- (1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member. The instrument appointing the proxy shall be deposited at the Registered Office of the Company not less than 48 hours before the time for holding the meeting.
- (2) The dividend, if declared, will be paid on or after 11th June, 1963, to those shareholders so

entitled, whose names appear in the Company's books on 11th June, 1963 or to their mandatees.

- (3) **Explanatory Statement regarding Item (5) and Item (6).**

Item (5): Mr. N. S. Coldwell was appointed a Director of the Company by a Special Resolution of the Shareholders passed at the Annual General Meeting of the Company held on 16th June, 1961. He retires at the Annual General Meeting to be held on 11th June, 1963, and special notice dated 10th May, 1963, of the intention to propose the above resolution as a Special Resolution has been received by the Company. Special notice has been given in order to comply with the provisions of Sections 190 and 261 of the Companies Act, 1956, as Mr. N. S. Coldwell is an officer in the employ-

ment of the Managing Agents.

Item (6): Under Section 293 of the Companies Act, 1956, the Board of Directors has powers to borrow moneys (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) only to the extent of the aggregate of the paid-up capital of the Company and its free reserves. With the recent reduction of Capital by Rs. 29,58,200, the limit is found to be short of the requirements of the Company's business and an Ordinary Resolution is necessary to give the Board of Directors the authority to borrow moneys in excess of the limit placed by Section 293. The limit of Rs. 90 lacs has been proposed in accordance with the

Shareholders' resolution dated 18th November, 1925 as it is considered that the same requirement applies to-day.

HOPE'S METAL WINDOWS (INDIA) LTD.

NOTICE is hereby given to the members of the above-named Company that the Fifth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 13th June, 1963 at 3-30 p.m. to consider the Accounts of the Company for the year ended 31st December, 1962, to transact other ordinary business and the under-noted special business:

SPECIAL BUSINESS.

NOTICE is also hereby given of the following Resolutions:—
(To be proposed as Ordinary Resolution)

- "That 1,20,107 ordinary shares of Rs. 10 each (ranking for dividend in the manner mentioned in Resolution No. 2 set out below and in all other respects *pari passu* with the existing issued shares of the Company) be issued and offered for subscription for cash at par in the first instance to the members of the Company as at 14th June, 1963 in the proportion of one new share for each ordinary share in respect of which the members of the Company are respectively registered on that date with the right to renounce all or any part of the shares so offered and upon the footing that the full amount of each share taken up shall be paid to the Company on application and that applications for the said new shares be invited by notice specifying the number of shares for which members may apply, and limiting a time not being less than fifteen days from the date of the said notice within which applications accompanied by remittances in payment for the shares applied for must be received by the Company failing which the invitation will be deemed to have been declined, and that the Board

of Directors of the Company be and is hereby empowered to dispose of the shares, applications for which accompanied by remittances are not received within the time limit aforesaid, in such manner as it considers expedient in the interests of the Company and in particular to such other person in whose favour the right to apply for any new shares has been properly renounced, provided that the allotment of the said new shares shall be subject, in the case of members not resident in India, to the consent of the Reserve Bank of India being obtained thereto in accordance with the provisions of The Foreign Exchange Regulation Act, 1947."

- "That the said new shares shall be entitled to participate in the dividend, if any, which may be declared on the shares of the Company in respect of the year ending on the 31st day of December, 1964."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 11th June, 1963 to 8th July, 1963, both days inclusive.

- The Dividends, if declared, will be paid on or after 5th July, 1963 to those Shareholders so entitled whose names appear in the Company's books on the 28th June, 1963, or to their mandatories. No application for Dividend Warrants will be necessary.

BENGAL POTTERIES LIMITED

NOTICE

NOTICE is hereby given that the Fifty first Annual General Meeting of the Bengal Potteries Limited, will be held at the registered office of the Company at 45, Tangra Road, Calcutta, on Friday the 14th June, 1963, at 4 P.M. to transact the following items of business:—

- To receive and adopt the Directors' Report, the audited Balance Sheet and the Profit and Loss Account for the year ended 31st December, 1962.
- To declare a Dividend.
- To elect Directors in place of those retiring.
- To consider and if thought fit to pass the following Resolution as an Ordinary Resolution:—

"RESOLVED that the Members of the Company approve of the appointment and continuation as a Director of Bengal Potteries Ltd., of Dr. H. L. Dey who has attained the age of over 65 years, and

declare that the age limit of 65 years as specified in Section 280 of the Companies Act 1956 shall not apply to him".

EXPLANATORY STATEMENT UNDER SECTION 173(2) OF THE COMPANIES ACT 1956, REGARDING ORDINARY RESOLUTION UNDER SECTION 281.

Special notice has been received by the Company on 17th May, 1963 of this Resolution from three of its Members under the Provision of Section 281 of the Companies Act 1956.

Dr. H. L. Dey will retire by rotation at the next Annual General Meeting of the Company. He has attained the age of over 65 years. If appointed Dr. H. L. Dey will get remuneration from the Company as provided in its Articles of Association, and he is interested to that extent. Save as aforesaid no other Director or the Managing Agents have any concern or interest in the above resolution.

- To appoint Auditors for the current year and to fix their remuneration.

The Share Transfer Register of the Company will be closed from 7th June to 2nd July 1963, both days inclusive.

A member entitled to attend and vote at a meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE SOORAH JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, at 15, India Exchange Place, Calcutta, on Wednesday, the 26th June, 1963 at 2-30 P.M. for the following purposes:—

- To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st December, 1962.
- To declare Dividends on Preference and Ordinary Shares.
- To elect Directors in place of Mr. H. J. Silverston and Shri G. D. Kothari, who retire by rotation, but being eligible, offer themselves for re-election.
- To appoint Auditors and to fix their remuneration.
- As special business to consider and, if thought fit, to pass, with or without modification, the following Special Resolutions:—

(i) "Whereas Messrs. Birla AG incorporated in Switzerland, an associate of Messrs. Hindusthan Investment Corporation Ltd., Managing Agents of the Company, maintain an office in ZUG in Switzerland and WHEREAS the said Company is established to carry on business inter alia of acting as agents in Europe and other countries for purchase and sale of goods including stores, plant and machinery, etc. and propose to have dealings and business connections with parties all over Europe and other countries and operations on a large scale and whereas their expenses of maintaining their office establishment are likely to amount approximately to Swiss Francs 200,000 per annum in the initial stages and Whereas expenses which can be attributed to the work to be done for and on behalf of the Company would depend on the value of purchases effected through the said Company in relation to their total turnover in each year, NOW it is hereby RESOLVED that Messrs. Birla AG be and are hereby appointed to act as buying agents and selling agents of the Company for periods of 3 years and 5 years respectively with effect from 1st October, 1962 in Europe and other countries on the following terms as to commission:—

(a) for purchase of stores, etc. 5% of the invoice price;

(b) for purchase of plant and machinery—2½% of the invoice price; and

(c) for sale of goods manufactured/produced by the Company 2% of the invoice price.

Provided that if anything to be done in pursuance of the above arrangements requires the permission of the Central Government or the Reserve Bank of India, as the case may be, the same will be done in accordance with such permission."

- (ii) "RESOLVED that the Company do hereby approve of the arrangement with Messrs. Birla AG who are associates of Messrs. Hindusthan Investment Corporation Ltd., Managing Agents of the Company, for utilising their services for employment of technical personnel and/or consultants, making arrangements for securing Know-how, credit facilities, attending to enquiries and generally to act as representatives of this Company as and when required for negotiations in Europe and other countries and for such services they be paid all expenses incurred and/or apportionable in respect of work done by them in each particular case provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India, the same will be done in accordance with such permission."

(iii) "RESOLVED that the company do hereby approve of the contracts entered into or to be entered into from time to time with parties who are or may be associates of the Managing Agents of the company including the companies (a) East Indian Produce Co. Ltd., and (b) Premier Stores Supplying Co. Ltd. for the purchase, sale or supply of any property movable or immovable upon terms stated in the agreement copies/draft(s) whereof are placed before the meeting which provide inter alia that:

- property to be purchased, sold or supplied shall be as dealt in by or be available with the seller and

required by the buyer from time to time.

- rates or prices to be charged shall be as ruling with the seller or supplier at the date of requirement or as shall be currently in force or be otherwise reasonable.

(c) payment shall be as specified in acceptance, provided that the payment for any property supplied or sold by the company shall be made to the company within one month from the date of such supply or sale.

- the contract may be terminated at any time by either party giving to the other one month's notice in writing."

The Register of Members and Share Transfer Books of the Company will remain closed from 12th June, 1963 to the 26th June, 1963, both days inclusive.

By Order of the Board,

For HINDUSTHAN INVESTMENT CORPORATION LTD.,

R. K. CHHAOCHHARIA,
Managing Director,
Managing Agents.

Regd. Office:

15, India Exchange Place,
CALCUTTA-1.

Dated, the 9th May, 1963.

N.B. (i) The Directors have recommended the following dividends free of income-tax payable by the company but subject to deduction of tax under the I.T. Act, 1961—

On Preference Share @ 10% per annum and

On Ordinary Share @ Rs. 2.50nP.

If dividend on shares recommended by the Directors are approved at the meeting, THE DIVIDEND WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDER whose names are on the Company's Register on the 26th June, 1963 or to the order or to their banker. No application need be sent for dividends, as relative dividend warrants will be posted to such shareholders by the 15th July 1963.

- A member entitled to a dividend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) An explanatory statement in respect of the above items of special business is being forwarded to the members of the Company.

Indo-Pakistani relations, which will continue to dampen sentiment. On the economic front, the super profits tax has affected different companies differently. Companies with a higher rate of profitability have suffered less, while those having a smaller capital-plus-reserve base in proportion to their turnover and profits have to take a heavy drubbing. Since foreign exchange, raw materials, power and transport are allocated on a priority basis, a careful examination of how a company is placed in relation to these factors will be helpful. In the case of several products such as iron and steel, cement, paper, coal and sugar, the Government controls the prices. Past experience shows that the prices fixed often do not adequately cover the production costs.

Operators are cautious for the time being because of the possibility of forward trading being resumed in clearing shares. Forward trading involves futures contracts which are settled by paying the difference between the buying and selling

prices or vice versa rather than by taking or giving delivery of shares. In principle, it is difficult to defend futures contracts in shares, although they seem to have some empirical justification in that the vigour of the stock market depends greatly on this kind of trading. Since it encourages excessive speculation, it should be permitted only under adequate safeguards. The Government of India, it is reliably learnt, has indicated to the stock exchanges the terms and conditions on which it would permit the resumption of forward trading. The conditions mainly relate to margin requirements and the by-laws governing the inclusion of shares in the cleared list. The new margins will be imposed on the total outstanding purchases and sales, and not on the net positions. In fact, margins on the total outstanding positions have been in force since the stock market crash of last November. The Government now wants to make them permanent. This apart, there will be bigger carry-over margins. These restrictions are obviously designed to curb speculation.

INDIA'S CASE FOR MORE AID

NEXT week's meeting of the Aid-India Club takes place under distinctly unpropitious circumstances. If the decision on Pakistan's aid needs is to be regarded as a precedent, India quite clearly is not going to get anything like the \$1,250 million she has asked for. The parallel consortium which handles Pakistan's requests has trimmed aid from \$625 million last year to \$425 million this year largely as a result of the reduced commitments made by France and Germany, the cut on this account being doubled by the U.S. insistence on the parity principle. This principle, as Professor I. M. D. Little points out in an article in the *Observer*, was not enforced in previous years. What France and Germany curtail their commitments is not clear, but in all likelihood this has something to do with their domestic economic outlook and the U.S. pressure on them to contribute more liberally to Atlantic defence. The same consideration will undoubtedly apply to India's request, and in any case there appears to be a tacit understanding that aid to India and Pakistan should be roughly in the proportion of two to one. If this formula is maintained, India can expect to get only about \$600 million. The West German delegate to the Washington meeting of the Club held in May dropped a clear hint about Bonn's intentions when he said that it would prefer to see India's rising requirements met more by private investment than by inter-governmental aid.

Apart from purely economic factors, India's case this year is bound to be affected by the request she has separately made for military aid. The *Times* in a recent first leader posed the question whether the West can afford to provide as much economic aid as in the past and also meet India's demand for substantial military assistance. Citing a figure of £600 million (Rs. 800 crores) as the sum that India is seeking by way of military aid, *The Times* thought that the share devolving on Britain would amount to more than anything she has provided by way of economic assistance. Even if defence needs are reduced—as seems to have been done in the talks which Mr. T. T. Krishnamachari has just concluded in Washington—the net effect will still be sizable and may mean, according to *The Times*, a “strong possibility” of Britain being obliged to cut economic aid. It is argued that it is beyond Britain's capacity in the present state of her balance of payments to provide military support as well as economic aid on the old scale.

Observers both here and in the U.K. have not failed to note that the current misgivings about the size of aid have something to do with the political assessment of the immediacy and seriousness of the Chinese threat, and also of the best way of dealing with the situation. British opinion as reflected by *The Times* favours keeping India's economic momentum going than to “indulge” in preparing for large-scale rearmament which, it is apprehended, will “aggravate” relations with Pakistan and may, therefore, be “simply wasted”. There is also a fairly wide consensus in the U.K. in favour of a larger share of the aid to be earmarked for “maintenance” imports. The ground for this emphasis on assisting India to meet her “mainte-

nance” needs was prepared by the Kipping report which made it clear that Britain's share in the total imports of this country cannot but be affected by the quantum of aid available to bridge the wide gap between export earnings and import requirements.

There is no doubt that the British attitude to both the total amount of aid and its break-up between “project” and “maintenance” requirements will be decisive at next week's meeting. Because of her long association with India, Britain's view will carry much weight with the European members of the consortium and may also tilt the balance where the United States is concerned. Great interest attaches, therefore, to what is being said in Britain about the problem of aid, not only by the section of opinion which *The Times*'s leader reflects, but also by others. Among these, the stand taken by Professor Little is exceptionally helpful, and it is to be hoped that the views he has expressed (echoing a line of argument adopted earlier by the *Economist*) will weigh with the Treasury in arriving at the final decision. Professor Little's principal point is that Indian industrial development has reached a critical stage where the future depends largely on her ability to secure foreign exchange to get her economy moving forward again. The idle capacity of her industries cannot be brought into use without balance of payments support to meet “maintenance” requirements. And the longer this capacity remains unutilised, the greater will be the import burden thrown upon India because the goods that might have been produced at home would need to be brought in from outside.

This reasoning is borne out by the break-up of India's aid request for this year. Out of the total of \$1,250 million, \$700 million is for projects and programmes all of which have a high import-saving potential. Roughly three-quarters of the \$700 million is requested for ten key industries, including iron and steel which alone claims a little over \$170 million. With steel imports running at an annual average of Rs. 80 crores to Rs. 90 crores, the need for enlarging domestic production should be obvious. In fact, as Mr. Chester Bowles, U.S. Ambassador-designate to India, has just pointed out

in the context of Bokaro, additional steel production will directly benefit all the private sector industries now languishing because of shortages of this important raw material. The next largest claim for assistance is on account of the fertiliser industry, in which capacity has not increased in spite of the efforts made in both the public and private sectors because of the foreign exchange restraint. All observers are agreed that the use of fertilisers must be rapidly increased to raise larger crops, as a failure on the farm front not only increases import liabilities, but also endangers political stability. With foodgrain imports costing as much as Rs. 117 crores in 1962-63—over 10 percent of the total import bill—the logic of expanding fertiliser output is self-evident. The third largest claim for aid is on behalf of machine-building industries. Here again, the import-saving potential constitutes the main reason why India is so anxious to forge ahead with local manufacture of capital goods. It will be a mistake, however, for anyone to imagine that India's advance in this field will threaten the commercial interest of those now supplying such equipment. India's progress, if sustained, would expand her demand for capital goods faster than home production. Ideally, a situation should emerge in which imports continue at around present levels and at the same time import capacity is improved through exports of less sophisticated engineering items to third countries to meet some part of the latter's growing needs. It is towards such widening of trade opportunities for both the developed and developing nations that both groups of nations must work in their enlightened self-interest.

The immediate issue, however, in deciding the quantum of contributions is the likely effect upon the donors' balance of payments. But, as Sir Robert Hall has pointed out in a letter to *The Times*, aid to underdeveloped countries such as India cannot lead to any real payments difficulties. The assistance they are giving benefits the donors in the form of enlarged export opportunities for the latter, and the link between the two is becoming increasingly more direct as a rising proportion of aid is tied down to purchases in a specified currency. This tying down has obvious disadvantages, not least its distorting effect upon the pattern of world trade. Sir Robert has urged the developed nations to agree among themselves upon some machinery to prevent aid from one source ending up as a reserve in the hands of another country. Once this fear is removed, it should indeed be possible to put underutilised capacity in the West to work to produce the goods and services which developing nations desperately need.

In India's specific case, the argument for extending more generous help is unanswerable, judged in terms of the West's own interests. Here is a country which has obviously done the utmost to help itself and is demonstrably capable of sustained growth, provided it gets a measure of support from outside in this present critical phase. On the political plane, India provides, as Professor Little says, the only example of central but democratic and responsible planning. The outcome of the Indian experiment may well be decisive in determining the path that other Afro-Asian nations follow. To contemplate a stoppage of the process of growth which has brought India a long way in the last ten years because the means cannot be found of seeing her through would be, as Sir Norman Kipping has appropriately said, a “heartbreak”.

CAPITAL EXPORTS FROM U.K.

THE U.S.A. and the U.K. are now accelerating their economic growth-rate, but they have not solved their external payments problems. In each case, the balance of payments position, in spite of recent improvement, has been a cause of some apprehension; for experience shows that expansion at home increases imports and that expansion abroad is needed to increase exports. But the world market in general may not be buoyant this year. The problem of the two countries is different in so far as the U.S. deficit is actual rather than prospective and the U.K. deficit is prospective rather than actual. (However, the U.S.A. has immense reserves, whereas those of the U.K. are inadequate for contingencies.) But some observers

believe that in both cases it will be necessary to impose additional restrictions on exports of capital to offset deterioration in the current account.

The Board of Trade has recently published some informative statistics of the U.K.'s capital exports. The capital account is, naturally, somewhat involved, since it includes the Government's lending and the Government's repayments, private industry's investment from funds in the U.K. and its investment from funds earned and retained abroad. According to the Board of Trade, private investment in recent years has accounted for more than half of the capital deficit that should be offset by current surplus. An important factor in this con-

rent surplus is income derived from past investments abroad; so it should not be lost sight of that by restricting capital exports, a nation restricts its future income from abroad.

The estimate of investment by British industry—excluding oil and insurance companies—in subsidiaries, associates, and branches, abroad is £224 million for 1962, nearly the same as for 1961. The comparable estimate of foreign investment in the U.K. is £139 million—much less than the figure for 1961, because in that year the American Ford Motor Company bought the British-owned Ford shares. But it is nearly the same as the figure for 1960. Thus the industrial account shows that British companies invested abroad considerably more than companies domiciled abroad invested in Britain last year. But at the same time, the estimated earnings from Britain's direct investment abroad were considerably more than the estimated earnings of foreign-owned companies in Britain—£272 million which is an increase of 8 percent over the earnings for 1961, compared with £136 million which is a rise of only 6 percent over those for 1961.

The picture is seen more clearly in round figures for the last five years, during which the outflow of direct investment has averaged some £200 million a year and the inflow £150 million; earnings from direct investment have contributed about £240 million a year gross and £115 million a year net to Britain's current account. However, over the same period the whole current account, as presented by the Treasury, has shown an average surplus of little more than £25 million a year. The Treasury has indicated that the true surpluses may have been much larger than the figures revealed (official records of exchange transactions are not complete). But it is unlikely that they would fully cover the prospective deficits on capital account, and, moreover, the surpluses will probably be reduced in the period of expansion in domestic trade.

The arrangements for supporting the major currencies are not intended to counterbalance deficits in long-term capital accounts, and it may be argued that capital exports should be more closely controlled if for long periods current surpluses cannot cover the deficits. But the argument may be more relevant to American than to British capital exports; for in the American case, short-term foreign credits arranged to support the dollar are being converted into medium-term bonds held by foreign central banks, and a large volume of American foreign investment is, in effect, financed by these means. The arrangement is probably advantageous to the United States, for the investments are likely to yield considerably more than the cost of interest on the bonds; but it was to support the dollar against short-term pressures, not to help long-term American investment, that the central banks agreed to co-operate.

Any restrictions on foreign investment would, if applied, it may be supposed, selectively. It is, of course, to the subsidising of investment in Europe that the central banks may object; and American investment inclines towards the profitable European market. British investment in Europe also increased substantially in 1961—the latest year for which the survey in the *Board of Trade Journal* had full figures—and, excluded from the Common Market, British firms are further investigating the opportunities for making or assembling their products there. But the latest analysis shows that the overseas sterling countries absorb about 80 percent of Britain's direct investment abroad.

Movement of British capital to the rest of the sterling area is virtually uncontrolled; but the British authorities do not provide foreign currency for companies' direct investment in non-sterling countries, nor allow investment of their retained profits in those countries, unless the investment will yield quick benefit to the nation's current account. (Development can, however, be financed by borrowing abroad or by selling foreign assets.) It is not certain that the authorities could leave capital exports to the sterling countries free if they decided that, as an alternative to restricting growth at home, capital exports in general must be restricted. It is certain, however, that additional restrictions on capital exports would arouse strong

criticism in Britain. Critics would assert that the Government's military spending abroad had not been reduced to the practicable minimum and that

productive capital investment should not be restricted until all other means of economising—even temporary restriction of imports—had been used.

Current News and Comment

Revision of Cloth Prices Urged

While the Government of India has still to pronounce its verdict on the Tariff Commission's report on fair prices of cloth, the Indian Cotton Mills Federation has decided to make a representation to the Government seeking an early increase in cloth prices to cover the progressive rise in the cost of production since 1961. That numerous tax burdens and other levies, higher freight and increasing raw material and labour costs have seriously affected the industry's profitability is obvious from the disappointing results of almost all the textile mills in 1962. The outlook for the current year is considered to be even worse. Many mills are said to be actually incurring losses. Sharing the Government's anxiety to hold the price line, the industry had pegged cloth prices at the level which obtained on 1st January, 1961. “But a stage has been reached”, said Mr. Bharat Ram in his address at the annual general meeting of the Federation last week, “when it is no longer possible to postpone a revision of prices to cover the progressive increase in the cost of production that has occurred since 1961.” The prospect of the common man having to pay higher prices for cloth, which is a basic necessity, is certainly disturbing. But the industry's plea for a rise in prices seems unassailable unless it can be established that the January 1961 prices offered more than reasonable profits. The need for strengthening the financial position of the industry which requires considerable resources for rehabilitation and modernisation cannot be overemphasised. If prices are to be held at current levels, the Government must take effective steps to enable the industry to reduce its production costs, so that its profitability is not seriously affected.

But cotton prices have been moving up year after year because of the gap between the industry's growing requirements and the virtually static domestic production of cotton. This gap has had to be bridged by large imports involving substantial foreign exchange expenditure. In his speech, Mr. Bharat Ram has deprecated the Government's continued reliance on price incentives to the exclusion of other positive measures for increasing cotton production. That the dismal record of cotton production in India is largely due to the fact that only 13 percent of the area under the crop is irrigated is not an entirely valid point of view, according to Mr. Bharat Ram. His view will be widely endorsed because there are other countries where conditions are not dissimilar and yet the yield an acre is very much higher than in this country. The need for ensuring abundant cotton supplies at reasonable prices to the industry can hardly be overemphasised. Opinion is no doubt divided on the advisability of spending large amounts of foreign exchange on cotton imports when cloth made from the cotton is consumed largely within the country. But with domestic cotton output being what it is, it is difficult to see how the country can do without substantial imports if cloth production is not to be allowed to suffer. As it is, cloth output is lagging behind the plan targets.

The outgoing chairman of the Federation has also criticised the suggestion for substituting viscose staple fibre for imported cotton. There is certainly a good case for diversifying textile production by making a judicious use of artificial fibres, but that is not the same thing as a wholesale substitution of cotton by staple fibre, Mr. Bharat Ram says. The viscose staple fibre is stated to have a low wet strength, and it has also poor resistance to caustic soda treatment and has high elongation and poor abrasion resistance. The sub-committee of the Federation which recently examined the question of staple fibre in all its aspects is of the view that the ordinary viscose staple fibre of the type manufactured in India is not suitable either as a substitute or as a supple-

ment to cotton. The committee has decided to request the Government that there should be no expansion in the production capacity for ordinary viscose staple fibre. It is, however, in favour of investigating the suitability of polynosic fibre which is being increasingly used in developed countries. The Development Council for the Art Silk Industry had recently recommended that the target for all types of viscose staple fibre should be 100,000 tons a year, since it will help minimise the growing pressure on cotton supplies as a result of the rise in the per capita consumption of cloth.

Mr. Bharat Ram's observations on textile exports are important, especially because they hold out the promise of a better performance in the future. The obligatory export scheme, he says, has begun to gather momentum and, if other things are equal, there is no reason why exports this year should not be more than those of last year—a disappointing 508 million yards valued at Rs. 4 crores. Last year's performance is far short of the third plan target of 850 million yards. Referring to the low average price realised from the sale of cloth during October-December 1962, Mr. Bharat Ram said that this was at least partly due to the international trend in prices; the decline in prices during that period was not peculiar to this country alone. When an ambitious scheme like that of the Government is introduced for the first time, it is bound to have an unsettling effect for some time. Now that the novelty of the scheme has worn out, and all have become accustomed to it, export realisations are stabilising at the level dictated by the international forces of demand and supply. It is heartening to note that the export prices of Indian piecegoods have moved up this year. Mr. Bharat Ram has earnestly urged the friendly countries to show favoured treatment to India. The view will be widely shared that unless discriminatory treatment is given in favour of developing countries, they will never be able to earn through the export of their products even a reasonable portion of their foreign exchange requirements. While there is a good deal to be said for international co-operation, there is no doubt that the industry will need to exert to the utmost in making its products widely acceptable in foreign markets on account of both price and quality. This calls for serious attention both by the Government and the industry to the problems of rationalisation and modernisation of mills, of the finances necessary for implementing such programmes and of increasing productivity in the field and the factory.

Corporate Finances Surveyed

The impact of heavier taxation on the working of the corporate sector has been revealed in a study of the finances of 405 medium and large public limited companies in the April issue of the *Reserve Bank of India Bulletin*. These companies have a paid-up capital of more than Rs. 5 lakhs each and have closed their accounts during January-March 1962. In terms of paid-up capital, they account for about 35 percent of the total coverage which excludes banking, insurance and

India's Resources

are Precious

WASTE NOT,

WANT NOT

investment companies, companies limited by guarantee, non-profit associations and branches of foreign companies. A majority of these companies have been taken from the sample of 1,001 companies studied earlier in the *Bulletin*.

Profits, before tax, improved slightly from Rs. 75.6 crores in 1960 to Rs. 79 crores in 1961, but the provision for tax liability increased substantially from Rs. 25.6 crores to Rs. 32.2 crores. Profits, after tax, fell sharply by 6.4 percent in 1961. Since dividends were more or less maintained at the same level as in 1960, the retained profits declined sharply by 17.6 percent. The gross fixed assets of the selected companies rose by 8.7 percent in 1961, against 7.6 percent in 1960. Internal sources accounted for the bulk of the total funds, their share being 68.5 percent in 1961, against 67.5 percent in the previous year. Sales rose by Rs. 54.5 crores to Rs. 530.5 crores.

Although the profitability, as measured by the ratio of gross profits to sales, was more or less the same at 10.5 percent, the ratio of gross profits to the total capital employed declined from 9.6 percent in 1960 to 9.4 percent in 1961. The ratio of profits, after tax, to net worth fell from 10.9 percent to 9.6 percent. The total assets formation in the selected companies amounted to Rs. 103.5 crores. The internal sources of finance continued to play a dominant rôle. About 58 percent of the internal funds was provided by depreciation provision alone. Among the external sources of finance, borrowings contributed Rs. 15.2 crores and new issues Rs. 8.5 crores. Bank borrowings accounted for about 80 percent of total borrowings. The cause for worry is that the assets formation in the corporate sector has suffered a serious setback following the levy of the super profits tax since it has retarded the capacity of companies to plough back funds.

Rehabilitating Goldsmiths

One of the worst effects of the Gold Control Order has been the unemployment of thousands of goldsmiths in the country. Recently the All-India Swarnakar Sangh submitted a memorandum to the Prime Minister in New Delhi which demanded that the highest priority should be given to providing alternative employment to unemployed goldsmiths, and that they should be treated as highly skilled workers. Some State Governments have already announced programmes for rehabilitating them.

The U.P. Government, for example, has instructed its labour department to give priority to unemployed goldsmiths while granting admissions to the industrial training institutes, polytechnics, and apprentice training schemes in the Government's Precision Instruments Factory in Lucknow. The unemployed goldsmiths and their physically fit dependents would be considered for training in motor-vehicle driving in the U.P. Roadways Organisation. Loans would be given to them for starting small-scale industries. The main difficulty in all the training schemes is that there is already a heavy rush for admission, and with the best of intentions the organisations concerned may not be able to provide employment to any appreciable number of goldsmiths. As for small-scale industries, there is already some difficulty in selling their output; besides, the goldsmiths may not find it easy to run small industries in competition with the already established units. It also remains to be seen if they can acquire the skills necessary for lorry driving and adapt themselves to the new profession. The difficulty of identifying goldsmiths has, however, been satisfactorily solved by the U.P. Government. The district magistrates have been asked to issue certificates to those who were in the profession, either solely or mainly either as self-employed persons or as paid employees, for a period of at least six months prior to the promulgation of the Gold Control rules. Such certificates would prove helpful provided alternative employment opportunities are available.

It has been suggested that the best method of helping the goldsmiths would be to rehabilitate them in their own trade. Ornaments of 14-carat gold are becoming popular, and easily workable ornaments of this specification are being put on the market. The All-India Swarnakar Sangh's memo-

randum has demanded that Government-certified gold of 14-carat purity should be made available to goldsmiths from Government agencies and that they should be trained in making beautiful ornaments.

Response to New Loans

The subscriptions for the two new loans—the 4 percent loan 1969 and the 4½ percent loan 1986—have now been completed. The list opened on 8th May and closed on 18th May. They were conversion loans and subscriptions were tendered in the form of the two maturing loans—the 3½ percent loan 1963 and the 3 percent loan 1963-65. Total subscriptions have amounted to Rs. 138.79 crores, of which Rs. 85.69 crores have been received for the 4 percent loan 1969 and Rs. 53.10 crores for the 4½ percent loan 1986. The bigger subscription for the shorter-dated loans is understandable because institutional investors have preferred it in view of the likelihood of interest rates hardening. The longer-dated loan, it is learnt, has mainly been subscribed by the Reserve Bank and the Life Insurance Corporation.

Since securities amounting to Rs. 138.79 crores only have been converted into the new loans, the Government will have to pay Rs. 33.44 crores in cash, being the balance on account of the two maturing loans. The total liability for the 3½ percent loan 1963 is Rs. 58.06 crores, and for the 3 percent loan 1963-65 Rs. 116.17 crores. So the ratio of repayment in cash for the maturing securities is slightly higher than in 1962. This seems to have been largely due to the tighter money conditions prevailing this year. Although the traditional busy season has come to a close, there has been no worthwhile decline in the demand for funds. The call rate has been moving between 4½ percent and 5 percent, and bank advances have risen to a high level. A substantial portion of the advances has been taken by industries. The market has now started discussing the prospect for the second stage of the official borrowing programme. The Central Government is expected to borrow about Rs. 393 crores this year. This includes the Rs. 100 crores to be raised on behalf of the State Governments. The new loans, which will be offered for cash subscription, are likely to be floated next month when money conditions may become easier.

Sugar Soars in London

The sharp rise in the international price of sugar which once touched £101 a ton in London—an increase of over £55 a ton since the beginning of 1963—has aroused a good deal of interest in India, but it is only of academic value. Under earlier commitments, India has to export the commodity at substantial loss because of her high production costs. The present rise in London could have helped to mitigate the losses if she had a substantial surplus. But unfortunately the country is not in a position to take advantage of the situation because of the heavy shortfall in output during the current season. Production in 1962-63 is not expected to be more than 2.2 million tons, a decline of about 500,000 tons compared with 1961-62. Including the carry-over from the 1961-62 season, it is just possible to meet the internal demand and the export commitments which have already been made. It needs to be pointed out that domestic consumption has also now risen to more than 2.5 million tons a year.

There are reports that Mr. S. K. Patil, Central Minister for Food and Agriculture, while in London on this way to New York, tried to impress on the U.K. Government the desirability of taking India as a member of the Commonwealth Sugar Agreement. Although under the Agreement the U.K. buys sugar from the Commonwealth producers at a price of only £46 a ton, India might stand to benefit in the long run if she were admitted as a member because the present international price is considered purely temporary. A price of £46 a ton is considered fairly attractive under normal circumstances. The Agreement will be renewed in 1966 when the question of admitting India as a member will come up. The British Government has the discretion to buy a quantity

of 200,000 tons a year from Commonwealth producers outside the Agreement. India has been trying to get a share of the discretionary purchases.

India has already been exporting raw sugar to Canada and Japan. The latter has contracted to buy 100,000 tons of raw sugar from India this year. A delegation from that country now touring India, it is reported, has been impressed by the quality of the Indian commodity. The U.K. is also interested in buying only raw sugar. But despite the export prospects, there is no sense in exporting it when the supplies for the domestic market are short.

Slow Progress of Heavy Electricals

The heavy electricals factory in Bhopal, which was formally inaugurated by Mr. Nehru on 6th November, 1960, is now producing a steady stream of equipment for the various State electricity boards, power projects, public sector undertakings, the railways and industries in the private sector. Transformers of sizes varying from 10,600 kVA to 71,000 kVA have been supplied to many important power projects, including Neyveli, the Damodar Valley Corporation, the Calcutta Electric Supply Corporation and the Talcher thermal scheme in Orissa. Negotiations are also in progress for securing an order for 175,000 kVA capacity transformers from the Damodar Valley Corporation. The heavy electricals factory has supplied capacitors to Hindustan Machine Tools in Bangalore and the armament factory in Ambar-nath, besides a number of private industries. Circuit breakers too have been sold to various parties. The factory has completed the first order of five sets of 1,500 volts of D.C. traction motors, each consisting of four motors, for the Indian railways.

However, with all this production, the factory, is still lagging behind the targets set by the project consultants. Associated Electrical Industries of the U.K. They had estimated the factory's output between July 1960 and March 1963 at slightly under Rs. 4 crores, against which the actuals are only about Rs. 2 crores of finished goods and Rs. 2.6 crores worth of work in progress in different stages of completion. The reason for the shortfall, it is explained, is that production started a year after the scheduled date because of the delay in receiving the imported machine tools and raw materials caused by foreign exchange difficulties. For the current financial year, the consultants' target is a little over Rs. 4 crores. The factory hopes to do better than the target by producing goods worth Rs. 5.5 crores because of the valuable experience gained so far.

FISCAL PHILATELY

THE Indian Government issues (other than those for postal and telegraph purposes) are unusually interesting. Many are very beautiful, but in the absence of a reliable work of reference relating to them, they have hitherto failed to secure less than general attention from the collecting world to which they are justly entitled. Some of the well-known members of the Philatelic Society of India are busily engaged upon the pleasant pioneer of work of endeavouring to add to the knowledge of the Fiscal Society, or in other ways improve its tentative lists, and with this in view are subjecting the advance sheets of the Indian Catalogue to careful scrutiny. Indian fiscals fall under many clauses, some of them that most readily occur being "Receipt," "Foreign Bill," "Petition," "Special," "Postal Service," "Indian Postal Notes," "Customs," "Court Fees," "High Court," "Small Cause Court," and "Forest." These extend back to the early sixties, and many of them have experienced varied and interesting changes at the hands of official surcharges. There have been times when postage and telegraph stamps have been converted to fiscal uses, but all along, they have, as a class, been absolutely free from the attention of the forger, and have never been made for collectors. The Fiscal Society's catalogue should aid very materially in popularising Indian Fiscal Philately.

A Ditcher's Diary

MINOO MASANI BEING UNCOMPROMISINGLY ON THE side of free enterprise as distinct from official meddling which passes for socialism, his unmistakable victory in the Rajkot parliamentary by-election will surely delight industrialists and business men in general. With reason too, although among the happy, many must be substantial donors to Congress funds. Mr. Masani is also a good speaker and particularly dextrous and painstaking with economic facts; the Lok Sabha has not a surfeit of members so equipped. Coming after the Congress reverses in Amroha and Farrukhabad, the Rajkot by-election is a further blow to the Congress. Yet it may be hasty to treat the three non-Congress victories as indicative of a steady and countrywide political trend. Whenever I see the Congress colossus teased here and there I am reminded of a fragment left by the Greek poet Archilochus, translated thus by Sir Isaiah Berlin: "The fox knows many things, but the hedgehog knows one big thing". Sir Isaiah adds, "Scholars have differed about the correct interpretation of these dark words, which may mean no more than that the fox, for all his cunning, is defeated by the hedgehog's one defence". It is necessary, therefore, to make sure that the Right, such as it is, does not rejoice too soon. The Congress Party, for all its recent setbacks, has few tricks to learn from any Indian political party on how to win elections while, possibly, losing support. I have read most of what the political pundits have written about why the Congress has been defeated without, of course, being much wiser. The Indian electorate does not wear its heart on its sleeve. While the Congress High Command goes ahead with its own enquiry into the reverses, a Bombay friend writes to me to say that, in his opinion, Mrs. Indira Gandhi's over-active participation in the campaign may have been a powerful vote-losing factor. I seem to remember that at Amroha too Mrs. Gandhi said one or two things which the audience did not greatly appreciate. There is a line in a Tagore lyric to the effect that when you try too hard to catch a floating flower it escapes you because by your very effort you have pushed it away.

THE 32 AFRICAN HEADS OF STATE WHO RECENTLY MET and then dispersed in Addis Ababa, Ethiopia's oddly impressive capital, cannot be said to have achieved nothing at all, although there must be cynics galore who will point to the various charters of unity adopted earlier which came to nothing. If the conference cut Dr. Nkrumah down to size more than somewhat, even that may be no bad thing;

and it is entirely appropriate that this should be done by Africans rather than by outsiders. It is easy enough to cite the many divisions among the African States; there are moderates like the Emperor of Ethiopia and there are extremists like Oginga Odinga of Kenya; there are the black Frenchmen like Ivory Coast's Houphouët-Boigny and there are men like Nkrumah who are proud of little besides their blackness; some believe in socialism of a sort and others have not even begun to think what they will do with power when they get it. The importance of Addis Ababa lies in the boldness of its ambition. Who can even think of a United States of Europe, when even the Six cannot enlarge itself to Seven? Mr. Nehru may once have dreamt of an integrated Asia; but he will be the first man today to hesitate to suggest even a common market with India, Burma, Ceylon, Nepal and Pakistan as members. Yet the 32 States of Africa that adopted the charter of unity comprise an area much larger than the other two I have mentioned. If Dr. Nkrumah's shrill claque now tells me that I have just praised the Osagyefo's own plan, rejected by the conference, I will have to point out that it is not the plan the other African States suspect but they dread the unconcealed personal ambitions of Dr. Nkrumah. On the other hand, I understand his impatience with some African leaders' continuing attachment to their erstwhile masters, the French a little more than the British.

INDIAN BUSINESS MEN AND THE HORSE RACING fraternity will be interested to learn what may happen to Sir Victor Sassoon's interests in both spheres, now that his widow has had some time to think things over and decide what to do. Lady Sassoon, it is reported from London, is giving up her proprietary interest and her directorship in the E. D. Sassoon Banking Co., Nassau. This is one of the main family businesses which was moved from the Far East to the Bahamas several years ago because of unsettled trading conditions. Ownership of the bank will, however, continue entirely in the hands of the Sassoon family. Lady Sassoon, who lives in Nassau, now plans to devote herself to racing activities in England and to the management of her Nassau interests. Sir Victor, who died in 1961 at the age of 79, left her shares in companies connected with horse-racing and breeding, as also the balance of his property after expenses and legacies. At the time of his death, he was the second biggest racehorse owner and breeder in Britain and had won the Derby no less than four times. He had four stud farms in the country, two in Yorkshire and two in

Newmarket. All are owned by the Eve Stud Company, a British concern whose shares are held by a company in Nassau. Shortly after her husband's death Lady Sassoon made it clear that she intended to retain these interests. Sir Victor also had another stud farm of 550 acres in County Meath, Eire, held by an Irish unlimited company whose shares are with another Nassau concern. It was by this method of holding the shares through companies abroad that the stud farms were saved from what would normally have been a heavy estate duty charge. The English rate of duty would almost certainly have been 80 percent and the Irish duty 40 percent. Assets valued for probate of Sir Victor's estate in the Bahamas were announced at £235,649 in November 1961. A substantial trust fund in New York announced later gave Lady Sassoon securities and £214,000 in trust.

EXCEPT PERHAPS DURING THE PAST TWO YEARS, there have been very few occasions on which I have found myself in complete agreement with Dr. Per Jacobsson, the late head of the International Monetary Fund. His ideas always seemed to me to be altogether too austere, especially in the peculiar economic circumstances of the under-developed countries. It must be admitted, though, that they were singularly effective in curing some outstanding problems; certain European economies undoubtedly owe their present stability to the stern manner in which Dr. Per Jacobsson imposed his conditions for I.M.F. assistance. But in Latin America they were a complete failure, and it will take some time to clear up the damage they caused there. Recently, however, his views changed quite radically from deflationary to reflationary, at least on the international plane, and that was when I found myself in greater tune with him. Also to his credit was the fact that he did contrive to develop the I.M.F. from being a comparatively ineffectual international organisation within the short span of his tenure in office. Now I see it is rumoured his successor will be M. Pierre-Paul Schweitzer, a former French civil servant and a deputy Governor of the Banque de France. Personally, I should not have thought the choice of a Frenchman at the present time was a wise one. There is no doubting M. Schweitzer's brilliance, nor, I imagine, his impartiality. But the difficulty which anybody in his position is bound to experience will be to divorce himself from the general feeling prevailing in his own country, especially when he himself has had a prominent hand in shaping it. France, at present, is distinctly to be numbered in the ranks of the economically self-righteous. So much of her current prosperity is due to a stern decision to forgo the luxuries of weak Government, internal inflation and an over-valued currency, that it would scarcely be normal for her to eschew the warm consolation of a little

CARBORUNDUM UNIVERSAL ABRASIVES

a
change
in

marketing
arrangements

Carborundum Universal have pleasure to announce the opening of a Branch at Calcutta, from 1st June 1963, for direct marketing of their well-known range of Coated and Bonded Abrasives.

All inquiries (both Trade and Consumer) may please be addressed to:

Carborundum Universal Ltd.,
Armenian College Building (Second floor),
56-D, Free School Street, Calcutta-16

Territories Covered:

For Grinding Wheels and other Bonded Abrasives: West Bengal, Bihar, Assam, Orissa, Uttar Pradesh and Eastern half of Madhya Pradesh.
For Coated Abrasives: West Bengal, Bihar, Assam, Orissa, and part of Madhya Pradesh.

Carborundum Universal are grateful to M/s. William Jacks & Co., Ltd., Calcutta for their valuable services all these years in the distribution of their abrasive products.

CARBORUNDUM UNIVERSAL LTD.

Head Office: 52/53, Jehangir Street, Madras-1

Works: Tiruvottiyur.

self-satisfaction. But that is not the soundest basis on which to formulate a policy for running any international monetary organisation in the middle 1960's. The main virtue required of any successor to Dr. Per Jacobsson, or so it seems to me, will be a sense of inadequacy, a feeling that the I.M.F., in its present form, cannot meet the calls likely to be made upon it in what we all hope will be an era of unprecedented world trade expansion. From this it follows that he should have a policy for far-reaching and liberal international monetary reconstruction. I cannot imagine any Frenchman of this particular generation having that.

SOME TIME AGO I REMEMBER REMARKING IN THIS diary that earth satellites should not be allowed to remain in orbit once their useful life had ended, as they might become a danger to future space navigation. I was joking, of course; one can scarcely foresee the day when space will become so crowded with orbiting objects that there will be danger of collisions occurring. But now an increasing number of eminent scientists are beginning to say the same thing, for reasons which are all too obvious when one considers them carefully, and which are certainly not funny. The fact is that our new frontier is already suffering, as so many others have done in the past, from man's reluctance to regulate his activities in the general public good. It is becoming cluttered with various objects which will soon be so numerous as to halt effective scientific investigation altogether. So far there are about 50 or so satellites and rocket pieces circling the earth. When these are added to the number of copper needles the Americans have recently put into orbit, that makes at least 400,000,050 objects with which scientific observation now has to contend. Soon the total will be even larger. And items of matter are not the only danger; atom bomb explosions in space must also be reckoned among the difficulties facing the astronomer or cosmic scientist. Before I am accused of taking the side of the Russians against the Americans on this issue, let me hasten to add that I regard both as being equally to blame. What the world needs is an agreement on space, one which will save it from becoming either an ideological battlefield or a scientific rubbish heap; and at present only these two countries are capable of entering into one. No doubt, this is simply crying for the moon; things are probably going to get considerably worse than they are now before East and West meet on this issue. There would be no harm in making a start, however. Agreement now might be a good deal easier to obtain than it would be when other nations make their contribution to the growing cosmic clutter.

THANKS TO A FRIEND RECENTLY BACK FROM LEAVE in Britain, I have just glanced through three issues of *Private Eye*, that periodical which I was told had shaken the Establishment good and proper and brought a revolution in British humour together with the B.B.C.'s *That Was The Week That Was*. I haven't listened in to the B.B.C.'s effort yet, so no comment. *Private Eye* I am unable to admire, except the idea behind it that it does politicians and other busy-bodies no harm to be laughed at occasionally. I am sorry for British humour if *Private Eye* is the best it has to show. The photo cartoons are hardly brilliant; originally an American idea, anyway. The paper recently paid dearly for its treatment of Randolph Churchill; reading the three issues before me, I could think of several others who might sue it successfully and profitably. The art work isn't always bad; there are some tolerable Troggs. Most of the ideas are pure fourth-form and in poor taste. I find a long piece called "The Ceremony of the Balls"; this is the kind of thing juvenile delinquents enjoy writing on the lavatory wall. The whole thing is singularly unfunny; and I think I know why. There is no serious purpose behind the effort; and the superficially clever young men who are producing the magazine have not got the native, natural humour of music-hall comedians of old. Some of the attempted jokes are political; and these young men are politically illiterate. No wonder much of the humour is personal, at a rather low level.

THE DITCHER

Guide for Investors

JARDINE HENDERSON JUTE GROUP DOES WELL

THE Jardine Henderson group of jute mills have produced excellent results for the year ended December 1962. The Kamarhaty Company and the Kanknarrah Company have earned substantial profits because of good demand for jute goods, combined with adequate supply of fibre at reasonable prices. The mills have been working at their maximum level of production since 15th January, 1962. Full production has still been continuing, although jute goods prices have fallen somewhat in 1963. Sacking has, nevertheless, been causing concern to Indian mills since they have been losing markets to Pakistan. The Pakistani mills enjoy the advantage of cheaper fibre and export subsidies. So Kamarhaty and Kanknarrah mills have switched as many looms as possible from sacking to hessian. The directors say that the decline in sacking looms and the need to improve the quality and the price of Indian jute goods have led to a decline in the demand for inferior raw jute. But it is disappointing that for 1963-64, the Government does not seem to have taken any step to discourage the production of poor fibre. It has not also reduced the minimum prices for low grade jute. The demand for superior fibre will continue to be good, and the mills will be willing to pay much more than the minimum price for such fibre.

Kamarhaty has declared a taxable ordinary dividend of 20 percent, including an interim of 5 percent. It is covered more than six times and works out to a yield of 9.8 percent at the present price of Rs. 204 a share of Rs. 100 each. There was no dividend for 1961. The profit has amounted to Rs. 54.55 lakhs, after providing Rs. 6.88 lakhs for depreciation. There was a loss of Rs. 13.75 lakhs in 1961. Sums of Rs. 1 lakh, Rs. 35,706 and Rs. 2 lakhs have been transferred from the debenture sinking fund, debenture redemption reserve and general reserve, respectively. Taxation absorbs Rs. 23.50 lakhs. Development rebate reserve is allocated Rs. 96,816, the debenture sinking fund Rs. 2 lakhs, and development reserve Rs. 3 lakhs, and general reserve Rs. 1.36 lakhs. Bringing in a debit balance of Rs. 17.21 lakhs, a credit balance of Rs. 14.157 has been carried forward. New machinery has been installed which has helped to increase the efficiency of the mills. A second drawing frame has been ordered and is likely to be installed during the next couple of months. Sales were Rs. 4.16 crores, against Rs. 4.32 crores.

Kanknarrah has made a profit of Rs. 60.84 lakhs, after providing Rs. 5.41 lakhs for depreciation. The loss was Rs. 13.36 lakhs in 1961. A taxable ordinary dividend of 15 percent, including an interim of 5 percent, has been declared. It is covered more than seven times and offers a yield of 10.5 percent at the present price of Rs. 143 a share of Rs. 100 each. There was no dividend for 1961. Taxation absorbs Rs. 10.69 lakhs, development rebate reserve Rs. 4,706, general reserve Rs. 2 lakhs and the debenture sinking fund Rs. 2 lakhs. Bringing in a debit balance of Rs. 30.80 lakhs, a credit balance of Rs. 11.179 has been carried forward. Steps have been taken to improve the efficiency of the "B" mill by modernising lighting in

the preparing and spinning departments.

Champdany Jute Makes Profit

THE outlook for the Champdany Jute Co. Ltd during the current year is considered satisfactory. The directors have, however, said that the margin of trading profit will be only moderate unless there is a marked increase in the world offtake of jute goods. The new crop is expected to be substantial. The mills have accumulated large raw jute stocks and the industry has been working at the maximum level of production. For the year ended March 1963, the Company has made substantial profits because of abundant raw jute supply at reasonable prices. The backlog of orders has aided the demand for gunnies. The mills have been able to recover earlier heavy losses and build the necessary rehabilitation reserve.

The Company has earned a profit of Rs. 36.63 lakhs, against a loss of Rs. 24.02 lakhs in 1961-62, after transferring Rs. 9.84 lakhs (against Rs. 8.98 lakhs) for depreciation. A sum of Rs. 1.88 lakhs has been provided for depreciation relating to previous years. Contingency reserve is allocated Rs. 1.75 lakhs, general reserve Rs. 12 lakhs and taxation provision Rs. 11 lakhs. The carry-forward is Rs. 22,643. The taxable ordinary dividend has been raised from 5 percent to 40 percent, including an interim of 5 percent. It is covered more than two-and-a-half times and works out to a yield of 16.7 percent at the present price of Rs. 24 a share of Rs. 10 each. Gunny sales rose from Rs. 2.68 crores to Rs. 3.39 crores and jute goods stocks from Rs. 50.28 lakhs to Rs. 82.55 lakhs.

The good effects of closing down the Champdany mill and of concentrating upon the Wellington mill are being felt. There has been a substantial reduction in manufacturing costs. The first stage of expanding the broad-loom plant has been completed. In the second stage of expansion, it is proposed to bring the installed capacity up to 46 broad-loom. A total of 39 looms are already operating. The department has been contributing substantially to the Company's profit. The Champdany mill has been sold. The share capital of the Company has been halved to Rs. 30 lakhs by paying a refund to the shareholders at the rate of Rs. 50 a share of Rs. 100 each. The balance share value of Rs. 50 has been sub-divided into five shares of Rs. 10 each.

British Paints (India) Earns More

THE report of British Paints (India) Ltd for the year ended December 1962 refers to the adverse effects of the super profits tax on the Company. The profit and loss account has provided for Rs. 4.70 lakhs to cover the estimated liability of this tax. But this provision was made before the concessions in the levy were announced. As a result of the concessions, the tax liability has been substantially reduced. The chairman of the Company has decided to state at the Company's annual general meeting

on 26th June, 1963, that "in view of this, a substantial amount will become available for disposal this year, and it is the intention of the directors to take account of this state of affairs at the time when, later on in the year, the question of an interim dividend comes up for consideration by the board".

Sales rose from Rs. 2.11 crores in 1961 to Rs. 2.36 crores in 1962. The profit has risen sharply from Rs. 13.05 lakhs to Rs. 24.65 lakhs, after transferring Rs. 2.75 lakhs (against Rs. 2.88 lakhs) to depreciation and writing off Rs. 23,779 (against Rs. 6,928) towards bad debts. The taxable ordinary dividend has been cut from 12.5 percent to 10 percent, including an interim of 6 1/2 percent. It is covered more than four-and-a-half times and offers a yield of 4.8 percent at the present price of Rs. 20.69 a share of Rs. 10 each. Taxation is allocated Rs. 14.38 lakhs (against Rs. 6.40 lakhs). A sum of Rs. 20,000 has been transferred to development rebate reserve. The carry-forward is Rs. 27,656, against Rs. 19,940 brought in.

The directors say that there has been a considerable improvement in the productive efficiency following various economies made. Substantial profits have been earned from the synthetic resin factory. So it has been decided to expand its output. The factory is being modernised, in order to improve the yield and reduce its production costs. The project for producing bituminous coatings with foreign collaboration has fallen through due to numerous difficulties in implementing the scheme.

Results of Kettlewell Bullen Group of Mills

THE Kettlewell Bullen group of cotton mills have published their results for the year ended December 1962. Trading conditions have been moderately good, but the production cost has risen due to various factors. The emergency risk insurance scheme, the increase in the import duty on cotton and rise in the price of domestic cotton, dyes and chemicals, have inflated the production costs. The profits have fallen since the prices of yarn and cloth have not risen in proportion.

The Dunbar Mills Ltd sold goods worth Rs. 3.22 crores, against Rs. 3.01 crores in 1961. The profit has declined from Rs. 40.11 lakhs to Rs. 32.84 lakhs, after providing Rs. 8.40 lakhs (against Rs. 8.86 lakhs) for depreciation. The taxable ordinary dividend has been cut from 20 percent to 15 percent, which is covered more than five times. It offers a yield of 5.5 percent at the present price of Rs. 27.50 a share of Rs. 10 each. Taxation is allocated Rs. 20 lakhs (against Rs. 20.75 lakhs), development rebate reserve Rs. 2.29 lakhs (against Rs. 1.11 lakhs), general reserve Rs. 3.92 lakhs (against Rs. 4.50 lakhs) and the debenture sinking fund Rs. 2.50 lakhs. The carry-forward is Rs. 1.03 lakhs, against Rs. 2.30 lakhs brought in. Machinery worth Rs. 15.84 lakhs has been installed in implementing the replacement, modernisation and diversification schemes and further orders for Rs. 10 lakhs have been outstanding.

There has been a decline from Rs. 30.42 lakhs to Rs. 21.74 lakhs in the

profit of the Bowreah Cotton Mills Co. Ltd, after increasing depreciation from Rs. 12.31 lakhs to Rs. 14.55 lakhs. A taxable ordinary dividend of 15 percent has been declared on the share capital which has been raised from Rs. 24 lakhs to Rs. 33.60 lakhs by issuing rights ordinary shares at par. The dividend is more than five times covered and offers a yield of 6.5 percent at the present price of Rs. 23.25 a share of Rs. 10 each. The dividend was 20 percent for 1961. Development rebate reserve absorbs Rs. 3.97 lakhs (against Rs. 3.75 lakhs), general reserve Rs. 5 lakhs (against Rs. 13.50 lakhs) and taxation Rs. 7 lakhs. The carry-forward is Rs. 1.94 lakhs, against Rs. 2.16 lakhs brought in. Sales were Rs. 2.68 crores (against Rs. 2.70 crores). Machinery worth Rs. 18 lakhs has been installed in implementing the replacement, modernisation and diversification schemes and further orders for Rs. 32.20 lakhs have been outstanding. Full provision for depreciation relating to previous years could not be sufficiently made due to inadequate profits in earlier years.

Clevedon Tea Does Well

CLEVEDON Tea Company Ltd has produced better results for 1962 than for 1961, mainly because of a strong internal market following the shortfall in production in East Pakistan. A taxable ordinary dividend of 30 percent has been repeated, but this dividend along with the dividends declared in previous years will be paid when funds can be brought to India from Pakistan. The profit has risen from Rs. 3.58 lakhs to Rs. 8.03 lakhs, after providing Rs. 44,785 (against Rs. 34,537) for depreciation. The dividend absorbs Rs. 1.20 lakhs and taxation Rs. 8.35 lakhs. The carry-forward is Rs. 22,095, against Rs. 50,183 brought in.

The crop amounted to 224,804 kilograms, against 250,818 kilograms and the average sale price rose from Rs. 4.80 to Rs. 7.49 a kilogram. A crop of 260,000 kilograms has been estimated for 1963 at a cost of Rs. 9.47 lakhs. The directors point out that the start of the next season has been unsatisfactory due to the severe drought in East Pakistan, but substantial rainfall has, however, occurred since March 1963. The crop harvested so far has been slightly ahead of the one in the same period of 1962.

Poobong Tea Pays Again

THE Poobong Tea Co. Ltd (a Darjeeling garden) has returned to the dividend list. It has declared a taxable ordinary dividend of 5 percent to absorb Rs. 15,000 for the year ended December 1962. The yield is 6.6 percent at the present price of Rs. 7.56 a share of Rs. 10 each. The profit has been Rs. 1 lakh, against Rs. 35,841 in 1961, after increasing depreciation from Rs. 8,744 to Rs. 10,308. Revenue reserve is allocated Rs. 75,000 (against Rs. 50,000). The carry-forward is Rs. 30,513, against Rs. 16,007 brought in. The crop declined from 127,797 kilograms to 122,495 kilograms, but the average sale price rose from Rs. 5.77 to Rs. 6.65 a kilogram. The 1963 crop estimate is for 120,000 kilograms at a cost of Rs. 7.12 lakhs.

New Samanbagh Tea Earns More

THE New Samanbagh Tea Co. Ltd (a Sylhet garden) has made a bigger profit of Rs. 11.93 lakhs during the year ended December 1962, against Rs. 3.45 lakhs in 1961, after

providing Rs. 1.48 lakhs (against Rs. 1.05 lakhs) for depreciation. A taxable preference dividend of 10.4 percent has been maintained, absorbing Rs. 10,400. Taxation is allocated Rs. 9.84 lakhs (against Rs. 7.24 lakhs) and development rebate reserve Rs. 2,200 (against Rs. 2,300). The carry-forward is Rs. 2.07 lakhs, against Rs. 10,027 brought in. A remittance of Rs. 3.77 lakhs has been received from Pakistan against head office expenses, and representations have been made to the Pakistani authorities for further remittances. The crop improved from 14,284 maunds to 14,351 maunds as did the average sale price from Rs. 1.99 a lb to Rs. 3.34 a lb. The 1963 crop estimate is for 13,500 maunds at a cost of Rs. 21.03 lakhs.

Hoolungoree Tea Pays More

THE Hoolungoree Tea Co. Ltd (an Assam garden) has increased the taxable ordinary dividend from 7.5 percent for 1961 to 20 percent for the year ended December 1962, absorbing Rs. 1.74 lakhs. The yield is 10.3 percent at the present price of Rs. 195 a share of Rs. 100 each. The profit has improved from Rs. 87,730 to Rs. 4.52 lakhs, after providing Rs. 1.65 lakhs (against Rs. 1.35 lakhs) for depreciation. General reserve is allocated Rs. 55,000 and development rebate reserve Rs. 9,500 (against Rs. 19,500). The crop was 5,155 quintals, showing a rise of 325 quintals. The average sale price rose from Rs. 5.71 a kilogram to Rs. 6.62 a kilogram. The 1963 crop estimate has been made for 3,000 quintals. It has been stated that the Company's Konikor-Dallim division has been sold and that a sum of Rs. 7.79 lakhs has been received. The estate has been handed over to the buyers.

Hattikhira Tea Passes Dividend

THE Hattikhira Tea Co. Ltd (a Cachar garden) has incurred a loss of Rs. 3.12 lakhs during the year ended December 1962, after providing Rs. 25,000 (against Rs. 64,377) for depreciation. The dividend has again been passed. After transferring Rs. 2.95 lakhs in relation to liabilities no longer required and making other adjustments, there is a net loss of Rs. 4,023. Bringing in Rs. 49,518, a credit balance of Rs. 45,495 has been carried forward. The crop was 580,232 kilograms, against 723,716 kilograms in 1961. The average sale price rose from Rs. 3.84 a kilogram to Rs. 3.97 a kilogram. A crop of 725,747 kilograms at a cost of Rs. 26.52 lakhs has been estimated for 1963.

Hooghly Docking Makes Profit

IN their report for the year ended December 1962, the directors of the Hooghly Docking and Engineering Co. Ltd take a fairly optimistic view of the outlook. They think that the trading results will continue to be satisfactory because the earlier unremunerative orders have now been completed. The Company's order-book is full till the end of 1964. The net value of completed work billed during 1962 was Rs. 77.24 lakhs, against Rs. 1.34 crores in 1961. The drop in the figure is due to the fact that no major new construction work was completed during the year. The Company's workshop, however, remained fully occupied, the work-in-progress at the end of the year having increased to Rs. 1.30 crores from Rs. 0.85 lakhs at the beginning. The profit amounted to Rs. 8.07 lakhs,

against a loss of Rs. 16.35 lakhs in 1961. It is proposed to issue 10,000 ordinary shares of Rs. 50 each at a premium of Rs. 25 a share to the existing shareholders in the proportion of two new shares for every five held. This will be done for raising funds to buy new equipment for the workshop.

The net profit has been Rs. 3.80 lakhs, after providing Rs. 94,167 (against Rs. 92,674) for depreciation. A taxable ordinary dividend of 12.5 percent has been declared, which is more than twice covered and offers a yield of 5.8 percent at the present price of Rs. 108 a share of Rs. 50 each. Sums of Rs. 10.94 lakhs and Rs. 9.31 lakhs have been transferred from development rebate reserve and general reserve, respectively. Statutory development rebate reserve is allocated Rs. 5,000 (against Rs. 6,000) and general reserve Rs. 2.99 lakhs. In view of the loss suffered in the previous year, there will be no liability for income tax or super profits tax on the profits for 1962. The carry-forward is Rs. 5,801.

Isaac Holdens (India) Skips Again

ISAAC Holden (India) Ltd has produced satisfactory results for the year ended December 1962. Processing charges have increased by nearly two-and-a-half times from Rs. 22.04 lakhs to Rs. 75.27 lakhs. A trading profit of Rs. 19.70 lakhs has been earned, compared with a loss of Rs. 8.29 lakhs in 1961, after increasing depreciation from Rs. 5.16 lakhs to Rs. 8.63 lakhs. The dividend has nevertheless been passed again, because of the need to adjust the previous loss of Rs. 14.69 lakhs. The Company has also conserved resources in order to meet the capital expenditure in future. The plant has started working to its full capacity. So has the first French combing unit of ten combs. The combing of Indian wool for defence purposes, it is said, has substantially increased. As a result of concentrating on defence production, the foreign orders for finer wools had largely to be cancelled. The sorting department has, therefore, been under-utilised. The directors think that the department may not contribute to the Company's profit under the present circumstances. Its full working will be resumed as soon as the combing of Merino wool starts. The activity of the Company has also been retarded by the shortage of dyestuffs.

There is a possibility of expanding production after some time. The Company has been granted an industrial licence to expand the capacity to 13 million lbs of wool tops a year. An allocation of Rs. 67 lakhs has been negotiated from the French credit for buying equipment to produce a further 5 million lbs. For the time being, it has been decided to install more machinery for producing only a further 1.5 million lbs for attaining the full licensed capacity. The French credit has been negotiated on favourable terms, and the necessary equipment will be installed early in 1964.

Shree Gopal Paper Maintains

THE directors of Shree Gopal Paper Mills Ltd say in their report for the year ended December 1962 that the difficulties facing the pulp mill and the soda recovery section have now been overcome. Satisfactory results have been obtained and an output of 35,126 tons has been achieved. Moves have been made to increase the output which has shown a rising trend during the first four months of

the current year. There has also been an improvement in the quality of production. The production cost has, meanwhile, risen considerably while the selling prices of paper and boards have been statutorily fixed. The latest Central Budget has inflated the production cost further. So the directors think that the price of paper should be increased to compensate the producers for the rise in production cost. Sales of stationery continue to be good. An expansion of the printing unit of the stationery wing is being considered. Sales of *vanaspati* rose from 1,868 tons to 3,738 tons.

The profit has risen from Rs. 58.84 lakhs in 1961 to Rs. 1.16 crores in 1962, after transferring Rs. 58.10 lakhs (against Rs. 62 lakhs) for depreciation and writing off Rs. 35,351 towards bad debts. A taxable ordinary dividend of 17-6/7 percent has been maintained which is more than five times covered. It offers a yield of 7.3 percent at the present price of Rs. 24.31 a share of Rs. 10 each. Taxation is allocated Rs. 60 lakhs (against Rs. 22.50 lakhs), development rebate reserve Rs. 2.90 lakhs (against Rs. 6.75 lakhs) and capital reserve Rs. 6.177. The carry-forward is Rs. 73,294, against Rs. 1.58 lakhs brought in.

Hope's Metal Windows Rights Offer

IN their report for the year ended December 1962, the directors of Hope's Metal Windows (India) Ltd say that production has started but some time must elapse before an economic level of output is reached. They, however, expect that the profit-earning stage will not be reached before 1964. A hot-dip galvanising plant has been supplied to the Company by Henry Hope and Sons Ltd of the U.K. The installation of the plant has been completed and production may start soon. Shares in Hope's Metal will be allotted to Henry Hope and Sons in exchange of payment for the machinery supplied. It is proposed to make a further issue of shares in order to finance the capital expenditure and private working capital. The Company will issue 120,107 rights ordinary shares of Rs. 10 each at par to the existing shareholders in the proportion of one new share for every share held. There has been a loss of Rs. 2.70 lakhs in 1962, after providing Rs. 65,978 for depreciation. The dividend has been passed, and a debit balance of Rs. 3.37 lakhs has been carried forward.

British India Corporation Pays More

THE British India Corporation Ltd has increased the taxable ordinary dividend from 7 percent to 9 percent for the year ended December 1962. It is covered more than four times and works out to a yield of 5.1 percent at the present price of Rs. 8.81 a share of Rs. 5 each. The two woolen branches of the Company have shown satisfactory results. Licences for importing equipment worth Rs. 20 lakhs have been obtained for modernising the two branches. The directors are trying to obtain more import licences for further modernisation. The results of the Cooper Allen branch have been disappointing, but steps have been taken to improve its working. The boot factory remained closed for several years, but has again started operating.

The profit has risen from Rs. 1.05 crores for 1961 to Rs. 1.33 crores for 1962, after providing Rs. 8.62 lakhs (against Rs. 8.50 lakhs) for depreciation and Rs. 87,527 (against Rs. 1.29 lakhs) for development rebate reserve. A sum of Rs. 2.93 lakhs has been written off from stores and

spare parts. General reserve is allocated Rs. 20 lakhs and taxation, including the super profits tax, Rs. 75 lakhs (against Rs. 48 lakhs). The carry-forward is Rs. 2.53 lakhs, against Rs. 3.92 lakhs brought in.

Share Offer by Shalimar Wires and Industries

THE Shalimar Wires and Industries Ltd is offering 220,000 ordinary shares of Rs. 10 each for public subscription at par. The paid-up ordinary share capital is at present Rs. 8 lakhs divided into shares of Rs. 10 each. The list opens on 10th June, 1963. (Details are printed on a later page in this issue of Capital).

The Company will manufacture Fourdrinier wire cloth in technical collaboration with Messrs Norsk Gjæerde-og Metalludfabrik A/S of Oslo, Norway. The factory will be situated in Uttarpara, West Bengal. The capacity for the time being will be 396,000 square feet a single shift. An application has been made to the Calcutta Stock Exchange for an official quotation of the Company's shares. The entire public issue has been underwritten.

Hindustan Lever Earns More, Pays Less

THE directors of Hindustan Lever Ltd state in their report for the year 1962 that while the rights issue has been postponed, they are taking steps to proceed with some of the expansion plans which are already in hand with the aid of a loan of about Rs. 20 lakhs in pound sterling from Unilever Ltd to cover the immediate foreign exchange needs. The construction of the factory buildings and quarters for the Etah milk project is well under way. Orders for most of the plant have already been placed. The Company has secured a loan of about Rs. 25 lakhs in foreign currencies from the I.C.I.C.I. for this project. The ghee development unit at Etah continues to provide ghee for market test. The dehydrated pea operation at Ghaziabad has been extended this year and a beginning has been made at Etah.

Experimental quantities of dehydrated vegetables have been produced and a small canning unit has been set up at Ghaziabad for experimental purpose. The Ghaziabad factory expansion has been completed. The Company has agreed to purchase the plant and equipment of a *vanaspati* factory in Howrah. This will be particularly helpful in relieving the pressure created by growing exports and the need for substituting imported hard oils. The total cost of capital projects approved during 1962 was Rs. 60.47 lakhs.

The Company's turnover in value increased by 7.9 percent from Rs. 49.92 crores to Rs. 53.85 crores during 1962. Sales of soaps, detergents and toilet preparations rose from Rs. 23.74 crores to Rs. 24.85 crores, *vanaspati*, margarine and other foods from Rs. 23.08 crores to Rs. 24.70 crores and glycerine and other products, animal feeding stuffs and oils from Rs. 3.11 crores to Rs. 4.31 crores. While soap sales were up by 4 percent in value, they were down by 2 percent in quantity. Some lines suffered a small setback, but on the whole, the profits compared favourably with the previous year. The non-soapy detergent "surf" continued to show satisfactory progress. The reorganisation of the toilet preparations division has been carried out smoothly and the Company hopes to be able to increase its sales further in 1964.

The Company did well in both sales and profit of *vanaspati* because

of the stable oil market. Cattle-feed sales have been extended to some upcountry districts around Bombay. There has been a substantial increase in the exports of the Company's products from Rs. 74 lakhs in 1961 to Rs. 2.01 crores in 1962. In recent months, imports of some of the raw materials used by the Company have been drastically reduced. The Company is making every effort to use indigenous raw materials, but it is considered necessary to import certain raw materials to maintain quality and production. In spite of a record gross profit of Rs. 4.77 crores (against Rs. 4.18 crores), the dividend for 1962 has been reduced from Rs. 2.60 to Rs. 1.20 a share because of the heavy tax liability. The dividend for 1962 is on a larger capital as increased by the 12-for-25 bonus issue.

Tata Group Textile Mills Disappoint

THE preliminary reports on the working of the three textile mills belonging to the Tata Group, namely, Svadeshi Mills, Tata Mills and Ahmedabad Advance, show that like the majority of the other mills in the country, these too have fared badly during 1962. In spite of an improvement in the sales, all the three mills have suffered a substantial fall in their profits with the result that the dividends have had to be reduced. The Svadeshi Mills has had to draw on the reserves to provide for the payment of the reduced dividend; the Tata Mills had to do without any allocation to the general reserve which had received a huge amount in the preceding year and the Ahmedabad Advance has had to effect a substantial cut in the allocation to the general reserve. The preliminary figures do not show the amounts set aside for depreciation and managing agents' commission. The omission is hard to understand, especially when all the other important figures, including the turnover, have been mentioned. In the absence of these two figures, it is not possible to arrive at the gross profit which alone provides a dependable clue to the profit margin.

Svadeshi Mills: Despite an increase of 5.2 percent in the total turnover from Rs. 4.81 crores to Rs. 5.06 crores, the profit of the Svadeshi Mills Company Ltd for 1962, after providing for depreciation and managing agents' commission, shows a decline of 32.5 percent from Rs. 56.07 lakhs to Rs. 37.84 lakhs. The dividend has been reduced from Rs. 19 to Rs. 17 a share, and the directors have had less tax, and the dividend for 1962 to withdraw a sum of Rs. 2 lakhs from the general reserve to provide for the payment of the proposed dividend. After providing Rs. 18 lakhs (against Rs. 24 lakhs) for taxation and Rs. 2.75 lakhs (against Rs. 6.50 lakhs) for development rebate reserve, the net profit amounts to Rs. 17.08 lakhs, compared with Rs. 25.57 lakhs in the preceding year. With Rs. 24,559 brought forward, the disposable surplus amounts to Rs. 17.33 lakhs. The directors have set aside a sum of Rs. 75,000 for gratuity reserve and transferred Rs. 16.50 lakhs to dividend reserve. The preference dividend takes Rs. 1,07,100 (the same) and the ordinary dividend absorbs Rs. 17 lakhs (against Rs. 19 lakhs). The dividends are to be paid out of the dividend reserve. After making various appropriations, there remains a surplus of Rs. 8,176 to be carried forward.

Tata Mills: The total turnover of the Tata Mills Ltd is up by 3.3 percent from Rs. 4.74 crores to Rs. 4.90 crores, but the profit after providing for depreciation and managing agents' commission, is down by as

much as 57.5 percent from Rs. 58.47 lakhs to Rs. 24.81 lakhs. The dividend has been reduced from 22 percent to 20 percent, that is, from Rs. 5.50 to Rs. 5 a share, less tax. The provision for development rebate reserve is slightly lower at Rs. 4 lakhs, against Rs. 4.50 lakhs, and taxation accounts for Rs. 7 lakhs against Rs. 16 lakhs, leaving a net profit of Rs. 13.81 lakhs, against Rs. 20.50 lakhs in 1961. With Rs. 30,469 brought forward, the disposable surplus amounts to Rs. 14.11 lakhs. No allocation has been made to the general reserve which received Rs. 23.50 lakhs in the preceding year, but a sum of Rs. 60,000 (against nil) has been set aside for gratuity reserve. The directors have transferred a sum of Rs. 13.50 lakhs (against Rs. 14.43 lakhs) to the dividend reserve. The proposed dividend which is being paid out of the dividend reserve absorbs Rs. 13,11,575 (against Rs. 14,42,735), leaving a sum of Rs. 1,422 to be carried forward.

Ahmedabad Advance: The total turnover of the Ahmedabad Advance Mills Ltd shows a small increase of 2.4 percent from Rs. 2.91 crores to Rs. 2.98 crores, but the profit, after providing for managing agents' commission and depreciation, is down by about 50 percent from Rs. 28.86 lakhs to Rs. 14.38 lakhs. No provision has been made for taxation as in the previous year, and allocation to the development rebate has been reduced from Rs. 2 lakhs to Rs. 1 lakh. The provision for general reserve has been reduced from Rs. 21.50 lakhs to Rs. 7.50 lakhs and a sum of Rs. 10,000 (against nil) has been set aside for gratuity reserve. The directors have transferred a sum of Rs. 5.75 (against Rs. 5.51 lakhs) to the dividend reserve, out of which they propose to pay Rs. 4.67 lakhs (against Rs. 4.80 lakhs) to the equity shareholders and Rs. 71,400 (the same) to preference shareholders. The dividend has been reduced from Rs. 12 to Rs. 11 a share, with a proportionate dividend on the new equity shares issued during the year as rights. After making various appropriations, there remains a balance of Rs. 14,370 to be carried forward, against Rs. 10,945 brought in.

Podar Mills Maintains

IN spite of a sharp fall of 45.7 percent in the gross profit from Rs. 30.80 lakhs to Rs. 16.72 lakhs, the directors of Podar Mills Ltd have maintained the dividend for the year 1962 at 12 percent, less tax and what is more, the dividend for 1962 is on a larger capital as raised by the issue of bonus shares of the value of Rs. 10 lakhs during the year. The provision for depreciation has been reduced from Rs. 6.73 lakhs to Rs. 6.40 lakhs, but the development rebate reserve receives Rs. 1.25 lakhs, against Rs. 1 lakh. The provision for taxation has been drastically reduced from Rs. 13.50 lakhs to just Rs. 1 lakh. The proposed dividends—ordinary and preference—absorb Rs. 7.17 lakhs, against Rs. 5.97 lakhs, leaving a surplus of Rs. 1.24 lakhs to be carried forward, against Rs. 1.36 lakhs brought in.

The sharp decline in the profit is attributed to unfavourable trading conditions and increased costs of production without any corresponding increase in the selling prices of manufactured goods. The Company, it is said, has made further progress towards modernisation and rehabilitation. It has received a licence from the Government of India for setting up a separate spinning unit with a complement of 12,000 spindles in Jaipur. Steps are being taken to

put up the unit. The Company has also received an industrial licence for the establishment of a new undertaking for the manufacture of motor-vehicle tyres and tubes, with an annual capacity of 300,000 units each in Kotah (Rajasthan). Negotiations are in progress for technical and financial collaboration from abroad. The Rs. 10-paid share is quoted around Rs. 12.24, offering a gross return of about 10 percent.

Ceat Tyres Profit Down

CEAT Tyres of India Ltd reports disappointing results for 1962. In spite of an increase of about 20 percent in the sales from Rs. 3.61 crores to Rs. 4.34 crores, the gross profit is down by nearly 38 percent from Rs. 49.36 lakhs to Rs. 30.44 lakhs. The fall in profit is attributed to the expenditure incurred in establishing the sales organisation all over India for the sale of the licensed capacity of 1,000 tons a month and to the increase in the cost of raw materials which has gone up from Rs. 1.72 crores to Rs. 2.09 crores. Other expenses are up from Rs. 51.36 lakhs to Rs. 79.57 lakhs. The excise duty paid by the Company was considerably higher at Rs. 1.29 crores, against Rs. 1.04 crores.

From the year's gross profit of Rs. 30.44 lakhs, the directors have set aside Rs. 19.95 lakhs (against Rs. 13.86 lakhs) for depreciation and Rs. 6.66 lakhs (against Rs. 22.37 lakhs) for development rebate reserve. While last year, the Company had to wipe off the loss of Rs. 8.04 lakhs brought in from the previous year and write off miscellaneous expenditure amounting to Rs. 2.92 lakhs, there is no such contingency this year. The directors have, therefore, been able to create a general reserve with an allocation of Rs. 5 lakhs. As for the prospects for the current year, the directors state that the enhancement of Customs tariff during the current year and the usage of more costly indigenous products and/or substitutes will lead to a further increase in the cost of production.

The proposed expansion of the licensed capacity is also not expected to be attained earlier than the end of 1963 due to the delay in the receipt of licences. The I.C.I.C.I. has agreed to give a rupee loan of Rs. 50 lakhs for the Company's expansion scheme. A new account has been opened with the Bank of Baroda with the facility of a clean cash credit of Rs. 25 lakhs. The Company's borrowings as at the end of 1962 stood at Rs. 1.42 crores. The additions to the fixed assets during the year amount to Rs. 48.84 lakhs and capital works in progress at the end of the year amounted to Rs. 49.91 lakhs. In view of the national emergency, Ceat Italy has waived the purchase commission clause of the technical agreement for purchasing capital equipment and raw materials.

Jyoti Cuts Dividend

ALTHOUGH the dividend has been reduced from Rs. 12 to Rs. 9 a share, less tax, the working results of Jyoti Ltd for 1962 are fairly encouraging, with both sales and gross profit recording a rise. Sales have risen by about 18.6 percent from Rs. 1.72 crores to Rs. 2.04 crores, and the gross profit has increased by about 12 percent from Rs. 17.98 lakhs to Rs. 20.17 lakhs. Appropriations include depreciation Rs. 5.52 lakhs (against Rs. 4.01 lakhs), development

rebate Rs. 2.34 lakhs (against Rs. 1.84 lakhs), taxation Rs. 6 lakhs (against Rs. 4.95 lakhs), gratuity reserve Rs. 50,000 (the same) and reserve for doubtful debts Rs. 10,000 (the same). The proposed dividend absorbs Rs. 4.50 lakhs, against Rs. 5.68 lakhs, leaving a sum of Rs. 20,000 to be carried forward, against Rs. 11,000 brought in.

The directors state that the Company started during the year production of plastic components which are required in the manufacture of switchgear and switchboards. The Company has obtained licence for the manufacture of extra H. T. circuit-breakers, and it is expecting another licence for manufacturing alternators up to 3,000 kW. During the last few years, the Company has extended the range of its manufacturing activities with various collaborations. The directors now feel the need for consolidating the present range of manufacture, which is very varied comprising such items as low tension and high tension switchgears and switchboards, different types of electrical rotating machines such as various kinds and sizes of electric motors and hydro-electric generators, instrument transformers, hydro-electric turbines and governors, numerous types and sizes of pumps for clear water and special sand handling and chemical pumps. The trend of manufacture is towards larger equipment, and at present, the Company is one of the few manufacturers engaged in producing large pumps and large electric motors.

Investa Machine Tools Does Better

THE working results of Investa Machine Tools and Engineering Company Ltd for 1962 show a considerable improvement over the previous year's performance. Sales are up by about 30 percent from Rs. 45.09 lakhs to Rs. 58.92 lakhs, and the gross profit has shot up by nearly 112 percent from Rs. 4.65 lakhs to Rs. 9.84 lakhs. But the equity shareholders who have gone without a dividend ever since the Company was set up in 1942, will probably have to wait for some more years before their investment begins to bear fruit. Investa Machine Tools has yet to clear arrears of preference dividend for many years.

The working results for 1962 have enabled the directors to declare preference dividend for two years, 1947 and 1948. After providing Rs. 4.58 lakhs (against Rs. 1.84 lakhs) for depreciation, Rs. 3.39 lakhs (against Rs. 2.08 lakhs) for development rebate reserve and deducting other charges, the net profit amounts to Rs. 1.62 lakhs, against Rs. 54,000. With Rs. 70,354 brought in from the previous year and adding 19,782 being excess provision for taxation in previous years, the disposable surplus amounts to Rs. 2.52 lakhs. After providing for the payment of the proposed preference dividend for two years—1947 and 1948—which absorbs Rs. 1.17 lakhs and setting aside Rs. 1.33 lakhs for general reserve, there remains a small surplus of Rs. 1,664 to be carried forward, against Rs. 70,354 brought in. The Rs. 100-paid share of Investa Machine Tool is quoted nominally at par.

Prospects for Permanent Magnets

THE chairman of Permanent Magnets Ltd, Mr. Madanmohan R. Ruia, informed the shareholders at the Company's second annual meeting that following the representation

made by the management, the Government has banned the import of permanent magnets and necessary steps have been taken to restrict further imports of the product. Under the circumstances, the order position will improve considerably within a couple of months. Mr. Ruia said that the Government had issued licences through mistake for importing permanent magnets to many actual users, and this had adversely affected to some extent the orders for the Company's products.

The Company has begun commercial production since January. All the machinery required to complete the project has been ordered and is likely to be installed by the end of the current year. It will then be able to produce at the rate of 180 tons of permanent magnets a year. The Company has received the import licence for the necessary raw materials required for the current year. The chairman disclosed that the directors were contemplating a scheme to revise the schedule of production to meet the increased demand, and plans for further expansion of the production programme will be placed before the shareholders at the proper time. The Company's market research has shown that there is a very good demand for magnets made from powder metallurgy which are popularly known as ferrite or ceramic magnets. A scheme for producing this kind of magnets is under consideration. As far as land and other facilities for future expansion are concerned, the Company has made all necessary provisions and should this scheme materialise, it will be placed before the shareholders for their approval.

Ganesh Flour Pays Less

THE Ganesh Flour Mills Co. Ltd reports disappointing results for the year ended September 1962. Although sales have been more or less maintained at Rs. 13.46 crores, against Rs. 13.59 crores in the preceding year, the gross profit is down by about 57 percent from Rs. 29.42 lakhs to Rs. 12.49 lakhs. The ordinary dividend has been reduced from Rs. 1.60 to Re. 1 a share, less tax, and the dividend on the first cumulative preference shares has been pruned from 12.8 percent to 9.1 percent, less tax. From the year's profit, the directors have provided Rs. 3.70 lakhs (against Rs. 2.97 lakhs) for depreciation, Rs. 1.70 lakhs (against Rs. 25,000) for development rebate reserve and Rs. 4 lakhs (against Rs. 17 lakhs) for taxation. The proposed dividends absorb Rs. 5.41 lakhs (against Rs. 7.30 lakhs), leaving a sum of Rs. 30,359 to be carried forward, against Rs. 2.62 lakhs brought in.

The directors attribute the Company's disappointing performance during 1961-62 to the extremely difficult trading conditions in Pakistan and the all-round increase in expenses. While the production of *vanaspathi* at the Delhi and Kanpur factories showed an improvement from 30,887 tonnes to 32,583 tonnes, the production at the Lyaipur factory was lower at 5,200 tonnes, compared with 5,494 tonnes. The production at the Lyaipur flour mill was also appreciably down from 63,548 tonnes to 49,501 tonnes. The fan factory which started production in July 1962 has progressed steadily, and production during the current year has markedly improved. The construction and erection work relating to the solvent extraction plant has now been taken in hand, and every effort is being made to complete it as early as possible. The directors propose to make calls on the partly-paid shares of Rs. 12.50-paid share of

Ganesh Flour is quoted around Rs. 15.75.

Coimbatore Pioneer Mills Cuts Dividend

DUE to a marked decline in the profit of the Coimbatore Pioneer Mills Ltd for the year ended December 1962, because of higher raw material and labour costs, the directors have recommended a lower dividend of 15 percent, compared with 25 percent for the previous year. The net profit for the year amounts to Rs. 16,42,150, after providing Rs. 6,48,447 for depreciation, against Rs. 20,12,014 (Rs. 5,63,132 for depreciation), in the previous year. Adding to the net profit for 1962, a sum of Rs. 17,916 brought forward, and also a sum of Rs. 9,663 being excess provision in equity dividend for 1961, the total surplus available for appropriation amounts to Rs. 16,69,729. Out of this, taxation receives Rs. 8,76,000 (against Rs. 9,50,000), and provision for super profits tax amounts to Rs. 3,04,000. The dividend on preference shares at 8.45 percent, subject to tax, amounts to Rs. 8,450. The proposed dividend of 15 percent on the equity shares will absorb Rs. 4,45,665. A sum of Rs. 35,000 is transferred to general reserves (against Rs. 3,25,000). The balance of Rs. 614 is carried forward.

The directors' report says that some auxiliary machinery and materials were purchased for modernising units. All the machinery have been installed and commissioned. As for the ball and roller bearing unit, they state that negotiations are still in progress for securing technical collaboration. Referring to the expansion programme to install 10,000 spindles for spinning staple fibre yarn, the directors say that the Company has received 9 ring frames of 440 spindles each, out of the balance of ten ring frames, and they are under erection. It is said that with the receipt of one frame for 440 spindles, the implementation of the licence will be completed. Orders have been placed for the purchase of some other auxiliary machinery and conversion materials for modernising the existing old frames. These items of machinery are expected to be delivered during the current year. The value of the machinery ordered is about Rs. 18,69,400. The value of cotton contracted to be purchased from merchants amounts to Rs. 23,68,310.

Adoni Spinning Pays the Same

ADONI Spinning and Weaving Co. Ltd has earned a net profit of Rs. 2,77,520 for the year ended December 1962, after providing Rs. 7,10,693 for depreciation and deducting other charges. This compares with the previous year's net profit of Rs. 8,08,391, after providing Rs. 8,04,232 for depreciation. With Rs. 1,71,575 brought forward from the previous year, the total available for appropriation comes to Rs. 4,49,095. Out of this, the dividend of 7.8 percent on 6 percent tax-free cumulative preference shares, amounts to Rs. 1,55,981. The directors have recommended a dividend of 8 percent on equity shares (the same) and this will absorb Rs. 2,39,988. The balance of Rs. 53,126 is carried forward. Sales have registered a rise from Rs. 1.42 crores in 1961 to Rs. 1.50 crores in 1962.

Debentures of the face value of Rs. 10 lakhs issued in favour of the State Bank of India were redeemed during the year, as against the scheduled redemption of Rs. 5 lakhs. The debentures outstanding as on 31st December, 1962, amounted to Rs. 10 lakhs. The provision for tax-

ation includes Rs. 40,000 towards the liability for super profit tax. The directors' report says that Indian cotton position during the year was very difficult, and the prices ruled considerably higher than in the previous year. Hence the Company's cotton bill was higher by more than Rs. 6.25 lakhs. But this was offset by the increase in the realisation from yarn. The chairman has pointed out that the supply of Indian cotton during the 1962-63 season is expected to be about 1 million bales more than that in the previous season. But the prices of Indian cotton have been ruling very firm, more or less throughout the season, very near the ceiling prices which were revised upwards by Rs. 125 a candy. Although the control on varietywise distribution of cotton imposed last year has been lifted, Indian cotton continues to be purchased by the mills on the basis of quotas.

Outlook for Ouchterlony Valley

THE chairman of the Ouchterlony Valley Estates Ltd, Mr. J. N. A. Hobbs stated at the recent annual general meeting that the Company's income in recent years has been derived from the tea crop and that the crop of 655,342 kilograms for 1962 was a record. The estimated crop for the current year is 700,000 kilograms and the chairman was optimistic that a crop in excess of 700,000 kilograms would be maintained in the future. He was appreciative of the assistance given by the Government to the industry in improving exports. India's exports in 1962 were higher by 20 million lbs than in 1961, although her total production in 1962 at 738 million lbs was 22 million lbs less than in the previous year.

As for the super profits tax, the chairman observed that it would not immediately affect his Company as a substantial loss had been suffered during the past year. But the Company would have to bear this additional tax when conditions improved. It would, however, be affected immediately by the 20 percent surcharge on the excise duty levied on coffee and tea and by the levies on commodities like petrol and diesel oil and other materials essential for the Company's working. Mr. Hobbs stressed the importance of maintaining a thriving home market to provide stability to the industry; he pleaded for active steps to stimulate the consumption of lower quality teas in India so as to provide a cushion against any setback in the overseas market.

Mr. Hobbs expressed his dissatisfaction with the present system of marketing coffee adopted by the Coffee Board as it did not benefit the producers of quality coffees directly. Referring to the decline in the quality of Indian coffee in recent years, he said that it was unlikely that there would be maximum production of quality coffee as long as followed. He regretted the discontinuance of the system of open auction for export sales, and doubted whether the reversion of the tender system would result in more buyers participating in auctions in future. The Company's 1962-63 coffee crop of 211,742 tonnes was the smallest for many years. The revised crop estimated for the year 1963-64 is put at 355 tonnes.

Travancore Cements Pays Slightly More

TRAVANCORE Cements Ltd shows substantially higher profits for

the year ended December 1962, compared with the previous year. This improved result is mainly due to the higher retention price allowed to the Company by the Central Government for grey cement with effect from November 1961, the increase in the volume of sales of its white cement and the efficient performance of the factory. The net profit for 1962 amounts to Rs. 9,67,529, after providing Rs. 5,62,454 for depreciation and Rs. 1,06,893 for managing agents' remuneration, compared with the previous year's net profit of Rs. 4,99,058 arrived at after providing Rs. 6,21,515 for depreciation and Rs. 55,451 for managing agents' remuneration.

With the amount of Rs. 15,547 brought forward from the previous year, the total comes to Rs. 9,83,076. Out of this, a sum of Rs. 50,372 is transferred to reserve for rehabilitation (against Rs. 9,440). The provision for taxation amounts to Rs. 5,60,000 after taking into consideration the transfer of Rs. 1,37,800, from deferred taxation reserve, against a tax provision of Rs. 2,25,000 in the previous year. The directors have recommended a slightly higher dividend of 7 percent (against 6 percent) and this dividend will absorb Rs. 3,50,000. The loan of Rs. 45 lakhs taken from the State Government in 1947-48 to meet capital expenditure has been fully repaid. In 1957, the Company took another loan of Rs. 15 lakhs from the State Government for the white cement scheme repayable in five equal instalments beginning from 1963.

New Capital Issues

FIVE companies have been authorised to issue capital totalling Rs. 1.72 crores. Two are new companies and two are Central Government undertakings. Four companies will issue equity shares and one equity plus cumulative redeemable preference shares. The consent in all cases is valid for 12 months. The following are the details:

Bahri Automobiles Corporation Private Ltd, Bombay, a new company, will issue capital of Rs. 75 lakhs in equity shares of Rs. 100 each for cash at par. The proceeds will be used for manufacture of bevel gears, universal joints, excels shafts, speed reduction gears, spur gears for motor-vehicles, tractors, earth moving machinery and cranes.

Andhra Cotton Mills Ltd, Proddatur (Andhra Pradesh), is to issue capital of Rs. 25 lakhs, divided into 25,000 equity shares of Rs. 100 each to be issued for cash at par of which shares worth Rs. 18.50 lakhs will be offered for public subscription. The money will be used in the establishment of a cotton spinning mill with a capacity of 12,000 spindles.

National Seeds Corporation Ltd, a Central Government undertaking, is issuing capital of Rs. 20 lakhs divided into 2,000 equity shares of Rs. 1,000 each for cash at par. The Company was registered last March to promote production of improved seeds in the country by giving financial assistance.

National Buildings Construction Corporation Ltd, Delhi, another Central Government undertaking, will raise further capital of Rs. 12 lakhs divided into 1,200 equity shares of Rs. 1,000 each for cash at par.

New India Spinning and Weaving Mills Ltd, a new Company, will issue capital of Rs. 40 lakhs divided into 320,000 equity shares of Rs. 10 each and 8,000 9.3% cumulative redeemable preference shares of Rs. 100 each, for cash at par. The money will be used to set up a cotton spinning mill.

The Stock Markets

CALCUTTA AWAITS RESUMPTION OF FORWARD TRADING

Wednesday Evening.

THE Calcutta stock market has been busy examining the terms and conditions under which the Government will permit forward trading in shares, which has been stopped from last November. The restrictions relate mainly to the margin requirements and the inclusion of shares in the clearing list. Although the margins stipulated by the Government are considered rather high, they are expected to be accepted by the various stock exchanges since they are aimed at curbing speculation. Since forward trading is bound to promote speculation, strict vigilance will be necessary to maintain the health of the market. Opinion is divided on the likely effects of the resumption of forward trading. Freer trading will no doubt help to establish more realistic prices. Hence, it is argued, greater resistance to a further decline may develop. The other line of argument is that forward trading will encourage short selling, which may depress prices.

The market trend has been sluggish during the past week. Operators are cautious since the political situation has become less favourable. Reports about concentration of the Chinese army along the Indian borders have disturbed sentiment. The clearing on Wednesday was uneventful. Carry-forward charges were slightly higher than in the previous settlement. So there has been no inclination to extend commitments.

The corporate news has, meanwhile, been mixed. While some companies have declared good dividends, the disposable profits of many have been squeezed by heavier taxation, including the super profits tax. Indian Standard Wagon have been prominent because the Company has declared for 1962-63 a taxable ordinary dividend of 20 percent, including a bonus of 5 percent, on the share capital doubled by the issue of bonus shares. The dividend was 28.5 percent, subject to tax, for 1961-62. The decision of the Government to decontrol *vanaspathi* prices and leave the industry free to regulate them on a voluntary basis, has been welcomed. It is wondered whether the prices of other commodities such as steel, cement, paper and coal will be similarly decontrolled.

The initial support for steel shares was due to rumours of decontrol of steel. Past experience shows that whenever the Government has fixed prices, they have been inadequate to cover production costs. Unless a more realistic price policy is pursued, the development of industries will be retarded. Indian Iron have fluctuated narrowly and turnover has shrunk. Except for Indian Standard Wagon and Burn which have been supported, engineering shares have generally shed their gains. Guest, Keen, Williams, Texmaco and Braithwaite have been transacted. Although the latter Company has produced excellent results for 1962, the taxable ordinary dividend declared is only 14 percent on the increased share capital, compared with a taxable dividend of 25 percent for 1961. A substantial portion of the bigger profit has been mopped up by taxation, including the super profits tax.

Prices of selected jute shares have been maintained on the declaration of satisfactory dividends. Buyers

have, nevertheless, turned cautious towards the close because of the lack of foreign enquiries for jute goods. The trend of gunny prices has been downward while the minimum price for raw jute has been fixed by the Government for 1963-64 at the same level as in 1962-63. Hence the profitability of jute companies, it is feared, may be affected. Champdany have been steady on paying a higher dividend. Interest has been taken in Kamarhatti, Kankarrah and Birla.

Turnover has declined in miscellaneous shares, which have moved within a narrow groove. Indian Copper have recovered smartly because of short-covering. Among new shares, Isaac Holdens have lost on passing the dividend. Paper shares have generally been neglected. Cotton mill shares have been dealt in cautiously because the present prices of cloth and yarn have become unremunerative. Dunbar have been sold on announcement of a lower dividend. Bank shares have met with stray buying. Sugar shares have been difficult to transact in the absence of support.

Coal shares have been subdued. Stray business has been done in Burakur, Central India and Bengal. Only a few tea shares have been transacted and the prices have shown little variation. The discouraging trend at the first export auction held in Calcutta has made investors chary.

Government securities have been quietly steady. Support has largely been confined to short-dated loans. The 3 percent Conversion loan 1986 has been quoted at Rs. 63.05. Scattered business has been done in selected State Government loans. The market has been awaiting the announcement of the second instalment of the official borrowing programme.

Bombay

SIZABLE DECLINE IN TURNOVER CORPORATE NEWS AFFECTS SENTIMENT

Wednesday Evening.

THERE has been a substantial decline in turnover in the Bombay stock market during the past week. Operators are inclined to await the resumption of forward trading. The stock exchange authorities are believed to have accepted the terms and conditions under which the Government will permit futures contracts. The restrictions relate mainly to margin requirements. The Government has asked for bigger margins, and the stock exchanges have pleaded for a cut if possible. In any case, forward trading is likely to begin soon. Although the technical position has been healthy, operators have been hesitant to extend commitments since freedom to indulge in short-selling might aggravate pressure.

Dalal Street has been restrained because the corporate news has generally been unfavourable. The Tata Group of cotton mills have cut the dividends because of the impact of rising production costs and heavier taxation. The earlier sup-

port for steel shares has proved short-lived since operators have not been able to know whether decontrol of steel would contribute to the better working of companies under the present circumstances. Operators have been disturbed by reports of the concentration of Chinese troops along the Ladakh and N.E.F.A. borders. The prospects of foreign aid are also uncertain. This apart, investible funds have been largely diverted to the new issues.

Tata Steel have closed at Rs. 135.75 and Indian Iron at Rs. 22.44. Among engineering shares, Tata Locomotive have gained slightly at Rs. 287.50 on replacement buying, but Larsen and Toubro have been quiet at Rs. 23.24. Mukand Iron have been steady on influential support. Among motor-vehicle shares, Hindustan Motors have been sluggish, but little interest has been taken in Premier Automobiles. Except for Standard, which has gained on buying from knowledgeable quarters, cotton mill shares have generally been subdued. Bombay Dyeing have been quoted at Rs. 61.50, Kohinoor at Rs. 315 and Svadeshi at Rs. 248. Century have been somewhat steady on the news that the tyre cord plant has started operating. India United ordinary have been sold freely down to Rs. 23. Sugar shares have met with selective buying in the miscellaneous sec-

*Here with a loaf of
Bread beneath the bough,
a bottle of Gold Coin,
a book of verse and thou,
Beside me singing in
the wilderness—and wilder-
ness is Paradise enow.*

tion. Belapur have been taken at Rs. 185.50 and Walchandnagar Industries at Rs. 145. In the cement section, Associated Cement have been done at Rs. 143.50 and Digvijay at Rs. 164. Mining shares have been quiet, and B. B. Petrol have been sold at Rs. 3.24. Steamship company shares have been quiet, and Scindia Steam have fallen to Rs. 10.16. Bombay Burmah have been sluggish at Rs. 66. Chemical shares have been quietly steady, and Tata Chemical have fetched Rs. 15.32. Indian Dyestuff have been transacted at Rs. 415. Among rayon shares, National Rayon have recovered to Rs. 357 on favourable corporate news. Voltas have been quiet at Rs. 257, as have been Tata Oil at Rs. 58.50. Turnover has been negligible in cash scrip. Synthetics and Chemicals have been subdued at Rs. 144. Ceat Tyre have declined to Rs. 8.75 on producing disappointing results.

Bank and insurance shares have been neglected. Prices of electric company shares have declined on balance. Scattered interest has been taken in Ahmedabad Electric at Rs. 91 and in Tata power at Rs. 1,040.

Bombay

INVESTORS BECOME CHARY BUSINESS IN CLEARING SHARES NEGLIGIBLE

Tuesday Evening.

THE Madras stock market has been dull during the past week. Turnover has declined almost to a trickle. Business has been negligible in clearing shares because of the lack of outside support. Investors have been chary in view of the heavy impact of the super profits tax on corporate profits. There has been a general inclination to cut commitments to the minimum because of the likelihood of forward trading being resumed soon. It is thought that short-selling would push down prices if forward trading were to start.

Government securities have been quietly steady and selected State Government loans have been bought. Except for stray buying in Pandyan, bank shares have generally been neglected. Despite a sharp rise in the international price of sugar, sugar shares have lacked interest. Support for planting shares has declined considerably and prices have generally been lower on balance. Cotton mill shares have been offered freely without attracting support and turnover has been negligible in miscellaneous shares.

Among electric company shares, West Coast have been taken at

Rs. 18.37 on reports that the Government of Kerala may pay a compensation of more than Rs. 50 lakhs to the Company for acquiring the Calicut electricity undertaking. The Company has decided to pay a dividend of Rs. 5 an ordinary share out of the compensation. Among sugar shares, Deccan have been transacted at Rs. 9.40 and E.I.D. at Rs. 37.25. In the planting section, Blue Mountain have come to hand at Rs. 2.22 and Consolidated Coffee at Rs. 17. Periakaramalai have been dealt in at Rs. 282 and Twyford at Rs. 8.75. Anandam have declared a taxable ordinary dividend of 15 percent and Thamarappally a taxable ordinary dividend of 16 percent. Travancore Rubber and Tea have announced a taxable ordinary dividend of 10 percent and Rajagiri an interim taxable ordinary dividend of 10 percent. Devashola have declared a final ordinary taxable dividend of 5 percent. Highland have declared a taxable ordinary dividend of 15 percent.

In the cotton mill section, South India Viscose have been subdued at Rs. 139 and Travancore Rayon at Rs. 24.20. Madura have declined to Rs. 32.50. Radhakrishna have declared a taxable ordinary dividend of 10 percent and Cambodia a taxable ordinary dividend of 9 percent.

Among miscellaneous shares, Aluminium Industries have been transacted at Rs. 17 and Ashok Leyland at Rs. 7.46. Dalmia Cement have come to hand at Rs. 13.10 and India Cement at Rs. 5.60. Mettur Chemical have been dealt in at Rs. 12.15. Business has passed in Seshasayee Paper at Rs. 7.75 and in Parry's Confectionery at Rs. 3.24. Travancore Cement have been done at Rs. 8.20 on declaring a taxable ordinary dividend of 7 percent. Bangalore Printing have declared a taxable ordinary dividend of 5 percent and United Electricals a taxable ordinary dividend of 7 percent. A. V. Thomas (Alleppey) have paid a taxable ordinary dividend of 13 percent and Travancore Rubber a taxable ordinary dividend of 12 percent.

THE WEEK'S TRANSACTIONS

London

BUSINESS IN SHARES FALLS

FIRM UNDERTONE IN GILT-EDGED

London, 29th May.

THE stock market gave a disappointing performance during the past week. There was a marked contraction in the volume of business, and generally prices drifted lower to record widespread, but usually small falls compared with the previous week's levels. Persistent talk of the possibility of an autumn general election was the chief unsettling influence. Further good company and economic news and the Chancellor's optimism on the outlook failed to offset the uncertainty caused by election fears. However, the gilt-edged market maintained a firm undertone, particularly in the long-dated stocks which inclined higher.

Banking shares were dull and insurances reacted after earlier firmness. Property shares attracted little attention. Industrials generally drifted lower. Most of the leaders recorded small falls, but there were several firm features mostly for specific reasons. Sugar shares moved up on the rise in the price of sugar, but later reacted with the commodity. Finance shares in the gold share market were supported at one time, but generally golds were very quiet. Coppers turned easier after earlier firmness. Tins attracted little attention. Oils inclined easier. Rubbers and teas were selectively supported from time to time. Dollar stocks fluctuated narrowly. The dollar premium recovered a small part of the previous week's heavy fall.

For a nominal charge. "Capital's Statistical Department can provide you with a certificate of share prices.

ECONOMIC RESEARCH is an essential part of modern commerce. But it is not always easy to obtain. The ordinary business house does not usually possess the records, statistics and archives which are the raw material of research. CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT has a long record of service to Chambers of Commerce, Industrial Associations and private business concerns. It does not undertake trade inquiries, but its facilities and advice are available for all kinds of research proper into the problems of Indian commerce and industry.

CAPITAL RESEARCH & STATISTICAL DEPARTMENT has constructed and maintains a number of cost of living indices for various classes and communities in India and Pakistan. It offers the industrialist and business house its experience in consumer market surveys—industrial prospecting—readership analysis—economic indices—business research.

RESERVE BANK

Money

THE CALCUTTA MONEY MARKET

MODERATE DECLINE IN ADVANCES

Wednesday, 29th May.

THERE has been a moderate decrease in the general level of advances in the Calcutta money market during the past week. This has been brought about by the slight decrease in the credit given to the jute and sugar mills. The accommodation extended to the iron, steel and engineering industries has gone up moderately. Advances to the cotton mills and to the foodgrains and seeds trade are almost unchanged. In the interbank market, conditions have hardened after an easy spell, and the call rate is quoted at 4½ percent.

The exchange market has been fairly active, with the supply of tea bills showing an improvement. Gunny bills continue at a moderate level. The demand for remittance is keen. Sterling is stronger in relation to all the major currencies with the exception of the Norwegian and Danish kroner.

SILVER WAS QUIET IN CALCUTTA during the past week. The price fell from the previous week's level of Rs. 270.50 to Rs. 260.25, quoted today for ready delivery and there was no business in forward. The London and New York prices were 110½d and 128½ cents. Gold was not transacted.

DURING THE WEEK ENDED 24TH MAY, Government of India Treasury bills for Rs. 18,56,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 28th May. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.410 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.350 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres excepting Madras up to the close of business on 1st June and at Madras up to the close of business on 3rd June.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 29th May to 1st June at Rs. 99.431 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 22nd May to 25th May amounted to Rs. 80 lakhs only.

THERE WERE DECLINES OF RS. 26.21 crores to Rs. 2,295.75 crores in active notes and of Rs. 24.11 crores to Rs. 2,318.20 crores in the total note issue in the return of the Reserve Bank of India for the week ended 24th May, 1963. The currency contraction was adjusted by increasing foreign securities by Rs. 5 crores to Rs. 1,10.08 crores, and by reducing rupee securities by Rs. 30 crores to Rs. 1,976.44 crores in the paper currency reserve. These adjustments were made by transferring relevant securities from and to the Banking Department. Hence balances held abroad in the latter department fell by Rs. 4.66 crores to Rs. 9.39 crores, while investments rose by Rs. 29.95 crores to Rs. 256.79 crores. Deposits of the Government of India rose by Rs. 3.07 crores to Rs. 57.18 crores, while those

of State Governments fell by Rs. 2.13 crores to Rs. 10.06 crores. Balances of scheduled banks fell by Rs. 90 lakhs to Rs. 82.60 crores. Their loans from the Reserve Bank fell from Rs. 24.92 crores to Rs. 8.76 crores, of which advances against usance bills were Rs. 6.28 crores (Rs. 17.49 crores). Ways and means advances stood at Rs. 50.70 crores, against Rs. 49.21 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 17th May, 1963, shows a rise of Rs. 1.74 crores to Rs. 556.33 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 10.76 crores and Rs. 1.50 crores to Rs. 232.13 crores and Rs. 9.34 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 9.73 crores to Rs. 298.19 crores. Cash and balances are, in consequence, shown at Rs. 24.48 crores or Rs. 1.68 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 17th May, 1963, shows Demand and Time liabilities at Rs. 1,024.62 crores (Rs. 32.38 crores on account of borrowings from banks) and Rs. 1,272.09 crores (Rs. 19.78 crores), compared with Rs. 1,018.60 crores (Rs. 25.05 crores) and Rs. 1,256.91 crores (Rs. 18.21 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.35 crores and Rs. 93 lakhs to Rs. 54.33 crores and Rs. 78.99 crores, respectively. There is a rise of Rs. 10.57 crores to Rs. 617.42 crores in investments. Advances and bills discounted at Rs. 1,579.26 crores show a drop of Rs. 18.70 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.8 percent and 68.8 percent, against 6 percent and 70.2 percent.

THE UNITED COMMERCIAL BANK LIMITED

CHAIRMAN, MR. G. D. BIRLA'S STATEMENT

Statement of Mr. G. D. Birla, Chairman, circulated to the members at the Twentieth Annual General Meeting held on Friday, the 24th May, 1963.

Gentlemen,

The Directors' Report and the accounts of the Bank for the year ended 31st December, 1962 have been in your hands for some time and it is a matter for satisfaction that the progress of the Bank has been maintained in a somewhat difficult year for banking. There has been some delay in the presentation of the accounts, but this has been due to the understandable desire of the Board to finalise the Balance-Sheet only after the Super Profits Tax proposals adumbrated by the Finance Minister in his Budget speech had taken final form so that any liability to the new tax to which the Bank might become subject could be squarely faced and taken into account.

You would have noticed from the report of the Directors that Mr. G. L. Bangur and Mr. M. L. Shah who retire by rotation this year are not seeking re-appointment as Directors by reason of their having attained the age of 68 years. Mr. Shah joined the Board in December 1946 and Mr. Bangur in January 1948. The Bank has benefited greatly by their long association and I wish to acknowledge on your behalf the valuable services rendered by them. Mr. Shrenik Kasturibhai was invited to join the Board as an additional Director during the year and you will be asked to confirm his appointment. I am confident that his participation as a Director will continue to be of great value to the Bank.

The Emergency

The Finance Minister's inclusion of such an innovation as the Super Profits Tax in an unprecedented Budget was, of course, directly in consequence of the dastardly Chinese aggression upon Indian soil. Faced with this challenge to the nation's integrity, the people have responded magnificently and, what is far more important, unitedly. Spontaneous contributions have been forthcoming both in the form of money and in greater productive effort. Banks for their part have had an even more responsible role in the functioning of the economy. On the one hand, in the front-line areas there has been the need to finance stocks and distribution of essential consumer supplies. On the other hand defence production has also necessitated suitable accommodation from the banking system. It is satisfactory to record that banks rose to the occasion and were not found wanting when essential financing endeavours were called for. Indeed, they took more care than ever before in the screening of requests for advances, for in the conditions created by the emergency they had to make doubly sure that their facilities were not abused for the speculative withholding of stocks.

Deposits

Resuming the review of the Bank's affairs, I am happy to state that during the year the Deposits of the Bank crossed the Rs. 100 crore mark and stood at Rs. 105.74 crores at the close of the year. This figure compares with Rs. 98.90 crores a year previously and thus showed a rise of Rs. 6.84 crores or 6.9 percent.

Cash and Securities

Cash on hand and with banks and money at call and short notice were

Rs. 11.24 crores and represented 10.6 per cent of Deposits. As the proportion of the Bank's holding of Government securities to its Deposits was already higher than the ratio for the banking system as a whole the addition to the securities portfolio is only of the order of Rs. 1 crore, the rest of the accretion to our Deposits being utilised for meeting the rising demand for credit from our industrial and commercial borrowers. Nevertheless, our quick assets consisting of cash on hand and with banks, money at call and short notice and unencumbered Government securities totalled Rs. 46.84 crores forming 44.3 per cent of Deposits, the corresponding percentages for the two previous years being 43.31 and 43.80.

Profit and Loss Account

The net profit of the Bank has shown a slight rise from Rs. 72.61 lakhs to Rs. 73.33 lakhs but in judging this figure it should be borne in mind that apart from the normal increase in working expenses the Bank had to bear an additional burden resulting from the implementation of the Desai Award, make provision for depreciation in the value of holdings of Government securities and pay the Deposit Insurance premium, all of which in the aggregate substantially eroded the increase in gross earnings during the year. We did not seek to offset these charges by reducing our Advances; we preferred throughout the year to adhere to our conventional standards of a high degree of liquidity. As stated in the Directors' Report the Board have transferred out of the profit Rs. 28 lakhs to the Reserve Fund and Rs. 4 lakhs to the Gratuity Trust Fund. After allocating Rs. 16.50 lakhs for bonus to the staff the Directors have recommended the maintenance of the dividend of 12 per cent, less tax on the old shares and the payment of a pro rata dividend on the new shares. The Directors have contributed Rs. 2 lakhs to the National Defence Fund from the 1962 accounts and a further sum of Rs. 2 lakhs early in January 1963, thus making our total contribution stand at Rs. 4 lakhs.

Capital Deposits Ratio

In my statement last year I had informed you that the Board had decided to increase the capital of the Bank by the issue of 200,000 ordinary shares at a premium of Rs. 25 per share and that an application had been made to the Controller of Capital Issues for sanction of the proposals. This sanction was obtained on 14th April, 1962, but a condition of the approval was that the issue should be made only after 31st August, 1962. When the issue was actually made conditions in the capital market had changed, and the Chinese aggression aggravated the situation therein. Notwithstanding these adverse factors applications were received for 160,000 shares which were allotted in full. The share premium of Rs. 40 lakhs realised, together with the year's allocation of Rs. 28 lakhs to the Reserve Fund, has brought the total of published Reserves of the Bank to the impressive figure of Rs. 3.03 crores. The amount called up on the new shares on capital account is Rs. 80 lakhs, the bulk of which has since been paid in, with the result that the capital base of Rs. 5.83 crores, comprising Rs. 2.80 crores in paid-up Capital and Rs. 3.03 crores in Reserves, gives an equity-deposits ratio of 5.5 per cent against the target of 6 per cent. I think it will be generally conceded that our Bank for its part has

spared no effort, whether by way of the quantum of transfer to the Reserve Fund or in the form of raising fresh capital through right issues, in striving to increase the ratio of equity plus Reserves to Deposits. Indeed, had the capital market been slightly better even the target of 6 per cent would have been hit.

