but of greater bulk and flexibility with reduced yarn twist and more open constructions so as to permit easier pre-finishing, if necessary, to further develop loft and cover. Compacting has also been suggested in the report. As appearance is an important attribute of the added-backing, the survey has recommended the construction of new cord-type jute yarn structures

with additional styling aspects of colour. Even high quality jute fabrics lack from the aesthetic angle when compared with paper yarn structures. With their lighter weight and open weave, the latter more nearly simulate the appearance of woven rugs. Besides, there is competition in the efforts to combine non-woven materials, foams and similar bulky structures to serve not only the purpose of added backing but also to eliminate the rug underlays. The report advises the Indian jute mills to develop non-woven jute pads, combined with stabilising secondary hessian fabrics to eliminate both added backing and the carpet underlay.

Bonus and Higher Wages

About 250,000 jute mill workers are expected to be benefited from the agreement reported to have been reached in New Delhi last week at a meeting of the Jute Wage Board between millowners represented by the Indian Jute Mills Association and the workers' representatives. This introduces a bonus system for

the first time in the history of the industry. The agreement provides, among other things, that daily rated workers will receive two weeks' wages and those on the monthly payroll half a month's as the annual bonus whether or not the company earns a profit. It lays down that a worker's minimum monthly wage will be enhanced from Rs. 70.59 to Rs. 81. Provision has also been made for an increase in the dearness allowance by 20nP for each point of rise in the cost of living index with 425 as the base. All I.J.M.A. mills and some others outside its membership are understood to have agreed to implement the agreement, which will cost them an additional amount of more than Rs. 3 crores a year.

Exporting Hessian to U.K.

India's hessian sale prospects in relation to the recent abrogation of the British jute trade price agreements are discussed in the latest *Jute Bulletin* of the Indian Central Jute Committee. The cancellation of the common minimum selling prices will, according to the bulletin, stimulate a degree of free competition never known in Dundee and district since the second World War. The higher efficiency associated with competition will make for lower prices of Dundee goods.

With a downward adjustment of prices on a free market and a drop in internal manufacture, some relaxation of the import control along with appreciable reduction of the current

I.J.M.A. STOCK FIGURES FOR APRIL

The Indian Jute Mills Association reports the stocks of jute goods at the end of April as follows:

Description	30th April, 1963		31st March, 1963		Increase over (+) or decrease from (-) last month	30th April, 1962	
	000 Metres (Lakh Yds.)	000 Metric Tons	000 Metres (Lakh Yds.)	000 Metric Tons		000 Metres (Lakh Yds.)	000 Metric Tons
Hessian cloth and bag	9,54.96 (10.44)	29.0 (28.6)	9,82.40 (10.74)	29.7 (29.2)	-27.44 (-30)	5,91.51 (6.47)	18.1 (17.8)
Sacking cloth and bag	9,97.74 (10.91)	45.0 (44.3)	9,94.34 (10.87)	44.8 (44.1)	+3.40 (+0.2)	5,61.61 (6.14)	26.0 (25.7)
Others		16.9 (16.6)		16.5 (16.2)	+0.4 (+0.4)		16.0 (15.7)
Grand Total		90.9 (89.5)		91.0 (89.5)	-0.1 (0.0)		60.1 (59.2)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British measures.

"mark up" on landed prices of imported hessians is considered possible. A great deal will, however, depend on how the U.K. Board of Trade fashions its "protective apparatus" in the light of the Restrictive Trade Practices Court's verdict.

Jute Products at Moscow Fair

The Indian Jute Mills Association proposes to spend about Rs. 2 lakhs in connection with the display of jute products, including carpets and linoleum, at the Indian exhibition to be held in Moscow in July this year. It has booked a stand space of 3,000 square feet. The Central Food and Agriculture Ministry has also booked a stand space of 500 square feet for exhibiting the progress made in the sphere of jute research and development. This section will also feature all possible uses of jute. Special emphasis is reported to have been laid by the Government on this show not only from the angle of prestige but also from that of India's future trade relations with Russia. Of late, Indian jute goods exports to that country, especially of hessian, although paid for in rupee currency, have increased fast. Russia took 21,623 tonnes of jute goods in 1960-61, 25,372 tonnes in 1961-62 and 29,315 tonnes during the eight-month period ended November 1962.

Further Showers Reported

From the present trend of the weather, the Governments of Assam, West Bengal, Bihar and Orissa apprehend that a heavier rainfall during the year will be followed by floods. So preventive measures are being taken to reduce the incidence of such a calamity to the barest minimum. Further showers, spread evenly all over the jute-growing areas, were reported last week. Instead of helping the growth of the plants, they have caused a mild setback due to the clogging of soil and the fast sprouting of grass and weeds. Meanwhile, inter-culture and raking operations have commenced. In late-sown areas, seedlings were damaged. The soil has to be prepared again and jute seeds sown afresh. A week's sunshine might have helped the plants at this stage. But the gathering clouds and humidity indicate a heavier rainfall. Reports from East Pakistan also say that the standing plants were slightly damaged by showers during the past week. But prompt steps are being taken to retrieve the damage.

THE JUTE MARKETS

Manufactured Goods: Buoyant conditions, induced by stray overseas buying and short-covering, prevailed in the jute goods market during the past week. On the basis of returns of shipping instructions submitted by the larger groups of mills, operators believed that the April-end stocks of hessian would substantially decline. A brisk offtake of sacking by the Middle East and for internal consumption also reinforced the view that heavy goods stocks too would register a downward trend. The U.S.A., Russia, Australia and Argentina were reported to have taken scattered lots of hessian for ready and near delivery positions. Shipments lagged behind schedule due to delay in the arrival of some loaders. It was reported that some 6,000 tonnes of ready goods could not be moved from the mill warehouses during April for want of steamers. Some consignments were despatched to the Continent, Russia and the North American ports. The April due date settlement passed off satisfactorily. All delivery schedules were adhered to with no reports of shortages or surpluses. The smooth settlement seemed to indicate that the large out-

view of the slackness of demand for lighter hessian constructions, 40in. 7½oz. May futures was done up to a discount of Rs. 40 a ton, compared with the rates for 40in. 10oz. So substantial repurchases were made by the mills against May-June deliveries so that they could concentrate on the production of thicker constructions of hessian which enjoy a readier and better market.

In the spot section, hessian opened steady and extended the gains on good follow-up support with 40in. 10oz. showing a rise of Rs. 2 to Rs. 49.10 for May, Rs. 1.70 to Rs. 48.80 for June, Rs. 1.40 to Rs. 48.55 for July-September, and of Rs. 1.30 to Rs. 48.25 for October-December deliveries. But for a subdued opening, sacking also remained firm in sympathy with the general trend, showing a lower gain on the balance of 30nP to Rs. 113.10 for May, 40nP to Rs. 113.25 for June, 55nP to Rs. 113.65 for July-September and of 40nP to Rs. 113.50 for October-December positions.

In the futures market, B. Twills May improved by 30nP to Rs. 112.60 after fluctuating widely between Rs. 113.10 and Rs. 112 on alternate bouts of long liquidation and bear-covering with profit-taking at every bulge. But hessian May registered an increase of Rs. 1.80 to Rs. 48.26, after moving between Rs. 48.50 and Rs. 46.26. B. Twills and hessian August also rose by 65nP and Rs. 1.22 to Rs. 113.15 and Rs. 47.76, respectively, in nominal transactions. At the close, the differential between May ready and futures rose from 64nP to 84nP in hessian and was unchanged at 50nP in sacking.

Quotations on Wednesday were as follows:

	May	June	July-Sept.	Oct.-Dec.	Jan.-March
40in. 7½oz.	36.15	36.25	36.40	36.10	35.70
40in. 8oz.	38.75	—	—	—	—

Liverpools	129.00	128.00	127.50	127.50	127.00

Raw Jute: Opening on a dull note, the raw jute market firmed up for a while on brisk mill-buying against the Jute Commissioner's quotas for May. There were also scattered reports of short-covering. Towards the end of the week, the demand evaporated and mills turned reserved. As a result, part of the gains was erased and turnover declined to a trickle. Reports of a larger acreage under jute during the season disturbed sentiment, and holders, mainly of lower grade fibre, were willing to clear their stocks even at a discount. With enough stocks in their warehouses, mills are unlikely to enter the market in a big way except for lifting small lots of better grade jute for blending purposes. Assam Bottoms, ready, f.o.r. Calcutta closed at Rs. 28.25 a maund. Turnover was small and the undertone hesitant at the close. In the futures market, upper Assam White Bottoms June opened and closed at the previous week's level of Rs. 30 after touching a high of Rs. 30.06.

THE U.K. JUTE MARKETS

FIBRE FIRMER

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan was firm last week and the tendency was for the prices of new crop to become dearer. Old crop prices were at steady levels, and offers were being quite freely made. The spot market in Dundee was somewhat firmer, as fair quantities had been sold in the previous week. Ex-warehouse parcels were still available at under current shipment rates, but sellers were not discounting to the same extent as previously.

By all reports, the new crop in Pakistan is making satisfactory progress and more offers are being made. Although spinners here have been buying new crop jute, the quantity so far secured is not as large as usual by this time of year. Mill Lightnings were scarce with the lowest price at £117; Mill Hearts at £92 and Grade Hearts at £80, c.i.f. U.K. for August-September shipment. Grade Tossa-4 was offered at £107 and Outport Tossa-2/3 at £96, October-November.

Old crop prices were irregular and a wide range of offers were being made. Mill Lightnings were scarce with the lowest price at £111; Mill Hearts at £92 and Grade Hearts at £77 for May-June shipment. Grade Tossa-2/3 was at £122 and Grade Tossa-4 at £105. Dacca Tossa-5 was at £125 and Dacca Tossa-6 at £107 10s. There were sellers of outport Tossa-2/3 at £93 15s and of outport Tossa-4 at £84 May-June. As Dundee spinners were already holding large stocks of raw material, little or no buying was taking place for this shipment period.

Although raw jute prices appeared to be at an attractive level at present, spinners were in no hurry to add to their stocks. Of course, everything depends on weather conditions in Pakistan during the next two months to allow the crop to mature. At the same time, both buyers and sellers were waiting for some announcement from the Pakistani Government concerning minimum export prices for the next season.

The Siam jute market was firm and some sellers raised their rates by £1 to £2 a ton. This was due to a certain amount of buying by Japan. However, there were still sellers here at £72 for grade A, at £67 for grade B and at £63 for grade C, delivered mill Dundee for May-June shipment.

The Calcutta goods market was steady and little change took place in prices during the past week. A fair business continued to take place here in imported goods. Quotations were at 71s 3d for 40in. 10oz. and at 53s for 7½oz. a 100 yards f.o.b. Calcutta for May shipment and at 71s 9d and 53s 3d June and also July-September. B Twills were at 172s 3d, 172s 6d and 172s 9d for the respective shipment periods.

Spinners and manufacturers in Dundee were busy and further orders were being received. In the heavy end of the trade, a good demand was being shown for sackings and tarpaulins and some substantial orders were received during the past week. Delivery in many instances was well forward and it was expected that further business would be placed very soon. Prices were very firm, and the quoted rates had to be

CAPITAL, 9th May, 1963.

Commodity Markets

BIGGER COFFEE CROP EXPECTED

NEW DISEASE MAY AFFECT OUTPUT

(BY A SOUTH INDIAN CORRESPONDENT)

THE present feeling is that India's 1963-64 coffee crop will be larger than the previous season's 53,000 tons. Current estimate places the new crop at 56,000 tons. The largest crop on record is that of 1960-61, which was 67,000 tons. A fresh factor limiting India's coffee crop is a new disease which has affected the coffee plants in the south west monsoon zone. This new malady, the main symptom of which is a falling-off in the vigour of the bush by a slow but steady deterioration, was first noticed in 1957 in certain areas of Coorg and Mysore. It was of little economic importance then. But the malady has now spread to larger areas and it is at present looked upon as a major threat to India's coffee growing industry. In the affected plants, bud formation is poor and setting of the flower is below normal. Heavy leaf fall also occurs. The older types of coffee such as Coorg Arabica and Kents are more severely affected than the new and more vigorous Balhonnur selections.

Arabica crop has been falling below expectations since the last four seasons and this is attributed to the new malady. Quality also is getting affected. Crops now tend to be erratic and confidence in forecasting a crop from experience on the condition of the new wood, bud or blossom has been undermined by the greatly fluctuating results. Coffee in excellent condition in November-December may very well not fulfil its promise. This was not so in the past. In south India, about 272,000 acres are under coffee. Of this, 167,000 acres are under Arabica and the rest under Robusta.

Although the Coffee Board's Research Department has been at it since 1959, it has not been able to contribute anything worth the name to combat this disease which is causing great anxiety to the growers. A few months ago, a private research project, supported by a section of planters, started investigating this malady. The scheme mainly aims at finding an economic solution or ascertaining measures which will alleviate the situation until either a cure or a preventive is found. Knowledge gained will be shared with the Coffee Board. In the meanwhile, planters are trying to control the malady by trying several experiments. Control of thrips by widespread spraying of insecticides is being tried.

At least a section of the coffee growers are critical of the Coffee Board's marketing policy. They feel that the planter who produces quality coffee is not sufficiently rewarded for the extra trouble and expense involved. They are unhappy about the discontinuance of the system of open auctions for export sales introduced last year. They prefer open auctions to closed tenders in coffee marketing. The Board is going back to the system of closed bids.

The recently constituted Cardamom Committee has fixed the support price (minimum price the cultivators should get) for cardamom between Rs. 12 and 18 a kilogram depending upon quality. The committee has also fixed the export price for the commodity at 12½ percent over the support price to meet handling charges. The exporter can also sell cardamom to foreign buyers at a price up to 33½ percent in excess of this price. Kerala's Minister for Agriculture who gave this information to the Press

CAPITAL, 9th May, 1963.

ed stock of about 300 tons of cardamom including 150 tons from Kerala and the Director of Cardamom Marketing would purchase the unsold stock at the price fixed by the committee. Kerala grows 1,600 tons, out of the 2,200 tons of cardamom produced in India.

The Central Government has proposed the setting up of a company to be called the "banana export house", and has asked the Governments of Kerala, Madras, Mysore and Andhra to participate in the share capital of the Company, which comes to Rs. 10 lakhs. The Company will purchase bananas and transport them to shipping centres for export by the State Trading Corporation. The proposal is to export 25,000 tons of bananas annually. The southern States would get a quota of 10,000 tons. The Kerala Government is now considering the question of participating in the share capital of this firm.

Tea Auction Prices Move Downwards

(BY A SPECIAL CORRESPONDENT)

LAST season, the final crop figures from the major producing countries resulted in a small deficit, and it is expected that final figures for consumption will show some increase. With no heavy weight of surplus tea likely to come on to the markets before the end of June (small auctions may be expected any time after the end of this month), there does not appear to be any reason for a fall in the prices of this commodity. But for the past few weeks, prices have shown a downward tendency. At the auction on 1st May, Dust teas after meeting with reasonable competition closed below the best except for good liquoring Assams. London sales, on the same day, reported an irregular market with a general downturn.

The average price of tea sold in London for a month or more has been under 4s a lb, against 4s 5d a year ago. This disappointing result, it is said, is due to fairly heavy stocks which are being influenced by large shipments from Africa.

The official view of the India Tea Board is that consumption in the whole world is increasing rapidly and the pace of growth will be accelerated as a result of the Board's promotional campaign and, the explosion in world population will provide the demand, but the bulk of the people may still lack the necessary purchasing power. Against this optimism has to be set the fact that production is increasing.

Chittagong recently shipped to West Pakistan over 4 million lbs of tea during March. West Pakistan sources state that Pakistanis are already the biggest tea drinkers in the world next only to the U.K.

In view of the fact that the U.K. and Ireland are already the best markets for tea, it is curious to note that exporters from India are now on a tour in Europe in the hope of expanding consumption. Meantime, other tea interests report that tea drinking in Europe averages only one cup a head a week. On the face of it, Europe appears to be a potential market. But the problem is to supply something better than coffee at a competitive price.

The battle may be won by a good "instant tea", and here Ceylon appears to have made a sound start with a product called "Ceytea". This product is said to retain to a marked degree the attributes normally associated with quality tea leaf. It is to be hoped that science has the solution. This correspondent recollects

testing samples of synthetic tea as far back as 1905-06.

Advertising Darjeeling Tea

In recent issues, this correspondent has touched on the question of advertising Darjeeling teas as part of "the drink more tea propaganda". It is clear from the statistics that in the event of a demand being created for Darjeeling teas, there is no possibility of the supply meeting the demand adequately.

Here are some figures showing Darjeeling's percentage of India's total production (in lbs). According to the annual bulletin of the International Tea Committee, in 1961, north India produced 598.166 million lbs. Punjab produced 4,400 million lbs and south India 174.102 million lbs, giving a total of 776.668 million lbs. According to figures from Calcutta sources in 1960; 536.1 million lbs were produced in north India, and 169.1 million lbs in south India, making a total of 705.2 million lbs.

Due to the Indian calculations being in kilograms, while world trade is computed in lbs, it is not always easy to secure an up-to-date comparison, but in 1960, out of 705.2 million lbs, only 21.0 million lbs came from Darjeeling. In 1961, Calcutta figures show that 352.2 million kilograms were produced in north India, of which only 9.2 million kilograms were manufactured in Darjeeling, or say 3 percent in 1960 and rather less in 1961.

The figures relating to the tea auctions held in Calcutta also show that Darjeeling district produces only about 3 percent of India's total crop, but the estimate may well be on the low side, because quite a fair proportion is shipped direct to London and other places.

If one considers that 25 percent to 30 percent of this small supply is often of a very ordinary character, it will be agreed that it is poor business and doubtful ethics to try to build up new connections by supplying sample teas which cannot be followed up in quantity. The figures, of course, support the opinion that prospects for Darjeeling tea companies are fairly bright.

Subject to proper advertising in export markets, which seems to be in hand, there should be a potential increase in demand from old and new consuming markets of 25 million lbs or upwards, this and next season. That alone could absorb the Darjeeling crop. It, therefore, seems important to start selling Indian teas in bulk or in blends. The main point is to supply good value in competition with coffee, and to do that, and to make headway against coffee, good tea for price is essential. It is doubtful if the trade can do the needful and a Government subsidy may conflict with trade treaties. So the only real remedy is to reduce taxes or grant freight rebates. The two hurdles to tea at present are cost and coffee. Good tea is so rare that apart from professional tea tasters, hardly anybody outside the trade ever tastes its full flavour or inhales its wonderful aroma.

Reports from Pakistan show that the opening of the 1963 season is about normal. Outturn during March was given as 422,000 lbs, compared with 290,000 lbs in the same month as in 1962. Last year, Pakistan, in common with north India, experienced a marked fall in output. Figures were 51.83 million lbs, against 58.46 million lbs the year before.

Tea sold at the Chittagong auctions during March was recorded at a little over 3 million lbs, but the quantity despatched to West Pakistan alone during that month was reported at nearly 4½ million lbs. On these figures, it is not surprising that very little tea from this country finds its way to the U.K.

COMPANY AND PUBLIC NOTICES

STATE BANK OF INDIA

NOTICE is hereby given that a Local Meeting of the shareholders of the State Bank of India on the Branch Register of Shareholders kept at the Calcutta Local Head Office of the Bank will be held at the Calcutta Local Head Office, No. 1, Strand Road, Calcutta, on Wednesday, the 19th day of June, 1963, at 4-00 P.M. (Standard Time) for the purpose of electing one person to be a Member of the Local Board at Calcutta in pursuance of Regulation 48 of the State Bank of India General Regulations, 1955, in place of Shri V. V. Parekh, a Member of the Local Board, whose term of office will expire on the 30th June 1963.

B. VENKATAPPAIAH,
Chairman.

Bombay, 10th April, 1963.

JENSON AND NICHOLSON (INDIA) LIMITED

NOTICE is hereby given that the Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, 21st May, 1963 at 11 a.m., for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1962 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 15th to 21st May, 1963.

By Order of the Board,
K. S. REGUNATHAN,
Secretary.

2, Fairlie Place,
Calcutta, 9th April, 1963.

Note:—A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

JESSOP & CO. LTD.

NOTICE is hereby given that in compliance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an Interim Dividend on 5% Cumulative Preference Shares for the half-year ending 30th April, 1963, at the rate of Rs. 3.25 per share subject to deduction of tax in accordance with the Finance Act currently in force.

The Preference Share Transfer Register will be closed from 20th May 1963 to 23rd May 1963 both days inclusive.

Dividends will be paid only to the Shareholders whose names are registered in the Books of the Company on the 23rd May, 1963 or to their Mandatees.

By Order of the Board,
K. S. BASU,
Secretary.

63, Netaji Subhas Road,
Calcutta, 6th May, 1963.

THE BENGAL FLOUR MILLS CO. LTD.

The Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Final Dividend of 15 per cent for the year ended 31st December, 1962.

BALMER LAWRIE & CO. LTD.,
D. MANSON

Managing Director,
Managing Agents.

21, Netaji Subhas Road,
Calcutta.

2nd May, 1963.

ISSAC HOLDENS (INDIA) LIMITED

Registered Office: 31, Netaji Subhas Road.
Annual General Meeting
NOTICE

NOTICE is hereby given that the register of members and share transfer books of the Company will remain closed from 21st to 28th June, 1963, both days inclusive.

By Order of the Board,
DUNCAN BROTHERS & CO. LD.,
Managing Agents.
Calcutta, 4th May, 1963.

SHORTFALLS IN KEY SECTORS, PLAN TO BE REPHASED

A FULL session of the Planning Commission, it is reported, has started examining the shortfalls in the targets of the third five year plan with a view to rephasing it. The slow rate of economic growth has caused widespread disappointment. The progress achieved so far has been inadequate to make any impact on living standards, which, if anything, have deteriorated. The disappointment has been the greater because the review of the progress during the first two years of the third plan, presented by Mr. Gulzarilal Nanda, Central Minister for Planning, to the Lok Sabha the other day, has raised doubts whether the Planning Commission's preoccupation with mobilising funds has not diverted its attention from prescribing appropriate remedies for fulfilling the targets. Although the emergency has put considerable pressure on resources, there is hardly any evidence to show that the shortfalls in the plan have occurred for lack of finance. As far as rupee resources are concerned, the procurement has been as satisfactory as had been hoped for. During the first three years of the third plan, the Central and State Governments have raised additional revenues of Rs. 1,700 crores and Rs. 520 crores, respectively, against an overall target of Rs. 1,710 crores fixed for them. Hence it is odd that the Planning Commission should have called for a changed perspective on taxation in order to meet the needs of development and defence. The stupendous tax effort of the 1963-64 Central Budget has already started to produce strains and stresses in the economy. The prices of capital and consumer goods have shot up since the Budget. The rises in excise duty have boosted the domestic prices of several commodities. Industrial costs have been inflated by the increases in import duty on raw materials and capital goods. Although sufficient resources have been mobilised for the public sector, no worthwhile attempt has been made so far to reinforce the resources of the private sector. The vigour of the private sector can be sustained only by the buoyancy of the capital issues market. Now that investment confidence has suffered a serious setback following the stiff tax measures in the Budget, there has been a growing fear that development in the private sector may be retarded by a shortage of resources. Considering that the private sector has, by and large, fulfilled its targets during the past twelve years, and in view of the vast field left for it in the plan, any setback it suffers may jeopardise the overall economic development.

The concern about foreign exchange is understandable since India has to depend rather heavily on foreign aid for obtaining it. It is indeed fortunate that the progress of the plan has not been hampered so far for lack of foreign exchange because of the assistance of friendly countries. The future prospect of aid is, however, uncertain. Much will depend on the decisions which the Aid-India Club may take at its forthcoming meeting in June. The donor countries have been impressed by India's pressing foreign exchange requirements for development and defence. It is encouraging to know that they have viewed favourably the argu-

ment for giving more untied aid at a cheaper cost for promoting development. Past experience shows that aid tied to specific projects has been difficult to use in full; furthermore, its terms have prevented its use for "maintenance" purposes. It is a sheer economic waste to build up new capacity if it cannot be utilised fully. In order to have the full benefit of foreign aid, it is necessary that adequate foreign exchange should be procured in untied form to be able to work the existing capacity fully.

The performance in the agricultural sector has been very disappointing in that the output during the first two years of the third plan was less than in 1960-61. Production during the current year

farmers are financially in a position to use the facilities. They must be provided with better seeds, sufficient fertilisers and modern implements. They must be taught scientific methods of farming. Energetic steps should be taken to bring more fallow land under the plough. A scientific scheme of rotation of crops should be introduced. It is regrettable that the shortfall in the output of fertilisers has not attracted the attention it deserves.

The performance on the industrial front has also fallen below expectations. Although industrial production rose by an average of 8 percent during the first two years of the third plan, it is doubtful whether even this improvement will be maintained in the current year. There was an increase in the production of iron and steel, aluminium, engineering goods, mineral oils and chemical products, but the output of pig iron, steel castings, forgings, alloy and tool steel and fertilisers was below the targets. Mr. Nanda has expressed concern over the working of Government undertakings. There has been an increase in the approved estimates of several public sector projects. Their inability to stick to time schedules has resulted in serious shortfalls. As a result of inefficient management, they are not expected to contribute the targeted revenue of Rs. 300 crores. Considering that a major portion of the country's resources has been diverted to the public sector at the cost of the private sector, the overall picture has been adversely affected by the shortfalls in Government enterprises. The outlook for private enterprise is also far from encouraging since its output has been held down by extraneous factors beyond its control. Idle capacity in industries has substantially increased during recent months. The engineering industry, for instance, has been

embarrassed by growing idle capacity, although it is expected to work at the maximum level to meet defence requirements. Its working has been retarded by the shortage of power, transport, raw materials and foreign exchange. The recent threat of a substantial cut in the power supply will further curtail industrial activity in West Bengal. Unless prompt steps are taken to obtain additional power supplies from outside sources, such as Rihand, more industrial capacity will go unused. This apart, the growth of the private sector has been jeopardised by the super profits tax since it has substantially reduced the capacity of industry to plough back funds. Several expansion, modernisation and diversification programmes may have to be deferred for shortage of funds. Outside funds have been difficult to get because of the decline in confidence. Banking resources have been more or less fully employed. Banks may not be able to attract sufficient deposits because savings will be affected by heavier personal taxation coupled with compulsory deposits.

As a result of the poor performance, the national income rose by only 2.1 percent during 1961-62, compared with an average rise of 4 percent during the second plan period. But it rose substantially by 7.1 percent in 1960-61. In the circumstances, the decision of the Planning Commission to rephase the plan has not come as a surprise. The view is gaining ground that the targets have not been achieved because the plan itself, besides being lop-sided, is too ambitious. The revocation of several industrial licences during recent months seems to reinforce the belief that too many projects were being attempted in too short a time. The Planning Commission has only been realistic in deciding to prune the plan according to priority and capacity.

EXPORTS: A DEPRESSING PICTURE

EXPORT earnings in 1962-63 at Rs. 686 crores were 3.5 percent higher than in the previous year—a disappointing performance nevertheless on three counts. In the first place, the increase was smaller than the 4.7 percent rise in 1961-62 in spite of the labours of the Board of Trade set up in May 1962. The Board bravely set an export target of Rs. 720 crores but its expectations are shown by the actuals to have been too optimistic in the case of a number of important items. Secondly, India lost ground in several major markets including two, the E.E.C. and Japan, with which trade deficits are already serious. Thirdly, the earnings from manufactured products, upon which India must rely for future expansion of exports, not only did not increase but actually fell by a third.

A comparison of the actuals with the Board's targets and the results of the previous year is instructive. Tea exports in 1961-62 had earned Rs. 122.4 crores and the Board had hopefully set its sights on an earning of Rs. 140 crores for last year. Although the volume of exports increased by 15 million kilograms, it would seem that unit values suffered a marginal decline and earnings, therefore, did not rise proportionately. As a result, tea earned only Rs. 129 crores. But more than the fall in unit value, the gap between actuals and the target is attributable to the inability to export as much as had earlier been hoped, largely because of the smaller north Indian crop.

In jute goods, the fall in export price in the first half of the year from the abnormally high levels of 1961 reduced the earnings despite a sizeable rise in the volume of exports. This trend would seem to have been corrected during October-March; the figures for the year published in *Indian Trade Journal* show an increase in total earnings despite a lower quantum of exports. At Rs. 155.66 crores, jute manufactures earned Rs. 11 crores more than the previous year and Rs. 25 crores more than the target. Likewise, earnings from tobacco were almost Rs. 4 crores higher than the previous year and Rs. 2 crores more than the target.

These unexpected gains were cancelled out by the fall in textiles, both in terms of quantity and value. At Rs. 46.53 crores, earnings were almost Rs. 11 crores lower than the target and Rs. 1.8 crores lower than in 1961-62, confirming that the voluntary export quota of 12½ percent adopted by the

mills has not been able to arrest the declining trend. Rising costs, especially on account of the shortfall in domestic supplies of raw cotton, have handicapped the industry, and it was, therefore, unable to make any headway. For instance, even the limited quota granted by West Germany was used only partially as buyers presumably found Indian prices uncompetitive.

Exports of manganese ore were particularly disappointing, with both volume and earnings down for the second year in succession to reach a level lower than in any of the five preceding years. In part, the fall is explained by the sluggish world demand which India could hardly help; but increasing competition from new sources of supply was perhaps a more important factor. The long-term outlook should be considered anything but bright unless Indian costs of production could be reduced substantially by striving for the economies obtainable from large-scale mining. A long and close look at mining and freight policies is needed, keeping in mind the obvious lesson that mechanisation will tend initially to raise costs until production comes up close to capacity. In the transition period, the safest bet would seem to be to spread the costs between old and new mines. Another pointer to future policy is provided by the Russian example—that of tying up deliveries of manganese ore to West German steel mills with purchases of finished products from them. Something like this has already been attempted through barter and link deals but success must ultimately depend upon the cost factor.

The record of ferro-manganese is more dismal. Its production in modern electric furnaces was undertaken specifically for export but without establishing the necessary conditions for success. Electricity rates, transport costs and the quantity as well as quality of coke available to these units leave much to be desired, and several units have either had to stop production or curtail it drastically. This industry provides a telling example of the failure to plan for new industrial capacity in sufficient depth. It is now being suggested that even the location of some of the ferro-manganese plants is unsatisfactory from the point of view of exports or access to the right raw materials. The decision on location was, of course, made by the sponsors and not by the licensing Ministry, but what is the point of planning, after all, if the Gov-

ernment's technical advisers were unable to foresee the difficulties which have now arisen. In 1962-63, ferro-manganese exports fell, according to the *Indian Trade Journal's* figures, to 12,000 tonnes against 56,000 tonnes in the previous year, resulting in a decline of Rs. 4 crores in earnings. Some two years ago, the Ministry of Steel set up a committee to look into the problems of this industry but whether any action has been taken to set matters right is not known.

Engineering goods earned Rs. 2 crores more than in 1961-62 but exports at Rs. 9.98 crores were almost Rs. 6 crores lower than the target. It will be unrealistic to expect more substantial progress in the present conditions of shortage of raw materials and power. The foundries were short of both pig iron and coke all round the year, inhibiting the export of castings for which a potential market undoubtedly existed. In metals and metal products, there was a sharp fall from Rs. 10.73 crores to Rs. 3.27 crores, chiefly because iron and steel scrap exports dropped by two-thirds, and prime steel fell from about Rs. 2 crores to nil. Steel ingots and billets were exported in 1961-62 when finishing mills in the new steel plants were not ready to absorb the output. This being no longer the case, this item has disappeared from the export list. Scrap exports were affected by poor world demand because of lower levels of steel output in the importing countries; there is reason to think that the fall may have been less precipitate but for the Government's unhelpful policies.

Taking an overall view of the composition of exports during 1962-63, misgivings about the future are unavoidable. Exports of both tea and jute goods are already at high levels and further increases are bound to affect unit prices, unless world demand expands more rapidly than now seems possible. In any case, future prospects will depend, as much if not more, on India's competitive ability vis-à-vis Pakistan's jute and Ceylon's and Indonesia's teas. The tea export duty has been abolished—a sensible move in the light of conditions obtaining in the world market—but the benefit has been greatly offset by the higher incidence of internal levies. The unspoken assumption in the Government's thinking seems to be that the tea industry's progress towards the high third plan output targets will have the effect of reducing costs, making it possible for the grower to maintain prices despite the inflationary pressures. But nobody seems to know whether there will be enough fertilisers to sustain the larger crop, or again whether the tea companies will, after paying the new taxes, have sufficient funds left to plough back for expansion.

In jute, the bulk of the increase in export earnings has come from carpet backing, a new line of production. It remains to be seen whether efforts at modernising the industry and diversifying its production can be continued in the changed circumstances. There is even greater uncertainty about the competition from Pakistan, where the mill industry is rapidly forging ahead under the stimulus of bonus vouchers. It is not yet known what Mr. Morarji Desai proposes to do in response to the Shrivastava Committee's recommendations. But each month that goes by only aggravates the difficulties and the loss of some sacking markets may well be irreversible.

The export contribution from newer industries like engineering and chemicals is unlikely to improve substantially in the short term—a fact that must be squarely faced. For one thing, growing domestic demand will tend to reduce the exportable surplus. Even if home consumption is artificially restrained, a break-through in world markets will not be possible without heavy and self-defeating subsidies until the scale of production can be appreciably increased. This in turn depends on larger supplies of raw materials, power, and also foreign exchange to acquire balancing equipment which many of the units need.

Broadly speaking, the advance towards greater international viability cannot be either quick or easy. There is a close and obvious correlation between the levels of export and economic growth at home. The factors which hold back the latter will inevitably tell upon the former, as the current power crisis in Calcutta plainly shows. Setting one's house in order is thus a pre-condition, and mere export subsidies and incentives offer no last-

ing solution. What lies ahead, therefore, is a trying period of transition in which trade deficits may well worsen before a firm upward trend is estab-

lished. The length and the severity of this transition period will depend upon how much assistance India receives from outside.

SUGAR INDUSTRY IN DOLDRUMS

THE widely fluctuating fortunes of the sugar industry faithfully reflect the Government's shifting policy. It has been very sensitive to the incentives and deterrents contained in the official pronouncements. Last year there was a surplus production and the problem was to clear the glut. This year the problem is one of shortage caused by a steep fall in output and a big jump in the off-take. Domestic consumption was around 2.05 million tons during the four years before decontrol in September 1961. After decontrol, the off-take rose to 2.5 million tons; exports aided by subsidies accounted for another 600,000 tons. Mr. M. N. Pittie presented a comprehensive review of the sugar industry's problems in his presidential address at the annual general meeting of the Indian Sugar Mills Association last Wednesday in New Delhi. (Fuller details of Mr. Pittie's speech appear on a later page of this week's *Capital*.) He anticipates that production during the current season will be only about 2.15 million tons, compared with 2.7 million tons in 1961-62. Several factors have brought about this decline, including unfavourable weather conditions and consequent crop failure, low cane yields and increase in the diversion of cane supplies to *gur* and *khandasari* manufacture, particularly in Bihar and Uttar Pradesh. The low cane output is also due to the fact that at the time of sowing, the Government had not announced the withdrawal of the 10-percent cut in sugar production. When the cut was removed towards the beginning of the current season, it was too late to influence the acreage. The current season's sugar production—2.15 million tons—and the carry-over of 1 million tons from the previous season take the total availability to 3.15 million tons. Present internal demand has been placed around 2.7 million tons and exports at 500,000 tons. Thus towards the close of the season very little stock will be left. It is, therefore, not surprising that the Government has again imposed controls, nearly 17 months after sugar was decontrolled. Mr. Pittie has analysed the trend of production during the period of controls and pointed out that controls, as a rule, have only restricted consumption and pushed down production.

The stock market has reflected the industry's unprofitability. Sugar shares are depressed and few transactions have been taking place. The corporate reports for 1961-62 have been generally disappointing, most companies having either reduced the dividend or passed it. Their production costs have gone up because of the poor quality of cane, increases in wages as a result of the Wage Board's recommendations, rises in the prices of chemicals and other materials, higher railway freight and increases in taxes. Furthermore, the plant and equipment with the factories in U.P. and Bihar, who are major producers, are old and out-of-date, having been installed in the 'thirties.

For the 1963-64 season, the Government has set an output target of 3.3 million tons, which is considered the minimum needed to meet domestic requirements and exports. This can be achieved only if the right type of incentives are offered. By linking the price of cane to its sucrose-content, the Government has introduced a rational system of pricing. It has also meant slightly higher prices for cane, and should encourage the growers to improve its quality. The Government proposes to give financial and other types of assistance for intensive cultivation of cane. In order to raise the yield an acre, there is a proposal to take up blocks of 4,000 acres around each sugar factory in Uttar Pradesh for intensive cultivation. The cost will be shared by the Central Government, the State Government, the mills and the cultivators. Similar schemes are also proposed for Bihar and Punjab. While these are steps in the right direction, Mr. Pittie has made a plea for reviving the incentive scheme which was in force in 1959-60 and 1960-61, with suitable modifications. The fiscal incentive during those seasons was an exemption from excise duty on the excess quantity produced over the output of the previous season. He has urged that steps should be taken to ensure that cane produced within sugar factory areas is not diverted for making *gur* and *khandasari*. The use of cane for producing the latter is wasteful and should be discouraged. It has been estimated that about 50 percent of the cane produced is used for this uneconomic production, and only 35 percent is converted into sugar.

Current News and Comment

World Cotton Prospects Improve

Set up in 1939 with only ten members, including India—all exporting countries—the International Cotton Advisory Committee has now come to be regarded as the world parliament on cotton. This is because with a membership of 40, the Committee now represents 96 percent of total production, 93 percent of consumption, 93 percent of exports and 81 percent of imports of cotton in the world, excluding communist China. Although the Committee has no sanctions to compel member-countries to follow its decisions, its recommendations made from time to time have proved to be of considerable help in promoting co-operation in solving international cotton problems. Great significance, therefore, attaches to the annual meetings of the I.C.A.C. Deliberations at the regular plenary session held for the first time in India in Bangalore were followed with more than ordinary interest because, apart from the widespread fear of competition from man-made fibres, the current season marks a turning point in the world cotton situation since for the first time after 1955-56 world production is likely to exceed world consumption. For the fifth season in succession, world production has risen to a new peak—about 2 million bales more than in 1961-62.

Production is up by about 500,000 bales in the U.S.A., and a smaller crop in Russia is counter-balanced by some improvement in communist

China. The real increase has occurred in other countries where production is estimated at a record 21 million bales, against 19.5 million bales in 1961-62. In contrast to the U.S.A., the supply-demand relationship in other countries has continued to be favourable. Stocks in most of the producing countries are reported to be at or near the minimum. Most exporting countries have enjoyed another good year while importing countries are said to have been living on a hand-to-mouth basis. The world surplus is thus concentrated almost entirely in the U.S.A. where stocks are expected to increase to 11 million bales by the end of the current season, compared with 7.8 million bales a year earlier. The chairman of the Standing Committee of I.C.A.C., Mr. John P. Duncan, attributed the increase in the U.S. surplus to a further marked contraction in U.S. cotton exports and lower domestic consumption. The increase in world production has been due essentially to higher yields in several countries, with Syria establishing a record of 2 bales (roughly 800 lbs) an acre.

The U.S. chief delegate, Mr. Duncan, described intensified competition from man-made fibres as the major long-term problem. This view was endorsed by many delegates from other countries, more particularly West Germany and Japan. In his inaugural speech to the plenary session, India's Central Food and Agriculture Minister, Mr. S. K. Patil, also pointed to the growing competition

from man-made fibres but added that "we may have no fear as entertained in certain quarters about overproduction in cotton at least in the foreseeable future." Mr. Patil said that in spite of their advantages, the high cost of most of the man-made fibres would definitely militate against their replacing cotton on a large scale for a long time to come. If any immediate threat to the supremacy of cotton may arise, it is only from rayon, but it is probably too much to expect that rayon will at any time capture the entire textile market. Apart from the detailed assessment of the statistical position of cotton in different countries, extra long staple cotton figured prominently in the deliberations at the Bangalore session. The supply position of extra long staple this season will easily be the largest on record even though the total acreage is reported to be lower. The improvement in supply is attributed to a record crop in the Sudan and higher yields in general.

In its policy statement on cotton adopted at the concluding session on 8th May, the Committee expressed the view that the outlook for cotton in 1963-64 might be more reassuring than during the current season when it faced a big surplus, particularly in the U.S.A. The available indications are said to point to a better balance between production and consumption next season. Since the long-term outlook depends to a large extent on the U.S. Administration's policy, the Committee welcomed the assurance given by the U.S. delegation that its country would always bear in mind the interest of other cotton producing countries while implementing its production programmes and avoid any likely disruption of the world cotton market. While noting that the decline in cotton consumption has been "cyclical", the policy statement has conceded that the consumption of man-made fibres has risen to new record levels. Many delegates felt that the present price relationship between cotton and cellulose fibres in most countries was more or less appropriate; some expressed the view that a modest increase in price would not have a detrimental effect on cotton's competitive position.

The need for intensifying research for finding new end-uses for cotton has been greatly stressed. The Committee was encouraged by the progress made in improving the yield an acre and the quality of cotton through planned programmes of research into all aspects of cotton production. Progress in this direction is essential to offset the rising production costs, to increase productivity, and to maintain and improve the living standards of cotton farmers. The Committee was, however, critical of the promotional efforts which were said to fall far short of those being made for promoting man-made fibres, in the field of both publicity and technical development. The Committee felt that if increased effort was made in all possible directions, the long-term position of cotton as a textile fibre would be encouraging. The continuous increase in world population and rising incomes, together with the hoped-for improvement in the standards of living should provide cotton with ample opportunities, especially in countries where the per capita consumption is low and where for climatic and other reasons cotton is particularly suitable.

The I.C.A.C.'s decision to set up a permanent committee on cotton production and research will be widely welcomed, especially by India where the average yield is considerably less than half the world average of 185 lbs. Against a record production of 49.6 million bales grown over an area of 83.8 million acres in the world, India accounts for nearly one-fourth of the acreage but hardly a tenth of the

India's Resources
are Precious

WASTE NOT,
WANT NOT

output. It is to be hoped that India will profit by the experience of other cotton producing countries in raising their output through higher yields. India has only to raise the yield from the present miserably low 112 lbs to 140 lbs an acre to achieve the third plan target of 7 million bales, but past experience has not been encouraging enough to inspire the hope that she will be able to produce 7 million bales by 1965-66.

Aid to Co-operative Farming

In order to be able to achieve the food targets in the third plan, the Government of India has revised the pattern of financial assistance to co-operative farming societies in the pilot project and non-pilot project areas in different States. Under the revised scheme, the Central Government's assistance for co-operative farming societies in the pilot projects would be increased, although the State Governments will have to find counter-parts of the outlay from their own resources. Under the programme already finalised by the State Governments for 1963-64—the third year of the third plan—it was decided to organise 588 farming societies in the pilot project areas and 363 such societies in non-pilot project areas, against the respective targets of 1,200 and 800 farming societies suggested by the Central Government. The latter agreed to the programme drawn up by the State Governments, but it subsequently became clear that with the present effort, it might not be possible for the State Governments

to achieve the food targets laid down for the third plan period or for that matter even the target fixed for 1963-64.

The State Governments have, therefore, been asked to prepare revised programmes with a view to concentrating their effort on the organisation of co-operative farming societies in the pilot project areas and to have at least 1,000 such societies by the end of 1963-64. In order to finance this expanded programme, the State Governments will have to find from their own resources additional funds to the extent of Rs. 13 lakhs in order to avail themselves of additional Central assistance to the extent of Rs. 45 lakhs. The State Governments may not be able to finalise the programme in time to be able to organise 1,000 such societies by the end of 1963-64, and some may have difficulty in finding their share of the matching contribution. But the main flaw in Government policy is the assumption that the chief cause of an unsatisfactory increase in food production is cultivators' credit difficulties. It is true that the loans which the Indian cultivator is able to get from the co-operatives, Government agencies and other sources are not adequate for his needs, and he is not able to buy proper implements, seeds of good quality and better manure. But there are other equally important causes for low agricultural production in India, such as defective administrative set-up in the States, lack of cheap and effective manures and seeds and the use of uneconomic methods of cultivation.

There is no doubt that the increase in the number of co-operative farming societies in the pilot

CAPITAL, 16th May, 1963.

project areas and the provision of more liberal financial aid to the cultivator will help in increasing food production provided the scheme is sincerely implemented. But as the teams, which have been visiting different States at the instance of the Planning Commission's panel on agriculture have indicated in their preliminary reports, it will be necessary to make drastic changes in Government policy if the production of agricultural commodities is to be increased according to the third plan targets.

Another important indication which emerges from the findings of these study teams is that in view of the limited time in the current plan period, the approach should be selective. Intensive cultivation of selected agricultural commodities of strategic importance should be undertaken in selected areas which are capable of producing quick results. Although there is nothing contradictory between this selective approach and the pilot projects scheme undertaken by the State Governments, it is apparent that all the pilot projects do not satisfy the condition of producing quick results from the existing natural resources available to them. Since the State Governments' resources are limited, they will have carefully to consider the best means which are available to them to increase agricultural production according to the plan targets.

Raising Coal Output

Although the production of coal in India in 1961-62, the first year of the third plan, did not show any increase over that of the previous year, the output in 1962-63 at a little over 62 million tonnes was quite satisfactory. It is likely that, if proper effort is made, the total output in 1963-64 might come up to the plan target of 67.9 million tonnes. But taking an overall view of the picture, as Mr. H. K. Banerji, president of the Indian Mine Managers Association, did at the recent annual general meeting, it is doubtful whether the third plan target of 97 million tons will be reached by the end of the plan period. Since coal is required by the steel industry, the Indian railways and other industries, any shortfall in the total coal output is likely to affect adversely the rate of industrial growth.

There are many causes for the low production of coal in India, but one of the causes, which has not received the attention it deserves, is the difficulties of the medium and small collieries; they have not been able to modernise their machinery and equipment. Apart from the fact that there is a shortage of the latter, the main difficulty is the lack of funds. It is unfortunate that the collieries have not been able to use the World Bank loan of Rs. 17 crores, out of which only Rs. 9 crores has so far been used, mostly by larger mining concerns. The medium and small collieries are finding it difficult to raise the rupee counter-part loans to be able to use the World Bank loan. The Central Government recently introduced a scheme under which the financial institutions granting loans to collieries are indemnified to the extent of 65 percent. It is estimated that collieries will need at least Rs. 30 crores for their modernisation programmes. Some efforts should be made by the Government to provide this sum to the coal mining industry at reasonable rates of interest.

In order to increase the coal output at a sufficiently rapid rate, smaller collieries will have to be encouraged more than they have been so far. Mr. Banerji's suggestion that the earlier plans should be modified to provide for the opening of comparatively small units, deserves careful consideration. These smaller collieries are more labour-intensive and can increase production from their own resources. But in the case of these small collieries—much more than in the case of bigger units—the price of coal matters much. It is true that the coal prices have been increased, but the rise in prices has not been sufficient to cover the higher wages, higher interest charges and other production costs. There seems to be no escape from the fact that coal prices will have to be increased still further if production is to be sufficiently increased, although such a step will

CAPITAL, 16th May, 1963.

inevitably increase the production cost of most industries in India.

In order to increase the production of coal, its transport will have to be thoroughly rationalised. Mr. Banerji has suggested that a master plan should be drawn up for the location of centralised loading arrangements for washed coal, and the link between the centralised loading points and the raising units should be either aerial ropeways or trackless road transport. This will undoubtedly quicken the pace of production. In addition to this, it will be necessary to co-ordinate rail, river and road transport of coal more carefully than has so far been done. This is necessary to avoid the accumulation stocks at pitheads.

Setback on Food Front

That all is not well on the food front has been clear for some time. Rice prices in West Bengal and other areas, where the cereal is the staple food, have risen unchecked to a level which they do not normally touch in lean seasons, and starvation deaths have been alleged in some areas of Orissa and West Bengal. The reason, of course, is the shortage of rice supplies. It is estimated that India's rice production in 1962-63 has fallen by more than 1 million tons, whereas imports have totalled only 700,000 tons. With a smaller available surplus of rice in the world market, and larger requirements of importing countries, India is unable to obtain all that she needs. The Central Government has been asking the States to fill as much of the food gap as possible with wheat, and encourage the wheat-eating habit among the population. This may mitigate the scarcity, but whether it will provide a satisfactory solution is doubtful. In the first place, food habits of the people do not change so quickly, and secondly, it is not certain that India has even enough wheat to fill the gap.

In the circumstances, the talk of floor or minimum prices for agricultural products, including rice, sounds unrealistic. For the same reason, the reported acceptance "in principle" by the Planning Commission of the need to set up an official agency for the procurement of foodgrains directly from the farmer at agreed minimum prices seems rather odd. Under the price policy of the third plan, it is no doubt, proposed to build an integrated price structure which would provide incentives for the farming sector to raise output in accordance with the plan targets. But the unsatisfactory performance during the first two years of the third plan has apparently less to do with prices than with the failure of the organisational machinery which the Government has set up to aid the farmer in raising production. Weather, too, has had a hand in frustrating the drive for higher output. It is obvious, therefore, that the country will have to import on a greater scale than before.

The internal demand has been rising at one million tons a year, while production has not kept pace with the rise in consumption. For example, the entire import of 4 million tons in 1962-63 has had to be pumped into the market to avoid serious scarcities, and the Government has been unable to add anything to the buffer stock which still stands at 2 million tons, against a target of 5 million tons. Without a sizable buffer stock, it will not be possible to ensure adequate distribution of food in areas of scarcity. The Central Government has now made "detailed arrangements" to ensure supplies of foodgrains along with kerosene oil, drugs and medicines, to the network of consumers' stores which are being organised all over the country. This may be a good move to check the price rise, but everything will depend on the efficiency of the proposed procurement machinery, sufficiency of stocks and adequacy of transport arrangements.