Operating Costs

The Desai Award has imposed a heavy strain upon the banking system inasmuch as the number of categories of banks and the classes of areas have been reduced from four to three (though with some measure of relief), the salary structure has been radically revised and new burdens like leave-fare concessions and accumulation of medical benefits, for all workmen, have been introduced.

Although banks in their need to add to the Reserves, both inner and published, can ill afford such increases in operating costs, with a view to ensuring cordial relations and in the hope of this, in turn, effecting an improvement in labour productivity, the Award has been accepted in its entirety and implemented. Also, with the coming into being of the Deposit Insurance Corporation, the premium payable in this regard constitutes a new and not inconsiderable item of expenditure in the Profit & Loss account. The increase in costs on account of the premium is, however, of small consequence when set against the background of increased confidence in banks which was one of the factors which made it possible for bank Deposits to rise more than sufficiently to cover the expansion in Advances during 1962.

The Deposit Insurance scheme now covers six million accounts, with balances not exceeding Rs. 1,500 each, which form 77.6% of the total number of accounts in banks. The Reserve Bank is to be congratulated on the speedy

implementation of this scheme; for, the restoration of public confidence in banking is now complete.

In passing, I may mention that mechanisation has often been suggested as a solution to counteract the ever-increasing establishment charges. If the present day ultra-modern electronic accounting machines are to be used profitably, they need a vast volume of business transactions for processing and no branch of any bank in India has such a volume of business. The import policy of the Government of India at present is such that it does not permit import of even ordinary adding or calculating machines, not to speak of sophisticated accounting machines. The suggestion of mechanisation in banks in a big way is, therefore, at present impracticable and uneconomical.

Inter-Bank Agreement on Interest Rates

In the meantime, an important development during the year, which may go some little way to compensate for the increased expenditures to which I have just referred, was the adoption of the inter-bank agreement on interest rates on Advances. It was unfortunate that almost immediately after the agreement came into force an automatic upward revision of the prescribed minimum took effect by reason of the raising of bank rate, but the fact remains that we have now made a beginning towards evolving an orderly structure of interest rates for the banking system. For, despite minor and infrequent complication in its working, the Inter-bank Agreement on deposit rates has been operating satisfactorily. The small and medium banks have been seen to benefit in a fairly big way from the differential they were permitted to offer. The subsidiaries of the State Bank of India who are signatories to the Inter-bank Agreement have had a double advantage. They were naturally in a position to quote the enhanced rates on Deposits allowable for the "small" and "medium" categories of banks. Apart from the differential in interest rates, the fact is that the subsidiaries have enjoyed the other differential stemming from their status as subsidiaries of the State Bank. In the same way, I regret to say that, recently, the State Bank of India increased its deposit rates to bring them on par with those in the Inter-bank Agreement. Does the State Bank of India really need to offer the lure of interest rates on a par with the com-

BRAITHWAITE & CO. (INDIA) LIMITED

CHAIRMAN, MR. J. V. JARDINE PATERSON'S STATEMENT

Statement by Mr. J. V. Jardine Paterson to the Thirty-third Annual General Meeting of Members, to be held on 20th June, 1963.

Profits, Taxation and Dividend

The profit for the year, after providing Rs. 9,96,276 for depreciation and transferring Rs. 4,60,976 to Development Reserve, amounted to Rs. 1,06,44,579. This is indeed a satisfactory increase over preceding years and again reflects the benefit to be obtained from the policy which the Company has pursued of ploughing back money for the continual modernization and expansion of production facilities. It is unfortunate that this excellent result has been offset to a large extent by the Super Profits Tax introduced in 1963, and it will be noted that in addition to Taxation of Rs. 58,42,526 the Company will be liable for Super Profits Tax of Rs. 16,75,000.

As explained in the Chairman's Statement last year, it is necessary to build up again the Company's reserves to provide for the amortisation of the foreign exchange loans which are being finalised and for the rupee requirements

of the expansion plan. It is in these circumstances, therefore, and taking into account the former provision no longer required and the changed accounting procedure with regard to the provision for gratuities, that the Directors have recommended the transfer to General Reserve of Rs. 28,80,210 leaving available for payment of dividends the sum of Rs. 14,90,000. The amount available for payment of the Ordinary dividend is approximately the same as last year and the first interim dividend on the Redeemable Preference shares amounting to Rs. 90,000 has already been paid. It is the Directors' intention that in accordance with normal practice the Preference dividend should be payable half-yearly at the end of June and December.

Production and Development

CLIVE WORKS: In spite of the shortages referred to in the Directors' Report, total output was 27,479 tons, which was some 16% above the best previously achieved in 1957. It will be remembered that the available capacity in the Structural Shop was not fully booked in 1961 and it is to be regretted that in spite of an increase in output of nearly 50% in 1962, there was still idle capacity. This situation has, however, been general throughout the industry and has been the subject of many reports in the Press and elsewhere. With the further demands that are being made as a result of the National Emergency and the determination that the industrial development of the country should not be slowed down, it is now more than ever essential that Government should establish an efficient organisation to lay down priorities for orders that are placed and that all the necessary raw materials should be made available as soon as these priorities have been decided.

Notable contracts that have been booked during the year for the Structural Shop either directly or as a constituent of the Braithwaite, Burn and Jessop Construction Company Limited are:—

1,800 tons for extensions to the Indian Tube Company's plant at Jamshedpur.

2,000 tons for the double track main line girders for the Yamuna Bridge, New Delhi.

7,000 tons for the Alloy Steel plant at Durgapur.

Wagon building capacity is fully booked for a further eighteen months.

ANGUS WORKS: Reference is made in the Directors' Report to the delay experienced in receiving from Government the import licences required for the machine tools and equipment necessary

for the Company's expansion. It will be remembered that the Chairman referred last year to the application which had been made for these licences and expressed the hope that they would be forthcoming shortly after our foreign exchange requirements had been provided for. Owing to procedural delays, the final sanction of the Reserve Bank of India was not received until March this year since when there has continued to be an unfortunate delay in issuing of the required licences.

Progress in the Works has been greatly restricted by the limitations of the foundry caused by the shortage of pig iron and coke. There was a virtual shutdown in that department for three months on this account and throughout the year the quality of coke received has resulted in considerable increases in costs. Some improvement is hoped for, following allocations under priority for orders linked to defence requirements. The housing development and expansion of essential services that has been undertaken is handicapped by the shortage of cement and steel and this position is unlikely to improve.

Despite difficulties, however, satisfactory progress is being made and it is hoped that turnover will show an increase of at least 50% during the current year.

Exports

The Company's exports continue to be limited to Pressed Steel Tanks and we are grateful to our Technical Consultants, Braithwaite & Co. Engineers Limited, who have continued to co-operate closely with us in the development of the South-East Asian markets. I would again suggest that there is scope for the expansion of exports of other engineering products if the raw materials required by the industry are made available. This obviously can only be achieved through imports but it could be expected to result in a net gain in foreign exchange if not in a profit for the exporting company.

Labour

Relations with labour have continued to be good and the workers have been able to earn high rates of pay through production bonus. The quantum of annual bonus to be paid was settled under a bipartite agreement and the Company has made every effort to ensure implementation of the Code of Discipline. It is to be hoped that no disputes will disrupt these cordial relations which must be recognised as being the basis for the continued prosperity of the Company and all its employees.

Management and Directors

I would like again to pay tribute to our Managing Director, Mr. J. E. Bingham, who has worked tirelessly throughout the year to further the interests of the Company. The results of his work are to be seen in the increasing prosperity of the Company and to him and his senior executives, Messrs. Sawtell, Tayal and Morley must go the gratitude of all shareholders for what has been achieved. Our thanks are also due to the other executives and members of the staff of the Company, who have all played their part in producing the satisfactory results which are now before you.

Finally, I have to record the retirement from India of Sir John Brown, who for the last five years has been Chairman of the Company. We are most grateful to him for his invaluable

THE STERLING GENERAL INSURANCE COMPANY LIMITED

EXCELLENT RESULTS — REMARKABLE PROGRESS

INCREASE IN PREMIUM, PROFIT AND RESERVES

Extract from the Chairman's Speech and Directors' Report placed before the Annual General Meeting of the Company held in New Delhi on May 25, 1963.

1962 has been a good year for the Company. In fact the best year for some time. The business has shown an all-round progress, and the steps taken during the last few years to improve the organization and internal controls, including drastic reduction in motor premium, have enabled the Company to further consolidate its position and show very satisfactory results.

Increase in Premium—Reduction in Claims

Gross premium has increased from Rs. 101.31 lacs in 1961 to Rs. 107.69 lacs in 1962 while Net premium increased from Rs. 30.54 lacs to Rs. 31.83 lacs. Simultaneously, there has been a sharp decline in claims from Rs. 24.23 lacs in 1961 to Rs. 18.48 lacs in 1962.

Reduction in Management Expenses

Despite the increase in premium, commission and management expenses have also been reduced, and amounted to Rs. 10.13 lacs during the year, as against Rs. 11.72 lacs in 1961.

Increase in Reserves

Underwriting Reserves including additional reserves have increased from Rs. 15.86 lacs in 1961 to Rs. 17.22 lacs in 1962; and a General Reserve has been started with a transfer of Rs. 75,000 from the Profit & Loss Account. The percentage of capital and reserves to net premium has increased successively from 71.3% in 1958 to 102.4% in 1961, and to 104.9% in 1962.

Increase in Profit and Dividend

After providing for all expenses, claims and reserves, the profit subject to tax amounted to Rs. 4,04,662 (Rs. 1,34,486 in 1961) and after providing for tax and making appropriations for General Reserve, Gratuity fund, etc. the Company has declared a dividend of 10% subject to tax on Equity capital (5% in 1961).

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

(Continued from previous column).

work during those years in guiding the development and expansion of the Company. We were particularly fortunate to have his specialised knowledge at our disposal at a time when the lease of the Angus Works was finalised, the Company's capital was re-organised and very large foreign exchange loans were negotiated. I am pleased to be able to tell you that he will be visiting India from time to time in the years ahead and that his valuable experience and advice will be available in the interests of the further development of the Company.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

G.A.T.T. MEETING DISAPPOINTS DEVELOPING NATIONS

By Malcolm Subhan

GENEVA:

AS the 23-nation committee charged with the task of drafting a report on the problems of the developing countries broke up after a long and difficult meeting, a delegate from an Asian country was heard to exclaim angrily: "How can I return home with such an agreement?" There is no doubt that the Ministerial session of the G.A.T.T. which closed in Geneva last week proved to be a considerable disappointment to the delegates from the developing countries. Mr. Manubhai Shah felt that the conference, although it accepted in principle the eight-point programme of action submitted by the developing countries, had done no more than take a halting step in the right direction. Pakistan's Minister for Commerce, Mr. Wahiduzzaman, stated after the Conference: "Nothing substantial has been gained, but a beginning has been made."

The report adopted by the Conference noted that the Ministers of the less-developed countries had "expressed disappointment with the understandings and positions as set out by some industrialised countries and found them to be unhelpful." This curiously elliptical attack on the six Common Market countries deserves to be more closely examined at a time when Mr. Manubhai Shah, India's Minister for International Trade, is visiting Brussels, and the E.E.C. Commission is preparing to study the aide-memoire submitted by India last month.

Before proceeding to an examination of the draft report adopted by the Ministers at their final session, a few words on the Conference itself will not be out of place. It was clear from the first that for the industrialised nations at any rate, the success or failure of the Conference depended in the last analysis on whether or not agreement could be reached between the U.S.A. and the Common Market on the principles of the projected round of tariff negotiations—the Kennedy round. Once battle had been joined, so to speak, between Mr. Christian Herter and the Belgian Minister for Foreign Trade, who represented the Six, little was heard of the problems of the developing countries. As the struggle between the two grew more intense, the energies of both were more and more devoted to the task of finding a compromise which would prevent the Conference from breaking down completely.

Inevitably, neither the Six nor the U.S.A. could devote much time to the drafting committee entrusted with the task of reporting on measures to expand the exports of the developing countries. But such was the nature of the problems facing the members of the committee that crucial political decisions were necessary if the Six in particular were to make a fresh approach to the problem of the developing countries. In the end, the attitude of the E.E.C. remained substantially what it had been earlier in the year when the Action Programme was discussed in Committee III of the G.A.T.T.

U.S.-E.C.M. Conflict

While the preoccupations of the industrial countries with their own problems does not altogether explain the relatively meagre gains made by the developing countries, it does suggest however that attention will

remain focussed in the coming months on the conflict between the U.S.A. and the Six. Although the agreement reached in Geneva last week is more substantial than it appears at first sight, the fact remains that it leaves unanswered a number of important questions. These will now be studied by a working group, which in principle must report before 1st August. The most important of the problems concerns the formula for dealing with those tariffs which are significantly higher in the U.S.A. than in the Common Market. The Americans have admitted that such tariffs cannot be simply reduced by 50 percent. The Six, however, do not want to negotiate each of these tariffs separately. The search for a suitable tariff-cutting formula will, therefore, be long and may eventually prove fruitless, thus putting an end to the trade negotiations, which otherwise should open next May.

While it would be an exaggeration to say that the situation concerning the developing countries is equally uncertain, it is evident that the implementation of the Action Programme presented by the 21 developing countries will not be easy. The resolution finally adopted by the Ministers at their closing session authorises the setting up of an Action Committee which is to assist in the implementation of this programme and to initiate and co-ordinate the various "positive measures" mentioned in the 14-page report prepared by the drafting committee. The effect of this relatively forthright declaration is considerably blunted, however, by the report itself, which makes it abundantly clear that neither the six abundantly clear that neither the six E.E.C. countries nor the 18 African States associated with them accept the Programme of Action.

Refusal by African States

This fact will, of course, strongly influence the work of the Action Committee. It may lead to a renewal of the angry exchanges which marked some of the sessions of the drafting committee, although much will depend ultimately on the speed with which the Six are able to reach agreement with the U.S.A. on the basic rules of the Kennedy round. It must not be forgotten that if the Common Market countries found themselves unable to accept the Programme of Action along with the other industrialised countries, in the words of the report they nevertheless "endorsed in principle, the general objectives of the Programme, and declared themselves ready to contribute, for their part, to the fullest extent possible, towards the development of the developing countries."

As had been expected, only the E.E.C. countries and their African partners refused to support the general conclusions relating to tropical products contained in the report of the drafting committee. Under French pressure, they refused even to endorse the general objective of free access to markets for tropical products. Obviously, they could not agree to duty-free entry for tropical products by 31st December, 1963, without violating their agreement with the 18 African associated States. This does not mean that the Six are determined to maintain indefinitely the tariff preferences which the latter now enjoy. They argue, however, that international action "should, in particular, be directed to a deliberate effort to organise international trade in products of interest to the less

developed countries." This effort, in their view, must "take into account economic inequalities between the less developed countries themselves," some of whom "cannot at present face competition from the countries which have already achieved a certain degree of development."

Organising Markets Better

The Six maintain, therefore, that the primary effort should be directed not simply at eliminating barriers to trade, but at organising markets so as to assure the developing countries growing exports at "remunerative, equitable and stable prices." In this connection it may be noted that the recommendation for the gradual elimination of fiscal charges and revenue duties by 31st December, 1965, was strongly opposed by the Common Market. Thus if the Dutch representative could declare that no such taxes were levied in his country on products of interest to the developing countries, both the West German and the Italian representatives warmly defended such taxes which are extremely profitable to the Treasury.

On the whole, the Six's reluctance to abolish the preferences enjoyed by their African associates on tropical products led them to adopt in Geneva a more rigid attitude concerning tariff and non-tariff barriers generally. Thus, whereas the other industrialised countries were prepared to support a "standstill" agreement—no new tariff or non-tariff barriers to be erected against exports from the developing countries—the Six felt unable to give a similar undertaking. They also could not join the other industrialised countries in pledging themselves to seeking the elimination, or at least substantial reduction, of tariffs on primary products. As regards semi-processed and processed products from the developing countries, while the majority of industrialised countries agreed to work towards a substantial reduction of the tariffs on these products, the Six proposed that a study be made "to determine the selective measures... which could assure the developing countries the necessary markets for the products in question."

It would be wrong, however, to conclude from the foregoing that the Six's attitude to the problems of the developing countries was wholly negative. Significantly enough, it was the Belgian Minister for Foreign Trade who took up the Indian suggestion that the industrialised countries grant preferential treatment to the semi-manufactured and manufactured products exported by the developing countries. The Six also supported the proposal that a working party be set up to study the following proposals and to submit a report at the next Ministerial session: (a) the granting of preferences on selected products by industrialised countries to developing countries as a whole; and (b) the granting of preferences on selected products by the developing countries to all other developing countries.

At the same time, the Six subscribed to the belief that the "fundamental need" of the developing countries is for higher export earnings, and they joined the other members of the G.A.T.T. in seeking to extend the work of Committee III in collaboration with other international agencies, particularly the lending agencies. Moreover, the Six Common Market countries were

among the handful of industrialised countries which supported the demand by the developing countries for an amplification of the objectives and a revision of the principles and rules of the General Agreement on Tariffs and Trade, with a view to safeguarding the interests of the latter in the overseas trade and development programmes.

Lukewarm Endorsement

In his opening speech, the president of the Conference, Mr. Hans Schallner, told the assembled delegates from some 73 nations: "It is no exaggeration to say that, no matter whether our work is going to meet with success or failure, the world will not be quite the same as before." In retrospect, it is clear that the half-hearted manner in which the industrialised countries supported the Programme of Action has left things largely where they were when the Conference opened. Indeed, the outright rejection of the Programme by the industrialised countries would have had a far more stimulating effect on the conscience of the major trading nations than the lukewarm endorsement which it finally received.

Mr. Christian Herter, President Kennedy's special representative on tariff matters, told the assembled delegates that "no task this meeting faces is more important than that of finding ways to improve the export opportunities of less developed countries." Although all the Ministers who followed him to the podium echoed Mr. Herter's words, it is clear that many of the delegations from the industrial countries were more preoccupied with the Kennedy round than with the development problems of the non-industrialised world. Moreover, much of what the Ministers had to say sounded all too familiar. This was not surprising as the problem of helping the developing nations has been before the G.A.T.T. for some years now. The discussion at the last session centred in fact around an eight-point programme of action which 21 developing countries, including India, Pakistan, Nigeria and the United Arab Republic, presented in Committee III of G.A.T.T. (The eight points appear at the end of this article).

British Support

Mr. Frederick Erroll's endorsement of the action programme was perhaps the most enthusiastic of any representatives of an industrial nation. "The U.K. thinks it is of the first importance that industrial countries should state clearly and firmly their wholehearted acceptance of the broad concepts of the action programme, and we ourselves intend to do so," the President of the British Board of Trade told the delegates. He went on to point out that his country had already put into practice the various points contained in the programme of action, particularly as far as the members of the Commonwealth were concerned.

Mr. Herter declared that as regards the first seven points of the action programme "the U.S. has taken a positive action on all of them." He went on to say: "In certain cases, along with other industrialised countries, we have accepted the points recommended by the less developed countries with certain minor qualifications." His Government supported the proposal, for instance, that the industrialised countries in framing their policies affecting the pattern of production take into account the need for providing larger outlets for the exports of the less developed countries.

Whether by accident or design, most of the Ministers who spoke on the first day represented the developing countries and those who spoke on the second the industrial nations. Among the latter were the Ministers of Canada and Australia, both of

whom vigorously supported the action programme, which the former described as "constructive and imaginative." He expressed concern, however, at the ideas contained in the last of the eight points "in so far as they contemplate new discriminatory measures." He felt they would require careful study, and expressed doubts as to whether the "weaker countries would be the ones most likely to benefit from the undermining of the principle of non-discrimination."

The developing countries taken as a group emphasised four points. They argued that the programme of action should be accepted as a whole, even though some countries laid particular emphasis on the need for the industrialised nations to remove internal or fiscal duties on products such as tea and coffee. They stressed the need during the Kennedy round for flexibility as regards the problems of the developing countries, and in general, supported the idea that the industrial countries grant tariff preferences to the less-developed countries.

Finally, they called for the strengthening of the institutional framework of the G.A.T.T., while a number of them suggested that the various international agencies concerned with the problems of the developing countries, such as the I.B.R.D. and the International Finance Corporation, be linked to the G.A.T.T.

Significantly enough, none of the developing countries took the position that the organisation was of no value to them. Mr. Manubhai Shah declared that India was "conscious of the valuable work which the G.A.T.T. has done all these years in the field of international trade, and we have lent our full support to its functioning." Several developing countries, however, stressed the fact that little progress had been made during the last 18 months in removing trade barriers. "Progress in the last 18 months," according to Mr. Manubhai Shah, "has been at best marginal and the overall situation of the developing countries today is, if anything, worse than what it was when we met in 1961." Clearly, the fear that some

of the developing nations may show their impatience with the G.A.T.T. by threatening to leave it—thereby strengthening the hand of Russia in the coming U.N. conference on world trade—has not been altogether dissipated and may yet influence the work of the Conference.

Common Market Attitude

A group of countries whose remarks on the action programme were awaited with particular interest was the Common Market. Not only did Ministers of each of the six member States address the Conference, but Mr. Jean Rey, the member of the Commission in charge of external relations, spoke also for the Community as a whole. Of the seven speakers, perhaps only the Belgian Minister of Foreign Trade, Mr. Brasseur, attempted to break fresh ground when he gave cautious approval to the proposal, first put forward in the G.A.T.T. by Mr. K. B. Lall, India's Ambassador to the European Communities, for preferential tariffs for the developing countries for the simpler manufactures.

Inevitably, the Ministers of all six member States maintained that while in principle they viewed with favour the action programme, their obligations towards the 18 African States associated with the Community made it impossible for them to accept all eight points unconditionally. They, nevertheless, expressed the hope that a way would be found to reconcile their commitments to their associates to the programme of action. It is obvious, however, that the Six will continue to resist any move to eliminate tariffs on tropical products by the end of the year as the action programme visualises. The most determined opposition has come, of course, from the French, who claim that such a step would lead to chaos as it would be the signal for a price war. In the French view—and in the view of the Community generally—the emphasis should, therefore, be in the first instance on price stabilisation schemes and marketing arrangements. They do not regard the present regional structure of the trade in tropical products as permanent, however, but visualise the eventual merger of the various regions with the gradual disappearance of preferential systems.

The Six also made it clear that the Community had already made a substantial contribution to the economic development of the non-industrialised countries. Mr. Jean Rey declared that the Six were prepared to conclude a trade agreement with any developing country which would express the wish. He pointed out that despite the breakdown of the British negotiations the Community hoped to adopt certain of the provisions made on that occasion to the three countries of the Indian sub-continent. The decision to reduce the common external tariff on tea to zero—which was formally approved by Mr. Erroll when he addressed the Conference—was the first step in this direction.

The most promising contribution from the Six came from the Belgian Minister of Foreign Trade who visited India last year. Mr. Brasseur argued that the industrialised nations could not insist on a monopoly as regards manufactured goods, and suggested that they grant the developing nations tariff preferences on certain products in order to enable the latter to develop their industrial production. According to Mr. Brasseur such a concession could not be offered in the case of two categories of manufactured goods: (1) those for which the developing countries possess a clear advantage over the industrial, whether because of cheap and abundant labour or ready access to, if not a virtual monopoly of raw materials, and (2) those which cannot be manufactured economically in developing

countries. At the same time, Mr. Brasseur stipulated that the preferences be granted only on condition that the developing countries undertake to liberalise their import trade as their manufacturing industries grew more competitive.

Sources close to the Indian delegation feel that Mr. Brasseur's proposals are far too vague and too hedged about with qualifications to be acceptable, though they do offer a basis for negotiations. While the Belgians do not appear to have discussed their proposals with their partners, they nevertheless have their support in principle. It now remains to be seen whether it can be expressed in a form acceptable to all the countries concerned. The Americans, who have so far opposed any exceptions to the most-favoured-nation principle, are prepared to study proposals for tariff preferences for manufactured goods.

PROGRAMME OF ACTION PRESENTED BY 21 DEVELOPING COUNTRIES, INCLUDING INDIA

(1) No new tariff or non-tariff barriers should be erected by industrialised countries against the export trade of any less-developed country in the products identified as of particular interest to the less developed countries.

(2) Quantitative restrictions on imports from less developed countries which are inconsistent with the provisions of the G.A.T.T. shall be eliminated within a period of one year. Where on consultation between the industrialised and the less-developed countries concerned, it is established that there are special problems which prevent action being taken within this period, the restriction on such items will be progressively reduced and eliminated by 31st December, 1965.

(3) Duty-free entry into the industrialised countries shall be granted to tropical products by 31st December, 1963.

(4) Industrialised countries shall agree to the elimination of Customs tariffs on the primary products important in the trade of less-developed countries.

(5) Industrialised countries shall also prepare urgently a schedule for the reduction and elimination of tariff barriers to exports of semi-processed and processed products from less developed countries, providing for a reduction of at least 50 percent of the present duties over the next three years.

(6) Industrialised countries shall progressively reduce internal charges and revenue duties on products wholly or mainly produced in less-developed countries with a view to their elimination by 31st December, 1965.

(7) Industrialised countries maintaining the above-mentioned barriers shall report to the G.A.T.T. Secretariat in July of each year on the steps taken by them during the preceding year to implement these decisions and on the measures which they propose to take over the next 12 months to provide larger access for the products of less-developed countries.

(8) In putting forward the seven specific proposals for action the countries sponsoring the action programme pointed out that the gap between the needs of the less-developed countries and their current earnings from exports was so large that even the adoption of the measures outlined above might not be adequate. The less-developed countries therefore urged that the contracting parties should also give urgent consideration to the adoption of other appropriate measures which would facilitate the efforts of less-developed countries to diversify their economies, strengthen their export capacity, and increase their earnings from overseas sales.

New Delhi

EXPANDING BARAUNI AND KOYALI OIL REFINERIES

(FROM OUR NEW DELHI CORRESPONDENT)

PLANS for economic and technical assistance from Russia for expanding the oil refineries in Barauni, Bihar, and Koyali, Gujarat, and for establishing a second precision instruments plant in Pudukseri, near Palghat (Kerala) have been finalised between the Governments of India and Russia. Protocols to this effect were signed in New Delhi recently. The present agreement provides for expanding the capacity of the refineries in Barauni and Koyali each from 2 million to 3 million tons a year during the third plan period. The foreign exchange costs of the two expansion projects will be financed out of the 112.5 million rouble credit (Rs. 59.53 crores) extended to India in February 1961.

The foreign exchange costs of the precision instruments plant in Kerala will also be met from the 112.5 million rouble credit (Rs. 59.53 crores) granted to India in November 1957. The plant will manufacture hydraulic, mechanical and pneumatic instruments for industrial process control. The plant's production pattern has been finalised in consultation with Russian specialists. The plant is the second Russian-aided instruments factory to be constructed in India. Together with the first one, designed for manufacturing electronic and electro-magnetic instruments, to be built in Kothah, the two plants will meet the increasing demand for precision instruments of Indian industries.

I. D. A.

Credit for Power Projects

The International Development Association (I.D.A.), an affiliate of the World Bank, extended a credit equivalent to \$20 million to India for electric power development in Andhra Pradesh. The credit will cover about half the cost of building a 120,000-kilowatt steam power-station in Kothagudem, a reservoir to supply cooling water and a 150-mile transmission line to equip the station with power facilities. The project is part of a programme of the State Government to relieve the chronic power shortage which has for many years hampered the development of industry and agriculture there.

The construction of the Kothagudem power project is one of a series of steps being taken by the State Government during the third plan period to increase capacity by about 380,000 kilowatts. The demand in the State, it is estimated, will reach 500,000 kilowatts by 1966; the present rate of increase is expected to continue thereafter. With this rapid growth in prospect, the Kothagudem station has been designed to allow for a doubling of capacity in the next stage of development and for an ultimate capacity of 1 million kilowatts or more. Over two-thirds of the demand is expected to come from industry, among which are plants producing iron and steel, ferro-manganese, textiles, jute, rayon, rubber, fertilisers and chemicals and engineering goods.

The I.D.A. credit for India is for a term of 50 years. The repayment of the principal will begin on 1st

December, 1973. Thereafter, 1 per cent of the principal will be repayable annually for ten years and 3 per cent annually for the final 30 years. The credit is free of interest, but a service charge of three-quarters of 1 per cent a year on the amount withdrawn and outstanding will be made to meet the I.D.A.'s administrative costs.

The Governments of India and the United States concluded an agreement last week. It provides for an American loan of \$8.4 million (Rs. 4 crores) for financing the foreign exchange costs of expanding the capacity of the Ramagundam thermal power-station in Andhra Pradesh. The U.S. Government has approved two more foreign exchange loans to the Government of India. The first, for \$7.7 million (Rs. 3.7 crores), will finance the foreign exchange cost of a ropeway project in the Jharia coalfields. The other credits of \$5.1 million (Rs. 2.4 crores) will be used to double the output of the Dugda coal washery. Both these projects, located in Bihar, will make a significant contribution to increasing the supply of coaking coal to steel mills.

The loans are repayable over a period of 40 years with a grace period of ten years. They are free of interest and carry a service charge of three-quarters of 1 per cent a year.

The existing Ramagundam power-station has an installed capacity of 37,500 kilowatts. The United States will finance the installation of a 60,000 kilowatt turbo-generator with associated boiler and other facilities. This will enable the expansion of many industries in the Telengana area, including cement factories, collieries, paper and pulp plants, and textile mills. The Ramagundam station will also increase electric power supply to the metropolitan area of Hyderabad and Secunderabad.

The ropeway project in the Jharia coalfields will transport 3 million tons of sand each year over a total distance of 25 miles. The sand, obtained from the river Damodar, will be used to fill up mined spaces in the coalfields. Coal seams in the region are thick, and the roofs of the mines are supported by vast coal pillars. These pillars contain good quality coking coal. By stowing sand, most of the coal in the pillars can be removed. The project will help increase coal production by 1.5 million tons a year.

The expansion of the Dugda coal washery to be financed by the last of the loans announced will also help increase the supply of good quality coking coal to the steel mills. The first stage of the coal washery, which is now in operation, processes 2.4 million tons of coal a year. The second stage will double the capacity to 4.8 million tons.

The first stage of the washery used \$6 million from the credit extended to the Government of India by the U.S. Export-Import Bank, and the second stage will be financed by the present \$5.1 million loan. Coal with high ash content, separated in the washing process, will be used in generating electricity at the Chandrapura thermal

power-station which is located close to Dugda.

BOKARO

Prospects Surveyed

In its report on the Bokaro steel plant, the U.S. steel mission made a number of suggestions on raw materials, land, water, power, transport and management. While speaking at a Press conference in New Delhi last week, the Central Minister for Steel and Heavy Industries, Mr. C. Subramaniam, made a detailed statement on the subject. Referring to raw materials, he said that the U.S. team had indicated in its report that the best source of iron ore for the Bokaro project throughout all its three stages would be Kiriburu. "In Phase I, 100 percent of the ore will be lump. In Phase II and in Phase III, only 55 percent and 30 percent, respectively, will be lump ore, and the balance being fines generated at the mines to be used after sintering. As a result of further discussions, it has been decided to plan to get 2.5 million tons of lump ore from Kiriburu, against 2 million tons recommended by the U.S. team for Phase I and 7 million tons for Phase III, against 5.7 million tons for the final stage as recommended by the U.S. team.

"One of the problems raised by the U.S. team during its visit and in its final report was the relatively high percentage of alumina in the Kiriburu iron ore. This makes it difficult to use the fines for producing good and economic sinter. A similar problem has arisen for some time at the three Government steel plants. The National Metallurgical Laboratory in Jamshedpur has already done some work in this direction as a result of which it is being tackled through beneficiation of the iron ore. Extensive samples of iron ore from Kiriburu are being taken up for full-scale study in Jamshedpur. This problem appears to be capable of solution through proper beneficiation of fines by washing.

Coal Requirements

Coal: The requirements of coal for steel have to be viewed over the long term as a problem in advance planning for the steel and coal industries. These are under constant review by the Government of India and associated agencies. In order to use India's low-grade high-ash coal for the steel plants, we will have to establish a number of coal washeries at suitable locations. The distribution of coal from the washeries to various steel plants is a problem for mutual discussions and settlement taking into account the pattern and cost of transport. This does not present an insuperable problem. Considerable detailed work has been done and is in progress on various aspects of the question. Investigations are being made to determine the characteristics of the blend to be used in the various steel plants. It has also been established that Bokaro can be well served from Kathara and Dugda-II washeries in the first stage. Full-scale tests on this are now in progress at the T.I.S.C.O., Jamshedpur.

"Limestone: The U.S. team considered that one of the most serious deficiencies in the supply of princi-

pal raw materials is concerning limestone. Long before the U.S. team's visit, Hindustan Steel had already taken up a detailed investigation of various prospective areas of limestone not only with reference to the needs of Bokaro but also with reference to the needs of other steel plants. Since the visit of the U.S. team to India, considerable work on the possibilities of raising limestone in the Bhavanathpur area in Palamau district of Bihar has been done. Detailed investigations in Bhavanathpur have proved that adequate reserves of blast furnace grade limestone, nearly about 200 million tons, are available in the area and arrangements are being made to open up a captive mine at this place. For steel melting grade limestone, a captive mine will be opened up in the Satna area, wherefrom limestone is already being mined.

"When the U.S. team visited the Bhavanathpur area, detailed work on the deposit had just begun. The extensive work since carried out indicates that the limestone in Bhavanathpur would be of a slightly better quality than what has been indicated in the U.S. team's report as minimum acceptable. As for limestone for the steel-melting shop, there is no difficulty concerning quantity and quality.

Water: Arrangements have been made with the Damodar Valley Corporation and the Central Ministry of Irrigation and Power to construct a dam across river Damodar in Tenughat costing about Rs. 12.5 crores to get the water supply needed for operation. The time schedule for the construction of the Tenughat dam has been drawn up in such a way as to leave enough margin to get adequate quantity of water for Phase I. The construction of the Tenughat dam is expected to be completed in six to seven years to supply 140 cusecs of water needed by Bokaro in Phase II. The water from Tenughat dam will be carried by an open canal as recommended by the U.S. steel team. Steps have been taken to construct this canal also.

Land: It has been decided to acquire 42,500 acres of land for the Bokaro steel works, its township and ancillary works such as railways, etcetera. About 5,000 acres of land has already been taken over. The Bihar Government will start handing over the rest of the land from July 1963.

Power: For the construction of the steel works, about 8-megawatts of electric power is required. Arrangements have been made with the Damodar Valley Corporation to supply this at any time we want it. According to the U.S. team's report, for the operation of the steel works, 94 megawatts of power is required for Phase I. There will be no difficulty to get this power, since the Chandrapura thermal power-station, which is being built with American aid, will be in commission before the first stage of Bokaro goes into operation.

Transport: The U.S. team's observation in its report that the fulfilment of present plans for the construction of tracks and the supply of rolling stock is the pre-requisite for efficient and fully productive operation of Bokaro is concurred in by the Government of India. We are concentrating on adequate implementation of this plan.

Some Problems

"Certain problems of details are commented on below: (a) iron ore: The railways feel that there will be no difficulty in transporting the 2.5 million tons of iron ore from Kiriburu to Bokaro. The railways have assured that by 1971-72, they will have completed the doubling of certain sections and such other improvements

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

- consumer market surveys
- industrial prospecting
- readership analysis
- economic indices
- business research.

P.O. Box 14, Calcutta-1, or 5, Mission Row, Calcutta, India.

of the track as are necessary for transporting 7 million tons of iron ore to Bokaro. The details of this have been discussed with the Railway Board officials at various meetings recently and decisions have been taken.

"For transporting coal, two cable ways—one from Kargali-Kathara (whichever coal mine is finally decided) and the second from Dugda—will be constructed. The Argada coal will be received by rail; for this also, there is no difficulty. The coal middlings required would be obtained by rail from Ramgarh coal washery, which is expected to come into production in the third plan period. In this matter also, there is no difficulty.

"(b) Limestone: The blast furnace grade limestone will be received from Bhavanathpur. This will be transported by constructing a new railway line from Bhavanathpur to Ramna joining the new railway line now under construction from Robertsganj to Garwa Road. The railways have been asked to take up the construction of the Bhavanathpur-Ramna link which is about 14 miles in length. This will be ready in time for Phase I.

"The S.M.S. grade limestone will be ultimately transported by rail from the Katni area via Singrauli joining the Robertsganj-Garwa Road railway line now under construction.

"(c) Finished products: The railways have assured us that for transporting about 1 million tons of the finished product from Phase I, there will be no difficulty and the necessary wagons, etcetera, will be made available. As for the other stages of Bokaro, the various points raised in the U.S. team's report are being further examined by the Railway Board, and it is confidently ex-

pected that the problems can be solved well in time.

"Management: The U.S. steel team has recommended that Bokaro should be managed by an organisation separate from that of the existing steel plants. The Government of India had indicated to the team, even when it was here, that it was thinking on the same lines. The Government has now decided to set up a separate company to run the Bokaro plant. It is the Government's intention to give this organisation the necessary flexibility to run a modern industry efficiently, taking into account the U.S. steel team's observations.

A number of important issues have been raised by the U.S. steel team concerning the management of the engineering construction and operation of the Bokaro steel plant. The Government of India considers that the question is not whether the management of the Bokaro steel plant should be American or Indian. It is rather how to manage the plant efficiently. For this purpose, we will have to recruit as many people from the U.S.A. as cannot be found from among the qualified Indian personnel. This has been the lesson of our experience in Bhilai, Durgapur and Rourkela. Taking this experience into account, we will have to examine how many Americans will be needed for helping us to manage Bokaro, in what positions and for how long a time, Mr. Subramaniam concluded.

SHIPPING

Indo-U.S. Cargo Service

The Shipping Corporation of India will start from next month its once-a-month direct cargo service from India to the United States, it is

announced. The first vessel *Vishwa Maya* will leave India on its maiden voyage to the U.S.A. on 8th June.

MINERALS

Meeting in Bangalore

Several proposals for the speedy development of the Indian mineral industry will be considered at the session of the All India Mineral Advisory Board beginning in Bangalore on 30th May, 1963. The advisability of fixing zone-wise targets for the export of iron ore through the serving ports and the programmes for the movement of exportable iron ore are chalked out for the different supplying areas by joint consultations among the railways, the State Trading Corporation and its suppliers will be considered by the Board. A proposal that the State Governments should make prior consultation with the Government of India before levying any direct and indirect taxes, cesses or any other levies affecting the mining industry situated in a State, will also come up for consideration at the meeting.

The need for greater Central assistance to the State Governments for mineral development schemes has been suggested. The Board will be urged to recommend the expeditious survey of underdeveloped States by the Geological Survey of India. The regular supply of explosives to the mining industry and an adequate supply of wagons for the movement of minerals produced are some of the other subjects which will come up for consideration.

The appointment of a high-power commission to go into the details of the metalliferous mining industry in India has been suggested. The transport and communication problems of the metalliferous mining in-

dustry in the eastern zone will be discussed at the meeting. The present operating capacity of iron ore and manganese ore mines in Bihar and Orissa and the Guwahati-Manoharpur section of south-east railways is about 6 million tons annually, against the present transport capacity of 2 million to 3 million tons. The proposals seek to urge the railway authorities to increase the transporting capacity of the particular section. Several suggestions have also been made for increasing the production of mica and its export.

CAPITAL, 30th May, 1963.

AID-INDIA CLUB

Meeting in Paris

The crucial meeting of the Aid-India Club will be held in Paris on 4th June. Two issues are involved. Firstly, although there is a legitimate and logical explanation for it, there is a feeling among the aid-giving countries that India had not been able to use more than 50 percent of the aid offered to her for the first two years of the third plan. Secondly, as far as the U.K. and the U.S.A. are concerned, they are being asked to give massive military aid to India. The U.K. is, however, worried about its own internal economic problems. This has naturally placed certain limitations on its resources. But it is still anxious to assist India within its financial limitations. Knowledgeable circles say that if its contribution towards India's defence effort is raised eventually, it may be, to a certain degree, at the cost of economic aid to India.

The position of the U.S.A. is simpler. It has provided military aid to India during its fiscal year ending 30th June, 1963, from its overall allocation for military aid. It is prepared to

CAPITAL, 30th May, 1963.

continue giving aid on a similar basis for a number of years. But in giving massive aid, it will have to seek the sanction of Congress. In order to get the sanction, it will like India to do the lobbying for herself, just as other countries, such as Pakistan, are doing.

IRON ORE

Exports to Japan

A message from Tokyo says that ten major Japanese iron and steel manufacturers have signed a two-year barter agreement with the State Trading Corporation last week. Under the agreement, Japan will import 4,450,000 tons of iron ore at \$10.22 a ton and India will buy Japanese steel at \$104 a ton. This revoked the earlier agreement under which Japan was to import 2,650,000 tons of iron ore at \$11.34 a ton. It is too early to say what repercussions this deal will have on other iron ore importers, particularly West Germany and Italy. They may similarly link the import of iron ore with their surplus commodities.

Japan, it is pointed out here, has been virtually buying contracts in India by quoting rock bottom prices, which, as a buying country, India has not been able to resist. Japan was able to overbid all its competitors in the alloy steel project. It has been able to oust the traditional suppliers of railway locomotives from the Indian market.

Reference was made in these columns last week to the telephone switching project. The World Bank loan of \$42 million for the project is divided into three parts, for microwave equipment, for telephone switching and for cables. As could be expected, the tender of Nippon Electric Company of Japan for microwave is the lowest, as also for telephone switching for which the tenders are as follows:

	(In \$ million)
Nippon Electric Company	5.6
International Telephone and Telegraph Corporation of the U.S.A.	7.7
L. N. Ericsson (Sweden)	9.1
Automatic Telephone and Electric Co. (U.K.)	12.1
Northern Electric Company of Canada	14

In addition to supplying the equipment for telephone switching, the successful tenderer will also become eligible to establish a factory in India for the same type of equipment. As the Japanese tender is lower by over \$2 million to its next competitor, with probably a cushion for bargaining, there is every chance that it will be accepted eventually.

The western countries, and in particular the United Kingdom, apparently feel greatly concerned over their being elbowed out from India and probably from south-east Asia. The case of the alloy steel project is cited to illustrate the point. If India were to have a second plant in Bhilai and the United Kingdom or Canada had agreed to finance it, the presumption should be that India would demand that its total foreign exchange cost should not exceed the one supplied by the Japanese. This would be impossible, and unless the Japanese credits were available, India would have to pay a higher price for a second alloy steel plant. Alternatively, India should decide whether it would be wise on her part to put all her eggs in the Japanese basket. In any case, the iron ore-steel barter deal is bad in principle and detrimental to India's trading interests.

ALUMINIUM

Progress of Projects

There is a definite move to accelerate the progress of the aluminium

industry. While in Hungary, the Central Minister of International Trade, Mr. Manubhai Shah, will make arrangements for an early report on the public-sector project in Madhya Pradesh. Some progress is also reported in the Mangalore project in the private sector. Thanks to the good offices of the Central Steel Minister, Mr. C. Subramaniam and the Central Defence Minister, Mr. Chavan, the Maharashtra Government has agreed to make bauxite available for the project. The Government is waiting for the deadline when the licence granted to Mr. Murarji Vaidya for the project may be revoked and negotiations started afresh with another Indian party to undertake the commissioning of the project. Meanwhile, a definite move forward is expected by the beginning of June.

SMALL INDUSTRIES

Report by U.S. Team

A U.S. team is here again on its third and final visit for perspective planning of small-scale industries. An early report is expected.

COAL

Importing Mining Machinery

The Cheddi Lal mission has returned to New Delhi after a successful visit to Belgium and the United Kingdom where it saw new and second-

hand coal mining machinery to be imported into India for raising coal production. Belgian credit is usable for these imports. India, it is expected, will shortly place an order for a sizable quantity of mining equipment. The mission also paid courtesy visits to France and Poland, both of which are assisting India in raising coal production—Poland in deep coal mining and France in introducing the "caving" method. Poland is financing seven deep coal mines, each having a washery.

The last Finance Act has improved the climate for coal mining in the private sector. The Act, it will be recalled, has raised the development rebate from 20 to 35 percent and has exempted certain items of coal mining equipment from duty.

PETRO-CHEMICALS

Advisory Body Set Up

A Petro-chemical Advisory Committee—on the model of the Oil Advisory Committee—has been set up in the Central Ministry of Mines and Fuel, with the Minister-in-charge as its chairman. The Central Ministry of Mines and Fuel has been claiming jurisdiction over the industry primarily because it has jurisdiction over oil refineries, which produce raw material for the industry. If this contention is accepted, the Central Ministry of Mines and Fuel will have jurisdiction, among others, over the steel industry and the Central Ministry of

Agriculture, among others, over cotton, jute and plantation industries.

Chemicals are within the jurisdiction of the Central Ministry of Commerce and Industry, and it had been claiming jurisdiction over the petrochemical industry as well. While the whole issue is being discussed, the Central Ministry of Mines and Fuel, as reported earlier, has set up an advisory committee.

Meanwhile, the Ministry of Commerce and Industry has issued a letter of intent to Mafatlals to set up a naphtha cracker with a capacity of 200,000 tons in the Bombay area. Mr. Mafatlal is due to leave for the United Kingdom and the United States to fix up a financial and technical collaborator.

Meanwhile, Union Carbide, which has been licensed to set up a 60,000-ton naphtha cracker, also in the Bombay area, is going ahead with its project.

S. T. C.

Link Pact Concluded

In the issue of *Capital* of 9th May, it was stated on page 686 that the State Trading Corporation had concluded a link agreement with Messrs A. B. Sukab of Sweden for exchange of goods valued at Rs. 1.56 lakhs each way in a period of one year. The figure should have been Rs. 1.55 crores.

NEW FORTLOK CONSTRUCTION GIVES DUNLOP CONVEYOR BELTS AN EDGE OVER OTHERS

Conveyor belts are most vulnerable at the edges. The new Dunlop **FORTLOK** construction more than doubles the life of the belt edge by providing double edge cushioning capacity.

A common cause of belts wearing out prematurely is edge wear due to rubbing against the side of the structure, against the chute, against jammed abrasive loads, or by the excessive use of guide idlers. When the edge has been worn or torn away, further wearing of the edge and consequent belt deterioration is usually comparatively rapid.

Dunlop **FORTLOK** overcomes this problem. Note its construction as shown under the magnifying glass in this illustration of a conveyor belt section.

- The thickness of the edge protection rubber has been doubled as compared with the conventional conveyor belt edge.
- Note, too, that the edge rubber has been keyed into the carcass of the belt which produces an anchorage infinitely greater than in conventional belt edges. This permits the use of thicker edge protection of assured stability—especially important where guide idlers or trippers are used.
- The thicker, stronger edge protects the belt carcass from attack by moisture, grit, acids, alkalis or oils.

FORTLOK is a registered Trade Mark

SHARP RECOVERY IN U.K. ECONOMY FORECAST

(FROM OUR LONDON CORRESPONDENT)

FOR just over a year now, Britain has been regaled with talk of the coming economic expansion, but hitherto the actual indicators, while being encouraging, have somehow failed to provide a really convincing answer. Now, however, it looks as though the prospects are more encouraging than usual. The National Institute of Economic and Social Research in its issue of *Economic Review* for May confirms many other forecasts by predicting a "sharp recovery". The two quarters up to March have been disappointing, but the *Review* suggests that output should soon start rising at the rate of about 4 percent a year.

This is rather less than has been suggested by other forecasters. The argument is that apart from the bad winter, it has been the decline in fixed investment and stockbuilding which has pulled output down. Both these sectors of expenditure are now likely to stop contracting. In addition, current expenditure of public

authorities is rising and exports should rise "a little further", according to the *Review*. Employment is expected to improve further, although the first effects of the recovery will be a lengthening of hours worked rather than an increase in the number of people at work. In fact, the Institute calculates that by the end of 1963, unemployment may be little, if at all, lower than it was at the end of last year. This, it should be pointed out, is a gloomier view of the situation than is taken by officials in Whitehall.

While the general argument that the coming expansion will be slow to absorb manpower is fully in line with the U.K. Treasury's view, as set out in the economic report last month, the latest idea seems to be that by autumn serious unemployment will be mainly confined to the development areas. Seasonal trends will, of course, add again to the numbers out of work in the winter months, but Whitehall will be disappointed if the

total at the end of the year is anything like that of last December.

Industrial Production Up

Even so, it will do no harm to take a look at the latest industrial production index to see to what extent expectations are likely to be realised. This refers, of course, to March, and is, therefore, not perhaps as revealing as its successors ought to be. The best that can be said for it is that it marks the end of the great winter paralysis. The seasonally adjusted figure for "all industries," which includes construction, is five points up at 115, after rising four points from January to February. The figure is just up to the October-November level and not yet equal to the somewhat higher average of May-September. There is certainly nothing in these figures to bear out Mr. Maudling's assertion earlier last week that the economy had started to expand.

A very slightly better picture emerges from the manufacturing in-

CAPITAL, 30th May, 1963.

dustries alone, for which the March index is 116, compared with 115 for March 1962. Here again, the level is not yet up to that of May-September, when monthly figures of 117 and 118 were reported. The U.K. Treasury comments that the five-point rise in the March figure for all industries, seasonally adjusted, reflects mainly the recovery of the construction industry from the effects of the severe weather. The smaller rise of two points in the manufacturing index for March came from a number of industries, especially engineering and electrical goods. The plain fact is that in spite of the revival of the construction activity and the boom in the motor-car industry, the official estimates still show no evidence of general economic expansion. Of course, the latest index figure deals with a period that ended seven weeks ago. A good deal must have happened since then. But the absence of any real speed-up in March—except for the climatic change—comes as a disappointment.

The way in which expectations have been raised by hopeful official pronouncements can be seen in the monthly review of a leading New York stockbroking house, which writes as follows on the situation in the United Kingdom: "Although the March index of industrial production is not yet available, there can be no doubt that the normally strong seasonal spring improvement will be particularly pronounced this year." Perhaps it will be.

A Remarkable View

Expansion may be in the pipeline. Mr. Maudling has been careful to warn the country not to judge by statistics, but "by the feelings and views of practical men of business." That is a remarkable view to come out of the Treasury, which has always regarded judgments based on the views of business men as a mere journalistic exercise. One welcomes the conversion, but doubts whether anyone in Whitehall has yet developed a method of discovering and weighing up the "feelings and views of practical men of business."

The slow recovery of industrial output makes it all the more significant that company profits are already well on the way up. No doubt, certain industries and firms have done very much better than the average. As always, the overall national statistics are weighed down by the depressed industries. But in a number of cases, higher profits have actually been made on a static or even reduced volume of production or sales. This ability to get costs a unit of output down and so to increase profit margins in a period of slack trade should produce substantial results when the real expansion comes at last.

In the same issue of the *Review*, the Institute draws attention to the sharp downward revisions of the personal savings figures for past years which the statisticians have been making. The savings ratio in 1956, for example, originally given as 10.1 percent, is now shown as 6.2 percent. The 1959 figure, originally estimated at 7.4 percent, has since been drastically revised, and is shown in the latest national income accounts at only 5.5 percent.

The *Review* comments: "It seems clear that there is a systematic tendency for the savings ratio to be overestimated, the bias being greater the more recent the estimate. This is chiefly because, as new information comes in (from the census of distribution, for instance) it tends to show that the increase in consumption has been understated." The *Review* goes on to suggest that part of the spectacular rise in the savings ratio in recent years (the latest figures give the ratios as 10 percent for 1961 and 8.9 percent for 1962) may again disappear in future revisions.

CAPITAL, 30th May, 1963.

Jute

MOVE TO RAISE FREIGHT RATES WORRIES GUNNY EXPORTERS

EXPORTERS of Indian goods in general, and of jute goods and sea in particular, are worried over the possibilities of an upward revision of the westbound cargo freight rates following the present round of discussions among the spokesmen of the India-Pakistan-U.K.-Continent Shipping Conference and the representatives of various export promotion councils, trade associations and chambers of commerce. Conference circles say that although there has been a more than 45-percent increase in operational costs, they have asked for only a 15-percent rise in the freight rates. Since 1957 there has been no increase in the rates. They were, in fact, reduced in June 1958 either directly or through an increase in the deferred commission. In 1962, the freight rates on jute and jute goods were further cut, it is stated. Explaining their difficulties, a spokesman of the Conference lines has said that while the latter are eager to help expand India's export trade, they cannot but raise the freight rates on westbound cargo on account of the sharp increase in operational costs. Conference circles believe that liner services are indispensable for the development of India's economy and her foreign trade, so they should be offered higher returns. Meanwhile, efforts are being made to arrive at a compromise.

The present position is that under the 1962 agreement with the Government of India, the Conference cannot introduce an overall increase in the freight rates before 30th June this year. The agreement laid down that in matters connected with the revision of the rates, the shipping interests should first thrash out the issue with the shippers. In the event of any disagreement, the matter would be referred to the Government of India. It is believed that Conference circles might have agreed to a lower increase but for the provision in the agreement that once an increase is effected, it cannot be revised in two-and-a-half years.

In course of the talks already held in Calcutta and Madras, Indian trade interests have pointed out that so high an increase in the freight rates will affect India's exports, particularly at this juncture when the country is trying to build a thriving overseas market. They have urged the shipowners to reduce operational costs by modernising their facilities. Ceylon and Pakistan, it is further understood, have rejected the proposal.

Growing Consumer Resistance

If the proposed increase is eventually accepted, it may cause a serious setback in the overseas offtake of Indian jute goods. It is felt that a 15-percent rise in the freight rates will increase the price of jute goods in export markets by more than 1 percent. This will cause an appreciable shrinkage in their demand. Consumer resistance is already perceptible, and the Indian industry has been trying hard to overcome it by keeping down its production costs. The volume of gunny exports has increased with the progress of modernisation and diversification in the industry. Jute circles, however, hope that the Conference authorities will weigh the comparative advantages between a higher freight

with a lower volume of cargo and the present rates with a higher volume and desist from insisting on the proposed increase.

Pakistani Competition

Pakistan is gradually gaining an increasing foothold in the world jute goods markets. U.S. market statistics for March 1963 show that out of 158.07 million yards of hessian purchased by that country during that month, India got orders for 147.65 million yards (93.4 percent) and Pakistan 10.21 million yards (6.5 percent). Total forward purchases as at the end of March for April and distant positions were 264.48 million yards. Of this, India held 236.49 million yards (89.4 percent) and Pakistan 26.58 million yards (10.1 percent).

In March 1963, Pakistan exported 17,696 tons of jute goods. Of this, 12,340 tons were sacking, 5,266 tons hessian and 90 tons miscellaneous goods. Total exports during the nine-month period ended March 1963 were 168,481 tons, comprising 120,333 tons of sacking, 46,629 tons of hessian and 1,469 tons of other goods. Of this, Australia was the best customer for heavy goods, since she absorbed as much as 27,345 tons. West Africa came next with an intake of 16,898 tons, South Africa 12,578 tons and east Africa 11,383 tons. The U.S.A. bought 21,878 tons of hessian.

With an average of 8,759 looms in operation, the total output of gunnies during the period was 221,281 tons—151,496 tons of sacking, 62,664 tons of hessian and 7,121 tons of miscellaneous goods. About 1.3 million bales of raw jute was consumed by the industry. During the corresponding period of 1961-62, the industry had a complement of 8,059 looms at work, producing 201,837 tons of jute goods. Of this, 138,613 tons were sacking, 53,813 tons hessian and

9,411 tons miscellaneous goods. About 1.2 million bales of raw jute was consumed.

Raw Jute Arrivals

Arrivals of raw jute in Calcutta and mill stations during April 1963 were 487,130 bales—467,380 bales from India and 19,750 bales from Pakistan. The total was 121,170 bales lower than the figure for the previous month and also 81,670 bales less than in April 1962. Arrivals between July 1962 and April 1963 were 5,882,000 bales from India and 359,000 bales from Pakistan, making a total of 6,241,000 bales. In the corresponding period of 1961-62, total arrivals were fractionally higher at 6,325,000 bales, made up of 5,962,000 bales from India and 363,000 bales from Pakistan. Thus arrivals during this season were lower by 84,000 bales than those during the same period of the previous season—those from Pakistan declined by only 4,000 bales, while India's share was lower by 80,000 bales.

Fibre Exports from Pakistan

Export sales of 78,446 bales of raw jute were registered with the State Bank of Pakistan during the second half of April. Czechoslovakia was the best customer with an intake of 13,690 bales, followed by Japan with 12,110 bales and West Germany 7,845 bales. Total sales during the ten-month period ended April 1963 were 3,387,000 bales, against 3,766,000 bales for the corresponding period of the previous season.

Raw Jute Crop Prospects

The tornado which blew over parts of north Bengal and the northern wing of East Pakistan during the past week was followed by heavy rainfall in the Jalpaiguri, Cooch Bihar, Dinajpur, Lalmanirhat, Rangpur, Bogra, Pabna, Serajganj, Mymensingh and Sylhet areas, indirectly helping the standing jute

plants. In other districts of East Pakistan and West Bengal, rainfall has been scanty with the result that the soil has dried up. Farmers are relieved to hear the weather clerk's forecast that monsoon is in the offing. Heavy rainfall followed by an inundation of the fields was reported from scattered areas in Assam. Prompt arrangements for drainage saved the standing jute plants. Reports from Purnea and Saharsa districts of Bihar and from wide areas in Orissa and Tripura reaching Calcutta state that the plants are thriving well in those areas. It appears from available indications that the crop prospects are good. The raw jute acreage, it is reported, is about 10 percent higher than in the previous season.

THE JUTE MARKETS

Manufactured Goods: The manufactured goods market opened on a subdued note during the past week and receded further on the emergence of a larger number of mills as keen sellers for all positions in both hessian and heavy goods. Chances of an upward revision of the freight rates on westbound cargo following the present discussion between the India-Pakistan-U.K.-Continent Shipping Conference lines and Indian exporters induced caution and drove overseas buyers to the fence. Indian jute goods prices are already considered high in these markets. A 15-percent increase in the freight rates is likely to affect the sales of jute goods and stimulate the use of substitutes. Towards the close, scattered business was reported in sacking with Australia and in hessian with the U.S.A., Argentina, Chile and the Continent. But these failed to enthuse sentiment, and prices registered a further decline. There was no Government tender during the week. In the futures market, transactions in May contracts in B Twills and hessian were closed from Saturday. There was heavy bull liquidation in both, depressing the trend. But hessian remained firmer than sacking in view of the sustained interest in the former. Fluctuations were wide in sacking and narrow in hessian.

In the spot market, B Twills registered a loss of Rs. 2.20 to Rs. 111.60 for May, Rs. 1.75 to Rs. 112.25 for

in the
expansion of
TEXTILE INDUSTRY

IBCON offers to intending promoters of textile industry, comprehensive consultancy services comprising:

- Project study and financial estimates.
- Project design including equipment, buildings, power, steam, water-supply, etc.
- Advice on purchase of equipment from India or abroad by tenders or negotiations.
- Supervision of construction of buildings and erection of equipment and services.
- Commissioning and operation.
- Senior and supervisory staff selection.
- Management organisation, clerical procedures, quality control, scientific cost and wage schemes.
- Technical assistance after commissioning to ensure successful and profitable operation.
- Also production planning, waste control, stores, dyes and fuel consumption.

June, Rs. 1.35 to Rs. 1.13 for July-September, Rs. 1.40 to Rs. 1.12 for October-December, and Rs. 1 to Rs. 1.12 for January-March 1964. Hessian showed a lower loss of 70nP to Rs. 51 for May, nil to Rs. 50.90 for June, 30nP to Rs. 49.70 for July-September, 35nP to Rs. 48 for October-December and 40nP to Rs. 47.10 for January-March 1964.

In the futures market, B Twills May declined by Rs. 2.40, against the previous week's gain of 10nP to Rs. 110.90 after moving between Rs. 113.45 and Rs. 110.90, while Hessian May lost 64nP, against a gain of 86nP during the preceding week to Rs. 49.84, after fluctuating narrowly between Rs. 50.90 and Rs. 49.84. For August positions, B Twills showed a loss of Rs. 1.40 to Rs. 112.60, after Rs. 114.05 and Rs. 112.05 and Hessian 30nP to Rs. 49.10, after moving between Rs. 50.10 and Rs. 48.74. Turnover was moderate and the undertone hesitant.

At the close, the differential between May ready and futures was higher from 50nP at the end of the preceding week to 70nP in sacking and lower from Rs. 1.26 to Rs. 1.16 in Hessian. The corresponding figures for August were 40nP, against 35nP in the former and 60nP, against the same, in the latter.

Wednesday's quotations were as follows:

	May	June	July	Oct.	Jan.
40in. 70oz.	37.40	37.40	36.50	35.75	35.10
40in. 80z.	39.90	—	—	—	—

Liverpools	127.00	127.00	127.00	126.50	126.00

Raw Jute: The raw jute market lacked interest. Mills did not like to take lower grade jute at a discount. Small transactions were reported in quality fibres in bare marginal lots at the prevailing levels, basis Rs. 29 a maund, ready f.o.r., Calcutta for Assam Bottoms. The market was awaiting official permission to commence trading in the new crop.

The futures market was subdued. Upper Assam White Bottoms June moved idly around the floor level of Rs. 30 a maund. Scattered business commenced for September positions from Monday. Opening at Rs. 30.52, it moved within a narrow range between Rs. 30.58 and Rs. 30.50 to close at the latter rate. Turnover was small and the undertone hesitant at the close.

With the gradual depletion of up-country stocks and an extremely restricted turnover at lower-than-floor levels in the agencies, arrivals at the Cossipore market were shrinking. Sellers there were freely offering their holdings at below the floor levels. But hardly any business of interest was reported to have been transacted.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms)		T.S.D. Prices	
	Rs.	Rs.	Rs.	Rs.

THE U.K. JUTE MARKETS

FIBRE REMAINS FIRM

(FROM OUR DUNDEE CORRESPONDENT)

A STEADY tone existed in the raw jute market in Pakistan last week, and prices became slightly dearer. This applied to both old and new crop fibre. Although there has been excessive rain in some of the jute-growing districts of East Pakistan, no damage has been done to the young plants. Despite this firm position, there were offers of some grades of new crop at under the current minimum export price levels. However, this did not attract much buying at present, and business was confined to fairly small quantities.

The spot market in Dundee was also firmer and good quality jute was no longer available at discounted rates. A substantial quantity of jute was still offered ex warehouse Dundee, but as spinners were already holding large stocks, business was of a selective nature. Old crop prices were lowest at £111 for Mill Lightnings, at £94 for Mill Hearts and at £78 for Grade Hearts, c.i.f. U.K., for June-July shipment. Grade Tossa-2/3 was available to a limited extent at £121 10s and Grade Tossa-4 at £105 10s. Output Tossa-2/3 was at £95 15s and Output Tossa-4 at £85 10s—June-July. Cuttings were steady at £54 for S.N.C. and at £45 10s for N.C.

Books

PROBLEMS OF ECONOMIC PLANNING

Indian Economy. By G. C. Jangir. (Published by Atma Ram and Sons, Kashmere Gate, Delhi 6. Price Rs. 14, pages 756.)

This book examines the various aspects of the Indian economy in the light of the successive five year plans. A book of this nature has to be descriptive to some extent; the author has also discussed the background of the different problems whenever necessary. One can detect certain repetitions in different chapters, but this is possibly unavoidable in a publication of this type. The author has collected material and statistics from various authoritative publications and journals with a view to showing the relative progress and shortfalls in different sectors of the economy during the plan periods. The author's conclusions may be summed up as follows. The economy is progressing but at a slow rate, and the path is beset with many difficulties, one of them being a very high rate of population growth (2 percent a year). This has compelled the nation to use up a substantial part of its resources, including foreign exchange reserves, in feeding additional mouths each year. The democratic system of Government, which relies more on persuasion and voluntary acceptance by the people rather than on imposition and regimentation, does not usually ensure rapid progress.

There had also been certain major defects in the implementation of the plans, particularly the third plan, with the result that the actual rise in national income and output fell far short of expectations. The increase by 2.2 percent in national income in 1961-62 was hardly sufficient to match the 2 percent rise in population. Domestic savings by individuals, corporate bodies and the Government could not be raised according to expectations from the second five year plan period. On the other hand, the inflationary pressures on prices, which have often accompanied development expenditure by the Government, appeared to have prevented progress by discouraging the marginal propensity to save and inducing the cost structure to rise. The author is, however, hopeful that once the defects in planning and expenditure are removed by better co-ordination and foresight, the original aim of the plan should not be too difficult to realise. The goal is moderate and not ambitious.

There are several misprints in the book. As for example, on page 594, the deposit with the foreign banks in 1958 is stated to be Rs. 1.96 crores—this should presumably have read Rs. 196 crores. On page 582, the figures given for assistance (authorisations) by the U.S. Government do not agree with those appearing on the chart in the previous page. On page 557, paragraph 3, the author states that India's imports from the non-sterling area are almost constant at 14 percent to 15 percent. As the U.S.A. and Canada are also in the non-sterling area and now belong to the "external accounts area" with the European countries (except of course the U.K.), the statement needs modification.

Indian Chamber of Commerce, Calcutta. Published by Oxford Book Company, 17 Park Street, Calcutta 16. Price Rs. 6, pages 136.)

Various specialised institutions have come into being for providing finance to industry, but each has its own procedure, constitution and responsibilities. The Indian Chamber of Commerce, therefore, considered it desirable to bring together in a compact book the details of procedures for obtaining financial assistance from these institutions and, in particular, information on such matters as the extent of loan that is given by each of these institutions to any single borrower, the nature of security that will have to be provided, the margin that the financing institution generally requires, the rate of interest that it will charge, the form in which applications for loans should be made and other relevant information which any person seeking financial assistance from these institutions will require. In the present edition, all the information given in the first edition has been revised and brought up-to-date. There is an appendix outlining the scheme introduced by the Government of India for the guarantee of advances granted to small industries.

PLANNING IN U.P.

Planning in Uttar Pradesh. By P. N. Masaldan. (Published by Vora and Co. Publishers Private Ltd, 3 Round Building, Kalbadevi Road, Bombay 2. Price Rs. 3, pages 49.)

This is the report of a research project entitled "A Study of Co-ordination of Planning at State Level in U.P." The study was divided into two parts. The first part was on the organisation and procedures of the various mechanisms stipulated to achieve co-ordination and the second one was on the nature and extent of co-ordination achieved in actual practice.

The U.P. secretariat is said to consist of a band of clerks (page 31) and proper co-ordination is rendered difficult by the procedure suggested by the secretariat manual which lays down that on each reference the officer concerned will either prepare a reply or ask the office to prepare it. But the latter course is invariably followed, lowering the level of initial consideration. The administrative department is described as a post office, passing the files from one office to another. The Government of India, it is said, interferes with matters of details falling within the purview of local offices. For example, the Ministry of Health suggested a reduction in the height of rooms of the proposed Medical College in Kanpur from 17 feet to 12 feet. But the Principal and the Executive Engineer of the Medical College did not agree. The Ministry replied that the Government of India would give assistance in accordance with the ceilings to be fixed by it and the extra expenditure on account of the increased height of buildings would have to be borne entirely by the State Government. The need for co-ordination among the co-ordinating agencies is also stressed (page 37).

Commodity Markets

TEA PLANTERS RESENT EXTRA TAX BURDEN

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE chairman of the Central Travancore Planters Association, Mr. J. C. Strange, said in Peermade last week that the introduction of the new super profits tax would hit "most unfairly" the great majority of the tea producing companies in India. Addressing the latest annual general meeting of his Association, the chairman said: "There are more tea companies in planting than any other sector where the original capital has not been altered, while the assets have expanded. The 6 percent rule will apply with exceptional severity on old established tea companies because it will be related to the original capital and it will also penalise efficient management".

While fully appreciating the country's need for raising more money through taxation to meet the challenge of emergency, the chairman felt that the nation could probably raise the extra resources required with much less strain if the large number of paid holidays and the lavish absenteeism which in the planting industry and in Kerala was about 20 percent could be reduced and if a good eight-hour work day was put in by labour. "The question of a fair day's work for a fair day's wage is before the three plantation wage boards set up by the Government of India. If the wage board decides on a wage boost without a like increase in work output, it will be an act of cost inflation in an industry which can now least afford it", he added.

Mr. Strange said that the planting industry in this country had to pay a higher price than all its overseas competitors for almost all the essential supplies on which they had to depend for production. The Indian planters had to pay more because most of the manufacturing industries supplying their needs were protected and they did not have to face the competition in an import-restricted country, whereas the plantation products had to be sold in a free world market. Over and above the effect of import restrictions and protection afforded to these industries, sales tax and excise duties at different stages of production added to the cost. The competitors of Indian planters abroad could buy the latest machinery and equipment from the most reputable suppliers without any of the involved, protracted and sometimes endless procedures the planters here had to undergo and they were available at considerably less price. He added that tea machinery of the right type was almost unobtainable on account of import restrictions in the country and many of the gardens had to continue to manufacture teas with out-of-date equipment.

Referring to the need for replanting, he said that planting began in his district in the late '70s of the last century, but some of the land with tea might be tired out as a great deal of the planted area was well over 65 to 70 years. The planters have made the existing tea bushes good producers by careful husbandry and general care. He underlined two facts. One was that while the crop was doubled in 22 years, the planters were still managing with factory facilities organised to meet less than half the present-day intake of crop. The other was that while the bushes had responded well to the cultural practices and

yielded high crops, any long-term improvement should now be based on replanting and replacement with the new type of high-yielding planting material. Both these demanded capital investment. The trend of taxation was such that the necessary resources could not be built up internally. A correction to this policy might not occur until it was too late, and the economy of the industry seriously damaged, Mr. Strange said.

The chairman drew attention to the uneconomic price for tea and said that last year from about 37,689 acres in his district, 35.9 million lbs of tea was produced. This was a remarkable achievement in production. The realisation in the market did not, however, match this record in production as 4 million kilograms of dust grade tea from this district was sold through Cochin auctions realising Rs. 1.81 crores in 1951, whereas the sale proceeds from 4,776,022 kilograms of dusts in 1962 were Rs. 1.64 crores. So the average price obtained from these dust grades dropped 72nP a kilogram but the offerings were 16 percent more. On-leaf sales, they offered over 840,000 kilograms more last year, but realised Rs. 11 lakhs less in value. Thus the earning was becoming less and less as production grew more and more. Therefore, in his opinion, the time had come when the planters should endeavour to improve quality. Unless the appearance at least was improved, the difficulty of the producer in selling his teas at a reasonable price was bound to increase.

Growing Cash Crops

The Planning Commission has advised the Kerala Government not to interpret the national objective of food self-sufficiency in its literal sense at the State level, but to place emphasis on the production of cash crops like rubber, coconut, arecanut and cashew in which the country is either deficit or in the export of which the country is interested. The soil and climatic conditions of Kerala are very suitable for the cultivation of these crops unlike most other

parts of India. Mr. Sriman Narayan, Member of the Planning Commission, who disclosed this to the newspaper men last week said that Kerala should give top priority to rubber among the cash crops and make the maximum efforts to increase production. In this strategically important commodity, the country was in deficit today, and was spending substantial amounts of foreign exchange for imports. For rubber production programmes, an amount of Rs. 4.40 crores was included in Kerala's third plan, Rs. 3.80 crores for loans to smallholders of ten acres and less and Rs. 60 lakhs for loan assistance to landless and poor peasants who take to rubber cultivation. It had also been decided to raise the replanting subsidy from Rs. 400 to Rs. 1,000 an acre. Rates of loan assistance for new planting also has been increased to Rs. 750 an acre.

When it was pointed out to him that despite all these assistance promises, the progress made in the matter of rubber production was very slow and unimpressive, Mr. Narayan said that he was at a loss to understand why it was so. He has asked the Kerala Government to point out to the Planning Commission its genuine difficulties, if it had any, and promised their quick removal.

At the instance of the Planning Commission, the Kerala Government has decided to bring under 50,000 acres Sea Island cotton by the end of the fourth plan. The Planning Commission and the Central Government are keen that Kerala should devote some attention for the cultivation of this long-staple cotton, which is now largely reported. Kerala alone holds out the possibilities for its successful cultivation, and if its cultivation was discarded in the State, India could never think of growing this variety of cotton, Mr. Sriman Narayan said. The Kerala Government has pointed out some difficulties like the high cost of production and has demanded special considerations like price support. The Planning Commission has agreed to consider these demands sympathetically.

More Indian Tea Consumed at Home

(BY A SPECIAL CORRESPONDENT)

SINCE the final export sale of leaf teas for the 1962-63 season was completed, world prices have recorded

a slow but steady decline in prices. Having regard to the statistical situation of this industry in relation to supply and stocks, this downward tendency is puzzling, but news from Russia gives one clue. This correspondent has pointed out the apparently extravagant claims made by Russian sources as to the great advances made by the planters in Georgia, both as to quality and quantity. Recent news to hand from that area indicates that the 1965 target has already been exceeded.

With reference to east Africa, it is reported that production is expected to increase rapidly in the near future. On that showing, the F.A.O. warning that supplies would exceed consumption presages a difficult year for Indian tea producers. Fortunately, perhaps, the chairman of the Indian Tea Board will not listen to the prophets of gloom. He continues to preach that new markets will be opened up and maybe some old ones will be recovered. It is also gratifying to find that Messrs W. S. Cresswell and Co. Private Ltd who have a long experience of the vagaries of the tea trade have some encouraging comments to make. Firstly, last year's world production was lower at 1,485.5 million lbs, compared with 1,491.2 million lbs in 1961. A year ago, the estimated amount of tea in India carried over into the 1962 account was 334 million lbs. Now the figures are estimated at 295 million lbs only.

As for Indian domestic consumption, the firm says:

"Consumption has undoubtedly risen again and is now thought to be in the region of 315 million lbs annually. The quantity estimated to be retained in India from the last season's crop, therefore, represents a remarkable change from the very comfortable stock position of June 1962, and explains the sustained demand from internal buyers in the closing sales of the season.

"The internal market once again demonstrated a marked preference for teas of C.T.C. manufacture, particularly dusts and broken, and this has been largely responsible for the switch to this type of manufacture by so many gardens in the Doars, and more recently in Cachar, who were unable to obtain reasonable prices for their orthodox teas."

Prospects in E.C.M.

As for the European Common Market, it is said "in spite of Britain's failure to join the Market,

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to April 1963. As compared with March, the April indices

for Food, Clothing and Miscellaneous show rises of 15 points, 4 points and 3 points, respectively, while that for Fuel and Lighting reveals a drop of 3 points.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 9 points during April 1963.

Middle Class Cost of Living Index Number for Calcutta. Prices in August, 1939=100

FINANCIAL AGENCIES

Central Financing Institutions for Industry in India. (Compiled by the

recent pronouncements by European leaders indicate that there is every prospect of India eventually being able to negotiate a trade agreement whereby the present import duties on tea might be abolished. This will considerably improve prospects for increasing tea consumption in Europe at present handicapped by high retail prices. In this context, the Tea Board's present promotional activities for Indian tea in Europe assume a new importance.

The U.K. President of the Board of Trade has said that India and Ceylon would benefit from the decision of Britain and the European Economic Community to suspend their tariff on non-Commonwealth supplies of tea. Reporting to the House of Commons, he said, "We and the E.E.C. are working on details of arrangements for suspending our tariffs on tea. He explained it would help India and Ceylon to secure improved access into the markets of other countries, greater than they could have hoped to get by the natural increase in tea drink-

ing in Britain. From Darjeeling comes news that 139 workers of tea estates who had been retrenched earlier this month were reinstated on 24th instant. This is reported to be due to action taken by the State Labour Minister who requested members of the I.T.A. to exercise caution before dismissing workers during the emergency period.

Prospects for New Season

On the prospects for the coming season, Messrs W. S. Cresswell and Co. Private Ltd say that with 295 million lbs only likely to be retained in India from the 1962 crop, compared with 334 million lbs retained from the 1931 crop, stocks in the country are known to be low and a strong demand for internal types in the opening sales seems certain.

Until artificial irrigation can be arranged for, say, 20 percent of the area under tea in north India, extra valuable foreign exchange earnings

will remain subject to the vagaries of monsoons. The area under tea in north India is about 635,000 acres, so 20 percent would equal 12,700 acres. Two maunds extra tea a year if available from irrigation would, therefore, give an increased crop of 254,000 maunds or, say, 20 million lbs which if exported at the average price secured over the past three seasons, of Rs. 5.6 a kilogram would increase exchange earnings by a few crores.

Tea Price Trends

The London tea sale held on 20th May, recorded a good demand at better prices for Assam, some selling up to 2d a lb higher. But mediums were wanted less and most kinds were only about steady at the last week's prices. Doors were strong with the possible exception of a few thin-liquoring sorts. Low-priced plain teas sold in buyers' favour.

Stocks in London are at present higher than this time last year, but

that alone does not explain the down trend in prices, which continues in spite of the optimistic forecasts from the members of the Indian Tea Board and some local traders.

Calcutta registered its first sale for the 1963-54 season last week and although foreign buyers were reported to be in attendance, the demand for Darjeeling was disappointing, which seems to be somewhat surprising after the advertisement given to teas from this district.

The higher prices paid in Mincing Lane for certain quality grades seems to have been a flash in the pan, for although a good demand for leaf teas continued on 20th May, the first Calcutta sale prices continued to favour buyers. Offerings amounted to 17,723 packages at Sale No. 1.

The market opened weak but demand improved somewhat later. Most of the offerings came from Darjeeling and prices were irregular. Flavoured Darjeelings came to a selective market, but with the exception of a few special lines, sold below brokers' expectations with many withdrawals. Broken and Fannings were strong features and were readily absorbed, good prices being realised for Fannings.

Orthodox teas from other districts were well supported with buyers' emphasis on whole leaf grades and stylish B.P.S.s. C.T.C. were in short supply and brokers fetched better prices than fannings of corresponding invoices.

Calcutta continued with its Wednesday Sales of dust teas. On 22nd instant, offerings amounted to 30,290 chests at internal sale No. 48. There was a fair demand at easier rates. C.T.C. teas once again came to an irregular market, and were up to 30nP lower and sometimes more, but a few selected lines sold well. The fibrous C.T.C. teas were well supported, but at irregular and lower rates. Plain and medium orthodox descriptions, although readily absorbed, were again easier by up to 30nP. "Teas for price" sold around last rates.

Cochin reports the same dreary news with prices favouring buyers.

HIDES AND SKINS

The market was quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 21st May and 27th May 1963)

Cowhides: Wet salted (Ord.) 19,000 pcs. on the basis of Rs. 8 to Rs. 10.62; Wet salted (Slaughtered) 44,500 pcs. on the basis of Rs. 10 to Rs. 16.50 and Rs. 19.50 to Rs. 28.
Goatskins: Wet salted (Patna, Daissee, Kustia) 63,200 pcs. on the basis of Rs. 225 to Rs. 240, Rs. 325 to Rs. 340 and Rs. 435 to Rs. 445; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.75 a piece; Purneah 3,000 pcs. on the basis of Rs. 300; Assam-Dinaipur 23,500 pcs. on the basis of Rs. 270 to Rs. 280 and Rs. 290.

Bazaar Stocks

(27th May, 1963)

Cowhides: Wet salted 87,500 pcs.
Goatskins: Wet salted (Daissee, Kustia, Killed) 48,000 pcs.; Assam-Dinaipur 42,000 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kissanganj 1,52,000 pcs.

COMPANY AND PUBLIC NOTICES

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta on the 28th day of June, 1963 at 3 p.m. to consider and, if thought fit, to pass with or without modification the following Resolutions:

As an Ordinary Resolution:

"RESOLVED that approval is hereby given to a proposed scheme of arrangement for amalgamation with Walker & Greig (Cooonor) Ltd. whereby the whole undertaking, property and liabilities of Walker & Greig (Cooonor) Ltd. shall be transferred to this Company".

As a Special Resolution:

"RESOLVED that the following new sub-clauses be inserted in Clause 3 of the Memorandum of Association of the Company and numbered as sub-clauses (3A), (3B) and (3C):

(3A). To carry on all or any of the businesses of constructional engineers, structural engineers, mechanical engineers, iron masters and iron foundries, galvanizers, smelters, public works and general contractors, masons and masonry and building contractors, electrical engineers and electricians, suppliers, generators, accumulators of electrical energies, power, etc. general engineers, civil engineers, tool makers, brass founders, metal workers, boiler-makers, millwrights, machinists, iron and steel converters, smith, wood-works, builders, painters, metallurgists, crane makers, water supply engineers, ship-builders, shipwrights, dredgers, tug owners, wharfingers, gas generator and suppliers, framers, printers, carriers and merchants, salt refiners, manufacturers of chemicals and chemical engineering equipment, oil refiners, colliery proprietors and coal masters, coal and coke merchants, miners, smelters engineers, lime-burners and the businesses of forging pressing stamping structural and rolling works of all kinds,

(3B). One Purchase Officer with a headache cut his inventory down from 30 products to only 8!

The Caltex "Stop-Loss" plan was the headache antidote... When each department in a plant specifies a lubricant it wants without reference to the purchases of other departments, there is bound to be a lot of waste and costly over-lapping. The Caltex "Stop-Loss" programme helps to eliminate this waste of lubrication by effectively reducing the total plant lubricant inventory. Caltex "Stop-Loss" is a complete plan for organising lubrication on an efficient basis. There is no other programme like it.

Find out today how Caltex "Stop-Loss" can specifically stop the problem in your plant. Help your operation to greater profit with the Caltex "Stop-Loss" Programme.

CALTEX (INDIA) LIMITED Bombay • New Delhi • Calcutta • Madras.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex Office.

BRAITHWAITE & CO (INDIA) LIMITED **NOTICE**

NOTICE is hereby given that the Thirty-third Annual General Meeting of the members of Braithwaite & Co (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Thursday, 20th June 1963 at 11 a.m. to transact the following business:—

- To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1962.
- To confirm the interim dividend on the Preference shares and to declare a dividend on the Ordinary shares.
- To elect Directors in place of those retiring and in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by section 281 of the Companies Act, 1956, has been received by the Company:—

"That pursuant to the provisions of section 281 of the Companies Act, 1956, Sir Asoka Kumar Roy, who has attained the age of 76 years and who retires from the Board by rotation, be and is hereby

re-appointed a Director of the Company and it is hereby specially declared that the age limit for directors prescribed by section 280 of the Companies Act, 1956, shall not apply to him."

- To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification the following resolutions of which numbers 5, 6 and 7 will be proposed as ordinary resolutions and number 8 as a special resolution.

- (As an ordinary resolution)

"That pursuant to the provisions of section 294 of the Companies Act, 1956, the appointment of Marshall, Sons & Co. (India) Limited in terms of an agreement executed by the Company on the 25th day of February, 1963, as the Company's sole selling agent for the Overhead Travelling Cranes, Level Luffing Cranes, Locomotive Steam or Diesel Cranes and Spare Parts for such cranes manufactured by the Company for the whole of the Union of India be and is hereby approved."

- (As an ordinary resolution)

"Resolved that in variation of the ordinary resolution passed

at the annual general meeting held on 29th March, 1957 and in compliance with clause (d) of sub-section (1) of section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company borrowing from time to time any sum or sums of money which together with moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) exceeds the aggregate for the time being of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose, provided that the total amount of moneys borrowed by the Board in excess of the limit prescribed by clause (d) of sub-section (1) of section 293 of the Act shall not exceed Rs. 1,50,00,000/- at any one time."

- (As an ordinary resolution)

"That consent be and is hereby accorded to the creation of first legal mortgages of all present and future immovable properties of the Company in favour of the Commonwealth Development Finance Company Limited and the Industrial Credit and Investment Corporation of

CAPITAL, 30th May, 1963.

India Limited so far as and to the extent (if any) that the creation of such mortgages may be deemed to be a disposition of the undertaking of the Company within the meaning of Section 293 (1) (a) of the Companies Act, 1956."

- (As a special resolution)

"Resolved that the regulations contained in the printed document submitted to the Meeting and for the purpose of identification signed by the Chairman thereof be and the same is hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof."

The Transfer Books of the Company in respect of the ordinary shares will be closed from the 6th June 1963 to the 20th June 1963, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of such dividend as may be declared on the ordinary shares will be made on or after 27th June, 1963 to those members whose names are on the Company's register on the 20th June, 1963.

By Order of the Board,
Y. S. TAYAL,
Secretary.

4, Clive Row,
Calcutta,
9th May, 1963.

Note: The Explanatory Statement pursuant to section 173 of the Companies Act, 1956 has been forwarded to the members of the Company.

BALMER LAWRIE & CO. LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 28th June, 1963, at 12-30 p.m. to consider the Accounts of the Company for the year ended 31st December, 1962, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 8th June, 1963 to 28th June, 1963, both days inclusive.

By Order of the Board,
D. MANSON,

BRITISH INDIA ELECTRIC CONSTRUCTION CO. LTD.

The Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a dividend of 15 per cent for the year ended 31st December, 1962.

BALMER LAWRIE & CO. LTD.

D. MANSON,
Managing Director,
Managing Agents.

21, Netaji Subhas Road,
Calcutta, 22nd May, 1963.

PITAL, 30th May, 1963.

FILE MACHINERY CORPORATION LIMITED

NOTICE is hereby given that the thirty-third Annual General Meeting of TEXTILE MACHINERY CORPORATION LIMITED will be on Friday, the 28th June, 1963, P.M. at the Registered Office of Company at Belgharia, 24-anas, West Bengal, to transact following business:—

To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 31st December, 1962.

To declare dividend on Preference and Equity Shares.

To appoint Directors in place of Shri J. M. Goenka and Shri Surottam P. Huthesing, who retire by rotation and are eligible for re-election.

To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS:

To consider and, if thought fit, to pass with or without modification the following resolutions:

- As an ordinary Resolution:

"Resolved that the reappointment of Messrs. Islamistan Traders (Regd.) of Bashir Manzil, Montgomery (West Pakistan), as sole selling agents for the sale of all items of textile machineries and accessories in West Pakistan for a period of 3 years with effect from 16th May, 1963, on the same terms and conditions as contained in the previous agreement dated 6th June, 1960, be and is hereby approved."

- As a special Resolution:

"Whereas Messrs. Birla AG incorporated in Switzerland, an associate of Messrs. Birla Brothers Private Limited, the Managing Agents of the Company, maintain an office in ZUG in Switzerland and whereas the said company is established to carry on business inter alia of acting as Agents in the Continent, United Kingdom and other countries for purchase and sale of goods including stores, plant and machinery, etc., and propose to have dealings and business connections with parties all over the Continent, United Kingdom and other countries and operate on a large scale and whereas their office establishment are likely to amount approximately to Swiss Francs 200,000 per annum in the initial stages and whereas expenses which can be attributed to the work to be done for and on behalf of the Company would depend on the value of purchase effected through the said Company in relation to their total turnover in each year, now it is hereby resolved that Messrs. Birla AG be and are hereby appointed to act as Buying Agents and Selling Agents of the Company for periods of 3 years and 5 years respectively with effect from 1st October, 1962, in the Continent, United Kingdom and other

countries on the following terms as to commission

- For purchase of stores, etc. 5% of the invoice price.
- For purchase of plant and machinery 2½% of the invoice price, and
- For sale of goods manufactured/produced by the Company 2% of the invoice price,

Provided that if any thing to be done in pursuance of the above arrangements requires permission of the Central Government or the Reserve Bank of India, as the case may be, the same will be done with such permission.

The Register of Members and the Share Transfer Registers of the Company will remain closed from 16th June, 1963 to 28th June, 1963, both days inclusive.

By Order of the Board,
R. C. MAHESHWARI,
Finance Officer.

Belgharia,
21st May, 1963.

- (1) A member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a member.
- (2) The dividends, when declared, will be paid to the registered shareholders whose names are on the Company's Register on the 28th June, 1963, or to their order or to their bankers on/or after 21st July, 1963.
- (3) An Explanatory Statement relating to the special business is being forwarded to the members.

mand for credit has, meanwhile, risen appreciably on account of the needs of defence and development. Although resources have been somewhat replenished by borrowing from the Reserve Bank, banks have been reluctant to approach the former for accommodation because of the high rate of interest. The outlook for deposits has deteriorated during recent months. The stiff 1963-64 Central Budget will mop up a large volume of funds in the form of heavier taxation and compulsory savings. A considerable sum is also being siphoned off by the National Defence Fund and the Defence Bonds. This apart, funds are being attracted by industrial houses and the non-monetised sector because of attractive interest rates. Although the influence of these factors should be somewhat mitigated by the bigger Government expenditure on defence and development, it will be some time before the latter can exert its influence.

Deposit mobilisation calls for bigger efforts than have been made so far. The Reserve Bank report is disappointing in that it has merely stated the problem without prescribing any remedy. The banking community seems to have relied on luck rather than effort for obtaining more deposits. There is no doubt that the climate for promoting deposits has improved during recent years. Confidence in the banking system has been reinforced by the introduction of the deposit insurance scheme. The process of weeding out inefficient and uneconomic units and merging the weaker units with the stronger ones has helped to strengthen the banking structure. If the Gold Control Rules were to succeed, funds could be diverted from gold and ornaments to banks.

It is not difficult to understand the banks' reluctance to pay a higher rate of interest for attracting deposits. But it is time the bankers seriously considered whether an increase in the interest rate is not called for under present circumstances. The interbank agreement for regulating the interest rate has been a healthy development, but the question of raising it has come to the fore, especially after the State Bank has raised its deposit interest rates recently. It is difficult to say for certain whether or not the State Bank is trying to divert funds from the private commercial banks to the public sector. In any case, the competition for deposits has increased. Considering that the bulk of the deposits are personal in character, the rôle of interest rates in increasing deposits cannot be ignored. The interest rate apart, the growth of deposits can be promoted by increasing the range and efficiency of services and facilities offered to customers. Bank managements are largely to blame for the present poor services. Hence loose talk about holding down competition in terms of bank services will do serious harm. Mr. G. D. Birla has rightly stressed, in his chairman's address at the annual general meeting of the United Commercial Bank in Calcutta last week (details of which were printed in last week's issue of *Capital*), the importance of promoting competition in providing various services and facilities to customers.

The banks are getting worried about whether they can satisfy the rising credit requirements of the economy in the near future. The 1962-63 busy season has just come to a close, but it does not appear that there will be much credit contraction during the current slack season. Advances are still running at a high level because a substantial portion of the advances have been taken by trade and industry. Despite the selective credit control measures of the Reserve Bank, the demand for credit has been high because of the needs of defence and economic development. Since the prospects of deposit expansion do not appear to be

very favourable so far, the Reserve Bank should consider liberalising credit terms to the banking system. Now that the Central Government is likely to launch its second borrowing programme soon, the banking community is wondering whether appropriate measures will be taken to help it in supporting the Government loans. Although the investment portfolio of commercial banks has expanded in 1962, they have encountered several difficulties in investing in securities. Apart from

WITH exports touching 212 million kilograms during the year ended March 1963, Indian tea has had a satisfactory year. The increase of 12 million kilograms over the previous year's exports reflects a satisfactory response to the fiscal reliefs granted in the 1962 Budget, and seems to have paved the ground for the final step of abolishing the export duty which New Delhi was persuaded to take three months ago. The increase in exports is the more welcome because despite the weakness in prices in earlier months, average realisations over the whole year at the Calcutta auctions show gains for both leaf and dusts. All districts have benefited from the improvement, especially Darjeeling and Assam. As the annual review published by J. Thomas and Co. (P) Ltd, leading Calcutta brokers, says, the outstanding feature of the season's marketing was the excellent price paid for orthodox teas. J. Thomas does not suggest that the poorer showing of C.T.C. teas was because of any surplus, but only reflected a relative shortage of good orthodox types which was "possibly temporary". While the mere conversion to C.T.C. may not command the premium enjoyed in the past, the Company nevertheless advises changing over to this process of manufacture in lower quality districts in view of the growing preference for quicker brewing and stronger liquoring qualities.

The J. Thomas report agrees with other trade assessments that the prospects for the 1963 season are more favourable than was the case at this time last year. The principal factor underlying this forecast appears to be the leanness of stocks held in Calcutta warehouses; at 229,118 chests, they are lower than at any time in the past six years. Excluding mainland China, for which the 1962 production figures are unavailable, overall world production is believed to have declined last year, which warrants the hope that prices in international markets should be well maintained at least in the first half of the season until the trend of production can be accurately gauged. Early reports from Ceylon and south India indicate that new records may be set by the 1963 crops, but the decisive factor will, as always, be the size of the north Indian harvest. While most sources expect that the 1963 crop in north India will be better than last year, the J. Thomas review points to the prolonged dry spell in most districts and the damage suffered from hail as adverse factors. These notwithstanding, the crop may be equal to the 1961 bumper crop and may be even marginally larger should weather conditions improve. Exports should in consequence improve, particularly now that the export duty has been abolished altogether.

The investor in tea shares can draw little comfort, however, from these crop and export prospects. His dividends will be severely affected by the super profits tax because many companies have for historical reasons retained a narrow capital base although their assets have expanded. The 6 percent rule, despite the modifications introduced subsequently by the Finance Minister, has the effect of penalising efficient management, as Mr. J. C. Strange said to the Central Travancore Planters Association recently. Even apart from taxation, the Indian tea grower cannot but be concerned over the steady rise in all his costs partly as a result of inflationary pressures and partly on account of the State's zeal for the worker's "welfare". Tea companies do not object to State-sponsored welfare measures, and are willing to play their part in ameliorating conditions. They only ask that commitments should not run ahead of the industry's ability to find the extra resources in a situation where their sales

the capital loss which they have suffered from the existing investments, they have found it difficult to raise funds against Government securities. Not only has the security market been extremely narrow, commercial banks have had to borrow from the Reserve Bank by paying prohibitive rates of interest. If the banks are to give more generous support to the new Government loans, they should be in a position to raise funds against these securities at a reasonable rate of interest.

OUTLOOK FOR TEA

are subject to increasing competitive pressures. This is in fact the essential point to grasp: the level of India's domestic costs is getting increasingly out of line with world price trends. The prospect of offsetting cost increases by gains in productivity grows increasingly remote chiefly because north India has reached a high plateau. With yields having already risen from 630 kilograms a hectare in 1938 to 1,056 kilograms in 1961, further improvements will be much more difficult to achieve and will be more costly because of not only inherent technical handicaps but also the steady erosion in the purchasing power of the rupee. On this point, the J. Thomas review makes the valid point that comparisons of north India's gains in productivity *vis-à-vis* Ceylon's cannot be fairly made unless it is noted that north India started from a base much higher than the others. Scope for further growth is thus more limited and cannot be expected to equal that in other countries.

The investor, in judging the financial prospects for 1963, will also need to take into account the impact of the higher garden excises. Payments, at the 20 percent higher rates now prescribed, will have to be made as teas leave the estates, and this must increase their requirements of working capital. Coming at a time when money has become tight and interest rates are on the increase, this will impose a serious disability, especially on the less affluent gardens. It may be noted in this context that crop hypothecation arrangements for the 1963 season presented some difficulty because of the hesitancy of banks in the face of the border uncertainties. Emergency risks insurance, and the initiative of the Tea Board, finally reassured the banks, but it is possible that some estates have had to make do with less accommodation than they need to maintain the momentum of growth.

Taking a longer view, growers in India cannot dismiss the possibility that world absorption may fall behind the rising volume of tea entering international trade. Despite official optimism, the fact remains that newcomers like the African territories and the Argentine are rapidly expanding their output from year to year. A new factor in the situation is the Soviet effort to expand domestic output, to which a correspondent referred in *Capital* last week. While the F.A.O. forecast of a world glut by 1965 may have been off the mark, there is no room for complacency. It is encouraging to learn that apprehensions voiced by the Indian Tea Association and other bodies have persuaded New Delhi to approach the F.A.O. for a fresh assessment, a great improvement from the initial reaction which was to dismiss these fears out of hand.

In judging the long-term outlook, the possibility of developing new markets has, of course, to be taken into account. The E.E.C. move to abolish tariff duties on tea is an interesting departure in principle, but its practical implications are limited by the fact that about 2 percent of all Indian exports go to this market. In 1962, according to the J. Thomas tea statistics, exports to the Netherlands and West Germany added up to just over Rs. 3 crores out of a total of Rs. 123 crores. Undoubtedly, tea drinking is catching on, but it would be a mistake to read too much into the recent uptrend. Imports of tea into Germany (including the East, now a separate political entity) were 5.3 million kilograms in 1938, against 6.5 million kilograms in 1961 for West Germany alone. In the Netherlands, however, consumption is still below prewar levels. Removal of tariffs may help tea somewhat, but the outcome

will depend far more on the comparative relationship with coffee prices at the retail level. The plea of India and Ceylon to the E.E.C. to help encourage tea-drinking will be judged against the more immediate responsibility to coffee producers in associated territories. More important than the E.E.C. as future markets are the countries of Africa and Asia where levels of consumption should increase in the wake of economic pro-

CEMENT RETENTION PRICE UP

AFTER considerable delay, the Government of India has allowed a general increase of Rs. 2.75 a tonne in the ex-works price of cement to be paid to the industry. The selling price of unpacked cement, *f.o.r.* destination, has also been increased from Rs. 94 a tonne to Rs. 97.75 a tonne. The cement industry, in common with other producers, has had to cope with a large rise in costs on account of raw materials, freight and power. Understandably, the increase in the retention price of cement has not satisfied the industry, which considers it very inadequate. The full benefit of the rise of Rs. 2.75 a tonne, it appears, will not accrue to the producers since their commission as selling agents has been reduced by 25p a tonne.

The increase in the retention price is meant to enable the industry to meet the rise in the costs of production since 1st November, 1961, when the fair prices payable to cement manufacturers were last fixed. A Government resolution published then had accepted the Tariff Commission's recommendations on raising the retention prices in line with any rise in the production costs due to Governmental action. However, the latest mark-up in the retention price is not sufficient to cover the increase in the costs of the high-cost producers. Furthermore, it does not have retrospective effect from 1st November, 1961. Production costs in the industry have gone up because of several factors, of which those deriving from Governmental action are the increases in freight rates, pithead coal prices, electricity duty and limestone royalty.

There has been a fair amount of idle capacity in the industry until recently. In 1962, India's output of cement was only about 8.6 million tonnes, against an installed capacity of about 10 million tonnes. There has been a considerable increase in production since the beginning of this year, but

gress. The demand there is unlikely to be for quality teas, but for plain and medium varieties sold at a low price. Whether India will benefit from such expansion of trade can hardly be taken for granted because of her poor competitive ability in the lower price ranges. Thought has to be given, therefore, to helping plain and medium teas, an intention implicit in the differential excise but which remains unfulfilled so far.

It has been achieved at high cost. The shortage as well as the poor quality of coal supplies, the rise in the prices of raw materials, the change-over from coal to furnace oil by factories in southern and western India and the shortage of power have pushed production costs up. Transport difficulties have been serious, both in obtaining raw material supplies and in clearing cement from the works. Since the sources of limestone and coal are located far away from each other and from the consuming centres, long hauls are necessary. Transport thus assumes a special significance for the cement industry. Although the transport situation has recently improved, the cost, particularly for road haulage, has gone up. Another major burden which the industry has to bear is the fiscal one. All these factors have affected its profitability. This is reflected in the prices of cement shares, the index number for which has declined from 169.3 to 140.7 (1952-53 equals 100) over the past year.

There is a considerable shortfall in the targeted capacity for cement. The third plan visualises an increase in capacity to at least 15 million tonnes. Existing capacity is only about 10 million tonnes. The projected expansion will call for an investment of about Rs. 70 crores, assuming that the capital required for a tonne of annual capacity will be, on average, about Rs. 140 (the cost is higher for establishing a new plant than for expanding an existing one). Such a large amount of capital can be raised only if the profitability of the industry improves. Apart from the other disincentives, the industry is subject to rigid controls, both in relation to prices and distribution, which restrict its earning capacity. The importance of granting a fair retention price is thus of far-reaching significance.

Current News and Comment

Coal and Power Supply in West Bengal

In his address from the chair, Mr. J. N. Mookherjee, president, Bengal National Chamber of Commerce, said that the fuel costs of the industries in the Calcutta area had risen as they had been obliged to take their coal supplies by the more expensive means of road transport. Also the new system of block movement, particularly by box wagons, compels small consumers to take their supplies either from the dumps or by making their own transport arrangements. A considerable increase in the fuel cost apart, industries in and around Calcutta have been placed in "a comparatively disadvantageous position *vis-à-vis* industries in the south and the west where movement of coal by coastal ships is being subsidised from a fund to which consumers of coal from every part of the country, including West Bengal, are contributing". In effect, Mr. Mookherjee says, the Government has equalised the price of coal practically throughout the country, but while the disadvantages of distant States on account of higher freight have been removed, West Bengal's industries are suffering from many handicaps because of locational difficulties. Smooth transport of coal to Calcutta is hampered by the inadequacy of suitable roads from the coalfields to the consuming areas. Much attention had not been given earlier to the laying out of a good road system around the coalfields, probably because they had been adequately served by the railways. But if the road system has now

to carry a heavier load of the coal traffic, this difficulty must be removed. Mr. Mookherjee thought that with better roads, the cost of coal to the local industries could be brought down by 50 percent.

Another serious difficulty arises from the recurring power crisis. In the past few months, there has been frequent power shedding in the northern part of the Calcutta industrial area, where industrial concerns have had to suffer an electricity cut of about 40 hours a week, with inevitable loss of production. Mr. Mookherjee attributed the crisis to the Planning Commission's inaccurate estimates of energy demand in the industrial belt of West Bengal. His Chamber as well as a few others have made a careful calculation of the requirements of the Calcutta industrial area during the third plan period, and in their view, the demand should be at least 2,120 MW more than the 1,000 MW which is planned to be supplied. But much less than 1,000 MW will be actually available by the end of the third plan. Mr. Mookherjee, has therefore, urged the authorities to take this large shortfall into account while preparing the energy estimates for the fourth plan period.

Maharashtra Financial Corporation

The Maharashtra State Financial Corporation has done well during the year ended March 1963. Its profit of Rs. 8.12 lakhs shows an increase of 33

percent over the previous year's figure of Rs. 6.09 lakhs, so it has been able to pay the guaranteed dividend of 3½ percent out of the year's profit without seeking any subvention from the Government. The Corporation's results are to be judged by the financial assistance it renders to the corporate sector, especially the small-scale and medium-scale concerns, rather than by the profit that it is able to make. Its record in this direction is encouraging. The total number of applications for loans received by the Corporation during 1962-63 was 605 for an aggregate sum of Rs. 9.53 crores, of which 166 applicants were sanctioned loans amounting to Rs. 2.06 crores. In the previous year, the Bombay State Financial Corporation, out of which the Maharashtra State Financial Corporation was reconstituted in August 1952, sanctioned loans for 185 applicants for a total sum of Rs. 1.79 crores. Total disbursements amounted to Rs. 1.65 crores—the largest amount paid out during any year since the Corporation's inception.

Of the 166 applications for which loans were sanctioned by the Corporation in 1962-63, 28 were for constructing new premises by existing concerns, 46 were for setting up new concerns and 92 for completing programmes of expansion and manufacturing new products. Of the 46 new concerns to whom loans have been sanctioned, 28 have actually started production. Since its inception, the Corporation has sanctioned loans of Rs. 10.35 crores, of which Rs. 2.56 crores is for 452 small-scale concerns, Rs. 6.46 crores for 234 medium-scale concerns and Rs. 1.29 crores for ten large-scale concerns. Of the total sum of Rs. 9.23 crores disbursed by it, the amount given to the units in Maharashtra is Rs. 5.52 crores. The total amount of loans repaid is Rs. 1.48 crores, leaving an outstanding amount of Rs. 4.08 crores at the end of March 1963. In order to meet its immediate requirements of funds, the Corporation resorted to borrowings from the Reserve Bank of India as well as to taking advantage of the refinance facilities offered by the Refinance Corporation for Industries. The Corporation has also decided to accept deposits from the public. It proposes to replenish its resources by the issue of bonds.

The Corporation raised its lending rate from 6½ percent to 7 percent in July 1962. Its income from interest rose during the year from Rs. 15.42 lakhs to Rs. 24.65 lakhs. Interest paid on deposits, bonds, debentures and borrowings increased from Rs. 7.24 lakhs to Rs. 13.26 lakhs. The Corporation's profit has increased from Rs. 6.09 lakhs to Rs. 8.12 lakhs. After providing Rs. 3.75 lakhs (against Rs. 3.06 lakhs) for taxation, the directors have transferred Rs. 10,000 (against nil) to general reserve and Rs. 75,000 (against Rs. 62,000) to special reserve. The 3½ percent dividend absorbs Rs. 3.50 lakhs. The total amount of subvention that the Corporation availed itself since its inception amounts to Rs. 27.59 lakhs, of which Rs. 9.30 lakhs has been transferred to the Gujarat State Financial Corporation as its share of the liability.

Wages and Productivity

A number of labour problems were discussed at the 14th annual session of the I.N.T.U.C. in Jaipur. Inaugurating the session, the Congress President, Mr. D. Sanjivayya, observed that the concept of minimum and fair wages and the legislative and other measures taken by the Government for achieving these wage standards were only interim steps, and the ultimate goal was a living wage for all workers. But the Congress President did not emphasise that it is not possible to ensure a living wage unless the workers put in hard work and raised their productivity. The impression in labour circles that the employers could pay higher wages even at the present level of productivity is obviously wrong. As things are the wage bill in most industries is beyond their paying capacity and any effort to raise the wage level without a corresponding increase in productivity, will inevitably increase unemployment. The I.N.T.U.C. has passed a resolution that wage boards should be set up for chemical, paper, engineering and power industries.

It has been argued that bonus should not be considered an *ex gratia* payment and the worker

India's Resources

are Precious

WASTE NOT,

WANT NOT

has a right to get bonus in addition to wages. But the proposition that a minimum bonus should be provided for each worker regardless of the profits or losses of the company concerned is hardly defensible. The very object of bonus is to encourage the worker to increase his output and the concept of a minimum bonus irrespective of the productivity of labour, vitiates this basic principle.

In the annual report of the I.N.T.U.C. for 1962-63, which the general secretary, Mr. S. R. Vasavada, presented at the session, it has been recognised that industrial relations in India have improved since the state of emergency was declared, and that there have been no strikes or lock-outs in the country. In fact, as against an average monthly loss of 400,000 man-days because of industrial disputes before the emergency was declared, the loss of man-days has now been reduced to less than 25,000 a month. This shows considerable improvement. Mr. Vasavada has regretted that some employers have made changes in working conditions without prior consultation with labour, and have thus not observed the spirit of the Industrial Truce Resolution. But since some employers had to change the conditions of work in order to adjust production to defence requirements quickly, it is difficult to blame them. The object of both employers and workers should be to maximise production to meet the requirements of the national emergency and any changes made in working conditions to achieve this objective, should not amount to a violation of the spirit of the Resolution. However, the criticism that the public sector enterprises have not yet evolved a satisfactory method of voluntary arbitration is substantially correct. In fact, the creation of a machinery for the public sector enterprises to resolve their industrial disputes by voluntary arbitration is overdue.

Inland Water Transport

The third plan has provided a sum of Rs. 7½ crores for developing inland water transport, against less than Rs. 1 crore actually spent during the two previous plans. But the progress of development schemes relating to inland water transport has been disappointing in the current five-year period. This mode of transport plays an important part in some States like Assam, Orissa and Kerala. It has been estimated that out of over 2½ million tons moved between Assam and Calcutta, nearly half is carried by river. In most States inland water transport has not been properly developed, and there is plenty of scope for developing it on the lines recommended by the Inland Water Transport Committee.

In the first five year plan, the Ganga-Brahmaputra Water Transport Board was set up as a joint venture of the Central Government and the Governments of U.P., Bihar, West Bengal and Assam to co-ordinate their activities in developing transport on the Ganges and the Brahmaputra systems. The Board's other functions are to administer pilot projects for testing the feasibility of operating modern craft on shallow waterways and to conduct topographical and hydrographical surveys for collecting data for future projects. The Bihar Government has proposed to take over some of the operations of the Ganga-Brahmaputra Board. But this may not be advisable. It is only by making the Board more effective that success could be achieved in organising inland water transport on sound lines.

It is necessary to start some more pilot projects on navigable rivers and canal systems. The boats used by private operators on inland waterways are old and dilapidated. There is an almost complete absence of mechanical and electrical aids to help these river crafts. There is also no adequate arrangement for dredging the river and canal beds. In order to overcome these defects, the Government may have to provide financial and technical assistance to private operators. The Transport Development Council at its recent meeting urged the State Governments to organise the operators of small country boats into co-operatives and encourage them to switch over to large mechanised craft. Co-operation can offer a satisfactory solution for the problems of all small and disorganised units, whether in the field of agriculture, industry

or transport. But certain essential conditions such as adequate demand, regular service and organised repairing facilities should be available before co-operatives could effectively solve the problem. Unless the Government helps in providing all these facilities, in devising suitable designs for craft to be used on shallow rivers, and in making adequate finances available to the private operators on inland waterways, the organisation of existing services on co-operative lines or their nationalisation, will hardly improve matters.

Expanding Refinery Capacities

In spite of the shortage of petroleum products in India, the Central Ministry of Mines and Fuel has been persistently resisting the efforts of the three private-sector oil refineries to expand their capacity. At a recent meeting the Planning Commission considered in detail the problems of expanding refinery capacity in both the public and private sectors. The Commission has asked the Indian Institute of Petroleum to make an estimate of the prospective demand at the end of the third plan period.

The Ministry is opposed to the expansion of the private-sector oil refineries because, according to it, the expanded capacity of the four public-sector refineries along with the existing capacity of the three private-sector ones will be enough to meet the internal demand of 15 million tonnes, at the end of the third plan. The Oil Advisory Committee, however, had estimated the demand at some 17 million tonnes. The basis of the Ministry's contention is that after the proposed expansion, the public-sector oil refineries in Barauni and Koyali will have a capacity of 3 million tonnes each, Nunmati refinery 1.25 million tonnes and the Cochin refinery, which is expected to be ready by the winter of 1965, 2.5 million tonnes. So the four public-sector refineries will have a total production capacity of 9.75 million tonnes which, along with the capacity of 7.5 million tonnes in the private sector, will be adequate to meet the Indian demand by 1966. But the snag is that, if past experience is any guide, the public-sector refineries may not be able to expand their capacity to 9.75 million tonnes by 1966. In any case, it is futile to hope that production will be maintained at full capacity. The private-sector refineries should, therefore, be allowed to expand their capacity so that the large amount of foreign exchange, which is now spent on importing petroleum products, might be conserved.

The private-sector refineries have proved their worth, so the Government should not be in two minds about allowing them to expand. The argument that the permission to expand will entail foreign exchange expenditure for importing crude oil does not appear to be valid. By producing various petroleum products, the private-sector refineries will help save more foreign exchange than what will be spent in importing crude oil.

Building More Houses

The Central Government has asked the State Governments to make larger allocations for various housing schemes—subsidised industrial housing, low and middle income housing and rural housing—during 1963-64 and to desist from diverting their allocations to other development projects. In view of the state of emergency and the shortage of building materials like steel and cement, the budgetary provision for housing in 1963-64 had been reduced to Rs. 12 crores. Even before the emergency was declared, many State Governments were diverting the housing funds to other schemes. At the beginning of the third plan, there was a shortfall of about 2.5 million houses in urban areas alone. With population increasing at the rate of 2.1 percent a year, the shortage of accommodation in the first two years of the third plan has become more acute not only in industrial areas but also in other cities and towns.

It is, therefore, a move in the right direction to intensify construction efforts. During 1963-64, the Life Insurance Corporation has agreed to advance a sum of Rs. 4 crores for house-building in addition to the annual allocation of Rs. 10 crores for the third plan period. While the availability of

cheap finance for construction is undoubtedly important, it is not the major difficulty at present. In the case of industrial housing, employers have not been keen on building more houses because of the difficulty in getting materials like bricks, cement and steel at reasonable prices and in sufficient quantities. Furthermore, the rentals which they are allowed to charge for the tenements are not economic. The Government of India has asked the State Governments either to persuade employers to avail themselves of the 75-percent assistance from the Government under the subsidised industrial housing scheme or to pay their part of the contribution (25 percent) to the States for building houses for workers. But this will not apparently solve the problem. A satisfactory solution must aim at providing industrial employers with the requisite materials in sufficient quantities at controlled prices; it must also allow them to charge economic rents for the tenements. If these facilities are not available, even the State Governments will not be able to accelerate the pace of house-building in industrial areas.

The Central Government has asked the States to persuade persons, who have been allotted houses on rent or on hire-purchase basis under the low and middle-income housing schemes, to buy the houses outright by paying the outstanding amounts so that they may be used for building more houses. To popularise the low and middle income housing schemes, it is necessary to liberalise the terms on which the loans are made available, to increase the amount of loans and to reduce the interest charges. Land prices have increased sharply in urban areas during the past few years. So it is necessary for the Government to devise a scheme by which prospective house builders may be able to acquire land at reasonable prices. The municipal corporations and other local bodies should examine the possibility of providing land at reasonable rent on 99 years' lease. Even more important is that supply of bricks, cement, steel and other building materials should be ensured at controlled prices to people who desire to build their own houses.

INDIAN RAILWAYS

IF the public in India were given to the reading of Blue Books, a form of intellectual recreation not popular for certain excellent reasons, there is no doubt as to which part of Mr. Robertson's Report they would turn. They would skip Administration, Government Control, and the attractions of those parts which deal with Railways finance and go straight for the "Working of the Railways." What Mr. Robertson has to say in this important section of his report appeals to everybody who is compelled to use the line. The Commissioner's observations constitute the most scathing criticism from an authoritative source ever written against a hundred evils and defects for which the working of our Indian Railways are conspicuous. It is one thing for the mere passenger to growl, or carp, maybe to swear at, miserable rates of speed and high charges: but when a Special Commissioner feels constrained to condemn in no measured terms then indeed it is impossible that some one may listen to him. Much of what Mr. Robertson has said has often been said before in angry letters to the Editor, and by means of strong denunciations in all places where men—and women—do congregate. But it is something to have it said in the way Mr. Robertson says it who, if he does not always call a spade a spade, generally dubs it a shovel. Mr. Robertson is of opinion, which will be heartily endorsed by everybody, that on the main railway routes at least, the public have a right to expect that they shall be carried in a much shorter time from point to point than they now are. We have just said that Mr. Robertson's remark will be endorsed by everybody. Perhaps we are wrong. It is possible that a large number of the third class passengers rather like the slow and methodical speed of certain of the branch lines, and consider our very mediocre averages on the main routes a marvel. Against this must be set the verdict of busy business men, European and native, merchants, agents, travellers, officials while the time taken in the transit of merchandise, produce and goods is regarded as a grievance by all whom it may concern. The average speed of the fastest passenger trains on Indian railways is a fraction over 31 miles an hour.

A Ditcher's Diary

NOT IN RECENT HISTORY HAS THE DEATH OF A POPE caused as much grief in such diverse circles as that of Pope John XXIII earlier this week. I do not believe that only courtesy or cynicism explains the message sent by Mr. Khrushchev, for while concern for peace is a fairly widespread feeling among all thinking men the Pope was in a peculiarly happy position to speak of it with conviction. Pope John was pretty old when elected; and many thought of him, initially, as a stop-gap incumbent in the high office. Yet he initiated several moves for universal peace and unity among the churches which, he must have known, he would most probably not see fulfilled. It is as a sower of seeds that he will be long remembered. Even as periods of the Khrushchev régime in the Soviet Union witnessed a thaw, in the Vatican too has been discernible in recent years an atmosphere of relaxation, of a holiday from rigidity, of a certain compassion based more on natural humanism than on a body of acquired beliefs as to what is correct and what is not. It was widely believed, for instance, that on the question of family planning Pope John XXIII held views closer to those of most economists and sociologists than those of the orthodox. I have long been sceptical about promises among people with different convictions, which often pass for syntheses. My respect is the greater for those who are prepared to stand by the interests of amity. Pope John's contribution was not to slur over the real differences among the various Christian churches but to emphasise the much larger area of unanimity. Such a point of view, more than a merely passive tolerance, could lead one only to a keener consciousness of the essential oneness of mankind. All religions are not one: we wouldn't have so many if they were; but mankind is at most levels one. Especially on that supreme level—that of survival. This is where our nuclear age was fortunate to have a Pope whose supreme thought was of peace.

WORLD WAR II PRODUCED A NUMBER OF EXCELLENT documentaries: one is still vivid in memory because its title, *London Can Take It*, has since been adapted as a slogan for various purposes such as export promotion, converting "take" into "make". I have often wondered whether a people's capacity to "take" is not a surer measure of its greatness or otherwise than almost any other criterion one can think of. I was led to these reflections when I read last week of the cyclonic storm that hit Chittagong and adjacent areas recently. The damage has apparently been extensive and severe. There was, however, nothing in the reports to sug-

gest that the people of Chittagong "took" it heroically. I don't know why, every word I read conveyed to me a sense of pervasive helplessness. I am not being superior. I always remind myself of the *Punch* cartoon of long ago in which a drowning man was crying "Help, help, I can't swim," and the man walking by soliloquised, "I guess I can't swim either but I am not making such a song and dance about it!" It is ridiculous for a bystander to accuse people in distress of cowardice; and I am doing nothing of the sort. What I am suggesting is that in this sub-continent of joint families and traditional togetherness all things and communities seem to fall apart as soon as a calamity arrives. The nearest relations become strangers and "everyone for himself" drives a whole mass of people into universal disaster or something very like it. That official relief arrives late, if at all, is certainly deplorable; the only use of a Government's behind is that it ought to be kicked as often as possible. There still remains the question of a community helping itself without waiting for Authority to come to its rescue. One of the things Mahatma Gandhi never tired of saying was that the people must not look to the Government for everything; some of his disciples have since abused this to cover up their deficiencies when in power. It may still be true that a people caught helpless every time something catastrophic happens has not quite come into its own.

EVER SINCE I READ OF THE AWARD, TO PRESIDENT Kennedy, of the George Washington Medal as 1963's Father of the Year I have been wondering, without envy, just what he might have done to deserve this undoubtedly great honour. That he has two children and is expecting a third can hardly be a great achievement. There is not an executive in Netaji Subhas Road who has not received petitions from a clerk or two for extra increments on the ground that they have seven—or eleven—children to feed. No, President Kennedy had better not enter for that race at all. The report says that the National Fathers Day Committee—to father committees is a free society's fundamental right—chose Mr. Kennedy "because of his brilliant and courageous leadership of the free world and his humane championship of the rights and dignity of the individual over the entire universe". I am sure all this means something, although I may not know what; but I still don't see what it has to do with being a father. West Bengal since its birth has not had a Chief Minister who was not a bachelor; and the only complaint

I have seen on this score is that, being unmarried, Drs. Ghosh and Roy and Mr. P. C. Sen might for that reason have been insufficiently appreciative of the woes of those having to run largish households. This, surely, is frivolous. Emile Zola, it is said, visited Les Halles long after he had written his celebrated novel on the famous market. Tagore wrote convincingly of the lives of boatmen and post-masters without ever being one. It is a fatal fallacy to imagine that one can write only of that which one can call one's direct and personal experience; in fact those who live intensely have seldom the detachment to observe men and things or the tranquillity in which to write. In the absence of other evidence, therefore, I conclude that the U.S.A.'s National Fathers Day Committee is yet another pressure group which President Kennedy dare not displease by refusing its dubious "honour". Photographers and reporters, I find, were not summoned to record the presentation ceremony for posterity. Well, posterity is all that Fathers Day is about, isn't it? I am still mystified. What on earth can a National Fathers Day Committee have for its aims and objects? Can U.S.I.S. get me a prospectus?

"PERHAPS GRAHAM GREENE SHOULD STICK TO entertainments. He is very good at them": this catty remark of Sarah Gainham's in the *Spectator* last week, very thinly disguised as a compliment, was provoked by a piece written on East Berlin by the distinguished British novelist. Political journalists are to be pardoned for pretending to understand politics, not for claiming a monopoly; and anybody who has read *The Quiet American* or *Our Man in Havana* knows that, for all his preoccupation with the soul and the conscience and all that, Mr. Greene is a shrewd observer of political manoeuvres. As it happens, the *New Statesman* of the same week carries Greene's "Letter to a West German Friend"; and Sarah Gainham's acrid protest seems a shade overdone. Greene's sober, unexcited piece, which I suspect is what infuriates Sarah Gainham, reminds one of the abnormal, almost feverish atmosphere one found in Berlin four years ago. The Wall must have made West Berliners even more excitable; and I think that's a pity. That the position of West Berlin is most unnatural nobody can deny; that life in the beleaguered city should acquire a certain unreality in consequence is quite understandable. Nor is it my intention to withhold from West Berliners admiration for the courage they have often shown. The point I have to make is that a permanently excited mind is not a good judge of things; and journalists who cannot resist the passions of the residents perhaps serve their readers ill. Mr. Greene spent no more than two and a half days in East Berlin; and his report, such as it is, may well be inaccurate in detail. He seems, still, perfectly within his rights to say

Guide for Investors

PHILIPS INDIA MAKES STEADY PROGRESS

THE good effects of the expansion of Philips India Ltd have begun to show in its results. The Company has increased the taxable ordinary dividend from 12 percent for 1961 to 13 percent for the year ended December 1962. It has taken steps to manufacture tungsten and molybdenum wire and tungsten coils in its Bombay factory. These are vital components of electric lamps and are at present entirely imported. Technical collaboration has been arranged with N. V. Philips Gloeilampenfabrieken. In order to finance the scheme, the Government has permitted the Company to issue rights ordinary shares for Rs. 16.66 lakhs at a premium of Rs. 5 a share of Rs. 10 each. The manufacture of light products in the Bombay factory, combined with a satisfactory level of production in the Calcutta factory, has contributed substantially to the turnover. Sales rose from Rs. 6.82 crores to Rs. 8.85 crores. With progressive realisation of the capacity of the manufacturing plants and the gradual improvement in supplies, it should be possible to maintain the trend in sales in future.

The Bombay factory has produced a sizable quantity of fluorescent lamp starters. The production of glow switches and burners for gas discharge lamps has started. The Calcutta factory has successfully realised its production programme for fluorescent light fittings. The Loni factory has set up an integrated programme for manufacturing radio components, and its production has increased. The factory is now meeting the demands of large-scale and small-scale radio manufacturers in addition to meeting the Company's requirements. With a view to overcoming the inadequate supplies from local sources, the ancillary industries are being promoted. The Calcutta factory has acquired an outfit for a tool room which should ensure the supply of mechanical piece parts. Meanwhile, the Company has decided to discontinue the pharmaceutical business which has hitherto constituted only a minor part of its total business. The Company has been collaborating with other manufacturers for producing vital parts and components.

The profit has improved from Rs. 66.20 lakhs in 1961 to Rs. 1.20 crores, after providing Rs. 20.96 lakhs, against Rs. 19.44 lakhs for depreciation, Rs. 3 lakhs (the same) for gratuity reserve, Rs. 5 lakhs (against Rs. 1.50 lakhs) for contingencies reserve, Rs. 1 lakh (against Rs. 2 lakhs) for debtors and stock risks. A sum of Rs. 85.50 lakhs, including Rs. 20 lakhs for the super profits tax, has been provided for taxation. Tax provision was only Rs. 36 lakhs in 1961. The dividend is more than four times covered and offers a yield of 4.9 percent at the present price of Rs. 26.37. Development rebate reserve is allocated Rs. 6.15 lakhs (against Rs. 3 lakhs). The carry-forward is Rs. 1.40 lakhs, against Rs. 1.43 lakhs brought in.

The directors say that if the present high rate of taxation continues, it will affect the future dividend policy and the accumulation of reserves for internal financing. There has been an increase of Rs. 33.60 lakhs in the net value of fixed assets which stands at Rs. 1.99 crores, against Rs. 1.66 crores. Current assets have risen by Rs. 17.72 lakhs. Foreign loans have been obtained for procuring capital goods.

Import licences for capital goods sanctioned so far cover nearly 50 percent of the value of foreign loans. A sum of Rs. 10.60 lakhs has been used up-to-date.

Duncan Brothers Pays the Same

THE expansion schemes of Duncan Brothers and Co. Ltd have made considerable progress. The directors have, however, expressed their doubt whether the Company will be able to develop the several useful projects which have been launched in recent years because of the heavy impact of the last Central Budget on its finances. The wool-combing plant of Isaac Holdens has started producing at the existing installed capacity, and it has been licensed to raise production capacity to 13 million lbs a year. Import licences for a part of the undeveloped capacity have been assured by an allocation of Rs. 67 lakhs from the French credit. The full licensed capacity is expected to be achieved early in 1964. The commercial production of the factory set up by Phillips Carbon Black has begun. The Government has sanctioned a further expansion in the capacity up to 40 million lbs a year. This Company has issued rights ordinary shares in the proportion of one new share for every four held at a premium of 30 percent to raise funds for expansion. Schrader-Scovill Duncan has completed its factory for manufacturing tyre and tube valves. The National-Standard Duncan is setting up a factory for producing bead wire, production from which, it is expected, will begin before the end of 1963. Duncan Brothers will be associated with Phillips Petroleum Company and the Government of India in establishing an oil refinery in Cochin with a capacity of 2½ million tons a year.

A taxable ordinary dividend of 14 percent has been repeated which is more than two-and-a-half times covered. The yield is 9.5 percent at the present price of Rs. 147 a share of Rs. 100 each. The profit is Rs. 35.59 lakhs for 1962, against Rs. 37.24 lakhs for 1961, after providing Rs. 1.35 lakhs (against Rs. 1.07 lakhs) for depreciation. Taxation is allocated Rs. 16.75 lakhs (against Rs. 17 lakhs), general reserve Rs. 5 lakhs (against Rs. 3 lakhs), contingency reserve Rs. 80,000 (against Rs. 55,000 lakhs), and development rebate reserve Rs. 13,000 (against Rs. 20,000). The carry-forward is Rs. 2.42 lakhs, against Rs. 3.47 lakhs brought in.

The Company has been sanctioned by the Controller of Capital Issues to issue 18,000 rights ordinary shares at a premium of Rs. 10 a share and 10,000 redeemable preference shares of Rs. 100 each, carrying a fixed dividend of 6 percent. Although the managed tea companies have done well in 1962, the 1963 production got off to a poor start due to drought. But the weather has since improved, and the prospects for the new season appear to be satisfactory. Most of the estates are being developed and modernised. A progressive change-over to C.T.C. manufacture is taking place. The tea buying department and the tea warehouse department have done well. Although the managed jute Company has fared

well in 1962-63, the prospects for the current year have been cautiously assessed as the operating expenses have increased. The jute mill has expanded its engineering services, and steps have been taken to diversify its production.

Macneill and Barry Pays Less

MACNEILL and Barry Ltd has cut the taxable ordinary dividend from 10.5 percent to 7.5 percent for the year ended December 1962. It is covered more than two-and-a-half times. The yield is 8 percent at the present price of Rs. 93.50 a share of Rs. 100 each. The profit has declined from Rs. 35.11 lakhs in 1961 to Rs. 33.70 lakhs in 1962, after providing Rs. 1.50 lakhs (against Rs. 2.31 lakhs) for depreciation. Taxation is allocated Rs. 13.25 lakhs (against Rs. 14.50 lakhs), general reserve Rs. 6.50 lakhs (against Rs. 4 lakhs) and pension reserve Rs. 1 lakh (against Rs. 75,000). The carry-forward is Rs. 43,205, against Rs. 3.39 lakhs brought in.

There has been a substantial decline in the profits because of the unfavourable trading conditions experienced by some of the old-established companies. So the income from agency commissions and dividends has fallen. The Company has acquired for development purposes the leasehold tenancy of the land in Calcutta formerly owned by Kilburn Properties Ltd and Majerhat Properties Ltd. Rentals from manufacturing units in these properties will show a substantial rise in the current year. The Company has also disposed of its holdings in the three Pakistani tea Companies and it has acquired in exchange a property in Calcutta but the Government of West Bengal has notified its intention of acquiring this property since. The Moraghat Tea Co. Ltd and Dewrance Macneill and Co. Ltd have become subsidiary Companies. The latter Company is a new manufacturing unit established in collaboration with Dewrance and Co. Ltd of the U.K.

Braithwaite Earns More

IN their report for the year ended December 1962, the directors of Braithwaite and Co. (India) Ltd say that the order-book is well-filled. The output is expected to increase further during the current year despite the shortages of steel and welding electrodes. Terms and conditions for obtaining foreign exchange loans from the Industrial Credit and Investment Corporation of India and the Commonwealth Development Finance Company, London, have been finalised. Although the exports of the Company's products have increased, they continue to be hampered by the shortage of raw materials and uncertain delivery dates.

The profit has improved from Rs. 70.48 lakhs in 1961 to Rs. 1.11 crores in 1962, after increasing depreciation from Rs. 5.73 lakhs to Rs. 9.96 lakhs. A taxable ordinary dividend of 14 percent has been declared on the ordinary share capital which has been raised from Rs. 56.60 lakhs to Rs. 1

crore by the issue of new shares. The yield is 4.7 percent at the present price of Rs. 29.50 a share of Rs. 10 each. The dividend is more than seven times covered. Development rebate reserve is allocated Rs. 4.61 lakhs (against Rs. 2.37 lakhs), taxation Rs. 58.43 lakhs (against Rs. 32.25) lakhs and the super profits tax Rs. 16.75 lakhs. General reserve absorbs Rs. 28.80 lakhs (against Rs. 24.50 lakhs), leaving a carry-forward of Rs. 2,757, against Rs. 5,914 brought in.

In his chairman's statement, the details of which were printed in last week's issue of *Capital*, Mr. J. V. Jardine Paterson mentions the need for ploughing back funds to finance modernisation and expansion. The profit has been substantially mopped up by the super profits tax. A substantial amount has been transferred to reserve in order to build funds to repay the foreign exchange loans. Although the output of the Clive works has increased, there is still substantial idle capacity in the structural shop. In order to ensure full use of capacity, the directors suggest that the Government should establish an efficient organisation to lay down priorities for orders. Steps should also be taken to supply the necessary raw materials in time. The wagon-building capacity is fully booked for 18 months. The expansion of the Angus works has been delayed because import licences for bringing the equipment were not received in time. The output of this works has been restricted by the shortages of pig iron and coke. In spite of all the difficulties, production, it is expected, will increase by at least 50 percent during the current year.

Williamson Magor Tea Group Results

THE results of the Williamson Magor group of tea Companies for the year ended December 1962 have been published. The Dufflaghur Tea Co. Ltd (an Assam garden) has increased the taxable ordinary dividend from 25 percent to 30 percent, absorbing Rs. 2.10 lakhs. The yield works out to 11.1 percent at the present price of Rs. 27 a share of Rs. 10 each. The profit has risen from Rs. 3.87 lakhs in 1961 to Rs. 5.15 lakhs in 1962, after providing Rs. 91.44 (against Rs. 76.137) for depreciation. Taxation absorbs Rs. 3.34 lakhs (against Rs. 1.50 lakhs), including Rs. 26,000 for the super profits tax. General reserve is allocated Rs. 2 lakhs (against Rs. 25,500) and development rebate reserve Rs. 14,000 (against Rs. 2,000). The carry-forward is Rs. 92,668, against Rs. 3.22 lakhs brought in. The crop declined from 464,799 kilograms to 403,594 kilograms, but the average sale price rose from Rs. 5.77 to Rs. 6.70 a kilogram. The 1963 crop estimate is for 436,000 kilograms at a cost of Rs. 5.12 a kilogram.

The Lingia Tea Co. Ltd has made a profit of Rs. 3.49 lakhs, against Rs. 1.08 lakhs, after transferring Rs. 50,577 (against Rs. 31,988) for depreciation. The taxable ordinary dividend has been increased from 10 percent to 17.5 percent, absorbing Rs. 1.23 lakhs. Taxation is allocated Rs. 1.75 lakhs (including Rs. 7,000), for the super profits tax, against Rs. 50,000. Reserve receives Rs. 50,000, leaving a carry-forward of Rs. 54,303, against Rs. 36,756 brought in. The crop increased from 290,326 kilograms to 311,895 kilograms and the average sale price from Rs. 6.68 to Rs. 7.70 a kilogram. A crop of 322,000 kilograms has been estimated for 1963 at a cost of Rs. 6.29 a kilogram.

The Soom Tea Co. Ltd (a Darjeeling garden) has paid a taxable ordinary dividend of 40 percent, including an interim of 15 percent, absorbing Rs. 1.50 lakhs. It offers a yield of 11.4 percent at the present

THE DITCHER

price of Rs. 35 a share of Rs. 10 each. The taxable ordinary dividend was 40 percent in 1961, but the share capital was increased from Rs. 3 lakhs to Rs. 4.50 lakhs during the year ended December 1962 by issuing bonus shares. The profit has improved from Rs. 2.67 lakhs to Rs. 3.47 lakhs. Taxation absorbs Rs. 1.68 lakhs (including Rs. 9,000 for the super profits tax), against Rs. 1.08 lakhs. General reserve absorbs Rs. 1.49 lakhs. The carry-forward is Rs. 52,632, against Rs. 1.60 lakhs brought in. The crop declined from 166,630 kilograms to 160,068 kilograms, but the average sale price rose from Rs. 7.38 to Rs. 8.53 a kilogram. The 1963 crop has been estimated at 163,000 kilograms at a cost of Rs. 6.34 a kilogram.

The Chamong Tea Co. Ltd (a Darjeeling garden) has earned a profit of Rs. 49,610, against Rs. 1.11 lakhs, after providing Rs. 10,488 (against Rs. 9,657) for depreciation. A taxable ordinary dividend of 10 percent has been maintained, absorbing Rs. 27,990. Taxation is allocated Rs. 26,000 (against Rs. 44,000), leaving a carry-forward of Rs. 85,394, against Rs. 63,343 brought in. The crop was smaller at 77,090 kilograms, compared with 82,803 kilograms. The average sale price rose from Rs. 8.66 to Rs. 8.74 a kilogram. A crop of 84,000 kilograms has been estimated for 1963 at a cost of Rs. 8.35 a kilogram.

Indo-Burma Petroleum Pays Less

THE Indo-Burma Petroleum Co. Ltd has cut the taxable ordinary dividend from 25 percent to 22.5 percent, including an interim of 10 percent, for the year ended December 1962. It is covered more than two-and-a-half times and works out to a yield of 10.4 percent at the present price of Rs. 21.69 a share of Rs. 10 each. The profit has fallen from Rs. 63.36 lakhs in 1961 to Rs. 54.64 lakhs, after providing Rs. 6.01 lakhs (against Rs. 5.25 lakhs) for depreciation and Rs. 1 lakh towards the National Defence Fund. Taxation is allocated Rs. 31.28 lakhs (against Rs. 31.33 lakhs) and terminal gratuities Rs. 1 lakh (the same). Development rebate reserve receives a sum of Rs. 78,471 (against Rs. 58,073). The carry-forward is Rs. 1.19 lakhs, against Rs. 5 lakhs brought in. Sales on own account were Rs. 1.84 crores, against Rs. 1.89 crores, and sales on consignment account rose from Rs. 11.01 crores to Rs. 12.40 crores.

The directors state that the lower margin on sales is likely to continue in the light of Government measures and competitive conditions in the oil industry. The Government of Burma will take over from the oil companies their remaining investments in the Burma Oil Co. (1954) Ltd. Hence Indo-Burma Petroleum will receive a total sum of Rs. 68.74 lakhs for the take-over. Half of the total sum to be paid by the Government of Burma was received in 1963. In the U.K., the Company has been participating with the British and American Association in the drilling of a further exploration well. Since the end of 1962, the Company has made an investment of Rs. 7 lakhs in the Indo-American Electricals Ltd, Calcutta. Negotiations are in progress for acquiring shares in other companies selected for their growth prospects.

Gohpur Tea Pays More

THE Gohpur Tea Co. Ltd (an Assam garden) has increased the taxable ordinary dividend from 5 percent to 20 percent, absorbing Rs. 1.35 lakhs. The profit has risen from Rs. 78,220 to Rs. 4.64 lakhs, after

transferring Rs. 58,982 (against Rs. 60,962) to depreciation. Taxation, including Rs. 22,000 for the super profits tax, absorbs Rs. 2.90 lakhs (against Rs. 30,000). General reserve is allocated Rs. 1.70 lakhs and development rebate reserve Rs. 1,000. The carry-forward is Rs. 48,690, against Rs. 1.51 lakhs brought in. The crop was 259,394 kilograms, against 254,919 kilograms, and the average sale price rose from Rs. 5.81 to Rs. 7.44 a kilogram. The 1963 crop estimate is for 262,000 kilograms at a cost of Rs. 5.64 a kilogram.

Choonabhutti Tea Pays the Same

THE Choonabhutti Tea Co. Ltd (a Doonars garden) has made a profit of Rs. 2.82 lakhs for the year ended December 1962, against Rs. 2.24 lakhs in 1961, after providing Rs. 1.56 lakhs (against Rs. 1.32 lakhs) for depreciation. A taxable ordinary dividend of 26 percent has been repeated, absorbing Rs. 1.80 lakhs. The yield works out to 9.5 percent at the present price of Rs. 210 a share of Rs. 100 each. Taxation absorbs Rs. 1.26 lakhs (against Rs. 80,000), and development rebate reserve Rs. 6,000 (against Rs. 2,371). The carry-forward is Rs. 43,000, against Rs. 87,572 brought in. The crop was 5,214 quintals, against 5,142 quintals. The average sale price rose from Rs. 4.45 to Rs. 4.69 a kilogram. A crop of 5,300 quintals has been estimated for 1963.

Clive Row Investment Maintains

THE Clive Row Investment Holding Co. Ltd has repeated a taxable ordinary dividend of 7.5 percent, absorbing Rs. 10.41 lakhs for the year ended December 1962. The yield is 8.8 percent at the present price of Rs. 8.50 a share of Rs. 10 each. The profit is Rs. 15.08 lakhs in 1962, against Rs. 14.63 lakhs in 1961. Taxation is allocated Rs. 4.70 lakhs (against Rs. 4.25 lakhs), leaving a carry-forward of Rs. 2.47 lakhs, against Rs. 2.49 lakhs brought in. The investment income has shown a small decline. Rises in the income from the jute and miscellaneous companies have been offset by declines in dividends from tea companies.

Soorah Jute Repeats

THE Soorah Jute Mills Co. Ltd has increased the trading profit from Rs. 8.27 lakhs in 1961 to Rs. 18.14 lakhs for the year ended December 1962. A taxable ordinary dividend of 25 percent has been maintained, absorbing Rs. 3.50 lakhs. It offers a yield of 10.9 percent at the present price of Rs. 22.75 a share of Rs. 10 each. Depreciation is allocated Rs. 2.37 lakhs (against Rs. 2.40 lakhs), development rebate reserve Rs. 27,545 (against Rs. 2,200), general reserve Rs. 1 lakh (against Rs. 2 lakhs) and taxation Rs. 9.90 lakhs (against Rs. 2.60 lakhs). The carry-forward is Rs. 26,425, against Rs. 16,168 brought in. Sales of gunnies rose from Rs. 1.26 crores to Rs. 1.29 crores. Stocks were Rs. 5.08 lakhs (against Rs. 5.04 lakhs).

The directors have referred to the heavy impact of the super profits tax. They have been worried about the disposal of the next jute crop which is expected to be a bumper one. The Indian jute mills will be holding raw jute stocks equivalent to six months' consumption by the end of June 1963. Considering that a mini-

mum price of Rs. 30 a maund has been fixed for the fibre during 1963-64 and that the price of raw jute is much lower in Pakistan, smuggling from the latter country will aggravate the pressure on supplies in India. During the current year, the overseas demand for jute goods has tended to taper off, but the demand from the developing and communist countries may increase. The industry is likely to continue the maximum level of production throughout 1963.

Jeewanlal Repeats Dividend

THE profit of Jeewanlal (1929) Ltd has risen from Rs. 13.84 lakhs in 1961 to Rs. 15.78 lakhs for the year ended December 1962, after providing Rs. 1.91 lakhs (against Rs. 1.53 lakhs) for depreciation and Rs. 38,475 (against Rs. 6,731) for development rebate reserve. A taxable ordinary dividend of 10.5 percent has been repeated which is covered more than one-and-a-half times. The yield is 10.5 percent at the present price of Rs. 10 a share quoted at par. Taxation is allocated Rs. 8.52 lakhs (against Rs. 6.36 lakhs) and super profits tax Rs. 30,500. The carry-forward is Rs. 8,749, against Rs. 32,965 brought in. Sales were Rs. 2.19 crores, against Rs. 2.24 crores. The directors mention that the fabricating plants have worked below their capacities due to the shortage of raw materials. The difficulties will be overcome when the Company's own rolling mills start producing. The Company has applied to the Government for permission to issue new shares of Rs. 78 lakhs to finance its expansion programme.

Voltas to Manufacture Hydraulic Equipment

RELIABLE reports indicate that the Government of India has approved the scheme submitted by Voltas Ltd of Bombay for manufacturing a complete range of hydraulic equipment in collaboration with Schweizerische Industrie-Gesellschaft (S.I.G.) of Switzerland. The items proposed to be manufactured by Voltas cover a wide range of hydraulic equipment like power cylinders, control gear, boosters, accumulators, pressure transmitters, fluid motors, and the hydraulic controlling system used in such industries as machine tools, mining, and earth-moving equipment. The collaboration agreement provides for the payment of a technical know-how fee of 150,000 Swiss francs, royalty of 2½ percent of the net sales price, subject to tax, and research and development fee of 2½ percent of the net sales price, subject to a certain minimum.

The capital equipment of the project is estimated to cost Rs. 42.5 lakhs, of which machinery worth only Rs. 5.5 lakhs is to be of indigenous origin. Machinery worth Rs. 15 lakhs is proposed to be imported under D.L.F. loan arrangements, equipment worth Rs. 17.5 lakhs is to be obtained from Switzerland and equipment valued at Rs. 4.5 lakhs is to be secured from abroad under rupee payment arrangements. In addition, the Company will also need to spend about Rs. 3.2 lakhs a year on imported raw materials until such time as these materials become available from indigenous sources. The value of imported components for experimental purposes is placed around Rs. 3 lakhs. As for the manufacturing programme, the firm will have to import initially components worth Rs. 3.5 lakhs from Switzerland. In subsequent phases, it will achieve an indigenous content of not less than 95 percent. At present, hydraulic equipment is being imported and no capacity has so far

been licensed for the manufacture of such equipment. In view of the present import of these items and the potential utility in achieving higher production, the establishment of facilities for manufacturing hydraulic equipment is considered necessary.

The prospects of exporting such equipment to neighbouring countries are also considered fairly promising. The value of hydraulic equipment to be manufactured by Voltas, when the scheme has been fully implemented, is placed around Rs. 50 lakhs. No firm estimates of demand are available at present, since these items are being imported by a number of industries either as component parts or as original fitment. However, for application in the machine tool industry alone (grinding machines, presses, unit heads, furnaces, etcetera), the current demand is estimated around Rs. 2 crores which is expected to rise to around Rs. 6 crores a year by the end of the third plan.

Voltas has also applied to the Government of India for permission to manufacture core drills, haulages and mine fans in their existing workshop in collaboration with Joy Manufacturing Co. of the U.S.A. The foreign exchange required for the import of components for core drills is Rs. 6.70 lakhs in the first year, Rs. 4.55 lakhs in the second and Rs. 2.25 lakhs in the third. No foreign exchange is required for haulages but for mining fans, the Company will require foreign exchange worth Rs. 2.05 lakhs in the first year and Rs. 1 lakh in the second. The requisite licence is expected shortly.

Outlook for Mahindra and Mahindra

IN spite of a fall of about 10 percent in sales from Rs. 15.43 crores to Rs. 13.89 crores, Mahindra and Mahindra's gross profit for the year ended October 1962 recorded a rise of about 11 percent from Rs. 1.11 crores to Rs. 1.22 crores. This became possible because of rigid control on costs and increased efficiency in the organisation. But while the gross profit is considerably higher, shareholders have suffered because the dividend has been reduced from 15 percent to 12.5 percent, mainly because of the much larger provision for taxation. The Company has had to set aside Rs. 11.26 lakhs for the super profits tax. Not only have shareholders suffered a loss in the amount of dividends, compared with the previous year, but the plough back or generated cash retained in the Company has also declined from Rs. 29 lakhs to Rs. 24 lakhs. In view of all this, it is scarcely surprising that the chairman, Mr. K. C. Mahindra, should have devoted a major portion of his annual speech to the criticism of the Government's taxation policy, especially the super profits tax. (A fuller version appears on a later page in this week's issue of Capital.) Mr. Mahindra's view will be readily endorsed that export drives will have no meaning if fiscal measures and multiple taxes, levies, tolls and surcharges keep on adding to production costs. His suggestion for setting up a Bureau of Information in Delhi for disseminating correct facts about the industrial economy without prejudice or favour to any interests or preconceived notions deserves serious attention. The chairman visualises this agency not as a platform but as an organ for publicising the trend and the course of industrial development, the factors which advance or retard growth, the principles which govern the minds of people engaged in such vocations.

In view of the Company's expansion and diversification plans, the chairman views the future with hope and confidence. He assured the share-

holders that the Company's current working is "as satisfactory as one could hope for." Because of the emergency restriction, he was unable to give precise figures of the number and value of vehicles manufactured since the end of October. But he informed shareholders that the total outlay on the jeep expansion programme to raise the output from 5,500 vehicles to 10,200 vehicles is estimated to cost Rs. 2 crores. Mahindra and Mahindra's jeep production programme continues to be under "strict scrutiny controls" but on repeated representations, the Government had released about 20 percent of the Company's production of vehicles in the current year for civilian uses although priority of user-allotment will continue to be controlled by the Government. The chairman stated that the steel division had not been as active during the last six months as in the previous year, but it is due to the untiring effort of the personnel of the division that the alloy steel project has matured. The machine tool division has broadened the base of its operations by including the production of some indigenous machines as well as by promoting the beginning of manufacture of tools and gauges in a small way.

Mr. Mahindra added that in spite of the risk involved in promoting large schemes, the Company had decided to go ahead with the alloy steel and tractor projects. Both these schemes will need substantial finances and the Company hopes to collect them from the market before the next annual general meeting. Replying to shareholders' queries, the chairman said that Mahindra and Mahindra proposed to offer to its existing holders shares of the value of Rs. 20 lakhs in Mahindra Ugine Steel Co. Ltd which has been formed to implement the alloy steel project in Khapoli. The issued capital of the new Company will be Rs. 3 crores, including Rs. 50 lakhs in preference shares. Mahindra and Mahindra and the French collaborators will each take up shares worth Rs. 41.50 lakhs while the International Finance Corporation had agreed to subscribe shares worth Rs. 40 lakhs. The balance of Rs. 1.27 crores will be offered for public subscription. Mahindra and Mahindra will act as sole distributors for special steel to be manufactured by the new Company while it will act as secretaries and treasurers for the International Tractor Company.

Digvijay Cement Results Impress

ALTHOUGH the dividend has only been maintained at Rs. 10 a share, taxable, the preliminary report on the working of Shree Digvijay Cement Co. Ltd for 1962, shows all-round substantial improvement over the previous year's performance. The increase in clinker production is small—from 423,000 metric tons to 426,000 metric tons, but the production of cement shows an impressive rise from 404,000 metric tons to 472,000 metric tons and despatches of cement are also substantially higher at 475,000 metric tons, against 403,000 metric tons in 1961. The gross profit which had risen from Rs. 43.93 lakhs in 1960 to Rs. 65.27 lakhs in 1961 is further up by about 16.5 percent at Rs. 76.09 lakhs. After providing Rs. 21.75 lakhs (against Rs. 18.85 lakhs) for depreciation and Rs. 17.65 lakhs (against Rs. 14.50 lakhs) for taxation and deducting other charges, the net profit amounts to Rs. 32.84 lakhs, against Rs. 28.21 lakhs in the preceding year. Allocation to the development rebate reserve has been raised from Rs. 6.23 lakhs to Rs. 11.21 lakhs, presumably due to the coming into production of the asbestos cement pipe and sheet plant. The rehabilitation, re-

search and development reserve gets Rs. 4.95 lakhs, against Rs. 77,150.

The preference dividend absorbs Rs. 5.19 lakhs and equity dividend Rs. 13.49 lakhs, against Rs. 13.44 lakhs, including the proportionate distribution on the shares allotted to foreign collaborators. After all these appropriations, there remains a surplus of Rs. 56,953 to be carried forward, against Rs. 2.58 lakhs brought in. The working of the Company during the current year should show further improvement as the results would reflect the full year's production of the asbestos cement plant in Ahmedabad which was commissioned in November 1962. The Rs. 100-paid share of the Company is currently quoted around Rs. 158, offering a gross return of about 6.6 percent.

Brady Engineering Plans Expansion

THE Brady Engineering Co. Ltd, Bombay, has asked for the Government of India's permission to effect substantial expansion of its existing manufacturing facilities and to undertake the production of new articles. The Company proposes to increase the production of spur gear pulley blocks from 1,800 to 2,520 units a year, of hand-operated cranes from 60 to 156 and of elevating trucks from 300 to 600. In addition, the Company wishes to start the manufacture of 240 worm gear pulley blocks a year, 600 electric hoist blocks, 120 E.O.T. cranes and 8,000 meter hand and loan chains. The expansion scheme will require an additional capital of Rs. 30 lakhs. The Company is already collaborating with Harbert Morris Ltd of the U.K. The collaboration agreement is proposed to be extended to cover new items. For the expansion of the existing facilities, apart from raw materials and a limited quantity of machine tools, no other component imports are envisaged. For the manufacture of electric hoist blocks and E.O.T. cranes, however, the Company will need to import initially a limited percentage of components. The Government, it is understood, has approved the Company's expansion plans. The necessary licence is likely to be issued shortly.

Same from Mukand Iron on Increased Capital

THE directors of Mukand Iron and Steel Works Ltd have recommended a dividend of 12 percent, that is, Rs. 1.20 a share, on ordinary shares for the year ended March 1963, the same as in the previous year. They have also recommended a proportionate dividend of 60p a share on 100,000 new shares issued during the year. The dividend on deferred shares is, however, proposed to be raised from Rs. 26.70 to Rs. 29.94 a share of Rs. 10. The preliminary figures about the working results, which have been released along with the dividend announcement, show that the Company has fared much better than in the previous year. The gross profit, for 1962-63, is up by about 9 percent from Rs. 61.43 lakhs to Rs. 67 lakhs. After providing Rs. 15.25 lakhs (against Rs. 11.52 lakhs) for depreciation and Rs. 29.75 lakhs (against Rs. 25 lakhs) for taxation, the net profit amounts to Rs. 22 lakhs, against Rs. 24.91 lakhs in the previous year. The directors have transferred Rs. 4.25 lakhs (against Rs. 4 lakhs) to development rebate reserve and provided Rs. 26,411 (against nil) for bad and doubtful debts, leaving a balance of Rs. 17.49

Swadeshi Mills to Make Laminated Plastics

SWADESHI Mills Co. Ltd—a Tata concern—has asked for the Government of India's permission to undertake the manufacture of 24 million metres a year of laminated plastics which is a special water and acid-proof packaging material for textiles and other goods. The basic materials will be paper, cloth and metallic foils, and coating will be effected with alkathene and polythene plastic materials. All these materials are available within the country. The Company will, however, need to spend about Rs. 60 lakhs in importing the Oerlikon extrusion coating plant which is likely to be obtained from Switzerland. The Company is said to have pointed to the Government that if the necessary foreign exchange cannot be made available from free foreign exchange sources, the textile group of Companies of Tatas will be able to cover the foreign exchange out of their export earnings. Reliable reports indicate that the Government of India has approved Swadeshi Mills' application and that the requisite licence will be granted shortly. Apart from foreign exchange, the other main consideration with the Government concerning Swadeshi Mills' scheme for laminated plastics has been the supply of polyethylene within the country. Under the existing policy, 25 percent of polyethylene production is reserved for raw material manufacturers themselves and the balance is equally divided between large-scale and small-scale sectors. The capacity already licensed for polythene moulding powder is 17,500 tons. The Swadeshi Mills will need 300 tons of polyethylene a year for manufacturing 24 million metres of laminated plastics.

Lakshmi-Vishnu Mills Disappoints

LAKSHMI-Vishnu Cotton Mills Ltd reports disappointing results for 1962. While sales are down by only 6.8 percent from Rs. 5.81 crores to Rs. 5.41 crores, the gross profit has fallen by as much as 51 percent from Rs. 40.01 lakhs to Rs. 19.41 lakhs. Since the profit is converted into a net loss after making provisions for depreciation and development rebate, the dividend has had to be skipped. After providing Rs. 13.93 lakhs (against Rs. 10.25 lakhs) for depreciation, Rs. 8 lakhs (against Rs. 1.12 lakhs) for development rebate and nil (against Rs. 7.50 lakhs) for taxation, the Company's accounts show a net loss of Rs. 2.53 lakhs, against a profit of Rs. 21.14 lakhs in 1961. Together with the loss of Rs. 8.14 lakhs brought forward, the aggregate loss amounts to Rs. 10.67 lakhs. After bringing in Rs. 6,078, being the excess amount set aside for the 7 percent second cumulative preference dividend, the directors have carried forward a loss of Rs. 10.61 lakhs.

The directors, however, propose to pay the dividend on the two classes of preference shares amounting to Rs. 1.75 lakhs out of general reserve. They state in their report that the year 1962 has been one of reorganisation and modernisation. To obtain more economic production in each unit, an interchange of machinery has been carried out whereby one of the units now confines its production mainly to superfine varieties and the other to medium and coarse varieties. The processing departments, formerly located in various parts of both the units, have been brought under one roof. The separate workshops and foundries of the two units have been amalgamated

into one. New machinery installed during the year is of the order of Rs. 53.11 lakhs. Further machinery worth about Rs. 25 lakhs, it is expected, will be brought into commission during the current year. The Company has been granted a licence for the installation of 31,960 additional spindles for balancing purposes. The directors anticipate that the unification and modernisation carried out in 1962 will bear fruit in the years to come. The Rs. 100-paid share of Lakshmi-Vishnu Cotton is quoted nominally around Rs. 98.

New India Industries Does Well

THE New India Industries Ltd has reported encouraging results for 1962. In spite of a modest increase in sales from Rs. 1.13 crores to Rs. 1.15 crores, the gross profit has recorded an impressive increase of about 40 percent from Rs. 16.78 lakhs to Rs. 23.55 lakhs. The performance is all the more encouraging because the Company's factories remained closed for a fortnight during January and February for want of coal. After providing Rs. 1.29 lakhs (against Rs. 44,000) for development rebate, Rs. 4.33 lakhs (against Rs. 3.61 lakhs) for depreciation and Rs. 9.25 lakhs (against Rs. 6.10 lakhs) for taxation, the net profit amounts to Rs. 6.86 lakhs, against Rs. 5.33 lakhs in the previous year. Out of this, Rs. 6.64 lakhs (against Rs. 5 lakhs) has been set aside for general reserve. After including Rs. 43,203 brought forward and Rs. 76,785 being excess provisions written back, the directors have used Rs. 1.29 lakhs for the proposed preference dividend, leaving a surplus of Rs. 14,368 to be carried forward.

For the second year in succession, the directors have decided to skip the ordinary dividend but propose to issue bonus shares instead again. Last year, they capitalised Rs. 3.65 lakhs and issued bonus shares in order to conserve the cash resources to meet the cost of the photographic paper project. This year again, the directors propose to capitalise Rs. 3,99,800 from general reserve and issue bonus shares in the ratio of one share for every ten held. The bonus issue is subject to the consent of the Controller of Capital Issues. The directors state that the working of the camera factory showed further improvement, with production rising from 27,405 units to 30,788 units. The trial production of photographic paper started in February 1963 and regular production began in March.

Elecon Engineering Makes Progress

THE directors of the Elecon Engineering Co. Ltd state in their report for 1962 that the five main factory sheds and other buildings have been completed and the administrative block, which is under construction, will be ready soon. The machinery obtained from indigenous sources was installed at Vallabh Vidyanagar during the year. The production of conveyors and idler sets commenced during May-June 1962. Due to national emergency, there was some delay in the issue of import licences of certain machinery. But the machinery for the conveyor and idler sets divisions is now being shipped and the rated capacity is likely to be achieved before the end of the current year. The production of gears is expected to commence by early next year.

The directors add that the Company has orders valued at over Rs. 1 crore for the supply of conveyors and idler sets. Between 1st January and 26th April of the current year, orders for the supply of capital equipment

valued at Rs. 10.83 lakhs were placed, out of which orders worth Rs. 1.47 lakhs have been executed. The gross block of the Company increased during the year from Rs. 11.75 lakhs to Rs. 40.62 lakhs and the net block from Rs. 10.48 lakhs to Rs. 36.91 lakhs. The Company's sales rose from Rs. 21.21 lakhs to Rs. 27.63 lakhs. The working results show a net loss of Rs. 2.34 lakhs, after providing Rs. 2.44 lakhs for depreciation and Rs. 2.26 lakhs for development rebate reserve. Adjusting the surplus of Rs. 7,785 brought forward from the previous year, the debit balance of Rs. 2.26 lakhs is being carried forward. The Rs. 75-paid share of Elecon Engineering is currently quoted around Rs. 48.

Modern Mills Pays the Same

DESPITE an increase of nearly 7 percent in the sales from Rs. 2.33 crores to Rs. 2.49 crores, the gross profit of Moderns Mills Ltd, Bombay, for the year ended October 1962 is down by about 8.2 percent from Rs. 29.83 lakhs to Rs. 27.37 lakhs. The dividend has been maintained at 12 percent, that is, Rs. 6 a share of Rs. 50, subject to tax. The provision for depreciation has been raised from Rs. 7.84 lakhs to Rs. 9.29 lakhs and for development rebate from Rs. 70,000 to Rs. 1.60 lakhs. Taxation accounts for Rs. 9.24 lakhs, against Rs. 11.80 lakhs in the preceding year. A sum of Rs. 83,000 has also been set aside for meeting the liability for the super profits tax. No provision has been made for the general reserve which received Rs. 4 lakhs in the preceding year. The directors propose to create a dividend reserve with an amount of Rs. 5.58 lakhs to start with. Out of this, the proposed dividend of Rs. 6 a share on 92,947 shares absorbs Rs. 5,57,682. The Rs. 50-paid share of Modern Mills is quoted nominally around Rs. 51.

Sivanandha Mills Maintains

ALTHOUGH there was a substantial increase in sales and profits of Sivanandha Mills Ltd for the year ended December 1962, the directors have maintained the dividend at 26 percent. The net profit amounts to Rs. 18,31,465.03, after providing Rs. 4,68,148.93 for depreciation, Rs. 2,03,718.56 for managing agents' remuneration and Rs. 1,43,635 for development rebate, compared with Rs. 11,64,874.88 for 1961, after providing Rs. 4,15,591.48 for depreciation, Rs. 1,38,492.36 for managing agents' commission and Rs. 1,35,327 for development rebate.

With the amount of Rs. 5,185.58 brought forward from the previous year, the total available for appropriation comes to Rs. 18,36,650.61. Out of this, the provision for taxation amounts to Rs. 12,60,000 (against Rs. 5,30,000). A sum of Rs. 2,00,000 is transferred to general reserve (against Rs. 3,50,000). The proposed dividend of 26 percent will absorb Rs. 2,60,000. A balance of Rs. 22,936.48 is carried forward.

Good Results from India Reinsurance

INDIA Reinsurance Corporation Ltd has reported encouraging results for 1962, with the gross premium income up by about 16 percent from Rs. 5.06 crores to Rs. 5.87 crores. After processing this premium and after fulfilling the statutory obligations to companies, the net premium written by the Corporation amounts to Rs. 3.28 crores, against Rs. 2.59

crores in the previous year. The gross premium income of the fire department is placed at Rs. 3.06 crores; the net premium income amounts to Rs. 1.36 crores, against Rs. 1.14 crores in 1961. Net claims paid and outstanding amounted to Rs. 62.20 lakhs, against Rs. 48.91 lakhs in the previous year. Reserves are up by Rs. 11.04 lakhs at Rs. 68.04 lakhs. The gross premium income of the marine department is placed at Rs. 1.40 crores. The net premium written amounts to Rs. 74.12 lakhs, against Rs. 59.68 lakhs in 1961. Net claims paid and outstanding in this department amounted to Rs. 55.01 lakhs, against Rs. 38.90 lakhs. Reserves increased by Rs. 14.44 lakhs to Rs. 74.12 lakhs. In the miscellaneous department, the gross premium amounted to Rs. 1.41 crores. The net premium amounted to Rs. 1.18 crores, against Rs. 85.17 lakhs. Net claims paid and outstanding amounted to Rs. 50.57 lakhs, against Rs. 33.61 lakhs in the previous year. Reserves increased by Rs. 16.44 lakhs to Rs. 59.03 lakhs. The total departmental reserves in relation to the fire, marine and miscellaneous business totalled Rs. 2.01 crores, against Rs. 1.59 crores in 1961, showing an increase of 26.4 percent over the year. The Corporation earned a gross profit of Rs. 19.22 lakhs, compared with Rs. 13.29 lakhs in the previous year. This, together with Rs. 2.58 lakhs brought forward, amounts to Rs. 21.80 lakhs. Appropriations include taxation Rs. 6 lakhs (against Rs. 3.50 lakhs), reserve for depreciation on investment Rs. 4.16 lakhs (against nil) and general reserve Rs. 3.50 lakhs (against nil). The dividend has been maintained at 8 percent (Rs. 40 a share), subject to tax, which absorbs Rs. 8 lakhs (the same), leaving a small surplus of Rs. 11,000 to be carried forward.

In his statement circulated along with the annual report, the chairman, Mr. A. D. Shroff, says that the Corporation has successfully maintained the satisfactory growth pattern established in the previous year. The increase in the premium income in 1962 is comparable with that achieved in the preceding year, but due to the larger premium base, the percentage increase is small. In the marine section, experience, as far as the cargo business is concerned, was marginal as usual, while the hull business showed a handsome profit. Mr. Shroff says that a notable event in Indian shipping has been the formation of the Jayanti Shipping Co. Ltd which proposes to acquire ships with a total deadweight tonnage of 500,000 by 1964. The Jayanti fleet is expected to augment the hull premium income in India by about 30 percent. In the miscellaneous section, 1962 was again a very favourable year. Motor workmen's compensation and certain sundry classes of miscellaneous business showed "satisfactory results" and burglary, cash-in-transit, personal accident and such other classes of business showed "good profitability".

Share Offer by Hind Auto

HIND Auto Industries Ltd, which proposes to set up a factory in Lucknow (U.P.) for manufacturing various motor-car components, namely, tie rod ends, universal joint couplings, water pump repair kits, king bolts, spring shackle bolt and pins, crown wheels and tail pinion, is offering 151,900 equity shares of Rs. 10 each and 50,000 9.5 percent cumulative redeemable preference shares of Rs. 10 each for public subscription. (Fuller details appear on a later page in this week's issue of Capital.) The list will open on 10th June and close on 17th June or earlier but not before 12th June. The West German firm of Alfred Sell Autoteilefabri G.m.b.H. is collabora-

rating in the venture to assist in the manufacture of tie rod ends, king bolts and spring shackle bolt and pins. The firm has agreed to participate in the share capital and has given to the Company the rights of export of its products to all countries except Europe and the whole of the American continent including Canada and West Indies.

For the manufacture of the rest of the items, Hind Auto is negotiating for collaboration with reputed manufacturers of West Germany and the U.S.A. The collaboration agreement is expected to be finalised shortly. The Industrial Finance Corporation of India has in principle sanctioned a loan in deutschmarks equivalent to Rs. 14 lakhs which will help the import of capital goods. The Company has already received import licences to the value of Rs. 12.65 lakhs. The Company has an authorised capital of Rs. 1 crore, made up of Rs. 95 lakhs in equity shares and Rs. 5 lakhs in preference shares—11 of Rs. 10 each. The directors and their friends have already subscribed for 69,340 equity shares. The present issue consists of 240,660 equity shares and 50,000 preference shares. Out of this, equity shares of the value of Rs. 42,000 have been reserved for allotment to the foreign collaborators and equity shares of the value of Rs. 8.46 lakhs are being taken up by the directors and their friends and associates. The remaining 151,900 equity shares and 50,000 preference shares are now being offered for public subscription. The entire issue has been undertaken.

Universal Fire Pays Less

THE Universal Fire and General Insurance Co. Ltd has suffered a substantial setback in its working results for 1962. The dividend has had to be reduced from 20 percent to 15 percent—from Rs. 2 to Rs. 1.50 a share. Even for the payment of the reduced dividend, the Company has had to withdraw Rs. 40,000 from general reserve. Although the total premium income is down only slightly from Rs. 41.23 lakhs to Rs. 41.01 lakhs, the profit has declined sharply from Rs. 4.22 lakhs to Rs. 3.06 lakhs as a result of the fall in the profit of the fire department from Rs. 3.83 lakhs to Rs. 2.45 lakhs and the increase in the loss of the accident and miscellaneous departments from Rs. 44,100 to Rs. 56,265. The loss of the marine department has, however, declined from Rs. 36,390 to Rs. 3,148. In addition to the decline in the profit, the Company has had to provide a larger sum for depreciation on investments with the result that it has not been able to add anything to general reserve. The net premium income from the fire department amounted to Rs. 26.90 lakhs, against Rs. 26.64 lakhs. Claims amounted to Rs. 11.66 lakhs. After allowing for commissions, expenses, etcetera, the profit amounted to Rs. 2.45 lakhs. The net premium from the miscellaneous department amounted to Rs. 12.42 lakhs, against Rs. 12.87 lakhs. Claims amounted to Rs. 7.14 lakhs and the loss to Rs. 56,265. The working of the marine department resulted in a loss of Rs. 3,148. The net premium income was Rs. 1.66 lakhs, against Rs. 1.70 lakhs. The claims amounted to Rs. 71,611. Reserve for unexpired risks has been maintained at 50 percent in the fire, accident and miscellaneous departments and at 100 percent in the marine department.

After bringing in a surplus of Rs. 21,495 (against Rs. 30,375) from the previous year and transferring Rs. 40,000 from general reserve, the disposable surplus amounts to Rs. 3.68 lakhs. Out of this, Rs. 40,000 (against Rs. 1.80 lakhs) has been provided as a reserve for taxation and Rs. 13,107

(against nil) as reserve for bad and doubtful debts. Reserve for depreciation on investment is allocated Rs. 2.02 lakhs (against nil). After providing for the proposed dividend, which absorbs Rs. 96,690, there remains a small surplus of Rs. 14,203 to be carried forward.

Chemo-Pharma Results Impress

CHEMO-PHARMA Laboratories Ltd has done exceedingly well in 1962, although the dividend has just been maintained at 12 percent, less tax, with a proportionate distribution on the new shares issued during the year. Against an increase of about 37 percent in sales from Rs. 41.93 lakhs to Rs. 57.51 lakhs, the gross profit has shot up by as much as 176 percent from Rs. 4.36 lakhs to Rs. 12.05 lakhs. Provision for depreciation has been raised from Rs. 1.04 lakhs to Rs. 1.27 lakhs, for development rebate reserve from Rs. 22,004 to Rs. 31,075 and for taxation from Rs. 1.27 lakhs to Rs. 4.90 lakhs. In addition, the directors have provided Rs. 1.77 lakhs (against nil) for the super profits tax. The allocation to general reserve has been raised from Rs. 30,000 to Rs. 1.50 lakhs. After providing for the proposed dividend, which absorbs Rs. 1.30 lakhs (against Rs. 1.20 lakhs), there remains a surplus of Rs. 12,818 to be carried forward, against Rs. 672 brought in.

The directors state in their report that specialised products manufactured in collaboration with Lakeside Laboratories and the Endo Drug Corporation, both of the U.S.A., are showing an upward trend and have found good response in the market. The Company is making continuous efforts to obtain a larger foreign exchange allocation for the import of raw materials to achieve increased production. But the directors add that the situation created by the Chinese aggression and the need for diversion of available foreign exchange for defence purposes may not enable the Company to show the same rate of progress during the current year.

B. I. G. Insurance Maintains

THE British India General Insurance Co. Ltd has reported satisfactory results for 1962. The dividend has been maintained at 15 percent. Although the aggregate net premium income of all departments—fire, marine and miscellaneous—shows only a modest increase from Rs. 1.22 crores to Rs. 1.24 crores, the gross profit has gone up by about 26.7 percent from Rs. 5.91 lakhs to Rs. 7.49 lakhs in spite of the loss in the marine department. The improvement in the overall results is due mainly to the better performance of the fire department which shows a profit of Rs. 4.75 lakhs, against Rs. 3.71 lakhs in 1961. The miscellaneous department, which suffered a loss of Rs. 9,959 in 1961, has made a profit of Rs. 43,408 in 1962. But it is the other way round in the case of the marine department which has incurred a loss of Rs. 69,190, compared with a profit of Rs. 7,780 in the previous year. The net premium income of the fire department is slightly lower at Rs. 49.39 lakhs, against Rs. 50.03 lakhs, and the loss ratio has risen from 37.77 percent to 37.91 percent. The net premium income of the marine department has come up from Rs. 7.65 lakhs to Rs. 8.67 lakhs. The loss ratio is higher at 82.53 percent, against 71.40 percent. The net premium income of the miscellaneous department is higher at Rs. 66.15 lakhs, against Rs. 64.40 lakhs, but the claims ratio has gone up from

60.70 percent to 63.85 percent. Reserve for unexpired risks has been maintained at 50 percent in the fire and miscellaneous departments and at 100 percent in the marine department.

After providing Rs. 2.80 lakhs the Company's profit for 1962 is placed at Rs. 4.69 lakhs, against Rs. 3.71 lakhs in the previous year. The income earned by way of interest and dividend amounted to Rs. 2.81 lakhs, against Rs. 2.74 lakhs. Allocations include depreciation reserve Rs. 75,000 (against nil), gratuity reserve Rs. 40,000 (the same) and general reserve Rs. 60,000 (against nil). The proposed dividend absorbs Rs. 3 lakhs. Total funds of the Company at the end of 1962, including the paid-up capital of Rs. 20 lakhs, amounted to Rs. 1.08 crores.

National Peroxide Cuts Dividend

THE directors of National Peroxide Ltd have reduced the dividend for 1962 from Rs. 20 to Rs. 12 a share, less tax. In spite of a small increase in the sales of hydrogen peroxide and sodium perborate from Rs. 38.98 lakhs to Rs. 42.02 lakhs, the Company's gross profit is lower at Rs. 20.32 lakhs, against Rs. 21.22 lakhs in 1961. With Rs. 2.52 lakhs brought forward from the previous year, transferring Rs. 1 lakh from general reserve and including Rs. 68,174 being the excess provision for taxation in the previous year, the disposable surplus amounts to Rs. 24.52 lakhs. Appropriations include depreciation Rs. 7.72 lakhs (against Rs. 6.71 lakhs), adjustment of depreciation relating to previous years Rs. 2.65 lakhs (against nil), development rebate reserve Rs. 2,000 (against Rs. 25,000), taxation Rs. 6.58 lakhs (against Rs. 5.91 lakhs) and dividend Rs. 4.32 lakhs (against Rs. 7.20 lakhs).

The production of hydrogen peroxide increased from 1,592 tons to 1,787 tons and sales amounted to 1,582 tons, against 1,508 tons. The production of sodium perborate increased from 101 tons to 326 tons and sales rose from 97 tons to 333 tons. The Company has built up a substantial export market for its products. It earned Rs. 4.51 lakhs of foreign exchange on the f.o.b. basis. Exports of hydrogen peroxide amounted to 229 tons and of sodium perborate to 72 tons. Against these exports, the Company received incentive import licences for raw materials of the value of Rs. 2.28 lakhs. National Peroxide has requested the Government for a licence for the installation of an auto oxidation plant which is proposed to be located near Bombay. The rated capacity of the new plant is envisaged at 300 tons (in terms of 35 percent peroxide strength) to be increased progressively to 6,000 tons a year.

Poor Results from Mogul Line

THE Mogul Line Ltd has fared badly in 1962, so the dividend has had to be reduced from 7½ percent to 6 percent, less tax. While earnings from passage money, freight, etcetera, are down by about 7.2 percent from Rs. 1.79 crores to Rs. 1.66 crores, the Company's gross profit has declined by nearly 17 percent from Rs. 58.55 lakhs to Rs. 48.63 lakhs. After providing Rs. 12.55 lakhs (against Rs. 21.21 lakhs) for depreciation and Rs. 9 lakhs (against Rs. 20 lakhs) for taxation, the net profit is shown at Rs. 27.08 lakhs, against Rs. 17.34 lakhs in 1961. A sum of Rs. 1 lakh (against Rs. 1.50 lakhs) has been set aside for general reserve while Rs. 19.85 lakhs (against Rs. 10 lakhs) has been allo-

cated to reserve for special surveys. The proposed dividends will absorb Rs. 6.07 lakhs, against Rs. 7.58 lakhs, leaving a surplus of Rs. 47,612 to be carried forward, against Rs. 31,995 brought in.

Sakthi Pipes to Enter Market

SAKTHI Pipes Ltd, a new Company formed to undertake the manufacture of pipes and tubes of cast iron, other metals and cement, will shortly enter the capital market to raise Rs. 54 lakhs through the issue of equity and preference shares. The Company has been granted a licence to manufacture 50,000 tons of cast iron spun pipes a year. It has received an import licence of the value of Rs. 64 lakhs on condition that it will export pipes worth Rs. 75 lakhs up to 1967. The plant is proposed to be located in Elavoor, Pollachi, Madras State. The Company has entered into a technical collaboration agreement with Compagnie Generale Des Conduites D'Eau, Liege, Belgium. If all goes well, the plant is likely to go into production by about the middle of next year. The project is estimated to cost Rs. 1.71 crores, of which Rs. 64 lakhs will be spent on imported plant and Rs. 16 lakhs on indigenous machinery. The capital outlay will be financed by a foreign exchange loan of Rs. 64 lakhs from the Industrial Credit and Investment Corporation of India, the capital issue of Rs. 90 lakhs and borrowings of Rs. 17 lakhs.

The Company has an authorised capital of Rs. 1 crore, made up of Rs. 75 lakhs in equity shares of Rs. 100 each and Rs. 25 lakhs in 9.3 percent redeemable cumulative preference shares of Rs. 100 each. The Company has already issued 24,810 equity shares to directors and their friends. It now proposes to issue 47,190 equity shares and 18,000 preference shares, out of which 7,190 equity shares will be allotted to the directors and their friends and 4,000 equity shares to the Life Insurance Corporation which will also subscribe for 8,000 preference shares. The remaining 36,000 equity shares and 18,000 preference shares are to be offered for public subscription in the near future. Mr. K. R. Sundaram Iyer will be the chairman of the Company and Sakthi Enterprises will act as managing agents.

Indian Detonators Share Offer

INDIAN Detonators Ltd, which is setting up a factory in Kokutpally, near Hyderabad, for manufacturing detonators used as explosives in mining and excavation, is offering 15,000 equity shares of Rs. 100 each at par for public subscription. The list will open on 10th June and close on 20th June or earlier but not before 12th June. The entire public issue has been underwritten. The Company's issued capital is Rs. 30 lakhs, all in equity shares, of which shares of the value of Rs. 15 lakhs have already been subscribed. The Company has been licensed to set up a plant with an annual capacity of 40 million ordinary detonators and 24 million electric detonators. At a later stage, it will manufacture 20 million feet of detonating fuse on a two-shift basis. The entire project is estimated to cost Rs. 60 lakhs. It will be financed partly by a share capital of Rs. 30 lakhs and partly by bank borrowings. The Company has entered into an agreement with Komplex Trading Company of Hungary for supplying technical know-how, designs and plant and machinery. The import

licence for machinery of the value of Rs. 30.97 lakhs on rupee account has been received, and orders have also been placed.

The Andhra Pradesh Government has released 125 acres of land for the factory's use, and negotiations for acquiring another 115 acres are in progress. If all goes well, the factory is expected to go into production by about the middle of next year. The entire requirements of detonators are at present being imported, and the bulk of this trade is handled by the Company. The consumption of explosives is rapidly increasing and the current demand is placed at more than two times the licensed capacity of the Company. The marketing of the products is, therefore, unlikely to present any problem to Indian Detonators. The latter has been able to secure import licences worth Rs. 1.25 crores for the import of detonators, safety fuses, etcetera. Sales during the year ended June 1963 are estimated at Rs. 80 lakhs, against Rs. 13.56 lakhs. The Company had declared a dividend of 6 percent for 1961-62. The board of directors includes Mr. C. C. Desai (chairman), Mr. A. N. Shah, Mr. N. B. Vakil, Mr. B. M. Grover, Prince Mukarram Jah Bahadur, Mr. K. N. Nair, Mr. Ashok Desai, Mr. Itaat Hussain and Mr. Varadarajan (managing director).

Vishal Steel Tubes: a New Venture

VISHAL Steel Tube Co. Ltd—a new company under registration—which has been promoted by Chimanlal and Brothers of Bombay in collaboration with a German firm is expected to come to the capital market some time during the last quarter of the year with a public issue of Rs. 90 lakhs, all in equity shares of Rs. 100 each. The Company has been licensed to manufacture 96,000 tonnes of welded and seamless steel tubes a year. The project, it is estimated, will involve a capital outlay of Rs. 12 crores. The Company proposes to raise initially Rs. 3 crores by way of equity capital, while the balance is to be met by a foreign exchange loan of Rs. 6.5 crores and internal borrowings.

Of the issued capital, shares worth Rs. 1.20 crores will be taken up by the German collaborators, and the directors and their friends will subscribe for shares worth Rs. 90 lakhs. The balance will be raised by public subscription after the requisite consent of the Controller of Capital Issues has been secured. The factory will be located in Kalwa near Thana, where the promoters have already set up a plant for the reconditioning of old drums. The Company has already purchased about 100 acres of land for the project and is now negotiating with the State Government for the supply of power and water facilities. If all goes well, it is expected that the plant will commence production by the end of 1964 or early 1965. The raw materials required for the factory, namely, steel billets and strips, will be obtained from the domestic steel mills.

Reconditioned Drums from Asnew

THE acute scarcity in the supply of drums may be considerably relieved with the introduction of reconditioning facilities by Asnew Drums Private Ltd, which has been promoted by Chimanlal and Brothers of Bombay in collaboration with the U.K. firm of Victor Blagden and Company. It is estimated that the

project will cost Rs. 40 lakhs. The paid-up capital of the Company at present is Rs 15 lakhs, of which 49 percent is owned by Victor Blagden. The factory, located in Kalva near Thana (Bombay), can recondition 1,500 drums of 40 and 45 gallons capacity in an eight-hour shift, and thus bring back to life what would have normally been diverted for inferior use or disposed of as scrap. The output capacity will be stepped up to 2,000 drums after about six months.

The factory, it is expected, will start commercial production shortly. The used drum undergoes a thorough cleaning with hot detergents, before it is given a hot blast for removal of old paint. The dents are then removed by introducing into the drum hydraulic pressure and by hammering from outside. The drum is then dried, spray-painted and again dried in a hot oven. Highly automatised, the drum is ready for re-use in less than an hour. While a new drum costs about Rs. 45, a reconditioned drum can be had at around Rs. 32. Each drum can be reconditioned six times before being sold as scrap. The chief consumers of these drums—the oil and chemical industries—will, therefore, benefit a great deal from the reconditioning facilities provided by Asnew Drums. In addition, the reconditioning facilities would save the country about Rs. 2 crores in foreign exchange annually, which is now being spent on the import of steel required by the barrel manufacturing industry.

State Bank of Travancore Repeats

THE State Bank of Travancore has reported a higher net profit of Rs. 8,93,044 for the year ended December 1962, against 8,35,480 for the previous year. The income of the bank moved up to Rs. 1,08,26,995 from Rs. 74,56,844. The expenditure was also higher at Rs. 99,33,951, against Rs. 66,21,364. This was mainly because of the increase in salaries under the Bank Award. The directors feel that the net profit for the year is not commensurate with the expansion of business of the bank, the reasons being the rise in the establishment charges and the higher cost of deposits. The income also did not keep pace with the grant of fresh limits for advances due to realisation of certain sticky advances taken over from amalgamated banks. Interest on such of the advances of the amalgamated banks as are considered doubtful was not taken into account in the computation of the bank's earnings for the year.

The total available profit including the brought forward amount, was Rs. 9,06,766, and Rs. 2 lakhs will be transferred to the reserve fund. Bonus to staff will absorb Rs. 1,80,000 and Rs. 5 lakhs will go for the payment of dividend. The balance of Rs. 26,766 will be carried forward to next year's account. The reserve fund at the end of the year was Rs. 35,50,000. Deposits and other accounts totalled Rs. 19.10 crores, against Rs. 17.15 crores at the end of 1961. The bank's investments at or below market value amounted to Rs. 7.25 crores, showing an increase of Rs. 1.94 crores. Advances outstanding at the end of the year totalled Rs. 7.36 crores, against Rs. 7.28 crores. The ratio of advances to deposits being 38.52 percent and 42.46 percent, respectively.

The bank has selected 16 centres in Kerala for opening new branches. Of these, eight are sub-treasury centres. They are situated in industrial areas—one in Kalamassery in the factory belt near Alwaye, and the other in Pappanamcode industrial

estate, Trivandrum. Of the remaining six centres, two are in rural areas and four in the suburbs of large towns.

Ogale Glass Works Maintains

THE audited accounts of Ogale Glass Works Ltd for the year ended December 1962, show a net profit of Rs. 4,33,149, after providing Rs. 3,28,143 for depreciation and Rs. 43,395 for development rebate. This profit compares with the previous year's net profit of Rs. 4,05,855, after providing Rs. 2,68,712 for depreciation and Rs. 63,500 for development rebate. Adding to the year's net profit, a sum of Rs. 31,996 brought forward from the previous year, Rs. 20,080 being excess provision for 16th dividend, and a sum of Rs. 29,373 transferred from unclaimed dividend, the total available for appropriation comes to Rs. 5,14,598.

Out of this, the Provision for taxation amounts to Rs. 2,40,000 (against Rs. 2,60,000). A sum of Rs. 29,373 is transferred to dividend equalisation reserve. The directors have recommended a dividend of 10 percent (against 10 percent), and this dividend will absorb Rs. 2,25,000. (This dividend is on the increased capitals as the Company issued in May 1962, 100,000 rights equity shares of Rs. 5 each on the basis of one share for every four held. The balance of Rs. 20,225 is carried forward to the next year.

The directors' report says that trial production in the Pimpri unit started in June-July of 1962 with the available semi-automatic machinery. The automatic machinery and plant ordered from abroad will arrive by the middle of the current year and the present production will be considerably increased when the new plant goes into production. The working result of this unit during the short period of six months shows a revenue deficit of Rs. 43,530, after providing for depreciation and development rebate. The profit of the Company for the year has been arrived at after absorbing this deficit.

Southern Industrials Passes Dividend

THE Southern Industrial Corporation has reported a loss of Rs. 38,466 for the year ended December 1962, against a profit of Rs. 61,953 for 1961. Realisations from sales dropped sharply to Rs. 9,35,802 from Rs. 14,27,979. With the addition of the amount of Rs. 89,967 transferred to development rebate reserve and taxation of Rs. 131 relating to the previous year, the total loss was Rs. 1,28,564. After deducting the profit of Rs. 1,434 brought forward from the previous year, the net debit balance, to be carried forward to next year's account, will be Rs. 1,27,130.

The directors state that the economies of expenditure, wherever possible, have been effected. The loss for the year was because of a steep fall in the sales of woodscrews and the delay in commencing the final assembly of flexible shaft machines. On the other hand, the net block which stood at Rs. 14.35 lakhs in January 1961, rose to Rs. 18.85 lakhs at the end of 1962, reflecting developmental activity which has been compressed into a relatively short period. The Company has fulfilled repayments of borrowings on the fixed assets according to schedule. The loans at the end of 1962 stood at Rs. 2.72

lakhs, as against the original amount of Rs. 6 lakhs.

Faced with the necessity to confine its capital goods list within the prescribed limits, the company was obliged to depend on external capacity for castings and certain specialised components. Its strict adherence to specifications added to the delays on procuring the items. The production of 500 machines, planned for 1962, went into full swing only in March-April 1963. The Company has made a beginning with speedometer cables. Supplies for scooters are going forward regularly. Distribution arrangements are being finalised by the Company for the range of flexible shaft machines and spares currently under production. It has plans to manufacture about 500 machines within the next six months, and this will be achieved, according to directors, with only very slight increases in the overheads. Towards the end of the year, the Company expects more die-casting dies from West Germany which will enable it to introduce another horse-power range. The workshop, originally meant for maintenance work, can now manufacture some machines required for the expansion of woodscrew production.

Bharat Carbon Skips Again

ALTHOUGH the dividend has been skipped for the third successive year, the working results of Bharat Carbon and Ribbon Manufacturing Co. Ltd for the year 1962, show considerable improvement over the previous year's performance. Sales are up by about 25.5 percent from Rs. 52.27 lakhs to Rs. 65.59 lakhs, and the gross profit has risen impressively by 91.8 percent from Rs. 2.08 lakhs to Rs. 3.99 lakhs. After setting aside Rs. 1.91 lakhs (against nil) for depreciation and Rs. 4,053 (against Rs. 5,710) for development rebate and deducting other charges, the net profit amounts to Rs. 1.79 lakhs, against Rs. 1.77 lakhs in 1961. With Rs. 1.96 lakhs brought forward from the previous year and transferring Rs. 15,115 from the provision for taxation, the disposable surplus amounts to Rs. 3.90 lakhs. From this, a sum of Rs. 3.56 lakhs has been used for the payment of arrears of depreciation for 1960 and 1961, leaving a small surplus of Rs. 33,517 to be carried forward. In view of the loss carried forward from the last two years and the refund due to the Company as a result of the appeal against the previous year's assessment having been accepted, the directors have not considered it necessary to make any further provision for taxation.

The directors point out in their report that the carbon and ribbon factories showed considerable improvement with sales rising by nearly 22 percent. In view of the rapid advance in the methods of manufacture of carbon paper in Europe and the U.S.A., the Company has decided to take advantage of the new techniques and to install additional machines of the latest type at a cost of about Rs. 1.5 lakhs. Orders for some machines have already been placed abroad. The present trend of sales, it is said, is quite favourable and sales are expected to set a new record this year. The directors, however, add that the price of tissue paper continued to be uneconomic for the best part of the year. But prices have improved since the last quarter, and the tissue paper mill has been running at a profit.

Additional machinery at an estimated cost of about Rs. 6 lakhs has been ordered with a view to raising the production capacity. The major portion of the funds required would be covered from loan from the Punjab

Financial Corporation. The expanded plant, it is expected, will go into production early next year. With the improvement in the working of the tissue paper mill and the increase in sales of the other products, the directors hope to be able to resume the payment of preference dividend, which is in arrears for three years, from the current year. The Rs. 10-paid share of Bharat Carbon is quoted nominally around Rs. 7.60.

Bangalore Printing Pays Less

THE profit of Bangalore Printing and Publishing Co. Ltd having fallen sharply for the year ended December 1962 because of unfavourable trading conditions, the directors have reduced the dividend to 5 percent from 8 percent for the previous year. The net profit for 1962 amounts to Rs. 10,415.94, after providing Rs. 25,702.71 for depreciation and Rs. 14,661.25 for taxation, compared with Rs. 36,935 in the previous year after providing Rs. 26,041 for depreciation and Rs. 23,000 for taxation. With the amount of Rs. 1,058.49 brought forward, and a sum of Rs. 6,000 transferred from general reserve, the total available for appropriation comes to Rs. 17,474.43. Out of this, the proposed dividend of 5 percent will absorb Rs. 17,345.50. A balance of Rs. 128.93 is carried forward.

New Capital Issues

FIVE companies have been authorised to issue capital totalling Rs. 3.95 crores. One is a new company. One is a Central Government undertaking. Four companies are issuing equity shares and one equity plus cumulative redeemable preference shares. The consent is valid for 12 months in all cases. The following are the details:

Sankey Wheels Ltd, a new company incorporated in Maharashtra, has been granted consent to the issue of capital of Rs. 1,69,99,000 in equity shares. The capital is required for the establishment of a factory in Durgapur (West Bengal) for the manufacture of motor-vehicle wheels in collaboration with Joseph Sankey and Sons Ltd of the U.K.

Phoenix Tubes Ltd, Maharashtra, is to issue capital of Rs. 1.25 crores (inclusive of Rs. 18,000 already issued and subscribed) divided into 100,000 equity and 25,000 redeemable cumulative preference shares of Rs. 100 each, carrying dividend at 9.5 percent, a year taxable, for cash at par. The capital will be used for putting up a steel tube mill.

Indian Oil Company Ltd, a Central Government undertaking, with a paid-up capital of Rs. 3.23 crores, is raising further capital of Rs. 60 lakhs divided into 6,000 equity shares of Rs. 1,000 each to be issued privately for cash at par. The capital is needed for the construction of main oil installations and depots, etcetera.

Colaba Textile Mills Private Ltd, Bombay, will raise Rs. 25 lakhs equity capital in shares of Rs. 100 each, to be issued for cash. The money is intended for reducing the loan liabilities of the company.

Madras Forgings and Allied Industries (C.B.E.) Ltd, a company registered on 1st February, 1963, in Madras State, has been given consent to issue capital of Rs. 15 lakhs divided into 15,000 equity shares of Rs. 100 each, for cash at par. The proceeds will be used for establishing a factory for the manufacture of steel forgings and cast iron castings.

The Stock Markets

SLUGGISH CONDITIONS PREVAIL IN LYONS RANGE

Wednesday Evening.

LYONS Range has been busy examining the terms and conditions stipulated by the Government of India for the resumption of forward trading in shares. At a meeting held on Tuesday, the members of the Calcutta Stock Exchange have expressed the view that the margin requirements are very stringent and would virtually make it impossible to transact forward business on a normal basis. Hence they have requested the Committee of the Calcutta Stock Exchange to write to the Government asking for modification of the terms and conditions. The Committee will communicate its decision to the Government during the next few days.

It is odd that the broking fraternity has adopted this attitude. Since forward trading promotes speculation and does not help investment, the proposed restrictions are about the least that are necessary. The stock market should realise that speculation cannot be encouraged. Since the vigour of the Indian stock markets has been linked up with forward trading by a coincidence of circumstances, the Government has been constrained to permit it. The members of the stock exchange would, therefore, do well to accept the terms and conditions of the Government in toto. This will help restore normal conditions. Forward trading in shares was banned towards the end of 1962 following the Chinese invasion which caused a collapse in the stock market.

Sluggish conditions have prevailed in the Calcutta market during the past week because of various uncertainties. If forward trading is resumed there may be fresh selling pressure from bears. In the circumstances, turnover has shrunk considerably and operators have been inclined to keep their commitments light. Sentiment has also been disturbed by developments along the northern borders. Press reports about the efforts of Mr. T. T. Krishnamachari, Central Minister for Economic and Defence Co-ordination, in obtaining military aid from friendly countries have caused a mixed reaction. The corporate news has, meanwhile, been far from encouraging. There have been a series of dividend cuts following the heavy impact of the super profits tax. The shortage of funds has continued to worry the stock market. Despite the close of the busy season, money conditions have been fairly tight.

Turnover has largely been confined to clearing shares and prices have fluctuated within a narrow groove. Interest in cash scrip has been poor. Steel shares have fluctuated on alternate bouts of buying and selling because the investors have not been able to know for certain whether the decontrol of steel at present will do good to the producers. Indian Iron have moved narrowly. The Company has produced 116,102 tons of pig iron in May, against 109,650 tons in April. The output of steel ingots has been higher at 91,208 tons, against 80,807 tons and that of saleable steel at 65,015 tons, against 55,282 tons. Despatches of saleable steel have risen from 46,374 tons to 60,978 tons. Except for Indian Standard Wagon, which have been steady on an excellent report, engineering shares have generally moved down. Stray business has been transacted in Burn,

Guest, Keen, Williams, Texmaco and Kumardhubi. Despite a bigger profit earned by Bhartia Electric Steel, the shares have attracted little attention.

The prices of miscellaneous shares have fluctuated narrowly and turnover has declined. Indian Copper have recovered after an earlier shake-out. Union Carbide, Goodyear and Associated Battery have been neglected. Managing agency shares have been dull. Shaw Wallace have been sold because of disappointing results. In electric companies, Calcutta Electric have met with scattered buying. New shares have been sold freely at lower prices. Isaac Holden, Hindustan Aluminium and East Anglia than Plastics have lost. Paper shares have been subdued. Orient, Titagur and Sirpur have been offered freely. Turnover in bank shares has been poor. Cotton mill shares have been dealt in cautiously in view of the discouraging profit outlook. Sugar shares have been difficult to transact in the absence of buyers.

The earlier support for jute shares has abated and prices have generally slipped back. The lack of foreign enquiries for jute goods has been a restraining factor. Birla, Kamarhaty and Kankarrah have retreated. Coal shares have been neglected. Stray business has been done in Burrakur, Bengal and Central India. Tea shares have fluctuated narrowly and a small business has been transacted. Cement shares have been sold because the increase in the ex-factory price of the commodity has fallen below expectations.

Selected preference shares have met with support. Government securities have been dull. There has been scattered support for short-dated loans but the prices of long-dated securities have been easier. Little interest has been taken in State Government loans.

Bombay

FORWARD TRADING MAY START SOON

FEAR OF PRESSURE FROM BEARS

Wednesday Evening.

THE Bombay stock market has been dull during the past week. Share prices have moved narrowly and turnover has been limited. Operators have generally been restrained by uncertainties concerning the resumption of forward trading in shares. Although the stock market authorities have urged the Government to modify the terms and conditions under which forward trading can be resumed, they are now reported to have accepted the conditions in toto. Hence forward trading is likely to be resumed within the next few days. Since forward trading will again permit short-selling, it is feared that share prices might move down because of fresh pressure. In any case, whatever restrictions are placed on forward trading, its resumption may help share prices to settle down at realistic levels once normal trading is restored. Hence operators and investors have generally been inclined to lighten their commitments until the situation becomes clear.

the increase in the ex-factory price of the commodity, since it does not cover the rise in production costs. Associated Cement and Digvijay have declined. Mining shares have been subbed. Shivrajpur Syndicate have been offered freely. Steamship company shares have been quiet. Scindia Steam have lost. Sugar shares have been selectively steady. Support has been extended to Belapur and Walchandnagar Industries. Chemical shares have been quiet. Tata Chemical and Indian Dyestuff have fallen on a predominance of sellers. Bombay Burmah have reacted on profit-taking. Rayon shares have lacked interest. National Rayon have fluctuated narrowly.

Turnover in bank shares has been small. Bank of India and Central Bank have been transacted. In the insurance section, New India Assurance have been steady. Electric company shares have been quiet. Ahmedabad Electric and Bombay Suburban have fallen.

Madras

SIZABLE DECLINE IN TURNOVER SUPPORT CONFINED TO PLANTING SHARES

Tuesday Evening.
ALTHOUGH turnover has declined appreciably in the Madras stock market during the past week, share prices have generally been maintained. Support has, nevertheless, been confined to selected planting shares. Professional interest has been at a low ebb, so turnover has been negligible in clearing shares. The stock market authorities are reported to have accepted all the terms and

conditions laid down by the Government for resuming forward trading. Hence operators are inclined to await the resumption of forward trading. Sentiment has been adversely affected by the sharp decline in the price of South India Viscose due to the apprehension that the Company has incurred substantial losses in 1962. The dividend has been passed. Activity has also been restrained by the shortage of funds. New shares, in particular, have weakened appreciably because investors have shown little interest in them considering that they are not expected to yield any dividend for a long time. Heavier taxation appears to have affected the dividend outlook.

Government securities have been dull and nominal business has been transacted. In the banking section, scattered interest has been taken in Canara and Punjab National. Among electric company shares, West Coast have been bought up to Rs. 18.37 on hopes of compensation. Sugar shares have shown mixed trends. Scattered interest has been taken in E.I.D. at Rs. 37 and in Mysore at Rs. 51.30. But Andhra, Kothari and Travancore have weakened.

In the planting section, the steady features have been Blue Mountain at Rs. 2.30, Periakaramalai at Rs. 2.68, Thamarapally at Rs. 15.62, Nonsuch at Rs. 21.50 and Twyford at Rs. 8.75. Travancore Rubber have declared a taxable ordinary dividend of 12 percent and Nilambur a taxable ordinary dividend of 10 percent. Gokul have paid a taxable ordinary dividend of 10 percent and the scrip have fetched Rs. 1.90.

In the cotton mill section, South India Viscose have weakened to Rs. 125.50 due to a predominance of sellers. Travancore Rayon have been easier at Rs. 23.50, and Madura around Rs. 32.50. Tirumurti have been sold freely on payment of a

CAPITAL, 6th June, 1963.

taxable ordinary dividend of 6 percent, while Ramakrishna have been supported on declaring a taxable ordinary dividend of 23 percent. Cannanore Spinning and Weaving Mills Ltd has been permitted by the Government to issue 15,000 rights ordinary shares at par.

In the miscellaneous section, business has passed in Aluminium Industries at Rs. 17.50 and in Ashok Leyland at Rs. 7.50. Cement shares have generally been steady. Dalmia Cement have been transacted at Rs. 13 and India Cement at Rs. 5.55. Selected chemical shares have attracted attention and Mottur Chemical have been done at Rs. 12.20. F.A.C.T. have been steady at Rs. 7.20. Seshasayee Paper have been quoted at Rs. 7.68. United Electricals have declared a taxable ordinary dividend of 7 percent and Enfield a taxable ordinary dividend of 4 percent. Spencer have been steady at Rs. 21.50 on declaring an interim taxable ordinary dividend of 6 percent. United India Fire have paid a taxable ordinary dividend of 10 percent.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

ORIENTAL MERCANTILE CO. LTD.
Calcutta, Bombay, Kanpur, Delhi, Madras.

all over India

Formed in 1937, S&L are today the leading fabricators of steel tubes in India. Industry all over the country recognises S&L's ability to supply pipework installations for all types of conditions, from the initial design stages to erection and commissioning. S&L were the pioneers in India of the standard pre-fabricated tubular roofing structure, and are still the major producers of these economical buildings, which are in great demand for use as offices, stores, workshops, schools, hospitals etc. etc.

Money

THE CALCUTTA MONEY MARKET

CALL RATE GOES UP FURTHER

Wednesday, 5th June.

THERE has been a fair increase in the general level of advances in the Calcutta money market during the past week. The increase has been mainly due to the rise in miscellaneous advances. The credit given to the jute mills and to the iron, steel and engineering industries has gone up slightly. Advances to sugar mills have declined a little. Credit for the cotton mills and for the foodgrains and seeds trade remains almost unchanged. In the interbank market, conditions have become tight and the call rate has gone up to 5½ percent.

The local exchange market has been fairly active, and there has been a moderate supply of tea and gunny bills as also miscellaneous bills. The demand for remittance has been fair. Sterling has weakened in relation to most currencies except the deutsche mark and the Dutch guilder.

SILVER WAS STEADY IN CALCUTTA during the past week. The price rose from the previous week's level of Rs. 260.50 to Rs. 265.00 quoted today for ready delivery. There was no business in forward. The prices were 110½d. in London and 127.8 cents in New York. Gold was not transacted.

DURING THE WEEK ENDED 31st MAY, Government of India Treasury bills for Rs. 30,83,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 4th June. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.41 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,350 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 10th June.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 5th June to 8th June at Rs. 99.41 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 29th May to 1st June amounted to Rs. 50 lakhs.

A DECLINE OF RS. 14.31 CRORES TO RS. 2,281.44 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 31st May, 1963, while the total note issue was Rs. 30 lakhs larger at Rs. 2,318.50 crores. Notes held in the Banking Department consequently rose by Rs. 14.61 crores to Rs. 37.06 crores. The foreign exchange holding of the currency reserve declined by Rs. 1 crore to Rs. 109.08 crores. Deposits of the Government of India rose by Rs. 16.58 crores to Rs. 73.76 crores and those of State Governments by Rs. 1.55 crores to Rs. 11.61 crores. Balances of scheduled banks were Rs. 4.18 crores smaller at Rs. 78.42 crores. Balances held abroad declined by Rs. 1.05 crores to Rs. 8.34 crores. The investment portfolio was Rs. 2.36 crores smaller

at Rs. 254.43 crores. Loans to scheduled banks rose by Rs. 8.84 crores to Rs. 17.60 crores of which advances against usance bills were Rs. 8.70 crores (Rs. 6.28 crores). Ways and means advances stood at Rs. 45.64 crores, against Rs. 50.70 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 24th May, 1963, shows a rise of Rs. 3.35 crores to Rs. 559.68 crores in total deposits. Investments in Government securities are up by Rs. 10.91 crores to Rs. 243.04 crores, while other authorised investments remain unchanged at Rs. 9.34 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 7.24 crores to Rs. 290.95 crores. Cash and balances are, in consequence, shown at Rs. 24.73 crores or Rs. 25 lakhs higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 24th May, 1963, shows Demand and Time liabilities at Rs. 1,033.94 crores (Rs. 34.47 crores on account of borrowings from banks) and Rs. 1,273.40 crores (Rs. 21.20 crores), compared with Rs. 1,024.62 crores (Rs. 32.38 crores) and Rs. 1,272.09 crores (Rs. 19.78 crores), respectively, in the previous week. Cash has decreased by Rs. 1.68 crores to Rs. 52.65 crores, while balances with the Reserve Bank have increased by Rs. 44 lakhs to Rs. 79.43 crores. There is a rise of Rs. 12.83 crores to Rs. 630.25 crores in investments. Advances and bills discounted at Rs. 1,561.52 crores show a drop of Rs. 17.74 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.7 percent and 67.7 percent, against 5.8 percent and 68.8 percent.

MAHINDRA AND MAHINDRA LIMITED

CHAIRMAN, MR. K. C. MAHINDRA'S ADDRESS

Speech delivered by the Chairman, Mr. K. C. Mahindra, at the 17th Annual General Meeting of the shareholders of Mahindra & Mahindra Limited held in Bombay on 30th May, 1963.

The occasion of the Annual General Meeting this year should be of special interest to the shareholders. They are active participants in basic developments, and as such, they contribute substantially to the building of the infrastructure of our economy. The delay in the submission of Directors' report to you was almost wholly due to the fact that the original budget proposals presented on the 28th of February caused considerable confusion in interpretation of their impact on Company finance. Your Directors at their Meeting on March 1st hoped to be able to approve the audited accounts but it was not possible at that date to translate the precise incidence of new taxation on the profits of the Company.

Provision for Super Tax payments in respect of the Accounts as presented has been calculated at Rs. 11.26 lacs for your Company. This has meant that despite an increase of over 11% in gross profits the shareholders, in accordance with the Directors' recommendations before you, suffer a loss of one sixth in the quantum of dividends (as compared to previous year); the plough back or generated cash retained in the Company has declined from Rs. 29 lacs to Rs. 24 lacs. Government has increased its cut from Rs. 36.80 lacs to Rs. 55.65 lacs. In respect of Bonus, however, the Directors have decided to retain the same basic pattern as of last year. With the knowledge of the marginal subsistence of many of our industrial workers, and particularly, in recognition of the pressure on family budgets of rise in prices of basic commodities (which has become quite perceptible in the last three months) and which, in my opinion, will continue, despite what economic advisers and experts attached to Government bureaux may say, the Board felt that the case of the employees deserved the maximum sympathy. The decision in respect of Bonus was also in recognition of the all round effort by everyone in the organisation at increasing productivity. I trust that this approach will meet with your approval.

OVER A CENTURY'S TRADITION IN SERVICE For

Much has been written about the Super Tax proposals—and I would have refrained even from this mention had the matter rested with the solemn assurance by the Finance Minister in his concluding speech that he will not hesitate to abolish the measure if it is found to retard corporate expansion. But he has now categorically stated that "SPT has nothing to do with the present emergency in the country" and that both SPT and Compulsory Deposit Schemes were desirable in themselves. It remains therefore to be affirmed again that the principle of progression in corporate taxation goes contrary to what are universally accepted as sound canons of public finance. It erodes the very base of revenue. Its major effect on capital formation is dissuasiveness—dissuading people who have money to spare from investing in an industrial venture when there is a significant restraint on the quantum of profits and where taxation directly affects efficiency. Capital emerges from savings and 84.1% of total savings in India come from the household sector i.e., from private savers. Government and Corporate Sectors account respectively for 13.9% and 4.7%. This means that savings of private households feed both Government as well as Corporate Sectors with their investible funds, and such funds are bound to shy away from commitments when returns become uncertain and when public finance comes to mean mere gathering in of funds from the public.

That the Super Tax is a tax on efficiency, has been questioned in responsible quarters. Surely, it does not require any detailed arithmetical calculations to come to the conclusion that Corporate taxation ranging from 60% to 75% is not an inducement for exercising severe and rigid controls over expenditure, nor do such heavy imposts provide the motive power for pursuing vigorously the drive for productivity.

The views of a distinguished American analyst may aptly be quoted: Dr. E. Schmidt, Director of Economic Research, U.S. Chamber of Commerce has this to say of Corporate Taxation:—

"Its incidence is capricious and uncertain. It raises the general price level. It is largely a disguised sales tax. It has put the corporate form of doing business at a disadvantage.... It retards new investment. It reduces investment per worker. It raises the average age of plant and equipment.... It distorts investment decisions because of its severe bite."

Novel Concepts

Apart from SPT the Finance Minister has introduced certain novel concepts in his search for additional revenues. Increases in Customs duties for import of capital plant and machinery is justified as a protective measure, i.e. a measure which would encourage growth of indigenous machine building industry. The reasoning is superficial for there is a rigid control on the issue of import licences and the technical department hitherto known as the Development Wing does not clear any application for import licence when indigenous machinery is available. Prices do not come into the reckoning. This is protection enough. The only consequence of such imposts is increases in the cost of production. There is the Compulsory Deposit Scheme which agitated the minds of a considerable number of legislators, because it affects very severely the middle class people. As an illustration: in accordance with the regulations made by the Maharashtra Government a portion of Bonus paid to the worker must be

invested in national Defence Certificates. I know as a matter of fact, that many of our workers have been compelled to pledge their Defence Certificates for cash on prohibitive rates of interest within a few days of their receiving them. The further draft on their cash resources by the Compulsory Deposit Scheme would mean increased resort to private money-lenders. We are all familiar with the widespread operations of the non-banking sector which forms a considerable handicap to the restraints and controls which the Reserve Bank of India tries to administer in respect of inflationary credits. The boost thus given to usurious operations will further defeat the ultimate purpose of keeping prices within check.

Compulsory Deposit Scheme has been justified on grounds of reasonable restraint of individual's rights to spend his earnings in the interest of social economy as a whole. So economics gets mixed up with morality and legislation under another guise is enacted to improve the citizen's behaviour. Are we "dreaming of systems so perfect that no one will need to be good" (T. S. Eliot) and forget for the nonce what a Roman philosopher wrote 2,000 years ago: "Virtue alone is not sufficient for the exercise of Government; laws alone cannot carry themselves into practice."

Another odd feature introduced in this year's budget is the palpable discrimination shown in favour of foreigners employed in India in the matter of remuneration. Attempt is made to justify this measure also on grounds of social restraint. Despite the urgency and the need to enlarge and strengthen our technical and managerial cadres, this kind of restraint is more likely to drive the capable and the energetic to other lands than attract those who are already earning ampler emoluments abroad. The Council of Scientific and Industrial Research stated in 1961 that more than 4,900 Indian scientists and technicians were gainfully employed overseas and bemoaned the fact that no correspondingly attractive outlets or opportunities were being made available within the country to draw them back into our economy. The discriminating legislation now introduced as a finance measure will certainly not improve the situation. Perhaps it was thought that a tax on remuneration paid to Indian nationals above a certain figure would restrain the payment of so called high salaries to Indian managers and technicians and that somehow it will lead to equality in earnings. It is conveniently forgotten that a rupee today is hardly worth more than 25% of its intrinsic value 25 years ago and the salary levels which were not considered unusual then are now being declared the ceiling! It is also amiably forgotten that liberty is given to recruit and engage foreign staff as you will. What becomes of the drive to 'nationalise' completely as soon as practicable the managerial and technical cadres of all business organisations operating in India?

High Cost of Production

One of the major handicaps to the export of our products is the high cost of production. For reasons I need not elaborate, India furnishes today an example of a country which has converted itself from a low cost producer of steel to a land where retail steel prices are amongst the highest in the world. Export drives will have no meaning if fiscal measures and multiple taxes, levies, tolls, and surcharges keep on adding to costs of production.

It has been heard in responsible quarters that the additional excise duties have been so carefully framed as not to

CAPITAL, 6th June, 1963.

impinge on the prices of basic commodities. Literally it may be so, but it is well known that retail prices do not follow the convolutions of a statistician's mind, particularly when he tries to prove that a circle ends in a point. Apart from the recognised multiplier effect of a push in one direction, there is the infection attached to every rise in retail prices. Government attempts to open Fair Price Shops are like segregating the patients of a hospital after the infection has widely spread. With what results we have still to see.

You may manage a smile at the definition of "excise" given by Dr. Samuel Johnson, in his famous Dictionary:—

"A hateful tax levied upon commodities and adjudged not by the common judges of property, but wretches hired by those to whom excise is paid."

"With 100 rows of teeth the shark exceeds," (Marvell).

And on all trade like cassawar she feeds". (Marvell).

May I humbly suggest that taxation as an instrument of economic policy should be submitted to a fresh examination by a high-powered Commission. In the context of the novelties introduced in this year's budget, the fundaments of the policy of public finance need to be reviewed afresh, lest this branch of State administration deteriorates into a mere revenue-collecting agency.

The health of an economy is judged in some countries by the puffs of smoke over mills and factories, in other countries by the shining cavalcade of automobiles and queues at super-markets and pubs. In our country it is the long lines of men at factory gates and employment exchanges and of women and children at retail groceries for sugar and rice and oil which attract attention; if not these it is the teeming millions who sleep on pavements of the streets of Bombay and Calcutta, even of the capital city of Delhi, who cry for shelter. These are essentially economic problems whose solution or non-solution is related directly to the structure of the economy, its capacity for rapid growth in the matter of urgent basic needs, the climate of opportunity and the discipline and desire amongst the people for hard work. While finance is the limitation, financial and fiscal measures are the catalysts for progress toward redemption of the poor and the needy. Solemn therefore is the responsibility of those who devise these things—planners and administrators, financial pundits and economists, and they should welcome a continuing review and examination afresh of the problems and features which retard growth and development.

A more cogent argument for a Tax Commission is the danger of a drift toward Communist ideology when by accident or design a tax structure is imposed which breaks down the motive power, the sinews of our economy. Didn't Karl Marx propose in the famous Communist Manifesto the use of heavy progressive taxation as the means for making "despotic inroads on the rights of property and on the conditions of bourgeois production?"

I envisage for the Tax Commission a triple role: to enquire into the fundaments of tax policy; consequences of such policy on prices with particular attention to spheres where we desire exports to flourish; and influence on growth.

Bureau of Information

Those who are engaged in commerce and industry—essentially a non-political activity—have another duty to perform. The range and standard of debates in the Parliament this year displayed a pathetic non-knowledge of principles and guide lines of public finance. By and large, the case for industrial development went by default and I feel that this happened not because the Legislators were wedded to the ideology of socialism or were biased against the private sector. Full knowledge was not there. I therefore plead for the establishment of a Bureau of Information in

CAPITAL, 6th June, 1963.

Delhi—an Office disseminating from time to time correct facts about industrial economy, without prejudice or favour to any interests or preconceived notions. I visualise the agency not as a platform but as an organ for publicising the trend and the course of industrial development, the factors which advance or retard growth, the principles which govern the minds of people engaged in such vocations. Attention of the Bureau will naturally be directed toward the furnishing of full information on varied subjects to our Legislators primarily. Novel ideas and concepts have emerged this year in the Finance Act. I feel sure that the consequences, both light and serious, of such novelties were not comprehended by the framers of the Legislation. There is urgent need for educating Delhi in the whole palaver involved in establishing and operating an industry. There is need for understanding the overall thinking of members of the Planning Commission. There is need for informing the theoreticians of the Commission with relevant factors about industrial finance and industrial operations which assist or retard accomplishment. There is equal need to supply illumined data to the technical wings of the executive departments of Government. I feel that the Bureau will fulfil a very necessary need by advancing information on these matters of basic policy and which deserve a close and continuous watch.

I should like to suggest to my colleagues in industry that a dozen of them, like-minded and of kindred spirit, whose integrity is above question and who are imbued with national service, should band together and set up in Delhi a Bureau of Information. The proposed Bureau will not serve any sectional interest nor will it propound dogmatic theories which have little bearing on practical considerations that determine development. The Bureau must remain essentially non-political in its approach, non-sectarian in its relays of information and distinctively labelled as a service.

Another reason which I may advance in favour of such a Bureau is the necessity to remove the general aura of suspicion against private industry and industrialists in general which has been engendered during the Parliamentary debates on the Vivian Bose Commission report. It is not suggested that Industry should present itself in sack-cloth and ashes for it is not proven that the alleged evils disclosed in the report are widespread and rampant. Because industry has been generally branded it does not follow that we should remain quiet and silent until a case is proved. I am however of the opinion that it is time that individual industrialists should come forward and declare adherence to certain minima of ethical conduct in the exercise of their business procedures. Certain practices and arrangements which have been highlighted by the Vivian Bose Commission deserve unequivocal condemnation and one can do so without affirming or denying the allegations against individuals. Too much suspicion between Government and industry, between legislators and individual entrepreneurs, between political parties and Chambers of Commerce is both unhealthy and derogatory of individual dignity. The permutations and combinations of mistrust are manifold and attempts must start now to resolve the vicious equation. The remedy for abuses of economic power is both legal and social. As individuals we should abhor and condemn; as citizens we should assist Government in cleaning up the Augean stables; as business men we should affirm our strict adherence to ethical practices.

Defence and Development

Defence and development are stated to be the twin motives for the current economics and financial policy of Government. Supplementing the premise that the new taxation measures will definitely not encourage savings and therefore will retard capital formation, it is worth repeating that Defence, totality

of defence, is intimately linked with industrial development—in the long run it is the spread and range of the industrial base alone which can ensure the military security of the country. It is our experience that a worthwhile project takes many months, in some cases several years, to fructify and for a Company like ours deliberately set on a growth pattern it would be extremely disappointing if several years' efforts to chart a design for development have now to be halted. Your Board therefore has resolved to push ahead, knowing that perhaps they are taking a calculated risk in promoting at this moment of time large new schemes, in particular the Alloy Steel and the Tractor projects. They require substantial financing. I hope we will be able to place them on the market before the next Annual Meeting comes round. This decision has been taken despite the maleficent influence of current taxes and duties, because your Directors believe fundamental

ally that development and disciplined work must go on and we, both in the private and public sectors, in Government or private living, cannot afford to go slow. Did not our recent visitor—John Strachey, the British Labour leader, tell us the other day that "India is condemned to live dangerously, for, otherwise, she may not live at all? I commend these thoughts and our future plans to our shareholders.

Before I conclude I should like to tell the shareholders that the Company's Jeep production continues to be under strict security controls. On repeated representation, Government has been pleased to release about 20% of our production of vehicles in the current year for civilian uses, but priority of user-allocation will continue to be controlled by Government.

Steel division has not been so active during the last six months as in the previous year, but it is the untiring effort

of the personnel of this division of the Company which has now matured into the Alloy Steel project.

Machine tools division has broadened the base of its operations by inclusion of certain lines of indigenous machines in its portfolio, as well as promoting the beginning of manufacture of tools and gauges in a small way.

I opened my remarks by referring to the operations of the year as being more efficient from the productivity angle. For this accomplishment the management, the staff and the workers deserve your compliments. On your behalf I pay them tribute for their contribution and wish them success in the further goals of proficiency and skill which marks the industrial sectors of more advanced countries.

Note: This does not purport to be the proceedings of the Seventeenth Annual General Meeting of the Company.

**DUNLOP
EARTHMOVER
TYRES
SERVE AT MAJOR
NATIONAL
PROJECTS**

Massive tyres. Working under the killing sun or deep into the night by the powerful beams of scores of flood lights. Propelling the gigantic earthmoving machines amidst the loud clangour of incessant work... at Koyna, Nagarjunasagar, the N.C.D.C. mines and numerous important projects.

The tread pattern and the especially tough casing of the Dunlop Earthmover tyre were developed after prolonged field trials on many kinds of terrain in many parts of the world.

It is a tyre proved in service.

GUEST, KEEN, WILLIAMS, LIMITED

CHAIRMAN, SIR RAGHAVAN PILLAI'S STATEMENT

Statement by the Chairman, Sir Raghavan Pillai, K.C.I.E., C.B.E., on the occasion of the Thirty-third Annual General Meeting held in Calcutta on 31st May, 1963.

It is with great pleasure that I welcome you to this, the 33rd Annual General Meeting of your Company. The Directors' Report and the Accounts have already been circulated and I propose, with your permission, to take them as read.

Board of Directors

I am glad to tell you that Mr. S. Lloyd joined the Board of Directors on 28th June, 1962. Mr. Lloyd is a director of our associate company in the United Kingdom, Guest, Keen & Nettlefolds Ltd., and your Company is fortunate in gaining the benefit of his counsel and experience.

It is with regret that I report the resignation from the Board of Mr. T. K. Walshaw on his retirement from India. Mr. Walshaw first joined the Company in February 1935 and was appointed to the Board in May 1959 whilst serving as General Works Manager at the Calcutta Works. Mr. Walshaw is to be succeeded by Dr. A. K. Bose whose appointment to the Board is the subject of a resolution at today's meeting.

Production

The raw material shortages which affected production in 1961 and to which I referred in my statement to you last year were, I am glad to say, relieved to some extent in 1962, and this permitted the steady growth of output throughout the period.

Nevertheless, whilst the total tonnage of steel billets supplied by the integrated steelworks was substantially increased, it has not yet been possible to secure a steady and regulated supply in the numerous categories and sizes required, and in 1962 the irregular flow of certain categories still imposed a serious limitation on production. This imbalance in billet supplies is reflected in a considerable increase in billet

stocks involving substantial working capital.

Calcutta Works

A further substantial increase in the rolling mills output was achieved in 1962, and the new mills, commissioned early in 1961, made a welcome contribution to the year's operations. Meagre supplies of indigenous special steel billets were supplemented by imports, and the company was able to improve its output of special steel bars and sections for the railways and the automotive industries.

In spite of an acute shortage of free cutting steel the bright steel bar plant, installed in 1961, reached a satisfactory level of output in the latter months of the year and is proving to be a valuable addition to the unit.

Production of forgings improved and the construction of a new die shop to supply tools to the forge has undoubtedly contributed to this advance. A planned programme for further additions to tool making facilities is expected to lead to the progressive improvement of productive efficiency and will assist in the trend towards the manufacture of precision products which I mentioned to you last year and which is continuing steadily.

Some revival in the demand for railway track and signal items was apparent but the manufacture of steel crossing sleepers was again severely restricted by lack of raw materials. Production of this material by Hindustan Steel Ltd. was started in the latter months of the year, however, and the Company's sleeper plant has since been operating satisfactorily.

The production of fastenings in the bolt works was maintained at about the same level as in the previous year. Plans are now being made for the next stage of plant rehabilitation and modernisation in that department.

The shortage of power in 1962 has been the cause of grave anxiety and frustration in industries that are striving to expand, and I do not hesitate to reiterate what has been said so many times in recent years, that power planning must be performed with courage and with confidence in the growth potential of consuming industries; that power must lead development, not follow reluctantly behind. The irrecoverable waste of industrial resources and development potential that is synonymous with the shortage of power is immense compared with any temporary loss that might result from over planning power output; it is consoling to know that Central and State Governments now recognise the vital need for a bolder and more objective approach to power planning, and in the present emergency I would hope that such action as is taken will eliminate any possibility of a repetition of the tragic waste that we have witnessed in recent years.

Bhandup Works

Production and sales of wood-screws and other light fastenings made at the Bhandup Works rose again, in spite of the shortage of the special steel wire and strip required for various minor products. The manufacture of self-tapping screws to the highest international standard quality, which was started in the previous year, was successfully established at the full rated capacity of the plant.

Exports

You will be glad to know that the increased level of export achieved in

the previous year was maintained and surpassed in 1962. Direct export sales are as yet a very modest element of the Company's turnover and conditions of demand in neighbouring countries fluctuate to such an extent that a positive pattern of sales has not yet emerged. However your Company is making an indirect contribution to the export drive which is of considerable importance. Every year large quantities of fastenings and other products are shipped abroad by other manufacturers in India who use your Company's products in assembling equipment for sale overseas. The importance of exports is fully recognised and it is your Directors' intention to promote their growth as rapidly as conditions permit.

Operating Results and Dividends

Turning now to the Accounts, the income from sales in 1962 improved to Rs. 13,06,09,872 from Rs. 10,65,88,480 in the previous year, representing an increase of approximately 22.5%. As I have already explained, the shortage of certain categories of raw material prevented the achievement of an even higher turnover and it is clear that the programme of expansion and rehabilitation undertaken during the past few years has now started to contribute appreciably to your Company's activities. A small part of the increase in sales was due, however, to the inclusion of excise duty amounting to Rs. 16,36,712 imposed on iron and steel products with effect from 24th April, 1962.

Increased turnover coupled with economies effected in operating costs has made it possible for your Company to earn a higher trading profit before tax of Rs. 1,15,38,310 compared with Rs. 83,83,644 for the previous period. The total surplus before tax, in spite of a reduced return on investments in subsidiary companies, amounted to Rs. 1,27,55,590 which shows an increase of Rs. 23,29,326 over the corresponding figure for the previous period.

Owing to a reduced claim for Development Rebate and provision at the enhanced rate of 50% for corporate taxation, the charge for taxation for 1962 is Rs. 55,60,000 compared with Rs. 30,50,000 for 1961. After setting aside a sum of Rs. 1,20,000 for super profits tax the surplus after taxation for the period under review has been reduced to Rs. 61,63,670 compared with Rs. 63,07,072 for 1961.

The provision of Rs. 1,20,000 for super profits tax was based on the original proposals in the Super Profits Tax Bill and I am happy to say that, as a result of reliefs since announced, there will be no liability on this account in respect of the Company's 1962 profits. Similarly, the initial estimate of Rs. 13,00,000 provided in the accounts of your subsidiary, Sankey Electrical Stampings Ltd., for 1962 will now be reduced to Rs. 8,50,000. The accounts of both Companies were closed before the reliefs were announced and in consequence the Directors of Sankey Electrical Stampings Ltd. recommended a lower dividend at the rate of 10% compared with 17½% declared for the previous period. This reduction in your Company's dividend income for 1962 has been largely offset by the declaration on 18th April of an interim dividend of 5% for 1963.

I mentioned last year that taxation on the Company's profit for 1961 was under-provided to the extent of Rs. 2.70 lacs as a result of the increased rates of corporate taxation, announced in last year's budget proposals, which

CAPITAL, 6th June, 1963.

were published after the Company's accounts for 1961 were closed. This liability has been assessed at Rs. 2.60 lacs and is a charge against 1962 profits.

After the statutory transfer of Rs. 5,54,677 to the Development Rebate Reserve and the transfer of Rs. 5 lacs to the Debenture Sinking fund, the balance available for distribution is Rs. 49,85,391. Your Directors consider it desirable to draw upon the Company's General Reserve for an amount of Rs. 6,14,609 to meet the recommended final dividend of 80 nP. per share. An interim dividend of 60 nP. per share has already been paid making a total distribution of Rs. 1.40 nP. per share for the 52 weeks ended 29th December, 1962.

Sankey Electrical Stampings Ltd.

A further substantial increase in turnover was achieved by your Company's expanding subsidiary, Sankey Electrical Stampings Ltd. A good deal of development work was undertaken and the policy of diversifying the range of products was actively and successfully pursued. A proposal to acquire from the Tata Iron & Steel Co. Ltd. their shareholding in your subsidiary forms the subject of a resolution later at today's meeting.

Future Development

A year ago I referred to the proposed expansion of steelmaking capacity for the manufacture of special steels. This large project is to be located at the Calcutta Works and has been the subject of intensive study during the past twelve months. Detailed planning is virtually complete and excavation work on the site will start shortly. Associated with this project is a proposal for the re-organisation of the rolling mills, partly necessitated by the forthcoming rise in steel production. Application has been made to the Government of India for approval of this re-organisation. The rolling mills are of vital importance to your Company, being the main source of raw material for the fabricating departments, and this scheme will be of great benefit to your Company's development.

The Government of India has granted approval for the expansion of the wood-screw plant at Bhandup and the bright steel bar plant at Calcutta Works. Contracts for the purchase of machines have been placed, and the benefit of increased production should be apparent within eighteen months.

These are but a few of the development projects that your Company proposes to execute during the next few years aided by the valuable guidance of the technical consultants in the United Kingdom, Guest, Keen & Nettlefolds Ltd. In forward planning the emphasis remains on serving the transport industries, and the proposed investment in Sankey Wheels Ltd., which forms the subject of a resolution at this meeting, is complementary to this trend by virtue of their programme for the manufacture of wheels for commercial vehicles. The railways and road transport services have relied for many years on your Company for the manufacture of an ever widening range of products, and in the context of the present national emergency, which has revealed only too clearly the urgent need for improved rail and road communications, it is essential that the Company should not falter in its planning for expansion. It is in this belief that the groundwork for further development over several years ahead is now being vigorously prepared.

Finally I should like to record special appreciation on your behalf of the conscientious work of the staff and all employees whose loyalty and whole-hearted enthusiasm is making possible the increasing success of your Company's operations.

(Note: This does not purport to be a record of the proceedings of the Annual General Meeting).

CAPITAL, 6th June, 1963.

New Delhi

AID BODY PLEDGES HELP FOR THIRD YEAR OF THE PLAN

(FROM OUR NEW DELHI CORRESPONDENT)

THE Aid-India Club began its two-day session on 4th June in Paris. On the first day, it pledged assistance to India totalling approximately \$1,000 million (about Rs. 500 crores) to cover the latter's balance of payments deficit for 1963-64. This did not fully meet the requests submitted by India, which had asked for \$1,250 million. For the first two years of the third plan, the Aid-India Club and the World Bank contributed \$2,365 million. Thanks to the untiring efforts of Mr. L. K. Jha, Secretary to the Department of Economic Affairs, Central Ministry of Finance, India's foreign aid problems are now better understood. As far as aid is concerned, the basic criticism against India has been that it has not been able to use the aid offered to her for the first two years of the third plan.

Aid is divided into several categories, such as aid tied to a project but untied to a country. Or it may be tied both to a project and a country or untied to a project but tied to a country. Theoretically, it may also be untied to both a project and a country. In case aid is tied to a project, its full use is tied to the completion of the project. The case of the Durgapur steel plant may be cited to illustrate the point. A British loan, as is well known, has been made available for expanding the plant. This credit can only be fully used by completing the expansion programme. Canada finances a project in a slightly different way. It takes up a project and finances its requirements on a yearly basis till it is completed. This is done obviously with a view to avoiding the possibility of large-scale unused aid.