Zinc Smelter in Alwaye

Mr. A. O. Wolff, Vice-President of the well-known Canadian firm, Consolidated Mining and Smelting Co. of Canada Ltd, last week gave details of a 20,000-tonne zinc smelter, which his Company is helping to set up in Alwaye in Kerala State. Sponsored by Metal Distributors Ltd of Calcutta, the joint venture will also pro-

duce 48,000 tonnes of sulphuric acid a year as by-product and small quantities of cadmium. The sulphuric acid will meet the needs of Fertilizers and Chemicals Ltd which is also located in Alwaye. The cost of the smelter project is estimated at Rs. 5.08 crores, of which C.O.M.I.N.C.O. will subscribe Rs. 84 lakhs. The balance of the foreign exchange requirements will be met from a loan to be advanced by the Canadian Export Credits Insurance Corporation. Mr. Wolff stated that this will be his Company's first processing project outside of Canada. He felt that the modifications introduced in the super profits tax will help to make the proposed smelter economically viable. The plant is likely to go into production in about three years from now.

It may be mentioned that the Metal Corporation of India has already a project in hand to establish an 18,000-tonne zinc smelter in Udaipur in Rajasthan. India does not produce any zinc at present and imports about 76,000 tonnes of the metal a year. The Development Council for Non-ferrous Metals had estimated the country's requirements of zinc for 1960-61 at 85,000 tonnes, which was expected to go up to 187,500 tonnes by 1965-66. Thus even after the commissioning of the two smelters, consumption will be far in excess of indigenous production.

New Companies in South

During the quarter ended March 1963, 90 companies with an authorised capital of Rs. 9.50 crores

were registered in the southern region of India, comprising the four States of Andhra Pradesh, Kerala, Madras and Mysore. Out of these concerns, 18 are public companies with an authorised capital of Rs. 6.73 crores, and 71 are private companies with an authorised capital of Rs. 2.78 crores. Only one is a public company limited by guarantee. The total investment by way of increase in the paid-up capital of companies is of the order of Rs. 7.63 crores. Out of this, Mysore alone accounts for an increase of as much as Rs. 4.04 crores. The largest contributor to the increase in the paid-up capital is the Mysore Iron and Steel Company Ltd—a Government undertaking which has raised its paid-up capital by nearly Rs. 4 crores.

Of the newly floated companies in the region, there are seven giant flotations. Kerala Heavy Electricals Ltd in Kerala State which has an authorised capital of Rs. 2.20 crores and is to manufacture heavy electrical equipment, tops the list. The others are: Premraj Ganapath Raj and Company Private Ltd (electrical goods; authorised capital Rs. 50 lakhs) and Banu Paper Mills (paper and paper boards; authorised capital Rs. 50 lakhs) in Madras; Autofin Ltd (motor-car, buses, etcetera; authorised capital Rs. 75 lakhs) and Madanapalli Spinning Mills (cotton spinners, doublers, etcetera; authorised capital Rs. 50 lakhs) in Andhra Pradesh; Deepak Insulated Cable Corporation Ltd (electrical equipments; authorised capital Rs. 50 lakhs) and Malur Durga Mills (cotton spinning; authorised capital Rs. 50 lakhs) in Mysore. During the quarter, 52 companies were struck off

TODAY experienced travellers do not carry cash; it can be lost or stolen. Wherever you go in India, carry Bank of Baroda Travellers' Cheques—they're absolutely safe. No one but you can cash them. And so easily too...just sign your Travellers' Cheques in the presence of the bank official on duty. ■ Your Bank of Baroda Travellers' Cheques can be cashed almost anywhere in India—at any Branch of the Bank of Baroda, the State Bank of India, the Bank of Rajasthan, and some branches of the Punjab National Bank. Next time you travel, carry safe, convenient Bank of Baroda Travellers' Cheques—available in denominations of Rs 25, Rs 50 and Rs 100 from your local Bank of Baroda branch.

Say goodbye to your friends
but not to your money!

the register of companies as defunct, their total paid-up capital being Rs. 13.02 lakhs; seven companies went into liquidation, the total paid-up capital of which is Rs. 1.89 lakhs. Of the 96 companies registered, processing and manufacture of metals and chemicals claim the largest number, namely, 22, followed by commerce (trade and finance) with 20, transport, communication and storage with 17, processing and manufacture of foodstuffs and textiles with 14 and processing and manufacture of miscellaneous with 10. The remaining seven are distributed over a variety of activities, industrial and otherwise.

The Indian Marine Insurance Act

Surprise has often been expressed that India had no marine insurance law prior to the passing of the Indian Marine Insurance Act, 1906, even though marine insurance had been practised in the country for many years; but the surprise is not entirely warranted. Even in the United Kingdom, the traditional home of marine insurance, no effort was made to devise a legal system to govern insurance contracts until 1906, although the insurance had been practised for many decades. Such statutory provisions as there were, were confined normally to the prescription of particular practices, and merchants, shipowners and their insurers were for long content to accept what was customary.

The historical process of the evolution of the British law is, however, instructive. Judge

Chalmers, who for many years had given his attention to marine cases in the courts and had interpreted the law as it then was, took the view that the law needed to be codified. The Bill which was mostly drafted by him was referred to a committee of underwriters, average adjusters, shipowners and lawyers presided over by Lord Herschell. The Bill was brought before the House of Lords by Lord Halsbury as Lord Chancellor. Eventually, an Act codifying the law relating to marine insurance was placed on the English statute book.

The Indian Marine Insurance Act, 1906, which has been enacted in the current session of Parliament, also seeks to codify the practices relating to marine insurance. However, India had hardly any customary practice or legal decisions sanctioned by time which required to be codified. Indian courts were guided by decisions of British courts and the provisions of the English Marine Insurance Act, 1906. Hence what was required was an enactment of the nature of the Marine Insurance Act, 1906, of the U.K.

The international character of a marine insurance policy makes it necessary that a claimant, who has almost invariably to make his claim in a country other than where the policy was originally issued, should be sure of the protection he intends to have. This will not be possible unless the words convey the same meaning in courts of law as the interpretation given in the country of origin. Section 24 of the Indian Act clearly lays down that a contract of marine insurance shall not be admitted in evidence unless it is embodied in a

marine policy in accordance with the Act. The policy is, in all particulars, a reproduction of the internationally accepted Lloyds S.G. form of policy, which, together with the Rules of Construction, has "generations of legal interpretation hanging almost to every word and certainly to every sentence."

The Law Commission also, while arguing in favour of a legislation of this character, pointed out that when goods are exported from India, the relative insurance policies have to be assigned for protecting the rights of the transferors. It will facilitate business, the Commission has said, if there is uniformity of law. As early as 1944, the Statement of Objects and Reasons of the Bill for amending the provisions of the Transfer of Property Act relating to the assignment of policy of marine insurance also urged the need for introducing legislation of this character. It pointed out that while legislation on the above lines (meaning the law relating to assignment of marine policy) would clarify the law of assignment and subrogation of marine insurance policies, the whole law of marine insurance will not be put on a satisfactory basis unless comprehensive legislation on the lines of the Marine Insurance Act, 1906, of the U.K. is enacted in India.

The Indian Act does not, in essentials, differ from the English Act. It has certain differences, however, but they are only differences in codification. The Indian law, for instance, has clarified that inland transit policy is as much a marine policy as a policy of insurance on overseas shipment. This is well understood in the U.K. and accepted as such. The clarification was needed in India because of varying decisions of Indian courts, some of which held that the Insurance Act had only defined marine insurance business, and there was no definition of marine insurance policy. Unless inland transit policy is recognised as a marine insurance policy, the assignment and subrogation provided for in the Transfer of Property Act may not apply to such policies. The resulting chaos can be considerable. The Indian Act recognises inland policies as a marine insurance policy, and has also incorporated in the body of the Act those provisions from the Transfer of Property Act relating to assignment and subrogation which are essential for the transaction of marine insurance. An important departure in the Indian Act is that under Section 2, the definition of a ship has been included. In the English Act, there was no definition of a ship.

A MARRIAGE LAW

THERE is one bill now before the House of Commons, which has tried to get itself pushed through Parliament on many occasions during the past generation though without success, which now stands a good chance of becoming law this year. If the present Parliament lasts until the end of the ordinary session, I mean the Deceased Wife's Sister Bill. It has been twice passed by large majorities in the House of Commons during the present Parliament, and this session the bill is under the charge of Sir Gilbert Parker. Reuter has already told us that the second reading has been safely passed and the incoming mail will give the figures and perhaps some inkling of the future prospects of the measure. This is a bill which the last Prince of Wales always went specially to the House of Lords to vote for, and the fact that this last Prince of Wales is now King Edward the Seventh, will not hurt the chances of the measure at all. In fact the influence of the Court in all social matters—and this marriage question is entirely a social and not a party one—is very powerful, and makes itself silently felt everywhere throughout all classes, even among Bishops. The British Islands are the only portions of the Great British Empire where a man cannot lawfully wed his deceased wife's sister, with the exception of Newfoundland, Guernsey, and the Isle of Man, but these are only waiting for the decision of the mother country in order to follow suit. This year the bill finds itself in a more genial climate of opinion than ever it has had the good fortune to bask in before, and the chances are that the Bill will now blossom into an Act. And high time too.

A Ditcher's Diary

NOT SINCE THE L.I.C.-MUNDHRA AFFAIR FIVE YEARS ago has a session of the Indian Parliament been so exciting as the one just over. And the truth is that in Indian public life today there is an awful lot to be excited about. Thanks to Feroze Gandhi's Bill, later Act, on publication of parliamentary proceedings, the Press was able to carry a good deal, not all, about the many scandals Parliament discussed; I am unable to say that the Government came out of it all very well. What disturbed the public mind, and should make Mr. Nehru think hard, is that the Government seemed always to have too much to hide, too many to defend and protect. This is hardly the democratic way; but it is an entirely happy development that Parliament is increasingly insistent on not letting the Government get away with them. In seeking to place the judiciary as a cushion between Parliament and the Government, no good is being done to either Parliament or the Government or the judiciary. I have watched with distress how in recent years the judiciary has been involved in matters that are essentially executive or political; and it is not less distressing that the judiciary has allowed itself to be used thus. The Prime Minister is absolutely right in claiming that it is for him to decide whom he will or will not have in his Cabinet; this is a Prime Minister's prerogative. If Parliament does not agree with the Prime Minister it has the power to ask him to go. Where does the judiciary come into it? The judiciary has nevertheless been brought in, although the right of ultimate decision rests with the Prime Minister. It seems to have escaped him altogether that in placing the executive, of which he is the head, above the judiciary he is setting undesirable precedents. I raise this matter of principle because the juicy scandals about individuals, for the details of which my appetite is less than insatiable, have obscured the main issue. Politics are a murky game in any country; perhaps murkier in some than in others. It is still necessary to ensure that political decisions are not allowed to masquerade as judicial verdicts. Parliament should not permit this, nor should the judiciary.

I AM REACTIONARY ENOUGH TO THINK THAT CERTAIN societies may be justified in believing that they need the ultimate punishment to deter their delinquents from murdering for fun. I know the abolitionists' case well enough, without accepting it for I cannot share their assumptions. In India,

I am inclined to think, juries usually do their best to avoid the death sentence; this is in keeping with the country's religious and humanitarian traditions. For Mr. P. P. R. Sawhney, Delhi's District Judge, the question seems to be not abolition of capital punishment but its modernisation. He thinks hanging should go and be replaced by the electric chair. A colleague's immediate reaction was: "Yes, and just when the condemned man has sat on the hot chair the power station will be engaged in load-shedding". If this is being frivolous on a macabre subject, I see the point. Many States have in fact gone over to the gas chamber from the electric chair. If I remember aright, neither the Rosenbergs nor Caryl Chessman were dead at the first charge. Perhaps there is no such thing as a painless death. Some of the murders in recent years in Europe and the U.S.A. were certainly not painless; and Caryl Chessman's crimes were nasty in the extreme. Where he got some sympathy was the absurd judicial delay that preceded his end. For part of it he was, no doubt, himself responsible; he resorted to all possible devices permitted by the strange laws of the "sovereign" State of California. In India most cases just go on and on; not usually due to the fault of the accused. I have heard Indian lawyers argue that there aren't enough judges, that there are too many cases, that they don't ask for adjournments on trivial grounds and that if they do the judges don't oblige. I do not believe most of this defence. Everything about the law is unbelievably slow in this country; and that is that. Whether the lawyers are as responsible for this as the judges I do not know; I simply dread the possibility of getting involved in any kind of litigation in any kind of capacity—accused, complainant, juror or witness. I am quite certain that a great deal of injustice is happening directly because of delay in the name of perfect justice. This, in my view, should be the Law Commission's first concern, not theories for or against abolition nor whether the electric chair is an improvement on hanging.

UNLIKE MOST OTHER VISITORS, ACHARYA VINODA Bhava had some complimentary things to say about West Bengal before reaching Calcutta on Sunday. That, I am sure, was not the only reason why the city received him so warmly. Although a section of the Calcutta Press started something of a campaign against the Acharya some weeks ago for a few casual allegedly pro-

Chinese remarks, which got some encouragement when Mr. Nehru said at Digha that he didn't always agree with the Acharya, there is something in the Sarvodaya leader that should appeal to the Bengali ethos. To express a complex phenomenon simply, the Acharya functions on two planes and so does, very often, the Bengali mind. I have often wondered whether Bengal, once the home of terrorism which derived not a little inspiration from the worship of Kali, has ever thought of politics in exclusively political terms. Take, for instance, the Hindu Mela or the Swadeshi movement; for a good many Bengalis nationalism then meant composing or singing in chorus patriotic songs and most of the inspiring lyrics now served on All India Radio were born in that period. The basic inspiration was literary as much as political. I have written here before how politics are mingled with religion in Bengal's community pujahs. If there is something endearing in this duality, as there certainly is, it is also capable of landing its adherents into all sorts of trouble. Bengal's ordeals I need not discuss here, for I am at the moment concerned with dichotomy's demands on the individual. Acharya Vinoda Bhava falls foul not only of the Prime Minister and a part of the Press but also, I imagine, with full-time jeevandanis who see in his quasi-political excursions a dissipation of effort. It is never easy to decide how much to render unto Caesar and how much unto God; for their respective domains are undemarcated.

A DIRECT RESULT OF THE RECENT RECESSION IN Britain, and a healthy one I might add, has been a growing tendency to question the quality of management in British industry. Now this is something on which I have always had strong views. Bearing in mind that Britain is one of the leading countries in the world industrially, it has always surprised me that her general standards of business managements should be so low. Apart from a few British industries, whose standards of management are undoubtedly among the best anywhere, the majority are still managed by methods which are anything but expert and by men who are often too old, too unenterprising and too stupid to recognise the difference between a title and a qualification. Perhaps that is because it is so difficult to acquire anything in Britain which can be offered as a qualification for business management. Of course, there is always the evidence of a lifetime's experience. But these days a single working life may just not be long enough to acquire all the complex techniques of modern management; these have to be absorbed in condensed form and over a much shorter period. In other words, what is wanted is some kind of university-level course in business management in Britain, and I am glad to

WELLMAN INCANDESCENT STANDARD OIL FIRED FURNACES

- * Made in India by Wellman Incandescent India Ltd
- * For forging, reheating & heat treatment
- * Available in standard sizes or tailored to customers' specifications
- * Accurate temperature control
- * Low operation and maintenance cost
- * Rapid attainment of working temperature
- * Working temperatures ranging from 250°C - 1350°C depending on type of furnace

see that Oxford has decided to provide one. For those who think that it is odd for a venerable institution like Oxford to copy a relative newcomer like Harvard, I can only suggest that it is a sign of the times. Whether or not the proposed Oxford business school is to be entirely post-graduate, or "post-experience", and not itself a graduate institution, has, I believe, not yet been decided. But Professor Hicks, the chairman of the committee which has been set up to consider the project, seems to feel that it should be. For myself, I only hope that its standards will be high, that access will not be too difficult, and that it will recommend itself to other British universities as worthy of early emulation. I should not like to see industrial management in any country become the exclusive preserve of university graduates with post-graduate diplomas; the profession is much too catholic for that. But management is increasingly becoming a job for the general expert, a contradiction in terms which really means the man who can combine the various disciplines such as accounting, salesmanship and so on, which are at the moment the main pathways to the top in British industry today. And the best way to acquire this expertise in the short time available in a single life span is to get it at school.

AT LEAST IN THE WEST, LETTER WRITING HAS BEEN a dying art for many years now. Except, perhaps, in the specialised field of job applications, although recently that has become a science more akin to advertising-copy writing than a cultivated art. But even the business of applying for a job is becoming modernised now, I see, especially at the higher executive levels. It is moving into the field of disc and tape recordings. I believe the new technique is already well advanced in the United States where the long distances may justify a substitute for the preliminary personal interview. But it is now invading Britain as well and there, characteristically, considerable opposition is being met with; the other day an advertisement for a television rental managing director warned specifically that "gramophone records or tape recordings will disqualify". The advocates of the new method point out that it is more direct than a letter and that it gives a prospective employer some idea of the applicant's "speaking personality". There may be something in this latter point, although one would have thought that the ability to draft a good letter was at least as important a qualification as a smooth line of patter. The trouble is that both can now be expertly cultivated, and nowadays the drafting of applications is becoming a specialised technique on which professional advice is available. In other words, it is now recognised as yet another branch of selling. A really top-flight approach these days, especially in the United States, can involve much more than a letter or even a tape recording; very often the applicant will include photographs of himself, his wife and children, his parents, his house, his car and even his friends, just to prove he is moving in the right circles. If you are thinking that all this runs into money, then you would be right. In fact, the current practice in the West of applying for any job which even vaguely calls for the kind of qualifications which an executive possesses, or thinks he does, can account for a fair proportion of the average annual family budget. I have not yet heard of its being admitted for tax relief. We in India are still some way from this, although not perhaps as far as we may imagine. Personally I shall be extremely sorry when the ad-man gets his reforming hands on some of those picturesquely-worded job applications which are still one of the few consolations of having to recruit junior clerical staff in this country.

A WESTERN JOURNALIST WAS INTERVIEWING Russian official.

"What, in your opinion, is Capitalism?"

"Capitalism", came the coldly disapproving reply, "is the exploitation of man by man".

"And Communism?"

The official drew himself up proudly: "Communism is exactly the opposite".

THE DITCHER

Guide for Investors

DELTA, BUDGE-BUDGE, CHEVIOT JUTE DO WELL

THE Andrew Yule group of jute companies have produced excellent results for 1961-62. The directors point out that provided a sufficient supply of quality jute is available in the next season and a realistic parity is maintained between the prices of fibre and manufactured goods, the outlook for the current year should be considered favourable. But production costs will certainly rise due to the heavier taxation and the emergency risks insurance scheme. Since the jute industry as a whole will have to pay an extra sum of over Rs. 3 crores a year towards labour bonuses, there will be a further rise in labour costs.

The profit of the Delta Jute Mills Co. Ltd was Rs. 38.24 lakhs for the year ended November 1962, after transferring Rs. 12.20 lakhs (against Rs. 5.51 lakhs) to depreciation, compared with a loss of Rs. 9.12 lakhs in 1960-61. A taxable ordinary dividend of 12 percent, including an interim of 4 percent, has been declared, which is more than five times covered and offers a yield of 7.6 percent at the present price of Rs. 157 a share of Rs. 100 each. The dividend was passed for 1960-61. Taxation absorbs Rs. 13.65 lakhs, capital reserve Rs. 1.84 lakhs and development rebate reserve Rs. 7.62 lakhs. The carry-forward is Rs. 28.674, against a debit balance of Rs. 8.97 lakhs brought in. Out of the taxation provision, a sum of Rs. 1.75 lakhs will be paid towards the super profits tax. Gunny sales rose from Rs. 1.73 crores to Rs. 3.24 crores and stocks of jute goods from Rs. 13.86 lakhs to Rs. 32.37 lakhs. It has been decided to extend the modernisation of the fine side drawing and spinning machinery up to 95 percent of the mill's registered lousage at an estimated cost of Rs. 2.50 lakhs.

The Budge-Budge Jute Mills Co. Ltd made a profit of Rs. 37.70 lakhs for the year ended October 1962, after transferring Rs. 6.09 lakhs (against Rs. 6.30 lakhs) to depreciation, compared with a loss of Rs. 9.36 lakhs in 1960-61. A taxable ordinary dividend of 12 percent, including an interim of 6 percent, has been declared, which is more than eight times covered, and works out to a yield of 7.7 percent at the present price of Rs. 156 a share of Rs. 100 each. There was no dividend for 1960-61. Taxation absorbs Rs. 19.40 lakhs, out of which super profits tax will account for Rs. 5.30 lakhs. Development rebate reserve is allocated Rs. 2.37 lakhs, capital reserve Rs. 9,000 and general reserve Rs. 1.46 lakhs. The carry-forward is Rs. 30,613, against a debit balance of Rs. 8.91 lakhs brought in. Gunny sales were Rs. 2.6 crores, against Rs. 2.16 crores and stocks of jute goods increased from Rs. 14.30 lakhs to Rs. 20.52 lakhs. The directors have decided to modernise the fine side drawing and spinning machinery up to 95 percent of the mill's registered lousage at an estimated cost of Rs. 3.50 lakhs.

The profit of the Cheviot Mills Co. Ltd was Rs. 41.58 lakhs for the year ended November 1962, against a loss of Rs. 16.01 lakhs in the previous year, after increasing depreciation from Rs. 6.87 lakhs to Rs. 7.87 lakhs. A taxable ordinary dividend of 25 percent, including an interim of 7.5 percent, has been declared, which is more than four times covered. The yield is 10.8 percent at the present price of Rs. 23.25 a share of Rs. 10 each. The dividend was only 5 percent for 1960-61. Taxation absorbs

Rs. 12 lakhs, development rebate reserve Rs. 6.73 lakhs, capital reserve Rs. 3,120 and general reserve Rs. 12.49 lakhs. The carry-forward is Rs. 1.02 lakhs, against Rs. 1.21 lakhs brought in. Gunny sales rose from Rs. 2.05 crores to Rs. 2.71 crores and stocks of jute goods were Rs. 20.98 lakhs, against Rs. 11.46 lakhs.

National Resumes Dividend

THE National Company Ltd has declared a taxable ordinary dividend of 10 percent for the year ended October 1962, which is covered more than nine times and works out to a yield of 4.2 percent at the present price of Rs. 23.75 a share of Rs. 10 each. There was no dividend for the previous two years. The profit for the year is Rs. 33.25 lakhs, compared with a loss of Rs. 6.32 lakhs, after providing Rs. 16.41 lakhs (against Rs. 1.92 lakhs) for depreciation and development rebate reserve is allocated Rs. 11.95 lakhs, taxation Rs. 5.50 lakhs and general reserve Rs. 9,507. The directors say that part of the dividend will be exempted from tax because a portion of the Company's income is also likely to be exempted from income tax. They take an optimistic view of the current working in view of the prospect of an abundant supply of raw jute.

The expansion and diversification schemes have made considerable progress. It is proposed to have a complement of 255 broad looms out of which 215 have already been working. A capital expenditure of more than Rs. 1 crore has been incurred since the close of the year. The Company has also installed 103 silver spinning frames. The overall production of the mills has increased. The Company has borrowed funds from the State Bank in addition to the loan which has already been taken from the National Industrial Development Corporation. The directors foresee the need for a total loan of about Rs. 5 crores in order to meet the increased capital requirements.

Share Offer from Multimetals

THE subscription list for the Rs. 25-lakh public issue of Multimetals Ltd will open on 22nd May and will remain open until 28th May. The entire public issue has been underwritten. A sum of Rs. 2.50 a share is payable on application and Rs. 2.50 a share on allotment. The Company is setting up a factory in Kota (Rajasthan) for the manufacture of non-ferrous metal products including copper and copper alloy hollow and solid sections and copper printing rolls. (Fuller details of the issue appear on a later page in this issue of Capital.) The Company will be a pioneer in the production of copper printing rolls in India. The manufacturing licences provide for an annual production of 1,800 tons of copper and copper alloy hollow and solid sections and 3,000 pieces of copper printing rolls a year on a double shift basis. Land in Kota has already been acquired and construction work is expected to start in June. The

plant, it is expected, will be ready for production by about the middle of next year.

The Company has secured the technical and financial collaboration of Revere Copper and Brass Incorporated, New York. The amount which the U.S. firm will invest plus foreign exchange amounting to Rs. 54.64 lakhs has agreed to release under a D.L.F. loan will cover the cost of imported equipment. The project, it is estimated, will cost Rs. 1.50 crores, of which Rs. 1.27 crores will be spent on buildings and plant and machinery. It is proposed to meet the cost by the issue of share capital for Rs. 75 lakhs and by bank loans to the tune of Rs. 75 lakhs. The Company has an authorised capital of Rs. 1 crore—all in equity shares of Rs. 10 each. The issued capital will be Rs. 75 lakhs, of which shares worth Rs. 25 lakhs are reserved for allotment to the Company's foreign collaborators, Rs. 22.50 lakhs are being allotted to Metal Distributors Ltd, Calcutta, and Rs. 2.50 lakhs are being taken up by the directors and their associates. The balance of the issue amounting to Rs. 25 lakhs is being offered for public subscription. The board of directors includes Mr. G. D. Binani, Mr. A. C. Dutta, Mr. R. K. Bagri, Mr. J. M. Kennedy, Mr. J. H. Eikenberg and Mr. S. C. Gladstone.

Prospects for Burma Mines

THE chairman of the Burma Mines Ltd says in his statement that the Government of Burma will fully nationalise the Burma Corporation (1951) Ltd by taking over the "B" shares of the Company in due course. These shares are now being held by the Burma Mines Ltd. For the year ended June 1962, the Burma Corporation incurred a substantial loss of £351,951. But the Company's operation during the quarter ended December 1962 resulted in a small profit, reducing the estimated loss for the half-year ended December 1962 to £8,093, compared with an estimated loss of £168,202 in the corresponding period of 1961. The satisfactory results of the December quarter, it has been stated, are likely to continue. At the end of the current financial year the Corporation may again be operating on a profitable basis each year, although it must take time to eliminate the previous losses. The activities of the insurgents in the northern Shan States continue unabated. It is hoped that vigorous steps will be taken by the Government of Burma to ensure the security of the personnel engaged by the Company. This should help the Corporation to work on a profitable basis. A substantial rise in the price of silver, it is stated, has been welcomed by the Company. The future profitability depends largely on a rise in the world price of lead which has shown some improvement during recent months.

The Burma Mines Ltd has made a profit of £12,559 for the year ended December 1962, compared with £7,456 in 1961. Taxation absorbs £4,150 (against £2,925). The carry-forward is £174,204, against £164,295 brought in. Due to the absence of a dividend on the half-interest in the

Burma Corporation (1951) Ltd, which constitutes the major investment of Burma Mines, the directors have been forced to pass the dividend.

Rajgarh Tea Pays More

THE profit of the Rajgarh Tea Co. Ltd (an Assam garden) has improved from Rs. 1.75 lakhs in 1961 to Rs. 3.63 lakhs for the year ended December 1962, after providing Rs. 71,147 (against Rs. 63,633) for depreciation. The taxable ordinary dividend has been raised from 13.5 percent to 17.5 percent, absorbing Rs. 1.05 lakhs. The yield is 8.2 percent at the present price of Rs. 21.37 a share of Rs. 10 each. Taxation is allocated Rs. 2.25 lakhs (against Rs. 80,000), development rebate reserve Rs. 330 (against Rs. 614) and general reserve Rs. 40,000 (against Rs. 25,000). The carry-forward is Rs. 38,418, against Rs. 46,229 brought in. The crop was 2,307 quintals, compared with 2,166 quintals, and the average sale price rose by Rs. 1.04 to Rs. 6.35 a kilogram. The 1963 crop has been estimated at 2,250 quintals.

Basmatia Tea Cuts Dividend

THE Basmatia Tea Co. Ltd (an Assam garden) has made a profit of Rs. 3.94 lakhs for the year ended December 1962, compared with Rs. 4.48 lakhs for 1961, after providing Rs. 1.09 lakhs (against Rs. 89,311) for depreciation. The taxable ordinary dividend has been cut from 25 percent to 20 percent, absorbing Rs. 1.53 lakhs. The yield is 7.3 percent at the present price of Rs. 27.25 a share of Rs. 10 each. Taxation absorbs Rs. 2.42 lakhs (against Rs. 1.90 lakhs). Of this, the super profits tax will be Rs. 18,500. Development rebate reserve is Rs. 600 (against Rs. 4,586). The carry-forward amounts to Rs. 46,930, against Rs. 48,172 brought in. The crop was 2,869 quintals, against 3,136 quintals. The average sale price rose from Rs. 6.01 a kilogram to Rs. 6.60 a kilogram. The 1963 crop has been estimated at 2,900 quintals.

Phillips Carbon Black Shows Loss

PHILLIPS Carbon Black Ltd shows a loss of Rs. 3.25 lakhs for the period from 1st April to 30th November, 1962, after providing Rs. 69,351 for depreciation. The Company has changed the accounting year from March to November. Hence the present accounts cover a period of eight months only. During the year ended March 1962, the loss was Rs. 3.01 lakhs, after transferring Rs. 75,456 to depreciation. Although it was originally intended to start producing carbon black before the end of 1962, the working was interrupted by unavoidable delay. The unit for the conversion of raw materials operated from October 1962, but the full plant could not work before the end of December 1962. The factory produced about 1 million lbs of carbon black, when it started working at the end of 1962. The first commercial deliveries were made early in January 1963, and they were well received. Regular sales of carbon black have started since. The directors hope that production at the full annual capacity of 30 million lbs will be achieved before the end of the current year. The Company has meanwhile been permitted by the Government to increase the capacity by a further 10 million lbs. As for the supply of raw materials, coal tar

has started arriving regularly, but its supply may fall short soon in view of the rising production of the factory. So it may be necessary to supplement the domestic supply of coal tar by imported feed stock.

The Company issued rights ordinary shares towards the end of last year at a premium of Rs. 3 a share of Rs. 10 each. The dividend has again been passed. A debit balance of Rs. 3.25 lakhs has been carried forward.

Nit from Marshall Sons

MARSHALL Sons and Co. (India) Ltd has produced disappointing results for the year ended June 1962. The dividend has again been passed. There has been a loss of Rs. 8.37 lakhs, compared with one of Rs. 3.26 lakhs in 1960-61, after writing off bad debts for a sum of Rs. 2,548. Depreciation absorbs Rs. 1.05 lakhs and gratuities paid to retired staff Rs. 3.42 lakhs. Taxation for previous years is allocated Rs. 44,500. Bringing in a loss of Rs. 5.64 lakhs, a debit balance of Rs. 18.08 lakhs has been carried forward.

Referring to the outlook for the current year, the directors say that the order-book has been fairly satisfactory, but the tea estates have either cancelled or delayed their orders for machinery due to the uncertainties created by the state of emergency. They have, however, taken steps to make good the loss of the tea machinery business. They have also effected a substantial reduction in expenditure. Sales of machinery were Rs. 2.68 crores, against Rs. 2.69 crores, but the profitability of this business has declined due to the increased sales of road rollers on which profits are regulated by Government controls. An associate Company called Marshall Sons and Co. (Manufacturing) Private Ltd has been formed in Madras. It has been negotiating with foreign manufacturers and the Government of India for producing some essential machinery, especially required by the Government. Marshall Sons and Co. will be the selling agents for the products manufactured by the new Company. This should help expand the business in engineering products.

Finlay Group of Mills Do Well

ALL the three textile mills in the Finlay group—Finlay, Swan and Gold Mohur—have done exceedingly well in 1962 which is in pleasant contrast to the general performance of the industry during the year. The gross profit of the Finlay Mills Ltd has risen by 31.6 percent from Rs. 44.64 lakhs to Rs. 58.74 lakhs even though the sales have been barely maintained at Rs. 3.03 crores, against Rs. 3.02 crores in 1961. In the case of Swan Mills, sales are up by 7.8 percent from Rs. 2.17 crores to Rs. 2.34 crores, while the gross profit has risen by as much as 48 percent from Rs. 34.30 lakhs to Rs. 50.79 lakhs. Both Finlay and Swan have maintained the dividend at Rs. 23 and Rs. 21.60 a share, less tax, respectively. Gold Mohur, however, has reduced the dividend from Rs. 21.50 to Rs. 19.50 a share, less tax, although its performance is by far the best. For its sales have recorded an increase of about 14 percent, and the gross profit has shot up by 61.6 percent from Rs. 20.81 lakhs to Rs. 33.63 lakhs.

Explaining the dividend cut, the chairman, Mr. C. H. Campbell, says that the proposed reduction has been

recommended after very careful consideration. The Company has a machinery rehabilitation programme in hand involving considerable capital expenditure to be incurred during the next five years. The directors are of the opinion that during this period when large amounts have to be found to meet depreciation and development rebate, the amount to be distributed as dividend should be at a level which can be expected to be maintained after these prior charges have been met.

While these Companies have made an excellent showing in 1962, the outlook for the current year is not considered to be equally promising. In his statement to shareholders, which has been circulated along with the directors' reports, the chairman, Mr. Campbell, says that he is unable to take an optimistic view of the future because of the rising costs of production. He thinks it might be difficult to maintain the profits at the 1962 level even though the market conditions at present are satisfactory, and there is a good demand for the products of these mills. The stock of finished goods with the mills is also at a satisfactory level. But the Company's position concerning the supply of cotton is far from satisfactory, and does not look like improving in the near future. Cotton prices are going up and an import duty on raw cotton has been reimposed. In addition, production costs are mounting up. The Finlay group of mills use large quantities of imported cotton and the position appears to be steadily deteriorating, both in points of availability and prices. Mr. Campbell has criticised the compulsory scheme for the export of cloth. He says that the group has made every effort to increase its exports, but it has had only moderate success and the progress so far has been disappointing. The mills have had to purchase "export performance" from other mills in order to avoid paying a penalty. Mr. Campbell has expressed doubts about the success of the compulsory scheme in augmenting foreign exchange earnings.

As a result of the change in the basis of valuation of finished goods and stocks in process, there is an additional tax liability of about Rs. 10.70 lakhs for Finlay Mills, Rs. 12.35 lakhs for Gold Mohur and Rs. 6.65 lakhs for Swan. And the bonus award has involved an additional payment of Rs. 29 lakhs for Finlay, Rs. 20 lakhs for Gold Mohur and Rs. 10 lakhs for Swan.

Finlay Mills: After providing Rs. 10.02 lakhs (against Rs. 10.11 lakhs) for depreciation, Rs. 73,000 (against Rs. 46,000) for development rebate and Rs. 22.56 lakhs (against Rs. 14.35 lakhs) for taxation, the net profit amounts to Rs. 21.72 lakhs, compared with Rs. 16.28 lakhs in 1961. A sum of Rs. 8.07 lakhs (against Rs. 14,000) has been set aside for expenses for previous years and Rs. 2.09 lakhs (against Rs. 40,000) has been earmarked for under-provision for taxation for previous years. No provision has been made for general reserve which received Rs. 3 lakhs in the preceding year. The proposed dividend absorbs Rs. 11.50 lakhs, leaving a sum of Rs. 31,083 to be carried forward, against Rs. 26,894 brought in.

The directors state that the Alexander and Finlay Thread Company in which the Company has a 50 percent share earned a profit of Rs. 1.48 lakhs after allowing Rs. 77,000 for depreciation. Delivery of 38 ring spinning frames is expected to commence shortly, and an order has been placed for a further 18 ring spinning frames. One new high speed winding and warping unit was installed and certain automatic pirn winding machinery

was replaced. In addition, approximately 16,000 spindles are being converted to modern drafting. Orders have also been placed for a new stenter and mercerising machine for the bleach house. The Company has a paid-up capital of Rs. 50 lakhs (all in equity shares), and it is supported by free reserves amounting to Rs. 75.68 lakhs. The Rs. 100-paid share of Finlay Mills is currently quoted around Rs. 310, offering a gross return of about 8 percent.

Swan Mills: After providing Rs. 11.51 lakhs (against Rs. 11.92 lakhs) for depreciation, Rs. 1.92 lakhs (against Rs. 23,000) for development rebate and Rs. 19.69 lakhs (against Rs. 9.35 lakhs) for taxation, the net profit amounts to Rs. 10.56 lakhs in 1961. The directors have set aside Rs. 1.28 lakhs (against Rs. 32,000) for taxation for previous years Rs. 55,000 (against Rs. 16,000) for previous years' expenses and Rs. 3 lakhs (against nil) for tax on bonus shares. The proposed dividend absorbs Rs. 12.96 lakhs (the same), leaving a sum of Rs. 3.38 lakhs to be carried forward, against Rs. 1.10 lakhs brought in. The directors state that the delivery of the 35 ring frames referred to in the previous year's report has stated and the frames are being erected. A new high-speed winding and warping unit has been installed. Certain doubling and pirn winding machines have been replaced. In addition to the new ring frames, approximately 10,000 spindles are being converted to modern drafting. An order has been placed for two water tube boilers. The Company's paid-up capital of Rs. 60 lakhs—all in equity shares—is supported by free reserves amounting to Rs. 56.92 lakhs. The Rs. 100-paid share of Swan Mills is quoted around Rs. 280 cum-dividend, offering a gross return of about 8.4 percent.

Gold Mohur: The Company has made a gross profit of Rs. 33.63 lakhs, against Rs. 20.81 lakhs in 1961. After providing Rs. 6.76 lakhs (against Rs. 3.95 lakhs) for depreciation, Rs. 4.51 lakhs (against Rs. 3,300) for development rebate, Rs. 8.60 lakhs (against Rs. 7.07 lakhs) for taxation and deducting over charges, the net profit amounts to Rs. 11.25 lakhs, against Rs. 8.09 lakhs in the preceding year. After providing Rs. 1.83 lakhs (against Rs. 16,000) for expenses for the previous year and Rs. 90,000 (against Rs. 20,000) for under-provision for taxation for previous years, there remains a balance of Rs. 8.48 lakhs, which is insufficient for the payment of the reduced dividend. The directors have, therefore, transferred a sum of Rs. 1.50 lakhs (against Rs. 3.50 lakhs) from general reserve. The proposed dividend absorbs Rs. 9.75 lakhs (against Rs. 10.75 lakhs), leaving a sum of Rs. 29,942 to be carried forward, against Rs. 6,662 brought in.

The directors state that the 36 new ring spinning frames have been installed and are in operation. A new high-speed winding and warping unit has also been installed. Twenty-four automatic looms have been received and are under erection. A further 24 automatic looms have been ordered. An order has been placed for a further 23 ring spinning frames, which are expected to be received early next year. Certain doubling and pirn winding machinery has also been replaced. In addition, approximately 17,000 spindles are being converted to modern drafting. The Company has received permission to install an additional 15,000 spindles to balance the spinning and weaving equipment. The Company has a paid-up capital of Rs. 50 lakhs (all in equity shares) and it is supported by free reserves amounting to Rs. 60.34 lakhs. The Rs. 100-paid share of Gold Mohur is quoted nominally

around Rs. 230, offering a gross return of about 9.2 percent.

Shreeniwas Cotton Disappoints

THE working results of Shreeniwas Cotton Mills Ltd for 1962 are in sharp contrast to the Company's performance in the previous year. In 1961, the gross profit increased by 15.5 percent from Rs. 70.53 lakhs to Rs. 83.49 lakhs, and it raised the dividend from Rs. 18 to Rs. 20 a share. But in 1962, the gross profit has fallen by 24 percent to Rs. 63.30 lakhs and the dividend has been reduced from Rs. 20 to Rs. 14 a share, less tax. The reduced dividend is, however, on the increased capital of Rs. 1 crore, against Rs. 90 lakhs in the preceding year. Apart from the various common factors which affected the fortunes of the cotton textile industry last year, Shreeniwas Cotton has had to pay about Rs. 11 lakhs more by way of retrenchment compensation and gratuity in 1962.

After providing Rs. 23.78 lakhs (against Rs. 15.09 lakhs) for depreciation and Rs. 13.40 lakhs (against Rs. 21.75 lakhs) for taxation, the net profit amounts to Rs. 22.96 lakhs, compared with Rs. 40.61 lakhs in 1961. The Company has had to provide Rs. 2.40 lakhs for taxation for 1961 and Rs. 7.62 lakhs for bonus paid in excess of provisions for three years to 1960. Since the balance of profit is not sufficient to pay the proposed dividend, the directors have withdrawn Rs. 1.88 lakhs from investment reserve and Rs. 3.50 lakhs from the general reserve. The ordinary dividend accounts for Rs. 25,000 (the same). The Company has added further machinery worth about Rs. 34 lakhs during the year and the depreciated block of the Company at the end of December 1962 stood at Rs. 1.60 crores. Further programme of machinery installation valued around Rs. 40 lakhs is in hand for the current year. The Company has received sanction for 20,000 additional spindles, out of which 5,000 spindles have already been installed and the remaining will be installed in stages within the current and next year. At its current quotation of Rs. 230, the share of Shreeniwas Cotton offers a gross return of about 6.5 percent.

New Great Eastern Mill Pays More

THE New Great Eastern Spinning and Weaving Co. Ltd reports encouraging results for 1962, which has enabled the directors to step up the dividend from Rs. 12 to Rs. 18 a share, less tax. Despite a fall of nearly 11 percent in the sales from Rs. 2.90 crores to Rs. 2.58 crores, due mainly to the closure of the mills for some time on account of fire, the gross profit has increased by about 11.6 percent from Rs. 23.93 lakhs to Rs. 26.72 lakhs. The directors have provided Rs. 12.09 lakhs (against Rs. 7.74 lakhs) for depreciation and Rs. 5.49 lakhs (against Rs. 2.33 lakhs) for development rebate. The proposed equity dividend absorbs Rs. 5.40 lakhs, against Rs. 3.60 lakhs. After providing for the preference dividend and making certain other adjustments, there remains a balance of Rs. 1.80 lakhs to be carried forward, against Rs. 1.54 lakhs brought in. Additions to fixed assets in 1962 totalled Rs. 43.94 lakhs, against Rs. 17.12 lakhs in the preceding year. Capital work in progress was of the order of Rs. 16.60 lakhs, against Rs. 29.04 lakhs. The directors propose to increase the share capital of the Company from Rs. 30 lakhs to

Rs. 35 lakhs by the issue of 5,000 equity shares of Rs. 100 each. The new shares, it is proposed, will be issued at par to shareholders in the ratio of one share for every six held. The Rs. 100-paid share of the Company is quoted nominally around Rs. 270.

Jawahar Mills Cuts Dividend

THE working results of Jawahar Mills Ltd for 1962 show a modest setback over the previous year's performance. Sales are down from a little over Rs. 1 crore to Rs. 99.51 lakhs; the gross profit is lower at Rs. 15.21 lakhs, against Rs. 16.97 lakhs and the dividend has been reduced from 15 percent to 12 percent, less tax, that is, from 75p to 60p a share of Rs. 5. After providing Rs. 3.66 lakhs (against Rs. 3.75 lakhs) for depreciation, Rs. 5.47 lakhs (against Rs. 6.15 lakhs) for taxation and deducting other charges, the net profit amounts to Rs. 5.22 lakhs, compared with Rs. 5.88 lakhs in 1961. From the net profit, a sum of Rs. 2.33 lakhs has been spent on bonus for previous years and Rs. 15,304 on charity and donations, leaving a balance of Rs. 2.74 lakhs. Including a sum of Rs. 8,391 representing the refund of sales tax, a sum of Rs. 2.82 lakhs is available for appropriations. Provision for development rebate amounts to Rs. 10,789 (against Rs. 10,000) and donations takes away Rs. 45,000 (against Rs. 50,000). The proposed dividend absorbs Rs. 2.03 lakhs (against Rs. 2.54 lakhs), leaving a balance of Rs. 23,599 to be carried forward. The Rs. 5-paid share of Jawahar Mills is currently quoted around Rs. 10 cum-dividend.

Mahendra Mills Repeats

THE directors of Mahendra Mills Ltd of Kalol, have decided to maintain the dividend for 1962 at 14 percent, less tax. The preliminary figures about the Company's working results which have been released along with the announcement of the dividend, show a modest setback. In spite of an increase of about 16 percent in the sales from Rs. 2.34 crores to Rs. 2.70 crores, the gross profit is slightly lower at Rs. 38.66 lakhs, compared with Rs. 39.02 lakhs. Appropriation includes statutory development rebate Rs. 57,000 (against Rs. 2.38 lakhs), depreciation Rs. 20.16 lakhs (against Rs. 20.19 lakhs), and taxation Rs. 11.02 lakhs (against Rs. 8.20 lakhs). Dividends, ordinary and preference, absorb Rs. 5.04 lakhs (the same). The Company has received a licence from the Government for the installation of 500 automatic looms with preparatory machinery and processing equipment. The Rs. 100-paid share of the Company is currently quoted around Rs. 200.

Omega Cable to Enter Market Soon

THE Omega Insulated Cable Co. (India) Ltd, which is setting up a factory in Ambattur (near Madras) for manufacturing different kinds of cables, will soon be in the market, some time in June, to raise capital for the project. The Company has been licensed to manufacture 45 million core yards of V.I.R. and P.V.C. cables and 280 miles of paper insulated power cables a year. It has applied to the Government for an industrial licence to manufacture 3,000 tons of A.C.S.R. and A.A. conductors a year. Construction work on the factory has been started and

machinery, it is expected, will arrive by the end of the year. If all goes well, the factory is likely to go into production in April 1964.

The Company has an authorised capital of Rs. 3 crores, of which Rs. 70 lakhs, it is proposed, will be issued in the beginning. Out of the issued capital of Rs. 70 lakhs (all in equity shares), the directors and their friends are expected to take up shares worth Rs. 30 lakhs. The balance of Rs. 40 lakhs is likely to be offered for public subscription shortly. Arrangements are in progress for getting the public issue underwritten. The capital outlay on the project, it is estimated, will cost Rs. 1.05 crores, which it is proposed to meet by the share capital of Rs. 70 lakhs and borrowings from banks to the tune of Rs. 35 lakhs. The Company has received a licence from the Government for importing machinery worth Rs. 33 lakhs under the U.S. Export-Import Bank third loan. Mr. M. N. M. Veerabhadra Chari, the managing director of Dhanalakshmi Mills and a director of South India Viscose and Madras Aluminium, will be the chairman of Omega Insulated Cable Company.

Cibatul to Make Epoxy Resins

CIBATUL Ltd, Atul, (Gujarat State) had long been planning to manufacture epoxy resins which are used for various industrial purposes such as adhesives, coatings, laminates, tooling, casting, etcetera. It was in August 1961 that the Company applied to the Government for an industrial licence to manufacture 540 tons of epoxy resins a year, but it was only last month that the Government of India approved the proposal and an inter-Ministerial meeting recommended to the Licensing Committee to issue a letter of intent to the Company in order to enable it to submit final proposals for meeting the foreign exchange requirements of the project. The Government is of the view that if a unit is set up for the manufacture of these resins, it will save a lot of foreign exchange which is now being spent on importing them.

At present, imports of epoxy resins are allowed to actual users as also against established importers' quota. Among the imported raw materials needed for the manufacture of epoxy resins, the major item of import is epichlorohydrine. Cibatul is being asked to undertake the manufacture of this important raw material in order to avoid its imports at the earliest. The Government, it is said, has informed the Company that it will not be allowed any Swiss credit for importing the capital equipment required for the project. The Company is, therefore, being asked to make its own arrangements for foreign exchange to the satisfaction of the Government. The letter of intent is likely to be issued soon to the Company on condition that it will export at least 20 percent of its output in order to provide for the repayment of the foreign exchange loan.

Prospects for Premier Tyres

RELEASING the third annual report of the Premier Tyres Ltd for 1962 to the Press on 6th May, Mr. Chandrakant S. Desai, a director of the Company told newsmen that the present output of 425 tyres a day will be raised to 700 tyres a day as soon as the 40 percent power cut effected by the Kerala Government from 5th February due to the failure of the winter monsoon, is restored.

The electricity cut, it is expected, will be restored before the end of the current month. Mr. Desai also stated that the Company was likely to reach its licensed capacity of 800 tyres a day within a couple of months.

The directors' report says that the Company rolled out its first tyre on 27th May, 1962, but it was not until late in September that commercial production was started after the Company had completed rigid tests, both on the test wheel at the factory and on roads under varying conditions.

Within a space of a little over three months, the Company was able to effect sales of tyres of the value of Rs. 25.69 lakhs. During 1962, the Company incurred a loss of Rs. 60.12 lakhs, after providing Rs. 40,000 for managing agents' commission and Rs. 19.18 lakhs for depreciation and Rs. 24.84 lakhs for development rebate, compared with a gross profit of Rs. 2.37 lakhs in 1961. This loss of Rs. 60.12 lakhs has been reduced by Rs. 1.84 lakhs, being balance at the end of the previous year and the loss of Rs. 58.28 is being carried forward. An amount of Rs. 1.17 lakhs was outstanding on 31st December, 1962, being allotment and calls in arrears in relation to equity and preference shares together. Since then a further sum of Rs. 3,000 has been received leaving a balance of Rs. 1.14 lakhs. In view of the heavy loss to be wiped out, the directors have not recommended any preference dividend for 1962 and the arrears of preference dividend add up to Rs. 9.51 lakhs. The Rs. 100-paid share of Premier Tyres is currently quoted around Rs. 107.