It is often complained that with a sizable untied aid, India is still following a restrictive import policy or has imposed a virtual ban on foreign travel. On the face of it, this criticism is justified. There are, however, two explanations for the restrictive import policy. Firstly, many projects, although fully covered with a foreign loan for its foreign exchange expenditure, do contain a part the expenditure on which has to be met from free foreign exchange resources. The foundry-forge project, financed by Czechoslovakia, is a case in point. Part of the equipment for the projects has to be imported from outside the rupee-payment area for which foreign exchange amounting to about Rs. 1 crore has to be found. The Czechoslovak Government has made it clear that it will not guarantee the performance of such equipment. Originally, a ceiling of Rs. 80 lakhs for such non-Czech equipment was agreed upon. This ceiling was deleted from the supplementary agreement signed here last week.

Secondly, India is using the maximum quantity of indigenous equipment in some of her projects. Then again, many projects are only an expansion of the existing units for which no foreign aid is provided. But for proper maintenance of plant and machinery, it is necessary to import spares and components. So a large amount of untied aid is required for maintenance imports.

Export Credit

The World Bank had advocated that aid should be tied to a country but not to a project. Aid given by

several countries, it may be added here, are in the nature of export credit. The Government of India appreciates the difficulties of the former. Under the circumstances, part of the aid may be given in the shape of capital goods which could be pooled by aid-giving countries to meet India's needs.

Aid from several European countries can hardly be called aid. It is really a commercial credit for a short period and at a high rate of interest. This has, in fact, been the main criticism by the U.S.A. of the so-called "matching" aid. There is a general realisation that aid—if it is to be effective—should be on a non-commercial basis, untied and for a long term and at a low rate of interest.

The second plan and the democratic method of commissioning projects through global or countrywide tenders have shown one glaring weakness of planning, namely, the delay in commissioning projects. The case of power projects may be cited to illustrate the point. Due to foreign exchange difficulties, the commissioning of some power projects was either slowed down or postponed with the result that there was an acute shortage of power towards the end of the second plan. It is, therefore, felt that planning being a continuous process, some projects falling in the fourth plan should be commenced within the third plan period. But this will inevitably increase India's foreign aid requirements under the third plan.

Denmark was an observer at the last meeting of the Aid-India Club. It is, however, anticipated that the three Scandinavian countries will offer aid to India without joining the Club.

STEEL PLANTS

Expansion Programmes

The western countries should carefully study the techniques of communist countries if they are out to compete with them successfully, particularly in the field of industries. The case of the three public-sector steel plants should illustrate the point. Even before the publication of the third five year plan, the expansion programmes for these plants were widely known. Russia, the United Kingdom and West Germany were willing to finance the expansion of the Bhilai, Durgapur and Rourkela steel plants, respectively. In the early stages of the third plan, Russia produced a project report for Bhilai. On the basis of this, an agreement was reached under which Russia was to supply the plant and equipment at a certain price. No tenders were invited by the Government of India even to compare the cost of such plant and equipment. On the basis of the agreement, orders for plant and machinery were placed. It is now anticipated that the expansion programme of the Bhilai steel plant will be completed well within the third five year plan, as it was originally planned. There being only one supplier, the question of creating a co-ordinating machinery does not arise.

The Russians, for all practical purposes, are running the Bhilai steel plant. If, say, ten top-grade engi-

neers are wanted for Bhilai, the Indian General Manager of the plant makes the required demand on the Russian Embassy in New Delhi through Hindustan Steel and the Government of India. The Embassy forwards this requisition to Moscow, which directs its steel works to send out to India ten hand-picked engineers with instructions that they are to work for India, in Indian climate and with such food as is available in Bhilai. In case of any failure on their part, their next assignment may be in Siberia.

As for the other two steel plants, their project reports for expansion were prepared by Hindustan Steel. On the basis of the project reports, tenders were called included in which there were some tenders from the United States. As competition is the most essential pre-requisite for free enterprise, various tenderers adopted the technique of under-cutting their rivals. From India's point of view, this could be regarded as a healthy development. The basic issue is, however, to achieve the steel production target by a certain date, namely, by 31st March, 1966. Plant and equipment for the expansion of the Rourkela steel plant has now been ordered. Tenders for the Durgapur plant are still being discussed, and it may take some more time before orders are placed for plant and equipment. It roughly takes 30 months from the date of placing orders to the plant going into production. It should be possible for Durgapur to make a beginning in production in its expanded plant by March 1966. Due to such a widely different procedure, it is unfair to compare the production schedules of the three public-sector steel plants.

Many of the difficulties which the Rourkela steel plant has had to face are due to the lack of a co-ordinating machinery. The commissioning of the Durgapur plant was smoother because of a well-knit co-ordinating organisation. At the West German Government's insistence, a co-ordinating organisation has been set up for the Rourkela plant. The British Government likewise has emphasised the need for a co-ordinating organisation for the Durgapur steel plant's expansion. As pointed out earlier, there is no need for such an organisation for Bhilai because there is only one supplier of the entire plant and equipment.

As for technicians, first-class men are not willing to come to India for a limited number of years. They are generally selected by an Indian team, who makes its selection from such men as are willing to come to this country. Here in India, they demand living conditions almost equal to those they have in their own country. So it is not easy to get the services of top-grade foreign technicians unless big enticements are offered.

IRON ORE

Czechoslovakia Plans to Buy

The Czech Commercial Counsellor and Trade Representative to India, Mr. V. Kirsbaum, said in a Press conference last week that his country was prepared to buy more iron ore from India, provided it was offered at competitive prices and arrangements were made for the speedy

delivery of a stipulated quantity a day at the Indian ports of loading. As it is, the price of Indian ore is about 20 percent higher than that of the Brazilian ore. Moreover, the loading arrangements in India are highly unsatisfactory.

ASIAN COMMON MARKET

Diplomats Discuss Prospects

A conference of Indian diplomats serving in the south-east Asian countries was held here last week. Emphasis was laid on developing trade relations with the countries of the region. The proposal for an Asian Common Market was the subject of a report to which India's Ambassador to the European Common Market, Mr. K. B. Lall, was a signatory. The subject was not, however, even mentioned at the last meeting of the E.C.A.F.E. earlier this year. The issue is a simple one. There are two leading countries in the region, namely, Japan and India. Japan is not interested in the Asian Common Market. As for India, she is prepared to have a Customs union of India, Burma, Ceylon and Pakistan to begin with? The Indian diplomats meeting here last week did not consider these issues.

COAL

Price Increased

The Government has decided to increase the price of coal by 6nP a ton with effect from 1st June, 1963, in order to enable the collieries to meet the incidence of the incremental scales of wages to workers awarded by the arbitrator of colliery disputes. The award recommended, among other things, the introduction of grades and time-scales of pay for workers as from 1st June, 1959. Thus an additional increment will fall due on 1st June of each year for six years.

HOUSING

Official Programme Prepared

The Central Ministry of Works, Housing and Rehabilitation has prepared a Rs. 100-crore construction programme to meet the shortage of office accommodation and residential houses for Central Government employees in Delhi, Bombay, Calcutta and Madras. The construction programme, which will be spread over the next seven years—the remaining two years of the third plan and the entire period of the fourth—envisages the construction of nearly 5.8 million square feet of office accommodation and about 74,000 residential units in these cities by 1971.

The main feature of the programme, which has been sent for approval to the Central Ministry of Finance and the Planning Commission, is to construct over 55,467 more residential units in Delhi, 9,811 in Bombay, 3,210 in Calcutta and 5,487 in Madras. For office accommodation, the programme provides for the acquisition of land worth Rs. 19.17 crores and the construction of units with space of 4 million square feet in Delhi, 483,000 square feet in Bombay, 1,278,000 square feet in Calcutta and 134,000 square feet in Madras.

The Ministry has informed the Planning Commission that the programme limit for the current plan period should be increased to Rs. 65 crores and that for the fourth plan period placed at Rs. 70 crores so that it is able to plan now to achieve the targets. According to the Ministry's assessment, the demand for residential units at present is: Delhi 90,065, Bombay 10,266, Calcutta 3,770 and Madras 5,487. Against these, the units

available are: Delhi 34,598, Bombay 455, Calcutta 560 and Madras nil.

The assessment of the demand is based on the applications received for the allotment of accommodation. The total number of Government employees in each of the cities is much larger than the figures indicate, but it has been presumed that those who have their own private houses have not applied for allotment. The programme expects to meet this demand in full.

So far, lower percentages of residential accommodation were fixed for Bombay, Calcutta and Madras. Consequently, the targets for fulfilment there had been lower resulting in an acute shortage of accommodation for the Central Government staff. This has been one of the reasons why Central Government offices have been reluctant to shift from Delhi. According to the new programme, the policy on the construction of Government buildings in Bombay, Calcutta and Madras will be changed and brought in line with that prevailing in Delhi.

The programme has been worked out on the basis of meeting the existing assessed demand for office accommodation plus 10 percent for future expansion. For residential accommodation, the objective is to meet the present demand on a 100-percent basis, which will become 80 percent or less by the time the programme has been completed in 1971. The total cost of the programme is in addition to the sanctions so far made amounting to about Rs. 32 crores for the current plan period.

The Central Ministry of Works, Housing and Rehabilitation has appointed a Committee of Secretaries to examine the implications of the official decision that Government employees owning houses should be considered for Government accommodation. The committee consists of the Secretaries to the Ministries of Defence, Railways, Communications, Finance, Home Affairs and Works, Housing and Rehabilitation.

The setting up of the committee has been necessitated because a large number of Government employees, who were given notices, represented against the Government's decision, and secondly because some of the Ministries like Defence and Railways were averse to adopting rules depriving their employees who owned houses from Government accommodation. The committee will examine whether exceptions can be made in certain circumstances and on what grounds. The committee will also ensure that the rule is followed uniformly by all the Ministries. A final decision will be taken by the Central Government after the committee makes its recommendations.

Following the Government's decision that market rent, in conformity with the prevailing market conditions, should be charged from those Government servants who occupied Government accommodation in spite of the fact that they had residential accommodation of their own and had let it on rent, a large number of notices were issued to Government servants. In almost all these cases, representations were received from Government employees emphasising that due to one reason or another, it will cause hardship to them if they were either deprived of Government accommodation or were subjected to the payment of market rent.

It was pointed out that the decision discriminated against those Government servants who might invest in other ways such as the purchase of shares. It was also pointed out that employees, who owned houses, had only a modest amount left from these houses after the payment of land dues, municipal taxes and additional income tax. It was stressed that the decision

will be particularly harsh when the house is built with borrowed funds.

The representations made by employees also pointed out that investment in houses as a means of providing income for the future, particularly on retirement, was a legitimate investment on the part of a Government servant. The problem has also legal aspects, because in some cases, the houses belonging to Government servants are trusts or joint Hindu family properties.

RETIREMENT AGE

Government Decides to Raise

The retirement age of I.A.S. and I.P.S. officers has been raised by three years, from 55 to 58. The order which the Central Home Ministry has issued in consultation with the State Governments came into effect on 25th May this year. A proviso has been added to the Act under Service Rules that at the age of 55 or after, the officer can himself retire or the Government can make him do so, but in either case a three-month notice will be required. The retirement age of employees belonging to the Central services has already been increased from 55 to 58.

In 1960, the second Pay Commission had recommended the extension of the retirement age from 55 to 58. It argued that this step would at best reduce fresh employment under the Central Government by about 12,000 persons during each of the three following years. This was less than 1 percent of the total volume of additional employment needed for educated people during the third plan period.

Initially, when the Central Cabinet considered the recommendations of the Pay Commission, it was decided that the age of superannuation might continue to remain at 55, particularly because the higher age would reduce employment opportunities. Later, on 30th November last year the Cabinet reconsidered its decision and agreed to raise the retirement age to 58.

BERLIN FAIR

India to Participate

India has agreed to participate in the annual Berlin Fair, to be held from 20th October to 27th October this year. Since last year, the organisers have introduced a new feature in the fair, namely, "partners in progress." Last year, the African countries participated in this sector. This year, such Asian countries as India, Pakistan, Nepal, Japan, Indonesia, Thailand, Ceylon, Burma, the Philippines, Hongkong, Malaya, Singapore, South Korea and Laos have been invited to participate in this sector.

CZECHOSLOVAKIA

Pact on Equipment Signed

Contracts were signed here last week for the supply of Czech equipment worth about Rs. 9 crores for three major public-sector industrial projects. The machinery is being supplied under the Indo-Czech economic collaboration agreement of November 1959, which provided for a Czech credit of Rs. 231 crores for India. The contracts cover the supply of plant and other equipment for setting up the heavy machine tools plant, Ranchi; the third stage of the foundry-forge plant, Ranchi; and the establishment of the high pressure boiler plant, Tiruchi (Madras State).

The foundry-forge plant, Ranchi, will cater fully to the heavy machine-building plant's requirements of

castings and forgings. In its third stage, it will manufacture about 47,000 tons of grey iron castings, 90,000 tons of steel castings and about 37,000 tons of forgings.

The plant for producing heavy machine tools in Ranchi will be constructed in the two separate stages. In the first stage, the output of 10,000 tons of finished products a year will be achieved gradually. In the second stage, the production capacity will be increased approximately twice as much, namely, about 20,000 tons of finished products a year. The plant has been designed in such a way that it has general-purpose machine equipment so that it can produce machine tools different from those incorporated in the planned production programme. The structure of the production programme has been settled on the basis of average demand for the heavy-duty machine tools in engineering works.

In the first stage, according to this programme, 22 types of heavy-duty machine tools of the most modern design will be manufactured. These machine tools are now exported from Czechoslovakia to many countries all over the world. These include various types of radial drilling machines, double housing planers, centre lathes, horizontal boring machines, vertical lathes, portal milling machines and centre grinders. Vertical lathes with 4,000-millimetres diameter and a weight of 110 tons will be manufactured there. Within the proposed scheme of organisation, it will be possible to carry out changes in the structure of the production programme according to the actual requirements of the Indian industry.

The production programme for the second stage will contain other kinds of machine tools of more complicated designs and more elaborate types, especially portal milling machines and grinders, while the assortment of centre and vertical lathes, horizontal milling machines and planers will be extended. The factory will also produce the corresponding quantity of standard and special accessories as well as spare parts.

The construction of the heavy power equipment plant in Ramachandrapuram, near Hyderabad, and the high pressure boiler plant in Tiruchirappalli follows from the Government of India's decision to increase power generation as quickly as possible so that in 1975, the output of about 35 million kilowatts is reached. That brings about the requirement of securing the annual increase of about 2,500 megawatts of the installed output. In its first stage, the heavy power equipment plant near Hyderabad will have the capacity of 600 megawatts a year which will be doubled to 1,200 megawatts later on.

In its first stage, the high pressure boiler plant, Tiruchi, will manufacture 12 boilers a year with an average rated output of 200 tons of steam an hour. It will have a total capacity of 750,000 kilowatts. The manufacturing programme will also include certain items of fittings, pumps and other ancillary equipment for using in steam turbines and boilers. The completion of the present stages of the three projects will involve a total capital outlay of over Rs. 60 crores.

BHILAI

Expansion of Capacity

Steps are being taken to increase the supply of raw materials for the Bhilai steel plant, whose capacity is being expanded from 1 million tons to 2.5 million tons of ingot a year. Except coal, Bhilai produces most of the major minerals it needs from its own captive mines. So far, the plant has produced about 10 million tons of raw materials to meet its own

CAPITAL, 6th June, 1963.

requirements as well as part of the needs of other steel plants in the country.

The Bhilai plant's entire demand for iron ore is met from the captive mines of Rajhara and Dalli. The Rajhara mechanised mine at present supplies 70 to 75 percent of the ore required by Bhilai. As the mechanised mine has not so far achieved the rated capacity, the rest of the requirements is met by manual excavation of the ore. The mechanised unit is, however, expected to reach its target shortly. About 1,329,200 tons of iron were extracted at the mechanised mine during 1962. The total demand of the Bhilai plant during the year was 2,131,100 tons. In view of the present expansion programme of Bhilai, it has been decided to introduce three shifts in the Rajhara mine. It has also been decided to develop Dalli as a separate mine for which detailed prospecting is being done. At Dalli, a reserve of 112 million tons of ore has been proved. Besides, 5 million tons of easily obtainable float ore is available near the loading point.

During 1962-63, it is learnt, Bhilai despatched about 250,000 tons of iron ore to Rourkela to enable the latter to upgrade the Barsua ore. From the beginning of 1963, Bhilai has also started despatching iron ore to the State Trading Corporation, for which a separate mine has been developed a few miles from Dalli. At this place, reserves are estimated at about 17 million tons of float ore with about 65-percent iron content.

As for limestone, deposits have already been discovered at a place about 20 miles from the steel plant. During 1962-63, the mechanised quarry there produced 430,000 tons of limestone. In order to meet the requirements of the expansion programme, arrangements are being made for the increased supply from the quarry by installing additional crushers, etcetera. Bhilai has also succeeded in finding out good areas for the development of captive mines for manganese, and the Government has already granted the necessary mining leases to the plant. The plant has also prospected and selected a suitable area in Jabalpur district for developing a bauxite mine. The lease has already been granted, and the mining programme is being worked out. A good deposit of chromite has also been located by the steel plant authorities in Maharashtra. The Madras Government has granted Bhilai a certificate of approval for prospecting for magnesite near Salem, for which a cell has already been opened.

The rare mineral, fluor spar, most of which had in the past been imported from China, has also been located at a place about 60 miles from Bhilai. Detailed prospecting is going on in the area, and reports so far obtained are promising.

BEAS DAM

Finding of U.S. Team

The team of engineers from the U.S. Bureau of Reclamation which is visiting India on behalf of the U.S. Agency for International Development (A.I.D.) has expressed the view that there is scope for increasing the floor storage in the reservoir to be created upstream of the Beas dam. It has also suggested that the dam might be designed for a higher flood discharge. This suggestion has been accepted by the project authorities.

The A.I.D. is considering a proposal for assisting the Beas project with a dollar loan to meet the requirements of construction machinery and permanent equipment. At the time of signing the Indus Waters Treaty in 1960, the World Bank and the U.S. A.I.D.

CAPITAL, 6th June, 1963.

had agreed to give India a total loan of \$56 million for the project.

According to the team, the concreting done in Bhakra was of outstanding quality, and it was surprised to note the absence of any seepage into the drainage and foundation galleries. The team is reported to have suggested that there is scope for using the secondary power generated in Bhakra for which necessary arrangements may be made.

Unit I of the Beas project envisages the diversion of the Beas river from a point upstream of Mandi (Himachal Pradesh) into the lake created by the Bhakra dam on the Sutlej river.

Unit II of the Beas project comprises an earth and rock fill dam, 380 feet high on the river Beas in Pong, near Talwara. The Beas dam in Pong will provide maximum utilisable storage capacity which will be used for irrigation in Punjab and Rajasthan.

POWER GRIDS

Regional Agencies Planned

The Central Government is likely to introduce legislation shortly to establish regional agencies for planning and operating zonal power grids leading eventually to an all-India grid system. The Government has already accepted the recommendations of the special committee set up to suggest organisational pattern and functions of the regional agencies. The committee included the representatives of the Central Water and Power Commission, the Planning Commission, various State Electricity Boards, the Damodar Valley Corporation, the Delhi Electric Supply Undertaking and the Federation of Electricity Undertakings of India.

The legislation is expected to be on the lines of the recommendations made by the committee. The latter has recommended the demarcation of the country into the following zones for establishing regional agencies: (1) Western Ghat region: Kerala, Madras, Mysore and south Andhra; (2) Eastern Ghat region: north Andhra, south Orissa, eastern Maharashtra and central and southern Madhya Pradesh; (3) Satpura region: Gujarat, western Maharashtra, west Madhya Pradesh, extreme south Rajasthan; (4) Western Himalayas: Jammu and Kashmir, Himachal Pradesh, Punjab, Delhi and Rajasthan; (5) Central Himalayan region: Uttar Pradesh and north Madhya Pradesh; (6) Eastern Himalayan region: Bihar, Bengal, the D.V.C. and north Orissa; (7) Assam region: Assam, Manipur, Tripura, N.E.F.A. and Nagaland.

According to the recommendations of the committee, a regional power agency shall be vested with responsibility for planning of new power stations and major transmission lines and the integrated operation of power systems in the region as a whole. It shall comprise technical representatives of the State Electricity Boards concerned, organisations like the D.V.C. and representative of the Central Electricity Authority. The chairman of the regional power agency will be the representative of the constituent State Electricity Boards by rotation on a yearly basis. The secretary of the regional power agency will be a full-time technical officer to be appointed by the agency. The headquarters of the various regional agencies and the secretariat will be fixed by the respective agencies.

The representatives of the various State Governments have agreed that the functions of the regional agencies should include the planning of generation and major transmission programme in the region and ensure efficient integrated operation of the constituent systems in such a manner that at any given time, the total

amount of electricity generated and transmitted shall give optimum benefits to the region as a whole.

In view of the growing demand, all State Governments have accepted that planning of power on a regional basis will prove advantageous to all the constituents of a regional agency. The system is already in operation in some of the European countries where sovereign nations have pooled their power resources to ensure that the requirements of all the participating nations are fully met.

It has been estimated that, when the four systems of Kerala, Madras, Mysore and Andhra Pradesh are interconnected and operated on an integrated basis, there will be a saving of 265 megawatts in the installed capacity on account of diversity between the systems and the reduction in standby capacity. This is expected to result in a saving of Rs. 22.73 crores in the capital outlay and Rs. 2.60 crores in the annual running charges after allowing for the capital and running expenditure involved in the construction of the inter-State links together with the associated grid substation equipment and a central load frequency control station.

Similarly, in the eastern region, as a result of inter-connections and integrated operation of the D.V.C., West Bengal, Bihar and Hirakud-Talcher systems, it is estimated that the saving by the end of the present plan period will be 350 megawatts in equivalent generating capacity due to diversity between individual systems and the reduction in standby capacity. This is likely to result in a saving of about Rs. 27.15 crores in the capital outlay and Rs. 4.8 crores in the annual running charges after making due allowance for establishing the inter-connections and associated terminal equipment.

OIL INDIA

Cost of Pipeline

The total cost of Oil India's 720-mile long Nahorkatiya-Gauhati-Barauni pipeline system is estimated at Rs. 24,250,000. The amount of foreign exchange raised to finance the cost of the pipeline is Rs. 13,250,000. Of this sum, Rs. 3 million has been provided by the British Government through the Government of India. The balance of Rs. 10.25 million has been covered by the Burmah Oil Company by issuing debentures for Rs. 25,000,000 and by issuing to the Bank of Scotland and the Chartered Bank of an unsecured B.O.C. loan stock of Rs. 5 million. Proceeds of these borrowings will be made available to Oil India Ltd by the B.O.C. at identical terms of interest and repayment. The rupee cost of the project has been covered by the Rs. 30-crore debenture stock issued recently by Oil India Ltd in India—the largest single public issue of debenture stock in this country to date.

CEMENT

Selling Price Raised

The selling price of unpacked cement free on rail destination has been revised at Rs. 97.75 a ton with effect from 1st June, 1963. The price hitherto was Rs. 94. The excise duty and the additional surcharge thereon and the packing charge have to be paid separately.

On a representation by the cement industry, the Government has examined the incidence of the increases in the cost of production and has decided that with effect from 1st June, 1963, the ex-works price to be paid to the industry should generally be increased by Rs. 2.75 a ton.

CARBORUNDUM UNIVERSAL ABRASIVES

a
change
in

marketing
arrangements

Carborundum Universal have pleasure to announce the opening of a Branch at Calcutta, from 1st June 1963, for direct marketing of their well-known range of Coated and Bonded Abrasives.

All inquiries (both Trade and Consumer) may please be addressed to:

Carborundum Universal Ltd.,
Armenian College Building (Second floor),
56-D, Free School Street, Calcutta-16

Territories Covered:

For Grinding Wheels and other Bonded Abrasives: West Bengal, Bihar, Assam, Orissa, Uttar Pradesh and Eastern half of Madhya Pradesh.

For Coated Abrasives: West Bengal, Bihar, Assam, Orissa, and part of Madhya Pradesh.

Carborundum Universal are grateful to M/s. William Jacks & Co., Ltd., Calcutta for their valuable services all these years in the distribution of their abrasive products.

CARBORUNDUM UNIVERSAL LTD.

Head Office: 52/53, Jehangir Street, Madras-1

Telephone: 29141 (8 lines)

Works: Tiruvotiyur.

FACILITIES FOR COMMERCIAL EDUCATION IN U.K.

(FROM OUR LONDON CORRESPONDENT)

At a very early stage in its history, the London Chamber of Commerce began to take a close interest in education for commerce. It is curious that its concern with the question first arose because many London merchants at that time were employing a number of foreign clerks. An investigation by a special committee of the Chamber showed the reason to be that most of the English clerks available, apart from knowing no language but their own, lacked, not ability or application, but education in commercial subjects. And they suffered that deficiency largely because the necessary facilities were not available to them. This special committee, which became the London Chamber's Commercial Education Committee, co-opted leading headmasters, visited several Continental schools of commerce and made thorough enquiries into educational facilities available. As a result, it drafted a suggested course of instruction for pupils in secondary schools, based to a large extent, it appears, on the practice of the commercial schools of Leipzig and Munich.

Although the Committee started in a purely advisory and consultative capacity, it soon realised that the many gaps in the education system could be filled only by its offering both lectures and courses to those employed in clerical occupations in the London area. As those gaps were gradually filled by the education authorities, the Committee discontinued its work in those directions. Nevertheless, it continues to act in an advisory capacity to both commerce and education.

During the 1880's, the Committee came to the conclusion that, just as there was an urgent need for the expansion of education for commerce, so also was there a need for awards, based on examinations, to enable the business community to recruit or promote soundly educated and properly certificated young people. With this in mind, the Committee devised a series of junior examinations, the first of which were held in 1890. With the growth of further education, a senior examination in more specialised commercial subjects was offered

in 1894. These were particularly valuable, for at that time many of the present leading professional bodies were not in existence, or were in their infancy.

In spite of the growing number of recognised professional bodies, there is still a big demand for the Chamber's examinations in the more advanced commercial subjects, particularly among those who are not intending to become professionally qualified, but who wish to present evidence of successful studies in the form of the London Chamber's certificates and diplomas. In the early days, the Chamber included a number of technical and semi-technical subjects in its examinations, jointly with the City and Guilds of London Institute and the Wholesale Textile Association, but later discontinued them to concentrate on more commercial examinations.

Stages of Education

Between the first and second World Wars, the Commercial Education Committee revised its scheme to provide for three stages of examination, i.e., elementary, intermediate and higher, with the intention of encouraging students to progress from the lower to the higher levels of examination through an intermediate stage. This policy has been continued by the Committee. The Committee, aware of the difficulties experienced by employers in finding a sufficiency of well-trained and adequately qualified female clerical staffs, carried out an investigation with a view to ascertaining whether the traditional methods of examining in the typing, stenographic and secretarial fields were appropriate to present-day needs. Throughout its discussions on the subject, it had constantly in mind that any decisions affecting its examinations would also affect teaching methods.

As a result of its investigations, it developed new and revolutionary examinations for typists, stenographers and private secretaries. These have been acclaimed by the commercial teaching profession at home and abroad. Unfortunately, too few employers support them, perhaps

through lack of knowledge of their content and purpose, with the result that they continue to complain of the low quality of work and output of those employed in these categories. The remedy lies in the hands of employers who could, by encouraging schools and colleges to train young people up to the Chamber's standards, receive into their employ an ever growing number of young women who were properly trained and certificated.

With the development of trade in the then British Empire in the early part of the 20th century, there followed a growth in education, and as a result of this and because of the public interest taken in the work of the Committee, there came a growing demand for the Committee to extend its examination scheme throughout the Empire and more particularly in the Commonwealth countries—other than Australia, Canada and New Zealand. Today, the London Chamber has active examination centres in nearly 40 Commonwealth and other countries having close links with the U.K.

When the Committee first decided to offer examinations, it came to the conclusion that in addition to awarding certificates and diplomas, it should award medals and prizes to those who were outstandingly successful in its examinations in the U.K. This policy it has continued as an encouragement to greater endeavour. The medals and prizes awarded by the Committee were later supplemented by prizes awarded by outside bodies for special successes in the examinations, among them the Institute of Chartered Accountants, the Association of Certified and Corporate Accountants and the Spanish Chamber of Commerce. The medals and prizes are presented every year by a distinguished visitor at the Mansion House by kind permission of the Lord Mayor of London. In 1950, Her Majesty the Queen, then Princess Elizabeth, honoured the Chamber by presenting these special awards.

Scholarships

In 1923, the late Mr. Charles R. E. Bell bequeathed the sum of £10,000

to the Committee in order that scholarships might be awarded to suitable young people. After careful consideration, the Committee decided to offer two types of scholarship—one of £60 to young people to enable them to continue their whole-time day education, and the second, a senior scholarship, valued £180, to enable young business men and women to travel abroad and improve their knowledge of foreign languages. After the second World War, and with the passing of the 1944 Education Act, it was decided to discontinue the above scholarship; in favour of scholarships to the value of £500 for higher commercial studies at home or abroad.

Altogether 42 Junior and 27 Senior Travelling Scholarships were awarded under the old scheme, while 17 scholarships have been awarded during the period 1951-60 under the new scheme. The value of scholarships awarded during the period 1926-60 was over £12,000. Scholarships will continue to be offered each year, and the Committee hopes that the business community will bring these valuable awards to the notice of their staffs.

A further extension of the work of the Committee has been the part it plays in the national commercial apprenticeship scheme inaugurated by the Association of British Chambers of Commerce. The scheme provides for a two-tier system of commercial apprenticeship based on individual employers' needs, and leads, through part-time day release and evening study, to the National Certificates in Commerce (probably shortly to become the National Certificates in Business Studies), and to suitable professional qualifications. An Apprenticeship Sub-committee has been appointed by the main Commercial Education Committee to assist employers to develop new schemes of practical training and to approve, on behalf of the Chamber, schemes which offer the breadth and level of training which it is felt would be acceptable to the National Commercial Apprenticeship Board. It is the Committee's hope that an increasing number of employers will support the scheme, for it is clear that commerce badly needs young men and women who can be trained to fill the more senior posts as they fall vacant through retirement and other causes.

Old Attitudes

Just as there is a realisation in industry that technical training is a necessary function of the employer if it is to get the future technicians, technologists and scientists it will need, so should commerce realise that it is only through planned practical and academic training that it will get its future administrators and managers. The laissez-faire attitude of commerce towards commercial education and training is resulting in the brighter young school-leavers seeking posts elsewhere, and leaving in the main only the residue for clerical employment. This may be one of the reasons, if not the most important reason, why commerce is so consistently complaining about the poor quality of young men and women entering its employment. Support for the Commercial Apprenticeship Scheme could go a long way towards remedying the situation.

It will be seen from the above summary of the work of the Commercial Education Committee that it has played an important part in the development of commercial education at home and overseas, and exercised considerable influence in directing this development into the right channels. The Committee's value has not been diminished today, when the country is still to some extent in a transitional stage as far as education, and particularly commercial education, is concerned.

CYCLONE AFFECTS PROSPECTS OF BUMPER CROP

WITH reports of a cyclone and tidal bore sweeping over the coastal districts of East Pakistan, drought conditions in the Gangetic basin of West Bengal and heavy rain in the catchment areas of the Brahmaputra and its tributaries swelling the rivers in Assam, the prospects of a bumper jute crop have receded. In East Pakistan, the coastal districts have suffered heavy loss of life and property. The damage has been so great that the authorities may take months to repair it. Meanwhile, vast areas of land in the Chittagong, Noakhali, Tipperah, Dacca and Barisal districts lie submerged in saline water, which will seriously affect the normal growth of the jute plants. In Mymensingh, Pabna, Rangpur and Dinajpur districts, the swelling rivers have already inundated the fields, damaging the plants.

Monsoon Delayed

The monsoon has been delayed in West Bengal. Normally, it should be here, around 7th June. So far, there is no indication of any depression developing soon in the Bay of Bengal to accelerate the entry of the monsoon into the State. As a result, fields with standing jute are dry and the plants are of stunted growth. A week's heavy shower at this stage can revive the plants, but the chances of such rainfall appear remote.

In Assam, heavy showers in the catchment areas of the Brahmaputra and its tributaries have raised the level of the rivers. The Brahmaputra has already inundated some of the fertile jute-growing areas. In some places, the fields have been submerged. As a result, the plants have been benefited to some extent. But unless there is timely rainfall, the plants lie exposed to infestation by pests.

In North Bihar, fields lying contiguous to river or canal banks are getting enough water and plant growth has been sustained on them. In Tripura, river-levels are rising. The jute plants are submerged in turbid tidal water. In the coastal districts of Orissa and Andhra, rainfall has been sparse and normal growth of plants has been affected. Only the early advent of the monsoon can halt further damage to the jute crop.

Market circles do not yet seem to be worried about the present crop situation and the price and offtake are unaffected. Both mills and the Jute Buffer Stock Association have got adequate stocks of fibre with them. The carryover from the current season will be about 3.5 million bales, which will enable the mills to continue the present high level of production. Pakistan too will have a sizable carryover. So, any shortfall in the output of the 1963-64 season is not likely to cause any difficulty for the industry.

Burlap Imports into the U.S.A.

With a gradual rise in the import of burlap into the U.S.A., India's share in the trade is improving. The U.S. intake in March 1963 was 30,800 tons, making a total of 91,000 tons for the first quarter of the year. The intake was 78,800 tons for the corresponding quarter of 1962. Supplying as much as 78,800 tons against 67,900 tons, India's share in the trade rose to 86.6 percent in the current year from 86.2 percent in the previous year. Pakistan supplied 7,200 tons against 7,100 tons; Continental countries

3,900 tons, against 2,600 tons; and others 1,100 tons, against 1,200 tons.

THE JUTE MARKETS

Manufactured Goods: The manufactured goods market opened steady on hectic covering for the due date by bears and shippers during the past week. The transactions were closed without any difficulty. Towards mid-week, sentiment suffered a mild setback when a number of mills and holders made keen offers for all positions. But there was no evidence of selling pressure. Scattered business in heavy goods with Cambodia was reported. A Nigerian Government tender for 7,200 bales of B Twills for near positions was shared by India and Pakistan. There were some enquiries in sacking from West Africa. Small hessian business was done with the U.K., the U.S.A. and the Continent. At the close, the market showed a modest gain in sacking. But a lower offtake in hessian depressed sentiment, revealing fractional losses on balance. The futures market moved in sympathy with the spot market on intermittent spells of profit-taking by bulls and short-covering by bears.

Quotations on Wednesday were as follows:

	June	July-Sept.	Oct.-Dec.	Jan.-March
40in. 71oz.	37.50	36.90	36.10	35.40
40in. 80z.	40.00	—	—	—
40in. 100z.	50.75	49.70	48.15	47.25
B Twills	112.75	113.75	113.35	112.85
Cornsacks	115.25	116.25	115.35	115.00
Heavy Cees (Plain)	112.75	113.50	113.25	112.85
A Twills	135.50	136.50	137.50	136.50
Liverpools	127.50	127.50	127.50	126.75

Raw Jute: The raw jute market was dull and inert during the past week. Mills were reluctant to take off-quality fibre even at a discount and confined their purchases to mar-

ginal lots of selected jute for blending purposes around the prevailing prices. Assam Bottoms closed at Rs. 29 a maund, ready f.o.r., Calcutta. Operators were awaiting permission to commence business in the new crop. The futures market lacked interest. Upper Assam White Bottoms June were transacted nominally at the floor level of Rs. 30 a maund. For September positions, scattered business was reported. Opening on a subdued note with a loss of 10nP from the previous closing level at Rs. 49, the price moved within a narrow range from Rs. 49.04 to Rs. 48.30 to close steadier at Rs. 48.92, showing a loss of 18nP. The turnover was small and the undertone quietly steady at the close.

Arrivals at the Cossipore market were 300 wagons during the week. About 50,000 maunds were purchased and the closing stock was estimated at 350,000 maunds.

	Landed at Mills (Basis Bottoms)	
	1962-63 Rs. a Md.	1963-64 Rs. a Md.

THE U.K. JUTE MARKETS

LITTLE BUYING OF FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

The raw jute market remained firm in Pakistan during the past week. The E.P.C. value of Grade Tossa-4 was raised by £3 a ton, the reason being to bring it into line with

the official price of Dacca Tossa-6. However, this made little or no difference to the position here, and there were still sellers willing to accept the previous rates.

Dundee spinners showed little interest in raw material, so practically no movement took place in fibre. It is unlikely that much more buying of old crop jute for shipment will take place as a substantial quantity is available ex warehouse Dundee, which should be sufficient to maintain production until fibre from the new crop becomes available.

The new crop in Pakistan is making satisfactory progress. A cyclone has hit East Pakistan, but no news has been received about damage to the jute crop. Offers are being quite freely made here with the lower grades available at under minimum export rates.

New crop offers were lowest at £109 10s—for Mill Lightnings, at £94 for Mill Hearts and at £80 for Grade Hearts, c.i.f. U.K. for August-September shipment. Grade Tossa-4 was still available at £107/10s—and Outport Tossa-2/3 at £97. Dacca Tossa-6 was offered at £109/10s—for October-November shipment.

Old crop prices were at £111 for Mill Lightnings, at £94 for Mill Hearts and at £79 for Grade Hearts. Grade Tossa-2/3 was at £121 10s and Grade Tossa-4 at £107 10s. Outport Tossa-2/3 ranged from £95 10s and Outport Tossa-4 from £84 10s for June-July shipment. Cuttings were steady at £53 10s for S.N.C. and at £45 10s for N.C.

The Siam market was firm, but there was no further increase in prices. Grade A was at £75, grade B at £72 and grade C at £69, delivered mill Dundee for June-July shipment. New crop was available at £2 to £4 a ton less. Some Far Eastern countries were still showing interest in this type of raw material.

The Calcutta goods market was quieter, and prices returned to a more normal level. Quotations were at 77s for 40in. 100z. and at 57s for 71oz. a 100 yards f.o.b. Calcutta for June shipment, at 75s 3d and 55s 6d July-September and at 72s 9d and 54s 6d October-December. B Twills were at 172s, 173s and 172s 6d for the respective shipment periods.

Commodity Markets

PEPPER PRICES FALL FOR LACK OF DEMAND

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIAN shippers have been anxious about the continued absence of foreign demand for pepper. Prices have been on their downward move for some time now. Forward positions are virtually neglected by buyers. Bombay, which has become the new nerve-centre of forward deals in this commodity, reports that Jeth and Shrahan contracts once touched their lowest. Jeth, which opened around Rs. 330 six weeks ago came down to Rs. 234 a quintal, and Shrahan dropped from Rs. 334 to Rs. 305 a quintal. Spot delivery has come down to about Rs. 150 a 50 kilograms. Sentiment in pepper is induced by lack of demand, both foreign and local. According to certain reports, Singapore recently unloaded about 1,500 tons on New York at around 31 to 31½ cents, but the Indian price works to around 33 cents even at the present low rates.

It is said that the stock position in the U.S.A. is at present comfortable.

If this is true, then the U.S.A., which is the largest buyer of this commodity, might wait for more attractive prices to resume its buying. The Communist countries of Europe which used to buy substantial quantities of Indian pepper at regular intervals are also keeping away from the market, probably looking for prices to come down further.

There is a talk in market circles that the earlier estimates of supplies this year were on the low side. Singapore's willingness to sell at lower prices and the foreign buyers' continued disinterest in Indian pepper are attributed partially to this revised idea about supplies.

According to certain trade estimates, exports from India so far this season are about 12,000 tons. Market circles are not optimistic now as they were previously and their present opinion is that the current season's

CAPITAL, 6th June, 1963.

exports are not likely to touch last season's record of 23,000 tons.

Exports of coir products from India during 1962-63 bettered the export performance of the two previous years, both in terms of quantity and value. According to the Coir Board figures, their exports were to the tune of 78,212 tonnes, compared with 76,077 tonnes in 1961-62 and 70,936 tonnes in 1960-61. The coir industry earned on this account Rs. 12.18 crores in foreign exchange by these exports, against Rs. 11.35 crores in 1961-62 and Rs. 8.67 crores in 1960-61. Compared with 1961-62, the increase in coir products was 2.8 percent in terms of quantity and 7.3 percent in terms of value. Coir prices were higher during the year, and a section of the foreign buyers had the complaint that prices were prohibitively high.

The Central Government has decided to abolish the system of licensing for the export of coir yarn and coir products largely as a measure for removing the procedural delays and formalities connected with the export of coir goods. Coir exports will, however, be confined to registered exporters. The Coir Board has introduced a system of voluntary pre-shipment inspection of coir mats as a first step in the introduction of quality control for all coir products. Two inspectors appointed by the Board, one each in Alleppey and Cochin, the two important shipping points, will conduct the inspection to help the exporters. It was decided at the recent meeting of the Coir Board to supply high quality coir mats, mattings and carpets to all Indian embassies abroad as a means of popularising Indian coir goods.

Bonus Dispute Settled

The long-drawn dispute in Kerala plantations over bonus for workers for 1960, 1961 and 1962, was settled at a meeting of the tripartite Plantation Labour Committee, held on 30th May in the presence of the Kerala Chief Minister. The issue was before the committee for the past one year, and by this agreement, nearly 200,000 plantation workers in the State are benefited. As a result of this agreement workers in tea plantations will get bonus at rates ranging between 6½ percent and 8 percent of the annual total earnings for each of the three years. Rubber estate workers will get bonus at rates ranging between 6½ percent and 7½ percent of the total annual earnings for each of the three years. Employers have already paid bonus at rates, which appeared to them reasonable, but that will be now treated as interim payment. The remainder will be distributed along with the payment of wages for July 1963.

Weather Affects Tea Supply Prospects

(BY A SPECIAL CORRESPONDENT)

THE tea trade still appears to be somewhat uncertain as to the supply of the commodity during the 1963-64 season. The total world output fell slightly last year. In north India, the weather to-date has not been very favourable, and with snow melting on the Himalayas, and with early rains swelling the rivers and flooding large areas, the immediate outlook does not suggest that there will be plentiful supplies soon. But outside India, as reports indicate, Russia and east Africa may be both going ahead fairly fast.

The approximate amount of tea retained in India for the last four seasons was: 1959 265 million lbs; 1960 266 million lbs; 1961 334 million lbs; and 1962 295 million lbs. The average is 290 million lbs. Since

CAPITAL, 6th June, 1963.

1959, internal consumption has considerably increased, and is now estimated at 315 million lbs a year.

Price Trends

At the London tea sale on 27th May, 25,839 packages were on offer, of which 14,852 came from north India. Good liquoring Assams again sold well, but other grades met with little support and some lines fell away by 3d a lb. Doars had fair enquiry, but were generally about 1d a lb lower. At the sale on 29th May, 23,862 packages were on offer of which 18,533 packages came from north India. There was less demand than at the previous sale, except for useful Doars teas.

At the 28th May tea sale in Cochin, there was a good demand, but again, rates were lower. To some extent, quality was the cause of an irregular fall of from 15nP to 20 nP a kilogram. High-grown offerings also came to an irregular market, and the majority sold below the previous week's rates.

According to Press reports, nearly 8 million lbs were offered for sale on 27th May in Colombo. There was a firm to strong demand for the best Dimbella Dickoya B.O.P. at dearer rates. Others followed the decline in quality and were generally lowed on last closing rates. There is a sustained demand for good tea, but the supply of medium and commons seems to be heavy. At the above sale, prices eased 2 to 8 cents a lb.

North Indian estates are rapidly changing over from Orthodox manufacture to C.T.C. production. If, as has been maintained, C.T.C. style produces more cups of tea to the lb, and again, if 1963 crop plans out to be 47 percent C.T.C. manufacture and only 45 percent Orthodox (leg-cut making the balance 8 percent), then the increase in the C.T.C. supply means, in fact, that there are to be more cups of tea available without any increase in the weight manufactured. This may also be a serious matter because still more gardens are turning over to the C.T.C. method.

If out of India's production, the changeover from Orthodox to C.T.C. already shows that the latter method exceeds the former and assuming that C.T.C. definitely gives more cups of tea to the lb, than it stands to reason that consumers will require less tea the weight. Meanwhile, the Russian position is moving from being an important buyer to that of a large combined producer and consumer. East Africa is also going to be a source of worry to all common producing countries. Kenya has raised its planted area from 21,000 acres to nearly 44,000 acres in the past few years. Uganda and Tanganyika have done likewise, but South Rhodesia is in the running in a small way, and Portuguese East Africa is going ahead too fast to be ignored.

The West Bengal tax on teas entering Calcutta remains in force. It is reported that tea proprietors are doing more business outside Calcutta. This tendency is likely to continue and may influence the proprietors of direct-export estates.

Mechanical Plucking

The Russians claim "that a mechanical tea plucking instrument has been successfully tried out on a row of shrubs 500 metres long. The task took 30 minutes and produced 42 kilograms of tender shoots." That statement implies that the collecting bunker or hoppers did not pluck much, if any, stalk. The note continues, "a simple calculation revealed that in a shift the unit is capable of collecting 700 to 1,000 kilograms of tea leaves while an experienced plucker gathers only 40 to 60 kilograms daily."

31, Chowringhee Road,
Calcutta-16, 23rd May, 1963.

The Dividend if sanctioned will be paid on or after 27th June, 1963, to those Shareholders so entitled whose names appear in the Company's Register of Members on 13th June, 1963.

Note—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company.

THE GENERAL INDUSTRIAL SOCIETY LIMITED

NOTICE is hereby given that the Annual General Meeting of Shareholders of the Company will be held at the Registered Office of the Company, at No. 15, India Exchange Place, Calcutta, on Friday the 28th June, 1963 at 2-45 P.M. to transact the following business:—

1. To consider and adopt the Report of the Directors and of the Auditors and the Audited Accounts for the year ended 31st December 1962.
2. To declare dividend.
3. To appoint a Director in place of the retiring Director.
4. To appoint a Director in place of Sri H. V. Gandhi who being co-opted by the Board as an additional Director under Article 117 of the Company's Articles of Association with effect from 7th November, 1962, is eligible to hold office only upto the date of this Annual General Meeting under the Provisions of Section 260 of the Companies Act, 1956. He, being otherwise eligible, seeks re-election.
5. To appoint Auditors and to fix their remuneration.
6. As Special Business.

To consider and if thought fit, to pass with or without modifications the following Resolution as an Ordinary Resolution:—

"RESOLVED that pursuant to the provisions of Section 293(1)(d) of the Companies Act, 1956, the consent of the

Company be and is hereby accorded to the borrowing of moneys by the Board of Directors from time to time upto Rs. 4 Crores remaining outstanding on account of principal at any time from such person(s) and on such terms and conditions as the Board of Directors may think fit notwithstanding that the moneys so borrowed (apart from the temporary loans obtained from the Company's Bankers in ordinary course of business) will exceed the aggregate of the Company's paid up capital and its free reserves, i.e., to say, reserves not set apart for any specific purpose.

The Share Transfer Book and the Register of Members of the Company will remain closed from 21st June, 1963 to 28th June, 1963, both days inclusive.

By Order of the Board,
For THE GENERAL INDUSTRIAL SOCIETY LIMITED,
K. C. BAGRI,
Secretary.

15, India Exchange Place,
Calcutta-1.

Dated, 1st June, 1963.

N.B. i. The Directors have recommended dividend on Equity shares @ Rs. 1.30 per share, subject to deduction of tax under section 194 of the Income-Tax Act. If dividend on shares as recommended by the Directors is approved at the meeting, the dividend will be payable only to such shareholders whose name are on the Company's Register on the day of the Annual General Meeting. No application need be sent for dividend as relative Dividend Warrants will be posted to the shareholders by 8th August, 1963. Shareholders are requested kindly to notify immediately any change of address.

- ii. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Explanatory statement in respect of the Item No. 6 has been appended in the notice, calling this Annual General Meeting sent to the individual shareholders.

THE CALCUTTA JUTE MANUFACTURING CO. LTD.

NOTICE is hereby given that the fifty-seventh Annual General Meeting of the Calcutta Jute Manufacturing Co. Ltd. will be held at the Registered Office of the company "Stephen House" fourth floor, No. 4 Dalhousie Square East, Calcutta, at 3 p.m. on Friday, the 28th June, 1963 for the following purposes:—

AGENDA:

1. To receive and adopt the Balance Sheet as at 31st December, 1962 and the Profit and Loss Account for the year ended 31st December, 1962, together with the Reports of the Auditors and Directors.
2. To declare dividend on the Preference shares.
3. To appoint a director in place of Sri Debi Prasad Poddar retiring by rotation.

And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act 1956:—

"That Sri Debi Prasad Poddar be and is hereby appointed a Director of the company liable to retirement by rotation".

Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act 1956, has been received wherein it is stated that Sri Debi Prasad Poddar is a partner of Dayaram & Sons, the Managing Agents of the company and accordingly an "Associate" of the Managing Agents within the meaning of the

Act and that therefore he can only be appointed by a Special Resolution as a Director liable to retirement.

4. To appoint auditors and fix their remuneration.

The Share Transfer Books of the company will be closed from June 18th to June 28th 1963, both days inclusive.

Any member of the company who is entitled to attend and vote at the meeting convened by this Notice is also entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the company.

By Order to the Board,
DAYARAM & SONS,
Managing Agents.

"Stephen House" 4th floor,
4, Dalhousie Square East,
Calcutta.
The 31st May, 1963.

Note: Payments of dividends declared will be made to those members whose names are registered in the books of the company on the 28th June, 1963. No application for Warrants will be necessary.

THE BISRA STONE LIME COMPANY LIMITED

Notice of Interim Dividend

THE Board of Directors has sanctioned payment of an Interim Dividend on the 4,00,000 Ordinary Shares @ Re. 0.50 nP per share in respect of the year ending 31st March, 1963, subject to deduction of tax at source.

This dividend will be paid on or after 2nd July, 1963, to those Shareholders (or their mandatees) whose names appear in the Company's books on the 26th June, 1963, as the registered holders of these shares.

The Share Transfer Register of the Company will be closed from 14th

June, 1963 to 26th June, 1963, both days inclusive.

By Order of the Board,

Managing Agents.

Registered Office—

Chartered Bank Buildings,
Calcutta: 31st May, 1963.

THE BISHNAUTH TEA COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of The Bishnauth Tea Co., Ltd., will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, at 11-50 in the forenoon on the 28th day of June, 1963 for the following purposes:—

1. To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1962, the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. D. K. Basu, who retires by rotation and who being eligible offers himself for re-election.
4. To appoint Auditors and to fix their remuneration.

SPECIAL BUSINESS:

To appoint a Director in place of Mr. K. A. Evers who has expressed his intention to resign his office of Directorship with effect from the conclusion of this Annual General Meeting. To consider in this connection and if thought fit to pass with or without modification the following Resolution which will be proposed as Special Resolution:—

"That Mr. V. V. Parekh be and is hereby appointed Director whose period of office shall be liable to determination by retirement of Directors in rotation."

Special Notice as required by Section 261(2) of the Companies Act 1956, has been received by the Company from a member expressing his intention to propose the Resolution for the appointment of Mr. V. V. Parekh as Director as a Special Resolution. The Notice states that the sanction of a Special Resolution becomes necessary for the appointment of Mr. V. V. Parekh as Director as Mr. Parekh happens to be Director and Member of Messrs. J. Thomas & Co., Private Ltd., who by Special Resolution have been approved as Brokers for the sale of the teas produced by the Company and who may therefore be deemed to hold an office of profit under the Company.

The Share Transfer Books and Register of Members of the Company will be closed from the 18th June, 1963 to the 28th June, 1963, both days inclusive.

By Order of the Board,
THE BISHNAUTH TEA COMPANY, LIMITED,

For WILLIAMSON MAGOR & CO. LTD.,

T. R. SWAMINATHAN,

**LODNA COLLIERY COMPANY
(1920) LIMITED**

NOTICE is hereby given that the Forty-second Annual General Meeting of Lodna Colliery Company (1920), Limited, will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on Thursday, the 27th day of June, 1963, at 3-30 P.M. for the following purposes:—

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1962.
2. To consider and declare a dividend in respect of the year ended 31st December, 1962.
3. To appoint Auditors and to fix their remuneration.
4. To appoint a Director in place of Mr. A. J. Hormasji who retires from the Board and is eligible for re-appointment subject to compliance with Section 261 of the Companies Act, 1956, and in this connection to consider and, if thought fit, to adopt the following Resolution which will be proposed as a Special Resolution:—

"That Mr. A. J. Hormasji, Secretary of Turner, Morris & Co. Ltd., the Managing Agents of the Company, and as such Secretary, an associate, officer and employee thereof, be and is hereby re-appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation".

(Special notice has been received by the Company to move this resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956. The reasons which make the resolution necessary as set out in the special notice are (1) Turner, Morrison & Co. Ltd., are the Managing Agents of the Company and Mr. A. J. Hormasji, the Secretary of the Managing Agents, is an associate, officer and employee thereof in terms of Section 261(1)(f) of the Act, (2) The Managing Agents are a company and as such Managing Agents hold an office or place of profit under the Company and Mr. A. J. Hormasji is an officer and employee of the Managing Agents as aforesaid in terms of Section 261(1)(c) of the Act, and (3) the Managing Agents also being a body corporate holding the office or place of profit as aforesaid Mr. A. J. Hormasji is an officer and employee thereof in terms of Section 261(1)(d) of the Act.)

The Share Transfer Register of the Company will be closed from the 18th to 27th June, 1963, both days inclusive.

Warrants for the dividend, when declared, will be forwarded in accordance with the registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration. An Explanatory Statement is annexed to the convening notice issued to members of the Company.

ECONOMIC RESEARCH is an essential part of modern commerce. But it is not always easy to obtain. The ordinary business house does not usually possess the records, statistics and archives which are the raw material of research. **CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT** has a long record of service to Chambers of Commerce, Industrial Associations and private business concerns. It does not undertake trade inquiries, but its facilities and advice are available for all kinds of research proper into the problems of Indian commerce and industry.

CAPITAL RESEARCH & STATISTICAL DEPARTMENT has constructed and maintains a number of cost of living indices for various classes and communities in India and Pakistan. It offers the industrialist and business house its experience in consumer market surveys—industrial prospecting—readership analysis—economic indices—business research.

for more untied credits. If this leads to a substantially larger proportion of future aid grants being available in an untied form, the total will have been raised in effect if not actually in fact. This is a point on which Indian attention could profitably be concentrated. At present about half the U.S. commitment is tied, although the proportion has been increasing in recent years. If the other members of the consortium could be persuaded to accept this as a target, then India's problem might effectively be solved without any overall increase in the figure of assistance granted. Again, the main stumbling block here would seem to be the attitudes of France and West Germany. In any event, India's case for increased aid in all forms, which is largely based on the Chinese threat, will eventually stand or fall on that issue alone. At present, the United States and Britain are providing India with almost all the military assistance she is getting. But there is no reason to believe that the other Powers could not be persuaded into doing so if the Chinese resumed their attacks on Indian territory.

The final verdict on the Paris meeting, then, must be one of moderate satisfaction. There is time before the next gathering, which is due in Washington in July, for further intensive diplomatic activity on India's part. Perhaps more than anything else, this should be aimed at countering the growing feeling in the West that India is not herself making the best efforts, either politically or economically, on her own behalf. This may sound a strange theory when Indian ears are constantly being reassured with soothing words from the West

THE FOG OVER BOKARO

THE way the prospects of setting up the Bokaro steel plant keep changing every other week is an unfortunate commentary on the uncertain course of Indo-American relations. After President Kennedy's strong defence last month of U.S. aid for a public-sector plant in Bokaro, one would have thought that the going would be relatively easy. The impression was confirmed when Professor Galbraith, now almost at the end of his assignment in New Delhi, told the Press that he expected the funds needed for Bokaro to be included in the aid Bill to be presented to the U.S. Congress for approval in July. The Ambassador also let it be known that credits for the steel plant would carry only a nominal service charge, as is the case now with most A.I.D. disbursements. With such details being brought up, it seemed that the Bokaro negotiations had moved forward to a stage where the final outcome was no longer in doubt. New Delhi knew, of course, that several knots would have to be untied before Bokaro got past the U.S. Congress. There was, for instance, the touchy question of State versus private ownership on which, President Kennedy's effort notwithstanding, Congressional feelings are still strong. Only a shade less difficult was the issue of control during the period of construction and initial operation. The conciliatory statements made by Mr. C. Subramaniam, India's Minister for Steel and Heavy Industry, warranted the hope that a formula could be devised which would give the Americans the substance of their demand without putting India in a difficult position in relation to other countries which might want similar rights over the projects they were assisting.

But the more hopeful trends have now suddenly been reversed by the suggestion that a second survey be undertaken to assess the raw material and transport situation before the U.S.A. makes a firm commitment to support Bokaro. Mr. Subramaniam has declined to reveal where the suggestion has come from; he has only added to the mystery by his reference to unnamed "Indian and American quarters". Pressed to identify the Indian element at a Press conference in Calcutta last week, he refused to mention names but said enough to indicate that the move was inspired by a desire to see it built under private management, if not private ownership. Although there have been some references in the foreign Press to an Indian lobby campaigning in Washington against a public-sector Bokaro, the question has never been

about how satisfied it is with the use to which its aid is being put, and at the persistently determined way in which India's plans are being pursued. But it must be remembered that a strong body of economic opinion, especially in France and West Germany, attributes India's slow rate of growth at least partly to faulty planning and intrusive ideology. Whether the view is right or wrong, it would be useless for India to ignore it, especially when the evidence of the Paris meeting clearly underlines the importance of these two countries in the future of economic aid, at least for as long as the United States holds to its "matching" principle.

On the whole, India has not come out too badly from the recent round of aid and trade talks. Much will now depend on what happens in the economies of the West, and that will determine whether willingness to help this country further will increase or diminish. The efficacy of aid is not necessarily accepted nowadays without qualification, as it was only a few years ago. Resistance exists, and it tends to grow whenever economic conditions become less favourable or whenever political circumstances seem to indicate that aid does not necessarily buy allies. Considering how strong this feeling is among the developed countries now, the Indian Government can congratulate itself and its Chinese opponents on having put up an excellent performance in gaining such a large quantity of development resources for the third year of the plan. It is to be hoped, however, that in the future, the initiative will come entirely from the former and not from the latter.

touched upon in India except indirectly. Even now, the Minister seems curiously reluctant to avoid joining issue with this lobby publicly, although there seems little point in adding mystery to what is basically a straightforward issue of policy.

It is said that some business interests in India would like to see themselves controlling a steel plant because it is a badge of status which they have so far had to do without. That the private sector might not be able to finance a project of this size at the present stage (a point which Mr. J. R. D. Tata made in New York) apparently does not count with them; they argue that the Government too does not have the funds and will have to depend largely on borrowings. If the plant has to be built in any case on the strength of credits, there is no reason, the argument runs, why the State alone should be regarded by A.I.D. as credit-worthy. It may be recalled that the bid to set up a privately-owned steel mill in the early 'fifties with British assistance was based on similar premises. The Government took the view that if it was required to underwrite the credits, it might as well take the loans for itself and build a plant under State ownership. This plea is being rebutted in the present instance by the charge (which can obviously be made to stick) that State management is *per se* inefficient and hence private control would be a great improvement even if a substantial part of the capital is contributed by the Indian and U.S. Governments. Whatever position one takes in the debate, one cannot fail to note that the plea for efficient private management has its attractions, both to a disenchanted public in India and to U.S. Senators who start with a pronounced bias against State-owned industry.

The renewed plea for a privately-managed Bokaro takes one right back to the original idea underlying U.S. participation in an Indian steel works designed to serve as a showpiece of U.S. aid. A distinguished American banker, who has taken a good deal of interest in the Indian steel industry on behalf of the World Bank, is credited with fathering the proposal for tripartite sponsorship of a new steel plant by private entrepreneurs in India and the U.S.A. and the Indian Government. Soundings taken by this banker in New Delhi suggested to him that the Government might not reject such a move out of hand. A diligent research worker might, if he scrutinised the verbatim record

of a Press conference which the Prime Minister, Mr. Nehru, held in 1960, find that some curiously ambiguous replies were given which indicated that the Cabinet had not, up to that time, ruled out "mixed" ownership. But all that was a long time ago. Since then, the Government has committed itself to a public-sector Bokaro, a fact to which various statements in the Lok Sabha bear witness. No doubt, New Delhi has lately shown itself capable of a great deal of indecision; some might judge India's need for Bokaro to be so urgent as to assume that the Government can, if pushed hard enough, talk itself out of its commitments. It is on some such assumption that the interests to which Mr. Subramaniam referred appear to be acting, pressing their case in both New Delhi and Washington, with their hands strengthened by the poor performance of public-sector management. It is believed that it is this pressure which makes A.I.D. try to defer a decision on Bokaro on the disingenuous plea of surveying raw materials and transport plans all over again.

Two aspects need to be considered before deciding where the balance of advantage lies, judging by the larger interests of private enterprise as a whole rather than of any particular section which may be interested in Bokaro. There are persistent reports that the talks initiated by Russia with India on the pattern of assistance for the fourth plan did touch upon the possibility of a new steel plant. This was only to be expected, judging from the value that Russia has derived out of Bhilai's fortuitously outstanding record *vis-à-vis* the other two steel plants. The Government's thinking on the fourth plan calls for two new steelworks, if not three, besides Bokaro. Normally, therefore, Russian assistance would be sought for one of the other projects if Bokaro went through with U.S. aid. If it does not, it should not be too difficult to make Bokaro the candidate for Soviet assistance, while fresh endeavours are made to secure support from different quarters for other steel projects. Admittedly, such a switch would be made only with great reluctance because India needs all the support she can get. But it is one which the Government may be forced into if U.S. reservations about ownership and control are taken under the pressure of lobbying beyond the point of compromise. Should this happen, the impact it will have on public opinion will do private enterprise no great good. The fact is realised in responsible quarters in the private sector and has prompted them to extend their full support to New Delhi's efforts to secure an early U.S. commitment on reasonable terms. Mr. J. R. D. Tata has gone out of his way to urge the U.S.A. to support Bokaro during his recent visit to that country. Mr. Bharat Ram, president of F.I.C.C.I. also lent a hand when he was recently in New York.

Another aspect needs to be considered before arriving at any conclusions on the issues raised by the latest turn of events on Bokaro. Private enterprise is perfectly entitled to press its case upon New Delhi for greater latitude in the administration of industrial policy. In fact, the pressure needs to be exerted overtly, rather than in private as some people seemingly prefer, so that the issues which arise may be freely judged. Such a dialogue based on convictions on either side cannot but be healthy for a young democracy. But this debate will go off the rails the moment extraneous influences are introduced, such as foreign pressure on the Indian Government to agree to a course of action which may be unwise. The danger will be the greater if publicists ranged on the other side

India's Resources
are Precious
WASTE NOT,
WANT NOT

can insinuate that foreign pressure is not motivated primarily by principles, but is inspired by an active lobby of powerful firms interested in the fat contracts that Bokaro will yield. If, as is being

EXPORT PROMOTION

THE nature and seriousness of India's export problems are now well understood. But they need to be restated from time to time to give a new sense of urgency to the export drive. Although the Department of International Trade was set up under Mr. Manubhai Shah about a year ago, the trend of exports remains far from encouraging. To achieve the third plan export target of Rs. 3,700 crores, the annual average of Rs. 612 crores achieved during the second plan has to be increased to around Rs. 740 crores. And to meet the country's growing foreign exchange requirements, the third plan average will need to be doubled during the fourth plan. The actual growth in exports of the order of Rs. 30 crores a year that has taken place is inadequate by any standards.

The inaugural address of Mr. P. C. Bhattacharyya, Governor of the Reserve Bank, at the annual meeting of the Indian Council of Foreign Trade in Bombay last week provided an illuminating analysis of the country's export problems. As Mr. Bhattacharyya pointed out, despite rigorous import controls, which have affected the supply of even essential imports, the balance of payments has to be supported by external assistance on a massive scale. This obviously cannot provide a long-term solution, although securing a sustained rise in exports in a developing country like India is undoubtedly difficult. The narrow range of exports, especially the concentration on primary commodities and simple manufactures, tends to limit the scope for expansion. There are also difficulties in diversifying exports, difficulties which flow directly from the under-developed state of the economy itself. The problems arise from the inadequate surpluses available for exports, a protected domestic market, quality deficiencies, low productivity and the absence of export tradition and experience in marketing.

The Reserve Bank Governor said that export incentives should be short-term measures designed to meet the initial or temporary handicaps of exporters. Export incentives can also be justified for the products of new industries, because the latter need to be nurtured and assisted until they are in a position to overcome their initial handicaps. There may also be some justification for providing special aid, for strictly limited periods, to old established industries, especially when they are in arrears of modernisation or when their exports face a setback for no lack of effort on their part. But it is doubtful whether all the export incentives which are allowed at present would stand these tests. For incentives have been extended to many commodities in which India not long ago enjoyed pride of place in world markets.

As Mr. Bhattacharyya pointed out, incentive schemes have to be so framed as not to harm the legitimate trading interests of other countries. This brings into focus the more enduring aspects of export promotion. The overall long-term export targets have to be distributed among the various commodities and markets. This not only means gearing up industry to produce these requirements but also implies strict control over costs of production so that the products can be sold in highly competitive markets. There can be little doubt that the private sector in the economy exports will remain a priority sector in the economy for a long time, with all the attendant facilities for setting up of industrial capacity, allocation of essential materials, provision of short-term and long-term credit and such other incentives as are needed to overcome the initial handicaps of exporters. The Reserve Bank is already extending preferential treatment to the credit requirements of exporters.

In his presidential speech, Mr. Murarji J. Vaidya said that the reduction in the trade deficit from Rs. 473.8 crores in 1957-58 to Rs. 383.1 crores in 1962-63 had been brought about by starving the country of essential raw materials, components and

said, a link-up exists between these firms and some interests in India, public opinion may well conclude that the private-public sector issue in steel is really no more than a struggle for the spoils.

capital goods. India has been trying to develop her industries and import large quantities of capital goods and industrial goods, but she has not sufficiently developed agriculture, which would have prevented the large import of foodgrains valued, on average, at over Rs. 120 crores a year. The export promotion methods so far employed by the Government have been far from effective. Although exports have risen by about Rs. 24 crores to Rs. 686 crores, the increase has been achieved mostly by jute goods and tea, which together account for an additional Rs. 17.6 crores; tobacco fetched an extra Rs. 4 crores. While traditional items have thus helped augment foreign exchange earnings, the value of exports of manufactured goods has fallen substantially. Furthermore, trade deficits have worsened with a number of important countries on whom India depends for her requirements of capital goods and industrial raw materials.

While the export trend, by itself, is discouraging, the likely import requirements during the current year lend greater urgency to the problem of export promotion. According to the demand estimates made by the Government for enabling the Aid-India Club to assess the pressure on the country's balance of payments, imports are expected to increase from \$2,411 million in 1962-63 to \$2,976 million in 1963-64. The rise will be mainly accounted for by machinery, equipment and basic materials like non-ferrous metals, iron and steel, chemicals, petroleum products and fertilisers. While aid will no doubt help cover a substantial part of the trade deficit, the need for stepping up export earnings remains. In this effort, the indus-

Current News and Comment

Gold Policy Losing Glitter

In spite of the failure of gold control policy, Mr. Morarji Desai, Central Finance Minister, would have the people believe that it has been quite a success. Speaking in Madras the other day, he claimed that his policy had been a success, although there was still "some" hidden gold in the country and warned that those who held it "could not benefit by it." Mr. Desai's statement has to be examined in the context of the Reserve Bank's estimate of total hoards at Rs. 5,000 crores at the internal price before the gold control rules were announced. The chairman of the Gold Control Board, Mr. G. B. Kotak, stated recently that the Government would have to do something to bring out hoarded gold into the Government's coffers. But beyond making platitudinous statements from time to time, neither the Finance Ministry nor the Gold Control Board has done anything to bring out hoarded gold or to check the rise in the price of the metal. The failure of the gold policy has to be attributed to the absence of a ceiling on ornament gold as well as concrete measures to arrest the rise in the price of the metal.

But it would appear that Mr. Desai could not adequately foresee the implications of his policy when he announced it in January. The price of the metal, for one thing, could not be brought down to the international level. The price of spot gold in Bombay is hovering between Rs. 112 and Rs. 115 for 10 grams which is much more than what Mr. Desai could anticipate a few months ago. The incentive for smuggling thus remains as before. Mr. Desai, however, believes that smuggling has been effectively checked. This is also the view of the Gold Control Board whose chairman gave some reasons to justify this official belief. True, the price of Middle East gold has fallen to some ex-

trialised countries especially those offering aid to India, can help by reducing their import restrictions. As Mr. Manubhai Shah, India's Minister for International Trade, pointed out at the recent Commonwealth Trade Ministers Conference in London, the simpler manufactured articles, processed and semi-processed goods and primary products, which the developing countries export, are now subject to higher tariff and other barriers than the more sophisticated products from the industrially advanced countries. While the lowering of trade barriers must depend on the economic conditions and policies of the industrialised countries, India on her part can adopt vigorous measures to sell her products abroad. The various export promotion councils, which have been set up by the Government, have not been very effective so far. In order to extend their influence, a special membership drive is to be launched by the councils so that all the exporters will be bound by the code of conduct prescribed by the councils. They have also been asked to submit special schemes of quality control, publicity and market research. Mr. Bhattacharyya mentioned the example of Japan, where careful studies of international commodity price trends are made to give proper direction to the export effort. Efforts to make Indian market surveys more utilitarian and less academic should be helpful. There is also a pressing need to draw up a more vigorous and effective programme of export publicity to create a new image of India abroad.

While these measures might help the export drive, more important is the need to make Indian products cheaper. This involves the broader question of reducing industrial costs. The Indian manufacturer has to cope with shortages of raw materials, equipment and power. In many cases, the plant and machinery used are out-of-date and inefficient. Tax burdens are too heavy. The entire fiscal structure has to be examined afresh with a view to assessing the crippling effect of taxes on exports. An effective scheme of cost reduction will have to be the major plank of India's export policy.

But it may or may not have been due to a fall in the smuggling of gold into India. Mr. Kotak said the other day that London refineries which usually took a few weeks to effect deliveries now take only a few days to do so. This improvement in their delivery schedule, he said, could be due to the decline in smuggling of gold into India. But in the face of the rising trend in spot gold prices, it is difficult to believe that smuggling has declined to a trickle.

Obviously perturbed by the rising trend in prices, Mr. Desai is now unwilling to fix the price of 14-carat gold. Although refineries will be set up and dealers will be licensed wherever facilities exist for converting pure gold into 14-carat gold, it is not the intention of the Government, he said, to supply gold to the dealers. The latter may, therefore, have to buy gold in the form of jewellery in the market and convert it into 14-carat gold. The price of the latter in that case will depend on that at which the dealer purchases it in the open market. It is clear that Mr. Desai is discovering the limitations of his gold policy and gradually retreating from his previous stand.

A related subject is his threat to close down the Kolar and Hatti gold mines if the cost of production was not brought down. He said last week that the gold produced in Kolar was costlier than even the inflated values of gold in the country. "As against the international price of Rs. 62.50, the Kolar gold costs Rs. 128", Mr. Desai said. It is well known that gold worth Rs. 1.50 crores a year is produced from the Kolar gold fields and that the whole of it is supplied to the Government. Mr. Desai is apparently annoyed that the price of Kolar gold should be so high when he wants the internal price of the metal to be brought down to the international level. But he fails to appreciate that the production costs are high, mainly because

gold from those mines has to be extracted from great depths.

World Bank Loan for I.C.I.C.I.

The Industrial Credit and Investment Corporation of India has secured a fresh line of credit amounting to \$30 million from the World Bank. Like the four earlier loans from the Bank totalling \$60 million, the latest loan will be used to meet the foreign exchange requirements of projects financed by the Corporation. The I.C.I.C.I.'s financial operations are expected to continue at the high level of the past few years, and it will, therefore, have to increase both its foreign exchange and rupee resources. The latest loan of \$30 million together with the balance still available from existing loans should meet the Corporation's foreign exchange requirements until early 1965. It is also making arrangements to obtain an additional Rs. 10 crores of rupee funds.

Including the World Bank loans totalling \$90 million, the Corporation's resources amount to Rs. 72.3 crores. They include Rs. 5 crores of paid-up share capital, Rs. 17.5 crores of advances and credits from the Government of India, lines of credit amounting to \$5 million from the United States Agency for International Development and 25 million deutschmarks from Kreditanstalt für Wiederaufbau and surplus and reserves of about Rs. 1.6 crores. Organised in 1955, the Corporation has so far approved financial assistance worth Rs. 601 crores for 200 industrial projects involving 183 firms. Of this amount, nearly half is accounted for by foreign exchange loans, one quarter by rupee loans and the balance by underwriting operations and direct equity investments. It is estimated that the Corporation's operations have resulted in mobilising a total capital investment of about \$650 million or five times its own investments. They have generated some 60,000 additional jobs.

Removing Sugar Shortage

There has been a sharp rise in the price of sugar in Calcutta during the past month. What is more distressing is that the bulk of the supplies have gone underground and consumers have been forced to buy the commodity at the black-market price of Rs. 1.65 a kilogram, against the so-called controlled price of Rs. 1.25. Although the Government has loudly announced that the pipeline is full of sugar and an adequate supply will be available from the fair price shops it is difficult to get even a small quantity from these shops.

The Government is largely to blame for the prevailing shortage. Judging from the experience during the past few years, it is obvious that it does not have any clear-cut policy. It always adopts half-hearted measures, and those belatedly, to overcome difficulties whenever they occur. Following a bumper production of sugar in 1960-61, the output was reduced in 1961-62 by prescribing ceilings on production. The late recognition of a shortage led to some ineffective measures at the beginning of the 1962-63 season for increasing production. At the start of this season, the production curbs were removed but they had, as was to be expected, no effect because the sugarcane crop was already on the ground. So there has been a sharp fall in production. During 1962-63, the output is not likely to be more than 2.2 million tons, against 2.7 million tons in 1961-62. Since the domestic consumption has risen to more than 2.5 million tons and exports of about 500,000 tons have been planned, there is to be a shortage of the commodity.

The Central Food and Agriculture Ministry does not appear to have taken any practical steps to increase the supply of the commodity. It has taken a complacent view of the prevailing shortage by urging the factories to produce at least 3.3 million tons during the coming 1963-64 season. Although the price of sugarcane has been raised to promote bigger cultivation and pilot cane development schemes have been adopted in selected areas, it is doubtful whether sufficient sugarcane will be grown to achieve the target.

Impact of S.P.T. on Companies

An interesting study of the incidence of super profits tax on companies has been attempted by Dr. Raj K. Nigam, Director of Research and Statistics,

and Mr. S. M. Dugar, Senior Accounts Officer, of the Department of Company Law Administration; it is published in the fortnightly Bulletin of the Department. The striking feature of this intellectual exercise is that the impact of the levy has been considered to be lighter than has generally been thought of. The latest company reports do not, however, support the authors' point of view, since the levy has substantially eroded the after-tax profits of several companies. The practical value of the study is, however, limited since the sample chosen is far too small. The authors have examined the incidence of the levy before and after the concessions in the tax were announced.

For the purpose of this study, a random sample of 100 non-Government big-sized companies, each with a paid-up capital of Rs. 50 lakhs or more, and 55 non-Government medium-sized public companies with a paid-up capital of between Rs. 5 lakhs and Rs. 50 lakhs, has been taken. These companies were in existence in 1959 and 1960. Concerns floated recently have not been included as they may not make sufficient profits to attract the levy. The data have been collected from the published annual accounts for the financial years ended during the twelve-month period from 1st July, 1961 to 30th June 1962.

The incidence before the concessions has been studied first. Of the 100 big-sized companies, 66 have been affected by the impost. Hence one-third of the companies do not come within the purview of the new tax measure since their profitability rates have been either low or negative. Out of the 66 companies bearing the brunt of the levy, the chargeable profits are more than 10 percent of the capital in 41 cases. Hence they come within the purview of the higher slab of 60 percent tax. The income tax and super profit tax payable by these 66 companies work out to Rs. 37.25 crores and Rs. 9.60 crores, respectively. The total tax burden of these companies is, therefore, Rs. 46.85 crores, of which the S.P.T. constitutes 20.5 percent of the total liability. The tax liability of these 66 companies will be about 58 percent of their net profits on average. Of this, nearly 46 percent is in the form of the usual corporation tax—income tax and super tax. In the case of a large number of companies, the retained earnings or dividends should be reduced to between 20 percent and 50 percent.

Out of the 55 medium-sized companies, 32 are liable to pay super profits tax. Twenty companies will have to pay the tax at the higher rate of 60 percent since their chargeable profits are more than 10 percent of capital. These 32 companies will pay Rs. 35 lakhs in the form of S.P.T. The income tax and super tax of these companies aggregate about Rs. 1.27 crores. Hence the total tax burden, including S.P.T., works out to Rs. 1.62 crores. The total tax liability of these companies will be about 59 percent of their total net profits.

Secondly, the authors have studied the incidence of super profits tax after the concessions were announced. There is no doubt that these concessions have softened the impact of the levy to a great extent, but it is still regarded as sufficiently heavy. The burden, combined with the fact that the impost is bad in principle, has affected the investment climate. Since it has not been possible for the authors to make a detailed study of the concessions because of the absence of published information concerning many details in the profit and loss accounts, the incidence, as examined after the concessions, has not been conclusive. Only two major concessions have been studied. The first is that the development rebate reserve has been included for calculating the capital-reserve base. The second is that a sum equal to 10 percent of the total income before tax has been deducted from the chargeable profits. Although the latter concession is subject to certain conditions, it is hoped that nearly all companies will avail themselves of it. Broadly speaking, the 10 percent deduction from the pre-tax profits is likely to be more beneficial to efficient companies rather than a straight increase in the rate of standard deduction of 6 percent of net worth as the corporate sector asked for.

Against 98 companies which were subject to super profits tax before the concessions, only 74 come under the amended tax measure. Thus out of the 155 companies covered, about 50 percent

will not be subject to the levy. In terms of the number of companies subject to the levy, the fall is about 26 percent in the case of big-sized companies and 22 percent in the case of medium-sized companies. In terms of the amount of super profit tax these companies will pay, the respective declines are 46 percent and 49 percent. An important point is that the number of companies which will pay the tax at the higher rate of 60 percent has also been cut. The highest rate of total tax which will be paid by a company after the concessions works out to 63 percent, against 73 percent (before the concessions) of its net profits.

In sum, under the final form of super profits tax, 74 companies will have to pay the levy out of the 155 companies covered. Out of them, 31 companies will pay the tax at the higher rate of 60 percent. The total net profits of the 74 companies work out to Rs. 67.2 crores, and the estimated profits subject to super profits tax, come to Rs. 10.2 crores. Thus the 74 companies will contribute Rs. 5.37 crores by way of super profits tax. The total tax liability of these companies will work out to 54 percent of their net profits, of which super profits tax will be 8 percent.

The authors have also found that after the concessions, the amount of super profits tax has been reduced by 45 percent for big-sized companies and by 49 percent for medium-sized companies. The number of companies which will pay at the higher rate of 60 percent has fallen from 62 percent to 41 percent in the case of big companies and from 62 percent to 32 percent in the case of medium-sized companies. The percentage increase in the tax liability before the concessions was more for medium-sized companies than for big-sized companies. This liability has, however, declined after the concession, to 16.8 percent from 27.6 percent in the case of medium-sized companies and to 17.3 percent from 25.5 percent in the case of big-sized companies. Hence the concessions have been more pronounced in the case of the former.

JUTE CROP FORECASTING

THE Jute season, 1962-63, is now so near a close that we can, within very approximate figures, tabulate out the result so far as the outcome of the crop is concerned. The following figures will be found to be very near the mark:

	Bales
Exported to all places, say	3,225,000
Purchases by local Mills	2,126,500
Country consumption	500,000
Stocks at Press Houses, local bazars in Ships' holds say	35,000
Total crop for 1962-63	5,886,500

The final forecast was 52,800,000 bales.

The official estimate of the local Jute Mill consumption for the year ending 31st July, 1963, based upon the actual nine months' consumption up to 30th April last, is 27,26,500 bales, but the Mills have not purchased all this quantity this season, but have trenced into their last year's stocks to the extent probably of between five and six lakhs of bales. To keep on the safe side, I have, in the immediately preceding paragraph, estimated that stocks in Mills' hands will be about 6 lakhs of bales or 30,00,000 maunds short of what they were on the 1st of August, 1962, and have therefore put in the Mill purchases for the season now ending, at 6 lakhs of bales less than the actual consumption, or at 21,26,500 bales. When the Government Forecast came out in June last year, giving 52,80,000 bales, as the probable output, Capital ventured to say on 26th June, 1962, when commenting upon the tremendous discrepancy between the Forecast and the actual results of the crop 1961-62 that "assuming the acreage and conditions (in the Government document) to be correct, the crop will be nearer 61,00,000 bales" than 52,80,000. And so it has turned out. The Director of Agriculture has been very far out of his reckoning on each of the two past seasons. If he makes the same happy blunder this month in reference to the coming crop every one will be delighted. But if the present Director has any sense of humour in his constitution, he will ask himself a question before firing off his preliminary telegram from Darjeeling next week giving his prophecy for 1962-63.

A Ditcher's Diary

"NOT ALL AMERICANS SEE INDIA'S POINT", THUS a headline summed up the results of President Radhakrishnan's visit to the United States. My reaction is best put in the form of two questions: (a) do all Indians? and (b) where in all universe is there a single subject on which all Americans see alike? The inevitably negative answer to both is something to be profoundly thankful for. No, Dr. Radhakrishnan's visit to the U.S.A. was not intended to achieve anything in particular; and that nothing the trip has, in my view, achieved triumphantly. For generally stating India's point of view, without pressing it too hard, India at the present time could not possibly have found a better representative; and I exclude nobody. The harm done by Mr. Krishna Menon in the U.S.A. will live long after him. Would Mr. Nehru have been more effective, since he is the head of the executive? No, Mr. Nehru's "image" is not what it used to be—anywhere. It seems slightly unfair to the substitutes concerned that they should be sent abroad when there are not laurels to be gathered for services to peace but arms and other aid to be begged in an hour of vanished glory; but Dr. Radhakrishnan, who had never spoken in terms of victory or defeat, was the best man to go abroad and philosophise on peace in mainly non-political terms. The sobriquet of "philosopher-statesman" has somehow stuck to the President. In academic philosophical circles, especially those with an aversion to speculative metaphysics through ill-defined words and concepts, Dr. Radhakrishnan is loved and respected as an interpreter, rather than an originator, of ideas; and this, I suggest, is an additional qualification for the rôle in which he has been cast at present. He can bear the Cross of Non-alignment lightly because it is not a chip on his shoulder as it is on some others'. In Britain he is almost on home ground; and he will find there how genuine and widespread the British people's sympathy is for this country. Even in democracies aid deals have to be negotiated by and with a few Ministers and officials; but their task is made much easier by public opinion. This is where President Radhakrishnan's gentle presence and civilised speech will quietly and unobtrusively achieve much.

IT SEEMS THAT MR. KRISHNAMACHARI HAS BEEN AT his evasive best while answering questions about his recent visit to Washington and London. Which to me confirms the impression that

India's claims for military aid have not got the reception he had hoped for in Britain and the United States. Assuming that the claims were, quite rightly, over-stated in the first place, the substantial scaling down which now seems likely might have serious consequences for this country. It all appears to boil down to a straightforward disagreement on two main points: what exactly India needs to repel a new Chinese invasion, and whether or not the Chinese will invade at all. On the second one, I consider the western Powers should accept India's opinion, if only because it is the safest and most sensible one for all concerned. But on the first I can appreciate there might be room for differences. The western case seems to be that an early-warning radar system is unnecessary. I tend to disagree; and Mr. Krishnamachari is on record as explaining that India's position is complicated by the fact that the Himalayan barrier permits Chinese aircraft to be over Indian territory before there is any possibility of detecting them. And by then, of course, it may be too late. On the question of supersonic fighters, India's case appears to have carried little weight for no other reason than that Pakistan is able to represent such weapons as being a threat to herself rather than China. I should have thought that these days supersonic fighters are a "must" if a high-flying enemy is to be intercepted before he can do much damage, even though the intruding plane may itself be only subsonic. What puzzles me is that the United States should be so reluctant to provide the best possible arms against a communist enemy because an ally has objected. It is most unlike the Americans to consider the interests of an ally where the claims of a neutral power are concerned, and I seem to detect the influence of the British here. If so, the point may have been missed in London that a successful Chinese attack on India could cost Britain and the United States far more in the long run than even the persistence of the Kashmir quarrel with Pakistan. I do admit, though, that the central dilemma is capable of solution in Delhi and Rawalpindi only, and not in either London or Washington.

PERHAPS IT WAS NECESSARY FOR THE CALCUTTA Metropolitan Planning Organisation to remind us that its business is to draw up plans, not to execute them. If there had been popular expectations beyond that, the C.M.P.O.'s publicity was not a little to blame. Even now there is an aura of

secretiveness about it all. It has happened to me to meet an odd C.M.P.O. expert or two at parties; the moment they knew I was a journalist they discussed everything except Calcutta. Let that pass. The organisation's first report, as summarised in the daily Press, contains not a few generalities; but I get the impression that there is some more realism around now than in the past. It is realised, for instance, that the C.M.P.O. or anybody else has not got a clean slate to write on, that a lot of people live and work in this city and they must be enabled to continue to do so while somebody is working on a new city out of Calcutta and, above all, that much of Calcutta must remain as it is. And it is amazing how much one could do within the existing framework and under the existing laws, inadequate though these are in many respects. Like all of us, the Corporation is, I know, hard up. But just tot up the enormous waste and you will see how much more could be done with the funds the municipal body has already got. The streets of Calcutta would be a good deal cleaner if only the conservancy department had all the men shown on its payroll or even the existing employees did the quota of work they are paid for. The C.M.P.O. also draws needed attention to another important thing: Calcutta's civic affairs cannot improve without a toning up of the economy. Here the city has received nothing but neglect from the Centre; and all on the specious plea that Calcutta is already amply or over-industrialised. In other cities I have seen considerable building activity by the Life Insurance Corporation. Not in Calcutta. With most development funds at the Centre's disposal, no part of India can develop today without Central help; of this Calcutta has received the least. The Calcutta Metropolitan Planning Organisation's report needs to be read more closely in New Delhi than in Calcutta. The Ford Foundation should talk to Mr. Morarji Desai.

NOT FOR ONE MOMENT DO I BELIEVE THAT MILITARY secrets passed from Britain's ex-Secretary of State for War via a call-girl to the former Russian Naval Attaché in London; and Lord Dillhorne's report confirms the impression. Yet no one who has followed the details of the sordid affair can have the slightest doubt that the price paid so far by Mr. Profumo, or by the Government to which he belonged, may not be the fullest the nation has a right to demand. High falutin' moral indignation about other people's sexual adventures is often inspired by hypocrisy, or worse; and I have no sympathy for it. The plea is nevertheless valid that the private lives of those in positions of authority and responsibility can never be purely their own concern. In Mr. Profumo's case, if there was no breach of security, the danger of it occurring certainly did exist, if only through the acci-

HOW TO ORDER ABOUT 2476 PERSONS WITHOUT BEING AN EMPEROR

The moment you open a current account with Union Bank, you acquire the right to order about 2476 fully trained banking personnel in its many branches. "Pay my children's school fees regularly," you say. (Yes, Sir). "Pay my car taxes every quarter." (Yes, Sir). "Remit my insurance premiums yearly." (Yes, Sir). "Collect the dividends on my shares." (Yes, Sir).

Prompt, unquestioned and never-failing obedience to your wishes. Open a current account with Union Bank and feel like an Emperor.

dent that Miss Keeler simultaneously numbered among her professional friends a suspected Soviet spy. Having deliberately lied to his colleagues, and to Parliament, the ex-Secretary of State for War has paid a penalty by having to relinquish not only high office but also a potentially brilliant political career. Many will wonder, however, whether the penalty, voluntary though it be, matches the egregiousness of his falsehoods in Parliament. The storm of criticism which Mr. Macmillan will face when the Commons debate on the Profumo affair begins on Monday will also, I venture to suggest, be largely deserved. Armed with Lord Dilhorne's report, he will no doubt be able to say that nowhere was security violated. He may still have a hard time explaining how Scotland Yard agents trailing Commander Ivanov to Miss Keeler's bedroom happened not to come across Mr. Profumo; or if they did, why Mr. Macmillan apparently never got to hear of it. On a longer view, the worst by-product of the whole unsavoury episode might well be an indiscriminate witch-hunt in British public life—by the Press, the politicians and other busybodies. The point may nevertheless survive that vigilance is always necessary, and finds its own reward: it is a point which in India, a land of suppressed scandals, may not be easily missed.

FOR AS LONG AS I CAN REMEMBER BIHARI POLITICS have always been turgid in the extreme; and I will not even attempt to understand just what lies behind the proposed merger of Mr. Jaipal Singh's Jharkhand with the Congress. I do not need to be assured that political principles had nothing whatever to do with the motives that inspired either Party to the deal. As a Party, the Congress in Bihar has such a monstrous majority in the Assembly that it needed no support from Jharkhand; Jharkhand with its handful of elected legislators once did rather well for itself in Orissa when Dr. Harekrishna Mahatab's Congress Ministry did not enjoy a clear majority. Hay made, the sunshine was probably declining; perhaps in Bihar too. Perhaps Mr. Singh is right in thinking that small parties have no future in the elections to come in which finance and organisation will be the decisive factors. Is there a feeling in the Congress too that tribal support is worth buying? If, in consequence, the Congress does a little less, not more, for tribals, there may be reason to be happy. I know of several Congress leaders who, in the name of integration, can hardly wait to turn tribals into Hindi-speaking *bhadralogs*, and of course we all know Mr. Morarji Desai's definition of a good man. He does not smoke or drink and goes to bed at 8 p.m. If this is the very antithesis of everything that makes the life of tribals joyful, Mr. Desai will simply say, "So much the better". Mr. Binodanand Jha, Chief Minister of Bihar, should really have consulted Dr. Mahatab before his deal with Jharkhand; the latter has experience of the costly difficulties involved. Mr. Jha has said that the Congress has made no promises in exchange for support; and he is a gentleman. Yet the time may have come for the Congress seriously to consider where the Party has been landed by its unstated and unnumbered commitments to various pressure groups that financed its election campaigns before and after independence. What happens, if anything, to Mr. K. D. Malaviya is as nothing when compared to what has already happened to the Party as a whole. With its socialism and pledge to purge the administration of corruption it simply cannot go beyond a certain point, easily reached—as Mr. Nehru must be painfully aware. The past has a terrible habit of extracting its price.

QUESTION AND ANSWER FROM THE New York Herald Tribune's "Successful Investing" column:

Q—"I am in my twenties and can invest \$100 a week after all expenses. I would like to gamble and yet I would also like an investment that could be cashed in an emergency without taking a loss. What would you do if you were me?"

A—"If I were you, I'd revise my thinking a little."

TAX ON CAPITAL REFUND BY CHAMPDANY JUTE

THE ordinary shares of the Champdany Jute Co. Ltd have been hesitant around Rs. 23.25 a share due to the news that the 50-percent refund of the share capital which has already been made to the shareholders will be subject to tax deduction at source "as a dividend to the extent of the accumulated profits in the hands of the Company as at the repayment date." In a circular letter to shareholders, the Company says that the tax on the refund should have been deducted at source. Since the payment was made without any deduction, it became necessary for the Company to pay tax on behalf of the shareholders concerned, the amount of tax being Rs. 9 lakhs on Rs. 22.83 lakhs out of the total distribution of Rs. 29.58 lakhs to the shareholders. The tax has already been paid by the Company. The figure of Rs. 22.83 lakhs is the estimated amount of the accumulated profits in the Company's hands as on 16th March, 1963, and represents 77.188 percent of the distribution. So all shareholders have been asked to reimburse the tax to the Company, which has already been paid by it on their behalf.

Shareholders should show in their income-tax returns for the relevant year only 77.188 percent of the amount of the capital refund. The amount which they will now refund to the Company as tax should be claimed as tax paid at source. It is possible that the income-tax authorities may ultimately disagree with the Company's estimate of accumulated profits as at 16th March, 1963, in which case the figure of tax deducted will require to be amended. Unless refunds are given to the Company by the shareholders by 22nd June, 1963, they will be recovered by deduction from the net final dividend payments to shareholders. The Company has already declared a taxable final ordinary dividend of 35 percent for 1962-63.

Balmer Lawrie Maintains

ALTHOUGH the profit of Balmer Lawrie and Co. Ltd has risen from Rs. 41.27 lakhs in 1961 to Rs. 51.63 lakhs for the year ended December 1962, the taxable ordinary dividend has been maintained. The directors say that due to heavier taxation, including the super profits tax, the distributable amount has not been sufficient to pay a higher dividend. The profit has been arrived at after providing Rs. 3.03 lakhs (against Rs. 2.12 lakhs) for depreciation. A taxable ordinary dividend of 25 percent, including an interim of 7 percent, has been repeated. This is covered more than twice and offers a yield of 10.5 percent at the present price of Rs. 239 a share of Rs. 100 each. Taxation absorbs Rs. 22.22 lakhs (against Rs. 14.08 lakhs), development rebate reserve Rs. 78,579 (against Rs. 44,747) and general reserve Rs. 14.12 lakhs (against Rs. 7 lakhs). The improved results have been due to an all-round increase in the Company's activities.

Bengal Paper Makes Progress

THE output of the Bengal Paper Mills Co. Ltd has risen from 19,627 tons in 1961 to 21,588 tons

during the year ended December 1962, but the profit has not increased substantially due to the rise in production costs. Prices of raw materials, chemicals and stores have increased. The railway freight has been raised, and the emergency risks insurance scheme has placed an additional burden on the Company. The cost of power has also risen. The Company's expansion programme has been making good progress. New equipment is being installed. The new paper machine, the directors say, may go into production by the end of this year. The Company has already issued 180,000 ordinary shares of Rs. 10 each at a premium of Rs. 12 a share. The offer of unsecured convertible loan stock for Rs. 30 lakhs has been subscribed. The funds will be used to finance the Company's expansion programme.

There has been a profit of Rs. 47.17 lakhs for 1962, against Rs. 41.43 lakhs in 1961, after transferring Rs. 12.55 lakhs (against Rs. 13.62 lakhs) to depreciation. A taxable ordinary dividend of 20 percent has been declared on the old shares and *pro rata* dividends have been paid on the new shares. The dividends are more than four times covered and offer a yield of 6.9 percent at the present price of Rs. 29.12 a share of Rs. 10 each. The dividend was 27.5 percent for 1962. Taxation is allocated Rs. 25.65 lakhs (against Rs. 19.30 lakhs), the super profits tax Rs. 5.08 lakhs, capital reserve Rs. 10,000 (the same), general reserve Rs. 2.50 lakhs (against Rs. 1.23 lakhs) and development rebate reserve Rs. 1.26 lakhs (against Rs. 4.36 lakhs). The carry-forward is Rs. 50,816, against Rs. 1.40 lakhs brought in.

Outlook for Indian Standard Wagon

COMMENTING on the excellent results achieved by the Indian Standard Wagon Co. Ltd during the year ended March 1963, the directors in their report say that the profit must be considered exceptional. Two factors are responsible for this. Firstly, large orders have been completed. Secondly, the unit cost of production has consequently fallen. The improved profit has enabled the directors to meet the additional burden of the super profits tax without having to reduce the total value of the dividend recommended. The directors say that it is difficult to make any accurate forecast of the profits for the current year during the first two months of which production was hampered by the lack of matching steel. There was also a negligible supply of electrodes. With this poor start, it may not be possible to achieve the same results during the current year as in 1962-63, but they hope that the current year's working will be satisfactory as conditions are improving.

The profit has mounted from Rs. 68 lakhs in 1961-62 to Rs. 1.72 crores in 1962-63, after providing Rs. 6.39 lakhs, against Rs. 6.30 lakhs for depreciation. Rs. 11 lakhs for labour profit-sharing in bonus, Rs. 1.71 lakhs (against Rs. 7.55 lakhs) for labour retiring gratuity and Rs. 82,038 (against Rs. 45,600) for development rebate statutory reserve. A taxable ordinary dividend of 20 percent, including a bonus of 5 percent, has been declared. It is cover-

ed more than ten times, and works out to a yield of 6.1 percent at the present price of Rs. 33 a share of Rs. 10 each. The taxable ordinary dividend was 28.5 percent for 1961-62, but the ordinary share capital has, meanwhile, been increased from Rs. 38.99 lakhs to Rs. 77.97 lakhs by the issue of bonus shares. General development reserve is allocated Rs. 15.54 (against Rs. 5.29 lakhs), general reserve Rs. 9.50 lakhs (against Rs. 7.07 lakhs) and dividend adjustment reserve Rs. 5 lakhs. The carry-forward is Rs. 24,064, against Rs. 78,603 brought in. Sales rose from Rs. 4.89 crores to Rs. 8.05 crores. Work in progress was Rs. 3.77 crores at the end of March 1963, compared with Rs. 4.22 crores at the end of March 1962.

Goodyear India Disappoints

THE ordinary shares of Goodyear India Ltd have declined sharply to Rs. 31.25 on disappointing results produced for the year ended December 1962. A serious power shortage was experienced by the new factory in Ballabgarh throughout 1962, so the output had to be severely curtailed. This factor, combined with the high start-up costs of the factory, has resulted in a trading loss of Rs. 57.13 lakhs, compared with a profit of Rs. 28.06 lakhs in 1961, after raising depreciation from Rs. 10.87 lakhs to Rs. 31.94 lakhs and interest to the agency for International Development Loan from Rs. 4.15 lakhs to Rs. 13.50 lakhs. The dividend has again been passed. Bringing in Rs. 51.86 lakhs, transferring Rs. 8 lakhs from development rebate reserve and Rs. 94,955 from taxation provision no longer required, a credit balance of Rs. 3.68 lakhs has been carried forward. The directors say that although the Company has been permitted to expand the capacity of the factory, the shareholders had earlier decided not to proceed with the expansion programme and the issue of rights shares for the time being.

United Commercial Bank Raises Capital Base

THE United Commercial Bank Ltd has made all-round progress during the year ended December 1962. At the Reserve Bank's request to bring the capital-plus-reserves base up to 6 percent of deposits, the bank has already issued rights shares. As a result of the subscriptions, the equity-deposit ratio has moved up to 5.5 percent. In his chairman's statement (details were printed in the 30th May issue of Capital), Mr. G. D. Birla deals with the rising operational costs following the implementation of the Desai award. Although the beneficial effects of deposit insurance have been stressed, the scheme has placed an additional burden on the bank.

Commenting on deposit interest which has been held down by an interbank agreement, Mr. Birla says that "a new and unhealthy spiral of interest rate increases" through competition for deposits is nevertheless possible. In its bid to attract bigger deposits, the State Bank has

recently raised its rates of interest on deposits in order to bring them on a par with those of other commercial banks. Mr. Birla stresses the importance of encouraging competition among banks for providing a wide range of services and facilities. As for investment in Government securities, he thinks that the rate of interest on these securities should be increased to a more realistic level, if banks are to be encouraged to invest more funds in Government loans. There is no logic in forcing banks to borrow from the Reserve Bank against Government securities by paying interest which is higher than the return available from these securities.

An important effect of the super profits tax has been that it has forced industries to take bigger loans from banks. Since the outlook for shares has suffered due to the levy, it has become very difficult to obtain funds by selling shares. Despite the prospect of rising credit requirements, the outlook for deposits has become less favourable. Substantial funds will be siphoned off by heavier taxation and compulsory savings. The deflationary effects of import surpluses have been pointed out. Although the expansion of branches is necessary for attracting deposits, Mr. Birla thinks that they should be opened in unbanked and rural areas as well as in cities which already have banking facilities. The need for more branches in cities arises from the fact that banks must be encouraged to compete among themselves in providing services and facilities.

Binani Metal Repeats

IN their report for the year ended December 1962, the directors of the Binani Metal Works Ltd review the progress of the Company's expansion scheme. Net fixed assets have been increased by Rs. 10 lakhs, and the additional plant and machinery has helped to increase production. Of the new schemes sanctioned by the Government, the tool room has made further progress and its output has been satisfactory. Production in the small tool project has been gathering momentum. The solder resin cored unit has begun production. As for the milling machine project, the directors have decided to defer it for the time being in view of the growing competition and the heavy capital cost involved.

Sales rose from Rs. 1.76 crores to Rs. 1.88 crores. The profit has increased from Rs. 12.88 lakhs to Rs. 15.32 lakhs, after raising depreciation from Rs. 1.26 lakhs to Rs. 2.63 lakhs. The taxable ordinary dividend of 10 percent has been repeated, which is more than three-and-a-half times covered. The yield is 9.8 percent at the present price of Rs. 10.19 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 1.30 lakhs (against Rs. 90,000), taxation Rs. 8.09 lakhs (against Rs. 6 lakhs) and general reserve Rs. 1.50 lakhs (against Rs. 1 lakh). The carry-forward is Rs. 19,201, against Rs. 52,670 brought in.

Dr. Paul Lohmann to Start Production Soon

THE results of Dr. Paul Lohmann (India) Ltd for the year ended December 1962, mainly show the capital expenditure which has been incurred for setting up the fine chemicals factory. The installation of machinery has almost been completed and production will start soon. The licensed capacity of the factory is 1,500 tons a year. An

Industrial licence has been obtained for producing exalic acid, formic acid and sodium formate. The Company has issued rights ordinary shares for Rs. 60 lakhs in the proportion of two new shares for each one held. In view of the good demand for the products to be manufactured by the Company, the directors do not think that there will be any difficulty in selling all the products.

Dalmia Cement Repeats Dividend

THE profit of Dalmia Cement (Bharat) Ltd has risen from Rs. 54.09 lakhs in 1961 to Rs. 1.15 crores for the year ended December 1962. A taxable ordinary dividend of 12 percent has been maintained which is covered more than four times. The yield is 9.2 percent at the present price of Rs. 13 a share of Rs. 10 each. Taxation is allocated Rs. 70.50 lakhs, of which the super profits tax is Rs. 14.50 lakhs. Taxation provision was Rs. 24 lakhs in 1961. Gratuity reserve receives Rs. 1.71 lakhs (against Rs. 1.66 lakhs), general reserve Rs. 13.50 lakhs (against Rs. 3 lakhs), rehabilitation and development reserve Rs. 4.99 lakhs (against Rs. 87,965) and bad debts reserve Rs. 502.

Sales rose from Rs. 4.14 crores to Rs. 5.21 crores. The profit of the ceramics division has increased. The cement output was 495,000 tons, against 406,000 tons. The directors say that production costs of cement have risen due to rises in the freight and electricity charges. The emergency risk insurance scheme has also placed an additional burden on the Company. Sales of iron ore rose from 53,000 tons to 170,000 tons. It is hoped that the negotiations, which are now taking place between the State Trading Corporation and the Japanese buyers, will result in big orders for high-grade iron ore for the Company during 1963-64. As soon as these orders are received, the Company will plan for an increase in output. The profit from the magnesite business has declined from Rs. 19.30 lakhs to Rs. 16.31 lakhs. The expansion programme of the Salem works is being considered in view of the uncertainty about the demand for dead-burnt magnesite. The Company has acquired the Magnesite Corporation of India Ltd as a wholly-owned subsidiary.

Expansion of Jagatjit Cotton

COMMENTING on the satisfactory results achieved during the year ended January 1963, the directors of Jagatjit Cotton Textiles Mills Ltd cautiously consider the prospects for the current year. Although the cloth offtake has improved since February 1963, production costs have risen all-round. The increase in the price of cotton is likely to affect the current profits. The directors consider that the present cloth and yarn prices are unrealistic, and they are awaiting the recommendations of the Tariff Commission on this matter. The Company is going ahead with its expansion programme. New equipment has been installed to increase the processing capacity. Plans have been made to place an order for a printing plant. Steps have also been taken to buy ring frames and cards. The directors say that the Benaras Cotton and Silk Mills will soon be taken over. They are considering renovating and modernising the unit.

The profit has been Rs. 55.95 lakhs, against Rs. 61.43 lakhs in 1961-62, after providing Rs. 17.68 lakhs (against Rs. 17.52 lakhs) for depreciation. A taxable ordinary dividend

of 15 percent has been declared. It is covered more than eight times and offers a yield of 8.8 percent at the present price of Rs. 17 a share of Rs. 10 each. Taxation is allocated Rs. 33 lakhs (against Rs. 30 lakhs), development rebate reserve Rs. 3.30 lakhs (against Rs. 1.90 lakhs) and general reserve Rs. 12 lakhs (against Rs. 22.50 lakhs). The carry-forward is Rs. 70,555, against Rs. 62,549 brought in.

British India Electric Earns More

THE British India Electric Construction Co. Ltd has declared a taxable ordinary dividend of 15 percent for the year ended December 1962, which is covered more than six times. The yield works out to 4.5 percent at the present price of Rs. 33.12 a share of Rs. 10 each. The dividend was 20 percent for 1961, but the share capital has, meanwhile, been raised from Rs. 15 lakhs to Rs. 25 lakhs by the issue of rights shares. The directors mention that it has not been possible to maintain the dividend on the increased capital due to the heavy impact of taxation, including the super profits tax. The sales of switch gear and electric motors increased substantially. The profit has risen from Rs. 12.02 lakhs to Rs. 14.08 lakhs, after transferring Rs. 2.46 lakhs (against Rs. 1.80 lakhs) to depreciation. Taxation absorbs Rs. 9.23 lakhs (against Rs. 5.54 lakhs), development rebate reserve Rs. 95,225 (against Rs. 36,243), and general reserve Rs. 2.60 lakhs (against Rs. 3 lakhs).

Guest, Keen, Williams Expanding

IN his chairman's statement (details of which were printed in last week's issue of *Capital*) at the annual general meeting of Guest, Keen, Williams, Ltd, held in Calcutta recently, Sir N. Raghavan Pillai has dealt with the expansion programme of the Company. Plans have been made for expanding the capacity for making special steels. This is a large project, which will be located at the Calcutta works. It is also proposed to reorganise the rolling mills, which are of vital importance to the Company's operations. The Government has been approached for permitting this reorganisation. The Government has also approved of the expansion of the wood-screw plant in Bhandup and the bright steel bar plant at the Calcutta works. The benefits of increased production should be felt during the next 18 months. The Company will also invest funds in Sankey Wheels Ltd, which will manufacture wheels for commercial vehicles. It is also proposed to acquire from the Tata Iron and Steel Co. Ltd its shareholding in Sankey Electrical Stampings Ltd.

Commenting on the results for the 52 weeks ended 29th December, 1962, the chairman refers to the rise in production. Income from sales rose from Rs. 10.66 crores in 1961 to Rs. 13.06 crores in 1962. Hence the programme of expansion and rehabilitation undertaken earlier has begun to show. Although the shortage of raw materials has been relieved to some extent, there has not been a steady and regular supply of the several categories and sizes of steel billets. The meagre supply of domestic steel billets has been supplemented by imports, so the output of the rolling mills has increased substantially. The bright steel bar plant has reached a satisfactory level of production. A planned programme for further additions to tool-making facilities, it is expected, will lead to

a progressive improvement of efficiency in the making of precision products. The manufacture of steel crossing sleepers was restricted due to the lack of the raw material, but as Hindustan Steel Ltd is producing this raw material, the sleeper plant has been working satisfactorily. Plans have been made for the next stage of planned rehabilitation and modernisation of the bolt works. The shortage of power has interrupted working. Hence it is hoped that the Government will give topmost consideration to providing an adequate supply of power in order to reduce the idle capacity in the engineering industry. The production of wood-screws at the Bhandup works has risen.

The trading profit before tax has improved to Rs. 1.15 crores from Rs. 83.84 lakhs. But the tax provision is higher at Rs. 55.60 lakhs, against Rs. 30.50 lakhs. There would be no liability on account of the super profits tax for 1962, although a sum of Rs. 1.20 lakhs was provided earlier. A provision of Rs. 13 lakhs for super profits tax made by Sankey Electrical Stampings Ltd, a subsidiary, has now been cut to Rs. 8.50 lakhs. These changes have been made after the amendment of the Super Profits Tax Act. A smaller dividend of 10 percent declared by Sankey Electrical Stampings, against 17.5 percent, has been compensated to some extent by the declaration of an interim dividend of 5 percent for 1963.

Prospects for Shaw Wallace

THE group profit of Shaw Wallace and Co. Ltd has improved from Rs. 58.19 lakhs in 1961 to Rs. 70.16 lakhs for the year ended December 1962, but the profit of the parent Company has fallen from Rs. 47.79 lakhs to Rs. 41.86 lakhs. The rise in the turnover of fertilisers has been retarded because of the shortage of funds. So efforts have been made to keep the turn-round of funds at a high level. If the Central and State Governments were to extend bigger credit facilities, the turnover could be increased substantially. The working of the superphosphate and sulphuric acid factory has been interrupted by a break-down. The production of superphosphate in south India has been increasing. The output was 223,976 tons in 1962 but the total installed capacity will be 449,130 tons in 1963. The Madras factory producing agricultural spraying and dusting equipment has reached the maximum level of output. The Madras glue factory has done well but it was decided to close the Calcutta glue factory towards the close of 1962. Tinplate production has reached a record of 77,346 tons, against 77,045 tons in 1961. The subsidiary companies have made a substantial contribution to the profits. The distillery has done well. The initial difficulties of the Indian Yeast Co. Ltd have been overcome. Sales improved in 1962 and better working is expected in the current year. Shaw Wallace and Co. is, therefore, soundly based, and the directors hope to improve profits during the current year.

The taxable ordinary dividend has been halved to 7.5 percent, absorbing Rs. 5.63 lakhs. The yield is 5 percent at the present price of Rs. 14.94 a share of Rs. 10 each. Taxation provision of the parent Company is Rs. 23.13 lakhs, against Rs. 22.50 lakhs. General reserve is Rs. 13 lakhs and development rebate reserve Rs. 55,000 (against Rs. 1.20 lakhs). The carry-forward is Rs. 76,764, against Rs. 21,315 brought in. Commenting on the dividend cut for the first time

since the Company was incorporated in 1946, the directors say that this was necessary in view of the increase in tax and the need to plough back funds to finance capital commitments.

Orissa Cement Pays Less

THE ordinary shares of Orissa Cement Ltd have been sluggish around Rs. 13.94 a share of Rs. 10 each due to the cut in the ordinary dividend, taxable, from 15 percent for 1961 to 10 percent for 1962. The profit for 1962 has fallen from Rs. 1.13 crores to Rs. 95.45 lakhs. The dividend is more than four times covered, and offers a yield of 7.2 percent at the present price. Taxation is allocated Rs. 51 lakhs (against Rs. 44 lakhs). Out of this, super profits tax is Rs. 6.50 lakhs. Gratuity reserve receives Rs. 1.19 lakhs (against Rs. 1.38 lakhs), general reserve Rs. 13.50 lakhs (against Rs. 30 lakhs), rehabilitation and development reserve Rs. 4.08 lakhs (against Rs. 69,341), and bad debts reserve Rs. 1.95 lakhs.

Sales were Rs. 5.90 crores, against Rs. 5.34 crores, but the profit has fallen due to increases in production costs. A smaller production in the refractory division has also contributed to the decline in profits. Cement production rose from 373,000 tons to 380,000 tons, but the production of refractories fell below expectations. In the basic section, the working was interrupted by the shut-down of a kiln for repairs. The output of silica refractories has been cut and one of the kilns has been switched over to the manufacture of fire-clay refractories. The Company has been making efforts to import some balancing equipment to facilitate the adjustment in production. The new refractories unit for producing chemically-bonded bricks has begun to produce since January 1962. Chemically-bonded steel-clad refractories have been produced for the steel industry. A second kiln has been installed for producing these refractories. The manufacture of coke oven silica bricks has started. Orders of Rs. 27 lakhs have been placed for machinery.

Kamani Engineering Fares Well

SHAREHOLDERS of Kamani Engineering Corporation Ltd who had felt somewhat disappointed at the modest 1 percent increase in the dividend in spite of the Company's excellent performance during the year ended September 1962, returned happy from the Company's annual meeting on 7th June as the chairman assured them that the board would consider their suggestion for an additional dividend for the completed year and an interim dividend for the current year in view of the reduction in the liability for super profits tax from the estimated Rs. 5.35 lakhs to around Rs. 4 lakhs because of the revised formula. (A fuller version of the chairman's speech appears on a later page of this week's *Capital*.) The Company did exceedingly well in 1961-62, with sales rising by about 73 percent from Rs. 2.68 crores to Rs. 4.65 crores, and the gross profit going up by 58 percent from Rs. 24.80 lakhs to Rs. 39.10 lakhs. But the dividend was raised by a mere 1 percent from 9 percent to 9 1/2 percent, mainly because of the enhanced tax liability. The provision for taxation has been stepped up from Rs. 9.25 lakhs to Rs. 15 lakhs and in addition, the Company has had to set aside Rs. 5.35 lakhs for super profits tax. The chairman stated that but for the enhanced tax liability, the Company could have

easily paid a dividend of 12 to 14 percent.

Outlining the Company's progress in his speech, Mr. R. H. Kamani said that the production tempo had been maintained, and the factory had crossed the production mark of 20,000 tons, with output for August 1962 exceeding 2,500 tons—25 percent higher than the previous record output of 2,100 tons achieved in December 1961. The supply position of steel was improving, but Mr. Kamani feared that production in the galvanising section might be thwarted by difficulty in importing raw materials due to the emergency. Referring to the Company's programme of expansion and diversification of its activities, Mr. Kamani said that it had been licensed to expand the monthly capacity of light structurals and transmission line towers from 1,500 tons to 4,000 tons, and to double the heavy structural capacity to 1,000 tons a month. The Company has also received sanction for the manufacture of new items of high tensile bolts and nuts up to 500 tons a month. The management also intends to undertake ropeways installation and the manufacture of certain defence materials. Orders have been received by the Company from Maharashtra, Assam, Andhra Pradesh and West Bengal for the construction of important transmission lines. Work under these orders is in progress. The Company completed electrification work in the eastern zone without outside help, and intends participating in similar types of work in the south and west zones. The export and agency business of the Company has been increasing. It has been awarded contracts for the supply of H.T. insulators, underground telecommunication cables and one complete thermal power station for the Bihar State Electricity Board.

Replying to shareholders' enquiries, Mr. P. R. Kamani, a director, stated that the Company had secured jointly with some other firms an order for the supply of transmission lines to the Nigerian Government. Kamani Engineering's exports at present amount to about 10 percent of its sales. The working of the Ceylon Metal Industries Ltd, in which Kamani Engineering has an interest, has been improving and there are now hopes of getting some dividend from that Company in the near future. It is hoped that the Company's assets in Lahore will be repaid, which, however, have been written off. In reply to the criticism that the profit ratio in terms of sales had come down to around 7 1/2 percent, Mr. Kamani pointed out that the percentage of profit to employed capital had, in fact, gone up from 10.71 percent to 16.40 percent.

Ganges Rope Earns More

ALTHOUGH sales and profits of the Ganges Rope Co. Ltd have improved for the year ended December 1962, there has been an acute shortage of essential raw materials. International prices of hard fibres have increased considerably. The directors apprehend that unless imports are increased, the Companies working will be affected. Sales rose from Rs. 72.35 lakhs in 1961 to Rs. 1.05 crores in 1962. The profit has improved from Rs. 6.53 lakhs to Rs. 11.60 lakhs. Taxation is allocated Rs. 8.32 lakhs, of which the super profits tax is Rs. 1.82 lakhs. Tax provision was Rs. 2.60 lakhs in 1961. The taxable ordinary dividend has been increased from 15 percent to 20 percent which is more than three-and-a-half times covered and offers a yield of 8.4 percent at the present price of Rs. 236 a share of Rs. 100 each. Development is allocated Rs. 7,961 (against Rs. 1.17 lakhs) and

general reserve Rs. 80,000 (against Rs. 1 lakh). The carry-forward is Rs. 17,856, against Rs. 46,218 brought in.

South India Steel Share Offer

THE South India Steel and Sugars Ltd, which proposes to set up a sugar factory in Mundiampakkam in Villupuram taluk in South Arcot district, is entering the capital market on 17th June with a public issue of Rs. 55 lakhs; made up of Rs. 41 lakhs in equity shares of Rs. 10 each and Rs. 14 lakhs in 9.3 percent taxable redeemable cumulative preference shares of Rs. 10 each. (Fuller details of the issue appear on a later page in of this week's issue of *Capital*.) The Company has an authorised capital of Rs. 2 crores, consisting of Rs. 1.50 crores in equity shares, and Rs. 50 lakhs in preference shares. The issued capital is Rs. 33,99,800—all in equity shares. The present issue consists of Rs. 57.33 lakhs in equity shares and Rs. 16.50 lakhs in preference shares.

Out of the present issue, equity shares worth Rs. 15 lakhs are reserved for allotment to cane-growers and equity shares of the value of Rs. 1.33 lakhs and preference shares worth Rs. 2 lakhs have been earmarked for allotment to the directors and their friends. The United India Fire and General Insurance Co. Ltd is taking up preference shares worth Rs. 50,000. The balance of the share capital—Rs. 41 lakhs in equity shares and Rs. 14 lakhs in preference shares—is now being offered for public subscription. The entire public issue has been underwritten. The present issue will meet part of the capital cost of the project which is estimated around Rs. 1.60 crores. Plant and machinery is being procured from indigenous sources. Construction of the factory is in progress, and it is expected to be completed by July 1964, and production is likely to commence during the 1964-65 season. It will have a crushing capacity of about 1,000 tons of cane a day and will be capable of expansion to 1,500 tons. The location of the factory, it is said, is ideal for sugarcane supplies. Mr. M. A. Chidambaram is the chairman of the Company.

Bharat Fertiliser to Issue Shares

BHARAT Fertiliser Industries Ltd, which proposes to set up a modern factory in Thana, near Bombay, for the manufacture of granulated N.P.K. mixed fertilisers, will soon be in the market to raise capital through public subscription. The Company is already carrying on business of manufacturing and selling mixed fertilisers under a scheme of Gujarat States, under a scheme of popularising such mixed fertilisers to suit different soils and crops since 1955. Granulation of N.P.K. mixed fertilisers is the latest development in the fertiliser industry in advanced countries. Bharat Fertiliser, it is claimed, will be the first in India to bring out this type of N.P.K. granulated products and the promoters do not expect any difficulty in marketing the product. The main raw materials required for the project are nitrogenous fertilisers, phosphatic and potashic fertilisers. The Company receives its requirements of nitrogenous fertilisers from the State Government and the other raw materials are available in ample quantities locally.

The Company has been licensed to manufacture 25,000 tons of granulated N.P.K. mixed fertilisers. The project is estimated to cost Rs. 33 lakhs, and it is proposed to meet the financial requirements by the capital issue of

Rs. 25 lakhs and a loan of Rs. 8 lakhs from the I.C.I.C.I., which has agreed in principle to grant this loan. The entire imported plant and machinery worth Rs. 5.85 lakhs has been received at site. Orders for indigenous machinery costing Rs. 1.62 lakhs have been placed, and the machinery, it is expected, will be received soon. Land for the factory has been purchased. Construction work, it is expected, will be over during the third quarter of the year. When the new granulating plant goes into full production, an annual turnover of Rs. 1 crore is expected. Barring any unforeseen circumstances, the directors are of the opinion that the Company will be able to pay a reasonable dividend during the first year after the commissioning of the plant to full capacity.

The Company has an authorised capital of Rs. 50 lakhs in equity shares of Rs. 100 each. Out of this, equity shares worth Rs. 10 lakhs have already been issued and paid-up. The Company now intends to issue 15,000 shares at par, of which 2,500 shares reserved for subscription and allotment to directors and their friends have already been allotted. The balance of 12,500 shares will be offered for public subscription some time about the middle of July. The entire issue has been underwritten. The board of directors consists of Mr. Ratilal Mulji Gandhi, Mr. Khushal Khengar Shah, Mr. Madhav Laxman Apte, Mr. Chandrakant T. Sanghvi, Mr. Nathalal Gokaldas Thakkar, Mr. Dhanvantrai T. Sanghvi, Mr. J. V. Patel, Mr. Dahyabhai M. Patel (managing director) and Mr. Chhotabhai B. Patel (managing director).

Swastik Textile Loses

THE Swastik Textile Mills Ltd reports disappointing results for 1962, and both the ordinary and preference dividend have been skipped. The Company which had made a gross profit of Rs. 9.37 lakhs in 1961, has incurred a loss of Rs. 51,867 in 1962. The setback in results has been due to the closure of the weaving factory with 240 looms during the year and the payment of Rs. 3.92 lakhs as the lay-off and retrenchment compensation, gratuity, etcetera, to the employees in order to minimise the losses consequent on the four-fold increase in the excise duty on cotton cloth manufactured on powerlooms by units having more than 49 looms with effect from 23rd April, 1962. The Company has, however, a processing factory in Chembur, and the directors are trying to secure more work for the factory by expanding. After providing Rs. 2.65 lakhs (against Rs. 2.26 lakhs), for depreciation, Rs. 21,100 (against Rs. 65,812) for development rebate reserve and nil (against Rs. 3 lakhs) for taxation and deducting other charges, the year's working shows a net loss of Rs. 3.68 lakhs, against a profit of Rs. 2.77 lakhs in 1961.

Good Result from Indian Standard Metal

THE Indian Standard Metal Co. Ltd, a subsidiary of Investment Corporation of India Ltd, shows encouraging results for 1962. Sales are up by nearly 15.7 percent from Rs. 89.15 lakhs to Rs. 103.13 lakhs, while the gross profit has risen by 34.7 percent from Rs. 9.43 lakhs to Rs. 12.70 lakhs. The dividend on the ordinary shares has been reduced from 10 percent to 7.5 percent with a proportionate distribution on the new shares to the extent of their paid-up value. Although the dividend has been reduced, it involves a larger distribu-

tion of Rs. 1.63 lakhs, against Rs. 1.45 lakhs.

Allocations include depreciation Rs. 4.35 lakhs (against Rs. 2.99 lakhs), taxation, including super profit tax Rs. 4.40 lakhs (against Rs. 3.10 lakhs), development rebate reserve Rs. 77,587 (against Rs. 24,000) and general reserve Rs. 1.22 lakhs (against Rs. 75,000). A sum of Rs. 1.90 lakhs has been transferred to the dividend reserve, of which Rs. 1.88 lakhs is being used for the payment of dividends. Preference dividend accounts for Rs. 24,975 (the same) and ordinary dividend absorbs Rs. 1.63 lakhs (against Rs. 1.45 lakhs).

Century to Expand Rayon Plant

THE chairman of the Century Spinning and Manufacturing Co. Ltd, Mr. R. D. Birla, informed the shareholders' recent annual meeting that the Company has plans for further expansion of its rayon plant, and negotiations are under way for the purchase of 18 new machines which would raise its capacity by 4.5 tons to 23 tons a day. The shareholders were also told that the Company intends to replace the old machinery in the textile division to improve the working efficiency, but such replacement will depend upon the financial position. The machinery for the caustic soda plant has started arriving, and the last instalment is expected to be received by the year-end. The Company's tyre cord plant has already gone into production. Negotiations are in progress for the marketing of the cord.

In reply to shareholders' enquiries, Mr. J. J. Asher, a director, who presided in Mr. Birla's absence, pointed out that for the time being, two machines were working in the tyre cord department and it would be some time before the rated capacity of 6 1/2 tons a day was reached. The Company has plans to raise the capacity to 10 tons a day. In 1962, it produced approximately 6.8 million kilograms of rayon yarn, out of which 5.8 percent consisted of 75 deniers, about 42 percent in 100 deniers and about 46 percent in 120 deniers. Giving the shareholders the break-up figures of the past year's performance, it was stated that the turnover of the textile division amounted to Rs. 10.35 crores and of rayon Rs. 6.74 crores. The gross profit of the textile section amounted to Rs. 1.69 crores, compared with Rs. 1.95 crores in the preceding year, while the gross profit of the rayon section amounted to Rs. 2.10 crores, compared with Rs. 1.97 crores in 1961. Out of the net profit of Rs. 1.23 crores, cotton textiles accounted for Rs. 64.68 lakhs and rayon Rs. 57.79 lakhs. The Company's exports in 1962 amounted to Rs. 99.58 lakhs, and on an average, there was a loss of 30 percent on this account. The Company's sales in the first four months of the current year, it is said, have been satisfactory. Century Spinning is not likely to incur any liability for super profits tax for 1962 as well as for the current year. Full provision has been made for taxation, depreciation and development rebate. Tax assessments have been made up to the accounting year 1957. The Life Insurance Corporation is holding 13,962 equity shares and 26,200 preference shares of Century Mills.

South India Viscose Earns More

SOUTH India Viscose Ltd has earned a gross profit of Rs. 1.27 crores in 1962—the first full year of working of the factory—compared

with Rs. 21.13 lakhs in 1961. Sales rose from Rs. 69.98 lakhs to Rs. 318.35 lakhs. After providing depreciation at Rs. 1.6 crores (against Rs. 17.95 lakhs), there is a loss of Rs. 31.72 lakhs, against a net profit of Rs. 1.11 lakhs in the preceding year. With a further depreciation provision of Rs. 53.09 lakhs concerning previous years, the total loss to be carried over amounts to Rs. 84.09 lakhs. The directors, however, state that if normal conditions prevail in the current year, a major portion of the loss will be absorbed. The Company's staple fibre plant continued to work to its full capacity of 10 tons a day throughout the year except in July 1962, when production was reduced because of the power cut. The total production of staple fibre during the year amounted to 3,759 tonnes, against 1,894 tonnes in 1961, while sales were 3,665 tonnes, against 1,880 tonnes.

Referring to the rayon plant, the directors point out that out of the 41 frames in the rayon plant, 22 frames had been erected in 1961 and 16 more in 1962. The output of rayon yarn increased from 148 tonnes to 2,769 tonnes, and sales amounted to 2,516 tonnes, against nil. The plant worked to full capacity of 10 tons a day on an 120 denier basis from August 1962 to the end of the year. Considerable difficulty is being experienced by the Company in obtaining wood pulp and caustic soda at present. It is obliged to obtain pulp through the export promotion scheme at an additional cost of about Rs. 28 lakhs a year. The directors state that the staple fibre market has been paralysed due to heavy imports. The recent imposition of additional taxes, excise duty, war risk insurance, etcetera, have thrown additional burden on the Company. The Company has represented to the Government for an increase in the prices of rayon yarn as the existing sale prices are wholly inadequate for new concerns. The profit earned under such handicaps is said to be hardly enough even to cover depreciation. The Rs. 100-paid share of South India Viscose is currently quoted around Rs. 128.

Calico Mills Maintains

THE directors of the Ahmedabad Manufacturing and Calico Printing Co. Ltd., popularly known as the Calico Mills, have recommended a final dividend of Rs. 18 a share (Rs. 125-paid) for the year ended March 1963. This, together with the interim dividend of Rs. 14 a share, makes a total of Rs. 32 a share, the same as in the preceding year. The dividend for 1962-63 is, however, payable on the increased capital as raised by the capitalisation of Rs. 6.25 lakhs for the issue of bonus shares in the ratio of 1/33 of a share for each one held. Although the gross dividend has been maintained, the net dividend works out to Rs. 22.40, instead of Rs. 24.95 a share in the preceding year, because the entire dividend for 1962-63 is subject to tax, whereas in the preceding year the interim dividend of Rs. 14 was subject to tax but a part of the final dividend (Rs. 8.50 out of Rs. 18) was exempt from tax. Apart from the dividend, the directors have also recommended, subject to the sanction of the Government, the issue of 1/34th fraction of an ordinary share as bonus for each existing ordinary share. This will mean, as in the previous year, the capitalisation of a sum of Rs. 6.25 lakhs. The proposed bonus shares will be entitled to dividend declared for the year ended March 1964 and thereafter.

Although the dividend has been maintained, the preliminary figures about the Company's working results during the year show a substantial

setback, with the gross profit down by nearly 23 percent from Rs. 2.04 crores to Rs. 1.57 crores. The setback in the profit is attributed to a considerable extent to the increase in interest charges from Rs. 26.21 lakhs to Rs. 52.48 lakhs. After providing Rs. 84.37 lakhs (against Rs. 80.45 lakhs) for depreciation, Rs. 40.43 lakhs (against Rs. 26.46 lakhs) for development rebate reserve, Rs. 16 lakhs (against Rs. 15.16 lakhs) for bonus to employees, nil (against Rs. 28.35 lakhs) for taxation, and deducting other charges, there remains a balance of Rs. 11.48 lakhs, against Rs. 46.53 lakhs. The directors have transferred Rs. 43.50 lakhs from general reserve in order to provide for the payment of the proposed dividend which absorbs Rs. 54.40 lakhs, against Rs. 52.80 lakhs. The directors state that the Company made additions to the gross block to the tune of Rs. 1.38 crores. Exports of the group increased by 50 percent over the previous year. The textile, chemical and plastic products of the Company are said to be in good demand. At its current price of Rs. 736 cum-dividend, the Company's share offers a gross return of about 4.5 percent.

Investa Machine Tools to Issue Rights

IN his statement to shareholders of Investa Machine Tools and Engineering Company, the chairman, Mr. K. C. Bakhle, has revealed that the Company proposes to increase its share capital from Rs. 60 lakhs to Rs. 85 lakhs by the issue of 25,000 equity shares of Rs. 100 each at par. These shares are to be offered to existing shareholders in the proportion of one share for every two held. The Government's sanction for the issue has already been obtained and the shareholders' approval is to be sought at the Company's annual meeting scheduled to be held on 28th June. The rights issue is being made at the instance of the National Industrial Development Corporation which has agreed to give a loan of Rs. 50 lakhs to the Company for setting up a modern foundry in Chinchwad. With the additional equity capital of Rs. 25 lakhs and the N.I.D.C. loan of Rs. 50 lakhs, the Company's financial position will be considerably strengthened and it will become possible to set up the foundry and also to expand the Chinchwad factory to undertake the manufacture of heavy lathes and shapers of the designs of Okuma Machinery Works of Japan with whom the Company is about to execute a technical collaboration agreement.

The Company has already received a loan of Rs. 25 lakhs from the N.I.D.C. The chairman says that the shifting and expansion programme is being carried out in two phases. The first phase, covering the construction of the new factory in Chinchwad, the installation of new plant and machinery and the shifting of equipment from the Byculla works is nearing completion. Some dislocation and setback in production during the current year will be unavoidable due to the change-over work. The construction of a new up-to-date foundry in Chinchwad covering the second phase has just been taken in hand. The total cost of the phased programme, which started in 1960 is placed at Rs. 1.50 crores, of which Rs. 95 lakhs have so far been spent. The demand for machine tools has increased greatly as a result of the national emergency, and the Government has exhorted manufacturers to step up their output by 30 percent. Mr. Bakhle says that despite difficulties in attaining full production because of the change-over from Byculla to Chinchwad, the

Company will endeavour to meet the higher production target.

National Ekco Cuts Dividend

THE National Ekco Radio and Engineering Co. Ltd. has fared badly in 1962. Despite an increase of 6 percent in the sales from Rs. 1.16 crores to Rs. 1.23 crores, the Company's gross profit is down by about 9 percent from Rs. 27.62 lakhs to Rs. 25.17 lakhs. The benefit of a larger turnover was offset by the increase in the cost of production on account of the excise levy on a number of items imposed in March 1962. There was a fall in the demand for sets on which excise duty was Rs. 75 and more. After providing Rs. 77,680 (against Rs. 75,996) for depreciation, Rs. 16.76 lakhs, including Rs. 4.02 lakhs for super profits tax for taxation (against Rs. 11.60 lakhs) and deducting charges, the net profit amounts to Rs. 5.93 lakhs, against Rs. 13.42 lakhs in the preceding year. The sharp fall in the disposable surplus has forced the directors to reduce the dividend from 20 percent to 15 percent, less tax. Allocation to general reserve has been pruned from Rs. 2.50 lakhs to Rs. 1.75 lakhs, and no provision has been made for the contingency reserve which received Rs. 1.50 lakhs in 1961. A sum of Rs. 3.20 lakhs was utilised in the preceding year to write off development expenditure, but no such allocation has been made in 1962. The directors propose to transfer a sum of Rs. 4.60 lakhs to dividend reserve out of which Rs. 4.50 lakhs is being drawn to provide for the payment of the proposed dividend.

The directors state that the Company intends to introduce several new models during the current year. The existing machinery in use is stated to be comparatively old and it is necessary to replace it before it becomes obsolete. With this end in view, the Company engaged an independent engineer who has made a detailed study of this problem and has submitted his report. The report is under scrutiny, but due to the acute foreign exchange shortage, imports of machinery are not allowed from the U.K. and the Continent. Imports under the D.L.F. scheme are relatively costly. The matter is, therefore, receiving the attention of the directors. Although the plastics division of the factory worked all the three shifts during the year, the Company's requirements were barely met. An additional cabinet moulding press is expected to be added when the Government issues a licence to import the same under the D.L.F. scheme.

Vulcan Insurance Repeats

THE Vulcan Insurance Company Ltd. reports satisfactory results for 1962. Despite a setback in the premium income of the marine department, the Company's total net premium income shows a small improvement from Rs. 46.41 lakhs to Rs. 46.60 lakhs. The net premium income of the fire department was higher at Rs. 29.36 lakhs, against Rs. 28.67 lakhs in 1961. The net claims paid and outstanding rose from Rs. 10.69 lakhs to Rs. 11.08 lakhs. After making usual provisions, the fire department's working shows a profit of Rs. 2.36 lakhs, against Rs. 3.16 lakhs. The fire fund increased from Rs. 17.79 lakhs to Rs. 18.13 lakhs. The net premium income in the marine department was lower at Rs. 4.13 lakhs, against Rs. 4.74 lakhs and net claims paid and outstanding amounted to Rs. 2.98 lakhs, against Rs. 3.55

lakhs. The marine department's profit, after making usual provisions, fell from Rs. 1.11 lakhs to Rs. 43,325 lakhs. The marine fund stood at Rs. 4.13 lakhs, against Rs. 4.73 lakhs.

The net premium income in the accident and miscellaneous department increased from Rs. 12.99 lakhs to Rs. 13.11 lakhs, and net claims and outstanding amounted to Rs. 6.70 lakhs, against Rs. 6.46 lakhs in 1961. The working of this department, after making the usual provisions, showed a loss of Rs. 20,598, against Rs. 1.74 lakhs in the previous year. The accident fund stood at Rs. 7.85 lakhs at the end of 1962, against Rs. 7.80 lakhs at the end of 1961. An amount of Rs. 3.31 lakhs by way of surplus from the working of different departments and interest income from investments has been transferred to the profit and loss account, compared with Rs. 2.60 lakhs in 1961. Including Rs. 26,000 brought forward, the amount available for appropriations is Rs. 3.57 lakhs. The dividend has been maintained at Rs. 2 a share, which absorbs Rs. 3.08 lakhs, leaving a surplus of Rs. 50,887 to be carried forward.

Sardesai Brothers Fares Well

SARDESAI Brothers Ltd. reports satisfactory results for 1962. While gross sales are down from Rs. 45.92 lakhs to Rs. 44.93 lakhs, the net sales have risen from Rs. 37.47 lakhs to Rs. 43.14 lakhs on account of considerable reduction in selling expenses from Rs. 8.45 lakhs to Rs. 1.79 lakhs. The Company's gross profit shows an increase of nearly 26 percent from Rs. 3.39 lakhs to Rs. 4.27 lakhs. Although the dividend has been reduced from 6 percent to 4 percent, the total distribution is higher at Rs. 83,616, against Rs. 54,285 because of the increase in the capital. Following the conversion of the Company from private to a public limited one additional capital of Rs. 40 lakhs was issued during the year. Allocations include depreciation Rs. 1.74 lakhs (against Rs. 1.35 lakhs), development rebate Rs. 41,288 (against Rs. 61,284) and taxation Rs. 80,000 (against Rs. 68,411).

The directors state that certain modifications were made in the new plant for carboxy methyl cellulose which had been put into operation in 1961, and these changes are claimed to have made the production more economical and improved the quality of the product. The Company has succeeded in preparing a pure grade of C.M.C. and a separate small plant for this purpose has already been put into operation. The directors feel that a new plant with a larger capacity for this quality may have to be installed in the near future. The production and sales of Nopco products have been encouraging. Negotiations for the manufacture of bases in India are being pursued and the Government's consent is awaited. It is felt that with the cut in imports of synthetic resins and the growing demand for these products, the Company's production and sales there are likely to show an appreciable improvement. In order to supplement the present buildings and plant, the directors have decided to make the first call of Rs. 25 on the new shares.

Bharat Line Earns Profit

SHAREHOLDERS of the Bharat Line Ltd. have gone without a dividend for four years and have suffered heavily because of the depreciation in their investments—the Rs. 10-paid share is quoted nominally around Rs. 4—but they can derive some comfort from the Company's performance in 1962. After three

CAPITAL, 13th June, 1963.

years of sustained losses, Bharat Line has made a profit of Rs. 24.23 lakhs in 1962. In the previous year, it suffered a loss of Rs. 2.55 lakhs. After providing Rs. 23.58 lakhs (against Rs. 36.09 lakhs) for depreciation and Rs. 50,000 (the same) for managing agents' minimum commission, there remains a small surplus of Rs. 15,249 which has been adjusted against the accumulated deficit of Rs. 77.25 lakhs brought forward, leaving a debit balance of Rs. 77.10 lakhs to be carried forward.

The Company earned a profit of Rs. 12.37 lakhs on the sale of two vessels and this amount has been credited to general reserve. Since the close of the financial year, two more vessels have been sold for scrap. The arrears of instalment in the repayment of loans secured from the Government of India and the Shipping Development Committee amounted to Rs. 17.76 lakhs, of which a sum of Rs. 13.12 lakhs has been paid since the end of the year. All possible efforts are being made towards effecting economy and with the disposal of four uneconomic units of the fleet, the avoidable drain on the Company's resources has been halted. The directors point out that although the financial position has improved with the sale of the uneconomic units of the Company's fleet, it is not such as could justify the declaration of a dividend.

New Great Insurance Fares Well

THE New Great Insurance Company of India Ltd. reports satisfactory results for 1962. The total gross direct premium income of all the departments is placed at Rs. 1.56 crores, against Rs. 1.52 crores in 1961, and the net premium income has gone up from Rs. 1.06 crores to Rs. 1.19 crores. In spite of a cut in the fire premium rates, the gross direct premium income in the fire department has risen from Rs. 60.69 lakhs to Rs. 62.94 lakhs; claims amounted to Rs. 22.30 lakhs, against Rs. 22.41 lakhs, and the net premium income rose from Rs. 50.61 lakhs to Rs. 60.47 lakhs. The net premium income of the miscellaneous department amounted to Rs. 41.46 lakhs, against Rs. 40.40 lakhs, and claims totalled Rs. 23.73 lakhs, against Rs. 22.04 lakhs. The marine business fetched a net premium income of Rs. 16.99 lakhs, against Rs. 14.85 lakhs, while claims amounted to Rs. 15.22 lakhs, compared with Rs. 14.31 lakhs in 1961.

The fire department alone yielded a profit of Rs. 9.28 lakhs, compared with Rs. 4.16 lakhs in the previous year. The working of the miscellaneous department showed a much smaller loss of Rs. 1.04 lakhs, against Rs. 2.62 lakhs in 1961. The marine department, however, showed a big loss of Rs. 3.64 lakhs, against a profit of Rs. 2.92 lakhs in the preceding year. After providing Rs. 3.35 lakhs (against Rs. 3.50 lakhs) for taxation, the revenue account yielded a net profit of Rs. 3.41 lakhs, against Rs. 6.30 lakhs. The income earned by way of interest and dividend amounted to Rs. 3.30 lakhs (against Rs. 3.26 lakhs). The directors have transferred Rs. 40,000 (the same) from the year's profit to staff gratuity fund. The transfer to general reserve is nil, against Rs. 3 lakhs in 1961. The dividend at the rate of Rs. 3 a share absorbs Rs. 3 lakhs, leaving a surplus of Rs. 22,823 to be carried forward, against Rs. 21,078 brought in.

In his annual statement to shareholders, the chairman, Mr. Tulsidas Kilachand, says that the heavy impacts of the 1963-64 Budget have resulted in a severe loss to general insurance companies in the shape of a depression in the market value of

their investments in industrial securities. In the long run, the Budget would adversely affect trading activity and industrial development, and consequently, the growth potential of general insurance. The chairman says that the Company's plans to develop its business in the Far Eastern countries like Singapore, Thailand, Fiji and Hongkong have been held up by the Government. Its operations in Ceylon east Africa, Pakistan and other countries are reported to have been satisfactory, but the Company has withdrawn from Burma where it was represented by an agency house.

Good Year for Esso Standard Refining

THE Esso Standard Refining Company of India Ltd. had a good year in 1962. Its crude throughput increased by 7 percent in 1962 from 40,945 barrels to 43,807 barrels a day resulting in a total production of 2,433.5 million litres of various petroleum products. The Company sold 2,442.3 litres of petroleum products in 1962, compared with 2,238.8 million litres in the previous year. Out of this, the Company exported 190.8 million litres of motor gasoline and asphalt surplus to the requirements here to New Zealand, Malaya and Indonesia, earning Rs. 1.99 crores worth of foreign exchange. Since the refinery went on stream in 1954, it has saved and earned an estimated Rs. 34.71 crores in foreign exchange for the country. It is stated that by the end of 1962, the Company was receiving about 4,881 barrels of crude oil a day from Ankleshwar. During the year, the new solvent plant went on stream. Since then, the refinery has been supplying hexane and solvent oil to the local market, thus helping preserve additional foreign exchange for the country.

The Company's sales in 1962 amounted to Rs. 37.20 crores, against Rs. 37 crores in 1961, but the payment of excise duty thereon was slightly lower at Rs. 13.50 crores, compared with Rs. 13.62 crores. The net revenue, inclusive of miscellaneous income of Rs. 29.47 lakhs (against Rs. 22.54 lakhs) increased from Rs. 22.60 crores to Rs. 23.99 crores. The gross profit for 1962 is placed at Rs. 4.67 crores, against Rs. 4.18 crores in the previous year. The directors have recommended a 6 percent dividend on preference shares. Allocations include depreciation Rs. 94.11 lakhs (against Rs. 92.30 lakhs), taxation Rs. 1.83 crores (against Rs. 1.45 crores), development rebate Rs. 7.50 lakhs (against Rs. 5 lakhs), debenture issue expenses written off Rs. 52,000 (the same), general reserve No. 2 Rs. 1.88 crores (against Rs. 1.66 crores) and dividend on preference shares Rs. 4.50 lakhs. No provision has been made for self insurance reserve which received Rs. 5.70 lakhs in 1961.

Asian Cable Loses Again

THE third annual report of the Asian Cable Corporation Ltd. for the year ended September 1962, shows a loss of Rs. 11.52 lakhs, compared with Rs. 48,331 in the preceding year, after providing Rs. 6.61 lakhs (against nil) for depreciation. Adding the net debit balance of Rs. 36,566 brought forward from the previous account, a total loss of Rs. 11.90 lakhs has been carried forward. The Company's first plant for the manufacture of V.I.R. and C.T.S. cables went into production in November 1961, and regular production started from January 1962. The value of the monthly production

reached Rs. 6 lakhs (800,000 core metres) in September last, and total sales in 1961-62 amounted to Rs. 9.40 lakhs. The present monthly production is valued at Rs. 8 lakhs (1,250,000 core metres) on a single shift basis. The net value of the fixed assets has increased by Rs. 13.89 lakhs over the previous year. The net value of fixed assets at the end of September 1962 was Rs. 72.87 lakhs. The value of raw material, semi-processed goods and finished products and scrap at the end of the financial year was Rs. 40.26 lakhs.

The Company, it is stated, found initial difficulty in disposing of the stocks. Buyers were reluctant to purchase goods in the absence of an I.S.I. certificate and fire insurance approval. The Company, it is said, has obtained an industrial licence for additional capacity of 840 tons of enamelled copper wires over the existing capacity of 360 tons and another licence for 500 tons of paper and cotton-covered wires and strips a year. It is stated that the fresh issue of capital of Rs. 1.55 crores made during the year had been fully subscribed and that this amount will be used exclusively for the implementation of the project II for the manufacture of paper-insulated power cables and enamelled copper wires. The Company proposes to invest not more than Rs. 15 lakhs in the share capital of a public limited company to be incorporated for setting up an up-to-date rod rolling mill in western India in collaboration with the major cable and winding wire manufacturers of the region. The Rs. 1 crore project will provide an annual rolling capacity of 20,000 tons. The directors are taking powers to borrow up to a total amount of Rs. 2.50 crores for implementing their expansion schemes. The Rs. 100-paid share of Asian Cable is quoted around Rs. 92.

Raja Bahadur Mills Cuts Dividend

DESPITE an increase of about 5 percent in the gross sales from Rs. 1.59 crores to Rs. 1.6 crores, the gross profit of Raja Bahadur Motilal Poonia Mills Ltd. for 1962 is down by nearly 11.8 percent from Rs. 18.03 lakhs to Rs. 15.91 lakhs. The working results have been adversely affected by higher prices of cotton, stores and chemicals and increased wages. The directors have reduced the dividend from Rs. 9 to Rs. 4 a share (Rs. 100-paid) subject to tax. After providing Rs. 8.68 lakhs (against Rs. 8.88 lakhs) for depreciation, Rs. 2.72 lakhs (against Rs. 1.94 lakhs) for development rebate and Rs. 1.94 lakhs (against Rs. 3.10 lakhs) for taxation, and deducting other charges, the net profit amounts to Rs. 1.91 lakhs, against Rs. 3.21 lakhs in the preceding year. After writing back excess provision for previous years amounting to Rs. 1.46 lakhs and providing Rs. 40,346 for income tax for the previous year and Rs. 38,460 for liability, repayment and capital assets acquisition reserve, the directors have proposed the payment of a dividend of Rs. 4 (against Rs. 9) which absorbs Rs. 1.13 lakhs (against Rs. 2.54 lakhs).

No provision has been made for dividend equalisation reserve and general reserve which received Rs. 30,000 and Rs. 35,676 in the preceding year. The directors state that all efforts are being made to rationalise the working of the Company, and good progress has been made in spinning and weaving departments. The management made additions to plant and machinery of the value of Rs. 12.90 lakhs during the year, and machinery of the value of Rs. 10.96 lakhs is said to be under erection. Since the close of the year, machinery worth Rs. 1.50 lakhs has been received.

The directors state that the Company may not have to pay anything by way of super profits tax.

All India General Resumes Dividend

THE All India General Insurance Company Ltd. which had been skipping the dividends for the past five years has declared a dividend of 5 percent (40nP a share of Rs. 8) for 1962. This has been possible because of the Company's improved performance. The net premium income of the fire department was higher at Rs. 12.41 lakhs, against Rs. 11.74 lakhs in 1961, that of the marine department rose from Rs. 1.02 lakhs to Rs. 1.40 lakhs, and of the miscellaneous department from Rs. 9.27 lakhs to Rs. 10.39 lakhs. The total net premium income written by the Company in all the departments was thus up by Rs. 2.16 lakhs over the previous year's figure. The total expenses of management amounted to Rs. 9.63 lakhs, against Rs. 9.51 lakhs.

The total claims paid and outstanding in the three departments amounted to Rs. 12.08 lakhs, against Rs. 11.05 lakhs. As a result of the year's working, the Company was able to add a further sum of Rs. 1.27 lakhs to the reserve for unexpired risks and the reserve at the end of December 1962 stood at over Rs. 12.79 lakhs. The Company earned a profit of Rs. 66,965 (against Rs. 13,007), after making a provision of Rs. 31,403 (against nil) for depreciation on investment. After including the surplus of Rs. 56,820 from the previous year, the amount available for appropriation is Rs. 123,785. The proposed dividend absorbs Rs. 50,000, leaving a balance of Rs. 73,785 to be carried forward. The Company's assets increased by over Rs. 5 lakhs in 1962 and stood at Rs. 44.77 lakhs at the end of the year.

Crookes to Diversify Interests in India

CROOKES Laboratories of London, one of the pioneer companies of Britain's pharmaceutical industry, is joining forces with Indian and Dutch producers to set up a new company to develop, make and sell pharmaceutical products in India. Announcing this in London, Crookes said the other participants would be International Franchises (of Bombay) and a subsidiary of Philips, the Dutch group.

The principal product of the new company, which will be named Crookes Interfran, will be Vitamin D. The Company will extend Crookes' already considerable interests in India. Its products have been sold in the country for over 50 years and it has had a branch in Bombay since 1929. Local manufacturing was begun by Crookes ten years ago.

Nenmeny Rubber and Produce Maintains

DURING the year ended December 1962, the Nenmeny Rubber and Produce Co. Ltd. has earned a higher profit of Rs. 1 lakh, after providing for depreciation and taxation. The previous year's net profit was Rs. 81,296, after providing Rs. 75,000 for taxation. With Rs. 89,820 brought forward, the total available for appropriation is Rs. 1.90 lakhs. Out of this, the dividend of 7.01 percent on preference shares, subject to deduction of tax, amounts to Rs. 21,030. The proposed dividend at 15 percent on ordinary shares (the same) will

absorb Rs. 50,250. The balance of Rs. 1.19 lakhs is carried forward.

The rubber crop harvested during the year amounted to 242,757 kilograms at an estate cost of 221.80nP a kilogram. The estimated crop for 1963 is 250,000 kilograms at 211.38nP a kilogram. But since the trees on 360 acres have been sold out during 1963, the crop will be lower. The report says that with a view to obtaining the benefit of the rubber replanting subsidy scheme of the Rubber Board, the directors decided to replant the old low-yielding areas in the estates where trees are of the ordinary variety. Accordingly, trees in 38.50 acres in the Eldorado estate and 40 acres in the Nenmeny estate were sold during the year with rights for slaughter tapping till 31st March, 1963 and 31st March, 1965, respectively. Furthermore, in March 1963, trees in about 154 acres in the Nenmeny estate and 205 acres in the Eldorado estate were sold with the right for slaughter tapping for three years. On the whole, the Company will realise about Rs. 5.85 lakhs on this sale. The whole area will then be replanted with high-yielding rubber plants under the subsidy scheme.

Vijayalakshmi Mills Earns More

A SUBSTANTIAL rise in the net profit of the Vijayalakshmi Mills Ltd for the year ended December 1962 has enabled the directors to declare a higher dividend of 15 per-

cent (against 12 percent). The net profit amounts to Rs. 14.34 lakhs, after providing Rs. 5.95 lakhs for depreciation, compared with the previous year's Rs. 9.55 lakhs, after providing Rs. 5.32 lakhs for depreciation. With Rs. 3,841 brought forward, the total available for appropriation comes to Rs. 14.38 lakhs. Out of this, provision for taxation amounts to Rs. 6.99 lakhs (against Rs. 1.75 lakhs). Development rebate reserve gets Rs. 1.27 lakhs (against Rs. 4.50 lakhs). The dividend at 15 percent amounts to Rs. 2.55 lakhs. The balance of Rs. 1 lakh (against Rs. 20,000) is transferred to dividend equalisation reserve. Sales of finished goods during the year amounted to Rs. 1.19 crores (against Rs. 1.04 crores).

Highland Produce Pays the Same

THE Highland Produce Co. Ltd has earned a lower net profit for the year ended 31st December, 1962, due to a general drop in tea prices. The profit for the year before taxation amounts to Rs. 7,30,177.31, compared with the previous year's figure of Rs. 8,63,429. With the amount of Rs. 32,247.74 brought forward, the total comes to Rs. 7,62,425.05. Out of this, the provision for taxation comes to Rs. 2,25,000 which includes a sum of Rs. 11,200 for super profits tax. Tax Provision for 1961 was Rs. 400,000. Appropriations include reserve for development rebate Rs. 31,500

(against Rs. 3,500), and general reserve Rs. 100,000 (against Rs. 25,000). The dividend on preference shares at 6.76 percent (gross), taxable, amounts to Rs. 20,280. The dividend on ordinary shares at 15 percent (the same) accounts for Rs. 2,70,000. The balance of Rs. 15,645.05 is carried forward. The total tea crop for the year amounted to 670,200 kilograms (against 636,207 kilograms). The all-in-cost of production was slightly higher at Rs. 3.67 a kilogram, compared with Rs. 3.63 a kilogram in the previous year. The average price realised fell to Rs. 4.39 a kilogram from the previous year's level of Rs. 4.64 a kilogram. The cardamom crop amounted to 26,690 kilograms, against 19,120 kilograms in the previous year. The estimated tea crop for 1963 is 635,000 kilograms, and the estimated cardamom crop is 22,500 kilograms.

Anandam Rubber Cuts Dividend

DURING the year ended December 1962, Anandam Rubber Co. Ltd has earned a net profit of Rs. 55,115, after providing Rs. 31,603 for depreciation and Rs. 10,000 for taxation. The previous year's net profit was Rs. 81,888, after providing Rs. 33,280 for depreciation and Rs. 70,000 for taxation. Due to the lower profit, the ordinary dividend has been reduced to 15 percent from the previous year's 18 percent. With Rs. 48,609 brought forward, the total

CAPITAL, 13th June, 1963.

surplus available for appropriation amounts to Rs. 1.04 lakhs. Out of this, the dividend of 7.35 percent on preference shares (subject to deduction of tax) amounts to Rs. 18,375. The balance of the preference dividend for 1959 at 0.35 percent has absorbed Rs. 875. The proposed ordinary dividend of 15 percent will absorb Rs. 37,500. The balance of Rs. 46,875 is carried forward.

The tea crop for the year amounted to 156,930 kilograms at an estate cost of Rs. 2.67 a kilogram. The tea crop estimated for 1963 is 141,000 kilograms at a cost of Rs. 3.07 a kilogram. The average selling price of tea was Rs. 3.48 a kilogram. The rubber crop harvested up to 14th September, 1962, amounted to 30,930 kilograms. The average realised price for rubber was Rs. 3.46 a kilogram. The ordinary shares of the Company are now quoted at Rs. 15.24 cum dividend each of Rs. 10 paid-up.

Sri Kannapiran Mills Pays Less

IN spite of a higher profit for the year ended December 1962, the directors of Sri Kannapiran Mills Ltd have reduced the dividend sharply to 6 percent from the previous year's 12 percent. In order to pay even the reduced dividend, the directors have had to draw from the general reserve. The reasons for the inadequacy of disposable profit are the increase in bonus by Rs. 75,000, increased provision by about Rs. 25,000 for development rebate reserve and the larger provision for taxation which increased by about Rs. 1.35 lakhs, inclusive of the super profits tax. The net profit for 1962 amounts to Rs. 6.72 lakhs, after providing Rs. 4.04 lakhs for depreciation. The previous year's net profit was Rs. 5.48 lakhs which was arrived at after providing Rs. 3.88 lakhs for depreciation. With Rs. 3,367 brought forward from the previous year and transferring Rs. 22,840 from general reserve, the amount available for appropriation is Rs. 6.98 lakhs. Out of this, development rebate reserve gets Rs. 60,167 (against Rs. 34,691). Provision for taxation amounts to Rs. 4.07 lakhs (against Rs. 2.65 lakhs). The proposed dividend at 6 percent will absorb Rs. 79,726. Sales of finished goods rose to Rs. 62.60 lakhs during the year, against Rs. 59.93 lakhs in the previous year.

Rajeswari Mills Profit Down

DURING the year ended December 1962, Rajeswari Mills Ltd, Gudiyattam, has earned a net profit of Rs. 5.57 lakhs, after providing Rs. 1.74 lakhs for depreciation. The net profit for the previous year was Rs. 6.07 lakhs, after providing Rs. 1.80 lakhs for depreciation. With Rs. 6,734 brought forward from the previous year, and with Rs. 1,865 being the refund of income tax, the total available for appropriation amounts to Rs. 5.66 lakhs. Out of this, provision for income-tax amounts to Rs. 3.10 lakhs (against Rs. 3.20 lakhs) and provision for the super profits tax Rs. 85,000 (against nil). Development rebate reserve gets Rs. 6,300 (against Rs. 9,600). A sum of Rs. 9,000 (against Rs. 15,000) is transferred to dividend equalisation reserve. No amount is transferred to general reserve (against Rs. 50,000). Provision for the gratuity fund amounts to Rs. 5,000 (the same). The proposed dividend of 15 percent will absorb Rs. 1.50 lakhs (against Rs. 2 lakhs). The balance of Rs. 816 is carried forward.

The turnover remained almost the same as in the previous year, but the

CAPITAL, 13th June, 1963.

profits were lower due to the higher cost of production. The directors state that they have had to reduce the dividend due to higher taxation. The mill is working with 14,000 spindles at present. The Company is awaiting the Government's orders concerning its application for 6,000 additional spindles.

Radha Krishna Mills Pays Less

THE directors of Radha Krishna Mills Ltd have reduced the dividend to 10 percent for the year ended December 1962 from the previous year's 12½ percent, due to a decline in the net profit for the year. The net profit for 1962 amounts to Rs. 16.19 lakhs, after providing Rs. 5.70 lakhs for depreciation (against Rs. 5.38 lakhs). The previous year's net profit was Rs. 20.02 lakhs. With Rs. 3,497 brought forward the total comes to Rs. 16.22 lakhs. Out of this, Rs. 8.47 lakhs (against Rs. 11.52 lakhs) is transferred to contingency reserve and Rs. 1.41 lakhs (against Rs. 61,172) to development rebate reserve. The proposed dividend of 10 percent will absorb Rs. 6.30 lakhs. The balance of Rs. 4,908 is carried forward.

The directors say in their report that trading conditions were not encouraging during the year due to the steep rise in the price of cotton and a sluggish cloth market. Furthermore, there was no upward revision of yarn prices during the year, and this affected the profit of the Company. There was an increase in the surcharge on electricity and the bonus payment to staff. The number of operatives also increased. The gross block of the Company stands at Rs. 1.25 crores. After deducting depreciation amounting to Rs. 82.42 lakhs, the net block is Rs. 42.26 lakhs. Sales declined to Rs. 2.07 crores from the previous year's Rs. 2.26 crores.

Seshasayee Industries Makes Profit

SESHASAYEE Industries has earned a profit amounting to Rs. 12,742 for the year ended 31st December, 1962 after providing Rs. 3,91,784 for depreciation, as against the previous year's loss of Rs. 8,97,485, after providing Rs. 3,22,853 for depreciation. The value of production improved to Rs. 34.6 lakhs from the previous year's level of Rs. 14.7 lakhs. It is reported that the tempo of production in all the sections has considerably increased and it is expected that in 1963, production will be substantially higher. After adjusting the brought-forward loss of Rs. 14,23,660, the balance of loss carried forward amounts to Rs. 14,10,918.

On product development, the directors' report says that besides conventional I.T. and h.t. transmission line insulators, the factory is now producing and marketing 11, 22 and 33 kV post type insulators and bushings for 11 kV transformers. The directors add that prototypes for heavy duty disc insulators (18,000-lb and 25,000-lb varieties) for 22 and 33 kV transformer bushings as well as railway mer insulators are under development, and it is hoped that many of these items will come into regular production during 1963.

On the expansion project, the report says that the project is making good progress. The new foundry is expected to be completed by July 1963, and the tunnel kiln for the ceramic section by December 1963. Products of the Company are well received by all the users. Another line in which the Company has established itself fairly well is the manu-

facture of ni-hard cast iron material for the cement industry. About the expansion of the factory from a 1,200 ton unit to one of 3,000 ton unit, the directors refer to the issue of Rs. 40 lakhs share capital last year to meet part of the cost of expansion. The total cost of the expansion comes to Rs. 93 lakhs. The balance of Rs. 53 lakhs will be found through a further issue of Rs. 20 lakhs of share capital and by securing a loan of Rs. 33 lakhs. The share issue of Rs. 20 lakhs, it is proposed, will be made to only institutional investors.

Pankaja Mills Skips Again

DUE to a steep fall in the net profit for the year ended December 1962 largely because of the unremunerative prices realised for its yarn, the directors of Pankaja Mills have again passed the dividend for this year. The net profit for 1962 amounts to Rs. 2,35,217 after providing Rs. 1,94,909 for depreciation, compared with the previous year's net profit of Rs. 7,27,407 after providing Rs. 1,40,608 for depreciation. Out of this profit, bonus for the prior years amounted to Rs. 1,10,175, while sales tax for the prior years amounted to Rs. 827 and Income tax amounted to Rs. 17,114. After these appropriations, there is a balance of Rs. 95,263. Adding to this amount, a sum of Rs. 3,969 being refund of sales tax, and also a sum of Rs. 25,000 being donation in the previous year brought back to the account, the total comes to Rs. 1,24,232. After adjusting this amount against the brought forward loss of Rs. 19,14,583, the balance of loss of Rs. 17,90,351 is carried forward.

Andhra Cement Earns More

A MARKED rise in the profits, before taxation, and a substantial improvement in sales, feature the working results of the Andhra Cement Co. Ltd for the year ended December 1962. Provision for taxation is substantially higher at Rs. 7.88 lakhs (against Rs. 3.50 lakhs). The ordinary dividend for the year is reduced by 1 percent to 9 percent from the previous year's 10 percent. The net profit amounts to Rs. 14.43 lakhs, after providing Rs. 9.39 lakhs for depreciation. The previous year's net profit was Rs. 10.82 lakhs, after providing Rs. 9.85 lakhs for depreciation. With Rs. 2,498 brought forward and with Rs. 1.91 lakhs transferred from the rehabilitation fund, Rs. 1.05 lakhs transferred from general reserve, the total available for appropriation amounts to Rs. 17.41 lakhs. Out of this, the directors have provided Rs. 7.88 lakhs (against Rs. 3.50 lakhs) for taxation. Provision for development rebate reserve amounts to Rs. 54,750 (against Rs. 75,000). Expenses not relating to the year of account amounted to Rs. 23,994. Transfer to the rehabilitation fund, 1962, amounts to Rs. 1.62 lakhs. The preference dividend at 6 percent free of tax (gross 7.8 percent), amounts to Rs. 19,407. The proposed ordinary dividend at 9 percent (against 10 percent) will absorb Rs. 6.39 lakhs. The balance of Rs. 2,172 is carried forward.

The directors say in their report that although production during the year showed slight improvement over the previous years, it could not be maintained to full capacity due to the shortage of raw materials and transport. Coal was continuously in short supply and supplies had to be arranged at exorbitant cost by the sea-cum-rail routes as well as from other alternative sources. The report adds that after the price of cement was

fixed by the Government under the Tariff Commission's recommendations in 1961, there was a further increase in the cost of production. Representation has been made to the Government of India for an increase in the retention price due to the increase in the production cost. The directors think that the working results during the year have not been entirely satisfactory. They are taking steps to convert the coal firing kilns to oil firing ones as permitted by the Government of India, subject to a subsidy being allowed for the increased cost.

The Government of India has granted a licence to the Company for establishing a sponge iron plant in two stages, by making suitable modifications to the existing rotary kilns. The first stage will be for a production capacity of 40,000 tonnes a year and the second stage for an additional production capacity of 60,000 tonnes a year, making a total of 100,000 tonnes.

Aspinwall (Travancore) Loses

THE working of Aspinwall and Co. (Travancore) Ltd for the year ended December 1962 has resulted in a net loss of Rs. 55,217 after providing for depreciation and agricultural income tax, compared with the net loss of Rs. 58,702 in the previous year. In view of the loss incurred for the year and the impact of the super profits tax, the directors consider it not desirable to recommend any dividend for the year. The dividend for the previous year was 4 percent. The amount brought forward from the previous year was Rs. 299 and excess provision for taxation no longer required amounted to Rs. 2,961. In order to set off the net loss in working, the directors have transferred a sum of Rs. 52,000 from general reserve to profit and loss account. The above three items total Rs. 55,260, against which the net loss of Rs. 55,217 is adjusted. This leaves a small sum of Rs. 43, which is carried forward. The capital reserve now stands in the balance sheet at Rs. 1,52,870, while the general reserve stands at Rs. 1,50,205. The Rs. 10 paid-up share of the Company is now quoted at Rs. 5.85.

Premier Fertiliser Fares Well

WORKING results of the Premier Fertilisers Ltd for the year ended December 1962, are satisfactory. The civil construction of the factory buildings and the erection of the plant and machinery were completed during the year. The expenditure during construction up to 31st December, 1962, totalled Rs. 4,84,658, which is in addition to the sum of Rs. 1,08,209 spent under the same head in the previous period and included in the last balance sheet. This includes Rs. 2,20,281 incurred as machinery erection expenses. The income during the year, after providing Rs. 5,445 for depreciation, Rs. 7,600 for development rebate reserve, and Rs. 8,900 for taxation, is Rs. 7,069. The directors have decided to carry forward this surplus amount to the next year's account. The erection of the plant and machinery was completed about the end of 1962, and trial runs were taken.

After getting over a few initial mechanical difficulties, regular production began from January 1963. It has been established that the plant is capable of producing more than its rated capacity. The factory is situated near Cuddalore Old Town

railway station in Madras State with a manufacturing capacity of 40,000 tons of superphosphate and 16,500 tons of sulphuric acid a year. The directors state that the quality of the superphosphate is very good. The managing agents, Emecete and Sons Ltd, Madras, have agreed to waive their minimum remuneration of Rs. 25,000 and this is the second year in succession of their waiver.

Mahendra Electricals Starts Production

THE second annual report of Mahendra Electricals Ltd, which manufactures wires and cables in association with Johnson and Phillips Ltd, London, for the nine months ended December 1962, shows that the working of the Company during this period has resulted in a net loss of Rs. 58,964 (against Rs. 36,075) for the year ended 31st March, 1962. Referring to the progress on the project, the report says that during the year, structural and civil works of the main factory buildings, electric sub-station, water tower and pump house, stores buildings, etcetera, have been completed and bulk power has been made available to the Company. It is further reported that all the plant and machinery, both indigenous and imported, have been installed, and trial runs on various items have been taken and steady progress is being made. In the middle of January 1963, the Company commenced production of some of the items in the programme of manufacture.

Enfield India Does Well

CONSIDERABLY improved results over the previous year, and the maintenance of a 4 percent dividend on the increased capital highlight the working of the Enfield India Ltd for the year ended 31st December, 1962. The profit of the Company amounts to Rs. 7,03,362, after providing Rs. 8,56,986 for depreciation, compared with the previous year's profit of Rs. 4,30,462, after providing Rs. 6,83,364 for depreciation. With the amount of Rs. 2,414 brought forward, the total available for appropriation comes to Rs. 7,05,776. The reserve for development rebate gets Rs. 1,16,167 (against Rs. 69,847). Donations amounted to Rs. 16,191. The provision for taxation amounts to Rs. 2,93,000 (against Rs. 1,23,000). The dividend at 9.10 percent on 7 percent tax-free redeemable preference shares amounts to Rs. 91,000. The proposed dividend at 4 percent on equity shares on the increased capital (the same) will absorb Rs. 1,84,627. The balance of Rs. 4,791 is carried forward.

Sales during the year rose by 16 percent, while the net profit after depreciation rose by 60 percent. But for the developments in the last quarter of the year and the declaration of emergency, the directors state, working results would have been better still. Although the Company had been manufacturing two models of motor-cycles on a defined basis, only the heavier type of motor-cycle is now being made in order to meet the requirements of the Defence services. This necessarily resulted in a dislocation of the production facilities. As planning in the motor-vehicle industry has to be done considerably in advance, normally about a year ahead, this sudden implementation of the change in the pattern of production adversely affected the working of the last two months of the year. Besides, considerable expenditure was incurred in converting vehicles on

EASTERN ECONOMIST TWENTIETH ANNIVERSARY NUMBER

In this Special Number, published in place of its regular weekly issue for June 7, 1963, Eastern Economist has pleasure in offering to its readers a panoramic presentation of the progress of the Indian economy in the last twenty years. A large section is devoted to a factual description and analysis of industrial development in the various States of our Republic. This narrative brings together for the first time the major particulars of industrial expansion in the private and public sectors as well as in the small-scale and large-scale sectors.

An outstanding feature of the rich fare presented in this publication of 176 pages is a series of interesting and thought-provoking articles on various aspects of the Indian economy, contributed by distinguished personalities, included among whom are the Ambassador of the U.S.S.R. in India, Mr. K. D. Malaviya, Mr. K. Santhanam, M.P., Mr. R. R. Morarka, M.P., Dr. P. S. Lokanathan, Mr. E. P. W. da Costa, Mr. Tarlok Singh, Member, Planning Commission, Mr. V. Shankar, I.C.S., and Mr. M. S. Sivaraman, I.C.S.

The Twentieth Anniversary Number also carries a very informative and illuminating statistical feature on economic trends and situations in the various States. A number of graphs and charts contribute to the readability as well as the utility of this publication. Priced at Rs. 5 per copy, this Special Number is available to our annual subscribers without any extra charge on their annual subscription. New subscribers, who remit the annual subscription of Rs. 65 before July 15, 1963, will be entitled to a free copy of the Twentieth Anniversary Number. Please mail your orders to:

hand and in varying stages of manufacture, to meet defence specifications.

On the scooter project, the directors' report says that the developments during the year affected the programme of making scooters, which had just got into stride. The equity capital raised for financing the scooter project could not, therefore, yield the anticipated return on investment. The Company has now reached a stage of normal operations concerning motor-cycle production on the basis of the revised pattern. Most of the machinery required for the second phase of the scooter project have been received and are being erected, with half of the additional loan of Rs. 14 lakhs which was sanctioned by the Industrial Finance Corporation.

The Company will be shortly introducing a new model lightweight motor-cycle in place of the existing model. It is reported that a considerable amount of planning and preparatory work in connection with the industrial engines project were

done during the year. In spite of the limitations caused by the change-over to the revised pattern of production and despite the fact that the manufacture of scooters during 1963 would be considerably less than what the Company should be producing under different conditions, the chairman says in his statement that an increase of about 40 percent can be achieved in sales during the current year.

A. V. Thomas Pays More

ALTHOUGH the net profit of A. V. Thomas and Co. Ltd for the year ended December 1962 is lower than in the previous year, the directors have recommended a higher dividend of 13 percent on ordinary shares, against 12½ percent in the previous year. The profit for 1962 before taxation amounts to Rs. 2,41,432.68, compared with Rs. 2,88,635 for the previous year. With the amount of Rs. 25,700.80 brought forward, the total available

surplus comes to Rs. 2,67,133.48. Out of this, the provision for taxation is Rs. 1,75,000 which includes Rs. 17,000 for super profits tax (against Rs. 1,30,000). The preference dividend at 7.8 percent, taxable, absorbs Rs. 9,453.60. The proposed dividend on equity shares at 13 percent will absorb Rs. 61,126. The balance of Rs. 21,553.88 is carried forward.

Palani Andavar Earns Less

A STEADY rise in the price of raw materials, increased cost of labour and working expenses and a surcharge on the consumption of electricity, without any corresponding increase in the selling prices of yarn have affected the working results of Palani Andavar Mills Ltd for the year ended December 1962. The net profit for the year has declined to Rs. 15.04 lakhs from Rs. 17.11 lakhs in the previous year, after providing Rs. 4.75 lakhs for depreciation (against Rs. 4.46 lakhs). With Rs. 26,544 brought forward from the previous year, the total amount

available for appropriation is Rs. 15.31 lakhs. Out of this, development rebate reserve gets Rs. 1.12 lakhs (against Rs. 42,000). Provision for taxation amounts to Rs. 9 lakhs (against Rs. 7.25 lakhs). The preference dividend at 9.1 percent amounts to Rs. 18,200. The proposed dividend on ordinary shares at 35 percent (against 50 percent) will absorb Rs. 3.50 lakhs. The balance of Rs. 3,755 is carried forward. Yarn sales for the year amounted to Rs. 1.34 crores (against Rs. 1.34 crores).

Thamarapally Rubber Pays Less

THE working of the Thamarapally Rubber Co. Ltd for the year ended December 1962 has resulted in a net profit of Rs. 1,00,060.69, after providing Rs. 7,642.73 for depreciation and Rs. 86,000 for taxation. The net profit for the previous year was Rs. 1,01,541 after providing Rs. 6,112 for depreciation and Rs. 90,000 for taxation. With the amount of Rs. 12,539.46 brought forward, the total comes to Rs. 1,12,600.15. Out of this, the dividend on preference shares at 6.54 percent (taxable) amounts to Rs. 4,905. The directors have recommended a dividend of 16 percent on the ordinary shares (against 18 percent). This will absorb Rs. 100,000. The balance of Rs. 7,695.15 is carried forward. The rubber crop for the year amounted to 1,88,085 kilograms, at an estate cost of Rs. 166.97 a kilogram. The average price realised was Rs. 3.06 a kilogram. The estimated crop for 1963 is 188,500 kilograms at a cost of Rs. 187.18 a kilogram.

New Capital Issues

FOUR companies, of which two are new, have been authorised to raise capital totalling Rs. 1.55 crores. All are issuing equity shares. The consent for three companies is valid for 12 months and for the fourth up to the end of August this year. The following are the details:

The International Computers and Tabulators Indian Manufacturing Company Ltd, a new company recently incorporated in the State of Maharashtra for the manufacture of data processing equipments in India in collaboration with the International Computers and Tabulators Ltd, London, has been allowed to issue capital of Rs. 50 lakhs divided into 50,000 equity shares of Rs. 100 each at par. Out of this, shares of the value of Rs. 30 lakhs will be offered to the U.K. Company against the import of machinery and plant, technical know-how and/or cash at par. The money will be used for financing the Company for the manufacture of the equipments mentioned above.

A. Stock and Company Ltd, Calcutta, a new company, will issue capital of Rs. 50 lakhs in equity shares of Rs. 10 each for cash at par. The capital will be used for the manufacture of steel structurals and steel storage tanks.

Tiwac Industries Ltd, Dharwar (Mysore State) is raising capital of Rs. 28,00,000 divided into 28,000 equity shares of Rs. 100 each, at par, of which 2,200 shares will be allotted to the foreign collaborators for consideration other than cash and balance will be offered in India for cash. The money will be used for setting up an industrial undertaking for the manufacture of "one-day alarm time-pieces".

Century Flour Mills Ltd has been given consent in supersession of the previous consent order of 11th May, 1962, to the issue of Rs. 27 lakhs of capital to be issued for cash at par. The money will be used for the establishment of a biscuit factory. The consent will be valid up to 31st August, 1963.

The Stock Markets

FORWARD TRADING MAY START NEXT WEEK IN CALCUTTA

Wednesday Evening.

THE Calcutta Stock Exchange has decided to accept the Government's terms and conditions for resuming forward trading in shares. Its request for modification has been turned down. It has also applied to the Government for permission to begin forward trading, which may be resumed next week. The Bombay, Madras, Ahmedabad and Delhi stock markets have already started forward trading because they accepted the terms and conditions of the Government earlier.

Dull conditions have prevailed during the past week. Turnover has largely been confined to clearing shares and fluctuations have been narrow. Operators have been inclined to keep their commitments light. Bulls, in particular, have been cautious and have tried to take their profit whenever possible. Hence the clearing passed off on Wednesday uneventfully. The carry-forward charges are more or less the same as in the previous settlement.

Investors have been very discriminating because of the discouraging outlook for dividends, despite bigger turnover and profits, after-tax profits have been substantially reduced by heavier taxation, including the super profits tax. Most of the companies have found it difficult even to repeat the dividends. This apart, the growing idle capacity, especially in the engineering industry, has been a discouraging factor. The working of several engineering units has been interrupted by the shortage of matching steel and electrodes.

The news that the Aid-India Club has sanctioned aid for the third year of the plan has created mixed feelings. Disappointment has been caused because the aid has fallen short of India's request. But the fact that a substantial portion of it is untied has been welcomed. This should facilitate bigger imports of raw materials and spare parts.

The stock market has been worried by the growing shortage of funds. A substantial amount has been mopped up by new issues. The flow of bank credit into stocks and shares is unlikely under present circumstances. Although the busy season has come to a close, money continues to be tight. Since the outlook for bank deposits is not very encouraging considering that a large volume of savings has been siphoned off by heavier taxation and compulsory savings, banks are not inclined to lend liberally.

Indian iron have moved within a narrow groove on alternate bouts of buying and selling. Engineering shares have been neglected. Except for scattered interest in Indian Standard Wagon because of a good report, investors have been cautious. Stray business has been transacted in Guest, Keen, Williams, Texmaco, Burn, Jessop and Kuniardhubi. Bhartiya Electric Steel have not responded to the increase in the dividend.

A smart rise in the price of Indian Copper has been an outstanding feature in an otherwise dull miscellaneous section. This Company has decided to issue bonus shares in the proportion of one share for every two proportion of capitalising reserves. Goodheld by capitalising reserves. Goodheld by capitalising reserves. Goodheld by capitalising reserves. Among tobacco shares, Imperial Tobacco have recovered but National Tobacco have

been easier. Managing agency shares have been quiet. Balmer Lawrie have nevertheless been maintained on repeating the dividend but Shaw Wallace have been sold on halving the dividend. The prices of new shares have fallen all-round. Isaac Holdens, Phillips Carbon Black and Dr. Paul Lohmann have lost on balance. Paper shares have been quiet. Orient, Titagur and Sirpur have slipped back.

The earlier support for jute shares has fizzled out. Champdany have reacted because the capital refund has been subjected to tax. Investors are also worried by the absence of foreign enquiries for jute goods. Birla have reacted but Barnagore have been supported. Scattered interest has been taken in Fort Gloster, Anglo-India, Ganges, Megna and India.

Coal shares have been neglected and stray business has been transacted in Burrakur, East Indian, Bengal and Central India. Interest has declined in cotton mill shares because the profit outlook has become uncertain. J. K. Rayon and Bharat Commerce have been sold. Sugar shares have been difficult to deal in because the prospect is considered far from bright. Bank shares have evoked no interest.

Stray business has been done in tea shares and prices have shown little change. Investors have been disturbed by developments along the northern border.

Government securities have been steady mainly because of official sup-

port. The 3 percent Conversion Loan 1986 has recovered to Rs. 63.20. Despite interest in short-dated securities, turnover has been small because of the shortage of sellers. Selected State Government loans have been bought.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during May 1963 was: iron 168,400 metric tons; steel ingots 164,800 metric tons and salable steel 122,900 metric tons.

Head Office: Baroda

quirements have been imposed, the checking of speculation will depend greatly on the members themselves. At first, prices of forward shares in particular improved because of short-covering and replacement buying. Subsequently, prices have slipped back on profit-taking and absence of follow-up support. Operators have been hesitant to extend their commitments because of various uncertainties. The corporate news, on the whole, has not been encouraging in that the profits of cotton mills have been held down by rising production costs. Since the recommendations of the Tariff Commission on the prices of cloth and yarn will be published soon, investors are hesitant to extend their commitments. Attention has largely been concentrated on steel shares on the view that decontrol of steel may benefit the producers.

Tata Steel have closed around Rs. 138.75, but Indian Iron have been subdued on pressure from Lyons Range. Among engineering shares, interest has been taken in Tata Locomotive at Rs. 276.50, in Mukand Iron at Rs. 18.64 and in Larsen and Toubro at Rs. 22.56. Among motor-vehicle shares, Hindustan Motors have been steady at Rs. 16.72 and Premier Automobiles at Rs. 109.

Century have been prominent in the cotton mill section and have been bought up to Rs. 540.50 on prospects of expansion. Standard have reacted

towards the close after an earlier rise. Kohinoor, Svadeshi, Morarjee, Khatau and India United ordinary have been transacted. In the miscellaneous section, cement shares have been steady. Associated Cement have been done at Rs. 141.75 and Digvijay at Rs. 148.

Among sugar shares, Belapur and Walchandnagar Industries have attracted attention. Steamship company shares have been quiet, and stray business has passed in Scindia Steam and Great Eastern. Mining shares have been subdued, and Shivrampur Syndicate have been sold down to Rs. 16.20. Bombay Burmah have attracted attention at Rs. 61.50. Chemical shares have been quietly steady, and business has passed in Tata Chemical and Indian Dyestuff. Among rayon shares, National have fallen on adverse corporate rumours. Business has been slow in cash scrip, although Associated Bearings have recovered somewhat towards the close on replacement buying.

A small turnover has been seen in bank shares and fluctuations have been narrow. Bank of India, Central Bank and Bank of Baroda have been dealt in. In the insurance section, New India Assurance have been bought at Rs. 60.70. There has been less interest in electric company shares and prices have generally slipped back. Ahmedabad have been available at Rs. 92.20 and Tata Power at Rs. 1,061.25.

Madras

MARKET SENTIMENT IMPROVES

MORE INTEREST IN CLEARING SHARES

Tuesday Evening.

SENTIMENT has improved in the stock market during the past week on the resumption of forward trading. Better advices from Bombay have also been a helpful factor. After a long interval, interest has expanded in clearing shares. But operators have turned cautious towards the close because of developments along India's northern borders.

Government securities have been quietly steady and support has been extended to State Government loans. Bank shares have generally been neglected. Selected electric company shares have been bought on dividend considerations. Good tea and coffee shares have met with support at rising prices because of good crop prospects. It is generally believed that the coffee crop during the current year will be bigger since weather conditions have been favourable. Rubber shares have been sluggish. Although selected cotton mill shares have improved, the turnover has, on the whole, been limited. In the miscellaneous section, attention has been

CAPITAL, 13th June, 1963.

concentrated on cement and chemical shares.

Among banks, Indian Overseas have been done at Rs. 142 and Pandyan at Rs. 37. In electric companies, South Madras have been taken up to Rs. 10.22. In the sugar section, E.I.D. have reacted to Rs. 37 and Kothari to Rs. 7.40. Stray support has been extended to Deccan at Rs. 9.75 and to Andhra at Rs. 17.36.

Among planting shares, Blue Mountain have been steady at Rs. 2.37 and Consolidated Coffee at Rs. 18.35. Periakaramalai have been wanted at Rs. 3.03 and Thamarapalli at Rs. 15.62. Highland have declared a taxable ordinary dividend of 15 percent and Twyford a taxable ordinary dividend of 5 percent. London

SHARP FALL IN SHARE VALUES

POLITICAL UNCERTAINTY UPSETS SENTIMENT

London, 12th June.

THE past week was an unhappy one for the stock market. Prices deteriorated in most sections prior

to the week-end on nervousness concerning the possible political repercussions of Mr. Profumo's resignation from the Government, but it was not until Monday that the full weight of this affair fell upon the market. Prices tumbled as a fair amount of selling developed, and the market suffered their sharpest setback since last year's Cuba crisis. Somewhat steadied conditions developed after

Money

THE CALCUTTA MONEY
MARKETFAIR DECREASE IN
ADVANCES

Wednesday, 12th June.

THE general level of advances has shown a fair decrease in the Calcutta money market during the past week. Most of the decrease is accounted for by the iron, steel and engineering industries, but the credit given to the cotton textile and sugar mills has also shrunk. Advances for jute, and for the storage of food-grains and seeds, are unchanged. In the interbank market, conditions are tight, and the call rate quotes 5½ percent.

The exchange market has been very dull, with few tea or gunny bills passing. The demand for remittance has been poor. Sterling has been stronger in relation to most of the major currencies except the deutschmark and the Swedish krona.

SILVER WAS QUIET IN CALCUTTA during the past week due to lack of support. The price fell from the previous week's level of Rs. 265 to Rs. 260.75, quoted today for ready delivery. There was no business in gold. The price of silver was quoted at 110½d in London and at 127.6 cents in New York.

DURING THE WEEK ENDED 7TH JUNE, Government of India Treasury bills for Rs. 25,39,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 11th June. The total amount offered was Rs. 2,10,00,000. Tenders at Rs. 99.415 percent were accepted in full, and those at Rs. 99.410 percent were allotted approximately 93 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.354 percent a year. Tenders for Rs. 2 crore of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 17th June.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 12th June to the 15th June at Rs. 99.426 percent, subject to the conditions previously announced that sales can be stopped at any time without notice, if the Government thinks it necessary. These bills sold from 5th June to 8th June amounted to Rs. 1,35,25,000.

THE RISE OF RS. 32.55 CRORES TO Rs. 2,313.99 crores in active notes was a prominent feature of the return of the Reserve Bank of India for the week ended 7th June, 1963. The total note issue was Rs. 16.98 crores larger at Rs. 2,335.48 crores. The currency expansion was adjusted by raising rupee securities by Rs. 20 crores to Rs. 1,997.44 crores, and reducing rupee coin from Rs. 114.22 crores to Rs. 111.20 crores in the paper currency reserve. These changes were made by transferring securities from the Banking Department in which investments fell by Rs. 20.05 crores to Rs. 234.38 crores. Deposits declined all-round. Deposits of the Government of India were Rs. 2.81 crores smaller at Rs. 70.95 crores and those of State Governments fell by Rs. 4.50 crores to Rs.

7.11 crores. Balances of scheduled banks were Rs. 3.72 crores smaller at Rs. 74.70 crores. Balances held abroad declined by Rs. 2.92 crores to Rs. 5.42 crores. Loans to scheduled banks rose from Rs. 17.60 crores to Rs. 24.53 crores, of which advances against usance bills were Rs. 9.35 crores (Rs. 8.70 crores). Ways and means advances were shown at Rs. 49.41 crores, against Rs. 45.64 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 31st May, 1963, shows a rise of Rs. 1.58 crores to Rs. 561.26 crores in total deposits. Investments in Government securities are down by Rs. 2.19 crores to Rs. 240.85 crores, while other authorised investments remain unchanged at 9.34 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 1.79 crores to Rs. 292.74 crores. Cash and balances are, in consequence, shown at Rs. 24.34 crores or Rs. 39 lakhs less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 31st May, 1963, shows Demand and Time liabilities at Rs. 1,026.24 crores (Rs. 31.72 crores on account of borrowings from banks) and Rs. 1,269.54 crores (Rs. 22.48 crores), compared with Rs. 1,033.94 crores (Rs. 34.47 crores) and Rs. 1,273.40 crores (Rs. 21.20 crores) in the previous week. Cash has increased by Rs. 9 lakhs to Rs. 52.74 crores, while balances with the Reserve Bank have decreased by Rs. 2.58 crores to Rs. 76.85 crores. There is a drop of Rs. 2.07 crores to Rs. 628.18 crores in investments. Advances and bills discounted at Rs. 1,563.30 crores show a rise of Rs. 1.78 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.6 percent and 68.1 percent, against 5.7 percent and 67.7 percent.

MANAGEMENT

The Management of the Company rests with the Board of Directors, of which Mr. M. A. Chidambaram is the Chairman.

OBJECTS

The Company was incorporated on 8th May 1944 under the name and style of The Madras Circle Registered Stockholders' Association Limited, for the purpose set forth in the Memorandum of Association. By a special resolution passed at the Extra-Ordinary General Meeting of the Shareholders, held on 14-6-1960 and confirmed by the order of the High Court, Madras, dated 20th June, 1961, in company petition No. 57, of 1960 the Memorandum of Association was amended so as to enable the Company to carry on the business of Steel rolling mills and re-rolling mills in all its branches and also to carry on the business as Manufacturers of Sugar in all its branches. The following are the main objects of the Company:

To acquire from the Deputy Iron and Steel Controller, Madras, the stocks of Iron & Steel materials now held by him and for such purpose to enter into and carry into effect with or without modification the agreement referred to in Article 3 of the Articles of Association of the Company. To enter into contracts with Central Government for the purpose of being appointed stockholders of controlled stock (which expression shall mean and include all such Iron & Steel materials as are declared to be controlled stock by the Central Government) of one or more categories of Iron and Steel specified in the Second Schedule of Iron & Steel (Control of Distribution) Order 1941.

To hold and handle such Iron and Steel materials as are placed in controlled stock by the Central Government on consignment or in transit.

To buy, sell and deal in such Iron and Steel materials as are placed in controlled stock by the Central Government in accordance with the terms and conditions of the contracts entered into with the Central Government as specified in Sub-clause 2 hereof.

To carry on the business of Steel Rolling Mills and Re-rolling Mills in all its branches.

To carry on business as manufacturers and traders and dealers in all goods manufactured of iron and steel including structural steel, beams, rafters, tubes and similar products, and all goods in

which iron and steel are used as components or otherwise incorporated.

To carry on the business of merchants, dealers, traders, exporters and importers, distributors and stockists and agents and commission agents of steel and iron and goods made of iron and steel of every kind.

To carry on the Business as Manufacturers of sugar in all its branches.

HISTORY AND BUSINESS

The Company was incorporated on 8th May 1944, under the direction of the Iron and Steel Controller, to deal in Iron and Steel of the controlled categories, the membership being restricted only to the Registered Stockholders within the meaning of the Iron and Steel (Control of Distribution) Order 1941. The Company soon commenced business after obtaining certificate of Commencement of business dated 2-6-1944 from the Registrar of Companies, Madras.

It has declared substantial dividends since the inception. We append herewith the particulars of dividends for the five years immediately preceding.

Year ending 30th June, of	Dividends Declared
1953	10% free of tax
1959	12% gross
1960	15% gross
1961	22% gross
1962	9% gross

As advised by the Deputy Iron and Steel Controller, it was decided to throw open the membership to non-registered stockholders also.

PROSPECTS

The Company has obtained a Licence under the Industries (Development and Regulation) Act, 1951 for establishing a Factory for the manufacture of Sugar in Villupuram Taluk in South Arcot District of Madras State. The South Arcot District is well known as a good sugar cane area next only to Maharashtra. The Company is fortunate in having most of the area in the belt as dry lands (garden lands) with lift irrigation facilities. The region selected is very well known for its plentiful supply of underground water. A large number of wells have been sunk by the agriculturists in the area to supplement the irrigation water from river sources and tanks. Electrically operated pumpsets are in use in the area to a very large extent and some are also using oil engine pumpsets. The area has, therefore, all the essential requirements for the cultivation of sugarcane, namely, good land and plenty of water, combined with good drainage facilities. The crops in the area have been growing cane for a long time and are capable of raising the crop efficiently. Another good feature is that most of the cane to be supplied to the Factory will come from an area within a radius of about

16 miles from the Factory so that the lapse of time between cutting the cane and crushing it can be reduced to the minimum which is a factor favourable for good recovery. The Factory will be at a distance of about 5 miles from the Municipal Town of Villupuram and about 97 miles from the City of Madras so that marketing will be easy.

The price of sugar is controlled and the Government can be expected to provide reasonable margin of profit to the manufacturers of Sugar. The future for the industry is bright.

LOCATION OF THE FACTORY AND FACILITIES AVAILABLE

The Factory will be at Mundiyampakkam, in Villupuram Taluk, South Arcot District. An ideal site with the Southern Trunk Road on one side and the Railway-line on the other side, has been selected. 95.43 acres of land has been acquired for the Factory. Seed Farm and Quarters. The Factory will be adjoining the Railway-line, thus facilitating the provision of a railway siding. There are about 10,000 acres suitable for Cane Cultivation with facility for water supply in the area. A Factory with a 1000-ton crushing capacity will require about 5000 to 6000 acres on the basis of an average yield of about 35 to 40 tons of cane per acre. There are six wells in the lands acquired for the Factory and Quarters and there will be abundant supply of water from them for the requirements of the Factory, Farm and Staff Quarters. There is facility for sinking a few more wells, if necessary.

BANKERS TO THE ISSUE

1. State Bank of India, 1st Line Beach, Madras-1.
2. The United Commercial Bank Ltd., 310/311, Linghi Chetty Street, Madras-1.
3. The Indian Bank Ltd., 32/33, Linghi Chetty Street, Madras-1.
4. The Indian Overseas Bank Ltd., 151, Mount Road, Madras-2.
5. The Canara Bank Ltd., 1/153, Mount Road, Madras-2.

UNDERWRITERS

The following institutions have agreed to underwrite the issue as under:

	Equity Preference (Rs. in lakhs)
1. The Madras Industrial Investment Corporation Limited, 23, Nungambakkam High Road, Madras-34.	20.00
2. Industrial Finance Corporation of India, Reserve Bank Building, Parliament Street, New Delhi.	10.00
3. Life Insurance Corporation of India,	5.00

16 miles from the Factory so that the lapse of time between cutting the cane and crushing it can be reduced to the minimum which is a factor favourable for good recovery. The Factory will be at a distance of about 5 miles from the Municipal Town of Villupuram and about 97 miles from the City of Madras so that marketing will be easy.

The price of sugar is controlled and the Government can be expected to provide reasonable margin of profit to the manufacturers of Sugar. The future for the industry is bright.

The price of sugar is controlled and the Government can be expected to provide reasonable margin of profit to the manufacturers of Sugar. The future for the industry is bright.

LOCATION OF THE FACTORY AND FACILITIES AVAILABLE

The Factory will be at Mundiyampakkam, in Villupuram Taluk, South Arcot District. An ideal site with the Southern Trunk Road on one side and the Railway-line on the other side, has been selected. 95.43 acres of land has been acquired for the Factory. Seed Farm and Quarters. The Factory will be adjoining the Railway-line, thus facilitating the provision of a railway siding. There are about 10,000 acres suitable for Cane Cultivation with facility for water supply in the area. A Factory with a 1000-ton crushing capacity will require about 5000 to 6000 acres on the basis of an average yield of about 35 to 40 tons of cane per acre. There are six wells in the lands acquired for the Factory and Quarters and there will be abundant supply of water from them for the requirements of the Factory, Farm and Staff Quarters. There is facility for sinking a few more wells, if necessary.

2. Sri S. Govind Swaminathan, Barrister-at-Law, High Court, Madras-1.

AUDITORS

Messrs. Fraser & Ross, Chartered Accountants, McLean Street, Madras-1.

Application forms along with copies of prospectus can be had from the above-mentioned underwriters, Brokers and Bankers.

The subscription list will open at the commencement of the Bidding hours on the 17th June, 1963 and will close on 27th June, 1963 at 2.00 P.M. or later at the discretion of the Board of Directors. Subscription for shares reserved for Cane Growers will be collected by the Company immediately after the issue of this Prospectus.

CAPITAL, 13th June, 1963.

KAMANI ENGINEERING CORPORATION LTD.

BOMBAY

CHAIRMAN, MR. R. H. KAMANI'S REVIEW

Following is the summary of the Speech of Mr. R. H. Kamani, Chairman, Kamani Engineering Corp. Ltd., delivered at the 17th Annual General Meeting of the Shareholders on the 7th June, 1963 at the Office of the Company at Bombay.

Extending a cordial welcome to the Shareholders of the Company, Shri R. H. Kamani, Chairman of the Kamani Engineering Corp. Ltd., Bombay presented the Directors' Report, Audited Profit & Loss Account and the Balance Sheet and proposed them to be adopted.

Referring to the attack on our country's territory by the Chinese as unprovoked and dastardly and their subsequent ceasefire as tricky, the Chairman assured those present that these tactics on the part of the invaders will not stop our country from contributing its mite towards building of national economy and bringing prosperity through industry. Sacrifice will have to be made all round, he said and added that all should be determined to face the situation bravely. He went on to inform the Shareholders that their firm has offered the industry's services to the Government and that the Company would be able to serve the country in many ways. He was happy to state that the workers, staff and the management together have contributed about Rs. 2 lakhs to the National Defence Fund.

Accounts

The working of the Company, Shri R. H. Kamani stated had shown satisfactory progress with sales and profits touching new heights viz., from Rs. 2.68 crores last year to Rs. 4.65 crores and from Rs. 24.60 lakhs before providing for depreciation and Managing Agents' remuneration, to Rs. 39.10 lakhs.

He then recounted the allocations. The lion's share in allocation had gone to taxation, viz. Rs. 15 lakhs as against the previous year's Rs. 9.25 lakhs while the Managing Agents' remuneration was Rs. 2.66 lakhs against Rs. 1.60 lakhs in the previous year. Depreciation rose from Rs. 5.85 lakhs to Rs. 8 lakhs. Reserve for Super Profit Tax was Rs. 5.35 lakhs and the figure for general development Reserve was reduced from Rs. 0.40 lakh to Rs. 0.35 lakh, the general reserve and gratuity absorbing Rs. 1.15 lakhs and Rs. 0.30 lakh respectively as against Rs. 1.30 lakh and Rs. 0.10 lakh respectively for the previous year.

Shri Kamani pointed out that the Directors in their report forwarded to the members of the Company had recommended a slightly higher dividend of 9.5% subject to tax deduction at source, despite the substantial burden imposed by Super Profit Tax and by the provision of Rs. 8 lakhs for depreciation: they had also declared dividend on Preference Shares. After providing Rs. 4,95,994/- for proposed dividend a sum of Rs. 4,403/- has been carried forward as against Rs. 5,162/- brought in.

Factory Working

The Chairman informed the Company that the production tempo has been maintained and the factory has crossed the production mark of 20,000 tons and the production for August 1962 reached over 2,500 tons, i.e. 25% higher than the previous record production of 2,100 tons achieved during December 1961.

The supply position of steel, Shri Kamani remarked, was positively improving but the lighter sections, especially steel plates still estimated to

be difficult and irregular. However special efforts were being made to cover up the requirements in order to maintain the tempo of production, he added.

While on the subject Shri Kamani mentioned that national emergency was bound to affect to a certain extent the industrial production in general and as a result import of raw materials would be reduced to the minimum which would have certain repercussions especially in galvanising activities.

The Company had under active study the schemes of expansion and diversification. As far as expansion was concerned Shri Kamani informed that the Company had received an industrial licence for substantial expansion of the existing capacity from 1,500 tons to 4,000 tons per month—2,500 tons more per month for towers and light structures and doubling the capacity of heavy structures to 1,000 tons per month, adding that this licence provided also for manufacture of new items of high tensile Bolts and Nuts up to 500 tons per month. Regarding diversification Shri Kamani said that the Company had under active consideration the participation in Ropeway installation and taking up the manufacture of certain categories of defence requirements.

Erection

Shri Kamani informed the Shareholders that their Company had successfully completed the construction of 110 miles of 132 kV Double Circuit Line in Bihar in a record time of 8 months, for which it had earned the praise of the Project Authorities. The Company had also received orders from Maharashtra, Assam, Andhra Pradesh and W. Bengal States for construction of further important transmission lines. Shri Kamani said and added that the work was in progress in various places and that the Erection Dept. had kept pace with the production by doubling the activities over last year's performance. He expected that the same tempo would be maintained during the current year also provided required equipments were received.

Railway Electrification

Shri Kamani was happy to report the completion of the first contract awarded to the Company for Electrification in the Eastern Zone and lines constructed had been put to commercial use satisfactorily. The Company intended to participate in future business of similar type also in South and West Zones, he declared.

"Tractamont" Road Rollers

An improved model of "Tractamont" Road Roller to work in conjunction with various types of tractors has been put in the market and research and experiments were being conducted so as to further improve the standard of performance, Shri Kamani said.

Export

Referring to the Company's effort towards export promotion Shri Kamani said that the Transmission Line Towers valued at over Rs. 40 lakhs had already been exported to various countries including New Zealand, West Africa and East Africa. He said great importance was being attached to the matter of export for earning the much-needed foreign exchange and added that to do that, great sacrifice will have to be made as competition in foreign markets was severe from internationally known manufacturers which could not be overcome without

adequate facilities and support from the Government, to whose notice the matter was being continuously brought. Shri Kamani hoped that the Government would give due and serious consideration to these difficulties which would greatly help our export business turnover.

Research

The Research and testing department had successfully tested several new and improved types of tower designs with a view to economising in weight and thereby saving steel so

vital to the national economy, Shri Kamani informed the meeting.

Agency Business

Shri Kamani referred to the Agency business and said that the same has increased and the Company continued to receive large orders as for example, orders for large quantities of H.T. Insulators, underground telecommunication cables, and one more complete Thermal Power Plant for Bihar State Electricity Board and added that erection of two more similar power units was nearing completion.

He attributed the good results to the good efforts and co-operation of workers and the members of the staff as also to the encouragement and the backing of the Shareholders received from time to time and thanked them all for the same.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

EFFORTS TO PROMOTE INDO-E.C.M. TRADE

By Malcolm Subhan

BRUSSELS: THE visit of Mr. Manubhai Shah to Brussels gave both the Belgian Minister of Foreign Trade and Mr. Jean Rey, the Member of the Common Market Commission in charge of the Community's external relations, the opportunity to put into practice some of the precepts which they had been preaching in Geneva recently before the delegates to the Ministerial session of the G.A.T.T.

Early reports suggest that both acquitted themselves reasonably well, so that Mr. Shah could tell the Press on the eve of his departure for West Berlin that his talks with the Belgian Government and the Commission had gone well. The fact is, of course, that the visit paid by the Indian Minister of International Trade cannot be viewed in isolation. It was part of a continuous interchange of ideas and suggestions between top people on both sides, and, therefore, no precise balance-sheet can be drawn up at this stage.

To take the Common Market first. The basic difficulty here was mentioned by Mr. Shah himself. The Commission's approach to the developing countries must necessarily be a global one; it cannot consider Indian problems except in the wider context of the developing countries taken together. Mr. Shah was concerned, therefore, not only to demonstrate the need for rapid action in India's case, but also to outline a solution to them. Although he was listened to with sympathy by both President

Hallstein and Mr. Rey, it is apparent from the *communiqué* issued at the end of the talks that the Commission feels that its hands are tied.

While it has the power to make recommendations to the Council of Ministers, the Commission naturally tries to time them so that they may not be shelved by the latter. The fact that it has submitted no proposals so far suggests that in the Commission's view, the time is not yet ripe; and the fate of the recent Indian *aide-memoire* seems to bear this out. This four-page document was submitted to the Commission and the six member-States some five weeks ago. Since then, only two countries appear to have offered their comments on it, in spite of the fact that it contains a plea for urgent action. The Commission is reluctant to comment on the *aide-memoire* as long as the permanent representatives of the Six have not examined it in detail.

The Problem for India

The Six, however, feel that India's problems have lost their urgency now that the question of Britain's entry into the Common Market has been put off indefinitely. The *aide-memoire* tried to show how mistaken such a view is by demonstrating that India has a very real problem with the Community as it stands—the problem which is posed by her mounting trade deficit with the Six. The proposals contained in the *aide-memoire* are not radical; they were, in fact, put forward by the Six themselves

during the negotiations with the U.K. The first step in the Indian view is the suspension by the Community of the tariffs on 11 products as agreed to during the negotiations. The conclusion of a comprehensive trade agreement is thus seen as only the last of several stages.

These points were stressed by Mr. Shah when he met President Hallstein and Mr. Rey. The Indian Minister asked that as a sequel to the decision to suspend the tariff on tea and tropical woods, the Community suspended the tariffs on the ten remaining products. (They are: cashewnuts, curry powder, cardamoms, ginger, mango chutney, sandalwood, lemongrass and tobacco seed oils, handloom products and sports goods.) At the same time, Mr. Shah pointed out that a decision on the part of the Six to consider such measures only in the framework of the Kennedy round would result in a delay of up to two years, although it was evident that the Indian balance of payments problem cannot wait.

While the Commission's representatives "reaffirmed their willingness to pursue their efforts to promote economic co-operation between the E.E.C. and India and the E.E.C." to quote from the *communiqué*, they evidently were unwilling to give an assurance that such suspensions would, in fact, take place before the Kennedy round opens next May. Moreover, while the *communiqué* contains a reference to the removal of non-tariff barriers, this was included at Mr. Shah's request. The Germans, who have among the highest fiscal duties on products such as tea and coffee staunchly defended them in Geneva, and they are unlikely to renounce them easily.

Tariff on Tea

On the whole, therefore, despite the encouraging tone of the official *communiqué*, further action by the Six appears out of the question, at least until the negotiations with the British for the suspension of the tariff on tea have been concluded. The fact that there was no discussion of Indian problems at the latest session of the Council of Ministers bears this out. The difficulties encountered by the negotiators seem to have convinced the Six of the need to move cautiously concerning the suspension of other tariffs.

The problem of tea is as simple as it is intractable. While both the British and the Six have agreed to suspend their tariffs on tea in bulk, the latter have refused a British request to suspend the tariff on tea in small packets also. The common external tariff in this case amounts to 23 percent, against 18 percent on loose tea. The Six argue that as Britain is the largest supplier of tea packed for domestic consumption, a suspension of the second tariff would not benefit India directly, but would harm the interests of Dutch and Belgian packers. From the Indian point of view, a suspension of both tariffs is desirable as it would lead to increased consumption of tea.

It must be remembered that neither Mr. Rey nor President Hallstein could speak on behalf of the member-States. Mr. Shah did have the opportunity, however, to discuss these problems with the Ministers of the member-States also, first in Geneva, and later during his visits to Paris, Bonn and Brussels. But these talks seem to have been concerned principally with the possibility of expand-

CAPITAL, 13th June, 1963.

ing trade between India and each of the Six on a bilateral basis. The results of these talks were encouraging, according to Mr. Shah. The French plan to send a trade delegation to India in the near future, and an Indian trade delegation is expected to visit West Germany.

The results of Mr. Shah's talks with the Belgian Ministers of Foreign Trade and Finance were more immediate. When Belgium joined the Aid-India Club last year, she offered a long-term credit of \$10 million, and at the same time, promised a second credit for a similar amount once the first had been fully used. Progress, however, has been very slow in the 12 months or so which have elapsed since the credit was made available. One reason is that the Belgians have insisted that the funds be used principally for large installations. This is because such is the mechanism of the credit that it would lose its long-term character were it used for the purchase of spare parts or small machinery.

Mr. Shah was able to convince the Belgians, however, of India's urgent need for maintenance imports, certain raw materials and smaller pieces of equipment. It appears that the Belgian Trade and Finance Ministers have agreed to make at least half the credits available for the purchase of such items. A number of technical problems will have to be overcome on the Belgian side, but they are not expected to take long. At the same time, the Belgian Government agreed to make the second credit of \$10 million available without waiting for the first to be fully used.

The Indian Minister also discussed with both officials and business men the possibilities of expanding India's exports to Belgium. Last year, as a result of restrictions on imports, India's balance of trade with Belgium was in her favour for the first time in years. Exports to Belgium amounted to \$16 million, whereas imports were just over \$15.5 million.

Indian Ore Exports

Among the proposals examined was one for the export of iron and other ores from India. The Belgian steel industry, which produces roughly 6 million tons of finished steel a year, imports the bulk of its requirements of iron ore. Mr. Shah had talks with representatives of the industry, to whom he suggested that a study be made as to the feasibility of using Indian ores. The relatively high freight costs apparently make imports of Indian ores uneconomical, although it was pointed out that the problem could perhaps be overcome by means of a long-term contract. Linked transactions are another possibility: one has, in fact, just been concluded between the State Trading Corporation and a Belgian steel mill. According to available reports, India will supply 750,000 tons of ore over a three to five-year period, against finished steel products.

Speaking to the Belgo-Indian Chamber of Commerce, an organisation set up over ten years ago, Mr. Shah declared that India is in a position to export between 700 and 800 different items. He pointed to the enormous strides which she had made in industrial production since independence, and urged Belgian business men to establish links with Indian companies. One of the ideas stressed here a few months ago by a delegation from the Indian Engineering Export Promotion Council. Mr. Shah said that India, which today produces everything from a pin to a locomotive, could easily supply component parts for use in machinery and other equipment manufactured in Belgium. Although a number of Belgian firms have been examining the proposals first put to them by the delegation, no agreements have been concluded so far.

New Delhi

MINISTER DEFENDS POLICY ON PRIVATE OIL REFINERIES

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Minister for Mines and Fuel, Mr. K. D. Malaviya, said last week that the Government would not allow the three oil refineries in the private sector to expand. While the official policy is to create a mixed economy and to realise the third plan production targets speedily, Mr. Malaviya is bent on enlarging the public sector at the expense of the private. His policy supposedly hinges on the Industrial Policy Resolution. Steel, aluminium and fertilisers, it may be added, are reserved for the public sector under the Resolution. Yet the Central Ministry of Steel has permitted the expansion of steel works in the private sector and proposes to allow their further expansion during the fourth plan period.

The Central Ministries of Heavy Industries and of Commerce and Industry have permitted the entry of the private sector in the field of fertilisers and aluminium. But Mr. Malaviya has advanced various arguments against the expansion of, in particular, against the expansion of the two refineries in Bombay although almost all the arguments have been rejected by the Planning Commission.

Soon after the Chinese aggression, the Central Home Minister, Mr. Lal Bahadur Shastri and the Central Minister for Economic and Defence Co-ordination, Mr. T. T. Krishnamachari, urged the immediate expansion of the three oil refineries in the private sector. Mr. Malaviya, however, succeeded in securing the approval of the Cabinet for expanding the three public sector refineries by 2.5 million tons as follows: the Barauni refinery by 1 million tons to 3 million tons, Koyali by 1 million tons to 3 million tons, and Nummati by 500,000 tons to 1.25 million tons.

New Refinery in Cochin

The Government has also entered into an agreement with Phillips Petroleum for setting up a 2.5-million-ton refinery in Cochin. The latter is expected to go on stream within 30 months. Assuming that all the estimates will materialise, the refining capacity in 1966 will be as follows:

	(In million tons a year)
Esso	2.40
Burmah-Shell	3.50
Caltex	1.05
Digboi	0.50
Total of the private sector	7.45
Nummati	1.25
Barauni	3.00
Koyali	3.00
Cochin	2.25
Total	16.95

The Indian Institute of Petroleum, on the other hand, has worked out the following projections of demand for petroleum products. These projections have been accepted by the Central Ministry of Mines and Fuel:

	(In million tons)
1966	17.69
1967	20.03
1968	22.58
1969	25.20
1970	27.70
1971	30.35

According to these accepted figures of demand in 1966, India should be short of supplies by 740,000 tons. The

shortage is expected on the assumption that the expansion programmes of the public sector refineries would not only be completed, but that they would also produce petroleum products as needed by India. There is, however, no magic attached to the year 1966. In 1967, the shortage will amount to 3.08 million tons, in 1968 to 6.55 million tons, in 1969 to 8.25 million tons, in 1970 to 10.75 million tons and in 1971 to 23.40 million tons. Incidentally, the productivity team which visited Russia, Rumania and Czechoslovakia recommended that India's refining capacity should always be 2 million tons in excess of the demand.

Appraisal of Demand

While agreeing to the expansion of the public sector oil refineries, the Central Cabinet directed the Planning Commission to make an appraisal of the demand for petroleum products in 1966 onwards. On the basis of its findings, the Commission was asked to suggest whether there was

any need for creating further refining capacity and if so in what sector.

The Commission has had to consider the problem in the context of the third plan as a whole. The main problem facing the Planning Commission and the Central Ministry of Finance is that of foreign exchange. Even at the time of finalising the third plan, there was a gap between the financial resources and the requirements of the physical programme included in the plan. Since then, various changes introduced in the plan have had the effect of widening the gap. After considering the overall position, the Commission had suggested the immediate expansion of the three private sector refineries by 1 million tons each.

The members of the Aid-India Club and the World Bank have been urging India to conserve her foreign exchange resources by making greater use of the private sector in oil exploration and refining. The announcement that no further expansion of

the private sector refineries shall be permitted was made when the Aid-India Club was in session in Paris.

Phillips Petroleum

Meanwhile, not much is known about the agreement Phillips Petroleum has signed recently. According to the Petroleum Press Service: "At first sight, it looks as though this U.S. independent has shouldered an onerous task without any commensurate benefit. But the new company, in which Phillips has a quarter share, is guaranteed a high process margin, \$1.35 a barrel for ten years, and \$1.30 for the next five. This is irrespective of the prices paid for crude imports, which Phillips is to obtain on the best terms possible, although how these are defined is not disclosed.

"Phillips, moreover, gets a 15-year outlet for its own crude or what it can exchange or buy. Unless much more oil is discovered in India, at least 2.5 million tons a year will be needed. In 1962, Phillips, through its 37-percent holding in Aminoil, drew 1.6 million tons from the neutral zone and nearly 200,000 tons from the Iranian consortium's output, while its Venezuelan production was 1.8 million tons. It had its first discovery in Libya last year, with a well yielding 2,285 barrels a day, although two outpost wells have been dry and the potential is not clear. However, outlets are lined up in advance today and the refinery will not be complete until 1965-66. After two or three

17-SD, Block A, Nalini Ranjan Avenue, New Alipore ; 163, Rash Behary Avenue.

years' operation, its expansion to 3.5 million tons is foreseen."

FOREIGN EXCHANGE

Outlay on Mines and Fuel

As far as the Central Ministry of Mines and Fuel is concerned, the following changes in the plan outlay in the context of foreign exchange are envisaged. The cost of expansion of the public sector refineries is estimated as follows:

(In million tons)

Barauni 1 Rs. 4 crores (foreign exchange Rs. 2 crores)

Koyali 1 Rs. 4 crores (foreign exchange Rs. 2 crores)

Nunmati 0.5 Rs. 1 crore (foreign exchange Rs. 50 lakhs)

The total cost of the refinery proposed to be set up by Phillips Petroleum is estimated at Rs. 26 crores. In 51-percent participation, the Government's share on this will be Rs. 13.26 crores. It may be assumed that the foreign exchange requirements of the refinery will be found by Phillips Petroleum. If another refinery is to be set up in the south, using the credit offered by E.N.I. of Italy, it will make a further demand on the Government's resources, since the entire cost, including foreign exchange, will have to be met by the Government.

The enlargement of the size of the Khetri copper project will involve a

total additional investment of Rs. 14 crores, including an additional Rs. 4 crores in foreign exchange.

The revised programme of oil exploration estimated the cost at Rs. 202 crores (foreign exchange Rs. 71 crores), against an outlay of Rs. 115 crores (foreign exchange Rs. 53 crores) envisaged in the plan. While a substantial part of the foreign exchange requirements have been tied against foreign credits, matching rupee resources will have to be provided.

The development programme of the Hutti gold mines will involve an additional outlay of Rs. 2 crores, about half of which will be in foreign exchange.

As a result of the revised agreement with Burmah Oil Company, the outlay required for the Government's contribution towards the share capital of Oil India will increase from the plan figure of Rs. 1.42 crores to Rs. 6 crores. In addition, the Government will have to subscribe to the debenture capital of Oil India to the extent of Rs. 13 crores.

The total cost of the coal programme, as estimated now, is substantially larger than that envisaged in the plan. Additional demands may also be made by the Central Ministry of Mines and Fuel for expanded programmes of limestone investigation and the base metals survey.

The Ministry is considering the following additional proposals for diver-

sification of the pattern of products of the public sector refineries:

1. An L.P.G. plant of 10,000 tons' capacity for the Nunmati refinery—cost Rs. 15 lakhs (foreign exchange Rs. 10 lakhs).

2. Facilities for the calculation of petroleum cokes—cost Rs. 1 crore (foreign exchange Rs. 60 lakhs).

3. Lubricating oil plant for Koyali—cost Rs. 12 crores (foreign exchange Rs. 7.2 crores).

AID-INDIA CLUB

Communique Issued

The following is the text of the Press communique issued at the end of the two-day meeting of the Aid-India Club in Paris:

"The consortium of Governments and institutions interested in development assistance to India held its eighth meeting in Paris on 4th and 5th June, 1963, under the chairmanship of the World Bank. The meeting was attended by representatives of the Governments of Austria, Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, the United Kingdom and the United States and by representatives of the World Bank and the International Development Association (I.D.A.). The International Monetary Fund sent an observer.

"The purpose of the meeting was to discuss aid for India during 1963-

CAPITAL, 13th June, 1963.

64, the third year of India's third five year plan. The consortium had held preliminary discussions on the same subject in Washington on 30th April and 1st May.

"At the beginning of the third plan, the Government of India assessed the total requirement of external assistance from all sources, including non-consortium countries and private foreign investment, at \$5,460 million. Against this, the members of the consortium have already pledged \$2,365 million of aid to India for the first two years of the third plan. At the meeting just concluded, they undertook to make additional aid available for commitment during the third year of the plan amounting to about \$915 million, subject, as appropriate, to legislative action or other necessary authorisation. The new pledges for 1963-64 are as follows:

(In \$ million)		
	1962-63	1963-64
Austria	5	3.85
Belgium	10	10.00
Canada	33	30.50
France	45	20.00
West Germany	139	65.35
Italy	53	35.00
Japan	55	60.00
Netherlands	11	11.10
Britain	84	84.00
U.S.A.	435	375.00
World Bank and the I.D.A.	200	220.00
Total	1,070	914.80

"Some members of the consortium said that they might be in a position to increase their pledges later in the year. On the initiative of the U.S. Government, it was accordingly agreed that the meeting should be reconvened in Washington in July to consider additional pledges for 1963-64. Depending on the amount of additional pledges forthcoming from other sources, the U.S. representative indicated that his Government would be prepared to raise its own pledge for the year up to a maximum of \$450 million.

"The consortium considered it to be of the greatest importance that the pledges announced at the meeting should be translated into firm commitments as soon as possible and that a substantial part of these commitments should be in the form of non-project aid which could be used to finance imports required for the maintenance of the Indian economy. The consortium also recognised the need to extend as much of the aid as possible in the form of grants or long-term loans at low rates of interest. Several members of the consortium announced that their aid for 1963-64 would be on more favourable terms than in previous years."

PRIMARY EDUCATION

More Funds Offered

The Government of India has decided in principle that accelerated Central assistance should be made available to the State Governments for the expansion and improvement of primary education during the current year. This assistance will be given outside the annual ceilings fixed for the States for 1963-64, and will be subject to the condition that the State Governments will not reduce or divert any provision that has now been made in their Budgets for primary education.

As a result of the additional Central taxation that is being levied during 1963-64, total resources amounting to about Rs. 64 crores are being made available to the State Governments to enable them to allocate a portion of these additional revenues for primary education in addition to the accelerated Central assistance that is now being made available to them.

Thus, within a month of the enactment of the Finance Bill, the appre-

CAPITAL, 13th June, 1963.

hensions expressed in these columns are coming true. It was pointed out that the Government of India would not be able to spend all the money it was collecting by way of taxes for building the defence potential, and that a tendency to squander would set in as soon as it found that it had more money than it actually needed. It may be added that there was no serious objection to the taxation programme. What was objected to was the incidence of certain levies. The country as a whole had willingly undertaken to shoulder the biggest burden of taxation since independence. It is not generally realised that, on the one hand, the cost of living has gone up by almost 25 percent. On the other hand, there is the additional burden of taxation. Side by side, people are being told to save compulsorily. This has already led to serious hardship among the people. But instead of reducing taxation, the Government has agreed to spend money on primary education, which under the Constitution is the sole responsibility of municipal committees and the district boards.

I. A. C.

Purchasing Caravelles

India is to sign a contract with Sud Aviation of France for the purchase of three Caravelle aircraft to be used on the trunk routes of the Indian Airlines Corporation. India will thus introduce jet aircraft in internal services for the first time. The first delivery of Caravelles is expected by the end of 1963. The agreement, it is expected, will shortly be signed in New Delhi. The present fleet of the airline is as follows:

Operating fleet	
Viscounts	13
Friendships	5
Skymasters	5
Dakotas	45
	68
Ground fleet	
Vikings	12
Hérons	7
	19

In October 1961, the I.A.C. signed an agreement for the purchase of five more Friendships on a barter basis.

OPHTHALMIC GLASS

New Factory to be Set Up

Arrangements have been finalised for the setting up of an ophthalmic glass factory with Russian assistance by the National Instruments Ltd. Russian credit for the project will be available from the 500-million roubles credit given to India in November 1957.

The factory is scheduled to go into production early in 1966 in Durgapur. When in full operation, it will produce 300 tons of ophthalmic glass a year. This will meet part of the demand for ophthalmic glass and help to save foreign exchange.

STOCK EXCHANGES

Forward Trading Resumed

In order to prevent undesirable speculation on the Stock Exchanges, the Central Government had, by a notification dated 29th November, 1962, banned forward trading in shares. The conditions in the stock markets are now relatively stable.

So the Stock Exchanges have represented to the Government to permit them to resume forward trading in shares.

The Government has considered these representations and decided to permit forward trading, subject to certain amendments to the bye-laws and the tightening of margin regulations. The conditions prescribed by the Government have been entirely accepted by the Bombay and Madras Stock Exchanges. So the Government has permitted them to resume forward trading.

IMPORTS

Policy Clarified

The Government of India has clarified the provisions of the Central Commerce and Industry Ministry's public notice of 18th March relating to the import of raw materials, components and spare parts against actual user licences granted to industries in the scheduled and non-scheduled sectors, including small industries. The clarifications which have been given following enquiries from importers are as follows:

Quantitative limit: Actual users are issued normally with value alone as the limiting factor, and in cases

where quantity is to be the limiting factor, it is shown in the licence both in value and quantity. The words "quantitative limit" have been used in para 2 of the public notice in the general sense to cover the value limits indicated in the licences for importing various items.

Scope of facilities allowed: The facility allowed in para 2 of the public notice will be applicable only to actual user licences for raw materials and components, and not to the licences granted for machinery and/or spare parts. Actual user licences for components would be those where certain components are allowed to be imported for assembling the finished product.

The facility to import permissible spare parts and small tools required for licence holders' factory up to 25 percent of the face value of actual user licences for raw materials and/or components, will be available even where the licence does not cover more than one item.

The permissible spare parts are those required for servicing, maintenance and replacement of the plant, machinery and equipment, installed in the licence holders' factory. But spare parts of machinery which are specified elsewhere in the Red Book, such as ball bearings, bolts and nuts,

etcetera, will not be allowed to be imported.

FERTILISER CORPORATION

Excise Duty Refund

Negotiations between the Central Ministry of Agriculture and the Fertiliser Corporation of India have resulted in an understanding that 75 percent of the excise duty paid by the Corporation on ammonia and other gases since April 1962 will be paid back to it. The Tariff Commission is being asked to recommend reasonable prices for the products of the Corporation as from 1st April, 1962.

PETROCHEMICALS

U.S. Firm Shows Interest

The representative of Daw Comma, well-known U.S. firm, recently met the Prime Minister to indicate his Company's interest in developing the petrochemical industry on the basis of the Henny report. It was disclosed that the firm would be willing to invest over \$6 million in the industry spread over ten years. The proposal is being examined by the Government.

London

U.K. BODY GETS TO WORK ON INCOMES RESTRAINT

(FROM OUR LONDON CORRESPONDENT)

THE monthly meeting of the National Economic Development Council (Neddy) dealt the other day with the most difficult problem on its agenda—incomes and prices. This was the first full discussion of the part which a national incomes policy must play in achieving faster economic growth without inflation. It arose from the decision, made public in the Council's interim report, to accept the subject of income restraint as part of Neddy's task. Only 14 members of the Council attended the meeting. The six absentees were Mr. Frank Cousins, who is recuperating after a mild heart attack, Mr. John Hare, the Minister of Labour, who had to have treatment for an injured knee, Mr. Frederick Erroll, the President of the Board of Trade, Sir Cyril Harrison, Dr. Beeching, and Mr. Douglass, all of whom are out of London.

No statement was issued after the meeting. One gathers that wide differences of view were frankly displayed. No one came away with any impression that a national incomes

agreement would be reached easily or quickly. On the other hand, the discussion was described by one of those present as being "very high-level." The fact that the meetings are secret and the members have already come to know each other well discourages any political speech-making. The debate on incomes and prices is to be continued in future sessions.

The Council also authorised the publication of a booklet entitled *Survey of Export Trends*. This is a new study prepared by the Neddy staff. It takes the place of a similar analysis of British export successes and failures which has been done regularly for many years by an inter-departmental working party in Whitehall. The N.E.D.C. is, of course, deeply concerned with the trend of exports. It has insisted that exports must grow at an annual rate of 5½ per cent if the economy as a whole is to have an annual rate of growth of 4 per cent.

The survey contains a warning that this expansion will not be forthcom-

ing unless exports are made more profitable relative to sales on the home market than they are at present. The booklet offers no suggestions how this should be done. It simply points out that exports will have to be increased faster than manufacturing output as a whole. Since export prices must be kept in line with those of the competitors, margins will have to be generally small and some other way must be found to make exports more attractive than home sales. The next meeting of the Council has been fixed for 3rd July. One of the subjects will be science and technology.

Export Trends

A fall in home prices of manufactures relative to foreign export prices may be needed if exports are to expand sufficiently. This is one of the main conclusions in the survey of "export trends" by the staff of the National Economic Development Council. At least, the survey says, the past relative increase in home prices of over 1 per cent a year must be eliminated. The N.E.D.C. staff believes that the expansion of world manufacturing production and prospective tariff changes may together increase demand by more than 5½ per cent a year. On the other hand, the U.K. may continue to lose through a lessening of discrimination in the U.K.'s favour in the sterling area and through some loss of Commonwealth preferences. There may be some slight adverse effect through the U.K.'s geographical pattern of trade. And the British quality, design, delivery dates and salesmanship may compare unfavourably with those of the competitors. It is also possible, the survey says, that the effects of past increases in the export prices of manufactures have not yet fully worked themselves out.

A more rapid rate of growth of output and productivity will, in the N.E.D.C.'s view, make it easier to provide the necessary expansion in export supplies. But it points out that the required increase in the British exports of manufactures of 5½ per cent a year is probably rather faster than manufacturing output can be expected to grow. Hence, "if exports are to expand faster than sales in the home market, it may be necessary to make them relatively more profitable."

British exports of manufactures increased by only 1 per cent in volume from 1961 to 1962, the survey says, and the U.K.'s share in world exports fell further. World trade in manufactures expanded by perhaps 6 per cent in volume in the same period and, according to some provisional estimates, the rate of expansion slowed down during 1962. This is the sombre background against which Sir Robert Shone and his staff have examined reasons for Britain's relative export failure. Two main reasons are offered for Britain's declining share in world trade:

(1) The ending of quota restrictions discriminating in the U.K.'s favour. This caused an especially large loss of the British share in the sterling area—from 57.8 per cent in 1954 to 43.4 per cent in 1961.

(2) The faster increase in costs and prices in Britain compared with other manufacturing countries. From 1953

CAPITAL, 13th June, 1963.

to 1961, productivity in manufacturing industry rose 1½ per cent to 2 per cent a year more slowly here than abroad and hourly earnings rose 1 to 1½ per cent a year faster.

Slow growth, rising costs, falling profitability, and in some cases inefficiency in design, quality, delivery or salesmanship have, the N.E.D.C. says, all reacted on each other.

On the other hand, the commodity pattern of the U.K.'s trade is thought not to have been, on balance, a significantly adverse factor. The regional pattern may have been—but only of a moderate extent. Both the commodity and geographical patterns of the U.K.'s exports are now probably more favourable than they were in the early 1950s, the survey says.

The survey also says that there may be several ways in which the provision of export finance in this country could be improved, and the N.E.D.C. office is now discussing the matter with the F.B.I. and the Associated British Chambers of Commerce. It says, however, that the provision of insurance for export credits is "probably better in this country than in most others."

Discussing the impact of aid to underdeveloped countries on the U.K.'s exports, the survey says that this has probably not been a major factor explaining the British loss of the share in world markets, although it has affected the British share in particular markets at different times. Aid represented a smaller fraction of the U.K.'s exports to underdeveloped countries in 1961 than was the case for other countries taken together.