New India Pays the Same

THE directors of New India Assurance Company Ltd have recommended a dividend of Rs. 4.50 and a bonus of Rs. 1.50, making a total distribution of Rs. 5.70 a share, subject to tax, for 1962, which is the same as in the preceding year. The dividend of Rs. 4.50 a share is to be paid from the profits for the year, and the payment of bonus of Rs. 1.20 a share is to be made from the balance of capital reserve of Rs. 19.60 lakhs built up from compensation received for the Company's life business. The preliminary report on the Company's working shows that it has fared well during the year. Subject to audit, the net premium income of the Company exceeds Rs. 13.6 crores, showing an increase of Rs. 1 crore over the previous year. The profit after tax provisions and transfer to departmental reserves is expected to exceed Rs. 71 lakhs. The Rs. 15-paid "A" share of New India Assurance is quoted around Rs. 60.50.

Polson Earns More, Pays Less

THE shareholder of Polson Ltd can hardly derive any comfort from the Company's improved performance during 1962—both sales and gross profit are higher—because the dividend has been reduced from Rs. 17 to Rs. 14 a share, less tax. The Company's sales are up by about 9 percent from Rs. 1.54 crores to Rs. 1.68 crores, and the gross profit has risen by about 5.8 percent from Rs. 17.25 lakhs to Rs. 18.32 lakhs. The dividend has had to be cut because of the sharp decline in the disposable surplus resulting from the substantially larger provision for taxation, which has been raised from Rs. 5.90 lakhs to Rs. 9.96 lakhs, which in-

cludes Rs. 2.19 lakhs for super profits tax.

The provision for depreciation amounts to Rs. 2.63 lakhs, against Rs. 2.68 lakhs. The development rebate reserve absorbs Rs. 29,284, against Rs. 62,671, and the general reserve has been allocated a mere Rs. 200, against Rs. 1 lakh in 1961. The proposed dividends absorb Rs. 4.77 lakhs, against Rs. 5.65 lakhs, leaving a sum of Rs. 18,866 to be carried forward, against Rs. 86,392 brought in. The directors state that the Company's products are meeting with increasing competition in the internal as well as foreign markets. The export business has suffered a further setback due to restrictions in the importing countries which were hitherto served by the Company. The Rs. 100-paid share of Polson is quoted nominally around Rs. 191.

Rajalakshmi Mills Cuts Dividend

THE 5 percent cut in the dividend by the Rajalakshmi Mills Ltd, Coimbatore, from 20 percent to 15 percent, less tax, for the year 1962 reflects the Company's poor working results. Although the sales are down by only 5.7 percent from Rs. 1.39 crores to Rs. 1.31 crores, the gross profit has shrunk by nearly 26 percent from Rs. 27.34 lakhs to Rs. 20.05 lakhs. The profit margin has been squeezed by the all-round increase in manufacturing costs and the lower realisations from the sale of staple fibre yarn. The raw material bill has risen from Rs. 70.28 lakhs to Rs. 90.22 lakhs; the wage bill is higher at Rs. 23.71 lakhs, against Rs. 22.65 lakhs and electricity cost was up at Rs. 3.07 lakhs, against Rs. 2.69 lakhs. After providing Rs. 6.17 lakhs (against Rs. 5.66 lakhs) for depreciation, Rs. 87,000 (against Rs. 1.20 lakhs) for development rebate and Rs. 4.85 lakhs (against Rs. 8 lakhs) for taxation, the net profit amounts to Rs. 8.16 lakhs, compared with Rs. 12.48 lakhs in the preceding year.

The proposed ordinary dividend absorbs Rs. 4.49,790, against Rs. 5,99,439 and preference dividend accounts for Rs. 16,900 (the same). A sum of Rs. 1.89 lakhs has been provided for donations, charity and bonuses for prior years and another Rs. 15,000 have been set aside for donation to B. Rangaswami Naidu Trust. The provision for bonus for 1962 is lower at Rs. 1.50 lakhs, against Rs. 2.90 lakhs. After making all these appropriations, there remains a small sum of Rs. 4,995 to be carried forward, against Rs. 9,410 brought in. The directors state that the construction of a new unit of the Company in Karamadai is progressing according to schedule. Production, it is expected, will start by the end of the current year. The total net assets of the Company at the end of December 1962, were valued at Rs. 96 lakhs. It has a paid-up capital of Rs. 30 lakhs, of which bonus shares amount to Rs. 10 lakhs. Preference capital accounts for Rs. 2 lakhs. The reserves and surplus of the Company total Rs. 38 lakhs. The gross block of Rs. 1.14 crores has been written down to Rs. 54 lakhs. The Rs. 50-paid share of Rajalakshmi Mills is currently quoted around Rs. 85, offering a gross yield of about 9 percent. The share has touched a high of Rs. 122 last year.

Buckingham and Carnatic Does Well

THE Buckingham and Carnatic Company Ltd reports fairly satisfactory results for the year 1962, although the increase in the gross

profit from Rs. 1.83 crores to Rs. 1.88 crores is small, compared with the rise in the sales from Rs. 12.36 crores to Rs. 13.23 crores. The improvement, although small, is encouraging in view of the generally unsatisfactory performance of the cotton textile industry last year. After providing Rs. 47.48 lakhs (against Rs. 45.14 lakhs) for depreciation, Rs. 37.58 lakhs (against Rs. 31.20 lakhs) for bonus and Rs. 55.29 lakhs (against Rs. 46.60 lakhs) for taxation, the net profit, however, is lower at Rs. 47.24 lakhs, compared with Rs. 60 lakhs in 1961. With Rs. 2.15 lakhs brought in and Rs. 4.86 lakhs transferred from reserve for taxation the disposable surplus is Rs. 54.25 lakhs.

The dividend has been maintained at 18 percent (6 percent interim and 12 percent final) and it absorbs Rs. 32.13 lakhs. Preference dividend amounts to Rs. 2.08 lakhs (the same). Appropriations of the year's profit include Rs. 5 lakhs (against Rs. 6.50 lakhs) for debenture redemption fund, Rs. 5 lakhs (against Rs. 6.51 lakhs) for development rebate reserve, and Rs. 8 lakhs (against Rs. 12.80 lakhs) for general reserve, leaving a sum of Rs. 2.05 lakhs to be carried forward. The directors state that the production was maintained at a satisfactory level throughout the year. Exports amounted to Rs. 1.64

crores. The directors anticipate an increase in costs during the current year due to the additional tax burden imposed by the emergency legislation. During the year, debenture stock of the face value of Rs. 19.63 lakhs was purchased and cancelled and an amount equivalent to the face value of the stock cancelled was transferred from the debenture redemption fund to the general reserve.

Kothari Textiles Earns Less

THE directors of Kothari Textiles Ltd have recommended the payment of the usual 6 percent preference dividend and also an ordinary dividend of 8 percent for the year ended December 1962. The ordinary dividend for the previous year was 8 percent. Although the profit for 1962 is lower than that of the previous year, the dividend is maintained at 8 percent by transferring Rs. 3.50 lakhs from general reserve. According to the preliminary figures, the net profit amounts to Rs. 3.11 lakhs, against the previous year's Rs. 4.13 lakhs. Depreciation amounts to Rs. 15.51 lakhs (against Rs. 15.96 lakhs). Development rebate reserve gets Rs. 1.89 lakhs (against Rs. 2.13 lakhs) provision for taxation Rs. 5.75

lakhs (against Rs. 7.20 lakhs). A sum of Rs. 9 lakhs is transferred to general reserve from reconstruction reserve.

Bangalore Woollen Pays the Same

THE working of the Bangalore Woollen, Cotton and Silk Mills Co. Ltd for the year ended December 1962, shows a profit of Rs. 68.02 lakhs, after providing Rs. 16.96 lakhs for depreciation. The profit includes Rs. 17.45 lakhs, being the proceeds on sale of assets. The profit for the previous year was Rs. 59 lakhs, after providing Rs. 15.80 lakhs for depreciation. With Rs. 2.25 lakhs brought forward from the previous year, the total amounts to Rs. 70.27 lakhs. Out of this, provision for taxation gets Rs. 32 lakhs (against Rs. 27 lakhs). A sum of Rs. 4.40 lakhs (against Rs. 1.90 lakhs) is transferred to development rebate reserve. A sum of Rs. 9 lakhs (against nil) is transferred to general reserve. The preference dividend at Rs. 7.80 a share, subject to deduction of tax, amounts for Rs. 46,800. The interim ordinary dividend at Rs. 6 a share absorbed Rs. 7.29 lakhs. The proposed final ordinary dividend at Rs. 12 a share will absorb Rs. 14.58 lakhs. The total ordinary dividend for the year amounts to 18 percent

CAPITAL, 16th May, 1963.

(the same). The balance of Rs. 2.53 lakhs is carried forward.

The directors' report says that production in all departments was well maintained and progress was made in the manufacture of "varsity" suiting, a Terylene polyester fibre/wool blend material. Its reception in the market has been encouraging. With ample supplies of filature and spun silk yarn available, the silk department worked to capacity. Sales of yarn, cloth and waste amounted to Rs. 6.16 crores, against Rs. 6.19 crores last year. Sales would have been higher had it not been for the temporary accumulation of process stocks of Union fabrics. The Company has entered into contracts with the Government for the supply of a large quantity of Angola shirting to the Defence Services. Due to higher taxation, costs are expected to rise in 1963. Trading results were adversely affected by rising prices of raw materials, additional contribution to the employees' State insurance, excise duty on yarn, additional bonus for 1961 and the liability under the obligatory export scheme. Provision for taxation includes the estimated liability to the super profit tax. The additional costs have been offset by the realised profit on the sale of the Hebbal Mill machinery, and this has made it possible to transfer about Rs. 13.50 lakhs to reserves.

Binny Cuts Dividend

BINNY and Co. Ltd has earned a profit of Rs. 37,93,428 for the year ended December 1962, after providing Rs. 22,552 for depreciation, Rs. 2,40,000 for bonus and Rs. 94,170 for pension and gratuity. The profit for the previous year was Rs. 65,86,262, after providing Rs. 20,696 for depreciation, Rs. 2,10,000 for bonus and Rs. 100,000 for pension and gratuity. But the previous year's profit included a profit of Rs. 24,23,585 on the sale of land and buildings and also the receipt of Rs. 15,62,563 being the managing agency commission for 1960 from the managed companies. Adding to the year's net profit, the sum of Rs. 3,46,495 brought forward from the previous year and with a sum of Rs. 4,927 being past provisions no longer required, the total available for appropriation comes to Rs. 41,44,850. Of this the provision for taxation comes to Rs. 16,00,000 which includes additional provision for 1961, against Rs. 16,80,285 in the previous year. The additional dividend of Rs. 3.25 a share for 1961 amounted to Rs. 3,25,000. The interim dividend of Rs. 8 a share for 1962 has absorbed Rs. 8,00,000. The proposed final dividend of Rs. 13 a share will absorb Rs. 13,00,000. The balance of Rs. 1,19,850 is carried forward.

Substantial increases were achieved during the year in the turnover of the handloom textile department and of the engineering sales department. The net profit on trading before taxation and after excluding profit on the sale of fixed assets and other non-recurring credits, has improved to Rs. 9,37,993 (against Rs. 63,507). Investment income has also improved to Rs. 28,31,850 (against Rs. 23,34,282). The directors' report says that the proposed dividend of 13 percent final on the ordinary shares represents the minimum distribution necessary to avoid the penal provisions of Section 104 of the Income Tax Act, 1961. The total dividend for the year amounts to 21 percent (against 25 percent last year).

In the sphere of development, the report says that during 1962, the Company completed its investment in its new engineering subsidiary com-

CAPITAL, 16th May, 1963.

pany's paid-up equity capital of Rs. 35 lakhs.

Anglo-French Textiles Modernises

THE chairman of the Anglo-French Textiles Ltd, Mr. R. M. King, has discussed the difficulties of the textile industry in his statement to shareholders. India's exports of cotton piecegoods suffered a setback in 1962, since they fell from 574.30 million yards in 1961 to 508.31 million yards in 1962—the lowest in last 12 years. This happened in spite of the various incentives available under the export promotion scheme and the introduction during the second half of 1962 of a scheme of obligatory exports. The overseas markets in recent years have become increasingly competitive and quality-conscious. The United Kingdom took from India 150 million yards in 1961, and increased its off-take from Pakistan from 23 million yards to about 38 million yards and from Hongkong from 85 million yards to 99 million yards. In the context of this decline, Mr. King suggests that the Government should examine the question of entering into a voluntary trade pact with the U.K. If entry of cloth into the U.K. is handled by established importers in that country, then it is not improbable that some of the ground lost last year would be regained.

The Company's export sales of cloth and yarn declined to Rs. 73.05 lakhs from Rs. 1.03 crores in 1961. The deliveries of cloth and yarn to buyers in India during the year remained more or less steady at Rs. 2.03 crores (against Rs. 2.02 crores in 1961). In terms of quantity, the Company exported 8 million yards of cloth in 1962 and delivered in India 17 million yards, against 10.7 million yards and 18.4 million yards, respectively, in 1961. The fall in exports was not to be counterbalanced by increased deliveries in India, and stocks carried at the end of the year were correspondingly larger.

The working results for the year ended December 1962, shows that the gross profit before depreciation, and taxation fell from Rs. 40.36 lakhs to Rs. 27.29 lakhs. The persistent cost inflation, lower realisations on internal sales and increasingly competitive export markets explain this decline. The dividend for the year has been cut to 12 percent from 16 percent of 1961. Depreciation provision of Rs. 6.80 lakhs (against Rs. 10.14 lakhs) has been calculated on the basis of the rates prescribed by the Indian Income Tax Rules, 1962. Modernisation loan redemption reserve has received an increased allocation and is now Rs. 4 lakhs. The transfer to general reserve has been reduced to Rs. 3 lakhs.

The chairman feels that the plant and machinery should be modernised, the finishing department enlarged and improved, production and sales diversified and working capital increased if the Company is to hold its own in competition with the cotton textile units elsewhere in India. The modernisation programme made slower progress during the year, chiefly because of the inability of suppliers to adhere to contracted delivery. Capital expenditure on completed works amounted to Rs. 7.73 lakhs, of which Rs. 1.72 lakhs represented expenditure on such works in the earlier years. Incomplete capital expenditure at the end of the year stood at Rs. 8.81 lakhs. During the year, the blow-room was improved by the addition of four super cotton cleaners, one intermediate frame was converted to D-zone drafting bringing the number of frames so converted to ten. Seven ring frames

drafting system. Conversion of the remaining 13 intermediate frames to D-zone drafting and 40 ring frames to GX-2 high drafting is expected to be completed during the year. Sixteen MDF-5 high speed draw frames have already been received and are being erected, and 11 second hand carding engines are being purchased. The modernisation of the ring spinning department is now expected to be completed by the end of the year. Three sizing machines were provided with accelerated drying arrangements.

The Company has obtained an industrial licence for replacing 289 plain looms by 250 automatic looms. An import licence for the purchase of Howa NZ type automatic cop change looms from Japan has been received.

Progress of Kerala Lakshmi Mills

THE second annual report by the directors of Kerala Lakshmi Mills Ltd for the year ended December 1962, says that as orders for machinery could not be placed in time because of the delayed receipt of the import licence, the managing agents (Messrs Thiagaraja Chetty and Sons) arranged to get preparatory machinery on a lease and lend basis from sister concerns, and the mill commenced production on the November 1962. But the mill has not yet got sufficient preparatory machinery, so it spins only finer counts. The directors also add that the Company has not received any allotment of foreign cotton, to secure which, efforts are being made. Although 6,720 spindles had been fully erected as on 31st December, 1962, only 2,100 spindles are being worked due to the 40 percent power cut enforced by the State Electricity Board from 1st February, 1963. When the power cut is lifted, all the spindles will be worked and the full capacity of 24,000 spindles will be reached before the end of the current year. Orders have now been placed for one line of blow room and three sets of super drafters on deferred payment terms, and they are expected to be received and installed before the end of this year.

The amount of Rs. 53,629.20 expended till the commencement of production has been capitalised as the same was incurred during the construction. As the period of working during the year under report was only about seven weeks (during November and December 1962), there was a small trading loss of Rs. 9,619.71, which together with depreciation and development rebate of Rs. 1,53,063 (after capitalising Rs. 4,760) leaves a carry-forward loss of Rs. 1,62,682.71 for the next year.

Peermade Tea Profit Falls

IN spite of a fresh crop record touching 1,104,598 kilograms, the Peermade Tea Co. Ltd reports a marked decline in the net profit for the year ended December 1962. The fall amounts to Rs. 2,47,048 from the profit level of 1961, and it is mainly due to a recession in the tea market and the statutory increase in wages. The net profit for the year ended 31st December, 1962, amounts to Rs. 3,34,790, compared with the previous year's net profit of Rs. 5,81,838 after meeting all expenses and after providing Rs. 4,29,750 for taxation (against the tax provision of Rs. 5,48,000 in 1961). With the amount of Rs. 72,279 brought forward from the previous year and with a sum of Rs. 14,408 being excess provision for taxation in previous years no longer required, the total amount available for appropriation comes to

RENAULT ENGINEERING a subsidiary of Regie Nationale des Usines RENAULT (the famous automobile manufacturer of France) offers to handle your project from conception to implementation—including technical knowhow, training facilities and credit terms for plant and machinery

The service of RENAULT ENGINEERING have studied and built industrial installations in France and in the following foreign countries: Argentina, Australia, Belgium, Brazil, China, Finland, Germany, Great Britain, Italy, Japan, Norway, Sweden, U.S.S.R.

general workshops for machine tools, railway equipment

machining lines for valves, injection pumps, farming tractors, tubes, water meters, gun parts, differential parts, diesel engines, ball bearings and motor-scooters

They have built complete factories for automobile engines, gear boxes, suspension & steering elements

We invite you to refer your scheme to :-

They have also built :- complete workshops for forges, foundries, machining, stamping, painting, heat treatment and surface treatment

workshops for plastics, industrial rubber, cardboard, felt, padding

Rs. 1,491 is transferred to development reserve (against Rs. 1,176). No amount is transferred to general reserve, while Rs. 100,000 was transferred to general reserve in the previous year. The preference dividend of 6.765 percent, subject to tax, accounts for Rs. 10,147. The interim dividend of 7½ percent on ordinary shares has absorbed Rs. 1,27,500. The proposed final dividend of 12½ percent on the ordinary shares will absorb Rs. 2,12,500. The total dividend for the year amounts to 20 percent (against 25 percent). The balance of Rs. 69,839 is carried forward. The total tea crop for the year established a fresh record at 1,104,598 kilograms exceeding the 1961 record by 21,033 kilograms. The all-in cost of production was lower at 364.24nP against 371.54nP a kilogram in the previous year. But the average sale price showed a sharp decline at 383.73nP a kilogram, compared with 420nP a kilogram in the previous year. The estimated tea crop for 1963 is put at 1 million kilograms.

Less from Savamalai Estates

THE Savamalai Estates Ltd has fared badly in the year ended November 1962, and the directors have had to reduce the dividend from 16 percent to 15 percent (32nP to 30nP on the Rs. 2-paid share), less tax. The pre-tax profit is down by as much as 37.4 percent from Rs. 1.98 lakhs to Rs. 1.24 lakhs, because of the smaller coffee crop which has pushed the all-in cost from Rs. 1,587 to Rs. 2,120 a tonne. This is mainly because the Company harvested a total coffee crop of 207 tonnes, made up of 146 tonnes of Robusta and 61 tonnes of Arabica, compared with the record 292 tonnes in the preceding year. The outlook for the current year, however, is considered to be a little better as the Company hopes to harvest 247 tonnes of coffee—175 tonnes of Robusta and 72 tonnes of Arabica. The all-in cost is estimated at Rs. 2,006 a tonne. Assuming a similar valuation of Rs. 2.20 a point returned in 1961-62, a modest increase in earnings is expected during 1962-63. Out of the 1961-62 profits, the directors have provided Rs. 26,625 (against Rs. 26,608) for depreciation and Rs. 64,640 (against Rs. 1,97 lakhs) for taxation. A sum of Rs. 2,000 has been transferred from the general reserve. The proposed dividend absorbs Rs. 82,526. After making various appropriations, there remains a modest balance of

Rs. 699 to be carried forward, against Rs. 19,574 brought in. The Company incurred a capital expenditure of Rs. 15,418 during the year. It has a paid-up capital of Rs. 5.5 lakhs—all in equity shares—of which bonus shares account for Rs. 3.7 lakhs. The reserves and surplus total Rs. 3.20 lakhs. The total net assets of the Company at the end of November 1962 were valued at Rs. 10.9 lakhs. At its current quotation of Rs. 4 cum-dividend, the Rs. 2-paid share of Savamalai Estates offers a gross return of about 7.9 percent.

Tropical Plantations Maintains

THE directors of the Tropical Plantations Ltd have maintained the dividend at 8 percent for the year ended December 1962. The net profit amounts to Rs. 2 lakhs, after providing Rs. 2.28 lakhs for taxation. This compares with the previous year's net profit of Rs. 2.81 lakhs, after providing Rs. 2.90 lakhs for taxation. With Rs. 12,239 brought forward from the previous year and with Rs. 1,131 being the agricultural income tax refund, the total available for appropriation amounts to Rs. 2.14 lakhs. Out of this, Rs. 40,000 is transferred to general reserve. The proposed dividend will absorb Rs. 1.60 lakhs. The balance of Rs. 14,062 is carried forward.

The tea crop for the year amounted to 271,706 kilograms at an all-in-cost of Rs. 2.62 a kilogram. The average price realised amounted to Rs. 3.15 a kilogram. The total rubber crop for the year amounted to 329,487 kilograms at a cost of Rs. 2.15 a kilogram. The average price realised amounted to Rs. 3.03 a kilogram.

Sri Ranga Vilas Skips Again

THE directors of Sri Ranga Vilas Ginning, Spinning and Weaving Mills Ltd have again passed the dividend for the year ended December 1962. The Company's working shows a loss of Rs. 60,792, after providing the normal depreciation of Rs. 4.37 lakhs. The profit for the previous year was Rs. 51,663, after providing Rs. 3.14 lakhs for depreciation. The amount brought forward from the previous year was Rs. 9,966. Adding Rs. 1.50 lakhs transferred from the mortgage loan redemption reserve account, there is a total of

Rs. 1.60 lakhs. After adjusting against this amount a sum of Rs. 90,116 being the arrears of depreciation for 1961 and also the loss of Rs. 60,792 for 1962, there is a balance of Rs. 9,058 which is carried forward. The directors' report says that payments due to the Industrial Finance Corporation have been met on due dates and the next instalment due on 1st January, 1964, is Rs. 1 lakh only. This will also be met on the due date. The directors say that they have transferred Rs. 1.50 lakhs from mortgage loan redemption reserve for making the adjustments and appropriations noted above.

The factory cost has gone up during the year by Rs. 2.35 lakhs, compared with the previous year. The directors' report says that cotton prices were high during the year, while there was no change in the ceiling rates for yarn. After the close of the year, there was an upward revision in the ceiling prices of yarn up to 40s, while the prices of higher counts were reduced. Since the bulk of the yarn manufacture consists of counts up to 40s, the directors hope that better results will be achieved during the current year. Sales of yarn during the year were higher at Rs. 85.25 lakhs, against Rs. 77 lakhs.

State Bank of Mysore Maintains

THE State Bank of Mysore has maintained the dividend at 10 percent, taxable, for 1962. The bank's income for the year totalled Rs. 1.45 crores, against Rs. 1.26 crores for 1961. After making the usual and necessary provisions and providing for taxation, the net profit was Rs. 18.41 lakhs, against Rs. 20.67 lakhs. The fall in the net profit was because of the heavy incidence of additional establishment charges incurred due to the implementation of the bank award and the revision of the scales of pay and allowances of officers and the cost of deposit insurance. Transfers to the reserve fund totalled Rs. 4.50 lakhs. Bonus to staff absorbed Rs. 4.10 lakhs and dividend Rs. 10 lakhs. Reserves of the bank stand at Rs. 64.50 lakhs. Deposits and other accounts totalled Rs. 25.91 crores, against Rs. 22.99 crores. Investments recorded an increase of Rs. 1.78 crores during 1962. Advances were placed at Rs. 12.98 crores, against Rs. 13.15 crores at the end of 1961. The ratio of advances to deposits was 50.09 percent, against 57.20 percent. Out-

Pandyan Insurance Results Impress

THE working of the Pandyan Insurance Co. Ltd for the year ended December 1962 is satisfactory. Transfers from the fire and marine revenue accounts to the profit and loss account totalled Rs. 3.57 lakhs and Rs. 2.62 lakhs, respectively. The miscellaneous revenue account reported a loss of Rs. 37,210. The amount at the credit of the profit and loss account, including the amount brought forward is Rs. 7.85 lakhs. In December 1962, the directors made an allotment of 10,000 new equity shares of Rs. 100 each as a capital bonus through the capitalisation of the entire sum of Rs. 7.50 lakhs standing to the credit of the share premium account together with Rs. 2,500 lakhs forming part of general reserve. Because of this, the amount standing to the credit of general reserve was reduced from Rs. 45.50 lakhs to Rs. 43 lakhs. The directors have recommended a dividend of 20 percent gross for the year on the increased capital of Rs. 30 lakhs. Insurance funds at the disposal of the Company totalled Rs. 22.27 lakhs, comprising Rs. 8.90 lakhs under the fire account, Rs. 11.39 lakhs under the marine account, and Rs. 1.94 lakhs under the miscellaneous account.

New Capital Issues

FOUR companies are the latest to be given consent to issue capital totalling Rs. 104.85 crores. Of these, Hindustan Steel alone will raise Rs. 100 crores. One company will issue bonus shares two equities and one equity plus debenture stock. The consent for three companies is valid for 12 months. For the fourth, consent for equities is valid for six months and for debentures 12 months. The following are the details:

Hindustan Steel Ltd, Ranchi, will raise capital of the value of Rs. 100 crores divided into 1 million equity shares of Rs. 1,000 each to be issued privately for cash at par. The proceeds will be used for construction, expansion and operation of public sector steel projects and coal washery projects.

The Khatau Makanji Spinning and Weaving Company Ltd, Bombay, is to issue capital of Rs. 59,85,000 divided into equity shares of Rs. 100 each to be issued as fully paid bonus shares, on capitalisation of the Company's general reserves to a like extent, in the ratio of one such share for each equity share held.

Atul Products Ltd is issuing Rs. 3 crores capital comprising 100,000 equity shares of Rs. 100 each to be issued for cash at a premium of Rs. 25 a share, and debenture stock of the value of Rs. 2 crores to be placed with the State Bank of India as collateral security for a loan or advance to be obtained from them. The proceeds of the issue will be used on various expansion projects of the company.

The Plantation Corporation of Kerala Ltd, Kottayam, will issue capital of Rs. 1.25 crores divided into 12,500 equity shares of Rs. 1,000 each to be subscribed privately for cash at par.

standings at the end of 1962 totalled Rs. 47.58 lakhs, against Rs. 39.85 lakhs. Advances against warehouse receipts showed considerable improvement, total outstanding being Rs. 28.69 lakhs, against Rs. 21.94 lakhs.

The Stock Markets

UNCERTAINTIES AFFECT TRADING IN CALCUTTA

Wednesday Evening.

THE settlement passed uneventfully in the Calcutta stock market on Wednesday. The carry-forward charges are about normal. There has been a substantial decline in turnover and operators have been unwilling to extend their commitments in view of various uncertainties. Although the selling pressure has not been pronounced, fresh support has been poor. Hence share prices have generally declined even on small selling enquiries.

The investors have generally kept off since the corporate news has not been encouraging. The latest company reports show that profits have been squeezed, although turnover and activities have risen. The production costs have gone up and taxation too has mopped up a substantial portion of profits. As a result, dividends have been repeated, if not cut. Considering that the inflationary effects of increased taxation and rising Government expenditure are likely to make their influence increasingly felt in the coming months, industrial costs may soon move upwards.

Lyons Range has taken a cautious view of the near-term outlook because of the prospect of forward trading being resumed under some restrictions. It is feared that there may be a renewed effort to sell. Whether this factor has already been discounted is difficult to say, although the technical position has taken a turn for the better because the load of floating stocks has become substantially lighter. A major restraining factor for the time being is the shortage of funds. Although the seasonal demand of the busy season has virtually come to a close, interest rates have been high. Banking resources are already sufficiently employed; there are little possibilities of deposits increasing because of heavier personal taxation and compulsory savings.

The market does not seem to have responded to the prospect of the Aid-India Club approving the necessary foreign aid to India when it meets again at the end of next month. Lyons Range has been particularly worried by the growing idle capacity in industries. The breakdown of a generator of the Calcutta Electric Supply Corporation has caused a good deal of concern. Although vigorous efforts have been made to obtain additional power supplies from the D.V.C. and power supplies from the D.V.C. and the Rihand, it is difficult to see how a further cut in the power supply to Calcutta and neighbourhood can be averted, for the time being at least.

Indian Iron have fluctuated narrowly in poor trading. The prices of engineering shares have fallen because of lack of interest. The payment of a higher dividend by Texmaco has been counteracted by a smaller dividend from Braithwaite. The latter has paid the dividend on an increased share capital. Guest, Keen, Williams, Jessop, Burn and Indian Standard Wagon have been neglected.

Miscellaneous shares have moved down in the absence of fresh support. Indian Copper have recovered somewhat after an earlier sharp fall on rumours of a dividend cut. Alkali Chemical have not responded to the payment of an interim divi-

dend. British Paints have been subdued despite satisfactory results. Union Carbide have been neglected following the heavy impact of the super profits tax, as has been shown in the latest report. As for the recent public issue of 250,000 ordinary shares of Rs. 10 each by the English Electric Co. of India Ltd, allotment has been made as follows: applications for 25 shares have been allotted 20 shares; for 50 shares, 30 shares; for 75 to 100 shares, 50 shares; for 125 to 200 shares, 70 shares; for 225 to 375 shares, 80 shares; for 400 to 500 shares, 100 shares; for 525 to 800 shares, 120 shares; for 925 to 1,525 shares, 150 shares; for 2,000 to 2,025 shares, 200 shares; for 4,025 shares, 350 shares and for 5,000 shares, 480 shares.

There have been a few bright patches in the jute section. Champdany have shot up on paying a higher dividend. Kamarhatti, Kankarnah, Soorah and Caledonia have been steady on paying good dividends. The steadiness in Reliance has been maintained, since the latter has offered to buy all shares from the existing shareholders at the current market price of Rs. 11.50. Coal shares have been sluggish since the Government has not yet taken a decision concerning an increase in the price of coal. Cotton mill shares have lacked support because production, especially of medium and coarse cloth, has become unprofitable. Paper shares have declined on pressure. Business has been difficult in sugar shares because of the discouraging outlook for the industry. Stray business has been transacted in tea shares. Investors are inclined to wait until the marketing of the new season's tea starts next Monday.

Government securities have been steady, although turnover has been small. Interest has largely been confined to short-dated loans which have been scarce. The 3-percent Conversion Loan 1986 have improved to Rs. 63.80. The steadiness of this section has been due to the prospect that the new loans recently issued will meet with satisfactory response. Selected State Government loans have improved somewhat on institutional buying.

Bombay

SHARE PRICES FALL ON BROAD FRONT

OPERATORS REMAIN CAUTIOUS

Wednesday Evening.

THE Bombay stock market started the new account on Monday in a subdued mood. Turnover has declined considerably and share prices have climbed down on a broad front because of profit-taking sales and absence of fresh support. Operators have preferred to keep their commitments light in view of the fact that there may be fresh selling pressure if the Government permits forward trading. Although no great decline is foreseen, the near-term trend may not be upward since there has been no follow-up support. The corporate news has not been con-

sidered encouraging. The latest results of cotton mills show that almost every unit has incurred a loss on the production of medium and coarse cloth. The export prospect for cloth is far from encouraging since the Indian product has been priced out of many foreign markets following keen competition.

Tata Steel have declined and the ordinary scrip has closed at Rs. 133.25. Among engineering shares, Tata Locomotive, Premier Construction and Alcock Ashdown have lost fractionally. Influential support has helped maintain Mukand Iron around Rs. 18.56 on prospects of expansion. Among motor-vehicle shares, Hindustan Motors and Premier Automobiles have reacted on profit-taking.

Cotton mill shares have shown a mixed trend. Khatau have been firm on prospects of a bonus issue in the proportion of one bonus share for every share held. Kohinoor have been bought on favourable corporate rumours. Century, Bombay Dyeing, Svadeshi, Standard and Simplex have reacted on profit-taking. India United ordinary and Morarjee have shed some of their gains.

Business has declined considerably in miscellaneous shares. Among sugar shares, interest has been taken in Belapur and Maharashtra Land Ceilings Act would not be enforced

for some time. Cement shares have been quiet. Associated Cement and Dalmia have fallen. Except for scattered interest in B.B. Petrol, mining shares have been subdued. Pressure has reduced the prices of Scindia Steam and Great Eastern Shipping among steamship company shares. National Rayon have fallen on adverse corporate rumours. Baroda Rayon have been quiet. Among chemical shares, Tata Chemical have been available at Rs. 15.40. Synthetics and Chemicals have lost at Rs. 142, as have Indian Dyestuff at Rs. 410. Scattered support has been extended to Voltas. Small interest has been taken in S.I.M. Maneklal and Permanent Magnets.

Turnover has been small in bank shares and fluctuations have been narrow. New India Assurance have been steady on repeating the divi-

dend. Electric company shares have declined in the absence of interest. Tata Hydro have been quoted at Rs. 104 and Ahmedabad at Rs. 91.30.

Madras

TURNOVER DECLINES STEEPLY

LIMITED SUPPORT TO PLANTING SHARES

Tuesday Evening.

THERE has been an appreciable fall in turnover in the Madras stock market during the past week. Except for scattered support in

selected planting shares, the trend has been softer. Investors have been discouraged by the heavy impact of the super profits tax, which is indicated in the latest company reports. The stock market is also getting worried over the growing shortage of funds. Interest rates show no sign of declining in spite of the fact that the busy season has ended. The possibility of support from the Life Insurance Corporation has been discounted in view of the fact that it will have to invest substantial funds in the forthcoming Government loans. Business has been negligible in clearing shares and operators have been cautious lest prices should move downward when forward trading is resumed.

Small interest has been shown in selected State Government loans. Except for scattered support in

Pandyan, bank shares have generally been neglected. Among electric company shares, West Coast have been bought on hopes of the compensation which will be paid by the Government of Kerala for acquiring the Company's undertaking. In the sugar section, E.I.D. have lost at Rs. 37.35, but Kothari have been steady at Rs. 7.85. Deccan have been transacted at Rs. 9.62 and K.C.P. at Rs. 24.50.

In the planting section, interest has been shown in Blue Mountain at Rs. 2.37, in Consolidated Coffee at Rs. 17 and in Periakaramalai at Rs. 3. Nennery have been steady on paying a taxable ordinary dividend of 15 percent. Cowooddy have declared an interim taxable ordinary dividend of 7.5 percent and Lucky Valley a taxable ordinary dividend of 10 percent. Thirumbadi have been steady at Rs. 1.30 on declaring an interim taxable ordinary dividend of 10 percent.

Turnover has fallen considerably in the cotton mill shares. Scattered support has been forthcoming for Buckingham, Bangalore Woollen and Binny. South India Viscose have reacted to Rs. 144.50 and Travancore Rayon to Rs. 26. Kadri have declared a taxable ordinary dividend of 6 percent. Jawahar a taxable ordinary dividend of 12 percent and Kothari a taxable ordinary dividend of 8 percent. Adoni have been steady on paying a taxable ordinary dividend of 8 percent.

Among miscellaneous shares, cement scrip have met with stray buying. Dalmia Cement have been transacted at Rs. 13.05 and India Cement at Rs. 5.60. Andhra Cement have paid a taxable ordinary dividend of 9 percent and Travancore Cement a taxable ordinary dividend of 7 percent. Business has passed in F.A.C.T. at Rs. 7.35 and in Seshasayee Paper at Rs. 7.90. Ashok Leyland have been steady at Rs. 7.40, but Aluminium Industries have reacted to Rs. 17.40. Mettur Chemicals have been done at Rs. 12.25. Travancore Ogale have declared a taxable ordinary dividend of 6.5 percent and Bangalore Printing a taxable ordinary dividend of 5 percent.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

London

OPERATORS TURN CAUTIOUS

IMPACT OF ELECTION RESULTS

London, 15th May.

THE stock market was dominated by political uncertainties during the past week, and there was a general reluctance on the part of buyers to open new commitments. There was considerable speculation as to when the general election would take place, and after the Conservatives' big setback in the local council elections last week, a decision by the Government to go to the country it seemed, was going to be protracted. There was no lack of favourable factors and the forecast by the National Institute of an upsurge in the economy later in the year was of considerable interest, while encouraging company news continued to claim a good deal of attention. Although buyers held back, there was very little selling and, therefore, prices did not move far. Falls in equities were fairly widespread, but they were mostly small. An outstanding firm feature was Marks and Spencer which responded smartly to the very good results. Gilt-edged found moderate support and prices steadily hardened. Dollar stocks, as usual, moved sympathetically with transatlantic trends. Gold shares came under the influence of South African political uncertainties at one time, but a better trend developed later. Coppers also tended to edge forward. Oils saw-sawed narrowly, but the recent strength of Burmah Oil was a feature which was in response to vague take-over talk. Rubbers lost ground following further disappointing company statements, but teas improved.

THE TYRES MOST TESTED AND PROVED

Dunlop Truck and Bus tyres have been tested under the toughest conditions you can imagine. They have proved themselves to be the tyres that can stand up longest to shock treatment. You will be surprised at the tremendous strength of the casing and the safety and long mileage which Dunlop tyres offer.

DUNLOP TRUCK AND BUS TYRES
lowest cost per mile

Money

THE CALCUTTA MONEY MARKET

CALL RATE GOES UP FURTHER

Wednesday, 15th May.

THERE has been a slight decrease in the general level of advances in the Calcutta money market during the past week. The credit given to the sugar industry has declined slightly. The requirements of the iron, steel and engineering industries have gone up moderately. There has been no change in the advances given to the jute and cotton mills, and to the foodgrains and seeds trade. In the interbank market, conditions have become tight and the call rate has gone up to 6 percent after having been down to 4½ percent.

The local exchange market continues to be very dull. The supply of gunny and tea bills remains poor as before. The demand for remittance has been moderately good. The downward movement of sterling has been arrested and it has improved in relation to most currencies except the Deutschmark, the Swiss franc and the Austrian schilling.

SILVER WAS QUIET IN CALCUTTA during the past week due to the absence of demand. The price fell from the previous week's level of Rs. 275.25 to Rs. 274.50 quoted today for ready delivery. There was no business in forward. The London and New York prices were 109½d and 127½ cents. No trading took place in gold which was unofficially quoted at a higher price of Rs. 117.50 a 10 grammes.

DURING THE WEEK ENDED 10TH MAY, Government of India Treasury bills for Rs. 68,47,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 14th May. The total amount offered was Rs. 2,62,00,000. Tenders at Rs. 99.420 percent and above were accepted in full and those at Rs. 99.410 percent were allotted approximately 86 percent. Lower tenders were rejected. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.360 percent a year approximately. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 20th May.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 15th May to 18th May at Rs. 99.426 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 8th May to 11th May amounted to Rs. 13 lakhs only.

THERE WERE RISES OF RS. 27.35 crores to Rs. 2,362.15 crores in the total note issue and of Rs. 23.85 crores to Rs. 2,344.09 crores in active notes, according to the return of the Reserve Bank of India for the week ended 10th May, 1963. The currency expansion was covered by increasing rupee securities of the paper currency reserve by Rs. 30 crores to Rs. 2,026.44 crores. This was done by transferring securities from the Banking Department in which investments fell by Rs. 30.43 crores to Rs. 172.37 crores. Deposits of the Government of India fell by Rs. 66 lakhs to Rs. 50.83 crores and those of State Governments by Rs. 1.01 crores to Rs. 7.07 crores. Balances of scheduled banks

at Rs. 79.53 crores showed a rise of Rs. 44 lakhs. Balances held abroad again fell by Rs. 11 lakhs to Rs. 7.48 crores. Investments at Rs. 172.37 crores showed a fall of Rs. 30.43 crores. Loans to scheduled banks rose from Rs. 41.86 crores to Rs. 45.97 crores, of which advances against usance bills were Rs. 30.73 crores (Rs. 31.06 crores). Ways and means advances stood at Rs. 70.11 crores, against Rs. 62.45 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 3rd May, 1963, shows a drop of Rs. 2 crores to Rs. 558.02 crores in total deposits. Investments in Government securities are up by Rs. 3.21 lakhs to Rs. 233.72 crores, while other authorised investments remain unchanged at Rs. 7.84 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 3.94 crores to Rs. 307.64 crores. Cash and balances are, in consequence, shown at Rs. 21.31 crores or Rs. 96 lakhs higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 3rd May, 1963, shows Demand and Time liabilities at Rs. 1,032.06 crores (Rs. 25.27 crores on account of borrowing from banks) and Rs. 1,247.39 crores (Rs. 16.85 crores), compared with Rs. 1,038.26 crores (Rs. 30.61 crores) and Rs. 1,246.07 crores (Rs. 13.85 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have risen by Rs. 5.28 lakhs and Rs. 3.56 crores to Rs. 54.28 crores and Rs. 77.21 crores, respectively. There is a rise of Rs. 3.48 crores to Rs. 618.29 crores in investments. Advances and bills discounted at Rs. 1,601.90 crores show an increase of Rs. 4.97 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.8 percent and 70.3 percent, against 5.6 percent and 69.9 percent.

TREASURY BILL MATURITIES

THE INDIAN SUGAR MILLS ASSOCIATION
NEED FOR A PROGRESSIVE APPROACH TO STEP UP
SUGAR PRODUCTION—CONTROLS NO SOLUTION

In his Presidential address at the 30th Annual General Meeting of the Indian Sugar Mills Association held at New Delhi on the 15th May, 1963, Shri M. N. Pittle said:

Sugar Situation

Events on the sugar front have moved rather briskly. Last year, when we met, the industry was grappling with the problem of surplus. Today we are faced with the problem of inadequate supplies. The principal reason leading to this situation has been an unprecedented rise in offtake on the one hand and a precipitous fall in production on the other. The Annual offtake for internal consumption had stagnated around 20/50 lakh tons for four consecutive years prior to decontrol in 1961. The outlook for exports then was equally bleak—the International Sugar Agreement was in operation and the prospects of any increase in our export quota of 50,000 tons were extremely poor. Therefore, while sugar output in 1960-61 reached the peak level of 29.8 lakh tons, there was no outlet for the surplus production and stocks were piling up. Sugar was decontrolled in September, 1961 and the offtake for internal consumption rose to about 25 lakh tons. Meantime the International Sugar Agreement also broke down and restrictions on exports ceased. The net effect was the increase in total offtake from 21/22 lakh tons to about 31 lakh tons.

In the background of this increased offtake, the industry was looking forward to higher production but to our disappointment production has registered a precipitous fall and is now estimated to be around 21.50 lakh tons. Unfavourable weather conditions, and the resulting poor cane crop brought in its wake increased diversion of the limited cane supplies to gur and khandasari. But such fluctuations are inherent in an agro based industry. The decline in production is therefore a natural phenomenon and we should take it in that spirit rather than be weighed down by the occurrence.

Voluntary Regulation

With the fall in production and the apprehension that prices might rise the industry conscious of its responsibilities initiated voluntary measures such as fair price shops in various zones such as Bengal, Bihar, U.P., Punjab, South and the Deccan. Fair price shops had already started functioning in New Delhi. We were eagerly awaiting release of a quota so that the entire scheme could be put into full operation, but meanwhile statutory controls were imposed by the Government on the 17th April, 1963. I wish the Government had given at least a month's trial to the voluntary control scheme of the industry. Had the opportunity been given, it might well have been that the necessity of statutory controls and all the repercussions thereof could have been avoided.

Control Inhibit Production and Consumption

The history of Sugar vis-a-vis controls is indeed enlightening. This history of sugar is one of control, decontrol, recontrol, partial control and control again. Controls as a rule have stifled consumption and reduced production. Production of gur and khandasari which remain uncontrolled is promoted at the cost of sugar. The consumer too usually is not able to get his full requirements at the prices envisaged. In sharp contrast to this, the policy of decontrol and incentives whenever followed has stimulated

both production and consumption. Therefore the ultimate answer is increased production and not controls.

Control Price

The level at which Control prices have been fixed this year has caused great hardships particularly to a large section of the industry in the North where even a fair price has been denied to the units situated in East U.P., Bihar, Punjab. It is an accepted and time honoured principle of price fixation that the prices fixed should be such as to take into account the cost and provide for a reasonable profit margin.

Much of the hardships could have been avoided had separate prices been fixed for East U.P., South Bihar, North Bihar, Punjab and Meerut Division. One finds it difficult to understand when separate prices have been fixed for smaller number of factories in regions like Rajasthan, West Bengal, Assam, etc. where the number of factories is hardly one, two or three, why such large sections of the industry in sub-regions of the North have been denied separate prices. It is indeed paradoxical that the lowest prices have been fixed for these regions having the highest costs of production. Unless the prices are revised, factories would be adversely affected. Equity demands that they should be at least given fair prices so as to ensure that they meet their cost of production and are left with reasonable profit margins. Such a step would inspire confidence in the large section of the industry and entice them to plan for higher production next year.

1963-64 Sugar Production

All out efforts should be made to increase sugar output to at least 33 lakh tons in 1963-64 which is the absolute minimum we need to produce in order to meet the requirements of internal consumption and exports. I am convinced that the production target can be achieved provided cane price is suitably increased within the framework of the recovery linking formula. The industry should also be given incentives to start early and maximise production. Coupled with these measures, steps should be taken to ensure that the Sugarcane produced within the Sugar factory areas is crushed by the factories alone. Bonding of cane should be strictly enforced and those failing to fulfil commitments should be penalised.

Low Profitability

Profits are the very life blood of any industry and their importance in the sugar industry cannot be overlooked in the context of the need to step up sugar production. Unfortunately, the level of profits presently obtained in the sugar industry are far from satisfactory. Studies made by the Wage Board regarding profits during 1958 (when controls were imposed in the North), the analysis of 1961-62 financial results carried out by the Association, the decision of the Tripartite Committee in U.P. and the latest Reserve Bank Study published in its Bulletin of June, 1962 all very clearly point out that the sugar industry is making extremely meagre profits and if it has to meet its requirements for rehabilitation, modernisation, expansion, etc., which in the ultimate analysis would benefit the consumer, profits have to be raised to reasonable levels.

Price Policy

Although it has been the declared policy of the Government to maintain

fair prices in the interest of the growers, the industry and the consumers, in actual practice the industry is not able to realise a fair price. When there is over-production, the prices decline and the industry does not realise the "fair" price. Again, in years of shortage, if the prices tend to rise slightly, say by 5% or so, over the fair price, controls are clamped and prices fixed at levels, which in several cases are, not commensurate with fair price level.

Sugar Priceline

The three principal elements that constitute the price of sugar are: the cost of cane, State and Central taxes and the manufacturing charges. Usually cane costs account for 45%, taxes 35% and manufacturing charges 20%, of the ex-factory price of sugar. It would thus be seen that over 80% of the price, the industry has no control. Of the balance 20% costs towards manufacturing, such as salaries, wages, repairs, renewals, interest, stores, etc., account for 18% leaving about 2% as gross profit which is further taxed, leaving less than 1% as net profit to the industry.

Since the last Tariff Commission Enquiry of 1957-58, costs have gone up. The emergency risk insurance alone would entail an additional burden of Rs. 1.75 crores and the incidence of the Wage Board Award would be around Rs. 4.5 crores. Further, costs of materials such as coal, firewood, lime, filter cloth, chemicals, etc., have gone up by 17; 47; 30; 13 and 17 percent respectively. Interest rates and railway freight have gone up by 25% and 10% respectively. Moreover due to the steep decline in production, the incidence of overheads is bound to rise. No doubt the manufacturing expenses have increased, but the rise in these is relatively much less compared to increase in cane costs and taxes. Thus, over 1952-53 cane costs have increased by over 25% and taxes by over 155%. Exclusive of excise duty, the rise in sugar price over 1952-53 level is hardly 15%, against an increase of over 26% in the general price level.

Expansion

An important remedy that could go a long way in curing many ills of the sugar industry is the increase in volume of production per factory. This should be achieved in a two-fold manner—by expanding the existing factories and ensuring that sufficient cane is made available to them to start early in November and close by the middle of May. Just like the yield of sugarcane per acre, production of sugar per factory continues to remain very low in India compared to other countries. The daily crushing capacity in India is extremely low—about 1,100 tons per day against over 3,000 tons in most of the other countries. Though during the last decade the installed capacity in India increased by about 100%, the daily crushing capacity of the factories increased hardly by 25%. The number of factories increased from 139 in 1951-52 to 183 in 1962-63. Increased volume of production per factory would reduce the cost of production and lend economic stability to the existing units.

Cane Development

Over 30 years have lapsed since the establishment of the industry, but the yield of sugarcane has remained stagnant around 15 tons per acre and the sugar content has also not shown any significant improvement though several crores of rupees have been collected by

way of excise duty, cane cess and co-operative commission, etc. The Punjab Government have recently decided to utilise the entire cane cess collections for cane development. Other States like U.P. and Bihar should emulate this fine example.

The intensive cane development scheme evolved by the High Power Committee appointed in U.P. is a step in the right direction and such schemes should be taken up in other States as well. Steps should be immediately taken to increase the irrigation facilities, especially in the East U.P., and Bihar, where they are almost non-existent. Vigorous efforts should be made not only to breed indigenous varieties, but to give fair and extensive trials to foreign varieties as well. In the matter of research I am convinced that autonomous Research Board would greatly improve the working of our Research stations and will go a long way in bringing the grower, industry and the Research institutions closer. Facilities of rail and road transport around factory areas are extremely poor. These need to be improved considerably and the factory areas should be saturated with a network of good roads.