Key to Growth

The key to economic growth in Britain may be management consultancy. This is the conclusion to be drawn from an article by Dr. J. Johnston, Professor of Econometrics at Manchester University, which is to appear in this month's issue of the *Journal of the Royal Statistical Society*. Professor Johnston's estimate is that management consultants have been responsible for at least a quarter of the annual productivity increase achieved in Britain in recent years. His figures, based on reports on more than 600 assignments, from the files of the four largest management consultancy firms in Britain, which employ some 1,500 of the 2,000 consultants, show that in 47 per cent of the jobs done by management consultants, a productivity increase was measured, the average increase being 53 per cent.

Whether or not the figures are precise, it is clear that management consultants can do a great deal to increase productivity. Big firms seem to think so; of British firms with issued capital of more than £10 million, 91 per cent have employed consultants, who are mostly men in their thirties with honours degrees or professional qualifications of degree standard. They have spent some years in management and have been selected by the management consultancy firms for their ability to apply rational standards of judgment to business problems. They often spend a year or two preparing a report, and are, in fact, a body of those fashionable people, technocrats.

The four big British firms have subsidiaries in many European capitals, where their jobs include advising the Italian Government agency on the development of Sardinia, and advising the Italian equivalent of the British National Productivity Council. The chairman of the Management Consultants Association in London, Mr. David Nicolson, described the management consultants of Britain as "a major national asset which is not being used." He thought the Board of Trade should employ consultants abroad to survey potential export markets.

CAPITAL, 13th June, 1963.

Jute

MOVE TO GRADE FIBRE ON MORE RATIONAL BASIS

THE reconstituted Central Supervisory Body for Jute has set up an expert committee to evolve a more scientific basis for classifying and grading jute. Mr. G. C. L. Joneja, Jute Commissioner, has been appointed chairman of the committee. Representatives of the Indian Central Jute Committee, the Indian Jute Mills Association and the National Agricultural Marketing Federation have been taken on the committee. It has been asked to submit its report within three months so that the revised classifications may be introduced soon.

Although no specific terms of reference have been drawn up, the committee is likely to devise methods of doing away with the present empirical or visual assessment of jute grades as well as price assessment on a zonal basis. It may suggest the introduction of mechanical tests with the aid of simple and inexpensive instruments in the primary and secondary markets through the Co-operative Marketing Federation.

Long-felt Need

The need for evolving a scientific basis for grading has been felt for a long time. From 1935, raw jute was classified on a crude basis as Grade I, Grade II and so on. In 1941, the classification of jute into Tops, Middles, Bottoms and Cross Bottoms was introduced. In 1950, the Indian Standards Institution investigated the matter and drew up two sets of standards for raw jute—I.S.S. 271 for pucca kutchra bales and I.S.S. 272 for pucca bales. The former was meant for internal consumption and the latter—drawn up on the lines of the London Jute Association standards—for exports.

According to I.S.S. 271, raw jute is classified into two broad categories, Tossa (*corchorus olitorius*) and white (*corchorus capsularis*). These are further divided into four subgrades, Tops, Middles, Bottoms and Cross. Besides, the growing areas are grouped into separate districts or zones. These classifications have been accepted by the trade, the industry and the Government. They have also been incorporated in the Transferable Specific Delivery contracts of the East India Jute and Hessian Exchange. In the event of any dispute, the matter is referred to the Bengal Chamber of Commerce Arbitration Committee. Almost all disputes are settled at this level.

Defects of Present System

But the empirical determination of grades and the zonal assessment of prices are the two great disadvantages of the existing classification. The farmer sends his produce to the market in a lump without sorting the fibre according to colour, length or other attributes. The *aratdar* or the *faria* judges the quality by the visual method and invariably pays the farmer the price of the lowest grade in the lot. A sort of crude assortment is made by the *faria* when he despatches the lots to the secondary markets. After collecting a sizable quantity, the wholesalers or the mill takers, separate the lots before sending them to the mills or the Cossipore market. It has been seen that the mills pay a reasonable price for the jute they buy; the producer of raw jute, however, gets much less because there is no clear and foolproof criteria for classification and the buyer seldom accepts the seller's

assortment in the primary market. There are also a host of intermediaries who take away a substantial portion of the value in the shape of price differentials for the upper grades.

The committee is likely to substitute some specific scientific qualities, such as spinning properties, fibre strength, etcetera, for the existing ambiguous descriptions like "sound fibre of good colour of the district" in I.S.S. 271. It will also have to see how far the zonal assessment in vogue at present is tenable. For, since the launching of intensive efforts for improving the quality of fibre, better-grade jute has been grown in districts described as "inferior". Furthermore, there is the difference in quality from place to place within the same zone.

Another anomaly in the present grading system is that the price varies for jute of the same grade depending on its origin. Thus Assam Top commands a premium ranging from Rs. 4 to Rs. 8 a maund over Orissa Top or Bihar Top, although there are some areas in Orissa and Bihar where almost comparable

grades are grown. These invariably act as a disincentive to the grower, for he knows that whatever expenditure he may incur to improve the quality of fibre, he will not get a higher price for his product.

The Technological Research Laboratory of the I.C.J.C. is reported to be examining the properties of various grades of jute from different areas in an effort to develop some scientific criteria for classifying it on the basis of spinning qualities, fibre strength, fibre length, fibre usability, colour, percentage of cuttings and so on. Simple instruments for determining these characteristics are being tried so that they may be introduced in the markets. The investigations are likely to assist the committee in evolving more precise and scientific terminology, which may enable the ultimate grower to get better value for his product and thus offer a positive inducement to improve the quality of fibre.

I.S.I. Standards for Jute Goods

The special committee appointed by the Indian Standards Institution has

already completed the task of drawing up standard specifications for various types of jute goods manufactured in India. Set up with Mr. G. C. L. Joneja, Jute Commissioner, as the convener, the committee consisted of representatives of various interests in the industry and trade. The industry was represented by the Indian Jute Mills Association. In drawing up the specifications, emphasis has been laid on the end-uses of the products. The approved standards are expected to be published soon. With their introduction, all ambiguities in their nomenclature and classification are likely to be removed. The consumer too will be able to know precisely the goods he buys.

It is felt that the greatest threat to the industry arises from substitutes, particularly synthetic substitutes. Their main advantages are they can be made to any specification and mass production lowers their cost of manufacture appreciably. But in the case of jute goods, raw materials and wages are the two inflexible elements, accounting for as much as 85 per cent to 90 per cent of the price of the end-product. Hence when the products are made strictly according to some precise specifications, there will be an economy in the prime costs, inducing the consumer to weigh the relative advantages of the competing products before making a final selection.

The Indian Jute Mills Association is reported to be considering a pro-

I.J.M.A. STOCK FIGURES FOR MAY

The Indian Jute Mills Association reports the stocks of jute goods at the end of May as follows:

Description	31st May, 1963		30th April, 1963		Increase over (+) or decrease from (-)		31st May, 1962	
	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)	000 Metres (Lakh Yds.)	000 Metric Tons (000 Tons)
Hessian cloth and bag	10,36.01 (11.33)	32.3 (31.8)	9,54.96 (10.44)	29.0 (28.6)	+81.05 (+89)	+3.3 (+3.2)	8,94.89 (9.79)	27.1 (26.6)
Sacking cloth and bag	10,11.95 (11.07)	45.5 (44.8)	9,99.12 (10.93)	45.0 (44.3)	+12.83 (+14)	+0.5 (+0.5)	8,00.57 (8.74)	37.3 (36.7)
Others		18.0 (17.7)		16.9 (16.6)		+1.1 (+1.1)		19.7 (18.4)
Grand Total (000 Metric Tons/Tons)		95.8 (94.3)		90.9 (89.5)		+4.9 (+4.8)		24.1 (23.7)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhal with estimates for two non-member mills. The figures in brackets are in British measures.

NATIONAL CL 2-279 10143

posal for introducing a voluntary scheme of quality control and inspection soon. It seeks to assist mills in producing goods according to the rules and regulations which may be framed under the recently introduced Export (Quality Control and Inspection) Act by the Government of India. The Association has asked member-mills whether such a scheme is already in operation in their establishments. On receipt of information from the members, it proposes to draw up a phased programme for introducing quality control and inspection standards in the industry.

Increase in Acreage

Sitting in Calcutta recently, the re-constituted Central Supervisory Body for Jute announced that there has been a slight increase in the acreage under jute in West Bengal, Bihar and Orissa during the current season. Widespread rain has been reported all over the growing areas during the past week. The standing plants have been benefited and are thriving well. Some rivers in north Bengal and lower Assam are in spate because of heavy showers in the catchment areas. But the flood water is flowing smoothly. No damage to crops has been reported except in scattered pockets of Agartala. The situation is well under control there. In Gangetic West Bengal and in the canal areas of Orissa, the plants are well grown. No report of pest infestation has been received so far. The weather trend indicates that a week's sunshine would help the plants a good deal.

Maximum Output to Continue

At its meeting on Wednesday, the committee of the Indian Jute Mills Association considered the market situation in the light of the stocks of manufactured goods held by the mills at the end of May. It noted that the stocks had risen by 4,800 tons but agreed that the industry should continue to operate at the present maximum level of production for a further period of one month from the end of June to the end of July 1963.

THE JUTE MARKETS

Manufactured Goods: Quiet conditions prevailed in the manufactured goods market during the past week. Overseas buyers seemed to be hesitant to make any commitment at the current levels. But mills emerged as keen sellers for all positions. A number of enquires during the week-end tended to harden sentiment but the publication of the I.J.M.A. gunny stock figures for May reversed the trend on Monday. The only transactions reported were for 40,000 bales of Heavy Cees to Cuba, scattered lots of hessian to the U.S.A., and a few hundred bales of hessian cloth to Australia. Rumours of Pakistan getting an order for about 5,000 bales of Cornsacks for July-September from Australia, and for about 8,000 bales of heavy goods from Burma for the June-August positions, disturbed sentiment. Some freight bookings by North America, the U.K. and Australia for shipments in the near future were interpreted bullishly but failed to stimulate the market. The futures market moved in sympathy with the spot market on intermittent bull unloading and bear-covering. Turnover was moderate to small and the undertone hesitant at the close.

Quotations on Wednesday were as follows:

	June	July-Sept.	Oct.-Dec.	Jan.-March
40in. 7oz.	37.00	36.65	35.70	35.25
40in. 8oz.	39.25	—	—	—
40in. 10oz.	50.40	49.50	47.00	47.00
B Twills	111.95	113.00	112.90	112.40
Cornsacks	114.25	115.50	115.25	114.50
Heavy Cees (Plain)	111.75	112.75	112.75	112.40
A Twills	135.00	136.50	137.50	136.50
Liverpools	127.00	127.00	127.00	126.50

Raw Jute: The raw jute market lacked interest. Mills were conspicu-

ous by their absence. Holders sought to dispose of their stocks, mainly of poor quality, at a heavy discount. Routine transactions in marginal lots of selected grades were reported around the previous levels, basis Rs. 29 a maund, f.o.r. ready, Calcutta. The futures market was subdued with Upper Assam White Bottoms for June done in nominal lots around the minimum level of Rs. 30 a maund. For the September position, the market fluctuated narrowly between Rs. 30.70 and Rs. 30.50. Turnover was small and the undertone hesitant at the close.

Quotations on Wednesday were as follows:

	Landed at Mills (Basis Bottoms)	1962-63	1963-64

I.J.M.A. PRODUCTION FIGURES FOR MAY

The Indian Jute Mills Association reports the total production of jute goods for May as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	8,592 tonnes (8,456 tons)
2,25,17 thousand metres	(2,46,3 lakh yds.)
1,64,3 lakh nos.	
(b) Sacking	40,925 tonnes (40,160 tons)
8,86,10 thousand metres	(9,69,1 lakh yds.)
4,13,2 lakh nos.	

2. Gunny Cloth	
(a) Hessian	35,168 tonnes (34,613 tons)
12,13,94 thousand metres	(13,27,6 lakh yds.)
(b) Sacking	1,576 tonnes (1,551 tons)
31,36 thousand metres	(34,3 lakh yds.)
3. Other Manufactures	18,768 tonnes (18,472 tons)
4. Total Production (All Kinds)	1,04,909 tonnes (1,03,252 tons)

Summary				
(000 metres and 00,000 yds.)				
	May '63	Apr. '63	May '62	
Hessian	14,39.11	14,80.75	12,37.19	
	(15.74)	(16.19)	(13.53)	
Sacking	9,17.46	9,38.79	10,07.20	
	(10.03)	(10.27)	(11.01)	
(000 tonnes and (tons)				
	May '63	Apr. '63	May '62	
Hessian	43.7	43.8	37.3	
	(43.0)	(43.1)	(36.7)	
Sacking	42.4	43.2	47.0	
	(41.7)	(42.5)	(46.2)	
Others	18.8	18.4	15.4	
	(18.5)	(18.1)	(15.2)	
	1.01.9	1.03.4	99.7	
Grand Total	(1.03.2)	(1.03.7)	(98.1)	

Hours worked 216.0 208.0 208.0

THE U.K. JUTE MARKETS FIBRE QUIETER

(FROM OUR DUNDEE CORRESPONDENT)
THE raw jute market in Dundee had a slightly quieter appearance last week, although the position in Pakistan was reported to be steady. Very little buying interest was shown here, and spinners generally were refusing to pay the rates asked. On

the other hand, bids being made at under the quoted rates were not being accepted by shippers.

With the new crop making good progress in Pakistan, spinners were looking for lower rates in the not-too-distant future despite the fact that it had already been stated that minimum export rates were not to be reduced. Dundee spinners are in the fortunate position that they are holding large stocks of raw material, and they can remain out of the market for some time yet.

The spot market in Dundee was quieter and some sellers were willing to accept less than previously. This brought out a little more buying interest, but only good quality parcels were being taken up. There was still a fair quantity of jute available ex warehouse Dundee.

Offers of old crop were being made at £111 for Mill Lightnings, at £94 for Mill Hearts and at £78 for Grade Hearts. Grade Tossa-2/3 was available at £121 10s and Grade Tosa-4 at £107 10s. Outport Tosa-2/3 was lowest at £95 and Outport Tossa-4 at £85, c.i.f. U.K., for June-July shipment. Cuttings were steady at £55 for S.N.C. and at £46 for N.C.

Some shippers were still remaining out of the new crop market, but offers were being quite freely made. Mill Lightnings were at £109 15s, Mill Hearts at £93 10s and Grade Hearts at £80 for August-September shipment. Grade Tossa-2/3 was named at £125 and Grade Tossa-4 at £107 10s. Outport Tossa-2/3 was at £97 15s for October-November shipment. The quantity of new crop jute bought by Dundee spinners was considerably less than normal by this time of year. However, imports during the present season were well above average.

Shalimar Superlac Synthetic Enamel and Plastic Emulsion Superlac Synthetic Enamel, available in 36 intermixable colours, may be applied on almost any surface—interior or exterior—at home or in industry. Superlac Plastic Emulsion brings you a fabulous range of colours—easy to apply, odourless, and thoroughly washable! Both Shalimar Synthetic Enamel and Plastic Emulsion dry fast, have high covering capacities and, like every Shalimar paint, offer the sum of four decisive elements—resources, research, know-how, quality-control—that guarantee superior quality and performance.

SHALIMAR PAINTS

A MEMBER OF THE ROYAL DUTCH GROUP

Opening a research centre recently, our Prime Minister Jawaharlal Nehru said, "If I were much younger and inclined to do research, I would rather like to do research in the conditions here."

The Prime Minister, a scientist himself, has always advocated the limitless power of research to improve the lot of the common man.

Under his brilliant and dedicated leadership, pure and applied research in India has forged ahead.

In the public sector there are 23 national and regional laboratories, and many other research centres. These work in close collaboration with research units attached to the private sector and the universities. The ultimate aim: "To confer the benefits of science on the man in the street."

"One of the first things we thought of from the early days of independence was...RESEARCH!"

In the field of research, as in many others, we can never repay our debt to Jawaharlal Nehru.

On 12th June 1963, the Prime Minister laid the foundation stone of a new, trail-blazing research project--**THE RUBBER RESEARCH CENTRE** sponsored by the **MADRAS RUBBER FACTORY**. The first of its kind in India, the Centre will work on research towards providing

the public with new and quality rubber products.

The Rubber Research Centre is to commemorate the full scale production of Mansfield tyres in record time at the Madras Rubber Factory.

Commodity Markets

TEA PROSPECTS THIS YEAR CONSIDERED GOOD

(BY A SPECIAL CORRESPONDENT)

MESSRS J. Thomas and Co. Private Ltd have published their annual Calcutta tea market reviews for the 1962-63 season, together with a booklet of statistics relating to production, prices, sales and exports. This includes figures dealing with world absorption, stocks, etcetera. This firm states that the "final district averages for 1962 compare quite favourably with 1961".

It has been noted by brokers that there is a pronounced swing from orthodox to C.T.C. manufacture. It is, therefore, interesting to see that Messrs J. Thomas and Co. Private Ltd remark: "Perhaps the outstanding feature of the season's marketing was the excellent prices paid for orthodox teas, particularly from Darjeeling and Assam." The quotations given are:

	1960-61	1961-62	1962-63
	(Rs. a kilogram)		
Darjeeling	6.80	6.46	7.44
Assam	5.33	4.86	5.56

Although the north Indian crop was short, the proportion of Dust grades offered on the Calcutta market did not show a decrease corresponding with the 1962 crop shortfall. This resulted from the changeover to C.T.C. manufacture. Considering the supply of Dust teas on offer, prices were well maintained. Looking to this year's outturn of north India, Messrs J. Thomas and Co. Private Ltd point out "that progressively larger areas, which are new or have been replanted in recent years, are coming into bearing and these have, given normal growing conditions, considerably increased yield potential". On the other hand, difficulties in forwarding fertilisers have been reported so that normal manuring programmes may have been lost. Many districts again suffered from a prolonged dry spell and some lost from hail damage. Markets were seriously upset by the prolonged strike by R.S.N. boatmen and steps are in hand to improve communication with Assam. The new bridge at Pangu across the Brahmaputra is of considerable significance in this context. On the question of orthodox vs. C.T.C. teas the firm reports on the outlook for 1963: "Many good quality estates producing orthodox teas have had higher sale averages than those following the C.T.C. process."

"This should not be taken to indicate that there is a surfeit of C.T.C. teas, but that there may have been a shortage of good Assam orthodox types, and the mere conversion to the C.T.C. process will not, therefore, in the case of Assam, command the premium which it has done in the past", but it is also noted that C.T.C. manufacture is quicker brewing and has stronger liquoring qualities. The firm estimates that over 55 per cent of the north Indian production now consists of C.T.C. manufacture.

With reference to drought, the firm suggests that the cause may be the heavy deforestation in the north east, a course which is fraught with peril for an agricultural country like India. This unfortunately is true. Fifty years ago, good trees were being cut down for firewood in factories. In the Darjeeling district, the situation was positively sinful only a few years ago. This is a matter which requires the immediate attention of the authorities, for no rain means no tea in the long run and

irrigation alone can never take the place of the monsoon and its humidity.

All tea estates should be compelled to undertake afforestation of say 10 percent or more of open land. Trees for firewood should prove profitable as hardwoods take so long to mature, but a percentage of good timber should be grown. Surely, the authorities must be alive to the vital importance of this matter.

Messrs J. Thomas and Company think that "prospects for the coming season appear to be more favourable than at the same time last year, since there would appear to be no carry-over or surplus tea, at any rate in India". The course of the market in the second half of the season will naturally depend on the overall supply position.

A recent issue of *Tea and Rubber* reports as follows: "From a peak of just below 180 million lbs in March—even now they top 173 million lbs—the U.K. warehouses have a well filled look; in fact, there are sufficient supplies to keep the tea pots fully charged for some 17 weeks. The heavier weight of tea here means that as production and consumption are in near balance, smaller stocks are held in other countries, particularly India, where latest figures show there are 51 million lbs in stock against 67 million a year ago".

It is reported that the U.N. Food and Agricultural Organisation proposes to set up a tea study group, preliminary to a new international agreement to regulate crops for a proper balance between world supply and demand. There are about 20 different countries now producing tea, but if coffee growers succeeded in working together for mutual benefit, tea interests should be able to do likewise. The tea industry already has old formulas to work from. This seems to be a sound move, and it is to be hoped progress will be made before African low cost produce floods the tea markets.

World Coffee and Tea, a U.S. magazine, in its May issue says that 1962 was a good year. It predicts that 1963 "is going to be a whopper of an iced tea season." Last year, "instant" secured 46 percent of the trade. This year the percentage is expected to be far greater. The total consumption of tea in the U.S.A. was reported up by 7 percent in 1962, while iced tea demand moved up 9 percent in the U.S.A.

Exports to the U.S.A. from 1st July to 30th June were as follows:

	1961-62	1962-63
	(In metric tons)	
From north India	7,500	7,031
From Ceylon	19,029	20,597

Latest figures for Indonesia, east Africa, etcetera, are not available at the moment.

East Africa is noted as having had over 63,000 hectares (1 hectare=2.4710 acres) under tea in 1961. In 1953, the area was 38,500 only. So it would appear that about 60,000 acres of young tea will add its weight to forthcoming crops, say, at a modest estimate of 10 maunds for each acre or 600,000 maunds in the total or 48,000,000 lbs of output. Latest figures give yield from each hectare from east Africa as 488 kilograms in 1953 and 763 kilograms in 1961 with

the tendency still in the same direction.

At long last, there seems to have been a check to the downtrend in prices. At Sale No. 2 held in Calcutta on 4th June, Darjeeling offerings met with a limited demand, but others encountered useful competition and some of the poorer grades found ready buyers. Orthodox teas were well supported subject to some irregularity and C.T.C. grades were firm, particularly broken.

On 3rd June, Colombo again put up nearly 8 million lbs, which met with a good general enquiry with Dimbula and Dickoya in strong demand, but some B.O.P. and fanings from those areas were irregular to begin with, but prices firmed up latter.

At the 4th June sale in Cochin, 822,000 kilograms were offered. The market opened to a good demand which continued throughout the sale. Good mediums were reported lower, but the majority of offerings met with a firm demand.

There was a good demand for Dust teas on sale on 6th June. There was a good general demand for the 15,313 chests of old season's teas on offer at Sale No. 49, but prices continued to move lower. There were 5,255 packages of new season's teas at last week's sale. The small quantity of Assam C.T.C.'s generally sold at a drop of 20p, but other C.T.C. types after a quiet opening, came to a good market, and sold well. The new season's Darjeeling dusts came to a very strong market, and sold at much enhanced rates. This, at least, is some cheering news.

The reconstituted Tea Board held its first meeting in Calcutta on 5th June. Mr. N. K. Dutta, senior vice-chairman, Assam Tea Planters Asso-

ciation, was elected vice-chairman of the Board for 1963-64.

The Central Government, it is understood, is considering a scheme to promote the sale of Indian tea in European Common Market. Market conditions there are now being studied. Indian tea promotion machinery already functions in the U.K., the U.S.A. and Australia.

Rubber Research Centre in Madras

THE Prime Minister, Mr. Jawaharlal Nehru, laid the foundation stone of a rubber research centre at the Madras Rubber Factory on Wednesday. The centre will study the feasibility of using materials available in India for producing tyres and other rubber products.

Mr. James J. Hoffman, President of the Mansfield Tire and Rubber Co. who are the American collaborators of the Madras Rubber Factory explained to journalists on Monday the scope of the work to be done at the research centre. He said that as a result of research in petrochemicals, it would be possible to find out hitherto unknown products which might be useful to India's economy. The centre is estimated to cost Rs. 25 lakhs.

Mr. K. M. Mammen Mappillai, managing director of the Madras Rubber Factory, pointed out that in addition to the equipment worth Rs. 12.5 lakhs already acquired for the centre, new machinery valued at Rs. 10 lakhs would be imported from the U.S.A. It would start functioning with the pilot plant used by the rubber factory for manufacturing prototypes.

FOOD OUTPUT STAGNATES, PRICES RISE

FOODGRAIN prices in India have risen sharply over the past few months. At the beginning of this year, the all-India wholesale price index for food articles stood at 122.4 (base year 1952-53 equals 100); it is 131.1 now. The rise, to some extent, is seasonal: harvesting has been completed, and the pressure of supplies arriving in the markets until about three months ago has abated. But the disturbing fact remains that food prices in general, according to the Government's own statistics, are almost 5 percent higher than they were at this time last year. The increase in cereal prices has been somewhat sharper. Even so it disguises the fact that the price of the most important cereal, rice, in the eastern States has gone up by very nearly 12 percent. In the Calcutta markets, the commodity costs almost 25 percent more than it did a year ago. The Government has been proudly claiming that the increase in wheat prices has been fairly small. But that cannot offer much consolation to a country which consumes thrice as much rice as it does wheat.

Unlike in the case of wheat, the decline cannot be offset by the relatively small imports of rice coming under the P.L. 480 programme from the United States; and the foreign exchange situation being what it is, no sharp increase in commercial imports is possible either.

The third factor is that the economy has had the pleasure of, first, a heavy dose of deficit financing after the Chinese invasion, and, later, a thumping big Budget from Mr. Desai. The former has put more cash in the hands of the people, cash which has inevitably been spent mostly on food. The latter has sharply increased costs, especially transport costs, which are by no means a small element in the prices of commodities moving from distant rural areas to wholesale and retail markets. Fourthly, and finally, there remains the fact that too many Indians are producing too many Indians each year; the annual rate of population growth, estimated at an alarming 2.15 per cent over the past decade, shows no signs of declining.

Against this background, it is hardly surprising that the reassuring noises made by Government spokesmen over the past few weeks have had little effect. Addressing a Press conference in New Delhi a few days ago, Mr. Thomas implied that complaints about the rise in food prices were exaggerated, and that in any case the Government had enough stocks in hand to check the rise. On a visit to Calcutta last Friday, Mr. Shriman Narayan, member of the Planning Commission, took the liberty of announcing that the rice position was "comfortable" in most States, and even in the eastern States "there is no cause for alarm."

The factual basis for the pronouncements remains unknown. In his statement in New Delhi earlier, Mr. Thomas produced an imposing array of statistics showing how much rice lay in Central godowns, and how liberal the Centre had been in offering it to the deficit States. The question which apparently remained unasked, or unanswered, was why, if the Centre's stocks really were large, and if they had been liberally offered to the deficit States, prices were still showing no signs of coming down? Perhaps the clue lies in Mr. Thomas's reported estimate that the Centre's rice stocks really total no more than 800,000 tons. That quantity is but chicken-feed in comparison with simultaneous estimates that India's rice crop this year has fallen by anything between one million tons and three million tons. It may be true, as Mr. Shriram Narayan reminded his audience on Friday, that 150,000 tons will soon be coming from Burma and Thailand. Mr. S. K. Patil had already announced that a first batch of 150,000 tons would be shipped from the United States soon, and another batch of 200,000 tons before the end of the year. Simple arithmetic, however, suggests that rice supplies in the market, including all imports, may not reach anywhere near last year's already unsatisfactory level—unless the Government is prepared pretty nearly to empty its godowns as fast as it can.

Faced with the danger that the godowns might be emptied out this year, it is perhaps not wholly

Several explanations have been offered for the increase in food prices. The Food and Agriculture Ministry has pointed to the seasonal variations, but forgotten to mention that these cannot be of any significance if today's prices are compared with those of June last year or June the year before. The Deputy Minister for Food, Mr. A. M. Thomas, has reminded the people of the sales taxes some States have imposed on food articles—which taxes have, as was only to be expected, been added straight on to consumer prices. Dark references have been made to the scare created by speculators, hoarders and profiteers through "premature disclosures" concerning the decline in the rice harvest; no explanation has been given, however, as to what can be "premature" in disclosing a fact that has been known to both the Government and the trade for several months. Finally, refuge has been sought in the oldest ditty from the gramophone record of excuses patented by the Food and Agriculture Ministry—that last year's monsoon was unfavourable, leading to drought in some areas of the country and floods in others (as if any monsoon in the past 1,000 years has ever been adequately and evenly distributed).

The real factors responsible for the rise in foodgrain prices are four in number. The first and most important is that, ever since the last year of the second five year plan, foodgrains production has shown almost no improvement at all. In 1960-61, it amounted to 79.7 million tons; being well above the second plan target, it sent a thrill of joy through the Food and Agriculture Ministry and brought it a flood of congratulatory telegrams. In the following year, output declined, to 78.6 million tons. In 1962-63, the agricultural year now ending, a recovery is expected, but only a minor one—to around 80 million tons. The second factor is that, within the stagnant total, the rice harvest has been declining steadily. The decline last year was small. But the fall this year, as compared with last, is variously estimated as anything between one million tons and three million tons.

indigenous manufacture of man-made fibres. Besides, in the export markets, the consumer was said to be showing greater and greater preference for mixed fabrics and a similar tendency was noted in the home market also. Diversification of Indian mills' production by the use of man-made fibres, it was argued, would be helpful from the point of view of both local consumers and exports.

But when the Government arranged for the import of staple fibre, not many mills appeared willing to lift their quotas. Apparently, in recommending a switch-over from imported cotton to imported fibre, the Indian Cotton Mills Federation had not carefully examined the problem in all its aspects. But the Government also cannot escape the blame for accepting the Federation's recommendation without assessing all its implications. The staple fibre sub-committee makes no mention of what happened over the past 18 months to change the Federation's views, but since the sub-committee was actively assisted by the directors of the three textile research associations of Bombay, Ahmedabad and Coimbatore in studying the problem, its findings cannot be treated lightly. The Government will have to examine the sub-committee's findings thoroughly before taking any decision on its recommendations, which are of a far-reaching nature. The sub-committee has suggested that some investigation should be made about the possibility of extending the growth of medium and long-staple cotton in the country by investing in fertilisers and pesticides. It might be found that with the quantity of foreign exchange required for producing a pound of viscose staple, a much larger quantity of cotton could be grown in the country with far more beneficial results for the economy. The need for stepping up cotton production can scarcely be over-emphasised, but the sub-committee's excessive concern over the expansion of staple fibre production capacity is likely to arouse suspicion. All over the world, the use of staple fibre has become popular and in view of the continuing shortage of indigenous cotton production and the difficulty of securing cotton from abroad due to foreign exchange scarcity, the Indian textile industry will probably need to take on a good admixture of staple rayon fibre and man-made fibres.

Rayon and Synthetic Fabric Exports

Exports of rayon and synthetic fabrics from India in May are placed at 6.25 million metres, valued at Rs. 62.7 lakhs, compared with 7.99 million metres valued at Rs. 74.3 lakhs in the preceding month and 2.29 million metres worth Rs. 29.3 lakhs in May 1962. The May figure takes the total exports for the first five months of the current year to 27.77 million metres valued at Rs. 2.61 crores, compared with 25.17 million metres valued at Rs. 2.5 crores in the corresponding period of last year. Shipments to important destinations in metres (with value shown in brackets) during May were as follows: Singapore 852,349 metres (Rs. 905,418), Iraq 618,973 metres (Rs. 690,989), Aden 373,372 metres (Rs. 312,971), Ceylon 335,349 metres (Rs. 346,835), Rhodesia—north and south—437,927 metres (Rs. 418,661), Nyasaland 339,777 metres (Rs. 277,860), Canada 324,216 metres (Rs. 310,608), Belgium 297,149 metres (Rs. 238,671), Iran 267,670 metres (Rs. 316,749), the Sudan 208,788 metres (Rs. 123,797), Kenya 186,007 metres (Rs. 236,367), Malaya 159,964 metres (Rs. 124,582), Mauritius 158,852 metres (Rs. 164,125) and Fiji Island 163,310 metres (Rs. 148,883). Zonewise exports for the January-April 1963 period show that out of total shipments worth a little over Rs. 2 crores, the Asian zone took rayon and synthetic fabrics worth Rs. 12 crores to be followed by Africa with Rs. 45 lakhs, the U.S.A. Rs. 15.3 lakhs, Europe Rs. 12.8 lakhs and Oceania Rs. 4.9 lakhs.

The average price of exports realised in May works out to Re. 1 a metre, against 93p a metre in April which is also the average for the January-April period. The marked improvement in the prices realised, it is said, is due more to over-invoicing than to the strength in the overseas demand for Indian fabrics. Goods are being over-invoiced in order to earn export incentives. The Silk and Rayon Export Promotion Council, it is reported, has taken a serious view of the fantastic over-invoicing of rayon ready-made garments, and has suggested to the Government that the export

incentive scheme for ready-made garments and made-up articles should be suspended as it is damaging the reputation of the country in foreign markets.

Conserving Forest Resources

Inaugurating the third meeting of the standing committee of the Central Board of Forestry in Srinagar last week, the Central Minister for Agriculture, Dr. Ram Subhag Singh, said that instead of increasing the forest area since independence, or even since 1952, this country has gradually allowed it to decrease. Large blocks of forest have been lost because of the grow-more-food campaigns, river valley schemes and rehabilitation projects. The result has been that instead of one-third of the total land area in the country being under forests, which in the opinion of experts is necessary, only a little less than one-fourth is under forests. The third plan recognises the need for increasing the area of land under forests, but it has provided only Rs. 51 crores for this purpose, although forests yield to the Government an annual revenue exceeding this sum. What is worse, even the afforestation schemes drawn up under the third plan have not been properly implemented. Against the third plan target of extending plantations of industrial and economic importance to cover 700,000 acres, the achievement in 1961-62, according to the third five year plan Progress Report for 1961-62, was only 82,000 acres under different species—26,300 acres under teak, 10,500 acres under matchwood, 2,400 acres under wattle and 42,600 acres under miscellaneous varieties. It is, therefore, necessary to accelerate the rate of growth of plantations, especially in Madhya Pradesh, Madras, Rajasthan and Mysore, so that at least the third plan targets might be achieved.

The prices of all varieties of timber have considerably increased. This is one of the factors which is discouraging building activity. It is only through increasing the forest area that this difficulty can be effectively overcome. It is estimated that India's requirements of industrial wood, including pulp materials for paper and rayon industries, will increase from 4.5 million tons a year at present to some 9.5 million tons by 1975. But since new plantations take 25 to 30 years to develop, it is expected that the supply will not be more than 5.5 million tons by 1975. It is, therefore, necessary to devise some ways of overcoming the shortage of industrial timber more quickly. One of the ways, it has been suggested, is to increase the area of land under the fast-growing species, which take a much shorter time in maturing. Another step is to prevent wastage by devising better methods of cutting trees and by preventing heart rot, fungus diseases and the drying up of logs. The Wood Preservation Branch of the Forest Research Institute in Dehra Dun should be able to help in this important work. It is unfortunate that although the third plan recognises the need for making a comprehensive survey of India's forest resources with a view to formulating a 15-year plan for developing the forest-based industries, this has not been done so far.

New Indo-Soviet Trade Pact

Under the comprehensive five-year Indo-Russian trade agreement covering the period from 1964 to 1968, which was signed recently in Moscow, trade between the two countries is expected to double within the next three years to 400 million roubles a year. India imports from Russia machinery and equipment, oil and oil products, chemicals, refractories and newsprint, raw materials like wood-pulp and asbestos, metals like lead, zinc and alloy and special steels. She exports to Russia woollen and cotton fabrics, leather goods, coir and coir products, handicrafts, razor blades, rolled steel products, and linoleum. The new agreement does not disturb the trade in any of these commodities, but the quality of each has been determined, taking into account the needs and requirements of the two countries. In future about 40 percent to 45 percent of the trade will relate to manufactured or processed goods, against only 33 percent in the past. India, as was only to be expected, will supply Russia "less complex" manufactured goods in exchange for more complex heavy industrial pro-

ducts. This is calculated to help India's industrial development.

Another important feature of the agreement is that an effort has been made to balance Indian imports from Russia against Indian exports to that country on a more comprehensive basis. So India's exports to that country will be sufficient to pay not only for her current imports from Russia but also for the Soviet capital equipment installed during this period on credit. This, along with the fact that goods are to be traded in at specified international prices, will prevent the terms of trade from becoming unfavourable to India, as frequently happens in the trade of underdeveloped countries with industrially advanced countries.

Food Shortage and Population Growth

The deliberations of the World Food Congress, held recently in Washington under the auspices of the U.N. Food and Agriculture Organisation, show that, although the depressing conclusions of Malthus about the connection between population increase and food supply may not be altogether correct in modern times, the conditions in some parts of the world—especially in underdeveloped countries—conform to his theory. The third food survey of the F.A.O., based on studies of some 80 countries covering nearly 95 percent of the world's population, shows that half the world's population lives in the Far East on only one-quarter of the world's food resources. Furthermore, nearly 10 percent to 15 percent of the world's population, that is, 300 million to 450 million people, live below the margin of subsistence and from one-third to one-half of mankind suffers from either undernourishment or malnutrition or both. There is already an overall food shortage in the world. The future is still more gloomy. It is estimated that by the end of the century, world population will be doubled and to provide enough sustenance, the food supply in Asia and the Far East will have to be increased four-fold, in Latin America from three to four-fold, in the Near East three-fold and in Africa between two and three-fold. This poses a serious problem.

The problem is not only that people in some countries are so poor that they are not able to buy enough food but also that there is an overall shortage of food. Illustrating this point from Indian statistics, Dr. B. R. Sen, director-general of the F.A.O., said that 60 percent of the population in this country earned much less than the overall national average of Rs. 25 a month, while according to experts, at present prices, a man must eat food worth Rs. 35 a month to attain the minimum standards of health and nutrition. But even if each one in the world has the minimum monthly income required for a balanced diet, there will not be enough food to go round. In Europe, North America and Oceania, for example, food production exceeds the rate of population growth, so these countries have a food "surplus". But contrary to popular belief, even if it is physically possible to distribute these surpluses as outright grant or aid, the poor people in the food-deficient countries cannot be fed for more than a few weeks. It is, therefore, necessary for the developing countries to make more vigorous efforts than at present to increase their food production.

Dr. Radhakrishnan said in his address to the World Food Congress that modern science had devised methods for increasing food production. But in most countries, these methods have not yet been properly conveyed to the tiller of the soil. Farmers in the more advanced western countries are more readily using improved seeds, better manures and modern methods of cultivation than their opposite numbers in the less developed countries in Asia and the Far East. This is attributable partly to their ignorance and partly to their conservatism and long-established habits. But it should be possible to break these habits if proper efforts are made by the Governments concerned. For this purpose, as Dr. Sen pointed out, aid in cash, equipment and technical skill from the developed countries should play an important "catalytic rôle" in increasing food production in the underdeveloped countries.

In order to solve the food problem, efforts should also be made to control the population

growth. A number of speakers at the Congress emphasised this important aspect of the problem. But checking the growth of population poses a highly complex problem. According to demographic experts, with the best effort it may not be possible to reduce the rate of growth in the next 30 or 40 years below 1.7 percent a year. This emphasises that the main effort will have to be concentrated on increasing food production and productivity in all countries of the world.

Shortage of Managers

Some interesting points were discussed at a conference of senior executives in charge of personnel management held earlier this month under the auspices of the Bombay Management Association. In modern times, it was rightly said, the limiting factor in economic expansion is not so much the supply of steel, cement or labour, as the shortage of skilled managers. The problem is really two-fold, namely, to attract persons of the right calibre to managerial posts and to create conditions in which they are able to discharge their duties efficiently. The unit cost of production as also productivity in any enterprise depend considerably on the skill and efficiency of management. A skilled manager is able to keep an effective check on expenses and on the use of raw materials, plant and machinery, stores, labour, etcetera, which determine the quality of output and the unit cost of production.

The supply of trained managers in India has increased in recent years, thanks to the Indian Institute of Personnel Management, the management courses at some universities and the training schemes started by some progressive employers in the country. But there is still a shortage of managerial personnel. One of the speakers at the Bombay conference said that although promotion to higher posts in an organisation boosts the morale of employees, the infusion of fresh blood is necessary. The new entrants bring not only fresh enthusiasm to the work but are also trained in the latest management techniques. But a great disadvantage in having a high proportion of new entrants is that the existing employees are frustrated and lose interest in their work. A speaker said that the problem was not only to get the right man but to create in him the feeling that he was getting the right remuneration for his effort. He added that it was not only money which played a part in retaining good men. There are other things as well as direct encouragement which matter much.

Although some progressive firms have started advanced training courses for their managerial personnel and take great care in selecting the right men, the services of such persons are not always properly used. A speaker at the conference complained that in nine out of ten cases, right use was not made of the men so chosen. There is bound to be some human element in managerial functioning, but it should be possible to keep this element strictly within limits. What really matters more is that managers should be given sufficient initiative and enough discretionary powers to do their work efficiently. In this matter, the record of the private sector is much better than that of the public sector.

Voluntary Savings

Inaugurating a two-day session of the National Savings Central Advisory Board in New Delhi recently, Mr. Morarji Desai, Central Finance Minister, said that most of the savings in India were at present being made by some 6 million people paying income tax who earned Rs. 3,000 or more a year. The result is that total savings in India do not exceed 8 percent to 10 percent of the national income, against 20 percent in most other countries. But in order to finance the expenditure on defence and development, savings will have to be increased to 15 percent of the national income within the next five years, Mr. Desai said. About 80 percent of national savings, it has been estimated, come from individuals and only 5 percent from institutions. Therefore, in order to increase savings to the level of 15 percent of the national income, attention will have to be paid to individual savings. But in the past

few years, small savings have actually declined. After having increased from some Rs. 61.50 crores in 1956-57 to over Rs. 105 crores by 1960-61, small savings in the first year of the third plan declined to Rs. 87.50 crores.

Mrs. Tarakeshwari Sinha, chairman of the National Savings Central Advisory Board, recently said that in 1962-63, small savings further declined to a little above Rs. 79 crores in spite of an increase in the collections from the defence deposit certificates and the Treasury savings deposit certificates. It is necessary to examine why small savings have declined. It is not that the people have become less savings-minded or reckless in their spending habits. It is because of the ever-rising prices and the higher incidence of taxation that the people's capacity to save has been seriously impaired. The vast majority of people in the lower income groups, earning up to Rs. 3,000 a year, find it extremely difficult to make both ends meet.

Mr. Desai said that unless the people in the lower income groups increased their savings, it would not be possible to increase national sav-

ings to 15 percent of the national income. It will not be possible even to achieve the third plan target of Rs. 600 crores, if the people in lower income groups are not able to save more. At present, nearly 50 percent of the outstanding amount under small savings originates from investments of provident funds, balances of co-operative institutions and savings of people in higher income groups. What has to be increased to make the lower income groups save more is not their willingness to save but their capacity, to do so. The Government should, therefore, reduce the incidence of taxation and the prices of essential commodities to enable them to save. If the inflationary rise in prices continues, the small man's savings will be lost.

Mr. Desai told the meeting that the compulsory savings scheme would not reduce voluntary savings, since its aim was to inculcate the habit of saving in the people. Although the scheme may cause great hardship to people in the lower income groups, it may increase their savings. But there is likely to be some reduction in voluntary savings as a result of the scheme, especially in

talking
about
banks

There is more in banking
with the
STATE BANK OF INDIA
than the mere possession
of a bank account—first
class service, security and
safety and ability to obtain
friendly and helpful advice
and information when
required.

The wide experience of the State Bank is at the disposal of the customers whether their accounts be large or small. The State Bank can be of assistance to your business and its problems. If the business covers a small-scale industry, you will find special attitudes aimed at earnest desire to help. In the co-operative sector too, the Bank has similar attitudes with schemes offering special facilities. Every kind of foreign exchange business is transacted. Why not contact the nearest office?

You will always find a friend at

THE STATE BANK OF INDIA

India's Leading Bank

SBISAS 88-88A

cases where people are not able to increase the rate of savings in proportion to their incomes.

Progress of Land Mortgage Banks

Inaugurating the recent annual conference of primary land mortgage banks in Madras, the Central Finance Minister, Mr. Morarji Desai, said that the land mortgage banks, which are designed to supply long-term credit to agriculturists, have gradually come to play an important rôle in India's rural economy. While the outstanding loans of these banks amounted to Rs. 13 crores at the end of the first five year plan and to Rs. 38 crores at the end of the second plan, it is expected that they will amount to Rs. 150 crores at the end of the third plan. This shows that the land mortgage banks are playing an important rôle in providing long-term finance to agriculture. But one serious defect from which the land mortgage banks, like all co-operative institutions, suffer is that their own funds are much too small. Mr. Desai rightly told the conference that it would be disastrous for the banks to continue to depend for funds on other agencies to the same extent as at present. So

efforts should be made to increase the share capital and deposits of these banks. This will not only enable them to increase their loans but also to give them to the cultivator at cheaper rates.

At present, one of the important sources of finance for land mortgage banks is debentures which they issue in the market from time to time. Mr. Desai said that the outstanding amount of debentures issued by these banks had increased from Rs. 37 crores or Rs. 38 crores in the second plan to about Rs. 50 crores now. In 1963-64, these banks are to issue further debentures worth Rs. 29.50 crores. This is higher than the maximum amount issued in any single year in the past. The Life Insurance Corporation has agreed to take 30 percent of the land mortgage banks' debentures for the next three years with a ceiling of Rs. 6 crores a year. The Reserve Bank will take 20 percent of the debentures while the State Bank of India will take 10 percent, thus leaving only 40 percent for co-operatives and other institutions. There can, therefore, be no doubt that the full amount of debentures issued by these banks will be absorbed. But the difficulty is that after issuing the debentures at 4½ percent, these banks charge the borrower 7½ percent in-

CAPITAL, 20th June, 1963.

terest. It will not be possible for the land mortgage banks to raise debenture finance from the market at less than 4½ percent, but if they succeed in reducing their operational costs, it should be possible for them to supply finance to the cultivator at cheaper rates of interest. At present, the Reserve Bank provides finance to co-operative banks at concessional rates, but these land mortgage banks do not receive a similar concession. Mr. N. S. Ramalingam, who presided over the conference, suggested that the Reserve Bank should liberalise its policy in favour of these banks. Besides, they should be given representation on the Investment Committee of the L.I.C. These suggestions are basically sound and deserve consideration.

One of the more serious defects in the working of land mortgage banks at present is that a high proportion of their loans are granted for unproductive purposes. In 1962-63, out of Rs. 2.84 crores disbursed by these banks, nearly 60 percent were given for productive purposes and the rest for such unproductive purposes as the repayment of prior debts. Mr. Desai said that the land mortgage banks should issue a higher proportion of their loans for productive purposes than they have so far been doing so that the loans might help in increasing agricultural production. It is unfortunate that at present the organisational set-up of land mortgage banks is weak so they are not able to ensure that most of the loans advanced by them are used for productive purposes. Mr. Ramalingam told the conference that it has been decided to give 70 percent of the loans in 1963-64 for productive purposes and only 30 percent for unproductive purposes. But the main need is to effect an improvement in the organisation of the banks so that the loans granted by them are actually used for productive purposes.

FUTURE OF CALCUTTA PORT

IN resuming what we have to say on this subject, the scheme of connecting the Hughli and Mutlah comes again on the tapis, and though the Government official report on the navigable state of the latter river was unfavourable, the republication of an independent survey made some forty years ago throws a very different aspect on that matter. The main objection advanced by Captain Petley and his colleagues to the Mutlah was that it had silted up and that the ebb tide was never of sufficient strength to scour this out, but the official omitted to mention first that these accumulations were simple mud from sluggish khals and creeks, easily enough removed, and from the absence of all rush or connection with the Ganges the amount of silt brought down is quite infinitesimal; once dredged out very little attention would suffice to keep the channels open. A canal due east from Diamond Harbour creek would debouche on the Mutlah about half way between the inner and outer boat route through the Sunderbunds interfering with neither and would certainly cost far less than the first mooted one from Port Canning to Kidderpore, while no engineering difficulties are indicated and acquisition of the land required would amount to but a little of what it would in the former case. No one, we believe, questions that there is ample depth of water in the Mutlah, while the channels throughout are void of those sinuosities that render swirls and collisions so frequent in the upper reaches of the Hughli. It is puerile for the officials to rake up the loss of the "Eagle Speed" which led to the closing of the port; lamentable as that catastrophe was, the state of the river had nothing to do with it; insufficient power in the tug and utter incapacity on the part of all concerned caused the accident. We do not advocate the excavation of huge docks at Diamond Harbour, if ultimately decided on they can come hereafter, but for present requirements merely a tidal canal lined from end to end by wharves similar to the levees at New Orleans, the coaling station for colliers and all vessels to be at Port Canning, to which land access is already secured and can be much improved by doubling the present line between the Jubilee Bridge right through Calcutta would thus possess an exit and entrance to and from the sea, served by a circular railway ensuring immunity from the congestion that now takes place each fute season, and in all respects as advantageous to its trade as the metropolitan system enveloping London has for its enormous passenger traffic, with very little likelihood of a jam occurring at any point.

A Ditcher's Diary

IF THE RESIGNATION OF MR. K. D. MALAVIYA WERE only an answer to the oil industry's prayers, it would be welcome enough. But it's more; and several issues are involved. First, should he have been allowed to resign? I read somewhere the other day that a high British official in British India had been suspected of some grave impropriety whereupon he submitted his resignation. The Viceroy of the day rejected the resignation and sacked him instead. If Mr. Nehru is convinced that Mr. Malaviya was guilty of something, which he has not publicly said yet, he should have, in his opinion, acted like the Viceroy of old. The second point has already been made by Mr. Rajagopalachari, who has reminded the Government that there is such a thing as the Indian Penal Code for offences which, for all their political guise, may be actionable. My third point concerns the delay in disposing of Mr. Malaviya. Whether he willed it or not, Mr. Nehru has given the impression that he has parted with Mr. Malaviya with the utmost reluctance. It seems unlikely in the extreme that the assistance of the Attorney General and a Supreme Court Judge was needed to find out the truth; if it was, well, the Government should have been better informed. If, on the other hand, Mr. Malaviya has been the victim of a faction's pique, and an element of that has certainly have stood by his colleague. What seems probable is worse still, judging by Mr. Malaviya's statement that his resignation is only the end of a chapter but not the end of his political career. If the privileges enjoyed by Mr. Krishna Menon constitute the precedent to be followed, Mr. Malaviya only quits the Government under pressure that could not be resisted, but he will continue to belong to an inner circle the Prime Minister is believed to trust more than the Party and other colleagues. If this is the leader's way of getting his own back on the Party, it does not speak very well either of the Party or the leader. Perhaps both should do some rethinking on political principles as distinct from expediency.

AFTER THE COMMONS DEBATE ON THE PROFUMO affair, perhaps the best that can be said about Mr. Macmillan is that he was ignorant to the point almost of innocence; he was merely the victim of circumstances which he knew virtually nothing about, thanks to the astonishing lapse of the intelligence chiefs in not bringing their information about Mr. Profumo's activities to the attention of the Prime Minister. From his own personal point of view, this may no doubt be a source of satisfaction

to Mr. Macmillan; it absolves him of the charge of complacency, or worse, concerning the misdemeanour of a senior colleague. From the political and constitutional angle, however, a plea of ignorance has no validity; it was the duty of the secret services to keep the Prime Minister fully informed, and if they failed in their duty, the principle of ministerial responsibility cannot be abrogated, especially on an issue of such importance. India has had more than her fair share of ministers denying responsibility on the ground that they had no knowledge of what their underlings had or had not done; the Mundhra affair only a few years ago was the occasion for a memorable exercise in the shuffling off of blame. But the harm this sort of thing does in breeding cynicism, and accelerating a general decline in political morality, is incalculable. Mr. Macmillan's personal reputation, as a man of high integrity, will perhaps emerge untarnished even after the last, distant echoes of the Profumo scandal have been heard. But the main issue here is not one of personal reputation; it concerns the setting of proper standards by men in public life. Mr. Macmillan committed at least an error of judgment in accepting Mr. Profumo's word when the latter denied his illicit association with Miss Keeler. But errors of judgment are what we all pay for in our own different ways; if politicians in office are expected to pay for them more heavily, it is an inevitable risk which cannot be divorced from the plums of authority, status and responsibility. The private and political conscience of statesmen must not only be clean, but must be seen to be clean. To cling to office when it is not is to qualify for burial in the graveyard of public contempt.

THE RECEPTION GIVEN TO DR. RADHAKRISHNAN IN Britain these past few days has, by all accounts, been most impressive. India's President is the first head of an independent Commonwealth country to be given the full ceremonial treatment; indeed, he is the first ever to pay a State visit to Britain. And much of the warmth with which he has been received is certainly due to his own international reputation as a great scholar and renowned intellect. But there is still an element in it all, perhaps, which can only be explained in terms of Britain's deep respect for India as the only one of her former possessions which has made anything like a success of democracy, and of her sympathy with this country's present difficulties. On a recent visit to London, I got the impression that Britain is particularly sensitive at the moment about the criticism she has been

attracting in India. She feels misjudged, and is apt to protest when the opportunity occurs that her motives in urging a solution to the Kashmir dispute are of the highest. The point most people abroad do not grasp, of course, is why there should be a dispute at all. The complications arising out of the religious factor are rarely analysed as closely as they are here, for instance. The tendency is to simplify the issue of who should have Kashmir into the straightforward one of self-determination for the inhabitants. The President's visit is likely to achieve more in the way of evoking British goodwill towards this country, and ensuring its eventual concomitants, military and economic aid, than any amount of visits from reigning politicians. Not all of these have in the past been as deserving of respect as is Dr. Radhakrishnan with his warmth, humanity and intelligence.

KHARASHO! AUCHIN KHARASHO, IF YOU LIKE. But feminists weaken their case by making such a fuss over Valentina Tereshkova's feat. If I were a woman—no, I wouldn't like to be in orbit—I would affect to be totally unsurprised in order to give the impression that I never had any doubt that anything a mere man could do a woman could do better. Pravda, I find, has made a pathetic effort to be funny about Miss Christine Keeler and Mr. Profumo. It all shows, you see, how corrupt and rotten bourgeois society is. And now a comparison will no doubt be made between Miss Tereshkova and Miss Keeler. I take the view that, in their own and very different ways, the two women are unusual specimens; and to regard either as the representative of the society that produced her is to get the whole thing out of focus. Another thing I don't understand is that by now routine despatch of greetings to the Communist Party after every performance. You will remember how the Chinese mountaineers who claimed to have climbed Everest announced their gratitude to the Party. The Americans have since climbed the highest peak; and for U.S.I.S. to claim that this proved the superiority of capitalism would be just too silly for words. But communism does something to you; and that "something" is what makes me uncomfortable. The photographs show clearly that Miss Valentina Tereshkova is an attractive woman; yet, I confess, I would be uncomfortable in her formidable presence. Colonel Bykovsky is said, by the American news agencies, to have had this "date in space" with Miss Tereshkova. "Dating" her is what would not come to me naturally. A colleague tells me that it was all summed up in Leningrad for him some years ago. His Intourist guide, a most competent woman, had gone to an official in the Foreign Ministry for getting something altered in the visa of a member of his party. She succeeded in getting the official to do it, when the latter said, "Madame, you are a

'BEHAR' the dependable name in
FIRECLAY & SILICA Refractories
For nearly half a century BIHAR REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other Industries in the country.
Our manufacturing range includes
SILICA BRICKS • FIRE BRICKS • HIGH ALUMINA BRICKS • INSULATING BRICKS • FIRECLAY • FIRE CEMENT • STOPPERS • SLEEVES • NOZZLES • TUYERS, ETC.

"SCCO"

These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning, and other tough scaling propositions and rough castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

most persistent and efficient woman; and I am very glad I am not married to you". She thought it was an excellent compliment.

TWO WINSTONS, I KNEW, HAD ALREADY MADE THEIR place in history: Winston Churchill of 1940 and Winston Smith of 1984. In between comes Winston Field of Southern Rhodesia, whom history may or may not remember. Although this Winston feels that Big Butler is watching him, he sometimes speaks like the other Winston who spoke of fighting on the beaches and the streets. Mr. Field says that he will not endorse any transfer of power to irresponsible hands. The short answer to it is that in Southern Rhodesia today power is in irresponsible, meaning unrepresentative, hands. While in Bulawayo and elsewhere there has been some evidence of violence, Big Butler in London gives the impression that he has all the time in the world to settle Central African affairs in his own way which he refuses to define. I recently heard from a friend in Salisbury who takes a less complacent view of things. With Joshua Nkomo and others away from Southern Rhodesia, the African nationalist movement is not indeed "overly strong"—you know now that my correspondent is an American—but that may be where the danger lies. Not even Sir Roy Welensky can any longer believe that the Federation has any future; Dr. Verwoerd must have told him in no uncertain terms that while he could do with another 225,000 whites he simply has no use for the three million Africans that would come with them if Southern Rhodesia merged with the Republic of South Africa. The closer one looks at Africa south of the Zambesi, the grimmer seem the prospects in the next few years. Afro-Asia is a not very funny joke; and even after Addis Ababa Africa is sadly divided. The threat, one fears, is within. The South African economy is booming; a visitor recently told me, "You see, we don't have to make any money; we just dig it up". In spite of crises, Southern Rhodesia is not bankrupt. But it will be a very different picture when the Federation breaks up.

VISITORS TO THIS CITY ALWAYS EXPRESS SURPRISE when I assure them that we do in fact have traffic rules; it is just that nobody enforces them, that's all. I am wondering whether the same fate might not eventually befall the new code of motoring regulations in Britain, because there is no doubt about its extreme severity and its frightening potential for choking the courts. Any of my British friends who are due for leave this hot weather would be well advised to acquaint themselves with its provisions. For one class of what it calls "serious" offences, an automatic disqualification from driving for at least a year is decreed. And what are these? Well, racing on the highway is one; dangerous driving within three years of a previous conviction for the same thing is another. Not too drastic, one might say. But surely both these offences depend to a remarkable degree on the personal judgment of the policeman who brings the charge, and in the traffic courts so far it has not been the practice to insist that this be corroborated by a second and independent witness. Another class of offences, some of which have not previously even been classified as such, now attract the "accumulator" provision. This lays down that three such charges within three years should automatically lead to disqualification for at least six months. Again what strikes one is the responsibility which must attach to the opinion of the person bringing the charge. Because the courts have always had a traditional reluctance to convict on unsupported evidence in cases which attract severe penalties—some will, of course, amount to loss of livelihood—it strikes me that these swingeing provisions may never be enforced in the rigorous way Mr. Marples, the Transport Minister, intends they should be. Mind you, before Mr. Marples is condemned for what appears to be an almost pathological urge to persecute the motorist, it is as well to remember that Britain's roads are now far and away the most congested in the world. On the basis of motor-vehicles per road mile, her figure of 38.5 compares strikingly with only 21.8 for the United States.

The revenue profit of the Phaskowa Tea Co. Ltd (a Doora's garden) has been Rs. 9,288, against a loss of Rs. 99,044 in 1961, after providing Rs. 15,275 (against Rs. 16,629) for depreciation. The taxable ordinary dividend has again been passed. Revenue reserve is allocated Rs. 30,000 (against Rs. 1.15 lakhs).

The profit of the Phaskowa Tea Co. Ltd (a Doora's garden) has been Rs. 9,288, against a loss of Rs. 99,044 in 1961, after providing Rs. 15,275 (against Rs. 16,629) for depreciation. The taxable ordinary dividend has again been passed. Revenue reserve is allocated Rs. 30,000 (against Rs. 1.15 lakhs).

THE DITCHER

Guide for Investors

DUNCAN GROUP OF TEA COMPANIES FARE WELL

THE results of the Duncan group of tea Companies for the year ended December 1962 have been published. The Hantapara Tea Co. Ltd (a Doora's garden) has doubled the taxable ordinary dividend to 10 percent, absorbing Rs. 3.60 lakhs. The yield works out to 9.5 percent at the present price of Rs. 105 a share of Rs. 100 each. The trading profit has improved from Rs. 2.83 lakhs in 1961 to Rs. 7.94 lakhs, after transferring Rs. 2.65 lakhs (against Rs. 2.48 lakhs) to depreciation. Taxation is allocated Rs. 3.51 lakhs (against Rs. 2.69 lakhs), revenue reserve Rs. 2 lakhs (against Rs. 21.50 lakhs) and development rebate reserve Rs. 5,500 (against Rs. 5,000). The crop was 1,374,053 kilograms, against 1,433,022 kilograms and the average sale price rose from Rs. 4.07 to Rs. 4.76 a kilogram. The 1963 crop estimate is for 1,390,000 kilograms at a cost of Rs. 57.85 lakhs.

The Carron Tea Co. Ltd (a Doora's garden) has made a revenue profit of Rs. 97,006, against Rs. 43,396, after providing Rs. 56,556 (against Rs. 37,213) for depreciation. The taxable ordinary dividend has been increased from 5 percent to 7.5 percent, absorbing Rs. 45,000. The yield is 5.2 percent at the present price of Rs. 145 a share of Rs. 100 each. Taxation is allocated Rs. 27,500 (against Rs. 2,700), revenue reserve Rs. 1 lakh (against Rs. 3.80 lakhs) and development rebate reserve Rs. 13,000 (against Rs. 500). The crop declined from 299,250 kilograms to 280,187 kilograms, but the average sale price rose from Rs. 4.17 to Rs. 4.70 a kilogram. A crop of 295,000 kilograms has been estimated for 1963 at a cost of Rs. 12.18 lakhs.

The Poobong Tea Co. Ltd (a Darjeeling garden) has earned a revenue profit of Rs. 1 lakh (against Rs. 30,841), after transferring Rs. 10,308 (against Rs. 8,744) to depreciation. A taxable ordinary dividend of 5 percent has been declared, absorbing Rs. 15,000 (against nil), the super profits tax Rs. 1,98 lakhs (against Rs. 1.82 lakhs), the super profits tax Rs. 4,599, development rebate reserve Rs. 12,631 (against Rs. 199) and general reserve Rs. 45,000. The crop declined from 311,077 kilograms to 301,064 kilograms, but the average sale price improved from Rs. 6.58 to Rs. 6.71 a kilogram.

The profit of the Betjan Tea Co. Ltd (an Assam garden) has increased from Rs. 5.37 lakhs to Rs. 5.57 lakhs, after providing Rs. 1.03 lakhs (against Rs. 97,198) for depreciation. The taxable ordinary dividend has been cut from 45 percent to 30 percent, absorbing Rs. 1.92 lakhs. The yield is 9.8 percent at the present price of Rs. 30.56 a share of Rs. 10 each. Income tax and super tax absorb Rs. 3.21 lakhs and the super profits tax Rs. 27,117. The crop was 408,929 kilograms, compared with 408,269 kilograms, and the average sale price rose from Rs. 6.56 to Rs. 6.66 a kilogram.

The Gairkhata Tea Co. Ltd (a Doora's garden) has made a profit of Rs. 3.65 lakhs, against Rs. 3.52 lakhs, after transferring Rs. 86,763 (against Rs. 75,866) to depreciation. The taxable ordinary dividend has been reduced from 20 percent to 11 percent, absorbing Rs. 82,500. It offers a yield of 5.1 percent at the present price of Rs. 21.50 a share of Rs. 10 each. Taxation is allocated Rs. 1.68 lakhs, including Rs. 3,753 for the super profits tax. The provision was Rs. 1.30 lakhs in 1961. Development rebate reserve is allocated Rs. 9,201 (against Rs. 42,663) and general reserve Rs. 1.40 lakhs

Sums of Rs. 3,500 and Rs. 6,000 have been transferred from development rebate reserve and tax provisions no longer required. The crop rose from 100,575 kilograms to 126,816 kilograms and the average sale price from Rs. 4.22 to Rs. 4.64 a kilogram. The estimate for 1963 provides for a crop of 130,000 kilograms at a cost of Rs. 6.15 lakhs.

Gillanders Tea Group Results

THE results of the Gillanders group of tea Companies for the year ended December 1962 have been published. The Tengpani Tea Co. Ltd (an Assam garden) has earned a profit of Rs. 4.20 lakhs, against Rs. 4.62 lakhs in 1961, after providing Rs. 91,873, against Rs. 93,042 for depreciation. The taxable ordinary dividend has been cut from 30 percent to 22.5 percent, absorbing Rs. 1.80 lakhs. At the present price of Rs. 35 lakhs, the yield is 6.4 percent. Income works out to 6.4 percent. The yield a share of Rs. 10 each, the yield tax and super tax absorb Rs. 2.27 lakhs, against Rs. 2.11 lakhs and the super profits tax Rs. 9,033. Development rebate reserve is allocated Rs. 10,174 (against Rs. 10,455) and general reserve Rs. 40,000. The crop was 338,378 kilograms, against 348,111 kilograms. The average sale price rose from Rs. 6.59 to Rs. 6.81 a kilogram.

The profit of the Ananda-Bag Tea Company Ltd (an Assam garden) has declined from Rs. 4 lakhs to Rs. 3.50 lakhs, after transferring Rs. 90,188 (against Rs. 86,880) to depreciation. The taxable ordinary dividend has been reduced from 32.5 percent to 20 percent, absorbing Rs. 1.40 lakhs. It offers a yield of 6 percent at the present price of Rs. 33.25 a share of Rs. 10 each. Income tax and super tax absorb Rs. 1.98 lakhs (against Rs. 1.82 lakhs), the super profits tax Rs. 4,599, development rebate reserve Rs. 12,631 (against Rs. 199) and general reserve Rs. 45,000. The crop declined from 311,077 kilograms to 301,064 kilograms, but the average sale price improved from Rs. 6.58 to Rs. 6.71 a kilogram.

The profit of the Betjan Tea Co. Ltd (an Assam garden) has increased from Rs. 5.37 lakhs to Rs. 5.57 lakhs, after providing Rs. 1.03 lakhs (against Rs. 97,198) for depreciation. The taxable ordinary dividend has been cut from 45 percent to 30 percent, absorbing Rs. 1.92 lakhs. The yield is 9.8 percent at the present price of Rs. 30.56 a share of Rs. 10 each. Income tax and super tax absorb Rs. 3.21 lakhs and the super profits tax Rs. 27,117. The crop was 408,929 kilograms, compared with 408,269 kilograms, and the average sale price rose from Rs. 6.56 to Rs. 6.66 a kilogram.

The Gairkhata Tea Co. Ltd (a Doora's garden) has made a profit of Rs. 3.65 lakhs, against Rs. 3.52 lakhs, after transferring Rs. 86,763 (against Rs. 75,866) to depreciation. The taxable ordinary dividend has been reduced from 20 percent to 11 percent, absorbing Rs. 82,500. It offers a yield of 5.1 percent at the present price of Rs. 21.50 a share of Rs. 10 each. Taxation is allocated Rs. 1.68 lakhs, including Rs. 3,753 for the super profits tax. The provision was Rs. 1.30 lakhs in 1961. Development rebate reserve is allocated Rs. 9,201 (against Rs. 42,663) and general reserve Rs. 1.40 lakhs

(against Rs. 50,000). The crop declined from 533,092 kilograms to 504,794 kilograms, but the average sale price was higher from Rs. 4.88 to Rs. 5.46 a kilogram.

The profit of the Jutlibari Tea Co. Ltd (an Assam garden) has risen from Rs. 5.83 lakhs to Rs. 6.32 lakhs, after increasing depreciation from Rs. 88,295 to Rs. 1.17 lakhs. The taxable ordinary dividend has been reduced from 30 percent to 20 percent, absorbing Rs. 1.80 lakhs. The yield is 6.3 percent at the present price of Rs. 31.50 a share of Rs. 10 each. Taxation is allocated Rs. 3.72 lakhs, of which the super profits tax is Rs. 27,989. Tax provision was Rs. 2.69 lakhs in 1961. Development rebate reserve absorbs Rs. 3,196 (against Rs. 2,121) and general reserve Rs. 60,000 (against Rs. 25,000). The crop was 533,423 kilograms, against 539,472 kilograms. The average sale price improved from Rs. 5.99 to Rs. 6.50 a kilogram.

Sone Valley Cement Pays More

ALTHOUGH the production, sales and despatches of the Sone Valley Portland Cement Co. Ltd improved substantially during the year ended December 1962, the profit has not proportionately risen due to increases in production costs. The current trends do not encourage the hope that these costs will be held down. In fact, the last Central Budget has increased the burden of taxation. Railway freight has also been raised. The war risks insurance scheme has placed a heavy financial burden on the Company. The present formula for fixing packing charges has added to costs. The directors do not think that the production incentive which has been given by the Government will be of any help because the ceiling of production after which bonus will accrue to the Company has been fixed at too high a level. The output of cement rose from 203,694 tons in 1961 to 234,640 tons in 1962.

The profit has risen from Rs. 16.29 lakhs to only Rs. 16.83 lakhs, after providing Rs. 4.50 lakhs (against Rs. 4.74 lakhs) for depreciation. The taxable ordinary dividend has been increased from 6 percent to 8 percent which is more than two-and-a-half times covered, and offers a yield of 8.4 percent at the present price of Rs. 4.75 a share of Rs. 5 each. Development rebate reserve is allocated Rs. 6,500 (against Rs. 25,000), general reserve Rs. 2.35 lakhs and taxation Rs. 8.80 lakhs, including Rs. 60,000 for as super profits tax. The tax provision was Rs. 3.70 lakhs in 1961. The carry-forward is Rs. 7,167, against Rs. 45,303 brought in.

Bridge and Roof Maintains Dividend

ALTHOUGH the turnover and profits of the Bridge and Roof Co. (India) Ltd have improved for the year ended December 1962, compared with 1961, the directors have not been able to recommend a higher dividend since the Company has had to provide large funds for the super profits tax and development rebate reserve. Sales rose from Rs. 2.58

crores to Rs. 3.86 crores. The profit has increased from Rs. 18.97 lakhs to Rs. 21.52 lakhs, after transferring Rs. 9.40 lakhs (against Rs. 9.30 lakhs) to depreciation. A taxable ordinary dividend of 30 percent has been maintained. It is more than five times covered and offers a yield of 5.7 percent at the present price of Rs. 52.25 a share of Rs. 10 each. Taxation is allocated Rs. 9.60 lakhs (against Rs. 10.66 lakhs), development rebate reserve Rs. 3.94 lakhs (against Rs. 1.14 lakhs) and general reserve Rs. 6.20 lakhs (against Rs. 3.62 lakhs).

Kumardhubi Fireclay Repeats

THE gross profit of the Kumardhubi Fireclay and Silica Works Ltd has been Rs. 39.98 lakhs for the year ended December 1962, against Rs. 39.03 lakhs in 1961. A taxable ordinary dividend of 18 percent has been maintained, absorbing Rs. 5.40 lakhs. Depreciation is allocated Rs. 9.63 lakhs (against Rs. 7.56 lakhs), taxation Rs. 11.50 lakhs (against Rs. 13 lakhs), the super profits tax Rs. 1.90 lakhs, development rebate reserve Rs. 4.28 lakhs (against Rs. 87,500), the debenture redemption reserve fund Rs. 1 lakh (the same), plant renovation reserve Rs. 1.75 lakhs (against Rs. 3.35 lakhs) and general reserve Rs. 1 lakh (against Rs. 2.35 lakhs). The carry-forward is Rs. 25,499, against Rs. 34,654 brought in.

The directors say that production was lower than in 1961 because of the interruption of work following the implementation of the modernisation programme in the firebrick section. The output of sillimanite and insulation has been substantially higher. So the turnover has risen from Rs. 2.11 crores to Rs. 2.26 crores. The Company has been making efforts to diversify production in view of the declining demand for silica, especially from the steel industry. The expansion and modernisation schemes, which have already been undertaken, are expected to be completed by the end of 1963.

Metal Distributors Expands Interests

METAL Distributors Ltd has earned a profit of Rs. 18.82 lakhs during the period from 6th November, 1961, to 31st December, 1962. The Company's financial year has been changed to the end of December. A taxable ordinary dividend of 10 percent has been declared, which absorbs Rs. 5.70 lakhs. The yield works out to 9.9 percent at the present price of Rs. 5.06 a share of Rs. 10 each on which only Rs. 5 is paid up. The dividend was 27.5 percent for the previous year. But the ordinary paid-up share capital has, meanwhile, been raised from Rs. 24.36 lakhs to Rs. 57.05 lakhs. A sum of Rs. 57,294 was provided for depreciation (against Rs. 42,556) before arriving at the profit figure. General reserve is allocated Rs. 36,240, taxation Rs. 10.97 lakhs (against Rs. 9.76 lakhs) and the super profits tax Rs. 1.23 lakhs. The carry-forward is Rs. 6,405, against Rs. 1.34 lakhs brought in.

The Company has decided to invest funds in the share capital of Multimetals Ltd and Cominco Binani Zinc Ltd. It has already paid a sum of Rs. 5.63 lakhs towards share subscription in Multimetals Ltd, which is building a factory in Kota; construction work will start in June 1963. Output may begin by the middle of 1964. The Cominco Binani Zinc Ltd will soon issue

shares and Metal Distributors will subscribe for 420,000 shares of Rs. 10 each.

Kettlewell Bullen Repeats

THE profit of Kettlewell Bullen and Co. Ltd is Rs. 14.50 lakhs for the year ended December 1962, against Rs. 14.87 lakhs in 1961, after providing Rs. 34,373 (against Rs. 35,631) for depreciation. A taxable ordinary dividend of 10 percent has been repeated. It is covered more than three-and-a-half times, and works out to a yield of 7.2 percent at the present price of Rs. 139 a share of Rs. 100 each. Taxation absorbs Rs. 5.50 lakhs (the same) and general reserve Rs. 7 lakhs (against Rs. 3.50 lakhs). The carry-forward is Rs. 86,447, against Rs. 2.36 lakhs brought in.

National Insurance Earns More

THE National Insurance Co. Ltd has declared a taxable ordinary dividend of 6 percent for the year ended December 1962, absorbing Rs. 1.50 lakhs. The yield is 3 percent at the present price of Rs. 200 a share of Rs. 100 each. The profit has amounted to Rs. 3.06 lakhs, against Rs. 1.76 lakhs in 1961, after transferring a loss of Rs. 3.08 lakhs from the miscellaneous department and making other adjustments. Taxation absorbs Rs. 78,000 (against Rs. 55,000) and general reserve Rs. 70,797. The carry-forward is Rs. 1.72 lakhs, against Rs. 1.14 lakhs brought in. The fire department earned a net premium of Rs. 19.54 lakhs (against Rs. 18.35 lakhs), the marine department Rs. 8.78 lakhs (against Rs. 10.43 lakhs) and the miscellaneous department Rs. 36.88 lakhs (against Rs. 35.6 lakhs).

Anderson Wright Pays Again

ANDERSON Wright Ltd has made a profit of Rs. 4.16 lakhs for the year ended December 1962, compared with Rs. 1.83 lakhs in 1961, after providing Rs. 4,428 (against

Rs. 5,213) for depreciation. A taxable ordinary dividend of 6 percent has been declared, against nil. It is covered more than thrice. Taxation is allocated Rs. 2.13 lakhs (against Rs. 80,567), leaving a carry-forward of Rs. 11,325, against Rs. 45,223 brought in.

General Industrial Society Fares Well

THE General Industrial Society Ltd has already installed 38 broad jute looms which have begun to operate. The remaining 48 looms will be installed during the current year. The Company has applied to the Government to install further 114 broad looms. These looms, it is expected, will improve the profits substantially. Despite the unsatisfactory supply of raw materials, the working of the cast iron foundry has improved. The cotton mill of the Company has been shifted to the former property of the Champdany Jute Co. Ltd. Some 9,240 spindles with ancillary machinery have already been installed. The target of installing 18,128 spindles should be completed during the current year. The directors state in their report for the year ended December 1962 that this cotton mill unit should contribute to the profits greatly.

The profit has improved from Rs. 6.51 lakhs in 1961 to Rs. 19.56 lakhs, after increasing depreciation from Rs. 6.01 lakhs to Rs. 9.86 lakhs because the jute mills have done very well. Sales rose from Rs. 2.58 crores to Rs. 2.96 crores. A taxable ordinary dividend of 13 percent has been declared on the increased capital. The ordinary share capital has been raised from Rs. 10.80 lakhs to Rs. 43.20 lakhs, divided into shares of Rs. 10 each. Some 216,000 rights ordinary shares have been issued at a premium of Rs. 3.50 a share. It is proposed to issue 12,500 cumulative redeemable preference shares in the near future. The dividend is more than thrice covered, and offers a yield of 8.3 percent at the present price of Rs. 15.62. Taxation absorbs Rs. 10 lakhs (against Rs. 2.50 lakhs), general reserve Rs. 2.30 lakhs and development rebate reserve Rs. 3.35 lakhs (against Rs. 1.20 lakhs). The carry-forward is Rs. 16,522, against Rs. 1.88 lakhs brought in. The directors say that the new jute crop

which is expected to be a bumper one, may present a serious problem to the industry as the price of fibre in Pakistan is much lower than in India. The Indian mills are already holding substantial stocks of raw jute. It is hoped that the world offtake of jute goods will continue to increase.

Bhartia Electric Steel Pays More

THE Bhartia Electric Steel Co. Ltd has produced satisfactory results for the year ended December 1962. The taxable ordinary dividend has been increased from 10 percent to 12.5 percent, which is more than five times covered and offers a yield of 8.7 percent at the present price of Rs. 14.37 a share of Rs. 10 each. The profit has improved from Rs. 10.12 lakhs in 1961 to Rs. 34.13 lakhs, after providing Rs. 5.69 lakhs (against Rs. 5.60 lakhs) for depreciation and Rs. 30,000 (against Rs. 2.74 lakhs) for development rebate reserve. Taxation provision is Rs. 22.30 lakhs (against Rs. 4.65 lakhs). As a result of the super profits tax, the tax burden has amounted to nearly 70 percent of the total profits. General reserve is allocated Rs. 12 lakhs, leaving a carry-forward of Rs. 5,246, against Rs. 46,999 brought in. Sales rose from Rs. 1.05 crores to Rs. 1.69 crores.

Commenting on the prospects, the directors mention that the steel foundry has a fairly well-filled order book. The demand for steel castings has been encouraging, and a large contract for the supply of centre buffer couplers is expected. The Company has applied to the Government for permission to increase the capacity for castings by 12,000 tons a year. It is proposed to set up a new works for the purpose, and the estimated cost is about Rs. 50 lakhs in fixed assets. The directors are considering ways and means to raise the necessary funds.

Expansion Projects of Mafatlal Mills

MR. Arvind N. Mafatlal, chairman of the Mafatlal group of mills—Mafatlal Fine, Standard Mills and Sassoon Spinning—disclosed at the

recent annual meeting of these Companies that the management proposed to set up a new textile unit exclusively for export purposes. The mill, which will be located in Dewa (Madhya Pradesh) will have 25,000 spindles and 500 automatic looms. The project is estimated to cost about Rs. 2.5 crores to Rs. 3 crores, and it will be implemented jointly by all the three mills. The Government of India has agreed to release the necessary foreign exchange required for the import of plant and machinery. This unit will help the mills to earn foreign exchange to buy more foreign cotton, dyes and chemicals under the export incentive scheme.

Mr. Mafatlal also disclosed at the annual meeting of the Standard Mills that the National Organic Chemical project has been almost finalised and that the new concern would come into being within a few months. He said that the original scheme has undergone certain changes, and that all these are for the better. The outlay on the project is likely to be considerably higher than that visualised earlier, but it will now be a more paying proposition. Mr. Mafatlal added that as soon as the scheme was cleared by the Government of India, he would be going abroad to finalise a collaboration agreement with a consortium of well-known foreign firms. He assured the shareholders of the Standard Mills, which has sponsored the scheme, that they will have a better chance of participation in the share capital of the project. The factory is likely to be located in Maharashtra.

Of the three textile Companies belonging to the Mafatlal group, only Mafatlal Fine has reported some improvement in its working results and is able to maintain the dividend for 1962. Standard Mills and Sassoon Mills have suffered a setback in profits despite larger sales and have reduced the dividends. Referring to the fall of Rs. 50 lakhs in the gross profit of Standard Mills from Rs. 1.76 crores to Rs. 1.26 crores, Mr. Mafatlal said that the fall was due to reasons beyond the control of the Company. Costs of production have risen while the selling prices of cloth have been controlled. The prices of Indian cotton and the wage bill have recorded sizable increases. The Company has had to pay extra bonus during the year and retrenchment compensation cost Rs. 5 lakhs.

Commenting on the current year's prospects, the chairman stated that

he did not see any bright future for the cotton textile industry in view of the marked increase in the manufacturing costs. But he assured shareholders that the management was trying its best to effect economies wherever possible and improve the efficiency of the mills. He hoped that the profits for 1963 would be around the previous year's level.

As for modernisation and rehabilitation, Mr. Mafatlal said that the spinning departments of the mills had already been modernised and the Company was embarking on the replacement of old looms. It was the intention of the Company gradually to plough sufficient funds for modernisation. Answering shareholders' criticism of the dividend cut in 1962, the chairman said that the cut had been made "very reluctantly" in order to present a realistic picture of the Company's position in the context of the super profits tax levy. The board could, of course, have maintained the dividend by drawing on the reserves, but the chairman added that if reserves were raided they would not be available for the investment programme of the Company. He assured shareholders that the dividend for 1963 would be maintained at the previous year's level. Referring to the Dewas unit, the chairman said that the acquisition of this unit had been a profitable investment.

Referring to the working of Mafatlal Fine, the chairman stated that the mills had sufficient stocks of cotton, both Indian and foreign, to meet the requirements for the whole year. However, the Company has had to change its pattern of production according to the supply of cotton following the reduction in its quota of imported cotton. The present stocks of cloth with the mills were quite reasonable, and the mills did not experience any difficulty in marketing their goods. The Company had received orders for defence. It was said to have successfully experimented with the manufacture of mixed fabrics, and it would go into that line when terylene is made available indigenously. The chairman disclosed that the Company had no liability for super profits tax for 1962, and that it might have to pay between Rs. 75,000 and Rs. 1 lakh for 1963 if the profits were maintained around the previous year's level.

Speaking to shareholders of Sassoon Mills, Mr. Mafatlal said that the management preferred to pursue a conservative dividend policy in view of the large rehabilitation and renovation programme that the Company had in mind, involving expenditure of more than Rs. 1 crore. He said it was not a wise policy to declare higher dividends and then ask the shareholders to subscribe to new shares for cash to meet the capital expenditure. Answering shareholders' enquiries, the chairman said that the management would think of diversification of activities only after it had completed its modernisation programme.

Amar Dye-Chem Rights Issue

AMAR Dye-Chem Ltd fared very badly in 1962, with sales down by about 16.5 percent from Rs. 1.70 crores to Rs. 1.42 crores, and the gross profit falling by as much as 42 percent from Rs. 64.06 lakhs to Rs. 36.59 lakhs. The directors have blamed the Company's disappointing performance on the change in the Government's policy concerning the assessment of Customs duty and heavy imports of naphthols and bases which created a strong pressure on prices. In his speech at the annual meeting on 12th June, the chairman, Mr. A. K. Doshi, stated that the Company's naph-

thol plant worked at 67 percent and base plant at 45 percent of their installed capacity. He criticised the Government's policy in not allowing the private sector to proceed with its plans to manufacture intermediates under apprehension that the output of the proposed public sector plant may not be easily marketed.

The Company's programme for the manufacture of intermediates has been delayed and its future appeared uncertain at present. The chairman's assessment of the outlook for the current year suggested that the Company is likely to fare better than last year. Its sales were expected to increase because of the additions of new items to the range of production. The Company's T.P.M. plant which was commissioned in March last, will be manufacturing all the items included in the first phase by the end of the current year. Amar Dye-Chem has already started manufacturing reactive dyes and has put in the market one item and three more items will be introduced soon. Production of methylene blue has commenced; malachite green and brilliant green units were cited and brilliant green units were put on stream last month. The pigment plant, it is expected, will go into production in the third quarter of this year. Mr. Doshi said that the cut in imports of dyes against the export incentive licences of textiles from 65 percent to 25 percent and from 65 percent to 25 percent in the import duty on naphthols and fast bases from 20 to 50 percent will help to improve the offtake of the Company's products.

However, the textile industry is buying its requirements in limited quantities because of the financial stringency. It will, therefore, be some time before the Company is able to revert to its normal production which had to be curtailed last year because of heavy imports. As for exports, the chairman said that the performance was satisfactory. In 1962, the Company exported 20 tons of dyes valued at Rs. 1.50 lakhs. And in the first five months of the current year, orders worth Rs. 1.90 lakhs have already been received.

In reply to shareholders' questions, the chairman stated that the production of T.P.M. series of dyes this year was expected to be around 50 tons, which was proposed to be stepped up to 300 tons next year. The output of reactive dyes this year would be around 15 tons and this is proposed to be increased to 250 tons next year. The Company also hopes to reach full production of 250 tons of pigments next year. The chairman added that since no decision had yet been taken on the Company's various applications for the manufacture of intermediates, it has been decided to restrict the issue of additional capital to Rs. 30 lakhs instead of Rs. 45 lakhs originally proposed to meet the immediate requirements. The shares are to be issued at a premium of Rs. 25 each.

National Rayon Disappoints

SHAREHOLDERS of the National Rayon Corporation made no secret of their extreme disappointment over the drastic cut in the dividend for 1962 from Rs. 22 to Rs. 16 a share, when they got together at their annual meeting on 13th June. They spoke in angry tones, and not without reason. The Company had not fared well last year, but certainly not so very badly as the dividend cut appeared to suggest. As against a fall of Rs. 19 lakhs in the Company's gross profit from Rs. 2.44 crores to Rs. 2.25 crores, the equity shareholders' share was reduced by as much as Rs. 14.48 lakhs from Rs. 53.05 lakhs to Rs. 38.57

lakhs. And that was not all. The shareholders have also suffered heavily as a result of depreciation in the value of their investments. Surely, the heavy fall in the shares of National Rayon from the 1962 high of Rs. 584 cannot be explained away in terms of the general slump in the stock market. For National Rayon scrip have continued to display pronounced weakness even when the rest of the market has been trying to put up a steady show recently.

Perhaps the market's reaction to the Company's poor performance in 1962 as also to the cut in the dividend, might not have been so bad but for the persistent rumours that all was not well with the Company's tyre cord plant. That National Rayon shares should have been marked down to a new low of Rs. 320 on 14th June—the day after the annual meeting—indicated that the market was not completely satisfied with the chairman, Mr. Kasturbhai Lalbhai's assurance that the quality of the tyre cord is good and up to the standard. He informed shareholders that two leading tyre manufacturers—Dunlop and Firestone—had placed bulk orders with the Company and had been using its yarn for some time; the third leading tyre manufacturer—Goodyear—has just placed a trial order and the fourth—Ceat Tyres—has approved the yarn and the Company expects its orders very shortly.

When pressed for more details about the working of the tyre cord plant which is expected to be a more profitable proposition than rayon yarn when it is able to work to full capacity, the chairman said that the plant had a rated capacity of 200 tons a month while the current production amounted to only 90 tons and of this also, the Company was able to sell only 50 percent for the present. The chairman refused to give the breakdown figures for closing stocks of yarn, chemicals, etcetera, which have recorded a steep rise from Rs. 11.06 lakhs to Rs. 1.15 crores, on the unconvincing plea that such information is against the interests of the Company. Mr. Kasturbhai Lalbhai conceded that the Company might not have experienced all the difficulties it has had to face in connection with the tyre cord plant if it had secured the requisite foreign collaboration, but he added that the Company had engaged the services of foreign technical experts.

While all is not yet well with the tyre cord plant, in that actual production is far short of the capacity and sales are still disappointingly poor, the Company has also been experiencing considerable difficulties concerning the disposal of its rayon yarn with the result that yarn stocks have been piling up with the Company. The Textile Commissioner has appointed a committee to go into the question of how best to avoid the accumulation of stocks, but the chairman has expressed the fear that this is likely to cause delay and give no relief in reducing the stocks with the spinnings. He has suggested that the card holder who does not lift his quota within a prescribed time unit should lose his right of obtaining the yarn. The Company, he added, has been successfully manufacturing finer deniers of yarn in sizable quantities for some time past, and these have been well received by the weaving industry.

In reply to shareholders' enquiries, however, the chairman conceded that the quality of bleached yarn of South India Viscose and Baroda Rayon was superior to that of National Rayon. But the Company had placed orders for the necessary machinery to improve the quality of its yarn. Mr. Kasturbhai Lalbhai stated that the Development Council for Rayon had recommended that the target for staple fibre industry should be in-

creased to 100 million kilograms during the third plan and that the Company had expressed a desire to get its share of this capacity. The installation of a 100-ton a day plant for the manufacture of sulphuric acid is said to be progressing satisfactorily and the plant is likely to be commissioned towards the beginning of next year. The bulk of the plant and machinery for expansion of the caustic soda plant has been received at the plant site.

The chairman was unable to say whether the Company would be able to fare better in the current than last year. National Rayon has lost one month's production due to the recent labour strike and the subsequent lock-out and the loss therefrom is estimated around Rs. 30 to Rs. 40 lakhs. The rayon plant is still suffering from the after-effects of the labour trouble, but it is hoped that the plant will reach its normal working soon. All the other plants of the Company, however, have reached normal working since the lifting of the lock-out. Referring to the dividend outlook, the chairman said that the management would try to maintain the dividend at least for a year or two. He defended the dividend cut and said that the dividend declared for the year was about the best that the management could have done. Out of the Rs. 16, only Rs. 6 a share is being paid out of the year's profit, and the balance is being met out of the transfer of funds from the reserves. The chairman disclosed that the arrears of depreciation amounted to Rs. 97 lakhs, and that the Life Insurance Corporation held 197 equity shares and 33,755 preference shares.

Colour-Chem Pays the Same

THE preliminary report on the working of Colour-Chem Ltd for the year ended March 1963 shows that the Company has done much better than in the previous year. The gross profit has risen by about 27.5 percent from Rs. 95.89 lakhs to Rs. 1.25 crores. In view of the substantially larger tax liability, the directors propose to maintain the dividend for 1962-63 at Rs. 12 a share. The net dividend, however, works out to 84p a share higher as the entire amount will be tax-free. In 1961-62, a sum of Rs. 9.20 a share was free of tax whereas for 1962-63, the whole dividend of Rs. 12 will be free of tax in the hands of shareholders.

The directors have been advised that out of the year's profits, a sum of Rs. 15.93 lakhs is expected to be exempt from tax under Section 84 of the Income Tax Act, 1961. This amount has been transferred to a separate reserve styled as "special reserve—profits exempt under Section 84", and it is proposed to transfer Rs. 15 lakhs out of this special reserve to a dividend reserve for payment of dividend. An application is being made to the income tax authorities to certify this figure for tax exemption.

From the year's profit of Rs. 123 crores, the directors have provided Rs. 10.79 lakhs (against Rs. 8.49 lakhs) for depreciation, Rs. 4,782 (against Rs. 3,805) for development rebate reserve, Rs. 64.29 lakhs (against Rs. 41.50 lakhs) for taxation, Rs. 26 lakhs (the same) for general reserve, Rs. 42,700 (against nil) for gratuity reserve and Rs. 6 lakhs (against Rs. 2 lakhs) for dividend equalisation reserve. After providing for the payment of the proposed dividend, there remains a small surplus of Rs. 1.134 to be carried forward, against Rs. 91.291 brought in. At its current price of Rs. 325 cum-dividend, the share of Colour-Chem offers a net return of

Polychem Commissions Styrene Monomer Plant

MR. Ramdas Kilachand, chairman of Polychem Ltd, performed on 4th June the muhurat ceremony to mark the commissioning of the Company's styrene monomer plant on the Chembur near Bombay. Polychem is the first and only manufacturer of polystyrene in India and the styrene manufactured at the Chembur plant will be used mainly for its polystyrene plant in Goregaon (Bombay), which is already in production. With the regular production of styrene monomer some time in August, the Company's licensed capacity of the polystyrene plant will be raised from 12 million lbs to 15 million lbs a year. The capacity of the Chembur plant is 15 million lbs a year.

When the plant goes into full production, it will save foreign exchange worth about Rs. 1 crore now spent annually on imports. The project has been undertaken in collaboration with the well-known Dow Chemical Company of the U.S.A., and the erection contract for the plant is being executed by H. K. Ferguson Co. of the U.S.A. The Company's alcohol distillery in Nira, near Poona, which will supply alcohol, one of the main raw materials for the manufacture of styrene monomer, is expected to go into production some time next month. The distillery would involve a capital outlay of about Rs. 45 lakhs. The styrene monomer project in Chembur is estimated to cost about Rs. 2.55 crores, of which the foreign exchange cost is around Rs. 1 crore.

New Victoria Mills Disappoints

THE New Victoria Mills Co. Ltd of Kanpur reports extremely disappointing results for 1962. While sales are down by only 13.2 percent from Rs. 3.71 crores to Rs. 3.22 crores, the gross profit has shrunk from Rs. 24.50 lakhs to a mere Rs. 1.29 lakhs. And after providing Rs. 7.85 lakhs (against Rs. 6.67 lakhs) for depreciation, the year's working shows a loss of Rs. 6.56 lakhs, against a profit of Rs. 17.83 lakhs in the preceding year. Adding to the year's loss Rs. 2.60 lakhs concerning items relating to previous years and Rs. 4,000 written off deferred revenue from Rs. 4.44 lakhs being development rebate reserve written back, there is a debit balance of Rs. 4.76 lakhs.

Together with the previous outstanding losses of Rs. 46.24 lakhs, the total loss to be carried forward to the balance sheet amounts to Rs. 51 lakhs. Besides, the Company has a contingent liability of Rs. 28.45 lakhs on account of accumulated arrears of preference dividends for 14 years up to the end of 1961. The Company has a subscribed capital of Rs. 61.17 lakhs, and it has no reserves. The Rs. 2.50-paid share of New Victoria Mills is quoted nominally around Rs. 1.53.

Particle Boards to Enter Market Soon

PARTICLE Boards of India Ltd which proposes to set up an up-to-date factory in Bhandup (Bombay) for the manufacture of particle boards and its bye-products out of

firewood, logging and forest management wastes, industrial woods, etcetera, is entering the market to raise funds through public subscription to meet part of the cost of the project. The Company has been licensed to manufacture 6,000 tons a year of particle boards on a single shift basis, but the layout of the factory is stated to have been arranged for subsequent expansion also. Most of the raw materials to be used by the Company are waste materials which have low economic value, but can be profitably converted into particle board. Because of its varied uses, the manufacture of particle board has developed at a very fast pace in advanced countries.

The immediate minimum demand for particle board in India is estimated around 30,000 tons a year, and this is expected to increase rapidly as indigenous supplies become available. The construction work of the factory buildings has already been taken up on hand. Major portion of the imported machinery, it is said, will be ready for shipment. Erection of the machinery, it is expected, will begin in August, and will be completed by October. If all goes well, the factory is likely to be commissioned by October-end.

The Company has an authorised capital of Rs. 1 crore, made up of Rs. 60 lakhs in equity shares of Rs. 100 each and Rs. 40 lakhs in 9.3 percent taxable redeemable cumulative preference shares of Rs. 100 each. The issued capital will be Rs. 30 lakhs, consisting of Rs. 25 lakhs in equity shares and Rs. 5 lakhs in preference shares. Out of this, the promoters have already taken up five equity shares of the value of Rs. 5 lakhs. The directors, their friends and associates have agreed to subscribe for 4,344 equity shares. Equity shares worth Rs. 6,65,600 are being reserved for allotment to G. Siempelkamp and Company of Krefeld, West Germany, which is collaborating in the venture, against 30 percent of the net value of the machinery payable to the firm. The remaining 5,000 preference shares and 9,000 equity shares are being offered for public subscription. The board of directors includes Mr. N. K. Petigara (chairman), Mr. A. N. Kilachand, Mr. G. R. Jolly, Mr. K. L. Jolly, Mr. M. P. Shah, Mr. R. B. F. Kuka and Mr. Dieter Siempelkamp.

New India to Issue Bonus Shares

THE New India Assurance Co. Ltd reports satisfactory progress during 1962. The aggregate net premium income of all the departments shows an increase of about 8 percent from Rs. 12.65 crores to Rs. 13.67 crores—a new all-time record. In his chairman's statement, Mr. A. D. Shroff says that the increase in the premium income would have been more marked but for several factors beyond the control of the Company. The reduction in the fire premium rates in July 1962, the general setback in business following the Chinese aggression and disturbed conditions of business abroad, including restrictive legislation in a number of countries, adversely affected the Company's business. The total claims paid and outstanding rose from Rs. Rs. 6.30 crores (50 percent of the premium income) to Rs. 7.35 crores (53.7 percent). The bulk of the increase in the premium income accrued from the miscellaneous and marine departments.

The net premium income of the fire department is up by only Rs. 5 lakhs from Rs. 4.42 crores to Rs. 4.47 crores, while that of the marine department has risen from Rs. 2.44 crores to Rs. 2.93 crores and that of the miscellaneous department from

Rs. 5.79 crores to Rs. 6.27 crores. The claims cost of the fire department has gone up from 37.3 percent to 44.5 percent and that of the miscellaneous department has risen from 50.2 percent to 57.4 percent. The claims cost of the marine department, however, shows an impressive improvement from 74.1 percent to 60 percent. The expense ratio of the fire department shows a slight improvement from 44.5 percent to 44.1 percent. The expense ratio of the miscellaneous department is higher at 35.2 percent, against 33.6 percent, and that of the marine department is up from 24.8 percent to 25.3 percent. Commission, expenses of management and other charges of all the departments have increased from Rs. 4.52 crores (35.7 percent) to Rs. 4.92 crores (36 percent).

After adding Rs. 76 lakhs to the departmental reserve, the Company's profits from the various departments amount to Rs. 1.04 crores, against Rs. 1.02 crores in 1961. The fire department earned a profit of Rs. 59.9 lakhs (against Rs. 72.3 lakhs) and miscellaneous department Rs. 37.4 lakhs (against Rs. 51.1 lakhs). But the marine department which had incurred a loss of Rs. 20.9 lakhs in 1961, has made a profit of Rs. 6.9 lakhs in 1962. In addition to the departmental profits, the Company earned Rs. 19.3 lakhs (against Rs. 17 lakhs) by way of investment income and Rs. 24 lakhs (against Rs. 14.3 lakhs) by way of net profit on sale of investments. After making some adjustments, the Company's gross profit amounts to Rs. 1.4 crores, compared with Rs. 1.28 crores in 1961. The provision for taxation has been increased from Rs. 53.65 lakhs to Rs. 67.34 lakhs. Allocation to the general reserve has been drastically reduced from Rs. 20.60 lakhs to Rs. 3.50 lakhs, but the provision for exchange reserve has been stepped up from Rs. 5.50 lakhs to Rs. 15 lakhs. A sum of Rs. 10 lakhs (against nil) has been set aside for dividend equalisation reserve, and gratuity reserve receives Rs. 4.69 lakhs, against nil in the previous year.

The dividend has been maintained at Rs. 4.50 a share of Rs. 15, and it will absorb Rs. 42.72 lakhs which is to be paid out of the dividend reserve to which a sum of Rs. 43.65 lakhs has been transferred from the year's profit. The bonus of Rs. 1.20 a share is recommended for payment out of the capital reserve. As a result of the year's operations, the Company's total funds have been augmented by Rs. 93 lakhs to Rs. 13.49 crores. The Company proposes to issue bonus shares of Rs. 15 each (fully paid-up) in the proportion of one bonus share for every five existing shares held. These bonus shares will participate in the dividend to be declared for 1963. The book value and market value of the Company's investments amount to Rs. 11.42 crores and Rs. 11.91 crores, respectively. The Company has contributed Rs. 5.58 lakhs to the National Defence Fund.

Polson Pays Less, but Interim May Follow

DESPITE satisfactory improvement in both sales and gross profit, the directors of Polson Ltd have reduced the dividend for 1962 from Rs. 17 to Rs. 14 a share mainly because of the substantially larger provision for taxation. Mr. Morarji J. Vaidya, who presided over the Company's annual meeting in the absence of the chairman, Mr. D. M. Khatau, assured shareholders that the board would sympathetically consider their plea for an interim dividend in view of the reduction in the Company's liability concerning the super profits tax to around Rs. 97,000, against a provision of Rs. 2.19 lakhs in the year's accounts. Mr. Vaidya

added that the Company's progress in the current year so far was quite satisfactory. Considerable progress has been made in the experimental production of cheese at the Patna factory and most of the difficulties have been overcome. The product will be put on the market when the management is satisfied about maintaining the quality.

The Company's experiments on the cultivation of chicory on a commercial scale are stated to have met with very good success. But unfortunately, the Company's application for the import of chicory processing machinery has been turned down by the Government in spite of the recommendations by the Coffee Board and the Director of Industries, Bombay. The management is, however, pursuing the matter. Complaining about the acute shortage of tinplates, Mr. Vaidya said that the management was examining alternate modes of packing. He also said that the production of ghee had been discontinued as the specifications laid down by the Government were unattainable in the Kaira district. The production would be resumed as soon as the necessary modification of the specifications is announced.

South India Insurance Fares Well

THE South India Insurance Co. Ltd reports satisfactory results for 1962, mainly because of the improved performance of the marine and miscellaneous departments. The premium income of the fire department is slightly lower at Rs. 48.48 lakhs, against Rs. 50.42 lakhs. After providing 40 percent of the premium income as reserve for unexpected risks, additional reserve has been reduced from Rs. 7.25 lakhs to Rs. 4.85 lakhs. The profit of the fire department is down from Rs. 11.25 lakhs to Rs. 9.19 lakhs. The premium income of the miscellaneous department is lower at Rs. 49.78 lakhs, against Rs. 51.64 lakhs. After maintaining the reserve for unexpected risks at 40 percent and reducing the additional reserve from Rs. 5.69 lakhs to Rs. 4.98 lakhs, the loss on the miscellaneous department has come down appreciably from Rs. 5.34 lakhs to a mere Rs. 51,697.

The premium income of the marine department shows a rise from Rs. 21.24 lakhs to Rs. 25.18 lakhs. The reserve for unexpired risks has been maintained at 100 percent and the loss in this department has come down from Rs. 6.30 lakhs to Rs. 4.70 lakhs. The combined net premium income of all the three departments is slightly higher at Rs. 1.24 crores, compared with Rs. 1.23 crores in 1961. But there has been a rise in the net claims paid and outstanding from Rs. 55.28 lakhs to Rs. 60.40 lakhs, that is, from 44.8 percent to 48.9 percent of the premium income. Commission and expenses of management are higher at Rs. 59.45 lakhs (48.1 percent), against Rs. 54.04 lakhs (43.8 percent). The Company's profit for 1962 amounts to Rs. 7.15 lakhs, against Rs. 2.59 lakhs in the preceding year. The provision for taxation amounts to Rs. 1.63 lakhs, against Rs. 82,500. A sum of Rs. 59,000 (against Rs. 19,500) has been set aside for reserve for bad and doubtful debts, and general reserve receives Rs. 50,631 against nil. Allocation to gratuity reserve has been increased from Rs. 24,992 to Rs. 60,421.

The directors have transferred Rs. 4 lakhs to the dividend reserve out of which Rs. 3.71 lakhs is being drawn for the payment of the proposed dividend of 15 percent. The year 1962 was the first year of the Company's working after its amalgamation with the Bombay Fire and General Insurance Co. Ltd and the Sentinel Assur-

ance Company Ltd with effect from 1st January, 1962. The comparative figures for 1961 are the combined results of the three companies. The directors are confident that considerable saving in expenses will be effected during the current year.

Usha Refrigeration Share Offer

USHA Refrigeration Industries Ltd—a Shri Ram Group enterprise—which is setting up a factory in Hyderabad (Andhra Pradesh) for the manufacture of hermetically sealed compressor units for air-conditioners and refrigerators is entering the market on 24th June to raise Rs. 24.50 lakhs through public subscription. The list will close on 3rd July or earlier, but not before 27th June. A sum of Rs. 2.58 a share is payable on application and an equal amount on allotment. The balance of Rs. 5 a share will be called later.

The well-known U.S. firm of Westinghouse Corporation is collaborating in the venture. The company will take over the export business of the American firm in the adjoining countries. When in full production, the Company will save foreign exchange to the extent of about Rs. 1.5 crores a year, which is now being spent on the import of sealed compressors for air-conditioners and refrigerators. Sealed compressor units are being manufactured in India at present only in very small quantities and this has been hampering the development of the domestic refrigeration appliances industry.

The Government has estimated the demand for air-conditioners and refrigerators around 120,000 units by 1965. Besides, export prospects are considered to be fairly promising. The Company has an authorised capital of Rs. 2 crores made up of Rs. 1.50 crores in equity shares of Rs. 10 each and Rs. 50 lakhs in preference shares of Rs. 100 each. The issued capital is Rs. 50 lakhs in equity shares. Shares worth Rs. 7.50 lakhs have already been subscribed and paid-up. Shares of the value of Rs. 18 lakhs are being reserved for promoters, directors and their friends. The balance of Rs. 24.50 lakhs is being offered for public subscription.

In addition to the share capital of Rs. 50 lakhs, the Company will raise Rs. 66 lakhs by way of long-term loans. The Industrial Credit and Investment Corporation of India has agreed, in principle, to make a loan of Rs. 40 lakhs to the Company for this project. The factory building is being constructed. The board of directors consists of Lala Bharat Ram (chairman), Lala Charat Ram, Mr. B. S. Agarwal, Mr. T. R. Gupta, Mr. D. N. Mitra, Mr. K. L. Poddar, Mr. P. S. Rau, Mr. Shri Dhar and Mr. S. P. Virmani.

Ferro Alloys Corporation Cuts Dividend

ALTHOUGH the Ferro Alloys Corporation Ltd has reduced the dividend for 1962 from 11 percent to 9 percent, less tax, its working results cannot be considered unsatisfactory. Despite a 22 percent decline in the gross sales from Rs. 2.91 crores to Rs. 2.26 crores, the gross profit shows only a slight setback from Rs. 55.12 lakhs to Rs. 34.87 lakhs. After providing Rs. 10.69 lakhs (against Rs. 8.47 lakhs) for depreciation, Rs. 24,702 (against Rs. 54,602) for development rebate reserve and Rs. 8.16 lakhs (against Rs. 5.50 lakhs) for taxation, the net profit amounts to Rs. 15.77 lakhs (against Rs. 20.80 lakhs). With

Rs. 29,996 brought forward from the previous year, the disposable surplus amounts to Rs. 16.07 lakhs. The directors have provided Rs. 5.50 lakhs (against Rs. 3.50 lakhs) for general reserve and a sum of Rs. 75,000 (against Rs. 90,000) has been set aside for bonus to staff. The preference dividend absorbs Rs. 1.56 lakhs and ordinary dividend Rs. 7.20 lakhs (against Rs. 8.80 lakhs).

After making various appropriations and some minor adjustments, there remains a surplus of Rs. 1.20 lakhs to be carried forward. The directors state in their report that the trial production of ferro-silicon has been very satisfactory and an application has been made to the Government for permission to manufacture the same on a commercial scale. The Government, it is said, is negotiating another barter deal with the U.S.A. through the State Trading Corporation of India for exports of ferro-manganese against imports of cotton. The Company, it is expected, will get the largest quota for supply of ferro-manganese under the proposed barter. Since the close of the year, the Company has received on account payments from the S.T.C. aggregating Rs. 51.85 lakhs, against hypothecation of ferro-manganese stocks. A final decision on the proposal for the installation of electrolytic manganese and manganese sulphate plant is expected to be taken shortly.

Hyderabad Asbestos Cement Issue

HYDERABAD Asbestos Cement Products Ltd reports excellent results for 1962, which have enabled the directors to declare a maiden dividend of 40 percent, subject to tax. The Company's production has gone up by 50 percent and its turnover has increased by nearly 43 percent from Rs. 1.40 crores to Rs. 2 crores. After providing Rs. 5.55 lakhs for depreciation, Rs. 3.32 lakhs for development rebate reserve and Rs. 12 lakhs for taxation, the net profit is shown at Rs. 18.44 lakhs, against Rs. 7.29 lakhs in 1961. The directors have set aside Rs. 5 lakhs for general reserve and the proposed dividend absorbs Rs. 1.18 lakhs. After wiping off the accumulated losses of Rs. 11.66 lakhs, there remains a balance of Rs. 60,000 to be carried forward. The directors state that the Company has made substantial progress in its modernisation and rehabilitation programme.

New India Investment Pays Less

THE New India Investment Corporation Ltd has suffered a setback in its results for 1962. Its gross profit is down by about 41 percent from Rs. 6.83 lakhs to Rs. 4.01 lakhs, and the dividend has been reduced from Rs. 6.50 to Rs. 5 a share, less tax. Appropriations include Rs. 37,838 (against Rs. 58,990) for commission to secretaries and treasurers, Rs. 80,000 (against Rs. 2.25 lakhs) for taxation and Rs. 2.25 lakhs (against Rs. 2 lakhs) for general reserve. A sum of Rs. 1.08 lakhs has been transferred from the taxation reserve to provide for the payment of the proposed dividend, which absorbs Rs. 1.55 lakhs, against Rs. 2.02 lakhs, leaving a sum of Rs. 46,930 to be carried forward, against Rs. 36,902 brought in.

Devashola (Nilgiri) Tea Does Well

▲ **RECORD** tea crop and a higher price realisation provide some encouraging features of the working

of the Devashola Tea Estates for the year ended December 1962. Although the total sale proceeds of tea exceeded the previous year's figure by Rs. 1,12,889, this appreciable increase in gross revenue was entirely absorbed by cost increases. The net profit for 1962 amounts to Rs. 1.09 lakhs, after providing Rs. 1.40 lakhs for taxation including super profits tax; against the previous year's net profit of Rs. 1.29 lakhs after providing Rs. 1.12 lakhs for taxation. Adding to the year's net profit, Rs. 1,973 brought forward, Rs. 12,000 transferred from dividend equalisation reserve, Rs. 1,490 transferred from fluctuation in investment reserve, and Rs. 6,989 transferred from development rebate reserve, the total available for appropriation comes to Rs. 1.31 lakhs. Out of this, miscellaneous provisions amount to Rs. 1,749. The interim dividend at 7½ percent has absorbed Rs. 63,000. The proposed final dividend of 7½ percent will absorb Rs. 63,000. The total dividend for the year is 15 percent on the increased capital (against 20 percent). The balance of Rs. 3,300 is carried forward to the next year.

A record crop of 188,643 kilograms of made tea was secured during the year, exceeding the previous record in 1960 by 14,272 kilograms. The all-in-cost of production was Rs. 4.79 a kilogram, against Rs. 4.36 a kilogram in the previous year. The income a kilogram of tea was Rs. 5.30, against Rs. 5.11 in 1961, resulting in a net profit of 51p a kilogram. The estimated crop for 1963 is 175,000 kilograms of made tea, at an estate cost at Rs. 3.50 a kilogram.

Travancore Electro-Chemical Industries

TRAVANCORE Electro-Chemical Industries Ltd has incurred a net loss of Rs. 64,641 for the year ended December 1962. The balance-sheet, therefore, shows a total loss of Rs. 6,73,288 including the brought forward loss of Rs. 6,08,646. This is carried forward to the next year. The directors' report says that the major portion of the machinery has already arrived at the factory site. The balance is expected to arrive shortly. The Company's factory buildings are being constructed, and it is expecting to start the erection of machinery by July 1963. As for the subscribed capital, the directors state that it was Rs. 24,25,500 according to the last balance-sheet. Further capital of Rs. 10 lakhs was offered to shareholders in the first instance, and subsequently, the unsubscribed capital was offered to other interested parties. So far, Rs. 7.02 lakhs worth of shares have already been subscribed. The directors are making arrangements for getting subscribed the balance of the issued capital as also for getting the necessary funds for additional requirements inclusive of working capital.

Udayagiri Rubber Skips Again

NO dividend is recommended on the ordinary shares by the directors of the Udayagiri Rubber Co. Ltd for the year ended December 1962, as the working of the Company has resulted in a net loss of Rs. 42,641. This is the second successive year for the dividend to be skipped. The working loss is attributed to the fall in the market price of tea; the average sale price declined from Rs. 3.97 a kilogram in 1961 to Rs. 3.54 in 1962. The balance brought forward from the previous year was Rs. 13,440, and there was an excess

CAPITAL, 20th June, 1963.

provision for income tax amounting to Rs. 3,217. Adding to these amounts, a transfer of Rs. 32,254 from general reserve, there is a total of Rs. 48,913. Out of this, the preference dividend for the year at 7.84 percent, subject to tax, amounts to Rs. 6,272. The balance is adjusted against the carried forward loss of Rs. 42,641. The tea crop harvested during the year was 132,852 kilograms at Rs. 3.20 a kilogram, against an estimate of 133,900 kilograms at Rs. 3.17 a kilogram. The estimated crop for 1963 is 133,900 kilograms at a cost of Rs. 3.09 a kilogram. The average price realised for tea in 1962 is Rs. 3.54 a kilogram.

New Capital Issues

SIX companies have been authorised by the Controller of Capital Issues to raise fresh capital totalling over Rs. 1.83 crores. Two companies are issuing bonus shares and one cumulative preference shares plus equity. Two companies are public sector enterprises. Two companies in the private sector are issuing part of their capital to their foreign collaborators. The consent in all cases is valid for 12 months. The following are the details:

The New India Industries Ltd, Baroda, has been allowed to issue further capital of Rs. 3,99,800 divided into 3,998 equity shares of Rs. 100 each as bonus shares on capitalisation of the Company's reserves to a like extent. Out of this, bonus shares of the approximate value of Rs. 1,03,070 will be allotted to the Company's three non-resident shareholders.

The A. P. V. Engineering Company Private Ltd is issuing capital of Rs. 24,49,000 divided into (i) Rs. 7,94,000 as fully paid up bonus shares, (ii) Rs. 3,50,000 in equity shares to be issued to Messrs A. P. V. Holdings Ltd of Sussex, England, partly for cash and partly against supply of plant and machinery, and (iii) Rs. 13,50,000 in equity shares for cash at a premium of Rs. 2 a share to be issued in India.