For achieving success in the work of cane development it is of paramount importance that the agency responsible for the various schemes should be suitable for the purpose. Small committees at the factory level consisting of the representatives of the growers, Government and the factory should be set up. The entire funds for cane development, which should be at least 50% of the cess collected from the factory, should be placed at their disposal to be used at their discretion.

Land Ceilings

In the context of this compelling need to increase cane productivity, it is really unfortunate that Governments of U.P. and Maharashtra are thinking of taking over farms attached to sugar factories, under Land Ceilings Act. These farms do useful extension service and have promoted an industrial outlook in Agriculture. It will therefore be a retrograde step to take over these farms.

Recovery Linking

The scheme of payment of cane price based on the recovery was enforced from the current season in replacement

General Manager

of method of paying for cane on the basis of weight. Though much opposition and apprehension was voiced at the time of the introduction of the scheme in practice, it has worked out very well and has been even welcomed by a large number of growers.

Gur and Khandsari

In India 35% of the cane produced is converted into sugar and about 50% finds its way to gur and khandsari. Conversion of a given quantity of cane into sugar, yields about 50% more sugar than its conversion into gur and khandsari. Sound economic considerations therefore demand that production of gur and khandsari is not encouraged. Under the present set up, due to the inequitable levy of taxes on factory sugar, a filip has been provided to the production of gur and khandsari. If sugar production is to

be freed from this problem, the disparity of taxes should be removed.

East U.P. and Bihar

The Industry in East U.P. and Bihar which comprises of 61 sugar factories is the weakest link in the chain of the sugar industry and representing such a big segment, it certainly impairs the health of the industry in general. It is not an impossible task to improve the conditions of these factories if steps are taken to merge, shift and expand the existing factories, improve road and rail communications and provide irrigation facilities, fertilisers, etc.

Exports

The emergence of India as an exporter of sugar has been a most welcome development during recent years. In 1962, we exported 3.73 lakh tons, and during 1963 our exports are expected to be about 5.00 lakh tons. The

foreign exchange earned during 1962 amounted to Rs. 14.82 crores and is expected to be around Rs. 30.00 crores, during 1963.

For the first time in the history of Indian Sugar Industry, raw sugar was produced to meet export requirements. In all, about 2.50 lakh tons of raw sugar is expected to be produced by 39 factories. Our success in producing raw sugar opens a vast field for export in future.

Indian Sugar is Cheap

India is one of the World's cheapest sugar producers. The impression that Indian sugar is costly results from the fact that exports of sugar from India have to be normally subsidised, but this is not due to high cost of Indian sugar but due to the extremely low prices which usually prevail in the "Free" markets. Comparing the cost

of production of various countries it emerges that India is one of the cheapest sugar producers in the world.

Future Needs

The set-back in production this year and the imposition of Controls need not cause any apprehension about the long term prospects of the Industry. The Industry looks forward to increase in production with the hope that it will bring additional payments to the cane grower, increased benefits to the worker, larger revenue to the exchequer, greater foreign exchange earnings to the country, plentiful supplies of sugar at reasonable prices to the consumer and an equitable return to the industry.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

POWER CABLES PVT. LTD.

Proudly Announce

Commencement of production of

POWERARC WELDING ELECTRODES

under technical supervision of

WESTINGHOUSE, U.S.A.

Mr. E. H. Turnock (left), Chief Engineer, Westinghouse, U.S.A. is seen above, handing over the first consignment of Powerarc Welding Electrodes manufactured at Vithalwadi Works, to Mr. D. D. Desai (right), Chairman, Power Cables Pvt. Ltd., Bombay.

PRODUCTION CAPACITY:
120,000,000 running feet

POWER CABLES PVT. LTD., P.B. 1522, BOMBAY 1 • WORKS: VITHALWADI & BARODA

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Applications for shares will be entertained only on the basis of Prospectus, copies of which are available at the Registered Office of the Company and in the Offices of its Bankers, Underwriters and Brokers.

Consent of the Central Government has been obtained to this issue.

The Subscription List will open at the Commencement of Banking hours on Wednesday the 22nd day of May, 1963, and will remain open until the close of Banking hours on Tuesday the 28th day of May, 1963.

which application money @ Rs. 2.50 nP. per share has been received Rs. 22,50,000
24,993 Equity Shares of Rs. 10/- each at par reserved for allotment to Indian Promoters, Directors and their associates for cash Rs. 2,49,933

Available for Public Subscription:—
2,50,000 Equity Shares of Rs. 10/- each at par Rs. 25,00,000 Rs. 74,99,933
Rs. 75,00,000

Payable:—

(i) On application Rs. 2.50 nP. per share.
(ii) On allotment Rs. 2.50 nP. per share.

The balance of Rs. 5/- per share will be payable by one or more Calls as may be determined by the Directors.

APPLICATIONS MUST BE FOR A MINIMUM OF 50 SHARES OR MULTIPLES THEREOF.

LOAN CAPITAL

The Company has no mortgages, debentures or other loan capital outstanding but agreement has been reached with The Bank of Baroda Limited and The Bank of India Limited to grant loans of the total amount of Rs. 75 lakhs to be secured by equitable mortgages on the present and future fixed assets of the Company. The terms as to interest, repayment, etc. are referred to in greater detail elsewhere in the Prospectus.

2. Harbans Singh Mehta & Co., 33, Regal Building, Parliament Street, New Delhi.

REGISTERED OFFICE
Binani Buildings,
38, Strand Road, Calcutta-1.

OBJECTS OF THE COMPANY

The Company was incorporated on 2nd August, 1962 with the objects stated in its Memorandum of Association and in particular to undertake the manufacture of Copper and Copper Alloy Rods, Tubes, Sections, Copper Printing Rolls for the Textile Industry.

The Company has obtained a Certificate of entitlement to commence business from the Registrar of Companies, West Bengal, dated, 12th November, 1962.

MANUFACTURING LICENCE

An Industrial Licence No. L/IB(2)/N-65/60 dated 9th August, 1960 has been issued by the Government of India to Shri G. D. Binani, a Promoter and Director of the Company. The Licence has been endorsed in the name of MULTIMETALS LIMITED by the Government on 5th September, 1962.

The Licence provides for the yearly manufacture of 1,800 tons of Copper and Copper Alloy hollow and solid sections. The licence also provides for the manufacture of 3,000 pieces of Copper Printing Rolls on double shift basis which has since been increased by the Government to 5,000 pieces in terms of their letter No. 3(6)Met/61 dated 2nd January, 1962.

PROSPECTS

Copper and Copper Alloy Rods, Tubes, Sections, etc. proposed to be produced by the Company are extensively used by the Railways, Communications, Defence and Electrical Industries as well as by manufacturers of engineering plant and components tyre tube valves, etc.

The Tariff Commission has estimated that, as against the requirements of about 5,338 tons during 1961, the requirements of these products will be increasing to about 15,000 tons by 1965-66.

There is no production of Copper Printing Rolls in India at all and the entire indigenous requirements are met by imports. The production of Copper Printing Rolls is extremely specialised and there are very few plants in the world producing this item. The Company will be pioneers in the production of Copper Printing Rolls in India.

TECHNICAL AND FINANCIAL COLLABORATION

The Company has made arrangements for technical and financial collaboration with Revere Copper and Brass Incorporated, New York. Revere, with annual

sales exceeding Rs. 110 crores, are one of the largest producers of non-ferrous products in the world. Besides providing 'know-how' and technical assistance, they will also participate in the share capital of the Company to the extent of Rs. 25 lacs in terms of a collaboration agreement dated 15th June, 1962. The Government of India has approved the collaboration arrangement by letter No. 12/(1)Met/61 dated 13th February, 1962. The consents of the Controller of Capital Issues and the Reserve Bank of India have been obtained for the issue of shares to Revere for cash. The amount proposed to be invested by Revere, along with foreign exchange amounting to Rs. 54.64 lacs agreed to be released by the Government of India under D.L.F. Loan No. 157, is expected to cover the entire capital cost of imported plant and equipment.

PLANT SITE, WATER AND POWER

The Company has taken on lease 37.71 acres of land at Kota from the Government of Rajasthan in the area reserved for heavy industries on 99 years' lease, renewable for a further similar period. The Company has agreed to pay rent @ Rs. 30/- per acre per year which amounts to Rs. 1,131-30 nP. from 6th December, 1962 the date of taking over the possession of the land.

The Rajasthan State Electricity Board has agreed to supply power and an abundant supply of water is available close to the plant site.

APPLICATION FOR SHARES

Applications must be made on the form attached to the Prospectus (or on a printed copy thereof). Application forms properly completed must be lodged together with the amount payable on application before the closing date of the subscription list to the Bankers of this issue or with any of their existing main branches at:—

Ahmedabad, Amritsar, Bangalore, Baroda, Bombay, Calcutta, Delhi, Hyderabad, Indore, Madras, New Delhi, Nagpur, Poona Camp, Poona City and Surat.

Remittances should be made by cash, draft or cheque and should be crossed "Account Payee" only. If payment is made by cheque or draft, the cheque or draft must be drawn on a Bank situated in the town at which the application is submitted. Cheques or Drafts should be drawn in favour of any one of the following Bankers A/s. "Multimetals Ltd."

1. The Bank of Baroda Ltd.
2. The Bank of India Ltd.
3. National and Grindlays Bank Ltd.
4. First National City Bank.

A separate cheque or draft must accompany each application form.

DARE HOUSE at PARRY'S CORNER

Soon after he had founded his business in 1788, THOMAS PARRY acquired a site for his office and godowns at the corner of Esplanade and First Line Beach, strategically situated, as close as it was then possible to approach Fort St. George. It was not long before this corner became known as Parry's Corner, which name it bears to this day.

On January 1, 1819, PARRY took into partnership JOHN WILLIAM DARE—"not only a fine businessman but also a great character."

DARE HOUSE, the Head Office of the E.I.D.—PARRY GROUP, is named after him.

One-hundred and thirty-five years have passed since JOHN DARE'S death in 1838. Eventful years of steady progress for PARRYS!

POWER RESOURCES IN RURAL AREAS SURVEYED

(FROM OUR NEW DELHI CORRESPONDENT)

UNDER the auspices of the General Electric Company of the U.S.A., a survey of the generation and utilisation of power in rural areas of the developing countries was recently carried out. The survey covered India and some countries of Latin America. The report includes an on-the-site investigation of certain villages in Rajasthan, Maharashtra, Uttar Pradesh and Orissa. The survey was made before the recent increase in allocations for power development during the third year of the third plan. The targeted power capacity shown in the report may, therefore, be out of date but not its conclusions, which should be of some interest to India. The report says: In the past decade, India has carried out a fairly rapidly electrification programme, increasing the installed capacity from 2.3 million kilowatts in 1950 to 5.7 million kilowatts in 1961.

While the rate of growth in the past decade has been high, 8.6 percent a year, it has been inadequate to meet the nation's rising requirements. As a result, in the next five years under the third five year plan, India plans to double the annual rate of expansion to 17.4 percent and more than double the generating capacity to 12.7 million kilowatts. This expansion in the generating capacity in the next five-year period will take place almost entirely in the public sector, costing Rs. 1,039 crores or approximately \$(U.S.) 2,000 million. The expansion of power in private industrial plants totals only 5 percent of this, or Rs. 50 crores. The total expansion in generating capacity for the third five year plan will be about equally divided between the increased capacity of large-scale coal-fired thermal plants and hydro-electric plants, 3.6 million and 3.2 million kilowatts, respectively. The expansion of diesel generating plants is negligible, and these stations which totalled only 5 percent of the nation's public utility capacity in 1961, will decline to 3 percent in 1966.

Generating Capacity

India's generating capacity is becoming increasingly orientated towards large-scale hydro-electric and coal-fired thermal stations serving the major transmission grids because of the low cost of electricity generation in these stations. "The average cost of generating electricity during the third plan period in hydro-electric stations is estimated at six mills, whereas diesel power costs are estimated to total 52 mills." The low cost of hydro-electric power generation in India is to be expected in a nation which has only used a small fraction of its hydro-electric potential. India has an estimated hydro-electric potential of 40 million kilowatts. Even the planned expansion by 1966 will use only an eighth of this potential. There are, therefore, many favourable sites for hydro-electric development in India. The earlier versions of the third five year plan had anticipated the creation of 9.1 million kilowatts of hydro-electric capacity by 1966, but this was revised downwards to 5.1 kilowatts because of the difficulties of international financing and high overall capital requirements. Even so, the relative importance of hydro-electric power will increase in India to account for about 40 percent of the total capacity and more than half of all power production by 1966.

India generated 20,000 million kilowatt hours of electricity in 1961 and her industry used more than 60 percent of this total. The domestic and commercial consumption for lighting totalled only about 12 percent of the total power generated—a relatively small proportion—nearly all of which was consumed in urban areas. Irrigation consumption totalled only 4.2 percent of the power generated.

Only one-fourth of 1 percent of all the electricity consumed in 1960 was used for domestic purposes in rural areas. In spite of a fairly rapid rural electrification programme, this consumption of electricity for domestic purposes in rural areas is expected to remain only one-third of 1 percent of all the electricity consumed by the end of the third five year plan, and less than 1 percent in 1975. This low level of rural electricity consumption reflects not only the relatively small number of the rural population living in electrified villages and towns—9.6 million in 1960, which is expected to increase to 19.7 million in 1965—but also the very low level of per capita consumption of electricity in these rural areas estimated at 4 kilowatt hours in 1960, which is expected to increase to only 5.5 kilowatt hours in 1965. India's policy of electrifying the country by the construction of Statewide grid systems has allowed the various State Electricity Boards to construct their most economical large-scale generating plants serving Statewide urban connecting grids, and to realise the additional generating cost economies achieved by higher load factors," the report says.

Electrical Grids

By 1961, India had succeeded in electrifying all towns above a population of 201,000, almost nine-tenths of the 856 towns in the 10,000 and 20,000 population range, more than one-half of the 3,101 communities in the 5,000 to 10,000 population range, but only a small fraction of the more than 500,000 villages under a population of 5,000. It is anticipated that the electrical grids in India will reach all communities above a population of 5,000 by 1966, about one-half of the 10,000 villages with populations between 2,000 and 5,000, and about 7 percent of the 545,000 villages in India with populations under 2,000. These smaller villages will be electrified depending on their proximity to larger towns or their being within a reasonable distance of transmission lines established between load centres and generating facilities. As a consequence, the electrified villages will typically be those most directly benefiting from the rising incomes in the urban and industrialising sector of the economy and thus most able to pay the cost of electrification and able to use electricity productively.

The progress of the various Indian States in rural electrification differs sharply. Four States—Madras, Kerala, Andhra Pradesh and Punjab—have made considerable progress. These States had electrified the following proportions of their total villages and towns: 36, 32, 10 and 8 percent, respectively. Various factors tended to make rural electrification easier in these States. In Kerala, there is a relatively low proportion of smaller villages, only 12 percent of the villages have a population of less than 500, compared with

the all-India average where two-thirds of all villages have populations under 500. In Madras and Andhra Pradesh, the typical village also tends to be somewhat larger in size, increasing the minimum load of the village electrical installation. Significant pumping loads supplement the lighting loads. In addition, Madras, Kerala and Punjab have each developed electric transmission and grid systems served by a large proportion of low cost hydro-electric power.

However, though these States are serving the "optimum villages" first, their rural electrification programmes are being heavily subsidised by the urban industrial and domestic consumers. In Madras, for example, a State which has succeeded in electrifying the largest proportion of villages, the State Electricity Board estimated that the total annual subsidy to rural users in 1958, when only 4,000 villages were electrified, was Rs. 1.50 crores, or \$(U.S.) 3 million. The subsidy is estimated to total almost half the cost of supplying rural electricity and is high in relation to the planned annual investment of Rs. 6 crores.

The State Electricity Board of Madras is now expanding its rural electrification programme by connecting approximately 1,300 villages a year. In this connection, the State

electrical engineers conduct load surveys in prospective villages in order to determine the priority of order to connect those villages first where the losses would be minimised. According to this formula, the estimated annual revenue required from a village before connection is authorised is 10 percent of the capital cost of the extension of power to the village, including transmission and distribution line and transformer costs. It is estimated that of this 10 percent, 1.7 percent goes to pay the cost of power, 3 percent to power operation and maintenance costs, 2.5 percent to depreciation, and 3.5 percent to interest. However, cost experience in 1961 indicated that annual revenue would have to equal 18.2 percent of the capital cost of a rural extension before the system would pay its way. This was because the basic cost of power and the operation and maintenance expenses had both more than doubled.

Rural Power Rates

Given rural electricity rates as low as 1.5 and 2.1 cents a kilowatt hour, the State Electricity Boards in India have not undertaken to serve rural communities isolated from transmission grids by small-scale diesel generation except on an interim load building basis awaiting a grid connection. In small-scale diesel generation, given diesel fuel at 50 U.S. cents an imperial gallon, about one-half of which is taxes levied to lessen the foreign exchange drain, the cost of power from small diesel generators is prohibitive for rural use. At a load factor of 30 percent, using 50 cents worth of fuel, the total cost a kilowatt hour ranges from about 12 U.S. cents for a 25-kilowatt unit down to about 7 U.S. cents for a 100-kilowatt unit. Reflecting the high cost of small-scale diesel electric power

generation, there are only a relatively small number of public utility diesel power-stations in India.

In spite of the higher cost of serving the rural consumer, the rural electricity rates today are often as low and at times lower than those of the urban consumer. In Madras State, for example, low tension power is supplied at a rate of 10p (2.1 U.S. cents) a kilowatt hour for such agricultural processing industries as rice hulling, flour grinding, oil pressing, sugarcane crushing and cotton ginning. For cottage industries and for agricultural water pumping, the rate is 7p a unit (1.5 U.S. cents).

As a result of these low rates, there is considerable incentive to shift irrigation pumping from the bullock or diesel engine pump to electric pumps, and by 1960, it was estimated that 28 percent of all the power generated in Madras State was consumed in irrigation pump sets. The losses in rural electricity in Madras were, therefore, incurred even though the rural load contains a relatively high proportion of pumping and industrial demand; pumping takes up about 50 percent of the rural load, rural industries 25 percent, and domestic use only 25 percent. The cost of lifting water from wells for

irrigation in each acre of paddy crop by alternative methods is as follows: by bullocks Rs. 500, by diesel engine pump Rs. 83, and by electric pump Rs. 56.

Generally speaking, the on-the-site investigations of village communities showed only a limited opportunity for the productive application of electric energy supplied by small-scale generating units. As for irrigation pumping, direct diesel pumping is invariably more economical than electric pump sets supplied with electric energy from small-scale generating units. Furthermore, given the pattern of land tenure in India—in many cases three to four acre holdings—it is difficult to justify the use of either a diesel or an electric pump in them. The Indian Government is making attempts to consolidate holdings, but in many parts of the country the size of the holdings is so small that even consolidated holdings will require common sharing of the pumped water supply, an arrangement which has so far been extremely difficult to arrange to the satisfaction of the parties concerned.

There also appears to be very little potential for the consumption of electricity by small industry at the village level because the traditional industries—textiles, tanning, oil expelling, shoe-making, etc.—simply cannot compete with the larger and more efficient units in the market towns and cities. Currently, these industries are economically marginal or sub-marginal. It appears that the only reason that these industries have not been completely wiped out is that the local product is viewed as having special properties—ghani oil, for example, is said to be purer, healthier, more tasty and resistant to deterioration than the mill product—or the artisan is willing, in the absence of suitable alternatives, to pay a heavy price in terms of hard work, under-nourishment and poverty for being able to continue with the trade.

Again, if it is appropriate under certain circumstances, e.g., lack of access to market towns or the existence of a local market, to perform certain processing operations at the village level such as grain grinding or oil expelling, then it would appear to be more economical to use the shaft power of an internal combustion engine directly rather than convert shaft power to electric energy to power an electric motor. From the standpoint of domestic usage, particularly for illumination, it is less costly to use kerosene or gasoline-mantle lanterns than it is to use this same fuel to power a small-scale engine-generator which supplied electricity to an electric light bulb.

Limited Opportunity

Given this limited opportunity for the application of electric energy, on the one hand, which works against the possibility of achieving an appreciable load factor, and the favourable economics of shaft power as against electric energy for satisfying principal existing requirements for power, it appears doubtful that the introduction of electric energy by means of a small-scale generating unit can be justified at the village level. This is not to say, of course, that power may not be worthwhile social and political investment for purposes of improving rural amenities and avoiding dissidence. For example, one business executive stated to the survey team that a "power plant was worth 100 policemen" since power provides the basis for entertainment, education and vocational opportunities for an otherwise restive rural populace. However, it is important to be clear concerning the costs of providing such services and whether in the absence of significant productive applications of electric energy in

agriculture and small industry, such services would prove to be transitory.

At the outset of the field surveys, it was assumed that a small-scale engine-generator (10-15 kilowatts) capable of using alternative indigenous fuels would be an effective and economical means for supplying electric energy to individual villages. This hypothesis was not borne out in either Latin America or India. From the standpoint of the scale of generation—in the limited number of instances where it was judged that electric energy might make a productive contribution at the village level (population 2,000 to 3,000), it is estimated that a 50-kilowatt unit would be the minimum size required. In addition, it would be advisable to install excess capacity at the outset to provide for future load growth. Furthermore, some reserve or standby capacity should be allowed for in order to assure a dependable supply.

Rural Development

A major conclusion of the field survey teams is that the planning and implementation of rural electrification projects need to be more effectively focussed on viable rural development opportunities.

India's village industry programme, the report says, dates back to the teaching of Mahatma Gandhi and his followers which brought about a new consciousness of the importance of traditional village industries as a means of upgrading the village life. Partly as a challenge to the British, but mostly out of personal conviction, Gandhi and his followers had created the All-India Spinners' Association and the All-India Village Industries Association for the revival and encouragement of traditional rural industries including the *charkha* (hand spinning) and weaving industries. There was an important social context to these efforts and village self-sufficiency was one of the prime objectives. In 1956, as part of a national small industry programme which was having considerable impact on urban areas, 26 pilot projects were sanctioned with the special aim of accelerating rural industrialisation.

One of the objectives of this scheme was to develop a pattern of industrial extension services which would be necessary in undertaking rural industrial development blocks. The effort was to concentrate in part on new industries, and in part on the traditional village industries. The most successful village industries in these schemes were expected to be builders' hardware, soap-making, fruit and vegetable preservation, electrical goods and accessories, general engineering workshops, agricultural implements, saw mills, foundry and blacksmithery and bucket and steel trunk making units.

Of the 26 pilot projects, only 15 were really started, and of these only nine were considered successful. The most successful in the final analysis were those involving traditional industries; namely, *khadi*, *Ambar charka*, or handlooms. Even here the "successes" were subsidised heavily.

It is generally recognised, however, that this effort was not particularly successful. Industry has gravitated to those centres where it can operate effectively, namely, where raw materials, labour, power, capital, and markets were present (i.e., the congested super cities). During 1951-57, 47.2 percent of the new manufacturing enterprises were located in Class I cities (over 100,000 population) where 41.8 percent of the urban population resides. On the other hand, Class II and III cities (20-100,000 population) with 26.9 percent of the population received only 19.3 percent of the new manufacturing enterprises. Finally, towns with a population of less than

20,000, received 33.1 percent of the new enterprises. This preliminary assessment of industrialisation does not reflect the size of the new manufacturing enterprises. It can be expected that the distortion in favour of the large cities (particularly Calcutta and Bombay) is even more pronounced than shown since the average size of new manufacturing establishments in the large cities is bound to be substantially larger in terms of number of employees, capital, etc., than the average for small towns.

The contention that rural villages can be economically industrialised, even for mechanised service industries, is questionable. "Past experience indicates that the likelihood of economic success of industrial decentralisation would be greater in a programme concentrating on small rural towns from 10,000 to 20,000 population, nearly all of which already have been electrified through grid extension in India. This programme would then have its impact on the surrounding rural economy."

In India, it is difficult to conceive of the village as a self-generator of new industry, although the traditional industries (*khadi*, *coir*, handlooms, etc.) evolved over time from within the resources of the village. Modern small industries imply an urban training not available within the village. This training must be imported either by bringing entrepreneurs and skilled workers to the village, or by selecting promising villages and training them.

The Karve Committee, which helped pave the way for the small industry programme in India, had this to say about the pattern of industrial decentralisation: "The pattern of industrial activity that should gradually emerge is that of a group of villages having its natural industrial and urban centre. These small urban centres will be similarly related to bigger ones. Thus a pyramid of industry broad-based on a progressive rural economy will be built up. In such an organisation, small centres can experience a co-operative interest in the bigger ones, and these latter would develop a genuinely supporting, instead of an exploitative, relationship towards the smaller towns and the countryside."

This brief discussion highlights the fact that the issues of urban versus rural development, of centralised versus decentralised growth, and regional balance in development, are clouded by many complexities, which are unlikely to be resolved in the near future. Consequently, economists, sociologists, and planners will have to do some "educated" guessing. Such an educated guessing effort was undertaken in India at a seminar on rural industrialisation sponsored by the Ford Foundation in March 1960.

The main conclusion of this meeting seemed to be that industrial decentralisation would at best mean decentralisation from the very large urban centres towards the smaller towns. Rural industrialisation could not be conceived as a village goal, but as an area objective. Within given areas of rural India, nodal growth centres would provide a need and opportunity for clusters of small industry. It is around these clusters, probably located in market towns, that a foundation for rural industrialisation might be established.

It was further proposed that the block instead of the village be considered as the centre of gravity and planning unit for rural industrialisation. The Block administration has been super-imposed on the traditional administrative machinery of India, but only for development purposes. The traditional administrative units were the village, the *tehsil* or *taluka* (with a population of 200,000), the district (with a population of about 1

million), and the State. Yet the block may well be the most practical unit for agro-industrial planning.

PLAN TARGETS

Progress in Agriculture

The Deputy Chairman of the Planning Commission, Mr. Gulzarilal Nanda, recently admitted that there had been serious shortfalls in the third plan targets, during the first two and a quarter years of the current quinquennium. He cited the case of agriculture. Too many agencies; it is now admitted, have been created for raising agricultural production. But there has been lack of co-ordination between the agencies functioning under different authorities. So there has been a diffusion of responsibility. The progress of irrigation could be cited as a case in point. Against the five-year target of creating 16.2 million acres of irrigational potential, 1.07 million acres were achieved in 1961-62 while 1.65 million acres are expected to be achieved in 1962-63. The actual utilisation in 1961-62 was 890,000 acres and in 1962-63, 1.39 million acres of irrigation potential is likely to be used, compared with the five-year target of 12.8 million acres. The Planning Commission says: "In the construction and maintenance of field channels and the effective use of irrigation potential created on major and minor irrigation projects, one of the main difficulties has been the enforcement of obligation resting upon the beneficiaries. These responsibilities have now been placed on in *panchayat raj* institutions, especially *panchayat samitis* and *village panchayats*. The necessary legislation already exists in some States and is to be introduced in the other States. Funds available in the State budget can be used for carrying out such work."

This could be regarded as the basic mistake of the Planning Commission. Firstly, if by passing a legislation the objects could be achieved, this country would already have reached the take-off stage of economic growth. The Planning Commission, in its first appraisal of the third plan, says that "the community development budget has been re-oriented so as to concentrate on agricultural production to the maximum extent."

Thousands of crores of rupees have been spent on agriculture. The Prime Minister of India at one stage had banned the import of foodgrains into India. Since then, millions of tons of foodgrains have been imported and the Government, instead of making this country self-sufficient in food, has only succeeded in creating some employment opportunities in rural areas.

It is time that the Commission reread the first report of the grow-more-food campaign. The report said that the cultivator was shrewd enough to take up the cultivation of such crops as paid him the highest price. The cultivation of sugarcane in a case in point. There has been no grow-more-sugarcane campaign, yet the area under sugarcane has increased rapidly, simply because it fetched more money to the cultivator. It is the price policy in the United States which enables that country to feed the hungry in world in general and India in particular. Instead of fixing production targets, if the Planning Commission could devise an effective price mechanism, this country would have been exporting wheat by now.

The mid-plan reappraisal of a plan by the Planning Commission should be welcomed. The appraisal, it is expected, will review targets and shortfalls, if any, in their achievement, and delays in the execution of projects. It will also reassess the

requirements in the had core of the plan. The appraisal will take note of the defects in the system of planning and the shortages of trained and experienced personnel. At present, there is a clear realisation in the Udyog Bhavan that there is a great deal of overlapping in work which has created the present confusion. The Commission, it is said, is determined to fix responsibilities.

F. I. C. C. I.

Mr. Bharat Ram on Exports

The president of the Federation of Indian Chambers of Commerce and Industry, Mr. Bharat Ram, discussed his impressions last week in a Press conference concerning his recent three-week tour of New York, Mexico city, London and Brussels. He was obviously impressed by the functioning and performances of the European Common Market and expressed himself in favour of such an organisation for Asia. Referring to the E.C.M., he said that it was a historic experiment as far as the "Six" were concerned. Although the conditions in south-east Asia are different, it will be worth while for an organisation like the E.C.A.F.E. to study the successful working of the secretariat which runs the E.C.M. As a beginning, Mr. Bharat Ram is not opposed to a sort of Customs union between India and her neighbours.

In this connection, the president recalled that in the course of the negotiations for the accession of the United Kingdom to the European Economic Community, the member States had provisionally agreed to certain interim measures for the reduction of tariff barriers on some Indian exports pending the working out, in due course, of more comprehensive solutions concerning India's trade with the Community. There is no reason why the contemplated reduction in the tariffs on Indian goods should not be unilaterally given straightaway even though negotiations with the U.K. have broken down, Mr. Bharat Ram argued.

Industries in developed countries are undoubtedly in a better position to bear the burden of adjustment and should not, therefore, restrict the traditional and new exports from developing countries. At the same time, the developing countries like India have got to go a long way to meet the challenge of world markets which are getting more and more sophisticated. Not only must greater attention be paid to prices and quality of Indian exports, but there must also be a keener awareness of the techniques to create additional demand abroad for this country's goods. "I cannot help feeling that we are not responsive and sensitive enough to the changes that are taking place in the world markets and it should be remedied as quickly as possible", the president said.

Mr. Bharat Ram said that the tax concessions—particularly for new industries, offered by India were being negatively in the absence of similar concessions in the capital-exporting countries. "This is a handicap which foreign entrepreneurs face, and the remedy lies in the hands of their Governments. In point of fact, the Governments of the capital-exporting countries will be doing a great service if they go further and offer positive tax concessions to their capital seeking investments in developing countries."

BOKARO STEEL PROJECT

U.S. Aid Prospects

Last week, President Kennedy gave an unequivocal support to an Indian request for U.S. aid for the

construction of a \$1,504-million steel plant in Bokaro, near Calcutta. "India needs that steel," he told reporters at his Press conference. He expressed that hope that the U.S. Congress will approve American aid for the proposed project.

At the Press conference, the President was asked the following question by a reporter: "In view of the Clay report, do you think that the Bokaro steel mill project in India should be rejected on the ground of public versus private (financing)?"

The President replied: "No. There is such a need for steel that is going unfulfilled. Provided it is an efficient project, I would think we would assist it if it meets what the economy of India requires. I must say that I do not quite get the logic of those who so vehemently oppose this much-needed project; not to take possession of a steel mill already constructed but to build one—so there is an important distinction."

The President pointed out that the United States has lent millions of dollars to Canada for a nationalised electrical project. "I think we ought to do it," the President said with emphasis. "I think we ought to do it. Now, Congress may have other views. I think it would be a great mistake not to build it. India needs that steel."

Taking note of President Kennedy's endorsement of American support for the Bokaro steel plant at his Press conference, Professor J. K. Galbraith, U.S. Ambassador to India added the following statement: "I am sure all of my Indian friends will join with me in welcoming this statement of President Kennedy. I hope everybody will realise that numerous technical and administrative problems remain to be worked out in connection with the project. Also, as President Kennedy made clear, Congress has the final right of decision, for it must provide the requisite funds. However, I feel sure that with understanding and patience, things can be worked out and the United States and India will collaborate on this vitally important and, if I may say so, highly exciting enterprise in Indian industrialisation."

"The policy of the United States is to recognise the existence of a large range of choice in economic development. We want to see the tests of efficiency and results rigidly applied. Beyond this, it is not our policy to insist dogmatically on any particular design for development. In the past, we have respected India's preference for power development in the public sector. President Kennedy's comment on Bokaro reflects the same attitude towards steel production. In recent weeks, a few people have predicted with something almost approaching pleasure that Americans would never give support to publicly-owned enterprise. I am not at all sorry to disprove them. During these last months, I have had occasion especially to admire the skill with which Mr. Subramaniam combined patience with his friends with persistence towards the project. It is in good hands," Professor Galbraith said.

Answering subsequent questions, the U.S. Ambassador declared that the question of Bokaro during a "relatively long running-in period would not pose any insuperable problem." He pointed out that anybody could operate an inefficient steel mill, but the real problem was to build up the "organic machine" which would run a steel plant efficiently and inexpensively.

As for the anticipated high capital cost of the project, the U.S. Ambassador to India said that it was un-

avoidable because the proposed mill was intended to make sheets and plates. Moreover, the import duty to be paid on machinery and components was included in the estimate prepared by the U.S. steel mission.

MAN-MADE FIBRES

Tariff Probe Ordered

The Government of India has asked the Tariff Commission to review the cost structure and other allied aspects of the man-made fibre industry in the country. The Commission has been asked to examine and report on the fair prices for all types of deniers of viscose filament yarn and other man-made fibre yarn except acetate rayon yarn. The Commission has also been requested to recommend the fair ex-mill prices as also the fair prices payable by consumers. In making its recommendations, the Commission will

bear in mind the need for fixing a concessional price for the quantity of yarn supplied to manufacturer-exporters in lieu of the surrender of a percentage of their import entitlement under the export promotion scheme. The Commission will also take into account the cost of raw materials, power, wages and other overheads and any other factor which may be considered relevant.

The Government feels that this industry has now come to a stage when a review of its cost structure and other allied aspects should be undertaken so as to make the man-made fibres available to consumers at reasonable prices, while assuring the industry of a fair return. The Government has decided to refer these issues to the Tariff Commission. The Commission will examine the entire cost structure of all man-made fibres (both cellulosic and non-cellulosic), including staple fibre yarn

but excluding acetate rayon yarn which has already been examined by the Commission.

ALUMINIUM

The Koyna Project

The Vereinigte Aluminium-Werke A.G. (V.A.W.), of West Germany, will make its know-how available for the establishment and operation of the Koyna aluminium project in the south of Bombay. With the commencement of bauxite mining, a start is to be made on the construction of a complete plant for the production of aluminium oxide, primary-aluminium pig and semi-finished products (wire and rolling mill products). The project, which is being set up by the Khatau group in collaboration with the Maharashtra Government and the V.A.W., envisages a plant with an initial output of 20,000 tons and, later on, 50,000

CAPITAL, 16th May, 1963.

tons a year. Capital expenses are estimated at about 180 million Deutschmarks for the first stage of construction.

The major suppliers of bauxite to West Germany are Yugoslavia, Greece, and France. India is also one of the supplying countries with its share of 24,460 tons, out of a total of 1,563,287 tons of bauxite imported in 1961. India's share actually amounted to 27,493 tons out of a total of 1,326,047 tons imported in 1962.

MOTOR-VEHICLE PARTS

Making Ring Gears

Repco Ltd., Australia's biggest manufacturer of replacement parts for motor-vehicles has interests in Bimetals Bearings Ltd. of Madras. It is now proposed to manufacture fly wheel ring gears which will be made by the new Company, India Pistons-Repco Ltd.

London

PROSPECTS FOR REVIVAL OF U.K. ECONOMY

(FROM OUR LONDON CORRESPONDENT)

AN interesting conflict of views appeared at the National Production Advisory Council meeting recently. It concerns a question that worries a great many people. Mr. Maudling noted the revival of confidence in industry and maintained that the Budget had provided sufficient stimulus to bring about the required expansion, although its full effects would not be seen "until the summer." On the other side, Mr. George Middleton, while admitting that the economic situation was improving, insisted that another strong stimulus was needed if this was to continue.

Who is right? Inevitably, the present problem is being judged by memories of 1955 and 1959, when previous Chancellors intervened in a quiescent economy. In both cases, unemployment was quickly absorbed and expansion turned into boom until a payments crisis forced the Government to retreat. For several reasons, the 1963 effort looks like being different.

First of all, virtually the whole of the huge Budget deficit which is going to pump purchasing power into the economy represents Government spending and not tax cuts. In fact, total tax revenue is going up, not down. This means the Government can make sure that the money is spent; it need not depend much on people's decisions on whether to spend or save according to their state of "confidence." The money spent on schools and hospitals, roads and power stations, will, of course, spread out into wages and salaries and profits, where it will start off a second round of demand—the "multiplier" effect. The stimulus so far provided may, therefore, be sufficient to help the national product grow by rather more than 4 percent—perhaps 4½ or 5 percent. To achieve this no further action is needed. But whether this kind of expansion will absorb the bulk of the unemployed is an entirely different matter. That is probably what Mr. Middleton had in mind.

In the first place, the two previous expansion periods, 1955 and 1959, coincided with a big rise in industrial capital investment. The resulting demand for steel, machinery and heavy engineering work brought jobs back to the depressed areas. In any case, the world crisis of ship-building had not yet begun. This time industrial capital expenditure is more likely to be down than up in the next 12 months and public capital spending, which should more than offset this fall, provides more jobs for the construction industries than for heavy engineering—except for the additional power-station programme.

Secondly, the coming expansion will bring out the steep rise in productivity for which industry has been preparing both by the heavy re-equipment of the past few years and by the special economy campaigns of the past 18 months. It would not be surprising if an overall growth of 4 percent could be achieved this time with very little extra labour. Leaving aside the seasonal swing of employment, the number of people out of jobs at the peak of next winter may still be very high. Whether any further tax cuts or other stimulants could alter this fact with-

out at the same time producing inflationary pressures in the rest of the economy, is open to doubt.

Public Works

However, if the 1963 advance is unsatisfactory from the point of view of jobs, it is unlikely to press heavily on the balance of payments. Public works, which bulk so large in the present pump priming effort, need bricks, mortar and labour, all of which are easy on imports. In previous expansions, the stress was on durable consumer goods and industrial machinery: home supplies on both were soon taken up and massive imports were sucked in to meet the continuing demand.

Any expansion in consumer goods or other industrial products this year can be largely supplied from existing home capacity without drawing any resources away from exports or pulling in large imports of semi-finished materials, machinery or consumer goods. Imports must, of

course, rise as production rises, because the U.K. depends on imports for food and raw materials. But the increase is unlikely to cause undue pressure on the balance of payments, at any rate over the next 12 months.

Meantime, the all-time peak in British exports reached in March turns out to be rather less elevated than the provisional figures suggested. The high export figure was partly due to the backlog of shipments delayed by physical obstacles in the first two months of the year, and it also included some ships, which tend to give a lift to the trade returns in any month in which they are handed over. This is brought out by the full analysis now made by the Board of Trade.

But the March record also included a recovery in exports of cars which had fallen away in the fourth quarter of last year, and substantial shipments of heavy electrical machinery and submarine cable. The March

record was good, although not perhaps as exceptional as it seemed.

Exports to western Europe, which had shown signs of flattening out after the middle of last year, rose sharply again in the first quarter of 1963 when they were 4 percent above the level of the second half of last year.

Increased deliveries to the E.E.C. accounted for the greater part of this. Exports to France and West Germany were particularly good. Other markets, which had been looking weaker last year, also recovered in the first quarter, partly because of a rise in exports of petroleum products. Exports to E.F.T.A. countries were 2 percent more than in the second half of last year, mainly reflecting the delivery of ships to Norway. Exports to Russia rose in the first quarter, but this was offset by a fall in exports to the rest of eastern Europe.

Recovery in Exports

There was some recovery in exports to the sterling area in the first quarter, which was largely due to the delivery of a warship worth over £4 million to South Africa in March. Exports to Australia and India also rose. On the other hand, exports to the United States were 11 percent less than in the fourth quarter of 1962, and it remains to be seen whether they will recover now the aftermath of the dock strike is out of the way.

TARGET - OIL !

One of the methods used to test a newly completed well for its oil production potential makes use of a special type of gun which is lowered into the hole and fired by an engineer on the surface. The well is first lined with steel casing, cemented to hold it in place. The gun barrel is lowered into the well. When the "trigger" is pulled, 50 or more bullets pierce the casing,

and the cement—and the possible oil producing rocks. If any oil is present in the zone being tested, it will run into the well and be brought to the surface. Then the production crew takes over the operations. But if no oil is encountered the well is classed as a dry hole and the drillers move off to continue the search elsewhere.

Sweden's Advanced Technology in air handling applied to almost a CRORE SHIPPING TONNAGE

Sailing the Seven Seas is a crore of shipping tonnage where Swedish Engineers' expert knowledge and highest skill in the field of air handling are evident. Over the past nearly half a century SF have developed air technology to such an extent that few other countries can compete with them. The benefit of decades of experience, research & study in air handling is now brought to India. SF technicians & trained men are posted in practically every country of the world to study individual requirements and offer service after sales.

There is an SF product for every vessel :

- Ventilation and air conditioning installations for passenger liners, cargo ships, tankers and naval vessels.
- Hold and engine-room installations.
- Forced draught fans and air preheaters for ship boilers.
- Air cleaning installations.
- Special equipment for heating, ventilation and cooling.

CARBORUNDUM UNIVERSAL ABRASIVES

a
change
in

marketing
arrangements

Carborundum Universal have pleasure to announce the opening of a Branch at Calcutta, from 1st June 1963, for direct marketing of their well-known range of Coated and Bonded Abrasives.

All inquiries (both Trade and Consumer) may please be addressed to:

Carborundum Universal Ltd.,

Armenian College Building (Second Floor),
56-D, Free School Street, Calcutta-16

Territories Covered:

For Grinding Wheels and other Bonded Abrasives: West Bengal, Bihar, Assam, Orissa, Uttar Pradesh and Eastern half of Madhya Pradesh.

For Coated Abrasives: West Bengal, Bihar, Assam, Orissa, and Part of Madhya Pradesh.

Carborundum Universal are grateful to M/s. William Jacks & Co., Ltd., Calcutta for their valuable services all these years in the distribution of their abrasive products.

Jute

JUTE MILLS WORRIED OVER POWER SHORTAGE

THE power shortage is a major hurdle in the way of development of industries; it also hampers the smooth operation of the existing ones. This is especially so in the far-flung belt within the area of control of the Calcutta Electric Supply Corporation. All industrial establishments, located within this area, have had to remain idle because of sudden load-shedding caused by the failure of supplies from the D.V.C. grid or from the C.E.S.C. system itself. The load demand in this zone has, in fact, outstripped all the estimates drawn up so far. Industries have obviously grown much faster than the development of power supply capacities. Knowledgeable circles now apprehend that even the much augmented capacity which will result after the Durgapur plant is installed, will fall short of the area's demand. By the time the 150-megawatt unit goes on stream around 1966, the demand of industries in this part of the State will rise further. The existing C.E.S.C. generators have to be worked without respite. As a result, serious breakdowns occur occasionally. Industries are, therefore, thrown out of gear for indefinite periods bringing in its trail forced idle capacities, loss of production and dislocation of production schedules. Markets behave erratically and prices fluctuate between wide limits, scaring away customers and also involving trade and industry in unforeseen losses.

Erratic Supplies

The jute industry has also been hit because of erratic power supplies. In order to meet export requirements, the industry has been using its capacity fully. It has almost completed an ambitious modernisation and diversification scheme at colossal expenses. With supplies of fibre at economic rates, it is now in a position to earn more foreign exchange—particularly dollars—if it can continue to use the capacity at an even tempo. Referring to the problem of power shortage facing the industry, Mr. Manubhai Shah, Central Minister for International Trade, assured in the course of his address to the Board of Trade in Calcutta that its needs would be met.

But since the failure of the new 50-megawatt turbo-alternator set of the C.E.S.C.'s generating system in Cossipore a week ago, compulsory load-shedding has been resorted to all over the control area with the exception of the zone served by the southern generating system on a regulated scale. The area affected has been grouped into four sections, and every zone has to suffer a power cut for the minimum period on alternate days. Jute mills are now working three shifts in all the sections, except the weaving departments which operate only two shifts. At a meeting held under the auspices of the West Bengal Government's Commerce and Industries Department towards the week-end, at which the representatives of the Indian Jute Mills Association were present, the industry agreed to a programme of adjusting working hours in a way that load-shedding might not cause much setback to production. All H.T. consumers affected have been divided into four groups. The jute and engineering industries have been allotted the fourth order of priority for power supplies following defence, public utilities and such continuously operating industries as chemicals, glass and foundries. The power supply restrictions in force between

6-30 and 8-30 p.m. on the weaving departments of jute mills will continue during the period of emergency, but mills will be allowed to work on the weekly offday. These arrangements will not affect those mills which receive power from the southern power-station.

Extent of Loss

The latest power cut has, however, caused some adverse effect on the production of jute goods. The extent of the loss, it is estimated, may be of the order of 10 percent. Similar conditions prevailed during last summer, but through the co-operation of the C.E.S.C., the D.V.C. and the industry, the production trend was kept practically unaffected. The number of hours worked was 200 and the total output 97,800 tonnes in March 1962, 200 and 97,000 tonnes in April, 208 and 99,700 tonnes in May and 200 and 97,800 tonnes in June.

The industry and trade have already made long-standing commitments against firm contracts. The dislocation of power supply will not only affect the total output but will also increase the cost of production due to higher overheads and forced idle hours. So there may again ensue a decline in the demand for Indian jute goods due to a rise in production costs. Overseas consumers will, therefore, resort to substitutes or meet their requirements from other producing countries.

In view of the vital stakes involved, the industry cannot afford to let the vagaries of power supply foil its drive for maintaining the tempo of production. So it should develop its own standby arrangements by setting up captive power plants as soon as possible. The Government of India has agreed to consider such requests favourably on production of "no objection certificates" from the West Bengal State Electricity Board. The latter has decided to issue such certificates liberally in favour of individual jute mills. Meanwhile, im-

port licensing and foreign exchange allocation formalities should be simplified, for any investment on a standby power plant will be a sound one, helping the industry to offer more employment opportunities to labour and maintain an even flow of jute goods to the internal and overseas markets.

A satisfactory parity between the prices of raw jute and manufactured goods, combined with a broadening demand, enabled the Indian jute mills industry to continue production at the peak levels in 1962-63. In spite of the larger output, stocks are reasonable and mills have a comfortable order-book position. The outlook seems to have improved further of late. Russia has already bought a sizable volume and is expected to lift much more under the Indo-Soviet trade agreement. Furthermore, the Continent is evincing keener interest in Indian hessian. The E.C.M. countries are also believed to be increasing their purchases of jute fabrics from the Indian market. Although the U.S.A. has taken a good quantity and holds a large stock—equivalent to above four months' consumption at the current level of its intake—the country's demand for hessian, especially broad carpet-backing cloth, is rising fast. One should not be surprised if the U.S.A. enters the market soon in a big way. This expectation is reinforced by its recent purchase of 10 million yards. As for sacking, India's defence demands are reported to be satisfactory. Australia, meanwhile, has been taking more woolpacks, and the Middle East is also lifting heavy goods from India. In spite of the devaluation of the peso, making imported goods dearer in the Argentine, the latter's packing needs are being met by importing more heavy goods from India. A recent expert survey pointed out that the Argentine offtake could be boosted considerably by an extension of the bilateral trade agreement with that country. The latest pro-

duction statistics for April and April-end stocks of jute goods show that the mills sold their entire output during the month without any difficulty.

I.J.M.A. Output Figures for April

The I.J.M.A. jute goods output statistics show only a small increase of about 1 percent from 104,500 tonnes in March 1963 to 105,400 tonnes in April. Of this, hessian constitutes 43,800 tonnes (41.5 percent), against 44,400 tonnes (42.4 percent), sacking 43,200 tonnes (40.9 percent), against 42,700 tonnes (40.9 percent), and miscellaneous goods 18,400 tonnes (17.4 percent), against 17,400 tonnes (16.6 percent). The number of hours worked was unchanged at 208. The slight fall in hessian was compensated by almost an equal rise in the production of miscellaneous goods. In April 1962, the mills worked for 200 hours, and reported a total output of 97,000 tonnes—37,000 tonnes of hessian (38.1 percent), 45,000 tonnes of sacking (46.4 percent) and 15,000 tonnes of other varieties (15.4 percent).

U.S. Burlap Consumption Down

The decline of U.S. burlap consumption in April to 77 million yards from 84.7 million yards for the previous month did not seem to produce any reaction in the jute goods market on Tuesday. Operators regarded April as a generally lean month for burlap sales in that country. They were awaiting substantial orders from the U.S.A. on the belief that it would soon enter the Indian hessian market in a big way. In spite of a very low intake during January due to the strike of longshoremen and the fall in April consumption, the January-April intake was higher at 318.7 million yards this year, against 310.7 million yards for the corresponding period of 1962. The monthly averages worked out to 79.6 million yards and 77.6 million yards, respectively. U.S. stocks registered a fall of 3.8 million yards to 300.2 million yards at the end of April. Of this, 156.1 million yards were spot stocks and 144.1 million yards afloat. At the April rate of consumption, stocks will last 3.8 months. At this period last year, the stock duration was 4.41 months on the same basis.

Gram: "GEEBEECOMP". Phone: Office — 23-1702 & 1703. Works: 66-3915.

Bihar around 6.7 acres, followed by Assam's 5.2 acres and West Bengal's 4.15 acres, according to tentative findings of the cost study team on jute and paddy sponsored by the Economic Research Section of the Indian Central Jute Committee. Preliminary data on the size of holdings as between districts shows Saharsa in Bihar having the highest average of 8.4 acres and Midnapore in West Bengal reporting the lowest of 3.21 acres.

Among the different systems of tenancy, owner-cultivation predominates, accounting for more than 90 percent of the cultivated land in Bihar and 80 percent in Assam and West Bengal. Next in order is the share-rented (*bhagchasi*) tenancy, absorbing 14 percent of the cultivated land in West Bengal, 10 percent in Assam and 7 percent in Bihar. Under the latter system, land is taken on lease for which rent is paid in kind in either fixed quantities of particular crops or as percentages of crops actually produced. The existence of other modes of tenancy is insignificant. The cost study programme is expected to fill the gaps in current knowledge on the distribution of the area under jute between white and Tossa varieties. Although a fairly reliable assessment in this direction is unlikely to be available before the final year of the survey, preliminary data in Bihar corroborate the findings of the State Government's marketing surveys conducted between 1957 and 1960.

Since 1960, the cultivation of Tossa jute has gained about 2 percent at the expense of the white accounting for 32 percent of Bihar's total acreage. Between the districts, the distribution varies widely. In Purnea district, which accounts for the bulk of the area under jute in Bihar, Tossa forms 37 percent, while almost the entire area in Saharsa district is sown with the white variety.

In West Bengal, the eastern districts of Nadia and Murshidabad have as much as 66 percent of the total jute acreage under Tossa. The cultivation of Tossa is more extensive in the western districts of the State, known as the Daissee area. The latter consists of the Hooghly, Burdwan and 24 Parganas districts where the acreage under capsularis is less than 30 percent. The northern districts of West Dinajpur, Malda, Jalpaiguri and Cooch Behar,

where jute is grown mostly in low-lying flooded areas, more than 70 percent of the land is under the white variety.

Raising Jute Yield

The easiest and cheapest way to achieve a large increase in the yield of jute an acre is to spray the leaves of plants with urea aqueous solution, according to the Jute Agricultural Research Institute of the Indian Central Jute Committee. Foliar spray of urea has been found to increase the fibre yield from white jute by 116 percent. In Tossa, the yield is 35-percent higher. Urea, because of its easy solubility, is the most suitable nitrogenous fertiliser for foliar application to jute plants. The foliage will readily absorb urea, which is a neutral organic salt that can do the leave no harm.

The dosage an acre recommended for both white and Tossa jute is 20 kilograms of urea, made into an aqueous solution of 430 gallons (at the rate of 45 grammes of 1-percent urea a gallon) and sprayed in four equal applications. The first spraying should be given at the crop age of 35 to 40 days, the next three following at an interval of a week each. Spraying should be done in the morning with the spray directed to the underside of leaves. Any ordinary sprinkler may be used for spraying but a modern sprayer of the hand or pressure type will do the job more efficiently and with the minimum of waste.

THE JUTE MARKETS

Manufactured Goods: The Calcutta jute goods market opened in a buoyant mood earlier in the past week on reports of heavy load-shedding of about 132 megawatts on 8th May following the breakdown of the new 50-megawatt turbo alternator set of the C.E.S.C.'s Cossipore station. Fears of a heavy power cut affecting the production of jute goods induced frantic short-covering. Shippers were keen on ready and near positions in the spot market. The emergence of the U.S.A. with a bulk order for 10 million yards of hessian for ready and near delivery and scattered overseas enquiries were yet other stimulants. Dealers availed themselves of the opportunity and hammered the prices to the year's best levels at which a heavy volume of business was transacted. For two days, the prices retained their buoyancy when some mills also made good business. But more mills came out as sellers on Saturday by which time it was learnt that the dislocation to the production schedule of the industry would be minimised substantially by power shedding in a well-planned scale. Besides, the publication of the production and stock figures of the I.J.M.A. mills during April showed that the entire April output was well absorbed. Market circles did not seem to attach much significance to the 9.8-percent decline in the U.S. burlap consumption to 77 million yards in April. The market reacted heavily towards the close on nervous selling by holders, wiping out a major portion of the week's gains. Turnover was large and the undertone hesitant at the close.

In the spot market, sacking showed gains on balance, of 50nP to Rs. 113.60 for May, 55nP to Rs. 113.70 for June, 35nP to Rs. 114 for July-September, 25nP to Rs. 113.75 for October-December and 50nP to Rs. 113.25 for January-March 1963. Hessian showed a lower gain of 15nP to Rs. 50.25 for May, 45nP to Rs. 49.25 for June but in July-September, it lost 15nP to Rs. 48.40, in October-December 75nP to Rs. 47.50 and in January-March 65nP to Rs. 47.

In the futures market, B Twills May scored a gain of 60nP to

Rs. 113.20, after fluctuating widely between Rs. 117.90 and Rs. 112.55 while hessian May made Rs. 130 more to Rs. 49.56, after moving between Rs. 53.20 and Rs. 48.10. At the close, the differential between May ready and futures declined from 84nP to 69nP in hessian and was unchanged at 50nP in sacking.

Wednesday's quotations were as follows:

	May	June	July-Sept	Oct.-Dec.	Jan.-March
40in. 71oz.	36.90	36.65	26.35	35.90	35.40

Raw Jute: The weather was fair throughout the past week, so it helped plant growth. Interculture and racking operations have almost been completed and plant roots are having enough humidity and sunshine. Upcountry jute mills are expecting a bumper crop and feelers are being dropped for the commencement of trading in the new crop. With a virtual depletion of stocks with farmers, daily arrivals in upcountry agencies have dwindled considerably and routine business is passing in small lots of selected fibres at the best available prices. The trend is quietly steady but turnover low.

In the Calcutta spot jute market, a dull trend prevailed throughout the past week. Mills did not show any interest in business except for small lots of better grade fibre to meet their day-to-day blending requirements. A small turnover was transacted at the prevailing rates, basis Rs. 28.25 a maund for Assam Bottoms, ready, f.o.r. Calcutta. Sentiment was subdued in the future market. Upper Assam White Bottoms June opened and closed at the floor level of Rs. 30 a maund, after fluctuating narrowly between Rs. 30 and Rs. 30.02 on stray covering. Turnover was negligible, and the undertone was hesitant at the close. Operators were awaiting official permission to commence forward business in the new crop.

Wednesday's quotations were as follows:

THE U.K. JUTE MARKETS

FIBRE STEADIER

(FROM OUR DUNDEE CORRESPONDENT)

The raw jute market was firm in Pakistan last week and it was indicated that minimum export prices would be maintained at the present level for next season. This fact brought out more buying interest here, but there were still sellers offering the lower grades of both white and Tossa jute at under the official rates. This applied to old and new crop fibre.

The spot market in Dundee was steadier despite the fact that a considerable quantity of jute was available ex warehouse. Holders of these parcels were refusing to accept less than their quoted rates, and

CAPITAL, 16th May, 1963.

this was most noticeable in the case of Tossa qualities.

Excessive rain was reported from some of the growing districts in East Pakistan, and this tended to harden new crop prices. However, there were sellers of Mill Lightnings at £107, Mill Hearts at £93 and Grade Hearts at £80, c.i.f., U.K., for August-September shipment. Grade Tossa-4 was offered at £107 and Outport Tossa-2/3 at £96 October-November.

Prices of old crop jute were irregular, and a wide range was being quoted. The lowest rates were at £111 for Mill Lightnings, at £92 for Mill Hearts and at £77 10s for Grade Hearts, for May-June shipment. Grade Tossa-2/3 was at £123 10s and Grade Tossa-4 at £105 10s. Dacca Tossa-5 was available to a limited extent at £125 and Dacca Tossa-6 at £107 10s. Outport Tossa-2/3 was now lowest at £94 10s and Outport Tossa-4 at £85 May-June. Cuttings were steady at £54 10s for S.N.C. and at £45 5s for N.C.

The Siam market was firmer and fewer offers are being made. Grade A was at £74, grade B at £69 and grade C at £65, delivered mill Dundee for May-June shipment.

The Calcutta goods market became much dearer during the past week. Stocks of goods held by the Calcutta mills during April showed very little change. Business was taking place here in imported goods prior to the rise in prices, but the position was now quieter. Quotations were at 75s 3d for 40in. 100z. and at 55s for 71oz. a 100 yards f.o.b., Calcutta for May shipment, at 74s 9d and 55s 3d June and at 73s 9d and 55s 3d July-September. B Twills were at 173s, 173s 3d and 173s for the respective shipment periods.

Certain descriptions of yarns and cloth were in good demand, but other qualities were difficult to sell at present. The wide cloths for tufted carpet backings were selling steadily, but linoleum hessians were very quiet.

I.J.M.A. PRODUCTION FIGURES FOR APRIL

The Indian Jute Mills' Association reports the total production of jute goods for April as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	6,946 tonnes (6,856 tons)
1,82,60 thousand metres	(1,99,7 lakh yds.)
1,38,1 lakh nos.	
(b) Sacking	41,691 tonnes (41,033 tons)
9,10,23 thousand metres	(9,95,4 lakh yds.)
4,35,1 lakh nos.	
2. Gunny Cloth	
(a) Hessian	36,653 tonnes (36,271 tons)
12,98,15 thousand metres	(14,19,7 lakh yds.)
(b) Sacking	1,494 tonnes (1,470 tons)
28,56 thousand metres	(31,2 lakh yds.)
3. Other Manufactures	18,414 tonnes (18,123 tons)
4. Total Production (All Kinds)	1,05,398 tonnes (1,03,733 tons)

Summary	
(000 metres and 00,000 yds.)	
Hessian	Apr. '63 Mar. '63 Apr. '6
	14,90.75 14,87.45 12,45.2
	(15.19) (15.27) (13.62)
Sacking	9,38.79 9,32.26 9,72.1
	(10.27) (10.20) (10.63)
(000 tonnes and tons)	
Hessian	Apr. '63 Mar. '63 Apr. '6
	43.8 44.4 37.0
	(43.1) (43.7) (36.5)
Sacking	43.2 42.7 45.0
	(42.5) (42.1) (44.3)
Others	18.4 17.4 15.0
	(18.1) (17.1) (14.7)
Grand Total	1,05.4 1,04.5 97.0
	(1,03.7) (1,02.9) (95.5)
Hours worked	208.0 208.0 200.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

Books

SHIFTS IN PATTERN OF EMPLOYMENT

Unemployment and Structural Change. (Published by the International Labour Office, Geneva. Price \$2 or 14s. pages 206.)

In a dynamic economy, structural changes are inevitable. These may be caused by "technological innovations", exhaustion of natural resources, e.g., mines, changes in taste and fashion, and discovery of new products. Structural changes may also be brought about by changes in Government policy towards protection and tariff or in its planned expenditure. Shifts in the pattern of employment are unavoidable, although the incidence of the problem depends on the nature of structural changes, how fast they take place and the industries they affect. For example, in a small town, the problem of resultant unemployment and the difficulties of absorbing the unemployed labour may prove acute. In large cities, the adjustment problem is more easily mitigated by transferring the unemployed workers to new industries in the locality or to new lines of production. One should not, however, generalise, since every structural change is different from the other and each affects the society in a different way. The study, however, points out that the economic distress of an industrially concentrated area depends upon the size of the declining industry's labour force, the rate of industry's decline and the severity of the secondary repercussions within the region.

The problem is not so acute with young workers who can adapt themselves to changes and can move from one place to another more freely in search of employment. Recruitment of older workers is rendered difficult as they are less inclined to move, generally due to domestic reasons and, secondly, they are usually less adaptable to changes.

This authoritative study by the I.L.O. discusses the various measures of relief for the unemployed and the methods which can be adopted to bring about a speedy solution of the interim adjustment problem. Examples have been drawn from the postwar economies of different countries to show the nature of structural changes which had taken place and the effectiveness of the measures taken to ameliorate the resultant distress and unemployment. Generally speaking, the reabsorption of labour has been less difficult where the Government has consciously pursued a policy of a high level of general employment and has thereby generated a high level of effective demand in the community.

Considerations of economic efficiency often clash with those of social stability when a country seeks to formulate its policy for trade and tariff protection. The fear of dislocation in the domestic economy has caused even industrially advanced countries like the U.S.A. to "go slow" with drastic tariff reductions in favour of the products of the less developed countries. The British Government, too, made arrangements with Hong-kong, India, and Pakistan to limit their export quotas for cotton fabrics to the U.K. over a period of three years to arrest the rapid decline of the British cotton textile industry in the 1950s.

A case study based on the postwar economy of West Germany has been presented in the appendix. This timely publication should attract the attention of Government policy-

makers, trade union leaders and the public at large.

BUSINESS ORGANISATION

Fundamentals of Business Organisation. By Y. K. Bhushan. (Published by Sultanchand and Sons, Nai Sarak, Delhi 6. Price Rs. 13, pages 756.)

The book is meant for students preparing for B.Com. and other pro-

fessional examinations. The topics dealt with include the principles of pricing, cost control, warehousing, produce exchanges, etcetera. The language of the book is simple, and previous years' questions have been reproduced. These two features might appeal to students who are particularly allergic to attending lectures.

RURAL TRANSPORT

Case Studies of the Role of Bullock Carts and Trucks in Rural Transport. (Published by the Programme Evaluation Organisation, Planning Commission, Yojana Bhaban, Parliament Street, New Delhi 1. Pages 142.)

At the request of the Committee on Transport Policy and Co-ordina-

tion, the Programme Evaluation Organisation of the Planning Commission undertook a survey to assess the rôle of bullock carts in rural transport over the last decade or so. Since the study had to cover, for considerable stretches, an untrodden path (both *kutchra* and *pucca*), it was decided to cover five selected mandis and their hinterland through an intensive case study. The nature and extent of the use of bullock carts, the ground lost by them to mechanised transport and the underlying economic factors have been studied in each of these market areas. The main points emerging from these case studies have been summed up in the last chapter. In spite of the many limitations of the study, it does provide some basis for understanding the likely course of development of rural transport in the near future.

FOR GETTING DOWN TO EARTH
JOY-VOLTAS DRILLS
VOLTAS HIGH PRESSURE PUMPS
VOLTAS—J. K. SMIT DIAMOND BITS

Joy-Voltas Drills are rugged, versatile, heavy-duty machines built for efficient drilling at low cost. They are manufactured in India in collaboration with Joy Manufacturing Company, U.S.A.

Joy-Voltas Drill No. 12-B: Runs on diesel, electricity or petrol. Four speed transmission. Hydraulic Retraction, NW Swivel Head. Capacity 228 meters (750 ft.) NX 381 meters (1250 ft.) AX

Joy-Voltas Drill No. 7: With Diesel or Electric Power Units Screwed Swivel Head. Capacity 122 meters (400 ft.) AX or 152 meters (500 ft.) EX

Voltas-J.K. Smit Diamond Bits are made in collaboration with J.K. Smit & Sons, London. Their mechanical precision ensures fast drilling rates and higher diamond recovery value

A range of Joy Drilling Accessories is made in India. It includes water swivels, hoisting plugs, drill rods, casings, core barrels, core lifters, etc.

Commodity Markets

RAW RUBBER CONSUMPTION INCREASES STEADILY

(BY OUR SOUTH INDIAN CORRESPONDENT)

THE Indian rubber products industry is likely to require 75,000 tons of raw and synthetic rubber in 1963, according to present estimates. This would be an increase of 13,000 tons over the previous year's consumption. Indigenous production of natural rubber, on the other hand, would expand only to about 40,000 tons if the estimates of the Rubber Board would materialise. The manufacturers are, however, pessimistic; they do not anticipate anything more than 35,000 tons.

This gap between production and consumption will be partially bridged by synthetic rubber produced in India's first synthetic plant in U.P. The plant with an initial capacity of 20,000 tons set up by the Kilachand group with the technical collaboration of Firestone is nearly completed, and production will begin shortly. According to one estimate, the rubber manufacturing industry's entire requirement of 15,000 to 20,000 tons of synthetic rubber during the current

year would be completely met by this new plant. The ultimate capacity of this plant is 30,000 tons a year. Another synthetic plant with a 20,000-ton capacity is likely to come up in some other part of the country.

Mr. P. S. Vaidya, president of the Indian Rubber Industries Association recently drew attention to the increasing use of poly-butadiene rubbers, particularly for motor-vehicle tyres. In his opinion, the Indian tyre industry would have to use more and more of poly-butadiene rubbers if its products were to stand competition in other markets both in price and quality. He was addressing the recent annual general meeting of his Association. He pleaded for the setting up of a plant to produce this kind of rubber in India to meet indigenous demand.

Consumption requirements of raw rubber are increasing and the rubber growing industry in this country is not able to keep pace with this growth. There has been a marked

expansion of manufacturing capacity in India recently. The Government intends to see some 5.2 million tyres and an equal number of tubes produced, compared with the current level of 1.7 million. Some of the earlier estimates of the future consumption requirements will have to be modified in the light of the fast growth in the manufacturing sector. According to one planting estimate, production of natural rubber in India is not likely to rise at a faster rate than 2,500 tons of additional supply each year for at least the next four or five years. The overall picture which emerges is that rubber imports will have to continue for some time to come. Since indigenous produced synthetic rubber will act as the main gap filler in future, natural rubber may have to fight for its share of the market.

Cashew Kernel Exports

According to a trade estimate, exports of processed cashew kernel from India so far this year amounted to about 600,000 cases of 50 lbs each. This represents an increase of 50,000 cases over the exports during the same period last year. A section of the shippers now hold the view that exports in 1963 would touch 2 million cases, compared with 1.8 million cases last year.

Kernel prices have improved slightly from 44 to 46 cents. The market is currently firm following

CAPITAL, 16th May, 1963.

purchases by Russia to the tune of 60,000 cases at around 45½ cents a lb. According to market reports, enquiries from the United States have also been coming in, and business to the tune of 25,000 cases has taken place recently at prices between 45½ cents and 46 cents. For some time, this country which is the principal buyer of this commodity, had not been showing any interest at more than 44 cents. Russian entry might have induced the American buyers to revise their price ideas.

It is said that America still has a wide gap to cover. Import by this country so far this year did not exceed 500,000 cases, compared with its normal annual of about 1.2 million cases. Raw nut imports from Africa so far this season are placed at 120,000 tons and another 15,000 tons more are expected. With the Indian production of about 50,000 tons, the overall raw nut supply is considered comfortable. The difficulty of an unworkable raw nut price that existed recently seems to have disappeared.

Plantation Strike Threat

The plantation workers of Kerala under I.N.T.U.C. leadership are planning to stage a token strike on 20th May in support of their demand for a speedy settlement of the problem of their bonus for the past two years. The plantation workers are very dissatisfied about the delay in finalisation of the quantum of their bonus for three years. The State Government made several efforts at various levels to bring the employers and labour to a settlement, but none of them has succeeded so far. The Chief Minister is likely to make a final bid shortly. In the meanwhile, the Labour Minister has indicated that the Government might refer the issue for arbitration or adjudication.

Good General Demand for Dusts

(BY A SPECIAL CORRESPONDENT)

AT the Calcutta Sale held on 8th May, there was a good general demand for Dust teas. Some 29,445 packages were on offer, but the main tendency was towards easier rates and Medium C.T.C. descriptions were quite well supported at prices which were generally easier, but selected small and powdery teas sold well. The strong enquiry recently prevalent for good C.T.C. types was weaker, and this sale was irregular and often easier; a few selected lines, however, were firm to dealer. Plain orthodox dusts were quiet and eased further as the sale progressed, but towards the close, some recovery was evident. "Tea for price" was again a strong feature. The Assam varieties were well supported, but at easier rates; good liquoring invoices, however, were firm and sometimes dearer. The limited quantity of Legg-cuts on offer sold at generally easier rates.

Coomoor auction mart will be in operation during 1963. The first sale was held on 23rd March and fortnightly auctions will follow during the year. This part of the east now holds tea auctions in Calcutta, Cochin and Coonoor in India and Colombo in Ceylon. The new venture is not likely to affect Calcutta, but may in time make inroads into the amount of tea sold through Cochin, although the main idea appears to be to establish a market for internal consumption in the south.

A large proportion of tea gardens in south India, it is reported, are in need of renovation or may be replanting, but in spite of the poor conditions, south India increased its output in 1962 whereas north India fell away considerably.

The Minister of Industries of Assam recently informed the State

CAPITAL, 16th May, 1963.

Assembly of a scheme to insure 300,000 workers. The proposals have been worked out by the Assam Tea Provident Fund trustees in consultation with the Life Insurance Corporation of India. The premium may amount to Rs. 50 lakhs to cover the age group 18 to 40. A separate scheme will probably be arranged for staff members. The Emergency Risk Insurance will presumably cover goods, factories and include crops and inland transport against damage by enemy action.

The Planning Minister for Assam, Mr. K. P. Tripathi, inaugurated the first general meeting of the Tea Association of India Cachar Branch recently, when he urged the Central Government and the Tea Board to provide more assistance to the tea industry. He said that the present difficulties were due to lack of replanting as well as bottlenecks, but he considered the outlook for tea in Cachar district as cause for pessimism.

The president of the T.A.I., Mr. S. R. Daga, called on the Government and the Planning Commission to fix tea production well in advance of the start of any plan period. He remarked that the target for the third plan was not fixed until near the end of the second plan. As tea bushes still take some years to mature, this recommendation sounds reasonable.

Mr. Daga criticised the extra levy on excise and pleaded that Cachar estates should be allowed to arrange for deferred payments. He also felt that the increase in wages recommended by the Wage Board were without sufficient justification. He added, "he hoped that in the final report the Board would consider the question of linking wages with productivity. This important question is receiving attention in other countries."

Mr. K. L. Khaitan, the branch chairman, dealt with floods and communications. He drew attention to the urgency of controlling floods as they affected rail and river service and even transport. He also suggested that the authorities should supply foodgrains at subsidised rates, and that for transport and fertilisers, subsidies should be extended to estates with more than 300 acres.

Weather reports from north India for April are not very encouraging, although in upper Assam, conditions have improved due to useful rain. But hail is reported to have caused some damage. Central Assam reports poor outturn, but prospects in the lower region are good. North Cachar has had rain, but it remains too hot and dry in the south where severe hailstorms have occurred. In eastern Doorgas, outturn is poor, but the prospect is now better. In the Cachar areas, it is too cold and here also hail has done damage. In the western areas, yield has been poor, but prospects are brighter. Terai reports good rain and some hail and Darjeeling advises hail, poor crops and bad prospects.

Calcutta sales of Dust teas continue to meet with a good enquiry. Meantime, offerings in Cochin met with a further seasonal decline in quality all round and reports from London state there was a falling off in demand at the auction on 29th April.

It is pleasing to note from a report in the Press that the Government of West Bengal has decided to allow tea gardens to retain their surplus lands. It is understood investigations are continuing and presumably in special cases the Land Acquisition Act will be invoked. This is sound policy, although some reluctance to finance tea estates was recently reported. Most of the gardens in West Bengal are intrinsically sound credit risks and as when expansion of acreage and yields progresses, it will be advisable to continue with deve-

lopments in areas already provided with the necessary facilities as to factories, workers and general amenities. With reference to expansion, it also has to be borne in mind that old land can be renovated and replanted on modern scientific principles considerably cheaper than opening up virgin land. In fact, in the conditions ruling today, it cannot be desirable to further denude good forest lands of useful timber.

New tea auctions in Calcutta for exports are not expected to open before June, or maybe end-May. Meantime, there appears to be a quantity of Dust teas still to come on offer from last year. The proportion of Dusts to Leaf appears to grow larger year by year which is, of course, a natural trend, for it stands to reason that the smaller the atom, the quicker will boiling water produce a brew. Dusts make a stronger infusion than leaf from the same garden and, therefore, suit mechanical vendors. Although flavour, aroma and quality may be lacking the tannin is present. This mixed with milk and sugar provides a cheap and satisfactory beverage to workers.

Improvement in Coffee

Fortunately for tea growers, there has been a moderate increase in the price of coffee. Some robusta marks have improved. Gradually, over the past four years and thanks to international agreements, helped in small degree by climatic conditions, it is thought that the world coffee market is moving towards more stable conditions. The F.A.O. reports that coffee consumption has been increasing over the past five years at the rate of 4 percent a year. This indicates that 20 percent or more coffee is going into consumption. This is said to be due to higher incomes and, for a spell, low coffee prices as well as some reduction in world duties and taxes and better quality as well as an expanding demand for instant coffee. There has also been a decline in production since the record supplies of 1959-60, and the U.S. Department of Agriculture expects this downward trend in output will continue. But it will be seen that the competitive power of coffee is formidable.

CHEMICALLY RESISTANT COVERING MATERIALS

The National Chemical Laboratory, Poona, has developed a process for making chemically resistant material. The latter are required for covering laboratory work benches, flooring and in tank lining used for transporting alkalis and acids. At present, rubber or ebonite is used for these purposes. Rubber modified plastics are forming new series of compounds which yield products with high impact strength. Many thermoplastic resins modified with butadiene-resins have shown improved physical properties. This makes them suitable for brake lining and clutch facings composition. These are all costly and involve the use of chemicals, some of which have to be imported. The National Chemical Laboratory has successfully developed a process for preparing stable and homogenous sheets and structures having desired properties from indigenously available cashew-nut shell liquid. With the exception of accelerator, other raw materials such as cashewnut shell liquid, hexamine and zinc oxide, etcetera, are all available indigenously. The capital expenditure required for a plant capable of preparing 50 lbs of chemically resistant sheetings a day is estimated at Rs. 12,000. The investment data is for preparing only the polymer. No imported equipment is required.

COMPANY AND PUBLIC NOTICES

BRITISH PAINTS (INDIA) LIMITED

REGISTERED OFFICE: 32, CHOWRINGHEE ROAD, CALCUTTA-16.

NOTICE is hereby given that the Thirty-ninth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company at 32, Chowringhee Road, Calcutta-16, on Wednesday, the 26th June, 1963, at 11 A.M., to transact the following business:—

1. To receive the Report of the Directors and adopt the Audited Accounts for the year ended 31st December, 1962.
2. To declare a Dividend.
3. To elect a Director.
4. To consider, and if thought fit, to pass the following Resolution, with or without modification:—

"That due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office pursuant to Section 257 of the Companies Act, 1956 Mr. Robert George Edwards be and is hereby appointed as a Director of the Company."

5. To appoint Auditors and to fix their remuneration.

To Transact as Special Business

6. To consider, and if thought fit, to pass the following Resolution, with or without modification, as a special Resolution:—

"That with effect from the First day of September, 1962, Mr. R. A. Godwin, the Managing Director of the Company, will be entitled to receive from the Company remuneration for his services in accordance with the terms set out in an Agreement dated the 26th day of April, 1963, made between the Company of the one part and Mr. R. A. Godwin of the other part."

7. To transact any other ordinary business that may be brought before the meeting.

By Order of the Board,

S. R. ROY,
Secretary.

Dated at 32, Chowringhee Road, Calcutta-16, the 14th day of May, 1963.

N.B. 1. The Share Transfer Books of the Company will be closed from the 12th June, 1963 to the 26th June, 1963, both days inclusive.

2. A member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself, and the Proxy need not be a Member.
3. Subject to the confirmation of the Members in the Annual General Meeting, the related Dividend Warrants in respect of the Shares registered in the Books of the Company on the date of this Meeting will be ready for despatch on the 2nd day of July, 1963, to the Holders thereof.

The explanatory statement as required by Section 173(2) of the Companies Act, 1956 in regard to the Special Business cited above has been forwarded to Members together with a copy of this notice.

THE TITAGHUR PAPER MILLS COMPANY LIMITED

Registered Office: Chartered Bank Buildings, Calcutta-1.

RIGHTS SHARES—UNPAID INSTALMENT MONEY.

NOTICE is hereby given that the Board of Directors of the Company, at its meeting held on the 8th May, 1963, decided that interest on the instalment money, i.e., Rs. 7.50 per share due on the 5th April, 1963, in respect of Rights shares allotted on the 27th February, 1963, would be waived provided that such instalment money is paid in full to the Company on or before the 18th May, 1963, and that allottees who fail to pay such instalment money on or before the 18th May, 1963, shall be liable to interest thereon at the rate of 9 per cent per annum calculated from the 6th April, 1963, until payment. Furthermore the Rights shares allotted and in respect of which the instalment money remains unpaid after the 18th May, 1963, shall be liable to forfeiture in the terms of the Articles of Association of the Company.

Allottees concerned are therefore advised to make a prompt and punctual remittance of the outstanding instalment money to reach the Company on or before the 18th May, 1963. Payment thereafter must be accompanied by the appropriate interest calculated from the 6th April, 1963, to the date of payment.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Dated 8th May, 1963.

THE NEW DEVELOPMENT POINT OF VIEW

LAST week's Commonwealth Trade Ministers' conference in London was not, after all, a total waste of time so far as the under-developed countries are concerned. The object of the meeting was primarily to discuss the agenda for the G.A.T.T. conference in Geneva. The British Government took great pains to ensure that hopes of anything more than this should not be allowed to spring up. In the event, this move was only partially successful. The meeting did not provide the under-developed countries with any concrete opportunities for increased trade within the Commonwealth; the British did make their point that the Commonwealth can never provide them with an alternative to Common Market membership or to the need to work for expanded world trade; and the manner in which the whole thing was played down to the British public did discourage the kind of sentimental attitude which tends to regard the Commonwealth as a later-day empire united under the Crown and determined to develop as a unit. But the under-developed countries, India included, appear to have broken through this stifling envelope of British-orientated thoughts and feelings and stated a case which not only carried weight at this conference, but also made an impact in Geneva. Briefly, it is that too much attention is at present being given to expanding trade between the developed countries—admittedly a good thing in itself—to the exclusion of promoting exchanges between all countries, with special privileges accorded to those who need them most.

With the developed world itself being at present deeply divided on trading matters, it is not surprising that the case of the under-developed countries has, for once, been most forcefully stated and sharply defined. This is an advance indeed. It might mean a sharp modification in the present unsatisfactory view taken of development problems in many countries already well developed. More specifically, it might spell progress along the road to replacing the currently faltering flow of international development aid, at least in part, by increased trading opportunities. In this respect the London conference has been an unexpected success, and may indeed find its way into history as the first occasion on which the case for the under-developed countries was stated clearly, firmly, and in united chorus.

What then are the details of this case as so far formulated? Mr. Manubhai Shah put the whole thing in outline in the speech he made at the London meeting. His point was that G.A.T.T. does not provide the kind of liberal trading opportunities which the under-developed countries want, and want in a hurry. He complained that the reduction of Commonwealth preferences, which might result from British commitments under the "Kennedy round", could hurt the under-developed without providing any compensatory advantages. And he urged that such advantages, which are urgently needed, should take the form of a general lowering of tariffs and quota res-

trictions on the products of the poorer countries. In his own words: "If the forthcoming trade negotiations in the G.A.T.T. are to have any significance for developing countries like India, it is of the greatest importance that they should result in the maximum possible concessions on products of particular interest to us..." Mr. Shah then specified simple manufactured articles, processed and semi-processed goods and primary products, and pointed out that in most industrialised countries such exports are generally subject to higher levels of tariff and other trade barriers than the more sophisticated products from the industrialised countries themselves. This is true, and the under-developed countries can scarcely be expected to take much interest in the G.A.T.T. until something is done about it. At the London conference the British Government made a fair attempt to put the case for the G.A.T.T., and bearing in mind that Britain is one of the smallest offenders against under-developed countries among the world's largest trading nations, its words may have carried some weight. But the obvious fact remains that Britain has more to gain from the Geneva negotiations and that anything she may say about promising future prospects is automatically suspect.

Again in the words of Mr. Shah: "If the negotiations do not result in tariff cuts which are at least as deep and as wide on products of interest to developing countries as on the more sophisticated products traded between the industrialised countries the G.A.T.T. would

there may be some difficulty in getting agreement among the under-developed countries themselves as to what is in their true interest. The fifth point provides that reductions in tariffs of at least 50 percent should be made on the processed and semi-processed exports of under-developed countries, and the sixth, that there should be a progressive reduction of internal charges and revenue duties on their products, with complete elimination by 1966. On the face of it, the chances of this last one ever being accepted by the developed countries, even in principle, do not appear high.

But the most important point, and the one which is both the most general and the least likely to encounter opposition, is that a new institutional machinery should be set up in the G.A.T.T. for dealing with the special problems of under-developed countries. There is obvious scope in this for the kind of benevolent pre-variation towards the claims of the under-developed in which so many of the larger trading nations have frequently indulged. But its adoption would mean a foot in the international trade organisation, a toe-hold which the under-developed countries could progressively widen and use to swing world opinion round to their own way of thinking.

In one sense, of course, the argument put forward by the British representative at the London conference was correct. The Commonwealth will benefit from any relaxation of world trade barriers secured through the "Kennedy round". Certainly the under-developed countries are entitled to formulate and propagate their own particular points of view, but this does not detract from their vested interest in more liberal world trade, and is no substitute for it either. Before the London conference it was widely accepted that the G.A.T.T. round would be a dialogue between the United States on the one hand and France, as the most obdurate and outspoken member of the

Common Market, on the other. The emergence of the under-developed countries' point of view has not materially changed this. It has only served to remind the two main contestants that their bargaining is of more than academic interest to the rest of the world. There is no doubt that the United States appreciates this, although its past record of trade protection is one of the reasons for the current strength of self-sufficiency theories in western Europe. It is France who has been the greatest obstacle to the achievement of any "across-the-board" reduction of tariffs, and who must, therefore, be the main target at which the efforts of the under-developed countries are aimed. This fact has already emerged from last week's discussions in Geneva.

However, there are two facts which the under-developed countries should remember in their new-found unity, if in fact this has now been established. The first is that but for French initiative the Common Market would never have come into being, and without the bargaining power this organisation has provided, there would be no question now of the United States being prepared to cut its tariffs by 50 percent. In this sense the Common Market, despite its current autarkic leanings, has served the cause of more liberal world trade rather than hindered it. And the second is that France can claim considerable credit for the way in which she has helped the trading positions of her ex-dependencies—which together form a fair proportion of all the world's under-developed countries—through promoting their Associate status in the Common Market. So the moral bargaining power of the under-developed countries in the G.A.T.T. negotiations has not been as high as it would seem at first sight. The real opportunity probably lies in the future, and its realisation will certainly be assisted if the present concerted viewpoint of the under-developed countries can be broadened, strengthened and made more articulate.

HIGH COSTS HIT TEA INDUSTRY

THE volume of tea exports increased by 7 percent during the year ended March 1963, but the rise in terms of value was only 5.5 percent. This confirms that, despite the up-trend at the Calcutta auctions from October, the average unit value of exports over the whole year has marginally declined. This is not necessarily an unwelcome development since the whole point of reducing export duties and granting a drawback of excise on exports was to make Indian teas more competitive in world markets. But the point to note is the effect on tea companies' finances at a time when their outgo on many items of operating costs is on the rise. Besides, there is the burden of the super profits tax; even if that is excluded as an extraordinary levy arising from the emergency, the question remains whether tea companies will be able to absorb the continuous rise in overheads through larger production. If they cannot, the result will be a squeeze on their profits which must impair the capacity to expand, jeopardising the third plan target set for the industry.

While the target need not be considered sacrosanct, the rising home demand is a factor to reckon with. India now consumes 40 percent of her total production; and it will be difficult to meet future demand without cutting into the exportable surplus if the present rate of increase continues. As a leading firm of brokers has said in its review of the 1962-63 season, the "threat" on this account to India's export prospects is "more immediate than many people realise". One can, however, look upon the strength of home demand not as a "threat" but as a blessing, since it assures the grower an alternative market if international supplies exceed the demand. In fact, India is the only major tea-producing country with a second line of defence in the form of an assured and substantial home market. But an over-emphasis on the home market cannot but affect exports and the larger interests of the country. Setting policy on the right course to maintain a balance between the two is by no means easy, and the Government manages to make the task more difficult for itself

by disregarding the advice available to it from responsible organisations of the industry.

A case in point is provided by the recent tax measures. The abolition of the export duty is indeed a sensible step because this levy was wholly indefensible at a time when India was actively trying to persuade the E.C.M. countries to permit duty-free imports into Europe. But what benefit will the elimination of export duty confer when domestic production costs have been raised by well-nigh an equal amount through the 20 percent surcharge on excise? In the case of the two zones which account for the bulk of the exports, the actual net relief is as little as 1nP or 3nP a kilogram. This, of course, does not take into account the incidence of higher costs following the increase in the excise and other levies on the stores and supplies that the tea industry requires to maintain production. While no precise estimates are yet available, it is safe to assume that tea placed on auction in India or exported direct to London will in either case cost more than last year, offsetting the advantage sought to be gained by removing the export duty. This apart, the abolition of the drawback of excise reduces the incentive to export at a time when the aim of policy should be just the opposite. With the major U.K. market close to the saturation point, much aggressive selling will be needed to develop others—a task which need not be left wholly to the Tea Board. But can private initiative be mobilised if the incentive to export is whittled down in this manner?

Looking to the future, the more important policy requirement is to ensure that the tea industry has the wherewithal to invest on expansion. The broad picture, regardless of minor variations from year to year, is of profits being squeezed by rising costs. Apart from the general inflationary pressure unavoidable in a period of rapid growth, there is also the incidence of the obligations for workers' welfare which legislatures have imposed on the industry. There is a widespread notion that an expanding industry should be able to spread rising overheads over its larger output. This theory does

not stand up to the test of experience; in an essentially agricultural enterprise like tea, costs do not decline to anything like the same extent as in manufacturing units. As a contributor to the last annual number of *Capital* pointed out, green leaf must be paid for according to weight; excise duties, cesses and octroi rise in proportion and there is no reduction in transport costs either. The rigours of the super profits tax will further aggravate this general decline in profitability, and net effect must be to weaken the industry financially.

The Government, already having to buttress tea finances by special loans and replanting subsidies from the Tea Board, will find itself carrying a larger burden of responsibility, especially because of its concern for weaker, uneconomic gardens. This is exactly what official policies must strive to prevent if debilitating dependence upon outside help is not to become a permanent feature. In other spheres, the emphasis in official thinking is changing towards giving freer play to market forces in recognition of the value of private initiative and healthy competition. To extend this thinking to the tea industry would imply making it possible for growers to earn enough to pay for their own expansion. This means restraining not only the impulse to pile tax upon tax but also curbing excessive zeal for the worker's welfare.

There is no doubt that employers must lend a hand to the State in realising its social objectives. But it will be folly to push ahead in this sphere so fast that international cost comparisons are distorted. Disregard would involve either losing the export markets or making up the difference between costs at home and world prices through subsidies, hidden or explicit. In either case, the community stands to lose as much as, if not more than, the industry. Indian tea may be priced out of export markets in the same way as manganese ore. It is to be fervently hoped that the Government will heed the writing on the wall and act before it is too late.

The setback in the north Indian tea crop last year because of adverse growing conditions in the best picking months reduced the total world availability below the 1961 level. The long-term trend, however, is for production to rise steadily in all growing countries. Since domestic consumption accounts for only a small proportion of the crop in countries other than India, an increase in their output means an almost equal rise in the supplies to the world market. So far the demand has kept pace with supplies but there is no guarantee that this will always be so. The F.A.O. report which forecast a glut around 1965 was admittedly wrong in several particulars and a fresh forecast is necessary. But must India wait before this is completed to think out the steps which she may initiate in concert with other growers to achieve some measure of international price stabilisation?

FAILURE OF GOLD CONTROL

THE sharp rise in the price of gold from Rs. 92 to Rs. 118.50 for 10 grammes since the enforcement of the Gold Control Rules is a second reminder that an assault on age-old customs will not succeed through half-hearted measures. The first reminder came when the Gold Bond scheme introduced in November 1962 failed in its objective of attracting the metal out of the hoards. This scheme had to be abandoned later. Although the Gold Control Rules have been described as comprehensive, there are some gaping loopholes which make them difficult to enforce effectively. The provision that the people need not declare their gold ornaments has restricted the success of the control measures. It looks as if most of the gold bullion has been converted into jewellery and is being held in that shape. Since the promulgation of the Rules, only 27.5 million grammes of gold, valued at Rs. 13 crores at the international price, have been declared by dealers and refiners; individuals have declared only 12.7 million grammes of gold holdings. But the total hoards in the country are believed to be worth more than Rs. 2,000 crores at the international price. It is thus clear

that gold control has barely touched the fringe of the problem.

It may be argued that there has not been sufficient time yet to tighten up the administrative machinery for enforcing the Rules. Even granting that this deficiency is removed, it is doubtful if the objectives can be achieved. The official view about the object of the Rules has now shifted in emphasis from the reduction of gold price to discouragement of smuggling. When the Rules were promulgated, it was complacently stated that the price would be forced down to the international level of about Rs. 70 a tola. The present price is nearly Rs. 130 a tola. It is obvious that smuggling is closely linked with the price factor; if the domestic price were to move down to the international level, there would be no incentive for smuggling. However, this is not to suggest that the control measures have not restrained smuggling. A check has been put on the free transferability of gold. It has become difficult for smugglers to deal in gold in the sense that it cannot be sold except in the form of ornaments. Obviously, if the metal is smuggled in the form of ornaments, this difficulty will not arise. The recent seizures of contraband gold seem to indicate that smugglers have become active again. As a result, the value of the rupee has depreciated in overseas markets. Considering that smuggling has been a major source of foreign exchange leakage—to the extent of Rs. 25 crores to Rs. 50 crores a year—it is essential that vigorous steps should be taken to eradicate it. But it should be borne in mind that it will be almost impossible to stop

Prospects for Man-made Fibres

The man-made fibre industry has made spectacular progress over the past decade or so, with world output rising from a mere 48 million lbs in 1951 to 8,665 million lbs in 1962. Man-made fibres constitute an important chunk of the total international output of fibres, their share being 25 percent, compared with 65 percent of cotton and 10 percent of wool; in 1952, these percentages were 15, 75 and 10, respectively. In India also, the record of man-made fibres is quite impressive. As against 5 million lbs in 1951, the output in 1962 is placed at 57 million lbs of viscose filament yarn and more than 70 million lbs of staple fibre. For the cotton textile industry in India, the immediate problem, however, is not competition from man-made fibres, but to find a material which will blend with cotton in order to make good the shortfall in supplies.

In his address at the annual meeting of the Association of Man-Made Fibre Industry, the chairman, Mr. A. R. Ramanathan, has urged the Government to help the research-orientated man-made fibre industry to reach optimum production and stabilise prices. The development of this industry, says Mr. Ramanathan, deserves priority in the allocation of foreign exchange. His case rests on the argument that the cotton textile industry is a net spender of foreign exchange, and there seems little hope of stepping up domestic production of cotton in the near future to a level which will appreciably reduce dependence on imports. He says that with the achievement of self-sufficiency in man-made fibres, Indian textiles will gain new dimensions and will even earn a sizable amount of foreign exchange by entering the overseas market at increasingly competitive prices. Increase in the production of man-made fibres, especially staple fibres, will help reduce the dependence on foreign cotton. The switch-over to cellulose-based fibres appears advisable since the raw materials required for their development, namely, bamboo and cotton linters, are available from indigenous sources.

Apart from the fact that foreign exchange available for the expansion of man-made fibres has been inadequate, the industry, for the present, is subject to stringent controls. The prices of man-made fibres have been frozen at the 1957 level in

smuggling unless the incentive for it is removed by bringing down the domestic price of the metal to about the international level. The mere fact of increasing the risks attached to smuggling will not, by itself, eliminate smuggling.

As for the spurt in gold price, the trend is not difficult to understand since the demand for the metal has revived whereas the supply is short. It is unfortunate that no active measures have so far been taken to reduce the demand. The 14-carat specification for ornaments did cause a temporary decline in demand. But the glittering ornaments turned out of special alloys with 14-carat gold content have stimulated the demand. Unless the gold habit of the people is curbed, substantial funds will continue to be immobilised in the form of jewellery. The demand for ornaments apart, an important factor which has encouraged the hoarding habit is the value of the yellow metal as a hedge against inflation. To attribute the increased demand for gold in recent months to the busy season is to over-simplify the problem itself. The rise in the demand has coincided with the steady increase in the prices of commodities. As inflation proceeds, the attraction for gold will become greater. The prices of commodities have been pushed up by the rises in production costs, following the imposition of heavier import and excise duties; the shortage of several agricultural products including foodgrains, has added to the inflationary pressure. If the people are to be weaned away from hoarding gold, one of the measures must be to hold the prices of other commodities down.

Current News and Comment

spite of the all-round rise in costs. Meanwhile, market prices are showing a downward trend and stocks with spinners have been piling up. Mr. Ramanathan has suggested that the Government should allow spinners to sell such quotas as are not lifted by the consumers within a prescribed time limit. Despite the various problems that the industry has to face, the outlook for man-made fibres is promising, he says, because of the growing population, rising living standards and changing consumer tastes. Besides, the almost unlimited variety of yarns which these fibres make available have increased the ability of the designer to produce new, better and different fabrics on a scale which would otherwise be impossible. Man-made fibres have also made possible the production of high quality fabrics at prices "within the reach of the common man."

Progress in Machine Tools

The production of machine tools in India has increased from a little over Rs. 7.25 crores in 1961 to over Rs. 12 crores in 1962. However, as Mr. C. Subramaniam, Central Minister for Steel and Heavy Industries, stated in his speech at the training centre for Hindustan Machine Tools project to be set up near Ernakulam, the machine tool output has not still reached the modest target of Rs. 30 crores set in the third plan. By the end of the plan-period, the total demand for machine tools will rise to Rs. 65 crores. The present production capacity in the country is far below it. Mr. Subramaniam said that the achievement of the public sector enterprise was better than that of the private enterprises in the industry; Hindustan Machine Tools had not only been functioning efficiently, but had also been gathering resources within itself to double its production capacity in Bangalore and to put up more units elsewhere. But the Minister would have given a more realistic picture if he had gone a step further to analyse the causes for the poor performance of the machine tool industry in the private sector. Private enterprise has not been able to put up new units because the Government has not approved many of the foreign collaboration schemes proposed by the entrepreneurs. Besides, the licences issued for importing machinery, components and raw mate-

rials have not been adequate. Financial assistance to the industry was also insufficient.

Machine tools are important for India's economic development. Their importance has increased in view of the defence requirements. It is, therefore, necessary for the Government and the private sector to make renewed efforts to develop the industry so that it is able to achieve the third plan target. The industry has to depend on foreign collaboration for designs, technical know-how and capital goods to a much larger extent than many other units. Hindustan Machine Tools itself owes its progress to such foreign collaboration on a generous scale. The Government's insistence that the royalty rate in foreign collaboration should not exceed 5 percent is unreasonable, since this leaves only a little less than 3 percent to the foreign firm and is not attractive enough. As has been suggested by the Machine Tools Industries Association, the maximum rate of royalty should be fixed at 7½ percent and the duration at ten years in order to attract foreign collaboration for producing machine tools.

In the interest of developing this vital and strategic industry, it is also necessary to allow the concerns to earn a profit of 12 percent on their capital investment. The tax holiday on new enterprises should be extended from five to ten years. In spite of the prevailing foreign exchange shortage, it is necessary to grant licences to the industry rather liberally for importing machinery, raw materials, etcetera. By doing so, much foreign exchange spent on the import of machine tools will be saved and the country's industrial base will be strengthened. It is quite evident that in spite of the good progress of Hindustan Machine Tools and the expansion programme it has put through, private sector units are necessary to meet at least half the Indian requirements by the end of the third plan period.

Population and Economic Growth

While inaugurating last week in Bangalore the summer school of demography organised by the Institute of Economic Growth, Dr. V. K. R. V. Rao, member of the Planning Commission, emphasised the need to study the all-India and regional growth of population, its distribution, class composition and status to be able to undertake systematic planning. Unfortunately, many mistakes have been made in planning in India because of wrong estimates of population growth. According to Spengler, it is necessary to invest 4 percent of a country's national income annually if the population is increasing at the rate of 1 percent a year in order to maintain current living standards. Since India's population, according to the 1961 census, is increasing at the annual rate of a little over 2.1 percent, the above formula would suggest that nearly 8½ percent of the national income needs to be invested in a year to protect the existing standards of living of the people. Or else, it will be necessary to check the growth of the population.

Contrary to popular belief, there is nothing inconsistent between a rising rate of economic development and an increasing rate of population growth. In fact, it is only natural that with economic growth, the population should be expected to increase. But India's case is exceptional. As against the pattern in most advanced countries, where with rising rates of economic development and population growth the death and birth rates have both tended to decline, in India the death rate has declined with economic development but

India's Resources

are Precious

WASTE NOT,

WANT NOT

the birth rate has increased. The death rate in India started falling some ten or 15 years ago and might now be estimated at 18 a 1,000 a year. The birth rate, on the other hand, began to increase and is now in the neighbourhood of 40 a thousand a year. The death rate has declined because epidemics are now better controlled, medical help and sanitation have improved and with higher incomes, the people's resistance to disease has increased. In the more developed western countries, the birth rate also began to decline with an improvement in the people's living standards because of their mental attitude, urbanisation and family planning, to mention only a few of the causes. As Dr. Rao pointed out, the people of India cannot afford to ignore the psychological aspects of economic development. If the birth rate continues at 40 a 1,000 a year or increases further, it will become impossible to solve the unemployment problem and to raise the people's standard of living.

It is, therefore, necessary to make the programme of family planning more effective than in the past. For this purpose it is not enough to spread information on family planning in cities and rural areas. It is also necessary to provide cheap and effective means of birth control. In spite of much talk about family planning, the methods are not yet widely known in India. A study of population trends is also necessary to bring about a balanced regional development of the economy. While the mean rate of growth in the ten years ended 1961 was of the order of 21.1 percent, compared with 13.2 percent in the decade ended 1951, the rate of increase in some States such as Assam, U.P. and West Bengal was much higher. This indicates the need for greater economic development of these regions.