Associated Iron and Steel Industries Ltd, Ramganjmandi, Rajasthan, is issuing fresh capital of Rs. 40 lakhs divided into 30,000 equity and 10,000 9 percent cumulative redeemable preference shares of Rs. 100 each for cash at par. The money is needed for financing the manufacture of malleable iron castings, etcetera.

Assam Gas Company Ltd, Shillong, a State Government undertaking, is to issue further capital of Rs. 9,00,000 divided into 9,000 equity shares of Rs. 100 each, to be subscribed privately by the Government of Assam. The proceeds will be used in connection with the Naharkatiya-Namrup gas pipeline.

Hindustan Photo Films Manufacturing Company Ltd, Ootacamund, wholly owned by the Central Government, has been given consent to issue further capital of Rs. 90 lakhs, divided into 9,000 equity shares of Rs. 1,000 each, to be subscribed by the Central Government in cash at par. The capital will be used for the manufacture of raw films for the cinema industry, X-ray and roll films.

John Fowler (India) Ltd, Bombay, is to issue Rs. 15,97,000 in equity shares of Rs. 10 each, of which 53,000 shares will be issued to Vokes Group Ltd, U.K., and Streamline Filters Ltd, U.K., and the balance of 106,700 shares will be offered to the public for cash at par. The capital is required for the manufacture of Filters and Elements and tobacco processing machinery.

CAPITAL, 20th June, 1963.

The Stock Markets

TURNOVER CONFINED MOSTLY TO CLEARING SHARES

Wednesday Evening.

THERE has been a temporary flutter in Indian Iron shares in the Calcutta stock market during the past week. At first the price was boosted by short-covering, combined with replacement purchases, on the news of an increase in the retention price of steel and pig iron. Later there has been a reaction due to profit-taking in the absence of follow-up support. The announcement of the increase in retention prices has been welcomed because it will help steel companies to finalise their accounts for the year ended March 1963.

The increase has been granted by the Government to cover rises in production costs arising from two factors. The first is that the producers are entitled, under the escalation clause, to a rise in the price of steel if the production costs go higher due to increases in the price of coal, freight, royalty and wages. Secondly the cost of the emergency risks insurance scheme has to be offset. But there has been some disappointment because the increase to cover the latter item of cost will be effective only from 1st July, 1963, while the emergency risks insurance scheme has been enforced much earlier. In any case, there is no justification to interpret the present increase in the retention price bullishly as it had been done earlier, since it will not give any windfall income to the companies. It merely aims at compensating the producers for rises in the production costs. There is no doubt that but for the increase, the steel companies would have suffered.

In other shares, turnover has been sluggish and has largely been confined to clearing scrip. There has been a general inclination to take profit whenever possible because operators are restrained by various uncertainties. The political situation has, meanwhile, taken a turn for the worse. The possibility of a reshuffle of the Central Cabinet due to the resignation of two Ministers has called for caution. There is little evidence that Indo-Chinese relations will improve in the near future, although an imminent attack by the Chinese is thought unlikely.

The stock market has felt the shortage of funds caused by subscriptions to the new issues. The corporate news too has not been very helpful in that several companies have been obliged to prune dividends because of heavier taxation, including the super profits tax. The reiteration by Mr. Morarji Desai, Central Finance Minister, that the super profits tax should not be regarded as a temporary measure has chilled enthusiasm. Operators have preferred to await the resumption of forward trading, which is likely early next week.

Among engineering shares, Indian Standard Wagon, Braithwaite, Burn and Texmaco have met with scattered support. Coal shares have been subdued and small business has passed over in Burrakur, Bengal and East Indian. Cotton mill shares have been hesitant because of uncertainties concerning the prices of cloth and yarn. The prices of Bowreah, Dunbar, Bharat Commerce and J. K. Rayon have been softer.

Miscellaneous shares have fluctuated narrowly and turnover has been small. Among clearing shares, attention has largely been concentrated on Hindustan Motors, Indian Aluminium, Dunlop Rubber, Rohtas and

Indian Cable. Alkali Chemical, Angelo Brothers and Britannia Biscuit have been bought. Goodyear India and Union Carbide have been neglected. New shares have generally weakened. Dr. Paul Lohmann and Isaac Holden have been easier. Among electric company shares, Calcutta Electric have been sluggish. Interest has declined in managing agency shares. Martin Burn, Shaw Wallace and Jardine Henderson have been freely available. Paper shares have been idle and routine business has passed in Orient, Titagur and Sirpur. Sugar shares have been difficult to deal in in the absence of buyers; investors have been disappointed by the discouraging outlook. Stray business has been transacted in tea shares and prices have shown little change. Bank shares have been neglected. There has been support for selected jute shares, although the slow offtake of jute goods by foreign countries has caused some concern. Champdany, Barnagore, Fort Gloster and Birla have been taken. Government securities have been steady. Support has been extended to short and medium-dated securities but there are few sellers. The 3-percent Conversion loan 1986 has been quoted around Rs. 63.60.

Bombay

SUPPORT FOR STEEL SHARES RISE IN RETENTION PRICES WELCOMED

Wednesday Evening.

THE support for steel shares has been a prominent feature of the Bombay stock market during the past week. Operators have been cheered by the rise in the retention price of steel and pig iron. It is prices of steel believed that the Tata Iron and Steel Company would show improved results for the year ended March 1963 because of bigger production and the increase in the retention price of steel. Whether the Company will be able to improve on its previous dividend remains to be seen.

Turnover has been fairly large in other forward shares, although the trend has generally been downwards towards the close. The earlier buying spree due to resumption of forward trading seems to have fizzled out. Most of the bulls have preferred to take profit since they had bought several scrip at cheaper prices on cash account earlier. The absence of follow-up support has been a major restraining factor. Investors and operators have been rather cautious in view of the fact that the after-tax profits of several companies have been squeezed by heavier taxation and the super profits tax. Dalal Street has been disappointed by the statement of the Central Finance Minister that the super profits tax is not a temporary fiscal measure.

Tata Steel ordinary have closed at Rs. 139.50, but Indian Iron have been subdued at Rs. 22.92 because of pressure from Lyons Range. In the engineering section, Tata Locomotive have been steady on hopes of improved working. Scattered support has been extended to Premier Construction, Mukand Iron and Larsen and Toubro. Motor-vehicle shares

have met with selective support. Hindustan Motors and Premier Automobiles have been taken at current prices.

The prices of cotton mill shares have generally drifted downwards on account of profit-taking. Bombay Dyeing have nevertheless been steady on knowledgeable support. Standard have met with selective buying on the news that the Company has been going ahead with its programme to diversify activity. Century, Kohinoor, Simplex, Svadeshi and India United ordinary have been quoted lower. Gokak and Morarjee have been quietly steady.

Miscellaneous shares have shown mixed trends. In the chemical section, Tata Chemical have gained on hopes of improved results during the current year. Indian Dyestuff have reacted on profit-taking. Sugar shares have been quietly steady. Belapur have been taken at Rs. 175 and Walchandnagar Industries at Rs. 141.50. Mining shares have been subdued, and Shivrampur Syndicate have been offered without attracting support. Among steamship company shares, Scindia Steam have recovered on replacement buying. Great Eastern Shipping have been neglected. In the cement section, Associated Cement and Digvijay have been supported. Bombay Burmah have reacted on profit-taking. Voltas and Tata Oil have lost in the absence of buyers. Rayon shares have been quiet. National Rayon have reacted on the discouraging statement made by the chairman of the Company at its annual general meeting. Synthetics and Chemicals have reacted on a predominance of sellers.

Nominal business has been done in bank shares. Bank of India and Central Bank have been transacted. Among electric supply companies, Ahmedabad have been steady. Interest has also been taken in Bombay Suburban and Tata Hydro.

Madras

SHORTAGE OF FUNDS LIMITS ACTIVITY INVESTORS REMAIN HESITANT

Tuesday Evening.

THE Madras stock market has been steady during the past week. Turnover has increased in clearing shares because of the resumption of forward trading. Operators have, nevertheless, turned cautious towards the close on account of lack of support from outside sources. Activity has been restrained by the shortage of funds. Investors have been hesitant to buy shares considering that several companies have been forced to cut their dividends as a result of the super profits tax. In view of the smaller dividend yields, it is thought that there may be a further downward adjustment of prices.

Government securities have been steady and scattered support has been extended to selected State Government loans. Sugar shares have generally been neglected. Good tea and coffee shares have been fairly steady because of good crop reports. There is little interest in rubber shares. Textile shares have gene-

rally weakened on fears that the prices of cloth and yarn might be further reduced. In the miscellaneous section, interest has largely been confined to selected cement and chemical shares.

Among banks, Canara have been quoted at Rs. 80. This Bank proposes to issue 50,000 ordinary shares of Rs. 50 each at a premium of Rs. 15 a share. Of these, 41,000 will be offered as rights shares in the proportion of one new share for every three held, 3,000 will be offered to the employees of the bank and the remaining 6,000 will be offered to its constituents. Among electric supply companies, West Coast have been steady at Rs. 18.37.

Among sugar shares, E.I.D. have recovered to Rs. 37.12 and Deccan to Rs. 9.80. Mysore have been quiet at Rs. 47.75. In the planting section, Blue Mountain have been taken at Rs. 2.35 and Cochin Malabar at

Rs. 5.95. Consolidated Coffee have been transacted at Rs. 18.65 and Periakaramalai at Rs. 3.08. Ouchterlony have been taken at Rs. 3.70. Karikode have been sold at Rs. 7.69 on declaring a taxable ordinary dividend of 7.5 percent. Manar have been transacted at Rs. 2 on declaring a taxable ordinary dividend of 5 percent. Kalasa have been sold at Rs. 3.83 on declaring an interim taxable ordinary dividend of 7.5 percent.

Among textile shares, South India Viscose have been quiet at Rs. 128, as have been Travancore Rayon at Rs. 24. Lakshmi have fallen to Rs. 135 on cutting the taxable ordinary dividend from 25 percent to 20 percent. Premier Mills have been bought up to Rs. 300 on declaring a taxable ordinary dividend of 20 percent. Janardana have been sold at Rs. 69.50 on paying a taxable ordinary dividend of 6 percent. Cambodia have been steady at Rs. 13 on paying

a taxable ordinary dividend of 9 percent. Tirumurti have been offered down to Rs. 127 on declaring a taxable ordinary dividend of 6 percent. Buckingham and Bangalore Woollen have been steady on reports that the strike in the mills would be called off soon.

In the miscellaneous section, Aluminium Industries have been steady at Rs. 17.25 and Ashok Leyland at Rs. 7.55. Among cement shares, Dalmia have been bought up to Rs. 13.15 and India Cement at Rs. 5.60. Among chemical shares, Mettur Chemical have been wanted at Rs. 12.30 and F.A.C.T. at Rs. 7.20. Seshasayee Paper have been steady at Rs. 7.55, but Enfield have been quiet at Rs. 9.25 on declaring a taxable ordinary dividend of 4 percent. Business has passed in Kirloskar Electric at Rs. 20 and in Madras Rubber at Rs. 16.75. Spencer have been steady at Rs. 21.50 and Textool at Rs. 152.

CAPITAL, 20th June, 1963.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.)

UNDER TONE STEADIER AT CLOSE

London

BUSINESS AT LOW LEVEL

UNDER TONE STEADIER AT CLOSE

London, 19th June.

THE stock market was completely dominated by the Profumo affair last week, and this kept business at a low level. Actual selling was light, but on most days, buyers were inactive resulting in prices drifting. More recently, however, selective buying developed on the view that the Government will have time to straighten things out prior to the general election. There was a distinctly more confident atmosphere immediately in front of the Commons debate, and although the market resumed cautiously afterwards, the cheap buyers reappeared. Equities recouped lost ground, and from an economic point of view, there is everything to push prices higher. The latest survey of the F.B.I. was particularly encouraging and the Chancellor of the Exchequer was optimistic in his views of the future.

Gilt-edged were uncertain and prices were lower. Dollar stocks followed the wake of Wall Street, and in the main, the trend was towards lower levels. Gold shares were quiet, but a comparatively steady, with the tendency improving in the last day or so in response to Cape support. Finance issues made good showing. Oils moved narrowly and indecisively, but rubbers met with quiet selective buying.

The tyres
most trusted
under
all conditions

Rain, mud or rough, broken ground—however dangerous or difficult the road surface, you can trust Dunlop Truck and Bus tyres to give you the maximum in safety and long service. Sturdy casing—deep, safety-pattern tread—and more re-treads per tyre—add up to the lowest cost per mile for the operator.

DUNLOP
TRUCK AND BUS TYRES
lowest cost per mile

DUNLOP—LONGEST MANUFACTURING EXPERIENCE IN INDIA

SAVE TODAY

SPEND TOMORROW

A thrifty person saves today and saves his tomorrows while a spendthrift spends today and spends away his tomorrows as well.

Money

THE CALCUTTA MONEY MARKET

DECREASE IN ADVANCES CONTINUES

Wednesday, 19th June.

THERE has been a fair decrease in the general level of advances in the Calcutta money market during the past week. The credit given to the cotton, woollen and jute mills is almost unchanged. But there has been a decline in the requirements of the sugar mills, as well as the iron, steel and engineering industries. Advances for foodgrains and seeds are also slightly smaller. In the inter-bank market, conditions are noticeably easier and the call rate is down to 4½ percent.

The exchange market has been dull, with a meagre supply of tea and gunny bills. The demand for remittance has been poor. The tendency in sterling has been mixed, gains and losses being fractional in most cases.

SILVER WAS STEADY IN CALCUTTA during the week. The price rose from the previous week's level of Rs. 260.75 to Rs. 261.75 quoted today for ready delivery. The London and New York prices were 110½d and 127.4 cents. There was no trading in forward silver and gold.

DURING THE WEEK ENDED 14TH JUNE, Government of India Treasury bills for Rs. 110,86,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 18th June. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.410 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.350 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 24th June.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 19th June to 22nd June at Rs. 99.431 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 12th June to 15th June amounted to Rs. 1.35 crores.

THERE WAS A FALL OF RS. 6.91 CRORES to Rs. 2,307.08 crores in active notes, according to the return of the Reserve Bank of India for the week ended 14th June, 1963, while the total note issue was Rs. 58 lakhs bigger at Rs. 2,336.06 crores. Notes held in the Banking Department consequently rose by Rs. 7.59 crores to Rs. 28.98 crores. Deposits of the Government of India fell by Rs. 12.01 crores to Rs. 58.94 crores, but those of other Governments rose by Rs. 85 lakhs to Rs. 7.96 crores. Balances of scheduled banks were Rs. 4.24 crores larger at Rs. 79.04 crores. Balances held abroad increased by Rs. 1.64 crores to Rs. 6.96 crores. Investments were Rs. 13 lakhs smaller at Rs. 234.25 crores. Loans given to scheduled banks declined from Rs. 24.53 crores to Rs. 6.91 crores, of which advances against usance bills were Rs. 2.86

HINDUSTAN LEVER LIMITED

CHAIRMAN, MR. P. L. TANDON'S ADDRESS

The following speech was delivered by Mr. P. L. Tandon, Chairman, at the Annual General Meeting of Hindustan Lever Limited held at Bombay on Wednesday, 12th June, 1963.

It gives me great pleasure to welcome you to this Annual General Meeting of the Company. The Report and Accounts for the year 1962, in which is incorporated the Report of the Directors on our activities, has been with you for some time. May I therefore take it as read, except perhaps to say that your Company has had the good fortune of experiencing a year of record sales and profits before tax. Our performance in the nationally vital field of exports, where there has been a big jump from Rs. 71 lakhs to Rs. 201 lakhs in 1962, has also given us much satisfaction. Later in the proceedings I shall be happy to answer any questions you may wish to ask.

Continuing our past practice of choosing a particular aspect of your Company, I shall today talk to you about the management of Hindustan Lever.

Hindustan Lever is a concern whose main activities in the past have had to do with oils and fats, though it is now branching out more widely in the field of foods, both human and animal. The primary purpose is to manufacture and sell a wide variety of products, mainly consumer goods to be used by the housewife, including cooking oils and fats, soaps and non-soapy detergents, toilet preparations and dehydrated vegetables. The extent of our business is largely governed by the standard of living of the average household; as the standard rises, the wider the range of the products becomes and the more we sell of them. The organisation of the Company is designed to fulfil this purpose to the best advantage.

Ancillary to the manufacture and sale of goods is the side of the business which is concerned with the procurement of materials. We purchase oils and fats and other basic commodities mostly within the country and partly, though decreasingly, in world markets. Part of our local purchases is in the form of oilseed to be crushed in our own oil mill.

All our activities are carried out in a highly competitive environment.

A Public Company

Ours is today what we call an integrated Company. All its activities, ramifications and products, including buying, production and marketing are contained within the one Company. But this was not always so. Up to 1944 we operated as three main companies, each with its own managing director and its own set of services such as buying, accounts and transport. At that time, although the three companies continued as separate statutory entities, their entire operations were combined under a single control at the top to obviate the overlapping and duplication of services. While a common pool of all services was formed, marketing still continued in three separate groups, each known by the name of one of the three companies. The Hindustan Vanaspathi Company Ltd. handled vanaspathi, Lever Brothers (India) Ltd. soaps and United Traders Ltd. toilet preparations. The head office and the main branches in Bombay, Calcutta, Delhi and Madras offered to each of the three marketing companies all services from the common pool.

1956 was a historic year for us. We became a public limited company and placed a part of our share capital on the market. The operations of the three

private companies, named above, were amalgamated into one under the name of Hindustan Lever Limited. This made our integration complete, for now all our activities and products were grouped under the single new name, which is our image to the public.

In the running of the Company we have always been guided by our responsibilities to the parent company, the employees, the consumers and the community. When we became a public company, to these responsibilities was added yet another, namely, to the Indian shareholders. This introduced a new influence on our thinking insofar as we had to ensure a balance between the current interests of the shareholders and their future interest in the development of the Company. And out of the public shareholding arises the duty to conform with the utmost care to the elaborate Company Law with its meticulous but understanding administration. We have much appreciated the opinions, criticisms and advice which we have received at our Annual General Meetings, and the integration of Unilever with Indian shareholders has been a happy and stimulating one.

History and purpose therefore define the job of managing Hindustan Lever. The task never remains constant. People and economies are always changing, more so in a developing country like ours. There are constantly arising new leads and pressures, in response to which changes in our organisation are also necessary. These changes are seldom radical, but they must be made as we meet new problems. This is therefore a description of the organisation just as it is at the present moment.

Before describing the organisation, may I give you a few figures to illustrate the size of the operation. We have 6,521 employees, of whom 363 are managers, 717 office staff, 538 engaged in the field, 554 service staff, 347 technical and 4,002 general operatives in the factories. Of the managers, 55 per cent have risen from within the ranks while 45 per cent were recruited either directly as managers or as management trainees. There are only 13 expatriates, mainly in technical specialist functions and training Indians to take over. It is possibly true to say that Hindustan Lever is foremost today among the large Indian companies forming part of international groups, in having vested its management and control in the hands of Indian managers.

Moreover, our Company was among the first of the many overseas companies within the Unilever group to start this process and today has probably gone further along this road than any. The process itself is so well known inside Unilever and is progressing, at differing rates, in so many countries that a new word "Isation" has been coined as a generic term of reference.

The Board

The number of Board members has varied up to a maximum of eight. They are all in the whole-time employment of the Company and have risen from within. They have no stake in the Company other than the very important one that as professional managers they are wedded to their jobs. They do not participate in the profits, nor invest in the Company; they are subject to the same terms and conditions as other managers, perhaps with added self-restraint. I would not like to venture any generalisations about working directors, against outside advisory directors, an oft-discussed issue in India. It is argued that a working director is so immersed

on occasions requires a delicate balancing.

Ad-hoc Committees

A further and typical part of our method of management is the periodic setting up of small committees on an ad-hoc basis to investigate and report upon some major problem that the business faces. These committees are small but high-powered with experts on each of the fields impinging on the problem; usually not more than three or four people in all—sometimes including Directors, sometimes not. We find this device a very useful one. The members of the committee take some time off from the normal pressure of business to consider calmly and dispassionately the particular problem. The problem is always of sufficient magnitude that it is clear to all concerned that the best decision is important to the Company as a whole. We value these committees also because they provide an opportunity for the younger executives for training and development and for participating in the overall management of the Company at a high level and as part of a team in such a way that it will help them to take on ever more important duties of management.

Advisory Departments

As I have already explained to you, our main purpose is the manufacture and sale of consumer goods, and the departments responsible for these are termed operating. All other functions of the Company exist to assist manufacture and sale, and are called service and/or advisory. The aim of the technical and marketing departments is straightforward, but I would like to say a little more about the role of the service and advisory departments. These are departments like economics, operational statistics, planning, marketing research, organisation and methods, legal, who are primarily advisory; and others like transport, accounts, buying and personnel, who both advise and give service.

The quality of decisions in the Company rests primarily on the quality of top management, but can be enormously improved by the effectiveness of its advisory services. Their whole purpose is to offer experience and knowledge of a specialised quality in specialised fields. As the name suggests, the advisory and service departments do not give orders, they can only suggest, recommend or persuade. Whether their advice or service should be accepted or not must always rest with the operating units, who have the ultimate responsibility for their results. To be successful, the advisory and service departments should have a broad understanding of the different operations of the Company, for their opinions are unlikely to impress with theory alone. Also necessary is complete intellectual integrity. To make their advice acceptable, tact is a primary qualification. As advisers never have the satisfaction of personally putting their ideas into practice, and indeed sometimes the chagrin of seeing things going wrong because their advice was not accepted, to tact must be added considerable self-control. Ultimately success depends as much on those who advise as on those who do the job.

Control of the Company rests basically on four devices:

1. The operating plan
2. The capital expenditure budget
3. The overheads budget
4. The review of top management.

Annual Operating Plan

In September each year, marketing plans with clearly defined objectives for the ensuing year are fully discussed with the Board. At this meeting, advertising, distribution, establishment, sales tonnages, margins and estimated profits for the coming year are put forward. It should be mentioned that, although the detailed plans apply to one year only, the long term objectives of the Company are forcefully kept in mind and discussed. Once these plans

1971, at 7 percent, have given indications that the tax effort, needed for their next exercise, will make this year's collection pale into insignificance.

Meanwhile, the Planning Commission has developed into an organisation which wields power without responsibility. Its members have no fixed tenure of office, and they are neither subject to Government servants' rules nor answerable to Parliament. The Gresham's Law is now in operation within the Commission, the law being that bad money drives out good money from the market. A civilian specially brought here from Uttar Pradesh, Mr. A. N. Jha, found it impossible to function. He went on leave and has now been given another assignment. An unprecedented step followed as the Deputy Chairman appointed one Joint Secretary, Dr. S. R. Sen, as the Secretary of the Commission.

As for the fourth plan, on the assumption that the third plan targets will be reached in full, the food target has been fixed at 120 million tons, cotton at 9 million tons, coal at 180 million tons, fertilisers at 16 million tons in terms of nitrogen, steel at 18 million tons, including 3 million tons of pig iron, electricity generation at 25 million kilowatts and the production of industrial and agricultural machinery at two and a half times more than in the third plan targets. The target for crude oil is raised from 6 million tons to 14 million tons.

It is indicated that while the poorer sections of the population should be allowed to raise their consumption levels rapidly, presumably through pumping money, the rich and the relatively well-to-do should be asked to restrain further increases in consumption. There are, however, two snags in this paper exercise. The first snag is that the targets fixed for the third plan, on the basis of which projections are made, may not be reached. The second snag is that in a democracy under a state of emergency, there is a limit to keeping men and women in strait-jackets. The recent election reverses of the Congress in three places are a case in point. It is wrong to attribute these reverses to India's policy of non-alignment or to Mr. Nehru's China policy. It was a verdict against the Government's policy on high taxation, the steady rise in the cost of living, and the gold policy.

By 1966, it was claimed, India will reach the take-off stage. The Chinese

aggression could provide no explanation for any shortfall in the plan, because the plan is being fully implemented. The basic issue before the country is whether the Planning Commission has been making realistic plans, capable of being fully implemented. Masses are getting tired of big plans followed by begging delegations going abroad for financing the plans.

COAL

Developing Karanpura Field

After an extended study of the technical problems involved, a project agreement has recently been signed here between the Governments of India and France. Its purpose is to exploit the thick coal seams of the Karanpura coalfield in Bihar State by methods widely used in France. The aim is to recover a greater percentage of the coal present in the mines, using, in particular, the roof caving method and working the mines from top to bottom, without substantially increasing the capital cost. But these methods call for considerable engineering skill and mining experience which the French will share with the National Coal Development Corporation miners. On account of the project, the French Government will bear the foreign exchange cost worth Rs. 10 lakhs for personnel, depreciation of the equipment used, detailed plans and know-how, etcetera.

The project will be implemented by the National Coal Development Corporation and the Charbonnages de France, the State-owned undertaking operating all coal mines in France. An integrated team of French miners will be despatched to India. They will act as operators and demonstrators along with an Indian team of fully-trained miners and engineers in the mine selected for pilot experiment. The French mission is expected in November. It will stay in this country for about a year.

FRANCE

Pacts on Indian Imports

France signed an agreement for the supply of three *Caravelles* to the Indian Airlines Corporation last week. Another contract is envisaged between the Indian railways and Societe Nationale des Chemins de Fer for supplying electric locomotives. Renault of France has signed several agreements last week. They include a 9,000-ton forge plant in

Calcutta, a 7,000-ton forge plant in Orissa, a 9,000-ton forge plant in Hyderabad, an electric cable plant of 3,600 tons' capacity in Orissa and a tool and dies plant of 370 tons' capacity in Faridabad.

CANADA

Orders for Durgapur Plant

Canada has secured orders for three heat-treating furnaces for the alloy steel plant to be set up in Durgapur, largely in collaboration with Japan. The estimated cost of the three furnaces is placed at Rs. 1.55 crores, out of which Rs. 65.10 lakhs will be in foreign exchange. The order was awarded to Amco Furnace Construction, Ltd. Negotiations are being carried on for the fourth furnace costing Rs. 65.25 lakhs, including Rs. 55.70 lakhs in foreign exchange.

FOODGRAINS

Imports under Indo-U.S. Pact

The following is the text of the joint *communiqué* recently signed in Washington by Mr. S. K. Patil, Central Food and Agriculture Minister, and Mr. Orville L. Freeman, Secretary to the U.S. Department of Agriculture:

"When the present agreement comes to an end in June 1964, India will require a much smaller P.L. 480 agreement, possibly of the order of 10 million tons in four years. Because of increased production, India has taken less wheat than anticipated and it may, therefore, be possible to extend the period of time for wheat shipments under the current agreement for another year beyond 30th June, 1964. Since rice is the main staple food of India, Mr. Patil indicated his intention of building a stockpile of rice of nearly 2 million tons during the next four years.

"It was agreed that detailed discussions of measures which could be taken to meet India's future needs under P.L. 480 would take place later in the year since the current P.L. 480 agreement will have a year to run and may be extended. To meet India's immediate needs for rice, it was agreed that shipments of about 150,000 tons under the current agreement would be made available, with shipments to begin soon."

ROAD TRANSPORT

New Company to be Formed

The Government of India has decided to convert its departmental road

CAPITAL, 20th June, 1963.

transport organisation which was set up in November last to provide goods transport services in the Assam-north Bengal area, into a limited liability company. The latter, which may eventually have a fleet of 200 vehicles, will start with a paid-up capital of Rs. 50 lakhs. Provision will be made for enabling the State Governments to be served by the company, namely, Assam, West Bengal and Bihar, to join it later as shareholders, if they so desire.

The company, which is to be registered in Delhi, will have its head office in Siliguri—the centre of its operation. It will have a small board of directors, including a chairman, a managing director and a representative each of the Central Ministries of Finance and Railways. The association of a representative of the Central Ministry of Railways with the board of directors, it is expected, will facilitate rail-road co-ordination. A procedure will also be evolved to enable the company to function as out-agents of the railways and to have through-booking arrangements wherever necessary.

TELEX SERVICE

Charges for Messages

The national telex service will make its debut in India with the commissioning of the new exchanges installed in Calcutta, New Delhi, Bombay and Madras. The new exchanges will start operating from 24th June. The new services will enable teleprinter subscribers at these stations to communicate with each other, the calls being established by automatic dialling. The annual rental for the telex connection will be Rs. 800. Charges for the transmission of messages will be levied at the rates depending on the distance and duration of the call. For instance, a call from Delhi to Bombay will cost 40nP for a unit period of 12 seconds. Local call charges are 40nP for every three minutes. The same is the charge for booking telegrams to the local telegraph office. Any telegram intended for a telex subscriber will be transmitted on his teleprinter line, free of cost.

The existing Bombay-Ahmedabad service will continue, and Ahmedabad subscribers will also shortly have the facility of inter-connection to other stations.

I. T. I.

Sales Rise

The sales of goods manufactured by the Indian Telephone Industries, Bangalore, during 1962-63 exceeded Rs. 7.50 crores, against the original sales budget of Rs. 6.2 crores. The products of the Indian Telephone Industries have been in demand from outside India. Equipment worth about Rs. 4 lakhs is awaiting either inspection or shipment. The I.T.I. is scheduled to participate in the Indian exhibition in Moscow and at the Budapest fair during the current year.

The I.T.I. manufactures various types of equipment ranging from monitoring equipment for the All India Radio to line relays for the railways. While the "Priyadarshini" telephone—once developed by I.T.I. with improved efficiency and a pleasing appearance—manufactured during the year was three times the figure for the previous year.

Orders worth about Rs. 45 lakhs are now being executed to meet the requirements of the Indian railways for the supervisory remote control equipment. This type of equipment has been manufactured for the first time in India and is being used on a large scale in the railways.

CAPITAL, 20th June, 1963.

the Southern and South-eastern Railways.

The manufacture of co-axial equipment has also been taken up for the first time by the I. T. I. The equipment, designed in collaboration with the Tele-Communication Research Centre of the Posts and Telegraphs department, is now being manufactured to meet the requirements of the Patna-Sasaram section and the Bangalore-Poona section.

WOOL

Training at Grading Centres

On 10th June, a team of five wool experts from Australia started a school in Jodhpur to train 150 Indians in wool grading, classing and the management of wool grading sheds. The seven-month course comprises three-month theoretical and four-month practical training at Churu-Ganganagar, Jhunjhunu-Sikar, Bikaner and Nagaur grading centres.

The wool growers and their operatives as well as the wool trade will be encouraged to bring raw wool to the four grading centres for classing and grading by the trainees. This will enable the State to supply 10 million to 12 million lbs of wool to the textile industry.

If this pilot project proves a success, the Indian Council of Agricultural Research might start similar courses in wool grading in other wool growing areas of the country.

POWER

Contract for Swedish Firm

The Stockholm firm of civil engineers and contractors, S.E.N.T.A.B., has been awarded a £2-million contract by the Government of Rajasthan for the tunnelling work of a large power plant project. The assignment includes the driving and concrete lining of a 1.5-kilometre discharge tunnel for the power-station to be built under Chambal river, 50 kilometres from the city of Kotah. Of horse-shoe shape, the tunnel will be 12 metre high and 13 metre wide. The work will also comprise blasting operations for the power-station canal and for an open tail-race canal between the plant and the tunnel opening and from the tunnel outlet to the river bed. Swedish engineers and technical staff will conduct the work, which will start this summer and take more than three years. Swedish equipment will also be used to a large extent.

WHEAT

Research on Storage

Wheat-producing countries like India, which are faced with the storage problems, will be interested in a research work on the storage of the grain in Australia. It is being carried out by the Australian Commonwealth Scientific and Industrial Research Organisation (C.S.I.R.O.). Storage silos in the State of Victoria were kept under observation for a long period, and the scientists engaged in the work made tests of temperature, moisture content of the wheat, and of insect infestation down to depths of 35 feet.

These tests have shown that there is a relationship between the temperature and moisture content of the deterioration of the surface wheat. High temperature and high moisture content give rise to rapid deterioration. The reduction of either slows down the rate of deterioration. The C.S.I.R.O. says that it appears that cooling of the wheat by aeration is a very practical way of reducing sto-

rage losses. Equipment to study the resistance of wheat to low air flow is at present under construction for use in the tests.

AGRICULTURE

Refinance Corporation

An Agricultural Refinance Corporation is proposed to be established on 1st July, 1963. It will be mainly a refinancing agency for concerning itself with major agricultural development projects which cannot be satisfactorily financed either by central land mortgage banks or apex co-operative banks within their existing framework either on account of the amount of finance involved, or the terms of repayment. The schemes to be considered by the Corporation will be compact ones; assistance may be available for such schemes as (a) the financing of the reclamation and preparation of land so that, in particular, the irrigation facilities are fully used, (b) financing the development of special crops like arecanut, coconut, cashewnut, cardamom, orchards, vineyards, tea, and coffee; (c) development of mechanised farming, use of electricity through tubewells, pumping sets, etcetera, and (d) the development of animal husbandry, dairy

The authorised capital of the Corporation is Rs. 25 crores divided into 25,000 shares of Rs. 10,000 each, of which 5,000 shares of the value of Rs. 5 crores will be issued in the first instance. Out of these, 2,500 shares will be subscribed by the Reserve Bank, 1,500 by central land mortgage banks and State co-operative banks and 1,000 by scheduled banks, the Life Insurance Corporation and insurance and investment companies.

The shares of the Corporation will be guaranteed by the Central Government concerning both repayment of the principal and the payment of a minimum annual dividend. The shares of the Corporation will be deemed to be trustee securities for the purpose of the Insurance Act, 1938, and the Banking Companies' Act, 1949. The Government of India will provide an interest-free loan of Rs. 5 crores, the repayment of which will commence after 15 years from the date of the loan. The Corporation is also authorised to raise resources by accepting deposits for periods exceeding 12 months and by issuing bonds and debentures.

The management of the Corporation will vest in a board of directors, consisting of nine persons including the managing director. A Deputy Governor of the Reserve Bank of India will be the chairman of the board. Other directors will include three representatives of the Government of India, a representative of the Reserve Bank, a representative each of central land mortgage banks and State co-operative banks and one from scheduled banks, the Life Insurance Corporation, insurance and investment companies.

INDIANOIL BRINGS YOU

Mobil LUBRICANTS

known for their premium quality

Symbol of Progress! The Indian Oil Company now makes available to you Mobil automotive and industrial lubricants, known throughout India and the world for their premium quality.

Now Indianoil can readily supply the entire range of your requirements of lubricants.

Please specify your requirements to:

Indian Oil Company Limited

WHICH HOLDS

THE GREATER LOAD ?

Modern construction projects, require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites. Mills tubular scaffolding has a versatile use—storage racks, temporary buildings, open-air auditoriums or bridges—apart from its normal use as a construction aid.

The special spring-steel fittings quickly secure the tubes—with a $\frac{1}{4}$ " spanner as the only tool needed. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle grip' principle.

All fittings are made from special quality spring steel, by Guest, Keen, Williams, Ltd. and the tubes are manufactured by The Indian Tube Company (1953) Limited.

THERE'S NO LIMIT TO THE SUPPORT YOU CAN GET FROM MILLS

ITC/SU-7A

A NEW APPROACH TO INDUSTRIAL RELATIONS IN BRITAIN

(FROM OUR LONDON CORRESPONDENT)

IF effective action, resulting in a happier "family", produced only one minute more work in every hour paid for, there would be a resultant 2½ percent increase in productivity. It is a striking thought for National Productivity Year, but the U.K. is still left with the old problem of what action can be taken which will really prove effective in dealing with industrial disputes and their resultant complications. Is it possible that the Marlow Declaration will provide the answer?

This document was inspired by a meeting of 18 men in Marlow, Buckinghamshire, from the churches, the board rooms, the trade unions and the teaching profession, who came together because of their common conviction that the present generation has within its grasp a great opportunity to shape a new society sustained by the rightness of its purpose, and based on the justice of its institutions. They believe that the cardinal emphasis of the British way of life must be on individual responsibility, established on a framework of high moral values and integrity. This is the stuff of success and international respect. British people should be proud to be citizens of a nation which has given so much to mankind.

Seventeen years ago, a war ended in which Britain's contribution to the effort for human freedom was second to none. Seventeen years later it is sometimes heard—possibly in certain quarters believed—that her golden age is past. The Marlow signatories reject this notion. They have faith in the courage, ability and integrity of their countrymen. Yet all is not well in British society. Now is the moment, therefore, to launch an endeavour to reinspire traditional national attitudes. The winds of change have created widespread uncertainty and old ideals and personal standards no longer control opinion and action as once they did. Every continuing human effort, if it is to succeed, needs understanding, a clear picture of what is to be done, the reasons for doing it and the methods

to be employed. In a stable world, this may be achieved by custom and practice. In the present changing world, there is a singular need for man's actions to be based firmly on clear and acceptable principles. The first concern must be for the community. The signatories recognise an urgent need for greater acceptance of responsibility by the individual to society. They believe human beings are in a state of constant development; that today they are mature enough to understand and bear such increased responsibilities asked of them.

Effort of Individual

Society, particularly a democratic society, can be sustained only by the considered and continuing effort of the individual. If the individual will give the best of his abilities and energies both he and society will be greatly enriched. Society is created by man for man. One cannot take from society without giving in return. To live in a society such as the present one provides advantages which must always be earned. The function of society is complex, but above all, it is designed to ensure the provision of man's wants along with security and opportunity: security in the assurance of a livelihood and such services necessary to maintain the dignity of his being and opportunity enabling him to realise his innate potential abilities.

The signatories hold that progress along the wide front of social advance depends on the harvest of the whole field of human effort; the manufacturing and agricultural industries, commerce, finance and the public services. British society may seem to be affluent, but the future of the nation is uncertain. The industrial body is not as healthy as it should be and if industry fails, there is unemployment, impoverishment, frustration, conflict and loss of self-respect. The importance of industry to the nation and the large part which it plays in the life of the individual are such that no stability can be assured as long as two distinct

ethical and social standards continue to co-exist. Standards of behaviour in industry and in private life should be equally high. A way must be found to improve the industrial climate, enabling man to play his full part in industry and the community. Just as the strength and resilience of industry is of high importance to a nation, so the conduct of industry affects the moral welfare of those engaged in it.

Therefore, the second concern is for industry and associated fields of human activity. The signatories seek:

(1) To direct public opinion towards a better understanding of the vital importance of industry to the nation and to the individual and of the economic realities within which it has to function.

(2) To induce a realistic attitude to economic situations, on which the success of industry depends.

(3) To remind those concerned with industry, and the general public, that the most valuable asset of a company or other organisation is measured, not in financial terms, nor in capital equipment, but in the skill, knowledge, loyalty, enthusiasm and goodwill of the people whom it employs and with whom it does business.

(4) To focus attention on matters of such great social and industrial importance as education, technical training, the proper induction of youth into industry; industrial safety; problems of the industrially unfit, industrial stress and redundancy. There are also the problems of increased leisure, and earlier retirement resulting from industrial change.

(5) To improve the day-to-day relationship between management and labour and to seek to replace the habit of regarding those employed in industry as composed of "two sides" by a feeling of being responsible partners in a common effort.

Climate of Work

They are convinced there should be recognised standards by which

CAPITAL, 20th June, 1963.

those engaged in industry should judge their conduct, for without a foundation of self-discipline and a profound regard for human values, the creation of a new spirit in industry is impossible. The British people are responsive to trust and to high moral standards. On the other hand, if people are consistently not trusted, they become untrustworthy. A man's life is a unity and cannot be subdivided, for the frustrations and tensions both of work and of home are carried over from one to the other. The climate of work has, therefore, a direct and important effect on the mental and moral health of the nation as a whole.

Challenge to Industry

British industry is facing a great challenge. Much remains to be done, if the U.K.'s industrial effort is to reach the pitch of excellence of which, it is believed, it is capable. It is not enough to achieve faster economic growth than before the war. The U.K. needs to achieve the still faster rates which the experience of other west European countries, to say nothing of new developing countries, is showing to be reasonable and practical. It is not sufficient to provide a job of some kind for everyone. The relationship of the job to the individual is important. It should be one that uses each person's capacity to the full and encourages him or her to grow and develop as a human being and to seek all the education and training available. The wage and salary structures are not in every instance logical and contain anomalies and injustices. Too many of the pensioners and sick people still depend on the voluntary benevolences of an employer and on a state benefit designed to prevent destitution, but not to promote a fruitful and happy life.

They recognise, in conclusion, that merely to identify governing principles is insufficient. They must be constantly tested and developed by experience. This will need the full support of all men of faiths and understanding. They look to the churches, the trade unions, employers and teachers to be in the van of a new movement. Unquestionably, the ultimate answer must lie in the hearts and minds of British men and women. If they wish it to be so, they can confirm by action now that they are a people richly endowed by a thousand years of unifying experience and are capable of justifying the aspirations of their forefathers and the respect of those to come.

Case histories have shown time and time again that where communications are good between top management and the humblest worker, industrial relations are of a much higher standard than in those enterprises where a wide gap exists. Lord Robens, one of the signatories, writing on the subject recently, said he believed by far the heaviest responsibility for improving communications lies with the employer. Union leaders everywhere are usually willing to help, but their resources are limited and their opportunities too few. The employer has at his command all the machinery and the opportunities to do a thorough job.

Too many employers step back from this responsibility and feel that it is a task only for the trade unions. They assume that having provided consultation at the top level, they can leave it to the union machinery to carry the news back. This assumption has never been justified, and never will be. An employer cannot be absolved from his duty—and should always exercise his right—to communicate properly with all the people on his payroll. What he can do in this field, added to the work of the trade unions in informing their members, will all help to fill the gap.

CAPITAL, 20th June, 1963.

Jute

SELF-SUFFICIENCY IN JUTE MILL MACHINERY

THE remarkable resiliency of the Indian jute industry is reflected in the recovery it has staged during the past few years in the face of fresh threats confronting it from time to time. First came the challenge posed by the serious shortage of raw jute after partition. It was followed by the setting up of a modern jute industry in Pakistan. The competition from substitutes and the postwar rehabilitation and modernisation of the industry in Europe were some of the other threats. Fluctuating export demand, soaring production costs, obsolete machinery and equipment, rising labour charges and high fibre prices hit the industry further. Thus "modernise or perish" was the alternative before it. The shortage of foreign exchange and the difficulty in getting machinery and replacements from abroad presented major problems.

Faced with this situation, the industry fought hard. The Government liberalised imports of jute mill machinery and granted licences for manufacturing it within the country. Foreign collaboration helped the ventures. Special-purpose institutions were set up to grant long-term loans to the industry for rehabilitation and development. Thus about 88 percent of the preparatory and spinning sections of the mills were modernised by 1962.

With production continuing at the maximum level, the jute industry is facing the problem of maintaining supplies of yarn, particularly fine yarn, for hessian warp and weft and sacking weft for the looms. The shortage of spinning capacity is becoming more acute with the installation of more and more broad looms for weaving carpet backing cloth. About 1,000 such broad looms commenced production during the past year, raising the total complement at work to 1,300. In about six months' time, with the installation of further capacity, the total number of such looms will be around 2,000. To provide the fine yarn for this extra loomage alone, about 1,000 more silver spinning frames of the latest design have to be set up.

Range of Manufacture

Thanks to the development of a well-planned machinery industry over the past decade, the Indian jute industry has been able to attain virtual self-sufficiency in these highly specialised lines. The entire lot of about 1,000 silver frames for spinning fine yarn, which were installed during the second plan period, was supplied by Indian producers, one single unit supplying as many as 850. The factory has since supplied 663 more such frames and has also raised its annual capacity to 300 frames on a multi-shift basis. Another unit was recently commissioned for manufacturing roll winders; it will also produce 144 broad looms a year on double-shift working. A third unit has taken up the manufacture of broad looms, thus raising their annual output to 840.

On the heavy yarn side, up to the end of March 1961, 455 imported silver spinning frames had been installed for producing sacking warp. The first factory has been licensed to produce 48 such frames on a single-shift basis. Work is expected to commence from September. Early next year, the company will also undertake the manufacture of finisher drawing frames on the fine side, producing 24 finisher heavy yarn drawing frames, 24 second light yarn drawing frames and 48 finisher light yarn drawing frames. Another firm proposes to take up the production of prebeamers and dressing machines soon.

Judged by the present rate of progress, practically the entire range of machinery needed for modernising and diversifying the jute industry may be available from indigenous sources. Besides producing the complete equipment, the factories should be capable of meeting replacement needs. The order-book position of the two leading manufacturers is comfortable and they are optimistic about a continued demand for their products.

Fall in Jute Goods Offtake

An I.J.M.A. statement shows a decline of 4,900 tonnes in jute goods despatches, from 104,800 tonnes in April to 99,900 tonnes in May 1963. Of this, hessian fell by 4,200 tonnes to 40,900 tonnes, sacking by 100 tonnes to 42,000 tonnes and other goods by 600 tonnes to 17,000 tonnes. Exports of hessian declined from 41,600 tonnes to 37,700 tonnes, but the loss was almost offset by a rise of 3,700 tonnes in sacking to 23,200 tonnes. Miscellaneous goods fell by 600 tonnes to 14,400 tonnes. Total export offtake was 75,300 tonnes—lower by 800 tonnes. Internal consumption of both sacking and hessian declined. The hessian offtake in May was 3,200 tonnes, against 3,500 tonnes in April, and the sacking offtake was 18,800 tonnes, against 22,600 tonnes. Miscellaneous goods were unchanged at 2,600 tonnes. Total internal consumption fell by 4,100 tonnes to 24,600 tonnes. The total fall in offtake was reflected in a rise of 4,900 tonnes in jute goods stocks at the end of the month.

In May 1962, the total despatches were 90,000 tonnes—33,500 tonnes of hessian, 42,800 tonnes of sacking and

13,700 tonnes of miscellaneous goods. Exports amounted to 66,200 tonnes—29,500 tonnes of hessian, 25,700 tonnes of sacking and 11,000 tonnes of other goods. Internal consumption was reported at 23,800 tonnes—4,000 tonnes of hessian, 17,100 tonnes of sacking and 2,700 tonnes of miscellaneous varieties.

Crop Prospects Improve

Widespread showers all over the jute-growing areas in Bihar, Assam, northern Bengal, Gangetic West Bengal, Agartala, Orissa and Andhra during the past week have improved the prospects for the jute crop during the coming season. Although the northern, Orissa and Agartala rivers are in spate, so far no damage has been reported to the standing crop. Crop-cutting has already commenced in the early-sown areas and there is an ample supply of retting water. In other areas, the second round of racking, interculture and fertiliser-spraying is in full swing. Pest contamination has been held in check. In some places, insecticide sprays are being applied.

In East Pakistan, the cyclone and floods in the coastal districts followed by heavy downpours caused some damage to the crop in Feni, Noakhali and Comilla. Heavy showers in other districts are reported to have helped the crop and crop-cutting has commenced in some zones.

Pakistani Export Earnings

Pakistan's foreign exchange earnings from raw jute exports recorded a sharp decline from \$61.7 million for the 11-month period ended May 1962 to \$50.72 million for the corresponding period of 1963. Exports to India fetched an additional Rs. 2.88 crores, against Rs. 4.62 crores for the previous period. Total shipments from July 1962 to May 1963 were 3.61 million bales, including 270,000 bales to India.

905

According to the Economic Survey of Pakistan, the acreage under jute during 1962-63 fell from 2.06 million to 1.72 million. The total crop was estimated at 5.77 million bales, against 6.97 million bales. The decline in output was primarily due to floods and a shrinkage in area. The total output during the 1963-64 season is likely to decline further because of the restrictions imposed on the cultivation of jute in certain border areas and the low level of prices prevailing during 1962-63. Besides, some damage has been caused to the crop in the coastal districts by the recent cyclone and floods.

Fall in U.S. Burlap Consumption

A small decline in U.S. burlap consumption, from 77 million yards in April to 76.2 million yards in May, has been reported. Although the latter figure compares favourably with the total of 72 million yards for May 1962, the fall has had a bearish effect on sentiment, especially since little interest has been shown by the U.S.A. during the past week. Taking into account the May consumption, the January-May figure is higher at 394.9 million yards this year, against 382.7 million yards for the corresponding period of 1962. The monthly average works out to 78.9 million yards and 76.5 million yards, respectively. U.S. stocks at the end of May showed a decline of 3.7 million yards to 296.5 million yards. At the May rate of consumption, they will last for about four months. At this time last year, the stock duration was 3.25 months on the same basis.

THE JUTE MARKETS

Manufactured Goods: Easy conditions prevailed in the manufactured goods market in Calcutta during the past week. Sentiment was disturbed by a quick succession of adverse news which accentuated the bearish trend. The first was the I.J.M.A. statistics of jute goods production which showed only a fractional decline in output, from 105,400 tonnes in April to 104,900 tonnes in May. The decision of the I.J.M.A. to continue the maximum level of production up to the end of July dampened enthusiasm. On Tuesday, the publication of the I.J.M.A. statement of despatches showing a decline of 4,900 tonnes in

KRS/8A

the May offtake induced the mills to become keen sellers for all positions. Bulls were seized with panic in the futures market and sought to reduce their commitments; buyers were shy. Scattered covering by bears at the lower levels and stray foreign business did not help sentiment and prices drifted downwards. Turnover was small and the undertone hesitant at the close.

Quotations on Wednesday were as follows:

	June	July	July-Sept.	Oct.-Dec.	Jan.-March
40in. 7oz.	36.25	36.25	36.00	35.25	35.00

Liverpools	126.00	125.75	125.50	125.50	125.00

Raw Jute: The Calcutta raw jute market was subdued during the past week. Mills showed little interest in purchasing the off-grade jute offered by holders at a discount. Jute were reported to have taken small quantities of selected grade fibre around the minimum levels, basis Rs. 30 a maund, Assam Bottoms f.o.r. Calcutta, June-July delivery for new crop and Rs. 29 a maund for ready delivery. They were also turning over the J.B.S.A. stocks lying with them. Interest was lacking in the futures market. Business in Upper Assam White Bottoms for June was

closed from 14th June. For the September position, the market opened at Rs. 39.50 and fluctuated within a narrow range between Rs. 30.50 and Rs. 30.24 to close at Rs. 30.26. Turnover was small and the undertone hesitant at the close.

Quotations on Wednesday were as follows:

THE U.K. JUTE MARKETS FIBRE QUIET

(FROM OUR DUNDEE CORRESPONDENT)

The raw jute market in Pakistan was steady, and little change took place in prices during the past week. Offers became a little irregular, possibly due to lack of demand from most consuming countries. Reports concerning the new crop continue to be satisfactory, and although the outturn is expected to be less than last season's, there should be sufficient

fibre to meet all requirements. It is expected that quality will be much improved this season, and the price margins between higher and lower grades should be back to normal. The question now is, will there be any real demand for the higher qualities?

The spot market in Dundee was quiet, and there were instances where sellers were prepared to discount the generally quoted rates. However, spinners were still very difficult to interest and very little movement was taking place. The reason for the irregularity in new crop offers was that some sellers were offering groups, and others were naming prices for single marks. The lowest quoted rates were at £107 for Mill Lightnings, at £93 10s for Mill Hearts and at £80 for Grade Hearts for August-September shipment. Grade Tossa-3 was available at £118, Grade Tossa-4 at £106, Outport Tossa-3 at £97 15s and Outport Tossa-4 at £86 10s, October-November.

There were sellers of old crop at £111 for Mill Lightnings at £94 for Mill Hearts and at £78 for Grade Hearts. Grade Tossa-3 ranged from £121 10s and Grade Tossa-4 from £107 10s. Outport Tossa-3 was at £94 and Outport Tossa-4 at £84 10s c.i.f. U.K. for June-July shipment. It is not expected that much change will take place in raw jute prices in the near future.

CAPITAL, 20th June, 1963.

THE PAKISTANI JUTE MARKETS

SOWINGS IN ARREARS

(FROM OUR Dacca CORRESPONDENT)

THIS correspondent has recently returned from a tour of Europe where he found everywhere heavy stocks of unsold warehoused goods, which have undoubtedly been responsible for the market being remarkably low. When warning was given last June that E.P.C.s would be raised, both balers and merchants registered unsold bales in large quantities and some of these contracts had not been sold to ultimate buyers when eventually, according to local regulations, they had to be shipped. The goods, therefore, were warehoused in such places as Dundee, Antwerp and Bremen, which put balers for the rest of the season at buyers' mercy. Buyers still bitter about the high prices and defaults of 1960-61, took full advantage and, in fact, it is quite possible that mills in most countries are not so very well bought. They have fair stocks, but are merely buying their monthly requirements ex warehouse, keeping a safe margin in their own warehouse.

The result has been regular depressed sales at well below E.P.C. prices creating an atmosphere, which has enabled the mills to make fairly large purchases even of the new crop as far forward as November-December at prices below minimum. Sowings of the 1963-64 crop appears to have been some 10 to 15 percent below the last crop with every indication of a slightly better outturn. There is talk of the midland crop in the jat areas having germinated poorly. If this is correct, there will be a tendency to shortness among jat Mill Hearts and Mill Lightnings generally, since this is the largest jat area.

It would also appear that the white crop in proportion to the tossa crop is smaller than last year, from which one can assume that Mill Hearts and Mill Lightnings will be a little bit more expensive than at present and may maintain a level at or above minima. As for tossa, it is still a bit early to talk about the quality outturn of the season, but there is no doubt that the tossa crop will be hampered by the very large carry-over of the good Outport Tossa 3s from the last season.

Fortunately, at this time of year, there are not many shipments pending because the cyclone has done considerable damage to the Chittagong port so that far more is being shipped in and out of Chalna. The result is that whereas the slack seasons should have enabled Chalna port to clear this congestion, this has not happened. There is no doubt that communications of all types in this country are in a bad way and have worsened due to the cyclone.

In the local pucca bale market, there have been a few transactions at very low prices, but there has been slightly more interest at slightly better prices in cuttings since India came in to buy recently. It would appear that the heavy stockholders of cuttings have disposed of most of their goods so that there is a chance that the price of this grade may improve. There is still, however, a large carryover of Export Hearts and Outport Tossa 4s, not to mention Outport Tossa 3s.

Imports of loose jute continue and in spite of the dull market there are still a few buyers. Compared with the pucca bale prices, the sellers of loose jute are getting fairly good prices. New crop jute will be coming in to the market shortly, but this will be mainly weddings.

CAPITAL, 20th June, 1963.

Books

BALANCE OF PAYMENTS: AN ANALYSIS

India's Balance of Payments. By Arun Kumar Banerji. (Published by Asia Publishing House, Calicut Street, Ballard Estate, Bombay 1. Price Rs. 22.50, pages 255.)

Increasing interest is nowadays shown in the problems of India's balance of payments. In order to realise the aims of the successive five year plans, India has asked for assistance from abroad in the form of interest-bearing loans, both short-term and long-term, to enable her to import essential raw materials, spare parts and machinery. Meanwhile, the postwar developments in the structure of world trade have affected India's balance of trade, and concern has been expressed over her dwindling foreign exchange reserves. The want of statistics has always been a major hindrance to a comprehensive study of India's balance of payments. Until recently, figures relating to non-commercial and "service" transactions (such as remittances made by foreign shipping companies operating on the Indian coast, exchange banks, etcetera) were not methodically recorded or published, although they have considerable bearing on India's balance of payments position.

In this publication, the author has attempted to present a comprehensive treatment of the current and capital accounts of India's balance of payments during the interwar period (i.e., from 1921-22 to 1938-39, and has made every possible attempt to search for the relevant materials to enable him to compile reliable data. So meticulous is his analysis that even the foreign trade of the French and Portuguese possessions in India, although small in volume, has not escaped his attention, nor has he ignored the imports and exports made by private individuals for personal purposes. One cannot but appreciate the author's knowledge, resourcefulness and insight into the problem.

The method applied by Professor Viner in his work entitled *Canada's Balance of International Indebtedness, 1900-13*, has been broadly accepted by the author, but he has chosen to abandon it for some plausible reasons, when estimating the investment of foreign capital in India. The characteristic feature of India's current account during the interwar period was a large favourable balance of trade in merchandise, a small part of which averaging 6 percent of the balance being used to finance the import of bullion. The major part of the balance was, however, needed to pay for India's large debts on various services and non-commercial transactions such as the payment of interest on sterling debts, remittances of dividend on foreign capital invested, "home charges", payment of pension to British civil and military personnel and so on. The annual outward remittance of interest and dividend on foreign investments was the largest individual item in magnitude, the annual average of which, according to the author, was Rs. 32.21 crores during the interwar period. Next in importance was interest payment on sterling public debts to the order of Rs. 18.07 crores on average a year. Compared with these figures, the receipts under all headings on the balance of "service" transactions amounted to an annual average of Rs. 8.82 crores only which was not certainly encouraging.

A considerable part of the book has been devoted to estimating

foreign investments in India. An exhaustive analysis has been made with the detailed industrywise breakdown. Previous estimates made from time to time by noted economists like Lord Keynes, Mr. Beaumont, and Lord Kindersley have been discussed. The concluding chapter deals with India's wartime payments and the repatriation of sterling debt.

The book is an invaluable addition to the literature on India's economic history and should provide adequate inspiration and guidance for young

economists to analyse and discuss the shape of this country's balance of payments in future.

STATISTICAL GUIDE

Statistical Outline of India, 1963. (Compiled by Tata Industries Private Ltd., Department of Economics and Statistics, Bombay House, Bombay 1. Price Rs. 3, pages 110.)

Like *Tata Quarterly*, the *Statistical Outline of India* published by Tatas enjoys much popularity as a dependable statistical guide for the Indian economy. The publication used to be brought out every alternate year. But due to the increasing demand, the 1963 edition, the compilers say, has made its appearance barely a year after the publication of the 1961 edition. Although it is a pocket-size handbook, the publication contains a

wealth of statistical data on every aspect of the Indian economy, namely, national income, population, agriculture, industry, foreign trade, public finance, planning and social services. A special section has been devoted to international comparisons. The collection of statistics of a varied nature indicates the painstaking efforts made by the compilers.

(FROM OUR SOUTH INDIAN CORRESPONDENTS)

IF the problem of a surplus was the worry of the Indian coffee industry until a couple of years ago, the industry's anxiety today is that it may not be able to fulfil the target laid for it under the third plan, and take advantage of the export quota provided under the International Coffee Agreement. The coffee crop after rising above 67,600 tonnes in 1960-61, fell back to 45,688 tonnes in 1961-62. Although production has been slowly picking up since then, it does not appear that the third plan target of 80,000 tons will be realised. The latest estimate of the current year's crop is 54,000 tonnes and the next year's is 60,000 tonnes. With extensive areas of coffee cultivation in the country affected by the new malady which it is feared may reduce the crop substantially, production is not likely to jump from 60,000 tonnes to 80,000 tonnes within the one year that is left between

next year and the end of the third plan period.

The internal market consumed as much as 34,651 tonnes of coffee in 1962. Exports amounted to very nearly 20,000 tonnes, and the difference of about 10,000 tonnes was made good by the carry-over from the 1960-61 crop. The crop prospects for the 1962-63 season may be round about 54,000 tonnes. This output must allow not only for the export of 21,600 tonnes under the International Coffee Agreement, but also for meeting the rising requirements of internal consumption. Presuming that the export quota is fulfilled, the remainder of the crop with the small carry-over of 3,806 tonnes from the 1961-62 season may be just sufficient for the home demand. It is very unlikely that there will be any substantial carry-over at the end of 1963, and consequently, the advantage that was available during the past eight

years for the Coffee Board to adjust its export sales with some flexibility with the buffer stock available, will be lost.

Internal consumption has been rising at the rate of 2,100 tonnes a year in the past nine years, except last year when the increase was limited to 682 tonnes, and this was probably due to lower offerings or a readjustment of buying by the dealers. If the country has to provide for the increasing home demand and to take advantage of the export quota provided under the International Coffee Agreement, production will have to be increased.

It is pointed out that the most important matter to which the industry and the Government must give attention now is the long-term development of the industry. The Coffee Board has a development scheme for small growers. As the chairman of the Coorg Planters Association has pointed out in his address to the recent annual general meeting of his Association, what is required today is an "overall coffee plan taking all sectors into account and not leaving out the expansion and improvement of handling, transporting and processing facilities".

Coffee has to fight for its share of the beverage market. It cannot afford to put up its price, as that may

help its competitors. Both to improve the field assets and to raise the standard of production, a carefully thought-out development plan is urgently necessary. According to a recent estimate, the coffee industry in India would require about Rs. 30 crores over a 15-year period to rehabilitate and modernise its field assets and processing and handling facilities. It is said that some 40 per cent of the present stand of coffee in the country is in need of replacement, rehabilitation and improvement. As in the case of tea and rubber, coffee growers need assistance. With a tax burden which leaves nothing for saving and reinvestment and with prospects of cost increases, the coffee growers do not have the means of rehabilitating their properties on their own.

The Coorg Planters Association chief, Mr. A. C. Thimailah, emphasised the need for export promotion work in his speech at the recent annual general meeting of his Association. He said that the quota secured under the International Coffee Agreement would not ensure exports. It would be a major folly if it was taken for granted that Indian coffee exports were safe just because this country has been given an export quota of 21,600 tons a year. "An export quota does not guarantee that the buying country is left with no choice but to buy our coffee. Our coffee should be in demand. That means that we should popularise our coffee in the world market", he added. Before 1929, Plantation A coffee of India was fetching a premium over Kenya coffees in the European markets. Today, Kenya coffees fetch a premium even over India's best grades. In his view, the ideas on India's export promotion machinery require drastic changes.

Mr. Thimaiah voiced his disapproval of the Coffee Board's decision to give up the system of open auctions for the sale of export coffee. It was after much agitation by the producers that this system was introduced in January 1962. By December 1962, the Coffee Board secured a voted decision to go back to the old system of the sealed tender system. Mr. Thimaiah said that open auctions were more beneficial to the producers because they served the purpose of getting better prices. Since December in the sales under closed bids, prices fetched had steadily fell, although the international market for coffee from other countries had been good. In addition, the number of exporters to the bilateral quota countries continued to be small with no fresh exporter entering the field as had been hoped by the Board in reverting to the old system.

He disclosed that the Coor-
Planters Association had already
made representations against this
decision of the Coffee Board and at
its instance, the Mysore State
Planters Association and the United
Planters Association of Southern
India were also seized of the matter.
He felt that unless this decision of
the board was not revised, the
future of the coffee planting indus-
try would be in jeopardy.

A factory for the manufacture of reclaimed rubber, it is proposed, will be set up in Ernakulam in the private sector with American collaboration. This will be one of the ten units which will come up in different States in the country for which the Central Government has granted industrial licences. The Ernakulam unit will have a capacity to produce 1,800 tons of reclaimed rubber annually. Production, it is expected, will start by the end of next year.

Instant Tea Factory

Tata-Finlay has started building a new factory in Nullatanni Estate in

the Munnar area for the manufacture of instant tea. They have obtained a licence from the Government of India recently for starting instant tea manufacture in this country. Munnar is the premier tea-growing area of Kerala, and most of the estates there belong to Kanara Devan Hill Produce Company under the management of James Finlay.

The State Trading Corporation will soon start buying lemongrass oil with a view to stabilising the price of this essential oil, which has been falling for some time now to the distress of its producers in Kerala. The present price of Rs. 120 for 10 kilograms is considered very uneconomical by the producers, and they have been pleading for help.

Cardamom Market Stabilised

The latest market report confirms the view that the stalemate which developed in the cardamom market following the fixing of the floor and ceiling prices for the commodity recently was only transitory. The report is that the market is getting stabilised with overseas buying interest getting revived.

The export dealers of cardamom, especially those in Bombay, were complaining that the floor price fixed by the Central Government on 15th May on the recommendation of the recently-constituted Cardamom Development and Marketing Committee was "unworkable", as the controlled prices for the commodity were higher than the market price. It was said that this had put the shippers in great difficulty. Representations were made to the authorities that contracts made prior to the fixing of prices might be exempted from the operation of the Export Control Order of 15th May, 1963. The authorities were also requested to postpone the implemen-

tation of the control on export prices.

The chairman of the Cardamom Development and Marketing Committee, Mr. Sitarama Reddy, announced at the fourth meeting of the committee on 17th June in Kodaikanal that the Government's position was that the implementation of the control order could not be postponed, but that the export control authorities could examine *bona fide* cases of any firm commitments, provided evidence was furnished to their satisfaction for the existence of an order, acceptance by the foreign authorities and an irrevocable letter of credit to the effect that the transaction had been opened. This was a fair decision, and it would be in the interest of all, Mr. Reddy claimed.

The chairman of Cardamom Development and Marketing had discussions with the exporters in Bombay on 31st May, concerning certain difficulties in cardamom exports to the Persian Gulf and the Middle East at the minimum prices fixed by the Government. The floor prices fixed by the Government were lower compared with the export prices prevailing in previous years, and it seemed that there should be little or no difficulty in disposing of a small quantity of about 125 tonnes with the exporters in Bombay, the chairman said. Mr. Reddy claimed that the promulgation of the Export Control Order seemed to have had a salutary effect on the market. Since the last meeting of the committee, prices had been steady.

In justification of Government intervention, Mr. Reddy said that the exports of cardamom had been steadily increasing during recent years, but foreign exchange earnings had unfortunately not kept pace with this. On the other hand, the earnings showed a fall. The ex-

port figures for the past three years were as follows: 2,304 tonnes valued at Rs. 1.44 crores in 1960-61, 2,365 tonnes valued at Rs. 3.58 crores in 1961-62, 2,259 tonnes valued at Rs. 2.61 crores, in 1962-63. The chairman attributed this sorry state of affairs to the indiscriminate trading in cardamom, shipment of cardamom of uncertain quality and the inability of the growers, particularly small growers, to hold on to their stocks even for short periods, resulting in distress sales.

Cardamom has been grown and exported from India from ancient times. Although India cannot be said to enjoy an absolute monopoly the bulk of this spice in the world market comes from India. Ceylon, the Congo, Guatemala and Malagasy are the other producers, but their combined influence on the world market even now is very marginal. The high prices prevailing for cardamom in the postwar years has helped stimulate the development of cardamom cultivation. Although the total area under cardamom has increased from under 100,000 acres in 1950-51 to 132,000 acres by 1960-61, production as evident from exports increased from 1,393,616 lbs to 5,210,912 lbs during this period. Export earnings increased from Rs. 1.48 crores to Rs. 3.58 crores. For the volume of export achieved, the fall in price a lb would appear to have been remarkably gentle, although prices have dropped more sharply in 1962 and have hardly recovered since then.

Even a section of growers in India hold the view that an artificial price stimulation cannot be in the long-term interest of the industry as it might have the effect of curtailing consumption, stimulating efforts at substitution and in encouraging development in other producing countries. The *Planters Chronicle*, official organ of the United Planters

Association of Southern India, says in a recent editorial that a fancy price for cardamom cannot last for long and the industry has to be helped towards reaching viability at reasonable prices. "Scientific research and experiments to improve cultural practices, field management, the prevention or treatment of pests and diseases, the breeding of higher yielding varieties, better preservation and processing of the crop, quality grading and marketing require careful planning, organisation and necessarily slow development. Whether these various tasks can be better accomplished by a centralised body on the lines of the Coffee Board or by growers voluntarily with reasonable assistance or by decentralised organisations, are matters which require to be carefully considered before firm decisions are taken".

The original estimates concerning India's cardamom crop for 1963-64 are being revised in the light of the reports that due to hailstorms in the growing areas in the Kottayam district and the delay in the outbreak of monsoon, the crop in some parts had been adversely affected. The present feeling is that the new crop will not be as big as the original estimate of 3,255 tonnes. The last year's crop was placed at 2,850 tonnes.

Tea Output in Africa Increasing

(BY A SPECIAL CORRESPONDENT)

THE old producing areas may be expected to add to the supply, and some old consumers such as Russia are trying to produce a part of their own requirements, but the main danger now facing the Indian tea export trade is the increasing quantity of ordinary tea from Africa. The extensive additions to the planted areas throughout tropical Africa will henceforth yield unwanted sup-

plies of common tea. Here are some figures: (Area under tea in acres).

	1950	1960	1961
Kenya	18,800	39,300	43,800
Uganda	6,400	16,800	
Tanganyika	9,000	18,000	
Nyasaland	23,500	30,000	
S. Rhodesia	1,600	3,600	
Mozambique and Portuguese East Africa	23,800	37,000	
	83,100	144,700	
		Revised figures now due	

Further new planting is reported from Ruanda Urundi and Nigeria. The above areas produced (thousands of lbs):

	1950	1960
Kenya	15,000	28,000
Uganda	4,100	11,200
Tanganyika	1,750	9,800
Nyasaland	15,400	31,500
S. Rhodesia	810	2,380
Mozambique and Portuguese East Africa	6,950	23,300
	43,940	106,180

It will be seen that whereas planting increased by approximately 75 percent in the period 1950-60, production from the same areas more thaned.

doubled, being an increase of approximately 118 percent. This tempo is increasing.

The latest statistics available in Calcutta are furnished by Messrs J. Thomas and Co. Private Ltd. These show the advance in east Africa to be from 18.8 million kilograms of tea in 1950 to 49.8 million kilograms in 1962, say, an increase of about 160 percent. Except for 1957, the expansion has been without a check and the supply of ordinary teas from Africa must continue to increase. The fact that the addition in 1962 moved from 48.2 million kilograms to 49.8 million kilograms only, is probably an indication that the current year will witness an unwelcome jump in African output.

Recent tea sale averages in London were: Indian teas 5s a lb, Ceylon 4s 5d a lb, Indonesia 2s 8d a lb, Africa 3s 2d a lb. It is worth noting that the African product sells at a profit. With costs caught in a never ending upward spiral, India's place in world export markets can be maintained only if the Government imposes reduced or other concession allowance from the same areas more thaned.

COMPANY AND PUBLIC NOTICES

TENDER CALL NOTICE

COMPLETE hoisting gear mechanism are needed for 4 nos of Head Regulator gates (45'x12'), 4 nos pocket sluice gates (60'x26') and 6 nos of under sluice gates (60'x14'). Parties with previous experiences may apply for detail drawings to the undersigned. Drawings and specifications can be obtained from the Office of the undersigned on payment of Rs. 10/- per set.

The last date of receiving tenders is fixed at 3-00 P.M. on 25.7.63.

CURRENCY AND FINANCE: THE ART OF SAYING NOTHING

THE Report on Currency and Finance issued by the Reserve Bank each year has traditionally been a product of pusillanimity. The one just published, covering the year 1962-63, is no exception; for insipidity and cowardice, it sets a record which has rarely been equalled before and which is not likely to be broken easily in the future. Running to more than 300 pages, it contains a mass of information, descriptive and statistical. But throughout the long and turgid narrative dropping from the quills of a tired bureaucracy, there is hardly a hint of dissent or criticism to suggest that India's central bankers could conceive for themselves a rôle more purposive than that of silent slaves stationed at the feet of the Finance Ministry. Trends are duly noted: the production of A

In addition, there will be articles on industries such as structural engineering, refractories, machine tools, fertilisers, inorganic chemicals, vanaspathi, footwear, air conditioning and rayon.

The Survey will be published along with CAPITAL of 4th July and will be available at Rs. 5 a copy (postage extra). Registered subscribers will receive their copies free, but others should write for their copies immediately to the Commercial Manager, CAPITAL, 5, Mission Row, Calcutta-1. No copies can be sent by V. P. Post.

in Delhi should effectively help in solving these problems.

Worries of Paper Traders

Since the state of emergency was declared in India, the demand for paper has increased but its production has not risen to the same extent, so the supply position has become extremely difficult. The recent conference of the Federation of Paper Traders Associations of India, held in Ahmedabad discussed the problems facing paper traders. One of the causes of the paper shortage in India, it was suggested, was that manufacturers did not stick to the Tariff Commission's formula that 67 per cent of paper production should be printing and writing varieties, 14 per cent packing and wrapping paper, 16 per cent paper boards and 3 per cent special types of paper. Since the proportion of the special types to total production has considerably increased in recent years, a shortage of the common varieties of paper has inevitably been created. As a result, their market prices are higher than the fixed rates. Another cause of the paper shortage is the Government's defective import policy under which most of the import licences are granted to actual users. Established importers have not been given import quotas which they need to obtain in the past, so a shortage has developed in the market.

The conference urged the Government to restore the established importers' quota of printing, packing and wrapping paper to what it was when the import policy for April-September 1962 was announced. It also requested the Government to give at least a token quota to established importers for writing paper and boards since many of these varieties were not being produced in the country. It is difficult to understand the argument of Mr. Morarji Desai, Central Finance Minister, who attended the Federation's meeting, that established importers cannot be allowed a greater share in imports as the indigenous production of paper has increased. In fact, it is because the indigenous output of all varieties of paper has not increased that there is a shortage in the market and paper prices are ruling higher than the fixed rates. Moreover, the distribution of the available supplies is defective, so all markets are not served properly. If established importers get a greater share in imports, the supply position will definitely improve.

From the long-term point of view, the only effective method of increasing the supply is to raise production. The third plan aimed at increasing the production capacity of the industry from 410,000 tons to 820,000 tons with a view to meeting the estimated demand of 700,000 tons by the end of the plan period. But although new licences were granted some of them have since been cancelled. Meanwhile, it is unlikely that the industry's installed capacity will exceed 680,000 tons by the end of the plan period. This is partly due to the fact that the price-cost structure of the industry is such as not to leave a sufficient margin of profit to the producers. It is because fresh capital is difficult to attract that the installed capacity is not rising rapidly.

Evils of Controls

A tragic aspect of planning in India is the increasing use of controls. Nobody denies that there is scope for some controls in a planned economy with a view to making the best possible use of scarce resources. But more often than not controls have been introduced in India for achieving ideological objectives, and where they were employed for strictly economic reasons, they were administered in such a way as to hinder production and penalise efficiency. In a pamphlet entitled *Who Gains by Controls?* published by the Society for the Propagation of Democratic Thought, a "student of economic affairs" has analysed the effects of controls on the Indian economy. Such countries as West Germany having free market economies, it is argued have made amazing progress in a short time. "This is in striking contrast to the situation in India where, in spite of over a decade of planning, the country is faced with an acute shortage of almost everything that is needed for civilised existence. Apart from perpetuating scarcities, controls generally have crippled enter-

prise and initiative, bred corruption, bloated the bureaucracy and placed the citizens increasingly at the mercy of the Government."

The facts cited in the pamphlet justify the author's scathing criticisms against controls. Steel prices have been controlled in such a way as to prevent the industry from functioning efficiently and obtaining the funds required for implementing the expansion schemes. The profit margin of steel producers has been fixed at an uneconomic level, so they have been unable to obtain adequate capital from investors. As a result, they have had to rely on borrowings. After persistent representations, the Government has increased the steel retention prices. But the Central Steel Minister's assurance to producers that the Government would lift controls has not still materialised. Meanwhile, the administration of steel distribution has led to avoidable difficulties and confusion. Cement is another industry whose growth and development has been retarded on account of rigid controls on price and distribution. The demand for the commodity has risen sharply while there has been an acute shortage of supplies. But instead of giving an incentive to producers to increase output, the Government has arbitrarily reduced the price which the Tariff Commission had recommended.

The growth of the sugar industry has also been retarded by the imposition of unimaginative controls which have seriously affected production. This has led to the disruption of the normal trade channels and created chaotic conditions in the system of distribution in many parts of the country. The fall in rice production, the study points out, has been caused not so much by adverse weather conditions as by the ineffective implementation of various agricultural development programmes. The zonal restrictions on the movement of foodgrains also appear to have contributed to scarcity and consequent rise in prices in some parts of the country. Since State trading in foodgrains in India during 1944-53 led to a loss of about Rs. 277 crores, it is argued, the country should refrain from adopting ill-conceived measures which may harm the economy.

The pamphlet does not state, although it is implicit in its analysis, that controls lead to a condition of "suppressed inflation" in the economy. Controls are no panacea for shortages: they do not increase output but only restrict it by removing the price incentive. Controls also pose many administrative problems with the result that corruption becomes rampant, efficiency declines and the delays in getting the much-needed supplies inevitably affect production schedules. No wonder, a condition of "suppressed inflation" created by ill-conceived controls is a dread to economists and planners in all countries. But not so in India where controls are getting a fresh lease of life. The economy, therefore, continues to be plagued with recurrent shortages of one commodity or another.

THE JUTE FORECAST

THE first forecast of the jute crop in Bengal, for the season 1963, has just been issued, and its full text is given in the usual column. Briefly put, the Officiating Director of Agriculture intimates that "having regard to the marked tendency to under estimate" he has added 5 per cent to the acreage returns and thinks "it is safe to assume that the area under jute this year is not less than 2,100,000 acres". He further observes that "notwithstanding the smaller area, the estimates for outturn given by the District Officers are on the whole more favourable than last year," and again, "the outturns for some districts appear to be unduly low". Taking the normal area as 2,350,000 acres, and a normal crop (3 bales per acre) as 70½ lakhs of bales, the Director sums up his first guess thus: "As the area is less by 10 per cent. than the normal area, an outturn of 85 per cent. in that area represents 70½ per cent. of a normal outturn, or nearly 54 lakhs of bales." Last season, Mr. Maddox says, the Director in his final forecast gave the area under jute as being 2,200,000 acres with an outturn of 80 per cent. producing nearly 53 lakhs of bales. He adds "the outturn of the crop of 1962 was not less than 58 lakhs of bales."

A Ditcher's Diary

IT IS NO SECRET THAT NEW DELHI WAS NOT OVERJOYED when six non-aligned countries, since called the Colombo Powers, took the initiative to bring India and China round the conference table. Some were quite rude about Mrs. Bandaranaike and Dr. Nkrumah. I have seen less criticism of the efforts, to the same end, of India's communist leaders—Mr. Dange last year and now, I gather, a party of four who will be going to Moscow shortly. "Informal contacts between them and Chinese communist leaders", I read, "are not ruled out". This, surely, is undesirable, to say the least. I would normally welcome any effort, almost by anybody, which could lead to India and China resuming their dialogue in a civilised manner rather than fighting; but I see no reason to believe that Messrs Dange & Co. are likely to achieve anything of the sort. The Chinese communists have to all appearances very little respect for their Russian comrades; for the Indian communists, for Mr. Dange and his friends in particular, Peking's contempt must be fathomless. If the Indian communists try to converse at all with the Chinese communists the latter will quite correctly say, "Who on earth are you to discuss these things? You represent no Government; and even if you do fully represented the Indian Party, which you do not, your Party has no authority to implement anything agreed to. Go home and read your text-books more carefully". The truth, of course, is that both the Russians and the Chinese will need all the time at their disposal to sort out their own differences. While I can understand official efforts to persuade the Russian Government to make the Chinese see reason, there is no rôle at all for Indian communists to play. To give the impression that the Government of India somehow blesses these efforts is to mislead internal opinion as well as external. The point is that there would be no need for mediators if New Delhi and Peking were on speaking terms. Only the Government, however, can decide when to send other things to the Peking besides protests, for none else has the necessary information. Any contact between Indian and Chinese communists may have several undesirable consequences.

WHEN CHINA PILED SURPRISE UPON SURPRISE by declaring a unilateral cease-fire, releasing Indian prisoners of war and, finally, returning captured equipment, several Indian missions were visiting various countries to seek military aid. A visiting various countries to seek military aid. A somewhat cynical friend then said, "China's next move will be to offer India arms for our defence; and an Indian mission should go to Peking". It has not come quite to that yet; but I find that Mr.

S. Bhoothalingam is to visit Moscow next month to explore possibilities of acquiring Russian equipment for the Indian Armed Forces. With a few M.I.G.s already here, as reported, this is not altogether surprising; yet it says something for India's strict impartiality that Mr. Bhoothalingam is said to have been selected for Moscow because he had earlier gone to London and Washington on a similar mission. There is nothing wrong in receiving arms aid from any country that is prepared to give it; and, in terms of non-alignment, there may be political advantages in getting arms from both the West and the East. What, it must be asked, do the Armed Forces think of this mix-up? As far as I know, there are significant differences between British and U.S. equipment; somebody must be busy sorting these out. Now to introduce another, very different, kind of equipment is to import further difficulties. We are, of course, never told anything about military matters; this country is the least informed on its own defence affairs; Mr. Nath Pai brilliantly showed in Parliament how the White Paper on defence in Britain, not excessively revealing, at least said something about defence while the Indian Defence Ministry's annual report spoke only of schools and hospitals opened for jawans or their children. I have a suspicion that in receiving arms from all and sundry the Government of India tends to subordinate technical, military, considerations to those political. Not everybody may have forgotten that India once placed an order for some *Ilyushins* and then had second thoughts. To civil aviation in India the error would not have been fatal, perhaps. It is far more serious with military equipment. Modern weapons are terribly complicated; training takes time. India should not be dependent on any one or two countries, admitted; but equipment is not much use if you don't know how to use it.

THE BRITISH PRESS MUST BE FEELING GRATIFIED that after all the reputations which have suffered in the Profumo scandal, its own has remained intact. It may even have been enhanced, because without the behind-the-scenes efforts of some newspapers to keep the matter alive, Mr. Profumo might never have been forced to admit his lies. The only blame appears to have been attracted by a certain Sunday paper which has undoubtedly strengthened Miss Christine Keeler's personal finances by paying an outrageous sum of money for her memoirs. But when the other aspects of the affair have passed into history, there would seem to be every excuse for a public enquiry into the part the Press has played. And this is not because of anything

the newspapers did, only what they were prevented from doing. Under the English law of libel, as amended in the early 1950's, truth is a valid defence. Why, then, was the Press so effectively silenced—despite the virtually universal conviction among the reporters concerned of the veracity of their allegations against Mr. Profumo—when the Minister of War threatened in the House of Commons to sue anybody who persisted in linking his name with that of Miss Keeler? One newspaper, an Italian, actually paid damages rather than be taken to court, and Time magazine, so I have been told, scrapped an entire British edition to avoid running the risk of legal action. But was this threat in fact the whole reason? Personally I do not think so. After the drubbing it received over its part in the Vassal scandal, the Press in Britain has been understandably sensitive about the impression it is creating with the general public. That is why no newspaper cared to face the publicity attendant on an action instituted by Mr. Profumo, despite the knowledge that the allegations were substantially correct and despite the fact that the damages paid over in a libel case are sometimes more than compensated for by an increase in circulation. And that too, more or less, is what prompted the distinguished editor of *The Times*, immediately after the Profumo scandal broke, to emphasise in public that it is a newspaper's job to "probe, and go on probing". So it is; and exactly what made the major part of the British Press forget this at a time when the public interest demanded that it should remember it, is something which, in my opinion, would make an excellent excuse for yet another tribunal. The British Press has always set an example for fearlessness in revealing what goes on in the country. If any circumstances, or combination of circumstances, now inhibits it from doing just this, then it is time they were investigated and put right. The world still needs that example.

A COLLEAGUE ON A VISIT TO NEW DELHI WRITES: "You might remember I told you last week that it might be interesting to be in London now that the Profumo affair had broken. Foreign exchange regulations make a journey thither just about impossible; but here in Delhi I see Mr. Morarji Desai's point. He can well say that if one is so perverse as to be interested in Profumo, anti-Fumo or any other form of official indiscretion, corruption or worse, there is no reason at all why an Indian should go abroad and spend scarce foreign exchange. All he has to do is to come to New Delhi. I haven't been in the capital for more than 36 hours yet; and, without being too inquisitive, I have already had my fill and more on people in high places and their goings-on. I have not the slightest doubt that most of the stories, none of which I can repeat in print, are grossly exaggerated. The significant point is that they should have been told at all. Officials are the more active retailers of scandal; and none is spared. They

all over India

Formed in 1937, S&L are today the leading fabricators of steel tubes in India. Industry all over the country recognises S&L's ability to supply pipework installations for all types of conditions, from the initial design stages to erection and commissioning. S&L were the pioneers in India of the standard pre-fabricated tubular roofing structure, and are still the major producers of these economical buildings, which are in great demand for use as offices, stores, workshops, schools, hospitals etc. etc.

will tell you where Shri So-and-so, a dedicated moralist, was seen last with Shrimati So-and-so, the wife of a stenographer in such-and-such department where he may soon be section officer, if not assistant secretary. Sex is, of course, the most prolific source of hypocrisy in most countries; but I did not know until I came to Delhi how enormous the distance can be between precept and practice. The capital has been experiencing strong dust-raising winds lately; the heat is unspeakable; and on Friday morning an earth tremor was felt, according to the Meteorological Office. All this seems symbolic. There is nothing on which a film of dust has not settled. Wind is the main produce of New Delhi, even in the national emergency. There is no revolution in the offing; only tremors of low intrigue; epicentre not so unknown. It is quite impossible to be in Delhi without sensing that there is something inherently corrupt in the soul of this place. Or, am I being unduly harsh? One who lives and works in Calcutta most of the time is apt to think that no place could be worse. All I will say is that I may be back sooner than you think. All I have to say by way of comment is that my friend has tremendous bouts of depression but, somehow, he generally gets over them.

WHEN PRESIDENT KENNEDY LEAVES WASHINGTON things, at best, tick over, but could in fact come to a complete standstill if some major decision had to be made. That is why so many people were saying that the President would have been well advised to cancel his current trip to Europe. I am inclined to agree with them. If there was ever a time when the internal situation in the United States required his personal attention, this is surely it. Eventually that country's claim to the leadership of the non-communist world will stand or fall on the issue whether or not racial segregation is to continue in the southern States, and at present only the influence of Mr. Kennedy seems to be standing in the way of its being settled in a welter of violence and bloodshed. It would be worth postponing a visit to Europe to avoid that. Indeed, there seems no particular reason at the moment why such a trip should be considered to hold out any hope of substantial benefit. There have been too many changes there recently. In Italy Signor Fanfani is out of office, and at the Vatican Pope Paul is still settling down. In Germany Dr. Adenauer has only a few weeks to go before his enforced retirement, and in Britain Mr. Macmillan can scarcely postpone his resignation much longer. So who of importance would Mr. Kennedy be able to talk to on a State visit? Only President de Gaulle, presumably; and it was not planned to see him anyway. President Kennedy's speech in Cologne on Sunday indicates that he is anxious to embark on the next stage of his plans for a European deterrent and for a stronger N.A.T.O. In other words, what he has in mind is the constant struggle against communism. It seems to me, however, that the greatest threat to the western cause is not, at present, located in Europe. Unless and until organised racial segregation can be rooted out in the United States itself, and the image of western freedom suitably repaired, there is little chance of winning support from the substantial proportion of non-communist mankind located in Asia and Africa. Compared with this threat to the western cause, I should have thought the prospects of allowing Europe's problems to fester for another month or two were not all that difficult to face.

"Dacca, June 24.—BREAKING MONOTONY OF THE marathon budget debate, which lasted till midnight, an Opposition member suggested in the East Pakistan Assembly yesterday that a resolution be moved by the Leader of the House to invite Miss Christine Keeler of Profumo scandal to East Pakistan so that members of the House and the public may have a glimpse of the sex queen.

"The member was referring to a newspaper report which quoted Pakistan's Foreign Minister, Mr. Bhutto, as blaming Pakistani missions abroad for their inability to introduce him to an important figure like Keeler when he was in Great Britain. —News agency despatch, published in the Hindustan Standard.

THE DITCHER

Guide for Investors

METAL BOX EARNS MORE BUT PAYS LESS

THE observations on the current prospects for the Metal Box Co. of India Ltd made by Mr. M. K. Vellodi, chairman, in his statement which has been circulated along with the report and accounts for the year ended March 1963, constitute the main point of interest in the review. (The details are printed on a later page in this week's issue of Capital.) It is not easy to forecast the trends. But direct supplies for defence are likely to form a substantial part of the Company's activity. The steady increase in the sales of non-tinplate products has been an encouraging feature. The demand for the Company's products continues to be buoyant, although the impact of the Central Budget is likely to be reflected on consumer spending in the coming months. Heavier taxation has been imposed to cut expenditure on consumer goods but to what extent it will succeed in doing so remains to be seen.

Considering the import restrictions, the Company's performance in 1962-63 has been impressive. Although direct export sales have declined somewhat, the Company has indirectly helped raise exports by providing exporters with containers and packaging materials, conforming to international standards of quality. Metal Box has found it difficult to obtain the required quantity of tinplate, aluminium sheet, aluminium foil and sheet steel. In spite of the foreign exchange shortage, the Government, it is hoped, will provide the Company with an adequate supply of imported tinplate, if required. Rourkela's new tinplate mill is not expected to achieve full production until 1965-66. Mr. Vellodi points to the rise in the costs of raw materials and ancillary materials following the increased duties and excises. The Company has started producing treated and laminated papers and boards and containers made from them. The construction of the No. 2 factory in Bombay has made satisfactory progress and production should begin next month. The should begin next month. The Cochin factory has been expanded. The Company has also made efforts to develop its range of packages. New plants have been commissioned to supply printed polyethylene bottles and a variety of printed and laminated flexible packages and flexible packaging materials. The plant modernisation programme has progressed satisfactorily with the emphasis on material economy and higher manufacturing speeds. The activity of the machinery building department has been extended.

Sales rose by Rs. 1.37 crores to Rs. 12.08 crores, compared with those in 1961-62. The profit has risen from Rs. 1.14 crores to Rs. 1.24 crores, but the shareholders have not been able to participate in the increased prosperity because of heavier taxation which has absorbed nearly 74 percent of the total profit. The taxable ordinary dividend has been reduced from 25 percent to 19 percent, including an interim of 9 percent. It is covered more than four times and offers a yield of 3.8 percent at the present price of Rs. 49.87 a share of Rs. 10 each. Taxation is allocated Rs. 79 lakhs, of which the super profits tax accounts for Rs. 16 lakhs. Tax provision was Rs. 58.10 lakhs in 1961-62. Development rebate reserve absorbs Rs. 2.50 lakhs (against Rs. 4.20 lakhs) and general reserve Rs. 39.50 lakhs (against Rs. 10 lakhs). The carry-forward is Rs. 38,785,

against Rs. 29.83 lakhs brought in. Expenditure on fixed assets was Rs. 49.34 lakhs, of which Rs. 26.25 lakhs was spent on machinery and plant. The Bombay factory will shortly commence the production of cartons.

Andrew Yule Tea Group Results

THE results of the Andrew Yule group of tea Companies for the year ended December 1962 have been published. The Banarhat Tea Co. Ltd (a Dooars garden) against Rs. profit of Rs. 11.19 lakhs, against Rs. 11.55 lakhs in 1961, after providing Rs. 3.74 lakhs (against Rs. 3.19 lakhs) for depreciation. A taxable ordinary dividend of 21 percent has been maintained, absorbing Rs. 5.67 lakhs. The yield is 9 percent at the present price of Rs. 233 a share of Rs. 100 each. Taxation absorbs Rs. 4.95 lakhs, of which the super profits tax is Rs. 12,000. Tax provision was Rs. 4.35 lakhs in 1961. Development rebate reserve is allocated Rs. 500 (against Rs. 35,680) and general reserve Rs. 50,000 (against Rs. 1 lakh). The carry-forward is Rs. 41,581, against Rs. 70,081 brought in. The crop declined from 15,515 quintals to 14,844 quintals. The average sale price rose from Rs. 4.50 to Rs. 4.86 a kilogram. The 1963 crop has been estimated at 15,250 quintals.

The profit of the New Dooars Tea Co. Ltd has declined from Rs. 4.53 lakhs to Rs. 2.31 lakhs, after providing Rs. 2.19 lakhs (against Rs. 1.73 lakhs) for depreciation. The taxable ordinary dividend has been cut from 20 percent to 14.5 percent, absorbing Rs. 2.03 lakhs. The yield is 6.3 percent at the present price of Rs. 230 a share of Rs. 100 each. Taxation is allocated Rs. 24,000 (against Rs. 1.63 lakhs). Development rebate reserve Rs. 36,000 (against Rs. 143) and investment realisation surplus Rs. 2,030. The carry-forward is Rs. 6,049, against Rs. 55,177 brought in. The crop was only 6,409 quintals, against 7,847 quintals. The average sale price improved from Rs. 4.31 to Rs. 5.10 a kilogram. A crop of 7,500 quintals has been estimated for 1963. The garden has switched over to C.T.C. manufacture.

The Jaybirpara (Dooars) Tea Co. Ltd has incurred a loss of Rs. 61,500, compared with one of Rs. 1.53 lakhs, after transferring Rs. 51,162 (against Rs. 29,327) to depreciation. The dividend has again been passed. Bringing in a debit balance of Rs. 1.25 lakhs, one of Rs. 1.87 lakhs has been carried forward. Steps have been taken to improve the manufacturing procedure which has started yielding good results. The average sale price rose from Rs. 4.48 to Rs. 5.59 a kilogram. Besides, a satisfactory standard of C.T.C. manufacture has been achieved. The disappointing results have largely been due to a decline in the crop from 1,903 quintals to 1,889 quintals following an unfavourable weather.

Burn to Issue Bonus Shares

THE ordinary shares of Burn and Co. Ltd have smartly risen from Rs. 510 to Rs. 580. The rise is due to the Company's decision to issue bonus shares. It has already

applied to the Government for sanction to issue bonus shares by capitalising reserves. These shares will be issued in the proportion of one bonus share for every one held. The Company's present ordinary share capital is Rs. 84 lakhs divided into shares of Rs. 100 each. Reserves are more than Rs. 2.78 crores.

The Company's preliminary results for the year ended April 1963 have been published. The net profit has amounted to Rs. 1.43 crores, against Rs. 1.40 crores in 1961-62, after increasing depreciation from Rs. 24.26 lakhs to Rs. 32.46 lakhs. The taxable ordinary dividend has been pruned from 28.5 percent to 25 percent presumably due to heavier taxation. At the present price, the yield works out to 4.3 percent. Taxation absorbs Rs. 98.25 lakhs (against Rs. 92.50 lakhs) and reserves Rs. 22.18 lakhs (against Rs. 20.99 lakhs).

Jardine Henderson Tea Group Fares Well

THE Jardine Henderson group of tea Companies have done well during the year ended December 1962. The Rydak Tea Syndicate Ltd (a Dooars garden) has increased the taxable ordinary dividend from 20 percent to 25 percent, absorbing Rs. 3.73 lakhs. At the present price of Rs. 25.44 a share of Rs. 10 each, the yield is 9.8 percent. The profit has improved from Rs. 4.76 lakhs in 1961 to Rs. 8.77 lakhs in 1962, after transferring Rs. 2.69 lakhs (against Rs. 2.68 lakhs) to depreciation. Taxation absorbs Rs. 4.26 lakhs, of which the super profits tax accounts for Rs. 19,430. Tax provision was Rs. 2.20 lakhs in 1961. Development rebate reserve is allocated Rs. 8,661 (against Rs. 2,000) and general reserve Rs. 6.04 lakhs. The crop was 978,337 kilograms, against 921,964 kilograms. The average sale price of the Rydak estate rose from Rs. 4.81 to Rs. 5.34 a kilogram and that of the Kartick estate from Rs. 4.77 to Rs. 5.54 a kilogram. The 1963 crop is estimated at 1,010,245 kilograms.

The Dessai and Parbutia Tea Co. Ltd (an Assam garden) has made a profit of Rs. 7.21 lakhs, against Rs. 5.42 lakhs, after providing Rs. 78,143 (against Rs. 78,710) for depreciation. The taxable ordinary dividend has been increased from 10 percent to 15 percent, absorbing Rs. 1.26 lakhs. It offers a yield of 7.9 percent at the present price of Rs. 189 a share of Rs. 100 each. Taxation absorbs Rs. 4.55 lakhs, of which the super profits tax accounts for Rs. 52,417. Tax provision was Rs. 4.39 lakhs in 1961. Development rebate reserve is allocated Rs. 2,213 (against Rs. 869) and general reserve Rs. 2.83 lakhs. The crop amounted to 597,724 kilograms, against 543,624 kilograms. The average sale price rose from Rs. 5.63 to Rs. 6.12 a kilogram. The crop for 1963 has been estimated at 533,773 kilograms at a cost of Rs. 5.93 a kilogram.

The profit of the Baradighi Tea Co. Ltd (a Dooars garden) has been Rs. 6.60 lakhs, against Rs. 6.62 lakhs, after transferring Rs. 1.63 lakhs (against Rs. 1.55 lakhs) to depreciation. A dividend of 25 percent has been maintained, absorbing Rs. 3 lakhs. The yield is 10.8 percent at the present price of Rs. 23.25 a share of Rs. 10 each. Tax provi-

sion, including Rs. 7,000 for the super profits tax, is Rs. 2.76 lakhs (against Rs. 2.89 lakhs). Development rebate reserve is allocated Rs. 15,521 (against Rs. 1,466) and general reserve Rs. 4.63 lakhs (against Rs. 3 lakhs). The crop was 666,481 kilograms (against 724,364 kilograms), but the average sale price improved from Rs. 4.69 to Rs. 5.13 a kilogram. A crop of 664,600 kilograms has been estimated for 1963 at a cost of Rs. 4.15 a kilogram.

Octavius Steel Repeats

THE Octavius Steel and Co., Ltd has earned a profit of Rs. 14.23 lakhs for the year ended December 1962, compared with Rs. 13.70 lakhs in 1961, after providing Rs. 57,197 (against Rs. 55,011) for depreciation. A taxable ordinary dividend of 7.5 percent has been maintained. It is covered more than thrice. Taxation is allocated Rs. 7.63 lakhs (against Rs. 6.40 lakhs) and the loss on investments Rs. 77,784 (against Rs. 8,657). The carry-forward is Rs. 24,342, against Rs. 2.32 lakhs brought in.

Hindustan Aluminium Raises Capacity

THE Rs. 10-paid share of Hindustan Aluminium is currently quoted around Rs. 12.52. The substantial premium that these shares have continued to enjoy despite the slump in the stock market, is an indication of the investors' confidence in the outlook for the Company. This optimism seems well-founded. It is not merely that the Company has been able to build up its plant economically and come into production within 18 months of the construction of the factory, but its present rate of production at 22,000 tonnes of aluminium ingots a year is in excess of the rated capacity of 20,000 tonnes. Apparently, the plant has had very little of the usual "teething" troubles. Encouraged by the successful working of the plant, the Company has undertaken to expand its primary aluminium capacity from 20,000 to 50,000 tonnes a year and to set up its own thermal power plant for meeting the additional power requirements. The Company also proposes to set up a fabrication plant which is estimated to cost about Rs. 6 crores. The expansion programme, estimated to cost Rs. 30 crores, has been approved by the Government of India.

Presiding over the Company's annual meeting last week, the chairman, Mr. G. D. Birla, stated that the fabrication plant which was likely to be commissioned by about the middle of next year, would greatly strengthen the Company's financial position. Hindustan Aluminium will not then have to send the metal abroad for the purposes of conversion as it does at present. The establishment of conversion facilities will make it easier for the Company to dispose of its products and improve its profitability. Mr. Birla added that the Company did not require any fresh capital for setting up the fabrication facilities. It would use a loan of Rs. 2.5 crores from the U.S. Export-Import Bank and another Rs. 1 crore from the A.I.D. loan. The balance would be obtained from the Company's own resources and bank borrowings.

The chairman assured shareholders that the Company would not issue any additional capital for at least one year even though it had secured the Government's sanction for issuing fresh capital at par. "We do not want to put any undue burden on the market or the shareholders in the

present circumstances, said Mr. Birla. Replying to shareholders' questions, the chairman indicated that the Company's sales in 1963 would amount to Rs. 7 crores or Rs. 7.50 crores provided the present prices were maintained. While unwilling to make any commitment concerning the payment of dividend, Mr. Birla assured shareholders that the management would do its best to pay a dividend as soon as possible. He dismissed the notion that the quality of Maharashtra bauxite was the best; he felt that Bihar bauxite was better than that available in Maharashtra. The chairman stated that compared with the international price of Rs. 2,000 a ton, the domestic price of aluminium ranges between Rs. 3,000 and Rs. 3,400 a ton. The home market is a protected one. The Company has at present 17,500 shareholders. There are about 1,300 workers engaged on the plant.

New Plant and Machinery for Tata Group Mills

SINCE the preliminary reports on the working of the three textile mills belonging to the Tata group, namely, Svadeshi Mills, Tata Mills and Ahmedabad Advance, have already been released along with the announcement of dividends, the chief interest in the directors' reports lies in the information they contain about the progress of the modernisation plans of the mills. The directors of Svadeshi Mills state that new plant and equipment of the value of about Rs. 16 lakhs was installed during the year under report. The important additions were a shearing and cropping machine, high-speed draw frames, automatic pirn winders, a mercerising machine, a ring doubler and new plain looms. The new plant and machinery will enable the mills to produce improved and better varieties of cloth. Additional machinery worth Rs. 14 lakhs was awaiting installation at the end of the year, and further orders have been placed for machinery of the value of Rs. 9 lakhs.

Against the Company's application for permission to install 25,000 additional spindles to balance production, the Government has so far sanctioned the installation of 16,192 spindles, including 2,712 spindles as transfer from Empress Mills. Orders have been placed for 30 spinning frames, which, when received, will increase the Company's spinning capacity to 91,228 spindles, with the result that the present lack of balance between the spinning and weaving capacity will be considerably reduced. The Company has received sanction for installing 144 automatic looms, against its application for 192 looms. So far the Company has received sanction to install 288 automatic looms in replacement of 253 plain looms. Out of these, 144 looms carry an obligation to export 1.75 million metres of cloth a year for a period of five years from the date of installation. On the installation of all these looms, the Company's automatic capacity will be about 42 percent of the total installed weaving capacity.

The Ahmedabad Advance Mills installed new plant and machinery of the value of about Rs. 4 lakhs in 1962, and further machinery worth Rs. 7 lakhs was awaiting installation at the end of the year. Orders have also been placed for additional machinery valued at about Rs. 12 lakhs. The delivery of 96 automatic looms which was expected in 1962 was received only during the current year. The Company has been permitted to install 144 additional automatic looms which carry an obligation to export 1.75 million metres of cloth a year for five years. The question of modernisation of the mills

with a view to producing quality fabrics is receiving the attention of directors. A stentering and drying range and a comprehensive shrinkage range will be installed in the near future in order to give better finishes to cloth and to increase the output of processed goods. The Government has sanctioned the installation of 3,000 spindles against the Company's application for 3,520 spindles for balancing purposes.

Tata Mills received a large part of the new non-woven fabric plant in 1962 and this was installed in October. This is an entirely new line of manufacture and requires considerable experimentation with the product accompanied by market research to ascertain the requirements of Indian consumers. The non-woven fabric plant is part of a new set of plant and machinery valued around Rs. 23 lakhs installed during the year. Machinery worth about Rs. 8 lakhs awaited installation towards the end of the year. Further orders have been placed for additional machinery of the value of about Rs. 12 lakhs.

Against the Company's application for 20,000 spindles for balancing equipment, the Government has so far permitted the installation of 13,640 spindles, including 4,055 spindles as transfer from Empress Mills. This will enable the Company to reduce considerably the present unbalance between the spinning and weaving capacity. The Company also received sanction in 1962 to install 144 automatic looms, and a further allotment of 48 automatic looms was received early this year. These looms carry an obligation to export 2.5 million metres of cloth a year for five years from the date of installation.

The directors' reports show that while the Ahmedabad Advance Mills exported cloth in 1962 amounting to 2.5 percent of its aggregate sales, Svadeshi Mills' exports were 8.25 percent of the total sales and Tata Mills' exports amounted to 11 percent of its aggregate sales. (As already pointed out in the 30th May issue of *Capital*, the Tata group of mills did not fare well last year. Despite larger sales, all the three mills suffered a substantial decline in their profits with the result that the dividends had to be reduced.)

India United Mills Profit Falls

INDIA United Mills, which recorded an impressive improvement in its performance between 1959 and 1961, made a disappointing show in 1962, with the gross profit down sharply by as much as 52 percent from Rs. 1.82 crores to Rs. 86.62 lakhs. The fall in profits was caused by the marked deterioration in the market conditions after the Chinese aggression, rise in cotton prices, a higher wage bill and increase in other costs. In his annual speech, the chairman, Mr. M. D. Bhat, has assured the shareholders that the management is fully seized of the situation. Suitable redistribution of work, effective checks at different levels and complete orientation of the sales organisation are being planned. On account of bulk production and a relatively small number of varieties of cloth, the Company is unable to obtain adequate prices. Old and obsolete machinery presents difficulties in producing better and finer varieties of cloth for which there is a good demand. But the chairman has expressed the hope that as the old machinery is being gradually replaced by new machinery, the Company will be better equipped to introduce new and popular sorts and to compete successfully with other mills producing similar types of cloth.

The Company spent Rs. 25.41 lakhs on additions to new machinery in

1962, bringing the value of new machinery added during the four years 1959-62 to Rs. 71.68 lakhs. The gross profit for these four years, subject to depreciation, taxation and bonus, amounted to about Rs. 410 crores. Considering this profit, the capital expenditure incurred for replacement of old obsolete machinery cannot be regarded as excessive. The chairman says that a more ambitious programme has been planned, and further machinery has been ordered, some of which has already arrived and is being erected. The price of machinery which has been ordered and is to be received as on 1st May, 1963, is Rs. 1.34 crores, including advance payments made for such machinery. The machinery is expected to be received by about the end of 1964, and some of the machinery has been purchased on deferred payment terms. The machinery includes ten sets of draw frames and speed frames, 170 ring frames, 15 doubling frames, 2 roto-coners with high-speed winding and warping, one cloth mercerising range and other miscellaneous machinery, motor, etcetera, in different sections. All the new machinery will enable the Company to cut down manufacturing costs, improve quality, increase production and to achieve higher profitability. The Company has applied to the N.I.D.C. and to the Punjab National Bank for financial assistance to meet the cost of the phased programme of rehabilitation and modernisation.

The chairman stated that the Company could not meet its export obligations fully in spite of working more than 30 percent of its looms for export orders during certain months. Because of old and obsolete machinery, there was high proportion of sub-standard production and rejections and prices recovered for export varieties were below cost. The Company's exports fell short of its obligations by about Rs. 12 lakhs, and that export incentive received in cash amounted to Rs. 7 lakhs. Replying to shareholders' questions, the chairman said that the sales during the first five months of the current year amounted to Rs. 5.79 crores and the stock position had improved greatly although some of the cloth had to be sold below stamped prices. The chairman was reluctant to make any forecast about the prospects for the current year, but he hoped that the position for the current year as a whole would be satisfactory. He was unable to say as to how much would be the Company's liability for bonus for 1962, as this would depend mostly on the formula evolved by the Bonus Commission. Mr. Bhat reiterated the plea for an upward revision of cloth prices in order to compensate for the rise in manufacturing costs, over which the industry has little control.

Raymond Woollen Fares Well

THE Raymond Woollen Mills Ltd reports encouraging results for 1962. Sales are up by about 17.3 percent from Rs. 3.20 crores to Rs. 3.75 crores, and the gross profit has gone up by about 12.5 percent from Rs. 54.12 lakhs to Rs. 60.87 lakhs. The dividend, however, has only been maintained at 12 percent, less tax, because the net profit is slightly lower on account of the enhanced tax liability. Apart from the increase in the income tax and super tax from Rs. 21 lakhs to Rs. 24.30 lakhs, the Company has had to set aside Rs. 6 lakhs for super profit tax, raising the total incidence of taxes to 62.35 percent of the assessable income. After providing Rs. 6.41 lakhs (against Rs. 5.67 lakhs) for depreciation and Rs. 30.30 lakhs (against Rs. 21 lakhs) for taxation and deducting other charges, the net profit amounts to Rs. 20.14 lakhs, compared with Rs. 23.81 lakhs

CAPITAL, 27th June, 1963.

in 1961. Allocation to the general reserve No. 2 has been raised from Rs. 9.70 lakhs to Rs. 10 lakhs, and development reserve gets Rs. 95,000, against Rs. 70,000. The provision for investment depreciation reserve has been maintained at Rs. 1 lakh. Ordinary dividend absorbs Rs. 9 lakhs (the same) and preference dividend Rs. 1.62 lakhs (the same), leaving a sum of Rs. 51,000 to be carried forward, against Rs. 2.94 lakhs brought in.

The directors state that the Company's woollen mills have received substantial orders for defence materials and have been engaged almost entirely during the current year in the production for defence. The Company is proceeding apace with a scheme for complete modernisation, particularly in wool combing spinning and weaving. The Company has been allotted 24 heavy power looms with a view to increasing the production capacity of barrack blankets required for defence services. As the Government has permitted transfer to the woollen industry of machinery entitlements earned under the cotton textiles export promotion scheme, the Company has made commitments for transfer of such entitlements to the extent of about Rs. 15 lakhs, and has paid a total premium of Rs. 6.40 lakhs as consideration for such transfer.

The Company has been negotiating with a leading firm of top makers abroad for financial participation as well as technical know-how for the development of its wool combing capacity. With a view to diversifying its activities, the Company proposes to enter into the field of manufacture of organic and inorganic chemicals and chemical compounds in collaboration with Helene Curtis Industries of the U.S.A. The terms of collaboration which have already been approved by the Government of India visualise the setting up of a new company with a capital of Rs. 5 lakhs, in which Raymond Woollen will have a 51 percent interest and foreign collaborators will have a 49 percent interest. The foreign collaborators will also provide the necessary technical and marketing know-how without any additional remuneration. The turnover of the J. K. Engineering files increased by over 60 percent in 1962 and the directors expect a further increase in production and turnover during the current year. The Rs. 100-paid share of Raymond Woollen is currently quoted around Rs. 136 cum-dividend.

Dharamsi Morarji Chemical Earns More

DHARAMSI Morarji Chemical Co. Ltd did very well in 1962 with a 30 percent increase in its gross profit from Rs. 27.60 lakhs to Rs. 35.89 lakhs. From what the chairman, Mr. Pratapsinh R. Morarji, said at the Company's annual meeting on 18th June, the shareholders can look to the future with confident optimism. Sales in the first five months of the current year are placed at Rs. 1.28 crores, and the Company is said to be fully booked for the rest of the year. The chairman sees no reason why 1963 should not close as successfully as 1962, provided, of course, economic conditions do not worsen. Although Mr. Morarji refrained from making any definite promise, he felt that there would be no difficulty in maintaining the dividend for 1963.

The chairman stated that apart from the excellent sales potential of the main product—superphosphate—the increasing sales of other products, namely, alumina sulphate, nitric acid, oleum, chlorosulphonic acid, etcetera, were bound to reflect favourably in the working results in future years. Moreover, the Company would also

CAPITAL, 27th June, 1963.

benefit considerably from the three new projects—borax and boric acid project, industrial explosives project and the sulphuric acid project. Reviewing the working of the Company in 1962, the chairman stated that the sales of superphosphate had set a new record. The Kumhari factory had made a welcome contribution to the sales. The Company had secured new markets in Orissa and Rajasthan, although a few old markets were lost in Andhra Pradesh because of the setting up of new units there. The chairman said that the Company would be able to market its entire output from the Kumhari factory in those two States alone if the present tempo of demand continued.

The demand for alumina sulphate, nitric acid, oleum and chlorosulphonic acid continued to be on the increase. The Company has applied to the Government for permission to increase the capacity for chlorosulphonic acid from the present 5 tons a day to 20 tons a day. Satisfactory progress is reported in the construction of the 300-ton a day sulphuric acid project in Ambernath and the 50-ton a day aluminium sulphate project in Kumbhari. The chairman did not visualise any difficulty in securing the supply of rockphosphate and sulphuric acid in the current year. The Company has been making good progress on the export front. It has already shipped 5,499 tons of alumina sulphate to Egypt and another 436 tons to Iraq. Further, it had on hand orders for 6,000 tons to be shipped from this month onwards. The Government had granted the Company a subsidy on exports of alumina sulphate to compensate for the loss on exports.

Mr. Pratapsinh Morarji stated that the Company has signed the technical and financial collaboration agreement with Borax (Holdings) Ltd for the new borax and boric acid project. The project which is estimated to cost Rs. 60 lakhs, will be financed by an equity capital of Rs. 30 lakhs and loans amounting to Rs. 30 lakhs. The Company will subscribe for Rs. 7.5 lakhs and foreign collaborators will take up shares worth Rs. 13.5 lakhs. The balance of Rs. 9 lakhs will be offered for public subscription at the instance of the Government of India. The Company has made further progress in the implementation of the project for industrial explosives. The chairman assured shareholders that some shares in the proposed venture for industrial explosives would be reserved for firm allotment, to the shareholders of Dharamsi Morarji Chemical Company. Replying to shareholders' questions, the chairman hinted that the Company might have to come out again with a small rights issue later in the year. The board is, however, yet to consider the matter. The Company is not liable to pay super profits tax for 1962. No tax is payable on the whole amount of the dividend for 1962. The income tax assessment of the Company has been completed up to 1961. The Life Insurance Corporation does not hold any shares in it.

Expansion Plans of Pesticides

THE chairman of Pesticides Ltd, Mr. Madannohan R. Ruia, informed the shareholders' annual meeting last week that the benzene hexachloride (B.H.C.), malathion, copper and zinc sulphide plants which had gone into production by stages from January to April this year, have been working satisfactorily. The P. M. A. plant is expected to go into production by the year-end, and the 2-4-D plant thereafter. The Government has approved the Company's scheme for the manufacture of parathion and has sanctioned an import

licence for capital equipment worth Rs. 5.49 lakhs. The Company has also been sanctioned a licence for importing essential raw materials for the first two years. The plant is expected to be put up by about the middle of next year. Mr. Ruia said that the Company proposed to extend its activities by undertaking the manufacture of a series of other chemicals widely used in the field of pesticides. It proposes to manufacture lindane from technical B.H.C. and also ethylene chloride and carbon tetrachloride mixture used in fumigation of stored foodgrains. The Company has applied to the Government for permission to increase the capacity for benzene hexachloride from the present 1,500 tons to 2,250 tons a year. The chairman stated that after the implementation of the diversification programme and expansion, Pesticides would be one of the largest in the field saving considerable amount of foreign exchange for the country.