Plea of Scrap Exporters

Ferrous scrap exports in 1962 at 165,000 tons were 56 percent down from the 1961 figure of 375,000 tons. The performance this year is likely to be even more disappointing since shipments during the first quarter are placed at no more than 35,000 metric tons. The fall in foreign exchange earnings is likely to be much heavier because of the substantially lower prices now being fetched abroad. For the past many months, the overseas prices of No. 2 bundles and turnings and borings—the main export grades—have been quoted around £10 to £11 a metric ton c.i.f. Japan as against £15 to £17 about the middle of 1961. Domestic prices also have suffered an almost corresponding decline during this period, with No. 2 bundles down from Rs. 165 to Rs. 90 a ton, and turnings and borings declining from Rs. 140 to Rs. 60 a ton. It would be a different matter if the slump in scrap exports were due entirely to a change in the market conditions abroad. But the trade blames the setback in exports mainly on the unrealistic and unimaginative policy adopted by the Government.

In its memorandum to the Central Minister of International Trade, Mr. Manubhai Shah, the Scrap Traders and Exporters Association has drawn the Government's attention—not for the first time—to the sharp fall in scrap exports and to the adverse circumstances facing the trade. The memorandum points out that the severely restrictive and irreconcilable features of the present export policy are the outcome of the defective basis adopted by the Government in framing its export policy. The Government's policy is based on the findings of the Scrap Committee which have already been seriously questioned by the trade.

The Scrap Traders and Exporters Association has again made a plea that an independent and expert agency like the T.C.M. be requested to conduct a physical survey of the arisings of various grades of scrap as well as their domestic requirements in order to secure the most economical utilisation of the surplus. Meanwhile, says the Association, the export of steel melting scrap should be freed from all restrictions in order to improve the utilisation of the surplus. The trade, on its part, is prepared to guarantee supplies to domestic users for a period of time to satisfy the Government that free export of scrap will cause no hardship to domestic users.

Since practically the entire surplus of the order of 1.3 million tons of scrap a year is at present

unexploited for want of encouragement to scrap export, the Association has put forward a number of suggestions, which, if implemented as a long-term policy, would help improve exports, to 1 million tons a year in a period of two or three years. The Association has asked for the removal of the overall export quota restriction which is unrealistic in the context of an estimated annual arisings of 1.5 million tons and a domestic demand of about 200,000 tons. It has also demanded the lifting of the ban on export of No. 1 sheet cutting and heavy melting scrap with a view to providing outlet for the sizable surpluses in these grades as also to help exporters meet the competition of the foreign suppliers offering superior grades. The Association has also suggested various incentives for encouraging intensive collection of scrap and for making good the heavy losses incurred on exports. Introduction of a concessional railway freight of 50 percent of the current rates is considered to be very necessary for encouraging the collection of scrap from the outlying areas; as it is, collection continues to be mostly confined to economic zones around the port towns of Bombay, Calcutta and Madras.

The Association has asked for permission to use the entire export earnings from scrap for importing finished steel. The anomalous and adverse fluctuations in the ocean freight rates for scrap are also said to be inhibiting scrap exports. For a commodity with an average export price of about £11 a ton c.i.f., a freight incidence of £3 is heavy. The Association has suggested that the ocean freight should be reduced to a flat 50s a ton for all grades. In the face of the prevailing low overseas demand and price for scrap and in view of the increasing foreign competition, a free export policy by itself may not be adequate to promote exports to the desired level. The Association has, therefore, suggested that the existing incentives should be further liberalised. It feels that if improvements and relaxations of the policy coupled with export incentives and freight concessions, as suggested by it, are introduced, the exports might soon rise to around 50,000 tons a month in spite of unattractive conditions in export markets.

Fire Losses in U.K. and India

The British Insurance Association recently announced that the fire wastage in Britain was worth £55 million in 1962. This total is about four-and-a-half times the level of fire damage 16 years ago. Fire losses in Britain during the last few years have been particularly heavy. Although 1962 was not characterised by as dry a summer as 1960 (a dry summer is often regarded as one of the major causes of fire damage), the losses baffled many, and a variety of reasons have been offered. The Times is reported to have commented rather unkindly on the B.I.A.'s elaboration of the causes. It said that "before any tears are shed on behalf of the insurance companies, it would be interesting to see by how much fire insurance premium has increased in the same period and to what total".

This caustic comment seems to ignore the precise significance of fire wastage in a country. Fire damage means a loss of national wealth. Although the insurance companies try to keep the economic fabric of the community in a state of constant repair, they do not in that way add to the national wealth. They merely help to replace the loss by a process of pooling the resources of the community. These resources could have been used to add to the wealth of the community had there been no waste to replace. As for premiums, it has been pointed out that the premium income of British companies in 1946 amounted to £87 million, on which the underwriting profit was about £5 million (5.7 percent), while in 1961 premiums totalled £293 million and the underwriting profit was £5.3 million (1.8 percent). The companies would have been better off had there been less fire damage.

There is no computation in India of the money value of fire damage in a year. The regional reports of the Insurance Association of India refer to a number of fires, but the list is incomplete, since the insurance companies are not required

to report all fire losses. Even if they were to report all such losses, the compilation would not include losses which are not insured with the insurance companies. These, in India, are not inconsiderable. So there is need for a statistical return of fire wastage in India during a particular year. This will enable the country to determine the annual value of fire damage. Fire losses, by and large, are due to carelessness, and if a careful enquiry is made about the causes, many useful conclusions might emerge.

The underwriting balance of Indian insurers in relation to their net premium income was 15.2 percent in 1959 and 23.7 percent for non-Indian insurers in the fire section. In 1960, it was 12.9 percent and 27 percent, respectively, against 1.8 percent of British companies in their worldwide fire business in relation to their premium income in 1961 which totalled £293 million.

Rise in Freight Rates Proposed

A delegation of the India-U.K. Continental Shipping Conference is now in this country with a proposal to increase the freight rates by 15 percent on all west-bound cargoes from India to the U.K. and the Continent. A rise in the freight rates is sought because operational costs of shipping lines have increased considerably during the past few years. There has been no increase in the freight rates since 1957. In fact, the freight on jute and jute goods was cut in 1961. It is authoritatively learnt that the Conference lines are willing to accept a smaller increase in the rates for the time being, provided a further increase is considered within a year. However, such a move will be contrary to the agreement between the Government of India and the Conference lines that no increase in the freight may take place within two-and-a-half years after any rise.

The proposed increase in freight cannot be viewed with complacency at this time when export promotion is a vital necessity. An important factor which hinders exports is that price of Indian commodities have become uncompetitive in overseas markets. Since freight constitutes a substantial portion of the total cost of commodity, any rise in it will affect the competitive power of Indian products. Under the circumstances, it is hoped that the Government of India and trade interests will try to impress on the delegation the adverse effects of a freight rise on the Indian economy.

PROTECTION VS. FREE TRADE

It looks as if the battle between Protection and Free Trade would have to be thrashed out again as it was a couple of generations ago. John Bright always challenged Protectionists to produce a workable plan, and they could never do it. The moment you begin to penalise the imports from foreign countries, you at once invite a war of tariffs. We see a small object lesson of this kind begin already between Canada and Germany. It will be interesting to watch its developments and ultimate results. A return to protection in Great Britain under the specious guise of differential duties in favour of colonial produce would simply mean, in the long run, dearer bread to the working classes, and dearer raw material to those great manufacturing industries (cotton, for instance) on which British commercial prosperity so largely depends. Dearer raw materials means reduced profits and lower wages. This would be a bleak outlook for the industry just mentioned considering that even now there are in Lancashire ten thousand looms out of employment. The politician who dislocates Britain's present international trade relations with other countries by penalising their goods with differential import duties, will soon learn all the ins and outs of a Protection policy, but it will be in the same costly fashion as that by which the Irish pilot learned his profession. He discovered the rocks by bumping up his ships against them. There were a good many shipwrecks, but he learned navigation.

FROM
CAPITAL
28th May, 1903

A Ditcher's Diary

WHY SHOULD I BE CHARY OF CONFESSING QUITE candidly that I had not expected either Acharya Kripalani or Dr. Ram Manohar Lohia to come anywhere near the Lok Sabha through the recent by-elections in Uttar Pradesh? Yet I was, initially; and the reason, I suppose, is that there is in us all not merely a budding Dr. Gallup but also some sort of an aspiring prophet. The fact is, let us ruefully admit, that we can foresee the future but dimly, if at all. For once the editorial "we" includes some of the astutest politicians the world has ever known. Mr. Nehru apparently persuaded himself that a message from him and Hafiz Mohammed Ibrahim would be safely home. But fallibility is by no means a monopoly of men in office. The long list of complaints produced by both Acharya Kripalani and Dr. Lohia about the most unfair way in which the election and the preceding campaign had been conducted is surely evidence enough that neither had seriously hoped to get through; their post-poll remarks were in fact pre-fabricated excuses for defeat. Prophets' pitfalls apart, what is the significance of the latest bunch of by-elections? To try to interpret the results in terms of right, left or centre is to get lost in a futile and utterly profitless exercise. If the Congress lost valuable contests in Amroha, Farrukhabad and Trivandrum II, it also scored notable victories in unsure constituencies in West Bengal, Madras and Kerala, some of them urban. What the Congress will do well to note is that popular discontent with its myriad inconsistencies is more widespread than it has so far been prepared to admit. Men like Mr. Morarji Desai, whose difficulties are at least as monstrous as is their conceit, should see this before an Indian Cromwell beseeches them in the bowels of Christ to think it possible that they may be wrong. All this said, the Congress deserves to be congratulated that even in an emergency it invites by-elections in which it hopes, and does its worst, to win but allows conditions in which it can be, sometimes, handsomely defeated. Of how many countries, in any part of the world, could you say that?

ALMOST EVERYTHING APPEARS TO HAVE GONE wrong at one stage or another with the U.S.A.'s latest sortie into space, except the one element, the human, which the world is being taught daily to rely less and less on. The sheer cool courage shown by Major Gordon Cooper in face of re-

peated mechanical failures was entirely exemplary. But it will be a long time before N.A.S.A. and others concerned have satisfactorily explained why there were so many "malfunctions", if that is the word, from beginning to end, exposing the astronaut to unimaginable hazards. This is the kind of thing that shakes one's faith in the Americans' supposed mastery of the machine. It is simply not enough to say that the Russians never publicise their failures, that the U.S. Press advertises every detail and so produces a wrong "image" of U.S. skills in spacecraft. I do not believe that there are no inter-service rivalries in the Soviet Union; I do not believe that the Russians' advance in this department of human endeavour is explained by their spending more money on these projects than the Americans. It would not have mattered so much if the U.S. expedition had not succeeded in climbing Everest; after all, there were many British failures in the Himalayas before they eventually "did it". Space is another matter, for here the U.S.A. has accepted the Russian challenge and then, so far, failed to match the Russian record. And the Americans' performance in technology is second to no other people's. Why then do so many gadgets in a relatively small space capsule go awry once aloft? When I read that something or other had gone out of order and, because of that, Major Cooper's capsule might just be burnt up on re-entry into atmosphere, I was filled with nothing short of horror. There was, fortunately, no loss of nerve on the Major's part; and so he is still alive. But if there had been, the tragedy would have been attributed, not unfairly, directly to U.S. engineers and technicians. And if excessive publicity is the U.S. scientists' handicap, why not hold up the ballyhoo until a flight is over and all are safe on terra firma?

AS I READ THE PROCEEDINGS OF THE DRUG INQUIRY Commission in Calcutta, I thought of the Russians shot at dawn for offences far less murderous than adulterating drugs. If somebody has to pay with his life, it is surely easy enough to decide whether it is to be an innocent patient or a profiteer who has so little regard for a fellow human being's life. Most of the cases, of course, are not fatal. You just pay good money for rubbish which does you no good but doesn't kill you either. I don't think even that is good enough in a matter like this, for serious diseases may go undiagnosed for weeks, perhaps until the point of no treatment

has been reached. Those who know Sir Biren Mookerjee know of his total outspokenness. They will not be surprised that during the enquiry Sir Biren said things few judges would have said. But then this is not a judicial enquiry; and having watched some judicial enquiries of late I am not at all unhappy that Sir Biren Mookerjee heads the Drug Inquiry Commission. Not having anything to do with the drug industry is a great advantage; and Sir Biren has been more than an ordinary industrialist all his life. He has not only paid his taxes, as he rarely forgets to remind you, and also made money, on which we need no reminder; he has always insisted on the ultimate in efficiency. And one of my constant theses has been that incompetence begets more corruption than a positive will to be dishonest. Efficient units do not need to cheat; and the drug enquiry has already shown that what's wrong with West Bengal's pharmaceutical industry is that there are too many units with too meagre resources in both finance and technical competence. Sir Biren rightly pointed out the fallacy in blaming the Government's drug control machinery for the prevailing anarchy and, at the same time, demanding nationalisation of the drug manufacturing industry. Nationalisation rarely improves matters, in any industry. What the Federal Government in the U.S.A. does, for drugs and canned food, is to ensure the strictest inspection at factory level; and the results, I personally know, are impeccable. Meanwhile, why cannot the better units, which are many, publicise what steps they take to ensure quality?

COMPARED WITH INDIA'S POPULATION PROBLEMS, the misgivings being expressed in Britain at the moment about the prospects of a 20-million increase in numbers by the end of the century, seem almost trivial. But they are serious enough for Britain, and anybody who knows what modern life is like on that congested little island will understand why. At present the population is just over 50 million; according to the latest surveys, by the year 2000 it will have topped the 70-million mark. That might not be so bad if these extra numbers did not have to be housed, employed and their movement generally catered for on standards which would bear little comparison with those existing today. The experts can be forgiven for wondering, whether it is going to be possible, given the inexorable limits set by the island's scant acres; just where is the room going to be found for all the new and larger houses, the expanded industries and the booming transport system which this jump in population will entail? Already the south-west of England gives the impression of being just one big suburb surrounding London. What will it be like when 70 million

These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning, and other tough scaling propositions and rough Castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

people have been housed and accommodated in the more luxurious and spacious standards which are bound to develop during the next 37 years? Is Britain to become just one large slab of asphalt with scarcely a blade of grass in sight? Britain's problem is, of course, only the world's in miniature, and advanced by, say, a couple of hundred years. By then the population of this planet will have risen to such a terrifying total that the only reason it is not causing more concern at the present time is that nobody living now will be there to see what it is going to be like. Quite apart from the stupendous economic problem of coping with the simple animal needs of such numbers, just where are they all to be accommodated? The answers I have heard to this question so far do not exclude the inevitable conclusion that man must eventually exchange his present economic discomforts for the equally serious one of unbearable congestion. I often wonder whether such high-population enthusiasts as, for example, Mr. Colin Clark, pay sufficient attention to this point. But I bet their ideas of personal comfort imply some measure of privacy and exclusion from the enforced company of their fellow human beings.

A HIGHLY SUCCESSFUL SALESMAN I KNOW TOLD ME once that his secret was always to trust to luck and his intuition. He laughed at me when I said I thought selling these days was a scientific matter and that success could only be achieved by constant application and single-minded dedication to the job. His business was selling to retail shops, and as an example of what he meant he informed me that unless he gets an order from the first two visits he makes in any day, he simply gives up and goes home. His point is that success breeds an atmosphere of success, and that a run of failures early in the day is sufficient to create a psychological climate of failure which makes the rest of it as good as a write-off. So much for the old recipe for success: "Try, try and try again". I had always considered these methods my friend uses were perhaps more appropriate for the professional gambler than for the modern salesman. But after reading the results of a survey of salesmen and their habits made in Britain recently, I am not so sure. On the whole they seem to be a highly unscientific lot, although one of the reasons for this may be the circumstances under which they have to operate. For example, the discovery that an average salesman spends only 75 minutes of every working day in face-to-face selling, could be partly due to the distance between clients and to difficulty in finding parking space for his car. But the fact that he takes up most of his time at retailers by waiting about or making social small talk, surely calls for some explanation. The delays may not be his fault at all, and certainly the cheery chat is probably necessary in all but the extreme, high-pressure type of selling. But the general impression from this survey is that far too much of a salesman's time is wasted, that selling methods are altogether too casual and that, to quote the findings, there is a "sad lack" of training. His main assets appear to be his enthusiasm and his unshakable belief in himself. Perhaps it is these which make it so difficult to impress on him the necessity of method and planning. Certainly it is so in the case of my friend, who would not be in the least appalled to learn that a salesman in Britain spends three hours of his eight-hour working day in his car, one hour eating lunch (and I bet that is an underestimate), most of his time with the client making casual conversation and, on an average of nine calls a day, only seven minutes actually selling to each customer. I imagine he would consider that anything else would be taking the originality, the adventure, and most of all the personal satisfaction, out of his profession.

THE DINER HAD BEEN WAITING A LONG TIME FOR his order. At last his waiter approached and said, "Your fish will be coming in a minute or two now, sir."

The man looked interested. "Tell me," he said, "what bait are you using?"

THE DITCHER

Guide for Investors

GROWTH PROSPECTS OF COTTON MILL SHARES

(BY A SPECIAL CORRESPONDENT)

THE cotton mill shares have shown mixed trends, since mills producing fine and super-fine cloth have done fairly well during 1962, while those manufacturing medium and coarse cloth find it difficult to make both ends meet. The gross profits of Mafatlal Fine, Finlay Mills, Gold Mohur and Swan Mills have risen while Standard, Shree Nivas and Sassoon Mills have made less profits in 1962 than in 1961.

The industry's overall performance during 1962 has generally been far from encouraging. The cloth output declined from 5,141.5 million yards in 1961 to 4,983.3 million yards in 1962 and yarn production fell by 331 million lbs. Exports have also fallen below expectations. Cloth exports were only 512 million yards in 1962, against 575 million yards in 1961. Yarn exports declined from 65,702 bales in 1961 to 55,000 bales last year. The loss of export markets has partly been due to political factors and partly to economic ones. The competition in the overseas markets has increased a great deal. Several importing countries have set up their own cotton mills. But the main reason why Indian products are being priced out of foreign markets is that the domestic cost of production has sharply risen. Although there has been a small improvement in exports in terms of quantity during the current year so far, the cause for worry is that the total value of exports has declined. Cloth shipments from January to February 1963 were, for example, 100.34 million yards, compared with 100.23 million yards in the corresponding period of 1962. But the total value realised declined from Rs. 8.1 crores to Rs. 7.3 crores. Not only have the mills been forced to cut prices in foreign markets due to competition, but many of them have also been compelled to export at cut prices in view of the compulsory export scheme. In fact, many mills have had to export at substantial losses in order to fulfil their export obligations.

Taking a broader view of the prospects for the current year, it does not look as if the industry will do better than in 1962. During the first quarter of this year, there has been no improvement in overall production. The cloth output amounted to only 1,181 million yards, compared with 1,249 million yards in the corresponding period of 1962 while that of yarn declined from 477 million lbs to 468 million lbs. Investors are naturally concerned most with the prospect of profitability of mills. Considering that the price of cloth has been held down under a scheme of voluntary control, the industry may find it difficult to improve its profits. It is, in fact, feared that mills manufacturing medium and coarse cloth may have to suffer a further loss of profits during the current year. There has, meanwhile, been a substantial rise in the production cost. Indigenous cotton has become more costly since its ceiling price has been increased by Rs. 125 a candy. The prevailing market prices have generally hovered around the ceiling prices. Furthermore, the production cost of mills has been boosted by the surcharge on power bills, higher wages, the increased contributions of employers to the employees' State insurance, the rise in excise duty on various chemicals and dyes and the increased

Customs duty on machinery and equipment. Even the existing level of profits on the manufacture of fine and super-fine cloth may be affected by the new levies of the 1963-64 Budget. The war risks insurance scheme has also added to the production cost. But the most disturbing feature is that the industry's profit will be substantially squeezed by the super profits tax. So investors have been inclined to take a cautious view about the dividend outlook.

In spite of these difficulties, the industry seems to be confident of fulfilling the third plan production target of 5,800 million yards of cloth a year by 1966. But in order to enable the industry to make progress, it is essential to take active steps to surmount the hump. If cloth and yarn exports are to be increased, their prices must be cut by reducing production costs. This can be done if the industry is helped to undertake modernisation and rehabilitation schemes. It has been estimated that modernisation may cost about Rs. 254 crores during the third plan. But now that the super profits tax has virtually made it impossible to plough back funds, it is difficult to raise finance for this purpose.

As for the supply of domestic cotton, the prospect for the current year has improved greatly. The present crop should be about 5.4 million bales. With adequate imports of foreign cotton, the industry has been more or less assured of an adequate supply. The total mill consumption, it is estimated, is not likely to be more than 5.8 million bales.

Ambika Silk Mills Fares Well

THE Ambika Silk Mills Co. Ltd reports highly encouraging results for 1962, with substantial improvement in sales as well as profit. The dividend, however, has only been maintained at Rs. 20 a share, subject to tax. Sales have increased by about 36 percent from Rs. 1.26 crores to Rs. 1.71 crores, and the gross profit has shot up by nearly 50 percent from Rs. 21.06 lakhs to Rs. 31.35 lakhs. The ratio of gross profit to sales has improved from 16.7 percent to 18.3 percent. Appropriations include Rs. 3.02 lakhs (against Rs. 2.71 lakhs) for depreciation, Rs. 17.31 lakhs (against Rs. 8.40 lakhs) for taxation, Rs. 42,000 (against Rs. 38,000) for development rebate reserve and Rs. 3.50 lakhs (against Rs. 3.54 lakhs) for general reserve.

After providing for the payment of the proposed dividend which absorbs Rs. 4 lakhs and making some minor adjustments, there remains a balance of Rs. 26,452 to be carried forward, against Rs. 4,482 brought in. The directors state in their report that the Company's fabrics continued to be in good demand and its exports fetched Rs. 3 lakhs. The Company installed during the year one singeing machine and one friction calendaring machine. An order has been placed for one stentering range valued at about Rs. 5 lakhs, and the machine is expected to arrive shortly. Printing department has been expanded to enable the Company to intensify its activities in printing, processing and other allied sections. The

Rs. 100-paid share of Ambika Silk is currently quoted (nominal) around Rs. 220, offering a gross return of about 10 percent.

Bharat Vijay Mills Pays Less

THE Bharat Vijay Mills Ltd, Kalol, has reported disappointing results for 1962. Although sales have been well maintained at Rs. 113.20 lakhs, against Rs. 112.80 lakhs, the gross profit is down by as much as 48 percent from Rs. 21.37 lakhs to Rs. 11.04 lakhs. The dividend has been reduced from 20 percent to 15 percent and even for paying the reduced dividend, the directors have had to withdraw Rs. 1.70 lakhs from general reserve. In view of the substantial additions to the fixed assets made during the year, provision for depreciation is higher at Rs. 4.07 lakhs, against Rs. 2.63 lakhs. The allocation to statutory development rebate reserve has been increased from Rs. 1.22 lakhs to Rs. 2.28 lakhs. Provision for taxation is also up from Rs. 1.88 lakhs to Rs. 2.88 lakhs and, in addition, the Company has had to provide Rs. 1.66 lakhs to make good the short provision for taxation for 1961. A sum of Rs. 75,000 has been earmarked for a special reserve. No provision has been made for general reserve and dividend equalisation reserve which received Rs. 6 lakhs and Rs. 4 lakhs, respectively, in 1961. After bringing in Rs. 1.05 lakhs from the previous year and adding Rs. 1.70 lakhs transferred from general reserve, the directors have provided for the ordinary and preference dividends which absorb Rs. 2.10 lakhs (against Rs. 2.70 lakhs), leaving a small sum of Rs. 4,343 to be carried forward.

The Company made additions to building, plant and machinery to the tune of Rs. 19.66 lakhs. Orders have been placed for further equipment of the value of Rs. 13.48 lakhs. The Company has received the Government's permission to install 192 automatic looms for replacing plain looms. The Rs. 100-paid share of the Company is quoted nominally around Rs. 350.

Gokak Mills Sales Up, Profit Down

DESPITE a small increase in sales from Rs. 4.23 crores to Rs. 4.3 crores and a rise in the premium received under the export incentive scheme from Rs. 5.03 lakhs to Rs. 11.75 lakhs, the gross profit of Gokak Mills Ltd for the year 1962 is down by nearly 22 percent from Rs. 74.92 lakhs to Rs. 58.30 lakhs, necessitating a cut in the dividend from 18 percent to 12 percent, less tax. The setback in the profit is attributed to the increase in production costs without any corresponding increase in the selling prices of yarn. The cost of cotton and staple fibre consumed is up from Rs. 2.58 crores to Rs. 2.66 crores and the wage bill has gone up from Rs. 66.86 lakhs to Rs. 70.30 lakhs. After providing Rs. 14.30 lakhs (against Rs. 15.14 lakhs) for depreciation and Rs. 20 lakhs (against Rs. 22.25 lakhs) for taxation, the net profit amounts to Rs. 19.72 lakhs, compared with

Rs. 31.69 lakhs in 1961. The directors have set aside Rs. 1.22 lakhs (against Rs. 1.38 lakhs) for development rebate reserve and allocation to the debenture redemption reserve has been reduced from Rs. 5 lakhs to Rs. 4 lakhs. The general reserve No. 1 gets only Rs. 64,000, against Rs. 11 lakhs in the preceding year. The directors have transferred a sum of Rs. 3.35 lakhs to the contingency reserve which is considered to be adequate to meet any possibility of paying the super profits tax. A sum of Rs. 87,423 (against Rs. 1.08 lakhs) has been provided for additional tax for the previous year and Rs. 1.99 lakhs (against Rs. 1.64 lakhs) has been set aside for additional bonus for the previous year. The proposed dividend of 12 percent (against 18 percent) absorbs Rs. 8.79 lakhs (against Rs. 11.89 lakhs), which is to be paid out of the dividend reserve which has been created with an allocation of Rs. 8.80 lakhs from the year's profit. After writing back Rs. 94,126, being excess provisions of previous years, there is a negligible balance of Rs. 244 to be carried forward, against Rs. 20,774 brought in. The directors in their report have expressed regret at the lower profit, but have recalled the warning given by the chairman, Mr. F. H. Kemple, at the last annual meeting that although the results for the first four months of 1962 were satisfactory, the shareholders should not expect the results for the full year to be as good as in 1961. The directors add that the Company's yarn is in good demand. The programme of development and rehabilitation of the mills had to be slowed down because of the restricted availability of import licences and the deferred deliveries quoted by local manufacturers. The Company has installed two cheese winders and five doublers. The Rs. 100-paid share of Gokak Mills is currently quoted around Rs. 146 cum dividend, offering a gross return of about 7.9 percent on fresh investment.

Union Carbide (India) Expanding

THE main point of interest in the latest report of Union Carbide (India) Ltd for the year ended 25th December, 1962, is the Company's expansion programme. During 1962, capital expenditure was Rs. 33.89 lakhs, compared with Rs. 1.14 crores in 1961. A large portion of the expenditure was incurred at the Trombay plant. Additional facilities have been installed at the Metals and Ores Co. The Trombay factory has diversified the production of polyethylene film. The commercial production of polyethylene pipe has been planned for early 1963. These facilities will help develop the use of polyethylene in industry, irrigation and agriculture. The Company has decided to expand the chemical and plastics facilities in Trombay. The construction of the Olefins plant has been undertaken. The Company has been licensed to install a plant for producing projector carbons for the cinema industry. It will also manufacture midget carbon electrodes. The expansion scheme may cost Rs. 8 crores. The Company has been negotiating two long-term loans to raise funds.

The profit has risen from Rs. 83.21 lakhs to Rs. 1.86 crores, after transferring Rs. 56.39 lakhs (against Rs. 34.94 lakhs) to depreciation and Rs. 7.80 lakhs (against Rs. 65.50 lakhs) to development rebate reserve. Taxation absorbs Rs. 1.29 crores (against Rs. 60 lakhs). The general reserve Rs. 60 lakhs. The taxable ordinary dividend has been cut from 18 percent to 12.5 percent, which is more than five times cover-

ed and offers a yield of 3 percent at the present price of Rs. 42.37 a share. The carry-forward is Rs. 4.44 lakhs, against Rs. 42.36 lakhs brought in.

Sales rose from Rs. 9.50 crores to Rs. 12.26 crores. There has been an all-round improvement in production. Although the two battery plants situated in Calcutta and Madras have worked satisfactorily, their output has been restrained by the shortage of imported raw materials. The activities of the Eveready flashlight factory in Lucknow have been diversified. Those of the zinc rolling mill of the Metals and Ores Co. have also been diversified. The production of organic chemicals and polyethylene at the Trombay factory has been satisfactory. The demand for dry batteries, flashlights and flashlight bulbs has been strong. The Company has taken steps to promote the export of its products.

Hindustan Aluminium Expansion

THE Hindustan Aluminium Corporation Ltd has completed its programme of setting up an integrated plant with an annual capacity of 20,000 tons of aluminium ingots a year. The necessary facilities for producing the required quantity of alumina have also been completed. The smelting and the alumina facilities have been brought into operation and are at present working to their full capacity. The output of ingots since the beginning of production from May 1962, amounted to 8,333 tons, of which the major portion was of electrical grade. Delivery against sales totalled 5,607 tons. For initial production, the alumina was partly purchased from Indian Aluminium Company and partly imported from the U.S.A. The Company's own alumina plant has started production from October 1962. It produced 3,375 tons of alumina up to the end of 1962.

The Company has already been permitted by the Government of India to expand its capacity from 20,000 tons to 50,000 tons a year, and to set up its own thermal power station for the additional power supply. The expansion scheme is in hand. The directors point out that the Government has approved in principle the issue of new ordinary shares, which are likely to be offered at the appropriate time in order to meet the costs of expansion. Since the plant has been completed, a sum of Rs. 97.20 lakhs expended during the construction period, has been capitalised and allotted to the various heads. The profit and loss account for 1962 shows a loss of Rs. 1.99 crores, which includes a provision of Rs. 1.56 crores for depreciation. Hence the actual working loss for 1962 has been only Rs. 42.72 lakhs, which was mostly incurred during the first few months before the production started. The plant, it is believed, has now been working on a profitable basis and full production has been achieved. It has not been possible to provide for development rebate because of the debit balance in the profit and loss account. But since this rebate can be carried forward for income tax purposes, it will be provided in due course when the Company makes profits. The accumulated development rebate has been estimated at Rs. 2.14 crores. The dividend has been passed.

Kumardhubi Engineering Fares Well

IN their report for the year ended November 1962, the directors of the Kumardhubi Engineering Works Ltd say that the results have been satisfactory. The demand for steel cast-

ings has increased. The foundry output has been 27 percent higher than in 1960-61, but the structural shop production has been 14 percent smaller following the shortage of steel sections, including matching steel. There has also been some idle capacity in the structural shop. As a result of a vigorous sales drive the order book of the Company has been very satisfactory.

The taxable ordinary dividend has been increased from 35p to 45p a share of Rs. 3 each. The profit has risen from Rs. 7.80 lakhs to Rs. 22 lakhs, after transferring Rs. 5.98 lakhs (against Rs. 6.20 lakhs) to depreciation and writing off bad debts for Rs. 47,362. The ordinary dividend is more than four-and-a-half times covered and offers a yield of 5.6 percent at the present price of Rs. 8 a share. Taxation is allocated Rs. 11.50 lakhs (against Rs. 3.65 lakhs) and super profits tax Rs. 1.65 lakhs. Statutory development rebate reserve absorbs Rs. 77,100 (against Rs. 38,300) and general reserve Rs. 3.25 lakhs. The usual preference dividends have been paid, leaving a carry-forward of Rs. 3,088, against Rs. 13,579 brought in.

Jay Shree Tea Modernises

IN their report for the year ended December 1962, the directors of Jay Shree Tea and Industries Ltd point out that the Company has been modernising the equipment of all tea gardens. About 200 acres were brought under new tea cultivation in 1962. The Company has obtained a loan of Rs. 14.97 lakhs from the Tea Board for financing the new plantation. The plywood factory in Assam has done well. The factory for making decorative plywood has not yet started full production. The superphosphate and sulphuric acid plants have produced good results, but the offtake of these chemicals has not been up to expectations. Their supply, it is said, has been excessive. But the directors hope for an improvement in demand. They consider the outlook satisfactory in view of the diversification of activities.

As for the issue of new shares, the directors have already issued preference shares for public subscription. Since the Government has put a premium of Rs. 3.50 a share on the issue of rights ordinary shares of Rs. 10 each, the directors have postponed the issue for the time being, since they consider the premium too high. So they have made representation to the Controller of Capital Issues for modifying the premium. They will consider issuing these rights shares after knowing the Government's decision.

Merging Hansqua with Killcott Tea

IN their report for the year ended December 1962, the directors of the Hansqua Tea Co. Ltd (a Terai garden) say that the scheme for amalgamating the Company with the Killcott Tea Co. Ltd (a Doora garden) has been sanctioned by the Calcutta High Court. So all properties, rights and liabilities of Hansqua, except for a sum of Rs. 87,500 for the payment of dividends, have now been transferred to the Killcott Tea Co. Ltd. Hansqua Tea Company will be dissolved from 30th June, 1963.

The profit of Hansqua Tea has been Rs. 3.08 lakhs, against Rs. 1.95 lakhs in 1961, after providing Rs. 62,771 (against Rs. 58,361) for depreciation. The taxable ordinary dividend has been increased from 15 percent to 17.5 percent, absorbing Rs. 87,500. The

yield is 11.4 percent at the present price of Rs. 20 a share of Rs. 10 each. Revenue reserve is allocated Rs. 1.10 lakhs (against Rs. 5.75 lakhs), development rebate reserve Rs. 2,000 (against Rs. 4,000) and investment reserve Rs. 5,000. The carry-forward is Rs. 18,241, against Rs. 14,876 brought in. The total crop was 317,061 kilograms, against 288,960 kilograms, and the average sale price improved from Rs. 4.29 to Rs. 4.74 a kilogram. The 1963 crop has been estimated at 275,000 kilograms at a cost of Rs. 11.51 lakhs. Kilograms at a cost of Rs. 11.51 lakhs. The start of the new season has not been satisfactory, since there has practically been no rain between last October and March this year. There has, however, been some useful rain in April.

Loobah Passes Dividend Again

THE profit of the Loobah Co. Ltd (a tea estate in Sylhet) has declined from Rs. 49,083 in 1961 to Rs. 23,090 for the year ended December 1962, after providing Rs. 18,349 (against Rs. 19,348) for depreciation. Taxation in India absorbs Rs. 20,000 (against Rs. 25,000). Taxation in Pakistan is allocated Rs. 7,000 (the same). Bringing in Rs. 28,053, a credit balance of Rs. 1.14 lakhs has been carried forward. The dividend has again been passed. The crop declined from 166,156 kilograms to 151,283 kilograms. The average sale price improved from Rs. 3.81 to Rs. 4.26 a kilogram. The 1963 crop estimates is 103,293 kilograms at a cost of Rs. 6.19 lakhs.

Bengal Flour Mills Maintains

THE Bengal Flour Mills Co. Ltd has maintained a taxable ordinary dividend of 25 percent, including an interim of 10 percent, for the year ended December 1962. This is more than twice covered and offers a yield of 7.3 percent at the present price of Rs. 34.25 a share of Rs. 10 each. There was a record output following an adequate supply of wheat, although the working was interrupted by the power shortage. Lower ceiling prices for flour, atta and semolina have been fixed under a Government ordinance. The extraction control continues to prevail in West Bengal.

The profit has risen from Rs. 7.30 lakhs in 1961 to Rs. 10.88 lakhs in 1962, after providing Rs. 1.06 lakhs (against Rs. 1.21 lakhs) for depreciation. The directors say that in spite of the bigger profit, it has not been possible to raise the dividend because of the increased taxation and the estimated liability of the super profits tax. Taxation absorbs Rs. 6.63 lakhs (against Rs. 3.27 lakhs), development rebate reserve Rs. 2,337 (against Rs. 22,157) and general reserve Rs. 2.91 lakhs (against Rs. 1 lakh).

Prospects for Asian Refractories

IN their report for the year ended November 1962, the directors of Asian Refractories Ltd point out that the prospects are encouraging. The demand for refractory products has risen in response to the expansion of the steel and allied industries. The Company has purchased land in Hazaribagh, Bihar. The pilot plant is being set up for producing firebricks and insulation bricks. The factory will meet the Company's entire requirements of firebricks. The equipment from Poland is soon expected to arrive, and production may

start early next year. The Company has arranged for an adequate supply of electricity from the Bihar State Electricity Board. A loan of Rs. 35 lakhs from the Industrial Finance Corporation, is soon expected to be received. The directors say that in view of the rise in prices, the original project costs may have to be revised upwards. There has been a loss of Rs. 3,749, after transferring Rs. 1.57 lakhs to the project expenses account. This loss has been carried forward, and the dividend has been passed.

Assam Saw Mills Pays Again

THE Assam Saw Mills and Timber Co. Ltd has returned to the dividend list after an interval of nine years. It has declared a taxable ordinary dividend of 3 percent for the year ended September 1962. Production has been interrupted by the shortage of glue, but sales rose from Rs. 38.82 lakhs to Rs. 45.66 lakhs. The profit has nevertheless declined from Rs. 2.57 lakhs in 1960-61 to Rs. 1.70 lakhs in 1961-62, after providing Rs. 1.32 lakhs (against Rs. 1.27 lakhs) for depreciation and Rs. 44,731 (against Rs. 1,480) for development rebate reserve. The dividend is more than thrice covered and offers a yield of 3.6 percent at the present price of Rs. 2.50 a share of Rs. 3 each. The carry-forward is Rs. 94,397, against Rs. 10,925 brought in. The directors think that the results during the current year may improve provided production does not suffer due to the shortage of glue. Sales have so far been satisfactory, and steps have been taken to install new machinery in order to raise output.

Sterling General Insurance Results

THE Sterling General Insurance Co. Ltd has earned a profit of Rs. 4.05 lakhs for the year ended December 1962. A taxable ordinary dividend of 6 percent has been declared, absorbing Rs. 89,507. Taxation is allocated Rs. 1.54 lakhs, general reserve Rs. 75,000, depreciation for investments Rs. 66,200 and the gratuity fund Rs. 17,500. The carry-forward is Rs. 1,687. The gross premium of the fire department rose from Rs. 34.04 lakhs in 1961 to Rs. 36.66 lakhs and that of the marine department from Rs. 16.83 lakhs to Rs. 20.67 lakhs. The gross premium of the miscellaneous department declined from Rs. 50.44 lakhs to Rs. 50.36 lakhs. The subsidiary Company, the Central Mercantile Assurance Co. Ltd, has incurred a loss of Rs. 17,853, against a profit of Rs. 75,866.

Shalimar Wires to Enter Market Soon

SHALIMAR Wires and Industries Ltd, Calcutta, proposes to manufacture Fourdrinier wire cloth which is required for the paper making industry, in collaboration with a Norwegian firm. At present, the entire requirements of the paper industry in the country are imported. The Company has already acquired land, buildings, and a power house in Uttarpara near Calcutta. Order for the plant and machinery were placed with the suppliers in West Germany and the major part of the machinery has already arrived in Calcutta. It is planned that production on a limited scale will start from September 1963, and full scale production is expected to begin in early 1964. The licensed capacity of the

plant for the time being is 3,96,000 square feet of Fourdrinier wire cloth a year on a single shift basis.

The authorised capital of the Company is Rs. 1 crore, made up of 800,000 equity shares of Rs. 10 each and 20,000 9.3 percent preference shares of Rs. 100 each. The issued, subscribed and paid-up capital of the Company is Rs. 8 lakhs. It is now issuing 220,000 equity shares of Rs. 10 each of the face value of Rs. 22 lakhs. Out of the said issue, the directors and their friends have already subscribed for and have been allotted at par 71,000 equity shares of Rs. 10 each on which Rs. 5 each have been paid. The collaborators have also taken 1,500 equity shares of Rs. 10 each which have been fully paid. The Company proposes to offer to the public by the end of this month 147,500 equity shares of Rs. 10 each.

Industrial Containers Earns More

THE Industrial Containers Ltd has produced satisfactory results during the year ended December 1962 due to good deliveries of steel sheet and bigger orders. The directors have, however, pointed out that in spite of a larger profit, it has not been possible to raise the dividend since a substantial portion of it has been absorbed by heavier taxation, including the super profits tax. The profit has risen from Rs. 6.15 lakhs in 1961 to Rs. 9.92 lakhs in 1962, after transferring Rs. 85,677 (against Rs. 90,257) to depreciation. A taxable ordinary dividend of 10 percent has been maintained. This is more than seven times covered and offers a yield of 4.5 percent at the present price of Rs. 2.2 percent a share of Rs. 10 each. Taxation absorbs Rs. 7.03 lakhs (against Rs. 2.67 lakhs), development rebate reserve Rs. 1,420 (against Rs. 20,011) and general reserve Rs. 2.13 lakhs (against Rs. 1 lakh). Sales rose from Rs. 63.24 lakhs to Rs. 74.85 lakhs.

Steel Containers Repeats

THE Steel Containers Ltd has maintained a taxable ordinary dividend of 20 percent for the year ended December 1962. The directors say in their statement that it has not been possible to increase the dividend since the bigger profit has largely been absorbed by heavier taxation, including the super profits tax. The profit has increased from Rs. 12.25 lakhs in 1961 to Rs. 20.72 lakhs in 1962, after providing Rs. 36,434 (against Rs. 35,643) for depreciation. The dividend is more than seven times covered and offers a yield of 5.9 percent at the present price of Rs. 34 a share of Rs. 10 each. Taxation is allocated Rs. 14.88 lakhs (against Rs. 5.48 lakhs), development rebate reserve Rs. 575 (against Rs. 5,465), general reserve Rs. 1.81 lakhs (against Rs. 1.50 lakhs) and replacement of plant and machinery reserve Rs. 2 lakhs (the same). Sales rose from Rs. 85.97 lakhs to Rs. 1.14 crores. There has been a substantial increase in orders and deliveries of steel sheets have been satisfactory.

Elphinstone Mills Cuts Dividend

THE directors of the Elphinstone Spinning and Weaving Mills Co. Ltd have reduced the dividend for 1962 from 22 percent to 18 percent (from Rs. 11 to Rs. 9 a share, Rs. 50 paid), less tax. For the payment of the reduced dividend, a sum of Rs. 6.50 lakhs has had to be withdrawn from general reserve. According to

the preliminary figures, released along with the dividend announcement, the Company's gross profit is down by nearly 27.8 percent from Rs. 48.78 lakhs to Rs. 35.24 lakhs. The dividend has had to be pruned mainly because of the heavy liability of bonus to employees which amounts to Rs. 19.76 lakhs, against Rs. 6 lakhs in the previous year; the figure for 1962, however, includes Rs. 12.76 lakhs for the three years 1959 to 1961. Other appropriations include depreciation Rs. 9.82 lakhs (against Rs. 8.08 lakhs), development rebate reserve Rs. 3.07 lakhs (against Rs. 2.26 lakhs), taxation Rs. 60,000 (against Rs. 16 lakhs), development reserve Rs. 1.02 lakhs (against Rs. 75,000), and doubtful debts Rs. 12,500 (against Rs. 70,793). With Rs. 6.50 lakhs transferred from general reserve and including Rs. 1.37 lakhs brought forward from the previous year, the surplus amounts to Rs. 7.21 lakhs. The proposed ordinary dividend absorbs Rs. 5.40 lakhs (against Rs. 6.60 lakhs). The preference dividend accounts for another Rs. 1.75 lakhs (the same), leaving a small sum of Rs. 5,844 to be carried forward. The Rs. 50-paid share of the Company is quoted nominally around Rs. 100, offering a gross return of about 9.9 percent on fresh investment.

Alcock, Ashdown Earns More, Pays Less

THE working results of Alcock, Ashdown and Co. Ltd for 1962 show considerable improvement over the previous year's performance, although the dividend has been reduced from 22.5 percent to 19 percent, less tax. The dividend for 1962 is, however, on the increased capital, the 9,068 new equity shares allotted during the year being entitled to a dividend of 9½ percent. The directors state that subject to confirmation by the income tax authorities, the tax-free portion of the proposed dividend is placed 4.3 percent. The net dividend, therefore, works out to 14.59 percent, against 16.92 percent in the preceding year. The total amount to be distributed by way of dividends amounts to Rs. 9.01 lakhs, compared with Rs. 9.65 lakhs in 1961. Realisations from sales and work done in 1962 are up by about 15.8 percent from Rs. 1.55 crores to Rs. 1.73 crores, and the gross profit has risen by nearly 26 percent from Rs. 23.17 lakhs to Rs. 29.13 lakhs.

After providing Rs. 1.66 lakhs (against Rs. 1.38 lakhs) for depreciation and Rs. 9.67 lakhs (against Rs. 7.18 lakhs) for taxation, the net profit amounts to Rs. 15.64 lakhs, against Rs. 12.71 lakhs in the preceding year. With Rs. 24,806 brought in and including Rs. 3 lakhs being excess provision in the previous year, the disposable surplus amounts to Rs. 18.89 lakhs. The directors have set aside a sum of Rs. 48,412 (against Rs. 44,484) for development rebate reserve and Rs. 4.80 lakhs (against nil) for general reserve. No provision has been made for machinery rehabilitation and replacement reserve which received Rs. 1.38 lakhs in the previous year. The payment of bonus in past years accounts for Rs. 2.49 lakhs. The proposed dividend absorbs Rs. 9.01 lakhs, against Rs. 9.65 lakhs. After making certain adjustments, there remains a balance of Rs. 26,123 to be carried forward.

The directors state in their report that all the shops except the boat-building yard, were fully employed in the first shift and partially in the second shift. There have been welcome signs of improvement in the ship repair work, which was, at one time, the main stay of the defence works. The newly erected tower shop was fully engaged in executing orders for various State Electricity Boards. The structural shop in

Bhavnagar went into production early this year and execution of orders for structural work and transmission line towers has begun. The activity in the boat-building yard was restricted only to the first half of 1962, because the work of construction of tugs on order could not be started for want of licences for importing machinery. However, a fresh order for barges from the Gujarat Government was obtained later in the year and boat building yard is again fully booked, and is expected to remain so for about two years.

The Company has received industrial licences from the Central Government for manufacturing electricity overhead travelling cranes and marine diesel engines. The question of finalising the terms of collaboration with the foreign manufacturers has now reached the final stage. In order partially to meet the requirements of financing the erection and equipment of shops in Bhavnagar, a medium-term loan of Rs. 20 lakhs against mortgage of fixed assets of the Company has been arranged with the State Bank of India and instalments totalling Rs. 15 lakhs have been received. The Rs. 100-paid share of Alcock, Ashdown is currently quoted around Rs. 300, offering a gross return of about 6.8 percent on fresh investment.

Hindustan Polymers : A New Venture

HINDUSTAN Polymers Ltd is a new Company which has been promoted by Shree Ram Mills Ltd of Bombay to undertake the manufacture of alcohol, styrene monomer, polystyrene and its copolymers. Distillers Company Ltd and its subsidiary BX Plastics Ltd of the U.K. will supply the technical know-how for the manufacture of polystyrene and its copolymers, and will also participate in the equity capital of the Company to the extent of Rs. 20 lakhs. Universal Oil Products Company Incorporated of the U.S.A. will supply the technical know-how for the manufacture of styrene monomer. Power-Gas Corporation Ltd of the U.K. will supply the plant and equipment on a turn-key basis. The factory, it is proposed, will be located in Visakhapatnam.

The Company has been licensed to manufacture 1.5 million gallons a year of alcohol from molasses, 10,000 tons of styrene monomer from alcohol and benzene to be purchased from the steel plants and 7,500 tons of polystyrene and its copolymers. The project, it is estimated, will cost about Rs. 6 crores and the foreign exchange component is estimated around Rs. 2.36 crores. The Company, it is said, will be negotiating with the Commonwealth Development Finance Company of London, the Mercantile Bank Ltd, the I.C.I.C.I. and the I.F.C. for the supply of requisite foreign exchange. The Company will have an authorised capital of Rs. 6 crores, of which Rs. 3 crores is likely to be issued in the beginning. Equity shares of the value of Rs. 1.28 crores are likely to be offered for public subscription some time during the last quarter of the year. The board of directors includes Mr. Kasturbhai Lalbhai (chairman), Mr. Bhogilal Leherchand, Mr. R. G. Saraiya, Mr. Jehangir Patel, Mr. Pratap Bhogilal, Mr. N. K. Petigara and Mr. Ramnik K. Parikh.

Share Offer by Borosil Glass

BOROSIL Glass Works Ltd, which is setting up a completely mechanised factory in Marol (near

Bombay) for the manufacture of scientific and laboratory glassware, is offering 382,500 shares of Rs. 10 each for public subscription at par. The list is expected to open on 27th May. (Fuller details of the announcement appear on later pages of this week's issue of *Capital*.) Construction work at the factory site has already started and machinery is expected to be installed before the end of August. The plant is likely to go into production by the end of this year, and it will achieve its full capacity by about the middle of 1964. When the plant reaches full production, it will turn out 7,200 tons of glassware a year which is about one-third of the total requirements of the country. About 90 percent of the raw material required for the project is indigenously available. The Company hopes to be able to export about 10 percent of its production to countries in West Asia, east Asia and even the U.S.A.

The Company has secured the technical and financial collaboration of the reputed U.S. firm of Corning Glass Works. The American firm will hold 49 percent of the equity capital of Borosil Glass. Apart from providing the technical know-how, Corning Glass will supply machinery and equipment worth Rs. 58.50 lakhs. This amount will be paid to them in the form of shares. Borosil Glass is taking over the Industrial and Engineering Apparatus Company Private Ltd which is already producing at its factory in Andheri (Bombay) a wide range of general laboratory and hospital glass apparatus and micro chemical apparatus. The Andheri plant produces about 1,500 tons a year of borosilicate glass. Borosil Glass Works has an authorised capital of Rs. 2 crores and the issued capital is Rs. 1.50 crores. Of this, 49 percent will be taken up by Corning Glass, Rs. 38.25 lakhs will be offered for public subscription, and the rest will be absorbed by the directors and their friends.

Share Issue by Napco Bevel Gear

THE subscription list for the Rs. 38.81-lakh public issue of Napco Bevel Gear of India Ltd—a big Indo-U.S. venture—will open on 24th May and will close on 31st May or earlier, but not before 27th May. The Company proposes to set up a factory in Faridabad (Punjab) to manufacture, fabricate and assemble automotive and other gears, transmissions, axles, universal joints and other related items. The Company has been licensed to manufacture 3,600 tons a year of bevel gears, universal joints, axles, shafts, speed reduction gears and spur gears. This industry, it is said, will be the first of its kind in India. The well-known U.S. firm of Napco Industries Inc., Minneapolis, is collaborating in the venture.

The Indian Company is purchasing the entire Detroit Bevel Gear Division in Detroit belonging to Napco Industries. All the machinery, equipment, tools, jigs, dies and fixtures to be taken over by the Company from Napco Industries will be reconditioned by the U.S. firm prior to shipment and will carry the same warranty guarantee from Napco Industries that is given by the original equipment manufacturers on brand new machinery. The entire plant will cost \$2.8 million, out of which \$500,000 will be paid in the form of shares in the Company credited as fully paid-up. The balance of \$2.3 million will be paid in cash in U.S. dollars. The A.I.D. has granted a loan of \$2.3 million outside the regular Indian aid pro-

gramme. The loan will carry an interest of 5½ percent a year and is repayable in seven equal annual instalments after a two-year grace period. The total cost of the project is estimated at Rs. 2.61 crores, of which Rs. 1.30 crores will be spent on imported plant and machinery.

The financial requirements, it is proposed, will be met by the issue of equity shares worth Rs. 1.27 crores, a loan of Rs. 1.10 crores from the A.I.D. and proceeds of P.L. 480 loan amounting to Rs. 25 lakhs. The authorised capital of the Company is Rs. 5 crores, made up of Rs. 1.27 crores in equity shares of Rs. 10 each and Rs. 3.74 crores in unclassified shares. Equity shares of the value of Rs. 16 lakhs have already been issued, and taken up by the promoters and their associates. The present issue consists of 1,107 million equity shares, of which 243,920 shares are being subscribed by the promoters, directors and their associates. The foreign collaborators are being allotted 237,500 shares in satisfaction of a part of the price of the plant and equipment to be supplied by them under the agreement. Another 237,500 shares are being allotted to Napco Industries in consideration of supply of plans, engineering data, know-how, etcetera. The balance of 388,080 equity shares are now being offered for public subscription. The entire public issue has been underwritten by the American Express Company Incorporated, New Delhi.

There exists a ready market for the items proposed to be manufactured by the Company; at present, most of these items are being imported. And the demand for the Company's products is bound to increase with the industrialisation of the country. Moreover, under the present arrangements, Napco Industries has agreed to purchase and import from India the products of the Company to a minimum guaranteed amount of \$100,000 a month non-accumulative for a period of three years with four options of additional three-year periods each to Napco Industries. This guarantee is subject to a condition imposed by the A.I.D. limiting the export by the Company to 20 percent of its total production until the satisfaction of the A.I.D. loan. The Company's board of directors includes Mr. Max E. Rappaport (president Napco Industries), Mr. Maurice P. McCarthy (Executive vice-president, Napco Industries), Mr. Peshori Lal Kapoor, Mr. Faqir Chand Mehra, Mr. M. M. Kampelman and Mr. B. C. Dasgupta.

Debt Issue by Tata Hydro and Power

TWO of the three power Companies belonging to the Tata group, namely, Tata Power Co. Ltd. and Tata Hydro-Electric Power Supply Co. Ltd., are entering the market on 24th May to raise a total debt issue of Rs. 1.85 crores. The debentures issued in units of Rs. 1,000 carry an interest of 7 percent a year and are repayable in 1975. Both the debt issues have been fully underwritten. The subscription list will open on 24th May and close on 31st May or earlier but not before 27th May. Tata Power Company is raising Rs. 85 lakhs through the debt issue for financing its programme of modernisation, improvement and rehabilitation to meet the continuous increase in the demand for power in the Company's area of supply.

The programme includes the construction of a new tunnel for the Bhira power-house and additions,

improvements and replacements to the transmission and distribution network owned jointly by the Company with its two associate enterprises—Tata Hydro and Andhra Valley. The Company will meet a portion of the capital expenditure from its internal resources. The total capital expenditure during the next two years is estimated at around Rs. 2.75 crores, excluding the expenditure on the Trombay project. The Tata Hydro-Electric Power Supply Company is raising Rs. 1 crore through debentures for financing its programme of modernisation, improvement and rehabilitation which includes cement grouting and the strengthening of the Shirawta and Walwhan dams and additions, improvements and replacements to the transmission and distribution network owned jointly by the Company and its associates—Andhra Valley and Tata Power. A portion of the capital expenditure will be met from internal resources.

Share Offer by Air Control and Chemical Engineering

THE subscription list for the Rs. 49-lakh public issue of Air Control and Chemical Engineering Co. Ltd.—a new enterprise in the Maganlal Parbhudas group of industries—will open on 30th May and will close on 10th June or earlier but not before 5th June. The Company proposes to undertake the manufacture of a wide range of ventilation, air conditioning and refrigeration equipment in collaboration with reputed foreign firms. Ventilation and air-conditioning equipment will include all types of fans and blowers rated for all duties, namely, light, medium and heavy industrial exhausters, cyclone separators, heavy type dust filters, evaporative type cooling equipment such as spray and capillary type air washers, articulated units, and conditioning units. The Company will also manufacture compressors for ammonia and freon which are needed in cold storage, tunnel freezers, package type plate freezers, dairy equipment, ice-cream manufacture, marine and research refrigeration, ice plants, refrigerating railway wagons, trucks and trailers. In addition, the Company will manufacture such components as heat transfer coils, unit coolers, heavy duty product coolers, and condensers. Sheldons Engineering Ltd. of Canada will provide technical assistance and know-how in the setting up and operation of the Company's unit for manufacturing air-handling, air-conditioning and ventilating equipment, their components and accessories. The foreign firm will participate in the Company's equity capital to the tune of Rs. 5 lakhs and it will be paid technical service fee-cum-royalty at the rate of 2½ percent on the cost of articles manufactured and sold, subject to a minimum of \$10,000 for the first five years.

Air and Refrigeration Corporation of New York will assist in the setting up and operation of the unit for manufacturing air cleaning, air conditioning and dust removal plant and equipment for use in industrial application, their components and accessories. The U.S. firm will take up shares of the value of Rs. 50,000 and it will be reimbursed the actual cost for the supply of drawings, training of personnel but not exceeding \$10,000. In addition, it will be paid a technical service fee-cum-royalty at 2 percent on the cost of production of the articles manufactured and sold. The Danish firm of Aktieselskabet Thomas Ths. Sabroe will assist in the setting up and operation of the Company's unit for manufacturing compressors, heat

transfer equipment and refrigeration equipment. It will be paid technical service fee-cum-royalty of 2½ percent of the cost of production of the contracted material manufactured and sold by the Company. As for all the three collaborations, the c.i.f. value of imported components is to be excluded in computing the cost of production. The Company is also negotiating to secure the collaboration of Air Coils Manufacturing Company of Canada and Canada-Wide Air Conditioning and Refrigeration Services of Canada. The Company's factory will be located in Devdi, near Bareilly, which is about ten miles away from Ahmedabad. The entire project is estimated to cost Rs. 1.5 crores, of which Rs. 80 lakhs will be spent on machinery. The cost of imported equipment is placed at Rs. 36 lakhs for which the Company has already been sanctioned a loan by the Industrial Finance Corporation of India under the A.I.D. programme. It has also obtained a loan of Rs. 24 lakhs from the I.F.C. for purchasing indigenous machinery. A sum of Rs. 1 crore is being raised by way of equity capital. The working capital requirements estimated around Rs. 36 lakhs, will be met by loans from the Company's bankers.

The authorised capital of the Company is Rs. 1.50 crores, comprising Rs. 1 crore in equity shares of Rs. 100 each and Rs. 50 lakhs in unclassified shares of Rs. 100 each. Equity shares worth Rs. 10 lakhs have already been issued and taken up by the promoters and their friends. The Company now proposes to issue 90,000 equity shares. Sheldons Engineering is subscribing for 5,000 shares and 500 shares are being taken up by Air and Refrigeration Corporation. The directors and their associates have agreed to subscribe for 35,500 shares. The remaining balance of 49,000 shares are now being offered for public subscription.

Binny Debenture Issue

THE subscription list for the Rs. 30-lakh 7 percent 1973-78 debenture issue by Binny and Co. Ltd. will open on 29th May and will remain open until 31st May. The entire debenture issue is underwritten. (Fuller details appear on a later page of this week's issue of Capital). Out of this Rs. 30-lakh issue, the firm allotment agreement covers Rs. 15 lakhs. Hence debentures of the value of Rs. 15 lakhs are now offered for public subscription. Interest is payable half yearly on 1st January and 1st July, at 7 percent, subject to deduction of tax.

Applications must be for multiples of Rs. 1,000. The object of this issue is to reduce the existing level of short-term bank indebtedness and replace part of such indebtedness with medium-term secured loan capital in the form of this debenture stock. In particular, the proceeds of the issue will be used for repaying the fixed loan of Rs. 24 lakhs from banks and for reducing bank overdraft. This would release short-term borrowing capacity for the general use and benefit of the Binny group of companies.

Seshasayee Wire Ropes Share Offer

SESHASAYEE Wire Ropes Ltd., which proposes to set up a factory in Edathala in Ernakulam district of Kerala State for manufacturing wire ropes, wire rope accessories and fit-

tings, is offering 278,000 equity shares of Rs. 10 each for public subscription. The Company has secured the collaboration of two well-known Japanese firms which are also participating in the equity capital to the tune of Rs. 3.35 lakhs each. Ataka and Co. Ltd. of Osaka will purchase and supply machinery and equipment from Japan for setting up the factory and Kokoku Iron and Steel Wire Manufacturing Co. Ltd. of Tokyo will design and engineer the factory, draw up specifications for equipment and work in liaison with Ataka and Company for supervising the erection of the equipment in India, commissioning the factory and bringing the plant to the rated production capacity.

The Company has an authorised capital of Rs. 1 crore, made up of Rs. 15 lakhs in 9 percent redeemable cumulative preference shares of Rs. 10 each and Rs. 85 lakhs in equity shares of Rs. 10 each. Out of this, only equity shares worth Rs. 50 lakhs are being issued for the present. The promoters and their friends and associates are taking up shares worth Rs. 15.50 lakhs. Shares of the value of Rs. 6.70 lakhs have been reserved for allotment to the Japanese collaborators. The balance of 278,000 equity shares are now being offered for public subscription. The entire issue offered to the public has been underwritten. The subscription list will open on 27th May and will close on 31st May or earlier but not before 29th May.

New Capital Issues

FIVE companies, of which two are new, have been authorised to issue capital totalling Rs. 9.65 crores. Of these, one company will issue rights shares, three equities and one equity plus cumulative preference shares. The consent for five companies is valid for 12 months. The following are the details:

Hindustan Aluminium Corporation Ltd. is raising further capital of Rs. 4 crores divided into 4 million equity shares of Rs. 10 each to its existing shareholders in the proportion of 33 new shares to 50 shares held, for cash at par.

Hindustan Polymers Ltd., a new Company proposed to be incorporated in Maharashtra, will issue capital of Rs. 3 crores, divided into 300,000 equity shares of Rs. 100 each of which 20,000 shares will be issued to foreign collaborators for consideration other than cash and another 20,000 to the C.D.F.C., London, for cash at par. The balance of 260,000 shares will be issued in India for cash at par of which 127,400 shares will be offered for public subscription.

A. K. Cements Ltd., a Company proposed to be incorporated in Andhra Pradesh, is to issue capital of Rs. 1.50 crores, divided into 123,000 equity shares of Rs. 100 each and 25,000 cumulative preference shares of Rs. 100 each redeemable after nine years at the option of the Company and carrying a dividend of 9.3 percent (free of company's tax but subject to deduction of taxes at source at prescribed rates) to be issued for cash at par.

The Industrial Development Corporation of Orissa Ltd., Bhubaneswar, will issue further capital of Rs. 1 crore divided into equity shares of Rs. 100 each to be subscribed entirely by the Government of Orissa.

Otis Elevator Company (India) Ltd., Bombay, is to issue Rs. 15 lakhs in equity shares of Rs. 100 each for cash at par of which shares of the value of Rs. 9.83 lakhs will be subscribed by Otis Elevator Company Ltd. of the U.S.A.

The Stock Markets

DULL CONDITIONS IN LYONS RANGE

Wednesday Evening.

DULL conditions have prevailed in the Calcutta stock market during the past week. Support has declined to almost a trickle, so share prices have generally declined substantially on any selling indication. Attention has largely been concentrated on clearing shares which have closed below the best levels touched earlier. Operators have been cautious and have preferred to keep their commitments light anticipating the resumption of forward trading. Although forward trading is likely to be allowed under severe restrictions, it is thought that the move may lead to fresh pressure. Since the technical position has improved and the load of shares has been reduced considerably, no great break in prices is foreseen. Except for scattered support to selected jute shares, buyers have kept out.

Lyons Range has been disturbed by the turn of political events. The failure of Indo-Pakistani talks over Kashmir seems to have rendered foreign aid prospects uncertain. Reports about the concentration of Chinese troops along the Ladakh and N.E.F.A. borders have caused concern. Press reports suggest that the prospect of foreign aid should not be considered as optimistically as was done before. The Aid-India Club is expected to meet early in June to decide the amount of assistance. Since some of the donor countries like Britain are inclined to include the defence aid in the total amount to be given to India, it is feared that foreign assistance during 1963-64 may fall short of the requirements. The possibility of the plan being pruned in view of the shortfalls in the targets has also called for caution.

Indian Iron have been sluggish and have fluctuated narrowly. Reports about decontrol of the price and distribution of steel have had little effect. Engineering shares have lost on balance. Scattered support has been extended to Hooghly Docking because of the payment of satisfactory dividends and the prospect of a rights issue in the proportion of two new shares for every five held at a premium of Rs. 25 a share. The prices of miscellaneous shares have drifted downward in the absence of support. The latest reports about the squeeze of corporate profits by heavier taxation have weakened sentiment. Indian Copper have lost on a cut in the dividend from 27 percent to 18 percent. Although its report will not be published in view of the emergency, it looks as if the super profits tax has been responsible for the smaller dividend. Calcutta Electric have been neglected, although the generator which broke down has been reasonably repaired. Paper shares have been subdued and so have been sugar shares. The sugar factories situated in Bihar and U.P. may be adversely affected since the ex-factory prices of the commodity fixed for them may not cover their production costs.

Coal shares have been neglected. Cotton mill shares have been dealt in cautiously because the manufacture of coarse and medium cloth has become almost unprofitable. Scattered business has been done in bank shares. Tea shares have generally been subdued despite the declaration of some good dividends for 1962. Investors have been disappointed because the first export auction for the new north Indian crop held in Cal-

cutta last Monday was not as satisfactory as was previously thought of. Although the supply-demand position of tea is considered good, it remains to be seen whether the average price during the 1963-64 season turns out to be better than in 1962-63.

The declaration of some good dividends has helped to attract support for selected jute shares. But the investors have generally been inclined to take a cautious view of the future outlook. They have been wondering whether the increased jute goods production will be absorbed during the coming months at remunerative prices.

Government securities have been steady. There has been good support for short-dated loans. Subscriptions to the two new conversion loans recently floated by the Central Government amount to about Rs. 138.79 crores. The new loans—4 percent 1969 and 4½ percent 1988—were open for subscriptions from 9th May to 18th May. Conversion facilities were offered for two maturing loans—3½ percent 1963 and 3 percent 1963-65. Of the total amount tendered, subscriptions to the 4 percent loan 1969 have been Rs. 85.69 crores and for the 4½ percent loan 1986 Rs. 53.10 crores.

Bombay

SENTIMENT WORSENS IN DALAL STREET

PRICES SOFTEN ON BULL LIQUIDATION

Wednesday Evening.

THE Bombay stock market has been sluggish during the past week. Although the new account started on Monday in a steadier mood because of the smaller carryforward charges, sentiment has deteriorated later. Share prices have generally turned softer on tired long liquidation, combined with the absence of support. Operators have been disinclined to extend their commitments in anticipation of the resumption of forward trading. The corporate news has, meanwhile, been unfavourable. The latest reports of cotton mills have indicated mixed trends. Mills producing medium and coarse cloth, in general, have found it difficult to earn profits in 1962. The trend is not likely to improve during the current year. Dalal Street has also been worried by Press reports about the concentration of Chinese troops along India's northern borders. The prospect of foreign aid has also become uncertain.

Tata Steel ordinary have declined to Rs. 132.75 in idle trading. Investors have not been able to ascertain whether decontrol of steel—if it were to take place—would be helpful for the Company or not. Tata Locomotive, Larsen and Toubro, Premier Construction and Alcock Ashdown have lost in the engineering section. In motor-vehicle shares, Hindustan Motors have reacted on profit-taking. Premier Automobiles have been neglected.

Except for influential buying in Standard and Kohinoor, cotton mill shares have generally drifted downwards. Kohinoor have met with sup-

port because of the encouraging statement of its chairman. He has indicated that the Company's results during the current year are likely to be better than in 1962. Century have recovered somewhat towards the close on reports that the tyre chord plant of the Company has started production. Khatau have been barely steady, while Morarjee have lost. Bombay Dyeing, Simplex, India United ordinary and Svadeshi have been quoted lower.

Turnover has declined appreciably in miscellaneous shares. Interest in cash shares, in particular, has been subdued. In the cement section, Associated Cement have been sold at Rs. 140.50 and Digvijay at Rs. 164. Sugar shares have been slightly steadier, and Belapur have been taken up to Rs. 185.50. Steamship company shares have been sold freely at cut prices. Mining shares have shown mixed trends. Shivrampur Syndicate have been neglected, but B.B. Petrol have attracted support from knowledgeable quarters. Among chemical shares, Tata Chemical have been done at Rs. 14.88 and Indian Dyestuff at Rs. 416.25. Synthetics and Chemicals have declined, and so have Permanent Magnets. Among rayon shares, National Rayon have recovered slightly towards the close after a sharp fall earlier. The improvement has been due to the news that the lockout declared by the Company has been lifted. But normal working is not likely to be restored for some

time more. Voltas have been quiet at Rs. 261.

Bank shares have been idle. Business has passed in Bank of Baroda at Rs. 86.30 and in Dena Bank at Rs. 55. In the insurance section, New India Assurance have been steady. Among electric company shares, Tata Power has been bought at Rs. 1,030, but Ahmedabad have been offered down to Rs. 91.30.

Madras

INVESTORS REMAIN CAUTIOUS INTEREST CONFINED TO PLANTING SHARES

Tuesday Evening.

THE Madras stock market has been dull during the past week. Although share prices have declined somewhat, turnover has been negligible. Operators have been inclined to await the decision of the Government about the resumption of forward trading. Investors have generally turned hesitant because of the heavy impact of the super profits tax, which is indicated in the latest company reports. There has been virtu-

ally no interest in clearing shares, since outside support has almost come to a standstill. Whatever interest has been shown, has largely been confined to selected planting shares.

In Government securities, scattered support has been extended to selected State Government loans. Among banks, Indian Overseas and Pandyan have been transacted. Interest has been subdued in electric company shares. Prices of sugar shares have declined on balance. E.I.D. have been sold down to Rs. 37.25 and Deccan have been available at Rs. 9.60.

In the planting section, Blue Mountain have been transacted at Rs. 2.30 and Consolidated Coffee at Rs. 17.12. Periakaramalai have been bought at Rs. 2.90 and Lucky Valley at Rs. 11. Tropical have declared a taxable ordinary dividend of 8 percent and Nenneny a taxable ordinary dividend of 15 percent. Good tea shares have met with little pressure because of satisfactory auction prices. Sellers have been reserved in coffee shares on the view that the export outlook is fairly encouraging. Rubber shares have been neglected.

Turnover has declined to a trickle in cotton mill shares. Coimbatore Pioneer have paid a taxable ordinary dividend of 15 percent and Balarama Varma a taxable ordinary dividend of 7.5 percent. Kadri have declared a taxable ordinary dividend of 6 per-

cent. Interest has been taken in Bangalore Woollen at Rs. 250 and in Buckingham at Rs. 265. South India Viscose have reacted to Rs. 142.50 and Travancore Rayon to Rs. 25.25. Profit-taking has reduced Madura to Rs. 32.50.

There have been few transactions in the miscellaneous section. Madras Rubber have been steady at Rs. 17 on prospects of a rights issue in the proportion of one new share for every two held, at par. In the cement section, Dalmia have been transacted at Rs. 13.05 and India at Rs. 5.52. Aluminium Industries have weakened to Rs. 17 and Mettur Chemicals to Rs. 12.15. Ashok Leyland have been sold down to Rs. 7.46, while Seshasayee Paper have been taken up to Rs. 7.80. Textool have been quoted at Rs. 154 and Spencer at Rs. 21.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

London

ALL-ROUND RISE IN SHARE PRICES

GILT-EDGED ADVANCE

London, 22nd May.

RISE hopes of an economic recovery and a further string of good company news brought buyers into the market and an all-round advance was recorded in the stock market prior to the week-end. Business was on a very good scale, and markets had one of the most active weeks of the year. Unsettled conditions developed after the week-end, however, on a renewal of election fears. The advertising campaigns by both the Conservative and Labour Parties gave rise to renewed talk that the general election may be held in the autumn rather than in the spring. Prices, consequently, slipped back, but even so widespread and often appreciable gains were recorded compared with the previous levels. Gilt-edged were in demand and although off the top, gains extended to nearly a point. Dollar stocks lost ground following a sharp fall in the dollar premium, which followed news that the Bank of England had permitted an investment trust to borrow dollars in New York and would consider similar applications from other trusts. Industrials went ahead on a broad front and although easing after the week-end, extensive gains were recorded. Property shares fluctuated narrowly, while banking and insurance shares moved erratically. Gold shares were in selective demand and coppers also advanced. These however, were subdued. Oils fluctuated and lost ground after the week-end on talk of a petrol price war developing in the U.K. Rubbers were out of the picture, but teas often responded to good dividend statements.

Money

THE CALCUTTA MONEY MARKET

FAIR DECREASE IN ADVANCES

Wednesday, 22nd May.

THE general level of advances has shown a fair decrease in the Calcutta money market during the past week. This has resulted from the slight decline in the credit given to the sugar mills, to the iron, steel and engineering industries, and to the foodgrains and seeds trade. The advances to jute mills have gone up modestly. Credit for cotton and woollen mills remains almost unchanged. In the interbank market, conditions have become steadier after initial weakness, and the call rate has risen to 5 percent from 4½ percent.

In the exchange market, activity has increased slightly, and there is an improvement in the supply of gunny bills. Tea bills are still in short supply. The demand for remittance has been moderately active. Sterling is weak in relation to most currencies except the Canadian dollar, the Italian lira and the Norwegian kroner.

SILVER WAS QUIET IN CALCUTTA during the past week. Turnover was small. The price fell from the previous week's level of Rs. 274.50 to Rs. 270.50, quoted today for ready delivery. There was no business in forward. The London and New York prices were 110½d and 128.4 cents. No trading took place in gold.

DURING THE WEEK ENDED 17TH MAY, Government of India Treasury bills for Rs. 68,20,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-day Government of India Treasury bills were opened on 21st May. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.410 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.355 percent a year. Tenders for Rs. 2 crores of 1-days Government of India Treasury bills will be received at all centres up to the close of business on 27th May.

IT IS STATED THAT 91-day INTERMEDIATE Treasury bills will be sold from 22nd May to 25th May at Rs. 99.426 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 15th May to 18th May amounted to Rs. 1.65 lakhs only.

DECLINES OF RS. 22.13 CRORES TO Rs. 2,321.96 crores in active notes and of Rs. 19.84 crores to Rs. 2,342.31 crores in the total note issue were notable features of the Reserve Bank return for the week ended 17th May, 1963. The currency contraction was covered by reducing rupee securities of the paper currency reserve by Rs. 20 crores to Rs. 2,006.44 crores. This was done partly by transferring securities to the Banking Department in which investments rose by Rs. 54.47 crores to Rs. 226.84 crores. Deposits of the Government of India increased by Rs. 3.28 crores to Rs. 54.11 crores, and those of State Governments by Rs. 5.12 crores to Rs. 12.19 crores. Balances of sche-

duled banks rose by Rs. 3.99 crores to Rs. 83.52 crores. Their loans from the Reserve Bank fell from Rs. 45.97 crores to Rs. 24.92 crores, of which advances against usance bills were Rs. 17.49 crores (Rs. 30.73 crores). Ways and means advances stood at Rs. 49.21 crores, against Rs. 70.11 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 10th May, 1963, shows a drop of Rs. 3.43 crores to Rs. 554.59 crores in total deposits. Investments in Government securities are down by Rs. 2.35 crores to Rs. 221.37 crores, while other authorised investments remain unchanged at Rs. 7.84 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 37 lakhs to Rs. 307.92 crores. Cash and balances are, in consequence, shown at Rs. 22.80 crores or Rs. 1.49 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 10th May, 1963, shows Demand and Time liabilities at Rs. 1,018.60 crores (Rs. 25.05 crores on account of borrowings from banks) and Rs. 1,256.91 crores (Rs. 18.21 crores), compared with Rs. 1,032.06 crores (Rs. 25.27 crores) and Rs. 1,247.39 crores (Rs. 16.85 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.40 crores and Rs. 2.71 crores, respectively. There is a drop of Rs. 11.44 crores to Rs. 606.85 crores in investments. Advances and bills discounted at Rs. 1,597.96 crores show a drop of Rs. 3.94 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6 percent and 70.2 percent, against 5.8 percent and 70.3 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 24-5-63.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

22, SIKAND ROAD, CALCUTTA-1

This announcement is not a Prospectus and persons interested are requested to apply for a copy of the Prospectus for full details, copies whereof are available from the Bankers, Managing Brokers and Brokers.

The Subscription list will open at the commencement of Banking hours on the 27th day of May, 1963, and will close at the discretion of the Directors, but not earlier than the close of Banking hours on the 29th day of May, 1963.

BOROSIL GLASS WORKS LTD.

(Incorporated under the Companies Act, I of 1956 on the 14th day of December, 1962, as a public Company, limited by Shares)

REGISTERED OFFICE

CHOTANI ESTATES, PROCTOR ROAD, GRANT ROAD, BOMBAY No. 7.

SHARE CAPITAL

1. AUTHORISED

20,00,000 Equity Shares of Rs. 10 each Rs. 2,00,00,000

2. ISSUED

15,00,000 Equity Shares of Rs. 10 each Rs. 1,50,00,000

OUT OF THE ABOVE

(a) 90 Equity Shares of Rs. 10 each (fully paid) have been allotted for cash to the Subscribers to the Memorandum and Articles of Association of the Company .. Rs. 900

(b) 1,50,000 Equity Shares of Rs. 10 each have been issued (credited as fully paid up) shares to Corning Glass Works, Corning, U.S.A. the technical collaborators of the Company for the supply of technical know-how, continuing technical assistance, etc. in terms of an Agreement dated the 7th day of May, 1963, made between Corning Glass Works and the Company and hereinafter referred to as "the Technical Collaboration Agreement" .. Rs. 15,00,000

(c) Corning Glass Works have agreed to subscribe for and will be allotted 5,85,000 equity shares of Rs. 10/- each (to be credited as fully paid-up) in consideration of supply of machinery and equipment to be imported and which are listed in the Technical Collaboration Agreement .. Rs. 58,50,000

(d) 1,43,600 Equity Shares of Rs. 10 each (to be credited as fully paid-up) have been agreed to be allotted to the existing shareholders of the Industrial & Engineering Apparatus Co. Pvt. Ltd. in part consideration of the acquisition of the assets and undertaking of Industrial & Engineering Apparatus Co. Pvt. Ltd. (herein-after for brevity's sake referred to as IEA) in terms of the Scheme of Amalgamation between IEA and the Company .. Rs. 14,36,000

(e) 8,900 Equity Shares of Rs. 10 each (to be credited as fully paid-up) have been reserved for allotment to the existing shareholders of IEA representing the maximum possible number of shares to be allotted for the balance of consideration of Rs. 89,000 for the acquisition of the assets and undertakings of IEA in terms of conditions imposed by the Controller of Capital Issues .. Rs. 89,000

(f) 2,29,910 Equity Shares of Rs. 10 each (fully paid-up) have been allotted and agreed to be allotted for cash to Directors and Friends and Associates of the Directors and promoters .. Rs. 22,99,100

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION
3,82,500 Equity Shares of Rs. 10 each .. Rs. 38,25,000

Rs. 1,50,09,000

TERMS OF PAYMENT

Payable as follows

- (a) Rs. 2.50 per share on application.
(b) Rs. 7.50 per share on allotment.

APPLICATION FOR SHARES

Application forms along with the copies of the Prospectus can be had from the Bankers, Managing Brokers and Brokers.

DIRECTORS

Name & Address	Nationality	Description & Occupation
(1) Mr. Robert D. Murphy, President, Corning Glass International, 717, Fifth Avenue, NEW YORK 22 N.Y., U.S.A., (Chairman), Alternate Director to Mr. Robert D. Murphy;	American	Business, Director, 1. EXISTING AND PROPOSED ACTIVITIES

The Principal object of the Company is to manufacture Scientific and Laboratory Glassware of the Borosilicate type. Industrial and Engineering and Apparatus Co Private Limited (which is proposed to be merged with the Company) presently manufactures products, such as, scientific and laboratory glassware, neutral vials, Amber and White—petroleum lamp chimneys, transfusion bottles, blood and saline bottles, graduated ware, lampware, etc., and has an annual turnover of over Rs. 33,00,000/-. These products are marketed by I.E.A. under the trade mark "BOROSIL" which is widely known in India. It is proposed to merge I.E.A. with the Company and for that purpose a scheme of amalgamation has been prepared, which is subject to the approval of the court. The Company has entered into a financial and technical collaboration agreement with Corning Glass Works, Corning, U.S.A. who are known the world over as the leading manufacturers of laboratory glassware, industrial glasses, television tubes, optical and ophthalmic glass, glass pipes radiation shielding windows, industrial radiant heaters Corning will supply to the Company Technical Know-how and plant and machinery required for the project. The Company will undertake manufacture of the range of scientific and laboratory glassware of the borosilicate type presently being manufactured by I.E.A. but the production by the Company will be by fully mechanised automatic machines. In addition, the Company will undertake manufacture of the range of scientific and laboratory glassware manufactured by Corning. Corning has agreed to grant to the Company licence to use its patents in India, and the right to use the trade mark "CORNING" as a Registered User. The maximum capacity of the Company's plant will be 7,200 tons per annum. It is expected that the Company's plant will reach its maximum capacity of 7,200 tons per annum by the end of 1964. The Planning Commission has estimated the requirement of scientific and laboratory glassware at 21,500 tons per annum during the Third Plan period. The existing plant of I.E.A. is situated at Andheri, while the new plant to be set up will be situated at Marol which is within about a mile of the existing plant.

One special advantage that will accrue to the Company under the Scheme of Amalgamation with the IEA, will be that the Company will be beneficiary of the profits that will arise from the business of the IEA as from 1.1.1963. The sales and profit earning capacity of the present plant of the IEA may be had from the following figures:—

INDUSTRIAL AND ENGINEERING	1958		1959		1960		1961		1962	
	1958	1959	1958	1959	1960	1961	1960	1961	1960	1961

- An application has been made to the Bombay Stock Exchange to grant official quotation for shares of the Company and permission to deal in them on the Company complying with the usual and necessary formalities after the close of the subscription list.

**CARBORUNDUM
UNIVERSAL
ABRASIVES**

a
change
in

marketing
arrangements

Carborundum Universal have pleasure to announce the opening of a Branch at Calcutta, from 1st June 1963, for direct marketing of their well-known range of Coated and Bonded Abrasives.

All inquiries (both Trade and Consumer) may please be addressed to:

Carborundum Universal Ltd.,
Armenian College Building (Second floor),
56-D, Free School Street, Calcutta-16

Territories Covered:

For Grinding Wheels and other Bonded Abrasives: West Bengal, Bihar, Assam, Orissa, Uttar Pradesh and Eastern half of Madhya Pradesh.

For Coated Abrasives: West Bengal, Bihar, Assam, Orissa, and part of Madhya Pradesh.

Carborundum Universal are grateful to M/s. William Jacks & Co., Ltd., Calcutta for their valuable services all these years in the distribution of their abrasive products.

CARBORUNDUM UNIVERSAL LTD
Head Office: 52/53, Jehangir Street, Madras-1
Telephone: 29141 (8 lines)
Works: Tiruvottivur.

PROSPECTS OF E.C.M. TARIFF CONCESSIONS FOR INDIA

By Malcolm Subhan

IT is too soon to say whether the crisis which has paralysed the Common Market for the last three months is finally over. An agreement reached at midnight may prove largely illusory by morning. The fact remains, however, that the E.E.C. Ministers who met here last week succeeded in finding solutions to two of the three major problems confronting the Community—the Kennedy round and agriculture. Their inability to agree on how to keep in touch with the British—the French are firmly opposed to any consultations with them on a Community basis—merely suggests that the ghost of Mr. Edward Heath has yet to be exorcised from Brussels.

The encouraging thing in this from the Indian point of view is that the Community should now be able to devote more time to her problems than hitherto. The answer which Mr. Jean Rey, the member of the Commission responsible for external relations, gave this correspondent, clearly underlined the difficulties which India is facing. When asked at the opening of the Ministerial session whether the Ministers would discuss the Indian *aide-memoire*, Mr. Rey replied, "Yes, if we have the time." Without under-estimating in any way the political and economic problems which the *aide-memoire* poses for the Six, this correspondent feels that one of the principal reasons for the Six's apparent lack of concern for India is to be found in their preoccupation with the more immediate problem of finding a way out of the impasse in which the Community has been finding itself since February.

The agreements reached by the Council of Ministers last week suggests that a beginning has been made. Although the problems remain as numerous as ever, there is visible relief here that the dispute between the French and the Germans should have been settled with a minimum of polemics. Now that the atmosphere of crisis has lifted somewhat, the Six may be expected to take up the numerous matters which have been kept

pending. The Indian *aide-memoire* will be studied more closely by the Commission and the permanent representatives of the Six soon, and would be taken up by the Ministers when they reassemble in Brussels at the end of the month. Progress may, however, be slow, not because of any unwillingness on their part to grant concessions to India, but for procedural reasons. The Six are undecided, for instance, whether to grant India tariff concessions at this stage or to wait for the Kennedy round. Some would prefer to see what the other industrial countries are prepared to do for the developing countries before elaborating a Community policy.

Developing Countries

The main reason for this hesitancy appears to be that the Six have given little thought so far to the concessions which they are prepared to offer the developing countries during the Kennedy round. It is significant that only the last of the seven points contained in the Council's mandate to the Commission in view of the Ministerial session of G.A.T.T. deals with the problems of the developing countries. It simply states that as regards the other problems which may be raised in Geneva, including that of the developing countries, the Commission is to follow the recommendations made by the 111 Committee. (This Committee has been set up under Article 111 of the Treaty of Rome—hence its name—to conduct negotiations on tariff matters, which are a Community responsibility.)

None of the recommendations is particularly novel; the question of preferential tariffs for the developing countries is not raised at all. Taken as a whole, they suggest that the Six would like to discuss this matter further with the U.S.A. Indeed, the first of the recommendations of the 111 Committee is that the Community must not act alone in this matter, but co-ordinate its efforts with those of other industrialised countries within the framework of G.A.T.T. However, the Committee shows a certain readiness to modify its earlier position as regards reciprocity by the developing countries. It is now suggested that the demand for reciprocity should be abandoned, although there are some who still argue that developing countries could be asked to review their import policies and to eliminate restrictions which are not entirely justified by considerations of foreign exchange.

As for tropical products, the 111 Committee feels that the various suspensions and reductions of the common external tariff which the Six have agreed to, whether in the framework of the new Convention of association or, as in the case of tea and tropical woods, on condition that the British make similar concessions, should be consolidated in G.A.T.T. The Committee is of the opinion, however, that tariffs are not of primary importance in the case of tropical products; it is more important in its view to stabilise the prices of these products than to reduce the tariff on them to zero as the Americans have proposed. The Community is, therefore, prepared to participate with the other members of G.A.T.T. in finding a system of price stabilisation, and to extend technical and financial aid to producers to help them market their products.

On the whole, the Six seem reluctant to submit more detailed proposals

without knowing what concessions the other industrial countries are prepared to offer. In one sense, the question is back at the point which prevailed during the British negotiations: during the Kennedy round, the needs of developing countries such as India will be examined as an incidental element in the negotiations between the Common Market and the United States. Although these negotiations have been placed under the auspices of G.A.T.T., so that whatever reductions are made by the two main participants will be extended to all the signatories under the most-favoured-nation clause, it is evident that the main objective of the Kennedy round is the freeing of trade between the Common Market on the one hand, and the U.S.A. and Britain, on the other. Consequently, the degree to which the industrialised countries are willing to help the developing countries increase their export earnings will depend in considerable measure on the extent to which they are able to achieve their primary objective.

The Kennedy Round

This does not mean, of course, that the needs of the developing countries will be largely ignored. The Council of Ministers of the Six has expressed the hope that all the members of G.A.T.T. would participate in the Kennedy round. In this connection, the Ministerial session opening in Geneva on 16th May may give the developing countries a reasonably clear idea of just how far the industrial countries are prepared to accept their demands for a fresh approach to tariff matters.

It is well to bear in mind, however, the possibility of the negotiations between the Six and the United States foundering during the procedural stage on either one of two obstacles. The first concerns the method to be used in making tariff reductions, the second relates to agriculture. Both were discussed at length by the Council of Ministers, and although agreement was reached on the mandate to be given the Commission, the fact is that a deadlock between the Six and the U.S.A. may arise sooner or later on either one of them.

The question of the mechanism by which tariffs would be reduced was first raised by the French. It has to do with the fact that while much of the common external tariff falls within a range of 10 percent to 20 percent, only 1 percent of the total being over 30 percent. American tariffs range from zero to 80 percent and over, nearly one-fifth of them being in the latter category. The Six, therefore, argue that a 50 percent linear cut as proposed by the Americans would leave the Community holding the shorter end of the stick: after all, there is a world of difference between reducing an 80 percent tariff to 40 percent and a 20 percent tariff to 10 percent.

New Tariff Formula

The Six have, therefore, proposed what has been termed the 0-5-10 formula. Under this formula, devised by the French and the Germans, the negotiators take as their objective a tariff on raw materials of zero, of 5 percent on semi-processed goods, and of 10 percent on manufactured goods. The difference between the ideal or hypothetical tariff and the

CAPITAL, 23rd May, 1963.

existing tariff is then reduced by 50 percent. Thus a tariff on manufactured goods of 80 percent would be reduced to 45 percent, a tariff of 20 percent on the identical product to 15 percent. But this is not all. The Six are equally concerned with the wide disparities which American tariffs display, and they, therefore, insist that during the negotiations, tariffs should not only be reduced but also harmonised—that is to say, that the peaks in the American tariffs should be levelled off.

Although the Six have expressed their readiness to examine whatever methods of tariff reduction are submitted in Geneva, and have suggested that a committee be set up to study them, it is clear that they reject the American proposal out of hand. The latter, however, have their hands tied in the matter by the Trade Expansion Act, under which the Kennedy round is being organised. The Americans have little choice, therefore, but to maintain that it should be possible to negotiate separately those items on which the American tariff is particularly high—to which the Six have retorted that the exceptions would be so numerous as to make nonsense of the notion of linear cuts.

This is not the only obstacle to the Kennedy round. The question of whether or not the negotiations should cover agricultural products as well is another. In principle, it was settled last week, when the Council of Ministers of the Six agreed to include them in the negotiations. This agreement depends, however, on whether or not the Six are able fully to implement the common agricultural policy before the end of the year. The French have, in fact, strongly opposed the American demand to include agricultural products. In this, they have found themselves at loggerheads with the Germans.

Common Agricultural Policy

The French, who look upon their country as the bread basket of the Community, want to implement the common agricultural policy adopted by the Six in January 1962 as quickly as possible. The Germans, who are primarily interested in industrial exports, prefer, like the British, to subsidise their farmers heavily and to import a substantial part of their requirements of food from countries such as the United States and Argentina. They are reluctant, therefore, to adopt a policy which will almost certainly result in a fall in farm incomes and which virtually compels them to reduce their agricultural imports from third countries. Although the Germans have given in on this point, when they agreed that the remaining agricultural regulations should be adopted—and not simply drafted—before the end of the year, it remains to be seen whether the regulations will in fact be ready in time.

The chances are that the negotiations between the U.S.A. and the Common Market on agricultural products will be particularly long and bitter, and the Kennedy round may well collapse on this question, much as the British negotiations did three months ago. Clearly, these negotiations may not achieve the success which was forecast for them when the Trade Expansion Act was adopted. It is reported that President Kennedy, astute politician that he is, would like to dissociate his name from the negotiations. While India is expected to decide whether or not to participate only after the Ministerial session of G.A.T.T., the terms of the *aide-memoire* suggest that she would prefer to negotiate a trade agreement with the Six now rather than venture on shifting sands.

CAPITAL, 23rd May, 1963.

New Delhi

MEETING FOODGRAINS SHORTAGE THROUGH IMPORTS

(FROM OUR NEW DELHI CORRESPONDENT)

INSTEAD of relying on too many agencies to raise food production, the Government, after years of hesitation, has now resorted to the well-tried method of price support. It has already announced its price support policy for wheat and rice. The price support policy for *jowar* was announced last week—Rs. 9 a maund for white *jowar* and Rs. 8.50 a maund for yellow *jowar*. But because of the critical food situation in the country, the Central Minister for Food and Agriculture, Mr. S. K. Patil, has been authorised to import the balance of 16 million tons of wheat and 1 million tons of rice under the P.L. 480 agreement after its expiry in June 1964. He will, however, sound the U.S. Government concerning the possibility of further wheat imports should it become necessary to build a buffer stock of 4 million tons. Mr. Patil said that he proposed to build a buffer stock of 2 million tons of rice through imports and internal procurement. There is a proposal to import 40,000 tons of rice from the United Arab Republic. The Minister hoped to import a larger quantity of rice from the U.S.A. provided the suggestion to increase the rice acreage in that country was accepted. As a long-term measure, Mr. Patil proposed to set up 100 experimental farms in India for the *apane* method of paddy cultivation. "If this could be done in two years, we will solve the rice problem or all times", he added.

Mr. Patil, who was addressing a press conference prior to his departure for the U.S.A., gave no hope to hold the price line. He said that only those who purchased their supplies from shops other than fair price shops, paid higher prices. He claimed that there were adequate foodgrain stocks in the country to keep prices down. Mr. Patil also announced a marginal rise of 6p a maund in the price of sugarcane. He explained that his announcement could not affect the current sowings which, he said, had been completed. He claimed that it would encourage farmers to take proper care of the crop. "If further incentive were found necessary, after harvesting, to prevent the diversion of cane to *gur* manufacture, they would be considered," he added.

Earlier during the past week, Mr. Patil, while addressing the annual general meeting of the Indian Sugar Mills Association, referred to the various problems of the industry, particularly to exports. He said:

"I have referred earlier to the industry's new-found firm footing in exports. Our efforts towards this end originated in the difficulties of surpluses with which the industry was confronted two years ago. Gradually through persistence and persuasion and the co-operation of your Association and the State Trading Corporation, it has been possible for us to secure for the industry a regular foothold in the international sugar market. It is no longer a problem of exports as a means of disposal of unwanted surpluses; on the other hand, it is the necessity of exporting sugar as a regular foreign exchange earner which has been recognised."

"We have taken a very significant step this year in this field in that with the co-operation and enterprise of some of your members, we have been able to manufacture raw sugar

to the tune of 250,000 tons and shall be in a position to export it to Japan, the U.S.A., and a number of other countries. This and the fact that even refined sugar has become a regular feature of the export trade would appear to call for a revision of our ideas regarding the basis on which the industry was participating in these exports hitherto. My Ministry has this problem actively under consideration and I am sure that with your co-operation and assistance, it could work out a scheme of things which would place sugar on par with other export commodities, particularly in view of the prevailing price trends."

Mr. Patil, it would appear, warns that cultivators should benefit, to the maximum extent possible, from the prices of agricultural products. As far as sugar is concerned, his emphasis was on exports. He also promised to take such steps as were necessary to prevent the diversion of sugarcane to the manufacture of *gur*. If he had his way, India would continue to import foodgrains, as hitherto, from the United States. There is one snag in this thinking. The cultivator is also a consumer; his standard of living has been steadily going up and he may demand not only price support for his products but also a reasonable price for his necessities, including sugar. But the Government is apparently doing little to hold the price line of essential commodities.

BOKARO PROJECT

Forming Government Company

The Central Ministry of Steel and Heavy Industries has been busy discussing the U.S. steel mission's report on the Bokaro steel project. The mission has made a detailed examination of the supply of raw materials for the proposed plant. Meanwhile, an important decision, taken some months ago, was formally announced: the Government has decided to set up a separate company for the Bokaro plant, which will not be managed by Hindustan Steel. The decision, it is pointed out, is in accordance with the U.S. steel mission's recommendation.

Another decision taken is to set up a construction company for both new plants and for the maintenance of the existing plants. It is proposed to use the existing equipment and purchase a good deal of new equipment for this company. Initially, the company will be a subsidiary of Hindustan Steel, but, in due course, it will have its independent identity.

The Government is also expecting project reports for a blast furnace to be located in Bhilai and for small pig iron plants to be located in the three public sector steel mills. A definite decision to augment the pig iron supplies in India is expected by October next.

INDO-BRITISH TRADE

Improvement Recorded

Indo-British trade during the first three months ended March 1963, showed a definite improvement over last year. Britain's imports from India amounted to £39.5 million, against £37.3 million for the first

three months of 1962. The commodities which showed improvement were tea, textiles and crude animal and vegetable materials. The U.K.'s exports to India during the period rose from £30,961,000 to £34,396,000—the principal beneficiaries being machinery and transport equipment. Machine tools, textile machinery generators, motor converters were the main items of machinery whose exports to India showed an increase.

YUGOSLAVIA

Zagreb Trade Fair

The Government of India has decided to organise India's participation in the Zagreb International Autumn Fair, 1963, to be held in Zagreb, Yugoslavia, from 7th to 22nd September, 1963. The fair, which attracts a large number of buyers and visitors from Yugoslavia and other parts of the world, is an important annual event of its kind.

TELECOMMUNICATION SERVICES

Using I.D.A. Credit

In September 1962, the International Development Association extended a development credit equivalent to \$42 million to India for importing equipment during the next two years to expand and improve the telecommunication services. Equipment to be purchased through the I.D.A. credit will be procured on the basis of international competitive bidding. The I.D.A. credit is for a period of 50 years. Repayment of the principal will begin on 1st March, 1973. Thereafter, 1 percent of the principal will be repayable annually for ten years and 3 percent repayable annually for the final 30 years. The credit is free of interest, but a service charge of three-fourths of 1 percent a year on the amount withdrawn and outstanding will be made to meet the I.D.A.'s administrative costs.

The loan is being used, among other things, for importing equipment for telephone exchanges in Bombay, Kanpur, Madras and Delhi. The Government is also setting up a factory for manufacturing switch equipment for telephones with foreign collaboration. A number of foreign companies have tendered, included in which are Nippon Electric of Japan, L.M. Erickson of Sweden, Northern Electric of Canada, Automatic Telephone Equipment Company of the United Kingdom and International Telephone and Telegraph Corporation of the U.S.A. The Japanese tender is reported to be the lowest. A final decision is expected shortly.

G.A.T.T.

Ministerial Meeting

The ministerial meeting of the General Agreement on Tariffs and Trade (G.A.T.T.), which opened in Geneva last week, has three main subjects on its agenda: (1) Measures for the expansion of trade of the developing countries; (2) arrangements for the reduction or elimination of tariffs and other barriers to trade; and (3) measures for access to mar-

kets for agricultural and other primary products.

The main problem is to improve the outlets mainly for tropical products and raw materials. The G.A.T.T. secretariat has already made detailed studies of the obstacles to trade in tropical products. In November 1961, the G.A.T.T. Ministers adopted a joint declaration on the promotion of trade of the less-developed countries.

The measures suggested for this purpose were the removal of quantitative restrictions, tariffs and internal taxes on all products of interest to the less-developed countries. The latter have also asked for urgent consideration of other measures to help them diversify their economies and increase their export earnings. Some countries have already gone some way to meet this requirement, but it is generally felt that progress has been inadequate.

Of the other two subjects discussed, the reduction or elimination of tariffs and other barriers to trade will mainly affect trade in manufactured goods. It is hoped in Geneva that tariffs will be reduced by 50 percent. The U.S. Administration is empowered to negotiate this under the U.S. Trade Expansion Act which was passed in October last year.