Replying to shareholders' questions, Mr. Ruia stated that the Company's sales in the current year would be around Rs. 35 lakhs. He estimated the gross profit at 40 percent of the turnover. The net profit after providing for depreciation, development rebate and taxation was likely to be around 20 percent of the turnover. The profitability was likely to improve when the phenyl mercury acetate and 2-4-D plants go into production as the overhead costs will be spread over. After providing for depreciation and development rebate, the current year's working is likely to leave only a nominal surplus. The chairman seemed optimistic about a maiden dividend for 1964. Mr. Ruia informed shareholders that the Company's production so far amounted to 550,895 kilograms of B.H.C. valued at Rs. 7.67 lakhs, 29,350 kilograms of C.O.C. (Rs. 1.11 lakhs), 3,740 kilograms of malathion (Rs. 33,600), 3,184 grams of malathion (Rs. 14,328) and 8,925 kilograms of cuprous oxide (Rs. 49,533), making a total of Rs. 9.76 lakhs. Sales aggregated Rs. 8.07 lakhs, of which B.H.C. accounted for Rs. 6.10 lakhs. The Rs. 7.50-paid share of the Company is currently quoted around Rs. 5.88.

Hindustan Lever Expands and Diversifies

IN his chairman's address at the annual general meeting of Hindustan Lever Ltd held recently in Bombay, Mr. P. L. Tandon elaborately described the management of the Company. (The details were printed in last week's issue of *Capital*.) Since the shareholders have all along been convinced about the first-class management of the concern, they have little interest in knowing the details. They would have been happier if he had given an indication as to what fresh developments had taken place concerning the rights share issue which was deferred due to the increased tax burden in the 1963-64 Central Budget.

In the past, the Company had to do mainly with oils and fats, but it is now branching out more widely into the field of human and animal foods. So the momentum of the Company's expansion and diversification programmes is expected to be maintained. Mr. Tandon made an important point in relation to the Company's expansion and diversification which deserves careful attention. An existing company, he said, should promote growth into new fields of activity by forming new companies. This is a better way of diversifying control and capital. But to promote such development, the practice of taxing inter-company profits must first be abolished. In

1962, the Company made record sales and profits before tax. Exports of its products jumped from Rs. 71 lakhs in 1961 to Rs. 2.01 crores in 1962. It is interesting to know that along with the Company's growth and expansion, the directors have concentrated attention on keeping production costs in check.

Ceat Tyres to Complete Expansion by Year-end

THE chairman of Ceat Tyres of India Ltd, Mr. A. D. Shroff, informed the shareholders' annual meeting on 21st June, that the Company's current average monthly production was around 550 tonnes, compared with 390 tonnes in 1962. The expansion programme for raising the output to 1,000 tonnes a month is expected to be completed by the end of the current year. The chairman did not expect any difficulty in marketing the output as the Company had now built up a satisfactory countrywide sales organisation. The current sales are placed around Rs. 50 lakhs a month and the annual realisations are expected to increase to around Rs. 10 crores at the current prices when the expansion programme has been completed.

Mr. Shroff said that the Company's working in the next six months would be considerably better, if the Government sanctioned, with immediate effect, an increase in the prices of tyres even according to the formula recommended by the Tariff Commission. If the Commission's formula was applied to the conditions prevailing today, there would automatically be an increase in the price of passenger tyres of about 16 percent and for lorry tyres of about 22 percent. Prospects for the current year naturally depend on the Government's decision concerning tyre prices. Mr. Shroff said that the tyre industry was confronted with the serious problem of rising manufacturing costs which had practically wiped out any reasonable margin of profit. The costs of production, particularly concerning raw materials over which the industry has no control, have been mounting. The progressive utilisation of indigenous products like synthetic rubber, carbon black, rayon and tyre cord, etcetera, under compulsion is bound to push up manufacturing costs further to the extent of about 10 to 25 percent over the landed cost of similar imported products. Raw materials are said to account for about 65 percent of the total cost of production of tyres.

Mr. Shroff has urged the Government to raise tyre prices in order to ease the pressure on the industry's profit resulting from mounting raw material costs. Referring to tyre exports, the chairman stated that the industry was not in a position to compete in world markets because of the substantially higher prices of its products. Answering shareholders' questions, Mr. Shroff said that the Company has made full provision for depreciation and development rebate up to December 1962. The Life Insurance Corporation holds 2,400 shares of Ceat Tyres.

Alembic Chemical Does Well

ALEMBIC Chemical Works Co. Ltd did extremely well in 1962 with both sales and profit setting new records. The Company's sales increased by about 24 percent from Rs. 2.84 crores to Rs. 3.53 crores, and the profit after providing Rs. 2 lakhs for contribution to the National Defence Fund rose by 44.6 percent from Rs. 41.68 lakhs to Rs. 60.30 lakhs. The annual speech of the chairman, Mr. R. B. Amin, holds out the promise of

still better results in the current year as the sales of the Company's products are increasing and the full results of some of the earlier expansion schemes will be reflected in the current year's working. The chairman says that the expansion of the ethyl alcohol plant is nearing completion. When completed, it will increase the production of ethyl alcohol as well as that of Co. gas, which is a by-product.

Orders for machinery for the yeast project have been placed and the machinery is expected to arrive early next year. The Company proposes to enter the field of virus vaccines, and it has, therefore, started a new virus research laboratory. Mr. Amin says that this is the first such effort in the private sector in India. In order to diversify its activities, the Company has plans to manufacture many products such as dentifrices, inhalers and nasal drops, clear and pearly shampoos, non-caloric sweetening agents, first aid sprays and such other things as every one in the family desires. Most of these products have already been scientifically developed by the Company in its laboratories and have been tested. A few more are said to be at the laboratory stage. All these products would be marketed under a special brand name, and some of them are expected to be in the market early next year.

Bajaj Electricals Results Impress

THE preliminary report on the working of Bajaj Electric Ltd for the year ended March 1963, shows that the Company has done exceedingly well during the year. Compared with a 26 percent rise in the sales from Rs. 2.84 crores to Rs. 3.53 crores, the gross profit has gone up by as much as 62 percent from Rs. 16.74 lakhs to Rs. 27.20 lakhs. Improved results have enabled the directors to step up the dividend from 9 percent to 10 percent on the increased capital as raised by a rights issue of Rs. 10 lakhs in December 1961. The dividend on the deferred shares has been raised from Rs. 2.68 to Rs. 4.27 a share. Realisations from the sale of lamps and lighting equipments are up from Rs. 1.42 crores to Rs. 1.57 crores; fans fetched Rs. 1.14 crores, against Rs. 85 lakhs, transformers Rs. 37 lakhs (against Rs. 27 lakhs), instruments Rs. 18 lakhs (against Rs. 14 lakhs) and appliances and other Rs. 32 lakhs (against Rs. 16 lakhs).

After making provisions and writing off amounts totalling Rs. 51,553 (against Rs. 14,932), providing Rs. 2.17 lakhs (against Rs. 1.96 lakhs) for depreciation, Rs. 13,000 (against Rs. 25,000) for development rebate reserve, Rs. 14 lakhs, including Rs. 2.25 lakhs for super profits tax (against Rs. 6.25 lakhs) for taxation, and making adjustments concerning previous years amounting to Rs. 33,000 (against Rs. 1.74 lakhs), there remains a surplus of Rs. 10.05 lakhs, compared with Rs. 6.28 lakhs in 1961-62. Allocation to the general reserve has been raised from Rs. 2.32 lakhs to Rs. 4.05 lakhs, and a sum of Rs. 6 lakhs has been transferred to the dividend reserve out of which the proposed dividends are to be paid. Ordinary dividend absorbs Rs. 4.75 lakhs, against Rs. 3.21 lakhs, deferred dividend Rs. 73,777 (against Rs. 45,959) and preference dividend Rs. 47,983 (the same).

Mr. Ramkrishna Bajaj, a director of the Company, told newsmen recently that the Bajaj Electricals was expected to fare better during the current year as the turnover was likely to reach Rs. 4.50 crores. The construction of the building for the new instrument factory in Poona is expected to start in August, and will

be completed by the end of 1964. The total capital outlay on this factory is estimated around Rs. 24 lakhs. Negotiations for securing foreign collaboration for this factory are said to be nearing completion. The programme of further expansion of Hind Lamps Ltd, Bajaj Electricals subsidiary, has not been taken up yet. The Company is celebrating its silver jubilee during the current year. The Rs. 100-paid share Bajaj Electricals is currently quoted around Rs. 116.50 cum-dividend.

Share Offer by Autofin

AUTOFIN Ltd, which is already in the market to raise Rs. 20 lakhs—all in equity shares of Rs. 100 each—through public subscription, is a new Company which has been formed to undertake the purchase and sales of motor-cars, lorries, buses, motor cycles, scooters, tractors and allied machinery of all kinds and also to promote their sale by hire-purchase. The promoters point out that the demand for motor-vehicles in Andhra Pradesh has registered a steep rise in recent years, the total number of vehicles on the road having gone up from 15,675 in 1956-57 to 46,008 in 1960-61. The system of sale by hire purchase, it is said, will encourage and enable small investors to own vehicles.

The Company proposes to hold adequate stocks of spares and maintain a workshop with up-to-date machinery and equipment which will answer a keenly felt demand by motor-vehicle owners in the two cities of Hyderabad and Secunderabad, who are now obliged to send their vehicles to far-off places for want of a good workshop in the city. The Company has been appointed authorised dealers for Hindustan Ambassador cars and Bedford lorries in the territories comprising the former Hyderabad State. The Company has an authorised capital of Rs. 75 lakhs in equity shares of Rs. 100 each. The issued capital is Rs. 25 lakhs of which shares of the value of Rs. 5 lakhs are being taken up by the directors and their friends. The remaining 20,000 equity shares are now on offer to the public. The board of directors includes Mr. Pannalal Bansilal Pitti (chairman), Raja Ramdave Row, Mr. Ghevarechand Jain, Mr. Ratnapal D. Shah, Mr. Lakshminarain Dandotiva, Mr. M. M. Khajia and Mr. Hashim Mehdi. The Company is incorporated in Secunderabad.

Mopeds India to Enter Market Soon

MOPEDS India Ltd, Coimbatore, which proposes to set up a factory near Tirupati, Andhra Pradesh, for the manufacture of mopeds (auto cycles), will soon be in the market to raise Rs. 20 lakhs through public subscription. Motobecane, Patin, France, one of the leading manufacturers of mopeds, is collaborating in the venture. The Company has been granted exclusive rights to manufacture and sell mopeds in India. It has also been authorised to export to Pakistan, Afghanistan, Nepal and Ceylon on a non-exclusive basis and to other countries on obtaining prior approval of Motobecane. The Company has been licensed to manufacture 7,500 mopeds a year on a single shift basis. The project is estimated to cost Rs. 57.50 lakhs, which is proposed to be met by the share capital of Rs. 35 lakhs, a loan of Rs. 15 lakhs from the I.C.I.C.I. bank loans amounting to Rs. 5 lakhs and advances and deposits from directors, managing agents and others to the extent of Rs. 2.50 lakhs.

Most of the raw materials, it is said, will be available from indigenous sources. Some raw materials and a few proprietary items will, however, need to be imported.

The Company has an authorised capital of Rs. 50 lakhs, made up of Rs. 40 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in 7½ percent redeemable cumulative preference shares of Rs. 10 each. The present issue consists of Rs. 35 lakhs comprising Rs. 33 lakhs in equity shares and Rs. 2 lakhs in preference shares. The preference shares are being taken up by the foreign collaborators, and out of the equity capital of Rs. 33 lakhs, the directors and their friends are taking up shares of the value of Rs. 13 lakhs. The balance of Rs. 20 lakhs, it is proposed, will be offered for public subscription shortly. Venkatapathi and Company has been appointed as the managing agent for a period of ten years from January 1963.

Results of Nederlandsche Handel-Maatschappij

THE profit and loss account of Nederlandsche Handel-Maatschappij, N.V., for the business transacted through its branches in Bombay and Calcutta shows a profit of Rs. 2.08 lakhs for the year ended December 1962, compared with Rs. 2.78 lakhs in 1961. (The details appear on a later page in this week's issue of Capital.) Interest paid on deposits and borrowings rose from Rs. 13.96 lakhs to Rs. 16.14 lakhs while the interest and discounts earned increased from Rs. 25.55 lakhs to Rs. 30.76 lakhs. Deposits improved from Rs. 1.92 crores to Rs. 2.23 crores. Cash was shown at Rs. 48.57 lakhs, against Rs. 20.56 lakhs. Investments rose from Rs. 54.56 lakhs to Rs. 73.50 lakhs while advances declined from Rs. 4.45 crores to Rs. 3.73 crores.

Nil from Nazira Coal

THE Nazira Coal Co. Ltd has passed the dividend for the year ended December 1962. The profit has amounted to Rs. 1.16 lakhs, against a loss of Rs. 5.296 in 1961, after providing Rs. 11.863 (against Rs. 12.653) for depreciation. Taxation absorbs Rs. 50,000 leaving a carry-forward of Rs. 74.711, against Rs. 1,918 brought in. Raisings were 17,449 tons, against 17,874 tons, and despatches declined from 17,999 tons to 17,048 tons.

A Firpo Earns Less

A FIRPO LTD has earned a profit of Rs. 1.44 lakhs for the year ended October 1962, compared with Rs. 2.65 lakhs in 1960-61, after providing Rs. 76.296 (against Rs. 41.656) for depreciation. A taxable ordinary dividend of 5 percent has been declared, absorbing Rs. 40,000. Taxation is allocated Rs. 1.05 lakhs (against Rs. 1.48 lakhs), leaving a carry-forward of Rs. 2,623, against Rs. 19,583 brought in.

Same from Concord of India Insurance

THE Concord of India Insurance Co. Ltd has maintained a taxable ordinary dividend of 20 percent for the year ended December 1962, absorbing Rs. 2.70 lakhs. At the present price of Rs. 10.25 a share

of Rs. 10 each, of which only Rs. 5 has been paid up, the yield works out to 9.8 percent. A sum of Rs. 2.74 lakhs has been transferred to the appropriation account from the profit and loss account. Bringing in Rs. 78,475, there is a distributable balance of Rs. 3.5 lakhs. General reserve is allocated Rs. 50,000, leaving a carry-forward of Rs. 32,703, against Rs. 78,475 brought in. Net premiums of the fire department were Rs. 41.67 lakhs, those of the accident department were Rs. 26.99 lakhs and of the marine department Rs. 16.53 lakhs.

Mettur Industries Cuts Dividend

THE directors of Mettur Industries Ltd have recommended a lower dividend of 20 percent for the year ended March 1963, compared with the previous year's 22½ percent. A decline in sales by Rs. 7.29 lakhs compared with the previous year and a fall in the profit highlight the working results of the Company. After meeting all expenses and providing Rs. 1.98 lakhs (against Rs. 2.01 lakhs) for depreciation, the profit for the year amounts to Rs. 23.62 lakhs (against Rs. 31.02 lakhs). Out of this, provision for taxation gets Rs. 13.51 lakhs which includes Rs. 1.75 lakhs for the super profits tax. This leaves a net profit of Rs. 10.11 lakhs after taxation. With Rs. 45,412 brought forward from the previous year and with Rs. 1.75 lakhs transferred from general reserve, the total available for appropriation amounts to Rs. 12.31 lakhs. Out of this, Rs. 20,925 (against Rs. 16,100) is transferred to development rebate reserve. The proposed dividend will absorb Rs. 12 lakhs. The balance of Rs. 10,434 is carried forward.

The directors state in their report that the working of the mill was affected by the power cut from 26th June to 11th July, 1962. In addition, the operational efficiency of the mills was affected by poor voltage and low frequency. The cost of power consumed increased by about Rs. 70,000 due to the levy of the electricity tax at 30 percent of the cost of consumption from 1st July, 1962. This increase represents only 75 percent of what the figure will be during the current financial year. The cost of cotton consumed increased by about Rs. 2.62 lakhs due to the high prices of Indian cotton. The export cess of Rs. 5 a bale on all Indian cotton consumed by the mill amounted to an additional sum of about Rs. 32,000. The cess was, however, reduced from 1st January, 1963. The directors state that the Indian cotton crop in the 1962-63 season has improved and purchases for the year have been effected at lower prices.

Referring to the export obligation and the penalties for non-fulfilment of the latter, the directors say that it was not possible to attain the target and a sum of Rs. 1.28 lakhs has been provided for the shortfall. During the current financial year, exports of the value of Rs. 3.07 lakhs have been made. The directors also say that the continuation of emergency risks insurance will cost about Rs. 40,000 during the current financial year. The Employees' State Insurance Scheme will cost about Rs. 49,000 more due to the enhancement of the rate.

New Capital Issues

THE Controller of Capital Issues has given his consent to nine companies to issue capital of the order of Rs. 4.82 crores. Three are

CAPITAL, 27th June, 1963.

issuing bonus shares, one preference shares, one cumulative preference plus equity, and the rest equities. One is a new company involving foreign collaboration, one is a Central Government undertaking and one is a public corporation. The consent for all the nine is valid for 12 months. The following are the details:

Allied International Products Ltd., a Company registered on 11th October, 1962, for the manufacture of motor-vehicle and aircraft general spares in collaboration with a U.S. company has been accorded consent to issue capital of Rs. 75 lakhs divided into 750,000 equity shares of Rs. 10 each to be issued as to Rs. 25 lakhs to the U.S.A. company against the import of plant and machinery to the extent necessary, and in cash through inward remittance in foreign exchange and the balance to Indian nationals for cash at par. The proceeds will be used for financing the manufacture of motor-vehicle and aircraft general spares.

Gopichand Textiles Mills Ltd. will issue Rs. 40 lakhs—Rs. 30 lakhs in equity shares of Rs. 10 each, and Rs. 10 lakhs in preference shares of Rs. 100 each. The shares will be issued for cash at par and the proceeds will be used in the establishment of a mill in Sirsa (Punjab) with 12,000 spindles for the manufacture of cotton yarn.

Meameco Ltd. Calcutta, is to issue capital of Rs. 33,81,900 in equity shares of Rs. 10 for cash at par. The capital is required for liquidation of debts. The Company is engaged in business as manufacturers of mining and mechanical handling equipment in Dhanbad.

Deepak Industries Ltd. Calcutta, is to issue capital of Rs. 29,98,500 divided into 199,850 equity shares of Rs. 10 each and 10,000 cumulative redeemable preference shares of Rs. 100 each for cash. The capital is required for the expansion of the Company's New Allenberry Works for the manufacture of gear boxes.

Sassoon Spinning and Weaving Company Ltd. Bombay, is to issue capital of Rs. 5,20,000 divided into 52,000 equity shares of Rs. 10 each, on capitalisation of its share premium account to a like extent, to be issued as fully paid-up bonus shares to the existing shareholders of the Company in the proportion of two such shares for every 29 shares held.

Bakelite (India) Private Ltd. Bombay, is raising further capital of Rs. 4,99,000 divided into 49,900 equity shares of Rs. 10 each, on the capitalisation of its reserves to a like extent, to be issued as bonus shares.

Navinchandra Purshotamdas and Company Ltd. Bombay, is issuing further capital of Rs. 50,688 divided into 50,688 ordinary shares of Re. 1 each, on capitalisation of the Company's reserves to a like extent, to be issued as bonus shares to existing shareholders of the Company in the proportion of 99 such shares for every existing share held.

Heavy Electricals (India) Ltd. Bhopal, a Central Government undertaking, has been given consent to issue further capital of Rs. 2.88 crores, divided into 28,800 equity shares of Rs. 1,000 each for cash at par. The proceeds will be used in financing the projects under the control of the Company.

The National Industrial Development Corporation Ltd. is to issue further capital of Rs. 5 lakhs, divided into 5,000 equity shares of Rs. 100 each, to be issued privately for cash at par. The proceeds will be used for giving assistance to one of its subsidiary companies.

CAPITAL, 27th June, 1963.

The Stock Markets

BONUS ANNOUNCEMENT BY BURN CAUSES TEMPORARY RALLY

Wednesday Evening.

EXCEPT for a temporary rally, the Calcutta stock market has been quiet during the past week. The announcement of a bonus issue by Burn and Company has been a bright feature. As soon as the news was received on Tuesday, there was hectic support for Burn and Indian Iron. Operators hastily concluded that since Indian Standard Wagon and Burn have decided to issue bonus shares, Indian Iron too will do the same since all these companies are under the same managing agents. But it took a little time for operators to find out that their thinking was completely illogical because the issue of bonus shares by a company depends on its peculiar circumstances. It is, nevertheless, felt that there is now an incentive for giving bonus shares because of the present system of computing the chargeable profit for super profits tax.

The improvement was short-lived and the market has again relapsed into a state of nervousness. Towards the close, share prices have weakened on a broad front on heavy bull unloading, combined with bear pressure. Turnover has been largely restricted to clearing shares. Interest in cash scrip has been at a low ebb since buyers have been conspicuous by their absence. Under the circumstances, any selling pressure has reduced prices out of proportion. The clearing passed off quietly on Wednesday. Although the carry-forward charges were more or less the same as in the previous settlement, operators preferred to keep their commitments light.

Lyons Range has been hesitant because of various uncertainties. The political news has been unfavourable. Reports of fresh incursions into Ladakh by the Chinese have caused a great deal of concern. The possibility of a reshuffle in the Central Cabinet following the resignation of two Union Ministers has put investors and operators on their guard.

The Government of India has given permission to the Calcutta stock market to resume forward trading. Since the resumption of forward trading in the Bombay and Madras markets has failed to inspire confidence, operators in Lyons Range have turned cautious. In fact, it is feared that short-selling may become more pronounced when forward trading is resumed. But the hope is that stringent margin regulations will help to curb speculation.

Indian Iron have been subdued after a temporary rally. Even the notice about the closure of books by the Company for paying the dividend for the year ended March 1963, has caused no interest. Except for a smart rise in the price of Burn due to the news of bonus shares, engineering shares have generally moved down. Indian Standard Wagon, Guest, Keen, Williams, Texmaco and Jessop have fallen.

The prices of miscellaneous shares have declined all-round and turnover has shrunk considerably. Business has largely been confined to clearing scrip. Scattered interest has been shown in Alkali Chemical and Britannia Biscuits. Electric company shares have been subdued and Calcutta Electric have been sold freely. Managing agency shares have weakened. Shaw Wallace and Martin Burn have lost. The prices of new shares

have been softer on a predominance of sellers. Despite an encouraging outlook, Hindustan Aluminium have declined. Paper shares have moved down in sympathy with the general trends. Orient, Titaghar and Sirpur have declined. Sugar shares have been difficult to deal in because there are no buyers.

There has been little interest in jute shares and prices have generally declined. The slow offtake of jute goods by foreign countries has made the investors cautious. Scattered business has been transacted in Birla, Barnagore, Fort Gloster, Champdany and Kamarhatty. Howrah have slipped back despite declaring an ordinary dividend of 10 percent, subject to tax. Coal shares have been subdued and nominal business has been transacted in Burrakur, Bengal and Central India. Stray business has been done in tea shares. Investors have been worried by the developments along the border. Cotton mill shares have been sold freely on fears that the profits of mills have been squeezed by rising production costs.

Government securities have been steady, but turnover has been small because of a shortage of sellers. The market expects that the second instalment of the Government's borrowing programme will be announced during the week-end. Meantime, the market is being groomed for the new loans. The Reserve Bank has stopped selling Government securities and it has raised its purchase prices for selected securities. The 3 percent Conversion loan 1966 has moved up to Rs. 64.15. There has also been support for selected State Government loans at good prices.

Bombay

WIDESPREAD FALL IN DALAL STREET INTERIM MARGINS IMPOSED

Wednesday Evening.

THE Bombay stock market has been subdued during the past week. There has been an all-round decline in share prices due to selling pressure. Interim margins have been imposed on sellers in the case of some scrip since their prices have fallen by more than 10 percent, compared with the last havalda price. The optimism, which was shown at the time of the resumption of forward trading, has fizzled out. Although operators at first tried to push prices up when forward trading was resumed, the improvement could not be sustained for lack of follow-up support. It has now become clear that unless investment support is attracted, it will be difficult for the stock market to go ahead. But investors have been discouraged by the super profits tax which has squeezed distributable profits considerably.

Pressure has also been induced by margin requirements. Several brokers have found it difficult to pay the required margins, so they have been anxious to liquidate their holdings. The imposition of carry-forward margins on clients has also forced many holders to dispose of their holdings. Meanwhile, both

political and economic news has been unfavourable. Press reports about further incursions into Ladakh by the Chinese Army have upset sentiment. Dalal Street has been worried by the prospect of a reshuffle in the Central Government. The growing shortage of funds is being felt increasingly. Business in cash shares has declined to almost a trickle and prices have generally receded.

The earlier improvement in steel shares has proved to be short-lived. Tata Steel ordinary have declined to Rs. 131.25 and Indian Iron to Rs. 21.88 on pressure from Lyons Range. Among engineering shares, Tata Locomotive, Premier Construction, Mukand Iron and Larsen and Toubro have been quoted lower. Motor-vehicle shares have been quiet. Hindustan Motors and Premier Automobiles have lost.

There have been widespread losses in the cotton mill shares. Investors have been discouraged by fears that the profits of mills during the current year will be squeezed by heavier taxation, combined with rising production costs. Century, Bombay Dyeing, Svadeshi, Morarjee, Standard, Tata Mills and India United ordinary have fallen.

Miscellaneous shares have moved down in sympathy with the general trend. Cement shares have been quiet. Associated Cement and Digvijay have lost. Sugar shares have been quietly steady, and small business has been transacted in Belapur and Walchandnagar Industries. Mining shares have been subdued, and Shivrampur Syndicate have been freely offered. Among steamship company shares, Scindia Steam have rallied somewhat towards the close on short-covering. Rayon shares have been under pressure. National Rayon, Baroda Rayon and Indian Rayon have declined on balance. Chemical shares have been quiet. Tata Chemical and Indian Dyestuff have been quoted lower. Bombay Burmah have reacted. Voltas and Tata Oil have been softer.

Bank shares have generally been neglected. Routine business has been transacted in Bank of India and Central Bank. Among insurance scrip, New India Assurance have been steady. Electric company shares have met with scattered buying. Ahmedabad, Tata Power and Andhra Valley have been higher.

Madras

TRADING REMAINS SUBDUED PRICES OF SECURITIES IMPROVE

Tuesday Evening.

THE resumption of forward trading in the Madras stock market has had little steadying effect. Trading has been subdued during the past week and prices have generally declined. Operators have been discouraged by easier advices from other centres such as Calcutta and Bombay. Investors have been worried by power cuts and shortage of raw materials. Except for earlier scattered support for selected planting shares, business in cash shares has been negligible.

Even in clearing shares, turnover has shrunk considerably.

Government securities have been steady and prices of selected State Government loans have improved. In the banking section, scattered business has been done in Canara around Rs. 80.50 on prospects of a rights share issue in the proportion of one new ordinary share for every three held. Among electric supply companies, West Coast have been taken at Rs. 18.37 on declaring a taxable ordinary dividend of 20 percent.

In the planting section, Blue Mountain, Consolidated Coffee, Ouchterlony and Periakaramalai have been prominent. Interest has been taken in Thamarapally, T. R. and T. Nelliampathy, Peermade and Kil Kotagiri. Nilambur have been done at Rs. 13.45 on declaring a taxable ordinary dividend of 10 percent. Gokul have been bought at Rs. 158 on paying a taxable ordinary dividend of 10 percent.

Sugar shares have declined on a predominance of sellers. E. I. D. have weakened to Rs. 36.87 and Deccan to Rs. 9.75. Textile shares have been softer in the absence of buyers. Mettur have been sold at Rs. 324, although a taxable ordinary dividend of 20 percent has been declared. Ramnarayan have been freely offered down to Rs. 94.75 on declaring a taxable ordinary dividend of 7.5 percent. South India Viscose

have weakened to Rs. 118.50 and Travancore Rayon to Rs. 22.75. Lakshmi have been sold at Rs. 135 and Madura at Rs. 31.25.

Except for scattered support in cement shares, miscellaneous shares have declined all round. India Cement new shares have been available at Rs. 5.10. F.A.C.T. have been softer at Rs. 7.14 while Seshasayee Paper have attracted attention around Rs. 7.50. Forest Industries have been quoted at Rs. 2.18 on paying a taxable ordinary dividend of 12 percent. Ogale Glass have been weaker at Rs. 5.05 on revising the taxable ordinary dividend downwards from 10 percent to 8 percent. Aluminium Industries have been freely sold down to Rs. 16.80 and Ashok Leyland at Rs. 7.35. Mettur Chemical have been barely steady at Rs. 12.30. Madras Rubber have been quoted at Rs. 16.75 and Spencer at Rs. 21.50.

London

STOCK MARKET UNSETTLED GOOD DEMAND FOR GILT-EDGED

London, 26th May.

FEARS concerning the possible repercussions of the Profumo affair were again a major influence in the stock market during the past week, but it failed to frighten investors into selling good stock and merely restrained would-be buyers. Even so, a certain amount of selective buying was going on, and generally speaking, the market put

SHELLAC QUIET

During the week ended 26th June, the tone of the market was quiet. The following was the range of quotations:

	Rs. a package
Pure Buttonlac	88, 86 value
Lemon One Shellac	86, 84 buyers
Lemon Two Shellac	90, 88 sellers
Standard One Shellac	76, 74 buyers
Pure TN Shellac	80, 78 sellers
Golden Kusmi Seedlac	66 buyers
Kusmi One Seedlac	70 sellers
Golden Bysack Seedlac	66 value
Manbhumi Fine Bysack Seedlac	62 value
Fine Bysack Seedlac	58 buyers
Genuine Bysack Seedlac 5%	58 sellers
Grade One Class B Seedlac	48 value
Grade Two Class B Seedlac	34, 32 value
Grade Two Class B Seedlac	54, 56 value
Grade Two Class B Seedlac	38 value

Shipments during June until the 17th were 11,703 packages.

In Hospitals, Factories, Schools, Public places...

PUT AN END TO THE DANGERS OF

SUDDEN DARKNESS

In hospitals sudden darkness can be a danger to life. Emergency lighting is the obvious safeguard—and that's where KeePalite comes into its own. KeePalite is an automatic emergency lighting system employing lead-acid storage batteries which are automatically triggered into operation by the actual

main failure. Modern methods of control and 'trickle' charging mean that KeePalite equipment has outstandingly long life and requires minimum of maintenance. That's why architects everywhere specify KeePalite as sure inexpensive protection for hospitals, factories, schools, banks and public places.

KEEPALITE

AUTOMATIC EMERGENCY LIGHTING EQUIPMENT

THE METAL BOX COMPANY OF INDIA LTD.

REVIEW BY THE CHAIRMAN, MR. M. K. VELLODI

The Thirtieth Annual General Meeting of The Metal Box Company of India Ltd. will be held on Wednesday, the 17th July, 1963 at 59C, Chowringhee, Calcutta.

The following is a copy of the Review by the Chairman, Mr. M. K. Vellodi, which has already been circulated to members.

Sales

This is rather a special occasion for me as this is the first time that I am meeting you. It is therefore with very real pleasure that I am able to report another successful year of business for your Company with an increase in Product Sales from Rs. 10.50 crores in 1961-62 to Rs. 11.85 crores or an increase of 13%, an achievement which, in the conditions that prevailed during the year—uncertainty in the supply of raw material, increased excise duties and so forth—must be regarded as highly satisfactory. Constant vigilance and the never-ceasing search for substitutes for tinsplate and the adoption of more and more progressive methods of production and sales are the factors that contributed to this result which, in normal circumstances, would have been passed on to the shareholders in the shape of increased dividends; but the times are not normal and taxation of an unprecedentedly heavy nature has denied to the shareholders these benefits that should have legitimately accrued to them. For as long as our marginal rate of tax is 74% in all, such denial is likely to continue.

The year 1962-63, particularly in the early months, has repeated in many respects the features of the preceding years, features that have become increasingly familiar: a steadily dwindling foreign exchange reserve resulting in ever stricter restrictions on imports even of essential raw materials and the efforts of a much harassed Finance Minister to balance his budget, resulting in fresh imposts. However, as the year progressed, not only were the resultant problems solved, but the shock of the Emergency gave a new impetus to industrial effort in the country, production generally increased and, with it, the demand for the Company's products.

Prospects for the year ahead are not easy to forecast. It is the avowed object of the new taxes to cut expenditure on consumer goods but to what extent they will achieve this object is still a matter of conjecture. Direct defence supplies are bound to form a substantial part of the Company's activity during the year.

The steady increase in the sales of non-tinsplate products which contribute some 25% of our total sales is an encouraging feature. Your Company's fortunes, however, depend in the last analysis, on those of the trades we serve: in most of these, conditions are at present buoyant, but this may prove to be the consequence of short-lived optimism when the impact of the Union Budget has its full effect on consumer spending.

Defence

Our industry adapts itself rapidly to a war situation. Within one year of the commencement of World War II, 80% of your Company's output was devoted to war purposes of which 50% represented direct supplies of war stores and 30% indirect supplies, namely, packages for war supplies. In the current Emergency we have already supplied the latter by the million: the need to supply the Armed Forces in the forward area with canned foods required a very rapid build-up in the supply of Open Top cans which was met on a basis of top-most priority until stocks of the specialised imported tinsplate required were exhausted. I shall have more to say on this later. As to direct defence supplies, within one month of the outbreak of hostilities, the authorities, with commendable promptness, placed orders on us. Your Company's response to the Emergency was thus immediate and our resources were placed unreservedly at the country's disposal.

Your Company is better equipped for defence production than it was in the 1940's. Not only is its normal process capacity of press tools and can-making plant larger than it was, but in the Industrial Components and Machinery Building shops at Calcutta No. 2 there is both equipment and specialised engineering knowledge, which are particularly well suited to the manufacture of many urgently required defence supplies. Our newly established Paper Products Group will be able—though they have no orders as yet—to manufacture many of the special spirally wound containers required by Kirkee and our Flexible Package Works in Calcutta can produce many of the specialised packing materials used in modern war. Our capabilities and past performance have been recognised by the Defence Purchasing and Ordnance Authorities in collaboration with whom we are tooling up on a priority basis for a wide range of defence stores. We hope in these diverse ways to make a

notable contribution to the re-equipment of the country's Armed Forces.

Exports

Economic stresses and strains arising from political changes have affected our markets in South-East Asia and as a consequence, our direct export sales at Rs. 21.37 lakhs fell short of last year's level. Ceylon placed restrictions on imports, Burma's Defence Services bought less and there was intense international competition in crown corks. We, therefore, looked elsewhere in our drive for sales particularly to the markets of West Asia. As a result, machinery exports were nearly doubled; sales in East Africa and Hongkong were increased and our goods broke into four new markets: Afghanistan, Jamaica, Taiwan and Trinidad. Our success in the distant markets of Taiwan and in the Caribbean area mark a significant achievement for our and, therefore, India's engineering exports.

But it is by supplying exporters with containers and packaging materials made to international standards of quality that we make our main, though indirect, contribution to the country's exports—principally in America. Sales under this heading increased substantially, particularly in the shape of Open Top cans for the Kerala prawn packing industry. We now have two factories almost entirely devoted to servicing exports: the Mangalore Factory supplying the cashew trade and the Cochin Factory the prawn packers. We estimate that the value of goods exported in our containers is as much as Rs. 8 crores and we believe that much of these exports has been made possible by the provision of packaging to international standards by your Company; an impressive indication of the contribution which sound packaging can make in the effort to diversify India's exports into non-traditional fields.

Raw Materials

Throughout the year we were in difficulties with our major raw materials (tinsplate, aluminium sheet, aluminium foil, sheet steel) and we ended it with depleted stocks. Until Rourkela's five-stand mill is delivered and commissioned presumably in 1965 or 1966, the country, and hence your Company, will depend to an uncomfortable extent on tinsplate imports. Not surprisingly then, the provisioning of tinsplate was a cause of continuing anxiety throughout the year, particularly as regards the special qualities for processed food containers (Open Top cans), the import of which has to be planned many months in advance of the packing seasons in various parts of India. Supplies ordered this year on the assumption of a brisk, though normal, rate of growth proved to be quite inadequate for the requirements of the Emergency. Immediately the accelerated demands became known, both we and the canning industry represented urgently to Government the need to licence additional imports. The initial delay in responding, understandable as it was in the circumstances of the recently declared Emergency, was nevertheless the cause of an unhappy, though temporary, interruption in supplies to the Defence Services.

The significance of tinsplate as an important industrial raw material has been represented vigorously at the highest appropriate levels of Government. Some 150,000 tons of tinsplate, with an imported element amounting to only Rs. 6.50 crores, enable approximately Rs. 360 crores of consumer goods to be distributed. There is undoubtedly some limited scope for the introduction of substitute packaging materials, but substitutes are frequently more expensive and functionally less efficient. I am glad to say that notwithstanding the

CAPITAL, 27th June, 1963.

many competing demands of high priority for all available foreign exchange, the Government has shown an awareness that a shortage of tinsplate would not only have an adverse effect on Defence provisioning but that it would have damaging and inflationary consequences for the economy as a whole. At the same time, in their anxiety to reduce imports, Government is contemplating restrictions on the use of tinsplate. It is to be hoped that when deciding about these, the authorities will bear in mind that, while the foreign exchange saved would be marginal, seriously dampening the demand for tinsplate products now could have an unhappy effect on the large market required to support Rourkela's new tinsplate mill in 1965-66.

Any new mill for secondary steel products will take time to build up the quality and quantity of its production Rourkela is no exception to this rule. It has had plenty of teething troubles, culminating in a serious breakdown early this February. The damage has been repaired and this mill, it is hoped will now be brought up to full production with the commissioning of further hot-dip tinning capacity which should enable tinsplate production in 1963-64 to be stepped up appreciably.

Supplies of deep-drawn steel for Industrial Components were adequately maintained throughout the year notwithstanding the commandeering, for defence production by the Ordnance Authorities on its arrival, of a consignment we had purchased against a barter deal from Japan.

We have been very careful in our use of aluminium with the result that availability has broadly met requirements, although there was a serious shortage of foil which your Company uses widely for pilferproofing purposes. In successive annual reviews in the past my predecessor had stressed the importance of pilferproofed consumer packaging. I would like to suggest to the authorities concerned that when all materials are scarce, it is more important than ever to ensure that goods reach their destination in first-class condition. Pilferproofed packaging is one of the most effective means of beating the racketeer who adulterates or substitutes the genuine article by the spurious. Your Company has on every possible occasion represented to the authorities the essential role of consumer packaging in any national drive against adulterated commodities. It is understood that the Health Ministry of the Government of India has under consideration several legislative measures which are designed to penalise the adulteration of food, but the contributions of sound marketing and distribution, of which packaging is an essential part, is still inadequately appreciated.

In common with most industries the cost of virtually all our raw and ancillary materials continues to rise, due to increased duties and excises in fiscal budgets. As the cost of materials represents such a large proportion of the total cost of manufacture, we have had no option but to increase selling prices.

Research, Design and Development

Our efforts under this heading have been devoted principally to taking the pressure off the demand for tinsplate by designing and developing alternative packages; to evaluating new sources of raw materials; and latterly to problems connected with Defence supplies.

Paper Products. Your Company received its manufacturing licence for making "treated and laminated papers and boards, and containers made therefrom" on March 27th, 1962 and was granted import licences for the equipment nine months later on January 14th, 1963. No time was lost: the first shipment was made on February 2nd and by March 31st, 50% of the plant had been shipped. By the end of March, short-term specialist staff were already in the country engaged in training staff and installing and commissioning the machinery. It has recently started production. Against the possible breakdown of tinsplate supplies

CAPITAL, 27th June, 1963.

under Emergency conditions, our Paper Products Group has already developed a series of superior composite containers. Due to the disproportionately high cost of Indian board, however, it seems unlikely that these will displace tins except to the extent that tinsplate is not available.

Bombay No. 2. Last year your Chairman referred to the acquisition of a fine factory site nine miles from Bombay No. 1, namely at Deonar. There the construction of the 90,000 square-foot Bombay No. 2 factory has made most satisfactory progress: production should commence this July. The private railway siding makes the premises well suited for the reception, storage and printing of tinsplate and the manufacture of Open Top cans of which tinsplate represents a particularly large fraction of cost. The removal of stocks and machinery from Worli will make room for the Paper Products Group, leave sufficient space to lay out anew the metal containers plant there and thereby improve operational efficiency.

Cochin Factory. In order to improve our service to the prawn canning industry, the Service Installation at Cochin has been expanded into a fully-fledged manufacturing operation. Not only have we been able to pass on freight savings, but the new factory serves as a base for engineering and scientific staff needed to support this highly promising export industry.

Flexible Packages. During the past year, your Company continued to implement its policy of developing its range of packages manufactured from indigenous raw materials to international standards of appearance and functional performance both for the home market and intending exporters. New plant has now been commissioned to supply printed polyethylene bottles and a variety of printed and laminated Flexible Packages and Flexible Packaging Materials made both by heat-lamination and extrusion-coating processes.

Work at our Research Division during the year has progressed satisfactorily

in all aspects including those of protective and decorative finishes made from indigenous materials; the evaluation of cold-reduced tinsplate from Rourkela and Russia; and the general compatibility testing of a wide range of pharmaceutical containers, including of printed flexible packages. The Emergency has given impetus to the Canning Advisory Service and close cooperation is being maintained with Defence Laboratories in all aspects of canning technology, with particular reference to the rigid requirements for foodstuff supplies to the Armed Services.

The Technical Development Division has again had a successful year making a valuable contribution by designing new products and new customers' closing machinery. The plant modernisation programme has progressed satisfactorily with the emphasis on material economy and higher manufacturing speeds.

Machinery Building. Lastly, the range of machinery built by your Company was extended by the addition of a Double Seamer for canner operation which is faster and more sophisticated than any that has been previously manufactured in India. I wish to stress again that each extension of your Company's machinery building activities means a directly corresponding saving in foreign exchange.

Visit from Associates

Toward the end of the year we had the pleasure of welcoming Mr. K. D. Brough, Managing Director of The Metal Box Company Overseas Limited, accompanied by Mrs. Brough. During his tour Mr. Brough was able to see for himself the progress in the Company's establishments throughout the country and, representing our Technical Consultants, was able to give valuable advice and assistance in connection with the Company's development requirements and the financing of them.

Board Changes

It was with real regret that your Board accepted the resignation of Mr.

K. C. Mahindra both as its Chairman and as a Director of the Company. For five eventful years which began with the foreign exchange crisis of 1958 and ended with the declaration of the Emergency, Mr. Mahindra had placed unreservedly at the service of the Company and of the Board his deep and wide experience of business and industry. The Board will miss his wise counsel and his human approach to all problems. I feel it is a great privilege to succeed him as your Chairman. Mr. Mahindra has been in the front rank of Indian industrialists for well over a quarter of a century. He has now decided to retire and I am sure that all of you will join me in conveying to Mr. Mahindra in his retirement our very good wishes for his health and happiness.

Employee Relations

With one exception, relations between management and employees continued to be satisfactory throughout the Company. Agreements covering terms of service were successfully concluded with monthly-rated staff at Calcutta No. 1, Calcutta No. 2, Mangalore, Research Division, Technical Development Division and Head Office and with both monthly-rated and daily-rated employees at Faridabad. An agreement on retirement age was reached with Research Division employees. The exception I referred to is the daily-rated men in Calcutta. The restlessness reported last year has continued into this year. An attempted bipartite settlement on conditions of service, wages and dearness allowance failed and the dispute has now been referred by the union to conciliation.

Soon after the declaration of the Emergency, the Company announced its policy dealing with the release of men called up for service in the Armed Forces; as a result nine men were able to join the forces without loss of pay. The employees' support of the National Defence Fund has been impressive: the Company's donation of Rs. 3 lakhs during the year was supplemented by donations and voluntary deductions

from salaries and wages amounting to Rs. 1,35,000.

Your Company is a strong believer in keeping employees "in the picture"—a difficult exercise in communications which is more easily enunciated than executed. To this end an employees' handbook, "Metal Box and You", dealing with the Company's policy as well as its rules and regulations was published in English, Marathi, Bengali, Hindi and Tamil and was well received.

Training at all levels in the organisation continues vigorously. Ten Indian officers were trained by Metal Box in the U.K. One senior manager was sent to the Administrative Staff College at Henley-on-Thames and another attended the Advanced Management Programme organised by the All-India Management Association at Srinagar. A further thirty-six managers have undergone the Company's residential management course in Calcutta: four of these came from our Associates in Malaya and Pakistan. Arrangements for the training of supervisors and apprentices and participation in workers' education programmes have been further strengthened.

I thank all the employees of the Company for their contribution to the past year's progress and their ready response to the increased demands made upon the Company as a result of the Emergency.

The Coming Year

Demand continues to be buoyant and we believe we shall be able to meet it, but the shadow of the Chinese incursion is still over us and high taxation both personal as well as corporate, direct and indirect, is such as must daunt even the most ardent and progressive man not only amongst our employees at all levels but also amongst you, our shareholders, in India, the United Kingdom and the U.S.A. The difficulties and disincentives are considerable, but I have every confidence in our management and employees who, I am quite certain, will continue to surmount them.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

now made in India UNBREAKABLE INDUSTRIAL POLYTHENE CONTAINERS

For more economical transport, safer and more convenient handling of hazardous acids and chemicals. POLYTHENE CONTAINERS made from Polyethylene withstand a wide range of corrosive acids and chemicals. Available in various sizes and shapes to suit your requirements.

POLYTHENE CONTAINERS are:

- | | |
|-------------------|---|
| ECONOMICAL | ... Being light, cut down tare weight and freight. Can be used over and over again. |
| SAFE | ... Don't leak or break, |
| CONVENIENT | ... Have specially shaped spouts to pour out contents. |

Money

THE CALCUTTA MONEY MARKET

DECREASE IN ADVANCES CONTINUES

Wednesday, 26th June.

THE aggregate level of advances has again decreased by a fair amount in the Calcutta money market during the past week. The credit given to the cotton and woollen mills, and to the foodgrains and seeds trade, is unchanged. But the requirements of the jute and sugar mills, and of the iron, steel and engineering industries, have declined. Conditions in the interbank market have been easier, and the call rate is hovering between 1½ percent and 2 percent.

In the exchange market, the supply of tea bills has improved but gunny bills remain scarce. The demand for remittance has been fair. Sterling has improved in relation to most of the major currencies, except the French, Danish and Swedish.

SILVER WAS QUIET IN CALCUTTA during the past week. The price declined from the previous week's level of Rs. 261.75 to Rs. 260.25 quoted today for ready metal. There was no business in forward. The London and New York prices were 110½d and 127.8 cents. Gold was not transacted.

DURING THE WEEK ENDED 21ST JUNE, Government of India Treasury bills for Rs. 61,42,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 25th June. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.410 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.345 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 1st July.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 26th June to the 28th June at Rs. 99.431 percent subject to the conditions previously announced that sales can be stopped at any time without notice, if the Government thinks it necessary. These bills sold from 19th June to the 22nd June amounted to Rs. 4.62 crores only.

THERE WERE DECLINES OF RS. 31.88 crores to Rs. 2,275.19 crores in active notes and of Rs. 27.94 crores to Rs. 2,308.12 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 21st June, 1963. The currency contraction was covered by reducing foreign securities by Rs. 3.50 crores to Rs. 105.58 crores and rupee securities by Rs. 26.50 crores to Rs. 1,970.94 crores in the paper currency reserve. These changes were made by making contra transfers to the Banking Department in which investments rose by Rs. 35.57 crores to Rs. 769.82 crores and foreign balances by Rs. 8 lakhs to Rs. 7.04 crores. Deposits of the Government of India fell by Rs. 7.83 crores to Rs. 51.11 crores, while those of other Governments rose by Rs. 4.32 crores to Rs. 12.28 crores. Balances of scheduled banks increased by Rs. 10.12 crores to Rs. 89.16 crores, while their loans from the Reserve Bank declined from Rs. 6.91 crores to Rs.

New Delhi

FOREIGN SHARE IN INDIAN CAPITAL ISSUES RISES

(FROM OUR NEW DELHI CORRESPONDENT)

THE latest staff paper of the Department of Company Law Administration contains an interesting study of capital issues during 1962-63. It relates to 54 companies involving a sum of Rs. 21.73 crores, of which Rs. 19.9 crores was in equity shares and the remaining Rs. 1.08 crores in preference shares. The list of 54 companies includes the following ten with capital above Rs. 50 lakhs each:

	Amount issued (In Rs. lakhs)
Associated Bearings Company	390
Asiatic Oxygen	160
Kirloskar-Cummins	150
Oriental Power Cables	105
S.L.M.-Maneklal Industries	80
Assam Sillimanite	70
English Electric Co. of India	60
Gammon India	60
Prabhat Udyog	55
Pyrotenax India	55
Total	1,190

The study shows a noticeable increase in the subscription of foreign collaborators to the capital of Indian companies, compared with 1961-62. Against 7.9 percent during the pre-vious year, 23.2 percent was taken up by foreign collaborators in 1962-63, as will be seen from the following table:

Western zone	30.9 (4.4)
Eastern zone	18.0 (14.0)
Southern zone	8.4 (7.6)
Northern zone	19.1 (10.1)
All India	32.2
Comparative data: 1961-62	7.9

A further study of the pattern of participation in the capital of companies shows that 15 of the 55 companies, which issued prospectuses, sought collaboration from foreign countries. The companies issued shares to foreign collaborators in return for technical know-how and other assistance. The agreements generally with foreign collaborators consisted of the lay-out plans of factories, supply of machinery and the equipment, permission to use the "trade marks" of foreign collabora-

Name of the company	Country of foreign collaboration	Amount of capital invested by foreign collaborators	Percentage of total capital issued
Asiatic Oxygen	U.S.A.	25.00	15.5
Assam Sillimanite	West Germany	6.00	8.5
Associated Bearings Company	U.K. and Sweden	240.00	60.5
English Electric Company of India	U.K.	35.00	58.5
Facit Asia	Sweden	15.00	50
Hind Rectifiers	U.K.	3.00	15.0
Hindustan Dowidat Tools	West Germany	6.50	27.7
Kirloskar-Cummins	U.S.A.	75.00	50.0
Kirloskar-Asa	Sweden	7.50	30.0
National Standard Duncan	U.S.A.	25.00	50.0
Neiveli Ceramics and Refractories	West Germany	3.77	8.4
Prestolite of India	U.S.A.	17.50	43.8
Pyrotenax India	U.K.	27.50	50.0
Simco Meters	U.K.	6.67	19.0
S.L.M.-Maneklal Industries	Switzerland	10.00	12.5

CLEARING HOUSE RETURNS

Week	Calcutta	Bombay
21-6-63	86.25	1,08.23
14-6-63	83.05	...
7-6-63	95.50	96.47
31-6-63	1,00.22	1,05.68

facturing Bedford lorries and should now undertake the manufacture of Bedford engines.

Dodge has no diesel engine of its own. Premier Automobiles may, therefore, approach Cummins. The latter is already manufacturing petrol engines in collaboration with Kirloskar. Another possibility is that Premier Automobiles may go into collaboration with Meadows, the British engine manufacturers. This, however, is speculation, and definite proposals are awaited from the three parties concerned.

FERTILISER

F.A.C.T. to Make Equipment

Fertilisers and Chemicals, Travancore Ltd is seeking collaboration from Davy Ashmore of the United Kingdom to set up an engineering and designing units as well as a fabrication plant to make fertiliser manufacturing equipment. The project is expected to cost Rs. 1.50 crores.

ALUMINIUM

Licence to be Revoked

The validity of the industrial licence granted to Mr. Murarji Vaidya for setting up an aluminium plant in collaboration with the U.S. firm of

I am a born optimist —what about you?

If a man can look at the bills his wife runs up and say: "Thank heavens she has not spent more!"—then he is an optimist. AND THAT'S ME.

Even when it comes to paying more through taxes and compulsory deposits, I grin and bear it. It's not that I'm some kind of heroic nut. I know that some day it's all going to pay dividends, if not for me, for my kids—and they are all that I'm concerned about. Of course, it means tightening the old belt a bit.

Not that I never groan, of course. I groan when the postman brings those premium notices on my Life Insurance. But I pay up and say: "One payment less; one more chunk saved; one step nearer maturity." It *does* make for peace of mind. The thought of my wife and the children having this little security feeds my optimism.

I AM AN OPTIMIST—I think.

Reynolds having expired, the Government of India, it is learnt, will shortly issue a notice revoking the licence. As the differences over bauxite between the Governments of Maharashtra and Mysore have been ironed out, there is every likelihood that the project will be commissioned at an early date. The Mysore Government, it is reported, wants to locate the Rs. 100-crore project in Karwar. It is thinking in terms of a joint Mysore-Maharashtra State venture with foreign collaboration. Whether Reynolds will go into partnership with a public-sector project is not yet known.

The Government of India has notified a list of 112 industries for which licences may ordinarily be rejected without reference to the Licensing Committee till 31st December, 1963.

OIL POLICY

Contribution of Mr. Malaviya

Mr. K. D. Malaviya's exit from the Central Cabinet is regretted by some in New Delhi, particularly because he has resigned over issues unconnected with his oil policy. When the dust of controversy relating to what has come to be known as the Serajuddin affair settles down, it will be conceded that Mr. Malaviya's contribution to India's oil policy has not been inconsiderable. Three factors have assisted him, namely, the glut of crude oil in the world market, the greater unity among the oil-producing countries and the Russian oil offensive. The latter even accepted rupees for exporting oil products to this country. The western oil companies, it is said, were too slow to adjust themselves to the changing conditions. But to make them agree to go into partnership with the Indian Government was not a mean achievement. Although he overlooked the cost factor, Mr. Malaviya also introduced State competition into the refinery and distribution business.

All this is on the credit side. On the debit side will stand the huge avoidable foreign exchange expenditure which the Minister decided to spend on the exploration of oil. His rigid approach will lead to a shortage of petroleum products even during the third plan period. But as far as the Government's oil policy is concerned, both the Prime Minister and Mr. Malaviya have declared that it will remain unchanged. Mr. Malaviya could be reminded of Sir Winston Churchill who, in a pre-election

period, said that he could not commit his unknown successors to his line of policy. During the State's reorganisation controversy, the Prime Minister said that there was nothing final in a democracy. How correct he was! Even the Industrial Policy Resolution has been modified in practice.

There should be unanimity on the point that any policy should serve the best interests of India. The oil policy should be changed without delay if national interests demand this. Here, mention may be made of the Oil and Natural Gas Commission's proposal to undertake oil prospecting in Iran. The proposal, on the face of it, can be taken as an admission that Indian sources—proved and otherwise—are not adequate to meet the growing demand for petroleum products in India. But the foreign exchange shortage is the principal hurdle in importing oil products from abroad. As stated earlier, the foreign exchange spent on oil exploration could have been saved had there been a more flexible approach to the problem. India, moreover, has an acute shortage of well-trained technical personnel. So she has had to hire French and Italian technicians to undertake oil exploration. In view of these handicaps, it should be a matter for some concern why the Commission should have gone in for the project. Meanwhile, the Planning Commission is said to be still undecided over the proposal of the O.N.G.C.

FOREIGN AID

Probe by Expert Body

The Government of India has decided to set up a committee under the chairmanship of Professor V. K. R. V. Rao, member of the Planning Commission, to examine the present procedures for negotiations, allocation and disbursement of external assistance and to suggest measures to ensure a speedier and more efficient use of the available assistance in keeping with the plan priorities.

With the growing tempo of development and the diversification of the economy, there has been a significant increase in the range and scale of foreign aid operations in recent years. The expeditious and effective use of available external assistance has become an important factor in accelerating the pace of India's economic development.

The other members of the committee are: Mr. B. N. Adarkar,

Additional Secretary to the Central Ministry of Economic and Defence Co-ordination; Mr. P. Govindan Nair, Additional Secretary to the Central Ministry of Finance; Dr. I. G. Patel, Chief Economic Adviser to the Central Ministry of Finance; and Mr. V. K. Ramaswamy, Economic Adviser to the Central Ministry of Commerce and Industry (member-secretary).

The committee will consider problems associated with the use of external assistance from all sources and in all forms. For this purpose, it will hold discussions with the representatives of Government departments as well as of public-sector enterprises and private trade and industry. The committee will also examine the problems facing the private sector in its search for foreign technical collaboration or foreign capital investment.

In view of the urgent nature of these issues, the committee, the Government expects, will submit its report within the shortest possible time. The Government would also welcome any interim recommendations on specific points which the committee might wish to make in advance of its final report.

DURGAPUR

New Blast Furnace Ordered

India's largest blast furnace is to be built by a British firm, it was an-

	Zone A Western	Zone B Southern	Zone C Northern	Zone D Eastern
16.5-kilogram tin	47.19	47.02	48.51	48.67
4-kilogram tin	12.96	12.92	13.28	13.32
2-kilogram tin	6.78	7.76	6.94	6.96
Loose (one kilogram net)	2.86	2.85	2.94	2.95

nounced in London last week. The plant, valued at about £7 million, will form part of the extensions to the Durgapur steel works. It is to be supplied by Head Wrightson Iron and Steel Works Engineering Ltd of the U.K. in co-operation with its Indian subsidiary. The extensions to the Durgapur plant are aimed to increase its output from 1 million to 1.6 million ingot tons a year.

Head Wrightson has been commissioned to design, supply and erect a blast furnace to produce 1,500 tons of pig iron a day, a gas cleaning plant, a materials handling plant to deal with 900 tons of ore

CAPITAL, 27th June, 1963.

an hour, as well as all the associated specialised items of heavy rolling stock. The firm will also be responsible for the design and installation of the foundations and other civil engineering work. Some of the equipment needed in the project is to be made in India. Work on the new project is expected to start immediately. It will be completed within about two-and-a-half years.

VANASPATI

Prices Raised

The maximum prices for vanaspati, notified by the Government on 21st May, 1963, have been reviewed in the light of the prevailing price of the raw oil. In view of the persistent higher level of prices of the raw oil, some adjustments in those prices have had to be made. The increase has, however, been kept down by making some adjustments in the distribution margins and other economies. As on the earlier occasion, prices have been fixed on a zonal basis. But the zonal structure has been somewhat simplified. There will, in future, be only four zones, broadly covering the four geographical regions. In each case, two sets of prices have been notified, one ex-factory and the other for retail sale.

Retail prices for representative pack-sizes applicable to different zones, which the industry has agreed to maintain, are as follows:

COAL

Plans to Improve Transport

Some construction projects costing over Rs. 3.5 crores are being undertaken by the railways during the current year for the development of transport facilities for moving coal to Gujarat and the Saurashtra area. In addition to setting up a new transshipment yard in Patholi in the Bayana-Agra section, it is proposed to provide power-operated points, arrange colour light signalling and build a new meter-gauge goods shed between Idgah and the Fatehpur cabin. With the completion of these works, it will be possible for the railways to increase the overall intake of coal from 500 to 850 wagons a day via Agra East Bank, which is the focal point for the flow of coal traffic from the Bengal-Bihar coalfields to the Western Railway region.

On the Bhopal-Bhairagarh and Ujjain-Maksi sections, railway track is proposed to be doubled. This, along with other works in hand on the Bhopal-Ujjain route, will increase receipts via Bhopal, particularly from the Central India coalfields, by about 370 wagons a day.

To facilitate the supply of coal to Rajasthan, the Jaipur-Phulera meter-gauge section of the Western Railway is also being doubled.

LEMONGRASS OIL

Price Support by S.T.C.

The State Trading Corporation is entering the lemongrass oil market with a view to giving price support to the lemongrass oil industry. Purchase depots are being set up in Telicherry, Calicut, Alwaye, Cochin and Alleppey. Producers

CAPITAL, 27th June, 1963.

and collectors will be able to sell at these depots lemongrass oil of requisite citral content at the minimum prices fixed by the Government. The price at which the S.T.C. will buy lemongrass oil with the 76-per cent citral content will be Rs. 13.75 a kilogram. The prevailing prices are at present below Rs. 12 a kilogram.

WOOL

Aims of Research Body

Mr. David Scott has recently taken up his assignment as the project adviser for the Central Sheep and Wool Research Institute, F.A.O.-U.N. Special Fund project. The Institute is being established in Rajasthan with the following aims:

1. to provide experimental stations with research and training facilities in sheep husbandry, better use of land, wool shearing, testing, grading and processing;
2. to train key personnel, instructors, supervisors, managers and research workers; and
3. to furnish technical information and data for the benefit of small and medium-scale manufacturing industries with a view to making better use of wool and stimulating new investments in this field.

For the establishment of the Institute, the U.N. Special Fund is providing \$777,500. The counterpart contributions of the Government of India will be \$6,064,744 for services, personnel, buildings and maintenance. The U.N. Food and Agriculture Organisation will be responsible for implementing the project over a five-year period.

The Government has purchased a farm in Malapura, Rajasthan, as the site for the Institute. It will consist of a central sheep and wool research institute, two sub-stations in the Himalayan region of Punjab and in Kodakanal, Madras State, ten large-scale and 148 small-scale field centres to demonstrate shearing, wool marketing and management of sheep flocks and one main sheep and wool training centre to be located at the Central Sheep and Wool Research Institute in Malapura.

FULBRIGHT PROGRAMME

New Pact Signed

A formal agreement to continue the Fulbright programme of educational and cultural exchange between India and the United States was signed here last week by India's Foreign Secretary, Mr. M. J. Desai and the U.S. Ambassador to India, Professor John Kenneth Galbraith. The new and revised agreement supersedes the original one of 1950 and provides a broader and more flexible scope of educational activities for the U.S. Educational Foundation in India.

STEEL

Retention Prices Raised

The Central Government has decided to allow an increase of Rs. 10 a ton in the steel retention prices with effect from 1st July, 1963, to enable the producers to cover the cost of the emergency war risks insurance. This amount will, however, be finally adjusted with the equalisation fund on the basis of the actuals of each steel plant. Simultaneously, the Government has allowed a further increase in the escalation of Rs. 8 a ton in the case of steel and Rs. 4 a ton in the case of pig iron with effect from 1st April, 1963.

The following is the full text of the Government's resolution on the

proposed increase in the retention prices:

"In the resolution dated 7th September, 1962, the Government stated that the retention prices fixed for the period 1960-62 should also be applicable, provisionally, beyond 1st April, 1962, subject to changes that may be necessary on account of the increase in the price of coal and the increase in rail freight.

"In January 1963, the Government had allowed an interim increase in the retention prices of pig iron and steel by Re. 1 a ton from 13th June, 1962, over the 1960-62 prices.

"The producers had represented that apart from the statutory increase in the price of coal and rail freight, there have been increases in costs due to the enhanced royalty on iron ore, limestone and other minerals, increase in wages on account of the interim wage board award, increased incidence of excise duty on certain consumable stores, etcetera. The matter was referred to the Cost Accounts Branch of the Central Ministry of Finance for examination. The Branch having completed its enquiry, has submitted its report. The Government, after

careful examination of the report, has decided:

"(1) For the period 1962-63, escalation element of Rs. 10 a ton and Rs. 6 a ton should be allowed on the 1960-62 retention prices of salable steel and pig iron, respectively. These increases are inclusive of the escalations already allowed.

"(2) From 1st April, 1963, onwards, a further increase in escalation of Rs. 8 a ton in the case of steel and Rs. 4 a ton in the case of pig iron should be allowed.

"(3) From 1st July, 1963, the steel retention price should be increased by a further sum of Rs. 10 a ton for the payment of emergency war risks insurance. This sum, however, will be finally adjusted with the equalisation fund on the basis of the actuals of each steel works."

SUGAR

Enquiry on Uneconomic Units

The Government of India has appointed a committee in order to consider ways of dealing with the uneconomic sugar units. Accord-

ing to an official press note, the problems of uneconomic units in the industry have been the cause of concern to the industry and the Government.

The committee will assess the recommendations and suggestions made to eradicate the problems, including the financial factors involved and gather further material on the subject. The Government's view is that it is improper for the mills to demand high prices and make the consumer pay on the ground that there are many uneconomic units in the northern region and that the cost of production of uneconomic units is high.

PLANNING COMMISSION

Report Contradicted

An error crept into last week's New Delhi newsletter for which deep regrets are expressed. This correspondent is told by the Planning Commission that Dr. S. R. Sen has not been promoted to become the Secretary to the Commission, as reported in these columns last week. Dr. Sen, according to the Commission, still continues to be a Joint Secretary.

Cut down your lubricants Cut out your paper-work

Help your Purchase Officer to eliminate the stacks of paper that collect in his office...the unnecessary flood of Purchase Orders. When each department in a plant specifies a lubricant without reference to the purchases of other departments, there is bound to be duplication and waste.

The Caltex "Stop-Loss" programme can do away with this lubrication waste...can cut a great deal of Purchase Order paper-work.

Caltex "Stop-Loss" is a complete plan for organising lubrication on an efficient basis. There is no other programme like it.

It will be worth your while to find out specifically how Caltex "Stop-Loss" can help to ease the problems in your plant.

Help your operation to greater profit with the Caltex "Stop-Loss" programme.

London

U.K. BUSINESS MEN OPTIMISTIC ABOUT ECONOMIC PROSPECTS

(FROM OUR LONDON CORRESPONDENT)

THE question which will arouse greatest interest in City circles in the next few weeks will be how far political uncertainties will outweigh expectations of a progressive improvement in the economy. Those who are prepared to look far enough into the future can hardly fail to be encouraged by the latest survey of business trends conducted by the Federation of British Industries. The survey is the fullest and most up-to-date indication of industrial conditions and prospects available, for it covers a representative sample of 660 firms of all sizes and drawn from most industries. Here at last is firm proof that the clouds, which have hung over the economy since last autumn, are lifting.

The replies sent in to the F.B.I. confirm all that the Chancellor has been saying in recent weeks about the change of mood among business men. The swing in sentiment in industry since February is unmistakable—indeed, the change is the largest recorded since these surveys were initiated in 1958. Moreover, optimism is not confined in any one sector—a majority of firms are now convinced that business will improve all round, and not least that exports will continue to grow.

This revival of confidence is, in itself, an element of great significance. It is bound to influence the decisions that business men take about, for example, the level of stocks and the scale of future spending on new plant and machinery. Indeed, it would be fair to say that a return to optimism is at least one of the pre-conditions that must be met if the economy, which has been dragging along the bottom, is to be set moving again quickly.

Nevertheless, a change of sentiment by itself might not be enough to convince all those who have doubted whether, in fact, a recovery was really under way. This is where the

replies to the other questions asked in the F.B.I. survey are important. For they show clearly that the new found optimism in industry does have firm roots in a widespread improvement of actual business. The level of output reported shows a significant rise—for the first time since June 1961. This is reflected in an appreciable increase in the proportion of firms which now have less unused capacity than four months ago. At the same time, there is a marked upturn in the rate at which firms say they are receiving new orders, so that order-books too, are lengthening.

These changes are, of course, less marked than the swing in optimism that has gone with them. The fact remains that they are all changes in the right direction. Moreover, although the impact of the rise in activity is greatest in the consumer industries, there is at least some evidence that an upturn in orders for the capital goods industries has at last begun. Nowhere are order-books yet held to be satisfactory. What matters is that there has been this definite change in trend.

Export Outlook

Not the least remarkable feature of the survey is the widespread optimism with which firms view the prospects for exports. Actual export performance has improved over the past four months, but most firms seem certain that they will do even better in the rest of the year—notably, in the E.F.T.A. countries, but also in the markets of the "Six" where conditions are thought to have become more favourable. The one slight note of doubt here is whether prices might rise and eat into such competitive advantage as Britain now enjoys.

Companies reporting that they were more optimistic about the general business situation formed 56 percent of those replying to the questionnaire. Only 3 percent said they were less optimistic. The remaining 40

percent felt as they did four months earlier. The answers were given between the end of May and the first week in June. The change in business outlook measured by the survey is substantial. As recently as February, only 18 percent of the firms were more optimistic and 30 percent were pessimistic.

While conceding that a change in sentiment does not in itself produce an upturn, industry generally agrees that the sort of confidence shown in the survey is necessary if an economic improvement is to be sustained. The Federation regards the change as a "turning point." Supporting this view is an encouraging expansion on a number of points. As many as 41 percent of the firms said that the rate of new orders had increased. Only 18 percent had experienced a fall.

This change is linked with the first significant rise in output recorded by the survey since 1961. In February, the trend of orders was still clearly downwards. Then output was neither rising nor falling. The latest survey shows 37 percent with a higher level of output, against 20 percent which had seen a fall. The measures taken by the Government to stimulate demand, a normal upturn in the trade cycle and the recovery after the severe winter lie behind the improvement. For what it is worth, all the firms replied before the Profumo affair became public.

Significantly, for the first time in two years, the number of firms who fear that a shortage of skilled labour may soon limit expansion has risen. Most still regard the shortage of orders as the most likely restrictive factor, but slightly less emphatically so than in February. Equally encouraging is the evidence that the tendency to draw on raw material stocks rather than place fresh orders may now be coming to an end. Industry is still destocking, but much less heavily than in February.

As for exports, the firms were more optimistic about prospects than for two years. The margin of those which expect higher sales over those which forecast a deterioration was 23 percent, compared with 14 percent in February. Analysis of replies from individual industry groups shows that the main stimulus so far has come from Government plans to speed up construction, and from last November's tax concessions on motor-cars. Although the detailed figures of particular industries' replies are a closely guarded secret, about three out of four firms in building materials, glass and pottery were feeling more cheerful, and no one was feeling more pessimistic. Among the motor-car manufacturers, about three out of five said they were more optimistic and, again, no one was feeling pessimistic.

These are the two outstandingly cheerful sectors of industry. Companies in the vast engineering and electrical group reported only about average optimism—although this makes a pleasant contrast with their gloomy forecasts last February. Two other big groups, chemicals and clothing and textiles, also showed a balance of optimism which emerged close to average.

Gloomy Sectors

The two gloomy sectors of business—where less than half the companies

CAPITAL, 27th June, 1963.

are feeling more cheerful than they were four months ago—are paper and food, drink and tobacco. Paper makers are no doubt suffering from Scandinavian competition following the E.F.T.A. tariff cuts. In food and drink the major benefits of reflation will only come next month, when the Budget tax reductions are paid out. Optimism in this industry may also have been restrained by the check to cigarette sales.

Prolonged political uncertainty as an aftermath of the Profumo affair may cut into confidence in industry as well as in the City. There may be a greater tendency to play safe and to defer decisions which involve spending heavily on long-term projects. But for industry, the state of order-books is crucial. Provided orders continue to flow in, as now seems likely, there should be a solid basis for steady expansion. Mr. Maudling has visited the City twice in the last few days, and on both occasions, he dispensed a timely tonic in the form of the excellent trade figures for May, which he welcomed as evidence that the economy was in good health. He did not regret that the import bill was rising along with the increase in exports; this was "a sign of general expansion in the economy." That, anyhow, was what he told the Association of British Chambers of Commerce at their annual luncheon. Britain's trade was definitely moving upwards, he said. "Things are improving and business is expanding on a sound basis. As for the external position, I think the omens are good."

The figures issued by the U.K. Board of Trade are even better than they look. With exports at £364.7 million, re-exports at £13.5 million, and imports at £424.6 million, the crude "trade gap" appears to be £46.4 million, against £42.1 million in April. But this is on the basis of sugar imports recorded at the inflated world price, while the great bulk of Britain's sugar imports is, in fact, paid for at the much lower fixed price under the Commonwealth Sugar Agreement. This alone could account for almost the whole of the rise in imports between April and May, and for a fair part of the import rise in the past three months or so.

Trade Figures

In any case, the seasonally adjusted trade figures make a much better showing than the crude statistics. They show exports up from £320 million in April to £341 million in May. This is a monthly record except for the £349 million last March, which was inflated by arrears from the severe winter weather. In the first five months of the year, the rate of exports has been 4 percent up on the average for 1962, while the rate of imports has been up 2 percent.

For May alone, the adjusted import figure is £394 million, against £388 million in April. With unchanged re-exports at £13 million, the "gap" has narrowed to £40 million, against £55 million in April. This, however, is making no allowance for the spurious sugar price which no one is really paying. The true monthly average gap in April-May is believed to have been hardly larger than the low £36 million in the first quarter. This explains Mr. Maudling's reference to an improvement in the balance of payments and the continued strength of the pound sterling.

Industrial production, on the other hand, still shows no sign of revival. The production index for April, just issued by the Central Statistical Office, is the same as for March at 116, after adjustment for seasonal factors. This is only one point up against April 1962, and still below the modest level reached in the summer months of 1962. It is to be hoped that it will not be long before Mr. Maudling can report some improvement in this matter.

CAPITAL, 27th June, 1963.

Jute

CO-OPERATIVES TO HELP SUPPORT FIBRE PRICES

IN order to implement the price support scheme for raw jute, the Government of India, it is reported, has decided to widen the network of jute co-operatives. To safeguard the interests of growers, the Government had instructed the State Trading Corporation to buy jute from co-operative societies on the basis of Rs. 30 a maund. Assam Bottoms ready for export, Calcutta. The S. T. C. paid in the first instance 90 percent of the value of the fibre supplied and the remaining 10 percent was paid within 45 days from the date of delivery.

The jute market, however, has remained depressed because the mills have large quantities of fibre bought on their own account and on behalf of the Jute Buffer Stock Association. In order to prevent a further decline in prices, the Jute Commissioner directed the mills to make compulsory purchases from the market from month to month, and finally made it obligatory on the mills to hold minimum stocks equivalent to 20 weeks' consumption. Even these measures have had little effect and prices have remained below the minimum levels, both in Calcutta and in the up-country markets. At present, Assam Bottoms, ready for export, Calcutta are quoted around Rs. 29 a maund for the old crop, and at Rs. 29.50 a maund, June-July delivery, for the new crop.

So far 600 jute co-operatives, operating in Assam, West Bengal, Bihar, Orissa, Uttar Pradesh, Andhra and Tripura, have purchased about 400,000 maunds of jute valued at Rs. 1.15 crores. The co-operatives in Orissa have bought the maximum quantity of 172,000 maunds. Assistance by the State Governments in the shape of contributions to share capital, subsidies for staff and godowns and warehousing facilities. The State Trading Corporation has provided special financial assistance of up to Rs. 1.55 crores to the various State Governments—Rs. 50 lakhs to Assam, Rs. 40 lakhs each to West Bengal and Bihar, Rs. 20 lakhs to Orissa and Rs. 5 lakhs to Tripura.

The ad hoc committee of the National Agricultural Co-operative Marketing Federation has recommended the provision of adequate circulating capital to the co-operatives to work the price support scheme. It has also urged granting of priority to co-operatives in the allocation of wagons, weight arrangements, inspection and warehousing facilities.

Financial Implications

The tentative scheme for redoubling the activities of the co-operatives during the new season implies the provision of financial accommodation of up to Rs. 7 crores on the 1961-62 basis. Judging from the current trend of jute goods production and raw jute consumption, the mills are likely to have a carry-over of about 2 million bales. Besides, the J.B.S.A. has a stock of 750,000 bales. With a stock of about 2.75 million bales occupying all available warehousing space and entailing a huge lock-up of capital, the mills and the J.B.S.A. may not be in a position to enter the market in a big way when the new crop starts coming in from next month.

During the 11 months ended May 1963, imports of fibre, mainly of jute cuttings, from Pakistan totalled 263,108 bales, against 383,423 bales in the corresponding period of the pre-

vious season. But these statistics do not take into account the large quantities of better-grade fibre smuggled into India. The smuggling occurs because there is a difference of more than 50 percent between prices on the two sides of the border. Besides, the higher prices of rice in Pakistan encouraged barter between the two commodities. According to informed circles, the efforts of the authorities to support raw jute prices may not be successful, unless they are reinforced by effective steps to stop smuggling all along the frontier.

Plea to Scrap Bond System

With a view to facilitating exports of jute goods, the Federation of Indian Chambers of Commerce and Industry has requested the Government of India to discontinue the bond system. Excise duty is levied on jute goods consumed internally, while exports are exempted from the duty. But the authorities insist that the excise duty should be paid on all goods produced; a proportionate drawback can be claimed on exports only after shipment. The drawback thus accruing is estimated at around Rs. 25 lakhs a month. At present, individual shippers have to execute bonds and furnish securities for every consignment before obtaining clearance certificates from the Customs authorities.

Small shippers are badly affected since large sums of money remain locked up in the shape of such securities. It is stated that the bonds are not released for months after the date of expiry because the excise authorities want to make sure that the goods have been shipped. Exporters are thus required to continue paying commission to the banks even after completing the contracts. To avoid this difficulty, the F.I.C.C.I. has endorsed the scheme submitted by the Calcutta Jute Fabrics Shippers Association. According to it, the Association proposes to execute a collec-

tive bond on behalf of its members for such amount as may be determined by the Government. It will be backed by a bank guarantee and indemnities from members participating in the scheme.

The practice followed in Bombay allows shippers to clear export goods without payment of duty against a bond supported by a bank guarantee of up to 25 percent of the face value of the bond. The F.I.C.C.I. has suggested the extension of the same procedure to exports from Calcutta.

Bag Factory for Thailand

A Calcutta firm, it is said, has entered into a collaboration agreement with a concern in Thailand for setting up a sacking mill in that country. It is proposed to install 80 looms with an annual rated capacity of five million gunny bags. Most of the machinery and plant will be made in India. Managerial skill and technical know-how will be supplied by the Indian firm. Indian technicians will be responsible for setting up the plant and running it during the initial stages. Eventually, the mill will be handed over to Thai personnel. India supplies about 81 percent of Thai imports of gunnies.

Coated Woolpacks

The Technological Research Laboratory of the Indian Central Jute Committee has developed a suitable woolpack, which has been received well by Australian and New Zealand packers. Since partition, Indian sacking had been gradually losing these markets on account of the lower prices quoted by Pakistan and the better grade material offered by her. Importers were dissatisfied with Indian sacking because of the contamination of wool by loose jute fibres from the packing. Experiments conducted in the I.C.J.C. laboratory have shown that A Twills can be covered inexpensively with a thin film which

prevents the contents from being contaminated by loose fibres.

An experiment on woolenised jute has also yielded satisfactory results. The technique is capable of being used on a commercial scale and will help the blending of jute with wool for making blankets, knitting wool, etcetera. Wall papers are being replaced by bleached and dyed wall covering made from burlap in the U.S.A. and other advanced countries.

Crop Prospects

Despite the sultry weather, the continuous sunshine during the past week has proved beneficial to the standing crop in Assam, Bihar, North Bengal, Gangetic West Bengal, Tripura, Orissa, Andhra Pradesh and East Pakistan. It has checked the growth of weeds and helped the plants to thrive. The floods in northern Orissa and East Pakistan rivers have not caused much harm to the crop. In most of these areas early sowing took place and the mature plants have already been harvested. In scattered pockets of East Pakistan, cutting may have to be premature. Arrivals of the new crop in Narayanganj are about 5,000 maunds daily. In the up-country markets in India, they are around 1,500 maunds.

THE JUTE MARKETS

Manufactured Goods: The goods market continued to be dull during the past week. Overseas enquiries declined to a trickle and there was hardly any business worth mentioning. Heavy gunny bookings by Britain, Europe and west African loaders did not help sentiment since shipments were presumably made against forward contracts concluded during earlier periods. The news of the decline in U.S. burlap consumption and stocks in May, followed by fewer foreign enquiries even at the lower levels, induced nervousness among holders who resorted to panicky selling in the futures market to lighten their commitments. The approach of due date accentuated the bearish trend. Towards the close, shippers showed scattered interest in covering in hessian for the near positions because of the lower levels. But that did not encourage operators. Although substantial foreign orders were reported to have been bagged by Pakis-

Raw Jute: Quiet conditions prevailed in the Calcutta raw jute market during the past week. Mills were conspicuous by their absence and holders were keen to dispose of their stocks at a discount. Scattered purchases of a routine nature were made by the mills in bare marginal lots of selected grade fibre for blending purposes around Rs. 29 a maund ready for C/Leutia for the old crop and Rs. 29.50 a maund for the new crop. In the futures market, Upper Assam White Bottoms for September opened with a loss of 4nP from the previous week's closing level and fluctuated narrowly between Rs. 30.32 and Rs. 30.06 on alternate bouts of bear-covering and bull liquidation to close around Rs. 30.10. Turnover was small in the spot and moderate in the futures markets.

Quotations on Wednesday were as follows:

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in May was 800,000 yards less than during April 1963, but 3.6 million yards more than May a year ago. The average monthly consumption during the first five months continues to run slightly ahead of the consumption for the comparable period a year ago. Last month's bag cut-up was 51.8 million and piecegoods deliveries 24.4 million

yards, compared with 53.1 million and 19.5 million yards, respectively, in May 1962. U.S. spot stocks and afloats fell by 4.5 million yards. At 295.7 million yards, 173.7 million yards were afloats. Spot stocks increased quite heavily as afloat stocks declined. Appearing below are two tables which include the May figures — (1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. burlap consumption (as reported to T.B.M.A.) (In million yards)			U.S. burlap consumption (estimated industry total) (In million yards)

THE U.K. JUTE MARKETS

LITTLE DEMAND FOR FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute markets were quieter in Pakistan for the higher grades. The E.P.C. values of Mill Lightnings and higher grades of white jute have been reduced by £3 a ton and Grade Tossa-4 and higher qualities of dark jute have been reduced, by a similar amount. However, this has made little or no difference to actual offers as many sellers were already discounting the official rates.

Heavy rain has fallen in Pakistan, and river levels are rising rapidly. Flooding has taken place in some districts, but so far, there appears to be no actual damage to the jute crop. There are reports that the Tossa crop may not be so large as expected, but it will be some time yet before this can be confirmed.

Demand from most overseas countries is small and the quantity of new crop purchased is well below average for this time of year. This is due to many countries having large stocks of old crop jute a portion of which is still unsold to spinners. At the same time, no official announcement has been made about minimum export prices for next season, nor have trading licences been issued.

The spot market was quite firm in Dundee. Most sellers were refusing to accept less than their quoted rates, although very little demand was being shown at present. New crop offers were being made at £107 for Mill Lightnings, at £93 for Mill

CAPITAL, 27th June, 1963.

Hearts and at £80 for Grade Hearts, c.i.f. U.K. for August-September shipment. Grade Tossa-2/3 was available at £117 and Grade Tossa-4 at £108. Output Tossa-2/3 ranged from £96 10s and Output Tossa-4 from £86 10s October-November.

Little or no change took place in old crop prices during the past week, but some of the better qualities are now becoming scarce. Mill Lightnings are named at £111/10s, Mill Hearts at £94 and Grade Hearts at £78. Grade Tossa-2/3 was at £116, Grade Tossa-4 at £106, Output Tossa-2/3 at £94 and Output Tossa-4 at £84, c.i.f. U.K., for June-July shipment. Cuttings remained steady at £55 for S.N.C. and at £47 10s for N.C.

The Siam jute market was firm with practically no offers of old crop being made. New crop was lowest at £72 for grade A and at £67 for grade B, delivered mill Dundee for November-December. Spinners consider these prices to be too dear compared with other raw materials.

THE PAKISTANI JUTE MARKETS

CUTTINGS IN FAIR DEMAND

(FROM OUR DACCAL CORRESPONDENT)

THROUGHOUT the western half of the country, continuous heavy rains fell over the past week, which is most unseasonal. Since river levels and rainfall generally were up to a week ago below last year's levels, even these continuous heavy downpours have only resulted in a slightly higher rainfall and river levels than in the same period last year. From now on, of course, things may deteriorate, but it will be remembered that even though there were localised floods in East Pakistan last year during July, these were not serious and did little or no damage. Floods have to come later in order to do serious damage. The papers, however, both in India and Pakistan have, from the point of view of raw jute, been over-dramatising the so-called floods.

It is unlikely that the present conditions will affect the crop with the possible exception of a very small loss in outturn in the lowland crop due to slightly earlier harvesting. This is not likely to be enough to be noticeable. Reports indicate that these heavy rains will retard the growth of the Tossa crop. This is unlikely unless the heavy rainfall and lack of sunshine continue for a considerable time. In the meantime, harvesting of the lowland crop is progressing, and it may be expected that jute will start coming in early in July, that is to say, slightly earlier than reported last week.

In the overseas markets, there have been some sellers' resistance, but very little business is reported. Locally, transactions continued mainly in cuttings, and a fair premium was paid for delivery during January-February. The discount for ready remained.

Due to the cyclone, there has been a pile-up of foodgrains cargo in Chittagong. These have priority on the railway wagons, so a shortage of wagons has developed. This is not important at present with small exports, but may be serious if the congestion, or the railway is not relieved by the end of July. In Chittagong, there are still 60,000 bales awaiting shipment resulting in a shortage of barges. Several barges are also being used for carrying foodgrains around the country, and here again, unless the position is eased by the end of July, there may be a serious shortage of transport for raw jute movement.

CAPITAL, 27th June, 1963.

Commodity Markets

SHARP RISE IN CASHEW KERNEL EXPORTS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

A FRESH record was established by cashew kernel exports from India during the financial year 1962-63. According to the figures just published by the Cashew Export Promotion Council, a total of 48,557 tonnes of cashew kernels valued at Rs. 19.36 crores was exported in 1962-63. When compared with the previous year, this was 6,800 tonnes more and in terms of money, the gain was to the tune of Rs. 1.19 crores. The increase in exports was largely due to larger offtake by the U.S.A., Australia, France, Germany (both East and West), Iran, Japan, the Netherlands and Sweden. The United States continued to be the largest buyer of Indian cashew kernels. She took 27,000 tonnes, representing about 55 percent of the exports in 1962-63.

Russia is the second largest buyer of Indian cashew kernels with her 1962 offtake amounting to 5,300 tonnes. She started buying this commodity from India only recently. Her purchase in 1957 was only 2,100 tonnes. According to the Cashew Export Promotion Council, the bulk of the Russian imports is consumed by the baking industry, although small quantities of salted and roasted kernels are sold locally in some of the special restaurants. The requirements of the baking industry are conveyed every year to the State Planning Committee, which decides on the quantity of cashew kernels to be imported, depending however on the availability of foreign exchange. As foreign trade is a Government monopoly in Russia, purchases in India are handled by the Bombay branch of the trade representation of Russia in India.

With a view to popularising Indian cashew products in Russia, the Cashew Export Promotion Council is participating in the forthcoming Indian exhibition in Moscow, which is to be inaugurated on 18th July, 1963. Samples of exportable grades of cashew kernels as well as treated and untreated cashew shell liquid have already been sent to Moscow for display at the exhibition. Models of the cashew tree, cashew apples, of the cashew and samples of products photographs and samples of liquid have been sent to the exhibition for display. Russia is not importing cashew shell liquid at present.

The cashew market in India is at present steady and exports are moving. According to some trade estimates, exports during the first five months of 1963 amount to about 900,000 cases of 50 lbs each, against 850,000 cases during the same period of last year. Exports this year are likely to be little better than last year, but money earned from exports may not be commensurate with the increase in quantity because the prices this year were less than that of the previous year. The present American offer is 44 cents a lb.

Stalemate in Lemongrass

A stalemate has developed in the lemongrass oil market following the recent fixing of the floor and ceiling prices by the Government with a view to helping the producers. The prices have been falling for some time now and there was a persistent cry from the producers for Governmental interference. The minimum and maximum prices fixed by the Government are Rs. 160 and Rs. 200

a 10 kilograms. The present market price, on the other hand, is Rs. 95 a 10 kilograms and even at this rate, there are no buyers, it is said. There was an offer from the Government that the State Trading Corporation would be asked to step in and buy stocks if the open market price was falling below the controlled price and the producers were finding it difficult to dispose of their stocks. The producers who are small agriculturists with hardly any capacity for holding back their stocks until prices increase say that unless the Government implements its promise quickly, they will be nowhere. In the meanwhile, there are reports that the State Trading Corporation will soon enter the market.

India produces about 1,000 tons of lemongrass oil a year and almost 75 percent of it is exported. Pro-

duction is mostly confined to central Kerala. Lemongrass oil is used in the manufacture of vitamin A and perfumes.

F.A.O. to Study Common Tea Problems

(BY A SPECIAL CORRESPONDENT)

REFERENCE to excess supplies of common teas has been repeatedly made in these columns. The question of adjusting production to consumption, as recommended by Mr. Betts at the I.T.A. meeting in London, has also been mooted. The F.A.O. committee on commodity problems is reported to have considered this matter at its meeting last month. The international situation in relation to tea was discussed in detail in the context of establishing an F.A.O. study group. It was observed that in spite of the stability in prices and trade in recent years, present indications point to a continued expansion of production, whereas it is doubtful if consumption can continue to increase at recent rates.

After considering the current situation and prospects and after discussions with the representatives of the major producing countries, it was decided that there is need for inter-Governmental consultations

between producing and consuming interests.

It was noted that in recent years, world production of tea had jumped by 22 percent but net imports of consuming countries showed a rise of only half that, namely, 11 percent. A tea glut had been avoided by consumption within producing countries which is estimated to have gone up by 50 percent over the same period.

Pakistan already absorbs most of her own output and fortunately for India, the internal demand continues to rise. But world indications point to an intensification of the up-trend in production following the emergence of new producing lands, expansion of planted areas and higher yields from them.

At a time when considerably larger supplies may be anticipated, the expansion in consumption outside producing countries is thought to be on the decline; it is doubtful if consumption can keep pace with supply. The fully developed countries are already taking the tea they require (the E.C.M. excepted), and although there is a great potential demand in Africa and Asia, the money to pay for such imports is not yet forthcoming.

The F.A.O. committee meeting appears to have indicated that due to the rigidity of demand for the commodity in relation to price in

a challenge
well met

On the 3rd January, this year, the 'E' blast furnace at the Jamshedpur steel works was blown out for relining and enlarging. It was a big job involving 2,100 tonnes of refractories, 1,700 metres of piping, 7,600 metres of electric cables and 1,100 tonnes of steelwork and castings.

When the original schedule was halved from 180 days to 90, many thought it to be impossible. But a team of Tata Steel engineers, technicians and workers took up the challenge and completed the operation in 84 days, 6 days ahead of the drastically revised schedule.

The 'E' blast furnace, with an original capacity of 315 tons a day, was bought second-hand from

the U.S.A. 45 years ago. Its rated capacity has now been stepped up to 660 tonnes of pig iron a day without sinter burden, or to 725 tonnes with sinter and sized iron ore.

The record-breaking achievement is another demonstration of efficient team-work, technical know-how and sustained efforts to attain greater productivity with the minimum outlay that characterise a city like Jamshedpur, where industry is not merely a source of livelihood but a way of life.

important markets in western Europe and north America, any increase in consumption resulting from a reduction in price would be relatively small and as far as foreign exchange is concerned, total export earnings would decline.

Recent experience has shown the truth of the last sentence and the forecast may be correct as far as the U.K. is concerned, for saturation point in consumption may have been reached but this correspondent still thinks that the U.S.A. and western Europe, if sound and intensive propaganda is taken in hand, could take some more. South America is another area where semi-European habits prevail and the tea prospect should not be ignored. So, even if the poor people of Africa and Asia cannot afford to buy tea, there would still appear to be millions in both the old and new worlds, who could start taking to tea if India's cost of production can be reduced by, say, 25 percent.

The F.A.O. committee appears to take the view that periodical consultation on production policies may avert the necessity of market controls at a later date. The proposed study group will consider markets and outlook for off-take; as also reduction or cancellation of barriers to trade.

The F.A.O. memorandum takes note of the fact that the world tea

economy in recent years has been saved by the marked increase in consumption in the producing countries (already referred to), especially India. The Calcutta trade estimates current consumption around 315 million lbs, which confirms the F.A.O. estimate. The report adds that the overall consumption in the Far East trebled during the same period, but balance of payments difficulties may check expansion in these overpopulated lands.

Burden on Tea

The annual Assam dinner was held at the end of May in London, and the Tea and Rubber Mail reports that the chairman, Sir Percival Griffiths, pointed out that as tea is a corner-stone in India's economy, the Government of India should limit the demands made upon the industry. Planters' anxieties include the rise in the cost of production, linked with the constant increase in taxation, not only on the producing companies, but on the planters themselves, and the fact that not enough propaganda for tea is being carried out in the U.K. The chairman said that it was necessary to publicise tea as tea and not as a particular country's product. "What we want in this country," he declared, is "really large campaign with perhaps a million pounds to spend on the promotion of tea as

tea", and added, "until we get that going we shall not make the headway we need to make".

Sir Percival continued: "When I went on tour and I found there were indeed great dangers attached to a tour of Assam, but they were not the dangers my friend had in mind. Perhaps I can best illustrate them by saying that in 23 nights I was in 22 clubs and once by very good fortune I dined before midnight. And of course, the length of the sessions in those days was facilitated by the fact that the price of a bottle of whisky was not very much more than the price of a burra peg today. That was the first of many tours I made to the tea districts and I soon developed a most tremendous respect for the planter. I came to realise that he had the same courage, the same determination, the same tenacity which had led his forebears first of all to carve the tea gardens out of almost trackless jungles of Assam. I often let my mind go back to those early pioneers. What men they were.

"In the days of C. A. Bruce, the hazards of travelling were appalling. It was a malaria-infested country, full of jungle, full of wild beasts, and practically no civilisation at all.

"I have not the time to follow on the story of the work of the

CAPITAL, 27th June, 1963.

pioneers, but it is worth while remembering that from their beginnings, tremendous things were built; it is worth while remembering that what was uninhabited, trackless jungle has been turned into a home, of civilisation, into a place where order and efficiency, tempered with humanity, prevail in a degree very much greater than is to be found in many parts of India.

"Above all things, the planter has become a first-class employer. It might have been thought that all the rules and regulations that Governments have seen fit to introduce would have broken the old relationship, but they have not done so. It is still there. The planter is still liked and loved by his labour force and still regards their welfare as his main job. But besides being good employers, they are good citizens.

"The tea industry is very much the corner-stone in the whole Indian economy. It is the most important earner of foreign exchange, it is the largest employer, except for the railways, and it is a very big revenue payer. I cannot pretend that I look upon that aspect of its contribution with unqualified satisfaction. We do, of course, suffer from the fact that we are mulcted both by the Central Government and by the States.

"Since we are the corner-stone in the Indian economy, it is, I think, quite right that we should from time to time tell the Government of India, and of Pakistan, too, what our anxieties are. I think they are in the main three in number. The first is the growth in the cost of production, linked, of course, with the constant increase in taxation, and we have to face the fact that today our competitors from east Africa can land tea in this country from 1s to 1s 6d a lb cheaper than we can, and on top of that, we are also very heavily taxed. We understand that the Government of India needs money; the Chinese cannot be fought without an increase in revenue, so I am not saying this in a captious or critical spirit. But I would make this appeal to the Government of India and the State Governments concerned, do not overtax us and do not be unrealistic in your assessment of what can be paid to labour. We are all desirous of raising the standard of our labour—we are raising them—but there are limits. If the Government concerned want tea to continue to be the corner-stone of the economy, they must put some limit on the demands they make upon it.

"Our third anxiety is that we are not doing anything like enough propaganda for the sale of tea in this country. (Hear, hear). We are not enlarging our market in the way we ought to be. Teenagers are not drinking tea as they should be. I would not mind so much if they drank things like beer, but they drink things like milk and coca-cola, and obviously we ought to be doing something about it. Mr. Vohra, whom I am glad to see here tonight, is running a very good campaign for Indian tea, but there are two things wrong with it, which are not his fault. First, he has a hopelessly small fund at his disposal, and secondly, the real thing to push is not tea of a particular country but tea as tea. What we want in this country, and I am not without hope that we shall see something coming into fruition before very long, is a really large campaign, with perhaps a million pounds or something of that order to spend on the promotion of tea as tea. Until we get that going, we shall not make the headway we need to make."

CAPITAL, 27th June, 1963.

COMPANY AND PUBLIC NOTICES

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE is hereby given that the Thirtieth Annual General Meeting of the Company will be held at the Registered Office, 59C Chowringhee, Calcutta, on Wednesday, the 17th day of July 1963, at 12-30 p.m. for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st March 1963 and the Reports of the Directors and Auditors thereon.
2. To declare a Dividend.
3. To elect Directors. Special Notice of the intention to propose the election of Mr. M. K. Vellodi, who is 67 years of age, has been received.
4. To re-appoint and fix the remuneration of the Auditors.
5. To transact any other ordinary business of the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

NOTICE is hereby given that the Ordinary Share Register of the Company will be closed from 1st to 17th July 1963, both days inclusive.

By Order of the Board,
B. BARKER,
Secretary.

59C Chowringhee, Calcutta,
22nd June, 1963.

TENDER CALL NOTICE

SEALED tenders are invited for supply of the following machinery, detailed specifications of which can be had from the office of the undersigned on payment of Rs. 5/-.

Tender will be received up to 3 P.M. on 1.8.63 and will be opened on the same date.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE

THE Ordinary Share Register and Transfer Books of the Company will be closed from Saturday, the 27th July, 1963, to Saturday, the 17th August, 1963, both days inclusive, for the purpose of payment in due course of dividend on Ordinary Shares in the Company for the year ended 31st March, 1963. The dividend when declared will be paid to those Shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 17th August, 1963, or to their mandatees.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Registered Office :
12, Mission Row,
Calcutta-1,
25th June, 1963.

NOTICE

IMPORTERS and Exporters are hereby advised that the Foreign Exchange Dealers' Association of India, which is representative of all Banks in India authorised to deal in Foreign Exchange, has decided to adhere officially to the Uniform Customs and Practice for Documentary Credits (1962 Revision) International Chamber of Commerce Brochure No. 222, with effect from 1st July, 1963.

Therefore, all documentary credit transactions relating to both imports and exports—which are based upon instructions dated on or after 1st July, 1963 will, unless otherwise expressly stated, be governed by the provisions, definitions and articles of the relative Uniform Customs Code.

On the other hand, all documentary credits issued, confirmed or advised, which are based upon instructions dated prior to 1st July, 1963, will—unless otherwise expressly agreed to between the parties concerned—be governed by the existing practice and not by the Code, notwithstanding the fact that such credits may be extended or otherwise amended on or after 1st July, 1963.

All Banks authorised to deal in Foreign Exchange in India will be pleased to explain to their import/export customers, on personal request, the provisions of the Uniform Customs Code.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to May 1963. As compared with April, the May index

for Fuel & Lighting reveals a rise of 4 points, while those for Food, Clothing and Miscellaneous remain unchanged at 578, 602 and 317 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 1 point during May 1963.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

COAL COMPANIES

O. Po. F. and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. 'P' next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

action will be taken. We hope also that they will be able to make concrete, practical and economical suggestions for speedy turn-round of wagons.

Use of Block Rakes

For the operational convenience of the Railways, bulk point-to-point movement of coal was largely introduced, as a consequence of the Coal Conference held in Delhi in December last. The use of block rakes at collieries, particularly the smaller units—and there are many more smaller units than larger ones—presents innumerable problems. I would like to cite an example. A colliery producing 300 tonnes a day would receive a block rake for loading on every fifth day. Under this scheme the colliery would have to stack its daily production for five days and arrange to load something over 1500 tonnes of coal within a period of five hours. No colliery, I submit, can work satisfactorily on this basis, and it is hoped that in this matter of block rake movement a workable solution will be found, to ensure that all the coal raised is moved to those who need it.

We welcome the initiative shown by our Minister, in developing alternative means of transport so that the full burden does not fall on the Railways alone. Moreover, we applaud all measures which will result in increased movement of goods, including coal. The success of any scheme to encourage greater use of road transport involves the rapid improvement of roads and bridges and the availability of sufficient vehicles of the right size to make it an economic proposition. The early construction of the Durgapur Expressway could afford great relief to the already congested traffic on the

Grand Trunk Road, and we welcome the steps that have been proposed by the Transport Ministry in conjunction with the State Governments and hope these will now be implemented. The many schemes that exist on paper should now be made a physical reality.

With regard to the rail-cum-sea route, the target of 2 million tonnes announced a few years ago has still not been reached, and the position is said to be under review. Because of the increased coastal freight rates as well as the proposed increase in Calcutta Port charges, the cost of coastal shipments will become even greater than the present high costs. I submit that this needs early re-examination in the interests of the consumers.

A matter connected with the transport problem is the delay in the construction of Central Ropeways for san-stowing in the Jharia and Ranigunge Coalfields, regarding which I expressed concern last year. I must once again record our very grave concern over the slow progress made, particularly as our coal production becomes more and more dependent on stowing with sand to be provided by these schemes. I hope that this matter will continue to receive the urgent attention of the Coal Board in the overall interests of both safety and conservation.

Subsidies for Stowing

On the subject of stowing, this Association has perhaps with tireless persistence drawn attention to the recommendations made by the Coal Prices Revision Committee which clearly specify that subsidies should fully neutralise actual costs incurred in stowing. We understood that our

previous submissions to Government in this connection would be considered favourably but we found to our regret that Government's revised proposals which were announced in August fell far short of our expectations. Under these revised rates of subsidy, those collieries which had not hitherto undertaken any stowing voluntarily on the plea of financial stringency, now stand to have their more expensive stowing costs involving conveyance of sand by road transport, neutralised in full, while those units which had voluntarily undertaken stowing to conserve national wealth will continue to be at a disadvantage. This discrimination should be removed, and while no one denies the necessity to encourage more sand-stowing, the progressive units which at their own expense long ago installed mechanical sand-gathering equipment should not be made to suffer in the matter of full neutralisation of costs incurred.

I also feel that it is necessary to point out that the literal interpretation of the principles and procedures laid down in the Coal Board's Manual tends to vitiate against the spirit of the Coal Mines (Conservation & Safety) Act. Because of restrictive interpretations, many collieries have to incur additional costs, apart from the subsidies they receive, to the extent of up to Rs. 1.50 nP per tonne. This Association in December last put forward numerous proposals in this respect, so that the assistance rendered could be more realistic. I hope that the Coal Board will soon rectify the position.

We are also grateful for the interest our Minister has taken in the matter of improving benefits to collieries from the scheme to subsidise working under

adverse mining conditions. The rate were enhanced in November last. We have been told that the rates cannot be increased because the total income from the cess is insufficient. The solution, if I may venture to suggest one lies with Government in that more funds could be obtained if the present cess on despatches could be suitably altered. As it is possible that coastal shipments may now be reduced to 1 million tonnes per annum, more funds within the framework of existing levies would be available, and I would suggest that these surpluses be used to increase the subsidies payable for working under difficult conditions.

The other day, the State Chief Minister and our Minister both stressed the vital need to extract coals from deep seams to a much greater extent. We in this Association fully concur with this view, because we are largely confined to vertical expansion, but it must be remembered that extraordinary mining difficulties and hazards are encountered at depth. The existing subsidies are totally inadequate to cover the greatly increased costs of such extraction, and my submission is that Government, in order to provide the proper climate for such developments, might appropriately consider the formulation of a special subsidy scheme for this particular purpose.

Report on Grading

I shall now deal with the all-important subject of Grading. Last year, I dwelt on this subject at some length and referred to the appointment of an Experts Committee which was to look into the possibility of changing the present system of sampling adopted by the Board and the existing system of classification of coals on the basis of ash and ash plus moisture contents. This Committee submitted its report to Government in July and urged that the classification of all coals should be fixed on the basis of their calorific value. We did not agree with many of the recommendations made by the Committee and we submitted our own views to Government in August. We agreed with Government's suggestion that a sample survey should be undertaken before the changes recommended were introduced as these would have serious effects on the pricing system which could only become apparent after the sample survey had been completed. About 74 units were selected for this survey and although we agreed to extend every co-operation to the Coal Board's field staff to expedite this work, I must record with regret that the traditional approach of the field staff to this as also to other problems reveals that in the few cases where samples have been drawn the procedure laid down by the Committee has not been properly followed, thus vitiating the results and defeating the very purpose of this exercise. I trust that before the new price structure on the basis of the revised classification is determined, our considered views will be taken into account. We continue to hear references to supplies of bad quality coal and we in this Association have persistently asked our Members to take such measures as are humanly possible to ensure that consumers have no cause for complaint.

We have continued to face difficulties over power and explosives. Our problems over power had, we felt, been resolved when the surplus energy available from Rihand and Hirakud was linked to the D.V.C. System. Many collieries in West Bengal were unable to derive full benefits from this increased availability, since the State Government's Electricity Licensing Committee was not aware until December that the Central Government had decided that the requirements of the Coal Industry were to receive the highest priority. Fortunately, we did not experience a very severe monsoon in 1962 and the peak loads normally essential for pumping immediately fol-

lowing the monsoons were not taken up. I would like to record our appreciation of the prompt steps taken by the Central Government and the assistance rendered to us by the Coal Controller's Organisation, since a year ago the situation was, indeed, critical.

The supply of explosives has been most unsatisfactory. Severe production cuts during our peak raising periods have been forced on us due to non-availability of the approved types of explosives and detonators. Emergent supplies have had to be rushed up to the coalfields on occasions. If production is not to be interfered with, any new arrangements for supply of explosives should be examined, in detail before implementation, if they involve changes in the existing arrangements.

Acquisition of Land

We have also continued to face difficulties with regard to acquisition of land and had hoped that our problems would have been overcome through the amendments to the Land Acquisition Act which were effected last year. We have put up numerous proposals to Government and have also discussed our difficulties with the respective State Governments. Unfortunately, the amendment restricts the purposes for which land can be acquired under the Act. I do hope something tangible will result from our representations in this matter.

Our dispute with the West Bengal Government over the removal of royalty-receiving rights of lessees and sub-lessees seems nearer solution, in that although the appeals are still pending in the High Court, talks are to be held shortly with a view to arriving at an out-of-court settlement. I might add that this Association has during the past few years proposed such an amicable settlement which we had then hoped would have been possible. In Bihar, the position remains unaltered, although in both States income from royalties has been virtually abolished without compensation since the end of December, 1961.

The decision of the Supreme Court in the matter of application of the Coal Bearing Areas (Acquisition and Development) Act, 1957, to lands which had vested in the State Governments was announced in December last. This generally supports the view taken by us which is that Central legislation relating to a basic industry such as Coal should and must prevail over State enactments. The dispute now having been resolved, several areas in the Ranigunge Coalfield have been notified for acquisition by the National Coal Development Corporation. Some of these notifications cover working collieries and the law as it stands, prohibits the continuance of mining operations in notified areas. This results in a most anomalous situation, in that on the one hand we are continually being pressed to increase production while on the other hand continuance of mining in such cases would result in an infringement of the law. I have already stated that in many of the units in the Private Sector workable deposits are nearing exhaustion. If such units are to be allowed to continue, new workings are essential to replace lost production potential. Our Minister, in an address from another platform a few weeks ago made a welcome comparison of our mixed economy with that of the European Community and referred to the "happy combination of the Public and Private Sectors engaged in a joint endeavour to maximise coal production." For this mixed economy to function effectively, it is essential to create an atmosphere in which both sectors can work in close co-operation, have equality of opportunity and be allowed to operate under similar conditions.

Our periodic meetings with the Chief Inspector of Mines have continued and are now accepted as most beneficial to

both sides. No one denies that the safest pit is the best one for increased production and this view, I know, is shared by our Chief Inspector. Many of the measures which we feel are essential, from the point of view of safety, and which we would like to introduce so as to establish in India the pattern adopted in other countries where legislation follows the practices of enlightened managements, are regrettably not possible within the framework of our existing price structure.

Labour Relations

Except in the case of a large unit in the Ranigunge Coalfield, our relations with labour have generally been satisfactory. It was most unfortunate that due to intra-union rivalry, there was a prolonged strike accompanied by violence, resulting in assaults on managerial personnel and the stoppage from work of safety men in a mine that is well known for its extremely dangerous workings due to the influx of gas. While breaches in the Code of Discipline on the part of the union and its officials have been brought to the notice of the authorities, the action taken, if any, under the Code does not appear to have had any noticeable result since the dispute within the union still remains unresolved. Stoppages of work without notice on this account at neighbouring collieries have also been reported. I do hope that the Central Workers' Organisation concerned, with the assistance of Government, can resolve this unsatisfactory state of affairs at an early date.

During the year, we received a Questionnaire from the Bonus Commission asking for our views on the introduction of a Profit-Sharing Bonus Scheme for our workers. As bonus disputes in coal mines had been eliminated altogether as far back as 1948 with the introduction of the statutory Bonus Scheme not dependent on profits, we opposed this proposal in our written reply and when we appeared before the Commission earlier this year. I hope that the Commission is convinced that it would not be in the interest of the workers themselves to have a profit-sharing bonus scheme. Improvements in the present scheme have already been effected, but we are always open to further suggestions which would make our existing bonus scheme even more satisfactory.

The Wage Board for the Coal Mining Industry which was constituted in August last has recently recommended an interim wage increase of Rs. 9.75 nP per worker per month pending the submission of its final report. The price increase sanctioned to implement this does not meet the cost in full, and in the case of By-product Coke Plants and we hope that this anomaly will be rectified. The Board has also issued a very detailed Questionnaire calling for voluminous statistical information from individual managements. If the Wage Board is proposing to include in its terms of reference matters which do not in any way have a direct bearing on wages, one fails to see how it can finalise its deliberations with the expedition demanded of it.

In the field of welfare, while progress has been made, our activities and those of the Coal Mines Labour Welfare Fund Organisation have to some extent been curtailed due to the Emer-

gency as a measure of economy. However, an approved scheme for the establishment of Co-operative Societies in the coalfields was recently circulated to managements. I would appeal to our members to extend their whole-hearted support so that the success of this scheme can be assured. The Housing Board has introduced a "Build Your Own House" scheme for miners, who are now entitled to financial assistance by way of subsidies and loans for construction of their own houses according to a given standard. The response has so far been poor but I would urge our Labour Unions to give wide publicity to this and encourage the implementation of this excellent proposal.

Turning now to minerals other than Coal, I am pleased to say that progress last year was generally satisfactory and output and movement of iron ore, limestone and dolomite for the Steel Industry again kept pace with the increasing demand. The position concerning manganese ore is still unhappy, as exports have again been very disappointing on account of ready availability of high grade ores from countries which enjoy a freight advantage over India. Future prospects are not encouraging.

Last year I reported that the Iron ore Mines Welfare Cess Act, 1961 sought to create a Welfare Fund for workers in iron ore mines. The Government of India has not yet notified a date for starting the levy and collection of this cess.

Welfare Funds

At the Third Session of the Industrial Committee on Mines other than Coal a proposal was considered for constitution of separate welfare funds for each category of non-coal mines. It was felt that whereas such funds can be efficiently administered in respect of minerals produced on a large scale such as coal, iron ore and mica, this would not be a practical proposition for most other minerals as units are often small and widely dispersed. It was, however, agreed that the Ministry of Labour and Employment should examine the possibility of establishing a common welfare fund covering all non-coal mines and should prepare a working paper on the subject for discussion at a future Session of the Committee. With regard to wage-fixing for workers in non-coal mines, the Committee agreed that the Minimum Wages Act, 1948, should be extended in three stages to all mines and meantime we learn that two Wage Boards are shortly to be set up for the iron ore and limestone-cum-dolomite mines.

Gentlemen, I would be failing in my duty if I do not make some statement on the Industry's relations with Government. These relations, I am happy to say, are indeed excellent. We have our differences and on occasions when we are critical it would sound as though the Industry and Government have a very poor opinion of each other. This, of course, is not the case, otherwise many of our distinguished guests would not be sitting with us today. The tasks that face us in the future require the joint and co-operative efforts of all concerned. The years that lie ahead hold a great opportunity for the Mining Industry which is charged with the task of making a significant contribution to the industrial growth of this country. Given the necessary incentives and encouragement, there is no reason why we should not prove equal to the challenge and I am confident that if the authority and power of Government is linked in a joint endeavour with the resources

and potentialities of private enterprise, there is no doubt that we can with confidence shoulder the burdens of the future.

Checks and Balances

Our country's philosophy, based on the principle of peace and co-existence, demands continuous vigilance if we are to preserve our liberties. It requires a spirit of live and let live. It needs, in the industrial sphere, an understanding of the wants of the community. We in the Mining Industry are conscious of our responsibilities in these and other directions and with the checks and balances that exist on the financing, development, labour policy, extraction and distribution of our products, the community can be sure that their requirements will be suitably met. These controls, wisely applied, will ensure that while sufficient freedom exists to guarantee efficient working, unfettered exploitation is not permitted. The days of "post-office socialism" also, namely, the working of enterprises without profit or loss, are gone, and the need for a fair profit commensurate with the hazards of the Industry and its requirements for growth will be recognised. It is in this context that I should like to say that so long as we in the Industry continue to demonstrate our vigour and vitality and the successful fulfilment of the community's wants, we need have no fear of saying frankly and objectively what the country should, in turn, do for us. For this reason also, I am convinced that with the controls which form part of our planned economy, there is no cause for the occasional cry of Nationalisation which one sometimes hears. We are playing our part according to our programmes and while we all continue to do that, there is nothing that a nationalised industry can do which we cannot do as well, if not better.

In conclusion, Gentlemen, I would like to stress, that it is the aim of this Association to co-operate wholeheartedly with Government in all its plans for the industrial development and defence of our great country.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

There is no limit to the usefulness of the Jeep Universal. It can go virtually anywhere—on good roads—bad roads—and where there are no roads. With its front wheels pulling and rear wheels pushing, the 4-wheel drive Jeep Universal goes through impassable roads, where conventional 2-wheel drive vehicles stall and stop. On normal roads it shifts into 2-wheel drive.

Jeep Universal—the world's biggest little vehicle

This is the sign of your Jeep Dealer who is specially trained to solve your transport and maintenance problems. He is equipped to supply you with factory-approved genuine spare parts throughout the life of your Jeep.