But the situation has been complicated by the European Common Market's proposal that instead of a 50 percent reduction, the aim should be to reduce tariffs by 50 percent of the difference between their present levels and the agreed levels. This will have the effect of levelling out the disparities in different countries' tariff rates and, in particular, in lopping off the peaks of some high U.S. tariffs. At its latest meeting, the E.E.C. Council of Ministers agreed to propose that both approaches should be considered by a G.A.T.T. working party.

The progress in the actual "Kennedy round" of tariff negotiations will be easier to achieve than in the last "Dillon round" if the present Geneva meeting approves, as expected, the adoption of the technique of negotiating uniform reductions in countries' tariffs in place of the more laborious method of negotiating each tariff item separately which G.A.T.T. has followed hitherto. This was suggested by the G.A.T.T. Ministers in November 1961.

In pressing for the new round of trade negotiations, the U.S. Government has emphasised that reductions in industrial tariffs must be accompanied by improved outlets for temperate farm produce. In this, the United States will be strongly supported by the Commonwealth as well as other exporters of these products, who consider that G.A.T.T. has so far not given them a fair balance of advantages for the obligation it lays on them. This is because the most serious obstacles to international trade in farm produce are non-tariff barriers. The way in which trade in temperate farm produce will be covered within the framework of the "Kennedy round" remains to be determined. The main target for the agricultural exporters' attention will undoubtedly be the agricultural policy of the European Common Market.

U.K.

Private Investment in India

Britain's private investment in India since her independence has more than doubled itself. It constitutes just under 75 percent of all foreign private investment. In 1948, British capital invested in India totalled Rs. 206 crores. In 1960, out of the total foreign private investment of Rs. 612 crores, British capital amounted to Rs. 446 crores. This represents an average increase of Rs. 20 crores a year. Some of the best known names

in British industry are now investing in India, and the number of such new enterprises and joint ventures continue to increase.

Imperial Chemical Industries Ltd have many interests in India and among the notable enterprises developed in the first commercial explosives plant built in Gomia, Bihar, as a joint enterprise of I.C.I. and the Government of India. India's first polythene plant was opened in Rishra, West Bengal, in May 1960. The project cost Rs. 4 crores and has an annual capacity of 3,500 tons. It was built by an I.C.I. subsidiary, the Alkali and Chemical Corporation of India Ltd. It is based on alcohol obtained from molasses and will save India Rs. 1.5 crores a year in foreign exchange on imports. The Corporation is also to build a rubber chemical plant in Rishra.

Instances of Indo-British co-operation in road transport include the motor-car manufacturing agreement between Hindustan Motors Ltd and the British Motor Corporation, and the agreement between Standard Motor Products of India Ltd, Madras, and the Standard Motor Company of Coventry, England. In addition, Ashok Leyland Ltd of Madras is associated with Leyland Motors Ltd of Lancashire, for producing lorry and bus chassis. By early 1962, all the castings for Ashok Leyland Ltd will be produced by Ennore Foundries Private Ltd, another Company in

which Leyland Motors Ltd has a large interest and investment.

To meet the demands of the expanding Indian motor-car industry, Joseph Lucas Ltd, of Birmingham, has, in collaboration with T. V. Sundaram Iyengar and Sons (T.V.S.) of south India, formed a new Company which is manufacturing all types of motor-car electrical equipment. Lucas has a 64-percent share in the new Company; and investment, by way of plant and machinery, of just over £1 million. It has also formed a new Company, Brake India Ltd, again in collaboration with T. V. Sundaram Iyengar and Sons, to manufacture motor-car brake systems.

Manufacture of Bicycles

Many of the bicycles in use in India carry familiar British names. The "Hercules" bicycle is produced in the Madras factory of T. I. Cycles of India Ltd, which is associated with the Tube Investments Ltd, and the Hercules Cycles and Motor Cycle Co. Ltd, both of Birmingham. Since 1952, the "Raleigh" has been manufactured at the Asansol factory of Sen-Raleigh Industries Ltd, in association with the Raleigh Cycle Co. Ltd of Nottingham. Tube Products of India Ltd, in association with Tube Products Ltd, Oldbury, produces steel tubes for the cycle industry at its Avadi plant. The Enfield Cycle Co. Ltd, Redditch, through its associates, Enfield India Ltd, is producing motor-cycles at a

plant in Madras at the rate of 5,000 machines a year. Dunlops are another well-known British Company actively engaged in manufacturing rubber tyres and tubes in Ambattur and vehicle wheels and rims in Avadi, both near Madras.

In the electrical field, machinery of various types is being manufactured by A.E.I. Manufacturing Co. Private Ltd of Calcutta, an Indian subsidiary of Associated Electrical Industries. The English Electric Co. Ltd is engaged in such ventures as the manufacture of low voltage switch and fuse distribution equipment and complex control panels in Madras.

W. T. Henley's Telegraph Works Co. Ltd, in co-operation with Henley's Cables (India) Ltd, has put up 60 percent of the Rs. 1.1-crore capital required for an electric wire and cable factory in Poona. The Automatic Telephone and Electric Company (India) Private Ltd, with its factory in Bangalore, was the first major concern of its kind to be set up by the Government of India with foreign collaboration after independence and is generally regarded as one of the most successful examples of Indo-British collaboration.

There is a large project in Durgapur for the manufacture of heavy machinery for cement plant, coal mining equipment, boilers, pressure vessels, heat exchangers, and similar items. This plant, opened on 6th February,

CAPITAL, 23rd May, 1962

1962, by the late Dr. B. C. Roy, then Chief Minister of West Bengal, has been established by a new company, A.C.C. Vickers-Babcock Ltd, in which two leading British Companies, Vickers Armstrong and Babcock and Wilcox, are collaborating with Associated Cement Companies of India. The project is one of the biggest in the private sector. In terms of modern power station boilers, the yearly manufacturing capacity of A.C.C. is estimated at equivalent to 500,000 kilowatts and the combined cement machinery manufacturing capacity will be about four to five plants a year, each plant having a capacity of 500 to 600 tons a day.

Consolidated Pneumatic Tool Co. Ltd has invested Rs. 15 lakhs to manufacture pneumatic tools and air compressors in Mulund, Bombay.

A factory for manufacturing cold rolled steel strip has been set up in Bombay. The project has been sponsored by Graham Firth Steel Products (India) Private Ltd, a new Company formed by Indian interests in collaboration with Graham Firth Steel Products Ltd of Walsall, England. One-third of the capital outlay of the project will be subscribed by the British Company and the remainder by the Indian participants. The contribution of the British Company takes the form of complete plant, machinery, tools and other equipment and technical advice. The collaboration agreement does not involve any payment of royalty, and the new Company has the right to use the "Firstel" trade mark of the parent Company. The factory will have a final capacity of 25,000 tons of finished steel strip a year.

Producing Paper-making Machinery
Three Scottish firms formed a Rs. 10-lakh syndicate to establish and operate a factory to produce paper-making machinery in Calcutta. The firms are Bertrams Ltd, Ernest Scott and Company, and James Bertram and Sons Ltd.

A well-known British engineering firm, Head Wrightson and Co. Ltd, of Thornaby-on-Tees, County Durham, which has had close links with India for many years has formed a new subsidiary with administrative headquarters in Calcutta. The new Company under the name of Head Wrightson India Ltd, was inaugurated on 1st February, 1961, and acts as a contracting Company for the supply—as far as possible from Indian sources—of various types of plant according to the designs of the parent Company.

As a result of an agreement signed between Metropolitan-Cammell Carriage and Wagon Company of Birmingham and Southern Structural of Madras, the Indian firm is to produce welded rolling stock instead of riveted carriages. Under the agreement, which was signed in Birmingham, the British firm is to acquire a substantial shareholding in Southern Structural.

Heath, Hicks and Perken (Thermometers) Ltd, London, is collaborating with Pearls and Beads (India) Ltd, Aligarh, for the manufacture of thermometers and glass syringes. One factory will be located in Aligarh and a thermometrical unit, because of the temperature and moisture factors, is to be set up in Mussoorie.

The Cambridge Instruments Co. Ltd has joined with Hindustan Precision Instruments (P) Ltd for manufacturing industrial instruments and with Messrs Scientific Repairs and Trading Company for producing industrial dial thermometers.

The heavy engineering firm of John Thompson Ltd of Wolverhampton, Staffordshire, has entered into an agreement with the Indian Sugar and General Engineering Corporation for manufacturing some of its major products in India. Initially, the latter is concentrating on the production of

CAPITAL, 23rd May, 1963.

machinery for the sugar industry, but all large pressure vessels can be made in its factory.

Messrs Fisons Ltd of Britain (the principals of Messrs Bengers Laboratories Ltd) has participated to the extent of 70 percent in a collaborative venture with Bengers Laboratories (India) Private Ltd, covering all aspects of the manufacture and packing of dextrin B.P. and iron dextrin (pharmaceuticals).

There is a technical collaboration agreement between Twyford Ltd (England) and Hindustan Twyford Ltd for the manufacture of sanitary-ware and household ceramics.

Isaac Holden and Sons Ltd of Bradford is collaborating with Dunlop Brothers. A wool-combing factory, with an annual capacity of 10 million lbs, has been set up near Calcutta.

Gannon Norton Metal and Diamond Dies Ltd, Bombay, a joint venture of Gannon Dunkerley and Co. Ltd, Bombay, and Wire Drawing Dies (Manchester) Ltd, has been formed to manufacture fire drawing dies of tungsten carbide and diamonds. Wire Drawing Dies is a subsidiary of the British firm, Sir James Farmer Norton and Co. Ltd. The plant is expected to manufacture dies to the value of about Rs. 7.20 lakhs a year, which would help in saving foreign exchange to the extent of some Rs. 5.30 lakhs a year.

Bookers, a leading British industrial group, has announced the incorporation of a company in India in partnership with the Sawhney Organisation. The company will set up a heavy engineering works to manufacture sugar machinery and industrial process turbines.

Boots Pure Drug Co. Ltd has undertaken the manufacture of insulin in collaboration with an Indian firm.

Among other well-known firms, who have recently had their schemes approved, are the following: Chubb and Sons' Lock and Safe Co. Ltd: fire resisting and strong doors; Wellman Smith Owen Engineering Corporation Ltd: industrial furnaces and heat treatment equipment; Humphrey and Glasgow Ltd: erection of resin and intermediates plants; British Jeffrey Diamond Ltd: short fall coal cutters; Sunday Times Publications Ltd: printing and publication of books; Hall Harding Ltd: printing machines; C.E.C. of India (Mfg) Ltd: house service meters; Aveling-Bradford Ltd: road rollers; Ferranti Ltd: transformers; Imperial Chemical Industries Ltd: non-ferrous alloy sheets and strips; Bush Electrical Engineering Co. Ltd: electric-motors, transformers and alternators; Joshua Heap and Co. Ltd: threading and screwing machines; Henry Meadows Ltd: meadows diesel engines; and J. H. Fennex and Co. (Overseas) Ltd: conveyor belting.

U.S.A.

Grants and Loans Offered

U.S. loans for the Indian railways, power projects and for financing the import of capital goods, components and industrial raw materials announced since 1st July, 1962, now total \$411.4 million (Rs. 196 crores). This compares with a total foreign exchange assistance of \$1,704 million (Rs. 811 crores) for the development of these key sectors of the Indian economy since the United States started its aid programme for this country in 1951.

The U.S.A. has given dollar grants and loans totalling \$362 million (Rs. 172 crores) for power development. Rupee loans and grants totalling Rs. 252 crores have also been extended. The grand total of U.S. assistance for power development

comes to Rs. 424 crores. This is nearly three times the investment in power facilities in India during the entire period prior to the commencement of the first plan. The total U.S. aid commitments for the modernisation and expansion of the Indian railways now stands at \$258 million (Rs. 123 crores).

The United States has provided a number of grants and credits to the Government of India for the purchase of machinery and raw materials abroad to foster the growth of Indian industries. These have included steel worth Rs. 69 crores. U.S. aid commitments for the financing of imports of capital equipment required by a wide variety of industries as well as non-ferrous metals, components and industrial raw materials total Rs. 447 crores.

Almost every major industry in India is benefiting from U.S. aid. Capital equipment has been provided, among others, to jute, cement, textile, paper, rayon, aluminium, motor-car, and mining industries. Components and raw materials supplied by the United States include zinc, aluminium, copper, synthetic tyre cord yarn, sulphur, carbon black, wood pulp, lubricants, synthetic rubber, motor-car components and spare parts, machine tools, rollers for steel plants, and caustic soda.

Most of this non-project aid has been given to the Government of

India which has issued import licences to industries in the public and private sectors. The United States has also given loans to the Industrial Finance Corporation, the Industrial Credit and Investment Corporation of India and the National Small Industries Corporation, which are playing an important rôle in stimulating industrialisation.

A number of leading Indian firms have secured dollar loans directly from the U.S. Government agencies such as the U.S. Export-Import Bank, the U.S. Agency for International Development and its predecessor, the U.S. Development Loan Fund. These include Premier Automobiles, Hindustan Motors, Tata Engineering and Locomotive Company, Delhi Cloth Mills, Hindustan Aluminium, Orient Paper Mills and National Rayon Corporation.

The United States has also been helping American firms operating in India and Indian firms associated with them by extending them rupee loans from the Cooley Fund. The Cooley amendment to U.S. Public Law 480 provides that a portion of the local currency proceeds from the sale of American agricultural commodities can be used for this purpose. To date, 22 firms have received loans totalling Rs. 19.2 crores from the Cooley Fund.

Goodyear Tyre and Rubber Co. of India has received a large loan from

the Cooley Fund for its rubber tyre factory in Ballabgarh, near Delhi. Two other rubber tyre factories, Madras Rubber Factory and Premier Tyres, both with plants in south India, have also received credits.

Synthetics and Chemicals, which is establishing India's largest synthetic rubber factory in Bareilly, Uttar Pradesh, is the recipient of the largest loan (Rs. 6.5 crores) so far extended from the Cooley Fund. Other firms who have received credits include Mysore Cements, Hindustan Aluminium, Seshasayee Paper and Board, Carrier Airconditioning and Refrigeration, and Ex-Cello-O (India).

E.C.M.

Tea, Timber to be Duty-free

Imports of package tea weighing more than 3 kilograms and of tropical timber into the European Economic Community and into Britain are to be duty-free. Dr. Ludwig Westrick, Deputy West German Minister of Economics, has told the West German Bundestag (Parliament) that this was the aim of negotiations in Geneva between the E.E.C. members and Britain. The West German Government expects the African States and Madagascar, associated with the E.E.C., to approve the arrangement.

PROMOTING TRADE WITHIN COMMONWEALTH

(FROM OUR LONDON CORRESPONDENT)

As a curtain raiser to the Geneva meeting of the General Agreement on Tariffs and Trade, the Ministerial conference in London of the Commonwealth Economic Consultative Committee was undoubtedly worth while. It has served to acquaint the Trade Ministers of Commonwealth countries with the revised plans of the British Government, following on the rejection of its application for membership of the Common Market, and has also furnished an opportunity for Britain to outline her intentions towards Commonwealth trade within the overriding necessity of expanding world trade through the agency of the "Kennedy round" of tariff cuts at G.A.T.T.

Briefly, it would appear that the British Government is determined to give top priority to a three-point programme for expanding world trade. This seeks to achieve: (1) Solid support for the G.A.T.T. proposal by the United States for a 50 percent cut in all tariffs; (2) major reforms in developing markets in Europe and elsewhere for agricultural products, which would be of substantial benefit to Australia, New Zealand and Canada; and (3) expanding markets for tropical produce as well as manufactures of the developing countries, in order to strengthen the economies of Asian and African nations.

The final communiqué issued by the Commonwealth Trade Ministers, as was to be expected, failed to convey the many differences of opinion to which the discussions gave rise, but it does show that these were noted, although they may not have been resolved. Even so, it indicates that a large measure of common ground was found—an invaluable development as a prelude to the even more diversified discussions to be expected in Geneva. It is against this background that the communiqué needs to be studied. It said:

"The Council recognised the importance of increasing trade between Commonwealth countries and noted that a substantial volume of trade and valuable commercial links had developed under the Commonwealth preference system. These special relationships had made, and continued to make, a major contribution to the economic development of the Commonwealth and to world trade, and any modifications would need to be considered in the light of the compensating benefits which might be offered.

"The Council agreed on the need for a general expansion of world trade and on the importance of this for all Commonwealth countries. They accordingly welcomed the initiative that had led to the proposed 'Kennedy round' of trade negotiations and were agreed on the importance of finding in these negotiations solutions to the problems of temperate agricultural products and of the exports of developing countries (including processed and manufactured goods), no less than to the problems of reducing tariffs on industrial products generally. The ability of different Commonwealth countries to contribute to these negotiations would vary with their circumstances. In particular, the less-developed countries would not be able to afford reciprocal tariff concessions. All

Commonwealth Governments were, however, determined to play a constructive rôle in the discussions."

Primary Goods Exports

The Council (the statement added) noted the restrictions (other than those required by international commodity arrangements) on access for primary products and processed and manufactured products of particular interest to the less-developed countries imposed by many industrialised countries. These had proved a serious obstacle to the expansion of world trade and had reacted unfavourably on the interests of less developed countries and of exporters of primary products.

The Council emphasised the importance of measures to assist the trade of developing countries. In the light of the declaration adopted at the G.A.T.T. Ministers' meeting of November 1961, the Council attached great weight to securing at the forthcoming meeting in Geneva a general acceptance and rapid and substantial progress in carrying out the action programme proposed by the developing countries. References were made to the deterioration during the last decade in the prices of primary products and raw materials and to the adverse effect which this had had on the less-developed countries and the exporters of temperate agricultural products and raw materials.

The Council also considered questions concerning the United Nations conference on trade and development, whose preparatory committee would hold its second meeting in Geneva immediately after the G.A.T.T. ministerial session. The Council recognised the importance of full consideration being given to the widest range of trade and development problems, and particularly those of concern to the developing countries, and agreed to give full support to the work of the preparatory committee and to the conference itself.

Mr. Erroll, President of the Board of Trade, who was the chairman at the Ministerial meeting, said afterwards: "The commercial interest of the Commonwealth lies in the expansion of world trade as a whole and of Commonwealth trade within it." He added: "The Ministers all favoured a practical approach to the trade and economic difficulties of the world, especially those to be discussed at the G.A.T.T. meeting. In short, the Commonwealth believes in common sense." He believed there would be growing opportunities for the expansion of Britain's trade with the Commonwealth. The nature of Britain's exports to those countries might have to change. The "compensating benefits" referred to in the communiqué will be in freer access for the products of Commonwealth countries in the European Economic Community, the United States and other countries. Commonwealth countries, especially Britain, will open their markets wider to the outside world if other countries do the same on a mutually beneficial basis.

Effort by Business Men

So much for the official approach to Commonwealth trade. That alone cannot be enough to ensure success.

It is good to learn, therefore, that industrialists and business men throughout the Commonwealth are also taking a hand. Sir Gilbert Laithwaite made this clear to this correspondent the other day, when he spoke on the latest activities of the Federation of Commonwealth and British Chambers of Commerce. The Federation is founded on confidence in the potential of intra-Commonwealth trade. It believes that the realisation of that potential depends as much on business men as on Governments, and that vigorous trade promotion and frequent consultation are urgently needed. Chambers of Commerce exist in every Commonwealth country. They represent the business communities of their areas, including in practically all cases both manufacturers and merchants, exporters and importers. These Commonwealth Chambers have for some 70 years co-operated through the Federation, chiefly by means of triennial Congresses. The conditions of the modern world, however, made this periodic consultation too infrequent, and the structure of the Council of the Federation in London had become inadequate to reflect rapidly the views of Commonwealth business men in the circumstances of modern transport and communications.

The Federation has, therefore, carried through a radical reorganisation to bring its services into line with the needs of today. It has set up in the Commonwealth countries representative committees which can speak for their whole business communities. It will hold a major Congress every other year—two in overseas Commonwealth countries and one in London. It is organising bilateral trade talks between Commonwealth groups. The United Kingdom Chambers visited Canada this spring, continuing a series of meetings of this kind which have been held for some years; and talks with Australia, New Zealand and Nigeria will take place later in the year. A trade conference to discuss the post-Brussels Commonwealth position takes place in London at the end of this month. These are, briefly, the Federation's plans for ensuring effective and frequent consultation between Commonwealth business men, providing opportunity for the exchange of ideas, the ironing out of misunderstandings and the early appreciation of opportunity. They were made and largely put into operation before the break-down of the Brussels talks and are not a reaction from Britain's exclusion from the E.E.C. They reflect the confidence of the business world that there is a great future for Commonwealth trade, now as well as in the long term.

Trade Promotion

Meetings and consultation between Commonwealth business men have inherent merits, but to realise their full potential well-defined objectives are essential. In addition to specific problems of the moment which it may be desirable to discuss, the following are among the major questions with which the Federation is particularly concerned:

(1) *Trade promotion*: It believes that a vigorous and imaginative policy

in this field can pay big dividends, and that the Chamber of Commerce network is well equipped to initiate and encourage such a policy.

(2) *Investment*: The exchange of information on investment opportunities and needs at business man level is important, particularly for the developing countries.

(3) *Commercial education*: There is much work to be done by the provision of acceptable qualifications and the supply of know-how and technical training assistance.

(4) *Research*: As Commonwealth business problems arise in the course of discussions at Congresses and Conferences, the Federation will conduct the necessary research needed to further their solution.

The Federation has influential support from leading business men throughout the Commonwealth and will progressively provide the many aids to trade expansion which are outside the scope of Government action.

The Commonwealth Trade Conference to be held from 22nd to 24th May is indicative of the usefulness of the Federation's plans. The agenda for this meeting includes: (1) to record the present state of Commonwealth trade and consider directions in which trade within the Commonwealth can be developed;

(2) to consider practical means of trade expansion in the Commonwealth, including trade missions, sales promotion and publicity, trade fairs and exhibitions, technical training assistance by industry and commerce, and, aids to investment; and

(3) to consider the active part chambers of commerce can play in the promotion of Commonwealth trade.

RISE IN GUNNY PRODUCTION COSTS CAUSES CONCERN

HIGH cost of raw materials and equipment, increasing burden of wages and amenities for labour, power shortage, and an unequal competition from Pakistan in the overseas markets are some of the problems worrying the Indian jute industry. These problems have apparently retarded the industry's progress, although it has ploughed back and invested substantial sums for rationalisation, modernisation and diversification. Recently, the Government fixed an artificially high floor price for jute. Another burden—and a heavy one at that—will be placed on the industry by the enforcement of the Central Jute Wage Board award.

The industry, no doubt, readily accepted the increase in wages, provision of a compulsory bonus irrespective of profit or loss, and a rise in the dearness allowance with every increase in the cost of living index beyond 425. The paramount consideration before it was to avoid strife in the industry in order to work the mills to capacity. But unless the workers take a keener interest in discharging their duties more efficiently and stepping up production, it will be difficult for the industry to bear the extra burdens.

With the completion of the modernisation and diversification programmes and the easier availability of raw jute, the industry is now well set for working at an optimum level. It may be able to reduce the incidence of overheads if capacities are worked to the maximum without let or hindrance. Here comes the need to enlist the worker's co-operation. There is also a need for evolving some rational norms for linking wages to productivity in order to permit the burden of wages to be spread over a larger output. Both the authorities and representatives of workers, it is to be hoped, will extend their co-operation to the industry in evolving and implementing such norms.

It should also be appreciated that the demand for jute goods, which has been ruling at a high level for about a year and a half, has almost spent its force. Pakistan is now a more viable competitor than India in the international market. Some countries are now better equipped to produce jute goods to meet their own requirements with better and cheaper fibre supply assured from Pakistan. Some of India's best customers already hold large stocks. This apart, earnest efforts are being made by the major consuming countries for developing substitute packaging or bulk storage facilities. In the sphere of carpet-backing cloth, in which India holds considerable advantage up to now, experiments are being carried on some substitutes. Even a fractional increase in the cost of production may have a serious effect on the overseas demand. So there is a need for keeping production costs at the lowest level.

Terms of Agreement

Based on the cost of living index at 425, every jute mill worker will get a minimum wage of Rs. 81 a month—Rs. 40 as basic salary and Rs. 41 as dearness allowance. For every additional point of rise in the index, 20p more will be paid as dearness allowance. All mistries and sardars will get an ad hoc increment of Rs. 10 in their monthly emoluments. Irrespective of profit or loss in working, a compulsory bonus

equivalent to two weeks' wages in the case of daily rated workers and half a month's salary for monthly rated employees will be paid by the industry.

The mills in Guntur, Elluru and Vizianagram in Andhra Pradesh will be classified as "new and small" ones, and the workers engaged in them will get 20-percent less in the basic wages during the first year, 10 percent less during the second and 5 percent less in the third year, compared with the wages of operatives in Calcutta and north Bihar mills. From the fourth year, there will be no difference in the scale of wages between workers of the north and south Indian mills.

The gratuity scheme has been left as it is now in force in Calcutta mills. Under the present rules, workers get 15 days' basic wages for each completed year of service for the pre-provident fund period and nothing since the enforcement of the compulsory provident fund scheme. Piece

rates are being revised in the Andhra mills on the lines of those prevalent in West Bengal where they are about 10 percent higher.

I.J.M.A. Despatches Rise

An all-round increase in the despatches of jute goods is revealed from the I.J.M.A. statistics on jute goods despatches in April 1963. The total offtake is shown higher by 10 percent from 95,200 tonnes in March 1963 to 104,800 tonnes in April. The internal consumption has improved by 13.4 percent from 25,300 tonnes to 28,700 tonnes and exports by 8.8 percent from 69,900 tonnes to 76,100 tonnes. Expressed as percentages of the total offtake for the respective months, hessian constituted 43 percent (45,100 tonnes) for April, against 41.3 percent (39,400 tonnes) for March, sacking 40.1 percent (42,100 tonnes), against 43.6 percent (41,600 tonnes) and miscellaneous goods 16.7 percent (17,600 tonnes), against 14.9 percent (14,200 tonnes).

Gradewise, exports of hessian have risen from 35,300 tonnes (50.4 percent) in March to 41,600 tonnes (54.6 percent) in April and other goods from 11,600 tonnes (16.5 percent) to 15,000 tonnes (19.6 percent). But sacking has registered a downward trend from 23,000 tonnes (32.8 percent) to 19,500 tonnes (25.4 percent). In internal consumption, the offtake of sacking has improved from 18,600 tonnes (73.5 percent) to 22,600 tonnes (78.7 percent), while that of hessian came down from 4,100 tonnes (16.2 percent) to 3,500 tonnes (12.1 percent). The intake of miscellaneous goods was unchanged at 2,600 tonnes, but the respective percentage was lower from 10.2 in March to 9 in April.

In April 1962, total despatches were 22,100 tonnes lower at 82,300 tonnes, of which 30,000 tonnes were hessian, 40,300 tonnes sacking and 12,000 tonnes miscellaneous goods. Exports amounted to 54,300 tonnes, including 25,300 tonnes of hessian, 19,800 tonnes of sacking and 9,200 tonnes of other goods. Internal consumption was 28,000 tonnes—4,700 tonnes of hessian, 20,500 tonnes of sacking and 2,800 tonnes of miscellaneous varieties.

Need for Salesmanship

Only high-pressure salesmanship can stimulate and maintain the demand for Indian jute goods in the overseas markets. Mr. Manubhai Shah, Central Minister for International trade, made this observation

THE NAMES
MACKIE & LAGAN
ARE VITAL IN THE
JUTE INDUSTRY

Two third of India's Jute Industry is now modernised and the two names "Mackie" and "Lagan" are playing the leading rôles in this transformation.

JAMES MACKIE & SONS LIMITED
Belfast, Northern Ireland.

Technical details available from:

THE LAGAN JUTE MACHINERY CO. (P) LTD.
24 B, PARK STREET, CALCUTTA-16.

while addressing a recent session of the Board of Trade. Since then, a long-term policy is reported to have been evolved to place the export of jute manufactures on a firm foundation. Some units of the industry, on their own initiative, have done a lot in this direction. But in order to succeed in its drive, the industry has to devote more attention to developments in the packaging industry and the evolution of substitutes. Enormous sums of money are being spent in the U.S.A. for this purpose. Bulk handling and storage in pneumatically operated silos were developed fast when jute goods proved to be costlier between 1959 and 1961.

Since the beginning of the current year, the Government of India has started assisting the industry in a big way. A Rs. 4-crore marketing board has been set up, and about Rs. 2 crores has been offered for a self-financing scheme. Liberal licences have been issued for the import of essential machinery, and loans have been sanctioned for their procurement. But it has been complained that not all the assistance, especially that for modernisation, has been used. Some broad loom installation licences are being held by some mills for a long time.

Meanwhile, the tide seems to have taken a turn. Russia and the east European countries are showing a keen interest in Indian jute goods, so they are expected to enter the market in a big way. West Africa has already lifted about 100,000 bales of heavy goods. It is, therefore, imperative on the part of the Indian industry to carry out an intensive study of the scope and nature of demand in these markets.

India need not be alarmed at the efforts being made by some countries to develop their own jute goods industries. With its long tradition and modern technical know-how and a streamlined jute mills machinery manufacturing industry, the Indian industry is still decades ahead of its competitors in this sphere. The chainwork of research institutes at its command will no doubt help fight any situation that may face the industry.

Jute Loomage in Pakistan

In its bid to grab an increasing share of the world market for jute goods, the Pakistani Government is reported to have sanctioned an ex-

pansion of jute loomage from 8,000 to 11,000 by the end of the current year. On completion of this programme, the industry will be able to use 40 percent of the country's annual jute crop, especially those with shorter staple and of inferior grades. The use of this fibre will help the industry to earn a substantially higher volume of foreign exchange, besides making the best use of fibre having little demand at home. The expansion of capacity would not have caused any headache to the Indian industry had that country followed normal business practices to boost the sale of gunnies. But the unethical practice of allowing a heavy export subsidy, which it has resorted to, leads one to conclude that India may have to face more stiff competition in some of her traditional export markets.

In spite of the clamping of drastic restrictions on jute acreage in East Pakistan, the Government is not optimistic of the success of its latest policy. Speaking at Dundee last week, Mr. Wahiduzzaman, Central Minister for Commerce, said that if weather conditions continued to be favourable, the jute crop during the coming 1963-64 season would be about the same as in the previous season. Estimating the carryover from the present season around 1.1 million bales, he gave no hope of any reduction or abolition of the present heavy export duty of £8 8s a ton on raw jute. He said that even after the payment of this duty, Pakistan's quality jute was cheaper in the overseas markets. The Pakistani Government intended to maintain the minimum internal and export prices for raw jute at the existing levels during the next season, he added.

Use for Jute Caddis

In its bid to make the maximum use of raw materials and to prevent wastage, efforts are being made by the jute industry to evolve a use for jute caddis—short fibres dropped by ring frames at the time of spinning. Bulk of the caddis are reprocessed in the spinning of yarn for sacking wuffs. The balance with little spinning value is sold to manufacturers of boards, paddings, quilt, mattresses and motor-car seats. About Rs. 10 lakhs worth of caddis is exported.

It was felt that a much better use could have been made of this waste

product. So the Indian Jute Mills Association has undertaken an investigation on the amount of caddis available, the percentage being used by mills, the total quantity exported and the quantity of jute dust with no spinning value. Information on the mode of disposal of the dust and the average price fetched by spinnable caddis and jute dust is also being collected. Recently, a new use has been developed for caddis in the manufacture of non-woven fabrics, using latex or some cheap chemical as the bonding material. It is, however, still in the experimental stage.

Moreover, the manufacture of book binding cloth and rexin and non-porous cement bags may offer some scope for the use of unspinnable dust caddis. The largest single loss suffered by the industry in the internal market was caused by the cement industry resorting to the use of paper packaging. The substitution took place soon after the second World War in view of the high prices of sacking at that time. But the change-over was effected because of the porous body of the jute bag.

The jute industry will be able to win back its share of the cement container demand, provided it can evolve the means of sealing the pores of jute bags by spraying some composition with jute caddis and making the sacking wall impervious to any physical or chemical reaction due to atmospheric changes. Besides, a non-porous jute bag will also ensure a better packing for many powdery substances.

Complaint on Cornsacks

The Australian market for Indian cornsacks is reported to be threatened due to the presence of a bad smell in the sacks, it is learnt from informed circles. The I.J.M.A. is reported to have received a complaint from the Australian Jute Goods Association that flour packed in Indian sacks get spoilt due to a bad odour from the sacks. The I.J.M.A. has been requested to take suitable steps against this, for the Australian flour industry could ill-afford to spoil the market for its cereal products by using such bags.

The odour originates from the batching emulsion used for softening the fibre and making it more pliable.

The I.J.M.A. Research Institute says that it can be removed to a great extent when the oil content of the emulsion is maintained within specified limits. But scant attention is devoted to this aspect with the result that serious complaints have come from one of India's best customers.

The gunny trade is worried over the frequency of such complaints from that country in which Pakistan has already gained a foothold. Consumer dissatisfaction with the quality of Indian products will further weaken its position. It is time that the complaint was taken up for investigation and steps were taken for their removal.

Prospects for Standing Crop

Alternate sunshine and rain have helped the smooth growth of the standing jute plants in the growing areas all over Bihar, Assam, north and West Bengal, Agartala and Orissa, according to reports reaching jute circles in Calcutta during the past week. Inter-culture and raking operations have almost been completed, and the young plants are thriving well. The rivers are rising to their normal levels for this time of year. In the Kishanganj-Purnea zones of Bihar, good progress has been made in sowing on high lands and seeds have germinated well. To date, about 95 percent of the land has been sown. In the river-fringed areas and in low lands, the plants have already attained a height of 2 feet 6 inches. Some areas which had been overgrown with weeds and grass have been intercultured.

In Nowgong district of Assam, plants have attained a height of about 3 feet 6 inches due to timely rainfall. Well-spread April-May showers, combined with sunshine, have helped jute plants grow rapidly to a height of about 4 feet in Dhubri district. Weeding out operation has been completed in time. In the Dinhat-Cooch Behar zones, the growth of the plant has been normal. Sowing has been completed in the late-sown upland areas and seeds have germinated well.

Favourable weather conditions have also been reported from the Nadia, Murshidabad, Bongaon and Basirhat areas where the plants are thriving well. More than 90 percent of the available land has been sown with jute, and the height of the plant ranges from 1 foot 6 inches to 2 feet 6 inches. The river level is normal. In dry pockets, the supply of water has been ensured by artificial irrigation and in some places from deep tube wells. But reports from scattered areas in Hooghly and Burdwan districts say that rainfall was scanty in those regions up to mid-April. Moreover, an adequate supply of water was not available from the D.V.C. canals. So most plots of land remained fallow. The few plots which were sown with jute with considerable difficulty and at high expenses became overgrown with weeds and grass due to the intermittent heavy showers since the third week of April. Due to the shortage of daily labourers, a setback has been caused to interculture and raking operations in these areas.

THE JUTE MARKETS

Manufactured Goods: The manufactured goods market opened buoyant during the past week on a report that mills had intimated to buyers about possible delays in delivery schedules due to drastic load-shedding. It was followed by hectic covering by bears and shippers for ready and near positions, and prices soared to the week's highest levels. On Friday, talk of the loss of a big Australian Government tender for sacking in competition with Pakistan depressed sentiment. It was further weakened by the emergence of a

larger number of mills as keen sellers for all positions. On Saturday, there was a reversal of the trend following reports of good overseas enquiry in heavy standard goods and a deal of 72,000 B Twills sacking, easy and near positions, with west Africa. The restoration of the power at the successful recommissioning of the new 50-megawatt turbo alternator of the Calcutta Electric Supply Corporation at the Cossipore station from Saturday relieved worries of dealers. On Monday, they were glad to find that April was a good month showing a 10-percent rise in the internal and export offtake of jute goods at 105,000 tonnes—the second highest monthly figure during recent months. The highest figure of 112,000 tonnes was reached in December 1962. Later, rumours of a substantial Government of India tender for sacking stimulated sentiment. It was followed by reports of further overseas enquiries. Furthermore, the approach of the due date induced shorts and shippers to cover their open positions. This boosted sentiment and helped prices to retain their buoyancy. The futures market also closely followed the trend in the spot market and was subjected to similar ups and downs in wider fluctuations. Turnover was comfortable and the undertone steady at the close.

In the spot market, sacking showed on balance lower gains of 20nP to Rs. 113.80 for May, 30nP to Rs. 114 for June, 35nP to Rs. 114.35 for July-September, 25nP to Rs. 114 for October-December and a loss of 25nP to Rs. 113 for January-March 1964. Hessian showed a higher gain of Rs. 1.45 to Rs. 51.70 for May, to Rs. 50 for July-September, 85nP to Rs. 48.35 for October-December and 50nP to Rs. 47.50 for January-March 1964.

In the futures market, B Twills May scored a nominal gain of 10nP to Rs. 113.30 after fluctuating widely between Rs. 114.80 and Rs. 112, while hessian May showed a gain of 88nP, against Rs. 1.30 for the previous week, to Rs. 50.44, after moving between Rs. 51.04 and Rs. 49. For August positions, B Twills recorded a gain of 30nP to Rs. 114 and hessian of Rs. 1.28 to Rs. 49.40 in small transactions. At the close, the differential between May ready and futures rose from 69nP in the preceding week to Rs. 1.26 in hessian and was unchanged at 50nP in B Twills. The respective figures for August were 60nP for the former and 35nP for the latter.

Wednesday's quotations were as follows:

	May	June	July	Oct.	Jan.
40in 7joz.	38.10	37.75	36.65	36.15	35.50
40in. 8oz.	40.60	—	—	—	—
40in. 10oz.	51.80	51.05	50.05	48.50	47.50
B Twills	113.65	113.90	114.15	113.85	113.50
Cornsacks	115.25	116.25	116.50	116.00	115.50
Heavy Cees					
(Plain)	113.00	113.50	113.85	113.85	113.50
A Twills	135.50	136.00	136.50	137.50	137.00
Liverpools	128.00	127.50	127.50	127.50	127.50

Raw Jute: The raw jute market in Calcutta was subdued during the past week. With enough stocks in their own warehouses and with the Jute Buffer Stock Association, mills showed little interest in lifting further lots of fibre from the market, except limited quantities of special grade jute for day-to-day blending purposes. But with the approach of the new crop season, sellers were keen on clearing their stocks, mainly of lower grade fibres, even at a discount. So the turnover shrank to a trickle and routine business passed around the prevailing prices, basis Rs. 29 a maund for Assam Bottoms, ready f.o.r., Calcutta. The market was awaiting formal permission to commence trading in the new crop. Some lucky deals were unofficially transacted for August delivery around Rs. 33 a maund for Assam Middle, Rs. 29.50 for Assam Bottoms and Rs. 32.50 for Daissee, all f.o.b., Calcutta.

The futures market was also sluggish and nominal transactions were reported around the prescribed floor level of Rs. 30 a maund for Upper Assam White Bottoms, June delivery, with no fluctuations. With the gradual depletion of stocks with the farmers and wholesalers, daily arrivals into upcountry markets declined to around 10,000 maunds. But the stuff on offer was of a sub-standard quality in which mill agencies were least interested. The prices were ruling around Rs. 27.75 a maund for Assam Bottoms, ex-stockists' godowns. Turnover was negligible and the undertone hesitant at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms)		T.S.D.	
	Current Prices	Minimum Prices	Rs. A Qtl.	Rs. A Md.

THE U.K. JUTE MARKETS

FIBRE FIRMER

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market tended to be firmer in Pakistan last week, and many shippers raised the prices of both old and new crop jute. This did not bring out much more buying interest from spinners in Dundee as they were already holding large stocks of raw material. The spot market in Dundee was also firmer, and although a substantial quantity of jute was still available ex-warehouse, holders of these parcels were refusing to accept less than their quoted rates.

The outlook for the future is that prices will remain around the present levels. The Pakistani Minister of Commerce, who is on a visit to the U.K., said in London last week that the prices of jute could remain stable this year. He said that in the past, the price had been based on an economic and reasonable return to the grower in Pakistan, and that position would be maintained. Despite the above statement, there were still sellers of both old and new crop jute willing to accept less than minimum export prices for many grades of the fibre. However, the number of par-

cells available at discounted rates became considerably less during the past week.

Old crop offers were lowest at £111 for Mill Lightnings, at £93 10s for Mill Hearts and at £78 10s for Grade Hearts, c.i.f. U.K., for May-June shipment. Grade Tossa-2/3 was available at £122 10s and Grade Tossa-4 at £106 10s. Outport Tossa-2/3 was named at £96 and Outport Tossa-4 at £86 May-June. Cuttings were steady at £54 for S.N.C. and at £46 10s for N.C. Offers of new crop were being quite freely made with the lowest prices at £94 5s for Mill Hearts and at £80 for Grade Hearts August-September. Grade Tossa-4 was at £107 and Outport Tossa-2/3 at £97 October-November shipment.

The Calcutta goods market became very much dearer at the beginning of the week due to a break-down in the supply of electric power which reduced output. However, prices were below the highest point and quotations were at 78s for 40in. 10oz. and at 57s 6d for 7joz. a 100 yards f.o.b. Calcutta for May shipment, at 76s 6d and 57s 3d June and at 76s 3d and 56s 6d July-September. B Twills were at 174s 9d, 175s 3d and 175s 6d, for the respective shipment periods. A fair amount of business took place here before the rise in prices.

**DURABLE FIREBRICK JOINTS
INCREASE PRODUCTION
and lower maintenance
costs**

ACCOSET-50

HIGH TEMPERATURE REFRACTORY CEMENT

produces strong joints, as impermeable to the action of furnace gases as the best firebricks. Consequently, air infiltration is reduced and the thermal efficiency of the furnace improved.

Bricks jointed with ACCOSET-50 are not easily dislodged and remain bonded together throughout the whole temperature range of the furnace.

ACCOSET-50

- has air-setting properties • produces thin strong joints
- allows only the minimum shrinkage • is highly refractory
- is economical in the long run

Technical literature sent free on request.

Ready stocks of ACCOSET-50 available from
THE CEMENT MARKETING COMPANY OF INDIA LTD
Bombay • Ahmedabad • Bangalore • Calcutta • Coimbatore • New Delhi
Indore • Kanpur • Madras • Patna • Secunderabad

SETTLING BONUS DISPUTE
IN KERALA ESTATES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE I.N.T.U.C.-led plantation workers of Kerala deferred their decision to observe a one-day token strike on 20th May. Mr. B. K. Nair, their president, said in a statement that the decision to postpone the strike was taken in the light of the meeting of the State Plantation Labour Committee proposed to be held in Trivandrum on 31st May in the presence of the Kerala Chief Minister, Mr. R. Sankar. The meeting will make a further attempt to solve the bonus question. The union gave the strike call to register a protest against the alleged refusal of the managements to give the arrears of bonus for 1960, 1961 and 1962.

Meanwhile, the Association of Planters of Kerala has issued a statement clarifying the employers' position. It says that the industry has paid bonus at the rates which appeared to it to be "reasonable", so the expression used by workers in their strike notice, namely, "arrears of bonus" is gravely misleading. Workers on several estates have accepted those payments without even a protest. The Association's contention is that no arrears are really due to the workers.

Some trade union officials have suggested that the bonus the employers paid were too low and inadequate. This allegation was discussed in the tripartite Plantation Labour Committee in the recent past. The sponsors of the strike notice are aware of this. They have stated that the industry's represen-

tatives on the Committee refused to pay any additional bonus. The Association says that this is a "blatant lie", for the question as to whether and to what extent the bonus already paid should be enhanced is precisely the question with which the Committee is currently concerned. It is true that an agreed settlement has not been possible, but a further meeting of the Committee will be held shortly to pursue the matter.

Top-ranking representatives of all the major trade union organisations are members of the Committee. The Association says that it is regrettable the trade unions should undertake direct action at the present juncture when the Committee is actively considering the question. "This action discredits not only the labour representatives on the Committee, but the whole system of settlement of disputes by peaceful and ordinary negotiations", the Association says.

World Coffee Crop Down

An 8.5-percent decline in the world coffee crop for 1962-63 indicated in the latest estimate of the U.S. Department of Agriculture. In terms of actual quantity, the current season's crop will amount to about 65.2 million bags with an exportable surplus of 51.7 million bags. Production will be smaller in North and South America, but will be larger in Africa and Asia. It is said that the 1962-63 crop will exceed world re-

quirements by about 4 million bags. World trade should be at an all-time high as imports in some of the European countries continue to increase. Stocks at the end of the year will be at a record level unless some of those in hand are destroyed. It is said that Brazil, the largest world producer of coffee, burned or otherwise destroyed 6 million bags of low-grade coffee during 1961-62. That country's exports for the 1962-63 marketing year were 12.4 million bags. World trade in coffee in 1962 was a record at 47 million bags. This represents an increase of about 6 percent over the 1961 record. The largest gain was in U.S. imports, and increased imports into Europe also continued. Stocks in consuming countries were higher at the end of 1962 than at the beginning. Consumption did not, therefore, show as much rise as trade did.

The Indian Coffee Board has recommended good farm management as a means to improve coffee production. Efficient management of the soil and shade, proper application of fertilisers and plant protection materials are some of the means by which excellent results could be obtained. While referring to the new malady which has become a serious threat to the coffee planting industry, the Coffee Board's official organ, the *Indian Coffee*, says in a recent editorial that reports from abroad describe similar experiences. There also it has been shown that inhospitable soil conditions such as poor drainage, acidity in the soil, exposure to too much sun and so on, favour the development of fungi and help them to invade plant tissues, producing various types of die-back. The journal claims that research workers in other coffee producing countries agree that the kinds of die-back mentioned under the new malady in India are caused by the adoption of wrong cultural practices leading to soil deterioration, lack of proper amount of shade, over-cropping and under-nourishment.

Regulating Cardamom Exports

The Central Government has assumed regulatory control over cardamom exports in all forms "in order to stabilise the industry". Under an announcement by the Joint Chief Controller of Imports and Exports, certain specified grades of cardamom will be licensed freely, provided the consignments tendered for exports conform to the floor and ceiling export prices fixed by the Government. This new directive of the Government has put the cardamom trade in a stalemate. Trade circles complain that the minimum prices fixed by the Government are on the high side, so business is impossible at these rates.

Hindrances to Increasing
Tea Output

(BY A SPECIAL CORRESPONDENT)

THE Annual Bulletin of Statistics issued by the International Tea Committee should be available shortly. It will then be possible to examine reliable figures of production and consumption, because the softness in the commodity market suggests that the F.A.O. forecast is coming true. India's target to be reached by 1965 remains fixed at 900 million lbs of made tea, and as noted recently in these columns, one of the oldest established tea agents admits that he has some selected areas in Assam which is producing 30 to 35 maunds an acre. (Quite a fair number of plots have yielded over 20 maunds an acre for some years past.) But there are still some limiting factors to the yield of tea from north India. For example, apart from cul-

tivation, diseases and pests, yield depends on jat—or in these modern scientific times "clones"—supply of nutrients, amount and perhaps even more important is the distribution of rainfall. Other important matters are temperature, humidity and sunshine. Yield is the result of all these factors working on vegetation. Some state that fertilisers without sufficient water will not increase the yield. This is a serious matter for north India as only one monsoon hits Assam and other bearing areas, whereas south India, Ceylon, Indonesia enjoy longer rain spells.

In the Doorgas, it has been calculated that nearly half the year is dry. Assam and other parts average about five dry months. In dry months, the rainfall fails to replenish the moisture lost by evaporation. A shortage of water in the soil limits growth. Therefore, irrigation in dry periods could result in greater production. Experiments are now being carried out.

News from U.S. tea centres continues to be generally optimistic. New York prices for different grades compare as follows:

India fine leaf	78 cents a lb
India fine broken	68 cents a lb
India fine F.N.G.S.	65 cents a lb
Ceylon fine leaf	90 cents a lb
Ceylon fine broken	67 cents a lb
Ceylon fine F.N.G.S.	65 cents a lb

Colombo advices indicate some perturbation about costs, prices and exports. Trade circles there think that the immediate cause of lower prices for Ceylon's production can be traced to India's reduction in cost of export teas. According to reports, high quality teas selling over Rs. 1.65 a lb have to pay an *ad valorem* duty of 50 percent of the excess price, as well as export duty of 35 cents a lb, whereas Indian exports are not subject to export duty. This is thought to have helped the sale of all grades of Indian teas.

Due to trade agreements the Government of Ceylon expects to maintain its shipments at a satisfactory level, but the trade feels that greater competition from India will cause a fall in prices. Auction sales have shown a downward tendency for some time past except for quality teas. This reasoning supports the call from Mr. Betts of the Indian Tea Association, London, for the regulation of output. Any move in that direction will have to be agreed to by African interests, but practically all their estates are new and expanding and they are also at a financial advantage as to costs of production and taxation. If India and Ceylon cut production by 5 to 10 percent it would give the African producers a grand fillip.

According to news from Brussels, this matter is still under discussion. The Common Market duty on bulk tea is reported as 18 percent and for packaged teas 32 percent. That, of course, is a serious handicap to the exports of Indian blended teas and some suppliers are now in Europe investigating methods to increase trade. Concessions from importers are expected. The U.K. still allows free imports from Commonwealth sources. India's exports last year were given as 15 million kilograms higher than in season 1960-61, but actual foreign exchange earnings moved up from Rs. 122.4 crores to Rs. 129.0 crores only.

At the London tea auctions on 13th May teas from north India were well represented with 22,680 chests, out of a total offering of 31,674 chests. Good grades came to a firm market but the rest were irregular and generally easier. On 15th May, the downward tendency was accentuated.

COMPANY AND PUBLIC NOTICES

HERCULES INSURANCE
COMPANY LIMITED(Incorporated in India)
REGISTERED OFFICE: 16, HARE STREET, CALCUTTA.
